S			
SPEAKER (continued) :—			
Lays paper on Table in reference to Parliamentary Reporting Staff, 190.			
Lays on Table Minute of Executive Council, 459.			
Reports presentation of Address of Congratulation to the Governor, 10.			
Reports return of Writ for Bourke, 11, 329; for Balranald, 35.			
Unavoidable absence of, 49, 341.			
Reports Governor's approval to Additional Standing Order (<i>Limitation of Speeches</i>), and makes observations on application of, 81.			
Do do (<i>interruption and renewal of proceedings of Bills</i>), 595.			
Reports issue and return of Writs, 119 (2), 251 (8), 252.			
Directs Clerk to amend Roll of Members, 137.			
States his intention to issue new Writ for Illawarra, 167.			
Directs Member to discontinue his Speech, 203, 316 (5), 384.			
Quotes practice as to Members attending as witnesses before Select Committees when requested so to attend, 420.			
Gives casting vote, 443.			
Declines to giving any ruling or direction in reference to removal of Mr. Toohy from the Chamber during the sitting of the Committee of Supply, 478.			
Presents Bills to Governor for Royal assent in Legislative Council Chamber, 606 (3).			
RULINGS OF :—			
That Contractors Lien Bill related to trade, and should have originated in a Committee of the Whole, 73.			
That amendment to omit words in the Representation of the People Bill (No. 2) was within province of the Committee, and therefore in order, 79.			
That amendment on motion that Monday be an additional Sitting Day was out of order, 154.			
That amendment to substitute Friday in motion that Monday be an additional Sitting Day was out of order, 154.			
That amendment on motion in reference to Liquor Traffic was in order, 162.			
That motion in reference to Import Duties on Agricultural Produce was similar to one already decided during the present Session, and could not be put, 163.			
That Balranald Irrigation Bill was properly before the House, 182.			
That Mining on Private Property Bill (No. 2) was beyond order of leave, 240.			
That Question to refer Seat of H. H. Brown, Esquire, to Committee of Elections and Qualifications was one of privilege, 257.			
That new clause proposed in Electoral Reform Bill was not relevant to subject matter or title of the Bill, 288.			
That amendment proposed to add words in reference to plebiscite on the fiscal question was similar to question already decided during the present Session and therefore inadmissible, 315.			
That clauses of Masters and Servants Bill were beyond the order of leave, 322.			
That Law Practitioners Bill was not out of order, 322.			
That Diseased Animals and Meat Bill (No. 2) was beyond order of leave, 333.			
That Resolution from Committee of Ways and Means for imposing new taxation differed essentially from mere abstract Resolutions on the same subject (Import Duties on Agricultural Produce), and was therefore in order, 356.			
That a Member having spoken to a question, may not conclude by moving "That the question be now put," 399.			
That the subject of a proposed motion for adjournment, viz., the introduction of a Coal-mines Bill, had already been discussed this Session and could not therefore be put, 414.			
That amendment to add words to Schedule C of Customs Duties Bill was inconsistent with previous decision in Schedule A of same Bill, and therefore out of order, 420.			
That amendment to add word "water" to Schedule C of Customs Duties Bill was such as to turn Proceedings of the Committee into a farce, and therefore out of order, 420.			
That, on amendment to omit words, it having been decided that the words stand, the debate was closed, 431.			
That Tolls on Stock Bill, again presented for consideration, a question decided by the House this Session, was contradictory of provisions of the Customs Duties Bill, and therefore out of order, 440.			
That Diseases in Sheep Acts Amendment Bill was not beyond order of leave, 449.			
SPECIAL ADJOURNMENT :—			
Motion made for, and passed, 202, 247, 250, 309, 350, 357, 392, 597.			
Motion made for, and withdrawn, 589.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

OFFICERS OF THE DEFENCE FORCE SENT TO ENGLAND
FOR MILITARY INSTRUCTION.

(PARTICULARS RESPECTING).

Ordered by the Legislative Assembly to be printed, 18 January, 1892.

[Laid upon the Table of the House in answer to Question No. 3, of 18 January, 1892.]

Question.

3. MR. WRIGHT asked THE COLONIAL SECRETARY,—

- (1.) The name and rank of each of the officers of the Defence Force sent to England for military instruction, and the corps to which each belongs?
- (2.) The total cost to the Colony of each officer who has completed his course of instructions, including salary, passage to and from England, travelling expenses, and all other allowances; each item to be separately shown?
- (3.) The probable cost to the Colony of each officer now in England?
- (4.) The length of time officers are to remain in England to complete their studies, and the nature of the instructions they are to receive; have they to pass any examination, if so, in what subjects?
- (5.) What (if any) examinations have been passed by each officer who has completed his course of instruction?
- (6.) Has any certificate of merit or proficiency been obtained by any officer; if so, will he state the name of such gentleman, and the nature and class of such certificate or certificates?
- (7.) For what object were these gentlemen sent to England, and at whose suggestion; is the practice to be continued, and, if so, to what extent?

Answer.

1.

Captains Bridges, Savage, and Morris, New South Wales Artillery. Captain Sparrow, of the Mounted Infantry, Captain J. H. A. Lee, of the Permanent Submarine Miners, and Lieut. G. A. Lee, of the Cavalry.

2.

Captains Sparrow and Lee have completed their course of instruction and have returned to Sydney. The total cost, including salary, &c., is as follows:—

Captain Sparrow.

	£	s.	d.
Salary	185	19	11
Lodging allowance	35	0	0
Servants' allowance	26	11	6
	<hr/>		
Passage to and from England	249	11	5
	105	0	0
	<hr/>		
	£352	11	5
	<hr/>		

Captain

Captain J. H. A. Lee, Per. Sub.-M.M.

	£	s.	d.
Salary	399	11	8
Lodging allowance	80	4	8
Ration allowance	14	11	4
Fuel	7	19	0
Light	6	9	0
Passage to and from England	252	0	0
	<hr/>		
	£760	15	8
	<hr/>		

3.

Probable cost to the Colony of each officer now in England will be as follows:—

	£	s.	d.
Captain Bridges, P.A.	1,053	8	11
Captain Savage, P.A.	1,020	17	8
Captain Morris, P.A.	1,020	17	8
Lieutenant Lee, Cavalry	760	0	0

4.

(a) Captains Bridges, Savage, and Morris, New South Wales Artillery, seventeen months, long course of gunnery at Shoeburyness and Woolwich, firemaster's duties at Waltham Abbey (and to acquire the most recent knowledge of position finding at the establishment, Isle of Wight), were thus under orders when they were granted leave.

Lieutenant Lee, New South Wales Cavalry, sixteen months, to go through the riding school at Canterbury, and be afterwards attached to a Cavalry Regiment of the 1st Army Corps at Aldershot.

(b) They have to pass in above subjects.

5.

Captain Lee, Permanent Submarine Miners, passed the practical examination of the long course in submarine mining, also in electricity, electric lighting, and Brennan torpedo course.

Captain Sparrow, Staff, passed the practical test of field work with mounted infantry, and infantry of the line.

6.

Captain Lee holds certificates of proficiency from the School of Military Engineering, signed by the Commandant, Submarine Mining and Engineering, in the following subjects:—

- (a) Long course of submarine mining.
- (b) Electricity and electric lighting.
- (c) Brennan torpedo course.

Also certificates of proficiency in submarine mining from two officers of the Royal Engineers, by whom he was instructed.

Certificates are not given for field work, mounted infantry, and infantry, as undergone by Captain Sparrow.

7.

With the intention of obviating the necessity for employing Imperial officers as instructors for local troops, at the suggestion of the Major-General Commanding, acting on the recommendation of Major-General Schaw, C.B., and Sir J. Bevan Edwards, K.C.M.G., in their reports submitted to the Government, it appears desirable that this practice should continue from time to time as required.

1891-2.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DEFENCE FORCES.
(TRAVELLING EXPENSES TO OFFICERS OF.)

Ordered by the Legislative Assembly to be printed, 19 January, 1892.

[Laid upon the Table of the House in answer to Question No. 5 of 19 January, 1892.]

Question.

(5.) FREE RAILWAY PASSES TO OFFICERS OF THE MILITARY FORCES:—MR. WRIGHT asked THE COLONIAL SECRETARY,—

(1.) Is it a fact that all the officers of the General, Artillery, and Permanent and Medical Staffs are provided with annual free passes over the railways?

(2.) What amount has been paid for travelling expenses during the past year to each officer of the above staffs?

1891-2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

OFFICERS OF PERMANENT AND VOLUNTEER CORPS.

(RETURN SHOWING PAY AND ALLOWANCES OF.)

*Ordered by the Legislative Assembly to be printed, 1 March, 1892.**[Laid upon the Table of the House in answer to Question No. 6, of 2 February, 1892.]*

Question.

(6.) MILITARY ESTIMATES:—MR. SHELDON *asked* THE COLONIAL SECRETARY,—Will he cause to be laid upon the Table of this House a Schedule of the Military Estimates prepared in the following form, viz:—

- (a) The rank and name of each officer, warrant-officer, non-commissioned officer, and clerk of the staff to be shown with all salaries and allowances under one Schedule?
- (b) The rank and name of each officer and warrant-officer of the Artillery Force, and the number of each grade of non-commissioned officers and men, together with all salaries and allowances, to be shown in the same way?
- (c) Each branch of the service, to be shown in the same way, excepting where allowances are uniform?
- (d) No officer, warrant-officer, or non-commissioned officer of the Staff or Permanent Force to appear on more than one Schedule?

Answer.

The Officer Commanding the Military Forces to The Principal Under Secretary.

Sir,

Head Quarters, 12 February, 1892.

I have the honor to forward the return called for by Mr. Sheldon, M.L.A., on the 2nd instant. This return has necessarily been based upon the expenditure of 1891, and the item of *Travelling Expenses* can only be stated at the rates allowed when an individual is travelling.

The *Miscellaneous Allowances* also have to be stated in the same manner, as they are not personal, but are granted to different individuals, and are therefore varied from time to time.

The *number of each grade of Officers of the Volunteer Force* is shown, as to give the name of each would delay the rendering of the return for a very considerable time.

I have, &c.,

CHAS. F. ROBERTS, Colonel,
Commanding Troops.

RETURN showing Pay and Allowances of Officers of Permanent and Volunteer Corps.

CHAS F ROBERTS,

Colonel, Commanding Troops, 12/2/92.

1891-2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEFENCE FORCE.

(RETURN RESPECTING.)

*(In lieu of Return on same subject ordered to be printed, 1 December, 1891.)**Ordered by the Legislative Assembly to be printed, 1 February, 1892.**[Laid upon the Table of the House in answer to Question No. 3, of 24 November, 1891.]*

Question.

(3) DEFENCE FORCE:—MR. WRIGHT asked THE COLONIAL SECRETARY,—

(1.) What is the total cost in salaries, allowances, rent, and travelling expenses of the staff of the New South Wales Defence Force, including the Head-Quarters Staff and the Regimental Staff of the different corps, both permanent and volunteer?

(2.) The name and rank of each commissioned officer holding a staff appointment in the Colony, with the amount that each receives in pay and allowances of all description, including travelling expenses?

(3.) The name and rank of each Imperial officer now holding an appointment in the Colony as military instructor, with the total annual payment made to each, including salary, allowances, and other expenses?

(4.) What are the special duties of each of the Imperial military instructors now in the pay of the Colony?

Answer.

Mr. Dibbs answered,—I will cause a Return to be prepared and laid upon the Table, giving the required information.

THE following information has been supplied by the Major-General Commanding the Military Forces:—

(1.)

£43,323, covering General Staff, Military Instructors, New South Wales Artillery, Commanding Engineer, Permanent Submarine Miners, Permanent Medical Staff, and Permanent and Regimental Staff of all arms. Travelling allowances are only drawn when actually travelling at the following rates, based on those obtaining in other Government Departments:—

Officers, 1st Class	30s.	per diem.
Officers, 2nd Class	20s.	„
Warrant Officers	7s. 6d.	„
Other Non-Commissioned Officers	6s. 6d.	„

(2.)

The Commissioned Officers and rates of salary and allowances are,—

<i>General Staff.</i>				£	s.	d.
*Major-General Richardson, G.O.C....	1,421	1	3
Lieut.-Colonel Mackenzie, A.A.G.	918	14	0

Captain Sparrow, Adjutant M. I. Regiment	585	8	0

(3.)

Colonel de Wolski, Major Lassetter, Major Churchward, Captain McNeill. (For rates of pay see reply to No. 2.)

(4.)

Colonel de Wolski.—Command and instruction of the Engineer and Submarine Mining Corps; preparation of all plans and designs for and the execution of all military works, fortifications, roads, bridges, magazines, storehouses, barracks, and buildings appertaining thereto; the conservation of fortifications, military buildings, defence lands, surveys, land and submarine mining, &c., the property of the Colony, and such other engineer duties as the General Officer Commanding may direct.

Major Lassetter.—Command and instruction of the Mounted Infantry Regiment.

Major Churchward.—Chief Instructor in Gunnery, Fire-master, and Riding Instructor.

Captain McNeill.—Instruction of Cavalry Regiment.

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PERMANENT MEDICAL STAFF CORPS.

(COST OF.)

*Ordered by the Legislative Assembly to be printed, 24 November, 1891.**[Laid upon the Table of the House in answer to Question No. 2, of 24 November, 1891.]*

Question.

2. MR. WRIGHT *asked* THE COLONIAL SECRETARY,—

- (1.) What is the total annual cost of the Medical Corps of the Permanent Artillery; the name of each officer holding an appointment in this corps, and the amount of salary received by him?
- (2.) The total amount annually paid in salary to Staff Surgeon-Major Williams for the various appointments held by him; and the total amount that he receives as allowances for quarters, forage, servants, rations, fuel, light, travelling and other expenses?

Answer.

The following information has been supplied by the Major-General Commanding the Military Forces:—

- (1.) The total annual cost of the Permanent Medical Staff Corps is estimated at £3,657. Lieutenant-Colonel Williams, Brigade Surgeon and Principal Medical Officer, Military Forces, annual salary, £472. Surgeon Swanston, annual salary, £365.

- (2.) Total amount paid annually to Staff Surgeon-Major Williams is—

	£	s.	d.
Salary	472	0	0
Command pay	27	0	0
Lodging	150	0	0
Forage... ..	64	0	0
Stabling	50	0	0
Groom (when not supplied with soldier's servant)	52	0	0
Rations... ..	18	2	0
Fuel	13	0	0
Light	11	12	0
Allowance as Ambulance Instructor	100	0	0
	<hr/>		
	£957	14	0

Travelling expenses 30s. per diem when travelling.

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RANDWICK RIFLE RANGE.

(CORRESPONDENCE RESPECTING THE COMPETITION, WITH MODELS AND WITH WORKING TARGETS FOR.)

Ordered by the Legislative Assembly to be printed, 28 September, 1891.

RETURN to an *Order*, made by the Honorable the Legislative Assembly of New South Wales, dated 5th August, 1891, That there be laid upon the Table of this House,—

“Copies of all reports and correspondence in reference to the competition, with models and with working targets for Randwick Rifle Range.”

(Mr. Frank Farnell.)

Lieutenant M. J. Keating to The Assistant Adjutant-General.

Sir,

Sydney, June, 1889.

I notice that endeavours are being made to obtain a new rifle range at Randwick, and I assume, in the event of this range being granted, some system of canvas targets will be adopted.

I have invented and patented a combination target (carton and skirmishing), which has met with the approval of the military authorities in the other Colonies, and is acknowledged by experts, both naval and military, in this Colony to be the best target yet invented.

Since the target was first shown on the rifle range, many improvements have been effected. The marking discs are now so arranged as to work parallel with the target and not at right-angles, as shown in diagram, and the counterbalance weights have been dispensed with.

The skirmishing or figure target has also been considerably improved. One, two, three, or four figures can now be fitted to the one target apparatus. Two moving figures, equivalent to one file, may always be visible to the practicing squad, and, as the stand carrying figures works in a socket, the figures can be made to face in any required direction, thus doing away with the necessity of erecting targets every time the men have to go through a course of musketry or practice at moving figures or fixed objects at unknown distances, and other improvements of a minor character have also been effected.

Taking into consideration the above facts, and the possibility of this Colony being armed with the magazine rifle, and the total inability of iron targets or canvas targets with iron frames withstanding a rifle which carries a steel-cased bullet and has a much greater muzzle velocity than the M.H. rifle, there can be no question that this target is the only one which contains all the requirements necessary for any rifle that is likely to come into use.

In the event of the Colonial Secretary giving a favourable answer, and the question of targets comes before the military authorities for consideration, I hope the merits of my invention will be fully and favourably considered.

I have, &c.,

M. J. KEATING.

Capt. Cuthell.—For report.—H.D.M., A.A.G., 27/6/89.

The Assistant Adjutant-General,—Kindly refer to enclosed report on canvas targets. This target has been greatly altered and improved since these papers were forwarded.—W.A.C., Capt., Instructor of Musketry, 4/9/90. Plans herewith.
Appendix A.

The Deputy Assistant Quartermaster-General. Forwarded.—H.D.M., A.A.G., 18/9/90.

276—A

[Enclosure.]

[870 copies—Approximate Cost of Printing (labour and material), £15 8s. 8d.]

[Enclosure.]

Report.

31 May, 1890.

THE marking on the "Keating target" is too slow, otherwise I consider it an excellent target. I have advised all the country reserve rifle clubs to try Keating's target; but they all prefer one invented by me at the Government expense. An average marker cannot score quicker than one and a quarter minutes per shot; thus I could not put through a larger squad than ten men in a day, whereas now I often put through a squad of twenty men.

W. A. CUTHELL, Capt.,
Instructor of Musketry.

The Assistant Adjutant-General.

Keating's Patent Carton and Skirmishing Targets.

"The only Combination Target in existence."

The target does not necessarily require any trench, but can be used either in a trench or behind earthwork.

The target can be adapted to either the Wimbledon or the disc system of marking.

The only part of the target that can possibly be shot away may be replaced at a very small cost.

The target can be unshipped and changed in the interval of time occupied by the squad marching from one range to another.

All the working parts of the target are composed of wrought and cast iron, and the whole can be mounted or dismounted in the short space of thirty minutes.

The same target apparatus is equally adaptable for third-class, second-class, or skirmishing targets, and, with a slight modification in the earthwork, may be arranged as a first-class target.

The following are a few of the many testimonials received by Lieutenant Keating:—

Captain W. A. Cuthell, Inspector of Musketry to the New South Wales Military Forces:—"I must draw the special attention of any club requiring canvas targets to that invented by Lieutenant Keating, of the N.A.V. It is the cleverest invention of the sort I ever saw."

Captain A. Fraser, N.S.W. R.A., Executive Committee, and Hon. Secretary Rifle Range Committee:—"I have very much pleasure in recommending your patent target for use on any rifle range. For its simplicity and accuracy in marking it certainly is the best target I have ever seen, and, in my opinion, it is simply perfection."—7th November, 1888.

Major P. B. Walker, N.S.W. R.A. Executive Committee:—"I have inspected Lieutenant Keating's target most minutely, and, having seen the working of canvas targets used at Wimbledon, and in other parts of the world, I have no hesitation in stating that Lieutenant Keating's is the best adapted for convenience of marking, as well as accuracy and freedom from danger to the marker. I know of no target so well adapted for rifle shooting, and I strongly recommend it to the consideration of all military and rifle corps."—6th November, 1888.

Major W. F. Longfield, N.S.W. R.A., Executive Committee, and Treasurer of N.S.W. R.A.:—"I think very highly of your target, and I hope the day is not far distant when we will have a complete row of them on our range at Paddington. During our late meeting I took particular notice of the working of your target, especially during the rifle club's match, as one of my (*i.e.* the Second Regiment) club teams shot on same, and I was greatly pleased with its working. In my opinion, your target combines strength and durability with simplicity and precision in working."—7th November, 1888.

Commander A. J. Lewington, N.S.W. R.A., Executive Committee:—"Judging from what I saw of of your target, and from the manner it appeared to work, I should say it was the best thing of the kind that has been shown. I watched it very carefully from the range, but had no opportunity of seeing the men at the target itself."—16th November, 1888.

Lieutenant W. Foskett, Secretary N.S.W. R.A.:—"I have much pleasure in stating that one of your patent targets was in use on the rifle range at Paddington during the five days of our prize meeting, and gave very great satisfaction. The marking was both prompt and correct, the simultaneous disappearing of the target and the appearing of the marking disc, with the almost immediate reappearance of the target with the spotting disc showing where the shot had hit, were so regular and machine-like that the competitors were charmed. The interval between the shot being fired and the appearing of the marking disc—as taken during a trial on the 22nd October, when the marker and target were both fresh—was slightly over seven seconds. This was for ten shots, and there can be no doubt, when markers become accustomed to the novelty of the target, the time could be considerably reduced. I had an opportunity of examining the target after it had five days' exposure, and found it well riddled with shot, but still as good and serviceable as ever. A good many shots had gone through the frame, but without apparently weakening it, or doing any material harm. There was no appearance of strain on any of the working parts, all of which are of the simplest construction, and would no doubt stand the wear and tear of an ordinary range for a very long time. The target is very simple to work—a man who was a perfect stranger to its construction working it with the greatest ease from the start—while the ease and rapidity with which it can be mounted and dismounted, coupled with the simplicity of the earthworks required, should make it a most valuable acquisition to all rifle ranges."—5th November, 1888.

Messrs. Hawkins and South to Colonel Spalding, C.M.G.

Sir,

7, Tasman Chambers, 106, King-street, 19 August, 1890.

We have the honor to inform you that we addressed a letter to Lieut.-Colonel Taunton yesterday, asking him whether, as competitors for canvas targets to be erected at Randwick, referred to in *Gazette* notice, we would be allowed the privilege of attending personally before the Board for the purpose of explaining the working of a model of our invention.

We observe that Lieut.-Colonel Taunton is absent at Ulladulla, and as plans, &c., have to be in by the 23rd instant, we are afraid our letter to him will not reach him in time, we therefore take the liberty of asking you for information on the subject.

We have, &c.,

HAWKINS AND SOUTH.

Yes; Board meets at Musketry Office, Victoria Barracks, 11 a.m., Monday, 25th instant.—
H.D.M., A.A.G., 20/8/90.

Extract

Extract from General Order No. 168.

Head-quarters, Sydney, 20 August, 1890.
4. A Board of Officers, consisting of Lieut.-Colonel Eden (President), Major Churchward, R.A., and Major Bartlett (members), will assemble at the Musketry Office, Victoria Barracks, at 11 a.m., 25th instant, to examine and report upon drawings of canvas targets submitted for selection.
The Instructor of Musketry will attend the Board.

By order.
H. D. MACKENZIE, Lieut.-Col.,
A.A.G.

Report of Board.

PROCEEDINGS of a Board of Officers assembled at Victoria Barracks on the 25th August, 1890, by order of the General Officer Commanding the New South Wales Forces, bearing date 20th August, 1890, to examine and report upon drawings of canvas targets submitted for selection.

President :—Lieut.-Colonel Eden.

Members :—Major Churchward, R.A., Major Bartlett.

THE Board having assembled, pursuant to the above order, proceed to examine the following models and drawings:—

1. Hawkins, South, and Johnson	Shutter models
2. D. Mackey and Son	"
3. Lamont	"
4. William Cox	"
5. Broughton	"
6. Lane's target, by Hudson Bros.	"
7. Copeman	"
8. Cuthell	"
9. Purcell	"
10. D. Mackey and Son	Windmill target
11. "	Self-balancing target
12. Keating	"
13. Enthrop	Shutter target.
14. Ralston, Green, & Co.	Self-balancing target
15. Kinstrup and Pearson	Running-in target
16. Grimley	Capstan target
17. Burt	Balancing target
18. Murray	Lever target

The above models were carefully examined and the prices taken into consideration. In most cases the inventors were present and explained the working of their respective models.

Opinion.

The Board is of opinion that Keating's patent target is the most suitable, for the following reasons:—

Being of iron, it will not perish or suffer from wear and tear as much as a wooden target.

It is fairly simple in its action and not liable to get out of order.

It does not require excavation, which is necessary with most other pattern targets, and simply requires a mound or mantlet.

It seems to be the most suitable for use as a disappearing target.

In comparison with other targets, it is cheap.

T. M. EDEN, Lieut.-Colonel, President.

W. S. CHURCHWARD, Major, R.A., } Members.

C. T. BARTLETT, Major,

Victoria Barracks, Sydney, 26 August, 1890.

Approved.—JOHN S. RICHARDSON, Major-General. The Instructor of Musketry,—What will it cost to furnish the new range with targets recommended by the Board? Estimate should include all details.—J.S.R., M.-G., 1/9/90.

The General Officer Commanding,—Sixty-one targets at £20, £1,220; 660 yds. mantlets at £1 per yd., £660; total cost, £1,880. I could give a price for almost all the work, but in that case I think that I should be interfering with the duties of the Commanding Engineer. There will be a lot of levelling, fencing, clearing, &c., also a pavilion to build, which must come under the duties of the above-mentioned officer.—W. A. CUTHELL, Capt., I. of M., 2/9/90.

The Deputy Assistant Quartermaster-General. Forwarded.—H.D.M., A.A.G., 3/9/90. The Instructor of Musketry,—I presume all the work, &c., would not exceed the £4,000 formerly specified by you to make the range complete in every particular.—J.S.R., M.-G., 8/9/90. The General Officer Commanding,—My application, dated September 12th, 1887, is for £9,000. I do not think the range could be completed for less.—W.A.C., Capt., I. of M., 11/9/90.

Mr. C. B. Johnston to The President of the Board on Targets.

Sir,

37, Park-street, 9 September, 1890.

Will you kindly allow me, on behalf of the patentees of the Randwick target, to make an amendment to our tender, viz, the mound in front to protect the marker should only be 8 ft. high. We are prepared to build mounds 8ft. high and 12 ft. wide to each target for £12. In fixing the above target no trench is required, as per drawing it is simply placed on the ground with stays behind to steady it. I beg to offer to build and fix a full-sized target for your inspection at any place you may direct to be shot

shot at. In building the mounds a hardwood fence would be put up and earth thrown up against it, 6 ft. wide at top with a 12 ft. base, including table for markers, seats, &c., and platform for markers to stand on. The whole of the woodwork of the targets to be well saturated in preserving oil.

I have, &c.,

C. B. JOHNSON.

[Enclosures.]

Dear Sir,

Strathfield, Sydney, New South Wales, 29 August, 1890.

Having seen the model of your proposed canvas targets, I have much pleasure in stating that I consider it very suitable; also, one that would be easily worked and understood, and not cost much to keep in repair.

Yours, &c.,

B. CARNE.

Mr. Johnson.

The Randwick Canvas Target.

To the Patentees,—

WE the undersigned, having seen the model of the above target, and being practical riflemen, beg to state that, in our opinion, the Randwick target is on the best principle of any we have seen as yet, being simple in construction, easily worked by the marker, the signalling of the scores being nearly as possible resembling the marking on the iron targets, but more correct, and we fully endorse all that the patentees claim, viz. :—

Simple in construction;
Easily and quickly worked by the marker;
Easily kept in repair;
Correct and distinct signalling of the scores;
Cheapness of construction.

With regard to the mounds in front, all that is required is a simple one, 8 feet high, with a wooden platform 18 inches high by 3 feet wide and 6 feet long; this will always keep the marker's feet dry in wet weather. In fixing the targets no trench is necessary, but it is simply placed on the ground and braced to supports at the back.

We are, Gentlemen,

Yours faithfully,

[Here fourteen signatures follow.]

The Deputy Assistant Quartermaster-General,—As the proceedings of the Board on targets is with you, conveying a report of a nature not in accordance with a renewed consideration, I suppose these documents should be filed in your office. I may add, Mr. Johnson had equal opportunities with other tenderers of explaining a target the Board disapproved.—T.M.E., Lieut.-Colonel, 26/9/90.

Memorandum by Lieut.-Colonel Farrel to The Deputy Assistant Quartermaster-General.

9 October, 1890.

I WOULD respectfully desire to state that, from the expressions of opinion I have heard from shooting men generally, as well as from my own experience as a practical shot, I have no hesitation in saying that I consider the vertical targets, as patented by Mr. Johnson, preferable in every way (provided durability be guaranteed), to those in use at the last meeting of the New South Wales Rifle Association. Competitors on that occasion who had to fire at the targets on the falling down principle were not at all satisfied with their action.

W. T. FARREL,

Lieut.-Colonel.

Referred to the President of the Board.—J.S.R., M.-G., 13/10/90. The D.A.Q.-M.G.—*Re* Keating and Johnson.—Perhaps, were those anxious to compete allowed at their own cost to set up their targets for practical test, no future dissatisfaction would have any footing. The Board's first consideration was on economy, calculated to promote training of troops rather than for match shooting.—T.M.E., Lieut.-Colonel, 14/10/90.

Captain Cuthell,—What would you suggest in this matter?—J.S.R., M.-G., 16/10/90.

The D.A.Q.-M.G.,—I would suggest that one of each, viz., Keating's, Murray's, and Johnson's targets be erected on the Paddington rifle range, and that one afternoon be given up for experiment. Only experienced shots will fire, so there will not be any danger to people in the park. Do you wish my private opinion on the targets?—W.A.C., I. of M., 17/10/90.

Commanding Engineer. Referred, by order.—J.E.D.T., Lt.-Col., 24/10/90. Commanding Engineer,—Please attach this to remainder of the correspondence sent to your address. By order.—J.E.D.T., Lt.-Col.

D.A.Q.-M.G.,—Owing to my having been called away yesterday to take over the works at Botany, I omitted to include the attached correspondence to my memo. of the 6th, which expresses my views on the target question. It should be pointed out to Instructor of Musketry that it is not permissible for an officer to hold "private opinions" on questions connected with his office. He probably means personal opinion, to be taken for what it is worth. Personally I would be extremely glad to hear his views on a subject on which he is so well qualified to speak. The trials should, in my opinion, not be made on the Paddington range. It is not advisable to re-open the question of this range, which is manifestly unsafe, and which has now been definitely closed by order of the Minister. The trial targets might be erected on the new Randwick range.—F. R. DE W., Col., 7/11/90.

Memorandum

5

Memorandum by the Deputy Assistant Quartermaster-General to The Instructor of Musketry.

10 October, 1890.

PLEASE place yourself in communication without delay with the Commanding Engineer, and afford him all the assistance you can anent the formation of the rifle range at Randwick. This is a matter of extreme urgency, as the General Officer Commanding is very anxious to push the transaction to its final stage.

By order.

J.E.D.T., Lieut.-Colonel,
D.A.Q.-M.G.

The D.A.Q.-M.G.—Your orders have been complied with. On Monday last I had a two hours' interview with Colonel de Wolski.—W.A.C., Captain, Instructor of Musketry, 15/10/90.

Memorandum by The Deputy Assistant Quartermaster-General to the Commanding Engineer.

10 October, 1890.

THE General Officer Commanding would be glad if you take immediate steps to submit plans of the work to be done for the formation of the new rifle range at Randwick, together with the approximate cost of the same for the approval of Colonial Secretary. Captain Cuthell has been instructed to place himself in communication with you to afford any information or assistance you may require. I forward herewith a letter from that officer giving a description of the land and a Board on targets showing the one approved.

By order,

J.E.D.T., Lieut.-Colonel.

D.A.Q.-M.G.—On the 10th instant, you forwarded me the Board on targets, showing the one approved. I find that this Board was ordered to examine and report upon drawings of canvas targets submitted for selection; and I therefore presume that the G.O.C. approved the proceedings, but that the decision as to targets to be finally adopted will be referred to a Board ordered to examine and report upon full-sized targets erected in a suitable spot, and that technical evidence be taken as to cost of manufacture and erection. The cost of Lieut. Keating's target appears to be very high, and I am informed that there is considerable conflict of opinion as to the merits of vertical *versus* side-falling targets. I would suggest therefore that an advertisement be inserted, to the effect that as no design for a perfectly satisfactory target at a moderate cost has been received by the Military Authorities, that they are prepared to receive full-size working targets for the inspection of a Board to sit as early as possible in December, which will decide on the target or targets to be erected, and tried on the range, the competition to be open to the general public, and not confined to those who submitted designs previously. I would urge that the Board be asked to invite the Executive Committee of the Council of the Rifle Association to assist the Board in arriving at a decision.—F.R. DE W., 6/11/90.

The Commanding Engineer to The Major-General Commanding.

Suggested conditions which might be referred to to the Instructor of Musketry for concurrence.

1. Pits into which target frame are lowered, considered inadmissible at Randwick, owing to sand drift and drainage.
2. The bottom edge of target to appear 6 inches above top of mound level.
3. The top of permanent frame of metal work to be 9 inches below mound level.
4. The bottom of the target or of the frame to be kept 6 inches clear of ground when lowered.
5. Provision in the form of a platform or banquette must be made for wiping out and mending target, when the height to be reached by the marker exceeds 7 feet.
6. The set of target apparatus to be adaptable for the use of targets of first and second classes, without alteration of mantlet.
7. The relative cost of targets to be estimated from the cost of erection of target and mantlet complete in every respect with platform, &c., the cost of renewal and repairs being also taken into consideration.

F.R. DE W.,
6/11/90.

D.A.Q.-M.G.—These suggestions may be carried out.—J.S.R., M.-G., 7/11/90. The Commanding Engineer. For information and action, please draft instructions for the Board. By order.—J.E.D.T., Lieut.-Colonel, 7/11/90.

Mr. C. Johnston to The Major-General Commanding.

Sir,

126, Botany-street, Moore Park, 3 November, 1890.

You kindly told me that if I sent in an application for leave to erect one of my targets to be tested, in view of the contract for the range at Randwick, if satisfactory I beg to state that I have two full sized ones made, one in iron and the other in wood, and can be seen at 279, Elizabeth-street. I am ready to put them up wherever I am ordered to.

I am, &c.,

C. B. JOHNSON.

Mr. C. Johnston—With reference to your memo. dated 3rd inst. *re* testing your patent target, I beg to inform you that the matter is in the hands of the Commanding Engineer, Military Works Office, Phillip-street, who will give you all the information you may require.—J. E. D. TAUNTON, Lieut.-Colonel, D.A.Q.-M.G., 5/11/90.

B.

B.

Memorandum by The Commanding Engineer to The President of the Board of Targets.

DRAFT circular for approval of General Officer Commanding herewith. I will order 100 copies when I know it is correct.

I forward also draft advertisement, and would suggest that it be inserted in the papers of Sydney, three insertions each.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

C.

[Enclosures.]

Targets and Apparatus connected therewith for new Rifle Range at Randwick.

THE attention of persons desirous of submitting targets and apparatus connected therewith for trial at the new Randwick Rifle Range, is invited to the following points, viz. :—

1. The bottom edge of the target, when in the firing position, should be at least 6 inches above the top of the marker's mantlet, the minimum height of which is 7 feet 6 inches.

2. No metal work of any description will be allowed above a level 6 inches below the top of the marker's mantlet.

3. Six inches clear space must be allowed below the target when lowered.

4. When the height to be reached by the marker (either for the purpose of wiping out a hit or mending a target) exceeds 6 feet 6 inches, a platform or banquette must be provided.

Owing to difficulties of sand at the new range, targets requiring trenches or pits, will not be adopted if a suitable pattern is obtainable in which this difficulty is obviated.

5. The set of target apparatus for first and second-class ranges must be adopted to a uniform height of marker's mantlet.

6. In estimating the relative cost of targets, the cost of erection of target, platform (if any), and mantlet, will be considered, as well as the cost of renewals and repairs.

7. Intending competitors must deliver their apparatus complete and free of cost to the Clerk of Works, Military Works Branch, Randwick Rifle Range. Labour only will be supplied free by the Government for the erection of the targets, the trial of which has been previously sanctioned by the Major-General Commanding, but competitors must supervise the erection of their own targets.

8. All communications relative to the above to be addressed to the undersigned.

By order,
T. M. EDEN, Lieut.-Colonel,
President, Committee on Rifle Targets.

Brigade Office, 72, Phillip-street, Sydney, 21st March, 1891.

A.

[Draft Advertisement.]

TARGETS FOR RIFLE RANGE.

PERSONS desirous of submitting targets for trial on the new rifle range, Randwick, should submit, not later than the 15th April, applications in writing to the undersigned, who will supply them with the necessary information and conditions to be observed.

By order,

T. M. EDEN, Lieut.-Colonel,
President, Committee on Targets.

Brigade Office, 72 Phillip-street.

The above appeared in the local papers on 21st and 23rd March, 1891.

The Deputy Assistant Quartermaster-General to The President, N.S.W. Rifle Association.

Sir,

27 May, 1891.

The Commanding Engineer will place, as soon as possible, twelve targets on range as a temporary measure for practice. He is also in communication with the President of the Board on Targets, with the view to the selection of a special pattern target, which will be available for the next meeting of the Association. For this year the Council must be satisfied with a shed 75 feet by 30 feet as a shelter, in addition to tentage, no funds being at present available for a more pretentious building. Application will be made to the Government to grant free passes by train to competitors in matches, and for ordinary practice; also that the tram-line may be carried to the boundary of the range. The question of telephonic communication on this range will be referred to the Commanding Engineer.

I have, &c.,

C. BOUVERIE, Captain,
(Per D.A.Q.-M.G.)

[This letter was the outcome of a deputation who waited, on this date, on the Major-General in reference to the matter.]

Memo. from the Deputy Assistant Quartermaster-General to The Commanding Engineer.

27 May, 1891.

THE General Officer Commanding approves of your placing twelve targets (Colonel French's pattern) on the new rifle range as a temporary measure, and to enable practice to be carried on without delay. He will also be glad if you will place yourself in communication with the President of the Board on Targets, so that the special type may be selected and targets constructed in time for annual meeting of Association in October next.

By order,

C. BOUVERIE, Captain
(Pro D.A.Q.-M.G.)

The

The Commanding Engineer to The President of the Board on Targets.

Recommendations *re* Targets on New Rifle Range.

18 June, 1891.

1. The authority of General Officer Commanding should be obtained for the purchase of all the targets exhibited, so that they may be further tried and be used for practice on the range.

2. The authority of General Officer Commanding was obtained for twelve French's targets to be erected. The material was ordered, but, as Mr. Anderson's pattern seems more promising, authority is requested to erect twelve of this pattern instead; cost, about £3 10s. each.

3. Lieutenant Keating should be asked to state if he can erect a first and second class target under cover of a 7 ft. 6 in. mantlet. Keating's target not required for first class.

4. Mr. Anderson's system should be tried on the first and second class range. Authority to erect two targets at a cost of £4 each is requested.

5. Mr. Anderson gives his invention to the New South Wales Government, so that there will be no royalty nor profit claimed. I will have the targets erected by contract.

6. I would recommend that the third class targets be fixed 12 ft. apart, and the first and second classes 18 ft. apart. I want an early decision on this point, as I cannot lay out pickets on range until this is done.

7. The authority of the General Officer Commanding is requested to continue the present height of mantlet, viz., 7 ft. 6 in. throughout the first and second class range. The work is at a standstill until this is decided. I strongly recommend its adoption.

F. R. DE WOLSKI, Colonel.

Report of Committee on Rifle Targets.

To the D.A.Q.-M.G.

Sydney, 22 June, 1891.

PURSUANT to due notice, published, and in accordance with three attached documents marked A, B, C, the Committee assembled on 16th inst., at 3 p.m., on the new rifle range at Randwick, for the purpose of conducting a practical test of targets submitted for its inspection, and, when "the light" no longer "served," adjourned until this day, the earliest date apparently consonant with other duties required of the officers of which it is composed.

The Instructor of Musketry being present, and his opinion being invited, states:—"My ideas of the future calico targets for the New South Wales Forces are, for second and third class targets, Keating's; and for first class, Anderson's. I suggest that all the targets exhibited on 16th June be purchased and further trials be made. Johnson's target is simply a copy of mine, erected at the Government expense, and therefore can be used without the patentee's permission. The reason I do not recommend my target is that it cannot be worked with a 7 ft. 6 in. trench, and therefore cannot be drained. A pit must be dug to allow the target to fall into. There are many faults in the Anderson target. The width of trench necessary is very great, also wear and tear will necessitate constant repairs. The disc is far too small. So much woodwork cannot contend with the white ant. The greatest economy is not got by the cheapest article. Great durability secures the lowest cost in the end.

The "recommendations" of the Commanding Engineer, dated 18th inst., handed in to-day, are attached hereto, after due perusal.

Opinion.

A careful consideration of all the items affecting the selection of a target or targets induces the Committee to adopt the following opinion, viz.: That the targets of Keating, Anderson, and Johnson are most to be recommended; that the higher cost of the Keating is covered by its greater durability; but the Committee venture to recommend the purchase of all it inspected, in order that they be submitted to a more drastic test than has yet been possible.

T. M. EDEN, Lieut.-Colonel, President.

W. S. CHURCHWARD, Major, R.A. } Members.

C. T. BARTLETT, Major

Sydney, 22nd June, 1891.

The Commanding Engineer,—I concur in recommendation as to purchase of targets. Perhaps you will be good enough to take the necessary action.—JOHN S. RICHARDSON, M.-G., 22/6/91.

The General Officer Commanding,—I will take the necessary action, but I desire to point out that the opinion of the Instructor in Musketry, as regards Keating's targets is, in my opinion, incorrect. It is essential that there should only be one form of target on the 1st and 2nd class range, and that there should only be one mantlet. Lieutenant Keating has not yet shown how his 2nd class target under 7 feet 6 inches cover of mantlet can be made into a first-class target. I want to complete the mantlet throughout at a height of 7 feet 6 inches, and I cannot do so until this difficulty is grasped. [*Vide* pencil note opposite paragraph 3 of my memo., 18/6/91.—F. R. DE WOLSKI, Colonel, 26/6/91.]

Memorandum from Major Churchward, R.A., to Lieutenant-Colonel Eden.

Colonel Eden,—Have applied to-day to be relieved as member of Board, the Field Battery course interferes so much with any assistance I can render. Have asked Assistant Adjutant-General to appoint another member at once.—W. S. CHURCHWARD, Major, R.A., 6/7/91.

Urgent,—The Assistant Adjutant-General,—Will you kindly relieve me from my position as one of the members of the Board on Targets, as I find it very inconvenient attending the meetings of the Board during the Field Battery course, and my attendance at the range on Saturdays is almost impossible having generally Volunteer Artillery parades. I beg to suggest that an officer of the Rifle Association, e.g., Major Longfield or the Musketry Instructor, be made a member in my place. The choice of targets is also a subject I am not well up in.—W. S. CHURCHWARD, Major, R.A., 6/7/91.

The Officer Commanding 2nd Regiment,—Please ascertain if Major Longfield can be detailed as a member of Board on Targets, in place of Major Churchward, R.A. By order.—H.D.M., Lieut.-Colonel A.A.G., 6/7/91.

Assistant

Assistant Adjutant-General,—Major Longfield will be glad to become a member of the Board on Targets. Presumably this garrison duty will cover leave from a regimental parade ordered for Saturday afternoon, 11th instant, should the two details clash.—M. BAYLY, Captain, Adjutant (*pro* Commanding Officer), 6/7/91.

Officer Commanding 2nd Regiment.—Yes.—H.D.M., Assistant Adjutant-General, 10/7/91.
D.A.Q.-M.G.,—M. BAYLY, Captain Adjutant, 7/9,91.

Extract from General Order 129.

Head-quarters, Sydney, 7 July, 1891.

3. Major Longfield (2nd Regiment) will be a member of the Board on canvas targets, detailed in paragraph 4, General Order 168, of 20th August, 1890, in place of Major Churchward, R.A. By order.—H. D. MACKENZIE, Lieut.-Colonel, A.A.G.

The President of the Board on Targets to The Commanding Engineer.

7 July, 1891.

SOME of the best riflemen now desire to further test the targets at 500 and 600 yards next Saturday. May I consider that this wish will fit in with the range-work you are conducting?

Permit me to point out that there seems to be a general opinion opposed to the scheme of pegs for an alley of fire.

T. M. EDEN, Lieut.-Colonel,
President, Target Committee.

President, Target Commission,—1. I have no objection to any firing you may think fit on Saturday. 2. My opinion is that if you listen to the general consensus of opinion in this Colony, you will never get anything settled. It does not matter to me whether pegs are put up or not, but the General Officer Commanding saw them in use at Melbourne, and liked the idea, and so do I. If you do not have pegs, you must have large letters fixed below mantlets.—F.R. DE W., Colonel, 7/7/91.

The Commanding Engineer,—Being somewhat of a shot myself, have distinct favour for letters *v.* pegs, say A, B, C, D, 1, 2, 3, 4, and so on—eight targets. So soon as a member in place of Major Churchward is in General Order, the Commission can speedily prefer its report.—T.M.E., Lieut.-Colonel, 7/7/91.

The President, Target Commission,—If, in your opinion, the method of indicating the targets to be fired at should be by letters or numbers, near (above or below) targets, please make a definite suggestion on the subject. I want the actual size, position, lettering, &c., of the indicators, and until this is supplied, I cannot proceed with laying out of the range. My own firm conviction is that the alleys formed by pegs or poles ensure the greatest safety, and I propose to adopt this system on the cadet range. I have shot for several successive seasons at Broudown, Portsmouth, at targets marked by letters, and shooting at the wrong target was of common occurrence.—F. R. DE WOLSKI, Colonel, 8/7/91.

Major Longfield,—Pray attach your opinion, so that Committee can meet on Monday for final report.—T.M.E., Lieut.-Colonel, 9/7/91.

The President, Target Committee,—I have never seen a rifle range with pegs or poles for an alley of fire, and cannot speak on this matter from practical knowledge. I do not, however, favour such a scheme, as I think it savours too much of a shooting-gallery. I am of opinion that the best idea is a letter or numeral of sufficient size to be distinguished up to 1,000 yards on the mantlet directly under the centre of the target, where it would be almost certain to catch the eye of the rifleman as he brought his rifle to the present, with a corresponding letter or numeral, which need not be of any great size, at the firing-point on each mound. The targets and firing points might be divided into sections of eight or ten, the sections being numbered 1, 2, 3, and so on, and the targets and firing points of each section being lettered A, B, C, and so on. If the targets and firing points are not numbered or lettered, I fear that considerable confusion will arise, and I am of opinion that firing at the wrong target will at times take place whatever scheme is adopted, although the adoption of disappearing targets will lessen this danger, as there is the probability that if a rifleman is aiming at the wrong target, it will disappear through being hit from its proper firing point before he fires, which will warn him that he was aiming at the wrong target.—W. J. LONGFIELD, Major, 10/7/91.

The Commanding Engineer,—I consider Major Longfield, who is on the Council, Rifle Association, has above written an opinion that is consonant with that of Major Bartlett and my own. The Committee will not presume to urge this matter.—T.M.E., Lieut.-Colonel, President, Target Committee, 10/7/91.

K.

The President, Target Committee,—I adhere to my opinion that if the poles are properly fixed, greater safety, especially in firing at the long ranges, will be ensured. I am giving only my own personal views on the subject, and I will make any arrangement which is considered best. I would suggest that a portion of the long-range targets at the first and second class range, on the south side, be tried with poles (say) six targets, and if not found a good place, it will be no great expense to revert to the other system. I would recommend that the question be referred to the General Officer Commanding for the necessary instruction, as I want to push on the work.—F. R. DE WOLSKI, Colonel, 10/7/91.

Lieutenant M. J. Keating to The Commanding Engineer.

Dear Sir,

191 Elizabeth-street, 1 August, 1891.

Some time back you told me personally that you would be glad to receive information *re* targets. As the Committee on targets have furnished their report, I can see no harm in supplying any information which, to my mind, would forward my own make of target in your favour. In this day's issue of the *Echo* it states that some doubt had arisen as to whether the 8 ft. x 6 ft. target had ever been practically tested. I do not know why this sized target should prove, or be thought unworkable, when the other

other two sizes had stood all tests for over two years, more especially as the principle of the apparatus makes the heavier target work the lightest. As far as wind pressure is concerned, the 8 ft. x 6 ft. target was tried in Melbourne in 1888, and stood the test allright, but the only shooting was done at the late test. Even this is more than any of the other competitors can say. The paper also states that the largest targets wants a trench 21-inches deep. Now, if you accept my way of fixing the 8 ft. x 6 ft. target, the trench would not be more than 15 inches—could be managed with 12 inches deep (see diagram).

Appendix B.

I overheard one of the competitors say that he would supply his apparatus in either wood or iron for £10. Now the English cost of a similar target in iron is £16. I need not tell you in which country labour and material is the cheapest.

If you have not made up your mind on the subject of targets, if you will allow me, and grant me an interview, I will undertake to prove to you that not only is my target the cheapest, but that it was the only one that carried out the conditions laid down, and is practically the only one workable.

I have, &c.,

MAURICE J. KEATING.

The Instructor of Musketry to The Commanding Engineer.

Sir,

Musketry Office, Victoria Barracks, 18 August, 1891.

I have the honor to report that I have visited the Randwick Rifle Range, and have found the following additions necessary:—

1. The pattern of target to be immediately decided upon.
2. Ten first-class targets capable of being altered to second-class; forty second-class targets; twenty third-class targets;—to be erected as speedily as possible. ; This does not include cadet range.
3. Revolver range and targets.
4. Fencing to be completed and notice-boards erected.
5. Magazine built as per plan, but submitted by Director of Military Works.
6. A workshop and store room (to contain all necessary appliances, timber, calico, &c.), might be built against the back of magazine.
7. Forty squadding posts be erected on parade ground near flagstaff, 7 feet apart, and 6 feet above the ground; each post to be numbered to correspond with target to be fired at.
8. Squad pegs 1 foot above ground to be erected on firing mounds to correspond with targets.
9. A large number to be placed on mound in front of each target.
10. A small number to be attached to each target, to show markers where to go when ordered.
11. A large boiler for making paste.
12. Telegraph lines to be laid from Randwick.
13. Gas to be laid on.
14. Windmill or small engine for pumping water to a position above large cottage, and from there distributed where necessary by means of pipes.
15. Two shelter-sheds on main range at 400 and 600 yards, capable of sheltering 150 men; each shed to be supplied with a tank for drinking water.
16. A flag-staff to be erected on top of hill in rear of targets.
17. Hill in rear of cadet range to be terraced.
18. Closets and urinals erected in suitable place.
19. Telephones to be arranged, as proposed by Mr. Anderson.
20. Wooden steps at north end of trench for the use of markers.
21. Two closets in rear of mantlets for use of markers.
22. Seats and tables for markers in trench.
23. Small work-shop, 12 ft. x 12 ft., in trench, with bench and tools, for immediate repairs.
24. A tarpaulin to every three targets, to cover frames when unshipped.
25. Small locker in trench large enough to hold brushes, paper, buckets, &c., under lock and key; this might be included in workshop (No. 23).
26. Shelters erected in trench (might be movable) for markers, should firing cease on account of bad weather.
27. Road from tram to range to be formed if possible.
28. Stores necessary:—
 - A large supply of canvas.
 - Black and white paper.
 - Gluc.
 - Flour.
 - 100 tins, each having three compartments for paper and paste.
 - 100 hand danger flags (4 ft. 2 in. x 3 in.) and poles 6 feet 6 inches long, shod with iron.
 - 100 paste brushes.
 - Twelve zinc buckets, for carrying water and paste.
 - Halliards for flag-staffs.
 - Forty pairs of coloured glasses (neutral tint preferred) for markers.

I have, &c.,

W. A. CUTHELL, Captain,
Instructor of Musketry.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

Minute Paper.

Subject:—Targets for Randwick Rifle Range.

Department of Public Works, Military Works Branch, Sydney, 18 August, 1891.

1. The Instructor of Musketry reports, 18th instant, that seventy targets will be required, viz. :—
- | | | | | | | | | | | |
|--|-----|-----|-----|-----|-----|-----|-----|-----|-----|----|
| 1st class, capable of being altered to 2nd class | ... | ... | ... | ... | ... | ... | ... | ... | ... | 10 |
| 2nd class targets | ... | ... | ... | ... | ... | ... | ... | ... | ... | 40 |
| 3rd | " | ... | ... | ... | ... | ... | ... | ... | ... | 20 |

276—B

In

In addition, about thirty targets will be required for the cadet range—in all about 100. There are not funds available to equip the range with targets of Keating's pattern, at a cost of £16 each, from Military Works Branch Votes.

2. Further, there is not mantlet space for ten 1st and forty 2nd class targets at 6 yards intervals on the long range. In my opinion, thirty-two 1st and 2nd class targets is the maximum number for which there is space, and that this number is ample.

3. Under the circumstances, I recommend the purchase at present of not more than twenty of Keating's targets, each to be capable of being used either as 2nd or 3rd class. The remainder of the targets required, about sixty, to be of wood, at a cost not exceeding £4 each. If Keating's targets are, after trial, considered the best, the whole range may be equipped with them next year, and the timber targets gradually used up on other ranges.

4. Keating's first-class target was not practically tried by the Board. They have merely attached to their proceedings a rough—very rough—sketch of the method proposed by Lieut. Keating for working a first-class target, requiring a 1 foot 9 inches trench, but at my request Lieut. Keating has submitted a sketch to scale showing a 1 foot 3 inches trench. I consider this portion of the trial very unsatisfactory, as on the 18th June I recommended that this question should be gone into, and on the 26th June I stated that "Lieut. Keating has not yet shown how his second-class target under 7 foot 6 inches cover of mantlet can be made into a first-class target." I do not, therefore, consider that the Board's opinion can be accepted on this point, and I concur with the Instructor of Musketry in recommending Anderson's system for first-class targets. Under any circumstances the effect of a 6 feet x 8 feet target, at 6 yards intervals, side falling, at long range, should have been observed. My own opinion is that a vertical falling target is far superior.

5. The Board state that "it is probable that only a limited number of first-class targets will be placed on the range," and the Secretary of the Rifle Association has recently informed me that no first-class targets are required for the October meeting. I adhere, however, to my former opinion that for military requirements all the thirty-two targets on the long range should be capable of being used either as first or second class.

6. I do not concur in the Board's recommendation to place the targets closer to the mantlet. The reason for this was based on a shot striking a target mounted 6 inches too high.

7. Lieut. Keating has notified his marking arrangement, and has added gearing which I have never seen, and I do not think it has ever stood the test of trial. It is not alluded to by the Board, although I am informed it was explained to them.

8. It will be necessary to apply at once to the Colonial Secretary for an additional £2,000 to meet the cost of targets and to carry out the twenty-eight requirements alluded to in Instructor of Musketry's report of 18th inst., as well as other wants which will probably be asked for subsequently. This sum might fairly be charged to Loan Act, 1888, works of defence, £125,000.

9. I propose to erect, meanwhile, twelve targets for practice (on General Officer Commanding's authority of 27th May, 1891), at a cost of about £4 each.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

President of Board,—For report and final selection of targets, with all possible expedition. Please reassemble Board.—WARNER SPALDING, Colonel Commanding Garrison, 20/8/91.

The D.A.Q.-M.G.—The above received p.m. yesterday. The lapse of time between date of Board's report, 16/7/91, and that of the C.E. remarks is noted, and the proceedings of the Board at its reassembly here to-day are herewith some addenda.—T.M.E., Lieut.-Colonel, Phillip-street, 21/8/91.

THE Board having reassembled, pursuant to instructions of the General Officer-Commanding, dated 1st January, 1891, proceeded on 4th, 11th, and 16th instants to the range and made further and very careful examinations of the targets in position, and reassembled this day for the purpose of preparing report.

Opinion.

Having perused the Commanding-Engineer's minute, dated 26th June, 1891, and further examined the targets as above stated, the Board submits the following opinion in lieu of its former one:—

1. That Keating's is beyond all doubt the best target submitted, being of great strength and durability, working and marking with ease and simplicity.

With respect to the concluding portion of the Commanding-Engineer's minute of 26th June, 1891, Mr. Keating submits the following systems, *vide* rough sketch attached marked M, for working a first class target, 6 ft. x 8 ft., of his construction, viz. :—Trench, 8 ft. long, 21 in. deep, and 12 in. wide, for the left side of the target to drop into when lowered, so that the right side would then be only same height from the ground as a second or third class target.

As it is probable that only a limited number of first class targets will be placed on the range, the cost of constructing the necessary trenches will not be very great.

2. The opinion expressed in previous report, dated 22nd June, 1891, placing Anderson's and Johnson's targets next in order of merit, has not been borne out by subsequent examinations; in fact, none of the targets submitted except Keating's appear to fully meet the requirements of the service.

3. That there should be a clear space of 12 in. between bottom of target and top of working gear, so that the former may be 6 in. above mound line or top of mantlet, and the latter 6 in. below. This will be absolutely necessary in the case of iron marking gears, as proved by an example that occurred in the presence of the Board on 11th instant, when a bullet went through the top of the framework of Johnson's target which was level with top of mantlet.

4. That the targets should be placed at least 3 ft. closer to the front of the mantlet than those at present on the range are, as this would add to the security of the markers and lessen the danger of any part of the working gear below top of mantlet being struck.

The Board concurs in the recommendation embodied in Commanding-Engineer's minute of 10th July, 1891, on document marked K.

T. M. EDEN, Lieut.-Colonel, President.
W. F. LONGFIELD, Major } Members.
C. T. BARTLETT, Major }

Sydney, 17th July, 1891.

The Commanding-Engineer.—Is there any reason why the opinion of the Board should not be acted on?—JOHN S. RICHARDSON, Major-General, 20/7/91.

The Commanding-Engineer.—The Officer Commanding Military Forces desires (in accordance with instructions received from G.O.C.) that you will return without delay proceedings of Board on Targets referred to you on 27th July, 1891.—By order, J.E.D.T., Lieut.-Colonel, D.A.Q.-M.G., 14/8/91.

D.A.Q.-M.G.—I sent you to-day all correspondence in my possession.—F. R. DE W., Colonel, 18/8/91.

Report of Board.

Military Office, Phillip-street, Sydney, 21 August, 1891.

THE Board having reassembled, pursuant to minute of the Officer Commanding the Garrison, dated 20th instant (to hand late yesterday), on the Commanding Engineer's minute of 18th instant, proceed to consider the said remarks of that officer and report as follows:—

1. The Board sees no reason to alter the opinion expressed in its report, dated 16th ultimo, with respect to the targets tested to that date, being still of opinion that Lieutenant Keating's target best answers the requirements of the service, and the Board annex hereto a memorandum (marked S) with respect to the other targets inspected, which guided it in forming the opinion it preferred.

2. Although Lieutenant Keating's target as a first class was not practically tested, the Board sees no reason why, with a trench of from 1 foot 3 inches to 1 foot 9 inches, it should not work as easily as a second or third class.

3. At the final examination of targets on the 15th ultimo, Lieutenant Keating had his new disc affixed to his target, and showed and explained the working thereof. It worked in a very simple and satisfactory manner. Lieutenant Keating stated, however, that he was prepared to supply whichever disc was deemed most suitable, that is, the one submitted in the first instance or the new one.

T. M. EDEN, Lieut.-Colonel, President.
W. F. LONGFIELD, Major, } Members.

[Enclosure.]

S.

OBSERVATIONS by the Board on "Anderson's," "Johnson's," "Lamont's," "Haldane's," and "Murray's" (2) Targets.

Anderson's.

1. Would be very hard and difficult work for the markers if a strong front or rear wind were blowing.

When being lowered or raised, this target has to be hauled forward, as it moves on part of the circumference of a circle as well as downwards and upwards; consequently, with the heavy pressure caused by a strong front wind, the work would be very laborious, especially lowering the target, and if a strong rear wind were blowing the target would probably be impelled forward too rapidly, and perhaps come down with a run, and strike the marker whilst in the act of hauling it down, before he could get out of the way.

2. When lowered, the top of the target is about 8 feet 1 inch from the ground on which the marker stands; consequently, he could not reach up to deal with a hit on or near the top without standing on a platform, when his hand, and—in the case of a very high hit—part of his arm would be exposed to the danger of being struck by a stray bullet.

3. If the target be worked in a pit or cutting of (say) 21 inches or 2 feet deep, so that when lowered the top would be not more than 6 feet 6 inches from the ground level, it would then be same distance in front of the marker, who would have to reach forward to touch it; so that unless a moderately tall man, he would have difficulty in reaching the top at the height last mentioned.

4. There is no provision for the target being lowered for the purpose of examination to locate a hit which the marker cannot see after hearing the bullet strike without the disc being raised.

Johnson's.

1. Requires a trench about 2 feet deep to work in.

2. Marks by means of a dummy target, which answers no useful purpose whatever, and might at times be fired at in mistake for the target, especially if raised without a disc when the target be lowered for the purpose of examination.

3. The target is fastened to two uprights, fixed to framework of gear by four metal screws at back, viz., two on each side, and a bullet going through either side of frame of target might come in contact with the point of one of these screws, and drive it out or glance off and become an element of dangers to persons in the mantelet.

4. When the dummy is raised an iron handle, to be used in hauling target up and down, is exposed to the danger of being struck by a stray bullet, and would certainly be an element of danger. Johnson states, however, that the iron could be replaced by a rope handle.

Lamont's.

Lamont's.

1. Requires a trench about 21 inches deep to work in.
2. Marks by means of a dummy, consequently paragraph 2, as regards Johnson's, applies to this target also
3. Hauling it up and down, for which purpose both hands must be used in iron handles, is very laborious work.
4. The targets sway about very much when in motion, and unless kept perfectly straight, which is difficult, owing to the swaying; it jains, especially when being raised.

Haldane's.

1. Requires trench about 21 inches deep to work in.
2. Is a double target, one being raised as the other is lowered, which, as in the case of a dummy, answers no useful purpose.
3. The marking is crude and unsatisfactory, the value of a hit being shown by a hand disc as in marking on iron targets, and the spotting disc in the bullet hole on one target is not seen at the firing point until the other target is hit and lowered, which would be a great disadvantage to a rifleman if the other man shooting with him (men shooting generally in pairs in the Association matches) missed the target, as the man who did hit would not thus see the exact position of such hit until after he had fired his next shot.

Murray's Parallel Lever.

1. Requires a pit about 21 inches deep.
2. The iron lever, which is part of the working gear, goes almost entirely across the mantlet.
3. The work of hauling it up and down would be very laborious.
4. The marking disc is faulty, and would probably lead to mistakes on the part of the scorers through being misread at firing points, as the colours showing "centre," "magpie," and "outer" occupy only one-fourth of the disc, which is circular, consequently would not be distinctly seen at long ranges; besides which, the only difference between a "magpie" and "outer" is the denoting colour (black) being shown in lower right quarter instead of lower left, which would probably lead to many mistakes.
5. Paragraph 4, as regards Anderson's target, applies to this one.

Murray's Shutter.

1. Requires a trench about 2 feet deep to work in
2. Is heavy to haul up and down.
3. Paragraphs 4 and 5, as regards his parallel lever target, apply to this one also.

General Observations.

1. All the targets mentioned require a trench or pit to work in, which would have to be bricked or cemented, and possibly drained, in order to prevent its being gradually filled up by the action of the sand, and at all times after a strong wind sufficient sand would probably be blown in to impede or stop the working of the target until cleared out. With respect to Keating's target, only the first class (a limited number) would require trenches, which would be small in comparison with what most of the others require.

2. Any wooden working gear or frame resting on or close to the ground would be liable to destruction by white ant, and to warp and get out of working order through exposure to the weather. The working gear of Keating's is of cast and wrought iron, fastened, however, to hardwood planks resting on the ground; but for these, old iron tramway rails or blocks of stone can be substituted. The working gear of Murray's parallel lever is of iron; Lamont's frame-work is partly of wood and partly of iron—that is, there are two iron rods, on which the target runs up and down on iron rollers. The frame-work of Anderson's, Johnson's, Haldane's, and Murray's shutter is almost entirely of wood; but Murray states that his can be made of iron for same cost, and Johnson states that he can replace two wooden uprights with iron for same price.

3. Proper provision for the examination of a target, if the marker hears or thinks hears a bullet go through it without being able to see the hole, is absolutely necessary for correct marking. Keating's fully answers this requirement. The disc can easily be placed out of gear, so as not to rise when the target is lowered. When the hit (if any) is located, the disc can be replaced in action, and raised to denote the nature of such hit, after which the marking proceeds as usual. If the examination proves that there is no hit, the target is raised without any disc, which is not placed in action until after that is done, being shown, which would signify "clean target, no hit." Johnson's, Lamont's, and Haldane's also provide for this examination of targets: Johnson's, by lowering the target and raising the dummy without a disc thereon, and after the hit (if any) is located, the disc showing its value is hung on the dummy, after which the marking proceeds as usual; clean targets, &c., by lowering the dummy without any disc having been shown. With Lamont's, the target is lowered, and the dummy raised with black stripes on left top and low right corners, signifying to those at the firing point, "Examination of target." After the hit (if any) is located, the value is shown on the dummy, and the working proceeds as usual. "Clean target, &c.," would be shown in the same manner as by Johnson's. With Haldane's, one target would be lowered and the other raised without a disc being shown; and after the hit (if any) was located, the disc would be shown. With this target it would probably be found necessary, in order to prevent delay at the firing point, to signify "Clean target, &c.," by hoisting a flag of some description.

The difficulty with respect to Anderson's and Murray's would have to be got over in something like the following manner: A flag hoisted as soon as the target is lowered, to signify to those at the firing point, "Examination of target," "take no notice of disc." After the hit (if any) is located, the target would have to be raised to lower the disc for adjustment, &c., and lowered again to raise the disc, showing the proper value of the hit. Consequently, for the one shot, the target would have to be lowered and raised twice. As with Haldane's, it would be necessary to hoist a flag to signify "Clean target, &c.," as soon as the target is raised after examination, if there be no hit. With this system, confusion and
incorrect

incorrect marking might at times be caused through a marker omitting to raise a flag when required, or through it not being seen when raised at the firing point. In either case, the value shown by the disc when first raised, which might be altogether false, would be credited to the man who had fired the last shot.

5. All targets have to be hauled up and down, as in the case with Anderson's, Johnson's, Lamont's, Haldane's, and Murray's, would probably necessitate, if in use continuously for (say) half a day or upwards, the employment of two markers for each target, to relieve each other from time to time, as the work is laborious and tiring. This is the case with the Swiss targets, which work in the way mentioned, used by the A.R.A., England. It is stated that the use of eleven of Keating's targets at the N.S.W. R.A. prize meeting in 1889, did not necessitate the employment of a single extra marker.

The Colonel Commanding the Garrison to The Commanding Engineer.

24 August, 1891.

IN the event of approval being given to the adoption of Keating's target throughout the range, please state what would be the additional amount required to meet the cost of the necessary number of targets, and to carry out the requirements of the Instructor of Musketry, contained in his report of 18th instant. This matter being very urgent, is recommended to your earliest consideration.

WARNER SPALDING, Colonel,
Commanding Garrison.

The Commanding Engineer to The Colonel Commanding Garrison.

25 August, 1891.

[Urgent.]
If the estimate of the number of targets required, given by the Instructor of Musketry in his letter of 18th August be accepted as correct, the additional cost of adopting Keating's targets throughout will be about £800 or £850. This sum would be required in addition to the £2,000 asked for by me on the 18th instant for completing range and meeting the requirements of the Musketry Instructor, providing twenty Keating's and the remainder wood targets.

If, however, my estimate of the number of targets required, viz., eighty-two, be accepted, and if the practice targets in course of construction and those already on the range be included, the additional targets required will be forty. If, then, sixty Keating's targets (instead of twenty) be ordered, the additional expense will be about £500, so that £2,500 will be required.

I recommend—

1. That immediate authority be given for the purchase of twenty Keating's targets in anticipation of approval for the necessary funds.

2. That Mr. Keating be asked to erect a first-class target on the range at once.

3. That the Colonel Commanding the Garrison inspect the targets on the range on Wednesday, the 2nd September, at 2.30 p.m., and that the Board, the Instructor of Musketry, and Commanding Engineer be asked to attend. A decision could then be arrived at as to the remaining forty targets required.

4. That the authority of the Colonial Secretary be asked for expenditure of £2,000 from Loan Vote, 1888, £125,000, to complete and furnish range.

I attach a further memo. *re* targets for your consideration.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

[Enclosure.]
Memorandum.

25 August, 1891.

1. The Board on targets sees no reason why, with a trench of from 1 foot 3 inches to 1 foot 9 inches, Lieutenant Keating's target "should not work as easily as a second or third class." No mention is made of the fact that the target itself enters the trench, and that the marker may have to go down on his hands and knees to patch a hit on this portion of the target. The trench must be 1 foot 9 inches deep if the extreme height to the top of target be limited to 6 feet 6 inches; but I would prefer, as in Anderson's target, the occasional use of an empty ammunition-box to stand on when the top edge of the target is struck, and a trench open, if possible, 1 foot 3 inches deep.

2. In Anderson's target, on the contrary, all the target is above ground. The Board consider that it will be difficult to work in a high wind, and that the marker will have some difficulty in reaching the top edge. These opinions have been arrived at from imperfect data and argument, not actual experiment. There is no difficulty whatever in working in a strong wind, nor in reaching to wipe out. The targets have been used for a month without a hitch of any kind, and being vertically and not side falling, are far less distracting in their motion. I am quite alive to the merits of Lieutenant Keating's targets, but it has not been tried on the first-class range, and Mr. Anderson's has.

3. As a military range, the targets on the long range should all be capable of being used as either first or second class, notwithstanding that the Association only intend shooting up to 700 yards at a 6 ft. by 6 ft. target, I presume they will shoot up to 1,000 yards ultimately. If Keating's target be adopted, trenches will be required for all the targets on the long range. The additional cost of this will be, if anything, greater with the Keating than the Anderson target.

4. A decision will have to be arrived at as to Lieutenant Keating's marking gear. I have not seen it at work, but the officer in charge of the construction of the range informs me that it works very well. I observe that there is an exposed iron rod used to carry the disc, which appears objectionable.

5. I may mention that in the conditions for the target competition the authorities made no promise to accept the best target exhibited. As there is a considerable divergence of opinion on the subject, I consider the best plan would be to offer facilities for the trial of every target which is considered to have any merit. We will thereby stimulate invention, and trust to obtain absolute perfection in time. The plan I suggest of erecting this year a large proportion of cheap targets will ultimately prove the best.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

Memorandum by The Deputy-Assistant Quartermaster-General to The Commanding Engineer.

28 August, 1891.

THE Officer Commanding Military Forces desires me to inform you that he approves of the number of targets as estimated by the Instructor of Musketry in his letter of the 18th inst. being accepted. He further approves of the adoption of Keating's targets throughout, and authorises the purchase of twenty of these targets in anticipation of approval of necessary expenditure by Colonial Secretary. He will be glad if you will forward letter in usual manner asking for the authority of the Colonial Secretary for the amount required to complete and finish the range, which is apparently £2,850 chargeable to the Loan Vote referred to by you in your minute of the 20th instant.

The Officer Commanding can see no object in his inspecting the target on the 2nd September next, the Board having finally advised as to the nature of target.

By order,
J.E.D.T., Lt.-Col.,
D.A.Q.-M.G.

[Two plans.]

Sydney : George Stephen Chapman, Acting Government Printer. -1891.

— KEATING'S Improved —
— DISCING & SKIRMISHING —
— TARGET —

— Protected by LETTERS PATENT —
— IN GREAT BRITAIN, THE COLONIES —
— & THROUGHOUT THE WORLD. —
Manfield Newton, C.E., Patent Agent, Sydney.

— DESCRIPTION —

In the accompanying diagrams Fig: 1 is a front view of a carton target, Fig: 2 is a front view of a skirmishing target, while Fig: 3 is a side view of a carton target shewing a section of mound and trench.—

The principal working part of the target apparatus consists of a quadrantal socket, into one of the socketed arms of which the target is dropped and secured in position by a set screw.—By this arrangement the target may be changed and another substituted for it with a minimum of trouble.—The target is retained in the vertical or horizontal positions, by a counterbalanced and adjustable weighted lever.

The marking apparatus consists of marking discs secured to counterbalanced rods which are furnished with cam pieces, against which the target impinges (as it is raised from the horizontal to the vertical positions) thus throwing the rods & discs back to the horizontal position shewn in Fig: 3. These discs are usually four in number corresponding to the number of divisions upon the target, viz:—
- 1 - OUTER - 2 - MAGPIE, - 3 - CENTRE, and - 4 - BULL'S EYE. No 1 - OUTER - disc is circular, colored black, and marked ②. - No 2 - MAGPIE, - is lozenge shaped, colored black and white, and marked ③. No 3 CENTRE, - is square, colored red, and marked ④. - No 4 - BULL'S EYE - is circular, colored white, and marked ⑤. —The modus operandi is as follows; say the marksman has made a "Magpie". The marker raises the weighted lever arm of the target, when the target will assume the position shewn by dotted lines in Fig: 1.—The marker will then slightly press down the counterbalance weight marked ③ and the rod carrying disc marked ③, will rise to the vertical position, thus shewing the number of points scored. The marker will next place a small spotting disc suitably colored, in the perforation made by the bullet, will paste a small piece of paper over the previous bullet hole, and will press down the target counterbalance weight, thus causing the target to rise to the vertical position. As the target revolves it will impinge against the cam piece on the rod and throw the latter back to the horizontal position shewn in Fig: 3, and the target will be ready for another shot.

The skirmishing target consists of a figure (as in Fig: 2) balanced on a horizontal axis secured to an upright which is dropped into one of the arms of the quadrantal socket. When the figure is struck by a bullet, it will fall backwards, thus indicating to the marksman that it has been struck. It will however automatically and immediately be caused to reassume its upright position by the action of the adjustable counterbalance weight with which it is furnished. A series of these targets may be rooked together (in the arc shewn by the dotted lines in the diagram) from one switch lever, by one man or boy, so that each member of a skirmishing squad, shall be placed on an equal footing.

My improved targets may be used in connection with either mounds or trenches; the combination of mound & trench designed by Captain Cuthell, Inspector of Musketry in New South Wales, and shewn in section in Fig: 3 being preferably adopted.

Further information may be obtained from the Patentee, M. J. KEATING, 181 Elizabeth St. Sydney, N.S.W.

RANDWICK RIFLE RANGE.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 14 December, 1891.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 14th October, 1891, That there be laid upon the Table of this House,—

- “(1.) Copies of correspondence and reports *re* targets for Randwick Rifle Range dated later than the Return furnished a few days since.
“(2.) Copies of any correspondence which may have taken place, or reports which may have been made, in connection with statements that the “Randwick Rifle Range has been badly constructed.”

(*Mr. Nobbs*).

(I.)

The Commanding Engineer to Mr. M. J. Keating.

Supply of Twenty Targets for Randwick Rifle Range.

(91-727)

28 August, 1891.

PLEASE give me a tender for fixing complete, on Randwick Rifle Range, twenty of your patent targets (2nd and 3rd class) with, and also without, wheel-gearing for marking-discs, and inform me within what time you can deliver these, and any further supplies which may be ordered.

Will you also inform me if you are prepared to exhibit on the range a 1st-class target, showing the trench required, and how you propose to construct it, and state, at the same time, the cost (per target) of a 1st-class target fixed complete on range.

F. R. DE WOLSKI, Colonel.

Mr. M. J. Keating to The Commanding Engineer.

Tender for the supply of Twenty Targets for Randwick Rifle Range.

Sir,

Sydney, 28 August, 1891.

In reply to the first portion of your minute, 91-727, of this day's date, I have much pleasure in tendering for the supply of twenty of my patent 2nd and 3rd class targets, with or without wheel-gearing for marking-disc, for the sum of £16 each, complete, fixed in position on the range on wooden base, as at tests, or on iron rails or stone footings, the iron rails or stone footings to be furnished and put in position.

I will deliver the above-mentioned twenty targets within fourteen days from receipt of order, and any future supplies that may be ordered at the rate of ten targets per week, dating from completion of first order.

In the event of my being favoured with an order, I would like to be informed if the targets are to be placed on iron rails or stone footings, in order that I may alter the patterns in accordance.

I have, &c.,

MAURICE J. KEATING.

462—A

The

[970 copies—Approximate Cost of Printing (labour and material), £39 17s. 7d.]

The Commanding Engineer to Mr. M. J. Keating.

Tender for the supply of Twenty Keating's Targets for Randwick Rifle Range.

28 August, 1891.

I BEG to inform you that your tender for the supply of twenty of your patent targets, capable of taking 2nd and 3rd class targets, at £16 each, fixed complete, has been accepted, to be delivered within fourteen days from the date of the receipt of this order. The arrangement of gearing for marking-discs and supports for tripods, &c., are left to you.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

Sydney, 28 August, 1891.

In reply to second paragraph of your minute of this day's date, No. 91-727, I am prepared to exhibit on the rifle range at Randwick a 1st-class target, showing the trench required, and how I propose to construct it, within seven days from date of my being requested to do so, and will supply same at same price and conditions as embodied in my tender for 2nd and 3rd class targets, viz., £16 per target.

I have, &c.,
MAURICE J. KEATING.

The Commanding Engineer to Mr. M. J. Keating.

Keating's Patent Target for Randwick Rifle Range.

28 August, 1891.

IN reply to your letter of to-day's date, offering to exhibit on the rifle range at Randwick a 1st-class target, showing the trench required, &c., I beg to accept the offer, provided the target be arranged for both 1st and 2nd class ranges. I will leave the question of marking-gear, footings for tripods, &c., entirely to you, the target to cost £16, and to be delivered, if possible, by Saturday week, the 5th September, 1891.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

28 August, 1891.

TWENTY targets have been ordered, and will be delivered within a fortnight. I cannot deal further with this question until you return me the correspondence.

F.R. DE W., Col.

Urgent. C.E.—Correspondence asked for herewith. Please return with as little delay as possible, as copies of all papers have been called for by the Government.—By order, J.E.D.T., Lt.-Col., 31/8/91.

The Commanding Engineer to Mr. M. J. Keating.

1 September, 1891.

WITH reference to my memo. 91-727 of the 28th ultimo, please note that there must be 12 inches clear between bottom of target and top of metal work, so that the former may be 6 inches above mound line and the latter 6 inches below.

Please inform me if you intend making your trench for 1st-class target 1' 3" or 1' 9" deep. The former was the depth shown in your letter dated 1st ultimo, and the latter in the sketch (pencil) handed to the Board.

F. R. DE WOLSKI, Colonel.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

2 September, 1891.

IN accordance with the orders of the O.C. the Military Forces, I ordered on the 28th ultimo twenty of Keating's patent targets, at a cost of £320, to be delivered within fourteen days. Future supplies will be delivered at the rate of ten targets per week.

2. As no reply has been given to paragraph 4 of my memorandum on targets, dated 25th August, I have thought it best to leave the question of the pattern of marking-gear to the inventor himself, who will no doubt supply the form he likes best. I accept no responsibility whatsoever for the pattern or design of the targets, which, in my opinion, is defective in certain points.

3. As Lt. Keating's 1st-class target has never been tried on the range, I have written to ask him if he was prepared to exhibit one on the range complete, with necessary trench. He has agreed to do so within seven days, the target to cost £16.

4. The O.C. the Military Forces has been pleased to approve of the number of targets estimated by the Instructor of Musketry, viz., ten 1st-class, forty 2nd-class, and fifty 3rd-class. I adhere to the opinion contained in my minute of the 18th August, that there is not room for fifty 1st and 2nd class targets at the interval previously approved. I would be glad, therefore, if definite instructions were issued as to how I am to reconcile these conflicting conditions.

5. This approval overrules the opinion expressed in paragraph 3 of my minute of the 26th August, as well as in previous minutes and in paragraph 5 of the conditions, viz., that all targets on the long range should be capable of being used either as 1st or 2nd class. This being the case, I would be glad of precise instructions as to the intended distribution of the ten 1st-class targets on the range. I need hardly say that had I been informed of this sooner I would not have constructed continuous firing-mounds for ranges over 600 yards. I adhere to my opinion that thirty-two targets will be ample, and that all, or at all events a large proportion, of these targets should be capable of taking the 6' x 8' target to meet military requirements

6. I recommended on the 25th ultimo that the Colonel Commanding should visit the range and inspect a cheap form of target which answers all requirements, and has been in constant use on the range for practice. He declined, as "the Board had finally advised as to the nature of target." I would point out, however, that the Board expressed the opinion only as to targets tested up to 16th July. The military authorities are not bound to accept any target because the Board say it is the best they have seen, and I consider that a cheap and efficient target having been erected, one of a design recommended by the Instructor of Musketry for 1st-class, it should have been inspected at least.

7. I am strongly of opinion that it will be unwise to purchase 100 of these expensive type of target after such a hasty trial, and I desire to record my opinion to that effect.

The Keating target has many defects, and I would express a hope that the decision arrived at will not prevent other forms of target from being properly tried.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

The Commanding Engineer to The Major-General Commanding.

Completion and equipment of the new Rifle Range at Randwick.

Sir,

I have the honor to request the authority of the Colonial Secretary for the expenditure of a sum not exceeding £3,000, required for the completion and equipment of the new Rifle Range at Randwick, the amount to be defrayed from the Loan Vote for Defence Works, £125,000, 1888.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

P.U.S.—Recommended.—J.S.R., M.G., 3/9/91, B.C. Submitted.—4/9/91. Approved.—H.P., 14/10/91.

Report of Board.

Dawes Battery, Sydney, 3 September, 1891.

PURSUANT to instructions from the General Officer Commanding, the Board re-assembles Present, the same members as before. The Board proceeds to consider the Commanding Engineer's memoranda dated 26th August, 1891, and 2nd September, 1891, and prefers the following report:—

REPORT.

1. The Board, notwithstanding the Commanding Engineer's memoranda, is unchanged in its opinion, which it regarded as a distinct recommendation of Keating's target.

2. With respect to the Commanding Engineer's memorandum of 26th August, 1891, the Board is of opinion that the markers will have no difficulty in marking a hit on the left edge of Keating's 1st-class target, notwithstanding the fact, of its descending into a trench. It concurs in the opinion of the Commanding Engineer that a 1 foot 3 inch trench will answer the required purpose.

3. The Board does not concur in the opinion of the Commanding Engineer that all the 2nd-class targets should be capable of being worked as 1st-class targets. In the opinion of the Board it will be sufficient for all military purposes if eight or ten

Portion missing.

Memorandum from Major-General Commanding to Instructor of Musketry.

4 September, 1891.

PLEASE advise as to distribution of ten 1st-class targets, also minimum number necessary to carry out the meeting of the Rifle Association. (See C.E.'s memorandum of 2/9/91.)

J.S.R., M.-G.

Memorandum from The Major-General Commanding to The Instructor of Musketry.

8 September, 1891.

PLEASE to place yourself in communication with C.E. in regard to these matters, which are also referred to in his memo. of 2/9/91, as there must be no further delay in getting the range ready for practice.

J.S.R., M.-G.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

9 September, 1891.

In continuation of my minutes of the 18th, 25th, and 26th ult., and 2nd inst., *re* targets—none of which appear to have received the attention they merit—I have to report that I find on examination that Keating's 2nd and 3rd class target, as approved and recommended by the Board, fails to comply with the second condition laid down, viz., "No metal work of any description will be allowed above a level 6 inches below the top of the marker's mantelet." For every shot which is fired a portion of the massive metal frame will be twice exposed above the safe level when the target is revolved, and in consequence the markers will not be safe from splashes from wide shots.

As regards the 1st-class target, the pattern which he is at present constructing is simply inadmissible, as the metal work will be exposed above the marker's mantelet. The Inspector of Musketry, whom I have consulted on the subject, concurs with me on this question.

I wrote on the 2nd inst. that "I accept no responsibility whatsoever for the pattern or design of target, which, in my opinion, is defective in certain points." I was not then aware of the defect now alluded to, and considering that my opinion was ignored, and that I have been subjected to malicious attacks both in the Press and elsewhere—attacks prompted by interested persons—I would have been quite justified in keeping this information to myself, and in rejecting these targets when delivered.

As the time for the meeting of the Rifle Association is drawing close, I would recommend an immediate reconsideration of this question, and a compliance with my request for *trial*. Anderson's target is immeasurably superior to Keating's target for 1st and 2nd class, and can be constructed for one-third the cost.

During

During the gale on Monday I worked a 2nd-class target many times in the teeth of the storm without effort. I consider it to be a thoroughly serviceable and durable target, and I think I know more about the question than all the Board and Staff together, and should not be ignored.

F. R. DE WOLSKI, Colonel.

Referred to the Board.—J.S.R., M.-G., 10/9/91. The D.A.Q.M.-G. The Board submits an addendum to its report of 10th instant, which, in transit, crossed the G.O.C.'s minute here above,—T. M. EDEN, Lt.-Col., 11/9/91.

Report of the Board.

Military Offices, Phillip-street, Sydney, 10 September, 1891.

THE Board having re-assembled, consequent upon the C.E.'s memo. of 9th instant having been referred to it by the General Officer Commanding, proceeds to consider the memo. in question, and to remark thereon:—

1. The Board considers that the condition quoted by the Commanding Engineer applies to the target when in position for being fired at, and that the fact of a portion of the metal frame of Keating's target being momentarily exposed above the safe level whilst the target is being lowered or raised is not a violation of this condition; and the Board is also of opinion that any danger arising therefrom is infinitesimal.

2. The remarks of the Commanding Engineer with respect to Keating's 1st-class target are upon a target that has not been submitted to or inspected by the Board, and which Mr. Keating appears to be constructing at the request of the C.E. If this target does not, when in position, comply with the condition above referred to, Mr. Keating can be required to make such alteration as may be necessary.

3. The statement of the Commanding Engineer notwithstanding, the Board is still of opinion that Anderson's target would be very difficult to work with a strong front or rear wind blowing, and that there would be danger to the markers in the latter case through the target being impelled forward and coming down too rapidly. With respect to the relative cost of "Keating's and Anderson's targets," the Board is of opinion that the former will eventually prove the most economical, from the fact that it will be so much more durable than any target with wooden working-gear.

4. With respect to the very extraordinary conclusion of the memo. now under review, the Board assumes that it is no part of its duty to enter into a controversy with the Commanding Engineer as to whether he possesses more knowledge on the question than "all the Board and Staff together" or not.

Signed at Phillip-street, Sydney, 10th September, 1891.

T. M. EDEN, Lt.-Col., President.

W. F. LONGFIELD, Major. } Members.

C. T. BARTLETT, Major. }

The Board desires to add to the above report that it considers there is no danger whatever with Keating's target, as tested at the various trials, other than obtains on all rifle ranges.

T. M. EDEN, Lt.-Col., President.

W. F. LONGFIELD, Major. } Members.

C. T. BARTLETT, Major. }

The Instructor of Musketry to The Deputy Assistant Quartermaster-General.

10 September, 1891.

I HAVE placed myself in communication with the C.E. as ordered. * * * I have again seen the Secretary of the New South Wales Rifle Association, and he says that he can manage with forty-two targets for the meeting in October. The targets to be classified as follows:—

10 3rd-class targets on 3rd-class range (north flank).

32 2nd-class targets on main range.

The whole of the thirty-two 2nd-class targets must be capable of being converted into 3rd-class targets, and ten of the thirty-two 2nd-class targets at southern flank be convertible into 1st-class targets.

Kindly inform the G.O.C. that this decision may be considered as final. The C.E. says that there is plenty of room for the above number, and as soon as the target question is settled the work can be immediately completed.

I consider that the range is perfectly safe, and in a few days will be ready for the erection of targets.

W. A. CUTHELL, Capt.,
I. of M.

Referred to the Board.—J.S.R., M.-G., 10/9/91.

Report of Board.

Military Staff Office, Sydney, 14 September, 1891.

THE Board having re-assembled pursuant to instructions from the General Officer Commanding, and Mr. Keating being present by same order, proceeds to consider the question of safety of Keating's target.

REPORT.

Mr. Keating states that he can make such alterations in his 1st-class target, which may be inspected by the Board, as will make it absolutely safe.

The Board desires to add that the last seven words in paragraph at foot of its report of 10th instant do not apply to danger from the targets, as it considers that Keating's 2nd and 3rd class targets as tested are absolutely safe.

T. M. EDEN, Lt.-Col., President.

W. F. LONGFIELD, Major. } Members.

C. T. BARTLETT, Major. }

The President of the Board,—I gather that Keating's targets do not comply with the conditions, and that those of the 1st-class are not absolutely safe. I cannot therefore approve of any extension of the order for these targets at present. It seems to me that the only thing to be done is to call for fresh competitions with as little delay as possible.—JOHN S. RICHARDSON, M.-G., 14/9/91.

Report

Report of Board.

Military Office, Phillip-street, Sydney, 16 September, 1891.

WITH reference to the report of the Board, dated the 14th instant, the President and Members yesterday inspected Keating's 1st-class target, the Commanding Engineer being present. The target which had been placed in position was worked, and measurements taken, and the Board considers that with the alterations already made by Keating, and one suggested by the Commanding Engineer, the whole of Keating's targets will be absolutely safe, and comply with all conditions.

Signed at Phillip-street, Sydney,
16th September, 1891.

T. M. EDEN, President,
W. F. LONGFIELD, Major. } Members.
C. T. BARTLETT, Major. }

C.E.—There would seem to be no necessity for disturbing the order of the Officer Commanding the Garrison *re* supply of targets.—JOHN S. RICHARDSON, M.-G., 16/9/91.

The General Officer Commanding,—1. The order appears to have been disturbed already by the minute of the I. of Musketry, dated 10/9/91. The O. C. Military Forces approved on 28/8/91 of "the number of targets as estimated by the I. of M. in his letter of the 18th being accepted," in spite of the opinion expressed in paragraph 4 of my minute of the 2nd September to the effect that there was not room on the range for the number of targets asked for. As my estimate appears to be now accepted, I am unable to issue instructions as to the position of the targets, until the order of the 28th August is modified. 2. Again, the order for "the adoption of Keating's target throughout" implies that the other targets are to be removed. Instructions on this point are requested. 3. The Board reported on 14th instant that "Keating's 2nd and 3rd class targets as tested are absolutely safe." This is not only an incorrect statement, but it is an unjustifiable contradiction of my minute of the 9th instant. 4. I wrote to Mr. Keating at the time of ordering the targets as to the necessity of keeping all ironwork below the mantelets. I inspected the work in progress on the 5th, and pointed out to him that the metal was exposed twice during each shot fired. He replied that this condition did not apply to the target when lowered, and the Board adopted this view in their report of the 10th September, viz.:—"The fact of a portion of the metal frame being momentarily exposed above the safe level whilst the target is being lowered or raised is not a violation of this condition." Yet this very objection was raised against Johnson's target in the observations attached to the Proceedings of the Board on the 21st August, viz.:—"The iron handle on the dummy is exposed to the danger of being struck by a stray bullet, and would certainly be an element of danger." For the same reason the iron tube with rod inside which carries Keating's marking-disc is liable to be struck by a wide shot, and is therefore *an element of danger*. 5. I inspected the targets erected in Mr. Keating's workshop on the 15th instant, and found that *he had altered* his 2nd and 3rd class target, but that the canvas target was 6 inches too low. The 1st-class target was also 6 inches too low, and still unsafe, inasmuch as the bar on which the counterpoise runs was exposed, as well as the metal work of the arm. He promised to shorten the bar, and suggested bending the arm down so as to keep it within the safe limit. I recommended a block of wood over the metal to prevent a stray shot splashing. I have not yet inspected the targets erected, and I cannot tell him where to fix them until precise orders, asked for in paragraphs 1 and 2, are issued. 6. I think I have proved that I know more about this question than the Board, and I cannot congratulate them on what they termed in their report of the 22nd June "a practical test," and again, "a more drastic test." Had my very clear recommendations of the 6th November last been properly carried out there would have been no necessity for this prolonged discussion. It has, however, resulted in good. Keating's target is a very improved one to that recommended last year, but I am still entitled to my own personal opinion that it is not the best.—F. R. DE WOLSKI, Colonel, Commanding Engineer, 21 Sept., 1891.

The Commanding Engineer,—1. The number of targets required will be those specified in minute of I. of M., dated 10/9/91, but 1st-class targets will not be needed until after the meeting of Association. 2. Four of the targets at present on the range to be erected at north end of main range for pool-shooting. 3. All other targets to be removed. 4. There must be no further delay in supply of Keating's target.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 24/9/91.

Urgent. The Deputy Assistant Quartermaster-General,—1. The number of targets specified by I. of M. in his minute 10/9/91 was ten 3rd-class, thirty-two 2nd-class. "The whole of the thirty-two 2nd-class targets must be capable of being converted into 3rd-class targets, and ten of the thirty-two 2nd-class targets be convertible into 1st-class targets." You now say 1st-class targets will not be needed at present, and the Board, in their report dated 10th instant, appear to repudiate any responsibility for the 1st-class target "which Mr. Keating appears to be constructing at the request of the Commanding Engineer." Under the circumstances, I would be glad if you would issue specific instructions whether I am to order ten 1st-class targets, capable of conversion into second and third, as specified by the I. of M. on the 10th instant, or not. 2. Instructions have been issued as regards four targets on north flank of main range. 3. Are the targets on the Cadet Range to be removed also? They have been in constant use for practice, and are required. 4. I am not responsible for the delays. Twenty 2nd and 3rd class targets were ordered from Mr. Keating on the 28th August. He agreed to deliver them in a fortnight—*vide* my minute, 28/8/91—but he now says they will not be completed till the 30th instant. The 1st-class target, ordered on same date, was to be delivered within seven days; but it has not yet been sent out. As Mr. Keating has been altering his targets since the order was given, I am not surprised that he has exceeded the specified time; but I do not anticipate any further delay.—F. R. DE WOLSKI, Colonel, 28/9/91. P.S.—I was directed to proceed to Newcastle on the 24th, and did not return till the 28th.—F. R. DE W.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

Sydney, 21 September, 1891.

Kindly let me have the following information for fixing targets as soon as you possibly can:—

- (a) Distance from back of shelter-mound to targets $\sqrt{\dots\dots\dots}$ ft.
(b) Interval between targets, edge to edge, or centre to centre.
(c) Range the targets are to be fixed.

I have, &c.,

M. J. KEATING.

Memorandum

Memorandum from The Commanding Engineer to Mr. M. J. Keating.

24 September, 1891.

IN reply to your letter of the 21st September, I beg to inform you that—

- (a) Distance from back of shelter-mound to centre of target should be 6 feet.
- (b) Interval between targets on both ranges, 6 yards.
- (c) 2nd and 3rd class targets on main range, commencing from fourth target on north end. 1st-class target to be the tenth target from southern end. Mr. Anderson has received all necessary instructions.

F. R. DE WOLSKI, Colonel.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

23 September, 1891.

1. I have kept back this correspondence for the purpose of having a complete copy made for my use.
2. The report of the Board dated 3rd inst. appears to be incomplete.

F. R. DE WOLSKI, Colonel.

Portion of report referred to evidently detached, but will be printed with other papers now being prepared for Parliament.—By order, J.E.D.T., Lieut.-Col., D.A.Q.M.-G., 24/9/91. D.A.Q.M.-G.—
Will you please furnish me with a copy of the missing portion of this report?—F. R. de W., Col., 28/9/91.

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

24 September, 1891.

IN accordance with the order of the Officer Commanding Military Forces, dated 28/8/91, I accepted on 28/8/91 a tender from Mr. Keating for the supply of twenty 2nd and 3rd class targets at £16 each, and informed you that I had done so, as well as an order given for a 1st and 2nd class target. The former should have been delivered on the 11th, and the latter on the 5th, but with the exception of some of the timber bases, none of the targets had been delivered on the range last night, when I was there with the Inspector of Musketry.

It will be necessary to order nine* 1st and 2nd class targets, and two more 2nd and 3rd class targets, and ten 3rd-class targets; total, twenty-one,† at £16 = £335. † Authority is requested to give the necessary order.

I would suggest that the targets be inspected and passed by the Inspector of Musketry.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

Commanding Engineer,—Instructions for the necessary supply of targets were noted in my minute of 24/9/91, on Target Board. Inspector of Musketry will be directed in General Orders to inspect and pass targets.—By order, J.E.D.T., Lieut.-Col., D.A.Q.M.-G., 28/9/91.

Extract from Garrison Order 190.

Head-quarters, Sydney, 28 September, 1891.

- * * * * * *
3. The Instructor of Musketry will inspect and pass targets for the Randwick Rifle Range as they come in.

H. D. MACKENZIE, Lieut.-Col.,
A.A.G.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

Sydney, 24 September, 1891.

I am sending out the targets to-day, and will start erecting on Monday; will be finished on Wednesday afternoon next, weather permitting.

Yours, &c.,

M. J. KEATING.

The D.A.Q.M.G.—Forwarded. The targets will be ready by 30th instant, in thirty-three days instead of fourteen, as agreed on. It will be necessary to give the remainder of the order at once.—F.R. DE W., Col., 24/9/91.

The Commanding Engineer,—Please give necessary order in accordance with my minute of this day on proceedings of Target Board.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 29/9/91.

Urgent. The D.A.Q.M.-G.—I am unable to give the complete order for targets until you issue specific instructions as to the order for 1st-class targets. Meanwhile I have ordered ten 3rd-class targets, and two 2nd and 3rd class targets. I have received no reply to the concluding paragraph of my minute dated 24/9/91.—F. R. DE WOLSKI, Colonel, 28/9/91.

The Commanding Engineer,—Ten 1st-class targets will be required, as already notified.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 29/9/91.

The Deputy Assistant Quartermaster-General to The Commanding Engineer.

28 September, 1891.

1. MINUTE of 24/9/91 states requirements exactly. The ten 1st-class targets are required, and should therefore be ordered, but it is not actually necessary to have them prior to the N.S.W.R.A. Meeting, to take place at the end of October.
2. Instructions as to targets to be removed refer to main range, and not to school range.

By Order,

J.E.D.T., Lt.-Col.,
D.A.Q.M.-G.

The

* This should be ten —W.A.C., I. of M.

† Thus making total of 22, or 42 in all.—W.A.C., Capt., I. of M.

‡ Not required for N.S.W.R.A. Meeting.—W.A.C., Capt.

The Commanding Engineer to Mr. M. J. Keating.

Urgent.

I AM instructed by the Major-General Commanding to order ten 3rd-class targets and two 2nd and 3rd class. The pattern is left entirely to you. Will you please say when you will be able to deliver these fixed on the range?

28 September, 1891.

F. R. DE WOLSKI, Colonel.

The Commanding Engineer to Mr. M. J. Keating.

I AM desired to inform you that in addition to the thirty-two targets ordered ten targets will be required capable of being used as 1st, 2nd, or 3rd class.

29 September, 1891.

Will you please inform me if you are prepared to tender for these targets, and state within what time you can have them ready on the range, specifying at same time what arrangements you propose as regards the pattern of arm or arms for carrying the various sizes of canvas target.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The Commanding Engineer to Mr. M. J. Keating.

Urgent.

WITH reference to my letter of the 28th ultimo, accepting your offer to exhibit a 1st-class target on the range, to be ready by the 5th September, I have to request an explanation of your failure to keep your promise.

29 September, 1891.

F. R. DE WOLSKI, Colonel.

Please reply to my letter of the 28th *re* time of delivery of twelve targets ordered on that date.

F. R. DE WOLSKI, Colonel.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

Sydney, 30 September, 1891.

I regret very much that I should have misunderstood your memo. of the 28th ult., *re* exhibiting a 1st-class target on Rifle Range ready for the 5th September. I thought when you attended at my place of business on 15th September, with the Board on targets, and inspected the 1st-class target, the matter of exhibiting was settled, more especially as you seemed satisfied with everything, conditionally that I carried out a few alterations you suggested.

I did not send this target out with the others ordered, because at an interview in your office I thought from what you said that you would fall in with the proposal of having a separate arm to carry 1st-class targets; however, I will send the target as exhibited out to-day, so that it will be ready for your inspection at the end of the week.

I trust this explanation will suffice, as I am quite willing to carry out your instructions entirely.

Yours, &c.,
M. J. KEATING.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

Sydney, 30 September, 1891.

In reply to your memo. of the 28th (91/875), I will supply and fix twelve targets as ordered within two weeks from date.

I have, &c.,
M. J. KEATING.

Mr. M. J. Keating to The Commanding Engineer.

Sir,

30 September, 1891.

I have the honor to acknowledge the receipt of your memo. of the 29th, for the supply of ten targets capable of carrying 1st, 2nd, and 3rd class target-frames, and agree to supply and fix same on Randwick Range by the 17th of October.

- a. Target apparatus capable of carrying 2nd or 3rd class targets, with a 2nd or 3rd class frame, for sum of £16 each.
- b. Extra arm to carry 1st-class target, £2 2s. each.
- c. Target apparatus capable of carrying 2nd and 1st class targets, with a 2nd or 1st class target-frame, for the sum of £16 each.
- d. Target-frames, if required, ready for use,—3rd class, 24/-; 2nd class, 25/-; and 1st class, 30/- each.

I would recommend the adoption of *a* and *b* in preference to *c*, because the reach in *c* for a 2nd-class target is 7 ft., in *a*, 6 ft. 6 in., and while using a 2nd-class on apparatus C the trench would be in use, but could be filled in or covered up, if a spare arm was provided. First-class target as exhibited does not carry a 3rd-class target, but can be made to do so by altering patterns.

I have, &c.,
M. J. KEATING.

The Commanding Engineer to Mr. M. J. Keating.

30 September, 1891.

PLEASE supply ten targets capable of carrying 1st, 2nd, and 3rd class targets, in accordance with your letter of the 30th instant, *a*, *b*, viz., with an extra arm to carry 1st-class target, at £2 2s. 1d.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

30 September, 1891.

I HAVE ordered ten targets, as per *a b*, as recommended by Mr. Keating (not signed or dated, 1/10/91), at a cost of £18 2s. each.
F. R. DE WOLSKI, Colonel.

When the above was sent to D.A.Q.M.G. on 1/10/91 the memo. which finished at "Keating" was not signed or dated, but when it came to hand on 13/10/91 it was signed and dated 30/9/91.

Memorandum from The Commanding Engineer to The Deputy Assistant Quartermaster-General.

30 September, 1891.

WITH reference to *a* and *d* of Mr. Keating's letter of the 30th September, it would appear that Mr. Keating will supply only one target-frame with each target, and that the cost of target-frames ready for use is as follows:—1st-class, 30s. each; 2nd-class, 25s. each; 3rd-class, 24s. Will you please inform me how many target-frames should be ordered, specifying number of each class? I presume it will be as follows:—Additional targets: 3rd-class, on 3rd-class range, nil; ditto, main range, 32; 2nd-class, ditto, nil.; 1st-class, ditto, 10. Spare target-frames?

F. R. DE WOLSKI, Colonel.

The I. of M.,—Referred.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 1/10/91.

The D.A.Q.M.-G.,—Additional: 3rd-class targets, on 3rd-class range, nil; ditto, main range, 32; 2nd-class ditto, nil; 1st-class ditto, 10. The above extra targets are required. I should think that my other memo. stated this distinctly enough. The 1st-class targets are not required until after the meeting, but they can be ordered now, to be delivered on November 1st, if you wish. Ten 3rd and ten 2nd class extra frames sufficient.—W.A.C., Capt., I. of M., 2/10/91.

The C.E.,—For information.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 6/10/91.

Telephone from The D.A.Q.M.-G. to The Commanding Engineer.

6 October, 1891.

HAS Mr. Keating yet delivered the twenty targets ordered by you on the 28th of August?

Telegram from Randwick to The Director of Military Works.

6 October, 1891.

NONE of Keating's are ready for use; eighteen are delivered complete, and are being erected.

C. G. ANDERSON,
Rifle Range.

Telephone from The Commanding Engineer to The D.A.Q.M.-G.

6 October, 1891.

FOLLOWING telegram from Officer-in-charge, Rifle Range:—"None of Keating's targets are ready for use; eighteen (18) are delivered complete, and are being erected."

F. R. DE WOLSKI, Colonel.

Memorandum from The Commanding Engineer to The Deputy Assistant Quartermaster-General.

7 October, 1891.

1. I WROTE on the 28th September for "specific instructions as to the order for 1st-class targets," and failed to obtain them. You briefly replied "Ten 1st-class targets will be required, as already notified."

2. If you refer to the Proceedings of the Board on Targets, dated 10/9/91, paragraph 2, you will find that "the remarks of the Commanding Engineer with respect to Keating's 1st-class target are upon a target that has not been submitted to or inspected by the Board, and which Mr. Keating appears to be constructing at the request of the Commanding Engineer."

3. The Board inspected this target in Keating's shop on the 15th September, and I reported on it on the 21st. Mr. Keating had contracted to have it erected on the range by the 4th September, with trench complete, but he has failed to do so. This target was not designed to take a 3rd-class target-frame as required.

4. Being unable to specify the actual pattern of 1st-class target approved, or the particulars of trench, I was compelled to invite the inventor to tender without specification, and he then submitted alternative designs, showing that he himself was unaware of a decision in the matter.

5. As time was pressing, and it appeared hopeless to make a further reference, I ordered the pattern of target recommended by the inventor, involving an additional cost of £2 2s. per target. I learnt for the first time that only one target-frame would be supplied with each apparatus for the tender of £16 each, and that 30s., 25s., and 24s. was his price for each of the classes of target-frames complete.

6. I would feel obliged if you would specifically state if 1st-class targets are to be erected with trench complete, or if the trench is to be omitted in the meantime, and constructed after the meeting. This information is required, because in the pattern of first-class targets exhibited on the 15th ultimo the frame for the trench formed an integral part of the base on which the tripod stands, and if Mr. Keating be asked to erect for the meeting only 2nd and 3rd class targets, and to alter ten of them to 1st-class later on, he will be entitled to submit a claim for the extra labour involved.

7. It was clearly the business of the Board to ascertain the prices of these targets complete, in accordance with paragraph 6 of the very clear instructions drawn up by me for their guidance as far back as the 6th November, 1890. As I decline all responsibility, either for pattern or cost, I beg to request approval for the additional expenditure involved, viz.:—10 arms for 1st-class targets, at £2 2s., £21; 32 3rd-class target-frames, at £1 4s., £38 8s.; 10 1st-class target-frames, at £1 10s., £15; 10 2nd-class target-frames, spare, at £1 5s., £12 10s.; 10 3rd-class target-frames, spare, at £1 4s., £12.;—total, £98 18s.

8. I am still of opinion that Keating's 1st-class target should be exhibited and properly tried on the range without further delay. I am at a loss to understand how there can be two opinions on the subject.

F. R. DE WOLSKI, Col.,

The Commanding Engineer,—1. On 24/9/91 you were informed that the number of targets as specified in I of M minute of 10/10/91 would be required, and asked to give the necessary order. On 28/8/91 in reply to your minute on proceedings of Board, which was concurrent with minute referred to, you were again informed that my minute of 24/9/91 "stated requirements exactly" and that the targets should be ordered, and in reply to minute quoted by you, instructions having been given you as above, you were told that ten 1st-class targets will be required as already notified. 2. The Board on 16/9/91, after inspecting, in your presence, Keating's 1st-class targets, report that the whole of Keating's targets will be absolutely safe and comply with all conditions. 3. If time will admit, and no delay be thereby occasioned in the arrangements for the Association Meeting, to save the expense referred to in para. 6 of your minute of 7/10/91, the targets should be erected with trench complete, but it still may be noted that the 1st-class targets are not absolutely required for that event. 4. The G.O.C. approves of the additional expenditure of £98 18s. asked for being incurred. 5. As the Board have reported that the whole of the targets comply with all conditions, there would appear to be no necessity to conduct a further test, and no good purpose will be served by a continuance of this correspondence.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 9/10/91.

Memorandum from Major Longfield to The Major-General Commanding.

8 October, 1891.

OWING to the large number of entries for the forthcoming matches of the New South Wales Rifle Association it will hardly be possible for the meeting to be carried out in the given time with less than forty targets on the mid range for the general matches, and, under present arrangements, there will be only thirty-three of Keating's for this purpose and four of Anderson's for pool, what the Association therefore would ask is—

1. That the ten targets now on 3rd-class range should be shifted to the north end of the range.
2. That Anderson's four targets now on north of mid range should be shifted to south-end 3rd-class range, where they can be used for pool-shooting.
3. That seven more of Keating's targets be ordered, four of them to be placed on north mid of range, in lieu of Anderson's, and, if necessary, room to be made for the other three by lessening the distance from centre to centre of all the targets on this range from 18 ft. to 16 ft.

W. F. LONGFIELD, Major,
(On behalf of New South Wales Rifle Association.)

The Commanding Engineer.—I am directed by the G.O.C. to forward the accompanying memorandum signed by Major Longfield, and to say that he will be glad if you will comply as far as possible with the requirements of the Rifle Association in the direction indicated therein.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 8/10 91.

The D.A.Q.M.-G.—I have made all the arrangements in consultation with I. of M., and I regret it is too late to alter them now. I am receiving at the last moment requests of all kinds which should have been thought out long ago.—F. R. de Wolski, Col., 8/10/91.

Major Longfield, for information.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 9/10/91.

Telephone from The D.A.Q.M-General to The Commanding Engineer.

8 October, 1891.

RE your minute (7/10/91) targets for range, paragraph 7, to save time, will you please cause a letter to be prepared in the usual manner for the £98 18s., so that the General may submit the same at once.

D.A.Q.M.-G.—I do not want this sum approved by the Colonial Secretary, but by the General. I cannot give the order until I obtain it, as I have no funds, and many liabilities.—F. R. DE W., Col., 8/10/91.

Memorandum from The Commanding Engineer to The Deputy Assistant Quartermaster-General.

8 October, 1891.

I WOULD remind you that I have received no reply to my "very urgent" letter of the 2nd ultimo asking for the necessary authority for £3,000 to complete the range, and as my funds are exhausted and I have incurred many liabilities, I shall be compelled to stop all work at once unless I receive authority to proceed. Pending approval, I can incur no further responsibility in the matter.

F. R. DE WOLSKI, Colonel,
Commanding Engineer.
The

The C.E.—Your letter was forwarded to P.U.S. on the following day marked "very urgent"; a reminder has now been sent.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G. 9/10/91. The D.A.Q.M.-G.,—You have omitted the authority to proceed pending approval of Colonial Secretary, and in consequence a very unfair responsibility is being thrust on me.—F. R. DE W., Col., 13/10/91.

The Principal Under Secretary,—The A.A.-G. personally saw the P.U.S. on this subject yesterday, when he was informed there was no money available. It is therefore impossible for me to give the C.E. the provisional authority required. As noted, the work must stop, and the range will not be available for the annual meeting of the Rifle Association, which is advertised to be held this month, the preliminary arrangements for which are already complete.—J.S.R., M.-G., B.C., 13/10/91.

The Commanding Engineer,—With reference to your minute of even date marked urgent—Subject: Previous application for £3,000 to complete Randwick Range—I am directed to inform you that the G.O.C. forwarded the same to the Colonial Secretary this a.m., pointing out that it is impossible for him (the Major-General) to give the provisional authority required, as he had been informed that there was no money available. When a reply thereto has been received, notification will be sent you in the usual manner.—By order, J.E.D.T., Lt.-Col., D.A.Q.M.-G., 13/10/91.

The Major-General Commanding to The Principal Under Secretary.

Very urgent.

Sir,

9 October, 1891.

I have the honor to request an early reply to my B.C. communication of the 3rd ultimo—subject, as per margin.*

The Commanding Engineer has reported that "funds are exhausted," and that he has incurred many liabilities, and that he will be compelled to stop all work at once, unless he receives authority to proceed pending approval.

I have, &c.,

JOHN S. RICHARDSON,
Major-General Commanding.

£3,000 to complete the Randwick Rifle Range.

Memorandum from The Deputy Assistant Quartermaster-General to The Instructor of Musketry.

Urgent.

Sydney, 9 October, 1891.

PLEASE be good enough to place yourself in immediate communication with Lieutenant Keating *re* taking over from him twenty targets, which he reports are now ready.

By order,

J.E.D.T., D.A.Q.M.-G., Lt.-Col.

The Instructor of Musketry to The Deputy Assistant Quartermaster-General.

Sir,

Musketry Office, Victoria Barracks, 12 October, 1891.

As per G.O. 190, paragraph 3, and memo. attached, ordering me to take over targets from Lieutenant Keating, I beg to inform you that on Saturday last, when I visited the range, I asked where the specifications for the targets in question were, being informed there were none, but that the targets were according to those approved of by the Board on Targets, I have the honor to request that the Board may be directed to take over the targets from Lieutenant Keating and hand them over to me.

I have, &c.,

W. A. CUTHELL, Captain,
Instructor of Musketry.

The Deputy Assistant Quartermaster-General to The Commanding Engineer.

12 October, 1891.

As regards the missing portion of the report of Board on Targets, which was lost in transit, copy of which you asked for on 28/9/91, although a copy was taken for printing, it has also been lost, and cannot be found; every endeavour has been made to trace both it and the original, but without success; I therefore cannot furnish the copy asked for and promised.

By order,

J.E.D.T., Lt.-Col., D.A.Q.M.-G.

The Deputy Assistant Quartermaster-General to The President of Target Committee.

12 October, 1891.

As the Board have full knowledge of the details of the targets submitted for its inspection, please instruct one of its members to take over Keating's targets, in conjunction with the I. of M.

By order,

J.E.D.T., Lt.-Col., D.A.Q.M.-G.

The Commanding Engineer to Mr. M. J. Keating.

13 October, 1891.

As you have failed to deliver the 1st-class target on the range for my inspection, in accordance with your tender of the 28th August, I hereby cancel the contract for a 1st-class target.

F. R. DE WOLSKI, Colonel.

The Commanding Engineer to Mr. M. J. Keating.

13 October, 1891.

As the ten 1st-class targets, ordered 30/9/91, will not be required for the Association Meeting, please see Inspector of Musketry on the subject of trench required, and take instructions from him.

F. R. DE WOLSKI, Colonel.

The

The Commanding Engineer to The Deputy Assistant Quartermaster-General.

13 October, 1891.

I CAN accept no responsibility for the trench, which, never having been tried, might possibly delay the work. I have referred Mr. Keating to the I. of M. for instructions.

The 1st-class target inspected by the Board is not the same as now being supplied.

The concluding paragraph of the minute is referred to on other papers.

F. R. DE WOLSKI, Colonel.

The Principal Under Secretary to The Major-General Commanding.

Sir,

Colonial Secretary's Office, Sydney, 16 October, 1891.

With reference to your letter of the 9th instant and previous correspondence, I am directed to inform you that the Colonial Secretary approves of the expenditure of the sum of £3,000 in the completion and equipment of the new rifle range at Randwick, the amount to be defrayed from the Loan Vote for Defence Works 1888, £125,000.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

D.A.Q.M.-G.,—Forwarded—H. D. Mackenzie, Lt-Col., A.A.G., 17/10/91.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

Colonial Secretary's Office, Sydney, 16 October, 1891.

I am directed to state for the information of the Colonial Treasurer that the Colonial Secretary has approved of the expenditure of the sum of £3,000 in the completion and equipment of the new rifle range at Randwick, the amount to be defrayed from the "Loan Vote for Defence Works 1888, £125,000."

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

(II.)

Memorandum from The General Officer Commanding to The Deputy Assistant Quartermaster-General.

MAJOR CHURCHWARD to place himself in communication with C.E. as to field-firing range, 7/11/90.
What has been done in this matter? J.S.R., 26/6/91.

Referred to Major Churchward.—J.E.D.T., Lt.-Col., D.A.Q.M.-G., 26/6/91. The Commanding Engineer,—When will you be ready to proceed in this matter?—W. S. CHURCHWARD, Major, R.A., 27/6/91.

The Chief Instructor,—The following is a *précis* of previous correspondence on this subject:—On 5/11/90 G.O.C. minuted on my letter 1/11/90 on "Proposed Rifle Range, Randwick":—"This area . . . will provide not only for ordinary shooting, but *field-firing* and experimental firing; and it is also almost identical with that selected by Major Churchward for *field-battery practice*." I replied, 6/11/90:—"I have no knowledge of the range for field-firing selected by Major Churchward, R.A., but I would be glad to be made acquainted with his suggestions and views, in order that they may be embodied in the scheme." G.O.C. minuted, 6/11/90:—"Major Churchward will on his return be directed to place himself in communication with C.E., or whoever he may depute to act during his approaching absence from Sydney." Will you please furnish me with your views on the subject of a field-battery range? I may mention that Colonel French, R.A., who visited the rifle range with me, expressed the opinion that firing into the head of the rocky valley south-east of the rifle range would be unsafe. Major Airey, with whom I have recently spoken, suggests putting up targets on the 1st and 2nd class rifle range, but I fear this might endanger the markers' mantelets. There is no provision in this year's Estimates for any expenditure for this special purpose, but I presume the cost would not be great, and the funds could be found out of current votes of my Branch.—F. R. DE WOLSKI, Colonel, Commanding Engineer.

The Commanding Engineer,—I think the range previously selected by Major Airey and me would be fairly safe providing the ordinary precautions of posting vedettes, &c., are taken. A field-gun range could be made parallel to the rifle range on the right if the hill were cut away to give a perpendicular face (or nearly so) of 20 to 30 feet. Shrapnel shell would be the chief projectile used, and I do not think the splinters or bullets would injure the markers' mantelets.—W. S. CHURCHWARD, Major, R.A., 2/7/91.

Major Churchward, R.A.,—I fear a vertical (or nearly vertical) face 20 to 30 feet in height would give great trouble in sand, but we might terrace a portion of the hill, which slopes from 1 in 5 to 6. Could you kindly arrange to have the actual position of the field-firing butt marked on the ground, so that I could have the estimate of cost prepared?—F. R. DE W., Col., 3/7/91. P.S.—What arrangements would be necessary for markers' mantelets?

The Commanding Engineer,—A suitable range having been found at Long Bay, further action is not necessary.—W. S. CHURCHWARD, Major, R.A. The D.A.Q.M.-G.,—Forwarded.—F. R. DE W., Col., 8/10/91.

The Commanding Engineer to The Officer Commanding Garrison.

Practice on Randwick Rifle Range.

Sir,

Sydney, 29 July, 1891.

On several occasions I have received applications for permission to practise at the experimental targets on the range; and last week someone inserted an advertisement in the papers that there would be shooting at Randwick on Saturday. The officer in charge of the works, Mr. Anderson, has requested orders as regards firing, and I have informed him that he can accept no responsibility in the matter.

I

I see no objection whatever to practice being carried out at the targets now on the range on Saturday afternoons, provided it be carried out under proper supervision and control.

I have the honor to request that instructions be issued regulating the shooting during the construction of the range; and until this is done I cannot permit, in the interests of public safety, any practice to be carried out.

I have, &c.,

F. R. DE WOLSKI,
Colonel.

The Instructor of Musketry,—Please confer with Commanding Engineer as to instructions necessary until range is handed over.—By order, H. D. MACKENZIE, Lt.-Col., A.A.-G., 14/8/91. Rifle Range Regulations attached.

The Secretary, New South Wales Rifle Association, to The Major-General Commanding.

The New South Wales Rifle Association, Box 1109, G.P.O.,

Dear Sir,

Sydney, 25 August, 1891.

The representations you refer to have been made by a member of the Council, but not altogether in his capacity as such. As I understand there are several points in the construction of the range which are considered objectionable, and in deference to your request, although I do not wish to appear as the originator of the statements, I will mention the following:—

1. The construction of the continuous mantelet at the mid-ranges being on crescent plans, all the targets at unequal distances, and in echelon, may be a cause of danger to the markers from wide shots.
2. The firing mounds being of the same shape will be a source of annoyance to men firing, inasmuch as the wind from either flank will blow the smoke across those firing.
3. The height of the firing mound, together with the narrow width, will render it almost impossible to conduct a large firing competition, while the approaches from both the front and rear are quite inadequate; and in wet weather the spaces between mounds, owing to want of drainage, will be a swamp. I am told there is a large quantity of water now between some of them.
4. The mantelets or shelters for markers are not considered safe, the top being light in construction and wrong in shape,—not sufficient to resist the force of a falling bullet from a short shot.
5. The Cadet Range enfilades the targets and mantelets of the mid-range, rendering it exceedingly dangerous to the markers.
6. Generally that the way the range is laid out unfits it for ordinary military use, inasmuch as it appears to be impossible to conduct field-firing or any match of the character of the "Mullens" or "Lloyd Lindsay," at Bisley.

Whether these things are so or not they are matters of common conversation, and persons qualified to judge are strong in their all round condemnation of the way the works are being carried out.

Yours faithfully,

W. FOSKETT,
Secretary.

The attached letter of the 25th August, 1891, from the Secretary of the New South Wales Rifle Association, is the outcome of an interview I had with him, consequent on the instructions I received from the Minister to have the objections raised against the range by certain persons put in a tangible form, which resulted in my memo. to the Minister of August 29, 1891.—J.S.R., Major-General Commanding.

Memorandum by The Major-General Commanding.

[Confidential.]

29 August, 1891.

REPRESENTATIONS have been made to the Minister, presuming a faulty construction of the rifle range at Randwick, and the estrangement of a portion of the Military Reserve sufficient for the training of troops in field-firing. He therefore considers it advisable that the matter should receive the earliest attention, especially in view of the near approach of the annual meeting of the New South Wales Rifle Association, and that the Officer Commanding the Forces declines to be held responsible for any accident which may be caused through want of the usual and proper safeguards

The following are the objections taken to the range as it at present exists:—

- (a.) "The construction of the continuous mantelet at mid-ranges, being in crescent form, places the targets at unequal distances, and in echelon, which may be the cause of danger to the markers from wide shots."
- (b.) "The height of the firing mound, together with the narrow width, will render it almost impossible to conduct a large firing competition, while the approaches from both the front and rear are inadequate, and in wet weather the spaces between the mounds will, owing to want of drainage, be a swamp."
- (c.) "The Cadet Range enfilades the targets and mantelets of the mid-range, rendering it dangerous to the markers. It is moreover placed in a situation which precludes the training of the troops on the Military Reserve in 'field-firing.'"

It is essential that an inquiry should be held of such a character as will induce confidence in the range arrangements, and be satisfactory to the Government and the Defence Forces. To this end the Minister approves of the appointment of a Board, consisting of Colonel Spalding, C.M.G., President; Lieut.-Colonel Eden, Volunteer Permanent Staff; and Lieut.-Colonel Stokes, 4th Regiment, as members,
who

who will be empowered to call such evidence as may be necessary, and to report the result of their investigations. The last-named officer should be permitted to claim an allowance of 3 guineas per diem, or 1 guinea per evening sitting, he being an unpaid officer, and employed outside his legitimate military duties, and to the prejudice of his civil avocation.

I desire to have as little communication as possible with Colonel de Wolski, and I respectfully suggest that the Minister should send for that officer and acquaint him with the objections raised. He will thus have the opportunity of suggesting a solution of the difficulty in place of that indicated herein.

JOHN S. RICHARDSON,
Major-General.

The Principal Under Secretary to The Commanding Engineer.

Sir,

Colonial Secretary's Office, Sydney, 2 September, 1891.

Representations having been made to the Colonial Secretary with regard to the faulty construction of the rifle range at Randwick, and the estrangement of a portion of the Military Reserve sufficient for the training of troops in field-firing, I am directed to inform you that Sir Henry Parkes considers it advisable that the matter should receive the earliest attention, especially in view of the near approach of the annual meeting of the New South Wales Rifle Association, and as the Officer Commanding the Forces declines to be held responsible for any accident which may be caused through want of the usual and proper safeguards.

The following are the objections taken to the range as it at present exists:—

- (a.) The construction of the continuous mantelet at the mid-ranges, being in crescent form, places the targets at unequal distances, and in echelon, which may be the cause of danger to the markers from wide shots.
- (b.) The height of the firing mound, together with the narrow width, will render it almost impossible to conduct a large firing competition, while the approaches from both the front and rear are inadequate, and in wet weather the spaces between the mounds will, owing to want of drainage, be a swamp.
- (c.) The Cadet Range enfilades the targets and mantelets of the mid-range, rendering it dangerous to the markers. It is moreover placed in a situation which precludes the training of the troops in the Military Reserve in field-firing.

2. I am desired by the Colonial Secretary to request that you will be good enough to report as to the validity or otherwise of the objections taken.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

The Commanding Engineer to The Principal Under Secretary.

Sir,

3 September, 1891.

I have the honor to acknowledge the receipt of your letter of yesterday's date, directing me to report, for the information of the Colonial Secretary, on certain alleged objections taken to the new rifle range at Randwick. I will submit a complete statement, with plans, not later than Saturday, the 5th instant.

I would be glad if the Colonial Secretary would kindly permit me to have immediate access to any reports received from the Officer Commanding the Forces on this question, as I now learn for the first time that he considers there has been a want of usual and proper safeguards in the design and construction of the range.

I desire to express my satisfaction at being afforded this opportunity of disproving the malicious and utterly groundless assertions daily appearing in the Press and elsewhere.

I have, &c.,
F. R. DE WOLSKI, Colonel,
Commanding Engineer, N.S. Wales Forces.

The Commanding Engineer to The Principal Under Secretary.

Randwick Rifle Range.

Sir,

Sydney, 9 September, 1891.

I have the honor to acknowledge the receipt of your letter of the 2nd instant, directing me to report for the information of the Colonial Secretary as to the validity or otherwise of certain objections made against the rifle range at Randwick, and in reply to state:—

(a) The continuous mantelet for the long ranges was laid out to follow the contour of the hill, in order to avoid a heavy cutting with a high sand slope, behind which would be constantly filling up the mantelet trench below. The length of the arc being 60 feet longer than the chord, the curved mantelet enables the targets to be placed further apart; but there is no absolute necessity for placing the targets at unequal distances, although it will be an advantage to do so on the flanks where the curvature is sharpest. The targets will necessarily be in echelon, but for about five-eighths of its length there will be no practical difference between a curved and a straight mantelet. As all the military long-range shooting will take place at the central portion of the mantelet, markers who are safe at the centre targets will be even safer at the targets on the flanks, because the drop of the bullet due to increased range far exceeds the additional drop due to the widest shots on the curved mantelet.

It was at my instigation that the distance between the bottom of the target and the top of any exposed metal was increased from 6 to 12 inches, so as to ensure greater safety from wide shots. The target recommended by the Board and approved by the Officers Commanding the Military Forces, in opposition to my advice, for adoption throughout the range will, in its present form be unsafe from wide shots

shots even at a straight mantelet, because in the 2nd and 3rd class targets the heavy iron arm which carries the target rises 6 inches above the safe limit twice for every shot fired, and in the 1st-class target it rises 12 inches, or 6 inches above the mantelet itself.

I did not design the mantelet for targets which would be unsafe under any conditions, and the persons who have raised the objection as to danger from a curved mantelet are straining at gnats and swallowing camels.

(b) The site for the range, within the area recommended by the Commandant, was selected after careful survey. Every possible disposition was tried by me on the ground, and a reference to the sketch *Appendix A. of the range* will show that it was the only possible arrangement without resuming land already sold and built on. The ground on the north of the main range is rocky, and on the south very marshy and with large differences of level. To the uninitiated the site appears fairly level, but the sections show that the ground slopes from north to south about 5 feet, and from east to west 15 feet, and that the centre is a basin varied with sand hillocks, the differences between depressions and elevations on portions where the mounds now stand being as much as 15 feet. It was not possible to avoid the construction of mounds. The cutting and filling were exactly equalised, and no sand was carted from outside the range for the purpose.

With the object of ensuring that the line of sight from each firing-point should clear the mound in front, and of making the shooting from all portions of the mounds on equal terms, the tops of the mounds were arranged in a uniform plane so that the line of sight cleared the mound in front by about 2 feet 6 inches, which is not excessive in the events of tufts of grass coming in the line of fire, and the necessity for a clear view of the numbers which may be 6 or 8 feet below the target.

The height of mound is a fault on the right side. In summer when the hot sand would cause abnormal refraction if the line of sight grazed the intervening ground, elevated firing-points will have great advantages, as being cooler and less exposed to drift sand. Further as pointed out by Colonel French, R.A.,—no mean authority on ranges—the mounds will effectually prevent low-aimed shots ricocheting on to parallel ranges, and consequently the number of targets in use at one and the same time may safely be increased. These mounds do not interfere in any way with drainage because there is no natural outfall from this basin. The holes in which water is now standing have been dug long ago by persons in search of grass-tree gum. This has been an exceptionally wet season, and yet it has always been possible to move freely about from one range to the other.

As regards "the width of mounds rendering it almost impossible to conduct a large firing competition," I can only say that if it is conducted in accordance with the regulations, that is if the squads are told off to their respective firing places, and no one allowed to stand or walk behind men shooting, there will be ample room at each firing-point for everyone whose business it is to be there, and those who are competing will not be interfered with by spectators.

I did not select the ground, nor was I consulted in the matter, as I should have been, in accordance with the Regulations, before final approval was obtained. I regret the ground selected was not a gentle sloping plain, as it would have saved no end of money. I have done my best with a difficult piece of ground, and it is now rather late in the day to make these discoveries.

The Committee of the Rifle Association have seen the range in course of construction, and also the plans, and I never heard any objection, nor received any suggestion, until my action on the target question evoked this hostile criticism among a certain discontented faction.

(c) It is distinctly untrue that "the Cadet Range enflades the targets and mantelets of the mid range, rendering it dangerous to the markers."

It is almost needless to remark that no range in the world can be made safe against wilful or accidental wide shots. I have worked out the trajectories from all points on the Cadet Range, and there is only one point from which a bullet could enter the mantelet of the mid range, and that is from a point on the extreme south-west corner of the 300 yards range. This shot would have to be fired at an angle of $31\frac{1}{2}^\circ$ from the proper line of fire at targets which would be seen on edge. The shot would cross the centre of the 200 yards Cadet Range, from which point shooting would be simultaneously carried on.

The danger from wide shots was mentioned in a long article, which appeared in the *Australian Star*, of 28th August. (Copy attached.)

We are asked to believe that the Cadets of this Colony are capable of firing across the range at the targets on the long range as "the result of some thoughtless joke, to puzzle another shooter, who while taking aim would be astonished to see his target suddenly disappear, in order that the unsuspecting marker might mark the result of a shot fired across the range," and "there would be great danger of a silly jest resulting possibly in loss of life."

The bare suggestion of such mischief in the public press is an insult to the Cadet Force of which this Colony may justly be proud.

As regards a field-firing range I would point out that the ground selected by the Inspector of Musketry could not possibly be utilised for this purpose, owing to its swampy nature, and the extreme differences of level.

The Cadet Range does not interfere in any way as the mounds do not rise above the average level, and can be fired over.

The site generally is ill adapted for the purpose of a field-firing range, which necessitates an unrestricted line of fire and ample space.

In conclusion I desire to assure the Colonial Secretary that I fail to see the necessity of any grounds whatsoever for an inquiry. There is no inherent defect whatsoever, and the objections have been raised by interested persons who have attempted to force my hand on the target question, by raising an agitation on utterly untenable grounds.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Commanding Engineer.

Send copy of this report to Council of the New South Wales Rifle Association for any remarks they may desire to offer.—H.P., 12/9/91.

[Enclosure.]

[Enclosure.]

[From the Australian Star, 28th August, 1891].

Randwick Rifle Range.—Some Defects.—A Case for Inquiry.

It is some time ago since the Government saw fit to suddenly close the Paddington Rifle Range, and leave the metropolitan riflemen and the New South Wales Rifle Association without any range on which to practice or to hold the annual matches. Owing to this last year no matches were held, and this year it would seem quite a possibility that the new range will not be ready in time for the date (late in October) fixed by the association for the annual competitions. It was only after very considerable delay that the Government at last selected a site beyond Randwick, admirably suited for the purpose of the range, and probably, judged from all points of view, the best site available within such easy distance of Sydney. Then, in order to make a range that would be equal to all demands upon it, the Government decided to carry out the work on an elaborate scale, and Parliament voted a large sum of money necessary for carrying it out. The work was taken in hand by the Commanding Engineer, Colonel de Wolski, and now that it is, after long delay, approaching completion, riflemen are beginning to find that the range, which, to quote the words of the Premier, was "to be one of the best in the world," is not at all what they could wish, and some experts are very definite in their condemnation of the arrangements.

The range as it now stands is to the unpractised eye a very nice piece of engineering work. It looks pretty. The targets of the main range are fixed at the bottom of the hill. It is intended to use the disappearing canvas targets in the range and along the base of the hill. Some few feet from the lowest point has been erected in a curve following almost the conformation of the rising ground a shelter mound built of wood and brush and corrugated iron curved over and covered with turf, beneath the shelter of which the markers are completely hidden from the firing parties in the range, and from where they should be able to mark with some comfort the results of the shooting.

But in the construction of this mound the only part likely to be much touched by bullets has been left lamentably weak. The top is simply corrugated iron, showing almost a flat surface to the bullets, and only covered by thin turf, which from its very position must very quickly dry. This is only a few inches below the target, and in the course of firing in matches, where the work is continual, there is a danger that low-fired shots will knock the turf away. Then there will be left to meet the bullet only the surface of iron, and the result can be seen at once. The bullet striking on this may go anywhere, and markers at adjoining targets who have come out for the purpose of attending to their duty would stand a chance of injury to which they should not be exposed.

As we have said, the range from the hillside looks very pretty. The Commanding Engineer has thought well to build at each distance of 100 yards huge mounds, from which the firing is to take place. These are of sand in all cases several feet high, and of course are in exactly the same curve as the targets. The sight of these grass-covered mounds rising at regular intervals from the low scrub or sandy ground is pleasing, more particularly when, after a heavy fall of rain, the intervening ground is covered with a series of lakelets, which can be easily understood, add somewhat to the picturesqueness of the effect. But while in some engineering works picturesqueness of effect may perhaps be desirable, though at the present moment we cannot cite an instance, certainly a rifle range requires nothing of the kind. In common acceptance it would seem that a rifle range should be rather useful than beautiful. It is intended rather to be used than looked at. And the utility of these mounds seems doubtful, and their permanency, except at a continual cost, a question. Supposing that a rifle match is in progress, the constant traffic of many riflemen on the ground will quickly wear away the grass, and the heavy winds playing on the loose sand will soon be responsible for the rest. While the matches are being held the dust that will come from the mounds will hardly tend to improve the shooting or the temper of riflemen. Then again the riflemen, after finishing their work at one target, instead of being able, as they should be able, to march back 100 yards to the next range, will be obliged, more particularly if the weather be wet, to walk past their comrades firing from the same distance with the possibility of stumbling over their heels and the certainty in the afternoon of casting shadows that will inconvenience and injuriously affect the records of those shooting. Then, too, if the riflemen have the misfortune to get a bad position on the mound, instead of walking 100 yards to the next range his walk will be nearer half a mile, another point not to be desired by a man who wishes to weary himself as little as possible, and in every way to keep himself quite steady. Besides this, the firing mounds being in crescent form, there is the greater chance that the smoke from the sides will drift across the line of vision of those firing from the centre. These defects were scarcely to be looked for in what was to be "one of the most perfect ranges in the world," and it can scarcely be said that the fact that a picturesque effect in an engineering work has been obtained will compensate for them.

The evil is much more glaring in the Cadet Range, which is built from another face of the hill. Here, from the targets to the firing-points, there is a sharp incline much greater than at any point on the old Paddington Range, and yet here, too, it has been thought necessary to rise these mounds, for what other reason than to be in uniformity with the big range it is difficult to conceive. Certainly there could be no necessity for the mounds. But it is when taking the two ranges together that what would seem a great blunder has been committed. It has been explained that they face in different directions, and the result of the arrangement is that in case of the both ranges being in use on the same day the markers on the one range will be liable to danger from a misplaced bullet from the other, the result of some thoughtless joke or a shot being fired accidentally. It may not be a commendable joke, but Cadets or others at practice may occasionally fire across a range at another target in order to puzzle another shooter, who, while taking aim, would be astonished to see his target suddenly disappear in order that the unsuspecting marker might mark the result of a shot fired across the range. With the two new ranges shots fired across at certain angles would fairly cover the line of markers in the other trenches, and there would be a great danger of a silly jest resulting possibly in loss of life. It is no uncommon thing for a rifle to go off accidentally, and nothing more possible than that the bullet would reach the shelter trenches on the other range. The fear of danger from these sources is hardly likely to be lessened when it is remembered that one of the ranges is intended for the Cadet Forces; a body of youths in whose hands a rifle is, perhaps, at any time a dangerous weapon. They cannot be expected always to realise such a danger as that pointed out. As the ranges are designed it would appear that the only way to ensure safety from the dangers

dangers pointed out will be by closing one range while the other is in use. It would seem, to say the least, a great oversight, which would result in the construction of the ranges so that the markers in one would be open to fire from the other in this way.

Then, again, these ranges as they are now, can only be useful for match rifle-shooting at known distances under the disadvantages we have mentioned. This is not at all in accord with what was expected, and what it was presumed by those generally interested was intended by the Government originally. The range was to be of use for field-firing and other contests, which it is thought should form part of an afternoon's training. The old idea that when a man from certain ascertained distances could make good scoring he knew all that was necessary, is very much questioned now-a-days, and the practice of taking men to unmeasured distances to shoot is also looked upon as a necessary training. With a huge mound of sand at every hundred yards the men must be able to judge within a few feet of what distance they are away from the targets. Besides this, it is questionable if the mounds will not in places quite hide the targets from their view. Such contests as those known by the names "Mullens" and "Lloyd Lindsay" will be altogether out of the question.

All this work has cost something approaching, if not exceeding £7,000, and it would seem that the expenditure is one calling for the strictest inquiry to discover how much was necessary, and if a better range, according more with the requirements of our riflemen, could not have been constructed for the same amount or less. Another question which has excited some little attention recently has been the selection of targets. Some time ago a Board, after the fullest tests, recommended one very decidedly, and the report went on to the Commanding Engineer for any remarks he might choose to make. After being delayed for some weeks it is understood that he has sent the report on to the General Commanding, who will now be called on to give his final decision, and there is now a possibility that the range will be supplied with the necessary targets in time for the meeting. A test has been made at the Cadet Range of one of the targets entered for the general competition, and that not the chosen target. Why the test was not extended to all the targets is a question that is being asked by some of those interested.

The Commanding Engineer to The Principal Under Secretary.

Randwick Rifle Range.

Sir,

Sydney, 10 September, 1891.

In continuation of my letter of yesterday's date, I have the honor to forward an extract of a report addressed to the General Officer Commanding:—

"I consider that the range is perfectly safe, and in a few days will be ready for the erection of targets.

I have, &c.,

F. R. DE WOLSKI,

Colonel, Commanding Engineer.

The Secretary, New South Wales Rifle Association, to The Assistant Adjutant-General.

Sir,

New South Wales Rifle Association, Sydney, 11 September, 1891.

I am directed by the Council of the New South Wales Rifle Association to apply for the use of the rifle range at Randwick, together with the buildings thereon, for the two weeks, 19th to 31st October, both days inclusive, for the purpose of carrying out organised practices and the firing of the matches arranged for the programme of the 30th Annual Prize Meeting.

I have, &c.,

W. FOSKETT,

Secretary.

The Commanding Engineer,—Please intimate when above may be expected to be handed over to G.O.C. or his representative.—By order, JI. D. MACKENZIE, Lt.-Col., A.A.-G., 14/9/91. The A.A.-G.,—By 10th October. The completion of minor details for meeting will not interfere with the handing over.—F.R. DE W., Col., 17/9/91. The Secretary, Rifle Association,—Please note and return.—H.D.M., Lt.-Col., A.A.-G., 22/9/91. The A.A.-G. Noted and returned.—W.F., Secretary, 23/9/91.

The Principal Under Secretary to The President, New South Wales Rifle Association.

Sir,

Colonial Secretary's Office, Sydney, 14 September, 1891.

In transmitting to you the accompanying copy of a report that has been received from Colonel de Wolski, R.E., Commanding Engineer, relative to certain objections made against the new rifle range at Randwick, I am directed to request that you will be good enough to invite your Council to favour the Colonial Secretary with any remarks they may desire to offer thereon.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The Secretary, New South Wales Rifle Association, to The Principal Under Secretary.

Sir,

Sydney, 17 September, 1891.

I am in receipt of your letter of the 14th instant, covering copy of a report from the Commanding Engineer relative to certain objections made against the construction of the new rifle range at Randwick, and inviting my Council to favour the Colonial Secretary with any remarks they may desire to make thereon.

In

Dated
9 September,
1891.

In complying with this invitation, I, on behalf of the Council, have to offer a few remarks; but in the first place beg to say that the statements of the Commanding Engineer—that he “never heard any objection nor received any suggestion until his action on the target question evoked this hostile criticism among a certain discontented faction”; and again, “the objections have been raised by interested persons, who have attempted to force my hand on the target question by raising an objection on utterly untenable grounds”—have no application whatever so far as the action of my Association in this matter is concerned. As a matter of fact, although the wrong or injudicious construction of this range had been a subject of general conversation amongst riflemen for some time, no action whatever was taken by my Association, it being felt that it could not well do so unasked, as the range was being constructed as a military one under the Commanding Engineer; and it was only when I received a communication from the General Officer Commanding Military Forces, asking me to state what the objections to the range were, that any steps were taken, the outcome, I understand, of a statement made by a member of my Council in his individual capacity to the Colonial Secretary. The Association which I represent has but one object in this matter, and that is to have a range suitable for all descriptions of rifle-shooting, and on which it can carry out its prize meetings with satisfaction to and for the benefit of the defence forces of the Colony; but it is feared that such will not be the case with the range as at present constructed.

I will now revert to the report of the Commanding Engineer; but, not being in possession of the letter upon which he is reporting, am to a certain extent in the dark.

- (a.) The explanation does not remove the difficulty referred to, as the opinion of well-informed persons bears out the theory of danger to the markers, inasmuch as the right or left of the targets, according to the flank (where the curvation is sharpest) on which it is placed, would have to be thrown back to enable the target to face the firing-point, thus endangering the marker. It certainly is contrary to ordinary practice for long-range shooting to be carried on in the centre of a range, as such a course would increase the danger and lessen the accommodation. The objection to a straight cutting is exceedingly weak; the curved mantelet trench is already showing signs of filling up in places, and continued rifle practice will greatly increase the movement of the sand if no preventative measures are taken. In the opinion of many the construction of the mantelet will be a source of danger consequent upon the curved formation of the top not having sufficient thickness of earth protection. This is, however, a question which should be decided by experts. I am informed by those who have been in the mantelet whilst firing was going on that bullets falling short of the target, and striking this curved top of mantelet, frequently ricochet, which is an undoubted source of danger, as it is hard to say where a ricochet bullet will find its billet. The danger from ricochet bullets was in fact the principal cause of the closing of the Paddington Rifle Range. The remarks of the Commanding Engineer respecting targets do not call for any reply from me, as this is a matter which I assume is being, or has been, dealt with by the Board on Targets, but are nevertheless open to criticism. If the Commanding Engineer “did not design the mantelet for targets which would be unsafe under any conditions,” he appears to have caused their construction without any question, and thus accepted all responsibility.
- (b.) I fail to understand how a different laying out of the range would necessitate resuming land already sold and built upon. The firing-mounds beyond doubt are unsuitable. They render it impossible to have field-firing, or any mounted competition. The remarks *re* the line of sight are not understood, but appear to be at variance with previous experience. The unusual height and insufficient width of the mounds, coupled with their awkward curve, will prove a source of annoyance and inconvenience, and will render it very difficult for the prize meetings of my Association to be conducted with satisfaction, even if conducted on the perfect regulation lines indicated by the Commanding Engineer. Ever since the formation of this Association the public has taken more or less interest in certain matches, and the Council has endeavoured to foster the interest, but the height of the mounds will most effectually shut out the public from any possible show of interest, as it will be quite impossible for any to see what is going on from the high level above them. A committee of the Council of my Association attended on one occasion at the office of the Commanding Engineer by invitation, and were, I understand, shown a plan or tracing of the range, which, however, did not disclose what is considered by many the most objectionable feature in the construction of the range, viz., the high mounds. The principal discussion on that occasion was the building, in the shape of pavilion, &c., that would be suitable for the requirements of the Association. Subsequently the committee, I being one, met the Commanding Engineer by invitation on the range, the General Officer Commanding being present, when the only matter on which our opinion was asked was the site for a pavilion. The range was then in course of construction, but the work done at the mounds up to that time did not show that any would be built to the height they are now. Since that time the committee, which is one specially appointed by my Council to deal with all matters in connection with the new rifle range, has not been consulted in any shape or form by the Commanding Engineer.
- (c.) The matter of the Cadet Range enfilading the mantelets of the mid-range is a matter to be determined by experts. With shooting on the Cadet Range properly conducted the danger would probably be minimised. It is admitted, however, by the Commanding Engineer that, under certain circumstances, a bullet fired from this range could enter the mantelet on the mid-range, and anyone conversant with the erratic shooting sometimes indulged in, even by cadets, can realise the danger markers on the mid-range would be subject to.

I will not further trouble you on the report from the Commanding Engineer, as my Council is of opinion that no satisfactory solution of the points in dispute, *i.e.*, the theories of the Commanding Engineer, or the practical knowledge of those who differ with him, can be arrived at except by independent inquiry by some one qualified for that purpose.

I have, &c.,
W. FOSKETT,
Secretary.

The Major-General Commanding to The Principal Under Secretary.

Urgent.
Sir,

Sydney, 18 September, 1891.

I understand that the new rifle range at Randwick has been so constructed as to preclude the practice of the Head-quarter troops in field-firing, and as this is one of the most important essentials for the modern training of infantry, it cannot be set aside; and provision for this will, therefore, have to be made, either by the reconstruction of the range, or the reserve of an additional area.

Instructions as to the requirements of the service were conveyed to the Commanding Engineer, and I do not think he should have departed from them on his own responsibility, and without reference to me.

It may be that the peculiar features of the ground presented insuperable obstacles to the construction of a practice range, as well as one for field-firing. I may, however, mention that the Instructor of Musketry, who has considerable experience, had prepared plans, &c., which apparently made satisfactory provision for both ranges. This defect has already been brought to the notice of the Minister, and, I believe, replied to by the Commanding Engineer; I shall therefore be glad to receive a copy of his explanation in respect thereto, in order that I may be able to offer suggestions as to the course to be now pursued.

I have, &c.,

JOHN S. RICHARDSON,
Major-General Commanding.

Telephone Message from The Assistant Adjutant-General to The Instructor of Musketry.

21 September, 1891.

PLEASE meet Commanding Engineer and Secretary, Rifle Association, on the Randwick Rifle Range at 3 p.m. on Wednesday next, to arrange as to a tracing of the range for Council of Rifle Association.

Memorandum from The Assistant Adjutant-General to The Secretary, N.S.W. Rifle Association.

Sydney, 21 September, 1891.

Re your letter of 11th instant. Please arrange to meet the Commanding Engineer and Captain Cuthell on the Randwick Rifle Range at 3 p.m. on Wednesday next, to settle the questions, and a tracing of the range as requested supplied.

By order,

J.E.D.T., Lieut.-Col.,
Pro A.A.G.

Memorandum from The Assistant Adjutant-General to The Instructor of Musketry.

Sydney, 21 September, 1891.

THE Commanding Engineer has reported to the G.O.C. that the Randwick Rifle Range will be ready for handing over on October 10th next, as the completion of minor details are not considered sufficient to prevent this course being carried out. The G.O.C., therefore, directs you will be good enough to make all necessary arrangements for taking over charge of the range in the first instance on that date.

By order,

H. D. MACKENZIE, Lieut.-Col.,
A. A. G.

Memorandum from The Deputy Assistant Quartermaster-General to The Commanding Engineer.

Sydney, 25 September, 1891.

THE G.O.C. has directed me to ask you to send to him Captain Cuthell's plans for construction of rifle range, which are in your possession.

By order,

J.E.D.T., Lieut.-Col.,
D.A.Q.M.-G.

The D.A.Q.M.-G.—Plan of range proposed by Captain Cuthell herewith. You will find the lines plotted on the map of existing range forwarded herewith. The ground would not have admitted of a range as proposed, which was designed without reference to levels or marshy ground. Further, it would have necessitated resumptions of land built on.—F. R. DE WOLSKI, Colonel, 13/10/91. Please return tracing.

Memorandum.

Randwick Range, 10 October, 1891.

I HEREBY certify that, having been requested to take charge of the shooting here to-day, and to hold myself responsible for accidents, &c., I do so as far as it is possible to exercise the necessary supervision.

FRED. R. BARLEE, Capt.,
Sydney Reserve Rifle Company.

The Instructor of Musketry to The Assistant Adjutant-General.

Sir,

Sydney, 12 October, 1891.

I beg to inform you that, in accordance with your memo. of 24th ultimo, attached, I attended at the Randwick Rifle Range on Saturday last, and found that on account of extra work being carried on within the mantelets I could not take over the mantelets and firing mounds.

Will

Will you kindly ask the Commanding Engineer when I can take over this part of the work? I do not propose to interfere with any of the work going on, but I should like to take over this portion of the range as soon as it is ready (viz., mantelets and firing mounds).

I have, &c.,

W. A. CUTHELL,

Captain, Instructor of Musketry.

The D.A.Q.-M.G.,—Forwarded.—H.D.M., A.A.-G., 13/10/91.

Memorandum from The Deputy Assistant Quartermaster-General to The Commanding Engineer.

13 October, 1891.

THE G.O.C. desires me to request that you will comply with my memo. of 25th September, 1891, re sending him Captain Cuthell's plans for construction of range.

By order,

J.E.D.T., Lt.-Col.,

D.A.Q.M.-G.

The D.A.Q.M.-G.,—As Captain Cuthell's plans were of no use I had put them aside, and I experienced some difficulty in finding them amongst the immense amount of rubbish in my office. I sent them all yesterday with my remarks.—F. R. DE WOLSKI, Colonel, 14/10/91.

Mr. M. J. Keating to The President of Board on Targets and President of Rifle Range Committee.

Confidential.—Urgent.

191, Elizabeth-street, 13 October, 1891.

Sir,

When I undertook to fix up my targets in position on the Randwick Range, I had not the slightest idea so many difficulties would be placed in my way. I was given to understand that the shelter-mound in front would not exceed 7ft. 6in., and the bottom of the trench would be asphalted, so that all I had to do was to place the targets in position, instead of which I have had to sink the targets on the short range and raise the targets on the middle range. I do not complain about the sinking, but I decidedly object to having to place targets on hillocks of sand up to 12 inches with no proper foundation, and then intoxicated markers having to take handsprings on to the target cross-tree to bring them down.

Before starting to fix the targets I wrote to Col. de Wolski, asking him the distance from back of mound, and the interval between each target, and subsequently saw him. Neither in writing or verbally did he give me any instructions as to which end of the range I was to start from—as far as the short range is concerned—but in the main range I was to start from the fourth target on the north end. I naturally thought that the same stood good for the short range. I told the men to start from the north end. After the men had the bases down and some of the targets up, the officer in charge of the range ordered the men to take them down and start from the southern end. The men refused to obey his orders; subsequently Col. de Wolski arrived on the ground, and at his orders the targets were taken down, and refixed in places marked out, starting from the south end. After the targets were again in position the end ones had to be again shifted to make room for a workshop which the carpenters were to build.

Before I would start the main range I asked the officer-in-charge to mark out the position for the targets; he marked out thirty-two places, although I have written orders for thirty-three for this range; I pointed this out, but it had no effect.

On Saturday last, on the instructions of the Instructor of Musketry, I prepared eleven targets for general practice—five on short range and six on main range. On looking at the markers provided I saw most of them were employes of the Military Works Department, and several of them were intoxicated, and seemed to me to be trying their level best to smash up or put out of action the targets. On remonstrating with one of them, by name Adams, I was told to go to h—— and mind my own b—— business, and used rather violent language.

The language and threats seemed to please one of the many overseers on the range, Oldham, who took good care to repeat the same to other employes of range so that every one could hear him. I reported the matter to the officer-in-charge of the range, Mr. Anderson, but I was told they had a spree the previous night, and that several of them had drunk so many gallons of beer between them.

I mention those matters to give you a slight idea of the way I am wilfully obstructed in carrying out my contract.

I have to report that a bullet struck within a few feet of one of my men inside the shelter-trench. The cadets were firing at targets fixed on western end of the Cadet Range, thus proving conclusively that the Cadet Range even now enfilades the main range. I reported the matter to the Instructor of Musketry and officer-in-charge of range. We subsequently found three bullets in the top of the shelter-mound of the main range in the southern end.

I have, &c.,

M. J. KEATING.

The Secretary, New South Wales Rifle Association, to The Colonial Secretary.

Urgent.
Sir,

New South Wales Rifle Association, Box 1,109, G.P.O.,

13 October, 1891.

I have the honor to again communicate with you regarding the Randwick Rifle Range, in connection with the forthcoming meeting of the Rifle Association.

I would respectfully point out that on the repeated promises of the Commanding Engineer, that the range would be ready first in April, and subsequently "a month before October 26th," my Association made all arrangements for holding the annual prize meeting during the week commencing that date. A very large number of entries for the matches has been received from all parts of the country, and Volunteers and members of the Reserve Rifle Companies throughout the country, as well as hundreds of men in private employ, have arranged to be absent from their duties during the meeting. The Railway Commissioners also have made arrangements in connection with this meeting, and everything is in readiness for one of the largest national meetings ever held in the Colonies, but the range is not available.

The

The Commanding Engineer has been communicated with through the General Officer Commanding repeatedly on this subject, but apparently there is not the least desire on the part of the Military Works Department to complete the range sufficiently to enable the matches to be fired. The last intimation as to the completion of the range was contained in a recent military General Order, which stated that the range would be handed over to the military authorities on October 10th. That has not been done.

On 8th inst. a memo. was addressed to Major-General Richardson, pointing out that a particular arrangement of the targets would be necessary for the meeting, and that memo. having been forwarded by the Major-General to the Commanding Engineer, with a request "that you will comply as far as possible with the requirements of the Rifle Association in the direction indicated," Colonel de Wolski, on the same day, replied that he could not do so.

A very efficient military committee has been appointed by the Major-General to manage the range. That committee is quite ready to take over the conduct and management of the range. And as this is a matter of great importance to the Rifle Association, and one affecting hundreds of people throughout the Colony, I would most respectfully suggest that the range should be placed in the hands of the committee forthwith, in order that it may be made ready for use by practical officers experienced in the requirements of a rifle range.

I would, in conclusion, ask your consideration of this matter as one of urgency, in order that my Council may be in a position to take whatever steps may be necessary to assure competitors that the meeting will take place as notified, namely, within a period of ten working days from this date.

I have, &c.,

W. FOSKETT,

Secretary.

The General Commanding,—For his report.—H.P., 13/10/91. The Commandant.—B.C., 13/10/91. C.W., P.U.S. The Commanding Engineer for immediate report.—J.S.R., M.-G., 13/10/91. G.O.C.—Report herewith.—F.R. DE W., Col., 15/10/91. P.U.S.—Explanation of C.E. herewith.—J.S.R., M.-G., B.C., 19/10/91.

The Commanding Engineer to The Major-General Commanding.

Sir,

Military Works Branch, 14 October, 1891.

In reply to the letter from the Secretary of the N.S.W.R.A. to the Colonial Secretary, dated 13th instant, and minuted by you "for immediate report," I have the honor to state that I visited the rifle range on the 10th and 13th instant, and found it virtually completed, with the exception of a few minor details. So far as lies within my power everything will be ready in time for the ensuing meeting of the Rifle Association.

2. The Inspector of Musketry reported to you on the 9th ultimo as follows:—"I consider that the range is perfectly safe, and in a few days will be ready for the erection of targets."

A tender was accepted on the 28th August for the supply of twenty of Keating's targets, to be delivered and erected on the range by the 12th of September. The contractor failed to complete them until the 12th October, a delay of one month, for which I am in no way responsible. Moreover, by my timely advice I saved him from having the whole lot condemned as unsafe after delivery, which would have involved a far more serious delay.

3. The executive committee of the Rifle Association marked out on the 22nd September the site for a revolver range without consultation with me, and on my pointing out to the Inspector of Musketry the dangerous site selected, and suggesting a better one, my recommendation was approved, and the work put in hand at once. It was completed on the 10th instant, and is now being partially turfed. On the same day, viz., 22nd September, the position of the several minor huts was arranged, and they have all been shifted. How could the range be completed one month before the meeting when the Rifle Association committee and the military authorities were unable to make up their minds about these details until the last moment?

4. On the 23rd September the Inspector of Musketry and the Commanding Engineer settled finally on the spot the position of the shops in the mantelets, and the positions of the targets, the number required for the meeting having been previously agreed on by the Secretary. On the 8th October, after most of the targets had been erected, Major Longfield, on behalf of the Association, asked for a radical alteration in the spacing of the targets, and for the removal of four of Anderson's targets. I minuted on the same day to the General:—"I have made all these arrangements in consultation with the Inspector of Musketry, and I regret it is too late to alter them now. I am receiving at the last moment requests of all kinds which should have been thought out long ago."

The Secretary, who apparently has free access to the official records, should not have misquoted me, nor should he have omitted to mention that I saw him on the subject on the following day, and showed him a plan for increasing the number of targets in order to meet the requirements of the Association, in which both he and the Inspector of Musketry at once concurred. This plan consists in utilising four of the 3rd-class targets as 2nd-class, and will be carried out at trifling cost in time for the meeting.

5. The remarks of the Secretary, that apparently "there is not the least desire on the part of the Military Works Department to complete the range to enable the matches to be fired," and the insinuation that I disregarded a General Order in not handing over the range, are not only unwarranted, but so improper that I venture to hope that no time will be lost in inviting the attention of the committee of the New South Wales Association with a view to an ample apology being tendered to the Commanding Engineer.

6. I may mention that in reply to a question when the range will be handed over to the General or his representative, I replied on the 17th September as follows:—"By 10th October. The completion of minor details for the meeting will not interfere with handing over." Orders were issued to the Inspector of Musketry on the 9th October in the precise terms of this minute, and on the 10th instant the range was handed over, so far as practicable, by mutual agreement between me and the Inspector of Musketry, and practice at a large number of targets took place during the afternoon. Captain Cuthell informed my Clerk of Works on the same morning that he could not take over the range, because the targets were not ready, and Mr. Keating had previously written asking a postponement till Wednesday, the 13th.

7. In this connection I desire to invite attention to a paragraph in the *Daily Telegraph* of the 10th October, headed "Military and Defence," from information apparently supplied at Head-quarters, in which the following paragraph occurs:—"The specially-appointed Military Board is to take over the Randwick Range to-day, providing Colonel de Wolski is willing to hand it over to them. Whether he will do so or not is uncertain." For weeks past the Press has been utilised by unscrupulous persons to discredit me, and to excite a feeling of discontent and distrust. I venture to hope the Premier will do me justice, and direct a thorough investigation into the whole question.

8. It would appear that this is Mr. Foskett's second communication to the Colonial Secretary regarding the Rifle Range; but a copy of the first not having been forwarded to me, I can only assume that this was one of the "representations" made on the alleged faulty construction of the rifle range to which I replied in my letter of the 9th September. I am glad to see these groundless objections have not again been referred to.

9. When the range was planned and in course of construction I conferred on several occasions with the committee, both in my office and on the ground. The never-failing topic of conversation was the erection of a pavilion. The range was left entirely to me; and I have never received one single practical suggestion from any of the members except as to matters which had been decided on long before. I have shown that they were unable to make up their minds till the last moment about the most commonplace question, and now that everything is ready or in train for the meeting, it is a little too absurd for the secretary to ask that the range "be made ready for use by practical officers experienced in the requirements of a rifle range." I can only express my surprise that a letter so studiedly offensive and discourteous was ever forwarded to me.

I have, &c.,

F. R. DE WOLSKI,
Lt.-Col., R.E., and Colonel.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SOUTHERN RIFLE ASSOCIATION.

(CORRESPONDENCE RESPECTING THE FORMATION OF THE HEAD QUARTERS AT MOSS VALE,
OF THE.)*Ordered by the Legislative Assembly to be printed, 28 September, 1891.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 2nd September, 1891, That there be laid upon the Table of this House:—

“Copies of all papers and correspondence in connection with the formation of the Head-quarters of the Southern Rifle Association at Moss Vale.”

(Mr. Stevenson, for Mr. Rose.)

The Joint Honorary Secretaries of the New South Wales Southern Rifle Association to Colonel Eden.

Sir,

Wagga Wagga, 9 May, 1889.

We have pleasure in enclosing copy of circular to our Members of Parliament by this post, *re* the formation of a New South Wales Southern Rifle Association here, and trust that your kind recommendation and influence may be rendered towards the object, with the view of bringing it to a successful issue.

We are, &c.,

W. J. DALEY,
J. MCKENSEY,

Joint Hon. Secs.

The A.A.G.,—I should wish to be informed if other corps in the district have been consulted as to the locale of the proposed head quarters of the Southern Rifle Association.—J.S.R., M.-G., 22/5/89. B.C., Colonel Eden.—M.B., Capt., Adj., 14/5/89. The A.A.G., for information. I am not aware how I can aid the matter.—T.M.E., Lieut.-Colonel, Commdg. I.R., 17/5/89. Lieut.-Colonel Eden.—Acknowledge, and say matter in question will be brought to notice of G.O.C., on return from leave.—H.D.M., A.-G., 20/5/89. O.C. 1st Regiment,—Please ask Captain Fitzhardinge to supply information required.—H.D.M., A.G., 22/5/89. Captain Fitzhardinge, Wagga Wagga,—Please supply the information asked for by the Major-General in his minute of 22/5/89.—By order, C.B., Major, Adj., 28/5/89.

The Adjutant 1st Regiment Infantry,—The officers commanding companies, and the Presidents of all reserve rifle corps, and the secretaries of civilian rifle clubs in the Southern district, were notified by circular that it was proposed to form the South-western Rifle Association, with head-quarters at Wagga Wagga, and were asked to join the Association. Nearly all the parties communicated with have signified their intention of forming the Association and assisting its promotion. No objection has been made to Wagga Wagga being the head-quarters. It was considered advisable to have the head-quarters at Wagga Wagga because it is a central point, connected by railway with nearly all the towns within a radius of 150 miles, where there are either companies of the defence forces, reserve rifle corps, or civilian rifle clubs, also because Wagga Wagga was the first town in this part of the Colony in which a volunteer company or a rifle club was formed.—HY. BERKELEY FITZHARDINGE, Captain, G. Co. 1st Regiment Infantry, 31/5/89.

The A.A.-G.,—Forwarded.—C.B., Major and Adjutant (*pro* O.C. 1st Regiment Infantry), 3/6/89. O.C., 1st Regt.—G.O.C., would like to be furnished with nominal roll of corps and clubs referred to.—H.D.M., A.-G., 6/6/89. Captain Fitzhardinge,—Please furnish the nominal roll of corps and clubs referred to, required by A.A.-G's minute.—By order, C.B., Major and Adjutant, 10/6/89.

The

273—A

[870 copies—Approximate Cost of Printing (labour and material), £17 3s. 1d.]

The Adjutant, 1st Regiment of Infantry,—The proposal to form a Southern Rifle Association referred to in the foregoing documents, was allowed to remain in abeyance by the proposers after receipt of No. XI. It has been again revived by letters to Colonial Secretary's Department. The papers may be inquired for at Military Staff Office, so I forward them to be ready for production if asked for.—

H. BERKELEY FITZHARDINGE, Captain, G. Co., 1st Regiment Infantry, 23/9/90.

Assistant Adjutant-General,—Forwarded for your information.—C. T. BURDETT, Major and Adjutant (pro. O.C. 1st Regiment Infantry), 24/9/90.

[Enclosure.]

To J. Gornly, G. R. Dibbs, and D. Copland, Esquires, M's.P.

Gentlemen,

I beg to enclose to you a copy of the report of a public meeting held here, on the 15th April, for the purpose of forming a Rifle Association to be called the New South Wales Southern Rifle Association, having its head-quarters at Wagga, also a copy of a circular which has been addressed to all the Volunteer and Reserve Rifle Corps in New South Wales and Victoria.

In doing so I am desirous of pointing out to you the manifest advantages possessed by this town as a centre for the proposed Association, and enlisting your sympathy and assistance in furthering the proposed object.

It has been suggested that, as the Government has liberally assisted the Metropolitan and Bathurst (Western) Rifle Associations, it may reasonably be approached with the request for a similar subsidy to the Southern one; and the Committee therefore beg to request that you will favour them in your capacity of Members for this district, by urging their claims to recognition and assistance.

I have, &c.,

W. J. DALEY,

Honorary Secretary.

[Sub-enclosures.]

Proposed Rifle Association.

A MEETING was held at the Council Chambers last night, convened by His Worship the Mayor, in accordance with the terms of a requisition requesting him to convene a meeting to take into consideration the advisability of forming a Rifle Association, to be called the Southern Rifle Association. The Mayor (Mr. H. B. Fitzhardinge) occupied the chair, and the following gentlemen were present:—Mr. D. Copland, M.L.A., Captain Coleman (Murrumbidgee Light Horse), Captain Orr (Reserve Rifle Company), Lieutenant Bennett (Wagga Volunteers), Messrs. A. T. Bolton, C. H. Croaker, A. B. Crew, Tewksbury, Millenet, Smith, Hughes, O'Byrne, Thomson, Rogerson, Howarth, Haycross, Hallford, Browe, M'Kearney, Heath, Mitchelmore, Eaton, Hennessy, Eastcott, Hogg, Robinson, Daley, Jefferson, and Edney.

The Chairman, in opening the proceedings, stated that he had called the meeting in pursuance of a requisition to him as Mayor, asking him to call a meeting to consider the advisability of forming a Rifle Association, having Wagga Wagga for its head, in this part of the Colony. He had no doubt that many of them who took an interest in rifle shooting, knew that there had been a Central Association in Sydney for a number of years past, and that there was also an Association at Bathurst, called the Western Rifle Association. Within the last twelve months there had been a number of companies formed in this Southern and South-western District, and he thought they would be all willing to join in the support of the proposed Association. If the Association was formed, they could hold an annual meeting at which prizes could be given which would be open to competitors from all parts, not only of this, but also of the other Colonies. The Association in Bathurst formed on these lines had been very successful, and he could see no reason why a similar success should not attend the carrying out of such an Association in Wagga Wagga. The town was easily accessible by rail from all parts of the Colony, and they might rely confidently on plenty of support. At Albury, Young, Narrandera, Cootamundra, Gundagai, reserve rifle companies existed from all of which they might expect support. At Adelong also, where he had lately been, he was informed they would be willing to give them all the encouragement and support in their power. At Gundagai, they not only promised to join, but also to send a delegate to attend the meeting at Wagga Wagga if necessary. The matter was now open for discussion, and some of the gentlemen present would bring forward the necessary resolutions. He might state, before concluding, that he had received a letter from Mr. L. A. Fosbery, who took a deep interest in the matter, regretting that business compelled him to go to Sydney, and this prevented his presence at the meeting. He (Mr. Fosbery) hoped that they would take advantage of his presence there to make use of his services in any way that would further the object they had in view. (Applause.)

Mr. Bolton then moved the first resolution, as follows:—"That, in the opinion of this meeting, it is desirable to establish at Wagga Wagga, a Rifle Association, to be called the New South Wales Southern Rifle Association." He thought that, after what had been said so fully and so explicitly by the Mayor, very little remained for him to say. As one, however, who took a deep interest in rifle shooting, although not a "shot" himself, he hailed the formation of the Association with a great deal of pleasure, and he trusted that it would be carried out in a manner worthy of the district. (Hear, hear.) It affected not only the immediate district of Wagga Wagga, but also the whole of the southern and south-western districts of the Colony. There were already in existence, as his Worship had informed them, Rifle Associations at Sydney and Bathurst; and if this Association was formed on the same basis as those referred to, the effect would be that they would have competitors from all the other Rifle Associations at their meetings. They would also have members joining it from the country districts who had never been brought out before, and emulating such crack shots as their friend, Mr. Daley. (Hear, hear.) He thought it was a matter which very materially affected the interests of the district, inasmuch as they would benefit very considerably by the visitors who would be attracted by these rifle competitions. The more visitors attracted to a place the better, because it was likely that through such visits some would be induced to settle permanently amongst them. It would also give many amongst themselves opportunities of visiting Sydney, Bathurst, and other places, and do them good in that way. He thought also that the time would come ultimately, when the Government would be called upon to recognise these companies to a greater extent than was now the case. These various Rifle Associations throughout the Colony

Colony would then be placed in a more stable and advantageous position. In Victoria at present a cadet had only to appear with his rifle or his uniform—or he thought with his rifle alone—to secure a free pass on any of the railway lines, and he did not see why the same privilege should not be extended to those connected with Rifle Associations in this Colony. It would really cost the country nothing, because those travelling in this way would be occupying seats that would be otherwise unused, and the more every citizen travelled about and saw the Colony the better it would be for himself and the State eventually. (Applause.) The result of the formation of this Association would be to make a large number expert in the use of the rifle, and the man who could use the rifle well was a better citizen than the man who could not. Unity was strength, and if they succeeded in forming a large Association, as they hoped to do, they would be able to offer more liberal prizes than they possibly could if they had only a small number of local members to rely on. (Hear, hear.) If they had to get up a prize list of £150 or £200 amongst themselves, they would have to send subscription-lists about more frequently than would be altogether pleasant. They would, however, by the means proposed, be forming the Association on a firmer basis than if they were relying entirely on themselves, and he had no doubt that they would be able to form such an Association as would be creditable to that part of the Colony. (Hear, hear.)

Mr. Coleman said he had much pleasure in seconding the resolution. The advantages that would accrue from the formation of this Association had been so well and so explicitly set forth that little was left for him to say. The very fact of the Government paying so much attention latterly to the instruction of the people in the use of the rifle under this new system of forming reserve rifle companies gave them room for hope that such an Association as was proposed when once started would meet with Government support. The Mayor had mentioned that a number of these rifle corps existed within a comparatively short radius, and that appeared to him (Mr. Coleman) a strong reason why a Central Association should be formed in the Southern District, with which all these various corps could co-operate and, so to speak, be affiliated. There was also the farther consideration that Wagga Wagga was the most centrally situated place in the Southern District, and he took it that the prizes which would be offered would not only attract crack marksmen from all the surrounding localities, but also from the neighbouring Colony of Victoria.

The resolution was then put and carried unanimously and with acclamation.

Mr. Copland, M.L.A., who was well received, moved the next resolution, as follows:—"That the following gentlemen be appointed a Committee to draw up draft rules and regulations for the carrying on of the business of the Association, and communicate with other bodies in the district, viz.:—Messrs. Fitzhardinge, Coleman, Orr, Bennett, Daley, Fosbery, Egan, M'Kensey, Howarth, Jefferson, Lorimer, Hughes, and J. J. M'Grath." He said that he had scarcely as yet got his Parliamentary legs in the House, and for that reason was not able to speak so much or so often at a moment's notice upon every subject as some hon. members, and he felt that he was almost similarly situated here. They had, however, recognised his want of knowledge by only giving him what might be termed a formal motion to propose. He must confess that he knew little about rifle shooting, but he could promise them that he would do all in his power to forward the formation of this Rifle Association, believing it to be a most laudable object. If the Government intended to grant assistance to the Bathurst Association, he certainly thought that Wagga Wagga was as well entitled to similar treatment, and he would use whatever power his position gave him to aid them in this or any other way. He believed in doing everything calculated to push Wagga Wagga forward. (Applause.)

Mr. Croaker, in seconding the resolution, said he felt a deep interest in the success of the proposed Association, and he hoped it would flourish and become a force in the country. They were proud of having amongst them gentlemen who could hold their own with the rifle with any men in the country. (Hear, hear.)

The resolution was carried with acclamation.

Mr. Orr moved the next resolution:—"That this meeting authorises the captains and officers of the Wagga Wagga volunteers and cavalry to interview the authorities in Sydney, and ask their support to the movement." He said Mr. Copland had struck the keynote in saying they should use all endeavours to push Wagga Wagga along. He was glad to see, therefore, that they had moved in this matter, because if it had not been taken up by Wagga Wagga, he believed that there were other places in the Southern Division which would have been before them. It, therefore, behoved them to lose no time in perfecting their arrangements.

Mr. Jefferson seconded the resolution. He thought that during the fortnight the officers would be encamped in Sydney they would be able to do a great deal of good in forwarding the objects of the proposed Association. The motion was, therefore, a necessary one.

The resolution was put and carried.

Mr. W. J. Daley moved the next resolution, as follows:—"That the non-commissioned officers of the Wagga Wagga cavalry and infantry be authorised to solicit the support of the non-commissioned officers and men of the volunteers in this district while in camp." The resolution would greatly strengthen their position, and tend to bring the object of the meeting to a successful issue. He thought the people of the town and district would welcome with pleasure the formation of the Southern Rifle Association.

Mr. Alfred Bennett had much pleasure in seconding the resolution. He pointed out they would have a very good prospect of receiving considerable aid from Victoria. Their central position would give them a very great advantage in this respect. Victoria took a very deep interest in rifle shooting, and would be glad to come to New South Wales to get a little of their money. They would have the satisfaction, however, of making the Victorians leave a little of their money if they did come. If they got a good prize list, they might depend upon having plenty of competition.

The resolution was then put and carried.

After a few remarks from Mr. Howarth in support of the meeting, Mr. Bolton moved a vote of thanks to the Chairman for presiding, which was carried with acclamation.

The Mayor replied, thanking them for the very warm manner in which they had carried the vote. Amongst the numerous things in which he had been interested, volunteering was the one in which he felt the deepest interest. Every man had his liking, and volunteering had been his. He had been a volunteer since he had been old enough, and he hoped to continue with them as long as they would let him. (Applause.)

The meeting then terminated.

A meeting of the Committee was held afterward, at which Mr. H. B. Fitzhardinge presided. Mr. W. J. Daley was appointed secretary, *pro tem*. Messrs. Fitzhardinge and Orr were appointed a sub-committee to draft a circular to be sent by the Acting-Secretary to the various rifle and volunteer organisations in the Southern District, requesting their co-operation.

Wagga Wagga, May, 1889.
We desire to inform you that, at a public meeting held at Wagga Wagga, it was resolved to form a Rifle Association, to be called "The New South Wales Southern Rifle Association," having its head quarters at Wagga Wagga. We have the pleasure of bringing the proposal under your notice, and request that your club or company will join the Association.

Rules, regulations, and fees of joining will be forwarded to you if you signify your intention of joining the Association.

W. J. DALEY,
Hon. Secretary.

J. Gormly, Esq., M.P., to The Principal Under Secretary.

Sir, I have the honor to request that the matter referred to in the enclosed letter receive your favourable attention.

Legislative Assembly, 17 May, 1889.

Yours, &c.,
JAMES GORMLY.

[Enclosure.]

To James Gormly, Esq., M.P.
Gentlemen,

Wagga Wagga, 9 May, 1889.

I beg to enclose to you a copy of the report of a public meeting held here on the 15th April, for the purpose of forming a Rifle Association, to be called the "New South Wales Southern Rifle Association," having its head-quarters at Wagga Wagga; also, a copy of a circular which has been addressed to all the volunteer and rifle reserve corps in New South Wales and Victoria.

In doing so, I am desirous of pointing out to you the manifest advantages possessed by this town as a centre for the proposed Association, and enlisting your sympathy and assistance in furthering the proposed object.

It has been suggested that, as the Government has liberally assisted the Metropolitan and Bathurst (Western) Rifle Associations, it may reasonably be approached with the request for a similar subsidy to the Southern one; and the Committee therefore beg to request that you will favour them, in your capacity of Member for this district, by urging their claims to recognition and assistance.

I have, &c.,

W. J. DALEY,
Hon. Secretary (*pro tem*).

Acknowledge, and refer for report of the Commandant.—C.W., 25/5/89. The Major-General Commanding the Military Forces.—C.W., B.C., 27/5/89. P.U.S.—Before reporting on this subject, I should wish to see the circular referred to; it has not accompanied this correspondence.—J.S.R., M.-G. 25/5/89. B.C. Where is the circular?—C.W. The circular referred to does not appear to have been forwarded. Obtain copy.—C.W.

D. Copland, Esq., M.P., to The Principal Under Secretary.

Dear Sir, I enclose herewith the circular you asked for, bearing on the question of application for subsidy to Wagga Wagga Rifle Association.

Parliament House, Sydney, 31 July, 1889.

I am, &c.,
D. COPLAND.

[Enclosure.]

Wagga Wagga, — May, 1889.

We desire to inform you that, at a public meeting held at Wagga Wagga, it was resolved to form a Rifle Association, to be called "The New South Wales Southern Rifle Association," having its head quarters at Wagga Wagga. We have the pleasure of bringing the proposal under your notice, and request that your club or company will join the Association.

Rules, regulations, and fees of joining will be forwarded to you if you signify your intention of joining the Association.

W. J. DALEY,
Hon. Secretary.

Perhaps this should be acknowledged, and forwarded to General Officer Commanding.—15/8/89. Refer.—15/8/89. The General Officer Commanding.—C.W., B.C., 15/8/89. P.U.S.—The circular referred to *re* subsidy is not appended to this communication.—J.S.R., M.-G., 27/8/89. Return. Returned.—C.S.O., 21/8/89.

The Principal Under Secretary to J. Gormly, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 7 August, 1889.

Referring to your letter of the 17th May last, enclosing a letter from Mr. W. J. Daley, Wagga Wagga, respecting the formation of a Rifle Association, I am directed by the Colonial Secretary to inform you that the circular referred to in Mr. Daley's communication does not appear to have been received in this Department, and to request that a copy of the same may be furnished for the information of the General Officer Commanding the Military Forces.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The

The circular referred to is the one addressed to the three Members as on page 2.

The Principal Under Secretary to D. Copland, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 15 August, 1889.
I am directed by the Colonial Secretary to acknowledge the receipt of your letter of 31st ultimo, respecting subsidy to the Wagga Wagga Rifle Association, and to state that your communication has been forwarded to the General Officer Commanding the Military Forces.

I have, &c.

CRITCHETT WALKER,
Principal Under Secretary.

D. Copland, Esq., M.P., to The Principal Under Secretary.

Dear Sir,

Parliament House, Sydney, 12 September, 1889.

In reply to yours of 30th inst., stating that the circular referring to the Wagga Wagga Rifle Association had not been received by you, I may state that it was forwarded by me on your last application, and there is not another copy procurable. I cannot see what purpose it can serve to have this circular, it being merely a notice calling the meeting, and its object. The memo. attached to a previous letter, and which you have, sets forth all the details of the Society's programme and its functions.

If, however, you insist on the production of the circular I will try and obtain one.

I am, &c.,

D. COPLAND.

Referred to the General Officer Comdg. the Forces.—C.W., P.U.S., B.C., 4/10/89.

The Principal Under Secretary,—I think the first question to be settled is the *locale* of headquarters of the Southern Rifle Association, which should be settled by voice of various corps in Southern district.—J.S.R., M.-G., 9/10/89.

Informed, 9/12/89.

J. Gormly, Esq., M.P., to The Principal Under Secretary.

Sir,

Parliament House, 20 August, 1890.

I have the honor to enclose a letter I received from the Hon. Secretary, Wagga Wagga Reserve Rifle Company, and would respectfully request that the matter referred to will receive your favourable consideration.

Yours, &c.,

JAMES GORMLY.

[Enclosure.]

Dear Sir,

Wagga Wagga Reserve Rifle Company, 15 August, 1890.

Some twelve months since, a Southern Rifle Association was formed at Wagga Wagga, and application made for recognition at Head-quarters. Certain requisite information was required and supplied, but since that time nothing has been heard in the matter.

As the Wagga Wagga Reserve Rifle Company has a great interest in the formation of the Association, and is desirous of furthering the object, the members of this body would esteem it a favour if you would take such steps as would ensure the placing of the Association upon a sound footing.

The question in the House relating to the subsidy promised to the Northern (Singleton) Association (*Hansard*, page 2,712) may strengthen your hands in the matter. It may be added that the application from Wagga Wagga was amongst those first sent in.

I am, &c.,

F. C. HOGG,

James Gormly, Esq., M.P.

Hon. Secretary, Wagga Wagga Reserve Rifle Company.

Refer again to the Commandant.—C.W., B.C., 26/8/90.

P.U.S.—I think it desirable that a Southern Rifle Association should be formed. As pointed out in my memo., the various corps in the Southern District, viz., detached companies of 1st and 2nd Regiments, and Reserve Corps affiliated to those Regiments, should mutually settle the most convenient centre for the meetings to be held. If Mr. Daley, the Hon. Secretary of the movement, would communicate with the various Commanding Officers on the subject, no further delay need occur.—J.S.R., M.-G., B.C. 2/9/90.

May be perhaps informed in terms of Commandant's minute.—C.W., 15/9/90. Approved.—H.P., 17/9/90.

The Principal Under Secretary to D. Copland, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 30 August, 1890.

With reference to your letter of the 31st ultimo, I am directed by the Colonial Secretary to inform you that the circular alleged to have been forwarded, regarding the application for subsidy to the Wagga Wagga Rifle Association has not been received; and to request that you will be kind enough to furnish me with a copy of it.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

Telegram

Telegram from D. Copland and Jas. Gormly, Esqs., M's.P., to The Principal Under Secretary.

PLEASE forward grant for Wagga Wagga Southern Rifle Association, two hundred and fifty pounds, passed in Estimates.

Wagga Wagga, 4 September, 1890.

D. COPLAND.
JAS. GORMLY.

The Honorary Secretary, Southern Rifle Association, to G. R. Dibbs, Esq., M.P.

Dear Sir,

Wagga Wagga, 6 September, 1890.

You will remember a good amount of correspondence passed between the Members of this district and myself respecting the formation of a Southern Rifle Association at Wagga Wagga, and also that every possible information was given the Department in advocating our claim.

I am informed a grant has been, or is about to be, made to Bathurst and Singleton for the purpose of assisting a Western and Northern Rifle Association.

A similar grant is to be given to a southern district.

The grant will, I am informed, consist of £250 and 50,000 rounds of ammunition.

Hearing this, I thought it well to write you (in conjunction with the other Members of the district), and ask your co-operation with them at once, as Kiama, Picton, and Goulburn are trying tooth and nail for it.

It is needless to mention that Kiama is very much out of the way, and both Picton and Goulburn too close to Sydney. We also think we should have a prior claim to both of these places, as it is now two years nearly since the matter was first taken up by us, their applications being sent in some time after ours.

May I therefore ask if you would kindly make application to the Colonial Secretary's Department on our behalf, and feel sure you will energetically push it to a successful issue.

I am, &c.,

W. J. DALEY,
Hon. Secretary.

The Principal Under Secretary,—I would be very glad if the wishes of Wagga Wagga could be complied with.—G. R. DIBBS, 11th September.

The Honorary Secretary, Southern Rifle Association, to D. Copland, Esq., M.P.

Dear Sir,

Wagga Wagga, 6 September, 1890.

You will remember that some time ago a good amount of correspondence respecting the formation of a Southern Rifle Association at Wagga Wagga passed between us, your replies giving result of interviews with the Department for that purpose. You are also aware I gave them every possible information in connection therewith.

I am informed a grant has been, or is about to be, made to Bathurst and Singleton for the purpose of assisting a Western and Northern Association. A similar sum is to be given to a Southern district.

The grant will, I am informed, consist of £250, and 50,000 rounds of ammunition.

Hearing this, I thought it well to write you at once, as Kiama, Picton, and Goulburn are trying to get it. It is needless to mention that Kiama is out of the way, Picton too close to Sydney, also Goulburn. We think we should have a prior claim to these towns, as it is now drawing upon two years since the matter was first taken up by us, their applications being sent in after ours.

May I therefore ask if you would kindly make application to the Colonial Secretary's Department on our behalf at once, and feel sure you will energetically push it to a successful issue.

I have written Messrs. Gormly and Dibbs to same effect, and ask their co-operation with you.

I am, &c.,

W. J. DALEY,
Hon. Secretary.

Presented by Messrs. Gormly and Copland.—C.W., 10/9/90. Refer to Commandant.—C.W., B.C., 30/9/90. P.U.S.—I have already replied on this subject on B.C. communication of 29/9/90.—J. S. R., M.-G., B.C., 30/9/90.

The Principal Under Secretary to G. R. Dibbs, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 18 September, 1890.

In acknowledging receipt of your communication of the 11th instant, forwarding and endorsing an application from Mr. W. J. Daley, of Wagga Wagga, for a grant in aid of the projected Southern Rifle Association, I am directed by the Colonial Secretary to inform you that the Major-General Commanding the Military Forces reports that he cordially concurs in the establishment of this institution, but points out that the various corps in the Southern District, viz., detached companies of the 1st and 2nd Regiments, and Reserve Corps affiliated to these Regiments, should mutually settle the most convenient centre for the meetings to be held. General Richardson adds that if Mr. Daley will communicate with the various Commanding Officers and decide on the locality, no further delay need occur.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The

The Honorary Secretary, Southern Rifle Association, to G. R. Dibbs, Esq., M.P.

Sir,

Wagga Wagga, 23 September, 1890.

I beg to acknowledge receipt of the reply from the Principal Under Secretary to your communication, and may state, in reply, that when application was made for establishing a Southern Rifle Association here, in March, 1889, Captain Fitzhardinge was asked by the military authorities to report on the matter.

He has desired me to state that the information now asked for has been supplied by him in April, 1889, and the correspondence relative thereto may be seen at the Military Staff Office, and has written them respecting it.

I shall feel obliged if you will again interview the Principal Under Secretary (to whom I have written by this post) upon the subject.

I am, &c.,

W. J. DALEY,

Hon. Secretary, Southern Rifle Association.

P.S.—Have written Messrs. Gormly and Copland also.

The Principal Under Secretary,—Kindly see to this.—G.R.D.

The Honorary Secretary, Southern Rifle Association, to The Principal Under Secretary.

Sir,

Wagga Wagga, New South Wales, 23 September, 1890.

Referring to your communication of 18th September, addressed to Mr. G. R. Dibbs, in the matter of the formation of a Rifle Association, the head-quarters of which will be at Wagga Wagga, I have to inform you that Captain Fitzhardinge, of the Volunteer Infantry, has already answered the questions relating to the concurrence of surrounding military bodies.

He authorises me to state that his communications during April, 1889, may be seen at the Military Staff Office, and that these give the requisite information.

I am, &c.,

W. J. DALEY.

Hon. Secretary, Southern Rifle Association.

Refer to Commandant.—C.W., B.C., 26/9/90.

The Principal Under Secretary,—Neither Captain Fitzhardinge nor the Honorary Secretary have given the required information as to the corps which desire the Association to be formed at Wagga Wagga. This is absolutely necessary to prevent rival claims being set up. Previous correspondence referred to is attached for Minister's information.—J.S.R., M.-G., B.C., 29/9/90.

Inform.—C.W., 10/10/90.

The Principal Under Secretary to Messrs. Copland and Gormly, M's.P.

Gentlemen,

Colonial Secretary's Office, Sydney, 25 September, 1890.

Referring to your telegram of the 4th instant and previous correspondence respecting a grant in aid of the projected Southern Rifle Association, I am directed by the Colonial Secretary to inform you that the Major-General Commanding the Military Forces reports that he cordially concurs in the establishment of this institution, but points out that the various corps in the Southern District, viz., detached companies of 1st and 2nd Regiments and reserve corps affiliated to these regiments, should mutually settle the most convenient centre for the meetings to be held. General Richardson adds that if a decision can be arrived at in reference to the locality no further delay need occur.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The Honorary Secretary, Moss Vale Reserve Rifle Company, to Colonel Eden.

Sir,

Moss Vale, 11 October, 1890.

I have the honor to apply that a Rifle Association, embracing the South Coast and Southern Rifle Clubs may be formed, having its headquarters at Moss Vale. I have no doubt you are already aware of the suitability of this place for such a purpose, seeing that there are at least a dozen rifle clubs within a radius of 50 miles, viz., Milton, Shellharbour, Jamberoo, Kiama, Nowra, Berry, and Kangaroo Valley on the coast, and Burrawang, Campbelltown, Goulburn, Camden, Picton, and Balmoral on the Southern railway line, besides four partially-paid corps, viz., Goulburn and Bowral Infantry, also West Camden and Picton Light Horse, and as the mail coaches plying to and from the South Coast and the railway line starts from here, you will see it is more conveniently situated than any other town on the southern line. In April last we arranged an "All comers" rifle contest on our local range, which was a great success, there being no less than twenty rifle clubs represented at it. We have a well-appointed range with targets erected under our charge within three minutes walk of the local railway station. We have

have also a good strong corps, with an energetic committee, several members of which have previously belonged to the partially-paid, and who, I feel sure, would prove their capability in conducting and managing an Association; and as I am informed that a Northern Association, with its headquarters at Singleton, has been formed, also a Western Association, with its headquarters at Bathurst, both of which are to receive an annual grant of £250, besides a free gift of 50,000 rounds of ammunition. I therefore trust you will be good enough to grant our request and honor us with the same privilege.

I have, &c.,

G. GISSING,
Hon. Secretary, Moss Vale Reserve Rifle Company.

Memo. by Colonel Eden.

Staff-Sergeant Berry,—Let me know all you know of this scheme. I am disposed to consider that a sort of ballot opinion should be secured from the several Presidents as to the best place for a centre. Surely Bathurst, Wagga Wagga, Sydney, and a Northern meeting should suffice.—T.M.E. To hold over till opinions have been received from Presidents in reply to circular memo. of 14th October, 1890,

Confidential Report by Staff-Sergeant Berry.

Moss Vale is the only suitable spot for Southern Association, embracing both coastal and inland companies. The range is close to the town, hotel accommodation is ample, and great interest is taken in rifle shooting by the district. Goulburn not suitable; range 4 miles from town; very little interest taken by Goulburn folk in this kind of sport. Wagga Wagga too far away; eight-tenths of southern companies would be excluded if Association were formed here; range between 2 and 3 miles from town.

The Honorary Secretary, Moss Vale Reserve Rifle Company, to The Colonial Secretary.

Sir,

Moss Vale, 10 October, 1890.

I have the honor to apply that a Rifle Association embracing the Southern and South Coast Rifle Clubs may be formed, having its head-quarters at Moss Vale. I have no doubt you are already aware of the suitability of this place for such, seeing that there are at least a dozen rifle clubs and half a dozen partially-paid corps within a radius of 50 miles, and as we are informed that a Northern Association has been formed with its head-quarters at Singleton, and which receives an annual grant of £250 from the Treasury in addition to a free gift of 50,000 rounds of ammunition, I trust you will be good enough to honor us with a similar privilege. There is a well appointed range with targets erected under our charge within three minutes' walk of the local railway station, and as the mail coaches plying to and from the south coast and the railway line start from here, you will see it is more conveniently situated than any other town on the southern line.

I have, &c.,

G. GISSING,
Hon. Secretary, Moss Vale Reserve Rifle Company.

Refer again to the Commandant.—C.W., B.C., 5/11/90. P.U.S.—As previously pointed out, the site for head-quarters of the proposed Southern Association should be determined by vote of the various corps in the districts. To this end a circular has been sent to each Commanding Officer. When the replies are received the site can be definitely fixed.—J.S.R., M.-G., 7/11/90. Await replies.—C.W., 18/11/90.

The Honorary Secretary, Moss Vale Reserve Rifle Company, to W. McCourt, Esq., M.P.

Sir,

Moss Vale, 10 October, 1890.

On Monday last, our Mayor, N. H. Throsbie, Esq., posted a copy of the petition which I sent to Sir Henry Parkes, addressed to you at the Assembly, which I hope you received. I have also written to the Hon's. John Lackey and H. E. Kater, M.'s L.C., also to J. Kidd, Esq., M.L.A., asking them to act in concert with you in obtaining our desire, and as we are informed on very good authority that this matter will be decided by Sir Henry Parkes within the next few days, we hope you will do your best to push it forward for us. I have enclosed another copy of petition in case the other should have got miscarried. Thanking you in anticipation.

I remain, &c.,

G. GISSING,
Hon. Secretary, Moss Vale Reserve Rifle Company.

The Principal Under Secretary to The Honorary Secretary, Southern Rifle Association.

Sir,

Colonial Secretary's Office, Sydney, 28 October, 1890.

With reference to your letter of the 23rd ultimo regarding the project to establish a Southern Rifle Association, I am directed by the Colonial Secretary to state that the Major-General Commanding the Military Forces represents that neither Captain Fitzhardinge nor yourself have yet stated what corps desire the Association to be formed at Wagga. It may be mentioned that this information is absolutely necessary in order to prevent rival claims being set up.

2. I am at the same time desired to invite your attention to the proposed mode of determining the question, as suggested in my letter of the 18th of September last addressed to Mr. G. R. Dibbs, M.P., viz., that the various corps in the Southern District—detached companies of the 1st and 2nd Regiments and reserve corps affiliated to those Regiments—should mutually settle the most convenient centre for the meetings to be held.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Hon. H. E. Kater, M.L.C., to The Colonial Secretary.

Sir,

Homebush, 5 November, 1890.

I am President (Hon. Captain) of the Moss Vale Rifle Reserve Company, and I understand that it is the intention of the Government to form a Rifle Association in the Southern District. Illness will prevent my accompanying a deputation from Moss Vale, which I understand will wait upon you, having in view the question of which is the best and most central position for the establishment of the Association. I therefore beg to lay before you reasons why I think Moss Vale would be the most convenient place in the Southern District.

It has direct daily communication by mail coaches with the coast districts, which include Wollongong, Kiama, Shoalhaven, Berry, Robertson, Burrawang, and all the important and populous districts surrounding those places, all of which have warmly taken up the rifle reserve movement, and where there are at least a dozen rifle reserve companies, and half a dozen partially-paid corps in a very prosperous condition, within 50 miles of Moss Vale; and I am of opinion that in districts like these I have mentioned, when the land is held by numerous small holders, all well-to-do, that rifle reserve companies, as well as partially-paid corps, will have much more vitality than in districts further out, where the land is in the hands of large holders, and the people are more scattered, as witness the Cavalry Corps, having for their head-quarters the neighbourhood of Robertson and Kiama. As another proof of the suitability of Moss Vale, I may mention that in April we held a rifle shooting contest, which was very successful, representatives from about twenty clubs being present.

There is a good range about five minutes walk from the railway station. Rifle shooting generally takes place in summer, when the temperature in that district is very pleasant, and the clear air very good for shooting:

Hoping that our application will receive your favourable consideration.

I am, &c.,

H. E. KATER,
(Per M. E. K.)

The Commandant.—C.W., B.C., 10/11/90., P.U.S.—As previously pointed out, in reply to a similar application from the Secretary of the Moss Vale Rifle Range Company on the 7th inst., the site for head-quarters of the proposed Southern Association should be determined by votes of the various corps in the district. To this end a circular has been sent to each Commanding Officer. When the replies are received the site can be definitely fixed.—WARNER SPALDING, Colonel Commanding Forces (*pro* Major-General), 13/11/90. There are some other papers. Refer to Commandant.—C.W., B.C., 9/12/90. The Commandant.

The Principal Under Secretary to The Secretary to the Southern Rifle Association,
Wagga Wagga Branch.

Sir,

Colonial Secretary's Office, Sydney, 13 January, 1891.

I am directed by the Colonial Secretary to enclose a Form of Application for the issue of a sum of two hundred and fifty pounds, which has been voted unconditionally on the Estimates for 1891, as a special grant in aid of the Wagga Wagga Branch of the Southern Rifle Association, and to request that you will have the goodness to return the same to me at your convenience, duly filled up as indicated.

2. I am desired to add that a certificate to the effect that the money has been expended upon the object for which it has been placed at your disposal should be sent to the Auditor General.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

[Enclosure.]

New South Wales.—Special Allowances.—Unconditional Grants.

Item.—Wagga Wagga Branch, Southern Rifle Association, payable from Vote of £250. Item No. 208 of Appropriation Act of 1891.

THE Committee of the abovenamed Association respectfully request that the sum of £250, voted unconditionally in the Estimates for 1891, for the Wagga Wagga Branch Southern Rifle Association may be authorized for issue, and that the amount may be placed to the credit of in the Australian Joint Stock Bank.

W. B. JEFFERSON,
Treasurer.

The Major-General Commanding the Military Forces to The Principal Under Secretary.

Sir,

Head Quarters, 16 February, 1891.

I have the honor to submit papers affecting the selection of a place for the Head Quarters of the proposed Southern Rifle Association, with a schedule of the ballot taken from the various partially-paid corps and reserve rifle companies interested, by which it would appear that the consensus of opinion is in favour of the Association being formed at Moss Vale.

I would, therefore, request the necessary authority be granted to form the Southern Rifle Association at this place.

I have, &c.,

JOHN S. RICHARDSON,
Major-General Commanding.

I understand that the majority are in favour of Moss Vale.—C.W., 19/2/91. Approved.—H.P., 19/2/91.

As provision is made on this year's Estimates for the above, but with head-quarters at Wagga Wagga, perhaps a reference might be made as to whether the subsidy in question, viz., £250, can be used for the purpose of the formation of the Association at Moss Vale before action is taken.—25/2/91.

Yes.—C.W., 26/2/91. Accountant, 26/2/91. The Auditor-General.—C.W., P.U.S., B.C., 27/2/91. Urgent. The Auditor-General. The Vote 208 of 1891 limits the £250 to the "Wagga Wagga Branch."—E.A.K., B.C., 3/2/91. The Principal Under Secretary. Urgent. Inform Commandant with reference to Minute of Auditor-General.—C.W., B.C., 5/3/91.

P.U.S.—I know nothing of the money being on the Estimates for Wagga Wagga, but as it was no doubt intended for the Southern Rifle Association, the Head Quarters of which has been fixed by consensus of opinion of the majority of corps interested at Moss Vale, and approved by the Minister, I think the latter place may fairly claim the Government grant.—J.S.R., M.-G., B.C., 9/3/91.

[Enclosures.]

RESULT of ballot taken from Officers Commanding partially-paid corps, 1st and 2nd Regiments Infantry, and honorary captains of reserve rifle companies, in the Metropolitan, Western, and Southern District affecting the head-quarters of the Southern Rifle Association :—

	Partially paid Companies.	Reserve Rifle Companies.	Total.
Moss Vale	1	10	11
Goulburn	1	6	7
Wagga Wagga	2	3	5
Pietermaritzburg	5	5
Kiama	3	3
Berry	2	2
Yass	2	...	2
Paddington	1	1
Queanbeyan	1	1
Milton	1	1
Cooma	1	1
Total	6	33	39

Memorandum from the Assistant-Adjutant General, Military Staff Office, to the Officer Commanding 1st Regiment Volunteer Infantry.

Sydney, 13 October, 1890.

OFFICERS Commanding 1st and 2nd Regiments, and Officer Commanding Southern Reserves, will be good enough to ascertain from Officers Commanding partially-paid and reserve rifle companies in the Southern District, their opinion as to the most suitable position for the head quarters of the proposed Southern Rifle Association. The opinions to be accompanied with full explanation for the information of the Major-General Commanding.

By order,

H. D. MACKENZIE, Lt.-Colonel,
A. A.-General.

Officer Commanding 2nd Regiment and Southern Reserves similarly notified.—H.D.M., Lieut.-Colonel. A.A.-General.—Attached please find opinions of officers commanding companies of this Regiment in the Southern District.—C. T. BARTLETT, Major and Adjutant (*pro* O.C. 1st Reg. Infantry), 24/10/90.

Memorandum from the Officer Commanding 1st Regiment Infantry, Sydney, to Officer Commanding "G" Company, Wagga Wagga.

14 October, 1890.

You will be good enough to furnish your opinion as to the most suitable position for a proposed Southern Rifle Association, your opinion to be accompanied with a full explanation for the information of the Major-General Commanding.

By order,

C.B., Major,

Adjutant 1st Regiment Infantry.

The Adjutant, 1st Regiment Infantry,—Opinion, and reason therefore, attached hereto.—H.Y. BERKLEY FITZHARDINGE, Captain, G. Co., 14/10/90.

Wagga Wagga, 15 October, 1890.

IN compliance with memo. of 14th instant, hereto annexed, as to most suitable position for a proposed Southern Rifle Association, I am of opinion that the head-quarters of the Association should be at Wagga Wagga, for the following reasons :—

The proposal to establish the Southern Rifle Association was first made from Wagga Wagga, because Wagga Wagga is a central point connected by railway with towns within a reasonable distance of Wagga Wagga, in which there are reserve rifle corps and infantry corps, cadet corps, and a cavalry troop, the members whereof will in all probability become members of the Southern Association if formed, and can, without much loss of time or expense, come to Wagga Wagga to take part in the rifle matches.

Wagga Wagga was the first town in the South-western District of the Colony where a company of the Defence Force was formed, and Wagga Wagga is now the head-quarters of a troop of cavalry, a company of the 1st Regiment Infantry, a reserve rifle corps, and a public school cadet corps, having an aggregate nominal roll of 200 members.

There is at Wagga Wagga a rifle range already established, in a safe position, and in close proximity to the town, and so situated as not to be likely to be interfered with for many years by erection of buildings, and which, with little extra cost, is capable of extension, to meet all probable requirements for many years.

The

The following towns, within a reasonable distance of Wagga Wagga by rail, have either reserve, volunteer, or cadet corps established:—Albury, Germanton, Junee, Gundagai, Cootamundra, Yass, Young, and Narrandera—Wagga Wagga being a centre for the whole of them.

The members of the Wagga Wagga various corps have by private means had a pavilion, at a cost of about £110, erected on the reserve, on which the rifle range is situated, which will be available for use by the members of the Rifle Association if formed.

I therefore am of opinion that Wagga Wagga is fairly entitled to have the head-quarters of the Southern Rifle Association located in it.

HY. BERKELEY FITZHARDINGE, Captain,
"G" Company, 1st Regiment Infantry.

Memo. from the Officer Commanding 1st Regiment Infantry, Sydney, to Officer Commanding "H" Company, Albury.

14 October, 1890.

You will be good enough to furnish your opinion as to the most suitable position for a proposed Southern Rifle Association, your opinion to be accompanied with a full explanation for the information of the Major-General Commanding.

By order,
C.B., Major,
Adjutant, 1st Regiment Infantry.

To the Adjutant, 1st Regiment Vol. Infantry,—Herewith report as requested.—J. M. WILKINSON, Captain, Comdg. L.H.Co., 1st Regiment Vol. Infantry, 22/10/90.

Report as to site for proposed Rifle Association Town.

Albury, 22 October, 1890.

I HAVE assumed that the Southern Rifle Association will comprise only the Moss Vale, Goulburn, Yass, Young, Wagga Wagga, and Albury Corps, and have considered the matter from two points of view—1st, as to actual convenience in travelling, and, 2nd, as to the most representative Southern District town.

I find the distances from Sydney by rail are as follows:—

Moss Vale	86 miles.
Goulburn	134 "
Yass	190 "
Young	250 "
Wagga Wagga	308 "
Albury	386 "

The distances, selecting each town in turn as a centre, are as follows:—

<i>Moss Vale.</i>				<i>Goulburn.</i>			
From Albury...	300 miles.	From Albury...	252 miles.
" Wagga Wagga	222 "	" Wagga Wagga	174 "
" Young	164 "	" Young	116 "
" Yass	104 "	" Yass	56 "
" Goulburn	48 "	" Moss Vale	48 "
			838 miles.				646 miles.
<i>Yass.</i>				<i>Young.</i>			
From Albury...	196 miles.	From Albury...	176 miles.
" Wagga Wagga	118 "	" Wagga Wagga	98 "
" Young	60 "	" Yass	60 "
" Goulburn	56 "	" Goulburn	116 "
" Moss Vale	104 "	" Moss Vale	164 "
			534 miles.				614 miles.
<i>Wagga Wagga.</i>							
From Albury	78 miles.			
" Young	98 "			
" Yass	118 "			
" Goulburn	174 "			
" Moss Vale	222 "			
				690 miles.			

From this I conclude that Yass and Young are about equal as to distance. Allowing for the fact that Young is on a branch railway-line, and the present train arrangements from Harden to Young are very inconvenient, and that Yass is on the main line, I place Yass No. 1 in point of travelling convenience and central situation.

I think that Goulburn and Wagga Wagga should next be considered. In point of convenience they are about equal, but I consider that Goulburn is too near Sydney to be considered a representative town of the Southern Districts of the Colony, and would therefore recommend Wagga Wagga as the more suitable of the two.

In conclusion, if mere transit convenience is to decide the question, I should place Yass No. 1 (assuming, of course, that Yass can provide a suitable and convenient range), and Wagga Wagga No. 2. If convenience and a representative Southern District town are to be considered, I should place Wagga Wagga No. 1, and Yass No. 2.

I should like to point out, in view of the fact that the Southern Rifle Association must, under proper management, assume great importance, and that riflemen from Victoria, Tasmania, and South Australia will doubtless compete in large numbers, that Albury would then undoubtedly be the most representative Southern District town, and the most central.

To the Adjutant 1st Reg. Vol. Infantry. J. M. WILKINSON, Captain,
"H" Co., 1st Regt. Vol. Infantry.

Memo. from the Officer Commanding 1st Regiment Infantry, Sydney, to Officer-Commanding Infantry Company, Young.

14 October, 1890.

You will be good enough to furnish your opinion as to the most suitable position for a proposed Southern Rifle Association, your opinion to be accompanied with a full explanation for the information of the Major-General Commanding.

By order,
C.B., Major,
Adjutant, 1st Regiment Infantry.

Officer Commanding 1st Regiment Volunteer Infantry, Sydney,—23 October, 1890.
In reply to attached memo. *re* Southern Rifle Association, I consider Wagga Wagga will be the most suitable for head-quarters, because that town is central, and the head-quarters of three distinct companies, and is easy of access by rail.

W. E. MILLARD, Lieut.,
Infantry Company.

Memo. from the Officer Commanding 1st Regiment Infantry, Sydney, to the Officer-Commanding "F" Company, Yass.

14 October, 1890.

You will be good enough to furnish your opinion as to the most suitable position for a proposed Southern Rifle Association, your opinion to be accompanied with a full explanation for the information of the Major-General Commanding.

By order,
C.B., Major,
Adjutant, 1st Regiment Infantry.

Memo. from Officer Commanding "F" Company, 1st Regiment Infantry, to Officer Commanding 1st Regiment Volunteer Infantry.

Yass, 19 October, 1890.

In my opinion, I consider that Yass would be the most suitable position for the proposed Southern Rifle Association for the following reasons:—This town is situated on the main southern line equidistant from Sydney and Albury; the town has good hotel accommodation; the rifle range is situated about 1 mile from the centre of the town; the range itself is equal to any in the Southern District, and, being situated near the river, affords an excellent site for forming a camp, there being a never-failing supply of water.

A. R. HOLT, Captain,
"F" Company, 1st Regiment Volunteer Infantry.

Circular Memorandum.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

This club consider that Moss Vale is the most convenient for head-quarters of the Southern Rifle Association, and vote for that place.—W. MATCHETT, President, Gundagai R. R. Company.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Bega,—
THE Officer Commanding M., W., and S. Dis. Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

From what I can learn, Milton would appear to be the most central and suitable place. So far, however, as this district is concerned, it makes little or no difference whether it be at that place or some other nearer Sydney. In either case it would be just as easy, perhaps easier, to get to Sydney from this district.—Wm. SCOTT, President, Bega R. R. Company, 20/10/90.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I consider that Wagga Wagga is the most suitable position for the head-quarters of the Southern Rifle Association. There is a good range, there is a troop of cavalry, a company of infantry, and a R.R. Company in the district. The residents have always taken a lively interest in rifle shooting, as shown by the valuable prizes which have been given; and from my own knowledge I am sure the Association would be well managed by those who would be at the head of affairs in Wagga Wagga.—RICHD. WARREN, President, Camden R.R. Co., 15th October, 1890.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

Kiama seems to me the most central. I imagine a Southern Rifle Association would not embrace clubs further south than Milton, if the latter should join even. Gerringong, Berry, Coolangatta, and Nowra will in two years be connected with Kiama by rail, and the companies to the north of Kiama already have their railway. Kangaroo Valley is within easy distance, so also Jamberoo and Robertson, &c. It is impossible for the clubs, &c., of the Southern and South Coast railway lines to combine with any degree of success; there is too great a difficulty getting, say, from Berry to Moss Vale, or from Nowra to Moss Vale.—H. L. LOVEGROVE, President, Berry Res. Rifle Co., 16/10/90.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

In reply to the above request—whilst not being well versed in the respective positions—I should deem Moss Vale the most suitable for Southern rifle teams.—A. WOOD, President, Grenfell R.R. Co.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Bombala,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I am hardly certain as to the towns which would be within the radius to be embraced; but as far as I can judge the best place would be Goulburn.—W. A. YORK, Honorary Captain R.R. Co. To Colonel Eden, Sydney.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Reserve Rifle Company, Nowra,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the headquarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

In the absence of the President, I reply to the attached circular memorandum. At a general meeting, held on Friday night, 17th instant, the matter was fully discussed, and I was instructed to inform you that the members of the Nowra Reserve Rifle Club would recommend Picton as the most suitable place for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.—WALTER H. ARMSTRONG, Hon. Sec. Nowra R. R. Club. 18th October, 1890. The Officer Commanding the M., W., and S. Districts Reserves.

I am of opinion that Kiama is the most suitable place for the head-quarters. It is very central, taking Bulli on the north and Shoalhaven on the south. It is in the midst of a comparative teeming population, and it has sufficient accommodation for riflemen. The most suitable place for the range is a spot about half a mile north of the Shellharbour railway station, distant from Kiama about 5 miles (connected by rail), and about 1½ miles from Shellharbour. The direction for firing is about perfect, being south-east. The back ground is a high hill.—HENRY HICKS, President S.R.R.C. Shellharbour, 16th October, 1890. Col. Eden, Comdg. Reserves.

Re Southern Rifle Association.—In reference to the above, I may state that as yet I have not heard as to what extent the proposed Southern Rifle Association embraces, exclusive of the South Coast; but in any case I think it will be impossible for South Coast Companies to combine with those on tableland, owing to natural features of country intervening, and no rail or coach communication. Having the head-quarters on Coast district would not suit those on tableland and *vice versa*. As regards my knowledge of the South-western District, I think Moss Vale would be the most central place.—H. F. NOBLE, Captain (*pro* W. Dymock, Secretary). Jamberoo, 16th October, 1890. Lt.-Col. Eden, Commanding Reserves.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Reserve Rifle Company, Moss Vale.
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I am requested by the members of the Moss Vale Reserve Rifle Co. to respectfully state that we consider Moss Vale the most central and suitable town for the head-quarters of the proposed Southern Rifle Association.—G. GISSING, Hon. Sec., Moss Vale R.R. Co. To the Officer Commanding M., W., and S. Districts Reserves.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Reserve Rifle Company, Coolangatta,—
THE Officer Commanding M.W. and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

The most suitable and central position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast, is Berry—access by steam or rail.—JOHN HAY, President, Coolangatta, 14/10/90. Lt.-Col. Eden, Commanding Reserves.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Reserve Rifle Company, Wagga Wagga,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

Memo. from Wagga Wagga Reserve Rifle Co., 16 October, 1890:—The most suitable and central position is undoubtedly Wagga Wagga, which is situate on the main southern line, and in direct rail communication with the townships at which there are either bodies of infantry or reserves. There are also four targets at the Wagga Wagga range, used by the cavalry, infantry, reserves, and cadets. I also forward you letter on the subject, with report of formation of the Southern Rifle Association.—F. C. HOGG, Hon. Sec., Wagga Wagga Reserve Rifle Co.

Sir,

Wagga Wagga, 16 October, 1890.

With reference to the enclosed memorandum, I have to inform you that the Southern Rifle Association was formed at Wagga Wagga some eighteen months ago. Officers were appointed and a report forwarded by the captain of the Infantry Company, giving the necessary information, and acquiescence of the military bodies in this district.

The matter has been again brought up, and communications from the Under Secretary received on the subject, in accordance with which the secretary to the Association (Mr. W. J. Daley) has already written to the military forces in the surrounding district, asking them to signify their willingness that Wagga Wagga should be the centre. It may be pointed out that the reserve rifle company has purchased a target, and that those in use by the cavalry, infantry, reserves, and cadets now number four.

An

An extensive and safe range is available for large meetings, which, by the addition of other targets, can be increased to any extent at a comparatively small cost. Wagga Wagga has been, so far, the only shooting centre which has moved in the matter, and from its geographical position can be easily reached. The centre being here would create a friendly rivalry for contests with Victorian companies and advance rifle shooting in the southern district. There are at present over 200 belonging to the defence forces in Wagga Wagga alone, and this should entitle it to some consideration; while there are at Albury, Cootamundra, Gundagai, Adelong, Junee, Narrandera, Hay, and other places, large numbers who could avail themselves of the opportunity of attending a meeting at Wagga Wagga.

I may point out that the communications on the matter may be seen at the Colonial Secretary's or Staff Office, where further information may be obtained if necessary.

I enclose you a report of the first public meeting held in April, 1889, at which the Association was established, and since that time has awaited official recognition.

Trusting that you will use your endeavours to get the matter settled in accordance with the wishes of the four bodies in Wagga Wagga,

I am, &c.,

F. C. HOGG,
Hon. Sec., Wagga Rifle Reserve Co.

[Enclosure.]

Southern Rifle Association.

Extracted from the "Wagga Wagga Express," April 16th, 1889.

A PUBLIC meeting called by advertisement was held at the Town Hall last evening for the purpose of considering the desirability of forming a Southern Rifle Association. His Worship the Mayor (Mr. H. B. Fitzhardinge) occupied the chair, and there were amongst those present Messrs. D. Copland, M.L.A., C. H. Croaker, W. Orr, F. C. Hogg, A. B. Crew, A. Tewksbury, H. Millenet, R. Smith, Hughes, Mitchelmore, Halford, Eaton, Eastcott, Rogerson, M'Kearney, Howarth, Heath, G. Coleman, H. B. Jefferson, W. J. Daley, A. Bennett, A. T. Bolton, W. Browe, Hayeross, R. H. Tompson, and others.

The Chairman, after explaining that the meeting had been held in deference to a requisition signed by residents, said he had no doubt they all took an interest in rifle shooting. They knew there was the Central Association of New South Wales in Sydney, which had existed for years, and there was one at Bathurst, having its head quarters there, called the Western Rifle Association. Within the last twelve months volunteer forces had been formed in the southern or south-western district, also a number of rifle companies under the regulations which came into force last year. The meeting had to consider whether it would be advisable to form an Association at Wagga Wagga, and that all the companies and corps in the different towns in that part of the Colony should be asked to join it. The principal object was to encourage rifle shooting, and to have at the same time an annual meeting at Wagga Wagga, when a number of prizes would be given, open to competitors from the various rifle companies, civilian or otherwise, in New South Wales, or the other Colonies. It had been very successful at Bathurst, and he saw no reason why it should not be at Wagga Wagga. Wagga Wagga was connected with various towns by rail; there were rifle companies at Albury, Young; cavalry and infantry, and reserve and civilian rifle clubs at Wagga Wagga. At Cootamundra, Narrandera, and Gundagai, there were reserve companies; and it was almost a certainty that they would have one shortly at Adelong. He happened to be at the latter place on Friday, and was informed the company was very far advanced. He saw the captain of the reserve company while passing through Gundagai, who informed him that they would certainly join and assist Wagga Wagga in any way, and, if necessary, a delegate would be sent down to attend any meeting. (Hear, hear.) The matter was now open for discussion, and the results had been put before them. (Applause.) He would read a letter from Mr. L. A. Fosbery, who regretted his non-attendance, in consequence of leaving for Sydney.

Mr. A. T. Bolton moved the first resolution, as follows: "That, in the opinion of this meeting it is desirable to establish at Wagga Wagga a Rifle Association, to be called the Southern Rifle Association." He thought that any remarks he might have been desirous of making had been so explicitly put by His Worship the Mayor that nothing remained for him but to move the resolution. As one who took very great interest in rifle shooting, although not a shot, he looked forward to the Association, if it were to be formed, with a great deal of pleasure. It was not only for this, but the whole of the southern districts of the Colony. As the mayor had explained, there were Rifle Associations in Bathurst and Sydney, and he thought, other places. If it were formed upon the same basis as those referred to, they would have visits from other Associations, and members joining in the competitions who had never been heard of before, coming out and emulating the old members like their worthy friend Mr. Daley. (Hear, hear.) If they did not, they must only try to. He thought it was a matter which affected the district more particularly than others, inasmuch as it was the head-quarters of the district, and the town and district must benefit considerably by it. (Hear, hear.) Visitors made notes of the place, and possibly would settle down, and the more people induced to visit Wagga Wagga the better for the district. It also gave men the opportunity of visiting other places, such as Sydney and Bathurst, for competition there. He thought the time must shortly come when the Government would take more cognisance, or recognition to a greater extent, than they had done heretofore of the various clubs and Associations throughout the Colony. In Victoria the cadet had only to produce his uniform or rifle, or uniform only—he was not quite sure—to obtain a free pass over the Colony; so it should be in New South Wales. It was not as if in doing that the Government was giving away money to any extent; it was simply persons using seats in the trains that would not otherwise be used. The more travellers upon the railways the more the Government and Colony profited. The Association would educate men and boys in the use of the rifle. Every man in the Colony who could use a rifle, and was an expert, was a better citizen than a man who could not. If that was the effect it would have done a very great amount of good at, comparatively speaking, a very small cost. Unity was strength, and if they had a large Association such as was proposed to be formed, it would offer what private individuals and small clubs could never hope to. (Hear, hear.) It took something solid as a basis. If they had to bring out a programme of £100, £150, or £200, they would have to resort to the continuous subscription lists that went round. They wanted to put it on a better and stronger basis, and thereby obtain members who would become proficient in the use of the rifle. He did not know that any further remarks he could make would enhance the object in any shape or form, beyond stating he had much pleasure in presenting the resolution. (Hear, hear.)

Mr.

Mr. G. Coleman seconded. He need scarcely say that the fact of the Government recently having paid so much attention to the instruction of the people in the use of the rifle, by the inauguration of the new systems of reserve rifle companies, it would not be surprising if an Association such as that, when once started, were to meet with Government recognition. The Mayor had mentioned the number of similar institutions that existed within an ordinarily short radius of Wagga Wagga. That was a circumstance that did not occur to him until then, but it appeared to him a very strong reason why some central authority should be formed in the southern district, with which the various Associations should become affiliated or attached. In the event of a successful formation of such an Association, the opportunities for competition would attract not only marksmen from New South Wales but from the neighbouring Colony of Victoria. Wagga Wagga occupied such a central position, and was so readily accessible, and so many facilities existed by the means of transit, that he thought it a more appropriate place than any for the formation of an Association. He had pleasure in seconding the resolution.

The motion was put and carried unanimously.

Mr. D. Copland, M.L.A., after prefacing his remarks by explaining that he had not yet got thoroughly into Parliamentary harness, said that he thought neither Mr. Croaker nor he could hit the target, and it was time they took lessons. He was quite struck by reading an account of the new Maxim gun, which one had only to sit behind and make bull's eyes with, and would suggest its substitution for the weapon at present in use. He thought the Association was worthy of the support of the sharpshooters of the district, and he thought there were some there who would be very difficult to eclipse. If the Government wanted defence they should pay for it, and he thought the Government should give them the same advantages as Bathurst. If he could be of any assistance in the position in which he had been placed he would be only too happy to give every assistance to Wagga Wagga that he could. (Hear, hear). He would move, "That the following gentlemen be appointed a Committee to draw up and draft rules and regulations for the carrying on of the business, and communicate with other bodies in the district, viz.:—Messrs. Fitzhardinge, Coleman, Bennet, Orr, Daley, Fosbery, Egan, M'Kensey, Howarth, Jefferson, Lorimer, Hughes, and J. J. M'Grath."

Mr. Croaker seconded the motion. He felt he was labouring under some disabilities, as he found he had been preceded by military authorities. In furthering the interests of such an institution he, as a townsman, was only too happy to do so. He hoped it would be a medium for carrying out a spirit of emulation they were only too proud to create. They had men amongst them who could hold their own. As Mr. Bolton had mentioned Mr. Daley, he had only too much pleasure in endorsing it. (Hear, hear.) He was, though not a good shot, prepared to meet Mr. Copland to-morrow from 100 yards upwards. (Laughter.) He hoped they would, and go side by side and "do" them all. (Hear, hear.)

The motion was carried unanimously.

Mr. Orr next proposed: "That this meeting authorises the Captains and officers of the Wagga Wagga Volunteers and Cavalry to interview the authorities in Sydney, and ask their support to the movement." It behoved them all to give Wagga Wagga a push ahead, and he would like to point out that they must be first in the field, and if they did not take the initiative other places would do so. He trusted the captains and officers of the volunteer forces, while in Sydney, would interview the authorities in Sydney and help to push the thing ahead.

Mr. Jefferson seconded, and considered it fortunate the matter had come up at that time, as the volunteer officers were going to Sydney, and would, no doubt, be able to give them much assistance. (Hear, hear.)

The motion was carried unanimously.

Mr. Daley then proposed: "That the non-commissioned officers of the Wagga Wagga Cavalry and Infantry be authorised to solicit the support of the non-commissioned officers and men of the Volunteers in this district while in camp." He thought that additional assistance would greatly strengthen the movement, and bring the object of the meeting to a successful issue. (Hear, hear.)

Mr. A. Bennet seconded the motion. There was a good prospect of receiving a good support from Victoria, whose rifle shots were so enthusiastic, while Wagga Wagga was more central than Bathurst or Sydney. He hoped they would create an inland rivalry, which in other parts they would not be able to do. He had much pleasure in seconding the motion. (Hear, hear.)

The motion was put and carried.

Mr. Howarth said that while in camp he would endeavour to promote the interests of the Association. He had written to Bathurst two years ago, when their Association was formed, and they had got considerable encouragement. As the camp would take place next week he hoped they would have satisfactory progress to report.

Mr. A. T. Bolton moved a vote of thanks to the Mayor for presiding, which was carried by acclamation.

The Chairman replied briefly, expressing pleasure at the movement, which he had made a hobby. The meeting then terminated.

A Committee meeting was then held, at which Mr. W. J. Daley was appointed Hon. Secretary *pro tem.*, and it was decided to send out circulars to the various Clubs in the Southern District, asking for their support and co-operation.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Mongarlowe,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I consider that Goulburn would be a very suitable position.—H. BENSLEY (*pro P. Phillips*),
President, Little River, 15/10/90.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Cootamundra,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

Sir,—*Re* the enclosed, as we are in no way connected with the coast, I cannot see how any opinion can be formed by my company as to which place would be the best for the object referred to.—W. H. MATTHEWS, President, Cootamundra R.R. Co. Cootamundra, 16/10/90. Lieut.-Colonel Eden.

Narrandera, 16/10/90.

In reply to circular memo. of 14th October, I am requested by the Committee of the Narrandera R.R. Co. to inform you that they would suggest that Goulburn be made the head-quarters for Southern and South Coast Rifle Association.—I am, &c., E. W. LESMOND, Hon. Secretary. The Adjutant.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Picton,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

We have carefully considered above, and are of opinion that Picton would be the most suitable place for head-quarters of Southern Rifle Association, for the following reasons:—(1.) That Picton is the most central place for the majority of such clubs as are likely to join the Southern Association. (2.) That we have at present a range fitted up for conducting rifle meetings on a large scale. (3.) That we can get a splendid range up to 1,000 yards, which is in every way safe. (4.) That the range is within 1 mile of the railway station.—GEO. BRUCE HENRY, President; GEO. BELL, Hon. Sec.; G. B. FORSTER, Hon. Treas.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Campbelltown.—
THE Officers Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I am of the opinion that Mcss Vale is most suitably situated for the head-quarters of a Rifle Association, which would embrace all the companies formed on the southern line, and the South Coast companies as well.—ALEX. MUNRO, Pres. Res. Rifle Co., Campbelltown, 15/10/90. Colonel Eden, Sydney.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Reserve Rifle Company, Queanbeyan,—
THE Officer Commanding M., W., and S. Districts Reserves, requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I am of opinion that Goulburn would be a suitable position for the above.—J. W. YEUL, President R.R.C., Queanbeyan, 15/10/90.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Bulli and Woonoona,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

In compliance with above request, I have no hesitation in naming Kiama as the most suitable, central, and convenient position for the head-quarters of the proposed South Coast Rifle Association.—HENRY T. HICKS, President, B. & W. R.R. Co.

Circular

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Snowy River,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I consider Queanbeyan central to embrace South Coast, and southern line districts.—E. C. BODY, President, Snowy River R.R. Co.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, No. 2 Railway, Junee,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

The members of the above company are in favour of Moss Vale being the head-quarters of the proposed Southern Rifle Association.—W. B. CONROY, Hon. Capt., 22/10/90. Lieut.-Colonel Eden.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Adaminaby,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

I am of opinion that Goulburn would be the most suitable place for the Southern Reserves to meet.—ALEX. A. M'KEAHNIE, President, Adaminaby, R.R.C.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Goulburn,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

Replying to the above memo., I consider that Goulburn is the most suitable position for the head-quarters of the proposed Southern R. A. Goulburn taps the main southern line, Cooma line, Blayney line, and the South Coast, *via* Moss Vale, also Braidwood, &c., &c. At present we have a first-class range, with six targets, which is capable of being enlarged to any size, and I consider it could be made the finest range in the Colony, at a very small expense. The range is only 2½ miles from the town by a good road. I cannot see any other position suitable but Goulburn.—W. M. H. QUINN, President, Goulburn R.R. Co., Goulburn, 29/10/90. The Officer Commanding M., W., & S. Districts Reserves, Sydney.

Circular Memorandum.

Regimental Offices, Phillip-street, 14 October, 1890.

The President, Res. Rifle Company, Balmoral,—
THE Officer Commanding M., W., and S. Districts Reserves requests your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

We are of opinion that Picton would be the most suitable place for head-quarters for Southern Rifle Association. The Picton rifle range is within 1 mile of township.—R. TOOTH, Hon. Sec.

Circular Memorandum.

Regimental Offices, Phillip-street, Sydney, 14 October, 1890.

The President, Res. Rifle Company, Smithfield,—
THE Officer Commanding M., W., and S. Districts Reserves request your opinion, to be set forth below, as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, to embrace the South Coast.

Please reply at once.

T. M. EDEN, Lieut.-Colonel,
Commanding Reserves.

The President of the Smithfield R. R. Co., is of opinion that Picton would be most suitable position.—JAMES S. SIMPSON, Hon. Sec. Lieut.-Colonel Eden, 12/11/90.

The A. A., G. to The Officer Commanding.

Head-quarters, Rifle Companies, Sydney, 21 November, 1890.

WITH reference to memo. 13th October, *re* the opinions of the Rifle Reserve Companies in the southern district for the head-quarters of the proposed Southern Rifle Association, thirty-two companies have voted, (herewith papers attached) as follows:—

Moss Vale	10	Berry	2
Goulburn	6	Paddington	1
Picton	5	Queanbeyan	1
Wagga Wagga	3	Milton	1
Kiama	3		

The Moss Vale range is quite close to the town, and plenty of hotel accommodation, and more convenient to get at from the coast.

By order,

C. G. NORRIS, Major.

Southern Rifle Association.

From Officer Commanding 2nd Regiment Infantry to Acting Adjutant-General, Dawes Battery.

Sir, Head-quarters, Sydney, 12th December, 1890.

In accordance with instructions conveyed by your minute of 13th October, 1890, I have the honour to submit herewith the opinion of the various officers consulted.

It appears to me inadvisable that the Southern Rifle Association should be located further south than Goulburn.

The annexed list, marked "A," shows the Partially Paid Companies and Rifle Reserve Companies which would benefit by a Rifle Association at Goulburn, and which would have to travel an additional 175 miles if held at Wagga Wagga.

The list marked "B" shows the number of Companies that would benefit by an Association at Wagga Wagga.

I have &c.,

JOHN H. GOODLET, Colonel,

Commanding 2nd Regt. Infantry.

A.

The Adjutant, 2nd Regiment, to Assistant Adjutant-General, Dawes' Battery.

16 December, 1890.

PLEASE find attached hereto, reports from Cooma, Bowral [Nowra?], and Goulburn, being replies to query *re* Southern Rifle Association, referred to in letter by Officer Commanding 2nd Regiment, of 12th December, which was inadvertently forwarded alone.

M. BAYLY, Captain and Adjutant,
(*pro* C.O.)

From The Officer Commanding 2nd Regt. to Officer Commanding "G" Co., Goulburn.

14 October, 1890.

You will be good enough to state, at your earliest convenience, for the information of the Commanding Officer, your opinion as to the most suitable position for the head-quarters of the proposed Southern Rifle Association, giving at the same time your reasons for advancing this opinion.

By order,
M. BAYLY, Captain,
Adjutant.

O.C. 2nd Regt.—In my opinion Goulburn is the most central. My reasons for giving this opinion is based on receiving great support from other companies and rifle clubs in the Southern District, viz., Picton, Bowral, Goulburn, Yass, Queanbeyan, Cooma, Bungendore, Young, Wagga Wagga, and Albury. Goulburn has the trains running to all places named.—H. BLACKSHAW, Capt. "G" Co. Infy., 16/10/90.

In reply to memoranda 536 and 575 *re* subjects hereinafter dealt with, *vide* head-quarters for Southern Rifle Association, I have the honor to state, understanding the Southern Rifle Association District to comprise Queanbeyan, Braidwood, Cooma, Bombala, Bega, Aaminaby, Jindabyne, &c., I believe Cooma to be the more central position for the head-quarters of the Association named.—T. W. FAULKNER, Capt., Cooma, 12th November, 1890. The Officer Commanding 2nd Regiment, V.I., Sydney.

Sir,

Nowra, 21 October, 1890.

Referring to your memo. of the 14th instant, I have the honor to inform you that I consider that Moss Vale would be a most suitable place for the head-quarters of the proposed Southern Rifle Association for the following reasons:—

It is situated on the Great Southern Railway Line, and therefore accessible to all parts of the Colony.

It is the terminus of coaches from Kiama and from the South Coast. It is convenient to the Head-quarters of the following riflemen:—

H Company, Bowral, 2nd Regiment, Vol. Infantry.
E Company, Kiama, 2nd Regiment, Vol. Infantry.
F Company, Ulladulla, 2nd Regiment, Vol. Infantry.
B Troop, Illawarra N.S. Wales Cavalry.
C Troop, West Camden N.S. Wales Cavalry.
Burrawang Rifle Club.
Moss Vale Rifle Club.
Goulburn Rifle Club.
G Company, Goulburn 2nd Regiment, Vol. Infantry.
Gerringong Rifle Club.
Berry Rifle Club.
Jamberoo Rifle Club.
Kangaroo Valley Rifle Club.
Nowra Rifle Club.
Milton Rifle Club.
Moruya Rifle Club.
Balmoral Rifle Club.
Picton Rifle Club.

The range is within half-a-mile of the railway station.

These and other reasons induce me to suggest that the head-quarters be made at Moss Vale.

I have, &c.,

F. GALBRAITH, Captain,
"H" Company.

The Officer Commanding 2nd Regiment, Vol. Infantry.

The

The Joint Honorary Secretaries, Southern Rifle Association, to D. Copland, Esq., M.P.

Sir,

Wagga Wagga, 21 March, 1891.
 Having received a letter from the head-quarters of the Defence Forces, intimating that until Government sanction is obtained for establishing the head-quarters of the Southern Rifle Association at Wagga Wagga, the Major-General will not grant permission for the holding of a prize meeting at Wagga Wagga, and without that authority it will be useless for us to carry out the arrangements that have so far been decided on. We may state that we have arranged for our prize meeting to be held on the 5th, 6th, and 7th August, 1891, and we would deem it a favour if you would interview the Colonial Secretary immediately, in conjunction with Mr. G. R. Dibbs, who has also been written to, and use your influence with the Colonial Secretary to authorise the Major-General to give his assent to the holding of our meeting on the dates mentioned. It may also be pointed out to you that the sum of £250 was voted by Parliament for the Wagga Wagga branch of the Southern Rifle Association, and the money has been lodged to our account in the Australian Joint Stock Bank, Wagga Wagga, thus showing that the Government have recognised Wagga Wagga as the head-quarters of the Association.

We have, &c.,

W. J. DALEY, }
 J. M'KENSEY, } Joint Hon. Secretaries.

Presented by D. Copland, Esq., M.P.

Inform that upon the report of the military authorities the head-quarters of the Association have been fixed at Moss Vale.—C.W., 23/3/91.

Mr. C. H. Croaker to G. R. Dibbs, Esq., M.P.

My dear Mr. Dibbs,

Wagga Wagga, 23 March, 1891.
 I have been asked by the Committee of the Wagga Wagga branch of the Southern Rifle Association to write and ask your good services in the following matter, which, as you can understand, is of much importance to Wagga Wagga, and I therefore rely with confidence that you will do all you can to obtain effect to the wishes of the Committee. Some short time ago, what is called the Southern Rifle Association was formed, and joined by all the local defence forces. The Committee have since been in communication with the Government, and obtained a grant of £250 for prizes, which money is now actually in the hands of the Committee.

The Committee having been thus recognised by the Government, have drawn out a programme of prizes to be shot for on the 5th, 6th, and 7th August next, which they wish to advertise. Before doing so it is necessary that they should have the sanction of the Major-General to the holding of the prize meeting on the dates stated at Wagga Wagga under the auspices of the Southern Rifle Association, and they press for such sanction on the following grounds:—

1. That Wagga Wagga has been formerly recognised as the head-quarters of the Association, by the payment of grant of £250 to the joint hon. secretaries, Messrs Daley and M'Kensey, for the purpose of defraying part of expenses of prize meeting referred to.
2. That a council and executive council have been appointed, and all arrangements made to hold meeting on 5th, 6th, and 7th August next.
3. That the above meeting cannot be held until the sanction of the Major-General is obtained, which, we presume, requires that the Government should formally recognise and establish Wagga Wagga as head-quarters before the Major-General can give the sanction asked.

On the grounds laid down, the Committee ask you to kindly use your influence in the proper quarter to obtain—

1. The sanction to the holding of the prize meeting on the date named.
2. That Wagga Wagga be proclaimed and recognised as the head-quarters of the Southern Rifle Association.

Surely there can be no question but that this should be head-quarters of the Association, as it is so centrally and favourably situated to command all branches round, viz., Albury, Gundagai, Narrandera, Junee, Cootamundra, Young, and even towns on the Western line, added to which, it is so easily approachable from all points in Victoria. I trust you will do what you can at once, and kindly wire me the result.

Yours, &c.,

C. W. CROAKER.

Presented by G. R. Dibbs, Esq., M.P.

P.U.S.—Moss Vale, by general consensus of vote of corps interested, has been selected as the head-quarters of the Southern Rifle Association, and recognised as such by the Government. It seems to me that under the circumstances Wagga Wagga must defer to that decision.—J.S.R., M.-G., B.C., 8/4/91.

The Principal Under Secretary to D. Copland Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 25 March, 1891.
 With reference to the joint communication presented by you from Messrs W. J. Daley and J. M'Kensey, requesting that the necessary assent may be given for the Southern Rifle Association to hold its annual prize meeting at Wagga Wagga, I am directed by the Colonial Secretary to inform you that it has been decided upon the report of the military authorities, that the head-quarters of the Association shall be at Moss Vale.

I have, &c.,

CRITCHETT WALKER,
 Principal Under Secretary.

The President, Moss Vale Rifle Reserve Company, to The Colonial Secretary.

Sir,

Moss Vale, 28 May, 1891.

I am informed that Moss Vale has been fixed upon for the head-quarters of the Southern Rifle Association. I have the honour to apply for the sum of money placed upon the Estimates for the benefit of that Association, and shall be glad if it can be placed to the credit of the Moss Vale Rifle Reserve Company at the Moss Vale Branch of the E.S. and A. Chartered Bank.

I am, &c.,

H. E. KATER,

President M.V.R.R. Company.

The President, Moss Vale Reserve Rifle Company, to W. McCourt, Esq., M.P.

My dear Mr. McCourt,

Fiona, Double Bay, 28 May, 1891.

I have applied to the Colonial Secretary for the sum of money which was placed on the Estimates for the benefit of the Southern Rifle Association to be paid to the credit of the Rifle Reserve Company at E. and S. Bank, Moss Vale.

I and all the members of the company will thank you very much if you will push this on .

Yours, &c.,

H. E. KATER.

I do trust Moss Vale will be officially appointed as the place for holding meetings of Southern Rifle Association, as the majority of clubs voted for it, and that a sum of money will be placed on next Estimates for prizes.—W. McCOURT. The Principal Under Secretary.

The Principal Under Secretary to The Honorable H. E. Kater, M.L.C.

Dear Sir,

Sydney, 15 June, 1891.

With reference to your personal inquiry this morning, I am desired to say that the Major-General Commanding the Military Forces reports that the volunteer corps in the Southern District selected Moss Vale by ballot-voting as the head-quarters of the Southern Rifle Association.

Yours, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The Honorary Secretary, Moss Vale Reserve Rifle Company, to W. McCourt, Esq., M.P.

Sir,

Moss Vale, 28 June, 1891.

Our President, the Hon. H. E. Kater, M.L.C., has received an official letter from Mr. Critchett Walker, stating that Moss Vale has been chosen as the head-quarters of the Southern Rifle Association. Would you therefore obtain for us at once, if possible the usual Government grant of £250, so as to enable us to hold our meeting. It appears that we can do nothing until we receive it, and, unless we receive it very shortly, it will deter us from holding a meeting for about eighteen months. I therefore hope you will use your best endeavours to obtain it for us without delay. An early reply will oblige.

Yours, &c.,

G. GISSING,

Hon. Secretary.

I hope a grant of £250 will be given.—W. McCOURT. The Principal Under Secretary. For consideration with Estimates.—C.W., 20/7/91.

W. McCourt, Esq., M.P., to The Colonial Secretary.

Sir,

Parliament House, Sydney, 27 August, 1891.

With regard to interview about fixing Moss Vale as place for Southern Rifle Association, have you approved of this matter. An official letter to the effect that you had approved would much oblige me.

Yours, &c.,

W. McCOURT.

Inform, 3/9/91.—C.W.

The Principal Under Secretary to W. McCourt, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 4 September, 1891.

In reply to the inquiry contained in your letter of the 27th ultimo, I am directed to inform you that the Colonial Secretary has already approved of Moss Vale being appointed the head-quarters of the Southern Rifle Association.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RESERVE RIFLE COMPANIES.

(PARTICULARS RESPECTING.)

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TEST OF TARGETS.

Ordered by the Legislative Assembly to be printed, 10 September, 1891.

[Laid upon the Table of the House in answer to Question 24 of Tuesday, 1st September, 1891.]

Question.

24. MR. NOBBS (*for MR. FRANK FARNELL*) *asked* THE COLONIAL SECRETARY,—Referring to the answers to Questions by the Honorable Member for Central Cumberland, Mr. Nobbs, on Wednesday last, in reference to test of targets, and the answers to previous Questions on the same subject,—
- (1.) Will he direct an examination of the “improved” targets now on the cadet range, to be made by some person not connected with the Military Works Department, with a view to stating whether those targets comply with conditions 1, 2, and 4 of the competition, since Colonel de Wolski stated (answers to Question 19 of 18th August) that these targets “complied with all the conditions”?
 - (2.) Have the two “improved” targets on the cadet range been permanently erected with a paved trench about 20 inches deep?
 - (3.) Did the Board on Targets recommend the adoption of a target which had not been tested, as shown by the Commanding Engineer in his answer to sub-question (5) of Question 1, of 26th August?
 - (4.) Were the “first-class” targets fully tested in the case of each pattern submitted?
 - (5.) For how much of the work on the Randwick Range were tenders called publicly?
 - (6.) How much money has been paid, and how much is due to Messrs. Goodlet and Smith for material supplied (*a*) for timber and iron for shelter mounds; (*b*) for buildings (cost in regard to each building separately)?
 - (7.) Were tenders called for such supplies?

Answer.

THE following information has been supplied by the Major-General Commanding the Military Forces:—

(1.) The Colonial Secretary has already answered on the 26th August last that “the Commanding Engineer considers that the targets tested on the 1st August complied, as nearly with all the conditions laid down, as any of the targets submitted.” The Instructor of Musketry recommended this form of target for adoption on the 1st class range, and as the Commanding Engineer had authority to erect for practice twelve cheap targets, he selected this pattern for trial on the cadet range.

2. No. These two targets have merely been temporarily erected, a little tar paving been added to form an open trench.

3. Yes; but the Board fully satisfied themselves by the result of trials, as a second and third class target it would be equally satisfactory as a first-class one with the addition of the trench. Its working as a first-class target was tested.

(4.) Yes, except in the case of Keating’s, which was unprovided with the small trench needed; but the Board was satisfied that, given this inexpensive addition, the target would prove an available first-class.

(5.) A detailed statement is in course of preparation, and will be furnished if required. Generally speaking, all the earth-work, turfing, construction of mantelets, &c., was done by daily labour—the prices tendered by contractors for land excavation being considered too high. Tenders were called for all other work, such as trenching, erection of houses, &c., wherever it was possible to do so.

(6.)	(a) Paid	£155	17	9
	Due	99	13	0
	(b) Paid, two houses at £75	150	0	0
	Due, one house at £235	235	0	0

Total £640 10 9

(7.) Yes, except in the case of the cottages, for which special Ministerial authority was obtained to purchase portable houses, as it was considered at the time that they were urgently required.

1891.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GUNS IN BATTERY AT STEEL POINT.
(MEMORANDUM BY THE MAJOR-GENERAL COMMANDING THE MILITARY FORCES RESPECTING.)

Ordered by the Legislative Assembly to be printed, 15 September, 1891.

[Laid upon the Table of this House in accordance with promise made in answer to Question No. 15.]

15. MR. BLACK asked THE COLONIAL SECRETARY,—

- (1.) Referring to his answer to Mr. Black's Question No. 3, of 1st September, relative to the case of the guns in Steel Point Battery, has he yet received the statement in writing from General Richardson which he said he had no objection to request that officer to make?
- (2.) If so, when will he lay it upon the Table?
- (3.) If not, will he state the cause of the delay in this matter?

Memorandum.

THE final decision of the Major-General is contained in letters of the 2nd of April and 10th of August, 1889, of correspondence, and to the effect that, whilst admitting the report as to the dirty state of the guns might have been somewhat exaggerated, they were not in the state as certified, viz., "clean and fit for immediate service." Consequently he could not hold those rendering such certificates free from blame. He further considered that Lieutenant Le Mesurier had not received adequate support from the Artillery authorities, notwithstanding which he appeared to have been possessed of a laudable desire to perform his duty to the best of his ability and knowledge. The Major-General wishes it to be understood he neither stated nor implied that officers *intentionally* rendered incorrect certificates.

JOHN S. RICHARDSON,
Major-General Commanding.
15/9/91.

The Principal Under Secretary.

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MILITARY WORKS DEPARTMENT.

(PARTICULARS RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 7 October, 1891.**[Laid upon the Table of the House in answer to Question No. 26, of 1st September, 1891.]*

Questions.

- (26.) OFFICER-IN-CHARGE, MILITARY WORKS DEPARTMENT:—MR. WALL ASKED THE COLONIAL SECRETARY,—
- (1.) What are the functions of the Officer-in-Charge of the Military Works Department; and is it considered necessary that this position should be filled by an officer on the active list of the British Army?
 - (2.) Is it true that a Major Taylour, of Gibraltar, has been appointed to the position of Officer-in-Charge of Military Works of the Colony; and, if so, what are Major Taylour's qualifications, how have these qualifications been ascertained, and on whose recommendation was the appointment made?
 - (3.) Are any assistant engineers or surveyors employed under the Officer-in-Charge of the Military Works Department at Newcastle, Wollongong, or other places; what is the character of their employment, rate of salary and allowances, and by whom were these appointments made?
 - (4.) What amount has been expended on improvements and repairs at the Victoria Barracks since the Officer-in-Charge of the Military Works Department entered upon his duties?
 - (5.) What amounts have been expended on improvements to the officers' mess-room, Victoria Barracks, and to the quarters occupied by Lieutenant-Colonel Airey, during the last three years; and on whose authority were these amounts expended?
 - (6.) What other amounts have been expended at the Victoria Barracks over the same period; for what purpose, and by whose authority?
 - (7.) During the same period, what amounts have been expended on improvements and repairs on any buildings, barracks, or officers' mess-rooms at Dawes Point, and by whose authority?
 - (8.) Will he state the number of engineers, draftsmen, surveyors, and others employed under the Officer-in-Charge of Military Works, the rate of salary and allowances of each person, their qualification for the work on which they are engaged, date of appointment, on whose recommendation, and the number of officers in this Department who are not naturalised subjects of the Queen?

Answers.

- (1.) The Director of Military Works is the Officer-in-Charge of the design and construction of all military works in the Colony. Until such time as an officer of the local forces is considered eligible for such an appointment, the Government deem it advisable that this post be filled by an Imperial Officer.
- (2.) No. Major Renny Taylour, of the Royal Engineers, has been selected by the Imperial authorities to succeed Colonel de Wolski, whose term of service will shortly expire. Major Renny Taylour is an officer of great experience and merit. The Inspector-General of Fortifications and Engineers recommends all such appointments.
- (3.) Yes. (a) At Wollongong:—Lieutenant P. T. Owen; salary, £200 per annum. Appointed under Ministerial authority. (b) At Randwick Rifle Range:—Mr. C. G. Anderson; salary, 16s. per diem. Appointed under Ministerial authority.

- (4.) £9,291 13s. 9d.
 (5.) Improvements to Officers' Mess, £1,177 10s.; Lieut.-Col. Airey's quarters, £699 9s. 1d. Ministerial authority.
 (6.) Sanitary Services, &c., £33 16s. 3d.; Artillery stables, £2,987 6s. 10d.; Drill-shed, School of Gunnery, £2,252 4s. 9d. Ministerial authority.
 (7.) £1,856 6s. 4d. Ministerial authority.
 (8.)

Name.	Situation.	Salary.	Date of Appointment.
E. M. T. Boddam	Superintending Engineer	£ 60)	30 Sept., 1889.
R. J. Thorpe	Inspector of Ordnance Machinery	400	1 Feb., 1890.
C. E. S. Murray	Accountant	100	1 May, 1891.
J. H. R. King	Draftsman and Surveyor	300	1 Sept., 1889.
D. Watson	Clerk of Works	300	1 Sept., 1889.
F. J. Ince	" "	300	1 Sept., 1889.
A. J. Pinchen	" "	300	27 Jan., 1890.
P. T. Owen	Assistant Engineer	200	1 Feb., 1890.
C. G. Anderson	Mechanical Draftsman	16/- per diem.	14 July, 1890.
J. Mailer	Assistant Foreman of Works	175	1 Jan., 1890.
A. J. Green	Foreman of Works	250	1 Jan., 1891.
G. C. Stevenson	Draftsman	250	1 June, 1891.
W. H. Maynard	Clerk of Works	250	4 July, 1891.
J. A. Kethel	Architectural Draftsman	150	10 July, 1891.

I have no knowledge of any officer in the Branch who is not a subject of the Queen. All officers named are duly qualified, and were appointed on the recommendation of the Commanding Engineer.

F. R. DE WOLSKI,
Colonel.

1891-2.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MILITARY WORKS OFFICE.
(PARTICULARS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 23 March, 1892.

[Laid upon the Table of this House in answer to Question No. 6, of 22 March, 1892.]

Question.

6. MR. MCGOWEN asked THE COLONIAL SECRETARY,—

- (1.) The number of persons employed in the Military Works Office since its formation?
- (2.) The nature of work each is required to perform?
- (3.) The salary of each at starting; also the salary received by each at present time?
- (4.) If any persons have been dismissed from the Service, the names of such persons, and for what reason?

Answer.

(1.)

Twenty-five, including those who have left, whose services were no longer required, or who have been dismissed.

(2 and 3.)

Nature of work.	Salary at starting.	Present Salary.
Superintending Engineer	£600 per annum	Nil.
Assistant Engineer	£200 "	£250 per annum.
Inspector of Ordnance Machinery	£400 "	£400 "
Accountant... ..	£100, in addition to military pay as Warrant Officer.	£100, in addition to military pay as Warrant Officer.
Assistant Accountant	£200 per annum	£200 per annum.

(4.)

One clerk and draftsman dismissed. Mr. Godden absented himself from duty. One Supernumerary clerk dismissed. Lce. Corporal Gardiner; irregularities.

1891-2.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PERMANENT ARTILLERY FORCE.
(PARTICULARS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 19 January, 1892.

[*Laid upon the Table of the House in answer to Question No. 1, of 18 January, 1892.*]

Question.

- (1.) PERMANENT ARTILLERY FORCE—RESERVE INFANTRY COMPANIES:—MR. SHELDON *asked* THE COLONIAL SECRETARY,—
- (1.) What is the total number of men of all ranks now serving in the Permanent Artillery Force?
 - (2.) How many of that number have been formerly in the Imperial Service?
 - (3.) How many of that number are of Australian birth?
 - (4.) What was the total cost of the Reserve Infantry companies from the date of formation until disbandment, when the forces were reorganised?

Answer.

- (1.) 555.
 - (2.) 126.
 - (3.) 174.
 - (4.) £39,780.
-

1891-2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PARTIALLY-PAID INFANTRY.

(RETURN RESPECTING).

*Ordered by the Legislative Assembly to be printed, 2 March, 1892.**[Laid upon the Table of the House in answer to Question No. 11, of 25 February, 1892.]*

Question.

- (11.) PARTIALLY-PAID INFANTRY:—MR. JONES (FOR MR. HAYNES) *asked* THE COLONIAL SECRETARY,—
- (1.) Is it a fact that the regulations require company officers and volunteers of the partially-paid infantry to classify as marksmen annually, prior to their drawing the full amount of pay voted by the Legislature; if so, will he be good enough to cause all officers of the general staff and otherwise to be classified in the same direction, having due regard to the different arms and requirements of the service?
 - (2.) What was the percentage of marksmen in the partially-paid infantry on 16th January, 1890?
 - (3.) Did not the returns before the General Officer Commanding show that this standard of classification has never been attained as yet in any known military force?
 - (4.) Will he amend the regulations in these respects, and also take into consideration the fact that the Head-quarters companies had no rifle range for practice for over two years, in order to reach the conditions imposed?
 - (5.) How long has the present Officer Instructor of Musketry held the position, and what are his duties?
 - (6.) How many lectures has he delivered, and how much instruction has he imparted to the officers in the partially-paid infantry?
 - (7.) What are his emoluments?
 - (8.) What is the number of the musketry staff, by ranks?

Answer.

- (1.) Yes, as the regulations require company officers, non-commissioned officers, and men of the partially-paid infantry to go through a course of musketry annually, under a sliding scale. They need not necessarily become marksmen (some are 3rd-class shots). All the officers of the general and permanent staffs have gone through a course of musketry instruction, the adjutants of the several corps having gone through a special course and passed an examination under the Officer Instructor of Musketry. All the non-commissioned officers on the permanent regimental staff go through a course annually when possible.
- (2.) The percentage of marksmen was 28·4.
- (3.) This high standard surpasses the British army, for the simple reason that in this country we deal with educated men, whereas in England recruits have to be educated after they join the service.
- (4.) It is not considered that the regulations require any alterations; as regards the Head-quarters companies, they went through their course of musketry at Flemington rifle range.
- (5.) The present officer has held the position of Instructor of Musketry since 11th March, 1885, and is in possession of a Hythe certificate, necessary for an officer in his position. His duties are to generally superintend the whole of the musketry instruction in the Colony; he has also the erection of and keeping in repair the many ranges throughout the Colony. He has, further, to teach his assistant-instructors in every branch of his department, so that they can impart the necessary knowledge to the men. He has, further, to visit the different companies as often as possible, and see that his assistant-instructors are doing their work properly, and that the regulations are being adhered to.
- (6.) He has given about twenty (20) lectures, but finds it much better after the preliminary drills are completed to instruct the men on the range when at actual practice, and it is far easier to point out mistakes being made, and there and then give solid reasons for the correction of and result of such errors; every man is then dealt with separately, and the instruction thus given makes a greater impression.
- (7.) £678 per annum, including pay and allowances.
- (8.) One warrant officer, four staff-sergeants, and one clerk.

CHAS. F. ROBERTS,
Colonel Commanding Troops.

MILITARY.

(ALTERATIONS AND IMPROVEMENTS, VICTORIA BARRACKS.)

*Ordered by the Legislative Assembly to be printed, 19 November, 1891.**[Laid upon the Table of the House in answer to Question No. 11 of 15 September, 1891.]***Question.**

11. ALTERATIONS AND IMPROVEMENTS AT VICTORIA BARRACKS:—MR. WILLIS (FOR MR. WALKER) asked THE SECRETARY FOR PUBLIC WORKS,—
- (1.) What amount has been expended on alterations and improvements to the officers' mess and billiard rooms at Victoria Barracks during the last three years to the present date?
 - (2.) Were these works let by tender; what was the amount of contract; and who was the successful tenderer?
 - (3.) What amount has been expended on improvements and alterations to the quarters now occupied by Lieutenant-Colonel Airey since the date of his occupation, giving detail of each improvement or alteration, and total cost of same?
 - (4.) On whose authority were these improvements and alterations carried out?

Answer.

RETURN of expenditure on Lieutenant-Colonel Airey's quarters, Victoria Barracks, from 15th September, 1888, to 24th August, 1889, by Government Architect.

9 January, 1889—S. Stead, repairs to roof	£4	2	7
22 May, 1889—W. Langley, erecting partition	18	10	0

EXPENDITURE on alterations, &c., to mess and billiard rooms, Victoria Barracks, during same period.

Nil.

RETURN of expenditure on alterations and improvements to the Officers' mess and billiard rooms at Victoria Barracks, from 24th August, 1889 (the date of transfer from the Colonial Architect to the Commanding Engineer), up to the 15th of September, 1891.

(1.) Total amount expended, £1,426 19s. 4d.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROYAL NAVY.

(CORRESPONDENCE RESPECTING THE ADMISSION OF AUSTRALIAN AND NEW ZEALAND BOYS
AND YOUNG MEN INTO.)*Ordered by the Legislative Assembly to be printed, 1 December, 1891.*

The Agent-General to The Colonial Secretary.

Sir, Westminster Chambers, 9, Victoria-street, Westminster, S.W., 2 October, 1891.

I have the honor to forward for your information a copy of a letter addressed to me by the Secretary of State for the Colonies, covering copy of a communication from the Admiralty, showing the arrangements which the Lords Commissioners of the Admiralty are willing to make for the admission into the Royal Navy of young men and boys of Australian and New Zealand birth.

I have, &c.,
SAUL SAMUEL.

[Enclosure.]

The Colonial Office to The Agent-General.

Sir, Downing-street, 29 September, 1891.

I am directed by the Secretary of State for the Colonies to transmit for your information a copy of a letter from the Admiralty showing the arrangements which the Lords Commissioners of the Admiralty are willing to make for the admission into the Royal Navy of men and boys of Australian and New Zealand birth.

The Agent-General for New South Wales.

I am, &c.,
ROBERT G. W. HERBERT.

[Sub-Enclosure.]

The Admiralty to The Colonial Office.

Sir, Admiralty, 9 September, 1891.

I have laid before my Lords Commissioners of the Admiralty your letter of the 12th ultimo, relative to the admission of boys and young men of New Zealand birth into Her Majesty's Australasian Naval Squadron, and, after full consideration, their Lordships desire me to state, for the information of Lord Knutsford, that while they are not prepared to depart from the principle of the continuous and general service system, their Lordships will be willing to make arrangements for the admission into the Royal Navy of men and boys of Australian and New Zealand birth on the following lines:—

1. Able or ordinary seamen to be entered on the Australian Station to fill vacancies as non-continuous service men for six months' trial on the station, and, if after that time they are found suitable, they will be allowed to join the Navy as continuous service men, and will be paid (as continuous service men) from the date of their original entry. Men so entered will be sent to England for training in gunnery, &c., but they will afterwards be employed on the Australian Station if they so desire.

2. Boys who volunteer and come up to the standard will be accepted and brought to England for training with the paid-off crews of Her Majesty's ships, and, after undergoing the necessary training, they will be employed, as far as possible, on the Australian Station, if they so desire.

I have, &c.,
EVAN MACGREGOR.

The Under Secretary of State, Colonial Office.

1891-2.

NEW SOUTH WALES.

ROYAL NAVY.

(REGULATIONS FOR THE ENTRY OF MEN AND BOYS OF AUSTRALIAN AND NEW ZEALAND BIRTH INTO.)

Presented to Parliament by Command

The Admiral to The Governor.

My Lord,

"Orlando," at Sydney, 13 January, 1892.

I have the honor to forward, for the information of your Excellency, the document noted at the foot hereof.

2. The rates of pay, pensions, and other advantages are given in the quarterly editions of the *Navy List*.

I have, &c.,

C. T. SCOTT, Rear-Admiral,
Commander-in-Chief.

For the Colonial Secretary.—JERSEY, 16/1/92.

(Three copies of printed regulations for the entry into the Royal Navy of men and boys of Australian and New Zealand birth.)

FOR DISTRIBUTION TO CANDIDATES.

ARRANGEMENTS for the entry in the Royal Navy of men and boys of Australian and New Zealand birth, application being made beforehand to the Commander-in-Chief, H.M.S. "Orlando," for each entry.

1. Able or ordinary seamen may be entered to fill vacancies as non-continuous service men for six months' trial on the station, and, if after that time they are found suitable, they will be allowed to join the Royal Navy for continuous service, and will be paid (as continuous service men) from the date of their original entry. Men so entered will be sent to England for training in gunnery, &c., but they will afterwards be employed on the Australian station, if they so desire.

2. Boys who volunteer and come up to the standard will be accepted and sent to England for training with the paid-off crews of H.M. ships, and after undergoing the necessary training they will be employed, as far as possible, on the Australian station, if they so desire.

(a) These boys should be between the ages of 15 and 16, and they must be in all respects suitable.

(b) When entered, boys will be received in one of H.M. ships on the station for passage to the training-ship in England.

3. Qualifications.

(All candidates must be of Australian or New Zealand birth.)

Rating for which the candidate is to be examined.	Age required.	Previous servitude and other qualifications required.	Nature of the examination the candidate must pass.	Remarks.
Ordinary seaman	18 and under 30.	Well grown and healthy; produce certificates of good conduct from the merchant service.	Considered in all respects fit for the rating, with a fair knowledge of the ordinary duties of a seaman.	
Able seaman	do	do	A good knowledge of the ordinary duties of a seaman.	
Boy, 2nd-class ...	Between 15 and 16.	That he is of robust frame, intelligent, of perfectly sound and healthy constitution, free from any physical defects or malformation, and not subject to fits; and willing to be revaccinated, observing that he is not to have more than seven defective or deficient teeth. V. Every boy must bring with him a certificate of birth, or a declaration made by his parents or guardians before a Magistrate to show that he is of the proper age; and also the consent in writing of his parents or guardians, or nearest relatives if he be an orphan, to his entering the Navy and engaging to serve until he shall have completed twelve years continuous service from the age of 18. (Forms of certificates supplied on application.) Boys are not to be received from reformatories or prisons.	That he is able to read and write. To write a passage of not more than six lines slowly read once, and then dictated word by word; and to sign his name legibly.	Height. Chest. ft. in. in. 15 to 15½—5 0½ 30½ 15½ to 16—5 1½ 31 (Liable to alteration from time to time.)

1891.

(SECOND SESSION.)

NEW SOUTH WALES.

AUSTRALASIAN NAVAL SQUADRON.

(CORRESPONDENCE REGARDING THE MOVEMENTS OF.)

Presented to both Houses of Parliament.

The Principal Secretary of State for the Colonies to The Governor.

N. S. Wales, No. 52.

My Lord,

Downing-street, 29 August, 1891.

With reference to previous correspondence respecting the new vessels for the Australasian Squadron, I have the honor to transmit to you, for the information of your Government, copies of a correspondence between this Department and the Admiralty on the subject of the movements of these vessels.

I have, &c.,

KNUTSFORD.

The Colonial Secretary.—JERSEY, 20/10/91.

[Enclosures.]

The Colonial Office to The Admiralty.

Sir,

Downing-street, 21 March, 1891.

I am directed by Lord Knutsford to request that you will suggest to the Lords Commissioners of the Admiralty the desirability of taking advantage of the approaching despatch of the new Australian vessels for the purpose of giving emphasis to this important departure in Colonial policy.

Lord Knutsford understands that four or five of the vessels of the special squadron, towards the cost of which the Australasian Colonies are contributing, will shortly be ready to go to sea. For many reasons it appears extremely desirable at the present time that the arrival of these vessels in Australia should be accompanied by such measures of ceremonial as would be calculated to attract public attention. The arrangement which was discussed and approved by the delegates at the conference of 1887 may eventually lead to wide-reaching results, and it is important that everything should be done both to show that Her Majesty's Government attach great value to this arrangement, and also to enhance its significance in the view of the Colonies themselves and of Foreign Powers.

Their Lordships are best able to decide what steps might be taken to give effect to the above proposal, and Lord Knutsford would merely suggest that as many of the new vessels as possible should proceed to Australia, calling at any British ports on the way as a squadron; that they should first reach Australia at Freemantle, where it might be desirable that they should be received by the Admiral commanding on the station; and that they should subsequently proceed as a squadron to visit the principal ports of the contributing Colonies, remaining at each a sufficient time to allow the vessels to be seen by large numbers of people.

Lord Knutsford trusts that this proposal will meet the favourable consideration of the Lords Commissioners of the Admiralty.

I am, &c.,

JOHN BRAMSTON.

The Admiralty to The Colonial Office.

Sir,

Admiralty, 13 May, 1891.

With reference to your letter of the 21st March, 1891, as to the new Australian vessels proceeding from this country to Australia as a squadron, I am commanded by my Lords Commissioners of the Admiralty to acquaint you, for the information of the Secretary of State, that for naval reasons my Lords do not consider it desirable that this course should be pursued.

2. In deference to the wishes of the Secretary of State, the vessels, although proceeding independently, have been directed to rendezvous at Batavia, and proceed thence to Thursday Island, where the Commander-in-Chief in Australia will give the necessary orders as to their further proceedings and the ports to be visited on passage to Sydney, and extracts of your letter now under reply have been sent to the Commander-in-Chief for his information, with instructions to comply as far as possible with the wishes of the Secretary of State for the Colonies.

I am, &c.,

EVAN MACGREGOR.

The Colonial Office to The Admiralty.

Sir,

Downing-street, 23 May, 1891.

I am directed by Lord Knutsford to acknowledge the receipt of your letter of the 13th instant, in reply to one from this Department of the 21st of March, in which it was suggested that as many as possible of the new vessels in course of construction for the Australasian Colonies should proceed to Freemantle as a squadron, and be there received by the Admiral on the station.

His Lordship learns with regret that it is not in the power of the Lords Commissioners of the Admiralty to adopt this suggestion, and still hopes that Admiral Lord Charles Scott may be able to make such arrangements as may enhance the significance of this addition to the squadron under his command.

A copy of a letter is enclosed from the Agent-General for Victoria, to whom a copy of your letter under acknowledgment will be forwarded.

I am, &c.,

JOHN BRAMSTON.

Not received.

The Colonial Office to The Admiralty.

Sir,

Downing-street, 30 May, 1891.

With reference to previous correspondence respecting the despatch of the new Australian cruisers, I am directed by Lord Knutsford to transmit to you, to be laid before the Lords Commissioners of the Admiralty, copies of telegrams from the Governors of Victoria, South Australia, and Western Australia on the subject.

Lord Knutsford has no doubt that their Lordships will give the most favourable consideration possible to the representations of the Colonial Governments to which, under all the circumstances of the case, it is very important to accede, unless there should be some exceedingly strong reason to the contrary.

His Lordship trusts that the very strong opinions expressed in the telegrams from the Earl of Kintore and the Earl of Hopetoun will receive special attention, and with regard to the telegram from Sir W. Robinson, he concludes that the intentions that the vessels should assemble at Batavia need not necessarily be abandoned, as they could proceed thence together to King George's Sound, if the Lords Commissioners should not prefer the last-named port as the place of assembling.

I am, &c.,

ROBERT G. W. HERBERT.

The Colonial Office to The Admiralty.

Sir,

Downing-street, 4 June, 1891.

With reference to previous correspondence respecting the approaching departure of the new vessels-of-war for the Australasian station, I am directed by Lord Knutsford to transmit to you the accompanying copies of two telegrams, which have been received, urging that these ships should visit Hobart and other capitals of the contributing Colonies before those that are to be paid out of commission are laid up at Sydney. I am also to enclose a copy of a telegram from the Governor of Queensland stating that a proposal will be made in the Parliament of that Colony for a contribution towards the cost of the additional ships-of-war to be placed on the station.

The First Lord of the Admiralty was good enough to meet at this office to-day the Agent-General of those Colonies which have already contributed to the cost of these ships, who urged that the ships should all be shown in the ports of their respective Colonies as soon as possible.

It was then pointed out that, for naval reasons, the Board of Admiralty were unable to comply with the proposal that had been made that the squadron should first visit Western Australia, rendezvousing at Albany; but, as Lord Knutsford understands, there is every hope that the First Lord of the Admiralty will be able to send such instructions to the Admiral on the station as will secure that the vessels should visit Moreton Bay for two or three days, and then proceed to Sydney, Adelaide, Melbourne, and Hobart, whence the vessels that are not to be kept in commission should return to Sydney to be laid up, the rest of the squadron visiting the Western Australian ports of Albany and Newcastle, and, as soon as practicable, the principal ports of New Zealand.

Lord Knutsford is sure that if the Board of Admiralty are able to carry out this programme, it will give great satisfaction to the respective Colonies, and, while strengthening the determination of those which have already contributed, will largely assist in securing the adhesion of Queensland to the joint arrangement of which the telegram from Sir H. Norman gives good hopes.

I am, &c.,

R. H. MEADE.

Not received.

The Admiralty to The Colonial Office.

Sir,

Admiralty, 9 June, 1891.

With reference to your letters, marked in margin, forwarding communications on the subject of a combined demonstration of Imperial and local naval and military forces in connection with the arrival of the ships composing the Auxiliary Squadron, now on their way to Australia, I am commanded by my Lords Commissioners of the Admiralty to request that you will inform the Secretary of State that, as their Lordships have strong reasons for desiring that these vessels should proceed *via* Thursday Island, it will not be possible for them to rendezvous at Albany (West Australia) as requested.

2. Their Lordships may mention that the strong head winds experienced on the long passage from Colombo to King George's Sound would make it very undesirable that the smaller vessels should proceed by that route without urgent necessity, and they have arranged for the vessels to arrive as a squadron at Thursday Island, when they will follow the orders of the Commander-in-Chief.

3. My Lords would moreover point out that the demands for the services of Her Majesty's ships amongst the Pacific Islands are always heavy and often urgent, added to which the new crews of the "Curaçoa," "Rapid," and "Lizard" form portion of the crews of the new ships now on passage, which will be laid up in reserve, and Her Majesty's ship "Himalaya" will be waiting at Sydney to return to England with the paid-off crews.

4.

Colonial Office,
23 May, 1891,
30 May, 1891,
4 June, 1891.

4. It will therefore be seen that the concentration of any number of Her Majesty's ships now forming the Australian Squadron for the purpose of meeting the Auxiliary Squadron on arrival, will hardly be practicable under the circumstances, but my Lords do not doubt but that the Commander-in-Chief will do all in his power to give effect to the wishes of the Australian Governments in this matter, and they have this day telegraphed to Lord Charles Scott as follows:—

“Ships cannot rendezvous Albany on account of passage round West Australia; will rendezvous Thursday Island, and you can make subsequently any use you may wish of squadron, but crews to be relieved must come home in the ‘Himalaya,’ ‘Curaçoa,’ ‘Rapid,’ and ‘Lizard,’ must be paid off temporarily whilst their reliefs are going the rounds.”

They will further send him detailed instructions to visit Sydney, Melbourne, Adelaide, and Hobart with the new squadron, but to accomplish this it will be necessary to temporarily lay up at Sydney those vessels now on the station, for the relief of whose crews the complements of that portion of the new Squadron which were to be in reserve were intended.

This may cause some inconvenience, but it is the only means by which the whole of the new squadron can visit the places mentioned. The Commander-in-Chief will subsequently visit New Zealand with those ships which are to be permanently kept in commission.

I am, &c.,
EVAN MACGREGOR.

The Colonial Office to The Admiralty.

Sir,

Downing-street, 18 June, 1891.

I am directed by Lord Knutsford to acknowledge the receipt of your letter of the 9th instant respecting the new Australian men-of-war.

I am to enclose a copy of a telegram which has been sent to the Governor of Victoria on the subject, after having previously been submitted to, and concurred in, by the First Lord of the Admiralty. Not received.

It is understood that the Admiral on the station will be informed that Moreton Bay is to be included among the places to be visited upon the first tour, and that Western Australia will be visited, as well as New Zealand, on the subsequent expedition. These two places appear to have been inadvertently omitted from those mentioned in your letter, and, subject to this correction, the arrangements now made will, it is believed, give satisfaction to the Australian Colonies. I am accordingly to express Lord Knutsford's thanks for the manner in which the Lords Commissioners of the Admiralty have met the Colonial representations.

I am, &c.,
R. H. MEADE.

The Admiralty to The Colonial Office.

Sir,

Admiralty, 14 August, 1891.

I am commanded by my Lords Commissioners of the Admiralty to transmit herewith, for the information of the Secretary of State, copy of a letter from the Commander-in-Chief on the Australian Station, dated 1st ultimo, No. 298, respecting the proposed movements of the new cruisers in Australasian waters.

I am, &c.,
R. D. AWDRY.

[Sub-Enclosure.]

Sir,

“Orlando,” at Sydney.

With reference to your telegrams Nos. 21, 22, 26, please to acquaint the Lords Commissioners of the Admiralty that I propose carrying out the following arrangements in regard to displaying the new cruisers on their arrival in Australia.

I shall proceed to Thursday Island in H.M.S. “Orlando” as soon as she is ready for sea after being recommissioned, and as there are only thirteen engine room ratings in the “Himalaya” for “Orlando” I shall keep the necessary ratings from the old commission, sending them home afterwards by freight.

I shall take the new ships to Moreton Bay for Brisbane, detaching one or two ships to visit Cooktown and Townsville on the way, as I consider it advisable to encourage the spirit that has been shown lately in Queensland to join with the other Colonies in defraying part of the expenses of the new ships. From Moreton Bay I shall proceed to Sydney, where I propose any pressing repairs shall be done. I hope to leave Sydney about 18th September and proceed to Melbourne, where I shall stop from five to six days, and then proceed to Adelaide, where I shall stay about the same time. I propose detaching one of the new cruisers for West Australia, giving her orders to remain there about a month. This will, I think, give the West Australians a sight of the new class of ship which will quite satisfy them, and which will please them more than a short visit from a larger number of ships. I shall then take the six remaining ships to Hobart, and, after a stay of five days, I shall send two of the new cruisers to New Zealand, to visit all the principal ports, as I have ascertained that the New Zealand Government will be more satisfied and pleased with such a visit than with a shorter visit from a larger number to Wellington only. I shall then take the three ships to be laid up in reserve here, and the torpedo gun-boat, to Sydney, where the three ships will be laid up in reserve, and the “Curacoa,” “Rapid,” and “Lizard” recommissioned. The “Orlando” will at the same time have the repairs and alterations made which have been ordered by their Lordships from time to time.

I have, &c.,
C. T. SCOTT, Rear Admiral,
Commander-in-Chief.

Secretary of the Admiralty.

The

The Colonial Office to The Admiralty.

Sir,

Downing-street, 29 August, 1891.

I am directed by Lord Knutsford to acknowledge the receipt of your letter of 14th instant, transmitting a copy of a letter from the Commander-in-Chief on the Australian Station respecting the movements of the new vessels of the Australasian Squadron.

I am to request that you will inform the Lords Commissioners of the Admiralty that these arrangements will entirely meet his Lordship's wishes, and that he does not doubt they will give great satisfaction in the Colonies.

I have, &c.,

R. H. MEAD.

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our trusty and well-beloved—

CECIL WEST DARLEY, Esquire, M. Inst. C.E., President,
WILLIAM WILKINSON WARDELL, Esquire, M. Inst. C.E., F.R.I.B.A.,
GEORGE ALLEN MANSFIELD, Esquire, F.R.I.B.A.,—

Greeting:—

KNOW YE, that We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do by these presents authorise and appoint you, or any two of you, as hereinafter mentioned, to make a diligent and thorough examination and inquiry into the manner in which certain of the Defence Works of the Colony, executed under the superintendence of the late Colonial Architect, James Barnet, Esquire, have been carried out. The works referred to are as follows:—(1) Botany: Bare Island Fortifications. (2) Port Jackson: Casemate Battery, George's Head; Twenty-five-ton Gun Battery, Middle Head; Observing and Firing Stations at the Heads. (3) Newcastle: Fort Scratchley. (4) Victoria Barracks: Flooring and Drainage. Further: We direct that in the carrying out of your inquiry you give your attention more particularly to the following points:—(1) The nature of the Ministerial authorities which have been given for the various works; whether such authorities have been exceeded, and if so to what extent. (2) The total cost of the several works referred to; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case. (3) The nature of the various contracts connected with the aforesaid works. (4) The method of letting the said contracts, whether by tender or otherwise. (5) The manner in which the said contracts have been carried out. (6) The departures, if any, which have been made from the specifications; the reasons alleged for such departures, with the sufficiency or otherwise of such reasons in your opinion. (7) The rates adopted for payment in the case of extras; whether in your opinion fair or otherwise. (8) The quality of the work. (9) The system adopted in arriving at the lowest tender in the case of Schedule rates. (10) The conduct of Edwin Colley and Henry H. Purkis, Clerks of Works, who are at present under suspension in connection with the works at Bare Island. (11) The manner in which the orders of Our Secretary for Public Works, in regard to the transfer of the Defence Works to Colonel de Wolski, have been carried out. (12) Generally, the whole conduct and management of the said works. And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power, at your discretion, to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is, that you do within four months after the date of this Our Commission, certify to Us, in the office of Our Secretary for Public Works, under your hands and seals, what you shall find touching the premises: And We hereby command all Government officers and other persons whomsoever within Our said Colony that they be assistant to you and each of you in the execution of these presents: And We appoint you the said CECIL WEST DARLEY, Esq., M. Inst. C.E., to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled, "An Act to regulate the taking of evidence by Commissioners under the Great Seal."

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Councillor, CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this fourteenth day of July, in the fifty-fourth year of Our Reign, and in the year of Our Lord one thousand eight hundred and ninety.

(L.S.)

CARRINGTON.

By His Excellency's Command,
BRUCE SMITH.

Entered on record by me, in REGISTER OF PATENTS, No. 14, pages 2 and 3, this fourteenth day of July, one thousand eight hundred and ninety.

For the Colonial Secretary and Registrar of Records,
CRITCHETT WALKER,
Principal Under Secretary.

By His Excellency Sir ALFRED STEPHEN, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, a Companion of the Most Honourable Order of the Bath, Lieutenant-Governor of the Colony of New South Wales and its Dependencies.

WHEREAS, by a Commission bearing date the fourteenth day of July, one thousand eight hundred and ninety, Her Majesty was pleased to appoint Cecil West Darley, Esquire, M.Inst.C.E., William Wilkinson Wardell, Esquire, M.Inst.C.E., F.R.I.B.A., and George Allen Mansfield, Esquire, F.R.I.B.A., to make a diligent and thorough examination and enquiry into the manner in which certain of the Defence Works of the Colony, executed under the superintendence of the late Colonial Architect, James Barnet, Esquire, have been carried out. The works referred to are as follows:—(1) Botany: Bare Island Fortifications. (2) Port Jackson: Casemate Battery, George's Head; Twenty-five-ton Gun Battery, Middle Head; Observing and Firing Stations at the Heads. (3) Newcastle: Fort Scratchley. (4) Victoria Barracks: Flooring and Drainage. Further, that in the carrying out of their enquiry attention be given more particularly to the following points:—(1) The nature of the Ministerial authorities which have been given for the various works; whether such authorities have been exceeded, and if so to what extent. (2) The total cost of the several works referred to; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case. (3) The nature of the various contracts connected with the aforesaid works. (4) The method of letting the said contracts, whether by tender or otherwise. (5) The manner in which the said contracts have been carried out. (6) The departures, if any, which have been made from the specifications; the reasons alleged for such departures, with the sufficiency or otherwise of such reasons in your opinion. (7) The rates adopted for payment in the case of extras; whether in your opinion fair or otherwise. (8) The quality of the work. (9) The system adopted in arriving at the lowest tender in the case of Schedule rates. (10) The conduct of Edwin Colley and Henry H. Purkis, Clerks of Works, who are at present under suspension in connection with the works at Bare Island. (11) The manner in which the orders of Our Secretary for Public Works, in regard to the transfer of the Defence Works to Colonel de Wolski, have been carried out. (12) Generally, the whole conduct and management of the said works: And whereas it was by the said Commission provided that the persons thereby appointed, after due examination of the premises, should, within the space of four months after the date of the said Commission, certify to Her Majesty, in the office of the Secretary for Public Works, under their hands and seals, what they find touching the premises: And whereas, in order to render such enquiry as full and perfect as possible, it is deemed expedient to extend such period as aforesaid: Now, therefore, I, ALFRED STEPHEN, Lieutenant-Governor of the Colony of New South Wales, do, with the advice of the Executive Council thereof, hereby direct and appoint that the period within which the persons appointed by Her Majesty's said Commission shall certify to Her Majesty touching the premises shall be extended, and it is hereby extended from the fourteenth day of November to the fourteenth day of January now next ensuing.

Given under my Hand at Government House, Sydney, aforesaid, this twenty-sixth day of November, in the year of Our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

ALFRED STEPHEN,
Lieutenant Governor,
Administering the Government

(L.S.)

By His Excellency's Command,
BRUCE SMITH.

By His Excellency The Right Honourable VICTOR ALBERT GEORGE, EARL OF JERSEY, Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

WHEREAS, by a Commission bearing date the fourteenth day of July, one thousand eight hundred and ninety, Her Majesty was pleased to appoint Cecil West Darley, Esquire, M. Inst. C.E., William Wilkinson Wardell, Esquire, M. Inst. C.E., F.R.I.B.A., and George Allen Mansfield, Esquire, F.R.I.B.A. to make a diligent and thorough examination and enquiry into the manner in which certain of the Defence Works of the Colony, executed under the superintendance of the late Colonial Architect, James Barnet, Esquire, have been carried out. The Works referred to are as follows:—(1) Botany: Bare Island Fortifications. (2) Port Jackson: Casemate Battery, George's Head; Twenty-five-ton Gun Battery, Middle Head; Observing and Firing Stations at the Heads. (3) Newcastle: Fort Scratchley. (4) Victoria Barracks: Flooring and Drainage. Further, that in the carrying out of their enquiry attention be given more particularly to the following points:—(1) The nature of the Ministerial authorities which have been given for the various works; whether such authorities have been exceeded, and if so to what extent. (2) The total cost of the several works referred to; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case. (3) The nature of the various contracts connected with the aforesaid works. (4) The method of letting the said contracts, whether by tender or otherwise. (5) The manner in which the said contracts have been carried out. (6) The departures, if any, which have been made from the specifications; the reasons alleged for such departures, with the sufficiency or otherwise of such reasons in their opinion. (7) The rates adopted for payment in the case of extras; whether in their opinion fair or otherwise. (8) The quality of the work. (9) The system adopted in arriving at the lowest tender in the case of Schedule rates. (10) The conduct of Edwin Colley and Henry H. Purkis, Clerks of Works, who are at present under suspension in connection with the works at Bare Island. (11) The manner in which the orders of Our Secretary for Public Works, in regard to the transfer of the Defence Works to Colonel de Wolski, have been carried out. (12) Generally, the whole conduct and management of the said works: And whereas it was by the said Commission provided that the persons thereby appointed, after due examination of the premises, should within the space of four months after the date of the said Commission, certify to Her Majesty, in the office of the Secretary for Public Works, under their hands and seals, what they find touching the premises: And whereas, in order to render such enquiry as full and perfect as possible, the period within which the persons so appointed should certify to Her Majesty, was by an instrument dated the twenty-sixth day of November, one thousand eight hundred and ninety, extended to the fourteenth day of January, one thousand eight hundred and ninety-one, and whereas it has been represented that a further extension of such period is necessary to enable the said Commission to complete their labour and submit their report: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, Governor and Commander-in-Chief of the Colony of New South Wales, do, with the advice of the Executive Council thereof, hereby direct and appoint that the period within which the persons appointed by Her Majesty's said Commission shall certify to Her Majesty touching the premises shall be extended, and it is hereby extended from the fourteenth day of January to the fourteenth day of March now next ensuing.

Given under my Hand at Government House, Sydney aforesaid, this fifth day of February, in the year of Our Lord one thousand eight hundred and ninety-one, and in the fifty-fourth year of Her Majesty's Reign.

JERSEY.

By His Excellency's Command,
BRUCE SMITH.

ROYAL COMMISSION ON DEFENCE WORKS.

MINUTES OF PROCEEDINGS.

The first meeting was held on 16th July, 1890, at the Public Works Department.

PRESENT :—

C. W. Darley, Esq., M. Inst. C.E., Engineer-in-Chief for Harbours and Rivers, President.
W. W. Wardell, Esq., M. Inst. C.E., F.R.I.B.A. | G. A. Mansfield, Esq., F.R.I.B.A.

The Royal Commission issued by the Governor on 14th July, 1890, was produced, accepted, and read.

A discussion took place with reference to the appointment of a secretary, the fixing of days for the holding of meetings, and the order in which work should be taken. The appointment of a secretary was left in the hands of the President, as also was the arranging for the petty cash account and for the Government printing.

The second meeting was held at 2 p.m. on 21st July, at the Public Works Department.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The President reported the appointment of Mr. Percy R. Meggy as Secretary to the Commission.

The President stated that a letter had been written by Colonel de Wolski, R.E., to the Under Secretary for Public Works on 4th July, suggesting that the Commission should first inspect the Bare Island Fortifications and the George's Head Battery, with a view of presenting an *interim* report to the Minister, so that a settlement might be come to as to what repairs were necessary at the fortifications named. Colonel de Wolski's suggestion had been approved by the Minister, who asked the Commission to send in a preliminary report dealing with these two fortifications, so that repairs might be at once taken in hand.

The President reported that the Minister had previously appointed a Board, consisting of Mr. Wardell and himself, to investigate certain charges brought by Colonel de Wolski against the mode in which some of the forts were constructed.

Two reports, dated 2nd and 10th June, dealing with Bare Island Fort, Botany Heads, were put in, and laid on the table. These reports had been sent on to the Colonial Architect for immediate answer to the charges therein contained, and Mr. Barnet's reply was also put in.

The Commission decided to visit Bare Island on 25th July.

The third meeting was held on Friday, 25th July, at 10 a.m.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The Commission, accompanied by Colonel F. R. de Wolski, R.E., Director of Military Works, assembled opposite the Australian Club, and were driven to Bare Island.

After a thorough inspection of the works at Bare Island Fort, the Commission returned to town at 4.30 p.m.

The fourth meeting was held on Monday, 28th July, at 2 p.m., at the office of the Engineer-in-Chief for Harbours and Rivers, Public Works Department.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq. | G. A. Mansfield, Esq.

A letter from Mr. John M'Leod to the Minister for Public Works, dated 4th June, 1890, was read.

A letter from Mr. John Norman, Reformatory, Rookwood, to the Minister for Public Works, dated 19th July, 1890, submitted by the Minister to the Commission, was read, and ordered to be re-submitted when dealing with Middle Head Fort.

Mr. James Barnet, ex-Colonial Architect, was then sworn and examined.

It was decided to meet again at the same place on 31st July, and the Secretary was instructed to summon Colonel de Wolski, R.E., Director of Military Works, Messrs. H. H. Purkis and Jno. L. Bruce to attend the meeting for examination; Mr. Bruce to be prepared to explain the measurements at the Bare Island Barracks, and to produce any note or measurement book he might have.

The fifth meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers, Public Works Department, on Thursday, 31st July, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

At the invitation of the Commission, Colonel F. R. de Wolski, R.E., Director of Military Works, was also present during examination of the witnesses.

The minutes of the two preceding meetings were read and confirmed.

The President reported that he had written to Mr. James M'Shane, Chief Clerk in the Colonial Architect's Department, requesting him to furnish full particulars of the action taken on certain papers recorded in the record-books of his Department. Mr. M'Shane had written in reply stating that all the papers mentioned had been marked off to Mr. Colley, and adding that all papers and reports in connection with the defence works that were in the office of the Colonial Architect had been forwarded to the Department of Works.

The President said he had not been satisfied with the reply, which gave no information as to what action had been taken by Mr. Colley, to whom the papers had been marked off, and he had accordingly written another letter to Mr. M'Shane, asking him what record was kept in the Colonial Architect's Department of the action taken by those to whom written instructions were given, and whether or no such action could be traced in the record-books of the Department. This letter had only just been sent, and no reply had as yet been received.

Two witnesses—namely, Mr. J. L. Bruce, Foreman of Works during the construction of the Bare Island Barracks, and Mr. H. H. Purkis, Clerk of Works, both in the Colonial Architect's Department, were then examined.

The sixth meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers, on Wednesday, 20th August, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

Also, by invitation, Colonel F. R. de Wolski, R.E., Director of Military Works.

The minutes of the preceding meeting were read and confirmed.

The President stated that he had received a reply from Mr. Jas. M'Shane, Chief Clerk in the Colonial Architect's Department, dated 31st July, with reference to the method pursued by that Department in recording the action taken on instructions contained on papers. Mr. M'Shane stated that, when a paper was marked off to an officer in the record-books of the office, it was considered sufficient evidence that the officer named had received the papers. The practice of the Department was for officers to furnish reports on separate covers, which were registered separately in the minute-book, and the number of the original paper being connected also in the book showed when or whether the paper had been reported on. In the cases referred to the books showed that Mr. Colley had not reported on them, and unless papers were returned through the record-books it was impossible to say whether a report had been made. Mr. M'Shane added that many papers marked off for report might possibly have been dealt with by verbal arrangement or personal interview with Colonel Scratchley.

The President stated that a memorandum had been sent to the Commission by Mr. Jno. L. Bruce, giving additional information on certain points touched upon in his evidence taken before the Commission on the 31st ultimo. The Secretary read the memorandum in which Mr. Bruce stated :—(1) With regard to the dressing of the bottom area of the excavation for the new barracks already made when he took charge, that the whole of the area when he took charge was lowered 10 inches, so as to suit the levels of the plans given him to work from, which, of course, involved the breaking-up of the former area bottom and the redressing of the bottom of the whole area existing at the stoppage of the work; (2) as to the quantity of bricks stated by him to be on the ground at the stoppage of the work, he had arrived at the number named by him by measuring the dimensions of the two stacks in the lower yard, as shown by the accompanying extract from his field book, which gave 51,000 bricks, but he only allowed for 47,000 on being informed that only that number had been invoiced; (3) with regard to the use of powder in the rock excavations, he was satisfied that the rock won with the aid of wedging shots, for which he had Mr. Purkis's permission, did not exceed about 118 cubic yards; (4) his authority from Mr. Purkis to charge the rubble packing behind concrete at the west corner of the old excavation by time, instead of under item in schedule, was contained on the voucher for 6th May, which was in Mr. Darley's hands. Mr. Bruce added, with reference to the foundation of the surcharged retaining wall above and behind the concrete retaining wall put in by him at the west corner of the south-west excavation, that he had naturally supposed that the builders of such a wall had carried it down to the rock, otherwise he should have underpinned it.

The President expressed his satisfaction at the way Mr. Bruce had given his evidence, and observed that he appeared to have done his duty throughout.

The President stated that a number of documents bearing on the suspension of the contract for the erection of the Barracks at Bare Island had been received by him from the Crown Solicitor's Office, where they had been sent for a legal opinion. The documents were handed to the Secretary, and were subsequently ordered to be printed.

A memorandum from the Director of Military Works to the Under Secretary for Public Works, bearing on "payment for iron work omitted from Bare Island Contract," was read by the Secretary, and two other memoranda from the Director of Military Works to the Under Secretary for Public Works, with reference to Mr. Barnet's evidence before the Commission, were handed over to his care.

Mr. R. L. Scrutton was then examined.

The Commissioners then examined the claim made by Mr. M'Leod on account of the contract at the Bare Island Barracks, passed several items, and postponed the re-consideration of others pending the examination of Mr. M'Leod.

The seventh meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Friday, 20th August, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

The President handed in a letter from R. L. Scrutton, stating that the amount paid for girders by Messrs. M'Leod and Noble on the Bare Island Contract was £319 17s. 4d.

Messrs. John M'Leod and John Noble were then examined with reference to certain items of their claim to compensation for the non-fulfilment of the contract at the Bare Island Barracks.

The Commissioners then went through the remaining items of the claim, and decided the amount they would recommend should be awarded to Mr. M'Leod on account of the suspension of the work.

The next meeting was called for Monday, the 25th instant, and the Secretary was instructed to request Colonel de Wolski, R.E., Director of Military Works, to attend.

The eighth meeting was held on Monday, 25th August, at the office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

The President stated that he had drawn up a progress report dealing with the Bare Island Barracks, in order that the Commission might have something to go upon.

The Secretary then read the report, and was instructed to have copies both of it and of the Commissioners' award on the contractors' claim placed in the hands of the Commission, in order that they might be finally dealt with at the next meeting.

Colonel de Wolski, R.E., Director of Military Works, who had been called to attend as a witness, said he would prefer if the Commission, instead of asking him questions which he could not properly answer without reference to papers not now in his possession, would allow him to draw up a statement giving a consecutive account of what had led up to the suspension of the contract at the Bare Island Barracks, together with details of transfer of the papers from the Colonial Architect's Office to the new Military Works Branch, and the alterations made in the designs for the different works which formed the subject of inquiry by the Commission.

Colonel de Wolski's offer was accepted; the Secretary was instructed to give him access to all the papers in the possession of the Commission; and the next meeting was called for Wednesday afternoon.

Printed copies of the papers dealing with Bare Island Barracks, which had been referred to the Crown Solicitor for opinion, were handed in, as also copies of a *resumé* of the travelling expenses of Messrs. Colley and Purkis from 1881 to 1889, and of a summary of Mr. Purkis's weekly reports for Bare Island for 1881 and 1882.

The ninth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Wednesday, 27th August, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

The progress report drawn up by the President, and submitted to the last meeting, was read by the Secretary as amended, formally agreed to, and the signatures of the Commissioners attached thereto. The Commissioners' award was also finally adopted and signed.

Colonel de Wolski, R.E., Director of Military Works, who was to have made a statement on the subject of Bare Island Fort and the fortifications generally, was reported to be away at Newcastle, and the meeting was accordingly adjourned till Wednesday next, to give him an opportunity in the meantime of preparing the statement he had volunteered.

The Secretary was instructed to request Messrs. Colley and Purkis to attend a meeting of the Commission on Thursday next, at 2 p.m.

The tenth meeting was held on Wednesday, 3rd September, at 2.30 p.m., at the office of the Engineer-in-Chief for Harbours and Rivers.

PRESENT :—

C. W. Darley, President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

The President handed in an unofficial letter which he had received that morning from Mr. J. Barling, Under Secretary for Public Works, in which he stated that he had given a brief summary of the Commissioners' report, which the Minister intended to bring before the Cabinet on Monday, but it occurred to him that, in view of the disgraceful work which had been carried out by Mr. M'Leod, they should, perhaps, by coming to terms with him in regard to the barrack work, be to a certain extent condoning his action in connection with other fortification works. Mr. Barling, therefore, asked the President to take this aspect of the case into consideration and further advise.

It was decided to send the following letter in reply :—

“Dear Barling,

“I brought your letter before the members of the Commission this afternoon, and we are unanimously of the opinion that the proper course for the Government to take is to eject M'Leod, the contractor, or in other words to give him notice that he is no longer required to carry out works in connection with the completion of the barracks, and to consider the order for the work cancelled. This will, of course, enable the Minister to at once issue the necessary instructions to the Director of Military Works to invite tenders for a new building, which we understand is urgently required.

“Then, as to further approaching the contractor for a settlement of his claims, we are of opinion that the Minister can deal directly with the contractor now as regards the barracks without prejudicing any claims the Government may have against him hereafter for bad work in the fort. This is a point, however, which we think it might be advisable to get the opinion of the Crown Solicitor upon.”

“C. W. DARLEY.”

Colonel F. R. de Wolski, R.E., Director of Military Works, then handed in a sworn statement on the subject of Bare Island Fort, to which he attached his signature, and was briefly examined by the Commission.

Witness promised to prepare another statement dealing with the transfer of the defence works from the Colonial Architect's Department to the Military Works Branch.

The eleventh meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Thursday, 4th September, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

Messrs. Colley and Purkis were examined. The latter handed in a sworn statement to supplement his evidence given at a previous examination, and in answer to certain comments contained in the Report by the Board of Inquiry.

The Secretary was instructed to call Messrs. J. B. Murray, George Flanagan, Marshall, and Jagger to give evidence at a meeting to be held at the same place and hour on Monday next.

The twelfth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Monday, 8th September, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

Mr. John B. Murray, working foreman during the construction of the Bare Island Fort, was examined.

The Secretary reported that he had also summoned George Flanagan, by letter addressed to Bare Island, to attend the meeting for the purpose of giving evidence, but that he was informed by Colonel de Wolski that before the notice could reach him Flanagan had been temporarily called away from Bare Island to the casement at George's Head, where he now was. The Secretary also stated that he had not summoned Marshall and Jagger to attend as instructed, not having yet obtained their addresses. He was instructed to ascertain the whereabouts of the men named, and summon them to attend a meeting of the Commission on Wednesday afternoon next.

The thirteenth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Wednesday, 10th September, at 2.30 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

The minutes of the preceding meeting were read and confirmed.

Mr. John Jagger, contractor for the telegraph station at La Perouse during part of the time that the Bare Island Fort was being put up, and whose work was inspected by Mr. Purkis, was examined, as also was Mr. George Flanagan, working mason, employed on the construction of the Bare Island Fort.

The fourteenth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Monday, 15th September, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

Messrs John M'Leod and John Noble were examined.

The fifteenth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers, on Wednesday, 1st October, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.
 W. W. Wardell, Esq., | G. A. Mansfield, Esq.
 Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The minutes of the preceding meeting were read and confirmed.

A letter from Mr. John M'Leod to the Royal Commission, dated 25th September, was read by the Secretary, in which Mr. M'Leod applied to be heard in support of the items of his account in connection with his contract at Bare Island Fort. He felt convinced, upon hearing the explanation of Mr. Noble and himself on the subject matter of the claim, the Commission would recognise the fairness and propriety of the charges. The writer said that he was taken very much by surprise, when appearing before the Commission on the last occasion, to find that the account in question was being inquired into, and, if he had been forewarned that information on this subject would be required of him, he would have arranged to give such a full and satisfactory account of the items as would have warranted the Commission in reporting upon them favourably. The writer added that, while he was prepared to assist the Commission in their investigations in every possible way, he must, in justice to himself, stipulate that the Report forwarded by the Commission to the Government regarding his account must not be taken to bind or prejudice him in any way.

The President stated that, on receiving the above letter, he had instructed the Secretary to call Messrs. M'Leod and Noble to make a further statement to the Commission, and they were waiting to be examined.

Messrs. M'Leod and Noble then gave further evidence with respect to their claim in connection with the Bare Island Barracks, and were informed that their statement would be duly considered by the Commission.

Colonel de Wolski handed in a printed statement respecting the "Transfer of the Military Works and Buildings from the Colonial Architect's Department to the Military Works Branch," which he had prepared at the request of the Commission.

The Secretary stated that, in accordance with the instructions of the President, he had prepared a *précis* of the evidence in a narrative form, with a view of enabling anyone to understand the bearings of the case at a glance, and he suggested that the same should be printed. The President stated that the *précis* was merely for the use of the members of the Commission to assist them in framing their Report, and that it would be an unnecessary departure to have it incorporated with the printed documents. The suggestion was not adopted.

It was decided to pay another visit to Bare Island on Friday, the 3rd instant, for the purpose of further inspecting the work, and the Secretary was instructed to make the necessary arrangements for starting at 10:30 a.m.

The sixteenth meeting was held on Friday, 3rd October, at 11 a.m.

PRESENT :—

W. W. Wardell, Esq., | G. A. Mansfield, Esq.

The Commission, accompanied by Colonel de Wolski, R.E., Director of Military Works, assembled, and were driven to Bare Island. After a thorough inspection of the newly-opened portions of the merlon at Bare Island Fort, and examining the work generally, the Commission returned to town at 3.30 p.m.

The seventeenth meeting was held on Friday, 10th October, at 2.30 p.m.

PRESENT :—

C. W. Darley, Esq., President.
 W. W. Wardell, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The Commissioners proceeded to the Casemate Battery, George's Head, of which they made a thorough inspection. Some concrete cuttings were examined, and it was found that large blocks of stone had been thrown in, and the concrete had been carelessly put together. The stone generally was found to be fairly hard sand-stone, but, where the epaulment had been cut through, the work was very coarse—large stones had been put in and not properly bedded in the concrete.

Colonel de Wolski explained that on the plan marked by Colonel Scratchley, and signed by the contractor, the expression "coarse concrete" was used with reference to a large portion of the work, and that putting in big blocks of stone without proper bedding might possibly be the contractor's definition of the term coarse. The President observed that the question the Commission had to decide was whether any special provision had been made in the specification for the payment of this part of the work different from any other portion, and also whether there was anything on the original contract to lead the contractors to suppose that coarse concrete of such a character would be accepted.

Apart from the epaulment, however, the Commissioners decided that they did not see sufficient to warrant them in making extensive cuttings into the fort.

The concrete arches over each of the three 10-inch 18-ton guns were observed to be slightly cracked in the centre in front, and some of the locks in the doors in the adjoining passages were observed to be broken. It was explained that this was the result of the shocks from the firing of the guns. The Commissioners returned to town at 6.30 p.m.

The eighteenth meeting was held at the Office of the Engineer-in-Chief for Harbours and Rivers, on Thursday, 30th October, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the three preceding meetings were read and confirmed.

The President stated that the inquiry into the first item named in the Commission—that of the fortifications at Bare Island—was nearly over, and the Draft Report, which had been drawn up, would be laid before them in a few days. They had now to consider what would be the best course to pursue with regard to the other subjects included in the inquiry.

After some discussion it was decided to visit the casement battery at George's Head, the 25-ton gun battery at Middle Head, and the observing and firing stations at South Head, on Tuesday next, starting from the floating jetty at 10.30 a.m., Colonel de Wolski to be invited to accompany the Commission.

The Secretary was instructed to obtain the specifications for the George's Head Battery, the measurement-book for the same, the voucher giving particulars of the final payment, and the plan, with a view of ascertaining what sort of concrete had been named in the specification and plan, and whether the contractor had been paid less for it than for ordinary concrete.

It was decided to pay T. C. Harlow 1s. per day for acting as messenger.

The nineteenth meeting was held on Tuesday, 4th November, at 10.30 a.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The Commissioners assembled at the floating jetty and embarked on board the Government steam launch, the "Day Spring," for South Head. They landed at Watson's Bay and examined the observing and firing stations situated underground on the slope of the hill. Colonel de Wolski pointed out the dampness inside the chambers and that it had permeated the walls and flooring. The Commissioners decided to examine the specifications, in order to ascertain what precautions, if any, had been taken to prevent the dampness from soaking in from the outside. Upon further examination it was found that the soakage was due to defective surface drainage, and that the present flow of water from the slope of the hill into the shaft might be easily diverted and made to flow in another direction. No other defect was observable in the stations, and the Commissioners did not think there was anything to warrant the expense of cutting into the work.

The Commissioners then proceeded to Middle Head, where they inspected the 25-ton gun battery. Colonel de Wolski stated that a short time ago he had had occasion to slightly alter the shape of the merlons in front of the guns. He found that the concrete was very easily removed and could be taken away in large masses. The Commissioners examined the concrete which had been thus removed, and which bore evidence of very imperfect workmanship. As the surface of the altered portion had been subsequently rendered, and was not therefore open for inspection, the Commissioners left orders to have a cutting made in front of the gun, with a view of examining the nature of the filling.

The Commissioners then visited George's Head casemate battery, and decided, on account of the reported dampness of the magazine, to cut down through the concrete on top of the magazine. They also ordered a cutting to be made in continuance of the one made by Colonel de Wolski, with a view of testing whether there was any difference between the coarse concrete already opened out, and which was marked "Coarse Concrete" on the plan, and the adjoining mass, marked "Fine Concrete" on the plan. Attention was also called to the dampness of the firing station at George's Head. It was decided to examine the specification, with a view of ascertaining what precautions, if any, had been taken for preventing the soakage of water through the concrete.

The twentieth meeting was held at the office of the Engineer-in-Chief for Harbours and Rivers on 13th November, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the two preceding meetings were read and confirmed.

The Secretary reported that he had been unable as yet to obtain the plans and specifications asked for by the Commission, owing to the sudden pressure of engagements on the Director of Military Works, who was leaving Sydney that day, and had been prevented by his other duties from getting together all the documents and plans. A few, however, had been placed in his (the Secretary's) hands on the previous night, such as :—(1) Specification for the construction of observing and firing stations—M'Leod & Noble, 6/9/88; (2) specification for alterations and additions to the 25-ton gun battery, Middle Head—M'Leod & Noble, no date; and (3) specification for renewing sashes at Victoria Barracks, from John Goddard, 13/12/89. The specifications not yet to hand were :—(1) For the construction of the 25-ton gun battery at Middle Head; (2) for the construction of George's Head casemate; and (3) for the construction of Victoria Barracks. The Secretary was instructed to look up the required specifications and make a *précis* of new papers handed over to him by the Director of Military Works.

Colonel Boddam and Colonel de Wolski, R.E., Director of Military Works, were then examined.

The latter handed in a sworn statement relating to the transfer of the military works from the Colonial Architect's Department to the Military Works Branch.

After deciding to visit Bare Island on Tuesday next, the 18th instant, and asking Colonel Boddam to attend, the Commission adjourned, first, however, countermanding the order previously given for the opening up of the concrete in front of the 25-ton gun at Middle Head.

The twenty-first meeting was held at Bare Island on Monday, 24th November.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

And also, by invitation, Colonel Boddam, R.E.

The Commissioners assembled at noon, and arrived on the island shortly after 1 p.m. They made a thorough inspection of the concrete which had been opened up since their last visit by Colonel de Wolski, and found it, for the most part, as bad as any which had been examined at previous visits.

The evidence given by the contractor (Mr. Noble) in answer to Q. 1066, that "special attention was paid to the arches," was, however, found to be substantially correct, that part of the concrete being far superior to the rest, and of good quality; but the deeper the concrete on the merlons was opened up the more disgraceful and slovenly the work appeared, the men having apparently tilted in the stone from the wheelbarrows without taking the least care about mixing the concrete or ramming it in.

The parapet wall was also opened up during the Commissioners' visit. The centre was found to contain large soft stones, not properly bedded in the concrete, although the specification distinctly provided that the latter should consist of "approved hard sandstone;" and, when large stones are used, that they should be properly bedded in the concrete is an understood thing. The Commissioners decided to have photographs taken of the cuttings made in the concrete, and the Secretary was instructed to make the necessary arrangements with the Government photographer, and to take note of the exact spots photographed. The Commissioners returned to town at 4.30 p.m., and the Secretary was instructed to call a meeting on the Monday following, for the consideration of the Draft Report on Bare Island Fort.

The twenty-second meeting was held on Monday, 2nd December, at 3 p.m., in the office of the Engineer-in-Chief for Harbours and Rivers.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the two preceding meetings were read and confirmed.

The Secretary reported that, in accordance with the instructions from the Commission, he had visited Bare Island Fort on the 27th ultimo, in company with Mr. Bischoff, the Government photographer, and that six successful impressions had been taken of the undermentioned spots, viz. :—

- No. 1. Over No. 2 magazine, longitudinal section from above.
- No. 2. Over No. 4 magazine, also from above.
- No. 3. Over No. 4 shell-room, from below. In this case the instrument was placed inside the cutting, and, although necessarily very cramped for room, the photographer succeeded in obtaining a first-class view of the work.
- No. 4. Over spring of 20-ft. arch, from the south side, from above.
- No. 5. Over No. 2 shell-room, from above. This was a portion of an extensive cutting, of which the longitudinal section first photographed was but a small part.
- No. 6. The same as No. 1, but with the rubbish and loose stones cleared out, and showing the holes more distinctly.

There was a very strong wind blowing at the time, which made the task more than usually difficult, and the plate glass attached to the instrument, and which was necessary to the taking of the view, was all but smashed to pieces early in the day. Fortunately, however, the difficulties were overcome, and six good views of some of the worst specimens of work on the Fort were obtained.

A letter was read from Colonel Boddam, Acting Director of Military Works, stating that, in reconstructing the Bare Island Battery, the merlon covering the casement would be reduced considerably, and the exterior slopes of the embrasures flattened.

The 6-inch gun pits were considerably higher than the existing one, consequently less cover would also be required for some of the magazines. It would, therefore, be unnecessary to replace a considerable portion of the concrete found to be defective.

The floors of the passage would also have to be lowered, and a different material consequently used in place of the tar-paving. In view of the above altered circumstances, the writer suggested that the defective work should be re-valued, and a refund obtained in money in lieu of making good the defective work. Colonel Boddam expressed himself ready to have the defective work measured up if the Commission deemed it advisable, in order to assist in the re-valuation.

It was decided to adopt the suggestion made by Colonel Boddam, and the Secretary was instructed to request him to re-measure the work in the way proposed.

The Draft Report on Bare Island Fort was then read by the Secretary, and, after various emendations and additions, was adopted and ordered to be printed.

The Secretary was instructed to call a meeting on Wednesday the 3rd instant, at 2 p.m., for the examination of Messrs. Quodling, Chief Accountant, and James Barnet, ex-Colonial Architect, *re* the transfer of the Defence Works from the Colonial Architect's Department to the Military Works Branch, and other matters.

The twenty-third meeting was held on Wednesday, the 3rd December, in the Office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the preceding meeting were confirmed.

The Secretary reported that he had handed over the Draft Report on Bare Island Fort, with the exception of the final conclusions and recommendations, to the Government Printer, and hoped to have copies by Friday next.

The Secretary stated that he had received a verbal report from the Acting Director of Military Works to the effect that the work of re-measuring the concrete, &c., at the Bare Island Fort had been commenced, and would be completed in a few days.

Six excellent views of the concrete at Bare Island Fort, taken by the Government photographer, Mr. Bischoff, were handed in.

Messrs. W. H. Quodling, Chief Accountant, and James Barnet, ex-Colonial Architect, were then examined, after which the meeting was adjourned till 2 p.m. on the following day for the examination of Mr. M'Shane, Mr. Barnet's Chief Clerk.

The twenty-fourth meeting was held on 4th December, in the Office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

The President reported that the application for the extension of the Commission for two months had been approved, and another Commission had been issued to cover the period named.

The President stated that an application had been made by Mr. Purkis for an advance on account of the salary which was not paid during his suspension. He had recommended that an advance be made to him, but he (the President) had since been informed that in case a Civil Servant under suspension was dismissed he forfeited his salary during the period he was under suspension.

Mr. James M'Shane, Chief Clerk in the Colonial Architect's Department, was then examined, after which the Commission adjourned.

The twenty-fifth meeting was held on Thursday, 11th December, at 3.15 p.m.

PRESENT :—

C. W. Darley, Esq., President.

G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The Commission met at the floating jetty, where a steam launch was obtained which conveyed them to George's Head casemate battery. An inspection was made of the work, especially of the extension to the cutting in the coarse concrete, which had been further opened out by order of the Commission. The cutting now embraced both the coarse and fine portions of the concrete, as marked on the plan, but no difference was found between the two; in fact, the newly opened part, supposed to be "fine" concrete, was so bad that an arm could be easily thrust into vacancies in the rubble and loose stone of which it was composed. The Commissioners then examined the doorway, which, under the directions apparently of Mr. Purkis, had been cut through the epaulment in an entirely different direction to that ordered by Major Penrose, at that time the officer in command. It was decided to call a meeting of the Commission on Monday, at 2 p.m., and to summon Mr. Purkis to attend in order to hear his explanation. The Secretary was also instructed to ask Colonel de Wolski to be present, and to bring with him plans of George's Head casemate battery, and the specifications, measurement-book, and final voucher, and details of final measurements.

The twenty-sixth meeting was held on Monday, 16th December, at the office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R. E., Director of Military Works.

The minutes of the preceding meeting were read and confirmed.

Colonel de Wolski produced plans of George's Head casemate battery and the specifications, measurement book, voucher, and details of final measurements, which the Commission carefully examined.

Mr. H. H. Purkis was then re-examined, after which the Commission adjourned.

The twenty-seventh meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers, on 24th December, at 11 a.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

A letter was read from Mr. James Barnet, dated the 22nd instant, in which he requested that the evidence of Messrs. Colley, Purkis, and M'Shane might be obtained on the questions referred to in his evidence

evidence taken on the 3rd instant, and that his (Mr. Barnet's) reply of 6th August, 1889, to Colonel de Wolski's report of 2nd July, 1889, upon works at Middle Head, be laid before the Commission and published with the evidence.

The Secretary was instructed to inform Mr. Barnet that the evidence of Mr. M'Shane on the subject referred to had already been taken, and that, in compliance with his request, Messrs. Colley and Purkis would also be examined. The Secretary was further instructed to request Colonel de Wolski to look up the documents mentioned by Mr. Barnet and submit them to the Commission at their next meeting.

A letter was read from Mr. Purkis, addressed to the President on the 22nd instant, requesting that he might be allowed to give further evidence in connection with the asphaltting done at the casemate battery at George's Head, as he was confident that an entirely different aspect would result from the information he desired to lay before the Commission. It was decided to comply with Mr. Purkis's request and to take his evidence at an early date.

After examining plans in connection with George's Head casemate battery, the Commission adjourned.

The twenty-eighth meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m. on 14th January, 1891.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The President laid a Draft Report of George's Head Casemate Battery on the table.

The President stated that the time of the Commission had been further extended for two months, namely, from January 14th to March 14th.

A letter was read from Mr. Barnet, dated 30th December, 1890, stating that he had requested that Mr. Telfer, Foreman of Works under Mr. Colley at the Victoria Barracks, and not Mr. Purkis, should be examined on the subject of the transfer. Touching Colonel de Wolski's report on the work at Middle Head, and his (Mr. Barnet's) reply thereto, he (Mr. Barnet) thought it only right that these papers should be placed before the Commission and printed with the evidence, as they formed the origin of the inquiry.

The Secretary was instructed to inform Mr. Barnet that, although a search had been made for the original documents to which he referred, they had not been found; but that copies of the original draft, on which Mr. Barnet's reply was based, had been found, from which the Commissioners ascertained that the papers related to the failure of the foundations of the 25-ton gun at Middle Head. They considered this was outside the scope of their inquiry and, consequently, decided not to have the documents in question printed.

The Secretary stated that Mr. Telfer, who had been summoned to attend, was temporarily absent at Bourke, but would be returning in the course of a few days.

Messrs. Colley and Purkis were then examined, after which the Commission adjourned till the following Thursday afternoon, when it was decided to visit Newcastle by the 7 p.m. train.

The twenty-ninth meeting was held on Friday, 16th January, at the "Great Northern Hotel," Newcastle, at 11 a.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The Commission proceeded to Fort Scratchley, of which they made a thorough inspection, and in the afternoon drew up a Draft Report.

Colonel de Wolski made a statement with reference to the manner in which the transfer of the Newcastle works was made, and was requested to write a memorandum on the subject for the information of the Commission.

It was decided to examine Mr. Bushby at some future time on the subject of the transfer, especially as to the alleged retention of the keys of the fort, the renting of the office, and as to his authority for constructing a road round the fort under a contract for alterations and additions thereto.

The Commission then adjourned.

The thirtieth meeting was held on Thursday, 23rd January, at the office of the Engineer-in-Chief for Harbours and Rivers, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq. | G. A. Mansfield, Esq.

Also, by invitation, Colonel de Wolski, R.E., Director of Military Works.

The minutes of the two preceding meetings were read and confirmed.

A letter was read from the Director of Military Works, dated 20th January, 1891, bringing under the notice of the Commission a conversation reported to have been overheard between Purkis and Flanagan, at Bare Island Fort, on 16th January, 1891, in the course of which the latter was alleged to have affirmed (1) that a man was dismissed, or threatened with dismissal, for not wheeling up stone for dry filling in concrete work fast enough during Purkis's absence; and (2) that Purkis was entirely innocent of ever having seen rubbish put in the concrete, owing to the precautions taken by the contractor.

A letter was read from the Director of Military Works, dated 20th January, 1891, in which it was stated that, since the last meeting of the Commission, Mr. Purkis had visited Bare Island Fort with Mr. Pinchen, Clerk of the Works to the Military Works Branch, for the purpose of comparing on the spot the

the original measurements made by him with those recently made by his (Colonel de Wolski's) officers, with the result that Purkis's measurements for tar-paving were found to be correct. There was a clerical error in his measurements for concrete foundation, resulting in an over-payment to the contractor of £11 2s. 6d., while, in the items for Seyssel asphalt and concrete wall round barrack site, the charge of over-measurement was fully sustained.

The document was ordered to be printed.

The Secretary read some correspondence with reference to the Colonial Architect's authority for the construction of the road round Fort Scratchley, Newcastle, viz.:—(1) A letter from the Mayor of Newcastle, dated February, 1882, to the Colonial Secretary, asking for the formation of the road; (2) a reply, dated 6th July, 1882, by Colonel Scratchley, to whom the matter was referred; (3) a letter from the Town Clerk of Newcastle, dated May, 1886, asking that the road might be carried out; (4) a letter from Mr. Joseph Creer, dated 22nd July, 1886, to the Under Secretary for Public Works, on the same subject; (5) a minute from the Colonial Architect, dated 13th August 1886, with reference to the same; (6) a further minute with reference to the same, by the Under Secretary for Public Works, dated 24th September, 1886; (7) and a memorandum, dated 23rd January, 1891, by Colonel de Wolski, dealing with the whole subject; as also further (8) an undated memorandum by Colonel de Wolski, entitled "Alterations and additions to Fort Scratchley, Newcastle."

The Secretary was instructed to have the above papers printed.

The following witnesses were then examined, viz.:—Karl Landerer, Bombardier at Fort Scratchley, Newcastle; Samuel Campbell, contractor, and ex-Government Inspector at Newcastle; Robert Bushby, Foreman of Works in the Colonial Architect's Department, formerly employed at Newcastle; and Archibald T. Telfer, Foreman of Works in the Colonial Architect's Department, formerly employed at Victoria Barracks.

The thirty-first meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers on Friday, 30th January, 1891, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq.

The minutes of the preceding meeting were read and confirmed.

Mr. Wardell laid on the table a Draft Report on the Middle Head Battery.

The Secretary laid on the table revised copies of the Reports on Bare Island Fort, George's Head Casemate, and Fort Scratchley, Newcastle, together with the Appendices.

Two letters were read, signed John Norman, Reformatory, Rookwood—one, dated 23/12/89, addressed to Colonel de Wolski, R.E., and the other, dated 19/7/90, addressed to the Minister for Public Works (the Hon. Bruce Smith). Both letters, which had been referred to the Commission, contained statements reflecting on the manner in which the concrete work at Middle Head was carried out while the writer was employed there.

Mr. John Norman was then examined, after which the Commission adjourned.

The thirty-second meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers on Wednesday, 18th February, 1891, at 3 p.m.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The Secretary laid on the table printed copies of the minutes, and asked permission to make certain verbal alterations, which was granted.

A letter was read from Mr. Colley, applying to be further examined before the Commission finally closed. The President stated that, on receiving the application, he had instructed the Secretary to call Mr. Colley to give evidence at that meeting.

Mr. Colley was then re-examined.

The President said he had requested Mr. Purkis to attend and give evidence that afternoon, thinking he was carrying out a suggestion made in writing by one of the members of the Commission, but it appeared, on referring to the letter, that he had summoned the wrong man. However, as the point on which further information was desired was one which Mr. Purkis could probably clear up, he suggested that they examine him.

Mr. Purkis was then examined, but, nothing being elicited that had not been already placed before the Commission, it was decided that the evidence should not be transcribed.

The Commission then went through the Reports, made various emendations, drew up others on the Victoria Barracks and the Observing and Firing Stations at the Heads, and adjourned.

The thirty-third meeting was held in the office of the Engineer-in-Chief for Harbour and Rivers, on Wednesday, 4th March, 1891, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.
W. W. Wardell, Esq. | G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

Three revised copies of the Report, together with the Progress Report, Appendices, Minutes and Evidence, were laid on the table. Certain alterations which had been made in the Report since last meeting were approved, and a few more were added. The Report was then finally adopted, and the Secretary was instructed to have a copy of the Report as finally revised laid on the table by 2 p.m. on the following Friday, in order that the Commissioners might attach their signatures thereto. The Commission then adjourned.

The thirty-fourth meeting was held in the office of the Engineer-in-Chief for Harbours and Rivers, on
Friday, 6th March 1891, at 2 p.m.

PRESENT :—

C. W. Darley, Esq., President.

W. W. Wardell, Esq.

G. A. Mansfield, Esq.

The minutes of the preceding meeting were read and confirmed.

A printed copy of the Report, as finally revised and adopted at the last meeting, together with the appendices, minutes, and evidence, &c., was laid on the table, and was signed by the Commissioners.

The Secretary stated that copies from the negatives of the photographs taken at Bare Island Fort were being prepared on canvas by the Government Photographer for presentation to the Minister, and would be ready in the course of a few hours.

It was decided that the Report should be presented to the Minister at the earliest possible moment.

The minutes of the present meeting were read and confirmed.

This concluded the business before the Commission.

ROYAL COMMISSION ON DEFENCE WORKS.

THE BARE ISLAND BARRACKS.—FIRST PROGRESS REPORT.

To the Right Honorable CHARLES ROBERT, Baron Carrington, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

WE, the Commissioners appointed by your Excellency "to make a diligent and thorough examination and inquiry into the manner in which certain of the Defence Works of the Colony, executed under the superintendence of the late Colonial Architect, James Barnet, Esq., have been carried out," have the honor to submit the following Progress Report on the work performed in connection with the construction of barracks within the Bare Island Fort, as we have been informed by the Hon. the Secretary for Public Works that it is most desirable a settlement should be come to as early as possible respecting certain claims submitted by the contractor for the stoppage of the works connected with the erection of the barracks, so that the claims may be adjusted, the contractor paid off, and a proper contract prepared for their erection on an improved or modified design. We have, therefore, devoted our attention, so far, to investigating the work performed and the contractor's claims.

We find that no proper contract was ever prepared for this work, for in the specification for the fort it was expressly stated that the barracks were not included in that contract. On the 10th day of March, 1886, Mr. Barnet wrote to the Minister, recommending that the barracks should be proceeded with, and carried out by the contractor for the fortification (Mr. John M'Leod), under his contract schedule of prices, which he (Mr. Barnet) considered fair and reasonable, the estimated cost of which was £7,580.

This was approved of by the Hon. the Colonial Secretary on the 7th of March, 1889, and the work ordered to be carried out by the Hon. the Minister for Public Works on March 14th, 1889.

Mr. Barnet thereupon sent the following letter to Mr. John M'Leod:—

Sir,

Colonial Architect's Office, Sydney, 15 April, 1889.

In reference to barracks proposed to be erected at Bare Island, I have to inform you that you can carry out this work at the schedule prices under your previous contract for fortifications at the place named, if you are willing to do so.

I am, &c.,

JAMES BARNET,

Colonial Architect.

And received the following reply:—

Sir,

Rockdale, 22 April, 1889.

Referring to your letter *re* barracks at Bare Island, I shall proceed with the work at once at my previous schedule price-rates for fortifications at Bare Island.

Yours obediently,

JOHN M'LEOD.

The Colonial Architect.

On May 30th, 1889, Colonel F. R. de Wolski, R.E., Director of Military Works, wrote to the General Officer Commanding, pointing out the unsuitableness of the design for a barracks for the purpose intended, and recommended that the question should be reconsidered. The stoppage of the works, pending a reconsideration of the plans, was approved of by the Colonial Secretary on June 10th, 1889. The contractor was thereupon notified to stop work, and on June 13th progress was suspended.

During the two months the works were in progress very little other than the preparation of foundations, and providing material, &c., was performed, and a good deal of the expense incurred during this period was for repairs to that portion of the walls of the fort surrounding the barrack site, which, owing to faulty construction, were showing signs of failure. This will, however, be dealt with hereafter in our report on the fort. We find the contractor was paid about £121 for these repairs of his own work
thus

thus carried out. In passing, we might remark that this expense appears to us to be an improper charge against the Loan vote. It should, in our opinion, have been charged to the Revenue vote for repairs and maintenance of public buildings.

In looking over the schedule of prices for the fort contract, which was made the basis for the erection of the barracks, it was at once apparent to us that the list of prices, which was no doubt sufficient to cover the various items in the fort, was quite unsuitable for the erection of the barracks, a building of a distinctly different design from anything in the fort, and that the Department would naturally be in the hands of the contractor, as he could name his own prices for the various works and trades not included in the schedule, or carry a great deal out under the day-work system; and this was probably the intention, for, notwithstanding the fact that very little more than the excavation of the foundations and drainage had been taken in hand, we find that 1,914 hours' time for various tradesmen have been already charged and £122 13s. 8d. paid.

At the stoppage of the works they were completely measured up, and the value of work performed was returned at £782 17s. 8d., of which sum £626 was paid to the contractor, leaving £156 17s. 8d. due.

On the 9th of May, 1890, the contractor sent in his claim for sundry materials procured, work performed, compensation for loss of profit on contract, and compensation for self and plant, amounting to £3,012 6s. 10d., should the contract be terminated; but if he were allowed to complete the contract his claim would be reduced to £622 6s. for loss of time, &c.

We consider it would be most unwise to proceed further with this very loose and unsatisfactory arrangement, and strongly recommend that it be forthwith cancelled, and the contractor paid all sums due for work done and materials delivered.

With this end in view we have carefully scrutinised his claim, and consider certain items may be allowed in full, some in part, and that others should be wholly omitted, the principal item under this last head being £529 2s. for loss of profit on contract. As the arrangement was wholly based on a schedule of prices, and the Government had power to reduce the work to any extent considered proper, we consider the contractor has no just grounds whatever for advancing the claim.

We append a statement of the account for the whole work showing the value of work performed, extent of claim for material delivered, which we think might be allowed, and deduction for money already paid on account, which shows the sum of £1,334 8s. 1d. due to the contractor, if all the materials in the schedule are handed over free of other claims to the Government. This we suggest should be offered as a final, complete, and full settlement of all claims.

Your Commissioners have the honor to subscribe themselves your Excellency's most humble and dutiful servants.

C. W. DARLEY, President.
W. W. WARDELL.
G. ALLEN MANSFIELD.

Sydney, 27 August, 1890.

ROYAL COMMISSION ON DEFENCE WORKS.

BARE ISLAND BARRACKS.

THE COMMISSIONERS' AWARD.

DETAILED statement of amount proposed to be allowed to Mr. John M'Leod, Contractor, on account of work performed material prepared, labour supplied, &c., in connection with the Bare Island Barracks.

Colonial Architect's Office,

Sydney, 2 September, 1889.

ROYAL COMMISSION ON DEFENCE WORKS.

I HAVE already brought before my colleagues the Report of the Royal Commission which was appointed in July last, on my recommendation, to investigate certain statements made by Colonel de Wolski as to the manner in which the fortifications at Bare Island, George's Head, and Newcastle had been carried out; and have now, as arranged at the last meeting of the Cabinet, to submit to my colleagues the recommendations in relation thereto which I have arrived at, after a most careful perusal and consideration of the document in question.

I fear no one reading the Report can but come to the conclusions which the Commission have, in such clear terms, placed before the Government. I need not recapitulate them, they are very concisely put in the Report itself; and it only remains for me to recommend to the Cabinet the course I think should be taken in regard to this most serious matter.

First—With regard to Mr. Barnet. No one regrets more than I do the position in which the Mr. Barnet. Report places him. He has held a position of the highest importance in the Government service for a period of over thirty years. He has enjoyed the confidence, so far as I am aware, of every Government which has been in existence since the time of his appointment; and his name is identified with some of our finest public buildings. It is therefore with peculiar feelings of regret that I have to place on record my complete accordance with the conclusions of the Commission regarding his conduct in connection with the fortification work which was entrusted to him. To use the words of the Report, "It is clear that the interests of the Colony (whose officer Mr. Barnet was) have suffered very seriously from a systematic indifference and neglect on his part of the gravest character, not only as to the quality of the works themselves, but as to the large sums of money expended on them." The Report continues: "We also consider Mr. Barnet was guilty of grave insubordination in resisting, or at least obstructing, the orders of the Minister as to the transfer of the works."

And again the Commission says (page 43): "The evidence taken points so forcibly to the conclusion that the late Colonial Architect himself is the principal person to blame, that we should be neglecting that duty if we did not recommend that some step should be taken which would satisfactorily prove that no public officer, whatever may be his position in the Service, can escape punishment for his misdeeds. Your Commissioners therefore recommend that a commensurate censure be recorded on the late Colonial Architect for his gross neglect of duty in connection with the works under our review, and that such further steps be taken by the Government as may mark the gravity of the case, which, in our opinion, is fully established against him."

I have to point out that Mr. Barnet before the appointment of this Commission had been practically retired from the service of the Government consequent on the re-organization of his Branch; and although he was paid full salary during the time of the Commission's investigations, he had received a notification that the Executive had approved of his retirement from the 30th June, and that his full pension would be paid him. His retirement was also notified in the *Gazette*. I do not think, therefore, that it is possible, however desirable, to interfere with the pension which has been secured to him by the regular operation of the law. Considering the high position he has held in the community, the publication of the Report of the Commission will probably be a sufficient punishment; and I cannot but express my deep regret that an officer who has held such a distinguished position should have the close of his career clouded with such severe condemnation as is contained in the Report.

With regard to Mr. Purkis, I quite concur in the recommendation of the Commission that his Mr. Purkis. services should be no longer retained, and I accordingly recommend that he be called upon at once to show cause why he should not be dismissed the Public Service.

With regard to Mr. Colley, the Commission modify their condemnation of his conduct in the Mr. Colley. following way:—"We cannot, however, but recognise the fact that Mr. Colley was, to some extent, the victim of a vicious system, whereby he was called upon to supervise a number of works, and to perform a multitude of duties, to which it is very obvious he could give but the most superficial attention. We therefore recommend that he be somewhat more leniently dealt with."

I am disposed to concur in this view of the case, but I cannot for a moment recommend that his services be retained. I find that he is over 60 years of age, and I therefore recommend that he be at once retired on his pension, as provided by the Civil Service Act, to take effect from the 30th April last.

Mr. M'Shane.

With regard to Mr. M'Shane, the late Chief Clerk of the Branch, it will be seen (page 40) that the Commission has come to the conclusion that he deserves some censure for the unseemly delay and obstruction that occurred, and to which he unquestionably contributed.

With a view to carry out a thorough re-organisation of the Branch, Mr. M'Shane was recently removed to a similar position in the Harbours and Rivers Branch. The Engineer-in-Chief informs me that he is not a success in that position, and I therefore recommend, on that account, and on account of his connection with the matter under review, he be retired on the pension as provided by the Civil Service Act, to take effect from the 30th June next. Mr. M'Shane is over 65 years of age.

Mr. M'Leod,
the contractor.

With regard to the contractor, Mr. M'Leod, the Commission have recommended that he should be called upon to refund the amount paid to him for that portion of work specified for, paid for, and supposed to have been done, which is a sum of £6,343 3s. 5d. A further amount will have to be added to this sum for the bad work done at George's Head Battery, but the particulars have not yet been furnished me. I have placed the matter in the hands of the Crown Solicitor, with a view to his advising what steps should be taken. I should mention that Mr. M'Leod has given me a letter acknowledging the bad work done, and in which he states his willingness to make it good to the satisfaction of the Government; but I cannot recommend that this offer be accepted, as I think we should seek to recover the money, and not to allow him to have anything further to do with the fortifications. I quite concur with the recommendation of the Commission that he and his sometime-partner Mr. Noble should be declared incapable of taking contracts for all time to come.

There will probably be some amount to be recovered from the contractor for the Newcastle fortifications, but it is not likely to be large.

Mr. Bushby.

The services of Mr. Bushby, who was the officer employed on the Newcastle works, have already been dispensed with.

I cannot conclude without expressing my sense of the obligations the Government are under to Colonel de Wolski for the fearless and persistent manner in which he pursued his inquiries.

I have only to say, in conclusion, that this matter has cost me more trouble than any other question I have had to deal with since I have held the office of Minister for Works. I have held many personal inquiries into the matter which the papers themselves do not of course disclose. I merely mention this to show that the whole subject has been dealt with by me in the most full and comprehensive manner possible. In dealing with an officer of Mr. Barnet's rank and long service, I had to proceed with extreme caution and deliberation before taking decisive action.

BRUCE SMITH.

ROYAL COMMISSION ON DEFENCE WORKS.

REPORT.

To His Excellency the Right Honorable VICTOR ALBERT GEORGE, CHILD-VILLIERS, Earl of Jersey, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the Commissioners appointed on July 14 by His Excellency Baron Carrington, G.C.M.G., the late Governor and Commander-in-Chief of New South Wales and its Dependencies, "to make a diligent and thorough examination and inquiry into the manner in which certain of the Defence Works of the Colony, executed under the superintendence of the late Colonial Architect, James Barnet, Esq., have been carried out," have the honor to submit the following Report:—

I. In the carrying out of the inquiry the Commissioners were directed to give their attention more particularly to the following points:— Directions to the Commission.

- (1.) The nature of the Ministerial authorities which have been given for the various works; whether such authorities have been exceeded; and, if so, to what extent.
- (2.) The total cost of the several works referred to; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case.
- (3.) The nature of the various contracts connected with the aforesaid works.
- (4.) The method of letting the said contracts, whether by tender or otherwise.
- (5.) The manner in which the said contracts have been carried out.
- (6.) The departures, if any, which have been made from the specifications; the reasons alleged for such departures, with the sufficiency or otherwise of such reasons in your opinion.
- (7.) The rates adopted for payment in the case of extras; whether in their opinion fair or otherwise.
- (8.) The quality of the work.
- (9.) The system adopted in arriving at the lowest tender in the case of schedule rates.
- (10.) The conduct of Edwin Colley and Henry H. Purkis, Clerks of Works, who are at present under suspension in connection with the works at Bare Island.
- (11.) The manner in which the orders of our Secretary for Public Works in regard to the transfer of the Defence Works to Colonel de Wolski have been carried out.
- (12.) Generally the whole conduct and management of the said works.

(1) BARE ISLAND FORT.

John M'Leod, Contractor.

We commenced our enquiry with Bare Island Fort, the first work submitted to the Commission for examination, and, as will be seen hereafter, in dealing with this matter we practically embrace most of the points referred to us to enquire into.

II. With a view of simplifying the report, and making it as intelligible as possible, we have ventured to rearrange the order and method of the directions given above, as follows:— Re-classification.

- A.
 - (1.) The nature of the contract.
 - (2.) The method of letting the contract, whether by tender or otherwise.
 - (3.) The system adopted in arriving at the lowest tender in the case of schedule rates.
 - (4.) The rates adopted for payment in the case of extras; whether in our opinion fair or otherwise.
- B.
 - (5.) The nature of the Ministerial authorities which have been given for the work; whether such authorities have been exceeded; and, if so, to what extent.
 - (6.) The total cost of the work; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case.
 - (7.) The departures, if any, which have been made from the specifications; the reasons alleged for such departures, with the sufficiency or otherwise of such reasons in the opinion of the Commission.
- C.

C.

- (8.) The manner in which the contract has been carried out.
- (9.) The quality of the work.

D.

- (10.) Generally the whole conduct and management of the work.
- (11.) The conduct of Edwin Colley and Henry H. Purkis, Clerks of Works, at present under suspension.

E.

- (12.) The manner in which the orders of the Secretary for Public Works in regard to the transfer of the Defence Works to Colonel de Wolski have been carried out.

Sir William Jervois' scheme.

III. In the course of his report upon the Military Defences of the Australian Colonies, dated June 4, 1877, Sir William F. Drummond Jervois, R.E., C.B., K.C.M.G., recommended the construction of a small work at Botany Bay with its guns well protected, commanding the entrance to the harbour and the whole anchorage, and constructed so as not to be liable to be taken by assault. Bare Island he thought was very well adapted as the site for a battery to fulfil these conditions. He further recommended the erection of a small barrack, which, in conjunction with the accommodation in bomb-proofs, should accommodate a garrison to consist of eighty men, thirty of whom should be permanent artillery men, and fifty from the militia artillery. This report was presented to both Houses of Parliament in 1877, and in 1880, at the instance of the late Colonel Scratchley, who had been appointed to assist Sir William Jervois in the examination of the defence works of the Colonies, a description and plans of the proposed fort at Bare Island, which in the meantime Colonel Scratchley had designed, were prepared by the late Mr. Morell, C.E., and a specification was drawn up by the Colonial Architect's Department, based in the main on the lines laid down therein. In 1881 it was decided to advertise for tenders for the erection of the fort, it being expressly stipulated in the preliminary remarks attached to the specification that the barracks, of which a detailed plan was given, were not to be included. The cost, exclusive of the barracks, was estimated by the Colonial Architect at £26,500. We may further add that in a letter to the Colonial Architect, dated 20/10/80, Colonel Scratchley gave an approximate estimate of the defence works remaining to be executed at Bare Island in order to complete Sir William Jervois' scheme, viz., barracks for forty officers and men (or half the number specified by Sir William Jervois), £11,000; viaduct between the island and the mainland, £3,500; and preparation for torpedo defence, £500.

A.

IV. With reference to the four questions bracketed as A—relating to the nature of the contract, the method of letting it, the system adopted in arriving at the lowest tender in the case of schedule rates, and the rates adopted in the case of extras—your Commission have to report as follows:—

The nature of the contract.

The nature of the contract will be best understood by the preliminary remarks attached to the specification, taken, with but slight alteration, from the "Description of work to be done and of materials to be provided in connection with the construction of a fort on Bare Island, Botany Bay," drawn up by the late Mr. Morell, which description, it may be observed, was not made a part of the contract, although Colonel Scratchley evidently intended that it should be. (*Vide* Colonial Architect's evidence, Q. 7, 8, 9). That portion of the description, however, dealing with the nature and extent of the contract was practically embodied in the preliminary remarks, and is quoted in Appendix A attached to this report.

The method of letting the contract.

V. On March 8, 1881, the following notice under the head of "Tenders for Public Works," dated "Department of Public Works, Sydney, 4th March, 1881," was published in the *Government Gazette* of New South Wales:—

Description of Work or Supplies to be Tendered for.	Dates up to which Tenders will be received.	Where plan, specification, and form of Tender may be seen.
Construction of fortifications at Bare Island, Botany Bay	29 March, 1881.....	Colonial Architect's Office, Sydney.

On March 29, the Under Secretary for Public Works referred the following eight tenders to the Colonial Architect for report prior to submission to the Minister:—

	£	s.	d.
(1.) W. H. Jennings, 2 years	27,805	15	4
(2.) R. Saunders, 2 years	29,246	17	8
(3.) John M'Leod, 20 months	25,020	15	4
(4.) Richard Nancarrow, 2 years	28,794	14	2
(5.) Wm. Wallace, 2 years	29,869	15	0
(6.) Isaac Banks, 30 months	29,175	2	6
(7.) Jas. Wadsworth, 30 months	40,104	0	10
(8.) Topham, Angus, & Co., 30 months	26,153	15	2

On

On April 4, 1881, the tender of John M'Leod was recommended for acceptance by the Colonial Architect, as "being the lowest and most reasonable." On April 7, the Under Secretary was directed to inform the Colonial Architect that the tender of John M'Leod had been accepted, and on May 14, a bond was signed by John M'Leod, of Ultimo, in the Colony of New South Wales, contractor; Hugh M'Master, of Sydney, in the Colony aforesaid, builder; and John Noble, of Botany, in the Colony aforesaid, builder; under which M'Leod agreed, under penalty of £2,500, being one-tenth of the gross amount of the contract, in accordance with the terms and conditions prefixed to the notice published in the *Government Gazette*, to carry out the works "in strict accordance in all things with the annexed specification and general conditions marked "A" and "B" respectively, and the twelve several plans or drawings relating thereto."

VI. The system adopted in arriving at the lowest tender was that usually adopted in the case of schedule-rate contracts such as we believe this one was intended to be. The Colonial Architect stated, in his evidence before the Board of Inquiry on June 4, that the original contract was "based on a schedule worked out to probable quantities," that "the lump sum was merely arranged to ascertain who was the lowest tenderer," and that he did not recognise it as a lump-sum contract. Your Commissioners have no fault to find with the method in which the contract was let. The way in which it was carried out is another matter, as to which we shall report further on.

VII. A laxity of control on the part of the Colonial Architect is shown in the price which the contractor was allowed to charge for extras. In the first place, the total charge on this head in the case of Bare Island Fort amounts to as much as £1,481 7s. 11d., a sum which your Commissioners consider is far too large to come under the head of extras, and which should have been made a subject of special agreement. Among the items is 670½ cubic feet bluestone gallery floor steps, which is charged at the rate of 16s. per cubic foot, making a total of £536 8s. This charge was made without any previous agreement, and is very high. The next item charged is for "labour-mixing 740 casks of cement for superior concrete at 2s. 4d. per cask, amounting to £68 6s. 8d.," which is distinctly an improper charge, since the labour of mixing is included in the schedule price for cement concrete, and there is no extra labour involved. Another "extra" is for compensation, amounting to £85, for the elimination of the iron portion of the contract; but that is a separate subject which will be dealt with in another section of the report (*vide* paragraph XII, section 2). The charge of 17s. 6d. each for twenty-three metal "locks" (railway carriage pattern), amounting to £20 2s. 6d., is also in our opinion improper. We consider that the "locks," so called, but which are really rough cast metal fastenings, should have been charged under item 87, viz. :—"Gun-metal in straps, sheaves, rollers, rails, bolts, nuts, screws, &c., including making pattern for founder, turning and finishing in best manner, including fixing to any material, and lead for running where necessary, at 2s. 9d. per lb.," in which case the amount would have been less than £3 3s., as the "locks" weighed less than a pound a piece. The charge of £13 5s. 1d. for a steel plate for guard-room door, fitted complete, is also in our opinion excessive. The extra works include, among other things, a guard-room, cells, and a stable, which were carried out without a plan, and it need not therefore be any matter of surprise that, as the Director of Military Works points out in his memorandum dated 3/9/90, "their cost has been out of all proportion to the accommodation provided."

B.

VIII. With reference to the questions bracketed as B—relating to the nature of the Ministerial authority which has been given for the work; whether such authority has been exceeded; and, if so, to what extent; the total cost of the work; the cost of works, if any, which have been carried out without Ministerial authority, giving full particulars of each case; and the departures, if any, which have been made from the specifications, with the reasons alleged for such departures, and the sufficiency or otherwise of such reasons in our opinion—your Commission have to report as follows:—

On June 19, 1890, Colonel Scratchley wrote to the Under Secretary for Public Works, urging that tenders should be called for the erection of Defence Works at Bare Island, in accordance with the recommendations made by Sir William Jervois in his report quoted in paragraph III. Colonel Scratchley's letter was sent in due course to the Colonial Secretary, and on the 11th of August following the approval of Sir Henry Parkes, as Colonial Secretary, was affixed to the paper, which bears the following Departmental numbers, viz., C.S. 80-5,068, P.W. 80-4,418, and C.A. 80-1,527. The paper containing the Ministerial approval was sent to the Colonial Architect, who called for tenders as already detailed in paragraph

paragraph V. The following letter from Colonel Scratchley to the Colonial Architect, C.A., 80-7,118, will be found to throw light on several matters connected with the letting of the tender, and the construction of the fort:—

Sir,

Bare Island Fort, Sydney, 13 August, 1880.

I saw Sir Henry Parkes on the 11th instant, and yesterday he approved calling for tenders for this work. I have requested Mr. Morell to see you at once in reference to the preparation by him of a general description of the works. The expenditure will have to be limited to £20,000, inclusive of the iron shield and iron work for the centre casemate gun, the cost of which I will let you know in a few days.

I should mention that the ironwork will have to be ordered from England, only two firms—Cammell and Brown, of Sheffield—being manufacturers of this class of work. No doubt the estimate cost will exceed the sum named, £20,000, and we shall have to proceed as in the case of Newcastle, *i.e.*, execute only the necessary works required to mount the guns and provide magazines, &c., and omit the barracks, retaining walls, and all such work as is not essential.

I have, &c.,

P. H. SCRATCHLEY, Colonel R.E.

N.B.—The date of the Colonial Secretary's approval was 11/8/80, not 12/8/80 as stated by Colonel Scratchley.

It would seem from this that the intention of the Colonial Secretary, when signifying his approval to Colonel Scratchley's recommendation, was to limit the expenditure to £20,000, but the paper with his approval contains no such limitation, and the Minister for Public Works subsequently (April 7, 1881) formally approved of the acceptance of M'Leod's tender amounting to £25,025 15s., exclusive of the armour plate. Attached to the paper containing this approval was an official estimate of the cost of the work, the sum named being £26,500. It would appear, therefore, that the Ministerial authority for the construction of the Bare Island fort covered the sum named in the tender or at the very outside the sum estimated as the probable cost of the work.

The total cost of the work.

IX. The total amount paid to Mr. M'Leod for the construction of the fort alone was £33,857 4s. 10d., of which sum £1,481 7s. 11d. was for extras (*vide* paragraph VII.)

Exceeding the Ministerial authority.

X. If your Commissioners are correct in their opinion (*vide* paragraph IX), that the Ministerial authority only covered the amount of the tender, or, at the very outside the amount of the official estimate of the probable cost of the work, then the Ministerial authority was exceeded by at least £7,357 4s. 10d., that being the amount paid to the contractor over and above the official estimate named above, or by £8,831 9s. 10d., if the Ministerial authority only extended to the amount named in the accepted tender.

Departures from the specifications.

XI. Some very important departures have been made from the original specifications, such as: (1) the omission of the granite facings and substitution of concrete; (2) the omission of the iron girders with a view of substituting those supplied from England; (3) the enlargement of the concrete merlons of the casemate, and the omission of the earthwork in front of the merlons; (4) the addition of magazines for 10-inch casemate gun; (5) the construction of approaches to the causeway from the mainland; (6) the extra works mentioned in paragraph 7, namely, guardroom, cells, stable; (7) very extensive departures from the quantities specified in the contract and schedule rates. An examination of the departures from the quantities named in the specification—whether by way of increase, decrease, or omission—will show that the total sum paid to the Contractor over and above the prices affixed to the "probable quantities" specified in the schedule amounts to no less than £16,561 4s. 6d.; that the sum total of the deductions from the schedule—*i.e.*, of the items that were specified for but not obtained—amounted to £9,393 2s., leaving a balance of £7,168 2s. 6d., which was paid to the Contractor for departure from the quantities named in the specification, without reckoning the extra works referred to in paragraph VII.

It should, however, be noted that the sum of £9,393 2s.—the amount of deductions for omissions from the schedule—includes items 26 and 79 for granite facing and iron girders respectively; £4,023 for the former, and £850 for the latter, or a total of £4,853, both of which items (*vide* paragraph XII, sections 1 and 2), were expressly countermanded by Colonel Scratchley before the bond was signed, and therefore should have been eliminated from the contract by the Colonial Architect. Had this been properly attended to, these two large items would not have appeared in the schedule at all, the sum total of deductions and omissions therefrom would have been £4,540 2s. instead of £9,393 2s., and the total sum paid to the Contractor over and above the prices affixed to the probable quantities specified in the schedule—after subtracting the sums not paid on account of deductions or omissions—would have been £12,021 4s. 6d., or almost half the total amount of the original contract.

The reasons alleged for such departures.

XII. (1.) The omission of the granite facing.—The granite facing was omitted in accordance with instructions from Colonel Scratchley, contained in a letter to the Colonial Architect, dated 11/2/81, which has not been handed over to the Commission, but which was referred to in a subsequent letter, of which the following is a transcript:—

(1) The omission of the granite facing.

Bare Island Fort.

Dear Sir,

Referring to the contract for this work, you will, I presume, not give the order to the contractor for the granite work in connection with the casemate until I hear from England, as explained in my letter to you of 11th February.

James Barnet, Colonial Architect, Sydney.

Yours faithfully,

P. H. SCRATCHLEY.

In omitting the granite facing, therefore, the Colonial Architect was simply carrying out the instructions of Colonel Scratchley, the nature of whose duty and the extent of whose authority in connection with the fortifications generally will be detailed in paragraph XIII. It is to be regretted that the letter dated 11/2/81, in which Colonel Scratchley gave his reason for the proposed omission of the granite work, has not been found, as the slight allusion to it in the letter quoted above only enables your Commissioners to conjecture, without being sure, what that reason was. It is to be noted, however, that when the Colonial Architect received the letter dated 10/4/81 quoted above, and which is marked off to Mr. Colley, M'Leod's tender had only just been accepted by the Minister for Public Works (*vide* paragraph VIII), and the bond was not signed till the 14th of the following month; yet no mention appears to have been made to the contractors of the probable alteration in the design of the fort as regards granite, although Colonel Scratchley particularly requested the Colonial Architect not to give the order to the contractor for this portion of the work until he heard from England (*vide* letter quoted above). In connection with this subject it may also be mentioned, that, in a report to the Colonial Architect, dated 10/6/81 (C.A., 82/1,124), Mr. Purkis states that, exclusive of excavations for gun-room, passage at rear, and magazines, all work on the casemate at Bare Island fort had been stopped for about five months, pending the decision as to whether granite, iron, or concrete should form external faces of embrasures, &c.

(2.) The omission of the iron girders.—In his letter to the Colonial Architect, dated 13/8/80, *i.e.*, ^{(2) The omission of the iron girders.} two days after the Colonial Secretary had formally approved of the calling for tenders, Colonel Scratchley expressly stated that "the ironwork will have to be ordered from England, only two firms—Cammell & Brown, of Sheffield—being manufacturers of this class of work" (*vide* paragraph VIII); and, as the Director for Military Works, in his memorandum to the Under Secretary for Public Works, dated 13/8/90, or exactly ten years to a day after the date of Colonel Scratchley's letter to which he refers, points out, it was expressly specified in Mr. Morell's description which accompanied the plans of the fort, that "the ironwork over roof and the shields, girders, racers, also the mantelet, will be provided by the Government." "It is clear," adds the Director, whose opinion we thoroughly endorse, "that in this instance, General Scratchley's instructions were not obeyed; and as the contract was at Schedule rates this payment was an improper one, as the Government had power to alter any portion of the work." Notwithstanding, however, the express directions of Colonel Scratchley, followed up by the written directions of Mr. Morell in the "Description," which should have served the Colonial Architect for a guide, even if it had not been included in the bond, this portion of the contract, like the granite facing, was retained in the Schedule, and the Contractor was not only allowed to charge £85 for compensation for the elimination of this portion of his Contract, or 10 per cent. on the value of the probable quantity, viz., 500 cwt., named in the Schedule; but Mr. Colley actually endorsed the claim in a minute dated 9/8/82 (C.A., 82/7,539). However, for this the Colonial Architect's Department, and not the contractor, is to blame, Mr. Barnet having neglected to inform the Contractor that this ironwork was to be omitted before the tender was accepted, the result being that the Government has had to pay what your Commissioners cannot but consider a most improper charge. The injustice to the Government in allowing the contractor this concession of £85 for the omission of £850 worth of ironwork is made more apparent when it is considered that the omitted wrought-iron girders were to be supplied for £1 14s. per cwt., whereas the price of the rolled girders (a much cheaper article, on which there was no workmanship) was put down at £2 7s. 6d. per cwt., and that while the small priced item was omitted the high priced one was increased from 40 cwt., which was the probable quantity put down in the Schedule, to over 200 cwt., and from £95 to £475 17s. 9d. In our opinion, this large increase in the high-priced girders might have been fairly set off against the omission of the low priced girders.

(3.) The enlargement of the concrete merlons of the casemate, and the omission of the earthwork ^{(3) The enlargement of the merlons &c.} in front of the merlons.—The concrete merlons of the casemate appear to have been enlarged to compensate for the omission of the granite facing, although there is no evidence to show that any written authority was given for the alteration. If it was desirable to enlarge the concrete, the omission of the earthwork must have been for a similar reason very undesirable, the character of the works being seriously impaired thereby. The only reasonable explanation for the departures referred to is that suggested by the Director for Military Works in his memorandum handed in to the Commission on 3/9/90, to the effect "that the Contractor found it more profitable to increase the mass of concrete, for which he had abundance of stone on the site, than to bring over earth from the mainland."

(4.) The addition of magazines for 10-inch casemate gun.—The construction of two chambers in rear of casemate was recommended by Colonel Scratchley in a letter dated 23/11/82 (C.A. 9,337), for the purpose of keeping the shells and cartridges of the centre 10-inch gun. Colonel Scratchley forwarded a rough sketch with his letter showing in addition the position of the lamp recesses, and suggesting that the arches over the chambers should be thrown across its short span of 10 feet. ^{(4) The addition of magazines.} (5.)

(5) The causeway.

(5.) The construction of approaches to the causeway from the mainland.—In a letter dated 23/11/82, referred to in the preceding section, Colonel Scratchley also recommends “that the approaches from the proposed viaduct to the rear of the fort should be commenced,” this step, as he explains in the same letter, being “required in order to provide fitting required for the works.” The following paragraph from a previous letter by Colonel Scratchley to the Colonial Architect should also be read at this point:—

May 24, 1882 (C.A. 4,016.) “As it will be necessary to provide at no distant date for the approaches to Bare Island from the mainland and on the island itself,—as well as for crossing the narrow piece of water,—I recommend that the latter be gone into and that provision be made in next year’s Estimates for the work. A viaduct on piles, with a movable portion on the island side to cut off communication with the shore, will probably be found less expensive and quite as suitable as a solid causeway.”

(6) Guard-room, cells, stable.

(6.) The extra works mentioned in paragraph 7, namely guard-room, cells, stable.—Colonel Scratchley further states, in his letter dated 23/11/82, referred to above, that “a guard-room at entrance gate is required and might be commenced.” In view of questions which will arise in the subsequent portion of the report, we will quote the concluding sentence of the letter, which runs as follows:—“I understand that there are sufficient funds for all the pressing works which have been explained on the spot to the superintending officers,” the term “pressing” apparently referring to the two chambers or magazines, the approaches to the causeway, and the guard-room, &c., referred to in the preceding portion of the letter.

(7) Departures from quantities.

(7.) Departures from the quantities specified in the schedule of rates.—These departures are either by way of increase or decrease.

I. Decreases.

I. Decreases:—Taking the decreases first the items 26 and 79 (*Vide* paragraph XI.) have been already dealt with in this paragraph, sections 1 and 2.

The remaining principal items are:—

	£	s.	d.
(a) Sod work	236	0	0
(b) Clay puddle	158	0	0
(c) Masonry	2,116	0	0
(d) Stone coping	252	0	0
(e) Bluestone metal	160	0	0
(f) Asphalt composition	300	0	0
Total... ..	£3,222	0	0

The omission of the earthwork in front of the merlons has been already referred to in paragraph XII, section 3, where will be found an explanation, suggested by the Director of Military Works.

II. Increases.

II. Increases:—The principal items are as follows:—

	£	s.	d.
(a) Earth excavations	1,573	10	0
(b) Rock channeling	158	10	0
(c) Concrete	6,386	0	0
(d) Cementing, $\frac{3}{4}$ -inch	314	0	0
(e) Rubble work... ..	942	0	0
(f) Portland cement	1,327	10	0
(g) Seyssel Asphalt	460	0	0
(h) Rolled girders	380	0	0
(i) Day labour	3,374	0	0
(j) Sundries	195	10	0
Total... ..	£15,111	0	0

The following reasons have been alleged by the contractor or the officers of the Colonial Architect’s Department for some of the departures referred to above, viz:—

(a) Earth excavations.

(a) Earth excavations.—Mr. Purkis explains (Q. 704) that the very large additions to the amount of earth excavation executed over and above the original estimate was owing to the fact that they had to excavate the cells, pits, and tanks, &c., and make the approaches to the island, also for additional works. They were extremely pinched for room, and had to form embankments and earth merlons, and sometimes had to shift the spoil-heaps twice when they were in the way. In further explanation, he states that when he first went on to the island to estimate the quantity of earth excavation required, there was a growth of about 2 feet high of rank herbage, and it was impossible to know where rock was and where soil was.

Your

Your Commissioners consider that these reasons are sufficient to justify a departure, either by way of increase or decrease, being made, it being plainly impossible, under the circumstances, to have formed more than a rough estimate of the amount of excavation that would be required; but that the amount by which the estimate was exceeded is so large that the attention of the Colonial Architect should have been called to it, and his written sanction should most certainly have been obtained before a subordinate officer allowed so great a departure from the original schedule to be made. Nothing of the kind, however, appears to have been done, and it is another instance of the loose and unsatisfactory way in which the whole work from beginning to end was carried out.

(e) The Concrete.—According to Mr. Colley, (Q. 519 *et seq.*), Mr. Purkis was instructed to put (e) The concrete, on superior concrete many years back; but, in answer to further questions, it was elicited that these instructions were of the most vague and indefinite character. At first Mr. Colley stated that on one occasion during a visit to Middle Head, Mr. Barnet instructed Mr. Purkis to use an extra half cask of cement per cubic yard over the arches, but it appeared that Mr. Barnet merely gave a verbal and general order that extra good concrete should be used. This was in connection with one of the forts in Sydney Harbour, but no such orders ever appear to have been given or sought for in connection with Bare Island Fort Contract. Your Commissioners consider that this was an extremely unsatisfactory way of giving instructions, and that Mr. Barnet should have given a written order to his subordinate officer before permitting him, on his own authority, to allow the Contractor to charge for so large a quantity of concrete over and above that specified in the schedule of rates. In report No. 22, dated 5/4/84, Mr. Purkis states:—“Forming concrete merlons at front, &c., is now in hand, the whole of which, including covering in gun-room of casemate, is of superior concrete.” So far, however, from this being the case, the concrete on the merlons in front, including the covering in of the gun-room of the casemate, is so inferior in quality as to hardly deserve the name of concrete at all. Extensive and very deep cuttings have been made by your Commissioners all over the merlons—especially over Nos. 2 and 4 magazines, Nos. 2 and 4 shell-rooms, and over the spring of the 20-ft. arch, photographs of which have been taken, and are attached to this report—and in every case the same characteristics were observed. There was a surface of fairly good concrete, about 9 in. in depth, under which rough stones had been shot in indiscriminately, with no attempt at ramming, nor with any of the most ordinary precautions to ensure the formation of a compact mass. A large quantity of this so-called concrete, really consisting of rubble-stone, pipe-clay, and dirt, appears to have been tipped in, even in such important places as over magazines, without any attempt to add cement, as large masses of loose stone which can be extracted by hand show no sign of ever having been in contact with mortar. It is no wonder then, in the face of such defective and scandalous work, that water should be found percolating through some 5 or 6 feet of this mass of loose rubble to the chambers below, and the usefulness of the battery and the safety of the fort have been seriously endangered thereby. Too much blame cannot be attached to the Contractor for the slovenly and very dishonest manner in which this part of the work has been performed, while no excuse can possibly be found for the gross neglect of duty which prompted Mr. Purkis to report that “the whole of the merlons in front, including the covering in of the gun-room of the casemate, is of superior concrete.” The statement is not only false on the face of it, but it is difficult to avoid the conclusion that the officer must have known it to be untrue. Mr. Purkis states. (Q. 705) that when the concrete was going into vital parts—*i. e.*, the magazine and the protection of the guns—he stayed on the island then, although at other times he was obliged to be frequently away. It is evident, however, from the practical evidence afforded by the opening up of this portion of the work, that that officer’s word is not to be relied on, and that whether he was on the island or not he could not have taken the most ordinary pains to see that the work was being properly done. The only part of the concrete that can be called good is that over the arches; but if this had been as bad, or anything like as bad, as the rest, the whole work must have tumbled down for want of a base; so that, in order to prop up the bad work, it was necessary to put in a certain small proportion of good. Photographs of the cuttings made by the Commission in the concrete on the fort are attached to this Report, together with a plan showing their position. (*Vide* Appendix J attached to this Report.)

(d) Cementing $\frac{3}{4}$ -inch, (g) Seyssel Asphalt.—The only explanation for the increase under these (d) and (g) Cementing and Seyssel Asphalt. headings is that given by Mr. Purkis, who states (*vide* his sworn statement contained in Appendix B attached to this report) that one-third additional measurement was allowed in the case of the magazine floors “for filling the joints of tiles to meet the cement; also the pattern on tiles; and to make up for the irregular surface of tiles when they are laid.” Your Commissioners found, on examination of the magazine floors, that instead of two coats of $\frac{1}{2}$ -in. asphalt being laid, as directed in the specifications, and as passed by Mr. Purkis and paid for, only three-quarters of an inch asphalt was laid. Mr. Purkis states (Q. 712) that he saw the asphalt laid many times, and he was satisfied that it went between the joints, but in three places, selected at random, your Commissioners

sioners found there was no asphalt at all between the joints, and that the joints were close and full of cement. With regard to the large amount of extra cement, Mr. Colley states (Q. 522) that he never questioned Purkis's returns on this head, as that officer was allowed absolute discretion to put on whatever he liked, and to do what was best in the interests of the Department, and he (Mr. Colley) supposed he was doing it. It is evident, therefore, that the blame for allowing an increase to be charged for work which was not done, rests with Mr. Purkis, who admits having seen the asphalt laid many times, and who ought to have seen that it was properly done.

(f) Portland cement.

(f) Portland cement.—The Colonial Architect states (Q. 108) that the increase in cement from ten barrels to 895 casks was done under the direction of Colonel Scratchley, and that he did not ask for any information of it from his officers, they having instructions to do everything they were ordered by Colonel Scratchley. The course pursued here was precisely the same as that pursued with regard to almost everything else, and your Commissioners can only repeat and endorse the statement and comment made by the Board of Inquiry in their report of 10/6/90, namely, that the alteration is “stated to have been carried out under the verbal directions of now absent persons to a subordinate officer. We think this a very serious irregularity, and, in view of the importance of the works and the large expenditure involved, every step, with its proper approval, should not only have been reported in writing, but have been carefully preserved.”

(i) Day-labour.

(i) Day-labour.—By far the heaviest departure from the specifications is the increase under the head of day-labour, which amounts to no less a sum than £3,505 18s. 10d. as against £131 16s. 8d. estimated for in the schedule. This matter is more fully dealt with in paragraph XVIII, section 3.

Further departures from the specifications.

XIII. In addition to the above, your Commissioners have to note further irregularities in connection with the carrying out of the schedule. What these irregularities were will best appear from a perusal of the sworn statement handed in by the Director of Military Works to the Commission on 3/9/90. The portion to which we refer is comprised in the paragraphs headed “Doors (7 paragraphs), tar pavement, Seyssel asphalt, cementing, woodwork, and pipe-railing.” This statement is marked “C,” in the appendix attached to this Report.

Colonel Scratchley's alterations.

XIV. Of the principal departures from the specifications, it will be observed that five were recommended by Colonel Scratchley, viz: (1) The omission of the granite facing, (2) and of the iron girders, (3) the addition of the magazines, (4) the construction of the approaches to the causeway, and (5) of the guard-room. The fact that Colonel Scratchley recommended an alteration was sufficient reason for its being made. In addition to having been appointed by the late Earl of Carnarvon to assist Sir William Jervois in examining the defences of the Colony, Colonel Scratchley was also the military adviser to the Government of New South Wales, and the nature of his duties, and the extent of his authority, will best appear from the paragraph entitled “Colonel Scratchley's Alterations,” quoted from our *précis* of the evidence given by Mr. Barnet before this Commission, and which will be found in Appendix D, section 1 (a), attached to this Report.

For all the departures from the specifications—whether of omission or of augmentation—made on the recommendation of Colonel Scratchley, that officer's authority was, therefore, amply sufficient; but when we come to the way in which these recommendations were carried out, we touch different ground. It is alleged that many of Colonel Scratchley's orders were only verbal, and not given in writing. This we may be inclined to doubt, from the fact that the deceased Colonel is known to have been a voluminous writer, and those who are best acquainted with him assert that he was always very careful in putting his instructions down in black and white; but even if it were a fact, it would not in the least have absolved the Colonial Architect and the officers of his Department from the duty—rather would it have rendered that duty more imperative—of making out and preserving, for departmental reference, the written orders for any important alterations in the work, as, indeed, they were specially enjoined to do by “General Conditions,” No. 8 (*vide* Appendix E, No. 1, attached to this Report) as also by a very explicit minute issued by the late Hon. John Sutherland, when Minister for Public Works, in 1887 (*vide* Appendix E, No. 2, attached to this Report), and which must necessarily have been very well known to the Colonial Architect as head of a Branch of the Public Works Department. Yet your Commissioners have been unable to find a trace of any such written orders, beyond the very meagre references to the proposed alterations contained in Colonel Scratchley's letters referred to above; neither have we seen any working drawing of the magazines, other than the rough plan supplied on a sheet of one of his letters by Colonel Scratchley, nor have we seen any plan of the guard-room, such as the Colonial Architect's Department ought to have supplied.

The cost of unauthorised works.

XV. In addition to the alterations noted above, recommended in writing by Colonel Scratchley, there are the additions of the cells and stable, for neither of which your Commissioners have been able

to

to find any authority whatever. The works were carried out without a plan, the cells we found to be damp, the walls and ceilings cracked, and the foundations have been paid for as 2 ft. 11 in. of concrete while the average does not exceed 11 in. (*vide* sworn statement handed in by the Director of Military Works to the Commission 3/9/90, and attached as Appendix C to this Report.) It is difficult to state in explicit terms what was the exact cost of the unauthorised works, because that raises the question of what, in this particular case, constituted authority. If we accept the statement of the Colonial Architect, everything was authorised which Colonel Scratchley recommended; but, as already pointed out, Colonel Scratchley's authority was conveyed verbally, and we have no record, beyond the reference in the letters quoted above, that he authorised anything at all. There is no definite authority for the increase in the concrete, none for the erection of the stable, none for the erection of the cells; and, speaking generally, we might say that no authority of any real tangible kind exists for anything outside the prices fixed by the schedule of rates. Speaking roughly, then, it may be said that the cost of the unauthorised works amounts to £12,021 4s. 6d., as stated in paragraph XI; but practically there seems to have been a general loose authority assumed to exist for exceeding the work in any way that suited the Contractor best, an assumption which appears to us wholly unjustifiable.

C.

XVI. Having now cleared the ground somewhat, and discussed in detail the departures made from the original specifications in quantity, in quality, and in cost, we propose to treat of the way in which the contract was carried out by the Contractor, and of the quality of the work, leaving over till the following section the statement of the method pursued by the Colonial Architect and his officers, in supervising the work.

How the contract was carried out.

The Contractor gave very little personal attention to this contract. He was never resident on the work, although he used to sleep there about once a week during the early part of the contract—the first twelve months or thirteen months—after which he does not appear to have been often present. As he says (Q. 983), “Everything was in Noble's hands.” Noble acted as manager for M'Leod, working on commission. During 1881 and 1882, especially in 1881, Noble seems to have been between two and three days a week on the island, after which his visits were less frequent. In 1882, he was also engaged at the Heads, and in 1883 he had the foundations of the Post-office to attend to, besides several other works. He was, however, on the island (Q. 1040), “more or less every week,” the time of his visits depending on whether the officer-in-charge could meet him. According to his own account (Q. 1037), he “had the setting out, and looking after the financial business, and the measuring of the work where necessary.” Noble appointed his brother-in-law, John Murray, as chief foreman, who commenced work in October, 1881, remaining there off and on between four and five years, by which time the work was pretty well finished. (Q. 872). As working foreman, his duties principally consisted in laying out the work for the men; but, according to Murray's own account (Q. 863), he never saw the specifications on which he was working till the contract was nearly finished—a statement, however, which is directly denied by Noble, who affirms (Q. 1047) that he gave Murray the specifications and a plan to work on. So far as the plans are concerned, Murray admits (Q. 872) he was furnished with some very elaborate ones by Mr. Morell. Murray says (Q. 765), he superintended all the arches and pits (Q. 766), and was there all the time when the arches were going on (Q. 764), but was not there the whole time when the concrete was put on the merlons. In fact, he appears to have been continually away from the Fort, especially after the first year or two. As he, himself, says (Q. 800), “I was frequently away (Q. 763) at Little Bay, backwards and forwards, and at George's and Middle Heads (Q. 797). The Little Bay job lasted about eighteen months (Q. 798). During the latter period that I was working on the fort, (Q. 787), I might be at Bare Island looking after the works before breakfast, and then perhaps go to Little Bay and be away two days. I was run off my legs pretty well—overworked.” Noble states (Q. 1049) that Murray had one or two foremen under him occasionally, Loveridge being there sometimes in that capacity. When Murray was away Flanagan acted as working foreman in his stead. Flanagan appears to have been the only one connected with supervising the work of whom it could be said, as Murray said of him, that “he was there mostly all the time.” Flanagan's duties, in Murray's absence, were (Q. 832) to see that the cement was being properly mixed and generally that the work was being properly done, and to look after the men in the same way as Murray. Flanagan says (Q. 954) that when he first went to the island about half of the work was done, but that he saw all the merlons put on. He also (Q. 938) never saw the specifications or plans, (Q. 975) the only thing he saw being a set of directions for fitting up the armour plates, and that was a copy which came from England.

(1) The Contractor's system of supervision.

In view of the extraordinarily bad character of the concrete on the merlons, as described in paragraph XII, section C, and again referred to in paragraph XVII, it is interesting to note the statements

(2) Mixing the concrete.

made respectively by Murray and by Flanagan as to how the concrete was mixed. They differ considerably from one another, as will be seen by referring to Appendix D, section 2, attached to this Report, which contains extracts from our *précis* of the evidence given by Murray and Flanagan on this point.

Mr. M'Leod denies having [instructed his foreman to put in large stones; but his evidence is so contradictory that it is easier to believe the foreman's statement of what occurred than the Contractor's, and in view of the fact, alleged by both Murray and Noble, that the foreman (Q. 875) had no interest whatever in putting in bad work, and that the men, like himself, were only receiving a weekly wage, we have no other option but to believe that M'Leod, or at any rate his representative Mr. Noble, was very willing that this portion of the work should be scamped, (*vide* paragraphs—"Putting in big stones" and "A question of cheapness"—from our *précis* of M'Leod's evidence, in Appendix D, section 3, attached to this Report.

(3) Shifting the men.

One of Flanagan's duties was to see that the men kept proper time. He could not say (Q. 938) whether time was being charged against the Government for work that should have been done under ordinary schedule rates, as he never saw a specification or plan, but he suspected it; and that he had some ground for his suspicion will appear from the extract, entitled "Shifting the men," from our *précis* of his evidence in Appendix D, section 4, attached to this Report.

(4) About the foundations.

Your Commissioners obtained a further insight into the way in which the contract was carried out from the evidence given by Murray. He states (Q. 840) that he was in charge when the wing-walls on each side of the barracks were built, and saw the foundations prepared for them. The bottom was very soft in places and he wanted to go deeper, and would have done so, but "Mr. Colley came out and saw and passed it," and said it was "quite good enough." This witness further described the foundation of the walls which turns round at the back of the laboratory in the square to the right hand side as "not very good—it is a soft marly foundation, a kind of rotten rock; the bottom was rotten." Mr. Colley authorised it and Purkis "knew all about it." Witness added that there was a good deal of soft rock in that part, but that when soft beds were encountered, of which he, as a practical man, did not approve, no extra width of foundation was put in and no precautions taken to obviate the effect of the soft bottom. Upon examining the foundation upon which this wing-wall was built, your Commissioners ascertained that no attempt had been made to reach a sound bottom, as the wall was started directly upon a bed of soft, black, loamy, or peaty sand several feet thick, between which and the rock there is a bed of pipe-clay. A more unstable foundation could not be found, and this fully accounts for the cracking of the wall and the necessity for all the cramping and pointing up which the contractor was employed at and paid for doing, when the barrack contract started.

(5) Laying the asphalt.

As another instance of the way in which the contract was carried out, we take the laying of the Seyssel asphalt. This has already been referred to in paragraph XVII, section 7; but a few more particulars may be added. The schedule provides prices for two thicknesses, viz., $\frac{1}{2}$ inch at 14s. per square yard, and $\frac{3}{4}$ inch at 16s. 6d. per square yard, but only one coat of barely $\frac{3}{4}$ inch was laid, although the full price of 28s. for two $\frac{1}{2}$ inch coats was charged and paid for. We quite agree with the paragraph dealing with the laying of the asphalt contained in the Report of the Board of Inquiry dated 2/6/90, marked F in the Appendix attached to this Report. Having further examined the flooring, we are of opinion that this portion of the work, like the mixing of the concrete and the laying of the foundations, was simply scamped, and that the contractor was paid large sums of money for work which was never done. How much of this neglect was owing to the lack of supervision on the part of the Colonial Architect and his officers will appear later on.

The quality of the work.

XVII. Your Commissioners paid several visits to the fort, and made a thorough examination of the work, the quality of which was found to be, with but rare exceptions, extremely bad. We thoroughly endorse the remarks of the Board of Inquiry on the subject of the concrete in their Report dated 2/6/90, marked F in the Appendix attached to this Report. We have made further examinations since then, and find that the concrete, if concrete it can be called, is literally rubbish. The Contractor's representative endeavours to shift the blame from his own shoulders on to those of the men. "I dare say," said Mr. Noble (Q. 1066), "the labourers may have done something of that, not thinking it might matter so much in that part of the work" (*i.e.* over the merlons); but, as he admitted (Q. 1070), "it must have been all measured as good concrete."

(1) The concrete.

(2) The tar paving.

We further endorse the paragraph headed "Tar paving" contained in the Report of the Board of Inquiry dated 2/6/90, contained in Appendix F attached to this Report, subsequent examination having fully borne out the statements made with regard to the bad quality of this portion of the work.

(3) Repairing the fort.

But the strongest evidence of the bad quality of the work done on the fort is the fact that it commenced to tumble down almost before it was finished, and that a considerable sum of money has been spent by the Government in repairs, all of which, in the opinion of your Commissioners, the contractor should

should be called upon to pay for. The evidence of Mr. Bruce, foreman of works during the construction of the barracks, shows that day work charged for the barracks was for repairs for the fort; that masons were continually employed in making up cracks in the walls; that the magazine had to be repaired and the drainage to be altered; retaining walls to be supported; shellrooms, pipes, and ventilators to be uncovered—in fact, a large quantity of work to be done to prevent the fort, which had only just been constructed, from falling to pieces. Flanagan also has something to say on this point:—"I was employed," says Flanagan (Q. 961), "in making good the cracks in some of the retaining walls. The place was not very long up when they first appeared. They appeared during the progress of the works. I got them done up under Murray's orders. I mixed up some cement and made it the same colour and made it look better."

D.

XVIII. In this Section we propose to deal with the whole conduct and management of the work, and to make particular reference to the behaviour of Messrs. Colley and Purkis, the clerks of works, at present under suspension. There are two almost equally important points connected with the conduct and management of a work of this kind—(1) the manner in which the instructions are given, and (2) the manner in which the work is supervised. In the present case, for instance, had the terms for the original contract been strictly adhered to, there would have been no room for complaint as to the Ministerial authority having been exceeded or of the contractor having been overpaid; while, had the work been properly supervised, there would have been no ground for complaint as to the wretched way in which it has been executed.

We have already referred (*vide* paragraph XIV) to the unbusinesslike way in which Colonel Scratchley's recommendations were attended to by the Colonial Architect, and to the absence of any written document from the Colonial Architect authorising the alterations to be made. This is, however, of so important a nature that we desire to draw special attention to it, seeing that the Colonial Architect's neglect of what he must have known to be a cardinal point in the conduct of a work of this kind (*vide* "General Conditions," No. 12, quoted in Appendix E, attached to this report), has been the main cause of the overcharges made by the contractor; and to the neglect of the Colonial Architect in carrying out his duties is owing much of the disgraceful proceedings that have occurred in connection with the construction of Bare Island Fort. While, therefore, we blame the contractor for scamping his work, it must not be forgotten that that very fault which we condemn in him was itself induced by a previous laxity on the part of the Colonial Architect. The extract headed, "How authority was conveyed" (*vide* Appendix 1 (b), section D, attached to this Report), from our *précis* of Mr. Barnet's evidence, will throw some further light on this point.

The extremely loose and unsatisfactory way in which the work of the Colonial Architect's Department was carried out is best shown by a comparison of the evidence given by the Colonial Architect himself, and by those employed in the construction and supervision of the Bare Island Fort, supplemented by the reports which the Colonial Architect received from his officers every week, and which are almost invariably marked off by him, showing that he was, at any rate, cognisant of their having been sent. Mr. Barnet was the first witness examined by the Commission, and almost the very first question put to him was with reference to the manner in which he, as head of the Department, supervised the carrying out of the work. In answer to questions, Mr. Barnet stated (Q. 14) that he appointed Mr. Colley Clerk of the Works, and Mr. Purkis under him, to look after the Bare Island Fort when it was first started; and he made a series of statements with reference to the duties and responsibilities of those two officers, which were not only contradicted by the officers themselves, but which plainly contradicted each other. What Mr. Barnet's idea was of those duties which he expected his officers to perform will be seen by glancing at our *précis* of that portion of his evidence bearing on this point, contained in Appendix D, section 5, attached to this Report, where will also be found a *précis* of the evidence given by Messrs. Colley and Purkis on the same subject. While Mr. Barnet told the Commission that he held Mr. Colley responsible for the measurements of Bare Island Fort, and Mr. Purkis for "being there the whole six days of the week," and "at all times when the men were at work," he must have been perfectly well aware, from the reports made to him by those two officers every week, as well as by the heavy travelling expenses for journeys to other places which he sanctioned and certified, that those officers could not possibly have been performing the work for which he told the Commission that he held them responsible. As Mr. Colley states (Q. 594), "if Mr. Barnet had given more consideration to the matter, he must have seen that I could not possibly have made the measurements, unless I was with Purkis and on the work myself." Mr. Colley had so many works on hand elsewhere—

Medical

The whole conduct and management of the work.

(1) How instructions were given.

(2.) How the work was supervised.

The action taken by—
(a) Mr. Barnet.

(b) Mr. Colley.

Medical School, Sydney, and a large number of smaller works, while the construction of the Bare Island Fort was going on—that it was only possible for him to visit Bare Island at rare intervals. (For a complete list of the works nominally supervised by Mr. Colley, in addition to the Bare Island Fort and the harbour batteries, *vide* evidence, Questions 1866 and 1868.) As a matter of fact, he was only, on an average, three times in the year at the fort between 1881 and 1885, after which his visits seem to have ceased. Mr. Colley thinks (Q. 627) that Mr. Barnet was aware of the number of his visits to Bare Island Fort, and, as his reports and vouchers for travelling expenses passed through Mr. Barnet's hands, he should have been aware that Mr. Colley was only very rarely at the island, and that therefore the measurements could not have been taken by him. The case against Mr. Barnet is even stronger, so far as Purkis is concerned. From the accompanying index to Purkis's weekly reports of his visits to the fortifications outside of Bare Island, from 1882 to 1886 inclusive, after which he appears to have given up residing at the fort, it will be seen that he sent in reports every week to Mr. Barnet of the work which was being done at the 25-ton gun battery and the entrenchments, Middle Head, commencing at the latter on September 2, 1882; on the entrenchments at the South Head, and on the casemate at George's Head (*vide* Appendix G, attached to this Report.) There is a minute written by Mr. Barnet on Purkis's weekly report on these different works of the 21st of August, 1882, which was made on a single sheet—namely, “Mr. Purkis to make separate reports for each week”—which is evidence that Mr. Barnet not only knew that Purkis was inspecting these different works every week at the period named, and, consequently must have been continually absent from Bare Island Fort, but that he actually instructed him to write a separate report every week on each of these works. Even had Mr. Barnet thought that his subordinate officer stationed at Bare Island Fort was able to make these weekly reports about works a long distance away, he must succumb to the evidence afforded by the monthly vouchers, in which Mr. Purkis claimed and Mr. Barnet certified for travelling expenses incurred through leaving his work at Bare Island. The vouchers which passed through the hands of the Colonial Architect, and are signed by him, show that, in addition to his travelling expenses, Mr. Purkis was paid a daily allowance of 12s. for being away from the fort no less than 683 days in five years:—

In 1882 Purkis was paid for being absent	125	days
In 1883	”	”	”	134	”
In 1884	”	”	”	136	”
In 1885	”	”	”	153	”
In 1886	”	”	”	135	”
Total	683	”

It should be mentioned that nearly the whole of the concrete was put in during the years 1882–3–4, during which period the above statement shows that Mr. Purkis was absent about 43 per cent. of the whole working time.

Summing up:
(a) Mr. Barnet.

In face of this evidence, Mr. Barnet informed the Commission (Q. 21) that he “certainly expected Mr. Purkis to be there (*i.e.* at the Bare Island Fort) the whole six days of the week.”

We have laid so much stress on the above because it may be regarded as fairly illustrative of the way in which the Fortification branch of the Colonial Architect's Department was conducted. When the principal inspecting officer was only at Bare Island on an average three times in the year, and the resident officer was absent between 125 and 153 days out of the twelve months, and, according to Mr. Barnet's own admission (Q. 31), there was “nobody else to watch the interests of the Government when Purkis was away,” it is evident that the amount of Departmental supervision was very small; and yet, while well aware of Mr. Purkis's constant absence from the fort, Mr. Barnet, in answer to Q. 75, made the following attempt to account for there being so much bad work, by pointing out that Purkis's place of business was on the mainland; that there was a very narrow footbridge between it and the island that the men could see him coming for a quarter of an hour; and, “under these circumstances,” says Mr. Barnet, “I think it would be easy enough for them to put in bad material.” Of whatever sins of commission or omission Messrs. Colley and Purkis may have been guilty, there is no doubt that the one primarily responsible for what has occurred at Bare Island is the Colonial Architect himself, who held his officers responsible for duties which he must have known they could not possibly perform. A stronger instance of his neglect of the Government interest could hardly be furnished than that afforded by the extension of the fort contract to the barracks in 1887. The prices for many of the items in the fort contract were exceptionally high, being based on the fact that in 1881, when the contract was let, there was no bridge from the mainland, and the goods had to be hauled across on a wire rope. Yet, in giving Mr. M'Leod the contract for the barracks, no attempt was made to readjust the prices.

(b) Mr. Colley.

Mr. Colley's supervision was of the most nominal kind. He never checked the measurements (*vide* Appendix D, section 6, attached to this Report), having such perfect confidence in both contractor and officer that he thought it impossible that mistakes should be made, and not being on the spot could not

not be expected to make them himself. He seldom even kept the computations, except at the start, Purkis being regarded as specially good at figures and leaving no room for complaint; while, as to Mr. Purkis's weekly reports, which Mr. Barnet invariably marked off to him, he appears to have as invariably put them into the pigeon-hole without taking any action on them, although he affirms that he always read them through.

Mr. Purkis's supervision appears to have been as nominal as was that of Mr. Colley, he being ^(c) Mr. Purkis: there, on his own admission (Q. 642), only about two nights in the week, and when he was there (Q. 655) "he could not put in the whole of his time on the island; because he had so much office work to do." Mr. Purkis, like Mr. Colley (Q. 664), had full confidence in the contractor and his representatives; so much so, that it "never occurred to him that it was desirable, in the interests of the Government, that there should be some one on the works looking after things and exercising a check, even if it were only an intelligent boy." Mr. Purkis had three principal duties as resident Clerk of the Works. He was primarily responsible—(1) for the work being faithfully done, (2) for the day labour account being properly kept, and (3) for the measurements being honestly made. That he utterly failed in his first duty is plain from the bad work that has been opened up, a result to which his frequent absence from the work—for which, however, the late Colonial Architect and not Mr. Purkis is to blame—naturally gave rise. He failed utterly in his second duty from the same cause.

It was simply impossible for him to check the day labour when he was only on the island on an ⁽³⁾ How the day labor was checked. average two days a week, and he did not attempt to do so (*vide* Mr. Noble's statement, with which that of Mr. Purkis agrees, contained in Appendix D, section 7, attached to this Report).

Had the work been an ordinary lump-sum contract, in which labour was included in the rates, no harm would have been done; but, as was pointed out in the report by the Board of Inquiry, 10/6/90, "a large portion, amounting to 11 per cent. of the whole contract, seemed to have been carried out under what is, in our opinion, the very worst form of day work, *i.e.*, under a contract schedule of rates for labour at per hour, instead of either taking a lump-sum price for all the fittings or carrying them out under a schedule rate for finished timber work, which includes all labour, fixing, &c., as is usual in such cases." The result was that, instead of only 1,730 hours, day labour amounting to no less than 50,810 hours was paid for before the conclusion of the work. Had Mr. Purkis been really stationed on the island, as he ought to have been, and as Mr. Barnet said that he was, he would have been guilty of the most culpable neglect of duty in not properly checking the labour; but it is evident that wherever he was stationed it was not at the fort, and, therefore, for the absence of supervision and check of the day labour the Colonial Architect is to blame.

When Purkis was on the island he measured the work with Noble, there being, however, no check ^(4.) How the work was measured. on either. Purkis's explanation of how he ascertained the amount of excavation done during his absence is somewhat singular (*vide* extract from the *précis* contained in Appendix D, section 8, attached to the Report). No progress plans or sections were kept by Purkis as a record of the work carried out, and the measurements were taken in a very unsatisfactory way. (*Vide* Appendix H.)

XIX. In the preceding paragraph we have already dealt with the conduct of Messrs. Colley and Purkis as inspectors and supervisors of the work at the fort; but this report would not be complete if ^{The conduct of Messrs. Colley and Purkis.} we did not refer to the unsatisfactory way in which Mr. Colley treated the important documents and reports which Mr. Barnet continually marked off to him. The extracts headed, "Pigeon-holing papers," and "A minute by Mr. Barnet," from our *précis* of Mr. Colley's evidence, contained in Appendix D, section 9, attached to this Report, will show what his system was. It would appear to have been Mr. Colley's ^(a) Mr. Colley habit to pigeon-hole all these papers without acknowledging the receipt of them (none of the important letters sent to Mr. Barnet by Colonel Scratchley, and marked off to Mr. Colley, appear to have received a reply), and frequently without taking any action on their contents. We can only characterise this as sheer neglect of duty on Mr. Colley's part, for which, in our opinion, there was not a shadow of excuse, and which Mr. Barnet appears to have permitted without remonstrance.

In Appendix D, section 10, attached to this Report, will be found extracts from our *précis* of the ^(b) Mr. Purkis evidence given by Messrs. Purkis and M'Leod, showing how the former borrowed £750 from the contractor and still owes him about £450." This was, on the face of it, a most improper proceeding on Mr. Purkis's part; but there is no evidence to show that it was more than that.

E.

XX. We now come to that portion of our report relating to the manner in which the orders ^{The transfer.} of the Secretary for Public Works, in regard to the transfer of the Defence Works from the Colonial Architect's Department to the Military Works Branch, were carried out.

In

Formation of the
Military Works
Branch.

In Transfer Appendix marked A (which follows after the evidence) will be found a number of memoranda, reports and letters, numbered consecutively from 1 to 58, bearing on the whole question of the transfer of the Defence Works to the Military Works Branch, prefixed to which is a *précis* of the same drawn up by the Director of Military Works, the entire document being furnished as his sworn statement. It will be seen from this that in consequence of the memorandum dated 18/6/89, by Colonel de Wolski to the Under-Secretary of Public Works, written at the request of the Minister for Public Works (*vide* No. 1, Transfer Appendix), it was decided to establish a Military Works Branch of the Public Works Department, under a Military Director, who should be responsible to the Minister for the administration and control of all sums authorised for Military Works, as well as for all sums voted in connection with the Sub-Marine Mining Defence, this work having hitherto been undertaken by the Colonial Architect. On July 16, 1889, an official notification appeared in the *Government Gazette* of the creation of the new Branch, and of the appointment of Lieutenant-Colonel de Wolski, R.E., as Military Director, and on the following day, July 17, the Colonial Architect was formally requested by the Minister, through the Under-Secretary, to "forward all the papers in his office in regard to the various defence works, particularly of the current votes, with balances on hand, and also a statement of the condition of the various works in progress." (*Vide* No. 11, Transfer Appendix.) In reply, the Colonial Architect forwarded on August 5 a brief statement of the condition of the works, together with "bonds, papers, &c.," and on the following day (*vide* No. 12, Transfer Appendix) reported that such officers of his Department as were employed on Military Works had been withdrawn, and the works of the several contracts virtually stopped, pending fresh arrangements for their resumption, under the new Military Works Department.

First request
for the transfer
of papers, &c.

Second request
for papers, &c.

On the following day, August 7, the Under-Secretary wrote to the Colonial Architect (*vide* No. 13, Transfer Appendix), pointing out that no plans had yet been given, and stating that the Minister was very anxious that "all the plans, specifications, books, and other documents in connection with military works and buildings should be handed over to Colonel de Wolski at the earliest possible moment," to which the Colonial Architect replied on August 16, forwarding forty-six plans, a few more papers, and adding that "bonds, specifications, and other papers were forwarded to the Works on 5th instant."

Third request
for papers, &c.

The information supplied by the Colonial Architect, in assumed compliance with the Minister's orders, was, however, of so meagre a character, that on 10th August (*vide* No. 15, Transfer Appendix), Colonel de Wolski had to request that the Minister would be pleased to issue instructions to the Colonial Architect "to hand over without further delay the various Military Works now in progress, and all the plans, accounts, and other documents connected therewith in the usual manner between one officer taking over charge from another," and he pointed out that, in consequence of the Colonial Architect withdrawing the officers from the Military Works without supplying the necessary papers and other information, he had been left "entirely at the mercy of the Contractors." On August 27 the Minister himself despatched a minute to the Colonial Architect (*vide* No. 18, Transfer Appendix) directing him to supply the information required "fully and at once," and expressed regret that he should have to refer to the matter so often. Accompanying the Ministerial minute was a statement of the information required, such as plans for George's Head Casemate; Fort Scratchley, Newcastle; and South Head; particulars of payment in each case; and Contracts in progress at the Barracks. In reply on 2nd September (*vide* No. 19, Transfer Appendix) the Colonial Architect forwarded fourteen more plans, financial details relative to Fort Scratchley and South Head and the Barracks generally, together with a denial that there had been any delay in complying with the Minister's wishes, "the information now furnished not having been previously applied for."

Fourth request
for information.

On the 9th September (*vide* 21, Transfer Appendix) the Under Secretary wrote for particulars of expenditure of over £14,000, with the authorities for the several items of the outlay, which was supplied by the Colonial Architect on the 16th of the same month.

Fifth request
for papers, &c.

On 16th September the Director of Military Works (*vide* No. 22, Transfer Appendix) requested the Under Secretary that he might be "furnished without delay with correspondence and plans relative to the erection of a stable at Victoria Barracks, and also with plans, contracts, and other documents connected with alterations and repairs now in progress at Victoria Barracks." This request, which was forwarded to the Colonial Architect on the same day, succeeded in eliciting tenders for works in connection with mounting guns at George's Head, as also for renewing window sashes at the Victoria Barracks, together with a statement that the papers asked for were before the Colonial Secretary and could not at present be obtained.

Sixth request
for papers, &c.

On September 24th (*vide* No. 23, Transfer Appendix) the Colonial Architect received another communication from the Public Works Department, asking for particulars of expenditure on the £125,000 Loan Vote for 1888, which had been previously asked for, and which was ultimately supplied on 30th September.

On

On October 3 (*vide* No. 21, Transfer Appendix) the Director of Military Works requested the Under Secretary to obtain from the Colonial Architect the authorities for the Position-finding and Firing Stations, for the new works at Newcastle, and the contract documents, &c., for Bare Island and South Head works, without which, as Colonel de Wolski pointed out, the works could not be proceeded with. The Director added that "the delay is not only seriously detrimental to the works, but the Contractors will probably put in heavy claims for compensation." The request was forwarded to the Colonial Architect on the following day, and he ultimately produced some of the information asked for. Seventh request for papers, &c.

On October 8th (*vide* No. 29, Transfer Appendix) the Colonial Architect was applied to for the agreement, specification, &c., in connection with Marshall's contract at the Victoria Barracks, to which Mr. Barnet replied on October 14 that the papers were all at the Crown Solicitor's Office for preparation of bond. While this correspondence with the Colonial Architect relative to Marshall's contract was proceeding, it appears, from the sworn statement of Colonel de Wolski (*vide* Note No. 29, Transfer Appendix, dated 5th November, 1889), that the Colonial Architect's Clerk of Works was carrying out the work, although the Colonial Architect had been specially ordered by the Minister three months previously to hand over to Colonel de Wolski at the earliest possible moment "all plans, specifications, books, and other documents in connection with the military works and buildings." (*Vide* No. 13, Transfer Appendix.) Eighth request for papers, &c.

On October 24th the Chief Accountant (Mr. W. H. Quodling) drew the attention of the Under Secretary to the fact (*vide* No. 32, Transfer Appendix) that the Colonial Architect continued to make charges against the Votes for Military Buildings and Fortifications without his knowledge, some of the balances named in the return furnished by the Colonial Architect, in his memorandum dated August 12th (*vide* No. 14, Transfer Appendix), having been materially reduced since that date, although, as your Commissioners may point out, the Executive Council, on 18th July, 1889, had expressly directed (*vide* No. 7, Transfer Appendix) that all vouchers connected with the newly formed Military Works Branch should in future be signed by Colonel de Wolski. The Chief Accountant accordingly advised that the Colonial Architect be requested to furnish an estimate of the charges he might still have to make against the balances. On the following day, October 25th, the Under Secretary requested Mr. Barnet to furnish the information required. From the returns supplied by Mr. Barnet on November 8th, it appeared that £13,000 would be probably required to meet outstanding claims on military votes. The opposition which the Colonial Architect offered to the Minister's instructions up to this point was so determined that the Under Secretary was compelled to write him a minute, dated November 7th (*vide* No. 29, Transfer Appendix), ordering him "to withdraw all his officers from these works (*i.e.* the Victoria Barracks referred to in the previous paragraph) at once, and not to operate on the votes in future." Ninth request for information.

In the meantime, on October 24th, Colonel de Wolski had written another minute to the Under Secretary (*vide* No. 34, Transfer Appendix) stating that, until the Colonial Architect supplied the information asked for in his letter of August 10th (*vide* No. 15, Transfer Appendix), he would be unable to assume any responsibility in regard to the works at George's Head. On November 6th (*vide* No. 38, Transfer Appendix) the Under Secretary wrote to the Colonial Architect, requesting him to supply list of schedules of contracts for George's Head, South Head, Middle Head, Chowder Bay, and Bare Island, asked for by the Director of Military Works, without a copy of which the current accounts could not be made up. In reply the Colonial Architect gave the required information, and stated that the bond and schedule of Bare Island had been "sent to Works on 4th instant," thus showing a delay in handing over this most important document, according to his own admission, of just three months. Tenth request for papers, &c.

On October 30th, the Director of Military Works (*vide* No. 25, Transfer Appendix) requested the Under Secretary to instruct the Colonial Architect to hand over the key of the office at South Head, with an inventory of contents, and the contractor's copy of the plans of the emplacement for the recently completed 6-inch gun. In reply the Colonial Architect sent a number of tracings and drawings, with list of plans used in carrying out the alterations, together with keys of the office and of Sub-marine Mining Observing Station, &c. It appeared, however, that before the office was thus tardily handed over it was stripped absolutely bare of furniture, everything except the fixtures having been removed, or to use the Colonial Architect's explanatory phrase (*vide* No. 36, Transfer Appendix), "inadvertently brought away," and "sold by auction." Eleventh request for information.

On December 10th, the Minister intervened for the second and last time (*vide* No. 40, Transfer Appendix) and appointed the Chief Accountant, Mr. Quodling, "to take the whole matter of the accounts in hand; to ascertain from Colonel de Wolski what further information was required; to obtain from the Colonial Architect's Office that information; and to report to me at the earliest moment any difficulty which you may find preventing a complete adjustment of the several matters involved." From the date of Mr. Quodling's appointment to that of the appointment of your Commissioners to inquire, among Mr. Quodling appointed to obtain further information.

among other things, how "the orders of our Secretary for Public Works in regard to the transfer of the Defence Works to Colonel de Wolski have been carried out," the process of extraction has been going on, the Colonial Architect and his officers placing every obstruction in the way, till by slow and tedious degrees the various documents, papers, plans, and other information, which should have been handed over in a business-like way when the Minister's orders were first issued, have been gradually obtained. As Colonel de Wolski observed in his *précis* attached to the Transfer Appendix, "the correspondence herewith attached represents only a small portion of the record of the protracted struggle to obtain control of the Military Works of the Colony out of the hands of the Colonial Architect and the Contractors in accordance with the decision of the Cabinet. It will be observed," adds the Director, "that throughout this controversy the onus of specifying the information required has been most unfairly thrust on me. The orders were to hand over 'fully and at once' (see No. 18). There was no handing over; it was extraction by degrees." In the Colonial Architect's report on Colonel de Wolski's memorandum suggesting the formation of a Military Works Branch (*vide* No. 2, Transfer Appendix)—which, though purporting to be by the Colonial Architect was, in reality, like almost everyone of his minutes and reports, written by a subordinate official, in this instance by Mr. Colley—the opinion is expressed that "such a Branch would neither be conducive to economy, nor improve the method of carrying out works," and "it can hardly be considered desirable to place entire control of the works in question under officers who remained a comparatively short space of time in the Colony and were succeeded by others whose views were possibly quite different in respect to the manner of carrying out works and the designs projected by his predecessor." Such was the view which the Colonial Architect and his subordinate officials took of the new Branch from the start, and such was the spirit which guided them throughout. The instances of deliberate and wilful obstruction, in addition to the altogether unnecessary delay in handing over papers and documents, are almost innumerable. For instance—

Instances of obstruction.

XXI. Nearly four months after Mr. Quodling's appointment by the Minister to expedite the transfer of the Defence Works to the Military Works Branch he wrote to the Colonial Architect, at the instance of the Under Secretary, asking his reason for delaying the transfer of the works at George's Head and La Perouse, or Bare Island, as the latter is sometimes called. A few days afterwards Mr. Quodling wrote again to the Colonial Architect, asking whether some materials, which were reported to have been delivered at Bare Island by M'Leod and Noble to be used in the construction of the Defence Works at that place, had been ordered by the Colonial Architect or any of his officers, and if they had been approved and accepted as suitable for the work. (*Vide* Appendix B, which follows after the Transfer Appendix.)

(a) The Bare Island Barracks.

At the time when these two letters were written, dated respectively April 1st and 11th, 1890, the construction of the Bare Island Barracks had been stopped; the Minister, at the instance of Colonel de Wolski, having ordered their suspension on 13th June, 1889, nearly a year before, shortly after M'Leod had commenced operations. It was understood by Colonel de Wolski (*vide* Appendix B, No. 11, which follows after the Transfer Appendix) that there was no legal contract for the construction of the Barracks, the work having apparently, judging from the papers which were then to hand, been given to M'Leod by the Colonial Architect on his own responsibility. Fresh plans for the erection of these barracks had been submitted by the Director of Military Works, and had been approved by the Colonial Secretary on 26th June, 1889 (*vide* Appendix B, No. 11), and it was proposed to call for tenders to carry out the work. Hence Mr. Quodling's letter to the Colonial Architect for information. A reply was written by Mr. Barnet, "None of the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my Department.—J.B., 14th April, 1890." Whereupon on 17th April, 1890, in compliance with instructions from the Under Secretary, Mr. Quodling wrote to the Colonial Architect, asking him to arrange for a representative to be at Bare Island, on 21st April, with M'Leod, the contractor, for the purpose of handing over the work to the Military Branch, and on the day named he and Colonel de Wolski visited Bare Island. To the surprise of both Mr. Quodling and Colonel de Wolski, when the former asked the contractor why he had delivered the materials at Bare Island, M'Leod handed him a letter from the Colonial Architect, dated 15th April, 1889, addressed to M'Leod, in which M'Leod was informed he could carry out the Bare Island Barracks under his previous contract for the fort. (*Vide* Mr. Quodling's report, No. 53, Transfer Appendix). All this time these important documents—*i.e.*, the offer and acceptance of the contract for the Barracks, the existence of which ought to have been made known by the Colonial Architect eight months before in compliance with the Minister's orders—had been suppressed, and the Director was thus kept in the dark as to what had occurred. Both Mr. Barnet and Mr. M'Shane were asked for an explanation by your Commissioners, but their answers were unsatisfactory in the extreme, and convicted them either of wilful obstruction or of very marked incompetence.

Mr.

Mr. Barnet's reply to the charge of suppressing the letter giving M'Leod the contract, till Mr. Quodling and Colonel de Wolski went to Bare Island to take over the work, was characteristic. "I do not see how it could have been produced till then," he said; "the letter was in M'Leod's possession; how could it have been produced?" (*Vide* question 1348.) Comment is almost superfluous; but your Commissioners may point out that several months previously, namely, in November, 1889, the Colonial Architect was asked by the Under Secretary for the contract for Bare Island Barracks (*vide* No. 38, Transfer Appendix), and in reply he forwarded the schedule of 1881, from which the barrack contract was expressly excluded. Even had the information been correctly supplied in November, it would then have been five months late.

In the case of the Victoria Barracks the Colonial Architect took no notice whatever of the Minister's instructions to hand over everything connected with the Defence Works to Colonel de Wolski, and persisted in giving out contracts for the Victoria Barracks, and carrying them out by his own officers, altogether irrespective of the Military Works Branch, and this, notwithstanding the fact that on August 7, 1889 (*Vide* No. 12, Transfer Appendix), the Colonial Architect reported having withdrawn such officers of his Department as were employed on Military Works, and that the works of the several contracts had been stopped. (See question 1236.) Nevertheless on 13/1/90 the Acting Colonial Architect reported that the contract for renewing window sashes at Victoria Barracks had just been completed, and the existence of another contract was discovered by Colonel de Wolski on the same day by finding timber on the Barrack square. On being asked by the Minister (*vide* No. 48, Transfer Appendix) to explain upon what authority he continued to carry on the work at the Victoria Barracks when the transfer of everything connected with these barracks to Colonel de Wolski had been ordered as far back as August 23, 1889, the Colonial Architect explained that "the contract for the work named having been taken under this Department, it is considered desirable that it should be completed under the same supervision," and a few days later (*vide* No. 49, Transfer Appendix) he ventured another explanation to the effect that, when the Victoria Barracks were handed over on October 16, 1889, to Mr. Watson for Colonel de Wolski, Mr. Colley, Clerk of Works, told Mr. Watson that the Colonial Architect considered it would be better for all parties that he should deal with existing contracts till their completion; and, added Mr. Barnet, "no objection was raised by Mr. Watson for Colonel de Wolski at the time, and I am not aware that any has been made since." The unsatisfactory and evasive character of this reply is apparent on the face of it. Nor is the matter one whit improved by the answers to the questions on this point put by your Commissioners (*vide* questions 1361 to 1370), in which Mr. Barnet endeavours to shift the responsibility for his not obeying the Minister's orders on to the Minister himself; for, as he somewhat naively remarks, "if I acted wrong, the Minister should have said so, but he said nothing," as if the Minister had not repeatedly expressed his dissatisfaction, both by written minutes and by officially appointing Mr. Quodling to take the whole matter in hand.

In consequence of the stoppage of the clock of the Victoria Barracks at the commencement of last year, Colonel de Wolski wrote to inquire if it was included in any contract. The Colonial Architect stated, in reply, "No contract exists in this Department for attending to the clock referred to." Our President observed to Mr. Barnet, when examining him on this point (*vide* question 1371), that, "Strictly speaking, this was perhaps the truth, because the contract had expired seven days previously, but it was a piece of blinding or prevarication. If the contract had been handed over when you were instructed to transfer everything to the Military Works Branch, the clock would have been kept in order; but no information was given that such a contract existed." To which Mr. Barnet replied, "That must have been a mistake." This incident may seem a very small matter; but, as Mr. Quodling remarks (*vide* No. 46, Transfer Appendix), it indicates the spirit in which information was given by the Colonial Architect to the Director of Military Works.

XXII. Your Commissioners examined both Mr. Barnet and Mr. M'Shane very closely with a view of ascertaining what excuses they had to offer for the delay in complying with the Minister's order, and it is impossible to read the evidence of either of these witnesses without recognising the spirit of hostility and wilful obstruction to the new Military Works Branch, and to Colonel de Wolski in particular, which is throughout displayed.

Mr. Barnet's position is summed up in his brief answer to question 1328. There was "no trouble at all," he says, in getting the transfer of the correspondence and papers, a statement which the most casual glance at the preceding portion of our report (*vide* paragraph XXI) proves to be false. "Colonel de Wolski got everything he asked for," pursued Mr. Barnet, "and whenever he asked for it," and, later on (*vide* question 1330), "he (Colonel de Wolski) was expected to ask for what he required," as if the Director of the new Military Works Branch could possibly know what papers were in the Colonial Architect's possession, all of which, in pursuance of the Minister's express orders, should have been handed over to Colonel de Wolski at once, and without his asking for them at all. But Mr. Barnet's statement as to

the readiness with which everything was handed over to Colonel de Wolski is directly contradicted by Mr. Colley, who expressly stated (*vide* evidence, question 1510) that Mr. Barnet went into his (Mr. Colley's) room, and, to quote the evidence, "instructed me what papers were to go and what were not to go. He took the whole of the plans and said, 'You can send these, but you are not to send those.' His reason was that some of the tracings had been prepared in the office, and he did not want them to go away."

(b) Mr. M'Shane.

Mr. M'Shane's excuses are not satisfactory. He told your Commissioners (*vide* question 1382) that when the Ministerial order of August 7 (*vide* No. 13, Transfer Appendix) to hand over "all plans, specifications, books, and other documents" to Colonel de Wolski was received, "we thought, perhaps, the order only related to papers of the last few years or so." As for the neglect in handing over current contracts that (*vide* question 1385) was "an oversight." His third excuse, which was similar to that made by Mr. Barnet, was that (*vide* question 1304) "Colonel de Wolski was told all particulars so far as he asked" (*vide* question 1415). In other words, as Mr. M'Shane even went so far as to state, "we sent nothing unless it was asked for." In answer to question 1408 Mr. M'Shane admitted that he wrote the minutes, and that Mr. Barnet signed them. While this does not in the least lessen the charge against Mr. Barnet, it strengthens the case against the subordinates themselves, of whom Mr. M'Shane was the chief, and he therefore deserves some censure for the unseemly delay and obstruction that occurred, and to which he unquestionably contributed.

(2) GEORGE'S HEAD CASEMATE BATTERY.

M'Leod & Noble,
Contractors.

XXIII. Serious complaints having been made of the dampness of the magazines and other rooms under this Battery, notwithstanding the fact that various attempts had been made to make the covering watertight by tarring over the surface, &c., your Commissioners had several cuttings made in the concrete to ascertain whether it was carried out strictly in accordance with the specification. Before we made the cutting there was ample evidence of something being wrong, for not only did the wet come through, but when the workmen were tarring the surface some of the tar came through a thickness of about 6 feet of concrete forming the roof into a magazine underneath.

Upon opening up the concrete this could be easily understood, as it was found to have only a fairly good skin some 9 to 12 inches thick on top, underneath which are layers of large stones, in places laid almost dry, with beds of concrete between them. The work is certainly not so bad as that exposed at Bare Island, but nevertheless it is very disgraceful, and a large amount of dishonest work has been put in, and it is quite evident that no attempt had been made to carry out the work in accordance with the specification.

Upon examining the plans the words "coarse concrete" are written across the centre core of the mass on each side of the guns, but "hard fine concrete" is shown for a thickness of 6 feet in from the edges. We therefore had a cutting from one of the first cuttings, which was over the works marked coarse concrete, extended close out to the water's edge, thus cross-cutting what is termed "hard fine concrete," but we found no change for the better—indeed, close to the edge there is a cavity into which a stick 3 feet long could be thrust; but the whole mass is intersected with layers of, practically, dry-laid stone.

Reference to the specification will show that there is no justification whatever for the insertion of any of the so-called coarse concrete in the core, as only one quality is specified, and that is for concrete made with 1 cask of cement 400 lb., 5 cubic feet sand, and 27 cubic feet stone, broken to a 2-inch gauge, the price being 34s. per cubic yard; and the whole of the concrete, $7,644\frac{1}{2}$ cubic yards, amounting to £12,994 17s. 3d., was paid for at this rate; it was therefore an improper proceeding to have put any large blocks into the concrete under any circumstances, to say nothing of putting in large masses almost dry.

In this case, too, as at Bare Island, it is impossible that so much bad work could have been carried on without the full knowledge, if not with the consent, of the inspecting officers.

Had the concrete been honestly mixed and put in as specified it would have been good enough for any portion of the structure; nevertheless we find the contractors were paid 30s. a cask for adding 1,134 $\frac{5}{8}$ casks cement to make so-called "superior concrete," and that they were paid the further sum of £144 12s. 8d. for extra mixing the same, being 2s. 8d. a cask on 1,084 $\frac{3}{4}$ casks of cement; thus, in all, £1,846 17s. 8d. was paid as an extra for making "superior concrete." Not one penny of this expenditure would have been necessary had the specification been strictly adhered to.

Asphalting.—Under the head asphalting we find two thicknesses were specified for and prices taken in the schedule, viz. :—

- Item 47. Pure seyssel asphalt, $\frac{5}{8}$ inch thick, @ 10s. 6d. per sup. yard; probable quantity, 976 yards;
- Item 48. Pure seyssel asphalt, $\frac{3}{4}$ inch thick, @ 17s. per sup. yard; probable quantity, 64 yards;

the

the difference in price being 6s. 6d. for an increase of $\frac{1}{8}$ -inch in thickness. In the face of this disproportionate increase for the $\frac{3}{4}$ -inch thickness, the contractor was paid for putting on all the asphaltting of this thickness, as we find that no $\frac{3}{8}$ -inch was paid for, while the $\frac{3}{4}$ -inch was increased from an estimated quantity of 64 yards to 618 $\frac{1}{2}$ square yards. We consider this to have been a most unnecessary and improper deviation from the contract, and that those who permitted or passed this change unduly favoured the contractor.

The evidence shows that Mr. Purkis had charge of this contract, and he states he was on the work from two to three days a week, but that he had a foreman of works, Mr. Murray (since deceased), under him to watch the work in his absence.

(3) 25-TON GUN BATTERY, MIDDLE HEAD.

XXIV. Your Commissioners visited the Battery at Middle Head, and examined the concrete that had been removed by Colonel de Wolski for the purpose of altering the shape of the merlons in front of the guns, and they regret to say that in this case also they found the concrete of very inferior character, in many places loose and full of voids, and throughout full of large stones loosely thrown in, and from the evidence afterwards (January 30) given by Mr. Norman it will be seen that this was done under the express order of the contractor's foreman, Mr. Murray. Subsequent to your Commissioners' visit, this work has been grouted up and restored again with good concrete, so that your Commissioners do not deem it desirable to make any further excavations into this part of the work, but, as Colonel de Wolski proposes to make some alteration which will necessitate the opening up of other portions of the concrete in this fort, an opportunity will be afforded to examine the concrete put in by the Contractor, without incurring the expense of making any more cuttings for the present.

(4) OBSERVING AND FIRING STATIONS AT THE HEADS.

XXV. Your Commissioners examined the two stations referred to and, as reported, found them very damp and almost unfit for the purpose required. Upon inquiry we ascertained they were constructed of concrete, chiefly by the daywork system and without the aid of working plans, so there is no record or plan showing details of construction. As it was quite apparent, upon examination, that the chief if not entire cause of the dampness was due to total absence of surface drainage, no provision having been made for intercepting the water from off a large area sloping towards the trap-door and ventilators leading down to the building, so that during heavy rain there was nothing to hinder a large body of water from passing into the chambers through the ventilators and soaking into the surrounding soil. As this matter can be easily remedied by proper attention to surface drainage, we saw no necessity for incurring any expense in cutting into or opening up the walls.

(5) FORT SCRATCHLEY, NEWCASTLE.

XXVI. We inspected the concrete work at Fort Scratchley, Newcastle, on 16th January, 1891. A certain portion which had been cut into for the purpose of forming a pit to mount a 6-inch gun was exposed to our view on the occasion of our visit. The sections of this concrete generally exhibit good work, with the exception that, in some parts of the wall, whole bricks have been inserted, and in the concrete filling of the floor a very large percentage of bricks appears to have been used instead of bluestone. The officer who acted as Inspector while the work was in progress informed the Commission that these bricks came from the Harbour-master's residence, which was pulled down during the progress of the work, and that the contractor obtained permission from him to put them in. We have also been shown photographs of another portion of the same fort which was cut into when excavating the pit to mount the 8-inch gun. These photographs exhibit work of an inferior class to anything the Commission had then an opportunity of seeing, but we are of opinion that the work is not of such a character as to warrant any extensive cutting in the fort for the purpose of making a further search. What the Commissioners saw exhibits more carelessness in putting the work together than dishonest or bad work. We made a careful examination of the whole fort, including the casemates, passages, and magazines. It was satisfactory to notice the almost total absence of cracks, settlements, or dampness in the work throughout; and, seeing that no Seyssel or other asphalt was specified or used for keeping the concrete dry overhead, and that it was covered by a considerable depth of earth, we are of opinion that the work on the whole must be good, otherwise the passages could not be so dry as we found them. We also directed our attention to the doors, fittings, and other details, and we found them comparing very favourably with anything that has come under our notice at Bare Island or in any of the Sydney forts. Although the concrete may have been in places carelessly put together, thus causing slight voids, yet, owing to its generally strong nature and good material, it is not such as need cause any uneasiness, nor is it likely to lead to any serious destruction of the fort in the event of being struck by a shell. As future opportunities will be given to the Director of
Military

Military Works in the course of alterations he is now making to ascertain whether the works concealed from us are as good as those which we have seen, we will not say anything further on this head beyond pointing out that their pressions recorded above have been largely derived from external observation. After a careful examination of the fort your Commissioners returned to Sydney and took evidence on various matters connected with the carrying out of the work. A careful perusal of the correspondence contained in Appendix I, attached to this Report, will show that the road round the fort—an ornamental and expensive work, much desired by the inhabitants, but not in any way necessary to the defence of the Port—was constructed by Mr. Barnet, not only without any Ministerial authority, but by a twisting of the Ministerial authority, which, in the opinion of your Commissioners, was a most improper and irregular proceeding. Here again the laxity of control of subordinate officers, which was throughout a characteristic of Mr. Barnet's régime, led to some very reprehensible conduct on the part of Mr. Barnet's representative stationed on the works. (*Vide* evidence given by Messrs. Bushby and Campbell.)

(6) VICTORIA BARRACKS.

XXVII. The Commission find that there is no dispute as to quality of work in any of the contracts at the Victoria Barracks, and that the complaints lodged by the Director of Military Works referred entirely to the dilatory manner in which the Barracks were handed over when the transfer was made. As this matter will be found fully dealt with in that part of our report dealing with the transfer nothing further need be said. (*Vide* Paragraph XXI, (b) The Victoria Barracks.)

CONCLUSIONS.

XXVIII. To sum up what has necessarily been a somewhat voluminous report your Commissioners find:—

1. That M'Leod's contracts for the construction of Bare Island Fort and George's Head and Middle Head Batteries were carried out in a most disgraceful way.
2. That the cost of the work—principally owing to the departures from the specifications, especially in the enormous increase in the items for day labour, concrete, earth excavations, and Portland cement, and in the charge for extras—was far in excess not only of the original tender but of the Ministerial authority given for the work.
3. That this was mainly owing to the fact that adequate supervision was not provided by the late Colonial Architect, and that verbal instead of written instructions were given for alterations, notwithstanding the explicit provisions of "General Conditions" No. 12, attached to the contract, and of the ministerial minute issued in 1887, to meet this particular point. (*Vide* Appendix E1 and E2.)
4. That Messrs. Colley and Purkis, at present under suspension, performed their duties in a very perfunctory manner, the former only being on Bare Island three times a year, and the latter only about two or three times a week, the work being entirely without supervision when Mr. Purkis was away.
5. That the true blame for the bad character of the work, induced by the utter lack of supervision, rests with the late Colonial Architect himself, who carried on these contracts for the fortifications at Port Jackson and Botany, without providing sufficient supervision, and made two officers responsible for duties which he must have known they could not possibly perform, even if they had the best intentions to do so. Mr. Barnet's other duties would, no doubt, make it impossible for him to exercise personally the supervision necessary, but, at least, it was his duty to see that ample supervision was provided, and that it was efficient and constant, so that no scamping or slovenliness of work would have made the destruction of forts intended for the protection of the colony, and the consequent and inevitable sacrifice of lives an easy matter for an attacking force, and we think that no other conclusion can be drawn from the evidence before us than that the interests of the colony, whose officer Mr. Barnet was, have very seriously suffered through a systematic indifference and neglect on his part of the gravest character, not only as to the quality of the works themselves but as to the large sums of money expended on them. We also consider that Mr. Barnet was guilty of grave insubordination in resisting, or at least obstructing, the orders of the Minister as to the transfer of the works.

RECOMMENDATIONS.

XXIX. In view of the above conclusions, which have been forced upon your Commissioners by the evidence, we have certain recommendations to make—

The Contractors:—

- (a) After carefully considering the matter, we are of opinion that, although the late Colonial Architect and his officers are primarily to blame for neglecting to supervise the works, the Contractor has taken

taken advantage of that neglect, and has grossly and systematically violated the obligations of his contracts. We therefore suggest that the contractor should be called upon to refund the amount paid to him for that portion of the work specified for, paid for, and supposed to have been done, and that both Mr. M'Leod and his manager and sometimes partner Mr. Noble should be declared incapable of taking any Government contracts for all time to come.

Mr. Purkis:—

- (b) Mr. Purkis's neglect of duty was so complete, and he showed himself to be so unworthy of the trust which should be placed in an officer holding such a responsible position, that we feel it to be our duty to express the opinion that it is not desirable that this officer's services should be retained.

Mr. Colley:—

- (c) Mr. Colley's neglect was equally pronounced though shown in a different way. It was in a great measure owing to his neglect that much of the unsatisfactory character of the work is due, as well as the want of necessary authority which he should have sought for what was done over and above the schedule rates, the almost total absence of proper drawings and plans which he should have asked for, and the carelessness in subordinate officials induced by want of proper check. If responsible officers are allowed to proceed as Mr. Colley continually did, no works could be properly carried on. We cannot, however, but recognise the fact that Mr. Colley was, to some extent, the victim of a vicious system whereby he was called upon to supervise a number of works and perform a multitude of duties to which it is very obvious he could give but the most superficial attention. We therefore recommend that he be somewhat more leniently dealt with.

Mr. Barnet:—

- (d) Mr. Barnet, the late Colonial Architect, has held such a prominent position as head of his Department for so many years, and is responsible for the execution of so large a number of the leading public buildings in the Colony, that your Commissioners feel it a very painful duty which they have to perform, but the proof of culpable neglect on his part is so strong, and the evidence taken before your Commissioners points so forcibly to the conclusion that the late Colonial Architect himself is the principal person to blame, that we should be neglecting that duty if we did not recommend that some step should be taken which would satisfactorily prove that no public officer, whatever may be his position in the service, can escape punishment for his misdeeds. Your Commissioners therefore recommend that a commensurate censure be recorded on the late Colonial Architect for his gross neglect of duty in connection with the works under our review, and that such further steps be taken by the Government as may mark the gravity of the case which, in our opinion, is fully established against him.

Before closing we desire to record our appreciation of the very satisfactory manner in which our Secretary, Mr. Percy R. Meggy, has performed his duties.

We have the honor to be,

Your Excellency's most obedient Servants,

(L.S.) C. W. DARLEY,
President.

(L.S.) W. W. WARDELL.

(L.S.) G. ALLEN MANSFIELD.

APPENDICES ATTACHED TO THE REPORT.

APPENDIX A.

Preliminary remarks attached to the "specification of work to be done, and of materials to be provided, in connection with the construction of a Fort on Bare Island, Botany Bay," taken, with but slight alteration from the description drawn up by the late Mr. Morell, C.E.

Nature and extent of contract.

1. The work to be done under the contract herein referred to shall comprise every operation necessary for the construction of a fort to be erected on Bare Island, Botany Bay.

The contract shall include—

- 1st. Providing the whole of the tools, labour, and plant, and supplying all materials required for the carrying out and completion of the work.
- 2nd. The maintenance of the approaches to the fort, and of any road that may be constructed for the conveyance of the materials to and from the works.
- 3rd. The levelling of ground to allow of the full range and depression of the guns, as shown on drawings.

The Government will supply the armour-plates, lamps, pivots, racers, shell-derricks, &c., required, all of which must be fixed by the contractor in strict accordance with the drawings and specification, and to the satisfaction of the Colonial Architect. Materials supplied by the Government.

The fort will comprise—

- 1st. Casemate for a nine-inch gun, protected by an iron shield formed of armour-plates.
- 2nd. Two emplacements for one nine-inch gun each, "en barbette."
- 3rd. Two emplacements for one eighty-pounder gun each, "en barbette."
- 4th. Two small pits for Gatling guns.
- 5th. Magazines and shell stores, with all necessary shell-proof passages, lobbies, and recesses, lamp store, &c.
- 6th. A bomb-proof artillery store and laboratory.
- 7th. Barrack accommodation and offices for officers and men. (These buildings to be omitted.)
- 8th. Parade ground and entrance to fort, retaining walls for slopes and embankments, also scarping projecting ledges of rock.

Description.

APPENDIX B.

BARE ISLAND FORT, BOTANY BAY.

Sworn statement by Mr. H. H. Purkis, handed in to the Royal Commission on Defence during examination, and in reply to Report of Board of Inquiry, dated 2 June, 1890, for which see Appendix F attached to this Report.

Concrete Merlon, &c.—Page 2.—It appears that a considerable quantity of large, and in some instances soft, stones has been improperly placed in this merlon, which makes this portion of the work quite unsatisfactory. I was in no way aware, or had any reason to suppose that such was the case. I always felt with the greatest confidence that every portion of the work was sound and good. An occasional large sound stone, as long as the quantity did not exceed the measure of the metre, I consider an advantage in a large mass of concrete, as they form dowels, and have a tendency to strengthen it.

Page 4—The additional 740 casks of cement were used to enrich the concrete of arches, covering magazines, stores, casemate, passages, laboratory, &c.; also, I believe, the upper two feet of parapets, &c. The books give the particulars. This was done in accordance with the custom carried out in previous works of a like nature at Port Jackson, &c. The process is to substitute 18 cubic feet of stone for 27 cubic feet, as provided for in schedule; by so doing it makes the aggregate about 6 to 1, including sand. The last schedule prepared for Defence Works by the Colonial Architect's Department provides an item for this quality of concrete, and was used for similar portions of the work at Mr. Farley's contract, South Head, Port Jackson.

Page 4—Tar-paving:—The whole of the tar-paving, included on floors of emplacements, passages, &c., is laid on solid rock or concrete; the only exception is the lower yard. There being no hard metal in the vicinity as per schedule, the contractor obtained permission from the Colonial Architect to substitute 4 inches of bluestone for the 6 inches of stone specified to be obtained in the vicinity of the works.

This tar-paving was done by experts, and, I believe, was laid to the full thickness and done well. It was considered at the time that sandstone ballast was not suitable for this material to be immediately laid upon. The larger stones were taken out from portions of the formation of lower yard, and placed at the outer part, near the wall, where some feet of filling had to be made up. Considering this tar-paving has been laid six or seven years, with not sufficient traffic over it to keep it in order, and exposed to the severe tests of the weather, it appears but reasonable for it to diminish in thickness and to crack in some places, especially on those portions exposed to the sun, where, in its somewhat perished state, each sweep from a broom would take away some portion of it.

Page 5—Seyssel Asphalt:—To lay two $\frac{1}{2}$ -inch coats of asphalt on concrete roofs of magazine, especially on those difficult of access, has been the usual custom to ensure a tight roof. One coat is laid, say longitudinally, in strips of about 3 feet wide; the other coat is then laid transversely in a similar manner. No other asphalt but Seyssel has, to my knowledge, ever been used on the work. Probably this could be ascertained by having portions analysed.

Referring to the asphalt over the roof of laboratory not being, at present, 1 inch in thickness, I beg to point out that, in addition to the loss occasioned by the action of the cement on which it is laid, there is no covering on it whatever, therefore it has been exposed to the sun and weather, also to the traffic over it for six or seven years. As to this portion of asphalt not being laid in two $\frac{1}{2}$ -inch thicknesses, as taken, does not appear easy to determine, as one coat is applied as soon as possible after the other. The great heat in the boiling asphalt, when it is fit for laying, would necessarily cause the first layer to become somewhat in a state of fusion when the second layer is applied, and unite the two layers together so as to make the joining imperceptible. With all due respect I cannot believe but what this was laid in two layers, as paid for.

Pages 5 and 6—Magazine Floors, &c.:—These floors were laid in the same manner as usually done in previous works, viz., laid on glazed tiles with a cement bed, the asphalt keying in the joints, &c.—the one-third additional measurement being allowed for filling the joints of tiles to meet the cement; also the pattern on tiles; and to make up for the irregular surface of tiles when they are laid. As each item in schedule stands by itself, I cannot understand how this method of payment is improper. For Bare Island, item (56) for $\frac{1}{2}$ inch thick is 14s. per square yard, and item (57) for $\frac{3}{4}$ inch thick is 16s. 6d.; this certainly makes a difference of only 2s. 6d. for the additional $\frac{1}{4}$ inch in thickness in this particular case.

<i>Bare Island.</i>	
Paid ..	£ 1 2 0
? ..	19 0
Difference	3 0
<i>Casemate, &c.</i>	
Paid ..	£ 1 2 8
..	1 10 0
Difference	7 4

It would probably create confusion to attempt to make the items of schedule, or take them in a manner of proportion. For Bare Island, to do so for these asphalt floors, the result would be 3s. per square yard less than paid to the contractor; but if the contract prices for the casemate battery, George's Head, were treated in the same manner, the result would be an advantage to the contractor of 7s. 4d. per square yard in addition to what he has been paid, as item (47) is for asphalt $\frac{5}{8}$ of an inch thick and 10s. 6d. per square yard, and item (48) $\frac{3}{4}$ inch thick 17s. per square yard, showing a difference of 6s. 6d. for an eighth in thickness, or 13s. for $\frac{1}{4}$ of an inch.

The floors of magazines, &c., at the casemate battery are laid in a similar manner to those of Bare Island.

It may also be presumed that the joints, &c., of tiles for $\frac{1}{2}$ inch floors will take the same quantity of asphalt as the $\frac{3}{4}$ inch thickness, although $\frac{1}{4}$ of an inch has only been allowed.

Page 6—Doors:—The whole of the doors were made on the works from well-seasoned cedar, and are finished to full thicknesses, and were framed together some weeks before being glued up. They are made in a proper and workmanlike manner, being sheeted on external faces over the middle and lower rails, and are similar in make to those previously made and approved of for Defence Works, Port Jackson, &c. They are made solid, as specified. I certainly think they are not inferior in construction to specification, but they are more costly to make.

The alterations made to some of these doors, viz., substituting single for folding at laboratory and shell-stores, also the sliding doors to stores, were made by the late Sir Peter Scratchley. The sheet iron he decided was not necessary on the outer laboratory doors, as it served no purpose, and was a detriment by adding weight to the hinges.

These doors were seen by Colonel Scratchley when being made, and after they were hung in position, and were approved of by him.

Locks:—The locks used for doors were approved of by Colonel Scratchley from samples, and were specially made to order and imported from England, with two extra long gun-metal keys for each lock, and interchangeable for each package of six. This provided for each set of magazine, shell-room, &c., doors, so that the Master Gunner has to carry one key only for each set of doors.

Distinctive labels were also provided to enable the man in charge to find any particular key he required in the dark.

These locks supplied were considered quite equal in value to those specified, and more suitable for the purpose. The apparent objections to the Hobbs' locks were that the keys were too small, and not equal in strength to those decided upon.

The same class of locks was afterwards used for the casemate battery, George's Head, and evidently, at the time, with approval by the military, as no complaint, to my knowledge, was ever made against them.

The last schedule prepared in the Colonial Architect's Department for Defence Works provides for these locks to be used, and specimens to be seen there.

For any alterations made by the late Sir Peter Scratchley at the works, I am under the impression were generally covered by a letter to the Colonial Architect. It was my practice to inform the Colonial Architect, verbally or otherwise, at my earliest opportunity. I am quite certain that no alteration was ever made by me on my own responsibility.

H. H. PURKIS,
Clerk of Works, 4/7/90.

BARE ISLAND FORT.

Memoranda *re* further report of Board of Inquiry, in continuation of 2 June, 1890.

Page 2—"Authority for alterations, &c."—It has not been the custom when alterations or additions were made in carrying out these works for the Colonial Architect to convey in writing to the Contractors concerning the same.

The late Sir Peter Scratchley generally covered any deviations by letter to the Colonial Architect, after deciding about them on the spot.

Page 3—All large or extensive excavations, such as were necessary for the 9-inch and casemate emplacements, to form superior slopes, were carefully set out with a theodolite to the required ranges; levels were then taken at the intersections of radiating and concentric lines. A plan was prepared in each case, and from it the blocks computed, including slopes to the full depths required. This was done before any of the rock was excavated. The measurements were then entered in the books. If necessary, these measurements may now be verified from the plan, showing the contour levels.

The concrete quantities given in schedule could of necessity be only approximate, as it entirely depended on the quality or soundness of the rock met with as the work proceeded. The more defective the rock the more the excavations and concrete increased.

The

The emplacements for the 9-inch guns were lowered 1 ft. 7 in., and the right gun given 20 degrees more range; this alone would increase the excavations to a large extent without the extensive additions.

The quantities for concrete, as compared with the schedule, can be best obtained from the books, which show how such a large increase was necessary in detail. Also it may be generally obtained from the works.

The casks of cement used are also explained by the books as to how and where used.

Page 3.—Magazine, &c., Fittings:—The reasons why the fittings in magazines, &c., were carried out by day-work schedule rates in this case may be attributed in the first instance to a war scare.

The two 80-lb. guns were required to be mounted temporarily, as the new-pattern iron carriages for them were not in the Colony. Each floor had to be raised 1 foot to suit the old carriages, which was done with 12 in. × 12 in. timber, &c., to fasten the racers to. This work, the bridge across ditch, and the stable were not considered to altogether apply to wrought-timber items in schedule, although claimed so by the contractor.

The fittings shown on plans for magazines are, I believe, merely battens on the floors. These magazines were required to be fitted hurriedly, after the military had decided what quantity of powder in casks, cases, or cylinders each had to stow. Plans were then prepared with shelves or racks to meet requirements, and were fitted after being approved.

Under these circumstances the contractor claimed, and was allowed to carry out, these fittings by day-work schedule rates, the same as the other timber-work.

An item is provided in the last schedule made by the Colonial Architect's Department for framed woodwork in addition to wrought iron.

Day-work:—The greater portion of day-work is due to the fixing of armour-plates, shields, girders, and iron ceiling of casemate; converting iron platform for the 10-inch gun; temporarily mounting 80-lb. guns; building bridge across ditch; and for escarping the rocks, &c., round the Island, to make it practicably inaccessible to an enemy.

Not one of these works is included in the probable quantities given in contract schedule, although when combined are of large magnitude. These works, under the circumstances, could not have been reasonably carried out otherwise than by day-work.

The abstract-book will best show the time taken for each.

The workmen employed were all good in their respective grades. The rates paid include tools, also a forge and fuel for the blacksmith.

I have at all times endeavoured to perform my duties in a proper manner, and to the best of my ability, and have had good reason to suppose to the full satisfaction of the military officers, the Colonial Architect, &c., under whose instructions I have had the honor to serve.

I always had full confidence that the work was done well, as in parts where we have had occasion to cut away for alterations, &c., it has always been, without exception, sound and good. The last occasion was at George's Heights, at the old 10-inch gun battery, for the purpose of mounting the two 6-inch new-type guns.

My time was fully occupied when at Bare Island, or any other of the defence works, &c. My duties comprised setting out the various works, measuring them, making plans of details, entering and computing the measurements in books, making up the several progress valuations for payments; also making plans, specifications, &c.

I very much regret that some of my answers in reply to questions put to me by the Commissioners were somewhat misleading to them, and were an injustice particularly perhaps to myself. In extenuation of this I can only say that I answered their numerous questions entirely from memory, and to the best of my remembrance.

Undoubtedly I should have requested the privilege from the Commissioners to allow me to look over my books, which were in their possession, to refresh my memory before giving some of my replies, especially as so many years had elapsed since the work was done, and I had other works of a similar nature to look after at the time this work was in progress. Also, the works of this character, both previous and subsequent to Bare Island, which have been under my supervision would tend to create a mixture to memory.

H. H. PURKIS,
Clerk of Works,
4/7/90.

APPENDIX C.

MEMORANDUM by Colonel de Wolski, R.E., Director of Military Works, on Bare Island Fort.

(Handed in to the Royal Commission on Defence as a sworn statement, 3 September, 1890.)

THE tender of Mr. John M'Leod for Bare Island Fort for the sum of £25,025 15s., to be completed in twenty months, was accepted 7th April, 1881. The work was commenced early in June, 1881, but the contract at a schedule of rates was run on to the early part of 1887. A further extension of the schedule, under an agreement with the Colonial Architect, was commenced in April, 1889, and is now in abeyance pending orders from the Minister.

					£	s.	d.	
The amount of work done under the contract	32,375	16	11	Amount paid.
Extras	1,481	7	11	
				Total for Fort ...	33,857	4	10	
Add for Barracks (1st advance)	500	0	0	
Do (2nd do)	120	0	0	
				Total amount paid ...	34,477	4	10	

No authority was obtained to carry out this work at a schedule of rates. It was let as a lump sum contract.

The

Deviations from plans.

The work has not been completed according to the plans and specifications drawn up by the late Mr. Morell, C.E., under the direction of the late General Scratchley, and neither the original plans nor the working tracings have been altered to show the modifications and additions introduced.

The numerous letters of General Scratchley to the Colonial Architect, none of which appear to have been answered, contain *authority* for the omission of the granite facing, for the *addition* of magazines for the casemate battery, and for alterations to the area walls of the barrack site. The omission of the granite work was attended to, but the concrete merlons of the casemate were enlarged and the earth blinding omitted, without the slightest authority, and the character of the work has thereby been seriously impaired. The only reasonable explanation is that the contractor found it more profitable to increase the mass of concrete, for which he had abundance of stone on the site, than to bring over earth from the mainland. The magazines were also constructed, but, beyond the sketch plan supplied by General Scratchley, no working drawing appears to have been prepared. These magazines being very damp will have to be repaired, but the want of a record plan is found to be a serious drawback, as the details of the construction are not known.

As regards the reduction of the wing-walls of the barrack site, mentioned in General Scratchley's letter to the Colonial Architect, dated 24th May, 1882, nothing appears to have been done, although the excavation for the foundations was not commenced till many months later. Not only was General Scratchley's recommendation treated as waste paper, but so also was Mr. Morell's specification for this portion of the work, which laid down that "no work will be proceeded with on any foundation until the latter has been examined and approved by the superintending officer," and also that weepholes should be provided every 6 feet. Although the foundations of these walls have been paid for as channelled out of solid rock, it will be seen that a portion has been built on black sand and the remainder on soft pipeclay. In consequence the walls have failed, and reconstruction and underpinning will be necessary throughout.

Extra works.

The extra works carried out include a guard-room, cells, and a stable, costing over £800 in all. These works were carried out without a plan, and the result has been that their cost has been out of all proportion to the accommodation provided. The guard and cells are damp, the walls and ceiling being cracked. The foundations of the cells have been paid for as 2 ft. 11 in. of concrete, the average not exceeding 11 in. The contractor was apparently allowed to fix his own schedule of rates for the stable, which he let to a sub-contractor, providing the materials.

Concrete.

5,480 $\frac{3}{4}$ yards concrete, at £2 4s. 6d.	£12,193	3	3
740 casks cement at 30s.	1,110	0	0
Labour "mixing 740 casks cement for superior concrete," at 2s. 4d.	86	6	5

Total £13,389 9 8

The average cost of the concrete is therefore £2 8s. 9d. The contractor was paid for excavating 13,115 cubic yards rock which he used for the concrete, and he therefore got the stone practically for nothing on the site of the work. The concrete should, therefore, have been of the very best description.

An examination of the concrete above the 10-in. magazines and in the merlons of the casemate will show that not only is the concrete not of "approved hard sandstone," but it contains large lumps of pipeclay and soft rock, proving the entire absence of ramming, except on the surface layers. The lower layers examined reveal large rounded boulders, and stones of every size and description appear to have been shot into it without any cement, or so little as to leave hollow spaces and loose sand between them. A large portion of the merlon appears to be little better than rubbish.

Apart from the folly of backing-up and covering massive armour by such concrete, which if struck by a shell would produce disastrous splinters and *débris* preventing the service of the guns, the omission of the 6,705 cub. ft. of granite facing blinded by earth specially necessitated that the work substituted should be sound.

Doors.

The thirty-five doors, fixed, cost £360, the hardwood frames being charged extra.

The doors are in no instance constructed according to plans and specification.

Instead of being framed solid 2-in. panel doors they are half-framed double-boarded, and inferior in strength and design. The locks, instead of being Hobbs' 122 all brass lever mortice, with drop handles, are common 7-in. brass rim locks, without master keys or handles, cabin rings being substituted. The cost of this furniture would be one-half that specified, and the cost of fixing far less.

5 magazine doors, £11 each

Not double doors hung folding, as specified, and without bolts. The issuers, instead of being in the shape of two half doors, admitting of issue either above or below, are framed by hinging the lower panel, which prevents heavy ammunition being passed out along the floor, or light ammunition being handed out quickly above. The doors further cannot be kept open.

5 shell-room doors, £11 10s. each.

Neither double nor otherwise, according to specification.

Cartridge recess doors, £8 15s. each.

Hinged instead of sliding doors provided.

Laboratory, outer, £13 10s.; inner, £10.

These doors are all the same and yet charged differently. They are not made folding; outer doors are not plated. One door patched; iron nails used.

Artillery store door, £12 10s.

No gunmetal padlock provided as specified. Door badly fitting; four planks patched. Badly framed (see left hand top corner on right door). Iron fittings very bad workmanship.

Upper door £12 10s.

This door is smaller than the one above-mentioned, and should not have been charged as an artillery store door.

As none of these doors are in accordance with the plans and specifications contained in the schedule, they should be revalued under Items 60, 61, 63.

Tar pavement.

898 $\frac{3}{4}$ yards at 12s. 6d. £561 14s. 8d.

The tar pavement is nowhere in accordance with specification. The thicknesses of pavement were found to vary from 2 $\frac{1}{2}$ to 4 inches, but there is no hard sandstone ballast laid under it as specified under item 52.

Blue

Blue metal has, however, been used in lieu of "hard metal obtained in the vicinity of the works." The pavement generally has failed and will require renewal, but probably it would be advisable to substitute blue metal concrete. This item, having been paid for improperly under item 52, should be revalued.

704 $\frac{3}{4}$ yards $\frac{1}{2}$ inch, at 14s.	£493	5	4	Seyssel asphalt.
484 $\frac{3}{4}$ „ „ $\frac{3}{4}$ „ at 16s. 6d.	399	17	0	
Total	£893	2	4	

The quality of the asphalt on the artillery store is distinctly bad. It appears to have been adulterated with tar. The roots of grass grow freely through it.

Over the laboratory and guard-room 2 half-inch thicknesses at 14s., making 28s. per square yard, have been paid for, instead of 1 three-quarter inch layer at 16s. 6d. Over the 80 pr. magazines, $\frac{3}{4}$ inch has been charged for, while the thickness is $\frac{1}{2}$ inch. There is reason to believe that the 9-inch gun magazines have only one instead of two layers of asphalt as charged for. An allowance of $\frac{1}{4}$ for between joints was added in 1882, and in 1883 this was increased to $\frac{1}{2}$. This was paid to the Contractor without good reason and in defiance of general condition No. 9, of the contract, which lays down that "all measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary."

The cementing of the floors and passages of the cells was at the rate of 4s. 8d. instead of 3s. 6d. per square yard. No explanation of this arbitrary addition of $\frac{1}{2}$ d. has been forthcoming. The cementing of the N.E. barrack area wall has been done over soft pipeclay, and has consequently failed to hold. As a general rule the cementing throughout the fort is fair, which might be expected under the circumstances, as there was an object in hiding up bad work securely. Cementing.

The wood-fittings in the magazines, laboratory, guard-room, &c., should have been charged for under timber work items 60 to 63, labour and materials. They have been improperly charged for under materials, and labour at so much an hour, item 101. The guard-bed on this system cost over £12. In some instances, as in the case of fuze boxes, a lump sum was arbitrarily fixed. Woodwork.

Twenty-three railway carriage locks were charged for at 17s. 6d. each, instead of at 2s. 9d. per lb. under item 87. As they weigh less than 1 lb. each, and are very coarsely cast, the charge was an improper one. Gun-metal.

One hundred and thirty feet pipe railing is charged for at 10s. per foot, instead of at £4 per cwt., under items 77, 78. This railing is shown on the original plans, and should have been provided for in the schedule. Pipe railing.

On the recommendation of Mr. Colley, £85 was paid to the contractor as compensation for girders of casemate omitted. On the 13th August, 1880, General Scratchley informed the Colonial Architect that the ironwork was to be ordered from England; and Mr. Morell's description also specified this. The total value of the ironwork estimated in the schedule was £1,635, and the amount paid was £993 7s. 4d. The value of the iron omitted was, therefore, £642, not £850. As the contractor could not have ordered this ironwork, the compensation was distinctly improper, considering that the work was being carried out at a schedule of rates and not a lump sum. Compensation for ironwork omitted.

(Signed)

F. R. DE WOLSKI,
Colonel, Director of Military Works.

2 September, 1890.

APPENDIX D.

Extracts from *précis* of the evidence taken before the Commission.

From MR. BARNET'S EVIDENCE:—

5. (A1.)

(Question 16) Mr. Colley was Inspector, "the measurements were by him;" (92) he and Mr. Purkis prepared the schedule, (93) and were responsible to me that proper allowances only were made to the contractor; (95) it was Mr. Colley's duty to check the inspector (*i.e.*, Purkis), (97) to check the measurements, (96) and to check the accounts. (27) Mr. Colley was also Inspector at other places as well as at Bare Island; (124) he was in charge of the Casemate battery, George's Head; (127) of the 25-ton gun battery, Middle Head; (129) of Fort Scratchley, Newcastle; (130) of the Victoria Barracks; (128) and of the Observing and Firing Station at the Heads, the two last being recent works. Mr. Colley's duties.

5. (A2.)

(17) There was no Inspector under Mr. Purkis at Bare Island, (18) he being practically foreman of the works; (15) he was stationed on the work, and had a house provided for him—not on the work exactly, but adjacent to it. (21) I certainly expected Mr. Purkis to be there the whole six days of the week, (36) the intention being that he should be there at all times when the men were at work; (35) I should think that there was no day work done when he was absent, (33) and that he would take care how the men's times were kept, and not be absent from the labour account. (20) In his absence no provision was made for the inspection, (31) there being nobody else to watch the interests of the Government when Purkis was away, (20) but if he had occasion to leave the works he would make arrangements accordingly. He would not tell me every time he left, as he had general instructions to visit other works; (19) he had occasionally, therefore, to go away from there, (22) but his other duties would only call him away "occasionally, not very often." (82) Mr. Purkis either brought his report, or sent it, every Monday; (83) he did not always see me. (24) His duties on the other works—(25) which were chiefly fortifications in Sydney harbour—(24) were "somewhat similar" to those of Bare Island, except that (26) at the other works he had an Inspector under him. (28 and 30) When Mr. Purkis went away to the other works, he was only allowed actual travelling expenses, (29) and had no temptation to absent himself more frequently than was necessary. (37) Mr. Purkis had nothing whatever to do with the fortifications at Newcastle, (38) and there was no contract work going on for the year that this work was begun. (124) Besides his duties at Bare Island, Mr. Purkis was resident officer at the Casemate battery, Georges' Head, (127) officer under Mr. Colley at the 25-ton gun battery, Middle Head, (128) and at the Observing and Firing Station at the Heads—the last being quite a recent work. Mr. Purkis's duties.

1. (A.)

Colonel Scratchley's alterations.

(42) Colonel Scratchley visited the works frequently, generally accompanied by Colonel Roberts, and they together suggested and made alterations. (43) Usually the Department used to get the alterations in writing, but sometimes Colonel Scratchley gave orders without writing. (44) When he wrote a request that any particular work should be done, I gave directions to have it carried out. (118) I had a general Ministerial authority for carrying out the whole work, (119) and did not require any special authority for deviating from the original plan; it was never done in the case of the fortifications; (123) there was a general authority from the Colonial Secretary to obey the instructions of Colonel Scratchley; it was not necessary to get instructions from the Public Works; (45) the general order was that Messrs. Colley and Purkis should attend and take instructions from Colonel Scratchley; (49) there was a general instruction to carry out whatever Colonel Scratchley required; Mr. Colley would in the first place report if that was necessary, and then carry out Colonel Scratchley's instructions.

1. (B.)

How authority was conveyed.

(49) When I conveyed an authority to Mr. Colley to do work I would not necessarily state it on the paper; whatever work Mr. Colley did would of course be registered in our office books; (45) if I marked off a paper to Mr. Colley (46) he would not necessarily report on it—a report might not be needed, (47) but he would note the instruction in his own books; (48) the paper would usually bear the evidence of his having noted the instruction, but not always; (54) I never expected my officers to write anything on the paper, but to make separate reports; (68) “each officer makes a separate minute enclosing the original paper”; (51) “in my office separate reports are made which show what work is being done”; (50) if there was nothing to indicate that the order by Colonel Scratchley had been carried out, or that anything had been done, Mr. Colley would probably have made a general report, which would be found in the office; (52 and 57) the books in the office would prove if Mr. Colley did report or not; (59) there would be a record in the record office—you could look to see if Mr. Colley had reported; (61) in the case quoted, that of Colonel Scratchley's letter ordering the omission of the wing walls, (62) which was referred by me to Mr. Colley, but which contains no evidence to show that it had been sent back, “the report would give evidence of that,” (63) and my approval would be on the report; (64) the reports are kept in the office; summed up in brief, (69) I never let the original papers show the action taken; “that is shown in the register book; whatever is to be done is marked off to the officer in charge; his action is marked off in the book,” and my approval is “on the officer's report.”

5. (B 1.)

FROM MR. E. COLLEY'S EVIDENCE:—

Mr. Colley's duties at Bare Island Fort.

(473) I am clerk of the works in the Colonial Architect's Department; (475) I received instructions from Mr. Barnet to visit and inspect the Bare Island works; (481) I had general supervision of the works; (482) I went to see that the work was properly done; (483) I used at first to check all the computations, but Purkis was exceptionally good at figures, and I found it was not necessary to check them all through, only a few items here and there; (484-5) I checked them on Purkis's weekly and monthly returns; (487) I never checked his measurements.

6.

How the work was measured.

(488) I believe the method adopted was to compare the figures with the measurements taken with the contractor, and to check the cubing afterwards before it was entered on the papers; (489) the only check was the contractor's book; (490) if the officer made a large measurement there was no means of finding it out, but I had not the least reason to suspect that any such measurements were made; (491) I do not think it possible for a mistake to be made; in my own experience I have never found any discrepancies; without some collusion, or want of integrity, the measurements would be correct; (492) of course all officers are liable to make mistakes, but I never considered it my duty to check measurements, because I thought it was impossible that such a mistake should be made.

5. (B 3.)

Nature of Mr. Colley's supervision.

(479-80) I only visited Bare Island thirteen times between 1881 and 1885 during the progress of the works, (604) making an average of about three visits in the year; (627) I think Mr. Barnet was aware of the number of my visits to Bare Island Fort; I had large jobs always on hand; I was always too busy; (605) I never made a report to the effect that visits at such rare intervals hardly gave me a fair chance of supervision; I had that confidence in M^r. Leod that I thought it was hardly necessary.

5. (B 2.)

Mr. Colley's other duties.

(575) I acted as inspector for the other forts, the same as at Bare Island; I was supposed to have all the forts at Port Jackson, Botany, and Newcastle under my charge; the papers were supposed to be sent to me, also the papers about some other works in Botany; (628) I also had the Medical School, Sydney, under my supervision during the construction of the Bare Island Fort, and a number of smaller works.

9. (B.)

A minute by Mr. Barnet.

(514) Report, number 12, by Mr. Purkis contains the following minute by Mr. Barnet:—
“This cement should be tested and applied before allowed on the works.”
I think it was tested by Mr. Telfer; (515) he did all the testing; (516) I did not mark off the paper to him, but told him; (517) I did not keep any record of that transaction; (518) I do not know whether the cement was tested.

9. (A.)

Pigeon-holing papers.

(527) Among the important documents marked off to me was General Scratchley's letter, dated 25/5/82, recommending that the wing walls of the barracks should not be proceeded with; I made no mark on that paper, and I do not know whether it passed through my room, not having my register with me, or whether it remained in my pigeon-hole, (528) but I took the information from it; (529) I remember General Scratchley's letter, dated 4/4/81, requesting the postponement of the order for the granite work at the fort, and the suggestions that were contained in it were carried out; (530) it was
not

not my invariable practice to put the papers I received in my pigeon-hole; if any remarks were necessary I would make a report, but this particular one did not seem to call for any special remarks; (532) there was no evidence of the instructions having been acted on or understood; the paper referred to action to be done at some future time; (533) it was not my practice to return the document, and to report that I had attended to the instructions contained in it; my register will show that I had seen the document; (534) I should consider it my duty to keep that paper, as it was an instruction that something should be done.

5. (B 4.)

(592) I never questioned Purkis's returns for the vast amount of day-labour, and for the large amount of extra cement used; he was allowed absolute discretion to put on whatever he liked; as officer resident in charge he had perfect discretion to do what was best in the interests of the Department; I supposed he was doing it; (593) a little overhauling now and then would have done no good; (595) my supervision was purely nominal for some time; Purkis consulted with Mr. Barnet direct, and he slipped out of my hands; (596) I am surprised that Mr. Barnet made such statements as he did in his evidence respecting the weight and value of my supervision; (636) I took a more active part in the supervision of the other works (referring to Medical School, the St. Leonards buildings, and the Court-house at Point Piper Road) than I did of those at Bare Island; (635) I went two or three times a week to the other works, and used to get details made and arrange all matters connected with carrying out the works, and referred them to Mr. Barnet, and saw that they were carried out.

Mr. Colley's supervision.

FROM MR. H. H. PURKIS'S EVIDENCE:—

5. (C1.)

(645) I cannot say I was resident clerk of works at Bare Island; I was resident clerk of works on the defences generally; (646) I do not think I was resident officer at Bare Island more than at Port Jackson defence works; (637) the position I held at Bare Island was clerk of the works, with other work at Sydney and elsewhere to attend to; I could not be resident clerk of the works, because that would mean I was there the whole of my time, (648) and I was not there the whole of my time; (649) an office was provided for me there with a small sleeping-apartment; I stopped there on an average two nights in a week; (650) I did not spend Sundays there; I went to the Colonial Architect's Office one day in the week, (651) not always on a Monday, but generally so; I went once a week to report and tell Mr. Barnet what had transpired; (650) probably I could not get away from there till 12; (653) occasionally I would go to some place in Sydney to see how any fittings, &c., were going on that were being made for the works, and get away to Bare Island as soon as I could; (655) sometimes I would get back on the Tuesday, and at others not till later in the week; (655) when I went to the Island during my weekly visits I went over the works, but I could not put in the whole of my time on the Island, because I had so much office-work to do; (666) I went every week when work was in progress; (656) sometimes I would leave the Island on a Thursday, sometimes on a Wednesday; it was according to what work I had to do elsewhere or where I might be wanted; (657) I never particularly called Mr. Barnet's attention to the fact that I had too much to do in connection with these works; (658) I think he knew where I was generally.

Resident or non-resident.

5. (C2.)

(660-1) There was no other officer of any kind under me at Bare Island, and no checking clerk, neither when I was present (659) nor when I was away; (660) I had to do the whole of the work; (664) it never occurred to me that it was desirable in the interests of the Government that there should be someone on the works looking after things and exercising a check, if it was only an intelligent boy; I had full confidence in the contractor and his representatives; I never knew anything against him; the merlon at Bare Island is the first instance I have seen of bad work on any of his contracts.

The nature of the supervision.

5. (C3.)

(705) "When the concrete was going into vital parts, *i.e.*, the magazines and the protection of the guns, I stopped there then," but I could not remain on the Island altogether; (707-8) I did not make it perfectly clear to Mr. Barnet that I was not on the Island when special work (that is concrete) was being carried out, and that I had no means of checking the work; I had perfect confidence in the way in which it was being done, and I think Mr. Barnet had confidence too; (672) I cannot understand what Mr. Barnet meant when he said (Q. 20) that in my absence I would make arrangements for the inspection of the work; he must have forgotten I had George's Head and the Middle and South Heads under my supervision (673) at the same time; (674) nor do I understand that portion of his evidence at all where he says that he expected me to be at Bare Island the whole six days of the week (*see* Q. 21), and that my other duties would call me away "occasionally; not very often" (*see* Q. 22); (675) because at the time Bare Island works were in progress I was reporting on George's, South, and Middle Heads, and the casemate (676) to Mr. Barnet; (677) I wish I had entered more fully into the matter in my reports, and had stated that I visited the works; I told Mr. Barnet what I had done, and I did not think it necessary to report what I had told him verbally.

Contradicting Mr. Barnet.

8.

(680.) How did I ascertain the amount of excavation done during my absence? I always measured it before it was touched. I measured some of it a year before it was done. I prepared a plan for all large or extensive excavations, such as were necessary for the formation of superior slopes, showing the intersections of radiating and concentric lines. The blocks were computed from this plan, including slopes to the full depths required, and the measurements were then entered in the books. All this was done before any rock was excavated; (681) I knew they were taken down to required depth by my datum; (682) to illustrate how I did all this before the rock was touched when I was absent from the work:—"Suppose I had five degrees of slope to excavate. I had my levels taken at each intersection of radiating and concentric lines. I made a plan, set it all out, and entered the measurements in a book. This could all be verified now by the measurements."

How the work was measured.

5. (C4.)

No special instructions.

(692) In reply to Mr. Barnett's statements (questions 77-8-9) that "concrete work should not be left any time," and that he gave me instructions never to leave it, I can only say that I do not remember receiving any special instructions whatever about concrete or any other portion of the work; (695) if Mr. Barnett had given me any instructions like that I would have told him that it would not be possible for me to carry them out.

10. (A.)

Borrowing from the contractor.

(735) I was always very friendly with M'Leod; in 1875 we saw a good deal of each other at the Seal Rock Lighthouse, of which he was the contractor and I the officer in charge; (748) six or seven years ago (747) I borrowed three sums of money from him—£500, £100, and £150, (746) by mortgage on a house and land; (747) I have repaid £300 to his son, who holds a power of attorney; (754) I still owe £450; (749) M'Leod has the deeds, legally drawn by a solicitor; I have always paid the interest, when due, to his son most promptly; I have never dealt with M'Leod personally in these transactions; (750) that was the only money transaction I had with him excepting the sale of an allotment of land; (751) I borrowed the money to be paid off in ten years; this is stated in the deed; (752) the impropriety of having money transactions with the contractor never struck me; I could have got the money from a relation just the same; I did not regard it as the slightest favour from M'Leod, but as a safe and fair investment for him.

FROM MR. J. B. MURRAY'S EVIDENCE:—

2. (A.)

How the concrete was prepared.

(805 and 809) The method adopted for preparing the ordinary concrete was as follows:—The cement was mixed with 27 feet of sandstone, properly gauged, and sharp sand; (768) proper stones were provided for the purpose; (781) they were not likely to go rotten by lying in a moist place; (782) it was all sound stone; (784) it was taken from the excavations on the fort, and would make first-class concrete; (834) a sufficient quantity of cement was provided for the concrete; (835) we were never stinted in the supply; it used to come in shiploads of 250 casks at a time.

FROM MR. GEORGE FLANAGAN'S EVIDENCE:—

2. (B.)

How the concrete was mixed.

(921) I remember the way in which the concrete was mixed; I saw it continually; (922-3) it was mixed on a board; sometimes they put in about thirty barrows of stone to a cask of cement, sometimes twenty, (926) sometimes eighteen, and mixed with that cement; (923) it never was gauged; (924) there was broken stone, (928) or rather boulders, not broken stone; (929) there was plenty of sand amongst the stone, (931) I saw large lumps of stone put in the work; (932) they were sometimes thrown in out of the barrow and sometimes put in by hand; I have seen a man do it; (933-4) and heard J. B. Murray giving instructions; (935) I saw them empty the barrow full of stones in one place, in a heap; (936) sometimes a man would spread them, but at other times they would not take the trouble; (937) the stones were not picked for the purpose, they were all of a heap there; I had no chance to see all that was going on, as I was busy at my own work, but I used to take notice when I knocked off for lunch.

4.

Shifting the men.

(910) I have seen the day-labourers taking off the plates, which was Government work; then I had orders to put the men doing the stonework on to the contract work; they were supposed to be doing day-work, and they were doing ordinary work at the time they should have been on plates; (941) Purkis would come, and I saw them shifted back to plates; (943) and that gave me reason to suspect there was something wrong; (47) Murray gave directions to have that done; (950) he told me always to shift the men when Purkis came, not to let Purkis see them working in the quarry; (921) I am sure of that.

FROM MR. JOHN M'LEOD'S EVIDENCE:—

3. (A.)

Putting in big stones.

(996) I never instructed my foreman to put in large stones; I am aware there was no objection to large stones being occasionally put in; I remember Colonel Scratchley saying at the time it was folly to use such small stones—that he would sooner have larger stones mixed up with cement concrete—but I said to the foreman I would sooner see it done according to the specification; (1003) I never gave the foreman instructions to put in these blocks; (1004) I might have seen one put in, in which case I would say, "This is not according to what I told you;" I was aware that he was putting some in occasionally, but I was never aware that he put them in of the quality and to the extent I saw; (1005) I have seen the work since it has been opened up, (1007) and I see that stones have been thrown in by the barrowful; I was aware of seeing pieces of sound rubble occasionally, but I never was aware that there were any soft stones put in; my instructions were that the stones were to be of a uniform hardness, according to the specification.

3. (B.)

A question of cheapness.

(996) There is more trouble in trying to put in large blocks now and then than in having the stones of a uniform size, and that is the reason I consider it costs more to do it in a block way (the way it has been done) than if the stones had been all of a uniform size; (997) of course if you use very large blocks it must make a cask of cement go much further, (100) but when it is all properly broken, a man takes a barrowful and throws it in without any bother; while, on the other plan, a man would lose so much time in throwing a piece here and there, and then having to ram in separately between the pieces, that I say it is as cheap to do it on a uniform size as to do it in blocks; (1001) if I were tendering for concrete to be made with a good deal of rubble I would tender for it cheaper, (1002) because it stretches out the concrete for mixing, and that cheapens the work to the contractor; but it must be specially specified for, in which case the contractor knows what he is going to do; in this case it is different.

10. (B.)

(1023) I lent Purkis £500 and two other sums of £100 and £150 on a mortgage; we happened to be talking about the hardship of having to pay rent, and so on, when I said, "I would rather have to pay rent than be in the same position as I am; I have two or three houses, and they don't pay me 5 per cent."; so he asked me if I would lend him some money at 5 per cent.; (1024) I consented to let him have it for ten years at 5 per cent.; the mortgage is registered; (1025) he has paid off, I think, £200 or £300; he is paying off regularly every quarter; (1026) the land on which the mortgage is given fronts the eastern side of the reserve on the North Shore; (1027) I never lend money so as to make any great profit by it; I would do it for a friend—one I thought was persevering and deserving of it; that is how I did it in this case; I got an allotment of land from him, and I took a mortgage on another.

Lending money to Purkis.

FROM MR. JOHN NOBLE'S EVIDENCE:—

7.

(1130) Every night a slip showing the amount of time worked by the men was handed in by the foreman (1131) to Mr. Purkis; (1132) he was not there every night to see them, but the slips were laid on his table; if he was away three days, three slips would be waiting him showing the nature of the work done, the number of men employed, and the hours they were engaged.

How the men's time was kept.

APPENDIX E 1.

"GENERAL CONDITIONS" attached to Contract, and legally binding on Contractor.

Extra Works, Omissions of Works, &c.

8. The Secretary for Public Works, on behalf of the Government or the Colonial Architect, shall have the power of making any deviation from, alteration of, or addition to, the several works as they proceed, without invalidating the contract. The value of such deviations, alterations, or additions, shall be ascertained and allowed for by the Colonial Architect or superintending officer at such rate as he shall consider to bear a due proportion to the other works in this contract; and the total value thereof shall be added to, or deducted from, the amount to be paid to the contractor, as the case may be; and the fact of any deviation, alteration, or addition, having been made, shall not extend the time for the completion of the contract.

It is to be distinctly understood that no deviation from the drawings or specification will be sanctioned or permitted unless an order in writing, signed by the Colonial Architect, authorising such deviation, be first obtained.

APPENDIX E 2.

PUBLIC WORKS CARRIED OUT UNDER CONTRACT.

At the present time Tenders for public works and supplies are carried out under the authority of the Minister, who has submitted to him plans and specifications of the work to be done, together with estimates of the cost and the approximate quantities.

It has been found, however, in practice, that in many cases the quantities estimated have been exceeded, in some cases the terms of contract have been varied, and the Minister is often left in ignorance of these matters, and of the increased amount required, until the time arrives that the Contractor has to be paid, or some legal action is threatened in consequence of disputes between the Contractor and the professional officers of the Department in charge of the work, owing to the refusal of the latter to recognise that extra work has been performed, or that some deviation from the specifications or conditions of Contract, insisted or permitted by the Department, entitles the Contractor to extra remuneration.

These departures from the original terms of the specifications have, as a rule, been authorised verbally, and the Minister, when the disputes are brought before him, is necessarily embarrassed by the conflicting testimony of the Officer and the Contractor as to the real nature or the bearing of the orders given. The effect in some cases has been to involve the Government in litigation, and almost invariably with disastrous effects.

With a view to minimising this evil I must direct that in future—

1. More exactness to be shown in determining the quantities for public works and supplies;
2. That all deviations from the terms of the specifications and conditions of Contract be authorised in writing; and
3. That no orders for extra works or for variations involving increased payment exceeding in value 5 per cent. of the contract, save when the Contract is less than three thousand pounds, be given without the written authority of the Minister being first obtained; and, unless so authorised, the maximum sum for such extras or variations must not exceed one hundred and fifty pounds.

Finally, that all contracts be made after public competition, and all payments be made in strict accordance with the conditions of Contract; that all vouchers, either for contract work, wages, or supplies of any kind, are not to be detained longer than absolutely necessary; and if any dispute arises as to the time required the Minister shall decide.

17/11/87.

JOHN SUTHERLAND.

APPENDIX F 1.

BARE ISLAND FORT, BOTANY HEADS.

Two Reports from Messrs. C. W. Darley, M. Inst. C.E., and W. W. Wardell, M. Inst. C.E., F.R.I.B.A., to The Minister for Public Works; with the Colonial Architect's reply thereto.

FIRST REPORT.

Department of Public Works, Sydney, 2 June, 1890.

Subject :—Bare Island Fort, Botany Heads.

Sir,

Referring to your instructions of the 14th of May, 1890, that we should examine the condition of certain works in connection with the Fortifications of Sydney and Botany, to which your attention was directed by a report from Colonel de Wolski, and understanding further that you desire as early information as possible as to the results of our examinations as they progress, we beg to submit the following for your consideration.

We commenced our duties on the 29th May at Bare Island Fort. The works here were carried out by Mr. John M'Leod, under a contract which was accepted on the 7th of April, 1881, and was completed early in 1887. The original contract lump sum was £25,020 15s. 4d.; but the basis of a lump sum contract appears to have been abandoned, and the work has been wholly carried out under a schedule of prices on which payments to the amount of about £34,477 were made.

According to your direction we informed the contractors and the Colonial Architect that we should proceed to the fort for the purpose on the 29th ultimo, and invited them to be present at the investigation by themselves or representatives. The contractors declined to attend, but the Colonial Architect sent three of his officers, Messrs. Colley, Purkis, and Bruce, and the examinations of the works were made in their presence.

The works examined on this occasion were the concrete, a portion of the asphalt, the tar paving, and the doors to the magazines, the shell-rooms, cartridge recess, laboratory, artillery store, &c. It is only as to the quality of these works that we are at present able to speak, as there has been as yet no time to examine the others, or to enter on the further question of quantities and payments made for them.

CONCRETE.

Colonel de Wolski states, with reference to the concrete, "that an examination of it above the 10 in. magazines, and in the merlons of the casemate, will show that not only is the concrete not of approved hard sandstone but it contains large lumps of pipeclay and soft rock; proving, moreover, the entire absence of ramming, except on the surface layers. The lower layers reveal large rounded boulders, and stones of every size and description appear to have been shot into it without any cement, or so little as to leave loose sand between them. A large portion of the merlon appears to be little better than rubbish.

The specification for the concrete is as follows:—

Concrete.—To be composed of one cask of cement, 400lb. gross weight, of approved brand, to 27 cubic feet of approved hard sandstone, broken to a gauge of 2 in. screened, and 5 cubic feet of clean sharp sand, mixed together with clean fresh water passed through a fine rose, and turned over at least three times in addition to the turn putting it into the bucket, barrow, or any other vessel used, after being well raked on a level platform. Contractor to provide, erect, and strike all shoring, planking, centreing, &c. Also meters for measuring the stone and sand.

Concrete as above for any purpose and of any thickness, either one or two faced work well rammed, and, where necessary, finished to a true and even surface, and to be measured when in its place, per cubic yard, £2 4s. 6d.

The concrete was cut through in eight places, marked A, B, C, D, E, F, G, H on plan herewith, for depths varying from about 3 ft. to 5 ft.; and it is our duty to report that Colonel de Wolski's description, above recited, is in no degree exaggerated. With the exception of a surface layer of good concrete of about 15 to 18 in. in depth, all below it to the extent excavated was little better than loose rubble and lumps of soft and rotten rock without mortar of any kind. What further excavations may reveal we are, of course, unable to say. The concrete specified for should contain one cask of cement to the cubic yard, or (say) six to one concrete. This, if properly made with sound stone, should be a strong and suitable material, and good enough for any part of the work; but we find the contractor has been paid £1,196 6s. 5d. for adding 740 casks of cement to the specified concrete. This, we presume, was to enrich the concrete used in forming the outer 12 in. to 18 in. skin of strong concrete which we found overlaying the rubble filling before referred to. To such an extent has this class of work been carried on that we found one place where the contractor had to fill only some 8 to 10 in. of concrete over the rock, and he must have first laid a layer of loose rubble stones and then smeared them over with 3 to 4 in. of concrete, so that they have no adhesion to one another or to the rock.

TAR-PAVING.

The tar-paving in the yards showing cracks, rents, and settlements in all directions, was cut through in several places for examination, and in all cases it proved not to be in accordance with the specification. It was deficient in thickness, for instead of being 6 in. as specified (item 52), it varied from 2½ in. to 4½ in., and in no case was there any hard sandstone ballast under it which was specified to be laid 9 in. in thickness underneath it. We find, however, that, instead of hard sandstone being used to make the paving 6 in. thick, bluestone spawls of assorted sizes have been substituted; but, while this is so far a better material than sandstone for the same purpose, the absence of the specified 9 in. of pitching between it and the dirt filling rendered it almost useless, and at once accounts for its present ruined state.

Items 56, 57: "Pure Seyssel Asphalt."

The Schedule for this asphalt provides prices for two thicknesses, viz., ½ at 14s. per square yard, and ¾ at 16s. 6d. per square yard.

We

We find that in some places, such as over the laboratory, and over the guard-room, two coats, each $\frac{1}{2}$ in. thick, making 28s. per square yard, have been paid for. We had some on the roof of the laboratory cut through, and find that only one coat has been laid, and that it is barely $\frac{3}{4}$ in. thick, and therefore a considerable over-payment has been improperly made. Some of the Seyssel asphalt appears good enough, but some of it is quite worthless, and it is very doubtful if it was the proper material. Even assuming the material to be 1 in. thick, a grave error was made in doubling the price for $\frac{1}{2}$ -inch, viz., 14s., and paying 28s. The price for $\frac{3}{4}$ in. is only 16s. 6d., or an increase of 2s. 6d. for the extra $\frac{1}{4}$ in. The proportional increase for 1 in. should, therefore, have been 5s., or 19s. in all, as the material was put on at one operation, and not in two coats as represented. We find, also, that nearly all through for this work the contractor has been paid 25 per cent. or 33 per cent. increased measurement. This is chiefly in floor, which we have not yet had time to open up; but on the face of it the allowance is highly improper, as the following statement shows:—

	Inch.	s.	d.
Price for $\frac{1}{2}$ in. asphalt5	14	0
Add 33 per cent.166	4	8
Thickness $\frac{3}{4}$ in. =	.666	cost	18 8

Whereas the contract rate for $\frac{3}{4}$ = .75 = 16s. 6d.

So that the contractor has been paid a much higher price for a thinner material than the contract provides for.

Doors.

Doors to Magazines, Shell-room, Cartridge Recess, Laboratory, Artillery Store.

None of these doors are in accordance with specifications or drawings. They are not furnished with Hobbs' brass locks, but with brass rim locks. Those of them described to be made folding are not so; the outer laboratory doors are not plated with iron; the bolts and screws in the styles and rails have been omitted; the cartridge recess doors are hinged instead of sliding; and the construction of all is very much inferior to what is required by the specification.

We propose, with your permission, to deal with the remaining questions in a further report.

We have, &c.,

C. W. DARLEY.

W. W. WARDELL.

The Honorable the Minister for Public Works, Sydney.

F 2.

Subject:—Bare Island Fort.

Sir,

Department of Public Works, Sydney, 10 June, 1890.

In continuation of our progress report, dated 2nd June, we beg to submit the following:—

Since that report we have taken the evidence of the Colonial Architect, Mr. Barnet, and further evidence from Mr. Colley and Mr. Purkis with the view of ascertaining:—

1. What authority was given for the various changes made in the design and works.
2. The reasons or causes of the very large discrepancies between the quantities of the works provided for in the schedule contract, and those carried out.
3. The system of supervision, and how it was carried out.

Before proceeding we desire to correct an impression which our former progress report might convey, viz., that the original contract was a lump sum contract, and was carried out as a schedule of prices contract. The Colonial Architect informs us that it was intended to be a schedule of prices contract, and that quantities were only used to determine the lowest tender.

1. With reference to the question as to who authorised the various changes no satisfactory evidence has been given. They seem, from what has been offered to us, to be the outcome of conversations of which there is no record, nor have we been shown any written instructions authorising the very large deviations that have taken place, although it is a condition of the contract that none shall be made unless ordered by the Colonial Architect in writing and signed by him.

So far, therefore, as we are able to ascertain, no written authority exists for these deviations, whether as requisitions from the Military Engineers to the Colonial Architect, or as instructions from the Colonial Architect to his Clerk of Works. They are stated to have been carried out under the verbal directions of now absent persons to a subordinate officer. We think this a very serious irregularity, and in view of the important works and the large expenditure involved, every step with its proper approval should not only have been recorded in writing but have been carefully preserved.

2. The reasons or causes assigned for the large discrepancies between the quantities of the works provided for and those carried out, appear to be that large additional works were ordered; but the increases in some cases are so far beyond ordinary deviations as to have required some special report and further approval. For instance, 860 yards of excavation is provided for in one item, and 5,790 yards were paid for. Under two other items, 8,200 were provided for, and 13,100 paid for. In concrete, 2,610 yards were provided, and 5,480 paid for. Of cement, 10 barrels were provided, and 895 casks paid for.

A large portion, amounting to 11 per cent. of the whole contract, seems to have been carried out under what is, in our opinion, the very worst form of day-work, *i.e.*, under a contract schedule of rates for labour at per hour, instead of either taking a lump sum price for all the fittings or carrying them out under the schedule rate for finished timber work which includes all labour, fixing, &c., as is usual in such cases; but in this contract the contractor was paid for the material and then for all the labour, skilled and otherwise, required for making it up and fixing. In the contract schedule we find that the estimated number of hours of the various classes of labour amounted to 1,730, at an estimated cost of £131 16s. 8d., whereas 50,810 hours, in the aggregate costing £3,505 18s. 10d., were paid for.

We

We cannot help expressing ourselves strongly on this point, for in our opinion the system adopted was most improper, it being directly the contractor's interest to employ slow or indifferent tradesmen. "The more hours the more profit to him," the rates paid to the contractor being:—

For labourers...	9s. 4d. per day.
„ carpenters	14s. Od. „
„ quarrymen	12s. Od. „
„ masons	14s. Od. „
„ blacksmiths	16s. Od. „

Yet notwithstanding all this day-work going on, there was no inspector or foreman on the work to keep the men's time on behalf of the department during Mr. Purkis's absence. The contractor's statement must simply have been accepted from week to week.

3. The system of supervising the works, and how it was carried out: The Colonial Architect stated that he visited the works once a month or so, and that the works were placed under the care of Mr. Colley, with Mr. Purkis as resident officer, and they were responsible; and Mr. Colley was supposed to check Mr. Purkis's measurements. He could not explain the items in the accounts, but had no doubt Mr. Purkis could; he trusted entirely to him. Mr. Colley stated that he was "nominally" chief inspector under Mr. Barnet, but that he visited these works latterly only at several months intervals, though oftener at their commencement; that he did not look through Mr. Purkis's measurements' book or check his measurements, and that there is no check in the department on the Clerk of Works; that he did not and would not think it necessary to question the Clerk of Works as to the quantities in any work. Mr. Purkis had charge of the fort at Bare Island as well as those in Port Jackson; and when he left Bare Island there was no officer on the works at all. Mr. Purkis stated he was in charge and responsible for the works, but had no written authority for alterations; took his orders from military officers; had charge of defence works in Port Jackson also; thinks that the bad work was done by the contractor's men in ignorance.

This *précis* of statements made by the three officers concerned will best explain the system adopted for supervising works of such importance; and the condition of the works themselves, as given in our progress report, shows how it has resulted.

The supervision, if it can be called so, as disclosed in this statement, was, in our opinion, absolutely inadequate, even if conscientiously given when the works were visited; and the measurements of works, for which so many thousands of pounds have been paid, were left to the contractor and the Clerk of Works without any check or query whatever. We are of opinion that both the Clerks of Works, especially Mr. Purkis, must have performed their duties in a most perfunctory manner. It seems almost impossible that so much palpably bad and dishonest work could have been carried out all through this contract without almost wilful neglect of duty. Mr. Purkis kept no progress plans, or sections, as a record of the work carried out; he apparently entered up the measurement books well, but these were never checked over by Mr. Colley, or any of the officers of the Department.

We can, therefore, form no other conclusion than that public interests have been very seriously overlooked by proper inspection not being provided for works of an importance that cannot be overstated, when the possible destruction of a fort, and its disastrous and far-reaching consequences, are considered; and that these interests have very seriously suffered is proved by the fact that the works we examined were so badly executed as to be unfit for their purposes, and must therefore be removed and replaced.

We have, &c.,

C. W. DARLEY,
W. W. WARDELL.

The Hon. Bruce Smith, Secretary for Public Works, Sydney.

Submitted.—J.B., 26/6/90.

In view of the very serious statements contained in this report, concerning the supervision of these works by Messrs. Colley and Purkis, I direct that these gentlemen be at once suspended.—BRUCE SMITH, 26/6/90.

I further direct the Colonial Architect to put all other public matters aside, and enter at once upon the preparation of an answer to the very serious reflections upon the administration of his branch, contained in these reports.—BRUCE SMITH, 26/6/90.

B.C., Mr. Barnet.—J.B., 26/6/90. Received, 26/6/90.—J.B. Letters suspending Messrs. Colley and Purkis are enclosed herewith, and Mr. Barnet will please hand them to those officers.—J.B., B.C. Report herewith.—J.B., 1 July, '90.

F 3.

NOTES of evidence taken at Bare Island by the Board of Inquiry into the condition of certain defence works at Bare Island on 29th May, 1890:—

Present:—

C. W. DARLEY, Esq., M. Inst. C.E., Engineer-in-Chief for Harbours and Rivers.

W. W. WARDELL, Esq., M. Inst. C.E., F.R.I.B.A.

Also by invitation, COLONEL DE WOLSKI, R.E., Director of Military Works, and Messrs. E. COLLEY, H. H. PURKIS, and J. L. BRUCE, of the Colonial Architect's Department.

Mr. Darley said that he and Mr. Wardell had been appointed to inquire into the condition of certain of the defence works at Bare Island. The Minister for Public Works had instructed them to do so in consequence of Colonel De Wolski having reported to the Minister that the works in question had not been carried out as he thought they ought to have been.

A copy of the specification and schedule, together with probable quantities, marked "John M'Leod's Schedule," and an abstract book to identify the class of work and payments made, were produced and identified by Mr. Purkis.

Mr. Purkis was then questioned by Mr. Darley and Mr. Wardell:—

Who was the contractor for this work? Mr. John M'Leod. He had a partner named Noble, but the contract was in the name of Mr. M'Leod only.

When did the work commence? In April, 1881.

Were

Were you in charge of the works for the Department? Yes; I attended them as frequently as my duties would permit. Most of the works were carried out before Colonel Scratchley went to England.

Did he give you any instructions? Yes; I took his instructions. Colonel Scratchley visited the place occasionally, and sometimes he wrote to me.

Any departures from the specifications were done under his directions? Yes, certainly. Sometimes he would also instruct me verbally, and on one occasion he ordered £300 worth of work in one day, and I carried it out. I carried out the Royal Engineer Officer's instructions. It was of no interest to me to do otherwise.

Some large departures were made from the original specifications? Yes, certainly. The girders and armour-plates, for instance, were ordered from England, because it was thought best to get them from thence.

Is there any record showing a change? I cannot say that exactly. I think we had private notes from Colonel Scratchley, who would write to say he would like so-and-so done, and I think he informed Mr. Barnet of any departure from the specification and plans.

Colonel Scratchley had no supervision of the actual work, such as would be exercised daily by a person in charge? No, I cannot say that he had.

It was more direction than supervision? He was Military Supervisor for the Government, and would direct the works.

Were you Clerk of Works all through? Yes.

And had charge of the class of work to be carried out? Yes.

There was no specification further than this schedule of prices? The schedule is a specification.

Was any departure made in connection with the contract for concrete? Only that a better class of concrete might be produced. In some cases, for instance, a cask and a half of cement would be used, instead of one cask, to the 27 cubic feet of stone. It was to make it richer where it was wanted stronger.

Did you keep the contractors close to the 2-inch gauge for screened stone? No; not the whole of it.

Did you pick the stone? We took the best we had. We did not go from the island to get any. There was no bridge at the time, and Mr. McLeod had to get his things over on a steel wire.

Did you screen the stone? Yes.

Did you mix your sand and cement? Yes; there were seven or eight men mixing them.

Did you find five feet of sand and a cask of cement sufficient as a rule for the 27 feet of stone? For sandstone they were sufficient, but we wanted more sand for bluestone.

There was no departure from the specification except for the better then? As far as I know there was not.

In regard to item 42: "Large flat rubble-work set in cement, the same as all other masonry, intended principally for foundation of parapets;"—was there any departure in regard to that? No.

What kind of mortar did you use? The same as the other—the same as for other masonry.

It was simply rubble-work? Yes; it was a cheaper kind of work.

Item 44: "Brickwork of any thickness from 4½ inches upwards, left rough for cementing;"—there was only one class of brickwork? That was all. The bricks came all from the one place.

Item 49: "Best Portland cement of approved brands, 400 lb. gross weight, including sufficient clean sharp sand for mixing with the same;"—did you ever weigh a cask of cement? I have had them weighed at Mason Bros. I had no means for weighing them myself.

Did you get the 400 lb? Yes, generally. We used a great deal of Robinson's cement.

Did you see it weighed? Yes, and I tested it under water and above water. For brickets there are tests at our office. I have some tested samples here (produced).

Item 52: "Tar-pavements, 6 inches thick, to be composed of 4 inches of hard metal, obtained in vicinity of works, broken to 2½-inch gauge, 1 inch of same broken to 1-inch gauge, 1 inch broken to ½-inch gauge and finished with fine grit, the whole sifted without dust, thoroughly coated with coal-tar and laid on 9 inches of hard sandstone ballast on well-consolidated formation; pavement to be well rolled at each layer, and finished to any given line, level, gradient, or convexity;"—was there any departure there? Yes; bluestone was used instead of the local stone.

Did you depart from the thickness or quantity? No.

Did you get blue-metal for this? Yes.

And did you pay the same price? Yes.

Did you lay the bottom pitching first? Yes; more particularly in the yard.

Is there 9 inches of ballast in the lower yard? More than that.

Is it laid and rolled as specified? Yes, most certainly.

Did you make the bluestone 6 inches? There was an arrangement made with regard to that, to put on a thinner material and put on a stronger bluestone.

You would not have changed it without authority? Certainly not.

You got authority from Mr. Barnet? Certainly.

Is that authority in writing? I could not say. Such a thing as this and many others are done without written orders. As far as possible I saw Mr. Barnet every Monday morning on these matters, and made reports to him before I started for the works. All these things were arranged every week.

By Colonel de Wolski.] It says that no alterations can be made without authority in writing? You could not get on with your works if you had to wait for writing for every item.

By Mr. Darley.] It is usual to get an order for important alterations? Oh, yes.

You did not carry out any work under item 53, where the price is 8/- instead of 12/6 per square yard? No. No work was done under schedule item No. 53. All pavements were carried out under item 52, except with the alteration I have mentioned in regard to blue-metal being substituted for the metal specified. We did not use any of the material under items 54 and 55 either.

Item 56: "Pure seyssal asphalt laid ½ inch thick, including necessary mineral, tar, labour, and fuel";—You used that? Yes, we used that.

Can you describe how that asphalt was prepared—in what shape did it come on the ground? It came out in blocks stamped. They sent mineral tar with it, and that was used. I would not have any sand put in it.

What kind of tar? It was in barrels.

There was no departure made? No, nothing. I think that in magazines I laid it in two layers.

Bj

We found this was not done.—
C.W.D.]

By Colonel de Wolski.] Would you be surprised to hear there was only one layer? Yes, I would in places where I have booked two.

By Mr. Darley.] Over the laboratory, two coats inch thickness have been put on? Yes, certainly; that is how they were all laid.

Item 64: "Magazine-doors with panels and issuer complete; issuer-door in the place of lower panels with rebated edges, hung with two brass 3-inch butt hinges, and fastened with brass spring lock and 6-inch brass barrel bolt. The magazine-door to be hung with two 5-inch brass butt hinges, and fastened with Hobbs No. 122, all brass, full leaver mortice lock, with two No. 130 drop-handles and two 10-inch brass barrel bolts";—was there any alteration made with regard to doors? Hobb's locks were not used. The contractors ordered special locks from England, and any key will open any of the locks. They are excellent locks, and unless this kind was used a very large number of keys would be required.

Was that alteration made with authority? I arranged with Colonel Roberts and Colonel Scratchley to have such things as this done, and this kind of lock was decided upon. Colonel Roberts arranged the labels.

This item, No. 64, for magazine doors—does that mean everything? Everything, excepting the painting and door-frame.

Excepting the locks, there is no departure? No; I do not recollect any being made.

The party then proceeded to inspect the works in question, where they found workmen engaged in making cuttings in the Merlon concrete, which cuttings are marked on a tracing A to H. They also examined the doors and the asphalt, with regard to which and the concrete the following notes were made.

CUTTINGS.

CUTTING A.

At from 15 to 18 inches below the surface there were large lumps of rotten rock—a continuous layer of rotten rock; and at 3 feet depth the concrete stops on rubble filling.

CUTTING B.

Large blocks of stone within 18 inches of the surface comparatively loose in the concrete.

CUTTING C.

About 3 feet below the surface on top of magazine large blocks of soft stone were found lying loose. The section of concrete showed pretty fair—far better than former cuttings, but still intersected with lumps of soft sandstone.

CUTTING D.

At 15 to 18 inches fairly good concrete on top; then a bed of lumps of soft stone apparently laid in without being buried in cement. Near the outer end of the opening, within a foot of the surface, rough rubble sandstone of a very soft description without any mortar.

CUTTING E.

Simply layers of loose boulders without any grouting whatever, and then layers of concrete, apparently as specified. The top 15 inches throughout is pretty strong.

CUTTING F.

Top dressing of fair concrete. The whole below, so far as the examination went, which was to the extent of 3 feet, consisted of soft rubbish.

CUTTING G.

Over shell store of 10-inch gun where leakage had been found to take place. Soft loose stone filled in with the concrete without grouting.

CUTTING H.

Rock within 6 to 8 inches of the surface. The upper 3 inches of concrete and the remainder loose stones.

TAR PAVEMENT IN YARD.

Item 52 (A).—Where there were two openings, $2\frac{1}{2}$ to $2\frac{3}{4}$ inches thick of asphalt an apparent absence of rolling. Half inch and 1 inch material, and no ballast underneath. Ordinary clay and dirt filling underneath. (B)—3 to 4 inches thick of asphalt on dirt. (C)—No difference. Yard.—Surface very much cracked, indicating settlement.

DOORS.

Item 71.—Laboratory—Not folding; no bolts; not Hobb's locks; no galvanized sheet iron; fastenings to styles and rails omitted.

Item 72.—Inner laboratory doors—Not folding doors; the ordinary rim-lock not framed solid.

Item 87.—Laboratory lobby—Fittings; brass brackets, rough cast. Artillery store doors—No padlock.

NOTES OF EVIDENCE.

Sydney, 4 June, 1890.

Present:

C. W. DARLEY, Esq., M. Inst. C.E., Engineer-in-Chief for Harbours and Rivers.
W. W. WARDELL, Esq., M. Inst. C.E., F.R.I.B.A.

MR. DARLEY said that he and Mr. Wardell had been appointed by the Minister for Works to make inquiry into the quality of the work at Bare Island Fort. Mr. Bruce Smith desired that their investigation should be as searching as possible, and in these circumstances they wished Mr. Jas. Barnet, the Colonial Architect, to be present that he might give them any information on the subject of which he had possession.

Mr. Jas. Barnet examined:—

When was the contract for this work taken? On the 7th day of April, 1881.

Who designed the fort at Bare Island? General Scratchley, and under his directions Mr. Morell prepared the plans.

The original contract was based on a lump sum? Yes; the amount was £25,020 15s. 4d., and the contract was in the name of John M'Leod only.

The contract was entirely changed from a lump sum to a schedule of prices? The whole was based on a schedule worked out to probable quantities. In consequence of the peculiar nature of the work we could not tell the exact quantities.

In a matter of this kind there might be a lot of details elaborately shown on plans. Is it usual then, when you have a lump sum and everything detailed accurately as regards fittings, to pay by day-work? The whole thing was paid for by schedule from beginning to end. The lump sum was merely arranged to ascertain who was the lowest tenderer.

You did not recognize it as a lump-sum contract? No.

Looking over the schedule book, are you aware that the fittings were paid for as daywork? Yes; it was cheaper.

When was the first material change made in the contract? I do not know whether there were any written directions given on this subject by Colonel Scratchley, but he gave a good many verbal directions on the spot. He intended to line the embrasures with granite, but that would have been more dangerous to those inside than to the enemy, and it was subsequently determined to omit it, and it was omitted under the directions of that officer.

Was any departure made in the general shape of the work? There was no alteration in the general design or shape of the work. Whatever alterations were made were made under the directions of Colonel Scratchley. For instance, here is a telegram from him when he was in Melbourne: "Please stop construction of wing walls round area on which barracks are to be placed at Bare Island Fort, at Botany, Am writing."

Can you in any way account for the large increases in the quantities of excavation. For instance, in one place the estimated quantity was 860 cubic yards, while the quantity paid for was 5,790 $\frac{1}{2}$ yards, which was seven times the estimated quantity; in another case the estimate was 5,700 yards, and the quantity paid for 7,282 $\frac{1}{2}$ yards; and in another 2,560 yards was estimated, and 5,833 $\frac{1}{10}$ yards were paid for? No; but I know that the ground turned out very bad. The quantities given were simply probable.

Had you any system for checking your clerk of works on the ground? There was my visiting clerk, and I looked to him to check the quantities.

It is a very glaring increase? It is a very large increase.

I suppose your clerk of works is able to level? Oh, yes; and Colonel Scratchley had the greatest confidence in him.

The next point is the concrete. This had to be increased as the granite decreased; but can you account for the increase from 2,610 yards to 5,480, the latter of which was paid for? I daresay Mr. Purkis can explain the whole thing. I trusted entirely to him, and he was in the hands of Colonel Scratchley.

When you gave your inspector orders he would not alter anything in the schedule? No, certainly not. He would report to me every week. Every officer did so, so that we could tell him what to do.

With regard to best Portland cement, there is an increase from 10 barrels to 895 casks;—that looks like a very serious departure? I cannot account for it. It was entirely under Colonel Scratchley.

Was the specified concrete good enough? Oh, yes. We have plenty of it used in other places. I believe, however, some of a finer kind was required for top-dressings.

We find that the contractor was paid for 895 casks? I have no recollection of that, but it may be in the weekly reports.

Do you recollect anything about the wrought-iron girder which was omitted? The Government found their own ironwork, and I think the contractor got compensation.

Did the contractor press his claim? Oh, yes; for all ironwork that was omitted.

Notwithstanding that the earthwork was doubled, the item for labour was very large? That was no doubt in connection with the scarping, and was no part of the original work.

We find that the contractor was paid for 27 kegs of powder and 113 coils of fuse;—that would indicate more day labour? That was for scarping, and was used after the fort was completed, and was no part of the original contract.

Would your officer follow verbal instructions without waiting for a written authority? As a general rule I think he did. The question of omitting the granite was discussed on the spot, and decided there at the beginning of the work, and in the presence of the contractor and clerk of works, because, as I have said, it was considered that granite would be more dangerous to those near by than to the enemy.

What would the contractor do with 18,000 cubic yards of earthwork;—where would he put it? I cannot say exactly. Mr. Purkis will explain that.

How often did you visit the place? About once a month or so. Colonel Scratchley had every confidence in the contractors and officers, and he has put it in writing to that effect.

Do you expect Mr. Colley to check through the book of the resident inspector? Of course he is responsible, and is supposed to check his measurements.

In going through Mr. Purkis's book, our attention was called to the Seyssel asphalt, and we found

on

Not done.—
C.W.D.

on top of the laboratory the contract item 56 was for two $\frac{1}{2}$ -inch layers. The contractor was paid twice over—there were not two layers? I cannot explain that. If it was only $\frac{3}{4}$ inch thick it should have been paid for under item 57. In fact, all that I can say is that Colonel Scratchley designed the work and Mr. Morell prepared the plans, and it was handed to me to carry out. The works were placed under the care of Mr. Colley, with Mr. Purkis as resident officer. Colonel Scratchley visited the works, and gave his instructions, many of which were verbal.

In respect of Bare Island, Mr. Colley and Mr. Purkis were responsible? Yes; and they were to take directions from Colonel Scratchley.

In general, is it your practice to let your inspector alter the nature of concrete without getting specific authority? He might have got specific authority. I should expect him to get it. If Colonel Scratchley ordered it, it would be done. None of my officers could do anything without my authority. If the works were not carried out in accordance with Colonel Scratchley's views, he could not be responsible.

Under item 87, "Gun-metal," in straps, sheaves, rollers, rails, bolts, nuts, screws, &c., making pattern for founder, turning and finishing in best manner, including fixing to any material, and lead for running where necessary;—should that not take in all kinds of brasswork? [*Shows rough brass lock.*] That is the same as a carriage lock. You will find those in the description by Mr. Morell.

Hobbs locks are specified for, but the locks on the doors are nameless? The locks were chosen by the military authorities themselves,—at least I was told so by my officers. I understood they wanted locks similar to those in the other forts.

In a change like that, would he take orders from you or from the military officers? From the military officers in all cases of that kind. The whole thing, in fact, was done under the military authorities.

Mr. H. H. Purkis examined:—

Was there any person to look after the making of the concrete? When the concrete was going into vital parts I stopped there then. What was examined the other day, I think, was the only bad concrete there. I should like to see the other parts tested. I was dumbfounded when I saw what was exposed the other day.

You were the responsible inspector of works? I had absolute charge of the defences of Port Jackson and Botany.

You were the responsible officer-in-charge? Yes.

In regard to item No. 1, "Excavation," was there any material alteration in the design that would increase or decrease the quantity? No.

In one of the original estimates there were 860 cubic yards of excavation, and 5,790 $\frac{1}{2}$ yards were paid for, or seven times the estimated quantity;—why was such a great change made? We have had great additions to our works.

Do you keep up progress plans of works as carried out? No.

Is there any plan showing the work done outside? No; I had not time to prepare it.

We find that the excavation estimated was doubled? I should be prepared to go through the books on the subject with Colonel de Wolski or anyone else. A large amount of the increase mentioned was caused in making approaches to the island.

When was the wooden bridge constructed? I think in 1886.

Before the contract was completed? It was completed long before that virtually.

Item 24, "Concrete": With regard to this we find an increase of 2,870 yards;—where was the bulk of that put? We had two additional magazines and a guard-room and cells which were extras to the design.

Have you any authority for substituting concrete for soil? No; I cannot find one. I have a lot of covers, but I cannot find the letters.

Do you remember a letter authorizing the substitution of granite for concrete? I have no letter to that effect, but I have my report on the subject.

Was the contractor on the work much? No.

Who looked after the work on his behalf? Mr. Noble; and he had a foreman named Murray. M'Leod never took the measurements with me on the work, but Noble did.

Who was the responsible officer for the contractors at Bare Island? John Murray and a subforeman, who was called Geordie Flanagan.

Who enriched this concrete? We had a letter from the military authorities particularly telling us to make rich concrete in the vicinity. In some cases, instead of 27 feet of stone, we put only 18, and that meant half a cask of cement more.

On what place did you put that? Over all magazines for 3 feet. We did that on all the forts—shell-rooms and arches.

Did you get any authority for doing so;—Mr. Barnet says he generally gave you one? These works were a little different from others. I worked here under the military authorities,—the military engineer officers. If we wanted anything I used to wait till Monday and tell Mr. Barnet, who would say, "Very well."

Did the 895 casks of cement really mean 1,790 cubic yards of superior concrete? Not absolutely. Some was used for setting tiles in dampcourses and in floors. We had to pay for setting, labour, and materials.

We find there was a large omission in the wrought-iron girders? With that I had nothing to do.

On what ground did the contractors claim compensation for the omission? Because they had made arrangements for obtaining them.

In a contract like this, would there not be included permission to omit anything;—should not the contractor yield up some points where he got so many other profitable items? Upon that I cannot express any opinion.

What was a fair price for the girders per ton? I cannot say the price exactly.

Have you two offices there? Yes. Mr. Colley ordered the second one to be put up.

These bluestone steps—There is no item in the schedule for them? No.

When such is the case, how do you arrive at the price? By taking a fair price at the time.

Here

Here is the price of granite put at 12s., and you paid 16s.? In Sydney it might be 12s., but it would be more at Bare Island. I think at that time 20 per cent. more.

I find charged $\frac{1}{2}$ ton of powder and 113 cwt. of fuse;—that would indicate a large amount of quarrymen's labour. Why was not this work done under the schedule for excavation? That was to make the island inaccessible to an enemy. We were required to have at least 14 feet of sheer in every way. We did the same at Middle Head.

Speaking generally, you cannot produce any authorities for these changes in the contract? I never had charge of the letters.

Were not all papers dealing with Bare Island put together? They should be, but they have been distributed many times.

Would they not gravitate back to your record room? Oh, yes, certainly.

With reference to the doors, we found a great difference between the specifications and the works;—who ordered this? Most distinctly Colonel Scratchley, and I think Colonel Roberts with him.

Who authorized the exchange in the locks? It was done at the instigation of Colonel Scratchley and Colonel Roberts. The locks were as good as could be made. We made a similar change at George's Head, where we had most keys.

We noticed that you had entered two coats of asphalt over the laboratory, and we found only one there? I think it is $\frac{3}{4}$ inch thick. It always shrinks a little.

Assuming it to be 1 inch thick, why was not the proportionate price paid as 14s. for $\frac{1}{2}$ inch, 16s. 6d. for $\frac{3}{4}$ inch, and 19s. for 1 inch. You paid 22s.? I do not think you could get contractors to work in that way. At that time it was not dear. I know these things are done cheaper now. With regard to the asphalt in the yard and round the passages, I can assure you that we had 4 inches in every case. I made the marks showing the falls with Mr. Murray or Mr. Noble. Mr. Lees, one of the best men, came out, and the contract price with Mr. M'Leod was 6s. 6d. per yard.

Have you seen Mr. M'Leod since we were down at the island the other day? I saw him on Saturday.

Did you tell him what we found? I said to him, "If you want to be astonished you had better go out." I think myself, however, that his men did it in ignorance.

Mr. F. Colley examined:—

You were Chief Inspector, under Mr. Barnet, at Bare Island? Yes, nominally.

During the progress of the work, how often did you visit the place? Not very often latterly—at several months' intervals—oftener at the commencement than latterly.

Did you look through Mr. Purkis's measurement book? No.

There is no check in your Department on the clerk of works? No.

When prices are fixed for work outside the schedule, do you check that? That is generally arranged by the local officer. If there is a dispute it is referred to a superior officer, or the head of the Department. If there was any glaring difference in the accounts I would direct attention to it.

You never looked through his book to query anything in his measurements? I never checked the measurements, and I do not recall querying anyone.

Looking through the measurements, it would only lead one to ask why the increases in connection with this work were made? I would not think it necessary to question the officer. The quantities are only approximate, and liable to large alterations as the work goes on.

Does anyone check Mr. Purkis's calculations at all? No.

Did you let the contractor know when you were going down? We did not appoint to meet him there.

Do not you think it desirable to drop on the works unknown to the contractor? I always do that.

Is it possible that so much work as we examined could have escaped your notice? I never saw bad work done there, nor even materials prepared for bad work.

Then they must have been pretty smart? Yes.

You admit that the openings were, generally speaking, a fair test? As far as the merlon was concerned—and the work in the job was bad.

I cannot understand how you could not have dropped on the bad stuff sometimes? I never saw bad work there.

Do you not think the cement specified was sufficient? It was for general work, but for exposed places it might be required richer.

How long have you been working with Mr. Purkis? Since 1871. He has been in charge of forts all the time.

Had he charge of other works? Yes—Seal Rock Lighthouse, and other forts in Port Jackson.

You had no resident clerk of works? No.

When he turned his back the contractor could do as he liked? When Mr. Purkis left there was no officer on the job.

Have you had any reason to doubt his ability? Never; and he has done some very large works in concrete.

FORTIFICATIONS at Bare Island, Botany Bay.

F 6.

The Colonial Architect to The Under Secretary for Public Works.

Sir,

Sydney, 1 July, 1890.

In attention to the Minister's instructions upon enclosed paper covering reports from Messrs. Wardell and Darley on works at Bare Island Fort carried out under me, I do myself the honor to state that I exceedingly regret there should be any grounds for the serious charges made in the reports referred to.

The Fort in question was designed by the late Colonel Scratchley, R.E., and the drawings, &c., were prepared by the late Mr. Morell, C.E., upon which tenders were obtained for carrying out the work, the lowest tenderer being Mr. John McLeod, which was considered a fortunate circumstance, as Mr. McLeod was well known as a reliable contractor. At the commencement of the work—for its supervision—I selected from my staff two officers, Mr. E. Colley and Mr. H. H. Purkis, clerks of works, in whom I had the greatest confidence. For the latter who was to be the resident supervising officer, an office and quarters were provided on the main-land, adjacent to the Island; the former, Mr. Colley, as senior officer, had to make periodical inspections of the work, and check measurements, valuations, &c., the work being visited by myself as frequently as my many other duties would admit. The officers named were selected for this work as having previous experience on similar works carried out at the suggestion of the Commission appointed for defence works of the Colony in 1870. During the progress of the works at Bare Island they were frequently visited by Colonel Scratchley, who always expressed his approval of the efficient manner in which they were being carried out, and on his leaving the Colony he not only complimented Mr. Colley and Mr. Purkis for their attention to the works and his instructions, but also presented the latter with a testimonial for his satisfactory superintendence.

I would here state that as the works proceeded, Colonel Scratchley on his visits frequently, for his own reasons, ordered alterations and additions, which were made both by his verbal and written requests, the direction given when the works were put in hand to be guided by the instructions of that officer,

officer, and the ground being of very irregular and uncertain formation, the quantity of excavation, &c., required could only be ascertained as the work went on. Anticipating this would be the case, an estimate of certain quantities to tender by fixing a lump sum was given, only as a means for ascertaining the lowest tender.

Although Mr. Purkis occasionally had to leave these for other works at Port Jackson, there has no doubt been apparent want of vigilance on his part, and it would also, unfortunately, appear there must have been dishonest workmen employed by the contractor—not that this is any excuse—always watching their opportunity, when the attention of the officer was taken in some other direction, to put in the bad work referred to.

I would suggest that the contractor be called upon to remedy all defects at his own cost, and can only again repeat my regret that works of so unsatisfactory a character should have been carried out under me.

In conclusion, I may state that I am glad to notice a Royal Commission has been appointed to investigate the matter.

I have, &c..

JAMES BARNET.

Submitted—J B., 2/7/90.

APPENDIX G.

INDEX TO MR. PURKIS'S WEEKLY REPORTS ON WORKS OUTSIDE OF BARE ISLAND FROM 1880 TO 1889.

1880.—On the

Batteries at the Middle, South, and George's Heads.

1882.—On the

25-ton gun, Middle Head, from 30/9 to 9/12;
Entrenchments, Middle Head, from 2/9 to 16/12;
Entrenchments, South Head;
Casemate Battery, George's Head.

21/8/82.

[C.A., 82/6450.

Single sheet report by Mr. Purkis on Casemate Battery, George's Head; 25-ton gun, Middle Head; entrenchments, Middle Head; and entrenchments, South Head; with minute by Colonial Architect—"Mr. Purkis to make separate reports for each week."

1883.—On the

25-ton gun battery, Middle Head, from 12/2 to 23/10;
Entrenchments, Middle Head, from 6/1 to 15/12;
Entrenchments, South Head, from 6/1 to 9/9;
Casemate Battery, George's Head, from 13/1 to 15/12.

188 —On the

25-ton gun battery, Middle Head, from 5/1 to 20/12;
Entrenchments, Middle Head, from 5/1 to 7/6;
Middle Head Battery;
Casemate Battery, George's Head, from 5/1 to 20/12.

1885.—On the

25-ton gun, Middle Head; entrenchments, Middle Head;
Casemate Battery, George's Head;
Road to Wharf and Cobbler's Beach.

APPENDIX H I.

BARE ISLAND FORT.

Sir,

Military Works Branch, 47 Phillip-street, 20 January, 1891.

I have the honor to remind you that at a recent Meeting of the Royal Commission on Defence Works I made certain informal statements with reference to over-measurements of work at Bare Island Fort, and suggested that, before I submitted a statement to the Commission, Mr. Purkis should have an opportunity of visiting the Fort with one of my clerk of works (Mr. Pinchen) for the purpose of comparing on the spot the original measurements made by him with those recently made by my officers.

The over-measurements in question were:—

(a) Tar-paving	{	Measurements by Mr. Purkis, 898 $\frac{7}{8}$ yards.
		Pinchen, 841 $\frac{3}{8}$ "
		Apparent excess, 57 $\frac{3}{8}$ yards.

Mr. Purkis's measurements have been found to be correct. The error arose from no allowance being made for tar-paving laid and subsequently picked up and replaced by racer stones. There was further a clerical mistake made by Mr. Pinchen in the deductions for the step in yard.

This satisfactorily clears Mr. Purkis of over-measurement of tar-paving.

(b) Concrete foundation for passage of cells, 2' 11" deep, which was found on cutting not to average more than a few inches.

Mr. Purkis compared the measurements in his field-book with those shown in his day-book, both of which were in my possession. The measurement in the field-book was:—18' 6" × 3' 8" × 0' 11"; and in the day-book, 18' 6" × 3' 8" × 2' 11".

The

APPENDIX I.

As to formation of Roadway with Military Road round the Fortifications.

Sir, Borough of Newcastle, Town Clerk's Office, 24th February, 1882.

Referring to an interview his Worship the Mayor of Newcastle, in company with the City Engineer, were permitted to do themselves, of having with Sir Henry Parkes in July last, upon the subject of the formation of a roadway to join in with the military roadway around the base of the fortifications at Flagstaff Hill, Newcastle, and to the promise then made that there would be no difficulty in carrying out the work in conjunction with the general scheme; and also to a subsequent interview the Mayor was granted by Sir Henry Parkes on 17th October last, when Sir Henry Parkes visited the fortifications,—the Mayor again pointed out the advisability of the military authorities carrying out the work. Upon that occasion Sir Henry Parkes was good enough to state that he saw no reason why the work, as suggested—viz., the formation of a roadway—should not be proceeded with, as the method was one that would be most likely to be approved of. As no reply has yet reached me in connection with this most important matter, I do myself the honor of again addressing you, and beg most respectfully to resubmit for consideration the proposal (*The remainder of this paper is missing from the documents.*)

The Honorable the Colonial Secretary, Sydney.

Submitted, 27/2/82. It would perhaps be advisable, before any action is taken in this matter, to have a report from Colonel Scratchley as to the advisability of connecting the proposed road with the military road.—C.W., 29/5/82. Approved.—J.R., 30/5/82. Colonel Scratchley.—C.W., B.C., 30/5/82.

Principal Under Secretary.—This paper has only just reached me. I have made a note on the plan relating to the proposed roads and paths, and I strongly recommend that permission should be given to the Borough authorities to construct the same. The question of the escarp on the land side of the proposed road or path round Signal Hill should be gone into, and, if it is determined that the Government shall pay the cost, provision will have to be made in next year's Estimates. The papers had better be referred to Mr. Barnet. I looked into the matter on the spot with Mr. Colley, of the Colonial Architect's Department.—P. H. SCRATCHLEY, Colonel, R.E., 6/7/82.

Submitted, 10/7/82. Permission may be given to the Borough authorities of Newcastle, as asked. That portion of the memo. which relates to the escarp should be dealt with separately.—J.R. The Under Secretary for Public Works.—C.W., B.C., 27/7/82. Colonial Architect.—J.R., B.C., 28/7/82.

That Roadway be opened up around Hill to Forts, Newcastle.

Sir, Borough of Newcastle, Town Clerk's Office, 11 May, 1886.

Some time since it was decided by the Colonial Architect to erect a wall at the base of the Fortification Hill, Newcastle, to protect the works. This has now been completed, and at the same time it was stated that a roadway would be opened up round the hill, and a promise was given by certain military gentlemen when here that the roadway in question would form part of the work, as it was necessary for the thorough completion of the forts.

Would you cause steps to be taken to carry out this useful and urgent work, and by so doing you will at same time be considerably improving the works at the fort, and adding greatly to the beauty and importance of the whole place.

I have, &c.,
EDWARD S. HOLLAND,

The Honorable the Colonial Secretary, Sydney.

Town Clerk.

I would be glad if my honorable colleague, the Minister for Public Works, would give this matter his early attention.—G.R.D., 29/5/86. The Under Secretary for Public Works.—C.W., B.C., 29/5/86.

Forwarded to the Under Secretary for Works. The proposed road, if made, will follow generally the direction of red line shown round the base of hill in map herewith. On margin of map is a minute by General Scratchley, to the effect, "that, on military grounds, there are no objections to construction of road, but that a retaining wall should be built all round the base of hill." The estimated cost of the works will be about £2,300. If approved, the work will be chargeable to Defence Works.—J.B., 30/6/86.

The Principal Under Secretary.—J.R., B.C., 2/7/86. Submitted for approval.—C.W., 5/7/86. G.R.D., 30/7/86. The Under Secretary for Public Works.—C.W., B.C., 31/7/86. The Colonial Architect.—J.R., B.C., 3/8/86.

My

My dear Mr. Rae,

22 July, 1886.

I saw Mr. Lyne to-day with reference to giving authority to proceed with the work of making the roadway round the base of the fortification at Newcastle.

Mr. Barnet only wants the authority of the Minister for Works to proceed. Mr. Lyne told me he would give authority as soon as the papers were put before him.

Will you kindly see that the papers are before him to-day.

Mr. Barnet informs me the papers are all at your office waiting.

Yours truly,
JOSEPH CREER.

Formation of a Roadway round the base of the Fortifications at Newcastle.

The Colonial Architect.—J.R., B.C., 23/7/86. Forwarded to the Under Secretary for Works. This work, if commenced, could not be completed until the cottages have been removed. The matter is being dealt with by the Crown Solicitor. If the cottages can be removed within a short time the work might be commenced; if not, it would be better to defer it until it can be carried through to completion.—J.B., 13/8/86. Submitted.—J. R., 18/8/86. Write Crown Solicitor as to how the matter of the removal of the cottages stands.—J.R., 19/8/86. The Crown Solicitor, 20/8/86. Re-submit in a week.—J.R. Remind Crown Solicitor.—J.R., 30/8/86. Crown Solicitor, 30/8/86. In a week.—J.R., 30/8/86.

The Crown Solicitor having been requested to take the necessary steps for the removal of the cottages, a decision should be arrived at in respect to the minute of the Colonial Architect, dated 13th August, on P.W. 86-87,980.—J.R. Colonial Architect may now have the works carried out.—W.G.L., 24/9/86.

Authority for the construction of a Road round Fort Scratchley, Newcastle.

On the 24th February, 1882, the Mayor of Newcastle addressed the Colonial Secretary on the subject of a road round Fort Scratchley, Newcastle. On 30th May, 1882, this was referred to Colonel Scratchley by the Colonial Secretary (Sir John Robertson).

On 6th July, 1882, Colonel Scratchley reports :—"I have made a note on the plan relating to the proposed roads and paths, and I strongly recommend that *permission* should be given to the *Borough authorities to construct the same*. The question of the *escarp* on the land side of the proposed road or path round Signal Hill should be gone into, and, if it is determined that the Government shall pay the cost, provision will have to be made in next year's Estimates. The papers had better be referred to Mr. Barnet. I looked into the matter on the spot with Mr. Colley."

The Colonial Secretary (Sir John Robertson) minutes, 10th July, 1882 :—" *Permission* may be given to the *Borough authorities* of Newcastle as asked. The portion of the memo. which relates to the *escarp* should be *dealt with separately*."

(Sent to Mr. Barnet, 28/7/82, and marked to Mr. Colley.)

On the 11th May, 1886, the Town Clerk writes about the road, and the Colonial Architect minutes, 30th June, 1886 :—"On margin of map is a minute by General Scratchley, to the effect, "that, on military grounds, there are no objection to the construction of road, but that a *retaining wall* should be built round the base of hill. The estimated cost of the works will be about £2,300. If approved, will be charged to *Defence Works*."

This was approved by Colonial Secretary, Mr. Dibbs, on 30th July, 1886.

Authority for works by Secretary for Works, 24/9/86.

Mr. Joseph Creer wrote also on 22/7/86 :—"Mr. Barnet only wants the authority of the Minister for Works to proceed. Mr. Lyne (the Minister) told me he would give authority as soon as the papers were put before him. . . . Mr. Barnet informs me that the papers are all at your office waiting."

It will be seen further from the Town Clerk's letter, 11th May, 1886, that the scarp or retaining wall referred to by General Scratchley and Mr. Barnet had been completed.

I reported to the Minister on the 4th July, 1889, although completely ignorant of the foregoing correspondence :—"However desirable it may be to allow the Newcastle Municipality to undertake the construction and maintenance of this 'costly carriage drive,' I submit that it is not a fair charge on the Military Vote; that proper authority was never obtained for its execution. . . ."

And in the same minute,— "This work should not, I submit, have been undertaken without the knowledge of the military authorities and the approval of the Colonial Secretary. I have good reason for believing that this road is being laid out without a plan. The Foreman of Works on the spot certainly has not one in his possession."

It would now appear that Mr. Barnet ignored or withheld the papers containing the Premier's decision, given on Colonel Scratchley's advice in July, 1882; that he misrepresented to his Minister in 1886 Colonel Scratchley's advice, both as regards the road and the scarp or retaining wall, and thereby obtained £2,300 authority, apparently in order to obtain Mr. Joseph Creer's good opinion or political influence.

Every word I wrote on this subject is fully borne out; and I trust that the Royal Commission will be pleased to investigate this subject as an instance of the manner in which Colonel Scratchley, Major Penrose, and I have been persistently ignored by the Colonial Architect, although we were successive Military Advisers when this work was under consideration and execution.

23rd January, 1891.

F. R. DE WOLSKI,
Colonel.
Alterations

Alterations and additions to Fort Scratchley, Newcastle.

On 18 December, 1888, the Officer Commanding the Garrison wrote to the Colonial Architect, forwarding eight plans of the reconstruction of Fort Scratchley, Newcastle, and urged "the necessity of the works in question being commenced with as little delay as possible," beginning with the salient 8 in. gun.

On the 28th December, a further plan, approved by the Colonial Secretary, showing certain alterations of the former plans, but affecting the 6 in. guns only, was sent to the Colonial Architect.

The whole of this correspondence was marked off to Mr. Colley.

Four tenders were received on 16/1/89, that of James Russell being accepted on 18 February, 1889. (P.W. 89-189).

When the tenders were referred to the Colonial Architect he reported that James Russell's tender amounted to £2,486 6s. 6d. "at schedule prices for probable quantities and at schedule prices for further work required." There was no mention of this further work in the specification nor in the general conditions. The contractors were not informed of the probable quantities before tendering, and Mr. Campbell informed me that Messrs. Jas. Russell & Co. were shown the general plan, but not the sections nor details, so that had they wished they could not have taken out the quantities. They only knew *the general nature* of the work required.

The Colonial Architect reported that the tender of W. Farley & Co. was the lowest, but that it was "informal, no price being given for timber framed, &c., item 55." A revised analysis of tenders shows that Jas. Russell's was really the lowest by £24, an error of £200 having been made in totalling W. Farley & Co.'s tender.

The whole transaction connected with this contract appears to have been contrary to the Tender Board Rules, and the Minister for Works' circular of 17/11/87. It further created unnecessary discontent amongst the contractors. Messrs. Farley & Co. maintained that their tender ought to have been accepted, as they were willing to undertake the work without any charge for item 55, "framing and fixing timber," only a very small quantity of this description being shown on the plans. Mr. Colley apparently intended that this item should apply to the construction of the new pilot's house, and estimated 30,000 feet as the probable quantity required. The contractors who tendered were, however, ignorant of this work being included in the fort contract, and saw neither plans nor quantities. The Clerk of Works, Mr. Bushby, who built this house, did it all by daily labour, and no work whatever was done under item 55 by the Colonial Architect's Clerk of Works.

There are 106 items altogether on the schedule. Probable quantities are marked opposite twenty, and one only of each of the remaining eighty-six items. Amongst the latter is the use of the contractor's tramway and plant, including 12 h.p. engine—the probable quantity being estimated as one hour. The tenders for this item vary from £2 10s. to 5s. 9d. per hour, showing the meagre information on the subject accorded to tenderers.

Item 92, "labourers," is estimated at 8,000 hours, and cart and horse 2,000 hours. It would appear, therefore, that the Colonial Architect intended carrying out the works other than those specified in the "extent of work" mentioned in the contract.

The analysis of tenders was not received from Mr. Colley until 17 February, 1890.

The authority for the works carried out at the fort under this contract was C.S. 2898, 6 March, viz. :—

	£	s.	d.
New emplacement	3,000	0	0
Look-out House	500	0	0
Total.....	£3,500	0	0

ROYAL COMMISSION ON DEFENCE WORKS.

MINUTES OF EVIDENCE.

MONDAY, 28 JULY, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

James Barnet, Esq., late Colonial Architect, sworn and examined:—

1. *President.*] You were the Colonial Architect, I believe? Yes.
2. The fortifications at Bare Island and Sydney Harbour were carried out under your Department? Yes.
3. We are dealing more particularly to-day with Bare Island. Who designed Bare Island Fort? Colonel Scratchley.
4. And then handed it over to your Department to carry out? Yes; the drawings were made by the late Mr. Morell, C.E.
5. Under General Scratchley? Yes; under his direction.
6. Was a specification prepared? There was a description, not a specification.
7. Was no specification prepared by Colonel Scratchley or Mr. Morell? Mr. Morell prepared the description.
8. Was that made a part of the contract? No.
9. It was not embodied in it? No.
10. Did you call for tenders publicly? Yes.
11. And the tender was let to John M'Leod? He was the contractor.
12. Had you had previous experience of M'Leod as a contractor? Yes.
13. Had you reason to believe him to be a good contractor? I had every confidence in him.
14. Whom did you appoint to look after the work when it was started? Mr. E. Colley was Clerk of the Works, and Mr. H. H. Purkis was under him.
15. How often did you expect these officers to visit the work? Purkis was stationed on the work; he had a house provided for him,—not on the work exactly, but adjacent to it.
16. And Mr. Colley was inspector? Yes; the measurements were by him.
17. You had no inspector under Mr. Purkis? No.
18. Was there no foreman of works? No; he was the foreman of the works practically.
19. Had Mr. Purkis other duties to perform which would take him away from Bare Island? He had occasionally to go away from there.
20. In his absence what provision did you make for the inspection? None; if he had occasion to leave the works he would make arrangements accordingly.
21. Did you expect Purkis to be there the whole six days of the week? Certainly.
22. Did his other duties call him away frequently? Occasionally; not very often.
23. He would not leave without you knowing, would he? He would not tell me every time he left. He had general instructions to visit other works.
24. *Mr. Wardell.*] Were his duties in respect to the other works on which he was engaged the same as at Bare Island? Somewhat similar.
25. *President.*] The other works on which he was engaged were chiefly fortifications in Sydney Harbour, were they not? Yes.
26. Was he the sole inspector at the other works? No; he had an inspector under him.
27. That is, he was the chief resident inspector at Bare Island and the senior inspecting officer at the other places? Mr. Colley was also inspector at the other places, as well as at Bare Island.
28. When Mr. Purkis went away to the other works, was he allowed a daily rate? He was only allowed travelling expenses.
29. I suppose he had no temptation to absent himself more frequently than was necessary? No.
30. *Mr. Wardell.*] Were these expenses commuted in any way? No, only his actual travelling expenses were allowed.
31. *President.*] When Mr. Purkis was away, was there anybody else to watch the interests of the Government? No.
32. Did you not carry out a large portion of this contract by day labor? I daresay there was a large amount carried out in that way. I could not say how much; there was a great deal of work that could not be done in any other way, such as the moving of the heavy ironworks in connection with the casemate.
33. In Mr. Purkis's absence, how was the men's time kept? He would take care of that; he would not be absent from the labor account.
34. In going through the schedule, I notice that a very large sum was paid for day work. Can you tell us anything about that? The work you refer to took place nine years ago at least; I think it is a year since I was at Bare Island.
35. Was there no provision made for inspection during the absence of the officer;—you say that Purkis was absent sometimes;—was there no day work done when he was absent? I should think not.
36. There is an account here for 27,331 hours of day work, as against an estimated quantity of only 600 hours. Was no portion of that work done in the absence of that officer? He could best answer that question. I could not tell. The intention was that he should be there at all times when the men were at work.

J. Barnet,
Esq.
28 July, 1890.

- J. Barnet,
Esq.
28 July, 1890.
37. *Mr. Mansfield.*] Had Purkis anything to do with the fortifications at Newcastle? No; nothing whatever.
38. *Mr. Wardell.*] He had with those in the harbour, I think? There was no contract work going on for the year that this work was begun.
39. *President.*] How often did you visit the work when it was going on? As frequently as I could. I had a very large number of works to attend to besides that. I had £800,000 worth of works going on in that year. I had not much time to attend to Bare Island.
40. But you did visit it? Yes, occasionally.
41. I suppose you visited it in company with General Scratchley? No; I never was there with General Scratchley.
42. Were the alterations at Bare Island fort all done under the direction of General Scratchley? He visited the works frequently, generally accompanied by Colonel Roberts, and they together suggested and made alterations.
43. Was any record kept in your Department of the alterations made? Usually they used to get the orders in writing. Sometimes General Scratchley gave orders without writing.
44. When General Scratchley wrote a request that any particular work should be done, what action did you generally take? I gave directions to have it carried out.
45. Here is a paper marked to Mr. Colley, to carry out? The general order was that Colley and Purkis should attend and take instructions from General Scratchley.
46. Did Mr. Colley report on that? There is no report, I think. None, I think, is needed.
47. *Mr. Wardell.*] Did he note the instruction, and return it to the office? Of course, he noted it in his own books.
48. In his own books;—should not the paper bear the evidence of it? It usually does; it does not in this case.
49. But when you convey an authority to Mr. Colley to do work, would you not state it on the paper? Not necessarily; whatever work Mr. Colley did would of course be registered in our office books. There was a general instruction to carry out whatever General Scratchley required. Colley would, in the first place, report if that was necessary, and then carry out General Scratchley's instructions.
50. *President.*] In many of these cases there is nothing to indicate that General Scratchley's orders were carried out, or that anything was done,—how do you account for that? I daresay Mr. Colley made a general report, which will be found in the office.
51. Then you did not expect Mr. Colley to put on the paper whether he had carried out the instructions he had received? In my office separate reports are made which would show what work is being done.
52. Did Mr. Colley send such a report? The books in the office will prove that.
53. They will show what action was taken? Yes.
54. Then you did not expect your officers to initial the paper? No; I never expect them to write anything on the paper, but to make a separate report.
55. I have asked for all the papers, but so far none have reached us showing what action was taken in these cases? If there is such a report there is no doubt it can be got.
56. *Mr. Wardell.*] Would this report bear your approval? The officer's reports would have my approval on them.
57. *President.*] Here is a telegram from General Scratchley to yourself:—
“PLEASE stop construction of wing walls round area on which barracks are to be placed at Bare Island Fort, at Botany. Am writing.”
- That is marked off to Mr. Colley. Here is the letter referred to, also marked for Mr. Colley to report; but there is nothing to show that Mr. Colley ever reported on it. Here is another report marked in the same way, so that we should have to refer to the books to find out Mr. Colley's report. Is that so? Yes; the books of the office would show if Mr. Colley did report or not.
58. *Mr. Wardell.*] Supposing you failed to find it in the books to which you refer, how should we trace what was done? Mr. Colley or Mr. Purkis would be able to explain it.
59. *Mr. Mansfield.*] But when you say the books will show whether Mr. Colley reported on it, would there be no paper or document other than the report itself? There would be a record in the record office. You could look to see if Mr. Colley had reported.
60. *President.*] In this telegram, General Scratchley stops the construction of the wing walls. In the accompanying letter he gives his reasons why he wants them omitted, and yet we find that the walls have been erected. If we got Mr. Colley's report would that explain why the instruction was not carried out? Mr. Colley or Mr. Purkis could explain all that.
61. *Mr. Wardell.*] General Scratchley's letter ordering the omission of the wing walls is addressed to you, is it not? Of course, all letters are addressed to me.
62. You referred it to Mr. Colley, but there is no evidence to show that it has been sent back to you? The report would give evidence of that.
63. And your approval would be on that report? Yes.
64. *President.*] And where are the reports? The reports are kept in the office.
65. Did you not get instructions from the Minister to hand over all instructions and reports? I suppose they are all here; they have been handed over.
66. A very large quantity of papers came down from your office on Saturday, marked “Oid papers.” They may be among them? I daresay.
67. *Mr. Wardell.*] Who was the officer in charge of the papers? The chief clerk.
68. *President.*] You say the records will show the action taken; then you never made a practice of noting what that action was on the original paper? No; each officer makes a separate minute, enclosing the original paper.
69. Then you never let the original papers show the action taken? No, that is shown in the Register book. Whatever is to be done is marked off to the officer in charge, and his action is marked off in the book.
70. But where is your approval? On the officer's report.
71. *Mr. Wardell.*] In the case of these wing walls, which General Scratchley asked should not be proceeded with, but which have been built—would there be a history of what led up to that? No doubt; very likely they were built before the report came.

72. *President.*] Have you been down to Bare Island since the works have been opened up? No, not for a year. J. Barnet, Esq.
73. Have you seen the report made by Mr. Wardell and myself on the works? Yes, I saw it.
74. You wrote a minute that in your opinion if the work was badly done the contractor ought to be called on to make it good? Yes. 28 July, 1890.
75. How can you account to your own mind, Purkis being there, for there being so much defective work? Only by the fact that his place of business was on the main land, and there was a very narrow foot-bridge between it and the work. The men could see him coming for a quarter of an hour. Under these circumstances, I think it would be easy enough for them to put in bad material. For a similar reason, I had an officer sleeping on Garden Island when the works were being erected, in order that he should be continually on the spot, with a view of preventing anything of the kind taking place.
76. *Mr. Mansfield.*] Would it not be Purkis's principal duty to be on the works? Yes; but he might have occasion to go across for a few minutes.
77. *Mr. Wardell.*] If you examined the work you would see it is not a question of being away for a few minutes; he could not have seen it for a considerable time? Concrete works should not be left any time. My instructions are that concrete works should never be left.
78. If you gave instructions to Mr. Purkis never to leave, that is important? Yes.
79. *President.*] These were your instructions? Yes.
80. If you went to Bare Island you would see that the filling is literally rubbish, and that the state of the works generally is pretty well as we have described in our report. Now, is it possible that so much bad work could be put in—in every instance it is bad—in those little intervals of which you speak? There must have been neglect of duty,—there is no doubt of that.
81. We cannot help believing that there is no exception to this bad work, that it is all equal. We examined six or eight holes, and every one of them was alike? In that case there must have been neglect of duty.
82. Did Purkis bring in his report? He either brought his report or sent it every Monday.
83. *Mr. Wardell.*] As a matter of fact he did not always see you, did he? No, he did not always see me.
84. *President.*] Had you any standard instructions to inspecting officers as to how far you allow them to depart from your authority, or from the specifications? They are not allowed to depart at all from the instructions. In this particular case they had orders to take instructions from General Scratchley. It was, practically, his work, not mine.
85. But would these reports show and explain the large departures in the quantities from the estimated quantity, and the large increases that were made? Of course they would. The drawings would show that.
86. There is a large increase, for instance, in the item for labour? The estimate is no guide whatever.
87. The estimate has been no guide whatever; then you practically gave *carte blanche* as to the work to be carried out? No, I did not.
88. There is a certain amount provided for in the estimate for day work. I want to find out how you explain the increases that have taken place? It was impossible to tell what amount of day work would be required.
89. Did you understand that all the wood-work fittings should be done by day work? If there was a schedule price for it it should not be done by day work.
90. Item 61 on the specification reads as follows: "Timber as above, wrought, framed, and fixed for any purpose, including all nails and screws, probable quantity 4,000 feet superior, at 6d. per foot." Did that include all labour? Yes.
91. The book shows that all fittings were put up by day work;—had the officer general authority for that? Yes; if it was considered better for the work, and more economical.
92. I suppose you looked to Mr. Colley to check what was done? Mr. Colley and Mr. Purkis prepared the schedule.
93. You looked to them to see that proper allowances only were made to the contractor? These officers were responsible.
94. Take the item for asphalt, there is a certain price for $\frac{1}{2}$ -inch Seyssel asphalt and $\frac{3}{4}$ -inch marked in the specification:—viz., 14s. per square yard for the $\frac{1}{2}$ -inch, and 16s. 6d. per square yard for the $\frac{3}{4}$ -inch; but we find on referring to the measurement-book that a much higher price was charged than was provided for in the specification. The book states two $\frac{1}{2}$ -inch thicknesses at 14s. per square yard, amounting to 28s. We cut into it in several places the other day, and we found it was only three-quarters of an inch thick, put on in one coat;—do you consider the inspector was justified in passing that? Certainly not; he had no right to pass it.
95. Was it Mr. Colley's duty to see that two coats were put on;—whose duty was it to check the inspector? Mr. Colley's.
96. It would have been Mr. Colley's business to check the accounts? Yes.
97. And to check all the allowances given to the contractor? He was responsible to me for the work being carried out on the measurements.
98. We found on going through the book that considerable allowances were made, and that in nearly every item one-third is added? Of course, I cannot explain that.
99. Whom do you hold responsible? Mr. Colley, of course.
100. *Mr. Wardell.*] Then Mr. Colley did not tell us the truth when he said he was not responsible? I should think not.
101. And Mr. Colley was distinctly responsible for checking? Certainly.
102. *Mr. Mansfield.*] And Mr. Purkis would be primarily responsible for passing $\frac{3}{4}$ -inch work, and for paying for it as $\frac{1}{2}$ -inch work done twice over? Yes.
103. Did these officers make any return to you of the days on which they were employed on certain works? That would appear in the weekly report. Every officer reports weekly—states what has been done during the week, what material has been used, and what labour, and if it is satisfactory, or otherwise. General Scratchley expressed himself in the highest terms of the way in which the work was done.
104. *President.*] Do you recollect whether your officer reported to you from time to time that the estimated amounts had been largely exceeded? I do not recollect. I knew that great additions were being made to the original work. The original estimate was £25,000, I think. It came to £30,000 when it was done. 105.

- J. Barnet,
Esq.
28 July, 1890.
105. *Mr. Mansfield.*] Has M'Leod's contract, the document constituting the agreement, been forwarded to the Commission? Oh, yes.
106. *President.*] Do you consider that the concrete specified, if only put into the work, is good enough for that work? Good enough for the general run of work. In some cases General Scratchley ordered it to be finer and better.
107. But, if honestly made, it would be very good material? Yes, good concrete.
108. There is a very large item here for adding cement to enrich the concrete. The schedule provides for 10 barrels of cement, whereas 895 casks were paid for. Do you consider it necessary that so much should be added? That I could not explain. That was under the direction of General Scratchley.
109. You did not call for any explanation from your officers? No.
110. You left it to the discretion of your inspectors? The officers had instructions to do everything they were ordered by General Scratchley.
111. Do you know what year General Scratchley left? I am not sure.
112. I think you will find that a great deal of this work was done after he left? I think not. The guns were mounted in 1884.
- *113. General Scratchley was at home in 1883, I think? The guns were all mounted before I went to England in 1885, and I was away a year, and during that year they had a war scare. General Scratchley was here then. He gave directions about a great many works.
114. What year was that? 1885. A great many works were done then; they were considered necessary.
115. *Mr. Wardell.*] Is there any proof of these instructions having been given by General Scratchley? General Scratchley and Colonel Roberts frequently visited the works; the latter made suggestions which the former accepted, more or less.
116. *Mr. Mansfield.*] These instructions were given through you? No; on the spot. I was not here in 1885.
117. But in such a case as that mentioned in the document which the President handed you just now, and which is endorsed "Mr. Colley," for execution, what constituted your authority for so instructing Mr. Colley? The contract was taken under me.
118. Then, at General Scratchley's request, certain alterations were made and were authorized by you;—what was the ground of your authority for carrying out General Scratchley's instructions—had you a Ministerial authority? I had a general Ministerial authority for carrying out the whole work.
119. Would you not require some special authority for deviating from the original plan? Not in the case of the fortifications. It was never done.
120. *Mr. Wardell.*] The instructions seem to have been all given *viva voce* ;—there are no written documents, only verbal instructions; is that so? There are only these letters.
121. Would your officers feel themselves justified by any authority you gave them in carrying out General Scratchley's instructions without informing you? The weekly reports would show whether General Scratchley or Colonel Roberts were there, and what they ordered.
122. And are these reports accessible? They ought to be here.
123. *Mr. Mansfield.*] What Ministerial authority had you? There was a general authority from the Colonial Secretary to obey the instructions of General Scratchley; it was not necessary to get instructions from the Public Works.
124. *President.*] This inquiry includes nearly all the forts. I would like to get the names of the officers whom you hold responsible for the different works. (1) Bare Island Fortifications, Botany. Messrs. Colley and Purkis, you have told us, were the responsible officers there. (2) Port Jackson, Casemate Battery, George's Head,—who was in charge of that work? Mr. Colley.
125. Who was resident? Mr. Purkis, and Mr. Murray, his foreman of the works. I think he is dead.
126. A Mr. Murray is still in the Department? It is a different man.
127. Twenty-five ton gun battery, Middle Head. Who were the officers there? Messrs. Colley, Purkis, and Murray.
128. And at the Observing and Firing Station, at the Heads? Messrs. Colley and Purkis. This is quite a recent work.
129. And at Newcastle, Fort Scratchley? Mr. Colley and Mr. Campbell and two others. Mr. Murray was there also.
130. Victoria Barracks, flooring and drainage;—is that a recent work? Yes. Messrs. Colley and Telfer were the officers there. Mr. Bushby was also an officer at Newcastle.
131. Did he succeed Campbell? He succeeded Murray, I think; he has only been employed during the recent alterations. The work was completed a long time before he went there. It was completed under Mr. Campbell.
132. Have any complaints of any of these works been brought under your notice? No. I was engineer myself of the works erected previous to General Scratchley's arrival.
133. Are you referring to any of the works with which we are now concerned? No, these are alterations and improvements carried out by General Scratchley, and recommended by Sir William Jervois.
134. The contracts for all these works were let by public tender, I suppose? Yes, all of them.
135. Is that the invariable practice of your Department? Yes; the works are all let by public tender. These particular works—the Torpedo Works and Observation Station—are merely continuations of a previous tender. I had instructions from the Government specially to employ M'Leod, because he was considered the man to trust.
136. Who carried out the Casemate Battery, George's Head? M'Leod & Noble; they had a general contract for works at Port Jackson.
137. And the Observing Firing Station? Yes; that was the last M'Leod had.
138. Who was the contractor at Newcastle? Russell.
139. And at the Victoria Barracks—flooring and drainage? There were two sets of contracts, I think. Long had the drainage, and Langley the flooring.
140. There is a second contract let to M'Leod for the erection of Barracks? It is a continuation of an earlier contract at the schedule price.
141. Can you stop and cancel the work on the ground? There is a provision to that effect.
142. *Mr. Wardell.*] M'Leod has not then entered into any contract for the works referred to? No; the arrangement was that he should be paid at schedule rates.

* General Scratchley left Australia early in 1883 for England, returned 4/1/85, and died at sea, 2/12/85.

143. It would be in your power then to stop him going on with the work? Yes.
144. And would he have no claim for compensation? No claim; only so far as he would have made provision for the work by the purchase of material.
145. *Mr. Darley.*] Are you aware he has sent in a claim? I believe he has.
146. *Mr. Wardell.*] What would be the practice in your Department with regard to payment in a case for which there is no item in the schedule? I would obtain a price from the contractor.
147. *President.*] Would it not have been better to have got this price before giving the order to do the work? It might have been if the construction of the work was not an immediate necessity.
148. But you gave the order for the work without doing this? It might have been necessary.
149. *Mr. Mansfield.*] In the construction of barracks there must be a large number of items not covered in the schedule intended for the construction of a fort? They would be provided for in the schedule.
150. Are there not a very large number of items not so provided for? The barracks were originally intended to be built as part of the work.
151. *President.*] Specification drawing No. 10—"Detailed plan and sections, &c., of barracks; also, plan of roof of barracks, with enlarged details"—distinctly says, "These buildings to be omitted"? The schedule provides for that.
152. You think there are several items in the schedule referring to these buildings? I think that was the intention.
153. *Mr. Wardell.*] Who is responsible—are you responsible—for that schedule? Of course I am, as head of the Department. The officer who prepared the schedule is responsible to me for it.
154. *Mr. Mansfield.*] Would it be submitted to you for approval? Oh, yes.
155. *Mr. Wardell.*] As I understand, this refers to the barracks, "These buildings to be omitted"; and still you think they are provided for in the schedule? I believe they are provided for in the schedule.
156. *Mr. Darley.*] Then with regard to the doors, the contractor appears to have made his own price for them? That may be; the particulars would appear in the reports.
157. He also appears to have taken out a certain amount of excavation? I could not say what he has done. They were in a great hurry to begin the work, and in as great a hurry to stop it.
158. *Mr. Mansfield.*] Were these different works going on at the same time, or at different times? The Bare Island contract was commenced in 1881; George's Head in 1884. I think.
159. Was the Bare Island contract still going on when the George's Head was commenced? Yes; but the heavy work must have been done. The guns were mounted in 1884; they were all mounted before I went to England, and I went in January, 1885. The contract will give exact dates.
160. *Mr. Wardell.*] Have you not visited Bare Island since you visited it with General Scratchley? I have visited it many times, but never with General Scratchley. I was there in 1880, before the work was begun, but never when he was there.
161. But you have had instructions from him? Oh, yes; he used to write to me occasionally, and ask for the officers to meet him there, and, of course, I told them to go there and meet him. What was done in 1885 I do not know, because I was not here. The casemate at George's Head was built for two guns only, and there was a third added. It was designed originally for three guns, but only two were to be mounted when the contract was taken. Constant alterations were being made.

J. Barnet,
Esq.
28 July, 1890.

THURSDAY, 31 JULY, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Colonel de Wolski, R.E., Director of Military Works, was also present by invitation during the examination of the witnesses.

Mr. John L. Bruce sworn and examined:—

162. *President.*] What is your name? John L. Bruce.
163. What position did you hold at Bare Island? I was sent there by the Colonial Architect as resident officer in charge of the Barracks. Might I mention—it would save a lot of questions—I have brought here the drafts of all my reports, and I would like to make a statement.
164. I have the originals? Oh, then, you will see from these drafts that I kept a record from day to day of what went on at the works, together with the condition of the weather.
165. There are some points I want to get at. I understand that the work was carried out under contract by M'Leod? Yes.
166. Was he there during the contract superintending the works himself? No; he came occasionally. The foreman in charge was Mr. J. Noble.
167. Is he a partner of M'Leod? No; I believe he is Mr. Noble's cousin; he was merely there as foreman; he was not the same Noble as M'Leod's partner. Mr. Murray was also there as general manager; he came down and paid the men on Saturdays.
168. But Mr. Murray did not act in a practical manner; he was not there as an officer in charge, was he? He was paymaster; he was the contractor's manager.
169. Was he resident on the work? No, he came to measure up with me.
170. He did all the measurement with you, did he? No, he took notes with me.
171. You made it up together? Yes.
172. And you agreed? I took the measurements which I have brought here. Noble and Murray and I went over the work, and I took a note of the dimensions in my book, and Murray in his. I made it up independently, and when he came down again we compared notes to see if they corresponded; that was the way we went about it.
173. Then Murray was really the measuring engineer and Noble was carrying out the work? Yes, that was it.
174. Were you constantly on the ground? I was stationed there constantly, but came to town every Monday to make my report.

Mr.
J. L. Bruce.
31 July, 1890.

- Mr. J. L. Bruce.
31 July, 1890.
175. When did you go back to the works? It depended on what I had to do; I had to look after the material, and so on; I was always doing that work. I also had sometimes to do work at the telegraph station at the same place.
176. When you were away on Monday was the department represented on the ground? No.
177. Was anybody there whilst you were away? No.
178. Have you sent in to Mr. Barnet a statement of the measurements you made on the suspension of the work? Yes.
179. Have you a copy? Not a correct copy. I have a rough draft, which was adjusted afterwards in some minor particulars with Murray. [*Handing in draft.*]
180. Is that book correct? No, I think it is adjusted slightly on some small items.
181. Where would the record be? There was a separate document sent in, taken from this and adjusted. I made this measurement and had no opportunity of adjusting it with Murray on the ground. When I came up to town I met Murray in the office and compared my results with his and found I had omitted some items and adjusted it.
182. Where would that be? It was sent to Mr. Barnet.
183. *Colonel de Wolski.*] That is a correct copy of the bill sent in by the Colonial Architect [*handing in document*]? *Witness:* There are one or two items which do not appear here. This is not the same as the one in my book.
184. It is the same total, £787 17s. 8½d.? Yes, I beg pardon; it is my mistake.
185. *President.*] Then you identify this as a correct statement of the measurements at Bare Island Barracks to date? Yes.
186. You were guided in the prices you were paying by the original contract, the original schedule, were you not? Yes, so far as they applied. One thing I would like to explain: I was sent down by Mr. Barnet with instructions to be resident there and to look after the work and to take all instructions from Mr. Purkis.
187. *Mr. Wardell.*] From Mr. Purkis? Yes, from Mr. Purkis. This was the first work I had under the department, and, being inexperienced in their method of working, I referred to Mr. Purkis whenever any difficulty arose.
188. *President.*] Was Mr. Purkis often there? I can give a record of all the times he was there. He came down to the Island six or seven times during my stay.
189. Just at intervals? Yes. I very often saw him on the Monday at the office of the Colonial Architect.
190. Had you had previous experience of this kind of work? Yes; I had what I think must have been the first contract given in Scotland twenty years ago under Drake. I also had a quantity of concrete work to do in and near Glasgow.
191. What is your training? I was trained as an architect; I was apprenticed to Mr. Honeyman, at Glasgow, and was in practice for fourteen years there.
192. Will you describe what the place was like when you went to the Barracks? Do you mean what the condition of the work was?
193. Was it in its natural state, for instance, on the left side of the entrance? No, it was level.
194. Was there soil on it? There was a soft rock; the contractors wanted to charge it as rock; I objected and referred to Mr. Purkis. As a result it was decided to measure 9 inches of earth all over the surface of the rock.
195. There are two prices in the schedule for rock excavations—Item 4: “Excavating rock to any depth and for any purpose, finished to a given line, or level without the aid of blasting, including wheeling, &c., as item 1, at 5s. 6d. per cubic yard”; and item 5: “Excavating rock as item 4, including wheeling, &c., without the aid of blasting, at 5s. per cubic yard.” I observe in your certificate that you have returned all under item 4 as without the aid of blasting—is that so? Yes.
196. Was there not some blasting done there? Powder was used. The first week I went down there the contractor asked if he might be allowed to blast. I had then no specification other than this (referring to M’Leod’s schedule), and I applied to Mr. Purkis for some guidance as to how the work should be carried out, whereupon he gave me a draft specification which he had prepared. It was merely a rough draft, and he said, “You can prepare your notes from this.” There was some reference in it that there should be no blasting allowed, and when the contractor asked if he might be allowed to blast I said no, that it would be objected to. He said it would not be objected to. I declined to act in the matter till I had referred to Mr. Purkis. I thought it of sufficient importance to note it in my diary. That was the first week after I went down there. On Monday, April 29th, I was up at the office, and saw Purkis, M’Leod, and Murray. I have a note of it in my diary under that date. The note is as follows:—“On date, Monday, 29th April, office in morning, Mr. Purkis gave permission to Mr. M’Leod and Mr. Murray, in my presence, to put small shots in excavating at Bare Island, just before leaving office in passage, about 11 o’clock. Present: Mr. Purkis, Mr. M’Leod, Mr. Murray and myself.” My reason for noting it was that it was contrary to the rough specification. When that question was decided I took the first opportunity the same day of speaking to Mr. Purkis about the price; how it was to be charged, so that I might know whether I needed to keep a separate note of the rock got by blasting. It seemed to me to be unfair to deduct the whole amount because the contractors were not getting the full use of the blasting.
197. What amount are you referring to? The extra 6d. per cubic yard, they had to channel all round first.
198. Did you not pay for the channeling? Yes, they had to channel round, but still they did not get the full benefit of the blasting.
199. But channeling is a distinct work, is it not, and was so paid for? Yes. At the same time they were not allowed to blast more than that. I accept no responsibility in that matter, as I got instructions from Mr. Purkis to charge it at the rate for cutting.
200. He instructed you to do that? Yes, it was not blasting in the ordinary sense; it was more like wedging with powder.
201. But that was distinctly blasting? Oh, yes.
202. Then Mr. Purkis authorized payment to be made under item 4 instead of under item 5? Yes; and that explains why I kept no separate note of rock blasted and rock cut in the ordinary way.
203. Going back to No. 1, where was the soil run to? Over the face right over the front; it was run out over the lower yard.

204. There was more than 25 yards extra wheeling, was there not? Yes, in some places; but it averaged it. At one end it was under, and at the other it was over. Taking both together, it averaged over 25 yards.

Mr.
J. L. Bruce.
31 July, 1890.

205. Coming to the rock excavation, where was the rock put to? All the inferior rock was run over the face, and the superior rock was put here. [*Pointing to plan.*]

206. You paid for all that? Yes.

207. And what did you intend to do with the rock you stacked? It was intended for the concrete in the bomb-proof roof.

208. Did it cost the contractor more to put that rock there than to wheel it out? I think it would come to very much the same thing. It was very much more than 25 yards extra wheeling, but I only allowed them that. The contractor wanted more, but I refused, because he put the good rock there for his own convenience.

209. With reference to channelling, did you measure all the rock as channeling? Yes.

210. One measurement? One.

211. Paying for one face, one area, not two? Yes; not two.

212. What did you measure as channeling here [*pointing to plan*]? All below the 9 inches. The arrangement ultimately come to was that all below the 9 inches should be paid for as channeling.

213. Item 1 on the schedule reads, "Excavating earth, clay, shale, or any other formation that may be met with except rock, and wheeling, not exceeding 25 yards run, and disposing of same at 1s. 10d. per cubic yard." In your book you have a certain amount charged for as rock excavation? Yes.

214. As a matter of fact, was not a very large proportion of that shale in every sense of the word? No. That was what I objected to in the first instance. They wanted to charge for channeling right back to the surface. I referred to Mr. Purkis, and he decided that 9 inches from the surface was to be charged as earth and the rest as rock.

215. And below that surface did you meet with no shale? It was mixed—some hard and some soft. I would call the soft part clay-rock almost.

216. The phrase "clay-rock" does not signify hard rock does it? The schedule says "earth, clay, shale, or any other formation except rock," and, as it was very questionable whether this should be designated rock, I brought the matter up.

217. There is a decided difference between shale and rock? Yes; and that was why I referred the matter to Mr. Purkis.

218. What would be your definition of sandstone rock? A silica cemented together with calcareous matter.

219. Yes, but I mean in a practical way, working with tools. Perhaps you have not been here long enough to have heard it, but in this country shale is commonly described as anything that can be got with a muck pick, and rock as anything got with a quarry pick. Do you think that a reasonable definition? Yes.

220. Was not this taken out with a muck pick? Yes; the ground was highest here [*pointing to plan*], and fell in this direction. On the surface was this soft stuff. When Mr. Purkis came down I showed this to him, and he fixed the 9-inch limit for the rock. They were cutting in soft stuff in this place, and in that other they were cutting in hard, so that I think the arrangement was a fair one.

221. Is it your opinion that any change by reason of the climate or otherwise had taken place there which has altered the rock to any softer material? This [*pointing to the plan*] showed a very material change from what I was told it had been before I went. When I was there it had assumed the appearance of a pipe-clay, whereas I was told that before it was much harder. I was not there long enough to notice any special change myself.

222. How long is it since you were there? About twelve months.

223. Did you notice, when you visited the place with the Board of Inquiry, that what you paid for as rock was not rock? I did not notice it.

224. In your twelfth report you say, under date 13th July, 1889, "I have caused a thin protective coating of concrete to be placed against certain soft parts of the rock under old retaining walls at rear of barracks, which exposure to the weather is beginning to fret away, and which might, if exposed for a longer time, endanger the wall over it. These parts would have been secured by the progress of the buildings before now had the works not been suspended;" did you observe, when you were putting that little protective coating of concrete on, that the wall was standing on clay, and not on rock? That coating was put on because I saw it was not rock. I told Mr. Purkis the rock there was very soft looking, like clay. He said it would be hard enough when the stuff was put on. I was afraid it would come to some damage if it were left without a coat.

225. Have you had long enough experience in this country to say whether sandstone rock usually decays with the weather? The rock referred to could not by any possibility be called hard sandstone rock. It was clay rock, with a small quantity of silica in it.

226-7. Is not that a shale? Shale is purely a clay. The material appeared to me to be a clay, with a small proportion of sandy material; I can quite understand when that was cut freshly that the sandy material might deceive anybody as to its being a rock. The weather would have the effect of softening it and breaking it down.

228. Did you pay for any cross channeling, or simply the face round the outer edge; was there no cross channeling for the purpose of quarrying? I am not quite certain. I think in one case that this verandah [*pointing to plan*] was paid for as channeling, because it was afterwards carried down further than it was first intended. I think there was something of that kind. I can answer your question with regard to the other matters. There was no channeling for quarrying.

229. Item No. 11 on the schedule reads "channeling rock for faced work, either straight or circular, one face only of channel to be measured, the rock cut away to be paid for as item 4. No channeling to be paid for unless ordered to be done by the officer in charge of the works." I see you allowed for 4,100 feet channeling? Quite so; but I allowed no channeling whatever for quarrying.

230. Did you pay for all that area again as dressing? A large portion of it.

231. Item No. 12 on the schedule reads "dressing down or escarping face of rock, finished true to a straight-edge or mould, either straight or circular, in rough picked work; the excavation to be paid for as item 4. This item is also intended to apply to defective parts of rock faces to be made good with concrete or masonry, at 5d. per square foot." I see there are 3,976 sup. feet of dressing paid for? Yes.

Mr.
J. L. Bruce.
31 July, 1890.

232. Where was that done? In places where the surface had to be true; only in those places;—not where it was behind the wall, but where the surface had to be cut down straight. I asked Mr. Purkis that question specially. I was not acquainted with the method of measurement, and I went down to George's Head on the 24th of April to see Mr. Purkis about it. Mr. Purkis told me then, generally that where the surface had to be true the dressing was to be paid over and above the channeling, because it could not otherwise be done perfectly flat.
233. Did they go over all that area that they had channeled and dress it true? They went over what I had measured.
234. *Mr. Mansfield.*] The area of the floor seems to have been paid for as dressing? The greater portion of it was.
235. One thousand four hundred and eleven feet seem to have been paid for as dressing? Yes; but this [*pointing to plan*] was not, because it was unfinished.
236. Was the level altered? This is the drawing I made of the condition of the work when I went down for my own guidance [*showing plan*] that [*pointing to plan*] was not dressed. It was uneven; it was not level.
237. *President.*] A large number of men were employed by day-work—1,476½ hours were paid for labourers' day-work, 166 hours for quarrymen, and 202½ hours for masons;—what were these men doing? A lot of it was for repairs on the fort. I had a number of cracks repaired, and the magazine was repaired to prevent it from leaking, and the drains also needed alteration.
238. There is also a number of hours charged for office attendant;—did you always keep an office attendant? Yes; a man was told off to do the office work.
239. A contractor's man? Yes.
240. Had he the run of your office? He cleaned it out.
241. Eighteen hours a week is apparently charged? I think there were two days allowed. The attendant also did the cooking.
242. Did the attendant put in two days' work a week? Yes, something like that.
243. *Mr. Mansfield.*] Before we leave this matter of the floor, it would seem as if the dressing had been paid for twice over—Mr. Bruce tells us that it was not finished? No, it was not finished.
244. It is here measured as dressing—there is no price against it? It is dressed now, and there are a lot of channels cut out for drains, which are filled up with concrete. I put those in.
245. *President.*] A lot of this dressing appears to have been amongst the gun-pits? There was some dressing at the back of the gun-pits.
246. Item No. 12, on the schedule—"Dressing down or escarping face of rock, &c."—Give me some further information about the work done under this item? A portion of the work was on the bottom of the excavation. This bottom was covered with earth when I arrived.
247. When you arrived on the ground first you found a portion of the bottom excavated, did you not? Yes.
248. Did you pay for dressing the bottom of any of that portion again? Yes.
249. You measured a portion what was apparently excavated before? Yes, it was not carried down to the proper level, nor was it full size.
250. Did you go over a portion of the original excavation again? Yes, I went over the bottom and a portion of the side; you will find that in my measurement book.
251. Then you afterwards enlarged the area—extended the excavation? Yes, and we cut out all round it, making recesses for windows, and so forth.
252. And you paid for the dressing of that fresh area? Yes.
253. Item 24 in your book states that 26 cubic yards Portland cement concrete, at 44s. 6d. was paid for—where was that put—where did you use that? It was used in here, under the foot of this retaining wall here [*pointing to plan*]. I put in an 18-inch wall and reported that I had done so. I put in a concrete wall to secure the retaining wall.
254. Where were the 26 yards of concrete put? Some of it was put in constructing a wall in place of the brick wall originally intended to be placed in front of the retaining wall at the south-west side.
255. In excavating for that wall, how did you pay for what was taken out? It was partly rock and partly earth. The rock dipped very rapidly, and I averaged it.
256. Does the concrete now stand at the bottom of the basement? I took it down below, because the drain is under the bottom of the basement. I took it down till we got to good sound hard rock, and then dropped it into the drain.
257. Can you call to mind whether there was any rock in that excavation? Yes; I recollect it perfectly. That wall was put on stages.
258. Did you not meet with a lot of black soft clay? Yes; a sort of loam.
259. Turfy-looking stuff? Yes.
260. Is that retaining-wall standing on that? I did not cut away to see.
261. It is cut away now; it is standing on the black soil? I was always suspicious of that corner. I did not cut it away; I was afraid to do so. I shored it up while putting in the wall in front of it. I showed it up in my reports.
262. You said in one of your reports that 250 casks of cement were landed from a vessel at the fort? Yes.
263. Some, of course, has been put into the work, has it not? Yes; immediately after the work was stopped, M'Leod was sent for to Little Bay to do some work for the hospital, and he took a number of casks there. My return of the material had the date put on it.
264. *President (to Colonel de Wolski).*] Have we this return? No, we have not; the information might be contained in M'Leod's claim.
265. *President (to Colonel de Wolski).*] Mr. Bruce stated in his report that he made a list of all materials on the ground; what has become of it? *Witness:* Here is a rough draft of my list of the material on the ground. It should be in that form.
266. *Mr. Mansfield.*] Did you make that when you gave up charge of the works? Yes; I made a note of the material on the ground about the time that the barracks were handed over to Colonel de Wolski.
267. *President (to Colonel De Wolski):*—We must copy that document. It is important. *Witness:* That is simply a draft, and has been perhaps altered since in small particulars.
268. Your report, No. 14, reads as follows:—"I have now completed the measuring up of the work done to date, and have also made out a note of the materials on the ground, and am therefore ready to adjust accounts to date whenever required to do so"? Yes; that is an extract from my report. 269.

Mr.
J. L. Bruce.
31 July, 1890

269. *Mr. Mansfield* [referring to draft return of material on the ground.] I do not see the cement in this? Yes; it is mentioned as in the store at Frenchman's Bay.
270. In the store, Frenchman's Bay—where is that? It is down near the telegraph station. The bay in front of the station is Frenchman's Bay.
271. *President.*] Then the contractor has a store at La Perouse other than the store on the Island? Yes; he put it up specially for the cement.
272. Up to the time you left, was the contractor still represented on the ground by a man? Yes; he had a man. He was not specially at the fort. They had a contract for a drain, and also work at Little Bay; so the foreman, who had formerly taken charge of the barracks, stayed over.
273. Then the contractor was not keeping any man on the ground as a caretaker? He was keeping a man who was all along on the spot, whose time is charged as office attendant.
274. Is he there now? I think so. George is his name.
275. There are certain freestone blocks, returned by Mr. Purkis as among the materials belonging to the contractor, left on the grounds, which were subsequently paid for;—were they pointed out to you? Two or three stones outside the guard-room were all that were pointed out to me.
276. This return shows ten casks of Portland cement as having been paid for? Yes; there was some cement in the room intended for a closet.
277. Are they there still? Yes; but they are all gone bad.
278. Thirty-eight feet of 9-inch earthenware pipes, and 2 feet of 12-inch earthenware pipes are also returned;—did you see them? There were a few pipes outside the barracks, but I was not shown them.
279. Did you pay for new piping? There was a lot of new piping. There are a quantity of old pipes lying in the upper yard, but most of these were pipes I had to lift when altering the course of the drain. In my report of the materials on the ground, you will find it stated that, with the exception of one 4-inch bend, one 9-inch bend, one 6 inch by 4 inch branch, and one 6-inch pipe, "all the other pipes in this yard belong to Government."
280. What were the quarrymen doing at day-work; there are 166 hours charged for? I could not answer right off, but you will find it detailed in the book.
281. There are 1,476½ hours charged for labourers? Yes.
282. Some of this is for cutting out asphalt round arc in casemate battery;—is that repairs; that is no part of the barracks? No; it is repairing the Fort.
283. Pick out some of the big items? Eight and a half hours, 8½, 17, all for cutting out asphalt round arc in casemate battery; 27 hours, 27, 12, 24, 18, for dressing area over casemate; 22½ hours cutting out at top of retaining-wall behind barracks and dressing; 27 hours, 27 and 32, uncovering shell-room and pipes; 18 hours uncovering ventilators; 15 and 12, making good foot of walls; 48 and 54, cementing and filling for magazines.
284. Does all this belong to repairs? Yes; that dressing for the casemate I will explain. Just in front of where the stone was stacked it had been roughly dressed. They complained of dampness. The water used to lie on it in pools. I got it dressed for that reason.
285. Two hundred and two and a half hours of mason's labour are charged for, a good deal of it for cutting out top of retaining wall behind barracks, and making good the wall west of barracks? Yes; that is for repairing. A leak occurred after the heavy rain, and we got permission to open it out to see where the leak was.
286. Could you not get labourers to do that? Not to cut into the concrete.
287. Not with a pick? No. We uncovered it, expecting to find the cement. These men were working along with the labourers.
288. And you got masons to do that work? Yes.
289. Pick out a few of the larger items? June 18, 9 hours making good wall behind barracks; 9, 9, 9, 8, 9, same, up to June 25; June 27, 9 hours making good joints, retaining walls, front—that, of course, was repairs; June 28, 9 hours making and fixing cramps near Gatling gun; July 1, 8 hours, all fixing cramps; July 2, 9 hours; July 3, 9 hours, this was also for fixing cramps.
290. What hours did the men work? Eight and a half.
291. Did you book nine—you read out nine hours—did they have to work nine hours? Yes; I kept this report daily; they started eight hours and a half at first, but they worked nine hours afterwards; they worked their time.
292. Had you any means of checking them? I was there, except on Monday, when I was away at the office. The principal work for which the masons were employed was making up the cracks.
293. You checked the time and saw the men? Yes; and I got this return (*showing time slip*) every night. There is one thing I might mention: There is an item, on May 6th, a charge for two labourers for packing rubble behind the concrete wall. I wanted to charge this under item 14 of the schedule, only it was objected to because there was such a small quantity. I have a note about it. I referred it to Mr. Purkis, and he said it should be paid for by time.
294. With due respect to Mr. Purkis, I think it was an improper charge; he should take the large with the small. The schedule is a schedule, and if it only applies to 1 yard the instructions should be carried out; but Mr. Purkis sanctioned it; you are, therefore, not to blame? I was careful to refer to Mr. Purkis whenever I had any doubt, because this was the first time I had done any work for the Department.
295. Supposing we want to verify these measurements, could we do so? Yes; I think you would be able to identify them from the way they are taken in my books.
296. I notice in some of your reports, you mention you were engaged on a plan showing the work as carried out;—where is it? That plan was never finished. It is in pencil, and was returned along with the other plans and handed over to Colonel De Wolski.
297. And the plan of the drains? That was to form part of the same plan which was not completed.
298. *Colonel de Wolski.*] When did you hand it over? You will find it among your receipts as one of the unfinished plans.
299. At Bare Island? Yes.
300. *Mr. Wardell.*] I noticed in one of your reports, there was a record of stone received for chimney-pieces;—what did that mean? The report was that stone had been found which was suitable for chimney-pieces. I showed it to Mr. Barnet, and he approved it, and we cut chimney-pieces out of it.

- Mr. J. L. Bruce. 301. *President.*] You cut them out? Yes; there is one at the fort now.
 302. That was paid for under schedule, I suppose? Yes, under schedule. No; it must have been returned under material on the ground. This is it:—Report No. 7—“Excellent white rock of clean clear grit has been struck, which is approved, I propose to use for all stone work except steps. A sample is submitted herewith.”
 303. There is another mention of it? If it is there it will be under item 32-3.
 304. *Mr. Mansfield.*] There is an item here for 47,000 bricks;—where were these? They were stacked in the lower yard.
 305. Were any of them removed afterwards? Not that I know of. Of course I went away immediately after I made up the statement of material on the ground.
 306. That should be noted, I think; I do not think there could be anything like that number on the ground paid for? Not paid for—only on the ground.
 307. But they would be charged for? They might be charged for.
 308. *President.*] You are quite sure that did not include any bricks other than those on the ground? I am quite sure. I measured the dimensions of the two stacks of bricks and calculated the number from that.

Mr. H. H. Purkis, sworn and examined:—

- Mr. H. H. Purkis. 309. *President.*] Your name is H. H. Purkis, I believe? Henry H. Purkis.
 310. You hold the position of Clerk of Works under Mr. Barnet? Yes.
 311. Did you hold that position during the construction of the barracks at Bare Island? Yes.
 312. We are not going into the larger matter of the fort to-day, but we want to deal more particularly with the barracks:—What was Mr. Bruce's position? He was foreman of works, presumably under me. I had very little to do with the barracks after Mr. Bruce was appointed. I do not wish to say I had no responsibility.
 313. Did your reports cease before the barracks commenced? Yes; I did not report after that. Mr. Bruce reported to the Colonial Architect.
 314. Was not Mr. Bruce appointed under you;—did not you go there at intervals to inspect the works? At intervals, at first—at any rate. Mr. Bruce was considered a good man, and I think Mr. Barnet did not consider it necessary for me to take any very active part. I went at first to show Mr. Bruce the work required to be done.
 315. Being a man of not long experience in this Colony, and not up to the ways of the Department, certainly a new man in the Colonial Architect's Department, you were putting him into the way of the Department;—was that it? Yes, I saw him at the Colonial Architect's office as well.
 316. Did he consult you occasionally how certain matters were to be paid for? Yes; I remember one occasion, at any rate.
 317. What was that one? I remember once in the lobby his asking me if there was any objection to blasting the excavation. I think, as far as I remember, I said, “Be careful, there is a magazine there; a little perhaps to relieve the rock won't matter.”
 318. *Mr. Wardell.*] What did you reply? I told him to be careful as there was a magazine in the immediate vicinity, but that small pops would not matter.
 319. *President.*] Did he ask you then how that was to be paid for? I do not remember that he did. Of course the schedule would show that. I would not call putting pops in like that blasting.
 320. There was a question raised as to how much should be paid for as earth under Schedule item No. 1, and how much should be paid for as rock under item No. 4, was there not? I remember being out there when Mr. Bruce asked me. I might have been out there on three or four occasions. We decided then, Mr. Bruce and myself, with the contractor's representative, to strike an average.
 321. Was that before much excavation was done? I think it was all done. I would not like to say exactly; probably the whole of the soil was done. I think it was. We could see round the edge. It might have been done in one part. I really could not say exactly.
 322. What guides you to distinguish between rock and shale? In cases of this kind, rock sometimes crops through. It was not rock throughout. We get clay and other stuff, and have to average.
 323. But what generally guides you—in taking out excavation, supposing you have a case such as item No. 1, for excavating earth, clay, shale, &c., and another such as item 4, for excavating rock, how do you distinguish between the shale and the rock;—what would you call rock, and what shale? I would call that rock which had to be excavated with a pick.
 324. What kind of pick? A quarry-pick.
 325. Anything that requires a quarry-pick to get out you would call rock,—is that it? That is my general idea of it.
 326. And anything you could excavate with a mud pick you would call shale,—is that it? Yes.
 327. I want you to draw a distinction between the two? That has always been what I have taken as a fair thing. If it has to be excavated with a quarry-pick it is rock. To measure a block of this kind, a certain thickness for an average was taken.
 328. It is evident that in the north-east corner a good deal is shale? I do not think I have seen any shale there.
 329. There is shale there? Shale?
 330. Yes; what I call shale. If you care to call it pipeclay it will amount to the same thing? Shale is harder than clay. Some gets softer when exposed to the weather. No doubt in this weather it would be pretty soft. Sandstone rock looks very well when opened out, but after being exposed for a few months to the weather it sometimes cracks all to pieces.
 331. But rock would not crack to pieces? Many times we have cut down rock which would absolutely crack with the weather, and would look sound good rock when excavating.
 332. There is another item here—some rubble packing. There is a concrete wall that Mr. Bruce put in instead of the old retaining wall in the south-east corner, and some filling with packed rubble was put behind it. We find that has been paid for by time. Mr. Bruce states it was sanctioned by you? I really do not remember what the work is—is it very much? *Colonel de Wolski:* It is in the south-west corner, behind the concrete wall.
 333. *President.*] Just over the back of the laboratory there is a concrete wall, lately constructed, in connection with the barracks, at some little distance from the wing wall, 2 feet 6 inches, and the space between
 has

has been filled in with concrete. I asked whether it had been paid for under the schedule, and Mr. Bruce said, referring to his notes under date May 10, that the contractor charged for rubble packing behind the wall; that he (Mr. Bruce) had raised the question whether it should be charged for by time, and referred to you for a decision; and that you had sanctioned the payment by time? I really do not remember the circumstances. I do not wish to deny it. I had absolutely nothing to do with this. Mr. Bruce might have asked me questions. Is there very much of it?

Mr.
H. H. Purkis.
31 July, 1890:

334. I do not know how much. It is a question of time. There would not be much; it is a matter of principle? If it is a small thing it may not be irregular for it to be measured.

335. There was no difficulty about measuring, I should say; it is only between two parallel walls;—is it not regular to pay for it at the schedule rate, whether it be large or small? I meant small things, such as packing round pipes.

336. That would be a small matter. I am looking to the principle of the thing. Did you get any instructions from Mr. Barnet with regard to supervising Mr. Bruce's work? I supposed I had charge, and I asked Mr. Barnet if it was necessary to go out to put Bruce into the way of the working. He said, "He is a good man, and it is not necessary; it is only a barracks." I did not know Mr. Bruce before this. I did not know that he was an architect. He asked me questions on my visit to the barracks on two or three occasions.

337. *Mr. Wardell.*] Did not you consider yourself as his superior officer? Bruce's reports went to Mr. Colley, not to me. I never received Mr. Bruce's weekly reports; Mr. Colley had them. I gave him every assistance in the style of measuring when he asked me on occasions, but I considered myself absolutely out of it so far as the barracks were concerned.

338. *President.*] You advised him more, did you? That was all. I thought that was all that was necessary. It takes a little time to get into the details of these works in measuring.

WEDNESDAY, 20 AUGUST, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Colonel de Wolski, R.E., Director of Military Works, was also present by invitation.

Mr. R. L. Scrutton sworn and examined:—

339. *President.*] What is your name? R. L. Scrutton.

340. Did you get an order for some ironwork from the contractor? Yes.

341. For the Bare Island Barracks? Yes.

342. Did you deliver it? I delivered part. A portion was sent to Bare Island, and the remainder was stored.

343. *Mr. Mansfield.*] On your own premises? Yes.

344. *President.*] What did it consist of? Rolled joists, riveted together in pairs 6 x 5 and 5 x 12. Only a portion of these were not riveted together.

345. Have you received payment for this? Yes.

346. From the contractor? Yes.

347. And is it simply lying in your yard? Yes; at the contractor's expense.

348. Do you remember the quantity you got? No; I do not. I could not say from memory. I should say about 80.

349. Do you remember the weight? The two together weighed 71 lb. a foot. There were 29 lb. and 42 lb.

350. Was that the whole weight of the order? I could telephone to the office and ascertain in that way; but I could not say from memory.

351. Did you receive payment for the whole? Yes.

*352. Do you know about what the price was? I cannot remember. There are two different rates, one for imported, and the other for goods in store, and there is also a charge for the making up.

353. *Mr. Mansfield.*] What was the aggregate amount? I should say about £12 10s. to £14 would cover the whole. £12 10s. was the original purchase money for the amount in stock.

354. *President.*] That is per ton? Yes; speaking from memory I should say there were forty of each. I could let you know the amount paid, and the total rate.

355. How long have you had them on hand? Almost since the order was given.

356. *Mr. Mansfield.*] Can you give us the date of the order? I can by consulting my books.

357. Also the date when the amount was finally paid? Yes. I can let you have all the particulars when I have seen my books; but I may say that the amount of the balance was small as compared with the total amount.

Mr. R. L.
Scrutton.
20 Aug., 1890.

FRIDAY, 22 AUGUST, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. John M'Leod sworn and examined:—

358. *President.*] Your name is John M'Leod, I believe? Yes.

359. You are the contractor for the Bare Island Barracks? Yes.

360. Was this contract taken in your own name? Yes, but I had a partner, Mr. Noble.

361. Did you personally look after the work of the barracks? No, not personally. The work was carried

Mr.
J. M'Leod.
22 Aug., 1890

* The following note was subsequently sent to the President of the Commission by witness:—

"Dear Sir,

"On reference to our books we find that the amount paid for girders by Messrs. M'Leod and Noble, re Bare Island contract, is £319 17s. 4d.

"Yours, &c.,

"R. L. SCRUTTON & CO."

- Mr. J. M'Leod. carried on by a person who was put there by Mr. Noble. Mr. Noble happened to be away at the time and put Mr. Murray in charge.
- 22 Aug., 1890. 362. Was he your foreman? Yes.
363. It has been deemed necessary by the Government to alter the design of the barracks altogether, and in pursuance of that I believe you got notice to stop the construction? Yes, that was about seventeen or eighteen months ago. The notice was to suspend the construction of the works.
364. And then you sent in a claim for loss of contract? I sent in a claim to Mr. Smith, the Minister for Works. At his request I was directed to furnish a claim.
365. Did you look upon this as a separate contract or as extra work in connection with the first contract? I looked upon it as a separate contract on the same terms as the first one was.
366. Not as extra work on the original contract? No; I looked upon it as a distinct work on the same terms as the first one.
367. Then it is governed by all the terms and conditions of the original contract? I always understood so.
368. In going through your claim, the original of which is in my hand, I notice there are certain things the foreman of works states to be correct, and I do not think they can be disputed in any way. There are other items which may be correct, but the price put down is deemed to be exorbitant. In bricks for instance you are charging £4 2s. 6d. per thousand for bricks delivered at the barracks? Yes.
369. What did these bricks cost to deliver? I think it was £3 or £3 5s. at the time when we ordered the bricks for the barracks. At the time of the original contract bricks were costing £4 per thousand and to deliver.
370. Did you pay for the bricks? We paid £120 for a portion of them.
371. How much per thousand did these bricks cost you that are now stacked? £3 per thousand as near as I can remember. Mr. Noble has all the papers in connection with these things, and he is quite conversant with them. I have brought him with me. He is more conversant with the papers than I am. I only got notice yesterday afternoon at 3 o'clock that my presence here would be required, and I have not had time to look through the papers. Mr. Noble is more competent to give you information on this point than I am.
372. You are charging for 215 casks of cement; where is it? It is stored at the place where we landed.
373. Near La Perouse monument? Yes.
374. Have you a store there? Yes; we have two little stores, one we built and an old one. The brick-layer I let the work to provided these stores.
375. Then we will get the information from Mr. Noble about the bricks and the quantity of cement? Yes.
376. Next item, caretaker 2,400 hours. Have you a caretaker there now? Yes.
377. Are you carrying on any other contract in the neighbourhood? No, sir; I have had no contract there since the work at the barracks was stopped.
378. Have you done nothing to the barracks or the Telegraph Station since then? Yes, I have done some repairs to the drains at the Telegraph Station.
379. And to Little Bay Hospital? No, not since the work at the barracks was stopped. The work at the Little Bay Hospital was finished a week after the work at the barracks was suspended.
380. And you have not been there since? I had a letter from Mr. Barnett to stop the works at once which I did, and I sent a letter to the Colonial Architect in which I stated that the plant and the material being scattered about the place, a caretaker would be needed for its protection, and that I would look to him to pay compensation for the caretaker's time.
381. Are you quite sure that you have not been doing other work in that neighbourhood that required a store to issue goods from? Yes, I am quite sure.
382. Nor any other in connection with the barracks or Telegraph Office? No, none other.
383. With respect to rolled girders, you seem to have ordered all your girders at once long before you were ready for them? I would have been ready for them in three weeks after the time that the works were suspended. My arrangement was that the girders should be delivered, I think one third of the number in June, one third in July, and one third in August. That was the arrangement we made with the parties who were making the girders.
384. You are charging £2 7s. 6d. for them. I see you made a small rebate for the cartage? That is so. The contract rate included the delivery and fixing of plates. I accordingly made a reduction of so much per ton for the non-cartage, and also a reduction of what it would cost to fix the girders in place.
385. Was the reduction for not fixing in position 15s. per ton? Yes, something like that.
386. You admit that £2 7s. 6d. is a very big price for girders? Yes, I admit that.
387. There was no communication between the mainland and the island when a price was fixed for the girders, was there? No; there was no bridge at that time.
388. Did you intend getting the girders over by wire rope? No; that was not my intention.
389. When you got this price for the girders the Government had not erected the bridge, and a big price was based on the great expense you would be put to in getting the girders across? Yes, that is so.
390. But subsequently the Government made a bridge, and you could get on to the island as easily as on to the mainland? Yes.
391. Have you any idea what the girders cost you—those delivered? There is some work on them. There were some holes bored in them by instruction for certain purposes. Two girders were linked together. I suppose they cost about £10.
392. Ten pounds a ton? Yes.
393. Does that include the riveting? No; it does not include the holes bored to rivet them in the joists, nor the holes bored in the ends so as to tie them up to the walls.
394. But should not the contract price include all the work done to them? No; the contract price is simply for the girders without such additional work.
395. "Rolled HT and L iron, any size, including all rivets, bolts, nuts, &c., and fixing at £2 7s. 6d. per cwt." Did you include rivet holes in that? There are holes bored in those girders to receive joists which are charged extra.
396. I notice that your price for wrought-iron box girders is only £1 14s. per cwt., while the price for rolled girders is £2 7s. 6d. Why did you offer to make the box girders so much cheaper? I cannot remember why now, but there was some reason for it at the time.

397. Item 79 provides for "wrought-iron box, or any other made girder, including fixing, at £1 14s. per cwt." Does it not become a made girder when you put two together? I would like to explain that it was intended to have these girders bolted first instead of riveted. They were afterwards changed from bolted to riveted girders.

Mr.
J. M'Leod.
22 Aug., 1890.

398. But they are made girders, are they not? They are a combination of rolled and made girder.

399. Item for removing and storage of iron girders, what does that mean? When the works were suspended the girders had to be stored; subsequently they had to be removed into town and stored there.

400. Have you paid for that? Yes.

401. Can Mr. Noble give us any information about the breach of contract with the brickmaker? Yes.

402. *Mr. Mansfield.*] What about the moving and the stacking of the bricks? The President was speaking about the stacking of the girders.

403. There is an item here for moving and stacking 30,000 bricks, how did that come about? Two kilns of bricks were being burnt when the works were suspended. I said I could not take any more bricks as we were not sure whether the work was to be gone on with. Something like three or four kilns of bricks had been stacked after the works were suspended. As the time was getting so long, and there were no bricks taken away from the place, I told the brickmaker to sell some of the bricks, and keep a kiln on the ground.

404. Would it not have been more business like to have told him to sell them at first as you did not want them? Yes, I did tell him to sell them, but I did not know at first whether the work was to be gone on with or not.

405. With regard to the item charged for breach of contract with the brickmaker on 153,000 bricks? Yes; that has not been paid yet. The brickmaker claimed something for breach of contract. I told him I would settle with him when I was paid, and he accepted my terms.

406. Was your contract with him for 153,000 bricks? The contract was for 200,000 bricks, of which 47,000 were delivered, 153,000 representing the balance.

Mr. John Noble sworn and examined:—

407. *President.*] Your name is John Noble? Yes.

Mr. J. Noble.
22 Aug., 1890.

408. I understand you are partner with Mr. M'Leod, in the contract for the barracks? Yes.

409. Your name did not appear on the contract; you were not a party to the bond? No; the original contract was in 1881, at which time I was manager.

410. Mr. M'Leod has sent in a claim for certain sums on account of the stoppage of the contract at the barracks, and there are a few items we want to adjust. The first item is bricks for which you charge £4 2s. 6s. per thousand; what is the price you paid for those bricks, delivered at the barracks? M'Leod entered into a contract with Banks Bros., who have done business with us for a long time. We have paid them on account for bricks delivered. We let the work to them.

411. Do you know what the bricks cost delivered on the island? £3 a thousand, perhaps, at the present time.

412. As a matter of fact do you know the brickmakers' price for bricks; was it £2 14s.? I could not say; between £2 15s. and £3, I think.

413. Was it not only £2 14s.? I could not say. That is the first time I have heard it mentioned.

414. You sub-let that portion of the work? Yes, to Messrs. Banks, who have always done our brickwork.

415. You do not get any profit for sub-letting? No; we are only responsible.

416. You also charged for 215 casks of cement—where is that stored? In the shed we built for the purpose in the vicinity of the island, where we could land it.

417. *Mr. Mansfield.*] Is it all there now? Yes, and we have a man there in attendance to keep it in order.

418. *President.*] What did it cost you to deliver it there? I think the cement cost 17s. 6d. a cask. We paid Mason Bros.; I have their receipts. We then had to take it round and land it ourselves. I have brought a few receipts for over £100 with me. That [*pointing to receipt*] is for Bare Island, with the exception of two allotments, which went elsewhere. That was paid twelve months ago last June.

419. You cannot tell from this what the price is? No; but if my memory serves me, the cement cost 17s. 6d. a cask. I only brought these receipts to show you they were paid for.

420. But this is no guide at all; the charge might be for girders, or water-pipes, or anything; there is no information contained on that receipt. It is simply a lot of items without any particulars? Yes; I will have to bring the account rendered.

421. What did it cost you to bring it down? I forget now. We had to pay drays when we took it overland.

422. Would it cost about 2s. a cask to deliver it? That would be about the cost by water.

423. With respect to the rolled girders, you are charging the full contract rate, namely, for HT and L irons, £2 7s. 6d. These girders were built up, were they not? Yes.

424. Then they would come under the head of made girders? No. We received the order to bolt them together for certain purposes, to put one on the other, for which there is an extra charge. We found the bolts, but any boring is extra, as you may see by the schedule.

425. Are the girders not riveted together? They are screwed, I think. There are parts where we bored to receive the joists; that is an extra.

426. Does not the schedule include all fixings; it is very distinct on this point. Item 79 reads, "Wrought-iron box, or any other made girder, including fixing," and item 80 "Rolled HT and L iron any size, including all rivets, bolts, nuts, &c., and fixing." Surely these items that you have charged for as extras were necessary for the fixing? I do not see it.

427. Were they put in for ornament then? That would depend.

428. But they are clearly put in for fixing, are they not? Yes.

429. Can you tell me now what you paid for these girders? Yes; here are the receipts; first amount paid, September, 1889, to Messrs. R. L. Scrutton & Co., £100; second amount paid in February, 1890, £75; and in July last, £144 17s. 4d.

430. That account includes all extra drilling holes, does it not? Yes.

431. They did all the drilling? Yes.

432.

- Mr. J. Noble. 432. Did no one else do any drilling on the work? No.
433. The next item is the caretaker; you charge 2,400 hours? Yes, he is there still.
- 22 Aug., 1890. 434. Looking after the cement? Yes, and after our other plant. He has been there since the suspension.
435. Are you doing any other work in the neighbourhood? No. We have taken no other work there since the contract was suspended.
436. Were you carrying on any other work at La Perouse? We have done no work since the suspension except for a week when we were finishing up.
437. At Little Bay? Yes; only a few men were engaged in doing a little repairing.
438. Is the asphalt stored there too? It is on the Island.
439. In casks? No, in blocks; it was sent out in a dray from the yard.
440. How do you explain the breach of contract with the brickmaker? The brickmaker undertook to supply 200,000 bricks, which was the approximate estimate of the requirements. Ultimately after the suspension of the contract he had to dispose of them at a reduced price. We have not paid him yet, but Mr. Leod promised to do so, so soon as he was himself paid.
441. Moving and stacking 30,000 bricks, what was that? That was immediately after the suspension. We could not allow them to be taken away. We did not know whether the work would be proceeded with in a day or a week, or a month. We accordingly had the bricks stacked waiting delivery. There were about three kilns.
442. I see you deduct £1 a ton for non-cartage, and 15s. a ton for not fixing the girders? Yes.

WEDNESDAY, 3 SEPTEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Col. F. R. de Wolski, R.E., Director of Military Works, sworn and examined:—

- Col. F. R. de Wolski, R.E. 443. *President.*] What is your name? F. R. de Wolski.
444. You hold the appointment of Director of Military Works in this Colony? Yes.
445. I believe the Minister for Public Works handed over to you the charge of certain works carried out under the Colonial Architect? Yes, he did. The Minister issued orders that the Colonial Architect should hand me over all the papers and documents connected with the office.
- 3 Sept., 1890. 446. And you are now the officer in charge of the works formerly carried out by the Colonial Architect? Yes, I am.
447. *Mr. Mansfield.*] I hold in my hand a memorandum purporting to be prepared by you on the Bare Island Fort. Has that been drawn up by you as a report on the work in question? Yes.
448. Was this prepared after an investigation of the work and of all the documents which could throw any light on the nature of the contract and the subsequent proceedings in relation to it? Yes.
449. Have you obtained all the documents that you require to throw light on the case? Yes, every document so far as I know connected with Bare Island Fort has been handed over.
450. Do you put this statement in as evidence upon the Bare Island Fort? Yes [*signing the document*]; I hand it over as a statement of the works at Bare Island Fort so far as I have seen them from personal examination and from an examination of the measurement books and accounts.
451. *Mr. Wardell.*] Is that handed in as a sworn statement? Yes.
452. *President.*] In one of the paragraphs of this statement you say that in his letter to the Colonial Architect, dated May 24, 1882, General Scratchley recommended that the wing walls should be omitted? Yes; or rather he recommended they should be reduced.
453. Did he not use the word omitted? He telegraphed to the Colonial Architect, on March 25, 1882, as follows:—
- “Please stop construction of wing walls round area on which Barracks are to be placed at Bare Island Fort.”
- and in a letter from Melbourne, dated the same day, occurs the following:—
- “I wire you this morning, recommending that the wing walls of this site, which are being prepared for the Barracks, in rear of the guns of this fort, should not be proceeded with. It has been suggested to me that it would be better to *omit* the wing walls altogether. It is thought, and I agree, that by this omission, more air and light will be given to the Barracks. Should you see no objection I shall be glad if you will issue the necessary instructions in the matter.”
- Two months later, on May 24, he wrote as follows:—
- “I went into the question of reducing the height of these wing or side walls, and found that it will be practicable to do so with advantage, and thus increase the circulation of air around the Barracks. Mr. Purkis can explain the matter in detail.”
454. And have the walls been so reduced? I cannot find any record of their having been so reduced.
455. Are the walls as they now stand carried out on the plans as originally prepared by the late Mr. Morell? I cannot see any deviation at all from the plans.
456. And you find, on examination, that certain portions of these walls were built on very uncertain foundations? I had them purposely opened out from the south side. I had the rubble packing removed from the walls—the packing I mean between the front wall that was built by Mr. Bruce for the Barrack area and the original walls—I had that taken out and I found the walls standing on clay; and then I dug round the south-west side, and found the wall was on black sand. I was led to make this examination by seeing that the wall had cracked in two places. I have not examined the wall anywhere where it has not failed.
457. Was General Scratchley in the habit of giving verbal instructions for the alterations in the fort? As far as I can judge from the correspondence, he seems to have given instructions very profusely in writing. Such an alteration as the one mentioned could only have been determined on the spot, because he mentions specially in his Melbourne letter, dated March 25, 1882, that he had not the plan of Bare Island by him; but he made a rough sketch on his letter, with “Wing walls to be omitted” plainly marked thereon.
- 458.

458. *Mr. Wardell.*] In the sworn statement you have handed in, you state that Mr. Morell's specification for this work laid down that "no work will be proceeded with on any foundation until the latter has been examined and approved by the superintending officer." Do you know that that was not examined by a superintending officer? I have no evidence to show that these works were or were not superintended; but I presume that, as the work was paid for to be excavated as rock, it could not have been supervised. I conclude that from the fact that the item for channelling in the book proves that the work was paid for at 1s. 2d. a foot.
459. When these documents were handed to you was there a description of the work written by the late Mr. Morell? Yes. I found from a letter of General Scratchley that a description had been specially specified and paid for, and I asked the Colonial Architect for it, or rather, I asked the Under Secretary for Public Works to obtain it from the Colonial Architect, and it was handed over to me some months ago. It gives a full description of the plans.
460. Was that description referred to in the bond and specification for the fort? No.
461. Then it could not have been made binding? No, it is not binding at all, but General Scratchley intended it to be binding.
462. As a matter of fact it was not in anyway binding on the contractor, because it was not made part of the contract? It was not in any way binding for that reason.
463. When Mr. Barnet was examined before the Commission, the following question, No. 32, was put to him:—"Did you not carry out a large portion of this contract by day labour?" To which he replied "I daresay there was a large amount carried out in that way. I could not say how much; there was a great deal of work that could not be done in any other way, such as the moving of the heavy ironworks in connection with the casemate"—Is it within your knowledge that some of this work was done outside the contract? Colonel Spalding informed me in writing that 60 men of the New South Wales Artillery were employed in moving the shields under a contractor, and he sent me a photograph showing the work being carried out.
464. And is that the photograph you have in your hand? Yes.
465. Showing that Artillery men were employed? Yes, in accordance with a recommendation from General Scratchley that all the moving of the guns and shields should be done by the Permanent Artillery.
466. Was there another contractor specially employed for this work? I believe another contractor was employed in getting the material from Sydney.
467. Mr. Chester? Yes.
468. Had he anything to do with getting the guns and shields on to the site of the work? I was informed that the Artillery moved them to the site.
469. Were these men in the Government employment? Yes, they were employed for many months. Colonel Spalding says that "a working party of about sixty non-commissioned officers and men were employed under command of Major (then Captain) Murray, but under the direction of Mr. Chester, contractor, from November 6, 1883, till about December 10, 1883, moving shields. A working party was engaged under Major Murray in moving ironwork from January 3 to February 7, 1884." It is quite possible that Mr. Barnet may have been referring to the fixing of the shields on the site, but in this measurement book I do not find any labour entered for moving the iron work.
- 470-1. *President.*] Then that settles it at once, does it not? I find on January 9, 1884, an item for getting the armour plate bolts to the island, but I find no record of moving the iron work.

Col. F. R.
de Wolski,
R. E.
3 Sept., 1890.

THURSDAY 4 SEPTEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. Edwin Colley sworn and examined:—

472. *President.*] What is your name? Edwin Colley.
473. What position do you hold in the Colonial Architects' Department? I am clerk of the works.
474. Were you one of the inspecting officers at Bare Island? Yes.
475. Did you get instructions from Mr. Barnet to visit and inspect the works? Yes.
476. You had a resident officer there? Yes.
477. Mr. Purkis? Yes.
478. What year did the work commence? I cannot tell from memory.
479. The work commenced in April, 1881, and continued to 1887; how often did you visit the works from the commencement? My books show that I visited Bare Island thirteen times from first to last.
480. You only visited the works thirteen times during the whole of that period? Yes, I find that is the case from my travelling account.
481. Did Mr. Barnet give you any instructions as to your duties? I had general supervision of the works.
482. What was your idea that that included; what did you go to see? I went to see that the work was properly done.
483. Had you anything to do with passing the vouchers for the work? I used at the first to check all the computations, but Mr. Purkis was exceptionally good at figures, and I found it was not necessary to check them all through, only a few items here and there.
484. On what document did you check them? On Mr. Purkis's returns.
485. Did Mr. Purkis send you a return? He sent in a weekly report and occasionally, at monthly intervals, a return of the quantity done.
486. Of the work performed? Yes.
487. Did you ever take any action to check his measurements? No, I did not.
488. Was there ever any check put on the measurements? I believe the method adopted was to compare the figures with the measurements taken with the contractor, and to check the cubing afterwards before it was entered on the papers.
489. Then the only check was the contractor's book? Yes.

Mr. E. Colley.
4 Sept., 1890.

- Mr. E. Colley. 490. Then if the officer made a large measurement there was no way of finding it out? I have not the least reason to suspect that any such measurements were made.
- 4 Sept., 1890. 491. But we are all liable to make mistakes, and it is not difficult to fancy a large mistake being made in favour of the contractor? I do not think it is possible for a mistake to be made. In my own experience I never found any discrepancies. Without some collusion or want of integrity the measurements would be correct.
492. Don't you think all officers are liable to make mistakes, and that it is desirable, in the Government interest, to keep a check on the work done? Of course all officers are liable to make mistakes. I never thought it my duty to check measurements, because I thought it was impossible that such mistakes should be made.
493. I think you might have made an approximate check in some form. However, you say there was no check made? I may as well say that there was no precedent for it. When I held a similar position in 1871, Mr. Coles being in charge, my measurements were never checked.
494. *Mr. Wardell.*] Are you speaking of a contract at schedule rates? Yes; precisely the same as at Bare Island.
495. *President.*] Mr. Purkis made weekly reports to Mr. Barnet. Did you see them? They came to me.
496. Did you ever take any action on them? The reports sometimes had marginal pencil notes, drawing my attention to something in them, and I had to see Mr. Barnet and consult him about them.
497. Here are 160 weekly reports sent in by Mr. Purkis. What did you do when you received these reports. That one [*handing report to witness*] is marked off to you. Did you take any action on that? It does not seem to require any action; it is not a special one.
498. That is the first report on Bare Island Fort. Was any action taken on that report? I think not.
499. *Mr. Wardell.*] Did you see that report—do you recognise it? It reports a visit to Bare Island. I remember the occasion. I was present.
500. It is marked off to you. Did you not note it as having seen it? Oh, yes; I marked it off on my book.
501. But on the paper? It does not bear my mark.
502. *President.*] The next one [*handing him Report No. 2*] is that marked by you? This one is not; but I always read them. They are not all marked; they are kept in my pigeon-hole.
503. Was it the rule of your Department not to mark papers as having been seen? No; it was not the rule.
504. Report No. 18 bears your initials for the first time. Is it the practice of the Department for you to take no action on the papers marked off to you, not even to initial them? I do not always mark them, it appears, but I always read them.
505. Supposing you found it convenient to say that you never saw the document? I would not find it convenient to do that. I have all the papers under my charge.
506. Could you not say that there was a report which you had not seen as shown by the fact that it did not bear your initials? But my book would show that I had seen it.
507. *Mr. Wardell.*] What book? My register.
508. *President.*] How would that prove that you had seen it? I hold myself responsible for having seen what is in my register.
509. *Mr. Mansfield.*] Did you make the marks in your register? No; but it was marked in my room.
510. *President.*] Am I to understand that it was registered in your room? Yes; a clerk would put a mark on the paper. If the paper bore that mark it would show that I had seen the report.
511. A clerk in your room put a check on your register to show you saw the report? Yes; he put a check-mark on the paper. I sometimes found it convenient to put a number on it for reference, the number being the folio number in my register.
512. *Mr. Mansfield.*] The check would be made by your clerk? Yes.
513. What was there to show that your clerks did not put these papers in the pigeon-hole without your seeing them? There was nothing to show that, but the rule was that the clerk should put the papers on my desk when they came.
514. *President.*] Report No. 12 contains the following minute by Mr. Barnet—"This cement should be tested and approved before allowed on the works." Was it tested? I think it was tested by Mr. Telfer.
515. How do we know whether it was tested? He did all the testing.
516. Is the paper marked off to him? I did not mark it off, but told him.
517. Then, as a matter of fact, you did not keep any record of the transactions of your department? I did not of that transaction. You think that the paper should carry the mark on it?
518. Certainly. I mark off a paper to some one, and he marks it off as having seen it; he would then report on the paper, and the whole transaction would be complete on the document; but there is nothing to show here that the cement was ever tested. Did you test the cement? I do not know.
519. That is just it, you do not know. You have doubts whether the cement was ever tested. Your memory cannot go back nine years, whereas if the transaction was all marked on the paper, it would be shown. Were you aware that Mr. Purkis was putting on a superior concrete? I was aware of it.
520. When was it authorised? Many years back, Mr. Barnet instructed Mr. Purkis to do it.
521. And where are the instructions? They were given verbally, on the spot. He was instructed to use an extra half cask of cement per cubic yard over arches, &c.
522. In report 122 you will see he reports that superior concrete has been used? Yes, I noticed that.
523. Was authority to do that given verbally? Yes, it was given in my presence, if I do not mistake, at Middle Head, when Mr. Barnet came out to inspect the work.
524. Verbal instructions were given at Middle Head to put on superior concrete at Bare Island Fort? No, but general instructions were given that extra good concrete should be put on the arches.
525. And it is left to the inspecting officer what he might consider superior, whether one or two or three casks was considered sufficient? No, half a cask extra per cubic yard was named.
526. Were the instructions in writing? Not to my knowledge.
527. Important documents were sent to you. Was it also your practice not to initial them as having seen them. Here are some of the most important documents in the transaction marked off to you (*handing in General Scratchley's letter of May 25, 1882, recommending that the wing walls of the site, which was being prepared for the Barracks, in rear of the guns of the Bare Island Fort, should not be preceded with*)? I made no mark on that, and I do not know whether it passed through my room, not having my register with me, or whether it remained in my pigeon hole.

528. Then you just pigeon-holed it and took no more notice of the paper? I took the information ^{Mr. E. Colley.} from it.
529. Here is another document; did you ever see that (handing in General Scratchley's letter of April 4, 1881, asking the Colonial Architect not to give the order to the contractor for the granite work in connection with the casemate at Bare Island Fort, until General Scratchley heard from England)? Yes, I remember this paper, and these suggestions were carried out. ^{4 Sept., 1890.}
530. Are we to understand that it was your invariable practice to receive papers and put them in your pigeon-hole? Not invariable; if any remarks were necessary, I should make a report, but it did not seem necessary to make a report to Mr. Barnet on that; it did not seem to call for any special remarks.
531. *Mr. Wardell.*] You did not note, and return the papers? No.
532. Then there was no evidence of the instructions having been acted on, or understood? No, this paper referred to action to be done at some future time.
533. But was it not your practice to return the document, and report that you had attended to the instructions contained in it? No, my register would show that I had seen the document.
534. *President.*] It has been your practice to keep a quantity of papers in your room? Yes; I should consider it my duty to keep that paper, as it was an instruction that something should be done.
535. On the different occasions that you went down to Bare Island fort during the progress of the works, I suppose you took a good look round, and saw the works going on. Did you never notice any bad work being done? No, never in my life. I saw something to object to once; some sandstone was being broken to too large a gauge. I told Mr. Barnet, who was present, and he pointed out to Mr. Purkis that there were some soft stones which were not good enough for the concrete, and he instructed Mr. Purkis to take them out. That was the only time I saw anything to object to.
536. *President.*] Did the contractor know you were going down? Yes. I was asked by the Board of Inquiry if I let the contractor know I was going down, and I replied that we did not appoint to meet him there, and I further stated, in answer to the question whether I did not think it desirable to drop on the works unknown to the contractor, that "I always do that." I put this in an incorrect light. I telegraphed the day before.
537. *Mr. Wardell.*] Whom did you telegraph to? To Mr. Purkis or to Mr. Murray, the contractor's foreman.
538. Had you any reason to think that Mr. Purkis was not there when this work was going on? He went to Port Jackson occasionally.
539. And therefore to that extent the work was left unsupervised? There are times when you can leave work, and there are times when you can't.
540. *President.*] Was not there a large amount of day-work going on all the time? Yes, whether it was going on during Mr. Purkis's absence, I do not know.
541. What check could there be on the day work during Mr. Purkis's absence? I did not know he was absent, but supposing he was absent, there could be no check.
542. Then you, as senior Inspector of the work, did not take any steps to see that the work was under proper supervision during Mr. Purkis's absence? I did not know he was absent.
543. But you knew that his duties called him away? Yes, I knew Mr. Barnet gave him supervision of Port Jackson works. When I left Middle Head Mr. Purkis remained in charge of all the forts in Port Jackson, subject to an occasional visit from Mr. Barnet and myself, and when the Bare Island fort works commenced he was put there also.
544. But holding the position you did as senior officer, did you not think it a part of your duty to see that Mr. Barnet was made aware of Mr. Purkis's absence? No, Mr. Barnet knew as well as I did. Mr. Purkis's weekly reports showed where he was. I did not think it my duty to suggest anything of the kind to Mr. Barnet.
545. Could Mr. Barnet tell from these reports (pointing to the Bare Island reports) where Mr. Purkis was? Speaking from memory, they referred to the different works.
546. Those here refer to Bare Island alone? Then there must be more, because he was stationed elsewhere as well.
547. *Mr. Wardell.*] Did Mr. Barnet know as well as you that Mr. Purkis was away from the work? Yes, because my visits were very few, and Mr. Purkis's weekly reports showed wherever he was.
548. That is supposing Mr. Barnet read the reports? I presume he did read them; in fact his marks are on them.
549. In Mr. Barnet's evidence to us (Q. 16), he says the measurements were by you? Then Mr. Barnet is mistaken; if he had given more consideration to the matter he must have seen that I could not possibly have made the measurements, unless I was with Mr. Purkis and had been on the work myself.
550. *President.*] One question put to Mr. Barnett was (Q. 15): "How often did you expect these officers to visit the work?" to which he replied, "Purkis was stationed on the work; he had a house provided for him—not on the work exactly, but adjacent to it;" while the next question was: "And Mr. Colley was inspector?" to which he replied "Yes; the measurements were by him?" That is not correct, he could not possibly expect me to do that with all the work I had besides. I had the University, the Medical School, a large contract there, and other places, too. It was not possible to take all the measurements; the resident officers on the works did that.
551. *Mr. Wardell.*] Was Mr. Barnet aware that day-work was going on while Purkis was absent? I do not know.
552. Is there any way by which it could have been brought under his notice? No, sir; I did not know myself whether it was being carried on during Purkis's absence.
553. Did you not know it was going on? I knew there was day-work from the monthly returns.
554. And you knew Mr. Purkis was away on other works? But I did not know from my own knowledge he was away when the day-work was going on.
555. *President.*] Approximately, how much time do you think Purkis's other duties would call him away. Have you any idea of the extent of his duties? No, I could not say.
556. From these reports you can see that he was at Bare Island during 1882? Yes.
557. Would you be surprised to hear that he was paid for being away 125 days in that year? I should be surprised.

- Mr. E. Colley. 558. He was paid for being away from the work one third of the year when the fort was at its busiest period. He was paid 12s. a-day? Paid for being away from his duty at the forts?
- 4 Sept., 1890. 559. Paid for being away from this fort? I did not know that. Do you mean he was paid travelling expenses?
560. I mean that he was paid 12s. a-day 125 times in that year in addition to his travelling expenses. He was away 26 days at the South and Middle Heads between January and March; 55 days between April and September, 31 days between September and November at George's, South, and Middle Heads, and 13 days again at Watson's Bay. He must have been away those days, because he was paid. He was paid 12s. a-day for 125 days in 1882? Was he?
561. Could he have been away all that time without it coming under your knowledge? Quite possible.
562. *Mr. Wardell.*] And yet you were the responsible officer in charge? I scarcely know how to answer that question.
563. Mr. Barnet has told us you were the responsible officer? Yes, I should like to give you a short history of the facts. When they commenced the defence works in 1871, Mr. Coles, the Chief Clerk of the Works, used to come down once or twice a week, perhaps oftener, perhaps not so often, and give directions. I took my instructions from him. He used to mark out on the ground what he wanted done, but he gave me no drawings. Gradually as I got a better grip of the work Mr. Coles's visits became less frequent, and ultimately they ceased altogether. That is how the works were initiated. Afterwards the work began to grow under my hands, and I was very busy in the office. I then left the forts for the office, and Purkis took on that part of the work. Purkis was in the habit of consulting Mr. Barnet or Major Penrose direct.
564. About what period are you talking of now? I am speaking of Major Penrose's time.
565. That is subsequent to General Scratchley's time, is it not? Yes, Purkis used to take instructions from Major Penrose, and consult Mr. Barnet, and I frequently knew nothing about it. Things went on so till Mr. Barnet went home in 1885, when Mr. Coles took his chair. Then Mr. Purkis's weekly reports did not come on to me. I told Mr. Coles I objected to any change being made in Mr. Barnet's absence. Mr. Coles replied as follows:—"Colley, when the forts were started in 1871 I was placed in charge, and I am not aware that I have been relieved yet." I just state this so that you can see how matters stood. I always thought I was in charge. I do not know that Mr. Barnet ever told me so in so many words.
566. *President.*] Then in Mr. Coles's time Purkis's reports were not sent on to you? After my complaint they were, but two or three were stopped.
567. You said they were not sent to you by Mr. Coles? They were not sent two or three times. The first I passed over thinking it might be an oversight.
568. Report No. 128 is marked off to you, is it not [*Showing report.*]? Yes.
569. By whom? By Mr. Barnet.
570. Look at the next report, 129. Is not that marked off to you? Yes.
571. That is Mr. Coles's writing, is it not? Yes.
572. But that is the very first report after Mr. Barnet left, so that there was no report held back from you? No, No. 129 is certainly marked off to me; it is quite likely that it would be. I asked for these reports. When they ceased coming I spoke to Mr. Coles. They are marked off to me, and the date is correct. At the same time I asked for them; they did not come to me till then.
573. The papers bear evidence that they were sent on to you at the right time? An extraordinary part is that the dates correspond, but I am on oath, and I swear that the papers did not come to me.
574. All that the papers show is that they went to Mr. Coles because he marked them off to you? That is the way they came to me.
575. Were you acting as inspector for the other forts in a similar capacity? Yes, I was supposed to have all the forts at Port Jackson, Botany, and Newcastle. The papers were supposed to be sent to me, also the papers about some other works in Botany Bay.
576. Mr. Barnet was asked when under examination,—“Had you any system for checking your clerk of works on the ground?” To which he replied, “There was my visiting clerk, and I looked to him to check the quantities?” It is impossible to check quantities on a job like that unless you have a second man. I had some experience at Middle Head measuring all day and checking all night. It would be simply impossible to do it for so many works.
577. *Mr. Wardell.*] Then as a matter of fact you did not check the measurements? No; I did not think it was expected of me.
578. Mr. Barnet said in his evidence before the Commission (Q. 49) “There was a general instruction to carry out whatever General Scratchley required. Colley would, in the first place, report if that was necessary, and then carry out General Scratchley's instructions.” Is that correct? I do not think I reported in writing whether alterations were necessary or not.
579. Did you understand on receiving instructions from General Scratchley it was your business to report to Mr. Barnet whether it was desirable to carry out these instructions? I never understood that.
580. *President.*] It is not merely a statement by Mr. Barnet made without consideration in giving evidence, but in his reply to the Minister for Public Works on the report made by the Board of Inquiry, which was only a preliminary investigation;—have you seen that? Yes.
581. He there states:—“At the commencement of the work—for its supervision, I selected from my staff two officers, Mr. E. Colley, and Mr. H. H. Purkis, clerks of works, in whom I had the greatest confidence. For the latter, who was to be the resident supervising officer, an office and quarters were provided on the mainland, adjacent to the island; the former, Mr. Colley, as senior officer, had to make periodical inspections of the work, and check measurements, valuations, &c., the work being visited by myself as frequently as my many other duties would permit.” Have you seen that? I have not seen that, sir; is that Mr. Barnet's report?
582. Yes? Well, I am surprised to see it, because it is utterly impossible to do it. If Mr. Barnet had told me to check Purkis's measurement I should not have been able to do it.
583. *Mr. Wardell.*] It is important that this should be thoroughly understood, because in answer to Q. 96 Mr. Barnet says it was your business to check the accounts. Mr. Barnet reiterated this? I checked Purkis's valuations for a long time till I found they were so well done they did not require it.
584. Mr. Barnet was also asked (Q. 97) if it was your business to check all the allowances given to the contractor, to which he replied, “He (*i.e.*, Mr. Colley) was responsible to me for the work being carried out on the measurements.” What do you say to that? Responsible for measurements? It is impossible.

585. The next question put to Mr. Barnet was as follows :—“ We found on going through the book that Mr. E. Colley. considerable allowances were made, and that in nearly every item one-third is added,” to which Mr. Barnet ⁴ replied, “ Of course, I cannot explain that,” and went on to say that, of course, he held you responsible? I Sept., 1890. never made any allowance.

586. It is followed up by another question (Q. 101), “ Then Mr. Colley was distinctly responsible for checking?” To which Mr. Barnet replied, “ certainly”? If Mr. Barnet told me that I should have known what to do. I should have told him that I could not do it.

587. *President.*] Coming to the allowances, did Purkis's returns show that he was allowing,—take asphalt, for instance, for its being done twice over? I could not speak from memory.

588. I am referring to the progress measurements? I know some allowance was made for asphalt going down into the joints.

589. That was one; and there was another allowance made for putting it on thicker? I could not say anything about it without reference to the papers.

590. You accepted Purkis's statement in all these matters without checking? Yes; I had to do so.

591. We cut into three different places—one in each magazine floor—and in each place we found the asphalt was flush with the joint; and yet this was paid 33 per cent. over the contract rate for going down through the tiles? I should have expected to find the tiles three-eighths apart, and the asphalt down between them. That was the way I believed it was done.

592. You never recollect questioning Purkis's returns for the vast amount of day-labour, and for the large amount of extra cement used? No; he was allowed absolute discretion to put on whatever he liked. As officer resident-in-charge, he had perfect discretion to do what was best in the interests of the Department. I supposed he was doing it.

593. You did not think that a little overhauling now and then would be a wholesome check? It would have done no good.

594. *Mr. Wardell.*] In your former evidence you said you would not think it necessary to question Mr. Purkis's measurements? No; I thought he was doing the best for the Department.

595. *Mr. Mansfield.*] In what direction was your supervision of any service to the Department, or was it something which might have been dispensed with? It was purely nominal for some time, as I told Colonel de Wolski. Purkis consulted with Mr. Barnet directly, and he slipped out of my hands.

596. Then all that Mr. Barnet says touching the weight and value of your supervision would seem to go for nothing? I am surprised that Mr. Barnet has made these statements. Of course, he made them in good faith.

597. Do I understand you to say that the whole number of your visits to Bare Island during all the years the work was going on was only thirteen? Yes.

598. *President.*] How did you get to Botany in those days? By boat, and by trap.

599. Did you pay for the boat? Occasionally.

600. Because I see a charge for a boat? Yes, on one occasion only; that was when I had to hire a boat once to meet Colonel Scratchley. The weather was boisterous, and the Departmental boat could not get up.

601. There is a charge on March 10, “ Botany (per cab and boat), £1”? Yes, that was the occasion.

602. *Mr. Mansfield.*] Did your general supervision extend after the time when the work was completed? I am supposed to be in charge now if there is anything going on there.

603. What would be the date of your last visit during the progress of the contract? In 1885.

604. That would cover a period of four years; making an average of about three visits in a year? Yes.

605. You described your duties as those of general supervision; did it occur to you that visits at such rare intervals hardly gave you a fair chance of supervision; did you ever make any report on that point? I made no report; in fact, I may say now, I had that confidence in the firm (John M'Leod) that I thought it was hardly necessary.

606. Does your experience of contractors as a rule warrant confidence of that kind? No, my general experience does not; but I have met with one or two exceptions to the rule.

607. Does not your experience point out that the very best of contractors, if left to their own devices, are apt to take advantage of it? I have had experience of people whom I could trust and in whom I had every confidence.

608. With regard to fixing prices for extras, is that left to the clerk of works to arrange? No; it is all submitted to Mr. Barnet.

609. There is a whole list of extras amounting to £1,481—the papers do not show that Mr. Barnet ever authorized any one of them [*handing witness a paper*]? This paper came to me; this is the final account.

610. Yes. Well, what course would you pursue with that paper? I would go through these items and discuss the point with Purkis; if I thought the price fair I should recommend the payment of the account.

611. Would you adjust it verbally? Yes.

612. You would not try and settle the price of the material to be used on the work before hand? I would prefer doing so.

613. I thought it was the practice in all the departments—it is the practice with all in this building, I think, for the resident officer to report the matter to the head of his department if he had a change from the original plan to make, and to get an authority for making it. The paper would go back to him to note, and he would quote it in future for the authority? I have no doubt the larger items were so arranged. Purkis's practice has been on the Monday morning to discuss the matters with Mr. Barnet personally. I do not know what was said between them.

614. Would you recollect now whether there was any special authority for the change in the granite facings? No, I do not.

615. There is another item here for £85 compensation from Government for eliminating the iron portion of the contract? That was a matter which was entirely left to Mr. Barnet. It did not come within my province. The contractor claimed the profits he would have made had he carried out his contract.

616. It was your recommendation, was it not? Perhaps so.

617. A quantity of iron work was omitted under one item amounting to £850, which was on the original estimate, and you recommended that the contractor should get 10 per cent. compensation for loss of profit? Did I recommend that?

618. Do you not think that if any compensation were given, it should have been based on the amount of ironwork on the contract as a whole. On the line immediately below, for instance, there is a very large increase? I do not know.

- Mr. E. Colley. 619. Would it not have been right to add the two amounts together and make an allowance based on the two taken together? In my opinion, decidedly not.
- 4 Sept., 1890. 620. The following item (80) was increased from 40 cwt. to 200 cwt., and that is the item for which the contractor has got his big price; there is more profit on that item than there is on the other? I hardly think that that method could have been adopted in this case.
621. Item 79 for 500 cwt. of wrought-iron girders at £1 14s. per cwt., amounting to £850 is omitted, but item 80 for Rolled H T and angle-irons at £2 7s. 6d. per cwt. was increased from an estimated quantity of 40 cwt. to 200 cwt. amounting to £475 12s. 9d. If it was perfectly right and proper that the contractor should be paid for the iron work omitted, which I do not admit, should not the Government have got credit for the excess they paid for? I do not think it is possible to do that.
622. But they are both practically the same thing; one is for wrought-iron girders, and the other for rolled girders. The actual amount excised from the contract, if you reckon the amount in excess with the amount omitted, is only £642; therefore if the contractor was to get compensation it should be on the £642, and not on the larger amount, or in other words he should get £64 instead of £85? I think the two items should be treated separately.
623. Surely it is a sort of thing on which you can make a compromise. Was it not a case in which you could say to the contractor, "We are omitting some ironwork from one item, but we are giving in some not provided for in the contract. Let the one offset so far as it can the other?" I hardly think that would do; one item is for wrought-iron heavy girders, and the other is for angle-irons.
624. Yes, but the peculiarity is that the higher price is for the cheaper article, that is for the rolled joists of commerce worth at that time £11 per ton, and the other was a manufactured article, a riveted girder. He was released from the expensive work for which he had a low price, and gets a large increase on the cheap work for which he charges a high price? The contractor complained of having to do it; it was entirely General Scratchley's doing; he sent home for the girders.
625. But the contractor would have been very well paid by getting the extra girders at the high price. They cost him 15s. a ton, and he got £2 7s. 6d.? I do not see how you can deal with the schedule in that way.
626. Do you wish the Commission to distinctly understand that you never attempted to check the measurements? Distinctly; if Mr. Barnet had said that that was my duty, I should have asked to be placed alongside of Purkis as the measurements were going on all the time.
627. Mr. Mansfield.] Was Mr. Barnet aware of the number of your visits to Bare Island Fort, and of the opportunities you had in a general way of supervising the work? I think so. I used to tell him. I had large jobs always in hand. I was always too busy.
628. Mr. Wardell.] What were these? The Medical School, Sydney, was the only large building under my supervision during the construction of the Bare Island Fort, but I had a number of small ones.
629. President.] But you had an inspector under you? Yes. In consequence of moving the site of the building viz., the Medical School, the foundations were materially altered. I had to accept the measurements taken by the foreman of works in the same way as I did Purkis's. There were material deviations made. In another case, that of St. Leonard's public buildings, tenders were called on a sketch plan to save the vote, there being not sufficient time to prepare proper contract drawings as the sketch was only returned with the Minister's approval near the end of the financial year. In carrying out the contract under those circumstances large deviations had to be made, involving extra expenditure amounting approximately to £1,000. These additional works were measured by the foreman of works stationed on the job, as they were executed. I had to accept the foreman's measurements. I was obliged to do so. A similar case occurred at Point Piper Road Court House, where I had to accept the measurements of the foreman of works.
630. Mr. Mansfield.] Do you mean the contractor's foreman? No, the departmental foreman.
631. Mr. Wardell.] What we would call clerk of works? Yes, I think that would be it.
632. President.] As a matter of fact don't you think these buildings would have gone on pretty well if you had not been there at all? No.
633. We cannot see in what way you exercised any supervision? I supervised the foundations.
634. Did you check the measurements there? No.
635. What did you do there if you did not check the measurements; what was your duty on the buildings if you trusted the clerk of works implicitly? I went two or three times a week. I used to get details made and arrange all matters connected with the carrying out of the works, and referred them to Mr. Barnet, and saw that they were carried out.
- 636-642. You took a more active part in the construction of the works there than you did at Bare Island, is that it? Yes.

Mr. H. H. Purkis sworn and examined:—

- Mr. H. H. Purkis. 643. Mr. Purkis.] Before being examined I wish to make an explanation. A question was put to me by the Commission during my last examination with reference to the rubble packing behind the concrete wall which Mr. Bruce said was paid for as day labour by my authority. I do not remember the circumstance, but I asked Mr. Bruce about it, and he said that the contractor's foreman (Mr. Murray) stated that rubble packing of a special quality was required, and that it was specially done. Item 14 for dry backing at 2s. per cubic yard would not cover that. The price for sandstone rubble alone, under item 43, is double the price given under item 14, so that it would be fairer for the contractor to be paid for day-work for rubble packing than to be paid under item 14. I would give the same instructions again if I were asked. I do not mean to infer that Mr. Bruce did not ask me at the time, but that I do not remember. I refer to this now because the President said that it was a question of principle.
- 4 Sept., 1890. 644. President.] Are you referring to question 332—"There is another item here—some rubble packing. There is a concrete wall that Mr. Bruce put in instead of the old retaining-wall on the south-east corner, and some filling with packed rubble was put behind it. We find that had been paid for by time. Mr. Bruce states it was sanctioned by you?" Yes. When Mr. Bruce asked me at the Colonial Architect's office if it could be paid for by day-work or under item 14, I should certainly say day-work.
645. Were you Resident Clerk of the Works at Bare Island? No, I cannot say I was. I was Resident Clerk of Works on the defences generally.
646. What position did you hold at Bare Island Fort? I do not think I was resident officer there more than at Port Jackson Defence Works. 647.

647. What position did you hold? I was clerk of the works, with other work at Sydney and elsewhere to attend to. I could not be resident clerk of the works because that would mean I was there the whole of my time.

Mr.
H. H. Purkis.

4 Sept., 1890.

648. Yes, it should mean that? Well, I was not there the whole of my time.

649. Was not a house provided for you there? Yes, an office with a small sleeping apartment. I stopped there some nights—two nights on an average in a week; I think that would be about the average.

650. What is the general routine of how you divided up your time; did you spend Sundays there? No; I went to the office one day in the week, probably I could not get away from there till twelve.

651. Was that on the Monday? Not always on a Monday, but generally so. I went once a week to report and tell Mr. Barnet what had transpired.

652. Then you reported yourself nearly every Monday to Mr. Barnet? Generally on Monday.

653. Did you then proceed to your work the same day at Bare Island? Occasionally I would go to some place in Sydney to see how any fittings, &c., were going on that were being made for the works, and get away to Bare Island or Sydney Heads as soon as I could.

654. Would you get away in the afternoon? Yes, by tram or 'bus

655. You would generally manage to get down to the Island by the Tuesday, I suppose? Sometimes I might get there by the Tuesday, and at other times not till later in the week.

656. How long did you remain on the Island? Sometimes I would go back on a Thursday, sometimes on a Wednesday; it was according to what work I had to do elsewhere, or where I might be wanted. These are memoranda that I wrote for Mr. Barnet in reply to the report of the Board of Inquiry, but I found that Mr. Barnet had already sent in a report. As two officers are suffering suspension, I think we should be given a hearing. I took the items seriatim as they came in the report. I was suspended on the report of the Board of Inquiry. Mr. Barnet was requested by the Minister to reply, but I believe he declined to enter into the details. These were my memoranda to give Mr. Barnet material on which to base his report. If I cannot be heard this way how am I to be heard? I hand this in as my sworn statement [*handing in statement*].

657. Did you ever call Mr. Barnet's attention expressly to the fact that you had too much to do in connection with these works? Not particularly.

658. Did you ever bring it under his notice that your other duties took you away from Bare Island? I think he knew where I was generally.

659. When you were away had you any other officer under you at Bare Island? No.

660. Was there any officer at all under you at Bare Island? No; I had to do the whole of the work.

661. Was there no other officer of any kind, no checking clerk? No. A day-slip of the day time was prepared by the contractor's representative every day and handed to me.

662. But did he hand that to you when you were away? No; he gave it to me when I came back.

663. Then he did not hand it to you every day? He used to make it daily.

664. Did it never occur to you that it was desirable in the interests of the Government that there should be some one on the works looking after things and exercising a check, if it was only an intelligent boy? No, I had full confidence in the contractor and his representatives. I never knew anything against them. The merlon at Bare Island is the first instance I have seen of bad work on any of his contracts.

665. When you went down there during your weekly visits did you go over the works or sit in your office? Certainly I went over the works; I could not put in the whole of my time at the Island, because I had so much office work to do.

666. Was there ever a week when you did not go there? I went every week when work was in progress.

667. How do you account for the fact that so much palpably bad work was done without your knowing it throughout the whole progress of the work? The only bad work I have seen is that on the merlon; that might be easily done without my knowledge.

668. When you speak of the merlon you speak of a very large portion of the fort, in fact of the whole top of the fort? No; everything in the magazines, parapets, &c., was done irrespective of the merlon. The merlon consists only of the concrete between the covering of casemate gun and the two 9-inch guns. I feel confident that nothing was attempted in any other part. The fort is sound I believe. I had not the slightest suspicion that anything of the kind was being done.

669. Mr. Barnet has been giving evidence; he does not seem to be under the impression that you were away from the work? I think my reports will show that. I issued a weekly report on three or four other works at the same time.

670. The following question (Q. 33) was put to Mr. Barnet:—

"In Mr. Purkis's absence how was the men's time kept?" to which he replied—"He (Purkis) would take care of that; he would not be absent from the labour account."

Then again (Q. 35) "Was there no provision made for inspection during the absence of the officer;—you say that Purkis was absent sometimes;—was there no day work done when he was absent?" to which Mr. Barnet replied—"I should think not."

Was there any day work done during your absence? Certainly; I could not tell the contractor to stop his work when I was away.

671. As a matter of fact there was a very large amount of day labour done during your absence—was there not? Yes, in the early part of the work, when the whole of the men were employed in shifting and fixing the girders and the armour plates. The whole of the men were generally employed during those times.

672. The following questions and answers occurred during the examination of Mr. Barnet:—

(Q. 18) "Was there no foreman of works? No; he (Purkis) was the foreman of the works practically."

(Q. 19) "Had Mr. Purkis other duties to perform which would take him away from Bare Island? He had occasionally to go away from there."

(Q. 20) "In his absence what provision did you make for the inspection? None; if he had occasion to leave the works he would make arrangements accordingly."

Did you make arrangements? I cannot understand what Mr. Barnet meant; he must have forgotten. I had George's Head and Middle Head and South Head under my supervision.

673. *Mr Wardell.*] At the same time? Yes.

- Mr. H. H. Purkis. 674. *President.*] Here are two more questions put to Mr. Barnet, with his replies—
 (Q. 21). "Did you expect Purkis to be there the whole six days of the week? Certainly."
 (Q. 22). "Would his other duties call him away frequently? Occasionally; not very often."
- 4 Sept., 1890. What do you say to that? I do not understand that portion of the evidence at all.
675. Do you dispute it? If you look at my reports you will find I have reported on George's, South, and Middle Heads, and the casemate at the time Bare Island works were in progress.
676. *Mr. Wardell.*] To whom did you report? To Mr. Barnet. You have the Bare Island reports.
677. *President.*] But you do not show in your reports that you were ever absent from the work. You will find that these different reports from different places are often on the same date? Sometimes I used to write my reports on the Saturday. I wish I had entered more fully into the matter in my reports, and had stated that I visited the works. I told Mr. Barnet what I had done, and I did not think it was necessary to report what I had told him verbally.
678. Then it did not occur to you that it was necessary during your continual absence from the work to check what was being done? No; I had such implicit confidence in the way in which the work was being done, from the experience I had of M'Leod's work in other places. Whenever we have had occasion to cut away for alterations the work has always been found to be sound and good. The last occasion we did this was at George's Heights, at the old 10-inch gun Battery, for the purpose of mounting the two '6-inch new type guns.
679. Did you often have occasion to cut up M'Leod's work? Frequently; we have twice had occasion to cut openings in the rear wall for alterations at the casemate at George's Head. The concrete was sound and good; in fact I have never seen bad work except the merlon at Bare Island. When I was there I could not possibly, with my office duties, be on the works more than half my time. You may imagine what I had to do with four or five different works on hand.
680. When you came to measure up, how did you ascertain the amount of excavation done during your absence? I always measured it before it was touched. I measured some of it a year before it was done. I prepared a plan for all large or extensive excavations, such as were necessary for the formation of superior slopes, showing the intersections of radiating and concentric lines. The blocks were computed from this plan, including slopes to the full depths required, and the measurements were then entered in the books. All this was done before any rock was excavated.
681. You are assuming all the foundations were taken to a given depth, but how did you know they were taken down to the required depth when you were absent from the work? By my datum.
682. You said just now you did all this before the rock was touched? Yes; I am sure it was done before the rock was touched. For example I knew I had five degrees of slope to excavate. I had my levels taken at each intersection of radiating and concentric lines. I made a plan, set it all out, and entered the measurements in a book. This could all be verified now by the measurements.
683. The following question was put to Mr. Barnet:—
 Q. 36. "There is an account here for 27,331 hours of day-work, as against an estimated quantity of only 600 hours. Was no portion of that work done in the absence of that officer (*i.e.*, Purkis)?" To which he replied,— "He (Purkis) could best answer that question. I could not tell. The intention was that he should be there at all times when the men were at work."
- Was that day-work done in your absence; you admit that part of that work must have been done in your absence? Yes, a great deal of it.
684. And the contractor prepared slips of the time of the different men, and handed it into you? Yes, I had a day slip for every job. The statement I have handed in was written with care. The following paragraph shows what I was doing:—
 "My time was fully occupied when at Bare Island, or any other of the defence works, &c. My duties comprised setting out the various works, measuring them, making plans of details, entering and computing the measurements in books, making up the several progress valuations for payments; also making plans, specifications, &c."
685. Was not a good deal of the hauling of the armour plates done outside the contractor? Yes, they were brought up by the soldiers to the site, but we had to turn the armour plates over to a right position and fix them. It was a very big job. In addition to that there were four armour plates, girders, and other heavy ironwork inside which had to be fixed by day labour.
686. When you went away to the other works you were paid for being away? Yes, I asked Mr. Barnet for some allowance; he decided that when I was away from Bare Island I was to be paid.
687. You were given an allowance for every day you were away from Bare Island? Yes, I used to sleep at the Heads frequently. I lived at the North Shore, and I used to walk sometimes from there and get from the North to the South Head by boat.
688. In making the different changes from the original plan did you seek authority? I never made an alteration without authority.
689. In writing or verbally? General Scratchley generally covered the alterations by letter. His letters to Mr. Barnet would contain the necessary instructions. I am quite sure I never made one alteration without authority.
690. Under what authority did you put in that extra rich concrete; was there special authority for that? A letter came from General Stewart and I believe another from General Scratchley respecting the use of rich concrete at Bare Island particularly over the casemate. I referred to it in one or two of my reports.
691. In one of your weekly reports (No. 122) you refer to where they put in rich concrete; the first time you referred to it was in April, 1884? My report to which you refer reads as follows:—
 "Forming concrete merlon at front, &c., is now in hand. The whole of this, including covering in gun-room of casemate, is of superior concrete."
- That was after I received instructions to do it. It is the same class of concrete we use in other places. In the last schedule we made we provided for that class of concrete.
692. *President.*] Mr. Barnet was asked:—
 (Q. 75) "How can you account to your own mind, Purkis being there, for there being so much defective work?" To which he replied, "Only by the fact that his place of business was on the mainland, and there was a very narrow footbridge between it and the work. The men could see him coming for a quarter of an hour. Under these circumstances, I think it would be easy enough for them to put in bad material." And further on in answer to another question (Q. 77.)

(Q. 77.) Mr. Barnet said, "concrete works should not be left any time. My instructions are that concrete works should never be left," while, in reply to Q. 78-9, he said he gave you instructions never to leave.

Mr.
H. H. Purkis.
4 Sept., 1890.

Do you remember having had instructions from Mr. Barnet never to leave the work whilst concrete was being done? Never; I do not remember receiving any special instructions whatever about concrete or any other portion of the work.

693. In reference to the inferior quality of the concrete, and want of supervision of the work, Mr. Barnet said, in answer to question 80, "There must have been neglect of duty,—there is no doubt of that." Have you anything to say to that? I am sure there was no neglect of duty, so far as I was concerned. I always endeavoured to do my best, and I had every confidence that the work was sound in all cases.

694. From your previous statements we gather that your other occupations were so considerable that whatever instructions you might have had it would have been impossible to carry them out? I do not remember receiving any special instructions.

695. Supposing you had any such instructions would it have been possible for you to carry them out? Certainly not. If Mr. Barnet had given me any instructions like that I would have told him so.

696. Do you remember the time when the work on the merlons was carried on? It was just before Colonel Scratchley left for England.

697. I do not ask you with reference to dates, but do you recollect the concrete being put on in the merlons? Yes.

698. Can you from recollection give an approximate idea of the proportion of your time that was spent in its supervision; would it amount to one day or three days in the week; did you consider it necessary to be more than usual on the alert while that concrete was being done? No more than when any other concrete was being done.

699. But more than when any other description of work was going on? I did not give any more particular attention to that than I did to any other portion of the concrete work.

700. What I want to get at is this—can you give us any idea of the amount of supervision that was given to the execution of the concrete for which a high price was being paid, and which proves to be nothing more or less than a mass of rubble. While that large mass of work was being done, were you able to give it supervision to the extent of one day or three days a week? Probably one to two days in a week in the aggregate, but if I was there I would probably go on the works once before breakfast and two or three times during the day.

701. The result of the examination so far has failed to discover any properly executed concrete at all? I think the upper portion is good enough, is it not?

702. I am not talking of superior concrete, but of the general mass; how can it be possibly accounted for that no part of the general mass of concrete examined turned out to be concrete at all; one would think that if you were able to give it a certain amount of supervision there would be at least a certain percentage of it good? I had not the slightest suspicion of any stones being improperly put in. I admitted a large stone occasionally, so long as the aggregate did not exceed the measure of the meter. I feel sure that nearly the whole concrete is good in the work.

703. What did you accept as a big stone? Say, half a foot cube. An occasional large stone in my opinion is an advantage in a large mass of concrete.

704. What caused the very large addition to the amount of earth excavations executed over and above the original estimate;—the estimate provided for 860 cubic yards, and there were 5,790 cubic yards done? That is best explained by the abstract-book which gives details. We had to excavate for walls, pits, and tanks, &c., and make the approaches to the Island, also for additional works. We were extremely pinched for room. My reports refer to that five or six times. We had to form our embankments and earth merlons, and sometimes we had to shift the soil heaps twice when the work was under way. There was no room to wheel a barrow scarcely. I got these quantities out for this work from the original plans. I had never been on the Island. There was a growth of about 2 feet high of rank herbage at the time when I first went on the Island; it was impossible on many parts to know where rock was, and where soil was.

705. *Mr. Wardell.*] You said in your evidence before the Board of Inquiry on June 4th, that "When the concrete was going into vital parts I stopped there then";—what do you call the vital parts? The magazines and the protection of the guns. I could not have stopped on the Island altogether.

706. The question put to you before the Board of Inquiry was:—

"Was there any person to look after the making of the concrete?" to which you made the reply quoted above "When the concrete was going into vital parts, I stopped there then;"

you distinctly understood you were the resident officer in charge of the works, did you not? Yes, with the other works under my supervision, I was in charge and responsible as far as I could be, I suppose.

707. Then you knew also that you were away from the Island when this special work was being carried out? I could not be on the Island the whole time, but was as much as possible.

708. Did you make it perfectly clear to Mr. Barnet that you were not on the Island then and that you had no means of checking the work? I did not. I had perfect confidence in the way it was being done, and I think Mr. Barnet had confidence too. It was a very stupid thing to put those stones there; as far as I can see it only saved a few casks of cement.

709. In your measurement book, under the head of item 57, asphalt, you add one quarter for area floors? One third was added in some instances.

710. In this case it is one quarter; you have one third in other parts; how do you explain that? The one-quarter added must be for the floors laid $\frac{3}{4}$ inch thick, and the one-third for those laid $\frac{1}{2}$ inch thick. I have the following paragraph with respect to that in the statement which I handed in:—

"Magazine Floors, &c.:—These floors were laid in the same manner as usually done in previous works, viz., laid on glazed tiles with a cement bed, the asphalt keying in the joints, &c.,—the one-third additional measurement being allowed for filling the joints of tiles to meet the cement; also the pattern on tiles; and to make for the irregular surface of tiles when they are laid. As each item in schedule stands by itself, I cannot understand how this method of payment is improper."

I have apparently made an error in taking for the whole of the magazine floors an additional one-third, not having my books to refer to.

- Mr. H. H. Purkis.
4 Sept., 1890.
711. Are you satisfied that the asphalt went down between the joints? Yes.
712. Did you see it being laid? Yes, many times.
713. Would you be surprised to hear that, on our cutting into it in three different places, in three different magazines, one in each, we found the joint full, the cement on one occasion being above, but in every case the joints were very close, and there was no asphalt at all. These three places were selected at random? I would be surprised. I am sure they are done right in some of them if not in others. One man did the whole of the floors—I mean laying the tiles. He is out there working now, I believe. Flanagan is his name. I remember making him take up some tiles on one occasion. I think it was a very fair allowance—one third for the half-inch thickness and one fourth for the three-quarter inch, if the work was done in the way in which it was directed.
714. But did not the contract provide for that? The contract only provides for three-quarter inch thick, and for half an inch thick; the contractor would have been paid more in one case and less in another. These schedules are very erratic in their prices. For instance, there is a difference of only 2s. 6d. between the price of a quarter inch asphalt at 14s. per square yard and three-quarter inch at 16s. 6d., taking the schedule for Bare Island, but I was dealing with other works at that time.
715. But we are dealing with Bare Island? Yes, but I am pointing out what difficulties there are in the way of dealing with the schedule in the way proposed. The difference between half and three quarters of an inch is a quarter of an inch, and the difference in price is 2s. 6d., whereas the contractor was allowed 5s. 6d., or 3s. more than the difference between the items for Bare Island, but if I measured in that way for the Casemate Battery, George's Head, the result would be an advantage to the contractor of 7s. 4d. per square yard in addition to what he has been paid, as item 47 is for asphalt five eighths of an inch thick and 10s. 6d. per square yard; and item 48, three-quarters of an inch thick, 17s. per square yard; showing a difference of 6s. 6d. for an eighth in thickness, or 13s. for one-quarter of an inch.
716. I would take care not to depart from the contract? It would be no advantage to take the schedule in a manner of proportion, or in the way you suggest. I would like to see some of the floor cut up.
717. We saw it cut up; the condition of the work was as I have stated? I am surprised.
718. *Mr. Mansfield.*] There was not the slightest depression for asphalt in any case? Was it broken off?
719. No; it never had been there? Then I cannot understand it.
720. It was plain to be seen; the joints were full of cement? Did you cut them up?
721. Yes? Was it of the right thickness—was it three-quarters of an inch thick?
722. Barely? Asphalt shrinks generally. It would have shrunk near the doorway.
723. *President.*] We avoided going near the doorway; we made our incisions away from the doorway, and near the corner? I would like Flanagan to be called. He had the proper instructions I am sure for laying these tiles.
724. *Mr. Wardell.*] That does not get over the fact? I am astonished at the result. I am sure that some parts must be good.
725. *President.*] Over the laboratory we found but one coat had been laid, and in cutting it open we found it was only three-quarters of an inch thick, whereas two coats of half an inch thick each had been paid for? I believed that two coats have been put on.
726. *Mr. Mansfield.*] Were you present. Can you say of your own knowledge that two coats were put on; did you see it done? I could not say I saw every portion of it done; it would be my practice in measuring for this to take the concrete for roof, the cement rendering to receive the asphalt, and then the asphalt, before perhaps any portion of the work was done; this method I have found saved time and prevented confusion, as to what had or had not been measured. Instructions for the work would be given at the same time.
727. How would you arrive at your conclusion that it was two thicknesses? This was put down between six and seven years ago, during which time it has been exposed to all sorts of weather and traffic; the cement would cause the asphalt to lose something in thickness. It would not be easily determinable if this asphalt was put on in two layers or in one. My impression is that it was put on in two. It would be put on in a boiling state, the top layer would cause the lower one to become in a state of fusion, and so unite them together. I know of one case at South Head in which Seyssel asphalt was laid on a Melbourne asphalt; the Seyssel asphalt melted the Melbourne asphalt in such a manner as to cause it to boil through to the surface. As this has been on several years it would be difficult to tell whether it was put on in one layer or in two. There has been no one to state the other side of the question.
728. What gave rise to the necessity for a second thickness? It has been the custom in previous works to have two layers for magazines, in all places difficult of access, or in particular places left bare. It was to ensure tightness. It was not a new idea, and had been acted upon for a long time before.
729. With reference to the tiles? I am perfectly sure that some of them were laid with open joints.
730. What is the name of the man who did all this part of the work, is it Flanagan? Yes; he is employed, I believe, under Colonel De Wolski now. I am certain he laid the whole of the tiles for the floors.
731. Who was the contractor's foreman on this work? J. Murray.
732. And with whom did you measure up the works? With Murray and with Noble.
733. Sometimes with Murray and sometimes with Noble? Yes; but they were generally together with me when I measured.
734. And you always agreed? Oh, there was sometimes a dispute.
735. Would you book up as you went along? I generally tried to book up before I left.
736. Is Murray about still? He is employed, I believe, by the Government, under Colonel De Wolski.
737. Where is Noble? He is in Sydney.
738. *Mr. Wardell.*] That is not M'Leod's partner? Yes, John Noble was M'Leod's partner.
739. *President.*] Which Noble had you there? John Noble.
740. You measured up with John Noble? Yes, principally; if he was not there I measured up with Murray.
741. *Mr. Wardell.*] Not James Noble? No, he did not go to Bare Island.
742. We have evidence that he was in charge of the works as contractor's foreman, and that John Noble hardly ever went to Bare Island? That is not correct.
743. It is very extraordinary. Mr. Bruce said in his evidence in answer to Q. 166, "The foreman in charge was Mr. J. Noble"; and the next question and answer were as follows:—"Is he a partner of M'Leod? No; I believe he is Mr. Noble's cousin; he was merely there as foreman; he was not the same Noble as M'Leod's partner?" I do not understand that.

744. *President.*] Does not that refer to a period after you left, when the Barrack contract was being proceeded with? Oh, yes; he was on the Barracks. I was thinking of the Fort all the time.
745. Was there any intimacy between you and the contractor—you were always very friendly? Yes; I may say officially friendly. I have known Mr. M'Leod for many years; in the early part of 1875 we left Sydney together to build the lighthouse at Seal Rocks, he as contractor, and myself as the officer in charge; this work took about twenty months; Mr. M'Leod was there a large portion of the time; this being a very lonely place, it may naturally have created a somewhat friendly feeling between us, as we had plenty of hardships, and not a few dangers to contend with.
746. Did you ever borrow money from him? Yes, by mortgage on my house and land, for completion of building, to £750.
747. Are you in his debt now? Yes; £450. I borrowed three sums—first £500, then £100, and subsequently, £150, of which I have repaid £300 to his son, who holds power of attorney; the mortgage was legally effected through a solicitor.
748. When was that? Six or seven years ago.
749. What were the securities? He has the deeds, legally drawn by a solicitor. I have always paid the interest when due to his son most promptly. I have never dealt with him personally in these transactions.
750. Was that the only money transaction you had with the contractor? That is all, except the sale of a land allotment.
751. These three sums? Yes; my house cost me more than I thought it would. I borrowed the money on these terms—to be paid off in ten years, any amount not less than £50 to be paid back at any time. This is stated in the deed. I stipulated ten years, because I thought I would be able to pay it back in that time, and because M'Leod was going away, and he asked me to act as executor for him. I have receipts showing the quarterly payments for interest, and the sums I paid over at various times off the principal.
752. Did it never strike you, the impropriety of having money transactions with the contractor? No; I could have got the money from a relation just the same. I did not look upon it as the slightest favour from Mr. M'Leod, but as a safe and fair investment for him. The documents have all been legally drawn up. I never tried to keep the fact from anyone. I paid the clerk if Frank M'Leod was not there. I have receipts from the clerk. I would have borrowed the money elsewhere if I had not from M'Leod.
753. You have not borrowed any other cash from him? Never a penny. If you wish, I will show you my bank-book; I have nothing to hide; also the receipts which I have from Frank M'Leod.
754. Are you in M'Leod's debt? Only the balance of mortgage; I have paid £300 off. I thought to have paid off the whole sum in ten years. I still owe £450 of the mortgage money.

Mr.
H. H. Purkis.
4 Sept., 1890.

MONDAY, 8 SEPTEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. John B. Murray sworn and examined:—

755. *President.*] What is your name? John B. Murray.
756. What position did you hold at Bare Island during the construction of the Fort? Working foreman.
757. Under the contractors? Yes.
758. M'Leod and Noble? Under John M'Leod.
759. Have you been on the work lately? No, sir; it is four years since I was there.
760. You have not seen any of the work that has been opened out lately? No, sir, I have not.
761. Did you hear that some bad and doubtful work had been found there? Yes, sir, I did.
762. Were you surprised? Very much surprised, I can assure you.
763. Did you believe the work to be all sound? Yes, I was there as working foreman. I was told by my employers to put a big stone here and there, but anything further than that I know nothing about. I was not there all the time. I was at Little Bay, backwards and forwards, and at George's and Middle Head, but I admit this—that I received instructions to put in a big stone occasionally; but I was astonished and surprised at what I heard.
764. Were you there during the time that the concrete was put in on the merlons? No, sir; not the whole time, but I will say this: what work I saw there I will guarantee; all that I superintended myself.
765. What part of the work did you superintend? All the arches and pits. The top of the big merlon was where we were told to put a big stone on occasionally.
766. Were you there when the merlons were constructed? I was there six months after the work was started. I went in October, 1881. They got the contract in January the same year. I was merely a working foreman at that time. I never saw the schedule at all; I was told to do this, and did it.
767. You got instructions to put in a large stone here and there? Yes; but in all cases to be well bedded in the concrete. I saw that it was properly done.
768. Were you given proper stone for the purpose? Yes.
769. Was it wheeled forward in heaps close to the work? When we were excavating the rocks we had big piles of stones put aside to break up for the concrete. Of course, at that time I was backwards and forwards between Bare Island and the 25-ton gun battery at Middle Head, and doing work at Little Bay at the same time.
770. Who told you to put in the big stones—M'Leod himself? Yes, and John Noble.
771. Are you sure that M'Leod told you? Both of them told me.
772. Was M'Leod often on the work? Sometimes twice a week; sometimes only once; sometimes he stayed all night.
773. But Noble was there every day? Yes, nearly every day.
774. And you are quite sure that both M'Leod and Noble gave you these instructions? Yes.
775. Was there more than one Noble on the work—are there two Nobles? Only one; there is another Noble—James Noble—a foreman, who was there during the time of the barracks.
776. Subsequently? Yes.

Mr.
J. B. Murray.
8 Sept., 1890.

- Mr. J. B. Murray. Sept., 1890
777. What was the name of the Noble we are speaking of? The other one—James Noble.
778. No. the one who gave you instructions? John Noble, partner of M'Leod.
779. Had you anything to do with the day work which was done there; did you return the time occupied by the men? I handed day slips to Noble, and sometimes to Mr. Purkis, if Mr. Noble was not there.
780. Now, with reference to the day account kept in your book, are you quite sure that the men were working the whole day? Every moment, every hour; if there was only one hour worked, only one hour was put down.
781. Was the stone you put in likely to go rotten by lying in a moist place? No.
782. Was it all sound stone? Yes, sir.
783. Was it the same material that you would use for making up concrete? Yes, good stone.
784. Was it taken from the excavations on the Fort? Yes, it would make a first-class concrete.
785. Who was the working foreman in your absence? Flanagan.
786. Did he finish up the top of the merlons? He was there mostly all the time.
787. Then do I understand that you did not finish the work up to the top? I was backwards and forwards between Bare Island, Little Bay, and Middle Heads. I might be at Bare Island looking after the work before breakfast and then, perhaps, go to Little Bay and be away two days. I was run off my legs pretty well—overworked.
788. Were you not there all the time when the upper part of the merlons was being done? No, I thought there could be no harm done then by my going away. It was all pretty well finished then.
789. Did the inspector see you putting in these stones? I could not say; I do not think he did. Not to my knowledge.
790. Did you often see the inspector walking about the works? He was there during the early part of the week—on Tuesday perhaps—and stopped there till (say) Friday, and then would be away at Middle Head and George's Head.
791. Did you stop putting in these stones when he was present? I do not think he saw any stones put in to my knowledge. He and Mr. Noble measured the work.
792. Did not he stand by and inspect? Not always. He had too much measurement to do, one thing and another.
793. *Mr. Mansfield.*] You say you went there in October, 1881? I think so, to the best of my recollection.
794. How long were you there altogether? About four years, off and on.
795. By that time the work was pretty well finished, was it not? Yes. I was there four and a half years, somewhere between four and five years.
796. Can you give us any idea of the proportion of your time that you were employed there—on an average how many days in a week; how many days were you absent? When the arches were going on I was there all the time.
797. How long was the Little Bay job going on? About eighteen months.
798. Was that during the earlier or later part of the period? During the latter part; it took two and a half years right straight off the reel.
799. Then this concrete filling of the merlons that has been particularly referred to;—when was that done? It was one of the last things that was done.
800. You were then frequently away? Yes.
801. Are you in a position to tell us how often during that time Purkis was present? He was there every week when I was there.
802. Every week? Yes, sir.
803. Was he there one day, two, three, or four days a week? He generally came on Tuesday in the morning, and left on Friday evening; sometimes he would be away half the week down at Middle Head.
804. What was the method adopted for preparing the concrete and filling the merlons—you were there part of the time? Yes.
805. What was the method adopted for preparing the concrete? The cement was mixed with 27 feet of sandstone, properly gauged, and sharp sand.
806. How were the different materials mixed? They were turned over three times and properly raked.
807. On a stage or platform? On a platform.
808. *Mr. Wardell.*] Measured in boxes? Yes, sir.
809. *Mr. Mansfield.*] Are you speaking of ordinary concrete? Yes.
810. In filling in ordinary concrete was the ground prepared? It was all cleared down to the rocks and passed by the inspector.
811. *Mr. Wardell.*] Do you know that of your own knowledge? Yes; we would not dare to do it unless it was passed by the inspector.
812. *Mr. Mansfield.*] Were there any places in which a deposit of rubble and clay was authorised—not concrete at all, mere rubble filling, sand and clay; are you aware of any such filling? No, sir; unless it was some rubble work under the two Gatling guns.
813. Was there any rubble masonry? Only foundations under Gatling guns.
814. Then how do you account for the fact that in a number of places opened up by the Board of Inquiry and the Commission a quantity of dry rubble filling has been discovered? I do not understand it.
815. Or that no concrete has been discovered other than the top dressing? I do not understand it. All I know is that as working foreman I was instructed to place the stones here and there.
816. But is it possible that in the course of your visits, even during the latter portion of the work, so much dry rubble and sand filling could have occurred without your knowledge? It was done unbeknown to me, sir.
817. Do you think you would be in a position to show the Commission any points at which the concrete can be found below the top dressing—as a matter of fact we have been unable to find any concrete at all? It is all supposed to be concrete.
818. There is not a point where anything pretending to be concrete has been found? It was all supposed to be good with the exception of those big stones here and there.
819. Who took your place in your absence? Flanagan; he was the foreman.
820. Who did he get his instructions from? From me.
821. Or from the contractor direct? He would get his instructions from me.
822. What were his instructions? He had to see that the cement was properly mixed, and generally that the work was being properly done, and look after the men just as I had to do myself. 823.

Mr.
J. B. Murray.
8 Sept., 1890.

823. *Mr. Wardell.*] Some short time ago you said you were satisfied in leaving the upper part of the work to those who were in charge, because you had no fear of their doing any wrong? I do not suppose they would.
824. What motive had they not to do any wrong? I do not know; that is where I am at a loss myself.
825. Would they have done wrong on their own motion, or have received instructions for it? I cannot say.
826. Had they any interest in doing wrong themselves? No; they only got their wages the same as I did.
827. Then if they did wrong it must have been done under orders? I could not say.
828. But if they did wrong without motive it must have been under orders? I do not believe that myself.
829. Then it was done against orders? Yes; I admit putting in the big stones, because I was specially instructed to do it.
830. But what motive had they in acting against orders? I do not know; it is quite unbeknown to me; I was quite unmanned when I heard about it; I had not the slightest knowledge of such a thing.
831. It seems strange that men who have no object should throw in rubbish instead of concrete? I was in the same predicament as they were; I only told them to do what I was told myself.
832. You say you were told to put in good concrete? Yes; there was a gauge-box and everything necessary for carrying out the instructions, and getting out a good article.
833. You cannot understand what object these men had? No, sir, I cannot.
834. *Mr. Mansfield.*] Was there a sufficient quantity of cement provided for the concrete? Oh, yes, quite sufficient.
835. You were never stinted in the quantity supplied? No, sir, it used to come in shiploads of 250 casks at a time.
836. You never had to complain of a deficiency in the supply? No, sir.
837. Were you ever told you were using cement too freely? No, sir.
838. Or that you were breaking stone smaller than was necessary? No; stone was always broken up to gauge.
839. *Mr. Wardell.*] Supposing you had seen this bad work that was discovered the other day: With all your knowledge of the process of the works, what would you have said—what reason could you have given for its presence? I could not say I am sure; I should have been awfully annoyed to see such work; I should not know what to say about it; it is something awful they tell me.
840. *Mr. Mansfield.*] Were you in charge when the wing walls on each side of the barracks were built? Yes, sir.
841. Did you see the foundations prepared for them? I did. I knew at the time the foundation was going in it was wrong. I wanted to go deeper but I was not allowed.
842. Are you aware that it was built on black sand? No; I know it was very soft rock in places. I would have gone deeper but Mr. Colley came out and saw and passed it.
843. You are quite sure of that? Positive. I wanted to go deeper but he would not allow me. I am a mason by trade, and I know if a good foundation is put in. I merely worked on instructions. I pointed out that particular spot to Mr. Colley, and I could do no more.
844. *President.*] Do you remember where that spot was? I mean the wall going along where they are going to build a barracks; it was 16 feet high.
845. Was it to the right or left as you go in, or was it the whole length? The whole length; I pointed it out to Mr. Colley, and he said it was quite good enough.
846. *Mr. Mansfield.*] Did Mr. Colley give any reason why he was content to build upon such a substance? No; he only said it was quite good enough; it was to save expense, I suppose.
847. *Mr. Wardell.*] Did he say that? No; it was pointed out to him; I did it myself.
848. *President.*] Do you remember the wall where it turns in as you enter? It turns round at the back of the laboratory.
849. In the square? Yes.
850. To the right-hand side? Yes.
851. Do you remember the foundation there? Yes.
852. What is that on? It is a very deep place there; that is not a very good foundation; it is a soft marly foundation.
853. A peaty looking stuff, was it not? No; a kind of rotten rock.
854. Do you remember seeing the bottom? Yes; it was rotten.
855. Did you come across any black sand anywhere in digging out? Not that I remember; only this soft marly rock.
856. We found the wall standing on soft black sand, nothing else? I went by my instructions; I did the best I could.
857. *Mr. Wardell.*] Did Mr. Purkis see these foundations? Yes.
858. Did he make any remark to Mr. Colley, that it was necessary to go deeper or not? I do not think Mr. Purkis was there that day. Mr. Colley took the responsibility of that; he said it was quite good enough. I would not vouch for Mr. Purkis being present at the time. I do not think he was. I think only Mr. Colley and myself were there.
859. Did Purkis know you were building on this foundation? He knew all about it; I never put anything on without his orders; he saw everything; it was more than I dare do to put down the foundation unless it was passed.
860. *Mr. Mansfield.*] Were you there when any of the asphalt was being laid? Yes; pretty near all through; most of it; I think so. Yes.
861. Was it all put down at one operation for each part? Some was three quarters of an inch thick, and some was half an inch thick. I do not know anything about the asphalt; I only went by my instructions.
862. Was it put down at different thicknesses? I never saw the schedule. I said, "How much asphalt is going on this?" I received my instructions, and carried them out.
863. *Mr. Wardell.*] Then in point of fact you never saw the specification on which you were working? No; they had all their prices attached to that. I never saw it till the work was nearly finished.
864. Then you were entirely dependent on verbal directions? Yes.

- Mr. J. B. Murray.
8 Sept., 1890.
865. *Mr. Mansfield.*] Do you remember asphalt being laid on in two thicknesses—first one thickness and then another on top of it? I cannot say; it might have been so, only I am not positive, on the laboratory. That was exposed; but I would not even vouch for that.
866. You do not remember whether one coating of asphalt was laid first, and then at some subsequent period another coating was laid on top of it? No, I do not; I only acted on instructions.
867. Is it not a little unusual to lay asphalt in two coats; it is not an ordinary practice, is it? Yes; we are doing the same now.
868. It is not a very usual thing, is it? Only in cases where it would be required to keep it dry.
869. It would be sufficiently unusual to impress itself upon your memory, would it not? I could not say; it is so long since I was there. It is usual to put the asphalt across the joints to keep the water out sometimes. The artillery store, for instance, has a coat of three quarters of an inch if I remember right, and so have the magazines, I think. The only place I could think of at Bare Island Fort where it might have occurred is over the laboratory, and I could not vouch for that, I would not be positive. I received my instructions and I carried them out.
870. *Mr. Mansfield.*] Did you ever see Mr. Barnet on the works? I suppose he was there about a dozen times; eight or nine times, perhaps, in the four years.
871. *Mr. Wardell.*] In the four years? He never came very often; very seldom.
872. *Mr. Mansfield.*] Were you furnished with any plans for your guidance in carrying out the work? Oh, yes; we had some very elaborate plans, as elaborate as ever I saw, by Morell. Alterations were sometimes made. The plans were very good; my work principally consisted in laying out the work for the men.
873. And you had no interest in the work excepting as paid foreman? £4 a week; that was all I got.
874. Have you any interest in M'Leod's business now? No, and never had; I never received a shilling except my weekly wage.
875. Are you still in M'Leod's employment? No, I am under Colonel de Wolski. When Noble went home to England I was employed as clerk of works for the spire of the Memorial Church, Hunter Bailley, for Mrs. Bailley. I was there about twelve months. Noble asked me to go back and I did. They gave me a little more power then—I had to keep the measurements at Middle Head and George's Head, but at Bare Island I was simply foreman. I was down at George's Head the last six months before joining Colonel de Wolski. I never had an interest in the matter, but my weekly wages. It was no benefit to me putting in bad work; it is against my nature doing that; I was never brought up that way. I only did what I was told.
876. *Mr. Mansfield.*] With reference to the laying of the asphalt, you were present probably during the time when the tile pavement was laid to receive the asphalt in the passages, magazines and corridors? I was there all that time.
877. How were these tiles laid—dry, grouted in, or set in cement? Set in cement; the crossings were left for the asphalt.
878. I am not speaking of the crossings. Were the tiles laid dry, grouted, or set in cement? They were laid in cement.
879. But the joints were not flush up? No.
880. Then how do you account for the fact that in several places where the asphalt was cut and the joints examined they were quite flush and in some cases more than flush? With asphalt?
881. No, with cement. There was no vacancy in point of fact between the joints into which the asphalt could penetrate? There ought to have been. The men may have done it behind my back.
882. *President.*] What thickness of joint were you instructed to leave? About a quarter of an inch; you are supposed to go half an inch from the top. If the men are left to themselves they will scamp the work in spite of you.
883. *Mr. Wardell.*] I think you were foreman in charge for the contractor? Yes.
884. And you had no specification of the works to refer to? No; I received simply verbal instructions from my employers. Noble was there on the work himself.
885. *Mr. Mansfield.*] During the whole of the four years was Noble present the greater part of the time? Principally when the bulk of the work was going on. Latterly when they had other works in town his time was mostly taken up elsewhere. Purkis and Noble did all the measurements. I had nothing at all to do with that.
886. *President.*] Did you ever tell Purkis that you had doubts about the foundation? No; he was there, and he could see it. I had his sanction for whatever I did.
887. You say you pointed Mr. Colley's attention to it? Yes; I did not like the idea of it, and pointed it out to him; he said it was quite good enough. That was the back wall leading into the casemate battery, fronting where they are building the barracks now.
888. *Mr. Mansfield.*] As a matter of fact did the foundations of these walls reach the rock anywhere at any point? Oh, yes.
889. What sort of rock? It was not very hard rock sometimes.
890. Such rock as you would approve of as a practical man? Some I would approve of, and some I would not approve of. There was a good deal of soft rock in that part. Every now and then we came upon a soft bed.
891. And when soft beds were encountered, such as you did not approve of, was there any extra width of foundation put in;—were any precautions taken at all to obviate the effects of this soft bottom? No; merely the same width as usual; no special precautions were taken that I know of.
892. When you came to these soft places, were ever test places dug to see if good rock could be obtained? We tried around to see if we could get better rock.
893. Were these places sounded with a rod? With a bar, a pointed bar, sometimes. I know there are several places like that, soft. Concrete, of course, will carry itself if there is only a small space between.

WEDNESDAY, 10 SEPTEMBER, 1890.

Present:—

W. C. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. Inst. C.E., F.R.I.B.A.

Mr. John Jagger sworn and examined:—

894. *President.*] What is your name? John Jagger.
 895. Were you employed on the works at Bare Island? No, sir.
 896. Were you employed in the neighbourhood of Bare Island during the construction of the Fort? Yes, Mr. J. Jagger.
 close to it. 10 Sept., 1890.
 897. Can you tell the Commission what is the information of which you are in possession? I have no information that I wish to give you at all. I am not here as a voluntary witness.
 898. No; we called you. I know you did not offer your services as a witness. I am aware of that. Had you occasion to see Mr. Purkis; did you know him? Oh, yes.
 899. Did you see him? He was the inspector of my works, as well as of the Bare Island Fort.
 900. What were you doing there? I was doing the Telegraph Station and quarters for the Telegraph Company.
 901. You were the contractor on the Government work? I was the contractor for the buildings.
 902. And Purkis looked after your work? Yes; he inspected it.
 903. Did you ever see him on the ground in an unfit state? No; I cannot say that I did. What do you mean by an unfit state?
 904. Did you ever notice him to be the worse for liquor? No; I do not think I did.
 905. You never did during the time he was inspecting your work? Not to my knowledge. Of course, I had nothing to do with him after he visited my works. You are speaking now of when he visited my works?
 906. Yes. Did you ever tell anyone that you had reason to believe that he was occasionally intoxicated? Not while visiting my works. Never.
 907. Did you ever see him intoxicated while visiting the forts? The forts had nothing to do with me.
 908. I know. But certain information has been placed before the Commission. I only want to get at the truth? I do not feel called upon to answer anything more than you ask.
 909. During the working hours did you ever see Purkis the worse for liquor? Never.

Mr. George Flanagan sworn and examined:—

910. What is your name? George Flanagan.
 911. Were you engaged in the employment of the contractor during the construction of the fort at Bare Island? Yes, sir. Mr. G. Flanagan.
10 Sept., 1890.
 912. What capacity were you in? A mason.
 913. Just working mason? Working mason.
 914. Not foreman? No; working mason.
 915. And were you working at your trade all the time? Sometimes I would be fitting in those iron doors, sometimes doing brick and stone work; whatever was required.
 916. Were you engaged on the concrete work at all? Sometimes I was.
 917. What were you doing there? Working the concrete.
 918. With the labour gang? Yes.
 919. Helping it? Yes, helping to mix up the material, and put it in place.
 920. Who was the foreman? J. B. Murray; he had full charge of the job.
 921. Do you remember in what way the concrete was mixed? Yes, I saw it continually.
 922. Did you notice in what proportion it was mixed—was it mixed on a board? Yes, sometimes they put in about thirty barrows to a cask of cement and sometimes twenty.
 923. Barrows of what? Stone; it never was gauged.
 924. Broken stone? Yes.
 925. On a board? Yes.
 926. And mixed with that cement? Yes, sometimes twenty, sometimes eighteen barrows to the cask.
 927. And sometimes thirty? Yes.
 928. Boulders, not broken stone? Yes.
 929. And how much sand? There was plenty of sand amongst the stone. It was allowed to be so.
 930. Did you see any sand brought to the Island? Yes; for plastering purposes.
 931. Did you see any large lumps of stone put in the work? Yes.
 932. How were they put in? Sometimes thrown in out of the barrow, and sometimes put in by hand. I have seen a man do it.
 933. Did you hear anybody giving instructions? Yes.
 934. Who? J. B. Murray.
 935. And you saw them empty the barrow full of stones in one place, in a heap? Yes.
 936. Did a man afterwards spread them? Sometimes, but at other times they did not take the trouble.
 937. Were the stones picked for that purpose? No; they were all of a heap there. I had no chance to see all that was going on as I was busy at my own work, but I used to take notice when I knocked off for lunch. I used to keep the time. If a man was an hour late I used to check it off. I marked the time on a sheet of paper. It was part of my duty to see if the men kept proper time.
 938. Did you know that time was being charged against the Government for work that should have been done under ordinary schedule rates? I suspected it, but I could not say, as I never saw the specification or plan.
 939. You did not know that some of the time was being kept separately? No; I had not a chance to see that, but I suspected it.
 940. You don't know, I suppose, whether those day labourers were moved off on to the contractor's job occasionally? I have seen them taking up the plates; that was supposed to be Government work. Then
 I

- Mr. G. Flanagan.
10 Sept., 1890.
- I had orders to put the men doing the stone work on to the contract work. They were supposed to be doing day-work, and they were doing ordinary work in the time they should have been on plates.
941. Is that a surmise, or do you know it? That was all I knew about it. Purkis would come, and I saw them shifted back to the plates.
942. You saw them shifted when Purkis came? Yes.
943. And that gave you reason to suspect there was something wrong? Yes.
944. But you did not know as an absolute fact that there was anything wrong, because you had not the books? No, I had not the books.
945. That is the only point you are certain of;—you saw the men shifted when Purkis was coming along? Yes.
946. Shifted from the quarrying work back to the Government work? Yes; back to shifting plates, back to Government work.
947. Was that done under Murray's direction? Yes; Murray gave the directions to do it.
948. To shift the men? Yes.
949. And did he tell you then to shift them back again? Yes.
950. Did he tell you each time or give you a general direction? He told me always to shift the men when Purkis came, not to let Purkis see them working in the quarry.
951. You are quite sure of that? Yes.
952. Had you anything to do with the asphalt work at all? Yes; I put on a piece of it myself.
953. Which kind? That patent asphalt—the Seyssel asphalt.
954. Where? On the top of the cells.
955. That is the last part of the building you put up? Yes.
956. How much was put on there? I think it was an inch.
957. An inch thick? I think so. I could not exactly say.
958. Did you put it all on in one operation? Yes.
959. You only went over it once? Yes.
960. Did you see any of the asphalt put over the top of the laboratory? No; that was done before I came.
961. Were you employed in making good the cracks in some of the retaining-walls? Yes.
962. When did you notice they were cracked—when did the cracks first appear? The place was not very long up when they appeared first.
963. Did they appear during the progress of the work? Yes; I doctored them up under Murray's orders. I mixed up some cement, and made it of the same colour, and made it look better.
964. What state was the work in when you first went there? About half of it was done; they were putting in the stone-work over the gun-pits when I went.
965. But none of the merlons were done when you went? No.
966. You saw all that work done? Yes; I saw the merlons put on.
967. Did you see bad work put in in places where it has been opened up? Yes; very bad work.
968. When the stones were thrown into the concrete did they make a bed of concrete? That is done in the walls.
969. Did you see large stones put into the walls too? Yes.
970. And they were buried in the concrete? Yes. First there was a layer of concrete 2 feet thick, and then a layer of stones, and then concrete on top.
971. These were all bedded in concrete? Yes; and the coarse concrete put on top.
972. What walls were these? The front walls.
973. The retaining-walls? Yes.
974. Did you see any of that kind of work done round the gun-pits? Yes; there is work of that kind all over the job.
975. *Mr. Wardell.*] Did you see the specification for that work? No, sir; the only thing I saw was a set of directions for fitting up the armour plates and the casemate, and that was a copy which came over from England.
976. *President.*] But you did not see the specification? No, sir.

MONDAY, 15 SEPTEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. John M'Leod re-examined:—

- Mr. J. M'Leod.
15 Sept., 1890.
977. *President.*] You were the contractor for the Bare Island Fort? Yes; the contract was taken in my name.
978. Had you a partner? Yes; John Noble.
979. We had a little misunderstanding with reference to this name;—there are two Nobles, are there not? Yes; John and James. The latter had nothing to do with the contract.
980. Do you remember the year this contract was taken? 1881.
981. Were you resident on the works? I was not resident—never resident on the works; I might stop there one night in the week occasionally, especially during the first portion of the work—during the first twelve or eighteen months.
982. Who looked after your interests—who was your representative? Noble; he had charge of everything. He did all the measurements and all the laying off, and he appointed his brother-in-law, John Murray, who is now with Colonel de Wolski, as chief foreman. If Murray happened to be away at any time, he left Flanagan, who is also with Colonel de Wolski, to superintend the work in his absence.
983. Then you did not have immediate charge of the works yourself? Not during the whole of the time; everything was in Noble's hands.
984. Are you aware that certain alterations were made in the design during the progress of the works? Yes.

985. In what way were the directions conveyed to you to make the alterations? We had a plan of the works there, and the Clerk of the Works, or one of the Colonial Architect's people, whoever happened to be there, stated what alterations had to be carried out. For instance, the granite walls, which would require about 6,000 cubic feet to construct, and which were provided for in the contract, were omitted by Colonel Scratchley's instructions. We got the plan for it at the time.

Mr.
J. M'Leod.
15 Sept., 1890.

986. Was it the practice to give you written directions on occasions of that kind? No, not as far as I am aware; I do not think it is the practice.

987. Of course, if instructions were given in writing they would necessarily come to you, would they not? I do not know that. If the Clerk of the Works had written instructions, he might communicate them to me verbally, and I would have the instructions carried out.

988. This is purely a schedule contract and not a lump-sum contract, is it not? Yes.

989. Did you tender a lump sum? Of course I totted up my total the same as the others.

990. You mean you added up the prices that were given in the contract? Yes; and they were checked afterwards by the Works Department or the Colonial Architect's Department.

991. But you understood it to be a schedule contract? Yes.

992. The lump sum at the foot of the contract did not mean it to be a lump-sum? No.

993. Are you aware that some bad work has been found in the concrete? I am.

994. And have you formed any opinion how that got there;—you never gave instructions for that kind of work? I never did.

995. How did it get there without your knowing it? It is just as great mystery to me as to you. My instructions were, "Keep the concrete up to specified conditions, and use nothing but what is right."

993. Did you instruct your foreman to put in large stones? No, I never instructed him to put in large stones. I am aware there was no objection to large stones being occasionally put in. I remember Colonel Scratchley saying at the time, it was folly to use such small stone—that he would sooner have larger stones mixed up with cement concrete; but I said to the foreman I would sooner see it done according to specification. There is more trouble in trying to put in large blocks now and then, than in having it all of a uniform size; and that is the reason I consider it costs more to do it in the block way—the way it has been done—than if the stone had been all of a uniform size.

997. How do you make out that it costs more if you throw in a lot of large stones; it must make a cask of cement go much further? Of course, if you use very large blocks,

998. Were they lumps of ballast? Yes; but the orders were that a yard of stone was to be used in a yard measure.

999. But that stone was not put in the yard measure? It ought to have been.

1000. It was not done; if it was put in a yard measure, I have no doubt it would be of the same price? Then it ought to have been. My instructions were, that no stones were to be beyond the yard measure. I first of all said, "I prefer the concrete not to be tampered with, by putting in big stone; it should be a uniform size." When it is all properly broken, a man takes a barrow full and throws it in without any bother; but on the other plan a man would lose so much time in throwing a piece here and there, and then having to ram in separately between these pieces. Therefore, I say it is as cheap to do it on a uniform size as to do it in blocks.

1001. If you were tendering for concrete to be made with a good deal of rubble, would not you tender for it cheaper? If it was specified that way, decidedly.

1002. Because it stretches out the quantity for mixing, and that cheapens the work to the contractor? Yes, if it is done by specification. Then the contractor knows what he is going to do. In this case, it is different. I never sanctioned it myself at all.

1003. As a matter of fact, you never gave your foreman instructions to put in these blocks? No, I did not.

1004. Your foreman, in his evidence, said he got instructions to put them in? Not from me. I might have seen one put in, in which case I would say, "This is not according to what I told you to do." I was aware that he was putting some in occasionally, but I was never aware that he put them in of the quality and to the extent I saw.

1005. Have you seen that work yourself since it has been opened up? Yes.

1006. Did you see that the stones had been pitched in by the barrow-full? No, not stones; I never gave instructions for stones to be put in like that.

1007. But you see now they have been thrown in by the barrow-full? Yes; it has all the appearance. I was aware of seeing pieces of sound rubble occasionally like that, but I never was aware that there were any soft stones put in. My instructions were that the stones were to be all of a uniform hardness, according to the specification.

1008. Did you let any of the concrete by sub-contract? No, sir.

1009. What instructions did you get about putting better cement in the upper portion of the merlons, where superior concrete has been put? These instructions were always given to Noble, and were carried out by him and Murray. It was to be a superior concrete.

1010. Did you get any written instructions? No; I am not aware of having any. Noble would have them if any written instructions were given.

1011. *Mr. Mansfield.*] Are you in a position to tell us how many barrels of cement were used in the Bare Island Fort altogether? I am not.

1012. Could you procure that information for us? Noble had the management of the whole of that in his own hands.

1013. He will be able to tell us that? I should think so; yes.

1014. When you took this work, was the tendering done by public competition;—was it a private tender or in answer to an advertisement? It was a tender in answer to an advertisement.

1015. Did you ever have any written communications from the Colonial Architect's Department while this work was in progress, or were all the instructions verbal? As far as I am aware, they were all verbal. I do not know of any having been given in writing—only one, as I think of it now. That relates to the casemate gun and the iron girders and buckle plates. There were written instructions sent that these girders were to be supplied by the Government, and not by the contractor. That is the only case I remember of written instructions having been supplied to me.

1016. But the general practice was that all instructions were verbal? That is as far as I know. Someone else must have obtained authority before instructions came to me verbally.

1017.

Mr.
J. M'Leod.
15 Sept., 1890.

1017. You say you have seen the work where the concrete, or what was supposed to be concrete, had been opened up by trenches and cuttings? Yes.

1018. You have already stated that you can form no opinion as to how much rubble stone appears there, and soft stone. I would like you to go a step further, and tell us whether you have observed that there is an absence of all appearance of concrete—that many of these cuttings betray mere filling in of rubble and clay and sand? I cannot speak for the stone, nor the quality of the sand. It was quite a surprise to me when I did see it. I said at the time that I was very treacherously dealt with by some one. When the merlon was put in I was away for several months. I think it was put in in 1887, and I was away for about eight or nine weeks in South Australia and elsewhere. It is quite unaccountable to me to see it there. When I saw it I could think of nothing to say, but that I wished there was a Government picket—if I may use the term—to see that the work was properly done. I use the word picket not in any disparaging way, but I think that is the name for a man whose duty it is to look after things.

1019. An Inspector? Yes; some one to see that the work is done just as it should be. I have done my best according to the terms of the specification. I put good and responsible men there to look after it, and I felt that I was treacherously dealt with. I cannot blame anyone in particular.

1020. *Mr. Wardell.*] Did it ever occur to you that the Clerk of Works was not there as frequently as he should have been? I am aware that he had many places to attend to besides Bare Island Fort in connection with the Colonial Architect's Department. That is the reason I am saying now it would be well if there was some one there when he was away, to see that everything was properly put in its place.

1021. *President.*] And it would have been more satisfactory to you and to all parties if there had been closer inspection, would it not? That was the thought which entered my mind when I saw the place. Colonel de Wolski could tell you the same thing—that I was taken aback, as it were, by the appearance of the work.

1022. Did you ever have any money transactions with Purkis? I did. I had money transactions with him in the way of lending him money on mortgage.

1023. What did you lend him on mortgage? I lent him, I think, £500, and two other sums of £100 and £150. I took a mortgage for it. We happened to be talking about the hardship of having to pay rent, and so on, and I said, "I would rather have to pay rent than be in the same position as I am. I have two or three houses, and they don't pay me 5 per cent." So he asked me if I would lend him some money at 5 per cent.

1024. And you lent him the money at 5 per cent.? I did. I said "How long are you going to take it"? "I cannot take it for less than ten years," he said; "That is a long time," I replied. However, I consented to let him have it for ten years at 5 per cent. The mortgage is registered.

1025. He has paid off a portion? Oh, yes; he is paying it off regularly every quarter. He has paid off, I think, £200 or £300. I could not now tell you exactly how much it is. When he got the first £500 I was going to Singapore at the time, and I said to my son, "If Purkis wants more give it to him conditional on terms of mortgage."

1026. Where is the land on which the mortgage was given? It is fronting the reserve on the North Shore—fronting the eastern side of the reserve.

1027. I suppose you are not in the habit of lending your money at 5 per cent. on suburban property? Well; I have lent it to two or three. I never lend it so as to make any great profit by it. I would do it for a friend—one I thought was persevering and deserving of it. That is how I did it in this case.

1028. You have never had any other cash transactions with Purkis besides the mortgage? No. He told me that he was anxious to get a house. When he spoke to me about it first, I said, "I do not think it is good enough; I do not see any security for the money if I lend it." He replied "I have two allotments of land; you can get one of them." I got one of the allotments from him, and took a mortgage on the other. It was the only way I could secure myself at the time.

1029. *Mr. Mansfield.*] Were there any other loans to Purkis except those on mortgage? None.

1030. Has the interest been paid regularly? I could have brought down the receipts—the bank receipts. He paid by cheque into the bank. The interest is paid up to the last quarter. He was very regular with his payments. He always paid the money to my son, who held a power of attorney for me. He has that because if at any time I happen to go away for a month or two, my son can transact business for me.

1031. Is there any statement you would like to make? No.

1032. If there is anything you wish to bring out with reference to the inquiry, we should be happy to hear it? I should like to see Murray face to face. That is the only thing I would like. Murray sent me a letter, asking me to give him a reference as to character and ability, and I declined to give it to him.

1033. *Mr. Mansfield.*] Have you had any conversation with Murray since you have seen the work? I may have met him once, but I do not believe I met him more than twice. I only met him casually. I said "That work has been opened up, and I am perfectly ashamed of it." That is all the conversation I had with him, and I think I added, "Either you or Flanagan ought to have known something of that." That was all I said to him.

Mr. John Noble re-examined:—

Mr. J. Noble. 1034. *President.*] Were you partner with M'Leod in the contract for Bare Island Fort? No, I was not a partner with him on that contract. I was only working on commission.

1035. Then you were acting as his agent? I was managing the work for him.

1036. Did you eventually go into partnership with him? Not on that contract.

1037. You were almost constantly on the works, I understand? No, I had a dozen jobs at the same time while the works were going on. I was oftenest there in 1881 and 1882. In the latter year I was also at the Heads, and in 1883 I had the foundations at the Post Office to attend to, besides several other jobs. I merely had the setting out and looking after the financial business, and the measuring of the work where necessary.

1038. Did you go down once a month to measure up? Yes; I was there two days a week sometimes; it depended on the officer-in-charge,—when he could meet me.

1039. You did all the measuring? Yes.

1040. How frequently were you down there? Sometimes two days a week. I was there more or less every week.

1041.

Mr. J. Noble.
15 Sept., 1890.

1041. You made visits every week? Yes.
1042. You were there two or three days some weeks? Yes; and at the commencement I was there for two or three weeks till something was started.
1043. Did Purkis give you general directions as to what was to be done? Yes; he would look over the plans, and everything I did not understand he would tell me.
1044. With reference to the departures from the original plans, was it the practice for you to get the instructions to make these alterations? Yes, from Purkis.
1045. Verbally? Yes; he would be on the ground, and would tell me. Sometimes we got the instructions from Colonel Scratchley, in which case what required to be done was pointed out on the moment.
1046. All verbally—no written instructions? No, no written instructions.
1047. What power did you give your foreman under you? The usual way; I just pointed out the work to be done, and told him, "There is the specification and a plan to work on"; nothing further—just verbally.
1048. Who was your senior foreman? John Murray. I had several foremen. Loveridge was there sometimes as foreman.
1049. But John Murray was the principal one? Yes, for a number of years; he had one or two under him occasionally.
1050. Have you seen the work lately? I have seen it. was there along with Colonel de Wolski two months ago.
1051. Since it has been opened up? Yes.
1052. And you saw some bad work? Yes.
1053. Have you formed any opinion how it got there; was that done according to your directions? By no means—no. I was just as much astonished as anyone could possibly be.
1054. Did you instruct Murray to put large stones—lumps of ballast—in the concrete? Yes; he had to place a few in by measure for keys—that was allowed by Morell and Scratchley—where there were heavy masses. That was the only departure from the schedule.
1055. Were they to go in the box? We just had to allow something on account of those which were used for dowels.
1056. Were they measured; was there any deduction made for mixing? We allowed a deficiency in the box.
1057. You did allow a deficiency? Yes; that is always understood.
1058. Then these stones were not over and above the yard-mixing? That was never the intention, by no means.
1059. And you gave instructions accordingly to Murray to put in these stone dowels? Yes.
1060. Can you explain, if you were two or three days a week on the work, how so much of that bad work was done over such a large area? There is not so much bad that I saw.
1061. How many openings did you see on the work? Some three or four.
1062. Not more? There may have been more; I did not count them. I did not pay much attention to the number.
1063. Are there not about eight openings? There may have been.
1064. Did you notice bad work was shown in all of them? I noticed bad work in some, and in some the work was pretty fair.
1065. Did you notice that the holes were pretty evenly distributed over the whole surface of the merlons? I should have preferred to have seen the work opened out in less inclement weather, and not mutilated; after being exposed to the weather for some time it crumbles.
1066. Concrete would not do so. How could you cut it up in a different way—we cannot understand how you can account for so much bad work when you were so frequently on the spot. You must admit that a large portion of the area shows bad work—there is enough to lead us to believe that it is all bad work? I should have rather seen some of the vital parts cut up—the arches rather than the merlons. I daresay the labourers may have done something of that, not thinking it might matter so much in that part of the work, but I know special attention was paid to the arches; I am positive of it.
1067. *Mr. Mansfield.*] I presume all this massive work was paid for as concrete whether it was more or less important? I could not say; the books will show that. I am sure there have been correct measurements taken. Every place had a clear description given of it, and of the quantity used. I feel very positive about the measurements because Purkis was as keen a measurer as I know, and I do know something about measuring.
1068. But you had not two classes of concrete in the schedule? No; but we used superior concrete for certain portions of the work.
1069. But there was only one class in the schedule? Yes.
1070. There was nothing to warrant inferior work being put in—it must have been all measured as good concrete? Yes.
1071. You took care to see that that has been all measured and placed as concrete? I would go and measure round with Purkis, so that I would be convinced that the quantities were there. I had to see the foreman to ascertain what the depths were, so that I should feel satisfied on behalf of the contractor.
1072. *Mr. Mansfield.*] Did you give your foreman permission to vary the quantity of the concrete? No.
1073. Did you ever put a specification in his hand to guide him? Yes; he has had the specification in the office, and the measure for the stone just in the usual way; it was all carried out under his inspection.
1074. *Mr. Wardell.*] Then it would not be true if he said he had not seen the specification? No. What I call the specification is the schedule.
1075. *Mr. Mansfield.*] Giving the description of the proportions? Yes.
1076. *Mr. Wardell.*] He had that? Yes.
1077. Did anyone have an interest in making this work as bad as it was, or economising cement? No, I know of no one. I have seen Murray since, and I mentioned it to him; I said "I do not see how you could have used so little cement;" that is what I said to Murray.
1078. *Mr. Mansfield.*] Can you tell how many barrels of cement were used? At that time we had 10,000 casks of cement from Robbins for various works. We gave orders for 5,000 casks at a time to Mason Bros. Their books would show, but I could not tell.
1079. Would their books show the number of casks that went to Bare Island as distinct from other jobs? I hardly think they would. I do not think they could tell so closely as that; they might.

Mr. J. Noble. 1080. *President.*] Did you not keep a diary, showing that on such a day such a ship landed with so many casks? No; I did not keep any journal there; Murray was in charge of that. I just merely sent the supplies as they were required.

15 Sept., 1890.

1081. Had you no clerk to check the supplies and see that they were properly delivered? No; only Murray.

1082. What check had you then over shipments—supposing you had 250 casks sent to you from the ship, what check had you to show they were duly received? The foreman would take note that whatever supplies he was credited with came to hand.

1083. *Mr. Mansfield.*] How was the cement forwarded—by carrier, or by steamer, or by sailing vessel? We had it conveyed by steamer occasionally, but principally by sailing vessels. We had the “Star of Peace”; she used to take 200 casks at a time.

1084. When the cement arrived what was the process pursued; what did you do? I put a jetty there to facilitate the landing, and we had to wait for the weather sometimes for days before we could land the cement.

1085. Who took charge of it? Murray. I would advise him to be there and tell him that so many casks were on the way.

1086. Would he give a receipt? Yes, to the man who delivered it.

1087. When you required cement to be sent there what process did you adopt—did you send an order in writing to Mason Bros.? I used to go down and tell them the number of casks I wanted at each place, or wherever it was required, and Chester used to come, and in fact there were several during the last twelve years who used to come, and bring it, or Mason Bros. would charge us so much per cask for taking it down to Middle Head or wherever we might require it.

1088. Then there must be a record somewhere of the cement that was used? There are all the receipts; that is, all that are left. Two years ago McLeod and I had a partnership—I was on commission before—and then I believe all the old papers were burnt. I did not want the papers, and nobody else wanted them, but I daresay some of them could be found.

1089. When Mason Bros. rendered their account for so many casks of cement did they make any distinction for cement delivered at Bare Island? Yes, I showed the statement to Mr. Darley. I have it still. It shows how many casks were delivered. £250 was paid to Mason Bros. fifteen months ago on account of Bare Island. That was the last amount paid.

1090. *President.*] That is for the barracks? Yes; I have not the account here. Mason Bros. books would show the particulars.

1091-2. *Mr. Wardell.*] You did not underlet the works? No, there was no sub-letting. I did give four men just at the commencement a small job. Oh, yes, there was the laying of some tarred pavement by the asphalt. They had all the appliances; they laid it and we paid them for it.

1093. *President.*] That was the Seyssel asphalt? No, we laid that ourselves.

1094. Do you remember the time that the Seyssel asphalt was put on top of the laboratory? I could not say; it is so many years ago.

1095. Do you recollect whether it was done in two coats or in one? I could tell by my books whether it was put on in two $\frac{1}{2}$ -inch coats or in one of three quarters of an inch. I could not remember these items now unless I saw the books.

1096. Were you there when the foundations were dug out for the wing walls—those walls enclosing three sides of the Barrack Square? I do not think I was there; I must have been there during some portion of the time, but it must have been a long time ago.

1097. Do you know these retaining walls and the wing wall on each side? Yes.

1098. Were you there when they were constructed? Yes; I remember then going up.

1099. Did you see the foundations prepared? I cannot say I saw the whole of them, I may have seen a portion.

1100. You did not see the foundation before the wall was commenced? I could not say—not to my memory now.

1101. You do not recollect that Murray called your attention to the fact that the bottom was bad? No; I do not recollect his saying anything of that kind to me.

1102. Who passed the bottom of the foundations generally? Mr. Purkis; we would not do anything without his permission.

1103. I suppose you would see it as a rule;—you seem to have been on the ground as much as he was? Not quite; I had a deal to attend to besides Bare Island.

1104. You never saw the bottom of these walls;—you are not aware whether they are on sound rock or not? That I could not swear. I think they must be, because I do not remember anything being put in that did not bottom on a rock. I know we had to go down repeatedly till we got it.

1105. As a matter of fact, it is not all on the rock;—did you carry out any repairs of your own work that was failing? No.

1106. You know that some of the wing-walls were cracking? It is not a rare thing to find a crack in similar work. I saw cracks there years ago.

1107. Who was the foreman on the barracks? James Noble had charge of it. I was away at the time.

1108. Is he a brother or a cousin of yours? A cousin.

1109. He was carrying out certain repairs to the fort, was he not? Not that I am aware of.

1110. *Mr. Mansfield.*] Was Murray there constantly? Formerly, during the construction of the fort. At one time, during my visit to England four years ago, he used to pay the men. He would be away a couple of days during my absence.

1111. Could he have been away so long as to render it possible for him to be ignorant of the character of work being done there? I would hardly think so. The only time he would be away would be from Friday till about Monday. He would go on Friday, pay the men on Saturday, and be back on Monday. I never spoke to him on that subject.

1112. Having reference to the large amount of bad work exposed, it would seem to be impossible but that he must have been aware of what was going on, would it not? If there is so much of it, it could not have been all done during his absence.

1113. *Mr. Wardell.*] Had he any interest in neglecting the work or in allowing bad work to be done? No interest whatever.

1114.

1114. Would it be possible for one to be on the work and to connive with the suppliers of material, and give Mr. J. Noble a receipt for cement that was not there? No; I or McLeod wrote out the cheques for the cement, and we gave the order before it was sent. 15 Sept., 1890.
1115. You say you could not think of anybody being likely to do this work badly? I could not.
1116. It seems a strange thing that there is so much bad work;—the question is, how did it get there? I don't know.
1117. Somebody must have known it, and somebody must have done it? Undoubtedly.
1118. *Mr. Mansfield.*] Can you imagine any process by which cement might be delivered there, and afterwards taken away? No; I could not conceive how it would be possible. No one would have any interest to do such a thing.
1119. The question arises: if a proper quantity of cement was sent for this work, what became of it? I cannot tell.
1120. Can you help us to solve that question? I have not the slightest idea that anyone would dare to do any such thing as you suggest. They could not take it off the island, and I know it was landed.
1121. Was it all landed on the island? Yes; for some time I used to send it over on a wire, a cask at a time, and had it stored there.
1122. Was there any convenience for landing it on the mainland;—you might have been under the impression that it had been landed on the island, whereas it was only landed on the mainland? I had it landed on the mainland, and sent over by wire.
1123. With regard to the cement transported there by the land,—could any of that have been smuggled away without getting to the island at all? We landed it by the cable station.
1124. You do not quite catch my question: Part of the cement was sent overland;—is it possible that only a portion of that reached the island, and that the balance was taken somewhere else? I do not think it would have been possible. It came in small quantities, and some of it was used years before the other was landed by water.
1125. *Mr. Wardell.*] And you are absolutely unable to account for the presence of that bad work? I am quite unable. I have not the slightest idea how it came there.
1126. *President.*] Did you have any money transaction with Purkis? No.
1127. He never borrowed any money from you? Never.
1128. How many hours were the men working there? Eight hours; they would work 8½ hours a day, in order to leave off on Saturday afternoon; they would work 48 hours altogether.
1129. In the account rendered to the Department, under labour item, I noticed in most cases 9 hours a day was charged? That would be for making up the end of the week. At the end of the week you will find it only amounts to 48 hours in all. At one time, during the war scare, the men worked longer hours in fitting up magazines and mounting the guns. That was the only time when there were any extra hours put on. Ordinarily the men worked 48 hours per week.
1130. What check was there on this large amount of time charged against the Government? A slip was handed in every night by the foreman.
1131. To whom? To Mr. Purkis.
1132. Was he there every night to receive it? No; but the slips were there on his table. If he was away three days, three slips would be waiting him showing the nature of the work done, the number of men employed, and the hours they were engaged.
1133. Did each foreman do that, or did Murray do it all? I think Murray had a foreman under him. I could not say if he allowed him to do it. I could not be positive.
1134. Was there no check on the returns made by the foreman, showing if the men were doing Government work or the contractor's work? No, except Mr. Purkis.
1135. But Purkis was away many days a week? Yes.
1136. Then there was absolutely no check that the men did the work? Not in that case. It was left to his judgment. That was the only check I see.
1137. *Mr. Wardell.*] He only knew then what day-work was done by the returns given by the foreman? Yes; he would also know by the execution of the work when he came to look at it. Three or four men would not be working away without doing anything. He would have that for a guide.
1138. But no one did return the day's work except the foreman? No; there was no one else.
1139. *President.*] There are 50,000 odd hours charged for day work;—it would be difficult to check that? But there was an immense amount to show for it. The armour plates had to be fitted up, the approaches to the island had to be made, and a lot of labour had to be used in various other ways.
1140. What is this item for a cook? A man was allowed two days a week to look after Mr. Purkis. He kept the office clean, looked after the bedding, and cooked for him when necessary. He was allowed so much per week.
1141. You just told off a man to do that work? Yes; a man was told off for that purpose.
1142. And you passed two days a week for him? Yes; the same man attended to our office. We kept him fully employed.

WEDNESDAY, 1 OCTOBER, 1890.

Present:—

C. W. DARLEY, Esq., M. Inst. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. Inst. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

And, by invitation, COLONEL DE WOLSKI, R.E., Director of Military Works.

Messrs. John M'Leod and John Noble re-examined:—

1143. *President to Mr. M'Leod.*] We have received a letter from you, Mr. M'Leod, to the effect that you wish to make a further statement about your claim for work at the barracks? Yes. Messrs. John M'Leod and John Noble.
1144. Have you prepared any written statement? I prepared a written statement some months ago which I gave to the Minister at the time.
1145. That was your claim was it not? Yes. 1146. 1 Oct., 1890.

- Messrs. John M'Leod and John Noble.
1 Oct., 1890.
1146. But have you prepared any statement since we made the award? No, except pointing out the difference between the award and our original claim.
1147. Have you put that in writing? I only got the request to make a written statement yesterday, and I have not had the time to comply with it.
1148. Can you make the statement *viva voce*? Yes; there are only five items in dispute.—*Mr. Noble* [*handing in a document*]: This is a statement of the difference between the award and our claim. The first item in dispute is for bricks.
1149. *President.*] You asked £4 2s. 6d. a thousand for them, and we awarded £3? *Mr. Noble*: Yes you have knocked off £1 2s. 6d. per thousand. There were eight tenders altogether, and yours was the lowest both for the whole sum and for this particular item as well. We are not working on the basis of the present time, but on the basis of our first contract. There are three items especially on which we had a little profit, and there are a dozen other items on which we stood to lose. You have cut down the three items, and not mentioned the others.—*Mr. M'Leod*: Mr. Noble has said that we were the lowest tenderers for the brickwork. I have here a list of the five lowest tenders—there were eight altogether—for brickwork per rod (item 44), viz.:—M'Leod, £30 10s.; Jennings, £31; Banks, £32; Topham, [Angus, and Co., £33; Nancarrow, £36.
- and I have here a list of the different prices of each of the five lowest tenderers.
1150. *President.*] We are dealing with raw material delivered on the ground. You are not going to be asked to finish the work, but merely to take a valuation for the material on the ground. The question is whether £3 per thousand is a sufficient price for the bricks? *Mr. M'Leod*: I do not think you can go from the contract price.
1151. *President.*] The Government has been to the expense of putting up a bridge since the time when the price was fixed for the delivery of the bricks? *Mr. M'Leod*: The bridge is there now certainly, but it was not in my contract price.
1152. We are dealing now with the barracks, which is distinctly outside of the contract for the Fort. The question we have to consider really amounts to this: What is a fair price for stock bricks—what could we get them delivered on the ground for? *Mr. M'Leod*: But I contend that the brickwork is not outside my contract. My contract prices are based on those of the Fort.
1153. But you have no price in that contract for stock bricks delivered on the ground. Can you show what a fair price would be. That is the point at issue? *Mr. M'Leod*: £30 10s. was the price we charged for brickwork. If you take the price of the bricks at £4 2s. 6d. per thousand, that comes to £16 10s.; the labour on that brickwork is £7 10s., which I can get done for £5 to-day, and the cement would be £6 10s., which makes up a total of £30 10s.
1154. *Mr. Wardell.*] That is on the basis of your contract? *Mr. M'Leod*: Quite so.
1155. But does not the contract specify that the barracks are to be omitted? *Mr. M'Leod*: It does; but a written agreement has been made since then. I was not in New South Wales when I was told to go on with the barracks. I was in New Zealand.
1156. *Mr. Mansfield.*] At what date was the bridge completed? *Mr. Noble*: We did not erect the bridge.
1157. Can you give us the date approximately? *Mr. Noble*: I think it was between 1886-7.
1158. *President.*] The next item is cement? *Mr. Noble*: Our contract price is £1 10s. per cask; you will see there is a deduction of 5s. per cask for non-supply of sand and water.
1159. We looked into that very carefully, and we came to the conclusion that £1 2s. 6d. would be a good profit price for the contractor. It is really a matter of valuation of material on the ground rather than a question of what was the contract price. The question we considered was what is a fair valuation of the material on the ground, giving a margin of profit? *Mr. Noble*: What we look at is the whole number of items on the schedule, of which there are 114. On the largest item of all we should lose. The three items named are the only ones we should get a profit for, and deductions have been specially made from them.
1160. We look upon it as a valuation. Under ordinary circumstances we would not dream of buying cement for that price, we could get it for very much less. But we considered that some profit was owing to you on the transaction, so we thought that £1 2s. 6d. was a fair price? *Mr. M'Leod*: We wish to give and take as much as possible without losing by it, that is all; and, another thing, we feel we are in a very peculiar position at the present time on account of other things that have taken place. We feel that we are perhaps dealt with rather harshly on account of other things that are occurring.
1161. *Mr. Wardell.*] I do not think that is the idea of the Commission at all? *Mr. M'Leod*: I do not say it is, but we feel that this may be the reason of a legitimate claim being cut down to one half.
1162. *Mr. Mansfield.*] The reason for dealing with these particular items in the way we have done is simply because they represent unutilised material? *Mr. M'Leod*: But that is not our fault at all.
1163. We do not put it forward as a fault, but we deal with it as a matter of fact. You have on hand certain materials which have not been used, and in the opinion of the Commission the prices allowed for the items in the schedule apply to executed work. For this material, which you happen to have by you, the Commission have recommended the Government to offer you a price which seems to them to be a fair and reasonable one after allowing for legitimate profit? *Mr. M'Leod*: We adjusted our claim on what we conceived to be an equitable basis according to the terms of the contract, which included a certain quantity of bricks, and taking the whole contract into account we consider the charge is perfectly fair.
1164. *President.*] The next item is for rolled girders; the question is what is a fair value. There are a few down on the ground, and there are some more in a yard in the city; the purchase price is about 11s.? *Mr. M'Leod*: I admitted that when you asked me the question. I told you straight what I thought we paid for them, still I do not think it was fair to make a valuation for a settlement of the claim. At the time when the work was tendered for, the difficulty of getting any kind of material from Sydney to Bare Island was greater than it is now, but you asked me what was the cost then.
1165. But they were not ordered then; they were ordered subsequently to the erection of the bridge, and when everything was cheap? *Mr. M'Leod*: But it was in the contract. I did not ask for the contract. It was given to me without being asked.
1166. Why did you charge a higher price for the plain joists with no work on them than for the made girders? *Mr. Noble*: In making out a schedule we charged a bigger price for the smaller quantity in those cases where it would not add much to the total amount. It is a question for private judgment to decide. I can distinctly remember in making out that schedule that we expected a larger quantity would be required than was shown on the schedule, and there was only a small amount given. Colonel Scratchley took the whole of the ironwork from us, and we put on a little extra price on this item, seeing that it would not swell up the total amount of the tender.

1167. We looked at that in the same light as we did at the others. There is the material, and the question is, what is a fair thing to offer to the contractor under the circumstances. We know the price is not much over 11s., but we allow something for carting, &c., and we decided that the amount named in the award was sufficient. There was a question whether you should be paid for the girders under item 80 at all, because £2 7s. 6d. is the price of plain rolled joists, whereas the price for built girders is only £1 14s. Therefore, you were only entitled to the smaller price, because these girders were riveted together. It is certainly a paradox on the face of it that the smaller price should be charged for the most expensive work? *Mr. M'Leod*: Our original instructions were that the girders were to be single girders, and it was not until eight or ten days afterwards that they were specified to be bolted together. We were to provide the girders singly, and to bolt them afterwards. So I said, "If the girders are to be bolted afterwards you will have to pay for drilling the holes." They were distinctly ordered single. I believe I could turn up that order yet.
1168. The specification deals differently with rolled and made girders. The question is, are these girders rolled or made? *Mr. Noble*: They were ordered in the first place as rolled joists, but as they had to be built up afterwards, we charged for the building on the other item.
1169. *Mr. Wardell*.] In that case you would be entitled to more than your charge? *Mr. Noble*: Yes; it was not our fault that the order for Bare Island barracks was changed.
1170. *President*.] Is not that shown on the drawings? *Mr. M'Leod*: No.
1171. *Mr. Wardell*.] Have you these orders by you? *Mr. M'Leod*: They ought to be somewhere, but I do not think I have them here. *Mr. Noble*: I can produce Mr. Bruce's order for the alteration, and a section along with the latter.
1172. *Mr. Wardell*.] There is a memorandum by Mr. Barnet, dated 14/4/90, in which he says that "none of the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my Department." This is in answer to a statement contained in a letter from Mr. Quodling, to the effect that Messrs. M'Leod and Noble delivered at Bare Island certain bricks, cement, and iron, to be used in the construction of the defence works at that place? *Mr. M'Leod*: We can show the contrary. *Mr. Noble*: Not with reference to the bricks. *Mr. M'Leod*: No; but the iron. *Mr. Noble*: It is not customary for an architect to order the material; that is done by the contractor, who is responsible for it, and when it has been used he charges accordingly.
1173. *Mr. Wardell*.] But this is a schedule contract? *Mr. Noble*: Nothing is acknowledged or approved until it is in the works. We, as contractors, get the material and put it up, and then it is approved.
1174. But certain bricks were said to have been ordered by officers from the Colonial Architect's Department, and Mr. Barnet says that such is not the case? *Mr. Noble*: There is no order for bricks, of course, but there is an order from Mr. Bruce to alter the dimensions of the girders and to make sundry alterations in the erection. *Mr. M'Leod*: I get a contract and I provide bricks as per specification; it is unnecessary for an architect to give the authority to buy the bricks; I provide them without any order being required. In reference to the girders, I merely asked the question, "Are these the size of girders you require for the work?" They were modified in certain points. We have the order of the clerk of the works for the girders. That is in our possession. Mr. Barnet must have made the minute referred to by Mr. Wardell in misapprehension of what has been done by the officers in his department.
1175. Were the alterations ordered by Mr. Bruce designed by Mr. Barnet? *Mr. M'Leod*: No. *Mr. Noble*: By Mr. Bruce only. *Mr. M'Leod*: He may have consulted Purkis about them, but I am not aware that he said anything at all to Mr. Barnet. Mr. Bruce was in his office, and we had a conversation about the girders, and he said, "We will have such and such an alteration made." *Mr. Noble*: And I have also the section showing alteration required.
1176. *President*.] The principle remains the same in each case. There is the material. What is the value. We offer £483 for so many cwt. of rolled girders, for which you claim £1,147 2s. 6d.? *Mr. Noble*: Were we to make a claim for the loss we have incurred I should have something to say about item 5, which has cost us double the money we got for it, but we say nothing about that. We just work on the schedule. I am satisfied that the rock excavation cost us double what we got for it. We do not make a claim on that. There are only three items out of 114 about which there seems to be any objection.
1177. What is the next item? *Mr. Noble*: The loss of profit. It was our intention to do the barracks in six months. It is fifteen months since the work was stopped. We have been all that time in idleness. We base our claim at 10 per cent. on the amount of the unfinished contract, *i.e.* 10 per cent. on the balance.
1178. The Government had power to stop the works at a moment's notice? *Mr. Noble*: I think it is a very legitimate claim. It is very hard that we should be kept in idleness all that time.
1179. We have put down the interest on £600 advanced on material for nine months, and we have taken that as an average time as some of the payments have only been very recently made? *Mr. Noble*: You allow only 7 per cent., but this is not a thing we wish to speak upon now. We will let that go.
1180. *Mr. Mansfield*.] But surely as this contract is based upon a schedule the only claim that can possibly be made is for the quantity of work done. Is not that the very essence of a schedule contract? *Mr. M'Leod*: If the work had been stopped outright we would not have a shred of a claim, but for purposes of alteration the work has been temporarily suspended, and we have never been informed what step the Government propose to take next. But we have provided everything necessary for the barracks according to the terms of our contract, and now the work is to be altered altogether. If the work had been stopped, and not proceeded with, then we would have no claim, but even if the work had been completed by someone else according to original plans we would have a claim then.
1181. But the very circumstances you bring forward tell against your own case. If the work had been proceeded with by some other contractor something might be said for your claim, but in view of the fact that the whole arrangement of the works is to be altered it seems to me to be a very clear and valid cause for terminating the contract? *Mr. M'Leod*: If the contract had been stopped at once, and the alterations made, I would not have a claim at all except for materials provided, but it has been deferred for fifteen months.
1182. The Commission fail to see where the claim comes in. As for the contention that you have been idle since the suspension of the contract you may as well put in a claim for being idle all the rest of your life. What has it to do with the termination of the contract, whether this inquiry was held six months ago or six months hence—what can that possibly have to do with a claim for loss of time? *Mr. Noble*: We have been waiting, since the suspension of the works, not knowing whether we might be called to go on with the work or not.

Messrs. John
M'Leod and
John Noble.
1 Oct., 1890.

Messrs. John
M'Leod and
John Noble.

1 Oct., 1890.

1183. You do not mean to say that you are suspending your whole operations because Bare Island barracks are not being proceeded with? *Mr. Noble*: We have so far.
1184. *Mr. Wardell*.] Clause 7 of the "General conditions" attached to the specification provides that "The Colonial Architect shall have full power at the commencement of, and from time to time, and at all times, until the completion of the work," to "require any portions of the works to be discontinued." That surely will bar any claim for compensation for loss of profit on what is not executed, and there is a foot-note to the clause in which the contractors' attention is particularly drawn to it? *Mr. Noble*: In this case the plans have been made, and the quantities taken, and the material put on the ground; I do not think any private firm or Government would attempt to rob a contractor in the way proposed. We have only made a claim for the probable amount of work to be done by us, and for the amount of material supplied, with a view of completing the work within a certain time.
1185. *Colonel De Wolski*.] There is no contract to do anything within a certain time? *Mr. Noble*: We did not sign anything, but there was a verbal understanding that we should complete it in six or eight months.
1186. *President*.] The contract only lasted two months? *Mr. M'Leod*: It is not the time we are thinking about but the material supplied. We have been paid for the amount done, and we want to be paid for the material supplied according to the terms of the contract, and for the delay in waiting for fifteen months before the thing was settled. There is a clause in the "General conditions" by which the Colonial Architect, if the work is not completed satisfactorily, can terminate the contract, but that is not the clause we are dealing with here at all.
1187. *President*.] Are there any other points you wish to explain? *Mr. M'Leod*: You say you don't want to discuss the matter about our claim for loss of time.
1188. But we are willing to hear what you have to say? *Mr. M'Leod*: We say if we were doing the work for any private individual he would certainly make an allowance such as we have claimed, but you say you won't make an allowance. If you wish to put the claim to arbitration we are quite willing to accept it. We are fighting for bread and butter. We want to get that if possible.

THURSDAY, 13 NOVEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. |

G. A. MANSFIELD, Esq., F.R.I.B.A.

Colonel Boddam sworn and examined:—

Col. Boddam.

13 Nov., 1890.

1189. *President*.] You are Colonel Boddam? Yes.
1190. I understand you had charge, under Colonel de Wolski, of certain alterations that were carried out at the 25-ton gun battery, Middle Head? Yes.
1191. Certain alterations suggested by Colonel de Wolski? Yes.
1192. What did they consist of? Remounting the guns, putting in new foundations of a different description, cutting down the merlons between the guns, repairing the magazines, and slightly altering the drains and the underground passages.
1193. How much did you take off the concrete when you cut it down? Between 5 and 6 feet in front, and it went off to nothing at the back; about 300 cubic yards in all.
1194. That would bring the merlon in front down to a level with the gun, would it not? Yes.
1195. I understand that the front of the battery has now no wall of concrete projecting over? No; nothing that would be likely to catch a shell.
1196. What kind of concrete did you find? It was freestone concrete. The stones measured on an average from 3 to 4 inches; some were large ones. We took out two or three large blocks of stone, and under each layer of concrete there was a portion measuring about 6 inches, which was quite loose. Then we came to hard concrete again, another foot of good concrete, and again 6 inches of loose concrete.
1197. Were they alternative layers? Yes.
1198. Would what you describe be owing to the concrete having been constantly advanced without being properly rammed? It could not have been properly mixed and rammed.
1199. How thick was the course? About 18 inches.
1200. I suppose you have had experience in concrete? Yes.
1201. If you put in 18 inches and kept advancing at one end without proper ramming, would not the effect be that the stones would roll to the bottom? I think it would. That was the idea I formed. I consider the result was principally due to want of ramming and carelessness.
1202. Did you cut away more than you actually required before you commenced to restore? No; very little. It was very uneven. When we came to bad stuff we cleared that away, and commenced our work on the good.
1203. You took all the loose stuff away before putting in new? Yes; of course the concrete there was not really wanted to resist shell. Earth would have done equally well, so that we did not want to make it specially stronger. We simply cut it down to give it the required slope, and rendered it over.
1204. From your experience as engineer, you think that the explosion of a shell would scatter concrete of whatever quality, would it not? Yes; but it is certainly better to have a little good concrete than all bad, but earth alone at a flat slope would be sufficient to turn a shell.
1205. Would there be much risk now of a shell entering the concrete? No; it will not enter a flat slope, nothing over 1 in 6 or 1 in 5.
1206. Did you make the surface good, then, with rich concrete? Yes.
1207. Is it your opinion that anything would be gained by removing any of the concrete at that spot, or did you make it sufficiently good to last without any further alterations? I don't think much would be gained, because being such a flat slope a very small covering would turn a shell away.
1208. What would be the average thickness of the concrete? About 1 foot; a little more in places, but it would not average more.
1209. That is good concrete, is it not? Yes.
1210. Properly mixed? Yes.
1211. Was that done by contract? Yes.

1212.

1212. Do you remember what the rate was? Two kinds of freestone were used, one costing £1 15s., and the other £1 18s. The former was for the foundations, and the other where timber was required. Col. Boddam.
13 Nov., 1890.
1213. Are you acquainted with the works at Bare Island? Only from having gone there occasionally.
1214. In case the Commission find it necessary to go there again, could you accompany them in Colonel de Wolski's absence? Yes.
1215. Under whose directions was that tunnel cut at George's Head? Under Colonel de Wolski's. I saw part of it done.
1216. Were there not some alterations made to improve the drainage? Yes; there was no drainage to a certain part of the magazine. We had to pump the water out. It all ran through the magazine. The water percolated all through the rock and collected around the magazines.
1217. Have you had experience in firing guns? Yes; for a good many years.
1218. Would you be afraid to fire a gun behind the casemate battery? I don't think freestone is the right thing to put in the walls; it would not stand the penetration of a shell, and is far inferior to blue-stone.
1219. What have you to say about the 25-ton gun battery? I think the roof is quite safe now.
1220. Would the men have confidence in working behind the Battery there? I think so; it is quite secure. You could not damage the cartridge store now that its position has been changed. The magazine was formerly placed in the most vulnerable part of the battery. It has now been removed to a lower level, so that there is no danger of its being broken through.

Colonel de Wolski, R.E., Director of Military Works, re-examined:—

1221. *President.*] Col. Boddam has just been giving us some information with reference to the removal of a portion of the concrete on the merlons at the 25-ton gun, Middle Head. Do you think the Commission would gain anything by making a further examination in that spot? I think it would be very difficult now to distinguish between the old and the new work. A further examination would probably expose some bad work, but it would not be desirable to strip the whole fort under any circumstances, as we have so many works in progress. The concrete is not good, but it will do. I do not think it would be worth while to make any further examination into that part of the work. Col.
de Wolski,
R.E.
13 Nov., 1890.
1222. *Mr. Mansfield.*] And even if we did open it up there would be no certainty as to which was the old and which was the new work? That is so, and as we have taken the magazine away from the front of the battery it is not so exposed to danger now as it was. There was a danger of a shell penetrating the magazines when they were placed in front of the battery.
1223. *President.*] Is it your opinion that the officers in the Military Department may have confidence in the fort now? A fair amount of confidence, I do not say absolute confidence. No concrete of that description, soft sandstone, could be called safe.
1224. As the fort was designed that way, and as it was intended that the concrete should be made of soft sandstone, you think it is sufficiently safe now? I think so for all practical purposes. If a shell were to drop from a sufficiently high angle you would get an explosion which would blow up any concrete. We altered the design of the merlon with a view of throwing off any shells that might come from an ordinary angle. But you are never safe from a shell fired at a very high angle.
1225. Then we would gain nothing by cutting further? No.
1226. With regard to the firing and observing stations at South Head, is there anything to warrant the expenditure that would be entailed by opening up these works? I do not think so, nor do I think that it was ever intended that the Commission should open them up. The complaint was that the bills were mixed up with bills for works in progress, and that no statement was ever made to distinguish works in progress from completed works. This bill for £6,450 (pointing to M'Leod and Noble's final account) included works in progress as well as works completed, and no statement was given to show how much had been spent on works still in progress and how much on works already completed.
1227. Does the bill you refer to include more than one particular work? Yes, the casemate battery at George's Head, and the observing and firing stations. In the *précis* attached to my statement regarding the transfer of the Military Works from the Colonial Architect's Department to the new Military Works Branch occurs the following passage:—"This correspondence (Nos. 56 to 58) relates to a large mass of correspondence on defence works, barracks, &c., handed over by the President of the Royal Commission to the Director, on the 25th July, 1890. This was received from the officers in charge of the Colonial Architect's Department after the Colonial Architect's retirement. Amongst the papers were found the weekly reports of the Clerks of Works, and the detailed statements of accounts, as well as correspondence throwing light upon many points on which information had been persistently denied." That correspondence gives the case as regards all the observing and firing stations we saw the other day. The bill to which I have referred also includes one for the work at George's Head, which was then in course of construction, but not handed over.
1228. Then this Bill includes expenditure for several distinct works? Yes; such for example as £1,641 10s. 3d., for the submarine mine observing station at Middle Head; £1,627 19s. 1d. for the firing station at George's Head; £994 for the observing station at the South Head; £530 6s. 2d. for the observing and firing station at George's Heights; £391 12s. 6d. for the telephone chamber at George's Head; £259 16s. 7d. for four cable trenches; and £1,004 14s. 11d. for the completion of the armoured casemate battery. That battery was only handed over to me the other day. The work for which £1,004 was charged was in the hands of the contractor for some time after it should have been handed over to me. I had to stop the work. That is the complaint about it that I have to make. It is all put down there (*pointing to the statement re the transfer from the Colonial Architect's Department to the Military Works Branch*).
1229. One portion of our inquiry relates to the transfer of the works, papers, and plans from the Colonial Architect's Department to the Military Works Branch. You say you have prepared a statement explaining the whole case in detail;—have you put that in evidence? I will do so (*signing document*). This contains a *précis* of the correspondence, together with all the particulars relating to the transfer.
1230. Is this a fair and correct statement of the case so far as you know it? Yes; of all the important points connected with the transfer.
1231. Does that contain full information—all the information you have on the important points? Yes, all the information I have. 1232.

Col.
de Wolski,
R.E.
18 Nov., 1890.

1232. Is there anything in your opinion which would justify the Commission in examining further with respect to the observing and firing stations, except as regards the making out of the accounts, and the regularity or non-regularity of the payment? The only two points to be inquired into are the payment of the bill without authority, and the wilful keeping back of the papers repeatedly called for by me, —called for time after time.

1233. Our object is to narrow down the scope, the very wide scope, of the inquiry as much as possible? The observing and firing stations were finished before I arrived in the Colony; the casemate battery was in progress when I arrived. I was kept in ignorance of what had been spent, and what was being spent. I did not know that that bill had been paid until the Colonial Architect had retired from office.

1234. Had the contractor been paid off in full? Yes.

1235. And you were under the impression that the contract was still unpaid? Yes; that the Colonial Architect had not settled up with the contractor.

1236. About the Victoria Barracks;—is there any charge of bad work lying there that we have to investigate. I might mention that the flooring and drainage of Victoria Barracks are expressly particularised in the Commission? The only point in reference to the flooring is that the Colonial Architect gave the contract for it without intimating to me that he had done so. My first intimation of it was gained by finding timber on the Barrack Square. I made inquiry, and found that the Colonial Architect had given a contract without intimating to me what he had done. When I wrote to Langley, the contractor, I for the first time discovered the nature of the contract. Neither the specifications, nor anything connected with the contract, were handed over to me. This is all narrated in the statement I have handed in.

1237. Is there anything else for the Commission to investigate in reference to the Victoria Barracks? No; there would be no object in going beyond the statement contained in the papers.

1238. Then that would be covered with that portion of the inquiry dealing with the transfer of the plans and documents? Yes; all the particulars are contained in this statement. The contracts for the drainage of the Victoria Barracks were carried out under the supervision of the Colonial Architect's Department, although the Minister had ordered that everything connected with the defence works was to be handed over to me. The Colonial Architect was carrying out these works by his own officers in spite of the Minister's orders, and he refused to hand them over to me. When questioned he said it was for the benefit of the Service. That is all described in the statement referred to.

1239. Since we last visited Bare Island I believe you have been making further excavations? Yes; in accordance with the orders from the Commission. A trench was opened up at the corner of No. 4 9-inch gun magazine to examine the concrete.

1240. And have you found further defects and bad work? The asphalt covering the magazine was found to be three-quarters of an inch thick, and good. Over the top of the asphalt there was 18 inches of loose stone, not a pretence of cement, except such as had percolated from the concrete above. Above that was 3 feet of fairly good concrete, then a layer of lumps of clay, and around the corner of the magazine the rough boulders had been left with black soil between them. No attempt had been made to dress the rock before putting in the concrete. The concrete generally was very bad. It was put on the rock sloping 1 in 3, and simply rammed down on the slope. It has no hold whatever on the rock.

1241. It was not attached to the rock? No, not in any way.

1242. *Mr. Wardell.*] Were there no berms cut in the rock? No; and no trace of cement. At another portion of the trench the soil round the loose sandstone had been apparently tipped in. It is almost all bad. The asphalt is simply tucked in under the rock. It is not carried over the top of the magazine and then down. At No. 2 9-inch gun the work is very bad. Indeed the stone has apparently been chucked in from wheelbarrows. Another trench was opened up south of the 10-foot passage.

1243. It was ordered by the Commission, I think? Yes. The concrete is generally very bad, except in the walls. There are walls carried up in various portions, and apparently filling put in between them. The walls appear very good, and the filling generally very bad. The work exposed is as bad as any the Commission has seen anywhere.

1244. So that the question of the extent of the bad work is even greater than we thought? The bad work is not only over the merlons but over the back portion of the 10-foot passage. It will all have to come off.

1245. Have you taken any action yet at Newcastle? No; it has not been possible to move further with reference to that work. Only a small portion has been cut at the corner of the 6-inch gun. When we came to look at the plan we found that the opening showed nothing. Colonel Boddam says that there is quite enough opened out in the fort to enable the Commission to judge of the quality of the work.

1246. Then Colonel Boddam will be able to guide us when we go to Newcastle? Yes; he knows as much about Newcastle as I do. He has had nothing to do with the road round the fort. They let a contract recently for mounting guns in the fort. When I went up to Newcastle, before I took over charge, I found they were making a road at a cost of £2,300 without authority. It was being done under the Schedule for the fort. They were paying their labourers 1s. 2d. an hour. Fifty or sixty men were employed. They were doing no work in the fort, but cutting out a road. There was no plan and no authority. They simply started it themselves. I got the Minister to stop the work, and it was finished by the Roads and Bridges Department.

WEDNESDAY, 3 DECEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. W. H. Quodling sworn and examined:—

Mr. W. H. Quodling. 1247. *President.*] You are Chief Accountant in the Public Works Department, I believe? Yes.

1248. Were you appointed by the Minister to communicate with Mr. Barnet with a view of getting a transfer of the documents, &c., from the Colonial Architect's Department to the newly-formed Military Works Branch? Yes, on the 10th December, 1889, by memorandum. [*Vide printed paper No. 40 in the Transfer Appendix.*]

1249. Did you then communicate with Mr. Barnet or did you see him? Not immediately; I saw Colonel de Wolski first. I handed him the paper, and asked him to state explicitly what he required.

1250.

1250. Did you obtain from Colonel de Wolski the particulars you asked for? He kept the paper from the 12th till the 23rd, and then said he had been too busy to prepare a statement.*

1251. Did you then see or write to the Colonial Architect? On the 23rd December I saw the Colonial Architect and Mr. M'Shane with reference chiefly to Russell's contract for the Fort Scratchley works. It was about the measurements. I had received a communication from Colonel de Wolski with reference to it.

Mr. W. H. Quodling.
3 Dec., 1890.

1252. Are you aware that before you were appointed the Minister issued instructions for a transfer to be made? Yes; I understand that instructions were issued for everything to be handed over.

1253. Your services were only called in after some difficulty had arisen? Yes, that I supposed to be the case. I understood that from the correspondence. Many of these letters I have not seen except in type.

1254. Had you to ask Mr. Barnet for any of the plans or papers? On that occasion?

1255. Did not you ask for particulars of accounts on that occasion? Yes, with regard to Fort Scratchley. One account in particular amounted to £925.

1256. Was work actually going on then, or was that for an outstanding claim? The information I received then was that the works were stopped on the 6th July, and measurements were made by the officers of the Colonial Architect's Department in the presence of Russell's representative. There is a memo. dated December 23rd [*vide No. 41 in the Transfer Appendix*], which pretty well explains the nature of the interview. It is a memo. from me to the Director of Military Works.

1257. Did that refer to some measurements that were in the possession of the Colonial Architect's Department, and had not been handed over? Yes; but Mr. Barnet explained that he was waiting for Russell & Co. to send in their claim. He had written to them on the 22nd August, and on the 18th November, but they had not complied with the request.

1258. Did Russell reply that he had not the measurements to give, and that he was prepared to accept the Colonial Architect's measurements? Yes, I was so informed.

1259. Then the Colonial Architect was in possession of the measurements? Yes, and would not hand over the documents till Russell & Co. sent in their final claim in connection with the work. On December 30 I requested the Colonial Architect to furnish me with a copy of the voucher for £935, passed by him in favour of Russell & Co.

1260. Did Mr. Barnet send you a copy? I think he did.

1261. There is a minute below, "Copy herewith. J. B., 3/1/90"? Yes, that was from the Colonial Architect in reply to my request that he would furnish a copy of the account.

1262. It is evident from this that the Colonial Architect was in possession of the information, and had not given it up? Yes; he had it no doubt, and his reason for not giving it up was that he was waiting for Russell's claims to be sent in.

1263. Had you to write again to the Colonial Architect on another occasion to get some information that had not been handed over in the first instance? On many occasions. I wrote to him on the 16th January, referring to my minute of the 11th instant, asking him to supply the information asked for at once. I wrote on the 17th January for the plans of Fort Scratchley.

1264. Did you get them in reply? I could not say from memory. I do not think the Fort Scratchley plans were sent on. I have not the whole of the papers here, and these are merely my copies.

1265. When you wrote did they retain the letters? I imagine so, as I have not got them. If they came back I would pass them on to Colonel de Wolski.

1266. And subsequently you wrote again? Yes; on the 18th January for copies of all the vouchers charged against certain votes. That I have marked as "received and forwarded to Colonel de Wolski, 20th January, 1890." That is in my letter-book. I also wrote on the 22nd January for information about M'Leod and Noble's voucher for £2,500, being the thirty-eighth advance on account of the Casemate Battery at George's Head, and also with reference to Batty and Sheehy's bill for towage. On the 25th January I wrote for certain authorities, specifying nineteen.

1267. Authorities for certain works? Yes.

1268. For the documents? Yes.

1269. Were they sent to you? I could not say from memory. Some of them were, I think. I wrote on the 6th February for a copy of the final voucher in favour of Russell and Co., on account of their contract for alterations to the fortifications at Newcastle, supposed to have been passed in July, 1889.

1270. Would not that have been the final voucher? No; it was for alterations, &c., to the fortifications at Newcastle. I wrote another letter on the same day to the Colonial Architect, requesting him to furnish me with a copy of the schedule of quantities for the work of alterations to the fortifications at Newcastle, the contract for which was let to Russell and Co. On February 19 I wrote a letter to the Director of Military Works, stating that Mr. Bushby, of the Colonial Architect's Department, had, in compliance with the Minister's orders, furnished certain information, and he did so through me to Colonel de Wolski. I wrote on the 19th March to the Colonial Architect for spare copies of the schedule of prices and specifications of the works at Fort Scratchley and any other military works which were being carried out by Colonel de Wolski. Many of these replies did not come direct to me, but to the Under Secretary or Colonel de Wolski. When I was requested to get certain papers I wrote for them, but the replies were sometimes sent to the Under Secretary. These are about the whole of the papers asking for information and documents. There may be a few others. I several times telephoned for papers.

1271. There were some plans at Fort Scratchley asked for which were said to be missing. Did you ask the Colonial Architect for a duplicate set of plans for the fort? I think there was a memo. to that effect. I think that I only asked for plans of Fort Scratchley, not knowing at the time that a duplicate set was in existence.

1272. Did they say in reply that all the plans had been sent? That was the reply made by the Colonial Architect on 16th January, with reference to Fort Scratchley.

1273. On that day you sent the following letter to the Colonial Architect:—

Will you be good enough to furnish me with the following documents relating to the military works at Fort Scratchley:—1. Tracing of plans, complete set. 2. Nature of work executed. 3. Detail of daily labour employed, measurements, and material, &c. 4. Authority, correspondence, and instructions to contractor, if any. To

*ADDED (*on revision*):—The Colonel also stated that, not knowing what documents were in existence, it was impossible for him to specify what was required.—W. H. Q.

Mr. W. H. Quodling. To which Mr. Barnet replied on the following day, as follows:—

3 Dec., 1890. 1. All drawing and tracings, &c., were forwarded to your department on 2nd of September last. 2. Plans and specifications show nature of work. 3. This information will be given in contractor's account, which has not yet been furnished; when it is it will be sent on. 4. Authorities, correspondence, and all papers sent to works on 5th August last. Contractor gets his instructions from specification, and verbally from officer in charge of works.

Can you recollect whether some of these documents you asked for then turned up afterwards, by more particularly specifying the actual plan you wanted? I really could not say. I merely passed the documents on without taking any particular notice of them. A subsequent inquiry was made by Mr. Barling, and I am inclined to think some information was furnished with reference to this, and the Minister also made an inquiry. The Under Secretary held his on the 4th and 5th of February, and the Minister on the 14th.

1274. Was any further information obtained on the 4th and 5th February when the inquiry was held? I think a missing set of plans was then produced. I was not present at the second day's meeting, but I understand some more information was obtained.

1275. I see from the statement made by the Director of Military Works [*vide transfer appendix, bottom of page 3*] that, "the missing set of plans of Fort Scratchley was produced, and a detailed statement of accounts was promised"? Now, I think I remember about the plans being produced. Lieut.-Colonel Boddam was brought over to identify them. They were produced by Bushby. But even then I do not think Colonel de Wolski was perfectly satisfied that he had all the drawings.

1276. Can you call to mind any other occasion on which you found difficulty in getting the information that was asked for? I remember on one occasion I could not get information that was urgently wanted, and I telephoned to Mr. M'Shane, the chief clerk in the Colonial Architect's Office, and asked him for certain information. He said it was waiting for Mr. Barnet's signature, and he shut me off the telephone. I rang him up again, and said, if the information was not there in an hour, I would report the matter to the Minister. It was then sent up.

1277. Were the minutes you saw on the paper written by M'Shane? I could not say they were.

1278. Did you have occasion to interview M'Shane at any time? Only on the first occasion when I went to see Mr. Barnet. By the way, I believe I was there a second time and saw Mr. Coles, but I forgot the exact circumstance.

1279. Mr. M'Shane was chief clerk in the Colonial Architect's Department and took an active part in the matter, I believe? Yes.

1280. Can you call to mind meeting some difficulty in getting information about the barrack clock—your marginal note to No. 46 [*vide transfer appendix*] refers to it? Yes. Colonel de Wolski wanted the information and I sent for it, and a reply came back that no contract was in existence. I then inquired by whom the clock was attended to up to the end of the year. I found out that Tornaghi had been the contractor, and I wrote that further minute about the spirit in which information was vouchsafed by the Colonial Architect. There was a good deal of obstruction, I considered. [*The minute referred to will be found in No. 46 transfer appendix.*]

1281. From what you saw of the transfer you are of opinion there was obstruction? I think so. Unnecessary difficulties were placed in the way, I am sure. This clock business indicates that very clearly I think. It is hard to fix anything, but as another instance of this obstructive spirit I might refer to the Bare Island Barrack contract. I went out to take over the works with Colonel de Wolski under the impression that there was no contract in existence, but M'Leod handed me a letter authorising him to go on with the barracks. That was the first information we had of the existence of the contract or of any arrangement between the Colonial Architect and M'Leod.

1282. It had been kept quiet before, and has not been disclosed that there was any contract existing, is that so? Yes; the erection of the barracks was excluded from the contract for the fortification.

1283. And the papers sent to you or to Colonel de Wolski contained no notice of this contract? None whatever. My report on the subject to the Under Secretary is contained in No. 53. [*Vide transfer appendix.*] It was sent on the 22nd April, 1890.

1284. Were you then first made aware of the existence of the contract or agreement or order given to M'Leod to erect the barracks? That is the first intimation I had about it. Previously I might mention, on April 11, in a paper submitted to the Crown Solicitor, I wrote to the Colonial Architect as follows:—"It is reported that Messrs. M'Leod and Noble delivered at Bare Island certain bricks, cement, and iron, to be used in the construction of the Defence Works at that place. Will you please inform me if these materials were ordered by you or any of your officers; and if they have been approved and accepted as suitable for the work? If so, will you please furnish a statement showing quantities and prices?" To which Mr. Barnet replied as follows:—"None of the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my Department." The Colonial Architect's reply was dated April 14, my request being dated the 11th.

1285. What did you infer from that? I inferred from Mr. Barnet's reply that there was no arrangement with M'Leod, and that the works might be taken over, so we went out on the 21st April, and my report of the 22nd gives the account of what occurred. [*Vide No. 53, Transfer Appendix.*]

1286. Was not that just a year after the order had been given by the Colonial Architect to M'Leod to erect the barracks? Yes; the order was dated April 15, 1889. M'Leod handed me the letter out there on my asking him by what authority he provided these materials. It is clear that if the contractor had an order to go on with the work he must provide the materials.

1287. When did this letter first reach the Department? On April 22, exactly a year after it had been given. Colonel de Wolski did not know of any such arrangement, neither did I. We were both in the dark with reference to it.

1288. What was the date Mr. Barnet was ordered to hand over everything? August 7, 1889.

1289. Then the agreement was handed over to you eight months after the order was given? Yes; that is eight months after Mr. Barling's memo. ordering Mr. Barnet to hand over to Colonel de Wolski "all plans, specifications, books, and other documents in connection with the Military Works and buildings."

1290. That is a very important document to be retained for a period of eight months, kept out of sight, is it not? Yes. I may observe that my letters are divided, and do not show matters very clearly. Some are included in the transfer documents, and some in the documents sent to the Crown Solicitor.

1291. Then, owing to the Colonial Architect keeping back all knowledge of this agreement, your visit to Bare Island was made of no account? Yes; completely.

Mr. James Barnet re-examined :—

1292. *President.*] Since you last gave evidence we have had Messrs. Purkis and Colley under examination, and they expressed surprise at the duties which you expected them to perform. We therefore thought it desirable to give you an opportunity to make some further explanation. I will read you some of the evidence. I quoted to Mr. Colley your reply to the Minister for Public Works on the report made by the Board of Inquiry, in which occurs the following statement :—

“ At the commencement of the work—for its supervision—I selected from my staff two officers, Mr. E. Colley, and Mr. H. H. Purkis, clerks of works, in whom I had the greatest confidence. For the latter, who was to be the resident supervising officer, an office and quarters were provided on the mainland, adjacent to the island; the former (Mr. Colley) as senior officer, had to make periodical inspections of the work and check measurements, valuations, &c., the work being visited by myself as frequently as my many other duties would permit.” I then asked Mr. Colley if he had seen that, to which he replied that he had not seen it, and that he was surprised to see it, because, said Mr. Colley, (Q. 582) “ it is utterly impossible to do it. If Mr. Barnet had told me to check Purkis’s measurements I should not have been able to do it.”

You were under the impression all the time that Mr. Colley was checking Mr. Purkis’s measurements, were you not? Yes, it was his duty to do so.

1293. We also drew Mr. Colley’s attention to your answer to Q. 96, in which you said it was Mr. Colley’s business to check the accounts, whereupon Mr. Colley replied that he checked Purkis’s valuations for a long time, but he found they were so well done they did not require it. He was further shown your answer to the next question, to the effect that Mr. Colley was responsible to you for the work being carried out on the measurements, to which Mr. Colley replied—“ Responsible for measurements! It is impossible.” Mr. Colley has disowned any responsibility for measurements, and says he never made any? Nevertheless, he was responsible.

1294. Then Purkis stated that his many other duties took him so much away from Bare Island that he could not be responsible for the work which went on in his absence. We gathered from you that you were under the impression that he was constantly on the work during the time the concrete was in progress? During the time that the importance of the work required him to be there, of course. He should have been there always when important work was being done.

1295. We see a weak point in this. You were aware that Purkis was away a large portion of the time on other works, the Sydney fortifications, for instance? He had an assistant there.

1296. An assistant there? Yes; on the Sydney fortifications.

1297. But he had no assistant at Bare Island? He had no one there, of course. He should not have left his work if it was necessary for him to be there.

1298. Did you ever ask what provision was made for inspection at Bare Island during his absence? You were fully aware that he was away? Of course he was away occasionally. He should not have been away when it was necessary for him to be there.

1299. Was it not brought under your notice pretty clearly when you passed his travelling vouchers that he was away for long periods? No.

1300. But you had to sign the vouchers? Of course I had to sanction them.

1301. I find from his report that the concrete was progressing chiefly in 1882-4;—in the year 1882 you paid him for being absent from the fort 125 days, in 1883 134 days, and in 1884 136 days;—that is nearly half the year? It does not follow that he was away all day.

1302. But you paid him for being away day and night. Twelve shillings a day and his expenses were paid to him on each of these occasions. He states plainly that he was never at Bare Island more than two days a week on an average, and broken time at that? He should not have been absent when it was necessary for him to be present. He was quite competent to understand that. If the work would not hinder him from being absent, there was no harm done by his going away.

1303. Did it not occur to you to put on an Inspector? No; it did not. I had great confidence in the contractor, and so had Colonel Scratchley.

1304. Of course the contractor is liable to be victimised too;—he may be taken in by his employees? Possibly.

1305. It comes out so prominently that Purkis was away for long periods, and ——? He had no right to be absent if the work required him to be there.

1306. But was not the concrete going on during the time he was away? I could not say if the work was going on continuously.

1307. But the contractor would not stop the work if the Inspector chose to absent himself four days out of the week, would he? Of course not. I may say that it is very seldom that I was there. I was never there with Colonel Scratchley.

1308. *Mr. Wardell.*] The following comment was made by Purkis on your evidence. You were asked (Q. 19) if Mr. Purkis had other duties to perform which would take him away from Bare Island, to which you replied, “ He had occasionally to go away from there,” and you were further asked (Q. 20) “ In his absence what provision did you make for the inspection?” to which you replied “ None; if he had occasion to leave the works he would make arrangements accordingly.” Purkis’s comment on this portion of your evidence was: “ I cannot understand what Mr. Barnet means; he must have forgotten I had George’s Head and Middle Head and South Head under my supervision.”—A. That was eighteen months after the work at Bare Island began.

1309. Purkis was asked another question as to whether you were cognisant of his being so often away from the fort, to which he replied that he issued a weekly report to you of three or four other works which he was supervising at the same time? That is perfectly true, but they were not commenced till eighteen months after the Bare Island works were begun.

1310. But the Bare Island work was going on? Yes; but it was eighteen months ahead of the others.

1311. Was the concrete going on then? I could not say.

1312. Is there anything further you would like to say on this point? No; Colley was responsible for the measurements from the position he was placed in. Whether he did his duty or not is another thing.

1313. *Mr. Mansfield.*] If Purkis had these duties at other places would not his discretion of leaving Bare Island be very limited, would he not be compelled to leave? I think not. He had an assistant at the other places. He had a foreman of the works at Middle Head and George’s Head.

1314.

- Mr. J. Barnet. 1314. Do you think that an officer who by the travelling expense was shown to be about one-third of his time absent from the work could properly fulfil his duties? That was entirely a question of confidence in the contractor. He had great confidence in the contractor, and so had Colonel Scratchley and myself. Colonel Scratchley especially had great confidence in him.
- 3 Dec., 1890. 1315. Do you not regard concrete as work of so especial a nature that constant supervision is necessary, no matter in whose hands it may be? No doubt it is necessary to have supervision in whose hands it may be.
1316. It practically amounts to this, judging from the returns of Purkis's travelling expenses, that he was absent one whole year out of three? It was only an occasional absence after all.
1317. But I mean the aggregate time that he was away amounts to one year out of three? The concrete was not going on all the time.
1318. *President.*] From the expense vouchers we find that Mr. Purkis's absence was very evenly distributed. He was away either two days or three days, taking one week with another week, all through. It was distributed very evenly all through the year. I don't think there was ever a week he was not away? He must have been on the island at the beginning of the work, because it was eighteen months after the commencement of the Bare Island Fort that the other work was begun.
1319. *Mr. Wardell.*] In answer to Q. 27 you state that "Concrete work should never be left at any time. My instructions are that concrete work should never be left"; while, in reply to Q. 78-9, you said you gave Purkis instructions never to leave. Purkis was asked if he remembered having had instructions from you never to leave the work whilst concrete was being done, to which he replied "Never; I do not remember receiving any special instructions whatever about concrete or any other portion of the work."—A. He would not have received instructions on that particular occasion, but it is a general rule in the office that concrete should always be under supervision.
1320. Purkis also said in answer to Q. 679 that, when he was at Bare Island, he could not possibly, owing to his office duties, be on the works more than half the time? I don't know what his office duties had to do with the work at all.
1321. *President.*] The fact that he was paid an allowance of 12s. a day shows that he was away a day and a night, does it not? He was paid according to the regulations.
1322. But it means that he was away a whole day, does it not; because if he were only away a part of the day he would only be entitled to his actual expenses? Yes.
1323. Taking the year 1882 when the concrete was actively proceeding, I find from the vouchers, which do not go into details, that he was away twenty-six days between January and March, fifty-five days between April and September, thirty-one days between September and November, and thirteen days between November and the end of the year—altogether 125 days in the year 1882, when the concrete was making its greatest progress? Well, if it was in progress he had no right to leave it.
1324. Colonel de Wolski made a complaint of great delay and trouble in getting the transfer of the plans and documents, and information connected with the fortifications. Do you remember the Minister giving you instructions to transfer everything to him? Yes, I subsequently explained to the Minister why I did not hand over all the papers at once.
1325. It was on the 7th August, 1889, I think, that the Under Secretary asked you to hand over everything connected with the defence works to Colonel de Wolski? Yes, there is a minute which explains the whole matter. The reason why the documents were not all handed over at once was because we had to square up accounts, and had to keep some of the papers back.
1326. Why was it necessary to keep back the papers? I cannot say now, but the minute will explain it. The whole thing was explained at the time to the Minister.
1327. Was it explained in writing or verbally? In writing.
1328. In going through the papers I see Mr. Barling's minute of the 7th August, 1889, (*Vide* No. 13, Transfer Appendix), "The Minister is very anxious that all plans, specifications, books and other documents in connection with the military works and buildings should be handed over to Colonel de Wolski at the earliest possible moment, and I am desired to ask that Mr. Barnet will be good enough to give the matter his earliest and best attention. If a day can be named when all will be in readiness for the transfer, Colonel de Wolski will be present at this office to receive the documents. No plans have yet been given." To which you reply: "Plans (46) and papers herewith. Bonds, specifications and other papers were forwarded to Works on 5th instant, with minute-paper." You do not say anything there about being obliged to keep the papers back. I understand that afterwards there was a great deal of trouble in getting over the correspondence? No trouble at all. Colonel de Wolski got everything he asked for and whenever he asked for it.
1329. Was it left to him to ask for what he wanted? Yes; and in doing so he gave as much annoyance as he possibly could.
1330. Was it necessary for him to ask for the documents specifically before he could get them? He was expected to ask for what he required, but when we offered them he would not receive them.
1331. Did he decline to take the papers? Yes; the whole matter was explained to the Minister from beginning to end. Colonel de Wolski got all the papers and as he wanted them.
1332. Take the matter of the Bare Island barracks. It was not till this was put into Mr. Quodling's hands that it was ascertained that an agreement had been made with M'Leod, and Mr. Quodling himself states that he had a great deal of trouble to get the papers handed over at all? He had no trouble at all.
1333. On April 11, 1890, Mr. Quodling wrote you as follows:—"It is reported that Messrs. M'Leod and Noble delivered at Bare Island certain bricks, cement, and iron, to be used in the construction of the defence works at that place;—will you please inform me if these materials were ordered by you or any of your officers; and if they have been approved and accepted as suitable for the work." To which you replied that "would the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my Department?" Yes; that is a complete answer to the question.
1334. Do you think so? All the time that these inquiries were being made you held back the letter in which you gave M'Leod permission to erect the barracks;—that letter you suppressed? What do you mean, sir?

1335. It was not until Mr. Quodling went to Bare Island to take over some materials that he ascertained an agreement had been made. His report to the Under-Secretary, dated April 23, 1890, reads as follows:—

Mr. J. Barnett,
3 Dec., 1890.

“In compliance with your instructions, I visited Bare Island yesterday, in company with Colonel de Wolski, R.E., for the purpose of endeavouring to arrive at a settlement with Mr. M’Leod for work performed and materials delivered.

“Unfortunately this object was frustrated in consequence of not having received full information from the Colonial Architect’s Department with reference to the arrangement with Mr. M’Leod for building the barracks.

“In October of last year the Colonial Architect was requested to furnish the contract for constructing the Bare Island Barracks, and he forwarded a bond, specification, and schedule of prices, dated 14th May, 1881, for the construction of the fortifications only, from which it was expressly specified that the barracks were omitted; and, on the 11th instant I wrote to the Colonial Architect to inquire if certain materials had been ordered or accepted by him or any of his officers, to which he replied in the negative.

“From a perusal of these documents it did not appear to me that a contract existed; but when I inquired of Mr. M’Leod why he had delivered the materials before referred to, he handed me a letter from the Colonial Architect, dated 15th April, 1889, in which he was informed he could carry out the barracks at Bare Island under his previous contract for fortifications.

“A copy of that letter is appended, and I have asked the Colonial Architect to send me Mr. M’Leod’s letter, dated 23rd April, 1889, in reply thereto.

“Perhaps, under the circumstances, it would be advisable to obtain the opinion of the Crown Solicitor as to whether these letters constitute a binding agreement upon the Government; and, if so, what further steps should be taken in the matter, in the view that the design for the barracks has been altered.

“In conclusion, I deem it necessary to express the opinion that I was placed in an embarrassing position in consequence of information with reference to these letters not having been furnished to me.”

Then there is the letter from you to Mr. M’Leod, dated 15th April, 1890:—

“In reference to the Barracks proposed to be erected at Bare Island, I have to inform you that you can carry out this work at the schedule prices, under your previous contract for fortifications at the place named, if you are willing to do so.”

That is dated eight months previous to the Minister’s order to hand over the papers? The Minister’s order to do what?

1336. To hand over all papers and contracts to the Military Works Branch. And here is M’Leod’s reply to your letter dated 22/4/89:—

“Sir,—Referring to your letter, *re* barracks at Bare Island, I shall proceed with the contract at once at my previous schedule price rates for fortifications at Bare Island.”

This letter was not handed over to Mr. Quodling till a year after it was written. That document was retained for a year and all but your officers were kept in ignorance that it had been made? I cannot remember the explanation for that now, but I have no doubt it can be explained.

1337. That document was suppressed all those months and everybody was kept in ignorance of its existence? There could be no ignorance, because we had the Minister’s authority, Mr. Dibbs’s authority, to go on with the work.

1338. Colonel de Wolski was in ignorance of it, and Mr. Quodling was in ignorance of it, and the latter had his trip to Bare Island for nothing? They knew all about it. You can’t talk about ignorance, because the very first thing that Colonel de Wolski did when he came to Sydney was to stop the erection of the barracks.

1339. But he did not know there was any contract? Then how could he stop it.

1340. But when he asked for documents relating to the barracks you only handed him papers dated 1881? He knew perfectly well there was a contract. He ordered the work to be stopped.

1341. But in these specifications that you sent to him as your authority for carrying on the work the barracks were expressly omitted? That must have been an oversight. The paper was not kept back with any intention.

1342. When you were asked for your authority for the erection of the barracks by Colonel de Wolski, you handed him the specification, dated 1881, from which the barracks was expressly omitted? There was no doubt that the authority of the Colonial Secretary of the day, Mr. Dibbs, was forthcoming.

1343. I presume that was in your possession at that time too? I do not think so. What I had was a copy of a letter from me to M’Leod, authorising the work to be gone on with. It was not a contract.

1344. I suppose you instructed your officers to deliver up the papers when you were ordered to do so? Yes.

1345. Could your chief clerk inform us how it was that the document was kept back for twelve months? It was not done with any intention. Colonel de Wolski was aware that there was a contract, because I told him so in the presence of the Colonial Secretary.

1346. Mr. Quodling states in his report dated 22nd April, 1889, quoted above (*vide* Q. 1335) that you were requested in the previous October to furnish the contract for constructing the Bare Island Barracks, and you forwarded the specification dated 1881; and on referring to the documents it was found that the barracks were expressly omitted? It was not an authority. The authority came from Mr. Dibbs. The first thing he did when in office was to give an order for the erection of the barracks to be gone on with.

1347. *Mr. Mansfield.*] Would not that form a portion of the contract? I suppose it would. I was instructed to accept M’Leod’s tender, and to tell him to go on with the work. That is the letter which seems to have been missing.

1348. *President.*] That letter was never produced till Mr. Quodling went out to Bare Island. It was never produced till Mr. Quodling and Colonel de Wolski went down to take over the works? I do not see how it could have been produced till then. The letter was in M’Leod’s possession. How could it have been produced?

1349. But you had a copy of it, and there was his letter to you, which was not handed over till the year after it was written. Colonel de Wolski and Mr. Quodling, who were investigating the matter, were left in

Mr. J. Barnet. in ignorance both of the existence and of the nature of the contract? They knew perfectly well that there was a contract. I told them so in the Colonial Secretary's office when the work was stopped. It is the same as the bother they kicked up about the plans of Newcastle Fort. Colonel de Wolski wrote about the plans, and found out afterwards that he had them in his possession all the time.

3 Dec., 1890.

1350. *Mr. Wardell.*] With reference to the difficulty of getting these papers, our President wrote to your department in July last requesting to be furnished with all papers relating to military works. You said they were being collected. They were then forwarded to the Under Secretary for Works on 27th July. How was it that they were not sent before when there was a Minister's order dated 7th August in the previous year that all the plans and documents should be handed over? It was understood that it was only plans and particulars of works in hand that were wanted, and that the order only related to existing contracts, because the papers in the office extended as far back as thirty years, and it was not thought that these were required. The plans at Fort Denison and the Kirribilli are obsolete. I only sent over plans and papers connected with the works in hand. That was all explained to the Minister in the minute.

1351. Did you give your chief clerk instructions to carry out these orders? Yes; to furnish all the plans and papers.

1352. Is his name M'Shane? Yes.

1353. Therefore whatever fault there was in not forwarding these papers was his? Of course I did not go through all the papers. I suppose they were all forwarded. Some were kept back to facilitate the squaring up of the accounts. It was all explained to the Minister. At South Head we were fitting the first disappearing gun. That was nearly completed, and it was thought better to wait a little and wind the whole matter up than to hand it over in its incomplete state.

1354. *President.*] Then Colonel de Wolski complained of the great trouble he had in getting intimation of contracts for the Victoria Barracks? That is another case of a similar kind. The contracts were nearly completed, and they were held back till they were completed. That was an exception. It is an old story and was all cleared up long ago. I never met Colonel de Wolski on the works at any time. I asked him once to meet me and he declined. He said he had other business. The fact is his letters and minutes were most vexatious from beginning to end, intended to annoy.

1355. Can you explain how it was that when the Minister asked you to hand over all contracts and all papers, and your minute subsequently stated that all your officers had been withdrawn from the works, that you still carried on certain works, the Victoria Barracks, for instance? I cannot recollect now, but the whole thing was explained.

1356. On the 23rd of January the Minister desired to know on what authority you continued to carry out the contract for window sashes at the Victoria Barracks when the transfer of everything connected with repairs to these barracks to Colonel de Wolski had been ordered as far back as August, 1889. [*Vide Transfer Appendix No. 48*]? I don't see that has anything to do with Bare Island. My retainer is specially for Bare Island.

1357. The Commission is inquiring into everything connected with the fortifications? The whole thing was explained long ago.

1358. *Mr. Mansfield.*] I am a little in doubt as to your exact meaning when you say you were retained specially for Bare Island? I had a minute from the Minister retaining my services in connection with the works at Bare Island.

1359. You are referring to a communication from the Minister? Yes. As far as the Victoria Barracks are concerned the whole thing was explained in writing long ago.

1360. *President.*] I presume when the Minister instructed the Commission to inquire further into these matters he did not consider your explanation satisfactory, and he wanted to get our report on it? All I know is I explained the whole matter in writing, and you can get a copy of it. I never met Colonel de Wolski on the Barracks, nor anywhere else. In fact he would not meet me.

1361. Your reply to the Minister's request, dated 23rd January, 1890, for your authority for continuing to carry on the work at the Victoria Barracks (*vide Q. 1358*) was as follows:—"The contract for the work named having been taken under this department, it was considered desirable that it should be completed under the same supervision." Was it not? Yes, that is dated March 3rd.

1362. But in August previously you were ordered by the Minister to hand over everything to Colonel de Wolski. Surely that answer is not sufficient for you to give as against the Minister's express instructions? I thought I was doing the very best thing possible to assist Colonel de Wolski.

1363. Then why did you hand over the larger works? That is a different matter. I handed over the fortifications at one time and the barracks at another.

1364. But they were both let under your directions, yet you handed over the one and retained the other? It has all been explained.

1365. Yes, but the same reason would apply to all the works. If you were justified in holding over one it seems to me you would be justified in holding over all? There is no similarity between the different works. They were not in the same state of completion.

1366. *Mr. Mansfield.*] Are we to consider, then, that when an express instruction was given by the Minister in reference to your actions you considered you had a discretionary power as to whether you should obey that instruction or not? I considered I had a discretionary power, certainly. I have always used my discretion, at any rate. I always do that.

1367. *Mr. Wardell.*] That is to say that if you thought the Minister's instructions were wrong you would not act on them? No; I do not say that.

1368. *Mr. Mansfield.*] How did you acquire that discretionary power;—on your own motion? Some Ministers would give me instructions to do certain things, and if I thought the instruction was wrong I would not act on it. I have frequently done so.

1369. *President.*] But that does not apply here at all. Have you ever before received an order to transfer works from your department to another? No.

1370. Then I do not see how it applies. The head of a department must use his judgment in certain cases, but this is an entirely different matter. There is no room for discretion here? What I did I did for the best, at any rate. If I acted wrong the Minister should have said so, but he said nothing.

1371. Now about the contract for winding the barrack clock. There is a paper here (*Vide No. 46, Transfer Appendix*) which shows that on the 7th January, 1890, the Director of Military Works asked the Chief Accountant to get a contract for the maintenance of the barrack clock which had stopped. You replied

replied that "No contract exists." Strictly speaking this was perhaps the truth, because the contract had expired seven days previously, but it was a piece of blinding or prevarication. If the contract had been handed over when you were instructed to transfer everything to the Military Works Branch the clock would have been kept in order, but no intimation was given that such a contract existed? That must have been a mistake.

1372. How do you explain that, when the George's Head Fort was handed over, everything was taken out of it? That was a mistake.

1373. A mistake of Colley's? A mistake in the office somewhere. At Middle Head the military authorities got a house given them free, but nothing was said about that. All these matters have been explained long ago. It is Colonel de Wolski's own fault. He gave as much trouble and annoyance as he could.

1374. But could you not have got over all that by handing over the documents? He would not receive them.

1375. But if you sent them down to the Minister you would have performed your duty and cleared yourself? I was ordered to give them to Colonel de Wolski.

1376. *Mr. Mansfield.*] On one occasion at least when you were dealing with papers that you were ordered to give to him you sent them to the Under Secretary? Colonel de Wolski got some, and the Under Secretary got some. It is a mixed affair altogether.

1377. Did you report that Colonel de Wolski declined to take over the documents? No; I did not think he was going to act as he did or I might have done so.

1378. It would have cleared you if you had done that. A whole year after the Minister's order was given that the transfer should take place, the papers were only then being handed over? That was Colonel de Wolski's fault. He asked for things which turned out to be in his own possession. In fact, he acted like a lunatic. I treated him like a gentleman and he forgot himself.

THURSDAY, 4 DECEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A., | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. James M'Shane sworn and examined:—

1379. *President.*] Is your name James M'Shane? Yes.

1380. You are Chief Clerk in the Government Architect's office, I believe? Yes.

1381. Do you recollect, on or about 7th August, last year, a letter coming to the Colonial Architect telling him to hand over everything to Colonel de Wolski? Yes; I recollect about that date. I recollect the circumstance well.

1382. What action did you take on receipt of that letter? As far as I can recollect, we gathered up all the papers that we thought at all connected with any of the works, and sent them on, but it was not all done at one time. We thought, perhaps, the order only related to papers of the last few years or so. Of course they extend over many years, ever since I have been connected with the office. From time to time we have sent on all the papers, so that we have not any of them left now.

1383. Were the instructions to forward the papers sent to you? The instructions came to me, and I marked them off to the officer whose duty it was to collect the papers.

1384. Did you take steps to see that the officers you instructed to send all the papers collected them all? I could not say now which of the officers received the instructions. We gathered the papers in by degrees.

1385. Did you get instructions to hold back any of the papers belonging to any contract? No; unless those connected with very old ones. All current ones we handed over so far as I am aware. Of course some got left behind through oversight, and search was made, and when they were found we sent them on.

1386. Do you remember the letter from Mr. Barnet to M'Leod, authorising him to erect the barracks? I recollect that very well.

1387. Did you see M'Leod's reply? Yes; I recollect both letters particularly, because the erection of the barracks was a matter which had been delayed for years. Colonel Scratchley was anxious to have them erected, but he went away without getting it done. There were many difficulties in the way, and the result was that for some time the barracks were not gone on with. Then other military authorities thought that the barracks were very much wanted; they pressed the matter, and they eventually succeeded in getting the work carried out on M'Leod's original contract for the Fort at the schedule prices.

1388. The barracks were omitted from the original contract, were they not? Yes.

1389. Why was M'Leod's letter accepting the offer to build the barracks retained in your office? I am not aware that it was so retained.

1390. The date at which M'Leod's letter was handed over to the Military Works Branch was 24th April, 1890, exactly a year after it was written? It is the first time I heard it was retained at all. Among the multiplicity of papers it might have been overlooked. Apparently it was not seen until some time after.

1391. *Mr. Wardell.*] That paper related to a work that was actually going on. The barracks had been ordered, and the materials were being sent in? I think it only related to the barracks.

1392. Yes; but the barracks had been ordered, and the paper containing the order was one of those that was ordered to be returned, and it could hardly have escaped the attention of the officer, because it referred to a work actually in progress? I think any delay must have been quite an oversight. These letters were written sometimes on scraps of paper. I almost recollect that very paper written by M'Leod. I recollect the circumstance well. He said he would go on with the work at schedule prices. There was a special contract to carry on the barracks.

1393. The Colonial Architect requests M'Leod to go on with the barracks; M'Leod acknowledges his instructions, and says he will carry them out. These are important papers which should have been handed over to the Director of Military Works, and, as they refer to a contract then going on, it seems curious that they should have been overlooked? I do not know that there was any reason for their not being handed over. We were only too anxious to get rid of the papers when it came to be known that the works were going to be transferred.

1394.

Mr. J.
M'Shane.
4 Dec. 1890.

Mr. J. M'Shane. 1394. You can see by the report made by Mr. Quodling [*Vide No. 53 Transfer Appendix*] that Colonel de Wolski had great difficulty in finding out whether a contract existed for the erection of the barracks or not? No contract existed at that time because the barracks were omitted.

4 Dec., 1890. 1395. That was precisely what Colonel de Wolski wanted to know, namely, whether a contract for the erection of the barracks existed at the time when he was in charge? Oh, yes.

1396. He wanted to get this information, and asked if there was a contract. In reply the Colonial Architect sent these papers, dated 1881, from which the barracks were excluded, showing that there was no contract based on those papers. These old documents indicated that the barracks were not included in M'Leod's contract? Nor were they at that time. The barracks were erected subsequently under an agreement.

1397. *President.*] I am speaking now of when Colonel de Wolski was in charge. He wanted to find out his position, and by what right M'Leod and Noble were building the barracks? Because they had a contract.

1398. But the document that was sent to him showed that they had not a contract. When Colonel de Wolski asked you for the authority you sent him these documents, which showed there was no contract. Mr. Quodling then (11/4/90) wrote this letter to the Colonial Architect :—

It is reported that Messrs. M'Leod and Noble delivered at Bare Island certain brick, cement, and iron, to be used in the construction of the defence works at that place. Will you please inform me if these materials were ordered by you or any of your officers, and whether they have been approved and accepted as suitable for the work?"

To which Mr. Barnet replied by stating that :—"None of the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my department." All this time Mr. Barnet's letter authorising M'Leod to erect the barracks had been suppressed? No document was suppressed at any time.

1399. It was suppressed so far as Colonel de Wolski was concerned? If it was omitted to be sent with the other papers it was an oversight.

1400. You sent these old papers down, which indicated there was no contract. You were then asked if these materials delivered at Bare Island by the contractors were ordered by you. Colonel de Wolski was trying to find out by what right M'Leod and Noble were erecting the barracks. Mr. Barnet replied by saying that none of those materials had been ordered by him? That is altogether out of my latitude. I presume those materials were ordered by M'Leod with a view of carrying on the works. Though the 1881 contract excluded the barracks, it was afterwards decided that the barracks should be erected at an estimated cost of about £7,000. It was proposed that they should be erected under the Schedule of prices for the fort. This was approved of by the Minister, and it was then that M'Leod and Noble were told to go on with the work.

1401. Whose suggestion was it that the work should be carried out at Schedule prices? I presume the Colonial Architect's. The barracks were omitted at the first instance, but afterwards new military authorities brought heavy pressure to bear, and the Minister authorised the work to be done. The Colonial Architect suggested that the work should be carried out under the Schedule of prices for the fort, and that was done by the authority of the Minister.

1402. Is there any record of that approval by the Minister? Yes, you have it.

1403. It seems Mr. Quodling was trying to find out the nature of the contract, if any contract existed at all, because they wanted to stop the work and alter the barracks. Yet these two documents, Mr. Barnet's letter and M'Leod's reply, were only handed to Mr. Quodling on the 22nd of April last? I don't know with what object it was done, nor why they were detained.

1404. Do you know whether Colonel de Wolski was told that a tender had been accepted or an arrangement had been made with M'Leod to carry on the works? So far as I know Colonel de Wolski was told all the particulars—so far as he asked.

1405. *President.*] That is the point. He did not know what to ask for. He asked for information and old documents were sent up, which showed that the barracks were excluded. Colonel de Wolski then asked by what right M'Leod brought material on the ground? I presume they were bringing it on the ground in connection with their contract.

1406. If your Department had replied to that effect, the whole thing would have been clear? I only surmise it.

1407. Who wrote the minutes on the paper? I wrote them from information given by the officers. When there was any question put with regard to these papers it was referred to the Officer-in-Charge.

1408. You just wrote the minutes and Mr. Barnet signed them? Yes.

1409. Did it never occur to you to give the full information when you were asked? I always did, so far as the reports went and so far as I knew.

1410. Is not that a very cleverly drawn answer? (*Vide Mr. Barnet's reply to Mr. Quodling's letter, quoted in Q. 1398.*) Did you write that? I wrote that no doubt from the report of the officers. The clerk had nothing whatever to do with the work except condensing the reports after they were made.

1411. *Mr. Wardell.*] Did you write the letter signed by Mr. Barnet instructing M'Leod to go on with the work? I might have drafted the letter. I think it would be very likely that I did write it, telling M'Leod that he could go on with the work at schedule prices.

1412. Then you knew that the work was going on at schedule prices? Oh, yes.

1413. I want to know if you knew when you handed these papers to Colonel de Wolski that the barrack contract was going on at the schedule prices? I have no doubt I was aware of it.

1414. *President.*] Don't you think it would have been desirable that you should have sent up a list of all the existing contracts with the papers you were told to supply? Unless we had been asked to give a list of the contracts I do not suppose it would have been done.

1415. As a matter of fact you sent nothing unless it was asked for? Not unless it was asked for. We followed our instructions.

1416-21. That is what you did not do? We did follow them in time. There are so many papers that you can't put your hand on them all at once. They will be cropping up every now and then. They are sometimes put on one side in the different officers' rooms.

MONDAY, 15 DECEMBER, 1890.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

G. A. MANSFIELD, Esq., F.R.I.B.A.

Also, by invitation, COLONEL DE WOLSKI, R.E., Director of Military Works.

Mr. H. H. Purkis re-examined:—

1422. Who carried out the George's Head casemate battery;—who was the contractor? M'Leod and Noble.
 1423. Who supervised the work? It was under my supervision, the same as Bare Island Fort was, but there was a foreman of works at the former place. Samuel Murray was the foreman.
 1424. Was he resident? Yes; he used to go to the head office once a week.
 1425. And where is he now? He has been dead two or three years.
 1426. How often did you visit the George's Head battery? I was there about half the week, according as I had other work to do.
 1427. Do you remember the year the work was in progress? It commenced, I think, in 1883.
 1428. About what year was the greater part of the work finished? In 1886. We made another start with the earthwork quite recently.
 1429. We found a measurement made in 1888? We started again about that time.
 1430. But when was the first part finished? I think we left off about 1886, and then we made another start.
 1431. Was that work running concurrent with Bare Island? Oh, yes.
 1432. And you were half of each week at George's Head? Not exactly at George's Head. I was at South Head as well. These abstract books will show you what works were in progress.
 1433. Did you recognise two classes of concrete at George's Head? There is very little superior concrete there so far as I remember. The guns were not covered with superior concrete as at Bare Island. I remember speaking to Mr. Barnet about it, and telling him I thought it was not necessary. He agreed. In the setting back all the joinings were made of superior concrete.
 1434. But with that exception you only recognised one class of concrete? I think so.
 1435. There is only one class of concrete provided for in the specifications? Yes.
 1436. The reason why I am asking you is that the plan is marked "coarse concrete" on one portion, and "fine concrete" on another portion. Did you recognise that as guiding you? No, the schedule was our guide. The schedule was taken from the plans.
 1437. And not what was written on the plans? No.
 1438. Were you aware that large quantities of blocks of stone were used at George's Head? No, my impression was that there were a few blocks of stone, which I always recognised so long as they did not, when mixed with the broken metal, exceed the measure of the meter; as I have already stated in my evidence on Bare Island. I was wholly in the dark as to more than that. No one was more astonished than myself at the revelations that have been made.
 1439. Are you referring to George's Head? Yes, and to Bare Island as well.
 1440. Were you aware before this that large stones were used at George's Head? I never heard of it. I asked Noble about the concrete there, and he said it was very good. I have never been there since I was with Colonel de Wolski, when handing over the office.
 1441. *Mr. Mansfield.*] You mean since the completion of the works? I mean since I was with Colonel de Wolski, handing over the works, about eighteen months ago.
 1442. Were you not frequently on the works before they were completed? Yes, but I am referring to what has occurred since they were finished.
 1443. Was Mr. Murray resident on the works? Yes; he had occasionally to go to Middle Head when work was going on there. Some, but not all of it, was going on at the same time.
 1444. So that he was not altogether resident at George's Head? Not while he had something to do at Middle Head. There was a special office built for him to sleep in at George's Head. Most of his time was supposed to be spent at George's Head; and during a portion of the period the whole of it was supposed to be spent there.
 1445. Who looked after this work for the contractors. Who was the contractors' foreman? At one time Noble used to look after it a great deal; then his cousin, James Noble, did.
 1446. Did he have a man to assist him? Yes, a working foreman.
 1447. *President.*] Did you never see these large stones going in? No; I allowed a big stone to be put in occasionally when I thought one was needed. If properly put in, I think it improves the concrete.
 1448. Did you look at the concrete when you were on your visits; or were you simply in your office making out your measurements? I used to go on the work as much as I could.
 1449. Did you look at it? Certainly; I used to spend a great deal of time on the work.
 1450. And yet you never saw these large stones put in the work? Never; it would be easy to put in big stones without my noticing it. The big stones would not be all put in at once.
 1451. But we found large cavities in the concrete as if an earthquake had passed through it? I never had the slightest idea that such work was being put in.
 1452. Would you be surprised to hear that the concrete at George's Head was loose enough to admit of an arm being thrust through the rubble? Yes; in the casemate battery?
 1453. Yes? What part was that?
 1454. On the left side of the gun towards the head? On the left wing. I am astonished at it. Murray was there the whole time, especially when that portion was being done. It was the first we did.
 1455. Did you put on superior concrete over the top? No; there is none there, I think. I cannot understand that such work should have been put in. I had not the least idea of anything of the sort. I rather took a pride in the work myself—I thought it was good. I suppose I got over confident about it.

Mr.
H. H. Purkis.
15 Dec., 1890.

Mr. H. H.
Purkis.
15 Dec., 1890.

1456. Do you recollect Colonel Penrose asking for an approach road to be cut from the gallery at the back of the casemate? Oh, yes; he marked it out with me.
1457. *Colonel de Wolski.*] He left a signed plan in which he wanted a passage cut through the right epaulment? He altered that himself, and subsequently gave instructions for the passage to be cut through the wall in the way in which it was eventually done. Colonel Boddam was there and Mr. John Murray. Colonel Penrose walked half way up to George's Head with me at the time, and on the way up marked on the rocks what he wanted done.
1458. Did he not ask you to cut it through the epaulment? No; he altered it, and gave me the data to go so many feet through the rock. Colonel Boddam was present at the time.
1459. *President.*] How did you intend getting out of the cutting that you did make? The cutting communicated with the sunken way to George's Head barracks.
1460. Was not the gradient very steep at that point? It was fairly steep. It was necessary to go down deep enough to allow for covering in the first portion.
1461. Was there no section? No.
1462. Does not the hill rise very rapidly there? Yes.
1463. Were you not asked to make the cutting through the epaulment? No.
1464. Was it not suggested that that would be the best place to make the passage? No more than that it was put on the plan and altered afterwards.
1465. If it had been cut out there, would it not have saved all the excavation on the side of the hill, and come out on the level? I think not. It was altered to reduce the cost.
1466. Was that all supposed to be fine concrete in the epaulment? No.
1467. Was it supposed to be concrete as specified? Yes.
1468. *Mr. Mansfield.*] Where was the superior concrete used at George's Head? Only in joining the covering over gun-rooms, and over magazines, &c., between which the guns were placed. That is as far as I remember.
1469. I notice in this final measurement 1,566 barrels of cement. I suppose that was for superior concrete;—is that for George's Head? No; for all the four works. All the covered passages were done with superior concrete, such being the custom, and superior concrete was placed over magazines and shell-rooms to the extent of about three feet in thickness.
1470. Does that book contain the whole of the measurements? No; this contains the whole of the first part, excepting the soil.
1471. *Colonel de Wolski.*] Some of these books were not handed over to me? This book contains a continuation.
1472. *President.*] Have you prepared a statement showing the cost of each work separately? I used to keep a valuation account which I filed. I had thirty-three for Bare Island, and twenty or thirty for George's Head.
1473. Did you make a final account for each one? Yes.
1474. *Mr. Mansfield.*] How do you account for the fact that in this account all your accounts are lumped together? I had nothing to do with that. I sent in my account for each work separately. The accounts must be about somewhere. I followed precisely the same course at George's Head as I did for Bare Island.
1475. Was it sent to you to certify to afterwards? I certified before it was made up. I have never seen that account before.
1476. Who made that up? Somebody in the Colonial Architect's office, I suppose.
1477. From your accounts? Yes; I presume so.
1478. Would you know the handwriting? I presume it is made from my returns.
1479. Do you know the handwriting? I think it is Howell's or Ellard's. I used to make an account of the progress measurements monthly.
1480. I would like to get the amount of work paid for at George's Head? This measurement book would give the details. I think, however, it is finished in another book called B, but the details are all here, and most of the items.
1481. What check was there as to the number of these casks of cement charged for from time to time? Details will be shown here [*referring to measurement book, item 41.*]
1482. *President.*] Referring to items 47 and 48, I find that in the original contract 976 square yards, five-eighths of an inch thick, were estimated for at 10s. 6d.;—how many were paid for? None.
1483. I find 64 square yards, three-quarters of an inch thick, estimated for at 17s., and that a very much larger quantity than was estimated was paid for. I want to know by what authority the smaller priced item was changed for the higher priced one? It was deemed expedient to put in a better class of work. We used three-quarters of an inch in every other work. Three-quarters of an inch is not too much for a shell-room.
1484. Don't you think that the proper authority ought to have been obtained before changing the item from the low to the high price? Three-quarters of an inch was not too much to put over the magazine. I had to consider how the work would be best done, not what the price was.
1485. *Mr. Mansfield.*] You were working under this document, were you not [*referring to M'Leod's contract*]? Yes.
1486. And you had before you not only the specifications or description of work to be done, but the probable quantities intended to be used? Yes, but many alterations and additions were made.
1487. Did it never strike you, as part of your duty, that when a change of such an extraordinary character was to be made, extraordinary as compared with what was expected when the calculation was made, you should call the attention of the head of the Department to it? I don't say that I did not. It is very likely that I suggested that three-quarters of an inch should be used instead of five-eighths. I do not remember the circumstances just now.
1488. It was expected that nearly a thousand yards of the low-priced material were to be used whereas none were used, but a large quantity was used of the three-quarter inch, which was only one-eighth of an inch extra in size, although it was 6s. 6d. higher in price, and of which only sixty-four yards were expected to be used. Does it not strike you, as a practical man, that that was a change in the character of the work that required the authority of the head of the Department before being allowed? I do not say that I did not get the assent of my superior officer. It is very likely that it was originally intended to put two five-eighth thicknesses, and that it was subsequently altered to one thickness of three-quarters of an inch. I cannot at present connect the circumstances.

1489. *President.*] Are these your final quantities? Yes.

1490. And certified by you? Yes.

1491. *Mr. Mansfield.*] Did you never make a summary at the conclusion of the work? Yes; I always did.

1492. *President.*] I cannot find your summary? It was my custom to make one.

1493. *Mr. Mansfield.*] Referring to the checking of the quantities of cement, you say with reference to the 1,144 yards that by far the greater portion was used in superior concrete? Yes.

1494. And that a quantity of cement so used was checked by a system of measurement, allowing one barrel to a yard of superior concrete? Not one barrel; half a barrel.

1495. What guarantee had you that that half barrel was ever put into that yard of concrete; if you receive 50 barrels of cement you know they are there; but, if you merely arrive at your conclusion by measuring the amount of concrete, how do you know that the cement was put in. Do you simply take the contractor's statement? No, there was a foreman of works. We had a meter to include 18 feet of stone only; the other meter was 27 feet.

1496. When you spoke of a foreman of works did you refer to Murray? He was the foreman of works.

1497. *President.*] Does it cost more to mix up that cement with 18 feet of stone than with 27 feet? Yes. At that time there was no water for the cement, and that was allowed for by the Colonial Architect. Additional time was therefore required for mixing. All that was settled in the office.

1498. You say you had no voice in that; was that added after you sent in your return? Yes; you will find by the schedule that the Newcastle contractor had the same paid to him. What it is for is explained. The schedule does not include mixing and providing water for mixing.

1499. How do you make out there was more labour involved—the Contractor is paid for the labour employed in mixing every yard of concrete; it is in the job; the amount of mixing is not increased, and is included in the schedule? It was decided in the office to allow it. I am not responsible for that. That has been added to my account. It is a separate item.

1500. *Mr. Mansfield.*] That is one of the items that will bring the two accounts nearer together? I did not include it in my account. I thought it had been added but apparently it has not.

1501. *President.*] There is a charge for 3,040 feet of timber used in moving armour plates? That was allowed; we certainly did rip up their timber for them.

1502. So that we may assume the quantities here represent the correct value of the amounts? I am positive. I sent in my final account similar to that. I don't know why it is not here.

1503. Can you find a copy? I think I can find my draft. It was in the Colonial Architect's office, and I dare say it is there now. I destroyed a lot of these things, but it is not likely I destroyed this particular one. I don't know why the copy is not among the papers. The books give all the particulars.

WEDNESDAY, 14 JANUARY, 1891.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Also, by invitation, COLONEL DE WOLSKI, R.E., Director of Military Works.

Mr. Edwin Colley re-examined:—

1504. *President.*] Had you charge of a portion of the plans and papers relating to the Defence Works? Yes; of all current papers. When papers were applied for the letter always came to me, and I saw Mr. Barnet about it.

1505. Do you remember seeing that instructions were given for all papers to be transferred to the new Military Works Branch;—did you get instructions? Not specially. Speaking from memory, Mr. Barnet said, "all papers connected with what is in hand"—something to that effect—"are to be handed over." My instructions were certainly not to hand over everything.

1506. Did you see the Minister's minutes ordering the transfer? I suppose I saw them all, although I do not recollect.

1507. Do you remember seeing this minute:—

"The Minister is very anxious that all plans, specifications, books, and other documents in connection with the military works and buildings should be handed over to Colonel de Wolski at the earliest possible moment." (*Vide* No. 13, Transfer Appendix.)

Yes, I remember that.

1508. Did you give instructions to take any action on that about collecting all the papers? I remember the circumstance well; but the action I took I cannot recall to mind at the moment, but I may say at once that everything was not sent.

1509. Was any reason at the time given why the Minister's order was not obeyed? I do not remember; I took Mr. Barnet's instructions about it.

1510. Your instructions were not to hand over everything? I did not receive instructions to send all the papers. On the occasion of my sending the very last batch of papers before I left, Mr. Barnet came into my room, searched through my drawers, and instructed me what papers were to go and what were not to go. He took the whole of the plans and said, "You can send these, but you are not to send those." His reason was that some of the tracings had been prepared in the office, and he did not want them to go away.

1511. Then did he instruct you that "all the tracings prepared in the office are to be retained?" Yes, all in that lot; that was the instruction he gave.

1512. Were not all the plans made in the office? No; some were made in England; some were handed over to us by Colonel Scratchley.

1513. So that all the plans made in the office were retained? I do not say that, but most.

1514.

Mr. H. H.
Purkis.

15 Dec., 1890.

- Mr. E. Colley. 1514. Did you get any instructions about handing over the offices at George's Head and Bare Island? Yes; I remember distinctly handing over the office at Bare Island to Colonel de Wolski's officer-in-charge, Mr. Watson, also a roll of plans in use on the work.*
- 14 Jan., 1891. 1515. How about the office at George's Head and Middle Head? I remember being called on to hand over the office and papers.
1516. Were you there when they were handed over? I was; some difficulty was raised by the Colonel because the contractors had not been paid in full, and he declined to take over the works till they had been paid.
1517. Were you aware the office at Middle Head was empty when it was handed over? No.
1518. Did you not get orders to remove everything out of the office before handing over the works? No.
1519. Had you anything to do with the Victoria Barracks? Yes; they were under my charge.
1520. Were you aware that the Victoria Barrack contracts were not transferred as they should have been? Yes. Mr. Barnet said with reference to the contracts in hand, "we will finish the contracts in hand ourselves." There was a new contract, I think, taken but not commenced. I believe the papers in connection with that were handed over at once; but answering these questions taxes my memory severely, as I have no documents before me.
1521. Was that the reason why the different contracts were not handed over? That was the reason why the papers referring to the contracts were not handed over.
1522. Was there any reason for that because the Minister's minute was so clear? I know nothing beyond Mr. Barnet saying that we were to finish the contracts that were begun. I do not remember what they were now.
1523. Coming to another matter, the foundations of the walls round the barracks site at Bare Island—do you remember there is a retaining wall round three sides of the barrack square? Yes.
1524. Murray, who was acting as contractor's foreman, told the Commission that all the foundations were examined before he started to work on them, and that one day you went down and he called your attention to a certain portion of the foundation and asked you if it was good enough, and you said it was. The following questions and answers were then given:—
- (841). Did you see the foundations prepared for them? I did. I knew at the time the foundation was going in it was wrong. I wanted to go deeper, but I was not allowed.
- (842). Are you aware that it was built on black sand? No, I know it was very soft rock in places. I would have gone deeper, but Mr. Colley came out and saw and passed it.
- I do not remember the circumstance at all. I do not dispute it, but I do not remember it.
5125. The next question with Murray's answer was as follows:—
- (843). You are quite sure of that? Positive; I wanted to go deeper, but he would not allow me. I am a mason by trade, and I know if a good foundation is put in. I merely worked on instructions. I pointed out that particular spot to Mr. Colley, and I could do no more.
- I don't remember it. I don't undertake to dispute or affirm it.
1526. The three following questions were then given:—
- (844). Do you remember where that spot was? I mean the wall going along where they are going to build a barracks; it was 16 feet high.
- (845). Was it to the right or left as you go in or was it the whole length? The whole length. I pointed it out to Mr. Colley and he said it was quite good enough.
- (846). Did Mr. Colley give any reason why he was content to build upon such a substance? No; he only said it was quite good enough; it was to save expense I suppose.
- A portion of this wall we had examined. It was cracked and giving way, and showing signs of tumbling down, and had to be propped up, and we found it was built on black sand? I don't remember it.
1527. We thought it was only right to call your attention to this evidence. Have you no recollection of the circumstance? No; I was only thirteen times on the Island in three years, and I have no recollection of such an occurrence, but I may say that I never did such a thing before or since.†
1528. There is only one corner of the wall that is on sand. The greater part of the rest of the wall is on what appears to be very soft shale. It has been paid for as rock, and the contractor has been paid for channelling and dressing the rock? I have no recollection of it.

Mr. H. H. Purkis re-examined:—

Mr. H. H. Purkis. The following sworn statement was handed in by witness:—"In my evidence referring to the asphalt items 47 and 48, for the casemate battery, George's Head, given on 15/12/90, I could not remember just at the time the whole of the circumstances in connection with this work. I wish therefore to give clearly the facts by taking the probable quantities given in schedule contract, viz., 976 yards for item 47, and 64 yards for item 48 (total, 1,040 yards), and the total quantity paid for asphalt being only 618 yards, including all additions, &c., carried out, all being paid under item 48. It would appear from this that a preference was given to the contractors as item 48 is the best paying one for them. Nothing could be more at variance with the facts, as the increase to item 48 is owing to the additions of covered passages, the emplacement for No. 1 gun, and the right flank of battery, which portions were not included in the probable quantities given in contract schedule. The 976 yards so given for item 47, was intended for covering the portion for the top surface of the battery, included in the first part of contract only; this portion of the work was ultimately omitted, and two coats of tar was considered all that was necessary, by reason that the roofs of magazines, covered passages, &c., were all protected by $\frac{3}{4}$ in. asphalt damp courses. The tar was substituted with the concurrence of the Colonial Architect. The saving effected by this amounted to several hundreds of pounds. If tar had not been substituted something like 1,500 yards

* NOTE (on revision):—The military were already in possession of the fort. The barracks could not be handed over, as the Contractor had not been arranged with as to payment for work done, materials supplied, &c. I am not aware whether any arrangement has yet been made or not, or who is at present in possession of the barracks.—E.C.

† NOTE (on revision):—That is, built on a bad foundation. But I maintain that sand, when confined, is a good bottom to build on. I have superintended the erection of several buildings on sand, e.g., one under Mr. Mansfield for Mr. Friend, at Darling Point, the Redfern Mortuary Station, and others; and I am not aware of the slightest failure in any case. When I was at Bare Island with the first Commission in June last, the defect referred to did not exist, or was not pointed out, although the wall had then been built four or five years.—E.C.

yards of asphaltting would have been done under item 47, including the additions as carried out. This work would have been profitable to the contractors, especially as they had the asphalt on hand, in anticipation of doing the work. For a full explanation, I would like to refer to the plans and documents, to point out particulars, &c.*

Mr.
H. H. Purkis.
14 Jan., 1891.

1529. *President.*] Your explanation now is that the change from $\frac{5}{8}$ to $\frac{3}{4}$ inch in the Seyssel asphalt was brought about through the fort being enlarged, a better class of concrete being required, and the intention to put asphalt on the concrete? Yes.

1530. It remains for us to say whether we can gather from the plans, whether it was intended to put asphalt on the concrete. Can you show any indication on the plan that that was the intention? I will try. [*Witness examines plan.*]

1531. Have you seen anything on the plan to show that it was intended to put asphalt over the concrete? I have not examined the whole of the plans. It is not shown over any portion of this plan.

1532. So that it is a supposition of yours that a saving was effected by not putting it there? It is not a supposition, I am sure.

1533. Is it not a supposition when it is not referred to in the specification, and not shown on the plan? I do not know what you mean.

1534. You are carrying out a contract, and before you proceed to do any work or to order the contractor to do any work, that is not specified or shown on the plan, is it not customary to seek authority for it? Yes.

1535. Would you not have had to obtain authority before putting asphalt over the fort? No; it was understood from the first, so far as I remember.

1536. By whom? By Mr. Barnet, I presume, and others.

1537. Can you show it in writing that it was understood? I recommended in writing that tar should be substituted.

1538. I am not talking about tar—I want to get at the asphalt—you have stated that the asphalt is not shown on the plans? I said I could not find it on the plans here.

1539. It is not specified? I think it is specified.

1540. What authority could you quote for putting it on? I am sure it was intended to put a covering of asphalt over the fort.

1541. *Mr. Wardell.*] Who told you that that was the intention? I took out the quantities originally.

1542. Who told you to include a top covering of asphalt? There was a description sent with these plans in which it was included, I believe.

1543. Did that appear in the specification, or was it marked on the plan? The description is the specification.

1544. By whom? The late Mr. Morell.

1545. Where is it? I do not know, unless it is with the other documents.

1546. *President.*] Was that made part of the contract? It was my guide for putting on the quantities.

1547. What was done previous to letting the contract is nothing. Was it embodied in the contract, was it signed and attached to the specifications? No.

1548. Then you may dismiss it. What is carried in mens' minds would not govern the contract at all. It has nothing to do with the contract. If it was not specified, you had no right to put it on without special authority? The contractor would take the quantity shown on the schedule.

1549. Seeing that you have given the contractor commission for the omission of items do not you think he would have very quickly claimed compensation for the omission of that item if it had been shown on the plan? I do not quite understand you.

1550. We find that where you have omitted any work that was specified, you have given the contractor a commission? I have not done so. It was settled at the office.

1551. You know it was done because you have certified to the account. Why did not the contractor seek his commission for this work not being carried out if it was part of the contract? I am sure I could not tell you.

1552. If that was part of the contract the contractor is just as much entitled to 10 per cent. for its omission as to 10 per cent. for the omission of the ironwork; if there was any ground for such a charge being made the contractor would have made it, but it was only in your own mind, so we may dismiss this explanation at once? You want to know how the change from five-eighths to three-quarters of an inch was brought about. I am giving you the reason to the best of my belief.

1553. I am not satisfied with the explanation, because you have no grounds for assuming that the asphalt was to go on top of the concrete? I assure you there was a description, and my quantities were taken from the plans and the description.

1554. *Mr. Mansfield.*] Was any similar work five-eighths of an inch in thickness measured for in Bare Island? No; George's Head is the only place where I remember distinctly that five-eighths was mentioned. I took it absolutely as directed by the guide and the plans.

1555. Was any asphalt of any thickness whatever provided for in the Bare Island fort, over the great mass of concrete? I do not know exactly. No, because there it was partly earth work, but at George's Head it was all concrete.

1556. *Mr. Wardell.*] Therefore, if asphalt was intended at George's Head, it would be shown on the plan; you say it was not shown on Bare Island, because it was not intended? I said it was partly earth work there. Although I have not seen it, it might have been written over the plan somewhere.

1557. *President.*] You made all the measurements in conjunction with Noble? Sometimes with Noble, sometimes with Murray. I took the measurements in conjunction with the contractor's partner or agent.

1558. Who held one end of the tape when you made the measurements? We generally had the foreman, sometimes we had the cook.

1559. Did you hold the box and read it yourself? I always read it.

1560. You did not have the reading called out? No, I have always been very particular in my measurements.

1561.

* NOTE (on revision):—I wish to point out that, when writing this statement, my belief was that the asphalt was continued from the magazine roofs over the covered passages. On going through the measurements in my field-books since, I could not find any asphalt measurements taken for over passages in this battery. I remember now that the asphalt stops a few inches over the slate damp course which runs round these roofs. I regret very much to have made this error.—H.H.P.

- Mr. H. H. Purkis.
14 Jan., 1891.
1561. Can you call to mind how you measured these high retaining-walls round the barrack square? Not unless I see my field book. I have taken many thousands of measurements since then.
1562. Here are your measurements (handing witness a book); refresh your memory? I would like to see the small book as well.
1563. *Colonel de Wolski*] This book is the one on which the contractor was paid? I presume the entries are correct.
1564. *President.*] On remeasuring the work, it was ascertained that the measurements were 11 per cent. too great? I do not know, I would like to see it. I could not believe it, because I am certain I was very particular in measuring.
1565. *Colonel de Wolski.*] Mr. Pinchem is going out to-morrow, and we shall have it all measured in witness's presence? You might not be referring to the same place as the one I have given the measurement for in my book. I give a full description in my small book. I would sooner have the comparison made from the latter.
1566. We have your small book; we have had everything carefully measured. Do you know measurement No. 1? I know the position.
1567. That is 2 feet over measured. Pinchem and I measured it the other day. We undercut the wall, and measured it carefully over? Whenever I went out to measure, I did the whole thing complete.
1568. When we were out there the other day we said, that Purkis could not have measured this? If I had not measured everything right off, I would have got confused. I made a rule to measure these things complete, so that there should be no dispute with the contractor. I would say "go down to that." I know that if I measured a certain depth, I gave instructions to go to that depth.
1569. *President.*] But you did not measure it before the work was carried out? I had to do most of it before the work was carried out. It was the only way I could do it. I could not go pottering about measuring 2 feet here and 2 feet there.
1570. So that if the wall was not constructed so thick as you intended it should be the contractor got the difference? Of course I would see that the wall was as thick as I intended it should be.
1571. Did you take levels afterwards to see that the contractor carried out your instructions? I always gave him the height to go to.
1572. Is it the usual thing to make measurements in large bulk work before the work is executed? I do not see how it could be done afterwards—not work of that kind. When they are going on with the work there is scarcely room to move. That was my idea of measuring, and I thought it was the proper way.
1573. I have had a good many years experience of this sort of work, and I never heard before of a man leaving a contractor to carry his instructions out to the height and depth required without seeing that the work was properly done? We took levels to certain points and intersections.
1574. How did you satisfy yourself that the contractor was putting in proper thickness? The thickness would show itself. I was only away two or three or four days at any time, and I could see whether the walls were carried to the proper thickness. I cannot understand how it has happened. I have not done it wilfully.
1575. *Colonel de Wolski.*] Everything I have examined I can state on oath has been over-measured. The asphalt has been measured as at a double thickness where only one thickness has been put on. In the foundations of cells 2 feet 11 inches has been measured where only a few inches have been laid. I am sure it cannot be.
- 1575½. If you like to come out you can see for yourself? Will you produce my books. There may be a few errors from so many measurements.
1576. The foundations also have been over measured? If you will take my books you will see everything has been measured in a proper practical manner. This is a most extraordinary surprise about the foundations being over measured.
- 1576½. *President.*] Can you go out to-morrow? Yes. I think the contractor should be present.
1577. I do not see why, unless you received your measurement from him, and wish to throw the responsibility on his shoulders? Oh, no.
- 1577½. *Mr. Mansfield.*] You are offered an opportunity of explaining your measurements? It is possible that I have made mistakes.
1578. *President.*] You are offered the opportunity of going out and give a contradiction to the statement? I think more than two of us should go out. I think there should be four.
- 1578½. For what? To measure.
1579. But surely you do not want four to assist you to measure? There was always Murray, and generally Noble, assisting me when I measured.
- 1579½. If there were four of you measuring, then the contractor must have had three representatives, because you told us you were the only one representing the Government, but you can have as many to make the measurements as you like? I should like the measurements to be very carefully made in justice to myself. Would you show me where these measurements were made.
1580. *Colonel de Wolski.*] This is from the measurement book on which the contractor was paid. It is in your handwriting? Has it been correctly transcribed.
- 1580½. *President.*] You are equally responsible if you have made an error in transcribing from your other books? I am responsible for every error that is there, certainly. There may be an error or two in so many measurements.
1581. *Colonel de Wolski.*] We have only discovered one error in the computations? With regard to tar-paving, we laid some stone in casemate, and a portion of the tar-paving was taken up for this, and things cropped up in the course of the job which I cannot precisely explain now, but I am very certain that if I have taken any measurements, I believed the work was carried out. As to tar-paving, I may have been mistaken. I think I very well know how to measure.
- 1581½. Everything I have examined is over measured? This is such a serious charge that I think the Commission should go out.
1582. Two half inch layers have been charged for cheeses, whereas only ¼ of an inch was laid? The cement certainly destroys the asphalt somewhat.

FRIDAY, 23 JANUARY, 1891.

Present:—

C. W. DARLEY, Esq., M.INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M.INST. C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Also, by invitation, COLONEL DE WOLSKI, R.E., Director of Military Works.

Mr. Karl Landerer sworn and examined:—

1583. *President.*] What is your name? Karl Landerer.
1584. Do you hold the position of bombardier at Fort Scratchley? Yes.
1585. Your duty is to keep the keys of the fort? Yes. When the man who preceded me gave me the keys, I found there were three missing, and he told me that Bushby took them away. Bushby was there about the time the things were taken away.
1586. Was Bushby long in charge of the fort after you went there? Bushby was not there when I was there the last time.
1587. Then you are only speaking of what you heard since you went there? Yes.
1588. Did you ever get the three keys? No. They were supposed to be extra door keys.
1589. What doors? The lamp-room, the shell recess, and the cartridge recess.
1590. Are they duplicate keys for those three doors? Yes.
1591. Then you have keys? No, none other.
1592. Can you not get in? Yes, the doors are not locked.
1593. Did you never get keys for those doors? No.
1594. When did you go to the fort? I have been three times. I went five years ago for the first time. The last time I had charge of the keys.
1595. When did you take charge of the keys? In August last.
1596. Was that the last time you had charge of the keys? Yes.
1597. And that was the only time it came under your notice that the keys were not there? Yes. I am not responsible for the keys going astray. I made inquiries from the man who handed me the keys over, and he told me the keys were lost or taken away by Bushby, and another man told me the same, so I sent up a report that the keys had been lost or taken away by Bushby.

Mr.
K. Landerer.
23 Jan., 1891.

Mr. Samuel Campbell sworn and examined:—

1598. *President.*] What is your name? Samuel Campbell.
1599. Are you partner with Russell & Co., Newcastle, contractors for the fort? Yes; I am one of the firm.
1600. Carrying out works in connection with the fortifications at Newcastle? Yes.
1601. Was the contract let to Russell to carry out the fort on Signal Hill? Yes.
1602. Did you not at that time act as Government Inspector? Yes; for the Colonial Architect.
1603. When did you cease to fill the position of Government Inspector on the works? I think it was in 1883, I am not sure. It was at the time that they wanted to remove me from there, on account of my being a son-in-law of the contractor. The matter was brought up in the House.
1604. Was the fort contract properly finished then? No.
1605. Did you resign the position of Government Inspector? Yes.
1606. And joined the contractor? Yes.
1607. We observed, in going over the work, some bricks in the concrete—will you state the authority for those bricks being put in there; it was done while you were Inspector? It was. I cannot give any authority other than my own for using a certain amount of broken bricks along with the blue-stone. The bricks were on the ground, were part of the Harbour-master's residence, and I told the contractor that, if he got them properly cleaned and broken, I would allow him to mix them with the concrete.
1608. Did you allow him to put them in whole? No, I did not.
1609. Did you not see that some had been put in whole? Yes, I saw some when the concrete was opened up, I do not know how they could have got there.
1610. Did you not see the heap of concrete lying on the outside of the mound the day we visited the fort? Yes; I did not notice it before.
1611. A large number of bricks rolled out quite perfect? In a good many places they were used for filling up. Colonel de Wolski pointed some out on the floor of the look-out place. He complained that that was bad concrete, but it was filling, making good underneath the floor.
1612. Making good with concrete? No, just the old bricks were used for filling in.
1613. But I am referring to the bricks in the concrete? I would be only about twice a day on the job. I had a lot of drawing to do in the office. There was a man named Murray to stand over the work while it was being done.
1614. You had an Inspector under you? Yes; he was supposed to stand there the whole time, keeping tally and seeing that the concrete was properly mixed. He was supposed to be on the work the whole of the time that it was going on.
1615. Who succeeded you as Inspector of the work? Murray, the sub-inspector, took charge.
1616. You handed over to him? Yes.
1617. Did he remain long? I could not say, I think for over a year. He was there until Bushby was appointed, I think. That was the first job Bushby had in the Department. I have a bad memory for dates, but I think Murray would have been there a year or eighteen months, probably more than that, when he was succeeded by Bushby.
1618. Did the Government provide you with an office? Yes.
1619. It was in the contract? Yes.
1620. Erected by the contractor? Yes.
1621. Was it on the fort, within the fort limits? No, not at that time; it was just outside the ditch.
1622. It is standing there still? No, it was removed and used as a look-out station; it is on the job now.

Mr.
S. Campbell.
23 Jan., 1891.

Mr.
S. Campbell.
23 Jan., 1891.

1623. Was there any office provided for the clerk of works? Since?
1624. Yes, since? There is an office down the road.
1625. That is not the same office? No.
1626. This was another office subsequently provided? Yes.
1627. Did Bushby occupy that? Yes.
1628. Was there living accommodation in it? There were two rooms and a kitchen.
1629. I think you were saying the other day that Bushby rented the office? Yes. The place was let. The man who was in it told me he was paying rent. He is in one of our houses now. I spoke to Mr. Colley about it, and I am not sure but I think he said that Bushby had told him about it, and that he (Bushby) intended sending the money when he had collected the rent to the Department. I know there was some mention made of that.
1630. What was the name of the man who leased the house? I cannot think of his name, although he is a tenant of ours. He lives in a little cottage near Stephenson Place.
1631. Was he employed on the works? No, I think not. He was a gardener. I believe it was after the work was pretty well finished that he leased the cottage. He used to go about attending the gardens, and does so still.
1632. What was the next contract your firm got? I cannot say which contract came next.
1633. Did you not get a contract for making a road round the fort? Yes.
1634. Had you a regular contract, a stamped agreement? I wrote offering to carry it out at our schedule prices, and we got notice from the Department that the work was to be carried out under our schedule of prices, and we were to send a shilling stamp up attached to our tender, I think, or contract, which we did.
1635. Was that road constructed principally by day-work or by measurement? It was nearly all of it done by day-work—all the excavation.
1636. How did you carry on that contract—did you look after it yourself, or had you a good foreman? We had a foreman, but Bushby took charge himself. I think he did not like our foreman, and said he would not allow the foreman to direct the men. He directed them himself.
1637. You paid the men? Yes.
1638. And who kept their time? Our foreman. That was all the use we had for him then.
1639. It did not matter to you whether the men were working or not? No, it did not matter.
1640. Did you or Russell engage men to do this work? Bushby would put them on and discharge them.
1641. He took the power himself for that? Yes, we discharged a man for giving insolence to the foreman, and Bushby put him on again.
1642. What was the man's name? I cannot say now, but we had it on the books.
1643. Was he any relation of Bushby's? I believe not.
1644. Did you ever engage any relatives of Bushby, and employ them there? There was his son and father.
1645. Any other relatives? I think not. Did I say his son? I meant his brother.
1646. Any other relatives? I think not.
1647. What were they doing? His brother was a stone-mason employed in cutting down concrete.
1648. Do you know his brother by sight? Oh, yes.
1649. Was he a qualified mason? Oh, yes, he was a good mason.
1650. What did his father do? I think we eventually sent our foreman away because Bushby and he did not agree; Bushby could not put up with him. Our foreman was speaking about leaving, and we put him into another place, and when he went Bushby put his father in charge.
1651. Was he competent? I believe so. I never saw him working at the trade, but I believe he was a mason. The men were just excavating, spreading the material, and he had charge of them. He kept their time like our foreman, and had charge of the men.
1652. The father kept the time? Yes.
1653. And handed you the pay-sheets? Yes.
1654. And Bushby returned the time with the number of hours work, &c., on the voucher, or did you make up your voucher from your own pay-sheets? No, we got his signature, we were supposed to get it every day—so many men employed, so many labourers, so many masons, &c. Bushby's father used to write out the documents and Bushby signed them.
1655. The father kept the time by which you made out your vouchers? Yes, of course, we paid him; he was our employee on our books.
1656. But his time was charged to the Government? Yes.
1657. Then you charged the time-keeper's time to the Government? He was not there as time-keeper; he was directing the men and doing whatever had to be done. Our time-keeper only goes up there twice a day to see that the men are at work.
1658. Do you have to keep a time-keeper on your present works? Yes, he is only there a couple of times; the foreman gives him the time.
1659. If you have a few men doing contract work and a number of labourers doing day work, do you charge the foreman's time to the Government? At Wollongong we had only a very few labourers working for us; and a good many working for the Government, and we proposed to charge the foreman's time, but Mr. Owen would not allow us to do it.
1660. He was right; you might as well charge the contractors' own time? I do not think that. Say the Government have only work for two or three men, it would not pay us to employ them and a foreman to look after them. We should want to be paid for the foreman's time.
1661. But this was a very big work? Yes, fifty or sixty men were employed.
1662. So the Government paid a timekeeper and everything on this job? Yes.
1663. You had no man at all? No, unless we were there occasionally ourselves. It does not take much time to keep the time.
1664. Did Bushby make all the returns? His father made them; he filled in the documents.
1665. The father did all the clerical work in fact, so the Government paid your clerk as well? You cannot say that.
1666. I do say that? But he kept the men's time.
1667. Did he? He kept the number of hours, and from his returns our timekeeper took the men's time.
1668. Were you carrying on day-work on the road round the fort at the same time? Yes. 1669.

Mr.
S. Campbell.
23 Jan., 1891.

1669. And were separate accounts kept of the two works? Yes.
1670. Were they kept separately all the time? Yes.
1671. Was there one return of the number of men on the road, and another of the number of men on the fort? Yes.
1672. Quite distinct? Yes.
1673. And were you paid on the same voucher by the Government? No, they were separate. I am not sure whether we got anything on account of the road at the time the road was stopped, but I know everything was kept separate to be charged separately, and I naturally expected a separate voucher for each.
1674. There was a further contract for alterations and additions to Fort Scratchley, was there not? Yes.
1675. That was the third contract? Yes.
1676. Did you get that by public tender? Yes.
1677. When? Either in 1888 or 1889.
1678. Were the probable quantities in that work given? No.
1679. What were you asked to tender on—simply on the schedule? Yes.
1680. No other particulars? No.
1681. No plans? No definite plans. I cannot exactly remember now what the plans were we did see. I think there was a sort of a general plan. I do not think there were any details or sections.
1682. Was any other information given, because contractors generally like to know if there are 10 yards or 1,000 yards of brick-work to be done before they tender? No quantity was named, but we thought it would include the lot. There was nothing definite. We could not say what it was to be. We were guided by our experience, having done similar work before.
1683. But, if there were no plans, you might be called upon to do some extremely difficult work? So we might; we had to take our risk of that.
1684. You went blindly into it, not knowing whether you were going to build a 9-inch brick wall or a 6-foot wall? Being used to fortification work, we thought we could judge near enough what was required.
1685. Had you a specification? Yes—a printed specification, with the schedule attached.
1686. Nothing beyond the schedule—because it is only a schedule? That is not all; there is a specification with it (*pointing to schedule*).
1687. You do not call that a specification? No.
1688. That is hardly a specification (*pointing to document*)? That was all we saw.
1689. Then, you tendered to do the work without a specification, without plans, and without quantities? I cannot say without plans, because there was a general plan.
1690. But you saw no plans except the general one? No.
1691. What work did you carry out under that specification? I really could not say what was carried out under it. I could tell by the dates. I think it was under that schedule that the road was built.
1692. Then the road round the fort was carried out under this contract? Yes.
1693. And when you tendered, did you know you were going to carry out that road? No, not at the time.
1694. Did you erect a pilot's house under that contract? We did not erect a pilot's house at all.
1695. Was it the pilot's look-out house? Yes; and there was a bit of fencing in connection with the road down at the pilot's place; we interfered with a shed of his.
1696. Did you carry out the southern scarp? Yes.
1697. Did you know you were going to do that? No, not till we were told to do it. Bushby's brother had charge of it.
1698. Did you receive at once instructions to carry out the road after getting the contract? Yes; we went to work at it at once.
1699. This contract states that it is a specification for proposed alterations and additions to Fort Scratchley? Yes.
1700. Did you finish the work at the fort then? No; we had the pit excavated, and Bushby said we could not go on any further till he got more details.
1701. You had to wait for plans? Yes; the plans were all right, but Bushby did not think they were definite enough.
1702. Seeing that nothing was done at the fort but excavation, what was delaying the work? We were waiting instructions from Bushby, and he said he was waiting for further details. It was not by our wish that the work was not going on.
1703. Are you now finishing that contract;—was that the work we saw you on the other day? That was a fresh contract.
1704. This contract was completed? Not entirely; we have not been paid; there are two or three little things in connection with the guide rods, and the grates we have to supply—a few pounds worth altogether.
1705. It is practically finished? Yes.
1706. And you are now working under a fresh and later agreement? Yes.
1707. Under Colonel de Wolski? Yes.
1708. And when you were working in the fort portion of the contract, did Bushby engage all the men there, too, for the concrete work? No; of course we would not allow that.
1709. I am referring to the day work;—did Bushby claim the right to engage the men on the fort portion of the contract, or simply to supply the men on the road portion of the contract? He engaged the men on the southern scarp—that is part of the fort. That is included in the fortifications, and was carried out in the same way as the road; but for the day work in the fort—it is only a few hours usually—some of our other men whom we employed ourselves would be sent on to do that.
1710. *Mr. Wardell.*] I understand you to say that Bushby did not employ any of the men by day work? Not in respect of the fortifications proper.
1711. Did he employ men on any other work except the road at day work? Yes, outside the ditch of the fort; I believe that is included in the fortification work.
1712. And Bushby employed all the labour to do that? Yes; that was all day work.
1713. Do you recollect how Bushby's father's time was charged, and under what head? Under the head of labour, just the same as all the rest of the men employed on that job.

- Mr. S. Campbell.
23 Jan., 1891.
1714. But what was he described as? As a labourer. There was extra time allowed; I forget what it was now; it was put down to make up. He got more wages than the labourers, and there was extra time put down to cover that. Now, I remember, there was a boy employed. It was not extra time put down. Bushby's father and the boy were put down as two men. The boy got so much, and the rest went to Bushby's father; that was it. A charge was made for two men—for the foreman (Bushby's father), and the boy.
1715. Then the man and boy were paid for as two men would have been paid? That is it.
1716. And the difference went to Bushby's father? That is it.
1717. Do you know whether the details of the items of the southern scarp and the gun-pit were kept separately? The southern escarpment and the fort were, I believe, kept together. The look-out house was kept entirely separate, but it is on the books in any case. Our foreman would put this down to the look-out house, that to the fortifications, and that to the road, as the case might be.

Mr. Robert Bushby sworn and examined:—

- Mr. R. Bushby.
23 Jan., 1891.
1718. What is your name? Robert Bushby.
1719. Are you employed in the Government Architect's Department? Yes; as Foreman of Works.
1720. And were you employed in that capacity at Newcastle? I was. 1722.
1721. At Fort Scratchley? Yes.
1722. Do you remember when you took charge? About five years ago.
1723. Whom did you succeed? Samuel Murray.
1724. Did he remain as your assistant, or did he leave the fort? He remained a week to show me the work. I took instructions from him.
1725. What was going on when you went there? The removal of the hill on the southern scarp. The hill was on the line of fire of the gun, and had to be removed.
1726. Under what contract? Under Russell's schedule contract.
1727. Under which—the original first contract? I do not know which one. The whole of the fort was completed at that time; nothing was being done in the fort; the work consisted of excavations; the only men employed were labourers—quarrymen's labourers
1728. Was the contract taken for alterations to the fort subsequent to that? Yes; about two and a half years after I left.
1729. After? Oh, yes. I was superintendent at the Garden Island works after that. The last contract was let to Russell, and I was sent to superintend it. I superintended the erection of the barracks—a £9,000 job altogether—and the erection of the Morgue in Merewether-street, together with other repairs. I assisted Mr. Lewis.
1730. Did you leave Newcastle on that occasion? The first time I was there about fourteen months.
1731. When did you go back again? Last March twelve months.
1732. March, 1889? I could give you the exact date.
1733. That is near enough,—have you it in your book? Yes (*referring to book*), 23 March, 1889.
1734. Was the contract let to Russell? Yes.
1735. For alterations to Fort Scratchley? Yes. This is the specification.
1736. Here is the specification (*showing witness another*)? It is the same.
1737. This is the original copy? Yes; that is the same as the one I have.
1738. What work was it intended to do when that contract was let;—what was shown on the plans? I helped to draw the specification out, along with Mr. Colley, and it was not known what work was actually to be done; but Mr. Colley said that Mr. Barnett was of the opinion that it would be better to draw out the specification, so that the contractor would not be bound to do the whole of the guns, as we could not let the whole of the guns on the one contract; alterations being made from time to time.
1739. But was there any plan showing that even one gun was to be done? No; only showing the class of work. Rough quantities of what was required were given, and the tenders were based on the quantities. The contractors had no quantities; they had no idea of what quantities were to be used.
1740. There was no detailed plan? It was to be generally similar to the other work, but no detailed plan was given; nothing that could be binding on the Colonial Architect.
1741. Roughly speaking, what work did you carry out under that contract? The excavation of the pit for the 8-inch gun. They did not supply me with details, and in consequence I asked for other work, and I was given the road around the fort.
1742. And you made that? I did not make it, but I made excavations; it was done under the same schedule; it was all included in the same schedule.
1743. With a look-out tower in the middle? That was in the fort, not on the road.
1744. Did you then commence the construction of the road round the fort? Yes.
1745. About how many men were employed on that road? A different number at different times, averaging from twenty to sixty, together with horses and carts.
1746. Did you receive the time and number of hours' work from the contractor? I got a day-slip from the contractor's foreman each day, which I checked. If there was any error I crossed it out on my slip, and the contractor's foreman took a note of it and crossed it out on his book. The contractor kept a man on the works as a sort of ganger. He was there before I went. He remained a few days, and the contractor sent another.
1747. What was his name? Charley was the name of the one I knew. There was a special item on the pay-sheet for a foreman—there must be a ganger—and, as the other inspector told me that the boy or nipper and the foreman were charged as two men in order to make up the foreman's extra wage, I did the same.
1748. But surely the contractor should pay for looking after his own men? Yes; but this was done before I went, and my instructions were to do the same.
1749. To employ a foreman and a boy, and charge as two men? Yes. The foreman took orders from me; he was responsible; he saw about getting the materials and everything.
1750. Did the contractor send away the first foreman? He changed him and sent him to some other work. I do not know the first one's name, but this one's name was Charley. Cook was the name of the first one. We do not often know each man's surname. 1751.

Mr.
R. Bushby.
23 Jan., 1891.

1751. No; but the foreman's name you generally know? The other man was always called Cook, and this one Charley.
1752. Was your own father employed? Yes.*
1753. How? He was employed on the road as foreman.
1754. What doing? He was in charge of the men.
1755. Was that the man you called Charley? No; that was the name of the second foreman.
1756. Who placed your father there? I saw the Colonial Architect about it, and I said to him:—"I have instructions to construct the road and I want someone to look after the men. This is very important work. I cannot be there all the time myself when the work commences inside the fort." My father was a road contractor in England, and I thought I could not get a more honest, more capable, or more reliable man for that kind of work than he. I asked Mr. Campbell if he would employ my father as foreman, as he was a good man at road-work; and I asked Mr. Barnet whether he had any objections before I allowed my father to go on the work. Mr. Barnet said, "Who pays him?" and I replied, "The contractor," whereupon he said, "The contractor can employ whom he likes." In order that he might have no bother with the men, Russell gave me authority to set them on, not to wait to see him, but to set them on straight away, and among others was this foreman, who took the time, laid out the work, and checked materials.
1757. And the contractor's representative who checked the time was your own father? Yes; the contractor had a representative, a relative of his own, who was a time-keeper and nothing else.
1758. Who paid these men? I do not know; I had nothing to do with the payment. I had nothing to do with the payment for these works at all, nothing whatever.
1759. Did you return your father and the boy as two men? Yes.
1760. Did the boy get a man's pay? No; a boy's pay.
1761. Who got the difference? My father. He had £3 a week, and I should think so, too. He was a thoroughly reliable man, and the best man I knew for the place.
1762. Had you any other relatives on the work? My brother was there.
1763. Any other relatives? Yes; there was a labourer there, who was getting a labourer's pay.
1764. What relation? Uncle.
1765. Then you employed these men, and put them on the works? Yes; that was Russell's plan from the first—to allow the inspector to set on or dismiss the men. I had the power to dismiss any man if he could not do the work. These men did their work, as I can prove, and did three times as much work as any men I could get. That is why I employed them.
1766. Then you practically took the work out of the contractor's hands? I did nothing of the sort. There were eleven men when I went, before the road started. When the road was commenced, in order to carry out the work expeditiously, I increased the number of the men to sixty-four, and I thought I could get no better or more reliable men than these three.
1767. Than your own family? If you saw the work they did you would agree with me in my estimate of it.
1768. Who gave you the order to carry out this road? Mr. Colley.
1769. Were the orders in writing? No.
1770. Was it a verbal order to make a road round the fort? Yes; but before I got the order I sent an estimate and a sketch. I had no written authority for it that I am aware of. It was decided that it was to be carried out under this schedule. It was estimated to cost £2,135.
1771. Have you any reports showing the quantity of work done on the road? That is given in the books of the office.
1772. Have you got the day-book? Here it is.
1773. Did you send in a report to Mr. Barnet? About what?
1774. The road? Yes.
1775. Are these press copies of the reports you sent in? Yes.
1776. Did you keep separate accounts of the number of men employed on the fort and road? The road account was kept separate. It was done under the same schedule. It was the same contract virtually.
1777. But it was kept separate? Yes.
1778. Had you an office supplied you by the Government? Yes.
1779. Whereabouts was that? Near the pilot's house, on the road going up to the fort.
1780. Did you live in the office? Yes.
1781. You occupied it yourself? Yes.
1782. Did you let it? No; not till after I left.
1783. To whom? To my brother; and I sent the money down to the office. The house was let again to another man who used to work on the fort. One of the gunners, I think, drew the rent, and I received it when I went there and paid it into the office. After that I do not know whether anything was ever received again. I was told the tenant was out of work, and that I could not get anything. He was a gardener, I think. I felt sure he would pay it if he got employment.
1784. You paid the money you received to the office? Yes; I forwarded it to our chief. Mr. Forsyth received it and gave me a receipt. It was only 2s. 6d. a week, and was better occupied, to keep the boys from breaking the place to pieces. It is better to have someone in than not, as boys are very destructive about there.
1785. Who succeeded you at the fort? Mr. Ince, I heard.
1786. You did not hand over to any person? No; I was taken away without any notice whatever, being wired for and sent to Kiandra for ten weeks to superintend the erection of a Court-house there. All my things were left at the office, and I got a telegram while at Kiandra to give up possession. They were all bundled out by my brother who was in the town at the time. It was rather an unsatisfactory ending.
1787. Did you hand the works and building at the fort over? I handed over the barracks, Mr. Colley had to do with that. I handed over the keys to the officer in charge.
1788. To whom? To Sergeant Curran.
1789. Did you hand all over to him? Yes, everything.

1790.

* NOTE (on revision):—A little explanation is needed here, as my interrogator did not seem to understand, as will be seen by referring to Question 1755. It was on the latter contract let to Russell my father was employed. Charlie was employed on the former one, two-and-a-half years previous.

- Mr. R. Bushby.
23 Jan., 1891.
1790. We were given to understand that there were three keys that were not handed over? Every key was handed over, and the receipt given to me.
1791. What was done with the receipt? There was a little bother over that afterwards. Possession was taken of the place, and the upshot of it was that Mr. Colley came up to make inquiries, and the remaining keys were handed over by me. I was told there were no keys missing.
1792. There are three rooms in the fort for which they have no keys, and they say they were not handed over by you? Everything was handed over. I took possession of the keys afterwards. The man in charge refused me entrance to inspect the works, and turned out some visitors—a gentleman and a party of ladies who came up to see me and inspect the works. He showed them out. There was a bother about it, and a lot of correspondence in the Press. These visitors were not friends of mine but of an inspector in the Harbours and Rivers Department. I asked the man in charge what he meant by it, whereupon he commenced swearing, and said he would not allow people to visit the works. I remonstrated. He then had me arrested and taken out to the station. Mr. Colley came up afterwards, and in addition to that there were a few little items that required attention. There were some printed correspondence about it that I could show you. It was a disgraceful thing, and I had no right to be treated in that manner.
1793. Who headed the inquiry? Colonel Airey.
1794. Was it a military inquiry? Yes. I asked for an official inquiry so that I could put the thing plainly. Mr. Barnett did not care about it. He does not like to fight the military at any time.
1795. What works are you looking after now? The whole of the public buildings in the north-east district.
1796. Have you any labour contracts there? No; the fact of the matter is I had too much responsibility at Newcastle in setting out work and everything—far more than I could do. It is an unsatisfactory thing at any time to do that. Of course, where it is a schedule of prices for quantities and work done there is no difficulty at all except that work has to be measured. I was really a foreman in charge of a body of men. I was not really clerk of works at that time. I am a practical man, and have had a good deal of experience. In this case the contractor got 14d. per hour for a labourer, and paid about 10d., but it was in the contract, and I could not say anything.
1797. Did you ever mention that to the Colonial Architect? No. The work at the look-out house cost double what it should cost. I could have let the work to another man outside for half the amount. If a contractor thinks there is going to be a large amount of a certain item required as extra or additional work, when tendering he will put a large amount opposite that item on the schedule attached. There is a lot of extras not included in the contract. I did not settle that. That is done in the office. I merely make recommendations to the office, and they deal with the matter there.
1798. You acknowledge from your experience that giving out these day work contracts is bad? It is an indefinite contract, which the Colonial Architect has the privilege of terminating at any time.
1799. But is it not against the contractors' interest to employ good men? He had to employ good men when I was there, because I knew the men were good men. He employed them nine hours a day, and I had to work the same amount of time.
1800. Then you told Mr. Barnett that you had your relatives on the works? Oh, yes; I got his permission. There is one working at Garden Island, and one for Mr. Frogley, builder. The latter gets 2s. more than any ordinary man, while at the fort he only got the ordinary pay. If you like to send a practical man to measure the sod and rubble pitching of slope, you will find that they did twice the work of any ordinary men.

Mr. Bushby subsequently recalled at his own request:—

1801. *President.*] Had you any written authority for erecting the road round the fort? I said just now that I had verbal orders from Mr. Colley. I did not remember if I had any in writing. I remember now that I had.
1802. Have you kept that written authority? I think not. I tried to keep the papers together, but they got a good deal knocked about. When I was sent to Kiandra without any notice everything was upset. I also wish to add that when I first went to superintend Russell's work I found that his foreman was not to be trusted. He used to put in bad cement, using clay water instead of fresh water, and wanted watching every hour; so I had to dismiss him. I dismissed three of Russell's foremen, as they would not do the work faithfully.
1803. *Mr. Wardell.*] Was the work at the fort all measured up? All the work that was in the schedule to be measured up was measured up, but such work as could only be done by day labour was not measured. There were two items under which to employ men—to do the excavations necessary, by day labour at schedule rate, or to carry it out at a price per yard.
1804. Where do the items appear? They were in the day-book when the return was sent in, but the excavations were done under the labour schedule at so much per hour.
1805. *President.*] You did not require the plans for the purpose of measurement? No.
1806. Was the work carried out by day work, and only paid for under the day schedule? Yes.

Mr. Archibald T. Telfer sworn and examined:—

- Mr. A. T. Telfer.
23 Jan., 1891.
1807. *President.*] What is your name? Archibald T. Telfer.
1808. Were you Clerk of Works in the Colonial Architect's Department? Foreman of Works.
1809. You hold that position still? I do.
1810. And some time ago you were in that capacity at Victoria Barracks? I was.
1811. Were you there when the barracks were transferred? I was.
1812. Did you get any instructions from Mr. Barnett about the transfer? Not directly. Mr. Colley was the party who handed over the works. I simply was present.
1813. Were you Mr. Colley's officer? Yes; I was under his directions.
1814. Had you in your possession any plans or documents connected with the work, contracts, &c.? Nothing but what was given up. 1815.

* NOTE (on revision):—The keys were handed to Sergeant Cullen, whom I gave permission to temporarily occupy a portion of the barracks (on my being wired for at head office to receive instructions *re* taking charge at Garden Island). On returning to complete, this trouble was with an officious officer clothed with a little brief authority—his captain being in Sydney at the time. Everything was taken over by Colonel Airey and a receipt for a few minor things to finally leave complete was given by Sergeant Cullen to Colonel Airey's orders and forwarded to Colonial Architect's Office.

1815. Who did you give them up to? To Mr. Watson, Colonel de Wolski's foreman of works, when Mr. Colley was present. Mr. Watson came to the office and received the papers, and I was present. Mr. Colley gave them up, and I took them out, or assisted to do so.

1816. What contracts were you carrying on at that time? Two unfinished contracts—one for window sashes, and another for closets, &c. These were nearly, but not quite, finished.

1817. Was there a contract for flooring? Yes; but that was not commenced. The boards were on the ground, but the work was not commenced.

1818. Was that handed over? I cannot say. When the closets and sashes were finished I never went near the works again.

1819. Can you carry in your mind the date of the transfer? I think it took place about the end of October, 1889. I could not be positive.

1820. You were aware that a new department was to be formed? I could not say.

1821. Did you never hear that the defence works were to be transferred from the Colonial Architect's Department to a new Military Works Branch? I heard of it, but I could not say what state it was in.

1822. The new Military Works Branch was gazetted on 16th July. On 16th September the Director of Military Works asked for plans, &c., connected with stables for artillery, and for information concerning alterations and repairs in progress at the Victoria Barracks. Were you asked to give Mr. Watson any information about the contracts you had in hand? When Mr. Colley went there I met Mr. Watson, and I told him that any information I had I would be most happy to give him, but I was never asked for any.

1823. When was the contract for the sashes finished? In December. It was in such a state that we could not very well hand it over before that, and it was decided in justice to Colonel de Wolski that this work should be done by the Colonial Architect's Department.

1824. When did you finally give up the work at the Victoria Barracks? There was no formal handing over afterwards. It would be in the early part of December that the contractor was paid, and got a certificate.

1825. He was paid on your certificate? I imagine so.

1826. These works were not handed over then to the new Department? They were not; they were nearly finished. It was explained to Mr. Watson on the day that Mr. Colley and I met him that these two works would be finished by us.

1827. The difficulty is, that the Minister ordered everything to be handed over without any discriminating power whatever from Mr. Barnet? I had nothing to do with it. I did say to Mr. Barnet that I thought it would be an injustice to hand over this contract in the state it was in. He did not say anything to me at the time, but he decided afterwards that it would be better not to hand the contract over. He did not say anything about it to me either then or afterwards.

1828. It was Mr. Barnet's own request that you should be called? He told me he had asked that I should be called, but he did not say what he wanted brought out.

1829. We would like to get whatever Mr. Barnet wants brought out. Is that all you want to say? I may be to blame in the matter, but I suggested to Mr. Barnet that we should keep these unfinished contracts back. That is all I know about the matter.

FRIDAY, 30 JANUARY, 1891.

Present:—

C. W. DARLEY, Esq., M. INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M. INST. C.E., F.R.I.B.A.

Mr. John Norman sworn and examined:—

1830. What is your name? John Norman.

1831. Were you engaged on the work of construction at the fort at Middle Head? Yes.

1832. Do you remember in what year? 1884. I don't recollect whether I started in 1883 or 1884, but I was there thirteen or fourteen months altogether.

1833. What work were you engaged on? I was in the trench outside the fortifications, but I would be on the concrete, not always, but mostly once or twice a week. I had to assist in making the concrete.

1834. Will you tell the Commission what you saw done? Of course I do not know anything about the stipulations, or how the contract was to be carried on, but we could always see the difference between the work done when the inspector was there and when he was absent. He would be there perhaps an hour a day, perhaps twice a day. As soon as he was in sight the foreman would say, "Stop that there; don't put any more in." The measure was 4½ft. x 6ft. x 1ft., holding a yard. The mixture was supposed to be a yard of metal to a cask of cement, one and a half cask and sometimes two casks. When there was no inspector present we filled up with metal, putting in about 2 yards; that is to say, we filled it up with metal so as to have the cement on 2 yards, consequently there was only half the cement used that there should have been. As soon as the inspector was seen on the heights the foreman said, "Don't put in any more." We came to the conclusion that we were always putting in twice as much metal as we should. Those who knew anything about concrete considered it was very weak, and I was told I had not seen the worst of it. Near the archways blocks of sandstone were put in for filling.

1835. On the top of the archways? Close to the archways. I don't recollect just now the exact place, but it was close to archways.

1836. Did you see concrete put into the arch itself? Yes; it was all the same; sometimes there would be a barrel and a half, sometimes two barrels, but even in these cases we filled the frames with metal up to the same level as the others, using twice as much metal as when the inspector was present.

1837. Were large blocks of stone put in the archways? Close about them.

1838. What was the actual arch made of? I would not say anything went in on top of the arch. There was hardly room there. They may have done so, but I was not always there. I was astonished when I saw them put the stones where they did. I wanted the other men to speak, but they only laughed and said, "We've got a good job, and we don't want to leave it." I considered it was only a soldier's trap.

1839. Who was the inspector? A Mr. Murray. He would be there only about half an hour; at the outside an hour. He was not always there twice a day.

Mr.
A. T. Telfer.
23 Jan., 1891.

Mr.
J. Norman.
30 Jan., 1891.

1840.

- Mr. J. Norman. 1840. And there was no resident officer? Yes, for the contractors.
- 30 Jan., 1891. 1841. Not for the Government? No; he was never there, to the best of my memory, more than once or twice a day.
1842. What was the name of the contractor? Messrs. McLeod and Noble were the contractors.
1843. Who represented the contractors on the ground? Leveridge; he had charge of the Custom-house Building.
1844. Was he the contractor for the Custom-house? No; he was only carrying out the works for another.
1845. For the contractor? Yes, I expect so.
1846. Do you know where the thick mass of concrete is in front of the gun? Yes.
1847. Did you see that put in? I saw some of it put in.
1848. Is that all done the same way? I asked the men if they were all doing it that way, and they said it was all the same. They then told me it was the same at George's Head, but I never saw any done there. There was an under-foreman by the name of McNamara.
1849. Do you know any of the men who were working there? I knew most of them, but I cannot find any of them now. When I spoke to them they said, "You don't know much about it. There is worse than what you saw—big blocks put in among the concrete." I worked two or three days at a spell on the concrete, and once or twice a week, and it was always done the same.
1850. Was it the practice to open more than one cask of cement at a time? No; but in some cases I expect there was more, one and a half, and even in some cases two, that is in very particular places. The mixture was supposed to be a yard of metal and a cask of cement, but the way we filled up a big top and all round the sides of the frame made me come to the conclusion that that could not be right.
1851. What size stones did they have? As big as I could roll—twice the size of that despatch box. I could not lift them, but had to turn them over.
1852. Did you roll them into the concrete? No; they were put in where the concrete was going, and then the concrete was covered on.
1853. Did you put a number in? Oh yes.
1854. And then put the concrete on top? Yes, in some places.
1855. Would they bed these down in soft concrete? Yes, as a rule.
1856. If you started on Monday morning when the concrete was pretty hard would they put the stones in on the dry concrete? I would not say they did that.*
1857. Then the blocks were mostly put on top of soft concrete? Yes.
1858. Did they wet them with water in any way? Oh yes, there was always the necessary water.
1859. On the blocks or on the concrete? We always had plenty of water—the concrete was pretty soft when it was put in. I won't say it was too soft; it was as well as you could make it with so much metal to the cement.
1860. If you were down on the ground would you know any of those places where bad work is to be found—would you be able to say, if you sunk down, "There you will find bad work?" McNamara would be able to do that. He was a sub-foreman, and he said he would be willing to come. He will be down at Easter; he is now at Hillgrove. He can tell you everything about it. He said he would go to any office and give the information.
1861. Was he the sub-foreman to the contractor? Yes.
1862. Why did you leave the work? It was a very wet season and we could not make more than three days a week, so one day I had been working from 6 to 8 in the morning, it started raining, and they cut me off two hours. "I won't pay for rain," said the manager. The next week it rained cats and dogs. A cement vessel came in, and they wanted me to go to work, but I said, "No, you don't pay for wet weather." The manager said, "If you don't go to work you know what you can do." I then left; but that has nothing to do with my giving the information. He was a liberal employer—no nigger-driving.

WEDNESDAY, 18 FEBRUARY, 1891.

Present:—

C. W. DARLEY, Esq., M.INST. C.E., PRESIDENT.

W. W. WARDELL, Esq., M.INST.C.E., F.R.I.B.A. | G. A. MANSFIELD, Esq., F.R.I.B.A.

Mr. Edwin Colley re-examined:—

- Mr. E. Colley. 1863. *President.*] You have sent in an application to the Commission asking to be further examined;—is there any particular point that you wish to bring out? Yes; it is about the measurements. Mr. Barnet says I should have measured with Purkis, and that he held me responsible for Purkis's measurements. I repeat the thing would have been impossible, and besides there was no precedent for it. When I was in charge of the forts some years ago with another officer over me, and holding a similar position to that occupied by Mr. Purkis at Bare Island Fort, no officer measured with me. I have made inquiries since I was here in respect to other large works, and I find that the measurements of the officer in charge are invariably taken.
1864. What were your duties? I considered it my duty in the first place to deal with the papers that were marked off to me by Mr. Barnet, to see Mr. Barnet about the work when necessary, and get instructions from him, and to visit the buildings occasionally when I had an opportunity, with a view of ascertaining what was being carried out. If a question arose on the job with a contractor I thought it my duty to settle it on the spot if I could, and if not to bring it before Mr. Barnet for him to settle. I think I should point out that the officer called foreman of works is really clerk of works; and that the clerk of works is in the position of visiting architect. I think this has given rise to some confusion. The foreman of works is responsible for the measurements.
1865. Did you consider it your duty to make any critical examination of the different works? Yes.
1866. To go round with a critical eye? Yes. I suppose I never had more than two hours on a job on any one visit, sometimes not so much. So far as the fortifications are concerned, I generally visited those

* NOTE (on revision):—I would like to state that Mr. Loveridge, the contractor's foreman, was a most able and careful man, and would have carried out good work if the concrete had not held so much metal.

those in Port Jackson in company with the Colonial Architect; we used to take the whole round some-
times in one afternoon. Another matter: I think, in my previous evidence, I left a wrong impression
on the Commission as to what I had to do and as to the extent of my work. I mentioned one or two
large buildings that I had to superintend, but that was a very small part of my duty, and the forts were
also a very small part of my work. Here is a list of the buildings which I had always in charge for
additions, alterations, and general repairs, in addition to the fortifications—those with the word
“erected” affixed were also erected under my superintendence:—Barracks, Victoria; Barracks, Artillery,
Dawes’ Point; Barracks, Middle Head (erected); Barracks, South Head (erected); Barracks, George’s
Head (erected); Barracks, Bradley’s Head (erected); Barracks, Newcastle (erected); Goat Island;
Spectacle Island, buildings generally; Captain Hixson’s residence; Assistant Health Officer’s house,
Watson’s Bay; Shaftesbury Reformatory (erected); Fort Phillip Signal Station; the Observatory;
University, comprising: 1. Old or main building; 2. Natural history, formerly Medical School (erected);
3. Engineering and natural history (erected); 4. Physical Laboratory (erected); 5. Chemical Laboratory
(erected); 6. Medical School (erected); 7. Lodges and entrance gates (erected); 8. Roads and terraces,
boundary wall and embankments, &c. (constructed); St. Leonards, public buildings, comprising Post
and Telegraph Office, Court-house, and Police Station (erected); North Willoughby, Police Station
(erected); Manly, Police Station; South Sydney Morgue, jury-room and caretakers’ residence,
(erected); North Sydney Morgue; Newcastle Morgue (erected); Australian Museum; Fort Denison;
Fort Macquarie; Fort Kirribilli; old Commissariat buildings, comprising Imperial Naval and Colonial
Ordnance Stores; Court-house and Police Station, Paddington (erected); Darlinghurst Gaol; Watson’s
Bay, Police Station; Manly Post and Telegraph Office (erected); Imperial Naval Station, Garden Island,
labourers’ cottages (erected); Barracks, for officers and seamen (erected); rigging house and sail loft
(erected); foundry, engineers and blacksmith’s shop (in hand); chain and anchor store (in hand); spar
shed and dining-room (in hand); saw-mill (in hand).

1867. Were you superintending these buildings during the currency of the Bare Island Fort contract?
Yes.

1868. Inspecting the works and checking the accounts, and so on? Yes. I sometimes went to
Wollongong, Cape St. George, and as far as Narrandera, Wagga Wagga, and Germanton, but I did not
put these places on the list as the buildings there did not remain in my charge.

1869. *Mr. Wardell.*] Did you have a foreman of works on all distant jobs? No. At Germanton, for
instance, Mr. Thorn had a district to travel round; he was a temporary foreman of works. A large job
always had a resident officer.

1870. Is there any rule in the Department as to placing a foreman of works on the different buildings,
for instance, on a work costing £1,000? I do not know.

1871. Then many works went on without any supervision at all, excepting the casual supervision that you
were able to give to them? Yes, exactly the same as in an architect’s private practice.

1872. *President.*] Is there anything else you would like to tell the Commission? No; I have stated
what I wished to say.

1890.

NEW SOUTH WALES.

ROYAL COMMISSION ON DEFENCE WORKS.

APPOINTED JULY 14, 1890.

APPENDIX A.

TRANSFER OF MILITARY WORKS FROM THE COLONIAL ARCHITECT'S
DEPARTMENT TO THE MILITARY WORKS BRANCH.

Precis of Correspondence relative to the transfer of the Military Works and Buildings from the Colonial Architect's Department to the Military Works Branch.

On the 16th July, 1889, a *Gazette* notice appeared, creating a new branch of the Public Works Department, to be called the "Military Works Branch," under Lieutenant-Colonel de Wolski, R.E., as Director, for the execution of defence works hitherto carried out by the Colonial Architect's Department. Nos. 1 to 7.

The Colonial Architect having expressed to the Minister the opinion that it was desirable that the barracks should remain in his charge as heretofore, the question of the transfer of this portion of the military works was not definitely decided until the 22nd August, 1889. Nos. 8 and 9.

On 5th August the Colonial Architect reports expenditure on Loan Vote of £125,000 for defence works as £12,110 12s. 6d. - Some bonds and papers were sent, and it was stated that the Clerk of Works in charge of the Newcastle defences could not be transferred as his services were required elsewhere. No. 11.

On the 6th August the Colonial Architect reports that "such officers of his Department as were employed on military works have been withdrawn," and that the works are "virtually stopped." No. 12.

On 7th August the Under Secretary for Works asks the Colonial Architect to hand over to Colonel de Wolski "all plans, specifications, books, and other documents in connection with the military works and buildings." No. 13.

On the 17th August the Colonial Architect sends forty-six plans and a second instalment of papers.

On the 7th August the Under Secretary for Works requests the Colonial Architect to furnish a return showing balances on all votes for military buildings and fortification works. No. 14.

On 12th August the Colonial Architect reports £14,102 3s. 11d. expended from Loan Vote, or £1,991 11s. 5d. in excess of his previous report of the 5th August (*see* No. 11.)

He further reports expenditure of Military Votes under his Department as amounting to £1,089 10s. 9d.

On the 10th August, the Director urges the Under Secretary to get the Colonial Architect to complete the transfer; reports removal of draftsmen while completing a defence plan, and withdrawal of Colonial Architect's Officers employed on military works, "thereby leaving me entirely at the mercy of the contractors." No. 15.

On the same date the Director traverses the Colonial Architect's report of the 5th August (No. 11) *re* works at Newcastle, the responsibility for the delay in pushing on with the defences there resting entirely with the Colonial Architect's Department. No. 16.

Mr. Barnett is requested to meet the Minister and Lieutenant-Colonel de Wolski at the Legislative Assembly on the 13th August respecting handing over the works. No. 17.

Mr. Barnett declines to meet Lieutenant-Colonel de Wolski.

The Minister for Works requests, 27th August, Mr. Barnett to supply fully, and at once, certain information with regard to the various defence works not yet received by Colonel de Wolski, and to place Mr. Purkis at the Director's disposal for the purpose of handing over the various works referred to. No. 18.

The orders of the Minister were not carried out as regards Mr. Purkis.

The Colonial Architect replies, 2nd September, giving further particulars of the works in progress and sending some tracings. His statement therein, that the information now furnished had not previously been applied for, is not borne out by facts, as he had been particularly asked for his information on 17th July, and again on 7th August (*see* Nos. 11 and 13). Since his report of 12th August (*see* No. 14), the Colonial Architect passed vouchers for £163 5s. 3d. against his votes for military works. No. 19.

The Colonial Architect is informed that Colonel de Wolski will take over the works at George's Head on the 11th September. No. 20.

Colonel de Wolski met Messrs. Colley and Purkis and the contractors on the works, but was unable to take over as neither books nor documents were forthcoming.

Mr. Colley promised that the contractors would be settled up with, but no intimation was ever sent that this had been done.

In reply to a minute from the Under Secretary for Works, dated 9th September, the Colonial Architect furnishes, on the 16th, particulars of expenditure of £14,102 3s. 11d., from Loan Vote £125,000 for Defence Works (*see* No. 14). Director asks for the authorities for this expenditure, and for contract documents, &c., pointing out that the delay is seriously detrimental to the works. No. 21.

On the 16th September the Director asks for plans, &c., connected with stables for Artillery, and for alterations and repairs in progress at Victoria Barracks. The Colonial Architect sends tenders for George's Head, and for renewing window sashes at Victoria Barracks. He further states that the plans, &c., in connection with the water-closets and window-sashes at Victoria Barracks are with the Crown Solicitor. It will be subsequently seen (*see* No. 29) that the Colonial Architect has been, meanwhile, continuing to carry out these contracts under his Department, in spite of the orders of the Minister, and of his own report of 6th August (*see* No. 12), that "such officers of his Department as were employed on military works have been withdrawn." No. 22.

On the 24th September a reminder is sent to the Colonial Architect that the information promised by Mr. Colley on the 11th September (*see* No. 20) has not yet been received. On the 16th October Colonial Architect sends "particulars of expenditure on Vote of £125,000, Loans 1888, generally to date," amounting to £17,322 1s. 3d. No. 23.

From this statement it would appear that the Colonial Architect had spent £3,219 17s. 7d. from the Loan Vote since his report on August 12th (*see* No. 14).

On the 2nd October the Director asks the Under Secretary for transfer of unexpended balances of Military Votes taken under the Colonial Architect's Department. No. 24.

There are two pencil notes on this letter, made presumably by the Colonial Architect:—

"Wait for quarterly accounts to come in."

"Mr. Neale look up all accounts chargeable to Votes named, in order that they may be sent to Treasury before transfer is made."

No. 25.
No. 26.

On 4th October the Director urges completion of transfer "without delay."
On the 8th October the Director asks that the works at Newcastle may be handed over to him on the 11th.

On the 11th October the Director met Messrs. Colley and Purkis, with the contractors, at Fort Scratchley, Newcastle. Mr. Bushby, the resident Clerk of Works, was absent, and the key of the office could not be found. Neither Mr. Colley nor Mr. Purkis appeared to know anything about the works in progress, and no information of any kind was forthcoming.

No. 27.
Further minute
on No. 18.

On the 24th October Director reports:—

1. Works at Newcastle, commenced 21 October.
2. Tracings of plans of works not yet handed over.
3. Authority and detailed account of expenditure up to date, £1,271 7s. 2d., *urgently required*.
4. Authority and detailed account of £350, Newcastle fortifications, required.
5. Contractor states he has not been paid.
6. Foreman of Works absent at transfer, "so that absolutely no information of any kind was obtainable."
7. In the Director's opinion, the transaction in connection with the transfer at Newcastle "displays either wilful obstruction or woeful incompetence."

It was a repetition of the tactics adopted at the transfer of George's casemate battery (*see* No. 20), and there was no excuse for the absence of the Foreman of Works, because Mr. Barnet had received, on the 4th October (*see* No. 25), a full week's notice, marked urgent.

No. 28.
(Further
correspondence
on No. 25.)

On 8th November Colonial Architect reports transfer of works at Newcastle. The Director replies that neither plans nor a detailed statement of expenditure has been furnished, and that "until this matter is settled in a businesslike manner he must decline to take over any more works."

No. 29.

The Director asks, 8th October, for Allan and Marshall's contract at Victoria Barracks.

No. 30.

On 11th November he reports that work is still being carried out by the Colonial Architect at the barracks (*see* No. 22), and requests that Treasury be instructed to pay no more bills (*see* No. 7).

No. 31.

On the 14th October the Minister asks on what works the officers formerly employed on military works are now engaged. Colonial Architect replies on the 29th October.

No. 32.

Director reports, on 26th October, continued expenditure by Colonial Architect on military works; his inability to accept responsibility if he is kept in ignorance of available funds on current votes; that work is still being carried out by the Colonial Architect's Clerk of Works at Victoria Barracks; recommends that some more satisfactory method be adopted of completing the transfer; and considers the cause of all this trouble was the refusal of the Colonial Architect to meet him.

No. 33.

Chief Accountant reports, 21th October, that "Colonial Architect continues to make charges against the votes for military buildings and fortifications without his knowledge."

No. 34.

On 8th November Colonial Architect submits estimate of probable amounts to meet outstanding claims. The Director asks, on 24th October, for a detailed statement of expenditure of £3,534 14s. 7d. for works at casemate battery, George's Head. *No action appears to have been taken on this letter.*

No. 35.

The Director reports, on 24th October, excess of expenditure on works at George's casemate battery; asks for detailed account; and states that he will be unable to assume any responsibility as regards these works until he receives the information asked for in his letter of 10th August (*see* No. 15). *No action appears to have been taken on this letter.*

No. 36.

On the 30th October the Director asks for the transfer of the office, plans, boat, &c., at South Head. On the 13th November he reports removal of furniture, to which the Acting Colonial Architect replies, on 28th January, 1890, that "the furniture can be replaced when desired."

No. 37.

On the 28th January Director again reports furniture at South Head office missing, and the Colonial Architect replies that the furniture was inadvertently (?) brought away and sold by auction.

No. 38.

On the 13th February the Director requests that the articles removed from office may be returned at once.

No. 39.

It took three months and a half to get this question settled, and meanwhile the Clerk of Works engaged in carrying on the South Head battery had not even a chair to sit on. It would be interesting to know what the articles realised at the sale, what became of the proceeds, and who paid for replacing the articles sold by auction.

No. 40.

On the 8th November the Colonial Architect furnishes information as to schedules of contracts in progress. In the case of Bare Island, the agreement for the barracks was not seen till more than five months later (*see* No. 53.)

No. 41.

On the 15th November Director requests that certain correspondence relative to a dispute between the contractor and the military authorities relative to the possession of "the old look-out house" at Newcastle be referred to the Colonial Architect; foresees that disputes are inevitable unless the works are handed over in a businesslike manner, and does "not propose to take over works at Botany and George's Head until this question is settled, and a proper statement of accounts rendered."

No. 42.

On the 9th December the Colonial Architect replies that that the contractor is not entitled to the £10 claimed; but the Director obtains, on 15th January, the approval of the Minister for the payment on the grounds that the house was twice shifted.

On 10th December the Minister appoints Mr. Quodling, Chief Accountant, Public Works Department, to take the question of transfer in hand.

On the 4th January, 1890, the Chief Accountant sends the Director copies of vouchers for £14,510 17s. 7d., charged to the Loan Vote, £125,000, and asks what further information he requires.

The Director replies on same date that he wants everything the Colonial Architect has in his possession, which will enable him to settle up with the contractors and resume the work.

Chief Accountant to Director, dated 23rd December, with reference to contractors' claim for Newcastle fortifications.

On the 18th January Messrs. Russell & Co. report having received an advance of £935 from Colonial Architect; that they have applied for balance; that this balance must be paid "before the works can be properly handed over, unless the Military Department will also take over and become responsible for all liabilities."

On 30th December Chief Accountant asks Colonial Architect for a copy of voucher for £935, paid to Messrs. J. Russell & Co., Newcastle.

On

On the 4th *January* the Director receives the voucher asked for, and again insists on a business-like handing over; states definitely what he requires; and considers the "transaction cannot be known to the Minister, or he would never tolerate this obstruction."

On the 6th *January* the Chief Accountant requests the Colonial Architect to furnish the duplicate No. 43. set of tracings of plans, measurements, authorities, and correspondence, &c., relating to the military works at Fort Scratchley.

The Colonial Architect replies that all drawings, &c., have been forwarded.

The Director reports that the set of plans has not been returned; that no plans nor specifications for work actually executed have been furnished; that measurement books, orders for material, &c., are necessary to check contractors' claims; and that no authority for the works actually carried out by Mr. Bushby, the Clerk of Works, has reached his office.

On 6th *January*, 1890, the Chief Accountant, asks the Colonial Architect to explain the discrepancy of £2,811 3s. 8d. between the statement of expenditure amounting to £17,322 1s. 3d., submitted on 16th October (*see* No. 23), and the amount of vouchers received, £14,510 17s. 7d. Mr. Colley explains that the "particulars of expenditure on vote, £125,000," "was intended to show only the approximate expenditure or cost of work," on which the Chief Accountant justly remarks that "it is to be regretted that Mr. Colley's intention was not made apparent on the face of the return in question." No. 44.

On the 17th *January* five books, containing the measurements of the various defence works in progress or completed, were received. These books should have been handed over when the Colonial Architect withdrew his officers from the defence works on 6th August—more than five months previously. (*see* No. 12).

On the 20th *January* the Colonial Architect furnishes a statement of outstanding accounts No. 45. chargeable to Loan Vote for defence works, and also sent copies of all vouchers charged to votes of his Department for military works.

On the 7th *January* the Director asks Chief Accountant to get the contract for maintenance of No. 46. Barrack clock, which has stopped. The Colonial Architect replies that no contract exists. Asked if there was a contract last year, he replies, on the 17th *January*, that Tornaghi "had the contract last year" for winding and regulating at £3 5s. This contract should have been handed over to the Director months before it expired, which would have obviated the serious inconvenience to the troops, caused by its stoppage for three weeks. I may mention that the weights attached to the clock were removed, and had to be replaced. Mr. Quodling remarks that "this correspondence indicates the spirit in which information is vouchsafed by the Colonial Architect to the Director of Military Works."

On the 13th *January* the Acting Colonial Architect reports the completion of Mr. Goddard's con- No. 47. tract for window-sashes at Victoria Barracks. (*see* Nos. 22, 29, 31).

The Director informs the Under Secretary, on the 16th, that this contract should have been handed over to him in accordance with the orders of the Minister, dated 23rd August, 1889, and adds that he has just heard of another contract at Victoria Barracks for flooring.

On the 23rd *January*, "the Minister desires to know upon what authority the Colonial Architect No. 48. continued to carry out this work (*see* No. 45), when the transfer of everything connected with the repairs of these barracks to Colonel de Wolski was ordered as far back as the 23rd August last."

On the 3rd *March*, Mr. Barnet replies, that "the contract for the work named having been taken under this Department, it was considered desirable that it should be completed under the same supervision."

On the 12th *March*, 1890, Mr. Barnet submits a further explanation of the contract for renew- No. 49. ing window-sashes at Victoria Barracks. The application of the Director for these documents (*see* No. 22) affords ample proof of his intention of carrying out these contracts under the supervision of the Clerk of Works appointed by the Minister (P.W. 89-2,393) on the 22nd August, and the Director was neither aware of, nor consulted as to, the arrangements whereby "the Colonial Architect considered it would be better for all parties that he should deal with existing contracts until their completion." His instance of a "similar case" at South Head, and another at George's Head, is neither borne out by the facts nor by the evidence of his own report, dated 6th August (*see* No. 12), and that of the Director on the 10th of the same month, as to the withdrawal of his officers; and his belief that he "was acting in accordance with the spirit of the Minister's instructions" is strangely at variance with his non-compliance with the orders of the Minister (*see* No. 18) as to Mr. Purkis being placed at the Director's disposal, and with his refusal to spare Mr. Bushby for the military works at Newcastle, for which he was specially engaged. In short, Mr. Barnet declined to hand over these petty contracts for repairing window-sashes, renewal of closets, &c., at Victoria Barracks, thereby creating a dual control and placing the Military Works Branch in a false position; whilst, in the case of important defence works at George's Head, Newcastle, and Botany, he left the Director of Military Works "entirely at the mercy of the contractors." (*See* No. 15.)

On the 6th *January* the Director forwards to Chief Accountant a report from his Clerk of Works No. 50. as to the amount still due to the contractor for work done under Colonial Architect's Department at Newcastle, and intimates that he is "not prepared to accept any responsibility for work of which no records nor measurements appear to exist"

On the 21st *January*, 1890, the statement of so-called measurements of works at Newcastle is No. 51. received.

With the exception of the *excavation* for a pit for an 8-inch gun, this work, amounting to £1,270 odd, was carried out without plans, specifications, nor Ministerial authority, and the contract let by public tender was virtually ignored by the Clerk of Works, who carried out the work by daily labour engaged by himself at contractor's rates.

On the 4th and 5th *February* an inquiry was held by the Under Secretary for Public Works, at which the Colonial Architect's officers were present.

The missing set of plans of Fort Scratchley was produced, and a detailed statement of accounts was promised. This was subsequently furnished, but owing to some articles being apparently charged for twice over, the Minister has authorized the final payment to the contractor being held over until the Royal Commission have investigated the matter.

On the 28th *January* the Chief Accountant asks the Colonial Architect for an explanation of the No. 52. expenditure of £6,450 on position-finding stations, for which only £3,500 was authorised.

On

On the 11th *February* the Colonial Architect replies, evading the question. It will be observed that neither in the voucher for £6,450, nor in the Colonial Architect's explanation, is there any intimation that the completion of the casemate battery at George's Head was included in this bill.

No. 53. On the 22nd *April* the Chief Accountant reports the attempts made to obtain a settlement of the Bare Island Barracks. The agreement between the Colonial Architect and Mr. John M'Leod, dated 15th April, 1889, is produced for the first time.

No. 54. On the 30th *April* the Director again calls attention to the final voucher for £6,450 14s. 3d., "showing an excess of £1,750 14s. 3d. over and above the specific authorities." No detail of the cost of the various works has been received, "and it is not known whether the contractors' claims for work at George's Head casemate battery have been fully satisfied."

No. 55. On the 19th *May* the Director asks for the specification for Bare Island barracks. The Colonial Architect forwards, on 4th June, a "description," inadvertently put away, which, he explains, "is not a contract paper, nor intended to be binding on the contractor." In reply to a further inquiry, Mr. Barnet states that the specification made by the Foreman of Works was "solely for his guidance in carrying on the work."

Nos. 56 to 58. This correspondence relates to a large mass of correspondence on defence works, barracks, &c., handed over by the President of the Royal Commission to the Director, on the 25th July, 1890. This was received from the officers in charge of the Colonial Architect's Department after the Colonial Architect's retirement. Amongst the papers were found the weekly reports of the Clerks of Works, and the detailed statements of accounts, as well as correspondence throwing light upon many points on which information had been persistently denied.

The detailed statement of Messrs. M'Leod and Noble's bill for £6,450 14s. 3d. was the first intimation that the contractors had been paid in full, on the 16th October, the sum of £1,004 14s. 11d. for the alterations to the casemate battery at George's Head—alterations not yet completed, and which could have been resumed last October had Mr. Colley kept the promise made to the Director (*see* No. 23).

Among the papers handed over to me after Mr. Barnet's retirement are two reports by Mr. Colley to the Colonial Architect, marked D. 89-1,917, 2nd July, 1889, and D. 89-2,276, 5th August, 1889, on which he has made a few pencil alterations and additions. An examination of these documents proves that Mr. Colley was the real author of reports Nos. 2 and 9.

When we find Mr. Barnet calmly fathering such impertinent criticisms by a subordinate official as—"provided the Engineer Officers possess the requisite constructive ability," and "delays are caused, to a considerable extent, by one military officer of the Royal Engineers condemning what his predecessor had carried out or advocated,"—a comment, by the way, utterly devoid of any foundation—it can hardly be a matter for surprise that he succeeded in so thoroughly demoralising his Clerks of Works that they ended by regarding the boycotting and obstruction of the new Branch as a legitimate pastime, as instanced by the wild-goose chase to Newcastle (*see* Nos. 26 and 27), and the ill-concealed delight of Mr. Colley when he handed over a heap of plans a quarter of a century old, and a lot of useless documents, such as demands by the military for chimneys to be swept, when meanwhile he was knowingly withholding plans, contracts, and accounts connected with works in progress, which were indispensable to the transfer.

The correspondence herewith attached represents only a small portion of the record of the protracted struggle to obtain control of the military works of the Colony out of the hands of the Colonial Architect and the contractors, in accordance with the decision of the Cabinet. It will be observed that throughout this controversy the onus of specifying the information required has been most unfairly thrust on me. The orders were, to hand over "fully and at once" (*see* No. 18). There was no handing over; it was extraction by degrees. I do not believe it would ever have been satisfactorily completed had I not precipitated matters at a time when my patience was fairly exhausted.

This protracted transfer has not only seriously delayed the defence works of the Colony, but it has almost entirely prevented my attending to the organisation of the sub-marine mining defences, and the training of the corps entrusted with that special branch.

Military Works Branch, 47 Phillip-street.

F. R. DE WOLSKI,
Colonel, Director of Military Works.

Correspondence connected with the Transfer of Military Works, Barracks, &c., from the Colonial Architect's Department to the Military Works Branch.

FORMATION OF THE MILITARY WORKS BRANCH.

INTRODUCTORY NOTE.—Lieutenant-Colonel de Wolski, R.E., had an interview with the Minister for Works on the 17th June, 1889, at which the Colonial Architect was present. The question of the relations existing between the Colonial Architect and the military authorities was fully entered into by the Minister, who desired Colonel de Wolski to submit to him, on the following day, a memorandum embodying his suggestions.

No. 1.

Lieutenant-Colonel de Wolski, R.E., to The Under Secretary for Public Works.
(P.W. 89-1,771.)

Sir,

Military Staff Office, Dawes' Battery, 18 June, 1889.

In accordance with the verbal request of the Secretary for Public Works, I have the honor to submit a memorandum for his information on a proposed "Military Works Branch" under the Public Works Department of this Colony.

I have, &c.,

F. R. DE WOLSKI,
Lieut.-Colonel, R.E.

[Enclosure.]

Memorandum on a proposed "Military Works Branch" of the Public Works Department of New South Wales.

HITHERTO the defence organisation of this Colony has been dependent for professional assistance, as regards the design of coast fortifications, on Imperial Officers of the Royal Engineers, and for the execution of the work on the Colonial Architect.

When Major Penrose's term of service as Instructor was about to expire, the Major-General Commanding, in accordance with a recommendation contained in General Schaw's report, dated August, 1887, applied for the services of a Major of the Royal Engineers with the local rank of Lieutenant-Colonel, "to command submarine mining defences and construction of defence works." I accepted the appointment on these conditions, but on arrival in this Colony I found myself gazetted to command the Submarine Mining Forces only, although I was verbally informed that I was responsible to the General for the design and inspection of all defence works. As the most important part of my duties and responsibilities was not officially recognised, and as the terms of my appointment gave me no status with the Colonial Architect, who executes the work, I considered it advisable to represent the necessity of my being gazetted Commanding Engineer.

The duties of this office are clearly defined in the Queen's Regulations (sec. v., paras. 60 to 67), which the Regulations of this Colony specify shall be taken as a guide.

I have not advocated this change without due reflection, nor solely on the grounds that the terms of my engagement warranted my doing so. Two months' experience of the present system of executing defence works has convinced me that it is radically wrong in principle, that a change is imperatively necessary, and that increased efficiency and economy will result.

I will endeavour to indicate, as briefly as possible, the reasons which appear to me to render this change desirable, and my proposals for carrying it into effect.

Under the existing system, all proposals for new works, or for alterations to existing defence batteries and armaments, are first considered by a permanent Committee of officers appointed by the General Officer Commanding. This Committee at present consists of:—

Colonel Roberts, C.M.G., President.	} Members.
Colonel Bingham, R.A.,	
Lt.-Colonel de Wolski, R.E.,	

When the site, nature of work, and armaments have been reported on by this Committee, designs are prepared in the Military Engineer's Office, and submitted by the General Officer Commanding for the approval of the Colonial Secretary. They are then sent on to the Secretary for Public Works for execution by the Colonial Architect, in whose office the plans are copied, and the work estimated. A specification is prepared, and tenders advertised in the usual manner. At last—usually after a lapse of many months—the Engineer Officer hears incidentally from one of the Colonial Architect's officers that the contract has been let, and that the work has been started. Neither estimate, nor specification, nor terms of tender, are officially communicated to the Engineer Officer, who, however, is now held responsible to the General Officer Commanding for the inspection of the works in progress. The Clerk of Works on the spot, from whom the contractor receives his orders, reports direct to the Colonial Architect, who himself inspects the work from time to time.

This dual system of responsibility is eminently unsatisfactory from a military point of view, for the following reasons:—

1st. The Colonial Architect, who has direct control of the works, is not in any way responsible for the design, nor has he the necessary information to make himself conversant with the reasons which have dictated its special features.

In defence works, details are essentially the root and foundation of the design, and the art of the engineer consists in adapting, in the most efficient and economical manner, the various parts to the end in view, viz:—the protection and proper service of the guns, &c. This is an art which, it is almost needless to remark, demands a certain amount of previous technical military education, constant study to keep pace with the progress of modern warfare, and access to the literature of the subject, which is obviously in many instances of a confidential nature. I

- I respectfully submit, therefore, that the Colonial Architect is not the proper official to whom the direct control of the military works should be entrusted. The system has signally failed, not for want of zeal, but from want of knowledge. In several instances, deviations from the original plans have been made, which now necessitate costly alterations, unsuitable materials have been employed, and specifications drawn up which enable the contractor to put in any class of material and work he may think fit. Alterations are made without being noted on the plan. There is consequently not one single accurate record plan of any existing work; this might result in serious mistakes in war time occurring. Further important features of the design have often been sacrificed for want of funds at the time, while less important work has been completed on which economies might have been effected by a military engineer, who had access to the progress reports, and was kept informed as to the rate of expenditure on the work.
- 2nd. The Military Engineer cannot efficiently inspect the works at present. Where there is no direct control, there can be no responsibility.
- 3rd. The present system is not conducive to economy. Not only does it involve practically a double staff, but every detail of the work has to be passed through several different Departments, and instructions as regards the work and the method of execution have to filter through several brains, instead of being directly communicated by the technical expert to the contractor on the spot. The delays and alterations inevitable from such procedure is the main reason why the defences of this Colony have cost more than any other similar works elsewhere.
- Again, the Military Engineer has not the necessary information as regards specification and rates to enable him to revise his designs, or to alter constructive details, so as to bring the cost of the works, as far as practicable, within the sum which it is considered advisable to spend on them. For example, the specification for the new submarine mining establishment at Chowder Bay was given out to tender without reference to the Military Engineer, although a previous estimate made in the Colonial Architect's Office had shown that the design, as it stood, could only be partially completed for the money allotted to this item in the Estimates. Again, sheds for cleaning the machinery of the hydro-pneumatic guns were erected by the Colonial Architect's Department at a cost out of all proportion to the nature of the service. Half the entire cost at least might have been saved had the specification been, in the first instance, submitted to the military authorities for any observations.
- 4th. The system involves serious delays in the execution of works. The first pit for a hydro-pneumatic gun at South Head has already taken six months to build. Designs submitted months ago have not, so far as I am aware, been yet given out to tender, although the work is of a most urgent nature.
- 5th. The present system would inevitably fail in the event of war. Relying, as we do, on a purely civilian element, we are training no military engineers and foremen of works for a defence which is scattered over a wide area, involving many practically independent commands in which the engineers will doubtless be called upon to play an important part. On the outbreak of war, a large amount of work would have to be undertaken under direct military control, and it would be too late then to organise a staff and a system of work. Confusion, disastrous delay, and lavish expenditure would be the inevitable penalty for this neglect in organisation in peace time.

For the reasons adduced, I would urge the necessity for a change in the system of executing military works. It might be necessary to introduce it gradually as regards the staff. In principal it must be radical from the outset. I would recommend the formation of a "Military Works Branch," under the Public Works Department. The head of that Branch should be the Commanding Engineer, who would be directly under the orders of, and responsible to, the Secretary for Public Works for the construction of all defence works, barracks, &c., and for all expenditure in connection with the submarine mining defences which had been approved by the Colonial Secretary.

The method of procedure as regards the origin of designs would remain as at present. The Artillery and Engineer Works Committee would advise the General Officer Commanding; but the plans, after approval, should be submitted direct to the Secretary for Public Works, who would obtain the Colonial Secretary's approval before he ordered them to proceed.

The Colonial Secretary would thus, as at present, occupy, relatively to military works, the office of Minister for War, and the Secretary for Public Works that of Inspector-General of Fortifications.

The Commanding Engineer would correspond direct on all departmental questions with the Under Secretary for Public Works, and, on questions of military discipline and training of the engineers under his command, with the General Officer Commanding.

This procedure is quite in accordance with the spirit of the "Queen's Regulations" and the "Regulations for the Royal Engineer Department," and from these a simple code of Regulations could be framed to ensure method in work and regularity in the performance of duties on the lines of Imperial organisation.

The Commanding Engineer would be responsible to the Secretary for Public Works for the administration and control of all sums authorised for military works now undertaken by the Colonial Architect, as well as for those voted in connection with the submarine mining defences.

Payments would be made in the manner prescribed for the other Departments under the Secretary for Public Works, an imprest being allowed to meet current expenses on urgent works and repairs which have been approved,

The following staff would be required :—

- Engineer for Works (Lt.-Col. Boddam).
- Surveyor and Clerk of Works (Mr. Purkis?)
- 1 draughtsman.
- 1 assistant draughtsman.
- 1 clerk and accountant.

Foremen of Works can be engaged for any special work, their pay being chargeable to the works.

Military foremen of works can gradually be enlisted and trained to undertake the special duties which would devolve upon them in war time.

Dawes' Battery, 18 June, 1889.

F. R. DE WOLSKI,
Lieut.-Colonel, R.E.

Send

Send on to Mr. Barnet, with a request that he let me have his answer to the whole matter as soon as he possibly can.—B.S., 19/6/89. Mr. Barnet, B.C., 19/6/89. Very urgent. The Minister desires to be furnished, as early as possible, with the Colonial Architect's reply to Col. de Wolski's memorandum. Will Mr. Barnet kindly expedite.—D.C.M'L. (*pro* Under Secretary), B.C., 26/6/89. Report herewith respecting fortifications and military works, including reply to memorandum of Lieut.-Col. de Wolski referred to and enclosed in letter P.W., 89-1,771.—J.B., 29/6/89.

No. 2.

Report of Colonial Architect on Memorandum of Lieut.-Colonel de Wolski.

BEFORE dealing with the memorandum of Lieutenant-Colonel de Wolski, it may be briefly stated that in 1850 the barracks, military buildings, and land belonging to the Imperial Ordnance Department were transferred to the Colony "on condition of providing, maintaining, and repairing quarters for Her Majesty's troops in the capital."

In 1855, under direction of Royal Engineer Officers, the military commenced fortification works at Middle and South Heads, Port Jackson; but Sir William Denison, K.C.B., an Engineer Officer, on his arrival as Governor, put a stop to these works, and designed other works, which were carried out on Pinchgut Island (now Fort Denison), Kirribilli Point, Mrs. Macquarie's Point, and Dawes' Point. When these works were completed the Royal Engineer Staff was discontinued, and the whole of the works, on the resignation of Lieutenant-Colonel Barney, R.E., in 1860, handed over, by direction of Sir William Denison, to the Colonial Architect's Department, under which all works in connection with military buildings and fortifications have since been carried out.

Of the works commenced at that time, the most pressing was reconstruction of powder magazine at Dawes' Point, which, from its dampness and other defects, was found to be useless for the storage of powder.

In September, 1870, the Colonial Architect was appointed one of a Royal Commission, with other gentlemen named in the margin, to consider matters concerning the defences of the Colony.

The Commission decided to construct batteries at the following points of Port Jackson, viz. :—

- Middle Head (outer and inner).
- George's Head (and casemate).
- South Head (outer and inner, and casemate).
- Bradley's Head.
- Shark Point.

Lieut.-Col. Richardson;
Wm. Macleay,
Esq., M.P.; E.
O. Moriarty,
Esq.; P. L. C.
Shepherd, Esq.,
V.A.; Francis
Hixson, Esq.;
E. C. Cracknell
Esq.

Also a boom across the Harbour, torpedo boats, &c., in addition to which batteries were to be erected at Newcastle and Botany, as well as along the coast between Sydney Heads and Botany, using the guns then in the Colony until larger and more modern guns were available, which were to be ordered from England. The works referred to, excepting a few of the items allowed to stand over, were carried out under the direction of the Colonial Architect; and, by the labour of the unemployed, the road to La Perouse was made, and those to George, Middle, and Bradley's Heads cleared, ready for the Roads Department under which they were completed.

On 2nd January, 1871, contracts were taken for construction of batteries at Middle Head, George's Head, and South Head before referred to, from drawings prepared by the Colonial Architect. On 17th March, following, the first gun was mounted (at Middle Head).

By the year 1875 forty-four guns were mounted, including ten 9-inch and 10-inch B.L.R. Armstrong guns which had been recently imported, and for which emplacements were designed by the Colonial Architect from type drawings sent from England by the Inspector-General of Fortifications—each work being provided with shelter trenches, magazines, shell-rooms, store-rooms, and water supply, also loopholed rifle pits, and permanent barracks at George's Head, Bradley's Head, and Shark Point. These works were carried out under the personal direction of the Colonial Architect by four officers whose united salaries amounted to £800 per annum.

The Government having invited the Imperial authorities to send military engineers as soon as they could be spared to report generally upon the defences of the Colony, in the year 1877 Sir W. Jervois and Colonel Scratchley were sent. They reported favourably upon the work done, at the same time making suggestions for improvements, which have been carried out under the same direction as previous works.

In the meantime, Colonel Scratchley was appointed jointly by the different Colonies to the general direction of the defence operations. He designed forts for Bare Island, Botany, and Newcastle, also armoured casemate for George's Head, Port Jackson, all of which have been satisfactorily carried out by the Colonial Architect, who designed and erected permanent barracks and officers' quarters at Middle and South Heads, Port Jackson, and Newcastle.

The plans of Middle Head and South Head Barracks were adopted by the late Sir Peter Scratchley, for Queenscliff, Victoria.

At the present time works are in hand at South Head and Newcastle, preparing for the placing of the new B.L. disappearing guns, also some earthworks at armoured casemate, George's Head, and barracks at Bare Island, the latter recently stopped by order of the Colonial Secretary, at the request of Lieutenant-Colonel de Wolski.

The officers now employed under the Colonial Architect on fortification works are—one clerk of works and three temporary foremen of works, all of whom are paid from the Colonial Architect's Department Vote, with exception of one of the latter, who is paid from Vote for Defence Works.

Lieutenant-Colonel de Wolski is assisted by an officer temporarily employed, I understand, and a draughtsman from the Colonial Architect's staff, preparing drawings showing alterations to present works from type plans sent from England, and other works contemplated.

With reference to the statements in the memorandum of Lieutenant-Colonel de Wolski, respecting works carried out under the Colonial Architect's Department (pages 6 and 7), "that the system has signally failed, &c.," I would remark that, until the arrival of Lieutenant-Colonel de Wolski, and his assumption of the duties previously performed by the late Sir Peter Scratchley and Lieutenant-Colonel Penrose, no difficulties had ever arisen between the Colonial Architect and the Royal Engineers. The works were carried out to their entire satisfaction, and no change of system was ever suggested. In no instance has any deviation from an original plan been made, unless first submitted for approval to the Royal Engineer Officer for the time being.

As

As to the employment of unsuitable materials, this can only be a matter of opinion, as Royal Engineer Officers and others have already approved of them; and, as to the contractors being able under the specification to use any class of materials and work, Lieutenant-Colonel de Wolski cannot possibly have read the specification or general conditions of the contracts. It has been customary to note on the working plans any alterations made during the progress of the works, and any portions of the designs that may have been omitted for want of funds have been so omitted with the concurrence of the Royal Engineer Officer-in-Charge.

Page 2, paragraph 2. Every facility has been offered to the Royal Engineer Officers to inspect the works in progress, and any alterations suggested or directed have been carefully attended to.

Paragraph 3. "The present system is not conducive to economy," &c.

With regard to the present system, all works are let by tenders, invited by public competition, and the lowest has always been accepted after keen competition. I fail to see where a double staff is employed.

As for delays and the method of carrying on the works, and for the "technical expert" to communicate with the contractor on the spot, such procedure would not be desirable, as many improvements have been suggested by the Colonial Architect and adopted by the Royal Engineer Officer, resulting both in utility and economy. Delays are caused, to a considerable extent, by one military officer of the Royal Engineers condemning what his predecessor had carried out or advocated.

As to the defences of this Colony having cost more than similar works elsewhere, such statement should be received with caution, unless supported by facts—the reverse would probably be more accurate; and, as to the quality of the work done, it has been eulogised by several eminent experts. The works in Victoria are carried out on a system similar to that in this Colony.

Page 9. Required information has at all times been furnished to the Royal Engineer Officers, as regards prices of works or details of the several contracts.

With regard to submarine mining establishments at Chowder Bay—the estimated cost was furnished to Colonel Penrose—the specification was merely a modified one from the general schedule, as the plans submitted by Colonel Penrose were for preparing sites for stores, building wharf, torpedo, boat-slips, cable-pond, and sea-wall only. These plans were forwarded to the Colonial Architect, with an urgent request that this portion of the work be proceeded with at once, as the torpedo stores were being damaged, and the plans for buildings were then not ready.

Lieutenant-Colonel de Wolski is again mistaken in supposing that the sheds erected at Middle Head and George's Heights were for cleaning the H.P. guns only. They are intended to be used as general stores when the guns at present in them are taken out, it being represented by the Officer Commanding Artillery that stores were much needed. These sheds are built in the least expensive manner compatible with their exposed situation, being simply of 4 in. x 2½ in. hardwood framing, covered externally with 26-gauge galvanised iron, with rubble in cement foundations and broken stone floors.

Page 10, paragraph 4. Any delay that has taken place in the work of the pit for the H.P. gun at South Head has been caused by the military. After receiving from Colonel Penrose plans for this work, revised plans were sent, with a request that a portion of the superior slope might remain unfinished, with the view of experiments being made by firing the gun across the old pit—which is on the superior slope—filled with sand. This has been decided by Lieutenant-Colonel de Wolski to be unnecessary, and the work in this connection has been completed accordingly. That officer having had made several additions and alterations within the last month, viz., an additional 2 feet of concrete over magazine, additional covered passage, mantlet across passage, and other smaller items, there is no reason why this gun should not have been mounted and used a month ago.

In addition to the works in hand, tender has been accepted for preparing emplacement on George's Heights for two H.P. guns, and tender for preparation of torpedo site at Chowder Bay has been recommended.

Additional alterations at Fort Scratchley, Newcastle, are being estimated, and the drawings for proposed alterations at Inner Middle Head are being traced. The two last-named works will be ready, with the approval of the Minister for Works, for advertising for tenders in a few days.

Page 11. As to recommendation for the formation of a "Military Works Branch," I think the substance of my report clearly shows that such a Branch would neither be conducive to economy nor improve the method of carrying out works, so confidently dwelt upon by Lieutenant-Colonel de Wolski, the works hitherto having been carried out by the Colonial Architect's Department with satisfaction to previous Royal Engineer Officers, and at so small expense, compared with the cost of maintaining a staff such as that proposed by Lieutenant-Colonel de Wolski. Moreover, so large a portion of the works having been already carried out, this Branch would appear scarcely necessary; and it can hardly be considered desirable to place entire control of the works in question under officers who remain but a comparatively short space of time in the Colony to be succeeded by others whose views may possibly be quite different in respect to the mode of carrying out work and the designs projected by his predecessor.

Lieutenant-Colonel de Wolski, in nominating the staff that would be required for his proposed "Military Works Branch," includes the name of Mr. Furkis, Clerk of Works in my Department; but as this officer's duties are not confined to fortification works, I must object to his being removed, should the proposed "Military Works Branch" be established, as his services are required in my Department.

JAMES BARNET.

Colonial Architect's Office, Sydney, 29th June, 1889.

Colonial Architect.

No. 3.

Minute by The Secretary for Public Works.

In accordance with my recommendation that the construction of defence works should, for the future, be placed under Colonel de Wolski, the Cabinet has so approved. Prepare Executive minute for gazetting Colonel De Wolski as Director of the Military Works Branch under the Public Works Department.

B.S.

No. 4.

No. 4.

Minute for the Executive Council.

Subject:—Appointment of Lieutenant-Colonel F. R. de Wolski, R.E., as Director of the Military Works Branch of the Public Works Department.

Department of Public Works, Sydney, 8 July, 1889.

For the reasons set forth in the accompanying papers, I have the honor to recommend, for the approval of His Excellency the Governor and the Executive Council, that Lieutenant-Colonel F. R. de Wolski, R.E., be appointed Director of a new Branch to be created under the Public Works Department, to be called the Military Works Branch, and also that, as the head of such Branch, Lieutenant-Colonel de Wolski be appointed a Member of the Tender Board of this Department.

BRUCE SMITH.

No. 5.

Minute of the Executive Council.

THE Executive Council advise that the appointment herein recommended be approved.—ALEX. C. BUDGE, Clerk of the Council. Approved.—CARRINGTON, 9/7/89. Min. 89-40, 9/7/89. Confirmed, 10/7/89.

No. 6.

The Under Secretary for Public Works to The Director of Military Works.

Sir,

Department of Public Works, Sydney, 17 July, 1889.

I am directed by the Secretary for Public Works to transmit herewith, for your information, copy of the *Government Gazette* of yesterday's date containing the notification of your appointment as Director of the Military Works Branch of this Department, and also as Member of the Tender Board.

I have, &c.,

J. BARLING,

Under Secretary.

[*Enclosure.*]

Extract from *Government Gazette*, 16th July, 1889.

Department of Public Works, Sydney, 12 July, 1889.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to appoint LIEUT.-COLONEL F. R. DE WOLSKI, R.E., to be Director of the Military Works Branch of the Public Works Department, and also a Member of the Tender Board of the said Department.

BRUCE SMITH.

No. 7.

The Under Secretary for Public Works to The Under Secretary for Finance and Trade.

Sir,

Department of Public Works, Sydney, 18 July, 1889.

I am directed to inform you that His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the appointment of Lieutenant-Colonel F. R. de Wolski, R.E., as Director of the new Branch of this Department, called the Military Works Branch, and that all vouchers connected with that office will in future be signed by Colonel de Wolski, as Director of the Military Works Branch.

I have, &c.,

J. BARLING,

Under Secretary.

No. 8.

Memorandum by The Director of Military Works.

Organisation of the Military Works Branch, as regards Barracks, &c.

It has been decided to hand over the construction and maintenance of all defence works to a new Department, to be called the Military Works Branch of the Public Works Department; but the Colonial Architect considers it desirable that the works connected with barracks should remain, as hitherto, in his hands.

I am strongly averse to any reversion to a dual system of carrying out military works, for the following reasons:—

1. If the construction and maintenance of barracks remain with the Colonial Architect's Department, we shall have foremen of works from both the Colonial Architect's Department and the Military Works Branch working side by side, independently, at Bare Island, Bradley's and George's Heads, &c., where one foreman would suffice if the control of all military works rested with the Commanding Engineer.
2. The Colonial Architect's Department is not in direct communication with the military authorities, and the carefully detailed Rules and Regulations of the Imperial Service, as regards periodical inspections, assessment of damages, periodical painting, &c., and other provisions, are not properly carried out. In consequence of this want of system, the barracks generally are in a very dilapidated condition, although a large sum is annually voted for their maintenance.
3. Trifling repairs to doors, windows, &c., which in the Imperial Service are executed by the artificers amongst the troops in occupation, are, under the present system, not attended to for months, and in the end extensive repairs become necessary. As one of numerous instances which have come under my personal observation, I may mention the side entrance to the officers' quarters at Victoria Barracks. The staple of the door became detached some months ago, and was not repaired. The door is now in pieces.
4. It is not only conducive to economy to have all expenditure on military works under one control and in one Department, but it is most desirable that the control should remain with those best acquainted with the habits and requirements of military life and conversant with the Regulations of the Service, as regards accommodation for troops, handing over barracks, record of fitments, &c.

5. Should it become necessary hereafter to construct any important new barracks or buildings, it would be desirable to advertise for competitive designs, the general arrangements being supplied by the Military Department. In that case, we would gladly avail ourselves of any architectural assistance which the Colonial Architect might be able to place at the disposal of the military authorities.

F. R. DE WOLSKI,

Lieut.-Colonel, R.E., 17/7/89.

P.S.—The Major-General desires me to add that he considers that the reorganisation of the Engineer Department should be based strictly on Imperial lines, and that it is absolutely essential to efficiency that the design, construction, maintenance, and repairs of barracks, stables, &c., for troops, should be vested in the Commanding Engineer.—F. R. DE W.

The Minister will be glad if Mr. Barnet, at his earliest convenience, will report on the suggestion made herein.—J.B., 17/7/89.

No. 9.

The Colonial Architect to The Under Secretary for Public Works.

Sir, Department of Public Works, Colonial Architect's Office, Sydney, 31 July, 1889.

In reference to the accompanying paper from Lieutenant-Colonel de Wolski, respecting Military Works Branch of the Public Works Department, forwarded to me under blank cover on 17th instant, I do myself the honor to report as follows:—

With regard to the gratuitous remark of Lieutenant-Colonel de Wolski, "the Colonial Architect considers it desirable that the works connected with the barracks should remain as hitherto in his hands," I would observe that whatever my opinion may be in the matter I have not expressed it.

1. "If the construction and maintenance of barracks remain with the Colonial Architect's Department, &c., &c. : The barracks remaining with the Colonial Architect's Department need not involve a dual system, as the Colonial Architect has officers visiting all the localities where the barracks are situated, who, when inspecting works in these localities, could at the same time inspect the barracks without reference to any other superintending officer.
2. "The Colonial Architect's Department is not in direct communication with the military authorities, &c., &c.": Under the present system, the Colonial Architect's Department is placed in direct communication with the military every quarter, when the barrack inspections are held; on these occasions the barrack-master meets an officer of the Colonial Architect's Department; an examination of all the buildings is made, and list of all necessary repairs prepared; this list is then forwarded to the Colonial Architect's Department; the work is estimated, and the list with estimate is submitted to the Minister for authority to incur the expenditure; when this is received the works are carried out; delays have sometimes occurred through having to wait for this authority, or in consequence of funds not being at the time available. The barracks generally are not in a very dilapidated condition as stated; those at Bradley's, George's, Middle, and South Heads, Steel Point, and Newcastle, erected by the Colonial Architect, are in excellent condition. Daves' Battery and Victoria Barracks are not in such a good state of repair, as they are much older buildings, the latter being very extensive. Neither of these, however, are in a dilapidated state. The usual annual sum voted for repairs to Barracks and Military Buildings is £1,500, but the last three years this sum has been increased for special works, such as renewing floors, providing new windows and frames, &c., Victoria Barracks, tenders for the latter work having been recently received.
3. "Trifling repairs to doors, windows, &c., &c.": These repairs are not left unattended to as stated, unless for the reasons already given; the instance referred to by Lieutenant-Colonel de Wolski is not a case in point, as the staple of the door in question was only off for a short time, and it should not have been off at all, as on examination it was found that it had been burst off violently from the outside, which would appear to be an act of wanton destruction, as the officers were furnished with the number of keys applied for, for their private use. Repairs, no doubt, could be effected by artificers among the troops, but at an increase in the expense, the labour of soldiers being costly, although the wages paid are low. As an instance, the military have been engaged for some time past in erecting a temporary shed at South Head, to be used in connection with mounting one of the new type guns, and to be portable. The cost of time, for two carpenters, bombardier, gunners, inspecting officer, &c., in addition to first cost of shed in Sydney, must amount to about double what a similar shed would cost if erected under contract in the usual manner.*
4. "It is not only conducive to economy to have all expenditure on military works under one control, &c.": This is a matter of opinion. In respect to works being carried out according to Regulations, it may answer in some instances, but, as is well known, hard and fast rules frequently prove the reverse to satisfactory. There certainly appears to be no rule at present regulating requisitions, some of the demands made by the officers being very extravagant, also the repairs, &c., requisitioned for being in many cases necessitated through the wanton destructiveness and carelessness of the military, as in the case of the door-staple before referred to. However, if it is desired that these buildings should be placed entirely under the control of the military, I have no objections to offer, provided the arrangement is permanent; but as to the economy and saving of expense Lieutenant-Colonel de Wolski appears to be so anxious to effect, I fail to see how this is to be attained by the construction of a new Department for the maintenance of the few buildings concerned, or erection of the small number of new military buildings, &c., now likely to be required, these services being at present performed by the Colonial Architect's Department, with those of the erection and maintenance of about 1,400 other buildings under this Department.
5. "Should it become necessary hereafter to construct barracks, &c., &c.": It is not clear why Lieutenant-Colonel de Wolski should consider it desirable to advertise for competitive designs in the event of any new barracks or buildings being required, as the general arrangements for these buildings would be supplied by the Military Department, and the proposed staff includes a draftsman,

* The Colonial Architect has been misinformed. This shed, 30' x 20' x 10', cost £75, and was a remarkably cheap piece of work.—F. R. DE W.

11

draftsman, leaving apparently nothing further necessary, provided the Engineer Officers possess the requisite constructive ability. I may add that the Military Barracks are leased by the Imperial Government to the Colonial Architect.

I have, &c.,
JAMES BARNET,
Colonial Architect.

Transfer approved.—B.S., 22/8/89. The Colonial Architect.—J.B., B.C., 22/8/89.

No. 10.

Minute Paper.

George's Head Battery.

THE Minister wishes to be furnished, as quickly as possible, with particulars of the works under your Branch now in progress at George's Head Battery, the nature and cost of same, the conditions of the contracts, time for completion, &c.

The Colonial Architect.

J. BARRLING,
(per D.C.M'L., B.C., 8/7/89.)

Works in progress, George's Head, comprise—Completion of battery, viz., earthworks, water supply, covered passages at rear to connect with proposed shelter-trench to barrack; estimated cost to complete these works, £1,000. They are being carried out at schedule rates under contract by Messrs. M'Leod and Noble. The work in hand might be completed in about two months, if the finish be definitely decided on by the military authorities.—J.B., 17/7/89.

P.W.O., 17/7/89. Refer to Col. de Wolski.—J.B., 18/7/89.

No. 11.

Minute Paper.

(P.W., 89-2,016.)

Subject :—Military Works Branch.

Department of Public Works, Sydney, 17 July, 1889.

IN accordance with the verbal arrangements made, the Minister would be glad if Mr. Barnet would forward all the papers in his office in regard to the various defence works, particulars of the current votes, with balances on hand, and also a statement of the condition of the various works in progress.

A statement should also be forwarded of the officers whose salaries are charged to Military Votes, and information as to whether they can be transferred to the new Branch.

J. BARRLING.

Statement &c., herewith.—J.B., 5/8/89. Hand over to Colonel De Wolski.—B.S. Colonel De Wolski.—J.B., 6/8/89.

Military Works Branch.

Statement of condition of works, &c., asked for by Minute Paper of 17 July, 1889, P.W., 89-2,016.

THE works in progress are as follows, viz. :—

South Head.—Alterations to old 10-inch battery for mounting one 6-inch new type gun on h.-p. carriage. This work is almost completed.

George's Heights.—Alterations to battery to receive two 6-inch new type guns on h.-p. carriages. This work is only recently commenced.

George's Head.—Completion of armoured casemate, and construction of range-finding and observing stations, &c. The armoured casemate is almost completed, and could be quite finished in a very short time, if the works were definitely pointed out. The military are in possession of a portion of the observing stations, &c., and the remainder are ready for handing over.

Bare Island, Botany.—Erection of barrack. The works have been stopped, in accordance with instructions.

Newcastle—Fort Scratchley.—Alterations to receive one 8-inch gun on h.-p. carriage, &c. Most of the excavation is done; steam-engine and tramway placed in position; but no construction commenced, as details have not been furnished.

Newcastle.—Road round base of hill. This work has been stopped, as instructed.

The whole of the works named are being carried out at schedule rates, and are paid for from the Loan Vote for Defence Works, &c., £125,000, taken in 1888. The balance of this vote, according to expenditure by Colonial Architect's Department, is £112,889 7s. 6d.

Bonds, papers, &c., herewith. Mr. Robert Bushby is the only officer paid from the Military or Defence Vote. His salary is £200 per annum, and his services are required for inspecting works in the Northern District.

JAMES BARNET,
Colonial Architect.

No. 15.

The Director of Military Works to The Under Secretary for Public Works.

(P.W., 89-2,441.)

Transfer of Military Works from the Colonial Architect's Department to the New Military Works Branch.

Sir,

Military Staff Office, Dawes' Battery, 10 August, 1889.

With reference to the Colonial Architect's memo. of the 5th and letter of the 6th instant, I have the honor to request that the Minister will be pleased to issue instructions to the Colonial Architect to hand over without further delay the various military works now in progress, and all the plans, accounts, and other documents connected therewith in the usual manner between one officer taking over charge from another. It would manifestly be unfair to expect me to accept the responsibility of taking over the works with the meagre information contained in the statements and documents forwarded to me through your office.

I desire to bring to your notice that the Colonial Architect has removed the draftsman from my office, without notice or reference of any kind, and whilst he was completing a defence plan. The Colonial Architect has further reported to the Minister that such officers of his Department as were employed on military works have been withdrawn, thereby leaving me entirely at the mercy of the contractors. The whole proceeding, as between two officials, is to my mind so prejudicial to the best interests of the Colony that I trust the Minister will intervene.

A month has already been allowed to elapse since the Ministerial decision to create a new Military Works Branch, and I am most anxious to assume charge at once of the defence works as well as of the barracks, &c., which form an essential part of the military system.

I have, &c.,
F. R. DE WOLSKI, Lieut.-Colonel, R.E.,
Director of Military Works.

Submitted.—J.B., 12/8/89.

No. 16.

The Director of Military Works to The Under Secretary for Public Works.

Sir,

Military Staff Offices, Dawes' Battery, 10 August, 1889.

With reference to the statement made by the Colonial Architect in his report to the Minister, dated 5th August, 1889, that the construction of the works at Fort Scratchley, Newcastle, has not been commenced, "as details have not been furnished," I have the honor to state that complete plans of the works were forwarded to the Colonial Architect some eight months ago, and that the contractor is quite prepared to push on if a free hand be given him. No other details have ever been called for by the Colonial Architect, and no other will be furnished until the work approaches completion. As

As I have previously reported, the delay in pushing forward this very important work is altogether due to the fact that it has been sacrificed to the construction of a so-called military road round the fort, for which there was no Ministerial sanction, nor plan, nor tender. The responsibility for delay rests entirely with the Colonial Architect's Department.

I have, &c.,

F. R. DE WOLSKI, Lieut.-Colonel, R.E.,

Director of Military Works.

Resubmit when we hear further.—B.S., 28/8/89.

No. 17.

Minute Paper.

(P.W., 89-2,252.)

THE Minister wishes Mr. Barnet to meet him at the Legislative Assembly to-morrow (evening at 8 p.m.), respecting the handing over of the military works. Colonel de Wolski is also to be present. The Minister will be in the Chairman of Committees' private room.

D. C. M'L. (*pro* U.S.), B.C., 12/8/89.

As I am unable to leave home after dark, I regret that I cannot meet the Minister as desired; but I decline to meet Lieut.-Colonel de Wolski unless he withdraws—publicly, as made—the unfounded charge against the Colonial Architect's Department contained in his report respecting disabling of 25-ton gun at Middle Head, which appeared in the public press and the printed papers placed before Parliament.—JAMES BARNET, Colonial Architect, 13th August, 1889.

Mr. Barnet to be here to-morrow at 11 a.m.—J.B., 13/8/89. Received too late to telephone, 13/8/89. Telephoned, 9.40 a.m., 14/8/89. Put by for the present, 15/8/89.

No. 19.

The Colonial Architect to The Under Secretary for Public Works, forwarding Statements, &c., of Defence Works

(P.W., 89-2,497.)

Sir,

Colonial Architect's Office, Sydney, 2 September, 1889.

In reference to accompanying minute paper, and paper respecting defence works, particulars of which have not yet been received by Lieut.-Colonel de Wolski, &c., forwarded to me under blank cover on 27th ultimo, I now do myself the honor to transmit herewith statements furnishing the information asked for.

With respect to handing over the various works, if Lieut.-Colonel de Wolski will name a time for the purpose, the officer-in-charge of the works, with his assistant in each case, *will meet him on any of the works he may wish, and, with the view of affording the fullest information relating to the works, the contractors will also be asked to attend.

I regret the Minister should, apparently, be under the impression that there has been delay in complying with his wishes in this matter, as such is not the case, the information now furnished not having previously been applied for.

I have, &c.,

JAMES BARNET,
Colonial Architect.

Colonel de Wolski.—J.B., B.C., 4/9/89. With fourteen tracings.

STATEMENT

* Mr. Bushby was not present at the handing over.—F.R. DE W.

STATEMENT of Defence Works referred to in Colonial Architect's letter, 2nd September, 1889.

1. *George's Head Casemate.*

Amount paid to date £23,608 0 0

The plans for this battery were sent to Colonel Penrose on 26th June, 1886, and have not since been returned.

Key of Foreman of Works' office will be given in handing over works—measurements being not yet quite completed.

Inventory of office contents annexed, marked A; all working plans in office.

2. *Botany Barracks.*

Amount paid to date £500 0 0

No materials on ground have yet been passed.

Details of work done annexed, marked B.

3. *Newcastle—Fort Scratchley.*

Amounts paid to date £40,926 10 4

Details—Construction of batteries for 3 9-in. and 1 80-pr. M.L.R. guns firing *en barbette*, and 3 80-pr. M.L.R. guns in casemate central magazines, with expense magazine to each gun, and store magazine to casemate guns, artillery and small stores, loop-hole wall and ditch at rear of fort, concrete retaining-wall round base of hill on which fort is constructed, &c.

Alterations, &c., in progress £935 0 0

Key of office will be given when handing over work.

Inventory of contents of office annexed, marked C.

Copies of plans (14) made for Foreman of Works herewith.

4. *South Head—6-inch Pit.*

Amount paid to date £1,550 0 0

Plans were sent to Colonel Penrose on 9th February, 1889, and have not since been returned.

5. *Barracks.*

List of contracts in progress and payments to date from this year's Votes annexed, marked D.

Colonial Architect's Office,

Minute Paper.

Department of Public Works, Sydney, 24 September, 1889.

LIEUT.-COLONEL DE WOLSKI states that Mr. Colley, of your Branch, promised to furnish him with certain information more than a fortnight ago respecting some of the military works, but that up to the present he has not received it.

Kindly expedite its supply. Lieut.-Colonel de Wolski is anxiously waiting for it.

D.C.M'L. (*pro* U.S.), B.C., 24/9/89.

Statement herewith prepared by Mr. Colley, giving information asked for by Lieut.-Colonel de Wolski. Any further information required may be obtained from papers in his possession.—J.B., 16/10/89. The Director Military Works.—J.B., B.C., 17/10/89.

(89-2,225, 25 Sept.)

[Enclosure.]

No. 24.

The Director of Military Works to The Under Secretary for Public Works.

Transfer of Unexpended Balance of Votes for Military Purposes from Colonial Architect's Department to Military Works Branch.

46, Phillip-street, 20 October, 1889.

I HAVE the honor to request that the necessary steps be taken to transfer the unexpended balance of the Votes for military purposes, detailed on page 125 of the Estimates for 1889, from the Colonial Architect's Department to the Military Works Branch, viz. :—

Repairs to Military and Volunteer Buildings	£3,500
Victoria Barracks, &c.	400
Fortifications, repairs, &c., &c.	500
Painting ordnance carriages, &c.	50

F. R. DE WOLSKI, Lieut.-Colonel,
Director of Military Works.

Please state balance.—J.B., 2/10/89, B.C., Colonial Architect.

No. 25.

The Director of Military Works to The Under Secretary for Public Works.

(P.W., 89-2,784.)

Handing over Documents and Works by Colonial Architect to Military Works Branch.

Sir, Military Works Branch, 46 Phillip-street, Sydney, 4 October, 1889.

I have the honor to request that steps be taken without delay to complete the handing over of the works, &c., from the Colonial Architect's Department to the Military Works Branch. I am ready to take over the works at Newcastle, Botany, and George's Head, and also the barracks, whenever Mr. Colley, of the Colonial Architect's Department, will intimate his readiness to hand over.

I am, &c.,

F. R. DE WOLSKI, Lieut.-Colonel,
Director of Military Works.

The Colonial Architect.—D.C.M'L. (*pro* Under Secretary), 4/10/89. Very urgent.

No. 26.

No. 26.

The Director of Military Works to The Under Secretary for Public Works.

Defence Works, Fort Scratchley, Newcastle.

[Pressing.]

46, Phillip-street, 8 October, 1889.

WILL you kindly ask the Colonial Architect to arrange to hand over the works, &c., at Fort Scratchley, Newcastle, on Friday, the 11th, at 2.30 p.m.?

F. R. DE WOLSKI, Lieut.-Colonel,
Director of Military Works.

The Colonial Architect.—D.C.M'L. (*pro* U.S.), B.C., 9/10/89. Urgent. I have instructed Mr. Colley to meet Lieut.-Colonel de Wolski at Newcastle at the time named.—J.B., 10/10/89.
The Director.—D.C.M'L. (*pro* U.S.), B.C., 10/10/89.

No. 27.

The Director of Military Works to The Under Secretary for Public Works.

24 October, 1889.

IN accordance with your minute of the 28th August, I have the honor to resubmit this letter, with the following remarks:—

1. The contractor, Mr. Russell, having expressed his willingness to proceed with the works on the original plans, they were recommenced on the 21st instant.

2. The Colonial Architect has not yet handed over the tracings of the works, although repeatedly asked for them.

3. The authority for "alterations to Fort Scratchley, Newcastle, £3,500," No. 88-2,711, together with a detailed account of the expenditure up to date, viz., £1,271 7s. 2d. is urgently required.

4. A detailed statement of the expenditure of £350, works, Newcastle fortifications, and the authority, 80-2,255, are required, in order to complete the record of the cost of works chargeable to the Loan Vote, 1888, £125,000. As the authority is dated 1880, it is not apparent how this expenditure could be charged to a Loan Vote of 1888 for a specific purpose, each item of which was detailed.

5. The contractor informed me last week that he had not been paid for his work, but it is impossible for me to say whether this refers to works of which the expenditure is reported up to date or not.

6. The Foreman of Works, Mr. Bushby, was absent when the office, &c., was handed over, so that absolutely no information of any kind was obtainable.

7. I regret to have to state that, in my opinion, the whole transaction in connection with the transfer of the military works at Newcastle displays either wilful obstruction or woeful incompetence on the part of the officers of the Colonial Architect's Department.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

No. 28.

Minute by Colonial Architect.

(P.W. 89-2,784.)

THE Newcastle works have been handed over, and if Colonel de Wolski will name a time for taking over the other works, I will instruct Mr. Colley to meet him. J.B., 24/10/89.

Received, 4/11/89. The Director of Military Works.—D.C.M'L., B.C., 4/11/89.

Under Secretary Public Works.—The Newcastle Works are certainly in progress under my Branch, but they cannot be said to have been handed over. I took possession. The plans in possession of the Foreman of Works have not yet been received, nor a detailed statement of the expenditure furnished, without which I shall not know what has and what has not been paid for. I must decline to take over any more works until this matter is settled in a businesslike manner.—F. R. DE WOLSKI, Colonel, Director of Military Works, 8/11/89.

Write, asking Mr. Barnet for the information.—J.B., 13/11/89. The Colonial Architect, 15/11/89. Send reminder,—2/12/89.

No. 29.

The Director of Military Works to The Under Secretary for Public Works.

Contract documents required from Colonial Architect.

Sir,

46, Phillip-street, 8 October, 1889.

Will you kindly obtain from the Colonial Architect the agreement, specifications, &c., for renewal of water closet at the Victoria Barracks? Messrs. Allan and Marshall are the contractors.

F. R. DE WOLSKI, Lieut.-Colonel,
Director of Military Works.

The Colonial Architect.—D.C.M'L. (*pro* U.S.), B.C., 8/10/89. The papers are all at Crown Solicitor's for preparation of bond.—J.B., 14/10/89. P.W.O., 16/10/89. A. A. Marshall & Co., 22/10/89. In a week, 22/10/89. Messrs. Allan A. Marshall & Co., 4/11/89. Colonel de Wolski to see and please return.—D.C.M'L. (*pro* U.S.), B.C., 4/11/89.

Under Secretary, Public Works.—While this correspondence was in progress, the Colonial Architect's Clerk of Works, Mr. Telfer, was carrying out the work, which is now nearly completed. The only course open to me is to take charge *vi et armis*; and I propose to obtain an order to exclude Mr. Telfer from the barracks. I consider the Treasury should be directed not to pay any more bills.—F. DE WOLSKI, Colonel, Director of Military Works, 5/11/89.

I have written to the Colonial Architect to withdraw all his officers from these works at once, and not to operate on the votes in future.—J.B., 7/11/89.

No. 30.
Minute Paper.

Department of Public Works, Sydney, 14 October, 1889.

THE Minister would be glad to know upon what works the officers are now engaged who were formerly employed in connection with Military Works under the Colonial Architect's Department? Will Mr. Barnet kindly say?

J.B.

Mr. Colley, who had charge of the Military Works, is engaged, as hitherto, on works for Naval Depot, Garden, Goat, and Spectacle Islands, and Commissariat Stores; Court-House, St. Leonards; Public Buildings, Manly; Australian Museum; Medical School and Laboratory, Sydney University; Darlinghurst Gaol; Reformatory, South Head; Health Office, Watson's Bay; Signal Station and Observatory, Fort Phillip; Morgues, Circular Quay and South Sydney, &c.

Mr. Purkis, who assisted Mr. Colley, is now occupied on works at Little Bay, La Perouse, Ulladulla Lighthouse, Asylum for Insane, Parramatta, &c.

Mr. Bruce, who was a short time at Bare Island, is now employed on Medical School and Chemical Laboratory, Sydney University, and assisting Mr. Colley.

Mr. Bushby, who was employed under Mr. Colley at the Newcastle Fortifications, has since been assisting Mr. Lewis, inspecting works at Maitland, Dungog, Clarence Town, Raymond Terrace, Stroud, and Bulladelah, and is now at Kiandra superintending erection of new Police Buildings.—J.B., 29/10/89. P.W.O., 1/11/89.

List may now, I presume, be put away.—J.B., 1/11/89.

No. 31.

The Director of Military Works to The Under Secretary for Public Works.

Sir, Military Works Branch, 46 Phillip-street, 26 October, 1889.

With reference to the return furnished by the Colonial Architect on the 12th August, 1889, forwarded herewith, I have the honor to report that I am informed that the available balance of the £500 for repairs to barracks at the Heads for 1889, which the Colonial Architect stated in his report, dated 12th August, 1889, amounted to £312 5s. 2d., has since been expended. No intimation of contracts in progress or of outstanding liabilities has been received since this return was submitted, and I have reason to believe that the other available balances have been similarly diminished by subsequent payments made by the Colonial Architect.

It is absolutely impossible for me to accept responsibility as regards expenditure if I am thus kept in ignorance of available funds on current votes. For example, I have recently instructed the Foreman of Works for Military Buildings to execute some very urgent repairs connected with damage done by the fall of a wall recently erected by the Colonial Architect's Department at South Head Barracks. I now find that there are no funds available to carry out this repair.

I have the honor to state that work is still being executed under the supervision of the Colonial Architect's Clerk of Works in Victoria Barracks, and that the contract documents, &c., connected therewith have been withheld. I would respectfully urge that the Minister will be pleased to issue peremptory instructions which will put an end to this evasion of repeated orders to hand over the military works and all documents connected therewith. I find that Mr. Colley, of the Colonial Architect's Department, is not vested with full powers to hand over, and constantly refers me to the Colonial Architect through the Under Secretary. I would recommend that some more satisfactory method be adopted of completing the transfer.

I take this opportunity of stating that the positive refusal of the Colonial Architect to meet me, even in my official capacity, has been the cause of all this trouble. It was a reflection on my good faith, which, in the interests of the Public Service, I did not resent at the time. I do so now, because I consider that my forbearance has been abused beyond endurance.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

No. 32.

Minute Paper.

Subject:—Expenditure on Defence Works and Military Buildings.

Department of Public Works, Sydney, 24 October, 1889.

I HAVE the honor to call attention to the undermentioned statement of balances on votes for military buildings and fortifications on the 12th August, and on the 23rd instant, and to point out that the Colonial Architect continues to make charges against these votes without my knowledge.

As will be seen, some of the balances on the 12th August have been materially reduced since that date; and if the practice of operating on these votes without reference to me be continued, complications are likely to arise.

I should advise that the Colonial Architect be requested to furnish an estimate of what charges he may still have to make against the balances.

Work.	Vote.	Balances.

£3,500—Repairs, military buildings, &c.	363 0 0
£400—Victoria Barracks—Lighting lamps, &c.	17 0 0

Colonial Architect's Office, Sydney, 8th November, 1889.

No. 33.

The Director of Military Works to The Under Secretary for Public Works.

Sir, Military Works Branch, 46 Phillip-street, 24 November, 1889.

With reference to the particulars of expenditure on Vote £125,000, Loans, 1888, for military works, I have the honor to request that you will kindly obtain from the Colonial Architect a detailed statement, together with the necessary authorities, of—

“Works at armoured casemate battery, George's Head; completion of entrenchments, &c., and erection of sheds at George's and Middle Heads, Port Jackson,” £3,534 14s. 7d., executed apparently under five separate authorities, dated 1882 to 1887, and charged to the Loan Vote of 1888, apparently without the necessary authority of the Hon. the Colonial Secretary, which it will now be requisite to obtain. This sum, £3,534 14s. 7d., appears to have been expended out of authorities obtained for specific works, such as “Barracks, Bare Island,” “George's Heights Battery,” &c., and in consequence sufficient funds will not remain to carry on these works if this matter be not forthwith rectified.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

No. 34.

The Director of Military Works to The Under Secretary for Public Works.

Completion of George's Head Casemate Battery.

Sir, 46 Phillip-street, 24 October, 1889.

I have the honor to state that, on the 13th March, 1889, the Hon. the Colonial Secretary approved of the expenditure of £1,000, as recommended in Major-General Schaw's report for “George's Head casemate battery, completion of merlons and roof (earthwork).” The Colonial Architect reported, on the 30th September, 1889, that the expenditure up to date on this work has been £1,004 14s. 11d., or an excess of £4 14s. 11d., for which authority will have to be obtained.

I would point out that a portion of the work executed by the contractors was for improving communications to casemate battery. This item was given to the contractor without authority from the Minister, and the work was carried out without a plan, estimate, and the necessary approval of the expenditure by the Hon. the Colonial Secretary.

In order to put this question on a proper footing, it will be necessary to obtain from the Colonial Architect a detailed account of the expenditure on this work up to date, viz., £1,004 14s. 11d., in order that the expenditure may be apportioned to the proper authorities, and approval obtained for the excess required.

I may remark that, as the work is not yet completed, a detailed account of measurements and expenditure up to date should have been submitted before the Colonial Architect sent in his report of the 6th August, 1889, that “such officers of my Department as were employed on military works have been withdrawn, and that the works of the several contracts are now virtually stopped.”

In conclusion, I have the honor to state that until the Colonial Architect supplies the necessary information which I called for in my letter of the 10th August, copy herewith, I shall be unable to assume any responsibility as regards these works.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

No. 35.

The Director of Military Works to The Under Secretary for Public Works.

Sir, 46 Phillip-street, 30 October, 1889.

I have the honor to request that you will kindly instruct the Colonial Architect to send to this office the key of the office at South Head with an inventory of contents, and the contractor's copy of the plans of the emplacement for 6-inch gun recently completed.

There is a boat at South Head, of which I should be glad to obtain possession at the same time.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The Colonial Architect.—D.C.M'L. (*pro* U.S.), B.C., 31/10/89.

Key of office, and four keys of submarine mine observatory station, herewith; also, tracings and drawings (nine in all), asked for, as per list enclosed, which gives as well contents of office. An officer of my Department will be at Watson's Bay to-morrow (Tuesday), when, if an officer of the Military Department is there to meet him, the boat referred to can be handed over.—J.B., 11/11/89. The Director.—J.B., B.C., 11/11/89. Under

Under Secretary for Public Works,—I have the honor to report that the furniture and utensils supplied by contract, in accordance with the specification of the schedule, have been removed before the office was handed over. Will you please ask the Colonial Architect to have them replaced if they were paid out of the Military Vote.—F. R. DE WOLSKI, Colonel, 19/11/89. P.W.O., 20/11/89.

Colonial Architect.—J.B., 22/11/89. The furniture referred to can be replaced when desired.—W.C. (for C.A.), 28/1/90. The Director.—D.C.M'L. (*pro* U.S.), B.C., 30/1/90.

LIST of plans that were used by Clerk of Works at South Head in carrying out the alterations for 6-inch h.-p. gun, for transmission to Colonel de Wolski, Director of Military Works.

One tracing—Submarine-mine firing stations, showing general arrangements.

” ” Submarine mining observing station.

” ” Site plan, submarine-mine firing station.

” ” Detail, magazine fittings.

” ” General plan of 6-inch B.L. gun.

Two tracings—Sections of 6 inch B.L. gun.

One tracing—Sketch, showing alterations to cartridge store.

” ” Detail of mantlet-door.

One drawing—Detail of clips and screwlinks for slinging racers.

One key of office and four keys submarine-mine observing station.

Contents in office—Drawing-table with drawers, &c.

Colonial Architect's Office, 8th November, 1889.

The office and boat have been taken over as directed. There is no furniture or utensils of any kind in the above (office); all except the fixtures having been removed.—E. M. TUDOR BODDAM, Lieut.-Colonel, 13/11/89.

No. 36.

The Director of Military Works to The Chief Accountant.

28 January, 1890.

MEMO.—Will you kindly call upon the Colonial Architect to explain why the office belonging to the works at South Head contains practically nothing, although when Mr. Purkis was in charge, it was furnished? The key of the drawers was found among the rubbish in the grate by Mr. Thorpe.

F. R. DE WOLSKI,

Chief Accountant, Public Works Department.

Colonel.

The Colonial Architect.—W.H.Q., 29/1/90.

When the office was cleared of the various articles belonging to the Head Office and the Clerk of Works, the furniture was also inadvertently brought away, and portion, with other old articles of furniture, sold by auction. The following articles were originally in the office, viz. :—2 iron pots, 1 kettle, 1 stool, 1 filter, 1 iron washstand and basin, 2 chairs, 1 iron bedstead and mattress, 1 table. The chairs and washstand are still in this office and can be returned; the other articles can be replaced by new if required.—J.B., 11/2/90.

The Director of Military Works.—W.H.Q., 13/2/90.

No. 37.

The Director of Military Works to The Chief Accountant.

13 February, 1890.

MEMO.—Will you please call upon the Colonial Architect to submit a list of the furniture and utensils, &c., which he removed from the South Head Office, and to have the articles returned at once during working hours.

Chief Accountant, Public Works Department.

F. R. DE WOLSKI,

Colonel.

The Colonial Architect.—W.H.Q., 14/2/90.

A list of the furniture, &c., referred to was included in my B.C. report of 11th instant, in P.W. 90-361. However, it is now again furnished as under :—2 iron pots, 1 kettle, 1 stool, 1 filter, 1 iron washstand and basin, 2 chairs, 1 iron bedstead and mattress, 1 table. The articles will probably be sent to South Head to-morrow.—J.B., 18/2/90. The Director of Military Works.—W.H.Q., 21/2/90.

No. 38.

Memo. by The Under Secretary for Public Works.

LIST of Schedules of Contracts asked for by the Director of Military Works :—

1. George's Head.—Parry and Farley.
2. South Head.—W. Farley.
3. Middle Head.—Phillips, Howie, & Co.
4. Chowder Bay.—Parry & Farley.
5. Bare Island, Botany.—M'Leod.

Without a copy of these schedules the current accounts cannot be made up. Will Mr. Barnet kindly supply the necessary information.

J.B., 6/11/87.

Urgent. George's Head.—Parry and Farley; bond not received. South Head.—W. Farley; copy from office copy herewith. Middle Head.—Phillip, Howie, & Co.; contract not taken under Colonial Architect's Department. Chowder Bay.—Parry and Farley; bond not received. Bare Island.—J. M'Leod; bond and schedule sent to Works on 4th instant, P.W. 89-3,126.—J.B., 8/11/89. The Director, Military Works.—J.B., B.C., 13/11/89.

No. 39.

No. 39.

The Director of Military Works to The Under Secretary for Public Works.

Military Works, Fort Scratchley, Newcastle.

Sir,

Military Works Branch, 46 Phillip-street, 15 November, 1889.

I have the honor to request that the accompanying correspondence relative to a dispute between the Contractor and the Officer Commanding Artillery be referred to the Colonial Architect for explanation. I have reason to believe that Mr. Bushby, the Foreman of Works, engaged all the daily labour for work done in the fort, and in all probability we shall be called upon to pay twice over for removing this shed. I have reported, in my memos. dated 24th October and 7th and 8th November, that the works at Newcastle have never been properly handed over.

I foresee that disputes are inevitable unless the works are handed over in a businesslike manner, and therefore I do not propose to take over the works at Botany until this question is settled, and a proper statement of accounts, &c., rendered. The works at George's Head are suspended for the same reason.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The Colonial Architect.—J.B., B.C., 18/11/89. Very urgent. B.C., Director.—J.B., 13/12/89. Messrs. Russell & Co. are not entitled to the £10 claimed in connection with the building, which should be handed over without any charge.—J.B., 9/12/89. P.W.O., 11/12/89.

MEMORANDUM from James Russell & Co. to Lieutenant Morris, Fort Scratchley.

Dear Sir,

Newcastle, 1 November, 1889.

In reply to your memo. respecting the old look-out house, we have to inform you that we were permitted to take possession of it (providing that we would remove it from its old position), and use as store and office during our contract. We are, however, willing to hand same over to you, providing that the military authorities will pay us the expense of removal and repairs which would amount to about £10.

Yours, &c.,

JAS. RUSSELL & CO.

Officer Commanding A and B Districts. Mr. Russell's reply herewith.—A.G.H.M., Lieut., 2/11/89. The O.C.P.A., for information.—L.A., Lt.-Col., 4/11/89.

Commanding Engineer.—From all I can ascertain, the house in question was removed under terms of contract. It was the property of Government, and not being required by one Department was, as is apparent, handed over to another, which could make use of it. I do not think Mr. Russell is entitled to anything. I can obtain no information that any repairs were effected.—C.F.R., Colonel Commanding Artillery Forces, 14/11/89.

Under Secretary for Public Works.—The old look-out house is stated by Messrs. Russell & Co. to have been removed twice. The Harbour Master asked for its removal from the first site, to which it was shifted by the Colonial Architect, and the contractor obtained permission to re-erect it at his own expense, and use it as a store office. In the absence of more reliable information, and in order to obtain immediate possession urgently required, I have agreed to pay Messrs. Russell £10, and the keys were yesterday handed over to my Clerk of Works, who took possession. This is one of the many difficulties arising from the Colonial Architect's method of transfer to the Military Works Branch.—F. R. DE WOLSKI, Colonel, 9/1/90.

P.W.O., 10/1/90. List fully explain.—J. B., 10/1/90. Approved by Minister; order No. 65.—D.C.M'L., 15/1/90. J.B. The Director, Military Works.—J.B., B.C., 16/1/90.

No. 40.

Minute Paper.

(P.W., 89-3,511.—C.A., 89-3,159.)

Subject :—Defence Works.

Department of Public Works, Sydney, 10 December, 1889.

HAVING understood from Colonel de Wolski that he has not yet obtained all the information he requires in connection with Defence Works which have been handed over to him—and which information was promised to be supplied at once, some months ago—I am forced to the conclusion that there is some misunderstanding between the Colonial Architect's Department and Colonel de Wolski as to what is actually wanted; and I am moreover of opinion that such misunderstanding, if continued, will prove detrimental to the public interest. I now desire Mr. Quodling, the Chief Accountant of the Department, to take the whole matter of the accounts in hand; to ascertain from Colonel de Wolski what further information is required; to obtain from the Colonial Architect's Office that information, and to report to me at the earliest moment any difficulty which he may find preventing a complete adjustment of the several matters involved. As Mr. Quodling is now keeping the accounts for the Military Works Branch, he will be aware of what is required, and I am hopeful that by this course a settlement of this rather protracted matter may be effected and any further friction and difficulty obviated.

BRUCE SMITH.

Will Mr. Quodling please attend to this at once?—J.B., 10/12/89. Urgent. Handed to Colonel de Wolski on the 12th and returned by him on 23rd Dec.—W.H.Q., 24/12/89. Will the Colonial Architect kindly give effect to this?—J.B., 24/12/89. The Colonial Architect.—F.H., 24/12/89.

Colonel de Wolski will perhaps be good enough to state definitely the information asked for that has not been furnished, as there has been no misunderstanding as far as this Department is concerned, Colonel de Wolski having been supplied with all the information he has applied for. I now forward herewith copies of all accounts, amounting to £14,510 17s. 7d., charged to Vote, £125,000, asked for by enclosed minute-paper from Mr. Quodling.—J.B., 3/1/90. Accounts

Accounts forwarded Colonel de Wolski to-day.—F.H., 4/1/90. Please state what additional information is now required from the Colonial Architect?—W.H.Q., 4/1/90. The Director of Military Works.

Chief Accountant.—I want every document, measurement, and statement, such as outstanding balances, which will enable me to settle up with the contractors and resume the works. As I do not know what information the Colonial Architect has in his possession, I cannot ask definitely for any documents. If none exist, all I have to say I *positively decline* to take over the works at Botany, George's Head, and Newcastle. The misunderstanding arises possibly from ignorance of the nature of a business transaction.—As the Colonial Architect has handed over no books, measurements, labour sheets, &c., I have a right to presume that he does not manage his Department on business principles—at least from my point of view.—F. R. DE WOLSKI, Colonel, 4/1/90.

[Enclosure.]

Minute Paper.

Subject:—Defence Works.

Department of Public Works, Sydney, 23 December, 1889.

HAVING been directed by the Hon. the Minister for Works to arrange for the adjustment of accounts and other matters between the Colonial Architect and the Director of Military Works, I have the honor to request you to be good enough to furnish me, as early as practicable, with copies of all accounts for works and services which have been charged to the Vote for £125,000 for Defence Works.

W. H. QUODLING,

The Colonial Architect.

Chief Accountant.

No. 41.

Minute Paper.

Subject:—Messrs. Jas. Russell & Co.'s Contract, Fort Scratchley, Newcastle.

Department of Public Works, 23 December, 1889.

I AM informed by the Colonial Architect that the works executed by Messrs. J. Russell & Co., at Fort Scratchley, Newcastle, were measured by an officer of his Department, in the presence of a representative of the contractors, and that the works were stopped, as far as his Department was concerned, on 6th July last.

Messrs. Russell & Co. were requested, on 22nd August and 18th November, to furnish a statement of their claims, but they have not done so. They wrote and stated that, having no record of the measurements, they were prepared to accept those of the officer of the Architect's Department, and a statement of the measurements was forwarded to Messrs. Russell & Co. on 18th instant.

The £935 already advanced was merely a payment on account, no measurements having been taken.

W. H. QUODLING,

The Director of Military Works.

Chief Accountant.

Chief Accountant.—I understood from Mr. Bushby, and also from Messrs. James Russell & Co., that the work had been done by daily labour. I think you ought to obtain from Treasury or Audit Department the original bill or voucher for £935. It is surely not regular to give advances without measurement or detail of any kind. I have written to the contractor on the subject.—F. R. DE WOLSKI, Colonel, Director of Military Works, 28/12/89.

Minute to Colonial Architect.—J.B., 30/12/89. I have requested the Colonial Architect to furnish a copy of the account.—W.H.Q., 30/12/89. The Director of Military Works.

J. Russell & Co. to The Director of Military Works.

Sir,

Newcastle, 18 December, 1889.

Mr. Ince having asked us what money we had received from Colonial Architect's Department on account of our contract for alterations to Fort Scratchley, we have the honor to inform you that we have received one advance only of £935 on account of this contract. We have applied for the balance due, but have not yet received same. We, however, consider it will be necessary that we receive this before the works can be properly handed over, unless the Military Department will also take over and become responsible for all liabilities.

We have, &c.,

JAS. RUSSELL & CO.

No. 42.

Minute Paper.

Military Works, Fort Scratchley, Newcastle.

Department of Public Works, Sydney, 30 December, 1889.

WILL you be good enough to furnish me with a copy of the voucher for £935, passed in favour of Messrs. Jas. Russell & Co., being a progress payment on account of military works at Fort Scratchley, Newcastle.

W. H. QUODLING,

The Colonial Architect.

Chief Accountant.

Copy herewith.—J.B., 3/1/90. Accountant.—D.C.M'L. (*pro* U.S.), B.C., 3/1/90. The Director of Military Works.—W.H.Q., 4/1/90. Chief Accountant, Public Works Department.

The works are still in progress. The Clerk of Works has been removed, and no particulars of the work done have been left in the office, not even the plans furnished by this office. I must insist on a business-like handing over before I can make any further payments, and I foresee that unless this be done soon difficulties and litigation must result. I propose to call on the contractor to submit his claims forthwith, and request permission to stop the works in progress until the matter is settled. I consider the whole transaction cannot be known to the Minister, or he would never tolerate this obstruction.

Required:—

Required:—Tracings of plans, complete set; nature of work executed; detail of daily labour employed, measurements, materials, &c.; authorities, correspondence, and instructions to contractor, if any.—
F. R. DE WOLSKI, 4/1/90.

The Colonial Architect.—J.B., 6/1/90. The Colonial Architect has been requested to furnish the information asked for.—W.H.Q., 6/1/90. The Director of Military Works.

No. 43.

Minute Paper.

Subject:—Military Works, Fort Scratchley, Newcastle.

Department of Public Works, Sydney, 16 January, 1890.

Will you be good enough to furnish me with the following documents relating to the military works at Fort Scratchley:—

1. Tracing of plans, complete set.
2. Nature of works executed.
3. Detail of daily labour employed, measurements, materials, &c.
4. Authorities, correspondence, and instructions to contractor, if any.

W. H. QUODLING,

Chief Accountant.

The Colonial Architect.

1. All drawings and tracings, &c., were forwarded to Works Department on 2nd September last—
P.W., 89-2,429.

2. Plans and specification show nature of works.

3. This information will be given in contractor's account, which has not yet been furnished; when it is it will be sent on.

4. Authorities, correspondence, and all papers sent to Works on 5th August last.—P.W. 89-2,016. Contractor gets his instructions from specification, and verbally from Officer in charge of works.

J.B., 7/1/90.

Mr. Quodling, 7/1/90. The Director of Military Works.—W.H.Q., 8/1/90

1. The set of drawings in possession of Mr. Bushby, late Clerk of Works, Newcastle, has not been returned, although repeatedly asked for. As these plans contain important military details, viz., a plan of Fort Scratchley, it is now my obvious duty to report this failure to deliver military plans to the General Officer Commanding for the information of the Honorable the Colonial Secretary.

2. This is incorrect. The work done according to plans lost was merely the excavation for the pit for 8-inch gun. No plans nor specification relating to the work done by the Colonial Architect in removing signal station, erecting new one, stone-pitching, and clearing glacis, &c., &c., have been furnished.

3. The Clerk of Works' measurement book, daily labour book, and orders for materials, &c., are necessary to check the contractor's claims.

4. No specification of work detailed in (2) was sent. The authority sent was for the erection of emplacement for 8-inch gun. No authority has reached this office for the works actually carried out by Mr. Bushby.

F. R. DE WOLSKI, Colonel, 11/1/90.

No. 44.

Minute Paper.

(P.W., 90-88.) *Subject*:—Defence Works: Expenditure (52 Vic. 17), £125,000.

Department of Public Works, Sydney, 6 January, 1890.

I AM in receipt of copies of vouchers amounting to £14,510 17s. 7d., which you state are all that have been charged against the vote of £125,000 for Defence Works.

On 30th September last you furnished a statement giving particulars of the expenditure on this vote to date, showing a total of £17,322 1s. 3d. It will be seen, therefore, that there is a discrepancy of £2,811 3s. 8d.

Will you kindly explain?

W. H. QUODLING,

The Colonial Architect.

Chief Accountant.

With reference to statement furnished on 30th September last, giving expenditure £17,322 1s. 3d. on various works, this information was prepared by Mr. Colley, at request of Lieutenant-Colonel De Wolski, in which he gave approximate cost of works to date named, although not all paid for; the amount, £14,510 7s. 7d., is what has been actually paid by this Department, charged against the vote, £125,000, as per vouchers forwarded.—J.B., 8/1/90.

Will you please furnish me with all authorities, documents, and measurements of works at George's Head, Newcastle, and Botany, in progress when the works were stopped?—W.H.Q. All documents, &c., asked for, as far as can be, have been furnished.—J.B., 8/1/90.

The measurements of works which were executed under the Colonial Architects' Department at Newcastle, George's Head, and Botany have not been furnished. They are urgently required, as the works have been stopped, and cannot be resumed until this information has been furnished. I have therefore to request that it be supplied without further delay. The return furnished by Mr. Colley purports to show the total expenditure on the vote of £125,000 to date (30th September, 1889), and there is nothing to indicate that it is merely an approximate estimate of the cost of works under that vote. Will you please obtain from Mr. Colley an explanation of this matter?—W. H. QUODLING, 11/1/90. The Colonial Architect.

Books 5, giving measurements asked for, herewith. Mr. Colley states the return made by him for Lieut-Colonel De Wolski, referred to hereon, was intended to show only the approximate expenditure or cost of work performed.—W.C. (for C.A.), 17/1/90.

The parcel of books has been forwarded to your office. Will you please report if they contain the information you require? I have retained the list of vouchers in order that it may be compared with the account books of the Treasury.—W.H.Q., 17/1/90. The Director of Military Works.

It is to be regretted that Mr. Colley's intention was not made apparent on the face of the return in question.—W.H.Q., 18/1/90.

No. 45.

2. Russell & Co.—Alterations, &c., Fort Scratchley, probable amount £357
Do Roadway round Fort do 233
J. M'Leod—Bare Island barrack do 156
3. None in office. No disputed claims have been furnished.

Copies of all vouchers against votes named herewith. No charge against £50 vote.
W.C. (for C.A.), 20/1/90.

The Director of Military Works.—W.H.Q., 20/1/90.

No. 46.

Memorandum.

7 January, 1890.

Will you kindly inquire from Colonial Architect if a contract exists which includes the barrack square clock at Victoria Barracks? The clock has been stopped since Saturday, and I am told that hitherto the winding has been done by contract, but no intimation was given to this Department at the time of handing over.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

The Colonial Architect.—W.H.Q., 7/1/90. No contract exists in this Department for attending to the clock referred to.—J.B., 8/1/90. Can you say by whom, and on what terms, the clock was attended to up to end of year?—W.H.Q., 10/1/90. The Colonial Architect. A. Tornaghi had the contract last year for attending to this clock, the price for the year being £3 5s. for winding and regulating.—J. M'SHANE (for Colonial Architect). 17/1/90. I am afraid this correspondence indicates the spirit in which information is vouchsafed by the Colonial Architect to the Director of Military Works.—W.H.Q., 17/1/90. The Director of Military Works.

Chief Accountant,—It is very much to be deplored that such a spirit exists. I would gladly see better counsels prevail in the Colonial Architect's Department. I have called for tenders from Mr. R. B. Smith and Messrs. Tornaghi for winding, regulating, and keeping in repair for 1890.—F. R. DE WOLSKI, Colonel, 18/1/90.

No. 47.

The Colonial Architect to The Under Secretary for Public Works.

Department of Public Works, Colonial Architect's Office,
Sydney, 13 January, 1890.

Sir,

I do myself the honor to report that John Goddard has duly completed his contract for renewing sashes at the Victoria Barracks.

I have, &c.,

W. COLES,
(for the Colonial Architect.)

B.C., Colonel De Wolski.—J.B., 15/11/90.

Under Secretary, Public Works Department,—The Hon. the Secretary for Public Works decided on Public Works, 89-2,398, 23/8/89, that barracks were to be transferred to Colonel De Wolski. This contract should therefore have been handed over to me. The Colonial Architect has repeatedly reported having handed over all documents. There is another contract still pending for floors with Mr. Langley, about which I heard to-day. Five months have elapsed since the order of the Minister, which was noted by Mr. Colley in pencil. I trust you will bring this to the Minister's knowledge. It is not known how the Colonial Architect's Department could have inspected this work in progress, as the Colonial Architect reported having removed all his officers. The misstatements, however, are so numerous that it is useless to attempt to refute them.—F. R. DE WOLSKI, Colonel, Director of Military Works, 16/1/90. P.W.O., 17/1/90.

Without sending this letter to Colonial Architect, inquire when the work referred to was finished as advised.—B.S. The work was completed on the 11th December.—J.B., 21/1/90. Memo. to Mr. Barnet, 24/1/90. Resubmit this when reply is received.—D.C. M'L., 24/1/90.

No. 48.

Minute Paper.

Subject:—Contract for renewing Window-sashes, Victoria Barracks.

Department of Public Works, 23 January, 1890.

WITH reference to Mr. Cole's letter of the 13th instant, in which he reports the completion, on the 11th December, of the contract for renewing window-sashes, &c., at Victoria Barracks, the Minister desires to know at once upon what authority the Colonial Architect continued to carry on this work, when the transfer of everything connected with the repairs of these barracks to Colonel De Wolski was ordered as far back as the 23rd August last.

J. BARLING.

The contract for the work named having been taken under this Department, it was considered desirable that it should be completed under the same supervision.—J.B., 3/3/90. P.W.O., 4/3/90.

No. 49.

Memo.

Contract for renewing Window-sashes, Victoria Barracks.

WHEN the Victoria Barracks were handed over on the 16th October, 1889, to Mr. Watson, for Colonel De Wolski, Mr. Colley, one of my Clerks of Works, told Mr. Watson that the Colonial Architect considered it would be better for all parties that he should deal with existing contracts till their completion. No objection was raised by Mr. Watson for Colonel de Wolski at the time, and I am not aware that any has been made since.

A similar case occurred at South Head Defence Works, where, at the request of Colonel de Wolski, certain works were completed by the Colonial Architect after he had received instructions to hand over. These finishing works comprised completion of emplacement of No. 1 Battery for disappearing gun, and was completed on 3rd September, 1889. At George's Head the works were also continued at the request of Colonel de Wolski until he finally made arrangements to carry on the works himself.

As these works were nearly finished before handing over the building to Colonel De Wolski, it was thought advisable to have them completed.

In following the above course I apprehended no objection would be raised by Colonel de Wolski, in view of the action taken by himself with reference to works at South Head and George's Heights, and I believed I was acting in accordance with the spirit of the Minister's instructions.

J.B., 12/3/90.

Submitted.—J.B., 14/3/90. Seen.—B.S., 8/4/90.

No. 50.

Memo. from The Director of Military Works to The Chief Accountant, Public Works Department.

6 January, 1890.

I BEG to forward for your information a report from the Clerk of Works at Fort Scratchley, Newcastle, from which you will observe that, apart from the new work now in progress, there is a claim by the contractor for £300, over and above the advance of £935 paid Messrs. Russell, on the 17th August last.

Mr. Russell says he cannot detail the bill; *neither can any one else*. I am not prepared to accept any responsibility for work of which no records nor measurements appear to exist. Perhaps the Colonial Architect may be able to furnish the required information, and sign the bills himself.

F. R. DE WOLSKI, Colonel,
Director of Military Works.

Colonial Architect.—F.H., 7/1/90.

The Director of Military Works,—Messrs. Russell & Co. appear to ignore the fact that the Colonial Architect furnished them (on the 18th ult.), with a copy of the measurements made by his officer at Fort Scratchley. (*Vide* my report of 23 ult. annexed.) The Colonial Architect has now been requested to furnish a copy of the measurements referred to; but of course he would not be justified in certifying a voucher in favour of the contractors, until they have supplied him with a copy of their claims.—W. H. QUODLING, 7/1/90.

Chief Accountant,—Noted. Will you please retain until the copy of measurements is forthcoming? In the face of the fact that the Colonial Architect has repeatedly stated that he has supplied every information to me already, I prefer to accept Messrs. Russell's statements to that of the report you mention, as I think the Colonial Architect has been misled by his officers.—F. R. DE WOLSKI, Colonel, Director of Military Works, 7/1/90.

[*Enclosure.*]

Sir,

Fort Scratchley, Newcastle, 31 December, 1889.

I attach a note which I have received from Messrs. Russell & Co., informing me that they have received a sum of £935, on account of work done at Fort Scratchley, under the Colonial Architect; but this amount includes many other items in addition to the excavation for the 8-inch gun, such as the new look-out house, moving flagstaffs, stone revetment to slope on south side, &c., and the Contractors cannot give me the cost of each item separately, *neither, they say, can anyone else*. They also inform me that there is still a *balance of about £300* due to them by the Colonial Architect.

These sums have no reference to the new road recently constructed.

FRED. G. INCE,
Clerk of Works.

Director of Military Works.

No. 51.

Minute Paper.

Subject:—Military Works, Fort Scratchley.

Department of Public Works, Sydney, 18 January, 1890

In reference to my minute of the 7th instant, will you be good enough to supply me, not later than Monday next, with a copy of the statement of the measurements of the works at Fort Scratchley, forwarded to Messrs. J. Russell & Co, on December 18th, 1889.

W. H. QUODLING,
Chief Accountant

The Acting Colonial Architect

Statement of measurements herewith—W C (for C A), 20/1/90 Received 1 40 p m. 21/1/90.
The Director of Military Works—W.H Q., 21/1/90 90/54 (with annexures) is returned herewith.—
W.H Q.

Chief Accountant,—

1. Plans, specification, and authority for this work, amounting to £1,271 6s 11d have not been furnished, because there are and were none. This is a sample of how military votes have been squandered by irresponsible officers

2 These are the measurements which the Colonial Architect stated he had sent to Mr. Russell You will see from my minutes of 6th and 7th January that I doubted the statement £918 of this bill is for daily labour, engaged by Mr Bushby, at the rate of £300 a month These works were supposed to be carried out by a contract approved by the Minister By whose authority was this work done by a schedule for labour? The work cannot be detailed nor measured, as no labour sheets exist

3. Where is the authority and bill for £27 odd for bedroom furniture, &c, for office? Where are the remainder of the articles detailed, which amount to £45 odd.

4 I think this subject should be brought to the notice of the Minister, for, at the same time, Mr Bushby spent £450 on labour on a road, with his father as foreman, and his brother as artificer under him And this is the Clerk of Works who refused any information to the Inspecting Military Officer.

F. R. DE WOLSKI, Colonel,
Director of Military Works, 24/1/90.

Submitted for the Minister's information, as suggested by the Director of Military Works—
W.H Q.—25/1/90. Under Secretary, B C. P W O, 28/1/90.

ALTERATIONS TO FORT SCRATCHLEY.

Minute Paper.

Subject :—Military Works, Fort Scratchley

Department of Public Works, 7 January, 1890.

In reference to the conversation I had with you this morning, will you be good enough to furnish me, as early as practicable, with a copy of the statement of measurements of the works at Fort Scratchley, forwarded to Messrs. James Russell & Co, on 18th December, 1889.

The Colonial Architect

Statement herewith.—W.H Q, 21st January, 1890. The Director of Military Works.

W. H QUODLING,
Chief Accountant.

No. 52.

Minute Paper.

Subject :—Position-finding Stations

Department of Public Works, 28 January, 1890

THE amount authorised to be expended in constructing position-finding stations was £3,500, and the amount expended for this service appears to have been £6,450.

Will you please explain the discrepancy, and why the extra expenditure was incurred without authority?

The Colonial Architect.

I have, &c,
W H QUODLING.

The amount, £6,450, includes other works than those named, consisting of cable and water tanks, fencing, additional earthworks, drainage, lining chambers with brickwork, substituting bluestone concrete for sandstone at South Head, fixing shields, providing and fixing steel shutters to chambers, providing telephone chamber, temporarily covering three chambers, &c These further works were carried out at Schedule rates, as customary, and by the direction of the Royal Engineer Officer, Major Penrose. Special authority for a large portion of same is provided in paper, P W 89-472, sent to Works Department on 5th August last, also for some other of the works on paper herewith (P W 87-10,124).—J B, 11/2/90 Please forward to Colonel de Wolski.—W.H Q, 11/2/90. The Director of Military Works—W.H.Q., 11/2/90.

Barracks at Bare Island, Botany Bay.

Department of Public Works, Sydney, 22 April, 1890.

IN compliance with your instructions, I visited Bare Island yesterday, in company with Colonel de Wolski, R.E., for the purpose of endeavouring to arrive at a settlement with Mr. M'Leod for work performed and materials delivered.

Unfortunately this object was frustrated in consequence of not having received full information from the Colonial Architect's Department with reference to the arrangement with Mr. M'Leod for building the barracks.

In October of last year the Colonial Architect was requested to furnish the contract for constructing the Bare Island Barracks, and he forwarded a bond, specification, and schedule of prices, dated 14th May, 1881, for the construction of the fortifications only, from which it was expressly specified that the barracks were omitted; and, on the 11th instant, I wrote to the Colonial Architect to inquire if certain materials had been ordered or accepted by him or any of his officers, to which he replied in the negative.

From a perusal of these documents it did not appear to me that a contract existed; but when I inquired of Mr. M'Leod why he had delivered the materials before referred to, he handed me a letter from the Colonial Architect, dated 15th April, 1889, in which he was informed he could carry out the barracks at Bare Island under his previous contract for fortifications.

A copy of this letter is appended, and I have asked the Colonial Architect to send me Mr. M'Leod's letter, dated 23rd April, 1889, in reply thereto.

Perhaps, under the circumstances, it would be advisable to obtain the opinion of the Crown Solicitor as to whether these letters constitute a binding agreement upon the Government; and, if so, what further steps should be taken in the matter, in the view that the design for the barracks has been altered.

In conclusion, I deem it necessary to express the opinion that I was placed in an embarrassing position, in consequence of information with reference to these letters not having been furnished to me.

W. H. QUODLING.

The Under Secretary for Public Works.

[Enclosure.]

Sir,

Colonial Architect's Office, Sydney, 15 April, 1889.

In reference to barracks proposed to be erected at Bare Island, I have to inform you that you can carry out this work at the schedule prices, under your previous contract for fortifications at the place named, if you are willing to do so.

I am, &c.,

JAMES BARNET,

Colonial Architect.

Mr. Jno. M'Leod, contractor.

No. 54.

Sir,

Military Works Branch, 47 Phillip-street, 30 April, 1890.

I have the honor to state that the Colonial Architect entered into a contract with Messrs. M'Leod and Noble for works at George's Head, estimated to cost £2,600, at the schedule of rates of their previous contracts. Extensions of the original contract were also given for other works, amounting to £2,100 without a bond, bringing up the total to £4,700. The Colonial Architect passed, in Sept., 1889, a final voucher for £6,450 14s. 3d., showing an excess of £1,750 14s. 3d. over and above the specific authorities. No detail of the cost of the various works has been received, and no satisfactory explanation of the discrepancy. It is not known whether the contractor's claims for work at George's Head casemate battery have been fully satisfied.

The bond for the work estimated to cost £2,600 is dated 6 May, 1889, subsequent to the completion of the work, and the stipulated date of completion is 30 November, of the previous year. Authority was given to increase one item of the original Schedule, viz., concrete, from 34s. to 44s. 6d. per yard.

I may mention that it appears to have been the practice of the Colonial Architect's Department to let contracts for specific works, to subsequently extend them to works altogether unconnected with them, to allow the contracts to run on for years without any settlement, and in the end to lump all the works into one final payment, thereby removing any possible chance of check of measurement made by subordinate officers. I would refer you to my letter of the 24th of October, for the subject of the cost of the work at George's Head still uncompleted.

I have, &c.,

F. R. DE WOLSKI, Colonel,

Director of Military Works.

To the Under Secretary for Public Works.

No. 55.

The Director of Military Works to The Under Secretary for Public Works.

(P.W., 90-1,732; C.A., 90-1,623.)

Specification for Barracks, Bare Island.

Sir,

Military Works Branch, 47 Phillip-street, 19 May, 1890.

I have the honor to forward a specification for Barracks, Bare Island, handed over on the 17th inst. by the Colonial Architect's officers to Mr. Watson, my Clerk of Works. It is dated March, 1889, but it apparently refers to the original plan prepared in 1880 by the late General Scratchley, and does not agree with the printed specification of the schedule of rates.

Will you kindly inquire from the Colonial Architect if this specification was intended to be binding on the contractor, and formed part of the schedule of rates or not in the Bare Island Barracks agreement?

In

In this connection, I may mention that the agreement for the preparation of certain plans for Defence Works, under the direction of the late Major-General Scratchley, R.E., mentioned that a specification of the work would be drawn up, but none has been furnished by the Colonial Architect. I would be glad if these specifications could now be furnished, as they would materially assist in elucidating certain details, and thereby facilitate the numerous repairs which have become generally necessary in all the works.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

Mr. Barnet for report.—J.B., B.C., 19/5/90.

The specification referred to, dated March, 1889, is not a contract paper, nor intended to be binding on the contractor, or to form part of the schedule of rates in the Bare Island Barrack agreement; the specification referred to in latter part of this communication is probably the "Description," now enclosed, which had been inadvertently put away with some other papers a long time since, and only recently found.—J.B., 4 June, 1890. P.W.O., 4/6/90. Colonel de Wolski.—J.B., B.C., 4/6/90.

Under Secretary for Public Works.—Will the Colonial Architect kindly explain why, if this specification is not binding on the contractor, a copy was supplied to the Foreman of Works at Bare Island for his guidance? Is this the description of the work stated by Mr. Purkis to have been prepared by him in 1885, or is it the original specification furnished by the late Mr. Morell, C.E., and dated 1880 or 1881?—F. R. DE WOLSKI, Colonel, 12/6/90. The Colonial Architect.—D.C.M'L. (*pro* U.S.), B.C., 13/6/90.

The specification referred to, 89-193, was made by the Foreman of Works from draft specification 85-193, with slight approved modifications, solely for his guidance in carrying out the work. Specification 85-193 is that prepared by Mr. Purkis in 1885, and in no way relates to the specification furnished by the late Mr. Morell, C.E.—J.B., 25 June, 1890. The Director Military Works.—D.C.M'L. (*pro* U.S.), B.C., 26/6/90.

No. 56.

The Director of Military Works to The Under Secretary for Public Works.

Documents, correspondence, &c., relating to Military Works not yet handed over by Colonial Architect.

Sir,

Military Works Branch, 47 Phillip-street, 1 July, 1890.

With reference to the Colonial Architect's statement on P. W. No. 90-1,731, dated 25th June, 1890, that "all old papers relating to military works are now being collected, and will be furnished as early as possible," I have the honor to report that I have not yet received the papers referred to. It is of the utmost importance that no time should be lost in extracting from the Colonial Architect's records every letter, report, and document bearing on defence works, as well as the correspondence between the Colonial Architect and the late General Sir Peter Scratchley.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

Submitted.—J.B., 1/7/90. Officers-in-Charge please supply all the papers as quickly as possible.—J.B., 10/7/90.

No. 57.

Minute Paper.

Subject :—Royal Commission on Fortifications.

Department of Public Works, Sydney, 22 July, 1890.

Will the Officers-in-Charge of the Architectural Branch be good enough to expedite the work of collecting papers, &c., referred to in paper P.W. 90-2,285, forwarded to them on 11th instant, also those to which reference is made in paper P.W., 90-2,316, forwarded on 4th instant.

J.B.

All papers, plans, &c., in this office relating to fortifications, barracks, &c., herewith.—E.R., for A.C.A.B., 25/7/90. The whole of the papers have been referred to the Commission.—D.C.M'L. (*pro* U.S.), 25/7/90. Colonel de Wolski.—J.B., B.C., 25/7/90.

No. 58.

C. W. Darley, Esq., to The Officers-in-charge, Colonial Architect's Department.

Royal Commission Defence Works, Department of Public Works,

Gentlemen,

Sydney, 21 July, 1890.

I shall be glad if you would kindly furnish me with all old papers relating to military works which, according to a memorandum of Mr. Barnet's, dated 25th June, 1890, were being collected by the officers in your Department, with the promise that they would be furnished as early as possible.

Yours, &c.,

C. W. DARLEY,
President.

The papers referred to have been forwarded to the Under Secretary for Works.—E.R., for A.C.A.B., 25/7/90. Deliver these in Colonel de Wolski's office.—C.W.D., 25/7/90. Forwarded to the Director to day.—J. TRIMBLE, 25/7/90.

CORRESPONDENCE *RÉ* BARE ISLAND BARRACKS SENT TO CROWN
SOLICITOR.

APPENDIX B.

CROWN SOLICITOR'S APPENDIX.

INDEX TO CORRESPONDENCE *RE* BARE ISLAND BARRACKS SENT TO CROWN SOLICITOR.

- 26/7/87.—Under Secretary Public Works *re* recommendation by Colonial Architect, dated 10/3/86, attached, that the barracks should be proceeded with by the Contractor for the fortifications (M'Leod) under his contract schedule of prices.
- 13/8/87.—Jno. M'Leod stating that he had kept a foreman and plant several months on the work in anticipation of the barracks being proceeded with, as recommended by the Colonial Architect (10/3/86), and that he had already commenced the work by excavating the basement.
- 14/3/89.—Ministerial approval of barracks being erected as proposed, together with Colonial Architect's letter (15/4/89) authorising M'Leod to carry out the work under his previous contract, and M'Leod's reply thereto, 22/4/89.
- 30/5/89.—Colonel de Wolski to the General Officer Commanding, condemning way in which barrack contract had been let without consultation with military authorities; and order for stoppage of works by Colonial Secretary pending reconsideration of plans, 10/6/89.
- 17/6/89.—Colonial Architect, in reply to Colonel de Wolski's memorandum, enclosing extracts from several military authorities recommending the erection of the barracks.
- 18/6/89.—M'Leod to the Colonial Architect stating that he would hold him responsible for the protection of his materials on the ground.
- 14/8/89.—Colonel de Wolski to the General Officer Commanding corroborating his memorandum of 30/4/89.
- 25/11/89.—M'Leod to the Colonial Architect declining to furnish an account in detail for amount due till informed whether he is to proceed with the contract.
- 11/4/90.—Mr. Quodling to the Colonial Architect asking if certain materials delivered at Bare Island had been ordered by him or his officers; to which Mr. Barnet replies in the negative.*
- 17/4/90.—Colonel de Wolski to the Under Secretary stating that the barracks had not yet been handed over to him, because the Colonial Architect had been unable to settle up with the Contractor.
- 18/4/90.—Under Secretary asking Colonial Architect for explanation as to steps actually taken *re* barracks, with Colonial Architect's reply, Colonel de Wolski's criticism thereon, and Colonial Architect's further explanation.
- 23/4/90.—Under Secretary referring question of M'Leod's barrack agreement to the Crown Solicitor for opinion as to whether it should be terminated at once.
- 23/4/90.—Colonel de Wolski to the Under Secretary criticising the way in which the barrack contract had been given to M'Leod, and recommending that the ironwork, cement, &c., be paid for at once, and the Contractor instructed to remove the bricks which were worthless.
- 29/4/90.—The Crown Solicitor stating that the barrack contract had been dealt with in so loose a way that, if an agreement could be come to with the Contractor for him to hand over the works, it had better be made.
- 14/5/90.—Colonel de Wolski to the Under Secretary recommending that a legal opinion be obtained from the Crown Solicitor as to his power to terminate the agreement, and to direct the removal of all material from the site.
- 4/6/90.—Crown Solicitor to Under Secretary stating that further information was necessary before he could give an opinion on the subject.
- 16/6/90.—Colonel de Wolski to the Under Secretary pointing out that the barrack agreement was an extension of the fort contract, that the same General Conditions applied to both, and recommending that no compensation be allowed for material not specifically ordered by the Colonial Architect, that the Contractor be instructed to remove all material from the site immediately, and that under no consideration should M'Leod and Noble be permitted to have any further connection with the military works of the colony.

No. 1.

(P.W., 87/9348.)

Minute Paper.

Subject :—Barracks, Bare Island.

Department of Public Works, Sydney, 26 July, 1887.

THE military authorities have repeatedly urged the erection of the Barracks at Bare Island. For this work the Colonial Architect submitted plans and estimate (£7,850) on the 10th March, 1886, and recommended that the work be done by the contractor for the Fortifications, J. M'Leod, under his contract schedule prices. This recommendation was duly forwarded to the Colonial Secretary's Department, viz., on the 15th March, 1886, but no authority has yet been received for proceeding with the work, and from inquiries made at the Colonial Secretary's Office it would appear that the above recommendation has been mislaid.

To expedite action, it would perhaps be advisable to obtain a duplicate recommendation from the Colonial Architect, with a view of the matter being again submitted to the Colonial Secretary.

J.R.

Copy of letter herewith.—J.B., 27/7/87. P.W.O., 29/7/87. Put by till asked for.

The Architect-in-Chief to the Under Secretary for Public Works, respecting authority required to proceed with Barracks in connection with Fortifications, Bare Island.

(P.W., 87/9348.)

Sir, Department of Public Works, Colonial Architect's Office, Sydney, 10 March, 1886.

In reference to the Fortifications at Bare Island, approaching completion, I do myself the honor to report that the erection of the Barracks included in the late General Sir Peter Scratchley's authorized Schedule of Defence Works should now be proceeded with, and would recommend that they be carried out by the Contractor* for the Fortifications under his contract schedule of prices which I consider fair and reasonable—the cost of the Barracks at these prices will be about £7,850, chargeable to Votes taken for Defence Works.

I have, &c.,

JAMES BARNET,
Architect-in-Chief.

No. 4.

(C.S., 89-6,617—M.S.O., 89-1,617).

Lieut.-Colonel De Wolski, to The General Officer Commanding.

Sir, Sydney, 30 May, 1889.

I have the honor to report that I have been informed by an officer of the Colonial Architect's Department that tenders have recently been accepted for the construction of Artillery Barracks on Bare Island at a cost of £7,850, and that the work is now in progress. No provision has been made for an officer's quarters on La Perouse.

I would remind you that on the 28th August, 1887, you wrote to the P.U.S. asking for the postponement of the erection of Barracks at Bare Island and La Perouse until the receipt of General Schaw's Report.

On the 19th August, 1887, General Schaw reported on this question as follows:—(Page 7, line 14) "The division of the guns into two groups, one on Bare Island, and the other on Henry Head, will render it desirable that the new barracks about to be built here should not be in the Fort, which is always to be avoided if possible, as the Barracks in such confined positions are always unhealthy and inconvenient, and also expensive. An excellent site is to be found in a central position between Henry Head and Bare Island concealed from seaward, and I would strongly urge that the barracks be constructed in this position."

Nothing appears to have been done in this matter until you wrote to the P.U.S. on the 5th September, 1888, without any reference to previous correspondence, urging that this work should be pushed on. On the 14th March, 1889, the Colonial Architect requested authority to proceed, which was approved by the Ministry. The contract was apparently let on the former tender.

I have recently seen the plans of these Barracks. They were designed in the Colonial Architect's Office without reference to military authority. In my opinion the designs are radically defective, the accommodation is excessive, and there is no officer's quarter.

In the "memorandum on Coast Defences" by the Inspector-General of Fortifications, dated 6th December, 1884, it is laid down in paragraph 10, that "Barracks, when required, should be retired as far as convenient from the Batteries, ample temporary bomb-proof accommodation being provided in the latter for the gun detachments and infantry guards."

For the reasons mentioned above I would strongly urge the advisability of this question being reconsidered. In all probability the Colonial Architect is unaware of the altered conditions, but I consider he ought to have referred the plans to this office before execution, more especially as they were made years ago.

The responsibility for the design and execution of these barracks rests now entirely with the Colonial Architect.

I have, &c.,
F. R. DE WOLSKI,
Lieut.-Col., R.E.

Principal Under Secretary—This is a most important and urgent matter, and in order to facilitate the Minister's consideration and decision thereon it will be well that Colonel De Wolski should personally interview the Minister, and explain the situation—J.S.R., M.-G., B.C., 7/6/89.

Stoppage of works pending reconsideration of plans approved.—H.P., 10/6/89. The Under Secretary for Public Works, B.C.—C.W., 10/6/89. Colonial Architect—J.B., B.C., 11/6/89. Urgent.

No. 5.

The Colonial Architect to the Under Secretary for Public Works, respecting Barracks, Bare Island, Botany.

(P.W. 89-1747 ; 89-1676.)

Sir, Colonial Architect's Office, Sydney, 17 June, 1889.

I do myself the honor to report that, in attention to the minute of Sir Henry Parkes on accompanying letter from Lieutenant-Colonel de Wolski, dated 30th May, addressed to the General Officer Commanding—forwarded to me under blank cover of 11th instant—the work in connection with erection of barracks at Bare Island has been stopped, pending further instructions.

With respect to objections raised by Lieutenant-Colonel de Wolski, as to the site of the barracks, and his statement that the barracks were designed in the Colonial Architect's Office without military authority, and that the design was, in his opinion, radically defective, the accommodation excessive—there being also no officers' quarters—I would remark that the site selected within the Fort is that shown on the late General Scratchley's original drawings. To this site no objection has been made by Major Penrose, successor as Engineer for Defence Works to General Scratchley, or by any of the military authorities; and in regard to barrack accommodation, it is in accordance with particulars furnished by Lieutenant-Colonel Christie, Acting Commandant, and additions to same considered necessary by Colonel Scratchley, included in plans at his request. Officers' quarters are not yet provided, as it has been determined that they be built on the mainland, the site selected by the military authorities being that at present occupied by the office of the Colonial Architect's officer in charge of the works. The

The extracts from original papers, and papers referred to hereon, show that there was no want of military authority in designing the barracks; also, that although the erection of same in the Fort was by direction of the late General Scratchley, some years back, the Officer Commanding the Forces, Major Penrose, R.E., and other military authorities of recent dates, were acquainted with the design of the barracks, and that they were to be erected within the Fort. Therefore, in respect to the concluding paragraphs of the before-named accompanying letter, to refer the plans back to the military authorities quoted, would have been an unusual course to adopt, under the circumstances, which Lieutenant-Colonel de Wolski evidently could not have been aware of when framing his report.

I have, &c.,
 JAMES BARNET,
 Colonial Architect.

The Commandant.—C. W. B.C., 6/8/89. The Director of Works, for information and remark if necessary.—J. S. R., M.-G., 12/8/89. Sir,

Rockdale, 18 June, 1889.

Referring to your letter of 13th instant *re* stopping work of Barracks at Bare Island, I desire to say that the tenor of your letter has been duly attended to.

While complying with instructions in this matter, I would respectfully call your attention to the following, in connection with this contract:

1st. The general plant necessary for the completion of the contract is now on the site—also special portions of plant for the efficient completion of work—such as suitable cranes to the unusual contour of fort and site is being prepared, and in my own interest, *but* at your expense, this plant will require to be protected during the time the work is suspended or delayed.

2nd. There is a considerable quantity of materials now on the site (apart from that used), the whole of the bricks, cement, iron, and timber are ordered and partly delivered, or in transit to the work, all of which will require to be protected in like manner, and on the same conditions as stated by me for the protection of plant.

Yours respectfully,

JOHN M'LEOD.

Forwarded to the Under Secretary for Works with reference to my report of 17th ultimo stating work at Bare Island Barracks had been stopped as directed, pending further instructions.—J.B., 8/7/89. Refer to Col. de Wolski at once.—J.B., 11/7/89.

No. 7.

(C. S., 89-7,369.)

The Director of Military Works to The General Officer Commanding.
Barracks at Bare Island.

Sir,

Dawes' Battery, 14 August, 1889.

With reference to your memo. of the 12th inst. forwarding, for information and remarks, correspondence relating to the Barracks at Bare Island, I have the honor to state that the design for Barracks at Bare Island was a modification of one got out years ago by General Scratchley; that, apart from any other question, this design was bad, inasmuch as access to each room was obtained by a separate flight of steps, entailing the addition of a box entrance, cutting up the floor space, and that the men's sleeping-rooms were little better than a dungeon as regards air and light. The plan was unsigned, and there were no documents to show that it had ever been submitted to the military authorities.

I have only to add that my previous letter of the 30th May is strictly correct in every respect, and that the Colonial Architect should have referred the plans to the military authorities before execution, considering that they had been made years before, and that the armament and disposition of guns at Botany and Henry's Head had been subsequently modified by General Schaw's scheme.

I have, &c.,

F. R. DE WOLSKI, Lt.-Col., R.E.,
Director of Military Works.

P.U.S.—Correspondence returned with further remarks of Director of Works, which seem to bear out previous report. J.S.R., M.-G., B.C., 15/8/89. Submitted, 15/8/89.

No. 8.

(P.W., 89, 3623.)

Mr. John M'Leod to The Colonial Architect.

Re Contract Bare Island Barracks.

Sir,

Box 676, G.P.O., 25 November, 1889.

In reply to your letter of the 19th inst., in reference to my contract for erecting Barracks at Bare Island, wherein you request an account in detail for amount due to me in connection with my contract, to include all claims for materials, &c.

With all respect I hope to show to your satisfaction why I cannot, for the following reasons, furnish you with the details asked until you notify me if I am to proceed or otherwise with the contract:—

1st After proceeding with the work for two months I received instructions in writing on the 13th June to stop. Subsequently all measurements were taken of the work done that was actually in place. I then applied for the balance of money due, less the 20 per cent., which was paid. I wish to draw your attention that up to the date of stopping the work done was at considerable pecuniary loss to me, as the greatest portion is rock excavation, for which my price is very low.

2nd Since the date of stopping the work it has been absolutely necessary to keep one man there to look after my tools, plants, and materials, &c., &c. This was done in the interest of the Government as well as my own.

3rd All girders were ordered, fitted, and partially delivered, when work was stopped. This also applies to all materials required for the completion of contract.

4th I fail to see how to comply with your request until I am informed on what lines I am to base the detailed statement which you require.

I am, Sir, &c.,

JOHN M'LEOD.

Forward to the Under Secretary for Works, with reference to previous communication from Mr. M'Leod respecting these Barracks, transmitted to him on 8 July last.—J.B., 17/12/89. The Director, Military Works, who has the previous papers.—J.B., B.C., 20/12/89. 445—(41).

No. 9.

(P.W., 90/1240.)

W. H. Quodling to The Colonial Architect.

[Very urgent.]

Department of Public Works, Sydney, 11 April, 1890.

It is reported that Messrs. M'Leod and Noble delivered at Bare Island certain bricks, cement, and iron, to be used in the construction of the defence works at that place. Will you please inform me if these materials were ordered by you or any of your officers; and if they have been approved and accepted as suitable for the work? If so, will you please furnish a statement showing quantities and prices?

W. H. QUODLING.

None of the materials referred to have been ordered by me or any of my officers, nor have they been accepted or approved by my Department.—J.B., 14/4/90. Received.—W.H.Q., 17/4/90, 9:30 a.m. The Director of Military Works.—W.H.Q., 17/4/90. Memo., 90/47a, 22/4/90.

The Colonial Architect's officers* maintain in presence of the Contractor that the bricks were of good quality, but that they never passed or rejected material until it was fixed in position.—F.R.deW., Mr. Purkis and Mr. Colley. 1/5/90. Yes.—W.H.Q.

N.B.—In connection with the above, read Mr. Quodling's report contained in No. 53, Transfer Appendix.

No. 10.

No. 10.

The Director of Military Works to The Under Secretary for Public Works.

(P.W., 90/1571.)

Barracks at Bare Island Fort, Botany.

Sir,

Military Works Branch, 46, Phillip-street, Sydney, 17 April, 1890.

I have the honor to state that the construction of Barracks at Bare Island Fort was stopped by order of the Minister on the 13th June, 1889, shortly after the Contractor had commenced operations. The work has been at a standstill ever since, and has not yet been handed over to me, because the Colonial Architect has been unable to settle up with the Contractor, Mr. John M'Leod.

The contract for these Barracks, estimated to cost £7,850, was apparently given by the Colonial Architect on his own responsibility as an extension of Mr. John M'Leod's contract for Fortifications at Bare Island, the bond for which was executed 14th May, 1881. It was therein specified that the works were to be completed on the 31 December, 1882, and that the Barracks were *to be omitted*.

As there is no legal contract between the Government and Mr. John M'Leod for the construction of these Barracks, and as the arrangement entered into by the Colonial Architect is a most disadvantageous one, I have the honor to request the authority of the Minister to call for tenders for the construction of the Barracks at Bare Island in accordance with the plans approved by the Hon. the Colonial Secretary on the 26th June, 1889.

This work is of a most pressing nature, and I would respectfully urge that an immediate decision be arrived at.

I have, &c.,

F. R. de WOLSKI,

Colonel, Director of Military Works.

By direction of the Minister the legal question involved as to the validity of the arrangements entered into between the Colonial Architect and Mr. M'Leod has been referred to the Crown Solicitor.—J.B., 29/4/90.

No. 11.

(P.W., 90/1,258.)

Minute Paper.

Subject: Barracks, Bare Island.

[Very urgent.]

Department of Public Works, Sydney, 18 April, 1890.

WITH regard to the work in connection with the Barracks at Bare Island, for which a sum of £7,850 was sanctioned by the late Colonial Secretary (Mr. Dibbs), and which Mr. Secretary Bruce Smith authorized to be carried out in March, 1889, it is not clear from the papers what steps have actually been taken in the matter. Will Mr. Barnet, therefore, kindly explain what has really been done, and if any contract has been entered into for the work; will he furnish particulars. The Minister desires to have an answer to-day.

J.B.

The *tender of John M'Leod*, for erection of these barracks, was accepted on 17th April, 1889,—the work to be carried out at the schedule prices of his contract for Bare Island fortifications. When these and all other military works were transferred from my Department, some of the work towards erection of the barracks, consisting of drains, trenches, cess-pits, concrete filling-in, trenches, &c., had been commenced; but, not since having access to the works, I am unable to say whether any further progress has been made. The papers and authorities relating to these barracks, together with communications from the Contractor respecting same, were forwarded to Works Department on 17 June, 8 July, 5 August, and 17 December last.—[P.W., 89/714, 1,676 (89/6,281, J. M'Leod), 12,850]—of which Mr. Quodling was informed, in reply to a communication from that office to me direct on 1st instant.—J.B., 19 April, 1890.

Col. de Wolski.—J.B., 19/4/90.

Neither the tender nor the acceptance are with the papers sent to me. The bond and specification forwarded specially *exclude* the barracks. There does not appear to be any contract nor Ministerial approval—merely a verbal arrangement. As the contract is for £7,850, this requires further explanation.—F. R. de W., 19/4/90. The Under Secretary for Public Works.

Please further explain.—J.B., 19/4/90. B.C., Mr. Barnet.

There was no special tender, as the papers referred to (P.W., 87/9,348, 89/714) sent to Colonel de Wolski show; neither was there any verbal arrangement. The papers also show full Ministerial approval, viz., that of the late Colonial Secretary (Mr. Dibbs) and the present Minister for Works, for the barracks to be erected under schedule of Mr. M'Leod's contract for fortifications, Bare Island; the approval also conveying instructions to carry out the work at once. The portion of Colonel de Wolski's minute, stating that the barracks are excluded from the specification, is correct, as it was not at the time decided whether they should be erected.—J.B., 25/4/90.

No. 12.

(P.W. 90/1,308.)

Minute Paper.

Department of Public Works, Sydney, 23 April, 1890.

Subject:—Barracks at Bare Island.

It appears that the Colonial Architect has entered into certain arrangements with Mr. John M'Leod, for the construction of works at Bare Island. These arrangements appear to be embodied in the attached letters. As far as I can ascertain, no bond or formal agreement has been entered into, with regard to the matter beyond the letters referred to. The management of the Military Works Department has now been handed to Colonel de Wolski, and that gentleman is anxious to terminate the agreement,

on

on account of an alteration in the original design. I attach the bond and specification for the Bare Island Fort under the schedule of prices, of which it is proposed to carry out the construction of the Barracks. According to Mr. Barnet's letter, addressed to Mr. M'Leod, he was asked to carry out the works at a schedule of prices. It is presumed therefore that the conditions attached to the contract will apply to this work, and according to the general conditions under clause 7 there will be found power to discontinue any portions of the work.

Will the Crown Solicitor kindly advise (1) whether under the circumstances disclosed herein the conditions referred to apply to this work; and (2) if they do, whether the terms of that clause will enable the Department to terminate the agreement. J.B.

Will Mr. Barnet kindly say if the facts of the case are correctly described, viz, as to the contract.—J.B.; 23/4/90.

The facts are correctly, but not fully, described, as the arrangements were made by me with Mr. M'Leod, under approval of the late Colonial Secretary, Mr. Dibbs, also the present Minister for Works.—P.W., 89/714, 87/9,348, accompanied by instructions to carry out the work at once.—J.B., 25/4/90. The Minister will feel much obliged, if the Crown Solicitor will kindly favour him with his opinion on the matter by Monday.—J.B., 25/4/90. B.C. Urgent.

No. 13.

(P.W., 90/1,309.—24/4.)

The Director of Military Works to The Under Secretary for Public Works.

Bare Island Barracks, Botany.

Sir,

Military Works Branch, 47 Phillip-street, 23 April, 1890.

I have the honor to report that the agreement between the Colonial Architect and Mr. John M'Leod for the construction of Artillery Barracks at Bare Island, estimated to cost £7,850, at a schedule of prices in extension of the contract for the Fort, dated 14 May, 1881, *was not submitted for Ministerial approval, in accordance with the usual custom*, nor were the bond and specification amended so as to make them applicable to this extension.

It is, in my opinion, absolutely necessary that a proper contract should be entered into for the modified plan of these barracks approved by the Hon. the Colonial Secretary on the 26th June, 1889, and, as a schedule for fortification work is not applicable to barrack buildings, I would recommend that the Hon. the Secretary for Works direct the Colonial Architect to notify to the Contractor his intention to discontinue the works under paragraph 7 of the General Conditions, and to come to terms forthwith for final payment of all outstanding claims.

I recommend that the ironwork, cement, &c. be paid for at invoice prices, plus, say 25 per cent., and the cost of carriage, and all other material at a fair valuation. A large quantity of *worthless* bricks have been delivered; they should be rejected, and the Contractor instructed to remove them at once from the site. I consider the Colonial Architect's officers are to blame for permitting the delivery of this material.

I have the honor to request that the Colonial Architect be instructed to hand over at once the plans at Bare Island, offices, &c., and all books and documents connected with the works.

This is one of the most pressing works in the whole colony. The artillery are now occupying sheds unfit for habitation, and this fort is the only defence for what has been aptly termed the "back-door of Sydney." It is a grave scandal that the Colonial Architect's Department has so long delayed handing over these works in a businesslike manner, in defiance of repeated orders of the Minister.

I have, &c.,

F. R. DE WOLSKI, Colonel,
Director of Military Works.

On a further examination of the paper, I think it will be seen that was done, but the agreement entered into appears to me to be most imperfect; the question has, however, been submitted to the Crown Solicitor.—J.B., 29/4/90.

The opinion of the Crown Solicitor is being sought on this matter.—J.B., 29/4/90. The Minister has ordered a special report to be obtained from Mr. Wardell on the quality of these materials.—J.B., 29/4/90. It was supposed that everything had been handed over. Send memo. to Mr. Barnet at once, asking why this has not been done.—J.B., 29/4/90. Send to Col. De Wolski at his request. J.B., 7/5/90.

No. 14.

The Crown Solicitor to The Under Secretary for Public Works.

(P.W., 90/1,396.)

Sir,

Crown Solicitor's Office, Sydney, 29 April, 1890.

I have the honor to return herewith the papers forwarded to me with reference to the proposed Barracks at Bare Island, and to state that from the loose way in which this matter has been dealt with it is impossible to advise with anything like certainty from the papers what the position of the contract really is.

The Colonial Architect's letter of 15th April intimates that the work can be carried out "at the schedule prices under your previous contract for Fortifications." This may mean either that it fixes the prices to be paid and also declares that the work shall be done under the previous contract, or that it refers to prices only. The Contractor's letter, however, does not in terms accept the offer; he merely states that he will proceed with the works at once at the previous schedule price rates, evidently intending to limit his acceptance to the price only,

The Architect's Department should have called attention to this acceptance, but did not do so, and I fear it will be held that all the Contractor agreed to do thereby was to fix the *rates* to be paid for the work tendered for. I think there can be no doubt that if litigation arises he will give evidence to that effect, and it will be for the jury to decide the question.

There is so much doubt in the matter, that I think if any agreement can be come to with the contractor for him to hand over the works it had better be made.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Submitted.—J.B., 30/4/90.

I should like Colonel de Wolski to express to me on paper his opinion concerning the utility of proceeding further with this work.—B.S., 30/4/90.

No. 15.

(P.W., 90-1694.)

Colonel De Wolski to The Under Secretary for Public Works.

* 1889 —F. R.
de W., 7/6/90.

THE completion of the Bomb-proof Barracks at Bare Island Fort, the plan for which was approved by the Hon. the Colonial Secretary on 26th June, 1890,* being one of the most pressing military requirements, I have the honor to recommend that a *legal opinion be obtained from the Crown Solicitor as to my power to terminate the agreement entered into between the Colonial Architect and Mr. McLeod at the schedule of rates of his former contract*, and to direct the removal of all material (from the site) which has not either been ordered or approved by the Colonial Architect. The material on the site is blocking up the Fort, and prevents my proceeding with the mounting of the new type guns and the modifications proposed elsewhere.

Whatever it may cost, the best course is to relet the work at once by public tender, and have it completed without any further delay. My opinion is that the Government will save more by entering into a proper contract than under the most unfavourable circumstances they are likely to lose by any action Mr. McLeod may bring for compensation and materials.

F. R. de WOLSKI, Colonel,
Director Military Works.
14/5/90.

Submitted, J.B., 14/5/90. Forward to the Crown Solicitor for the legal opinion asked by Col. de Wolski.—B.S., 14/5/90. Get the other papers. Crown Solicitor.—J.B., B.C., 15/5/90.

No. 16.

(P.W., 90/1987.)

Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 4 June, 1890.

I have the honor to return herewith the papers relating to the Barracks at Bare Island, and to state that, by section 16 of the General Conditions, the Secretary for Public Works has power, if the Colonial Architect is dissatisfied with the rate of progress at which the works are being carried on, to cancel the contract. Unfortunately, however, these General Conditions do not appear to be incorporated in the contract, which only stipulates as to the prices to be paid*. It follows, therefore, that all the Contractor is bound to do is to carry out the work within a reasonable time, and if he fails to do so the Government may take possession. What is a reasonable time, however, will be a matter of evidence for the jury to determine.

I think there must be some mistake in the minute sent to me, as it appears by it that the works were approved of by the Colonial Secretary on the 26th June, 1890—a date which has not yet arrived.†

Until Mr. McLeod makes default in carrying out the work in a proper manner, and within a reasonable time, there is no power of terminating the agreement.

To advise as to this, it is necessary that I should be informed when the contract was entered into, and what would be a reasonable time for carrying out the work, and how far such work has been completed or proceeded with.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Submitted.—J.B., 6/6/90. Col. de Wolski had better see me.—B.S., 6/6/90. The Director Military Works.—D. C. McL (pro U.S.) B.C., 6/6/90.

No. 17.

The Director of Military Works to The Under-Secretary for Public Works.

(P.W., 90/2,112.)

Bare Island Barracks Agreement.

Sir,

Military Works Branch, 47 Phillip-street, 16 June, 1890.

With reference to the letter of the Crown Solicitor on the subject of the agreement for the construction of barracks at Bare Island, Botany, dated 4th June, 1890 (P.W. 90-1987), I have the honor to recommend that the papers be referred to him for further consideration.

2. It has probably escaped his notice, as it did mine, that although the agreement between the Colonial Architect and Mr. McLeod does not expressly stipulate that the "General Conditions" are applicable, the note at the head of the "schedule of prices" on page 3 clearly incorporates them with the

* *Vide* following letter by Col. de Wolski, pars. 2 and 4.

† The date should read 1889. *Vide* letter immediately preceding.

the prices opposite the several items of the schedule. This note provides for "carriage and fixing complete" according to the specification and conditions, and the schedule of prices is not intelligible unless taken in conjunction with this note and such paragraphs of the General Conditions as Nos. 6, 9, 10, and 15. Moreover, the Contractor himself has accepted advances at the rate of 80 per cent. on the Colonial Architect's valuation of work performed in accordance with the provision contained in paragraph 24 of these conditions.

3. It appears to me that the agreement between the Colonial Architect and Mr. M'Leod must be regarded as an extension of the previous contract. On no other grounds would the Colonial Architect have been justified in recommending that the construction of these barracks should be given to Mr. John M'Leod.

Heads of Departments have power to accept tenders on behalf of The Minister for Works under £100 in value. Contracts exceeding £100 must be accepted by the Minister. Even when, as in this case, the Secretary for Works approved of the work being carried out, such approval does not amount to more than an instruction to the Head of the Department to take the usual course and submit for acceptance the specific contract. The Colonial Architect's omission to do so clearly proves that he regarded the Minister's approval as an acceptance of the extension of the previous contract.

4. If this interpretation of the agreement be the correct one, then the General Conditions are applicable, and the Minister has full power to cancel the contract under the provision of paragraph 16, if the Contractor fails to carry on the works in the manner and at the rate of progress required by the Director of Military Works. If, on the other hand, the General Conditions be held not to apply to the schedule of rates, the Colonial Architect exceeded his powers in accepting the contract amounting to £7,850, and the Government should repudiate the agreement as not legally binding, I would be sorry to suggest such a course were it not that in this case the Contractor has put forward exorbitant claims for compensation, and has served the Government very badly in the past.

5. The Contractor has failed to carry on the works in the "manner" required, inasmuch as, having been paid for excavating rock without the aid of blasting, he has improperly excavated portions of the rock with the aid of blasting. He has further delivered bad material, and has declined to accept the decision of the Director in regard to this material, as laid down in paragraphs 4 and 5.

6. Owing to the dangerous condition of the walls surrounding the barrack area and the dampness of the laboratory and artillery store, the construction of the barracks cannot be proceeded with until these defects are remedied. The dangerous condition of the walls is due to their having been built on pipeclay instead of rock foundation, as paid for. On the south side the wall is cracked from top to bottom in two places, and overhangs the area. It will be necessary to shore and underpin the walls, and also to protect the footings of the walls from weathering. The dampness of the laboratory and artillery store is partly due to unauthorized departure from the plans, and partly to bad and deficient work. The Contractor, Mr. John M'Leod, can be held responsible for the delay which must necessarily result owing to the rectification of his previous bad work, and the Minister has, therefore, ample grounds for cancelling the contract under paragraph 16 owing both to the "manner" and "rate of progress," for which the Contractor is solely to blame.

7. Whether the Minister decides to cancel or to repudiate this agreement, I would recommend that no compensation whatsoever be allowed for material not specifically ordered by the Colonial Architect, and that orders be issued to the Contractor to remove all plant and materials forthwith from the site, or they will be removed at his cost. Under no consideration whatsoever should Messrs. M'Leod and Noble be permitted to have any further connection with the military works of this colony.

8. It is now exactly one year since the construction of these barracks was stopped. The delay in carrying out the modified design approved by the Hon. the Colonial Secretary has been for many reasons fortunate, but I would now respectfully urge the Minister to treat this question as a matter of great urgency, and give an early decision on this agreement, as the Defences of Botany—four new type guns—cannot be proceeded with whilst this obstruction lasts.

I have, &c.,

F. R. DE WOLSKI, Colonel.

Director of Military Works.

Submitted.—D. C. M'L. pro U.S. B. C., 16/6/90. Forward to the Crown Solicitor, 16/6/90.

Would it not be as well, under all the circumstances of the case, to cancel the contract, and then let the Contractors seek a remedy if they dare. The reason for the cancellation as stated in paragraphs 5 and 6 of this report may, perhaps, be cited. Will the Crown Solicitor kindly reconsider this in view of Colonel De Wolski's further report.—J.B., 17/6/90. Urgent.

1891-2.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR AND IN CONNECTION WITH THE CONSTRUCTION OF A BATTERY AT BEN BUCKLER, BONDI BAY, PARISH OF ALEXANDRIA, COUNTY OF CUMBERLAND.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.NEW SOUTH WALES,)
to wit.)

(L.S.)

JERSEY,
Governor.Proclamation by His Excellency The
Right Honourable VICTOR ALBERT
GEORGE, EARL OF JERSEY, a Member
of Her Majesty's Most Honourable
Privy Council, Knight Grand Cross
of the Most Distinguished Order of
Saint Michael and Saint George,
Governor and Commander-in-Chief
of the Colony of New South Wales and
its Dependencies.

WHEREAS I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction of a Battery at Ben Buckler, Bondi Bay, in the said Colony, for and towards the completion of which said works public funds are lawfully available: And whereas the lands described in the Schedule hereto, are required for the construction of the said works: Now, I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein the said lands are situated, declare that the Crown Land comprised within the descriptions set forth in the Schedule hereto has been appropriated, and the private property within such descriptions has been resumed, for the public purpose hereinafter mentioned, that is to say, for and in connection with the construction of a Battery at Ben Buckler, Bondi Bay, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee; and I declare that the following is the Schedule of the lands hereinbefore referred to:—

SCHEDULE.

All that piece or parcel of land situate at Bondi, parish of Alexandria, county of Cumberland, and Colony of New South

Wales, being part of a grant of 5 acres to A. M'Arthur: Commencing at the junction of the southern boundary of Gregory-street with the eastern boundary of the Military Road; and bounded thence on the west and south-west by that road bearing south 7 degrees 30½ minutes east 2 chains 32½ links, and south 40 degrees 43 minutes 40 seconds east 3 chains 53½ links respectively; on the south by a line bearing north 89 degrees 49 minutes 25 seconds east 8 chains 53 links to the sea coast line; on the east by that coast line bearing generally north-westerly to the aforesaid southern boundary of Gregory-street; and on the north by that boundary bearing north 89 degrees 58 minutes 10 seconds west 8 chains 44 links, to the point of commencement,—be the said several dimensions a little more or less, containing 4 acres 1 rood and 30 perches or thereabouts, and said to be in the possession and occupation of G. R. Campbell.

2. All that piece or parcel of land situate at Bondi, parish of Alexandria, county of Cumberland, and Colony of New South Wales, being part of a grant of 6 acres 1 rood 8 perches to Francis O'Brien: Commencing on the north-eastern boundary of the Military Road at a point bearing south 27 degrees 38 minutes east and distant 5 chains 62½ links from the junction of that boundary of that road with the southern boundary of Gregory-street; and bounded thence on the south-west by the aforesaid boundary of the Military Road bearing south 40 degrees 43 minutes 40 seconds east 5 chains 9 links; on the south by a line bearing north 84 degrees 9½ minutes east 6 chains 45 links; on the east by the sea coast line bearing northerly; and on the north by a line bearing south 89 degrees 49 minutes 25 seconds west 8 chains 53 links, to the point of commencement,—be the said several dimensions a little more or less, containing 2 acres 2 roods or thereabouts, and said to be in the possession and occupation of the Sydney Syndicate.

In testimony whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this nineteenth day of February, in the year of our Lord one thousand eight hundred and ninety-two, and in the fifty-fifth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

1891-2.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LEPROSY IN NEW SOUTH WALES.

(REPORT ON, FOR 1891.)

Ordered by the Legislative Assembly to be printed, 16 February, 1892.

The Secretary to the Board of Health to The Under Secretary for Finance and Trade.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 11th February, 1892.

I have the honor, by direction of the Board of Health, to forward you herewith a report on Leprosy in New South Wales, and to suggest that, as the matter is of serious public importance, it should be laid before the Houses of Parliament.

I have, &c.,

EDMUND SAGER,

Secretary.

[Enclosure.]

LEPROSY IN NEW SOUTH WALES.

At beginning of the year 1891, thirteen lepers were under detention at the lazaret in accordance with provisions of the Act 54 Vic., No. 20, entitled "an Act to provide for the notification of cases of Leprosy; for the detention and isolation of lepers; the appointment of lazarets; and other purposes," and assented to November 26, 1890.

During the year seventeen persons were notified to the Board as suspected to have leprosy. On examination seven were found to be ill of some other disease. Ten were found to have leprosy; five of them were natives of New South Wales of European descent; four were Chinese; and one was a Kanaka from the island of Tanna. One of the five whites died very soon after his discovery.

The number remaining under detention on December 31, 1891, was twenty-one; one native of New South Wales of English descent and one Chinese having died during the year. Eight of them were natives of New South Wales of European descent (six male, two female); eleven were Chinese, one a Javanese, and one a Kanaka.

From the summary table it will be seen that the total number of patients admitted since 1883 (when the lazaret was established) is thirty-one, namely:—Natives of New South Wales nine, of whom one has died; nineteen Chinese of whom eight have died; one half-caste from the West Indies, who was discharged in 1885, his sores having healed, and there being at that time no law to warrant his forcible detention; one Javanese; and one Kanaka—Total thirty-one, of whom nine have died and one could not be detained.

The male lepers are lodged in the establishment specially provided for them which was described in the Report on this subject dated May, 1891. On admission of two female patients during the year it became necessary to provide separate accommodation for them and for their nurses. This has been done by erecting a cottage, which affords a bedroom and a sitting-room for each patient, and which is complete in itself as regards kitchen, laundry, baths, and offices; it is connected with the sewers. The rooms are cheerfully furnished, and provided with books and pictures.

Two wardsmen attend on the male patients (many of whom require no nursing, but only supervision), and they are lodged outside the gate of the lazaret as described in the Report already referred to. Two nurses have been engaged to attend on the female patients; at present they reside in temporary quarters adjacent to the cottage. It is necessary to provide suitable and permanent accommodation for them without delay, both for the better performance of their duties and for their own comfort.

In Appendix C will be found a full account of the important facts regarding each of the patients of European descent. It has been written after repeated and extended inquiries, to complete which as nearly as possible several long and arduous journeys were undertaken by the Chief Medical Inspector to remote parts of the province—both to places whence the patients had been removed, and elsewhere to converse with medical men and relatives who could aid in checking statements already taken or

supply fresh details; and it is believed to be more than usually exact. As was mentioned in the Report already referred to, it does not yield data on which views as to the possible origin of the cases in climatic, dietetic, mallygienic, or hereditary circumstances might be based, nor does it by itself afford anything of scientific weight regarding contagion. Much cannot be expected from a small collection; but in the case of so important and so fatal a disease as leprosy, which in many countries is now a most serious scourge, it is necessary that no pains should be spared to ascertain every detail concerning such examples as first appear in a country previously free from it. From the slowly accumulating mass of facts light will be shed at last.

"Notes on Leprosy," by James C. Cox, M.D., Honorary Physician to Sydney Infirmary, are reprinted in Appendix D.; they are taken from the *New South Wales Medical Gazette* of the years 1872-4-5. Dr. Cox, who at the first-mentioned date had already practised in Sydney fourteen years, begins by remarking that he believes "the existence of leprosy has not hitherto been recorded as existing in New South Wales amongst the native-born European population." The facts as to birth-place, probable date of attack, age at date of attack, and local distribution are as follows; and under locality are now added references in Roman numerals to those of the present series who were born in, lived in, or came from the same neighbourhoods, but subject to such farther details regarding them as are recorded in Appendix C.

Names of Dr. Cox's cases.	Birthplace.	Age on arrival in N.S.W.	Probable date of attack.	Age at date of attack.	Locality.	References to cases of the present series connected with the localities mentioned in the preceding column.
M.K.	Campbelltown...	Birth.....	1868-9	34-5	Campbelltown.....	Compare VII, G.R., deceased.
J.W.	England	17	1869	27	Sydney	I, IV, VI, IX, and compare VII.
C.D.	Windsor	Birth.....	1870	24	Windsor	Compare VI and VIII.
A.B.	Sydney	,,	1871	18	Sydney	I, IV, VI, IX, and compare VII.
J.H.	Germany	29	1872	46	Petersham (Sydney).	As above.
W.A.	Holland	11	1873-4	52-3	?	

And, with farther reference to local distribution of the present series, it will be observed that cases III and VII are known to have been in communication with cases of leprosy; that, in connection with the histories of cases II (near Mudgee), and cases I, IV, VI, and IX (Sydney), a Chinese leper was discovered during the present year at Mudgee—he had stayed there with his father on arriving in New South Wales twelve years ago, had lived there with his father during the year that preceded his arrest, and in the interval had lived and worked as a cabinet-maker in Sydney; that cases V and VIII resided in widely separated neighbourhoods, but still in the same north-western district where there is constant circulation of bush-hands between the isolated sheep-stations (but the patients themselves met for the first time at the lazaret); that cases VI and VIII were connected (in the degree shown by their histories) with the town of Windsor; that G. R., deceased, and Dr. Cox's case, M. K., were both connected with the village of Campbelltown; and that cases I, IV, VI, IX and VII, as well as some of Dr. Cox's cases, were all residents of Sydney or its immediate neighbourhood. These circumstances are to be noted, but they do not by themselves exemplify contagion (except cases III and VII); and in a province which has a great area, a comparatively sparse population, and large towns central to extensive tracts of country, their true import may possibly be different from their apparent import. Still, it must be remembered that any manifest grouping in a particular district of lepers who had had no intercommunication might well be taken to point to the presence there of an undiscovered source of contagion common to all of them. In the case of this disease, which is believed often to have a very long period of incubation, any such common source might easily have disappeared before the first of a known series had come to light; and in relation to that point it should be remarked that it is generally impossible to get either an intelligible or a trustworthy account of their life in Australia from immigrant Chinese who subsequently are discovered to be lepers.

Thus the small series of cases here recorded do furnish some slight hint of the contagiousness of leprosy. Were they unfortunately much more numerous they might serve to demonstrate it; in such case our own experience would doubtless be seen to agree with similar experiences in other parts of the world. There, isolation of the sick is generally regarded as the sole effectual safeguard against spread of leprosy; and should our plan of isolation result in the course of a few years in extinguishing the disease in New South Wales, the interference with personal liberty it involves and its cost cannot be very closely reckoned.

By order of the Board of Health,

EDMUND SAGER,

Secretary.

Sydney, 10th February, 1892.

APPENDIX A.

RETURN showing number of persons found to be suffering from Leprosy and removed to Little Bay; also Deaths and Discharges for each year since 1883.

* One West Indian discharged on the 29th December, 1885, his sores having healed and there being no law warranting his detention.

† One patient, I.L., reported 18th December, 1891, was removed to Little Bay on 12th January, 1892.

SUMMARY of cases since 1883.

	N.S.W.	Chinese.	Javanese.	West Indian.	South Sea Islanders.	Total.
Total admitted since 1883	9	19	1	1	1	31
Total died since 1883	1	8	1*	10
Remaining in on January 1, 1892	8	11	1	1	21

* Discharged, 29th December, 1885. (See previous note.)

was being touched. The patient's family have always been in comfortable circumstances. He says he was never much in the habit of eating fish; was not very fond of it; ate it occasionally, like other people.

March 23, 1891.—The mask is reddened—slightly, uniformly, without brown tinge, and looks rather as though it had been rouged and well powdered afterwards; the reddening ceases at the hair, except on the temples, where it stops a little short of the hair; it extends all round the neck. The skin of the face is loose and inclined to fold; it shows everywhere rather fine wrinkles, which are nearly longitudinal; they do cross each other, but at very acute angles. There is general thickening and distortion of the features; the nose is broadened and flattened, and the alæ appear to have lost substance, although they have never ulcerated. There are numerous tubercles in several situations, but most upon the cheeks; they are scarcely visible, but are very easily felt. The ears are not much deformed; there is no prominence of the superciliary ridge. The scalp is unaffected, and covered with thick silky hair; eyebrows gone; eyelashes gone; he has no beard or whisker. The whole trunk shows a brownish red or dirty red mottling, which is not very strongly marked. The hands are both considerably swollen, bluish-red, and the fingers sausage-like in shape:—Right hand: the first phalanges can be extended and flexed; the second row is permanently fixed; the third row is not distinguishable, but some firmly attached small fragments of nail remain; the thumb is similarly deformed, but not quite so much. Left hand, the changes are the same, but not quite so great, and more of the nails remains, though they have not the normal shape. The legs show brown maculæ and brown mottling; on the right shin, from the insertion of the patellar tendon downwards, is a row of cicatrices of old ulcerations. The feet are not so swollen nor so deformed as the hands. *Special senses.*—The sight is now quite gone; hearing good; smell (the left side of nose is permanently closed, the right only as a rule, but when the latter is free) is almost absent; voice, hoarse and without quality; but there is no dyspnoea. *General health* said to be perfectly good; seems strong and well nourished. He has no attacks of ill-health, and no pains. *Sensation.*—There is general analgesia, but sensibility to an ordinary touch is present. I have detected no area absolutely anæsthetic. I found no spot on which he could distinguish between the prick of a pin which drew blood and a touch with the head.

December 4, 1891.—His condition is not much altered. He complains of a great deal of thick and offensive discharge from the posterior nares; and there are several rather sharp-edged ulcers which have a yellowish coating on the soft palate, and especially around the base of the uvula. His usual breathing is decidedly more noisy; and he has had several attacks of laryngeal spasm which have lasted from two to five or six days at a time.

Case II.—H.B., æt. 17; 17 December, 1889.

His descent is as follows:—

History.—The boy's father, formerly a publican, is now a selector and labourer, living on the Meroo (Mudgee), and has always been in fairly comfortable circumstances. This is an old gold-field, and there have always been Chinese there within his recollection; but communication of this family with them has always been strictly limited to purchases of tea and sugar, and occasionally such articles as boots from a store kept by some of them. Those who keep the store are said to have been there very long and to be well. All other conditions seem to have been those usual in the bush. Fish was very rarely to be got, and canned fish was very seldom tasted by this patient. Until 13 years of age he was well, strong, intelligent and active. The fingers of the left hand then began to contract, and the muscles of the forearm wasted somewhat, so that a doctor supposed he had injured the limb, and that it was wasting from disuse. Next, blebs appeared on the fingers, and loss of sensation to a small extent was observed. At about 15 years of age discoloured spots of reddish-brown colour appeared on the trunk, and afterwards on the extremities; under some treatment these disappeared or nearly disappeared a few months later, but they reappeared of a pure brown colour without the reddening. The right hand and foot in the meantime had become contracted and swollen, and lastly, about the age of 16, his face began to get discoloured, to swell, and to be disfigured.

Present state.—The face (being the mask alone) is disfigured by an irregular swelling or infiltration, which is rather hard; a few distinct tubercles are to be seen; in colour it is uniformly reddened, but more deeply in places, so that it looks patchy; the nose is broadened and thickened, the eyelids thickened, the superciliary ridges prominent; the ears have the lobe slightly thickened, and not hardened, but the tragus is both thickened and hardened, and proportionately more deformed. *Eyesight* unaffected. *Hands.*—The fingers on both sides are contracted moderately and thickened; there is swelling, or thickening at, and immediately above, both wrists. *Feet.*—Right foot is generally swollen and deformed, but the toes are scarcely contracted; it is discoloured (reddish or purplish); a blister appeared on the sole about a year ago, which broke, healed, appeared again and healed, and at last left an ulcer, which is now present. Left foot discolouration only. *Trunk and Limbs.*—These show very numerous patches of discolouration of irregular shape, which are of a quite clear brown, of the same shade as the back of a sunburnt hand; there is no reddening of these patches. They are paræsthetic, but the patient (as usual) denied this until he was shown that he could not distinguish between a touch with the head of a pin and a prick with the point.

March 21, 1891.—The whole mask is now enormously distorted by prominent, large, and more or less distinct tubercles; it is very red, of a rather bright tint; the redness ceases where the hair begins; both sides of the hypertrophied and flattened nose are generally stopped up, but sometimes are free; the ears show many tubercles, especially about the lobes; the hair of the scalp seems normal, although dry and not very thick; the eyebrows are almost gone; the eyelashes broken and short, or wanting; hair present and normal in armpits and on pubes (the maculæ mentioned below do not infringe upon the hairy surface,

surface, although they approach it very closely). The hands are much swollen (firm œdema) and of a bluish red; the fingers are sausage-like; they cannot be completely flexed; the nails are present; there are a few tubercles on the ulna side of both forearms, and on both elbows; the back of the neck is thickened and red, but the condition is rather that of firm œdema than neoplastic. All other parts of the body are covered with maculæ: these, over the trunk, arms, and upper part of thighs, are of a dirty red colour, rather faint and mottled; on the lower part of the thighs and on the legs they are bistre-colour, leave no unaffected skin between them, or scarcely any, and are not uniform in tint, but mottled; there are among these latter patches many islands of matt white (achromatic) skin of different sizes, up to an inch in diameter. The feet are swollen, bluish-red, and slightly distorted. *Special senses*.—Hearing, taste, sight, and smell (when the nose is not stopped) seem normal. *Sensation*.—The achromatic patches on the legs are less sensitive than the bistre patches; in general, sensation to a touch is said to be normal; at no part examined can a prick with a needle be distinguished from a touch with the eye-end; there is therefore pretty complete analgesia everywhere, but not complete anæsthesia anywhere. There is no hyperæsthesia, nor any shooting-pains. *General Health*.—Uniformly good; strength good. *Development*.—As this patient was undoubtedly attacked before the usual date of puberty it is necessary to note that the genital organs are well developed, and that pubic hair is present in usual quantity; his voice, however, although certainly not affected by laryngeal disease as yet, is not virile, nor yet merely a boy's voice. Perhaps it may be described as "virile, but entirely without *timbre*." The tongue, mouth, and fauces show nothing.

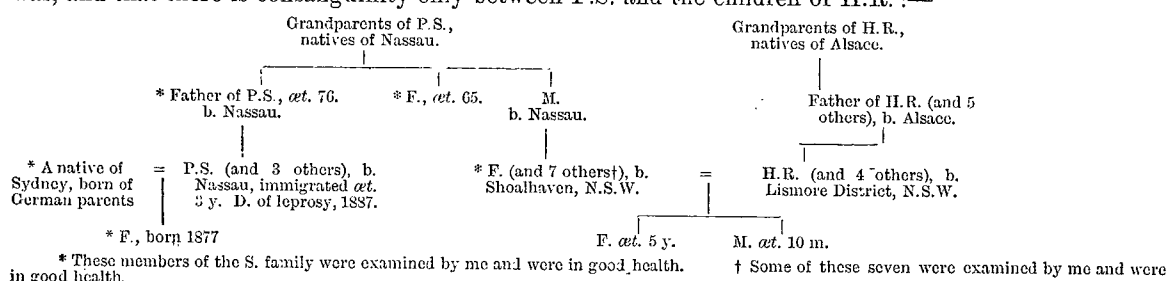

December 4, 1891.—The tubercular distortion of the mask is still very great, but much diminished; the tubercles are not so red, and there is variety of the shades of red in general. The fingers and hands seem, on the contrary, to be more swollen and bluer; but there is no deformity except what is due to the swelling (firm œdema). About two months ago a large blister appeared, which separated the cuticle over nearly the whole of the inner side of the right foot, and which was followed by ulceration; there was no pain; the ulcer is now healing very slowly. He says his general health has been quite uniformly undisturbed and good since the last note.

Case III.—H.R., æt. 28 (and P. S., deceased); 11 August, 1890.

THE case of this patient should be read with that of P.S., deceased, which accordingly is placed first. The details are given after an extensive inquiry on the spot, made among the near relatives of both men.

The case of P. S., deceased.—L.S. immigrated from the Duchy of Nassau in 1855, bringing with him three children, of whom P. was the youngest, and aged about 3 years. The family travelled to Shoalhaven, and lived there till 1871. They next removed to the Richmond River District, and ever since have lived there in the neighbourhood of Jiggi Creek. P. was then about 19. He became a timber getter; and he continued to live in the same neighbourhood and to work in the surrounding district until prevented by increase of the illness which caused his death. His absences from the district were by way of holiday only; they lasted only a few weeks; and he did not travel out of New South Wales. About the age of 23 (1875) he was rafting timber, when he scratched his leg under the water in which he was wading at the time. This injury ulcerated, and healed, and broke out again several times. He showed it to a druggist, who suspected disease of the subjacent tibia; but no bone exfoliated. This ulcer having once more healed, he married at the age of 24 (1876). A few weeks afterwards it opened, and I suspect that he was never again well from that time; but all that seems certain is that about five or six years after marriage (that is, about 1881-2) he became too ill to work any longer. I found it impossible to get any reasonable account of the progress of his illness during those first five or six years which followed the injury mentioned above; but the sequence of symptoms is given by his younger brother, who lived with him during the last five years of his life (1882-7), as follows:—First, the injury and ulceration mentioned above; next (the interval of time not being guessed at), a red patch on the same leg; then a breaking out of the skin over the knees and elbows; shortly afterwards, ulceration of the finger-tips and fingers, which lost their nails, and of the toes; the hands and feet became numb; the fingers became outstretched and stiffened; the ears were not affected, although there was a small ulcer at one time behind the lobe of one of them. About three years before death his sight began to fail, and was gradually lost; and he died, aged 35, in March, 1887, or, as it seems, twelve or thirteen years from the receipt of injury to the leg. An authentic account of his state at the end of 1886 is contained in a report by the Government Medical Officer for the Lismore District, under date December 21, 1886. He says:—"Loss of sight complete; both eyes covered with a thick white film. Nasal bones apparently decayed, as the bridge of the nose has nearly disappeared. Voice husky and harsh, showing extensive mischief in the larynx. Hands swollen considerably; covered with bluish, glossy skin; all the nails disappeared, the colour about the roots darkish brown, some of them discharging a very offensive matter, others apparently dried up, the fingers being all outstretched without possibility of closing the hands. The toes present a similar appearance, with the exception of one, which is covered with dried-up nail. Below the right knee is an open sore, with a very offensive discharge. * * * He informs me * * * that about 1882-3 he went to Sydney and entered a hospital, whence he was transferred after a few days to one of the asylums for the infirm and destitute poor; but after a week his relations were communicated with by the authorities, ordering him to be removed, the reason assigned being that he was a leper." I discovered nothing which distinguished this man's course of life from that usual among other persons of similar position and occupation; but, on the other hand, a good deal which showed that as to association, diet, labour, exposure to weather, and the like, it was the same as that common to all who live and work in the bush. The country, both around Shoalhaven and around Lismore, is well watered, and broken by hills and ranges between which fertile valleys lie. Shoalhaven is on the sea on the east coast in S. lat. 34° 50', the latter in S. lat. 28° 42'. Malaria is not, and I believe never has been met with in either neighbourhood; and the difference of latitude, which carries with it a considerable difference of mean annual temperature, seems to be the main distinction between the two.

Communication between the present patient, H.R., and P.S., deceased.—I found it loosely asserted by relatives and friends that H.R. was a cousin of P.S. The following table shows what the connection was, and that there is consanguinity only between P.S. and the children of H.R. :—

It is difficult to form any useful estimate of the degree in which these two men were associated. After a rather prolonged inquiry among the relatives and friends of both, I conclude that it was small, and, speaking generally, insignificant. The R. family preceded the S. family in settling on the Richmond River; but from arrival of the latter the several branches of both lived near each other and were associated as neighbours and as fellow-workmen. H.R.'s own statement that he "was not in P.S.'s house six times during the six years they lived near each other," which were the latter years of P.S.'s life, is borne out upon the whole by testimony of several independent witnesses. But he was present after P.S.'s death, and assisted J.D. and J.S. to place him in his coffin, even if (as he alleges) he had nothing to do with preparing the body for burial. As for wearing apparel which P.S. may have left behind him, I feel tolerably certain that H.R. had none of it, and that it was safely disposed of by burning or burial. It may be added here that I saw and examined P.S.'s father, mother, brother, aunt, wife, and child (et. 13), as well as other persons less closely associated with him during life, and that none showed any signs of disease.

History of the present patient, H.R.—The following history of H.R. before his admission to hospital is from information furnished by his father, wife, and other relatives or connections who were in the habit of seeing him frequently :—

* These persons were examined by me and were in good health.

He has lived all his life in the Richmond River District, and for the last six years on Jiggi Creek. He is a timber-getter, and was therefore often from home for rather long periods, but never out of the district. About September, 1888, a peg in the sole of a new boot injured the plantar surface of the left foot about the root of the great toe; this date is fixed by the same foot having been trodden on at the same time by one of a team of bullocks which he had recently purchased from his father. An ulcer followed this injury; and although it healed up it broke out again from time to time (and is still present). He was not observed to have anything else the matter with him, either constitutionally or locally, until about August, 1889, a change of colour or reddening about his forehead and eyelids being then noticed (but his father and his wife think that swelling of the hands was the first symptom, and that the reddening, accompanied by swelling around the eyes, followed very soon). He was well able to continue at work, and about the beginning of 1890 he engaged in clearing some swampy land several miles away. He continued at this occupation for three or four months. During these months the symptoms described below began to make appearance, and, as he then saw that he was suffering from a progressive disease of some kind or other, he came to Sydney.

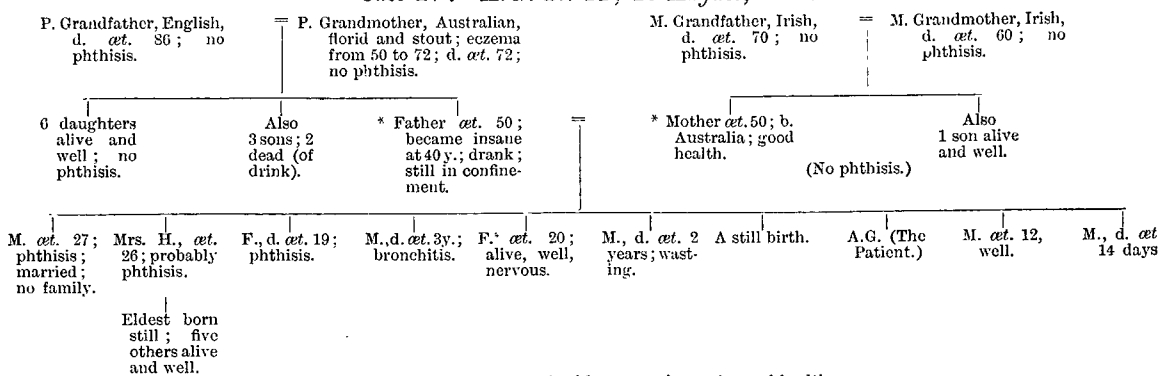

Present state:—*Æt.* 28; height, 5 feet 9 inches; weight, 10 stone; well-nourished and strong in appearance. Has been married eight years, and has two children; his wife never had any miscarriages. He denies all feelings of illness. There is a soft, puffy swelling of the upper eyelids and over the cheek bones; the skin is hyperæmic in the same situations; the swelling is quite soft, and without any feeling of thickening or hardening; perhaps there is slight anæsthesia, but this remains uncertain. The eyebrows are not prominent; I doubt whether there is any swelling of the skin under them. On causing the light to fall obliquely on the cheeks three circular spots slightly elevated are visible on the right cheek, the highest of which is an inch or so below the malar swelling mentioned above. One spot is three-eighths of an inch in diameter; the other two are smaller; they are not indurated; their surfaces do not look smooth, but incline to nodulation. The ears are unaffected. The upper part of the body presents only one patch of discolouration; this is about 4 inches in diameter, and covers the tip of the right shoulder; it is reddish, and perhaps brownish; it is not uniformly coloured; it is distinctly anæsthetic; the difference between a touch with the head and a prick with the point of a pin upon it could not be perceived, although that the skin was touched seemed to be felt. The hands (of which the backs are covered with warts of moderate size, and flat at the top, are uniformly swollen and reddened; this swelling is accompanied by hyperæmia of the skin, and is easily seen; there is a little fine desquamation of the cuticle here and there; there is no distortion, but as much stiffness as may be supposed due to the mechanical impediment of the swelling; sensation is said to be perfect, but on his attempting to pick up a small object it appeared to me that there was—(firstly) some loss of co-ordinating power which was not confined to the fingers, but extended to the right arm, and (secondly) that sensation in the fingers was impaired. As for the lower part of the body—on both knee-caps are scars. On the right knee-cap the scar is large, and seems due to a laceration, received, as he says, by falling over a box. On the other there may be a scar; he says it was burnt, and he sets both these injuries at about a year ago.

ago. But the appearance of these scars is not exactly or not alone that which would be left by such injuries. On the left leg are three circular brownish spots, which are anæsthetic, and the skin over them is very thin; he says there have not been sores there, but the appearance is rather that of the brown cicatrix over a healed ulcer than of a leprous macula. The feet are swollen like the hands, but not quite so much. At the root of the big toe of the left foot, on the sole, is a small circular ulcer covered with scab. On the heel of the right foot is a large and recent chafe, by which the cuticle has been entirely removed; he says he got this a week ago while ploughing in old and ill-fitting boots, and that he felt it at the time of injury. There is no distortion of the feet.

March 25, 1891.—Scalp free. The mask shows a rather deep brownish-red discolouration, which fades off at the edges a little short of the hair, and which is not abruptly raised above the general surface; but there is a general œdema, which in consistency is between the harder and softer sorts; the chin is exempt from these changes, which are more marked on the right side of the face. Just above the cicatrix of an old incised wound on the right side of the chin is a growth which may be a leprous neoplasm. There is considerable swelling of the superciliary ridge, and within the orbits; the nose is broadened and flattened, and the upper lip is slightly swollen; on the swollen parts are a few, rather indistinct, hard tubercles, but over the right malar bone is one larger than the rest associated with several quite small ones around it; the back of the neck is reddened and thickened, but there are no tubercles there. The tongue is normal; the soft palate and fauces are dusky-red and glazed. The upper part of the body in general is indistinctly mottled, without any describable maculæ; over the right shoulder is an irregular, ill-defined, patch of dirty red-colour; it is slightly mottled; it does not reach the scapula behind, nor extend down the arm; at the tip of the clavicle is a reddened, roughened, and raised patch, about the size of a florin which may be a commencing tubercle. The fingers and hands show a moderate œdema, which is not of the soft variety, but yet is not as firm as the hard; this swelling is uniform over hands and fingers, but stops at the wrists; joints and bones are unaffected, and can be flexed with no more difficulty than seems due to their swollen condition. The feet are a little swollen, but not at all distorted. There is one rather small brown macula on the left buttock, just behind and above the trochanter. *Hair.*—Normal on scalp; fallen from outer end of eyebrows; from eyelids, but most from the lower ones; has not fallen from beard or moustache, although the reddening extends under the latter, under the whiskers, and a little way on the right side under the beard below angle of mouth; nor from pubes or armpits. *Special senses.*—There is nothing to note. *Sensation.*—This is the same for the shoulder macula, for the face-tubercles, and for apparently normal skin about the shoulders,—namely, he could not distinguish between the head and the point of a needle, although the latter drew blood. *General health.*—Good; denies all prodromal symptoms (or occasional feelings of illness at present); thinks that his nose scarcely ever bled in his life.

December 4, 1891.—His face is still much swollen, but less than before; the small subcutaneous tubercles are present and stationary; the fingers are swollen and blue, not more (and perhaps rather less) than before; but this œdema is now distinctly hard. Two small tubercles on the ulnar surface of the right forearm have ulcerated. The spot on the clavicle is no longer raised, but sunken, and the skin over it white and atrophied. His nose has bled occasionally, but less than once a month; says that his general health has remained quite good.

Case IV.—A. G. æt. 14; 20 August, 1890.

* These persons were examined by me, and were in good health.

History.—Was born in Sydney in 1876, and always lived in one or other suburb, except a short visit to Melbourne. His father was a man of some little property; he drank to excess; ten years ago (when the patient was 4 years old) he became insane, and is still in confinement; the circumstances of the family were as a rule fairly good, but have been poorer during the last few years. They habitually bought vegetables from Chinese traders (in common with nearly every other family in Sydney), but none of them has had any other communication with Asiatics than this customary dealing. The patient attended school from the usual age. He has always slept with his mother, because he was afraid in the dark; and she (chiefly) has dressed his sores. He was fond of fishing, and of fish.

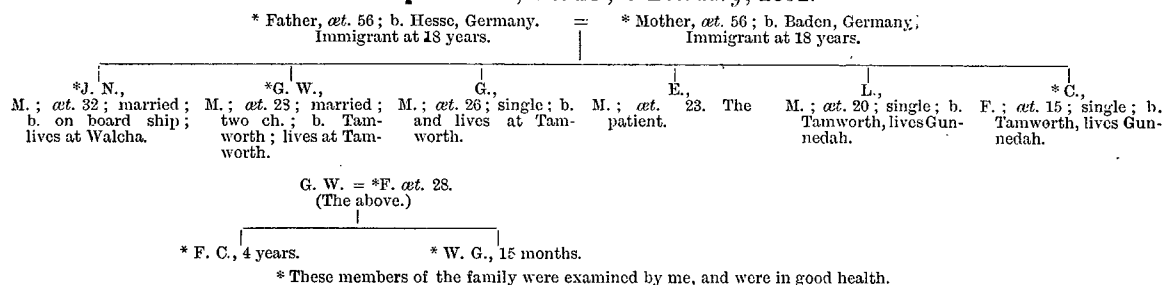

History of illness furnished by his mother.—At 10 years of age (1886) went with his family to Melbourne, where he stayed seven months; while there he had a cough, attended with a good deal of expectoration, and he wasted; on returning to Sydney he thoroughly recovered. At about 12 years (1888) he had some water-blisters on the fingers of the left hand, which broke and left small ulcers; he lost two nails; the attack lasted two months, and then the ulcers quite healed; soon (or immediately) after this contraction of the fore and middle fingers was noticed, and a little later some wasting of the fore-arm; he attended at a general hospital for a few weeks; after this only some cracks occasionally appeared about the fingers; so far no other parts of the body were affected. At about 13 years (1889) he one day drew attention to his left heel, because he "thought there was something the matter with it"; it was seen that there was a considerable collection of matter under the hard skin, and when it was let out it smelt very offensive. The fingers of the left hand contracted more and more; next a macula was observed on the left buttock, then on the right

right buttock, and later still on the left arm and fore-arm; about three months ago an ulcer appeared on the left palm; it was poulticed and it healed up; a few days later he swept the floor; the next morning he pointed out some blisters on the palm of the left hand where the broom handle had rested; poultices were again applied; the blisters spread until nearly the whole of the skin of the palm, fingers, and thumb was detached; it was removed; there was no attempt at healing, and that was the beginning of ulcers mentioned below; he attended at the general hospital for a time, but as he did not improve he applied to the Government Medical Officer for Sydney for admission to the Coast Hospital, and was by him forwarded for survey as probably having leprosy. During the progress of the illnesses described there was alteration of the general health whenever the blisters or cracks appeared; there was then irritability, loss of appetite, and constipation; feverishness was not noticed. *Prodromal symptoms* were either absent or unobserved (unless the cough, &c., indicated a prodromal phase). *Present state*.—He is an intelligent boy, small for his age, and without any indication of approaching puberty; he is still afraid in the dark; temperament lymphatic, with reddish hair (resembling his paternal grandmother in this respect, and in features); the upper eyelids are slightly full or swollen; he has had ophthalmia; the swelling is apparently not œdematous; there is a circular, red, and desquamating patch, about the size of a shilling, over the right orbit, which is not anæsthetic; perhaps the lobes of the ears are a little thickened, but these organs are ill-shaped and ill-placed, and may be normal; the left shoulder-tip and arm on its outer side show a continuous discoloured patch, not raised; it runs on to the left fore-arm, nearly the whole of which it covers; its colour is brownish and reddish, not uniform, mottled; the margins are rather strongly marked and serpentine; the left hand has all the fingers contracted, stiffened, and wasted; the index finger has lost its nail; the fingers cannot be extended; the thumb is wasted and contracted; from all these fingers, the thumb, the palm, and a part of the dorsum, the cuticle is gone, and there is a shallow ulceration which varies in depth in different parts; there is no pain at all, and he says that it would not hurt him however it might be handled. On the nates are two tolerably symmetrical maculæ, of a rather deeper shade than that on the arm, and having strongly marked (or well defined) serpentine edges; the left leg has numerous smaller maculæ, rather resembling in colour that on the shoulder than those on the nates; all other parts of the body are unaffected. *Sensation*.—The maculæ on left shoulder and arm are distinctly paræsthetic, and so is the apparently healthy skin of this limb; the maculæ on the nates and legs are paræsthetic, but less markedly than the first-named part; sensation to touch remains, but he cannot at any of the parts named distinguish between a prick and a touch with a pin. *Special senses*.—Unaffected.

March 25, 1891.—Has grown 3 or 4 inches, is well nourished, strong, cheerful, and apparently in good health; the patch over the right eye has gone; his face shows nothing except the slight swelling (probably not leprotic) of the upper eyelids; the ears are as before; the macula over the left shoulder has so nearly disappeared as to pass unnoticed except on careful examination; but halfway down the upper arm, although much faded, it is still distinct, appearing as a rather red, not brown, roughened or slightly desquamating patch, which extends down the posterior and outer surface of the fore-arm as far as the hand; there is no longer any ulceration of the hand (but it has been recently abraded by a fishing-rod); the fingers, flexed on the palm, can be extended with assistance only about half-way; but by voluntary effort the first phalanges alone can be extended and nearly to right-angles with the dorsum, the remaining two rows lying quiescent and paralysed; the macula on the left buttock is now quite gone; that on the right remains and extends intermittently down the back of the thigh and (by some separate small maculæ) a little towards the front; the right foot shows a little general swelling, and there is over the right Achilles tendon a small abscess, ascribed to an ill-fitting boot. *General health*.—Good; has pins and needles in his feet rather often, but not while walking about, and thinks he sometimes has them in his hands too; some pubic hair is appearing; his voice is unaltered.

December 4, 1891.—The macula on the left shoulder has gone; but the lower half of the upper arm is still discoloured, though now brownish only. Left buttock, free as last noted—sensation seems normal over site of the former macula; the macula on right buttock is markedly fading—its serpentine edge is still perfectly distinct at upper and inner sides, but now much nearer brown in colour than red; a faint brownish discolouration within the margin extends towards the thigh, but as it approaches the fore-part merges in a general slight bluish colour which is also shown by the left thigh in front. His general health has remained perfectly good.

Case V.—E. U., act. 23; 5 February, 1891.

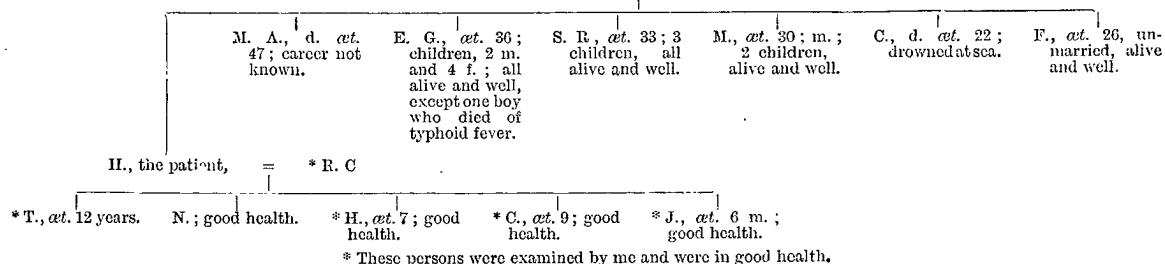

History.—Unmarried. His parents first lived at Singleton; they removed to a place 12 miles from Gunnedah where he was born (1868); at 11 years of age (1879) he removed with the family to the town of Gunnedah; he became a labourer or bush-hand, and his chief occupations were fencing, shearing, and droving; he was always employed at different stations in the Gunnedah district, but once travelled sheep to Queensland, whence he returned to Gunnedah by way of Brisbane and Sydney; for four and a half years past has been employed on Wondooba run, and he left for Gunnedah only after his illness had become pronounced. Careful inquiry failed to elicit any circumstances which would distinguish his course of life from that common to others who live in the bush; he says he never had special communication with Chinese or other Asiatics; he was not fond of fish, had rarely opportunity of eating fresh fish, and has but seldom eaten canned or salted fish. *History of illness*.—(From his own account, corrected by that furnished by his adult relatives at Gunnedah). In 1884 he had a whitlow, and lost the

ungual phalanx of right index-finger; the nail is present and normal, and the joint has without doubt been injured as alleged. He has had no other illnesses. In August, 1889 (the date being fixed by his having taken a stallion into Gunnedah to the Show then held there), he had a small crop of blisters on the back of both hands, which "came of themselves," were not painful, lasted about a week, dried up without breaking, were unattended with ulceration and have left no scars. At the same time the backs of the hands were puffy and the puffiness remained after the blisters had healed; at the same time (or at the latest a few weeks afterwards according to his relatives), there was a slight puffiness and redness about his eyes. He himself thought that all these swellings, after their first appearance, went away; but his relatives seemed certain that they remained, and stationary, until about the end of October, 1890. There was then some increase of the redness about the eyes and face, and of the swelling, and that caused him to consult a neighbouring doctor; syphilis was (and is) denied; however he was treated with mercurials, and within a few weeks there was improvement. A little later still there was an exacerbation; the doctor's suspicions, entertained at first, were increased; and he was recommended to enter a general hospital in Sydney. He was admitted about December 25, and on January 16 he was transferred to the lararet. He denied all feelings of illness either before the appearance of the blisters or subsequently. *Present state.*—Except for the alterations of the surface, he has the appearance of a person in health, well nourished, well proportioned, and muscularly strong, and he denies all feelings of indisposition; as to his general health there is no remark to make. His physiognomy is already considerably altered, but not yet (apparently) so as to hide his natural expression altogether. This alteration is due to a general swelling, of a purplish-red colour, of the whole mask; on the forehead it ceases about half-an-inch below the hair, and has there an irregular margin, abruptly limited, and raised one or two millimetres above the neighbouring surface which has a normal appearance. His nose is thickened and broadened; his lips thickened. Everywhere tubercles may be distinguished by oblique illumination, beginning to rise above the surrounding surface; the ears are of a bluish cast, rather bluish-white than bluish-red, slightly thickened in the lower half, and slightly distorted (but probably they were never well shaped). These appearances cease about the margin of the lower jaw. His hands, and his wrists about as high as over the articulation, are uniformly swollen, and are reddish; the fingers have a sausage-like appearance; there are no traces of the vesicles of two years ago. The trunk and limbs (except the feet) show very numerous pale-brown maculæ; these are thicker on the thighs than on the arms and trunk, and thicker still on the legs; in point of size they are generally speaking larger where they are fewer; on the body are many which are three or four centimetres across, while on the legs there are perhaps none broader than one centimetre or one and a half; two only, being large maculæ near the left shoulder, have acquired a white centre within which the skin is matt, and quite different from the normal white skin between the maculæ; the brown shade of colour is that of a sun-burned arm, but not quite so deep, and more transparent. The feet and ankles showed on January 16 a swelling not distinguishable from ordinary œdema; it was, however, not quite symmetrical, there being a distinctly larger swelling over the outer malleolus of the left leg. This swelling was quite different, both in distribution and in consistency, from that of the hands; and three weeks later it had nearly disappeared. During the three weeks of detention in the general hospital his temperature, observed twice daily, remained normal (with irregular fluctuations not exceeding half a degree), and his urine was then normal in quantity, acid, without albumen, and its specific gravity 1020. *Sensation.*—He thinks that it remains natural; on examination it is found to be greatly dulled everywhere, and nearly gone at points on the face; but merely dulled elsewhere, not much, and so that it is not possible to distinguish greater sensibility of normal skin on the trunk between the maculæ, than on the maculæ themselves. Except the forehead, it should be noted that on January 16 the greater swelling of the left ankle seemed to have become more markedly paræsthetic than any other part examined.

December 4, 1891.—His face is considerably distorted and his proper aspect thus disguised; his ears are considerably distorted by a swelling which has levelled up the sulci, &c., but they are not much enlarged; a few brown maculæ on the left side of forehead extend under the hair (which remains healthy) for about half an inch. The hands show a considerable degree of firm œdema and are slightly bluish. The rest of his body is thickly covered with very bright discrete brown spots, about half an inch in diameter, and more or less circular, of which none show any variation of shade towards the centre. The feet are slightly and uniformly swollen; there are no sores. Says his general health has remained unaffected.

Case VI.—H. S., et. 41; 23 January, 1891.

Father, d. et. 52; cold; 9 weeks illness; b. England, = Mother, et. 60; good health; b. N.S.W., Marramarra Creek, Lower Hawkesbury.
near Bristol; nothing known of his family.

History.—Was born (1850) in the Lower Hawkesbury district, on Marramarra Creek, and lived there for a few years; the family then removed to Windsor, not many miles away, and on the Hawkesbury, and he resided there for a few years; they returned to Marramarra Creek, and after an interval went again to Windsor. After this, H. left Windsor at the age of 18 to go to sea (1868); he spent three years in coasting-vessels, but never went out of New South Wales; his residence during these years was in Sydney. He returned to the Lower Hawkesbury (1871), where he engaged in boat-building, oyster-fishing, and running a ferry-boat. About 1877 he married and went to Sydney; he again went to sea in coasting vessels; then returned to the Hawkesbury; and finally went once more to Sydney about 1886, and

and resided there until he died. Much fresh fish and oysters were eaten from time to time. Has had no serious illnesses. *History of Illness.*—In 1877 had successive crops of boils; they lasted about a week each, and healed in a usual way; they were believed to be common boils; they appeared on the back of the neck, on the upper part of the trunk, and elsewhere, not selecting any particular region. About this time, but after the eruption of boils had ceased, he was engaged for some days in getting out cargo from a vessel partly submerged in Darling Harbour, Sydney; he was much in the water for several days. A month after this his wrists began to swell, and his nose became, and continued to be, obstructed; later, swellings appeared in different features—eyes, ears, nose, &c. But it was eighteen months before his physiognomy began to alter; and after so altering he never recovered his natural appearance. During that time he had repeated attacks of feverishness, and severe sharp pains in the legs; he was laid up by them for a month at a time, and after each attack had an interval of apparent good health. His sight remained unaffected until six or seven years later; then the right eye was invaded, and later still the left was attacked. *Present State.*—He is very weak, and very much emaciated. For a few months past he has suffered repeatedly from diarrhoea: he has also pains corresponding to the “lightning-pain” of ataxy in his legs and fore-arms. The ears are much distorted, but not hypertrophied; the soft parts of the nose are destroyed, but the bones are not sunken; in consequence of this and the general wasting, the upper jaw appears prominent, and its bony outlines are easily followed; the skin is drawn tight over the whole skull; it is white and smooth, and at a short distance looks as though it might shine in a favourable light; but on close inspection it is seen to be traversed in all directions by exceedingly fine white lines, which seem to be due to linear atrophy. The body is emaciated in an extreme degree; the skin is wrinkled and roughened; it shows many large, ill-defined, patches of a pale reddish-brown colour; elsewhere it is of something like clay-colour. The fingers and toes are very much distorted and useless; the joints are displaced in several different directions; they show large, irregular, superficial ulcerations; I did not examine them closely enough to say whether the bones had been absorbed, or were wasting, but apparently neither had happened. As to sensation—he was under the impression that it remained normal; but after an imperfect examination I ascertained that it was uniformly dulled, but was not altogether lost anywhere. However, the ulcerations mentioned above were said to be painless. The right eye was almost useless, the left was affected to a less extent; upon the whole he could see tolerably well. His memory was quite clear, and he talked well, and without apparent fatigue. He died February 4, 1891.

Case VII.—*M.R.*, *æ*t. 33, and *G.R.* (deceased); 25 March, 1891.

* These persons were examined by me, and appeared to be in good health. There is no family history of constitutional disease.

The case of G.R., deceased.—The following account is taken from information furnished by his sister and his brother separately, and from the case-books of the physician whom he consulted on dates mentioned below. Was born at Campbelltown, near Sydney, in 1861. He lived there until about 1868, when he removed to Sydney. About 1870 he went to Adelaide, S.A.; in 1880 he returned to Sydney, and he died there in 1889. He was always weakly. At about 6 or 7 years of age he suffered from a chronic submaxillary or cervical swelling; this lasted two years, more or less, and receded without suppurating; at 10 or 11 years he began to suffer repeated attacks of nose-bleed, and had brown patches on his body, which remained; at about 18 his face swelled; this swelling disappeared, but not long afterwards returned and remained; at about the same age his voice altered as from disease, but intermittently, and from about 24 he could speak only in whispers; he lost his eyebrows, the hair of the scalp used to fall out, and became thin. He was 5 ft. 11 in. in height, and “manly”; his voice altered in the usual way at about 15, and was a man’s voice subsequently; but he never got either beard or moustache. The physician referred to diagnosed this case in 1881, and furnished the following notes, with which the above account agrees nearly:—“December 16, 1881, *G.R.*, *æ*t. 19.—Said he had been ill twelve months, with breakings out on face, wrists, and legs, which were better and worse from time to time. Tubercles on various parts of skin; reddish-brown colour; parts of the face scaly; some anæsthesia; features enlarged, ears and nose notably so; no syphilis. Leprosy.” “February 2, 1882.—Said the remedies had cured sores. Seemed slightly better, but there was not much change. A tuberculous condition of mouth and larynx; hoarse.” “December 22, 1882.—During this interval the throat had become seriously diseased; he spits large quantities of yellow matter, and occasionally blood.” “26 April, 1883.—Voice still very hoarse; does not complain of sore throat; thick scabs on hands, wrists, and face, not on trunk; tubercles of mouth and throat not changed.” He did not after this date come under the same observation. The beginning of this case cannot (according to the several accounts) have been later than the tenth or eleventh year of age; but, apparently, development was not markedly interfered with, and it would seem that the usual puberal changes took place.

History of the present patient, M.R., æt. 33.—She was the chief and almost the only attendant upon her brother *G.R.* during his illness. About eight years ago she had a sore heel, attributed to a tight boot, which lasted about three weeks and healed perfectly. There was no other sign for about a year; then discoloured spots were seen on the legs, and afterwards red spots on the face, which never quite went away; later brownish or reddish-brown spots and patches appeared over the body; she lost her eyebrows four years ago; two years ago her voice was affected, but it recovered; about a year afterwards it was again altered, and has remained whispering and stridulous ever since. A written note by the physician already referred to runs as follows:—“March 22, 1887.—Disease began about three years ago; whole body tuberculous; anæsthesia.” *Present state.*—Prodromal symptoms, and illness during the eruptive stage, are both denied. The face is deformed by moderate general swelling, and not large tubercles; the brows are not very prominent,

prominent, but the eyebrows are wanting; many tubercles have ulcerated and gone, and have left behind them more or less circular, shallow cicatrices, over which the skin is white, and in some cases a little drawn or puckered; the soft parts of the nose are nearly gone, but the bones seem intact; the ulcerated edges of the nostrils are indrawn, and this retraction has also involved the upper lip at its junction with the nose, whence the skin is tightly drawn over the upper maxillary bones so as to give a characteristic expression to the face; the tongue is large, red, fissured both longitudinally and transversely, and has two or three mucuous plaques like those of syphilis, towards the tip on the left side. The ears are much deformed by tubercles of moderate size. The general tint of the face is dull red, inclining to yellow and there is some desquamation. The hands are enlarged by hard œdema; the fingers can be brought only to right angles with the palm, and not bent upon themselves; no phalanges have disappeared, but all the nails are deformed; there is excessive and fixed extension of one or two fingers, and lateral displacement on one or two unguis phalanges; the skin is roughened, desquamating, reddened and (on palmar surfaces) bluish, fissured everywhere, discharging so as to slightly resemble eczema, at some points slightly ulcerated and offensive. The fore-arms and elbows show numerous tubercles, chiefly on the extensor surfaces. The feet were said to resemble the hands, but to be not quite so much damaged; she walked without apparent difficulty. On the upper part of the chest are some large patches of a rather deep reddish-brown tint, which were said to extend over all the body; among them are small islets of matt-white; symmetrically placed on the lower half of each breast is a small and superficial ulceration in a state resembling a healing burn; these are said to be the only ulcerations, except as above noted. *Special Senses*.—Sight weak (uses spectacles), but there is no appearance of invasion of the eyes; hearing good, taste and smell said to be good. Voice, whispering and stridulous. *Sensation*.—the hands are sometimes painful and irritable; undid upper buttons of dress with right hand without great difficulty, and replaced them; sensibility to a touch remains, but there is analgesia, and on the upper part of the chest it was not possible to distinguish by pricking with a pin between the maculæ and apparently healthy skin. *General Health*.—Fairly good; only rises at 1 o'clock; once a week takes a short excursion by steamer or train; every three or four weeks she becomes low spirited, and has lassitude, diarrhœa, and bleeding from the nose; menstruates regularly and normally, and at the times just mentioned; appetite very good, but prefers fruit, vegetables, and milk. Both this patient and her brother are said not to have much cared about fish; may be said to have eaten it, but rather less than ordinary.

December 30, 1891.—There is very little change in this patient. Both hands and feet are extensively but superficially ulcerated, and very offensive; and there is greater distortion of some fingers. The face is also ulcerated in a few spots which are covered with a dry scab. On both upper arms, and nearly symmetrically placed are numerous discrete patches of ulceration now covered with indolent granulations slightly raised above the general surface; at these points there were tubercles. Her general health remains what it was; not bad as a rule, with occasional attacks of nausea, malaise, and chilliness. Maculæ on the body are now of a deep bistre colour with islands of matt-white at some parts. The ulcers are said to be painful, especially on the hands; however she remains indifferent when they are dressed.

Case VIII.—R.W., *æt.* 47; 23 December, 1891.

His descent is as follows:—

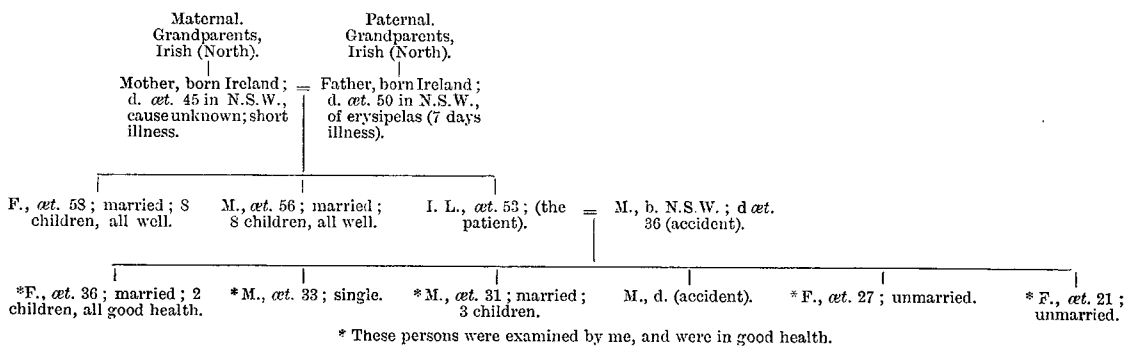

NOTE.—As far as the patient knows all these people have good health.

History.—Was born at Windsor, New South Wales; removed to Maitland during childhood, and lived there until he was 22, when he married; he was then occupied in carrying. Afterwards he wandered about the country in the north-west, engaging in shearing, fencing, mail-coach driving, bush-carpentering, &c.; but he lived in, or had his head-quarters at, Walgett for 9 years (1875–84), and Moree for 7 years (1884–91); and was living at Moree until he went to Narrabri for advice, and was thence sent down to Sydney as being leprotic. For the last eight months only he has got his living in part by catching fish. He believes his wife is in good health. *Clinical History*.—Had nothing at all the matter with him until seven years ago. Was then about to begin shearing when he stabbed the base of the left thumb with the shears; a jet of blood followed; the wound was plastered with Friar's balsam and bound up; the next day he began shearing. About three weeks afterwards he first noticed that his left hand was numb; and in the course of the next few months he found that he was liable to injure that hand without noticing it; thus he burnt the thumb deeply with a soldering iron without pain, and burnt the little finger deeply with a cigar and discovered it otherwise than by pain (to these two injuries he ascribes the loss of terminal joints now wanting). He noticed no other signs until about the fifth year from the numbness of the left hand; he then ran a nail into the sole of the left foot just over the first tarso-phalangeal joint; this injury ulcerated (and is still scarcely healed two and a half years afterwards; perforating ulcer). After this his left foot swelled and has since remained swollen. In the meantime his left hand and forearm so far lost ordinary sensation that one night when a log rolled out of the fire against his arm he was roused only when the upper arm began to burn, the fore-arm and elbow being by then deeply burnt. Then two years ago there were floods, during which he was much exposed to wet; he caught cold, and has been hoarse ever since. He says that there was no swelling or distortion of the face until nine months ago; the right foot began to swell somewhere about the same time before or afterwards; he cannot say when swelling of his hands began. *Present state*.—Aged 47; hair very thin on the scalp, and on the occiput is gone, though not from ordinary baldness; the scalp is rough, but not discoloured; eye-brows gone; no beard or moustache; says he shaves, but very little hair can be felt; the mask is generally swollen, but the forehead is free; superciliary ridges slightly prominent, and at outer end of each is a largish, ill-defined, soft swelling, which infringes on the orbit; cheeks swollen, but smooth, the left slightly larger than the right; nose so swollen as to have entirely lost its proper shape, and

and to be smooth and shining; lips much swollen; the chin has on each side of median line two largish soft swellings; the general colour is brownish about the forehead; elsewhere moderately red, or normal, with a cast of blue. The ears are considerably enlarged, chiefly as to the lobes, thickened, slightly bluish, the sulci a little blurred. Generally over the body the skin is atrophied and wrinkled, dry or even scaly and dirty-looking; it is yellowish-brown without much variety of shade; there are no distinct maculae, but some large areas, as the front of right thigh, for example—are of a brighter brown than the rest. Both hands have the palms covered with horny cuticle, which is fissured, and both are swollen by firm œdema, chiefly as to the fingers, and not excessively; colour bluish of moderate intensity; the *right* hand is not deformed, except by firm œdema of the fingers; the *left* is much more swollen than the right; the swelling more decidedly involves the carpal portion and over the wrist-joint, and all the fingers have lost their terminal phalanges. On both elbows are large soft swellings something like enlarged bursæ. Over both knees are soft swellings and scars of old superficial ulcerations; the feet are uniformly swollen; at base of left great toe is the imperfectly healed scar of a perforating ulcer; in the left groin are some enlarged glands. *Sensation*.—There is paræsthesia everywhere; anæsthesia is most nearly complete over the feet and left hand, but there are other patches about the body where it is not very far from perfect; no hyperæsthetic patch was detected. *Special senses*.—Sight and taste are normal; is slightly deaf; smell—the nostrils are permanently closed. The voice is very husky, and he sometimes has slight attacks of stridulous breathing; on the soft palate are large red patches, and in the centre a whitish patch. *General*.—Has never had any nose-bleed, nor any drowsiness; and, as to lassitude, has worked and has maintained himself steadily; but during two years past has had attacks of feverishness, and since his hand began to be numb he says he has perspired as usual only about as far as the waist, below which he perspires at all events very little, if at all; appetite and sleep are good.

Case IX.—I.L., *æt.* 53; 19 December, 1891.

Her descent is as follows:—

History.—*Æt.* 53. She was born at Annandale, a suburb of Sydney; she lived with her parents in several neighbourhoods in or close to Sydney; married at about 18; moved to Kent-street, in the city of Sydney, about 1855, and lived there until 1873, when she removed to Clarence-street, close by, and lived there until 1888, when she removed to Waverley, another suburb of Sydney, which is her present residence. Has always suffered from flatulent dyspepsia of varying severity, and still suffers from it. At about 22 and at 30 years of age she had attacks of erysipelas (of which her father is said to have died), from both of which she perfectly recovered; and at about 33 lead-poisoning (water); she has had no other acute or serious illnesses. She has had six children, of whom the first was born still at six months. Her husband was killed when she was 32 years old (or in 1870). After his death she had to work very hard to support her children, but she was never in any sort of want; and she got her living by dealing in haberdashery in a small way. She has habitually dealt with Chinese for vegetables, like everybody else, and never had closer communication with Chinese or other Asiatics. She does not remember having heard of or seen any other person suffering from leprosy, or at all as she is suffering. As to fish, she did not like it but eat it sometimes.

Clinical History.—She continued in her usual health, which was deranged habitually by flatulent dyspepsia, until 1889; menstruation then began to be irregular, and she suffered more from headaches than had been usual. From that date to the following there seems to have been no other disturbance than usually attends upon cessation of menstruation. In April, 1890, she went to Brisbane to visit relatives; she stayed about three months; towards the end of her visit she noticed a circular red patch on the flexor surface of the right fore-arm; it looked to her and her friends like ringworm, for which they took it. She returned to Sydney in June, 1890; she was depressed by leaving her relatives. After she had been some time at home she says that she became "melancholy," and distinguishes this from the depression mentioned; then her dyspepsia and flatulence increased very much; she began to suffer extremely from occipital headaches, and sometimes she was "light-headed." The spot continued. No further eruption was noted until September, 1891, when two subcutaneous tubercles were discovered over the left lower maxilla, and a rather diffuse and red swelling over the right frontal eminence; soon afterwards little tubercles appeared on the arms and fore-arms, which remained. It was earlier than this, perhaps about July or August, that her feet swelled greatly; there was no numbness of them; her medical attendant thought she had dropsy; he examined her urine and found nothing. From about September, 1891, the eruption of tubercles and erythematous patches increased steadily, until she became nearly covered with them. About the beginning of October, 1891, her medical attendant and another examined her in consultation; she was exposed to the cold for about two hours; and from that date she began to have pains. These she describes as felt in the legs below the knee, and in the fore-arms below the elbow-joint; there was a severe burning apparently in the skin, and also sharp, or neuralgic pains; both were constantly present, and prevented walking, but were worse at night. From the same date the eruption increased greatly, the tubercles becoming more prominent and the redness more marked. Four or five weeks ago she had an attack of feverishness, which was supposed at first to betoken the onset of influenza, then epidemic; but it was afterwards thought not to be influenza. She has

has had no drowsiness nor lassitude; her nose never bled in her life; she perspired as usual. *Present state.*—Says that when she went to Brisbane she weighed 15 stone; she is now spare. She also says that her complexion has always been very high; her hair is iron-grey. *The mask* is very red, but not uniformly; there is slight general swelling, such as does not much alter her appearance; her nose is more swollen; she has diffuse swellings over the forehead, which are in consistency from elastic towards doughy; there are many discrete tubercles which are almost entirely subcutaneous, easily distinguished by touch, not to be seen except by oblique light. *The ears* are generally enlarged (as to superficies); they are slightly, or moderately, swollen and thickened; the natural folds are distinct, but blurred; there are two or three separate, rather diffuse, swellings in each, which have not the hardness nor the sharp limits shown by tubercles elsewhere on the body. *Special senses.*—Sight, hearing, taste, and voice are normal. *The body* is nearly covered with small discrete tubercles, and with erythematous patches of red and reddish-yellow discolouration; on the whole the tubercles are thickest on the outer aspects of the limbs. The erythematous patches have no distinct margin—they seem slightly thickened towards central parts where the colour is deepest, and the latter fades away and then increases again to brightness and thickening at some neighbouring point without any interval of white skin. On the right fore-arm the original spot is visible just below the bend of the elbow and on the flexor aspect; it is nearly circular; it is dirty red and roughened in the centre which is about half an inch in diameter, and is surrounded by a dirty-brown band about three-quarters of an inch wide, over which the skin is atrophied and wrinkled. *Both hands* are greatly swollen as far as the wrists by an œdema which is not firm nor yet quite soft; they are of a rather bright red, and there is no blue tinge; the swelling and numbness prevent use. *The feet* are in the same state; there is no distortion of the extremities. *Sensation.*—This is everywhere disturbed in the usual way. The original spot seems almost anæsthetic, though not perfectly; other red maculæ are generally analgesic, and sensation is dulled; some maculæ on the legs, not distinguishable by appearance from other neighbouring maculæ, are highly hyperæsthetic (that is to say, the tests being carried out with pins and needles in the usual way, a firm touch with the head of a pin on these spots gave great pain, while close by the difference between a firm touch with the head and a prick with the point that drew blood could not be distinguished). She complains of disagreeable numbness of hands and feet, and of pins and needles in the legs occurring independently of pressure. From the elbows and knees downwards she still has the severe burning pain in the skin and the acute intermittent neuralgic pains which began ten or eleven weeks ago; they prevent sleep and locomotion. No part of the skin was found that had normal sensation, even in places nearest to natural in appearance. *General.*—She has lately menstruated again after an interval of three or four months. She dresses late in the morning and lies down most of the day; her general strength is fair; her appetite about as usual.

APPENDIX D.

[Extract from the *New South Wales Medical Gazette* of October, 1872, pages 10 and 11.]

NOTES ON LEPROSY BY JAMES C. COX, M.D.

Honorary Physician, Sydney Infirmary, &c., &c.

BELIEVING that the existence of leprosy has not hitherto been recorded as existing in New South Wales amongst the native born European population, I am induced to draw the attention of the profession to the subject by recording the following cases which have come under my observation during my tenure of office as Physician to the Sydney Infirmary. I am happy to say that so far this disease has shown itself very sparingly, only six well marked cases in native born subjects of European parents have come under my observation. It is not uncommon to meet with cases of this disorder, the subjects of which have contracted the disease while resident in other parts of the world, but the fact of the development of this disease in persons whose parents have had no taint of this disorder in this Colony is a matter well worthy the attention of the profession, and, I believe this to be the first time such cases have been recorded. Cases of this kind are liable to be mistaken for secondary and tertiary syphilitic disease, as was the second case which I now record previous to its admission into the Sydney Infirmary, especially when there exists a history of syphilitic inoculation. The cases which presented themselves in an early stage of the disease have readily yielded under a liberal administration of Cod Liver Oil, generous diet, and a carefully regulated course of arsenic. It is gratifying to be able to state that in this stage the disease is not contagious unless under peculiar circumstances.

A.B., age 19, native of Sydney, labourer at saw mills, states:—My parents are now living; my father is 50 years of age, in excellent health, and has been so all his life; he is a native of Birmingham, England. My mother, a native of Ireland, 40 years of age, a very healthy woman, Roman Catholic; has never had any symptom of the complaint I am suffering from. I have four sisters living, all strong and well. I lost one sister at the age of three years, and three brothers, one at eight years of age was drowned, one twelve months old from diarrhœa, and one 14 months old died of convulsions and thrush. I was in perfect health up to 14 months ago; at that time I felt severe pain coming on in the pit of my stomach, and found a difficulty in straightening myself; shortly after a lump came on my back, caused by a curvature of the spine, which has gradually got worse ever since; about 10 months ago I first noticed my face becoming swollen, the eyebrows appeared enlarged and overhanging; the whole skin of the face then began to get brown, and the skin thickened and lumpy, most of the eyelashes and eyebrows fell out, the hair has got very soft, short, and fine, the lobes of the ears in particular became enlarged and lumpy, the lumps being smooth and of irregular sizes. My hands became swollen and enlarged by a thickened and lumpy skin, they were of a livid colour and very soft, all the furrowed markings of the hands quite disappeared, and the nails broke off and split up longitudinally. The feet were swollen and enlarged the same as the hands, and soft with a disappearance of the furrows, the nails broke off and split up. My lips became large and thickened, the chin covered with small round hard lumps, smooth and unbroken on the surface. I had a sore throat, it soon went off, and has never been bad since; nothing was used to the throat. When the disease first came on, I came out all over small dark brown spots; they had no scabs on them, they

they were spots like such as are caused by a blow. The eyes became weak and watered much, and have continued to do so ever since. At present the lobes of the ears are enlarged—not uniformly, but with large irregularly rounded smooth lumps. The body, generally, is marked throughout with rounded undefined blotches of a light brown colour, and showing no indications at present, or for the last three months, of becoming scaly. He sleeps heavily; the nose bleeds under very slight irritation of any kind; the breathing is heavy, which appears caused by the Schneiderian membrane of the nose being thickened, causing obstruction. Since the disease became thoroughly developed he has noticed an unpleasant discharge from the nostril. The mucous membrane of the roof of the mouth is thickened and lumpy—especially the soft palate—but not indurated; the uvula, in particular, is so much affected as to give it quite an altered appearance, but on no point is there the slightest ulceration. There is no history of any symptoms resembling condylomata. His father states that it was about fourteen months ago that he first noticed any appearance of the disease; it was after he had been exposed for some days to much wet and cold, and had slept several nights in damp clothing. He noticed his face swelling, his eyes began to run, and brown spots came out all over his body; they were almost darker than they are now. His tongue is large, irregularly nodose, but not ulcerated.

C.D., *æt.* 26, a native of Windsor, admitted into infirmary 28th February, 1872. A drover of cattle; Roman Catholic religion; father and mother both living, aged—father, 62; mother, 45. His father and mother are natives of Windsor, on the Hawkesbury River. Has six brothers and sisters; two brothers dead—one brother was burnt to death at 5 years of age, and one died of low fever, 3 years of age. States that he is unmarried; at 19 years of age he was loose in his habits, and had frequent intercourse with women. When at this age he was affected with what he thought was chancery; these were white pimples round the corona of the glands of the penis. He at once placed himself under medical care, and under treatment he got quite well. No secondary symptoms of the disease showed itself—such as sore throat, or blotches over the skin, no sores about the anus, or pains in the bones of the legs or head. In May, 1870, he brought cattle to Sydney, and at that time was in perfect health; it was on his returning to the country that he noticed his face beginning to swell; at the same time the penis became so large that he could hardly thrust the skin back. Between the time he was in Sydney in April, till the time he noticed the swelling in May, he was exposed constantly, night and day, to wet weather—camping out every night. When he noticed the swelling in May, it had the appearance as if he was becoming bloated, and his face of a dusk-red colour; the skin of the face became hard, the eyebrows dropped off, the hair of the head became fine and very soft, the lobes of the ears became large and heavy, the eyes became bloodshot; he could scarcely breathe through his nose, but no discharge came from it; the lips became thick and stiff. Up to this time he had no sore throat or irritation; it is now ulcerated. This ulceration never gave him pain, and only came on after he was admitted into the infirmary (February). About the end of July he noticed brown spots come out all over his body; they have always remained as they now are—of an irregular round shape, undefined at the edges not raised, and showing no appearance of scales on the surface. About February the colour of his face changed somewhat; it had a livid blue colour, which has since gone off. He has never had any tenderness along the shins, or any lumps there, or on any other of his bones. He never had any sores or irritation about the anus. Up to about July, when the spots began to show out, his hands were quite natural; at that time they became, enlarged with a soft puffy swelling, the skin being soft the hair dropped off them, and also off his arms and legs, but did not fall from the head, chin, or pubes. The nails of the hands and feet became white and dead-looking, very brittle and ragged. The general surface of the hands were furrowed and cracked. The mucous membranes of the mouth and soft palate are thickened and lumpy, of a white-ashy colour in front of the uvula, running forward on the roof of the mouth.

[Extract from *New South Wales Medical Gazette* of September, 1874, pages 397-9.]

CASE 3 of LEPROSY.

Reported by J. C. Cox, Esq., M.D., Sydney, &c.

J.W., aged 32, native of Yorkshire, Protestant, states:—My father is still living, a healthy strong man; my mother died last year (aged 72), cause unknown; I came to this Colony in 1859; previous to that and from the time of leaving Yorkshire, I have been engaged as a sailor and have visited many foreign ports—such as China, East and West Indies, Mauritius, Penang, Calcutta; and have also sailed up the Red Sea in company with a Lascar crew; on arrival in this Colony, in 1859, I was examined and passed as a first-class life in a benefit society; I married in Sydney nine years ago, and had four children born to me, all of which are healthy and strong; in June, 1869, I was at work as a labourer, excavating for the building of the new Town Hall, on the site of the old cemetery; on the flat of the left foot which I used to the shovel a large blister rose, which on the following day I punctured, and afterwards returned to work; but my left leg became so swollen that I had to stop work altogether, and was obliged to give up work and place myself under the care of a medical man; on the second week after laying up I felt my tongue get sore; and up to this time I had no symptoms of constitutional fever, although my left leg became much more swollen and inflamed. The sore on the tongue has never since healed; this swollen condition of the leg remained so bad as to prevent my going to work for twelve months; twelve months after my tongue became sore I felt a severe pain throughout my whole body, more especially in the joints than in any other part; and at this time my legs and arms as far as the axillæ of the latter, and the face, but not the body, became covered with large, rounded, raised, solid, discoloured swellings, which were very irritable, and had the appearance of having been stained with walnuts; most of these swellings still remain as they originally existed; I have never seen any white scales formed on their surface; the feet hands and face were more particularly disfigured with these lumps; the nails of the fingers and toes split up almost to the quick, and became white, brittle, and almost crumbled away. At this time blisters would rapidly form on various parts of the limbs, which broke of their own accord, and from which exuded a dark watery fluid; shortly after the nodular swellings first came out my throat became stiff and felt sore; the lips enlarged and became thick and swollen as if stung by an insect; the eyelashes and eyebrows fell off and have never since grown; the hair of the head, the whiskers, and the hair on the body also were cast off; and what subsequently grew was soft, fine, and silky; the external ear became swollen and extremely enlarged and thickened; the lower lobe in particular was as large as a bantam's egg; the nose also was very swollen and nodular at the apex, and the alæ thickened, enlarged, and pendulous; a copious discharge
of

of thick matterly character came from the nose which continued for a year or two; much distress was caused by a difficulty of breathing through the nose; the skin of the scrotum was somewhat thickened and had a disposition to become scaly; no sores or excrescences were ever felt about the anus; the penis was in a normal state and the skin not nodulised; I positively assert that I never had any sores on the penis or suffered from gonorrhœal discharge; most of the medical gentlemen whom I have consulted, have asked me if I have ever suffered from syphilis.

This case first came under my observation while in charge of one of the medical wards in the Sydney Infirmary two or three years ago, and I have had him under my constant observation from that time. His general health had then become seriously impaired, but has since been greatly restored by careful nursing, good generous diet, and general attention to the *primâ via*. When first I saw him the lips were large, swollen, nodose, and raw; the ears had the same general character, the lower lobe being especially enlarged. The nose, eyebrows, and the skin of the forehead assumed the same general aspect, and gave to the surface generally a very marked and characteristic nodose, rough surface. These nodules were of a livid hue, and the skin, where it was not nodular, was of a bronze brown. The tongue had a deep ulcer at the apex, with thickened edges, and the rest of the organ had the appearance of being made up of rounded nodular masses. The roof of the mouth was markedly nodose, not ulcerated, but the nodules separated by deep furrows. The soft palate was intact, and showed no symptoms of having been ulcerated, but at the same time presented the same nodular, lumpy appearance, the nodules being of various sizes and separated by sulci. The beard was scanty, and what there was of it was peculiarly fine and silky. The dorsal skin of the hands was smooth, but enlarged with puffy, hard thickenings, the palmer skin being very much transversely furrowed. The fingers were red and tender at the apex, and the nails appeared as if crumbled away. The arms as far as the shoulders were blotched with large, rather raised, irregular, brown markings; some few were hard and enlarged. A few of these same characteristic dark raised markings were found on the back and shoulders. The elbows and wrists were more swollen than the other parts. The legs were more discoloured, swollen, and nodose than the arms, and very markedly enlarged about the knees and ankles. The feet were proportionately much more enlarged and more nodose than the hands, and the nails of the toes were split up, white and broken. There was very slight thickening of the integuments of the genital organs. The voice was quite weak; the articulation difficult.

The course of treatment pursued in this case was chiefly the use of arsenic, cod liver oil, and mineral acids, with vegetable infusions and free use of lemon-juice. With such treatment, strict attention to diet, and enforced regular habits, the patient is now enabled to carry on a laborious avocation and earn a good livelihood; and by constant use of astringent washes the ulcer on the tongue improves, though not yet healed.

[Extract from the *New South Wales Medical Gazette* of May, 1875, pages 203-5.]

CASES OF LEPROSY.

CONTRIBUTED BY JAMES C. COX, M.D.

Case No. 4 (with photograph).

W. A., labourer, native of Holland, was admitted into the Sydney Infirmary, Ward No. 1, March 28, 1868, under Dr. H. G. Alleyne.

This case is thus recorded by Dr. Schuctte, then resident medical officer:—

Patient, aged 54 years, has been a resident in this Colony forty-three years; is married, and has three children. He states that he once had syphilis, thirty-six years ago, but always enjoyed excellent health till two years ago, when he caught cold several times by being obliged frequently to lie out in the bush. For the last four months he has not felt at all well; at the end of this time his tongue became swollen, and his forehead was covered with blisters; he noticed his feet also swollen. For these symptoms he did not obtain any medical advice or treatment. At present he is suffering from the same symptoms, except that the blisters which formerly existed now show only elevated scars; so severe are they on the right hand that the little finger is contracted by one of them; ulcers formed where many of the blisters were, and some of them are not quite healed. The appetite is good, the tongue clean, but its tip shows an oblongate sulcus, which, he states, is the effects of a blister on it; there are several round ulcers on the roof of the mouth. The surface of his body is very irritable, so much so that his rest at night is much disturbed; he has a slight cough; bowels regular; urine normal, of a dark colour; pulse 70; hands, feet, and legs swollen.

July 1st.—This patient has not improved; the tubercles on the surface of the body are enlarging; the legs are thicker, and there are large hæmorrhagic spots about the feet and legs, which often bleed, and keep discharging for some time; the hair of the head and face had got thinner and finer; the nose bleeds frequently; the feet and legs are more swollen than they were, and walking causes much pain.

The course of treatment followed out in this case was the administration of the sixteenth of a grain (gr. 1/16) of the bichloride of mercury, three times a day, in solution; hot foot baths of a solution of hydrosulphite of potash, ʒi ad. ox. ʒi of water; gargles of bichlorate of soda and myrrh; Dover's powders occasionally at night. The bichloride was administered from 28th March to 6th May; subsequently a gargle of bichloride of mercury was used (gr. ij as ʒi) for a few days. On the 25th March he was given the following mixture:—R. Arsen. alb., gr. ʒ; pulv. pip. nig., ʒij, M.; divide in pil. xii. One pill to be taken after each meal. Discharged relieved.

Case No. V (with photograph), also recorded by Dr. Schuette:—M. K., *æt.* 41, drover, R.C., native of Campbelltown; admitted into No. 9 ward, under Dr. Renwick, 28th July, 1869. Complained of hoarseness, sore throat, and especially of a purple eruption of face, hands, and feet, also a small patch on knee and elbow. He states that he first saw the eruption on forehead about six or seven years ago; it has been gradually extending, in spite of medical treatment. The nails have fallen off the fingers, and the hands are stiff and useless. He had gonorrhœa ten years ago, but not chancre. The tongue is affected with the same eruption; purple, irregularly tuberculated in centre; appetite good; bowels regular; pulse 84; the eruption is not painful nor itchy. Discharged 8th October, 1869, somewhat improved.

Case

Case No. VI, also reported by Dr. Schuette:—

J.H., gardener, Petersham, native of Germany, protestant, was admitted into Sydney Infirmary, Ward 4, on August 18th, under Dr. Jones. Patient, aged 49, has been twenty years in the Colony, married, and father of two children; never had any syphilis, but always had good health. He had icterus once, many years ago. Three years ago became ill, with great weakness in both legs, and constant running from the eyes; his feet became swollen three weeks after; long bones of leg, and small bones of feet were very painful; he found a numbness of ring and little finger of both hands, which affected the other fingers for a short time only. By degrees the right eye got worse and worse, so that he almost lost his sight for ten months, the nose has been drawn to the right side of face; the bridge is very wide; stuff mixed with blood is discharged from right side of nose; smell is perfect. He has been under medical treatment, without much benefit; was unfit for labour for six months, from September to March, 1869; from then he worked up to last three weeks, when he was obliged to give up, being unable to see; complains of pain in the left side of the head, deep seated, most during night; pain round both ankles; a curious feeling, as if dead in both little fingers; the hands are always cold; the nails of all the fingers almost disappeared; skin of dark colour all over the body—thick on fingers, hands, face, and also the ears; for four weeks felt as if something was pressing on his throat, has difficulty in breathing and speaking; his voice is rough. On examination I find the uvula reduced to the small size of a pea, the whole pharynx covered with apparently round hard vegetations; appetite good, tongue clean, of sober habits, smoked much before admission, sleep disturbed with pain in head, bowels regular, urine normal, pulse 64.

N.B.—No portrait was taken of this case, and no record kept of treatment pursued.

1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT LABORATORY.

(ANNUAL REPORT OF THE WORKING OF FOR 1890.)

Ordered by the Legislative Assembly to be printed, 29 July, 1891.

The Medical Adviser to the Government to The Principal Under Secretary.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 5 May, 1891.
I have the honor to forward you herewith, for the information of the Colonial Secretary, a report by the Government Analyst on the working of the Analytical Branch of this Department for the year 1890.

I have, &c.,

F. NORTON MANNING,
Medical Adviser to the Government.

The Medical Adviser to the Government to The Government Analyst.

Board of Health Office, 127, Macquarie-street, Sydney, 3 April, 1891.
MEMO.—Mr. Hamlet is requested to be good enough to furnish as soon as possible a report on the working of the Government Laboratory for the year 1890.

F. NORTON MANNING,
Medical Adviser.

The Government Analyst to The Medical Adviser to the Government.

Sir, I have the honor to submit the following report on the working of the Government Laboratory for the year ending 31st December, 1890:—

The total number of analyses made during the year was,—

For the Medical and Health Departments	476
For the Inspector-General of Police	43
For the Collector of Customs	104
	633

All these samples were forwarded through the three departments named, but many of them originally came from the following branches of the Public Service:—

The Colonial Stores.	The Water and Sewerage Board.
*The Railway Department.	The Commissioners of Customs.
The Imperial Naval Depot.	The Public Education Department.
The Railway Construction Branch.	The Hospitals.
The Harbours and Rivers Branch.	Asylums for the Insane.
The Roads and Bridges Branch.	Asylums for the Destitute.
The Marine Board.	

The number of certificates, reports, memoranda, and minutes on various technical subjects were:—

Medical Adviser and Board of Health	406
Customs	115
Police	52
	573

During the year I have attended five inquests, given evidence in Criminal Courts on twenty-two occasions, attended Police Courts four times, Circuit Courts twice, and the District Court once.

* These ceased altogether in March, when the Commissioners appointed their own Analyst.

The rather larger proportion of samples received from the Health Department were sent in compliance with the requirements of the Dairies Supervision Act, a tabular statement of the results obtained being as follows:—

Date.	No. of samples.	Suburb.	Results.	Date.	No. of samples.	Suburb.	Results.
14 Jan.	1	Randwick	Passed.	15 July ...	2	Balmain.....	2 condemned.

1	Dundas	1				
7	Leichhardt	3	4	383	39	195	188
2	Summer Hill	2				

Reduced to percentages, it will therefore appear that the quality of waters used by dairymen in the suburbs, excluding the city supply, is:—

Waters declared fit for human consumption	Per cent.
Found to be unfit	50.9
	49.1

There were not so many samples of fermented and spirituous liquors received as in past years. A few sent in by Licensing Inspectors from various districts, and which were alleged to have been adulterated, were examined; but the results showed that no definite charge of adulteration could be maintained as the law now stands, since none of the noxious ingredients, enumerated in section 89 of the Licensing Act, could be found in any of the samples submitted for analysis. A

A case reported, near Murrurundi, of a publican, who supplied a man with liquor which produced burning pains in the throat and vomiting, was sent to me for analysis. Upon arrival, the quantity was found to be not more than a fluid drachm, and was utterly insufficient for analysis. An examination, however, was made, but without results confirmatory of the statements made by the complainant.

So far as my own observation goes, the real grounds for complaint as to the bad or adulterated liquors are that—

- (a) They are frequently made from illicit and imperfectly rectified spirit ; flavouring and colouring matters being added ; or
- (b) They are artificially-made drinks, and not in any sense genuine ; or
- (c) Sometimes they are to be found to have been good liquors mixed with common cheap spirit, worth about 2s. a gallon in Sydney, the process being known as “blending.”

In a few instances artificial colouring matters derived from aniline, or the other allied coal-tar dyes, have been found in liquors enjoying the names of rum, port wine, and brandy, but the tinctorial power of such dyes is so great that the small quantity present leaves it an open question as to whether such colouring matters are injurious to health.

In France there is to be shortly legislation on this particular phase of adulteration, and in the proposed Health Bill, section 133, sub-section VI, there is a clause inserted to meet such cases.

The articles mentioned in the Licensing Act are very rarely, if ever, used now-a-days, with the exception, however, of tobacco, which is still sometimes used to flavour rum. But the proportion added is so small that the minute traces that may be found in an ordinary pint sample is insufficient evidence to swear by in the witness-box.

Regular monthly analyses have been made of the water supplied to the City of Sydney, the samples being collected from

The Prospect Reservoir,
The Basin, at the head of the canal,
Crown-street Reservoir, and
A fountain in Allison Road, Randwick.

Quarterly analyses have been made of the effluents from the Sewage Farm at Botany, for the purpose of gauging the efficiency and working of the filtering beds.

Special reports have been returned on the following subjects:—

- On the St. Bede disinfectant.
- On canned fish and fish-poisoning.
- On the composition of shot-metal found imbedded in a human jawbone in a case of supposed murder.
- On the Chamberland filter.
- On Battle's and Buttle's vermin-killer.
- On the composition of the concrete used in the construction of the piers of a bridge subject to the action of sea-water.
- Estimate for erection and fitting up of a chemical laboratory for the Department of Agriculture. (For the Hon. the Minister for Mines and Agriculture.)
- On the absorbent powers of soils, with a view to their suitability for sewage irrigation.
- On the lactometer used by the Dairy Commissioners in the State of New York, and on lactometers generally.
- On Black Whale Oil, and other oils entered at the Custom House as such, jointly with Dr. Helms, at the request of the Commissioners of Customs.

The new additions of instruments, appliances, and apparatus made during the year comprised:—

1. A new microscope, with immersion lenses, and Abbé condenser, by Reichert.
2. One oleo-refractometer, by Dubosq.
3. A set of standard thermometers, of normal Jena glass, by Heintz, of Stützerbach.
4. Supply of new platinum dishes, from Johnson and Matthey.
5. Stock of porcelain and glassware.
6. Supply of ether, alcohol, and chemicals used in analysis.
7. Sundry articles, from the Stores Department.
8. Various books added to the library, including Roscoe and Schorlemmer's Treatise on Chemistry, Dupuy on Alkaloids, and the Journal of the American Chemical Society.

During the summer months a difficulty is always found in providing and maintaining freezing mixtures, in the various operations requiring reduced temperatures for their proper performance. It would be very desirable to have a supply of ice delivered at the laboratory, say five days a week, during the months of November, December, January, and February.

In conclusion, it gives me much pleasure in saying that Mr. Doherty has rendered me valuable assistance in the work done during the year, especially so with regard to the increased number of water samples, which entailed work done beyond the usual hours, in order to have the results ready in time for the Board meetings.

I have, &c.,
WILLIAM M. HAMLET, F.I.C., F.C.S.,
Government Analyst.

1891-2.

NEW SOUTH WALES.

GOVERNMENT LABORATORY.

(REPORT FOR 1891.)

Presented to Parliament by Command.

The Medical Adviser to the Government to The Principal Under Secretary.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 29 February, 1892.

I have the honor to forward you herewith, for the information of the Colonial Secretary, a report by the Government Analyst on the working of the Analytical Branch of this Department for the year 1891.

I have, &c.,

F. NORTON MANNING,
Medical Adviser to the Government.

The Government Analyst to The Medical Adviser to the Government.

Sir, Government Laboratory, Sydney, 16 February, 1892.

I have the honor to submit the following Report on the working of the Government Laboratory for the year ending 31st December, 1891:—

Samples submitted for analysis.

The total number of analyses and reports made during the year was:—

For the Medical and Health Department	406
For the Inspector-General of Police	106
For the Collector of Customs	68
Total	580

Although these samples were forwarded through the three departments mentioned, yet many were received from various branches of the Public Service, including the Commissioners of Customs, the Imperial Naval Depot, the Water and Sewerage Board, the Railway Construction Branch, various Coroners and Magistrates, the Hospitals, and Asylums.

Waters from dairy premises.

One hundred and eighty-four samples of water were received under directions from the Board of Health from milk vendors and dairymen in Sydney and the suburbs, including Redfern, Waverley, Granville, Burwood, Botany, Five Dock, North Willoughby, Enfield, Hunter's Hill, Ashfield, St. Peters, North Sydney, Hurstville, Rockdale, Marrickville, Kogarah, Petersham, Waterloo, Alexandria, Drummoyne, Leichhardt, and Newtown.

The results of the analyses of these waters showed that one half of the samples received were unfit for human consumption.

City Water Supply.

The water supplied to the inhabitants of Sydney was regularly examined every month, and the results reported in duplicate. The total solid matter contained in the water, dissolved naturally by the water in its contact with the earth and the surrounding air, expressed in grains per gallon, was as follows:—

Month.	Crown-street Reservoir.	Fountain in Allison Road, Randwick.	Prospect Reservoir, near the inlet.	Basin at the Head of the Canal.
January	6.16	7.00	6.86	6.86
February	6.44	6.60	6.16	6.86
March	7.28	7.28	6.30	7.17
April	6.02	6.30	6.44	7.00
May	6.30	5.83	6.02	6.30
June	6.86	7.00	7.00	6.30
July	6.86	6.58	6.16	6.58
August	6.16	6.44	6.30	6.30
September	10.24	6.70	7.00	6.86
October	6.30	6.16	6.30	6.30
November	6.02	6.16	6.07	6.30
December	6.58	6.18	6.30	6.38
Mean	6.76	6.51	6.40	6.60

The alkaline chlorides, chiefly present as common salt, were found to be as follows, the results given are grains of chlorine per imperial gallon:—

Month.	Crown-street Reservoir.	Fountain in Allison Road, Randwick.	Prospect Reservoir, near the inlet.	Basin at the Head of the Canal.
January	2.5	2.5	2.5	2.5
February	2.5	2.5	2.5	2.5

It will be interesting to compare the mean annual composition of the Sydney water supply with the composition of rain collected in Sydney, and with rain collected in one of the suburbs.

The following analyses show the precise extent of the impurity in the Sydney water, and its deflection from the purest standard obtainable in practice, namely carefully collected rain water:—

	Expressed in Grains per Gallon.				Expressed in Parts per Million.			
	Total Solid Residue, dried at 220°.	Chlorine as Chlorides.	Nitrogen as Nitrates and Nitrites.	Phosphates from animal impurity.	Free Ammonia.	Albuminoid Ammonia.	Oxygen absorbed in 15 min.	Oxygen absorbed in 3 hours.
Sydney Water Supply—mean of twelve monthly analyses	6·63	2·4	None.	None.	·01	·07	·29	·62
Carefully collected rain water from Hunter's Hill	2·24	0·90	None.	None.	None.	·02	·02	·10
Rain collected in Macquarie-street	1·12	0·42	Trace.	None.	·05	·01	·43	·50

These results show that in composition and quality the Sydney water supply will bear favourable comparison with the water supplied to the chief cities of the world.

It may be described as an upland surface water of great purity, but containing very little lime salts in solution, its source being the natural flow of water from a large area of sandstone rocks.

During the year a controversy arose in the newspapers regarding the dietetic value of lime in water, and I made special analyses of large quantities of the water, and found the proportion of lime in the Sydney water to 0·01 gramme per litre, or 7-10ths of a grain per imperial gallon.

Discolouration of the harbour.

A rather alarming phenomenon occurred in the month of March last, when the waters of Sydney harbour presented an extraordinary blood-red colour. This was at first thought to be caused by the blood from the City Abattoirs being allowed to run into the harbour. The Medical Adviser having requested me to examine and report upon the subject, I accordingly visited all the places where the discolouration had been observed. I examined the water both chemically and microscopically, and found that the red tint in the water was due to countless myriads of small organisms which were similar to *Euglena sanguinea*, Ehr.

Later on, the organism was carefully examined by Mr. Thomas Whitelegge, of the Australian Museum, whose monograph on the subject may be found in the Records of the Australian Museum, vol. I, p. 179. (No. 9, October, 1891.)

Intoxicating Liquors.

A number of alcoholic liquors have been examined during the year, including beer, wine, rum, brandy, gin, and whisky. The percentage of alcohol was found to average as follows:—

Alcoholic strength of liquors.

	Percentage of absolute alcohol.	Percentage of proof spirit.
Rum	44·76	91·9
Whisky	41·00	84·85
Gin	40·64	84·21
Brandy (pale)	41·13	85·08
Brandy (dark)	42·04	86·84
Schnapps	40·57	84·04
Colonial ale	5·12	11·21
English ale	6·20	13·70
Wines (mostly fortified).....	12 to 15	26 to 34

Adulteration

Adulteration of liquors.

The instances of drugged and adulterated* liquor are very rare, the former extremely so. With cheap alcohol there is hardly any need of adulterating liquor. Nearly the whole of the liquor consumed by the public is made up from white spirit; so that anyone may make gin, brandy, whisky, and rum at pleasure, by simply taking the required quantities of white spirit, burnt sugar, and the flavouring essence that can be obtained in the trade. This method of concocting the ordinary publican's liquor is euphemistically called "the art of blending and reducing," the evidence for which is the existence of such books as "Loftus's new mixing and reducing book for the use of publicans and spirit dealers."

In one of the townships in the country the police surprised a publican preparing his liquors—caught him, indeed, red-handed in the act. His apparatus comprised the filter composed of flannel and blotting-paper, usual for this purpose, together with sundry tubs, casks, jugs, bottles, and other utensils. Certain of the bottles seized were labelled, "Ingredients used for colouring rum, procured from a stranger." "Ingredients to be used to put on a good bead on rum, procured from a stranger."

Liquor, "procured from a stranger," means an illicit spirit that has arrived secretly, and been placed into the publican's cellar without either document or invoice of any kind to tell tales of its origin.

Analysis revealed that the ingredients for colouring the rum was simply burnt sugar, and the stuff intended "to put a good bead on" consisted of burnt sugar and oil of vitriol—20 grains of the latter per oz.

Another case of adulteration came from Forbes, in this a man asked a publican for a glass of beer, and was served with a mixture which caused a serious illness soon after. Upon analysis the beer was discovered to contain 0.34 grain of strychnine per pint of the beer.

These cases are, however, rare; the adulteration being generally confined to water, burnt sugar, and flavouring matters, such as chillies, liquorice, and preserved prunes. In most cases those who complain of bad liquor are those persons who may be described as drunkards or tipplers, who attribute the known ill effects of drink to adulterated liquor, while the real cause of the mischief is obstinately overlooked, namely, the alcohol itself. Such a case recently came under my notice, where a man drank thirteen glasses of rum, and died soon after from the effects of the liquor. It was alleged by his friends that it was the bad quality of the liquor; but analysis showed that there was nothing unusual in the rum, some of which was sent to me for analysis. The fact was that the alcohol itself was a sufficient cause to account for the man's death. Assuming the rum to be of the average strength (44.76 per cent.), and reckoning the glass at 1½ fluid ounces, 13 glasses would contain 7½ oz. of absolute alcohol. Now the fatal dose of alcohol being from 5 to 6 oz., taken in about thirty minutes, the deceased must have had more than a fatal dose.†

Chloroform.

Samples of chloroform used for producing anæsthesia were examined, and were found to be pure. In one sample an objectionable form of luting was employed in securing the stoppers. This was pointed out in a special report on the subject, and went to explain the cause of certain effects produced by the chloroform.

Tea.

This important article of consumption acquired an unusual share of public attention during the year, a number of samples having been sent in for analysis from the Collector of Customs and from other sources. The results showed the teas to be of very inferior quality, but not unfit for human consumption.

Colouring matter in food and drink.

Among some of the samples of wines and rums examined were found certain kinds of aniline dyes (methylaniline). Until the introduction of the long-expected Public Health Bill there is no possibility of obtaining a conviction in these cases.

In this connection, the Council of Hygiene in Paris have lately issued regulations respecting the colouring matters for articles of food and drink, the following pigments being prohibited in all articles of food and drink:—Copper, lead, arsenic, and mercurial compounds of every kind; also baryta chromate, yellow ultramarine, gamboge, and alkanet. The following may not be used in ordinary articles of food:—Coal-tar colours, such as fuchsine, Lyons blue, flavaniline, methylin blue, phthaleine, and their derivatives; eosine, erythrosine, naphthol yellow, Victoria yellow, diazoic compounds, tropecolines, scyloidines. But for colouring candies, liqueurs, ices, &c., the following may be tolerated in very small proportions:—Pinks: eosine, erythrosine, Bengal rose, phloxin, Bordeaux red, ponceau, and fuchsine, prepared without arsenic (Coupier's process). Yellows: sulpho-conjugated derivatives of naphthol. Blues: Lyons blue, light blue, Coupier's blue, all triphenyl rosaniline, or diphenylamide derivatives. Greens: All mixtures of the yellows and blues given above; also malachite green (hydrochloric ether of tetramethyldiamidotriphenylcarbinol). Purples: Paris violet or methylaniline. No pigments of the first group may be used for colouring any boxes, wrappers, or cases which are to come in contact with articles of food. Tinfoil used for wrapping articles of food may not contain more than one-half of 1 per cent. of lead, or more than 1 per 10,000 of arsenic. The metal used for tinning copper and other utensils must be of similar purity. Pewter implements, such as pots or measures employed in connection with food articles, may not contain more than 10 per cent. of lead and 1 per 10,000 of arsenic.

Paints and Colours.

During the year a number of paints and paint materials, such as are used for public works buildings and bridges, have been examined, and a large proportion were found to be adulterated with sand, whiting, gypsum, and heavy-spar, varying in extent from 20 to 80 per cent. This is a trade practice which fully accounts for the rapid wear and the most unsatisfactory nature of much of the paint work seen all over the country.

Expert

* The definition of adulterated liquor is that implied in section 89 of the Licensing Act (Amended Act, 1883.)

† *Note.*—The fatal dose is described as being from 2 to 6 oz., varying with the individual. But in addition to the ordinary alcohol there was one-tenth of 1 per cent. of the higher alcohols (the so-called fusel oil), which, in the 16½ oz. of rum taken, would amount to about 8 grains of fusel oil, which would tend to accelerate the poisonous action of such a quantity of rum.

Expert evidence.

During the year 1891 my attendance has been required in several criminal cases at the different Circuit Courts. This has necessitated my travelling some 3,786 miles, not including my attendance at the Sydney and suburban Courts.

Sewage effluents.

Periodical analyses have been made of the effluents from the filter-beds at the Sewage Farm at Botany.

The working of the system fluctuates with the change in the seasons and other atmospheric conditions, but taken all the year through, the results of these analyses show that the offensive nature of the sewage is removed by aeration and oxidation, whereby the effluents are sufficiently purified so as to allow them to pass away into rivers or water-courses without causing a nuisance.

Crematory refuse.

The attention of municipal authorities having been lately directed towards the disposal of garbage, it may be of interest to note the degree of carbonisation or destruction practically obtained in use. A sample of the incinerated residue from a crematory works at Katoomba was analysed and found to contain :—

8 per cent. of carbonised organic matter.
 $2\frac{1}{2}$ „ „ phosphates of lime.
 Traces of nitrogenous matter.
 87 per cent. of sand, clay, and other insoluble matter.

Miscellaneous Reports.

An investigation of the chemical aspects of an explosion of ammonia at the Fresh Food and Ice Company's works was undertaken and evidence given at the Coroner's inquest held immediately after the accident. Quite recently a similar explosion of an ammonia cylinder happened at Cardiff (Wales), the particulars of which may be gathered from the following account in an English paper :—

“ A Board of Trade inquiry has been held at Cardiff into the circumstances attending the explosion of a cylinder containing anhydrous ammonia on board the s.s. ‘Highland Chief,’ by which a cattleman was suffocated. The ‘Highland Chief’ left Ensalada, in the River Plate, on 30th September, for Liverpool. In the cargo were twenty-three cases of ammonia, which is now largely employed for refrigerating purposes. On 14th October one of the cases exploded, and the fumes of the ammonia killed one of the cattlemen. At the inquiry it transpired that the cases, or cylinders, were made by Messrs. A. and J. Stuart, of Glasgow; that they were filled by Mr. W. Metcalfe, of Church, in Lancashire, and supplied to Messrs. Page & Co., Liverpool. The Court considered that in the case under inquiry the cylinders in which the ammonia was contained were suitable in form, but as the exploded case contained a flaw that was probably visible at the time of filling it, the Court was of opinion that there was neglect of the necessary precaution in a preliminary examination of the cases. The Court was of opinion that, having regard to the dangerous properties of anhydrous ammonia, it should be stowed in an isolated part of the ship, remote from the living-quarters, and where it was least liable to be affected by changes of temperature, and was further of opinion that old receptacles for anhydrous ammonia should, before use, be subjected to severe tests as to bursting-pressure, and be stamped accordingly.

Analyses were also made of the lime juice in use for the Australian Auxiliary Squadron; of various disinfectants; of the opium used by the Chinese; of pills used for criminal purposes (three cases): of “preservitas” (a new trade name for boric acid), a number of soaps, varnishes, oils, medicines, and methylated spirits.

I have, &c.,

(SECOND SESSION.)

**MRS. CUNYNGHAME, LATE SUPERINTENDENT OF MACQUARIE-STREET
ASYLUM FOR INFIRM AND DESTITUTE, PARRAMATTA.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 25th August, 1891, "*with power to send for persons and papers, to inquire into and report upon the removal of Mrs. Cunynghame from the position of Superintendent of the Macquarie-street Asylum for Infirm and Destitute, Parramatta,*"—and to whom was referred on the same day "*the Progress Report from the Select Committee of Session 1889, and the Report from the Select Committee of Session 1890, on the same subject,*"—have agreed to the following Report :—

Your Committee having carefully considered the Reports and Evidence referred to them, find as follows :—

1. With regard to the charges of dishonesty and general untruthfulness made against Mrs. Cunynghame, your Committee are of opinion that they are not sustained.
2. Your Committee find that many of the irregularities referred to in the evidence were in a large measure due to the imperfect and exceedingly lax system that obtained for many years before Mr. Maxted's appointment, rather than to any perversity of disposition on the part of Mrs. Cunynghame.

And would, therefore, ask your Honorable House and the Government to give due consideration to her long past services, which your Committee are of opinion should merit some recognition.

JAMES P. HOWE,
Chairman.

No. 2 Committee Room,
Sydney, 16 September, 1891.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 1 SEPTEMBER, 1891.

MEMBERS PRESENT:—

Mr. Dale,		Mr. Howe,
Mr. Nobbs,		Mr. O'Sullivan.

Mr. Howe called to the Chair.
 Entry from Votes and Proceedings appointing the Committee, and referring the Progress Report from the Select Committee of Session 1889, and the Report from the Select Committee of Session 1890, to the Committee, *read* by the Clerk.

Printed copies of the Reports *referred* before the Committee.

[Adjourned till Tuesday, 15 September, at 3 o'clock.]

TUESDAY, 15 SEPTEMBER, 1891.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CALLAN PARK ASYLUM.

(CORRESPONDENCE RELATING TO THE APPOINTMENT OF A COMMITTEE TO INQUIRE INTO THE ADMINISTRATION OF THE.)

Ordered by the Legislative Assembly to be printed, 23 September, 1891.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 2nd September, 1891, That there be laid upon the Table of this House,—

“Copies of all the recent correspondence relating to the appointment of a
“Committee to inquire into the administration of the Callan Park Asylum.”

(*Mr. J. D. FitzGerald.*)

The Inspector-General of the Insane, Gladesville, to The Principal Under Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 13 May, 1891.

I do myself the honor to draw the attention of the Colonial Secretary to an article on the Hospital for the Insane, at Callan Park, and to point out that a similar article is promised in the next issue of the weekly paper in which this appeared.

Although the information on which this article was written was furnished by discharged attendants, and contains very evident exaggerations, the charges made are so serious that they should be fully investigated, and I beg to recommend that the official visitors, Sir Alfred Roberts, Dr. J. C. Cox, and Mr. Nugent Robertson, Barrister-at-law, may be requested to undertake this duty.

The inquiry will probably occupy some days, and the assistance of a shorthand-writer will probably be necessary.

I have, &c.,
F. NORTON MANNING.

Approved.—H.P., 13/5/91.

The Principal Under Secretary to The Inspector-General of the Insane, Gladesville.

Sir, Colonial Secretary's Office, Sydney, 14 May, 1891.

In acknowledging the receipt of your letter of the 13th instant, I am directed to state that in accordance with your recommendation the Colonial Secretary has been pleased to appoint a Board, consisting of Sir Alfred Roberts, Knt., Dr. J. C. Cox, and Mr. Nugent Robertson, to hold a full investigation into certain allegations that appeared in a recent issue of a weekly newspaper seriously reflecting upon the management of the Hospital for the Insane, Callan Park.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

(SECOND SESSION.)

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND IN CONNECTION WITH THE EXTENSION OF CALLAN PARK ASYLUM, PARISH OF PETERSHAM, COUNTY OF CUMBERLAND.)

Presented to Parliament pursuant, to Act 51 Vic. No. 37.

NOTIFICATION OF RESUMPTION OF LAND UNDER THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable VICTOR ALBERT
GEORGE, EARL OF JERSEY, a Member
(L.S.) } of Her Majesty's Most Honourable
Privy Council, Knight Grand Cross
of the Most Distinguished Order of
Saint Michael and Saint George,
JERSEY, } Governor and Commander-in-Chief of
Governor. } the Colony of New South Wales and
its Dependencies.

WHEREAS I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, have, with the advice of the Executive Council, directed that a certain public work, the estimated cost of which does not exceed twenty thousand pounds, that is to say, the Reclamation of the Land below high-water-mark at Callan Park Bay, extending down to the proposed new limit line for reclamations, as an extension of Callan Park Asylum, and for the formation of a public road forty feet wide between the western end of Callan-street and the western end of Byrnes-street, for the benefit of the adjoining owners, as shown upon the plan of Callan Park Bay now deposited in the Office of the Minister for Public Works, and for which work public funds are lawfully available, shall be carried out under the provisions of the "Public Works Act of 1888," as an authorised work, by the Minister for Public Works as Constructing Authority, and that the land described in the Schedule hereto, which is in my opinion required for carrying out the said work, shall be acquired by taking the same under the "Lands for Public Purposes Acquisition Act," as adopted by the "Public Works Act of 1888": Now, therefore, I, the said Governor, with the advice aforesaid, in pursuance of the "Public Works Act of 1888," do declare by this notification, to be published in the Government Gazette, and in one or more newspapers published or circulating in the Metropolitan Police District wherein the said land is situated, that the Crown Lands comprised within the descriptions and boundaries set forth in the First and Second Parts of the Schedule hereto have been appropriated, and the private properties within such boundaries and comprised in such descriptions (the supposed owners whereof are set forth in the Third Part of the Schedule) have been resumed, for the public purposes aforesaid, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority as a corporation sole on behalf of Her Majesty, for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever,

and to the further intent that the legal estate therein, together with all powers incident thereto or conferred by the last-mentioned Act, shall be vested in such Constructing Authority as a Trustee for the public purposes following, that is to say, as to the land in the First Part of the Schedule for the purpose of such public road as aforesaid, and as to the land in the Second Part of the Schedule for the purpose of an extension of the Callan Park Asylum, pursuant to the "Public Works Act of 1888." And I declare that the following is the Schedule of land hereinbefore referred to:—

SCHEDULE.

FIRST PART.

(Site of proposed road 40 feet wide.)

All that piece or parcel of land containing 2 roods 27½ perches, situate at West Balmain, parish of Petersham, and county of Cumberland: Commencing on the south-eastern side of Byrnes-street, at a point in the north-western boundary of allotment No. 17 (of Bobart & Jung's subdivision of allotment No. 6, section 45, of the Balmain Estate), distant 75 feet from its northernmost corner; and bounded thence on part of the north-east and part of the north-west by the north-eastern and north-western sides of the proposed road, being lines bearing as follow:—First, by a line parallel to and rectangularly distant 75 feet from the north-eastern boundaries of the said allotment No. 17 and of allotments Nos. 18 and 19 of the said subdivision, and its prolongation bearing south-easterly in all a distance of 94 feet; thence again by a line bearing south-easterly 85 feet to a point on the north-western side of Cove-street, and in the south-eastern boundary of allotment No. 19 (of the subdivision of allotment No. 5, section 45, of the Balmain Estate, shown upon deposited plan No. 1,011, in the Land Titles Office, Sydney), distant 2 feet from its southernmost corner; thence by a line bearing north-easterly 119 feet along the south-eastern end of Cove-street to a point on the south-eastern side of that street, and in the north-western boundary of allotment No. 32 of the last-mentioned subdivision distant 3 feet north-easterly from its westernmost corner; again by a line bearing south-easterly 186 feet to a point on the north-western side of Toelle-street, and in the south-eastern side of allotment No. 25 (of a subdivision of allotment No. 4 of section No. 45 of the Balmain Estate, shown upon deposited plan No. 959 in the Land Titles Office, Sydney), distant 4 feet and 5 inches from its southernmost corner; again by a line bearing south-easterly 44 feet along the south-western end of Toelle-street to a point on the south-eastern side of that street, and in the north-western boundary of allotment No. 24 of the last-mentioned subdivision distant 7 feet from its westernmost corner; again by a line bearing south-easterly 108 feet to a point in the south-eastern boundary of the last-mentioned allotment

distant 2 feet and 6 inches from its southernmost corner; again by a line bearing south-easterly 84 feet to a point on the north-western side of Callan-street, and in the south-eastern boundary of allotment No. 59 of the Springside Estate distant 17 feet from its southernmost corner; thence on part of the south-east by that side of that street bearing south-westerly 17 feet to the intersection of the north-western side of Callan-street with the boundary fence of Callan Park; and thence on the remainder of the north-east by that fence bearing south-easterly 31 feet to its intersection with the south-eastern side of Callan-street; and thence on the remainder of the south-east by the prolongation south-westerly of that side of that street 18 feet to the south-western corner of the said proposed road; thence on the south-west and south-east by the south-western and south-eastern sides of the said proposed road 40 feet wide, being lines bearing north-westerly 112 feet, 140 feet, 169 feet, south-westerly 107 feet, north-westerly 109 feet and 112 feet, in all 749 feet, generally parallel to the north-eastern and north-western sides of the aforesaid proposed road, to a point in the prolongation south-westerly of the south-eastern side of Byrnes-street and distant thereon 40 feet from the point of commencement; and thence on the north-west by that prolongation and that side of that street bearing north-easterly 40 feet to that point. The names of the supposed owners of the private properties comprised in the above description are set forth in the Third Part of this Schedule.

SECOND PART.

(Extension of Callan Park.)

All that piece or parcel of land situate at Long Cove, Callan Park, Leichhardt, in the county of Cumberland, containing 5 acres and $11\frac{1}{4}$ perches, proposed to be reclaimed from the sea: Commencing on the high-water mark of Long Cove, Callan Park, at a joint bearing south 50 degrees west 4 feet from Trigonometrical Station No. 573; and bounded thence on part of the north-west by a line bearing north 75 degrees east 60 feet to the proposed new limit line of reclamations; thence on part of the north-east by the said limit line bearing south 41 degrees east 213 feet; thence again by the aforesaid limit line bearing south-easterly, being the quadrant of a circle whose radius is 120

feet; thence again on the north-west by the aforesaid limit line bearing north 49 degrees east 331 feet to a point on the south-western side of the proposed road 40 feet wide (connecting the western end of Callan-street with the western end of Byrnes-street), and distant thereon 65 feet from the north-western corner of the said proposed road; thence on the north-east by the several lines composing part of the said south-western side of the aforesaid proposed road, as described in the First Part of this Schedule, bearing south-easterly 47 feet, 109 feet, north-easterly 107 feet, south-easterly 169 feet and 127 feet, in all 559 feet, to the high-water mark of Long Cove; and thence on the south-east, the south, and the south-west by that high-water mark bearing south-westerly, westerly, and north-westerly, to the point of commencement.

THIRD PART.

Names of supposed owners of allotments, parts of which are resumed to form part of site of proposed road mentioned in First Part of this Schedule:—

No. of Allotment.	Name of supposed owner.	Name of subdivision.
17	John Daniels	Bobart and Jung's subdivision of allotment No. 6, section 45, Balmain Estate.
18	E. Gallagher	
19	L. T. Jung	Subdivision of allotment No. 5, section 45, Balmain Estate.
19	L. T. Jung	
32	Fredk. Hoffman ...	Subdivision of allotment No. 4, section 45, Balmain Estate.
25	Thomas Munkert..	
24	Catherine Toelle...	Springside Estate.
59	Mary Shepherd	

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of October, in the year of our Lord one thousand eight hundred and ninety-one, and in the fifty-fifth year of Her Majesty's Reign.

By His Excellency's Command,
J. H. YOUNG.

GOD SAVE THE QUEEN!

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CHILDREN IN THE CHARITABLE INSTITUTIONS OF
THE COLONY.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 9 March, 1892.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 9th February, 1892, That there be laid upon the Table of this House,—

“ A Return, showing the number of children at present in the Charitable Institutions of the Colony of coloured foreign extraction, denoting the nationality of each, stating if the parents are living, and, if so, their calling or mode of obtaining a living, and stating in how many cases any contribution is made by the parents, also setting forth the amount contributed in each case.”

(*Mr. Bavister.*)

THERE are 28 children under the control of this Department born of Chinese fathers and European mothers. The following are the particulars:—

Parents dead	12
Parents contributing	2
Parents unknown	6
Parents in gaol	1
Father unknown (illegitimate)	3
Children supporting themselves (apprenticed), fathers unknown	4
								—
								28

Five of these children have been adopted, without cost to the State, by Chinese merchants, and are now at Hong Kong College, by consent of the S.C.R. Board, for the purpose of being educated to take part in the business of their foster parents.

South Sea Natives.—4.

Parents dead	2
Parents unknown	1
Parents deserted	1
								—
								4

There are thus altogether 32 children at present under the control of the Government Charitable Institutions of this Colony.

	Name of Parent.	Amount contributed.
Ang Kee	...	£5 0 0
Ah Tye	...	6 8 0

J. NORTON MANNING.
Inspector-General.

1891-2.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MAINTENANCE OF SICK PAUPERS.

(REPORT ON VOTE FOR THE YEAR 1891.)

Ordered by the Legislative Assembly to be printed, 31 March, 1892.

The Medical Adviser to the Government to The Colonial Secretary.

Sir,

Sydney, 31 March, 1892.

I do myself the honor to submit herewith a report on the vote for the maintenance and treatment of the sick poor for the year 1891, together with certain statistics in continuation of those given in previous reports, and, in addition, returns showing the nationalities, ages, occupations, and length of residence in New South Wales of all the persons who have been admitted to hospitals and asylums during the year from the Medical Adviser's Office and through the Hospital Admission Depôt.

This depôt has been continued at the top of King-street, and has been under the management of Dr. Paton, the Government Medical Officer for Sydney, who has been charged with the duty of assigning the cases to the different hospitals and asylums, in accordance with the nature, severity, and special character of the ailments from which the patients were suffering, and the accommodation available at the various institutions.

Preliminary inquiries have been made through officers, under Dr. Paton's direction, as to the pecuniary necessities of the applicants and their fitness in this respect for relief at the hands of the Government, and various statistics have, at the same time, been collected.

The following return shows the number of applicants for hospital treatment during the year, together with the manner in which they were dealt with:—

HOSPITAL ADMISSION DEPÔT, 1891.

TABLE showing how the Applications for Hospital treatment were dealt with.

Nature of Order issued and number refused.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
Coast Hospital	138	104	89	148	127	109	104	124	113	187	162	133	1,538
Prince Alfred Hospital.....	32	53	35	38	28	32	50	49	41	42	72	48	520
Sydney Hospital	73	64	70	60	53	56	49	59	51	58	101	44	738
Moorecliff Ophthalmic Hospital	24	12	15	13	13	6	14	19	18	14	15	8	171
Carrington Convalescent Hospital	3	1	7	2	3	11	6	33
Asylums for Infirm and Destitute.....	184	147	122	126	128	84	102	106	132	170	109	145	1,555
Out-door Hospital treatment..	78	90	79	52	70	74	63	72	94	103	97	89	961
Trusses	3	2	2	7	...	7	3	4	6	7	3	2	46
Refused Orders	50	41	53	45	24	17	39	21	34	20	21	33	398
Total	582	513	465	489	443	388	425	461	491	604	591	508	5,960

It should be pointed out in the first place that the total number of applicants—5,960—was 475 more than during the previous year, and 1,207 more than during the year 1889. If the number of applicants continue to increase at the rate of 600 a year some further hospital and asylum accommodation will become necessary as well as a considerable increase of the vote for their maintenance.

Of the 5,960 applicants—1,538 received orders for the Coast, 520 for the Prince Alfred, 738 for the Sydney, 171 for Moorecliff, and 33 for the Carrington Convalescent Hospital; whilst 1,555 were recommended for admission to the Asylum for the Infirm and Destitute, 961 received orders for out-door treatment, 46 orders for trusses, and 398 were refused relief not being fit subjects for aid from Votes granted by Parliament.

The numbers in excess of those for last year were provided for mainly at the Coast Hospital which received 1,538 patients as against 1,330 in the previous year, and the Government Asylums for which 1,555 recommendations were issued as against 1,137 in 1890.

In addition to the patients dealt with at the Hospital Admission Dépôt, 586 others were admitted under Government orders to the Metropolitan and Coast Hospitals, and paid for in the former institutions at the usual maintenance rate, these include :—

- 1st. Patients found by the police in a critical condition and taken direct to hospital.
- 2nd. Cases of severe typhoid and other fevers reported by medical practitioners.
- 3rd. Urgent cases of disease specially reported at the Medical Adviser's Office.

The following return shows the number of these cases admitted to each Hospital :—

ORDERS issued for the Admission of special and urgent cases, and cases taken to the Hospital by Police, or transferred from Government Institutions for special treatment.

Issued for	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
Coast Hospital	27	16	16	13	27	11	21	14	12	21	23	17	218
Prince Alfred Hospital.....	16	14	19	23	16	17	15	14	18	18	12	13	195
Sydney Hospital	13	17	19	11	13	7	7	7	13	11	13	15	146
Moorecliff Ophthalmic Hospital	...	3	2	4	2	4	2	1	1	5	...	3	27
	56	50	56	51	58	39	45	36	44	55	48	48	586

Return No. 3 gives the total of all applications during the year 1891 for Hospital treatment at the Government expense.

TABLE 3.

Carrington Centennial Hospital.			Coast Hospital.			Prince Alfred Hospital.			Sydney Hospital.			Moorecliff Ophthalmic Hospital.			Asylums.			Out-door treatment.			Trusses.			Refused.			Total.		
M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.
16	17	33	1,298	458	1,756	458	262	715	557	327	884	130	68	198	1,254	301	1,555	723	238	961	39	7	46	272	126	398	4,742	1,804	6,546

The statistics now collected and published for the first time, and showing the nationalities, the ages, the occupations, and the length of residence in New South Wales of all patients who were granted orders for admission to the Metropolitan and Carrington Hospitals, and to the Asylum for the Infirm and Destitute, through the Medical Adviser's Office and the Hospital Admission Dépôt, during the year 1891, present certain features of interest.

It may be pointed out, in the first place, that the natives of New South Wales and the neighbouring colonies, including New Zealand, tabulated as follows—

New South Wales	1,137
Victoria	127
Queensland	51
New Zealand	63
South Australia	14
Tasmania	41
							1,433

are a minority of the total; that the natives of Great Britain and Ireland numbered no less than 3,192, whilst those who may be classed as foreigners make up a total of 516, and include a considerable proportion of Chinese, Indians, and other Asiatics.

An even more important question arises in connection with the length of residence in New South Wales of those who sought and received aid from the Government Votes. No less than 437 of these had been in the Colony less than twelve months; 308, less than six months; and 106, less than one month. It is not an infrequent occurrence to find patients who have arrived direct from Queensland or other places applying for hospital relief, and on inquiry admitting that they have come to the Colony for this purpose only. In other cases the patients have come longer voyages, and arrived in the last stage of phthisis or in a condition of chronic ill-health or more or less permanent invalidism. Some legislation is clearly necessary on the lines adopted in all the neighbouring colonies, to prevent the influx of persons who, from the time of landing or soon after, become a charge on the State.

The return relating to age shows that less than one-third of the total number of patients were over 50 years of age, and that the great majority were between the ages of 15 and 50. A very large proportion of these, by the exercise of the most ordinary prudence, should have saved funds which would have precluded the necessity of seeking hospital relief at the public expense, and in not a few, especially in the Lock Ward, the illness was the direct outcome of drink and debauchery.

Total	3,708	1,433	5,141	Unknown	2	3	5
				Total	3,708	1,433	5,141

Details respecting those cases which were granted out-door treatment orders, trusses, and those refused, numbering 1,405, are not given.

The following returns show the number of patients previously admitted under Government orders who were transferred from the Metropolitan Hospitals to the Carrington Hospital and to the Asylums for the Infirm and Destitute, when the acute symptoms had subsided, and the patients were either convalescent or could be satisfactorily treated at less expense than in the ordinary hospitals:—

CASES transferred to the Carrington Hospital.

Institutions transferred from.	Male.	Female.	Total.
Prince Alfred Hospital	56	29	85
Sydney Hospital	27	17	44
Moorcliff Ophthalmic Hospital	1	1	2
	84	47	131

CASES transferred to the Asylums for Infirm and Destitute.

Institutions transferred from.	Male.	Female.	Total.
Coast Hospital	53	3	56
Prince Alfred Hospital	5	4	9
Sydney Hospital	4	2	6
Moorcliff Ophthalmic Hospital	5	...	5
Carrington Convalescent Hospital	1	...	1
	68	9	77

The following table shows the number of patients who remained in the Metropolitan Hospitals at the charge of the Government at the close of the year 1891, together with the number admitted to these and to the Carrington Convalescent Hospital through the Hospital Admission Depôt, Medical Adviser's Office, and other sources during the year 1891, the total cost to the Government, and other particulars.

MAINTENANCE of Pauper Patients in the Metropolitan Hospitals and the Carrington Convalescent Hospital, Camden.—Service, 1891.

Note.—The sum of 3s. per diem is paid for patients in the Metropolitan Hospitals, and 2s. for those in the Carrington Hospital, with an allowance of 10s. for the travelling expenses of each patient.

It will be seen that the Prince Alfred Hospital received £4,046 2s. 6d.; the Sydney Hospital, £3,902 7s. 6d.; the Moorcliff Hospital, £2,268; and the Carrington Convalescent Hospital, £457 12s.; and that the average stay in days of the patients thus sent was 36, 29, 76, and 25 respectively.

Attention was called in the report for the year 1890 to the great cost of the patients in the Moorcliff Ophthalmic Hospital. It will be seen that the number of Government patients discharged from this Hospital during the year 1891 was 202, and that these cost the Government £2,268, or an average of £11 4s. 6d. per patient, whilst, in addition, the Government paid the rent (£600) of the building in which the Hospital is located. It can scarcely be doubted but that the Government could itself carry out the treatment of these ophthalmic cases at a much cheaper rate than is now paid.

The following is a statement of the number and classification of all patients admitted to the Sydney, Prince Alfred, and Moorcliff Hospitals during 1891:—

Classification.	Sydney.	Prince Alfred.	Moorcliff.
Accidents	704	347	7
Urgent medical and surgical cases	763	363	16
Total	1,467	610	23
Pauper patients admitted by the Government at the rate of 3s. per diem	870	697	200
Paying patients contributing towards their maintenance at various rates	356	1,216*	51
Patients admitted under subscribers' orders	262	8
Total admissions	2,955	2,523	282

* Nine of these patients were admitted under the "Bed Donors" regulations.

On consideration of all accidents and urgent cases brought to the Hospitals being admitted, the Sydney and Prince Alfred Hospitals are subsidised by the Government by payments of £ for £ for subscriptions collected, and the sums paid to them on this account for 1890 was £4,000 for each Hospital. Of these cases it will be seen that Sydney admitted 1,467 and Prince Alfred 610; the latter institution is therefore performing considerably less than half the work that Sydney does for the same consideration.

In conclusion I beg to point out that the arrangements under which the sick poor now receive Hospital relief are briefly as follows:—

- 1st. Accidents and urgent and necessitous cases taken to the Hospital are admitted at once, provided there are beds, and the cost met by the Hospitals from the annual subsidy granted by the Government.
- 2nd. Cases of sickness discovered either in the streets or elsewhere by the police are admitted at once by the Hospital authorities provided there are vacant beds, and orders are subsequently granted from the Medical Adviser's office for payment at the rate of 3s. per diem from the Vote for the maintenance of sick paupers.
- 3rd. In certain urgent and necessitous cases (who are unable to present themselves at the depôt for examination) reported to the Medical Adviser by medical practitioners, orders are given for admission, and the patients are paid for at 3s. a day from the vote above mentioned.
- 4th. The Hospital Admission Depôt, at the top of King-street, is open from 10 to 12 daily, except Sunday, Good Friday, and Christmas Day. All sick persons applying are examined by the Government Medical Officer as to their sickness, and also as to their means. All who are in necessitous circumstances are given orders to either the Coast, the Sydney, or the Prince Alfred Hospital, according to the special nature of the illness and the beds vacant at the respective Hospitals, and, in the case of the Sydney and Prince Alfred Hospitals, payment is made by the Government at the rate of 3s. a day.
- 5th. Cases suitable for the Carrington Convalescent Hospital, at Camden, are either sent direct from the Hospital Admission Depôt, or are transferred from the Metropolitan Hospitals when the acuter symptoms have subsided, and are paid for at the rate of 2s. a day.

Cases which, on examination, appear not to need Hospital treatment, and to be suitable for the Asylums for the Infirm and Destitute, are given recommendations for those Institutions.

I have, &c.,

F. NORTON MANNING, M.D.,

Medical Adviser to the Government.

1891.

NEW SOUTH WALES.

INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR 1890.)

Presented to Parliament, pursuant to Act 42 Vic. No. 7, sec. 73.

The Inspector-General of the Insane to The Colonial Secretary.

Sir,

Lunacy Department, Inspector-General's Office, Gladesville, 1 April, 1891.

In accordance with the 73rd section of the Lunacy Act of 1878, I do myself the honor to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1890. In appendices to the report will be found reports on the Hospitals by the Medical Superintendents, together with the statistics of each Institution.

I have, &c.,

F. NORTON MANNING,
Inspector-General.

On 31st December, 1890, the number of insane persons on the official registers was 3,102, and their distribution was as follows:—

	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville	533	301	834	12	31	43
Do Parramatta (Free)	693	354	1,047	8	6	14
Do do (Criminal)	45	9	54	..f..
Do Callan Park	485	335	820	8	6	14
Do Newcastle	137	113	250	2	2	4
Licensed House for the Insane, Cook's River.....	13	82	95	3	3	6
Licensed Houses do Picton	2	2
Total.....	1,906	1,196	3,102	33	48	81

The number on 31st December, 1889, was 2,974 (1,822 males and 1,152 females), so that the increase during the year was 128 (84 males and 44 females), the largest which has occurred in any one year, and, as shown by the following figures, 28 above the average for the last ten years:—

Year.	Increase.	Year.	Increase.
1881	119	1886	74
1882	89	1887	104
1883	96	1888	76
1884	121	1889	76
1885	119	1890	128

Total for ten years, 1,002, or an average of 100·2 a year.

Of the number on the registers of the Institutions, 3,021 (1,873 males and 1,148 females) were in the Institutions at the close of the year, and 81 (33 males and 48 females) were absent on leave.

From returns received from the institutions it appears that there was an increase of 39 at Gladesville, 45 at Parramatta (free), 3 at Parramatta (criminal), 48 at Callan Park, and 5 at Newcastle, and a decrease of 13 at Cook's River. Another house for a single patient was licensed at Picton during the year.

Notwithstanding the large increase in number there has been no increase in the proportion of insane to population, which, as shown by the following return, has remained almost unchanged during the last twenty years, and is less than the proportion in England.

The proportion of insane to population in New South Wales for the last twenty years, and also the proportion in England for the same period, is shown in the following return:—

Year.	Population of New South Wales.	Total Number of Insane in New South Wales on 31 Dec.	Proportion of Insane to Population in New South Wales.	Proportion of Insane to Population in England.
1870	Per M.	Per M. 1 in 400 or 2.50
1871	519,182	1,387	1 in 374 or 2.67	1 in 394 or 2.53
1872	539,190	1,440	1 in 374 or 2.67	1 in 387 or 2.58
1873	560,275	1,526	1 in 367 or 2.72	1 in 381 or 2.62
1874	584,278	1,588	1 in 367 or 2.72	1 in 375 or 2.66
1875	606,652	1,697	1 in 357 or 2.80	1 in 373 or 2.63
1876	629,776	1,740	1 in 361 or 2.77	1 in 368 or 2.71
1877	662,212	1,829	1 in 362 or 2.76	1 in 363 or 2.75
1878	693,743	1,916	1 in 362 or 2.76	1 in 360 or 2.77
1879	734,232	2,011	1 in 365 or 2.74	1 in 363 or 2.75
1880	770,524	2,099	1 in 367 or 2.72	1 in 353 or 2.83
1881	751,265	2,218	1 in 352 or 2.84	1 in 352 or 2.84
1882	817,468	2,307	1 in 354 or 2.82	1 in 348 or 2.87
1883	869,310	2,403	1 in 361 or 2.77	1 in 345 or 2.89
1884	921,129	2,524	1 in 364 or 2.74	1 in 345 or 2.89
1885	980,573	2,643	1 in 374 or 2.67	1 in 343 or 2.87
1886	1,030,762	2,717	1 in 379 or 2.63	1 in 349 or 2.86
1887	1,042,919	2,821	1 in 369 or 2.71	1 in 346 or 2.88
1888	1,085,740	2,898	1 in 374 or 2.67	1 in 344 or 2.91
1889	1,122,200	2,974	1 in 377 or 2.65	1 in 341 or 2.92
1890	1,170,000	3,102	1 in 377 or 2.65

The following tables show the number of admissions, discharges, and deaths, the proportion of recoveries, the rate of mortality, the causes of insanity in those admitted, those who recovered and those who died, the causes of death, the length of residence in those who recovered and those who died, and also the ages, condition as to marriage, religious profession, nationality, and previous occupation of those admitted, and of all under care, as well as the form of mental disorder in those admitted, those who recovered, and those who died during the year:—

Admissions.

The number of patients admitted during the year was 611—376 males and 235 females—being the largest number yet admitted in a year, and 61 more than were admitted in 1889. This number gives a proportion to the population of 1 in every 1,914, and is not above the average rate of “occurring insanity” for the last five years, and decidedly less than the average for the last twenty years, as shown in the following return:—

RETURN showing the ratio of admissions to the population of the Colony, or the proportion of “occurring insanity” during the last twenty years.

Year.	Admissions.	Population.	Proportion to Population.	Year.	Admissions.	Population.	Proportion to Population.
1871	340	519,182	1 in 1,527	1881	494	731,265	1 in 1,581

1880	476	770,524	1 in 1,618	1890	611	1,170,000	1 in 1,914

Of the total admissions, 556 were admitted for the first time and 55 had been on one or more previous occasions under treatment in a Hospital for the Insane in New South Wales.

A very considerable proportion of the papers on which patients were received have, as usual, required amendment in minor particulars; and in ten cases, though the patients were undoubtedly insane, the certificates given by medical practitioners were so impotent and inconclusive that it was necessary to reject them, as detention was not warranted on such evidence.

In all these cases fresh certificates were subsequently obtained ; but it would save very considerable trouble to the officers in charge of Hospitals, and to the unfortunate patients and their friends, if these necessary documents were prepared with greater care and more intelligent appreciation of their importance both in a legal and medical point of view.

The admissions were more numerous during the latter than during the earlier months of the year, and especially during the months in which the stress of the great strike were most felt ; but there is no direct evidence that the strike tended to the production of insanity. The experience of many years shows that the admissions are always more numerous during the earlier summer months—October, November, and December—than during the autumn and winter.

I think it necessary once more to invite attention to the number of patients admitted to Institutions for the Insane within a few months after their arrival in the Colony. During the year 1890 36 persons were admitted to the Hospitals at Callan Park and Gladesville who had not been six months resident in New South Wales ; and of these, 13—9 at Callan Park and 4 at Gladesville—were sent to Hospital direct from the ship in which they were brought to the Colony, or immediately afterwards. The majority of these persons were without means, and their cost at once fell on the State.

Whilst Victoria, South Australia, Queensland, Tasmania, and New Zealand have all Acts forbidding the importation of insane and otherwise helpless and dependent persons, there is no statute of the kind in this Colony, a fact of which the captains and agents of ships are well aware. Not only are the insane persons who are booked for this Colony landed here, but also those booked for other colonies, and for whose maintenance the captain or agents would become responsible if they landed them therein.

The process is illustrated by a case of which the following are brief particulars:—H.M. was a passenger to Melbourne by the Orient steamer "Oroya." As he was insane on arrival and friendless, and the captain or agents must have paid for his maintenance if landed in Victoria, he was brought on to Sydney and handed over to the police as insane, the captain of the ship going into the witness-box and giving evidence that "this patient was booked from London to Melbourne, but I was ordered by the manager of our office to bring him on here."

On these facts being brought under the notice of the Master in Lunacy he made application to the Orient Company for the maintenance of the patient, and the manager of that company, evidently well aware of the state of the law, replied, "I should be glad to know under what statute or rule of law you propose to exact any payment from us in this case?" The Master in Lunacy finishes the correspondence by informing me that "in the present state of the law in this Colony there does not appear to be any means of compelling the Orient Company to pay for the maintenance of this patient." This it may be pointed out is only one of a considerable number of cases ; and it is difficult to see why such a condition of matters should be allowed to continue when an Act of Parliament of one or two sections would place this Colony in the same position as its neighbours in regard to these insane and pauper emigrants.

Discharges.

The number of patients discharged during the year was 286 ; of these 257 had recovered, and 29 were classified as relieved.

The recoveries give a percentage of 42·06, and the cases relieved a percentage of 4·74 on the admissions for the year, and excluding the figures for the Hospital for the Insane, at Newcastle, in which idiot and imbecile cases only are admitted, the recovery rate was 42·73.

The average percentage of recoveries on admissions and readmissions for the ten years, 1881 to 1890 inclusive, was 42·73, and the percentage of patients relieved during those years 5·41.

The recovery rate in English asylums, excluding idiot establishments, for the same period, was 39·74.

Transfers.

As during former years a number of patients were transferred from one Hospital to another, either for better classification, to try the effect of change on the mental health, to meet the wishes of friends, or of the patients themselves, or to relieve overcrowded wards. The total number of transfers was 74.

Escapes.

Four patients escaped and were not returned to hospital during the statutory period.

Deaths.

The deaths numbered 193,—128 males and 65 females ; and the death-rate calculated on the average daily number resident was 6·52. The average death-rate for the ten years, 1881 to 1890 inclusive, was 6·75.

The death-rate compares favourably with the rate in English Institutions for the Insane, which averaged 9·47 per cent. for the same period.

The causes of death are set forth in Table 4. In 85 cases deaths was due to cerebral disease, in 51 cases to diseases of the heart and lungs—pulmonary consumption being responsible for 25 of this number,—in 31 cases to general debility and old age, in 3 cases to suicide, and in 3 to accident. There was no death from typhoid fever, or from any epidemic ailment.

Total number under care.

The total number under care during the year was 3,659, and the average daily number resident 2,960, both of these numbers showing considerable increase on the figures for former years.

Leave of absence.

On 31st December, 1889, 80 patients were absent on leave, and leave of absence was granted to 127 patients during the year 1890, making a total of 207 cases. The Returns show that of these, 76 were discharged recovered, 47 were returned to hospital, 3 died whilst on leave, and 81 remained on leave at the close of the year.

The system of granting leave to patients, which is carried out under the provisions of section 82 of the Lunacy Act, is being gradually more extended. As a preliminary to final discharge, as a method of testing self control, as saving the trouble and expense of fresh proceedings in recurrent cases, and as enabling

enabling patients in their calmer and better times to spend a few days with their friends; the system has many advantages, and so far, under the careful selection of cases which has been exercised by the Medical Superintendents has had no ill results.

Accidents, &c.

Considering that two of the Hospitals have large frontages to the harbour and a third to the Parramatta River, there has been a singular immunity with regard to accidents by drowning, and it had been a long time since any fatality occurred until last year, when four deaths—one, by suicide, at Callan Park, and three, by accident, at Gladesville—occurred in this manner. In two of the latter cases the patients suffered from epileptic fits, and were attacked by these when near the water. Two other cases of suicide occurred in addition to the one above-mentioned, one at Gladesville and the other at Callan Park. In all these cases inquiries were held by the Coroner. The other accidents were decidedly less in number than in former years, and comparatively unimportant in character and results.

Changes in the staff.

The resignation by Dr. G. H. Taylor of the office of senior medical officer at Parramatta, on his appointment to the medical charge of the Public Works Prison at Trial Bay, led to the promotion of Dr. R. U. Russell to the vacant position, whilst Dr. J. M. Scott, a graduate of the University of Melbourne, was appointed in Dr. Russell's place.

No other changes have occurred among the officers, and the changes among the attendants, nurses, and servants have been less frequent than usual. Two attendants at Parramatta retired under the provisions of the Civil Service Act, one being superannuated and the other unable to carry out his duties owing to ill-health.

Changes in buildings.

A number of the old and dilapidated buildings at the Hospital for the Insane, Parramatta, were demolished at the beginning of the year, and the new buildings to replace them have been carried out so expeditiously and satisfactorily that some were occupied by the close of the year, and the remainder were all but ready for occupation. Extensive alterations have also been made in the buildings formerly occupied as an orphan school at Parramatta, to render them suitable for the occupation of insane patients; and, at the close of the year, 120 patients occupied these buildings, which were considered officially as a branch of the Hospital for the Insane, Parramatta, and were managed from and in connection with that institution. As soon as the alterations are completed, the buildings not yet occupied will be filled with chronic cases from the Hospitals at Gladesville and Callan Park, the wards of both institutions being now so overcrowded as seriously to interfere with the management, the overcrowding embarrassing the officers in charge and militating against the recovery of the patients. The Hospitals at Parramatta and Newcastle are both also overcrowded, and further accommodation is greatly required. No steps have been taken to commence the new Hospital, now so much needed, beyond securing a site; but it is hoped that another year will not elapse without some commencement being made to provide accommodation for the increasing number of insane and dependent persons.

Change in dietary.

As the dietaries in use had not been revised for some years and were faulty in some particulars, the whole question of diet was carefully considered, and a new dietary scale, drawn up by the Medical Superintendents, was submitted, approved, and adopted. It gives a more liberal and varied dietary at a small increase of cost, and allows to the Medical Superintendents an opportunity of meeting the wishes and needs of special classes of the inmates.

Attendants, nurses, &c.

Whilst considering the dietary for patients very considerable alterations and improvements were made in the dietary for attendants and other members of the staff. A new classification of the attendants and nurses has been approved with alterations in the rates of salary according to length of service, and it is now desirable that the numerous members of the staff of the Hospitals employed otherwise than on ward duty (cooks, messengers, gatekeepers, gardeners, &c.) should be classified under a similar scheme. Owing however to the varied duties and positions this presents some difficulties and requires close consideration so as to meet all reasonable claims.

The position of the attendants and nurses has been further improved by an increase in the number of days off duty, the Colonial Secretary having approved of certain additions to the staff of each Hospital so as to render this possible without any relaxation in the supervision of the patients.

The dining and sitting rooms for attendants, nurses, and other members of the staff require enlarging and improving at all the Hospitals. The necessary alterations have hitherto been delayed for want of funds, but these should if possible be provided during the next Session of Parliament.

The special training of attendants and nurses at Gladesville has been continued with most satisfactory results and has been extended to the staff at Newcastle where the lectures and demonstrations have been given by Dr. Williamson, the Medical Superintendent, and the examinations conducted by the Medical Officers at Gladesville. This training under a definite system, the lectures, &c., extending over two years, has now been long enough in operation to enable an estimate to be formed of its value. There can be no question but that it has conduced to a more intelligent appreciation of and a keener interest in their duties on the part of the attendants and nurses, and resulted in a more judicious consideration and a more careful nursing of the patients under their care.

Cost of Maintenance.

The collections from all sources have amounted to £516 1s. more than in the previous year, and the total was £11,901 15s. 11d.

This sum is made up as follows:—Collections by the Master in Lunacy for maintenance in Hospitals for the Insane, £10,930 16s. 6d.; collections at the Reception House, Darlinghurst, £11 18s. 11d.; payment by the Imperial Government, £404 4s.; sale of fat, old stores, &c., £453 12s. 5d.; and rent of land, £101 4s. 1d.

The details are shown in the following return:—

TABLE showing total receipts on account of Institutions for the Insane during the year 1890.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of fat and old Stores.	Rent of Land.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Hospital for the Insane, Gladesville.....	4,333 7 5	155 11 4	4,488 18 9
Do Parramatta	1,753 14 9	377 5 1	92 6 7	2,223 6 5
Do Callan Park	4,142 7 1	150 17 1	4,293 4 2
Do Newcastle	581 2 4	26 18 11	54 17 5	662 18 8
Licensed House for the Insane, Cook's River.....	120 4 11	120 4 11
Reception House for the Insane, Darlinghurst	11 18 11	11 18 11
Inspector-General's Office	101 4 1	101 4 1
Total	10,942 15 5	404 4 0	453 12 5	101 4 1	11,901 15 11

The total expenditure was £96,138 5s. 9d. and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £88,693 4s. 4d.; maintenance of Government patients at Licensed House, Cook's River, £2,927 10s.; maintenance of patients in the Reception House, £1,626 9s. 7d.; general expenses, including cost of Inspector-General's Office, fees to official visitors, maintenance of steam launch, &c., £2,891 1s. 10d.

The cost for maintenance in Hospitals for the Insane was less by £4,140 16s. 7d. than during the year 1889, although the daily average number of patients under care in these Hospitals was 71 more. The cost for 1889 was exceptionally large and was due to the high price of meat and other articles under contract.

The average weekly cost per head at all the Hospitals during 1890 was 11s. 11½d., or, deducting collections, 10s. 4¼d., whilst the cost in 1889 was 12s. 9¾d., or, deducting collections, 11s. 3¼d. The cost per head in 1890 was less than the average of the past ten years, which as shown in the following return was 12s. 4d., or, deducting collections, 10s. 11½d.

RETURN showing weekly cost for maintenance in Hospitals for the Insane for 10 years, 1881 to 1890 inclusive.

Year.	Without deducting Collections.	Deducting Collections.
	£ s. d.	£ s. d.

1890.....	0 11 11¼	0 10 4¼
Average for 10 years.....	0 12 4	0 10 11½

The sums expended for maintenance of patients at Cook's River and the Reception House and the expenses of the Inspector-General's Office, &c., differ in only trifling amounts from the expenditure during the previous year, the difference in the expenditure for the whole services being £23 2s. 1d. in favour of the year 1890.

The following tables show the particulars of expenditure in the Hospitals for the Insane. The first of these is prepared in the same way as those given in previous reports, whilst the others show for the first time details as to expenditure for stimulants and other articles:—

*First year, and including cost of stores and outfit.

† Opening of new Hospital.

Reception House for the Insane, Darlinghurst.

The number of patients passing through this Institution was larger than during the previous year, but in several former years a still larger number have been under care. The accommodation has been found quite sufficient to meet all the demands upon it. During 1890, 617 patients were admitted, and with 9 remaining from the preceding year there were 656 under care and treatment. Of this number 362 were under lunacy certificate, and 294 under remand in accordance with the 1st section of the Lunacy Act Amendment Act. Certain individuals came under both these classifications, being admitted, first under remand for a short period, and subsequently on the expiry of this time under certificate.

Of the cases under remand, 294 in all, 172 were discharged sane, 115 were certified and sent to Hospital, 2 died, and 5 remained at the close of the year; and of the cases under certificate, 362 in all, 25 were discharged sane, 170 were sent to Gladesville, 162 to Callan Park, 1 died, and 4 remained at the close

TABLE showing the number of Patients under certificate received at the Reception House for the Insane during the year 1890, the place whence received, and their disposal.

Hospital for the Insane, Gladesville.

The number of patients on the register of this Hospital at the close of 1889 was 795—500 males and 295 females. In 1890, 182 were admitted for the first time, 35 were readmitted, and 8 were transferred from other Hospitals, making a total of 1,020 under care during the year. Of this number 92 were discharged as recovered and 10 as relieved, 36 were transferred to other Hospitals, 2 escaped, and 46 died, leaving 834 (533 males and 301 females) on the register at the close of the year.

The average daily number resident was 771.

The recoveries show a percentage of 42.39 on the admissions, and the deaths a percentage of 5.95 on the average number resident. The Hospital has maintained its high reputation as a curative institution, though the recovery rate was lower than the average for the last 5 years, which was 54.96.

I visited and inspected the Hospital on January 9th, 10th, and 11th, February 7th and 8th, March 5th and 18th, April 15th and 23rd, May 30th and 31st, June 25th, July 23rd and 30th, August 2nd and 20th, September 11th, 17th, and 24th, October 18th and 21st, and December 2nd, 3rd, and 5th, and the official visitors, Sir Alfred Roberts, Dr. J. C. Cox, and Mr. Frederick Gibson, Barrister-at-law, made visits about once in each month, and reported to the Colonial Secretary after each visit. After their inspection in July the visitors called attention in their report to the defective condition of some of the bedding in the male division, and to some minor defects in the arrangements in other parts of the Hospital, and in October pointed out the need of additional workshops for the patients employed as tailors and in picking horsehair, &c., for making mattresses.

The matters forming the subject of animadversion in the report for July were remedied soon after, and steps had been taken to obtain new workshops at the time the visitors reported, but delay had occurred owing to want of funds.

The improvements during the year included the refitting of a general bath-room in the female division, the better lighting of a number of rooms by the lowering and enlargement of windows, the completion of a commodious carpenters' and joiners' shop, besides numerous minor alterations, all tending to the greater adaption of the buildings to Hospital purposes according to modern ideas.

Contracts .

Contracts were taken during the year for building a new wing to replace temporary buildings erected some years ago, and now beyond further service, and special votes were granted for a new dining-hall to serve for two wards, and for a complete renewal of the water-pipes, and their adaption to the high pressure of the supply from the Prospect Works, which will be shortly available. It is expected that both these important works will be carried out during the current year.

The future requirements include a new dining and sitting room for attendants, some important alterations in connection with the kitchen offices, and the completion of additional workshops.

At the priory, a detached house standing at some distance from the hospital 38 patients, mainly engaged in work at the farm, have been lodged throughout the year.

In my visits of inspection I have made the inquiries required by statute and signed the statutory books, examined all the patients recently admitted, and the papers on which they were received, besides making an inspection of the rooms occupied by patients and other parts of the buildings and offices.

The Hospital has been managed in a satisfactory manner, every regard being paid to the health, comfort, and recovery of the patients.

The statistics of the Hospital are given in tables appended to the report of the Medical Superintendent. [*Appendix A.*]

Hospital for Insane, Parramatta (Free).

On the 31st December, 1889, there were 1,002 patients (673 males, and 329 females) in this Hospital. During 1890, 101 were admitted, and 45 transferred, from other Hospitals, making a total of 1,148 (759 males, and 389 females) under care. Of these 41 were discharged as recovered, and 1 as relieved, 2 were transferred to other Hospitals, and 57 died, leaving 1,047 (693 males, and 354 females) on the books of the Hospital on the 31st December, 1890.

The average number resident was 1,002.

The recoveries give a percentage of 40.59 on the admissions, and the deaths a percentage of 5.68 on the average number resident. Of the 57 deaths 37 were over 50, and 13 over 70 years of age. I visited and inspected the Hospital on February 6th and 27th, March 19th, April 9th, May 6th, August 6th and 8th, November 5th and 13th, and December 30th, and the official visitors, Drs. Brown and Waugh, and Mr. Nugent Robertson, barrister-at-law, paid monthly visits, and reported to the Colonial Secretary on each occasion. In their report after a visit paid on the 25th of March the visitors pointed out, (1st) that patients were not attending Divine Service, there being no room suitable for the purpose; (2nd) that they were unable to visit and inspect the patients at the branch establishment; and (3rd) that the delay in completing the new buildings was causing much inconvenience.

The inspection of the patients at the branch establishment has been carried out by myself, and my visits have been made with exceptional frequency. The new hall was arranged for Divine Service a few days after the visitors report, and has been used ever since, and the new buildings have been pushed on as rapidly as possible, the contractor, under the special authority of the Minister for Works, being stimulated by a bonus on condition of the work being completed in less than the contract time.

All the other reports of the official visitors express a general commendation of the management of the Hospital, and call for no special comment. The progress of extensive building operations and the great overcrowding of the wards caused by the necessity of housing therein patients displaced from buildings which were demolished, or were undergoing alteration, has very greatly hampered the management of the Hospital throughout the whole year. Happily, however, there have been no serious accidents and no case of suicide. The weatherboard buildings have during the year been roofed with iron, and are now in less danger from fire. A new dispensary has been building, and the old one converted into a dining-room for old and feeble female patients. The dormitories in the weatherboard division have been refloored, alterations have been made in the hot water supply, and a number of minor alterations carried out, besides the extensive repairs incidental to buildings largely constructed of wood. Considerable progress has been made with the minor fittings of the large Amusement Hall to which gas has been laid on and which is now in frequent use.

The main requirements of the Hospital are as follows:—A new and properly equipped kitchen and scullery with dining-hall for the attendants, &c., in the main building, a sitting-room for nurses, additional workshops for patients, and new stables. The present kitchen, which has been in existence many years, is quite inadequate, and the want of workshops materially interferes with the proper industrial employment of the inmates.

During the year, advantage being taken of a favourable season, special attention has been paid to the gardens in the weatherboard and women's divisions, and the former is now in a condition most creditable to the attendant in charge.

The buildings formerly used as an Orphan School, and situated in the Municipality of Dundas, near Parramatta, have been occupied throughout the whole of the year, and managed as a branch of the Hospital. On January 1st the number of patients in these buildings was 50, and, by transfer from the main building, the number had reached 120 at the close of the year. These numbers are included in the general statistics of the Hospital. The patients selected for residence at "the branch" have been for the most part quiet chronic cases in good health, a large proportion being industrious, and occupied in forming the gardens, roads, &c., necessary for the proper administration of the hospital. In cases of sickness or exacerbation of mental illness the patients have been in all cases removed to the main buildings. It has only been possible to occupy part of the buildings, and it has been necessary to change the patients from one part to another, as repairs and alterations have been in progress, and the greater part of the buildings in the hands of contractors throughout the year.

I formally inspected the wards occupied on January 8th, April 9th, August 6th, and November 13th, and I have been frequently through them at other times when supervising the progress of the building contracts in progress, which have required very constant attention in matters of detail. The wards have been kept in a cleanly and creditable condition, and the patients properly cared for. The bedding I found at all my visits sufficient, clean, and in good order, and the provisions and stores of good quality.

Some difficulty has been experienced as to the water supply, owing to delay in laying the pipes from the corporation works.

The statistics of the Hospital are given in tables attached to the report of the Medical Superintendent. [*Appendix B.*]

Hospital

Hospital for the Insane, Callan Park.

There were 772 patients in this Hospital (453 males and 319 females) at the close of 1889, and during the year 1890, 259 were admitted, 237 being first admissions, 15 readmissions, and 7 transfers from other Hospitals. The total number under care was 1,031, and of these 101 were discharged as recovered, and 16 as relieved, 24 were transferred to other Hospitals, 2 escaped, and 68 died, leaving 820 (485 males and 335 females) on the register at the close of the year.

The average daily number resident was 785.

The recoveries calculated on the admissions show a percentage of 40·07, and the deaths show a percentage of 8·66 on the average number resident.

I visited and inspected the Hospital on January 16th and 22nd, March 17th and 29th, May 14th, June 20th, July 4th and 29th, August 13th, September 2nd, October 29th and 31st, and December 10th, and the official visitors paid, as usual, monthly visits, and reported to the Colonial Secretary after each visit; these reports were all commendatory in character.

The number of patients at the close of the year was 20 in excess of the accommodation, and it will now only be possible to receive new cases by transferring some of the more chronic and incurable ones to some other institution, so as to make room. As this Hospital receives all the recent cases of insanity occurring in Sydney and the Metropolitan area, and these amount to upwards of 200 a year, it is apparent that there must now be a considerable clearing out of the more chronic cases which have accumulated during the twelve years the Hospital has been in existence.

The Hospital has worked on the whole smoothly and well, but now that it is filled to its full capacity some defects in its arrangements are apparent. The day and dining room space for patients is too limited, the dining and sitting rooms for attendants and nurses are insufficient and not conveniently placed; some further provision in the shape of dormitories for night nurses, and additional workshops for the patients is necessary. Steps were taken during the year towards the furnishing and occupation of the three cottages for female patients paying for their maintenance, and they now afford a comfortable home for this class.

In my visits to the Hospital I have, besides making the inquiries and carrying out the duties required by statute, endeavoured to make myself thoroughly acquainted with the general working of the Hospital, even in matters of detail, and I am glad to be able to express satisfaction with its management.

The statistics of the Hospital will be found with the report of the Medical Superintendent. [*Appendix C.*]

Hospital for the Insane, Newcastle.

At the close of 1889 there were 245 patients in this Hospital (133 males and 112 females), 12 were admitted during the year, and 10 were transferred from other Hospitals, making a total of 267 under care and treatment. Of these 1 was discharged as recovered, and 1 as relieved, 2 were transferred to other Hospitals, 13 died and 250 (137 males and 113 females) remained at the close of the year.

The average daily number resident was 248, and the death-rate 5·24 per cent. This rate is the lowest recorded during the last nine years, and taken in connection with the fact that the cost for stimulants was lower than during any former year in the history of the Institution, being £3 15s. for the year, or 3½d. per patient per annum, might furnish a cogent illustration for the anti-alcoholic enthusiast if other factors in the result were ignored. It should, however, be noted that 1890 was the first year during which the Hospital was under the care and management of a resident medical superintendent, skilled and experienced in the treatment of epilepsy and diseases of the brain and nervous system, instead of under the medical care of a visiting medical officer, who, however careful and attentive, could not always be at hand to meet the emergencies of illness, or possess the special experience required for dealing with a difficult and peculiar class of cases.

The diminished death-rate, the diminution in the general sickness, the improvement shown in the industrial employment of the inmates, and the reduced cost for stimulants (the latter being the due apportionment and calculation of one among many medical means to a desired end) all seem to justify the course taken in appointing a resident Medical Superintendent to the charge of this Hospital.

I visited and inspected the Hospital in February, April, July, September, and November, and during those visits I checked the registers, seeing each patient, examined specially those newly admitted, signed the statutory books, passed through all the day-rooms and dormitories, and saw also the kitchen, stores, laundry, and offices. On three occasions I saw the patients at dinner, and found the food good in quality, properly cooked, and served with due order.

The grounds have been greatly improved by levelling, planting, &c., and there are now gardens bright with flowers in all the wards. The Medical Superintendent has paid special attention to the industrial employment of the inmates, and the returns show a percentage of 72·35 more or less usefully employed, whilst 71·25 per cent. attend Divine Service, which is held regularly on Sunday. The room now used for service is too small to hold all who might be allowed to attend.

I am glad to report favourably on the general management and progress of the Hospital.

The Statistics and other details with regard to the Institution are given in the report of the Medical Superintendent. [*Appendix D.*]

Hospital for the Criminal Insane, Parramatta.

The number of patients on the register of this Hospital on 31st December, 1889, was 51·42 males and 9 females.

During 1890 10 patients were admitted for the first time, and 1 was readmitted, making a total of 62 (51 males and 11 females), under care and treatment. Of these 3 were discharged recovered, 4 were transferred to other Hospitals on completion of sentence, and 1 died, leaving 54 (45 males and 9 females) under care at the close of the year. The average daily number resident was 51.

The

The percentage of recoveries on admissions was 27·27, and the death-rate 1·93 on the average daily number resident. Owing to want of room no prisoners serving sentences given in the Superior Courts could be received, the admissions being confined to prisoners awaiting trial, found insane on arraignment, and acquitted on the grounds of insanity, together with those serving sentences not exceeding six months received in Courts of Petty Sessions, &c.

From the accompanying return it will be seen that the number under sentence in this Hospital is now small compared with those acquitted on the grounds of insanity, or found to be insane before trial.

I visited this Hospital on 19th March, 8th May, 6th August, 5th November, and 30th December; and the official visitors, Drs. Brown and Waugh, and Mr. Nugent Robertson, barrister-at-law, have paid visits once in every month.

The buildings have been kept in substantial repair, and various minor improvements have been effected, but the following alterations, which will involve some expense, are imperatively necessary, and should be carried out as soon as possible:—(1st) the day space should be enlarged and made more light and cheerful by the removal of three or four single rooms; (2nd) a special room for sick and feeble patients should be made by roofing over a small airing yard; and (3rd) a room for the night attendant should be provided.

The full statistics of the Hospital will be found in the report of the Medical Superintendent. [Appendix E.]

TABLE showing classification of the crimes of patients remaining in the Hospital for the Criminal Insane, at Parramatta, on the 31st December, 1890.

Crime.	Classified with reference to the period at which insanity was recognized.																	
	Certified to be insane whilst awaiting trial.			Found insane by Jury on arraignment.			Acquitted on the grounds of insanity.			Rerieved on the grounds of insanity.			Certified as insane whilst serving sentence.			Total number in Hospital on 31st December, 1890.

Licensed House for the Insane, Cook's River.

The number of patients in this Institution at the close of 1889 was 108, 17 were admitted during the year and 4 transferred from Hospitals for the Insane, making a total of 129 (29 males and 100 females) under care. Of these 19 were discharged as recovered, 1 as relieved, 6 were transferred to Hospitals for the Insane, 8 died, and 95 (13 males and 82 females) remained at the close of the year.

The recovery rate was highly satisfactory, and shows an average of 46·72 per cent. for the last 5 years.

The daily average number resident was 101, and the death-rate, calculated on this, was 7·92 per cent., being somewhat higher than usual.

I visited and inspected the institution on February, March, May, July, August, October, and December, and the Official Visitors—Sir Alfred Roberts, Dr. J. C. Cox, and Mr. Frederick Gibson, barrister-at-law—paid monthly visits.

At my visits I have made the inquiries required by statute, and have inquired also into the general management, into the cases of individual patients, and into all complaints made to me either verbally or by letter. At each visit special inquiry was made into the cases of patients recently admitted.

The number of Government patients has been kept up to 50, the occasional vacancies caused by death being filled by transfer from Gladesville or Callan Park. The number of private patients has slightly decreased, but this was due to the discharge of several who had for some time been on leave of absence, but retained on the registers of the Institution. The number on leave at the close of the year was 6. During the year Dr. Vause, the Medical Superintendent and licensee, proceeded to England on a visit after making all arrangements for the satisfactory management of the institution during his absence. The position of medical superintendent has been filled during Dr. Vause's absence by Dr. N. P. Elliott, who has carried out the duties in an efficient manner and maintained the good reputation of the institution.

The

The following tables give the main statistics for the year :—

TABLE I.

SHOWING the admissions, readmissions, discharges, and deaths, in the Licensed House for the Insane, Cook's River, during the year 1890.

	Male.	Female.	Total.
In Hospital on 31st December, 1889	21	87	108
	Male.	Female.	Total.
Admitted for the first time during the year	8	9	17
Readmitted during the year

Swiss Cottage and Woodland Cottage, Picton.

Both of these houses are licensed for a single patient under the provisions of section 42 of the Lunacy Act, and are conducted under the conditions as to medical attendance, inspection, &c., imposed by section 43 and other sections of the Lunacy statutes.

Swiss Cottage has now been licensed for upwards of two years, and Woodland Cottage was licensed in February, 1890. Both are visited by Dr. Watt, the Government Medical Officer of the district, and I inspected both in March and October. At my visit I saw the patients inquired into the condition of their mental and general health, inspected their dormitories and sitting-rooms, and satisfied myself as to suitability of the patients for their special surroundings, and that the houses were properly conducted.

The medical journals were produced for my inspection and found to be properly kept.

Observation Ward, H.M. Gaol, Darlinghurst.

At the close of 1889 there were 15 prisoners in the Observation Ward, at Darlinghurst Gaol, and during the year 38 were received, making 53 under care.

Of these 22 were discharged of sound mind, 5 were sent to the Hospital for the Criminal Insane, Parramatta, 9 were discharged to the Police Courts, 8 were transferred to the newly-established Observation Ward at Parramatta, and 9 remained at the close of the year.

The whole of these prisoners were received into the Observation Ward, under the provisions of section 67 of the Lunacy Act, and section 4 of the Lunacy Act Amendment Act. In addition to these cases, 20 prisoners awaiting trial at the Supreme Court or Quarter Sessions, 3 acquitted on the ground of insanity, and detained during the Governor's pleasure, 20 under sentence, and 117 under remand from Police Courts were admitted to the ward under departmental arrangements for observation and care, and four of this class remained from the previous year.

Of these, 35 were discharged of sound mind, 4 were sent to the Hospitals for the Insane, 115 were discharged to Police Court, 1 died, and 9 remained at the close of the year.

I inspected the ward and saw the inmates on 17th February, 13th June, 5th September, and 8th December, making my visits without any notice; and I visited it on several other occasions to inquire into the mental condition of individual prisoners. At all my visits it was clean and orderly, and the arrangements were such as to call for commendation.

The registers and journal were found in good order and kept with intelligence and care, and the means for observation sufficient and judicious.

As in many former years, the ward has been an important auxiliary to the prison management and has served to defeat malingering, and determine the exact mental condition of borderland cases.

The following return, furnished by the Comptroller-General of Prisons, gives the statistics of the ward for the year.

Observation Ward, H.M. Gaol, Parramatta.

Owing to the overcrowding in the Hospital for the Criminal Insane, and the impossibility of receiving the whole of the prisoners who could be certified as insane in that Institution, the observation ward at Darlinghurst became overcrowded, and it was found necessary to set apart another ward at the gaol, Parramatta.

This was proclaimed in accordance with the 67th section of the Lunacy Act in the *Government Gazette* of 3rd July, 1890, and is described as "a corridor and 22 cells of No. 5 wing of Parramatta Gaol, set apart for the detention of prisoners who may be supposed to be insane, or who, from imbecility, may be supposed to be unfit for penal discipline."

At present only ten cells and the corridor are used. They are well ventilated, with special arrangements for lighting at night and for observation. One cell is padded, and is roomy, well lighted, and properly arranged. A small exercise yard, with shelter-shed, closets, lavatory, &c., has been provided, and the furniture supplied is comfortable and sufficient. I visited the ward on the 3rd of October, and found all the arrangements satisfactory, the corridor and cells models of cleanliness and order. There were twelve prisoners in the ward.

No one was in seclusion or restraint, and I spoke to all and examined into their mental condition. No complaints were made, except such as were obviously due to delusions

It appears from statistics furnished by the Comptroller-General, that 31 prisoners serving sentence have been placed in the ward, 9 of them having been transferred from Darlinghurst, owing to want of room. Of the total number, 13 were discharged of sound mind, 6 were sent on to Hospitals for the Insane, and 12 remained on 31st December.

One prisoner, acquitted on the ground of insanity, and awaiting the Governor's pleasure, and four under remand from the Police Court, have been placed in the ward during the year under departmental arrangements.

Owing to the great distances of many of the country districts from the Hospitals for the Insane and the want of provision for insane persons in the country hospitals, a number of cases of insanity in the early stages are treated in the up-country gaols.

The number under care during the year 1890 was 420, of whom 133 were sent to Hospitals for the Insane, 14 were sent to Darlinghurst or Parramatta Gaols for special observation, 259 were discharged as sane, either at the Police Courts or direct, 6 died, and 8 remained at the close of the year.

The majority of the cases discharged as sane were cases of *delirium tremens* or acute alcoholic insanity.

In the cases sent on to hospital the gaol was only used as a temporary refuge, and in only exceptional cases did the length of residence exceed fourteen days.

APPENDIX A.

The Medical Superintendent, Hospital for the Insane, Gladesville, to The Inspector-General of the Insane.

Sir,

Hospital for the Insane, Gladesville, 18 March, 1891.

I have the honor to forward for your information a report on this Hospital for the year 1890, together with the usual statistical tables.

At the beginning of the year there were 795 patients in the Hospital. During the year 225 (152 men and 73 women) were admitted. The whole number under treatment was 1,020, and the average number resident 771. There were discharged 186, of whom 92 had recovered, 10 were relieved, 36 were transferred to other Hospitals, 2 escaped, and 46 died. There remained at the close of the year 533 men and 301 women, a total of 834.

The number of admissions shows an increase of 34 on that of the previous year. Of these 60 were on the request of friends. This mode of admission, avoiding as it does the publicity of the police court, is much appreciated by both patients and their friends, and each year more advantage is being taken of it. It would be even more largely used were it not that in the case of country patients the expense of removal to Hospital is often greater than the relatives can bear, and for this reason they are compelled to call in the assistance of the police. When, however, it is used the patient on recovery is often grateful for the privacy conceded him.

The proportion of those discharged, recovered, to the admissions (42 per cent.) though considerably less than that for the past five years, is still satisfactory. The high recovery rate of these years was due (as pointed out in previous reports) to the sudden diminution in the number of admissions on the opening of the new hospital at Callan Park in 1885. For the five years immediately preceding that event the average number of admissions was 320, for the same period subsequent to it 177, or not much more than half. And since by far the larger number of recoveries occur early in the disease, it followed that for a year or two recoveries from a large admission rate were calculated on a much smaller one, giving a high ratio. That this was so is plain from an examination of the percentage of recoveries for the five years during which the admissions were 320, with the years in which they averaged 177, the former being 43·3 per cent., and the latter 59·8 per cent.

The health of the Hospital during the year has been good. The death-rate—just under 6 per cent.—is lower than it has been since 1873, the average rate for the previous ten years being 7·76. There have been no cases of epidemic or infectious diseases, excepting a single one of typhoid fever, and but few accidents. These comprised a dislocation of the thumb, a fracture of the clavicle, and two fractures of the neck of the femur in old people. There were also, however, three cases of accidental drowning and one of suicide by hanging. In all of these a special report was sent to you, and in the fatal cases an inquiry was held by the District Coroner, in each a verdict being returned absolving the Hospital from blame. In twenty-one of the forty-six deaths *post-mortem* examinations were made.

The daily average number of patients during the year was 771, an excess of eighty over the accommodation provided by the buildings. The consequent overcrowded state of the wards caused considerable inconvenience and discomfort to the patients, and interfered materially with good management. More especially was this felt on the female side of the house and it is hoped that relief may soon be had by extension of the buildings here or in other Hospitals. A new wing for women, similar to that now being erected on the male side, although it would tend to make the Hospital rather large and unwieldy, in other respects would be a decided boon. At present the proportion of women to men is so small (the women forming only one-third of the whole) that the work which falls to them in the laundry and sewing-room is almost more than they can overtake. A new ward, by increasing the number of women, would reduce this disparity, and, besides relieving the overcrowding, would make the purely women's work less arduous.

The ordinary work of the Hospital has gone on much as usual. The proportion of patients engaged in useful work has not diminished, and, in addition, occupation under the guidance of special attendants, has been found for the more acutely insane, and for the recent admissions—a class always difficult to provide for, as they require very careful watching and special treatment, and from their short residence the attendants have not had an opportunity of learning all their impulses or peculiarities. Work, too, has been found for those patients on both sides of the house, who cannot be trusted out of the wards on account of their violent or dangerous proclivities. In both these classes of cases an immediate good has resulted in increased quietness and order in the respective wards, and in the case of the curable cases in the hastening of their progress towards recovery.

The

The operations on the farm have been extended, an increased area of land brought under cultivation, and more cows added to those already possessed. The number of patients resident at the "Priory," and engaged in the work of the farm, is now thirty-eight. These patients—selected mainly from the class of the quiet and harmless chronic insane—live in a condition more nearly resembling that of the home than is possible in the main institution, and it is evident that they appreciate and enjoy the privilege. The erection of a new fowl-house and yard has been commenced, and the pig-sties and cow-houses have been enlarged. The most urgent requirement now is the placing of a cottage near the farm buildings for the attendant in charge, with accommodation for about ten patients. The farm buildings are so far distant from the Hospital that much time is lost in going to and from work, and the cottage is therefore desirable, so that the patients who are engaged in tending the cows, pigs, and poultry, may live near their work, their meals being cooked in the cottage, or sent from the Hospital kitchen. A design for this cottage has already been drawn, and a site selected, and it now only awaits the necessary funds to allow of the work being gone on with.

I have, on behalf of the Hospital, to tender thanks to those who kindly gave entertainments, concerts, and theatrical performances, viz.:—The Government Printing Office Dramatic and Musical Society, the Lotus Club, the Young Australian Band, the band from the S.S. "Ormuz," the Coldstream Band, the Newtown Band, the Young Australian Minstrels, the Petersham Social Glee Club, the members of the Sydney Y.M.C.A. Gymnasium, Mr. Clibborn and friends, Rev. S. Wilkinson and friends.

The following donations have been received, and I take this opportunity of thanking the donors for their gifts:—Illustrated papers, music and books, for the Hospital Library, from Dr. Manning, Miss Walker, of Yaralla, Mrs. Salter, Mr. E. O. Smith, Mr. Morris Moss, Mrs. Moreton; three Californian quail from Mr. J. F. Hoare; four cases of fruit from the "fruit-growers," through Rev. S. Wilkinson; pipes from Mr. Pearson and Mr. Justice Manning; £5 5s. from the Sydney Rowing Club; £15 15s. from Mrs. Salter to defray the expenses of a picnic; £1 11s. 6d. from Dr. Ross; £2 2s. from Mr. Betts; £1 1s. from the Zingari Cricket Club; 10s. from Mrs. Rooke; 10s. from Mr. Neil Matterson. The proprietors of the *Illustrated Sydney News* very kindly sent large parcels of their special issues.

The proprietors of the following newspapers:—*Bathurst Free Press*, *Bathurst Daily Times*, *Burrangong Argus*, *Deniliquin Chronicle*, *Dubbo Despatch*, *Goulburn Herald*, *Illawarra Mercury*, *Kiama Independent*, *Maitland Mercury*, *Monaro Mercury*, *Queanbeyan Age*, *St. Leonards Recorder*, *Wagga Wagga Express*, *Western Post*, *Weekly Advocate*, *Yass Courier*, *Sydney Daily Telegraph* have generously forwarded a copy of each issue free during the year.

To the officers and staff I beg to tender my hearty thanks for the willing and efficient assistance they have rendered me during the year.

I have, &c.,
ERIC SINCLAIR,
Medical Superintendent.

TABLE 1.

APPENDIX B

The Medical Superintendent, Hospital for the Insane, Parramatta, to The Inspector-General of the Insane.

Sir,

Hospital for the Insane, Parramatta, 20 March, 1891

I do myself the honour to forward herewith a report upon this Hospital for the year 1890, with the usual statistical tables for the same period

By reference to them it will be seen that there were 1,002 patients in the Hospital on the 31st of December, 1889, that during the year 97 were admitted for the first time, 4 readmitted, and 45 transferred from other institutions, making a total of 146 (86 men and 60 women) and raising the number of those under care during the year to 1,148 (759 men and 389 women). Of this number 25 men and 16 women were discharged recovered, one man was discharged relieved, one man and one woman were transferred to other Hospitals, and 39 men and 18 women died, leaving 693 men and 354 women, a total of 1,047, and an increase of 45 patients during the year.

The percentage of recoveries on the admissions and readmissions is 40.59, and the death-rate calculated on the average number resident is 5.68, which is lower than in the previous year.

The general health of the patients has, on the whole, remained good, no epidemic of any kind having made its appearance amongst them

There were three cases in which death occurred somewhat suddenly, and in each instance the District Coroner was communicated with, but did not consider an inquiry necessary.

The escapes have as usual been very few, and, with one exception, the patients were returned to the Hospital within a few hours of getting away.

The accidents have not been numerous nor of a serious character, except in the case of an old man who was pushed over by a fellow-patient and sustained an intra-capsular fracture of the neck of the femur, which was duly reported to you at the time of the occurrence

The industrial occupation of the patients has as usual received close attention, amusements have been continued as in former years, and the customary Sunday services have been regularly conducted. I am very glad to be in a position to report that the new hall has been used for Divine service, and although the building is not yet complete as to internal fittings, it will soon be sufficiently advanced to admit of all the usual entertainments being held in it.

The

The whole of the dormitories and out-buildings at the male weatherboard division have been covered with galvanized iron in the place of shingles; new floors have been laid, and the gardens and recreation ground remodelled under the well directed supervision of the senior attendant in charge.

The present arrangement under which this division of the Hospital is divided into two wards, each under the care of an attendant-in-charge, has not proved satisfactory; and I would submit the advisability of placing it in charge of one attendant, whose position might be made more responsible and his salary increased. In this way there would be no division of trust, and the attendant-in-charge would be held responsible for the general condition of the wards and the care of the patients therein.

During the year great alterations have taken place in the Hospital buildings, the old Hospital ward and other buildings at the west of the institution having been demolished, and others of a more modern and cheerful description erected. Some of the new buildings are already occupied by patients, who appreciate the change from the gloomy imprisonment of four walls to the bright and cheerful view across the river and the park now obtainable.

I have been unable to recommence the work of building a new dam, to take the place of the one washed away during the great floods in May of 1889; and this for several reasons, the principal being the difficulty of obtaining stone in blocks of sufficient size for work which must be of a strong and substantial character. This dam, by throwing back the river-water, would form an artificial lake, and add in a wonderful degree to the cheerfulness and beauty of the view obtainable as well from the park opposite as the institution.

I again wish to point out the great need of more land for cultivation and grazing purposes. The present area is much too small, and nothing like the quantity of milk or farm produce required can be obtained from it.

The kitchen in the main division of the Hospital is now the only portion of the original buildings left, and is in a very dilapidated and unsatisfactory condition. The building itself is inconvenient and inadequate to the growing requirements of the place, and the appliances of an obsolete and primitive description. A new kitchen should be built and the fittings replaced with others fulfilling the more modern requirements.

Several changes occurred during the year in the *personnel* of the officers and staff generally. Dr. Russell succeeded Dr. Taylor as senior medical officer on the appointment of the latter to the medical charge of the Public Works Prison at Trial Bay, and was succeeded by Dr. J. M. Scott as junior medical officer. To both of these officers, as well as to Mr. Colley and the other officers and members of the staff generally, my thanks are due for the valuable and efficient aid so willingly accorded during the last twelve months.

I have, &c.,
EDWIN GODSON,
Medical Superintendent.

APPENDIX C.

The Medical Superintendent, Hospital for the Insane, Callan Park, to The Inspector-General of the Insane.

Sir,

Hospital for the Insane, Callan Park, 12 March, 1891.

I do myself the honor to submit for your information a report on this Hospital for the year 1890, together with the usual statistical tables.

On the 31st December, 1889, there were in the Hospital 772 patients (453 males and 319 females). During the year 237 patients were admitted for the first time (135 males and 102 females); 15 were readmitted (7 males and 8 females), and 7 were transferred from other Hospitals, making a total of 1,031 under care during the year composed of 600 males and 431 female patients. The average number resident during the year was 785 (463 males and 322 females).

During the year 101 (45 males and 56 females) patients were discharged as recovered, 16, as relieved, 24 were transferred to other Hospitals, and 68 died, leaving under care on the 31st December, 820 (485 males and 335 females).

The percentage of recoveries on the admissions and readmissions was 40·07, and of deaths on the average number resident, 8·66, both being somewhat lower than those for the previous year.

The number of admissions was greater than in 1889, but there was a decrease in the number of general paralytics admitted, the percentage being 8·01 as against 9·90.

The general health of the patients has been good, and the year has passed without a single case of typhoid fever being recorded as occurring among either the patients or their attendants. A reference to Table IV shows that the largest number of deaths was due to cerebral disease, no less than 18 (17 males and 1 female) being due to general paralysis. Several minor accidents happened during the year, and I regret to say two cases of suicide, full reports of which were forwarded to you at the time. In a large Hospital of this character a certain number of casualties are almost sure to occur, but this is the first time I have had to record death from suicide.

Of

Of the escapes which numbered 15 all were retaken with the exception of 2 women. One of these was convalescent, and would have soon been discharged in the ordinary course, and the other was a quiet, industrious, chronic patient. It has since been ascertained that they both obtained situations, and were doing well.

Nine patients were received during the year direct from shipboard, or immediately after arrival in the Colony, and 2 had only been in the Colony a few weeks. Of the latter, one had been granted leave of absence from a Victorian Hospital, and was at the time of her relapse staying with some relatives in this Colony. Her term of leave having expired, a passage was taken for her to Melbourne, so that she could present herself at the Hospital, but she was not allowed to land, and the captain of the vessel was obliged to bring her back to Sydney, and she was eventually admitted into this Hospital.

The cottages for paying and better class male patients have been fully occupied, and have worked satisfactorily, being comfortable and homelike. Some difficulty, however, is experienced in inducing the patients to occupy themselves usefully, as they do not appear to realize the beneficial effects of work, and some consider that as they are paying full rates for maintenance, they should not be asked to occupy themselves. One of the buildings—the old mansion—is very old, and in constant need of minor repairs. A large part of the flooring on the ground floor will soon have to be renewed, and, owing to damp walls, the papering does not last as long as it should. The old weatherboard building, set apart for quiet chronic patients, is also much out of repair; the verandah roof leaks badly in wet weather, and the lining boards and rafters require renewing. When this work is carried out I would suggest that the roof should be of galvanized iron instead of tiles. This building was erected as a temporary hospital, and has well served its purpose, but if it is to be retained as a permanency some necessary repairs and alterations should be carried out.

The flower-beds in all the wards have been well kept by the attendants and patients in both divisions of the Hospital, the patients seldom interfering with the flowers or with birds and other tame pets.

The water which has been drawn from the Sydney Water Supply has been ample and good, but, under instructions from the Water Supply and Sewerage Board, it became necessary during the year to affix a water-meter to the main. The registered consumption was found to be excessive. The main and branches were tested, but found to be intact, and every effort was then made to reduce the quantity used, with some measure of success, as it fell in a short time from 70 to 50 gallons a head daily.

New hot water pipes have been fixed; the old cast-iron ones, which were always "pitting" and leaking, being replaced by copper tubes, which delivers the water to the baths in a much cleaner state than the iron ones did.

The Turkish bath has at last been fitted up and completed, and is working satisfactorily. Already several of the patients have derived much benefit from this useful adjunct to medical treatment.

A swimming bath, which could easily be arranged on the extensive water frontage to the Hospital, grounds, is still much needed, both on sanitary grounds and as affording exercise and recreation.

A large amount of outdoor work has again been carried out in the garden and grounds; the reclaimed land at the garden has been cropped, and the yield has been satisfactory, owing principally to the mixture of a large quantity of ashes with the heavy silt, which considerably lightened the soil, and to an abundant rainfall.

A great deal of heavy work has been caused, owing to leaks from drains being found in various parts of the female division. These had to be searched for, and were often difficult to trace, rendering it frequently necessary to cut up the paths, flower-beds, &c., and often to relay the pipes.

Divine services have been held regularly by the Church of England and Roman Catholic Chaplains, and I have again to thank them for their ever-ready and willing assistance when called on. Mr. Fred, Russell has again earned our best thanks for his regular attendance at the harmonium during the Church of England services.

Trips in the launch, picnics, cricket, tennis, bowls, quoits, &c., have as usual formed the staple out-door amusements, and the winter dances, together with various entertainments, have formed the chief indoor attractions. The great treat of the year was a fancy dress ball, which was eagerly looked forward to by the patients several weeks before it came off, during which time many were occupied in making their dresses, &c. This ball was much enjoyed, and fully 150 patients were present in fancy costume. I have to thank the Assistant Superintendent and others for their assistance in helping to carry out this and other amusements in a pleasant manner.

I have also to thank Mr. Charles Huenerbein, Mr. Walshe, Miss Colborne Baber, and many others, for their kindness in assisting at concerts and entertainments.

Thanks are also due to the various city and suburban bands for their services on several Saturday afternoons.

I have to acknowledge with thanks the following donations to the Hospital:—Dr. Manning, £2; Mrs. Morton and the Proprietors of *Sydney Illustrated News*, periodicals, and illustrated papers; Mr. F. H. Blaxland, 3 wallabies; Mr. A. Betts, a young kangaroo; Mr. J. Reynolds, a peacock; Rev. S. Wilkinson, fruit; and Miss Gall, 2/6.

To the officers and staff I have once more to tender my thanks for their cordial co-operation and assistance.

I have, &c.,
HERBERT BLAXLAND,
Medical Superintendent.

APPENDIX D.

The Medical Superintendent, Hospital for the Insane, Newcastle, to The Inspector-General of the Insane.

Sir, Lunacy Department, Hospital for the Insane, Newcastle, 13 March, 1891.

I do myself the honor to submit for your information a report upon this Hospital for the year 1890.

On December 31st, 1889, there were 245 patients in the Hospital, of whom 133 were males and 112 females. During the year there were admitted for the first times 7 males and 5 females—a total of 12; and 10 patients, of whom 8 were males and 2 females, were transferred from other Hospitals for the Insane, making a total number under care of 267. The average number resident during the year was 248, of whom 136 were males and 112 females. There were discharged 1 male patient recovered, and 1 male relieved; 1 male and 1 female were transferred to other institutions, while 8 males and 5 females (a total of 13) died. There remained at the close of the year 137 males and 113 females, a total of 250.

The death-rate was lower than for some years past, being 5·24 per cent., against 7·53 per cent. in 1889. The health of the patients has been exceptionally good, and no epidemic of any kind made its appearance. The accidents during the year were few, considering the large number of epileptic patients who are always liable to falls and injuries. One male fractured the right ulna, and two female patients sustained fractures of the femur. In all cases a special report was forwarded to you at the time of the occurrence.

A number of improvements have been carried out during the year, all tending to the increased comfort of the patients and the embellishment of the Hospital. The cooking apparatus in the kitchen, which was worn out and inefficient, has been, under the direction of the Government Architect, replaced by a new range and steaming pans. These are working satisfactorily, and to such improved means of cooking and the more varied and liberal dietary scale lately authorized the excellent health of the patients is largely due. The floor of the kitchen has been tiled, and the appearance of this department is now very creditable. There is at times a difficulty in obtaining proper draught in the boiler, due to the present chimney being too small for the purpose. This structure was formerly built for the kitchen only, and, now that it has to serve for the boilers and hot water supply as well, its capacity is found to be insufficient. I would recommend that an additional chimney be built to serve the boilers, and that, if possible, the heat from the furnaces be made to pass through the laundry drying room, the temperature of which might thus be raised considerably.

The inner walls of the dormitories in the male division, as also the dining-room for the female patients, have been cemented, and, as a result, are much improved in appearance. The store buildings have been considerably enlarged and made more suited for their purpose, and the carpenters' shop has been removed to the skittle-shed, where there is abundance of room and light. A 5-ton weighbridge has also been supplied, upon which all stores, coal, &c., can be accurately weighed, and the surrounding yard has been remade and asphalted. The new mortuary was completed early in the year, and new sheds have been put up where the old stores and rags can be allowed to accumulate before being sent away.

No steps have as yet been taken towards carrying out the suggestion of the Superintendent of Fire Brigades in Sydney in laying down a watermain with proper connections in front of the Hospital. The recreation paddock has been enlarged by the removal of the sheds formerly used for a piggery. The old quarry has been much altered and improved by portion of it being formed into a terrace and turfed over. A new road has been made to the Superintendent's quarters, and the pond in the quarry has been fenced off. The old cell-yard, formerly used when the Hospital was an Imperial barrack, has been completely altered by the removal of the cells and the formation of an open shed.

A separate day and dining room for the younger patients in the male division is much needed. These little boys should not be allowed to associate with the men, whose actions and habits they imitate. A site could readily be found for a suitable building close to their present ward, and by such an arrangement complete separation could be carried out with very great advantage.

The buildings generally have been kept in good repair, and a great deal of painting, as well as minor improvements, have been carried out by the members of the Hospital staff and patients. Pictures in great number have been provided to brighten the day and sleeping rooms throughout the institution, and the gardens and flower-beds have been extended wherever possible. Those situated in the wards have always been among the best cared for, and have been a source of pleasure and interest, as well as of occupation, to the patients by whom they are tended. Creeping vines have been planted on all bare walls, and so far the growth has been excellent. The abundant rainfall has tended to a good yield of vegetables from the kitchen garden, where the most has been made of the limited area of ground. During the year the special training of the nurses was commenced. They were instructed by lectures, supplemented by practical work, in ordinary medical and surgical nursing, as well as in the more special duties connected with the care of the insane, and more particularly the class of patients to be found in this institution. At the conclusion of this course of training, Dr. Chisholm Ross, of the Gladesville Hospital, kindly undertook their examination, and reported very favourably of the progress that had been made. There can be no doubt as to the great advantage such training has been to the nurses, as well as to the patients under their care.

Some preliminary steps have been taken in the training of the patients, and more especially in the matter of drill and other simple exercises. Several have been taught to spell and read, and singing classes have been held regularly for church practice. A proper system of training cannot be established in the absence of a suitable hall and class-rooms, but tenders have recently been invited by the Government Architect for these, and it is expected they will be completed within a few months.

The number of patients usefully occupied is now over 70 per cent., and every reasonable effort is made to employ those physically capable in some kind of occupation suited to their individual capacity. As a large number are epileptic, with whom special care and precautions are necessary, the high percentage of those employed must be considered satisfactory. I append tables showing the ages of all the epileptic patients, and the supposed causes of their disease.

TABLE 1.
SHOWING the ages of all Epileptic Patients in Hospital.

Up to 10 years.		10 to 15.		15 to 20.		20 to 30.		30 to 40.		40 to 50.		50 to 60.		60 to 70.		Total.

	37	37

* The term developmental is used to indicate that epilepsy made its appearance during growth, and without their being any specially assigned cause

The present condition of the wall and fence forming the boundary to Newcomen-street is still in a most unsatisfactory state, the wall being to a considerable extent below the level of the newly-widened street. The Newcastle Council have had plans drawn up, and accepted a tender to raise this wall where security for their street requires to such height as they think proper. Upon this they propose to place a picket fence as protection to the traffic, a footpath being placed alongside. As soon as I was aware of the intention of the Council to interfere with this wall (which is the property of the Government) I immediately communicated with you as to the legality of such proceeding, pointing out at the same time the very objectionable overlooking of the Hospital grounds and patients which would inevitably result therefrom. As it is now this inspection by any one passing on the street has become a positive scandal, it being impossible to prevent the patients—many of whom are paralysed, deformed, peculiar in their actions and faulty in their habits—from being watched and commented upon. In addition to this the manner in which Newcomen-street is being widened by the Council is such as to cause grave doubts upon the stability of the Hospital boundary-wall, now it is being made to bear some of, if not most of, the pressure of the material used in constructing the street. This is, of course, a question of engineering, but of the absolute necessity for some substantial protection from overlooking there can be no doubt, and a picket fence is quite insufficient. The Council have, upon my representation that the whole question was now under the consideration of the proper authorities, temporarily suspended operations, and it is earnestly to be hoped a satisfactory and early settlement of the entire question may be come to. The amusement of the patients has been attended to, and I hope for considerable expansion in this direction as soon as the recreation hall is built. The walking parties on the Hill Reserve have been continued, as well as the Saturday afternoon drives, cricket, &c.; and on each Monday evening the more advanced of the boys have had a concert in which they participate to their extreme satisfaction.

Appended are tables giving the main statistics of the Hospital. The position of matron was filled in December, by the appointment of Mrs. M. A. Watson. I would return my thanks to the staff of the Hospital generally for their assistance and co-operation during the year.

I have, &c.,

W. COTTER WILLIAMSON,
Medical Superintendent.

APPENDIX E.

The Medical Superintendent, Hospital for the Criminal Insane, Parramatta, to The Inspector-General of the Insane.

Sir, Hospital for the Criminal Insane, Parramatta, 12 March, 1891.

I do myself the honor to forward herewith a report upon this Hospital for the year 1890, together with the usual statistical tables.

The number of patients remaining in the Hospital on the 31st of December, 1889, was 51 (42 males and 9 females). During the year 9 males and 2 females were admitted, making the total under care and treatment 62 (51 males and 11 females). Of these 3 men were discharged recovered; 2 men and 2 women were transferred to the free division of the Hospital, and 1 man died, leaving a total of 54 (45 men and 9 women) in the Hospital on the 31st of December, 1890.

Reference to the appended tables will show the percentage of recoveries, mortality, &c.; also a classification of crimes, and the periods at which insanity was recognised.

The patients have been remarkably free from sickness, and in the one instance in which death occurred the man was nearly 80 years of age.

There has been very little noise or excitement among the patients; seclusion has been rarely necessary; and restraint has been practically unused. Whilst a few are fretful and anxious for discharge, the majority are even more contented and cheerful than could be expected considering their position.

Towards this desirable condition constant occupation has been the great aid. The cultivation of a large patch of garden ground and the sawing and splitting of wood, both carried out in the large enclosed area specially set apart for this class of patients, the teasing of horse-hair and coir for mattresses, and the necessary cleaning and ward service carried out in the ward itself have been the main forms of occupation, though individual patients have been employed as carpenters, painters, upholsterers, and tailors under the artisans of the Hospital.

The small seclusion yard mentioned in my previous reports still remains unused, and I would again venture to strongly urge the necessity of carrying out my suggestion of converting it into a small associated dormitory, in which anyone in this division attacked by acute physical disease could be treated with greater facility than is at present possible.

Three patients were transferred to the Hospital for Insane on expiration of their sentences and one under section 61 of the Lunacy Act.

The following tables show the main statistics of the Hospital.

I have, &c.,
EDWIN GODSON,
Medical Superintendent.

1891.

(SECOND SESSION.)

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR ADDITIONS TO THE SHAFTESBURY REFORMATORY AT SOUTH HEAD PARISH OF ALEXANDRIA, COUNTY OF CUMBERLAND.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37.

NOTIFICATION OF RESUMPTION OF LAND UNDER THE "PUBLIC WORKS ACT OF 1888," 51 VICTORIA No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable VICTOR ALBERT
GEORGE, EARL OF JERSEY, a Member
(L.S.) } of Her Majesty's Most Honourable
Privy Council, Knight Grand Cross
of the Most Distinguished Order of
JERSEY, } Saint Michael and Saint George,
Governor. } Governor and Commander-in-Chief of
the Colony of New South Wales and
its Dependencies.

WHEREAS the Minister for Public Works of the said Colony is desirous of acquiring the land described in the Schedule at the foot hereof for the purpose of a certain Public Work, that is to say, additions to the Shaftesbury Reformatory at South Head, in the said Colony: And whereas it is estimated that the cost of completing such work will not exceed the sum of twenty thousand pounds: And whereas the land described in the said Schedule is, in my opinion, required for carrying out the said work: Now, therefore, I, VICTOR ALBERT GEORGE, EARL OF JERSEY, the Governor aforesaid, with the advice of the Executive Council, in pursuance of the "Public Works Act of 1888," do hereby direct that the said work shall be carried out under the "Public Works Act of 1888," by the Minister for Public Works aforesaid, who, in respect of the said work shall be deemed to be the Constructing Authority; and in further pursuance of the said Act, I do hereby direct that the land described in the Schedule hereto shall be acquired and taken for the purpose aforesaid under the "Lands for Public Purposes Acquisition Act": And I do declare by this notification, to be published in the Government Gazette and in one or more newspapers published or circulated in the Police District wherein is situated the said land, that the said land described in the said Schedule has been resumed for the public purpose hereinbefore expressed, that is to say, the erection of additions

to the Shaftesbury Reformatory at South Head, to the intent that upon the publication of this notification in the Gazette, the said land described in the said Schedule hereto shall forthwith be vested in the said Constructing Authority on behalf of Her Majesty, for the purposes of the said Public Works Act of 1888, for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent, that the legal estate therein, together with all powers incident thereto or conferred by that Act, shall be vested in such authority as a trustee: And I do declare that the following is the Schedule of land hereinbefore referred to:—

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing at the south-east corner of allotment 26 of the subdivision of part of the Vacluse Estate; and bounded on the west by the eastern boundary of that allotment bearing northerly to the New South Head Road; thence on the north-west by part of the south-eastern side of that road bearing north-easterly to its intersection with the north-eastern boundary of the Vacluse Road; thence on the east by that side of that road, being the western boundary of allotment 27, bearing southerly to a point in line with the southern boundary of allotment 26 before mentioned; and on the south by a line westerly, to the point of commencement,—containing 1 rood and 14 perches or thereabouts, and said to be in the possession of the trustee for the Wentworth Estate.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-seventh day of May, in the year of our Lord one thousand eight hundred and ninety-one, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

1891.

NEW SOUTH WALES.

STATE CHILDREN'S RELIEF DEPARTMENT.

R E P O R T

OF THE

PRESIDENT, THE HON. ARTHUR RENWICK, M.L.C.,
B.A., M.D., F.R.C.S.,E., &c., &c.,

FOR THE

YEAR ENDING 5 APRIL, 1891.

Presented to Parliament, in accordance with the provisions of Act 44 Vic. No. 24

SYDNEY: GEORGE STEPHEN CHAPMAN ACTING GOVERNMENT PRINTER

1891.

[1s. 3d.]

110—A

[1,303 copies—Approximate Cost of Printing (labour and material), £23 1s. 6d.]

State Children's Relief Department,
Central Home, Paddington,
5 April, 1891.

The President of the State Children's Relief Board to The Honorable
The Colonial Secretary.

Sir,

I have the honor, in accordance with the provisions of section 12 of Act 44 Vic. No. 24, to present for the information of Parliament my tenth Annual Report as President of the State Children's Relief Board, containing a history of the operations of that Department of the Charitable Institutions of New South Wales during the year ended April 5, 1891. It is to me a source of gratification that I am again in a position to state that the records of the year are fully as satisfactory as those of any previous period, with regard to both the social and economical results secured by the boarding-out system in this Colony. The lapse of a decade, since its initiation in 1881, has permitted the home method of training our dependent children to be fully tested. In its gradual process of superseding the system which previously existed, it has been exposed to the fullest inquiry and investigation possible, frequently by unfriendly critics; indeed, throughout my annual reports, since its inception, my purpose has been to invite criticism from experts in the management of Charitable Institutions for the young in this and the neighbouring Colonies. The results of their investigations, which have been published from time to time, have fully tended to confirm the opinion which I placed on record officially, as President, in 1881, that in adopting the present policy of dealing with State Children, Parliament had made a wise and beneficent provision; and that its development, must, under proper conditions of management, satisfactorily solve a problem which for very many years had caused considerable anxiety to reformers in this particular Department of social science.

Four years have passed since I thought it necessary to explain the principles or details of the boarding-out system in my Annual Reports. They are now, I believe, thoroughly understood throughout the country, in almost every important district of which the system has taken root; and I do not intend to refer to them further than to say that the advantages of family life for the orphaned and destitute children of the Colony, as opposed to the unnatural method of training them in large institutions, have now become so generally admitted, that the successful results realised in New South Wales have been cited in other countries where the new system is yet in its infancy, and where for want of experience of its possibilities it is naturally regarded with some degree of disfavour and suspicion by committees and officials who, hitherto, have only dealt with the older methods of providing for the children of the State. Several of the English, Scottish, and notably the American Reports, show this to be the case; but there is no instance of boarding-out having failed, except where it has been tried under conditions which made success impossible; as, for example, in a poor English Union, practically without supervision, or when homes have been chosen indiscriminately, and left without subsequent inspection. In three of the Colonies (New South Wales, Victoria, and South Australia) the national policy of dealing with dependent children is uniform, and the record of results is the same; in Queensland and New Zealand it has been partially adopted with very great success; and I am informed that, during the present year, West Australia will probably follow the example of the other colonies in this matter.

In

In former reports I have suggested legislation for the more efficient management of State children generally, particularly with regard to placing them all under the control of one agency, but also with reference to several classes of friendless children who are not provided for under any existing law. I regret to say that no step in the direction indicated has yet been taken; and it is perhaps not probable that there will be, in view of the matters of vital State policy which must engage the attention of Parliament for some time to come. In my report for 1883 I presented the outlines of a comprehensive measure for governing all the institutions for the young maintained at the Government cost in this Colony, and I venture to express the opinion that if they were embodied in such a Bill as I then outlined there would be no opposition to it in either branch of the legislature. In this Colony the institutions for State children are controlled by three distinct departments, namely: The boarded-out children by the State Children's Relief Board, subject to the direction of the Colonial Secretary; the Girls Reformatory, by the Minister of Justice; and the Industrial Schools (which are practically penal establishments), by the Minister of Public Instruction. The disadvantages of this state of things are too obvious to need particularising, and I have already pointed them out year after year. In Victoria, South Australia, and elsewhere, all the children of the State are under the control of a single organisation; and I feel sure that the highest measure of success will not be attained among all classes of dependent children in New South Wales until the same system is adopted here.

Legislation is necessary at once, however, in one or two most important particulars. The want of a reformatory for boys has been as much felt as usual during the past year; and without such an institution the Board's operations will never be perfectly successful, neither will the requirements of a certain class of boys be fully met. I have so often ventilated this subject in my annual reports that it is unnecessary to go fully into particulars here; but it will not be out of place to point out that no new law is required to admit of such an institution being established at once. I have always protested against the use of the Rookwood buildings, because I know them to be quite unsuitable for a reformatory, and so constructed that any attempt to use them for that purpose would probably result in failure. It is certain, however, that something should be done without further delay to provide for young criminals whose only refuge at present, if they are dealt with according to the letter of the law, is the gaol, under a system which is both inhuman and calculated to destroy its own object. A number of isolated cells are set apart at Darlinghurst gaol for the reception of lads convicted of first offences, and they are here strictly kept from human companionship for specified periods—in certain cases as long as six months. The effect of such a method of treatment can only be either to seriously affect a boy mentally, or to confirm him in criminal tendencies. I know the judges regard it with abhorrence. Recently a lad, sixteen years of age, whose previous record was altogether a good one, was led under extenuating circumstances into the committal of a criminal assault. He pleaded guilty, and the presiding judge rather than permit him to undergo the gaol system, discharged him under certain conditions to this Department. On the same day a lad twelve years of age was convicted of breaking into a house at the Glebe with other boys, and stealing therefrom. He was brought before the same judge and similarly dealt with. Both lads have since done thoroughly well. What might have happened if they had been compelled to pass through the gaol taint is not difficult to understand. These are only typical cases; and it is, in my opinion, positively criminal to withhold all chance of reformation from the bulk of lads of this class who may have lapsed into crime for the first time. No expenditure should be considered too high which provides opportunities

opportunities for the conversion of such boys into good citizens; and I venture once again to express the hope, which is becoming faint indeed, that before my next report some steps will have been taken to bring about the provision of such a refuge.

A law is required immediately having for its object the preservation of infant life, which can only be secured by making the most stringent criminal provisions for the prevention of baby-farming. Recent investigations at the Sydney Benevolent Asylum into the causes of infant mortality in the Metropolis have disclosed an almost incredible state of things, which I find from later English Parliamentary reports has its parallel in London and other great centres of population. It is certain, from cases which have come to the knowledge of the Benevolent Asylum authorities, that child-life is destroyed in Sydney in the most cruel and wholesale manner under a system which permits death to result gradually from cold and deliberate neglect; and although the presumptive evidence has been very strong in several cases dealt with by the police during the past year, the difficulty of obtaining proof sufficient to justify conviction has been too great to be overcome; and this must continue to be the case while the law permits unrestricted baby-farming. As far back as 1883 I suggested a remedy which would, if adopted, have largely prevented this evil; and last year a "Bill for the Protection of Infant Life" was introduced into the British House of Commons which embodied this suggestion in the form of a distinct provision. This Bill was referred to a Select Committee, and, although it is of later date than the Benevolent Society's investigations, the evidence shows that almost the same remedies were recommended by the English and Colonial authorities. The matter has been so fully discussed in the public press and official reports during the past few months that it is unnecessary to refer to it further here; but it is one of such importance to the community, socially and morally, that immediate action should be taken with regard to it.

Finally, legislation is needed for a class of children who are at present not under the operation of any law, but who need protection as much as any others in the community. They are the offspring of idle and dissolute parents, and they nominally have homes which are in most instances mere drinking dens, and too frequently something worse. These little ones are the half-clad slatternly children who can any day be seen in numbers shoeless and unkempt in the lanes and alleys of the city, and who are almost certain, if they are left untouched, to eventually swell the criminal population of the country. Legislation is required for them as much as for the children who are sent to Industrial Schools or Reformatories. A Society for the Prevention of Cruelty to Children has, I am glad to say, been brought into existence in this city; but its operations can never be properly effective, and they may be not only useless, but officious and calculated to defeat their own high purpose until they receive the stamp of a carefully considered law. The home life of the children I refer to is simply a blot upon our civilisation; they are the victims of unkindness and neglect of the worst form; and unless absolute proof is afforded that they are cruelly beaten, the police or any other agency cannot interfere to rescue them from the streets. I trust that time will be found early in the coming Session of Parliament to deal with these one or two measures of social reform, the necessity for which is so apparent that they are not likely to meet with opposition. I am aware that there is a certain class of politicians who hold that it is unwise to pass legislation which may, in however indirect a manner, interfere with the liberty of the subject. To all such I would say that much more has been done in other departments of social science than the matters I have suggested, and further, that it is, in my opinion, the bounden duty of the State to interfere, when the subjects of legislation are too weak or too unprotected to protect their own interests. The

The records of the Department show that, up to April 5, 1891, 3,910 children have been removed from the public institutions and boarded out in this Colony. 1,541 of this number have been discharged to their parents or in other ways; and the number of children under care of the Board at the date of this report is consequently 2,369.

The following table shows the annual rate of numerical progression since the year 1881:—

* This total includes 5 children in Hospital, 116 in Cottage Homes, 2 children in Dépôt, 4 children under 3 years paid for at 7s. per week, 9 delicate children at 6s. per week, 1 delicate child at 7s. per week, and 19 infants paid for at 10s. per week.

† This total includes 18 children who are classed as "Boarders without subsidy," that is, placed with guardians who, as in the case of adopted children, do not receive payment for maintenance.

‡ This total includes 6 Orphan School children, 27 absconders, whose name still appears upon the books, and 3 children classed as unofficial.

This table has been published during the past three years for the purpose of showing at a glance the increase or decrease in the various divisions; and the feature which has hitherto marked it is again prominent this year. One of the objections raised to the boarding-out system was that it would largely increase the number of children chargeable upon the State, in consequence of the more comfortable provision which it made for them, and the facilities which, it was alleged, it afforded for imposition. A glance at the table should be sufficient to dispel any belief of that kind. The increase among the children supported by the Government has, during the past four years, since the large institutions were abolished, been altogether below the usual proportion to the increment of the general population. For example, the number paid for in 1887 was 1,214; in 1888 it had only increased by 64; in 1889, by 63; in 1890, by 7; and last year the increase was 26; and this trifling increase on the figures of the previous year arose in consequence of the Department having taken charge of 19 foundlings who were previously maintained in the Benevolent Asylum, so that the numerical advance among the classes usually dealt with by the Board was really only 7. There were 494 children boarded out in 1890-91, or 94 more than in the preceding year, but the balance of the paid and unpaid divisions has been preserved by the number of children apprenticed and adopted without payment. This latter element does not exist in connection with any other agency for dealing with State children, and it might be largely extended if all the institutions were governed by the one Department. The increase among the apprentices last year was 60, and there was a decrease of 1 among the adopted children, in consequence of the difficulty of procuring suitable children for adoption—that is, little ones who were either orphans or not likely to be reclaimed.

On April 5, 1890, there were 1,380 boys and 904 girls (or a total of 2,284 children) under the care of the Board; 294 boys and 200 girls have since been boarded out; 12 boys and 5 girls have died during the year—the increase having arisen in consequence of the deaths among foundlings; 239 children (138 boys and 101 girls) were discharged to relatives; 5 boys were sent to the "Vernon," after
