APPENDIX M.

Description of the Steam-Engine Plant at the
Exposition.

(Adapted from one of the leading Chicago Daily Newspapers.)

THE exhibit of steam-engine plant in the Palace of Mechanic Art was of representative character, comprising no fewer than fifty-two boilers, furnishing steam to sixty-nine engines of thirty-two different makes, aggregating 26,500 horse-power, and requiring the care of a chief engineer, eight assistant engineers, 100 operating engineers, and 100 oilers.

Having such a great diversity of motors and appliances, the main power plant at the Fair could hardly be called a model of its kind. But it was representative, and that was exactly what it was intended to be. Every type of stationary engine to be found, and nearly every American engine builder of prominence was represented by from one to fourteen engines in operation, while two English types not common on this side of the Atlantic and three German engines helped to drive the machinery, and half a dozen Canadian engines were listed as a "dead" exhibit. The visitor could here gain a pretty clear idea of the latest practice in engine building. These engines offered a subject for study that, judging by the crowds constantly to be found in their vicinity, was found interesting.

Of the sixty-two American engines, thirty-four, or more than one half, were built in States lying in whole or in part east of the Alleghanies, Pennsylvania leading every other State with twenty-three engines. New York and New Jersey were each represented by five engines, and Rhode Island by two. Coming west of the Alleghanies, Ohio stood second in the list of engines with fourteen, then came Illinois with four, Indiana and Wisconsin each with three. California and Iowa each sent one engine.

As already stated, the aggregate indicated horse-power at the maximum of economy was 26,500 indicated horse-power, maximum load about 35,000. Big engines were largely in the majority. There was one of 2,000 horse-power. Engines of 1,000 horse-power were quite common at the World's Fair, there being no fewer than twelve of that capacity. Five more engines were rated between 500 and 1,000 horse-power, six between 350 and 500, and fourteen between 200 and 350. The smallest engine on the Chief Engineer's schedule was rated at 40 horse-power. It was of German build, and was driving line shafting in the German section.

If the engines at the Fair were to be considered as representing the latest tendency in engine building, it must be said that high speed compound engines are growing in favour. There were thirty-one compound engines running at or above 150 revolutions a minute. There were one quadruple expansion engine, six triple expansion, three double compound, thirty-nine compound, and nineteen simple engines. Thirty-eight of this number were condensing. One was speeded at 380 revolutions a minute, two at 350, one at 300, five between 250 and 300, sixteen between 200 and 250, twelve between 150 and 200, and seven between 100 and 150 revolutions. The others ran below 100 revolutions, one being speeded as low as fifty turns a minute. Thirteen were direct coupled, ten were connected with counter-shafts, and the others were direct belted.

The methods of the engine builder have undergone a constant change since Watt, a little over a century ago, introduced the present type. In Watt's day steam was used at a pressure of seven to ten pounds to the inch. Every engine had an air-pump and condenser, and was of small power in proportion to the size. They were so wasteful of heat and fuel that 6 to 8 lb. of coal per horse-power per hour were required. Then the evaporation of 1 cubic foot, or about 62 lb. of water per horse-power per hour, was the standard; the 2,000 horse-power engine at the World's Fair requires the evaporation of 11.8 lb. of water per horse-power per hour. The pressure carried nowadays is 100 to 180 lb. to the square inch. The safety-valves at the World's Fair were set at 125 lb. As the steam had to travel through pipes a considerable distance, the available pressure varied from 110 to 120 lb. This pressure was a little too high for some of the engines and too low for others, but perhaps about right for most of them.

The advances in electrical engineering during the last few years have made necessary new requirements in engine building. Innumerable devices have been placed on the market for securing close regulation and economy, some of them meritorious, others of little value. Should Edison succeed in his endeavours to convert heat into electrical energy without the intervention of boilers and engines, good, bad, and indifferent devices will be alike worthless, and the engine builder, like Othello, will find his occupation gone.

An endless controversy has been waged between the advocates of high speed and low speed engines. London *Engineering* is the authority for the statement that the practice of driving dynamos by belts is becoming obsolete in England and on the continent

continent. Prof. Thurston, one of the most eminent of American authorities, declares that "existing conditions compel us to drive the engine up to the highest safe speed and to adopt the highest practicable mean steam pressure." With the pressure of 7 lb. usual in Watt's time a piston speed equal in feet per minute to about 128 times the cube root of the length of stroke was the standard. In 1849, when Corliss brought out the modern drop cut-off engine, pressure of 60 lb. and a piston speed of 450 feet a minute were becoming usual; now a piston speed of about 800 times the cube root of the stroke is not uncommon. The high-speed men claim that by coupling the dynamo directly to the shaft of the engine from 2 to 10 per cent., or say an average of 5 per cent., in friction is saved. This in a large plant would amount to a considerable sum in the course of a year. The advantage of compactness and noiselessness is also claimed. It is further asserted that the first cost and renewals of belting is so much clear gain and that less oil is needed by absence of belt tension and that direct-coupled machines are more reliable than belted. A certain number of "lines of force" must be cut to generate an electric current. This can be accomplished either by a large dynamo at low speed or a small dynamo at high speed. The high-speed men say that there is less wear and tear in a big dynamo direct coupled, running at, say, 300 revolutions a minute, than in a smaller one belted running at 500 revolutions. On the other hand, the low-speed advocates say the saving in friction is offset by the high compression necessary in a fast-running engine; that the low-speed engine has a more effective cut-off and is therefore, more economical, and that an engine at eighty or ninety revolutions a minute will far out-last the high-speed machines. The visitor at Machinery Hall was afforded ample opportunity to compare all types. By making known that he was interested in the subject he was promptly and thoroughly convinced that not only is the low-speed engine greatly superior to the high-speed, but that the high-speed is immeasurably better than the low-speed.

Engines at the Fair might be loosely divided into two general classes—"releasing gear," or "drop cut-off," and "positive motion." The Corliss may be described as the type of releasing gear engines, changes in or modifications of the type being taken up further on. The Corliss engine has four valves, an induction valve for the admission of steam being placed transversely on the top of and at each end of the cylinder and exhaust valves below at each end for releasing the steam after the stroke has been made. On the centre of one side of the cylinder is placed a stud on which is a disc called a wrist-plate, which is oscillated by the eccentric through a rocker and reach rod. From the wrist-plate short links or radial rods extend to a bell crank on the valve stem which moves the cylindrical valves alternately as the wrist-plate is rocked to and fro by the motion of the eccentric. When the induction or admission valves had been held open until the piston has proceeded a certain distance on the stroke the valve is released from the radial rod by a cam which pushes out the latch by which the bell crank turns the valve and is suddenly closed by the pressure of the atmosphere on a piston working in a partial vacuum in a "dash pot," thus "cutting off" the steam, so that the piston is carried to the end of its stroke by the expansion of the steam already in the cylinder. The point of cut-off is determined by the governor, which moves the tripping cam backward or forward so as to release the valve sooner or later, as the speed of the engine increases or decreases. Corliss engines are limited in speed to about ninety revolutions a minute. When the engine runs much faster the releasing gear will not work satisfactorily.

The first drop cut-off engine patented by Fred. E. Sickles, in 1841, quickly met with favour. An immense step in advance of this was taken by George H. Corliss, of Providence, who in 1849, invented the most famous engine that has appeared since the time of Watt. The engine came rapidly into use, making a fortune for its owner, and affording a pattern which every builder of releasing gear engines since has followed in general though trying to improve upon it. Countless changes have been made in the Corliss engine by different makers, but the essential features and the name, coupled with that of the designer, have always been retained. Thus there are Smith-Corliss, Jones-Corliss, Brown-Corliss, and Robinson-Corliss engines without number. This type of American engine has found its way into every part of the world.

One method of securing economical working of steam is to drive the engine at the highest safe speed. At high speed it is claimed that the engine gives a more regular motion. President Westmacott of the British Institution of Mechanical Engineers, observed several years ago that at the speed of 400 or 500 revolutions a minute attained by the screws of Thorneycroft's torpedo boats the engines seemed to run more smoothly than at lower speeds. This has been noted by many other builders and drivers of fast engines. The introduction of electric lighting, with its imperative demand for regularity of speed, seems to have opened a particularly promising field for the high-speed engine. The pioneers in high-speed engine building were Charles T. Porter, a lawyer, and John F. Allen, who formed a partnership to develop a new form of valve gear, the invention of Mr. Allen, about twenty-five years ago. They met with success and paved the way for other builders of the same class.

The advent of the high-speed engine demanded a form of governor different from the "fly-ball" type in use for slower speeds. This demand was met by the invention of the shaft or wheel governor. The use of centrifugal force in the governing mechanism of engines has been so universal that it may be said no successful governor has been made without it. In all forms of centrifugal governors weights are made to revolve around an axis with a latitude of motion to and from the axis, the motion being made to regulate the steam supply. In the common "fly-ball governor," in which the two balls revolve around a vertical axis, centrifugal force is counteracted by gravity, but as gravity never changes at any one place, the position of the balls at any fixed speed is always the same.

When

When a change in speed causes the weights to move from any position they will move to the extreme limit of motion in that direction, because the same difference between the two forces that causes a movement of the weights will continue to exist when they have reached their limit of motion. This action of the weights produces the effect of throwing the steam all on and all off, one extreme following the other in rapid succession, a result which is called "racing." To prevent this and obtain a regular action at all times it is necessary to adjust the opposing forces that as the weights move outward the centripetal force increases more rapidly than the increase of centrifugal force due to the larger circle in which the weights move.

In the shaft governor the tension of a spring is substituted for gravity, and the governor weights rotate vertically instead of horizontally. With this governor whatever changes occur in the steam pressure or load, the engine is kept always at speed. In the typical shaft governor two levers are set on either side of the crank shaft in a frame or wheel to which they are pivoted, the bearings being usually on knife edges. The centrifugal force is resisted by springs placed radial to the crank shaft. Rods attached to the arms carrying the weights are attached by their other ends to the eccentric which is loose on the shaft. As the centrifugal force of the flying weights throws them outward the rods pull the eccentric around so as to reduce the throw while retaining the lead. "Throw" is the length of stroke of the eccentric; "lead" is the amount of opening of the admission part when the engine is "on the centre" or at extreme end of stroke. As the travel of the valve is diminished it cuts off earlier in the stroke, thus bringing the engine down to speed. The action is reversed when the engine runs too slowly. All high-speed engines are equipped with shaft governors varying somewhat in construction but all accomplishing more or less perfectly the same result. Any departure from the type will be taken up as they are reached. All high-speed engines have "positive motion" valve-gear.

All the engines in the main power plant are scheduled and given a number for the convenience of the chief engineer and his assistants. The engines as they are described will be referred to by their schedule number.

By reason of its size No. 17, the 2,000 horse-power engine, might be considered of chief interest to the visitor. No larger stationary engine was ever built, though there is another of equal size in a cotton mill at Providence. This engine was rated 2,000 horse-power at the maximum of economy, but it was capable of developing 3,000 horse-power. Steam was supplied through a pipe 10 inches in diameter, while the exhaust pipe was 22 inches in diameter. Its total weight was 650,000 lb. The enormous wheel was so strongly built that it could be run at 120 revolutions a minute, just double its working speed without approaching anywhere near the danger limit. The strain increased as the square of the revolutions. The wrist plates and the studs on which they work are large enough for the balance wheel and shaft of a fifty horse-power engine. The reach rods are heavy enough for the connecting rods of a 150 horse-power engine. The size of the engine seems, comparatively speaking, smaller than one would expect from the floor, because everything around was on such a large scale. To gain an adequate idea of its immensity, it was necessary to walk in between the cylinders. Then, by standing beside the low pressure cylinder and noticing that although one-third of it was below the floor line the top of a tall man's head would not reach up to the induction valve stem by several inches, one might realize that it is a big engine. And yet if one desired to take it home with him it might be obtained for a matter of \$80,000 or thereabouts—perhaps.

This engine was quadruple expansion, the only one in Machinery Hall. The cylinders were 26 and 40 and 60 and 70 x 72 inches. It made sixty revolutions per minute. The fly-wheel was 30 feet in diameter by 76 inches face and weighed 80 tons. The shaft was 21 inches in diameter and 17 feet over all. The engine drove two 10,000-light dynamos. The valve gear was Reynolds-Corliss long stroke cut-off, capable of cutting off at 11-12 stroke. Under ordinary load, and at the average steam pressure carried, 115 lb., it cut off at half-stroke. Under the present load and pressure this engine would run on an evaporation of 11.8 lb. of water per horse-power per hour. The cylinders were steam jacketed. The receivers were placed below the floor, between the cylinders, and were supplied with reheating tubes. The air-pump was 36 x 16, and driven by a Corliss cylinder. It exhausted into the second receiver, thus expanding the steam from the air-pump in the same manner as the steam from the large engine. This engine was not in motion during the day. On top of the big engine, by way of contrast, stood a complete working model of a Corliss engine, 2 x 4, with a 14-inch wheel making 100 revolutions a minute. It ran a miniature dynamo and some small lights.

On the same platform with the big engine next to the south wall stood No. 18, a triple expansion engine of 1,000 horse-power. The engine had two low-pressure cylinders instead of one. The high-pressure cylinder was 20 inches in diameter, the intermediate 34 inches, and the two low-pressure 34 inches each by 60-inch stroke. It made $64\frac{1}{2}$ revolutions per minute, and could develop 1,000 horse-power at a steam pressure of 115 lb.; at a pressure of 180 lb. it could develop 1,400 horse-power. The fly wheel was 28 feet in diameter, 69 inches face, and weighed 49 tons. The engine ran a 10,000-light dynamo. The valve gear was of the Corliss type. All four cylinders were regulated from one governor. The engine could not be reversed. This made it impossible to destroy the brushes of the dynamo. This engine, like its big neighbour, was provided with a by-pass to the intermediate cylinder, so the engine may be started at any position of the crank. The high-pressure cylinder cut off at one-third, the intermediate at one-half, and the low pressure at the five-eighths stroke. The guaranteed duty of the engine was the development of a horse-power on the evaporation of 14 lb. of water per hour. It was mounted on the usual Corliss guerdon frame in sections with round slides.

Nos.

Nos. 23 and 27 stood for six engines of 1,000 horse-power each. These engines were of an entirely new type, those in Machinery Hall being the first built, so that their merits remain to be demonstrated. They were vertical tandem compound condensing, double acting, direct coupled by flexible couplings to the dynamos. All engines heretofore built by this company have been of the single acting type. The cylinders were $21\frac{1}{2}$ and 37×22 , and the engines made 210 revolutions a minute. The weight of each engine was seventy tons. The high-pressure cylinder has a piston valve, controlled by the governor, while the low-pressure cylinder had a slide valve worked by an eccentric inside the crank chamber. The valve gear weighed about 1,000 lb., and on account of the speed, the pressure due to the inertia of the reciprocating parts increasing with the square of the revolutions, the strain on the pins aggregated over two tons. It thus became necessary to neutralise this pressure otherwise than by direct resistance. This was accomplished by a newly designed inertia balance. This inertia balance in other words was an air cushion whose varying resisting pressure at the different points of the stroke exactly balanced the inertia strain, so it was stated, thus leaving the governor free from work except for controlling impulses of the vibrating gear. The engine was solidly built. The shaft was 13 inches in diameter, the crank pin was 10×12 , and the main bearings 14×36 .

No. 22 stood for three 125 horse-power direct coupled, Nos. 20 and 21 for two 330 horse-power direct belted and one 330 horse-power direct coupled single-acting compound condensing engines by the same company. It had also two 125 horse-power single-acting simple engines. In the compound engines the cranks were placed opposite each other so that the steam from the high-pressure cylinder was exhausted directly into the low-pressure cylinder without going through a receiver. They had piston valves placed across the tops of the cylinders at right angles. The valve stem was connected with the eccentric rod by a rock shaft. All this class of engines have shaft governors in an inclosed case, which is filled with oil. By this means it was proposed that the governor was always kept well lubricated, and therefore sensitive. The oil within the governor case, besides lubricating the bearings, has a secondary and fully as important an effect, namely: by impact and friction it acted upon the governor weights, assisting centrifugal force in rapid adjustment for violent and extreme changes of load.

These compound engines, and also the "standard" engines by the same makers, were like the old Newcomen engines in use before Watt came upon the stage, in one respect—that is, they were "single acting." In the single-acting engine the steam drives the piston in but one direction, the work of the other half of the stroke being done by the other cylinder. In a "double-acting" engine the steam drives the piston in both directions with practically the same effect. There were three English engines at work in Machinery Hall that embody the same principle. This type of engines worked much smoother at high speeds than the double-acting, and therefore they could be run much faster. A speed of 1,000 revolutions a minute has been obtained from single-acting engines. Capt. Ericsson designed an engine about thirteen years ago for an electric lighting plant which ran at 1,250 revolutions a minute for three years without giving the slightest trouble. A trouble met with in double-acting engines has been the shock caused by the change in the direction of the pressure upon the crank-pin as the engine "turned the centre." Some "lost motion" must always be allowed at the crank-pin to prevent heating. In order to still allow this freedom of fit and obviate the shock in reversing the pressure, the plan of preventing the lift of the brass of the crank-pin and cross-head pin on turning the centre was adopted by building an engine in which pressure was exerted in one direction only. In single-action engines the working parts are inclosed in a tight box called a "crank chamber," which is partly filled with oil and water. The oil is dashed over the bearings by the motion of the parts, thus insuring constant and free lubrication.

One of the new things in engine construction was an experimental engine, No. 59. It was a vertical tandem compound of 240 horse-power, 16 and 26×16 , running 175 revolutions a minute. Its peculiarity lay in the fact that the engine had but one piston, and the piston itself was the only separation between the cylinders. One-half the stroke was made by the high-pressure cylinder and the return stroke by the low-pressure. The high-pressure cylinder, which is the lower one, was a ring whose area was equal to that of a cylinder 16 inches in diameter. The piston extended into this ring, the upper part forming the piston for the low-pressure cylinder. The steam admitted into the high-pressure cylinder forced the piston up to the end of the stroke, and then exhausted into a receiver, and from there into a low-pressure cylinder to complete the revolution. The exhaust valves were of the regular Corliss type. The induction or admission valves were rotary cylinders worked by a ratchet. Steam was admitted through the centre of these valves, which were hollow, and had five parts. The ratchet pulls the valve one-fifth around at each stroke. The cut-off was fixed at the most economical point. When the engine got above speed, the governor, which was one of the Corliss type, pushed a wedge under the ratchet, so that it failed to engage with the valve, and the high-pressure cylinder got no steam on that stroke. As the wearing surface was changed at every stroke, it was thought that the valve should be perfect fitting at all times. The connecting-rod was attached directly to the piston, the engine being without a piston-rod. The engine had the advantage of being very compact. Whatever other merits it may have had, remain to be demonstrated, as the one in Machinery Hall was the first of its kind.

The same maker also had No. 7, a 500 horse-power cross compound condensing Reynolds-Corliss engine direct coupled to a railway generator. This was one of the first instances in which the slow-moving Corliss engine has been used direct connected. This engine was 19 and 36×48 inches, and was run at a speed of ninety revolutions a minute. The cylinders were steam-jacketed. The frame was of wrought iron, making it possible to use an open crosshead.

Six engines of the same make, represented by Nos. 24 and 28 to 32, were included in the main power plant. The largest was of 1,000 horse-power. It was triple expansion condensing with two low-pressure cylinders. The dimensions of the cylinders were 20 and 30 and 36 x 48 inches. It was run at a speed of eighty-five turns a minute. The band wheel, 20 feet in diameter by 6 feet wide, was belted to 10,000-light dynamo. The engine was capable of developing 1,300 horse-power at 150 lb. steam pressure. The high-pressure cylinder was fitted with piston main valve, and piston cut-off valve. At the rear of the intermediate cylinder was an auxiliary valve mover. This was simply a small engine, 6 x 6, coupled to the valve stem to assist in moving the valves. The engine had two shaft governors, each regulating two cylinders. The other engines of this make were cross-compound condensing, 14 and 28 x 24 inches, with a speed of 150 revolutions, 350 horse-power; a tandem compound 11 and 21 x 16 inches, making 240 revolutions a minute, and generating 175 horse-power; a simple engine 16½ x 30 inches, running 110 revolutions a minute, and rated at 190 horse-power; a simple engine, 13 x 16 inches, speeded at 240 revolutions, and rated at 100 horse-power; and a simple engine 13 x 21 inches, making 160 revolutions, and developing 100 horse-power. These engines had balanced slide valves, with two ports, on top of which was a cut-off valve, the travel of which was regulated by a shaft governor. Coiled springs held the valves on their seats when steam is shut off.

Another engine of peculiar design was No. 26. It was double tandem compound condensing, rated on the engineer's schedule as of 1,000 horse-power, but capable of being driven up to 1,500 horse-power. The cylinders were 18 and 32 x 36; the speed was 112 revolutions a minute. The engine had double piston valves, the cut-off valve fitting over the main valve like a sleeve, and being driven by a separate eccentric. One eccentric worked the cut-off valves on both sides. When the governor was down, the valves, which each have double parts, travelled nearly together; when cutting off short they travelled nearly opposite. The high-pressure cylinders and the receivers were steam-jacketed. The main valve eccentric worked a pump which kept up a constant circulation of oil through the main bearings. In addition the pillow-blocks were chambered and fitted with water pipes, so that in case the bearings should heat they could be readily cooled off. The pillow-blocks had ball bearings. The usual shaft governor had elliptic instead of spiral springs and was fitted with dash pots. The engine was massively built, and had bronze bearings throughout.

The only vertical triple-expansion engine of American build was No. 3, which was coupled direct to two multipolar dynamos of 400 kilowatts. The whole occupied a floor space of 18 x 27 feet. The cylinders were 22½ and 33½ and 53½ x 36, and the engine made 100 revolutions a minute. It had the regular Corliss valve gear.

Another of the pure Corliss variety was a cross compound condensing engine of 350 horse-power, No. 39. It made seventy-eight revolutions a minute.

About the only other engines of regular Corliss type were Nos. 36 to 38. One was tandem compound of 300 horse-power, a cross-compound of 350 horse-power, and a simple engine of 200 horse-power. All were speeded at eighty revolutions a minute.

A Corliss with minor modifications was No. 56. It was a simple engine of 400 horse-power, 24 by 48 inches, making seventy revolutions a minute. Its wrist plate was made in two sections, which could be separated by turning a screw for convenience in starting, the eccentric being attached to the outer and the radial rods to the inner disk. The valves turned outward instead of inward. It had an automatic governor stop which brought the engine to a standstill in case of accident.

No. 57, a kind of Corliss. This engine had two wrist plates and two eccentrics. The inner wrist plate worked the exhaust valves, the outer one the admission valves. The radial rods were fixed to the wrist plates, and the cut-off was regulated by a shaft governor as in a high-speed engine instead of by a Corliss governor dash pots and releasing gear. This engine, which was of 110 horse-power, ran at 175 revolutions a minute, and could be run faster if required.

One of the simpler modifications of the Corliss type was No. 53, a 300 horse-power engine. This engine was said to have sixty parts less than the regular Corliss. The radial rods were at all times connected with the wrist plate and the bell crank on the valve stem. The radial rods were bent downward at the wrist plate end until their centres were below the line of strain, which was a line drawn from the centre of the valve stem to the centre of the wrist plate pin. The radial rods were attached to an arm which was hung in its centre to the wrist plate. The tripping arrangement was composed of two arms pivoted at the lower end, and opening at the top like the letter V, the amount of opening being determined by the governor. These arms bore rollers on their outer sides. The radial rods being pivoted below the line of strain folded down as the wrist plate moved away from the valve, thus opening the port. They continue folded until the free end of the arm was lifted by the movement of the wrist plate against the roller. This threw up the other end of the radial rod above the line of strain and enabled it to fly back until the valve could be closed by the dash pot. The engine made sixty-four revolutions a minute, but would work equally well at ninety revolutions.

England sent the only superposed compound engine in Machinery Hall. In the superposed engine the high-pressure cylinder was placed upon the low-pressure cylinder at such an angle that the centre lines of both bisected at the centre of the crank shaft, so that both connecting rods could be coupled to one crank-pin. The condenser and air-pump were mounted on a continuation of the bed-plate, and were operated by a continuation of the low-pressure piston-rod. The engine had a multiple-ported main valve, and a multiple-ported cut-off valve riding on top of it. The main valve was worked direct from an eccentric. The cut-off valve was worked from a second eccentric and a link. An arm controlled

trolled by a parabolic governor moved the link-block up increasing or down diminishing the travel of a reach-rod, which acted on the cut-off valve-stem through a vibrating link. When the governor was down the cut-off valve travelled nearly with the main valve; as the governor rose its travel diminished, partly closing the ports. The engine was 17 and 30 x 45 inches, made 70 revolutions, and was rated at 350 horse-power. It was equipped with a novel starting apparatus called a "barring gear." This was a small engine, which, through bevel-cogged and worm-gearing, turns a shaft bearing two helical feathers on which slid a rifled pinion. As the engine was started this pinion was moved out until it engaged with a toothed ring in the circumference of the fly-wheel. The wheel was revolved until the steam admitted to the large engine turned the fly-wheel faster than the little engine was running, when the pinion automatically slipped back out of the toothed ring.

Some peculiar ideas were embodied in No. 54, which was called a "Corliss slide-valve engine." On what grounds a slide-valve engine laid claim to the name "Corliss" was not explained. The engine had four plain slide valves, two admission and two exhaust. The exhaust valve-rod was continued from a sliding block through the two exhaust-chambers. An arm with steel face was fastened to this exhaust-rod at each end just outside the chamber. These arms coming in contact alternately with a trigger upon each steam valve-stem pushed the valve off its port until steam enough had entered the port to do the work of that stroke, when the trigger was lifted out of contact by a horizontal wedge carried on a bell-crank which was connected with the governor for regulating the cut-off, and the valve was instantly pushed back over the port by the pressure of the steam. The shock was taken up by a horizontal dash-pot. The cut-off was practically instantaneous. The engine was tandem-compound, 12 and 22 x 30 inches, made 115 revolutions a minute, and was rated at 200 horse-power.

A good example of the piston-valve high-speed engine was No. 2. The valve had a double part, and was surrounded by "live" steam, thus taking steam at the middle and exhausting at the ends of the chest. As steam was admitted through a double length of port approximately boiler-pressure was obtained in the cylinder and up to the point of cut-off. The range of cut-off was from 0 to $\frac{3}{4}$ stroke. The valve was regulated by a shaft governor. This engine was simple, 18 x 21, made 225 revolutions a minute, and was rated at 300 horse-power.

In Nos. 25 and 40 an attempt was made to combine something of the Corliss and the positive-motion valve-gear. The high-pressure cylinder had balanced slide-valves. There were four rotary valves placed at right angles to the low-pressure cylinder, the induction valves having five parts so as to give as large an area of part-opening as possible on a slight movement of the valve. On the valve-stems were cranks carrying friction-rollers, which worked in grooved slides moved parallel with the piston by the eccentric rod.

The grooves in the slides were curved so as to open and close the valves by carrying the rollers up and down as the slides moved to and fro. The distance travelled by the slides which were controlled by a shaft governor regulated the point of cut-off of these engines. One was cross-compound, the other tandem-compound condensing; one was 1,000 horse-power, the other 500 horse-power. Both made 150 revolutions a minute.

In the high-speed class engines Nos. 4, 5, and 6 stood side by side. One was a triple-expansion condensing with two low-pressure cylinders, the dimensions being 15 and 24 and 26 x 18 of 500 horse-power; another was a tandem-compound condensing, 13 and 24 x 18, of 250 horse-power; the third was a simple engine, 18 $\frac{1}{2}$ x 18, also 250 horse-power. All made 200 revolutions a minute. These engines had double piston valves, taking steam at the ends and exhausting in the centre. The eccentric was hung on the inside of the wheel, and the governor on the outside, making it easy of access. The governor had knife-edged bearings and was lubricated by centrifugal oilers, by which oil was distributed by centrifugal force through pipes radiating from the centre of the limb. It was claimed that the simple engine required the evaporation of 22 to 30 lb. of water per horse-power per hour, the compound 16 to 18, and the triple-expansion 13 to 15 lb.

Engines Nos. 10 and 11 did a portion of the work in the main power plant. One was tandem-compound condensing, 13 and 22 x 16 inches, of 225 horse-power, and running 245 revolutions a minute; the other was a simple engine, 16 x 16, of 200 horse-power, speeded at the same rate. In the compound engine the cylinders were built close together, with no stuffing-boxes between; it cut off at $\frac{3}{4}$ stroke under usual speed and load, and required, it was stated, the evaporation of about 17 $\frac{1}{2}$ lb. of water per horse-power per hour condensing, or 22 lb. non-condensing. The steam from the high-pressure cylinder exhausted directly into the low-pressure. The high-pressure cylinder had a piston-valve, and the low-pressure a balanced slide-valve. Both valves were placed on one stem, which was connected directly to the eccentric rod by a ball-joint without rocker or slide. The engine was entirely self-oiling. A gallon of oil was placed in a basin under the crank disk. This was kept in constant circulation in the enclosed crank-chamber by the splashing of the crank and by centrifugal force. The compound engine was started March 28, and ran 850 hours without being shut down. Between these engines stood a little working model, 2 x 2, mounted on a neat granite base. It was run by atmospheric pressure by connecting its exhaust-pipe with the exhaust-pipe of one of the big engines. It was made by a boy in the Springfield watch-factory.

Nos. 35, 42, and 58 were especially designed for electric-light service. They were simple engines, 15 x 14, of 200 horse-power, and made 275 revolutions a minute. They had solid piston-valve and the regular shaft-governor. The third was also a simple engine, 18 x 22, of 200 horse-power, making 160 revolutions a minute. It had a Richardson balance slide-valve.

No.

No. 41 was a double-tandem compound, 9 and 16 x 14, of 250 horse-power, and making 265 revolutions. It had four ported balanced slide-valves. The pressure-plates were held down with four small spiral springs, so that in case of over-pressure of water in the cylinder the valve would move back. All four valves were controlled by one shaft or wheel-governor, which had but thirteen parts. One weight was used instead of two. Between each pair of cylinders was a sleeve instead of two glands for packing.

Another variation of the four-ported balanced slide-valve was found in Nos. 8 and 9. Steam-pressure was eliminated from this valve by a relief-plate, which in turn was supported against steam-pressure by a double wedge. A handle extended out through the steam-chest by which the relief-plate could be adjusted and thrown on or off the valve instantly. These two engines were both tandem-compound condensing, one 19 and 31 x 24, making 165 revolutions a minute, and of 600 horse-power, the other 15 and 25 x 20, making 200 revolutions a minute, and developing 375 horse-power.

In No. 1 the valve of the high-pressure cylinder itself formed a steam-chest. Its action was the reverse of the ordinary slide-valve, steam being admitted through the centre of the valve by an opening at the upper side and exhausted at the ends. The engine was cross-compound, 18 and 36 x 18, making 225 revolutions, and developing 480 horse-power. The valve of the low-pressure cylinder was of the regular slide type, but being broad was moved by two valve-stems instead of one. The eccentric was bolted fast to the wheel, and the eccentric strap was moved by the governor instead. The eccentric was outside and the governor inside the wheel. A plate carrying the eccentric-rod wrist-pin was fastened to the strap. The action was the same as though the eccentric itself were moved by the governor.

A newly-patented device for securing adjustment of a piston-valve was found in Nos. 51 and 52. The great trouble with piston-valves usually is to make them tight. By this device springs were done away with, and a solid valve was secured at all times. There were two of these engines, both being tandem-compound, 17 and 28 x 18, and making 176 revolutions a minute. They were 300 horse-power each. Beside these stood a simple high-speed engine of the same make, mounted with the bolts left out of the bed at three points to show the nice balance of the reciprocating parts. The engine, which was 60 horse-power, made 300 revolutions a minute without a jar.

Distinctly different from all its neighbours was No. 55. The engine had four flat gridiron valves. The admission-valves were connected to the cut-off mechanism by stems running parallel to their seats. They were worked by a sliding-bar driven by an eccentric parallel to the centre line of the cylinder. A pair of "tappets" on this bar was set so as to engage the rock shaft-arms which moved the admission-valves. A rod on the inner side of the sliding-bar connected with the governor moved the tappets up and down so as to release the rock shaft arms and cut-off steam sooner or later in the stroke, according to the load and speed. The exhaust-valves travelled across the line of the cylinder, and were moved by an oscillating shaft worked by a yoked eccentric. This engine was capable of cutting off anywhere between the beginning and three-quarters stroke. It was 12 and 20 x 42, of 300 horse-power, and ran at a speed of 125 revolutions a minute.

A combination of round and slide valves was found in Nos. 33, 34, and 44, the latter number representing three engines. In these engines the main valve, a triple-ported balanced slide valve, and the two exhaust-valves somewhat like the Corliss pattern, were worked by one eccentric. The cut-off valve, also triple-ported, slide, on top of the main valves. Its travel was regulated by a shaft governor so that when the engine was running slowly the two valves travelled nearly together, but when cutting off short they worked nearly opposite each other.

Engines Nos. 12 to 16 inclusive were high-speed, with balance slide-valves. There was one cross-compound, 14 and 22 x 12 inches, making 280 revolutions, and rated at 200 horse-power, two tandem-compound, 13 and 20 x 16 inches, making 226 revolutions a minute, and rated at 150 horse-power; and two simple engines, 16 x 16 inches, running at the same rate, and developing 150 horse-power. The valve was made in two parts, having its faces opposite, and with telescopic sleeves connecting the two parts and allowing each face to be pressed against its corresponding seat in the steam-chest. Steam was admitted to the interior of the sleeves, and thence through the ports into the cylinder, from whence it was exhausted by the ends of the valve into the steam-chest and out through the exhaust-pipe at the bottom. The valve for the low-pressure cylinder of the compound engines was cylindrical in shape, and placed transversely to the axis of the cylinder and directly underneath it. Two double-ported valves, with arc-shaped faces fitting the bore of the valve-chest, were placed opposite each other and mounted loosely on a central valve-stem, which drove them both, and allowed both to be held in contact with their faces by steam-pressure. Steam was admitted from the valve-chest over the end on edge of the valve and also through the port in the valve, giving a quick and wide opening. At the same time the exhaust had a direct passage to the condenser. The valve-stem had a rock-arm, which received its motion from a simple crank-pin on the outside of the balance-wheel.

England contributed three single acting engines, Nos. 64 and 65, which were said to be popular in that country for electric light stations. One was a "three-throw" engine, the others were "two-throw." The "three-throw" engine consisted of three tandem compound engines placed vertically coupled to one shaft by cranks placed 120 degrees apart. It has cylinders 14 and 20 x 9 inches. Its regular speed was 350 revolutions a minute, at which speed it developed 300 horse-power. The connecting rods were double, one being placed on either side of the eccentric. It had piston valves which worked in a trunk in the cylinder. The crank chamber was enclosed and partly filled with oil and water, all the bearings being lubricated by the splashing of the cranks

cranks. As there was a constant downward pressure with no alteration of strain there was usually little wear, and it was not usual for the engine to require adjustment. There were no brasses on top of the shaft. At the Royal Naval Exhibition in 1891 the weight of steam per indicated horse-power per hour by one of these engines was 20.5 pounds. The two-throw engines were identical with the three-throw except that they had two pairs of cylinders instead of three. One of them was rated at 300 horse-power and made 359 revolutions a minute, the other was rated at 150 horse-power, and made 380 revolutions a minute. All had separators to insure dry steam. The piston speed was reduced in these engines by giving them a short stroke. They had centrifugal throttle governors placed directly on the outer end of the crank shaft. By means of an adjustable weight on a lever attached to the throttle stem a variation of 15 per cent. in speed could be secured without stopping the engines.

From Germany came some fine specimens of workmanship in No. 60. No. 60 represented two engines, exact counterparts of each other, which stood side by side in the German section. One was 1,000 horse-power, the other 150. Both were of the marine type. The larger engine, it was stated, was built in twenty days, though some engineers expressed great wonder that such a piece of work could be accomplished in that time. It was built throughout of highly finished steel. It was vertical, triple expansion, condensing, and had cylinders 23 and 37 and 57 x 27 inches, and made 100 revolutions a minute. It was coupled directly to a 10,000-light dynamo. The high-pressure cylinder had a piston main valve and piston cut-off valve working over it. The cut-off valve was composed of four rings which were moved nearer together or separated by the action of the governor, which was of the "fly-ball" type. The intermediate and low-pressure cylinders had balanced slide valves. All the cylinders were steam-jacketed. The condenser and air pump which are above the floor-line were worked by a walking beam connected with the intermediate crosshead. All the oiling was done from oil tanks at the rear of the cylinders, from which pipes radiate to the bearings. The smaller engine had cylinders 12 and 19 and 29½ x 14, and made 150 revolutions a minute. It drove four sets of line shafting by means of an endless rope.

This vast power plant was under the supervision of Chief Engineer Charles F. Foster. Mr. Foster's staff was made up of John Meaden, first assistant, and A. Ritter, C. C. Clump, George Ross Green, John Colley, W. S. Monroe, Charles H. Smith, and Arthur Venning, second assistants. Subject to the orders of this staff were 100 operating engineers and 100 oilers. Each operating engineer made out a report on going off duty, showing engine and number of hours run, what stops were made, if any, and what for, steam pressure, total number of revolutions of engine, and a long list of other details.

APPENDIX N.

Historical Collection of the Locomotives in the Possession of the Baltimore and Ohio Railroad Company, showing the Evolution of the Steam Engine as a Prime Motor for transportation from place to place.

(A Synoptical Account by H. J. R.)

To the general visitor this was the most interesting exhibit of railroad engineering in the Transportation Building, embracing as it did complete and accurate models of locomotive engines, from those of the very earliest times, in the beginning of the present century when rapid transit from place to place by means of the expansive power of steam was scoffed at as the absurd and impossible dream of a visionary, up to the present time when, at the close of the same epoch, railroad travelling is not only looked upon as possible, but as one of the necessary adjuncts to the civilisation and progress of the human race. What would one of those scoffers say nowadays, if he could be confronted with the majestic and massive locomotives from the works of Baldwin, and these moving palaces complete with their fittings of luxury and refinement, the Pullman and Wagner vestibule cars?

But to proceed to the details of this wonderful and historical exhibit.

In a great many cases the original locomotives were shown, and where it was not possible to show these because they have long since been relegated through a species of vandalism to the scrap-heap, very accurate models of wood were prepared, and these showed in every detail the points of the originals.

1. The "Sandusky," 1837.—Designed and built by Thomas Rogers—of Rogers, Ketchum and Grosvenor, of Paterson, New Jersey. "Tall oaks from little acorns grow" was never more powerfully exemplified than in the comparison afforded between this, the first of the famous "Rogers," with, say, the majestic machine which heads the Pullman Exposition Train across the aisle to the north. There is, however, one point of similarity and it is in the lines. The "Sandusky" was as noticeable in its day for symmetry as are its progeny, so to speak, of the present time, and was a good description of a locomotive to be designed and constructed half a century ago. It has the following details characteristic of American locomotives:—The cylinders fixed outside the framing, and the slide-valve box above the cylinder. The connections of the eccentric rods with what then took the place of the more modern link, is rather old-fashioned and seems rather rickety, for it seems as if a rough jolt would displace them from their pins; this design however has the merit of great simplicity. The "Sandusky" was the first locomotive to turn a wheel west of the Ohio River. In the "Sandusky" several important features were introduced, among them, "counterbalancing," which had not been recognised as essential. Another novelty was the making of the driving-wheels with hollow spokes and hollow rim; the rim on the side opposite the crank being cast solid; this being the introduction of this form of construction subsequently becoming so general. The "Sandusky's" cylinders were 11 inches in diameter with 16-inch stroke, the driving-wheels being 4 feet 6 inches in diameter. The eccentric rods extended back to the rock-shaft which was under the footplate. The smoke-pipe was of the bonnet kind, having a deflecting cone curled over the edges in the centre so as to deflect the sparks downward, and thus prevent them passing through the wire-bonnet.

2. In contrast with the American model is exhibited next in order the original locomotive "Rocket," 1838, of English make, showing the English characteristics.—the cylinders placed inside the framing. This was designed and built by Braithwaite and Co., of London, England, and imported to America the same year. This was the first locomotive, the original No. 1 used on the Pennsylvania and Reading Railroad. Braithwaite was one of the earliest designers and builders of locomotives in England, and he, in conjunction with Ericsson, afterwards so famous, built the "Novelty," one of the competitors in the Liverpool and Manchester trial of 1829. The "Rocket" as it stands here has the same boiler, fire-box, cylinder and frames that came with it from England. In other words, it is the original locomotive in all main essential parts. The original wheels which came with the engine in 1838 were worn out several years ago, and were replaced with cast-iron wheels. The wheels which are now under the locomotive, as stated by Mr. L. B. Paxson, the superintendent of the Reading Railroad, and who has been continuously with the company for upwards of forty years, are to the best of his knowledge and belief, exact duplicates of those which came from the other side of the Atlantic, except that at that time locomotive builders did not depend entirely upon the shrinkage

shrinkage of the tires to hold them on the wheels, but had some four or five rivets in each tire, according to the diameter of the wheel. These rivets which were in the English wheels, were omitted in those made to replace them. "I am well satisfied," writes Mr. Paxson, "that all the work about the 'Rocket' is as she came from England, with the single exception of the stack, and from the best information I have been able to get I believe the stack is a duplicate of the one that was on the engine when it arrived here. The painting is also as she was when received in 1838, the only variation in the ornamentation being possibly the brass bands on the jacket, which may have been of iron and black." The "Rocket" is unquestionably the nearest in its original form of any English locomotives of those imported by American railroad companies in the "thirties" now in existence. Others which may have been preserved are only in very small part original, having been remodelled till almost nothing remains of the first construction.

3. The "Samson," 1838.—Designed and built by Timothy Hackworth, of England, at his shops at Soho. Shipped to Nova Scotia the following year, and used in coal-roads traffic for forty-five years. This, with the exception of the "Sans Pareil," which is preserved in the South Kensington Museum, in London, is, undoubtedly, among the very oldest of the Hackworth locomotives in existence. It was in use as late as 1882, but condemned to the scrap-heap several years ago. Fortunately it was rescued soon after the order to break it up had been issued, and preserved in more or less bad shape, to be sure, but still to such an extent as to render it of no ordinary interest from an historical standpoint. The cylinders and driving-gear are at the front end of the locomotive, and thus was the engineer placed so that he could keep a good look-out ahead. The fireman was at the other end. The sand-box consisted of two buckets of sand, one at each end of the locomotive, the sand being thrown by hand on the rails. This duty was attended to by the engineer, or "driver" as he was termed in those days, when the engine was moving ahead, and by the fireman when moving backward. The cylinders, 15 $\frac{1}{2}$ inches in diameter with 18-inch stroke, rest vertically upon cast-iron frames, and form part of a bonnet or hood which partially encloses the valve-gear, pump, throttle, and reversing-levers, and other working parts. The cross-heads, instead of being girded by slides, have an arrangement of levers and slides in the block. That this device caused very little friction is shown by the fact that the original pins and brass bushes in the levers and sliding-blocks are still in place, and show comparatively little wear after nearly forty-five years' service. The engineer was compelled to leave his place at the front of the locomotive whenever desirous of ascertaining the height of water or pressure of steam, and go round to the side of the boiler where the water and steam gauges were located.

4. Nova Scotia Car, 1838.—Designed and built in England, and shipped to Nova Scotia in the year named. The successful use of locomotives in England on the coal-roads for several years led the proprietors of the Albion Mine, in Nova Scotia, to decide to introduce them, and accordingly they ordered three from Timothy Hackworth, who then had his own shops at Soho in operation. Hackworth had been at the head of the Stockton and Darlington Railway repair-shops, at New Sheldon, in County Durham; but being a man of strong religious convictions, would not consent to working on Sunday, and left the service of the railway company rather than do violence to his opinions in that respect. At the same time the Albion Company determined to introduce steam to take the place of horses in conveying coal from the pits at Stellarton to navigation, at Picton Harbour. It was concluded to have at the least one car for personal and such other use as there might be occasion for. To this end the order was sent to England to forward a car with the locomotives, and as it was deemed desirable to have it especially commodious, the seating capacity was settled at four, with the possibility of accommodating six at a pinch. The result of a good deal of correspondence upon the subject was the construction of this car, which, compared to the Royal Blue Coach, or the Pullman parlour of to-day, is certainly not over-convenient and elegant, yet for its time it was much more than ordinarily comfortable. That its construction was thoroughly first-class, as far as it went, is proved by its existence, after so many years, in fairly good condition. It is probably the oldest passenger-car extant. There is hardly a question of this as regards the American continent; and if there are older railway passenger carriages in Europe in existence, records of these are not obtainable.

5. The "Albion," 1839.—Designed and built by Timothy Hackworth, of England, at his shops at Soho. Reached Nova Scotia the same year, and put in service on the Albion coal-road, between Stellarton and Picton Harbour. The "Albion" was built for the Albion Mines, in Nova Scotia, and placed on the six-mile track, extending from the coal-pits to navigation, and was in service many years before (like the "Samson") it was condemned to the scrap-heap. Of the pioneers, Timothy Hackworth was among the very foremost in reaching practical results, and the strong individuality of the man, coupled with his remarkable ingenuity, left a stamp upon the early history of the locomotive, which by no means lessens as the contrasts between the facilities of his time with those of to-day become so marked. That he had, to some extent, grasped the requirements of locomotive construction, is shown in such features as the coupled driving-wheels placed as near together as possible, the centre pair being without flange, the forced draught obtained by means of the exhaust in the smoke-stack, and the cylinders connected outside the frame. Hackworth, at the time of the construction of the "Albion" and "Samson," was by no means the only designer and builder following such principles of construction, but he was of the very first to adopt them in more than one important essential, and led all others. This fact lends added interest to the possession in this collection of two original old engines of his creation, both of which demonstrated their practical worth by upwards of forty years' actual service. To the modern locomotive engineer the cabless engine would indicate hardships of no ordinary nature. But old engine-drivers still living affect to scorn the modern machine, with its complicated gauges, air-brakes, and the like. A short time since, one of them, in speaking of his long service

service in Nova Scotia, on Hackworth locomotives, declared, "All the wind and snow of forty years never made old Donald Thomson shiver yet!" And to a further inquiry responded, "Indeed I was far more careful of her than of the gude-wife."

6. The "Buffalo," 1844.—Designed and built by Ross Winans, of Baltimore, Md., and the first eight-wheel coupled locomotive in the world. This engine has a vertical boiler, horizontal cylinders, guide rods, and spur wheel gearing.

7. The "Mount Clare," 1845.—Designed and built by James Murray, of Baltimore, and the first locomotive built by the Baltimore and Ohio R. R. Co. Cylinders placed inside the framing, immediately under the smoke-box, wheels having a diameter of 35 inches, and the gearing so proportioned as to make them equal to 50 inches in diameter. The valve-gear did not embrace cams, as this was a fault in the Winans geared engines to be avoided. The valves had considerable lap on the induction side, and there was an arrangement on the back of the valves by means of which the steam could be cut off at about half-stroke. This engine has a cab, but no pressure-gauge, and three gauge-cocks.

8. The "Camel," 1848.—Designed and built by Ross Winans, of Baltimore, Md. The first of this class of engines was placed on the Baltimore and Ohio Road, in 1848, in response to specifications prepared by Mr. Benj. H. Latrobe, and limiting the weight to 22 tons. It had 17-inch cylinders of 22-inch stroke placed horizontally, and eight 43-inch drivers. In distributing the weight of this engine on its four pairs of driving-wheels it became necessary to move the large dome from over the fire-box to a point well forward of the middle of the boiler, where also the throttle-valve and engine-man were placed. This humped feature suggested the name of "Camel," which was given to the first engine of this form, and the name has since adhered to the type. The features, some of which are now in general use, which were novel at the time, and distinguished the Camels from previous constructions, were:—The employment of eight driving-wheels set closely between horizontal cylinders and a long overhanging fire-box, the width of which was equal to or greater than the distance over frame; a fire-box having a downwardly and rearwardly inclined top; a dome and an engineer's house placed on top of the boiler close to the forward end; an upper chute for feeding coal through the top of the fire-box; a fire-box having no water-space on its rear side, which was closed by doors, so as to expose its entire area when required. The abandonment of iron sheet stay-bars, and the substitution of stay-bolts connecting the crown-sheet with the outer shell; the use of a half-stroke cam as a means of effecting cut-off. The valve motion was of the drop-hook pattern.

9. The "Dragon," 1848.—Designed and built by Mr. Baldwin, of Philadelphia, and one of the oldest examples of the Baldwin Locomotive Works extant. This is, as far as the boiler goes, very similar to the locomotives of the present day, having a cab, dome, sand-box, bell, smoke-stack, and head-light; the wheels and connecting-rods are of a different type however. Link motion is used; the cylinders are sloping and rather high; the boiler is fed by a pump driven by a rod from the rear crank.

10. "Ten-Wheel Camel," 1852.—This engine has the bogie truck, and in other respects is similar to the last mentioned, except that the cab is well forward, and in fact covers the entire boiler. In this case the alarm-bell is to the rear of the cab.

11. The "Mason," 1853.—Although forty years old, it seems precisely the same as the modern locomotives in use on the railroads of America to-day. The shape of the smoke-stack, the absence of a glass water-gauge, or an air-brake, and a few other details alone render it different.

12. The "Peppersauce," 1863.—Designed by Silvester Marsh, and built by the Whitton Machine Co., of Boston, and the first mountain-climbing locomotive in the world. A spur-wheel engages in a rack between the rails. The boiler hangs on trunnions, so as to maintain a vertical position. She was built to ascend Mount Washington, and did good service. At first she had no pump, and was filled by means of a funnel; when she ran dry she was taken back, and the plug unscrewed and again filled with water. One of the last trips it made was with the late Mr. William H. Vanderbilt, who conceived the plan of eating his breakfast at the Profile House, dinner on the summit of Mount Washington, and supper back at the Profile House. It was the intention to use another engine, but owing to something going wrong the "Peppersauce" had to be steamed up, and although, as Mr. Aiken says, she leaked around every tube, and constantly lost steam, Mr. Vanderbilt was able to carry out his programme, and he and his family were the first to accomplish the trip as indicated prior to the construction of the railroad from the Profile House to the base of the mountain. General Grant made his first ascent of Mount Washington in a car drawn by this engine. Many of the most distinguished men of this country, as well as noted visitors from abroad, have gone up the mountain behind this, the first, of all the mountain-climbing locomotives.

13. The "Perkins," 1863.—To a certain extent similar to modern American locomotives. There are small differences of detail, and the machine is rather gaudily painted. Has an injector instead of the pump used on the engines mentioned above. Has no glass water-gauge, but merely cocks.

14. The "B. and O. 600," 1876. Somewhat similar to the last. Has a feed-pump worked by the rear crank. Also has a glass water-gauge. Very modern in appearance.

15. The "Tom Thumb," 1829-30.—Designed and built by Peter Cooper, of New York, and the first locomotive built on the American continent; also the first locomotive to draw a car on the American continent. Vertical boiler; single vertical cylinder with cross-head over it, and connecting with the crank beneath; small feed-pump, spur-wheel gearing, a fan driven by a rope from the axle to force the draught; water carried in a cask; the exhaust opening direct into the air through a pipe.

16. The "Mercury," 1830.—Designed and built by George Stephenson, of England, and the development of the Planet type, which became the standard of the English locomotive. The "Mercury" was to the English what the "Campbell" was to the American type, in each instance the father, as it were, and thus both will retain place in the locomotive history of the world for all time. The "Planet" was complete as a locomotive, having its furnace, boiler, chimney, blast-pipe, and a pair of high-pressure steam-engines and feed-pumps, all mounted upon springs upon the same frame, the production of steam and its admission to the cylinders being under complete control.

17. The "Best Friend," 1830.—Designed and constructed by E. L. Miller, at the West Point Foundry, New York, and the first locomotive built for actual service in America. The locomotive exploded early in the summer of 1831, through the carelessness of the coloured fireman. It was shortly afterwards rebuilt, and named the "Phoenix." Vertical boiler, with the top in the shape of an inverted cone; weighted lever, safety-valve, inclined cylinders, no gauges, two drivers coupled, 5 feet in diameter.

18. The "George W. Johnson," 1830.—Designed and constructed by George W. Johnson, of Baltimore, and the first locomotive built complete in the State of Maryland. This was a competing engine in the Baltimore and Ohio trial, and was the first locomotive in the world with a double fire-box. Horizontal boiler; single drivers, 2 feet 6 inches in diameter; 2 beam engines, and steam-pipe exhaust in rear of fire-boxes; three gauge-cocks.

19. The "York," 1831.—Designed and built by Phineas Davis, of York, Pa. Awarded the first prize offered by the B. and O. R. R. Co. in 1831, in the locomotive trial of that year, and which was the first locomotive competition in America. Vertical boiler, inverted cylinders, crosshead connected with the two drivers, lever safety-valve, steam exhausting to the atmosphere from a pipe; feed-pump worked by crosshead.

20. The "Costell," 1831.—Designed and built by Stacey Costell, of Philadelphia, Pa., and taking part in the B. and O. locomotive competition of 1831. Horizontal boiler, oscillating cylinders with the piston-rod extending through the forward end of the cylinder; lever safety-valve; two drivers of 3 feet coupled; all these engines have wooden framing.

21. The "Child," 1831.—Designed and constructed by Ezra Child, of Philadelphia, and taking part in the B. and O. locomotive competition. In the preparation of the collection, no one field of research has been more persistently and faithfully worked than that incident to the trial of locomotives on the B. and O. road in 1831, the first event of the kind on the American continent. The English trial of a year and a half previously has been preserved in history to the most minute detail, but of the American trial there were but scraps of facts, and not a drawing is known to exist. Illustrations of the "Rocket," the "Novelty," and the "Sans Pareil," the contestants in the English competition, are numerous, the first- and last-named locomotives being still in existence and most carefully preserved in the South Kensington Museum, in London.

In this collection are for the first time shown the "York," the "Costell," the "James," the "Johnstone," and the "Child," the five participating engines in the American trial. This engine is the most notable example of the introduction of the "Rotary" principle in locomotive construction ever known—in fact, about the only one which ever performed any useful work. The steam enters the drum through the shaft which connects with the axle of the hind pair of drivers by means of spur-wheel gearing.

22. The "James," 1831.—Designed and constructed by William T. James, of New York, and participating in the B. and O. trial of 1831. The first to use link motion; vertical boiler; inverted cylinders; spur-wheel gearing connection with an upper shaft, which is cranked, and connects with both drivers by means of connecting-rods rigidly connected at bottom by means of a third rod.

23. The "Remodelled York," 1831.—Originally designed by Phineas Davis; remodelled by Ross Winans, being the first plan of construction suggested by him. In this engine the exhaust works a fan which draws air through a pipe, and the exhaust steam and air pass to the fire; vertical boiler; vertical inclined cylinders, and feed-pump.

24. The "Atlantic," 1832.—Designed and built by Phineas Davis, of York, Penna., and the first of the "Grasshopper" class. The oldest American locomotive in existence, and the only pioneer engine on American roads, either of American construction or foreign construction, in original form. In actual service for sixty years, a record unparalleled by any locomotive in any part of the world. Weight, 6½ tons; geared by spur and pinion, so as to make two revolutions of the road-wheels to one of the cranks; its speed was proportionately great, for which its tubular boiler and fan-blast for its anthracite coal fuel offered abundance of steam. It was designed for speed in propelling passenger trains, hence only one pair, the front one of its four wheels, was used as drivers, and on which pair nearly two-thirds of its weight was made to rest. The "Atlantic" averaged 12 to 15 miles per hour against an extreme grade of 37 feet to the mile, and a curve of 400 feet radius. The "Atlantic" is to-day as it was when originally constructed, thus enabling a study of the progress of the period, and consequently of value historically. No foreign locomotives were ever employed upon the B. & O. R. R.

25. The "Old Ironsides," 1832.—Designed and built by Matthias W. Baldwin, and the first effort of the founder of the largest locomotive works of the world. Very similar to the old English locomotives, having inside cylinders, brass dome at rear of the boiler, &c.

26. The "South Carolina," 1832.—Designed by Horatio Allen, of New York, and built by the West Point Foundry Works, and the first eight-wheeled locomotive in the world. The first double horizontal boiler locomotive in the world, and father of the "Fairlie" type, so largely used in Europe. Firing done at both ends. 27.

27. The "Experiment," 1832.—Designed and built by John B. Jervis, of New York, and the first locomotive in the world with the "Bogie" or forward truck. This engine has done its mile in fifty seconds.

28. The "James," 1832.—Designed and constructed by William T. James, of York, Pa., and the first distinctive freight locomotive in America. Very much the same as the "Atlantic." The first locomotive in the world with "link motion."

29. The "Traveller."—Designed and built by Phineas Davis, of York, Pa., and the first distinctive freight locomotive in America. Very much the same as the "Atlantic."

30. The "Thomas Jefferson," 1835.—Of the Davis type, and the first locomotive built by Ross Winans, of Baltimore. Just as it came out of the B. and O. service yard, after fifty-eight years' of continuous service. After the style of the "Atlantic;" has, however, an injector, as well as a feed-pump, a cab, and a bell.

31. The "Campbell," 1837.—Designed by Henry R. Campbell, of Philadelphia; built by James Brooks of the same city, and it was the father or first of the type of the standard American eight-wheel locomotive. Has the appearance of the English locomotive, for the cylinders are inside the framing and beneath the smoke-box.

32. The "Mazeppa," 1836.—A "Grasshopper," with cylinders changed from vertical to horizontal, and thus becoming the first of the "Crab" type. The original engine, which, like other "Grasshoppers," has seen upwards of half a century of actual service.

33. The "Hercules," 1837.—The first locomotive in the world with equalising frames and levers.

34. The "La Fayette," 1837.—The type of locomotive that created a revolution in construction, both in Europe and America, and was the most famous of its time. Built by William Norris, of Philadelphia, and the first six-wheel engine on the B. & O. R. R.

Now we come to some of the very earliest attempts at locomotion by means of steam:—

35. The "Newton," 1680.—Isaac Newton's idea of propulsion by steam on land, and the first in history of which there is any account. Full-size production of about what the machine would have been had it been actually constructed. Built from the best data possible to obtain. The world was the same in the 17th Century as now in the 19th, and there were those who laughed incredulously at Newton in 1600, as only a few years ago there were those who laughed at Edison. As described in the "Explanation of the Newtonian Philosophy," it consists of a spherical boiler mounted upon a carriage. Steam issuing from the escape fronting directly backwards, by its reaction upon the carriage drives the latter ahead. The driver, sitting upon the seat placed forward, controls the steam by the handle and cock. In other words, propulsion was through the force of the escaping steam against the atmosphere. That it would have amounted to anything from a practical standpoint is not probable, but as the initial idea of the possibilities, it marked the formation of the germ of the evolution of the locomotive, which has passed through stages of development to the comparative perfection of to-day.

36. The "Cugnot," 1769-71.—The first self-moving land carriage or locomotive of which there is record in history. Designed and constructed by Nicholas Cugnot, of France, an officer of the French army. The original machine is still in existence, being preserved in the Conservatoire des Arts et Metiers, Paris. Cugnot was the first man in the world to apply the high-pressure or non-condensing engine with cylinders and pistons to the production of rotary power, and he was the first to apply the energy of steam. In other words, he built what, though purposed for use on common roads, may be said to have been the first locomotive.

37. The "Murdoch," 1784.—Designed and constructed in model by William Murdoch, of England. He was James Watt's assistant, and as Watt was so bitter an opponent of the high-pressure engine, Murdoch made his experiments at night, and, as far as possible, without the knowledge of his chief. His locomotive had a single vertical cylinder, the piston-rod being connected to one end of a beam vibrating upon a joint at the other. A connecting-rod was jointed to the beam close to its working end, and turned a crank in the axle of a pair of driving-wheels. The cylinder was half-immersed in a copper boiler through which a flue passed obliquely, the heat being supplied by a spirit-lamp beneath.

38. The "Read," 1790.—Designed and patented by Nathan Read, of Salem Mass., and the first recorded idea of steam propulsion on land in America. Nathan Read is upon record as the earliest patentee of the multitubular boiler in the world, having taken out a patent in 1791, and he was undoubtedly the inventor of the vertical multitubular firebox boiler. The principle of the steam carriage was the driving of the wheels, the rear pair of which had pinions upon the hubs, by a ratchet arrangement on the racks connecting with the piston-rods, the steering being by a wheel, connected by ropes and chains. The exhaust-pipes it was proposed to turn so as to point backwards, in order to, as he explained, secure the advantage of the effect of reaction of the expelled steam.

39. The "Trevithick," 1800.—Designed and constructed in model by Richard Trevithick, of England, and the first effort of the father of the locomotive.

40. The "Trevithick," 1803-4.—Designed and constructed by Richard Trevithick, and the first locomotive on wheels in the world. It was on the Merthyr-Tydvil tramway, in South Wales, that the first locomotive upon a permanent-way was placed and operated.

41. South Wales Cars and Rails, 1800.—Used on the Merthyr-Tydvil tramway, and the first cars drawn by a locomotive in the world. Cars standing upon the original rails upon the original stones of the tramroad which was built in 1800, and upon which the train, as here constituted, ran in 1803. These are undoubtedly the oldest cars in existence.

42. The "Okrutor Amphibolis," 1804.—Designed and built by Oliver Evans, of Philadelphia, and the first practical propulsion by steam on land.

43. The "Trevithick," 1808.—Designed and constructed by Richard Trevithick, and the first locomotive on rails in London.

44. The "Blenkensop," 1811.—Designed and constructed by Matthew Murray, in conjunction with John Blenkinsop, both of England, the joint production resulting in the first really practical and serviceable locomotive of its time. A rack-rail outside the track was used by this engine.

45. The "Brunton," 1813.—Designed and constructed by William Brunton, of England, and called the "Mechanical Traveller," or "Horse Leg" locomotive. The legs or propellers at the rear imitated the legs of a man or the fore legs of a horse, and great care was taken to so construct them as to prevent them injuring the road, and at the same time obtain a firm footing. They were made broad, and with short spikes to lay hold of the ground, so that no jerks should occur at the return of the stroke.

46. The "Hedley Model," 1812.—Designed and constructed by William Hedley, of England, and the first carefully-constructed experiment to demonstrate the adhesion of smooth wheels to smooth rails.

47. The "Puffing Billy," 1813.—Designed and constructed by William Hedley, of England, immediately after his demonstration of the adhesion of smooth wheels to smooth rails, by means of the rudely-built experimental carriage, the model of which is now in the South Kensington Museum, London.

48. The "Blucher," 1814.—The first locomotive designed and constructed by George Stephenson.

49. The "Seguin," 1828-9.—A Stephenson engine remodelled by Marc Seguin, of Paris, France, and converted into the first locomotive with multitubular boiler.

50. The "Howard," 1829.—Designed by William Howard, of Baltimore, Md., and the first locomotive patented on the American continent.

51. The "Rocket," 1829.—Designed and constructed by George Stephenson, and the winner of the prize in the Liverpool and Manchester Railway trial.

52. The "Sans Pareil," 1829.—Designed and constructed by Timothy Hackworth, of England, and participating in the Liverpool and Manchester Railway trial.

53. The "Novelty," 1829.—Designed and constructed by Braithwaite and Ericsson, of England, and participating in the Liverpool and Manchester Railway competition.

54. The "Stourbridge Lion," 1829.—Designed and constructed by Foster and Rastrick, of England, and the first actual locomotive seen in America.

Having now completed a list of the fifty-four locomotives forming this collection, as a contrast I may notice very briefly some of the magnificent engines which stood in the same building, and which showed the very latest development of locomotive-building in England, the United States, France, and Germany.

Right next to the Sampson and Albion, both English locomotives of the years 1838 and 1839, was a locomotive built by the Baldwin Company of Philadelphia, and dated 1893, its number being 859. This engine was a double compound expansion engine, and showed the very latest development of this branch of engineering. It had two coupled drivers of 6 feet, the stroke being about 3 feet.

On the other side of the triple row of historical locomotives and models was a locomotive constructed by the Rogers Locomotive Company of Paterson, N.J. This engine had all the characteristic details of American locomotives. It had three coupled drivers, 72½ inches in diameter, cylinder, 19 in. x 24 in. Weight of the engine in working order was 126,000 lb. This engine was, during the currency of the Exposition, sold to the Charleston and Savannah R. R. Plant System. The cylinders were in this case the simple high pressure. It headed the train of Pullman Vestibule Cars, and a noticeable feature was the vestibule attachment applied to the tender and the front car. The number of the locomotive was 100.

Another engine exhibited by the Baldwin Company was the "Columbus." It had the usual features of the Baldwin expansion engine, and was similar to the first mentioned, except that it had three coupled drivers.

There was a historical locomotive exhibited by E. Warren Clarke, of Rockford, Illinois. This was the famous war locomotive "General," captured by the "Andrews raiders," on the Western and Atlantic R.R., 12th April, 1862. On one of the windows of the cab was placed a notice to the effect that "the men who occupied this engine cab paid the penalty with their lives. Executed 18th June, 1862."

The engine was decorated with the Stars and Stripes, having patriotic effusions gilded on them, such as "I do not regret dying for my country, for that is a soldier's duty," and "the old Union will yet be restored, and the flag of our common country wave over the very ground occupied by this scaffold." Dying words of Wilson, executed 18th June, 1862.

This was a very historical relic of the war, and attracted a large share of attention.

There was also to be seen a car that ran between Boston and Dedham, Massachusetts, in the year 1834. This car had evidently been repaired and renovated for exhibition purposes, and so did not present such an ancient appearance as the "Nova Scotia Car," and the train of cars behind the "De Witt Clinton," referred to elsewhere.

A small locomotive with saddle tank was exhibited by the Wellman Iron and Steel Company, and had all the distinctive features of the American locomotive, with the exception of the bogie.

One of the Baldwin locomotives exhibited had the cab located over the centre of the boiler. This locomotive was raised from the track and the driving-wheels were made to revolve by means of compressed air.

Another

Another Baldwin had the high-pressure cylinder beneath the low-pressure, and both inclined at a very small angle to the horizontal. This was a freight locomotive, and as a purely American type we may note the following details:—

“Decapod Type.”—Cylinders, h.p. 16 in., l.p. 27 in. by 28 in.; driving-wheels, 50 in. diameter; weight in working order, 195,000 lb.; weight on driving-wheels, 172,000 lb.; total weight, engine and tender, 284,420 lb.; total wheel-base of loco., 27 ft. 3 in.; driving wheel-base, 19 ft. 10 in.; engine truck wheels, 30 ft.; fuel, anthracite coal; diameter of boiler, outside, 76 in.; tubes $12\frac{1}{2}$ ft. long; fire-box, 10 ft. $11\frac{1}{8}$ in. by 8 ft. $2\frac{3}{8}$ in.; working steam pressure per sq. in., 189 lb.; water capacity of tender, 4,500 gals.; coal, 8 tons; diameter of tender-wheels, 33 in. The second and third drivers on each side had no flange. The driver's cab was on the centre of the boiler, and the stoker's cab on the rear of the boiler; Westinghouse air-brake; metallic packing; two fire-doors; No. 805.

The Brooks Locomotive Works exhibited a locomotive with four coupled driving-wheels. The Brooks' characteristic appears to be the fire-box with a square top, although this is not the only form they use, as they show locomotives with arched fire-boxes. This company also showed a locomotive in which the high-pressure cylinder was placed tandem with the low-pressure; that is, in front of it and in line with it. One locomotive, No. 210, by this firm had an electric headlight manufactured by the National Electric Headlight Co. of Indianapolis, Ind.

A locomotive of the Schenectady Locomotive Works had the piston-rods carried through the front end of a cylinder and enclosed in a tube. This locomotive also had the two centre coupled drivers without flanges.

One of the most modern forms of engine was the Shay patent locomotive engine, “Lima.”—Boiler, 44 in.; waggon-top, 11 in.; tubes, 106, 96 in. by 2 in.; fire-box, 73 in. by 40 in. by 52 in. deep; three cylinders, 11-in. bore by 12-in. stroke; eight driving-wheels, 32 in. diameter; capacity of tank, 1,800 gal.; 4-in. syphon; 5-in. patent steam-brake; geared, 19 in. to 42 in.; gauge, $56\frac{1}{2}$ in.; rigid wheel-base, 52 in.; total wheel-base, 27 ft. 4 in.; length over all, 34 ft.; weight in working order, 80,000 lb. The three cylinders were on the right side of the fire-box looking forward. This locomotive engine will overcome grades of 10 per cent. and curves of 63 degrees.

Rhode Island Works sent a locomotive with the high-pressure cylinder on one side and the low-pressure on the other. In fact this appeared to be the leading characteristic of this firm.

Having now glanced more or less superficially at the most noticeable of the American locomotives, let us glance for a brief time at the English representative types.

“The Lord of the Isles.”—These English locomotives are at once noticeable for the absence in a great many cases of the cab, which is universal on American locomotives. We also notice the vast amount of polished brasswork, the somewhat gaudy appearance of the machinery generally, the painted boiler (which is not at all common on locomotives here, they being as a rule covered with Russian iron), the tender with low sides, the slightness of the wheels, &c., all give them rather a slight appearance beside the American locomotives. We also notice the height of the bottom of the fire-box from the ground, the absence of the bogie truck and wheels, and the size of the one pair of drivers. Altogether the American locomotive, in my opinion, has decidedly the better appearance of the two. Let us notice the principal details:—Wheels—driving, 8 ft. diameter, leading and trailing, 4 ft. 6 in.; cylinders, 18 in. diameter by 24 in. stroke; boiler (barrel), 10 ft. 9 in. by 4 ft. 9 in.; tubes, 300, 11 ft. 1 in. by 2 in. outside; fire-box, 5 ft. 6 in. long by 6 ft. width; heating surface—fire-box, 156 sq. ft.; tubes, 1,611 sq. ft.; total, 1,767 sq. ft.; fire-grate area, 25.46 sq. ft.

The other sample shown was Frederic C. Winsby's patent four high-pressure cylinder express locomotive. This locomotive had a cab, and in general appearance was almost up to the American. Two coupled drivers, 7 ft. 6 in.; truck wheels, 4 ft.; pressure, 180 lb.; cylinders—inside, 17 in. by 22 in., outside, $16\frac{1}{2}$ in. by 24 in.; weight on the drivers, 80,640 lb.; grate surface, 28 sq. ft.; heating surface, 2,050 sq. ft.; total weight, 134,400 lb. Joy's patent valve gear. A steam jet was used to force the sand on to the rails.

There was also exhibited an express locomotive named the “Empress.” This was a splendid engine, built on F. W. Webb's system, *i.e.*, the low-pressure cylinder is placed between the two high-pressure cylinders. Two coupled drivers, 7 ft. diameter.

Let us now look at the French locomotives. They present a rather complicated appearance in some cases, and some are rather like the English. The cylinders are outside. One engine had three domes cased in brass upon the boiler and connected by a tube, giving the engine rather a peculiar appearance.

Another engine had outside cylinders as well as inside, all high pressure. Another engine exhibited had all the appearance of the English locomotive except for its outside cylinders and very complicated (for a locomotive) valve-gear. The leading-wheels in this engine were solid, and about 4 feet in diameter. All these engines have cabs, but, unlike the American locomotives, the cabs are rather open and unprotected.

The locomotives from Germany have an English appearance, but have outside cylinders. There were two of these exhibited.

Altogether the representation of the United States in this section was, as would naturally be expected, the most complete and representative.

Besides the actual machines exhibited there were a number of pictures and locomotive photographs exhibited which showed very clearly the difference between the engines of America and those of England, and which also showed the evolution of the locomotive engine.

APPENDIX O.

World's Congress Auxiliary.

Official Programme of the International Congress of Education.

(DEPARTMENT IX OF AUXILIARY.)

(July 25-28, 1893.)

UNDER CHARGE OF THE NATIONAL EDUCATIONAL ASSOCIATION, U.S.A.

All meetings to be held in the Memorial Art Palace, Michigan Avenue, foot of Adams-st., Chicago.

NOTE:—The other Departments of the Auxiliary whose programmes have not been given in detail were as follows—I, Department of Woman's Progress; II, Department of the Public Press; III, Department of Medicine; IV, Department of Temperance; V, Department of Moral and Social Reform; VI, Department of Commerce and Finance; VII, Department of Music; VIII, Department of Literature; X, Department of Engineering; XI, Department of Art; XII, Department of Government; XIII, General Department of Subjects Specially Assigned; XIV, Department of Science and Philosophy; XV, Department of Labour; XVI, Department of Religion; XVII, Department of Sunday Rest; XVIII, Department of Public Health; XIX, Department of Agriculture.

THE WORLD'S CONGRESS AUXILIARY OF THE WORLD'S COLUMBIAN EXPOSITION OF 1893.

NOT THINGS, BUT MEN.

President: CHARLES C. BONNEY.

NOT MATTER, BUT MIND.

Vice-President: THOMAS B. BRYAN.

Treasurer: LYMAN J. GAGE.

Secretaries: BENJ. BUTTERWORTH, CLARENCE E. YOUNG.

THE WOMAN'S BRANCH OF THE AUXILIARY.

President: MRS. POTTER PALMER.

Vice-President: MRS. CHAS. HENROTIN.

COMMITTEE OF THE NATIONAL EDUCATIONAL ASSOCIATION.

IN GENERAL CHARGE.

CHAIRMEN PRESIDING AT THE SESSIONS.

	Hall.		Page.
WILLIAM T. HARRIS, Commissioner of Education, U.S.....	C	DR. JAMES B. ANGELL, President of Michigan University, presides at general sessions.....	412

DEPARTMENTS:

<i>Higher Education:</i>			
PROF. NICHOLAS MURRAY BUTLER, Columbia College, New York City	7	DR. D. C. GILMAN, President John Hopkins University	413

THE

THE NATIONAL EDUCATIONAL ASSOCIATION

OFFICERS FOR 1893-94:

ALBERT G. LANE, President, Chicago, Ill.
 E. H. COOK, Vice-President, Flushing, N. Y.
 IRWIN SHEPARD, Secretary, Winona, Minn.
 J. M. GREENWOOD, Treasurer, Kansas City, Mo.
 N. A. CALKINS, Chairman of Trustees, New York City.

REGISTRATION.

All are cordially invited to register as members of the International Congress of Education.

MEMBERSHIP IN NATIONAL EDUCATIONAL ASSOCIATION.

A certificate of membership in the N. E. A. will entitle any person to membership in the General International Congress and its several departments.

It will also secure, *free of charge*, the volume of proceedings of all the Congresses held from July 25-28, 1893.

Membership certificates can be obtained in Hall 5, Memorial Art Palace, or from any of the Registration Secretaries, upon payment of the fee of \$2.00.

GENERAL CONGRESS.

Meetings of the General Congress held in the Hall of Columbus of the Memorial Art Palace.

TUESDAY, JULY 25, 3 P. M.

Meeting opened by prayer by Rev. F. A. Noble, D. D.

Address by C. C. Bonney, President of the World's Congress Auxiliary.

Addresses by Right Rev. Samuel Fallows, Chairman of General Committee on Educational Congresses, Mrs. Potter Palmer, President Woman's Branch of the Auxiliary, Mrs. Charles Henrotin, Vice-President, Mrs. H. W. Wilmarth, Chairman of Woman's Branch Committee on Congress of Education, Dr. S. H. Peabody, Chief of Department of Liberal Arts, and others.

Report of W. T. Harris, Commissioner of Education, Chairman of the Committee of Arrangements.

Address by Hon. A. G. Lane, President of the National Educational Association, introducing Dr. James B. Angell, permanent Chairman of the General Congress.

SECOND SESSION OF THE GENERAL CONGRESS, 8 P. M.

Address by Dr. James B. Angell, President of the General Congress.

Address by Sir Henry Trueman Wood, Secretary of the Royal Commission of Great Britain for the Chicago Exposition.

Address by M. Gabriel Compayré, President of the French Commission on Education.

Address by Professor Dr. Stephan Waetzoldt, General Commissioner-in-Charge of the German Imperial Educational Exhibit. Subject: The school reform in Germany.

Address by Prince Serge Wolkonsky, delegate of the Ministry of Public Instruction.

Address by Dr. G. W. Ross, Minister of Education in Ontario.

Address by Dr. Wm. R. Harper, President of the University of Chicago.

THIRD SESSION OF GENERAL CONGRESS, FRIDAY, JULY 28, 8 P. M.

Address by Miss E. P. Hughes, Principal of the Cambridge Training College for Teachers, Cambridge, England. Subject: The professional training of teachers for secondary schools.

Address by Rt. Rev. Jno. J. Keane, Rector of the Catholic University of America, Washington, D. C.

Address by Prof. L. Dimscha, of St. Petersburg University, and delegate of the Ministry of Public Instruction of Russia. Subject: Legal education in the United States.

Address by Prof. Dr. Ditmar Finckler, of the German Imperial Commission to the Exhibition.

Address by M. Benjamin Buisson, delegate of the Minister of Education of France.

Address by Gen. John Eaton, ex-Commissioner of Education of the United States. Subject: Educational endowments in the United States.

Address by M. Ergraff Kovalevsky, delegate of the Russian Ministry of Public Instruction.

Address by Dr. L. M. Törngren, Director of Royal Central Gymnastic Institute, Stockholm, Sweden.

Address by Dr. Alberto Gomez Ruano, Commissioner in charge of Educational Exhibit of Uruguay.

Address by Don J. Abelardo Nuñez, Inspeccion General de Instruccion, Primaria, Chili, Director of the Chilian Exhibit.

Address by Dr. Edwin Österberg. Subject: Training of teachers in high schools in Sweden.

HIGHER

HIGHER EDUCATION.

Hall No. 7, main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Subject: Universities.

Chairman, President D. C. Gilman, of Johns Hopkins University. Alternate Chairman, President W. R. Harper, of the University of Chicago. Secretary, Prof. Andrew F. West, of Princeton University.

Themes for Discussion.

1. How far is it desirable that Universities should be of one type? To be opened by President Martin Kellogg, of the University of California.
2. How should we cope with the problem of excessive specialisation in University study? To be opened by a paper sent by Professor Allievo, of the University of Turin, Italy.
3. To what extent should an antecedent liberal education be required of students of law, medicine, and theology? To be opened by Professor Woodrow Wilson, of Princeton University.
4. In what way may professional schools be most advantageously connected with universities and colleges? To be opened by President Seth Low, of Columbia College.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

Subject: Colleges.

Chairman, President Timothy Dwight, of Yale University. Alternate Chairman, President James B. Angell, of the University of Michigan. Opening address by the Chair.

Themes for Discussion.

1. Should Greek be required for the degree of Bachelor of Arts? To be opened by Professor W. G. Hale, of the University of Chicago.
2. What signs of improvement are visible in the undergraduate life of American students? The discussion to range over the topics of athletics, morals, student organizations, intercollegiate courtesies, and relations of students to instructors. To be opened by President Raymond, of Wesleyan University.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

Subject: Topic dealing with the relations of higher education to the advancement of culture, learning, and civilisation.

Chairman, President Francis L. Patton, of Princeton University. Alternate Chairman, President Seth Low, of Columbia College. Opening address by the Chair.

Themes for Discussion.

1. The evolution of liberal education. To be opened by Professor A. F. West, of Princeton University.
2. On what conditions should the degree of Doctor of Philosophy be given? To be opened (probably) by Professor Ira Remsen of Johns Hopkins University, followed by Professor W. O. Sproull, Dean of the University of Cincinnati.
3. The relation of our colleges and universities to the advancement of civilisation. Closing addresses by Rt. Rev. Bishop Keane, Rector of the Catholic University of America, Washington, D.C., and President James B. Angell, of the University of Michigan.

SECONDARY EDUCATION.

Hall 22, upper floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Inaugural address by Dr. J. C. Mackenzie, President of the Department. The supervision of all secondary education in public high schools, private schools, and endowed academies, by the State or municipal authority.—Discussion.

11:30 A.M.

Thesis: The course of study in secondary schools designed simply to prepare pupils for life (or designed as a finishing school), should it be different from that designed to prepare students for college or the professional school? By Dr. W. T. Reid, of Belmont, California.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: (a) Should the amount of time given to mathematics in secondary schools (as they are) be diminished? (b) Should the amount of time given to languages in our secondary schools (as they are) be diminished, in order to make room for a more extended course in physics, botany, and chemistry? By Dr. C. F. P. Bancroft, Principal Phillips Academy, Andover, Mass., Dr. D. W. Abercrombie, of Worcester Academy, Mass., and Dr. Schlee, Rector of the Real-Gymnasium of Altoona) and a member of the committee of seven appointed by the Emperor.—Discussion.

11:30 A.M.

2. Thesis: Should art studies, including drawing, painting, and modelling, form a part of the prescribed course for all pupils in secondary schools? To be opened by a paper presented by Mlle. Marie Dugard, Professor at the Lycée Molière, Paris, and member of the French Commission: On the secondary education of girls in France.—Discussion.

THIRD

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: Should algebra or geometry come first in the course of study of secondary schools? Hon. W. N. Hailman, Superintendent of Schools, La Porte, Ind., and Prof. Bela Krécsy, Delegate from Hungary.—Discussion.

11:30 A.M.

2. Thesis: In cases where a choice should be made, which should come first, Latin, or some modern language, in the course of study of secondary schools? W. C. Collar, Head Master Roxbury Latin School, Boston, Mass.—Discussion.

ELEMENTARY EDUCATION.

Meets in the Hall of Washington, on the main floor.

FIRST SESSION, WEDNESDAY, JULY 6, 9:30 A.M.

General topic: The course of Study in Elementary Schools.

Address by the President of the Department, General John Eaton, Ex-Commissioner of Education of the United States.

1. Thesis: Should morals, language, numbers, geography, history of the country, writing, and drawing be considered the essentials of the course of study for the eight years of elementary instruction, the pupils being from six to fourteen years of age? J. L. Pickard, LL.D., of Iowa, and Hon. L. H. Jones, Superintendent Public Schools of Indianapolis.—Discussion.

2. Thesis: What should be added to the essential branches of the elementary course of study to meet the industrial needs of localities or race characteristics? For example, should city schools introduce branches relating to commerce or manufactures, or should rural schools introduce agriculture, chemistry, and botany? Prof. Ergraff Kovalevsky.—Discussion.

3. Papers on the University Education of Women in England, prepared by Miss Fawcett and Miss Beale, of London. Read by abstract by Miss E. P. Hughes and Miss M. Louch, of London. Other papers prepared by foreign delegates for this department read by title or by abstract (and to be printed in full in the volume of proceedings).

SECOND SESSION, THURSDAY, JULY 27.

General Topic: The Teaching of Geography.

Programme of this and the third sessions furnished by the National Geographical Society.

1. Opening address by Dr. Gardiner G. Hubbard, the President of the Society. Relation of the currents of air and water to animal and vegetable life, and to the temperature of countries.

2. Addresses from delegates of Foreign Societies. (One hour.)

3. Address by Prof. William Libbey, Jr., delegate from the American Geographical Society of New York. The relations of the Gulf Stream to the Labrador current off the New England coast.

4. Paper by Col. F. W. Parker, Principal of the Cook County Normal School. Relation of history to geography.

5. Address by Miss Eliza Ruhamah Scidmore. Japan.

6. Address by General Eaton, representing the Bureau of Education. The relations which may or should exist between the National Geographic Society and geographical instruction.

7. Announcement relative to awards of prizes by the National Geographic Society.

8. Address by Prof. George Davidson, representing the Geographical Society of the Pacific. An examination of the early voyages of discovery and explorations of the north-west coast of America between 1536 and 1603, including the identification of the anchorage of Sir Francis Drake on the coast of California, 1579.

9. Address by Prof. T. C. Chamberlain, representing the University of Chicago. The relations of geology to physiography in educational work.

10. Geographical instruction in the public schools. Prof. W. B. Powell, Superintendent of Public Schools, Washington, D.C.

11. The arid regions of the United States. By F. H. Newell.

12. Address by Prof. Israel C. Russell, University of Michigan.

It is expected that the Hon. John Abercrombie will attend as delegate from the Royal Scottish Geographical Society, and Sir Casimier S. Gzowski, of Toronto, as a delegate from the Royal Geographical Society of London.

Through the courtesy of Mr. Wm. E. Curtis, U. S. Commissioner, the members of the conference will have the exclusive use of the Monastery of la Rabida from 9 to 11 a.m., July 28. Mr. Curtis and Capt. John G. Bourke, U. S. Army, will explain "Exhibits of Columbus," and "the most precious collection of historical papers that were ever exhibited together."

THIRD SESSION, THURSDAY, JULY 27, 8 P.M.

Address: International Polar Expeditions. By Gen. A. W. Greely, U. S. Army.

FOURTH

FOURTH SESSION, FRIDAY, JULY 28, 9:30 A.M.

General Topic: Morals, Religion, and Citizenship.

1. Thesis: How far should Moral Education be made to include courtesy and social etiquette? What school exercises are the best to promote education for citizenship? In what ways can the studies of the common school, such as History and Literature, be made to develop the sentiment of patriotism? What special work should be undertaken in the elementary school to prepare the pupils for the duties of citizenship? Hon. W. A. Mowry, Superintendent Schools, Salem, Mass., and Hon. D. B. Johnston, Superintendent Schools, Columbia, S. C.—Discussion.

2. Dr. N. G. W. Lagerstedt, delegate from Sweden, will read a paper on the Public Educational System of Sweden.

3. Thesis: Is it possible to separate religious and moral instruction? Should religious instruction be introduced into the public or common schools, and taught either by the regular teacher or by clergymen? Should the Bible be read as a religious exercise? In how far can the discipline of the school be relied upon to secure moral habits? E. E. White, LL.D., of Columbus, O.—Discussion.

KINDERGARTEN INSTRUCTION.

Sessions to be held in the Hall of Columbus, on the main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Introductory Address, Mrs. A. M. Hughes, President of the Department.

General topic of the first session: The essential characteristics of the kindergarten as distinguished from the primary school, and the practical adjustment of the former to the latter.

1. Thesis: (1) The essential characteristics of a kindergarten. (2) Its gifts and occupations. (3) Should the kindergarten attempt to teach reading or writing? (4) Should the plays and games, which Froebel invented, be modified? Should substitutions be made for any of them, or others be added? (5) What is the place and value of the song in the kindergarten, and the degree of dramatic element which should accompany the song? The above discussion opened by Mrs. Alice H. Putman, of Chicago, Mrs. Sarah A. Stewart, of Philadelphia, and Miss Constance Mackenzie, also of Philadelphia, and Mrs. Otilie Bondy, of Jena, Germany.

2. Thesis: (1) The organic union of kindergarten and primary school. (2) What modifications in the primary school are necessary or desirable in order to adapt it to continue the work of the kindergarten and reap the advantages of the training already received? (3) What are the essential differences in discipline and instruction that should characterize the primary school and distinguish it from the kindergarten? The above discussions to be opened by Mrs. Sarah B. Cooper, of California, Hon. W. E. Sheldon, of Massachusetts, Mr. B. Pickman Mann, of Washington, D. C., and Miss Mary C. McCulloch, of St. Louis.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: (1) Preparation of the kindergartener for her work. (2) Should all kindergarten teachers be required to pass examination in secondary studies, such as algebra, geometry, modern or ancient languages, general history, natural science, psychology, and English literature or the literature of the native country? (3) What training in Froebel's philosophy should be prescribed in a professional course of training for the kindergartener? (4) What work in the gifts and occupations, the plays and games, theoretically and practically, should be required for the graduate from a kindergarten training school? The above discussions opened by papers from Miss Susan E. Blow, by Miss Annie Laws, President of the Kindergarten Society of Cincinnati, and by Mrs. Louisa Parsons Hopkins, of the Board of School Supervisors, Boston.

2. Thesis: (1) Educative value of hand work in the kindergarten. (2) Cautions to be observed as to the limits of certain of the occupations, such, for example, as pricking paper, and other work that is liable to strain the eyes if too long continued. (3) The Froebel system of drawing, in contrast to free-hand drawing. (4) The characteristic mental and physical conditions of the first seven years of childhood, which determine the special educative value of hand work in the kindergarten. The above discussions opened by Hon. W. N. Hailman, Superintendent of Schools, La Porte, Ind., and Miss L. H. Pingree, of Boston.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: (1) To what extent is the use of symbolism justifiable in the kindergarten? (2) Is there any validity to the claim often urged, that the child under seven years of age is to be distinguished in psychological development from the child of more than seven years of age, through his greater dependence upon symbolic modes of instruction? (3) Is the distinction a valid one between symbolic and conventional studies,—conventional studies being understood to mean reading, writing, written arithmetic, and appliances useful in intercommunication but not emblematic or symbolic of a second and higher meaning? The above discussions opened by Prof. Earl Barnes, of Leland Stanford Junior University, and Prof. Charles A. McMurry, of Illinois State Normal University, Miss Elizabeth Harrison, of Chicago, Miss Marian Foster Washburne, of Chicago, Miss Hattie Neil, of Chicago, and Mrs. Eudora L. Hailman, of La Porte, Ind.

2. Thesis: What should be the character of the stories told in the kindergarten, and to what extent should stories be told? The above discussions opened by Miss Mary T. Hotchkiss, of Milwaukee.

SCHOOL

SCHOOL SUPERVISION.

Hall 4, on the main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Address by Hon. A. S. Draper, Superintendent Public Schools, Cleveland, O., President of the Department.

1. Thesis: Teacher's examinations, certificates, and licenses. What scholastic knowledge should be required from teachers before being permitted to enter on a term of probationary service—In English? In languages other than English? In natural science? In physics and chemistry? In mathematics? In art? Hon. W. B. Powell, Superintendent Public Schools, Washington, D. C.—Discussion.

2. Thesis: How to improve the work of poor teachers.—Hon. F. A. Fitzpatrick, Superintendent Public Schools, Omaha, Neb.—Discussion.

3. Thesis: How to interest a corps of teachers in the study of psychology and its application to the work of the school-room.—Discussion.

4. Thesis: University participation for teachers. Hon. E. P. Seaver, Superintendent Schools, Boston, Mass.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: Appointment and tenure of office of superintendents. President F. W. Parker, Cook County Normal School, Chicago, and Dr. B. A. Hindsdale, of Michigan University.—Discussion.

2. Thesis: Who shall appoint teachers, and on whose nomination? Hon. H. M. Tarbell, Superintendent Public Schools, Providence, R.I., and Hon. C. B. Gilbert, Superintendent Public Schools, St. Paul, Minn.—Discussion.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: At what point in the course of study should departmental or special teachers be employed in elementary schools?

2. Thesis: Should the law require the attendance of all pupils in school between the ages of eight and fourteen? Hon. John Jasper, Superintendent of Schools, New York City, Hon. Thos. B. Stockwell, State Superintendent of Public Instruction, Rhode Island, and the Hon. A. G. Lane, Superintendent Public Schools, Chicago, Ill.—Discussion.

PROFESSIONAL TRAINING OF TEACHERS.

Sessions to be held in room No. 3, main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

General topic of discussion for the session: Schools of practice, or "model" schools connected with the schools for the professional training of teachers.

Introductory address by Dr. E. A. Sheldon, President of the Department.

Paper by Fannie S. Guptill, Minneapolis, Minn. Discussion of the questions involved.

1. The kind and degree of preparation required before coming to the school of practice.

2. The time in the course of preparation when the practice should be taken.

3. The value and extent of observation work in the Model School.

4. Amount and character of criticism to be recommended.

5. Value of "substituting," or filling vacancies in ward schools.

6. Value of practising with classmates as pupils.

7. Shall the instructors of branches be the critics in their own branches?

8. Shall the critic be always present?

9. How much practice shall be required each day, and how long continued?

10. How often should the classes taught be changed?

11. What degree of perfection in teaching shall be required in order to entitle the candidate to a diploma?

12. Is the plan a good one to have a paid teacher in charge of each class in the School of Practice who does a part of the teaching and at the same time criticises the work of the pupil teachers?

13. The value of sending pupils out into neighbouring schools to observe and take charge occasionally of classes.

The discussion will be opened by Francis W. Parker, Principal Cook County Normal Cook, Chicago, Ill., and J. W. Cook, Principal State Normal University, and others. The discussion will be followed by the reading of two valuable and highly interesting papers. The first paper is prepared by Signor Giacomo Oddo Bonafide, Director of Normal School, Alvellino, Italy. Subject of the paper: "What Professional Training of Teachers is Desirable (in normals or by practical instruction)?" To be read by Mrs. C. L. Place, Principal of Training School, St. Paul, Minn. The second paper is prepared by Joseph W. Cownham, Lecturer on Education and Master of Methods, Westminster Wesleyan Training College, S. W. England. This paper will be read by Miss N. Cropsy, Assistant Superintendent of Schools, Indianapolis, Ind.

SECOND

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Should we have a gradation of Normal and Training Schools ?
 - a. For training teachers of normal schools, colleges, and universities.
 - b. For training teachers for secondary schools.
 - c. For training teachers for elementary schools.
 - d. For training teachers for kindergarten and primary schools.
 - e. For training teachers for rural schools.
 - f. Requirements of these different grades :
 1. As to scholastic instruction.
 2. As to psychological and technical instruction.
 3. As to practice teaching under criticism.

Thomas Kirkland, Principal of the Normal School at Toronto, Canada, will open this discussion with a paper, and will be followed by Eugène Martin, Directeur de l'Ecole Primaire Supérieure, Paris, Dr. Francis J. Cheney, Principal State Normal School, Cortland, N.Y., and others.

2. Should the course of study in normal schools be wholly professional, or should it include work in the elementary and secondary branches, even where proficiency in these branches is required as a condition for admission? If so, to what extent? The discussion will be opened with a short paper by Daniel Fulcomer, A.M., President Western Michigan College, Grand Rapids, Mich., to be followed by F. B. Palmer, Principal of Normal School, Fredonia, N.Y., and others.

3. How does the typical normal-school work differ in method from that of secondary or higher education? Malcolm MacVicar, Superintendent of the Freedmen's Schools of the Baptists' Home Mission Society, Brooklyn, N.Y., will open the discussion with a paper, to be followed by John W. Dickinson, Secretary Massachusetts Board of Education, and others.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

What should be required of a candidate for the degree of Doctor of Pedagogy? Discussion, led by Jerome Allen, Ph. D., Dean of Faculty of Pedagogy, University of City of New York, and Dr. Edward R. Shaw, of same institution.

a. Should such requirements be confined to scholastic instruction? Dr. Charles McMurry, of Illinois State Normal University. What should be required in the way of teaching ability, experience and skill? Dr. S. G. Williams, of Cornell University.

b. Should original investigation be required in some branch of child study? Earl Barnes, Professor of Pedagogy in Leland Stanford Junior University, California.

c. Or in some phase of the history of education? Dr. Edward Brooks, Superintendent of Schools, Philadelphia, Pa.

d. Or in experimental psychology with a view to determine some questions in regard to the education value of a branch, or branches, in the curriculum of elementary or secondary schools? Prof. Edgar D. Shimer, of Faculty of Pedagogy, University of the City of New York.

11:30 A.M.

What value should be attached to the formal study of children in the training of teachers? Dr. G. Stanley Hall, President of Clark University, Worcester, Mass., will open the discussion, to be followed by Miss Margaret K. Smith, State Normal and Training School, Oswego, N.Y.

The following persons from abroad have announced their intention of coming to the Departmental International Congress for the Professional Training of Teachers. They will doubtless take a part in the discussions of this department, making the occasion one of unusual interest and profit.

England—Miss E. P. Hughes, Principal Cambridge Training College for Higher Teachers, Cambridge.

France—Messieurs Gabriel Compayré, President of the French Commission; Benjamin Buisson, Delegate of the French Minister of Public Instruction; Eugène Martin, Directeur de l'Ecole Primaire Supérieure of Paris, and Member of the French Commission.

Ireland—Prof. D. Croly, M.A., St. Patrick's Training College, Drumcondra, Dublin; Prof. J. J. Doherty, L.L.D., Training College, Marlborough-street, Dublin.

Scotland—J. R. Leslie, M.A., Principal Episcopal Training College, Dalry House, Edinburgh; A. S. Baird, Esq., Free Church Training College, Glasgow; Dr. Thomas Morrison, Glasgow Free Training College, Glasgow.

Canada—John B. Calkin, Normal School, Truro, Nova Scotia; Eldon Mullin, Principal Provincial Normal School, Fredericton, N.B.; Thomas Kirkland, Principal Toronto Normal School, Toronto, Ont.; Th. G. Rouleau, Principal Normal School, Laval, Quebec; Prof. J. A. Calder, Principal Normal School, Moose Jaw, N.W.T.

ART INSTRUCTION.

Sessions to be held in Hall 8, main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

General Topic: Methods of Teaching Drawing.

Address by Prof. Halsey C. Ives, President of the Department.—Discussion.

1. Thesis: Whether the pupil shall first take a course of drawing from the flat, in order to learn the technique of representation. Prof. H. T. Bailey, Supervisor of Drawing for the State of Massachusetts.—Discussion.

2.

2. Thesis: How early shall the pupil begin to use models? Prof. W. S. Perry, Pratt Institute, Brooklyn, N.Y.—Discussion.

3. Thesis: Should the models to be drawn be artistically beautiful, or shall the pupil practice drawing real objects without reference to the æsthetic question? Prof. L. W. Miller, Principal of the Philadelphia School of Arts, and Prof. W. S. Goode-nough.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

General Topic: All art study should aim first to familiarise the pupil with the chief types of the great works of art with a view to cultivating the artistic taste.

Miss Emily J. Rice, of Cook County Normal School.

1. Thesis: The pupil should study and analyse a series of works from the great masters, describing in language in the form of essays the general theme and the methods adopted of making the work of art tell its own story, the technical difficulties and successful devices of the artist in completing his work of art. Prof. J. M. Hoppin, Prof. Alfred Emerson, Cornell University, and Rev. Frank Gunsaulus, President of Armour Institute, Chicago.—Discussion.

2. Thesis: The pupil should copy or make a drawing of the work of art which he has learned to analyse, and his exercise should be criticised by fellow pupils and teacher, making clear the respects wherein he has failed to seize the motives of the artist, or to reproduce his (the artist's) devices of representation. Mrs. Mary Dana Hicks, of Boston.—Discussion.

3. Thesis: Works of sculpture after being studied analytically and reproduced in drawings should be modelled in clay, and works of painting after such preliminaries should be copied in painting by the pupil. Prof. George L. Schreiber, of Armour Institute, Mr. E. F. Fenollosa, of the Boston Art Museum.—Discussion.

THIRD SESSION, FRIDAY, JULY 28.

1. Thesis: Connected with the learning to model in clay, wax, or other material, the pupil should have a series of lessons on the limitations belonging to the arts of painting and sculpture, and discuss what subjects can properly be treated in sculpture, and what more properly belong to painting. Prof. W. M. R. French, Director of the Art Institute of Chicago, Prof. J. F. Weir, of Yale University, and Miss Emily Sartain, of Philadelphia.—Discussion.

2. Thesis: Should drawing commence from the beginning with light and shade, or should it be outline drawing for the first year or more? Miss Josephine C. Locke, of Chicago, Miss Hannah J. Carter, of Drexel Institute, Philadelphia, and Prof. J. Ward Stimson, of the New York School of Fine Arts.—Discussion.

INSTRUCTION IN VOCAL MUSIC.

Sessions held in Hall 31, upper floor.

WEDNESDAY, JULY 26, 9:30 A.M.

General Topic: The course of study, or what the pupil should learn of vocal music in the elementary schools for children aged five to fifteen years.

Address by Prof. F. W. Root, President of the Department.

1. In what grades of the elementary school should the children learn pieces of music by rote (or by ear only), and in what grades should they commence to learn to read musical notation?—Discussion.

2. In what grades or at what ages should pupils be required to take up part singing or learn other parts besides the soprano or melody?—Discussion.

3. What music is especially adapted to children from five to ten, and what from ten to fifteen years? What rule should guide the selection from popular songs? from classic composers? A discussion of the characteristics of the compositions of such song-writers as H. G. Nägeli, Fr. Silcher, C. H. Rink, Fr. Kuecken, and the higher classical composers, Beethoven, Mozart, Mendelssohn, Schubert, Von Weber, Handel, Schumann, Kreutzer, Abt, Haydn, Rossini, and others, who furnish the best selections for pupils in their fifteenth year and upwards.

4. The feasibility of forming a library of pieces of music of permanent value for the different ages of youth—say, for example, selections from such composers as Nägeli for pupils from five to ten years, and from such as Mendelssohn for pupils from eleven to fifteen years.—Discussion.

5. The danger of confining the course of study in music for a too long period to reading and singing mere mechanical exercises devoid of artistic merit and empty of all thought and feeling.—Discussion.

6. The importance of including in the child's musical course popular songs of a permanent character, such as the national patriotic airs, the great religious hymns, the emotional utterance of pure sentiments, like love of home, friendship, generosity, industry, sobriety, respect for others, self-denial, and general right doing.—Discussion.

THURSDAY, JULY 27, 9:30 A.M.

General Topic: The qualifications requisite for a teacher of vocal music.

1. His knowledge of the physiology and hygiene of the vocal organs; the degree of strain that the vocal chords will bear without injury, at the periods of growth from five years to fifteen years.—Discussion.

2. His ability to accompany the voice with some instrument, say the piano or violin.—Discussion.

3. His knowledge of classic music and of the best course of study to lead up to it.—Discussion.

4. His knowledge of methods of instruction.—Discussion.

5. Is a knowledge of the higher science of counterpoint essential to the special teacher of vocal music, in view of the alleged fact that if he lacks such knowledge he will not be able to direct the course of musical study progressively from the elements toward a sufficiently high goal?—Discussion.

6. What musical studies in the great masters should the teacher keep up from year to year for the sake of his own improvement and culture?—Discussion.

FRIDAY, JULY 28, 9:30 A.M.

General Topic: The methods of teaching and learning vocal music.

1. What are the respective functions of the regular class teacher and the special teacher of vocal music?—Discussion.

2. The relative importance of correcting errors in musical enunciation; in keeping time; in proper expression; in proper posture of the body; opening the mouth; breathing; in attempting to sing notes of too high or too low a pitch for the degree of physical development.—Discussion.

3. The danger of laying too much stress on the mechanical part of singing to the neglect of musical expression.—Discussion.

4. The systems of musical notation—tonic *sol-fa*—"movable *do*" and "fixed *do*" systems.—Discussion.

5. What pupils, if any, should be excused from the musical exercises of the schoolroom?—Discussion.

NOTE.—Names not yet received at the time this goes to press, but a large number of music teachers have promised to take part in the discussions.

TECHNOLOGICAL INSTRUCTION.

Hall 24, on the upper floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Address by Gen. Francis A. Walker, President of the Massachusetts Institute of Technology, President of the Department.

Thesis: How far do the technological schools, as they are at present organized, accomplish the training of men for the scientific professions, and how far and for what reasons do they fail to accomplish their primary purpose? Prof. R. H. Thurston, of Cornell University, and Prof. John M. Ordway, Tulane University, New Orleans.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

General Topic: Educational Value of Technical Study.

1. Thesis: Workshop practice as an educational means. President Henry Morton, Stevens' Institute of Technology, Hoboken, N.J.—Discussion.

2. Thesis: The educational value of the study and practice of chemistry. Prof. Ira Remsen, of Johns Hopkins University.—Discussion.

3. Thesis: The early history and organization of the Sheffield Scientific School at New Haven.—Discussion.

4. Thesis: The educational value of laboratory work in exact measurement. Prof. A. M. Mayer, of Stevens Institute.—Discussion.

5. Thesis: The educational value of the laboratory study of electricity.—Discussion.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: The educational value of work in mechanical drawing and architectural drawing. Prof. G. Lanza, of Massachusetts Institute of Technology.—Discussion.

2. Thesis: Shopwork and drawing as a means of developing slow pupils. Prof. R. H. Richards.—Discussion.

3. Thesis: The educational value of natural science.—Discussion.

4. Thesis: The educational value of applied mathematics, including engineering. Prof. F. R. Hutton, of New York City.—Discussion.

5. Thesis: On the educational value of pure mathematics. Prof. H. T. Eddy.—Discussion.

6. Thesis: On the educational process of training an engineer.—Discussion.

INDUSTRIAL AND MANUAL INSTRUCTION.

Meets in Hall No. 6, main floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Introductory address by the President of the Department, Prof. J. D. Runkle.

1. Thesis: The new demands which the world's industries make upon the elementary schools. This question will be considered under the heads of Ethics, Education, Economics. Prof. C. M. Woodward, LL.D., of Washington University, St. Louis.—Discussion.

2. Thesis: In courses of mechanic arts instruction in wood and metals, consider the relative educational values of—

(a) A series of graded models embracing the fundamental principles of the art.

(b) A series of completed and more or less useful articles.

(c) A shorter course in the arts, and then a specialization with reference to some definite industrial pursuit, as in the French Schools. M. Eugène Martin, Directeur de l'École Primaire Supérieure, Paris.—Discussion.

SECOND

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: The claims of the two systems of manual training known as—
 - (a) The Russian. M. Kovalevsky, official delegate from Russia, Dr. H. H. Belfield, of the Chicago Manual Training School.
 - (b) The Swedish, or Slöjd. Prof. Gustaf Larsson, Principal of the Slöjd Training School of Boston.—Discussion.
2. Thesis: Since all industrial products involve form, it follows that all industrial instruction should have an æsthetic basis in the study of the general principles which underlie all tasteful and graceful forms, and this study should be regarded and ranked as of equal educational value with the mechanic art processes.—Discussion.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: Primary schools—Into what grades and with what subjects should industrial and manual instruction be introduced? Hon. W. B. Powell, Superintendent of Schools, Washington, D. C.—Discussion.
2. Thesis: Primary schools—In these grades should boys and girls receive the same instruction?—Discussion.
3. Thesis: Grammar schools—Should boys and girls have the same industrial and manual instruction in all the grades? If not, what should the difference be? Mr. Edward Boos-Jegher, Official Delegate of the Swiss Confederation to the Columbian Exposition.—Discussion.
4. Thesis: Mechanic art high schools—The place such schools hold in a public educational system. If they are regarded as special technical schools, to what extent may they be used as fitting schools for industrial pursuits?—Discussion.

BUSINESS EDUCATION.

Sessions to be held in Hall 29, upper floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Persons whose names are marked thus * are not expected to be present.

1. Hon. C. C. Bonney, President of the World's Congress Auxiliary, and Mrs. Potter Palmer, President of the Woman's Department, will address the Congress some time during its sessions.
2. Opening address by the President of the Department, Prof. Silas S. Packard, Packard's Business College, New York City, on the "Evolution of the Business College."
3. "Practical Advantages of Business College Training," Col. George Soulé, Soulé's Business College, New Orleans.—Discussion.
4. "Business College Teachers and their Equipment," Prof. J. M. Mehan, Principal, Capitol City Commercial College, Des Moines, Ia.—Discussion.
5. "Reciprocal Relations and Benefits of Business Colleges, and other Departments of Education," Hon. Ira Mayhew, LL.D., Detroit.—Discussion.
6. "The Relation of Business College Instruction to Industrial, Commercial, and Financial Interests," Prof. A. D. Wilt, Principal of Miami Commercial College, Dayton, O.—Discussion.

SECOND SESSION, WEDNESDAY, JULY 26, 2 P.M.

Hon. Ira Mayhew, LL.D., will preside.

1. "Graded Courses in Business Education," Prof. H. M. Rowe, Ph. D., President Curry University, Pittsburgh, Pa.—Discussion.
2. "Limitations of Business College Instruction," Prof. W. E. McCord, Principal Peoria Business College, Peoria, Ill.—Discussion.
3. "Business College Training in Counting-room Work," Prof. G. W. Elliott, Principal of Elliott's Business College, Burlington, Ia.—Discussion.
4. "Higher Aspects of Business Education," Prof. R. E. Galleghar, Principal of Canadian Business College, Hamilton, Ont.—Discussion.

THIRD SESSION, THURSDAY, JULY 27, 9:30 A.M.

Col. George Soulé, New Orleans, will preside.

1. "Business Colleges and the Art of Writing," Prof. Daniel T. Ames, Editor *Penman's Art Journal*, New York City.—Discussion.
2. "The Business Woman as Daughter, Wife, Mother, and Friend," Mrs. Sarah A. Spencer, Principal Spencerian Business College, Washington, D.C.—Discussion.
3. "The Value of a Business Education to Women," *Mrs. Charlotte Emerson Brown, President General Confederation of Women's Clubs, East Orange, N.J.—Discussion.
4. "Business Training for the World's Charities," *Miss Clara Barton, President of the Society of the Red Cross, Washington, D.C.—Discussion.

FOURTH SESSION, THURSDAY, JULY 27, 2 P.M.

Prof. R. E. Galleghar, Hamilton, Ont., will preside.

1. "Stenography and Typewriting as Branches of Business Education," Isaac S. Dement, Chicago, Ill.—Discussion.
2. "Teaching Morals and Manners through Shorthand Instruction," Mrs. S. S. Packard, Packard's Business College, New York City.—Discussion.
3. "What Stenographers and the Business Community Demand of Business Colleges in Shorthand and Typewriting Instruction," J. L. Bennet, President World's Congress of Stenographers.

FIFTH

FIFTH SESSION, FRIDAY, JULY 28, 9:30 A.M.

Prof. J. M. Mehan, Des Moines, Ia., will Preside.

1. "Economics and Social Science in Business Education," *Edmund J. James, Wharton School of Economy and Finance, Philadelphia; *Dr. Richard T. Ely, Department of Economics, Social Science and History, University of Wisconsin, and Prof. Fred. W. Spiers, Superintendent People's Institute, Milwaukee, Wis.
2. "A Merchant's View of the Business College," H. N. Higginbotham, President World's Columbian Exposition, Chicago.—Discussion.
3. "A Banker's View of the Business College," Lyman J. Gage, Treasurer World's Columbian Exposition, Chicago.—Discussion.
4. "The Science of Civics," Henry Randall Waite, Ph. D., President American Institute of Civics.
5. It is hoped that the concluding address of the Congress will be delivered by Dr. James MacAlister, President Drexel Institute, Philadelphia.

PHYSICAL EDUCATION.

Sessions to be held in Hall 26, upper floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Address by Dr. Edward M. Hartwell, Director of Physical Training, Public Schools, Boston, Mass., President of the Department.

1. Thesis: Some unsolved problems in physical education. Dr. T. D. Wood, Professor of Hygiene and Physical Training, Leland Stanford Junior University, Palo Alto, Cal.—Discussion.
2. Thesis: The cultivation of the human body. Dr. Angelo Mosso, Professor of Physiology, University of Turin, Turin, Italy.—Discussion.
3. Thesis: The Psychological aspects of exercise with and without apparatus. Dr. G. W. Fitz, Instructor in Physiology and Hygiene, Harvard University, Cambridge, Mass.—Discussion.
4. Thesis: Should medical schools teach physical training? Dr. Lena V. Ingraham, Boston, Mass.—Discussion.
5. Thesis: Supervision of school gymnastics by qualified physicians. Dr. Helen C. Putnam, Providence, R.I.—Discussion.
6. Thesis: The Royal Central Gymnastic Institute of Stockholm—its aims and work. Professor L. M. Törngren, Director of Royal Central Gymnastic Institute, Stockholm, Sweden.—Discussion.
7. Thesis: How should physical exercises for school purposes be selected and graded? Dr. J. Gardner Smith, Supervisor of Physical Training in Public Schools, New York City.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: The revival of Greek gymnastics in Germany. Jaro Pawel, University Teacher, Vienna, Austria.
2. Thesis: The movement for promoting popular and youthful sports in Germany. James L. Hughes, Inspector of Schools, Toronto, Ontario.—Discussion.
3. Thesis: English experience in providing the poor of cities with out-of-door facilities for exercise. The Right Honorable the Earl of Meath, London, England.—Discussion.
4. Thesis: The athletic movement in France. Baron Pierré de Coubertin, Paris, France.—Discussion.
5. Thesis: The observation and study of movement and mental states. Dr. Francis Warner, Physician to London Hospital, London, England.
6. Thesis: The relation of physical training to other forms of education. Dr. G. Stanley Hall, President Clark University, Worcester, Mass.—Discussion.
7. The physical training of deaf mutes. A. Gutzmann, Instructor in City Institute for the Deaf and Dumb, Berlin, Prussia.
8. Thesis: The physical training of criminals. Dr. H. D. Wey, State Reformatory, Elmira, N.Y.—Discussion.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: The North American Turnerbund; its history, aims, and achievements. H. Muench, ex-President N. A. Turnerbund, St. Louis, Mo.
2. Thesis: The normal school of the N. A. Turnerbund. J. Toensfeldt, St. Louis, Mo.
3. Thesis: The physiology of the German system of gymnastics. Hans Ballin, Sansdusky, O.
4. Thesis: School gymnastics in the Kingdom of Saxony. Moritz Zettler, Teacher in Gymnasium in Chemnitz, Saxony.
5. Thesis: Swedish school gymnastics in England. Mme. Bergman Oesterberg, London, England.—Discussion.
6. Thesis: Swedish military gymnastics. Captain Carl Silow, Instructor Royal Central Gymnastic Institute, Stockholm, Sweden.—Discussion.
7. Thesis: The laws of muscular and nervous fatigue and their relation to physical education. Dr. Warren P. Lombard, Professor of Physiology University of Michigan, Ann Arbor, Michigan.—Discussion.
8. Thesis: Physical education in the south. Dr. William A. Lambeth, University of Virginia, Charlottesville, Va.

9. Thesis: Physical education in Canada. Dr. R. Tait Mackenzie, McGill University, Montreal, Canada.

10. Discussion: How far is it desirable to attempt to secure state legislation (in the United States) making physical training compulsory in the public schools?

RATIONAL PSYCHOLOGY IN EDUCATION.

Sessions to be held in Room 27, upper floor.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

Address by the President of the Department, Rev. James McCosh, D.D. Topic: Reality—What place has it in Philosophy?—Discussion.

11:30 A.M.

Thesis: Can psychology be founded on consciousness alone, or does it need physiology? Prof. Josiah Royce, of Harvard University.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

Thesis: Perception, conception, and primitive truth. Prof. G. T. Ormond, of Princeton University.—Discussion.

11:30 A.M.

Thesis: Aristotle's doctrine of a first principle, as set forth in the eleventh book of his *Metaphysics*. The Very Rev. A. F. Hewitt, D.D., of the Catholic University of America.—Discussion.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

Thesis: Self-activity in education. Dr. G. Gould Schurman, President of the Cornell University.—Discussion.

11:30 A.M.

Thesis: Wundt's Psychology of the Will. Prof. E. B. Titchener, of Cornell University.—Discussion.

EXPERIMENTAL PSYCHOLOGY IN EDUCATION.

Sessions to be held in Hall 20, upper floor.

It has been decided, after much consideration and wide conference, to devote the entire three days to the subject of child study. Within a very few years several societies have been formed for this purpose; several journals have been started; the school children in many cities of this country and Europe have been measured or tested as to the rate of growth of body and muscular and mental power; various classes of defect of sense, limb, mind, character, form of error in school work and of ignorance on entering school, have been tabulated. From these results a new body of literature is being developed which throws much light upon the controllable causes whether of excellence or defect, and contains many suggestions on the method and matter of teaching, and promises to show how instruction can be made more effective as well as to point out the true beginnings of instruction in the entire group of psychological subjects.

It is hoped that not only all teachers, anthropologists, and physicians interested in this work, but parents and others representing different lines of study and from locations widely separated, may here meet, stimulate, and encourage each other by personal acquaintance, mutual suggestion, and plans for future co-operation.

The organization of a National Society with officers from different states will be considered.

All papers are strictly limited to twenty minutes. It is expected that discussions and reports will be confined to ten minutes each, in the hope that many workers may be heard from and results and methods from many sources may be recorded.

G. STANLEY HALL,
President of Department.

FIRST SESSION, WEDNESDAY, JULY 26, 9:30 A.M.

1. Thesis: Child study as a basis for psychology and psychological teaching, by G. Stanley Hall, President of Clark University, Worcester, Mass. Twenty minutes.—Discussion.

2. Thesis: The imaginations of children, by E. Harlow Russell, Principal of the State Normal School, Worcester, Mass. Twenty minutes.—Discussion.

3. Thesis: Mental waste and economy, by Prof. G. T. W. Patrick, State University of Iowa. Twenty minutes.—Discussion.

4. Thesis: Exercise of the will in children, by Prof. Charles McMurry, State Normal School, Normal, Ill. Fifteen minutes.—Discussion.

5. Dominant seventh in education, by Miss H. E. Hunt, Ph. D., Brookline, Mass. Ten Minutes.—Discussion.

6. Dreams, by Prof. James Sully, London, England. Read by abstract. Ten minutes.—Discussion.

SECOND SESSION, THURSDAY, JULY 27, 9:30 A.M.

1. Thesis: A study of children's theology, by Prof. Earl Barnes, Leland Stanford Junior University. Twenty minutes.—Discussion.

2. Thesis: Child study as a basis for pedagogy, by W. H. Burnham, Instructor in Pedagogy, Clark University, Worcester, Mass. Twenty minutes.—Discussion.

3. Thesis: The new psychology in normal schools, by Miss Lillie A. Williams, State Normal School, Trenton, N.J. Fifteen minutes.—Discussion.

4. Constitutionally bad spellers, by Miss Adelaide E. Wyckoff, Packer Institute, Brooklyn, N.Y. Fifteen minutes.

5. Principles of physical training and their application to the prevention of stuttering in children, by E. M. Hartwell, M.D., Director of Physical Training, Boston Public Schools.

THIRD SESSION, FRIDAY, JULY 28, 9:30 A.M.

1. Thesis: On the observation and study of movements and mental states, based on the examination of some 50,000 children, by Francis Warner, M.D., of London, England. Twenty minutes.—Discussion.

2. Thesis: Development of motor ability in school children, by Prof. W. L. Bryan, University of Indiana. Twenty minutes.—Discussion.

3. Thesis: Attention and association in children, by T. N. Balliet, Superintendent of Schools, Springfield, Mass.

4. Self-consciousness in children, by F. W. Parker, President Cook County Normal School. Twenty minutes.—Discussion.

5. A pedagogical need, by Dr. E. F. Buchner, Lecturer on Pedagogy, Yale University. Fifteen minutes.—Discussion.

DEPARTMENT OF EDUCATIONAL PUBLICATIONS.

Hall 21, upper floor.

FIRST SESSION, THURSDAY, JULY 27, 9 A.M.

Topic: *Present Ideals in Educational Journalism.*

Address of Welcome, Hon. Henry Barnard, Editor of the *American Journal of Education*.

Present ideals in educational journalism. Paper by C. C. Rounds, Principal of the State Normal School, Plymouth, N.H.

From the superintendent's point of view. Paper by Andrew S. Draper, LL.D., Superintendent of Schools, Cleveland, O.

The educational press and the public. Address by Col. J. B. Merwin, Editor of *The American Journal of Education*, St. Louis.

Discussion.—The following gentlemen have kindly consented to take part: Amos M. Kellogg, Editor of the *New York School Journal*; W. A. Bell, Editor of the *Indiana School Journal*; R. J. Guinn, Assistant State School Commissioner, Georgia, and Editor of *The Southern Educational Journal*; Mons. Buisson, Director of the College Alaoui, Tunis, late French Commissioner to the Expositions at New Orleans and Melbourne; Foster Watson, Esq., London; Joseph H. Cownham, Principal Wesleyan Training College, London; J. E. Wells, Editor *The Educational Journal*, Toronto; Ramon Manterola, Ministerio de Gobernacion, Editor *Boletin Bibliografico y Escolar*, Tacubaya, Mexico.

SECOND SESSION, FRIDAY, JULY 28.

Topic: *The History of Educational Journalism.*

In France, G. Compayré, Rector of the Académie de Poitiers, and President of the French Pedagogic Delegation to the World's Fair.

In Germany (Hannover), H. Wanner, Reallehrer, Hannover, recently Editor of the *Hannover Schulzeitung*.

In Bohemia, Jos. Klika, Redakce *Paedagogickych Rozhledn*, Prague.

In Italy, Piéro Barbèra, Editor, Florence.

In Mexico, V. Guzman, Editor of *La Educacion Moderna*.

In Canada, James L. Hughes, Inspector of Schools, Toronto.

In the United States:—

In New England, W. A. Mowry, Ph. D., Superintendent of Schools, Salem, Mass.

Dr. Barnard's *American Journal of Education*, Will S. Munroe, Leland Stanford Jr. University.

In New York and New Jersey, Pennsylvania, Virginia, and Maryland, C. W. Bardeen, Editor of *The School Bulletin*.

In the Carolinas and the Gulf States, James K. Powers, President of the State Normal College, Florence, Ala.

In Louisiana, Texas, and Arkansas, Prof. Henry E. Chambers, Tulane University, New Orleans.

In Kentucky and Tennessee, R. H. Carothers, Editor of *The Educational Courant*, Louisville.

In Ohio, Samuel Findley, Editor of *The Ohio Educational Journal*.

In Michigan, Henry A. Ford, Pontiac.

In Indiana, George F. Bass, Editor of *Indiana Young People*.

In Illinois, John W. Cook, LL.D., President of Normal University.

In Iowa, Henry Sabin, Editor of *The Iowa Journal of Education*.

In Wisconsin, Prof. J. W. Stearns, University of Wisconsin, Editor of *The Wisconsin Journal of Education*.

In Minnesota and the Dakotas, S. S. Parr, Superintendent of Schools, St. Cloud, Minn.

In Missouri, Howard A. Gass, Editor of *The Missouri School Journal*.

In Kansas, Colorado, and Utah, John MacDonald, Editor of *The Western School Journal*.
In

In Nebraska, Wyoming, Montana, and Idaho, J. H. Miller, Editor of *The Northwestern Journal of Education*.

In California, Washington, and Oregon, John Swett, Superintendent of Schools, San Francisco, Cal.

Special and Class Journals, W. N. Hailman, Superintendent of Schools, La Porte, Ind.

GENERAL INFORMATION.

Please Register in Hall 5.—Bureau of Information, Hall II.

All visiting educators are cordially invited to visit the Chicago Kindergarten College, 10 Van Buren-street, and make its rooms their headquarters for resting and writing.

The Committees in charge of the Congresses have headquarters during the week in Hall 5. *All persons, whether visitors or members, and especially the latter, are requested to visit Hall 5 and register.*

Official badges and medals of the World's Congress Auxiliary may be procured at stand to the right of main entrance, and also at Registration Desk.

Check-room, Post-office, Restaurant, Mailing-room, Lavatories, &c., are on the ground floor under main entrance.

Restaurant on ground floor.

OFFICIAL PUBLICATION OF PROCEEDINGS OTHER THAN THE CONGRESSES OF THE NATIONAL EDUCATIONAL ASSOCIATION.

The Auxiliary will make a full report of the proceedings of the several Congresses, which will be properly edited and published in book form. At this time it is impossible to estimate accurately the number of volumes the proceedings of a given department will make, or the cost of same per volume. It may be stated, however, that these valuable publications will be furnished at the lowest practicable price; and all persons who desire to obtain the report of the Congresses in any or all of the various departments should follow instructions contained in registration blanks, or address a special communication to the undersigned Secretary, who will register their names and at the earliest possible date furnish full information as to prices, date of delivery, and other particulars.

GENERAL ASSIGNMENT TO THE MONTHS OF THE EXPOSITION SEASON OF THE WORLD'S CONGRESSES OF 1893, BY DEPARTMENTS.

These general Departments embrace more than one hundred Congresses.

CLARENCE E. YOUNG,
Secretary.

World's Congress Headquarters, Chicago.

THE NATIONAL EDUCATIONAL ASSOCIATION.

The National Educational Association is representative of every grade of education, and by reason of its scope, its large membership, and long experience in the management of immense gatherings of people, commands abundant resources for the enterprise in hand. This Association was organized in 1857. Its objects are to elevate the character and advance the interests of the profession of teaching and to promote the cause of popular education.

The Association has held thirty-two meetings, as follows:—Two at Philadelphia, 1857, 1879; one at Cincinnati, 1858; Washington, 1859; Buffalo, 1860; Chicago, 1863, 1887; Ogdensburg, 1864; Harrisburg, 1865; Indianapolis, 1866; Nashville, 1868, 1889; Trenton, 1869; Cleveland, 1870; St. Louis, 1871; Boston, 1872; Elmira, 1873; Detroit, 1874; Minneapolis, 1875; Baltimore, 1876; Louisville, 1877; Chautauqua, 1880; Atlanta, 1881; four at Saratoga, 1882, 1883, 1885, 1892; Madison, 1884; Topeka, 1886; San Francisco, 1888; St. Paul, 1890; Toronto, 1891. There were no meetings in 1861, 1862, 1867, 1878.

APPENDIX P.

Rules of the Exposition.

RULES OF THE WORLD'S COLUMBIAN EXPOSITION, GOVERNING RATES OF ENTRANCE AND ADMISSION FEES, AND OTHERWISE AFFECTING THE RIGHTS, PRIVILEGES, AND INTERESTS OF EXHIBITORS AND THE PUBLIC, WITHIN THE GROUNDS ADOPTED AS A SITE FOR SAID EXPOSITION.

(1)

THE Exposition shall be open for the admission of visitors during the six months commencing on the first day of May and ending with the thirtieth day of October, 1893, on each day of the week, except on the first day of the week, commonly called Sunday, unless otherwise provided and authorised by Congress.

The gates shall be open to exhibitors and all employees at 6 o'clock, a.m., and to the public at 8 o'clock, a.m., and close at 7 o'clock, p.m., except in such cases as the management shall direct for special evening entertainments, and in such instances the gates shall close at an hour not later than 11 p.m.

(2)

The price of admission and entrance to the Exposition grounds and buildings shall be fifty (50) cents per capita, provided, however, that children under 6 years of age, accompanied by their parents, guardian, or an adult person, shall be admitted free of charge.

Complimentary tickets shall be issued to those whose official position demands recognition by the Exposition, viz.: To the President and Vice-President of the United States, Members of the Cabinet, Justices of the Supreme Court of the United States, Members of Congress of the United States, and the chief officers thereof, the Diplomatic Corps, Governors of the States and Territories of the United States, the Mayor of the City of Chicago and the Members of its Council, the Members of the World's Columbian Commission and their Alternates, the Board of Directors of the World's Columbian Exposition, and ex-Directors thereof, the Members of the Board of Lady Managers and their Alternates, the Members of the State and Territorial World's Fair Boards, Members of the Board of Control and Management of the United States Government Exhibit, Foreign Commissioners and their Secretaries, Judges and Jurors of Awards, all the Executive Officers of the Exposition, all the Custom-house Officials, clerks and employees connected with the United States Treasury Department in the service of the Secretary of the Treasury within the Exposition grounds, to the Members of the Board of South Park Commissioners, one each to a representative of the principal and most prominent newspapers of this and foreign countries, and to any other person or persons who may be adjudged to be entitled to a complimentary pass by the President of the World's Columbian Commission, the President of the World's Columbian Exposition, and the Director-General. In all cases where a pass is issued upon the request of the President of the World's Columbian Commission, the President of the World's Columbian Exposition, or the Director-General, such pass shall bear the signature of such officer who makes the application therefor.

All persons who may be actually employed by the World's Columbian Commission and by the World's Columbian Exposition, and all necessary employees World's Fair State Boards, in connection with the work of the Exposition, shall be given free passes to the grounds during their respective terms of service.

Each exhibitor shall be entitled to one pass, provided his presence is required during the installation of his exhibit, and the time same is on exhibition. Such attendants and employees as are necessarily and regularly required for the care of each exhibit, respectively, whose services are paid for by the exhibitor, shall be entitled to free admission.

One free pass shall be issued to each person, firm, or corporation who has been granted a concession by the World's Columbian Exposition, and all the necessary servants and employees of such concessionists shall be admitted free to the Exposition grounds.

(3)

A Bureau of Admissions and Collections is hereby created, to be composed of the President of the World's Columbian Exposition, the Chairman of the Committee on Finance, the Chairman of the Committee on Ways and Means, the Treasurer and Auditor of the World's Columbian Exposition, whose powers and duties shall be to manage and control the sale and collection of all tickets of admission, and to issue and collect

collect all passes to the Exposition grounds; and also to collect all the moneys which may become due to the World's Columbian Exposition from all persons, firms, and corporations on account of privileges and concessions which have been, or may be hereafter, awarded to them by the said World's Columbian Exposition; and also to collect all the moneys to become due from exhibitors and State World's Fair Boards to the said World's Columbian Exposition; and in order to enable the said bureau to practically and efficiently carry out and perform the functions of the same, they shall adopt such regulations as may be necessary, and employ such service and agents as may be required in that behalf, subject to the approval of the Executive Committee.

(4)

Exhibitors will not be charged for space. A limited amount of power will be supplied gratuitously. This amount will be settled definitely at the time space is allotted.

Power in excess of that allotted will be furnished by the Exposition at a fixed price. Demands for such excess must be made before the allotment of space.

Exhibitors must provide at their own expense all show-cases, cabinets, shelving, counters, fittings, &c., which they may require, and all counter-shafts, pulleys, belting, &c., for the transmission of power from the main shafts.

Exhibitors will be confined to such exhibits as are specified in their application. When the allotment of space is definitely made, exhibitors will be notified of their allotment of space and its location, and will be furnished with a permit to occupy such space, subject to the General Rules and Regulations adopted for the government of the Exposition, and the Special Rules governing the department in which their exhibit will be made. Permits for space will not be transferable.

Decorations, signs, dimensions of cabinets, shelving, counters, &c., and the arrangement of exhibits, must conform to the general plan.

Reasonable precautions will be taken for the preservation of exhibits, but the World's Columbian Exposition will not be responsible for any damage to, or for the loss or destruction of, an exhibit, resulting from any cause.

All packages containing exhibits intended for the several departments must be addressed to the "Director-General, World's Columbian Exposition, Chicago, Ill., U. S. A."

In addition, the following information must be written on the outside of each package: (a) Department in which exhibit is to be installed. (b) The State or Territory from which the package comes. (c) The name and address of the exhibitor. (d) The number of the permit for space. (e) The total number of packages sent by the same exhibitor. The serial number must be marked on each package, and a list of the contents inclosed in each package. Freight must be prepaid.

Favourable terms will be arranged by which exhibitors may insure their own goods. Exhibitors may employ watchmen of their own choice to guard their goods during the hours the Exposition is open to the public. Such watchmen will be subject to the rules and regulations governing employees of the Exposition, but no exhibitors will be permitted to employ attendants or assistants for service in any building except upon written consent of the Chief of the Department.

The Chief of each Department will provide cards of uniform size and character, which may be affixed to exhibits, and on which will be stated only the exhibitor's name and address, the name of the article or object exhibited, and its catalogue number.

Exhibitors' business cards and brief descriptive circulars only may be placed within such exhibitors' space for distribution. The right is reserved by the Director-General to restrict or discontinue this privilege whenever it is carried to excess, or becomes an annoyance to visitors.

The Chief of each Department, with the approval of the Director-General, has the power to order the removal of any article which he may consider dangerous, detrimental to, or incompatible with the object or decorum of the Exposition, or the comfort and safety of the public.

Exhibitors will be held responsible for the cleanliness of their exhibits, and the space surrounding the same. All exhibits must be in complete order each day at least thirty minutes before the hour of opening. No work of this character will be permitted during the hours the buildings are open to the public. In case of failure on the part of the exhibitor to observe this rule, the Chief of the Department may adopt such means to enforce the same as circumstances may suggest.

Sketches, drawings, photographs, or other reproductions of articles exhibited will only be allowed upon the joint assent of the exhibitor and the Director-General. General views of portions of the interiors of the buildings may be made by the approval of the Director-General.

Immediately after the close of the Exposition, exhibitors must remove their effects, and complete such removal before 1st January, 1894. Goods then remaining will be removed and disposed of under the direction of the World's Columbian Exposition.

Exhibitors requiring power in any of the buildings will have to furnish the necessary counter-shafting, pulleys, hangers, &c., at their own expense.

Shafting and motors will be under the care of the exhibitor requiring them; but can be erected only on receipt of a permit from the Chief of the Department. Exhibitors must arrange their exhibits in such a manner as to require a minimum amount of shafting by using motors connected or belted to their machinery direct.

The expense of transporting, receiving, unpacking, and arranging exhibits, as well as their removal at the close of the Exposition, shall be paid by the exhibitor.

Upon

Upon arrival at Jackson Park, prepaid consignments will be delivered by the Bureau of Transportation on, or as near as practicable, the exhibitor's allotted space, without additional charge. Transportation charges and the terminal charges of 6 cents per hundred pounds, on all consignments shipped by rail or water lines, destined to Jackson Park, must be fully prepaid at initial point, as under no circumstances will these charges be advanced by the World's Columbian Exposition. The terminal charge of 6 cents will apply to all consignments except those entering the grounds on their own wheels, small consignments, minimum car lots, and single pieces of an exhibit, weighing over 30,000 lb. The charge on cars and coaches on their own wheels will be 5 dollars each; on locomotives with tenders, 10 dollars each. The minimum charge of 50 cents for any single shipment will be exacted by the Exposition, and the minimum car load weight established by the initial road will be the basis on which the Exposition charge is made for such car load shipments, and exhibits weighing more than 30,000 lb., each piece, will be subject to special arrangements.

Such goods as are received at the Exposition with transportation and terminal charges unpaid, or only partially paid, or with no responsible party at the grounds to assume charge thereof, will be stored in the warehouse at the expense of the owner. The schedule of charges for this service will be based upon those adopted by the United States Government Customs Warehouses.

In case exhibitors request it, the Chiefs of the several departments shall turn over the boxes and cases, in which exhibits are shipped, to the Bureau of Transportation, to be by it stored and preserved in the warehouses to be constructed for that purpose, until the close of the Exposition; and after the Exhibition is closed it shall be the duty of said Bureau to deliver such boxes and packing cases to the respective exhibitors to whom the same belong, in which they may repack their exhibits, and when the same shall have been repacked it shall be the duty of the Bureau of Transportation to deliver them on board the cars or other vehicles provided by exhibitors for the reshipment of same.

Each exhibitor whose boxes or packing cases are so handled, stored, and returned to him, shall, on account thereof, pay to the World's Columbian Exposition 4½ cents per cubic foot for the actual space occupied, with a minimum of 50 cents on any one lot; this charge, however, not to include insurance. (*For further information, see Supplements to Traffic Arrangements, issued by the Transportation Department January 4 and 5, 1893.*)

Exhibitors must be manufacturers or producers of machinery, goods, and materials intended for exhibition.

In every case applicants for space are requested to give timely notice if they decide not to exhibit.

Each person who becomes an exhibitor thereby agrees to conform strictly to the rules and regulations established for the government of the Exposition.

Communications concerning applications for space, and negotiations relative thereto, should be addressed to "The Director-General, World's Columbian Exposition, Chicago, Ill., U.S.A."

(5)

Special rules will be issued governing each Department and the sale of articles within the buildings or on the grounds, but no articles shall be sold for removal previous to the close of the Exposition, unless a concession or privilege for the same has been granted by the Committee on Ways and Means. Privileges refer to the sale of such goods as are manufactured in order to illustrate a machine or process exhibited. Concessions refer to the sale of all goods and operations of attractions from which the securing of revenue is the sole object of the lessees. The removal of exhibits will not be permitted prior to the close of the Exposition.

(6)

The installation of heavy articles requiring foundations should, by special arrangement with the Director of Works, begin as soon as the progress of the work on the buildings will permit. The general reception of articles at the Exposition buildings will commence November 1, 1892, and no articles will be admitted after April 10, 1893. Space not taken possession of by April 1, 1893, will revert to the Director-General for reassignment.

If exhibits are intended for competition it must be so stated by the exhibitor, or they will be excluded from examination for award.

Articles that are in any way dangerous or offensive, also patent medicines, nostrums, and empirical preparations whose ingredients are concealed, will not be admitted to the Exposition.

(7)

An Official Catalogue will be published. The sale of catalogues is reserved exclusively by the Exposition Company.

(8)

As provided in the arrangement entered into by the joint Board of Reference and Control on August 11, 1892, providing for a Council of Administration, all matters of general administration are committed to the supervision, direction, and control of said Council.

(9)

The Board of Directors of the World's Columbian Exposition reserves the right to amend or add to these rules whenever it may be deemed necessary for the interest of the Exposition.

RULES

RULES AND REGULATIONS OF THE DEPARTMENT OF WATER SUPPLY
SEWERAGE, AND FIRE PROTECTION.

(A) All plans for the plumbing, drainage, or gas-fittings for any building in Jackson Park and Midway Plaisance must be submitted to the Department of Water Supply, Sewerage, and Fire Protection for approval.

(B) Any person or persons desiring to connect with the sewer, water, or gas-pipes in Jackson Park and Midway Plaisance shall take out a permit for same under the rules and regulations.

A permit must be taken out for each connection.

(C) No person or persons shall do any sewer plumbing or gas-fitting in Jackson Park or Midway Plaisance until the said person or persons shall have been granted a license by the Director of Works. Fee for a general license shall be 5 dollars.

(D) *Rules and Regulations for Sewer Connections in Jackson Park and Midway Plaisance.*

(1) Any person or persons desiring sewer connections shall make written application, on blanks provided by this Department, for the necessary connection, stating whether it is required for roof drainage or waste water.

(2) No person, except a duly authorised agent of the Department of Water Supply, Sewerage, and Fire Protection, shall tap any sewer at Jackson Park or Midway Plaisance, and no connection shall be larger than 6 inches in diameter.

(3) This department shall do all the work in making the connection from the main sewer to a point 5 feet outside the building, at the rate of 50 cents per hour, and furnish all materials at cost price, and will do all the work for exhibitors at the same rate.

(4) All repairs will be made by this department on proper notice, and the cost of same will be charged for at the same rate as for making connections.

(5) All sewers outside of buildings shall be of first-class salt-glazed vitrified pipe; all sewers inside of buildings shall conform to the plumbing regulations. All connections shall be made with Y's, and all changes in direction shall be made with curved pipe.

(6) All down-spouts shall be properly connected and sealed, and so arranged as to drain through one connection to the rain-water sewer.

(7) No down-spout shall connect with waste-water sewer.

(8) All plans for drainage, either for roof water or waste water, or for both, must be approved by Engineer of the Department of Water Supply, Sewerage, or Fire Protection before permit will be granted.

(E) *Rules and Regulations governing Plumbing in Jackson Park and Midway Plaisance.*

(1) So far as practicable, all soil, waste pipes, and traps shall be exposed to view, to facilitate inspection and for convenience in repairing. When encased, it shall be done by special permit from the Department of Water Supply, Sewerage, and Fire Protection.

(2) No brick, sheet metal, earthenware, or chimney flues shall be used for sewer ventilator, or to ventilate any trap, soil, or waste pipe.

(3) All sewers, vertical soil or waste pipes, and ventilator pipes, shall be of iron. Soil and waste pipes shall be exposed above the roof at least 12 inches, and have a diameter at least 1 inch greater than that of the pipe proper from a point 1 foot below the roof. No cap or cowl shall be affixed to the top of such ventilating pipe.

(4) Soil, waste, and vent pipes in an extension, in case they would open within 20 feet of a window of main building, must be carried above the roof of main building.

(5) Horizontal soil, waste, and vent pipes, except branches, are prohibited. Where rows of fixtures are placed in line, angle fitting must be used on vent pipes to prevent same from filling with rust or condensation. Trapped vents are strictly prohibited. No ventilation pipe from house side of any trap shall connect with any ventilation pipe, or with any sewer, soil, or waste pipe. Branches on main vertical vent pipes, where there is more than one fixture, must be taken out above the top of highest fixture.

(6) The least diameter of soil pipe permitted is 4 inches. A vertical waste pipe into which kitchen sinks discharge, if receiving the waste of five or more floors, must be at least 3 inches in diameter, and shall have 2-inch branches.

(7) There shall be no traps at the foot of soil or waste pipes.

(8) All iron pipes (cast) must be sound, free from holes or cracks, and of the grade known in commerce as extra heavy. The following weights per lineal foot will be accepted as complying with the rules:—2 inches, 5½ lb. per lineal foot; 3 inches, 9½ lb. per lineal foot; 4 inches, 13 lb. per lineal foot; 5 inches, 17 lb. per lineal foot; 6 inches, 20 lb. per lineal foot.

(9) All iron pipe for water supply shall be standard galvanized iron pipe. All lead pipe for water supply and connection shall be extra strong. The following weights per lineal foot will be accepted as complying with the rules:—½ inch, 2 lb. 8 oz.; ¾ inch, 3 lb.; 1 inch, 4 lb. 8 oz.; 1¼ inch, 6 lb.; 1½ inch, 7 lb. 8 oz.; 2 inch, 9 lb.

(10) All fittings used in connection with such pipe shall correspond with it in weight and quality. Tar or asbestos coated pipe shall be used.

(11) All plumbing work shall be inspected, and, if necessary, be subjected to test in the presence of an inspector of this Department. Defective pipe must be removed and all defective work made good and to conform to these rules.

(12) All joints on (cast iron) soil, waste, and drain-pipe must be so filled with oakum and lead and hand-caulked as to make them air-tight.

(13)

(13) All connections of lead waste or vent pipes shall be made by means of wiped joints and brass-soldered nipples or combination ferrules. Wrought iron or cast iron nipples or ferrules must not be used.

(14) Every water-closet, urinal, sink, basin, and bath-tub, and every set of trays, tub or set of tubs, must be effectively and separately trapped. Traps on bath-tubs must be placed in such a manner that the clean-out will be in plain view and above the floor.

(15) Traps must be placed as near the fixture as possible, and in no case shall a trap be more than 1 foot from said fixture.

(16) Every sink, basin, bath-tub, water-closet, slop-hopper, and every fixture having a waste pipe, shall be furnished with a trap. Traps shall be protected from siphonage or air pressure (when such make of trap is used that is liable to siphonage) by special air pipes of a size not less than the waste pipe, but air pipes for water-closet trap shall be not less than 2-inch bore. Air pipes shall be run as direct as practicable, and shall be not less than 4 inch bore where they pass through the roof. Two or more air pipes may be connected together, or with a soil pipe, but in every case of connection with a soil pipe such connection shall be above the upper plumbing fixtures of the building.

(17) In no case shall a waste from any fixture be connected with any water-closet trap or revert connection for same.

(18) No trap vent shall be used as a waste or soil pipe.

(19) All lead safes under fixtures must be drained by special pipe, which shall discharge into sink or on cellar floor; in no case shall the safe waste be connected with any waste, soil, or drain pipe, or sewer. The end of safe waste shall be covered by flap valve.

(20) Overflow pipe from fixtures must in each case be connected on the inlet side of the trap.

(21) The drain pipe from refrigerator must not be directly connected with any waste or soil pipe, or with the drain or sewer, or discharged upon the ground; it must be discharged into an open or water-supplied sink. Such drain pipe must be so arranged as to admit of frequent flushing, and must be as short as possible and disconnected from refrigerator. The outlet should be covered by means of metal flap valve.

(22) The sediment pipe from boiler must be connected on inlet side of sink trap.

(23) No water-closet shall be placed in an unventilated room or compartment. In every case the room shall be opened to the outer air or be ventilated by means of an air duct or shaft. Interior water-closets shall not be supplied from supply pipes direct. All water-closets within the building shall be supplied from special tanks or cisterns, the water of which is not used for any other purpose. A group of water-closets may be supplied from one tank; but water-closets on different floors shall not be supplied from one tank.

(24) The overflow pipes from water-closet cisterns may discharge into an open sink, or where its discharge will attract attention and indicate that waste of water is occurring; but not directly into soil, waste, drain, vent, or sewer pipes.

(25) The valves of cisterns must be so fitted and adjusted as to prevent waste of water.

(26) Special sewer systems are provided for rain-water leaders, and no house drainage other than roof water shall be connected into rain-water sewers.

(27) No steam, exhaust, blow-off, or drip pipe shall connect with the sewer or with any house drain, soil, or waste pipe. Such pipe shall be discharged into a tank or condenser, from which a suitable outlet to the house drain shall be provided.

(28) When area drains are connected to the house drain, they must be effectively trapped and protected by means of back water valves.

(29) Wooden wash trays and sinks are prohibited inside of any building; they shall be of non-absorbent material.

(30) Pan closets and latrines will not be allowed in any building.

(31) Plans of all buildings to be erected in Jackson Park, showing arrangement of plumbing appliances and pipe lines, shall be submitted to this Department for approval, and the use of any special appliances, or any variation from these rules and regulations, shall be upon permit granted by this Department, countersigned by the Director of Works.

(f) Rules and Regulations for Water Connections and Use of Water in Jackson Park and Midway Plaisance.

(1) Any person or persons desiring water supply, for any purpose whatsoever, shall make written application, on blanks provided by this Department, for the necessary connection, describing the purpose for which water is to be used, and the size of pipe desired.

(2) No person, except a duly authorized agent of the Department of Water Supply, Sewerage, and Fire Protection, shall tap any water pipe at Jackson Park or Midway Plaisance, and no pipe shall be tapped for larger than three-quarter ($\frac{3}{4}$) inch pipe; all connections exceeding a three-quarter ($\frac{3}{4}$) inch tap shall be made with a tee.

(3) No person or persons shall take water from any main except upon written permission from the Department of Water Supply, Sewerage, and Fire Protection.

(4) Except where special agreement is made, water will be delivered through meters.

(5) This Department will do all the work in tapping pipes and all work in the Exposition buildings at a rate of fifty (50) cents per hour, and furnish all fittings, pipes, and meters at cost price; and the consumer shall pay entire cost of connecting main with the location desired.

(6) All repairs will be done by this Department on proper notice, and the cost of same will be charged for at the same rate as the making of connections. (7)

(7) Water will be supplied at the rate of ten (10) cents per one thousand (1,000) gallons, meter measurement.

(8) All bills for construction and repairs of water connections, and all water rates, shall be paid monthly.

(9) The World's Columbian Exposition reserves the right to prescribe and limit the size of pipe and the hours for use of water.

(10) The World's Columbian Exposition reserves the right to shut off water for non-payment of bills, for necessary repairs, and in case of fire; and shall not be responsible for damages in case water is so shut off, or in case of flooding through breaks.

(11) No person or persons shall open or interfere with any hydrant or hose connection, except duly authorized agents of this Department.

(12) No person or persons, except the duly authorized agents of this Department, shall open or close any stop-gate on the water supply system.

(G) No variation from the Rules and Regulations of the Department of Water Supply, Sewerage, and Fire Protection will be allowed, except on written permit signed by the Engineer, and countersigned by the Director of Works.

GUARD, FIRE, AND HOSPITAL SERVICE.

The Police Department of the Exposition is known as the "Columbian Guard," and is subject to the control of the Director of Works. The Columbian Guard is officered by a commandant, and such other officers as may be from time to time appointed by the Director of Works.

The Fire Department of the World's Columbian Exposition is governed by the municipal fire department of the city of Chicago.

Hospital Service.

(1) A Medical Director with all the necessary assistants and attendants shall be appointed by the Director of Works, and their salaries fixed by him, subject to the confirmation or approval of the Council of Administration.

(2) The said Medical Director, subject to the control of the Director of Works, shall have charge of the hospital building and all fixtures and property therein for the uses of the Medical Department.

(3) The hospital buildings shall not contain exhibits except upon the recommendation of the Director of Works, approved by the Director-General. It is intended solely for medical purposes, and visitors will not be admitted to its wards without special permission from the Medical Director. All information concerning this department may be obtained from the members thereof.

(4) Under no circumstances will any remuneration be received for services rendered at the hospital, or at the Exposition grounds. No medicine will be sold, nor will any be dispensed except upon the prescription of the Medical Director, or some one of his assistants.

(5) No patient whose condition will permit his removal shall remain in the hospital building over night. All patients in wards of the hospital at the hour of closing the Exposition, if their condition will permit it, shall be transported by ambulance to their respective residences, place of abode, or to some reputable city hospital.

(6) All employees of the World's Columbian Commission, the World's Columbian Exposition, the United States Government Exhibit Board, the State and Territorial World's Fair Boards, and Foreign Commissioners residing in the World's Fair grounds, or who become ill within the grounds while engaged in the services aforesaid, shall report to the Medical Director or his assistants for treatment necessary before their departure or removal therefrom.

(7) All cases of serious sickness occurring among the employees aforesaid, visitors, or others within the grounds, shall be reported without delay to the Medical Director, who will immediately have the patient removed to his or her residence or place of abode, or to one of the neighbouring city hospitals.

(8) Nothing in the foregoing rules shall be construed to prevent the United States Government from providing in its own way for the officers and men in its service.

WORLD'S COLUMBIAN EXPOSITION—RULES AND REGULATIONS FOR THE SUPPLY OF ELECTRICITY, STEAM, COMPRESSED AIR, AND POWER FROM SHAFTING.

General conditions.

(1) The Director-General has general charge of the installation of all exhibits, and the control and management of the same to the closing of the work of the Exposition, through the Department Chiefs, under the system, heretofore established and now recognised by law as existing agencies. The Director-General has exclusively to do with all exhibitors in their connection with or relation to the Exposition it being understood that so much of the regular power and light plant accepted as exhibits shall be under the control of the Director of Works.

(2) Exhibitors desiring to contract for service of electricity, steam, compressed air, power from shafting, gas, or water, must make application to the Chief of the Department in which their exhibits are installed. No application will be entertained unless made upon a blank furnished by the Chief of the Department; and when an application has been approved by the Director-General, a contract will be executed on the part of the World's Columbian Exposition by the Director of Works, provided it is not impracticable, on the terms and conditions hereinafter specified. In

In no case will service be furnished except under authority of contract in writing, the payments for which shall be made by the applicant to the World's Columbian Exposition at the time of the execution of said contract.

(3) Service will be provided from 1st May to 30th October, 1893, inclusive.

(4) The Exposition management will not be responsible for stoppages from any reasonable cause.

(5) A limited amount of power will be supplied gratuitously to turn over, periodically, an otherwise inoperative exhibit; the length of time such exhibit shall be operated to be determined by the Chief of Department.

(6) The authorised representative of the management of the World's Columbian Exposition shall have access to the consumer's space for the purpose of inspection at all reasonable hours.

Electricity for Incandescent Lighting.

(1) The generators, primary system of wiring, and converters will be installed, operated, and maintained by the World's Columbian Exposition.

(2) Service will be furnished from 100-volt alternating current system, as manufactured by the Westinghouse Electric and Manufacturing Co.

(3) All lamps, sockets, switches, cut-outs, and other appliances must be adapted to the above-named system.

(4) All power service for generating light will be furnished during the Exposition hours by the World's Columbian Exposition, from the 1st May to the 30th day of October, 1893, inclusive, at the rate of 8 dollars per sixteen candle-power, lamp capacity, or the equivalent in lamps of other candle-power.

(5) National, State, Territorial, and Foreign World's Fair Boards and Concessionaires must install, operate, and maintain the wiring system for lighting their respective buildings at their own expense. The installation shall comprise all conductors and appliances necessary from the converter to the lamps, and the first installation of lamps. The plans for such installation must be submitted for the approval of the Director of Works before installation commences, and the work shall be installed so as to meet with the approval of the Director of Works before connections can be made with the main circuits. The actual work of connecting the converter with the secondary system will in all cases be done without extra expense by the World's Columbian Exposition.

(6) Exhibitors occupying space in buildings owned by the World's Columbian Exposition must have their wiring installed by the World's Columbian Exposition, through its authorised contractors. All wiring and appliances installed by the World's Columbian Exposition will be, and remain, the property of the World's Columbian Exposition. The class of wiring installed will be that known as plain moulding or interior conduit work, and will include the first installation of lamps, plain key or keyless sockets, switches, cut-outs, and the hanging of the lamps on plain cords or pendants, and shall be charged for at the rate of 3.50 dollars per lamp. Special or fancy wiring will be furnished at an additional charge covering the actual cost to the World's Columbian Exposition. All fixtures and shades must be furnished by the consumer. Changes in location of lamps and appliances, when once installed, shall be subject to an additional charge.

(7) The lamps referred to herein, unless otherwise stipulated, are sixteen candle-power plain lamps. Lamps of other capacity and fancy lamps will be subject to special agreement. Lamps of standard capacities for renewal purposes will be furnished to replace burned-out lamps free of cost to consumer. Lamps accidentally broken or lost will be replaced at the expense of the consumer at the regular market rates. Special and fancy lamps must be renewed by the consumer.

Electricity for Power Service.

(1) The generators and main conductors will be supplied, operated, and maintained by the World's Columbian Exposition. The service conductors will be furnished at the consumer's expense, and at the rates hereinafter mentioned. The motors and appurtenances must be supplied, operated, and maintained by and at the expense of the consumer. The service connections to the motors shall be installed, maintained, and owned by the World's Columbian Exposition.

(2) The motor shall be suitable to operate on a 500-volt constant potential circuit. The rheostat shall be constructed wholly of non-combustible material. The main-line switch shall be of the "knife-blade" type, and suitable for working on a 500-volt constant potential circuit.

(3) No service will be rendered for less than 20 dollars. Fractions of horse-power will not be considered, except for motors of less than 1 horse-power. Charges will be made for service connections with the main line at the following rates:—

	Dollars.
For $\frac{1}{2}$ h. p. and less.....	10
For 1 to 5 h. p.	15 per h. p.
For more than 5 h. p., not exceeding 10 h. p.	12 "
For more than 10 h. p.	10 "

(4) Charges for service will be based on the maximum electrical horse-power delivered to the motor, irrespective of the class of work to be operated by the motor, at the following rates:—

	Dollars.
For $\frac{1}{4}$ h. p. and less.....	20
For more than $\frac{1}{4}$ h. p., not exceeding $\frac{1}{2}$ h. p.....	40
For more than $\frac{1}{2}$ h. p., not exceeding 1 h. p.....	75
For more than 1 h. p., not exceeding 2 h. p.....	70 per h. p.
For more than 2 h. p.	60 "

(5) Special service for motors, not exceeding two horse-power, can be furnished from the regular alternating incandescent circuit.

(6)

(6) The above rates contemplate continuous service, or service on demand, at any time during the hours of the Exposition, from May 1 to October 30, 1893, inclusive. Consumers requiring power service for a specified number of hours only will be charged at the rate of 5 cents per electrical horse-power hour; the specified time of day in which this service can be rendered to be determined each day by the Chief of the Department.

Electricity for Arc-lighting.

(1) The main aisles of the Exposition buildings will be illuminated by arc lights free of expense to the exhibitor. A very limited number of arc lights will be supplied for private lighting on the following basis:—

- (a) The consumer shall pay the cost of wiring.
- (b) The consumer shall pay for service, from May 1 to October 30, 1893, inclusive, at the rate of 60 dollars per lamp of 2,000 (nominal) candle-power.
- (c) Lamps will be suspended from the ceiling and furnished with opal globes. If any special fixture is required, it shall be furnished by the consumer.

(2) All care and maintenance of the lamps and circuits will be furnished by the World's Columbian Exposition without extra charge.

Electricity for charging Storage Batteries.

(1) The consumer shall provide lines and all material necessary from the main lines from which the current is to be distributed to storage batteries.

(2) Consumer shall provide all necessary labour and attendance connected with the charging or handling of the batteries.

(3) Current will be provided at the rate of 5 cents per electrical horse-power hour.

Electricity for Miscellaneous Purposes.

(1) Electricity for special purposes will be subject to special agreement, to be determined at the time of making application therefor. Rates will be based either on those for power or those for charging storage batteries, according to the class of work to be performed.

Steam for all purposes.

(1) Piping and all connections from main lines shall be supplied, erected, and covered with non-conducting material by the consumer.

(2) Plans for the arrangement of piping shall be submitted by the consumer for approval before work is begun.

(3) A rate of 40 dollars per horse-power will be charged for steam supplied during the hours of the Exposition, from May 1 to October 30, 1893, inclusive. The above rate contemplates continuous service, or service on demand at any time during the hours of the Exposition. Consumers requiring power service for a specified number of hours only, will be charged at the rate of 4 cents per horse-power hour; the specified time of day in which this service can be rendered to be determined each day by the Chief of Department.

(4) The maximum rate of delivery to consumer's pipes shall form the basis of payment, irrespective of the class of work to be performed.

(5) The working pressure at the boilers will be 125 lb. per square inch.

Compressed air for all purposes.

(1) Piping and all connections from the main lines shall be supplied and erected by the consumer.

(2) Plans for the arrangement of piping shall be submitted by the consumer for approval before work is begun.

(3) Charges will be based on the equivalent in mechanical horse-power for the maximum rate of supply delivered to the consumer's pipe, at a rate of 60 dollars per horse-power, during the hours of the Exposition, from May 1 to October 30, 1893, inclusive.

(4) The above rates contemplate continuous service, or service on demand at any time during the hours of the Exposition. Consumers requiring this class of power service for a specified number of hours only will be charged at the rate of 5 cents per horse-power hour; the specified time of day in which this service can be rendered to be determined each day by the Chief of the Department.

Power from Shafting.

(1) The consumer shall supply and erect the pulley on the main line, together with all belts and connections to operate his machinery; and all pulleys for the main shafts must be balanced, and must be made in halves, and so secured to the shafting as not to weaken or injure the same.

(2) A charge of 60 dollars per horse-power will be made, based on the maximum rate of power supplied during the hours of the Exposition, from 1st May to 30th October, 1893, inclusive. The above rate contemplates continuous service, or service on demand at any time during the hours of the Exposition. Consumers requiring power service for a specified number of hours only, will be charged at the rate of 5 cents per horse-power hour, the specified time of day in which this service can be rendered to be determined each day by the Chief of the Department.

(3) The diameter and revolutions of shafts, and maximum permissible diameter of driving pulley, will be given to the consumer at the time of the execution of the contract providing for power.

Pipes

Pipes Crossing Passage-ways.

No steam or water pipes will be allowed to cross over passage-ways, except as specially provided for in Group 69, Class 417.

Water Pressure.

Water pressure will be that due to a head of 200 feet, or a pressure of 86 lb. per square inch.

Engineers and Firemen.

Exhibitors furnishing machinery for the use of the Exposition may select their own men to operate them when necessary, subject to the approval of the Director of Works; their wages to be fixed by the Director of Works, subject to the approval of the Council of Administration.

RULES GOVERNING LIGHT AND POWER IN ELECTRICITY BUILDING.

Exhibitors in the Electricity Building will be divided into two classes: First, those who contribute to the service of lighting and electric power transmission for the building; second, those who do not so contribute.

Contributors will be again divided into two classes:

- (1) Those who furnish generators connected to prime movers in Machinery Hall.
- (2) Those who contribute to the service lighting of Electricity Building through motor power taken from circuits in the Electricity Building.

Contributors to either class will be required to enter into formal contract for furnishing and operating machinery offered, in accordance with the following general terms:

No steam power being available in the Electricity Building, all generators provided by contributors of class (1) must be installed in Machinery Hall.

Generators provided by American companies will be located in the regular service plant in Machinery Hall. Generators provided by foreign companies will be located in the spaces severally allotted to these countries in Machinery Hall.

Power circuits will be led from the generators of each contributor of class (1) through existing subways from Machinery Hall to the Electricity Building. The several exhibitors offering generators for this service are expected to furnish and install, at their own expense, subject to the supervision of the World's Columbian Exposition, the several power circuits before mentioned.

The aisles of the Electricity Building will be illuminated by arc lights, which will be considered the service lighting for the building. Arc lights in addition to these, as well as all incandescent lights and power for keeping exhibits in motion, will be considered as special service rendered to individual exhibitors.

Power for operating generators needed for the service lighting will be furnished free of cost to the exhibitors installing this light. In consideration of such contribution to the service lighting of Electricity Building, exhibitors participating in this service will be granted such amount of extra power and light for the operation of their own exhibits as may be mutually agreed upon in contract.

Arc and incandescent lights may be taken direct from the several power circuits leading from Machinery Hall, or they may be furnished from generators driven by motors taking current from the power circuits before mentioned, motors and generators in this latter case being located in the Electricity Building. Arc lights for all night service are an exception to this rule, and will be supplied from the regular service plant already contracted for by the World's Columbian Exposition.

Contributors of class (2) who use current from the power circuits will be expected to provide the necessary motors, generators, and shafting, free of cost to the World's Columbian Exposition. Exhibitors contributing to the arc lighting necessary in the service of the building will be expected to wire, hang, and maintain such lamps as may be assigned to them free of cost to the World's Columbian Exposition. Such arc lamps, incandescent lights, and motors as may be installed within the contributing exhibitor's space will be wired and hung by said exhibitor at his own expense.

In order to provide for lighting and power service to those exhibitors who do not contribute to the service of Electricity Building, it is proposed to assign to each exhibitor contributing to said service a specified portion of the Electricity Building in which to furnish special lighting and power. All work of wiring, hanging, and maintenance of lamps, &c., done for other exhibitors in such space will be paid for by the Exposition Company at the following rates:—

(1) For each incandescent lamp, including the first lamp and socket with installation on a plain cord or pendant, 3.50 dollars per 16 candle-power lamp.

- (a) Special fancy wiring will be furnished at an extra cost, to be paid by consumer, under special agreement.
- (b) Fixtures and shades will be furnished and maintained by consumer.
- (c) Lamps of other capacities, fancy or coloured lamps, will be furnished in accordance with special agreement. Lamp renewals must be furnished free of charge by contributor. Breakages must be purchased by consumer from the exhibitor supplying his exhibit, at the usual market price.

(2) For each arc lamp, including ceiling block, suspension rod, and lamp complete, 35 dollars. Lamps must be furnished with opal globes. All care and attendance to lamps and circuits must be furnished without extra charge by the contributor maintaining the circuit.

(3)

(3) All wiring necessary for the installation of motors within the space assigned to each contributor shall be done by said contributor, at the expense of exhibitor desiring said power, at the following rates :—

	Dollars.
$\frac{1}{2}$ h.-p. and less.....	8
1 to 5 h.-p., per h.-p.....	12
More than 5 h.-p. and not exceeding 10 h.-p., per h.-p.	10
More than 10 h.-p., per h.-p.	8

Fractions of a horse-power will not be considered, except for motors of less than 1 horse-power. In all cases the rating of the motor will be the standard rating of the manufacturer.

Service connections, as well as all lamps and sockets installed at contributor's expense, shall be maintained and owned by said contributor. All alterations of original installation shall be made by said contributor, after written agreement with the exhibitor desiring change.

All installation and operation shall be subject to the inspection and approval of the Chief of the Department of Electricity. Installation must conform to the National Code of the Board of Underwriters, subject to the inspection and approval of the Director of Works of the Exposition.

Note.

Service will be provided only from 1st May to 30th October, 1893, inclusive, and during Exposition hours, except by special agreement.

The service rendered will be entirely at the risk of the consumer. The World's Columbian Exposition will not be responsible for stoppages from any reasonable cause.

RULES GOVERNING THE SUPPLY OF LIGHTING AND POWER TO EXHIBITORS IN THE DEPARTMENT OF ELECTRICITY.

Electric power only will be supplied in the Electrical Building.

The aisles of the building will be illuminated with arc lamps without cost to exhibitors; additional lighting to be paid for by exhibitors at the following rates :—

Arc lamps, service 1st May, 1893, to 30th October, 1893, inclusive, during Exposition hours, 65 dollars per lamp of 2,000 nominal candle-power; lamps suspended from ceiling, with opal globes and globe nets, special fixtures or globes, or special ornamental lamps, will be subject to an extra charge.

Incandescent lamps, service 1st May, 1893, to 30th October, 1893, inclusive, during the hours of the Exposition, 8 dollars per 16 candle-power lamp, including installation of first lamp and socket and lamp renewals; breakages must be purchased by exhibitor or the contractor lighting his space, at the usual commercial rate. Lamps will be hung on plain cords or pendant; special or fancy wiring will be furnished at an extra charge. Fixtures and shades will be furnished and maintained by consumer. Special coloured or fancy lamps, or lamps of other than 16 candle-power, will be subject to special agreement. Installations of 500 lamps or more will be subject to special discount.

Motors.

Exhibitors requiring motive power will furnish necessary motors, rheostats, main line switches, insulating base, &c., complete, together with all belts, countershafting, and other means of connecting motors to operating machinery. Motors should be suitable for operation on class of circuit furnished in exhibitor's location.

The rheostats must be constructed wholly of non-combustible material. The main line switch shall be of the "knife-blade" type, of ample carrying capacity, and suitable for breaking current at the potential used. Motors shall be erected in position at the expense of the exhibitor by the contractor furnishing power in the location of his exhibit; service connections being installed, maintained, and owned by the said contractor.

Charges for service connections with the main line will be as follows :—

	dollars.
For $\frac{1}{2}$ h.-p. and less	8
For 1 h.-p. to 5 h.-p., per h.-p.	12
For more than 5 h.-p., not exceeding 10 h.-p., per h.-p.	10
For more than 10 h.-p., per h.-p.	8

Fractions of a horse-power will not be considered, except for motors of less than 1 horse-power.

Ratings of motors will be the standard rating of the manufacturer.

Charges for service will be based on the maximum electrical horse-power delivered to the motor, irrespective of the class of work to be operated by the motor, at the following rates :—

	dollars.
For $\frac{1}{4}$ h.-p. and less	15
For more than $\frac{1}{4}$ h.-p. and not exceeding $\frac{1}{2}$ h.-p.	30
For more than $\frac{1}{2}$ h.-p. and not exceeding 1 h.-p.	50
For more than 1 h.-p. and not exceeding 2 h.-p., per h.-p.	45
For more than 2 h.-p. and not exceeding 3 h.-p., per h.-p.....	42.50
For more than 3 h.-p., per h.-p.	40

A limited amount of power may be furnished to exhibitors free of charge, to simply turn over an otherwise inoperative exhibit.

APPENDIX Q.

General Rules and Regulations and Information affecting
Transportation of Exhibits.

Reception of Articles.—The general reception of exhibits at the Exposition buildings will commence on 1st November, 1892, and no article except of a perishable nature will be admitted after 10th April, 1893, without special authority.

Machinery and other heavy articles will be admitted as soon as the special foundations for them are prepared, and it is desirable that they should be in place prior to the reception of other exhibits.

Boxing.—In boxing goods for the Exposition, screws should be used instead of nails.

Shipping Directions.—Foreign exhibits consigned in bond must be marked to the Collector of Customs, Chicago, U.S.A., and conspicuously marked "Exhibits for Columbian Exposition."

Each package should be marked on two different, but not opposite sides, giving the following information:—

- The country from which it comes.
- Name of exhibitor.
- Residence of exhibitor.
- Department to which exhibits belong.
- Weight of package.
- Total number of packages sent by exhibitor.
- Serial number of package.

Within each package should be a list of its contents and a copy of the outside directions.

Each package must contain only articles intended for a single department.

Foreign exhibitors will be furnished with shipping tags and labels by the Commissioner of the country from which the articles are forwarded.

Any single piece or section of any exhibit of greater weight than 30,000 lb. will not be accepted if machinery is required for its installation.

The departments of the classification which will determine the relative location of articles in the Exposition, except in such collective exhibits as may receive special sanction, and also the arrangement of names in the catalogue, are as follows:—

- A. Agriculture, Forest Products, Forestry Machinery, and Appliances.
- B. Viticulture, Horticulture, Floriculture.
- C. Live Stock:—Domestic and Wild Animals.
- D. Fish, Fisheries, Fish Products, and Apparatus for Fishing.
- E. Mines, Mining, and Metallurgy.
- F. Machinery.
- G. Transportation, Railways, Vessels, Vehicles.
- H. Manufactures.
- J. Electricity.
- K. Fine Arts:—Painting, Sculpture, Architecture, and Decoration.
- L. Liberal Arts:—Education, Literature, Engineering, Public Works, Music, and the Drama.
- M. Ethnology, Archæology:—Progress of Labour and Invention. Isolated and Collective Exhibits.

Favourable facilities will be arranged by which the exhibitors or Foreign Commissions may insure their own goods.

Foreign

NOTE.—Special care has been taken to render everything about the Exposition as nearly fire-proof as possible, and it is reasonably certain that the rates of insurance will not be excessive, but on the contrary very reasonable. Exhibitors may insure in any company, either foreign or domestic.

Foreign Commissions may employ watchmen of their own choice to guard their goods during the hours the Exhibition is open to the public, subject to the rules and regulations of the Exposition.

Foreign Commissions, or such agents as they may designate, shall be responsible for the receiving, unpacking and arrangement of objects, as well as for the removal at the close of the Exposition, but no person shall be permitted to act as such agent until he can give to the Director-General written evidence of his appointment having been approved by the proper commission.

The transportation, receiving, unpacking and arranging of exhibits for exhibition will be at the expense of the exhibitor.

The installation of heavy articles, requiring special foundations or adjustment, should by special arrangement begin as soon as the progress of the work upon the buildings will permit. The general reception of articles at the Exposition buildings will commence on 1st November, 1892, and no article will be admitted after 10th April, 1893.

Products brought into the United States at the ports of Portland, Me., Boston, Mass., New York, N.Y., Philadelphia, Pa., Baltimore, Md., Norfolk, Va., Newport News, Va., Key West, Fla., Mobile, Ala., New Orleans, La., Galveston, Tex., San Francisco, Cal., Port Townsend, Wash., Portland, Ore., Port Huron, Mich., Detroit, Mich., and Chicago, Ill., or at any other port of entry, intended for display at the International Exhibition will be allowed to go forward to the Exhibition buildings under proper supervision of Customs Officers without examination at such ports of original entry, and at the close of the exhibition will be allowed to go forward to the port from which they are to be exported. No duties will be levied upon such goods unless entered for consumption in the United States.

Ample facilities will be provided for the storage of empty cases and packing material at the cost of the exhibitor, which cost will be made as low as possible, but must be paid before cases are taken in charge.

APPENDIX R.

Supplement to Traffic Arrangements for
Foreign Exhibits.*(Dated 1st August, 1892.)*

World's Columbian Exposition, Chicago (Jackson Park), 4 January, 1893.

UPON arrival at Jackson Park, prepaid consignments will be delivered by the Bureau of Transportation, on, or as near as practicable, the exhibitor's allotted space, without additional charge.

Transportation charges and the terminal charges of 6 cents per hundred pounds, on all consignments shipped by rail or water lines, destined to Jackson Park, must be fully prepaid at initial point, as under no circumstances will these charges be advanced by the World's Columbian Exposition.

The terminal charge of 6 cents will apply to all consignments except those entering the grounds on their own wheels, small consignments, minimum car lots, and single pieces of an exhibit, weighing over 30,000 lb.

The charge on cars and coaches on their own wheels will be 5 dollars each. On locomotives with tenders, 10 dollars each.

The minimum charge of 50 cents for any single shipment will be exacted by the Exposition, and the minimum car load weight established by the initial road will be the basis on which the Exposition charge is made for such car load shipments, and exhibits weighing more than 30,000 lb. each piece will be subject to special arrangements.

When consignments are delivered at, or as near as practicable to their allotted space, receipt must be acknowledged on the prepaid expense bill, either by the owner, his agent, or the authorised representative of the Director-General.

Exhibitors are requested and urged to immediately upon delivery unpack all packages and release all empty cases required to be stored.

All excelsior, paper, burlaps, &c., used in packing exhibits, must be promptly placed in empty cases, or carefully baled, under supervision of representative of Bureau of Transportation, and delivered to said Bureau for storage under the regulations. Under no circumstances will such material be received for storage in open packages, but exhibitors are urged to make all preliminary arrangements to the end that all excelsior, paper, burlaps, &c., originally used in packing may be available for that purpose at the close of the Exposition.

All straw, excelsior, paper, &c., which it is not desired to preserve, must be daily bundled up by the exhibitor, and turned over to the janitors, in order that it may be destroyed at the crematory.

In addition to the preliminary notice of shipment sent by the exhibitor to the Director-General, it is requested that a duplicate be sent to the General Manager of Transportation, giving in all cases the serial number and number of packages sent.

Such goods as are received at the Exposition with transportation and terminal charges unpaid, or only partially paid, or with no responsible party at the grounds to assume charge thereof, will be stored in the warehouse at the expense and risk of the owner.

The annexed schedule of charges, based upon those adopted by the United States Government Customs, warehouses, will govern.

Where this schedule provides no rate for a particular consignment, charges will be based upon those for analogous articles.

The schedule is as follows, and the charges include transfer both ways and storage:—

WAREHOUSE STORAGE RATES.

The rates of storage are per month, and the fractional part of any month will be treated as a whole month. The rates of labour are per package, and include both receipt and delivery. The rates on packages not enumerated shall correspond to those charged for packages of merchandise of similar size and like general description, based upon advisory reports of the storekeeper. Special rates will be made for valuables as such cases arise. No single entry of less than 50 cents will be made in the storage books on single consignments. In all other cases rates will be charged in accordance with the schedule.

Articles.	Storage.	Labour.	Articles.	Storage.	Labour.
Single packages of any kind with drawn during the first month.	35	15	Herrings and Fish..... bbls.	10	3

" casks	40	15	" ⅓ "	10	5
			" cases	4	2

The Exposition management have provided ample facilities for the storage of empty packing cases, and will, upon proper application on the blanks provided by the Bureau of Transportation, undertake the storage of all such cases, packages, or bales. The charge for this service from the exhibitor's space to warehouse and return to said space at close of Exposition is 4½ cents per cubic foot, for the actual space occupied, with a minimum of 50 cents on any one lot; this charge, however, does not include insurance, which may be obtained through the usual channels.

It is distinctly understood that the World's Columbian Exposition, in undertaking the storage of such empty packing cases, does not assume, and it shall not be subject to, any liability for loss or damage resulting from fire.

W. H. HOLCOMB, General Manager.

Approved,—

D. H. BURNHAM, Director of Works.

GEO. R. DAVIS, Director-General.

APPENDIX S.

Regulations as to Warehouse Storage.

Goods received at the Exhibition with transportation and terminal charges unpaid or only partially paid, or with no responsible party at the grounds to assume charge thereof, will be stored in the warehouse at the expense and risk of the owner.

A schedule of charges, based on those adopted by the United States Government Customs Warehouses, will govern, and will include transfer both ways and storage.

Empty Packing Cases.

The Exposition management have provided facilities for the storage of empty packing cases, and will undertake the storage of such cases, packages, &c. The charge for this service from the exhibitor's space to warehouse and return to said space at close of Exposition will be $4\frac{1}{4}$ cents per cubic foot for the actual space occupied, with a minimum of 50 cents on any one lot. This charge does not include insurance, which may be obtained through the usual channels.

It is distinctly understood that the World's Columbian Exposition, in undertaking the storage of such empty packing cases, does not assume—and it shall not be subject to—any liability for loss or damage resulting from fire.

Arrangements have been made for a special space to be reserved for the packing cases of New South Wales exhibitors, so that they may all be stored together.

APPENDIX T.

The McKinley Tariff Rates.

(By ERNEST H. FISHBOURNE, M.A., Barrister-at-Law.)

THE following Abstract contains the material provisions of the United States Tariff, and shows the duties leviable under it on all classes of goods imported into the States:—

CHEMICALS, OILS, AND PAINTS.

(Schedule A.—§§ 1-92.)

Acid, acetic, not exceeding sp.g. $1\frac{4}{1000}$	1½c. per lb.	Oils (<i>continued</i>)—	
" exceeding " "	4c. "	flax and poppy seed—raw, }	32c. per gall.
boracic	5c. "	boiled, or oxidized ... }	of 7½ lb.
chromic	6c. "	fusel, amylic alcohol ...	10 per cent.
citric	10c. "	hemp and rape seed ...	10c. per gall.
sulphuric	¼c. "	olive	35c. "
tannic	75c. "	peppermint	80c. "
tartaric	10c. "	fish, n.o.p.	8c. "
Alcoholic perfumery, including toilet waters	{ \$2 per gall. and 50 p.c.	Opium, all liquid preparations, n.o.p. containing less than 9 per cent. morphia, or prepared for smoking	40 per cent. \$12 per lb.
Alcoholic compounds, n.o.p.	{ \$2 per gall. and 25 p.c.	Paints, colours, and varnishes—	
Alumina, alum, in their various forms	¼c. per lb.	baryta, sulphate of, including barytes earth, unmanufactured	\$1.12 per ton
Ammonia, carbonate of	1¼c. "	manufactured	\$6.72 "
muriate of, or sal ammoniac ...	¼c. "	blues, containing ferrocyanide of iron (when in pulp or mixed with water, on the material when dry) ...	6c. per lb.
sulphate of	½c. "	blanc fixe	¼c. "
Blackening of all kinds	25 per cent.	black from bone, ivory, or vegetable	25 per cent.
Blue vitriol, sulphate of copper ...	2c. per lb.	chromium colours, in which lead and bichromate of potash or soda component parts (when in pulp or mixed with water, on material therein when dry) ...	4½c. per lb.
Bone-char, for decolourising sugars..	25 p.c.	ochre, sienna, umber, and their earths, n.o.p., dry	¼c. "
Borax, crude, borate of soda or lime refined	3c. per lb. 5c. "	ground in oil	1¼c. "
Camphor, refined	4c. "	ultramarine	4¼c. "
Chalk, prepared, precipitated, French, and red	1c. "	varnishes, including so-called gold size or japan	35 per cent.
all other preparations, n.o.p. ...	20 per cent.	if spirit, additional on spirit therein	\$1.32c. per gal.
Chloroform	25c. per lb.	vermilion, red, and colours containing quicksilver	12c. per lb.
Coal, tar, colours, or dyes, n.o.p. ...	35 per cent.	wash-blue containing ultramarine	3c. "
other preparations, n.o.p. ...	20 "	whiting and Paris white, dry ground in oil or putty ...	1c. "
Cobalt, oxide of	30c. per lb.	zinc, oxide of, and white paint, containing zinc, but no lead, dry	1¼c. "
Collodion and all compounds of pyroxyline... ..	50c. "	ground in oil	1¼c. "
rolled, or in sheets not made up in finished or partly finished articles	60c. " and 25 p.c.	artists' water-colour paints ...	30 per cent.
Colouring for liquors	50 per cent.	all other paints and colours n.o.p.	25 "
Copperas, sulphate of iron	1½c. per lb.	Lead products—	
Drugs and excrescences, spices, vegetables, seeds aromatic and of morbid growth, weeds, woods used expressly for dyeing, and dried insects, not edible, and advanced in value or condition by process manufacture, n.o.p.	10 per cent.	acetate of lead, white	5½c. per lb.
Ether—		" brown	3¼c. "
sulphuric	40c. per lb.	litharge	3c. "
spirits of nitrous	25c. "	nitrate of lead	3c. "
fruit, oils or essences	\$2.50 "	orange mineral	3¼c. "
other kinds, n.o.p.	\$1 "	red lead	3c. "
Extracts and decoctions of dye woods, sumac, and barks, as used for dyeing or tanning, n.o.p. ...	¼c. "	white lead and white paint containing lead	3c. "
of hemlock bark	½c. "	phosphorus	20c. "
Gelatine, glue, isinglass, fish glue— value not over 7c. per lb. ...	1½c. "	Potash—	
" " 30c. "	25 per cent.	bichromate or chromate of ...	3c. "
" over 30c. "	30 "	caustic, or hydrate of, refined in sticks or rolls	1c. "
Glycerine, crude, not purified refined	1¼c. " 4¼c. "	hydrodate, iodide and iodate ...	50c. "
Indigo, extracts and pastes... ..	¼c. "	nitrate of, refined	1c. "
carmined	10c. "	prussiate of, red	10c. "
Ink-powders and all ink n.o.p. ...	30 per cent.	" yellow	5c. "
Iodine, resublimed	30c. per lb.	Preparations—	
Iodoform	\$1.50 "	medicinal, n.o.p.	
Licorice, extracts of... ..	5½c. "	where alcohol is used	50c. "
Magnesia, carbonate of, medicinal ...	4c. "	where no alcohol	25c. "
calcined	8c. "	calomel and other mercurial medicinal	35c. "
sulphate of	1½c. "	alkalies, alkaloids, distilled, essential, expressed, and rendered oils and their combinations, and all chemical compounds and salts, n.o.p. ...	25 per cent.
Morphia and all salts thereof ...	50c. per oz.		
Oils—			
alizerin, assistant, or soluble oils, containing more than 50 per cent. castor	80c. per gall.		
less than 50 p.c.	40c. "		
all other	30c. "		
castor	80c. "		
cod-liver	15c. "		
cotton seed	10c. per gall. of 7½ lb.		
croton	30c. per lb.		

CHEMICALS, OILS, AND PAINTS—continued.

Preparations (<i>continued</i>)—		Soda (<i>continued</i>)—	
used as applications to the hair,		bichromate and chromate of	3c. per lb.
mouth, teeth or skin, n.o.p....	50 per cent.	sal-soda, or soda crystals and	
santonine and salts thereof,		soda-ash	4c. "
containing 80 per cent. or		silicate of soda, or other alkaline	
over of santonine	\$2.50 per lb.	silicate	4c. "
Soap—		silicate	\$1.25 per ton.
Castile	1½c. "	sulphate of	20 per cent.
toilet	15c. "	Sulphur, refined	\$8 per ton.
all other, n.o.p....	20 per cent.	sublimed, or flowers of ...	\$10 "
Soda—		Sumac, ground	1½c. "
bicarbonate or super-bicarbonate		Tartar, cream of, and patent ...	6c. "
of, or saleratus	1c. per lb.	Tartars and less crystals, partly	
hydrate of, or caustic	1c. "	refined	4c. "
		Tartrate of soda and potassa ...	3c. "

EARTHS, EARTHENWARE, AND GLASSWARE.

(Schedule B.—§§ 93-131.)

Bricks and tiles—		Glass (<i>continued</i>)—

" over 16c. " ...	7c. "

Iron or steel wire and nail rods—	
not smaller than No. 6 gauge, value not over 3 $\frac{1}{2}$ c. per lb. ...	$\frac{1}{10}$ c. per lb.
flat, with longitudinal ribs for fencing, value not over 3 $\frac{1}{2}$ c. per lb. ...	$\frac{1}{10}$ c. "
N.B.—Rods smaller than No. 6 gauge dutiable as wire.	
Iron or steel wire—	
not smaller than No. 10 gauge	1 $\frac{1}{4}$ c. "
" " 16 "	1 $\frac{3}{4}$ c. "
" " 26 "	2 $\frac{1}{4}$ c. "
smaller than No. 26	3c. "
covered with material, and crinoline, corset, and hat ...	5c. "
cloths, nettings made in meshes	2c. p. lb. add.
metal coated (except for fencing) $\frac{1}{2}$ c. "	
value at more than 4c. per lb., not less than ...	45 per cent.
for manufacture of card clothing	35 "
rope and strand respectively 1c. & 2c. p. c. add.	
Flat steel wire, or sheet steel in strips of any width, $\frac{2}{100}$ in. thick and less ...	50 per cent.
N.B.—No article made of wire, or of which it is a component part of chief value, to pay a less rate than the wire.	
Manufactures of iron and steel—	
Anchors, mill-irons and mill-cranks of wrought-iron, and wrought-iron for ships, forgings for vessels, steam-engines and locomotives, weighing each 25 lb. or more ...	1 $\frac{3}{10}$ c. per lb.
Axles, and parts thereof, and forgings for same ...	2c. "
N.B.—If fitted in wheels dutiable as wheels.	
Anvils ...	2 $\frac{1}{2}$ c. per lb.
Blacksmiths' tools ...	2 $\frac{1}{4}$ c. "
Tubes, pipes, flues, stays of wrought-iron and steel ...	2 $\frac{1}{2}$ c. "
Bolts and blanks, finished hinges and blanks ...	2 $\frac{1}{4}$ c. "
Card clothing—of tempered steel wire ...	50c. p. sq. ft.
all other ...	25c. "
Cast-iron pipe ...	$\frac{1}{10}$ c. per lb.
Cast-iron objects and castings, n.o.p. ...	1 $\frac{2}{10}$ c. "
Castings of malleable iron, n.o.p.	1 $\frac{3}{4}$ c. "
Cast hollow ware, coated, glazed, and tinned ...	3c. "
Chains, minimum ...	45 per cent.
not under $\frac{3}{8}$ -in. dia. ...	1 $\frac{1}{10}$ c. per lb.
" " $\frac{3}{4}$ " ...	1 $\frac{3}{10}$ c. "
" under $\frac{3}{8}$ " ...	2 $\frac{1}{2}$ c. "
Cutlery—	
pen and pocket knives, erasers and parts thereof—value not over—	
50c. p. doz. ...	12c. p. doz. and 50 p. c.
\$1.50 " ...	50c. " 50 "

over \$8 " ...	\$2 " 30 "
files, blanks, rasps, and floats—	
not over 4 inches long ...	35c. p. doz.
9 " ...	75c. "
14 " ...	\$1.30 "
over 14 " ...	\$2 "
Firearms—	
muskets and sporting rifles ...	25 per cent.

METALS AND MANUFACTURES OF—*continued.*

Firearms (<i>continued</i>)—	
double-barrelled sporting breech-loaders—	
value not over—	
\$6 each ...	\$1.50 each and 35 p.c.
\$12 " ...	\$4 " 35 "
over \$12 " ...	\$6 " 35 "
single-barrelled breech-loaders	{ \$1 each and 35 p.c.
revolving pistols—	
value not over—	
\$1.50 each ...	40c. each and 35 p.c.
over \$1.50 " ...	\$1 " 35 "
Iron or steel sheets, plates, wares, or articles—	
enamelled or glazed with vitreous glasses ...	45 per cent.
if in more than one colour ...	50 "
Nails, spikes, tacks, and needles—	
cut nails and spikes ...	1c. per lb.
nails, wrought iron or steel, n.o.p. ...	4c. "
wire nails, wrought iron or steel, 2 in. and longer, and not lighter than No. 12 gauge ...	2c. "
less than 2 in. and not lighter than No. 16 gauge ...	2½c. "
less than 1 in. and lighter than No. 16 gauge ...	4c. "
spikes, nuts, washers, and shoes, wrought iron or steel ...	1½c. "
cut tacks, brads, sprigs—	
not exceeding 16 oz. per 1,000 ...	2½c. p. 1000
exceeding 16 oz. per 1,000	2½c. "
needles for machines, crochet and tape, metal bodkins ...	35 per cent.
all others, n.o.p. ...	25 "
Steel, engraved, &c., and other plates for printing ...	25 "
railway fish-plates ...	1c. per lb.
rivets ...	2½c. "
Saws—	
crosscut ...	8c. p. lnr. ft.
mill, pit, drag—	
not over 9 in. wide ...	10c. "
over 9 in. wide ...	15c. "
circular ...	30 per cent.
hand, back, and other, n.o.p. ...	40 "
Screws—	
over 2 in. in length ...	5c. per lb.
not over 2 in. in length ...	7c. "
" 1 in. " ...	10c. "
" ½ in. " ...	14c. "
Wheels or parts thereof, steel-tyred railway, and locomotive, car, and other railway tyres or parts thereof ingots, blooms, or blanks for same ...	2½c. " 1½c. "
N.B.—If fitted with axles, only dutiable as wheels separately.	
Miscellaneous metals and manufac- tures—	
aluminium, crude, alloys of which it is component material of chief value ...	15 per cent.
antimony, as regulus or metal	¾c. per lb.
argentine, albata, unmfct. ...	25 per cent.

Miscellaneous metals and manufac- tures (<i>continued</i>)—	
brass in bars or pigs, old brass clippings from brass or Dutch metal, and old sheathing or yellow metal fit only for remanufacture ...	1½c. per lb.
bronze powder ...	12c. "
bronze metal in leaf ...	{ 8c. per pkg. of 100 lvs.
copper in form of ores... old, clippings from new, and all composition metal of which it is component of chief value, n.o.p. ...	{ ½c. p. lb. of fine copper. 1c. per lb.
regulus of, black or coarse, cement ...	1c. p. lb. of fine copper.
in plates and other raw forms, n.o.p. ...	1½c. per lb.
in rolled plates, sheets, rods, pipes, and copper bot- toms, also sheathing or yellow metal of which it is component material of chief value and no un- galvanised iron forms part	35 per cent.
gold, silver, or other metals in form of bullion and metal thread, n.o.p....	30 "
gold leaf... ..	{ \$2 p. pkg. of 500 leaves.
silver leaf ...	75 c. "
lead in form of ore and dross...	1½c. per lb.
Note.—Ores containing lead pay duty of 1½ cent. per lb. thereon, according to sample and assay at port of entry.	
lead, in pigs and bars, old scrap, fit only for remanufacture ...	2c. per lb.
in sheets, pipes, shot, gla- siers, and wire ...	2½c. "
metallic mineral substances crude, and unwrought metals, n.o.p. ...	20 per cent. 35 "
mica ...	35 "
nickel, nickel oxide, alloy where it is component of chief value	10c. per lb.
pens, metallic ...	12c. p. gross.
penholders, and parts thereof, and gold pens ...	30 per cent. 30 "
pins of all kinds ...	30 "
quicksilver ...	10c. per lb.
Note.—Vessels in which same imported dutiable as empty.	
type metal ...	1½c. per lb.
types, new ...	25 per cent.
tin—bar, block, and pig, casse- tente, from 1 July, 1893 ...	4c. per lb.
watches, and parts of ...	25 per cent.
chronometers, and parts of ...	10 "
zinc, in blocks or pigs ...	1½c. per lb.
in sheets ...	1½c. "
old and worn out... ..	¼c. "
manufactures, articles, or wares, n.o.p., of which any part in metal, in any stage of manu- facture ...	45 per cent.

WOOD, MANUFACTURES OF.

(Sch. D.—§§ 216-230.)

Timber, hewn and sawed, used for spars and in building wharves ...	10 per cent.
square or sided, n.o.p. ...	¾c. p. cub. ft.
Sawed boards, &c., and other lum- ber of hemlock, white wood, sycamore, white pine, and bass- wood.) cub. feet board measure.	{ \$1 per 1,000
Sawed lumber, n.o.p. (except where export duty imposed by foreign country upon logs, stave bolts, shingle wood, or heading blocks)	\$2 "
Lumber of any sort, if planed or finished on one side—	
for each side ...	50c. " add.
if planed on one side, tongued and grooved ...	\$1 " "
if planed on two sides... ..	\$1.50 " "
Sawed cabinet woods, all forms of...	15 per cent.
Veneers of wood and unmanufac- tured wood, n.o.p. ...	20 "
Cedar—paving, telephone, and tele- graph posts, and railroad ties ...	20 per cent.
Clapboards, spruce ...	\$1.50 per 100.
pine ...	\$1 "
Hubs, posts, blocks, rough hewn or sawn only ...	20 per cent.
Laths... ..	15 per 1000.
Pickets, palings, and staves ...	10 "
Shingles, white pine... ..	20c. "
other ...	30c. "
Casks and barrels (empty), shooks and packing-boxes, n.o.p....	30 per cent.
Chair-cane or reeds, wrought or manufactured from rattans and reeds ...	10 "
Furniture, and manufactures of which wood component material of chief value ...	35 "

SUGAR.

(Schedule E.—§§ 231-241.)

Sugars above No. 16, Dutch standard	1½c. per lb.	Other confectionery, n.o.p....	50 per cent.
Sugar candy and confectionery where sugar used value under 12c. per lb., and sugars tintured, coloured, or adulterated after being refined	5c. ,,	Glucose	2c. per lb.

TOBACCO, AND MANUFACTURES OF.

(Schedule F.—§§ 242-246.)

Tobacco in leaf suitable for cigar wrappers, stemmed	\$2.76 per lb.	Tobacco (<i>continued</i>)—	
unstemmed	\$2 ,,	stemmed	50c. per lb.
N.B.—If any portion suitable, whole dutiable, as above.		manufactured, all kinds, n.o.p.	40c. ,,
other, in leaf, unmanufactured, not stemmed... ..	35c. per lb.	Snuff and snuff flour	\$4.50 ,,
		Cigars, cigarettes, and cheroots	{ \$4.50 ,, and 25 p.c.

AGRICULTURAL PRODUCTS AND PROVISIONS.

(Schedule G.—§§ 247-328.)

Animals, live—		Fish—	
horses, mules	\$30 per head.	anchovies and sardines—	
horses of greater value than \$150	30 per cent.	in boxes not more than 5 x 4 x 3½	10c. p. whl. box
cattle over a year old	\$10 per head.	in half boxes not more than 5 x 4 x 1½	5c. each.
a year old or less	\$2 ,,	in quarter boxes not more than 4 x 2½ x 3½	2½c. ,,
hogs	\$1.50 ,,	otherwise	40 per cent.
sheep one year old or more	\$1.50 ,,	pickled, in barrels or half barrels, and mackerel or salmon pickled or salted	1c. per lb.
less than a year	75c. ,,	prepared, and fresh fish n.o.p. herrings—	½c. ,,
all other live animals, n.o.p.	20 per cent.	pickled or salted	½c. ,,
Breadstuffs and farinaceous substances—		fresh	½c. ,,
barley	30c. p. bush. 48 lb.	in cans or packages n.o.p. cans or packages of metal of shell fish free of duty—	30 per cent.
barley malt	45c. ,, 34 lb.	not exceeding 1 quart in contents	8c. per doz.
barley, pearled, patent, or pulled	2c. per lb.	when exceeding 1 quart in contents on each add. ½ quart or fraction	4c. ,,
buckwheat	15c. p. bush. 48 lb.	Fruits—	
corn or maize	15c. ,, 56 lb.	apples, green or ripe	25c. p. bush.
corn meal	20c. ,, 48 lb.	dried, or in any way prepared and n.o.p.	2c. per lb.
macaroni, vermicelli, and similar preparations	2c. per lb.	figs	{ 2½c. ,, 60c. per barrel of 3 cubic feet capacity or fraction.
oats	15c. p. bush.	grapes	
oatmeal	1c. per lb.	oranges, lemons, limes, in packages not exceeding—	
rice, cleaned	2c. ,,	1½ cubic feet... ..	13c. per pkg.
uncleaned	1½c. ,,	2½ ,,	25c. ,,
paddy	2c. ,,	5 ,,	50c. ,,
flour, meal, or broken to pass 12-wire sieve	½c. ,,	exceeding 5 cubic feet	{ 10c. per cub. foot or fraction of.
rye	10c. p. bush.	in bulk	\$1.50 per 1000.
rye flour... ..	½c. per lb.	on boxes or barrels containing same	30 p. c. add.
wheat	25c. p. bush.	plums and prunes	2c. per lb.
wheat flour	25 per cent.	raisins	2½c. ,,
Dairy products—		comfits, sweetmeats, and preserved fruits, n.o.p., and jellies	35 per cent.
butter and substitutes therefor	6c. per lb.	fruits preserved in their own juices	30 ,,
cheese	6c. ,,	orange and lemon-peel, preserved or candied	2c. per lb.
milk, fresh	5c. per gall.	Nuts—	
preserved, including weight of package	3c. per lb.	almonds, not shelled	5c. ,,
sugar of	8c. ,,	clean, shelled... ..	7½c. ,,
Farm and field products—		filberts and walnuts—	
beans	40c. p. bush. 60 lb.	not shelled	3c. ,,
peas and mushrooms, prepared or preserved	40 per cent.	shelled	6c. ,,
broom corn	\$8 per ton.	peanuts or ground beans—	
cabbages... ..	3c. each.	unshelled	1c. ,,
cider	5c. per gall.	shelled	1½c. ,,
eggs	5c. per doz.	nuts, n.o.p.	1½c. ,,
yolk of	25 per cent.	Meat products—	
hay	\$4 per ton.	bacon and hams	5c. ,,
honey	20c. per gall.	beef, mutton, and pork prepared and preserved meats, n.o.p.	2c. ,,
hops	15c. per lb.	n.o.p.	25 per cent.
onions	40c. p. bush.	meat extracts, n.o.p.	35c. per lb.
nursery stock, n.o.p.	20 per cent.	fluid	15c. ,,
peas, green, in bulk or in barrel, sacks, &c.	40c. p. bush. 60 lb.		
dried	20c. ,, 60 lb.		
split	50c. ,, 60 lb.		
in cartons, or papers, or small packages	1c. per lb.		
potatoes... ..	25c. p. bush. 60 lb.		
Seeds—			
castor beans	50c. p. bush. 50 lb.		
flax, poppy, and other oil seeds, n.o.p.	30c. p. bush. 56 lb.		
garden, agricultural, and other seeds, n.o.p.	20 per cent.		
vegetables, prepared or preserved, including pickles and sauces, n.o.p.... ..	45 ,,		
in their natural state, n.o.p.	25 ,,		
straw and teazles	30 ,,		

AGRICULTURAL PRODUCTS AND PROVISIONS—*continued.*

Meat products (<i>continued</i>)—		Miscellaneous products (<i>continued</i>)—	
lard	2c. per lb.	salt, in bags, sacks, &c....	12c. p. 100 lb.
poultry, live	3c. "	in bulk	8c. "
dressed	5c. "	starch, and substances fit for use	"
tallow	1c. "	as such	2c. "
wool-grease	½c. "	dextrine, burnt, starch, gum	"
Miscellaneous products—		substitute	1½c. "
chicory root, n.o.p.	2c. "	mustard	10c. "
chocolate, other than con-		spices, n.o.p.	4c. "
fectionery	2c. "	cayenne pepper... ..	2½c. "
cocoa, n.o.p.	2c. "	sage	3c. "
butter or butterine	3½c. "	vinegar, standard strength,	
dandelion root and acorns pre-		which requires 35 grains of	
pared, and other articles used		bicarb. potash to neutralise 1	
as coffee or substitutes there-		oz. troy of vinegar	7½c. p. gall.
for, n.o.p.	1½c. "		

SPIRITS, WINES, AND OTHER BEVERAGES.

(Schedule H.—§§ 329-341.)

Spirits and spirituous beverages		in each, and same, n.o.p., pay additional duty of
or bitters of all kinds containing		3c. each, in casks, capacity to be not under 14 gall.
spirit, n.o.p.	\$2.50 p. pf. gall.	Imitations subject to highest rate for genuine
		article, and not less than \$1.50 per gallon.
NOTE.—Where compounds of which distilled		
spirits are component part of chief value, duty		
not less than on same.		
Bay rum or bay water distilled or		Ale, porter, beer—
compounded, of first proof and		in bottles or jugs (when free)
in proportion for any greater		40c. per gall.
strength... ..	\$1.50 per gall.	otherwise
		20c. "
Wines, sparkling, in bottles of not		Malt extract—

 Emery ore.
 Ergot.
- Fans, common and unmanufactured, palm-leaf.
 Farina.
 Fashion-plates.
 Feathers and downs for beds.
 Feldspar.
 Felt adhesive for sheathing vessels.
 Fibrin in all forms.
 Fish for bait.
- Fish-skins.
 Flint, flints, and ground flint-stones.
 Floor-matting manufactured of round or split straws.
 Fossils.
 Fruit-plants, tropical, and semi-tropical, for propagation.
 Fruits and nuts; currants, dates, fruits, n.o.p., Tamarinds; cocoa, Brazil, cream, and palm nuts; palm nut kernels.
 Furs and fur-skins, undressed.
- Gambier.
 Glass, fit only to be remanufactured.
 Glass-plates or disks in the raw, and suitable only for optical instruments, spectacles, and eye-glasses.
 N.B.—Disks exceeding 8 inches diameter may be polished sufficiently to determine character.
 Grasses or fibrous substances, textile unmanufactured and undressed, n.o.p.
 Gold-beaters' moulds and skins.
 Grease and oils, fit only for soap, wire-drawing, and stuffing or dressing leather, n.o.p.
 Guano and substances used for manure.
 Gunny bags and cloths, fit only for remanufacture.
 Guts, salted.
 Gutta-percha, crude.
- Hair of animals, unmanufactured, n.o.p.
 Hair, human, raw.
 Hides: Angora goat-skins; raw, without the wool, asses' skins, raw, and skins, except sheep-skins with the wool on.
 Hide cuttings, raw, with or without hair and other glue stock.
 Hide rope.
 Hones and whetstones.
 Hoofs, unmanufactured.
 Hop roots for cultivation.
 Horns and parts of, unmanufactured, strips, and tips.
- Ice.
 Indiarubber, crude, milk of, and refuse.
 Indigo.
 Iodine, crude.
 Ipecac.
 Iridium.
 Ivory, and vegetable ivory, raw.
- Jalap.
 Jet, unmanufactured.
 Joss-stick.
 Junkoid.
- Kelp.
 Kiesenie.
 Kyanite.
- Lac-dye, crude, seed, button, stick and shell.
 Lac spirits.
 Lactarine.
 Lava, unmanufactured.
 Leeches.
 Lemon, lime, and sour orange juice.
 Liquorice root, unground.
 Lifeboats and life-saving apparatus, specially imported by life-saving societies.
 Lime, citrate of.
 " chloride of.
 Lithographic-stones not engraved.
 Litmus.
 Loadstones.
- Madder, prepared, and extracts thereof.
 Magnesite, or native mineral carbonate of magnesia.
 Magnesium.
 Magnets.
 Manna.
 Manuscripts.
 Marrow, crude.
 Marshmallow.
 Medals.
 Meerschaum, crude.
 Mineral waters, all not artificial.
 Minerals, crude, n.o.p.
 Models of inventions and improvements in the arts, including patterns for machinery, not fitted for other use.
 Moss, seaweed, and vegetable substances, crude, n.o.p.
 Musk, crude, in natural pods.
 Myrobolan.

Selep.
Shells, not manufactured.
Shot-gun, barrels, forged, rough bored.
- Shrimps and other shellfish.
Silk, not advanced in manufacture in any way.
Silk cocoons and waste.
Silkworms' eggs.
Skeletons and other preparations of anatomy.
Snails.
Soda, nitrate, cubic, and chlorate of.
Sodium.
Specimens of natural history, botany, and mineralogy, as objects of science and not for sale.
Spices: Cassia, cassiabera, and buds, unground; cinnamon and chips of, unground; cloves and stems, unground; ginger, unground and not preserved or candied; mace; nutmegs; pepper, unground; pimento, unground; spunk.
Spurs and stilts used in manufacture of earthen porcelain and stoneware.
Stone and sand: crude bur, cliff, pumice, cotten, and sandstone.
Storax.
Strontia, oxide of, protoxide of strontian, strontianite or mineral carbonate of strontia.
Sugars, not above No. 16 Dutch standard in colour, tank bottoms, drainings and sweepings, syrups of cane juice, melada, concentrated melada, and concrete concentrated molasses, and molasses.
Sulphur, crude, in bulk, and n.o.p., and as pyrites or sulphuret of iron in its natural state containing in excess of 25 per cent. of sulphur (except on copper therein).
Sulphuric acid, sp. g. not $1\frac{3200}{80000}$, for agricultural purposes.
Sweepings of silver and gold.
- Tapioca, Cassada.
Tar and pitch of wood and coal-tar.
Tea and tea plants.
Teeth, natural or unmanufactured.
Terra alba.
Terra japonica.
Tin ore, cassiterite and tin in bars, blocks, pigs, or grain or granulated, until July 1, 1893.
Tinsel wire, lame.
Tobacco stems.
Tonquin, tonka beans.
Tripoli.
Turmeric.
Turpentine, Venice.
Turpentine, spirits of.
Turtles.
Types, fit only to be remanufactured.
- Uranium, oxide and salts of.
- Vaccine virus.
Valonia.
Verdigris, or subacetate of copper.
- Wafers, unmedicated.
Wax, vegetable or mineral.
Wearing apparel and other personal effects (not merchandise) of persons arriving in U.S., for their present convenience and not for sale.
Whalebone, unmanufactured.
Wood logs and round unmanufactured timber, n.o.p.; firewood, handle, heading, stave and shingle bolts, hop-poles, fence-posts, railroad ties, ships' timber, and planking, n.o.p.
Woods: Cabinet in the log, rough, or hewn, bamboo and rattan, unmanufactured; briar and the like cut into blocks only suitable for articles into which to be converted; bamboo-reeds, and sticks of partridge, hair, pimento and other, n.o.p., cut into lengths only suitable for sticks for umbrellas, &c.; and India malacca joints, in lengths only suitable for articles into which to be converted.
Works of art, drawings, &c., and apparatus brought in by professional artists, lecturers, or scientists for use by them temporarily for exhibition, and in illustration and promotion of art, science, or industry, or exhibition by any associations established for encouraging art and science, or erecting a public monument, and not intended for sale, subject to regulations.
- Yams.
Zaffer.

RECIPROCITY.

SECTION 4.

Section 3 of the McKinley Tariff Bill enacts that, with a view to secure reciprocal trade with countries producing the following articles, and for this purpose, on and after 1st July, 1892, whenever and so often as the President shall be satisfied that the Government of any country producing and exporting sugar, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, imposes duties or other exactions upon the agricultural or other products of the United States, which, in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States he may deem to be reciprocally unequal and unreasonable, he shall have the power, and it shall be his duty to suspend, by proclamation to that effect, the provisions of this Act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just; and in such case, and during such suspension, duties shall be levied, collected, and paid upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country, as follows, namely:—

All sugars not above No. 13 Dutch standard in colour shall pay on their polariscopic tests as follows, namely:—

All sugars not above No. 13 Dutch standard in colour, all tank bottoms, syrups of cane-juice or of beet-juice, melada, concentrated melada, concrete and concentrated molasses, testing by the polariscope not above 75 degrees, $\frac{1}{10}$ of 1 cent per lb.; and for every additional degree or fraction of a degree shown by the polariscopic test $\frac{1}{100}$ of 1 cent, per pound additional.

All sugar above No. 13 Dutch standard in colour, shall be classified by the Dutch standard of colour, and pay duty as follows, namely:—

All sugar above No. 13, and not above No. 16, Dutch standard of colour, 1 $\frac{3}{4}$ cents per lb.

All sugar above No. 16, and not above No. 20, Dutch standard of colour, 1 $\frac{3}{4}$ cents per lb.

All sugar above No. 20 Dutch standard of colour, 2 cents per lb.

Molasses testing above 56 degrees, 4 cents per gallon.

Sugar drainings and sugar sweepings shall be subject to duty either as molasses or sugar, as the case may be, according to polariscopic test.

SECTION 4.—continued.

On coffee, 3 cents per lb.

On tea, 10 cents per lb.

Hides, raw or uncured, whether dry, salted, or pickled; Angora goat-skins, raw, without the wool, unmanufactured: asses' skins, raw or unmanufactured; and skins, except sheepskins with the wool on—1 $\frac{1}{2}$ cents per lb.

SECTION 4.

There shall be paid on—

importation of all raw or unmanufactured articles not enumerated or provided for	10 per cent.
importation of all articles wholly or partly manufactured	20 „

SECTION 5.

Articles not enumerated, but similar in material, quality, texture, or the use to which applied, to any chargeable to pay as same; and if resembling two or more to pay as at highest rate.

SECTIONS 6, 7.

All articles of foreign manufacture, such as usually marked or labelled, and packages containing such or other imported articles to be respectively marked, so as to indicate the country of their origin, and the same not to simulate name or trade mark of any domestic manufacture or manufacturer.

SECTIONS 8, 9, 14.

Material and articles necessary for construction, equipment, and repair of American vessels, and machinery for repair, may be imported in bond, subject to conditions.

SECTION 17.

An additional discriminating duty of 10 per cent. levied on all goods, wares, and merchandise imported in vessels not of the U.S., unless exempted by treaty or any any Act of Congress.

SECTION 20.

Importation of meat, cattle, or their hides is prohibited, unless operation of the section is suspended by the Secretary of the Treasury.

APPENDIX U.

Synopsis of the Classification of the World's Columbian
Exposition, Chicago, U.S.A., 1893.DEPARTMENT A.—AGRICULTURE, FOOD AND ITS ACCESSORIES, FORESTRY AND FOREST
PRODUCTS—MACHINERY AND APPLIANCES.

- Group 1.—Cereals, Grasses, and Forage Plants.
- Group 2.—Bread, Biscuits, Pastes, Starch, Gluten, &c.
- Group 3.—Sugars, Syrups, Confectionery, &c.
- Group 4.—Potatoes, Tubers, and other Root Crops.
- Group 5.—Products of the Farm, not otherwise classed.
- Group 6.—Preserved Meats and Food Preparations.
(For Fish Products as Food, *see* also Group 40.)
- Group 7.—The Dairy and Dairy Products.
- Group 8.—Tea, Coffee, Spices, Hops, and Aromatic and Vegetable Substances.
- Group 9.—Animal and Vegetable Fibres.
- Group 10.—Pure and Mineral Waters, Natural and Artificial.
- Group 11.—Whiskies, Cider, Liqueurs, and Alcohol.
- Group 12.—Malt Liquors.
- Group 13.—Machinery, Processes and Appliance of Fermenting, Distilling, Bottling,
and Storing Beverages.
- Group 14.—Farms and Farm Buildings.
- Group 15.—Literature and Statistics of Agriculture.
- Group 16.—Farming Tools, Implements and Machinery.
- Group 17.—Miscellaneous Animal Products—Fertilizers and Fertilizing Compounds.
- Group 18.—Fats, Oils, Soaps, Candles, &c.
- Group 19.—Forestry, Forest Products.

DEPARTMENT B.—HORTICULTURE, VITICULTURE, POMOLOGY, FLORICULTURE, &c.

- Group 20.—Viticulture, Manufactured Products, Methods, and Appliances.
- Group 21.—Pomology, Manufactured Products, Methods, and Appliances.
- Group 22.—Floriculture.
- Group 23.—Culinary Vegetables.
- Group 24.—Seeds, Seed Raising, Testing, and Distribution.
- Group 25.—Arboriculture.
- Group 26.—Appliances, Methods, &c.

DEPARTMENT C.—LIVE STOCK—DOMESTIC AND WILD ANIMALS.

- Group 27.—Horses, Asses, Mules.
- Group 28.—Cattle.
- Group 29.—Sheep.
- Group 30.—Goats, Llama, Camels, and other Domesticated Animals.
- Group 31.—Swine.
- Group 32.—Dogs.
- Group 33.—Cats, Ferrets, Rabbits, &c.
- Group 34.—Poultry and Birds.
- Group 35.—Insects and Insect Products.
- Group 36.—Wild Animals.

DEPARTMENT D.—FISH, FISHERIES, FISH PRODUCTS, AND APPARATUS OF FISHING.

- Group 37.—Fish, and other forms of Aquatic Life.
- Group 38.—Sea Fishing and Angling.
- Group 39.—Fresh Water Fishing and Angling.
- Group 40.—Products of the Fisheries and their Manipulation.
(*See* also, in part, Groups 6 and 17.)
- Group 41.—Fish Culture.

DEPARTMENT E.—MINES, MINING, AND METALLURGY.

- Group 42.—Minerals, Ores, Native Metals, Gems and Crystals; Geological Specimens.
- Group 43.—Mineral Combustibles—Coal, Coke, Petroleum, Natural Gas, &c.
- Group 44.—Building Stones, Marbles, Ornamental Stones, and Quarry Products.
- Group 45.—Grinding, Abrading, and Polishing Substances.

Group

- Group 46.—Graphite and its Products ; Clays and other Fictile Materials, and their Direct Products ; Asbestos, &c.
- Group 47.—Limestone, Cements, and Artificial Stone.
- Group 48.—Salts, Sulphur, Fertilizers, Pigments, Mineral Waters, and Miscellaneous Useful Minerals and Compounds.
- Group 49.—Metallurgy of Iron and Steel, with the Products.
- Group 50.—Aluminium and its Alloys.
- Group 51.—Copper and its Alloys—Metallurgy.
- Group 52.—Metallurgy of Tin, Tin-plate, &c.
- Group 53.—Metallurgy of Zinc, Nickel, and Cobalt.
- Group 54.—Metallurgy of Antimony and other Metals not Specifically Classed.
- Group 55.—Extraction of Gold and Silver by Milling.
- Group 56.—Extraction of Gold and Silver by Lixiviation.
- Group 57.—Extraction of Gold, Silver, and Lead by Fire.
- Group 58.—Quarrying and Working Stone.
- Group 59.—Placer, Hydraulic, and "Drift" Mining.
- Group 60.—Tools and Appliances of Underground Mining, Timbering, and Supporting.
- Group 61.—Boring and Drilling Tools and Machinery, and Apparatus for breaking out Ore and Coal.
- Group 62.—Pumps, Engines, and Apparatus used in Mining for Pumping, Draining, and Hoisting.
- Group 63.—Moving, Storing, and Delivering Ores, Coals, &c.
- Group 64.—Apparatus for Crushing and Pulverizing.
- Group 65.—Sizing Appliances.
- Group 66.—Assaying Apparatus and Fixtures.
- Group 67.—History and Literature of Mining and Metallurgy.
- Group 68.—Originals or Reproductions of Early and Notable Implements and Apparatus used in Mining and Metallurgy.

DEPARTMENT F.—MACHINERY.

- Group 69.—Motors and Apparatus for the Generation and Transmission of Power—Hydraulic and Pneumatic Apparatus.
- Group 70.—Fire-engines—Apparatus and Appliances for Extinguishing Fire.
- Group 71.—Machine Tools and Machines for Working Metals.
- Group 72.—Machinery for the Manufacture of Textile Fabrics and Clothing.
- Group 73.—Machines for Working Wood.
(See also Departments A. and E.)
- Group 74.—Machines and Apparatus for Type-setting, Printing, Stamping, Embossing, and for Making Books and Paper Working.
- Group 75.—Lithography, Zincography, and Colour Printing.
- Group 76.—Photo-Mechanical and other Mechanical Processes of Illustrating, &c.
- Group 77.—Miscellaneous Hand Tools, Machines, and Apparatus used in Various Arts.
- Group 78.—Machines for Working Stone, Clay, and other Minerals.
(See also Department E.)
- Group 79.—Machinery used in the Preparation of Foods, &c.

DEPARTMENT G.—TRANSPORTATION—RAILWAYS, VESSELS, VEHICLES.

- Group 80.—Railways, Railway Plant and Equipment.
- Group 81.—Street Car and other Short Line Systems.
- Group 82.—Miscellaneous and Special Railways.
- Group 83.—Vehicles and Methods of Transportation on Common Roads.
- Group 84.—Aerial, Pneumatic, and other forms of Transportation.
- Group 85.—Vessels, Boats—Marine, Lake, and River Transportation.
- Group 86.—Naval Warfare and Coast Defence.

DEPARTMENT H.—MANUFACTURES.

- Group 87.—Chemical and Pharmaceutical Products—Druggists' Supplies.
- Group 88.—Paints, Colours, Dyes, and Varnishes. (See also Group 48.)
- Group 89.—Typewriters, Paper, Blank Books, Stationery.
- Group 90.—Furniture of Interiors, Upholstery, and Artistic Decoration.
- Group 91.—Ceramics and Mosaics.
(For Clays and other materials, see Group 46.)
- Group 92.—Marble, Stone, and Metal Monuments, Mausoleums, Mantels, &c., Caskets, Coffins, and Undertakers' Furnishing Goods.
- Group 93.—Art Metal Work—Enamels, &c.
- Group 94.—Glass and Glassware.
- Group 95.—Stained Glass in Decoration.
- Group 96.—Carvings in various Materials.
- Group 97.—Gold and Silver Ware, Plate, &c.
- Group 98.—Jewellery and Ornaments.
- Group 99.—Horology—Watches, Clocks, &c. (See also Group 151.)
- Group 100.—Silk and Silk Fabrics.
- Group 101.—Fabrics of Jute, Ramie, and other Vegetable and Mineral Fibres.

Group

- Group 102.—Yarns and Woven Goods of Cotton, Linen, and other Vegetable Fibres.
 Group 103.—Woven and Felted Goods of Wool, and Mixtures of Wool.
 Group 104.—Clothing and Costumes.
 Group 105.—Furs and Fur Clothing.
 Group 106.—Laces, Embroideries, Trimmings, Artificial Flowers, Fans, &c.
 Group 107.—Hair-work, Coiffures, and Accessories of the Toilet.
 Group 108.—Travelling Equipments—Valises, Trunks, Toilet Cases, Fancy Leather-work, Canes, Umbrellas, Parasols, &c.
 Group 109.—Rubber Goods, Caoutchouc, Gutta-percha, Celluloid, and Zylonite.
 Group 110.—Toys and Fancy Articles.
 Group 111.—Leather and Manufactures of Leather.
 Group 112.—Scales, Weights, and Measures. (*See also* Group 151.)
 Group 113.—Material of War, Ordnance and Ammunition, Weapons and Apparatus of Hunting, Trapping, &c., Military and Sporting Small Arms.
 Group 114.—Lighting Apparatus and Appliances.
 Group 115.—Heating and Cooking Apparatus and Appliances.
 Group 116.—Refrigerators, Hollow Metal Ware, Tinware, Enamelled Ware.
 Group 117.—Wire Goods and Screens, Perforated Sheets, Lattice Work, Fencing, &c.
 Group 118.—Wrought-iron and Thin-metal Exhibits.
 Group 119.—Vaults, Safes, Hardware, Edge Tools, Cutlery.
 Group 120.—Plumbing and Sanitary Materials.
 Group 121.—Miscellaneous Articles of Manufacture not heretofore classed.

DEPARTMENT J.—ELECTRICITY AND ELECTRICAL APPLIANCES.

- Group 122.—Apparatus illustrating the Phenomena and Laws of Electricity and Magnetism.
 Group 123.—Apparatus for Electrical Measurements.
 Group 124.—Electrical Batteries—Primary and Secondary.
 Group 125.—Machines and Appliances for Producing Electrical Currents by Mechanical Power—Dynamical Electricity.
 Group 126.—Transmission and Regulation of the Electrical Current.
 Group 127.—Electric Motors.
 Group 128.—Application of Electric Motors.
 Group 129.—Lighting by Electricity.
 Group 130.—Heating by Electricity.
 Group 131.—Electro-metallurgy and Electro-chemistry.
 Group 132.—Electric Forging, Welding, Stamping, Tempering, Brazing, &c.
 Group 133.—Electric Telegraph and Electric Signals.
 Group 134.—The Telephone and its Appliances.—Phonographs.
 Group 135.—Electricity in Surgery, Dentistry, and Therapeutics.
 Group 136.—Applications of Electricity in various ways not hereinbefore specified.
 Group 137.—History and Statistics of Electrical Invention.
 Group 138.—Progress and Development in Electrical Science and Construction, as Illustrated by Drawings and Models of various Countries.

DEPARTMENT K.—FINE ARTS—PAINTING, SCULPTURE, ARCHITECTURE AND DECORATION.

- Group 139.—Sculpture.
 Group 140.—Paintings in Oil.
 Group 141.—Paintings in Water Colours.
 Group 142.—Paintings on Ivory, on Enamel, on Metal, on Porcelain, or other wares ; Fresco Painting on Walls, &c.
 Group 143.—Engravings and Etchings—Prints.
 Group 144.—Chalk, Charcoal, Pastel, and other Drawings.
 Group 145.—Antique and Modern Carvings ; Engravings in Medallions or in Gems ; Cameos, Intaglios.
 Group 146.—Exhibits of Private Collections.

DEPARTMENT L.—LIBERAL ARTS—EDUCATION, LITERATURE, ENGINEERING, PUBLIC WORKS, MUSIC AND THE DRAMA.

- Group 147.—Physical Development, Training, and Condition—Hygiene.
 Group 148.—Instruments and Apparatus of Medicine, Surgery, and Prosthesis.
 Group 149.—Primary, Secondary, and Superior Education.
 Group 150.—Books, Libraries, Literature, Journalism.
 Group 151.—Instruments of Precision, Experiment, Research, and Photography. Photographs.
 Group 152.—Civil Engineering—Public Works, Constructive Architecture.
 Group 153.—Government and Law.
 Group 154.—Commerce, Trade, and Banking.
 Group 155.—Institutions and Organisations for the Increase and Diffusion of Knowledge.
 Group 156.—Social, Industrial, and Co-operative Associations.
 Group 157.—Religious Organisations and Systems.—Statistics and Publications.
 Group 158.—Music and Musical Instruments. The Theatre.

DEPARTMENT

- DEPARTMENT M.—ETHNOLOGY, ARCHÆOLOGY, PROGRESS OF LABOUR AND INVENTION.
- Group 159.—Views, Plans, or Models of Prehistoric Architectural Monuments and Habitations.
- Group 160.—Furniture and Clothing of Aboriginal, Uncivilised, and but Partly Civilised Races.
- Group 161.—Implements of War and the Chase.
(See also Groups 86 and 113.)
- Group 162.—Tools and Implements of Industrial Operations.
- Group 163.—Athletic Exercises—Games.
- Group 164.—Objects of Spiritual Significance and Veneration, Representation of Deities, Appliances of Worship.
- Group 165.—Historic Archæology—Objects Illustrating the Progress of Nations.
- Group 166.—Models and Representations of Ancient Vessels, particularly of the Period of the Discovery of America.
- Group 167.—Reproductions of Ancient Maps, Charts, and Apparatus of Navigation.
- Group 168.—Models and Representations of Ancient Buildings, Cities, or Monuments of the Historic Period anterior to the Discovery of America.
- Group 169.—Models and Representations of Habitations and Dwellings built since the Discovery of America.
- Group 170.—Originals, Copies of Models, or Graphic Representations of Notable Inventions.
- Group 171.—Objects illustrating generally the Progress of the Amelioration of the Conditions of Life and Labour.
- Group 172.—Woman's Work.
- Group 173.—State, National and Foreign Government Exhibits.
- Group 174.—The North American Indian.
- Group 175.—Portraits, Busts, and Statues of Great Inventors and others who have contributed largely to the Progress of Civilisation and the Well-being of Man.
- Group 176.—Isolated and Collective Exhibits.

WOMAN'S WORK

(subject to the above classification).

APPENDIX V.

Foreign Labour.

THE following joint resolution passed the Senate and the House of Representatives of the United States. Its object was to authorise foreign exhibitors at the World's Columbian Exposition to bring in foreign labourers from their respective countries for the purpose of preparing and making their exhibits :—

“PUBLIC RESOLUTION—No. 30.

“Whereas, under and in pursuance of the Act approved 25th April, Anno Domini 1890, the President of the United States has invited the Governments and citizens of foreign nations to participate in the International Exhibition authorised by the Act above recited ; and

“Whereas the invitations so extended have been accepted by the several nations, and space for installing foreign exhibits has been applied for and duly apportioned, and concessions and privileges granted by the Exposition management to the citizens and subjects of foreign nations ; and

“Whereas, for the purpose of securing the production upon the Exposition Grounds of scenes illustrative of the architecture, dress, habits, and modes of life, occupation, industries, means of locomotion and transportation, amusements, entertainments, and so forth, of the natives of foreign countries, it has been necessary for the World's Columbian Exposition to grant concessions and privileges to certain firms and corporations conceding the right to make such productions : Therefore,

“*Resolved by the Senate and House of Representatives of the United States of America, in Congress assembled* : That the Act of Congress, approved 26th February, 1885, prohibiting the importation of foreigners under contract to perform labour, and the Acts of Congress prohibiting the coming of Chinese persons into the United States, and the Acts amendatory of these Acts, shall not be so construed, nor shall anything therein operate to prevent, hinder, or in anywise restrict any foreign exhibitor, representative, or citizen of a foreign nation, or the holder who is a citizen of a foreign nation, of any concession or privilege from the World's Columbian Exposition, from bringing into the United States, under contract, such mechanics, artisans, agents, or other employees, natives of their respective foreign countries, as they, or any of them, may deem necessary for the purpose of making preparation for installing or conducting any business authorised or permitted under, or by virtue of or pertaining to, any concession or privilege which may have been granted by the World's Columbian Exposition in connection with such Exposition : Provided, however, that no alien shall, by virtue of this Act, enter the United States under contract to perform labour except by express permission, naming such alien, of the Secretary of the Treasury ; and any such alien who may remain in the United States for more than one year after the close of said Exposition shall thereafter be subject to all the processes and penalties applicable to aliens coming in violation of the alien contract labour laws aforesaid.

“Approved, 5th August, 1892.”

APPENDIX W:

Rules of New South Wales Court.

RULES to be observed in the various courts and buildings of the New South Wales Department of the World's Columbian Exposition, Chicago.

Superintendents.

1. Mr. Hudson, as General Superintendent, will have the oversight of all exhibits in the various courts with special supervision of, and responsibility for, the exhibits in the Agriculture, Forestry, and Machinery Buildings.
2. Mr. Pugh, as Assistant General Superintendent, will be responsible for the exhibits in Ethnology, Fisheries, Transportation, Horticulture (including the wine court), and Fine Arts Buildings.
3. Mr. Carne will be responsible for the exhibits in the Mining Building.
4. Mr. Terry will be responsible for the exhibits in the Liberal Arts, Manufactures, and Electricity Buildings.
5. Mrs. Terry will have charge of the exhibits in the Women's Building.
6. Mr. Bruce will be in charge of the wool and stock exhibits.

Assistants.

1. Assistants must be uniformly civil and obliging, and at all times ready to give information to visitors.
2. They shall keep the courts, the exhibits, and the precincts clean and tidy.
3. They shall carefully guard all exhibits, and shall not alter their disposition without reference to the superintendents.
4. They shall loyally carry out the instructions of the superintendents.
5. They shall attend in their respective courts at least half an hour before the public opening of the Exhibition, so as to have everything clean and tidy for the day.
6. They shall carefully cover the exhibits, and leave them well protected, before reporting themselves to the superintendents at the close of the day's work.

Attendance Book and Diary.

1. An attendance book and diary shall be kept in each court, in which shall be inserted daily the hour of arrival and departure of each officer belonging to the court, as well as the names of visitors from Australia or elsewhere, and all events requiring remark.
2. When entering their names, such visitors shall be invited to visit Australia House personally, to insert their names, and any remarks they may be pleased to make regarding their representation, or the exhibits generally, in the visitors' book kept there.
3. The superintendents shall be responsible for the due keeping of the attendance books, and shall direct them to be forwarded to Australia House every Saturday for inspection by the Executive Commissioner.

Hours for Meals, &c.

The superintendents shall make such arrangements as may be necessary to enable the assistants to relieve each other at meal times, so that in no cases shall the courts at any time be without due attendance from an officer.

Complaints.

1. Any officer may make any grievance under which he supposes himself to suffer known to his superintendent, and through him to the Executive Commissioner.
2. In case of urgency the Executive Commissioner may be directly appealed to.

Final Decision.

The Executive Commissioner's decision shall be final in all matters connected with the business of the various courts.

ARTHUR RENWICK, Executive Commissioner.

APPENDIX X.

AUTOMATIC MOLDING MACHINES.

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE,
SYDNEY, NEW SOUTH WALES.

APPENDIX Y.

A New System of Making Sand Moulds for Metal Castings.

IN view of the public interest which has lately been manifested in the question of the practicableness of using New South Wales iron-ores for the production of iron for water-pipes, &c., the following information with regard to a new system of making sand-moulds for metal castings is likely to prove of great interest and practical utility to persons engaged in the iron-trade.

AUTOMATIC MOLDING MACHINES.

The cuts (figs. 1 and 2) show the general outlines of the machines. The power used is steam, which may be taken direct from shop boiler.

Fig. 1 shows the foundation, the foundry floor being cut away, exposing the arrangement of the cylinder, swinging arms, and counterbalancing of same.

The machine above the floor consists of a table with upward projecting lugs, which support a frame to which is attached the patterns. This frame has an annular space, into which steam is admitted each time a mould is rammed, for the purpose of keeping the patterns warm, to prevent sweating, and to make them draw cleaner from the sand.

Directly over the frame, and resting on it, is the stripping-plate frame, which supports the stripping-plate; on each side of the machine is a lever, pivoted at the back end to the table, and connected in the middle by a link to the stripping-plate frame, the other ends being free. Directly in front of the machine is a tumbling or tripping shaft, with two arms projecting upward and along the line of motion of the free ends of the side levers. These arms are provided with stops of suitable length, which engage the free ends of the levers on the downward stroke, reducing the motion of the stripping-plate one-half, and drawing the pattern through the stripping-plate.

The stripping-plate frame is guided in the bored sockets in the table below, the sockets being provided with air-cushions to prevent jar and noise when stripping-plate is dropped.

This cut also shows the pattern projecting through the stripping-plate, ready for flask.

Fig. 2 shows the patterns drawn through the stripping-plate after the mould has been made.

The operation of making a mould is very simple. The half-flask is put on the stripping-plate, with the sand-box to hold the sand which is to be compressed, and both are filled with sand.

The ramming-head is then swung forward over the flask against stops, which define its position, and the throttle-valve is opened.

The upward motion of the piston and attached parts carries the flask and sand up to the ramming head, where it is rammed instantly, and upon the throttle-valve lever being moved again steam is cut off and, at the same time, exhausted, allowing the flask to descend, the stops then engaging the free ends of the side levers and arresting the downward motion of the stripping-plate at a point about midway; the pattern, continuing to descend, is drawn from the mould, and when the piston has returned to its lowest position the sand is struck off the flask, and the flask is then removed from the machine. As the man removes it he presses the tripping-treadle with his foot to release the stripping-plate frame, which then falls to its proper position with respect to the pattern, and the machine is ready to make another mould.

The capacity of these machines depends largely upon the number of moulds that can be taken care of after they leave the machine.

To ensure good moulds, the sand must be packed hardest at the joints and softer over the pattern. This is accomplished by cutting out the wood ramming head freely over the pattern. The head may be changed to suit any size flask within the limit of the machine.

A large number of these machines are in operation, doing good and satisfactory work.

The machines are not standardised according to flasks, for the reason that each machine will take a variety of sizes.

Machines with the following sizes of cylinders can be furnished with reasonable promptness:—

30 inch,	single
24 "	"
20 "	single and duplex
16 "	"

AUTOMATIC

AUTOMATIC DUPLEX MOULDING MACHINES.

The cuts (figs. 3 and 4) represent the Automatic Duplex Moulding Machine for making light castings.

Fig. 3 shows the machine with flasks on, filled with sand, ready for ramming, and fig. 4 illustrates same after a complete mould has been made by one operation of machine. In this case the patterns moulded are journal bearings—brass—for railway cars of 60,000 lb. capacity.

The duplex was designed especially to meet the requirements of iron and brass founders who are engaged in making light castings for the trade, where competition is severe and prices low.

Its distinctive feature, when compared with the standard single machine, is in moulding both parts of flask at one operation. It is, in fact, two machines in one, and will make a complete mould, or two nowels or two copes for separate moulds in the same time, and with the same operations that are required to make a half mould on the single machine.

The duplex principle makes a great saving in moulding light bench-work, which has, until the introduction of this machine, been confined almost solely to hand labour.

Sand will stick to cold metal patterns and often cause a break in the mould. This is avoided by keeping the patterns constantly warmed by the steam used for ramming, which in many cases dispenses with stripping-plates and to use the ordinary match-plates; when this is done the match-plate is automatically drawn from the mould by the machine, the same as patterns are drawn through a stripping-plate.

Power moulding machines are ordinarily so constructed that each machine is limited to one size flask only, which is a serious defect, and often compels the use of several machines to do work which would go on one if it were more universal in its range. These machines possess this feature, and will mould any size of flask within the ramming capacity of the cylinder; they will also conform to any irregular shape in flask, which is often necessary when cheap castings are made, to save handling a needless amount of sand.

We (the Tabor Manufacturing Co.) recommend the duplex machine especially for steam fittings, such as sight-feed lubricators, injectors, globe, gate, angle and check-valve bodies in brass; elbows, tees, return bends, and all valve-cases in iron; plumbers' supplies, such as brass fittings and iron tees, Y's and bends; sewing-machine castings and hardware; agricultural implement and lighter car castings, such as brake-shoes and journal bearings; and, in fact, bench-work generally.

The duplex may also be used as a single machine when desired, and when so used will take a much larger flask. The 16-inch machine—16-inch cylinder—when working duplex will take both parts of flask 12 in. x 15 in., and when working single will take one-half of flask 15 in. x 24 in.

When flasks are not too heavy one man will operate machine economically. A fair labourer, running a duplex with flasks 12 in. x 15 in. of average depth, should mould from twenty-five to forty complete moulds per hour, the number depending on the amount of core setting. An additional man on the machine would give a greatly increased product, and would make it more economical.

The value of a successful moulding machine in a foundry which has a fair amount of duplicate work cannot be estimated. We believe the moulding machine is destined to do for the foundry what the turret lathe and milling machine have done in the machine-shop, viz., reduce cost and increase quality, and this with a class of labour which is within the reach of all. It has been said of the turret lathe that its use is limited only by the skill and ingenuity of the toolmaker; if we substitute pattern-maker, the same may be said of a good moulding machine.

A large number of these machines are in operation, doing good and satisfactory work.

The machines of the Tudor Manufacturing Co. are not standardized according to flask, for the reason that each machine will take a variety of sizes.

Machines are made with the following size cylinders, which can be furnished with reasonable promptness:—

30 inch	single.
24 "	"
20 "	single and duplex.
16 "	"

AUTOMATIC DUPLEX MOLDING MACHINES.

FIG. 3.

FIG. 4.

APPENDIX Z.

Description of Exhibit of the Niles Tool Works
Company of Hamilton, Ohio.

TWELVE-FOOT PLANER.

HAS two heads on cross-rail and two side-heads.

A planer of great weight, strength, and power.

This machine is driven by all spur-gearing, though in the smaller sized planing machines of this company, an especial form of tangent gearing is used.

The table moves at cutting-speed of 19 feet per minute, and on return at 50 feet per minute. The table is the largest single casting, and weighs 35 tons. For chucking-work upon this table, a design of oblong square edged holes are provided, no continuous slots or round holes being used in the table, or in any of the Niles machines.

The "V's" are open angle and very wide, giving ample bearings. Lubrication of same is thoroughly accomplished by means of rollers of metal revolving in oil pockets; these rollers having grooves across the face, which grooves act as buckets for lifting the oil from the reservoir—not depending, therefore, on capillary attraction alone, as in most devices of this kind. Patented.

The bed is very heavy, and thoroughly braced with box-girders throughout. The housings are of hollow-box form, double-webbed, of great strength and good depth, and are both keyed and bolted securely to the bed. The vertical working edges of the housings are square, giving greatest strength and wear. These housings are tied together at the top with a top-rail of superior form and strength, upon which is mounted the works for raising and lowering the cross-rail, using a separate counter-shaft for same. The cross-rail is raised and lowered by power, is very deep in the centre from front to back, and of very wide face. All working edges on cross-rail are square, and saddles have wide bearings. Cross-rail is extended to the left, so that left hand head can be run entirely out of the way, giving the other head free movement the entire width between the housings. The two heads on cross-rail are counter-weighted for easy hand movement. These heads can be swung at any angle, and have independent vertical, horizontal, or angular feed by hand or power; motion being communicated to them through splined-rods for vertical and angular movement, and a screw for horizontal movement, making four horizontal rods within the cross-rail, each of these rods being provided with a ratchet-pinion at both ends, which regulates the degree of feed.

A fifth horizontal rod in the cross-rail operates a tool-lifting device, which lifts the tools on the cross-rail at every return stroke of the table. This is a positive tool-lifting device, and operates without any cords or weights, the entire mechanism being contained in the cross-rail. A rapid horizontal hand movement of the heads for adjustment is provided by means of a rack and ratchet.

The side heads are counter-weighted, and raised and lowered, and feed vertically, horizontally, and angularly by power. They are very heavy and can be dropped below the surface of the table, if necessary, when not in use.

The various movements of the tools on each head are made through a vertical splined-rod and screw, the lower end of these rods and screws being provided with ratchet-pinion for regulating the feed.

The machine is provided with an out-bracket or housing for work that will not pass through the regular housings. The bracket can be adjusted in every direction, the limits being 6-foot movement of entire bracket parallel to planer, 6-foot vertical movement to head, and 4-foot horizontal movement to column. The head used is one of the sideheads taken from regular housing, but extra head could be provided if wanted. When head is placed on outside bracket it is counterweighted in the usual way, and has every movement of regular side-head.

The feeds being by power, the arrangement of splined rod and screw and feeds in this out-bracket are the same as in the side housings, the power being given through a single splined rod running close to bed of planer, being broken by bevelled pinion where necessary. The other end of this bracket rests on a single base-plate with plain upper sides having holes mortised in top to engage bar for hand movement.

Throughout this machine, as in all planers of the Niles Tool Works Company, the driving-shafts run in brass bushings. The belts are shifted by a patented device which moves but one belt at a time, and the table can be stopped or started instantly from either side of the machine.

All feeds are positive and are operated in a very short distance travel of the table, the feeds taking no power whatever, except when feeding, and each head having independent feed in every direction.

The entire machine weighs 270,000 lb. Two of these machines have recently been built by the Niles Tool Works Company, one of which is now in operation at the General Electric Company, at Lynn, Massachusetts, and the one on exhibition being for a large engineering concern in New York State.

SIX-FOOT BORING AND TURNING MILL.

This machine, swinging 73 in. in diameter, takes in under the tool-holders, when the rail is raised to the top, 36 in. Boring-bars have 24 in. traverse. Cone has six steps for 4-in. belt, and is strongly back-gearred. Range of feed from $\frac{1}{32}$ in. to $\frac{1}{16}$ in.

The housings are double-web or box-girder form, and are well secured to the bed by strong bolts. Both the housings and the bed are exceedingly heavy and strong.

Driving gear.—The table is driven by an accurately cut internal spur-gear. The cone transmits power to a pair of heavy-cut bevel gears, thence to a steel pinion driving the internal spur on the table. This construction insures a steady-running machine without clatter and free from any lifting tendency.

Spindle.—The spindle is of great length, with very liberal bearings. It rests below on a steel step. The spindle-bearing has ample provision for taking up wear, and this adjustment is arranged to keep the spindle central.

Cone.—The driving-cone is placed at the side of the machine, and the bolts are as convenient as those on a lathe. Each mill is strongly back-gearred, giving a wide range of speeds.

Table-bearing.—An annular bearing under the outer edge of the table is provided, and when heavy pieces are to be worked the spindle is relieved and the table allowed to rest lightly on this outer bearing. Thus adjusted, the machine works with all the steadiness of a heavy planer and all the precision of the most accurate lathe.

Boring-bars.—The boring-bars are octagon in section, accurately fitted to their bearings. One bar is brought exactly central with the spindle. This form of bar is very stiff and rigid, and at the same time convenient to handle. The tool-holders are steel forgings arranged to hold the tools in any required position, and may be removed for other tool-holders if desired. The bars may be set over at any angle, and are quickly handled by means of worm and worm-wheel. They may be fed in any direction independently of each other.

Counter-weight.—Many attempts have been made to secure a balancing device for the bars that will compare in simplicity and efficiency with our patented device. The device, simple as it appears, is worthy of consideration. It will be noticed that a single chain is attached at one end to an arm rigidly secured to the rail, and that a similar arm at the other end of the rail carries a pulley over which the weighted end of the chain falls. There is a sheave on the face of each tool-bar, and each saddle carries two sheaves straddling its bar, and the chain is looped over the single sheave, and under the tool-bar sheave. This is a very simple and perfect arrangement, and possesses quite a number of advantages not apparent at first sight.

1. The counter-weight requires to be only half as heavy as the parts to be counter-balanced.
2. The counterbalance is perfect, no matter how much one or both of the tool-bars may be set over for angular work. As the saddles are moved along the rail no effect is had on the counter-balance weight, the sheave simply moving along the chain. When the swing is unbolted, so that it may be set over to an angle, the counter-weight has no tendency to pull the swing around and endanger a workman's life.
3. When a saddle nut is opened, and a swing quickly moved along by the ratchet lever, the counter-weight has no tendency to resist the motion, or to suddenly pull the swing along the rail out of the control of the workman.

There are no overhead arrangements to interfere with, or to be interfered with by belts or cranes.

Feeds.—The feeds are operated by a friction disk, and have a range of $\frac{1}{32}$ in. to $\frac{1}{8}$ in. The feed is thoroughly reliable, and very simple in construction and operation. It may be instantly varied to any degree within its range.

At the end of the rail are a pair of gears, by means of which the speed can be increased or decreased 100 per cent. without shifting the friction-disk. The feeds are independent. The saddles or bars may be fed in the same or in opposite directions at the same time.

Cross Rail.—The rail is of box girder form, with wide bearings. It is raised or lowered by power. The saddles are made right and left, so that they may be brought close together. The right-hand saddle has quick hand traverse by rack and pinion.

In General.—These mills are the result of years of experience both in their construction and operation, and embody the most advanced practice in machine tool construction. Ample weight has been given to all the parts. All sliding-fits are made by scraping, and the workmanship throughout is of the best character.

HORIZONTAL BORING, DRILLING, AND MILLING MACHINE.

Will bore or drill holes, or mill-off any surface in a space 9 ft. or more in length, by 6 ft. in width.

The machine consists of a heavy column, 10 ft. 6 ft. high, mounted on a bed-plate of any length to suit requirements. The column is moved along the bed-plate by power, operating through worm gear and rack. The column is 31 inches wide on the face, and is fitted with a heavy saddle 40 in. square, carrying the spindle.

The saddle has a vertical traverse on the column of 6 ft., and is raised and lowered by heavy screw. It is balanced by counterweight hung in the column.

Boring

Boring and milling spindle is hammered steel, $4\frac{1}{2}$ in. in diameter; it slides in a heavy revolving sleeve, and has a traverse of 4 ft. It revolves in either direction, right or left hand, reversing by lever conveniently located, and has eight power feeds, ranging from $\frac{3}{16}$ in. to $\frac{1}{4}$ in. per revolution of spindle. It is also provided with hand feed and quick return.

The milling feeds are six in number, ranging from $\frac{1}{16}$ in. to $\frac{1}{8}$ in. per revolution of spindle. These feeds are applied only to the column and saddle, and are by power only.

Any of these feeds for the quick motion may be utilised to set a drill, boring-bar, or milling cutter to work anywhere on the surface which the machine will reach.

At one end of the bed plate is placed the driving gear, milling feed, and quick traversing mechanism for the column. The quick-power traverse of the column has a speed of 5 ft. per minute.

The driving cone has six steps for 4 in. belt, and is strongly back-gearred, giving twelve changes of speed, ranging from two to 200 revolutions per minute, and has ample power for boring up to 24 in. diameter.

A platen is placed in front of the column, convenient to the spindle, for the operator to stand on, and all the movements of the spindle, saddle, and column may be started, stopped, or reversed by levers conveniently arranged on, and travelling with the saddle, within easy reach of the operator while he watches the work.

No. 3. SCREW MACHINE.

Capacity, $\frac{5}{8}$ in. to $1\frac{1}{2}$ in. screws.

This is a very heavy and powerful machine, embracing the latest patented improvements.

Dies will work up to 2 in. With the leaders, threads can be cut up to the full size of stock the machine will take.

The spindle is $4\frac{1}{4}$ in. in diameter, with a front bearing $6\frac{1}{4}$ in. long, and has a hole $2\frac{1}{8}$ in. diameter through it.

The cone ranges from 14 in. to 7 in. diameter, and has four steps for a $3\frac{1}{2}$ -in. belt.

Both the cone and face-gear are loose on the spindle, and are driven, the one by a friction, the other by a positive clutch, connected to a sliding hub, splined to the spindle. The friction obviates the shock incident to starting the spindle at a high velocity, as the motion is gradual, while the positive clutch on the face gear insures steadiness of motion under heavy strain.

The manner of mounting the turret and the arrangement of feeds, which have proved so satisfactory in the No 2 machine, are still retained, while in addition the turret is made to revolve and lock automatically. The point at which the revolution of turret takes place is adjustable, and is indicated by a gauge at the front of the turret slides.

The carriage has a power feed operated from the back feed shaft, independent of the motion obtained by the leaders.

A pump is supplied with each machine, which pumps the oil or water from a tank in the bed of the machine, and is provided with a safety-valve whereby all excesses of oil are returned to the tank, and allows the pump to continue working when the drip cocks at the tools are closed.

SIXTY-THREE-INCH HEAVY FORGE LATHE.

A machine of great weight, strength, and power.

Designed for use in forges for rough turning or finishing heavy shafts, rolls, cranks, &c., also for machine shop use where extra duty is required, as in turning or boring large steel castings.

Swings 63 in. over the ways and $47\frac{1}{2}$ in. over the carriage.

Has a bed 30 ft. long, and will turn 20 ft. between centres.

Cone is mounted on an independent steel spindle, with a steel pinion gearing into an internal gear on back of face-plate. It has five steps for a belt $4\frac{1}{2}$ in. wide, and has two sets of back gears, giving fifteen changes of speed.

The main spindle is 10 in. in diameter at the front end, with a bearing 15 in. long. The face plate is driven on and bolted fast to it.

All gearing is accurately cut from the solid.

Carriage is 68 in. long, and is of a very rigid form. It is accurately fitted to the bed its entire length, and gibbed both front and back.

The rest has compound movement, with longitudinal cross and angular power feed.

The feed mechanism is made in the strongest manner, and very rigidly supported in the apron, to enable it to withstand severe duty. The feed reversal is by strong tumbler gearing in the head, so that no change in the stud gear is needed in cutting either right or left hand threads.

Lead screw is placed well up under the screw of the bed and the nut so arranged as to bring the strain on the carriage as direct as possible.

The tail stock is held down by four bolts, and is also provided with a strong pawl engaging with a rack cast in the bed. Thus a positive resistance is offered, preventing all danger of slipping. The pawl is raised or lowered by a hand knob on the side of the tail stock.

The upper slide of the tail stock is also held independently by four bolts.

This arrangement allows the tail stock to be set over for taper work without unclamping from the bed.

The lathe is provided with a very heavy, steady, and follower rests. The steady rest has its opening of extra size to admit large shafts.

APPENDIX AA.

List of Awards to N. S. Wales Exhibitors.

NOTE.—The Diplomas which will be issued to Exhibitors will contain in a summarised form the Reports of the Juror on Exhibits, giving the reasons why the awards were made. Each Exhibitor will also receive uniform Bronze Medal.

REPORT

OF THE

PRESIDENT OF THE NEW SOUTH WALES COMMISSION,

World's Columbian Exposition, Chicago, 1893.

To His Excellency the Right Honorable SIR ROBERT WILLIAM DUFF,
a Member of Her Majesty's Most Honorable Privy Council,
Knight Grand Cross of the Most Distinguished Order of Saint
Michael and Saint George, Governor and Commander-in-Chief of
the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

The Commissioners appointed under the Great Seal of the Colony to devise and carry out the details necessary for the collection and transmission to the World's Columbian Exposition, Chicago, of all articles intended for display thereat, have the honor to submit to Your Excellency this, their report.

Appointment of Commission.

The first members of your Commission were gazetted on 29th September, 1891, and the names of the members of the Commission originally appointed, together with those of gentlemen who, from time to time, were added to the original number, will be found in Appendix A, along with the text of the Commission in accordance with which these gentlemen were gazetted, which Commission defines the duties with the carrying out of which they were entrusted under the Seal of the Colony.

First Meeting of Commission.—Appointment of Administrative Committee.

The first meeting of the Commission was held at the Colonial Secretary's Office on the 7th October, 1891, William McMillan, Esq., M.P., President, in the chair, there being in attendance no less than forty-four members out of a total of fifty-one appointed. An Administrative Committee was called into existence, on the motion of Sir Joseph Abbott, Vice-President, seconded by W. P. Manning, Esq. (now Sir W. Patrick Manning, M.P.), Mayor of Sydney, Vice-President, whose duties, as stated in the resolution, were to nominate the staff of the Commission, and generally to carry out all preliminary arrangements, and, from time to time, to report for approval to the Commission. A further resolution empowered the same Committee to consider the various applications for the position of Secretary, and select therefrom the names of four persons for submission to the Commission for its advice.

Appointment of Secretary.

The Administrative Committee held its first meeting on the 12th October, 1891, and resolved to recommend to the Commission the appointment of Mr. Alexander Cumming as Secretary. Recommendations were also made in connection with the positions of Clerk to the Secretary, and Messenger to the Commission. At a meeting of the Commissioners, held on the 16th October, the recommendations of the Administrative Committee were approved.

Preliminary arrangements.

At the second meeting of the Commission, held on the 20th October, 1891, preliminary arrangements were made for obtaining suitable office accommodation, and the Secretary was instructed to prepare drafts of an official programme and form of application for space or entry form. A number of matters of detail, having regard to the relations of the Commission with exhibitors, were decided upon at this meeting, to be embodied by the Secretary in the documents referred to, and a sub-committee was appointed to subdivide the very elaborate classification of the Chicago Exhibition authorities into departments to be placed under the control of various committees. A Finance Sub-committee of the Administrative Committee was also appointed, and the meeting of Commission instructed the Secretary to obtain information as to the cost of previous Commissions for Exhibitions at which New South Wales had been represented, in order to guide them in forming an estimate of the probable total expenditure in connection with the Chicago representation.

Executive Commissioner's Staff.

At a meeting of the Administrative Committee, held on the 26th October, 1891, the President drew attention to letters which he had received from the Colonial Secretary (the Honorable Sir Henry Parkes, G.C.M.G.), intimating the following appointments had been made on the staff of the Executive Commissioner:—Mr. Oscar Meyer, as Organising Secretary, and Mr. William Wilkins, as Literary Secretary; while he had also been officially informed that James Martin, Esquire, M.P., had been appointed as a Special Commissioner to report upon Manufactures. It seemed to him that this Commission had no responsibility in connection with the appointments made on the Executive Commissioner's staff, and that their notification should be regarded simply as an act of courtesy to this Commission. Dr. Renwick, Executive Commissioner, in the course of the discussion which ensued, said that his duties in that position were defined by a Special Commission under the Great Seal of the Colony, and the powers given to him therein were independent of the Commission itself, although he recognised the fact that an Executive Commissioner should act in perfect harmony with the Commission; and with respect to the two appointments on his staff which had been mentioned to-day, he might state that he had been consulted on the subject. The letters were read and received.

Classification.—Sub-Committees.

James Martin, Esq., M.P., brought up a report from sub-committee as to the arrangement of the original classification of the Chicago Exhibition authorities into divisions before issue, for organising the work of local committees, and this report was duly adopted. It was further agreed to recommend to the Commission the appointment of a number of ladies to act as a Sub-Committee of Department M, to deal specially with group 168, Woman's Work. A resolution was also passed, deciding that members of the Commission should elect to serve upon no more than three of its committees, the President and Vice-Presidents, however, to be *ex-officio* members of all committees.

Relations between Exhibitors and Executive Commissioner.

At a meeting of the Administrative Committee, held on the 2nd November, 1891, it was resolved, after discussion, that, subject in all cases to the approval of the Executive Commissioner, and under his control, an exhibitor of this Colony or his accredited agent may take charge of the arrangement and display of all his goods in the New South Wales Court at Chicago, and that any other special arrangement in connection with exhibits while at the Exhibition be subject to the approval and decision of the Executive Commissioner.

What

What the representation should be.—Relative duties of the Commission and Executive Commissioner.

At the next ensuing meeting of Commissioners, held on the 2nd November, Dr. Renwick, Executive Commissioner, addressed the members, chiefly on the subject of the important duties with which he had been entrusted by the Government of the Colony. Special reference was made by the Executive Commissioner to the principal sections in which it was desirable to have a very complete representation, and in order to ensure this result the Commissioners depended upon the efforts of the sub-committees in charge of the various Departments of Classification. Our mineral industry and our wool production would require to be prominently presented, and wherever practicable our raw produce should be displayed at Chicago in the form of bulky trophies. At this meeting an opinion was expressed that it would be well to have a clear definition of the respective duties of the local Commission and the Executive Commissioner, and copies of the latter's appointment under the seal of the Colony were submitted to the meeting. The President, speaking on this subject, said that the position was very clear, and that the Executive Commissioner, who was also a member of the local Commission, desired to work harmoniously with the general body of Commissioners. The moment the exhibits arrived at Chicago they were under the control of the Executive Commissioner.

Appointments under the Executive Commissioner, &c.

The President notified the receipt from the Principal Under Secretary of an official communication respecting the appointment of Sir Roderick W. Cameron as a Commissioner for New South Wales in America. Official letters of appointment of Mr. James Martin, M.P., Mr. Oscar Meyer, and Mr. W. Wilkins were submitted to the meeting; and an official communication was also submitted, notifying the appointment of Dr. Renwick as Executive Commissioner.

Probable cost of Representation.

The Honorable John Davies asked what would be the probable cost of the representation of the Colony? The President said he thought about £50,000, but that it was his intention to have an interview with the Premier without delay on the subject of an estimate of probable expenditure, the result of which he would report to the Commission.

Composition of Committees.

Dr. Renwick was appointed an *ex-officio* member of all committees, and it was decided to send out a circular to all the members of the Commission who had not yet replied, asking them to decide without delay as to the committees upon which they desired to serve.

Cost of Representation.

At a meeting of the Administrative Committee, held on the 10th November, 1891, drafts of official programme and form of application for space were submitted and approved. The President reported that he had had a preliminary conversation with the Honorable the Chief Secretary and Premier, Sir Henry Parkes, G.C.M.G., M.P., as to the estimate of expenditure for the proper representation of the Colony, and he stated that the Premier was inclined to leave this matter in the hands of the Commissioners themselves, they acting as economically as possible under their responsibility as Commissioners appointed for a specific purpose.

Resignation of Administrative and Finance Committees.

After discussion it was resolved that the President be requested to report to the Commission the resignation of the Administrative Committee for the conduct of preliminary business, and of the Finance Sub-committee, in terms which had been indicated in an address of the President made to the meeting at an earlier stage.

Combined representation of the Colonies.

Letters from the Premiers of South Australia and Tasmania to the Premier of New South Wales, having reference to the combined representation of the Australian Colonies at Chicago, were read to meeting of Commissioners held on the 10th November, 1891, and the opinion of the Commission was asked as to how this could be arranged. The President was of opinion that co-operation between the Colonies, while likely to be of little value in connection with the local work of collecting exhibits of each Colony, would prove a most excellent thing in America, where it was desirable that the Executive Commissioners representing the various Australian Colonies should work together for the general interest. As suggested by the new Premier, the Honorable George Dibbs (now Sir George Dibbs, K.C.M.G., M.P.), co-operation of this kind in Chicago would probably result in largely minimising the combined expenditure. The President was requested to communicate with the Chief Secretary in accordance with the views he had enunciated to the members.

Appointment of Committees.

Committees of Classification were then appointed, with power to add to their number. The resignation of the Administrative and Finance Committees was reported, and new Administrative and Finance Committees were elected in their place. It was agreed that the duties of members of the Administrative Committee should comprise all matters of finance, appointments, and general detail, to be reported upon to the Commission as a body. The names of the members composing the various Committees will be found in Appendix B.

Cancellation of appointments to staff of Executive Commissioner, and definition of powers of local Commission.

Letter dated the 12th November, 1891, from the Principal Under Secretary to the President of the Commission, was read to meeting of the Commission held on the 20th November, enclosing minute of the Premier, referring to the cancellation of the appointments of Mr. Meyer and Mr. Wilkins, which appointments had been made by the late Ministry, and to the necessity for a complete reorganisation of the working of the Commission. At present there was a dual management in the fact that there was a President and a Commission to deal with work which would entail the expenditure of large sums of money, and an Executive Commissioner also, with the power of employing a staff and incurring the expenditure also of large sums of money. The Premier therefore recommended that the dual form of management should cease. The Government would hold the President of the Commission as the responsible head of the whole business, and it must be understood that the Executive Commissioner, as such, is not independent of the President of the Commission and the Commission itself, except in regard to his duties at Chicago as defined in his commission. The President, in referring to the letter above cited, said that he believed that Dr. Renwick should have full control over and the nomination of those who would be attached to his staff in Chicago—men in whom he would feel the fullest possible reliance, and who should be appointed subject to the approval of the Commission here. The Executive Commissioner said that there was no doubt that this Commission should be consulted in all matters connected with the representation of the Colony. He was of opinion that the Government would yet find it necessary to have an Organising Secretary, who was a very important officer. His whole desire as Executive Commissioner was to work harmoniously with the Commission here, to secure the best possible representation of the Colony, and the matter of appointments was comparatively a small one.

Conjoint Australian Representation.—Wool Exhibits.—Minerals.

At this same meeting there was read a letter, dated 18th November, 1891, from the Principal Under Secretary to the President of the Commission, enclosing copy of a communication made by the Premier to the Prime Ministers of the other Australian Colonies, with reference to a conjoint representation at Chicago, with separate Courts for the various Colonies. There was read Report from the Wool Committee recommending that all classes of the product should be shown in bale and fleece; that the
wools

wools from each district or division of the Colony should be shown separately, as the characteristics of the wool product of the various divisions are essentially different, and the committee was of opinion that by this mode of arrangement woolbuyers would be better able to choose whatever samples may be best suited to their special requirements ; that greater care than usual should be taken in classifying the exhibits ; that commercial samples with prices attached should be part of the wool display ; and that it is not so necessary to take steps to secure exhibits of the present season's clip as it is to so arrange that there shall be a full representation of that of next year, which would be in ample time for despatch to the New South Wales Court. The committee finally requested the Executive Commissioner to write to the Exhibition authorities for full information with respect to wool exhibits—the form in which they are to be shown, and the detailed classification, if any, which has been adopted for wool. A report was also read from a preliminary meeting of the Mining Committee, which stated that the Executive Commissioner had undertaken to see the Minister for Mines as to the extent of the Departmental representation, and the committee expressed it as their opinion that it was extremely desirable that apart from Departmental exhibits an effort should be made to secure from the chief mining districts samples of various ores in bulk as private exhibits, portions of which might be submitted to experts from Germany, Great Britain, &c., with a view to obtaining from their after analyses suggestions as to their more efficient and economical treatment. Preliminary meetings of Committees VIII on Machinery and Implements, and IX on Manufactures also reported dealing with proposals which they had discussed with respect to obtaining definite information as to persons throughout the Colony most likely to contribute suitable exhibits.

Cost of Representation estimated at £30,000.

At a special meeting of the Administrative Committee, held on the 30th November, 1891, there was taken into consideration the question of the sum which will probably be required to meet the expenses of the representation of the Colony at Chicago, with a view to informing the Honorable the Chief Secretary, and the following resolution was agreed to:—"That the committee report to the Commission that they are of opinion that a reply may be sent to the Chief Secretary's letter of the 25th November, asking for an approximate estimate of the probable cost of the representation of the Colony at Chicago, in the following terms:—"That the Committee is impressed with the necessity for economy in connection with the Exposition, and is of opinion that an adequate representation should be secured for a sum not exceeding £30,000'" ; and at a special meeting of the Commission, held on the 4th December, the report of the Administrative Committee was brought up, and the resolution adopted by the Commissioners with the verbal alteration that the "Commission" instead of the "Committee is impressed, &c."

Woman's Work Committee.—Scope of Sectional Committees.—Wool Exhibits.

At the same meeting of the Commission, held on the 4th December, a committee of ladies was appointed to inquire into the question of exhibits of woman's industry, and to report to the Commission the result of their deliberations, and to also state if they could, what would be the probable cost thereof, the Executive officers of the Commission to advise with the committee. The names of the ladies referred to will be found in Appendix C, with the addition thereto of a report from Lady Windeyer, as President of Committee XII, giving a statement of the work done by that Committee, which reported soon after the meeting referred to that it was thought possible that a suitable representation in this section could be obtained for a sum not exceeding £500. It was resolved to call a meeting of the chairmen of departments to consider the scope of their several sections, and also the work that required to be done by canvassers, with a view to reporting to the Commission ; and it was agreed that a selection of the names of four persons to act as canvassers be left with the Administrative Committee. On the report of the Wool Committee it was agreed that the Woolbrokers' Association be requested to meet, and after discussion to select such brands as they may deem most suitable to represent different districts of the Colony, and that it is desirable, as far as practicable, for manufacturing purposes, to give the quantity of each class of wool available for sale. Committees III, on Viticulture, Wines, &c. ; IV, on Horticulture ; VI, on Fish and Fisheries ;

Fisheries; VII, on Mines, Mining, and Metallurgy; VIII, on Machinery and Implements; IX, on Manufactures; X, on Fine Arts; and XI, on Liberal Arts; also reported detailing the progress of work entered into by members of these committees, in order to secure suitable representation.

Appointment of Canvassers.—Forest Products and Cereals.—Wool.—Minerals.

At a meeting of the Administrative Committee, held on the 16th December, 1891, four canvassers were appointed—two for the city and suburbs, and two for the country—and these appointments were reported to the Commission at meeting held two days later. A report was received from Committee I on Agriculture and Forest Products, stating the steps that had been taken in order to secure a suitable representation of the Colony in forest products, and that a letter had been received from Mr. J. Ednie Brown, F.L.S., Director-General of Forests, promising the fullest possible assistance to the committee in this important matter. The committee had decided to have the cereal produce of the Colony well represented, especially in the matter of maize in cob for trophies. The Wool Committee reported that to the Woolbrokers' Association had been left the work of selecting the brands of wool from the various districts of the Colony which it was most desirable should be shown in competition at Chicago. Committee VII on Mining and Metallurgy reported recommending that with respect to refractory ores the exhibits should be in bulk, not only to impress visitors by their size, but also to leave sufficient for samples to be at the disposal of the Executive Commissioner for treatment by experts. It may be mentioned that about this period in the history of the work of the Commission, committees began to report to the general Commission, in accordance with its resolutions, the various classes in the official schedule of the Exhibition authorities to which they had decided to confine their efforts, there being a number of classes and groups which might practically be omitted from the classification of the several departments owing to the fact that no suitable exhibits of colonial production were likely to be forthcoming therein.

Regulations for Canvassers.—Timbers.—General expenses in connection with all departments of classification.—Opinion expressed by Chamber of Commerce.—Fisheries exhibits and pamphlets.—Project to cross from Sydney to San Francisco in small boat.—Photographic illustrations of public buildings.—Proposal to show aborigines at Chicago.

A series of regulations for the guidance of canvassers was adopted at a meeting of the Administrative Committee held on the 23rd December, 1891. A report was adopted from Committee I on Agriculture, in which that committee recommended that timbers in the shape of railway sleepers, wooden blocks, planks of cedar, tallow-wood, and other of our more valuable timbers should be shown, as also furniture made from colonial woods suitable for the purpose, but it was understood that as this matter was more properly in the hands of the Committee on Manufactures the Agricultural Committee would only seek to render all assistance in its power in this regard. The committee, at the instance of the President and the Executive Commissioner, entered into consideration of what would probably be the general expenses in connection with the various departments of classification, and prepared the following rough estimate to be submitted to the general Commission:—Agriculture and forestry, £2,000; wool, £500; viticulture, £500; horticulture, £100; live stock, (sum not stated); fish and fisheries, £500; mining and metallurgy, £2,000; machinery and implements, £250; manufactures, £1,000; liberal arts, &c., £2,000; fine arts, £500; woman's work, £500; total, £15,850. A general standing advertisement for insertion in the daily and weekly papers was adopted by the Administrative Committee at meeting held on the 30th January, 1892, and the first series of reports from canvassers in town and country was submitted for the information of the committee. A letter from Mr. H. C. Mitchell, Secretary of the Sydney Chamber of Commerce, was read to meeting of Commission held on the 15th January, 1892. It enclosed, by direction of the committee of the Chamber, the following resolution: "That it is the opinion of this Chamber that the exhibits

exhibits from this Colony should be confined to natural products, and such other materials as would be likely to produce practical results." After discussion the letter was remitted to the Administrative and Finance Committee for consideration and report. A report from the Administrative Committee, furnishing an estimate of the probable expenditure in connection with all departments of classification, was received and adopted. The Fish and Fisheries Committee (No. VI) reported as to the action they had taken in order to secure suitable exhibits illustrating the fish supply of the Colony, and also the arrangements they had made as to pamphlets illustrating the subject. Committee VIII on Machinery and Implements reported that they had taken into consideration a proposal of Messrs. Von Rantzow and Engelhardt to obtain the assistance of the Commission in the construction of a lifeboat in which they proposed to cross from Sydney to San Francisco, and that they had decided, that the matter was one that did not come within the scope of the Commission's operations. Committee X on Fine Arts reported that they had taken over from Committee XI on Liberal Arts, at its request, all photographic illustrations of public buildings, &c. Committee XI on Liberal Arts reported as to proposals of Mr. H. Stockdale for the display of fifty or sixty natives of the Northern Territory of South Australia at the Chicago Exhibition, and also for assistance in enabling him (Mr. Stockdale) to procure photographic or other reproductions of cave drawings by aborigines in the Northern Territory, and the Commission unanimously decided that Mr. Stockdale be informed that it declines his proposed representation of Australian aborigines in America.

Appointment of Special Canvasser for Ethnology.—Storage for Timbers.—Gun-stocks from Colonial timbers.—Ethnological Collections.

Meeting of the Administrative Committee, held on the 27th January, approved of the appointment of a special canvasser in the ethnological section, and of the compilation of a pamphlet on the manners, customs, religious belief, &c., of the Australian aborigines. Committee I on Agriculture reported, recommending that storage be obtained for the reception and inspection of timber exhibits, and that they had decided to obtain gun-stocks prepared from suitable timbers, while the Director-General of Forests had intimated to the committee that there were in course of preparation designs for suites of furniture to illustrate the suitable character of some of our principal woods for the purposes of the cabinetmaker. Committee XI on Liberal Arts related the steps they had taken to date to obtain suitable ethnological collections of Australian weapons, as well as similar collections from the South Sea Islands, and mention was made of the assistance which had been promised by the Trustees of the Australian Museum in the natural history section.

Departure of the President for England.

The President of the Commission reported to meeting of Administrative Committee, held on the 3rd February, 1892, that he proposed in about a week to leave for England. He had thought it right, before leaving, to report to the Administrative Committee his intention. He was not certain whether, in the circumstances of his absence from the Colony for a period of at least six months, he ought to retain the Presidency. The members of the Administrative Committee expressed a unanimous hope that the President would retain his position now that the preliminary arrangements were well settled, and it was agreed to recommend to the Commission that during the absence of the President the power of appointment and dismissal of canvassing agents and other officers be left to the Administrative Committee. The President also reported his intended departure to the Commission on the 5th February, and expressed it as his feeling that in view of his necessary absence from the Colony he ought to place his resignation in the hands of the Honorable the Colonial Secretary; but the Honorable R. Burdett-Smith moved the following resolution, which was unanimously agreed to: "That the President be desired to retain his position as head of this Commission, and that whatever leave of absence he may require will be willingly granted by the Commission," and in speaking to the resolution several members, including the

Executive

Executive Commissioner, joined in the hope that the President might benefit by the change he was about to take. The Administrative Committee was, by resolution, authorised to deal with appointments and dismissals in the absence of the President. The Executive Commissioner, in reply to a question on the subject, said that no definite decision had yet been arrived at by the other colonies as to joining in a united Australian representation. The meeting adjourned after passing the following resolution: "That, during the absence of the President, the Secretary confer with the Executive Commissioner on all matters of importance outside of meetings of the Administrative Committee and of Commission."

Failure of negotiations for combined Australasian representation.—

Typical plants of the Colony.—Suggested exhibit of Live Stock.—

Exhibits of Tinned Fish.—Arrangements with Mines Department for display of Mineral exhibits.—Photographs of Public and Commercial Buildings.

The Executive Commissioner reported to meeting of Commission, held on the 12th February, 1892, that the negotiations that had been entered into by the Honorable the Chief Secretary, at the suggestion of the Premiers of South Australia and Tasmania, for a combined Australasian Court, with himself as Executive Commissioner, had fallen through. In his report Dr. Renwick said he regretted that unfortunately thus had been lost an excellent opportunity of "presenting to the world a practical proof of the value and importance of the Federal idea as it is regarded in Australia, together with the opportunity afforded for obtaining a united representation of Australasia on an economical basis in connection with the united efforts of all the Colonies to display their resources as a whole." He might state that the Honorable the Chief Secretary had been good enough to give every assistance in connection with this important matter, but his suggestions and those of the two colonies named had not been adopted. Committee IV on Horticulture reported that in its opinion it might be possible with due care in the preliminary arrangements, which would include the developing of the plants in conservatories in some of the public gardens in Chicago some months before the opening of the Exhibition, to send a number of the gigantic ferns of the Colony for the decoration of the Court; and a further report of a subsequent meeting was submitted, suggesting that inquiries might be made in Chicago from the authorities there, whether, if the plants were forwarded, due care would be taken to protect them against excessive cold, and to see to their proper development. The Commission adopted report from the Live Stock Committee, recommending that if suitable exhibits were offered, principally of sheep, they might be sent to the Exhibition, together with typical live Australian animals, and this report further recommended that, subject to the approval of the Minister for Mines agreeing to his services being placed at the disposal of the Commission for supervision of this section, Mr. Alexander Bruce, Chief Inspector of Stock for New South Wales, be appointed to take charge of the exhibits. Committee VI on Fish and Fisheries reported that it had been decided to ask the Sydney Meat Preserving Company if they will be so good as to undertake to assist the Commission by preparing tinned fish to be shown in the New South Wales Court, and, in addition, to be used in connection with such luncheons as may be given by the Executive Commissioner. Committee VII on Mining and Metallurgy reported, and the report was adopted, that the Chairman had had an interview with the Honorable T. M. Slattery, Minister for Mines, as well as the Under Secretary of the Mines Department, with reference to the assistance which the Department would be in a position to afford to the Commission, when the following matters were agreed to, subject to the approval of the Commission, on the report of the Chairman:—1. All exhibits to be shown in the name of the Commission. 2. The Mines Department to lend the Commission its present collection of geological mineral specimens, and such to be exhibited as lent to the Commission by the Minister for Mines or Department of Mines. 3. An officer of the Mines Department to accompany the exhibits, display them, and to be responsible for their care. 4. The Commission to defray all costs in connection with the collection, despatch, and display of exhibits. 5. The officer allotted by the Minister for Mines to collect and prepare exhibits, to confer generally with the committee, and report progress

progress from time to time at approved intervals. 6. Bulk samples to be available for experimental treatment, and reports to be made upon them by experts in Chicago. Committee X on Fine Arts reported that they had taken steps to obtain, with the assistance of the Government Printer, a large number of well-selected photographic illustrations of the principal public and commercial buildings, with selections from leading churches.

The Question of a Federal Court.—Co-operation of Leading Wine-growers.—Publications on the Colony.—Busts of distinguished Colonists.

The Executive Commissioner, at meeting of the Commission held on the 26th February, 1892, drew attention to an article in the "Melbourne Age," which had asserted that the Colony had been opposed to a Federal Australian Court, whereas the contrary had been the case; and he had deemed it his duty to send a reply to that paper, and to communicate the nature of his reply to the Premier of this Colony, and of all the other Australian Colonies, with the exception of New Zealand and Western Australia. The report presented by Committee III on Viticulture, Wines, &c., showed that all the principal wine-growers throughout the Colony had promised to become exhibitors. A communication from the Under Secretary for Mines, reported upon by Committee VII on Mines, Mining, and Metallurgy stated that Mr. Carne, Curator and Secretary of the Mining Museum, would be detailed to visit the principal mines to collect suitable specimens, including bulk samples of refractory ores. The Commission adopted, on the report of Committee XI on Liberal Arts, a draft list of the publications upon the Colony, which it was proposed should be printed and published in Sydney, and issued from the New South Wales Courts. The same Committee furnished a list of distinguished Colonists in various spheres of usefulness, whose busts it was proposed should be prepared in plaster, and shown at Chicago, to illustrate a special group in the classification of the World's Fair purposely inserted to allow of their display; but after discussion the proposal of this Committee was declared to be lost.

Show-cases.—Shipment of Exhibits to Chicago.

It was announced to meeting of the Administrative Committee held on the 9th of March, 1892, by the Executive Commissioner, who was in the chair, that, in order to avoid expenses of freight, &c., he was obtaining from the Mines Department, Technological Museum, Australian Museum, Technical College, and other institutions, information as to the number of show-cases (Sage's counter-cases), which will be required for the display of case specimens they are about to forward; and he would take the necessary steps, if inquiries which he was about to make proved favourable, to have this work done in America, if the cases required could not be obtained on hire. A resolution was passed affirming the expediency of shipping to Chicago the bulk exhibits not later than September, in order to obtain moderate rates of freight.

Maize in Cob for Trophy.—Suites of Furniture.—Representation of Fishing Industry.—Co-operation of the Education Department.

The Agricultural Committee (No. 1) obtained the approval of Commission meeting held on the 11th of March, 1892, for the purchase of maize in cob for trophies in the New South Wales Court; and a sub-committee to supervise the matter of designs for and construction of suites of furniture, to be made from Colonial timbers, was appointed on the recommendation of Committee IX on Manufactures. The Fisheries Committee gave information as to their proposals for securing a suitable representation of the fishing industry. The Liberal Arts Committee (No. XI) announced the co-operation there was being obtained from the Department of Public Instruction, together with the Technical College and the Technological Museum, and Trustees of the Australian Museum.

Collection of Natural History Specimens.—Tender for Cartage.

The Administrative and Finance Committee, on 16th March, 1892, adopted a joint recommendation from Committee VI on Fish and Fisheries and Committee XI

on Liberal Arts for an expenditure of, say, £500, for a full collection of natural history specimens including fishes and also ethnology from the Australian Museum Trustees. The tender of Mr. J. McMahon & Co. for cartage was accepted as being the lowest of all the tenders submitted in answer to advertisement.

**Exhibit of Cereals.—Popular Pamphlet on the Fisheries of the Colony.—
Samples of Marble, and Photographs of Cave Scenery.**

At meeting of Commission held on the 20th March, 1892, Committee I on Agriculture reported that Mr. Anderson, Director of Agriculture, had reported to them as to the steps that would be taken to obtain a collection of maize in cob for trophies in the New South Wales Court, and also well-selected samples of other agricultural products. Committee VI on Fish and Fisheries reported the steps they had taken for the preparation of a popular pamphlet upon the fish and fisheries of New South Wales. The Mining Committee (No. VII) reported as to the action they had taken to secure samples of Colonial marble of suitable quality and photographic illustrations of the various limestone caves throughout the Colony.

**The late George Cass, Esq., M.P.—Appointment of United States
Consul to all Committees.—Typical Plants.—Photographs of
Aboriginal Natives.—Exhibit illustrative of work of Fisheries
Commission.—Technical Education.**

At meeting of the Commissioners, on the 8th April, 1892, the Executive Commissioner expressed the sympathy of the Commission with the widow of the late George Cass, Esquire, M.P., a member of the Commission. In order to facilitate his communication of important letters from the United States, to the various committees of the Commission, Alexander Cameron, Esquire, Acting United States Consul, was appointed *ex officio* a member of all committees. Committee IV on Horticulture made known the progress of the steps they had taken to secure a suitable representation of the typical plants of the Colony. The Liberal Arts Committee stated that they had taken action to secure the preparation by a photographer in Sydney of well-chosen enlarged photographs of the aboriginal natives of the Clarence and Richmond Rivers districts. The Commission approved of recommendation from the Fish and Fisheries Committee that a sum not exceeding £250 be at their disposal for a collective exhibit from the Fisheries Commission, to be completely illustrative of the work of that department; and approval was also given to a recommendation from Committee XI on Liberal Arts that a sum not exceeding £500 be placed to the credit of the Committee for the full representation of the technical educational system of the Colony, including the work of the principal classes of the Technical College, and also exhibits from the Technological Museum.

**Circular to probable Wool Exhibitors.—Suggested appointment of
Mr. Bruce to take charge of Wool Exhibits at Chicago.—Prepara-
tion of Preserved Fish.—Exhibit Illustrative of Ethnology of
South Sea Islands.—Acceptance of Tenders for Furniture.**

The Wool Committee (II) reported to the Commission of the 26th April, 1892, that they had arranged for the issue of a circular to embody the classification for exhibits. It was also resolved, as apart from competitive fleeces, to accept exhibits of bale wool, scoured, washed, and greasy, this wool not to be too hard pressed; and it was further stated that the committee had resolved to recommend to the Minister for Mines that Alexander Bruce, Esquire, Chief Inspector of Stock, be allowed leave of absence from his ordinary duties during the currency of the Exhibition, in order that his services may be at the disposal of the Executive Commissioner at Chicago in connection with the wool exhibits to be sent from the Colony, as well as live stock, should it be determined to send contributions in the latter department. The Fish and Fisheries Committee intimated that they had taken steps to have a large quantity of our best Colonial edible fish preserved in tins for despatch to Chicago. It was agreed to place a sum not exceeding £300 at the disposal of the Liberal Arts Committee, in order to

ensure

ensure an efficient display of the ethnology of the South Sea Islands. Committee IX on Manufactures reported the acceptance of tenders for bed-room, dining-room, and library suites of furniture, to be constructed of Colonial timbers, in accordance with designs specially prepared, which were to illustrate Australian flora and vegetation.

Suspense Account for Purchase of Metals.

The Executive Commissioner, at meeting of the Commission held on the 6th May, 1892, reported as to the steps he had taken for obtaining sum of £4,500 as a Suspense Account for the purchase of silver in bar, and tin and copper in ingot, as under the circumstances it was thought that this sum should be obtained in this particular manner rather than made a charge against the funds placed at the disposal of the Commissioners for general purposes, because the minerals so purchased would be permanent actual value for the amount of purchase money, and that little or no loss, and probably gain, would be the result of sale after exhibition. It was subsequently decided, however, to purchase tin and copper in ingot only, and not to go to the expense of purchasing silver, so that the sum obtained from the Treasury for the purchase of metals was reduced to £826 2s.

Exhibits of Wines.

J. F. Burns, Esquire, the Chairman of the Wine Committee, reported to meeting of Commission held on the 20th May, 1892, that the principal wine-growers throughout the leading districts of the Colony in which viticulture was pursued, had decided to send samples of their wines for exhibition, and that steps had been taken to communicate with the very few of the leading vigneron who had not yet intimated their intention of contributing, and that the Committee were of opinion that it was desirable that, in addition to samples of wine in bottle, the growers of the best-known brands of Colonial wines should be invited to send selected vintages in wood, which could be disposed of on their behalf from the New South Wales Court, either during the currency of the Exhibition or after its close, so as to popularise, as far as possible, the best-known and most-prized of New South Wales wines.

Photographs and Collections of Fine Art Exhibits.

The Honorable R. Burdett Smith reported from the Fine Arts Committee that it had been arranged to take steps for the full illustration of the scenery of the Blue Mountains, and of city and country life. Arrangements have been made for a competitive collection of pictures from the Art Society of New South Wales, and for the loan of a collection of works by Australian artists from the Trustees of the National Art Gallery.

Storage.

The Administrative Committee, at meeting held on the 1st June, 1892, decided to rent stores at Nicholson-street, Woolloomooloo, for the reception and packing of mineral exhibits; and subsequently Messrs. Hudson Brothers granted storage free of expense to the Commission at the Government Meat Stores, Darling Harbour.

Proposed Exhibit of Sheep.

The Honorable G. H. Cox, Chairman of the Live Stock Committee, at Commission meeting held on the 3rd June, 1892, obtained the approval of the meeting to the advance of sum not exceeding £250 to be devoted to the purpose of defraying the expense of conveying exhibits of sheep to Chicago, the estimated number being about thirty. At an after stage in the proceedings of the Commission it was, however, found impracticable to carry the intention of the Live Stock Committee into effect, and the vote of the Commission was not drawn upon.

Question of a Combined Australasian Representation.

At the same meeting the Executive Commissioner gave a summary of the correspondence with the other colonies on the subject of a joint Australian representation which had extended from the month of August, 1891, to the present date. In referring to this correspondence Dr. Renwick said: At first, South
Australia

Australia proposed that a joint representation should be carried into effect for purposes of economy, and communications were addressed to the various colonies upon this subject, asking them whether they were willing to fall in with the idea. The Government of Tasmania, on his meeting their representative while in that colony, had agreed to the proposal. Queensland at first was favourable, but afterwards intimated that it was found impossible to carry out the idea, as it was not now proposed to have a representation, and this was the tenor of the reply which had now been received from the whole of the Colonies, that they did not see their way to be represented, and it would now seem that New South Wales would be the only Colony to send exhibits to Chicago.

Dr. Renwick's Departure.

In reply to a question, Dr. Renwick said he proposed to leave for Chicago on the 27th of that month, when he would visit the continent of Europe for a little relaxation, and afterwards proceed to London. He had a good deal of business to transact in England in connection with insurances, railway freights, and other matters of the utmost importance, that could not be so well dealt with in this Colony. W. S. Dowel, Esq., M.P., and J. F. Burns, Esq., referring to the approaching departure of the Executive Commissioner, bore testimony to the great attention which he had bestowed upon the work of the Commission to date, and were of opinion that the intended visit to England and America would be to the best advantage of our representation.

Conveyance of Exhibits to America.—Appointment of J. F. Burns, Esquire, as Vice-President.—Exhibits of Cereals.—Wooden Blocks for Paving Purposes.

The meeting of Administrative and Finance Committee, held on the 15th June, 1892, decided to advertise for tenders for the conveyance of exhibits by steamer from Sydney to New York or Newport News, in Virginia, but, as will be hereafter seen, it was subsequently agreed to send the goods by the Union Steamship Company to San Francisco, and thence by rail to Chicago; and at the following meeting of the general body of Commissioners, held on the 17th June, the Executive Commissioner stated that they would be glad to hear that Mr. Burns had been appointed Vice-President by the Government, to act as executive head of the business of the Commission during absence of the President and himself from the Colony, but he thought a resolution might be passed by the Commission placing the work in the hands of that gentleman, and accordingly a resolution to that effect was unanimously carried. Committee I on Agriculture reported that it had taken steps to obtain, with the assistance of H. C. L. Anderson, Esq., Director of Agriculture, from the principal farming centres of the Colony, samples of cereals other than maize, to include wheat, rye, barley, and oats, together with rice and fodder plants; and the same committee further reported that it had agreed to recommend to the Administrative Committee that an expenditure be made upon the formation, on an elevated platform in the New South Wales Court, of a section of roadway paved with wooden blocks, to show the use of our Colonial timbers for this purpose, and, in addition, to provide for a trophy of these blocks to be exhibited in the New South Wales Court in the Agricultural Building. Committee VIII on Machinery and Implements reported, through the Honorable John Davies, C.M.G., M.L.C., that it was desirable to have prepared models of prominent public works, to include the Sutherland Dock at Cockatoo Island and the Lithgow Valley Zig-Zag, and this report was accordingly adopted.

Negotiations for Space.—Departure of the Executive Commissioner.

The Executive Commissioner reported for the information of the Commission on this subject, commencing with the promise that had been made by Colonel Campbell, delegate from the Exhibition authorities, of not less than 300,000 superficial feet of space for Australian exhibits, and he had thought that the pledges entered into by that gentleman would be implicitly carried out. On the 3rd February he, however, received from the Honorable Walker Fearn, Chief of the Department of Foreign Affairs of the Exhibition, a letter asking that we should apply for space to the British Royal Commission from whom Mr. Fearn hoped we might obtain

a good allotment. In reply he told Mr. Fearn that, as a Royal Commission, we preferred to deal directly with the Exhibition authorities as to our own space requirements, and that Great Britain, having only at her own disposal about as much space as we ourselves would require, was not in a position to treat with us on the subject. The result was that we were informed that this Colony would have the most liberal treatment possible, but that it was thought by the Exhibition authorities, and by the Royal Commission in London, that some mistake must have been made in the figures set down as representing our requirements in the matter of space. By every mail since then, from the offices of the Commission, and through the Agent-General by medium of the Colonial Secretary, the demands of this Colony for space were submitted to the Executive in Chicago, who replied that our requirements would meet with every consideration. He had lately been in a position to advise Mr. Fearn that this Colony would be the only one in Australia to be officially represented, so that there should be no difficulty in complying with our request to have sufficient space placed at our disposal. It seemed possible, however, notwithstanding the promises of every consideration, that he would have to interview the Exhibition authorities before sufficient space in the various buildings would be allotted to New South Wales, for we had now given up the contention for the concentration of the whole of our products under one roof, and so large and so important would our exhibits be in the agricultural, forestry, mines, wool, and other departments, that we would not appear to such disadvantage as originally appeared likely to be the case should the contributions of this Colony be subdivided.

At the close of the meeting Dr. Renwick referred to his approaching departure from the Colony, and said that Mr. Robert Hudson who, as a Commissioner, had taken a leading part in the work of the various committees, had agreed to go to Chicago as Superintendent. A vote of thanks at the close of the proceedings was awarded to Dr. Renwick for his most valuable, untiring, and indefatigable exertions on behalf of the representation of the Colony.

A special meeting of the Commission was called for the 28th of June, 1892, the day of Dr. Renwick's departure from Sydney. In the remarks made at this meeting the Executive Commissioner said that he was sure that our representation at Chicago would bear very great fruit in the future welfare of this country, and that it would tend to make us much better known than we were at present. It was his intention when he reached Chicago to endeavour as far as possible to impress the American mind with a proper sense of the importance of the oldest of the Australian Colonies.

The appointment of J. F. Burns, Esq., as Vice-President, was officially notified to meeting of Commission held on the 8th July, 1892, and at this same meeting that gentleman, in answer to a question from A. W. Meeks, Esq., said that the work of selecting exhibits in each section of classification would be left to the committee in charge of that section. (At a subsequent period the duty of approving of exhibits after their receipt into store, with a view to rejecting such as might prove to be unfit, was left in the hands of the chairman of each committee.)

Return of President.—Fifty thousand feet of space accepted.— Anthropometrical data.—Exhibit of Chartography by Department of Lands.

Among the correspondence submitted to the Commission at meeting held on the 22nd July, 1892, was a letter dated Paris, 3rd June, 1892, from the President of the Commission to the Secretary, stating the time at which he would probably return to the Colony, and also a letter dated 13th July, 1892, from the Principal Under Secretary with reference to the acceptance of 50,000 feet of space in the main buildings of the Exhibition. The Liberal Arts Committee reported that steps were being taken to procure a series of anthropometrical data of physical measurements of the remaining aborigines of the Colony for incorporation with work now in course of publication upon the indigenous races of New South Wales, and that a communication had been received from the Department of Lands showing that it was the intention to exhibit from the Survey Branch a very comprehensive and well-finished display of chartography.

Shipment

Shipment of Typical Plants.

The Horticultural Committee reported to meeting of Commission held on the 12th August, 1892, that they had shipped by the "Monowai," which sailed on Monday, 8th August, the following selected plants, typical of the peculiar vegetation of Australia:—Twelve specimens of *Macrozamia spiralis*; four specimens of *Macrozamia Denisonii*; twelve specimens of *Asplenium nidus*, or "bird's nest" fern; eight specimens of *Platynerium alcicornis*, or small "elk's horn" fern; thirty-one specimens of *Dicksonia antarctica*; six specimens of *Alsophila Cooperii*; two specimens of *Alsophila Australia*; two specimens of *Todea barbara*; and specimens of the *Dendrobium speciosum*. These plants were sent in the care of Mr. Bowles, of the Botanic Gardens, who, after delivering the plants in San Francisco, and seeing them aboard the freight cars, was to return forthwith to Sydney.

Appointments to Staff of Executive Commissioner.—Exercise of economy.

The matter of appointments on the staff of the Executive Commissioner in Chicago came under the notice of this meeting of Commission, and a number of questions were put upon the subject, and J. F. Burns, Esq., Vice-President, from the chair, said that the only appointments that had so far been made were those of Dr. Renwick, Mr. Hudson as General Superintendent, Dr. Renwick's private secretary (Mr. E. J. Welch, F.G.S.), and a gentleman whom the Executive Commissioner had engaged in Melbourne—Mr. Thomas Pugh—to act as Assistant General Superintendent of the Court. It was certainly the case that Dr. Renwick had left a list of gentlemen whom he considered were well adapted to perform certain work in connection with the Courts apportioned to this Colony in Chicago, and whom he would like to have on his staff there, because he knew them and had confidence in their capacity, but this list would have to go before the Administrative Committee for its consideration. It was, however, premature to deal with this matter, as there was no occasion to send these gentlemen away until the exhibits were in readiness for transmission to their destination. Every effort, in accordance with the promise made by the Commission to the Honorable the Chief Secretary, had been made to keep down expenditure, and he assured the Commission that there had been no extravagance whatever in the working so far; in fact great economy had been practised throughout.

Tobacco in leaf.—Typical Bark hut.—Pictures of edible Fishes.—Return of expenditure.

Committee I on Agriculture reported to meeting of Commission held on the 26th August, 1892, that steps had been taken with a view to obtaining suitable exhibits of tobacco in leaf. The same Committee reported as to the construction of a bark hut to illustrate the dwellings of new settlers in the more sparsely-peopled districts of the Colony. Committee VI on Fish and Fisheries informed the Commission that the members had taken steps to have pictorial representations prepared of some of the principal edible fishes, and also specimens of the seals generally to be found on the coast of New South Wales, especially about Seal Rocks. The chairman submitted a return showing the amount expended in each department of classification, the liabilities incurred, and the probable cost of the Commission in New South Wales.

Adjustment of accounts.—Payment of Railway charges.—Reduced Passenger fares to Chicago.

The meeting of Administrative and Finance Committee, held on the 31st August, 1892, decided that they would only keep the accounts of the local Commission, adjusting with the Audit Department all advances made for its purposes in Sydney, leaving it to the Executive Commissioner to adjust all advances made to him for the purposes of the representation in Chicago. The Secretary reported to the meeting that the Chief Secretary had decided that the Commission should pay from month to month accounts preferred by the Commissioners for Railways for carriage of goods to Sydney by rail, and this course was approved. (The arrangements now made by the Commissioners for

Railways

Railways were that half ordinary freights should be paid on all exhibits by rail to Sydney, with free returns of all goods sent back to this Colony.) The Secretary was authorised to inquire from the various steamship companies in Sydney whether any steps were being taken to reduce ordinary rates for passengers to Chicago, as the Commissioners, although frequently asked for information on this matter, had no knowledge of any concessions having been made.

Exhibitors to be interviewed by Mr. Hudson.—Freights and space.— Appointment of Storekeeper.

At subsequent meeting of the same committee, held on the 14th September, 1892, Robert Hudson, Esq., designated as General Superintendent in Chicago, was requested to interview parties who had promised exhibits, and to press for their being forwarded without delay. W. A. Hutchinson, Esq., J.P., a member of the Commission, who had just returned from Chicago, attended the meeting, and gave information respecting freights between this Colony and Chicago. He had been able to arrange for space for New South Wales in the various buildings of the Exhibition, the allotment in each instance being in a similar position in each building, and contiguous to Great Britain and Canada. The committee took into consideration the list of applicants for the position of storekeeper and receiver of exhibits, but a definite appointment was deferred until the goods came in more freely. It was, however, decided that in the meantime, should it be found necessary, Mr. Von Rantzow might be appointed to receive and label goods. This temporary appointment was afterwards confirmed, and Mr. Von Rantzow became storekeeper to the Commission.

Estimates of Space and valuations for Insurance.—Departure of Mr. Hudson.

At the next ensuing meeting of the Administrative Committee, held on the 30th September, the Secretary submitted estimates of space, both for floor and wall, which it was calculated would be taken up by the exhibits in the various departments of classification, together with valuations for purposes of insurance, and also extracts, including, under their respective headings, the exhibits about to be forwarded, classified according to the official classification, No. 10, for freights on the United States railways, which came into operation on the 1st April, 1892. The meeting approved of Mr. Hudson's departure at the beginning of October for Chicago by way of San Francisco, and agreed that he should be accompanied by a member of the staff, who had been nominated by the Executive Commissioner for a clerical appointment in the office at Chicago.

Insurance of Exhibits at Chicago.—Question of Expenditure.

The same meeting decided that a cable message be sent to the Executive Commissioner, asking him to insure the exhibits for £25,000, from February of 1893 until the same month in the year ensuing. At the Commission meeting held on the same date the action of the Administrative Committee was approved, and after reports of Committees had been read and adopted, the Chairman (J. F. Burns, Esq.), took exception to a number of exaggerated statements, not confined solely to the public press but repeated by members of the Commission, as to the sum likely to be expended by the New South Wales Commissioners. The greatest economy was being exercised, and the Commission had not for a moment lost sight of their promise to the Government to keep, if possible, within the estimate of £30,000 for all purposes furnished to the Chief Secretary nearly twelve months before.

Reports of Committees.

At the last-named meeting of the Commission, as at all meetings held for months past, as well as those held for months after this date, nearly every committee of the Commission furnished reports for the information of the members, detailing work transacted in the interval between meetings of the general body of members, and at several of these meetings some of the principal Committees of Classification furnished as many as three reports, giving full details as to the progress of the work with which they had been entrusted.

Return

Return of the President.—Organising Work of J. F. Burns, Esq.,
Executive Vice-President, &c.—Selection of Exhibits.

The President of the Commission was present on his return from Europe at general meeting held on the 21st October, and expressed his pleasure at being back once more in Sydney, and he was gratified to know that during his absence Mr. Burns, Vice-President, and the other members, had carried out the work of organisation most successfully. The question arose as to the steps that had been taken, now that applications for space for exhibits and the goods themselves were coming forward, to see that proper care was being exercised in checking the quality of the proposed contributions, and it was announced that for months past the committees at their frequent meetings had exercised their power of selection of the fittest exhibits in a most careful manner, and besides, the goods in store would be inspected by the chairmen of committees before they were allowed to be finally labelled for transmission to Chicago.

Appointments to Dr. Renwick's Staff.

The Administrative Committee, at meeting held on the 20th October, 1892, decided to communicate forthwith with Dr. Renwick in Chicago, and bring under his notice the whole of the nominations for his local staff, with a view to his deciding as to a reduction in the list of names, in accordance with the lessened space at the disposal of the New South Wales representation, and at the next ensuing meeting of Commission, on the 2nd November, 1892, it was decided to inform Dr. Renwick of seven appointments only which the Commissioners in Sydney had deemed it desirable to approve, and these included the appointments of Mr. Robert Hudson, as General Superintendent, Mr. Thomas Pugh, as Assistant General Superintendent, Mr. Alexander Bruce, Chief Inspector of Stock, and Mr. J. E. Carne, F.G.S., Superintendent of Mining Section, the whole number of appointments so approved being seven.

Estimated Expenditure in Chicago.—Minerals Ready for Shipment.—
Appointments to Dr. Renwick's Staff.

At meeting of the Commission, held on the 11th November, 1892, there was adopted a report from the Administrative Committee, stating that it had been decided to write and ask the Executive Commissioner to so minimise his expenditure that the total outlay, within Sydney and Chicago, shall not, if possible, exceed the estimate for all purposes of £30,000, and to enclose at the same time a statement of the past and probable expenditure in Sydney, to show Dr. Renwick the margin that would be left for his own special purposes. The Mining Committee reported that the total number of packages of minerals then packed and labelled, weighed and measured, ready for shipment, was 1,650, weighing approximately 250 tons. The matter of the appointments on the staff of the Executive Commissioner again formed a subject of discussion, and the President repeated that the Commission and the Administrative Committee had selected from a list of nominations a limited number of gentlemen of special qualifications, and these appointments, which had been duly ratified, were deemed sufficient, it being left to the Executive Commissioner to add to his staff from persons whose services might be offered in Chicago. They were aware of the force of the argument that, at all events, principal members of the staff should be gentlemen in whom the Executive Commissioner should have every confidence, and they had, therefore, made appointments in accordance with this view, of residents of Sydney, known to the Executive Commissioner, and nominated by him, and possessing qualifications suitable for the supervision of the principal departments of classification; and the appointments (seven in number) already notified and approved at previous meeting of Commission, were duly confirmed. The President also gave for the information of the meeting a summary of the expenditure to date, pointing out the balance that would be left for the use of the Executive Commissioner.

Freight of Exhibits to Chicago.

A special meeting of the Administrative and Finance Committee was held on the 14th November, to take into consideration a letter received from Mr. Robert Hudson, in which he said that he had concluded a contract with Messrs. Spreckels Brothers, agents for the Union Steamship Company (Limited), for the through freight of exhibits
from ;

from Sydney to Chicago at 16 dollars per ton. Mr. Hudson, on leaving Sydney, had been requested to make inquiries at San Francisco, and also at Chicago, if necessary, which would enable the local Commission to come to a decision upon the matter of freights, but that gentleman, the President said, had never been authorised to take independent action, and to settle personally a matter of so much importance. A resolution was passed, stating that the Commission could not recognise the freight arrangements without further information, and asking the Executive Commissioner to cable at once respective rates for the New York and San Francisco routes. To this cable the Executive Commissioner replied, and as he deemed that the arrangement, though an unauthorised one, was satisfactory, the contract was confirmed, and the goods shipped in accordance therewith. The attention of the Administrative Committee at several meetings about this time, and up to the date of the meeting just referred to, was largely taken up with this same question of freights, and the consideration of the tenders for carriage of New South Wales' exhibits by steamer and sailing vessel, both by way of the Pacific and Atlantic coast.

Departure of Mr. Pugh.

At a meeting of the Administrative Committee, held on the 25th November, it was resolved to approve of the departure of Mr. Thomas Pugh, Assistant General Superintendent, with the first shipment of exhibits by the "Alameda," on Monday, the 28th November, 1892.

Photographs prepared by the Government Printer.

A report was presented from Committee X on Fine Arts to meeting of Commission held on the 25th November, stating that the photographs prepared by the Government Printer at the instance of the Commission, who chose the subjects, included panoramas and other views of Sydney and its harbour, views of public buildings, of the principal churches and colleges, of the Garden Palace, the principal banks and arcades, the Sydney Botanic Gardens, Sydney water supply, illustrations of the limestone cave scenery of the Colony, and of the principal points of interest on the Blue Mountains, also representations of the Volunteer and Permanent forces, Police forces, and principal public works, the aboriginal natives of the Colony, and of old Sydney, together with views of New Guinea, Samoa, Tonga, Fiji, and New Britain.

Proposed appointment of a Deputy Commissioner.

The Administrative and Finance Committee, on the 30th November, dealt with the necessary reduction of the staff at the end of the year, in view of the fact that by that time the majority of the exhibits would be shipped to their destination, and at the next ensuing meeting of the same committee a letter was read from the Under Secretary for Mines and Agriculture to the President of the Commission, stating that Mr. Carne, F.G.S., would be the officer to receive a commission to take charge of the New South Wales court in the event of the absence of the Executive Commissioner from Chicago, this course having been recommended by the Commission, and steps were taken at the same meeting to arrange for the departure by the "Mariposa," of Mr. Carne as Superintendent of the Mineral court, and of Mr. Thomas Ford as Assistant Superintendent of the same Court.

The Commissioners at meeting, held on the 16th December, 1892, adopted a report from the Administrative Committee, approving of the appointments of Mr. Carne and Mr. Thomas Ford, and of the former gentleman, subject to the approval of the Government, to act as Deputy Commissioner should the Executive Commissioner require to leave Chicago at any time.

Selected Wines for Luncheons.

The Wine Committee reported that they had agreed, subject to the approval of the Commission, to obtain selected wines from New South Wales vigneron of a value not exceeding £60, to be forwarded to Dr. Renwick for use in connection with luncheons in the New South Wales court. These were not intended as exhibits, but to be supplementary to the competitive samples forwarded by exhibitors.

Authority to Deputy Commissioner.

At the Administrative and Finance Committee meeting on the 4th January, 1893, there was read a letter from the Principal Under Secretary to the President, stating that dormant authority, empowering Mr. Carne to act on behalf of the Executive Commissioner in the event of his absence from Chicago, given by the President of the Commission, would be sufficient for all purposes, and it was reported by the Secretary that the President had given such letter of authority to Mr. Carne. The Executive Commissioner having been advised of the action that had been taken in Sydney in the matter, replied from Chicago, that he did not anticipate that it would be necessary that this authority should be exercised, as it was his (Dr. Renwick's) intention to give his own personal supervision to all matters connected with the representation of the Colony in Chicago; and in all sections Dr. Renwick's intention was fully carried out, and he did not leave Chicago until several weeks after the close of the World's Fair.

Shipment of Exhibits.

The Chairman of the Finance Sub-committee reported that the "Mariposa," which left Sydney on the 26th December, 1892, carried 452½ tons of exhibits, valued at £15,362, this being the second bulk shipment of exhibits, and, further, he estimated that 250 tons additional would be shipped by the "Monowai" at the end of January, making a total in all of about 1,000 tons. The following details as to shipments to date were furnished by the Chairman of the Finance Sub-committee to the Commission at their meeting held on the 3rd February, 1893. "On the 23rd of January there were shipped per the 'Monowai' 321 packages, measuring 104½ tons, with a valuation of £4,073 8s. 2d., the previous shipments having been per 'Monowai' on the 8th August, 1892, 78 packages of plants measuring 63 tons, with a valuation of £300; per 'Alameda' on the 28th November, 1892, 1,053 packages, measuring 245 tons, with a valuation of £6,901; per 'Mariposa,' on the 26th December, 1892, 2,364 packages measuring 452½ tons, with a valuation of £15,361 5s., giving total of packages shipped to date 3,816, with a measurement of 865 tons, and a valuation of £26,635 13s. 2d." A tabulated statement of all shipments of exhibits from Sydney to Chicago, *via* San Francisco, will be found at Appendix D; while in Appendix E are furnished detailed particulars of all exhibits comprised in the shipments made from Sydney from time to time during 1892 and 1893.

Secretary's Staff.—Display of wool.—Nominations for appointments in the New South Wales Court.

On the 3rd February, 1893, the Administrative Committee reported to the Commission that great reductions in the strength of the Secretary's staff had been effected, and it would be still further lessened after the publication of the catalogue so as to consist only of the Secretary, clerical assistant, and messenger. To the same meeting there were submitted reports from Committee II on Wool, detailing the efforts which were being made by the Sydney Wool-Selling Brokers' Association to provide a suitable representation of our staple product; but the number of bales furnished for display fell short of the total number promised by the Association, *viz.*, 400, but it fortunately happened that the bales forwarded were of exceptionally good quality, and sufficiently numerous to form an imposing display. The Secretary, by instruction of previous meeting of Commissioners, placed on the table a list of the nominations for offices in the New South Wales Court in Chicago, which had been made by the Executive Commissioner, these nominations being of persons whom he desired should receive appointments, and the list so tabled specified the seven gentlemen whose nominations had been approved of by the local Commission.

Shipments of fresh Fruits.—Exhibits shipped to Chicago.

The Administrative Committee on the 22nd February, 1893, placed at the disposal of Committee IV on Horticulture a sum of £100 to enable that committee to forward to the New South Wales court in Chicago periodical supplies of fresh fruits in season, it being left to the judgment of the committee whether to send such fruits by way of San Francisco or by way of London. The greater part of the fruits was ultimately shipped as ordinary cargo by the Californian mail steamers. The Secretary at this meeting reported that the total number of packages shipped to date had been 3,886,
measuring

measuring 877½ tons, and valued at £29,529 8s. 2d. It was proposed to ship by the "Ophir" to London *en route* to America, gold specimens and precious stones, &c., to the value of about £7,000, which would bring the total estimates of shipments for insurance purposes up to between £36,000 and £37,000.

Expenditure.

There was submitted to meeting of Administrative Committee, held on the 1st March, 1893, the following documents prepared for the information of the Commission:—
1. Statement of accounts paid to date. 2. Estimated probable expenditure in Sydney until the close of the work of the Commission. 3. Statement showing the sums that had been paid in Sydney on account of the Executive Commissioner. The Secretary submitted for purposes of comparison previous estimates of local expenditure, and the President of the Commission, for purposes of comparison, submitted to the meeting a statement which he had made regarding expenditure on the 11th of November of the previous year (1892). The meeting arranged on behalf of the Executive Commissioner for the passage by the "Mariposa" of Mr. Alexander Bruce, J.P., Chief Inspector of Stock, who would take charge under Dr. Renwick of the wool section of the New South Wales representation.

Catalogues of New South Wales Exhibits.

At the next ensuing meeting of the same Committee, held on the 29th March, 1893, the Secretary reported that the Liberal Arts Committee had agreed to limit the circulation of the catalogue of exhibits as follows:—5,000 copies of each of the four principal sections—Agriculture, Minerals, Liberal Arts, and Forestry; and to divide a total further issue of 20,000 copies among all the other sections of classification, nearly a dozen in number. The Secretary pointed out that the Liberal Arts Committee had approved of a suggestion which he had made, that in order to avoid expense the catalogue should be published in sections, so as to provide for an issue for each building assigned for Departments of Classification.

Preparation of Special Literature upon important Colonial subjects.

A most important feature of the work done by the Liberal Arts Committee chiefly, but aided by other Committees of the Commission, was the preparation by specialists of pamphlets upon some leading subjects connected with the resources of New South Wales and their development. These works were eagerly sought for at the World's Fair, and no participating country was so well represented by a literature specially prepared. The following tabulated list gives full particulars as to the various publications prepared and issued under the auspices of the New South Wales Commissioners:—

Subject.	Author.	Pages.
Agriculture in New South Wales ...	W. Wilkins, formerly Under Secretary of Public Instruction.	50
Sheep and Wool in New South Wales (with diagrams).	T. A. Coghlan, A.M. Inst. C.E., Government Statistician.	24
History of the Fisheries of New South Wales (with maps and illustrations). Compiled from official and other authentic sources.	Lindsay G. Thompson, Chief Inspector of New South Wales Fisheries.	128
Edible Fishes and Crustaceans of New South Wales (with illustrations).	J. Douglas Ogilby	214
The Marine Fish and Fisheries of New South Wales, past and present, in their commercial aspect. (One map).	Philip Cohen	30
Physical Geography and Climate of New South Wales (with map and diagrams).	H. C. Russell, B.A., C.M.G., F.R.S., F.R.M.S., Government Astronomer of New South Wales.	36
Sketch of Progress and Resources of New South Wales (with coloured diagrams).	Greville Tregarthen, Chief Clerk, Government Statistician's Department.	48
Rise, Progress, and Present Position of Trade and Commerce in New South Wales.	Edward Pulsford	52
Australia and America in 1892. A contrast.	A. Edward Dowling, Hon. Sec. of the Australian Natives Association, and Secretary to the late Board of Technical Education.	VIII and 172 Coins,

Subject.	Author.	Pages.
Coins, Coinages, and Currency of Australasia (with illustrations).	Coleman P. Hyman	160
Catalogue of Coins, Coinages, and Currency of Australasia (with specimens of medals).	Exhibited by Coleman P. Hyman.	18
Social, Industrial, Political, and Co-operative Associations, &c., in New South Wales.	E. W. O'Sullivan, M.P.	IV and 24
Drama and Music in New South Wales	F. C. Brewer	96
Prison System of New South Wales	George Miller, Comptroller-General of Prisons.	6
Aborigines of New South Wales (with illustrations).	John Fraser, B.A., LL.D.	102
Notes on the Aborigines of New South Wales.	Hon. Richard Hill, M.L.C., and Hon. Geo. Thornton, M.L.C.	8
South Pacific and New Guinea: Past and Present.	Rev. William Wyatt Gill, B.A. (Lon.), LL.D. (St. Andrew's).	38
Australian Timbers (with map showing distribution of timbers and numerous diagrams of tests).	W. H. Warren, Wh. Sc., M. Inst. C.E., M.A.M. Soc. C.E., Challis Professor of Civil and Mechanical Engineering, University of Sydney.	68

Success of the New South Wales representation.—New South Wales exhibits first to reach Chicago, and first to be arranged.—Further shipments.—Wool.

At meeting of the Administrative Committee, held on the 3rd May, 1893, there was read a cablegram to the President of the Commission from the Executive Commissioner in Chicago. This cablegram was dated the 2nd May, 1893, and was as follows:—"At opening to-day our country all ready. Press allow in natural products and liberal arts we equal any nation. Congratulate Commission." It was decided to send a reply to the Executive Commissioner, complimenting him on the success of the Colony's representation. The letters subsequently received from the Executive Commissioners showed that, owing to the energetic efforts of the local Commission, the New South Wales contributions to the World's Fair were the first to reach Chicago, and by the diligence of the Executive Commissioner and his officers, were the first completely arranged for display in the leading sections of classification. The Secretary reported that since last statement of shipments packages had been forwarded by the "Ophir" on the 25th February, the "Oroya" on the 25th March, the "Orient" on the 8th April, and the "Monowai" on the 17th April, bringing up the total of packages shipped to 3,947, representing a tonnage of 882½, and a valuation of £36,509 12s. 4d. These shipments had consisted of fresh fruits, duplicate wines, wines for the use of the Executive Commissioner, and printed matter.

The Wool Committee reported to meeting of Commission, held on the 12th May, 1893, that at meeting on the 16th March the views of the committee on the subject of the representation of the wool section at Chicago were explained to Mr. Bruce on the eve of his departure for America. These views were, that our wool should be shown in Chicago in the manner best calculated to set forth the capacity of the Colony for wool production. With respect to a modification of the tariff it was not anticipated that the whole of the duties would be abolished, but it was deemed likely that there would be some considerable modification of existing duties. The committee considered that such modification would be all the better if it were to take the form of *ad valorem* duties upon the various descriptions of wool, as this would be the means of admitting all grades of our product into the American market. This plan was regarded as preferable to specific duties, and likely to prove of very great assistance to our woolgrowers.

Exhibits from Australian Museum.

The Liberal Arts Committee reported that supplementary exhibits from the trustees of the Australian Museum would shortly be shipped, consisting of casts of the bones of the following extinct mammalia of the continent of Australia:—*Diprotodon*, or gigantic native bear, partaking of some of the characteristics of the American sloths, and the skull of the *Thylacoleo*, or marsupial lion.

Congratulations

Congratulations to Executive Commissioner.

The following resolution was passed, on the motion of The Honorable John Davies, C.M.G., M.L.C., seconded by F. E. Winchcombe, Esq.:—"That a letter be forwarded to Dr. Renwick by the outgoing American mail, stating that the Commission are highly gratified with the reports received with respect to the New South Wales Courts, and trust that everything will be equally satisfactory up to the close of the work."

Further shipment.

It was reported by R. D. Adams, Esq., that by the "Alameda," which sailed on the 15th May, there were shipped eighty-four packages for the New South Wales Court, chiefly consisting of fresh fruits, and publications, the total value being £990 19s. 6d.

Disposal of Exhibits purchased by Commission.

The Administrative Committee, on the 5th July, 1893, took into consideration the manner of disposal of exhibits purchased out of Commission funds, and dealt with a complete list of all such exhibits, noting in each instance for the instruction of the Executive Commissioner how each exhibit is to be dealt with. Instructions were given for the sale of some exhibits; others, in accordance with the direction of the Chief Secretary, were noted to be handed over to the Imperial Institute, while a small number were to be returned to the Colony. In a number of instances the disposal was left to the discretion of the Executive Commissioner.

Death in Chicago of a Member of Commission.—Sale of private Exhibits in Chicago.

A letter from Dr. Renwick, dated the 14th July, 1893, was read to meeting of Administrative Committee held on the 16th August, 1893, intimating the death in Chicago of Dr. Carl Fischer, one of the members of the Commission. At the same meeting there was taken into consideration a request from the Executive Commissioner that exhibitors be asked to leave the sale prices of their goods to his discretion, as in many instances the prices affixed were so large that, with customs duties under the McKinley tariff added, a sale would be almost a matter of impossibility. In accordance with this view of Dr. Renwick, a circular was issued to exhibitors, and it was resolved that all replies of exhibitors to such circular should be tabulated and forwarded to Dr. Renwick at the earliest possible moment for his guidance. At the next ensuing meeting, on the 30th August, the Secretary reported that most of the replies of exhibitors had come to hand, and that the greater majority had expressed their willingness to leave the selling prices of their goods absolutely to the discretion of the Executive Commissioner.

Meetings of Administrative and Finance Committee.

The next ensuing monthly meetings of the Administrative Committee dealt with accounts, which were small in number and amount, and included the monthly salaries of the now greatly reduced head-office staff. At these meetings there were submitted for the information of the members the progress reports received by mail from Dr. Renwick, the gist of which reports had been supplied to the Press for the information of the members of Commission and of the public generally.

Exhibits donated to Imperial Institute.

It was decided at meeting of the Administrative Committee, held on the 12th January, 1894, that credit should be taken by the New South Wales Commission in their statement of accounts for the exhibits which have been purchased out of Commission funds and forwarded at the close of the Exhibition to the Imperial Institute by direction of the Chief Secretary.

Arrangements

Arrangements for dealing with returned Exhibits.

At a meeting of the Administrative Committee, held on the 2nd February, 1894, the late storekeeper to the Commission was reappointed, and further arrangements were made for the reception of the exhibits on their arrival in Sydney, and their distribution to their owners.

Return of Exhibits purchased out of Commission Funds.

At meeting of the Administrative Committee, held on the 2nd March, the Secretary reported that the returned exhibits had been expected by the s.s. "Mariposa" during the month of February, because the manifest for these goods bore the "Mariposa's" name. This steamer, however, arrived without them, and a cablegram was sent to Messrs. Spreckels Brothers, San Francisco, asking whether they might be expected by the "Monowai," due early in March, and a reply in the affirmative was received. The Secretary reported that, according to the manifest received so much in advance, it appeared that, owing to the restrictions in the way of sale offered by the excessive duties which would be levied by the United States Customs under the M'Kinlay Tariff, many exhibits purchased out of Commission funds were being returned to the Colony, including, for instance, the suites of furniture made to the order of the Commissioners by Messrs. Bartholomew & Co. and Messrs. Verdich & Co., and comprising library, dining-room, and bedroom suites, constructed of selected colonial timbers from specially prepared designs.

Expenditure till close of the work of the local Commission.

At this same meeting (the 2nd March) it was decided to ask for a further advance from the Treasury of £1,000, which it was estimated would be sufficient to meet all claims until the final closing of the work and offices of the Commission.

Return of the Executive Commissioner to New South Wales.

A meeting of the New South Wales Commission was held on the 9th March, 1894, when, after a number of reports had been read from the Administrative Committee, a conversation ensued among the members, during which the President spoke in the highest terms of the manner in which the Executive Commissioner had carried out the duties of his responsible position in connection with the representation of the Colony at Chicago. An opinion was expressed that steps might be taken to recognise these services, but that while the Commissioners could not, in such capacity, take any action in this direction, they would assist in their private capacity in every possible way to ensure the success of a public recognition.

Address by Dr. Renwick on the subject of the Representation at Chicago.

A well attended meeting of the New South Wales Commission was held on the 6th April, 1894, at the Colonial Secretary's office, the President in the chair, to hear from the Executive Commissioner a verbal report on the display made by the Colony at the Chicago World's Fair, and at the close a unanimous vote of thanks was presented to the Executive Commissioner, on the motion of W. S. Dowel, Esq., M.P., seconded by the Hon. P. G. King, M.L.C.

Resolution of Congress, recognising the participation of Foreign Countries.

There was read to meeting of the Administrative Committee, held on the 4th May, 1894, letter dated 9th April, 1894, from the Principal Under Secretary to the President of the New South Wales Commission, transmitting for his information copy of correspondence that had been received from the Secretary of State for the Colonies by His Excellency the Governor, relative to a joint resolution of the Senate and the House of Representatives, expressing the sense of the Government and people of the United States of the co-operation of the various foreign countries in the Exhibition lately held in Chicago.

Disposal

Disposal of Returned Furniture and Woman's Work Exhibits.

The Secretary, at meeting of the Administrative Committee, held on the 18th May, was instructed to communicate with the Government, asking whether it would take over, for use at Government House, the suites of furniture constructed from Colonial timbers to the order and at the expense of the Commissioners. The furniture was afterwards inspected at the stores of the Commission and taken over by the Chief Secretary for use at Government House.

Woman's Work.

The Secretary was instructed to have the returned exhibits of Woman's Work, purchased at the cost of the Commission, sold by public auction, and this was done, and the proceeds paid into the Treasury.

The Work of Commission and Committees.

The following figures will tell their own story of the extent of the work done by the New South Wales Commission and its committees; during the more busy period of organisation arrangements, no less than 426 meetings having been held, the greater number of which took place between the end of 1891 and the close of the next ensuing twelve months. The following table gives the particulars of the whole of the meetings held, until the close of the local work in Sydney :—

	Meetings.
New South Wales Commission	39
Administrative and Finance Committee	67
Finance Sub-Committee of Administrative Committee	34
Committee I on Agriculture	29
Committee II on Wool and Silk, &c.	22
Committee III on Viticulture, Wines, &c.	7
Committee IV on Horticulture	15
Committee V on Live Stock	14
Committee VI on Fish and Fisheries	28
Committee VII on Mines, &c.	27
Committee VIII on Machinery, Implements, &c.	10
Committee IX on Manufactures	42
Sub-Committee of Committee IX on Manufactures—Furniture	6
Committee X on Fine Arts... ..	31
Committee XI on Liberal Arts	48
Special Sub-Committee, Office accommodation	4
Special Sub-Committee for Classification	3
Total number of meetings	426

In several instances three and even four meetings were held in a single day. The correspondence incidental to the operations of the Commission as a whole, and of the various Committees in particular, was necessarily a heavy one, about 10,000 typewritten letters, many of them extending over eight foolscap pages closely written, besides appendices, were dictated, while circulars to exhibitors in the various departments of classification and for the convening of meetings were issued to the number of nearly 17,000. The President understands from the Secretary that for many months the extent of the work of the Commission demanded that he and his staff should work long after the ordinary office-hours, and until after 10 p.m., and on one occasion, at least, the staff were kept busily engaged with the first bulk shipment of exhibits for some three days and three nights in succession with but slight intermission. The Secretary of the Commission also informs the President that the members of the clerical staff of the Sydney office have discharged their duties in a most exemplary manner. The various officers proved themselves not only most attentive to their duties, but also painstaking and competent in their discharge.

For the greater part of the time over which the work of the local Commission extended, Mr. John R. Martin was clerk to the Secretary, and Accountant, and discharged the duties of his office in a highly satisfactory manner. Mr. W. A. Baird was chosen to succeed Mr. Martin on his resignation, and that gentleman proved himself in every respect fully qualified to perform the important functions of the position for which he had

had been selected. Mr. Patrick Lyons, the only other permanent officer of the Commission, who was appointed at the very beginning of its operations, discharged the duties entrusted to him in a most conscientious and careful manner. Mr. L. Von Rantzow is elsewhere mentioned as having been appointed storekeeper to the Commissioners, and that gentlemen, in carrying out the work connected with the reception into store and packing and shipment of exhibits, and returning them to their owners after the close of the Chicago Exposition, displayed great energy and capacity.

Private Exhibits sold in Chicago and adjustment of claims for damages.

The Executive Commissioner, on his return to Sydney, handed over to the Commission the moneys necessary to enable it to pay the sums due to exhibitors on account of their goods sold in Chicago. The total sum so disbursed was £2,519 5s., of which £1,924 9s. 11d. was on account of wool exhibits; the balance represented general private exhibits. Of course the majority of the private contributions from New South Wales were returned to Sydney. In connection with the return of these exhibits to Sydney, owing no doubt, in large measure, to the risk of the very long journey they had to undergo, a few articles arrived in Sydney in a somewhat damaged condition, and although the Commission, under its regulations, held themselves free from all liability on account of damage or loss of any kind which might not be covered by the insurances effected, it decided to adjust these claims, and, on this account, a sum only slightly in excess of £50 was disbursed, a very small amount indeed, when the gross valuation of the exhibits is taken into consideration.

Importance and success of New South Wales representation.

It is gratifying to know that on all hands, it has been admitted that in several of the principal sections of classification, New South Wales, in her contributions, equalled some of the leading nations of the world represented in Chicago, and, in three departments at least, this Colony undoubtedly took first place, namely, in the representation of mineral wealth in the Mines Building; secondly, in the display of wool and cereal products in the Agricultural Building; and in the third place, by the magnificent display of hardwood timbers exhibited in the Forestry Section. It has been universally admitted that at this great exhibition, but for the very valuable and extensive contribution of New South Wales and Canada, the representation of the products of the British Empire would have been altogether inadequate. Testimony to this fact has been borne among others by Sir Henry Trueman Wood, Secretary to the British Royal Commission and of the Society of Arts, in his official report to the British Royal Commission, and also by Mr. James Dredge, one of the British Commissioners, who, on the occasion of a lecture at the Imperial Institute on the display made by Great Britain and her colonies, said that New South Wales had shone most luminously, her exhibits being of the highest order.

Journal of the Final Session of the New South Wales Commission.

The final meeting of the Commission was held at the Board Room, Colonial Secretary's Office, at 4 p.m., on Thursday, the 2nd August, 1894. There were present: William McMillan, Esq., M.P. (President), in the chair, the Hon. Sir Arthur Renwick, Kt., M.D., M.L.C. (Executive Commissioner), Hon. J. F. Burns (Vice-President), R. D. Adams, Esq., J. Ednie Brown, Esq., J.P., J. J. Calvert, Esq., J.P., C. Collins, Esq., M.P., M. C. Cowlishaw, Esq., J.P., J. Carl Fischer, Esq., Hon. Charles Goodchap, M.L.C., W. A. Hutchinson, Esq., J.P., Alderman Thos. Jessop, J.P., Joseph Marks, Esq., J.P., Alfred W. Meeks, Esq., J.P., Charles Moore, Esq., J.P., Louis Phillips, Esq., J.P., Hon. R. Burdett-Smith, C.M.G., M.L.C., Francis Wright, Esq., J.P., M.P.

Apologies were received from the Hon. W. H. Suttor, M.L.C., and Alderman John Hardie, J.P.

The minutes of the previous meeting having been read and confirmed, R. D. Adams, Esq. (chairman of the Finance Sub-Committee of the Administrative Committee), submitted, for the information of the Commission, the following balance-sheet and statements of account, and information regarding disposal of exhibits purchased out of Commission funds.

R. D. ADAMS.

The Services of the Secretary.

The President submitted the following memo., which was unanimously adopted and endorsed by the meeting :—“That the manner in which the Secretary, Mr. Alex. Cumming, has discharged his duties is beyond all praise. His energy, industry, and intelligence have been felt in all departments ; and to his careful management and close study of details is largely due the very moderate expenditure in the collection and despatch of exhibits.”

It was also agreed that a bonus of £100 be paid to the Secretary.

Mr. Cumming acknowledged the kindness and consideration of the Commissioners, and said that he had had the good fortune to have associated with him a very competent and conscientious staff.

Mr. Adams referred to the able manner in which Mr. W. A. Baird, and his predecessor, Mr. J. Roxburgh Martin, had performed the duties of accountant.

The following resolutions were unanimously agreed to :—

Thanks to Government Departments and other Exhibitors.

Moved by Alderman Thomas Jessep, Esq., seconded by J. Ednie Brown, Esq., J.P. :—

“That the cordial acknowledgments of this Commission are hereby tendered to the various Government Departments and private firms and individuals who contributed to the success of the New South Wales representation at the Chicago World’s Fair, to the Commissioners for New South Wales Railways for concession in freights, and to the Postmaster-General for free telegrams throughout the Colony.”

Resolution for Woman’s Work Committee.

Moved by J. J. Calvert, Esq., J.P., seconded by Joseph Marks, Esq., J.P. :—

“That this Commission cannot close its proceedings without recording its high sense of the invaluable services rendered by Lady Windeyer, President of Committee 12 on Woman’s Work, and the members of that Committee in organising the very effective representation in Chicago of the important section confided to their care.”

Thanks to the Administrative and Finance Committee.

Moved by J. Carl Fischer, Esq., seconded by the Hon. Chas. Goodchap, M.L.C. :—

“That the thanks of this Committee are especially due, and are hereby tendered, to the Administrative Committee of the Commission and also to its Finance Subcommittee, of which R. D. Adams, Esq., is the Chairman ; the functions of this particular Committee and its Sub-committee having been exceptionally important and arduous.”

Thanks to the Executive Commissioner.

Moved by F. A. Wright, Esq., J.P., M.P., seconded by Joseph Marks, Esq., J.P. :—

“That this Commission desires to cordially reaffirm its resolution of special meeting, held on the 6th April last, bearing testimony to the exceptional zeal and ability displayed by Sir Arthur Renwick, in the discharge of his functions as Executive Commissioner for New South Wales, at the World’s Columbian Exposition.”

Thanks to the Executive Vice-President.

Moved by R. D. Adams, Esq., seconded by F. A. Wright, Esq., M.P. :—

“That this Commission desires to record its especial thanks to the Hon. J. F. Burns, Executive Vice-President of the Commission, for his most valuable services in attending to the official work of the Commission in Sydney, during the temporary absence in Europe of the President and on other occasions.”

Thanks

Thanks to the President.

Moved by the Hon. R. Burdett Smith, C.M.G., M.L.C., and cordially supported:—

“That this Commission desires to place upon record its hearty appreciation of the great interest taken by the President in the success of the Commission’s operations, and to record its sense of the high value of his most efficient Presidency.”

The President, in reply, thanked them very much for their kind vote of thanks. That day they closed their long labours, and one of the most satisfactory parts of their procedure was the report of the Finance Sub-committee showing the manner in which they had kept down expenditure. For this the thanks of the Commission were due to the Administrative and Finance Committee, and of course to the Executive Commissioner’s management on the other side of the water. (Hear, hear.) After all their trials and difficulties they had to hand back to the Government a report of the most successful Exhibition ever known in the history of this Colony. Everyone agreed that as an object lesson the natural productions in the New South Wales Court were not equalled by any other at this great gathering of the nations. It was most important that they had decided not to fritter away their energies on useless exhibits, but had confined their attention to large block-views of the Colony’s productions, and this was in large measure the cause of the Colony’s success. Owing to the impending financial crisis there were not many visitors from the Colonies to the Columbian Exposition, and thus we had not the enthusiasm which would have been brought about had colonial visitors been numbered in thousands. He predicted that, with the reduced tariff in the United States, and with closer relations with America, the fruits of this Exhibition would be seen in the next few years, and even those who had been most disparaging in their remarks about the Exhibition would have to admit the good that would be done. That the New South Wales portion was carried out successfully, and with so little expense, must be a matter of congratulation to all of them. (Cheers.)

[The Commissioners having thus completed the various duties which devolved on them by virtue of the Commission which His Excellency the Governor was pleased in Her Majesty’s name, and under the Great Seal of the Colony, to issue, adjourned *sine die*.]

I have the honour to be,

Your Excellency’s most obedient servant,

W. McMILLAN,

President.

APPENDIX A.

NEW SOUTH WALES COMMISSION.

*(Gazetted, 29 September, 1891.)**President :*

William McMillan, Esq., M.P.

Vice-Presidents :

Secretary of New South Wales Commission :

Alexander Cumming.

Text of Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and
 Ireland, Queen, Defender of the Faith, and so forth,—

To our trusty and well-beloved—

WILLIAM McMILLAN, Esquire, a Member of the Legislative Assembly of Our Colony of New South
 Wales, President ;
 The Honorable JOSEPH PALMER ABBOTT, Speaker of Our said Legislative Assembly ; and

Greeting :—

WHEREAS an International Exhibition of Arts, Industries, Manufactures, and the Products of the Soil, Mine, and Sea styled the World's Columbian Exposition, is to be held in the City of Chicago, in the United States of America, in the year one thousand eight hundred and ninety-three, for the purpose of celebrating the Four Hundredth Anniversary of the Discovery of America : And whereas it has been represented to Us that it is desirable that Commissioners should be appointed on behalf of Our Colony of New South Wales to collect, classify, arrange and provide for the safety and preservation of Exhibits ; and to make all arrangements in Our said Colony for the effective representation of New South Wales at the said Exposition, giving special prominence to the Wools, Minerals, Timbers, and other natural products : Now know ye, that We, reposing especial trust and confidence in your knowledge, integrity, and ability, do by these presents authorise and appoint you to be such Commissioners accordingly, of whom any ten shall form a quorum, with full power to act in these premises : And We do hereby authorise and appoint you, the said WILLIAM McMILLAN, to be President of this Commission ; and the said JOSEPH PALMER ABBOTT and WILLIAM PATRICK MANNING to be Vice-Presidents of this Commission ; And We do authorise you, the said President, Vice-Presidents, and Commissioners above described, to duly report your proceedings from time to time to Our Governor of Our said Colony of New South Wales, until the business of this Commission shall have been brought to a conclusion.

In testimony whereof, We have caused these our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Right Well-beloved Cousin and Councillor
 VICTOR ALBERT GEORGE, EARL OF JERSEY, Knight Grand Cross of
 Our Most Distinguished Order of Saint Michael and Saint George,
 Our Governor and Commander-in-Chief of Our said Colony of New
 South Wales and its Dependencies, at Government House Sydney, in
 New South Wales aforesaid, this twenty-eighth day of September, in
 the year of Our Lord One thousand eight hundred and ninety-one,
 and in the fifty-fifth year of Our Reign.

JERSEY.

By His Excellency's Command,
 HENRY PARKES.

Entered on Record by me, in REGISTER OF PATENTS, No. 14, page 192/3, this twenty-ninth day of September, one thousand eight hundred and ninety-one.

For the Colonial Secretary and Registrar of Records,
 CRITCHETT WALKER,
 Principal Under Secretary.

APPENDIX B.

ADMINISTRATIVE AND FINANCE COMMITTEE.

COMMITTEE XII ON WOMAN'S WORK.

Lady Windeyer (President).	Miss M'Carthy.
Mrs. Henry Austin.	Mrs. A. W. Meeks.
Mrs. Alex. Cameron.	Mrs. J. S. Mitchell.
Miss M. Clarke.	Mrs. O'Kelly.
Mrs. H. E. Cohen.	Mrs. Onslow.
Mrs. Dadley.	Mrs. Louis Phillips.
Miss Edwards.	Mrs. Pottie.
Mrs. Carl Fischer.	Mrs. John See.
Mrs. Matthew Harris.	Mrs. T. M. Slattery.
Mrs. S. H. Levy.	Mrs. W. H. Suttor.
Mrs. W. P. Manning.	Miss E. M. Woolley.

Mrs. Carl Fischer, *Secretary*.

 REPORT from Lady Windeyer, as President of Woman's Work Com-
 mittee, to The President of the New South Wales Commission.

N.S.W. Commission World's Columbian Exposition, Chicago,
 Sydney, 19 February, 1894.

To W. McMillan, Esq., M.P., President,—
 Sir,

The duties of Committee XII, appointed on the 4th of December, 1891, to
 "secure a representation of Woman's Work," having now terminated, it remains for
 me to report finally upon the result of the performance of those duties by your
 Committee.

Before

Before dealing with the business of their special department your Committee desire to convey to yourself, to the Executive Commissioner, to your honorable Commission, and to Australia, their earnest congratulation upon the position taken by our Colony upon the platform of art, industry, invention, and wealth. It has been a proclamation to the world of the boundless resources of the nation which is slowly gathering strength for the supremacy to which Federated Australia must ultimately rise, a demonstration to the mother of nations our loyal and filial fealty to whom we proudly assert, of the public spirit and enterprise of the mother Colony of the Australian group.

The Legislature having, in a spirit of enlightened patriotism and of national generosity, determined that the representation of this Colony at the Great World's Fair should be as complete as possibility would allow, it appeared to your honorable Commission imperative that, in the schedule of the different sections, Woman's Work, so largely to be recognised in this great celebration, should not be omitted. Your Committee was therefore appointed. They accepted the trust reposed in them with the modest hope of gathering a collection of exhibits, the utmost merit of which might be that it should not be discredit to the women of this portion of Her Majesty's dominions.

For the purposes of the Committee the sum of £500 was voted by the Administrative and Finance Committee, and was disbursed as follows:—

	£	s.	d.
Purchases of exhibits	245	18	0
Salary to Secretary	228	0	0
Packing exhibits... ..	28	6	11
	<hr/>		
	£502	4	11

The value of the goods for insurance was £815 15s.; the estimated commercial value was £1,232 5s., irrespective of certain inventions.

This statement demonstrates that the number of voluntary exhibitors has not been small, and also that the money expended in purchasing has been profitably applied. The official list of awards contains 96 awards allotted to the Department of Woman's Work. Reference to our catalogue shows that several hundreds of exhibits were sent from over a hundred individual exhibitors. These consisted of thirty specimens of furs, a number of the most remarkable birds and animals, specimens of woods, various exhibits in photography, lace-making, knitting, illuminating, modelling, painting, and printing. In the many branches of plain and fancy needlework the awards gained by our competitors testify that in New South Wales the skill in these arts brought to this far-off land by our mothers and foremothers has not degenerated. Especially Australian were the cabbage-tree hats and the gloves made from yarn spun from opossum fur.*

In conclusion, I may state with much satisfaction that your Committee are able to congratulate themselves that the modest hope with which they began their work has been so far realised.

I have the honor to be, Sir,

Your obedient servant,

MARY E. WINDEYER.

* In an official sketch of "the Woman's Building and what is to be seen in it," written by Mary S. Lockwood, it is stated that "New South Wales, snugly tucked in between Russia and Great Britain, brings her gift from the taxidermist, her wares from the ceramic artist, her products of the forest in rugs, and mats of skins and fur. There are also laces and embroideries, sculpture and paintings deserving notice."

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our trusty and well-beloved—

The Honorable Sir ARTHUR RENWICK, Knight, B.A., M.D., a Member of Our Legislative Council
of Our Colony of New South Wales, President;
FREDERIC NORTON MANNING, Esquire, M.D., Inspector-General of the Insane;
ANDREW GARRAN, Esquire, LL.D.; and
JAMES SINCLAIR MCGOWEN, Esquire, a Member of the Legislative Assembly of Our said Colony,—

Greeting:—

Know ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the conduct and management of the Licensed House for the Insane, at Cook's River, near Sydney, in Our said Colony, known as "Bayview House," and particularly as regards the allegations made in the said Legislative Assembly respecting the treatment of certain patients in the said Licensed House: And we do, by these presents, grant to you, or any two or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you the power, at your discretion, to procure such clerical and other assistance as you may deem necessary for enabling you to duly execute this Our Commission: And Our further will and pleasure is that you do, within two months after the date of Our Commission, certify to Us, in the office of Our Chief Secretary, under your or any two or more of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And we appoint you, the said Sir ARTHUR RENWICK, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoriae No. 1, intituled, "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness, Our Right Trusty and Well-beloved Councillor, Sir ROBERT WILLIAM DUFF, a Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this eighteenth day of October, in the fifty-eighth year of Our Reign, and in the year of Our Lord one thousand eight hundred and ninety-four.

(L.S.)

R. W. DUFF.

By His Excellency's Command,
(L.S.) JAMES N. BRUNKER.

Entered on record by me, in REGISTER OF PATENTS, No. 16, page 147, this nineteenth day of October, one thousand eight hundred and ninety-four.

For the Colonial Secretary and Registrar of Records,

(L.S.)

CRITCHETT WALKER,
Principal Under Secretary.

LETTER OF INSTRUCTIONS.

The Principal Under Secretary to The President.

Sir,

Chief Secretary's Office, Sydney, 19 October, 1894.

Dated 18th
October, 1894.

I am directed by the Chief Secretary to transmit herewith a Commission under the Great Seal of the Colony appointing you, in conjunction with the other gentlemen named therein, to be a Royal Commission to make a diligent and full inquiry into the conduct and management of the Licensed House for the Insane at Cook's River, near Sydney, known as "Bayview House," and particularly as regards the allegations made in the Legislative Assembly respecting the treatment of certain patients in that institution.

2. I am desired to add that the Governor-in-Council has also been pleased to appoint you to be President of the Commission.

3. You will be provided with such clerical and other assistance as may be deemed necessary for enabling you to execute the Commission.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The Hon. Sir Arthur Renwick, Knt., B.A., M.D., M.L.C., &c., &c.

EXTENSIONS OF COMMISSION.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of two months—to take effect from the 18th instant.

Given under my hand at Government House, Sydney, this nineteenth day of December,
one thousand eight hundred and ninety-four.

R. W. DUFF.

By His Excellency's Command,

JAMES N. BRUNKER.

WHEREAS the time appointed for the return of the Commission in the above matter was by an instrument dated the nineteenth day of December last, extended for a period of two months: And whereas it is necessary to extend the same still further. Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commission are to make their return to and for a further period of one month beyond the time in and by the aforesaid instrument appointed for the purpose—to take effect from the 18th instant.

Given under my Hand at Government House, Sydney, this nineteenth day of February,
one thousand eight hundred and ninety-five.

By deputation from His Excellency,

FREDK. M. DARLEY,

Lieutenant-Governor.

By His Excellency's Command,

JAMES N. BRUNKER.

WHEREAS the time appointed for the return of the Commission in the above matter was by an instrument dated the nineteenth day of February last, extended for a period of one month: And whereas it is necessary to extend the same still further. Now, therefore, I do hereby, with the advice of the Executive Council, further extend the time within which the Commission are to make their return until the 9th April proximo.

Given under my hand at Government House, Sydney, this twenty-second day of
March, one thousand eight hundred and ninety-five.

FREDK. M. DARLEY,

Lieutenant-Governor.

By His Excellency's Command,

JAMES N. BRUNKER.

INTERIM REPORT TO THE HONORABLE THE CHIEF SECRETARY.

Sir, Board Room, Chief Secretary's Office, Sydney, 11 December, 1894.

I have the honor to inform you that the period of duration of the Royal Commission appointed to make a full and diligent inquiry into the working and management of the Hospital for the Insane, known as Bayview House, Tempe, will lapse on the 19th instant. In consequence of the protracted nature of the investigation, we shall, as Royal Commissioners, be unable to present our report to His Excellency the Governor within the time prescribed in the Commission, I therefore beg to request that the time be extended for a period of two (2) months—to a date expiring on February 19, 1895.

From official papers placed at our disposal to aid us in executing the terms of our Commission, we see that, on July 10, 1891, in reply to a letter written by Dr. A. J. Vause on 23rd of the previous month, the then Colonial Secretary approved of the renewal for the further period of three years from 31st December, 1891, of an agreement entered into between Dr. Vause and the Government for the care of fifty insane patients in the Licensed House for the Insane, known as Bayview House, Tempe, at the rate of £1 2s. 6d. per week per patient, with the distinct stipulation that such renewal was granted under exceptional circumstances, and that the Government patients were to be removed on 31st December, 1894.

In a further paper, dated December 1st, 1893, the Inspector-General of Insane reported at length, for the information of the Chief Secretary, on the farming out of the insane at Cook's River Road. Dr. Manning then submitted that there had been no economy, but a greatly increased cost in farming out insane patients, and, incidentally, that by reason of political and other extraneous influences, it had been found difficult for the Government to regain possession of the patients farmed out. It was therefore necessary to point out that the whole principle of farming out insane patients is wrong. This memorandum was submitted to the Chief Secretary, who, after careful consideration of Dr. Manning's report and proposals submitted by Dr. Vause, and personal visits to the Tempe, Rydalmere, and Parramatta establishments, made a minute dated 19th March, 1894, to the effect that he had had the figures of cost at the private establishments and the cost of patients in Government institutions carefully checked, and, in consequence, was led to the conclusion that no further extension of the system of boarding-out of insane should be permitted, and he fully concurred in Dr. Manning's report and suggestions; and furthermore, he desired that all parties be so informed, and arrangements made accordingly.

In the meantime, therefore, while asking for an extension of time, we, as the Commissioners conducting this inquiry, recommend and unanimously approve the steps we understand are being taken by the Government for the removal of the Government patients from Bayview House on the ground of increased economy, as fully explained in the report of the Inspector-General of Insane.

I have, &c.,
ARTHUR RENWICK,
President.

To the Honorable the Chief Secretary, Sydney.

**ROYAL COMMISSION TO INQUIRE INTO THE CONDUCT AND MANAGEMENT
OF THE LICENSED HOUSE FOR THE INSANE AT COOK'S RIVER.**

MINUTES OF MEETINGS.

APPENDED are the minutes of the proceedings of the Royal Commission appointed on 18th October, 1894, to inquire into and report upon the conduct and management of the Licensed House for the Insane known as "Bayview House," Cook's River Road, near Sydney, and particularly as regards the allegations made in the Legislative Assembly of New South Wales, respecting the treatment of certain patients in the said Licensed House.

WEDNESDAY, 31 OCTOBER, 1894.

The Commissioners met in the Board Room, Chief Secretary's Office, at 11 a.m.

PRESENT :—

The Hon. Sir A. Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Andrew Garran, Esq., LL.D., James Sinclair Taylor McGowen, Esq., M.L.A.

At this preliminary meeting arrangements were made for the mode of procedure to be followed in executing the terms of the Commission. Mr. W. Wilson, of the Colonial Secretary's Department, attended in the capacity of secretary *pro tem*.

It was decided that it was absolutely necessary to secure the services of a competent shorthand-writer to report the proceedings of the Commission.

Dr. Vause, by letter dated October 27th, applied to the Commission requesting that they would permit him to be represented by counsel throughout the investigation. The Commissioners determined that they could not grant this request.

The Commissioners decided to meet every Tuesday, Wednesday, and Friday, and hear evidence from 11 a.m. to 1 p.m.

The Principal Under Secretary was asked to supply, for the use of the Commissioners, all papers connected with the charges made against the management of Bayview Asylum, including the cases of Major-General Richardson, Mrs. W., and Miss H.; also, to furnish papers and information in his possession concerning the boarding out of patients at this institution from the time it was licensed.

The Commissioners decided it to be judicious to conduct the inquiry with closed doors, and to give no publicity to their proceedings until their Report was presented to Minister.

The Commissioners decided that Dr. Vause should be invited to be present during the sittings of the Commission.

[The Commission was adjourned until the following Friday, at 11 o'clock.]

FRIDAY, 2 NOVEMBER, 1894.

PRESENT :—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Andrew Garran, Esq., LL.D., James Sinclair Taylor McGowen, Esq., M.L.A.

A letter from the Chief Secretary was read, stating that he had approved of the appointment of Mr. T. D. Elwell as secretary and shorthand-writer to the Commission. Other correspondence was read and passed.

The Secretary read the Royal Commission. The following witnesses were examined :—Charles E. Jeanneret, formerly Member of the Legislative Assembly for the Carcoar constituency; Professor Anderson Stuart.

Mr. Barton, Q.C., accompanied by Dr. Vause, appeared before the Commission and applied for permission to attend during the sittings of the Commission as counsel for Dr. Vause.

Mr. Barton and Dr. Vause having retired, the Commission considered the application and unanimously decided to adhere to their former resolution that no parties to the inquiry should be represented by counsel.

In the afternoon the Commissioners, accompanied by the Secretary, officially visited Bayview House, and were shown over various departments of the institution by the Medical Superintendent. Special attention was paid to the isolation rooms on the male side, and of the single rooms in the female division. The main building and grounds were also inspected.

TUESDAY,

TUESDAY, 6 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—Henry Gearey, Sanitary Inspector, Sydney Municipal Corporation; John Joseph O'Brien, Sanitary Inspector, Sydney Municipal Corporation; Edmund Sager, Secretary, Board of Health, Sydney.

[The Commission was adjourned until 11 o'clock on the following Wednesday.]

WEDNESDAY, 7 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—George Dickson, Green House, Annandale-street, Annandale; Alan Farquharson, attendant, Bayview Asylum; Rueben Alfred Peat, attendant, Bayview Asylum; Edward Erickson, warder, Little Bay Hospital; William Little, chief attendant, Callan Park Asylum.

[The Commission was adjourned until the following Tuesday.]

TUESDAY, 13 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—Constable Alex. Mackenzie, Goulburn; Thomas Kernahan, attendant, Callan Park Hospital; Thomas Ramsey, attendant, Callan Park Hospital; Alex. Robinson, formerly an attendant at Bayview House, Camden-street, off Junction Road.

[The Commission was adjourned until the following Wednesday, at 11 o'clock.]

WEDNESDAY, 14 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—Maggie Macleod, formerly nurse at Bayview House, 4, Essex-street, Sydney; Rose MacMahon, formerly nurse at Bayview House, North Shore; Lizzie Verity, formerly nurse at Bayview House, Neutral Bay; Annie Marshall, formerly nurse at Bayview House, North Shore.

[The Commission was adjourned until the following Thursday, at 11 o'clock.]

THURSDAY, 15 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—Rev. E. D. Madgwick, Church of England Chaplain at Bayview House; Rev. Father O'Callaghan, Roman Catholic Chaplain at Bayview House.

[The Commission was adjourned until the following Tuesday, at 11 o'clock.]

TUESDAY, 20 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—Josephine Mackay, re-examined, formerly nurse at Bayview Asylum; Rachel Kelly, formerly nurse at Bayview Asylum.

[The Commission was adjourned until the following Wednesday, at 11 o'clock.]

WEDNESDAY,

WEDNESDAY, 21 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.
 Correspondence read and passed.

The following witnesses were examined:—John Doherty, chief attendant, Bayview House; James O'Brien, attendant, Bayview House.

[The Commission was adjourned until the following Friday, at 11 o'clock.]

FRIDAY, 23 NOVEMBER, 1894.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.
 Correspondence read and passed.

The following witnesses were examined:—Bridget Morrissey, formerly matron, Bayview; Mary Magney, formerly housemaid, Bayview; Mary Doherty, cook, Bayview.

In the afternoon Dr. Garran and Dr. Manning, accompanied by the Secretary, paid a visit to the Hospital for the Insane, Callan Park. They were met by Dr. Herbert Blaxland, Medical Superintendent, who conducted them over various divisions of the institution. Major-General Richardson was seen on the verandah of the room which he occupies during the day. The members of the Commission also inspected the single room, in the corridor in which the Major-General has slept since his admission into this institution.

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President of the Commission, on this afternoon paid an official visit to the Hospital for Insane, at Gladesville. He was received by the Medical Superintendent, who conducted him over the institution.

[The Commission was adjourned until the following Tuesday, at 11 o'clock.]

FRIDAY, 25 JANUARY, 1895.

PRESENT :—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witness was examined :—A. J. Vause, Esq., M.B. *et* C.M. (examination continued).

[The Commission was adjourned until 11 o'clock on the following Tuesday.]

TUESDAY, 29 JANUARY, 1895.

PRESENT :—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witness was examined :—A. J. Vause, Esq., M.B., *et* C.M. (examination continued).

[The Commission was adjourned until 11 o'clock on the following Wednesday.]

WEDNESDAY, 30 JANUARY, 1895.

PRESENT :—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witness was examined :—A. J. Vause, Esq., M.B. *et* C.M. (examination continued).

[The Commission was adjourned until 11 o'clock on Friday, 1st February.]

FRIDAY,

13

FRIDAY, 1 FEBRUARY, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witness was examined:—A. J. Vause, Esq., M.B. *et C.M.* (examination continued).

[The Commission was adjourned until 11 o'clock on the following Tuesday.]

TUESDAY, 5 FEBRUARY, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witness was examined:—A. J. Vause, Esq., M.B. *et C.M.* (examination continued).

[The Commission was adjourned until 11 o'clock on Wednesday, 6th February.]

WEDNESDAY, 6 FEBRUARY, 1895.

The Commission met at 11 a.m. at the Board Room, Chief Secretary's Office.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

After deliberation, Mr. McGowen moved, and Dr. Manning seconded, That the President be empowered to draft a Report for the consideration of the Commission. Carried.

[The Commission was adjourned until 11 o'clock on Friday, 15th February.]

FRIDAY, 15 FEBRUARY, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

A. J. Vause, Esq., M.B. *et C.M.* (examination continued and concluded).

[The Commission was adjourned until 11 o'clock on Friday, 1st March.]

FRIDAY, 1 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

The following witnesses were examined:—Professor Anderson Stuart, re-examined; E. Sager, Esq., re-examined.

[The Commission was adjourned until 11 o'clock on Tuesday, 12th March.]

TUESDAY, 12 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.,
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.

Correspondence read and passed.

The following witnesses were examined:—C. E. Jeanneret, Esq., re-examined; A. J. Vause, Esq., M.B. *et C.M.*, re-examined.

[The Commission was adjourned until 11 o'clock on the following Wednesday.]

WEDNESDAY,

WEDNESDAY, 13 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.
 Correspondence read and passed.

The following witnesses were examined:—John Young, re-examined; A. J. Vause, Esq., M.B. *et* C.M., re-examined.

[The Commission was adjourned until 11 o'clock on the following Friday.]

THURSDAY, 14 MARCH, 1895.

Dr. Garran and Mr. McGowen paid a second visit to Bayview Asylum and re-examined the isolated rooms in the male division of the institution.

FRIDAY, 15 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.
 General of the Insane, | James Sinclair Taylor McGowen, Esq., M.L.A.

Dr. Vause attended on his own behalf to hear evidence and cross-examine witnesses.
 Correspondence read and passed.

The following witnesses were examined:—J. T. Wells; A. F. Twine; A. J. Vause, Esq., M.B., *et* C.M., re-examined.

[The Commission was adjourned until 11 o'clock on the following Monday.]

MONDAY, 18 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Andrew Garran, Esq., LL.D.
 General of the Insane, |

Correspondence read and passed.

The following witness was examined:—F. H. Reuss.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Tuesday.]

TUESDAY, 19 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Hon. Andrew Garran, LL.D., M.L.C., Vice-
 General of the Insane, | President of the Executive Council,
 James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Wednesday.]

WEDNESDAY, 20 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.
 Frederic Norton Manning, Esq., M.D., Inspector- | Hon. Andrew Garran, LL.D., M.L.C., Vice-
 General of the Insane, | President of the Executive Council,
 James Sinclair Taylor McGowen, Esq., M.L.A.

Correspondence read and passed.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Thursday.]

THURSDAY,

15

THURSDAY, 21 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Hon. Andrew Garran, LL.D., M.L.C., Vice- President of the Executive Council,
James Sinclair Taylor McGowen, Esq., M.L.A.	

Correspondence read and passed.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Friday.]

FRIDAY, 22 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Hon. Andrew Garran, LL.D., M.L.C., Vice- President of the Executive Council,
James Sinclair Taylor McGowen, Esq., M.L.A.	

Correspondence read and passed.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Monday.]

MONDAY, 25 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Hon. Andrew Garran, LL.D., M.L.C., Vice- President of the Executive Council.

Correspondence read and passed.

Consideration and revision of draft report.

[The Commission was adjourned until 11 o'clock on the following Friday.]

FRIDAY, 29 MARCH, 1895.

PRESENT:—

The Hon. Sir Arthur Renwick, Kt., B.A., M.D., M.L.C., President.	
Frederic Norton Manning, Esq., M.D., Inspector- General of the Insane,	Hon. Andrew Garran, LL.D., M.L.C., Vice- President of the Executive Council,
James Sinclair Taylor McGowen, Esq., M.L.A.	

Correspondence read and passed.

Further consideration and revision of draft report, which, as amended, was agreed to and signed by each member of the Commission.

Mr. McGowen presented a separate report which was read by the Secretary.

It was ordered that it be printed.

[The Commission was formally closed.]

**ROYAL COMMISSION TO INVESTIGATE CERTAIN CHARGES AGAINST
BAYVIEW ASYLUM.**

REPORT.

To His Excellency the Honourable SIR FREDERICK MATTHEW DARLEY,
Knight, Lieutenant-Governor of the Colony of New South Wales
and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

1. We, the Commissioners appointed by Your Excellency's predecessor, the late Right Honorable Sir Robert William Duff, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, on the 18th day of October, 1894, to make a diligent and full inquiry into the conduct and management of the Licensed House for the Insane, at Cook's River, near Sydney, known as "Bayview House," and particularly as regards the allegations made in the Legislative Assembly respecting the treatment of certain patients, have the honor to submit the following Report:—

2. In pursuance of the powers conveyed to us as Commissioners, we have held 42 meetings, have examined 82 witnesses, and have inspected the Government Hospitals for the Insane at Callan Park, Gladesville, Parramatta, and Rydalmere, as well as the Licensed House for the Insane at Cook's River. At an early stage of the inquiry we considered it advisable, in consequence of its nature, affecting as it necessarily would the private interests and history of many persons, to conduct the investigation with closed doors. We now feel assured that the course thus adopted has been, for many reasons, fully justified. Application was made on behalf of Dr. A. J. Vause, the Medical Superintendent of Bayview House, to be represented by counsel; but, in the interest of all parties to the inquiry, we deemed it desirable to refuse the request; but at the same time decided that Dr. Vause should be allowed to attend the meetings of the Commission, examine witnesses in his own behalf, and be supplied with a copy of all evidence taken. Mr. Gearey, who, as will subsequently appear, was Mr. Jeanneret's informant, and who practically worked up the case for the accusation, also made application through Mr. McGowen to be present at the examinations, but the Commissioners by majority declined the application.

3. Before referring to the specific details connected with our inquiry it may be said that on the 11th of December last we found it necessary to ask for an extension of the time originally provided within which we were desired to submit our Report. The request was granted, the time being extended until the 18th day of February, 1895. Further extensions until 9th April, 1895, became necessary, were applied for, and granted. In consequence of information contained in the numerous documents afforded by the Chief Secretary to aid the Commissioners in their investigation, and assisted in forming conclusions by evidence heard in the earlier stages of the inquiry, we, on 11th December, forwarded to the Honorable the Chief Secretary a Progress Report, recommending and unanimously approving the steps taken by the Government for the removal of patients from Bayview House, on the grounds of economy, as fully explained in the Reports of the Inspector-General of Insane.

The charges
and the
evidence.

4. In view of the seriousness of the charges made against Bayview House and its management, and in view of the fact that this is the only licensed house for the insane of any size in Australia, and looking to the extreme probability of a development of institutions of this kind as population increases and requirements arise, we deemed it to be imperative to make as complete an examination into all details of management and routine as the means at our disposal would allow. As a consequence, the inquiry has been more protracted than we originally anticipated; but we felt bound to listen to all the witnesses produced to support the accusations, and equally bound to listen to the witnesses in defence. As the examination of witnesses proceeded, and as various documents relating to the cases of the patients were submitted, the Commissioners found that, in the interest of many persons concerned in this inquiry, either as patients or as friends of the patients, it would be undesirable to publish the whole of the evidence as submitted. As it appeared equally desirable in the public interest, and for the purpose of disclosing the grounds on which the Commissioners based the conclusions at which they have arrived, to give as far as possible the language of the witnesses on the material points referred to, the Commissioners have stated the leading facts as taken from the lips of the witnesses themselves. In order to give every opportunity to all persons concerned to furnish the Commissioners with whatever information they possessed relative to the purposes for which the Commission was appointed, advertisements were inserted in the morning and evening newspapers published in the metropolis from the 5th to the 18th of December, 1894, requesting those desirous of giving evidence to notify such desire to the Secretary of the Commission.

Historical
sketch of Bay-
view Asylum.

5. Before proceeding to deal with the particular case which led to the appointment of the Commission, it may be desirable to give a brief historical sketch of the institution. The Commissioners find that the Licensed House for the Insane at Cook's River Road was opened early in the year 1868 by Mr. Tucker, and was carried on under the provisions of an Act of Parliament passed in the previous year. This Act authorised the license by the Government of such establishments as Bayview House, and made provision for the establishment of reception houses such as that at Darlinghurst. In the early days of the institution experience at Bayview proved that private patients were not sufficiently numerous to make it self-supporting, and in January, 1869, although there was accommodation at Cook's River for forty patients, the wards were occupied by only eight or nine patients. Application was made to the Government of that day to send State patients to Cook's River to assist in maintaining the institution until private patients so increased in number as to enable the proprietor to work the establishment without loss. In response to this appeal the Government sent twenty-five patients, for whom a maintenance fee of 25s. per head per week was paid, a condition of contract being that as the private patients increased those sent by the Government should be withdrawn. From the official documents supplied for our consideration it would appear that at this period the Government Asylums for the insane were in a deplorably overcrowded state. During the following five years there was no increase in the number of private patients at Bayview House, and in 1874, when the number of Government patients was thirty-two, an application made by Mr. Tucker in the previous year, for 100 Government patients to be placed under his care, was successfully renewed, a clause in the contract stipulating that the increase to 100 should continue for four years at the maintenance rate of £1 2s. 6d. per head per week. Still the number of private patients did not increase, for, as a matter of fact, the total did not at any one time exceed ten during the first eleven years after the premises were licensed. The contract of 1874 was continued to the 31st of December, 1885, with a further increase of twenty-five patients. Dr. A. J. Vause took charge of this institution in 1886, when the number of State patients was reduced to fifty, the amount paid by the Government for maintenance remaining at £1 2s. 6d. per head per week. Between the years 1878 and 1891 the correspondence between Mr. Tucker, Dr. Vause, and the Government relative to the applications for additional Government patients forms a most curious and interesting series of documents. Notwithstanding the frequent opposition of the Inspector-General of Insane to the continuance of this contract, and his repeated representations that the Government was prepared to receive into public institutions the inmates of Bayview House who were paid for by the State, the contract was renewed from time to time, and requests for an increased number were granted to such an extent that in the year 1888 there were no fewer than

than 130 Government patients at Cook's River Asylum. The last renewal was for three years from 1st January, 1892, to December, 1894, and when this renewal received sanction in July, 1891, Dr. Vause was distinctly informed by letter that all Government patients would be withdrawn on the date specified.

6. It is needless now for the Commissioners to refer to the influences which must have been brought to bear on various Governments to result in the renewal of these contracts in face of the opposition of the Inspector-General of Insane, who urged on more than one occasion that both on the grounds of economy and treatment the patients could be equally well, if not better kept at the public hospitals for the insane. In his memorandum to the Chief Secretary, in 1893, which will be found in Appendix "W," the Inspector-General does not hesitate to say that "female patients of the chronic class are maintained in the Government asylums at very considerably less cost than £34 a year, counting all charges and including interest of money as rent of buildings and cost of repairs of every description; yet for patients of this class £56 a year, after all collections are deducted, has been paid at Cook's River. Putting the matter briefly, the Inspector-General asserts that Government has paid the highest rate for the maintenance of the cheapest kind of lunatics. The difference between £56 and £34 a year for 125 patients during the twelve years from 1875 to 1886 and for 50 patients during the eight years from 1887 to 1894, inclusive, has been no less a sum than £41,800."

Renewal of contracts and cost of maintenance.

7. Commenting on this calculation, the Inspector-General says:—"So that in twenty years the Government has paid £41,800 to the proprietors of Cook's River in excess of what the Government patients sent there could have been maintained in Government establishments, and to what purpose? The patients would have been as well housed, as well fed, as well clothed, and in every way as well, if not better, cared for in the Government Asylums as at Cook's River, and there could scarcely have been fewer recoveries. The excess in cost has certainly not tended to the recovery of the patients, since there has not been a single instance of recovery or discharge since 1880—twelve years ago. The only reason which can be given for the unnecessary expenditure of this large sum of money is by way of subsidising a private asylum for the reception and care of patients able and willing to pay for their maintenance, and this is an object, if not of doubtful advantage, certainly one to which it is possible to take exception."

Comments on expenditure by the Inspector-General of Insane.

8. In the year 1885 representations were made to the Government by the Hon. S. H. Terry, M.L.C., and the Hon. Edward Greville, M.L.C., who, at this time, were acting as attorneys for Mr. Tucker, supporting an application made at that particular period for a continuance of the Bayview House contract, and an increase in the number of Government patients sent there for treatment. The substance of the arguments used in the appeal to the Government was—(1.) The success attending the treatment of patients. (2.) The overcrowded state of Government Asylums. (3.) Provisions contained in the Lunacy Act for the establishment of licensed houses, such as Bayview House, in consequence of numbers of persons preferring this mode of treatment rather than public institutions for their friends. (4.) That a Government monopoly would be established in the treatment of lunacy which, it appeared to them, would be impolitic, not only as a matter of economy, but also on scientific grounds; that Mr. Tucker had rendered valuable aid to the Government when the public asylums were overcrowded; that he had endeavoured to comply with every wise suggestion for the improvement of the institution; and that he was warranted in applying for a renewal and continuance of his contract. (5.) That the *per capita* rate paid by the Government for maintenance of these patients was reasonable. To these representations the Inspector-General of Insane replied by saying that amongst the Government patients at Bayview House the proportion of recoveries was small—in fact, although they were mainly chronic cases, the recoveries could hardly have been fewer, only four Government patients having been cured during upwards of fifteen years; that the cost of maintenance was excessive compared with the cost at Government institutions; and that there was adequate accommodation for these patients at public hospitals for the insane. In answer to the argument that unless Cook's River Asylum was subsidised in some way it would be closed, various suggestions were made by the Inspector-General as one speaking with authority, by which Bayview House or similar institutions could be adequately maintained without State aid. Finally he pointed out that the expectation of a continuance of the contract between Mr. Tucker and the Government was not consistent with the letter dated

Representations to the Government.

1st March, 1882, which announced the determination of the Colonial Secretary, "that under the circumstances, and in consideration that the arrangement between yourself and the Government shall be finally closed and the patients removed at the end of three years, that term of extension shall be allowed."

Removal of Government patients endorsed by Commissioners.

An anonymous letter. Purchase money and liability.

9. The Commissioners have examined the whole of these and other documents, contained in the Appendix, and they feel fully justified in unanimously endorsing the action of the Government in removing the Government patients from Bayview House at the end of last year to the public Hospitals for the Insane.

10. While on this part of the subject the Commissioners desire to point out that an anonymous accuser charged the Hon. Edward Greville, Mr. Henry Copeland, M.L.A., and others, with having a proprietorial interest in Bayview House. These gentlemen when called before the Commission, strenuously denied this allegation, and the Commissioners are clearly of opinion that the sole proprietorship of this institution has been vested in Mr. Tucker in the first place, and subsequently in Dr. Vause, the present Medical Superintendent. A further charge made by the same unknown author was that large profits were made, not only out of the Government patients but also from the private patients at Bayview, and the figures supplied by the Inspector-General of Insane appear at first sight to support such a conclusion. From the evidence of Dr. Vause, given with his official books before him, it would appear, as far as he is concerned, that whatever profits he has made through Government patients have been absorbed in the repayment of purchase money, the increase of accommodation, the general improvement of the asylum buildings, and the acquisition of a larger area of land adjoining Bayview House grounds. Dr. Vause was subjected to rigorous examination on this particular point, and he informed the Commission that the original purchase money, as arranged between himself and Mr. Tucker, was £14,500. In addition to the purchase price the present proprietor testified that he had expended £500 for furniture, £2,500 on a new house, making a total indebtedness of £17,000. He estimated, too, that he had expended about £3,000 in repairs and improvements, and in all £5,000 in new buildings. Altogether by instalments extending over a number of years the debt has been reduced out of profits from £14,500 to £8,500. The final instalment of £9,500 of the liability to Mr. Tucker fell due on the 1st of January, 1894. Dr. Vause, on the 2nd April, borrowed £9,000 from an insurance company, this paying off Mr. Tucker. Of the last mortgage, some hundreds have been paid off. The sum of £500 has been paid on the new house account, leaving a remaining total indebtedness of £10,500. In fact, Dr. Vause asserts that the whole of his profits made during a period of twelve years, exclusive of £3,500 paid to Mr. Tucker as purchase money, and after paying working expenses and the interest due on borrowed capital, have been devoted to the reduction of his liabilities. In his evidence Dr. Vause said there remained a sufficient margin for the provision of a sinking fund to pay off by instalments the original amount borrowed while he had the Government patients, but since they have been removed the revenue, after paying working expenses, has not been more than the customary salary of a medical superintendent.

Major-General Richardson's Case.

The charges made by Mr. Jeanneret, then M.L.A.

11. Referring now to the particular case which led to the appointment of this Royal Commission we wish to state that on May 22nd, 1894, Mr. Jeanneret, a member of the Legislative Assembly for the Carcoar Constituency, moved the adjournment of the House to discuss what he termed "the inhuman manner in which the Licensed House for the Insane, Bayview House, Cook's River, is conducted." In the course of his indictment the hon. gentleman made the following remarks, as reported in *Hansard*:—"I think it behoves the Government, upon the statement I have laid before the House, to make a full inquiry. The inquiry will prove this: That a gentleman has been for months past—for the last four months to my knowledge—kept from 5 in the afternoon till 7 in the morning, over twelve hours, in a cold stable, without even a bed to lie upon, without any water, without any attendant, without any food, having upon his body nothing but his night-shirt." Mr. Jeanneret was the first witness examined, and his first answer before the Commission was an affirmation that the charge he previously made in Parliament was valid and true. He disclaimed any personal knowledge of the circumstances or the management of the institution, and admitted that he levelled these

these allegations against Bayview House on information derived from a hearsay source. Although this was the first time the matter was mentioned in Parliament it was not the first occasion on which it had received the attention of the Government. It is evident that Mr. Jeanneret was set in motion by a house inspector under the City Corporation, named Henry Gearey, who informed him that Major-General Richardson was the recipient of inhuman treatment at Bayview Asylum, and that he was prompted to this activity in the patient's behalf because of a long standing friendship and of kindness rendered years ago. When cross-examined on this point, Mr. Gearey admitted that he had met Major-General Richardson and shaken hands with him only once at a ball in the Sydney Town Hall; that he had never visited at Major-General Richardson's house; and that he was not on terms of intimacy with him. Mr. Gearey received information from a man named Alexander Mackenzie, now in the police force, but who had been employed as an attendant at Bayview House for about four and a half months, and who still had a cousin there as a nurse, named Margaret Macleod. Mackenzie admits having been dismissed from the institution as he thought wrongly (1062-3). He wrote to Gearey saying, he knew Major-General Richardson was not getting justice, and to see that he got it would be far sweeter to him than any other form of revenge (1064). The cause of dismissal as regards Mackenzie is also self-supplied, for in answer to Question 1219 he accepts an impeachment embodying insubordination and impertinence to the lady superintendent. He refused to remove his hat whilst in her presence in the office, and when informed of the circumstance replied, "I consider that I should only take off my hat to my superiors." For having been guilty of this conduct, which he considered inconsistent with discipline, the Medical Superintendent dispensed with the services of this attendant, and the action of Dr. Vause on this occasion is the only motive disclosed to us which prompted this particular witness in his subsequent procedure. Consequent upon this particular set of circumstances, the Commissioners have had to contend with unusual difficulties in the evidence laid before them, as to the general management, inasmuch as in the main the testimony in support of the various accusations has been given by discharged servants, whilst much of the rebutting evidence is from servants still engaged at the institution. Assertions made under these conditions must be received with caution and reservation. Indeed, in numerous instances, the statements are absolutely contradictory, amounting to positive assertions on one side, and equally unequivocal denials on the other.

12. In view of the complaints made, Sir George Dibbs instructed Professor Anderson Stuart, the Government Medical Adviser, to make a special visit to the establishment and report. He took with him Mr. Sager, the Secretary to the Board of Health, Messrs. Gearey and O'Brien, house inspectors under the City Corporation, and Detective Goulder, a member of the Police Force, and made a surprise visit on 20th of May at 5.30 a.m. His report, which was strongly adverse in its tone, was accompanied by confirmatory documents signed by Mr. Sager and Messrs. Gearey and O'Brien. On these reports the Inspector-General of the Insane, made an official report, and another was made by the Official Visitors. To these Dr. Vause replied. These documents were placed before us at the commencement of our inquiry, and, together with Mr. Jeanneret's statement, furnished the material on which the Commissioners had in the first instance to proceed. These documents are embodied in and form a part of the evidence of their several authors, and reference to them will show that they contain a full history of the case and the charges against the management in the treatment of Major-General Richardson while at Bayview House.

13. Briefly told, the history of this case reveals the fact that the Major-General, who at the period was Commandant of the New South Wales Land Forces, was suddenly seized with a mental malady in November, 1892. The exciting causes are described by medical experts and medical friends of the family as having been extreme worry over a certain Royal Commission appointed to inquire into Military matters of New South Wales, and adverse criticisms on the part of Victorian Military authorities. A conference of medical gentlemen, consisting of Dr. Manning, the Inspector-General of Insane, Brigade-Surgeon Williams, the Principal Medical Officer of the New South Wales Military Forces, and an intimate friend of the Major-General, and Dr. Robt. Scot-Skirving, the family physician, was held. The Inspector-General advised a preliminary course of treatment in a private house under medical guidance and with skilled attendants, but difficulties in obtaining

obtaining suitable custodians resulted in the patient being admitted to Bayview House on the certificates of Dr. Williams and Dr. Scot-Skirving. The patient was received at Bayview House on 22nd November, 1892, the case being regarded medically as one of general paralysis of the insane in its acute or maniacal stage. There is little or no direct personal evidence as regards the early treatment of the patient at Bayview House, but a perusal of the case-book, extracts which will be found in Appendix Y, shows that on the day after admission the Major-General, as night drew near, became excited and noisy, and, as a consequence, was placed in the isolated room to sleep. This treatment was repeated on the following day, and was continued for about three weeks, when he became more tranquil. Subsequently it would appear that the patient occupied sleeping rooms in the main building, both upstairs and downstairs, according to the varying moods of his mental and physical condition, until November, 1893, when, owing to excitement, destructiveness, and other habits peculiar to paralytics in this stage of the disease, it was deemed by the Medical Superintendent advisable to put him again in the isolated room at night to sleep. He continued under this treatment until the 20th of May, 1894, when, on the order of the Chief Secretary, he was removed to the Hospital for the Insane at Callan Park. The case-book notes show, furthermore, that the Major-General occupied a private room during the night in the main building, with several exceptions, when he was for a single night at a time placed in the isolation room from December, 1892, to November, 1893.

Allegations
against the
treatment of
the Major-
General.

14. Grouped and relatively arranged, the allegations against the management of Bayview House and the treatment of this particular patient, as taken from the statements, reports, and sworn testimony of accusing witnesses, are as follow :—

- (1.) That Major-General Richardson was unnecessarily placed in an isolated room to sleep, without members of his family or the family physician being acquainted with the fact.
- (2.) That he was confined at night in a cold stable; that the building was altogether unsuitable for this purpose; that it was unnecessarily damp through being too near to the ground; and that it was deficient in light and ventilation.
- (3.) That, for purposes of economy, the patient had no bed to lie on; no bed covering—no night-clothes but a night-shirt; that he was often put in the room naked; and that he wore unsuitable day-clothes.
- (4.) That, owing to neglect, the room was not properly cleaned; that there was no night convenience provided for the relief of nature's calls; and that the room smelled foul from the presence of stale filth.
- (5.) That he was frequently left without food or drink for more than twelve hours, including the whole of night-time.
- (6.) That he was frequently left unattended for twelve hours, including night-time.

15. The Commissioners will deal with these charges *seriatim*, and review the confirmatory and contradictory evidence. "That the Major-General was placed in an isolated room to sleep, without members of his family, or the family physician, being acquainted of the fact" is a complaint which receives most emphasis, and naturally so, from Mrs. Richardson and Mr. Sydney Richardson. It is alleged that the sleeping accommodation of this patient when in the single room was never mentioned by the asylum authorities to the relatives and friends of the patient, nor to the official visitors, until they discovered the fact by personal inquiries. Mr. Sydney Richardson deposed that Dr. Vause told him his father was sleeping in the room opposite the sitting-room down-stairs (4714); that he had no recollection of the Medical Superintendent informing him it would be necessary to put the Major-General in a single room to sleep (4713); that he was never told by Dr. Vause that the patient was sleeping in an isolated room at night, but, on the contrary, he understood to the last that an attendant was constantly with his father (4664). Probably some confusion arose from the use of the definition "single room" by Dr. Vause when conversing with the relatives and friends of the patient. It is easy for any person unacquainted with the technical meaning of the term to be misled by its use, he being under the impression that a patient in a single room is merely sleeping by himself in ordinary conditions instead of in an associated dormitory with other patients, whereas the actual meaning of the term in the working
of

of establishments for the insane is sleeping in isolation. It is therefore probable that Mr. Sydney Richardson applied the former interpretation to the term, and it is certain that Dr. Williams, a friend of, and constant visitor to, the patient, was misled, for, in answer to questions 4945 and 9596, he says, when informed of the General being in a single room, he always understood that he constantly had an attendant with him, and that this room was either upstairs or downstairs in the main building, and certainly not in a detached building. Although having been kept in ignorance of the nightly sleeping accommodation of the patient, he could not complain of the treatment, and he believed the Medical Superintendent did everything he could for the comfort and welfare of the patient. Mrs. Richardson informed the Commissioners (7620 *et seq.*) that she took it for granted the Major-General was under constant supervision. When visiting the institution she saw the patient, first in his bedroom, occasionally in a sitting-room, and in various rooms down-stairs. She believed he at first slept upstairs, that he was then brought down to a room opposite the one she saw him in, which she understood to be the room in which he slept latterly. In the course of conversation, the patient informed her that he slept in a place he called a stable, and when she questioned the Medical Superintendent on this assertion, Dr. Vause assured her that the Major-General was not altogether responsible for what he said. Most emphatically she resented not having been informed of the patient's removal from the main building into isolation, and, failing having been told of the change herself, maintained that the least which should have been done was to acquaint the Inspector-General and Dr. Scot-Skirving of the fact. The medical testimony relative to the necessity for sleeping in isolation is singularly unanimous in support of this treatment. Dr. Scot-Skirving, the patient's family physician, did not appear to regard the isolation being kept secret from himself or the family as a serious offence, for even if he was told (4986) that the Major-General was placed in an isolation room it did not make any impression on his mind. If he had been apprised of the patient being in solitary confinement at night, he would, he said, at once have thought such treatment to be necessary, as (4991) he had every confidence in Dr. Vause as an expert in the matters of lunacy. Dr. Blaxland, the Medical Superintendent at Callan Park Hospital for the Insane, who received the Major-General on the day of his removal from Callan Park, asserted, in answer to Questions 4755-4816, that it was absolutely necessary to place him in a separate room and to make special provisions for the patient because of his peculiar habits. Precisely the same course of treatment was followed in the early days of his residence at Callan Park as had been in force at Bayview House, with the exception of an attendant being constantly on watch outside the single-room door, which was left ajar for observation purposes. A trial with an attendant inside the room was made, but it would not answer at all, the patient becoming more excited in company than when alone.

16. The Inspector-General of Insane does not view the reticence of the Medical Superintendent at Bay-view in the same lenient light as other medical witnesses. In his report to the Government on this case, he says he "saw no objection to General Richardson being placed in one of these rooms as an occasional measure, or to the continuance of the practice for a brief period, always under proper conditions as to the details of treatment; but he was decidedly of opinion that when Dr. Vause found he had a trying and difficult case requiring exceptional treatment at night, and taxing the limited resources of a comparatively small establishment, so as to interfere with the rest and comfort of other patients, he should have taken steps to inform both the private medical attendant of Major-General Richardson and his family and himself, so that new and special arrangements, pecuniary and otherwise, might have been made, and rooms set apart and structurally altered if necessary in the new house lately added to the establishment. * * * It was clearly the duty of the Medical Superintendent to bring under his notice any departure from usual methods of treatment." In cross-examination, the Inspector-General supplemented his report by saying he blamed Dr. Vause (8618) for not having fully reported the case to him and to the medical attendant of the Major-General's family, who frequently visited the asylum. When he made inquiries as to the patient's sleeping-room (8619) he was told by Dr. Vause that the bedroom had been changed, and that he was sleeping in a dormitory below; that he *occasionally* occupied a single room; but he was not aware that he was in one single room for a long period until the whole matter was placed more fully before him. In his opinion it would

would have been nothing short of cruelty to inform Mrs. Richardson, she being so highly sensitive and anxious about the patient, but the family medical attendant should have been told (8658). If he had known it was necessary to resort to continuous single-room treatment in the night-time (8635), he would have thought it advisable, considering the situation of the single rooms, which, although quite sufficient for their objects and ordinary purposes, are certainly an outbuilding, and liable to be a source of objection to people who do not understand questions of insanity, and considering that Mrs. Richardson wished her husband to have special night attendance, to make arrangements with Dr. Vause, in consultation with the medical attendant of the family, to have a special attendant stationed outside the door or in an adjoining room, similar to the course followed with the patient at Callan Park. While not considering such attendance or surveillance absolutely necessary, the constant presence of an attendant would have been more satisfactory to the family. He did not think Major-General Richardson would have been any better with an attendant so immediately near him while he was locked in, neither did he think the Major-General suffered in any degree from being placed where he was at Bayview House. If the whole matter had been fully and unreservedly reported to him at the proper time his opinion was that all the subsequent trouble would have been saved.

17. The official visitors were equally ignorant of the change from the main building to the isolation ward, until by personal investigation they discovered that it had been made. Sir Alfred Roberts, the Chairman of the Visiting Boards (7705), said the fact was never brought under his notice, neither was it recorded in the medical journal, nevertheless, had he been in charge of Bayview House he would, considering the excited and restless condition of the patient, have placed him in isolation (7775-6). In his opinion, the Medical Superintendent was not blamable for taking the course he took (7784). In the mind of Sir Alfred Roberts, too, it is evident there was some misunderstanding of the term "single room," as, in reply to Questions 7880-6, he admits having read the report of the case in the medical case-book, and if an entry was therein made, announcing that the Major-General occupied a single room during the first week of his residence there, he did not understand it to mean his being placed in isolation, as he did not occupy one of the isolation rooms at the time, but a single dormitory. He, however, did not regard the case as one of absolute isolation, nor a *bonâ fide* case of seclusion. This subject opened up a somewhat wide question, which the Commissioners deal with at length under a separate heading further on in this report. Mr. Nugent Robertson, another member of the Visiting Board (Questions 7945 to 7950), informed the Commissioners that neither from entries in the medical journal nor information volunteered, but from personal inquiries, he learned that the Major-General slept in an isolated room, and had been so sleeping there for some six weeks before the circumstance came within his knowledge. He understood that the Major-General was placed there temporarily, and was surprised to find he had been sleeping there longer than the visitors were aware of. While not aware how long he was an occupant of this particular room at night continuously, he knew the patient to be there for a considerable period before the fact became a matter of public notoriety. When he made the discovery—either from Dr. Vause or an attendant, he did not know which—he examined the medical journal to ascertain if the terms of the Act had been complied with, but found no entry. Dr. Huxtable, also an official visitor, approved of the single-room treatment in this case, adding that, in his opinion, if the patient was noisy and restless at night such a condition would be good and sufficient reason to place him beyond the possibility of self-injury or annoying other patients (8114). It did not come to his knowledge that the General was sleeping in an isolation room until the Medical Superintendent acquainted him; neither could he tell the Commissioners how long or how often he was placed in that room to sleep. There could, however, be little doubt that it was, for medical reasons, proper treatment, which was adopted in scores of similar cases. Keeping the members of the family ignorant of the patient's sleeping accommodation was not regarded as a matter for complaint by this authority, as he declared (8118) "That would wholly depend on what the family consisted of. Letting such things be known often did more harm than good." On the other hand, he is certain that the removal of the Major-General should have been notified in the proper book for the information of the official visitors. Dr. Charles James Cox, the present Chairman of the Visiting Board, whose

whose close, intimate friendship with the Major-General has extended over many years, has taken a deep and constant interest in this case. Reporting to the Colonial Secretary on this patient and his treatment at Bayview House, Dr. Cox, three days after the Major-General was removed to Callan Park, said it had been explained to him that restless habits caused by disease rendered it impossible to keep him in an ordinary bed in an ordinary room, and that it had been found necessary to place him in a secluded room at night, as he could not be satisfactorily managed in any other way without undesirable and injurious coercion. Knowing well the whole of the circumstances surrounding the case, he unhesitatingly approved of the patient sleeping in isolation (8267-75); it was the best course to be followed; and the same thing was done in hundreds of other cases of that nature. It was, however, only eight days before the Major-General was removed to Callan Park when, prompted by some undefinable impulse, he casually inquired if a patient occupied the room (8270), and ascertained that it had been used as the Major-General's sleeping apartment for some considerable time. In his opinion, Dr. Vause was not required by law to report to the official visitors or the family any change made in this respect, nevertheless he thought it would have been more judicious on the part of the Medical Superintendent, for his own comfort's sake, to have informed the members of the Visiting Board and the Inspector-General of Insane.

18. Dr. Vause defends himself against this charge in his main statement to the Commissioners (8930), by asserting that in the transitional stages of the disease the Major-General, at different periods, became so irritable at night, even at the presence of an attendant, that the excitement speedily developed into violent and dangerous outbreaks. These naturally had a retarding effect on his recovery, and he consequently thought it advisable to place him in a single room at night, and at night only. There was, he maintained, in reply to the strictures of the Inspector-General of Insane, "no departure from usual methods of treatment" in following this course, for if this room was fit for occupation for one month it certainly would be for six. Solely out of kindly feeling toward Mrs. Richardson he states, that he shrank from adding to a distress which was visibly affecting her health by enlarging upon the condition of the patient in any way calculated to increase the pain of mind she so acutely evinced. Although he did not make a prominent feature of the fact of the Major-General sleeping in isolation, he says he mentioned it incidentally to several medical men, notably Dr. Scot-Skirving, Dr. Williams, and to the Inspector-General of Insane. Here again the necessity for the medical attendant to have been more explicit when mentioning the sleeping-room of the Major-General to members of the family and medical visitors to the asylum prominently arises, and is admitted by Dr. Vause himself when he states "that he told Mr. Sydney Richardson the General occupied a single room at night, but he could quite understand that this gentleman thought he meant an ordinary bed-room occupied by one person." The matter, however, Dr. Vause proceeds to explain, did not strike him in that light at the time he proffered the information. The isolation of this patient (9171) was in accordance, as far as his knowledge extended, with the most important medical opinions yet obtained; the change to this state amounted to nothing more than the necessities of ordinary treatment, and he had not the slightest doubt in his mind as to the advisableness and humanity of placing the Major-General in a single room at night (9216). This change was notified in the case-book, and he did not consider himself under any obligation to dilate upon these circumstances to the official visitors, the medical visitors, or the members of the family. Most strenuously he denied (9983-7) having shown the friends of the patient the room he previously occupied as the room he was sleeping in for the purpose of deceiving them while he was undergoing single-room treatment at night, neither did he (10205), by evasion or otherwise, attempt to hide the fact of the Major-General sleeping in a single room from the official visitors.

19. The conclusions the Commissioners arrive at on this point are as follow :—

1. In placing Major-General Richardson in this isolated room without The Findings. acquainting the Inspector-General of Insane, the Official Visitors, or the members of the patient's family of the change, Dr. Vause, in his capacity as Medical Superintendent, carried out a practice, which is in accordance with the rules for the government and management of institutions for the treatment of the insane in Great Britain, America, and New South Wales.

2. Your Commissioners, in view of the special circumstances of this case consider it was an error of judgment that the Medical Superintendent failed to inform the Inspector-General of Insane, the Official Visitors, the private medical advisers of the Richardson family with his procedure in this respect, notwithstanding the views expressed by many medical witnesses in connection with the treatment of cases of this kind.
3. In fairness to Dr. Vause it should be mentioned that no complaints whatever were made of the treatment of the Major-General during the first twelve months of his residence at Bayview. On the contrary, it is admitted that it was solely due to the treatment and care accorded by Dr. Vause that the patient improved so much after his admission. Yet part of that treatment, and, according to Dr. Vause, an essential part, consisted in putting the patient to sleep in the very room and under the same conditions as to attendance that subsequently furnished the ground for complaint. It is clear that no motives of economy or convenience could have induced the change to the isolation room, and that Dr. Vause was influenced solely by medical considerations.

Single room
and its suit-
ableness for
occupation.

20. The second series of accusations arranged from the evidence and documents submitted to the Commissioners is—"That the patient was confined at night in a cold stable; that the building was altogether unsuitable for the purpose; that it was unnecessarily damp through being too near the ground; and that it was deficient in light and ventilation." That the Major-General was confined at night in a cold stable is an assertion made by Mr. Jeanneret in Parliament, without personal knowledge, but on the evidence of Mr. Gearey, whom, in answer to question 5, he describes as a reliable witness. It will be as appropriate, as it is necessary, to describe at this stage the visit made to the asylum by the Medical Adviser to the Government, out of which most of the allegations in this particular case have arisen. Before day-break on the morning of May 20th, armed with authority from Sir George Richard Dibbs, Professor Anderson Stuart, Mr. Sager, Mr. Gearey, Mr. O'Brien, and Detective Goulder, of the Metropolitan Police Force, proceeded to Bayview House. On entering the grounds through the front gate, no one objected to their presence (407) nor asked the nature of their business. They met an employé and asked him where Dr. Vause could be found, were directed towards the kitchen, and passed on, the employé not seeming surprised (408) at seeing strangers on the premises so early on a Sunday morning. Unchallenged, the visitors proceeded through the grounds (406) to a small courtyard, dividing the main building from another section of the male division, and containing the isolation wards. "After a time," an attendant appeared upon the scene (Professor Anderson Stuart's report); he is said to have roused the head attendant, who, after considerable delay, came to the visitors. Professor Stuart stated "his office, authority, and business," but the chief attendant told him he could not let any patient be inspected without Dr. Vause's direction, and that gentleman was still in bed in his residence. The visiting party then divided, the Professor and Mr. Sager going to the office, and Mr. Gearey and his official comrade being left on guard over the building supposed to contain the patient, to see whom the visit had been made. This precaution was taken under the instructions of Professor Anderson Stuart, who directed Gearey (140) "to steadfastly keep his eye on the place where Major-General Richardson was supposed to be confined, and he did so, feeling that unless he did there might be some attempt to smuggle him out." Dr. Vause was roused out of bed by his domestics, and Professor Stuart, after apologising for his intrusion at such an early hour, explained the nature of his mission. No hesitation was displayed in complying with the request, the Medical Superintendent without demur conducting the Professor and Mr. Sager to where the Major-General was. In the meanwhile, however, John Doherty, the senior attendant, and James O'Brien, another attendant at Bay-view, moved the Major-General "as a mere matter of routine" (2699) from this room, across the yard to the lavatory, and as the attendants with the patient entered at one end, Professor Stuart, Mr. Sager, and Dr. Vause entered at the other. A passing greeting was exchanged between the patient and the Professor, who, with his companions before-mentioned, proceeded through the door-way by which the Major-General had entered, when he was met by Gearey, who told him the patient had been taken from the left-hand compartment of the building in the yard. The door had been closed. Dr. Vause directed it to be opened, and he, with Professor Stuart, Mr. Sager, Gearey, and

and O'Brien, entered the room and made an inspection of it and its contents. At the outset the Commissioners feel it incumbent on them to say that the evidence relative to this inspection reveals a surprising want of observation. Perhaps that may be explained to some extent by the early hour and breaking daylight, together with the hurried nature of the inspection. Neither of the accusing witnesses stated the actual time this part of their morning's operations occupied, but in defending himself against these allegations Dr. Vause says, in answer to questions 9249-50, that from the time he first saw Professor Anderson Stuart until the visitors left the premises only about 10 minutes elapsed, and he did not think they were 2 minutes in the single room. The whole visit, he continues (9383-4), was so hurried in character that there was no time for explanations of any kind. After rapidly going through the place the Professor left, saying, "I have seen the General; I have seen the room he occupied; good morning."

21. Returning to the charge that the building is a cold stable, Professor Stuart, in his report, states that the building is a "stable-like outhouse, the compartment being quadrangular in shape, about 12 by 12 wide, with a very high ceiling, with no window or means of ventilation or of warming, with a wooden floor on the level of the ground." The ventilation was said to be absolutely insufficient, but contrary to the statement in the report, Dr. Stuart, in answer to Question 36, expressed the belief that there was a small window, screened by a shutter. At all events, his conclusion regarding the ventilation is that it was not up to standard unless (57) the smell of a urinal was taken as the standard. He gave the opinion the floor should have been made to slant, and it might have been of asphalt, and if of wood it could have been impregnated with paraffin. In a subsequent examination he said that he did not recommend asphalt because it would be too cold (10353). His assumption was that the building had been a stable, and he contended absolutely that there should be light and warmth in the room, whereas the patient was confined (102) in an outhouse within four brick walls. Although the building had the appearance of a stable (56) he made no inquiries on the point, but proffered an opinion to the Commissioners that if "the place had been a stable at any time, and converted into its present use, so much the worse." While inferring that the patient had been cold during the night, and that he was shivering from cold when removed, he admitted that this shivering appearance might be but the usual tremor of a paralytic. The witness Gearey, who must be regarded as the chief accuser and who worked up the whole case against the management of the institution, in reference to the alleged ill-treatment of the Major-General, is more pronounced in his statements than Professor Stuart or any other of the visitors to Bayview House on the 20th of May last. He asserts that he kept faithful and steadfast watch over the door of the room in which the patient was confined until his removal to the lavatory was effected. He accuses one attendant of attempting to push him away and of ordering him off the premises (142 *et seq.*), but he remained until he saw Major-General Richardson taken across the yard supported on each side by an attendant. At this moment the Major-General, it is said, was shivering from cold, seemed to dread crossing the yard (158), was expostulating with the attendants, and exclaimed, "Don't push, I have not got my coat on yet; good morning, gentlemen, I don't want a bath, I'm too cold." Further on this witness asserts that the patient's "face was drawn with pain (184), and he looked like a man going to execution." According to Question 162, the room was examined carefully by this witness, who says there was no ventilation beyond that available through the observation-hole in the door (168). There was a shutter high in the wall which had not been opened; no light except that which came through the open door (170); saw no ventilation-bricks (171); the floor seemed damp and the room cold (179); the room was pitch dark, and if there was a window it was covered up with a shutter (194); and the reason why he noticed this was that there were unbroken cobwebs on the shutter, which could not have been possible had it been opened on a recent date (200). In reply to Question 212, Gearey says he never left the vicinity of the door during the time Professor Stuart and Mr. Sager were away. This particular evidence was given on November 6th, 1894, and on January 4 this year the same witness was re-examined, and said he was still positive he saw the cobwebs over the window, and he was equally sure the window had not been open for months. These cobwebs he saw from the outside of the room over the window, and he could not see anything from the inside,

inside, because it was too dark (8446 *et seq.*). Cross-examined on this point Gearey, although having said formerly that he never took his eyes off the door, declares that he saw the cobwebs when walking up and down across the yard between the closets and the room, and when near the closet he could not see the cobwebs, but when it became broad daylight, and he walked round the building, he saw these spider-webs, which had not been broken by the opening of the shutter. Gearey's opinion as to the origin of the building is emphatically that it was a stable, and that the window in the wall was, in the earlier days, specially put there for the purpose of pitchforking loose hay into the loft. The size of the opening was about 2 feet square, for "when he looked up he knew there were no other means of egress from the room," and he said to himself "you cannot get a man out of that."

22. John Joseph O'Brien, a fellow official of Gearey, who was also present at the proceedings at Bayview House on May 20th, in the main corroborates this accusatory testimony. Speaking as one having had nine years experience as a sanitary inspector, he said he examined the room (260 *et seq.*) but saw no means of ventilation. The room was so dark that it looked like a cell, and failing to see any light he felt positive there was no window in the wall. With a boarded floor nearly level with the ground, the temperature of the room was cold, the floor was damp, and the Major-General appeared to be in a cold, shivery, weak condition (2659). When the door was first opened (278) he did not use the opportunity of personally inspecting the actual condition of the Major-General while in the room, nor did he see cobwebs over the window shutter (285). Practically, he repeats the evidence of the previous witness relative to the removal of the Major-General, and his spoken resentment while crossing the yard. He is also positive he saw no window in the room, which was quite dark (306), except for the light admitted through the open door, and that, he says, was the only light which came within the walls. It was a dark morning, not quite daylight (332), and, with the light thrown in through the open door, he was positive cobwebs could not have been visible.

23. Mr. Sager, the Secretary to the Sydney Board of Health, states in his report that the building resembled, from outside appearances, a stable; the room itself was 12 or 14 feet square, 16 feet high, with a wooden floor, no window, and no ventilation, the only opening being an observation hole in the door with a shutter. Having made a careful observation of all he saw (358-364), he did not discern any apertures for ventilation or light; there was no distinct place in which light could enter the room; if there was a window it must have been covered with shutter or blind; it certainly would be impossible to have seen cobwebs at that time in the morning with the light available, for, on looking round, he saw nothing but semi-darkness; indeed it would have been as much as an observer could see to notice the shutter itself. Since visiting the establishment he had been informed that there was a window in the room, but when he looked round he saw no sign of any aperture whatever. Differing from the other witnesses, Mr. Sager says the room did not appear to him cold or warm, neither could he detect the difference between the Major-General shivering from cold or from paralysis (401). Mackenzie, who attended on the Major-General every second day during the few months he was engaged at Bayview House, informed the Commissioners that the patient used to call his sleeping-room a stable (855). Personally he saw by going into the room (953 *et seq.*) that the Major-General was shivering with cold, and he told another attendant named Copley it was a disgrace to the country that a man who had occupied such a high position as the patient should be put in a room like that. The room was cold at night and warm in the morning, when frequently he had seen the Major-General shivering (1005). He considered the boarded floor being close to the ground was a great fault, as in damp weather it would not dry. His evidence was at direct variance with regard to light and ventilation to the statements made by the previous witnesses, inasmuch as he states there was (956) a hole high in the wall opposite the door which had a shutter on the inside and two or three bars on the outside. With an intimate acquaintance of this room, he said this shutter was opened every day, and in warm weather it was frequently left open at night. Sometimes he let the shutter down so as to let light into the room early in the morning (he being left to his own devices in this respect), and then the head attendant would put it up again (1011-1012). Mr. Sydney Richardson, when asked if the patient ever made any reasonable or rational complaint regarding his treatment, said his father informed him (4652-54)

on

on more than one occasion some months before he was removed from Bayview House that he slept in a stable, and on questioning Dr. Vause upon this assertion he replied that his father's statement amounted to nothing more than the mere ramblings of an insane person.

24. Against these charges numerous witnesses, professional and otherwise, gave convincing testimony. The attendants now at Bayview House on the male side, and some who have left the employ of Dr. Vause, gave entirely contradictory evidence. Attendant Farquharson in answer to questions (9596-9597) states, there was a shutter in the room, which on cold nights was pulled down by a string from the back and left up when the nights was warm. A painter named Peet, employed at Bayview House, asserted that there is a window in this room (687) which was always open or partly open when he saw it. William George Dickson who was a warder at the institution some eleven years ago, gave evidence to the effect (443) that there was a window in the room in his day, but it was kept closed by a shutter. Doherty, the senior attendant at present employed by Dr. Vause, contradicts Mackenzie by saying in answer to questions (2731 *et seq.*), that the floor of this room was always dry by between 10 and 11 in the morning. The patient might have said that he was sleeping in a stable, but he never objected to go into the room. There was a window in the room, and if the night was cold the shutter would be down; if it was warm it would be left open. On the warmest day the patient was always shaking, but he did not shiver from cold when taken out of this room on that particular morning. Even on winter mornings after leaving a warm room he never felt the sleeping apartment used by the patient, strike him as cold (2955). The ventilation was not faulty. The unbroken cobweb assertion he distinctly denied (2837) as the shutter in question was raised every day. Another attendant named James O'Brien, who for a time at all events, was alternately on night duty with Doherty to watch over the Major-General, states in his evidence that sometimes the patient would object, and at other times ask to be put in this room to sleep (3144). He too said it was his custom to pull down the shutter or raise it according to the state of the weather. He did not think the Major-General shivered from cold, for he was always very shaky on the warmest day. The shutter was certainly pulled up once a day at least (3234), hence it was impossible for cobwebs to have been where they were said to be. The Hon. Edward Greville, M.L.C., questioned in reference to this isolation building, said he never knew it to be used otherwise than as a receptacle for refractory patients. Mr. Tucker informed him that it was built and had been devoted ever since to this special purpose (4618-19). An architect who for some time occupied the room as a patient both in winter and summer, and who is now recovered, gave valuable evidence as an expert on this room. He said he occupied it at his own desire (6129 *et seq.*); there was nothing uncomfortable in his experience; he never suffered from cold while there in the winter; the heat was not excessive during the summer; the ventilation was perfect; and he was satisfied with the room in all respects. Particularising the ventilation (6152) he said there is an opening about 6 or 8 feet from the floor, in the wall to the outer air. In cold weather a shutter is put over this opening, and there is also ventilation in the door through the observation aperture. He thought the ceiling was perforated; but of a certainty the ventilation always struck him as being good. Another professional gentleman, who has intimate knowledge of both isolation rooms, is no less pronounced in praise of the ventilation. They are described as having air space below the floor; as possessing proper means of allowing the air to escape; and in his opinion it is better to keep these rooms dark, such being conducive to the patients obtaining more sleep. Patients suffering from general paralysis (6495) were not so susceptible to cold as ordinary patients, for the acute paralytic was unable to recognise the feeling of cold.

25. The medical evidence, which was voluminous and exhaustive, has an important bearing on these particular allegations. Dr. Herbert Blaxland, the Medical Superintendent of the Hospital for the Insane at Callan Park, who received the Major-General on the day he was removed from Bayview House, and who continued the single-room treatment, said he has never known single-room patients suffer from a chill (4801 *et seq.*). Paralytic patients were particularly tremulous, and he questioned whether a layman would be able to discern whether the tremor was from cold or paralysis, especially in a case like that of Major-General Richardson's. He did not think there would be much advantage in having an asphalt floor in single rooms. In his opinion (4840) it was unnecessary to artificially heat single
rooms

rooms in an Australian climate; there were none so heated at Callan Park, and letters from medical superintendents in South Australia and Tasmania, stating that the practice of artificially heating did not obtain at either place, agreed with his experience. Indeed, on this point, Dr. Blaxland (4848) considered that a slight feeling of cold was more beneficial than otherwise, because, as a rule, a patient feeling chilly was more likely to keep himself covered up and remain in bed. His experience was that on cold nights patients were quieter, while on hot nights they are more noisy and restless. Dr. Blaxland considered the admission of light into these rooms at daybreak to be of no importance (4807); indeed, with a restless patient, it would be an advantage to keep the room dark in the morning, if he happened to be asleep. Darkness in the cell early in the morning was not any disadvantage to the patients (4812). Dr. Eric Sinclair, the Medical Superintendent at Gladesville, supported his medical confrere at Callan Park, by saying (5240) he had found, from experience, that it was not advisable to have too strong a light; that the floor of his single rooms were of wood (5246), and that while he did not find it necessary, in this climate, to artificially heat these rooms (5259), he had never known patients to suffer from cold neither by day nor night. Dr. Williams (4944), Dr. E. P. Sinclair (5053 *et seq.*), Dr. Kingsbury (5804), and Dr. Jarvie Hood (7541 *et seq.*) all bore testimony to the suitability of this room for single-room treatment, each and all admitting that in Major-General Richardson's case such treatment was necessary, indeed imperative. It being detached from the main building, was said to possess advantages by placing the patient beyond the possibility of annoying other patients whilst in a noisy mood, and at the same time putting the patient himself away from possible annoyance, by contact with his fellows. Some of the medical witnesses considered the advantages and disadvantages to be about equal. Dr. Creed, M.L.C., who examined this room since the Major-General was removed to Callan Park, expressed his satisfaction (6072) both with the cubical space and the ventilation. He thought it might be disadvantageous when removing patients on a wet day, in having the building detached, but this could be obviated (6088) by constructing a covered way from the isolated dormitory to the main building.

26. The official visitors expressed opinions on these points consonant with those of the other medical witnesses. Sir Alfred Roberts (7661) said the two isolation rooms in one separate building were built before he began his visits, and prior to the first license being granted. They answered the purposes for which they were intended very well, the ventilation was ample, they were sufficiently lighted, and boarded round inside. While not exactly the same in character to those put to similar purposes in modern asylums, those rooms possessed some advantages, as the patients in them were more likely to be quiet and less likely to disturb others. The chief drawback in having the rooms detached from the main building would be in crossing the yard in any kind of weather, and, personally, he thought it would be preferable to put such persons in a corridor (7667). With Dr. Creed, he believed the difficulty of crossing the yard could be overcome by the construction of a covered way between the isolation rooms and the main building. In his experience he never knew nor heard of patients catching cold by crossing the yard early in the morning; indeed, one of the peculiarities of lunatics was that their cutaneous circulation was so active that they did not feel the cold (7751). One improvement that could have been made in the isolation rooms was constructing the floor 6 inches higher from the ground. Mr. Nugent Robertson (7908) expressed himself as highly satisfied with the ventilation of these rooms, which in regard to air-space were, in his opinion, better than many similar rooms in the public institutions.

27. Dr. Huxtable, from an experience gained in this and other countries (8061), thought the isolation rooms were perfectly suitable for the purpose, that the air-space was above the average cubical size, and that the ventilation was satisfactory. Comparing the room in which the Major-General slept with the corresponding rooms in Government asylums, he considered those at Cook's River to be superior, because of the larger cubic space (8103 *et seq.*), and their being detached was not such a disadvantage as to render them unworkable; perhaps it would be an improvement if a covered-way from the rooms to the lavatory were constructed. Dr. Charles James Cox, the present Chairman of the visiting Board, several days after the Major-General was removed, reported to the Government particularly in connection with the room. His description of the building in this report may be taken as correct, when he says
the

the two rooms form a detached building in the courtyard about midway between the two main buildings on the male side. The distance of these rooms from the building in which is the dining-room of the male patients (8252) is about 12 to 14 yards. The two rooms are identical in every respect. The one occupied by the Major-General is 12 feet long, 10 feet broad, 13 feet 8 inches high, and is lighted by a central window, situated 8 or 10 feet from the floor, 1 foot 9 inches by 1 foot 6 inches, which can be closed by a shutter from the outside. With the door closed and the shutter open, the room was light enough to read easily. Ventilation was provided for by three ventilators of ordinary kinds—one above and at the side of the window, a second on the opposite wall to the west, a third in the centre of the building, and six or eight open round holes are bored through the wooden ceiling. The building is of brick, with a gabled roof, and floored with firm wood, the space below the floor being efficiently ventilated. Dr. Cox inclines to the opinion, that an improvement would have been effected if the basement had been raised in its original construction by several inches, as the floor, to his mind, is rather near the surface. The interior of the room is panelled with wood to a height of 7 feet, the walls are colour-washed above, and the ceiling is boarded and painted. Both rooms are described as being perfectly dry. In the course of cross-examination Dr. Cox told the Commission (8314) that practically, for medical purposes, the isolation rooms at Bayview House are as good as those in the Government institutions; that he did not think Major-General Richardson had gained anything regarding sleeping accommodation by the change from Bayview House to Callan Park; that he thought it was an advantage for the room to be detached from the main building; that the isolation wards must have received Government sanction, or the house would not have been licensed; and, finally (8321), he would not condemn the rooms if he reported on them now.

28. The Inspector-General of Insane, in reporting to the Government on the 30th of May last (8616), says the rooms referred to as stables were built by Mr. Tucker for special isolation purposes before his connection with the Lunacy Department, and were subsequently altered. Although detached and ugly, the building is dry, panelled with wood, and neither ill-lighted nor devoid of ventilation. The ceiling is packed with sawdust, so as to make it cool in summer and warm in winter. They are intended for the temporary seclusion of violent, noisy, and restless patients, and for such cases they are fairly suited, the objection of being detached having some compensating advantages in the increased quietude. While equal in convenience to those at the Government asylums (8659), the Inspector-General stated that the building being detached put it beyond the supervision it might otherwise have.

29. Dr. Vause, in reply to these charges, most emphatically denied that the rooms were ever intended for or used as a stable, and he places his contention beyond all doubt by producing a letter, dated January the 31st, 1895, from Mr. F. H. Reuss, architect of Sydney, who therein states that about the year 1868 to 1869 he acted as architect to Mr. Tucker in the erection of a dormitory, and at the same time he erected a building for a seclusion room under the doctor's direction. The walls were padded about half way; the ventilation was a very great point with Mr. Tucker, and received special attention. Mr. Reuss was subsequently examined before the Commissioners and confirmed the statement made in his letter. A plan on which the position of this building is marked (A), together with a sketch of the building itself, appears in the Appendix. With the exception of the absence of an awning from the single rooms to the main building, the Medical Superintendent, supported by the evidence of all the medical experts, maintained that the two single rooms, in one of which Major-General Richardson was accustomed to be placed at night, are suitably situated, and in every way adapted for the purpose of insuring to patients absolute rest, undisturbed either by the presence of attendants or the proximity and annoyance of other patients. Controverting the statements that the room was cold, it was pointed out, that, in no Australian asylum did the authorities resort to artificial heat for single rooms, and no complaints had been made concerning the lowness of the temperature. It was contended that from the very nature of the rooms they are invariably warm, and, furthermore, excited or restless patients did not feel or catch cold. That Major-General Richardson was shivering from cold on the morning of the 20th of May is rebutted by the Medical Superintendent (9363-65) when he says: the patient was always shaky, and on this occasion he was shaking from a well-marked muscular tremor,

tremor, a characteristic of his case. Dealing with the question of light, Dr. Vause asserted that part of the system of single-room occupation was keeping the patients in comparative darkness so as to induce sleep, therefore (9393-94) the lighting should be judiciously managed, and he contended there was in those rooms sufficient light for all practical purposes. He scouted the idea of the witness Gearey having seen cobwebs and meets this assertion by disputing the veracity of this witness in saying he saw these cobwebs on the external face of the shutter, from the outside, whereas the shutter is fixed on the inside of the window, with window sashes outside. Indeed it would be impossible for him to see either window or shutter (9400.) The ventilation of the rooms he claimed to be good and sufficient, and, if called upon as an inspector of an asylum, he would sanction it as sufficient (9296.) Having given special attention to this particular necessity, the yard was raised with the effect of giving an increased current of air underneath the floor, and two air-bricks were inserted in the walls to increase the ventilation, and most decidedly he denied the statement made by witnesses when they said the rooms were insufficiently ventilated. So far as the rooms were concerned, he did not think they could be much improved, except by having a room adjacent for the use of an attendant (9396).

30. A collateral inference associated with these specific charges was that on the morning of May 20th the patient was removed from the isolation room and given a cold bath. No direct evidence in support of this supposition was forthcoming, Professor Stuart stating (71) that he "only heard something to that effect," and in answer to question 83, "his impression was that the patient had a cold bath, but for certain he did not know." Gearey and O'Brien also infer that the thoughts of an approaching cold bath were repulsive to the Major-General, and led him to protest while crossing the yard from the isolation room to the lavatory. Doherty and O'Brien, his attendants, who escorted the patient across the yard, positively denied (2904 and 3277) that he said, "I do not want a bath; I'm too cold," but, on the contrary, he took his bath kindly. Apparently intent on examining the sleeping apartment, not one of the visiting party waited to see the General undressed, to see the state of his body, to learn the nature of the bath, or to ascertain the temperature of the water used, an omission which resulted in our having to ask many questions, and the waste of much time. The whole of the evidence brought forward to refute this inference, even that of Mackenzie, goes to prove the Major-General always had a warm bath, and that, on this particular morning, shortly after the visitors took their departure, the patient had his usual sponge bath in his own room in tepid water.

- The Finding. 31. 1. Upon these specific charges your Commissioners determine that although the building referred to as a stable and outhouse presents, architecturally speaking, an unprepossessing appearance, it was originally constructed for the purpose to which it was applied in the night treatment of Major-General Richardson's case, and that it had been used, with the approval of the Inspector-General of the Insane and the official visitors, for many years and by many persons in similar circumstances for similar purposes, and, according to Dr. Vause, with uniformly good results. The evidence was clearly and indisputably against this building ever having been a stable, or ever having been used for any purpose other than for the isolation and treatment of insane patients, who, by the nature of their affliction, required to be alone.
2. With one or two exceptions the evidence of the numerous witnesses particularly examined on this point pronounced these isolation rooms on the male side to be suitable for the purposes to which they are put. Many of the expert witnesses who have inspected the isolation wards in the Government institutions say those at Bayview House are preferable in some respects. Your Commissioners very carefully inquired into this point, and they are of opinion that, whilst many of the more recently-erected separate rooms in the Government asylums contain superior appliances and provisions for comfort, others are inferior to those at Bayview House.
3. The charge that these rooms at Bayview House are unnecessarily damp through being too near the ground arose from the fact that alterations have been made in the level of the yard in front of the building, and
although

although the Commissioners believe it would be advantageous to have a more thorough ventilation beneath the floor, they do not think the floor itself is damp, even in its present condition, but they consider it could be improved by the use of better selected wood with the interstices suitably caulked.

4. The charge that there was insufficient light in these rooms, your Commissioners consider to be groundless, inasmuch as the unanimous testimony of expert witnesses was to the effect that cases treated in such rooms ought to be screened from light. The light should be sufficient to permit of inspection by attendants or nurses or medical officials from time to time.
5. There can be no doubt that the ventilation of these rooms could be improved, but your Commissioners believe that it is adequate for the purposes to which they are intended.
6. Reference has been made to this room being cold, it having been said that the Major-General, when removed from this room on the morning of May 20th, was shivering or shaking, because, according to some witnesses, of having been confined all night in a cold sleeping apartment. Your Commissioners believe this was a mistaken view of actual facts, and they therefore agree with the medical authorities, who stated that tremor was one of the symptoms of the disease from which the patient is suffering, and that the room itself would not in the circumstances referred to in the evidence on this part of this subject be in any injurious degree cold or dangerous in its effect on the patient.
7. Your Commissioners regret that this room is detached from the main building and so far from the room used by the attendants, who were alleged to have watched the Major-General during the night. This fact alone shows that these attendants were unable to be in that close proximity to the patient which was so highly desirable in the circumstances of his case. They further believe it to be an undesirable fact that this and other patients who sleep in this room, or the attendants, should have to cross an open yard in stormy weather, or any other unfavourable climatic conditions, and therefore are strongly of opinion that a covered way should be constructed between the isolation rooms and the main building. Whilst the isolation of this particular patient was undoubtedly proper treatment, and while there is no evidence that the Major-General suffered in any way from the detached position of this room, it is clear to the Commissioners that a provision of the kind now suggested should long ago have been supplied.
8. A further inference is that Major-General Richardson could only have had a cold bath on the morning of his removal and on other mornings when taken from his sleeping-room to the lavatory. Your Commissioners believe adequate provision was made for this patient to be properly bathed in warm water.

32. The trend of the evidence given by some half-dozen witnesses was to the effect "That, for purposes of economy, Major-General Richardson, while in the isolation room at Bayview House, had no bed to lie on, no bed covering, no night clothes, but a night-shirt; that he was often put in the room naked; and that he wore unsuitable day clothes." A statement to this effect, if not in these exact words, was made in Parliament by Mr. Jeanneret, who, it will be remembered, accepted Mr. Gearey's version of affairs as the basis of his charges. Referring first to the personal clothing worn by the patient both day and night, it is necessary to bear in mind the arrangement originally made between the Major-General's relatives and friends and Dr. Vause. According to the evidence of Mr. Sydney Richardson (4649 *et seq.*), Dr. Skirving made the arrangements with Dr. Vause, the terms being a payment of £5 5s. per week as maintenance fee. By members of the family the Medical Superintendent was frequently authorised to buy anything that money would purchase for the additional comfort of the patient. Especially in regard to personal wearing apparel, either for day or night use, repeated offers were made of further supplies whenever necessary (4709); and because of the exceptional destructiveness of the patient with pyjamas and singlets Mrs. Richardson, at Dr. Vause's request, forwarded some sixteen or eighteen suits of night-clothes to the institution. The Inspector-General of Insane, in his report

No bed or
bed-clothes;
no personal
night-clothes,
and unsuitable
day-clothing.

dated 30th of May, points out that the payment for maintenance in this case was certainly not too liberal, and could, under the special circumstances of the case, scarcely have been remunerative. In face of this arrangement and the apparent absence of any necessity to be sparing in dress, the accusing witnesses assert that for economic reasons the patient was not clothed as he should have been. Mr. Sydney Richardson (4670) said his father was not as well dressed then as he is now, and that his clothes were worn and spotted; Gearey, referring to the clothing worn when the Major-General was removed from the room, describes it (215) as appearing "as if it had belonged to an engineer engaged in a workshop"; Mr. Sager (385) said, "the clothing was extremely untidy for a man who had occupied the social position of Major-General Richardson"; and Mackenzie (903 and 1129) said it was the custom to dress the patient in better clothes when it was known he was to be visited by his friends.

32A. In the course of his evidence Dr. Blaxland, the Medical Superintendent of Callan Park, informed the Commissioners that precisely the same arrangement in regard to the supply of personal wearing apparel which existed at Bayview House is in force now. The family supply the personal clothing which, although torn repeatedly (4793), is renewed whenever necessary. The cost of maintenance, however, is £327 per annum as against £5 5s. per week, and because of the extraordinary destruction of clothing and other articles in the early days of his residence at Callan Park, this amount did not, as it does now, cover all expenses. Senior Attendant Doherty, at Bayview House, flatly contradicted former witnesses when he declared that the clothing worn by the Major-General on the morning of 20th May was, comparatively speaking, a new, clean, and good suit, not a month in wear (2700 *et seq.*), and he denied Mackenzie's statement by saying the clothes, excepting occasionally the nether garments (2994), were never changed when the patient was visited by his relations. Attendant O'Brien said the Major-General on this occasion wore a dark tweed suit perhaps a month or two old (3199), and not in a dirty condition, and, moreover, that he had three or four other suits to wear. Dr. Edward Petrie Sinclair, acting Medical Superintendent for Dr. Vause during his illness, also testified to the Major-General's dress in the daytime being good and clean (5040) and suitable to a man in his position, whilst Dr. Vause himself denied (9468) that the wearing apparel was dirty or unsuited to the patient.

33. The more serious allegations, however, were those which aver that neither bed, bed-covering, nor night-clothes were provided for this patient, and that frequently he was placed in the isolation room naked. A bulky mass of most conflicting evidence running through the whole inquiry was tendered on these assertions. Professor Anderson Stuart reported the sole contents of the room to be a mattress with a coarse canvas tick, whose straw stuffing felt hard and inelastic as if it had been lain upon for some time, and three pieces of coarse canvas cloth in single ply. There was neither blanket nor coverlet (67) nor covering enough to keep a man warm during the night, and altogether the bedding and clothing were totally inadequate (78-9). Mr. Gearey calls the bedding and bed-clothes (163) a sort of mattress made of coarse pieces of canvas sewn together, and stuffed with straw, together with three pieces of canvas sheeting measuring about 3 feet square, certainly not sufficiently large to cover a man. The latter were not rugs (214). In his opinion the Major-General could have had nothing on, except, perhaps, a night-shirt, before his day-clothes were taken into the room by the attendants (215); but when taken out he wore a flannel shirt buttoned up in front, and he could not say for certain if there was any garment underneath. Inference and belief convinced him the patient was naked in the room all night (233 *et seq.*), as there were neither torn clothes nor anything else on the floor, save the pieces of canvas which Professor Stuart counted at the time, saying "one," "two," "three." The witness, J. J. O'Brien, Gearey's brother officer, corroborated this evidence in every particular, except that he said the pieces of canvas measured about 4 ft. by 6 ft., and that he was positive a blanket had not been stitched on these canvas coverings (293). Mr. Sager differed slightly in his details, as he reported having seen in the room only an old and torn straw mattress and two pieces of canvas (336) of a size which he imagined would, if laid out properly (367), have just covered a human being, but on which he saw no appearance of blanket having been stitched (399). If the patient wore a singlet when he was removed from the room, it must have been so low down that it did not reach the throat. Witness Mackenzie made the most sweeping

sweeping assertions in support of these allegations when he declared, in answer to Questions 878 *et seq.*, that during his three months' service at Bayview Asylum he undressed the Major-General and put him to bed in this room as many as four nights a week; that, except on about half-a-dozen occasions, he wore no night-clothes of any kind besides a singlet or small flannel shirt, which he left in the room of his own accord "for mere pity's sake, because the patient complained of being cold"; and that he never supplied him with pyjamas, and was positive he put the General in the room naked, after having been definitely told to do so by the head attendant. He complained to Doherty of what he considered to be the shame that the Major-General could not get a better bed, offered to make a "proper mattress on which the patient could sleep," and eventually he was supplied with money, and on one of his afternoons off "he purchased canvas in Sydney, took it to Bayview House, and made the mattress" (950). Prior to this the bed was a common bag stuffed with straw. The stronger mattress was made, not because every other put in the room had been torn, but owing to his desire that the patient should be more comfortable than previously, and because of his complaints and inability to sleep, as the straw punished him by coming through the old bagging and puncturing his skin (1190). On one occasion a hair mattress, soiled by a dirty patient, was placed in the General's room, but, he refusing to sleep on it, threw it on one side (1103). For fear of being charged with insubordination, he did not report these matters direct to Dr. Vause, and he was unaware whether or not they came within his knowledge. This witness stated that the bed-covering used in the room was a rug made of two pieces of common rough canvas and one breadth of canvas, to which was stitched a piece of blanket (1109).

34. The Inspector-General of Insane, reporting on 30th May, says: "There is evidence of Dr. Vause and the attendant that flannel underclothing and flannel night suits were supplied and used, though very frequently torn (8616); but the fact remains that the bedding was coarse and insufficient, and that a grievous mistake was made in not supplying and keeping up the supply of blankets and blanketed rugs, though these blankets probably would not have been used, and almost certainly would have been torn to pieces, as patients in this condition are singularly insensible to cold or other bodily sensations. In treating patients of the character indicated whilst isolated at night, short straw or hay frequently renewed is the only material which can safely be used for mattresses. The coverings of these are frequently (sometimes nightly) torn, and the contents taken out, and if these are horsehair, kapok, or other close material they tend to suffocate the patient when burying his head or falling off to sleep among them." When before the Commission as a witness, the Inspector-General substantiated his report by saying (8656) the bed-clothing was wanting in warmth, and either rugs with blankets inside them or blankets themselves should have been provided. While not wishing to convey any idea of the patient having been put in this room naked (8862), he felt perfectly certain he very often was naked in the room, and he had seen him naked in his room at Callan Park.

35. Evidence of rebuttal was forthcoming from various sources. Taking first the testimony of attendants, that which may be accepted as the most disinterested and impartial came from the chief and ordinary attendants in the male division of the Hospital for the Insane at Callan Park. Mr. Little, the chief attendant, showed that the Major-General, on admission to Callan Park, was placed in a single room, and had occupied one until the present time (771 *et seq.*). He was supplied with a mattress, sometimes of straw and sometimes of hair, but the latter he refused to use, threw it aside, and asked for one made of straw. At the time this witness was examined (November 7th), the patient slept in a night-shirt, but even then his condition determined whether or not he was allowed ordinary blankets and sheets. When first at Callan Park, he tore his night-shirt once, twice, and three times a night, but with improvement mentally and physically a greater degree of quietness ensued (792-3). Attendant Kernaghan, of Callan Park, supported his chief when he asserted that the Major-General preferred a straw rather than a hair mattress (1287), and always asked for straw, believing it possessed electricity (1288). After complying with a request to change the mattress the Major-General would lie down and go to sleep, but occasionally he became so restless at night that he tore the blankets (1296) and other bed-clothes. Attendant Ramsay, of Callan Park, described the patient as one who, while not physically strong enough to be dangerous,

was

was difficult to manage (1330 *et seq.*) because of his sleepless, restless disposition, his persistence in destroying bed-clothes and personal night apparel, and his unyielding resistance to be reclothed. The attendants at Bayview House, called for the defence, told a widely different story to that of the accusing witnesses. Doherty, the senior attendant, describing the process of putting the patient to bed, said he was conducted to the isolation room (2709 *et seq.*), his day-clothes were removed, pyjamas and a singlet were substituted, and a straw mattress, with a strong canvas ticking, owing to an ordinary bed being useless, was comfortably arranged. With this mattress there were pillows and strong blanket-lined rugs, 6 ft. by 4 ft. 6 in., large enough to cover any man. Possibly on the morning of May 20th the canvas coverings had been stripped of the linings, as he had seen the Major-General on the previous night picking the blanket from the inside, a custom to which he was partial, as he appeared to prefer the rugs without. When first placed in the isolation room he invariably threw everything off his body, sometimes tore his pyjamas to shreds, and refused to remain clothed. Notwithstanding this repugnance to wearing night-clothing, the patient was supplied, as far as he knew, every night with pyjama-trousers and singlet. Whether worn or not these night-clothes should have been placed in the room with this patient, and every attendant who put him to bed was specifically instructed to induce him to wear the clothes. If an attendant failed in his persuasive powers, the articles were left in the room. While on night duty, this witness said he frequently saw the patient, who, although restless, was wearing night-clothes, and, as a rule, he had them on his body when removed for his bath in the morning. A day or two after Major-General Richardson was taken from Bayview House to Callan Park, Doherty showed the Inspector-General of the Insane, two of the three rugs, used by this patient on the night before the surprise visit to the institution (3006) was made. James O'Brien, the other attendant, who is said to have been on alternate night duty at Bayview House during a part of the period of Major-General Richardson's residence at the institution, told the Commissioners that the bed used was a canvas tick filled with straw (3153 *et seq.*), having as covering canvas sheets lined with blanket; he was always supplied with pyjamas, but sometimes without a singlet, because he would not wear one; the patient was never put naked in the room. If, while more excited than usual, he destroyed the pyjamas, those torn were replaced by other suits. On the morning the visit was made, and when the Major-General was removed from the room, he was wearing pyjamas and singlet beneath his ordinary day clothes (3194). When most restless, the patient was most destructive, and in these moods (3231) he had known him to tear two suits of pyjamas in one night. Sometimes when the patient was willing he would endeavour to coax him into a more pacified state of mind and reclothe him. Three other employees at Bayview House gave evidence for the defence. Alan Farquharson, who waited on the Major-General every alternate Sunday, and who put him to bed at about half-past 6 at night on these occasions, distinctly stated that the bedding was taken out every morning and put back at night, it always being clean and dry, and fit for a man to sleep on (550-2). The day-clothes were taken away because of the patient's destructive proclivities; but this witness was absolutely certain the General was never put to bed naked, but on the contrary always was dressed in pyjamas, which, however, he frequently tore off, and as a consequence was found naked in the morning (577). The custom at these times of unrest and destructiveness was for the attendant to take a top coat to the room when removing him in the morning, to shield him from the gaze of passers-by and protect him from the cold (592); in fact, he did not remember any occasion on which he went to the room for the purpose of removing the patient on which he did not find the floor littered with the fragments of torn garments, bedding, and bed-clothes (647). R. A. Peet, the painter permanently engaged at the establishment, had constant opportunities of seeing this patient morning, noon, and night, and on many occasions, by looking through the observation hole in the door (675), he had noticed the inmate always to be partly dressed. Edward Erickson, at present a warder at Little Bay Hospital, but formerly an attendant at Bayview House (750 *et seq.*), told the Commissioners that there was good bedding accommodation in his time, consisting of two sheets, two blankets, and two pillows, like an ordinary bed, in the isolation rooms. Patients were never put to bed naked. Some wore pyjamas, and those who had none were always provided with some other night apparel.

36. Henry Watt, also a former attendant at Bayview House, whose special duty it was to put the Major-General to bed, stated that he took off his day-clothes and put on pyjamas and a flannel singlet, which were usually torn off (6196 *et seq.*). At times there were three mattresses on the floor, to prevent the patient injuring himself, and the ticking of these, with the blankets and sheets, were generally torn to pieces during the night and scattered about the room. While quite certain the patient was never put to bed naked, he was frequently in that state next morning, and if attendant Mackenzie (6245) did not put night-clothes on him, he was guilty of negligence, and disobeyed instructions issued by the Medical Superintendent through the head attendant.

37. The medical testimony on these points embodied the opinions of the Medical Superintendents at Callan Park and Gladesville, the official visitors to all Hospitals for the Insane, and some of the most prominent private practitioners in the Metropolitan area. Dr. Blaxland who, having charge of the patient at present, who received him when he was removed from Bayview House because of alleged maltreatment, and who has had and used exceptional opportunities for studying the case, in the course of his evidence, as it bears on these allegations, and which will be found in answers to questions 4779 *et seq.*, stated that special provision in a single room had to be made for this patient on his arrival at the institution. Because of his habits of tumbling about the room and restless movements, two or three straw mattresses were placed on the floor to minimise the possibility of self-injury. For covering, a rug made by quilting a blanket between two sheets of canvas was used. Sometimes the patient would have ordinary blankets instead, and at others he would refuse to use blankets and say he preferred the rugs. Unusual difficulty was experienced in getting the Major-General to wear personal night-clothes. They tried their best to accomplish this end, but on the first night of his residence at Callan Park he destroyed seven garments and one bed-tick. During the first four months of his stay the destruction of clothing—the list itself appears in the Appendix—amounted to 118 shirts, 39 blankets, besides sheets, socks, and pillow-slips. This, too, is not a full list of every article destroyed during the period attempts were made to get him dressed. The attempt to force pyjamas on had the effect of increasing mental irritation, and, medically speaking, it was decidedly better in the interest of patient to leave him naked rather than accentuate his malady, while in the acute stage, by attempting to keep clothing on his body. The night treatment of all general paralytics in the acute or maniacal stage at Callan Park, irrespective of persons, social status, or anything else, was to (4817) first try the case in a single room, with night-clothing, which could be worn or discarded according to inclination. If in a destructive mood, the clothing was, for safety's sake, removed from the reach of the patient, who was left in the room with loose straw and quilted rugs for covering, and seen by an attendant every hour. Dr. Sinclair, the Chief Medical Officer at Gladesville, who, to keep abreast of the times, has visited, for comparative and educational purposes, the principal lunatic asylums in England, Scotland, and various other parts of the world, said, practically the same night treatment is followed in the acute stage of general paralysis at the institution over which he has control as that described by Dr. Blaxland. In the first place the patient was supplied with a straw mattress, a canvas rug, blanket-lined, and personal night-clothes (5267). If the mattress was destroyed it was replaced by loose straw. A certain proportion of patients while in the acute stage were put into isolation without personal covering, but with canvas and blanket rugs, both by night and by day, and these customs were observed at all the large institutions he had visited. Dr. Creed (6091) thought if a patient destroyed and disliked wearing night-clothes he should be provided with covering not easily torn, and canvas rugs were quite sufficient for patients of this class. Another medical practitioner, who has an intimate knowledge of Bayview House and other institutions, said canvas rugs, blankets, and ordinary bedding supplied to these rooms were quite sufficient. Dr. Ramsay, who was *locum tenens* for Dr. Vause, (5979) stated that during the months of March and April last, while Mackenzie was employed there, he saw blankets, sheets, and a rug which had been used by the Major-General. Dr. Edward Petrie Sinclair, who also acted as Medical Superintendent for Dr. Vause, described the bedding as straw mattresses, rugs lined with blanket (5087) large enough to cover a man and sufficiently thick to keep him warm at night; and Dr. S. T. Knaggs said, supposing a patient tore his bed clothes and denuded himself at night, he would leave him alone (5918) rather than cause irritation by attempting to re-clothe.

38. The official visitors did not condemn the management of Bayview House in the system of single-room treatment. Sir Alfred Roberts has never known an injurious chill result from a patient denuding himself, and seeing them in a naked condition was more (7753) distressful to the observer than the observed. It would be useless to insist on dressing a resisting patient, for the trial would meet with failure, and the contest would injuriously affect the patient. From a medical point of view it was desirable to avoid a struggle. The bedding used at Bayview House for this class of patient was similar to that followed at all large asylums—a straw mattress, a pillow, and a rug, made of ordinary canvas, lined with blanket (7793 *et seq.*). In some respects the latter was a preferable structure as compared with double canvas, having a blanket between, because of the woollen material coming next the skin. If, however, patients picked the blanket off, it would be the duty of the Medical Superintendent to have it renewed. In his experience he had not known patients put to bed naked, but they speedily made themselves so. Dr. Huxtable (8142) saw the rugs used in the Major-General's room, and they were the usual coverings approved by medical authorities for patients of that class. Adequate for this purpose, it was nothing unusual for the blanket lining to be torn away. Dr. Cox in his report (8252) notified a great improvement in the bodily health of the patient, and specifically stated that, as far as he had been able to judge by examination, the bed-clothing provided was sufficient. If any patient objected to wear personal clothing at night he would not break his rest by insisting on re-clothing the patient (8334), as instinctively as soon as paralytics realised the necessity for warmth they covered themselves, hence his strong advocacy of loose straw, and plenty of it, being placed in these rooms as bedding. The rugs used (8356) were of suitable quality, with ample blanket stitched inside, and, moreover, he was informed by the matron that the Major-General could have as many as he chose. Personally, he regarded pyjamas for any patient in the acute stage of paralysis as an unnecessary extra, liable to become a nuisance consequent on the peculiar habits to which they are prone. If the Major-General had been put in the room naked no great harm would have ensued. The disagreeable part of the proceeding would be more to the looker-on than the patient, who in this state would not realise his position. All sentiment must be set aside, and from a medical point of view (8372) it was to the interest of these patients to be left alone as much as possible, clothed or unclothed.

39. Dr. Vause, in his own defence, pointed out (8930) that were it true, on the grounds of economy, that he failed in supplying every requisite to this patient, he would have been defeating his own aim and object, which, before everything else, was ultimate recovery. The cure of a patient so well known and so important in his personality, would have been to him professionally of the first importance, and, therefore, he felt it incumbent on him to devote even extraordinary care to his treatment. No doubt people, ignorant of the requirements of acute paralytics, jumped to the conclusion that straw mattresses were an invention in the direction of economy, but, on the contrary, experience had proved conclusively that straw was as good as any material, if not the best, for this specific purpose. To the strictures of the Inspector-General of Insane, concerning alleged insufficiency of bed-clothing, he could but reply that everyone admitted there were three canvas rugs, and canvas was universally used, and proved to be the best kind of covering for these patients. Its properties as a non-conductor of heat were enormous; it prevented the egress of moisture, the rapid evaporation of which was the principal cause of feeling cold in the human body. The provision of even half-a-dozen blanket-lined rugs was a mere nothing to anybody who had the welfare of the patient and establishment as much at heart as he, and despite the assertions of the Inspector-General, a statement, he presumed, made prior to Dr. Manning ascertaining for himself that the Major-General would not be managed with less "coarse bedding," he could only adduce in extenuation the fact that the articles of bed-clothing used at Callan Park for months past were identical with the bed-clothing used at Bayview House by the Major-General during his worst periods. The supply of blanketed sheets or rugs, he maintained, was kept up, and the rugs seen on the 20th of May being stripped of their woollen lining was an unusual event; but, as a compensating balance, there were three pieces of canvas, while one ordinary blanket-lined rug was sufficient covering for anybody kept in a single room. A supply of blankets was kept up for a considerable time at extra cost, but this was discontinued in the hope of checking the destructive habits of the patient by giving him blanket-lined rugs. He then picked off the
blanket

blanket lining, and this habit only received a partial check when he reached the canvas, and even this was sometimes torn. Dr. Vause gave a general denial to all the charges under this head, as shown in answers to Questions 9589, 9237, 9243, *et seq.* Two of the three canvas rugs found in the room on the morning of 20th May were shown to the Inspector-General a few days after the occurrence, and he described them as being of the ordinary size. To satisfy themselves beyond all dispute, the Commissioners had one of the rugs—the only one remaining—produced, and identified by Dr. Vause as having been used by the Major-General on the night of 19th May, 1894. Its actual measurement was 5 feet 9 inches long and 3 feet 9 inches wide. Attached to the inner side were the remains of a blanket lining, which originally had been square-stitched to the canvas, and evidently picked off by the patient. An ordinary new canvas rug, blanket-lined, was also produced as a sample of the rugs at present used by this class of patient at Bayview House. This measured 5 feet 7 inches long by 5 feet wide.

40. In regard to these charges the Commissioners find—

1. Although the evidence upon the subjects referred to in these charges is very The Findings. conflicting, your Commissioners have no hesitation in believing that purposes of economy entered in no way into the provision actually made for the treatment of Major-General Richardson while in the single room. Regarding these provisions themselves there is an extraordinary discrepancy of statement. The charge itself would lead to the belief that no provision was actually made for the night comfort of the patient, and that as a regular practice he was placed in this room nightly denuded of clothing and without bed or bedding. The evidence shows clearly that both at Bayview and afterwards at Callan Park the Major-General, in consequence of his affliction, was a most destructive patient and prone, on many nights when placed in his room, to destroy every vestige of night-clothes, whatever their character, prepared for his use. The evidence of the attendants at Bayview, and other witnesses, is to the effect that an ample supply of personal night-clothing, bed and bedding, was always put in his room, and that it was no uncommon thing for him to not only destroy his personal apparel but the bed and bedding too. On the other hand, the Government visiting party, who proceeded to Bayview on the morning of 20th May for the purpose of making special inquiries into the Major-General case, his treatment and condition, were under the impression that he had no night clothes on whatever when removed from the isolation-rooms to his day-room for his morning's sponge-bath. Had any of them waited to see the Major-General undressed for his bath and put in his bath this would have been placed beyond all doubt. As a matter of fact the Commissioners believe that on many occasions the Major-General must have been in the condition described by these Government officials; but the fact that no fragments of torn clothes were seen or found in the room, either by the visitors or the Bayview House attendants, lends credence to the assertion that day clothes were put on over night clothes, as mentioned in the evidence.
2. Your Commissioners believe that usually bed and bedding provision was made for the night in the shape of a straw mattress and rugs, and that it was the instructions of the Medical Superintendent to provide personal night clothes; but they are not in a position to say whether on this particular occasion provision had been made.
3. Further, your Commission are of opinion that the official inspection on the occasion referred to, made as it was on a dark, cold, winter's morning, and extending over only a few minutes, no matter how acute the observers might have been, did not include the observation of many details. For example, whilst the Medical Superintendent and the night attendants on Major-General Richardson swear positively that an india-rubber utensil was in the room on the morning of May 20th, the Government officials sent specifically to make full inquiries into everything associated with this case were equally positive that there was no such convenience. A number of expert witnesses were minutely examined on this matter of treatment, and stated distinctly that it would probably be a terrible shock to

to the uninitiated to see things as they were seen on the morning the official visitors made their inspection of the room occupied as a sleeping apartment by Major-General Richardson ; but at the same time the absence of clothing and other ordinary comforts usually expected in a night room was by no means an uncommon occurrence in cases of this kind. Your Commissioners, therefore, taking the whole of the evidence into consideration, believe that the question of illtreating this patient in any respect for the purposes of economy never entered the mind of the Medical Superintendent. The form of treatment followed by Dr. Vause was approved by all the medical experts examined by the Commission, and the Medical Superintendent himself very clearly showed that it would not have been in his interest to neglect to make every provision for the relief and cure of this patient.

4. With regard to the charge that Major-General Richardson wore unsuitable day clothes, your Commissioners can only point to the fact that the clothing was supplied by the relatives of the patient, whose repeated instructions to Dr. Vause were not to stint the patient in any way; in fact to supply anything that money could purchase for his comfort. The Commissioners believe that Dr. Vause acted to the best of his discretion in supplying the clothing worn by the patient. The only evidence opposed to this view is that which had reference to the clothing he wore when being removed from the isolation-room to the main building on the morning of May 20th, and on that occasion the apparel used was stated to be such as was ordinarily employed for the purpose of covering him in his passage from the sleeping-room to his bath in his day-room, while for other purposes and at other times he wore suitable clothing. The evidence of his personal attendants at this time, and the statement, passed unchallenged, was that he had four suits of clothes in wear. Your Commissioners believe that neither on the grounds of economy, nor for the sake of his own reputation, did the Medical Superintendent allow the Major-General to remain unsuitably clothed. The patient was visited frequently by members of his family; he was seen unexpectedly at different times by medical gentlemen, and other visitors by whom he was well known, and who took a considerable amount of interest in his case, and as there is no record of any serious complaint on this head to be found, your Commissioners do not consider the allegations to be of any consequence.

Sleeping-room not cleaned; no night convenience; and foul smell from stale filth.

41. Further charges in the general indictment made against the general management of the institution and the treatment of Major-General Richardson are—"That owing to neglect his sleeping-room was not properly cleaned; that there was no night convenience provided for the relief of nature's calls; and that the room smelled foul from the presence of stale filth." In his report to the Government, Professor Stuart described the contents of the room, to which full reference has been made in a previous part of this report, and then adds that the wooden floor (29-45) had been fouled, and that "the odour of the place was most repulsive—a stale urinous odour of considerable standing." There appeared to have been an attempt to half wipe up the filth, and hurriedly make the room look decent. The contents of the place were lying on the floor, all fouled, and he could distinctly detect stale urine on that occasion. In his opinion there might be a considerable abatement in the smell of those rooms (45) as utensils should be provided, and although the tendencies of lunatics was not to use them, they should be trained to habits of cleanliness and made to get up two or three times a night if necessary. As a rule they did not like to be disturbed, and there was a certain amount of discomfort in getting them up, but that was better than allowing patients to remain in bed while addicted to dirty habits. In support of this contention Professor Stuart said it would be better to follow advice given by Charles Mercier in his work issued in 1894, entitled "Lunatic Asylums, their Organisation and Management," where, under the heading of "Dirty Habits," the author dealt with the treatment of these particular patients, recommending that they be roused up at least three times a night at the same time every night, for the purpose of training them into habits of cleanliness. The alternative of two evils was, Dr. Stuart continued, one of a man allowed to remain in bed in a state of filth, and the other, that of probable annoyance by waking him up, and he thought the latter was the lesser of the two. His opinion was that the floor of these rooms

rooms should be made to slant slightly, and, if of wood, impregnated with paraffine or some other preventive. The floor, too, might be of asphalt; but certainly something should be done to prevent it getting into the state it was, when a little trouble might keep it comparatively sweet. In answer to the Inspector-General of the Insane, Professor Stuart expressed the opinion that Mercier, in his work, was referring to patients of wet and dirty habits, and, personally, perhaps, he did not think the same opinion would apply to acute maniacs and general paralytics (85), neither did he think it would be advisable to disturb the rest of an acute maniac or a general paralytic for the purpose mentioned in the quotations he had read (88). There was in that room more than one distinct odour, and the odour was stale (98)—of longer standing than one night (108). The witness Gearey (166 *et seq.*) described the room and its contents as being in a state of absolute filth, and stinking so abominably that he was glad to escape to obtain fresh air. His experience as a sanitary inspector told him that the stench came from an old standing cause. He was positive there was no utensil in the room (198). John Joseph O'Brien, another sanitary inspector, with nine years experience (255 *et seq.*), said he had opportunities of acquainting himself with different smells, and could distinguish that of fresh from stale urine. There was a stale odour and a most sickly smell in this particular room on the morning in question. The floor was smeared, and, in his opinion, some attempt had been made to clean the room while the patient was being dressed. He was positive there was no gutta-percha utensil in the room. He had never come across a worse room in his experience as an inspector of Chinese dwellings in the City of Sydney than this room at Bayview House from a sanitary point of view (320), and if in the course of his inspection he had found any place in a similar condition he would have reported it for prosecution. Mr. Sager stated (390-94) that the room smelled foul; there was excreta on the floor, and he was quite sure there was no utensil in the room. Alexander Mackenzie who again appeared as the chief witness in support of the charges, told the Commission that during his stay at Bayview House (853) he used to clean out this room every morning, but in damp weather the boards would not dry, the fault being, in his opinion, because the floor was too close to the ground. With proper scrubbing he did not think he could keep the room clean and sweet (1039 *et seq.*), and he attributed the continual smell to the fact that he could not get the floor dry. Sometimes he scrubbed it out with a hard broom and hot water, and then could not get it clean and sweet. The room was properly attended to, or, if it was not, it was no fault of his. Never to his knowledge was an india-rubber utensil placed in the room (885). There was only one about the place, and that was used in the next room by another patient. He denied that the Major-General was at all dirty in his habits (893-1007), and the only way he could account for the state in which he was found in the morning was his having been placed in a dark room without any convenience, where he could walk about and possibly fall about. There was a suffocating, filthy, foul smell in the room—always the smell of stale urine (964). During the whole of the four months he was there, he was positive there was no india-rubber or any other utensil placed in the room. The floor was dirtied; the mattress, the straw, and the covering were soiled, and only once, he thought, during the months he was there did he rip that mattress open and remove the straw—and then he did it on his own initiative (111-19). Mr. Sydney Richardson informed the Commission that he saw this room at a quarter to eleven o'clock on the morning of the Sunday his father was removed from Bayview House to Callan Park (4687). It had then been washed out, and the floor was very wet. There was an abominable smell, although the room had been washed out (4708).

42. The evidence for the defence amounted to a direct denial of the charges. It was somewhat voluminous, and included the testimony of attendants at Bayview House, Callan Park Hospital for the Insane, private and public medical practitioners, the Government visitors appointed under the Lunacy Act, and Dr. Vause himself. Epitomised, it is as follows: Allan Farquharson, employed at Bayview House, whose duty it was to attend on the Major-General every second Sunday, in answer to questions (570 *et seq.*), described the patient as dirty in his habits, and said he had seen a utensil in his room, but the patient would never use it. The room smelled the first thing in the morning, but he never detected a stale odour when putting the General to bed at night. His experience invariably was to find the sleeping room dirty early in the morning—in fact, he never saw it clean. Further questioned (640), this witness said he was positive an india-rubber utensil was in the room

every time he put the Major-General there. Ruben Alfred Peet (684) said the room smelled sweet, and that there was no stale odour about the floor. Edward Erickson, a former attendant, deposed that there was a chamber utensil in each of these rooms, and further (752), these rooms were always kept clean after having been used by patients. They were cleaned every morning before Dr. Vause made his usual rounds. William Little, chief attendant at Callan Park, was called to testify to the Major-General's condition at the time he was received at that institution. The patient, he said, was in the habit of dirtying his mattress (775 *et seq.*), and a utensil left in the room was sometimes used and sometimes not. The room smelled bad in the morning, and he was aware (818) that often the odour from acute maniacs was exceedingly strong; he, however, could not tell whether the urine was fresh or stale, but he knew it was very strong in smell. The single rooms occupied by this class of patients were as a rule extremely filthy, and he did not think the keepers of lodging-houses in the city or elsewhere or sanitary inspectors would ever see rooms in such a state as these. Speaking as one having had thirty-two years' experience, he could say Major-General Richardson was one of the worst patients he ever had to deal with. This extreme dirtiness was usual with patients of this kind, and in dealing with wet and dirty patients at Callan Park they tried to give them rest at night, and at the same time endeavoured to train them in good habits. In his opinion it would be improper treatment in the case of an acute maniac to rouse him from his sleep two or three times a night; he would let him sleep rather than rouse him for the purpose of cleanliness. This evidence was corroborated by Thomas Kernaghan and Thomas Ramsay, attendants at Callan Park, the latter adding (1344 *et seq.*) that there was no particular difficulty experienced at Callan Park in removing the smell from the room by the use of disinfectants. Many rooms at Callan Park were perpetually soiled, yet they managed to keep the floors clean and the apartments comparatively sweet. John Doherty, senior attendant at Bayview (2727 *et seq.*) said there was a smell in the room when he removed the Major-General on the 20th May, but nothing beyond the ordinary smell. The room always emitted a stale odour in the morning, but it disappeared after being scrubbed out, when it would always be dry between 10 and 11 o'clock in the morning. The room was supplied with a utensil, which the patient would not use. As a consequence the room would probably throw off a strong odour as soon as the door was opened. He did not notice on that particular morning any distinct smell of stale urine, and the reason why a utensil was put in the room, although it was not used, was because it was the custom. It was Mackenzie's duty when he first arrived at the institution (2911) to clean the floor of the room, and he had no recollection of complaining that this had not been thoroughly done, thus leaving a smell in the room. He had never noticed in that room any stale urinous odour, and there was no such condition when he put the patient in the room the night before the Sunday morning Professor Stuart made his visit. No smell remained after the room had been scrubbed, and he would repeat that there was a utensil in the room when the Major-General was removed, for he saw it. James O'Brien, the other night attendant on the Major-General (3151), also stated positively that there was an india-rubber utensil in the room occupied by the Major-General. It was part of his duty to clean out the room, and usually (3187) the floor took about three hours to dry. The room was always sweet when he put the Major-General in at night. He denied (3236) that there was any stale urine about the place, for if there had been he would have detected it, and this he had never done in the day-time after the room had been properly scrubbed. Henry M. Watt, an attendant who had some experience of the Major-General, described his peculiar habits as mentioned in connection with these charges, but differed from the other attendants when he said no utensil was left in the room, because the patient was so destructive that it would have been dangerous to leave it. He, however, used to be seen every two hours, and the utensil was taken into the room on each occasion (6199). Sometimes there was and sometimes there was not a bad smell in the room. Part of the time he was there it was his duty to scrub the room, which on a fine day would dry quickly, but it would take longer on a wet muggy day. He never noticed a smell, stale and foul, when putting the patient to bed. If he had done so, and if the room had not been sweet, no time would have been lost in communicating with Dr. Vause on the subject.

43. The medical evidence on these points goes to show, beginning with Dr. Blaxland (4747) that this patient when admitted to Callan Park was refractory, destructive; and dirty in his habits. In cases of general paralysis, sometimes the urine of patients became highly ammoniacal, and this patient was in an acutely ammoniacal state on May 20th. He was placed under single room treatment; special provisions were made for him because of his peculiarities, and he knew (4836) it would have been impossible to follow the course of rousing the patient two or three times a night as recommended by Mercier, and quoted by Professor Stuart. It would certainly be unadvisable to rouse a general paralytic in this manner. His idea was that Mercier in writing as quoted was referring to old demented who were wet and dirty from inertia. In cases of acute mania he would not interfere. True, one might interfere (4763) to a certain degree, but there was nothing to be gained if a man was thrown into a state of constant irritation—by telling him or attempting to train him to do this or to do that. It would not be wise to rush in and tell a patient to use a utensil, for if he did the patient would not do it. The patient in question insisted on doing as he liked, and if an attendant interfered he would throw at him his pillow or the first thing he could lay his hands on. Up to December last the patient was sometimes as peculiar as ever in his habits. If the room at Bayview House stank abominably until 11 o'clock in the morning, even after it had been washed out earlier in the day it would be nothing uncommon, and if the room were well washed out in the morning (4834) it would be ready and fit for occupation again every night. Such a room requiring constant washing would dry better away from a corridor, if it had a large door, than a single room situated in a corridor such as at Callan Park. Dr. Eric Sinclair, the Medical Superintendent at Gladesville Hospital for the Insane, stated that while in certain stages of insanity, there was a particularly strong urinous smell from patients, it could be removed from the single rooms. He had wooden floors which could be made sweet under ordinary circumstances (5246 *et seq.*) even with this particular class of insane patient. Perhaps asphalt would dry quicker, and if so the smell would not last as long, although it would be quite as bad the first thing in the morning. An inexperienced person knowing nothing of these matters except by casual examination, he was afraid, could not state authoritatively whether the smell detectable was from fresh or stale urine. He certainly did not think with Professor Anderson Stuart, that patients in the acute mania stage in general paralysis should be roused two or three times a night for the purpose of cleanliness (5253). Such experiments might be tried with advantage on demented, but certainly not on general paralytics in an acute stage. On no account should these patients be roused. Interference in that direction would involve great danger, of a falling off in general health, owing to want of continuous rest. He did not believe that Mercier, when writing as quoted by Professor Stuart, meant his opinions to apply to acute cases of mania, but, on the contrary, to imbeciles, to demented, and to old and feeble patients, who might remain in bed from sheer indolence or weakness. If Professor Stuart applied those opinions to the treatment of acute maniacs, he had altogether mistaken his case. In most of these cases (5286) utensils were placed in the rooms—in some instances it would be futile to take this precaution because patients would not use them. With a dirty patient in a single room the accumulation of filth could not be avoided, and it was better to leave them in the dirt than to constantly insist on keeping them clean. With the aid of sanitas soap and carbolic, the smell was removed from the single room (5329 *et seq.*), which, when opened in the morning, emitted a strong smell of fresh urine. These patients, too, threw off from their own bodies exudations sufficiently pungent to cause a room to be stuffy, and the smell of these rooms, the first thing in the morning, would be quite sufficiently convincing to anyone meeting it when coming from the fresh air outside. If the floor of the room had not been properly cleaned it was quite possible for an odour to rise. Sometimes the liquid sank into the boards, and the smell returned as the room became dry. Dr. Edward Petrie Sinclair (5051), who acted for Dr. Vause at Bayview House for a time, stated that he never noticed any smell in the isolation room on the male side; and Dr. Hetherington expressed the opinion that he would leave patients of extremely dirty habits alone as much as possible. Such circumstances (5893) were not distressing to the patients themselves, but confined exclusively to the spectator; and—considering the question from a purely medical standpoint, purely in the interest of the patients—putting sentimental feeling altogether on one side, it was best to leave such patients alone. Dr. S. T. Knaggs

Knaggs (5920) said it would greatly depend upon the patient whether, in regard to personal cleanliness, it would be better to clean him during the night or leave him in his dirt. If a patient became excited through the interference necessary to clean him, it would be more judicious to leave him quiet. He would study the temperament of each case, and with an amenable patient he would interfere, but not with an unsuitable subject. Certainly he would not rouse (5930) a patient suffering from acute mania, to whom sleep was of paramount importance. He would not rouse a physically healthy patient, as sleep by all means was of the greatest importance in all these cases. Dr. Ramsay, who was in charge of Bayview for a time, said he was sure (5967) this room was scrubbed out every day. At 9 o'clock every morning he saw it wet as a result of having been scrubbed out. The doors were wide open, and there was no smell in the room after it had been cleaned. Dr. Creed supported (6077) the other medical witnesses relative to the peculiar odour emitted by this class of insane patients, and added (6095) that if a patient of this character were awakened and in a dirty condition, and if it could be done without violence or struggling, he would expect him to be cleaned. If cleaning him, however, involved violence or the use of force, he would leave him alone until morning. Such was the choice of two alternatives, and he knew of no physical injury which could accrue by allowing the patient to remain for twelve hours in this state. The distress would be wholly to the observer, as the patient could not feel nor realise his condition. While he could not conceive how a patient could sustain injury by being left alone, he knew it would be most injurious to use force in cleaning him. There might be two classes of patients, one to whom it would be comparatively harmless if he were cleaned, and another to whom it had been necessary to give a narcotic, and with whom it would be most inadvisable to interfere. Another medical practitioner, who had special experience at Bayview Asylum (6446) said these rooms were kept absolutely clean, and were always scrubbed out as soon as patients left them in the morning. From his experience, he most decidedly supported other medical experts when they said that in the treatment of patients in isolation wards (6469 *et seq.*) the first and chief requisite was sleep. Such was the established opinions of the best medical authorities, and it was desirable in the highest degree to avoid irritation, either by interference in watching or by restraint. Exceptionally dirty and destructive patients he would leave alone, in the hope of securing rest; it would be no easy matter to clean a patient of this kind in the night time, and more harm would be done by irritation than good would be gained by making him clean. Dr. A. Jarvie Hood (7571) said supposing he had to treat a paralytic dirty in his habits, he would not wake him for purposes of cleanliness, but if he was not in a good sleep nor likely to go to sleep, he might be cleaned. He would sink the whole of the sentimental side of the question, treat the patient for his own good, and, regarding the question from a medical point of view, he would certainly not disturb a patient as long as he could sleep. Giving him a utensil or interfering with him in any way, thereby inducing restlessness and irritation, would do more harm than allowing him to remain alone.

44. The official visitors also gave evidence on these points. Sir Alfred Roberts (7684) said that on the whole, and especially in cases of acute mania, he thought it was better when a patient acted in an unsatisfactory manner, for him to remain alone rather than be disturbed by an attendant entering the room for purposes of cleanliness. He would not allow attendants to go into the room periodically, for taking the interest of the patient into consideration, he not grasping nor suffering the ignominy of his condition, he should be left alone until he received his morning bath (7783), and personally he did not think the medical superintendent was to blame for the course he took in the Major-General's case. After administering a narcotic, the patient should be left alone to sleep as long as possible. In cleaning patients it would be necessary to employ at least two attendants, and this would mean tremendous work in the middle of the night, setting aside altogether the prejudicial effect the excitement would have on the patient. Patients of this class (7803 *et seq.*) had distinctly-smelling urine, and it would be difficult, in fact, impossible, he should say, to detect in the early morning the smell of stale from that of fresh. A sanitary inspector of a municipal council, entering a room when it was first opened in the morning (7826) would most likely encounter something altogether different to smells he would meet with in his ordinary avocation—perhaps

a smell at which he would be horrified, and furthermore, his experience in municipal matters, as a sanitary inspector, would not enable him in the slightest degree to correctly judge of the freshness or staleness of matter in this room. Dr. Huxtable was of opinion (8098) that anyone might easily be deceived regarding the odour from a room tenanted by this class of patient. A person experienced might be able to make a distinction, but an employee of a municipality whose duty it was to look after sanitary matters generally would not be able so to do. As a medical practitioner (8130), he would not interfere with a dirty patient during the night. The universal practice was to leave these patients alone until morning, sleep ever being the first consideration. The result of long medical experience was that interference was harmful. Patients arriving at this condition did not suffer, because they no longer remained persons of refinement. Dr. Cox (8257) said any statement to the effect that the room was in a filthy condition and that there was a stale urinous smell about the place was not in accordance with his experience, but he must add that he was never in the room at night. It was probable that the offensiveness of the smell would arise from the disease and the ammoniacal condition of a patient in a particular stage of paralysis. In his opinion, persons unaccustomed to these cases could not distinguish between the smell of stale urine and the smell of an ammoniacal odour. Very many times he had been in these rooms—sometimes in the morning between 11 and 12, and sometimes in the afternoon—and had never detected the odour described (8261). Officials connected with the municipal department, whose duty it was to examine places in the city, entering that room after it had been occupied by a patient all night, would certainly not be able to distinguish the smells to which he had referred. The correct treatment in cases of this kind (8372) was to leave the patients undisturbed as long as possible, the first consideration being sleep.

45. The Inspector-General of Insane reporting to the Government on 30th May said, of the Major-General, that lately for some weeks, though the bodily strength in the main had continued, there had been mental decadence with actively filthy and destructive habits, and great restlessness and excitement, all those symptoms being increased at night, and attended by great insomnia. From his long experience (8637) in these matters, and after hearing all the evidence in connection with the room, and after having seen and been in that room very frequently, he had never smelled any bad smell there, and considered the room was cleaned very fully and completely by being scrubbed, and he thought as far as the odour was concerned it compared favourably with similar rooms occupied by dirty patients at public asylums. The evidence given by Professor Anderson Stuart, and the opinion he quoted from a distinguished authority regarding urinous smells and the changes necessary were not applicable to this special class of patients. The treatment of acute cases was quite different to that of demented, and must be carried out on altogether different principles. Persons with general civic experience were not competent to pronounce a reliable opinion on a room occupied by a patient in the condition Major-General Richardson was on the 20th of May. If these officers (8641) paid a similar visit to the single rooms at the Government asylums he would undertake to say they would meet with smells worse than anything with which they would come in contact in a municipal inspection, if these visits were paid early in the morning. No cure had been discovered for this evil, which was difficult to avoid. It was possible (8655) for a medical man to occasionally distinguish stale from fresh urine in these cases, but certainly in numerous instances urine was alkaline and practically stale when passed, therefore it was impossible to distinguish urine recently passed, much more urine passed for several hours, especially in general paralytic patients.

46. In his own defence Dr. Vause traversed the statements of accusing witnesses, and contended (8930) that it was not surprising when it was admitted that the urine of acute maniacs gave forth a strong ammoniacal odour, that Professor Stuart, Mr. Richardson, and Messrs. Gearey and O'Brien, should have noticed what appeared to be the smell described by them, this giving the impression that the room had been neglected and allowed to remain uncleaned, an impression which he submitted was absolutely erroneous. Positive evidence had been given that these rooms were cleaned out daily as a matter of course. The official visitors asserted that they had invariably found them sweet and clean. Both the attendant Doherty and himself saw an india-rubber utensil in the room when the Major-General was removed on the morning of the 20th of May. There might have been an offensive smell in the room on that morning (9255), but during the brief visit which was made he did not think

think the distinctions referred to could have been discovered. Regarding the use of the utensil neither he nor Professor Anderson Stuart would have succeeded in persuading the Major-General in that direction if he refused, and it would have been a very dangerous experiment to try (9307). The patient could neither be coaxed nor forced. The quotations used from Mercier by Professor Stuart (9311) embodied no new theory in its application to demented, or aged and lazy and dirty patients, but it could not be applied in acute cases. If he had the Major-General on his hands again, and in a similar condition, he would follow the same course of treatment and issue similar instructions. He never spared any trouble in trying to keep that floor sweet, and Doherty saw that this duty was properly performed. The day before the Major-General was removed (9336) he was absolutely positive he was in the single room, and there was no foul smell there then; indeed he was perfectly positive there was nothing of the kind there as described by Professor Anderson Stuart. The floor was of good sound hardwood, and a stale smell of this kind could not have come from under the boards, because if it did it would not be got rid of, and the members of the Commission knew the room was sweet enough now. He did not think he could have distinguished the difference between a stale and a fresh smell (9374) in the room under such circumstances as those of the 20th of May, and he entirely rebutted (9406) the statement "that the smell was there and must have been there for some time." In all cases of great excitement (9453), he would certainly not disturb dirty patients when asleep, and even his own relatives and friends he would leave in that condition. The best medical opinion was with him on that point, and he would not have a patient disturbed for the purpose of cleanliness. In Major-General Richardson's case he was strongly impressed with the necessity of sleep, which was a question of life and death. If he could not procure sleep he felt certain the patient would go down towards death. With his sole attention concentrated on this one point his instructions were imperative that the patient must not be disturbed, and fighting with him in the matter of cleanliness would have destroyed the object he had in view.

47. The Commissioners find as follows in regard to these allegations:—

The findings.

1. The weight of evidence is entirely in favour of provision having been made for the proper cleansing of this room from day to day. Definite instructions were given by the Medical Superintendent to this effect, and every attendant engaged at Bayview House swears they were regularly and systematically carried out.
2. There is also sufficient evidence to show that an indiarubber utensil was supplied more or less regularly for the use of this patient while sleeping in the isolation-room. Whilst there certainly is some discrepancy in the evidence as to whether one had been placed in the room on the night of May 19th, your Commissioners believe that some reliance must be placed on the sworn testimony of Dr. Vause and the attendants to the fact that they saw the utensil in the room on the morning of May the 20th, when the patient was removed. The Commissioners believe that in consequence of the darkness of the morning and the hurried character of the visit the utensil was overlooked by the official visitors on this occasion.
3. Regarding the stale urinous smell, said to have been in the room on this particular morning, your Commissioners, after hearing the evidence of expert witnesses, cannot come to any other conclusion than that in the discrimination made by witnesses unaccustomed to the result of single-room treatment of cases of insanity of this description they were misled. From the evidence fully summarised in the foregoing pages it is clear that the witnesses were inexperienced in the conditions surrounding isolation-rooms in lunatic asylums after they have been occupied during the night by patients of a destructive or violent, or wet and dirty character. The testimony given by authorities from the public asylums is conclusive on this subject.

Charge of being left without food or drink for more than twelve hours.

48. Another charge was "That Major-General Richardson was frequently left without food or drink for more than twelve hours, including the whole of night-time." A statement to this effect was made by Mr. Jeanneret in the Legislative Assembly; but the first direct evidence given before the Commission concerning this allegation was by the witness Erickson, who said (721) that during the two
drink

years he was at the institution he did not know whether it was the custom at night-time to prepare hot milk, cocoa, etc., for refractory patients confined in the isolation rooms. Mackenzie said definitely (874) that there was no provision whatever, supposing the necessity arose, to give the Major-General or any other patient a drink of cocoa or milk, or anything else, if he were restless, hungry, or thirsty, and required nourishment during the night. The kitchen was locked up every night, and there was no other place where an attendant might make a warm drink or anything else for a patient. As far as he knew, it was impossible to get nourishment of this kind in the night-time; of that fact he was certain (905). Mr. Sydney Richardson informed the Commissioners that while his father did not complain about the food he received (4668), he invariably said he never had any breakfast.

49. Contradictory evidence was given by Senior-attendant Doherty (2790), who asserted that Major-General Richardson was specially treated in regard to diet, he always being provided with everything he wanted, no matter the hour; such, for instance, as cocoa, milk, beef-tea, &c. Medical comforts (2800 *et seq.*) were provided for the Major-General, supposing he required them during the night; they were kept in a cupboard in the dining-room, and the means for making any warm drink were at the fire in the kitchen, the door of which he never found locked at night. The cupboards were open and available to male attendants; and if they were not aware of the fact they ought to have been. Witnesses who said there was no such provision must have been mistaken, for there had always been available a supply of tea, cocoa, sugar, and other things which could be procured during the night. The Major-General had asked him for a drink during the night (9265 *et seq.*), and repeatedly he had supplied him with cocoa and tea. He had done so as often as two and three times a night, and more than twenty times altogether. He had never been unable to obtain the necessary materials for this purpose, and always prepared these warm drinks at the fire in the kitchen, which was kept going summer and winter all night long (3092). This evidence was supported by Attendant O'Brien, in answer to questions 3171-77, and he further stated that he had given the patient cocoa or warm milk as often as three times in the night, after suggesting it to him, thinking it might soothe him to sleep. Dr. Ramsay (6031) also told the Commissioners that there were stores of tea, sugar, and milk kept in a safe on the verandah, the key of which was in Doherty's possession. Dr. E. P. Sinclair stated (5086) that Major-General Richardson was always particularly well looked after in this respect, and dined in Dr. Vause's private house. Dr. Williams also asserted that this patient was fed from the private table of the Medical Superintendent (4955).

50. Dr. Vause, on his own behalf, described (9208) that for some time Major-General Richardson was fed artificially with stomach tubes, because he would not take food in the ordinary way. At one period he refused food entirely, and was fed artificially with milk, strong beef tea, eggs, and sugar. Two months later he began to take food in a natural way, and from that time there was an improvement in his general health. When it became necessary to place him in the single room at night, provision was made for supplying the patient with refreshments if he became exhausted. He had (9221) peptonised cocoa, specially made with milk, and kept in one of the sitting-rooms. At the time of his removal, his appetite was fairly good, and appetising food was always specially provided for him. Regarding the supplies of stores at night (9479 *et seq.*) he pointed out that they were issued every day, as a rule, just after breakfast, in sufficient quantity to last till the same hour the following day, including provisions for breakfast the next morning. They were kept where the attendants could have access to them during the night. It would be impossible to induce attendants to perform night duty unless they were supplied with food, and plenty of it; and it was the universal practice for attendants on night duty to prepare and cook food for themselves.

51. With regard to this charge, your Commissioners regret that more detailed The finding. explanations were not obtained by the Government Medical Adviser and his party, when they made their surprise visit to Bayview Asylum. The tenor of the evidence is that a misunderstanding occurred relative to this subject between the Medical Superintendent and the visitors, either owing to the want of opportunity or reticence on the part of Dr. Vause. From the evidence of Dr. Vause and the attendants who waited on Major-General Richardson, it is clear that, whether visits were periodically made and nourishment was given to the patient at stated intervals during the night, or not, ample provision was made for these purposes. 52.

Charge of
having been
left un-
attended for
twelve hours
at a time.

52. The final charge against the management of Bayview House in regard to this case was "That Major-General Richardson was frequently left unattended for twelve hours, including night-time." The exact words used by Mr. Jeanneret when making this charge in Parliament were "A gentleman has for months past, for the last four months to my knowledge, been kept from five in the afternoon till seven in the morning, over twelve hours, without an attendant." Professor Stuart, in his official report, inserted this clause:—"Dr. Vause says the Major-General was put in the outhouse when violent and specially ill, but no attendant remained in the outhouse with him, and that no attendant would see him between 10 p.m. and the morning, I presume 7 a.m., since when we first saw him he was being brought into the lavatory for his morning ablutions in the ordinary course of events." In his cross-examination, Dr. Stuart said he did not know whether the attendant he saw was attached to this patient, but he most certainly thought (100) there should have been an attendant, but there was not one there. Mr. Gearey (139) said there did not seem to be any supervision over the patients while he was in the yard, and it struck him as a kind of "go-as-you-please arrangement." Mr. Sager, in his official report, credits Dr. Vause with saying, in reply to questions:—(1) That the patient was placed in the single dormitory because he was noisy, dirty, and destructive; (2) that when there he had no night attendant; (3) that he was shut in about 7 p.m. and brought out about 7 a.m.; (4) that an attendant generally looked to him about 10 p.m. These statements were substantiated in cross-examination in answer to questions (374-76), in which witness said, from the conversation of Dr. Vause, he was under the impression the patient was visited each night about 10 o'clock. Warder Erickson, although not referring to the Major-General (722), was unaware of night attendants watching over patients, in the isolation ward. When he was an attendant, he generally went to the cell door about 10 o'clock at night, immediately before going to bed, and looked through the observation hole to see that all was right. Mackenzie (857 *et seq.*) said that as far as he saw, the Major-General was put into this room about 5 o'clock every evening. It was not part of his duty to watch him at night, but sometimes before going to bed at 10 o'clock, he, with a warder named Copley, who had gone to South Africa, would look at the patient through the observation hole. Nobody saw the patient after that hour until the next morning, as he was positive that no attendant was on night duty. Dr. Vause (1002) never made a round during the evening up to 10 o'clock. There was no attendant told off for night duty; they had to work as many as sixteen hours a day, and he could safely say (1017) that every male attendant was in bed by half-past 10 at night. Mrs. Richardson told the Commissioners she was certainly under the impression that one attendant at least (7369) slept in the same room with the Major-General all night; if she had been told by anyone whom she could trust that it would be better for the patient to be alone during the night she might not have objected, but she always understood that he had an attendant with him.

53. Attendant Doherty gave evidence directly contrary to these statements, as he said the Major-General constantly had an attendant, but not always the same person (2685). He, with O'Brien, was on duty on alternate nights during the period the Major-General was in the isolation room (2798), and his instructions from the Medical Superintendent were not to disturb the patient if he thought he was asleep, but on no consideration was he to be left without being seen for a longer period than three hours, whether awake or asleep. Whenever he was on night duty (2961) he looked in on the Major-General every two or three hours, and he did so for six or seven months (3079) prior to the patient being removed from Bayview House. He was on duty the night previous to the Major-General being taken away, and he saw him on that night every two or three hours. James O'Brien, the other night attendant, testified that he took night duty on alternative nights with Doherty, and, on these occasions, acting under the instructions of Dr. Vause, he saw the patient every two hours. Those instructions were faithfully carried out, and he never went to sleep himself all night (3244) and left the Major-General alone. If the patient was noisy it was his custom to open the door, but if he was asleep he merely looked through the observation hole, and refrained from disturbing him. Henry M. Watt, a former attendant at Bayview (6191-6243), said it was Dr. Vause's particular order that the Major-General should be seen every two hours during the night-time, and this instruction was obeyed. The attendants at Callan
Park,

Park, Mr. Little (781 *et seq.*) and Mr. Kernaghan, pointed out that the patient is under constant night supervision at this institution, but it was desirable that as little disturbance should be made as possible. An attendant sat in front of his door, which stood ajar, so that he could be seen without noise or interference. Patrick Martin, who was at Bayview House, as a generally useful man, for nine-and-a-half years under Dr. Vause, said there was always a night attendant on duty (7222) when a patient was confined in isolation, frequent visits being made to him throughout the night.

54. The medical authorities questioned on this matter of night attendance concurred that the proper and universal course had been followed by the Medical Superintendent at Bayview in the treatment of Major-General Richardson. Dr. Blaxland, who, in this inquiry, must be regarded as a witness of first importance and unquestionable impartiality, he now having charge of the patient, and a full knowledge of the nature of his ailment and the history of the case, stated that when he first received the patient (4775-8) he made the experiment of putting an attendant with him in the single room for the purpose of watching him and looking after his requirements, but found that such a course of procedure would not do at all. It was better to leave him alone with an attendant on watch, and this treatment resulted in the patient getting more mental repose and sleep. There was nothing cruel nor heartless in leaving the patient as much alone as possible while in that stage of his malady, of course, providing he was visited at intervals, and to secure this visitation there was a special man stationed constantly outside the room door (4186) with instructions to see him every hour. Dr. Eric Sinclair, Medical Superintendent at Gladesville (5272), confessed that after having seen most of the large asylums in the world, and inquired into systems of night attendance, he knew of no other effectual way of dealing with that class of patient. Keeping an attendant in the room was not a plan he would recommend, as he thought it better for the patient, if he had to be put in a single room, to place him there with a straw mattress rather than with an attendant. The presence of an attendant would not cure or check dirty habits (5274-5), and if he had such an increase of staff as would enable him to place an attendant with each dirty patient of this class, he would still object to make any departure from the present system, for experience proved that a change in that direction would be harmful to the patients, by keeping them in a constant state of irritation, and in consequence increase the excitement. Dr. Hetherington (5885-5900) expressed similar opinions relative to a night patrol being harmful, if it disturbed patients in their sleep. He did not think a night attendant was necessary at Bayview House when either or both of the isolation rooms on the male side were occupied, inasmuch as attendants slept so close to these rooms that they would hear if their services were required. On some occasions the attendants were actually roused in this manner. For any patient he had in the rooms he did not provide a night attendant, but there was one case where an attendant slept in the room with the patient. Dr. Ramsay (5988 *et seq.*) said he was aware of the fact that some attendant—he making Doherty responsible for it being properly done—waited on the Major-General during the night time. That rule was faithfully observed during the two months he was at Bayview House as Acting Medical Superintendent, because every morning he received from the head attendant a report of how the patient had slept the previous night. He felt quite sure an attendant periodically at stated intervals looked into the Major-General's room, and evidence given to the contrary was a mistake, unless he had been misled by the head attendant. Dr. Knaggs (5916), Dr. Creed (6106), and Dr. A. Jarvie Hood (7756) all approved of general paralytics being kept in isolation while in the acute stage, but under surveillance at stated intervals during the night.

55. Sir Alfred Roberts, as chairman of the Visiting Board, stated his belief that the night watch was properly kept (7764), notwithstanding the fact that by force of circumstances, in the isolation room being detached from the main buildings, there was some inducement for a night watchman, on a cold, dark, and dismal night, to remain by the fire in the dining-room in preference to crossing the yard to see a patient. Instructions for an attendant to see or listen at the door of this patient, and if quiet, not to disturb him, were quite proper, but he thought (7771) a patient in that particular stage should be seen at least every hour. Dr. Huxtable, speaking of general paralytic patients, informed the Commissioners (8123) that observation every two hours throughout

throughout the night was the custom in many cases. In England, visitations varied under different circumstances, bi-hourly visits being necessary at times. Instructions to visit a patient in the state Major-General Richardson was every two hours would not be an arrangement with which he could find fault, with the reservation, of course, that Dr. Vause, as Medical Superintendent, knew what was necessary, and gave directions accordingly. Dr. Cox thought it was much better (8333) for an attendant to be on the outside rather than inside with a patient of this class, and if Dr. Vause ordered that the Major-General should be inspected every two hours that would have been quite sufficient. It would have been nothing short of folly to disturb him uselessly, but at the same time there should have been an attendant sufficiently near to hear any disturbance. Specially he inquired into the point as to whether an attendant would be near enough if located in the dining-room, 14 yards distant, and in so doing asked the patient to speak when inside the room, while he, as listener, was in the other building. With the door of the sitting-room open, he heard the Major-General speak (8364), and providing there was no straw on the floor, he could hear the patient pacing the room in his bare feet. If an attendant occasionally listened at the door, this patient would be under sufficient night observation providing he was asleep, as if he discovered him to be asleep, it would be madness to flash a bull's-eye lantern in his face. It was not absolutely necessary that this patient should be seen at stated intervals unless the attendant were so instructed by the Medical Superintendent.

56. The Inspector-General of Insane officially reported to the Government on May 30th, 1894, that "with regard to the mode of treatment employed, the placing of a patient by himself in a room at night was one frequently and rightly adopted in institutions for the insane. The presence of an attendant was liable, in some cases, to altogether prevent sleep, and personal interference, in any form, was often so much resented that isolation became absolutely necessary. Interference at the hands of attendants was, perhaps, especially to be avoided in this case as, notwithstanding the mental failure, the long ingrained habits of command to a considerable extent remained. There appeared to be no doubt but that an attendant was always on duty at night in a sitting-room near where Major-General Richardson was sleeping, whose main, if not sole, duty was to look after the patient." In cross-examination as a witness, the Inspector-General stated (8621) that the attendants engaged in watching the Major-General seemed to be fit men for the position, but perhaps the night watching might have been better by the visits being more frequent. The only difference between the night attendance at Bayview House and that in vogue at Callan Park was (8919) that the patient was, at the last-named institution, under constant supervision throughout the night instead of being seen at stated intervals.

57. Dr. Vause declared (8930) that if, on the grounds of supposed economy, he had failed to provide sufficient attendance on this patient he would have retarded his recovery, which was the first and only object of his treatment. When the Major-General was put in the single room at night an attendant was told off to visit him every two hours. The two men of his establishment in whom he had the greatest confidence (9219) took it in turns to watch this patient on alternate nights, with special instructions not to disturb him unless absolute necessity arose for them to enter his room. Every provision was made for the due performance of this duty by the night-attendants (9233). In the visitation of any patient confined in the single rooms it was his custom to insure inspection every two hours, but at the same time the room must not be entered unless a special purpose—such, for instance, as the administration of food, the rearrangement of bedding, or the soothing of excited patients—demanded this attention; and in Major-General Richardson's case he was particularly anxious to insure unbroken rest, because at this juncture he relied on sleep as the one restorative. Hence the remark to Professor Stuart, that no attendant would see him between 10 o'clock at night and 5 o'clock in the morning. When speaking to Professor Stuart on the morning of the 20th May, he omitted to explain that, although the room was not entered, an attendant saw the patient at least every two hours, and acted as seemed necessary according to the patient's condition. When Professor Stuart reported Dr. Vause as having said, "The General was put in the outhouse when violent and especially ill," he misunderstood the words used, which were, "The General occupied a single room when too excited to be manageable in his ordinary bedroom"; and he did

did not use the term "outhouse" as applied to the room in question. His sole explanation for this misunderstanding was (9532) that the visit in question was a hurried one, and he thought his conversation with the visitors amounted to informing them of his instructions to the attendants, prohibiting unnecessary disturbance of the patient during the night, but, at the same time, insisting that he was to be seen at intervals. He did not think he told Professor Stuart that Major-General Richardson was left unseen from 10 o'clock at night until he was removed the next morning. The system of night watching in this case was the outcome of a mutual arrangement between two of the most trusted officials in his establishment (9554 *et seq.*), and as Medical Superintendent he considered it best to allow these men to work the night watching in their own way. The case with which they had to deal was so exceptional as to cause more trouble at one time than at others, and so long as the night watchers suited themselves, and the work of nocturnal supervision was satisfactorily done, it was not wise for him to interfere. If there had been more than one patient requiring night attention, such a system would not have answered, but in the circumstances the arrangement suited the men, and he was satisfied with the night supervision and attendance, especially as Doherty and O'Brien were experienced in night duty (9997).

58. The Commissioners, in relation to this charge, find as follows:—

1. This complaint is to a large extent involved in the charge already referred to. From the description given by Dr. Stuart and those who accompanied him to Bayview House on May 20th, it would appear that there was some laxity in the matter of attendance, as according to the statements made, attendant O'Brien, who was said to be in charge of the Major-General during the night of May 19th, was not seen by the visitors, as he undoubtedly should have been if he was on duty at the time. Even if O'Brien had retired after the performance of night duty, Senior-attendant Doherty should have been present on ordinary day duty. The continuity of attendance was not demonstrated to the satisfaction of the Commissioners, and consequently it is their impression that, although definite instructions had been given for regular attendance on the Major-General, the attendant in charge could not have been close at hand on this occasion.
2. The Commissioners consider that this defect was owing in a large degree to the fact that attendants while on the night duty had no conveniently accessible room within easy reach of the patient, and that, on the contrary, these attendants when not actually engaged in visiting the patient passed their time in a separate building some distance from the isolation rooms, having no window or aperture of any kind for overlooking the rooms in which patients are kept during the hours of night watch.
3. The Commissioners, however, do not believe the allegation, that the Major-General was left for twelve hours without an attendant, including the night-time, has any foundation in fact.

Case of J.J.G.

59. The discrepancy of the evidence furnished to the Commissioners by the various witnesses was exemplified in a remarkable degree in the case of J.J.G. an old gentleman, 87 years of age, suffering from senile dementia (9817). The attendant on this gentleman was Mackenzie, one of the principal witnesses in connection with the various charges against the management of Bayview Asylum. This witness stated that there were rats in the room in which Mr. G. slept. Mr. G. having accidentally fallen out of bed had injured his head. Mackenzie stated that, as a matter of personal observation (936), he had seen rats attack the wound in Mr. G's head, and that he complained of the matter (not to Dr. Vause), but to the head attendant (938), but no attention was paid to his complaint at the time (939). In describing the particular circumstances witness stated in answer to Questions (940, 941, 942, and 943), that immediately after the accident, the patient jumped up and exclaimed "Oh, my head!" about every five minutes. In the morning he found the pillow covered with blood. Saw a larger wound on the patient's head, but failed to realise by what it had been caused. Next night patient made more noise, and Mackenzie says he struck a light, and saw a rat

Serious
allegation.

rat

rat jump out from the back of Mr. G's head, which was then bleeding. On the morning following he told the head attendant of the circumstances, and was instructed to close all the doors. He did so, but next night the rats came again, gnawed open the bandage on the patient's head and again attacked the wound until it became nearly the size of the palm of his hand, or 4 or 5 inches in circumference. The next day the carpenter put pieces of tin over the holes through which the rats came. Another witness, Farquharson, who is at present employed at Bayview Asylum, stated that he had heard of the accident (608) and that he had heard that rats had eaten some portion of Mr. G's flesh (610); he added further that he had heard some of the warders say (611) that the rats had gnawed the flesh to the bone on the back of Mr. G's head. He was aware that there were rats near where Mr. G. slept. Reuben Alfred Peet, employed as a painter at Bayview Asylum, had heard of the accident to Mr. G. (693), but had not heard of the attack of the rats on the wound in Mr. G's head (681), and he thought they were not more in number than is usual in old places like Bayview Asylum (682).

60. On the other hand, J. Doherty, at present the head attendant at Bayview Asylum, stated that Mr. G. was placed in the charge of Mackenzie (already cited) (2818), and that he had reported to him that the wound had been attacked by rats, but on examination he found (2821) no difference in the size of the wound which might not have occurred through the patient rubbing the dressing off. He stated (2822) that the wound was about half an inch long, and after Mackenzie had told him about the rats the wound was neither larger than it was at first nor ragged about the edges. It was a clean cut. He never knew of, nor heard anything about, a rat jumping from under the pillow or having got at the wound, and saw no grounds for believing such to be the case.

61. The evidence of O'Brien, at present employed as a warder at Bayview Asylum, was to the effect that, although he had heard of the accident to Mr. G. (3205), he had never heard of the attack of the rats on the wound (3207), and that Mackenzie had only remarked to him that there were a few rats in the old building (3209).

62. Dr. Vause stated that he saw the case after the accident, which occurred on 2nd February, and dressed the wound (9819). It was reported to him that some one had (9820) said that the wound looked as though it had been attacked by rats. He laughed at the idea, for the wound was small, having a granulated surface. The case was duly entered in the Journal, and the entries were read by the Commissioners (9222). The wound was nearly healed when the patient was discharged (9823) on 11th February (9841). The statement with regard to the rats attacking the wound was absolutely untrue (9846), and he had never heard of any other circumstances connected with Bayview Asylum wherein rats had been injurious to patients.

The finding

63. The Commissioners have no hesitation in stating that the evidence given by the attendant Mackenzie is a gross perversion of the circumstances of the case, based on an erroneous presumption. While, doubtless, there were rats in the vicinity of this room, and in the bed-room itself, there can be no doubt that the description of the circumstances is greatly exaggerated. A wound such as that described by Mackenzie would have been a most serious matter, and could not have healed in the manner described in the short interval between the occasion of the accident and the discharge of the patient; in fact it would have given rise to symptoms that must have occasioned anxiety, if not alarm, to the friends when the patient returned to his home, where as the Commissioners find, on the contrary, that no mention of the circumstances is made in the letter dated 26th February, 1894, when Dr. Vause is tendered the most grateful thanks of the relatives of Mr. G. for his kind care and attention.

Case of Mrs. A.

64. The complaints against the treatment of Mrs. A. were made by her cousin, Mrs. H.E.C., who stated that she thought she was not insane (3727), although she was very dull at times, and suffered from excessive weakness. To a large extent the witness thought that her cousin was not violent (3738, 3754). This patient was under the care of Dr. Hetherington (in the absence of Dr. Vause), and Mrs. C. complained of the rudeness of that gentleman, and his denial of the fact

fact that Mrs. A. was in a dying condition, and the difficulty of obtaining access to the patient (3756), both in regard to herself and Mrs. A.'s mother, who had travelled a long way for the purpose. The witness further stated that, although a private room for the patient was paid for (3758), she was placed and died in one of the associated dormitories (3759). There was no information as to her death (3774). Subsequently she saw the body of her cousin in the mortuary, which she described as a stable (3763), with fodder under foot, and a couple of bags of fodder in the room (3766). It was also charged that, although boxes of linen were taken into the institution, and Mrs. A. was only a fortnight there before she was dead, there was no linen left. It would appear that Mrs. C. afterwards saw Dr. Vause, and made her complaint to him, and in disagreement asked him to sue her for any money owing for maintenance (3788).

65. Dr. Hetherington, who was in charge of Bayview Asylum during the absence of Dr. Vause from April, 1891, to April, 1892, stated in his evidence that he had only a hazy recollection of Mrs. C.'s visits to the institution (5968). He was satisfied, however, that the mortuary was suitable for its purpose (5846), and that it was kept as it should be (5847). The particulars stated in Mrs. C.'s evidence were not remembered by him (5866), and he gave a positive denial to her other statements (5865).

66. From the records of the Bayview Asylum, it would appear that Mrs. A. was admitted there on 16th May, 1892. The certificates were duly signed, and showed that she was suffering from melancholia, and she died on 23th May. Dr. Vause was absent in England when this case occurred, but on his return to this country was visited by Mrs. C. Dr. Vause's evidence is, in effect, a complete denial of the principal circumstances stated by Mrs. C., and his only recollection of the matter was as to her complaint of (9631) Dr. Hetherington's want of consideration for her at her various visits to her cousin. Dr. Vause further stated that the records of Bayview Asylum contained no mention of the provision (9535) of a private room; that Mrs. C. had inaccurately stated the amount of the maintenance money, and that no money was owing for which legal proceedings would be necessary. As regards the clothing supplied and missing, he had confidence in the matron then on duty (9640), that a careful record was kept of all such matters, and that he had heard no complaints from the matron on the subject (9639). He further stated that he believed the body was laid out in the proper way in the dead-house of the Asylum (9641).

67. In this case it would be impossible for the Commissioners to offer any The Finding. opinion on many of the complaints made by Mrs. C, which, it will be seen, are denied by Dr. Hetherington (5968). The Commissioners have, however, personally inspected the mortuary of the institution, and are satisfied that it is sufficient for its purpose, and contains similar provisions to those generally found in such buildings.

Case of Miss H.

68. The case of Miss H. was brought under the attention of the Commissioners in consequence of application made by her brother, Mr. S.H., for her discharge from Bayview Asylum, in order that she might be placed under his own care and control. Mr. S.H. denied that his sister was insane, and affirmed that she was retained in Bayview Asylum in consequence of his brother, Mr. R.H., being pecuniarily interested in the matter, and that Dr. Vause was a willing agent for the purpose. According to his view, the motive of his brother in retaining his sister in Bayview Asylum was that he and his children might ultimately obtain any accumulated moneys belonging to his sister. This witness also stated that he was dissatisfied with the treatment received by his sister as regards the food and other circumstances. On all these points he had received information from Mr. Gearey, who he stated seemed to know everything that occurred in Bayview Asylum; that, in fact, if he went to Gearey in the morning and asked what had occurred in regard to his sister during the day, he could obtain from him the information he required as early as 4 o'clock in the afternoon (3980 *et seq.*). The witness further stated that in the year 1891 he entered a suit in the Equity Court to obtain the release of his sister, but failed to obtain this result.

69. The statements of this witness were contradicted in every point of importance by the evidence of his elder brother, Mr. R.H., by the production of the medical certificates of duly qualified medical gentlemen, and by the evidence of the Inspector-General of the Insane and Dr. Vause.

70. Mr. R.H. spoke in most laudatory terms of the treatment of his sister, and read extracts from his reports, as a senior trustee, to the Master-in-Lunacy, approving of the liberty accorded to his sister in making and receiving visits, and expressing his contentment with the provisions supplied, the attention to personal requirements, and the comfort given in residential accommodation. He also stated that, while her physical health was excellent, her mental condition was such that there were strong grounds for believing that if she were beyond legal control, the eccentricities of conduct and manner, that occurred in the past, would be found to be in no degree diminished. The retention of the patient in Bayview Asylum, he said, was approved by her only sister and that sister's husband, a medical gentleman, and also by her other brother, Dr. H. This witness also stated that a portion of his sister's property, under the will of his mother, would fall to him and the other sister jointly, and that the larger portion of his sister's property, in case of her death, went to his children. Mr. R.H. contradicted the statements of his brother, Mr. S.H., as to his possession of independent means and his suitability in other respects to become the guardian of his sister.

71. In this case the various medical certificates showed that Miss H. was first admitted into Gladesville Asylum in April, 1875. Subsequently (31st May, 1881) she was admitted to Bayview Asylum on the certificate of Drs. Fortescue and Hodgson and at the request of her father. She had leave of absence on 12th December, 1882, and, after residing with her friends for a time, she was returned to Bayview Asylum on 7th August, 1884 (9671). She was discharged on 20th August, 1891, and re-admitted on same day at the request of the then (9673) trustee on certificates signed by Drs. Ashwell and Long, her father having died. This unusual course of action was explained by a letter produced by Dr. Vause (9675). Since then she has continued an inmate of Bayview Asylum, and according to Dr. Vause, her condition is (9676 and 7) much the same as before, complaining of insults being heaped upon her, but fails to specify any particular insult, and displays various symptoms of insanity. She visits her brother R. from time to time, and goes out driving and walking; occasionally attends the theatres, concerts, and public gardens accompanied by a nurse.

The Finding.

72. The Commission have carefully considered the case of Miss H., and, in view of all the circumstances connected with its history, are not prepared to recommend any departure from the decision of His Honor Judge Owen. In the opinion of the Commissioners, Miss H. requires the modified restraint now adopted, and the complaints made with regard to her treatment have not been justified by any of the evidence submitted.

Mr. W.'s Case.

73. The charges of maltreatment in this case were made by the witness Mackenzie, who stated (1154) that Mr. W. was so paralysed as to be unable to do anything for himself or to eat food when it was placed before him, and yet, helpless as he was (1155), he only got a bath and a change of clothes once a week on each Saturday afternoon; that his clothes (1160) were necessarily in a filthy condition and rotted away (1164). Further, that, although as his attendant (1199) he kept him as clean as was possible, in consequence of the insufficiency of attendants (1203) he was neglected. These serious charges, however, the Commissioners found to be completely answered by the evidence of other witnesses. H. M. Watt, who had been an attendant at Bayview Asylum on two occasions, stated, that although W. was a passively dirty and leaky patient (6259), he received a warm bath, &c. (6260). That it was untrue that he was bathed only once a week on Saturday afternoon; in fact, he was bathed when required. He had a bath once every day, and sometimes twice, according to circumstances (6261). He also stated that he had plenty of clean clothes (6262), and that if he had not been cleaned and changed frequently his legs would have become sore (6264). The filthy condition of the trousers, &c., described by Mackenzie (6265) was positively denied by this witness. This witness also stated the frequent visits to the patient by his friends and by Dr. Creed (6266), and that Dr. Creed had seen him frequently in his ordinary condition on the lawn (6268). Dr. Creed stated that when he sent W. to Bayview Asylum (6078) he was in a most delicate state of health, and that he was surprised that he had lived so long (6079) as eight years, a matter of pecuniary importance to his friends (6080).

(6080). It was only in consequence of the great care given to this patient that he had survived (6081). Further, if he had been neglected, the witness believed his life would have been materially shortened (6110). He had seen W. on several occasions, and had found him properly dressed and comfortable (6113); and when he visited Bayview Asylum he went frequently direct to the patient without a minute's interval (6114). The Inspector-General of the Insane gave a complete history of the case (8697), and stated that as he was deeply interested in the patient he never visited Bayview Asylum without specially seeing, speaking to, and examining this patient. The best proof of the care with which he had been treated was that he had lived so long beyond expectation. The Inspector-General of the Insane, who had heard the evidence of Mackenzie, stated that it was impossible to make special preparations by cleaning, &c, for visitors, owing to the patients' paralysed and helpless condition, and that the serious neglect charged by Mackenzie was refuted by the fact that if he had not received the utmost attention he could not have lived.

74. In this case the Commissioners have no difficulty in arriving at a conclusion. The Finding. They believe that the neglect charged, if it did occur on any particular occasion, was the result of Mackenzie's own want of attention to his duties. The weight of evidence and the results of treatment show conclusively that such neglect, if it did occur, was of immaterial character, and that the treatment of the case in the Bayview Asylum was attended by satisfactory results.

Mr. S.L.'s Case.

75. The witness Dickson gave evidence and made certain charges of neglect with regard to the case of Mr. S.L. He stated that this patient was strapped in a chair, with a strap round his waist and muffs on his hands, fastened to the straps (445, 446, 447). The sight shocked him, and on making inquiries he learned that the patient had been sitting in that position since between 8 and 9 o'clock in the morning. Without consulting anyone he gave Mr. L. a bath, and when he conversed with the attendant about the case, that official said it would be waste of time to bath a man like this patient. When he saw Mr. L. his legs were cramped, his clothes were saturated with urine, and when he tried to walk he could not do so without help, owing to his legs being cramped. This witness said he was not at Bayview House a month before the patient could walk across the lawn when held by the sleeve.

76. Dr. Vause's evidence with regard to this case was to the effect that Mr. L. was so severely paralysed (9801) that if he had not been supported by some mechanical arrangement in the chair provided for this purpose, he would have had to remain in bed constantly. It was the duty of the attendants to keep the patient clean (9802), and he contradicted all the statements made by Dickson as to neglect of the patient (9815). He stated that the chair employed was made with long arms (9810) specially for Mr. L.'s use, so that he could lie full length in it, and that it was designed in view of the fact that when lunatic patients of this class once get back in a chair of this kind it is difficult for them to tumble out, especially with a sheet or strap under the arms. The patient, he asserted, was daily under his observation (9811), and therefore he was able from his personal knowledge to contradict the exaggerated statements of Dickson.

77. In the absence of any further evidence on this subject, the Commissioners The Finding. prefer to give credence to the statements of Dr. Vause, more especially from the somewhat boastful character of the evidence given by Dickson in other respects.

The Case of Mrs. W.

78. In the case of Mrs. W., it would appear from the evidence that she was admitted to Bayview Asylum in December, 1884, and her previous history showed that she had been exposed to great heat in India, twenty-six years ago, which resulted in mental aberration. Shortly after this date, on the action of her late husband, who was an army chaplain in India, she was admitted to the Crichton Asylum in Scotland. About eight years ago, she was removed to a private asylum at Cremorne, in Victoria. With temper brooding and uncertain, she has an exacting and fidgety disposition. About two years ago, her sister, Miss E. W., according to her own

own

own statement (3797 *et seq.*), as the result of certain reports in connection with the treatment of her sister, and, on the advice of her legal adviser in England, came to this country. From the evidence, it would appear that Miss W. is under the impression that Mrs. W.'s late husband, as well as her sons, have persecuted Mrs. W., and have placed her in a lunatic asylum without real ground for such procedure. In fact, Miss W. charges the sons of Mrs. W. with complicity with Dr. Vause in keeping her sister in Bayview Asylum, knowing that she might with safety be discharged. Miss W. expressed herself, in her evidence, as being extremely anxious to obtain the discharge of her sister, in order that she might have her under her own care and control, although she stated that if her sister were so released from Bayview Asylum and placed in her care, she would have only her own (3879 *et seq.*) income of £60 per annum, and would require the pension belonging to her sister, £187 per annum, to maintain herself and her sister under the circumstances.

78. Without entering more fully into the nature of the further evidence in this case, it may be stated that Mrs. W. was first placed under control in the Crichton Asylum, in England, at the instance of her husband, Rev. W. W., and afterwards released. Subsequently, she was placed in Cremorne Asylum, Melbourne, Victoria, and for the last eight years she has been an inmate of Bayview Asylum. The evidence clearly shows that unfortunately this lady requires to be thus cared for. Further, the Commissioners believe that the sons of this lady consider that in their judgment the best treatment for their mother is that at present adopted, and in case of her recovery they are prepared themselves to take charge of their mother. There can be no doubt that they have no pecuniary interest in her retention in the asylum. It may be further stated that an appeal was made by Miss E. W. to the Supreme Court (8677) under sections 81 and 90 of the Lunacy Act, in the hope of having her sister discharged from Bayview Asylum to her own custody. This appeal was opposed by Mrs. W.'s sons, and the Court decided that Mrs. W. was not sane, and that it was not for her benefit that she should be removed from the Colony.

The Finding.

79. In the case of this lady, the Commissioners concur in the result thus arrived at. Independently of the question of finance involved in the matter, they believe that for many reasons the desire of the lady's sons should not be overlooked.

Mr. H's Case.

80. In this case a complaint was made by a witness named W. S. Dickson, who, according to his own statement, had been employed as a warder for six or eight weeks at Bayview Asylum in April, 1883 (410), that Mr. H., a patient whom he was in charge of (421) was quiet in his demeanour, and that there was no necessity to treat him as a refractory patient, and yet he was placed in a dark cell every night in the week, although in all other respects he was fairly treated (430). This witness stated that he was not an excitable patient, and was sensible and intelligent (437), and not subject to outbreaks of violence.

81. The statement of this case was completely contradicted by the evidence of the Inspector-General of the Insane (8686-91), who said this patient when sane was an extremely able man in a large business as a storekeeper, and "the first sign of his insanity was that he neglected his business and desired to become a member of Parliament." Before the general election of 1882 was completed, he was in the Receiving House at Darlinghurst, from whence he made a most extraordinary escape. He was sent to Bayview House on the 12th January, 1883. He was admitted to Gladesville Hospital for the Insane on the 22nd of the same month, where he removed the lock from his door by the aid of a sharpened tablespoon, and was only by accident prevented from strangling a night attendant with a rope made from sheets. At the wish of his friends he was transferred to Bayview House on May 14th, 1883, from which institution he was discharged on September 6th, in the same year. Some years subsequently he was readmitted to Gladesville, from whence he was removed shortly before his death. It was absolutely necessary for his own safety, and that of others, to place him in a single room, and he was not safe at Bayview during the night, except in a single room. Dr. Vause's (9794-9799) description of the case and treatment of this patient while at Bayview House, bore out and supported the statement made by the Inspector-General. He certainly did not consider Dickson competent to express an opinion regarding the

the character of this case. H. was a remarkably plausible individual, and without an intimate knowledge of his actions and the history of the case he could understand anyone being carried away by his conversation. H. was not treated as a refractory patient, as he had ordinary bedding and bed-clothing in a single room. When he escaped from Bayview Asylum it was not from a single room, but from a dormitory. From the history of the case given by the Inspector-General, and from his own observation, he considered it absolutely necessary to adopt the measures he did in this case.

82. The Commission can arrive at no other conclusion than that the witness Dickson was an incompetent judge of the nature of this case, and that his opinions on the subject are unreliable in view of the history of the case as already described; and further, that no other course was open to Dr. Vause, having regard to the history of the patient and the reports received with him from Gladesville, but to place him in a single room at night for the safety of himself and others.

The Finding.

The Case of Miss C.

83. The history of this case was to the effect that the patient was affected with acute melancholia, for the treatment of which she was admitted to Bayview Asylum on 8th March, 1894. Shortly after her admission, it was found necessary to administer the sedative medicines usually employed in such cases, and, as the restlessness of the patient increased, to place her in a single room. The statement of the complaints made with regard to the treatment of this patient forms a curious commentary on the character of the evidence given by some of the attendants on subjects requiring expert knowledge.

84. Margaret Macleod stated that the patient was put into a single room (1564-1739), but that she also got a good deal of shifting about, and was given draughts made of stuff that caused her to become very stupid. This attendant administered the drug at tea-time in her tea, according to instructions (1565) from the matron (1566), although she did not consider her an excitable patient, and was not violent in any way (1740). She refused the draughts, and this attendant forced them down her throat (1749). Her father came to see her nearly every day; but the interview took place in a different room from that in which she slept, and her clothes were changed, so that her father went away with an untrue impression as to her treatment (1750-1754).

85. Josephine Mackay corroborated, to some extent, the evidence of Macleod, but stated that she was so noisy at night that it was necessary to put her in a single room, and to administer bromide of potassium. She added that deception was practised on the patient's father when he visited his daughter, a room being shown to him in which Miss C. never slept, and she remonstrated with the matron with regard to this deception (2310-2320).

86. This evidence was contradicted by Nurse McBride, who stated that Miss C. was put into a single room only when she became very troublesome (4419), and that then she was provided with a nightdress (4420). Nurse Kate Brennan confirmed this statement, and added that a draught was given occasionally only. She had never seen draughts given to this patient in tea, but this had been done in the case of other patients under instructions (5520-5531). Ada Simpson further confirmed this evidence, and stated that several mattresses were put into the single room, because she would not stop in bed, and this precaution was taken until she became quiet (7532-7535).

87. Nurse Catherine E. Perrin stated that she put Miss C. in the single room, and she saw that she was provided with suitable nightdresses, which, in one stage of her illness, she tore up, and was so destructive that they were useless, and only blankets and rugs were found to be serviceable (7346-7352).

88. Mrs. Gilchrist, the lady superintendent referred to by Macleod in her evidence, stated that draughts were given to Miss C. as ordered by the doctor, and they were given in her tea if necessary. Witness had never known patient to be stupid from them, but she suffered very much from sleeplessness (6647-8). This witness further contradicted Macleod's statements about the changes made in the patient's night accommodation, and averred that during the early part of her illness she was only fit to be kept in a single room, and, as the single rooms were all on the Government side, that was the only reason she was placed there (6649-6652). Mrs. Gilchrist further

stated

stated that when the patient's father visited her he asked to see her room, and she showed him the room in which she was sleeping at that time; but the patient slept in various rooms. She was tried in the hospital, and then she was taken to a single room. She was next tried in the associated dormitories, and then she had to be put in a single room again, in accordance with the development of her disorder (6814-6818).

89. Mr. C., the father of the patient, described the history of the case and the circumstances under which she became an inmate of Bayview Asylum (6503-6510). He visited his daughter frequently, and was satisfied that she was made comfortable. His family and himself had been much distressed by the newspaper reports about Major-General Richardson, and he came from the country to remove her; but, after making some inquiries, he was so well satisfied that she was well treated that he left her in the asylum. He said that, after making personal investigation and inspection, he did not place much credence in the reports, which, however, had occasioned both himself and his family great mental distress (6519-6521). His daughter seemed very excitable when he visited her (6522). His daughter was now perfectly cured. His daughter made complaints about being put in the Government end of the asylum and other matters, but he was satisfied with the treatment she received at Bayview Asylum. In fact, it would be very hard for him to come to any other conclusion, because his daughter might be wrong in her statements to him. He knew that when she was there she was not capable of looking after herself, and he knows now that she is as well as ever she was (6555-7). In reply to a question by Dr. Vause (6567), witness stated that his daughter certainly recovered, and Dr. Vause's was the only treatment she had undergone.

The Finding.

90. The Commissioners believe that there can be no doubt with regard to the ignorance displayed in the charges made in this case. The excellent recovery of the patient under the treatment adopted, and the satisfaction of the friends with the means employed, are sufficient evidence of the groundlessness of the charges made in this case.

Seclusion and Restraint.

91. It was very evident from the nature of the evidence given not only in regard to Major-General Richardson's case, but relative to other patients placed in the isolation rooms on the Government side of the Bayview Asylum, that there is some ground for difference of opinion as to the meaning of certain words in the Lunacy Act. The words referred to will be found in clause 71, which provides that inquiries must be made by the Inspector-General and the official visitors to asylums—"as to whether any patient is under restraint or in seclusion, and why." This provision must have been specially considered by the Legislature when the Act was passed, inasmuch as in Schedule 9, which exhibits the form of the medical journal, special columns are printed—one for males, and the other for females—under the heading "Patients who are, or since the last entry have been, under restraint or in seclusion, when and for what period and reasons, and, in cases of restraint, by what means." There is no interpretation of the meaning of the term seclusion, either in the Act passed by the Parliament of this country, or in the English Act, from which, no doubt, the Act of New South Wales was framed. In the examination of the official visitors appointed by Government, the Commissioners found a considerable divergence of opinion as to the real significance and meaning of the term. The interpretation laid down by Sir Alfred Roberts, who has been Chairman of the Visiting Board for thirty years (7653), was that which would be probably adopted by any ordinary person having no specific or technical knowledge of lunacy, and was to the effect that it was intended that a record should be kept of all patients, male or female, requiring seclusion in consequence of an outbreak of violence or for some such satisfactory reason, whether the outbreak occurred during the day or night (7701, 7703, 7829). He thought it would appear as necessary to record such a departure from ordinary treatment on its occurrence during night-time as during the day, and for some reasons it might be even more important, as a matter of record of the history of the case, to note in the official journal for the information of the official visitors such an occurrence taking place at night. A very proper distinction was drawn by Sir Alfred Roberts between the necessity for a record of the continuous placing of an old

old chronic dement in seclusion as a matter of ordinary treatment and the deprivation of personal liberty on the occurrence of an outbreak in a case of acute mania during the night-time (7829, 7830, 7837, 7867).

92. The evidence of Mr. N. Robertson, one of the official visitors, and a member of the legal profession, was to the effect that he recognised no distinction as to the necessity for a record in the official journal of cases requiring seclusion between those occurring in the day or night time (7963 to 7967, 7980, 7981, 7986, 7992, 7994, 7997, 7999, 8015).

93. The evidence given by Dr. Huxtable, who stated that he had had certain British experience (8160), was to the effect that he accepted the definition adopted by the Scotch and English Commission in Lunacy (8067), whereby seclusion was regarded as isolation by day under certain circumstances. Although it would be possible to keep a record of cases requiring seclusion at night (8071), he thought it was unnecessary, because a universal practice had been adopted (8073). He further thought that no record of cases occurring at night was necessary (8077). When the attention of the witness was directed to the fact that one of the original objects of the provision for the record of seclusion was in order to prevent its too frequent use in asylums (8079) where it had become the common practice from motives of economy and insufficient number of attendants (8074), he thought that if the outbreak were accompanied by any unusual circumstances it might be reported. This witness further stated that even if a patient were placed night after night in seclusion because he had frequent outbreaks of violence, he did not think that this fact should be recorded in the official journal (8081), because it would not be in accordance with practice (8082), and would interfere with an understanding and an arrangement universally adopted. When asked how, under such circumstances, the official visitors could become acquainted with the occurrence of such cases, he thought he would look for them in the case-book (8086).

94. On the other hand, Dr. Cox, the present (8213) Chairman of the Board of Official Visitors, stated that, although well aware of the practice adopted in consequence of the limited interpretation of the term seclusion as referring to the day-time only, he had prepared a series of definitions of the various terms employed in connection with this subject (8279), and that the official visitors had a form drawn up so that records of all the persons locked up in these rooms should be made, which, however, had not been adopted. He was of opinion (8264) that if a serious outbreak occurred during the night-time, requiring seclusion, it should be reported in the Journal in the same manner as any case of seclusion occurring during the day. Personally, he desired that a record should be kept, but, according to the usages of the lunatic asylums and the requirements of the Lunacy Acts, it did not appear to be legally necessary to keep such a record.

95. Dr. Sinclair, Medical Superintendent of Gladesville Asylum, stated that he was well acquainted with the (8540) definition of the term "seclusion," as adopted by the English and Scotch Lunacy Commissioners, and approved of the practice. The chief reason for noting cases of seclusion in the Journal was for the purpose of enabling the authorities to compare one institution with another as to the results of treatment (8553), and to see that to no objectionable degree this mode of treatment is carried out to an extent that might be prejudicial to the patient (8555). If the number of persons in single rooms at night were recorded it would be of no value, inasmuch as no one then would be able to distinguish the real amount of seclusion (8563). In cases where a patient is taken out of the dormitory at night and placed in a single room, the occurrence is always noted by the night attendant (8549), and such reports are filed and accessible to the official visitors (8571). Further entries are often made in the case-books, showing that certain patients under certain conditions have occupied single rooms (8582), in order to show the different stages of the disease (8583). He further added that, if seclusion were resorted to by night, the matter would be recorded in some way (8585). With regard to the night attendants' reports already referred to, Dr. Sinclair stated that if of sufficient value they were recorded in the case-book (8588), and that the official visitors occasionally looked at these records (8589). He stated further that the original intention in regard to the proper use of seclusion was to prevent it being used as a means of punishment, and to keep patients from being deprived of association with others, or from exercise in the open air (8593), and to prevent abuses (8594). In the case of a patient placed in a single room for treatment,

treatment, against his will, for month after month, the fact should be recorded (8598). He was of opinion that if a patient were placed in a single room at 5 p.m. the fact ought to be recorded in the Journal (8603 $\frac{1}{4}$), but that seclusion in the Act meant that the record should be inserted in the Journal in cases between 6 a.m. to 6 p.m., or rather from the time patients get up in the morning till they went to bed at night.

96. The evidence given by the Inspector-General of the Insane was to the effect that, as a matter of general practice, seclusion was recorded in the official Journal only when employed in the day-time, and he quoted a number of authorities in support of this view (8740). He pointed out, however, that in regard to the term restraint, a special regulation had been made by the English Commission on Lunacy on the Lunacy Act of 1890 coming into operation, whereby no limitation was allowed, and its employment, whether by day or night, is entered in the Medical Journal, and he stated that, in regard to this matter, this course had been adopted in New South Wales under his direction. The Inspector-General would be satisfied if the removal of patients from a dormitory to a single cell in the night-time, from any cause, was made known to the Medical Superintendent in the morning. The necessity for seclusion must be judged of mainly by the Medical Superintendent, and if his views as to the amount of seclusion were not approved of, and he was using it more than seemed necessary, or than was used elsewhere, the official visitors could call upon him to give an account of the practice (8744). He was aware that the object of the Legislature in making special provision for recording cases of seclusion and restraint in a special column, and under a particular heading in the Journal, was not only for purposes of comparison, but also to prevent abuses, and if he found at one institution too many people in seclusion, or restraint applied to too large a number of cases, he did not inquire into individual cases, but asked the Medical Superintendent the reason of such an occurrence, and if the explanation was unsatisfactory he very often removed a certain number of cases from one asylum to another to try what could be done by such a change.

97. It appears that almost immediately after the removal of Major-General Richardson from Bayview House, the Inspector-General of Insane gave instructions that a note should be made in the Medical Journal at Bayview Asylum, under the heading of "General Observations," of every occasion in which a patient slept in one of the isolated rooms. This is an addition on the practice formerly adopted.

98. The importance of this question of seclusion, affecting as it does the personal liberty of the patients in lunatic asylums, has induced the Commissioners to make a very searching inquiry into the subject, and the evidence now summarised exhibits the very adverse views held on the subject by experienced persons. There can be no doubt that the original object of the Legislature in making provision for the due record of seclusion and restraint was to prevent a number of abuses that at one time occurred in the management of lunatic asylums. It would appear that the authorities who administer the Lunacy Acts, in order to make comparative investigation as to results of treatment, and for other reasons, adopted a technical definition of the term seclusion, making it refer only to deprivation of personal liberty during the day-time, and this definition seems to be universally employed by the officials of the lunatic asylums of Great Britain, America, and this country.

99. The Commissioners believe that the adoption of this technical definition opens the door to abuses. It is true that outbreaks at night requiring seclusion are reported by the night attendants to the Medical Superintendents, and at their discretion entered into the case-books; but the Commissioners have it in evidence that frequently the case-books at Bayview Asylum were not made up for some days after the occurrence of events in connection with the cases, and in the interval such reports might be overlooked, and it is possible that a similar practice occurs in other institutions.

100. A further difficulty occurs in connection with the distinction drawn between the terms day and night. When does the day end and the night commence? Dr. Sinclair stated (8603 $\frac{1}{2}$) that he regarded night as extending from 6 p.m. to 6 a.m., and then pointed out that different patients went to bed at different hours, and night-time in this case, doubtless, would be calculated from the time of going to bed to the time when the patient rose in the morning. He stated also that a case of violence requiring seclusion occurring at 5 p.m. should be recorded in the Journal, while, on the other hand, Dr. Vause (9195 to 9204) stated, with regard to a case of outbreak of violence occurring in the summer time, at 5 p.m., and placed in a single cell, that the case was not recorded in the Journal, because it took place after tea-time, and, therefore, at night.

101. As a record of a special treatment, the Commissioners consider that a case of violence occurring at night, and requiring seclusion, ought to be stated for the inspection of the Official Visitors, in the Journal, and some of the Official Visitors are of the same opinion. By such a procedure the statement in the Journal would be made to harmonise with the recent regulation of the English and Scotch Commissioners in Lunacy (which the Inspector-General of the Insane proposes to adopt in this country), whereby a record of all cases requiring restraint during the night time is to be made in the Journal. As is well known, the employment of the single room for seclusion purposes is only a more merciful form of the restraint formerly in use in Lunatic Asylums, and the record of its employment would appear to be as desirable in one case as in the other. The Commissioners cannot believe that the public interest would be conserved, or the views of the Legislature be carried out, by an optional record in the case book by the Medical Superintendent, after report by night attendants; in fact, the Inspector-General of the Insane, by his direction to have a record made of all cases placed in the specially isolated rooms at night at Bayview Asylum, has indicated that something more than an adherence to the technical definition of seclusion is desirable. The lengthened experience of Dr. Cox undoubtedly trends in the same direction. And while the Commission are aware that additional clerical labour would be occasioned by keeping a full record of all cases of seclusion, they are of opinion that it is absolutely necessary for the protection of the inmates of the lunatic asylums that a fuller record than that at present adopted should be made. They would suggest, for the consideration of the Government, that it might be submitted for the opinion of the Inspector-General of Insane and the Official Visitors, whether there should not be made a statement in the Journal of the total number of cases placed in single rooms at night, as well as a record of the cases requiring seclusion at night, in consequence of outbursts of violence or from other causes, as well as of those occurring during the daytime. In order that the comparative statistics of the various asylums regarding seclusion, according to the technical definition, may be still maintained, cases of seclusion occurring during the day could be separately recorded as heretofore.

102. This subject is regarded by the Commission as of very great importance, as the neglect of the course of procedure now recommended has been a leading factor in occasioning the necessity for this Royal Commission. If a record of General Richardson's case, who was placed in seclusion from night to night for months together, had been known to the Inspector-General of the Insane or the Official Visitors, doubtless steps would have been taken by those officials in the discharge of their duty to make themselves acquainted with the long continued course of treatment of this kind adopted in this case, and, as the evidence shows, would have suggested other arrangements in connection with the matter.

103. From the evidence given on the subject your Commissioners are led to ^{The Finding.} believe that in the absence of the plan of record now suggested, similar cases to that of General Richardson's may occur in the lunatic asylums, quite unknown to the Official Visitors, who have no means of becoming acquainted with such matters except by observing some casual report of the head Superintendent, which he has considered worthy of being copied from the night attendants' reports.

Complaints regarding General Management of Bayview Asylum, including certain individual cases of ill-treatment.

104. In addition to the cases already referred to, a number of complaints were made with regard to the general management of Bayview Asylum, and, in illustration of these complaints, reference was made to various patients who, it was alleged, had suffered ill-treatment in consequence of these circumstances. The Commissioners found that these complaints originated chiefly from dismissed servants of the institution, and while there was some diversity in regard to the evidence given concerning the particulars, there was a remarkable similarity as to the complaints themselves. The witness who enlarged most fully in regard to complaints of a general nature was Maggie Macleod, whose connection with the institution commenced on 22nd November, 1893, and extended over a period of eleven months (1473), during the last six months of which time she was head nurse over the patients in No. 2 ward sent by Govern-
ment

ment. According to her own statement, she was discharged by Dr. Vause in consequence of having given information to persons outside, and especially to a former warder, Mackenzie, a cousin of her own, about the management of the asylum (1488). This was denied by Dr. Vause, who stated that he dismissed her for striking a fellow nurse, and for unsatisfactory conduct generally (8930). During her term of office, Macleod, who had had no previous experience of similar work, was placed under a matron named Bridget Morrisey and an acting matron, Jessie Fuller, from whom she received instructions (1483-4). The various charges made by this witness comprised a great number of details, and contained the most important statements condemnatory of the general management; in fact, this witness may be regarded as the accuser-in-chief of the institution in the female division. Her evidence had reference to neglect in regard to the management of the single rooms for the isolation of patients; the absence of provision for nursing at night and for a supply of medical and other comforts for patients or the nurses; deceptive practices and neglect with regard to the bedding, the clothing, the food, and similar matters. This witness also stated that there was private notice given to the attendants when official and other visitors arrived at the institution, and that the patients were re-dressed and otherwise put in good order for the purpose of deceiving the visitors as to their usual condition, and mentioned the cases of several patients, illustrating the results of the neglect manifested in the management, were cited by the witness. It will thus be seen that the evidence given by this witness travelled over nearly every form of complaint that could be made against such an institution as the Bayview Asylum. More or less fully her evidence was corroborated by some other witnesses, also discharged servants, and the points brought out in the evidence of these witnesses evinced a remarkable degree of similarity. On the other hand, the evidence of the attendants at present in the institution, and of a number of professional and other witnesses, more or less discredited the statements thus made. In view of these circumstances, the Commissioners find it necessary to summarise under the various points of importance the evidence given on these matters. The charges may be classified under the following heads:—(1) Neglect with regard to the cleanliness of the patients, and cases of ill-treatment and cruelty; (2) Abuse of medicines; and (3) Infrequency of visits to patients by the Medical Superintendent.

1. *Neglect in respect of the personal cleanliness of the patients, and ill-treatment and cruelty.*

105. Maggie Macleod stated that the asylum was full of vermin (1493), which infested the beds and everywhere else (1496). From the very first day she entered the institution she was in a state of misery on account of the bugs (1494). She complained to the matron on the subject (1497), but she said it was of no use complaining as she could not get the doctor to do anything (1498), and Macleod said she could not speak to the doctor as she only saw him when he came about the place on his rounds (1499) just before dinner time (1500). A patient named Mrs. H. was much neglected, her body being frequently covered with vermin (1553 to 1555). This patient was often exposed to the rain. She used to lie in the yard, and sometimes on the verandah, in all kinds of weather. She was left to roll about as she liked in her own dirt, although she was a private patient. On one occasion when her daughter visited her, a silk dress was put on over her dirty clothes, and her daughter (1561, 1562) complained of the state of her underclothing (1540, 1541). The witness complained that a patient named Mrs. W. injured herself and was bruised very much (1634, 1666), and that a Mrs. N. was neglected (1684). If any complaint was made to Dr. Vause the nurses' complaining were sent about their business (1557 to 1559).

106. Josephine Mackay stated that the patients were much neglected—that there was vermin in their heads (2255). Speaking in general terms as to whether the patients were treated properly, this witness stated the treatment may have been the kind suited for the insane, but she should not like to be subjected to it, nor to see any of her friends treated in the same way (2257). She never, however, complained to the doctor or the Government Visitors on the subject (2259, 2385, 2270), but she wrote a letter to Rev. Father O'Callaghan after he had written to the papers commending the institution (2263), and to Mr. N. Robertson, one of the visitors (2268), but these letters appear to have been anonymous (2483 to 2489). She was on duty
as

as a sick nurse in the case of Mrs. N., and in her case there was no provision for sick comforts at night (2398 and 2406). On the subject of bathing the patients, this witness stated that all the patients were bathed on Saturday afternoon as a general rule, but dirty patients were bathed when the case required it (2241, 2242). When asked if she had ever seen any nurse behave cruelly to a patient she charged Nurse McBride with having hit a patient on the back with a boot (2300). She had never heard of a scrubbing-brush being used on patients, although she thought she had heard of one patient scrubbing another (2301).

107. The only complaint on this subject contained in Annie Marshall's evidence was to the effect that she never saw a nurse strike a patient, but that one patient named M. M. was scrubbed by another patient whilst in her bath (2099).

108. On the other hand, Bridget Morrissey, late matron of the asylum, stated that she had heard Maggie Macleod speaking of Mrs. H. having been left out in the rain, and having her body covered with vermin, but denied the truth of this statement, and said it could not have occurred without her knowledge (3376 to 3382). No patients were covered with vermin, but she was aware there were some very difficult to keep clean and a lotion was used for that purpose (3383). There were bugs in the place and kerosene was used to keep them down (3384). With regard to Mrs. W.'s case, she had bathed her on her admission, and then she found her bruised in places, and black about the hips; she was a very violent patient (3408 to 3411). She had never heard of a nurse having being discharged for making a justifiable complaint, and Dr. Vause always listened to all complaints, and endeavoured to rectify them (3428 to 3434). This witness gave an emphatic denial to all the charges made by Macleod, and also to her statement that she had made complaints to her (3544, 3545). She said the asylum was conducted in a comfortable and homelike manner (3455). Dr. Vause and the attendants were careful and considerate in dealing with the patients (3456), and the attendants never abused the power reposed in them (3457), or treated the patients inhumanly (3458).

109. Lizzie Verity stated that the patients were bathed once a week, as a rule, but others were bathed, if circumstances required it, at any time (1989). Similar evidence was given by Rose McMahan (1845 to 1847). Rachel Kelly had never heard of any complaint of the cruel treatment of patients (2587 to 2589, 2626). This witness, like several others, had never heard of M. M. being scrubbed (2589, 5519). Nellie McBride denied that she had ever heard or known of a patient being treated cruelly by a nurse (4431 to 4435). There were bugs in the asylum, but nothing unusual (4455). With regard to Mrs. H.'s case, this witness contradicted in every respect the evidence given by Macleod as to the vermin and the exposure, and stated that Mrs. H. was an excitable patient who received every possible attention (4511 to 4529). Mrs. W. received every possible attention during her illness (4570 to 4586). She had heard Macleod state that the patients were too well looked after and had too much of their own way (4561, 4562).

110. Jessie Urquhart stated that the only cases of cruelty known to her occurred in the case of M. A. C., who was scrubbed with a broom by Maggie Macleod, which witness had seen done herself (6292 to 6307), and the case of M. M., similarly treated. She spoke to her about the matter, and Macleod said there ought to be other brushes in the bath-room. Both these patients were dirty and troublesome (6308 to 6313 and 6328 to 6331).

111. Ada Simpson knew Mrs. H., who is at present in the asylum; never heard of the complaints made by Macleod. The patient was generally a most clean patient (7443 to 7445). Some witnesses having stated that E. H. continuously for long periods wore muffs, this witness stated that she wore strong dresses and muffs occasionally—nearly every week; the muffs were always taken off at meals and at night time (7519 to 7524). With regard to Mrs. N.'s case, she remembered that she was subject to fits, and could take very little food—only milk. This witness contradicted Macleod's evidence point blank, and stated that she always got plenty of milk for this patient, and arrowroot (7486 to 7490).

112. Mrs. Gilchrist contradicted the complaints made as already cited. Maggie Macleod never complained to her; the only expression she heard her use in regard to the patients was that she thought they were really too well treated. She had heard her make the remark more than once (6626). Macleod's statements as to Mrs. H.'s case were read over to and contradicted by this witness (6638 to 6646).

113. Dr. Vause denied the statements made as to vermin and neglect of patients (9926 to 9937).

114. An architect, who lived at Bayview Asylum in 1887, saw no unkindness on the part of the nurses to the patients (6159).

115. Mr. H. M. Watt, a former attendant, stated that the patients were always well treated in every respect (6214, 6221). In the case of the patient Williams, who was a positively dirty and leaky patient, every attention was paid. He received a warm bath the first thing every morning, then he was put into a chair and wheeled about, and all due precautions were taken to keep him clean and dry (6256-6266).

116. A medical practitioner, who had special opportunities of making himself familiar with the internal working and management of the asylum (6428) as well as other similar institutions (6432), was satisfied with the care given to the patients.

117. Mr. J. H. has a relative in the asylum who has been there more than eight years (6044 to 6047), and although prejudiced at first against the institution (6062) had changed his opinion, and is satisfied with the treatment of his relative. The patient, too, speaks very highly of his treatment when he is comparatively sane (6063). Other persons also have confirmed this opinion (6064). Witness never had a single fault to find with the treatment (6065).

118. Catherine Elinor Perrin, an attendant at No. 2 Ladies' Private Room, was satisfied that everything is carried on at the asylum in a satisfactory manner for the comfort and treatment of the patients (7314). She has seen no vermin, and in this respect there was nothing more than was usual in a large establishment of the kind (7315, 7316).

The Finding.

119. With respect to these charges the Commissioners believe that suitable provision was made for the purpose of the personal cleanliness of the patients. The Commissioners are aware that in all large institutions, and more especially in lunatic asylums, from the nature of the case it must frequently be a matter of difficulty to prevent the occurrence of the results of want of personal cleanliness, but it would appear that care and attention were bestowed on those matters in the Bayview Asylum. The evidence in rebuttal of the charges of illtreatment and cruelty must be regarded as quite as reliable as that given by the accusing witnesses. In the case of Mrs. W., for example, complaint was made that her body was bruised, and the statement was made in such a way as to lead to the opinion that this was the result of neglect or violence, whereas the evidence clearly shows that the lady in question, in consequence of her violence, occasioned by her mental disease, was marked with bruises before her admission to the asylum, where she remained after her admission for only a short time, her condition being very serious. In like manner the continuous wearing of muffs by E. H. was discredited by various witnesses, and more especially by the evidence of the Official Visitors. Taken as the whole the Commissioners therefore disbelieve the evidence in support of these charges.

2. Abuse of Medicines.

120. Several of the witnesses stated that drugs had been administered wrongfully to stupefy the patients, and that they had been deceitfully administered in their food and drink.

121. Maggie Macleod stated that she had administered some sleeping draughts to the patients herself (1696) which she had received from the matron (1697). The patients did not like to take them because they had an idea that they did them no good, and witness thought it was not the right thing that they should take them. Some of the patients used to complain that they felt very ill after taking them (1698 to 1700). Josephine Mackay stated that draughts containing bromide of potassium were given at night to make the noisy patients sleep (2319). In one case a patient, Mrs. D., had got an overdose of this drug, and had been poisoned, and after this event the medicines were administered by the matron only (2410-2412). When patients were noisy in the single rooms the matron and some of the attendants would get up and give the patients a sleeping draught (6993, 6994).

The Finding.

122. The Commissioners have referred to this subject because on several occasions it was mentioned by various witnesses, but in their opinion, with the exception of the case of poisoning, regarding which an inquest was held, the administration of medicines was carried out in the manner usually adopted elsewhere. The Commissioners have examined the case-books of the Government Asylums

as

as well as of Bayview Asylum, and have also examined a number of expert witnesses as regards the medical treatment of the patients at Bayview Asylum, and they believe that nothing unusual was adopted in this respect, that drugs were not used in excessive quantities or in improper methods, and that the suspicions aroused in the minds of some of the witnesses with regard to this matter arose simply from their inexperience.

3. *Infrequency of visits by the Medical Superintendent.*

123. The witness, Macleod, stated that Dr. Vause never spoke to the nurses so that they might make complaints to him (1614), and also that he never came round the wards after 2 o'clock (1615). He never made any unexpected visits (1618), and in witness' experience he never came to see any of the patients on special occasions; he merely made his proper rounds, and these were the only times he would see the patients (1691, 1798, 1799), and yet in the case of Miss H., who had a broken arm, witness states that Dr. Vause, when sent for, came without delay (1796, 1797), and in cases of emergency came as quickly as he could and paid the necessary care and attention to them (1802).

124. On the other hand Josephine Mackay stated that Dr. Vause always made his daily visit (2249) and came through the institution every day at dinner time, and on any other occasion when he was wanted (2250).

125. Bridget Morrisey stated that Dr. Vause always took a great interest in his patients, and he used to go in and out at different times besides making his ordinary rounds, and if there were any patients sick he was always very attentive (3420, 3421). He always wanted a very clear explanation about everything (3428), and was very particular in seeing that the work was properly carried on, and that the rules and regulations of the institution were strictly obeyed (3429). Any complaint against nurses, if of justifiable character, meant instant dismissal (3430-3432), because he was most punctilious in the matter of the discharge of duty (3431 to 3434).

126. Lizzie Verity stated that Dr. Vause made his daily round at noon, and occasionally visited the patients at other times (2012, 2013), and otherwise was attentive to the patients (2014).

127. Rose McMahon gave similar evidence (1899, 1900). On a few occasions she had seen him go round at night (1893).

128. Rachel Kelly gave similar evidence (2584, 2585, 2533, 2614 to 2616), and various nurses now employed at Bayview Asylum, confirm the statements thus made. In addition, the opinions of the Inspector-General of the Insane, and numerous medical gentlemen who have visited the Bayview Asylum, have universally the same tendency.

129. On the male side of the institution—evidence was given by several attendants on this subject. A. Mackenzie stated that Dr. Vause made a general round daily about dinner-time (894). A. Robinson, who was engaged in the asylum for some years, and left in February, 1890, stated that Dr. Vause did not make a daily round, and that he had heard patients say that they had not seen him for a week (1403), and he confirmed this statement (1404). Witness stated that he had complained to the Inspector-General that Dr. Vause did not make a daily inspection (1458). John Doherty, at present senior attendant at Bayview Asylum, where he has been employed since June, 1893 (2675), stated that Dr. Vause made his daily round at dinner-time unfailingly (3017). He might come in at 7 in the morning, and sometimes he would drop in about 7 in the evening (3018). He made no special evening visit, although he was liable to come in at any minute, and always came when sent for (3019). J. O'Brien, who has been an attendant for the last eighteen months, affirmed that he had seen Dr. Vause go through the institution as many as three or four times daily, but his regular time was about noon (3214). H. M. Watt stated that Dr. Vause made his round regularly once a day, and in the latter part of his time it was about lunch-time that he made this round. Formerly, he made his round sometimes in the morning and sometimes in the afternoon. He made his round always once a day, and sometimes twice (6276). A medical practitioner stated that he had seen Dr. Vause making his round at night.

130. The Commissioners are satisfied generally with regard to the performance of his duties by Dr. Vause as Medical Superintendent. The evidence clearly bears out the statements of those witnesses, who affirm that Dr. Vause has always been attentive, The Finding.

attentive to the patients, and regular in his visits to the wards; but the Commissioners feel bound to say that while they have no complaint to make as to Dr. Vause's treatment or instructions, they have been impressed with the feeling that he trusted too much to his leading subordinates, and that more unexpected visits, especially at night, would have been an improvement in the management.

Complaints with regard to Food supplied.

131. The witness Mackenzie was the first amongst the male attendants to generally condemn the food at Bayview House, and his condemnation was couched in most specific terms. He stated (912-914) that the meat was not what it should be, the milk was sour, and neither commodity was fit for human consumption. These definitions applied to the food given to private patients, and that supplied to attendants was little better, for "oftentimes they went a week without tasting good meat." Breakfast "mostly always consisted (1145 *et seq.*) of a sort of stewed steak, bread and butter, and sometimes chops." The meat was "high" from being kept too long—"kept until it became unfit to eat"—and after several complaints were made to the head attendant, the only response elicited was "he could not give any more, and that they could not get anything else."

132. Alexander Robinson, a former attendant at the asylum, was another complainant against the general food supply, he saying (1368) very often the steak was tough and insufficient in quantity, "the tea was like ink and not fit to drink," and when he made complaints in the kitchen he was snubbed for his trouble. He reported the dissatisfaction he felt to Dr. Vause (1448) and was told he had better leave.

133. Other attendants on the male side gave evidence which was flatly contradictory. Senior-attendant Doherty (2776 *et seq.*) stated that the food supplied was always good in quality and well cooked. As an attendant he received, perhaps occasionally not quite so good, but usually precisely the same kind of food as the patients, some of the patients having more variety than the attendants. For breakfast the dietary scale was chops three or four mornings a week, steak, bread and butter, and jam. The diet was changed daily for most meals. He had meat three times a day; there were always two kinds of vegetables as well as soup, pudding, and an ample supply of bread, butter, and jam preserves. Attendant Watt (6215), who left the institution some time ago, also deposed to the food being of good quality, and Mr. Martin, who for nine years was an employé at Bayview House, stated very tersely (7213) "there was plenty of everything, with cleanliness and comfort." Mr. V., stated that the food was of good quality and well cooked, and Dr. Creed, who had been at the establishment during meal-times (6083), applied a precisely similar description to the food he saw consumed. Indirectly, on this subject the evidence of the Hon. Ed. Greville, M.L.C., had some bearing when he said (4367) that as attorney for Dr. Vause while he was absent from the Colony he gave both Dr. Elliott and Dr. Hetherington a free hand as far as minor expenditure was concerned. These medical gentlemen were not stinted in the management of the institution, and the same remark would apply with truth to the patients.

134. In her evidence Maggie Macleod stated that the food supplied to the inmates of the asylum was very common (1519), and on more particular examination she stated that the patients got for breakfast chops badly cooked on one day, and a rough meat stew on the following day (1520), tea, such as it was, being also supplied (1521). The Government patients were supplied with bread and treacle or dripping, and for the fifty-two patients at that end of the asylum only 2 lb. of butter weekly was allowed (1522). Necks of mutton and soup, poor in quality, formed the dinner (1525, 1526), and at tea-time the patients had bread and treacle or dripping—nothing else (1527). She stated that she had never seen joints of meat (1529), and there was no change from roast to boiled meat. There was no dietary scale in the rooms of the institution showing what food the patients were to have each day (1530), nor any systematic arrangement for the proper feeding of the patients and attendants (1531). The supply of food, she said, was insufficient (1532). It was not nourishing. The milk was half water, and sometimes there was no such thing as fresh milk to be had. Condensed milk was used every day (1688).

135. Josephine Mackay, on the other hand, stated that the animal portion of the food was sufficient in quantity and quality (2220), but the bread was not often sufficient (2221); however, she thought the patients had enough to eat (2223). The fault of the food was, she stated, in the cooking, but beyond that there was not sufficient vegetable food (2368).

136. Annie Marshall stated that the food supplied was rather poor, and always the same over and over again. The meat, she said, was good, but it was spoilt in the cooking (2068).

137. Bridget Morrissey stated that she had no fault to find with the food; that it was fairly well cooked (3344). She had the same kind of food as the patients (3346) and the supply was always sufficient in quantity (3348); in fact, there was generally food left remaining after the patients had had their meals (3519, 3520, 3521). The supply of vegetables was sufficient, and consisted of potatoes, and sometimes parsnips, carrots, and other varieties (3524).

138. Lizzie Verity stated that she did not think the food supplied to the Government patients was sufficient in quantity (1983).

139. Rose McMahan was in charge of the dining-room eighteen months and she was of opinion that the food was fairly good (1836), that there was a regular and sufficient change (1838). The attendants sometimes provided little extras for themselves (1844). The patients sometimes made complaints about the food, but she believed they had no grounds for so doing (1842). This witness stated that when the visiting doctors, or the Inspector-General stayed to dinner there was a larger supply of meat and potatoes, and of better quality (1954), so that the patients remarked that they wished the doctor would come oftener, as they then got a better dinner (1955); but according to Bridget Morrissey's statement on cross examination it was not a better meal—the extra was pickles (3623).

140. Rachel Kelly, who was twelve months in charge of the Government patients, stated that the food was sound, and of good quality, and was well cooked.

141. Kate Brennan, who was attendant in the Government patients' dining-room, and has been at Bayview for two years, stated that she had heard some of the nurses grumbling about the food. The food was well cooked and of good quality, and the same food was supplied to both patients and attendants (5385 to 5390). There was more than an adequate supply. The excess was sent back to the kitchen and the scraps put in the waste-box.

142. Nellie McBride, who is still in the employ of Dr. Vause, gave similar testimony (4498 to 4501). Johanna Dwyer stated that the food was at all times sufficient and good in quality (5692), both the attendants and the patients having the same kind of food as Dr. Vause had at his own table (5693). There was always enough and to spare (5718 to 5722).

143. Mary Doherty, for some time past and at present engaged as cook at Bayview Asylum, denied that she had ever heard any complaints as to the cooking of the food (3690). The food was always of good quality (3691), and fresh meat was supplied every morning (3692). There was a fixed arrangement as to the supplies according to the dietary. Besides roast and boiled mutton, there was haricot. On the days there was no soup there were two vegetables; on Thursday corned beef, and dumplings, and mutton or fish on Friday and so on (3693, 3694). No nurse ever complained to her of the cooking of the food.

144. Mr. Alfred Barden gave evidence to the effect that he bought meat on commission for Dr. Vause for the consumption of the patients at Bayview (5619). The supplies were obtained from various sources, and he always made a personal inspection of the meat before purchase (5622), his object being, in accordance with his instructions from Dr. Vause, to obtain the best meat possible. Mr. Barden stated that he was paid a commission (5623). The supply was about 200 lb. daily, mutton and beef being purchased alternately (5624). The beef was purchased by the quarter and mutton by the sheep, and when a larger quantity than was necessary for consumption in one day was bought, the excess was returned to the freezing-house. On further examination, this witness stated that he got his commission on the cost of the quantity he bought, and therefore had no interest in getting the meat at a cheap price (5630); in fact, he always got the best meat he could obtain in the market, no matter at what price.

145. Mrs. Gilchrist, Lady Superintendent, stated that the food was good, well cooked, and more than ample in supply, the excess after meals being returned to the kitchen, some of it put aside for future use and the rest sent to the refuse box.

146. Dr. Ramsay, who was acting Superintendent of the Asylum during a period when Dr. Vause met with an accident, stated that the food was ample, of good quality, and well cooked (5954 to 5957).

147. Dr. Hetherington stated that the food supplied to the patients was the same as he had himself, and that he went to the dining-room for the express purpose of seeing the patients at their meals (5749).

148. Dr. Beeston stated that the food was excellent, well prepared, and of good quality (6434). Dr. E. P. Sinclair, who attended the Asylum for Dr. Vause, stated that during the five weeks he acted as Medical Superintendent he had every opportunity of observing the food, and he noted that it was adequate, well cooked, and sufficient in every way for an institution like Bayview Asylum (5069 to 5074).

149. As an official visitor The Hon. Dr. MacLaurin saw the food supplied to the inmates, and found it satisfactory, and the dietary scale adequate (5019 to 5021).

150. Sir Alfred Roberts, late Chairman of the Official Visitors, had been present at dinner and sometimes at tea (7691), as also had Mr. Robertson, an Official Visitor. The latter stated that the food was not only sufficient in quantity, but there were many patients who were sufficiently reasonable and sane to understand the surroundings of their position, and who would be most ready to complain if there was anything wrong with the food, and he remembered only one case in which such a complaint was made (7925). He had seen the meals frequently, and he thought the food was as good and as well cooked as it possibly could be in such large quantities.

151. The Inspector-General of the Insane stated that he had been present occasionally when meals were being taken by the patients. The food supplied had always been, as far as he had observed, good in quality and abundant in quantity. Compared with the food in the Government asylums he thought that the supply, especially of meat, was decidedly more ample and the dinners altogether better. Whenever he had been present at dinner-time with the Government patients at Bayview Asylum the supply had been unnecessarily abundant so far as meat was concerned; but he was always given to understand that any surplus was taken back to the kitchen and re-used as stews or hashes, as is done in private households. There was usually soup and sometimes pudding. The vegetables and bread were always sufficient, and the former varied in kinds. This witness stated that it was absolutely impossible that any special preparations could have been made at his visits. Neither Dr. Vause, the matron, nor the nurses ever knew, nor did he himself know, when he should see the dinners five minutes beforehand. This would depend on his general arrangements and his convenience. He further stated that he had in his journal the record of twelve occasions during the last three or four years when he had seen the dinners served in the Government division. He went less frequently into the dining-room for private patients, for obvious reasons. He had frequently seen the dinners in course of preparation in the kitchen. The cooking, although it has varied at different times and under different cooks, has in his experience been objected to only by two patients, who for special reasons raised objections; but as both patients left the institution after having gained in weight, he attached little importance to their complaints. The dietary of the asylum has been greatly improved since it was first agreed to, and particularly as to variety in food, and as to the increase in butter and the substitution of this in part for dripping, and of jam for treacle, changes made by Dr. Vause (8754).

152. In his evidence, Dr. Vause denied the charges made against the dietary of the Asylum (9946). He said that it was impossible to make special arrangements in connection with the meals when the official visitors arrived at the asylum (9948). He inspected the food personally every day, before and after cooking (9950). He stated that it would not pay him to starve the patients, as his object was to get them to eat as much as possible (9954). As regards the tea complained of, there had never been two classes of tea used, and the kind supplied to the patients was that used by himself and his visitors (9958). The milk supplied was obtained from five or six cows kept in the grounds and was obtained fresh twice daily (9959 to 9965). Dr. Vause had heard no complaints from Captain N. as to the food (9969). There was a dietary scale hanging in the kitchen (10034), which is strictly adhered to and contains improvements introduced by him as the result of his experience (10041).

153. The Commissioners are of opinion that the complaints made with regard ^{The Finding.} to the food supplied to the inmates of Bayview Asylum are frivolous, and that the statements made by some of the witnesses are untrue. It is possible that on some occasions the food supplied may have been below standard, and that the fixed dietary scale may have been altered, but the Commissioners are satisfied that every reasonable precaution has been taken to make satisfactory provision in this respect for the requirements of the institution.

Absence of a proper supply of Food and Comforts for night use in the Female Division.

154. In addition to the charges made with regard to the food supplies for the ordinary dietary, complaint was made that there was no provision for the proper supply of food and comforts, such as cocoa, tea, and the like, for the refreshment of nurses on night duty or patients who might require such sustenance and comforts.

155. Maggie Macleod stated that if she had required a cup of tea, cocoa, or warm milk for herself or for a patient, she could not get it (1594), as there was no convenience for that purpose, even if she had provided the tea. There was no fire or gas by which she could make anything warm either for the patients or the nurses (1595, 1596). Josephine Mackay, when asked whether there was any provision for obtaining a cup of tea, cocoa, or other refreshment at night, stated that there was none (2239), and that she had never seen any such provision (2240). She had been on night duty with sick patients on a few occasions only (2396), but she knew of no provision for hot coffee or such comforts (2339-2340). The kitchen was locked at night (2401). When asked why she sat up with a sick patient under such circumstances, she replied that the nurses sat up with the patients in case they should die in the night (2402). She was sure there were no stimulants provided (2404). Annie Marshall similarly stated that at night if she required it, she could get neither a cup of tea nor coffee for herself, nor hot water nor warm drink of any kind (2097, 2098).

156. Bridget Morrissey, a matron for some years at Bayview Asylum, when asked whether there was any provision for supplying patients with nourishment at night, stated that there was always a supply of tea and milk, and cocoa, and such things (3308), and if a patient were sick there was always a night nurse to administer these comforts (3309). She further stated that these supplies of comforts could only be obtained by waking up some official (3461, 3462). She could go round to the kitchen, although locked on the female side, and get hot water (3463). When cross-examined by Dr. Vause on this subject this witness became very confused. She then stated that there were stores, such as tea, sugar, and the like, in cupboards in No. 1 and No. 2 dining-rooms, and that milk was always obtainable (3559-3566). In order to gain access to the kitchen, she would require to waken the cook (3567), but that she could light a fire if required in either No. 1 or No. 2 dining-rooms (3568). She did not remember the provision of a kerosene stove for cooking at night if required (3569).

157. Lizzie Verity confirmed the statements as to the absence of the provision for supplying the patients at night with comforts (1981, 1982).

158. Rose McMahon gave similar evidence (1883, 1884), and stated that if she wanted a warm drink or a cordial, in case of emergency at night, she would require to ask for the key of the kitchen in order to get it (1885), as there was no provision for these things at night (1927-1929).

159. Rachael Kelly stated that she had been on sick duty, and the only provision for comforts, especially hot drinks, was a fire in the dining-room, which required to be lighted (2539-2543). The materials for a cup of cocoa or coffee were kept in a cupboard in the dining-room, but the key was in possession of the nurse in charge of the room, who would require to be knocked up to gain access to the room, a thing she had never done (2544-2548).

160. Kate Brennan stated that there was always a night nurse on duty if a patient was sick (5458). When she was on night duty she could get a cup of tea or cocoa in No. 1 dining-room (5460), where the materials for making these warm drinks had been kept ever since she had been at the institution—for the last two years (5461). She believed there was a fire always kept burning in this room, and the articles could be obtained without difficulty. The witnesses who stated that it was impossible to get these things must be mistaken, as she had had personal experience in the matter (5462-5465).

161. Nellie McBride, who has been employed for the last seventeen months at Bayview Asylum, confirmed Kate Brennan's evidence in every particular, and stated that the other nurses knew where these provisions were kept. Although she had seen these stores, she had never known a nurse to require them (4325-4337).

162. Johanna Dwyer, who six years ago was an attendant in both the Government and the private sides, stated that in her time there was ample provision for night comforts, and a nurse to attend on a sick patient (5655, 5656). The special place in which these supplies were kept on the female side was a large cupboard in No. 2 dining-room, where there was a fire available. She had never known any patient suffering from want of nourishment during the night (5657-5660).

163. Mary Doherty, the cook at Bayview Asylum, stated that an attendant could get into the kitchen on the male side at night, but not on the female side (3703), because there was a cross-lock on the door, which shut off the female side (3704), but the supplies for night use were kept in the dining-rooms, where the attendants could always get bread, butter, tea, milk, sugar, etc. (3705-3708). The attendants on the female side could make a cup of tea or a warm drink without awaking her or going to the kitchen, because there was always a fire in the dining-room with provision for refreshments (3709-3712).

164. This evidence was confirmed by Maggie Kennedy in every respect (5610-5612).

165. Catherine Perrin, who has been employed for the last ten months as an attendant at Bayview Asylum, when asked whether her experience as to the absence of provision for warm drinks and nourishments at night was the same as Macleod's already cited, denied the statement, and affirmed that there was always a fire and nourishment in No. 1 dining-room (7353), and this evidence was supported by that of Jessie Urquhart (6348-6353).

166. Mrs. Gilchrist, lady superintendent, gave similar evidence as to the ample provision in every respect for sick nursing and comforts (6732-6737).

167. Dr. Vause was very minutely examined on this subject, and contradicted the evidence given by witnesses Mackay, McMahon, and others, who stated that there was no provision for comforts and warm drinks at night (10042). He informed the Commissioners that there were stores—apart from special provision made for sick patients—which were always available, and, apart from what the nurses must have had for themselves, there was an abundance of tea, sugar, and milk during the night, inasmuch as the stores were taken from the principal store-room after breakfast every morning, in sufficient quantity to last till the next morning at the same hour (10043). When asked whether there would be sufficient stores allowed to meet the requirements of the night, he said he thought there would be sufficient for any emergency. Dealing with 130 patients only, it would be impossible to tell how many would require nourishment during the night—perhaps not one in a month. Where the occurrences were regular, he made special provision every day for night supplies. From his personal observation he could say that there was always a sufficient supply of stores for night use (10044, 10045, 10046). He further added that all the nurses could not get at these stores, but if anything in the way of nourishment was required it could be obtained in the night-time. Stores would not be left at the mercy of the nurses indiscriminately, so that she or they could make a cup of tea for themselves whenever they liked. There were three separate departments for stores, namely, for No. 1 ladies, No. 2 ladies, and stores on the Government side. The stores were under the control of the matron, who would give them out; and, in case of a sick person, stores would be left out for the nurse in charge. In case of emergency, at night the nurse would not have the stores herself, but could get them without difficulty from the matron (10047-10055).

The Finding

168. From the evidence, your Commissioners have arrived at the conclusion that there was a proper supply of provisions for night use available, but either wilfully or through ignorance, as inexplicable as it is unpardonable, some of the nurses did not appear to be aware of this fact. The established rule at lunatic asylums is that nurses will not perform night duties unless an adequate supply of nourishment is provided for their consumption at intervals throughout the night, and it is therefore reasonable to suppose supplies would be equally available for the patients. It was proved by medical gentlemen temporarily in charge of the institution, by the evidence of Dr. Vause himself, and by nurses and attendants, that articles of diet for night use were available if required, although frequently it would be necessary to wake up a nurse or matron and obtain the key. *Insufficient*

Insufficient Supply of Clothing.

169. In connection with the charges made by several of the witnesses as to the insufficient supply of clothing for the patients paid for by the Government, a statement is made by some of the female attendants that shortly after the removal of Major-General Richardson from Bayview Asylum large quantities of clothing material were obtained to remedy the defect. It was also stated that the supply of bed-linen was insufficient, and that the sheets on the beds were frequently removed at night.

170. Margaret Macleod stated that under ordinary circumstances the dress supplied to the patients was insufficient, and that, as a rule, patients had only a gown on (1545). When asked if the ordinary dress supplied to the patients was clean and suitable clothing, she said that it was not. She stated that there were some dirty persons, and if the soiled clothes were taken off them there was nothing to put on them; they would have to go about naked (1546). The supply of clothing was inadequate (1547). She stated in the case of Government and private patients the nurses changed the clothes about. If Government patients had no clothes, they would be taken from private patients and put on the Government patients (1548). There was supposed to be a room in which the surplus clothing of patients was kept, but there were only a few common print gowns in it, and they were mainly kept for show (1549). In the absence of a change of clothing the dirty patients were left just as they were (1550-1552). This witness further stated that the Government patients were not properly dressed, except on special occasions (1710). Further, that Government patients—at least the majority of them—had no stockings to put on (1711). And some of them wore stockings without feet. Such patients would try to stick the tongues of their boots in the openings so as to hide their bare feet (1712-1714). She complained to the matron on this matter (1715). The witness also stated that the women never slept in sheets, and during the whole time she was there, two only were supplied with sheets (1597). When asked if the sheets were kept only for show, she averred that she always took the sheets off at night; they were folded up and put away. They were put on again in the morning, but never used at night. If they had been used at night, they could not have been used for long, as they were not in sufficient number for a change (1591). When asked what covering the patients used, she said they used anything they could get, a small blanket if there was one, but very often there was only a bit of one, and they covered themselves with anything they could get hold of (1601). The patients did not sleep in night-dresses, for there were none in her time (1602, 1603). The witness had fourteen women in her ward, and there was only one possessed of a night-dress until some were made lately. Some coarse brown calico was bought, and was made up for use (1605.) While this was true of the Government patients, the private patients had things of their own, and some very few things were supplied by the asylum. As a result, the patients often complained of the cold (1606-1608). The witness added that before she left the asylum a lot of new sheets were made (1757), as well as new clothes for the patients (1758), and speaking generally matters at the asylum were very different now to what they were before Major-General Richardson's removal.

171. Josephine Mackay stated that she had observed that the supply of clothing to the Government patients was scanty, especially in the winter time (2209-2214). If there was a supply of extra clothing in the storeroom, she had not seen it (2115). The clothing was of poor quality, as were the stockings, which were often ragged (2217-2219). According to this witness, the patients in her ward had in summer a straw mattress, or, as she used to call it, a bag made of canvas and filled with straw, a pair of sheets, a kind of under-blanket, a pair of other blankets, and a counterpane (2353-2354). She stated that it was not the practice in her ward to do as last witness had described, *i.e.*, to fold up the sheets in the afternoon, and put them away, but there were a few dirty patients, and their sheets were folded up and put away; but it was not the general custom to remove the sheets from the beds (2355), and women of cleanly habits were allowed to have sheets at night, and in the winter-time there were extra blankets. There were twelve extra blankets given out at the Government end. The matron ordered them to take them off the beds in the day-time, to fold them up, but to put them on again at night (2356). This witness did not think any sheets or blankets were put on the beds in the day time

time merely for show purposes and taken away at night; but there were some patients whose dirty habits required this to be done (2358). Some patients got more warm clothing than others, and some (who did not make complaints for the purpose) got insufficient bed-clothing, and suffered from cold (2359-2365). In the winter-time those patients who had or could get warm flannel petticoats wore them, and the noisy and complaining patients were best served in this respect (2366, 2367). The matron referred to by this witness was Bridget Morrissey (2430).

172. Annie Marshall stated that the clothing was insufficient, and was changed from one patient to another. She spoke to Mrs. Gilchrist on the subject, but she paid no attention (2070-2073).

173. Bridget Morrissey's evidence on this subject was to the following effect:— She stated that there was an ample supply of clothing, but sometimes they ran short for a few days, but not very often (3349). Sometimes the Government patients might run a little short of underclothing, the supply in the store having run out (3350-3353). It was nothing unusual to find those patients without stockings, for sometimes they would pull them off and tear them up. The quieter patients would be better dressed than the destructive ones (3354). A large number of dresses were made in a general way and were sometimes used to put on patients, and the fit was of little importance if the patient was made clean and presentable (3357, 3358). On this point she further stated that she cut up the material for making gowns and a lot were made at one time, but no special suits. While these gowns remained in the store they were available for the patients when they were wanted (3371). She had known the case of Mrs. H. as one in which a private patient had been clothed in Government clothes, but she afterwards became a Government patient. There was no other such case (3372-3374). She had never heard of patients being without clothes and allowed to remain dirty for days (3375). She had very seldom heard the patients complain of cold in the winter time (3480). She had never heard any complaint about the want of sufficient bed-clothing at night (3481, 3484, 3485). It was the duty of the nurses to complain to her if they thought the patients had not sufficient bed-clothes (3486), but they never had done so (3487). Sometimes there was a little delay when things were reported as being required, but everything was got eventually (3489, 3490, 3515, 3516, 3577, 3578); the delay occurred especially in chemises and underclothing (3517). This witness contradicted the evidence of Macleod as to women sleeping without sheets (3546), and also as to her having made complaints that the patients were suffering from cold (3547). As regards sheets the witness stated that it was the usual practice for the female patients to have sheets, and there was only one from whom they had to be taken on account of dirty habits during the years she was at Bayview Asylum (3470). She had never given any authority to fold up the sheets and take them off the beds, and they were only taken off the beds of dirty patients (3471, 3472, 3473). Such a thing could not have been done without her order or her knowledge (3474-3476).

174. Lizzie Verity stated that there was a store in which the clothing was kept (1990), and she was able to get clothing for the destructive patients, when there was any supply there; and when there was none there she went to the laundry and got them. There were times when there was no store of clothing. Latterly a larger supply of clothing was kept in the store (1991). Matters had greatly improved since General Richardson was removed; blankets and rugs had been supplied, and new sheets and clothes had come in. Before that time the matron refused extra clothing when applied for, but since then the matron informed her that anything in reason she asked for would be supplied (1992, 1993, 2046). She had seen numbers of the patients wearing stockings without feet, but she did not take much notice of that matter, for some of the patients would not keep their stockings on (2049). This witness confirmed the statement that the patients in the associated dormitories never slept in sheets, and that the blankets were taken off the beds, and the patients complained of cold at night (2050). The sheets were taken off because there was not a sufficient number, although they were supposed to be put on the bed (2051, 2052).

175. Rose McMahon stated that patients did not complain of cold, but she did not consider the canvas rugs with which they were supplied to be sufficient bed covering (1895), as they consisted of only two pieces of canvas sewn together (1896), and sometimes having the blanket sewn on to them, but these latter were only used for show purposes (1897, 1898). When she made complaints to the matron of the
insufficiency

insufficiency of the clothing, she would supply her with clothing from the store, if there was any there; if not, from the laundry (1848-1853). Speaking generally, she did not think there was a sufficient supply of clothing (1854-1857).

176. Rachel Kelly, on the other hand, stated that the clothing was always sufficient and clean, and was ragged only when torn by the patients (2503-2505). She stated the clothing was never taken off some patients and put on others about to be visited by their friends, (2506-2510). She stated that Josephine Mackay never had complained to her of an insufficiency of clothing for the patients (2621) or that they had no bed-clothes at night (2622). This witness stated that she had never put a clean dress over a dirty one on a patient; all she did was to make the patients presentable by straightening their bonnets, and putting them in order. There were no dirty patients, for as soon as a patient was found in a dirty condition she was changed at once (2644, 2645). Sheets were supplied for the beds in the dormitories at night. They were not taken off the beds in the afternoon, folded up, and put away, with the exception of two patients, who were dirty and destructive. In all other cases sheets were used at night. It was not true that good mattresses and bed-clothing were displayed merely for show purposes in the daytime, and not used at night (2606-2613).

177. Kate Brennan, in the dormitory under her charge, did not make any change in the sheets, but she believed it had been done last winter (5393) by nurse Maggie Macleod, who used to make the change referred to (5396). When visitors came the patient's dress was tidied up and a specially untidy dress might be removed (5402, 5403). She never had taken off the clothes from one patient to put them on another, and had never seen it done (5404). There was always a good supply of clothing for the use of the patients, and everything required, including stockings, could be obtained from the laundry (5405, 5406). In reply to questions, this witness stated that Maggie Macleod, when she took the sheets off the beds at night, told her that she acted thus because she could not obtain sheets from the laundry, and it was not necessary to leave them on the beds. No order was given to Macleod to act in this manner (5451-5453), and she never knew any one but Macleod to do it (5533, 5534). The bedding at night was exactly the same as shown to visitors during the day, except in the case of dirty patients (5466-5469).

178. Nellie McBride (who has been a nurse for seventeen months at Bayview Asylum and in attendance on the Government patients) stated that there were plenty of sheets, blankets, and counterpanes in the dormitories (4313-4316), and that the patients had plenty of stockings (4317). It was part of her duty as a nurse to repair the clothing and torn stockings during every afternoon (4567). She had never known any patients permitted to wear stockings without feet (4568). There was always an ample supply of clothing for the patients in the dormitories (4338), and the patients were always kept clean in every way (4339). There was an ample supply of linen in the laundry available for use (4353). Regarding nurse Macleod's evidence, she was satisfied she was not a truthful person, as on many occasions she had had opportunities of arriving at such a conclusion. For example, Macleod had often told witness that she had put stockings on patients when she had never done so, and when her attention was called to this neglect she told witness to mind her own business, and this kind of occurrence had taken place frequently (4354-4361). Macleod's evidence, already stated, on the subject of sheets for the beds, was read over to this witness, and she stated that whatever Macleod stated in this respect was exactly the reverse of her experience and her practice (4372-4382). Patients in the single rooms were supplied with sufficient bed-clothing, only those who invariably destroyed their clothing and ripped up their bedding being put naked into them. Two persons only were so treated. The sheets and blankets supplied to the patients in the single rooms were only changed for stronger coverings when lighter things had been destroyed. This witness had never heard of a patient suffering from cold while in a single room (4468-4479). This witness was asked if she remembered the removal of General Richardson from the asylum, and whether shortly after that time there was a larger supply of linen brought into the asylum, and she stated that she had observed nothing unusual in that respect (4363-4365).

179. Johanna Dwyer, who was a nurse six years ago, gave evidence as to the practice in her time, and stated that the sheets were never taken off the beds at night, after being used for show during the daytime (5687, 5688). The supply of clothing was sufficient, and it could always be obtained when the attendants went for it (5689, 5690, 5691).

180.

180. Jessie Urquhart stated that when patients were put to bed at night they had everything necessary in the way of bedding and night-clothing (6336). She had removed the sheets from some of the beds, under the matron's instructions, because the patients were very dirty (6337-6344). This witness contradicted the evidence of Macleod on the subject of the supply of night-dresses and the practice as regards the removal of the sheets from the beds, and stated that if Macleod had wished to get more clothing for night use she could have done so equally as well as herself (6357-6372). The witness did not remember that any great extra supply of linen and clothing material had been brought to the asylum to be made up for the patients (6354 to 6356), and no extra work of making up had been engaged in other than what was usual (6415-6424).

181. Ada Simpson, who had been over a year employed at Bayview Asylum, stated that an ample supply of bedding was provided for the single rooms, consisting of blankets; mattress—sometimes a single mattress, but always large ones when the patient was troublesome—rugs, pillows, and sheets (7398). Maggie Macleod and this witness were employed at the same time at the asylum (7416). The various points referred to by Macleod in her evidence were all severally cited to witness, and she categorically denied each of them, stating that Macleod was very untruthful and always grumbling (7419, 7420). The denial of the truth of Macleod's statements extended not only to the matter of clothing but to other points of complaint stated by Macleod and to cases of neglect cited by Macleod. The sheets were not removed from the beds of patients in the dormitories except in the case of dirty patients. In these cases, four or five in number, the bottom sheets were removed, and they were replaced with waterproof sheets and a double blanket (7446). The sheets were never taken off for the purpose of saving washing or for preserving the sheets (7447).

182. Eliza Hunter stated that she had been laundress at Bayview Asylum for the last thirteen months (4217). There was always an adequate supply of linen for the use of the patients (4218-4220). She had had no extra amount of work to do since the removal of General Richardson (4221-4228), nor any larger supply of clothing coming to and going from the laundry (4235, 4236, 4260). Macleod's statement on this subject was untrue (4235); in fact, she was very untruthful (4238). Macleod used to keep back the soiled linen, and tried to induce other nurses to do the same, and thus led to great confusion (4240-4245). Macleod's statements as regards sheets not being used was also untrue (4262-4273).

183. Catherine Perrin's evidence was to the effect that Macleod's evidence was false in every respect, as far as she had observed, and that Macleod was an untruthful person (7337-7339). There was an adequate supply of clothing and bedding, and no larger supply than usual of clothing was brought to the asylum shortly after General Richardson's removal (7354-7362). This witness had never heard, in the course of her experience at the institution, that the clothing of some patients was put on others to make them presentable when taken to visitors (7363).

184. Mrs. Gilchrist, the lady superintendent of Bayview Asylum, said she had the control of the housekeeping and the domestic arrangements (6570). She had no recollection of an extra supply of clothing of unusual character being obtained soon after the removal of General Richardson from Bayview Asylum, although she made the requisition list for such articles (6583-6586). The usual practice is to regulate the supply according to the season (6587, 6588). There is always an ample stock of clothing kept in the store-room, from whence it is issued to the matron (6589, 6590). No complaints as to short supplies of clothing had been made to her, and every request made by her for supplies had been at once complied with (6592). The witness denied that the patients were either imperfectly clothed, or dirty, or deficient in stockings (6594-6596). She was aware that Maggie Macleod had removed sheets from the beds of the patients in the dormitory under her charge, but when this matter came to her knowledge she spoke to the matron, and the practice was stopped at once (6610-6615, 6617-6625). When Macleod stated that she had complained to this witness about the making up of the beds and making the best of everything, as she did not approve of these things, she made an utterly false statement. She never did so (6627). Witness never saw or heard of new dresses being put over old ones when the visiting doctors came (6628, 6629). Macleod's evidence, already cited, was read over to this witness, and she positively denied each of the charges of neglect made by Macleod as regards clothing and individual cases of neglect (6638-6664, 6755-6758). Witness never had heard

heard of the patients complaining of cold, and the supplies of blankets and bedding were adequate and adapted to the particular case, both in the dormitories and in the single rooms (6664 to 6670). The evidence of Verity was contradicted by witness (6671 to 6681). The statements of Annie Marshall that she had complained of the insufficiency of the clothing to witness was absolutely false (6681 $\frac{1}{2}$, 6682). Josephine M'Kay's statements with regard to the patients in the single cells being always put in in a nude condition at night was untrue; only those who tore everything off were so treated (6685, 6686).

185. Sir Alfred Roberts was satisfied, from personal examination, that the clothing of the patients was sufficient (7713-7717). On one occasion the visitors criticised adversely the bedding in regard to that supplied to the single rooms on the female side (7712). He approved generally of the provision made for patients in the single rooms (7788-7802). The practice adopted with regard to dirty patients when sheets were removed was not harmful (7817-7818).

186. The evidence of the other official visitors was very similar to that of Sir Alfred Roberts.

187. The Inspector-General of the Insane, when asked whether he was satisfied with the clothing supplied to the Government patients, stated that (8755) it had to his mind always been ample in quantity, but he had occasionally to criticise it in some particulars. He had considered that the dresses were at times not sufficiently light for the summer weather, that the quality of the material was poor, and that the dresses were sometimes worn to a very shabby condition, and he had at times, and when necessary, expressed his opinion on those points. He had never seen patients underclad, considering the time of year, nor in any way suffering from cold. The supply of petticoats had always appeared ample, and it was very easy to a practised inspector to see this. He had never had complaints from patients as to insufficiency of clothing. Other complaints were not unfrequently made. These for the most part had been as to the kind of material, the want of new and lighter boots, and as to little matters of collars, ribbons, etc. On such points he had occasionally asked the doctor or matron to humour the whims of the patients, and at his next visit he had been shown the article specially got. Scarcely a visit passed without some minor complaint of that kind, but he had heard no such grievance as to clothing, and seen none. It was most difficult to keep certain classes of patients, or certain patients, in particular phases of their malady clean or tidy. They were careless, destructive, dirty, and indecent, and it was almost impossible to keep them clean or tidy. It was necessary to employ canvas jumpers or overalls in some of the cases, and in some cases those jumpers were all the patient had on except, perhaps, some torn underclothing. For such patients it was not at all uncommon, indeed it was necessary and right, in the public asylums, to give the cast-off clothing of the better-class patients to the other patients so long as it was sufficiently warm and clean. It was only delaying by a few days or even a few hours the passage of these garments to the rag bag and making them serve a useful purpose in the meantime. Those patients who were almost always partially unclad, and whose persons were exposed when a nurse was for a moment away, did not appear to suffer cold. Their activity and constant movement kept them warm generally; there was a singular insensitiveness in others, and strange to say, colds, bronchitis, inflammation of the lungs, and other similar ailments were almost unknown among this class. Even infectious diseases seemed to attack them less, and the influenza when prevalent in hospitals for the insane, for the most part, if not entirely, passed them by. At his visits of inspection he had at times examined the bedding, removing it from one or two beds taken at random in the dormitories, with the special object of seeing if the sheets were clean and dry. At these times he had seen the bed and the blankets, and always considered the latter sufficient for the time of year; sometimes they were more than sufficient, and it had been explained to him that the extra blankets were left on at the wish of individual patients. He had never had a complaint made of insufficient clothing at night. The clothing for private patients was mostly supplied by friends, but sometimes it was left to Dr. Vause to supply, and was then, so far as he had seen, suitable and sufficiently varied. Questioned relative to the statement (8756) that private clothing had been worn by Government patients, he stated that he knew nothing to this effect, though he could easily imagine that discarded pieces of finery, or cast-off dresses of private patients, had been so appropriated, especially as they would in some cases be accepted with pleasure and worn with

with much satisfaction. As to the clothing of Government patients, or of the kind supplied to Government patients, being occasionally used for private patients, he was aware that it had been done, and with, in his opinion, perfect propriety.

188. Dr. Vause denied that there was any foundation for the charges made by the witnesses Mackay, Macleod, Verity, and McMahon as regarded clothing (10070). As far as he was aware there was always an ample supply (10071, 10072). He stated that he had used the same dress material for private patients that he used for Government patients when the friends of the patient had not supplied sufficient clothing (10073, 10074). This clothing so supplied is witness' own property, not the Government's (10077, 10078). Some of the patients made up their own dresses when witness supplied the material (10080, 10084). Under-clothing was amply supplied to the patients, and its absence would have been easily detected (10091, 10094). It was only on very rare occasions that the matron had to wait any unreasonable length of time for supplies (10096 to 10101). While trivial alterations were made in the clothing when visitors arrived, the changing of clothing to deceive was denied (10102, 10103), and he thought there was not time for this purpose (10104). Numbers of dresses were made in sizes and kept in stock for use, but not for slipping over dirty clothing when visitors came (10105 to 10110). Macleod's evidence as to the removal of the sheets placed on the beds during the day when patients were put to bed at night was utterly false, and if such a practice occurred it was caused by her neglect of duty (10423 to 10116). The witness explained that in the single rooms the bedding for destructive patients was a canvas tick, filled with straw, and rugs, two or more, for a covering. The other patients were provided with ordinary bedding, blankets, sheets, &c. Some had iron bedsteads. Loose straw was used in the case of one patient only, who persistently refused to sleep in anything else, and destroyed the ticks when supplied (10130 to 10131½). The patients were not placed in those rooms naked as a rule; there was only one case where this treatment was usual. In other cases, occasionally for a short time, patients became destructive, but as soon as they could use bed clothing it was supplied. The evidence of Mackay, Marshall, Verity, and Macleod on this subject was utterly false. The clothing was supplied in those cases, but was withdrawn if found to be a source of danger—in fact, the customary treatment of those cases was adopted (10133 to 10141). With reference to the charge that an unusually large quantity of clothing had been obtained shortly after Major-General Richardson had been removed from Bayview Asylum, the Commissioners, in addition to the evidence already given, obtained the services of an accountant to examine Dr. Vause's books with the result that the relative expenditure during the year 1893 and 1894, as well as the expenditure during the months of June to December, 1893 and 1894, showed that contrary to the statements made by some of the witnesses, a less amount was expended for clothing, &c., during 1894 than during 1893. (Appendix .)

The Finding.

189. The Commissioners, after giving careful consideration to the large amount of evidence forthcoming for and against this charge, find that the balance of testimony is largely in favour of an ample supply of clothing being available at Bayview House. If patients were allowed to remain insufficiently clothed, it was not owing to the absence of clothing from the establishment, but due to the negligence of those nurses whose duty it was to see that patients did not suffer inconvenience or harm in this respect. Private patients were clothed at the instance of friends and relatives, upon whom rested the responsibility of an ample and suitable supply of wearing apparel. The Government patients were seen at frequent intervals by the Inspector-General of Insane, whose special duty it is to insist on these unfortunate persons being adequately clothed. Evidence given by the Official Visitors, by medical officers who had charge of the institution during the absence of Dr. Vause, and by Dr. Vause, supports the Commissioners in finding that this charge is without foundation, and that the practice of preparing the patients for the visits of their friends followed at Bayview House was similar to universal custom in this branch of the treatment of the insane. They further believe that there can be no doubt, from the general evidence as well as from the examination of the accounts of the asylum, that no unusual expenditure for clothing occurred shortly after Major-General Richardson's removal, as was stated by some of the attendants.

Single Rooms.

190. In the Female Department, on what was termed the Government side of Bayview Asylum, were eleven single rooms for the isolation of patients, and at either end was a sleeping-room for nurses who were supposed to have the oversight at night of the inmates.

191. Macleod's evidence as to these rooms was to the effect that the patients were placed in them at from 5:30 to 6 p.m., and that they remained there till 6 o'clock next morning (1503) without any provision of any kind for attendance or for visitation during the night (1504). She stated that there was no observation hole in the door to make inspection (1505); that there was no night patrol, but that after Major-General Richardson was taken away provision was made for that purpose (1509), by arranging for the nurses to take the duty in turns (1510). The patients were not supplied with comfortable bedding; they were put in on straw; they were stripped of their clothing, put in these rooms, and a bag of straw would be put in with them. She stated that the women were stripped naked (1586, 1651), and were not supplied with sheets, blankets, or any other bedding (1515). She further stated that these women were placed in these rooms in this way to save trouble and expense (1573). No utensils were provided for their use (1653) while she was there, but lately, she believed, some had been placed there (1654, 1655, 1657). There was no covering provided for the convenience of the patients (1658). As particular cases of improper incarceration in the single rooms, the case of Miss C was mentioned (1564, 1739). She was neither a violent nor an excitable patient (1740), and Macleod stated that she would not have been frightened to sleep with her. Miss C. slept on the same kind of mattress, with straw, already described (1743). Mrs. W., a private patient, had only a straw mattress (1644) without any covering, and objected to go into the room. This patient, she stated, used to knock herself about terribly, making herself black and blue, both in the night and in the day time (1666, 1667). Some of the nurses intended to write to the Inspector-General of Insane about this patient on the very night she died (1668). Mrs. N. also died, witness stated, in one of these rooms (1683), when she was nursed by Josephine Mackay (1686). Miss H., placed in one of the single rooms (1766), had her arm broken (1719-1730), and a departmental inquiry was made (1731-1734), at which Macleod gave evidence (1771), when she had the opportunity to make complaint on these subjects (1771), but she did not do so (1772); and, in answer to inquiries, stated that she did not know why she did not avail herself of the opportunity. Such a series of charges made on oath by this witness impressed the Commission with the absolute necessity for the closest investigation of all the available evidence attainable. Josephine Mackay, who was an assistant nurse, and engaged in domestic duties for fifteen months, from April, 1893, to January, 1894, and who was dismissed because she allowed a patient under her charge to escape from this asylum, stated that the patients were placed in the single rooms after being undressed, and a kind of mattress made of straw was put in the room with them (2226), without any under-clothing, and quite naked (2227, 2228, 2229), with one exception, who was provided with night-clothes (2231). Afterwards, in cross-examination, she added that an old rug was given to the naked patients for covering (2271). She stated that there were observation holes in the doors (2276). The nurses only looked through these holes when there was an unusual noise and patients were heard knocking themselves about (2278). The mattresses put in during the day were taken out at night, and the bag of straw supplied (2281). She had seen one utensil in use (2288). On the whole, it was necessary to put some of these cases in single rooms (2350). As regards particular cases, this witness stated that Mrs. W. used to knock herself about very much (2252) during the week or fortnight that she was ill (2254), and, as she attended on her during the last three days of her life, she saw some bruises on her stomach (2291). In the case of Miss C., her father, when he visited her, was not shown the room in which she slept, but another bedroom altogether (2313-2318). Annie Marshall was engaged in the asylum for six months, from 3rd March, 1894, but was only six weeks among the patients, the rest of the time being spent in Dr. Vause's private residence. This witness resigned her connection with the asylum in consequence of a disagreement with the lady superintendent. She had seen the patients put into the single rooms, but regarded the absence of clothing as a necessary procedure in consequence of their destructive character (2088,

(2088, 2089). The matron visited these patients at 7 o'clock. Rose McMahon was employed for eighteen months at Bayview Asylum, from 1892 to February, 1893, and was dismissed. She had charge of the dining-room among the Government patients. She saw the patients placed in these rooms, when their clothing was removed (1866). Her evidence differed from that of previous witnesses. She saw placed in all these single rooms straw mattresses and a kind of canvas rug, one patient only being placed in loose straw (1868). One or two of the patients had night-dresses (1873). There were only two of the rooms supplied with utensils (1874-1876). No attendance was given during the night unless the patients made a noise (1878), when the nurse who was sufficiently near (1881) would go to the room. The canvas rugs with blankets were used for show (1897); those used at night were simply canvas, but the beds were put in clean at night (1894). Lizzie Verity was engaged as an attendant from January to September, 1894, when she was dismissed. She had put patients into these rooms (1970). There was no night attendant to look after their requirements (1973), and the patients were stripped, no night-dresses being supplied (1976, 1977, 1978). The bedding supplied depended on the character of the patient, either a straw mattress or straw only being supplied. She thought that five utensils were supplied to the rooms (1999-2002). Coverlets were supplied (2017), and the patients never complained of cold (2023). Bridget Morrissey acted first as nurse and afterwards as matron at Bayview Asylum. She left the asylum in November, 1893, in consequence of the accidental poisoning of a patient (3292). She received a good character from Dr. Vause, and certified, in the book kept for that purpose, that everything possible had been done, during her experience, for the comfort of the patients (3296). This witness stated that the patients placed in these rooms were dressed at night according to the nature of the case; some would have clothes on, but those who were violent or suicidal would be left naked (3304). The patients had beds and rugs, and the private patients took their own clothes in from the dormitory (3312). A nurse slept at each end of the rooms, but there was no special night-nurse. One patient tore up everything, and could only be placed in straw (3338). There were four or five india-rubber utensils. It would have been unsafe to give them to some of the patients (3540, 3541, 3542), as they would probably use them to attack the nurses. This witness thought there was no economy occasioned by placing the patients in the single rooms (3398). On emergency, she would put violent cases in at once and report to the superintendent (3388, 3465, 3466, 3467, 3468). Although she had conversations with Macleod (3448), and they agreed upon some points (3449), she denied Macleod's statements as to her complaints about putting the patients naked into the rooms (3544). This witness denied that the beds were changed at night, and stated they were always clean and fresh (3604, 3605, 3606). Only one woman slept in straw (3621). Five only were put in naked, and in two of the rooms there were bedsteads (3620). As regards Mrs. W.'s case, this witness stated that she bathed her on her arrival at Bayview Asylum, and that she had been much knocked about and was black and blue in places. She was a very violent patient, and was always throwing herself about. The priest was fetched by Josephine Mackay at the time of her death.

192. On the other hand, Mrs. Gilchrist, lady superintendent since 1st January, 1894, stated that the patients were not put into the rooms, as Macleod had stated, to save expense (6658). Two of the rooms were occupied by patients denuded of clothing (6710, 6711, 6712) as a matter of necessity. The nurses in the adjoining rooms could hear and attend to these cases (6738), and visited them when necessary at night (6739). A night nurse was now on duty, appointed since last June (6743), in consequence of a new arrangement of the duty (6744). Referring to the case of Miss C., Mrs. Gilchrist contradicted the statement of Macleod, that although a private patient she never slept in the private patients' department till her father came to see her. Witness stated that in the early part of her illness she was only fit to be kept in a single room (6649), and therefore it was compulsory to put her in an isolation room on the Government side (6650). Macleod had never made any complaint to her (6656); on the contrary, Macleod said the patients were too much humoured (6656). Two patients only were necessarily denuded of their clothing. When Mr. C. came to see his daughter, witness showed him the room in which she was sleeping at the time of the visit (6814). Miss C. was tried in the dormitory, in the hospital, and in a single room, according to the development of her disorder (6816, 6817, 6818).

193. Johanna Dwyer, who six years ago was an attendant on both the Government and the private side of the asylum, and who had previous experience at Parkside Lunatic Asylum (5634), stated that patients were placed in these single rooms under authority of the doctor or matron (5647), and were supplied with everything necessary (5649), but when destructive were deprived of clothing and allowed to remain in straw (5650, 5705). The watching of the nurses at either end of the corridor was ample. Any disturbance could be heard and attended to (5653), and there was no necessity for a night nurse on patrol (5654).

194. Kate Brennan was in charge of the Government patients' dining-room at Bayview Asylum, where she has been employed for the last two years. She knew one patient who is put into the rooms naked and slept in straw (5390), but she was a most destructive patient. Each room was supplied with a utensil (5441). She stated that Miss C. always had a night-gown on in the room (5524).

195. Nelly McBride had been seventeen months at Bayview Asylum, and had been employed amongst the Government patients. She had placed patients in the single rooms (4319). When dormitory patients they had their own bedding, of which there was plenty. The other patients would have a bed and a pillow, a coarse linen ticking filled with straw, and two rugs (4320) made of canvas on one side and a blanket sewn on the other (4321). When patients were taken out in the morning some would have their night-dresses on and others would not (4346), but the night-dresses were always put on at night (4347). Seven or eight utensils were used, and they were given whenever a patient would use them (4348, 4349, 4350, 4351, 4352). This witness denied that it was customary to put women into the rooms at night in a nude condition (4436). She had never used a scrubbing-brush to clean a patient, nor had been guilty of cruelty (4431 to 4435). Miss C. was only put into a single room when very troublesome (4419), and then she had night-dresses and plenty of blankets (4420). This witness also stated that she had heard Macleod say the patients were too well looked after, and had too much of their own way (4562). She remembered Mrs. W's case, and was present when she died in the associated dormitory (4854).

196. Rachel Kelly was employed at Bayview Asylum from 28th February, 1893, to 29th January, 1894, in charge of the Government patients (2500). She stated that she had had opportunities for observing the condition of the patients put to sleep in the rooms (2521), and was of opinion that, as a rule, they were dirty, troublesome, and destructive (2522). The articles of bedding supplied consisted of a straw mattress and canvas rugs lined with blanket. One or two patients were put in naked. These patients could not be kept in the dormitories (2602) on account of their noisiness or their destructive habits. If not destructive, night-dresses were supplied (2646). Two india-rubber utensils were supplied (2560), and the witness thought that the patients who had no night utensils would have destroyed them if they had been put into the room. This witness remembered Mrs. W. as a patient. When Mrs. W. was put in the single room witness stated that she was very excited (2649), and that it would have been dangerous not to have placed her there.

197. Jessie Urquhart has been an attendant on the Government patients since 16th April, 1894. She stated that according to her observation a night-dress was supplied to all the patients placed in the single rooms (6396).

198. Ada Simpson, employed since November, 1893, among the Government patients, stated that she had personal knowledge of the mode of dealing with the patients placed in the single rooms, and explained the system adopted in case of outbreaks of violence during the daytime (7388 to 7394). The matron was always present when patients were put in the rooms at night (7395). The rooms were kept clean and tidy, and were cleaned every time the patients left them (7397). The bedding supplied consisted of blankets, mattress—sometimes a single mattress, but always large ones when the patient was troublesome—also rugs, pillows, sheets, and sometimes an india-rubber utensil (7398); of utensils, there was an ample supply (7401). The only patient she had seen put in naked was E. H., a very destructive patient (7405). In the case of Miss C., she had a night-dress, and two double mattresses were placed in her room, because she would not stay in bed.

199. The Inspector-General for the Insane gave evidence that, in his opinion, there was a sufficiency of attendants both for day and night duty (8716). He stated that he was satisfied with the night nursing. He was aware that there was no regular night patrol, and with the attendants and nurses sleeping in the dormitories
he

he did not think this to be required. So far as the single rooms were concerned, the patients, except occasionally, when night attendance was required, were eight or ten chronic cases of insanity, isolated by reason of noise, violence, dirty or destructive habits, and in robust health—nothing could have been done for them at night; they would have been in no way benefited by visitation, and, indeed, in the majority of cases it would have been quite impossible or dangerous for any single nurse to have opened the doors. Some of the cases referred to as a matter of complaint by some of the witnesses, had occupied single rooms for years, both at Bayview Asylum and Callan Park Asylum (8724). He did not regard the night patrol as an absolute necessity for visiting the patients, but rather as a safeguard in regard to outbreaks of fire in the building (8726). He had not advised the provision (8728), and, except in cases in the acute stage, or if patients were suffering from any unusual mental or bodily sickness at Bayview, there was always a night nurse in attendance (8852). As regards the special cases, that of Miss H. had been inquired into by himself and two of the official visitors, and the accident which had occurred had been occasioned by placing an epileptic and restless patient in a single room with a bedstead, which had been done in ignorance of the history of the case (8707).

200. Referring to the single rooms in the female side, Dr. Vause stated that while a canvas tick filled with straw formed the bedding in the case of destructive patients (10130), there were other patients who of their own accord requested to sleep in them. While the destructive patients were supplied with the canvas tick with straw and two or more rugs for covering, those non-destructive were provided with ordinary bedding, blankets, sheets, etc. In one or two instances, when the rooms have been occupied for a long time, the patients slept on iron bedsteads (10132). Macleod's statement that these patients had only straw to lie on was true of one case only, a patient who persistently refuses to sleep on anything but straw (10132½). Dr. Vause stated that, as a rule, the patients were not put in the rooms naked; he knew, however, of one exception (10133). The evidence of Josephine Mackay to the effect that the patients were always put in these rooms naked at night, that of Marshall to the same effect, that of Verity that all the patients were stripped and had no night-dresses or chemises, and that of Macleod that the patients were stripped and put to bed quite naked with a bag of straw, was positively contradicted by Dr. Vause (10135). He added, that no patients were put naked into these rooms if they would wear clothing (10136), and the clothing was withdrawn if he found it a source of danger or injury (10137). This was in the interest of the patients (10138), and not from any desire for personal profit (10138). In pursuing this course, he followed the customary mode of treatment (10140).

201. Dr. Vause forwarded a written statement with regard to the various charges made against his management of Bayview Asylum, and referred to the individual charges of bad treatment made by the female witnesses already cited, and made certain explanations (minutes of evidence, p. 255). He stated that the private patients, who have from time to time been treated on the Government side of the house, had been such as required seclusion during the day; such as required a single room to sleep in at night; such as requested to be allowed to occupy a single room at night, and for whom a bedstead would be provided, as in the case of Mrs. H. and others.

The Findings.

202. Without entering further into details, it may be affirmed that with regard to the evidence furnished to the Commissioners it was apparent, not only from the nature of the statements made by the several witnesses, but also from their manner when being examined, that many of them were persons very unsuited for the positions they had filled. The majority of them had had no previous experience of the peculiar kind of work entailed on those in charge of lunatics. Dr. Vause explained to the Commissioners that it was his usual practice to prefer inexperienced persons, and to train them according to his own method for their work, graduating the various spheres of responsibility. The Commissioners are of opinion that, however theoretically correct this practice may have appeared to him, it has proved most unfortunate in numerous respects as regards many of the persons employed by him who have appeared as witnesses before the Commissioners. The absence of all experience, even in the common elements of nursing, and more especially the profound ignorance displayed with regard to the special treatment of lunatic patients, have led many of those who were employed as attendants at Bayview Asylum to make statements and give information and form opinions, which even a slight acquaintance with the general and necessary practice in lunatic asylums would have considerably modified. 203.

203. It will be observed that the principal gravamen of the charge in connection with the single rooms was that patients were often placed in them to save the expense of an adequate staff of attendants and the provision of the usual comforts of a bedroom, and that in consequence many persons were thus dealt with who should have received other treatment. As to the adequacy of the nursing staff at Bayview Asylum, the Commissioners are satisfied that as regards numbers there could be no doubt on the subject. The opinions of the nurses as to the suitability of this form of treatment may be dismissed summarily, inasmuch as the Commissioners cannot regard them as competent witnesses on the subject. The discrepancies already recorded as to the number of patients placed in these rooms from night to night prove clearly that, with the exception of two or three cases, which were those treated for long periods, the witnesses explained their personal experiences as much from their feelings towards the asylum as from their remembrance of numbers and cases, and this was very clearly shown in the evidence relating to the night clothing and bedding supplied to the patients in these rooms. On this point the Commissioners consider the evidence given by Macleod as generally unworthy of credence. It is only variously supported in its details by other witnesses, and is contradicted by a large number of those who may be regarded as giving evidence on the same lines as herself. It would be needless to enter into details on this subject, as the statements already recorded from the evidence furnish the proof.

204. The Commissioners believe that the evidence shows that the practice adopted at Bayview Asylum was similar to that employed elsewhere in lunatic asylums. In the presence of the head attendant and matron, and in accordance with the instructions of the Medical Superintendent, cases requiring seclusion were placed in the single room. Patients of a destructive tendency were denuded of clothing and placed on mattresses of straw, with canvas rugs for covering. Patients of other classes were provided with suitable night garments and bedding. There is no reliable evidence that these patients suffered from cold. The discrepancies with regard to the number of utensils supplied is, the Commissioners believe, explained by the fact that many of the patients destroy them, while others use them as weapons. The Commissioners entirely disbelieve, and the weight of evidence is altogether against, the statement that no utensils were supplied at night. It would seem that a varying number was given from time to time according to the nature of the case. This form of treatment in single rooms is now universally adopted in lunatic asylums, and its purpose is to do away with the methods of mechanical restraint at one time adopted. Patients requiring this form of treatment are no longer amenable to the usual conditions of ordinary life, and it is universally allowed by all the authorities that the quietude and rest provided are indispensable to successful treatment. The only case brought under the attention of the Commissioners, where an accident had occurred to a patient while in these rooms, was the one in which an epileptic patient was improperly placed in a room where there was an iron bedstead, and who sustained a fracture of the arm, in all probability in consequence of a fall on the bed-frame while in a fit. As stated elsewhere, a departmental inquiry was held in this case.

205. Reviewing the whole of the evidence on this subject, the Commissioners are of opinion that any shortcomings or laxity that may have occurred in connection with these single rooms have occurred in consequence of the want of professional knowledge and skill on the part of the nurses. Weighing the evidence as a whole, they believe that these single rooms, which have been continuously subjected to official inspection, have answered their purpose as well as could be expected in a temporary building.

206. The provisions made for the lighting of these rooms by the windows recently opened over the doors undoubtedly added to their usefulness. The night patrol, also introduced within the last few months, the Commissioners consider to be of great value, not only on account of the better attendance thus supplied to the patients in the rooms than when sole dependence was placed on the day-nurses sleeping at either end of the corridor in which the rooms were placed, but also because by this means precaution was taken against accidents by fire. On this latter point the Commissioners cannot agree with Dr. Vause as to the absence of risk, in view of the inflammable nature of the buildings, and the character of the patients locked up in these rooms.

The

The Mingling of Private with Government Patients.

207. In Bayview Asylum a distinction was necessarily drawn between the private portion of the establishment and that allotted to the patients paid for by the Government. Some witnesses gave evidence to the effect that this arrangement was not always maintained.

208. Maggie Macleod stated that it was a frequent occurrence for private patients to be mixed up with Government patients at all times (1568). The case of Miss C. was instanced as one of a private patient who slept in the Government end (1566). As this case has already been disposed of, it may be here stated that satisfactory explanation has been given to the effect that this patient required treatment in the single rooms, which were at the Government end of the building, and hence the reason she was placed there. The witness stated that Miss D. L. and Mrs. M'L., both private patients, were put in amongst the Government patients (1567).

209. With regard to the case of Miss D. L., Mrs. Gilchrist stated that the lady was not always fit to be put among the private patients, as she upset the tranquility of other patients. The patient always slept in the associated dormitories (6654). With regard to the case of Mrs. M'L., witness stated that, although a private patient, she was put on the Government side, and sleeps in the nurses' room, because the nurses paid her some personal attention during the night (6655). Miss D. L. frequently spent days together in the Government dining-room, in order to enable her to work off a large amount of superabundant energy without annoying anyone, but she invariably occupied a private patient's dormitory at night, with only a few rare exceptions (9941).

210. Mrs. M'L. was originally a Government patient, but some years ago, when the Government directed her removal to Gladesville, her friends agreed to pay at the Government rates on condition of her remaining at the Bayview Asylum.

211. Dr. Vause explained the nature of Miss D. L.'s case, both in his principal statement and in his evidence. Subject to various delusions, at times she becomes very excited and aggressive, and, therefore, Dr. Vause thought it better to place her in the large dining-room, where she could walk about and exhaust her excitement (9941--9944). Her meals, however, were supplied in the private side, where, under ordinary circumstances, she remained and slept (9945).

The Finding.

212. The Commissioners find that the private patients named in connection with this charge were in their own interest removed from the private wards to other parts of the institution, not only to place them in surroundings more conducive to an improvement in their condition, but also to put them where they would not be a source of annoyance and excitement to others.

Alleged preparation for Official Visits and the Visits of Friends and Relations.

213. A charge was made by several witnesses to the effect that a sufficiently long notice was given to the attendants, so that they were enabled to cover any defects in dress, cleanliness, and other matters from the observation of the Official Visitors or of the friends of the patients. It was stated that it was not merely a tidying up of the patients that occurred under these circumstances, but that a sufficient interval transpired between the arrival of the Official Visitors at the asylum and their examination of the patients in the wards or yards to permit of notice being given to the attendants to enable them to clean up and, in many cases, dress patients who were in a state of disorder or uncleanness.

214. Referring, in the first place, to the visits of the Inspector-General for the Insane and the Official Visitors, the Commissioners received the following evidence:—Margaret Macleod stated that notice was given to the attendants when the official visitors or visiting doctors had arrived at the asylum (1615), about twenty minutes or half an hour before they came to see the patients (1616), and that the visiting doctors never dropped on them suddenly (1617). When these gentlemen reached the institution the nurses went to extra trouble to make things more presentable (1679), and that instructions to that effect were given by the matron, so that the beds were made up, the patients' clothes changed, and the best was made of everything (1677). Further, this witness stated that she was quite certain that on no occasion while she was connected with the institution did either the visiting doctors or the Inspector-General of the Insane come straight into the wards and see the patients

patients without being announced in the manner described (1788). In other words, this witness stated that the place was thus fully prepared (1789), the beds were put in order, sheets were put on, to be afterwards taken off (1790).

215. Similar evidence was given by Josephine Mackay, who stated that the information of the arrival of the visitors was notified by the matron or the nurse who admitted them, and then the patients were undressed and dressed again in more suitable clothes for the inspection (2302-2309). This witness stated that about ten minutes or a quarter of an hour would be required to get the patients ready, and then the doctors would come through the wards and inspect (2328).

216. Annie Marshall, who was chiefly employed in Dr. Vause's private house, stated that when the Government visitors arrived to make their official inspection they called first at the doctor's residence, and then she ran across and told the other nurses of their arrival (2080). This was done so that they might get the patients and the place in proper order (2081). Neither Dr. Vause nor the matron had asked her to let the nurses know of the visit; she had done so on her own authority (2082). When she first arrived at the asylum Dr. Vause had once asked her to inform the nurses, and she had afterwards done so without being instructed (2082, 2083). She further stated that the official visitors always went to Dr. Vause's house before they saw the patients (2085). She never remembered them to have gone to the patients first and Dr. Vause's house afterwards (2086).

217. Bridget Morrissey stated that the nurses always knew when the Official Visitors came to the asylum (3359, 3417, 3418), and that thus they had a few minutes to get the patients ready (3360). The nurses all helped each other in this matter. Fresh dresses were put on the bad patients (3362). The witness stated that the notice was never a long one, sometimes only a few minutes (3524). The nurses never knew which way the visitors would go; sometimes they would go to the building, at other to the male division first (3525), and sometimes five minutes and sometimes half an hour would elapse after the arrival of the visitors before they reached the female division (3525, 3526). A great many of the patients were changed, but some were not (3527).

218. Lizzie Verity gave similar evidence. She had not known an Official Visitor to have gone straight to the wards. About a quarter of an hour elapsed between the time of their arrival and their inspection of the patients (2002-2006).

219. Rose McMahon stated that a quarter of an hour's notice was given when the Official Visitors came (1859). Dr. Vause sent the notice through one of the nurses or the matron (1860, 1861). The visiting doctors never came on them unawares (1862). This witness had heard that a notice written on paper was once sent so that the patients might be got in order (1863, 1864).

220. Rachael Kelly stated that there was no notification of the visit of the Government visitors. Dr. Vause went round with them. The matron used to say generally when visitors had come. She would send word so that they could get the patients together, as sometimes they were scattered about. About a quarter of an hour or twenty minutes elapsed between the arrival of the visitors and their entrance into the wards, and the patients were tidied and got ready in that time (2514-2517).

221. Kate Brennan stated that there was no special warning when the Official Visitors came to the asylum. The nurses never knew more than ten minutes or a quarter of an hour before the arrival of the visitors before they saw them in the wards. Not much could be done in making the patients ready in that time. They were only tidied, just as was done when Dr. Vause made his rounds (5402). Sometimes if a patient had a specially untidy dress it would be changed. The clothes were never taken off one patient and put on another (5403, 5404).

222. Nellie McBride had never heard that intimation of the arrival of the Official Visitors was sent to the nurses (4309, 4310, 4417). They often arrived in the dining-rooms and the wards before she was aware they were in the asylum (4416, 4298).

223. Johanna Dwyer gave similar evidence to last witness (5713-5717).

224. Jessie Urquhart stated that sometimes the nurses had about ten minutes notice, and at others they never knew when the Inspector-General of Insane or the visiting doctors were there till they saw them in the ward (6386). When notice was received one of the nurses gave it (6387). When they had ten minutes notice they would put clean things on some of the patients (6388).

225. Mrs. Gilchrist stated that, as a rule, the visiting doctors went first to Dr. Vause's office (6727), but occasionally they go directly to the wards. Usually the matron is sent for and accompanies the visitors and Dr. Vause; in such cases there may be an interval of ten or fifteen minutes, but no notification in this interval is sent to the nurses (6726-6730). Sometimes the Official Visitors go directly through the main building, without waiting for any one to accompany them (6782-6786).

226. Esther Allen, a housemaid at Bayview Asylum, who has been there for about eighteen months, stated that when the Official Visitors came they sometimes went to the office and sometimes to the house on arrival (7593, 7594). She answered the door, announced the arrival to the matron, who then takes the visitors to the wards (7595). No special message was sent to the nurses, and the witness had never heard that this was done (7596, 7597) in order to get the patients ready (7598). She had never heard of a piece of paper containing a written instruction to this effect being sent to the nurses immediately after the arrival of the visitors (7600). She positively denied the truth of Josephine Mackay's statement that such a notice was given, but said she had told Mackay as she was passing through that the visitors had arrived (7602), after she had seen and informed the matron (7603), and this was done only in a casual sort of way (7604, 7610), and without any particular object (7605). The witness was seriously cautioned as to the nature of the evidence she was giving, but stated that her evidence was true (7607). She positively denied the evidence of Verity, on the subject, when it was read over to her (7608), and affirmed that the only instruction she received from the Medical Superintendent was that she should inform the matron so that she might accompany the visitors through the wards (7609).

227. Hon. Dr. MacLaurin, who was formerly one of the Official Visitors to Bayview Asylum, stated that he considered that it would be a proper thing to announce the arrival of the Official Visitors so that the patients could be properly dressed and put in order. If he had the management of an institution of this kind he would send a message to the nurses to say the Official Visitors had come, in order that the performance of their duties might be facilitated as much as possible (5022).

228. Sir Alfred Roberts, in his evidence regarding this matter, stated that as Chairman of the Board of Visitors it was his duty to fix the day and hour of the visit, and he never apprised either the Medical Superintendent or anybody at Bayview Asylum when the visits were to be made (7692), and this was a universal rule (7693). When the Official Visitors arrived at the institution they went to the main building first (7694), and, as a rule, went to the female division first (7696). He did not believe the patients, between the time of the arrival of the Official Visitors and their visits to the ward, could be dressed in fresh, clean clothes, in order to make them appear in the eyes of the visitors clean and tidy and altogether different to what they were under ordinary circumstances before the arrival of the visitors (7718). There was barely time sufficient to get the patients together and put them on seats so that the visitors in their passage through the institution could see them properly. Certainly there was not time to change their clothing, except, perhaps, to arrange a shawl upon the shoulders or put a collar round the neck (7719). It would not be possible to make the changes described in the clothing, in the way of putting on fresh dresses, in the space of ten minutes or a quarter of an hour (7720). In some cases there would not be time enough to take the dress off one patient and put it on another (7721). There would certainly not be time to obtain clean dresses from the store and then put them on patients (7722). He believed that if such a process were gone through, some of the patients would have made loud complaint on the subject (7724, 7725).

229. Mr. N. A. Robertson, as one of the Official Visitors, confirmed the evidence of Sir Alfred Roberts (7911-7914). He stated that very frequently not so much as ten minutes elapsed after their arrival before they were in the wards (7915), and a quarter of an hour would be the longest interval (7916, 7917).

230. Dr. Huxtable gave evidence of a similar character (8036, 8037). He described the interval between the arrival at Bayview Asylum and the entrance into the wards as being only a few minutes, and on no occasion did it extend to half an hour (8038, 8039). On several visits the visitors went with the matron straight into the building (8038). He could not believe it possible that patients could be dressed in the manner described by some witnesses in the interval between the arrival of the visitors and their entrance into the ward.

231. Dr. Cox's evidence on this subject was very full. He said (8200 *et seq.*) that twenty-five minutes elapsed between the time of his arrival and his entrance into the wards. A longer interval would elapse before the visitors would reach the female ward if the male side was first visited—perhaps as much as three quarters of an hour (8361).

232. The Inspector-General of Insane gave the following information on the subject:—The arrangements in connection with his official visits to Bayview Asylum had been as follow: He had never given the slightest notice except on the rare occasions when visited to hold some special inquiry, and desired Dr. Vause or some one else from whom he required information to be at hand. He had always travelled by cab, arrived at irregular times, and his ten or eleven visits annually had been sometimes paid near together, and sometimes with rather long intervals. Officially, or rather by Statute, he was only bound to visit once in six months. He had never paid less than ten visits annually. As a rule, he would go to the office first at the main building, some four or five times in fifteen years, not more, and these chiefly during Dr. Vause's illness, and when he could not accompany him through the wards, and it was desirable and necessary for him to obtain information as to certain patients before going to the wards, he had gone to Dr. Vause's house first, and he might state, in justice to Dr. Vause, that his relations with him had always been friendly, though on an official basis; that he felt very sincere sympathy for him when the assault was made on him by a patient, especially as the mental shock was very severe and dangerous; that he then visited him on several occasions without going to the asylum at all, but that he had never then, before, nor since taken a meal in his house. He sometimes examined the statutory book first—and this, perhaps, took him less time than it did the official visitors, for he was officially notified of all admissions and discharges beforehand, and copies of all the admission papers were sent to him within forty-eight hours of each admission—and sometimes go straight to the wards. He generally saw the private female patients first, but sometimes he commenced at the Government ward, and sometimes with the male private patients. He had never been kept waiting, and was always admitted as soon as he asked. He would start sometimes without the matron or doctor, and they followed soon after. He considered it quite right that certain minor preparations should be made when official visitors were coming, such preparations as putting away towels and dish-cloths, tidying the dresses of patients, seeing that they were not in indecent positions or exposed, and if at the moment wet or dirty, that they were changed. Such preparations were only right and seemly. They were made, or should be made, in every institution, and they deceive nobody who had the least experience. It was impossible to put an institution which is in bad order into good order in ten or fifteen minutes, and he defied nurses to make many changes in the dress of insane patients without the inspecting officers being made aware of it by their own observation, or of the remarks of the patients themselves, or of others. There were always patients in such institutions who delighted in detailing to official visitors any shortcomings or shifts of the management or of the nurses, and to flaunt the information in the faces of the Superintendent or staff. He always made his official visits alone, except on occasions when there might be special matters to inquire into, and then occasionally he invited one or more of the official visitors to assist (8719).

233. Dr. Vause denied that he had ever received any notice of the intended visits of the Official Visitors, and as to preparing the patients for them after their arrival at the establishment, it would be quite impossible to do more than collect them together for convenience of inspection, to straighten a shawl or a bonnet, or some such simple arrangement. He had never suggested more than this to nurse nor matron, but he certainly expected this to be done, both on the occasion of official visits and on his own rounds. No message was sent to this effect that he knew of, but both matron and senior attendant ought to be notified of the arrival of Official Visitors, so that they themselves might be presentable and ready to answer questions if required. He did not believe that more than this was done, but he stated that he could quite understand that an inexperienced nurse or attendant, especially if of a suspicious temperament, should, on noting these slight preparations, jump to the conclusion that they were done to deceive, whereas the experienced visitor knew quite the contrary, and would have no difficulty in distinguishing between the thorough cleanliness of an institution and a make-shift attempt at it. (Page 255, evidence.)

234. Referring now to the practices stated to be adopted when relatives or friends visited the female patients in Bayview Asylum, Maggie Macleod, in her evidence before the Commissioners, complained that when the female patients were visited by their friends, the friends were not taken to the dormitories or the ordinary rooms (1536), but into a nice room near the office; and sometimes they would be taken into the new house, upstairs, to one of the nice new rooms (1537). The patients were specially dressed in their best clothes always (1538), their clothing being changed for the purpose (1542, 1675, 1676, 1677).

235. Josephine Mackay stated that the patients were made tidy and presentable after notice of the visit, because they very often disarranged their clothes, and were not in a state to see anyone at times (2324). She had seen the clothing of one patient taken for the use of another, to make her presentable when her friends came to see her (2325).

236. Bridget Morrisey stated that it was only on some occasions when in a hurry, and if the stock was low, that one patient's dress was put on another in order to make her presentable to her friends (3355-3357). A large number of dresses were made in a general way, and used for these purposes when necessary (3358). This witness stated that many of the patients were sufficiently intelligent on many points to discuss them with their friends (3403), and could make complaints if they wished (3404). The patients were allowed to speak in private to their friends, without the presence of an attendant (3405, 3406). She had no doubt that frequently the nurses would laugh when the patients told falsehoods or absurd stories to their friends, and then they would explain the matter (3407).

237. Lizzie Verity stated that when patients were taken to their friends, the dress was changed, and if the patient had none, better clothing would be taken off one of the other patients for her use for the time (2001).

238. Rachel Kelly stated that the only provision made when friends visited the patients was to make them tidy (2506, 2507), and clean dresses were put on them (2508), but she never knew of a case where the clothing was taken off one patient and put on another about to be visited by her friends.

239. Nellie McBride stated that the patients were always as clean and as well-clothed as they were at the visit of the Commissioners (4293). The only special arrangement that was made for visits of friends was that the boots were laced and neckties tied (4294, 4295). New dresses were never put on dirty patients on such occasions (4296).

240. Miss Bessie Anne Simpson, the matron at Gladesville Hospital for the Insane, who has occupied that position for thirteen years, stated that with even twenty minutes' notice of the arrival of Official Visitors (5175, *et seq.*), not much preparation could be made in the direction of changing the dresses of patients. It might be possible to obtain a clean dress, but the difficulty would be experienced in inducing a patient to wear it. It would be impossible to change the dresses of fifty patients, and tidy them up generally in the time. At Gladesville the strict rule was (6010) to make the patients tidy when they were visited by their friends, and quiet patients were not only pleased to be so prepared, but when well enough they took pleasure in making themselves presentable.

241. Not to cite other evidence, the Inspector-General of the Insane stated that it was his decided opinion that patients should be dressed tidily when taken to see their friends, and he knew that the patients at Bayview Asylum were always dressed decently when taken to the visiting-room to see friends. This practice was adopted at all well-regulated asylums (8730). The attention thus paid to clothing was an aid to decency in some cases. The patients on these occasions pulled themselves together, as it were, and behaved very well (8731).

242. Dr. Vause denied that anything was attempted to mislead the friends of the patients, but that it was the case these patients were made presentable when receiving the visits of their friends. He denied that any changing of the clothing takes place to mislead or deceive the visitors.

The Finding.

243. The Commissioners determine that the practice usually adopted in lunatic asylums in this respect was followed at Bayview House. Undoubtedly the patients were made tidy and presentable, a course which receives the approval of the Commissioners, inasmuch as it has a tendency to elevate the tone and create within the patients a desire to appear neat and clean before their friends. From personal inspection of the patients at the various institutions, as well as from inquiries made from

from attendants and nurses, irrespective of the evidence in the foregoing pages of this Report, the Commissioners are of opinion that it was practically impossible, within the limited period between the arrival of official visitors at Bayview House and their passage through the wards, to make the changes in the clothing of patients to the extent and in the manner described by some of the witnesses.

Duties of Official Visitors.

244. One of the most important means of protecting the interests of the patients provided by the Legislature is the Official Visitation. The Act provides: "The Governor in Council may appoint for every hospital for the insane or the criminal insane licensed reception-house or other place where patients certified to be insane or persons so found by inquisition are detained two or more Official Visitors one of whom shall be a Medical Practitioner and one a Police Magistrate or a Barrister-at-Law any two or more of whom one being a Medical Practitioner shall visit the place to which they are appointed visitors once at least every month with or without any previous notice and at such hours of the day or night and for such length of time as they shall think fit and also at such other times as the Colonial Secretary may direct, and such official visitors when visiting such hospital licensed house reception-house or other place shall so far as practicable inspect every part of the same and every out-house and building communicating therewith or detached therefrom and every part of the grounds or appurtenances held or occupied therewith and see every patient confined therein and make such inquiries examinations and inspections as are set forth in section seventy-one of this Act and enter in the Inspector-General's Book a minute of the then condition of the said hospital licensed house reception-house or other place and of the patients confined therein and such other remarks as they may deem proper and shall after every visit transmit to the Colonial Secretary a statement of the number of patients admitted and discharged since the date of the last visitation together with a copy of the entry made by them in the Inspector-General's Book and any other information that they may consider necessary Any or all of the official visitors may be appointed to two or more hospitals for the insane or the criminal insane licensed houses reception-houses or other places where patients certified to be insane are detained."

245. In view of the various complaints made by several of the witnesses, the Commissioners thought it proper to enquire as to whether these complaints had been brought under the notice of the Official Visitors. In the evidence adduced at this inquiry, various witnesses referred to the official visits of the gentlemen appointed by the Government for that purpose, and the Official Visitors themselves stated to the Commissioners their opinions with regard to the asylum and the performance of the duties of their office. It would appear from the evidence of some of the witnesses, who appeared before the Commissioners, that the official function was not regarded in a very serious light.

246. Maggie Macleod stated that on the occasion of the visiting officials attending the asylum no opportunity of speaking to them was given (1775, 1776). The visitors simply went through the different wards without speaking to the nurses (1777). They used to shake hands with the patients, pat them on the shoulder, pass an ordinary compliment, and then walk on (1778). She had never heard any of the patients make complaints to the visiting doctors (1779, 1780). Witness was well aware that the object of the official inspection was to see that all things were going on well, and to examine into complaints (1781), but she was not aware of the opportunity being availed of by the patients (1782), and the nurses were afraid to do so (1783 to 1785).

247. Josephine Mackay was asked whether she had not had an opportunity of speaking to the Official Visitors, and replied that that was the case, but the visitors never gave any encouragement to the nurses to speak (2382, 2383), never asked any questions about the patients (2384), and although she was in charge and accompanied the Official Visitors on their rounds of inspection, she never spoke to them. She thought their visit was only a matter of form, if she might be allowed to express an opinion (2385). She had never heard the Official Visitors ask questions about the patients from the nurses (2386).

248. Bridget Morrissey, a former matron, stated that, with the exception of the Inspector-General of Insane, the Official Visitors never examined the dresses of the patients (3363). They were sometimes accompanied by Dr. Vause, but when that was not the case the visitors never asked for her report on the patients (3364, 3365). She remembered one occasion on which Sir Alfred Roberts had spoken to her about the patients, but that was an unusual thing (3366). They never examined the dresses of patients, or anything else, as far as she was aware (3367). They may have received reports on these matters from the official in charge (3368). They sometimes asked the names of patients when they went round with her instead of the Superintendent (3529), and they always checked off their names in a book (3530). On examination on this point by the Inspector-General of Insane, witness stated that the visitors sometimes spoke to the nurses, but more frequently they would speak to the matron (3531). Replying to questions by Dr. Vause the witness stated she had seen Mr. Nugent Robertson going round as an Official Visitor (3598). She did not remember him pulling the beds down and looking at the mattresses (3599). She had seen him turn up the corner and pull the bed on one side (3600) to see if the bed was clean and all right (3601). She could not say she had seen him do this several times. He would just put his hand on it and feel it, but sometimes he would catch hold of the corner of a sheet, look at it, and put it back (3602). He would do the same with the single-room beds (3603).

249. Lizzic Verity stated that when the Official Visitors came round they never spoke to her or any of the attendants (2007) about the clothing or anything else (2008). When making their inspection they merely walked through the wards and along the verandah (2009).

250. Rose McMahan stated that when the visiting doctors came round they never asked questions of the nurses relative to the condition of the patients or the working of the institution (1923). The only opportunity she had of speaking to them was when she took the matron's place (1924, 1925), and then she never had called attention to anything she thought was wrong (1926).

251. Nelly McBride knew the Official Visitors, but had not taken particular notice as to whether they carefully examined the patients (4303). They had never spoken to her about them (4304), except that she thought she might have been asked a special question about a special patient (4305). It was the usual custom for the patients to be sitting down or standing in a group, and for the Official Visitors to pass through them (4306), and that was all they did (4307). When examined by Dr. Vause, this witness stated that she believed the visitors examined the beds, because, although she did not see them do so, she made the beds up again after the visits (4543 to 4547).

252. Rachel Kelly had seen but had never spoken to the Official Visitors (2511, 2512). They had never asked her any questions as to how the patients under her charge were cared for, and so on (2513).

253. Ada Simpson stated that she was not asked any questions about the patients by the Official Visitors (7408), but the attendants reported to the matron, and she told all that was told about the cases (7409).

254. Miss Baldwin, the present matron, who has had a large experience and possesses high qualifications (6821 to 6828), but has been only a short time in the Bayview Asylum (since 27th October, 1894), gives a high character to the institution generally (6829). When asked if the Official Visitors had called at the asylum since her appointment stated that Dr. Huxtable and Mr. Nugent Robertson had done so (6839). She accompanied them on their rounds (6340). They spoke generally about the patients. They did not examine the beds very particularly. They passed through the wards quickly and seemed in a hurry (6842); in fact, they simply passed through the dormitories. They came between 11 and 12 in the morning; all the beds were made and the patients were clean and tidy.

255. Mrs. Gilchrist, the present lady superintendent, stated, in reply to Dr. Vause, that the Official Visitors went through rather quickly (6787). She had seen them pull down all the bedding in the dormitories and in the single rooms (6788-6791).

256. J. Doherty, senior attendant, when asked if, when the Official Visitors came round the institution, they ever asked him how the patients were progressing, or entered into any conversation of that character, said, "No, not much" (2774). They were accompanied by Dr. Vause, and if the doctor could not explain any matter, he would refer to me (2775).

257. Dr. Vause stated that the Official Visitors made twelve visits annually (10181). These visits occupied not less than half an hour, and frequently they might occupy more time between the arrival at and the departure from the institution (10182). The visitors invariably went through all the departments (10183), and they always examined the books and records of the institution, and very frequently they held private conversations with the patients (10184). They had recommended improvements from time to time (10185 to 10187). The Official Visitors had never discharged a single patient (10188). They had not inquired very specially into the causes of seclusion or seen the patients themselves (10189). In cases of restraint, they had examined the records, inquired particulars, and seen the patients (10190 to 10192). Dr. Vause thought the position of Official Visitor a very useful one (10194). It was not a mere question of oversight and supervision. It was important that they had no pecuniary interest in the institution, and their powers of investigation into complaints and into the various records and reports should be of public advantage (10195). He thought the present system of visitation provided a fair and reasonable guarantee of the efficient management of lunatic asylums. He did not think a too inquisitorial system of visitation would be beneficial (10198). Generally speaking he thought the examination by the visitors was sufficient (10199). When asked if he thought it was a sufficient examination when General Richardson's case was not found out for months by the Official Visitors, he stated that he did not see that there was anything to find out in the case (10201), and when reminded that Dr. Cox, one of the Official Visitors, expressed astonishment and surprise that the fact was not reported, and that a vigorous examination might have resulted in its earlier discovery, he said that he thought if a medical superintendent was fit to occupy his position he should have the full confidence of the Official Visitors to treat cases properly. He had never hidden, by evasion or otherwise, from the Official Visitors the fact that General Richardson was sleeping in a single room (10202 to 10210).

258. Dr. Cox described the duties of an Official Visitor (8225-8231) in these terms:—"We go through the asylum after we have inspected the books. In the books we see the number of admissions, and then we examine the papers on which the patients have been admitted. This we have to do in accordance with the Act. We have to see whether they are properly signed, and that they are correct in all their details, also in accordance with the Act. Then we have to see what number of deaths have occurred, to ascertain the causes of death, and to note the number of discharges. We also examine the grounds and the appurtenances of the institution. Then we have to examine the case-book and the Medical Journal." Continuing his evidence, he said he was never led to think (8300-8305) patients placed in isolation at night were not sufficiently attended, but on the other hand he was under the impression that a person went round regularly at Bayview House every two hours during the night. He would be surprised to hear there was no night patrol. Was unaware that a nurse slept at each end of the single rooms in lieu thereof.

259. Sir Alfred Roberts, in reply to questions (7819-7824) stated that he never made any request to Dr. Vause to have a night patrol, because latterly the Official Visitors understood the single rooms on the female were not occupied at night. If he did not have a patrol on the male side he was not breaking any rule, for the matter of night attendance was entirely at his own discretion. If the Commissioners had been informed that these rooms on the Government side, or at least five of them, were used every night, all he could say was that the fact did not appear in the Medical Journal. Had he known that half a dozen rooms were so tenanted he would have recommended a night patrol. The Official Visitors would find fault very strongly if the occupancy of these rooms was not notified in the Medical Journal. Cross-examined by Dr. Vause (7871-7878), Sir Alfred said he had seen beds in nearly all the single rooms in the female division, but he did not notice any entries in the Medical Journal stating that the rooms were occupied at night. As an Official Visitor who had visited Bayview Asylum since it was first licensed, he had not reported or objected to the omission from the Journal of entries announcing that patients slept in these rooms. He was not objecting now, but stating that he considered it better for permanent cases to sleep in isolation. He understood that the occupants of the single rooms at night were chronic cases, continually placed in those rooms for sleeping purposes, and as such he did not expect to find the fact recorded in the Medical Journal.

The Finding.

260. The Commissioners regret that they are unable to express satisfaction with the system at present adopted in regard to the visitations at lunatic asylums by the Official Board. It is true that the powers conferred on them by their Commission have reference only to the Bayview Asylum, but they have had opportunities of visiting and examining the records and management of the Public Hospitals for the Insane, and whilst the conclusion at which they arrive has reference more particularly to Bayview House, they do not hesitate to express their opinion that it is more or less applicable to all institutions for the accommodation of the insane. From the evidence submitted to the Commissioners, they are led to believe that the object intended by the Legislature when provision was made for the appointment of Official Visitors has not been fully attained. The contradictory evidence given by the Official Visitors themselves on the subject of seclusion, which must be regarded as one of primary importance in the treatment of lunatics, and regarding which uniform ideas should exist in the minds of those officially inspecting these institutions, and which has already been referred to under the heading of "seclusion and restraint" in a former part of this Report, is conclusive on this point.

261. The Commissioners recommend that, in the interest of the unfortunate inmates of lunatic asylums, steps should be taken without unnecessary delay to provide more frequent and more thorough investigation as regards the management of these institutions. The system of appointment to the position of Official Visitor, the rate of remuneration for services rendered in that capacity, the method of visitation to each institution, and a number of similar matters, are all subjects which demand the attention of the Government.

General Management and Results of Treatment.

262. On this subject the Commissioners received a large amount of evidence. The specific charges affecting the details of management of the asylum have already been considered, but independently of the evidence obtained in connection with this view of the subject, that of a large number of witnesses, consisting of former patients of the asylum who had recovered under treatment therein, of friends of such patients, as well as of medical gentlemen and others who had sent patients into the institution for treatment, was also received. The evidence of Mr. R. H. was to the effect that his sister was far happier at Bayview than when she was at large. Nothing could be kinder than the treatment she received, and this, when in a good frame of mind, she admitted (4144). Mr. H.'s evidence with regard to his satisfaction with the treatment of his nephew has already been quoted. Mr. H. Copeland, M.P. in occasional visits to the asylum, was pleased with the manner in which it was conducted, the patients were always clean and tidy, and he was very favourably impressed with the institution (4953-4955). Mr. F. Gannon, solicitor, had visited the asylum very frequently, and had full opportunity of observing the way in which it was conducted, and the whole of the arrangements of the place have always met with his admiration, and he had the highest opinion of the humanity and skill of Dr. Vause (4722-4729). Dr. Williams, Principal Medical Officer of the Military Forces of New South Wales, stated that during the time Major-General Richardson was under treatment at Bayview Asylum he had the free run of the whole place, and was at the time quite satisfied with the arrangements (4961). Hon. Dr. MacLaurin was formerly one of the official visitors, and, as far as he saw when inspecting Bayview Asylum, he was satisfied with the general arrangements of the place, the treatment of the patients, and the performance of his duties by Dr. Vause (5004-5009). Dr. Edward Petrie Sinclair, Dr. Hetherington, and Dr. Ramsay, who had acted as *locum tenentes* for Dr. Vause at various times, all bore testimony to the excellent general management of the asylum. A number of medical gentlemen who had sent patients to Bayview Asylum, and who had visited them there, bore testimony to the excellence of the administration. The clergymen who officially attended the asylum—one of whom had held a similar office at Callan Park—gave the highest possible character to the orderly manner in which the institution was conducted. The official visitors, whilst pointing out that from time to time they had made suggestions for the improvement of the details of management, gave Dr. Vause credit for a sincere desire]

desire to carry out all such suggestions promptly and willingly. The Inspector-General of the Insane for New South Wales stated that Dr. Vause had always been ready to make any improvements suggested in connection with the buildings and the general sanitary arrangements of the institution (8722). For Government patients he had always regarded Bayview Asylum as only a temporary makeshift, but he had regarded the asylum also as a permanent home for private patients (8723). Generally he had visited the asylum alone, but on two occasions he had made special inquiries in conjunction with the Official Visitors. The first of these was a case of accidental poisoning, which occurred some years ago in consequence of defective management; and the other was a case of fractured arm, occurring in an epileptic placed in a single room containing a bedstead (8718-8721). One other matter was inquired into during the time Dr. Hetherington was in charge, when neither the Official Visitors nor he himself felt satisfied with the attention paid to the bedding—a matter which was remedied, and steps were taken to prevent its recurrence. In the official annual reports of the Inspector-General, submitted for the consideration of the Government, there is a uniform statement of approval of the cleanliness, good order, and government of the asylum, as well as the absence of complaints. In his report for the year 1892 the Inspector-General of the Insane stated, when referring to Bayview House, that “the institution has been well conducted, and considerable care taken to meet the special requirements of individual patients. The chaplains have been very regular in attendance, and Dr. Vause appears desirous of affording change and recreation to the patients whenever practicable. With this in view, a cottage at Narrabeen has been fitted and worked in connection with the main establishment, and to it patients have been sent for a change, under the provisions of section 82 of the Lunacy Act. This section has also been taken advantage of to give leave of absence on trial under the charge of friends, and in seventeen cases patients have been absent from the institution for considerable periods, and five of those who were discharged recovered whilst on leave. Fifty of the patients are maintained at the Government expense, owing to the want of room in Government establishments.” On page 18 in the report for the year 1893, he also says:—“At my visits I made the inquiries prescribed by statute, and was careful to see all the patients, especially those recently admitted, and to make inquiries as to their fitness for care and treatment in an institution for the insane. I have investigated all complaints made to me which were not obviously due to delusions, and have, when necessary, seen patients alone. I have on all occasions found the rooms everywhere clean and orderly, and consider the general management of the institution satisfactory.” “Very considerable addition has been made to the institution by the purchase of an adjoining property, the house on which has been repaired and greatly altered and rooms set apart for nine patients and the necessary attendants. These rooms have been very nicely furnished and give excellent accommodation for private cases. The alterations were approved by the Chief Secretary, under the provisions of section 27 of the Lunacy Act, on October 13, and the building now forms part of the licensed house.” “The number of Government patients has been kept at fifty during the year, vacancies by death being filled by transfer of others from the hospitals. The quarters of these patients have been rendered more comfortable by the addition of a large covered and enclosed verandah, which serves as an additional day-room.” The Inspector-General further said, in answer to questions 8732-8739, that “The general health of the Government patients at Bayview House compared favourably with that of patients in the Government institutions, and the death-rate was lower. The death-rate among the Government patients during the last ten years had averaged 4·40, or less than 4½ per cent. (22 deaths, with an average of 50 patients), whilst the death-rate among women in the Hospitals for the Insane has been 6·16 per cent. for the same period. He handed in three returns, the first of which showed the percentage of recoveries, the percentage of relieved, and the percentage of deaths at Bayview House for ten years, 1884 to 1893 inclusive; the second showed the percentage at the Government Hospitals for the Insane during the same period, and the third, which was taken from his report for 1893, similar percentages for both the Government Hospitals and Bayview taken together. These show that, whilst the recovery-rate at the hospitals had averaged 42·95 for the ten years, that at Bayview had averaged 47·92; that the percentage relieved at the Government Hospitals had averaged for the ten years 4·63, the percentages of those relieved at

at Bayview for the same period had been 14·28; and that the death-rate at Government Hospitals for ten years has been 7·00 and at Bayview for the same period 5·82. These returns included both males and females. Perhaps the figures were scarcely decisive, considering the large number of patients in the public institutions and the small number at Bayview House, but still the figures covered a period of ten years. The Government patients at Bayview House were nearly all chronic cases, and during the decade the recoveries had been nil. This result was anticipated from the character of the cases sent, they being to a large extent hopeless, as the Medical Superintendents at public asylums did not wish Dr. Vause to score recoveries where there was a possible chance of these gentlemen scoring recoveries for themselves. Perhaps conduct of this nature was unfair to Dr. Vause, but on the other hand he had always been anxious to send hopeless cases to the public institutions."

The Finding.

263. The Commissioners, in view of the evidence given by these witnesses, are satisfied, subject to the criticisms elsewhere in this Report, that, as far as the general management of Bayview Asylum is concerned, every reasonable effort was made to give satisfaction to the patients and their friends. The absence of complaints of a serious character from the friends of the patients during the long period the asylum has been carried on is, in their opinion, a strong endorsement of this conclusion, which is not seriously affected by the doubtful evidence of some of the attendants, who, after a few months employment in Bayview Asylum, without any previous experience of the mode of treatment of patients (whether hospital or lunatic), and whose previous career had in no way qualified them for the purpose, had no hesitation in expressing their opinion on subjects requiring expert knowledge and experience. The evidence given as to the successful results of treatment, in such cases as admitted of probable cure, may also be regarded as satisfactory. Evidence was given that Dr. Vause, in order to promote the happiness and the recovery of his patients, had provided a temporary home for such of them as could be sent to it, at Manly and Narrabeen, under the provisions made for that purpose by the Lunacy Act, and in other respects had endeavoured to add to the comfort of the patients.

Mr. Gearey's connection with the Charges.

264. From the general character of the evidence, it was patent to the Commissioners that the complaints made against the management of Bayview Asylum and the abuses alleged to have existed, originated with certain witnesses, who on examination were found to have held communication on this subject. Your Commissioners therefore feel bound, under these peculiar conditions, to make some reference to these witnesses, and especially to the part played by Mr. Henry Gearey, whose name so frequently occurred throughout the investigation. Mr. Gearey stated to the Commissioners that the disclosures were made in a purely accidental way (135) in his own house while "having a general talk over a few glasses of grog." Mr. Gearey, however, failed to explain how this peculiar meeting, which subsequently was to be pregnant of so much result, was brought about or who were present on the occasion. In this general talk statements were made and a letter was produced. According to Mr. Gearey's own evidence the first person to speak to him on the subject was a transit officer, who had obtained information from Alexander Mackenzie, who for three months and a half was in the male division at Bayview House as an attendant, was a cousin of Margaret Macleod, a nurse in the female division of the same institution, and who was discharged from Bayview House for what Dr. Vause regarded as insubordination and impudent behaviour towards a superior officer. On the strength of this information Mr. Gearey (201) began and carried on a system of detective tactics which eventually ended in the surprise visit to the institution, and the removal of the patient to a Government asylum. In following this course of action, Gearey admitted that he had met with many obstacles, and it was conspicuously evident to your Commissioners that his task must have involved a vast amount of time and trouble. His own confession is (223) that he risked his official position as an employee of the Sydney Municipality by championing the cause of a patient supposed to be inhumanly treated, as (224) if Dr. Vause had discovered "that a visit was to be made on the morning of 20th May, the Major-General might have been moved into the room he was supposed to occupy." He would then have been
unable

unable to prove his case, and "would have been regarded, on making his visit, if unable to prove what was desired, as nothing less than a meddling fool." With this risk, calculated before taking action, staring him in the face, the question naturally arising is,—What was Mr. Gearey's motive? He told the Commission (128) "that he was most decidedly interested in Major-General Richardson, who was a very old friend of his, and when he heard he was brutally treated he wished to know the truth or otherwise of the statement." It was purely in the interests and welfare of Major-General Richardson that he took action, together (8501) with a desire to serve the interests of the public. No feeling of malice against Dr. Vause ever entered his mind. He, however, informed Mr. Jeanneret that he took a great interest in the Major-General (5), "because of a very long-standing friendship, and felt himself under some obligation to him for kindness rendered years ago." On a subsequent occasion, when under cross-examination, Mr. Gearey answering questions (8530 to 8539) first declined to say how he became acquainted with the Major-General. Accepting the advice of the President he altered his mind and told Dr. Vause "that he met the Major-General at a ball at Sydney Town Hall; that he shook hands with him once; that he had seen the Major-General two or three times, the last occasion being publicly in the streets; that he never visited the Major-General's house; that he was not on terms of intimacy with him; and that he had never received any benefit at the Major-General's hands." With this contradictory evidence before them, your Commissioners cannot pretend to state the motive which prompted Mr. Gearey in his action in this matter.

265. It is proved beyond question that Mr. Gearey was in communication with servants previously employed at Bayview House, disaffected and otherwise, and that on their assertions he relied to prove some of the sensational statements which gained currency. It has been proved that many of these statements are either gross exaggerations or utterly at variance with truth. One of the first avowals of Mackenzie was that he wrote to Gearey (1064) something to the effect "that he knew Major-General Richardson was not getting justice, and to see that he got it would be far sweeter to him than any other form of revenge," and the same witness (1222 *et seq.*) admitted having been in communication with Mr. Gearey from April, 1894; expressed the belief that the names of attendants and nurses in the institution were supplied to him, and was cognizant of the fact that Gearey was in communication with the persons whose names had been supplied. That Gearey was in direct communication with the witness Macleod is also proved beyond doubt, as this witness (1503 to 1802) said she first visited Gearey's private residence while she was in the service of Dr. Vause. On this occasion she must have designedly gone with the purpose of making some statement relative to the institution, as she took the precaution to have as a companion Nurse Urquhart as a witness to all that was said. Macleod, however, did not see Gearey on this occasion, but remained to tea with Mrs. Gearey, and talked over Bayview Asylum affairs. In July, 1894, Macleod received from Mr. Gearey a letter asking for a personal interview at his house, mentioning that he would be at home during certain hours, and would keep any appointment made. She received this letter before she left the institution, but after the removal of Major-General Richardson to Callan Park she acquainted Dr. Vause of that fact. Two days after leaving Bayview House she called at Mr. Gearey's residence, and gave him much the same information she afforded the Commissioners. The witness, Josephine Mackay (2438 to 2456), said she first made Mr. Gearey's acquaintance some five weeks previous to her examination before the Commissioners. He called on her, and by appointment she subsequently visited him, and from him understood she could be compelled by Government to give evidence "and that she had better tell him all she knew about the matter." She had the impression that Mr. Gearey was one of the Commissioners appointed to investigate matters connected with Bayview House, "or else he was a detective or something of that sort." She supplied the name and address of Rachel Kelly, a former attendant at the asylum, whose opinion about its management was the same as her own; she was shown a type-written copy of Dr. Vause's report, but she did not see the evidence of any other witness. By the witness Macleod she was informed that efforts were being made to prevent Dr. Manning from sitting on the Royal Commission, also that the influence of gentlemen engaged on the Commission would be sufficient to obtain for her (Mackay) some situation. Gearey said nothing to that effect to induce her to give evidence, and the conversation which took place was only

only loose talk between herself and Macleod. The witness Rachel Kelly, referred to by Josephine Mackay, when under examination (2632 to 2637), said she received the following letter from Mackay;—

My dear Rae,

Paddington, 2 Zulu-terrace, Thorne-street.

I would have written long ago but I lost your address. There is a Royal Committee formed to inquire into the Bayview House, composed of the most influential men in Sydney, and we are all giving information against it. I hope you are still in sympathy with the patients, if so, it will be greatly to your advantage, but you must be quick, as the inquiry commences on Saturday or Monday. You will meet us all again, Jessie Fuller, Margaret M'Leod, Bridget, Rose, Alice, and Lizzie Verity. The only friends the Dr. has is Kitty and Nelly. Go at once and see Mr. Gearey, the clerk, or if you come out to me I will take you; do not delay. I am going to-night, and our evidence is printed in type. If you come out to me take the tram to Waverley right to the terminus, cross through the Council Chambers gate just at the terminus, and anyone will show the house right opposite the Council Chambers—a little cottage. All our expenses will be well paid, and we will be able to secure the best billets afterwards through the interests of the Committee. They are knocking Dr. Manning off the list; they think he is in favour of Bayview.

Ever your loving friend,

JOSEPHINE.

Wire when you come out. If you do not come they can compel you; there is no court-house business; just appear in the Town Hall before the Committee privately; 6s. a day expense paid. Call at Gearey's at once.—JOSEY.

This communication caused her surprise, many of the statements therein contained being the exact reverse of her experience of the institution. She handed the letter to her employer, who gave it to the Inspector-General of the Insane, who in turn passed it on to Dr. Vause during the examination of Mackay. She also was the recipient of a letter from Gearey asking her to call on him in reference to Bayview House affairs. She thought he informed her there was to be an official inquiry, and that it might be to her advantage to see him. To that letter she made no reply, neither had she seen Gearey. Bridget Morrisey (3435 *et seq.*) said that on October 30th, 1894, she received a letter from Mr. Gearey, after he had called to see her, while residing at Dr. M'Carthy's, in Elizabeth-street, requesting her to meet him at his house. On the following Saturday the appointment, as desired, was kept, and in the course of conversation he told her it was her bounden duty to give evidence before the Commission. Something was said about it being to her advantage to do so, and that it was only the proper thing to do. She replied that her desire was to have nothing to do or say in the matter, and when he discovered that she did not care to give evidence he did not press her for information. Macleod was not present at any interview between Gearey and herself, but on several occasions she and Macleod had conversed on the subject and agreed as to evidence on certain points. She could not remember Gearey having told her she would be paid to give evidence, but as an inducement he said, "Supposing Miss H. or Mrs. W. were released, as a result of the inquiry, she might get something to do looking after them." Kate Brennan, a nurse at Bayview Asylum (5551 *et seq.*), stated that Macleod wrote to Gearey while she was at Bayview House, and Nurse Kennedy posted the letter. Jessie Urquhart informed her, too, that Macleod visited Gearey while she was still in the employ of Dr. Vause. Macleod also told her that Gearey had promised to get her a Government situation. In further cross-examination (5566) Miss Brennan stated that she knew Mackenzie wrote to Macleod, for Annie Marshall gave her a letter, which she handed to Macleod, who said it was from Mackenzie at Goulburn, and that it said Gearey would get her a good billet. Maggie Kennedy, the nurse referred to, was called, and she (5594) told the Commissioners that Macleod had given her letters to post which bore Mr. Gearey's address. Mrs. Johanna Dwyer, who six years ago was a nurse at Bayview, said, in answer to questions 5667 *et seq.*, that Mr. Gearey found her at the "Native Rose Hotel," Darling Harbour, of which her husband is the licensee, gave her his card, and then proceeded to put questions relative to Bayview House and its management. He wanted her to give evidence before the Commissioners, but she not having seen Dr. Vause for six years, said to Gearey, "I have nothing to say either for or against him," and that, in her opinion, Dr. Vause was always extremely kind to the patients. Gearey also informed her that Alexander Robinson, a former attendant at Bayview Asylum had said she could give certain information which would substantiate accusations made about the place. Their talk during the interview was a general conversation, Mr. Gearey at first being persistent in his endeavour to find out anything he could about Bayview House; but when he discovered that she was favourably inclined towards Dr. Vause and the management, he did not appear to want to hear any more. From the nature of his conversation, she thought, at
the

the time, that he was prejudiced against the institution. Jessie Urquhart, the nurse who accompanied Macleod to Gearey's residence, described what took place there on that occasion, in answer to questions 6315 *et seq.*, by saying that one evening last August Macleod asked her to go. She consented, visited Gearey's House in Oxford-street, and saw Mrs. Gearey only, as Mr. Gearey was not at home. While she and Macleod were there, the witness Alex. Mackenzie arrived on the scene, and a general conversation, in which Macleod and Mackenzie were the chief participants, took place, Macleod telling Mrs. Gearey "things about the asylum, and how patients were treated there," and Mackenzie, talking to his cousin, Maggie Macleod, claimed the credit of having been the cause of Major-General Richardson's removal. They were present at Gearey's house from 7 o'clock to a quarter to 9, and had a long conversation about the treatment of patients, during which she had not much to say, as "Maggie Macleod did the talking to Mrs. Gearey." She personally neither visited, saw, nor had any communication with Mr. Gearey. The reason why she accompanied Maggie Macleod was that she was asked and consented (6735), not knowing whom she was about to see. Hearing what Macleod said at Gearey's residence about Bayview House, caused her surprise, and while not remonstrating with Macleod for her untruthfulness, she reported the circumstances of the visit to Mrs. Gilchrist, the lady superintendent.

266. The witness S.H., in answer to Questions 3977 to 3984, informed the Commissioners that some of the attendants reported to him on his sister's position and state in the asylum. In the next sentence he asserted that he only obtained information through Mr. Gearey, who seemed to know everything that was going on in connection with Bayview House. For instance, if he went to him in the morning and said, "I want to know what has happened in regard to my sister during the day," he would tell him to come again at four o'clock, and then he would let him know everything that was going on. Although Gearey was a comparative stranger to him, and one with whom he had had conversations only "now and again," he could tell witness all he desired to know of the history of every event in connection with the asylum within twenty-four hours of it happening.

267. A former attendant, Henry M. Watt, testified (6209 *et seq.*) that the witness Robinson already referred to, who was discharged from Bayview House in 1890, visited him at Kogarah, to ascertain if he could find the address of the widow of a former patient, in the hope of extracting information which he might use before the Commissioners to damage the institution and its management. The conversation, however, was of such little interest to him that he left Robinson to talk to himself.

268. Mr. Gearey, when recalled on 4th January, denied (8447 *et seq.*) having made, during his inquiries into the case, any promise to any of the witnesses that if they would give evidence against Bayview House he would secure for them a Government position. He did not make the promise to any one, as it would have been absurd for a man in his position to have done so. If any witness had written a letter to another, saying that, as a reward for giving evidence, she would obtain a Government billet through his influence, such a statement was incorrect. Knowing, however, that everyone who saw him would speedily be in the position of discharged servants, made him sorry to be a source of injury to these girls, and he interested himself in one, "inasmuch as he went to see Mr. Munro in the hope of getting a position for one of the girls as stewardess on board one of the ships trading along the coast." Passing to another point, Gearey told the President that he considered he had not received fair play at the hands of the Commissioners, and when asked why, he answered (8479), that he considered while Dr. Manning sat as a member, and heard the evidence of his (Gearey's) witnesses, he could not get fair play, because the presence of the Inspector-General amounted to intimidation, for this reason, "that a number of his witnesses must be drawn from those who had been attendants at Bayview, or who were attendants at the moment. Those who had been attendants, or many of them, were now looking for other situations; those still at the institution would not give evidence while Dr. Manning was there, for fear of results." He was not certain that the Commissioners would give fair play to everybody concerned (8480 *et seq.*). There were witnesses who should have been brought forward, who would not come, but when asked if he knew of any witness or witnesses, either in Bayview House or who had been there, who desired to give evidence and had been refused the opportunity, he made no answer. When asked what witnesses had been removed he mentioned the name of Copley,

Copley, a former attendant who worked with Mackenzie, and said he did not know he had gone to South Africa, neither did he know of his present whereabouts. He declined to mention any other names, "because they were girls and it might injure them in the way of getting situations." Although the witness, S. H., (8498) might have said he could give him every particular about the working of the institution up to within the previous twenty-four hours, such was hardly the case, but he certainly could tell H. or anyone else a good deal of what was going on. He could hardly tell in the afternoon what had transpired at Bayview House in the morning, but he certainly was posted up as well as he could be, and had a great deal of information. He obtained, after a great deal of trouble, information daily at one time before the investigation by the Commissioners began. He had conversations with the nurses before the 20th of May. He knew about Major-General Richardson in March, and since then information had come out bit by bit.

269. Dr. Vause, examined on this particular subject (9081 *et seq.*), said Gearey's motive in the course of action he took puzzled him. Even if he acted for notoriety it was more than he could understand, and whatever object he had in view was best known to himself. His opinion was that Gearey obtained his information from Macleod, and he disbelieved both Gearey and Macleod when they said there was only one visit paid by Macleod to Gearey before he discharged her from his service. At the same time, he did not believe she furnished him with all the information he obtained.

The Finding.

270. Although much of the evidence Gearey collected was, in our opinion, misleading and untrue, your Commissioners have no reason to doubt his statement to the effect that in prosecuting his inquiries he was actuated by a desire to repay a personal kindness and to perform a public service.

Alleged attempt to influence Mr. Jeanneret.

271. Towards the close of the inquiry a statement was made by Mr. Jeanneret that an attempt was made to influence him with regard to his procedure in connection with the course of action he had taken with regard to Bayview Asylum in Parliament, and that a Mr. Twine, whom he had known for a month or two previously (10512), and of whose character he had a good opinion (10513), stated that Mr. Young, the accountant at Bayview Asylum, wanted to see him to know if he could prevent things going any further, for if he could it would be worth a thousand pounds to him. Mr. Jeanneret had not at any time spoken to Young himself (10510), and he could not say that Young had authorised Twine to make any such offer (10511). The suggested offer was made in such a way as to lead witness to believe that there was a good deal of money in it, and that probably he could get a thousand pounds if he stayed his proceedings (10514). On further examination, Mr. Jeanneret stated that he was fully satisfied that Twine said to him that there was a thousand pounds in the matter if he took no further action (10529).

272. Dr. Vause, examined regarding this matter, stated that until he heard the evidence of Mr. Jeanneret he was quite unaware of such a proposal (10597), and if any overture of the kind had been made by Young or anyone else, it was entirely without his knowledge (10596), and that he had never heard of such a proposal before (10599). Mr. Young stated that he knew Mr. Jeanneret by sight but had never spoken to him (10603). He denied that he had ever had conversation with Twine to the effect that it would be desirable to cease further inquiry with regard to affairs at Bayview Asylum (10607). He had never induced Mr. Twine on any occasion to suppose that money might be given to Mr. Jeanneret, or to any other person, to prevent further inquiry into the management and other affairs at Bayview Asylum; in fact, such an idea never entered into his head (10608 to 10611). He was not aware that there was any occasion to make such an offer (10612), and he was positive that he knew nothing of such a suggestion (10613). Witness asserted that Twine had offered, if it were necessary, in the event of the Government taking over Bayview Asylum, to get an introduction to Mr. Jeanneret, who was supposed to have some weight with Dr. Manning, the Inspector-General of the Insane. As the accountant to Bayview Asylum, witness thought it was possible, if the Government took over the place, that he might, through Dr. Manning, retain that position (10625).

273. Alfred Fletcher Twine stated that he knew Mr. Jeanneret, with whom he had had several conversations about Bayview Asylum (10691). Mr. Jeanneret's statements

statements already cited were read over to this witness, and he positively contradicted them. He had never suggested to Mr. Jeanneret that it might be to his interest not to make public certain matters known to him in connection with Bayview Asylum (10693). He denied that he had ever said that it would not only be worth his while, but worth a thousand pounds to Mr. Jeanneret, if he would not make public certain disclosures in connection with Bayview House (10695), and he never, in any shape or form, told Mr. Jeanneret that it would be to his pecuniary advantage to withhold from the public certain information about Bayview House (10694). Mr. Jeanneret was unquestionably mistaken and under a misapprehension altogether (10697). Witness stated that he believed he could clear up this matter by an explanation. About a fortnight before Mr. Jeanneret moved the adjournment of the House and made certain disclosures (10702), he informed witness confidentially of the course of action he intended to take, and as Mr. Young, the accountant at the asylum, was an intimate friend of his brother-in-law, although not of his own, he thought Young's position might be jeopardised if something did occur, and in a friendly way he told him something was to be disclosed in connection with the asylum which might affect him, and therefore it would be well for him to be on the look out (10700). On subsequent occasions when he met Young, this question cropped up and he said to him, that if anything resulted in the Government taking over the institution he would use his influence to secure the continued employment of Young as an accountant, and that led up to Young wishing to meet Mr. Jeanneret, or wishing him to introduce him to Mr. Jeanneret, to see if he would use his influence to secure a continuance of his employment. But it was not a fact that he had ever referred to or suggested in any way that Mr. Jeanneret would receive any pecuniary benefit (10703). When witness was asked if Mr. Jeanneret expressed reluctance to speak to Young because he thought him to be a kind of go-between in regard to the proposal referred to, he said it was nothing of the kind (10706), and no suggestion of the kind occurred to his mind (10706).

274. The Commissioners believe that this evidence tells its own tale. They cannot avoid expressing their surprise that a charge of so serious a character as that involved in Mr. Jeanneret's statement should have been made by him. He was contradicted by the witness, whom he asserted to have suggested pecuniary advantage to him if he would relax his efforts to expose what he considered to be abuses in the management of Bayview Asylum—a witness of whose character he asserted he had a good opinion—and whom he wanted the Commissioners to examine in order that his own statements might be confirmed. The Commissioners can come to no other conclusion than that an error of judgment, as extraordinary as it is blameworthy, has occurred on the part of Mr. Jeanneret. The Finding.

Necessity for Private Asylums.

275. In the evidence given by the Inspector-General of the Insane, it was stated that in the absence of endowed hospitals private asylums for the insane were valuable institutions (8802), and, while he did not believe in the boarding-out of insane patients, he thought that in a disease like insanity, so different in its degree, so varied in its manifestations, and attacking all sorts and conditions of men, no system or manner of treatment should be altogether set aside. Private asylums have a useful place in any asylum system, especially when there are no endowed hospitals for lunatics, managed by trustees and set apart for paying patients, such as those at Coton Hill, near Stafford; Barnwood House, near Gloucester; and St. Andrew's Hospital, Northampton, in England; or the Royal Hospitals at Montrose, Dundee, and other places in Scotland. Moreover, there are persons who, for various reasons, prefer private to public hospitals, and avail themselves of their provisions when they would not send their relatives and friends elsewhere. Views of the
Inspector-
General of
Insane.

276. The Commissioners concur with these views. They believe that properly regulated private asylums are a desirable adjunct to the institutions provided by the Government. They do not approve, however, of the system of placing patients maintained by the Government in any private asylum, and they have already expressed their surprise that such a system, however excusable in its inception, should have been so long continued at Bayview Asylum. They see no reason why such institutions as the Bayview Asylum should not be continued under satisfactory inspection, and the provisions of the usual Lunacy Acts, as is done in other countries. The Commis-
sioners con-
cur.

The Conclusion.

278. The Commissioners believe that they have now dealt with all the various matters referred to them under their Commission. A longer time than they had originally supposed to be necessary has been occupied in the performance of their duties, but in the interest of the public and of the persons more immediately concerned in the questions submitted to them for consideration, they have deemed it imperative on them to carefully sift these questions, and they have endeavoured in this their Report to give a faithful representation of the evidence so that the reasons for the conclusions they have arrived at may be apparent. They have adopted this course although it has involved very considerable labour and research among the many thousand questions and answers of the various witnesses, inasmuch as they are decidedly of opinion, as they have already stated, that the evidence as a whole should not be published, affecting as it does the dearest interests of many persons, whose private affairs should never, without absolute necessity, be thus publicly paraded. The Commissioners are aware that there may be questions connected with this inquiry overlooked by them, but they believe they have sufficiently and impartially dealt with the subject matter referred to them in their Commission.

ARTHUR RENWICK, President.

F. NORTON MANNING.

ANDREW GARRAN.

JAS. S. T. MCGOWEN.*

* I only endorse this Report in so far as it is not at variance with the separate Report which I append.—J. S. T. MCG.

Dissents to Report of Commission.

DISSENTS to certain particulars in the General Report were made by the Inspector-General of the Insane and Mr. J. S. T. McGowen. They were as follow :—

SECLUSION.

As regards the finding of the Commissioners on the subject of seclusion the Inspector-General of Insane says :—

I dissent from the finding on this particular, on the following grounds :—
 In 1859 the English Commissioners in Lunacy pointed out that “ a question had arisen as to what kind of separation of individual patients from other persons constitutes seclusion within the meaning of the Act,” and decided that “ any amount of compulsory isolation in the day-time, whereby a patient is confined in a room or separated from all associates, should be considered as seclusion, and recorded accordingly.” In their report for 1873, in calling attention to the varying degree in which seclusion was used in public asylums, they stated specially that it applied to isolation *by day only* ; and in the same year the Commissioners for Scotland issued the following circular :—“ As very different interpretations have been given by the superintendents and medical officers of establishments for the insane to the term ‘ seclusion,’ it is found impossible to institute any accurate comparison between the practice adopted in this respect in different houses and recorded in their register of seclusion. I am, therefore, instructed to request that whenever a patient is placed *during the day* in any room or locality, alone and with locked doors, the case may be viewed and recorded as one of seclusion, irrespectively altogether of the question whether seclusion was adopted for purposes of
 medical

medical treatment or for purposes of discipline. The cause of its adoption will, of course, be recorded in the column of the register set apart for the purpose. You will clearly understand that in issuing this instruction the Board do not in the smallest degree express an opinion as to the desirability or undesirability of seclusion. This object is simply to introduce a uniform method of recording the practice and experience of each establishment." As the Lunacy Act for Scotland was passed many years before 1873, the Commissioners for that country appear to have waited and expressed their opinion very deliberately, and neither they nor their English colleagues have thought it necessary to vary the directions once authoritatively given. At no time has isolation by night been regarded as seclusion, and the definition of the English and Scotch Commissioners has been adopted in the United States, Canada, India, the Cape of Good Hope, and in all the Australasian colonies. It is also the official and general definition in France, Germany, and other European countries. In the opinion of all authorities, the isolation of patients by day, whereby they are deprived of air, exercise, and association with their fellows (though possibly used with discretion and for good reasons), is a serious deprivation of liberty, which should be recorded. It has a punitive or coercive aspect, and it may be resorted to by asylum officials as a matter of convenience or economy. The case is very different with regard to isolation by night, as was pointed out by Dr. Huxtable (8074 *et seq.*) and Dr. Sinclair (8540 *et seq.*), the only witnesses examined on this point who had special asylum experience. In the night-time all patients are shut up in their rooms, and the only difference is as to being alone or with others. The inmates of asylums sleeping in a room by themselves differ very little in this respect from the majority of their sane brethren outside, and, like sane people, they, as a rule, prefer to sleep alone rather than in association. They are, therefore, under no punitive or coercive disability, and the question of convenience or economy, so far as the asylum officials are concerned, does not enter into the question. The friends of patients often stipulate for a single room, and offer to pay extra charges to secure it. The patients are almost always anxious to change from the associated dormitories to the quiet and privacy of the single rooms, and it is rare to find a single room in the Government Hospitals for the Insane unoccupied, owing to the desire of the patients to secure what they consider a privilege. There are about 620 of these rooms in the Government Hospitals, variously furnished and fitted according to the mental condition of the patients to whom they are allotted, and all are filled at night. If the number could be doubled they would all find ready occupants, and the increase in number would add to the peace of the institutions and the comfort of the patients. In some hospitals in America a single room is allowed to every patient.

To record the names of all the patients sleeping in the single rooms would lead to no useful result, and would only lead to confusion and difficulty. They are of every class—from the most quiet and orderly convalescent to those lost to all sense of cleanliness and order. Dr. Sinclair states (8544) : "It would be of no value to anyone; no value to us, to you, or anyone else. It would only tend to mix up the people in the institution to such an extent that no one would be able to distinguish the real amount of seclusion." When patients are changed from an associated dormitory to a single room at night, or from one associated dormitory to another, owing to quarrels, excitement, or other causes, these changes are invariably recorded by the night attendants (Dr. Sinclair—8568, 8569, 8570, 8571) on the printed forms for night reports. These forms are filed in the Medical Superintendent's office, are always accessible to the Official Visitors, and should, indeed, be seen by these officers at every visit, since it is only from them that they can obtain at first-hand some of the information they are required by statute to report. The causes which lead to the removal of patients from associated dormitories to single rooms at night are often trivial, as stated by Dr. Huxtable (8074); for the most part very much more trivial than would necessitate seclusion during the day. Minor quarrels which would render advisable the separation of patients sleeping alongside each other in associated dormitories during the night and in the absence of attendants, would necessitate little or no action,
and

and certainly would not lead to seclusion if occurring in the presence of attendants by day, and it is not, therefore, necessary to make a record of these removals beyond that on the night reports above mentioned. When, however, the causes for removal are serious or illustrate the medical or general history of the case and the necessity for special medical treatment, the record is copied into the case-book (8588, 8589, 8590), which is open to the inspection of the Official Visitors, and which they are under statutory obligations to examine. The Medical Superintendents of the Hospitals for the Insane, who are Government officials of standing and experience, and are uninfluenced by any considerations, pecuniary or otherwise, beyond the welfare of their patients and the successful management of the institutions under their care, are the best judges of what cases should be specially recorded in the case-books.

Although some of the Official Visitors have in evidence before this Commission raised the question of recording the cases placed in single rooms during the night, their very diverse and conflicting views show that they could never have previously discussed the question among themselves, and had not fully informed themselves of the existing practice. Whilst Dr. Sinclair (8543, 8544, and 8445) expressly states that though he had frequently discussed the question of seclusion with the Official Visitors, neither as a body nor individually had they ever suggested that the term seclusion should be applied to sleeping in a single room at night.

Dr. Cox stated in his evidence that the Official Visitors had prepared a "form" so that a record of the patients in seclusion might be made, but this form shows on the face of it that a record of the cases occupying single rooms at night was not contemplated, and it does not differ in any material way from the form which has been used by the Official Visitors for the last eight years.

In directing the notation in the Medical Journal at Bayview House of all cases sleeping in the isolated rooms—not under the heading of seclusion, but in a separate column—I had in view (1) the special character and detached position of these rooms at that asylum; (2) the desirability of directing the attention of the Official Visitors to the cases so isolated, since they did not appear to have regularly examined the other official records; (3) the absence of special night attendants except in special cases—the attendants sleeping in the rooms with all ordinary cases—and the necessity, therefore, of ensuring (a) that there should in future be no question as to the presence of night attendants in these special cases, and (b) the examination of their written reports by the Official Visitors; and (4) the reticence of Dr. Vause even when questioned in the case of General Richardson. None of these conditions exist in the Government Hospitals, and I do not, therefore, consider any alteration of the existing methods as either necessary or advisable in these institutions if the duties of the Official Visitors are systematically performed.

The daily repetition in any record of some 620 names, from which it would be impossible for any Official Visitors to distinguish individual patients, would only lead to confusion and difficulty, and tend to diminish the protection to the patients which the present system affords. The statement of the number in single rooms would be an unvarying one, and as all are invariably filled, would correspond with the total number of single rooms at each hospital, whilst the removals from associated dormitories to single rooms during the night on the occasion of disturbance could be more distinctly seen in the night reports, where full particulars and reasons are given.

F. NORTON MANNING.

THE CASE OF MAJOR-GENERAL RICHARDSON.

Mr. McGowen dissented from the decisions signed by the other members of the Commission in regard to the allegations made against the treatment of Major-General Richardson, and submitted the following statement of his opinions on this and minor subjects referred to in the main Report :—

The charge is, that the General was put in a room, really an old stable, with no windows, in perfect darkness, without any attendance between 5 to 6 p.m. until 8 a.m. on the following morning. That his location was kept a secret from his family, the visiting doctors, and Dr. Manning. That his family and visitors were shown another room in which the General was on each occasion of their visits, and were led to believe that this was the room the General occupied.

On the 20th May, 1894, Dr. Anderson Stuart made a surprise visit to the asylum, reaching there at 5.50 a.m., accompanied by Mr. Sager, Henry Gearey, and J. J. O'Brien. At 6.45 a.m. the General was removed from the stable-like building in the presence of Dr. Stuart, Mr. Sager, Henry Gearey, and J. J. O'Brien.

The room is described by Dr. Stuart, Mr. Sager, Gearey, and O'Brien, as being about 12 x 12 x 14, having the appearance of an old stable, no windows, no ventilation, foul smelling, with a stale urinous odour. There was excrement on the floor, which had been smeared as though an attempt had been made to hastily wipe it up. The contents of the room consisted of a roughly-sewn piece of canvas, made to represent a mattress, stuffed with straw, and three pieces of canvas rugs insufficient to cover a human being. Mr. Sager mentions two pieces of canvas. The abovenamed witnesses assume the General was naked, because Gearey and O'Brien watched the door of the room in which the General was confined and saw Doherty and O'Brien (the attendants) carry in the clothes which were on the General when he was taken out. It must be borne in mind that the object of this surprise visit was to locate the room in which the General slept, and which was said to have been kept a secret from the General's family and the visiting doctors. [*Vide* report, Professor Anderson Stuart.] This fact is proved to my mind by the evidence of Dr. Vause, Doherty, O'Brien, Mackenzie, Peet, Farquharson, and others, all of whom swear that the General had occupied that room for six months. Mackenzie swears positively that the General occupied the room nightly, without a single exception, while he (Mackenzie) was employed there.

It is not a question of single-room treatment or the scientific treatment of patients in single rooms. The question is, the condition of the room as seen on the morning of 20th May, 1894, and the surroundings of the General.

It is admitted by all the witnesses that the General was put in daily about 5 p.m. The question then comes as to any night attendance. All the witnesses swear their hours of duty began from 5.30 a.m. and ended at 10.30 p.m. With the exception of Doherty, O'Brien, and Watt, they all swear there was no night attendance. Watt gives evidence in accord with Doherty and O'Brien to a certain extent, although in the main contradictory, inasmuch as he infers that O'Brien only performed the night duty.

Question 6202. Who visited him (the General) during the night? O'Brien would be on night duty.

6203. Was there always an attendant waiting on him? Yes; there were two attendants, one by day and one by night.

6204. Are you perfectly certain on this point? Yes.

Dr. Vause's evidence on this matter is worthless, as he only knows what Doherty told him, and nothing of his own knowledge.

Doherty and O'Brien swear they took it in turns to do night duty, and used to visit the General every two hours. Can anyone believe that a warder, after doing duty from 5.30 a.m. to 10.30 p.m., could then do night duty, and visit the General every two hours.

Mackenzie, who by the way was an unwilling witness, and absolutely refused to give any information until after the General was removed, swears positively that the whole time he was employed there was no night attendance after 10 p.m.

Dickson, in his evidence, says there was no night attendance during his time (501, 504, 505, 507).

Bridget Morrissey (a former matron) said if an attendant was on duty on the male side she would be sure to know it.

Erickson

Erickson (who received a good character from Dr. Vause on leaving Bayview Asylum), states there was no night attendance during his time (722).

Robinson (formerly head attendant) says, "I never saw a night attendant at all during my time." (1380, 1384, 1389.)

Dr. Vause himself admitted the General would not be seen after 10 p.m. till the following morning, to Dr. Stuart, though he afterwards contradicts this in his statement and evidence. These facts apply equally to the female side of the Asylum, as the acknowledgment of Dr. Vause and all his witnesses that there was no night patrol previous to May 20th, 1894, proves conclusively there was no night attendance in the institution at this time.

Then going back to the morning of Dr. Stuart's visit, nearly an hour elapsed before any attendant could be seen, showing clearly to my mind that the evidence of Doherty and O'Brien in this connection is not reliable.

The evidence shows that no surprise visit to Bayview Asylum had ever been made by Dr. Manning, the Inspector-General of the Insane, or the Official Visitors, between the hours of 6 p.m. and 6 a.m., although special provision is made in the Lunacy Act for that very purpose.

The inspection made by Professor Anderson Stuart and party at 5.30 a.m. on the 20th May, 1894, was the only occasion of such visitation. Notwithstanding all that has been said, the fact remains, the party all met and assembled in the vicinity of the room in which Major-General Richardson was confined, without being in any way challenged or seeing an attendant for nearly an hour, although rebutting evidence is brought forward to show that there was an attendant on night duty, who was supposed to visit the General every two hours, this attendant being provided with a couch and a fire in the main building, distant 14 yards from the General's room.

As to the condition in which General Richardson was placed in the stable-like outhouse, Mackenzie says he received definite instructions to leave the General in that room naked, from the head attendant, Doherty, and did so (990-992).

Doherty denies that the General was put in naked, and states some eighteen pairs of pyjamas were supplied to the General during eighteen months, and were usually torn up. Dr. Blaxland states the General tore up 118 shirts in four months at Callan Park. Doherty and O'Brien swear that on the morning of the 20th May, 1894, the General had on pyjamas and singlet and they placed the suit of clothes and flannel shirt over them. Professor Anderson Stuart swears "I felt the body and legs of the patient to see what clothing he had on, and I felt nothing more than the three garments I mentioned, a flannel shirt, a woollen jacket and trousers."

The President: We have it in evidence from the attendants who removed the Major-General, that he had on pyjama trousers and singlet when they entered the room, and that they put the day clothes you saw him wearing over his pyjamas before taking him across the yard.

Professor Stuart: If they did that, those attendants should have been dismissed on the spot. The three rugs and the mattress lying upon the floor were befouled and filthy beyond description. There was excreta and urine on the floor, and do you mean to tell me that finding a patient in these conditions with his pyjamas on, that these articles could be clean and dry, and in such a condition that clean day clothes could be put on over them;—do you believe that possible? I don't.

What then was your impression regarding the Major-General before the attendants put his day clothes on? My impression is that he was in that room absolutely naked.

When we remember that it was the practice on the female side to place wet and dirty and destructive patients (as they contend the General was) in single rooms in a naked condition, it is impossible to come to any other conclusion than that the General was placed naked in this room. In this matter also I consider the evidence of Doherty and O'Brien not reliable.

As regards the condition of the room on the morning of the 24th May, 1894, we have the evidence of Professor Anderson Stuart that it was unfit for a dog to sleep in. That he made a deliberate inspection, and that his inspection was not hurried. That the room in question was a stinking den. That the difference between the single rooms at Callan Park and this room at Bayview Asylum is, comparatively speaking, that of a palace to a den.

The President: We have had it in evidence, both from the attendants at Callan Park and other sources, that the single rooms there, after having been used all night by patients of this class, are in much the same condition as you found the single room at Bayview House on the 20th May. Do you think that is possible? I do not believe it. I cannot imagine such a thing.

The President: But we have had evidence to this effect from not only the attendants at Callan Park, but from the Medical Superintendent at that Institution, Dr. Blaxland (who never saw the room the Major-General occupied at any time).

Professor

Professor Stuart: I do not care. I do not believe it. I myself saw Major-General Richardson and his room at Bayview House, those at Callan Park did not see him there. They did not see this place at that particular time, and if you were to bring down a cloud of angels with statements to the contrary, it would not alter my opinion. I know what I saw on that occasion, and I have seen from short notices appearing in the Press from time to time, who have been examined by this Commission. Their evidence does not shake me in my opinion.

As regards the ventilation on the 20th May, 1894, the means of ventilation were there. They were insufficient on the evidence of Dr. Stuart, Mr. Sager, Henry Gearey, and J. J. O'Brien, all of whom corroborate the statement of Dr. Stuart. Dr. Manning, Inspector-General of the Insane, says in evidence,—“These rooms are not counted in the general accommodation for which the house is licensed.” “The difficulties attending his (General Richardson's) case at night I was not aware of.” As to whether the building was a stable or not is beside the question. Personally I inspected the room on a bright summer day late in the afternoon. The pine floor was then damp and wet, and for that reason totally unfit for any human being to sleep in without a bedstead.

The visiting doctors and Dr. Manning could not have made any very careful inspection of the room in question previous to May 20th, 1894, otherwise they must have found out the General was sleeping there, seeing that he had occupied the room nightly for six months and more.

It is clearly shown from the evidence that Dr. Manning and the official visitors, viz.:—Sir Alfred Roberts, Dr. Cox, and Nugent Robertson, were all ignorant of the treatment to which the General was nightly being subjected. If such treatment was necessary, why was it kept a secret from Dr. Manning, Sir Alfred Roberts, Dr. Cox, Nugent Robinson, Dr. Huxtable, Dr. Skirving, Dr. Williams, Mrs. Richardson, and Sydney Richardson, besides all the visitors who called to see the General?

In addition to this, no record of the fact of General Richardson being placed in seclusion appears in the Medical Journal of Bayview Asylum, an act strongly condemned by a majority of the visiting doctors. The absence of this entry from the Medical Journal is particularly commented on by Sir Alfred Roberts.

To my mind the charges of ill-treatment as regards General Richardson are proved beyond doubt. Dr. Blaxland and other doctors who have given scientific evidence as to the treatment of lunatics, is worthless in this case as they have not seen the room in question, and their knowledge of the General's case is derived from hearsay evidence. After the very strong and unshaken testimony of Professor Anderson Stuart (who went there satisfied that there was no truth in the accusation) borne out by those who were with him (Messrs. Sager, Gearey, and O'Brien) who saw the room on the morning of May 20, 1894, and are, therefore, in my opinion, the only reliable witnesses on the subject, I have no hesitation in arriving at the conclusion that the room which the Major-General occupied for months was totally unfit for a human being to sleep in.

With regard to the treatment of the male patients generally at Bayview Asylum, the evidence discloses to my mind a careless and loose system, aptly described by the witness Gearey as a sort of “go as you please.” The witnesses before the Commission, past and present attendants, have had no experience in lunatic asylums or any knowledge of the most elementary nursing work. Dr. Vause states he prefers men untrained, as he trains them to his own ways. Considering the sample of attendants and the frequent dismissals, the private training of Dr. Vause has been a lamentable failure. These facts lead to the suspicion that the frequent changes of attendants are due to the Medical Superintendent fearing a too-close intimacy with the patients' friends might lead to investigation. Colouring is given to this suspicion by the sudden and mysterious disappearance of three male attendants—James Copley, said to have gone to South Africa; Mick and Pat, said to have gone to the Clarence—all of whom were fully acquainted with the treatment received by Major-General Richardson. In fact all the male attendants, with the exception of Doherty and O'Brien, have been discharged since May 20th, 1894, thereby preventing the possibility of the Commission obtaining their evidence.

In examining the witnesses in this inquiry it was found that those who made accusations against the institution were nearly all dismissed servants, yet on the other hand those who contradicted the accusations or spoke favourably of the institution were nearly all of them, at the time of giving evidence, in the employ of
Dr.

Dr. A. J. Vause, so that the Commission had great difficulty in discriminating between the evidence of those who perhaps had a personal grievance and those who had to criticise the management of their employer.

With regard to the female side of the institution it is clearly proven that the single rooms were occupied nightly by patients. Nine or ten unfortunate women (in some cases perfectly naked) were placed in these rooms, the doors locked, the attendants all in bed. No provision in case of fire. Inflammable material, so much so that one of the Commissioners poked his umbrella through a portion of the wood-work forming the room. This custom may be excused and explained scientifically, but no layman will ever be able to understand the necessity for such treatment.

The case of Miss H., placed in a single cell with an iron bedstead, and found in the morning with a broken arm, is a clear case of proof. One cannot credit a patient breaking an arm without noise or violence. The excuse put forth on this occasion is: "The patient was subject to epileptic fits, and no doubt broke her arm while in a fit; and that a new matron was in charge, and had not been informed she had an epileptic patient to deal with."

Mrs. Dewhurst was accidentally poisoned, an inquest held, and the jury publicly censured Dr. Vause, the Medical Superintendent, for carelessness.

I desire strongly to protest against private lunatic asylums, contending that if there is one thing more than another that the State should take up it is the housing and care of our lunatic people, feeling sure that if these asylums are allowed to be conducted on the principles of profit, the inmates are liable to suffer, the friends to be misled, and the Government, in spite of every precaution that may be taken in the supervision of such places, to be hoodwinked and deceived.

In the case of Bayview Asylum let me specially call the attention of the Government to the following facts:—

A certificate of title was issued in February, 1880, for the whole property, consisting of 31 acres, in the name of George Alfred Joseph Tucker; that on the 31st December, 1885, Mr. Tucker sold the property to Arthur John Vause for £14,500. A mortgage was given to Mr. Tucker by Dr. Vause on the same date for £12,500, payable by instalments—£250 on the first days of April, July, and October, 1886, 1st January, April, July, and October, 1887 and 1888, and 1st January, 1889, and the final instalment of £9,500 on the 1st January, 1894. On the 2nd April, 1894, Dr. Vause seems to have borrowed £9,000 from the Mutual Life Association of Australasia on the whole property, and Mr. Tucker's mortgage was discharged.

The suspicion that enters one's mind is this:—The Bayview Asylum was practically purchased on time payment. These payments had to be made, rigid economy had to be practised, perhaps at the expense of the health and comfort of the patients.

Another argument, and one that has been forced on my mind by the evidence in this case, is the political and extraneous influences that have been made manifest to get Government patients sent to this Asylum, making the Government a wet-nurse to this private institution, at the expense of the Consolidated Revenue. To prove this statement I will simply quote from the official papers of Dr. Manning, the Inspector-General of Insane, and his sworn evidence:—

I have no hesitation in saying that female patients of the chronic class are maintained in the Government Asylums at very considerably less cost than £34 per year, counting all charges and including interest of money as rent of buildings, and cost of repairs of every description. I have made calculations which clearly show this, and yet for patients of this class £56 per year, after all collections are deducted, is paid at Cook's River.

To put the matter briefly, the Government has paid the highest rate for the maintenance of the cheapest kind of lunatic.

So that in twenty years the Government has paid £41,800 to the proprietors of Cook's River in excess of what the Government patients sent there could have been maintained in Government establishments—and to what purpose? The patients would have been as well housed, as well fed, as well clothed, and every way as well if not better cared for in the Government asylums as at Cook's River, and there could scarcely have been fewer recoveries. The excess in cost has certainly not tended to the recovery of the patients since there has not been a single instance of recovery or discharge since 1880.

Dr. Manning, under examination,—

Question 8868.—In your report, as referred to by the President, do you not say there were political and extraneous influences exercised to get and keep patients at Bayview House? Yes, or words to that effect.

8869. Do you know who used, or how these influences were used? I have nothing definite to tell you on that subject.

8870. Can you tell the Commission how or by whom you were informed that this political influence was brought to bear? I know on one occasion that a Government of the day was in difficulties, and I was told that renewing the contract to Bayview House saved the Government from defeat.

8871. What Government was that? Really at this time I do not know for certain. I do not know whether it was Sir Alexander Stuart's Government, or which Government it was. It was some years ago.

8872. As a high public officer having to report to the ministerial head of your Department can you not state the reason you had for forming such an opinion;—will you not admit that it is a sweeping charge to make when you, as Inspector-General of the Insane, say that by the granting of a certain contract a Government was saved? Perhaps it is a sweeping statement, but I had other reasons which led me to this conclusion. It was not difficult for me to see, when I interviewed the Minister in power, that he had advice other than mine.

Such evidence calls for no comment.

I consider the practice of a certificate of death being considered sufficient when given by the Medical Superintendent without any further inquiries is fraught with danger, and may lead to abuses.

The want of experience by the witnesses in the treatment of lunatics has been so strongly commented on by Dr. Vause, inasmuch to this alleged fact all troubles have arisen. It may not be out of place to mention that we have no evidence of the fact of Dr. Vause himself ever having occupied the position of Medical Superintendent of a Lunatic Asylum previous to his appointment as such under Dr. Tucker.

In conclusion, I strongly recommend that the evidence taken in this inquiry should be published.

This opinion of mine is opposed by my fellow Commissioners, who contend that consideration should be shown for the feelings of friends of the patients. If this is the only reason for the suppression of the evidence why not adopt the plan carried out in their Report, viz., substitute initials for names?

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BAYVIEW ASYLUM INQUIRY COMMISSION.
(RETURN SHOWING APPORTIONMENT OF EXPENSE OF.)

Ordered by the Legislative Assembly to be printed, 2 May, 1895.

[Laid upon the Table of the House in answer to Questions Nos. 3 and 4 of 17th April and 1st May, 1895.]

Questions.

- (3.) BAYVIEW ASYLUM INQUIRY COMMISSION:—MR. AFFLECK *asked* THE COLONIAL TREASURER,—
- (1.) Has the Commission appointed to inquire into the Bayview Asylum finished its work?
 - (2.) How long were they at it, and how many hours did they spend at each meeting?
 - (3.) What was the total cost of the inquiry?
 - (4.) How was the amount expended, and to whom paid, distinguishing each person's amount?

- (4.) COST OF BAYVIEW ASYLUM INQUIRY COMMISSION:—MR. AFFLECK *asked* THE COLONIAL TREASURER,—
- (1.) When will he be able to give the names and amounts as distributed from the cost of the Bayview Asylum Commission?
 - (2.) If he can, will he do so?

NEW SOUTH WALES.

IMMIGRATION.

(REPORT FOR 1894.)

Presented to Parliament by Command.

The Officer in Charge of Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, 9 January, 1895.

I have the honor to submit, for the information of the Chief Secretary, my report on Immigration for the year ending 31st December, 1894.

Operations under the Regulations have been confined to the nominations of wives and families by husbands and fathers, of good moral and industrial qualifications, being residents in the Colony.

Of the total of 67 immigrants who so arrived all were nominated in the Colony, none were selected by the Agent-General.

They consisted of 41 individuals above 12 years of age and 26 under 12 years of age.

No births or deaths occurred during voyage.

The Appendices herewith annexed give full detailed information relative to Immigrants during the voyage :—

- A.—General Statistical Information.
- B.—Nationality of Immigrants.
- C.—Educational Attainments.
- D.—Religious Persuasions.
- E.—Distribution into Country Districts.

I have, &c.,

FRANK J. JOSEPHSON,

Officer in Charge of Immigration.

APPENDIX A.
RETURN of Assisted Immigrants to New South Wales, 1894.

RESOLUTION OF THE NEW ZEALAND CONFERENCE—	
Proposal for cable to be laid on guarantee of interest for fourteen years	8
FINANCIAL ASPECT OF THE QUESTION—	
Mr. Sandford Fleming on the financial aspect of the question	8
OBJECTIONS TO THE CABLE--	
Pacific cable not required	9
If cable be laid, compensation should be given to existing lines	9
Agitation for an all-British cable based on sentiment	9
THE CONFERENCE AT OTTAWA.	
OPENING CEREMONY—	
Names of the delegates	9
Preliminary proceedings	10
Business sittings	10
Voting to be by Colonies	10
TRADE BETWEEN THE COLONIES—	
Power of the Australian Colonies to enter into Commercial treaties limited to their own boundaries	10
Extended power to enter into tariff treaties necessary to promote trade	10
Opinion of the delegates	11
Power to enter into treaties with foreign nations not asked	11
Sir Henry Wrixon's views	11
One of the first duties of the Conference	11
Treaties of Canada and Cape of Good Hope with foreign nations	11
Treaties between a dependency and a foreign country should be made through the Imperial Government	12
Questions of importance in the discussion	12
England's foreign trade	12
French and Australasian wines	12
Position of the Cape of Good Hope in regard to treaties... ..	13
THE ZOLLVEREIN AND BELGIUM TREATIES—	
Clauses in Zollverein and Belgium Treaties affecting the Colonies	13
Colonies made parties to the "most favoured nation" treatment... ..	13
Action of Canada in 1892	14
Doubt as to the effect of the Belgium and Zollverein Treaties	14
Resolution concerning foreign treaties passed	14
TRADE WITHIN THE EMPIRE AGAINST TRADE WITH FOREIGN COUNTRIES—	
Trade within the Empire to be more favoured than trade with foreign countries	14
Resolution moved by Canadian representative	15
The Canadian resolutions explained... ..	15
The delegates favourable or unfavourable to the proposal	16
Views of the New South Wales delegate	16
The Canadian representatives on the resolutions	17
Lord Jersey on the proposal... ..	17
The resolutions amended	17
Position of the Cape of Good Hope in relation to the resolutions	18
THE PACIFIC CABLE—	
Resolution with respect to Pacific cable	18
Object in framing the motion	18
In absence of a survey the question can only be considered in a general way	19
The Government of New South Wales in relation to the cable	19
Cable should be left to private enterprise, and guarantee of interest given	19
Governments to share the cost of survey	19
Position of the Imperial Government,	19

Tin	35
Other products	35
Canadian products of use to New South Wales	35
Development of trade probably slow	35

COLONIAL CONFERENCE AT OTTAWA, CANADA.

REPORT.

To His Excellency the Right Honorable SIR ROBERT WILLIAM DUFF, a Member of Her Majesty's Most Honorable Privy Council, a Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY:—

Having been appointed by the Executive Council of New South Wales to represent the Government of the Colony at a Conference to be held at Ottawa, Canada, on 21st June, 1894, for the purpose of considering the subjects of trade relations and telegraphic communication between the Dominion of Canada and the Australasian Colonies, I received from your Excellency on 18th May, 1894, a Commission empowering me to act as such representative, with authority to confer and deliberate with the other representatives of colonies assembling at the Conference, and to report fully the proceedings of the Conference; and now I have the honour to submit to your Excellency, for your information and that of the Government of New South Wales, my Report.

Proceedings Preliminary to the Conference.

MINUTE OF THE PRIVY COUNCIL OF CANADA.

UNDER date 8th February, 1894, the Governor-General of Canada forwarded to the Governor of New South Wales a copy of an approved minute of the Privy Council of Canada for the promotion of more extended trade relations and of telegraphic communication between the Dominion of Canada and the Australasian Colonies, and for the holding of a conference of delegates from the Colonies of Australasia and Fiji, with representatives of the Canadian Government, at Ottawa, on 21st June, 1894, to consider these subjects. The propriety of holding this Conference was agreed upon by the Prime Ministers of New South Wales, Queensland, Victoria, and South Australia, during a visit by the Canadian Minister of Trade and Commerce to the Australian Colonies in 1893. The minute recommended, "That the Governments of New South Wales, Queensland, Victoria, South Australia, West Australia, Tasmania, New Zealand, and Fiji be respectfully requested to appoint and send one or more delegates to meet at Ottawa, on Thursday, the 21st day of June, 1894, for the purpose of considering the trade relations existing between Canada and their respective countries, and the best means of extending the same, and of securing the construction of a direct telegraph cable between these Colonies and the Dominion of Canada." It was also recommended that the Government of the Cape of Good Hope and the British Government be invited to take part in the Conference.

TRADE RELATIONS AND TELEGRAPHIC COMMUNICATION.

Trade relations and telegraphic communication between Canada and Australasia have been matters of interest to both countries, and particularly to Canada, for some years past. Canada having constructed the Canadian Pacific Railway, which spans her territory from the seaboard on the east to that on the west, is desirous of securing to the fullest extent the advantages which the railway offers for promoting trade

trade across the Pacific Ocean from and to Vancouver. Naturally an export trade is her chief object, but she is willing to encourage imports as far as may be practicable and consistent with her tariff policy.

Telegraphic communication between the two countries by a direct route is considered essential to an extensive and profitable trade. It is also regarded as of great importance in relation to the defence of trade and shipping in time of war.

Trade between
Canada and
Australasia.

At present direct trade between Canada and Australasia is carried on to only a very limited extent. It has arisen in connection with the line of steamers running between Sydney and Vancouver, a means of communication between the two countries not yet sufficiently long in existence to indicate with definiteness the results which may flow from it. Indirectly there is between Canada and Australia a considerable trade in wool, which, bought in the Australian markets by English and American buyers, is purchased by Canadian manufacturers in England and the United States. The importance of establishing direct trade in all marketable articles of Canadian or Australian production led the Government of Canada to send to Australia last year the Honorable Mackenzie Bowell, Minister of Trade and Commerce, to confer with the Australian Governments on the subject; and since that visit a proposal has been made to increase the number of steamers running between Sydney and Vancouver, and to extend the service to England by means of a corresponding line of steamers across the Atlantic.

THE STEAMSHIP SERVICE.

Subsidies paid
to present
service.

As far back as 1889 the Federal Parliament of Canada passed an Act authorising the granting of a subsidy not exceeding £25,000 per annum to assist in establishing an effective fortnightly steamship service between British Columbia and the Australian Colonies and New Zealand. In 1893 this Act was amended so as to allow of the subsidy being given to a "monthly or more frequent" service, and under this authority the present steamship service was, with the assistance of the subsidy of £10,000 for three years paid by New South Wales, established.

THE PROPOSED CABLE.

Telegraphic
communica-
tion across the
Pacific.

Telegraphic communication over the Pacific, to connect Canada with Australia, was a subject for consideration at the Colonial Conference held in London in 1887. On that occasion it was resolved—

Resolution
passed by
Colonial
Conference
of 1887.

"That the connection of Canada with Australasia by direct submarine telegraph across the Pacific is a project of high importance to the Empire, and every doubt as to its practicability should without delay be set at rest by a thorough and exhaustive survey."

The matter was brought forward by the Canadian representatives, and it was then, and has since been, urged that by the proposed cable commercial intercourse would be stimulated and enlarged, the defence of commerce during war greatly assisted, and the cost of cable messages between Australia and Canada or Australia and America largely reduced.

The Pacific
the only ocean
not traversed
by the
telegraph.

In the correspondence which has taken place on the subject it is pointed out that the Pacific is the only ocean not traversed by the telegraph; that Canada and Australasia, the two largest divisions of the Empire, though actually separated from each other by only the Pacific Ocean, are telegraphically separated by but little short of the whole circumference of the globe; and that for closer commercial relations, or for joint action in any important matter of mutual concern, better telegraphic communication than exists at present is all but an absolute necessity.

ADVANTAGES FROM THE CABLE.

The cable and
British trade.

British shipping, it is stated, very truly, depends largely upon telegraphic advice for its most effective employment, and while this is so the cost of sending telegrams from Canada to Australia, or *vice versa*, is so high as to be practically prohibitive. The reduced charges which would be the result of laying a cable across the Pacific would, it is expected, very quickly bring about increased commercial activity, especially in connection with Australia.

Cable
advantages in
time of war.

The advantages to be derived from the cable in time of war were explained fully by Mr. Sandford Fleming in an address delivered by him before the Congress of Chambers of Commerce of the Empire, in London, in 1892. The highest naval authorities,

authorities, he said, are agreed that in time of war the use of the telegraph would furnish one of the most effective means of giving security to the vast commerce of the Empire. Telegraphic orders sent out confidentially by the Admiralty from time to time would indicate to merchant ships the precise course they should take on both outward and inward voyages, by which means the protecting naval force could be disposed with complete knowledge of the whereabouts of the commerce to be defended, while an enemy would have no such knowledge. To no part of the commerce of the Empire, Mr. Fleming contended, would a complete system of naval protection be so serviceable as to that of Australasia. Without taking into account the new route by way of Canada, which, in an emergency, might be used for commercial purposes—if, he explained, we take into consideration the alternate routes open around Cape Horn and the Cape of Good Hope, and the vast ocean spaces to be traversed, it will be seen that this system of naval protection might give to Australasian trade an almost complete immunity from attack, except in the immediate neighborhood of European waters, where the strongest force would be available for its defence. Among the general advantages to shipping there would be, he pointed out, an enormous saving from reduced risks and insurance charges; but the execution of any effective plan for the protection of maritime commerce depended upon the completeness and security of a national telegraph service around the globe. At present there is no such complete and secure service. England has four possible main lines of connection with the East and Australasia; but for national purposes in time of war it is, in Mr. Fleming's opinion, a fatal defect that they pass through possibly hostile countries, where they would be useless to us, or through shallow seas, where the cables could be easily fished up and destroyed. One line goes by way of Gibraltar, Malta, Egypt, and the Red Sea. Another, passing through France, Italy, and Greece, also goes on to the Red Sea. The third traverses Germany, Austria, Turkey, Russia, and Persia. The fourth crosses Russia to the Pacific, whence it connects to the south with Chinese and Indian lines. A route recently completed around Africa may be mentioned as a fifth alternative route. For issuing instructions to the merchant ships of the southern colonies, or of the eastern dependencies of the Empire, not one of these eastern lines, he said, could in time of war be depended upon for a single day. A line across the Pacific, on the other hand, would not only be far removed from the political storm-centres of the European continent, but would have two other great advantages—first, it would pass entirely, or almost entirely, over British soil; and second, it would pass chiefly through deep sea, where it could only be destroyed with great difficulty. And it would complete the circle of communication around the Empire. From a strategic point of view, therefore, he argued, the value of such a line in time of war would be immeasurable; and it might be fairly urged that even if the line were for a time commercially unprofitable, the Governments of the mother-land and the Colonies would be fully justified in bearing a portion of the expense for the sake of the added guarantee of national security which the cable would give.

SUGGESTED ROUTES.

Four routes have been suggested by Canada, through Mr. Sandford Fleming, for the cable, and in a memorandum dated Sydney, 11th October, 1893, they are described as follows:—

Route 1. Commencing at Vancouver Island, and extending to Fanning Island, and thence to the nearest island of the Fiji group. From Fiji it could run direct to New Zealand, and thence to the Australian continent; or it could go from Fiji to Norfolk Island, and from there bifurcate to the northern part of New Zealand and to a convenient point near the boundary between New South Wales and Queensland. Route 1.

Route 2. From Vancouver Island to Necker Island, a small unoccupied island about 240 miles westward from the Hawaiian group. From Necker Island to Fiji, and thence, as in Route No. 1, to New Zealand and Australia. Route 2.

Route 3. From Vancouver Island to Necker Island, and thence to Onoatua or some one of the eastern islands of the Gilbert group. From the station in the Gilbert group two branches would extend—one to Queensland, and the other to New Zealand. The Queensland branch would touch at San Christoval Island, in the Solomon group, and terminate at Bowen, connecting at that point with the land lines easterly to Brisbane and Sydney, and then going westerly to the Gulf of Carpentaria, Route 3.

Carpentaria, where a connection might be formed with the overland line to Adelaide, leading to Victoria, Tasmania, South and West Australia. The New Zealand branch of this route would find a mid-station on Viti Levu, the southern island of the Fiji group.

Route 4. From Vancouver Island to Necker Island, and thence in a direct line to Bowen, touching at Apamana—a central island of the Gilbert group—and at San Christoval, of the Solomon group. At Bowen, as in the case of Route No. 3, the line could connect with the southern colonies by means of the overland line to Adelaide. This route offers probably the shortest possible line between any part of Canada and any part of the continent of Australia, but it has the disadvantage of excluding from its telegraph service the Fiji Islands and New Zealand. The latter colony could be connected by special cable from Queensland or New South Wales, but the Fiji Islands would remain without a telegraph line by this route.

Distance by each route.

The distance by each of these routes was stated to be:—

Route No. 1. Including both branches from Norfolk Island to New Zealand and Australia..	7,145 knots.
Route No. 2. Including branches to New Zealand and Australia	7,175 „
Route No. 3. Including both branches to Queensland and New Zealand from the Gilbert group	8,264 „
Route No. 4. Vancouver to Bowen	6,244 „
Route No. 4a. Vancouver to Bowen, with a special cable from the mainland to New Zealand	7,310 „

Estimated cost by the routes.

The estimated cost of the cable complete by each of these routes was given as follows:—

Route No. 1, estimated cost completed	£1,678,000
„ „ 2, „ „	1,585,000
„ „ 3, „ „	1,825,000
„ „ 4, „ „	1,380,000
„ „ 4a, „ „	1,610,000

In this estimate of cost an allowance of 20 per cent. to the ascertained superficial distance is made for “slack,” in order that the cable may be safely laid at all depths and under all conditions likely to arise; and in the case of Route No. 1 a special allowance is made on account of the unusually long section between Vancouver and Fanning Island.

METHODS FOR PROVIDING AND LAYING THE CABLE.

Construction by a company expensive.

Government ownership and control.

Prior to the Conference at Ottawa two methods by which the work of providing and laying the cable might be accomplished were mentioned—one through the agency of a company liberally subsidised, and the other as a public work under Government control. With regard to the first, it was stated that no company had offered to carry out the undertaking for a less subsidy than £75,000 a year, continued for a period of twenty-five years. Under the plan of Government ownership a much smaller annual payment for a very much shorter period, it was asserted, would suffice, and, furthermore, the cable would be public property, controlled by Government for the public benefit. On those grounds it was proposed in Mr. Fleming's memorandum of October, 1893, that Australia, New Zealand, Fiji, and Canada should be joint owners of the cable, and that it should be established and worked as a public undertaking for the common good. This proposal for joint ownership on the part of the colonies named differs from what was originally put forward, in so far that until the publication of the memorandum of 1893 it had been strongly urged that the expenditure incurred in connection with the cable should be shared by Great Britain, the idea being that the British Government might assist in guaranteeing the loan necessary to be raised, in the manner adopted in the case of the railway connecting Quebec and Halifax, which was constructed with capital obtained on the joint guarantee of the Imperial and Canadian Governments. The Imperial Government, however, showed no great interest in the matter, and Mr. Fleming, and through him the Canadian Government, came to the conclusion that in view of the indifference of Great Britain, and to prevent the cable from getting into foreign hands, the only course was for Canada and the other colonies concerned to boldly take the initiative, lay the cable, and control it.

THE

THE EASTERN EXTENSION TELEGRAPH COMPANY AND THE PROPOSAL.

A difficulty appeared from the agreement under which certain of the Australian Governments have to pay to the Eastern Extension Telegraph Company, until May, 1899, an annual subsidy of £32,400, but this, it was considered, might be overcome by providing out of capital an annuity to meet the subsidy as it periodically became due. By such an arrangement, it was argued, the liability of New South Wales, Victoria, South Australia, and West Australia to the Eastern Extension Telegraph Company would be practically removed, and these Colonies would be free to enter with Queensland, New Zealand, Fiji, and Canada into a joint agreement to accomplish the establishment of the Trans-Pacific Telegraph. The annuity provided to extinguish the subsidy of £32,400 a year would be met by profits accruing from the new cable, and meanwhile all liability incurred in the raising of capital would be borne in equitable proportions by the co-operating Governments.

Difficulty in relation to cable subsidy at present paid.

To illustrate this proposal it was assumed that the cable itself, say on Route No. 2, required an expenditure of	£1,600,000
To this capital add the sum needed to purchase an annuity to meet the annual subsidy of £32,400 from May, 1894, to May, 1899, five years	145,000
Total... ..	£1,745,000

This total capital raised on the joint guarantee of the Australasian Colonies, New Zealand, and Canada, could be placed, Mr. Fleming said, at the low rate of 3 per cent., making a total charge of £52,350 per annum. This interest charge, he pointed out, was less than the lowest subsidy asked by a company, and he contended that, unlike a subsidy for a fixed period of twenty-five years, long before the expiry of that period the whole interest would be met by surplus revenue. Charges for transmitting messages would, with the establishment of the cable, be much less than at present, and this should bring a large amount of business. In Mr. Fleming's opinion the rates across the Pacific should be lowered to 2s. per word, immediately on the cable being laid. This would reduce the charges between Australia and England to 3s. 3d., in place of 4s. 9d. per word, as at present; while messages from Australia received at Vancouver would be forwarded to all parts of Canada and the United States for an average charge, not exceeding 2s. 3d. per word, in place of 6s., the present charge.

Reduction in cable charges.

ATTITUDE OF THE IMPERIAL GOVERNMENT.

The question of the proposed cable was considered by the Imperial Government to some extent in 1887, and more fully in 1892, but in relation to routes somewhat different from those suggested by Mr. Sandford Fleming, the British authorities being under the impression that the first landing place for the cable after starting from Vancouver should be either Fanning, Christmas, Palmyra, or Washington Island.

The Hydrographer of the Navy, reporting upon the project in 1887, observed that there were grave drawbacks to it. To minimise the effects of breakdowns on a submarine cable the individual lengths between the landing places should be, he explained, as short as possible, in order that the time lost in bridging over by a steamer until the repairs could be made good should be reduced to a minimum. The proposed line would not only be made up of the longest length of submarine cable known, but the state of trade at the calling places is such that steamers might not be available for temporary service in case of a messenger vessel being required. Further, he stated (1) that very few soundings exist on the actual line proposed; (2) that the soundings near this line show that the depth is unusually great, and therefore unfavourable for repairing; (3) that the probability of sudden inequalities of the bottom is very great in such an island-studded sea, and that such inequality would be also unfavourable to the maintenance of the cable; and (4) it would require a long and minute search by a vessel specially fitted for sounding before the best route could be selected. It is very doubtful, therefore, he concluded, what the ultimate cost of the undertaking might be, and, even at the estimate of £2,000,000, it was more than doubtful whether it could possibly be made to pay. As a single line of submarine telegraph has never yet been found to answer commercially, he observed, it would probably be necessary to duplicate this one, and this would cost about one and a half millions sterling extra.

Grave drawbacks to the project.

The

Route as stated by the Hydrographer of the Navy.

The route of the proposed cable was stated by the Hydrographer as follows:—

Vancouver Island to Fanning or Washington Island	...	3,220	miles
Washington Island to Phoenix Island	790	„
Phoenix Island to Fiji	920	„
Fiji to New Zealand	1,010	„
New Zealand to Sydney	1,125	„

Total 7,065 miles

Route given by British Postmaster-General.

Writing on 5th July, 1893, the Postmaster-General, London, stated that, for a cable to land only on territory under British protection or belonging to the British Crown, the route selected would probably be:—

Victoria, Vancouver Island, to Fanning Island	3,298	Distance in knots.
Fanning to Canton Island	845	
Canton to Fiji	1,130	
Fiji to the Bay of Islands, New Zealand	1,080	

Total 6,353

Adding 20 per cent. for "slack" would make the total distance 7,623 knots.

Excessive material and cost in connection with the cable.

The sections between Fanning Island and New Zealand, it was pointed out, might be laid with a cable of which the core would consist of 130 pounds of copper and 130 pounds of gutta percha to the knot, at a cost of about £150 a knot, or say £549,900 for the three sections. But, on the Vancouver-Fanning section, to secure even the moderate working speed of twelve words a minute, the cable would require a core of 940 pounds of copper and 940 pounds of gutta percha to the knot, and the cost of manufacturing and laying such a cable would probably be about £600 per knot, or say £2,374,200. The total cost of the whole line from Vancouver to New Zealand would thus be about £2,924,100.

Doubtful whether one section of the cable could be laid.

There would be no novelty, the letter proceeded to say, in laying or maintaining cables of the type required between Fanning and New Zealand, but a cable like that which would be necessary between Vancouver and Fanning has never yet been laid. The heaviest core in any existing cable contains only 400 pounds of copper and 400 pounds of gutta percha to the knot. It may well be doubted, therefore, whether, with existing appliances, the Vancouver-Fanning section could be either laid or maintained. If it were found possible to establish the communication, it would be necessary to its proper maintenance that a ship specially constructed for the purpose should be stationed in the Pacific, and that depôts of coal, spare submarine cable, and other stores should be established at various points.

Financial aspect of the question difficult to state.

As to the financial aspect of the question, it is not possible, the British Postmaster-General wrote, where everything is so problematical, to prepare a trustworthy statement. If the charges for telegrams to and from Europe were the same as the charges by the existing route, the annual revenue proper to the new line could scarcely at first, or, indeed, for many years, exceed £70,000 a year. Interest at 4 per cent. on the capital of £2,924,100 would be £116,964; a sinking fund at 4 per cent. to replace the capital in 25 years would take £70,200 a year; and the cost of maintenance and working could not well be estimated at less than £40,000 a year. There may thus be an annual expense of £227,164, as compared with a revenue of £70,000, leaving a deficiency of £157,164 to be made good by subsidies.

In this letter it was further stated that if it were not necessary to land the cable in all cases on British territory, a line of communication might be established for a smaller sum by a route which would include the Sandwich or Hawaiian Islands. The first section could be laid from Vancouver (or from San Francisco) to Oahu in the Sandwich Islands, and the core of this section of the cable need not exceed 400 pounds of copper and 400 pounds of gutta percha to the knot.

NEGOTIATIONS FOR A SURVEY.

Action of Canada.

These views of the British authorities on the subject of the cable were communicated to the different Governments interested, and that of Canada urged that a proper nautical survey should be made in order to discover and decide upon the

the best route. In 1887 the British Admiralty was urged by Canada to undertake this work, Canada offering at the time the use of a suitable vessel, and expressing her willingness to pay half the expense of the survey; but no action was taken. In the same year during the sittings in London of the Colonial Conference, the delegates to the Conference requested Her Majesty's Government, through Lord Knutsford, to cause the survey to be made. The letter of the delegates was transmitted to the Admiralty, and the Secretary to the Admiralty, replying, said:—

Request from
the London
Conference.

“ Unless the Secretary of State has reason to believe that a submarine cable is likely to be laid from Vancouver to Australia very shortly, their Lordships would not propose to despatch a surveying vessel for the sole purpose of obtaining soundings over the route, but they will endeavour to arrange that soundings shall be gradually obtained during the next few years in the ordinary course of hydrographic surveys.”

Reply from
the Admi-
ralty.

Mr. Sandford Fleming learned from the Hydrographer to the Admiralty that it was expected that in 1888 a surveying vessel would be despatched to Australian waters for purposes other than the proposed survey, and that while there the officers would be instructed, in the ordinary course of their duties, to endeavour to obtain some information which might be useful in connection with the question of laying the cable. It was intended to follow the same course year by year, but no definite idea could be formed as to the time which would be expended before the completion of the work.

On 7th March, 1888, a resolution passed at a Postal Conference held in Sydney, all the Australian Colonies being represented, was telegraphed to Lord Knutsford. The telegram asked that the Admiralty might be moved to make an early survey of a suitable route “ for ocean cable telegraph by way of Pacific Ocean *via* Vancouver Island, the cost to be defrayed by Her Majesty's Government, the Government of Canada, and the Australasian Colonies.” The Colonial Office immediately communicated with the Admiralty, and asked for an approximate estimate of the probable cost of a survey. The Admiralty replied on 4th April, 1888. Their letter stated that H.M.S. “ Egeria ” was on the point of sailing from Sydney to clear up the dangers, and fix the positions of and survey the islands on the route from New Zealand to Vancouver, and that the vessel had orders to obtain, in the course of this work, deep soundings, which would, in two or three years, furnish more detailed information than now existed as to the varieties of depths to be expected on the general line of cable. To survey a route for a cable to any purpose would, it was pointed out, entail long searching for the best line, examination of contours of coral islands, and continuous close soundings; and three years' steady work at that and nothing else would probably not complete the survey. The operations of the “ Egeria ” would furnish gradually, at a minimum cost, the preliminary information required, and a great part of that directly bearing on the laying of a cable. It was, therefore, not considered advisable to make any alterations in the orders under which the “ Egeria ” was about to act; and, the letter proceeded, “ as no vessel can be spared from her hydrographic work in any other part of the world, the question of hastening the survey by providing another vessel must, in their Lordships' opinion, remain open, until Lord Knutsford is able to inform this Department that there is a reasonable prospect that the funds for the construction of the submarine cable across the Pacific will be found, and that time is of importance in Imperial interests.” As to the probable cost of the survey, it was stated that the annual cost of H.M.S. “ Egeria ” was about £12,000, and that if a similar vessel were provided especially for the purpose of making a complete survey of the best ocean route and landing places, the cost would be about £36,000. This estimate was irrespective of the value of the vessel and the cost of fitting her out.

Resolution of
Sydney Postal
Conference.

Reply of the
Admiralty.

Probable cost
of the survey.

In the opinion expressed in the letter from the Admiralty, that the question of accelerating the survey must remain open until there was a prospect that the funds for the construction of the cable would be found, the Imperial Government concurred. There the matter rested. The “ Egeria ” commenced her work in the Pacific, but being shortly afterwards withdrawn, her surveying operations were stopped, and they have not since been resumed.

RESOLUTION

RESOLUTION OF THE NEW ZEALAND CONFERENCE.

In March, 1894, a Postal and Telegraph Conference was held in Wellington, New Zealand, the subject of this proposed cable being one of the questions considered, and the following resolution was passed :—

Proposal for cable to be laid on guarantee of interest for fourteen years.

“That, considering the important interests involved, both of a national and commercial character, in the establishment of a Pacific cable, the representatives of the respective Colonies assembled at this Conference recommend their Governments to consider the desirability of entering into a guarantee with the other countries interested for a period not exceeding fourteen years, and to guarantee interest at 4 per cent. on a capital of not more than £1,800,000 to any company undertaking the laying of a Pacific cable; the tariff not to exceed 3s. per word for ordinary telegrams, 2s. per word for Government telegrams, and 1s. 6d. per word for press telegrams, to and from Great Britain and the Colonies; and that the United Kingdom be asked to join in the guarantee; the routes to be either of the following: Brisbane to Ahipara Bay (New Zealand), Ahipara Bay to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver; or, from New Zealand to Suva, Suva to Apia, Apia to Fanning Island, Fanning Island to Sandwich Islands, Sandwich Islands to Vancouver.”

The guarantee of 4 per cent. interest on £1,800,000 would amount to £72,000 a year for fourteen years, and the liability in respect of it resting upon the interested Colonies, after the sum to be contributed by England had been decided upon, would be divided between them on the basis of population. Canada and England, according to the views expressed at the Wellington Conference, would bear the greater proportion of the expense of the guarantee. South Australia and West Australia it was not expected would contribute. The routes indicated in the resolution of the Conference, it was considered, rendered it possible for the Eastern Extension Company to tender for the establishment of the proposed cable, and to utilise the existing cables between Australia and New Zealand. On the other hand, the proposal left it open to the world to compete for the laying of a cable between Australia and New Zealand, and from New Zealand onwards, as indicated.

FINANCIAL ASPECT OF THE QUESTION.

Mr. Sandford Fleming on the financial aspect of the question.

On the financial aspect of the question, Mr. Sandford Fleming, in his memorandum of 11th October, 1893, contends that the proposed cable established and worked under the joint ownership of the Colonies would practically extinguish all subsidies now paid and render guarantees unnecessary; it would permanently establish low rates for ocean telegraphy; and it would yield a revenue which, after paying working expenses, providing for maintenance and renewals, would make good all interest charges on the whole cost of the undertaking from the beginning, and in a very few years would furnish large surplus earnings. Estimating the cost of the cable at £1,600,000, he adds, as already mentioned, a sum of £145,000 for the purchase of an annuity to extinguish the £32,400 subsidy at present paid the Eastern Extension Company. This makes a total cost of £1,745,000, which, raised on the joint guarantee of the Australian Colonies, New Zealand, and Canada, could, he says, be placed at the rate of 3 per cent., making a total charge of £52,350 per annum. The working expenses he estimates at £60,000 per annum, and the revenue for the year following the establishment of the cable at £90,539, “a sum equal to the whole working expenses, together with £30,539 for the renewal fund.” The renewal fund he proposes to make an annual charge on the revenue to the extent of £32,000. Within about seven years after the completion of the undertaking, Mr. Fleming states, the revenue would be sufficient to meet every current charge, and the contributing Governments would practically be relieved from further liability. Not only would all fixed charges be then met, but in succeeding years the productive capacity of the undertaking would yield an annually increasing surplus, to be dealt with as the co-operating Governments might determine.

OBJECTIONS

OBJECTIONS TO THE CABLE.

Objections to the cable have been put forward by Sir John Pender, Chairman of the Eastern Extension Telegraph Company, and in a letter to the Colonial Office, with reference to the Conference at Ottawa, he states them at length. He points out:—

- (1.) That the existing telegraphic communication with Australia was established by private enterprise without Government assistance.
- (2.) That the existing rates cannot be considered in any way excessive.
- (3.) That the existing communication with Australia is acknowledged to be most efficient and satisfactory, and is equal to the transmission of a much larger traffic than it at present carries.
- (4.) That a costly alternative cable across the Pacific cannot be said to be required to meet existing commercial wants, and, if established by Government assistance, could only be justified on strategic grounds.

The guarantee proposed by the Wellington Conference, Sir John Pender proceeds to say, would by itself be utterly inadequate to enable any company to live, and consequently a Pacific line could only be made a success if a large portion of the existing company's traffic were diverted *via* the Pacific, or a largely increased guarantee or subsidy were granted. About £165,000 a year would have to be made up in addition to the 4 per cent. guarantee on the capital expenditure upon the Pacific cable, and if this were done at the expense, and consequent serious injury of the existing service, Her Majesty's Government, Sir John Pender contends, could not in equity refuse to guarantee or subsidise the Eastern Extension Company to the same extent as it guaranteed or subsidised the Pacific cable; otherwise a fatal blow would be given to private enterprise which would seriously affect the carrying out of similar pioneer works in the future. A diversion from the existing Australasian traffic, *via* the Pacific, would also affect the telegraphic revenue of the Indian Government, and compensation would also have to be made to the South Australian Government, whose overland line from Adelaide to Port Darwin is still working at a heavy loss.

"As you are aware," Sir John Pender continues, "the agitation for an all-British cable across the Pacific is mainly based on sentiment, as it would almost inevitably have to touch foreign territory at one point or another, and would be dependent upon the Atlantic cables for the transmission of its traffic from Canada to Europe. Moreover, a Pacific cable would be no safer in time of war than cables in other seas, while it would impose increased responsibility upon the navy at a time when it might have to concentrate all its energies nearer home to protect the more frequented trade routes."

But, concluding, he says that if a Pacific cable is considered a strategic necessity, and the Governments concerned are prepared to provide the requisite subsidies to enable it to be established, the Eastern Extension Company is quite ready to co-operate in the matter, and with its large experience and special facilities is in a better position than any other company to carry out the work advantageously.

Such was the position, shortly stated, in which trade between Australasia and Canada, and the question of direct cable communication between the two countries stood prior to the Conference at Ottawa.

THE CONFERENCE AT OTTAWA.

OPENING CEREMONY.

The Conference at Ottawa opened with much ceremony in the Senate Chamber of the Houses of the Federal Parliament of Canada on Thursday, 28th June, 1894, His Excellency the Right Honorable the Earl of Aberdeen, Governor-General of Canada, presiding, and the members of the Canadian Government and of both Houses of Parliament, with a large assemblage of the general public, being present.

The following delegates were in attendance:—

The Right Honorable the Earl of Jersey, P.C., G.C.M.G., representing the Government of Great Britain;

The Honorable Mackenzie Bowell, P.C., Minister of Trade and Commerce; the Honorable Sir Adolphe P. Caron, P.C., K.C.M.G., Postmaster-General; the Honorable George Eulas Foster, P.C., LL.D., Minister of Finance; and Sandford Fleming, Esq., C.M.G.; representing the Government of the Dominion of Canada.

The

- The Honorable Francis Bathurst Suttor, M.L.A., Minister of Public Instruction, representing the Government of New South Wales.
- The Honorable Nicholas Fitzgerald, M.L.C., representing the Government of Tasmania.
- The Honorable Sir Henry de Villiers, K.C.M.G., and Sir Charles Mills, K.C.M.G., C.B., representing the Government of the Cape of Good Hope.
- The Honorable Thomas Playford, Agent-General, representing the Government of South Australia.
- A. Lee Smith, Esq., representing the Government of New Zealand.
- Sir Henry Wrixon, K.C.M.G., Q.C.; the Honorable Nicholas Fitzgerald, M.L.C.; and the Honorable Simon Fraser, M.L.C.; representing the Government of Victoria.
- The Honorable A. J. Thynne, M.L.C., Member of the Executive Council, and the Honorable William Forrest, M.L.C., representing the Government of Queensland.
- Mr. Theo. H. Davies, representing the Chamber of Commerce of Honolulu, Hawaii.

Mr. Theo. H. Davies, representing the Chamber of Commerce of Honolulu, did not attend any sitting of the Conference after the opening ceremony, objection having been taken to his being present as he did not represent any portion of the British dominions; but at subsequent sittings the number of delegates was increased by the attendance of the Honorable J. H. Hoffmeyr, as one of the representatives of the Cape of Good Hope.

Preliminary proceedings.

Addresses of welcome to the delegates, and, on the part of the delegates, thanks for the welcome accorded them, formed the first portion of the proceedings. Of immediate results from the Conference some doubts were entertained, but of ultimate advantages from the meeting together of representatives of the self-governing Colonies with a representative of Great Britain, for the discussion of subjects of common interest, each speaker was convinced. Throughout the proceedings the hope was expressed, or was apparent from what was said, that, as one result from the deliberations of the delegates, "the ocean which divides the Colonies," to use the words of Sir John Thompson, "shall become the highway for their people and their products." The opening ceremony terminated with an address of congratulation and loyalty to Her Majesty the Queen, on the 56th anniversary of her coronation, the motions for the preparation and the adoption of the address being moved by me and seconded by Sir Charles Mills.

Business sittings.

The business sittings of the Conference commenced the following morning, and were continued day by day until the business was concluded. The Honorable Mackenzie Bowell, Minister of Trade and Commerce, Canada, was appointed President of the Conference, and Sir Adolphe Caron, Postmaster-General, Canada, Vice-President; and, on my motion, it was resolved that the voting should be by Colonies.

Voting to be by Colonies.

TRADE BETWEEN THE COLONIES.

Trade relations between the Colonies was the subject first considered, and it was discussed on the following motion, moved by Sir Henry Wrixon and seconded by myself:—

Power of the Australian Colonies to enter into commercial treaties limited to their own boundaries.

"That provision should be made by Imperial legislation enabling the dependencies of the Empire to enter into agreements of commercial reciprocity, including the power of making differential tariffs with Great Britain or with one another."

Extended power to enter into tariff treaties necessary to promote trade.

The Australian Colonies, under an Act passed by the Imperial Government in 1873, to amend the Constitution Acts, have the power to enter into commercial treaties one with the other, and to impose differential tariffs, but this power does not extend beyond their own boundaries. It was therefore deemed by the delegates attending the Conference to be necessary, for the promotion of trade between Australasia and Canada, that this disability should be removed. The tariffs of the Australasian Colonies and Canada are at present protective, and as they stand affect the prospects of trade between the two countries; but with the power to enter into arrangements by which each country shall concede to the other such tariff modifications as shall be sufficient to establish and maintain the commercial intercourse possible, trade, it is believed, will very quickly acquire profitable and satisfactory proportions. Canada's object in the matter is, naturally, her

her own benefit. In his opening address at the first business sitting of the Conference, the President stated that the Conference was "the direct outcome of the policy of the Canadian Government in its efforts to extend trade in every direction, but more particularly with its sister Colonies." At the same time there are commercial advantages possible to Australasia from trading with Canada. If therefore trade between the two countries is considered desirable, the means necessary to bring it about must be obtained. The Act of 1873 being limited strictly to the Australian Colonies, it is necessary that the power it gives should be extended, and the delegates at the Conference were of opinion that the extension should be to all dependencies of the Empire, giving them the right to enter into agreements of commercial reciprocity, embodying differential tariffs, with the mother country or with one another.

Opinion of the delegates.

The power to enter into treaties with foreign nations was not asked. It was recognised that a Colony or dependency of the Empire could not expect to be allowed to make treaties which would be binding upon the Empire as a whole. Canada and the Cape of Good Hope were cited as instances in which treaties as between British Colonies and foreign powers had been made, but an examination of the matter showed that while these two Colonies may be said to have made the treaties, the negotiations for bringing them about and their ratification were largely the work of the Imperial Government.

Power to enter into treaties with foreign nations not asked.

Explaining his motion, Sir Henry Wrixon pointed out that the object of it was simply to remove the proscription under the Act of 1873, and extending the power given by that Act make it apply to the whole Empire, so that in regard to Australasia and Canada, if any one of the Australasian Colonies wished and were able to enter into a commercial treaty with Canada, it would be competent to do so, and to support the treaty by levying differential rates. He did not desire that there should be such a thing as a formal recognition of the right of a dependency of the Empire at its own instance and by itself to enter into treaties with foreign powers, because, in his opinion, such a recognition was inconsistent with Imperial unity. Each nation being an entity as regarded any other nation, it was impossible for a part of a nation to make with another nation treaties in its own interests.

Sir Henry Wrixon's views.

I seconded Sir Henry Wrixon's motion for the reason that one of the first duties of the Conference was to endeavour to bring about, consistently with colonial fiscal policy, the freest commercial relations possible between the Colonies of Australasia and other Colonies of the Empire. The Act of 1873, I was aware, had not in any case been brought into operation; but that did not, I considered, preclude us from seeking to obtain the further advantage proposed by Sir Henry Wrixon's motion. I did not think we were justified in going beyond what was so proposed. The foreign treaties which Canada and the Cape of Good Hope had been permitted by the Imperial Government to make were, I knew, a subject of great interest to the Government of New South Wales, and I had been instructed to inquire concerning the conditions under which those treaties had been entered into. I found that they were not the outcome of any existing legal right on the part of the two Colonies making them, but were effected through the Imperial Government, who, appealed to by the Colonies concerned, approved of the proposals and then virtually made the treaties in the names of the Colonies desiring them. If Canada find that a treaty relating to trade be desirable between her and a foreign country, a representation to that effect is made to the Imperial Government who, in accordance with what one of the Canadian delegates alluded to as "that accommodating and reasonable policy the British Government have always carried out," undertakes through the British Ambassador the negotiations necessary to the making of the treaty, and permits to be associated with him a representative of Canada. Thus while the Ambassador is the principal figure in the negotiations, and the treaty is actually an Imperial one, the negotiations are chiefly carried on by the representative of the Colony, who in the end signs the treaty as representing the Imperial Government. The Cape of Good Hope has entered into a Customs union with the Orange Free State, the Act relating to it having been passed by the Cape Parliament and assented to by the British Government. The case is an exceptional one, and does not imply that the Cape possesses full power to negotiate treaties with other Colonies or other States. It may enter into a Customs union with another Colony

One of the first duties of the Conference.

Treaties of Canada and Cape of Good Hope with foreign nations.

Colony or State in South Africa, but only in respect of goods imported overland. Goods imported by sea would be rigidly excluded from any treaty of this kind. When the Bill providing for the Customs union with the Orange Free State was received in England the Imperial Government refused to submit it for the Queen's assent, as it proposed to give the Orange Free State preferential duties on its products as against any other products of the same kind imported into the Cape of Good Hope. To this the Imperial Government objected, and it was only after the insertion of the words "if by overland only," which restricted the preferential duties to goods imported overland, that the Bill received the royal assent. That all treaties between a dependency of the Empire and a foreign country should be effected through the Imperial Government I, in common with the other delegates at the Conference, regarded as indisputable, and I agreed with Sir Henry Wrixon that no attempt should be made to bring about a change in this respect.

Treaties between a dependency and a foreign country should be made through the Imperial Government.

Questions of importance in the discussion.

Two questions of importance arose in the discussion which took place on the motion. One was the possible effect of commercial reciprocity between Australasia and Canada upon the trade between England and foreign countries, and the other the effect upon an important product of Australasia, in the trade, it is hoped, will spring up with Canada, which may result from a treaty Canada is effecting with France, by which French wines will be admitted into Canada under preferential duties.

England's foreign trade.

The question regarding the trade between Great Britain and foreign countries was raised by one of the delegates from Queensland. To him it appeared that preferential duties between Australasia and Canada might prove offensive to foreign countries important to England's trade, leading to the termination of treaties between those foreign countries and Great Britain, and therefore to the injury of British commerce generally. The fear of such a result was not shared by the other delegates. The extent to which reciprocal tariff arrangements between Australasia and Canada would affect British trade generally was regarded as very small and unimportant, and it was pointed out that Great Britain being alive to her commercial interests would be careful not to sanction any proposal seriously affecting them. For that reason if any reciprocal treaty between two British Colonies interfered with the provisions of the Belgium or the Zollverein Treaty, England might certainly be expected to deal with the difficulty in the right way, protecting her own trade, and at the same time meeting as far as possible the wishes of the Colonies.

French and Australasian wines.

The treaty between Canada and France, by which French wines will be admitted into Canada at preferential tariff rates, was explained by one of the Canadian delegates to be an arrangement not necessarily injurious to the Australasian Colonies. France will receive certain trade concessions from Canada, under a treaty by the provisions of which Canada will receive corresponding concessions from France, and Canada is ready to give the same concessions to Australasia, provided she receives from Australasia similar concessions in return. This would not be of much advantage to Australasia, if while the treaty with France exists Australian wines were not admitted into Canada at a lower duty than was charged on the wines of France. The competition between the wines of the two countries, and the difficulty the wines of Australia would consequently have in finding a profitable market, were apparent to the Australasian delegates at the Conference, and the opinion was entertained that it would have been more consistent with the expressed desire of Canada to establish trade relations with Australasia if the treaty with France had not been made. At a subsequent sitting of the Conference, when the treaty between Canada and France was again mentioned, the effect upon Australian wines was differently stated. It was then said that there was nothing in the treaty to prevent Canada giving to any British Colony what trade concessions in relation to wines she pleased; all that the treaty stipulated being that no power or nation should receive from Canada any consideration greater than that granted to France. If this be the right interpretation of the treaty, Australian wines may be admitted into Canada at any rate Canada and Australia may agree upon, without any alteration being made in the rate provided for in the treaty with France for the admission of French wines, which, of course, is a condition of affairs much more satisfactory than the first explanation of the treaty presented.

Whether it will ever be practicable on the part of any one or more of the Colonies to enter into reciprocal tariff arrangements with Great Britain, as the wording of the resolution provides for, is a question difficult to answer, but the inclusion of Great Britain was considered by the delegates necessary to make the resolution complete.

The

The resolution was passed unanimously, but it was afterwards found that one of the delegates from the Cape of Good Hope had desired to amend it, in order that the position of the Cape of Good Hope in regard to commercial treaties might be clearly defined. The position of the Cape with respect to these treaties, it was argued, was different from that of the Australasian Colonies. So far as the Cape was concerned Imperial legislation was not required to enable that Colony to enter into an agreement of commercial reciprocity with another Colony. Such legislation was necessary in the case of the Australasian Colonies, who were bound by the provisions of the Act of 1873, but it was quite possible for the Cape of Good Hope and Canada to enter into an agreement of commercial reciprocity, without first asking the consent of the Imperial Government, and without the necessity for any Imperial legislation, the only hold of the Imperial Government upon the action of the two Colonies being the power of vetoing the Acts of Parliaments which they might pass to carry out the commercial arrangement between them. In order, therefore, that the position of the Cape might be recognised in the resolution Sir Henry De Villiers proposed to move, at a future sitting, a motion in more general terms than that which had been adopted, and to this course the Conference agreed. The motion was:—

Position of the Cape of Good Hope in regard to treaties.

“That, in the opinion of this Conference, any obstacles which may at present exist to the power of the self-governing dependencies of the Empire to enter into agreements of commercial reciprocity with each other, or with Great Britain, should be removed by Imperial legislation, or otherwise.”

THE ZOLLVEREIN AND BELGIUM TREATIES.

With this motion was discussed another of which notice had been given by one of the delegates from Victoria (Mr. Fitzgerald) dealing with the treaties between Great Britain and the German Zollverein and the Kingdom of Belgium:—

“That this Conference is of opinion that the existing treaties between Great Britain and the German Zollverein, and with the Kingdom of Belgium, should be denounced and terminated as early as their conditions will permit, so far as regards the clauses therein specially naming British Colonies; and that Her Majesty’s Government be requested to take the necessary steps with this object.”

Though in moving his motion, Sir Henry de Villiers desired only to place the Cape of Good Hope in the position which he considered the motion passed by the Conference did not do, both these resolutions, in reality, aimed at very much the same object, the one in general and the other in direct terms, and the question the Conference took upon itself to decide was which should be adopted. The former had the support of some of the delegates, on the ground that it was quite as effective and more politic to gain the end sought in general terms; while the latter found favour with other delegates, who wished it definitely placed on record what the chief obstacles in the way of commercial reciprocity between the Colonies actually were. It may be well to quote the clauses in the treaties with the Zollverein and Belgium, which affect the colonies. In the first named, Clause VII provides:—

“The stipulations of the preceding Articles, I to VI, shall also be applied to the Colonies and foreign possessions of Her Britannic Majesty. In those Colonies and possessions the produce of the States of the Zollverein shall not be subject to any higher or other import duties than the produce of the United Kingdom of Great Britain and Ireland, or of any other country, of the like kind; nor shall the exportation from those Colonies or possessions to the Zollverein be subject to any higher or other duties than the exportation to the United Kingdom of Great Britain and Ireland.”

Clauses in Zollverein and Belgium treaties affecting the Colonies.

In the treaty with Belgium, clause XV is as follows:—

“Articles, the produce or manufacture of Belgium, shall not be subject in the British Colonies to other or higher duties than those which are or may be imposed upon similar articles of British origin.”

As will be found pointed out in the official report of the proceedings of the Conference the provisions of these clauses make the Colonies of Great Britain parties to what is known as the “most favoured nation” treatment, whether such a position is in their interest commercially or not, and thus interfere with that freedom of action in commercial arrangements between the Colonies and the mother country which the Conference desired to obtain.

Colonies made parties to the “most favoured nation” treatment.

The

Action of
Canada in
1892.

The Canadian delegates were favourable to Mr. Fitzgerald's motion; they preferred asking for what was wanted in distinct terms. In 1892, the Parliament of Canada passed an address to Her Majesty the Queen, praying that the effect of the provisions relating to British Colonies in the treaties with Belgium and the German Zollverein, and of any similar provisions in treaties between Great Britain and other nations, should be denounced and terminated; and the adoption by the Conference of a resolution embodying a like request would be no light support to the action of the Canadian Parliament. The address to the Queen sent from Canada did not effect its object, for the reason that what it asked for was apparently a more serious matter than thought by those who made the request. The reply from the Imperial Government explained that many of the commercial treaties entered into by Great Britain contained most-favoured-nation clauses, and that, in many instances, these treaties applied to all the colonies. To confer upon Canada complete freedom in its negotiations with foreign powers, would make it necessary to revise, very extensively, the whole of the commercial treaties of the British Empire; and "a great break-up of existing commercial relations, of which Canada now enjoys the benefit," the reply went on to say, was involved in the suggestion.

Doubt as to
the effect of
the Belgium
and Zollver-
ein Treaties.

As is generally known, there has been some doubt whether the Belgium and Zollverein treaties prevent the making of commercial arrangements between the colonies, such as this Conference contemplated, opinions having been given favourable to both views of the question. It is of course well to have the matter dealt with in a manner that will remove this doubt and place the colonies in the position desired; and to this extent I was favourable to the motions the Conference was discussing. I could not, however, see any advantage in adopting either a resolution so like that already passed as to be little more than a repetition, as the motion moved by Sir Henry De Villiers, in my opinion, was; or one which, while aiming at the removal of objectionable provisions in treaties with foreign nations, only dealt with two treaties among numbers, as Mr. Fitzgerald's did. I therefore suggested that the object sought should be attained by a resolution worded in another form, and I submitted to the conference the following, which in general terms embodied Sir Henry De Villiers and Mr. Fitzgerald's motions, embraced all treaties affecting the colonies, and did not clash with the resolution already adopted:—

Resolution
concerning
foreign trea-
ties passed.

"That this Conference is of opinion that any provisions in existing treaties between Great Britain and any foreign power, which prevent the self-governing dependencies of the Empire from entering into agreements of commercial reciprocity with each other, or with Great Britain, should be removed."

This meeting with approval, the motions of Sir Henry de Villiers and Mr. Fitzgerald were withdrawn, and the resolution framed by me was agreed to.

TRADE WITHIN THE EMPIRE AGAINST TRADE WITH FOREIGN COUNTRIES.

By passing these two resolutions the Conference, it will be seen, affirmed the desirableness of the colonies and other dependencies of Great Britain possessing the power to enter into reciprocal tariff arrangements with Great Britain or with one another, and, to enable this to be done, the necessity for removing from existing treaties between Great Britain and any foreign power, so far as they affected the colonies, those provisions which give foreign powers in their trade with Great Britain, or her dependencies, most-favoured-nation treatment.

Trade within
the Empire to
be more
favoured than
trade with
foreign
countries.

The Canadian delegates now proposed to go a step further. They desired to have the Conference resolve that it was both advisable and practicable to bring about between Great Britain and her colonies a Customs arrangement, by which trade within the Empire would be more favoured than trade carried on with foreign countries; and that pending the assent of the mother country to such a course, the British colonies, or such of them as might be disposed to agree to this proceeding, should in connection with their tariffs take immediate steps to differentiate between each other's products, in whole or in part, and the like products of foreign countries.

MR.

MR. FOSTER moved:—

- “Whereas: The stability and progress of the British Empire can be best assured by drawing continually closer the bands that unite the colonies with the mother country, and by the continuous growth of a practical sympathy and co-operation in all that pertains to the common welfare; and Resolution moved by Canadian representative.
- “Whereas: This co-operation and unity can in no way be more effectually promoted than by the cultivation and extension of the mutual and profitable interchange of their products;
- “Therefore resolved: That this Conference records its belief in the advisability and practical possibility of a Customs arrangement between Great Britain and her colonies by which trade within the Empire may be placed on a more favourable footing than that which is carried on with foreign countries;
- “And further resolved: That pending the assent of the mother country to such an arrangement, in which she shall be included, it is desirable that the colonies of Great Britain, or such of them as may be disposed to accede to this view, take immediate steps to place each other's products, in whole or in part, on a more favoured customs basis than is accorded to the like products of foreign countries.”

In the debate which took place upon these resolutions, the delegates became divided into those who thought it the duty of the mother country to treat her Colonies in matters of trade better than she treats foreign countries, and those who were of opinion that the Conference, in making such a request, was exceeding its functions, and calling upon England to do that which she could not do without an alteration of her fiscal policy.

Mr. FOSTER moved the resolutions in an able speech, but dealing chiefly with general principles. Trade and commerce, he explained, flowed from the centre of the Empire to its dependencies and back again, to the advantage of all, and these trade interests were the guarantee of the unity, the stability, and the prosperity of the whole of the Empire. How then could this trade and commerce be placed on the widest and most satisfactory basis? By, he argued, some such arrangement as that proposed in these resolutions. Who doubted, he remarked, if Great Britain and her Colonies could be formed into a commercial union, whereby the trade between the different parts of the Empire would have a more favoured position than outside foreign trade, that immense benefits would immediately accrue to the Empire as a whole? The attention of the commercial men in Great Britain would be directed more and more to her colonial possessions, and the growth and progress of the Colonies, through the rapid development of their resources, would be an inevitable result. Emigration to the Colonies from Great Britain would receive a great impetus, for under such a customs arrangement as this, a man intending to engage in industrial or commercial life would not only find his position the same in the Colonies as in England, but altogether better, in the circumstances, than it could be in a foreign country. All doubt as to the future of the Colonies would be removed, and while the Colonies progressed the Empire would be strengthened. Then arose the question whether what these resolutions proposed was practicable. Mr. Foster thought it was. British commerce, he contended, received, in reality, no material consideration from foreign nations, and in this matter of a customs arrangement with the Colonies England owed no goodwill to foreign countries. It might be argued, he went on to say, that a tariff preference on the part of England for colonial products would lead to increases in foreign tariffs against England; but his opinion was that these tariffs had in most cases reached their highest point, and instead of being increased the tendency was to have them reduced. It was true that, notwithstanding the tariff walls raised against her, Great Britain had extended her commerce, but this extension had been largely through her Colonies. British commerce had not been extended in foreign countries to anything like its increase in the Colonies. A very important consideration for Great Britain was her food supply, and in proportion as the mother country stimulated her Colonies they could be made the centre from which that food supply might be drawn. Canada, Australasia, and Africa might easily supply all the food of all the kinds that Great Britain needs. The resolutions, he was careful to point out, were framed so as to impart an elasticity to

to the proposed Customs union. They did not ask Great Britain to give a preference to every product of her Colonies, but the opportunity was afforded her to make a choice, and with that advantage she might be able to accede to the proposition without any detriment to her foreign trade. The Colonies also would have this power of selection—a choice of articles in reference to which, as against articles of the same nature from foreign countries, differential rates might be imposed. In Mr. Foster's opinion it was easy for the Colonies to do their share in bringing the proposed customs arrangement into existence. Most of them had a tariff more or less protective, and the initial difficulty apparent in the case of England, in consequence of her policy of freetrade, did not in the case of the Colonies present itself. The colonies, therefore, might take action in the matter themselves, leaving Great Britain to follow. For instance, said Mr. Foster, the Government of Canada, could propose in their tariff that they would, for every British Colony which reciprocated in a like manner, or offered an adequate return, enact, with reference to its goods coming into Canada, that they should be scaled down 5 per cent. or 10 per cent. less than the rates upon foreign goods. That small differential rate would give sufficient return to commercial men, and by stimulating trade direct it into channels which hitherto it has not been accustomed to take. Mercantile men would be at once on the alert, and take advantage to the full of the great facilities for profitable business offered in this way to them. Whatever the Colonies undertook to do in this regard their action would attract attention in England, and in the end induce the mother country to join; and it must not be forgotten, he urged, that trade was essential to the steamship service between Australasia and Canada and to the cable it was proposed to establish.

The delegates favourable or unfavourable to the proposal.

The delegates favourable to the proposal in the resolutions were those of Canada, Tasmania, Cape of Good Hope, South Australia, and Victoria; those against it were the delegates representing New South Wales, New Zealand, and Queensland.

Views of the New South Wales delegate.

In the consideration I gave to the resolutions, I could not see that it was at all within the scope of the duties which the delegates had been brought together to perform, to call upon England to reverse her national policy of free trade by instituting a discriminating tariff which should benefit colonial products at the expense of her imports from foreign countries; and I was of opinion that, even if the request were made, it was certain to be refused. Furthermore, I did not consider myself in the position to pledge New South Wales, or the Government I represented, by my vote, to either asking England to do that which her fiscal policy and the nature of her trade make it, as I consider, impossible for her to do, or to the taking of immediate steps for placing the products of the Colonies on a more favoured customs basis than that accorded to the products of foreign countries. The Conference had passed resolutions that the dependencies of the Empire should be enabled by Imperial legislation to enter into agreements of commercial reciprocity, including the power of making differential tariffs with Great Britain or with one another, and for the removal from existing treaties between Great Britain and foreign nations of those provisions which prevented self-governing colonies from entering into such agreements with each other or with Great Britain; and I considered that in the adoption of those resolutions we had done all that was necessary and had gone far enough. I was prepared, I stated in the debate, to listen to and most favourably consider, any proposal of a practical nature likely to improve the trade of the Australasian colonies with Canada, and that and the laying of the proposed cable were, as I understood, the objects for which the Conference had been convened; but I declined to do anything that would commit the colony I represented to a proposal unmentioned until put before the Conference, of doubtful advantage even if practicable, and quite impracticable, I considered, in view of the nature of the trade and commerce carried on by Great Britain with the world.

It was urged by those delegates who supported the resolutions that they were but the logical sequence of those which preceded them, and were necessary to give the others practical effect. I, and others who voted with me in the matter, did not take this view. It seemed to me that the resolutions were more a part of the commercial policy of Canada, and intended as a support to the efforts of her Government for the extension of her trade, than anything directly in the interests of, or required by, the Colonies of Australasia. Even if England were disposed to enter with the Colonies

Colonies into such an arrangement as that suggested, I could not but see the difficulty of the Colonies fully reciprocating. If Great Britain should be inclined to check the introduction of foreign goods, with the object of increasing the trade between the Colonies and herself, she might, I pointed out, fairly ask us to reciprocate by allowing her to send her manufactured goods into the Colonies on the same terms as those upon which she received our products. Were the delegates, I asked, prepared to pledge their Governments that if, in the interests of the Colonies, England taxed her foreign importations the colonies would allow the manufactured goods of Great Britain to come into their ports free of duty?

The mover of the resolutions declared this was not a fair statement of the case. The Canadian representatives on the resolutions. "If," he said, speaking for Canada, "Great Britain gives us to-day no advantage over another nation, we give Great Britain no advantage over another; and if Great Britain comes and says, 'We will give you 5 per cent. over another,' will she ask us to give her 35 or 40 per cent. advantage?" That, in his opinion, would not be just. If Great Britain gave 5 per cent. on goods sent there from the Colony—that is, taxed foreign goods to that extent—in order to assist the trade with the Colony, Canada would give Great Britain 5 per cent. on her goods representing the same volume of trade. That, he contended, would be fair, and very different from such an arrangement as "We will give you 10 per cent. advantage on a million pounds of wheat, and we will ask you to give us 35 per cent. advantage on a million dollars worth of goods in return."

LORD JERSEY, as the representative of England at the Conference, saw the difficulties in the way of the proposal in the resolutions being carried into effect, and without entering into the discussion, drew attention to them. Lord Jersey on the proposal. Though it was entirely within the power of the Conference to record its belief as to the "practicable possibility" of the first resolution, yet, he pointed out, it must be borne in mind that more than three-fourths of the trade of Great Britain was trade outside the Empire, and her trade with the Colonies—excluding India, the Straits Settlements, and Hongkong—but 15·1 per cent. of the whole. Of this 15·1 per cent., 2·7 represents the trade with Canada, 7·5 that with Australasia, 2·2 the trade with South Africa (Cape of Good Hope and Natal), and 2·7 that with other British Colonies. Then it seemed to Lord Jersey that the language of the second resolution was too strong, and that instead of taking it for granted that the proposed arrangement would be assented to by Great Britain, and declaring that, pending this assent, immediate steps should be taken by the Colonies to discriminate between each other's products and those of foreign countries, something more consistent with the moderate wording of the resolution adopted by the Conference, on the motion of Sir Henry Wrixson, should be submitted.

This criticism led to the resolutions being modified, and they were re-The resolutions amended. submitted in the following form:—

- "Whereas: The stability and progress of the British Empire can be best assured by drawing continually closer the bands which unite the Colonies with the mother country, and by the continuous growth of a practical sympathy and co-operation in all that pertains to the common welfare; and
- "Whereas: This co-operation and unity can in no way be more effectually promoted than by the cultivation and extension of the mutual and profitable interchange of their products;
- "Therefore resolved: That this Conference records its belief in the advisability of a customs arrangement between Great Britain and her Colonies, by which trade within the Empire may be placed on a more favourable footing than that which is carried on in foreign countries;
- "And further resolved: That until the mother country can see her way to enter into a customs arrangement with her Colonies, it is desirable that, when empowered so to do, the Colonies of Great Britain, or such of them as may be disposed to accede to this view, take steps to place each other's products, in whole or in part, on a more favoured Customs basis than is accorded to the like products of foreign countries."

Worded

Worded in this manner, the Conference was asked to record its belief in the "advisability," and not the "practical possibility," of the proposed customs arrangement, and to affirm that "until the mother country can see her way to enter into a customs arrangement with her Colonies," not that "pending the assent of the mother country to such an arrangement in which she shall be included," &c., it was desirable that, "when empowered so to do," the colonies, or such of them as were so disposed to adopt such a course, should take "steps," not "immediate steps," to place each other's products, in whole or in part, on a more favoured customs basis than accorded to the like products of foreign countries.

The resolutions in their amended form were put *seriatim*, the preamble being agreed to, and the first was passed on division by five votes to three, the voting being by Colonies, as follows:—

Ayes.	Noes.
Canada, Tasmania, Cape of Good Hope, South Australia, Victoria.	New South Wales, New Zealand, Queensland.

The second resolution was agreed to without a division.

Position of the Cape of Good Hope in relation to the resolutions.

In the course of the debate one of the delegates from the Cape of Good Hope, referring to the position of that Colony in regard to the Customs Union of the South African States, explained that if the vote of the Cape were given for the resolutions it must be with some addition to them which would protect the Cape delegates from any appearance of acting inimicably to South African trade arrangements. One of the parties to the Union was the Orange Free State, and to vote for the resolutions as they were moved would be voting for the breaking up of the Union so far as the Orange Free State was a part of it, for that country could not be regarded as within the British Empire. This, the Cape delegate said, would be a most unpopular step in Cape Colony, injurious to South African interests, and prejudicial to the interests of the British Empire as a whole. He, therefore, desired some amendment of the resolutions which, while enabling him to vote for them, would protect existing South African trade, and at the same time give South Africa the opportunity to enter the proposed Imperial Customs Union whenever that country might feel disposed so to do. The Conference met this difficulty by passing, on the motion of the Cape delegate (Mr. Hoffmeyer), the following addition to the resolutions:—

"That, for the purposes of this resolution, the South African Customs Union be considered as part of the territory capable of being brought within the scope of the contemplated trade arrangements."

THE PACIFIC CABLE.

The proposed Pacific cable was dealt with by the Conference upon the following motion, moved by myself:—

Resolution with respect to Pacific cable.

"That, in the opinion of this Conference, immediate steps should be taken to provide telegraphic communication by cable, free from foreign control, between the Dominion of Canada and Australasia."

Object in framing the motion.

When framing this motion it was my desire to confine it to an affirmation of the desirableness of cable communication between Australasia and Canada, as, in the absence of information obtainable only from a proper survey of that part of the Pacific Ocean through which the cable must be laid, I did not consider it wise to go far into details. In a sketch I gave of what had been done in connection with the project from the time of the Conference held in London in 1857, I pointed out that the position had been advanced but very little, and that we were as ignorant now as then of particulars essential to a right understanding of the question. Though all the Governments concerned in the project appear to be agreed as to the advantages to be derived from a cable such as that proposed, the want of a thorough ocean survey between Canada and Australasia makes it impossible to say whether the cable can be laid in a manner and at a cost

cost that shall be satisfactory. At present, therefore, the project can be considered only in a general way, and, so far as regards my motion, that course was adopted at the Conference. I explained the objections raised to the proposals for the carrying out of the work as put forward by Mr. Sandford Fleming, both by the authorities in England who reported on the subject for the guidance of the Imperial Government, and by our own Secretary for Telegraphs who examined Mr. Fleming's schemes for the information of the Government of New South Wales. These objections, though not opposed to the project itself, were sufficiently strong in respect of route and cost as to make further investigation absolutely necessary.

In absence of a survey the question can only be considered in a general way.

In speaking to my motion I was careful to explain clearly the position which the Government of New South Wales were disposed to take in connection with the cable. The motion, I pointed out, did not pledge them to share in the carrying out of the work if the cost should be excessive, or the conditions generally under which the work was effected not satisfactory. I did not think, I said, that the New South Wales Government would enter into any arrangement by which the cable would be constructed by the Governments concerned as a government work. This, as other projects of a similar nature, I explained, should be allowed to rest with private enterprise. The Government of New South Wales, I went on to say, would prefer their responsibility in the matter to be confined to what was laid down by the Conference in New Zealand. They were not prepared to subsidise any company, but were quite ready to enter into a guarantee as defined by the New Zealand Conference, which would prevent the company constructing the work from suffering loss—in other words, that, proportionately with the other Governments interested, they should make good to the company the deficiency, if any, between the fixed amount of interest and that represented by the net receipts. The New South Wales Government, I said further, were prepared to bear their proportionate share of the expense of the necessary ocean survey between Canada and Australia, if the Imperial Government did not see their way to have the survey made with the ordinary means at their disposal. As to the position of the Imperial Government in the matter, I expressed the opinion that the cable must be regarded as a work of a national character, and therefore one in the cost of which the Imperial Government should share. I thought also that Lord Jersey, as the representative of Great Britain at the Conference, should state the extent to which the Imperial Government were disposed to assist in the work, and endeavoured to obtain from the Right Honorable gentleman this very necessary information. He did not, however, give it, his instructions from the British Government with regard to his attitude at the Conference preventing him from saying anything but what might be advisable in explanation of matters of a technical nature. One other subject I touched upon when moving my motion, and that was the position of the Eastern and Eastern Extension Telegraph Company in its relations with the Government of New South Wales. The Government which I represented, I stated, had no feeling whatever against that company. They regarded it as a company that had done good work, and one that, so far as could be done within reasonable limits, had, whenever asked to do so, met the wishes of the Australian Governments. The Government of New South Wales, therefore, did not, by joining in the construction of the new cable, desire to destroy the cable already in existence. They were of opinion there was work for both the cables, and that the new one need not injuriously affect the old.

The Government of New South Wales in relation to the cable.

Cable should be left to private enterprise, and guarantee of interest given.

Governments to share the cost of survey.

Position of the Imperial Government.

The Eastern Extension Telegraph Company.

My motion was discussed at some length, and except that the representative of South Australia did not vote, was adopted unanimously.

The discussion showed the whole of the colonies represented at the Conference to be strongly in favour of the cable being laid. Lord Jersey said nothing of the view which the Imperial Government takes of the matter, but a telegram received from the Earl of Rosebery by the President of the Conference on the day upon which my motion was moved, expressed sympathy and interest in the proceedings, and referred to them as a "happy augury for the future of the Empire."

The discussion on the cable resolution.

Telegram from the Earl of Rosebery.

Lord Jersey's position during the discussion and throughout the Conference was little more than that of a seeker of information for the guidance of the British Government, and he was anxious to have from each delegate a definite statement of

Lord Jersey's position at the Conference.

the

the extent to which in the matter of the cable the colony he represented was willing to go, and as far as possible a clear indication of the route it was desired the cable should take. It was not difficult to inform his Lordship how far the colonies were prepared to give their assistance in the establishment of the cable, for most of the delegates had come to the Conference with precise instructions on that point from their respective Governments, but until a survey has been made of that portion of the Pacific across which the cable must be taken, the route for the cable cannot be stated with definiteness.

How the
guarantee
should be
provided.

England must
contribute.

The opinion of the delegates generally as to the method by which the cost connected with the proposed cable—that is the guarantee—should be provided was that a third of the amount should be paid by England, a third by Canada, and a third by Australasia, the last being contributed by the different colonies of Australasia according to their population. England, it was insisted, must contribute in the proportion mentioned, her interests being so largely concerned in the cable, and it was more than hinted that unless the Imperial Government agreed to this the work would not be undertaken. When it is borne in mind that the cable will be used by the British Government and by the business men of England much more than by Australasia and Canada put together, it is not too much to ask that England should pay proportionately for it.

Views of the
Australasian
and Canadian
Governments.

In the course of the discussion the views of the Australasian and Canadian Governments, as represented by their delegates, were stated with more or less definiteness.

Victoria.

Victoria is favourable to the cable on national grounds—as an important means for the development of trade, but principally as an invaluable protection in times of war or threatened outbreak of war. The Victorian representatives were not in the position to absolutely pledge the Government of Victoria to any specific share in the cost of the work, but it was thought there would be very little difficulty in the way of their agreeing to such an arrangement as that already stated—the division of the guarantee into thirds.

Queensland.

Queensland, it was explained, was anxious to have the cable at the earliest moment possible, and was quite prepared to pay its share of the expense in getting it. But the Queensland Government do not approve of the resolution passed at the Conference in New Zealand, and do not regard themselves as in any way bound by it. What they do approve of in relation to the question of route or method of contributing towards the cost connected with the laying and the working of the cable the Conference was not in this discussion informed. A definite statement of the view taken by the Government of Queensland was made subsequently on a motion moved by one of the Queensland delegates.

New Zealand.

The Government of New Zealand appear to be so favourable to the cable that if it cannot be established by private enterprise they are willing that the work shall be carried out at the cost of the several Governments. They desire, however, that the work should be done by a private company, and that this company should be given a guarantee against loss. The New Zealand delegate was very anxious to have his colony in a prominent position in respect of this cable. The first point that will be apparent from the official report of the discussion is an effort he made to have the word "Australasia" altered to "Australia and New Zealand," his object being to impress upon the public mind more emphatically than the term "Australasia" would do the share New Zealand desired to take in the cable and the distinct individuality of that colony. The alteration was not allowed, fear being expressed that it might be taken to mean a committal of the Conference to a route for the cable in which New Zealand would be either the starting or finishing station, and the delegates generally being of opinion that "Australasia" included New Zealand. But at a subsequent sitting the Conference approved of a resolution affirming that the words "Australasian Colonies" used in any motions or amendments should be considered to mean the Colonies of Australia and the Colony of New Zealand, it being understood that this should not commit the Conference in regard to route. It is scarcely necessary to say that taking the cable from Vancouver to New Zealand and thence to Australia would not be satisfactory to the different Australian Governments, and that continuing it to New Zealand after it had been laid between Canada and Australia might not be an arrangement even in the interests of New Zealand, in view of the fact that there is already cable communication between New Zealand and New South Wales.

South

South Australia, as is generally known, occupies in this cable project a position different from that of any of the other colonies. That colony constructed, at its own expense, the line of telegraph which crosses the Australian continent from Adelaide to Port Darwin, a distance of nearly 2,000 miles, and it is quite possible that the Pacific cable, by taking from the existing cables a portion of the business they now do, will subject South Australia to some loss. That loss the southern colony will expect to have made good, or minimised as much as possible; and if that be done, South Australia will throw in its lot with the others and support the proposed cable, regarding it as a work required in the interests of the Empire.

West Australia was not represented at the Conference, and the views of the Government of that colony respecting the cable were not stated. But it may be mentioned that if West Australia join with the other colonies in the proposed work her Government may claim some consideration of the kind required by South Australia. The telegraph line along the West Australian coast to Rohub Bay, where it connects with a branch cable of the Eastern Extension Telegraph Company, provides an overland route alternative to that of the South Australian trans-continental line, and was constructed at the expense solely of West Australia. If the Pacific cable should injure the business of the South Australian line, it will, in proportion, reduce that which now goes by the West Australian line; and though the consideration which West Australia might ask from the sister colonies to meet this loss would be much less than that expected by South Australia, it will, if the claim be put forward, add to the question of the expense for which, in the event of the proposed cable being established, provision will have to be made.

Canada has always been regarded as the strongest advocate of the cable, and, of course, the motion moved by me received the support of the Canadian delegates. But the position of the Dominion in relation to the proposed work, as put before the Conference in this discussion, was somewhat different from what has been understood from the correspondence between the Canadian and Australasian Governments. From that correspondence it has been gathered that the interests of Canada are, if not greater, quite as largely concerned in the cable as those of Australasia; but the delegate speaking for Canada sought to impress upon the Conference that in respect of advantages from the cable Canada had much less to gain than Australasia. In fact, according to his explanation, Canada's position in the matter was that of a sympathiser and generous helpmate rather than a sharer in the benefits expected from the work. The cable was necessary to Australasia, he argued; it was necessary to England; but it was not necessary to Canada. The proximity of Canada to England, and the complete system of cable communication existing between the two countries, removed from the minds of Canadians all anxiety as to the question of defence; and the commercial interests of the Dominion which might be served by the cable were much smaller than those of Australasia or England. The cable was not necessary to Canada for either defence or commercial purposes; but still it would assist in developing trade between Canada and Australasia, to what extent could not at present be stated, though from a fair survey of the situation, such as under fair conditions, should become very large. But outside all this, he went on to say, there was in Canada a very strong Imperial feeling, and taking into consideration her great desire for the cohesion and security of the Empire, it would be most ungenerous on her part if she did not do what she could to have the proposed work carried out. It would have been gratifying to the Australasian delegates to have had the position of Canada defined upon a higher standard, and more in accordance with what it is generally understood to be; but this may be passed over as of no great importance, when we consider that the Dominion is willing and ready to contribute a fair share of the cost connected with the cable. As the first step towards the accomplishment of the work, it was necessary, the Canadian delegate pointed out, to have a survey made and an estimate prepared of the cost of the whole work; and of the expense of the survey and of preparing the estimate Canada was willing to pay one-third, on the understanding that England paid one-third and the Australasian Colonies the other third. Then, as soon as the survey was completed, and the estimate obtained, the Government of Canada would be ready to meet the Governments of Australasia and the Imperial Government and do their share in the construction and laying of the cable, provided, of course, that the work

work was proved to be feasible. That feasibility, in his opinion, would depend upon the Imperial Government contributing their proper share of the cost; it would not, he thought, be possible for Australasia and Canada to bear the whole of the expense.

Tasmania.

The only colonies interested in the cable or in the proceedings of the Conference, in addition to those already mentioned, are Tasmania and the Cape of Good Hope. Tasmania was represented at the Conference by one of the Victorian delegates; but nothing definite was said by him as to the attitude of Tasmania in the matter. It may, however, be assumed that the colony is favourable to the work, and ready to give its share of the expense connected with it.

Cape of Good Hope.

The Cape of Good Hope is sympathetic, but scarcely sufficiently concerned to share in the cost. The interests of that country lie in an extension of the cable to it from Australia. Only this extension would be of any benefit to Cape colonists. The representatives of the Cape at the Conference expressed the sympathy of the Government and the people of that colony with the desire of Canada and Australasia to establish the cable, and asked the Conference to assist in extending it to South Africa. To most of the delegates this extension appeared beyond the limits of the duties they had met together to perform, and an attempt on the part of Sir Charles Mills to add to the motion before the Conference a rider affirming that it was in the interests of the Empire that the cable should be extended to the Cape of Good Hope, and that arrangements should be made between the Imperial and South African Governments for having a route surveyed, was resisted; but later on in the proceedings the Conference consented to the adoption of a separate motion to the effect desired by Sir Charles Mills, the general opinion then being that neither the Australasian Colonies nor Canada were committed thereby.

My motion having been disposed of, Mr. Thynne, one of the representatives of Queensland, proposed:—

Proposal of Queensland delegate that the cable should be laid by the several Governments.

“That in the opinion of this Conference it is desirable that the construction and maintenance of the proposed cable from Vancouver to Australasia should be undertaken by the Governments of Great Britain, of the Dominion of Canada, and of the Australasian Colonies, as a joint national and public work.”

Mr. Thynne thought that as a motion affirming the desirableness of establishing the cable had been passed, it was necessary to consider a process by which the resolution could be brought into operation. Of the three methods by which the work could be carried out—by guarantee, by subsidy, or by laying and maintaining the cable as a Government work—the Queensland Government, he said, were strongly in favour of the last. The interests of a private company, he argued, were not always those of the people who supported the cable service, while, on the other hand, if the cable were under the control of the Governments the advantages derivable from its construction would be fully secured for those most interested. All the administrative duties, he pointed out, might be done by one Government selected by the others, in a manner similar to the selection of Queensland in connection with the administration of New Guinea.

New South Wales opposed to the cable being laid and controlled as a Government work.

I opposed this proposal as not in accord with the instructions I had received from the Government I represented, and because it was clear to me that if the work were carried out at all it should be done by private enterprise assisted in the manner I had before indicated. The Government of New South Wales, I distinctly informed the Conference, did not feel themselves justified in becoming a party to the construction or laying down of the cable as a Government work. In their opinion the cable must be laid, if laid at all, by private individuals, and the assistance rendered by the Governments concerned confined to a guarantee against loss of interest. I was prepared, I said, to go that far and no further.

Opposition by other delegates, and motion withdrawn.

Other delegates opposed the motion on the ground that it was premature to come to any conclusion as to the manner in which the cable should be laid and maintained before the survey—indispensable as a preliminary step—was made; and the motion was withdrawn.

Two or three of the delegates expressed themselves as favourable to the cable being established as a Government work, but generally the motion was not approved.

The

The discussion was important in one respect. It elicited from Mr. Playford a more definite statement than he had previously made, as to the extent to which South Australia was disposed to assist in establishing the new cable. As, while addressing the Conference on Mr. Thynne's motion, he expressed himself as favourable to the cable being laid and controlled by the several Governments, I asked him whether he was speaking for himself or for his Government—was his Government prepared to join with the other Governments in the proposed work? The South Australian Government, he said, would assist as far as they ought, and they would join in the work under Mr. Thynne's proposal if due consideration were given to them in respect of what South Australia had already done in connection with existing cable communication.

Having by the passing of my motion affirmed the desirableness of laying the cable, and disposed of Mr. Thynne's proposal, the way was now clear for the Conference to deal with the important question of the survey of the route for the cable, and Mr. Foster, one of the Canadian Delegates, moved:—

“That the Imperial Government be respectfully requested to undertake at the earliest possible moment, and to prosecute with all possible speed, a thorough survey of the proposed cable route between Canada and Australia; the expense to be borne in equal proportion by Great Britain, Canada, and the Australasian Colonies.”

Survey of the route for the cable.

The motion was passed. The expense of the survey should not exceed £36,000, and divided as proposed the proportion falling upon the Australasian Colonies would be £12,000. It is quite possible, however, that the survey will be undertaken by the British Government with no expense to the Colonies. British war-vessels are constantly engaged in the work of surveying in the Pacific, and it may not be at all difficult for the Admiralty to detach one or two of these vessels for this particular survey without unduly interfering with the progress of other surveying work. Lord Jersey went so far as to say that he did not suppose it was at all likely that as the Admiralty is continually engaged in surveying the Pacific there would be any very great difficulty in deciding that the survey of that ocean should continue on some particular route instead of adhering to the general plan by which the surveying work is carried on now. The passing of a resolution affirming the willingness of the Governments of Canada and Australasia to share in the expense will, at any rate, show the earnestness of those Governments in their expressed desire to have the survey made.

Probable cost of the survey.

Survey may be undertaken at the cost of the British Government.

The Conference also resolved, on the motion of Mr. Fraser:—

“That, in view of the desirability of having a choice of routes for a cable connection between Canada and Australasia, the Home Government be requested to take immediate steps to secure neutral landing ground on some one of the Hawaiian Islands, in order that the cable may remain permanently under British control.”

Home Government to secure neutral landing ground in Hawaiian Islands.

Two other resolutions in relation to the cable were discussed, but the discussion came to nothing, the resolutions being negatived or withdrawn. One was the following, moved by Mr. Lee Smith:—

Other resolutions relating to the cable moved and negatived, or withdrawn.

- (1) That, in the opinion of this Conference, the most speedy and effective manner in which direct cable communication between Canada and Australasia could be established would be by inviting offers to carry out the work under conditions to be hereafter decided upon.
- (2) That with a view to this end the Canadian Government be requested to solicit offers of plans, specifications, and terms for alternative lines as indicated by the several proposals submitted to this Conference.
- (3) That any tenders received be submitted for the consideration of the several Colonies interested, and that any expense incurred be paid by the said Colonies jointly, according to their population.
- (4) That in the event of the proposals not being satisfactory, the several Governments take steps to carry out the undertaking as a national work.

The mover of this resolution wished to hasten matters; waiting for a survey was, to him, putting off the work of laying the cable indefinitely. Calling for tenders immediately would probably result in a satisfactory method of carrying out the

the work being discovered within a few weeks; and in the event of none of the tenders proving such as could be accepted, time would be saved by ascertaining this, and the Governments would know that if the work was to be carried out at all it must be done by them. The motion was negatived. Later on, however, a resolution was passed on the motion of Mr. Thynne, seconded by Sir Henry Wrixon, requesting the Canadian Government "to make, after the rising of the Conference all necessary inquiries, and generally to take such steps as may be expedient" in order to ascertain the cost of the proposed cable, and carry out the project in accordance with the views expressed in the Conference. In the course of the discussion upon this resolution I urged that in the investigations made as to the feasibility of laying the cable we must not lose sight of the importance of ascertaining from the highest authority whether if laid the cable could be worked. It may, I pointed out, be found easy to lay a line of cable from Vancouver to, say, Fanning Island, but it was necessary also to consider whether it was practicable to work a line of that length. The Conference agreed that the practicability of working the cable was as important as the laying of it.

The other motion was one moved by Mr. Fitzgerald, as follows:—

"That, in the opinion of this Conference, immediate steps should be taken for the construction of the cable from Australia to Canada as far as the island of Fiji, to which place the survey is already completed, on a tripartite arrangement between Great Britain and Canada and the Australasian Colonies."

By commencing the work of laying the cable over that portion of the route which has been surveyed, Mr. Fitzgerald thought it would show the determination of the Australasian and Canadian Governments in the matter, as a whole, it would be a guarantee that the work would be completed without unnecessary delay, and it would at once test the question whether the Imperial Government would consent to bear a share of the cost. One or two delegates supported the motion, but others pointed out how impossible it would be to induce any Government or any Parliament to sanction an expenditure of money upon a part of a cable which, until the complete route had been surveyed, no one could say would ever be fully carried out; and the motion was withdrawn.

IMPROVED MAIL SERVICE.

Mail service
between
Sydney and
Vancouver.

The subject of the mail service between Sydney and Vancouver was discussed by the Conference informally, and then dealt with by resolution. Connected with it was considered the question of establishing a fast service across the Atlantic. The service between Sydney and Vancouver, as is generally known, is a monthly one carried on at present by two steamers, run by Mr. James Huddart, and is subsidised to the extent of £35,000 a year, £25,000 of which is contributed by Canada, and £10,000 by New South Wales. The period fixed for the payment of the Canadian portion of the subsidy is ten years from 1893, and that for the payment of the subsidy from New South Wales three years from the same date. In its present condition the service is not satisfactory. It does not fulfil requirements in regard to rapid and frequent despatch of mails, and it is not profitable to its promoters. More steamers are necessary, a much larger subsidy is required, and an Atlantic service, also to be subsidised, is regarded as indispensable to the completeness of the undertaking.

Proposals put
before the
Conference.

Two proposals were put before the Conference. One was that three steamships shall run between Australia and Canada, giving a three-weekly service in the summer months, and a four-weekly service in the winter. Under this proposal, Sydney would be the terminal port in Australia, and on their way to Vancouver the steamers would call at Moreton Bay (Queensland), Fiji, Honolulu, and Victoria (Vancouver Island). If a port of call in New Zealand should be decided upon in preference to Moreton Bay, the service would be a four-weekly one all the year round between Sydney and (say) Auckland, Fiji, Honolulu, Victoria, and Vancouver. Calling at New Zealand would lengthen the voyage between Sydney and Vancouver by about seventy hours. If the Atlantic service be resolved upon the idea is to have five steamships running across the Pacific giving a fortnightly service. The steamers crossing the Atlantic it is proposed shall be four, capable of steaming twenty knots in ordinary Atlantic weather all the year round, and providing a weekly service. All the steamers would be built in accordance with Admiralty requirements,

requirements, and would be available for use in time of war. With these arrangements for rapid and regular transit across the Pacific and Atlantic Oceans, and the facilities offered by the Canadian and Pacific Railway for conveyance across Canada, it is claimed that mails will be delivered in England or Australia at least as quickly as is now done by any one of the existing services.

Time of conveyance of mails.

The capital required to provide the nine steamships is £3,000,000, but with three steamships on the Pacific, which would reduce the total number to seven, the necessary capital would be £2,500,000. On this expenditure of £3,000,000 Mr. Huddart, who is the representative of those from whom the capital would be obtained, and who was questioned before the Conference, asks an annual subsidy of £300,000. What subsidy would be required on the Pacific service only was not stated, Mr. Huddart explaining that it was difficult to consider the proposed service otherwise than as a through route between Australia and England. A subsidy of £300,000 on a capital of £3,000,000, it will be observed, is a very large one. It represents an interest of 10 per cent. The excessive nature of this demand was apparent to all the delegates. Lord Jersey regarded it as an admission that the service would be run at a great loss, and asked Mr. Huddart whether this loss was anticipated. Mr. Huddart said the subsidy would be absolutely necessary during the first few years of the service to make the scheme a success, and the intention was to ask that it be paid for ten years. Of the total amount Canada, it was stated, would contribute £150,000 in addition to the £25,000 now paid on the Pacific service. England would be asked to pay £75,000, and from Australasia would be required the sum of £50,000.

Capital required.

The subsidy asked.

Division of the required subsidy.

The Canadian delegates were very emphatic upon the importance of the scheme and sanguine of its success. It would, of course, work very well in connection with the Canadian Pacific Railway, and should be very beneficial to Canadian trade, especially across the Atlantic. To Australasia it would present the advantage of being one of the most complete steamship services in the world, favourable for passenger traffic and likely to promote trade between the Australasian Colonies and Canada. The Atlantic service would be of no advantage to Australasia as a means of trade with Great Britain. Produce could not be profitably sent from the Australasian Colonies to England across Canada, even by way of the Canadian Pacific Railway. But to ensure the regular and rapid transit of mails, the Atlantic service would be useful.

Advantages of the service relatively to Canada and Australasia.

The project, however, is hampered with difficulties. Some of the delegates were not slow to point out that the present mail service *via* Suez is doing its work in a satisfactory manner, and that, if necessary, it could be made more satisfactory in respect of the time taken in the carriage of the mails. Then South Australia, Victoria, and Tasmania are so well served by the Suez service that it is very doubtful whether they would give any sum worth having to subsidise the proposed new service. New Zealand is only willing to give an appreciable subsidy if the steamers call at a New Zealand port, and Victoria and Queensland take up the same position. A subsidy from West Australia, unless given for Imperial reasons, is, of course, out of the question.

Difficulties hampering the project.

The Conference was informed by Mr. Playford that public opinion in South Australia was more in the direction of withdrawing all subsidy for the carriage of mails and depending upon steamers for a mail service under the law which compels all vessels to carry letters.

Position of South Australia.

Queensland subsidises a mail service carried out by the British India steamers, which service at the present time is the quickest for the northern portion of the Colony. For the other portion it is useful, because it is a cargo service as well as a service for the carriage of mails, and the inclination of the people of Queensland, it was stated, is to subsidise steamers for cargo purposes in conjunction with the carrying of mails. Still, if a Queensland port formed one of the ports of call for the steamers of the Canadian Pacific line, the Colony might be disposed to contribute to the required subsidy.

Position of Queensland.

If Victoria give a subsidy such as will be required from her, the steamers will be expected to call at Melbourne. But it is not the intention of the promoters of the service that the steamers shall call at Melbourne, and this makes it very doubtful whether Victoria will contribute anything. One of the Victorian delegates expressed

Position of Victoria.

expressed this doubt in the discussion which took place upon the resolutions. The Government of Victoria, he gave the Conference to understand, would probably afford some assistance to prevent the present service across the Pacific from being discontinued, but nothing more, as if the steamers did not call at Melbourne they would be useless to Victoria for trade purposes, and as a mail line the Colony did not require them. A subsidy of substantial amount can only be obtained from Victoria by giving the Colony the mercantile advantage which will enable her to send away her produce.

Tasmania. In behalf of Tasmania, all that the delegate representing that Colony could offer was sympathy—at any rate for the present.

New Zealand. New Zealand is willing to subsidise the service to the extent of £10,000 a year if the steamers call there, and not otherwise. A branch service connecting with the main line of steamers does not meet with the approval of the New Zealand Government.

Conflicting interests and opinions a serious obstacle. The desire to have the steamers call at ports which must entail a considerable lengthening of the voyage between Australia and Canada, and the opinion that the service should be subsidised more as one for the carrying of cargo than for the conveyance of mails, are serious obstacles in the way of a successful issue from the labours of the Conference in this matter. If the steamers call at a New Zealand port the voyage, as already stated, will be extended by about seventy hours; if they call at Melbourne it will be lengthened another forty or fifty hours. A call at Moreton Bay would also cause delay—very material, when considered in connection with the necessity to make the complete voyage as short and rapid as possible. The calls at these places, as has been explained, are desired so that the steamers may be used for the purposes of trade, and trade is regarded by several of the Colonies, in relation to the service, as of much greater importance than the conveyance of mails. But using steamers for the carrying of freight is not consistent with building and subsidising them for the carriage of mails. For freight purposes steamers go wherever freight may be offering, but to meet the requirements of a mail service the route of a line of steamers should be as direct as possible, in order to ensure the rapid despatch and delivery of the mails.

Opposing interests may affect the action of Great Britain. These opposing interests put forward by the different Australasian Colonies may affect the action of Great Britain in relation to the subsidy which it is hoped the Imperial Government will be disposed to give. Lord Jersey pointed out to the Conference that the question before the delegates was a mail service. The Imperial Government, he said, could not be expected to look on the matter from a commercial point of view. They might look at it from an Imperial standpoint as well as regard it as a postal matter, but he thought if the Conference based its support of the proposed service upon cold storage in the steamers and things of that kind, it would probably lose a good deal of the support it might otherwise get. This difficulty, noticeable throughout the discussion, was not lessened by the evident desire of Mr. Huddart to secure for the steamers as much freight as could possibly be obtained.

Views of the New South Wales delegate. I represented to the Conference, as emphatically as I could, that if the service were to be subsidised at all the subsidy should be shared in by all the Australasian Colonies and by Fiji. South Australia, I admitted, was well served by the present mail services *via* Suez, but, I pointed out, so were all the Australian Colonies. The importance of the Pacific service lay in the fact that while it promised to give us a rapid transit for our mails it brought us into close communication with Canada and America. New South Wales, I remarked, was already assisting the service to the extent of £10,000 per annum, and this was being done while the Colony was paying the largest of the subsidies contributed by the Australian Colonies to the mail services carried on by the P. & O. and Orient Companies. Then, I contended, that if the service were to be a rapid one for the conveyance of mails, the steamers should go by the most direct route possible, and, therefore, it might not be expedient to call at New Zealand. That Colony, I argued, could be served very well by a branch line of steamers from Auckland to catch the steamers of the main line at Suva, Fiji. The main service should, I thought, alternate with the San Francisco service; that is, be a fortnightly service, the steamers running alternately with those leaving Sydney for San Francisco. I opposed the idea of the steamers calling at two Queensland ports,

ports, but Moreton Bay being not very much out of the direct route to Fiji, it may be possible to arrange for the steamers to call there. As for the subsidy asked by Mr. Huddart, it seemed to me to be very large, and it is questionable whether so great a sum would be approved by the Australasian Colonies. Still, if it were regarded as necessary, there should be no difficulty, I was of opinion, in finding sufficient money, if all the Australasian Colonies, as well as Canada and Great Britain, subscribed. It appeared to me, also, that England should be asked to subsidise the Pacific as well as the Atlantic service, and I moved the insertion, in one of the resolutions, of the words "and Pacific," so that this request should be made.

The resolutions, which were moved by Sir Adolphe Caron and seconded by myself, were passed unanimously in the following form:—

Resolutions passed.

- (1.) That this Conference expresses its cordial approval of the successful efforts put forth by Canada and New South Wales for the establishment of a regular monthly steamship service between Vancouver and Sydney, and affirms the advisability of the reasonable co-operation of all the Colonies interested in securing the improvement and permanence of the same.
- (2.) That the Conference learns with interest of the steps now being taken by Canada to secure a first-class fast mail and passenger service with all modern appliances for the storage and carrying of perishable goods across the Atlantic to Great Britain, and the large subsidy which she has offered to procure its establishment.
- (3.) That it regards such an uninterrupted through line of swift and superior communication between Australasia and Great Britain, as is above contemplated, as of paramount importance to the development of intercolonial trade and communication, and to the unity and stability of the Empire as a whole.
- (4.) That, as the Imperial Post-office contributes towards the cost of the mail service between England and Australia, *via* Brindisi or Naples, the sum of £95,000 per annum, while the sea postage amounts only to £3,000, and to the mail service between Vancouver and Japan and China £45,000, less £7,300 charged against the Admiralty, this Conference deems it but reasonable to respectfully ask that assistance be given by the Imperial Government to the proposed fast Atlantic and Pacific service, more particularly as the British Post-office, while paying the large subsidy of £104,231 a year to the line from Liverpool to New York, has, so far, rendered no assistance in the maintenance of a direct postal line between Great Britain and Canada."

These resolutions commit the Australasian Colonies to very little. They approve of the efforts of Canada and New South Wales to establish the steamship service between Sydney and Vancouver, and affirm the advisableness of all the Colonies interested co-operating in the matter to a reasonable extent. For the rest they merely express a feeling of interest in the steps being taken by Canada to establish the Atlantic service, and a sense of the importance of the through service as a means of benefiting the Empire generally; and they ask assistance from the Imperial Government. Whether in face of the difficulties which appeared in the discussion upon the resolutions, the required co-operation on the part of the Colonies of Australasia or the assistance sought from the Imperial Government will be forthcoming, remains to be seen. Australasia is interested for the most part in the service as far as Vancouver, and in respect of that there is the want of agreement as to whether the steamers should be devoted to cargo purposes more than to the carrying of mails and passengers, and as to ports of call. Canada's interests lie more in the direction of trade than mail conveyance, especially across the Atlantic; and England, if an Imperial subsidy is to be given, can only regard the service as a mail line.

Effect of the resolutions.

The only hope of a result from the resolutions in accordance with the objects at which they aim lies in a readjustment of the mail subsidies paid at present under the existing mail contracts. The contract between the Australasian Colonies and the P. & O. and Orient Companies for the mail service *via* Suez will terminate in January, 1895, but has been extended for one year, and, therefore, will run out in January, 1896. The contract under which the service *via* San Francisco is carried

Practical results from resolutions only likely from a readjustment of present subsidies.

on

on is an annual one, renewed each year from the date upon which it expires, and, therefore, can without difficulty be reconsidered in 1896, or at any time. In 1896 also the period will end during which New South Wales has undertaken to subsidise the service between Sydney and Vancouver. The contracts under which services for the conveyance of mails are subsidised by the Imperial Government will terminate between 1895 and 1898. When all these contracts shall have come to an end the opportunity will be present for a reconsideration of the whole question of mail subsidies, and Australasia and England may then see their way to establishing the service between Australia and Canada, or that service, together with the proposed service between Canada and England, upon a permanent and satisfactory basis. This seemed to be the only direction in which a possibility of requisite support being given was apparent to the minds of those delegates who asserted the desire of the Governments of their Colonies for a cargo service or for the steamers to find in these Colonies ports of call; and it is the only direction in which support can be looked for from England. The Imperial Government is not at all likely to add to the large amount it already pays as mail subsidies, but the Conference was informed by Lord Jersey that the British postal authorities are not indisposed to readjust the subsidies if a readjustment be found advisable. The authorities in England, his Lordship said, are only too anxious that the money spent on mail contracts should, by a choice of the best mail routes, be used in the way most advantageous to the various parts of the Empire and to people outside the Empire also. At the time the Conference was engaged in the discussion of this subject a committee was sitting in London dealing with the question of mail subsidies, and prepared to take into consideration the proceedings of the Conference in relation to the proposed new service. The resolutions of the Conference will therefore meet with full consideration at the hands of the Governments concerned, but, in the circumstances, the fate of the proposal cannot be determined before the expiration of two or three years.

BANKRUPTCY AND WINDING-UP OF COMPANIES.

One other matter of general interest was brought before the Conference. It was foreign to the stated objects for which the Conference was convened, but submitted by Sir Henry Wrixon at the last sitting, it was hurriedly dealt with. Sir Henry Wrixon moved:—

Legislation
required to
be completed.

“That this Conference desires to call the combined attention of their respective Governments to the proceedings of the Colonial Conference of 1887, in regard to the bankruptcy and winding-up of companies, with a view to completing the necessary legislation upon the questions therein raised.”

He explained that the bankruptcies of companies carrying on business in Australasia and in Great Britain had rendered it exceedingly desirable that the law on the subject should be perfected—all difficulties and ambiguities cleared away; and he desired to have placed on record the wish of the Conference that the matter should receive due consideration.

THE RESOLUTIONS OF THE CONFERENCE STATED COLLECTIVELY.

Collectively the resolutions passed by the Conference are as follows:—

Agreements
of commercial
reciprocity.

“That provision should be made by Imperial legislation enabling the dependencies of the Empire to enter into agreements of commercial reciprocity, including the power of making differential tariffs, with Great Britain, or with one another.”

“That this Conference is of opinion that any provisions in existing treaties between Great Britain and any foreign power, which prevent the self-governing dependencies of the Empire from entering into agreements of commercial reciprocity with each other, or with Great Britain, should be removed.”

Cable com-
munication
free from
foreign con-
trol.

“That, in the opinion of this Conference, immediate steps should be taken to provide telegraphic communication by cable, free from foreign control, between the Dominion of Canada and Australasia.”

“That

- “That the Imperial Government be respectfully requested to undertake at the earliest possible moment, and to prosecute with all possible speed, a thorough survey of the proposed cable route between Canada and Australia; the expense to be borne in equal proportions by Great Britain, Canada, and the Australasian Colonies.” Survey of the proposed cable.
- “That it is for the interest of the Empire that, in case of the construction of a cable between Canada and Australasia, such cable should be extended from Australasia to the Cape of Good Hope; and that for that purpose arrangements should be made between the Imperial and South African Governments for a survey of the latter route.” Extension of the cable to the Cape of Good Hope.
- “That, in view of the desirability of having a choice of routes for a cable connection between Canada and Australasia, the Home Government be requested to take immediate steps to secure neutral landing ground on some one of the Hawaiian Islands, in order that the cable may remain permanently under British control.” Home Government to secure neutral landing ground in Hawaiian Islands.
- “That if the words ‘Australasian Colonies’ be used in any motions or amendments that may be brought before this Conference they shall mean the Colonies of Australasia and the Colony of New Zealand.” Definition of the words “Australasian Colonies.”
- “Whereas : The stability and progress of the British Empire can be best assured by drawing continually closer the bands that unite the Colonies with the mother country, and by the continuous growth of a practical sympathy and co-operation in all that pertains to the common welfare.
And whereas : This co-operation and unity can in no way be more effectually promoted than by the cultivation and extension of the mutual and profitable interchange of their products.
Therefore resolved : That this Conference records its belief in the advisability of a customs arrangement between Great Britain and her Colonies, by which trade within the Empire may be placed on a more favourable footing than that which is carried on with foreign countries. Trade within the Empire against trade with foreign countries.
Further resolved : That until the mother country can see her way to enter into a customs arrangement with her Colonies, it is desirable that, when empowered so to do, the Colonies of Great Britain, or such of them as may be disposed to accede to this view, take steps to place each other’s products, in whole or in part, on a more favoured customs basis than is accorded to the like products of foreign countries.
Further resolved : That for the purposes of this resolution the South African Customs Union be considered as part of the territory capable of being brought within the scope of the contemplated trade arrangements.”
- “ (1) That this Conference expresses its cordial approval of the successful efforts put forth by Canada and New South Wales for the establishment of a regular monthly steamship service between Vancouver and Sydney, and affirms the advisability of the reasonable co-operation of all the colonies interested in securing the improvement and permanence of the same. Steamship service between Vancouver and Sydney, and between Canada and England.
 (2) That the Conference learns with interest of the steps now being taken by Canada to secure a first-class fast mail and passenger service, with all the modern appliances for the storage and carrying of perishable goods across the Atlantic to Great Britain, and the large subsidy which she has offered to procure its establishment.
 (3) That it regards such an uninterrupted through line of swift and superior communication between Australasia and Great Britain as is above contemplated, as of paramount importance to the development of Intercolonial trade and communication, and to the unity and stability of the Empire as a whole.
 (4.) That as the Imperial Post Office contributes towards the cost of the mail service between England and Australia, *via* Brindisi or Naples, the sum of £95,000 per annum, while the sea-postage amounts only to £3,000; and to the mail service between Vancouver and Japan and China £45,000, less £7,300 charged against the Admiralty; this Conference deems it but reasonable to respectfully ask that assistance be given by the Imperial Government

Government to the proposed fast Atlantic and Pacific service; more particularly as the British Post Office, whilst paying the large subsidy of £104,231 a year to the line from Liverpool to New York, has so far rendered no assistance in the maintenance of a direct postal line between Great Britain and Canada."

Canadian Government to promote the establishment of the cable.

"That the Canadian Government be requested, after the rising of this Conference, to make all necessary inquiries, and, generally, to take such steps as may be expedient, in order to ascertain the cost of the proposed Pacific cable, and promote the establishment of the undertaking in accordance with the views expressed in this Conference."

Bankruptcy and winding-up of companies.

"That this Conference desires to call the continued attention of their respective Governments to the proceedings of the Colonial Conference of 1887 in regard to the bankruptcy and winding-up of companies, with a view to completing the necessary legislation upon the questions thereto raised."

Resolutions and proceedings of Conference to be forwarded to Secretary of State for the Colonies, and Premiers of the Colonies.

"That the Chairman be requested to forward the resolutions and proceedings of this Conference to the Right Honorable the Secretary of State for the Colonies, and to the Premiers of the Colonies represented; and to take such steps as may be necessary for calling continued attention thereto."

TRADE BETWEEN AUSTRALASIA AND CANADA.

Australasian products much the same in all the Colonies.

Trade between Australasia and Canada, as will have been seen, was prominently before the Conference throughout its proceedings, and before the Conference finally adjourned, an informal discussion took place to afford the delegates an opportunity for exchanging views as to the products in respect of which trade might be promoted. Speaking generally, the products which Australasia has for export to Canada are much the same in all the Australasian Colonies, and my explanation of what New South Wales could offer to Canada and might take from Canada in return was more or less repeated by the other Australasian delegates in behalf of the Colonies they respectively represented. It appears to me, and I expressed my opinion to this effect, that notwithstanding the difficulties arising from the tariffs of the Australasian Colonies and of Canada, there are many articles produced in Australasia, and others the product of Canada, in which trade might be carried on between the two countries. New South Wales, I said, could supply with advantage to Canada:—

Products which New South Wales might send to Canada.

Wool.
Frozen mutton.
Tinned meats.
Hides and skins.
Hardwood.
Fruit.
Butter.
Tin.

Articles which Canada might send to New South Wales.

Canada, I considered, could find a profitable market in New South Wales, and in the other Australasian Colonies, for:—

Paper.
Cotton goods.
Fresh salmon.
Agricultural implements.

Wool.

At the present time Canada consumes a large quantity of Australian wool, but it is obtained through the English and American markets. Mr. Mackenzie Bowell, when in Sydney in 1893, stated that while Canada had been all along consuming a large number of Australian products, they had been purchased either in the United States or Great Britain. It was in that way Canadians had bought all their Australian wool, amounting in the course of a year to millions of pounds' worth. It had gone from Australia to England, and from England to New York, and had been transhipped in New York for Canada. All fine wools are admitted into Canada free of duty, but on coarse wools, such as Canada produces a duty is imposed.

imposed. Thus greasy and scoured merino wools are free, while upon Leicester, Lincolnshire, and South Down combine wools, or wools known as lustre wools, or combine cross-bred wools such as are grown in Canada, a charge is made of 3 cents per lb. The staple industry in Australia being wool, and the growth and sale of wool being always on the increase, there can be no doubt that in this product a large and growing trade with Canada in this important product, if fair encouragement be afforded, must take place. Sheep in Canada, instead of increasing, have been slightly decreasing, and the total number in the Dominion is stated as about 2,500,000. They are of a kind different from those in Australia, and when it is borne in mind that with our rapid increase we shall before very long be able to count the sheep of Australia at 130,000,000 it can be seen, as I pointed out to the Conference, what an enormous quantity of wool we have and shall have at our disposal for export. It seemed to me surprising that, notwithstanding the large purchases of wool made by Canada, it was bought, not directly from the Australasian Colonies, but chiefly through other countries. If, I said, we were going to establish a direct trade between Australasia and Canada, there was no reason why the buyers should not enter into direct communication with the wool-growers, for, by visiting the Australasian markets, the buyers would have a much better choice of wool and purchase it to much greater advantage. The growth of the wool trade of the markets in Sydney and Melbourne was so marked, I pointed out further, that it was not too much to say that before very long the bulk of the sales would take place in Sydney and Melbourne instead of in London as at present. It is very probable that before long Canadian buyers will form an important addition to the number of purchasing agents who now annually visit the Australasian wool markets from England, the Continent of Europe, and America. The Department of Mines in New South Wales is giving its assistance in the matter. In April of the present year there were forwarded from the Department to the Secretary of the Board of Trade, Toronto, and to Messrs. Kirkwood, Lennox & Co., Sudbury, 100 samples of ordinary commercial greasy wools, taken out of the bales just as they are placed on the Sydney market. All the sheep from which the samples were obtained were simply grass-fed, and, therefore, the opportunity is afforded all who examine the wool of seeing the product as it is naturally grown and as it is disposed of at the ordinary sales. This action on the part of the Department of Mines is undoubtedly in the right direction. Personal knowledge of the articles which New South Wales can sell to Canada is what Canadians require, for though the disposition to trade with Australasia undoubtedly exists among the people of the Dominion, ignorance, or at least a very limited knowledge, of what can advantageously be obtained from this part of the British Empire, hampers the efforts of those endeavouring to bring about practical results.

British Columbia, which comprises most of the western portion of Canada, ^{Frozen} should prove a profitable market for Australasian frozen mutton. ^{mutton.} When in Sydney, Mr. Mackenzie Bowell expressed the opinion that a large trade in this product would take place between Australia and the western provinces of Canada; and at the Conference, Mr. Foster, the Canadian Minister for Finance, spoke similarly. Cold storage would be necessary in the steamers running between the Australasian Colonies and Vancouver, and in the Canadian towns fixed upon as distributing centres. Competent agents would also have to be appointed to see both to the receipt and distribution of the mutton, and its sale at a reasonable rate to consumers. British Columbia—in fact, the whole of the western portion of Canada—depends almost wholly on outside sources for its mutton, obtaining it partly from the eastern provinces of the Dominion, and partly from Oregon, in the United States; but both the Canadian and Oregon mutton are said to be of inferior quality, and therefore the people should welcome Australian mutton, as it would be of good quality, and could be disposed of at a moderate price. Two things necessary to be secured are that the mutton from Australia shall be sold to retail purchasers as Australian mutton, and that the price charged for it shall be as low as it can be disposed of profitably. With those precautions, and the matter properly advertised, the quality and cheapness of the article will impress the Canadian people, and the trade will be permanently established. During my stay in Vancouver I was informed that small consignments of mutton had been sent there from Sydney, but that they had not been successful, partly from want of a suitable agency, and partly from the high charge made for the meat by the retail butchers. This charge was said to

to be from 7d. to 9d. a lb. Until suitable agencies, possessing of course refrigerating chambers, are obtained, it is of no real use sending mutton into Canada. With these agencies the success of the trade should be assured. I found, in conferring with Boards of Trade, and in talking with business men in Vancouver, and as far east as Winnipeg, the capital of Manitoba, a strong disposition to assist in the development of the Australian meat trade, but, like men of this class over all the world, those with whom I conferred, and others like them, do not care to run any unnecessary business risks, and while they are willing to assist they are not disposed to initiate. If anything definite be done it must be brought about by the merchants of Australasia, who must take the first practical steps towards obtaining what they want, and then look for help from the business men of Canada. If regular shipments of frozen mutton were assured Canadians could be found who would erect the necessary refrigerating stores, into which the mutton would be received, and from which it would be passed to purchasers. But regular shipments mean a certainty of a settled and extensive trade, and to have this the merchants of Australasia must themselves commence the trade, and then enlarge it to the necessary proportions. All over Canada commercial men, through their Boards of Trade, and individually, expressed themselves to me as earnestly desiring to see trade spring up with Australasia; but while they will do what they can to send Canadian products here, it rests with us to do all we can—to rely upon ourselves only—to introduce Australasian products there.

Tinned meats.

Tinned meats are an article which, from the position of British Columbia and attendant circumstances, should find a sale. Eastern Canada and the United States supply at the present time what is wanted, and this is said to be about 150 tons per annum, such a large consumption being due to the facts that the headquarters of the British fleet in the North Pacific are at Esquimaux, on the island of Vancouver, that a large sealing fleet is annually fitted out at Victoria, the capital of British Columbia, and also on Vancouver Island, and that numerous lumber camps exist in this western territory. The competition with which meat preservers in New South Wales would have to enter would be severe, but it is thought that if their articles be of the best quality and the sale of them pushed, a satisfactory trade should be established. In Vancouver, and in one or two other towns, there were a few tins of Queensland meats visible in shop windows, but they were not attractively displayed and as far as I could ascertain the sale of them was not large. An attractive outside appearance is not inconsistent with a good quality of meat inside, and this, with a taking method of display, often materially assists to bring about a sale. By the s.s. "Warrimoo" there were forwarded from Sydney, on 18th April, 1894, to Vancouver, to be divided between the Board of Trade and the Conference at Ottawa, two cases (each fifty-nine tins assorted) of preserved meats of the Sydney Meat Preserving Company; the Department of Mines being the shipper. On the same date, and by the same steamer, there were forwarded by the Mines Department to Messrs. Kirkwood, Lennox, & Co., Sudbury, Ontario, one case containing fifty-nine tins of assorted meats of the Sydney Meat Preserving Company, and one case of compressed corned mutton and sheeps' tongues from the Australian Chilling and Freezing Co., Aberdeen. These meats will be tested by persons interested in the question of their importation into Canada, and their quality and prices made known. So far this will be advantageous, but if the reports which, doubtless, the Department of Mines will receive, be favourable something must be done by the meat companies themselves to bring a trade in their meats into existence. In the case of these products, as with frozen mutton success will depend largely upon the establishment of good agencies, moderate prices consistent with fair profit, and such a pushing of the sale as will keep the articles well to the front in their competition with the Canadian and American brands.

Hides and skins.

The greater number of the hides and skins used in Canada are received through the United States. Many of them come from the Argentine and other States in South America, but they are treated in Canada as United States exports. Raw hides whether dry, salted, or pickled are admitted into Canada free of duty, and looking at the great quantity of both hides and skins New South Wales has at its disposal, I am of opinion and so I stated at the Conference, that we ought to find in Canada a suitable market for them. The hides we produce, I explained, are at least as good as any that can be obtained elsewhere, and in kangaroo skins, I mentioned,

mentioned, we have already a considerable trade with the United States. Some business is also done in Canada with rabbit skins, which are dressed and used for several purposes.

The hardwoods of New South Wales should prove useful in Canada, but, Hardwood. considering the almost limitless quantity of soft woods which the forests of the Dominion produce, and the uses to which these woods are put, it is doubtful if our hardwoods, for at any rate a very long time, could find a large Canadian market. The fir or pine of Canada, identical with that of Oregon or Puget Sound, is used for many purposes. Houses are built of it, pavements of it are laid down; bridges, railway as well as road, are constructed of it; and even railway sleepers, or ties as they are called in Canada, are of pine-wood. Its extensive use is due not only to the large quantity available, but to the ease and cheapness with which the wood is obtained. Our hardwoods would be much better in many cases in which pine is employed, but would be more expensive, and expense is an important circumstance in the matter. For the wood-blocking of streets New South Wales hardwoods should be very acceptable in the Canadian cities, but up to the present the people have been content with asphalt, or the ordinary stone which forms a macadamised street. I pressed the importance of our timbers in this direction upon the attention of the Canadian Delegates at the Conference, and they made several inquiries concerning them and the cost at which they could be supplied. Fortunately there were in the building where the Conference was sitting specimens of wood-paving blocks forwarded there by the Mines Department of New South Wales, and they were brought in and examined, one block of ironbark, which had formed part of the paving of a street for thirteen years, and yet was none the worse for wear, attracting a good deal of notice. The blocks were cut from blackbutt, spotted gum, bluegum, tallowwood and red mahogany. Before long there will be an opportunity afforded Canadians for seeing the wood laid down in blocks at Vancouver, and those who examine it there will then be able to judge of its durability and value. The Department of Mines in New South Wales are supplying to the Municipal Council of Vancouver sufficient hardwood blocks to pave an area of 100 ft. x 50 ft. at the entrance of the Canadian Pacific Railway Station, and the result of this experiment in wood-blocking will be watched with considerable interest by all. The usefulness of these woods for railway sleepers, bridges, and anything else requiring timber of great strength and durability I also urged. The information I was able to give, together with the specimens of hardwoods sent to Canada from Sydney by the Department of Mines, should make Canadians fairly well acquainted with the woods. The specimens forwarded by the Department of Mines comprised soft as well as hard woods, and consisted of black bean, red bean, mountain ash, turpentine, grey ironbark, red gum, bloodwood, stringybark, blackbutt, mountain gum, messmate, blackwood, red cedar, rosewood, tulipwood, forest oak, curly yarran, beefwood, black pine, coachwood, satinwood, and stone pine.

In Australian fruits it is considered in Canada that there is an opening for Fruit. an extensive trade. Canadians are very large consumers of fruit. No meal is complete without it, and at breakfast, and in some places at the other meals, fruit is the first thing eaten. The present supplies are obtained chiefly from the United States and from the West Indies. Australia's opportunity lies in the fact of her seasons being the opposite of those in Canada. For half of the year the present fruit supply of Canada fails, and it is in that period when Australian fruit should have a profitable sale. Oranges and lemons would probably find a ready market, and possibly a trade might be encouraged in apples and passion-fruit. Oranges, including mandarins, and lemons could be supplied from New South Wales in quantities from the middle of May till the end of July, and with fair prices the quantities supplied could eventually be increased to the extent of meeting the whole requirements of Canada. I explained the kind of oranges we could supply and the prices which would be expected for them, and the explanation seemed satisfactory. The lemons, I said, from information which had been supplied to me by the Department of Mines, would be of the main crop, a first-class fruit that would carry, and such as would keep well. Small thin-skinned juicy lemons are much liked by Canadians, who consume large quantities. Canada is not unacquainted with the Australian lemon, for they have been sent there and found great favour.

favour. Apples, it has been thought, would also be saleable in the western parts of Canada, particularly about the coast, say from February until May, but if the market for this fruit exists it is not certain that we have the apples to send. A report from an expert connected with the Department of Mines, supplied to me was quite unfavourable to the idea that New South Wales is in a position to export apples to Canada. "We have no apples or pears," the report states, "available for export that are at all suitable, and also as the bulk of our local apples are of inferior quality and ripen during the months of December, January, and February, they would have to compete with the better varieties of Canadian-grown fruit, which will keep in good condition till April or longer." Passion-fruit is at present unknown in Canada, but if introduced would doubtless be appreciated there. It must, however, be borne in mind in connection with this and any other fruit it may be suitable to send to Canada that only the best quality will attract notice and find a sale, and that every passion-fruit, apple, lemon, or orange must be carefully and properly packed. In Sydney, Mr. Bowell, speaking of oranges, pointed out that in sending oranges to Canada, Australia would have to compete with Southern California and the Pacific Slope on the one hand, and with Florida and the West Indies on the other. The fact that Manitoba is not a fruit-producing section of the country should lead to a large consumption there of Australian produce, but it must not, he said, be sent in the hotch-potch manner in which much of it had been sent in the past. The various qualities and the various sizes must be kept distinct, and they must be carefully packed. The first essential to a successful interchange of products is that the Australian fruit is selected with judgment and packed with care. The heavy, clumsy, and generally unattractive appearance of the cases in which Australian fruit is in most instances packed is a matter of serious importance. Californian fruit, and fruit from the West Indies which the Canadians have been and are in the habit of importing, is packed in lightly made, neat, and clean pine wood cases in which the fruit, carefully placed, looks as attractive as strawberries or cherries in a pretty basket. Display is an important object with the Californian fruit-grower or shipper, and in addition to imparting to his fruit a nice appearance he is careful in seeing that it is packed so that it shall not spoil—oranges, lemons, and apples being each wrapped in tissue-paper in a manner which largely assists in protecting them from injury. In the fruit shops of Vancouver I saw Australian fruit cases which were a sad contrast to the light and dainty cases from the fruit-producing districts of the United States, and I am sorry to say I saw fruit which had come from one of the Australasian Colonies so inferior that it could not have been sold in any Australasian market. That Australian fruit can be sent to Canada successfully, was shown to the Conference by a statement made by Mr. Bowell with reference to some oranges he obtained during his visit to Sydney last year. These oranges, he said, were brought in a bag 30 or 40 miles to Sydney, and then lay in his room for a week. At the end of that time he had them packed and forwarded to his son in Vancouver. At Vancouver they were not delivered to the person to whom they were addressed until some days after the steamer's arrival, and then when the box containing them was opened only one or two of them were found to have spoiled, and the rest were pronounced by every person who tasted them, delicious. Mr. Bowell went so far as to say that the orange groves of New South Wales were as fine as any he had ever seen in Southern California, and produced a better quality of fruit; and, in his opinion, there was no reason why they should not take, in the Canadian market, the place of the Southern California oranges, and supply the whole of the Canadian north-west territories. The one thing to bear in mind is that the Canadians know what good fruit is, and cannot be induced to purchase that which is bad or inferior.

Butter.

Butter is an article of general consumption which ought to sell largely in British Columbia during the winter months. Australian butter has been sent there, and has been pronounced much superior to that obtained from Eastern Canada. The price too at which it can be sold is both cheap to the purchaser and profitable to the producer. During the winter the Australian article would have the market almost to itself; but in the summer it would have to compete with the butter from Eastern Canada, and the sale during that period would consequently be restricted.

In

In the western parts of Canada large quantities of tin are used in the ^{Tin.} canning of fish, and there is no reason why this product of New South Wales should not be sent from Sydney to Vancouver. Canada does not possess any tin deposits, and therefore has to purchase all the tin used in her fish-canning industries.

Other products in which some business may be done with the Canadians are ^{Other products.} potatoes, eggs, wine, and possibly tobacco-leaf. Potatoes, it is thought, should find a profitable market in Canada, and eggs, also, if they can be preserved from deterioration during the tropical part of the sea voyage. Very large quantities of eggs are said to be consumed in Canada, and at times the price at which they are sold is very high. Australian wines ought to find favour among Canadians, but they will always have a formidable rival in the palatable and cheap wines imported from California. One of the New South Wales brands of wine can be had in the Canadian Pacific Railway hotels, but the price charged for it per bottle is virtually prohibitive, a dollar and a half, or 6s., being asked for what in Sydney can be purchased for 2s. or 2s. 6d. This excessive charge will not, of course, encourage the sale of the wine. At a reasonable price it ought to sell very well, for it is a favourite brand. Some samples of Victorian wine were sent to Canada and tested there. They did not meet with approval as they were considered to be naturally too strong or had been fortified after fermentation. Australian tobacco-leaf has also been forwarded to Canada, but so far has met with nothing but disapproval. A sample sent from Sydney was tested in Vancouver by one of the largest tobacco-manufacturers in Canada, and by another in Montreal, and they, the delegates were informed, pronounced it unfit for use. This is discouraging, but it does not show that tobacco-leaf of good quality may not be sent to Canada and sold there. There is no duty upon it.

Among the manufactures of Canada I found some that I thought were of a kind likely to sell profitably in New South Wales. Paper was one; it is produced ^{Canadian products of use to New South Wales.} in Canada largely, from the wood of the spruce, and is an excellent article, sold at a reasonable price. Cotton goods are the product of another Canadian industry which should find a market here. Canadian salmon is already arriving in Sydney; agricultural implements have also been coming. In each of these products of the manufacturing industries of Canada, and possibly in some others which the enterprise of Canadian business men may cause them to send in this direction, New South Wales may find it advantageous to trade with Canada.

But it is not likely that trade between the two countries will develop into large proportions rapidly. It is far more probable that it will grow very slowly. ^{Development of trade probably slow.} That eventually a large and profitable trade between the two countries will be established is certain. The opportunity offered for the shipment of produce by the line of steamers between Sydney and Vancouver must induce shippers to avail themselves of it, and the information which the delegates from the Colonies of Australasia were able to give of the products of these Colonies ought materially to assist any efforts in this direction.

During the time the delegates were in Canada they had many opportunities for making themselves acquainted with the country and its people. They visited the chief cities, conferred with the principal Boards of Trade, and were afforded all the information they desired. Their visit should result advantageously to both countries.

I have the honor to be,

Sir,

Your Excellency's most obedient servant,

F. B. SUTTOR.

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GRENFELL HOSPITAL.

(REPORT ON MANAGEMENT OF.)

Ordered by the Legislative Assembly to be printed, 23 April, 1895.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 14th March, 1895, That there be laid upon the Table of this House,—

“A copy of the Report of Dr. Ashburton Thompson in connection with the “Grenfell Hospital dispute.”

(Mr. Watson.)

Deputy Medical Adviser to the Government to The Medical Adviser to the Government.

REPORT on an inquiry into the circumstances under which one John James Walker (or Fullerton) was an in-patient at, and died in, Grenfell Hospital; and regarding the management of Grenfell Hospital.

Sir,

12 November, 1894.

I have the honor to present the following report on certain circumstances connected with the death of a patient known as John James Walker (or Fullerton) at the Grenfell Hospital, which I made on 31st October and on 1st and 2nd November, pursuant on the attached instruction approved by the Honorable the Chief Secretary on the 24th ultimo.

2. Appended to this report are copies of the evidence given at my request by the Secretary, President, and medical officer of the hospital, by a member of the General and Visiting Committees, and by Mrs. Hazelton, a charitable lady residing at Grenfell, who appeared as complainant. Attached are also the depositions taken at an inquest which was held on the body of Walker, and some newspaper extracts relative to that and other matters. In expressing the following opinions I have the documents just mentioned in mind.

3. The case which necessitated this inquiry appears to me to be the following:—The deceased Walker was admitted to the hospital on 21st May, 1894, and he died in the hospital on 12th September, 1894. The medical officer refused to give a certificate of death, in order that an inquest might be held, at which certain charges of cruelty and neglect which had been freely preferred against the matron and himself in respect of deceased might be inquired into. An inquest was accordingly opened on 13th September, adjourned to the 20th, and adjourned a second time to the 26th, when it was concluded by the jury finding that “the deceased died from weakness and exhaustion caused by tuberculosis”; to which they added a rider, in which they expressed the opinion that “he was subjected to harsh and cruel treatment at the hands of the matron, and to negligence on the part of the medical officer.” A special meeting of the Hospital Committee was thereupon called for the 27th. The matron’s resignation was then tendered by her, and was accepted. At the same time the medical officer tendered his resignation, and this also was accepted by the Committee; but he was requested to continue to discharge the duty of his late office at the salary formerly paid him. It was at the same meeting further resolved that the Secretary should advertise the post of medical officer to the hospital vacant, three times in the *Sydney Morning Herald* and twice in each of the Grenfell papers, and should require applicants for it to place their applications in his hands by 10th October following. It was further resolved that a special meeting of subscribers should be called for 17th October, to receive nominations to the post, and to vote thereon. On the 17th the meeting was held. There were four applicants for the post, besides the late medical officer, who presented himself for re-election. The other four candidates were unprovided with nominators and seconders; the late medical officer alone was nominated and seconded, and consequently he was elected without opposition. Under these circumstances the question arises, in view of that part of the rider which censures the medical officer, whether the interests of future patients at this hospital are likely to be carefully and humanely cared for, and whether the general management of the institution are such as to ensure all the supervision usually requisite to good order in public institutions.

4. I do not think that anything would be gained by attempting to examine the actual case of the deceased in detail; and the present inquiry turns upon quite other matters to which, however, this death has drawn public attention. I, therefore, merely refer to the general account of it given by the medical officer in his statements to me and at the inquest, and say that on the whole I am inclined to accept it as far as it goes. From some cause or other the deceased was doubtless constitutionally wrecked when he was admitted; and his symptoms seem to have been but indefinite and apparently incommensurate with his progressively increasing weakness. But however that may be, I feel satisfied that the deceased was not at any time regarded as a mere malingerer; and that the failure to ascertain the cause of his fatal illness was not due to neglect, at all events. Nevertheless, one sign of illness which he showed must be referred to in explanation of the evidence given at the inquest by certain persons who were in-patients in the same ward with the deceased, and by others, which were contrary to the statements they were (at the inquest) alleged to have made with reference to the deceased while he was alive. When these patients (of whom none were within reach at the time of my visit) were asked while deceased was alive whether he were being suitably treated, I believe from the statements made to me by different witnesses that they averred he was, and pooh-poohed the assertions made by Mrs. Hazelton that he was being harshly and improperly treated; but at the inquest they seem to have altered their opinion, and to have thought that he had been improperly treated. I think the difference lay in the deceased having died in the meantime, and in his being thought thus to have vindicated his character. These persons, and probably the matron too, really believed he was malingering to a certain extent as long as he was alive; they were prejudiced by his behaviour in one particular respect to such an extent that their eyes were closed to the more ordinary signs of illness which seem, notwithstanding, to have been tolerably clear. The truth was perceived by an unprejudiced observer (Mrs. Hazelton) when she accidentally saw the deceased; and she rightly valued the signs of illness he displayed, and recognised that he was in a state requiring great consideration, whatever his habits might be—even, in some sense, they were voluntary, and wilfully offensive. The real question, then, is whether the medical officer should not have seen this too, have formed an independent judgment of the case, and by definite instructions and extra watchfulness have so controlled the matron and the other patients that the deceased should not have suffered. I think there can be no doubt that he should have done so; in the ordinary and careful discharge of medical functions that is exactly the kind of administrative control which he should have exercised. After anxious consideration I feel obliged to concur in the censure laid upon him by the jury, although the depositions contain no evidence which warrants it without great qualification. It is true that he was absent from the hospital for four days during the deceased's illness—unavoidably absent as I understand; but there was no allegation that deceased suffered therefrom, nor was any great stress laid on the matter.

5. Had the late matron been a trained nurse of suitable disposition the deceased would not have suffered from any such lack of carefulness, or shrewdness, or caution, as the medical officer did show, but she was untrained to nurse, and there is evidence that she was of an eminently unsuitable disposition. Yet she had been maintained in her post for ten years by the Committee. How did this come about? The medical officer did not appoint, or even recommend, the matron. He found her in her position when he first took up his duty, and he has said that he thought her and the late wardsman, her husband, "very queer people for their position." And as to her conduct during the ten years she continued matron, although the medical officer attended the meetings of the Committee to give them information concerning the management and working of the institution, they did not rely on him for their knowledge. In accordance with the fifth rule of the institution they actually did appoint from their whole number a Visiting Committee of two, whose duties were defined by the rule as follows:—

5. At each monthly meeting of the General Committee two of its members shall be elected as a Visiting Committee for the month. The duties of the Visiting Committee shall be to inquire into the circumstances of patients; to visit the hospital once every week; to inspect the provisions, the state of cleanliness of the premises, and general order of the institution; to ascertain the comfort and well-being of the patients; and to inquire into any complaints which may arise, and if of sufficient importance, to report the same to the General Committee. * * *

How is it they did not earlier become aware of her unfitness? The fact is that they were perfectly well aware of it, and yet retained her in her position.

6. At a Committee meeting specially called for the purpose, which sat on 18th July, 1892, a report which had been presented to them by the Visiting Committee on 6th July was dealt with. Mr. Ralph Halls, the President, was in the chair, and ten other members of the Committee were present. The medical officer also attended. The report to be considered stated that a patient (Dow) had complained to the Visiting Committee that no potatoes had been served out to him for three weeks, and that an altercation took place between him and the matron, who was present when he made the complaint. According to the evidence tendered me by Mr. David Shackel, the altercation consisted in the matron shaking her fist in the patient's face, and threatening to blacken his eyes. To similar effect was the evidence given by the President, Mr. Halls, on my recalling him. On motion of Mr. Crommelin, the Committee unanimously adopted the following resolution:—"That the Committee regret to hear that the matron used harsh and threatening language to the patient Dow, and that such should not be practised on any patient in the future, it being the duty of the matron and wardsman to report to the Visiting Committee any patient not conforming to the directions of the medical officer or the rules of the institution, and that a copy of this resolution be forwarded to the matron and wardsman."

7. From this incident it appears that the Committee, I repeat, were perfectly well aware of the entire unsuitability of the matron's disposition for the position she held. But they seem not to have apprehended this. I regret to be obliged to remark, especially on the view of the transaction taken by Mr. Halls, who is but one member of a unanimous Committee, and who, I believe, has been largely instrumental in procuring the new hospital building, and in maintaining the institution in the sound financial position which I was informed it holds. But this gentleman was, and still is, the President of the Committee, and no doubt his opinions derive weight from his prominent position. On recalling Mr. Halls, and re-examining him with reference to this evidence, he said he thought the matron "was wrong, and should not have done it, but both I and the Committee thought but little of it"; and again, "We did condemn that particular action in Dow's case, but I did not think much of it." Mr. Halls seemed altogether unconscious that a person of a temper or of manners such as led to the behaviour described was quite unfit to have charge of the sick, and especially unfit to have charge of them in a hospital where she (and her deceased husband) was the only attendant, and where circumstances necessarily gave her large powers over the helpless, notwithstanding the intermittent (though regular) visits of the Visiting Committee

Committee and medical officer; and a consequence was that on first examining him, although he said "he agreed with the verdict as regards the matron—that is, in the case of the deceased Walker—it was proved that she said certain violent things," he found such excuse for her as consists in the opinion, "I do not think she meant them." It was only in answer to a direct question that he subsequently admitted that he did think her saying the violent things referred to "betrayed an unsuitable character for one in charge of the sick."

8. Other complaints against the management of the hospital as regards the matron (and her late husband) had been preferred by former patients from time to time, according to the evidence tendered by the Secretary. I concluded that it would be useless to attempt to go into them, and that the facts could not be now ascertained in all probability; but in the minute-book of the Committee I saw an account, clipped from the *Grenfell Record* of 17th February, 1894, of a special inquiry, apparently very carefully made, by the Committee, into complaints laid by a discharged patient named Frank Hewen, and it is impossible to read it without suspecting that the patient had not merely been oppressed whilst in the hospital, but even at the inquiry, and after his discharge, was under some restraint which prevented him from speaking freely. This inquiry, it will be observed, was concluded but three months before the deceased Walker was admitted. Still other complaints were preferred by Mrs. Hazelton in her evidence tendered to me, and in a letter (attached) which was published in the *Grenfell Vedette* of 27th October, 1894. Into two or three of these I made some inquiry; but, without prejudice to Mrs. Hazelton's statement, I must say that I found it worth while to pursue only one of them under the circumstances. This was made in the *Vedette* quoted, as follows:—

About a year ago an old man named John Barker died there. I went there at 6 a.m. to ascertain if he had lived through the night. Poor fellow; he had lived through the night, and in the early morning I found him passing away. He was lying on uncurtained bed, directly under an eastern window, on which hung a piece of green linen, several inches too narrow and too short, so that the full force of the morning sun was on his face. Thousands of flies swarmed round him; they crept in at his eyes and his mouth; no attempt was made to stop them. A yard of mosquito-net was thrown over him, but the poor fellow, in his delirium, only tossed it away. * * *

I inquired of the medical officer as to this matter, and he showed me the bed in which the deceased lay. I was informed that the blind was the blind originally hung at the window, and had not been altered since the date referred to by Mrs. Hazelton. It was an ordinary blind, of suitable length and width, and it fitted the window neither better nor worse than usual, and, the head of the bed being a little to one side, it was plain that the eastern sun would shine obliquely on the head of any person lying in the bed during the early hours of the morning; and the beds were still without mosquito-bars, having, indeed, no frame to which the latter might be hung. [Compare the evidence given by the medical officer.] I, therefore, find this complaint, though couched in exaggerated and inaccurate language, well-founded; and, notwithstanding the medical officer's statement that he visited this patient several times in the course of the night he died, I further concur in Mrs. Hazelton's remarks, in as far as they point out that this patient, though in extremis, was left, and eventually did die, unwatched and untended. The occurrence betrays the grossest neglect on the part of those who were especially hired to tend the inmates, in my opinion; and the degree of effective and thoughtful attention with which the Committee have regarded their charges may be judged from the fact that to this day there are no mosquito-bars to the beds in the male wards, nor any means of attaching them, for, though it is very likely true that there are no mosquitoes, or very few, to be met with at the hospital, flies must abound, and are but a slightly less annoyance to the sick during daylight. It is also plain that a supervision under which a dying man could be left to pass his last hours untended (though in this case he was happily insensible) is not effectual, and is not what the subscribers and the charitable public rely on the Committee to furnish.

9. When it is remembered that the Committee who have hitherto managed this hospital consists of gentlemen of position in the town, who take a great deal of trouble, from motives which can only be philanthropic, it becomes very puzzling to surmise how the state of things indicated by the attached evidence, and the official and other quotations herein made, came about and persisted, and I am unable to offer any explanation. But Mr. Halls' remark, made at his re-examination by me, on the case of Dow, and the altercation between the latter and the matron, attracts attention in this connection. When Mr. Halls was asked why, as he had said, he thought little of this incident, he replied, "The fact is that some members of the Committee had an edge on the matron, and were willing to make the most of the occurrence." The members of the Visiting Committee who laid that complaint were Messrs. D. Shackel and W. H. Hosie, and whether any other members shared their views of it or not, it is much to be regretted that they did not stick to their point, and cause a protest to be entered in the minute-book. But they did not do this, and consequently the method of general management, which has so conspicuously failed, remains unexplained.

10. I think it advisable that I should make some reference to Mrs. Hazelton's action, both because the holding of an inquest on the deceased was mainly due to her and for other reasons. I believe this lady to be a consistently charitable person, actuated by the best motives, whose sphere has for many years past occasionally included the hospital, but has also included much more than it, and I am inclined to lay great stress on the firmness and perseverance with which, in the face of opposition and, on one occasion at least, of something more than discourtesy, she followed up the case of the deceased when she had formed a strong opinion that he was being improperly treated. On the other hand, I feel compelled to remark that the methods employed by this lady have not always been marked by the reticence and discretion which are generally thought most effective. However, having effected a necessary alteration, it is probable that her efforts to complete the revolution in detail will cease, although it is to be hoped that her interest in the sick poor will not abate.

11. I, therefore, have the honor to conclude by submitting the following conclusions and recommendations for your considerations. I am of opinion—

- (a) That the medical officer failed to take up that independent attitude of caution and control which he should have occupied in the internal management of the hospital, and, consequently, fell justly under censure of the jury, although no important evidence was before that body to warrant it.
 - (b) That the Committee in general must share that same censure, in that their supervision and management were such as did not secure to the sick such skilled nursing, humane attention, and necessary appliances (at the least) as are properly believed by the public to be usually provided in a hospital.
- And,

And, in order to guard against a continuance or recurrence of failure, as far as it can be guarded against by such means, I recommend—

- (1.) That it be an instruction to the Committees of all hospitals subsidised from the public funds that no vacancy in the post of matron or nurse which shall in future occur is to be filled by appointment of any person who has not been trained as a nurse; and that the same rule shall apply as far as possible to vacancies which in the future may occur in the post of wardsman. [I believe the Medical Adviser to the Government has already made recommendation to similar effect.]
- (2.) That before actually making any such new appointment Committees shall be instructed to submit their choice for approval by the Medical Adviser to the Government, who shall approve it, provided the fact of sufficient training be established by the Committee in respect of the candidate to his satisfaction.
- (3.) That an attendance-book be kept, in which the members of the Committee, the Visiting Committee, and the medical officer shall sign the date and the hour at which they pay their official visits.
- (4.) That diets be arranged and fixed by scale, as is usual in all institutions.
- (5.) That all medicines prescribed for patients be recorded in a book kept in, and not allowed to leave, the institution.

I have, &c.,

J. ASHBURTON THOMPSON,

Deputy Medical Adviser to the Government.

[Enclosure.]

INQUIRY into the management of the Grenfell Hospital.

NOTES of statements made by witnesses examined :—These statements were read over to the witnesses, and were accepted by them before their examination closed, but they were not requested to sign them.

W. C. H. Lippman, Hon. Secretary :—I became Secretary on 5th May; I had been a member of the Hospital Committee since the beginning of the hospital year; my predecessor died; he had been Secretary for many years; at the beginning of this year, the staff consisted of a matron (Mrs. Day) and her husband, who was wardsman, but the latter died; his place was not filled, but the matron was authorised to get assistance if she wanted it; the Committee would have paid for it; this was understood by all, including the doctor, but was not the subject of any formal resolution; there was also a servant; dispensing is done by a druggist in the town, by an arrangement made by the doctor, who submits an account for drugs monthly (£2 17s. 6d. a month); the doctor is regular in his visits, as far as I know, and painstaking; he does not sign any attendance-book; none is kept; visitors do not regularly sign the visitors' book; no ladies regularly visit the hospital, as far as I know; no minister of religion has made a regular practice of visiting the hospital to my knowledge, during my term of office; neither the matron nor the wardsman had any hospital training; I believe the evidence given before the Coroner in the case of the deceased Walker, but I cannot reconcile it with the answers given directly to me to my questions concerning him by the other patients; we courted inquiry, and instructed a solicitor to attend the Coroner's Court, and get to the bottom of the affair, regardless of our own interests; I agree with the verdict as regards the matron, but not as regards the doctor; I think the term "impostor" was applied to the deceased Walker only in respect of his being "dirty"; there was no doubt about his being ill at any time; for that reason we could not turn him out; we isolated him in the private ward as soon as we heard of his dirty habits from the other patients; the Committee ordered him into isolation, in accordance with a suggestion of the Visiting Committee; I have the impression that the matron and her (deceased) husband were rough, and perhaps harsh, from habit and callousness; we had had occasional complaints against the former from discharged patients, but always long after their discharge; they may have been true; the matron anticipated the Committee's intention by resigning immediately after the inquest.

Ralph Halls, President :—Until about 25th August I thought the deceased Walker was an impostor, by which I mean that he was not so ill as he would have us think, but was trying to put in the winter; but we did not think of turning him out, he was too ill for that; at the date the word impostor began to be used by the other patients he was visibly ill enough to be kept in hospital; I understood from what the other patients said that they used the word with reference to his dirty habits, and to express their opinion that he was dirty voluntarily; I very often indeed conversed with Walker; he never made any complaint, and I never had reason to think he had any to make; but I relied altogether on what the matron and the other patients told me—mostly on the matron; the word began to be used long before 25th August, but I never asked the doctor distinctly whether he were an impostor or not; did not suggest his isolation before 6th September, because that seemed a matter for the doctor to arrange with the matron; another reason was, that it seemed most economical to keep him in the general ward where the other patients could help with him, but at last he got so bad that the others could not sleep at night, and then he was removed; if the matron had asked for help she could have had it, but she never did as far as I know; I agree with the verdict as regards the matron; it was proved that she said certain violent things; I do not think she meant them; I do think her saying them betrayed an unsuitable character for one in charge of the sick; I never heard anything of the kind from her myself; if I had I should have objected to it; my impression is the case was an obscure one, and more serious than was supposed; I believe the deceased spoke differently when I was away from what he did in my presence, according to what the other patients told me.

David Shackel, member of the Hospital Committee :—I thought the deceased really ill on admission; then he got better; I thought he became an impostor afterwards, and made himself out worse than he was so as to be kept in the hospital through the winter; but on 25th August, when I visited the hospital as one of the Visiting Committee for the month, I saw that he was seriously ill; I was on the Visiting Committee that time from 1st August to 5th September, and I visited the hospital three times during that month, but at one of them I did not go into the wards, but inquired of the matron whether anything particular needed attention; the other visits were paid on 25th August and 5th September; on 25th August the matron said deceased seemed bad as long as visitors were present, but as soon as they were gone he got up and jumped about; I then went into the ward and examined him, and I formed the opinion that he was too ill to behave as the matron alleged; I did not believe what the matron had said; the patient Hopkins said it too; I thought it impossible from the deceased's state; I did report on the same day that we had made searching inquiry into the matter, and had found that there was no just ground for accusing the matron of harshness and the doctor of carelessness, but what I meant by that was, that I had asked the patient if he had any complaints to make, and that he had said "No"; I do think it would have been better and fairer if we had mentioned that, from our own observation of the patient, we did not believe the statement of the matron and patient Hopkins; we suggested deceased should be isolated on 5th September, and not before, because the other patients had not complained before that deceased was troublesome to them; I agree with the verdict as regards the matron, and as regards the doctor if he were absent the four days; I think, at all events, the doctor probably relied on the matron for his information, and did not sufficiently observe and watch what went on; I think he might have been more careful in a general sense, and that the matron was left too much uncontrolled; I think, in that sense, the management had become careless and bad; I was present when the matron shook her fist in a patient's face and threatened to blacken his eyes; that was in 1892; the patient (Dow) had complained to me that he had had no potatoes for three weeks; I was a member of the Visiting Committee at that time; I reported the matter to the Hospital Committee, and a letter was ordered by them to be sent to the matron expressing their disapproval of her conduct; nothing further was done about it; the matron appeared before the Committee with reference to this; she admitted the charge; she did not defend her conduct.

Mrs.

Mrs Hazelton, an occasional visitor — I brought an old man named Bush, in whom I had taken an interest for some time before outside, into the hospital on 20th August; on that date the matron told me she had a filthy patient, who was an impostor. I then visited the deceased Walker, who was the patient the matron referred to, and I thought he was seriously ill, I wished Bush to be called at the inquest to prove that he was admitted to the hospital at 11 a m., 20th August, but was not visited by the doctor until Thursday, the 24th, at 5 p m.; he was to have appeared on 26th September; his evidence was to have been taken at his bedside; Mr Crommelin, the solicitor for the Committee, met me in the street on 26th September and told me that Dr Row had said that if Bush's evidence was taken it would shorten his time; I understood his life was meant; in consequence I did not persist in asking that his evidence should be taken, but later on the same day Mr. Beneke saw Bush and found him no worse and able to have his evidence taken without harm; I thought deceased was probably paralysed in his legs; he was certainly not insane; he was apathetic; he seemed to have lost all manliness; I did write a letter to the *Vedette*, in which I said that "Every day I hear of some good, just, and honorable man who resigned his place on that Committee because he could not be satisfied that justice was done"; Mr. Filby told me he would not remain on the Committee because he could not get justice done [the witness mentioned no other]; there has often been cause of complaint; Elizabeth Nicholls was a patient about April or May, 1891; she was suffering from cancer; she was told she was incurable, and would have to go to a benevolent asylum, she left the hospital and found a lodging outside, where she was attended by Dr Rygate; Nicholls got worse, and the people she stayed with could not stand the offensive smell; I visited her, and found her lying on the floor, I told Dr Row he must take her in; he said he could not, as she had been discharged as incurable, I must go to the police; the police told me Nicholls must be put in the street before they could interfere, and this was not done; I went to Mr Halls, the President of the Committee, who said she could not be admitted again because she had been discharged as incurable; I helped her to another lodging with an old nurse who had already another old woman lodging with her who had abscess of the face; this latter patient told me they would not admit her into the hospital; I went to the hospital and found that the female ward was being occupied by Captain Stanford, who also had cancer; I then asked Dr. Row to put Nicholls in the fever ward; this was when the old hospital building was still in use; Dr. Row said he could not, because the matron's grandchildren were occupying it as a bedroom; Dr. Row attended Nicholls as an out-patient of the hospital, and was kind to her; I have been visiting the hospital occasionally for twenty four years; I never had any complaint to make before against this or any other institution; I have from time to time seen various occurrences in the hospital which I did not like, but I said nothing about them; I did not attach much importance to them, but now I think more of them; I have twice been to the hospital about Mr Hamilton; he is a paying patient, who has a broken leg; I visited him on Saturday, 27th October, about 6 or 7 o'clock in the evening, and I stayed two minutes; I went again on Sunday night, about 9 o'clock, not to see Mr. Hamilton, but to inquire whether anyone was sitting up with him; I did see him, however.

Dr Row, Medical Officer — I was appointed to the hospital at a salary of £100 a year when I first came to Grenfell, four years ago; the old building was still in use then; Mrs Day, the late matron, was matron then; I visit the hospital every day, unless I am out of town on country journeys; that seldom happens; I visited the hospital on 21st August, when I prescribed for Bush, and then not again until 23rd August, when I called at 9 or 10 o'clock at night, and asked the matron whether anything particular was wanted, and then not again until 26th August, early in the morning, having been out of the town on country trips; I do not sign any attendance-book—there is none, for the past six or seven months prescriptions have been written on bits of paper, and sent to the druggist, who dispenses the medicine and files the prescription; no record is kept at the hospital on bed-cards or elsewhere, there is no diet scale; on several occasions I have urged the Committee to adopt one, and attention has been promised to the matter, but never given; I presented the Committee with a draft of one about three years ago, but nothing was done; I have told the matron verbally what "ordinary" and "milk" diet meant, these being the only two diets, and these words are entered on the bed-cards; I was always on good terms with the matron until about 20th August; John Barker was admitted on 11th December, 1893, and he died on 13th December; he was admitted about mid-day, and he died at early morning; he was admitted to, and died in, the male ward; there were other patients in the ward at the time (after viewing the ward and the bed occupied by Barker I saw the morning sun could shine on the patient's head, though the blinds, which fitted as well as usual, were drawn, and that the beds had no support for mosquito-bars); I have told several of the Committee at different times that they ought to provide mosquito-netting, but never in any official way; no one sat up to watch with Barker, but I happened to be in the building nearly all night on both nights he was alive, and several times went in to look at him; I was at the hospital because I had sent my wife and child there for coolness, the latter being dangerously ill with dysentery, and the town hotter than on the hill at the hospital; Elizabeth Nicholls was admitted 2nd February, 1891, for uterine disease; she remained in until 24th March, when she was discharged as incurable, but relieved, and also partly at her own request that she might go to friends near Young; instead of going there she stayed with some friends in Grenfell, and was attended by Dr Rygate at first; during July I was again called to see her; Mrs Hazelton asked me to admit her to the hospital; I said I did not think she was a fit case for admission, being incurable, but that I would admit her if she could not be attended to outside; Mrs Hazelton said it would be better to treat her outside, and that she would help to nurse her; Nicholls was then removed to another cottage, where I attended her until she died; readmission to the hospital was never refused; Mrs Hazelton said she thought she would do better in the cottage; Captain Stanford was in the hospital from 24th May to 7th November, 1891, when he was discharged; he did occupy the female ward in the old building, but he would have been removed to the male ward had there been any female patient admitted; there was also a ward called the fever ward; it was not occupied then, nor at any time, by the matron's grandchildren, or by anyone else within my experience; it was so much out of repair as to be unfit for occupation; I agree with that part of the rider to the verdict which applies to the matron; I think she was harsh to Walker, but not always; she was a woman of ungovernable temper; and, I think, that when Walker became so troublesome, and when Mrs. Hazelton added to the trouble by interfering, that she became harsh to the patient, that does describe a serious fault of character in one occupying her position, and I have often checked her for her manner of speaking of people not connected with the hospital; I have known her behave improperly to patients before, only in Dow's case; Walker was aged 32, admitted 21st May, 1894; he said he had walked from Broken Hill, and was brought in from Marsden's by coach, probably after suffering a great deal of exposure; on admission, he was thin and broken down; his temperature was 102; I examined his heart and lungs, and found nothing wrong there; his urine was examined, and was normal; for three weeks his temperature ranged between 101 and 102; about the fourth week he began to recover, and afterwards was merely weak; about the fifth week œdema of one or other of his legs appeared, and he went to bed again; he recovered again; about the ninth or tenth week œdema appeared in both legs; he did not wish to stay in bed, and was allowed to sit up with his legs raised; but he never would keep them raised; I repeatedly tested his urine, and found it healthy; I supposed the œdema was due to weakness; at this time he could not walk without supporting himself; he continued in the same state until about a fortnight before he died; the idea of paraplegia occurred to me about 20th August, when I first heard of him having become dirty; but on inquiry, I heard he had occasionally been dirty before; he was wet as well, but not every time he was dirty; and when he was wet as well, it was always at night, never in the day; I remarked this as a peculiarity; I spoke to him about his dirtiness, and he said he could not help it; I examined the sphincter, and found it contract round my finger in the usual way; I accounted for his dirty habits by having observed on admission that he was of weak intellect, although I did not think he was actually imbecile or insane; but from what I saw of his further behaviour, and from what I heard from others, I was obliged to doubt whether he were not really quite sane, and whether his dirty habits were not voluntary; in this suspicion I was confirmed, on hearing that he would sit on the commode for ten minutes in the morning without having any action, and then would have one very shortly after being returned to bed; the motions were always constipated, as far as I know; on the occasion when his bowels acted while the matron was washing him, she said he strained, showing voluntary action; I never saw anything of that myself; although my mind was awake to the possibility of paraplegia at the time (about 20th August), after careful examination I concluded that he had none; I know that he had no bed-sore on admission; I first heard of one about 26th August; he had then not been confined to bed for some time—say four or five weeks—but he would occasionally stay in bed all day during that time; I refused a certificate of death in his case, desiring that an inquiry should be held; at the *post-mortem* the stomach was not opened, nor the spinal column; none of the lymphatic glands were examined, not the bronchial nor the mesenteric; the lungs were perfectly healthy; the adrenals were small; the diseased hip-joint was not examined or opened; in the membranes of the brain, about the vertex, some small swellings were found, about the size of millet seeds; there was no sign of action in or about them; they had a similar appearance to obstructed or swollen glands in a mucous membrane; there were some others under the inner lining of the aorta, about half an inch above the aortic valves; all these Dr Cortis pronounced to be old tubercles, and thought the cause of death was tuberculosis; I was at no time in doubt about the

serious

serious character of Walker's illness ; I was puzzled at first by the absence of definite physical signs ; I was never able to get any clear history from him ; I doubted whether he really had walked from Broken Hill or not ; when he first began to improve I thought he might go on to recovery ; when he afterwards began to get worse again I thought he never would recover, and then I thought of discharging him as incurable, but he soon became too ill to travel ; after all, I do believe it is true that Walker was improperly dealt with by the matron, and I did not find it out before he died ; it was not for want of asking that I remained in the dark, and I can only say that if I ask patients whether they are comfortable and well looked after, and have what they want, and they answer " yes," I can do no more ; I agree that both the matron and her late husband were entirely improper persons to have charge of the sick ; when I first came here I arrived from England, where I had been studying ; I thought the matron and her late husband very queer people for this position, but my predecessors, Drs. Rogers and Bennett, had both given them very favourable testimonials, and I supposed it was merely their manner that was against them ; the Committee knew them better than I did, and they always seemed satisfied with them, as far as I know, except in Dow's case, which I mentioned before.

Ralph Halls, President, re-examined :—I was in the chair at a meeting of the Committee when a resolution censuring her for shaking her fist in a patient's face was unanimously adopted, and ordered to be communicated to her in writing ; when I said that I did not think she meant what she said violently, I meant she was wrong and should not have done it, but I and the Committee both thought but little of it ; the fact is, some members of the Committee had an edge on the matron, and were willing to make the most of the occurrence ; there was a member of the Committee who was always bringing up these little trivial things ; we did condemn that particular action in Dow's case, but I did not think much of it.

12th October, 1894.

J. ASHBURTON THOMPSON.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

“HISTORY OF NEW SOUTH WALES FROM THE RECORDS.”

(CORRESPONDENCE RESPECTING THE APPOINTMENT OF MR. ARTHUR GALTON TO CONTINUE THE.)

Ordered by the Legislative Assembly to be printed, 29 August, 1894.

A. Galton, Esq., to The Chief Secretary.

Sir,

Government House, Sydney, 26 July, 1894.

With regard to the several conversations I have had with you about continuing the History of New South Wales, as you are satisfied of my ability to continue this work, I accept your offer to go on with it for a period of three (3) years from this date, for a sum of £1,500 (fifteen hundred) payable to me by quarterly instalments.

At the end of this period of three years I am willing to let my work be judged on its own merits, and if the Government be satisfied with my performance of the contract I shall be prepared to make a contract for a further period, upon such terms as to time as may be agreed between us.

I have, &c.,

ARTHUR GALTON.

Approved; instructions to be given.—G.R.D., 26/7/94.
and Trade, B.C., 26/7/94.—C.W.

The Under Secretary for Finance

The Principal Under Secretary to A. Galton, Esq.

Sir,

Chief Secretary's Office, Sydney, 30 July, 1894.

I am directed by the Chief Secretary to acknowledge the receipt of your letter of the 26th instant, notifying your acceptance of his offer to continue the History of New South Wales for a period of three years for a sum of £1,500 (one thousand five hundred pounds), payable to you by quarterly instalments.

2. I am, at the same time, desired to add that the Colonial Treasurer has been duly apprised of the terms of this agreement.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HISTORY OF NEW SOUTH WALES FROM THE RECORDS.

(FURTHER CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 5 December, 1894.

RETURN (*in part*) to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 16th October, 1894, That there be laid upon the Table of this House,—

- “ (1.) Copies of all Correspondence, &c., in addition to that already ordered, that may have taken place between the Government and any persons in reference to the publication of the History of New South Wales from the Records.
“ (2.) Copies of any minutes, letters, or other documents in possession of the Government in reference to the contract entered into by Mr. Arthur Galton for writing the History of New South Wales.”

(*Mr. Fegan, for Mr. Hogue.*)

HISTORY OF NEW SOUTH WALES FROM THE RECORDS.

No. 1.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Dear Mr. Eagar,

Government Printing Office, Sydney, 5 January, 1889.

May I ask you to do me the favour to ascertain whether the Treasurer will approve of a further payment to me, on account of work done to date for the Official History, of £100.

I have to-day concluded the last chapter of the work, and am now making final corrections in the sheets. There is nothing to prevent publication during the present month.

I am happy to say that, from the opinions expressed outside, it is probable that the whole edition will be sold off within three months.

Yours, &c.,

G. B. BARTON.

No. 2.

The Government Printer to The Under Secretary for Finance and Trade.

Sir,

Government Printing Office, Sydney, 17 April, 1889.

I do myself the honor to transmit herewith a memorandum received by me this morning from Mr. G. B. Barton, the gentleman in whose hands the literary part of the work connected with the History of New South Wales has been placed, relative to certain proposed alterations in the wording of the title-page to the History; and also having reference to certain portraits with which it is proposed to illustrate the work.

I have, &c.,

CHARLES POTTER,
Government Printer.

[Enclosure.]

Sir,

Lake Macquarie, 15 April, 1889.

I enclose a memo. with reference to proposed alterations in the title-page to the History of New South Wales, and also with reference to photo-lithos. of Governor Phillip and Lieut. King.

I should be obliged by your submitting this memo. to the Government at your earliest convenience, and acquainting me with the result.

I have, &c.,

The Government Printer, Sydney.

G. B. BARTON.

[Sub-Enclosure.]

Memo. for the Government Printer,—

15 April, 1889.

WITH reference to the alterations made in the title-page of the History of New South Wales, by which it is made to appear that the work has been "compiled and edited" by me "under the authority of the Government," I wish to say that I strongly object to the words "compiled and edited"; for the following reasons:—

1. It is not correct English to say that a book is "compiled and edited," because compiling and editing are two very different things. No editor is ever termed a compiler, nor is a compiler called an editor. This inaccuracy is so obvious that it would expose me to the remark that I do not know the meaning of the most ordinary words.
2. The work I have written is essentially an original one, both in its plan and in its execution. It has no resemblance to any former work on the same subject, nor does it owe a single line to any other work, except in the shape of a quotation. To produce a work of this character has cost me eighteen months' hard and unremitting labour, and now it is proposed to stigmatise it as a "compilation," as a reward for my exertions.
3. By that word everyone understands a book to be what is called "paste and scissors"; that is, borrowed matter pasted on slips of paper, in the manner usual among sub-editors of newspapers. I decidedly object to my name being associated on a title-page with any suggestions of that kind.
4. It is obvious that the immediate effect of branding the book as a "compilation" will be that its value will be depreciated in the eyes of the public, and its sale injured. The Official History published by the Government in 1883 was a compilation, and the prejudice against it is so strong and so general, that it is very desirable to avoid even a faint suggestion of a connection between the two books.
5. It would be not less incorrect to say that the work has been "edited" by me. Editing implies that while one man writes a book, another revises his manuscript, the work of revision being termed editing; therefore, the inference would be that somebody unknown had written the History, and that I had edited his work; the fact being that no one else has written a line of the original matter in it.
6. I never saw any History which purported to be "edited" by anyone, nor do I understand how the term can be so applied.
7. If it is particularly desired to say that the work is "edited" by me, the title-page should be altered so as to substitute the words "Historical Records of New South Wales" for "History of New South Wales." It would be correct to say that the Records are edited by me, and I would not object to that title. But although I thought of it in the first instance, I came to the conclusion that it would be very much better to term the work a History, for the simple reason that while many people might be inclined to buy a History, very few would care for a volume of Historical Records.
8. If the object of the proposed alteration is to show that the work is a Government one, the proper place for doing so is the preface, which is intended for explanations of all kinds. I thought I had made the matter sufficiently clear in the first sentence, which states that the records were placed in my hands by the Government with a view to the publication of a work which might serve to commemorate the centennial year. If that statement is not considered sufficiently explicit it can be made still more so.

I take this opportunity of stating my objections to the two photo-lithos. of Governor Phillip and Lieut. King, which have been prepared for publication in the History. They not only fail to give a correct impression of the original, but they are sure to provoke unfriendly criticism. It would be infinitely better to have no portraits at all, and unless satisfactory engravings can be obtained I desire that the portraits in question may be omitted.

G. B. BARTON.

No. 3.

No. 3.

G. B. Barton, Esq., to The Government Printer.

Sir,

Lake Macquarie, 6 May, 1889.

I beg leave to apply for a further payment of £100 on account of work done in connection with the Official History of New South Wales.

The last payment was received by me on the 14th of March last.

The index and preface being completed (subject to final correction), there is now nothing to add beyond a few pages of the introductory sketch.

I am, &c.,

G. B. BARTON.

No payment to be made to Mr. Barton until all material of first volume completed.—W.M., 7/5/89.

No. 4.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 7 May, 1889.

The Government Printer has submitted to the Colonial Treasurer your application to him of 6th instant for a further payment of £100 on account of work done in connection with the Official History of New South Wales.

Mr. Potter reports that the first volume of the work is still incomplete, and I am desired by the Colonial Treasurer to inform you that the payment which you request will not be made until the whole material for Vol. I is in the hands of the Government Printer, finally corrected, so as to admit of an immediate publication.

I have, &c.,

G. EAGAR.

No. 5.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 3 June, 1889.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of 31st ultimo, and I am to convey to you his reply as follows:—

1. The Government Printer reports that he has not received from you the full material necessary to enable him to publish the first volume of the History of New South Wales. Copy of such report is enclosed.
2. When the Treasury requirements, already conveyed to you, are satisfied, Mr. McMillan will make the payment of £100 asked for on 7th ultimo.
3. The portion of your letter which reflects on the conduct of the Government Printer will be referred to that gentleman for an explanation.

I have, &c.,

G. EAGAR.

No. 6.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Sir,

Lake Macquarie, 7 June, 1889.

I beg leave to request that you will instruct the Government Printer to send me, by return post, duplicate copies of all matter set up for the History of New South Wales, from page 1 to page lxxxv inclusive, and also of the analytical index; also a further supply of press paper, cut up in slips of the usual size, with some sheets of foolscap paper and a few O.S. postage stamps. I cannot procure any stationery here.

I also wish to have sent me a book called, "A Letter from Sydney," by Robert Gouger, which is now on the shelves at the Government Printing Office, but which the Government Printer has refused to send me.

I am, &c.,

G. B. BARTON.

The Government Printer.—G.E. Treasury, B.C., 13/6/89.

No. 7.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Lake Macquarie, 7 June, 1889.

In reply to your letter of the 3rd inst., enclosing memo. from the Government Printer, I beg to say that the whole of the matter specified in it has been posted to him, "ordered for press."

With reference to his statement that "for a period of at least six weeks" he had "received but dribblets of MSS. for setting up, or of proofs for correction," and that he was "unable to comprehend why Mr. Barton had so prolonged the work," I beg to invite your particular attention to it, because it affords an easy means of testing the accuracy of his statements generally.

During the months of April and May last, he has received from me the "copy" of the analytical index, which now occupies some 30 pages of brevier—(I have not got it by me at this moment, and therefore cannot give the exact number of pages), and also the "copy" of the introductory sketch, pages xl to lxxxv, proofs and revises of which were also corrected by me within the time mentioned.

If you are disposed to do me justice in this matter, you have only to look through the Index and the introductory sketch in order to satisfy yourself that Mr. Potter's statement not only betrays his incapacity to comprehend the matter he writes about but also shows his determination to misrepresent me in spite of facts.

I have no hesitation in saying that if I had taken twice the time I did to write the index and the introductory sketch, no one could have justly accused me of having "prolonged the work," that is, delayed it unnecessarily.

Both the index and the sketch are strictly analytical—the one being designed to give the reader an exact idea of the various topics treated in the book, so that he can obtain at once all the information it contains, while the other is intended to show the reader how the colonisation of this country was brought about—a result which I accomplish by an analytical examination of the few records we have bearing on the subject. Another object in view is to show the nature of the misconceptions which have always prevailed with respect to the country, from the days of the early explorers down to the present time.

You will observe that all this is entirely original work. Nothing of the kind has ever appeared in any previous work on the subject. Nor will you find in any historical work published in London an index that can be compared with the one I have written.

As I look upon Mr. Potter's charge as libellous, I beg leave to request that you will require him to substantiate it at the earliest opportunity; and I would suggest that the three gentlemen to whom my work is to be referred for the purpose of assessing the amount to be paid me, should be authorized to investigate this matter at the same time.

Should they report that Mr. Potter is justified in the charge he has made, I shall be quite willing to put an end to my engagement.

But should they report that he was not justified in making it, then I beg leave to request that you will cause proper compensation to be made to me for the injury done.

I am, &c.,
G. B. BARTON.

No. 8.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Lake Macquarie, 10 June, 1889.

There are one or two matters connected with the publication of volume I of the History of New South Wales to which I beg leave to call your attention:

1. In several letters to the Government Printer I have expressed my objections to any alterations being made by him in the title-page without my consent and without any intimation from the Government on the subject, and I have set forth good and sufficient reasons for the objections referred to.

2. Up to the present date I have not received from him any intimation to the effect that the title-page will be printed according to my instructions.

3. I have also expressed my objections to certain photo-lithographs (of Governor Phillip and Lieutenant King) which the Government Printer insists on publishing. In my opinion those photos. are so much below the average standard of book illustrations in the present day that they would not only discredit the volume but would invite very disparaging criticism from critics in other countries, who would probably infer from them that our taste in matters of art is no better than that of aboriginals. You are well aware that in London, and New York especially, the illustration of books is a distinct profession among artists, and is consequently carried to a point which might be described as perfection. Compared with such work as is now to be found in English and American books the photos. in question are absolutely ridiculous.

4. In order to save the credit of the volume in question I engaged the best engraver I could find in Sydney to engrave the portraits of Phillip and King, and his work has been for some time in the Government Printer's possession. That gentleman, however, prefers his photos. to the engravings, and has recently informed me that he intends to publish the former.

5. I would therefore strongly recommend that he should be instructed to publish the engravings, and that the services of a printer accustomed to print wood engravings should be obtained for the purpose. I understand that there is no printer in the Government Printing Office who has had any experience in that kind of work.

6. Owing to the fact that the sheets comprising the main part of the volume were "worked off" the machine some months ago, I have not had sufficient opportunity for revising them and correcting errors. The result is that I find it necessary to recommend the cancellation of two pages (137 and 390) and the substitution of others which I have corrected. This would not involve any delay in the publication, but it would entail the loss of many sheets of paper. The matter, however, is important enough, in my opinion, to demand this sacrifice.

7. I would also beg leave to direct your attention to the expediency of making proper arrangements for the sale of the book. So far as I am aware, that part of the business has been left in the hands of canvassers; but as they cannot possibly reach large numbers of people who would or might be disposed to buy, especially in the country districts, I would suggest that an agent should be appointed for every town in the Colonies. That could be accomplished by means of a circular addressed to all the booksellers whose names appear in the Federal Directory of Australasia. In towns where there are no booksellers the local postmasters might be appointed for the purpose.

I have, &c.,
G. B. BARTON.

No. 9.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Lake Macquarie, 11 June, 1889.

I beg leave to apply for a further payment of £50 on account of work done, during the past month of May, in connection with the Official History of New South Wales.

The sum of £100 due to me on the 1st ultimo is still unpaid.

I do not ask for these payments as gratuities, but as money due to me under a specific agreement made with me by the Government Printer, and as the delay in payment causes me considerable inconvenience, I should be obliged by your causing the amount mentioned to be paid at the earliest possible moment.

I have, &c.,
G. B. BARTON.

No. 10.

No. 10.

G. B. Barton, Esq., to The Colonial Treasurer.

My dear Sir,

"Toronto Hotel," Lake Macquarie, 12 June, 1889.

I don't know whether the official correspondence, in which I have been unfortunately engaged with your Department for some weeks past, has come under your notice or not; but in any case I should be very much obliged to you if you would do me the justice to direct the payment of the money now due to me, as I have been, and am, greatly inconvenienced by the delay.

The amount now due is £150—being three monthly payments of £50, for the months of March, April, and May.

Excuse the trespass on your valuable time, and believe me,

Yours, &c.,

G. B. BARTON.

No. 11.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 15 June, 1889.

I have the honor, by direction of the Colonial Treasurer, to acknowledge receipt of your communications of 7th June (2), 10th June, 11th June, and 12th June (this to the Colonial Treasurer personally), and I am to inform you that the whole subject of your connection with the preparation of the projected History of New South Wales will be brought under the Government's consideration at an early date.

I am also to inform you that I have this day paid to your credit in the City Bank the sum of £100 (one hundred pounds).

I am further to state that the Government has directed the preface to be amended in accordance with the enclosed slip, there being nothing in the work, as it now stands, to show that it is of a national character, prepared at the public cost, in commemoration of a particular event.

I have, &c.,

G. EAGAR.

[Enclosure.]

PREFACE [as in the original].

In order to do justice to the valuable collection of records placed in my hands by the Government, with a view to the publication of a work which might serve to commemorate the Centennial year of the Colony, it seemed necessary to make them the groundwork of a narrative written on an essentially different plan from that of any previous one on the subject.

[PREFACE [as altered].

The attainment by the Colony of the Centennial period of its existence, appeared to the Government of New South Wales an appropriate occasion for the preparation, at the public cost, of a comprehensive history, embodying information obtainable from all known sources, and of such an authentic character as to form a reliable basis for the labours of the future historian. The duty of preparing this important work having been entrusted to me, it seemed necessary, in order to do justice to the valuable collection of records placed in my hands by the Government, to make them the groundwork of a narrative written on an essentially different plan from that of any previous one on the subject.

No. 12.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Toronto, Lake Macquarie, 17 June, 1889.

In reply to your letter of the 15th inst., enclosing a slip containing an addition to the preface as written by me, I venture to suggest a few remarks for your consideration.

If you will examine the first sentence, as it now stands, you will see that the words following "comprehensive history" to the end of the sentence are open to two objections:—

- 1st. They are what critics call surplusage—that is, words which really add nothing to the meaning of the term to which they are added. It must be obvious that if the History is comprehensive it must necessarily embody all known information on the subject, and must also be authentic.
- 2nd. It is equally clear that "the future historian" will not take the present work as the basis of his labours, unless he proposes merely to abridge it, but must necessarily go to the source of all history—the State records in London.
- 3rd. A still stronger objection may be seen in the fact that the words referred to omit the distinctive character of the work—that it is founded on the records—and which fact alone would be held to justify the Government in undertaking the preparation and publication of a History.

For these reasons, which I think are substantial, I would beg leave to suggest that all the words following "comprehensive history" down to "it seemed necessary" should be omitted. The sentence will then convey the intimation which you have in view, and will be shorter by thirty-eight words.

On the other page I have rewritten the sentence for your consideration.

I trust you will give me credit for offering this suggestion in the sole desire to make the work as little open to criticism as possible. I have found it necessary to correct my own manuscript repeatedly for the same reason.

I am, &c.,

G. B. BARTON.

The occurrence of our first centennial year having appeared to the Government of New South Wales an appropriate occasion for the preparation, at the public cost, of a comprehensive history of the Colony, it seemed necessary, in order to do justice, &c.

The amendment at beginning of original preface to stand.—W.M., 18/6/89.

No. 13.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 18 June, 1889.

I have the honor, by direction of the Colonial Treasurer, to acknowledge receipt of your letter of 17th instant, and I am to inform you, in reply, that the amendment at the beginning of the preface, as shown in the slip sent by you, is to stand.

I am also to state that the further prosecution of the work will be suspended until you complete the necessary arrangements for its continuance.

I have, &c.,

No. 15.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Reform Club, Sydney, 8 July, 1889.

I think I have mentioned in a former letter that, when I undertook to write the History of New South Wales, it was agreed that on the publication of the first volume it should be referred to three gentlemen—the Hon. Geoffrey Eagar, Mr. Alexander Oliver, and Mr. R. C. Walker—to assess the amount that should be paid to me in respect of it. May I therefore request that you will take steps for the purpose, at your early convenience.

I take the opportunity of suggesting that it should also be referred to those gentlemen to consider the terms on which the second and subsequent volumes should be written. Should you agree to this suggestion, I will prepare a statement on the subject, and submit it to the referees, on receipt of an intimation from you.

I take the liberty of further suggesting that, in view of the many matters connected with the publication which require attention from time to time, it would be of great service to the interests involved if the gentlemen I have named were appointed a Standing Committee or Board of Advice, for the purpose of considering and advising on all such matters. The absence of an experienced publisher renders it peculiarly desirable that some such arrangement should be made as soon as possible.

I have, &c.,

G. B. BARTON.

No. 16.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 10 July, 1889.

I have the honor to acknowledge receipt of your letter of 8th instant, addressed to the Colonial Treasurer, which I have submitted to Mr. McMillan, and I am to inform you as follows:—

It appears from the earlier papers in the case that the gentlemen you name as referees to determine the remuneration to be paid to you for writing the first volume of the History of New South Wales, namely, Messrs. Alexander Oliver, R. C. Walker, and myself, had already been appointed by Mr. McMillan's predecessor, so far back as 16th January, 1888. He now confirms the appointment, and has requested those gentlemen to take the matter in hand without delay.

Mr. McMillan also concurs in your suggestion that it should also be referred to those gentlemen to consider the terms on which the second and subsequent volumes should be written, and I am to ask that you will be good enough to prepare and forward to me the statement you refer to in the second paragraph of the letter now under reply, which should contain your views as to the number of volumes which it is presumed the work will fill, and the period of time over which the preparation of those volumes is to extend.

With respect to your further proposition, that is, the appointment of a Standing Committee or Board of Advice, the matter will receive the Treasurer's early consideration.

I have, &c.,

G. EAGAR.

No. 17.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Reform Club, 25 July, 1889.

I have to acknowledge receipt of your letter of the 10th instant, enclosing a certificate signed by the Hon. Geoffrey Eagar, Mr. Alexander Oliver, and Mr. R. C. Walker, with respect to the amount that should be paid to me for the first volume of the History of New South Wales.

The impression made upon me, on first reading the certificate, was that the referees were not satisfied with the work, and that they had recommended the Government to pay me a further sum of £200, in addition to the £1,050 already paid, as a solatium for discontinuing it.

Observing however, by another letter from you of the same date that I am requested to submit a statement of terms for the second and subsequent volumes, I infer that it was not intended to express any dissatisfaction with the work.

Under these circumstances, I beg leave to point out that the referees have arrived at their conclusion without having any evidence before them as to the value of the work or the methods by which a valuation should be made in such a case—an objection which at once nullifies their award, both as a matter of law as well as of common sense.

In my letter to the Government Printer of the 1st instant, requesting that he would take steps to have the matter submitted to the referees, in accordance with our agreement, I said, "Of course it is understood that I shall have an opportunity of submitting to them a statement of facts connected with it," or words to that effect.

A reference being practically an arbitration, it is obviously necessary that the referees should hear the parties concerned before proceeding to make their award. No one ever heard of referees or arbitrators acting on any other principle, except by consent of parties.

In the present case it was peculiarly necessary that the referees should have my evidence before them, either verbally or in writing, before making their award; because the question at issue is the first case of the kind that has occurred in the Colony, and moreover is one of an essentially technical character.

I have, therefore, to request that you will, in justice to me, refer the question to them again, with instructions to take my evidence on the points involved.

The

The grounds on which I object to the award are these:—

I. Counting the time occupied by the work at twenty months—from November, 1887, when I was instructed to prepare a second edition of the "Official History" of 1883, to June last—it appears that the amount awarded (£1,250 altogether) represents payment at the rate of £750 a year, a little more than the usual salary of a reporter, sub-editor, or experienced managing clerk.

Or counting the time occupied at eighteen months—from February, 1888, when I suggested and began the present work—the rate of remuneration awarded rises to about £800 a year, not more than is usually paid to men in subordinate positions, whose duties require no special gifts or qualifications, and do not involve any serious responsibility.

But unless it is held that an author, qualified to write History, is not entitled to any higher remuneration than men whose duties are of a purely routine and mechanical character, it is impossible to understand by what argument the conclusion arrived at by the referees can be justified.

In estimating the value of historical work the following points ought to be considered:—

- (1.) The special qualifications required in the author;
- (2.) The severe exercise of the mental powers involved in the work;
- (3.) The prolonged labour of research;
- (4.) The responsibility attached, especially in a work published by the Government; and
- (5.) The permanent value of the work when done.

Taking these points into consideration, I think that payment at the rate of £1,500 a year would be not more than a fair remuneration, and on that basis of calculation the amount that should have been awarded is not £1,250, but £2,500.

That the award is not just is evident from this further consideration, that the sum awarded represents no more than I could have earned by writing leading articles and reviews for the daily newspapers during the same time—a description of work which involves no severe exercise of the mental powers, no labour in the shape of research, and no responsibility.

It is unnecessary to dilate on the extent and nature of the research which I had to undertake, or the mental strain involved in writing a work of this description, or the responsibility it entailed; but it is manifest that these considerations have been overlooked by the referees, who have apparently treated my work as if it had been nothing more than a mechanical compilation.

The proper measure of value, in such a case as the present, is the amount usually received by historical writers in London, where work of this kind is well understood.

If, for instance, I had published the book in London, and if it had been reviewed there as it has been here—that is, in terms of unqualified approbation—the sale would probably have reached 10,000 copies at the usual price of 25s.; and as the sale in these Colonies would be quite as large, the total receipts of a first edition, after payment of all expenses, would have amounted to many thousands of pounds. That this is no exaggerated estimate might be easily proved, but it is enough to mention that the sale of Motley's "History of the Rise of the Dutch Republic" reached 17,000 copies in the first year, at 42s. for three volumes.

Taking this view of the matter, it follows that the amount which I ask for my work (£2,500) is a very moderate estimate of its commercial value.

II. There is another view of the matter which ought not to be left out of consideration. In December last Sir Henry Parkes stated in the Assembly that, having seen an advance copy of the book, which then contained only Parts I and III, he was of opinion that "the work had been exceedingly well done, and that it would prove to be of great value to the country."

That being the Premier's opinion, I am justified in saying that a work of great value to the country ought to meet with a proportionate reward. But where is the proportion in the present case, when the amount awarded represents nothing more than a clerk's salary for the time devoted to it?

III. There is a third view of the matter which has not met with any consideration. Owing to the arrangements suggested by me in the first instance, and stated in detail in the prospectus, the publication of the work will not involve any ultimate loss to the revenue. The reception it has already met with is conclusive as to the success which awaits it, and if proper publishing arrangements are made in the Colonies, and in London, it may be considered certain that the sale will more than cover all the expenses attending the publication, including the amounts paid and to be paid to me.

In no previous instance that I am aware of has this been the case. Not one of the many expensive books published by the Government in past years has been known to obtain any circulation, except by gratuitous distribution; and I am therefore justified in assuming that the marked success which has attended the present work is mainly owing to the fact that I am the author.

If, then, it appears that (1) the basis on which I planned the work in the first instance amounts to a virtual guarantee against loss on the publication, and (2) that its certain success may be ascribed to my being the author, it may be inferred that the remuneration to which I am entitled should be measured by a very much higher scale than that which the referees have chosen to adopt.

For these reasons I submit that I have fairly established a claim to payment of the further amount mentioned, £1,250, as a fair recognition of the value of my work. Should you be disposed to agree with me on that point, it would of course be unnecessary to trouble the referees any further on the matter.

I have, &c.,

G. B. BARTON.

No. 18.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Reform Club, 25 July, 1889.

In reply to your letter of the 10th instant, requesting me to prepare and forward to you a statement of terms for the completion of the History of New South Wales, I beg leave to enclose an abstract which, when revised and assented to, may form the subject of an agreement.

I am, &c.,

G. B. BARTON.

[Enclosure.]

[Enclosure.]

Abstract of Terms.

1. That the manuscript records, books, and maps, relating to the History of the Colony, now in the Government Printing Office, may be transferred to the Public Library, to be kept for reference in the room known as the Trustees' room; the use of which, when not occupied by the Trustees, to be allowed me.

2. That the Government Printer may be directed to confine himself to his duties as a printer and publisher, and in all matters relating to the literary execution of the work, including the illustrations, to carry out my instructions.

3. That I may be allowed the assistance of my son in his former capacity, in which he has been trained by me for eighteen months, and that in view of his qualifications his salary may be fixed at £3 3s. a week.

4. That twelve presentation copies be allowed me on the publication of each volume.

5. That no alteration may be made in my manuscript without my consent.

6. That the estimated time required for the completion of each volume is twelve months, but that every effort will be made by me to reduce the time as much as possible: Provided that I am not again to be subjected to any pressure for the purpose of compelling me to produce the volumes prematurely, and that in the event of any second or third edition being required of any volume the time occupied in preparing such new edition be taken into account.

7. That the estimated number of volumes required to complete the "History," on the plan adopted in Volume I, is fifteen; but that if it can be found practicable to reduce the number it will be reduced accordingly. The reason why so many volumes appear necessary is because each is intended to contain a full and accurate treatment of the following subjects:—

(1.) The exploration of the country by sea and land, illustrated by maps and charts.

(2.) The question of the aborigines.

(3.) The convict system and the introduction of free settlers.

(4.) The land question.

(5.) The relations between the Civil and Military Forces.

(6.) The administration of justice and the development of legal institutions.

(7.) The growth of the Constitution.

(8.) The Colonial policy of England.

(9.) The contemporary history of England as it affected the Colony from year to year, and also the current public opinion in England with respect to the Colony, as shown in contemporary publications.

It is also intended to publish in each volume the most important records relating to the Colony, such as have been given in Part III of vol. I.

On such a plan it does not seem possible to do justice to the subject in a smaller compass than that proposed.

Should the work prove to be popular it is not likely that the public would desire to see it curtailed.

8. That for the purpose of enabling me to describe, with sufficient accuracy, those portions of the country which formed the subject of exploration, I may be allowed a free railway pass over the Government lines, inasmuch as it is necessary to make myself familiar, by repeated visits, with the different places referred to in the book.

Vol. II, for instance, will contain an account of the gradual extension of settlement from Parramatta to the Hawkesbury and Nepean; the surrounding country should therefore be carefully described.

It is sufficient to point out that even an inadvertent mistake in descriptions of this kind might expose the book to very unpleasant criticism on its publication, and that such mistakes cannot be avoided unless the writer is placed in a position to study the topography of the country he has to deal with.

9. That the sum of £1,500 may be paid to me on the publication of each volume, commencing with Vol. II, less any amount that may be paid to me on account thereof during the time occupied in completing it.

10. That an account may be kept at the Treasury showing the receipts and expenses attending the publication of each volume; and that at the end of every year, commencing with the present, a balance-sheet may be prepared, and the amount shown as clear profit on each volume, including any subsequent editions (after deducting all expenses, including payments made to me) may be placed to my credit.

Memo. *re* Copyright.

On this point I wish to say that, as the work was originally designed and planned by me, I am clearly entitled to the copyright.

No agreement was entered into between the Government Printer and myself, nor was anything said on this subject until I wrote to him immediately after publication of Vol. I, enclosing a certificate of proprietorship in terms of the Copyright Act, and requesting him to have it registered for me. To my surprise he informed me that he had already registered the copyright in his own name, for and on behalf of the Government.

There is nothing in the Act to justify that proceeding, unless it can be shown that the "History" was originally projected by the Government Printer, and that I was merely employed by him to write it on behalf of the Government. That was not the case. The only work the Government Printer had in view was a second edition of the Official History of New South Wales, published in 1883, which edition I was requested to prepare. But there is no connection between that publication and the work which I proposed, an outline of which was written by me in the shape of a prospectus, dated 10th February, 1888.

If any representation has been made to the Government, to the effect that I did not originate the present work, or that somebody else originated it, such representation is without any foundation in fact. The idea of writing the history of the country, on some such plan as the present, has been in my mind for years past.

G.B.B.

No. 19.

The Government Printer to The Under Secretary for Finance and Trade.

Sir,

27 July, 1889.

Having read Mr. G. B. Barton's letter of the 25th instant, which you did me the honor to hand to me for perusal, I make the following remarks respecting it:—

As to the value of the work from a literary point of view, I am not competent to give an opinion; but I distinctly recollect that when I first waited upon Mr. Barton respecting his undertaking the writing of it for the Government, and speaking to him about the cost, he told me he could write a history of the Colony from £250 upwards, or words to that effect. In fact, what was then wanted was a gentleman of undoubted literary ability, to revise, as to style, what was, or would have been, written by Messrs. Byren and Bladen. All the facts necessary for the work could have been obtained from materials at the command of the Government without Mr. Barton's assistance.

In ordinary cases of arbitration no doubt it is usual to take evidence; but as to referees, I am not certain that that course is generally followed—in sporting matters for instance.

In counting the time occupied at the work, Mr. Barton should not forget that the volume was to have been finished in January last—which it might have been if the same rate of speed had been used after as before that date.

In

In estimating the amount of remuneration to Mr. Barton, I think it but fair to the Government that the large amount of assistance given to that gentleman should be taken into account. And, also, that, although the matter of the book has been arranged by Mr. Barton to suit himself, it is of necessity but a compilation. What I mean is that it is not a work of pure creation.

With regard to the labour of research, I would again refer to the great assistance Mr. Barton received in that direction.

As the Government did not enter upon the work as a money speculation, I do not see that Mr. Barton's reference as to what might be the result in point of gain were the work published in London properly applies. Nor do I see that a History of this Colony, as to the demand for it, can be compared with that of the "Rise of the Dutch Republic." It might as well be compared with Gibbons' "Decline and Fall of the Roman Empire."

It may be taken for granted that a History of the Colony—under the authority of the Government—written by any other capable man would pay for all necessary expenses connected with its preparation, and that the fact of the Government guaranteeing its genuineness would have more to do with its success than the name of the writer.

In conclusion, I would say, as far as I am capable of judging, that Mr. Barton has been fairly but not extravagantly paid for his services for the first volume; but I would strongly recommend that, before he is allowed to proceed further, a settlement—as far as he is concerned with matters relating to the first volume of the History—should be come to.

CHARLES POTTER,
Government Printer.

No. 20.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Dear Mr. Eagar,

"Royal Hotel," Windsor, 17 August, 1889.

I have not yet received any acknowledgment of my letter to the Treasurer, dated 25th ultimo, containing an abstract of terms for the completion of the History. Will you kindly send me a line to let me know whether the matter is under consideration?

I am now studying the antiquities of Windsor and the Hawkesbury, with a view to Vol. II. In the event of a second edition of Vol. I being required, let me suggest that it should not be printed off until I have had an opportunity of filling up the many gaps which I was obliged to leave in the book, especially on the subject of exploration. One object I have in view now, for instance, is to ascertain how far Phillip went up the Hawkesbury, and what knowledge he had of it during his stay in the country. Points of this kind are of great interest.

Yours faithfully,
G. B. BARTON.

No. 21.

Minute by The Under Secretary for Finance and Trade.

Treasury Minute.

The Treasury, New South Wales, Sydney, 21 August, 1889.

Subject:—Mr. G. B. Barton's two letters of 25th ultimo, in relation to the History of New South Wales from the Records.

I WOULD suggest that the letters above referred to be acknowledged in the following terms:—It should be pointed out to Mr. Barton,—

1. That the money value of the first volume was determined by his own referees, who were nominated by him before the work was commenced, and approved by the late Treasurer, Mr. Burns, and subsequently by the present Treasurer. The attempt to dispute the award of his own referees should be resisted and Mr. Barton should be informed that the award is final, and that the matter will not be reopened.
2. He should also be informed that the claim which he makes to the copyright of the work—which is initiated by the Government and paid for out of public funds—will not be entertained for a moment. The Government projected a work of a national character, to commemorate the centennial year, on the suggestion of the Government Printer, as set forth in his letter to the Treasury, dated 30th July, 1887. Mr. Barton, as a literary man of known repute, was employed and paid to write the first volume of the work, chiefly from materials supplied by the Government, and beyond this function he has no interest in the matter.
3. Mr. Barton should also be informed that the terms proposed by him to continue the work will not be accepted. The Government reject them in their entirety.
4. There is, however, no objection to treat with Mr. Barton (subject to the approval of the Cabinet) for the continuance of the work on the following basis, viz.:—
 1. The work not to exceed thirteen volumes, of not less than 600 pages of text each.
 2. £300 to be the payment in full for each volume, commencing with Volume II, and beyond this sum no allowance of any kind will be made for expenses incurred by the writer in the preparation of the work.
 3. Two volumes to be completed in each year.
 4. £200 to be kept back each year until the completion of the two volumes due for that year.
 5. £50 penalty should any volume be delayed for a fortnight beyond six months.
 6. Access to be allowed to the Records at the Government Printing Office, whence they are not to be removed.
 7. The whole details of "printing and publishing" will be exclusively in the hands of the Government Printer, who will have a general supervision of the work, and receive instructions from the Government only.
 8. No claim will be permitted to be set up, as to any alleged ownership of copyright, which is the absolute property of the Government.
 9. Alterations in the text of the work, or the excision of such portions as may be deemed undesirable in a National History to be entirely at the discretion of the Government, as owners of the property, on behalf of the public.
 - 10.

10. Should default be twice made under clause 5, so as to incur the penalty therein provided for, this contract to be thereby terminated, without any recourse upon the Government for damages.
11. Upon completion of any one volume, it shall be at the option of the Government then to terminate the contract, without liability for damages or compensation.

G.E.

Approved.—W.M., 22/8/89.

No. 22.

The Agent-General to The Colonial Treasurer.

Official History of New South Wales.—London Publisher.

Sir, 5, Westminster Chambers, Westminster, S.W., 22 August, 1889.

Referring to your letter L. 114, of the 20th June last, desiring me to select a publisher to launch successfully, in London, Volume I of the "History of New South Wales, from the Records," undertaken by Mr. G. B. Barton, I have the honor to state that, after full and careful consideration, I telegraphed to you on the 20th instant as follows, in code:—

"In reply to your letter of the 20th June, I have arranged with Trübner on the same terms as referred to in your letter, but with 10 per cent. commission. Imprint, 'Trübner & Co., London.' Please send first instalment of 150 copies. Registration copyright here will not be necessary. A despatch on the subject will follow."

The copy of Messrs. Trübner's letter, dated 19th October, 1888, which you enclosed with your despatch under acknowledgment, stated that a commission of 15 per cent. would be charged for "trade discounts and working expenses." I have ascertained from that firm, however, that their charge to the New South Wales Government will be at the rate of 10 per cent. only, and not 15 per cent., as stated in the above-mentioned letter.

The latter part of my telegram was intended as a reply to your telegraphic communication of the 29th ultimo, respecting the registration on this side of Vol. I of History of New South Wales. Since the passing of the "International Copyright Act, 1886," it has become unnecessary to register on this side (for the purpose of securing the copyright in the United Kingdom) any literary work produced in New South Wales, and there registered. I enclose for your information a copy of the Act in question.

As a first instalment, I consider that 150 copies of the first volume will be sufficient. Should there be a demand for further copies I will communicate with you.

I send herewith copies of two letters addressed to me by Messrs. Trübner & Co., dated respectively the 2nd and 9th instant. That of the latter date will furnish you with full particulars of the terms upon which I have agreed.

Messrs. Trübner will forthwith announce the book, and I propose, for the present, to go to the expense of £10 for advertising outside their "monthly list" and "record."

I have, &c.,
SAUL SAMUEL.

[Enclosures.]

Sir, 57 and 59, Ludgate Hill, London, E.C., 2 August, 1889.

According to your desire, we herewith have the honor to hand you copies of our monthly list of publications—from January, 1888, up to date—also the numbers issued for this year of our "oriental record." A glance at these will at once show you the nature and scope of our publications. Copies of our monthly lists are sent regularly to every bookseller in the United Kingdom, and it is also extensively circulated all over the world, and is sent to all public libraries, universities, and kindred institutions. Our "Record," of which 5,000 copies are printed of each number, is also freely circulated amongst all the learned institutions, libraries, and professors—Europe, India, and all transatlantic countries. We may add that we do not make any charge for advertising in the above books placed in our hands. Should you decide to place Mr. Barton's book in our hands, every attention will be given to it, and a regular quarterly settlement made. We may here state that we have a most extensive connection all over the world, more, perhaps, than any other firm in this country. This, we think, would be readily confirmed by any of the large publishing firms of London.

Sir Saul Samuel, K.C.M.G., C.B.

We have, &c.,
TRÜBNER & CO.

Sir, 57 and 59, Ludgate Hill, London, E.C., 9 August, 1889.

With reference to our letter to G. B. Barton, Esq., of Sydney, in the matter of the History of New South Wales, we wish to enlarge the explanation of our terms for publication then given, and also to make a correction. The explanation was as follows:—

That the books shall be sent to us on sale or return, and accounted for at the lowest trade price, twenty-five copies as twenty-four, less 15* per cent. commission, to allow for trade discount and working expenses.

We wish to show exactly what this means as regards the return to be made to your Government on account of sales.

Thus, supposing the selling price of the book to the public is fixed at 10s. 6d. per volume, the "lowest trade price" would be 7s. 6d. From this we deduct the 10 per cent. commission, which would be 9d., leaving 6s. 9d. as the net price payable on each volume sold. This sum of 6s. 9d. will, therefore, be the amount which we will place to the credit of your Government.

You are no doubt aware of the fact that in these days of excessive competition the retail booksellers have to give large discounts to their customers (in some cases as much as 3d. in the 1s., and generally at least 2d. in the 1s.), and consequently expect proportionately larger allowances from publishers, and if they are not allowed a very liberal margin for profit they will not take any trouble to get the book for a customer.

Nevertheless, we wish to leave the matter entirely to your decision.

If you decide upon an allowance of 10 per cent. from the selling price (10s. 6d.) only, we will, of course, be unable to offer the usual terms to the trade, who will have no inducement to push the sale. On the other hand, if the more liberal arrangement is agreed to, we will be placed in a position to give the booksellers every advantage, and may reasonably expect their cordial co-operation.

The Agent-General for New South Wales. We have, &c.,
TRÜBNER & CO.

* This should have been 10 per cent. We charge private people 15 per cent., but Governments only 10 per cent.

The Government Printer, for his information, and to return.—G.E., B.C., 4/10/89.

Noted. I make the publishing charges to be—25 per cent. allowance to the trade, and 10 per cent. commission to Trübner & Co., = 35 per cent., and twenty-five copies to be considered as twenty-four.—C.P., B.C., 17/10/89. The Under Secretary for Finance and Trade.

No. 23.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 26 August, 1889.

I have the honor, by direction of the Colonial Treasurer, to acknowledge receipt of your letters (two in number), dated 25th July last, one of which relates to the award made in respect of the amount to be paid to you for the first volume of the History of New South Wales, and the other to the claim which you make to be the owner of the copyright of the work. As a matter of convenience this communication is to be understood as a reply to both letters.

1. As to the award: I am to point out to you that the money value of the first volume was determined by your own referees, who were nominated by you before the work was commenced, and approved by the late Treasurer, Mr. Burns, and subsequently by the present Treasurer. The attempt to dispute the award of your own referees will be resisted, and I am to state that the award is final, and the matter will not be reopened.

2. As to your claim to the copyright: I am to inform you that your claim to the copyright of the work—which is initiated by the Government, and paid for out of public funds—will not be entertained for a moment. The Government projected a work of a national character, to commemorate the Centennial year, on the suggestion of the Government Printer, as set forth in his letter to the Treasury, dated 30th July, 1887. You, as a literary man of known repute, were employed and paid to write the first volume of the work, chiefly from materials supplied by the Government, and beyond this function you have no interest in the matter.

3. As regards the terms proposed by you to continue the work: These are rejected by the Government in their entirety.

There is, however, no objection to treat with you (subject to the approval of the Cabinet) for the continuance of the work, on the following basis, viz.:—

- (1.) The work not to exceed thirteen volumes, of not less than 600 pages of text each.
- (2.) £600 to be the payment in full for each volume, commencing with Volume II, and beyond this sum no allowance of any kind will be made for expenses incurred by you in the preparation of the work.
- (3.) Two volumes to be completed in each year.
- (4.) £200 to be kept back each year until the completion of the two volumes due for that year.
- (5.) £50 penalty, should any volume be delayed for a fortnight beyond six months.
- (6.) Access to be allowed to the records at the Government Printing Office, whence they are not to be removed.
- (7.) The whole details of "printing and publishing" will be exclusively in the hands of the Government Printer, who will have a general supervision of the work, and receive instructions from the Government only.
- (8.) No claim will be permitted to be set up as to any alleged ownership of copyright, which is the absolute property of the Government.
- (9.) Alterations in the text of the work, or the excision of such portions as may be deemed undesirable in a National History, to be entirely at the discretion of the Government, as owners of the property, on behalf of the public.
- (10.) Should default be twice made under clause 5, so as to incur the penalty therein provided for, this contract to be thereby terminated, without any recourse upon the Government for damages.
- (11.) Upon completion of any one volume it shall be at the option of the Government then to terminate the contract, without liability for damages or compensation.

I have, &c.,
G. EAGAR.

No. 24.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Records.

Sir,

Reform Club, 27 August, 1889.

In reply to your letter of yesterday, respecting the History of New South Wales, I desire to say:—

1. That I made no "claim" to the copyright of the work in my letter of the 25th ultimo. I simply stated the facts of the case, and the legal result of them, in order that the Government might be correctly informed on the matter.

I do not look upon the question of copyright as one of any importance, and am quite prepared to leave it out of consideration.

2. That for the sum of £50 per month, payable on application, without any deduction whatever, I am willing to compile an edition of the Records on the same plan as that adopted by the English Government in the publication of the National Records, a specimen of which you may see in the "Chronicles and Memorials of Great Britain and Ireland" in the Free Public Library.

Such an edition would comprise the full text of the Records, properly arranged and classified, with side-notes, introduction, and index. It would be in all respects a proper official publication, but it would be a distinctly different kind of work from the volume already written by me.

3. For the sum of £100 per month, payable on application, without any deduction, I am willing to prepare the remaining volumes of the work on the same plan as that adopted by me in the first.
4. The time required for the completion of each volume under the first plan would be six months; under the second, twelve months.

I am, &c.,
G. B. BARTON.

Terms of minute to be adhered to.—W.M., 27/8/89.

No. 25.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir, The Treasury, New South Wales, Sydney, 29 August, 1889.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of 27th instant, in reply to Treasury communication of 26 idem No. M. 1,435.

I am to inform you that neither of the propositions contained in your said letter of 27th instant will be entertained.

I am also to state that your further connection with the preparation of the History of New South Wales from the Records will be sanctioned only upon the conditions I to XI, contained in said Treasury letter of 26th instant, and your acceptance or refusal of these terms must be notified to us within one week from date.

I have, &c.,
G. EAGAR.

No. 26.

The Government Printer to The Under Secretary for Finance and Trade.

Sir, Government Printing Office, Sydney, 27 August, 1889.

In addition to the 150 copies of the History of New South Wales which I am already authorised to forward to London, I beg to request authority to despatch by the same mail, to the Agent-General, presentation copies as follows, viz. :—

To Her Majesty the Queen, one copy.

To the Secretary of State for the Colonies, one copy.*

To the Agent-General, one copy.

I also beg to request that the Agent-General may be instructed to forward two copies of the work to each of the Governments of Holland, Spain, Portugal, and France. In addition to these I beg to suggest that (say) twelve other copies be despatched to the Agent-General, to be forwarded by him to high dignitaries and societies in other countries, such as the Presidents of the French and American Republics, and the Libraries of London and Continental Institutes.

Out of the 150 copies to be forwarded for the London publishers, I would suggest that they be allowed to distribute forty copies to the leading London and Continental Reviews and to the British Museum and Libraries required by law, and that they be requested to procure two copies of all notices or reviews which appear, and forward them to me.

I have, &c.,

CHARLES POTTER,
Government Printer.

Approved. Mr. Potter to see Sir H. Parkes and obtain instructions.—W.M., 27/8/89. Attended to.—C.P., 4/9/89.

No. 27.

Minute by The Colonial Treasurer for Cabinet.

Proposed agreement with Mr. G. B. Barton, Barrister-at-Law, to write the History of New South Wales from the Records.

IN July, 1887, the Government Printer submitted a proposal to the then Colonial Treasurer, Mr. John F. Burns, with a view to mark in a permanent manner the Centenary of Australian Colonization, by the preparation and issue of a History of the Colony, based, as to its earlier settlement, upon State papers and official records now for the first time available for the use of the historian, and to be published by authority of the Government.

The proposal met with the approval of Mr. Burns, and Mr. George B. Barton—a gentleman of well-known literary ability—was selected to write the first volume, which was completed and published last month, and has been favourably reviewed by the Colonial Press.

The amount of remuneration for writing this volume, which occupied eighteen months of the author's time, and dealt largely with entirely new material, was referred at the request of Mr. Barton, and with consent of the Treasurer, to Messrs. Alexander Oliver, Robert C. Walker, and G. Eagar, for their decision. The sum of £1,200 was unanimously awarded as not more than an adequate payment for the work done.

The Treasurer, however, is of opinion that the future volumes of the work, fixed at twelve in number, should be proceeded with at a reduced cost,—and the arrangement which he now submits to his colleagues, provides that Mr. Barton should be paid £600 per volume of 600 pages each, and that two volumes should be produced every year, until the work is completed. The draft conditions (attached) are very stringent, and under one of these conditions, the Government have the power to discontinue the work upon the completion of any one volume, and so terminate the contract without liability to Mr. Barton for compensation or damages.

The Government Printer estimates that, after paying cost of printing and publishing, each volume will yield a profit of £1,500, less cost of compilation.

W.M., 5/9/89.

The Treasury, New South Wales, Sydney, 4 September, 1889.

Approved.—H.P. (for Cabinet), 10/9/89.

Agreement

Agreement with Mr. G. B. Barton for the continuance and completion of the History of New South Wales from the Records.

1. The work not to exceed 13 volumes, of not less than 600 pages of text each.
2. £600 to be the payment in full for each volume, commencing with Volume II, and beyond this sum, no allowance of any kind will be made for expenses incurred in the preparation of the work.
3. Two volumes to be completed in each year.
4. £200 to be kept back each year until the completion of the two volumes due for that year.
5. £50 penalty, should any volume be delayed for a fortnight beyond six months.
6. Access to be allowed to the Records at the Government Printing Office, whence they are not to be removed.
7. The whole details of printing and publishing will be exclusively in the hands of the Government Printer, who will have a general supervision of the work, and receive instructions from the Government only.
8. No claim will be permitted to be set up as to any alleged ownership of copyright, which is the absolute property of the Government.
9. Alterations in the text of the work, or the excision of such portions as may be deemed undesirable in a National History, to be entirely at the discretion of the Government, as owners of the property, on behalf of the public.
10. Should default be twice made under clause 5, so as to incur the penalty therein provided for, this contract to be thereby terminated, without any recourse upon the Government for damages.
11. Upon completion of any one volume, it shall be at the option of the Government then to terminate the contract, without liability for damages or compensation.

The Treasury, New South Wales, 3 September, 1889.

W.M., 4/9/89.

The above conditions were submitted to Mr. Barton in Treasury letter of 26th August, 1889.

No. 28.

The Government Printer to The Under Secretary for Finance and Trade.

Sir, Government Printing Office, Sydney, 5 September, 1889.

I do myself the honor to inform you that, in compliance with instructions received in Treasury minute of the 21st ultimo, I have this day shipped to the Agent-General, for this Colony, in London, per the Orient Company's s.s. "Orient," 150 copies of the History of New South Wales, 100 copies being in half Morocco binding, and fifty in cloth. The words "Trübner & Co., London," have been added to the imprint on the title-page.

I enclose the bill of lading herewith.

I have also to inform you that with respect to my letter of the 27th ultimo, relative to the distribution of complimentary copies in London and Europe, the Honorable the Premier is forwarding copies as follows from the Colonial Secretary's Department, viz.:—To Her Majesty the Queen, the Premier of England, the Secretary of State for the Colonies, the President of the United States, the President of the French Republic, the Emperor of Germany, the Queen Regent of Spain, the King of Holland, the King of Portugal, the King of Denmark, and also twelve copies to be distributed to various societies.

The Premier has also altered the number of copies proposed to be sent on for the London and continental reviewers from twenty-five to forty.

I have, &c.,

CHARLES POTTER,
Government Printer.

P.S.—The forty copies for reviewers are included in the 150 referred to.—C.P.

Seen.—W.M., 7/9/89.

No. 29.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Sir, Government Printing Office, Sydney, 6 September, 1889.

I desire to acknowledge receipt of Treasury letter, M-1,435, of date 26th ultimo, setting forth, *inter alia*, the terms on which it is proposed by the Government that I should continue and complete the History of New South Wales, from the Records, of which the first volume is already published.

I desire to state that I hereby agree to accept those terms, as comprised in clauses I to XI, contained in the Treasury letter referred to, on the understanding that by the word "volume," in clauses III, IV, and V, is meant the author's manuscript and final proofs appertaining to and constituting each separate volume concerned.

As no mention is yet made of the dates on which I am to receive payment for my services, I request that I may be allowed to draw monthly, at the rate of £1,000 a year, on account of the £1,200 specified as the remuneration for the two volumes agreed to be produced in each successive year.

I am, &c.,

G. B. BARTON,

Approved.—W.M., 9/9/89.

No. 30.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir, The Treasury, New South Wales, Sydney, 13 September, 1889.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of the 6th instant, in which you agree to accept the terms comprised in clauses Nos. I to XI of Treasury letter, M. 1,435, of the 26th ultimo, as those on which you bind yourself to continue and complete the History of New South Wales, from the Records, of which the first volume is already published.

I am to state that Mr. McMillan confirms said agreement, and also accepts your definition as to what constitutes a "volume" in reference to clauses Nos. III, IV, and V of the terms.

You will, also; during the currency of the agreement, be allowed to draw your allowance monthly, at the rate of £1,000 a year, on account of the £1,200 specified as the remuneration for the two volumes agreed to be produced each successive year.

The agreement to commence on and from the 4th instant.

I have, &c.,
G. EAGAR.

No. 31.

The Agent-General to The Colonial Treasurer.

Official History of New South Wales.

Sir, 5, Westminster Chambers, Westminster, S.W., 11 October, 1889.

In continuation of my letter of the 22nd August last, relative to the registration in England of the copyright of Vol. I of the Official History of New South Wales, and with reference to your letter L. 144 of the 8th idem, in which you were good enough to forward a certified copy of the registration of the volume in question in Sydney, under the Copyright Act, 42 Victoria No. 20, I have the honor to state that, from inquiries made, it does not appear to be absolutely necessary that the book should also be registered here, but, to put the matter beyond dispute, I have considered it advisable that registration should be effected under the provisions of the Imperial Copyright Act 49, 50 Vic. cap. 33 (a copy of which I forwarded to you under cover of my letter above referred to). For this purpose, it would be better that the registration should be accomplished in the same name as that in the Colony. I therefore enclose herein the proper form, which should be signed by Mr. Charles Potter, for and on behalf of the Government of New South Wales; and I have to ask you to be so good as to return the document to me at your early convenience.

I attach for your information copy of a letter on this subject, addressed to me by Mr. R. C. Want.

I have, &c.,
SAUL SAMUEL.

[Enclosure.]

Dear Sir,

Re History of New South Wales, I have caused inquiries to be made at Stationer's Hall, and I learn from the officials that, in spite of the "International Copyright Act, 1886," it is a common practice for proprietors of copyrights registered in a Colony to register in England. It is an inexpensive proceeding, and I think, as a matter of precaution, this book should be registered.

Having regard to the fact of the existing registration, which in all probability secures the British copyright, I think it advisable that Mr. Potter should sign the application form, which I enclose, so that there may be no discrepancy between the registers here and in the Colony.

I am, &c.,
RANDOLPH C. WANT.

The Agent-General for New South Wales, 9 Victoria-street, S.W.

Form returned, signed by Mr. Potter.—M.R., 21/11/89.

No. 32.

The Agent-General to The Colonial Treasurer.

History of New South Wales.

Sir, 5, Westminster Chambers, Westminster, S.W., 20 December, 1889.

Referring to your letter L. 175, of the 5th September last, covering a bill of lading for two cases containing 150 copies of the History of New South Wales (100 copies in half morocco binding and fifty in cloth), and enclosing copy of a letter from the Government Printer with respect thereto, I have the honor to inform you that, on handing the books to Messrs. Trübner & Company, they immediately drew attention to the difference in the bindings, and asked which style of binding was to be offered for sale, as only one price had been named in your letter of the 20th June, 1889, L. 114, viz., 10s. 6d. I thereupon informed Messrs. Trübner that the following sums (which I gathered from the advertisement issued in the *Government Gazette*) were the prices at which the History of New South Wales should be sold, viz., to subscribers to the series, cloth, 10s. 6d.; half morocco, 15s. To non-subscribers, cloth, 15s.; half morocco, £1.

A point has now been raised by the firm in question, as to whether they are at liberty to allow the same terms as regards discount to booksellers on the price at which the volume is offered to subscribers as on those offered to non-subscribers. I enclose copies of Messrs. Trübner's letters, from which may be gathered full particulars regarding the question, and I shall be glad to receive your instructions on the subject as early as possible. In the meantime I have informed Messrs. Trübner & Company that only the non-subscribers' prices, viz., cloth, 15s.; half morocco, £1, should be quoted as the price of the work out of the Colony.

I have, &c.,
SAUL SAMUEL.

The Government Printer.—G.E., B.C., 28/1/90.

[Enclosure.]

Sir,

57, and 59, Ludgate Hill, London, E.C., 12 December, 1889.
We beg to acknowledge the receipt of your letters of the 9th and 10th instant, and note that the price fixed in the Colony for the sale of the History of New South Wales is as follows:—

To subscribers to the series—cloth, 10s. 6d.; half morocco, 15s. To non-subscribers, cloth, 15s.; half morocco, £1.

With regard to the non-subscribers' price there can be no question as to the terms arranged between us; but with regard to the subscribers' price we are in need of your kind assistance in interpreting the agreement, because we are not clear as to whether the same terms hold good with respect to the lower price. We are reluctant to trouble you again upon this matter, but we think that you will agree with us in believing that the point (involving as it does the sale of so many volumes) is an important one, and should be settled now once for all.

Awaiting your reply, and hoping soon to be able to give a good report on the sale of the work in question,

We remain, &c.,
TRÜBNER & Co.
KEGAN PAUL, TRENCH TRÜBNER & Co.,

The Agent-General for New South Wales, 9, Victoria-street, London, S.W.

F. Duffing, Director.

Sir

Sir,

57, and 59, Ludgate Hill, London, E.C., 18 December 1889.

We regret that our letter should not have been so clear as it might have been with regard to the question we wished to raise with respect to the price of the Official History of New South Wales.

The point was this—are we to allow the same terms, as regards discount to the booksellers, on the prices offered to the subscribers as on those offered to non-subscribers?

Thus, in our letter to Sir Saul Samuel, of 9th August, we pointed out that, supposing the book sold at 10s. 6d. per volume, the lowest trade price would be 7s. 6d., and from this there would be a discount of 10 per cent., so that the amount payable to the New South Wales Government on such volume would be 6s. 9d.

As the prices have now been fixed at 10s. 6d. and 15s., and 15s. and 20s., respectively, our point is just this: are we to allow exactly the same discounts to the booksellers on the subscribers' as on the non-subscribers' copies?

In many cases a subscribers' price means a net price chargeable alike to booksellers and the public; in other cases a smaller discount than usual is allowed to the booksellers.

In the present case we would venture to suggest that only the non-subscribers' prices, viz., 15s. and 20s., should be quoted as the prices for the work out of the Colony, on the ground that the subscribers' prices only apply to the Colony itself. Should this assumption be incorrect the matter could easily be adjusted at a later date on receipt of instructions from the Government.

We remain, &c.,

(For Kegan, Paul, Trench, Trubner, & Co., Ltd.),

The Agent-General for New South Wales, 9, Victoria-street, London, S.W.

F. DUFFING.

No. 33.

The Government Printer to The Under Secretary for Finance and Trade.

Sir,

Government Printing Office, Sydney, 29 January, 1890.

In reference to the Agent-General's letter of the 20th December last, respecting the prices to be quoted for the History of New South Wales, and which was referred to me on the 28th instant, I do myself the honor to suggest that, in order to simplify as much as possible the business with Messrs. Kegan, Paul, Trench, Trubner, & Co., the proposal made by them be accepted, namely, that only the non-subscribers' prices (15s. per vol. for cloth, and 20s. per vol. for half-bound copies) be quoted; and I would suggest that the following cablegram be forwarded to the Agent-General, viz.:—"History, Trubner to quote non-subscribers' prices only, viz., 15s. and 20s."

My letter of the 5th September last, informing you of the despatch of the 150 copies to London, is apparently the one to which the Agent-General refers in an early part of his letter.

I have, &c.,

CHARLES POTTER,

Government Printer.

No. 35.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Sir,

Government Printing Office, 5 March, 1890.

The Government Printer informed me yesterday that you had intimated to him the intention of the Government not to make me any further payment on account of vol. II of the "History of New South Wales" until the work is completed and ready for the press.

Such an intimation compels me to say that, should the Government carry out that intention, the completion of the volume will be considerably delayed, because I shall be unable to devote the whole of my time to it as I have hitherto done.

There is no reason to suppose that the progress made with the work might have been greater than it is. A perusal of the matter already in type will be sufficient to show the great amount of research required in order to produce a readable book; and it is hardly necessary to point out the extreme disadvantages under which any such work must be done here; where there are no facilities of the kind enjoyed by writers in London and other large cities. There is no library here, worthy of the name, and consequently I can seldom obtain the books I require; nor are there any public record offices, and consequently I have no means of examining any records, except those sent out by Mr. Bonwick, which are not always complete. I have no one to assist me in searching books and making extracts, and consequently I have to spend many hours, frequently many days, in doing it myself. Under these circumstances, I am satisfied that no writer could have made greater progress than I have made; nor could I have made half as much progress as I have, if it had not been for my "mastery of the subject," as the critics call it, in addition to my knowledge of general literature and political history.

Since I began the work, now over two years ago, I have devoted the whole of my time to it, not only office hours, but those which might fairly have been devoted to rest and recreation; and I have done so from an earnest desire to expedite the publication as much as I could. The result has been that, owing to the inadequate remuneration I have received, proceedings in Bankruptcy have lately been taken against me by a creditor; and I am therefore under the necessity of submitting my claims for a rate of remuneration which will enable me to devote my time to the History as unreservedly as I have done up to the present hour without sacrificing my personal interests.

Moreover,

Moreover, as the contract contained in the Treasury letter of 26th August last is now, under clauses V and X, practically terminated—it will be legally terminated on the 14th instant—it becomes necessary to consider the terms on which the work is to be continued. It will not be premature in me, therefore—presuming that I am desired to continue it—to submit a short statement of my views on the matter.

Having regard to the value of my labour, with respect to which I may refer you to the criticisms of the Australian press, I beg leave to say that, if I am still expected to devote the whole of my time to the History, I am entitled to ask, as a minimum, payment of £100 on the first of every month, in advance, together with the £10 per month for travelling expenses, which the Government have agreed to allow. Less than that sum will not enable me—and I speak from painful experience—to meet my personal and family obligations as punctually as they should be met; and as I am compelled to find the money month by month, I must look to other sources if I cannot find it at the Treasury.

With respect to the time of publication, I take this opportunity of pointing out that a very grave mistake, as it seems to me, was made in publishing vol. I in Sydney *seven* months before it was published in London; and as it appears that this mistake is to be repeated with vol. II, I think it my duty to say that the interests at stake will be needlessly sacrificed by such a method of publication.

It should be manifest that the proper, as well as the established, course to adopt in such cases is to publish the book at the same time in London and Sydney, so that an edition would be placed before the reviewers and the public in both countries at the same time.

That course would (1) obviate the prejudice which always operates in London against any book published in a colony; (2) give the work a *locus standi* in London, which would greatly assist its circulation there; and (3) promote the sale in the Colonies by the publication of the London reviews at the same time as the Australian.

It has always seemed to me a most deplorable thing that, by the method of publication adopted with respect to the first volume, it should have been subjected to the unscrupulous attacks made upon it by writers manifestly incompetent to deal with it; while *eight* months have already passed without bringing us any expression of opinion from a London review.

The publishing season in London being January, I therefore suggest that, in future, each volume should be published in London and Sydney during that month, year by year, which would render it necessary to have it printed off here in October or November.

As any other mode of publication would mean a loss of money as well as a loss of *prestige*, I think my view of the matter will commend itself to the Government.

I am, &c.,
G. B. BARTON.

The Government Printer.—Will you please state exactly how the work done for the “second” volume of the History now stands?—G.E., B.C., 10/3/90. I have in type original matter equal to 180 pages. Extracts, despatches, &c., from records equal to 570 pages.—C.P., B.C., 10/3/90.

No. 36.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

Dear Mr. Eagar,

Government Printing Office, 25 March, 1890.

In the course of our last conversation you mentioned that I had been paid up to the end of this month, a statement which I then corrected, pointing out that the payments extended to the end of February, covering the six months from 1st September to 28th February.

As you may still be under the mistaken impression referred to, I send on the other side a list of the payments made, which can be verified by one of your clerks in two minutes.

And as this list shows that I have not been paid up to the end of this month, I wish to remind you that in September last you promised that I should in future be paid on the 4th of each month, in advance; and as I have not yet received the payment for this month, I wish to ask you whether you have any objection to let me have it now.

Yours, &c.,
G. B. BARTON.

No. 37.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

“The Hôtel Métropole,” Bent, Phillip, and Young Streets, Sydney,

Dear Mr. Eagar,

1 April, 1890.

Will you do me the favour to indorse a line or two, for which the bearer will wait, stating what I am to expect in the matter of payment for my literary services in connection with the History? I think I am entitled to ask for a distinct intimation on the subject from you; more especially as I understood you to say, when I last saw you, that you would write me about it.

Yours, &c.,
G. B. BARTON.

19

No. 38.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Sydney, 21 May, 1890.

I beg leave to apply for payment of the amount due to me for services rendered in connection with the History of New South Wales during the months of March and April last, at the rate of £83 6s. 8d. monthly; and also, should you determine to dispense with my services, for payment of one month's additional salary in lieu of notice.

I further beg leave to point out that the construction put upon the contract drawn up by your Under Secretary in the Treasury letter of 26th August last, so far as it relates to the completion of Vol. II of the History, is a mistaken one.

It is expressly provided in the contract that, in the event of that volume not being completed within a fortnight after six months had elapsed, "this contract should be thereby terminated." The volume not having been completed within that time, the contract thereupon became a dead letter; and consequently it was necessary either to give me notice that my services would be dispensed with or else to enter into a fresh arrangement.

I accordingly wrote your Under Secretary on the 4th March, pointing out that the contract would be at an end on the 14th, and requesting that, if it was desired to retain my services, the amount to be paid me in future should be the full £1,200 a year agreed to in the contract, without any deductions as before.

I received no answer to that letter until the 16th April, when the Under Secretary informed me that he would not pay me the amount due for March, because the contract had not been fulfilled, and in a subsequent interview he said that nothing would be paid until Vol. II was completed, and that then I should be entitled to £100.

This interpretation of the contract implies that, in the Under Secretary's opinion, it is still in existence. That view of the matter is, I submit, not consistent with the express terms of the clause which I have quoted.

I also beg leave to say that, before the contract in question was drawn up, I told the Under Secretary, both verbally and in writing, that the volume could not be completed within six months—my estimate being twelve; and that I accepted the terms specified by him solely because he gave me no choice in the matter, except to decline them. I told him that I would submit myself to the Government, and do the best I could; and I now declare that I have done so—the result being that, as I anticipated, it has proved wholly impossible to complete such a work in the time limited.

If the Government proposed to publish the Records without any original writing by the editor, it would take fully six months to bring out each volume, because it would take three to prepare the manuscript for the printer, and another three to print and revise them.

But if the Records are to be published on the plan adopted in Vol. I, the original writing required could not be done in less than six months—making twelve altogether.

I have, &c.,
G. B. BARTON.

P.S.—I continued my work on the History until the 28th April, when, on going to the room in the Government Printing Office assigned to me, I found the door locked to prevent my entrance, and I was informed by the Government Printer that he had locked it under instructions from your Under Secretary.

Case to be referred to the Attorney-General.—W.M., 13/6/90. After conference with the Treasurer, and explaining the facts of the case, I was directed not to send on this paper to the Attorney-General.—G.E., 21/2/91.

No. 39.

G. B. Barton, Esq., to The Under Secretary for Finance and Trade.

"The Hôtel Métropole," Bent, Phillip, and Young Streets,

Sydney, 6 August, 1890.

Dear Mr. Eagar,

I am glad to see that you have recovered from your recent illness.

As I understand that you have not yet made any other arrangement about the History, can we not hit upon a *modus vivendi*, so that the work may go on?

Yours faithfully,
G. B. BARTON.

Minute by The Colonial Treasurer.

Subject:—Second Volume of History of New South Wales from the Records.

The Treasury, New South Wales, Sydney, 2 January, 1891.

THE following arrangement may be made with Mr. Alexander Britten for the completion of the second volume of the above work, which had been left unfinished by Mr. G. B. Barton, viz., that he complete the second volume of the History—left in an unfinished state by Mr. G. B. Barton—on the same lines, as nearly as practicable, as those indicated by that gentleman; such completion to be effected within a reasonable time, and that for his services he be paid at the rate of £1,200 per annum, which he can draw monthly.

The Under Secretary for Finance and Trade to A. Britten, Esq.

Sir, The Treasury, New South Wales, Sydney, 2 January, 1891.
I am directed by the Colonial Treasurer to make you the following offer in relation to the work known as the History of New South Wales from the Records: That you complete the second volume of the History, left in an unfinished state by Mr. G. B. Barton, on the same lines, as nearly as practicable, as those indicated by that gentleman, such completion to be effected within a reasonable time, and that for your services you be paid at the rate of £1,200 per annum, which you can draw monthly.

I shall be glad of your acceptance or otherwise of this offer.

I have, &c.,
G. EAGAR.

No. 42.

A Britten, Esq., to The Under Secretary for Finance and Trade.

Sir, Athenæum Club, Sydney, 2 January, 1891.
I have the honor to acknowledge the receipt of your letter of this day's date, in which you offer me, by direction of the Colonial Treasurer, certain terms for completing the second volume of the History of New South Wales; that is to say, the volume is to be completed within a reasonable time, and I am to be paid at the rate of £1,200 per annum.

I have much pleasure in accepting the offer on these conditions.

I have, &c.,
ALEX. BRITTEN.

No. 43.

Minute by The Colonial Treasurer.

Subject:—Allowance to F. M. Bladen for services to be rendered in connection with the preparation of the Second Volume of the History of New South Wales from the Records.

The Treasury, New South Wales, Sydney, 14 January, 1891.

Mr. F. M. BLADEN, an intelligent officer in the Government Printing Office, may be paid for six months' services to be performed in connection with the History of New South Wales, commencing from the 1st instant, at the rate of £150 per annum.

W.M.

No. 44.

The Registrar of the University to The Under Secretary for Finance and Trade.

Dear Mr. Eagar, University of Sydney, 25 February, 1891.
In reference to the subject of our conversation last evening, I have seen Professor Wood, the newly appointed Challis Professor of History, and ascertained that he will be willing to act on the proposed Supervising Board in connection with the Official History of New South Wales. As to the question of fees, I may state that University professors have held the position of examiners in connection with the Barristers' Admission Board and the sister Universities, receiving fees for their services; and as the work of a member of the proposed Board would be somewhat analogous to that of an examiner, I do not think the Senate would make the least objection to the appointment of Professor Wood.

Yours, &c.,
H. E. BARFF.

No. 45.

Treasury Minute.

The Treasury, New South Wales, Sydney, 27 February, 1891.

Subject:—Appointment of a Board to Revise the Text of the History of New South Wales from the Records, and generally to supervise the preparation of the work.

This duty was undertaken, in respect of the first volume, by Messrs. Geoffrey Eagar, Alexander Oliver, M.A., and Robert C. Walker, without remuneration.

I now propose to associate Mr. G. Arnold Wood, B.A., Challis Professor of History in the University of Sydney, with the above-named gentleman, and, on the presumption that meetings once a month will afford the necessary amount of supervision, I approve of these gentlemen being remunerated at the rate of 5 guineas per meeting, or 60 guineas per annum each—their duties to commence on the 1st proximo, and the fees to be paid, for the present, from the "Unforeseen Vote."

Approved.—W.M., 28/2/91.

No. 46.

The Acting Under Secretary for Finance and Trade to R. C. Walker, Esq.

Sir, The Treasury, New South Wales, Sydney, 3 March, 1891.
I have the honor to inform you that the Colonial Treasurer has appointed you, as from 1st instant, a member of a Board (the other members of which are the Hon. Geoffrey Eagar, and Messrs. Alexander Oliver, M.A., and G. Arnold Wood, B.A.), to revise the text of the History of New South Wales from the Records, and generally to supervise the preparation of the work.

Mr. McMillan has approved of a fee of £5 5s. being paid to each member per meeting, the meetings to be limited to one per month.

I have, &c.,
F. KIRKPATRICK.

[A similar letter, *mutatis mutandis*, was addressed to the Hon. Geoffrey Eagar, and Messrs. Alexander Oliver and Arnold Wood.]

No. 47.

No. 47.

The Acting Under Secretary for Finance and Trade to The Registrar, Sydney University.

Sir, The Treasury, New South Wales, Sydney, 3 March, 1891.

I am directed by the Colonial Treasurer to inquire whether the Senate would have any objection to the appointment of Mr. Arnold Wood as a Member of a Board of Advice in connection with the History of New South Wales from the Records.

It is anticipated that there will be one meeting a month.

Mr. Wood would be associated with Hon. Geoffrey Eagar and Messrs. Alexander Oliver and R. C. Walker. The Board will be remunerated by fees.

Requesting the favour of an early reply,—

I have, &c.,
F. KIRKPATRICK.

No. 48.

The Registrar, Sydney University, to The Acting Under Secretary for Finance and Trade.

Sir, University of Sydney, 17 March, 1891.

I have the honor to inform you that the Senate has had under consideration your letter of the 3rd March, in which you inquire whether it would have any objection to the appointment of Mr. Arnold Wood as a member of the Board of Advice in connection with the History of New South Wales from the Records.

In reply, I am directed to state that the Senate has no objection to the course proposed.

I have, &c.,
H. E. BARFF,
Registrar.

No. 49.

A. Britten, Esq., to The Acting Under Secretary for Finance and Trade.

Sir, Government Printing Office, Sydney, 18 March, 1891.

I beg to acknowledge the receipt of your letter of the 17th instant, informing me that certain proposals made by the Board of Revision with regard to the scope of the Official History have been approved of, and conveying the wish of the Colonial Treasurer that I should follow the instructions of the Board in the same manner as if they had been given by Mr. McMillan himself.

I need only say, in reply, that the wishes of the Colonial Treasurer shall be duly complied with.

I have, &c.,
ALEX. BRITTEN.

No. 50.

The Acting Under Secretary for Finance and Trade to G. A. Wood, Esq., B.A.

Sir, The Treasury, New South Wales, Sydney, 21 March, 1891.

I have the honor to inform you that the Colonial Treasurer has appointed you, as from 1st instant, a Member of a Board (the other members of which are Hon. Geoffrey Eagar, and Messrs. Alexander Oliver, M.A., and R. C. Walker) to revise the text of the History of New South Wales from the Records, and generally to supervise the preparation of the work.

Mr. McMillan has approved of a fee of five guineas being paid to each member per meeting, the meetings to be limited to one per month.

I have, &c.,
F. KIRKPATRICK.

No. 51.

The Acting Under Secretary for Finance and Trade to A. Britten, Esq.

Sir, The Treasury, New South Wales, Sydney, 12 March, 1891.

I am directed by the Colonial Treasurer to inform you that he has appointed Hon. Geoffrey Eagar, Alexander Oliver, Esq., M.A., Robert C. Walker, Esq., and G. Arnold Wood, Esq., B.A., a Board to revise the text of the History of New South Wales from the Records, and generally to supervise the preparation of the work.

The three gentlemen first-named performed this duty in respect of the volume which was written by Mr. G. B. Barton, and, without in any way relieving you of the responsibilities of your office, it is thought that you will be glad to avail yourself of the information and experience possessed by the Board, in the continuation of the work.

I have, &c.,
F. KIRKPATRICK.

No. 52.

A. Britten, Esq., to The Acting Under Secretary for Finance and Trade.

Sir, Government Printing Office, 13 March, 1891.

I beg to acknowledge the receipt of your letter of the 12th instant, informing me that the Colonial Treasurer has appointed a Board, consisting of the Hon. Geoffrey Eagar, Alex. Oliver, Esq., R. C. Walker, Esq., and G. A. Wood, Esq., to revise the text of the History of New South Wales from the Records.

The belief expressed that I shall be glad to avail myself of the knowledge and experience possessed by the gentlemen who constitute the Board of Revision is entirely in accordance with my feelings in the matter. While, as your letter indicates, the appointment of the Board does not in any way lessen my responsibility, it cannot fail, I am sure, to promote the work upon which I am engaged.

I have had much pleasure, therefore, in receiving the intimation which the Colonial Treasurer has instructed you to convey.

I have, &c.,
ALEX. BRITTEN.

Seen.—W.M., 16/3/91.

The Acting Under Secretary for Finance and Trade to Alexander Britten, Esq.

Sir,

The Treasury, New South Wales, 17 March, 1891.

I am directed by the Colonial Treasurer to inform you that certain proposals regarding the scope of the History of New South Wales from the Records have been made by the Board, of whose appointment you were advised in Treasury letter of 12th instant.

Such proposals have been approved by the Colonial Treasurer, and I am to say that it is desired that you should carry out all the instructions of the Board in the same manner as if they had emanated from Mr. McMillan himself.

I have, &c.,

F. KIRKPATRICK,

Acting Under Secretary for Finance and Trade.

The Chairman of the Board would like to be supplied with a copy of this letter, and also with a copy of the agreement made with Mr. Britten.—F.K., 10/4/91. Approved.—W.M., 11/4/91.

No. 54.

R. C. Walker, Esq., to The Acting Under Secretary for Finance and Trade.

Sir,

Board to Revise the Text of the History of New South Wales,

Sydney, 21 March, 1891.

I have the honor to enclose herewith vouchers for £21 to pay fees for the month of March, 1891, to the members of the Board to revise the text of the History of New South Wales from the Records, as authorised by your letter of the 3rd instant, which amount I will thank you to cause to be placed to my credit (Public Account) in the Australian Joint Stock Bank, Sydney; also that you will be so good as to sanction a public cheque-book being placed at my disposal for operating on the account.

I have, &c.,

R. C. WALKER,

Chairman.

No. 55.

R. C. Walker, Esq., to The Acting Under Secretary for Finance and Trade.

Sir,

Official History Board, Sydney, 16 April, 1891.

On behalf of the Board I have the honor to thank you for your letter of the 14th instant, enclosing copies of Treasury letter of the 17th ultimo, addressed to Mr. Alexander Britten, together with a copy of Treasury minute, of the 2nd January, 1891, showing the arrangement made with that gentleman for the completion of the second volume of the History, which had been left unfinished by Mr. G. B. Barton.

I have, &c.,

R. C. WALKER,

Chairman.

Seen.—W.M., 18/4/91.

No. 56.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Public Library, 15 February, 1892.

I beg leave to ask your attention to certain facts disclosed in a Parliamentary return, published in the Session of 1890, containing "Correspondence relating to the History of New South Wales from the Records."

2. These facts have only come to my knowledge within the last few days, in consequence of my not having read the return on any former occasion. It was not moved for at my request, and at the time it was published I had no desire to read the contents.

3. At page 24 you will find (second paragraph from top) a memo. from the late Under Secretary for Finance and Trade to the Government Printer, and his reply, as follows:—

"The Government Printer,—Will you please state exactly how the work done for the second volume of the History now stands?—G.E., 10/3/90."

Reply.—"I have in type original matter equal to 180 pages; extracts, despatches, &c., from records, equal to 570 pages.—C.P., B.C., 10/3/90. The Under Secretary for Finance and Trade."

The total number of pages, therefore, then in type, was 750.

4. If you will now turn to page 21, where the "contract" is set out, you will find that by clause (1) each volume was to contain "not less than 600 pages of text." It follows that, when the Government Printer wrote his reply, I had more than satisfied that clause, having prepared 150 pages over and above the specified number.*

5. I was not aware at the time that the Government Printer had measured the matter in type, and that there were so many pages ready for the press. He did not mention the measurement to me; and as no inquiry of that kind had been addressed to me, it did not occur to me to ascertain the facts.

6. I am not aware of his reasons for not having pointed out to the Under Secretary that I had done more than I was required to do.

7. From the letter, dated 8th March, 1890, addressed by me to the Government Printer (see page 24), it appears that I had over-estimated the quantity of work remaining to be done at that date. This mistake arose from the fact that I had not measured the matter in type.

8. On the strength of this miscalculation on my part, the Treasury declined to make me any further payment, and shortly afterwards put an end to the contract.

9.

9. Under clause 4, a sum of £100 was "kept back" by the Treasury, and no payment was made on account of the work I continued to do for the two months (March and April) following the supposed breach of contract.

10. Under these circumstances, I beg leave to submit that I have not been justly or fairly dealt with by your predecessor in office, and that I am entitled to some compensation for the wrong done to me under a misconception of the true facts of the case.

I am, &c.,

G. B. BARTON.

The Government Printer for report.—F.K., 17/2/92. See separate report.—C.P., 27/2/92 (included herewith as paper No. 58). The Under Secretary for Finance and Trade.

No. 57.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Public Library, 22 February, 1892.

I beg leave again to ask your attention to certain facts disclosed by the Parliamentary return, Session 1890, relating to the History of New South Wales.

1. At page 21, it appears that two letters, which should have followed "No. 46" in the correspondence, have been omitted, although they are essential to a right understanding of the case.

2. On receiving the letter "No. 46" from the Under Secretary for Finance and Trade, I sent him a reply stating, in effect, that a volume of history could not be written in six months; that it would take fully twelve; and I submitted an alternative proposal—that the records should be printed in the form of the English historical record publications, containing the bare text of the records with an introduction,—adding that a volume of that kind could be completed in six months.

3. The Under Secretary, in reply, declined to entertain either proposal.

4. If you will direct a search to be made for the missing letters—of date between 23rd August and 6th September, 1889—you will find that this statement is correct. And I would then ask you to consider whether it was just to me that the return should be made up in such a shape—seeing that the effect of the omission was clearly prejudicial to my case.

5. It does not appear by the return that the letter "No. 47," accepting the Treasurer's terms, was drafted by the Under Secretary (as the wording of it shows), and handed by him to me with a request that I should copy it and send it to him with my signature. That, however, is the fact.

6. Nor does it appear that he also gave me to understand that the formal letter of acceptance was intended only for the satisfaction of the Treasurer, and that if the second volume was not completed within contract time, I should then be at liberty to write to him (the Under Secretary) stating the reasons, and that he would satisfy the Treasurer about it. But that also is the fact.

7. This statement will be more intelligible if I add that the Under Secretary professed personal friendship for me, having known me for many years; and that he also frequently expressed his satisfaction with my work in the highest terms of eulogy. He had no fault to find with the execution of the first volume, although he had critically examined every line of it.

8. The terms and conditions set out in the letter "No. 46" were the subject of several interviews between him and myself, in which I repeatedly told him that it would not be possible to complete a volume of history within six months, if the standard set up in the first was to be maintained.

9. You will observe that no reply was sent to my letter "No. 52," in which I gave reasons for the non-completion of the work within the six months, and adding that as the contract had run itself out, I desired to have better terms for the continuance of the work.

10. You will also observe that the only written intimation from the Treasury that my engagement had been terminated, was conveyed in the letter "No. 58," dated 2nd June—three months after the expiration of the contract; and that the Treasurer's minute, appended to letter "No. 55," dated 27th March, was never conveyed to me in writing. Neither was it conveyed verbally.

11. The statements made by the Government Printer, charging me with having "delayed" the work, are absolutely incorrect in every particular. For instance, in letter "No. 13," he said, "you commenced your present work in or about November, 1887—that is, nearly eighteen months ago"; whereas it appears from the enclosure in his letter "No. 4" that I had not begun it on 30th January, 1888, but was waiting for the Treasurer's authority to begin it—which authority was not given until some time in February.

12. The Government Printer repeated this charge in a letter to the Treasurer "No. 15"; adding, as an explanation of my "delay," that I was "engaged in writing other works." There was no foundation for this statement; but as he happened to know that Mr. F. Wentworth had, in February, 1889, requested me to write the "life" of his father, he concluded that I was engaged in writing that work as well as the History—an utterly absurd and impossible supposition. As a matter of fact, I may say that I never touched the "life" of Wentworth, until my engagement with the Treasury had been terminated.

13. In the same letter, "No. 15," he informed the Under Secretary that some months had been occupied by me "in preparing an introductory chapter, which could well have been deferred to a second edition; and in correcting and rewriting the Index, which had previously been very well prepared by an officer of this Department."

14. The facts are that (1) the index which had been prepared proved to be useless, and consequently I had to write the whole of it myself; and (2) that the "Introductory Sketch," which occupies 85 pages, was rendered necessary by the incompleteness of the materials supplied to me in the shape of records.

15. This was a matter which I had fully explained to the Government Printer before I began the "Sketch." After the body of the work had been finished, I discovered fresh facts relating to the earliest stage of our history, which had not been noticed in the copies of records sent out from England—more particularly, the fact that Sir Joseph Banks had, in his evidence before a Committee in 1779—[See p. xlv. of the "Sketch"]—proposed the settlement of felons at Botany Bay. This fact may be taken as the cardinal starting-point of our history; but it had never been published, or even noticed in the slightest degree by any of our historians—Rusden, for instance, although he had based his work on the records. At the same time there were other important facts which I had gleaned in the course of my studies, and which it was, to my mind, absolutely necessary to embody in the work.

16. But as there was no means of doing so except by writing this "Introductory Sketch," seeing that the body of the work had been printed off, I explained the position fully to the Government Printer; and

and to expedite the matter as much as possible, I left town for Lake Macquarie in order that I might devote myself uninterruptedly to the preparation of the "Sketch" and the "Index." To save time I sent him the "copy" and corrected proofs as fast as they could be got ready—a process which he described as sending him copy "by driblets," as if it ought to be sent like bales of paper.

17. You will thus see, Sir, that the delay of which he complained was caused solely by my desire to make the work as complete and accurate as possible. It would have been easy enough for me to have sent the book to press some months sooner than I did, and also to publish a volume of a certain kind every six months. By doing so I should have avoided all the unpleasantness that has occurred, as well as all the loss and suffering I have been compelled to endure; but it was my fixed determination not to sacrifice the work either to my own necessities or to the caprice of any narrow-minded official; and I leave it now for you to determine whether I was right or wrong in the course I adopted.

I am, &c.,

G. B. BARTON.

Please report fully upon this.—J.S., 25/2/92.

No. 58.

Minute by The Government Printer.

Government Printing Office, Sydney, 27 February, 1892.

Subject:—Mr. G. B. Barton's claim for compensation in connection with the compilation of Volume II of the History of New South Wales.

It will be seen from the printed correspondence enclosed herewith that Mr. Barton's relations with the Government in connection with the first volume of the History of New South Wales were of such a nature that it was deemed advisable to draw up a definite agreement setting forth the terms and conditions upon which Mr. Barton should be engaged on the second volume.

About the terms of that agreement there can, fortunately, be no doubt; they will be found set out on page 21 of the enclosed correspondence.

The contract came into force on the 4th September, 1889, and contained an undertaking on Mr. Barton's part to complete the second volume by the 4th March, 1890, for the sum of £600, payments to be made monthly at the rate of £1,000 per annum (£100 per volume being "kept back"). Each volume was to contain not less than 600 pages.

Six monthly payments were duly made by the Government, from September, 1889, to March, 1890, and in the latter month the contract was terminated by Mr. Barton's default through non-completion.

On the 10th of that month (March, 1890), the Under Secretary for Finance and Trade desired to be informed how the work for the second volume stood. It is on this query and my reply thereto that Mr. Barton bases his claim. The query and reply will both be found on page 24 of the enclosed correspondence. They are also quoted at length in the letter under report. My reply was as follows:—

"I have in type original matter equal to 180 pages. Extracts, despatches, &c., from records, equal to 570 pages.—C.P., B.C., 10/3/90. The Under Secretary for Finance and Trade."

Mr. Barton contends that, according to this report there were 750 pages ready for press, and that he had, therefore, more than fulfilled his part of the contract, having prepared 150 pages over and above the specified number.

As a matter of fact, Mr. Barton had only prepared the 180 pages alluded to as original matter. The 570 pages of extracts, despatches, &c., comprised matter put in type, but which Mr. Barton had not dealt with.

I find, on referring to the memoranda from which the above reply was drawn up, that on the 10th March, 1890, the work for the second volume stood as follows:—

Matter paged, but not finally corrected, 66 pages.

Matter ready to be paged, equal to 114 pages.

Matter not dealt with, being bare records, equal to 570 pages.

Further, from an examination of the proofs and manuscripts left by Mr. Barton, when he abandoned the work, I find that at the outside there had not been more than 225 pages out of the stipulated 600 pages prepared; and that out of this 225 pages not a single page was ready for press.

In regard to the 570 pages of extracts, despatches, &c., not one page was ready for publication, nor does it appear that Mr. Barton had done anything to them beyond handing the manuscript (*which had been received from England*) to the compositor; they remained, when Mr. Barton left, untouched.

It will thus be seen that Mr. Barton is in error when, on the strength of my report, he claims that these 570 pages were ready for publication, or could be regarded as part of the second volume. As a matter of fact, they formed the raw materials Mr. Barton had to operate upon, and their number, so far from proving progress, shows how much remained to be done.

The above somewhat lengthened explanation is rendered necessary by the fact that Mr. Barton does not, on his own responsibility, claim that he had completed the second volume, but apparently bases his claim solely on a statement made by me which he has entirely misunderstood.

The only other part of Mr. Barton's letter which it comes within my province to refer to is the seventh paragraph, in which Mr. Barton explains the discrepancy between his statement made in March, 1890, that the second volume would require an additional seven months to complete—and his present claim; the explanation being that he had not measured the matter in type. I may state that Mr. Barton's first estimate, made at the time, and with all the papers and proofs before him, was a very accurate one. So far as I can form an opinion it was rather under than over the mark.

I do not consider that Mr. Barton has the slightest vestige of a claim for compensation, nor do I know of any particular in which he was treated unjustly or unfairly. I am quite confident that the late Under Secretary could not have been under any misconception as to the amount of work completed, nor can I conceive how there could have been such a gross miscalculation on the part of Mr. Barton as he refers to.

CHARLES POTTER,

Government Printer.

Mr. Barton should, I think, be informed in terms of this minute. It is clear he has no claim whatever for compensation, nor has he been unjustly or unfairly treated.—F.K., 29/2/92. Submitted.
Inform Mr. Barton.—J.S., 29/2/92.

No. 59.

No. 59.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 2 March, 1892.

I am directed to acknowledge the receipt of your letter of 15th instant, in which you submit that a Parliamentary Paper containing "Further correspondence in connection with the History of New South Wales, from the Records," which paper was ordered by the Legislative Assembly to be printed on 19th December, 1890, shows that you have not been justly or fairly dealt with by Mr. See's predecessor in office, and that you are entitled to some compensation for the wrong alleged to have been done to you under what you term a misconception of the true facts of the case.

I am to inform you, in reply, that having called for a report from the Government Printer, Mr. See finds that out of the 750 pp. which you contend were reported by Mr. Potter in his minute of 10th March, 1890, as being ready for press, 570 pp. were composed of extracts, despatches, &c., which had merely been set up in type for convenience of perusal.

It is found from an examination of the proofs and Mss. left by you when your services were dispensed with, that at the outside there had not been more than 225 pp. out of the stipulated 600 pp. prepared, and that out of this 225 pp. not a single page was ready for press.

I am to say, therefore, that Mr. See is unable to admit that you have not been justly or fairly dealt with, and no claim for compensation can therefore arise.

I have, &c.,

F. KIRKPATRICK.

No. 60.

G. B. Barton, Esq., to The Colonial Treasurer.

Sir,

Public Library, 8 March, 1892.

In reply to your letter of the 2nd inst., permit me to point out that the question raised by me is one which involves the legal construction of the contract referred to, and that it cannot be settled by a report from the Government Printer, especially when I have shown, in my letter of the 22nd ult., that his statements with respect to my work are manifestly prejudiced and unreliable.

2. The report to which you refer contains statements which may easily be shown to be untrue; for instance, it states that the 570 pages of extract matter prepared by me for the second volume were "merely set up in type for convenience of perusal."

3. The materials with which I was supplied being manuscripts sent out from England, without any order or arrangement, it was part of my work to "peruse and examine" each page of them for the purpose of selecting those portions which I might consider advisable to insert in the volume. After this selection was made, the manuscript was handed to the printer to be set up in type—not for "convenience of perusal," but for insertion in the book. It was all "copy." If you will take the trouble to refer to Part III of the first volume, you will be able to satisfy yourself that the matter it includes was not set up for convenience of perusal, and the 570 pages I had prepared was matter of precisely the same kind. It included also the final section of the book on the "Bibliography" of Australia, which I had corrected and enlarged for the purpose with considerable care.

4. The Government Printer is equally in error in stating that "not one of the 570 pages was ready for publication," and you must allow me to take the same objection to your remark with respect to the 225 pages you mention, which you say were prepared, but "not a single page was ready for the press."* On this point it is evident that you have been misled by the Government Printer on a question he did not understand.

5. What is meant by the term "ready for the press?" The Government Printer implies that no "copy" is ready for the press until it has been corrected and revised for publication by the author, and that all the delay that may and must take place in connection with that part of the work is to be charged against him. That view of the matter is a mistaken one, and consequently I am obliged to correct it.

6. The contract must be read according to the established understanding and custom between authors and publishers. It is universally understood that when an author has handed his "copy" to the publisher his work as an author is done and he is entitled to payment for it. All the subsequent work, from the type-setting to the binding, belongs to the publisher's department. The author has no control over it whatever. He may correct the proofs if he likes, but he is not bound to do so unless he contracts to do it. His position is just the same as that of a journalist who contracts to supply leading articles and reviews for a newspaper. As soon as his "copy" is sent in his work is done, and he has earned his money. He may correct the proofs if he pleases, but, as a rule, he does not, the publisher being responsible for the proper publication of the matter.

7. Supposing that my contract had been made with a London publisher instead of with the Government, clearly I should have had nothing to do but to put the "copy" in the Post Office. According to the Government Printer, not a single page of it would be "ready for publication" until all the proofs and revises had been read and corrected by me. Would that be practicable? I think not.

8. Referring to the terms of the contract (p. 21 of the Return) it appears that it does not contain any stipulation that my "copy" was to be ready for publication in the Government Printer's sense, by a fixed time. It says nothing about the correction or revision of proofs, and consequently I was not under any legal obligation to correct or revise them. What I had to do was, to provide "600 pages of text," for each volume, and it is shown that I provided 750. Two volumes were to be completed in each year; but the word "completed" means nothing more than I have said—completion of the "copy."

9. It is true that in my letter of acceptance—which, as I have said, was drafted by the late Under Secretary—a volume is said to mean "the author's manuscript and *final proofs*"; but the words underlined were inserted in face of my express (verbal) stipulation, that the author should be required to furnish the "copy" only, because otherwise he would be responsible for all the delay that might take place in the mechanical department. I allowed the words underlined to stand, simply because I did not wish to raise any fresh discussion on the point, and also because I believed that no attempt would be made to take advantage of them.

10. Moreover, if two volumes were to be completed in each year, that was clearly a contract for a year, and it could not be legally or equitably terminated until the expiration of a year.

11. The contract was terminated under the 5th and 10th clauses, which imposed a penalty of £50, "should any volume be delayed for a fortnight beyond six months." Supposing that these words meant "delayed by the author;" then I say that there was no proof, or even allegation, of delay on my part, and that,

that, without such proof, the contract could not be legally terminated. The printed correspondence shows that no charge of delay was made against me, and therefore the Treasury had nothing to go upon; nor was there any justification for discontinuing the payments and putting an end to my engagement.

12. You will observe from the printed correspondence that even the usual formality of a written notice was dispensed with. I did not receive any intimation in writing until the 3rd June, 1890, when a letter from the late Under Secretary informed me that my "engagement with the Treasury had ceased." The Treasurer's minute of 29th March was never communicated to me, although at that time I was still at work on the second volume. On this ground alone, then, I submit that I was, and am, entitled to payment of £100 per month from the 1st March to the 1st June, as well as the £100 which had been kept back under clause 4.

13. For the reasons stated in this and in preceding letters, I beg leave to request that this correspondence may be referred by you to the Honorable the Minister for Justice, in order that he may determine the several questions raised in it, and more particularly the question whether the contract set out in page 21 of the return was legally terminated by your predecessor, in accordance with its terms? And that it may also be referred to him to determine, in the event of his decision being in my favour, what sum should be awarded to me in compensation for the loss and injury I have sustained through the action of your predecessor.

14. I also beg leave to request that it may be referred to him to inquire and determine whether the charges of "delay" made against me by the Government Printer in his letters of 11th April and 6th May, 1889, were well founded or not, and whether the several assertions to my prejudice contained in those letters were according to the facts or not, and that if the Minister should be of opinion that the charges were not well founded, and that the assertions in question are not true, I may be awarded payment of such sum as he may consider sufficient compensation. The charges are libellous, and he who made them should be called upon either to substantiate or retract them. They have been injurious to me in many ways. I have reason to believe that they influenced the referees when making their award of £200 on the publication of the first volume, because that sum, with the amount previously paid, represented only £70 per month for the time during which I was engaged on the work. Practically, therefore, they fined me at the rate of £30 a month for seventeen months, on the strength of the misrepresentations made by the Government Printer. Thus, I was punished in face of the fact that I had made the first volume a singular exception to the productions of the Government Printing Office, inasmuch as it was both a financial and a literary success. The official return of November, 1890, shows that up to that time over 1,800 copies had been sold in the Colonies and 150 in London, and that the cash receipts amounted to £1,227, thus proving that the calculations made in my letter of 30th January, 1888, in which I proposed the publication of the work, were fully realised.

I am, &c.,

G. B. BARTON.

Note to par. 4.—This statement is shown to be incorrect by letters Nos. 51 and 53 in the return, from which it appears that several chapters had been made up for the perusal of the late Under Secretary, comprising pages 1 to 66. The printed matter of a book is not made up into sheets until it is ready for the press. In addition to these sixty-six pages, there were over forty of the "Bibliography" section, which were also ready for the press. From this inaccuracy I should suppose that you have not seen the whole of the "copy" prepared for the second volume.

The Government Printer might be asked if he has any further remarks to offer.—F.K., 11/3/92. Approved.—J.S., 11/3/92. The Government Printer. See separate minute and enclosed parcels A and B herewith.—C.P., 7/3/92. The Under Secretary for Finance and Trade. Having carefully considered this case, I recommend that the decision already arrived at by Mr. McMillan be not disturbed.—F.K., 18/3/92. Submitted. Approved.—J.S., 18/3/92.

No. 61.

The Under Secretary for Finance and Trade to G. B. Barton, Esq.

Sir,

The Treasury, New South Wales, Sydney, 21 March, 1892.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of 8th instant, and to inform you, in reply, that, having carefully considered the whole case, he sees no reason to disturb the decision of his predecessor (Mr. McMillan).

I have, &c.,

F. KIRKPATRICK.

No. 62.

Précis.

Re Mr. Barton and the History of New South Wales.

11 March, 1892.

I HAVE carefully perused these papers. There can be no doubt, whatever, that, upon broad, general grounds, the Government was justified in terminating Mr. Barton's connection with the Official History, but there can be as little doubt that, upon a literal legal interpretation of the agreement between him and the Government, for the writing of the history, his services were wrongfully dispensed with, and that he would be able to enforce compensation at law.

The following is the full text of the agreement referred to:—

- (1.) The work not to exceed thirteen volumes, of not less than 600 pages of text each.
- (2.) £600 to be the payment in full for each volume, commencing with Volume II, and beyond this sum no allowance of any kind will be made for expenses incurred by you in the preparation of the work.
- (3.) Two volumes to be completed in each year.
- (4.) £200 to be kept back each year until the completion of the two volumes due for that year.
- (5.) £50 penalty, should any volume be delayed for a fortnight beyond six months.
- (6.) Access to be allowed to the records at the Government Printing Office, whence they are not to be removed.
- (7.) The whole details of "printing and publishing" will be exclusively in the hands of the Government Printer, who will have a general supervision of the work, and receive instructions from the Government only.

(8.)

- (8.) No claim will be permitted to be set up as to any alleged ownership of copyright, which is the absolute property of the Government.
- (9.) Alterations in the text of the work, or the excision of such portions as may be deemed undesirable in a National History, to be entirely at the discretion of the Government, as owners of the property, on behalf of the public.
- (10.) Should default be twice made under Clause 5, so as to incur the penalty therein provided for, this contract to be thereby terminated, without any recourse upon the Government for damages.
- (11.) Upon completion of any one volume, it shall be at the option of the Government then to terminate the contract, without liability for damages or compensation.

Clause 3 provides that two volumes shall be completed in each year, not one volume in each six months.

Clause 5 provides £50 penalty should any volume be delayed for a fortnight beyond six months. It may be observed, however, that the penalty for the first failure is one fixed fine, not liability to dismissal.

Clause 10 provides that, should default be twice made under clause 5, so as to incur the penalty therein provided for, this contract is to be thereby terminated, without any recourse upon the Government for damages.

I do not see how effect could be legally given to the provisions of clauses 5 and 10, until after the expiration of twelve months from the date of the agreement. Mr. Barton was not compelled to produce one volume within six months, but two volumes within a year. I think he had the right, if he chose to exercise it, of occupying eleven months over one volume, and one month in connection with the next volume, without incurring the penalties provided, unless he be held liable to £50 fine for not producing a volume in six months and a fortnight, but no further action could possibly be legally taken against him.

Clause 10 could not be used against Mr. Barton, until he had twice committed default under clause 5, or failed to produce two volumes within one year and four weeks—the period during which two volumes were to be written. But neither of these premises exist. The agreement is dated 4th September, 1889. A volume could not be required before 4th March, 1890, with fourteen days grace—18th March—when Mr. Barton would be liable to fine of £50. Mr. McMillan, however, went further, for his minute of 29th March, 1890, reads, “The connection of Mr. Barton with this Department, as regards the continuance of literary work, must now absolutely cease.” Unquestionably, the Treasurer had not the power or right to thus summarily dispense with Mr. Barton’s services, at a time when he (Mr. Barton) was only liable to a fine of £50, and was entitled to a sum of £100 then being withheld.

The provisions of clause 11 cannot be availed of, as notice of intention to terminate the contract must be given upon the completion of any one volume. This right was not exercised on the completion of Vol. I (the agreement did not then exist), and could not, consequently, be available until the completion of Vol. II.

The only circumstance disclosed by the correspondence, which may be held to put Mr. Barton out of Court, is to be found in the following letter, which may possibly be read as a voluntary surrender by Mr. Barton of all further connection with the work. The letter is as follows:—

Sir,

Government Printing Office, 28 March, 1890.

With reference to your remark made this morning on the subject of my remuneration for work done in preparing Volume II of the History of New South Wales, I wish to say that I will continue the work until the 1st of next month; and that if, on that day, I receive the sum of £100 for my services during this month, I will go on with the work from month to month at the same rate.

If these terms should not be accepted, then I wish to inform you that I shall be compelled, however reluctantly, to discontinue the work, and to resume my connection with journalism. I shall also be under the necessity, in that case, of making it known, by a letter to the daily newspapers, that I am no longer connected with the publication in question.

I am, &c.,

G. B. BARTON.

Referred to the Under Secretary for Finance and Trade.—C.P., B.C., 29/3/90. The connection of Mr. Barton with this Department, as regards the continuance of literary work, must now absolutely cease.—W.M., 29/3/90.

On this point I scarcely feel able to venture an opinion, but I do not think it at all probable that Mr. Barton had the slightest intention of waiving his right to the full benefit of the agreement, in consequence of which his failure to claim that to which he appears to me to have been legally entitled can only be explained in that he may never have carefully read the conditions to which he subscribed.

Having been through the whole of the papers, I may again say, in conclusion, that I am of opinion that the Treasurer acted wisely in dispensing with Mr. Barton’s services, which were of a highly unsatisfactory character, as the correspondence amply testifies, but having refrained from seeking redress upon the grounds that could for a moment be entertained, I beg to recommend that no further action be taken, pending the receipt of such reply as may be made to Treasury letter of 2nd instant, which conveys an intimation that the Colonial Treasurer is unable to admit that he (Mr. Barton) has been unjustly or unfairly dealt with, or that he had any claim for compensation.

The Under Secretary, &c., &c.

F. H. GALLOWAY.

Seen.—J.S., 8/4/92.

No. 63.

Minute by The Government Printer to The Under Secretary for Finance and Trade.

Subject :—Mr. G. B. Barton’s claim for compensation in connection with the preparation of Vol. II of the History of New South Wales.

Government Printing Office, 17 March, 1892.

I AM unable to qualify or withdraw any of the statements made in my minute of the 27th ultimo.

Papers returned herewith.

There can be no question about the following simple, and easily provable, facts in connection with Mr. Barton’s contract to prepare Vol. II of the History:—

- (a) That at the expiration of the stipulated time he had not nearly completed the work.
- (b) That it would have taken him, at his own estimate, seven additional months to do so.*
- (c) That he received, for the incomplete volume, the sum agreed upon for the completed volume, less percentage “kept back.”
- (d) That he refused, without an excessive additional payment, to proceed with the work.†
- (e) That he expressly, and in writing, admitted that the contract was at an end.‡

Mr.

* See Mr. Barton’s letter, No. 53, in papers ordered to be printed 19 December, 1890. † See Mr. Barton’s letter, No. 55, in papers ordered to be printed 19 December, 1890. ‡ See paragraph 5 of Mr. Barton’s letter, No. 35, page 17 herewith.

Mr. Barton's contention that my statements are "prejudiced and unreliable," and my letters "libellous" and "misrepresentations" does not call for any remark beyond the assurance I have previously given, that in this (to me) very unpleasant business, I have only moved when I could no longer remain inactive without the most culpable abandonment of duty. I have no personal feeling whatever in the matter; in fact, knowing as I did that Mr. Barton was a gentleman of singular ability, and most peculiarly qualified for the work, I, on every occasion did the utmost, consistent with my duty to the Government, to consult his convenience and accommodate myself to his methods. I gave him every assistance in my power, relinquished my private room to him, told off officers to assist him, took on his son as a copyist for him, and placed at his disposal facilities for carrying on the work which I have no hesitation in saying would never be extended to an author by any private publishing firm in the world.

Mr. Barton, in the letter under report, claims:—

- I—(In paragraphs 1 to 3) that my statements are inaccurate, and that Vol. II was completed within the specified period.
- II—(In paragraphs 4 to 9) that my use of the term "ready for press" is erroneous and misleading, and that he had completed the volume in the sense in which "completed" is used in the contract.
- III—(In paragraph 10) that the contract was for two volumes per year, and could not be terminated till the expiration of a year.
- IV—(In paragraphs 11 to 13) that there was no legal termination of the contract.
- V—(In paragraph 14) that certain letters of mine are libellous.

For the sake of convenience it will be best to notice these claims in the above order.

I. That my statements are inaccurate, and that the second volume was completed within the specified period (paragraphs 1 to 3).

This matter was dealt with in my minute of the 27th ultimo; but since Mr. Barton impugns the correctness of my report, I forward herewith the whole of the "copy," &c., prepared for the second volume. As Mr. Barton bases his whole claim on my statement of 10th March, 1890, that I had in type "Original matter equal to 180 pages; extracts, despatches, &c., from records equal to 570 pages," it is important to clearly understand what these 570 pages represent. The accompanying package, marked "A," contains the 570 pages referred to. They will be seen to be bare despatches, letters, &c., put into type from the manuscript received from England. They contain no original matter; there is not a line or word of comment by Mr. Barton; there are no excisions (the letters in almost every case being complete); no foot-notes; no references to other parts of the work; no explanatory text; no side-notes; and, as they are not even paged, of course no index.

On each bundle contained in this package ("A") will be found in red pencil the date on which it was put into type. It will be seen that no less than 395 pages were set up between the dates of the 10th and 23rd September, 1889, *i.e.*, within three weeks from the day on which Mr. Barton commenced Vol. II.

Except that parts of the type could be used subsequently for extracts and quotations, and, after arrangement, in Part III, there was no other reason for printing and binding them in galley form, at that time, but Mr. Barton's convenience.

In the letter under report Mr. Barton says (par. 3):—"The materials with which I was supplied being manuscripts sent out from England, without any order or arrangement, it was part of my work to peruse and examine each page of them for the purpose of selecting those portions which I might consider advisable to insert in the volume. After this selection was made the manuscript was handed to the printer to be set up in type, not for 'convenience of perusal,' but for insertion in the book. *It was all copy.*" (The italics are mine.) I regret to say that this statement is not in accordance with fact.

1. The major part of the perusal and examination referred to was done by an officer of this Department, in compliance with a request made by Mr. Barton on 13th July, 1889 (two months before he commenced Vol. II).
2. An examination of the matter in package "A" will show that there was no selection of parts suitable for insertion, but merely an arrangement into order of subjects. Published in its present form it would be unintelligible to the general reader. The "catch lines" at the heads of the galleys prove sufficiently the purpose for which they were printed in that form.

In order that it may be still more clearly understood in what condition Mr. Barton left the work, I enclose herewith (package marked "B") the original matter, partly in type and partly in manuscript, which makes up the 225 pages referred to in my letter of the 27th ultimo.

II. Mr. Barton complains that my use of the term "ready for press" is erroneous and misleading; and that he had completed the volume in the sense in which "completed" was used in the contract (pars. 4 to 9).

The term "ready for press" is only used in the one sense. Matter is never "ready for press" until the final corrections have been made, and it is ready to be printed off. Even the four sheets of paged matter were not finally corrected.

It is obvious from the nature of the work that there can be no comparison—such as is attempted to be set up—between a journalist handing his copy to the editor, and Mr. Barton handing *his* to the compositor. Besides, Mr. Barton was specially engaged, and contracted specifically in writing not to merely provide the "copy," but to complete the volume, and further stipulated that the terms of the contract should include the final proofs. No verbal stipulation, such as that put forth by Mr. Barton, however express, would be allowed by law to vary or discharge so plain a written contract.

III. Mr. Barton claims that as the contract was for two volumes each year it could not be terminated until the expiration of a year (par. 10).

This was specially provided for by clauses V and X of the contract.

IV. It is claimed that there was no legal termination of the contract (pars. 11 to 13).

Mr. Barton must be aware that the contract was legally terminated under clauses V and X by his default in March, 1890. (*Vide* his admission to that effect in the fifth par. of his letter, of 5th March, 1890, on page 23 of the printed correspondence, herewith.) In fact, Mr. Barton's letters of the 5th, 8th, and 28th March, the 29th of May, and the 16th June, 1890, are full of overt expressions of his intention to abandon all the rights he now wishes to claim; this renunciation alone would operate as a legal discharge of the contract, independently of the fact that it was legally terminated by non-performance on the part of Mr. Barton.

Enclosures A and B.

V.

V. Mr. Barton complains (par. 14) that my letters of the 11th April and 6th May, 1889, are libellous, and requests that they may be submitted to the Minister of Justice. In order to show the utter absence of any foundation for this complaint I give the full text of the letters themselves, which is as follows :—

The Government Printer to G. B. Barton, Esq.

Dear Sir,

In answer to your letter of the **7th instant*, I must be permitted to say that it appears to me to have been written without due consideration.

I cannot recognise your position towards the Government as that of an author towards his publisher. You are in fact working for the Government in respect of a special matter, for which you are being paid. The result of your work is the absolute property of the Government, who can do what they please with it, and any personal wishes of yours connected with the work must necessarily be subject to such modifications as the Government may see fit to impose.

I regret that you should have found it necessary to ask me "to consider the consequences of disregarding your wishes." Equally do I regret that you see reason to complain of your connection with the Government in this matter, or that you should desire, as an inducement to carry out the work, that you "should be treated a good deal better than you have been."

It is right that I should put plainly before you (and I do so in a very friendly spirit) the other side of the question, and state freely my complaints against you.

You commenced your present work on or about November, 1887—that is nearly eighteen months ago—and during that time you have been paid a total sum of £950. Up to this moment you have not completed the first volume. It was promised most faithfully by you to be ready for publication and issue to subscribers at the end of January of the present year, then at the end of February, then at the end of March, and it is still incomplete on the 11th day of April, and, judging from experience, there is no certainty when it will be completed. The Government have engaged experienced canvassers, to whom they have already paid about £300; they have procured subscriptions for a large number of copies, representing over £4,000, and there is not a copy ready to deliver. This is my complaint.

As to your complaint of ill-treatment, the Government have provided you with a comfortable, furnished room at the Government Printing Office for your special accommodation, two persons paid by the Government have for some months past been employed to search amongst papers and collect information for the work, thus saving you a great deal of personal trouble, and you have been allowed the assistance of your son, who is paid by the Government at the rate of £1 ls. per week. You have also had the occasional assistance of Mr. Bladen and the advantage of the preliminary work done by the late Mr. Byron, and you have been paid a sum of money for the work as it now stands without a precedent in the literary history of the Colony.

After this statement of my views of the case, I desire to say that if the first volume is not completed and in my hands by the last day of this month, it will become my duty to place the whole of the case—including this correspondence—before the Colonial Treasurer and recommend your retirement from any further connection with the work in question, in respect of which there appears to be so much mutual dissatisfaction.

Yours, &c.,

CHARLES POTTER.

* See Mr. Barton's letter, No. 12, in papers ordered to be printed 19 December, 1890.

The Government Printer to The Under Secretary for Finance and Trade.

Sir,

Government Printing Office, Sydney, 6 May, 1889.

I do myself the honor to bring under your notice the great delay on the part of Mr. G. B. Barton in completing the literary work of the first volume of the "Official History," which has now been in his hands for about eighteen months.

It is with very great regret that I take this step, but I am unable to assign any reason for the continued delay, unless it be that Mr. Barton is engaged in writing other works during the time which should rightly be devoted to the completion of the History. I am still unable to say when the first volume will be issued. At this rate it is improbable that Mr. Barton will live long enough to complete the remaining volumes.

The text of the volume was printed off two months ago, and the intervening period has been occupied in preparing an introductory chapter—which could well have been deferred to a second edition of the work—and in correcting and rewriting the index, which had previously been very well prepared by an Officer of this Department.

I was led by Mr. Barton to believe that his portion of the work would be completed sufficiently early in January last to enable me to have copies ready for subscribers during that month, and I advertised accordingly. The non-fulfilment of this promise has led to considerable embarrassment, the question being continually put to me, "When will the book be ready?" an inquiry which, if not satisfied, is naturally followed by complaints of breach of faith.

As Mr. Barton is absent from Sydney—at Lake Macquarie, where he has been for more than a month—and has not thought proper to reply to my letter of the 11th ultimo (although I sent him a reminder on the 2nd instant), I now submit the correspondence which has passed in reference to this question, and beg to request that you will be good enough to bring the case before the Colonial Treasurer, in order that steps may be taken to issue the volume and keep faith with the public, who have—through the canvassers employed—placed their names very freely on the list of subscribers.

I have, &c.,

CHARLES POTTER,

Government Printer.

The language in which these letters are couched will be seen to be in no sense libellous.

CHARLES POTTER,

Government Printer.

P.S.—It is desired that the enclosures A and B should be returned to me for future reference and record. I have not seen Mr. Barton's letter of the 22nd ultimo, to which he refers in par. 1 as containing proof of my alleged prejudice. Nor have I any knowledge of the circumstances he mentions in par. 9, relative to his acceptance of the contract.—C.P.

No. 64.

The Under Secretary for Finance and Trade to The Government Printer.

Sir,

The Treasury, New South Wales, Sydney, 29 March, 1893.

I am directed by the Colonial Treasurer to request you to be good enough to state, whether, in your opinion, the continued existence of the Board, consisting of Messrs. A. Oliver, M.A., R. C. Walker, and G. A. Wood, B.A., to revise the text of the "History of New South Wales from the Records," is necessary in the public interest.

I have, &c.,

F. KIRKPATRICK.

When the revision by the Board of the matter for the second volume of the "History," written by the late Mr. Britten, is completed (and for such revision it is necessary that the third volume of the "Historical Records," which will be ready in about three months, should be available), I am of opinion that the services of the Board might be suspended until a historian to succeed Mr. Britten is appointed, but before that is done, I think that it would be well that several volumes of the "Records" should be printed, which

which will probably take nearly three years. For the "History" I consider a Board to be most necessary, but in regard to editing the "Records" I feel quite sure that Mr. F. Bladen is quite equal to the duty. I may mention that frequent inquiries are being made by the general public for both the "History" and the "Records."—C.P., 4/4/93.

Are the services of these gentlemen to be dispensed with at once, or only after they have revised the text of Volume II?—M.R., 12/4/93. After the text of Volume II has been revised.—F.K., 12/4/93. Treasury Minute prepared and submitted.—M.R., 12/4/93 (Paper herein, No. 65).

No. 65.

Minute by The Under Secretary for Finance and Trade.

The Treasury, New South Wales, Sydney, 12 April, 1893.

Subject :—Board to revise the text of the History of New South Wales from the Records—Temporary suspension of functions.

In March, 1891, the following gentlemen, viz., Professor G. Arnold Wood, B.A., Alexander Oliver, Esq., M.A., R. C. Walker, Esq., and the Honorable Geoffrey Eagar, were appointed by the then Colonial Treasurer as a Board to revise the text of the History of New South Wales from the Records, with monthly meetings and a fee of 5 guineas each per meeting. Mr. Eagar is since deceased, and the Board, therefore, is now composed of the three gentlemen first named. The question has arisen whether, apart from the necessity for a jealous scrutiny of all public expenditure in the present shrunken and shrinking state of the public revenue, the services of this Board would be further required after the revision by it of the second volume of the History (and for such revision it is necessary that the third volume of the Historical Records, which will be ready in about three months, should be available) written by the late Mr. Britten? The Government Printer, having been asked for his opinion, advises that after Vol. II is published there will be a lull in the writing of the History proper for some three years, during which time the publication of the Historical Records will be pressed forward, and for the purpose of such Records an advisory Board is not requisite. Mr. Potter, therefore, recommends that the functions of the Board for revision of the text of the History be suspended during such period of Historical Record editing and publication, and, as I am strongly of the same opinion, I now recommend that the Board's functions be temporarily suspended so soon as the revision of the text of Vol. II is complete, and that Messrs. Wood, Oliver, and Walker be informed accordingly.

12/4/93.

F.K.

Approved.—J.S., 12/4/93.

No. 66.

The Under Secretary for Finance to R. C. Walker, Esq.

Sir,

The Treasury, New South Wales, Sydney, 18 April, 1893.

I am directed by the Colonial Treasurer to inform you that he has decided upon a temporary suspension of the functions of the History Board so soon as the text of Volume II has been finally revised.

I am to say that this decision has been arrived at in view of the circumstance that after the publication of the second volume there will be a cessation in the writing of the History during a period of some two or three years, which will be devoted to the editing of the Historical Records, for the purposes of which an Advising Board is not considered necessary.

Mr. Sec desires me to thank you for the interest which you have taken in the revision of the History, and to express a hope that when the main work is again proceeded with your valuable services will still be available.

I have, &c.,

F. KIRKPATRICK.

[A letter in above terms was also addressed to Messrs. Alexander Oliver and Arnold Wood.]

No. 67.

R. C. Walker, Esq., to The Under Secretary for Finance and Trade.

Sir,

History Board, Sydney, 28 April, 1893.

I have the honor to acknowledge receipt of your letter of the 18th inst., stating that the Colonial Treasurer has decided upon a temporary suspension of the functions of the History Board so soon as the text of Volume II has been finally revised.

The text of this volume has for some time had the close attention of the Board, and I am requested to state, for the information of the Colonial Treasurer, that owing to the second volume of the Records not yet being ready, it is found difficult to verify certain facts and computations given by the late Mr. Britten, but so soon as this can be accomplished the report of the Board will be furnished to you, with any suggestions it may be found necessary to make.

I have, &c.,

R. C. WALKER.

Seen.—J.S., 2/5/93.

No. 68.

R. C. Walker, Esq., to The Under Secretary for Finance and Trade.

Sir,

History Board, Sydney, 16 May, 1893.

Referring to your letter of the 18th ultimo, and to my letter, in reply thereto, of 28th ultimo, I have the honor to invite your attention to the position in which the History Board finds itself placed in connection with the publications that have been prepared, and are in course of preparation, under its supervision. In the first place, with respect to Volume II. of the History, a very serious question has presented itself, and it is one that cannot be satisfactorily dealt with unless the sanction of the Colonial Treasurer to a certain suggestion of the Board, which involves expenditure of money, although inconsiderable, be first obtained.

The

The unrevised text of this volume, comprising about 450 octavo pages, has been printed in galleys, and each member of the Board has carefully perused and re-perused it. The character of the work accomplished by the late Mr. Britten, as editor of the volume, has, without doubt, suffered, in a very marked degree, from the long and distressing illness to which that gentleman finally succumbed. The text, as it stands, is disfigured by repetitions and inaccuracies which, doubtless, Mr. Britten, had he lived, would have removed before submitting that text to the Board. Moreover, the prominence given to insignificant facts and details, while uselessly multiplying the pages of the book, would seriously injure its historical value, and encourage a comparison with antecedent work of a most unfavourable nature. Much of the labour bestowed on Grose's period will be found, it is feared, to have been practically thrown away; and, as a result, if the work done is to be turned to any account, a considerable amount of recasting and re-writing will be found necessary, together with much compression of matter. This will be an operation involving much labour and time, and no member of the Board could be expected to undertake it. Nevertheless, if, by careful revision and reconstruction, this work of Mr. Britten's could be put into such a form for submission to the Board, as to make the question of its final adoption a little less difficult than at present, the Board is not without hope that it would not be found necessary to lay aside entirely the work of the late editor, representing, as it does, so large a public expenditure, and, from a literary point of view, so much research and other labour.

It is thought by the Board that the preliminary work referred to could, under instructions from the Board, be adequately performed by Mr. F. Bladen, of the Government Printing Office, who has been intimately connected with the preparation of Volume I of the History, and with the publication of the Records.

Finally, with regard to the functions of the Board as a supervising and revising authority, I desire to state, on behalf of my colleagues and myself, that we will be very willing to perform all such duties, as we have hitherto performed, without remuneration, during the period of cessation mentioned in your letter.

I have, &c.,

R. C. WALKER.

This might be referred to the Government Printer for an estimate of the cost.—F.K., 16/5/93. Approved.—J.S., 16/5/93.

If the second volume of the "History" should be completed by Mr. Bladen, and the work performed so as to stand the favourable criticism of the History Board and the Public Press, I am of opinion that £100 would be a very moderate sum as remuneration for the accomplishment of such an important and difficult task. As payment would not be required for seven or eight months hence (it being proposed to finish the third volume of the Records before dealing with the volume of the History in question) I would recommend that the matter of payment remain in abeyance until the work is done. I may say that I feel sure that Mr. Bladen, as regards the work, is influenced more by literary ambition than by mercenary motives. I would further say that I believe him to be fully competent to do what is required.—C.P., 18/5/93. Approved.—J.S., 20/5/93.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CONFERENCE OF PREMIERS.

(MINUTES OF PROCEEDINGS OF THE, HELD AT HOBART, 1895.)

Ordered by the Legislative Assembly to be printed, 6 March, 1895.

CONFERENCE OF PREMIERS, HOBART.

MINUTES OF PROCEEDINGS.

TUESDAY, JANUARY 29, 1895.

THE Conference met at the Chief Secretary's Office at half-past 10 o'clock, the undermentioned gentlemen being present:—

The Hon. G. H. REID, New South Wales.
The Hon. H. M. NELSON, Queensland.
The Hon. C. C. KINGSTON, South Australia.
The Hon. Sir EDWARD BRADDON, Tasmania.
The Hon. GEORGE TURNER, Victoria.
The Hon. Sir JOHN FORREST, Western Australia.

The Hon. G. H. REID moved, That Sir EDWARD BRADDON be appointed Chairman of the Conference. The motion, having been seconded by Mr. NELSON, was carried unanimously.

Mr. JAMES ANDREW, Secretary to the Premier of Tasmania, was appointed Secretary to the Conference.

Correspondence was submitted to the Conference, by—

The Hon. G. H. REID :

A letter from the Federal League in Sydney, recommending their Scheme to the favourable consideration of the Conference.

The Hon. GEO. TURNER :

(1.) A letter from the Victorian Chamber of Manufactures, dated 4th December, 1894, communicating a Resolution recommending a Conference of Colonial Representatives to formulate a Tariff to be acceptable to all the Colonies.

(2.) A letter from the Chamber of Commerce, Melbourne, dated 3 December, 1894, conveying Resolutions as to the establishment of a Federal Constitution for Australia.

(3.) Resolutions adopted by the Municipal Conference on Australian Federation on the 7th November, 1894, as to the establishment of a Federal Constitution.

The Hon. Sir EDWARD BRADDON :

(1.) A letter from the Chamber of Commerce, Hobart, dated 28th January, 1895, conveying a Resolution in favour of free interchange between the various Colonies of such natural products as may appear to be to the mutual benefit of contracting parties.

(2.) A letter from the Secretary to the Council of Agriculture, dated 28th January, 1895, quoting a Resolution in favour of a free interchange of the Fruits of the various Colonies, and also as to the free admission of Queensland Sugar into Tasmania.

Certain Resolutions were submitted to the Conference, and accepted for further consideration.

THURSDAY, JANUARY 31, 1895.

The Conference met at 7:30 p.m.

All the Members present.

The Resolutions submitted at the last meeting of the Conference were considered and passed as follows:—

(1.) It was proposed by Mr. REID, and seconded by Mr. KINGSTON, That this Conference regards Federation as the great and pressing question of Australasian politics.

Carried unanimously.

(2.) Proposed by Mr. REID, and seconded by Mr. TURNER, That a Convention, consisting of Ten Representatives of each Colony, directly chosen by the Electors, be charged with the duty of framing a Federal Constitution.

Carried, Sir John Forrest dissenting.

(3.) Proposed by Mr. REID, and seconded by Mr. TURNER, That the Constitution so framed be submitted to the electors for acceptance or rejection by a direct vote.

Carried, Sir John Forrest and Mr. Nelson dissenting.

(4.) Proposed by Mr. REID, and seconded by Mr. TURNER, That such Constitution, if accepted by the electors of three or more Colonies, be transmitted to the Queen by an Address from the Parliaments of those Colonies praying for the necessary legislative enactment.

Carried, Sir J. Forrest dissenting.

(5.) Proposed by Mr. REID, and seconded by Mr. TURNER, That a Bill be submitted to the Parliament of each Colony for the purpose of giving effect to the foregoing Resolutions.

Carried, Sir John Forrest dissenting.

(6.) Proposed by Mr. REID, and seconded by Mr. TURNER, That Messrs. Turner and Kingston be requested to prepare a Draft Bill for the consideration of this Conference.

Carried unanimously.

Mr. NELSON, Premier of Queensland, stated:—"I agree to the above Resolutions, save and except in so far as they limit the mode of obtaining the approval of the Colonies to the Constitution as framed by the Convention, as in my opinion such approval should be obtained in such manner as each Colony may prescribe in the Act authorising such Convention."

Sir JOHN FORREST, Premier of Western Australia, stated:—"While agreeing that Federation is the great and pressing question of Australasian politics, I am opposed to the procedure proposed to be adopted, and I am of opinion (1) that the Draft Commonwealth Bill of 1891 should be first considered by the Parliaments of the respective Colonies; (2) that any amendments made by the several Parliaments should be referred to a second Convention to be appointed by the several Parliaments after a General Election, and that the Bill, as approved by this second Convention, be final, and be submitted for the necessary Imperial legislation."

Mr. KINGSTON, Premier of South Australia, added:—"As to Resolutions Nos. 4 and 5, I think that a better course would be for the local Legislatures to at once secure the passing by the Imperial Parliament of a Federal Enabling Act validating, as regards the accepting Colonies, without further Imperial legislation, any Constitution framed and accepted pursuant to Resolutions Nos. 2 and 3 and which receives the Royal Assent. I do not, however, think that this view should prevent South Australia's continued co-operation in the federal effort."

MONDAY, FEBRUARY 4, 1895.

The Conference met at 9 o'clock p.m.

Present: The Hon. G. H. REID.

The Hon. GEO. TURNER.

The Hon. Sir EDWARD BRADDON.

The Hon. C. C. KINGSTON.

Absent: The Hon. H. M. NELSON, through indisposition, and Sir JOHN FORREST.

The Draft Enabling Bill was submitted to the Conference, and considered, with some Amendments.

WEDNESDAY, FEBRUARY 6, 1895.

The Conference met at half-past 10 o'clock.

All the Members present.

Adjourned until 2:15 p.m., when all but Sir JOHN FORREST were present.

The Draft Bill prepared by the Hon. GEO. TURNER and the Hon. C. C. KINGSTON was considered, amended, and agreed to as the draft of a type of Bill suitable for giving effect to the Resolutions of the Conference.

Mr. REID intimated that so soon as practicable after the reassembling of the New South Wales Parliament his Government would introduce a measure providing for the chief objects of the Bill as defined in the draft.

Messrs. TURNER, NELSON, KINGSTON, and Sir EDWARD BRADDON intimated that as soon as New South Wales had passed the Bill their Governments would introduce measures providing for the same objects, Mr. NELSON reserving the right to dispense with the direct reference to the electors, required by the second object of the Bill.

It was resolved that, in view of the agreement arrived at by this Conference as to a general scheme of Federation, it was unnecessary at the present juncture to give consideration to many matters of Federal importance submitted by the several Premiers.

It was moved by Mr. REID, That a vote of thanks be accorded to the Chairman.

Carried unanimously.

Mr. REID also moved a vote of thanks to the Secretary.

Carried unanimously.

The Conference adjourned *sine die*.

JAS. ANDREW,

Secretary.

E. BRADDON,

Chairman.

A.D. 1895.

A BILL for an Act to enable Tasmania to take part in the framing, acceptance, and enactment of a Federal Constitution for Australasia.

Preamble.

WHEREAS it is proposed that legislative provision shall be made by the Colonies for the framing, acceptance, and enactment of a Federal Constitution for Australasia:

And whereas it is desirable to enable Tasmania to take part in the framing, acceptance, and enactment of the said Constitution, and this Act is necessary for the purpose:

Be it therefore enacted by His Excellency the Governor of Tasmania, by and with the advice and consent of the Legislative Council and House of Assembly, in Parliament assembled, as follows:—

Short title.

1. This Act may be cited as "The Australasian Federation Enabling Act (Tasmania)." 2.

2. In this Act the following terms bear the meanings set opposite to them respectively :—
- “Colonies”—The Colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, and Western Australia, and the Province of South Australia, including the Northern Territory.
- “Convention”—The Convention provided for by this Act.
- “Tasmanian Representatives”—The Representatives of Tasmania in the Convention.
- “Governor”—The Governor in Executive Council.
- “House of Assembly”—The more numerous branch of the Legislature of a Colony.
- “Proclamation”—Proclamation by the Governor published in the *Government Gazette*.
- “Prescribed”—Prescribed by Regulation made under this Act.
3. The chief objects of this Act are to provide as follows :—
- (1.) For framing a Federal Constitution for Australasia by a Convention consisting of Ten Representatives of each Colony directly chosen by the electors of the House of Assembly in each Colony :
- (2.) For submitting the Constitution so framed to the electors for the House of Assembly in each Colony for acceptance or rejection by direct vote :—
- (3.) For transmitting the Constitution for Legislative enactment by the Imperial Parliament.
4. This Act shall come into operation on a day to be fixed by Proclamation, when two Colonies in addition to Tasmania have adopted legislation providing for the chief objects of this Act as declared in the preceding section.
5. This Act is divided into Four Parts, as follows :—
- PART I.—The Convention.
- PART II.—The submission to the Electors.
- PART III.—The transmission for Legislative enactment.
- PART IV.—Supplemental.
- PART I.
- THE CONVENTION.
6. The Convention shall consist of Ten Representatives of each Colony represented.
7. Every Member and every person eligible for membership of either House of the Tasmanian Parliament shall be eligible for membership of the Convention as a Representative of Tasmania.
8. The seat of a Tasmanian Representative shall be vacated—
- (1.) By resignation under his hand addressed to the Governor.
- (2.) By failure, without leave of absence from the Convention, to attend any Five sittings thereof.
- (3.) By any circumstance, except resignation or absence, which in the case of a Member of the Tasmanian House of Assembly would vacate his seat in such House.
9. Every vacancy occurring pursuant to the preceding section shall forthwith be filled by a fresh election.
10. Every person qualified and entitled to vote for the election of a Member of the Tasmanian House of Assembly shall be qualified and entitled to vote for the election of Members of the Convention as Representatives of Tasmania.
11. The first election of Tasmanian Representatives as Members of the Convention shall take place on a day to be fixed by Proclamation, which day, as nearly as may be conveniently practicable, shall be the same as the day of first election of Representatives of other Colonies.
12. The voting shall be taken throughout Tasmania as one Electoral District, and every voter shall vote for the full number of Representatives required, otherwise the vote shall be rejected as informal.
13. No person shall vote more than once at the same election of Tasmanian Representatives.
14. If any question shall arise respecting the election qualification or disqualification of a Tasmanian Representative, the same shall be heard and determined as in the case of a question respecting the election qualification or disqualification of a Member of the Tasmanian House of Assembly.
15. The result of every election for Tasmanian Representatives shall be reported to and certified by the Chief Secretary in manner prescribed, whose certificates shall be conclusive, except in proceedings for contesting the validity of the election.
16. When the first elections have been held in three or more Colonies, a meeting of the Convention shall be convened for a time and place agreed to by the Governors of such Colonies, and, in default of agreement, at such time and place as a majority of such Governors shall decide, or, in case of an equal division, as the Governor of the senior of such Colonies shall fix.
17. The Convention may adopt Standing Orders, and may provide for keeping and publishing records and journals of its proceedings, and for the conduct of its business, in such manner as shall be thought fit; and, until otherwise provided, the proceedings of the Convention shall be regulated by the Standing Orders and practice of the House of Commons so far as applicable.
18. The Convention shall be charged with the duty of framing for Australasia a Federal Constitution under the Crown in the form of a Bill for enactment by the Imperial Parliament.
19. The Convention shall at its first meeting, before proceeding to the despatch of any other business, elect a Member of such Convention to be the President thereof.
20. The President may resign his office, or he may be removed from office by a vote of the Convention; and upon his ceasing to be a Member of the Convention his office shall become vacant.
21. In the case of the absence of the President the Convention may choose some other Member to perform his duties during his absence.
22. Whenever a vacancy shall occur in the office of President, such vacancy shall forthwith be filled by a fresh election.
23. The presence, exclusive of the President, of at least one half of the total number of the Members of the Convention shall be necessary to constitute a meeting of the Convention for the exercise of its powers.
24. The Convention may temporarily delegate any of its powers to any Committee of its Members, but the Constitution shall be submitted to and approved by the Convention.
25. Questions arising in the Convention shall be decided by a majority of the votes of the Members present, other than the President; and when on any division the votes are equal, but not otherwise, the President shall have a vote, and his vote shall decide the question.

When the Constitution shall have been framed and approved by the Convention, copies thereof shall be supplied to the Members of the Convention, and the President shall declare the sitting of the Convention adjourned to a time and place to be fixed by the Convention, not being less than Thirty nor more than Sixty days thereafter.
- Reassembling of Convention. 27. On the reassembling of the Convention, the Constitution as framed and approved prior to the adjournment shall be considered, with any amendments which may be proposed, and shall be finally adopted with any amendments that may be agreed to.
- Final adoption. 28. So soon as the Convention shall have finally adopted a Federal Constitution as required by the preceding section, and shall have disposed of all incidental business, copies certified by the President shall be supplied in duplicate to the Members of the Convention, and the President shall declare the proceedings of the Convention closed.
- Expiration of term of office. 29. Each Tasmanian Representative shall cease to hold office at the expiration of Fourteen days after the proceedings of the Convention have closed.
- Payment of Representatives. 30. Each Tasmanian Representative shall be entitled during his term of office to payment for his services at the rate of £ , to be paid by the Treasurer out of the General Revenue of the Colony.
- Payment of expenses of Convention. 31. Tasmania shall contribute to the payment of the expenses of the meeting and proceedings of the Convention in the proportion which the population of Tasmania bears to the total population of the Colonies represented at the Convention, and the Treasurer shall make such payment accordingly out of the General Revenue.

PART II.

THE SUBMISSION TO THE ELECTORS.

- Constitution to be certified to Governor. 32. Within Fourteen days after the close of the proceedings of the Convention, certified copies of the Constitution shall be forwarded by the President of the Convention and by the Tasmanian Representatives to the Governor.
- Submission to Electors. 33. So soon as practicable after the close of the proceedings of the Convention, the question of the acceptance or rejection of the Constitution shall be referred and submitted to the vote of all persons in Tasmania qualified and entitled to vote for the election of Members of the Tasmanian House of Assembly.
- Voting. 34. Each voter shall vote by ballot "Yes" or "No" on the question, in accordance with the direction on the Ballot-paper in the Schedule hereto, and all votes shall be taken on the same day.
- One vote only. 35. No person shall vote more than once on the question.
- Decision of question. 36. The majority of votes shall decide the question, and if the Constitution shall be thereby rejected, no further action shall be taken by Tasmania in reference thereto pursuant to this Act.

PART III.

TRANSMISSION FOR LEGISLATIVE ENACTMENT.

- Addresses to the Queen. 37. If two Colonies, in addition to Tasmania, accept the Constitution, both Houses of Parliament may adopt Addresses to the Queen praying that the same may be passed into law by the Imperial Parliament.
- Transmission. 38. When Addresses have been agreed to pursuant to the preceding section, the same shall be transmitted to the Queen with a certified copy of the Constitution.

PART IV.

SUPPLEMENTAL.

- Penalties. 39. If any person shall vote or attempt to vote more than once contrary to section 35 he shall be liable on summary conviction to a penalty not exceeding fifty pounds, or, at the option of the Court, to imprisonment not exceeding six calendar months.
- Writs. 40. For the purpose of holding elections of Tasmanian Representatives, and of submitting the Constitution to the electors, the Governor may cause writs to be issued by such persons in such form and addressed to such Returning Officers as he thinks fit.
- Application of general law. 41. Unless and until otherwise prescribed, the laws relating to the conduct of elections for the House of Assembly, the proceedings before and at and subsequent to such elections, the trial of disputed elections, electoral offences, and all incidental matters, shall apply, *mutatis mutandis*, to the election of Tasmanian Representatives, and to the proceedings for submitting the Constitution to the electors.
- Regulations. 42. The Governor may make Regulations prescribing the mode of holding elections of Tasmanian Representatives, and submitting the Constitution to the electors, and generally for the purposes of carrying this Act into effect.
- Publication of Regulations. 43. All such Regulations shall be published in the *Government Gazette*, and on such publication shall have the force of law; and all such Regulations shall be laid before both Houses of Parliament within fourteen days after the making thereof, if Parliament be then sitting, or if Parliament be not then sitting, within fourteen days after the next meeting of Parliament.
- Enforcement of Regulations. 44. Any such Regulation may provide for the summary enforcement thereof by a penalty not exceeding fifty pounds, or, at the option of the Court, by imprisonment not exceeding six calendar months.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOVERNMENT ARCHITECT'S DEPARTMENT.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 11 December, 1894.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 1st November, 1894:—

- “(1.) The total amount of contracts for buildings let in the Government Architect’s Branch of the Public Works Department (apart from furniture) for the year ending 31st August, 1894.
- “(2.) The total amount of contracts for furniture let in the Government Architect’s Branch during same period.
- “(3.) The salaries and other expenses, &c., and cost of stationery, &c., which have been paid for the year ending 31st August, 1894, in the Colonial Architect’s Department.
- “(4.) The percentage of cost on the total amount expended for the year ending 31st August, 1894.”

(Mr. O’Sullivan.)

(1.) Total amount of contracts let for year ending 31st August, 1894:—

Nature of Work.	No. of Contracts.	Amounts.		
		£	s.	d.
Erections	16	48,021	0	6
Additions	60	15,994	8	10
Alterations and repairs	469	16,728	15	6
Furniture, payable from Building Votes	41	1,423	3	7
Total	586	£82,167	8	5

The expenditure on buildings during that period amounted to £113,117 17s. 0d., comprising—

	£	s.	d.
Works over £500	64,762	8	5
„ above £100 and under £500	15,566	4	3
„ under £100... ..	32,789	4	4

The number of progress valuations and vouchers prepared amounted to 4,185, details of which are set forth in Schedule A.

The sum of £2,239 1s. 3d. was expended in 476 day-work accounts, averaging £4 14s. each, details of which are set forth in Schedule B.

The following services were also rendered during the same period:—

1. Plans and specifications prepared, and, in some cases, tenders called for twenty-seven works at an estimated cost of £45,647. (See Schedule C.)
2. Sketches and part plans prepared for twenty-nine works, estimated cost of portion only £51,920. (See Schedule D.)
3. Reports and valuations of projected improvements or repairs on 224 buildings, on thirty-six buildings for theatrical performances, valuation of City buildings for Rate Assessments, &c., also 260 corrected copies of plans of existing buildings were prepared, towards forming a complete Record Portfolio. (See Schedule E.)
4. Professional and clerical services in connection with building of Grafton Gaol and Sydney Hospital, £40,180 6s. 2d. (See Schedule A.)
5. Valuations of buildings for Government Valuator for resumption purposes, £30,110 11s. 2d. (See Schedule F.)
6. Clerical work, involving keeping accounts, correspondence, and preparing returns, &c., &c.

364—

(2.)

[770 copies—Approximate Cost of Printing (labour and material), £1 13s. 0d.]

(2.) The total amount expended from Furniture Vote, principally with annual contractors, £4,040; also work involved in receiving old furniture and redistributing same.

(3.) Salaries and other expenses were as follows:—

	£	s.	d.
Professional	4,902	15	4
Superintendence, District Inspectors, and Clerks of Works	3,801	1	0
Clerical Branch	3,242	6	1
Clerk in charge of Annual Contracts	222	10	0
Foreman of yard	164	0	0
Travelling, &c.	1,702	12	8
Messengers	438	0	0
Stationery, Stores Department	116	1	10
Printing, &c.	56	17	1
Incidental Expenses	214	15	2
Total	14,860	19	2

(4.) The percentage office cost is calculated as follows:—

	£
Professional, £4,902.	2,827
Schedule A. Expenditure, £113,117, at $2\frac{1}{2}$ per cent.	50
" " Grafton Gaol and Sydney Hospital... ..	
" B. Included in A.	
" C. Plans, Tenders, and Estimates, £45,647, at 2 per cent.	912
" D. Sketches, and Part Plans, £51,920, at 1 per cent.	519
" D. Sundries	45
" E. Reports and valuations, &c.	556
	<u>£4,909</u>

NOTE.—Schedule A, Buildings, cost an average of $2\frac{1}{2}$ per cent., whilst the several expenditures varied from £6,475 down to 1s. 6d.

Superintendence, £3,801.	2,827
Schedules A and B. Expenditure £113,117, at $2\frac{1}{2}$ per cent.	54
" C. Services, re 27 proposed Works, at £2	58
" D. " 29 Reports, at £2	448
" E. " 224 " at £2	
Preparation by District Officers of 260 corrected copies of existing Plans for Record purposes, at 30s.	390
Valuations for resumptions	20
	<u>£3,797</u>

NOTE.—The above services required travelling over the whole of the Colony, unavoidably incurring much additional time.

	£
Clerical, £3,242.	1,696
Schedule A. Expenditure, £113,117, at $1\frac{1}{2}$ per cent.	602
" A. Grafton Gaol and Sydney Hospital, £40,180, at $1\frac{1}{2}$ per cent.	
" B. Included in above.	
" C. Projected works	45,647
" D. Reports and valuations	51,920
Accounts, returns, &c., not valued	
	<u>£3,274</u>

Contingencies, travelling, &c.; stationery, &c., £2,528.

If calculated on the professional office work the rate would be £250,964 at 1 per cent., £2,509; but, as the total expenses cover many items having no reference to the professional office work, the percentage is actually lower than 1 per cent., though difficult to ascertain.

Summary.

The above details show the office cost on the year's expenditure to be:—

Professional	$2\frac{1}{2}$ per cent.
Superintendence	$2\frac{1}{2}$ "
Clerical	$1\frac{1}{2}$ "
Contingencies	1 "

NOTE.—The actual extra cost would have been less, inasmuch as the work could have been carried out by the working staff of the office, with additional assistance costing £600.

1894-5.

NEW SOUTH WALES.

FIRE BRIGADES' BOARD, SYDNEY.

(ELEVENTH ANNUAL REPORT.)

Presented to Parliament, Pursuant to Act 47 Vic. No. 3, sec. 7.

The Chairman to The Chief Secretary.

Fire Brigades' Board, Head Quarters Fire Station,

Sydney, 6 April, 1895.

Sir,

I have the honor to present the Report of the Fire Brigades' Board for the Metropolitan District upon their administration during the year 1894, as required by "The Fire Brigades' Act, 1884," section 7.

I have, &c.;

CHARLES BOWN,

Chairman.

REPORT OF THE FIRE BRIGADES' BOARD FOR THE YEAR 1894.

PURSUANT to Act 47 Victoria No. 3, section 7, we have the honor to furnish the following Report upon the work of the Fire Department for the Metropolitan District in the year 1894.

The biennial election to the Board took place in March, and resulted in the return of Alderman Board. J. C. Beare, J.P. (re-elected), by the Municipal Council of the city of Sydney; Walter Church, Esq., J.P. (re-elected), by the Fire Insurance Companies having their headquarters in New South Wales; John St. Vincent Welch, Esq., J.P., by the other Fire Insurance Companies carrying on business in the Colony; Alderman William Taylor, Mayor of Rockdale, by the proclaimed municipalities in the metropolitan area; and Edward J. Love, Esq. (re-elected), by the Volunteer Fire Companies. At the first meeting of the newly-constituted Board Mr. Walter Church was re-elected to office as Vice-chairman.

Thirty-two municipalities are included in the contributory list for the year [*Appendix II*], the total Municipalities. assessed value of whose ratable property was £5,296,891, on which the contribution to this department was equal to two shillings and nine-tenths of a penny (2s. 0·9d.) in every £100. Thirty-one were recorded in the previous return, but the erection of a portion of the Municipality of North Sydney, in June, 1893, into the Borough of Mosman accounted for the increase in the number. The sum of the assessments was £119,887 less than in that year. There was, however, an increase of £20,785 in the returns of the municipalities outside the metropolis; but the city returned a decrease of £140,672, which more than absorbed the increase of the other municipalities. During the year the Metropolitan District was largely extended by the addition of Auburn, Canterbury, Concord, Enfield, Hurstville, Rockdale, and Strathfield, but they were not called upon to contribute until the commencement of this year. By this extension the anomaly of isolated districts being outside the operation of the Act, while receiving more or less fire protection at the expense of neighbouring boroughs was abolished.

The statutory declarations of the amounts held at risk by the fire insurance companies within the Insurance Com- Metropolitan district recorded a total of £59,844,701. This represented a falling off of £1,341,014 upon panies. the previous return, and exhibited the first check in the regular yearly expansion from £36,690,987 in 1884 to £61,185,715 in 1893. The rate of contribution per £100 was two decimal two pence (2·2d.) The tendency to contraction in the number of Insurance Companies has been previously remarked, and a further reduction of one is shown in the list of forty-two furnished on page 4, the alteration being caused by the retirement of the Hong Kong Fire Insurance Company from the Colony, together with the cessation of the Pacific Fire and Marine Insurance Company, and of the New South Wales Assurance Corporation, from business. The two last-named were local offices, and their disappearance brought the number of fire offices having head quarters in the Colony down to six, while thirty-six others had branch establishments in Sydney. On the other hand, the Indemnity Fire and Marine Insurance Company of Australasia (Limited) and the Royal Exchange Assurance Corporation commenced business here.

The revenue levied upon the three contributory bodies was similar in amount to that of the Revenue. previous year, and the adopted estimate of the probable expenditure for the current year was £18,000.

Balmmain, North
Sydney, new fire
stations at.

As anticipated in our last report, a fire station for the district centring in Balmmain was erected on the site provided in Darling-street at a cost of £1,022, exclusive of electrical adjuncts and fittings supplied by the workshops of the Metropolitan Fire Brigade. The plans for the building were drawn by Mr. Charles Hellmrich, J.P., and the work of erection was carried out under his supervision by Messrs. Folster and Heels. Towards the close of the year a contract was entered into with Mr. Robert Wilkins to erect a station at North Sydney, where the Government had also provided a site, of similar design to that at Balmmain, and the building is in progress under Mr. Hellmrich's direction.

Balmmain.

The Balmmain Volunteer Fire Company was placed in charge of the former station in August, but this being the first occasion upon which volunteers have been permitted to occupy a permanent fire station erected by the Board, a term of trial of six months was prescribed, and the question is now under consideration whether to continue the volunteer firemen in possession or to replace them by the Metropolitan Fire Brigade. In North Sydney, which, owing to its position on the north side of the harbour, is very difficult of access from the city, it has been decided to station a detachment of the Metropolitan Brigade with an equipment suitable for that large and hilly district; for it is recognised that serious loss of time must elapse before assistance of men and material could be forwarded thither in case of any outbreak. From this centre it is proposed to stretch telephone fire-alarm lines towards Mosman and Willoughby.

North Sydney.

Mosman and
Willoughby.
Paddington.

It is hoped that when better protection has been provided for the northern suburbs, the requirements of Paddington and the eastern suburbs will not be overlooked. Besides the vacant piece of Crown land adjoining the Paddington Town Hall, there is a highly desirable position for a fire-station in the Paddington water reservoir enclosure. As we are given to understand that the Department of Water Supply and Sewerage expect soon to have no further use for that reservoir, we would suggest the desirability of setting apart a piece of that ground for a fire-station, from whence protection could be promptly afforded to a large and populous area, and assistance rendered to the city in case of necessity. It is to be regretted that so far no progress has been made with regard to securing a fire-station site at

Burwood.

Burwood.

Fires.

In a time of general depression such as the Colony has lately experienced, and which is well indicated by the aforesaid falling-off in the value of ratable property in the municipalities, an abnormal increase in the number and importance of destructive fires is always expected; but we are pleased to report that the year 1894 was exceptional in this respect, and no extraordinary increase has to be remarked upon. This satisfactory result has no doubt been largely due to the continued efficiency of the Brigade, to the celerity with which, owing to the reticulation of the telephone fire alarm system throughout the city and elsewhere, firemen can be concentrated at an outbreak, with the best obtainable extinguishing appliances; and to the warning effect which our power to direct the City Coroner to institute an inquiry into the cause of any fire, has had upon incendiaries,—even though that power has been very moderately exercised. Four hundred and nine calls for the Brigade's assistance were received, of which, excluding false alarms and chimney fires, 270 were for actual fires,—3 being for vessels in the harbour which, under the existing Act is, strictly speaking, outside our jurisdiction. These figures, compared with those of the previous twelve months, exhibit an increase of 8 alarms and 12 fires. Among the latter are included fires at Messrs. John Lawler & Sons; the Offices of the Chief Secretary, and Public Works Department; Palings' Buildings; the "Royal," "Grosvenor," and "Imperial" Hotels; Parbury's Wharf; the large warehouses of Messrs. Holdsworth, Macpherson, & Co.; Messrs. Virgoe, Son, and Chapman; and others, of which details are supplied in the list of fires. [Appendix VIII.] The first was the only one of those cited which resulted in total destruction; in the others, the firemen succeeded in arresting the flames and saving the buildings.

Messrs. John
Lawler & Sons.

The premises occupied by Messrs. John Lawler & Sons, Nos. 608, 610, 612, George-street, consisted of a narrow six-story erection, heavily stocked with furniture and other goods, which towered high above the other business establishments in the vicinity. In consequence of its construction the building had always been looked upon with apprehension, from the fireman's point of view, and the fire which broke out there shortly before 7 o'clock on Saturday night, the 1st September, fully justified the anxiety with which it had been regarded. The firemen were at work in the building within 3 minutes after the fire was first observed, and all available appliances were despatched to their assistance. But the flames spread with such rapidity that the retreat of a number of the Metropolitan Fire Brigade was almost cut off, and a quantity of valuable hose, &c., which had been taken inside, could not be recovered. The high walls fell in masses, and unfortunately an officer of the Metropolitan Fire Brigade was crushed beneath the ruins. Some 250 lb. of gunpowder were stored in premises close to the burning edifice, and this enhanced the peril of the firemen, while the populace, which gathered in immense concourse to the spectacle, unwittingly risked terrible disaster. By unrelaxed effort the blaze was fortunately prevented from spreading to other premises, and streams of water saved the explosive from ignition until the collapse of the neighbouring wall finally covered and protected it.

Gunpowder,
risk from.

Inquests

Out of the 270 fires recorded, the City Coroner held inquests, at our instance, into six. Four of these resulted in verdicts of arson, and two in open verdicts. Inquiries were also made into the origin of some other fires, by desire of the police.

Water Supply.

The proposal of the Water and Sewerage Department to construct a large water reservoir on the heights of the Centennial Park, to take the place of that at Paddington, is one which we regard with much satisfaction in consequence of the increased pressure which will be available for extinguishing fires. With pleasure we acknowledge the courteous attention which the Board of Water Supply and Sewerage has invariably given to any representations with regard to the water supply for fire purposes.

Building Act,
need for.
Legislation re
Explosives.
Inflammable
Liquids Bill.

The oft urged need for legislation to regulate the erection of buildings in the city, and to better control the traffic in explosives, has received forcible illustration by the fatal fire at Messrs. John Lawler and Sons. The Bill prepared in 1891 to "Amend and Consolidate the Law relating to the Keeping, Selling, and Conveyance of Inflammable Liquids," was sent down for reconsideration in the month of October, and after due consideration was returned with a report upon certain questions raised in connection therewith.

Amendment of
Fire Brigades'
Act.

We again desire to impress upon the Government the urgent necessity which exists for the present Fire Brigades' Act to be thoroughly recast. It is generally acknowledged that the defects are many and serious; and acting upon experience of the practical working of the Act, we drafted a Bill several years ago for its amendment (*vide* 5th Annual Report, page 35, April 1889.) Nothing, however, has yet been done to give effect to our recommendation in this respect. The

The height of the numerous telegraph wires in the principal streets of Sydney is an element of danger which at any moment may have serious results. They impede the operation of escape ladders and other life saving appliances, as evidenced in the destructive conflagration of 2nd October, 1890, and recently at the fire at the "Liverpool Arms Hotel," Pitt and King streets. Telegraph Wires.

The telephone fire alarm system which has proved so admirably adapted for the requirements of modern fire service, has been still further extended. The six alarm telephones referred to last year as in course of installation in the Glebe, are now in working order. A similar number has been provided in Paddington, several in Marrickville, Petersham, Darlington, and other places; in all adding twenty-seven to those previously existing, and bringing the total number up to 114. These are kept in order by our own staff, and a great deal of work requiring special training is thereby entailed upon the Brigade. Telephone fire alarm system.

The Metropolitan Fire Brigade now numbers fifty-two of all ranks, or one more than in 1893, and continues to maintain its high standard of efficiency, although at times its strength is taxed to the utmost. The water-tower referred to in our last report has been added to the equipment. This can be affixed to the summit of the 80-feet extension ladder, and a stream of water directed from it by men on the ground, in any required direction. As the ladder is readily movable, and supports itself in a vertical position without resting against a wall, it is apparent that the addition of the water-tower may prove very valuable. A double vertical steam fire-engine of the most improved pattern, somewhat lighter than those hitherto in use, but capable of delivering 260 gallons a minute, was ordered from Messrs. Shand, Mason, & Company, of London, early in the year, and has lately arrived. Its trials have been thoroughly satisfactory, and its comparative lightness will give it special value in long distance runs to the suburbs, where buildings are not so lofty as in the city. Brigade.
Water-tower.
New light steam-engine.

It is our sad duty to report the death of Senior-Fireman Edward Charles Brown, Officer-in-Charge of our No. 5 Station, Newtown, at the before-mentioned fire on 1st September. He had been a member of the Brigade since its inception in 1884, and previously had been one of the Insurance Companies' Brigade. His record for the whole term of his service was unblemished, and he had proved himself capable, courageous, and active. While working at that fire he was unfortunately crushed by a portion of falling wall, and expired shortly after his recovery from beneath the debris. Fireman Brown left a widow and four young orphans, and the public sympathy aroused at the time took the form of a fund for the assistance of those dependent upon firemen killed or disabled in their perilous duty, who might require relief. The "Firemen's Widows and Orphans' Fund" for this object was inaugurated at a public meeting in the Town Hall on 6th September. Sir W. P. Manning, Mayor of Sydney, presided, and the Premier (Hon. G. H. Reid), Sir Henry Parkes, Sir George Dibbs, and other leading public men took active part in it. His Excellency the late Sir Robert Duff, and Lady Duff, kindly gave their countenance and practical assistance, and it is hoped that a sufficient sum will be raised to place the fund upon a permanent basis of usefulness. Death of Senior-Fireman Brown.

The list of registered Volunteer Fire Companies, furnished in an Appendix, numbers twenty-four, and pecuniary assistance to the amount of £2,762, was granted to them, an increase of £277 on the similar amount for the previous year. The Companies have always readily responded to calls to fire, and those within reach of the city have sent assistance to the permanent brigade when called upon. Besides the help thus afforded the volunteer firemen have performed much useful work in the suburban districts wherein they operate. Volunteer Fire Companies.

Superintendent Bear having obtained three months' leave of absence from the 1st August, Deputy-Superintendent Alfred Webb was gazetted Acting Superintendent, and ably performed the duties of that responsible position. It was during this period that the great fire at Messrs. John Lawler and Sons occurred; and officers and men under his command acquitted themselves admirably. Acting Superintendent

In the Superintendent's report, and tables herewith, more particular information of the year's work is furnished.

CHARLES BOWN,
Chairman.

Adopted at a meeting of the Metropolitan Fire Brigades' Board, held in the Board-room, Headquarters Fire Station, Sydney, on the 20th March, 1895.

APPENDIX I.
INSURANCE COMPANIES.

NOTE.—This return is incomplete, owing to the failure of several companies to furnish fire reports

APPENDIX VII.

APPENDIX VII.

Mr. Superintendent Bear's Report.

To the Fire Brigades' Board,—
Gentlemen,Metropolitan Fire Brigade,
Head-quarters Station, 1 March, 1895.

I do myself the honor to submit my Eleventh Annual Report of the working and general efficiency of your Brigade and the several Volunteer Companies, together with the details of fires attended in the city and suburbs for the year ending 31st December, 1894.

The total number of alarms for fires, or supposed fires, was 409; of these 49 were false alarms, 90 proved to be only chimney alarms, and 270 were calls for fires. Of the fires 206 were slight or trifling, 23 were serious, and 41 resulted in total destruction. Of the 270 fires 146 were insured, 65 not insured, and in 59 instances the insurances on the buildings or contents could not be ascertained. In addition to the ordinary fires there have been 56 chimney fires, requiring the attendance of firemen with hand-pumps only, making an aggregate total of 409 calls for fires, false alarms, and chimney fires.

The fires of 1894, as compared with those of 1893, show an increase of 12; in the chimney fires attended with engines a decrease of 19; those attended by firemen with hand-pump only an increase of 10.

In the fires which were slight there has been a decrease of 4; in serious the same, viz., 23; and in fires which resulted in total destruction an increase of 16. Among the buildings totally destroyed are classed sheds, weatherboard cottages, &c. Attached are detailed statements of the various fires attended by the Brigade and the Volunteer Fire Companies, as well as those unattended, but which have been reported to the Brigade from various sources, and a member of the Brigade has been sent to obtain the necessary particulars. The various summaries appended show the particular dates, times of call, time of outbreak, trades, localities, insurances, hourly and daily, weekly and monthly. There is also appended a summary of the supposed origin of fires for the year.

Referring to the summary of localities, it will be noticed that in the City of Sydney alone there were 173 calls, 96 of which were for actual fires, 17 were false alarms, 23 were for chimney fires reported as houses on fire, and 37 were for chimney fires attended by firemen with hand-pumps only.

Of the fires in the city, there were in Phillip and Denison Wards, 17 each; Macquarie Ward, 14; Fitzroy and Gips Wards, 11 each; Bourke and Cook Wards, 10 each; and Brisbane Ward, 6.

In the suburbs there were 236 calls, of which 174 were for fires, 32 were false alarms, 11 were chimney fires reported as houses on fire, and 19 were for chimney fires attended by firemen with hand-pumps only. The suburbs affected in regard to fires only were as follows, viz.:—Newtown, 20; Paddington, 13; Leichhardt, Petersham, and Woollahra, 10 each; Glebe, 9; Balmain, 8; Granville, 8; Ashfield, Marrickville, North Sydney, and Redfern, 7 each; Annandale, 6; Waverley, 5; Alexandria, Drummoyne, Parramatta, and Rockdale, 4 each; Botany, Burwood, Darlington, Macdonaldtown, Randwick, The Harbour, and Willoughby, 3 each; Waterloo, 2; Auburn, Canterbury, Concord, St. Peters, Narrabeen,* Smithfield,* Hurstville, and Rookwood, 1 each.

In summarising the trades it will be found that private dwellings have been mostly affected by fires, the number for all classes of damage being ninety-six; but taking the actual trades into consideration the most notable stand in the following order, viz.:—Grocers, 15; licensed victuallers, 13; grass paddocks and parks, 9; commission agents and produce merchants, stables, unoccupied premises, 8 each; butchers, hairdressers, and tobacconists, 7 each; builders and contractors and sheds, 6 each; boarding houses, printers and stationers, and restaurants, 5 each; bakers and confectioners, drapers and milliners, 4 each; bedding manufacturers, coach builders, dairies, fruiterers and greengrocers, furniture dealers, Government buildings, omnibus proprietors, offices, painters and decorators, ships, workshops, 3 each; bootmakers, churches, coffee palaces, timber merchants, sail-makers, warehouses, railway sidings and banks, 2 each; other trades affected, 1 each. These are to be found in the "Summary of Trades."

The strength of the Brigade is as follows:—Two large steam fire engines, 5 small steam fire engines, 2 7-inch manual engines, 3 6-inch manual engines, 6 under 6-inch manual engines, 4 telescope ladders, 1 ladder van, 1 hose van, 1 steam engine tender, 12 hose reels, 24,017 feet of hose, most of which is in good and fair condition; 23 horses, 58 telephones erected, 9 telephone switchboards and 114 telephone fire alarms erected; 52 firemen, including Superintendent, Deputy-Superintendent, and coachmen.

The undermentioned Volunteer Fire Companies hold plant on loan from your Board, viz.:—Alexandria, Ashfield, Drummoyne, Burwood, Granville, Leichhardt, Manly, North Botany, North City, Paddington Brewery, Randwick, St. Leonards, Standard Brewery, Waverley and Woollahra. Seven Volunteer Fire Stations are also vested in the hands of your Board.

The following comprise the Volunteer Fire Companies within your Board's jurisdiction:—Alexandria Volunteer Company, subsidised, £100; Ashfield Volunteer Company, £110; Balmain Volunteer Company, £256 5s.; Burwood Volunteer Company, £110; Drummoyne Volunteer Company, £50; Glebe Volunteer Company, £160; Granville Volunteer Company, 75; Leichhardt Volunteer Company, £75; Manly Volunteer Company, £75; North Botany Volunteer Company, £50; North City Volunteer Company, £100; Paddington Volunteer Company, £200; Paddington Brewery Volunteer Company, £200; No. 1 Parramatta Volunteer Company, £100; No. 2 Parramatta Volunteer Company, £85; Randwick Volunteer Company, £50; Rockdale Volunteer Company, £25; Rookwood Volunteer Company, £50; St. Leonards Volunteer Company, £200; Standard Brewery Volunteer Company, £200; Waterloo Volunteer Company, £141; Waverley Volunteer Company, £110; Woollahra Volunteer Company, £200.

The total amount paid as subsidies and bonuses to the various Volunteer Fire Companies during the year was £2,762 5s. In addition to the subsidies new plant has been supplied in many cases to Volunteer Companies to replace that condemned as unfit for further use. The approximate value of the whole of your Board's plant, together with the land and stations held in trust, is £85,675 9s. The value of the Volunteer Companies' own plant is not included in this sum.

Outside the M.F.B. area.

MEMBERS

MEMBERS OF THE BRIGADE.

No. 1 Station (Head-quarters), Castlereagh-street, Sydney; No. 2 Station, George-street West; No. 3 Station, Circular Quay; No. 4 Station, Marrickville; No. 5 Station, Newtown.

During the year the No. 4 Metropolitan Fire Station, Marrickville, was connected by telephone to the General Post Office Exchange. The following Volunteer Fire Stations, viz, Burwood, Balmain, Glebe, Parramatta, and St. Leonards were also connected to the Telephone Exchange. The Glebe and Woollahra Volunteer Fire Stations were connected by telephone with the local Police Stations; and the North Botany Volunteer Fire Station was placed in communication by telephone with the Waterloo Fire Station. Most of the Volunteer Fire Stations, the Theatres and Music Halls, the University, Government Printing Office, Railway Department, and Messrs. Hoffnung and Co.'s warehouse, are in direct communication with our permanent stations. The Police Stations are also in communication, through the Central Police Station. The various wharves, warehouses, business houses, and many public buildings, are in telephone communication by means of the General Post Office Exchange, which is open to receive and transmit calls for fires at any hour of the day or night; and arrangements have been made by which watchmen employed by the principal business houses report through to the Head-quarters' Fire Station several times every night.

The telephone fire-alarms, and nearly the whole of the electrical apparatus, has been kept in order by the members of the Brigade.

A new improved 260 gallon steam fire-engine was ordered from Messrs Shand, Mason, & Co, London, and is of a type hitherto unused by the Brigade. This engine was purchased for attending fires in the suburbs.

The new fire station in Darling-street, Balmain, was completed at a cost of £1,100, exclusive of the amount expended for the purchase of the land, which was bought by the Government. The station was handed over to the Balmain Volunteer Fire Company on the 17th August, subject to a trial for six months.

Negotiations were completed for the purchase of a site for the erection of a Fire Station in North Sydney, to be manned by a staff of permanent firemen of the Metropolitan Fire Brigade.

The most notable fire during the year was at Messrs. John Lawler and Sons, at which a fireman lost his life through being crushed by falling walls.

I have to thank the officers and members of the Volunteer Fire Companies for their valuable assistance during the year; and also the officers and members of the Police Force for their very effective assistance. I have also to tender my thanks to the turncocks and to the public generally for their valuable co operation.

The discipline and general efficiency of the Brigade are in all respects satisfactory, and although the duties at times have been a severe strain on the whole staff, the work has been performed cheerfully and well.

In conclusion, I beg to tender my most sincere thanks to your Board for the cordial support it has awarded me.

I have, &c.,

WILLIAM D. BEAR,
Superintendent of Fire Brigades, and Inspector of Kerosene.

APPENDIX VIII.

DETAILS of Fires which have occurred within the Metropolitan District, during the Year ending December, 1894.

Date	When discovered	Time of outbreak	Locality	Name of tenant.	How premises occupied	Construction of premises.	Origin or supposed cause of fire	Insurances		Extent of damage, &c	Extinguished by

NEW SOUTH WALES.

FIRE BRIGADES ACT, 1884.

(WOLLONGONG FIRE BRIGADES BOARD.—REPORT FOR YEAR ENDED 31 MARCH, 1895.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

The Chairman of the Wollongong Fire Brigades Board to The Chief Secretary.

Sir,

Wollongong Fire Brigades Board Office, 30 April, 1895.

We have the honor to present you with the Annual Report of the Wollongong Fire Brigades Board for the year ending 31st March, 1895.

The Board have to report that no contributions were received by them during the year from either the Borough Council or the insurance companies, both having taken advantage of defects in the "Fire Brigades Act of 1884." With the exception of small donations from two insurance companies the only revenue received by the Board during the year was from the Government. From this cause they have been unable to procure a quantity of additional plant and clothing which they anticipated being able to purchase, and which are urgently required in order to add to the efficiency of the brigade under their control. The Borough Council has also neglected to strike a rate under the Fire Brigades Act for the ensuing year. Therefore the Board have to look to the Government for sufficient revenue to carry on their operations for the ensuing year. In view of these facts the Board would again respectfully urge the necessity that exists for the immediate passing into law of such a measure as will render it compulsory for Borough Councils and fire insurance companies to contribute their quota towards the expenses incurred by country Boards in maintaining the efficiency of brigades under their control.

Fortunately no fires occurred within the Borough during the year, thus materially lessening the expenditure of the Board.

The Board have pleasure in reporting that the members of the brigade are thoroughly efficient, and that the plant and appliances are in good order.

A statement of revenue and expenditure is appended herewith.

We have, &c.,

FRAS. WOODWARD,
Chairman.J. A. BEATSON,
Mayor.A. CAMPSHIRE,
Representative of Fire Insurance Companies.

NEW SOUTH WALES.

FIRE BRIGADES ACT, 1884.

(GOULBURN FIRE BRIGADES BOARD NINTH ANNUAL REPORT.)

Presented to Parliament pursuant to Act 47 Vic. No. 3, sec. 7.

The Chairman of the Goulburn Fire Brigade Board to The Chief Secretary.

Sir,

Goulburn Fire Brigades Board, Goulburn, 9th January, 1895.

We have the honor to submit to you the Ninth Annual Report of the Goulburn Fire Brigades Board.

There have been no fires of a serious nature in Goulburn during the past year.

The members of the brigade have maintained their efficiency by regular attendance at practice, the average being forty out of a possible fifty-two. The roll numbers twenty-eight full members and three call-boys.

Owing to the imperfect state of the law, as decided by the Supreme Court in the Deniliquin case several years ago, country boards have no power to enforce the payment of contributions by the insurance companies. Only one of the thirty-eight companies having risks in this city contributed for 1894.

The Board cannot but speak in terms of strongest condemnation of the conduct of the insurance companies in availing themselves of a technical defect in the law to evade the responsibilities the legislature intended to impose upon them. No one benefits more than these companies by the maintenance of fire brigades. So far as Goulburn is concerned, it has been admitted that the assessment of the Board is reasonable in amount, and the brigade has proved its efficiency, both at fires and in intercolonial competitions. It is no wonder that in some districts we hear of brigades disbanding or threatening to disband, and the responsibility of bringing this about must lie at the door of the insurance companies.

Seeing that frequent applications to the Colonial Secretary for an amending Bill had been ineffectual, Dr. Hollis, Member for Goulburn, was requested to take up the matter, and he kindly consented to do so, and obtained leave for the introduction of a Bill; but after consultation with the Parliamentary Draftsman, whose services the Government kindly placed at his disposal, he found that a Message from the Governor was necessary. It is hoped that at an early date after the reassembling of Parliament the Message will be obtained, and that an effective Bill will be passed.

Statement of receipts and expenditure for the year is herewith forwarded.

Yours, &c.,

A. M. BETTS,

Chairman.

(SECOND SESSION.)

NEW SOUTH WALES.

TREATY WITH LIBERIA.

(DESPATCH RESPECTING.)

Presented to Parliament by Command.Department of Justice,
Sydney, 7th June, 1894.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated 21st March, 1894, from the Secretary of State for the Colonies.

T. M. SLATTERY.

(Circular.)

Downing-street,
21st March, 1894.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an order of Her Majesty the Queen in Council, dated the 10th of March, 1894 [The London Gazette, 13th March, 1894. *Extract*], for giving effect to the Treaty between Her Majesty and the President of the Republic of Liberia, for the mutual extradition of Fugitive Criminals, signed at London on the 16th of December, 1892, the ratifications of which were exchanged at London on the 31st of January, 1894.

I have, &c.,
RIPON.The Officer Administering
the Government of New South Wales.**ORDER IN COUNCIL.****EXTRADITION TREATY WITH LIBERIA.***Windsor, 10th March, 1894.*

At the Court at Windsor, the 10th day of March, 1894.

*Present:***THE QUEEN'S MOST EXCELLENT MAJESTY.**LORD PRESIDENT.
LORD PRIVY SEAL.
EARL OF KIMBERLEY.MR. SECRETARY FOWLER.
MR. LEFÈVRE.
MR. BRYCE.

WHEREAS by the Extradition Acts, 1870 and 1873, it was amongst other things enacted that, where an arrangement has been made with any Foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such Foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such

possession the surrender of fugitive criminals who are in or suspected of being in such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any Foreign State, or by any subsequent Order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such Foreign State, and so long as such law continues in force there and no longer:

And whereas by an Act of the Parliament of Canada passed in one thousand eight hundred and eighty-six, and entitled "An Act respecting the Extradition of Fugitive Criminals," provision is made for carrying into effect within the dominion the surrender of fugitive criminals:

And whereas by an Order of Her Majesty the Queen in Council, dated the seventeenth day of November, one thousand eight hundred and eighty-eight, it was directed that the operation of the Extradition Acts, 1870 and 1873, should be suspended within the Dominion of Canada so long as the provision of the said Act of the Parliament of Canada of 1886 should continue in force and no longer:

And whereas a Treaty was concluded on the sixteenth day of December, one thousand eight hundred and ninety-two, between Her Majesty and the President of the Republic of Liberia for the mutual extradition of fugitive criminals, which Treaty is in the terms following:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and his Excellency the President of Liberia, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within their respective territories, that persons charged with or convicted of the crimes hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up; the said High Contracting Parties have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say;

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honourable Archibald Philip, Earl of Rosebery, Knight of the Most Noble Order of the Garter, Her Majesty's Principal Secretary of State for Foreign Affairs; and

His Excellency the President of Liberia, Henry Hayman, Esq., Consul-General of the Republic of Liberia in London;

Who, having communicated to each other their respective Full Powers, found in good and due form, have agreed upon and concluded the following Articles:—

ARTICLE I.

The High Contracting Parties engage to deliver up to each other those persons who, being accused or convicted of a crime or offence committed in the territory of the one Party, shall be found within the territory of the other, under the circumstances and conditions stated in the present Treaty.

ARTICLE II.

The crimes or offences for which the extradition is to be granted are the following:—

1. Murder, or attempt, or conspiracy to murder.
2. Manslaughter.
3. Assault occasioning actual bodily harm.
4. Maliciously wounding or inflicting grievously bodily harm.
5. Counterfeiting or altering money, or uttering counterfeit or altered money.
6. Knowingly make any instrument, tool, or engine adapted and intended for counterfeiting coin.
7. Forgery, counterfeiting, or altering or uttering what is forged, or counterfeited, or altered.
8. Embezzlement or larceny.
9. Malicious injury to property if the offence be indictable.
10. Obtaining money, goods, or valuable securities by false pretences.
11. Receiving money, valuable security, or other property, knowing the same to have been stolen, embezzled or unlawfully obtained.
12. Crimes against bankruptcy law.
13. Fraud by a bailee, banker, agent, factor, trustee, or director or member or public officer of any Company, made criminal by any law for the time being in force.
14. Perjury, or subornation of perjury.
15. Rape.
16. Carnal knowledge, or any attempt to have carnal knowledge, of a girl under 16 years of age.
17. Indecent assault.
18. Administering drugs, or using instruments, with intent to procure the miscarriage of a woman.
19. Abduction.
20. Child stealing.
21. Abandoning children, exposing or unlawfully detaining them.
22. Kidnapping and false imprisonment.
23. Burglary or housebreaking.
24. Arson.
25. Robbery with violence.
26. Any malicious act done with intent to endanger the safety of any person in a railway train.
27. Threats by letter or otherwise, with intent to extort.
28. Piracy by law of nations.
29. Sinking or destroying a vessel at sea, or attempting or conspiring to do so.
30. Assaults on board a ship on the high seas, with intent to destroy life, or do grievous bodily harm.
31. Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas, against the authority of the master.
32. Dealing in slaves in such a manner as to constitute criminal offence against the laws of both States.

Extradition is also to be granted for participation in any of the aforesaid crimes, provided such participation be punishable by the laws of both the Contracting Parties.

ARTICLE III.

Either Government may, in its absolute discretion, refuse to deliver up its own subjects to the other Government.

ARTICLE IV.

The extradition shall not take place if the person claimed on the part of the British Government, or the person claimed on the part of the Liberian Government, has already been tried and discharged or punished, or is still under trial, within the territories of the two High Contracting Parties respectively, for the crime for which his extradition is demanded.

If the person claimed on the part of the British Government, or if the person claimed on the part of the Liberian Government, should be under examination, or is undergoing sentence under a conviction, for any other crime within the territories of the two High Contracting Parties respectively, his extradition shall be deferred until after he has been discharged, whether by acquittal, or on expiration of his sentence, or otherwise.

ARTICLE V.

The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution, or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applied to.

ARTICLE VI.

A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has in fact been made with a view to try or punish him for an offence of a political character.

ARTICLE VII.

A person surrendered can in no case be kept in prison, or be brought to trial in the State to which the surrender has been made, for any other crime or on account of any other matters than those for which the extradition shall have taken place, until he has been restored or had an opportunity of returning to the State by which he has been surrendered.

This stipulation does not apply to crimes committed after the extradition.

ARTICLE VIII.

The requisition for extradition shall be made in the following manner:—

Application on behalf of Her Britannic Majesty's Government for the surrender of a fugitive criminal in Liberia shall be made by Her Majesty's Consul at Monrovia.

Application on behalf of the Liberian Government for the surrender of a fugitive criminal in the United Kingdom shall be made by the Diplomatic Representative of Liberia in London, or in the absence of such Representative, by the Consul-General for Liberia in London.

The requisition for the extradition of the accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

A sentence passed *in contumaciam* is not to be deemed a conviction, but a person so sentenced may be dealt with as an accused person.

ARTICLE IX.

If the requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

ARTICLE X.

If the fugitive has been arrested in the British dominions he shall forthwith be brought before a competent Magistrate, who is to examine him and to conduct the preliminary investigation of the case, just as if the apprehension had taken place for a crime committed in the British dominions.

In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the British dominions shall admit as valid evidence the sworn depositions or the affirmations of witnesses taken in Liberia, or copies thereof, and likewise the warrants and sentences issued therein, and certificates of, or judicial documents stating the fact of, a conviction, provided the same are authenticated as follows:—

1. A warrant must purport to be signed by a Judge, Magistrate, or officer of Liberia.

2. Depositions or affirmations, or the copies thereof, must purport to be certified under the hand of a Judge, Magistrate, or officer of Liberia, to be the original depositions or affirmations, or to be the true copies thereof, as the case may require.

3. A certificate of or judicial document stating the fact of a conviction must purport to be certified by a Judge, Magistrate, or officer of Liberia.

4. In every case such warrant, deposition, affirmation, copy, certificate or judicial document must be authenticated either by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or some other Minister of Liberia; but any other mode of authentication for the time being permitted by the law in that part of the British dominions where the examination is taken may be substituted for the foregoing.

ARTICLE XI.

If the fugitive has been arrested in Liberia his surrender shall be granted if, upon examination by a competent authority, it appears that the documents furnished by the British Government contain sufficient *prima facie* evidence to justify the extradition.

The Authorities of Liberia shall admit as valid evidence records drawn up by the British authorities of the depositions of witnesses, or copies thereof, and records of conviction or other judicial documents, or copies thereof, provided that the said documents be signed or authenticated by an authority whose competence shall be certified by the seal of a Minister of State of Her Britannic Majesty.

ARTICLE XII.

The extradition shall not take place unless the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime has been committed in the territory of the said State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and that the crime of which he has been convicted is one in respect of which extradition could, at the time of such conviction, have been granted by the State applied to. The fugitive criminal shall not be surrendered until the expiration of fifteen days from the date of his being committed to prison to await his surrender.

ARTICLE XIII.

If the individual claimed by one of the two High Contracting Parties in pursuance of the present Treaty should be also claimed by one or several other Powers, on account of other crimes or offences committed upon their respective territories, his extradition shall be granted to that State whose demand is earliest in date.

ARTICLE XIV.

If sufficient evidence for the extradition be not produced within three months from the date of the apprehension of the fugitive, or within such further time as the State applied to, or the proper Tribunal thereof, shall direct, the fugitive shall be set at liberty.

ARTICLE XV.

All articles seized which were in the possession of the person to be surrendered, at the time of his apprehension, shall, if the competent authority of the State applied to for the extradition has ordered the delivery thereof, be given up when the extradition takes place, and the said delivery shall extend not merely to the stolen articles, but to everything that may serve as a proof of the crime.

ARTICLE XVI.

All expenses connected with extradition shall be borne by the demanding State.

ARTICLE XVII.

The stipulations of the present Treaty shall be applicable to the Colonies and foreign possessions of Her Britannic Majesty, so far as the laws for the time being in force in such Colonies and foreign possessions respectively will allow.

The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions may be made to the Governor or chief authority of such Colony or possession by any person authorized to act in such Colony or possession as a Consular officer of Liberia, or if there is no such Consular officer in the Colony, by the Diplomatic Representative of Liberia in London, or in his absence by the Liberian Consul-General.

Such requisitions may be disposed of subject always, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, to the provisions of this Treaty, by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender, or to refer the matter to his Government.

Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of criminals from Liberia who may take refuge within such Colonies and foreign possessions, on the basis, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, of the provisions of the present Treaty.

Requisitions for the surrender of a fugitive criminal emanating from any Colony or foreign possession of Her Britannic Majesty shall be governed by the rules laid down in the preceding Articles of the present Treaty.

ARTICLE XVIII.

The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties at any time on giving to the other six months' notice of its intention to do so.

The Treaty shall be ratified, and the ratifications shall be exchanged at London as soon as possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at London, the sixteenth day of December, one thousand eight hundred and ninety-two.

(L.S.) ROSEBERY.
(L.S.) H. HAYMAN.

And whereas the ratifications of the said Treaty were exchanged at London on the thirty-first day of January, one thousand eight hundred and ninety-four.

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered, that from and after the twenty-third day of March, one thousand eight hundred and ninety-four, the said Acts shall apply in the case of Liberia, and of the said Treaty with the Republic of Liberia.

Provided always, and it is hereby further ordered, that the operation of the said Extradition Acts, 1870 and 1873, shall be suspended within the Dominion of Canada so far as relates to Liberia and to the said Treaty and so long as the provisions of the Canadian Act aforesaid of 1886 continue in force, and no longer.

C. L. FEEL.

1894.

(SECOND SESSION.)

 NEW SOUTH WALES.

EXTRADITION TREATY WITH ROUMANIA.
 (DESPATCH RESPECTING.)

 Presented to Parliament by Command.

Department of Justice,

Sydney, 2nd August, 1894.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated 21st May, 1894, from the Secretary of State for the Colonies.

T. M. SLATTERY.

[Circular.]

Downing-street,

21st May, 1894.

Sir,

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty the Queen in Council, dated the 30th April, 1894 [The London Gazette, 11th May, 1894, Extract], for giving effect to the Treaty between Her Majesty and His Majesty the King of Roumania, for the mutual extradition of Fugitive Criminals, signed at Bucharest on the 21st of March, 1893, the ratifications of which were exchanged at Bucharest on the 13th of March, 1894.

I have, &c.,

RIPON.

The Officer Administering

the Government of New South Wales.

ORDER IN COUNCIL.

EXTRADITION TREATY WITH ROUMANIA.

Windsor, 30th April, 1894.

At the Court at Windsor, the 30th day of April, 1894.

Present :

THE QUEEN'S MOST EXCELLENT MAJESTY.

LORD PRESIDENT.
LORD STEWART.
EARL OF CHESTERFIELD.

LORD CHAMBERLAIN.
SIR CHARLES RUSSELL.
SIR FRANK LASCELLES.

WHEREAS by the Extradition Acts, 1870 and 1873, it was amongst other things enacted that where an arrangement has been made with any foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such possession the surrender of fugitive criminals who are in or suspected of being in such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any foreign State, or by any subsequent Order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such foreign State, and so long as such Law continues in force there and no longer :

And whereas by an Act of the Parliament of Canada passed in 1886, and entitled "An Act respecting the Extradition of Fugitive Criminals," provision is made for carrying into effect within the Dominion the surrender of fugitive criminals :

And whereas by an Order of Her Majesty the Queen in Council, dated the seventeenth day of November, one thousand eight hundred and eighty-eight, it was directed that the operation of the Extradition Acts, 1870 and 1873, should be suspended within the Dominion of Canada so long as the provisions of the said Act of the Parliament of Canada of 1886 should continue in force and no longer :

And whereas a treaty was concluded on the twenty-first day of March, one thousand eight hundred and ninety-three, between Her Majesty and His Majesty the King of Roumania for the mutual extradition of fugitive criminals, which Treaty is in the terms following :—

"HER Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and His Majesty the King of Roumania, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within their respective territories, that persons charged with or convicted of the crimes hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up; the said High Contracting Parties have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say :

"Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Honourable Charles Hardinge, Her Britannic Majesty's Chargé d'Affaires at Bucharest, &c., &c.

"And His Majesty the King of Roumania, M. Alexandre N. Lahovari, Grand Cross of His Order of the Crown of Roumania, &c., &c., His Minister-Secretary of State for Foreign Affairs;

"Who, having communicated to each other their respective Full Powers, found in good and due form, have agreed upon and concluded the following Articles :—

"ARTICLE I.

"The High Contracting Parties engage to deliver up to each other those persons who, being accused or convicted of a crime or offence committed in the territory of the one Party, shall be found within the territory of the other Party, under the circumstances and conditions stated in the present Treaty.

"ARTICLE II.

"The crimes or offences for which the extradition is to be granted are the following :—

- "1. Murder, or attempt, or conspiracy to murder.
- "2. Manslaughter.
- "3. Assault occasioning actual bodily harm. Maliciously wounding or inflicting grievous bodily harm.
- "4. Counterfeiting or altering money, or uttering counterfeit or altered money.
- "5. Knowingly making any instrument, tool, or engine adapted and intended for counterfeiting coin.
- "6. Forgery, counterfeiting, or altering or uttering what is forged, or counterfeited, or altered.
- "7. Embezzlement or larceny.
- "8. Malicious injury to property, by explosives or otherwise, if the offence be indictable.
- "9. Obtaining money, goods, or valuable securities by false pretences.
- "10. Receiving money, valuable security, or other property knowing the same to have been stolen, embezzled, or unlawfully obtained.
- "11. Crimes against bankruptcy law.

"MAIESTATEA Sa Regina Regatului-Unit al Marei Britanii și Irlandei, Impărătesă a Indiilor, și Maiestatea sa Regele Romaniei găsind cu cale, in vederea unei mai bune administrații a justiției și pentru a preîntâmpina crimele comise pe teritoriile lor respective, ca indiviții piriți sau dovediti că au comis crimele mai la vale enumerate, și cari prin fugă s'ar fi sustras de la urmărirea justiției, să fie, în ore-cară circumstanțe, estradați în mod reciproc; dișele Inalte Părți Contractante au numit ca Plenipotentiari ai Lor, în scopul de a încheia un Tractat, și anume :

"Maiestatea Sa Regina Regatului-Unit al Marei Britanii și Irlandei, Impărătesă a Indiilor, pe Onorabilul Carol Hardinge, Insărcinat cu Afaceri al Maiestaței Sale Britanice la Bucuresci, &c., &c.

"Si Maiestatea Sa Regele Romaniei, pe Domnul Alexandru N. Lahovari, Mare-Cruce al Ordinului Său al Coronei României, &c., &c., Ministrul Său Secretar de Stat la Departament ul Afacerilor Străine;

"Cari, dupe ce și-au comunicat deplinele lor puteri, aflate în bună și convenită formă s'au învoit asupra Articolelor următoare :—

"ARTICOLUL I.

"Inaltele Părți Contractante se obligă a și preda reciproc indiviții cari, urmăriți sau condamnați pentru o crimă sau un delict comis pe teritoriul uneia din Părți, ar fi dovediti pe teritoriul celei-alte in circumstanțele și sub-condițiile prevădute de Tractatul de față.

"ARTICOLUL II.

"Estradarea se va acorda pentru crimele sau delictele, următoare :—

- "1. Omor sau tentativă de omor, sau complot având de scop această crimă.
- "2. Omucidere fără precugetare sau pândire.
- "3. Loviri și răniri grave.
- "4. Contrafacere sau alterare de monede; punerea in circulație a monedelor false sau alterate.
- "5. Fabricarea cu intenție a unui instrument, ustensil, sau uneltă destinată la contrafacerea monedelor țerei.
- "6. Falsuri în scripte, titluri, efecte sau valori; alterarea sau punerea în circulare a tot ce este ast-fel falsificat ori contra-făcut ori alterat.
- "7. Sustragerea frauduloasă sau furtul.
- "8. Distrugerea ori degradarea ori-cărei proprietăți prin explozive sau alt-fel, când faptul este incriminat și pedepsit cu pedepse criminale sau corecționale.
- "9. Escrocherie de bani valori sau alte obiecte sub false pretexte.
- "10. Tănuire frauduloasă de bani, valori sau alte obiecte, provenind din escrocherie, furt sau deturnare.
- "11. Crime contra legilor asupra bancrutei.

"12. Fraud by a bailee, banker, agent, factor, trustee, or director, or member or public officer of any Company, made criminal by any law for the time being in force.

"13. Perjury, or subornation of perjury.

"14. Rape.

"15. Carnal knowledge, or any attempt to have carnal knowledge, of a girl under fourteen years of age.

"16. Indecent assault.

"17. Procuring miscarriage, administering drugs or using instruments with intent to procure the miscarriage of a woman.

"18. Abduction.

"19. Child stealing.

"20. Abandoning children, exposing or unlawfully detaining them.

"21. Kidnapping and false imprisonment.

"22. Burglary or housebreaking.

"23. Arson.

"24. Robbery with violence.

"25. Any malicious act done with intent to endanger the safety of any person in a railway train.

"26. Threats by letter or otherwise with intent to extort.

"27. Piracy by law of nations.

"28. Sinking or destroying a vessel at sea, or attempting or conspiring to do so.

"29. Assaults on board a ship on the high seas, with intent to destroy life, or do grievous bodily harm.

"30. Revolt or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master.

"31. Dealing in slaves.

"Extradition is also to be granted for participation in any of the aforesaid crimes, provided such participation be punishable by the laws of both the Contracting Parties.

"ARTICLE III.

"Either Government may, in its absolute discretion, refuse to deliver up its own subjects to the other Government.

"ARTICLE IV.

"The extradition shall not take place if the person claimed has already been tried and discharged or punished, or is still under trial, within the territories of the two High Contracting Parties respectively, for the crime for which his extradition is demanded.

"If the person claimed should be under examination, or is undergoing sentence under a conviction, for any other crime within the territories of the two High Contracting Parties respectively, his extradition shall be deferred until after he has been discharged, whether by acquittal or on expiration of his sentence, or otherwise.

"ARTICLE V.

"The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution, or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applied to.

"ARTICLE VI.

"A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has in fact been made with a view to try or punish him for an offence of a political character.

"ARTICLE VII.

"A person surrendered can in no case be kept in prison, or be brought to trial in the State to which the surrender has been made, for any other crime or on account of any other matters than those for which the extradition shall have taken place, until he has been restored or had an opportunity of returning to the State by which he has been surrendered.

"This stipulation does not apply to crimes committed after the extradition.

"ARTICLE VIII.

"The requisition for extradition shall be made through the Diplomatic Agents of the High Contracting Parties respectively.

"The requisition for the extradition of the accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

"If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

"12. Frauda (abus de încredere) unui administrator bancher, agent, comisionar, curator sau director, ori membru ori funcționar al unei societăți ôrecare, dacă faptul este pedepsit de legile în vîgóre.

"13. Mărturia mincinosă sau subornațiunea martorilor.

"14. Violul.

"15. Atentat la pudóre asupra persoanei unei fete mai mică de 14 ani, sau tentativa acestui fapt.

"16. Atentat la pudóre cu violență.

"17. Avort, administrare de substanțe sau întrebuițare de instrumente în intențiunea de a provoca avortul.

"18. Răpire de minori.

"19. Furt de copii.

"20. Abandonare, expozițiune sau sechestrare ilegală de copii.

"21. Sechestrare sau detențiune ilegală.

"22. Efracțiunea sau escalada unei locuințe și a dependențelor sale în scopul de a comite un delict.

"23. Incendiü.

"24. Furt cu violență.

"25. Ori-ce act comis cu intenție de a pune în pericol viața persoanelor aflate într'un tren de drum de fier.

"26. Amenințări, scrise sau alt-fel, făcute în scop de extorsiune.

"27. Piraterie, considerată ca crimă dupe dreptul ginților.

"28. Inecarea, naufragiarea sau distrugerea unui vas pe mare, sau tentativa sau complotul avënd această crimă de scop.

"29. Atacarea pe bordul unui vas în largul mării, în scop de omucidere sau pentru a faptui grave lesiuni corporale.

"30. Revolta sau complotul de revoltă, a două sau mai multe persoane pe bordul unui vas în largul mării, contra autorității capitanului.

"31. Negotul cu sclaviü.

"Estradarea va avea de asemenea loc pentru complicitate la una din crimele mai sus pomenite, numai dacă complicitatea este pedepsită de legile celor două Părți Contractante.

"ARTICOLUL III.

"Fie-care din cele două Guverne va avea plină și întregă voia se refuze celui-alt estradarea propriilor săi supuși.

"ARTICOLUL IV.

"Estradarea nu se va acorda dacă individul reclamat a fost deja judecat, achitat sau pedepsit, sau se gasesce încă sub judecată într'unul din teritoriile celor două Inalte Părți Contractante, pentru chiar crima din cauza căreia se cere estradarea.

"Dacă persoana reclamată se află în prevenție, sau dacă, fiind condamnată, și suferă pedepsa pe teritoriul uneia din cele două Părți Contractante pentru o altă crimă, estradarea se va amâna până la punerea acelei persoane în libertate, fie că va fi fost achitată, fie că și va fi terminat pedepsa, fie pentru ori-ce alt cuvânt.

"ARTICOLUL V.

"Estradarea nu va avea loc dacă, dupe perpetrarea crimei, sau dupe urmăriri, sau condamnare, prescripția urmăririlor sau a pedepsei este dobândită dupe legile țerei căreia se adresază cererea.

"ARTICOLUL VI.

"Criminalul fugar nu va fi estradat dacă delictul pentru care estradarea se cere este considerat ca un delict politic, sau dacă individul dovedește că cererea de estradare a fost făcută, în realitate, în scopul de a l urmări sau de a l pedepsi pentru un delict cu caracter politic.

"ARTICOLUL VII.

"Individul care va fi fost predat, nu va putea, în nici într'un cas, în țera căreia s'a acordat estradiția, să fie ținut în arest sau să fie urmărit pentru vre-c crimă sau fapte altele de cât acelea cari motivase estradarea, afară numa dacă a fost întors, sau dacă va fi avut acasiunea de a se reîntórse el însuși în Statul care l estradase.

"Acastă stipulațiune nu este aplicabilă crimelor comise dupe estradare.

"ARTICOLUL VIII.

"Estradarea se va cere prin organul agentilor diplomatici respectiv ai celor două Inalte Părți Contractante.

"Cererea de estradare a unui prevenit va trebui să fie însoțită de un mandat de arestare emis de autoritatea competentă a Statului care cere, și de dovedile cari, dupe legile loculu unde prevenitul a fost dovedit, ar justifica arestare lul, dacă actul pedepsit ar fi fost comes chiar acolo.

"Dacă cererea de estradare privesce pe o persoană deja condamnată, ea trebuie să fie însoțită de sentința de condamnare care o fost dată contra culpabilului, de Tribunalul competent al Statului care cere.

" A sentence passed in contumaciam is not to be deemed a conviction, but a person so sentenced may be dealt with as an accused person.

" ARTICLE IX.

" If the requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

" ARTICLE X.

" If the fugitive has been arrested in the British dominions, he shall forthwith be brought before a competent Magistrate, who is to examine him and to conduct the preliminary investigation of the case, just as if the apprehension had taken place for a crime committed in the British dominions.

" In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the British dominions shall admit as valid evidence the sworn depositions or the affirmations of witnesses taken in Roumania, or copies thereof, and likewise the warrants and sentences issued therein, and certificates of, or judicial documents stating the fact of, a conviction, provided the same are authenticated as follows :—

" 1. A warrant must purport to be signed by a Judge, Magistrate, or Judicial Officer of Police of Roumania.

" 2. Depositions or affirmations, or the copies thereof, must purport to be certified under the hand of a Judge, Magistrate, or Judicial Officer of Police of Roumania, to be the original depositions or affirmations, or to be the true copies thereof, as the case may require.

" 3. A certificate of or judicial document stating the fact of a conviction must purport to be certified by a Judge, Magistrate, or Judicial Officer of Police of Roumania.

" 4. In every case such warrant, deposition, affirmation, copy, certificate, or judicial document must be authenticated either by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or of Foreign Affairs of Roumania ; but any other mode of authentication for the time being permitted by the law in that part of the British dominions where the examination is taken, may be substituted for the foregoing.

" ARTICLE XI.

" On the part of the Roumanian Government, the extradition shall take place as follows in Roumania :

" The Minister or other Diplomatic Agent of Her Britannic Majesty in Roumania, shall send to the Minister for Foreign Affairs, in support of each demand for extradition, an authentic and duly legalised copy either of a certificate of condemnation, or of a warrant of arrest against an incriminated or accused person, showing clearly the nature of the crime or offence on account of which proceedings are being taken against the fugitive. The judicial document so produced shall be accompanied by a description and other particulars serving to establish the identity of the person whose extradition is claimed.

" In case the documents produced by the British Government to establish the identity, and the particulars gathered by the Roumanian police authorities for the same purpose, should be deemed to be insufficient, notice thereof shall forthwith be given to the Minister or other Diplomatic Agent of Her Britannic Majesty in Roumania, and the individual whose extradition is desired, if he has been arrested, shall remain in detention until the British Government has produced new elements of proof to establish his identity, or to clear up any other difficulties arising in the examination.

" ARTICLE XII.

" The extradition shall not take place unless the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime had been committed in the territory of the said State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and that the crime of which he has been convicted is one in respect of which extradition could, at the time of such conviction, have been granted by the State applied to. In Her Britannic Majesty's dominions the fugitive criminal shall not be surrendered until the expiration of fifteen days from the date of his being committed to prison to await his surrender.

" ARTICLE XIII.

" If the individual claimed by one of the two High Contracting Parties in pursuance of the present Treaty should be also claimed by one or several other Powers, on account of other crimes or offences committed upon their respective territories, his extradition shall be granted to that State whose demand is earliest in date.

" O sentință dată în lipsă nu va fi considerată ca o condamnare ; dar o persoană ast-fel condamnat va putea fi tratată ca o persoană urmărită.

" ARTICOLUL IX.

" Dacă cererea de estradare este făcută în conformitate cu stipulațiunile precedente, autoritățile competente ale Statului de la care se cere vor proceda la arestarea fugarului.

" ARTICOLUL X.

" Dacă fugarul este arestat pe teritoriul Britanic, el va fi îndată dus înaintea unui Magistrat competent, care va trebui să-l asculte și să procedă la examinarea preliminară a afacerii în același chip, ca și când arestarea ar fi avut loc pentru o crimă comisă pe teritoriul Britanic.

" Autoritățile Marelui Britanii, când vor proceda la examinarea hotărâtă prin stipulațiunile precedente, vor trebui să admită ca dovezi deplin valabile deponițiunile asermentate sau afirmările făcute în România, sau copiile acestor piese, precum și mandatele de arestare și sentințele date în această țară, precum și certificatele de condamnare sau piesele judiciare constatând faptul unei condamnări, cu condițiune ca aceste documente să fi fost autentificate în modul următor :—

" 1. Un mandat trebuie să fie semnat de un judecător, Magistrat sau ofițer al poliției judiciare din România.

" 2. Depozițiunile sau afirmațiunile, sau copiile acestora trebuie să fie semnate de un judecător, Magistrat sau ofițer al poliției judiciare România, constatând că aceste depuneri sau afirmări sunt în original sau în copie certificată, dupe casuri.

" 3. Un cirtificat de condamnare sau un document judiciar constatând faptul unei condamnări trebuie să fie certificate de un judecător, Magistrat sau ofițer al poliției judiciare din România.

" 4. Aceste mandate, depuneri, afirmări, copii, certificate sau documente judiciare, trebuie să fie autentificate, în fie-care cas, sau prin jurământul unui martor, sau prin punerea sigilului oficial al Ministerului Justiției sau al afacerilor străine al României ; totuși piesele mai sus pomenite vor putea fi autentificate și în orice alt chip care ar fi recunoscut de legile locale în vigoare în acea parte a teritoriului Britanic, unde examinarea afacerii ar avea loc.

" ARTICOLUL XI.

" Din partea Guvernului Român estradarea va avea loc în România precum urmază :

" Ministrul sau orice alt Agent Diplomatic al Măiestății Sale Britanice în România, va trimite Ministrului Afacerilor Străine, ca basă a fie-cărei cereri de estradare, expedițiunea autentică și în regulă legalisată, sau a unui certificat de condamnare sau a unui mandat de arestare, contra persoanei inculpate sau acuzate, arătând limpede natura crimei sau delicțului din cauza căruia fugarul este urmărit. Documentul judiciar, astfel produs, va fi însoțit de semnalmente și de alte informațiuni putând se servi-se la constatarea identității individului reclamat.

" Dacă s'ar întâmpla ca documentele produse de Guvernul Britanic pentru a constata identitatea, și informațiunile culese de agenții poliției Românesce pentru același scop, să fie recunoscute neîndestulătoare, se va avisa despre acesta îndată Ministrul sau Agentul Diplomatic al Măiestății Sale Britanice în România ; iar individul urmărit, dacă a fost arestat, va continua să fie deținut până ce Guvernul Britanic va putea produce noi elemente de dovezi spre a constata identitatea sau a da lumină asupra altor greutăți de examinare.

" ARTICOLUL XII.

" Estradarea nu va avea loc de cât în cazul când dovezile produse vor fi fost găsite îndestulătoare dupe legile Statului de la care se cere, fie pentru a îndreptăți darea în judecată a deținutului, în cazul când crima va fi fost comisă pe teritoriul Țării Stat, fie pentru a constata identitatea deținutului cu individul condamnat de Tribunalele Statului care cere, și să dovedească că crima de care a fost recunoscut culpabil ar fi putut să dea loc la estradare din partea Statului de la care se cere, la epoca condamnării sale. Estradarea fugarului nu va avea loc în teritoriile Măiestății Sale Britanice, de cât dupe trecerea unui timp de cinci-spre-șapte zile de la data întemnițării în scopul estradării.

" ARTICOLUL XIII.

" Dacă individul reclamat de una din cele două Inalte Parți Contractante, în executarea Tratatului de față, mai este reclamat de una sau mai multe alte Puteri, pe motivul unor alte crime sau delict comise pe teritoriile lor respective, estradarea se va acorda Statului a cărui cerere poartă o dată mai veche.

"ARTICLE XIV.

"If sufficient evidence for the extradition be not produced with two months from the date of the apprehension of the fugitive, or within such further time as the State applied to, or the proper Tribunal thereof shall direct, the fugitive shall be set at liberty.

"ARTICLE XV.

"All articles seized which were in the possession of the person to be surrendered, at the time of his apprehension, shall, if the competent authority of the State applied to for the extradition has ordered the delivery thereof, be given up when the extradition takes place, and the said delivery shall extend not merely to the stolen articles, but to everything that may serve as a proof of the crime.

"ARTICLE XVI.

"All expenses connected with extradition shall be borne by the demanding State.

"ARTICLE XVII.

"The stipulations of the present Treaty shall be applicable to the Colonies and foreign possessions of Her Britannic Majesty, so far as the laws for the time being in force in such Colonies and foreign possessions respectively will allow.

"The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions may be made to the Governor or chief authority of such Colony or possession by any person authorized to act in such Colony or possession as a Consular officer of Roumania.

"Such requisitions may be disposed of, subject always as nearly as may be, and so far as the law of such Colony or foreign possessions will allow, to the provisions of this Treaty, by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender or to refer the matter to his Government.

"Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of criminals from Roumania who may take refuge within such Colonies and foreign possessions, on the basis, as nearly as may be, and so far as the law of such Colony or foreign possession will allow, of the provisions of the present Treaty.

"Requisitions for the surrender of a fugitive criminal emanating from any Colony or foreign possession of Her Britannic Majesty shall be governed by the rules laid down in the preceding Articles of the present Treaty.

"ARTICLE XVIII.

"The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties at any time on giving to the other six months' notice of its intention to do so.

"The Treaty shall be ratified, and the ratifications shall be exchanged at Bucharest as soon as possible.

"In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

"Done in duplicate at Bucharest, the twenty-first (ninth) day of March, in the year of our Lord one thousand eight hundred and ninety-three.

"(L.S.) CHARLES HARDINGE."

And whereas a Protocol relative to the aforesaid Treaty was signed at Bucharest on the twenty-first day of March one thousand eight hundred and ninety-three, which Protocol is in the terms following:—

"At the moment of proceeding to the signature of the Treaty of Extradition concluded this day, the undersigned Plenipotentiaries of Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and of His Majesty the King of Roumania, have agreed upon the following declaration:—

"The Roumanian Government may in its absolute discretion refuse to deliver up any person charged with a crime punishable with death.

"This Protocol shall have the same force and the same duration as the Treaty of Extradition signed to-day.

"In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

"Done in duplicate at Bucharest, the 21st (9th) March, 1893.

"(L.S.) CHARLES HARDINGE."

And whereas a Protocol explanatory of Section twenty-one of Article II of the aforesaid Treaty was signed at Bucharest on the thirteenth day of March one thousand eight hundred and

"In order to avoid the possibility of any misunderstanding arising from the present text of § 21 of Article II of the Treaty of Extradition concluded between Great Britain and Roumania on the 21st (9th) of March, 1893, the undersigned Plenipotentiaries, duly authorized thereto by their respective Governments, have agreed as follows:—

"ARTICOLUL XIV.

"Fugarul va fi pus în libertate dacă nu se vor putea produce dovezi îndestulătoare pentru a motiva cererea de estradare în timp de două luni din ziua arestării sale până la ori-ce alt termen mai depărtat ce va fi fost arătat de Statul de la care se cere să de Tribunalul competent al acestui Stat.

"ARTICOLUL XV.

"Obiectele găsite asupra individului reclamat în momentul arestării sale, dacă autoritatea competentă a Statului de la care se cere a ordonat remiterea lor vor fi predate atunci când estradarea va avea loc; această predate nu va cuprinde numai obiectele furate, dar și ori-ce alt ar putea servi ca piesă de convingere.

"ARTICOLUL XVI.

"Tote cheltuelile ocazionale de o cerere de estradare vor fi în sarcina Statului care cere.

"ARTICOLUL XVII.

"Stipulațiunile Tratatului de față vor fi aplicabile coloniilor și posesiunilor străine ale Majestății Sale Britanice pe cât se va putea dupe legile în vigoare în aceste colonii și posesiuni străine.

"Cererea de estradare a unui criminal care s'a refugiat în vreuna din aceste colonii sau posesiuni străine se va putea adresa Guvernatorului sau autorității superioare a acestei Colonii sau posesiune de către ori-ce persoană autorizată să funcționeze în această Colonie sau posesiune ca autoritate Consulară a României.

"Guvernatorul sau autoritatea superioară mai sus menționată va decide în privința unor asemenea cereri, conformându-se, cât se va putea, dupe legile acestor colonii sau posesiuni străine, cu stipulațiunile Tratatului de față. Va avea totuși libertatea de a acorda estradarea sa de a supune cazul Guvernului său.

"Se rezervă totuși Majestății Sale Britanice, conformându-se, pe cât se va putea, dupe legile acestor Colonii sau posesiuni străine, cu stipulațiunile Tratatului de față, de a face arangamente speciale în Coloniile sau posesiunile străine pentru estradarea criminalilor din România cari ar fi găsit refugiu în aceste Colonii sau posesiuni străine.

"Cererile privitoare la estradarea criminalilor fugiți dintr'una din aceste Colonii sau posesiuni străine ale Majestății Sale Britanice, vor fi tratate dupe dispozițiunile Articolelor precedente ale Tratatului de față.

"ARTICOLUL XVIII.

"Convenția de față va fi executorie dupe a ceea ce și de la promulgarea sa, în formele prescise de legile celor două țări. Fie-care din Inatelele Părți Contractante va putea ori și când să pună capăt acestui tractat, avizând pe cea-alta despre intențiunea sa cu șese luni înainte.

"Convenția de față se va ratifica și ratificările se vor schimba la București cât se va putea mai curând.

"Drept care, Plenipotențiarilor respectivi au semnat această Convențiune și au pus pe dânsa sigiliile armelor lor.

"Făcută în dublu original, la București, în a două-zeci și una (nou'a) zi a lui Martie, anul Mântuirii una miă opt-sute nou-zeci și trei.

"(L.S.) AL. LAHOVARI."

"In momentul de a proceda la semnătura Convenției de estradiție încheiată astăzi și subsemnații, Plenipotențiarilor ai Majestății Sale Reginei Regatului Unit al Marelui Britaniei și Irlandei, Impărătesă a Indiei, și ai Majestății Sale Regelui României au convenit asupra declarațiunei următoare:—

"Guvernul Român are absolută libertate d'a refuza estradarea ori cărei persoane acuzată de o crimă pedepsită cu mörte.

"Protocolul de față va avea aceeași forță și aceeași durată ca și Convenția de estradare semnată astăzi.

"Spre credința căroră, Plenipotențiarilor respectivi l-au semnat și l-au întărit cu sigilele lor.

"Făcut în dublu original, la București, în 21 (9) Martie, 1893.

"(L.S.) AL. LAHOVARI."

of Article II of the aforesaid Treaty was signed at Bucharest on the thirteenth day of March one thousand eight hundred and

"Pentru a evita ori-ce nînțelegere ce ar putea resulta din redacția actuală a § 21 de sub Articolul II al Convenției de Extradare încheiată între Marea Britaniă și România la 21 (9) Martie, 1893, subsemnații Plenipotențiarilor autorizați în regulă pentru acesta de către Guvernele lor respective au convenit asupra celor ce urmază:—

"The fact of having kidnapped or falsely imprisoned one or more persons will not admit of a requisition for extradition being made unless the act shall have been committed by private individuals. No such requisition can be made as against public functionaries who may have been guilty of the act in question while in the performance of their duties.

"The present Protocol shall be considered as approved and sanctioned by the respective Governments without any special ratification, by the sole fact of the exchange of the ratifications of the Treaty to which it refers.

"Done in duplicate at Bucharest, the thirteenth (first) day of March, in the year of our Lord one thousand eight hundred and ninety-four.

"(L.S.) JOHN WALSHAM."

And whereas the ratifications of the said Treaty and Protocol of the twenty-first day of March, one thousand eight hundred and ninety-three were exchanged at Bucharest on the thirteenth day of March, one thousand eight hundred and ninety-four.

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered, that from and after the twenty-first day of May, one thousand eight hundred and ninety-four, the said Acts shall apply in the case of Roumania, and of the said Treaty and Protocol of the twenty-first of March, one thousand eight hundred and ninety-three, and of the Protocol of the thirteenth of March, one thousand eight hundred and ninety-four, with the King of Roumania.

Provided always, and it is hereby further ordered, that the operation of the said Extradition Acts, 1870 and 1873, shall be suspended within the Dominion of Canada so far as relates to Roumania and to the said Treaty and Protocols, and so long as the provisions of the Canadian Act aforesaid of 1886 continue in force, and no longer.

C. L. PEEL.

"Faptul de a fi sechestrat sau deţinut în mod ilegal una sau mai multe persoane, nu va putea motiva cererea de extradare decât când el a fost săvârşit de către particulari. O asemenea cerere de extradare nu va putea fi făcută cu privire la funcţionarii publici cari s'ar fi făcut vinovaţi de faptul în chestiune în exerciţiul funcţiunilor lor.

"Protocolul de faţă se va considera ca aprobat şi sancţionat de către Guvernele respective prin faptul însuşi al schimbului ratificărilor convenţiunei la care se raportează, fără vre o altă ratificare specială.

"Făcut în dublu exemplar la Bucureşti, în treispre decea (ântâia) zi a lui Martie, anul Mântuirii una miiă opt-sute nouăzeci şi patru.

"(L.S.) AL. LAHOVARI."

(Extract from the London Gazette of Friday, 11th May, 1894.)

1894-5.

NEW SOUTH WALES.

ESTABLISHMENT OF PRIZE COURTS IN JAPAN.
(DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,
Sydney, 22nd January, 1895.

His Excellency the Governor directs the publication, for general information, of the following Despatch, dated 31st October, 1894, from the Principal Secretary of State for the Colonies.

ALBERT J. GOULD.

Downing-street,
31st October, 1894.

Sir,

I have the honour to transmit to you, for the information of your Government, a copy of a Despatch which has been addressed to the Secretary of State for Foreign Affairs by Her Majesty's Minister at Tôkiô, respecting the establishment of Prize Courts in Japan.

I have, &c.,
RIPON.The Officer Administering
the Government of New South Wales.

(No. 108.)

Mr. Trench to the Earl of Kimberley.

Tôkiô,
5th September, 1894.

My Lord,

With reference to my Despatch No. 99 of the 25th August last, informing your Lordship of the establishment of Prize Courts to adjudicate on prize cases arising in the present hostilities between China and Japan, I now have the honour to inform your Lordship that, by an Imperial Decree promul-

gated in the official Gazette of the 3rd instant, a Prize Court has been established at the Admiralty Port of Sasebo and a Higher Prize Court at Tôkiô.

Sasebo is situated to the north-east of Nagasaki, on the Gulf of Shimabara, in the province of Hizen, and is the most accessible of the Japanese Admiralty ports for ships coming from China and Corea.

The appointments of the various members composing these Courts were also gazetted in yesterday's official Gazette.

Viscount Kawase Matako, a Privy Councillor, and formerly Japanese Minister in England, has been appointed President of the Higher Court, which comprises ten other members, namely, eight Councillors and two Procurators.

The Prize Court at Sasebo is presided over by the President of the Nagasaki Court of Appeal, Judge Shitomi Tsune, and is formed of eight other members, namely, six Councillors and two Procurators.

I have, &c.,
(Signed) P. LE POER TRENCH.

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TREATY OF COMMERCE AND NAVIGATION BETWEEN GREAT BRITAIN AND JAPAN.

(DESPATCH RESPECTING, AND COVERING SAME.)

Ordered by the Legislative Assembly to be printed, 15 May, 1895.

[Laid upon the Table of this House in answer to Question No. 13 of 8th May, 1895.]

Question.

13. IMMIGRATION OF JAPANESE:—MR. WILLIS *asked* THE COLONIAL TREASURER,—

(1.) In view of the warlike events in the East, and the great success attained by the Japanese nation, will the Government consider the advisability of immediately introducing legislation to prevent Japanese immigration into New South Wales similar to that passed into law against the influx of Chinese?

(2.) Have the Government received from the Imperial authorities any official communication respecting the commercial treaty recently entered into between Great Britain and Japan?

(3.) If so, will he cause a copy of the same, together with such communication and correspondence relating thereto, to be laid upon the Table of the House?

Answer.

(Circular.)

Sir,

Downing-street, 31 December, 1894.

I have the honor to transmit to you, for publication in the Colony under your Government, a copy of a Treaty of Commerce and Navigation between Great Britain and Japan, signed at London, on the 16th July, 1894, the ratifications of which were exchanged at Tôkiô on the 25th of August last.

I have to call your attention to Article XIX of the treaty, from which you will observe that, if it is desired that the Colony under your Government should come within the operation of the treaty, notice to that effect must be given to the Japanese Government within two years from 25th of August, 1894, the date of the exchange of ratifications of the treaty.

I have, therefore, to request that you will be good enough to acquaint me of the wishes of your Government in the matter.

I have, &c.,
RIPON.

The Officer Administering the Government of

Treaty Series. No. 23, 1894.

TREATY of COMMERCE and NAVIGATION between GREAT BRITAIN and JAPAN.—Signed at LONDON, 16th July, 1894.—[*Ratifications exchanged at Tôkiô, 25th August, 1894.*]

HER Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, and His Majesty the Emperor of Japan, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say:

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Empress of India, the Right Honourable John, Earl of Kimberley, Knight of the Most Noble Order of the Garter, &c., &c., Her Britannic Majesty's Secretary of State for Foreign Affairs;

And His Majesty the Emperor of Japan, Viscount Aoki Siuzo, Junii, first class of the Imperial Order of the Sacred Treasure, His Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of St. James';

Who, after having communicated to each other their Full Powers, found to be in good and due form, have agreed upon and concluded the following Articles:—

ARTICLE I.

The subjects of each of the two high contracting parties shall have full liberty to enter, travel, or reside in any part of the dominions and possessions of the other contracting party, and shall enjoy full and perfect protection for their persons and property. They

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort in any manner whatsoever which they may lawfully acquire, the subjects of each contracting party shall enjoy in the dominions and possessions of the other the same privileges, liberties, and rights, and shall be subject to no higher imposts or charges in these respects than native subjects, or subjects or citizens of the most favoured nation. The subjects of each of the contracting parties shall enjoy in the dominions and possessions of the other entire liberty of conscience, and subject to the laws, ordinances, and regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be, paid by native subjects, or subjects or citizens of the most favoured nation.

ARTICLE II.

The subjects of either of the contracting parties residing in the dominions and possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, national guard, or militia; from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

ARTICLE III.

There shall be reciprocal freedom of commerce and navigation between the dominions and possessions of the two high contracting parties.

The subjects of each of the high contracting parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandise of lawful commerce, either in person or by agents, singly, or in partnerships with foreigners or native subjects; and they may there own or hire and occupy the houses, manufactories, warehouses, shops, and premises which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the laws, police and customs regulations of the country like native subjects.

They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the dominions and possessions of the other which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, other or greater than those paid by native subjects, or subjects or citizens of the most favoured nation, subject always to the laws, ordinances, and regulations of each country.

ARTICLE IV.

The dwellings, manufactories, warehouses, and shops of the subjects of each of the high contracting parties in the dominions and possessions of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to, such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances, and regulations for subjects of the country.

ARTICLE V.

No other or higher duties shall be imposed on the importation into the dominions and possessions of Her Britannic Majesty of any article, the produce or manufacture of the dominions and possessions of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of Japan of any article, the produce or manufacture of the dominions and possessions of Her Britannic Majesty, from whatever place arriving, than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the dominions and possessions of either of the high contracting parties, into the dominions and possessions of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

ARTICLE VI.

No other or higher duties or charges shall be imposed in the dominions and possessions of either of the high contracting parties on the exportation of any article to the dominions and possessions of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two contracting parties to the dominions and possessions of the other which shall not equally extend to the exportation of the like article to any other country.

ARTICLE VII.

The subjects of each of the high contracting parties shall enjoy in the dominions and possessions of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities, and drawbacks.

ARTICLE

ARTICLE VIII.

All articles which are or may be legally imported into the ports of the dominions and possessions of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in British vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and reciprocally, all articles which are or may be legally imported into the ports of the dominions and possessions of Her Britannic Majesty in British vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in British vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid and the same bounties and drawbacks allowed in the dominions and possessions of either of the high contracting parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in British vessels, and whatever may be the place of destination, whether a port of either of the contracting parties or of any third power.

ARTICLE IX.

No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of the dominions and possessions of either country upon the vessels of the other country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

ARTICLE X.

In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the dominions and possessions of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the high contracting parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

ARTICLE XI.

The coasting trade of both the high contracting parties is excepted from the provisions of the present treaty, and shall be regulated according to the laws, ordinances, and regulations of Japan and of Great Britain respectively. It is, however, understood that Japanese subjects in the dominions and possessions of Her Britannic Majesty, and British subjects in the dominions and possessions of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are or may be granted under such laws, ordinances, and regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of Her Britannic Majesty, and a British vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and custom-house regulations of the two countries.

The Japanese Government, however, agrees to allow British vessels to continue, as heretofore, for the period of the duration of the present treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata, and Ebisu-minato.

ARTICLE XII.

Any ship of war or merchant vessel of either of the high contracting parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship of war or merchant vessel of one of the contracting parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the district of the occurrence; or if there be no such Consular officer, they shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of Her Britannic Majesty shall take place in accordance with the laws, ordinances, and regulations of Great Britain, and reciprocally, all measures of salvage relative to British vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan shall take place in accordance with the laws, ordinances, and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furnitures and appurtenances belonging thereunto, and all goods and merchandise saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls, or Consular Agents upon being claimed by them within the period fixed by the laws of the country; and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When

When a ship or vessel belonging to the subjects of one of the contracting parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorised, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

ARTICLE XIII.

All vessels which, according to Japanese law, are to be deemed Japanese vessels, and all vessels which, according to British law, are to be deemed British vessels, shall, for the purposes of this treaty, be deemed Japanese and British vessels respectively.

ARTICLE XIV.

The Consuls-General, Consuls, Vice-Consuls, and Consular Agents of each of the contracting parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

ARTICLE XV.

The high contracting parties agree that, in all that concerns commerce and navigation, any privilege, favour, or immunity which either contracting party has actually granted, or may hereafter grant, to the Government, ships, subjects, or citizens of any other State, shall be extended immediately and unconditionally to the Government, ships, subjects, or citizens of the other contracting party, it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

ARTICLE XVI.

Each of the high contracting parties may appoint Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents in all the ports, cities, and places of the other, except in those where it may not be convenient to recognise such officers.

This exception, however, shall not be made in regard to one of the contracting parties without being made likewise in regard to every other power.

The Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions, and immunities which are, or may hereafter be, granted to Consular officers of the most favoured nation.

ARTICLE XVII.

The subjects of each of the high contracting parties shall enjoy in the dominions and possessions of the other the same protection as native subjects in regard to patents, trade-marks, and designs, upon fulfilment of the formalities prescribed by law.

ARTICLE XVIII.

Her Britannic Majesty's Government, so far as they are concerned, give their consent to the following arrangement:—

The several foreign settlements in Japan shall be incorporated with the respective Japanese Communes, and shall thenceforth form part of the general municipal system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place the existing leases in perpetuity under which property is now held in the said settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by the Japanese authorities.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

ARTICLE XIX.

The stipulations of the present treaty shall be applicable, so far as the laws permit, to all the colonies and foreign possessions of Her Britannic Majesty, excepting to those hereinafter named, that is to say, except to India, the Dominion of Canada, Newfoundland, The Cape, Natal, New South Wales, Victoria, Queensland, Tasmania, South Australia, Western Australia, New Zealand.

Provided always that the stipulations of the present treaty shall be made applicable to any of the abovenamed colonies or foreign possessions on whose behalf notice to that effect shall have been given to the Japanese Government by Her Britannic Majesty's representative at Tôkiô within two years from the date of the exchange of ratifications of the present treaty.

ARTICLE XX.

The present treaty shall, from the date it comes into force, be substituted in place of the conventions respectively of the 23rd day of the 8th month of the 7th year of Kayei, corresponding to the 14th day of October, 1854, and of the 13th day of the 5th month of the 2nd year of Keiou, corresponding to the 25th day of June, 1866, the treaty of the 18th day of the 7th month of the 5th year of Ansei, corresponding to the 26th day of August, 1858, and all arrangements and agreements subsidiary thereto concluded or existing between the high contracting parties; and from the same date such conventions, treaty, arrangements, and agreements shall cease to be binding, and, in consequence, the jurisdiction then exercised by British Courts in Japan, and all the exceptional privileges, exemptions, and immunities then enjoyed by British subjects as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

ARTICLE

ARTICLE XXI.

The present treaty shall not take effect until at least five years after its signature. It shall come into force one year after His Imperial Japanese Majesty's Government shall have given notice to Her Britannic Majesty's Government of its wish to have the same brought into operation. Such notice may be given at any time after the expiration of four years from the date hereof. The treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either high contracting party shall have the right at any time after eleven years shall have elapsed from the date this treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this treaty shall wholly cease and determine.

ARTICLE XXII.

The present treaty shall be ratified, and the ratifications thereof shall be exchanged at Tôkiô as soon as possible, and not later than six months from the present date.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at London, in duplicate, this sixteenth day of July, in the year of our Lord one thousand eight hundred and ninety-four.

KIMBERLEY.
AOKI.

Protocol signed at London, 16th July, 1894.

THE Government of Her Majesty the Queen of Great Britain and Ireland and Empress of India, and the Government of His Majesty the Emperor of Japan, deeming it advisable in the interests of both countries to regulate certain special matters of mutual concern, apart from the treaty of commerce and navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1. It is agreed by the contracting parties that one month after the exchange of the ratifications of the treaty of commerce and navigation signed this day, the import tariff hereunto annexed shall, subject to the provisions of Article XXIII of the treaty of 1858 at present subsisting between the contracting parties, as long as the said treaty remains in force and thereafter, subject to the provisions of Articles V and XV of the treaty signed this day, be applicable to the articles therein enumerated, being the growth, produce, or manufacture of the dominions and possessions of Her Britannic Majesty, upon importation into Japan. But nothing contained in this protocol, or the tariff hereunto annexed, shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food, or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs, or any other indecent or obscene articles; articles in violation of patent, trade-mark, or copyright laws of Japan; or any other article which for sanitary reasons, or in view of public security or morals, might offer any danger.

The *ad valorem* duties established by the said tariff shall, so far as may be deemed practicable, be converted into specific duties by a supplementary convention, which shall be concluded between the two Governments within six months from the date of this protocol; the medium prices, as shown by the Japanese customs returns during the six calendar months preceding the date of the present protocol, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any, shall be taken as the basis for such conversion. In the event of the supplementary convention not having come into force before the expiration of the period fixed for the said tariff to take effect, *ad valorem* duties in conformity with the rule recited at the end of the said tariff shall, in the meantime, be levied.

In respect of articles not enumerated in the said tariff, the general statutory tariff of Japan for the time being in force shall, from the same time, apply, subject, as aforesaid, to the provisions of Article XXIII of the treaty of 1858 and Articles V and XV of the treaty signed this day respectively.

From the date the tariffs aforesaid take effect, the import tariff now in operation in Japan in respect of goods and merchandise imported into Japan by British subjects shall cease to be binding.

In all other respects the stipulations of the existing treaties and conventions shall be maintained unconditionally until the time when the treaty of commerce and navigation signed this day comes into force.

2. The Japanese Government, pending the opening of the country to British subjects, agrees to extend the existing passport system in such a manner as to allow British subjects, on the production of a certificate of recommendation from the British Representative in Tôkiô, or from any of Her Majesty's Consuls at the open ports in Japan, to obtain upon application passports available for any part of the country, and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tôkiô, or from the chief authorities in the Prefecture in which an open port is situated; it being understood that the existing rules and regulations governing British subjects who visit the interior of the Empire are to be maintained.

3. The Japanese Government undertakes, before the cessation of British Consular jurisdiction in Japan, to join the International Conventions for the Protection of Industrial Property and Copyright.

4. It is understood between the two high contracting parties that, if Japan think it necessary at any time to levy an additional duty on the production or manufacture of refined sugar in Japan, an increased customs duty equivalent in amount may be levied on British refined sugar when imported into Japan, so long as such additional excise tax or inland duty continues to be raised.

Provided always that British refined sugar shall in this respect be entitled to the treatment accorded to refined sugar being the produce or manufacture of the most favoured nation.

5. The undersigned Plenipotentiaries have agreed that this protocol shall be submitted to the two high contracting parties at the same time as the treaty of commerce and navigation signed this day, and that when the said treaty is ratified the agreements contained in the protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is also agreed that this protocol shall terminate at the same time the said treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at London, in duplicate, this sixteenth day of July, in the year of our Lord one thousand eight hundred and ninety-four.

KIMBERLEY.

Rule for calculating *ad valorem* duties.

Import duties payable *ad valorem* under this tariff shall be calculated on the actual cost of the articles at the place of purchase, production, or fabrication, with the addition of the cost of insurance and transportation from the place of purchase, production, or fabrication, to the port of discharge, as well as commission, if any exists.

EXCHANGE OF NOTES.

The Earl of Kimberley to Viscount Aoki.

Sir,

Foreign Office, 16 July, 1894.

With reference to Article XIX of the treaty between Great Britain and Japan, signed this day, in view of the fact that some of the British Colonies and foreign possessions enumerated in that article might be prevented from acceding to the present treaty by reason of their inability to accept the stipulations relating to military service contained in Article II of the said treaty, and in order to avoid future misunderstandings, Her Majesty's Government request from the Government of Japan an assurance that any of the said British Colonies and possessions may accede to the present treaty under the condition that, notwithstanding such accession, they shall not be bound by the stipulations of Article II.

I have, &c.,

KIMBERLEY.

Viscount Aoki to The Earl of Kimberley.

M. le Comte,

Japanese Legation, London, 16 July, 1894.

In reply to the note of Her Majesty's Government, referring to Article XIX of the treaty between Great Britain and Japan signed this day, and requesting, for the reasons given in the said note, an assurance that any of the British Colonies and foreign possessions enumerated in that article may accede to the present treaty under the condition that, notwithstanding such accession, they shall not be bound by the stipulations of Article II, the Government of Japan hereby give the assurance desired.

I have, &c.,

AOKI.

Viscount Aoki to The Earl of Kimberley.

THE undersigned, Envoy Extraordinary and Minister Plenipotentiary of His Majesty the Emperor of Japan, in virtue of special authorization from His Imperial Japanese Majesty's Government, has the honour to announce to Her Britannic Majesty's Principal Secretary of State for Foreign Affairs, that the Imperial Japanese Government, recognizing the advantage of having the codes of the Empire which have already been promulgated in actual operation when the treaty stipulations at present subsisting between the Government of Japan and that of Great Britain cease to be binding, engage not to give the notice provided for by the first paragraph of Article XXI of the Treaty of Commerce and Navigation, signed this day, until those portions of said codes which are now in abeyance are brought into actual force.

The undersigned avails, &c.

AOKI.

Japanese Legation, London, 16 July, 1894.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT ADVERTISING.

(CABINET MINUTE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 6 September, 1894.

[Laid upon the Table of the House in answer to Question No. 4 of 6th September, 1894.]

Question.

- (4.) GOVERNMENT ADVERTISEMENTS :—MR. BLACK *asked* THE COLONIAL SECRETARY,—Will he lay upon the Table of this House a minute dealing with the newspapers in which the Government should advertise, and drafted by Sir Henry Parkes while he last held office?

Answer.

GOVERNMENT ADVERTISING.

CABINET MINUTE.

THERE can be but little doubt that much waste of public money has been incurred by negligence or want of knowledge in giving Government advertisements to newspapers.

In every case, and in all Departments of the Public Service, the first thing to be considered is whether the newspaper affords a medium of publicity for the advertisement, and *no other consideration should be allowed to have weight*. For general purposes, it is certain that both the morning journals published in Sydney (the *Herald* and *Telegraph*) and the *Evening News* afford this medium of publicity. The same may be said, though with less certainty, of the weekly papers (the *Sydney Mail*, the *Town and Country Journal*, and the *Tribune*). Again, advertisements which require publicity in one portion of the Colony more than in another may properly be given to any newspaper possessing an established circulation in that District. In the Hunter River District, for example, the *Maitland Mercury* probably affords a better medium than any other newspaper.

These circumstances may be fairly taken into account when advertisements of a special character have to be ordered.

In no instance is any Government advertisement to be given as a matter of favour or patronage, or for any reason whatever apart from the ascertained value of the medium of publicity which the newspaper presents.

Cabinet approve.

HENRY PARKES.

Colonial Secretary's Office, Sydney, 6th December, 1887.

1894.

^d(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GOVERNMENT ADVERTISEMENTS.

(RETURN SHOWING SUMS PAID TO METROPOLITAN NEWSPAPERS FROM OCTOBER, 1891, TO JULY, 1894, FOR.)

Ordered by the Legislative Assembly to be printed, 31 October, 1894.

RETURN showing sums paid for Advertising by the various Government Departments to the different metropolitan newspapers (daily and weekly) during the period elapsing between October, 1891, and July, 1894, as far as can be readily ascertained from the records of this Department.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE DOG ACT.

(PETITION FROM CERTAIN RABBITERS OF THE COLONY, PRAYING FOR AN AMENDMENT OF.)

Received by the Legislative Assembly, 7 November, 1894.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned Rabbiters in the Colony of New South Wales,—

HUMBLY SHOWETH:—

1. That your Petitioners are engaged in the destruction of rabbits at various places in the Colony of New South Wales, but principally in the Western Division thereof.

2. That the rapid and great increase of rabbits in the Colony has become a source of danger to the producers from the soil.

3. That your Petitioners are satisfied that it is in the best interests of the country that every facility and encouragement should be given to all classes to aid in their destruction.

4. That your Petitioners, as hunters of rabbits, have to use large numbers of dogs, and that the fees charged upon the registration of such dogs is a grievous burden upon your Petitioners, and largely restricts them in their work, and reduces their means of existing.

5. That in the year 1835 an Act of the Legislature was passed for abating the nuisance occasioned by dogs in the streets of certain towns, and on highways in New South Wales, the provisions of which only applied to towns of Sydney, Parramatta, Liverpool, Campbelltown, Windsor, Newcastle, Maitland, and Bathurst, with power to the Governor to extend it to other towns.

6. That no amendment of that Act was made for forty years until the year 1875, when the fees of registration were altered from the amount existing for forty years to two shillings and sixpence for each dog.

Your Petitioners therefore humbly pray that your Honorable House will take the premises into your earnest consideration, and pass a law whereby persons declaring that their dogs are *bona fide* kept and used for the purpose of hunting rabbits, may be exempted from paying fees, and that their dogs whilst still to be registered shall be registered without fee.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 76 signatures.*]

1894.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MARTIN-PLACE.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 20 December, 1894.

Minute by The Under Secretary for Public Works.

Subject:—Sale of Land, Martin-place.

MR. WRENCH called to-day to ask for the decision of the Minister as to the survey which will be required of the land about to be sold. Mr. Wrench proposes to employ Mr. Schleicher to do this work. As this is a matter which admits of no delay I respectfully suggest this course be approved.

J.B., 11/12/91.

Approved.—W.J.L., 11/12/91. Mr. Wrench telephoned to.—11/12/91.

Minute by The Under Secretary for Public Works.

Subject:—"Martin-lane."

Department of Public Works, Sydney, 27 January, 1892.

ABOUT a fortnight ago Mr. Wrench, of Messrs. Richardson and Wrench, called at the office to inform the Minister that he had discovered something which might seriously affect the sale of the Post Office land. He said that on the previous day he had noticed that a gate at the end of Angel-place, which had always remained open, had been closed, and this at once aroused his suspicions, and he thereupon instructed Mr. Surveyor Schleicher to make inquiries into the matter. This gentleman had found, by examining the title-deeds of the contiguous properties, that a 2-foot reserve had been left between the Government land and Angel-place, as shown on the plan, and it was further ascertained that Angel-place itself had never been dedicated as a public thoroughfare, although the City Council had for many years maintained it. These facts had evidently been overlooked when the descriptions were prepared for the purpose of the original resumptions under the Post Office (Approaches Improvement) Act, 1839. After consultation with the Parliamentary Draftsman and the Crown Solicitor, it was decided by the Minister, with the approval of the Cabinet, to introduce a Bill into the Assembly for the purpose of resuming the 2-foot reserve, and dedicating Angel-place and the proposed lane at the rear of the Government land as a public thoroughfare, under the name of "Martin-lane."

J. BARLING.

Report by The Chief Accountant.

Messrs. Atchison and Schleicher's charges.

I HAVE consulted Mr. Twynam about Messrs. Atchison and Schleicher's charge, but he is unable to give an opinion, as no information is given of the number and duration of the interviews they had with the several persons named in their account.

I have seen Mr. Schleicher (with Mr. Gregg) and he considers the charge for survey is very reasonable for the services performed. No arrangement appears to have been made as to the fee to be charged for the survey.

W.H.Q., 13/7/92.

Mr. Thompson, please look at this account, and certify if correct.—J.B., 15/7/92. Voucher certified herewith.—J.B.T., 22/7/92. Have we attempted to check the advertisement in any way?—J.B., 27/7/92. Yes.—W.H.Q., 28/7/92. Submitted.—J.B., 28/7/92. Approved.—W.J.L., 6/8/92.

Account rendered by Messrs. Atchison and Schleicher.

Dr. to Atchison and Schleicher.—Martin-place Subdivision, &c.

To investigation of boundaries of above and searches at Registrar-General's Office as to the titles and boundaries of adjacent land, particularly as to status of the lane known as Angel-place; numerous interviews with Mr. Wrench, Mr. Ellis, solicitor, the Crown Solicitor, and the Under Secretary for Works, with reference to same; attending Mr. Wrench, the Under Secretary for Works, Parliamentary Draftsman, and the Crown Solicitor, many times as to Amending Bill, also on the Minister for Justice, and preparing numerous plans during the progress of the passing of the Act, and furnishing descriptions for schedules of Act; laying out on the ground with extreme care the boundaries of the eleven allotments of Martin-place subdivision, and permanently marking the same on the ground; also preparing large sale-plan and litho. transfer of the subdivision, after many interviews with Mr. Wrench and the Government Architect; also furnishing deposit-plan for the Real Property Act...

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LEGALLY QUALIFIED MEDICAL PRACTITIONERS.
(REGISTER OF, FOR 1894.)

Ordered by the Legislative Assembly to be printed, 6 November, 1894.

[*Laid upon the Table of this House in answer to Question No. 14, of 1st November, 1894.*]

Question.

- (14.) LEGALLY QUALIFIED MEDICAL PRACTITIONERS:—MR. MILLER (*for* MR. HAYNES) *asked* THE COLONIAL SECRETARY,—Will he lay upon the Table of this House a copy of the register of the Legally Qualified Medical Practitioners of New South Wales?
-

Answer.
NEW SOUTH WALES MEDICAL BOARD.

PRESIDENT :

Charles M'Kay, Esq., M.D.

MEMBERS :

Robert Dalzell Ward, Esq., M.R.C.S.E. Arthur Renwick, Esq., M.D., F.R.C.S., Edin. Frederick Milford, Esq., M.D. Cosby W. Morgan, Esq., M.D. W. H. Goode, Esq., M.D.	H. G. A. Wright, Esq., M.R.C.S.E. P. Sydney Jones, Esq., M.D., F.R.C.S., Eng. Maurice John O'Connor, Esq., L.R.C.S., Irel; M.K.Q.C.P., Irel. Walter Brown, Esq., M.D., M.R.C.S. Eng. Frederick Harrison Quaife, Esq., M.D.
---	---

SECRETARY :

Andrew Houison, M.B., Mast. Surg., 144, Phillip-street, Sydney.

Meet at the Board Room, 142, Phillip-street, on the second Wednesday in each month, at 4 o'clock p.m.

REGISTER OF MEDICAL PRACTITIONERS FOR 1894.

LIST of Medical Practitioners who are registered under the provisions of the Acts of Parliament of New South Wales, 2nd Vic. No. 22, 9th Vic. No. 12, 19th Vic. No. 17, and the 31st Vic. cap. XXIX, of the Imperial Act.

N.B.—The Medical Board have revised the Register to the best of their ability, but are aware that it may contain inaccuracies. They therefore invite Members of the Profession and public officers, especially in country districts, to forward to the Secretary particulars in their possession regarding the death of any of the gentlemen whose names are recorded in this Register. Practitioners whose addresses are not given, or are given inaccurately, are requested to forward their correct addresses, in order that the Register may be rendered as accurate as possible.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PICTURESQUE ATLAS COMPANY.

(PETITION FROM THE COMMITTEE OF THE PICTURESQUE ATLAS DEFENCE ASSOCIATION, PRAYING THE HOUSE TO REAPPOINT A COMMITTEE OR PUBLISH THE EVIDENCE.)

Received by the Legislative Assembly, 3 July, 1895.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The respectful Petition of the Committee and sympathisers of the Picturesque Atlas Defence Association,—

HUMBLY SHOWETH :—

That in the early part of 1893 your Honorable House appointed a Select Committee to take evidence upon sundry matters connected with the transactions of the Picturesque Atlas Company with their subscribers.

That such Committee held numerous meetings, took much evidence, and received many documents which are and have been impounded ever since.

That the dissolution of Parliament closed the labours of the said Committee without any result.

Your Petitioners, therefore, respectfully pray your Honorable House to either reappoint a Committee, so as to complete the labours commenced, or otherwise publish the evidence received, and return all documents to their proper owners.

Trusting your Honorable House will grant this Petition, your Petitioners will, as in duty bound, ever pray.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WIDTH OF TIRES BILL.

(MESSAGE No. 64.)

Ordered by the Legislative Assembly to be printed, 6 June, 1895.

FREDK. M. DARLEY,
Lieutenant-Governor.

Message No. 64.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Lieutenant-Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to regulate the width of the tires of stage-carriages and vehicles constructed to carry loads, and the weight of the loads to be carried on the said vehicles; to provide for painting on the said vehicles the names and residences or places of business of the owners and the weight of the vehicles, and for purposes incidental thereto.

*Government House,
Sydney, 30th May, 1895.*
