P	
PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS (continued):—	VOL. PAGE.
RAILWAY FROM WOOLABA TO COLLARENBABRI:—	
Motion made (<i>Mr. Young</i>) to refer work to, 519.	
RAILWAY FROM MAITLAND TO TARRE:—	
Motion made (<i>Mr. Young</i>) to refer work to, 519.	
RAILWAY FROM THE TERMINUS OF THE ROSEHILL RAILWAY TO DURAL:—	
Motion made (<i>Mr. Young</i>) to refer work to— <i>Point of Order</i> —That the Minister had not complied with the requirements of the Act, ruled against by Mr. Speaker, 519; motion passed, 519.	
HARBOUR WORKS, TWERD RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 521.	
HARBOUR WORKS AT BELLINGER RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 521.	
HARBOUR WORKS AT NAMBUCCRA RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 521.	
HARBOUR WORKS AT MACLEAY RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 521.	
HARBOUR WORKS AT HASTINGS RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 521.	
HARBOUR WORKS AT MANNING RIVER:—	
Motion made (<i>Mr. Young</i>) to refer work to, 522.	
WEIRS ON THE RIVER DARLING BETWEEN BOURKE AND WILCANNIA:—	
Motion made (<i>Mr. Young</i>) to refer work to, 522.	
PARRAMATTA (See "SEWERAGE").	
PATENTS (See "INTERNATIONAL PATENTS AND TRADE MARKS ARRANGEMENTS BILL"):—	
OFFICE, EXAMINEE OF:—	
Motion made (<i>Mr. Wilks</i>) for papers relating to change of working, 215.	
PATENTS LAW AMENDMENT ACT:—	
Additional Regulations, laid on Table, 24.	
PATENTS LAW AMENDMENT BILL:—	
Assent to (<i>Session 1896</i>) reported, 2.	
PAYTEN, MR. (See "CIVIL SERVICE").	
PENSIONS (See "OLD AGE PENSIONS"; also "CIVIL SERVICE").	
PERMANENT ARTILLERY (See "MILITARY").	
PETITIONS:—	
Referred to Select Committee, 91, 219, 241.	
Read by Clerk, 214.	
To appear at Bar of House, 185, 435.	
PHARMACY ACT OF 1897:—	
Regulations under, laid on Table, 445.	
PHARMACY BILL:—	
Motion made (<i>Mr. Brunner</i>) for Message to Council, requesting that Bill be proceeded with, 59;	
returned from Council with amendments, 114; Assembly disagrees to one and agrees to remainder of Council's amendments, 140-1; Message to Council, 148; Council does not insist on its amendment disagreed to, 170; Assent reported, 173.	
PIDDINGTON, ALBERT BATHURST, ESQUIRE, M.P.:—	
Appointed by Mr. Speaker a Temporary Chairman of Committees for the Session, 7.	
PILLIGA (See "RAILWAYS").	
PILOT SERVICE:—	
SYDNEY AND NEWCASTLE:—	
Motion made (<i>Mr. Dick</i>) for Return respecting Vessels and Services of Pilots, 308; Return to Order, laid on Table, 392.	
PITT STREET (See "TELEPHONES").	
POINTS OF ORDER:—	
Reported from Committees, 403, 493, 512.	
RULINGS OF SPEAKER:—	
That motion for adjournment of House in reference to appointment of Select Committee or Royal Commission on the financial clauses of the Commonwealth Bill anticipated consideration of that Bill, and was out of order, 169.	
That the Franchise Extension Bill did not necessarily involve expenditure, and therefore did not require a Message from the Governor, 181.	
That discussion on Motion of Adjournment in reference to Administration of Land and Income Taxes must be confined to the subject of the Notice, 190.	
That motion to take 3 ^o of the Crown Lands Bill as matter of urgency before other business was in order, 256.	
That it be left to the House to decide whether the motion for the suspension of the Standing Orders to take 3 ^o of Crown Lands Bill as matter of urgency, was irregular, 257.	
That Totalisator Bill did not originate any tax or impost or appropriate revenue, and therefore did not require to be recommended by Message from Governor, 290.	
That Totalisator Bill did not contain provisions beyond the Order of Leave, 290.	
That motion relating to Reappraisal of Conditional Purchases and Leases would anticipate debate on Order of the Day already on the Paper, 309.	
That Liquor Traffic Local Option Bill was properly included amongst the Government Orders of the Day, having been introduced by a Minister, 317.	
That amendment, on motion, in reference to construction of railways through private land to apply betterment principle was not relevant, 328.	
That the Standing Orders only permitted the postponement of Orders of the Day, not being Government Orders (on Government days), from one sitting day to another, 341.	
That motion for adjournment in reference to the state of the roads of the Colony anticipated discussion on the Estimates or in Committee of Ways and Means, and was out of order, 363.	
That while upholding the ruling of the Chairman of the Committee of Supply against allowing a discussion on the constitution of the Works Committee or their fees or travelling expenses on the Vote "Parliamentary Standing Committee on Public Works" the items being fixed by statute the conduct of business of the Committee could be criticised in relation to another item, 403.	
That motion for adjournment of House relating to making of Dams and Weirs by the Water Conservation Branch of the Public Works Department was out of order, the matter having been fully discussed in Supply, 471.	
That Chairman was incorrect in ruling that the omission of the word "intestate" in the 12th line of the Probate Duties Bill was in order on the ground that it did not increase the area of taxation, because the effect would be an augmentation of the tax, 483.

S		
SPEAKER (continued):—		
RULINGS OF (continued):—		
That motion to take 3 ^o of the Crown Lands Bill as matter of urgency before other business was in order, 256.		
That it be left to the House to decide whether the motion for suspension of the Standing Orders to take 3 ^o of Crown Lands Bill as matter of urgency was irregular, 257.		
That Totalisator Bill did not originate any tax or impost or appropriate revenue, and therefore did not require to be recommended by Message from Governor, 290.		
That Totalisator Bill did not contain provisions beyond the Order of Leave, 290.		
That motion relating to Reappraisal of Conditional Purchases and Leases would anticipate debate on Order of the Day already on the paper, 309.		
That Liquor Traffic Local Option Bill was properly included amongst the Government Orders of the Day, having been introduced by a Minister, 317.		
That motion to "read Orders of the Day" was obsolete in House of Commons and opposed to Standing Order 211, 274.		
That amendment on motion in reference to construction of Railways through private land to apply betterment principle was not relevant, 328.		
That the Standing Orders only permitted the postponement of Orders of the Day, not being Government Orders (on Government Days), from one sitting day to another, 341.		
That motion for adjournment in reference to the state of the roads of the Colony anticipated discussion on the Estimates or in Committee of Ways and Means, and was out of order, 363.		
That while upholding the ruling of the Chairman of Committee of Supply against allowing a discussion on the constitution of the Works Committee, or their fees, or travelling expenses on the Vote "Parliamentary Standing Committee on Public Works," the items being fixed by statute, the conduct of business of the Committee could be criticised in relation to another item, 403.		
That motion for adjournment of House relating to making of Dams and Weirs by the Water Conservation Branch of the Public Works Department was out of order, the matter having been fully discussed in Supply, 471.		
That Chairman was incorrect in ruling that the omission of the word "intestate" in the 12th line of the Probate Duties Bill was in order, on the ground that it did not increase the area of taxation, because the effect would be an augmentation of the tax, 483.		
That the decision of the Chairman of Committees, that a Member was not entitled in discussing the principles of the City and North Sydney Railway Bill on a proposed amendment in the Short Title, was correct, 512.		
That subject of motion of adjournment of House in reference to Sunday Trading had been discussed on a previous motion, 518.		
That the Minister in moving the reference of the Roschill to Dural Railway to the Public Works Committee had complied with the Act 519.		
DISSENT FROM RULING:—		
Motion made (<i>Mr. Copeland</i>) for, in reference to opinion given respecting consideration in Committee of Draft Bill of Adelaide Convention, and negatived, 72.		
SPECIAL ADJOURNMENT (See "ADJOURNMENT").

STAMP DUTIES (AMENDMENT) BILL:—		
Message from Governor, 457; Ordered (<i>Mr. Reid</i>) that Bill be brought in founded on Resolution of Ways and Means, No. 10, presented and read 1 ^o , 465; read 2 ^o , committed, reported with amendments, 483; Order of the Day postponed, 473; Motion made (<i>Mr. Brunker</i>) for adoption of report, amendment moved to recommit, and amendment moved (<i>Mr. Rose</i>) to add words to amendment and negatived, amendment to recommit, passed, recommitment, reported 2 ^o with further amendments, Report adopted, 497; read 3 ^o , passed, and sent to Council, 499.		
STAMP DUTIES BILL:—		
Received from Legislative Council and on motion (<i>Mr. Gould</i>) read 1 ^o , 400; Order of the Day postponed, 451, 432.		
STAMP AND PROBATE DUTIES BILL:—		
Ordered on motion of <i>Mr. Reid</i> that Bill be brought in founded on Resolutions of Ways and Means (Nos. 4 and 5), Bill presented and read 1 ^o , 395; Order of the Day postponed, 418; Order of the Day discharged, Bill withdrawn, 459.		
Petition presented from Australian Mutual Provident Society against, 426	2	1243
STANDING ORDERS:—		
Sessional Order appointing Committee, passed, 13.		
Suspended as a matter of urgency to enable Bill to pass through all its stages in one day, 36-7, 302, 427-8.		
Suspended as matter of urgency to pass 3 ^o of Crown Lands Bill before other business, 257.		
Suspended to pass Bill through all its stages in one day, 378.		
Motion to suspend as a matter of urgency interrupted at 8 o'clock, 458.		
Motion made (<i>Mr. Schey</i>) for instruction to Committee to frame rule in reference to Limitation of Speeches, 147; Report brought up, 295	1	687
Motion made (<i>Mr. Cunn</i>) to refer question of balloting for Select Committees to Committee; amendment moved (<i>Mr. Hogue</i>), to except Committees on Private Bills and negatived—		
Motion agreed to, 197-8; Report brought up, 295	1	687

1897.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND
TRAMWAYS.

(ANNUAL REPORT OF THE RAILWAY COMMISSIONERS FOR THE YEAR ENDING 30TH JUNE, 1897.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35.

Printed under No. 15 Report from Printing Committee, 12 August, 1897.

Office of the Railway Commissioners of New South Wales,
Sydney, 10th August, 1897.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

SIR,

In accordance with the provisions of the 45th clause of the Railways Act of 1888, 51 Vic. No. 35, we have the honor to present, for the information of Parliament, our Annual Report upon the working of the Railways and Tramways for the year ending June 30th, 1897.

GENERAL REMARKS.

The result of the year's working may be briefly summarised as under :—

Total traffic, Railways and Tramways	£3,321,437
Total expenditure, Railways and Tramways	1,850,099
Balance after paying working expenses	£1,471,338

making an accumulated increase of £4,021,855 paid into the Treasury during the past nine years to meet the interest on capital.

From this sum must be deducted £450,000, six instalments of £75,000 each, towards paying off the £1,000,000 vote under Act 53 Vic. No. 24 (Railway Loan Redemption Act, 1889), which Act prescribes that a sum of £75,000 shall be paid from the Consolidated Revenue Fund to the credit of a special Trust Fund Account until a sufficient amount shall have accumulated to pay off and extinguish one million pounds of the Public Debt for Railways, which fell due up to the 31st December last; after deducting this amount the Treasury will still have received £3,571,855 increased net earnings during the past nine years.

2 NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS,

The following table shows the progress and results of the working of the Railways and Tramways for a period of years.

Year.	Open to 30 June.			TOTAL EARNINGS.			NET EARNINGS AFTER PAYING WORKING EXPENSES.			CAPITAL EXPENDED.		
	Railways.	Tramways.	Total.	Railways.	Tramways.	Total.	Railways.	Tramways.	Total.	Railways.	Tramways.	Total.

RAILWAYS.

During the year to which this Report refers the following extensions have been opened for traffic:—

Line.	Mileage. m. c.	Date handed over.
Jerilderie to Berrigan	21 65	October 14, 1896.
Parkes to Bogan Gate	23 38	December 15, 1896.
Narrabri to Moree	63 10	April 1, 1897.

These are "Pioneer" lines of the character advocated for some years, and specially referred to in the Supplementary Report attached to our Report for the year 1894-5, the object in view being to afford railway communication over level country into districts from which the traffic would not warrant the expenditure necessary to provide thoroughly-equipped railway lines. The cost of the "Pioneer" lines has averaged £2,019 per mile, being a reduction on the cost of the "light line" between Nyngan and Cobar—the cheapest line previously constructed in this Colony—of £1,691 per mile. The lines are capable of carrying the ordinary Rolling Stock, hauled by a light class of engine, at a speed of from 15 to 20 miles per hour. So far as present experience indicates, they will prove to be all that was anticipated when first recommended, and a continuation of a similar class of lines through suitable country in directions judiciously determined will permit of extensions where otherwise railway communication could not, with due regard to economy, be provided.

Lines of the "Pioneer" class are now under construction from Bogan Gate to Condobolin and from Nevertire to Warren. The former is 39 miles 22 chains in length, and is expected to be completed in December next; the latter 12 miles 3 chains, and will probably be opened for traffic within three months.

Further extensions of this class of line from Berrigan to Finlay and Tamworth to Manilla, covering distances of 13 miles 71 chains and 29 miles 62 chains respectively, will shortly be in course of construction. The cost of the latter line will, in consequence of the country being somewhat uneven, and the necessity for a comparatively expensive bridge across the Peel River, be rather more than other lines of the "Pioneer" class.

The total capital cost of the lines open for traffic stands at £37,369,205. The interest on this sum at 3·693 per cent., the average interest payable on the debt of the Colony, amounts to £1,380,045.

Debentures have been paid off and moneys provided out of the Consolidated Revenue Fund to the extent of £2,600,240. The net result of the year's transactions, after paying all working expenses, is a sum of £1,413,524, thus more than providing interest on the whole cost of the lines open for traffic by £33,479.

With regard to the general details of the year's transactions it may be stated that the revenue shows an increase of £194,325. The working expenses have increased by £49,330, the net result being an increase of £144,995.

The coaching traffic shows an increase of £54,774; 2nd class traffic having increased by £48,407, and miscellaneous traffic by £8,694. First class traffic shows a decrease of £2,327.

For

For the increased money earned there were 1,667,876 additional passenger journeys made.

The total revenue derived from Goods shows an increase of £139,551, all classes of traffic having contributed, viz.:—General Merchandise, £94,613; Wool, £21,733; Live Stock, £9,478; Minerals, £11,771; Miscellaneous, £1,956.

The train miles run were 8,130,405, being an increase on last year of 410,787 miles.

The earnings per train mile are 7s. 5d., and the net earning 3s. 5¼d., as compared with 3s. 3½d. last year.

The percentage the working expenses bear to the gross revenue is 53·11.

It is feared that the season of drought through which the Colony has recently passed will prevent any large expansion of traffic during the present year; indeed, in connection with the wool and stock traffic, a falling off must be looked for.

EXTENSION OF THE RAILWAY INTO THE CITY.

The proposed extension of the railway into the city is a matter which demands some mention in this Report, not with the object of advocating any particular route—our views on that subject having been placed most fully before the Public Works Committee—but because of the absolute necessity for a decision in the matter. The time has arrived when it must be emphatically stated that the passenger business cannot longer be conducted at Redfern with reasonable convenience to the public, or without unnecessary risk.

The accommodation is inadequate, and consequently there is, notwithstanding the exercise of the utmost care and the use of all modern appliances for safe working, an element of danger which would not attach to a terminal station arranged to meet traffic requirements.

For the daily business the accommodation is below what is required, and for holiday or exceptional traffic it is very deficient.

We trust that the question of the extension of the railway into the city will be finally dealt with on an early date.

SAFETY APPLIANCES.

The interlocking of points and signals has been steadily proceeded with.

The fitting of the Goods Stock with the Westinghouse Quick-acting Freight Brake has been continued, the number of vehicles fitted with brakes or pipes during the year being 1,576, making a total of 7,799 goods vehicles now provided with this great security.

Unfortunately we cannot repeat our report of last year as to the entire freedom from passenger-train accidents.

On the 1st February there was a collision in Redfern yard, between an incoming and an outgoing train, the driver of the latter train having started while the signals were at danger. Both trains were at the time moving slowly, the outgoing train having only just left the platform. Sixteen passengers were injured, but none seriously.

In our last Annual Report we mentioned that in consequence of the exorbitant claims made in connection with the accident which occurred on the 31st October, 1894, it had been deemed necessary to ask the Government to introduce a Bill into Parliament limiting the liability on account of accidents to a maximum of £2,000, and this has since become law.

RATES.

Much-needed relief, in consequence of the recent disastrous drought, has been given to stock-owners. "Starving Stock" rates were introduced, to have effect during proclaimed periods, by which stock coming within that designation could be removed, at a reduction of 50 per cent. on the ordinary stock rates, from the drought-stricken districts to districts where feed and water could be obtained. A reduction of 25 per cent. was also provided in cases of starving stock sent to boiling-down establishments, and a similar reduction was made in the freight of fodder for starving stock.

A number of reductions have recently been notified, the most important being a considerable reduction in the wool rates, amounting to an estimated value of £18,500 per annum.

In the Coaching Rate Book recently published several alterations and reductions were made in the fares within the Metropolitan Suburban Area, embraced in a radius of 22 miles from Sydney.

A reduced scale of fares was adopted for the districts situated between Sydney and Campbelltown, Penrith, Windsor, Berowra, and Stanwell Park.

Provision has also been made to apply the lower scale of fares charged in the Metropolitan Suburban Area to the Newcastle Suburban Area, extending to West Maitland, Morpeth, and Awaba.

Other alterations of a less important character have been given effect to, and it is estimated that the whole will amount to a reduction in fares to the extent of £10,000 per annum.

The result of the alterations in fares and rates (exclusive of the temporary "Starving Stock" rates), will, it is estimated, represent a reduction of £30,000 per annum.

Return of Ton Mileage for Year ending 31st December, 1896.

The

The foregoing Return shows an improvement upon that published in our Report for last year, notwithstanding that the line from Junee to Hay has to be again included in the non-paying list, with a deficiency of £8,494. For the previous year it returned a small profit, largely consequent upon the exceptional stock traffic. Narrandera to Jerilderie has also receded through a falling off in the live stock traffic. Other lines show a backward tendency; but generally an improved result is shown.

The Orange to Molong-Parkes and Forbes Line continues to improve. There is also an appreciable improvement in the Hornsby to Milson's Point and Sydney to Kiama Lines, the annual loss on both is, however, still considerable.

With regard to pioneer lines—Jerilderie to Berrigan, Parkes to Bogan Gate, and Narrabri to Moree—opened quite recently, the former shows a slight loss, but there is reason to anticipate an improvement. The two latter lines, however, indicate a good prospect, more particularly the Narrabri-Moree Line.

ACCOMMODATION FOR THE TRAFFIC AND CONDITION OF LINES AND ROLLING-STOCK.

The Passenger and Goods Stock is in good order, and has been increased.

Second-class Lavatory Carriages for the long-distance trains have been introduced.

Corridor Cars, to run on the Southern Express, are approaching completion in the Railway shops at Eveleigh, and will be placed in traffic in October.

In the renewal and repairs of engines, carriages, and wagons the expenditure this year has exceeded that of last year by the sum of £36,829.

The locomotive repairs have been extensive, 218 engines having received heavy repairs.

The existing shop facilities for dealing with the large locomotives which have been and will continue to be introduced are insufficient, and it will be necessary at no distant date to expend a considerable sum in the enlargement of the shops and providing suitable machinery.

The Permanent-way has been maintained in a satisfactory condition.

Various works were authorised, during recent inspections, to meet the altered traffic requirements, including the extension of numerous crossing loops, necessary for the accommodation of the longer goods trains now being hauled consequent upon the reduced gradients and the use of more powerful engines.

67 miles 51 chains of line were completely relaid, rerailed, or resleepered; 68 miles 73 chains of fencing were renewed, as against 56½ miles 32 chains and 32 miles 51 chains respectively last year.

The Wagga Wagga viaduct—a timber structure—is being renewed in steel. This is an extensive work, and it will be gradually completed, and the whole cost charged to Working Expenses.

Many works fairly chargeable to Capital have been carried out and debited to Working Expenses, and a large proportion of the station buildings have been repainted and put in perfect order.

IMPROVEMENT OF GRADES AND CURVES.

This work has been pressed forward on the Main Western Line over the Blue Mountains, and the flattening of the exceptionally sharp curves has added much to the comfort of the travelling public.

Deviations of the line between Katoomba and Mount Victoria, and at Dargan's Creek, between Bell and Clarence, have been made for the purpose of obtaining better grades and easing the curves.

The result of these deviations, as anticipated, has been productive of great benefit in working the goods traffic, and also the coaching service, when the passenger trains have been heavy; but the maximum advantage will not be realized until the difficulty attending the working of the Zig Zag is removed.

Important deviations for the more expeditious and economical working of the traffic have also been made in the Main Western Line between Wellington and Dubbo.

On the Southern Line the steep grades between Hill Top and Mittagong, and Moss Vale and Goulburn, have been considerably reduced by deviations of the line.

The extent of the work in connection with the deviations referred to will be fully understood when it is stated that 35 miles of new line were constructed, and the effect of the grade improvements, together with the introduction of more powerful engines, is graphically illustrated by the attached diagrams.

The reports of the Chief Mechanical Engineer and Engineer-in-Chief for Existing Lines will be found on pages 15 and 17.

Appendices are attached giving full information regarding the traffic expenses, &c., &c.

RESULTS

RESULTS OF THE WORKING.

RAILWAYS.

Year ending 30 June, 1897, compared with 1896 and 1888.

Train mileage... ..	8,130,405	7,719,618	6,689,313

TRAMWAYS

TRAMWAYS.

On the 30th of June, 1896, 61 miles were open for traffic, and on the 1st of March last the Electric Line from Mosman's Bay to Spit Road, a distance of 1 mile 37 chains, was opened, making a total of $62\frac{1}{2}$ miles of line in use.

The general result of the working of the whole of the Tramways for the year is an increase of revenue of £17,514; the working expenses also increased by £12,598.

The cost of the lines open for traffic is £1,452,670, of which £36,837 has been paid out of the Consolidated Revenue, leaving £1,415,833, upon which interest has to be paid.

The return upon the capital invested is £3 19s. 9d. per cent.

The table on the following page will give further details regarding the year's operations.

CONDITION OF EXISTING LINES.

The lines are in good order, a considerable sum having been expended in relaying.

ACCOMMODATION FOR THE TRAFFIC.

The Glebe Point Line has been duplicated for a distance of 68 chains, and an improved service introduced.

It has recently been decided to continue the double line from Enmore Road, Enmore, to Victoria Road.

The service generally is as satisfactory as it can be made with the facilities available. As pointed out in previous Reports, the confined space of the Bridge-street yard limits the service, and much-needed relief will be afforded when the George-street Electrical Tramway recently authorised is completed.

RESULTS OF THE WORKING.

TRAMWAYS—ALL LINES.

Year ending 30 June, 1897, compared with 1896 and 1888.

Tram mileage	3,088,138	2,736,260	1,388,786

Further information regarding the working of the various sections will be found as an Appendix, page 29.

Before

Before closing this Report we desire to refer to the death of our esteemed late colleague, Mr. E. M. G. Eddy, Chief Commissioner, to which we have already briefly alluded in the Quarterly Report recently published.

He had looked forward to the completion of this year, feeling sure that the financial result would be most satisfactory, and the wisdom of the system of administration brought into operation by the Government Railways Act of 1888 fully demonstrated.

His devotion to duty contributed to the early termination of a brilliant career, and, while expressing the deepest regret for the sad occurrence, we wish also to record our appreciation of the magnificent service he rendered to the Colony, and the great ability he displayed in being largely instrumental to placing the New South Wales railways in the position they occupy to-day.

We have the honor to be,

Sir,

Your most obedient Servants,

CHARLES OLIVER,
Commissioner.

W. M. FEHON,
Commissioner.

APPENDIX I.

Chief Mechanical Engineer's Report.

Sir,

Eveleigh, 21 July, 1897.

In submitting, for the information of the Railway Commissioners, the annual statement of the working of the Locomotive, Carriage and Wagon Department for the year ending 30th June, 1897, I have the honor to report that the rolling-stock, workshop machinery, furnaces, cranes, hydraulic, and pumping plant, in charge of this department, have been maintained in good working condition.

Locomotives.

Two tender engines, Nos. 83 and 90, were rebuilt and converted into tank engines for suburban line work. Three hundred and forty-nine engines have been repaired during the year; 174 of them at Eveleigh, 50 at Newcastle, and the remaining 125 at smaller depôts. Two hundred and eighteen of these received heavy repairs, and the remaining 131 had general repairs of a lighter character. Two new boilers were fitted to engines, and 313 boilers were overhauled during the year; 177 of them at Eveleigh, 46 at Newcastle, and the remaining 90 at smaller depôts. One hundred and seventy-nine of these boilers were internally examined, heavily repaired, refilled with tubes, and returned to locomotives. Sixty-nine stationary boilers were overhauled, 10 of them receiving heavy repairs.

Carriages and Waggon.

One hundred and fifty-four vehicles were rebuilt in the Eveleigh shops during the year and charged to Working Expenses as replacements. One thousand three hundred and eighty-nine passenger vehicles were repaired; 1,098 of them at Eveleigh, and the remaining 291 at Newcastle. Three hundred and twenty-eight of these received heavy repairs, and the remaining 1,061 had general repairs of a lighter character. Five thousand five hundred and eleven waggons and vans passed through the Eveleigh and Newcastle shops during the year, of which 1,746 were heavily repaired.

Two hundred and thirty defective axles have been withdrawn from service and replaced by stronger ones; and 2,599 defective axle-boxes, of designs now abandoned, have been replaced by standard types and debited to Working Expenses.

New Stock charged to Capital Account.

One Consolidation goods engine has been built in the Eveleigh works, the last of four constructed from materials partially prepared by Mr. Thomas Wearne under his contract for twenty-five goods locomotives.

Six suburban cars and six main line second class lavatory carriages were built by contractors, and added to coaching stock; and nineteen merchandise vehicles were built in the Eveleigh works as additions to rolling stock.

The cost of these additions is £23,731 against Capital Account.

New Stock charged to Working Expenses.

Six powerful goods engines have been charged against Working Expenses during the year. Three of them have been at work since the beginning of the year, and they replace seven old engines. The relative tractive powers are—for the three new ones, 86,331 lb., and for the seven old engines, 82,587 lb. The remaining three are at present on the sea, and, when put into service, will replace locomotives of our least useful types, in similar proportion.

Twenty-four new bogie suburban cars, built by contractors, with a floor area of 8,400 square feet, have replaced forty-two old four-wheeled carriages having a floor area of 7,551 square feet.

Ninety new goods vehicles, of which 33 are bogies, were built in the Eveleigh works.

The

The total value of the new rolling stock charged to working expenses is £63,476. The amount similarly spent in 1896 was £31,355.

The following statement shows the relative mileage executed and the working costs of the Locomotive Branch for the two years ending June, 1896 and 1897:—

	1897.	1896.	Increase.
Train miles	8,130,405	7,719,618	410,787
Engine miles	11,614,964	10,895,776	719,188
Percentage of unproductive miles on train miles	42·86	41·14	1·72
Revenue	£3,014,742	£2,820,417	£194,325

The means which we have for executing repairs to locomotives are now insufficient. That work is not done with the rapidity and economy desirable. The increasing use of large and more powerful locomotives has outgrown existing facilities, and should be provided for by an extension of workshops and suitable machinery. Our present erecting shops are taxed beyond their economic capacity, and much time and labour are lost in getting our large and heavy engines into and out of shops which were designed and fitted with machines for dealing with much smaller engines than those now doing the bulk of the business on these railways, and, as a consequence, useful locomotives that ought to be in service are kept too long waiting repairs. In pursuance of the policy observed for some years past of employing one powerful engine where two smaller ones were employed before, it is manifest the stock of large heavy engines must increase, and I venture to suggest that suitable provision should now be made for economically repairing them so as to get full use of them on the road.

I have, &c.,

W. THOW,

Chief Mechanical Engineer.

The Secretary to the Railway Commissioners.

APPENDIX II.

RAILWAYS.—RETURN OF WORKING ROLLING STOCK, 30TH JUNE, 1897.

	LOCOMOTIVES.		COACHING.							MERCHANDISE.					DEPART- MENTAL STOCK.	TOTAL.	
	Engines.	Tenders.	Special and Sleeping Cars.	First Class.	Composites.	Second Class.	Brake-vans.	Horse-boxes, Waggon trucks, &c.	Total.	Goods open.	Goods covered.	Meat Trucks.	Live Stock Trucks.	Brake-vans.	Total.		Loco. Coal, Fuel, &c., Waggons.

A. Three consolidation engines, with a tractive power of 86,331 lb., replace 7 small type engines having a tractive power of 82,587 lb.; 72 new engines, previously supplied, replace 83 old ones with a surplus tractive power of 192,000 lb. Three four-wheeled coupled tender passenger engines were rebuilt and converted into Suburban tank engines.

B. Twenty-four Suburban bogie carriages (first and second class), having a floor area of 8,400 square feet, replace 42 old four and six wheel stock with a floor area of 7,551 square feet—these complete the replacements of all the obsolete four-wheel stock; 66 carriages of various types have been rebuilt or replaced, and 26 carriages have been converted; 321 waggons have been rebuilt or replaced during the year, and 3 combination trucks converted into sheep-vans; 50 waggons, with a carrying capacity of 1,075 tons, have replaced 160 waggons of inferior type, with a carrying capacity of 980 tons.

APPENDIX III.

REPORT on Condition of Lines and Works for the Year ending 30th June,
1897.

Sir, New South Wales Government Railways,
Office of Engineer-in-Chief for Existing Lines, 6 July, 1897.

I have the honor to report, for the information of the Commissioners, that the permanent-way, works, and buildings, have been maintained in a thoroughly satisfactory state during the past year.

In the period under review, 67 miles 51 chains have been completely relaid, rerailed, or resleepered; 129 miles 36 chains have been lifted and ballasted; and 68 miles 73 chains of fencing have been renewed, the whole expenditure being charged to Working Expenses, and in addition, 49 miles of new fencing have been erected in connection with the deviation works.

In addition to the 67 miles 51 chains relaid, rerailed, or resleepered, 26,998 new sleepers and 41,296 good sleepers recovered in relaying have been used for partial resleepering and repairs, thereby adding over 31 miles to the length of road put in perfect condition during the year.

Many works of varied description, fairly chargeable to Capital, have been carried out and debited to Working Expenses, and special attention has been given to station buildings, a large proportion of these having been repainted and put in perfect order during the year.

Improvement of Grades and Curves.

All the sharp curves on the Western Mountains, between Faulconbridge and Blackheath, have been dealt with, deviations to increase the radii having been completed, and the line so much improved thereby that the speed of trains could be greatly accelerated.

On the Main Western Line grade improvements of an extensive character have been completed between Maryvale and Dubbo, between Bell and Clarence, and by the deviations made to reduce the curves between Katoomba and Blackheath the grades were also improved. Similar work between Blackheath and Mt. Victoria is nearing completion.

On the Southern Line steep grades have been reduced between Moss Vale and Meryla, and also between Hill Top and Mittagong, while others are in progress between Meryla and Exeter.

With the exception of the work between Bell and Clarence, all have been carried out Departmentally.

Good progress has been made with the work of replacing the present timber viaduct at Wagga Wagga with a structure consisting of steel-plate girders and steel trestles on concrete foundations; the bridge over Cottage Creek, near Newcastle, has been renewed in a similar manner, and those over Styx Creek and Ironbark Creek, on the Northern Line, are being similarly dealt with.

Extensions opened.

During the year the following extensions have been opened for traffic:—

Jerilderie to Berrigan	21 miles 65 chains.
Parkes to Bogan Gate	23 " 38 "
Narrabri to Morce	63 " 10 "

These are all of the "Pioneer" type of line.

I have, &c.,

THOMAS R. FIRTH,
Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

Sidings laid in and extended 14 miles 6 chains.

	New.	Second-hand.	Total.
Sleepers used in new sidings	1,078	28,510	29,588
Sleepers used in main lines—			
Relaying and resleepering	117,022	6,850	123,872
Repairs and respacing	26,998	41,296	68,294
Deviations to improve grades and curves	53,215	9,152	62,367
Total	197,235	57,298	254,533

	Blue-metal, and other hard stone.	Sandstone and Gravel.	Total.
	Cubic yards.	Cubic yards.	Cubic yards.
Ballast used in main lines—			
For relaying	7,511	7,511
For ordinary ballasting	36,785	10,691	47,426
For deviations to improve grades, &c.	55,558	55,558
Total	99,804	10,691	110,495

Length of new fencing erected 117 miles 73 chains.
 Length of fences wired 1 mile 6 chains.
 Culverts and flood-openings constructed 807 feet extra waterway.

I have, &c.,
 THOMAS R. FIRTH,
 Engineer-in-Chief for Existing Lines.

A Includes 46 officers in charge of locomotive running sheds, and timekeepers.

B Includes 75 officers for additional stations and crossing places, 22 night-officers transferred from wages to salary list. Of the remaining 659, 360 are officers and night-officers in charge of stations and sidings, and 165 are clerks employed at stations.

C Includes 36 telegraph operators.

The Wages Staff does not include gatekeepers with free house only, as the information was not kept in 1888.

APPENDIX X.

RETURN of the Mileage of Suburban Passengers on All Lines of Railway during the years ending 30th June, 1897, 1896, and 1888.

DESCRIPTION.	1897.	1896.	1888.
NUMBER OF ORDINARY PASSENGERS	11,323,539	10,635,753	7,413,868
NUMBER OF WORKMEN'S JOURNEYS	4,000,248	3,306,996	1,738,284
NUMBER OF SEASON TICKET HOLDERS' JOURNEYS ..	4,827,580	4,608,828	3,227,760
TOTAL NUMBER OF PASSENGERS' JOURNEYS	20,151,347	18,551,577	12,379,912
NUMBER OF MILES TRAVELLED	115,059,631	104,310,788	70,172,793
AVERAGE MILEAGE PER PASSENGER	5'71	5'62	5'67
AMOUNT RECEIVED FROM PASSENGERS	£264,392	£252,025	£186,393
AVERAGE RECEIPT PER MILE PER PASSENGER	0'55	0'58	0'64

NOTE.—Suburban Lines include only distances within 23 miles of Sydney and Newcastle, Liverpool and Morpeth included.

APPENDIX XI.

STATEMENT showing cost of Additions to Stations, Buildings, Siding Accommodation, &c., Machinery and Rolling Stock, the cost of which was charged to Capital Account, during the year ending 30th June, 1897.

	Amount.
	£
Additions to Stations, Buildings, &c.	50,183
Rolling Stock and additional appliances, including continuous brakes.....	69,024
	£119,207

APPENDIX XII.

Report of the Tramway Locomotive Superintendent.

Randwick, 13 July, 1897.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to submit, for the information of the Railway Commissioners, the following report on the working of the Locomotive Department of the Tramways for the financial year just closed:—

SYDNEY CITY AND SUBURBAN LINES.

The whole of the rolling stock, machinery, and plant has been maintained in good order, and the requirements of the traffic fully satisfied. Owing to the greatly increased tram service amounting to 312,726 train miles, the working expenditure has been considerably augmented, although it is satisfactory to note that the cost per train mile is less, being 12·57d. for the steam lines, and 6·16d. for the cable system, as compared with 13·62d. and 6·34d. respectively for the previous year. The mechanical staff, which in the previous year worked short time, has been making full time since 29th August last, and this, of course, contributed to the increased expenditure. Seven new cars have been paid for out of working expenses, and the remainder of the stock was overhauled as follows:—

Motors: 65 received general overhaul; 69 heavy repairs; 646 general repairs, occupying from one to eight days each; and 299 light repairs.

Cars: 180 (129 steam and 51 cable) thoroughly overhauled and repainted; 106 repaired and partially repainted; and 1,265 received minor repairs occupying about one day each. In addition 58 trucks and 29 cars for other lines were repaired.

NORTH SHORE CABLE AND ELECTRIC LINES.

Twelve cable line cars have been overhauled and repaired, and three electric motor cars received similar attention. The cable from Milson's Point to the power-house has had to be renewed twice during the year at a cost of £978, and as no similar renewal was demanded in the previous year, to this must be ascribed the principal cause of the increased expenditure this year. The extension of the electric system to Mosman was opened on 1st March, and the traffic is being worked satisfactorily from the existing power-house. The extra power demanded by this line, however, in consequence of its heavy gradients, makes the cost of working somewhat high.

NEWCASTLE CITY AND SUBURBAN LINES.

The rolling stock and plant have been maintained in good order. Two worn-out cars were replaced during the year. An increased tram service of 7,291 miles has been given, while the cost of working was ·36d. per train mile less than in the previous year.

KOGARAH TO SANS SOUCI, AND MORPETH TO EAST MAITLAND LINES.

The rolling stock has been maintained in good order, and the traffic requirements fully met.

I have, &c.,

GEO. DOWNE,

Locomotive Superintendent.

APPENDIX XIII.

Report of Engineer for Tramways.

Tramway Department, Office of Engineer for Tramways, July, 1897.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to submit, for the information of the Railway Commissioners, my Annual Report on the condition of the City and Suburban Tram-lines for the year ending 30th June, 1897.

During the year the electric line from Mosman's Bay to Spit Road, a distance of 1 mile 37 chains of single track, has been added to the tramway mileage. The Glebe Point line has also been duplicated, the distance being 68 chains.

The roads are generally in good running order, although we still have a considerable length of track with 42-lb. rails that will require renewing at an early date. The quantity of metal used in ordinary maintenance during the year was 10,000 tons.

The following relaying has been completed:—Glebe Point line, 1 mile 2 chains single track; Marrickville line, from Edinburgh Road to Marrickville, 40 chains single track; several curves on the Coogee line, 16½ chains single track; Leichhardt line, from Ross-street to Camperdown Town Hall, 40½ chains double track; and in Phillip-street, between Bridge-street and Hunter-street, 15½ chains double track. Total length of single track, 3 miles 10½ chains.

With the exception of the relaying in Phillip-street, 60-lb. T rails have been used throughout. The line in Phillip-street has been specially treated, the 80-lb. T rails and special fish-plates having been milled and secured with machine-fitted bolts, and laid without any allowance for expansion. It is believed the saving in maintenance will more than recoup the extra cost incurred in preparing the joints, besides adding greatly to the comfort of the travelling public.

The Ocean-street Cable line is in good order throughout, with the exception of the crossings at King-street, which it is intended to renew next month.

The North Shore Cable, Military Road and Mosman's Bay Electric, and the Ashfield to Enfield lines are in very good order.

The power-houses, waiting-sheds, bridges, and culverts are generally in a good state of repair.

I have, &c.,

G. R. COWDERY,

Engineer for Tramways.

LEGISLATIVE ASSEMBLY,
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING DECEMBER, 1896.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35, sec. 44.

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

Offices of the Railway Commissioners of New South Wales,
21st January, 1897.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 31st December, 1896, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.						Quarter ending 31st Dec., 1895.	Quarter ending 31st Dec., 1896.
Miles open	2,531½	2,576½
Revenue	...	1895. 1896. { Passenger ... £280,472 £289,012 } { Merchandise... £590,366 £620,563 }		£870,838	£909,575
Expenditure	£413,867	£426,195
Train miles run	2,095,314	2,175,454
Earnings per train mile	8/3¼	8/4¼
Expenditure per train mile	3/11½	3/11
Percentage—Expenditure to earnings	47·52	46·86
Number of passengers	5,357,918	5,810,483
Tonnage of goods traffic	1,019,069	1,094,110
Tonnage of live stock traffic	50,495	46,720

TRAMWAYS.						Quarter ending 31st Dec., 1895.	Quarter ending 31st Dec., 1896.
Miles open	61	61
Revenue from all sources	£73,728	£77,027
Expenditure	£62,879	£65,166
Tram miles run	672,973	759,751
Earnings per tram mile	2/2¼	2/0½
Expenditure per tram mile	1/10½	1/8½
Percentage—Expenditure to earnings	85·29	84·60
Number of fares collected	17,407,300	18,225,383

*5.—

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found as an Appendix, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

GENERAL REMARKS.

The line from Jerilderie to Berrigan, a distance of 21 miles 65 chains, was opened for traffic on the 14th of October last, and a section of the Condobolin Line, Parkes to Bogan Gate, a distance of 23 miles 38 chains, was opened on the 15th of December.

The earnings for the quarter show an increase of	£38,737
and the expenses an increase of	12,328
leaving an improved net result of	26,409

The working expenses represent 46·86 per cent. of the gross traffic. Liberal provision for renewals has been made.

The traffic generally shows a satisfactory improvement in all branches, the only exception being with the live stock, the better rainfall recently experienced having enabled the pastoralists to retain their stock to a larger extent than was practicable last year, when the country was afflicted with drought; this present loss will, however, lead to improved business later on.

The increase in the various sections of the traffic is as under :

Coaching traffic, £8,540; 452,565 additional passenger journeys were made.

(Goods—

General merchandise	£22,585
Agricultural produce	9,131
Wool	15,194
Minerals and Sundries... ..	961

The live stock revenue decreased by £17,674.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in excellent order and all needful provision is being made for the improving traffic.

TRAMWAYS.

TRAMWAYS.

The traffic shows signs of permanent improvement, the increase
 in revenue for the quarter amounting to £3,299
 The expenses have increased by 2,287
 additional services having been given to the extent of 86,778 miles.

The permanent-way and rolling stock are in good order.

The aggregate revenue from the Railways and Tramways
 for the half-year, 1st July to 31st December,
 amounted to £1,794,393
 being an increase of 78,582
 on the revenue for the corresponding period of 1895.

The Railway working expenses for the half-year represent $50\frac{1}{2}$ per cent. of
 the gross traffic.

We have the honor to be,

Sir,

Your most obedient servants,

E. M. G. EDDY,
 Chief Commissioner.

CHARLES OLIVER,
 Commissioner.

W. M. FEHON,
 Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on Condition of Way and Works for the Quarter ending
31st December, 1896.

Sir,

Office of Engineer-in-Chief for Existing Lines, 6 January, 1897.

I have the honor to report, for the information of the Commissioners, that the permanent-way and works have been satisfactorily maintained during the past quarter, while special attention has been given to the renovation of station-buildings, a large number of which have been repainted.

Re-laying, re-sleepering, and re-ballasting operations have been vigorously carried on.

The curve improvements near Katoomba and Blackheath, and the grade improvement south of Moss Vale Station, have been opened for traffic.

The grade improvements between Maryvale and Geuric have been completed and taken over from the contractor.

The contract for improving the grade between Dargan's Creek and Clarence is progressing.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ending 31st December, 1896.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING 31st MARCH, 1897.)

Presented to Parliament pursuant to Act 51 Vic. No. 35, sec. 44.

Printed under No. 2 Report from Printing Committee, 6 May, 1897.

Office of the Railway Commissioners of New South Wales,
Sydney, 26th April, 1897.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 31st March, 1897, upon the subjects specified, viz. :—

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 3.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached, page 3.

IV.—STAFF.

These returns are given as an Appendix, pages 4 to 7.

RAILWAYS.

GENERAL REMARKS.

The earnings for the quarter show an increase of £43,036, and the expenditure £4,091, leaving an improved net result of £38,945.

The increase in revenue was brought about by an improvement in nearly all classes of traffic.

In the Coaching Department the traffic increased to the extent of £8,414.

In the Goods Department a net gain of £34,622 was obtained, General Merchandise showing an increase of £22,277; Wool, £1,933; Live Stock, £7,739; Minerals, £2,877. A slight decrease of £204 occurred in the Grain, Flour, Hay, Straw, and Chaff traffic.

For the increased revenue in the Passenger Department 378,235 additional passenger journeys were made.

In the Goods Department 70,785 additional tons were carried.

The working expenses for the quarter represent 54.47 per cent. of the gross earnings, as against 57.45 per cent. in the corresponding quarter of last year.

CONDITION OF LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in excellent order. Relaying and resleepering are being proceeded with where necessary, and additions to the facilities for dealing with the improving traffic are being provided.

TRAMWAYS.

GENERAL REMARKS.

An extension of the Military Road Electric Tramway from Spit Road to Mosman's Bay, a distance of 1 mile 37 chains, was opened for traffic on the 1st of March.

The revenue for the quarter increased by £2,917, and the expenses by £2,231, considerable expenditure having been incurred in relaying and in improving the Rolling Stock.

We have the honor to be,

Sir,

Your most obedient servants,

E. M. G. EDDY,

Chief Commissioner.

CHARLES OLIVER,

Commissioner.

W. M. FEHON,

Commissioner.

APPENDIX J.

Report on Condition of Permanent-way and Works for the quarter ending
31st March, 1897.

Sir,
New South Wales Government Railways,
Office of Engineer-in-Chief for Existing Lines, 2 April, 1897.

I have the honor to report, for the information of the Commissioners, that the Permanent-way and Works have been satisfactorily maintained during the past quarter, while special attention has been given to the renovation of station and other buildings.

Relaying, resleeping, and reballasting operations have been carried on steadily.

The contract for improving the grades between Dargan's Creek and Clarence is nearly completed.

Similar works between Hill Top and Mittagong, and between Meryla and Exeter, on the Main Southern Line, and between Blackheath and Mount Victoria, on the Main Western Line, have been started, and good progress is being made.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ending 31st March, 1897.

Article.	Rate.	Reason for such rate.
Bichromate of Potash	"B" class rates and conditions	New rate.
Borax	1st class rates and conditions	do
Coke	South Clifton to Hermidale, 10 per cent. rebate to be allowed on the ordinary rate, provided 1,500 tons per annum are forwarded.	To equalise rates.
Do	Eskbank to Hermidale, 12s. 9d. per ton, in full truck loads, minimum 9 tons for standard 4-wheeled trucks and 13 tons for G trucks.	do do
Flour, bran, meal, pollard, &c.	In 2-ton lots and upwards, forwarded to stations on the Illawarra Line from Eveleigh, Darling Harbour, and Sydney, to be charged A class rates without the addition of 20 per cent.	To encourage traffic.
Limestone	Tamworth to Cockle Creek, carried at the convenience of the Department in full wagon loads, 10s. 2d. per ton.	do do
Molasses, for rabbit poisoning.	Miscellaneous class rates and conditions	do do
Square iron tanks	When filled to be charged at the same rate as the contents, provided that the rate is not less than Special B class or higher than 2nd class, as specified on page 16 of Goods Rate Book.	do do
Sulphuric acid	Darling Harbour to Cockle Creek, 93s. per truck load of 7 tons, all weight in excess to be charged <i>pro rata</i> , the tanks to be hauled free of charge. A charge of 3s. per truck per day to be made for the use of trucks when standing.	do do
Gold coin	The through rate charged on gold coin from the Temora line to be applied to consignments carried on the down journey.	To equalise rates.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING 30TH JUNE, 1897.)

Printed under No. 12 Report from Printing Committee, 22 July, 1897.

Offices of the Railway Commissioners of New South Wales,
Sydney, 20th July, 1897.

To THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 30th June, 1897, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.	Quarter ending 30th June, 1896.	Quarter ending 30th June, 1897.
Miles open	2,531½	2,639½

Percentage—Expenditure to earnings	85·09	85·02
Number of fares collected	17,448,019	19,004,820

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found as an Appendix, page 4.

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

GENERAL REMARKS.

The line from Narrabri to Moree, a distance of 63 miles 10 chains, was opened for traffic on the 1st of April last.

The earnings for the quarter as compared with the corresponding period of last year show an increase of £80,392, and the expenditure £20,834, resulting in an improvement of £59,558.

The satisfactory increase in the revenue return was brought about by an increase in nearly all classes of traffic.

In the Coaching Department the traffic increased to the extent of £19,150.

The Goods Department shows an advance of £61,242, general merchandise contributing an increase of £29,659; live stock, £28,998; minerals, £2,797. A slight decrease of £212 occurred in the wool traffic.

In the Passenger Department 471,911 additional passenger journeys were made.

In the Goods Department 322,375 additional tons were carried.

The working expenses for the quarter are 58·04, as against 62·38 per cent. in the corresponding quarter last year.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in excellent order. Re-laying, re-sleeping, and re-ballasting have been done where required, and satisfactory progress has been made in the improvement of grades.

TRAMWAYS.

The revenue for the quarter increased by £6,912, and the expenses by £5,825, the improved net result being £1,087.

The Quarterly Report is usually confined to the statutory requirements of the Government Railways Act. On this occasion, however, it is our mournful duty to refer, with the deepest regret, to the death, on the 21st ultimo, of Mr. E. M. G. Eddy, Chief Commissioner, our esteemed late colleague, who while at his post of duty was stricken with an illness which in a few days proved fatal.

By the decease of Mr. Eddy the Railways have been deprived of a Chief of the most exceptional ability and the country has sustained a great loss.

Although he has been taken from us, the system of management which he inaugurated and so ably presided over remains, and is capable of being continued.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,

Commissioner.

W. M. FEHON,

Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on Condition of Lines and Works for the Quarter ending
30th June, 1897.

Sir,

Office of Engineer-in-Chief for Existing Lines, 5 July, 1897.

I have the honor to report, for the information of the Commissioners, that the permanent-way and works have been satisfactorily maintained during the past quarter.

Steady progress has been maintained with re-laying, re-sleepering, and re-ballasting operations.

The grade improvement at Dargan's Creek, carried out by contract, and those between Hill Top and Mittagong, carried out departmentally, have been opened for traffic; and the deviation to reduce the grades between Blackheath and Mt. Victoria is nearing completion.

The work of replacing the wooden viaduct at Wagga Wagga with a steel structure has been pushed on, and very good progress is being made.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, quarter ending 30th June, 1897.

1897.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING SEPTEMBER, 1897.)

Printed under No. 22 Report from Printing Committee, 18 November, 1897.

Offices of the Railway Commissioners of New South Wales,
29th October, 1897.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ending 30th September, 1897, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.				Quarter ending 30th Sept., 1896.	Quarter ending 30th Sept., 1897.
Miles open	2,531½	2,639½
Revenue	...	1896.	1897.	£737,185	£699,481
	{ Passenger ...	£243,044	£251,186		
	{ Merchandise ...	£494,141	£448,295		
Expenditure	£405,756	£400,276
Train miles run	1,969,585	1,990,554
Earnings per train mile	7/5½	7/0½
Expenditure per train mile	4/1½	4/0¼
Percentage—Expenditure to earnings	55·04	57·22
Number of passengers	5,392,491	5,639,635
Tonnage of goods traffic	1,113,950	1,129,304
Tonnage of live stock traffic	42,330	34,083

TRAMWAYS.				Quarter ending 30th Sept., 1896.	Quarter ending 30th Sept., 1897.
Miles open	61	62½
Revenue	£70,606	£73,423
Expenditure	£58,833	£62,431
Tram miles run	745,170	807,330
Earnings per tram mile	1/10¼	1/9¼
Expenditure per tram mile	1/7	1/6½
Percentage—Expenditure to earnings	83·32	85·03
Number of fares collected	16,653,775	17,337,962

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached. [Appendix, page 4.]

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 7.

GENERAL REMARKS.

The revenue for the quarter shows a decrease of £37,704, which is more than accounted for by the falling off in the live stock and wool traffic. The former shows a decrease of £21,100, and the latter £33,443; in all, £54,543. The loss is almost wholly consequent upon the drought which was so seriously felt in many parts of the Colony a few months back; but the late shearing, and the difficulties of road transit, owing to recent heavy rains, have, to some extent prevented the wool coming forward as rapidly as it otherwise would have done.

The coaching traffic increased by £8,142, viz., first-class £921, second-class £5,662, and miscellaneous £1,539. For the increase in Passenger Earnings, 247,144 additional journeys were made.

In the goods department, general merchandise increased by £7,177, and coal, coke, and other minerals £1,520. The increase in Mineral Earnings represents 45,545 tons of additional haulage.

The working expenses were reduced by £5,480. The expenditure in connection with the working of new lines which were not opened during the corresponding quarter of last year, the larger outlay on rolling-stock, and the charges on account of the renewing and improving of the Wagga Wagga Viaduct, prevented the working expenses being kept more in harmony with the reduced receipts.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The permanent-way and works have been efficiently maintained, and further grade improvements have been executed.

TRAMWAYS.

The revenue for the quarter increased by £2,817, and the expenses by £3,598, considerable expenditure having been incurred in relaying, also in renewing and improving the crossing in King and Elizabeth Streets, and providing for the renewal of rolling-stock.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,
Chief Commissioner.

W. M. FEHON,
Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

Report on Condition of Lines and Works for the Quarter ending 30th September, 1897.

New South Wales Government Railways,

Sir,

Office of Engineer-in-Chief for Existing Lines, 5 October, 1897.

I have the honor to report, for the information of the Commissioners, that the Permanent-way and Works have been efficiently maintained during the past quarter.

Relaying, resleepering, and reballasting operations have been carried on steadily.

The alteration of gradient between Blackheath and Mount Victoria has been completed, and the duplication of the line between the same stations is nearing completion. Further grade improvements in the vicinity of Exeter, Frampton, between Bethungra and Illabo, and between Orange and Mullion Creek are being energetically pushed forward.

Satisfactory progress is being made with the reconstruction of the Wagga Wagga viaduct.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, Quarter ending 30th September, 1897.

Article.	Rate.	Reason for rate.

13 Sept.	Kelly, James H.	Car-cleaner	6/- per day	Vice J. Bleakley.

APPENDIX IV.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.

RETURN, in accordance with Clause No. 44 of the Railway Act, showing the Removals of Employees from the 1st July to the 30th September, 1897.

Date.	Name.	Position.	Rate.	Remarks.
1897.				
ENGINEER-IN-CHIEF FOR EXISTING LINES BRANCH.				
25 June	Frater, Robert	Labourer	7/6 per day	Retired.
25 "	Marshall, Thomas	Labourer	7/6 per day	Retired.
25 "	Pauley, John	Labourer	7/6 per day	Retired.
26 "	Golding, Daniel	Labourer	7/6 per day	Retired.
30 "	Flight, James	Labourer	7/6 per day	Retired.
1 July	Thorman, James	Fettler	7/8 per day	Deceased.
12 "	Hickey, Daniel	Labourer	6/6 per day	Discharged.
16 "	Jepson, John	Labourer	7/- per day	Resigned.
24 "	Worley, Henry	Fettler	7/6 per day	Deceased.
27 "	Martin, John	Labourer	8/6 per day	Deceased.
2 Aug.	Hawthorn, Frank	Fettler	7/8 per day	Deceased.
14 "	Richings, Thomas	Ganger	9/- per day	Deceased.
27 "	Barrett, John	Labourer	7/6 per day	Discharged.
3 Sept.	Jackson, George	Fettler	7/6 per day	Deceased.
8 "	Smith, William	Labourer	7/6 per day	Retired.
8 "	Hartigan, Thomas	Fettler	7/6 per day	Deceased.
8 "	Connelly, John	Ganger	9/- per day	Deceased.
9 "	Stapleton, Michael	Fettler	7/6 per day	Retired.
24 "	Duggan, Daniel	Fettler	7/6 per day	Discharged.
CHIEF MECHANICAL ENGINEER'S BRANCH.				
8 July	Henderson, James	Carrriage builder	10/6 per day	Deceased.
10 "	Downie, William	Examiner	10/4 per day	Deceased.
14 "	Tindle, George	Fireman	10/- per day	Deceased.
27 "	Murdoch, John	Blacksmith	10/4 per day	Written off books.
28 "	Kearsley, George	Carrriage builder	10/6 per day	Deceased.
4 Aug.	Pope, Francis	Cleaner	7/- per day	Discharged.
6 "	Mood, John C.	Painter	10/- per day	Deceased.
10 "	Croal, Alexander	Painter's assistant	7/- per day	Resigned.
18 "	Hurley, John	Waggon Builder	10/- per day	Resigned.
19 "	Bradley, John	Labourer	7/6 per day	Resigned.
19 "	Green, Frederick	Driver	14/- per day	Resigned.
19 "	Richarde, Robert	Fitter	10/8 per day	Deceased.
31 "	Bland, Howell J.	Travelling inspector	£230 per annum	Deceased.
2 Sept.	Rose, Thomas	Fitter	11/6 per day	Resigned.
27 "	Grierson, John	Cleaner	7/- per day	Deceased.
30 "	Baker, George	Labourer	7/6 per day	Resigned.
30 "	Moses, Henry	Driver	14/- per day	Resigned.
CHIEF TRAFFIC MANAGER'S BRANCH.				
1 July	Reid, Nora	Gatekeeper	Free house	Deceased.
7 "	Donn, Grace	Gatekeeper	Free house	Resigned.
10 "	Abbot, John	Junior Clerk	£20 per annum	Resigned.
13 "	Brown, Mary	Station Mistress	10/- per week & house.	Discharged.
16 "	Golding, Jane	Gatekeeper	Free house	Resigned.
16 "	Maudsley, Mary	Gatekeeper	Free house	Resigned.
20 "	McDarra, Kathleen	Gatekeeper	7/- per week	Discharged.
20 "	Troloar, Elizabeth	Gatekeeper	15/- per week & house.	Resigned.
24 "	Hutchinson, Thomas	Porter	7/6 per day	Resigned.
25 "	Greedy, Mary	Gatekeeper	Free house	Resigned.
30 "	Harrison, Mary	Gatekeeper	15/- per week	Deceased.
31 "	Garnham, John	Junior porter	4/2 per day	Deceased.
31 "	Hodder, Catherine	Gatekeeper	7/- per week	Resigned.
4 Aug.	Deveney, Timothy	Gatekeeper	30/- per week	Discharged.
5 "	Morris, Patrick J.	Clerk and operator	6/- per day	Discharged.
5 "	York, Lizzie	Gatekeeper	15/- per week	Resigned.
9 "	Morgan, Sarah	Gatekeeper	2/6 per week and house	Resigned.
10 "	Curlin, James	Junior porter	2/6 per day	Discharged.
13 "	Spicer, Thomas	Telegraph probationer	2/6 per week	Discharged.
16 "	Hutton, Thomas	Shunter	7/6 per day	Discharged.
26 "	Richardson, John	Night officer	£130 per ann	Discharged.
28 "	Wahnsley, West	Night officer	£130 per ann	Resigned.
28 "	Rogney, Kieran	Porter	8/- per day	Resigned.
28 "	Ternan, Christopher	Porter	7/- per day	Resigned.
3 Sept.	Paul, Emily	Gatekeeper	Free house	Resigned.
6 "	Watson, George	Telegraph probationer	2/6 per week	Resigned.
9 "	Reid, Annie	Gatekeeper	Free house	Resigned.
13 "	Ferney, Mary	Gatekeeper	10/- per week	Discharged.
SIGNAL AND INTERLOCKING ENGINEERS' BRANCH.				
10 Aug.	Parker, Albert	Blacksmith	10/6 per day	Discharged.
ELECTRICAL ENGINEER'S BRANCH.				
12 Sept.	Higgs, Edward	Junior fitter	5/6 per day	Deceased.
TRAMWAYS—LOCOMOTIVE BRANCH.				
12 July	Boden, Joseph	Driver	11/- per day	Retired.
15 "	Daley, Augustus J.	Shop boy	3/- per day	Discharged.
12 Aug.	Wormald, William	Driver	15/- per day	Discharged.
10 Sept.	Murray, James F.	Cleaner	7/6 per day	Left the Service
20 "	Stephenson, Thomas W.	Fireman	7/6 per day	Resigned
TRAMWAYS—TRAFFIC BRANCH				
12 July	Walker, Mrs. Sarah	Ticket seller	£75 per annum	Discharged.
1 Sept.	Blackley, James	Car cleaner	7/- per day	Deceased.
TRAMWAYS—MAINTENANCE BRANCH				
5 July	Fulton, Charles	Junior Labourer	6/- per day	Resigned.
26 Aug.	Wilson, William	Labourer	7/6 per day	Resigned.
31 "	Henry, William	Labourer	7/6 per day	Retired.
31 "	Heggie, Robert	Labourer	7/6 per day	Retired

COMMISSION.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our trusty and well-beloved—

- THOMAS THOMSON EWING, Esq., M.P., President.
- The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
- The Hon. JAMES HOSKINS, M.L.C.
- The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
- The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.
- The Hon. DANIEL O'CONNOR, M.L.C.
- HENRY CLARKE, Esq., M.P.
- CHARLES ALFRED LEE, Esq., M.P.
- JOHN LIONEL FEGAN, Esq., M.P.
- THOMAS HENRY HASSALL, Esq., M.P.
- GEORGE BLACK, Esq., M.P.
- FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
- FRANK FARNELL, Esq., M.P.

Greeting :—

KNOW YE, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any five or more of you, to make a diligent and full inquiry as to the expediency and best methods of extending the Railway system of the Colony into the City of Sydney, or through the City, and to the waters of Port Jackson :—

- I. For the convenience of passengers ; and
- II. For the conveyance of goods.

And we do, by these presents, grant to you, or any five or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means : And We do give you power, at your discretion, to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission : And Our further will and pleasure is that you do, within three months after the date of this Our Commission, certify to Us, in the Office of Our Chief Secretary, under your or any five or more of your hands and seals, what you shall find touching the premises : And We hereby command all Government Officers and other persons whomsoever within Our Colony of New South Wales, that they be assistant to you and each of you in the execution of these presents : And We appoint you, the said THOMAS THOMSON EWING, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled, "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twenty-second day of December, in the year of Our Lord one thousand eight hundred and ninety-six, and in the sixtieth year of Our Reign.

(L.S.) HAMPDEN.

By His Excellency's Command,
(L.S.) JAMES N. BRUNKER.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their Report in the above matter : Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such Report for a period of two months—to take effect from the 22nd ultimo.

Given under my hand, at Government House, Sydney, this ninth day of April, one thousand eight hundred and ninety-seven.

HAMPDEN.
By His Excellency's Command,
JAMES N. BRUNKER.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an Instrument dated the ninth day of April last, extended for a period of two months ; and whereas it is necessary to extend the same still further ; now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commission are to make their return to, and for, a further period of two weeks beyond the time in, and by, the aforesaid Instrument appointed for the purpose—to take effect from the 22nd instant.

Given under my hand, at Government House, Sydney, this twenty-fifth day of May, one thousand eight hundred and ninety-seven.

HAMPDEN.
By His Excellency's Command,
JAMES N. BRUNKER.

CITY RAILWAY EXTENSION.

REPORT.

To His Excellency the Right Honorable HENRY ROBERT, VISCOUNT HAMPDEN, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We the members of the Royal Commission appointed on the 22nd December, 1896, “to make a diligent and full inquiry as to the expediency and best methods of extending the Railway system of the Colony into the City of Sydney, or through the City, and to the waters of Port Jackson:—

I. For the convenience of passengers; and

II. For the conveyance of goods,”

have the honor to make the following Report:—

AN EXTENSION OF THE RAILWAY FOR THE CONVENIENCE OF PASSENGERS.

PREVIOUS PROPOSALS FOR EXTENDING THE RAILWAY INTO THE CITY.

1. At the opening of our inquiry an explanation was made by the Engineer-in-Chief for Railway Construction, of the conclusions arrived at by the Royal Commission of 1890 and 1891.

That Commission, by a majority, favoured a central station for long distance traffic on the site occupied by the Benevolent Asylum, and a suburban main station at King-street; two lines being continued to a terminus at Circular Quay, and other two lines taken from King-street round to the eastern suburbs.

This was an alternative scheme to one previously put forward by the Railway Commissioners, showing a central station at the top of King-street, and requiring the north-west corner of Hyde Park, as well as the area comprising St. James'-road, and the sites occupied by the Registrar-General's Office, the Supreme Court, and St. James' Church.

By this scheme the lines terminating at the Benevolent Asylum would be laid level, the four roads carried into the City being upon an ascending gradient of 1 in 260 as far as Belmore-road, and, over Belmore Park, Elizabeth-street, and Goulburn-street, by viaduct, on a grade of 1 in 100. At Goulburn-street the lines would enter a cutting along the western side of Nithsdale-street to Liverpool-street where it was proposed to provide an overhead station; and thence, passing under Liverpool-street they would enter Hyde Park, through which, parallel with Elizabeth-street and in a position to avoid interference with the avenue of trees adjacent to that street, they would be carried in covered way as far as Park-street. There they would leave the Park by curving in a westerly direction, and passing under Elizabeth-street, near the north-eastern corner of the Synagogue, emerge into an open cutting, and thence proceed under Market-street, between which street and King-street, and between Elizabeth and Castlereagh streets, the main Metropolitan Station would be situated.

This

This station was to be a daylight one, although below the surface, and, to facilitate traffic in connection with it, King-street, between Elizabeth-street and Castlereagh-street, was to be widened to a minimum width of 80 feet.

The two lines to the Circular Quay were to be in open cutting between Elizabeth and Castlereagh streets for a distance of about 50 yards, and then, after passing under the Victoria Arcade, enter another open cutting for a further distance of about 200 yards, to a point on the south side of Hunter-street. There they would enter and pass through a tunnel under Hunter, Bligh, and Bent streets, emerging into open cutting again, and passing thence through the site now occupied by the Public Instruction Department, proceed under Bridge-street and the New Zealand Loan and Mercantile Agency Stores to a terminal station at the Custom House.

The estimated cost of constructing the works in connection with the alternative scheme—by which only the suburban traffic would be brought into the city, all country trains being dealt with at Redfern—was £835,000, exclusive of land resumption, which the Chief Commissioner for Railways said would cost £1,000,000, and probably more.

No action appears to have been taken on the Report of the Commission of 1891.

PROCEEDINGS SINCE THE LAST ROYAL COMMISSION.

2. In 1892 the Engineer-in-Chief for Railway Construction submitted to the Minister for Works, a minute, in which he recommended a similar route, but covering over the portions of the line which in the Commissioners' scheme would be in open cutting; and at that point the matter rested until 1896, in April of which year the Railway Commissioners brought it again under notice in a letter to the Premier and Minister for Railways, inviting serious consideration to the question of the terminal accommodation as one calling for immediate settlement in the interests of the safety as well as the comfort of the travelling public; and they suggested, in order to reduce the interference with Hyde Park, the bringing forward of the railway to the south-west section of the Park, bounded by Liverpool, Elizabeth, and Park streets.

This scheme was suggested, they explained, principally in consequence of the expenditure which had been incurred, since the date of their previous proposal, in connection with the Supreme Court and St. James' Church, and because it was thought that the taking of the portion of Hyde Park required for the new scheme would not give rise to so much opposition as would, perhaps, be created if the section nearest the Supreme Court and all the land up to King-street were appropriated.

In view of the representations made, directions were given by the Minister for the preparation of the necessary plans and estimates; and, the Railway Commissioners having reported as required under section 13 of the Public Works Act, the Park-street scheme was referred to the present Royal Commission.

DESCRIPTION OF THE EXTENSION SUBMITTED TO THE PRESENT COMMISSION—THE PARK-STREET SCHEME.

3. According to this scheme, six lines of railway are extended from Redfern Station across Devonshire-street, which has to be lowered 9 feet in order to obtain headway under the railway for vehicular traffic, and the resulting gradients will be 1 in 60 falling from George-street to the railway, and 1 in 25 rising from the railway to Castlereagh-street.

The lines throughout will be in the open air. Through the Cemetery and Benevolent Asylum grounds, and also the grounds occupied by the police quarters, they are near the surface, after which they pass over Belmore-road by a bridge, and thence by brick viaduct and steel bridges, where roads are crossed, to a point about half-way between Goulburn-street and Elizabeth-street, where the lines go into cutting. Belmore-road, Elizabeth and Goulburn streets, are thus bridged over with a minimum headway of 16 feet for the traffic underneath.

The

The railway is carried under Liverpool-street without altering the present level.

Between Liverpool and Park streets the whole width of the ground from Elizabeth-street to about 25 feet from the central part in Hyde Park, would be taken up and excavated to an average depth of about 22 feet.

Park-street is lowered so as to run on an even grade between Liverpool and College streets, and it is widened so as to give 100 feet between the kerbs.

The terminal station buildings are on the frontage of Park-street, and the platform at the end of the line which terminates within 90 feet of Park-street, meets the level of the footpath outside. Thirteen lines of rails are brought into the station, and there are four double platforms, each of 30 feet; two single platforms, each of 21 feet 9 inches; and one single arrival platform of 30 feet in width. There is also a cab road 20 feet in width. The platforms are, for the most part, 700 feet in length, 600 feet of which is roofed over. The station buildings have the following accommodation:—On the ground floor—entrance hall, booking-offices, 96 x 55; general waiting-room, 62 x 36; refreshment-room, 96 x 38, with the ladies' dining-room and the necessary offices attached; ladies' waiting-rooms, first and second class, with lavatories, &c., as well as similar accommodation for gentlemen; cloak-room, 100 x 39; a telegraph office, and an information bureau. The station building, as proposed to be constructed, carries two stories above the ground floor. These would accommodate the Railway Commissioners and their officers.

There are also offices for the station-master, inspectors, and the station staff. Along the front of the station building is a colonnade over the footpath, and outside this a covered-way for cabs and carriages, 240 feet long.

In the line of Bathurst-street, and across the station at a sufficient elevation above the platforms, there is a double foot-bridge—one portion being 15 feet wide for the public to cross into the Park on the eastern side of the station, the other 20 feet for access to the different platforms, which is gained by means of staircases from the bridge. At a level below the platforms, and accessible from the latter by steps, are urinals and closets. At the south-western end of the station, that is at the corner of Liverpool and Elizabeth streets, a large parcels office is provided—200 x 50—with lifts for access to the level below. On the south-east corner there is a horse and carriage dock.

Under this proposal Elizabeth-street is widened to the extent of 30 feet, and along the centre of Park-street a double line of tramway is proposed to be laid.

ESTIMATED COST OF THE PARK-STREET SCHEME.

4. The Engineer for Railway Construction gives the following details of the estimated cost of the Park-street scheme:—

Land resumption between Belmore Park and Liverpool-street	£100,000
Buildings (600 feet roof)	200,000
Construction of line	£260,000
Signals and interlocking	15,500
Electric lights	4,500
			<hr/>
			280,000
Shelter-sheds and alterations	20,000
			<hr/>
			£600,000

In the estimate of £200,000 for buildings, £133,000 is set down for station buildings—£68,000 being for passenger accommodation and necessary rooms and £65,000 for offices—and the remaining £67,000 is the estimated cost of the roof.

The land resumption would probably be larger than that represented by £100,000, as a greater width of line than is calculated for in this estimate is contemplated, and if prices for material, &c., should rise, as at present there is a tendency for them to do, the estimate of cost generally would be increased.

REPORT

REPORT OF THE RAILWAY COMMISSIONERS ON THE SCHEME.

5. The report of the Railway Commissioners upon the scheme estimates the annual cost at £26,000, or, interest at 3 per cent. on the capital expenditure, £18,000, and cost of maintaining permanent-way, and for traffic, locomotive, and other expenses, £8,000. Their traffic estimate is £33,365, which is made up of a saving of £1,365 in rents for officers of the administrative staff, and £32,000 additional railway revenue obtained by adding 1d. for each ordinary-passenger journey, 1s. 6d. and 1s. per month for first and second-class season ticket-holders (with a percentage reduction per month for tickets taken out for three, six, and twelve months), and 3d. per week for workmen's tickets.

The Commissioners explain that the estimated revenue from the extension is calculated upon the existing traffic carried to and from Redfern Station, but that they fully expect the shortening of the time required for journeying to and from the suburbs, and the reduction in cost by avoiding the daily charges for cabs, trams, and omnibuses, will very soon lead to a great increase in the suburban traffic; and also that under the new arrangements increased rents could be obtained for the refreshment-rooms.

OUTLINE OF THE COMMISSION'S INQUIRY.

6. In conducting our inquiry we have confined our attention in detail to the Departmental proposals and to such other schemes as have been submitted to us by private persons; a full general consideration being given to all schemes which had previously been inquired into.

The question of extending the railway into the city for the conveyance of goods was disposed of by its being clearly established by evidence that such an extension is not at present required, and that the passenger and goods traffic, which are not dependent upon one another, must be treated separately; it was necessary, however, to procure sufficient information to properly represent this part of our inquiry, and, as will be seen further on, witnesses competent to inform the Commission on the subject were examined, and useful returns were obtained from the Department which administers the Government wharfs.

To the two main points in the question of an extension of the railway into the city for the convenience of passengers—route and cost—we have given very careful consideration. Each, in this inquiry, is in intimate relation to the other, for the appropriation of a portion of Hyde Park would lessen, while the adoption of a route involving the resumption of city property must largely increase, the cost of the extension.

We, therefore, proceeded to obtain from the Engineer-in-Chief for Railway Construction a full explanation of the proposed Park-street scheme, and to ascertain from another and special source (provision for which was made by us) the value of all properties within the city which might be affected by railway extension if the Hyde Park scheme were not adopted. As it was necessary also to understand clearly the condition of affairs at Redfern Railway Station, officers of the railway staff were examined in order to obtain this information, and to determine the best means for meeting requirements.

As the inquiry progressed and witnesses were examined, some of whom submitted schemes of their own, points of importance cropped up which led us to look in directions other than those specially put before us for possible improvements upon the Departmental proposal.

After bringing our inquiry to the stage of having before us what seemed to be—with the exception of evidence from the Railway Commissioners personally—all the information of value procurable by us on the subject, and of being in the position in which we might justifiably arrive at a decision as to the most advisable course to recommend for extending the railway into the city, we examined the the Chief Commissioner for Railways, so that we might obtain from him his views, and those of his colleagues, on all essential matters, and ascertain how far they were in accord, or otherwise, with what appeared to us should be recommended.

To

To assist us in our investigation the Engineer-in-Chief for Railway Construction, throughout the inquiry, was frequently engaged in the preparation of new or amended plans and estimates, or in explaining them to the Commission.

CONDITION OF THE REDFERN STATION AND YARD.

7. In the letter of the Railway Commissioners to the Minister for Railways in 1898, it is stated that the extension of the railway system of the Colony into the city is one "calling for immediate settlement, as the difficulties of working the station at Redfern have increased, and are still increasing, to such an extent that a considerable improvement in the terminal arrangements is, in the interests of safety, as well as to provide for the comfort of the travelling public, absolutely necessary."

From the evidence of the Out-door Traffic Superintendent of the Southern and Suburban System of the Government Railways, it appears that on an ordinary day the total number of passenger and goods trains and light engines passing through Redfern tunnel to and from the station and Darling Harbour would be about 561, and the number during the busiest hour of the day 45.

On last Eight-hour Holiday the number of trains and engines for the day was 701, and the number during the busiest hour of the day 52.

The number of long-distance and suburban passenger trains in and out of Redfern during the ordinary day is given as 324, and of this number 38 would be during the busiest hour of the day. On Eight-hour Day the long-distance and suburban passenger trains passing through the tunnel in and out of Redfern numbered 476, and the greatest number during the hour on that day 37.

The arrival and departure of these trains do not, however, represent the whole of the work done in the yard, as a large proportion of the trains arriving have to be drawn out from the platforms and shunted to liberate the engines which bring them in, or to place the cars at other platforms to form other trains.

Much of the shunting at present carried on in connection with the engines of the passenger trains is required because the platforms have only two roads between them—one for each as a main arrival and departure road—a state of things which makes it necessary for every train which runs into a platform to be drawn out again before the engine can be liberated; whereas, if there were a central or independent road between the two platform roads, an engine of a train running into a platform could be cut off, and then, by crossing over on the middle road, run back to the southern end of the train and couple on.

There is also, it is explained, a great deal of shunting of the engines to keep them out of the way of incoming and outgoing passenger trains, as there are no refuge sidings at the end of the platforms and between the main running lines to allow of the engines being readily shunted clear to take water or stand while other trains arrive and depart. Neither are there any sidings between or handy to the platforms where spare coaches can stand, so as to be readily available to strengthen trains, or for engines to stand ready to back on to trains which have arrived at the platforms; and considerable shunting across the main running lines is occasioned in consequence.

The distance between the ends of the passenger platforms and the junctions of the goods yard and the Darling Harbour branch with the main passenger lines is regarded as much too short, and frequently causes delay to shunting operations, both in the passenger yard, the goods yard, and to the goods trains on the branch.

The arrangement of the points and crossings is also unsuitable to conduct the traffic satisfactorily, in consequence of the limited length and their being hemmed in by the Darling Harbour branch, the yard having been added to, piecemeal, from time to time.

The sidings between Darling Harbour branch and the Mortuary for storing carriages necessitate trains of cars being shunted through the tunnel in the face of incoming passenger trains when drawing the empty trains out of the sidings to set back into the passenger platforms, besides blocking goods traffic on the branch while the shunting is being done.

In the busy hours of the morning and evening, the shunting staff in the station yard are said to be taxed to their utmost in getting the trains in and out without causing delay.

Much difficulty is experienced at all times, and more particularly at holiday times, in consequence of the shortness of most of the platforms, as trains when standing at some of the platforms overlap and block the entrance to and exit from adjoining lines. The length of a seven-car train, with engine, is 410 feet and 424 feet, according to the class of engine; but it is frequently necessary to run trains up to nine cars, the length of which is about 530 feet, and on holidays it would be an advantage to run, at times, up to twelve cars, the length of which, with engine, would be 689 feet. Yet only two out of a total of thirteen platforms are long enough to hold trains of more than eight cars and engine clear of adjoining roads; two are so short as to be useless for trains to arrive at or depart from; and two others are much too short to accommodate ordinary seven-car trains without fouling other roads.

The platforms are regarded as defective, not only in respect of length, but in not being provided with roofing or awning sufficient to admit of passengers' luggage and parcels of long-distance country trains being dealt with under cover; and the ends of the platforms, in some instances, are considered to be too narrow and most inconvenient.

Improvements are necessary also in connection with the cloak-room, parcels, and refreshment-room.

The tunnel at Redfern is very awkwardly situated, as the trains in coming through it have to pass "through the neck of a bottle," as one of the witnesses examined described it, and are only able to open out to the various platforms about 760 feet from the tunnel, which leaves only 850 feet of length for the diverging roads and the platforms.

DIFFICULTY OF IMPROVING REDFERN STATION AND YARD.

8. The present defective condition of Redfern Station and yard it appears cannot be materially improved without remodelling both, and this would mean a very large expenditure, in addition to the resumption of valuable property.

The Engineer-in-Chief for Railway Construction points out that any material alteration of Redfern Station would entail an entire reconstruction of the platforms and docks, as the station building was erected a long time ago, when the requirements of the railway traffic were nothing like what they are now; and any reconstruction of the platforms would involve a re-arrangement of the lines of railway in the station yard.

It is not desirable that Prince Alfred Park should be taken for the purpose of increasing the available space, but even if the Park were resumed it would be of no avail, as the distance between Redfern tunnel and the additional land which might be obtained from the Park is too short to permit of trains branching off in that direction conveniently after emerging from the tunnel, the situation of the Park being sharp off to the right after coming through the tunnel.

It is possible to widen the tunnel, but it is questionable whether this would afford any appreciable relief. If the tunnel were widened—which might be done by resuming sufficient land—the condition of affairs in relation to the station would not be materially improved, though by this means the Darling Harbour and Mortuary traffic could be kept away from the existing six lines of rails north of the tunnel.

Widening the tunnel would necessitate also an increase in the width of the approaches to the tunnel, and that would mean an expensive resumption of land about Regent-street and towards Eveleigh.

But even if the tunnel were widened in order to make a convenient and proper arrangement for the trains, the whole yard would have to be remodelled, as the lines of railway leading up to the station are so congested between the northern end of the tunnel and the platforms that, without making a radical alteration of everything, no really beneficial change, it is considered, could be effected.

"The re-arrangement of the station at Redfern," said the Engineer-in-Chief for Railway Construction, "would be a tremendous undertaking. To alter the six roads and make them suitable while the traffic is going on would be a dangerous operation." And the Chief Commissioner for Railways points out that to spend any large sum of money in improving the arrangements at the present station, or upon any addition to the existing yard from an adjoining site, would be unwise, because no increase upon the present passenger fares could be charged to recoup the outlay, and the station is not sufficiently far into the city.

ALLEGED

ALLEGED ADVANTAGES OF THE PARK-STREET SCHEME.

9. The advantages offered by the Park-street Scheme are stated officially to be as follows:—

1. It will provide a new and satisfactory terminal station, Redfern being not suitable for the present large and increasing traffic, and urgently requiring alteration.
2. It will bring the passenger traffic into the city.
3. It will not spoil the most frequented portion of Hyde Park.

From an engineering point of view the scheme is regarded as one of the best that can be put forward, and the Chief Commissioner for Railways is strongly of opinion that Hyde Park is the proper position for a station of the dimensions shown on the plans, and such as is necessary if the whole of the requirements of the traffic and the travelling public are to be met.

The site is considered by the Railway Commissioners to be fairly central, and is easy of access; the station would be commodious and safe, and would provide for the accommodation of the whole of the Railway Administrative Staff; and the arrangements generally would be complete enough to deal with both the suburban and long-distance trains.

The streets in the vicinity would be improved, and alterations contemplated in the tram services would connect the whole of them with the station. Park-street would be levelled and widened materially in front of the station, and the portion of Elizabeth-street between Park and Liverpool streets would be widened by 33 feet; and to connect the tram services with the station it is proposed to run an electric tram from the top of William-street along Park-street and on to George-street, where it would junction with the electric tramway about to be constructed in George-street to the Circular Quay.

The site of the station is convenient also for a railway round to the eastern suburbs, and for an extension to the Circular Quay; and a further advantage of the scheme is that it renders unnecessary any large resumption of city property.

OBJECTIONS TO THE PARK-STREET SCHEME.

10. It has been urged in opposition to the Park-street scheme that no portion of the Park should be taken for any purpose other than that to which it is put at the present time, and that Park-street is not sufficiently far enough into the city for the railway to be brought with the greatest advantage to the travelling public.

These objections are met, to a large extent at least, by evidence given by the Chief Commissioner for Railways and the Engineer-in-Chief for Railway Construction.

If a portion of Hyde Park required for the railway be granted, the Railway Commissioners suggest that the railway revenue shall be debited to the extent of £1,000 per year, or the railway capital might be charged with a lump sum of £100,000, for providing open spaces in districts needing them, or for the formation and maintenance of a park in some other part of the metropolis where it may be wanted; and in connection with this it is suggested that a very suitable site for such a park would be the old cemeteries in Devonshire-street.

As for the attractiveness of the remainder of Hyde Park being interfered with by the presence of the railway station and yard, the Engineer-in-Chief for Railway Construction points out that the running and shunting of the trains need not be objectionable to frequenters of the Park, and that if it should be necessary to wall off the Park from the station in order to exclude the yard from sight, this can easily be done; and, in respect to the idea that some of the Park may be taken for railway purposes in the future, the Chief Commissioner gives his assurance that no such thing shall take place. In addition to this assurance it is pointed out that much of the increased traffic of the future will be dealt with by extensions to the eastern suburbs and Circular Quay, which can be easily carried out.

With

With regard to Park-street not being sufficiently far in the city for the convenience of railway passengers, the Mayors of Ashfield, Burwood, and Strathfield, speaking on behalf of a large proportion of the suburban travelling public, consider that the railway should be extended to King-street; in fact, everyone is in favour of this, the Park-street proposal having only been made in the endeavour to reduce the opposition to taking Hyde Park; and in no instance has anyone examined by the Commission, expressed unqualified approval of the proposal to have the terminal station at Park-street.

AN EXTENSION INTO THE CITY FROM LIVERPOOL-STREET BY TUNNEL.

11. In view of the objections to the Park-street scheme, it appeared to us desirable that we should ascertain whether the railway could be extended from Liverpool-street to the necessary point in the city by tunnel. Such a plan would render unnecessary any appreciable interference with Hyde Park, or, it might be, any costly resumption of property; and it was represented to us as possible to use in connection with such a scheme electric instead of steam traction, by which method the inconvenience that might arise from the presence of smoke or gases in the tunnel would be prevented.

It may be said to be a railway axiom that where possible tunnels should be avoided, a surface line being much better, both the convenience of the public and the convenience of working being ensured to a much greater extent on a surface station. "The fact that passengers have to ascend and descend," the Chief Mechanical Engineer of the Railway Department informed the Commission, "even though you may have the best appliances for the purpose, is an immense objection to a station underground"; and, for the successful working of a large terminal station, daylight is regarded as almost indispensable.

The Engineer-in-Chief for Railway Construction, in describing to the Commission the Mont Cenis and St. Gothard tunnels, explained that if the traffic through a tunnel be very great and there be no time to clear the tunnel between the passage of the trains, a following train going through gets into the smoke left by the previous train, and it is still worse if the following train travel in an opposite direction and, as it were, churn up the air.

Any scheme in which there would be a large extent of tunnel work, and steam locomotives are to be used, ought, he says, to be avoided; and there can be no doubt that the difficulty of working in tunnel a constant succession of trains upon six lines—the number in the scheme the Commission regard as the best—would be extreme. Forty-five trains are said to pass in and out of Redfern station in the course of a busy hour, and to have this number passing and repassing with steam motive power through a long tunnel, even with the most approved means of ventilation, would give rise to serious complications, the tendency being to drive passengers from the trains at Redfern in order that they might find some other way of getting into the city.

Electric traction is used in America to a small extent, and is increasing there in favour. Cutting off the locomotive engine from a train, and attaching to the train an electric motor, preparatory to entering a tunnel, is quite practicable, but it does not, for many reasons, appear desirable or satisfactory. With further developments electricity may become a wholly satisfactory motive power, and tunnels will then doubtless be of great advantage; but, at present, we feel that this matter must be considered from the standpoint of steam traction only.

ROUTES INVOLVING EXPENSIVE RESUMPTIONS.

12. Any proposal involving a large resumption of city property would make the desired railway extension very costly, and the Engineer-in-Chief for Railway Construction informed the Commission that a width of 75 feet would be required upon which to satisfactorily locate six lines of railway under favourable conditions; and if land be resumed for this purpose, having in view existing buildings and the kind of construction necessary, the resumption could not be reasonably estimated at less than 100 feet wide.

Information

Information placed before the Commission shows that if Hyde Park were avoided, and a strip of land 100 feet wide were taken from Redfern Station to Circular Quay, the area represented by this strip would be within a fraction of 20 acres, without including any land required for stations, and the estimated cost of resuming it £1,424,285, at twenty years' purchase, and £1,755,624 at twenty-five years' purchase, without allowing anything for severance, for disruption of business, or for the 10 per cent. for forced sale always paid by the Government. Valuable properties would be severed if such a strip of land were resumed, and under the Public Works Act the Constructing Authority could be compelled to purchase many large and expensive buildings situated wholly or partly upon the area resumed, so that the total expenditure would, in this manner, be enormously increased.

A route of this kind is, of course, to a certain extent, an imaginary one, and the valuation necessarily an approximation; but the latter is based upon the municipal assessment for the present year on property in a part of the city of medium value, and may be taken as fairly indicative of what would have to be expended if the railway were brought to the Circular Quay by any route offering the facilities required for the traffic and away from Hyde Park.

Another illustration of the expensiveness of a route westward of Hyde Park is shown by taking the estimated cost of the proposed extension of the railway to Park-street, apart from the erection of station buildings, and then valuing according to the latest municipal assessments, but without making any allowance for disruption of business or for forced sale, the block on the opposite side of Elizabeth-street corresponding in area with what is proposed to be taken for the terminal station.

Excluding the station buildings, the cost of the extension to Park-street would be £280,000; and the estimated value of the block immediately west of the Park, and bounded by Elizabeth, Park, and Liverpool streets, which contains an area of 10 acres 2 roods 2 perches, is £922,800, without allowance for disruption of business and the 10 per cent. for forced sale.

This value is arrived at by taking the total of the municipal assessments for this portion of the city for the municipal year 1897-8—£34,832—capitalising that sum at 25 years' purchase, and adding £52,000 for certain buildings not included in the assessments.

The Commission having come to the conclusion that the question of tunnels should be postponed until such time as it is considered desirable to work the traffic with another motive power, have to estimate the cost of any extension into the city upon the basis of the illustrations given above. The cost of land resumption for the route of an extension to Circular Quay, on this basis, together with the cost of such an area as would be required to meet the wants of the Railway Commissioners for a terminal station, would approach £3,000,000. If the length of the resumption of the route for the line were reduced by the station being placed in a more central part of the city, much of the saving thus effected would be lost in the additional cost of the resumption of a site for the central railway station, where the land would be more valuable.

A suggestion that the Government should purchase a large area of land, and after taking that required for railway purposes resell the remainder, did not commend itself as a prudent solution of the problem.

A POSSIBLE LOOP-LINE.

13. Sensible of the difficulties associated with any Hyde Park scheme, and of the expensiveness of any route through another part of the city, and impressed with the undesirableness of tunnelling under the Park from Liverpool-street, with an underground terminal station, if such a scheme can be avoided, we endeavoured to ascertain what other outlet there might be which would prove generally acceptable.

It was stated that in the construction and extension of railways in other parts of the world some railway companies are adopting a system by which the lines, instead of coming to an end at a definite terminus, where shunting operations may be carried on, are continued so as to curve round in a loop, by which means incoming trains are able to proceed on their outward journeys without shunting.

A

A loop-line scheme was accordingly prepared by the Engineer-in-Chief for Railway Construction, to show, as he explained, what could be done by an alternative scheme to bring the railway into the neighbourhood of Hyde Park without materially interfering with the Park, and dispensing with the proposed terminal station there for one between Elizabeth and Castlereagh streets, and then carrying the railway on to the Circular Quay (for the convenience of suburban passengers) and round a portion of the Domain by a loop for empty long-distance trains, the loop being a substitute for a large terminal station with sidings. This scheme would accommodate all trains, except the Melbourne express and the mail and long-distance trains.

After passing through the Park to Park-street the lines would cross over to the west side of Elizabeth-street, about 40 feet north of the Synagogue, passing under Park-street, which would be carried over the railway by an overbridge, and curving to the west and then to the north. Having reached the west side of Elizabeth-street, the lines would proceed about 20 feet below the surface, but in open cutting, by a route midway between Castlereagh and Elizabeth streets, as far as the present High School building, to a central station.

This station, which would have three double platforms, booking-offices, and waiting-rooms, would be about 14 feet below the surface level, and therefore what must be called an underground station; but it would be open above, roofed with a large roof, properly ventilated. Its centre would be very near the position now occupied by that portion of Market-street which is between Castlereagh-street and Elizabeth-street.

Market-street would be closed for street traffic, which could only be continued by carrying the street over the railway, and that would have to be done by lowering the rails 2 or 3 feet more, a proceeding not considered desirable.

But while Market-street would be closed in this manner, a new street, 60 feet wide, would be opened at the north end of the station opposite the Registrar-General's office, and between the station and King-street, so as to give proper access to the station.

Northerly from the station the lines would divide into two pairs. The two lines on the west side of the road would be carried around a circular route or loop, through a tunnel under King, Phillip, and Macquarie streets, and the Domain, to the locality under the hill in the Domain near Woolloomooloo Bay, facing Sir John Young's Crescent, where they would emerge into the open air, and where there would be several sidings for stationary trains. Thence, these two lines would curve back in tunnel, commencing from a point opposite the main gateway at the Domain, to the station near King-street; thus providing an uninterrupted run for trains from and round again to the station to avoid shunting, and also siding room for storing vehicles at a point on the east side of the Domain.

This loop-line it was proposed should be used by the empty carriages of the trains, after discharging their passengers at the station between Castlereagh and Elizabeth streets, which would run around the loop back to the station, or to the sidings near Woolloomooloo Bay to await the time for their departure on the return journey.

The suburban traffic was to be carried on to the neighbourhood of the Circular Quay. This was to be done by continuing the eastern pair of lines from the station, through the tunnel used for the loop, as far as Macquarie-street, and thence under the Sydney Hospital towards the Inner Domain and the entrance gates to Government House, to a point nearly opposite Bridge-street, where they would emerge from the tunnel and terminate at a station commencing near Bridge-street, and having its centre a little to the north of Albert-street. Here there would be provided two double platforms, 500 feet in length, with booking-offices near the top of Albert-street, and access to the platforms by over-bridge from the booking-offices, and also by subway under Macquarie-street from the level of the Circular Quay.

The Railway Commissioners did not appear to be unwilling to accept this scheme, if no better could be had, but the evidence of the Chief Commissioner showed that the number of platforms provided for at King-street would, in his opinion, be altogether insufficient to deal with the whole of the traffic, as at present there are thirteen platforms at Redfern, and they are inadequate.

A FURTHER SCHEME.

14. The Chief Commissioner for Railways strongly urged the adoption of a scheme which would bring the whole of the traffic to one large general station in Hyde Park, but thought it possible that a modification of this idea might be fairly satisfactory. In the opinion of the Railway Commissioners every line should be connected with one station in Hyde Park, but if sufficient space in the Park for that purpose could not be obtained, there was the alternative of putting the suburban passengers on one side of Elizabeth-street and long-distance passengers on the other.

This, he explained, could be worked out by taking 5 acres of Hyde Park, or one-half the area previously proposed near St. James'-road, and placing in that area a station for long-distance traffic with about five platforms and a cab-drive between two of the principal arrival lines, and dealing with the suburban traffic at the station suggested between Castlereagh and Elizabeth streets on the site now occupied by the High School near King-street.

It might be possible, he informed the Commission, at slack times, to work the Campbelltown trains and the trains going to the Mountains, in addition to the suburban trains, at the Castlereagh-street station, near King-street, but impossible to do so at busy times. There is too much luggage to be dealt with; and on this point he pressed upon the attention of the Commission the necessity in dealing with the railway traffic—especially when it is going long distances, and people take a large quantity of luggage with them—for having the platforms on a level with the surrounding streets, up which cabs may drive and deliver their luggage to the trains.

Neither the southern express trains nor the mail trains could be dealt with satisfactorily at the station between Castlereagh and Elizabeth streets.

This plan would render an extension to the Circular Quay from King-street unnecessary. The shunting of the suburban trains, the Chief Commissioner thought, could be dealt with at the Castlereagh-street station, and, in his opinion, the time has not come for extending the railway to the Quay. The extra traffic which might be gained by it, would not, he considers, pay for the outlay, and he pointed out that for the distance between the Circular Quay and King-street the traffic would have to be carried without extra charge, as the same fare must be fixed whether the line were extended to the Quay or stopped at King-street.

The cost of the scheme, including resumption, is estimated by the Engineer-in-Chief at £850,200, or £292,000 for the Park station added to £558,200 the proportional cost of the scheme to Castlereagh-street, near King-street.

A REVIEW OF THE QUESTION.

15. Two things were now evident: We had, by our inquiries in all directions in which we were likely to obtain reliable information, ascertained it to be impossible to find a route for both long-distance and suburban traffic through the city, west of Hyde Park, unless at great and practically prohibitive expense; and it was clearly shown that if the railway were to be brought into the city at all for this purpose a portion of Hyde Park must be taken.

We discussed the matter in all its bearings, and came to the conclusion that the only recommendation open to us was that a Hyde Park scheme must be adopted.

It was proved that an extension citywards was necessary, and that Park-street is not far enough into the city. It appeared to us that, without interfering with any buildings between St. James'-road and King-street, the portion of the Park between St. James'-road and Park-street would be eminently suitable as well as sufficient for all terminal arrangements, including a surface station for both suburban and long-distance passenger trains. In this the Chief Commissioner fully concurs, as passengers would be landed in what may be described as near the centre of the business portion of the city, convenient to every part, and the situation is one from which either now or in the future there may be carried a further extension to the Circular Quay or to the eastern suburbs.

THE ST. JAMES'-ROAD SCHEME.

16. The Park must be used to a greater or less extent, as the expense of resuming city property by any other route is out of the question; and the appropriation of the portion asked for in connection with the dual scheme would probably prove as serious an interference with the north-western section as taking the whole of it would be.

It must also be borne in mind that dealing with the whole of the railway traffic at one station must be more satisfactory to everybody than dividing the traffic and finding accommodation for the suburban passengers—who number three-fourths of the whole—at a station which is practically underground.

Then the dual system would be more costly in the initial outlay, and also in working, as it would be necessary to have a staff for the station accommodating the suburban traffic, and another for the station dealing with the long-distance traffic.

If the 10 acres were taken the one large station building would extend square-off from Elizabeth-street, fronting St. James'-road, to about 20 feet from the central avenue of the Park, and the station appurtenances would go back as far as Park-street. But while this would be the case, 44 feet of the Park section would be added to Elizabeth-street from Park-street to St. James'-road, widening this portion of Elizabeth-street in this manner to as much as 110 feet. St. James'-road also would be widened considerably by a portion of the Park being added to it.

Park-street would be raised somewhat to permit of the lines—of which there would be six—approaching the station, running under it, and where the lines would pass through the portion of the Park between Liverpool-street and Park-street, portions of the cutting would be open, and portions covered, the arrangements with regard to the covered portions being that the existing pathways in this part of the Park would not be interfered with, and the present facilities for crossing or frequenting the Park not affected to an extent that would cause inconvenience, only sufficient of the route being left open to provide for ventilation and signalling purposes.

If it should be thought desirable to extend the railway to the Circular Quay, it could be done by lowering two lines on the eastern side of the station and carrying them in tunnel under Macquarie-street down to a point somewhere near the Water Police Court; and in the same manner by sweeping round in tunnel branch lines could be extended to the eastern suburbs.

In no respect, we are assured, need the station or the movements of the trains be an eyesore or a source of annoyance to anyone in or near Hyde Park. Arrangements would be made to completely and attractively cut off the station from the central avenue, and neither it nor the shunting or passing of the trains is likely to be objectionable in any sense. The station buildings, themselves, ought to be an ornament to the city.

REASONS IN SUPPORT OF ST. JAMES'-ROAD SCHEME.

17. The taking of 10 acres of Hyde Park, viewed in connection with the suggestion of the Chief Commissioner for Railways to contribute towards the purchase and formation of other open spaces for public recreation, and with the evidence on the subject, is not so serious a matter as considered alone it would seem to be. If these 10 acres be appropriated for railway purposes, the Park will be reduced to an area of 30 acres; but in addition to this, there are, within a short distance of the intersection of Elizabeth-street and St. James'-road, 158 acres in other park areas. The Outer Domain contains 90 acres, the Garden Palace Ground and Botanic Gardens, 60 acres; Cook and Phillip Parks, 8 acres. Then there are the grounds surrounding Government House, containing 40 acres, which sooner or later should be added to the Domain or the Gardens. Comparing this large extent of park land available to people in and immediately around the city with what exists within easy distance of Carter's Barracks, in Belmore-road, one of the most thickly populated localities within the metropolis, the difference is very great, for there only 28 acres 3 roods are to be found—Belmore Park containing 10 acres and Prince Alfred Park 18 acres 3 roods. A comparison of the residential population

population of the city with that in the locality of Carter's Barracks is equally striking. Taking the junction of Elizabeth-street with St. James'-road as the centre of a $\frac{1}{2}$ -mile radius the residential population is 15,000, and, with Carter's Barracks as the centre of a similar radius, the population is 31,000, and they generally of a poorer class than the people of the city and more in need of conveniently-situated public recreation areas.

If the old cemeteries in Devonshire-street were formed into a park it would materially add to the facilities for recreation in a locality where they are specially wanted, and the park would be upon one of the most suitable sites that could be found. The cemeteries alone contain an area of 11 acres 3 roods $11\frac{1}{2}$ perches; and in the event of the land being resumed it is unlikely, the Commission are informed, that any claim for compensation could be sustained, but it would be necessary for the Government to satisfactorily deal with the question of reinterments.

Adjoining these cemeteries are further areas containing 12 acres, upon which are the Benevolent Asylum, Christ Church Parsonage, a cottage and Carter's Barracks occupied by the police, the Female Refuge, and the Convent of the Good Samaritan. The land in the occupation of the police might be added to the proposed park. The Benevolent Asylum the Commission regard as unsuitable for the purposes for which it is used, and no doubt some arrangements will be made in the near future for the vacation of the present buildings. This would permit of the park area being further enlarged by nearly 4 acres.

A better situation for the park could not be well chosen. The land rises from Belmore Park by an easy grade to a considerable elevation, and it would be difficult to imagine any other area which could confer as much benefit upon an equally large section of the population of the metropolis.

A convenient approach to it, which would also be an advantage to the public travelling in the trams which now run along Devonshire-street, by shortening their journey, could be obtained by diverting those trams from Belmore Park and Pitt-street to Elizabeth-street and thence on to Devonshire-street. Instead of crossing Belmore Park these trams would, by the altered route, continue along Elizabeth-street to Belmore-road, and then turning a little to the west along a new road to be made facing the park, connect with Devonshire-street at its junction with Castlereagh-street.

The Commission are fully alive to the responsibility incurred in recommending the utilisation of a part of Hyde Park for railway purposes, but they are of opinion that with a park well laid out on the available land in the vicinity of Devonshire-street—and the £100,000 offered by the Railway Commissioners should be ample to meet any claims for compensation, and place the Park in good order—the city will be better provided with public recreation areas than it is at present.

The Park difficulty would in this manner appear to be satisfactorily met. It is asserted by the Railway Commissioners that the extension of the railway will return a surplus over annual expenses from the start, and while it should be profitable it will certainly be popular. To business people it will be of great advantage, and it should prove of equal benefit to workmen living in the railway suburbs, many of whom are engaged in the city, as the extension will be available to them at a cost of only a half-penny per day for the double journey for the extra distance from Redfern to St. James'-road.

A tram service cannot satisfactorily deal with the railway traffic to and from the city. It does not do so now, and it is not likely to do so when the electric tram is running down George-street, as the local traffic of that street will be very large.

These facts, and the certainty that no other route but one taking a portion of Hyde Park can be obtained unless at an enormous expense for the resumption of valuable city properties, and the increased cost for severance and the disturbance of business, are strong features in favour of the St. James'-road scheme; and if this scheme should not be adopted, the only course then open will be to spend a large sum of money in improving the present terminal station, which can never give satisfaction, as the change from tram to train and train to tram, with consequent delay, will always be a grievance while the terminus remains at Redfern. Further, that terminus is dangerous in consequence of the limited space available in which to work the trains and the congested nature of the traffic, the condition of affairs there being such that the travelling public are, it is not too much to say, constantly exposed to the risk of serious injury or loss of life.

AN EXTENSION INTO THE CITY FOR THE CONVEYANCE OF GOODS.

18. This second part of our inquiry, as already mentioned, was disposed of by its being clearly shown that an extension of the railway into the city for the conveyance of goods is unnecessary.

OWNERSHIP AND OCCUPATION OF WATER-FRONTAGES.

As a preliminary step we had prepared for us a statement of the ownership and present occupation of the principal business portions of the water-frontage of the city of Sydney extending from Potts' Point, Sydney, to Jones' Bay, Pyrmont, illustrated by a map of Sydney showing the foreshores in the possession of the Government and those portions in the hands of private owners or occupiers.

The information supplied in this manner, and other evidence on the subject are important, as they represent the wharfage capabilities of Sydney Harbour in relation to the trade requirements of the port—in respect of both the wharfs owned by the Government and those in private hands—and are useful in connection with the idea entertained by some people that it would be a wise policy for the Government to become the possessors of all the wharfage of the harbour, especially if the various wharfs were brought into close communication with the railway by lines extended around the foreshore from Darling Harbour.

From Potts' Point, without any break, the Government are the owners of the foreshore extending along the whole of Woolloomooloo Bay, the Domain, Mrs. Macquarie's Chair, the Botanic Gardens, Farm Cove, Fort Macquarie, Sydney Cove, and Circular Quay to the southern side of Dawes' Battery, a total length of about 16,460 feet; in Darling Harbour from its head to the western boundary of Darling Island they have about 6,810 feet, and in Blackwattle Cove 1,075 feet; or in all 24,345 feet of water-frontage.

The details of this frontage are as follows:—

Woolloomooloo Bay, from M'Quade's Point to the eastern end of Cowper Wharf, gives a frontage of 1,350 feet, with an average width of about 200 feet, and a total area of 6 acres 3 roods 12 perches. Pile-wharfs are being constructed to provide five broadside berths, each about 300 feet long; and, by dredging, a depth of 28 feet of water at low tide may be obtained.

Cowper Wharf in Woolloomooloo Bay is about 1,400 feet long, with a jetty of about 260 feet in the middle.

From Cowper Wharf to the outer limit of Woolloomooloo Bay—a length of 1,785 feet—the foreshore is occupied by the Health Department and by swimming-baths and rowing and boat sheds.

In all, Woolloomooloo Bay presents a frontage of about 4,535 feet, or, as it was explained to the Commission, a length similar to that which would be shown by a straight line drawn in Darling Harbour from the north-western corner of the Australian Gas Company's wharf through Pyrmont Bridge to the foot of Bathurst-street.

Next to Woolloomooloo Bay is the foreshore around the Outer Domain, Botanic Gardens, and Farm Cove; the length of this frontage being about 5,200 feet, and the depth of water 26 to 31 feet to the mud at low tide off Mrs. Macquarie's Chair, and from 16 to 36 feet in the middle of Farm Cove.

From the gate of the Botanic Gardens on the western side of Farm Cove to the North Shore Horse Ferry Dock at Fort Macquarie, there is a length of 1,680 feet of foreshore, with a depth 100 feet out, of from 13 to 20 feet at low tide.

Circular Quay, measuring from the Horse Ferry Dock to Dawes Battery, presents a frontage of about 5,045 feet; and Dawes Point 1,980 feet.

Then, in addition to being possessors of this amount of frontage on the foreshores east of Darling Harbour, the Government own on the west side of Darling Harbour, from the head of the Harbour to the western boundary of Darling Island, a frontage of about 6,810 feet; and in Blackwattle Cove, which is within $1\frac{1}{8}$ mile of Redfern Station and $\frac{2}{3}$ of a mile of the nearest point on the railway at Darling Harbour, a wharf at the head of the Cove 1,075 feet long.

The

The Associated Wharfs, which are private property, except where the reclaimed land has not been purchased from the Crown, show a total length of 4,370 feet, and contain thirty-three berths; the wharfs in some cases, including the land, stores, and jetties connected with them, being valued at a very high sum.

ESTIMATED VALUE OF PRIVATE WHARFS AND WATER-FRONTAGE PROPERTIES.

A rough estimate of the value of the private wharfs and water-frontage properties alone, extending from Dawes Point to the head of Darling Harbour, amounts to £2,037,300; but it is thought that the resumption of these frontages would not be effected for less than double that sum if allowance be made for a sufficient area upon which to locate the railway and readjust the frontages, and for compensation for disruption of business and the usual 10 per cent. increase in the value given by the Government when resuming property. The witnesses examined by the Commission were almost unanimous in the opinion that such a purchase must result in loss to the State, as neither by resale of unnecessary land, or proceeds for services rendered in connection with the wharfs, would a return be obtained commensurate with the outlay.

RAILWAY CONNECTION WITH THE WHARFS.

Of this water-frontage, Woolloomooloo Bay could be directly connected with the railway by an extension from Redfern, the line being brought by the route recommended for the passenger traffic as far as Liverpool-street, and then in tunnel to the Bay; and the railway in Darling Harbour could easily be made to serve wharfs around Darling Island and Blackwattle Cove.

THE TRADING METHODS OF THE PORT.

Circular Quay and the Associated Wharfs it would not be so easy to deal with. The large passenger traffic at the Quay presents ground for serious objection to a railway being extended there for goods traffic; and the Associated Wharfs are so constructed that, without a complete re-arrangement, by which the jetty system of wharf would be done away with, a railway could not get down to them, and such a re-arrangement would involve the resumption of these private wharfs by the Government.

We find, however, that an extension of the railway into the city for the accommodation of goods traffic is unnecessary.

In the importation of goods, Sydney, in relation to the country districts, is the distributing centre. Goods imported are not, except in a very few instances, sent direct from the ship to the railway. Packages imported are carted from the ship to the warehouses, where they are broken, and the goods distributed; portions remaining in the city warehouses and other portions being sent to country purchasers. With regard to exported goods, wool and other produce brought by rail from the country are carted or lightered from the railway to the warehouses, and only in very exceptional cases are they taken direct from the railway to the ship. Coal and shale are shipped from the trucks into vessels at Darling Harbour; but chilled meat, though received in large quantities by rail from the country, does not, in all instances, go at once on ship-board, as a large portion of it, the Commission were informed, is stored for some time before being exported.

Of the wool received in Sydney by railway, 75 per cent. may be said to go into the warehouses to be dumped, or offered for sale, and of the remaining 25 per cent.—which covers the quantity that comes to the city already dumped—only a small portion would be put on board ship direct. The quantity of wool shipped from Sydney per annum is stated to be about 100,000 tons, 70,000 tons of which are brought by rail; and 60 per cent. of the total quantity is shipped from private wharfs on the east side of Darling Harbour and at Miller's Point. The residue goes from the Circular Quay or Woolloomooloo Bay.

A change in the practice which exists of removing the wool from the railway trucks to the warehouses for shipment does not appear to be practicable, from the circumstance that the wool must be first offered for sale; and the custom of selling the wool in Sydney rather than shipping it for sale elsewhere is extending. This, however, is not the only obstacle that would be in the way of any attempt to ship wool direct from the railway, as it is found by the railway officials impossible to bring the wool of one consignee separate from that of others, for in picking up the wool from the different stations the bales become mixed, and when the loaded trucks reach Sydney the contents have to be divided.

The practice followed with regard to wool obtains also with respect to tallow and hides.

A RAILWAY EXTENSION FOR GOODS TRAFFIC UNNECESSARY.

This condition of things, considered with the fact that the warehouses are scattered over the city, and that there is a growing disposition for buyers to purchase at different places, and with what is stated to be done with imported general merchandise, is not such as to show that an extension of the railway into the city for goods traffic is for the present required. In the opinion of the Chief Commissioner for Railways, when the time comes—if it should come within a reasonable period—for any further development of railway traffic in connection with the Harbour, requirements can be met most amply by the extension of the Darling Harbour lines to Darling Island, a work now in progress. If the facilities offered by Darling Island should not be sufficient, it will not be difficult at any time to utilise Blackwattle Bay, and even Glebe Island; railway connection with these places being practicable either from Darling Harbour or from some point, say, in the neighbourhood of Petersham. But at the present time the wharfage accommodation in Sydney Harbour is beyond requirements, and, though doubtless the trade of the port will largely increase, and, perhaps to some extent alter in the methods followed in dealing with the various kinds of merchandise, there is no evidence before us to indicate the advisableness of the Government purchasing the private wharfs, which would have to be done to make a goods railway of any service to them. There is evidence, however, that if the private wharfs were purchased by the Government, some of the private wharf-owners bought out on one side of the harbour would probably enter again into competition with the Government by constructing wharfs on the other side.

FUTURE RAILWAY EXTENSIONS.

19. In dealing with the extension into the city there are four questions which, though not of such pressing importance as the matter specially under consideration, must not be lost sight of—

- (1.) An extension to the Circular Quay.
- (2.) An extension to the eastern suburbs.
- (3.) An extension to North Shore.
- (4.) A circular railway under the city.

It is necessary in deciding upon a scheme for bringing the railway into the city that our recommendation should be such as will not be inimical to any one of these four projects, and it is a feature of the St. James'-road Scheme that it will fit in with all these extensions.

In view of the terms of the commission issued to us we have not considered it necessary to enter into the question of the cost of any of these four possible extensions; but we desire it to be understood that the scheme for extending the railway to St. James'-road, which we recommend, is not antagonistic to what appears to be the future of railway development in relation to the city of Sydney.

The estimated cost of the St. James'-road scheme is £650,000, including land resumption, or £50,000 above the estimate for the Park-street scheme. This includes provision for large office accommodation.

THE COMMISSION'S RECOMMENDATION.

For the reasons herein stated, we are of opinion—

- I. That it is expedient the railway system of the Colony should be extended into the city for the convenience of passengers, and that the best method of doing this, is by the route and according to the plan described as the St. James'-road Scheme.
- II. That it is not expedient to further extend the railway system of the Colony into the city of Sydney, or through the city, and to the waters of Port Jackson, for the conveyance of goods.

We have the honor to be,

Your Excellency's most obedient Servants,

THOS. EWING,
 PRESIDENT. (L.S.)
 F. T. HUMPHERY. (L.S.)
 JAMES HOSKINS. (L.S.)
 C. J. ROBERTS. (L.S.)
 W. J. TRICKETT. (L.S.)
 HENRY CLARKE. (L.S.)
 CHARLES A. LEE. (L.S.)
 JOHN L. FEGAN. (L.S.)
 T. H. HASSALL. (L.S.)
 F. A. WRIGHT. (L.S.)
 FRANK FARNELL. (L.S.)

We concur in the above recommendations to the following extent:—

- I. That it is expedient the railway system of the Colony should be extended into the city for the convenience of passengers, but the route adopted for the purpose should be one that will not interfere with Hyde Park.
- II. That it is not at present expedient to further extend the railway system of the Colony into the city of Sydney, or through the city, and to the waters of Port Jackson, for the conveyance of goods.

DANIEL O'CONNOR. (L.S.)
 GEORGE BLACK. (L.S.)

Sydney, 1 June, 1897.

ROYAL COMMISSION ON CITY RAILWAY EXTENSION.

MINUTES OF PROCEEDINGS.

TUESDAY, 16 FEBRUARY, 1897.

THE Royal Commission appointed to inquire as to the expediency and best methods of extending the Railway system of the Colony into the City of Sydney, or through the City, and to the waters of Port Jackson—(1) for the convenience of passengers; and (2) for the conveyance of goods, met in the Board Room of the Parliamentary Standing Committee on Public Works.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. William Joseph Trickett, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The Commission was read by the Secretary.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 17 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

The Commission adjourned until 12 o'clock noon on Thursday, the following day.

THURSDAY, 18 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

The Commission adjourned until 12 o'clock noon on Friday, the following day.

FRIDAY,

FRIDAY, 19 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. James Hoskins, M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Charles Alfred Lee, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

The Commission adjourned until 12 o'clock noon on Tuesday, 23rd February.

TUESDAY, 23 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. James Hoskins, M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Francis Augustus Wright, Esq., M.P.
Henry Clarke, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence :—

Letter from the Hon. W. J. Trickett, expressing his regret that, so far, he had only been able to attend one meeting of the Commission, and explaining that his absence was caused by serious illness.

The correspondence was received.

John Parry, Out-door Superintendent, Traffic Branch, Department of Railways, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 24 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

John Parry, Out-door Superintendent, Traffic Branch, Department of Railways, was further examined.

The Commission adjourned until 12 o'clock noon on Thursday, the following day.

THURSDAY, 25 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT :—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. James Hoskins, M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Charles Alfred Lee, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

John Parry Out-door Superintendent, Traffic Branch, Department of Railways, was further examined.

The Commission adjourned until 12 o'clock noon on Friday, the following day.

FRIDAY,

FRIDAY, 26 FEBRUARY, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Stephen Edward Perdriau, Surveyor, Department of Lands, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Monday, 1st March.

MONDAY, 1 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. James Hoskins, M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

John Harper, Goods Superintendent, Department of Railways, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Tuesday, the following day.

TUESDAY, 2 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 3 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

James Powell, late Collector of Customs, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Friday, 5th March.

FRIDAY, 5 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Charles Alfred Lee, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

John Jackson, Manager of Public Wharfs, Treasury Department, made an affirmation, and was examined.

The Commission adjourned until 12 o'clock noon on Tuesday, 9th March.

TUESDAY, 9 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. William Greenwood, submitting for the consideration of the Commission a scheme prepared by himself for extending the railway into the city.

The correspondence was received.

John Jackson, Manager of Public Wharfs, was further examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 10 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. James Hoskins, M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Charles Alfred Lee, Esq., M.P.	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Under-Secretary for Finance and Trade, enclosing a statement showing the total revenue from Government wharfs in Sydney Harbour to 31st December, 1896.

The correspondence was received.

William Thow, Chief Mechanical Engineer, Department of Railways, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Thursday, the following day.

THURSDAY, 11 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	George Black, Esq., M.P.
Charles Alfred Lee, Esq., M.P.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Hugh McLachlan, Secretary to the Railway Commissioners, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Friday, the following day.

FRIDAY, 12 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	George Black, Esq., M.P.

Francis Augustus Wright, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

The Commission adjourned until 12 o'clock noon on Tuesday, 16th March.

TUESDAY,

TUESDAY, 16 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from Mr. G. N. Griffiths, requesting the attention of the Commission to a scheme for extending the railway into the city, prepared by the Stuart-Dibbs Government in 1884.

The correspondence was received.

Stephen Edward Perdriau, Surveyor, Department of Lands, was further examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY, 17 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	George Black, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, was further examined.

William Robson Benson, Manager, Wharf Association, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Thursday, the following day.

THURSDAY, 18 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
Henry Clarke, Esq., M.P.	George Black, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letters from Mr. William Cowper to the Honorable the Minister for Public Works, forwarded to the Commission for their information, advocating a scheme prepared by himself for extending the railway into the city.

The correspondence was received.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Tuesday, 23rd March.

TUESDAY, 23 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.	
The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
Frank Farnell, Esq., M.P.	

The minutes of the previous meeting were read, and confirmed.

The Secretary read the following correspondence:—

Letter from the Under Secretary for Finance and Trade, with a statement showing the yearly revenue derived from Government wharfs in Sydney Harbour to 31st December, 1896.

The correspondence was received.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, was further examined.

Walter Liberty Vernon, Government Architect, was sworn, and examined.

The Commission adjourned until 12 o'clock noon on Wednesday, the following day.

WEDNESDAY,

WEDNESDAY, 24 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Charles Alfred Lee, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	George Black, Esq., M.P.
Henry Clarke, Esq., M.P.	Francis Augustus Wright, Esq., M.P.
	Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

Stephen Edward Perdriau, Surveyor, Department of Lands, was further examined.

The Commission adjourned until 12 o'clock noon on Thursday, the following day.

THURSDAY, 25 MARCH, 1897.

The Commission met at 12 o'clock noon.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P. President.

The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.

The Commission met at 2 o'clock p.m.

MEMBERS PRESENT:—

Thomas Thomson Ewing, Esq., M.P., President.

The Hon. Frederick Thomas Humphery, M.L.C.	Henry Clarke, Esq., M.P.
The Hon. James Hoskins, M.L.C.	John Lionel Fegan, Esq., M.P.
The Hon. Charles James Roberts, C.M.G., M.L.C.	Thomas Henry Hassall, Esq., M.P.
The Hon. William Joseph Trickett, M.L.C.	George Black, Esq., M.P.
The Hon. Daniel O'Connor, M.L.C.	Francis Augustus Wright, Esq., M.P.

Frank Farnell, Esq., M.P.

The minutes of the previous meeting were read, and confirmed.

The Commission finally adopted and signed their Report to His Excellency the Governor.

Mr. Trickett referred to his absence from the meetings of the Commission from 16th February to 21st April, which, he explained, had been necessitated by a severe illness, and he requested that the fact be noted in the Commission's Minutes of Proceedings.

It was decided that the explanation should be inserted in the minutes as desired.

On the motion of Mr. Humphery, seconded by Mr. O'Connor, it was resolved:—

“That the Commission desire to place on record their high appreciation of the services and assistance rendered by the Engineer-in-Chief for Railway Construction, Mr. Deane, and his staff, and the officers of the Railway Department; by Mr. Perdriau, of the Department of Lands; and by the Secretary to the Commission, Mr. Charles Lyne, and his staff.”

The Commission adjourned *sine die*.

LIST OF WITNESSES.

	PAGE.
Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works	1-14, 28-32, 50-53, 57-59, 119-121, 123, 124-127, 136, 137

ROYAL COMMISSION ON CITY RAILWAY EXTENSION.

MINUTES OF EVIDENCE.

THURSDAY, 16 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL MEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
	FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works,
sworn, and examined:—

1. *President.*] You have prepared a statement in regard to the various schemes that have been proposed for extending the railway system into the city? Yes.
2. Will you be good enough to read the statement? It is as follows:—

H. Deane.

16 Feb., 1897.

I wish, in the first place, to call attention to the conclusions arrived at by the Royal Commission that was appointed by the Government in 1890. A large number of proposals was submitted to that Commission, and they selected certain of these for further consideration. After taking evidence, and after considerable discussion, the following resolution was passed:—"That the Commission approve of the Hyde Park scheme as put forward by the Railway Commissioners, and that the same be adopted."

In consequence of the objections that were urged against the use of Hyde Park for a railway terminus an alternative scheme was afterwards considered.

On the 3rd of July the Commission met and heard the evidence of Mr. E. M. G. Eddy, Chief Railway Commissioner, upon an amended proposal for bringing the line through the city, the particulars of which are embraced in the following statement:—

"The Railway Commissioners would wish the Royal Commission to understand that they consider the scheme which they have already submitted, providing for a terminal station in Hyde Park, with connecting lines to the eastern suburbs, is, in their opinion, the best that could be adopted; yet, failing to obtain approval of that scheme, and looking at the urgent necessity that exists for a settlement of the question, as Redfern station is altogether inadequate and inconvenient to meet the requirements of the growing traffic, and the tram communication with the railway station calls for a prompt decision, they submit an alternative scheme which, in their opinion, would very fairly meet the requirements of the railway system, and would also be a perfectly satisfactory scheme, so far as the suburban traffic is concerned. The scheme, necessitating as it does the resumption of a large amount of city property, would necessarily be considerably more expensive than if Hyde Park had been adopted for the terminal station. Doubtless a considerable amount of the money expended for property would be recovered by selling some parts of it later on, at a largely-enhanced value, consequent upon the contiguity of railway stations.

"The scheme contemplates the construction of a large terminal station for long-distance traffic on the site of the Benevolent Asylum and Police Barracks, and the projection of four lines therefrom into the city as far as King-street, from which point two lines are taken down to a terminus at the Circular Quay, and the remaining two lines are continued round to the eastern suburbs.

3. *Mr. Wright.*] What is proposed to be done with Devonshire-street? It will have to be lowered.

4. *President.*] How much? According to the way it is worked out on the scheme which is shown on the plan on the wall here, it will have to be lowered about 10 feet.

"It is proposed that the lines which terminate at the Benevolent Asylum station should be laid level, but that the four roads on the eastern side of the station, which are carried forward into the city, should be upon an ascending gradient of 1 in 260, for the purpose of crossing over the approach to the station from the eastern side. Having crossed over Belmore-road, the lines are taken across Belmore Park, Elizabeth-street, and Goulburn-street by viaduct, as in the Commissioners' first proposal, on grades of 1 in 100. From the last-named street the line enters a cutting, and passes immediately along the western side of Nithsdale-street to Liverpool-street, where it is proposed to provide an overhead station. Passing under Liverpool-street, the line is carried in covered way under Hyde Park, parallel to Elizabeth-street, in such a position as will avoid interference with the avenue of trees adjacent to the street, until Park-street is reached, when it curves in a westerly direction and passes under Elizabeth-street near the north-eastern corner of the Synagogue, when it emerges into open cutting, and, passing under Market-street, the main metropolitan station is reached. This station will occupy the area between Elizabeth and Castlereagh streets, and Market and King streets. Booking-offices and waiting-room accommodation will be provided at street level in both King-street and Market-street, with stairs communicating with the various platforms. This will be a daylight station, and will afford every facility for dealing with a large and increasing city traffic. King-street will be widened to a minimum width of 80 feet between Elizabeth and Castlereagh streets. After passing under King-street, the two lines on the eastern side of the station are taken round to the eastern suburbs; the remaining two are carried forward between Elizabeth and Castlereagh streets in open cutting for a distance of about 50 yards, and after passing under the Victoria Arcade, again in open cutting for a further distance of about 200 yards. From a point on the southern side of Hunter-street the line enters a tunnel, and passing under that street and Bligh-street (to the west of the Union Club), under the building now occupied by the Australian Club, and Bent-street, the line is again in open cutting. After passing through the site now occupied by the offices of the Education Department, the railway is taken under Bridge-street and the New Zealand Loan and Mercantile Agency stores to a terminal station at the Custom House, the main buildings of which it is suggested to adopt for railway offices. It is considered that a station in the position indicated will be found most convenient for dealing with the across-harbour and ocean-going traffic.

H. Deane.
16 Feb., 1897.

"The total length of the line from the present terminus at Redfern to the proposed station at the Circular Quay is 1 mile 51 chains.

"The estimated cost is as follows:—

Works	£835,000
Resumption and compensation
Total	£

5. The Royal Commission found in favour of a certain amount of work without knowing what it would cost? Yes: there was no estimate made for resumption and compensation.

6. *Mr. Hoskins.*] Was any estimate made of the cost of resumption? No.

"The station at the Circular Quay would of course be an enormous convenience in connection with the traffic between the harbour and the railway system.

"The station at King-street would be in a most central position for the city; all the existing tram-lines pass along the side of the proposed station, and the proposed new cable tram-line to Woollahra would pass in front of the station.

"Giving booking offices means of ingress and egress at Market-street, practically provides a second station.

"The station at Liverpool-street would also be exceedingly convenient for that end of the town, as well as in connection with the tram-lines to the whole of the eastern suburbs, which would pass in front thereof.

Tunnelling (in four sections)	725 yards.
Open running and stations	2,167 "
Area of Benevolent Asylum and Cemetery	16 acres.
Disturbance of park	2½ "
Works involving disturbance of the park, completed in	6 months.
Liverpool-street, from booking office to platform level	15 feet.
Market-street to platform level	15 "
King-street, Castlereagh-street entrance	20 "
Circular Quay	On the level.

"This amended project received the closest attention of the Commission at the meetings held on the 3rd and 7th of July. The Commission, bearing in mind the objections which have been raised to the resumption of any portion of Hyde Park, and the facilities which would be afforded by placing a station on the Benevolent Asylum site for extending the railway round the western side of the city of Sydney, and thus affording means of communication by bridge with North Shore, decided to recommend the above scheme as an alternative to the Hyde Park scheme, and passed the following resolution:—

"That, after consideration of the additional evidence placed before the Commission, this Commission recommends that the latest proposal of the Railway Commissioners—that the central station for long-distance traffic be on the present Benevolent Asylum site, and that the present suburban railway traffic be continued through to Circular Quay, as shown on the plan now submitted as an alternative to the scheme already recommended—be adopted. And the Commission further recommends that provision be made at the proposed central station—on the site of the Benevolent Asylum—for carrying a line west of George-street to a suitable point for connecting North Shore by means of a bridge.

This was carried on division.

7. *Mr. Humphery.*] Was any estimate made of the cost of constructing the western scheme? I do not think there was.

8. *Mr. Roberts.*] In this proposal, is Hyde Park avoided altogether? It goes underneath Hyde Park; there would be only a temporary disturbance of the surface of the park.

9. No actual encroachment on the park? No.

10. *Mr. Black.*] Would the surface be raised? It would be left as it is at present. After the railway was finished Hyde Park would be restored to its present condition. Under instructions, I went into the question of the best route for that scheme, and on the 1st December, 1892, I submitted to the Minister a report, which reads as follows:—

I forward herewith a map on which I have shown the course which I recommend for the City Railway Extension.

The railway would consist of four lines of way. In order to clear Devonshire-street the ascent can be made from the point marked A on plan with a grade of 1 in 66. If a grade of 1 in 100 is required, the line would commence to rise from the point B, 450 feet further south.

A station would be built in the Benevolent Asylum grounds for the through line with platform 350 feet long. Rail-level would be here 77 feet above high water in Port Jackson, or 13 feet above the present level at the station.

From this point to Goulburn-street the railway would be carried on a viaduct with sufficient headway for all street-crossings. The grades would be easy.

Goulburn-street would be crossed by a bridge with a headway for the road of 16 feet.

From Goulburn-street there would be a down gradient of 1 in 132 till the line reaches Liverpool-street, which it would pass under.

Through Hyde Park and under Park and Elizabeth streets the line would be in tunnel, or rather covered way, as the excavation would be made in trenches and then arched over, the depth not being sufficient for actual tunnelling. The surface of the park could be restored to its original condition, but one or two ventilating-shafts would probably be necessary.

On this portion of the line there would be a down grade of 1 in 95.

The blocks of land bounded by the Synagogue, Market-street, and King-street on the north and south, and by Elizabeth and Castlereagh streets on the east and west, would have to be resumed for the station, but portions could be resold. Market-street would be carried across the station by a bridge. Rail-level at this point would be 48 feet above high water, and 19 feet below the intersection of Market-street and Castlereagh-street. If between Market-street and King-street the station is put on a rising grade of 1 in 450, rail-level at the end of the station will be 49 feet and platform-level 52 feet above high water; the platform would thus be 22 feet below the road-level at the intersection of King and Castlereagh streets, and 35 feet below the level of the intersection of King and Elizabeth streets. The rails here cannot be brought any nearer to the surface unless Market-street is raised, which is not to be recommended.

Beyond King-street the line would be carried in tunnel to Bridge-street, passing under that street after which it would emerge and the terminus be placed at the Custom House. A grade of 1 in 66 is obtainable over this portion of the route.

From the King-street station northwards a pair of lines can be carried in tunnel as shown on the map to connect with the Eastern Suburban Railway.

The railway works would be above the level of the main sewer and its principal branches and would therefore not interfere with them.

The map shows an area on the Benevolent Asylum grounds for a reconstruction of the general terminal arrangements at Redfern, but this does not form an essential part of the present scheme.

The scheme submitted is probably the cheapest obtainable.

It is taking exactly the same route, only that I have gone into the question of levels much more closely than was done at first. The principle is the same, only that I propose to cover over by a tunnel this portion of the line which is shown by an open cutting. That would avoid a considerable amount of expense, because if you had to resume and pull down a property, and you covered the railway over again, you would

would be able to build over the top of the railway and let your premises. Although you would have to incur some considerable cost in the way of resumptions you would get a return for your money.

H. Deane.
16 Feb., 1897.

In October, 1894, a large and influential deputation, representatives of various municipalities near Sydney and leading business men of the city, waited upon Mr. Secretary Young to urge that some determination should be arrived at in regard to the question, and Mr. Young then promised to bring the matter before the Cabinet.

The Minister, in replying, said he had only to say, in the first place, that he regretted his colleague, the Premier, had not, as he had intended, been able to be present, as he knew he had had the carrying out of this extension at heart for some considerable time. He might, for himself, say at once that he was fully impressed with the advantages that would attend the extension of our railway system into direct touch with the deep-sea traffic of the world, and also with the great advantage which it would mean to the passengers now using the railways. He considered the deputation was wise in not going into the question of route, for there would be difficulties to meet with regard to that question no matter how the proposal might be dealt with. He understood the deputation wished him to bring the matter before the Cabinet, with a view to its being taken up as a question of national importance, affecting the interests of the whole community of New South Wales.

He had no difficulty whatever in promising them that this should be done. The whole matter should be brought before the Cabinet as early as possible, and receive careful consideration. He had no hesitation in saying that the extension of the railway into the city would be of great advantage to the whole people of New South Wales, always supposing that a line were constructed to accommodate not only the passenger traffic but the goods traffic of the whole country; and he gathered that the feeling of the whole of the gentlemen present was that any line proposed to be constructed must be made to accommodate both.

It was, however, a difficult matter to find any one line which would accommodate the passenger traffic and also supply the wants of the goods traffic of the country at the same time. The passenger traffic would probably be best accommodated by a line running direct to Circular Quay, while, on the other hand, the goods traffic might not be. He only desired to point this out to show the deputation the great difficulty there would be in deciding on any one route which would suit the whole community.

The matter would, however, be submitted for the careful consideration of the Cabinet; and he thought the deputation might safely leave it to the present administration to deal with the question thoroughly and bring it to a satisfactory conclusion.

On April 28th, 1896, the Railway Commissioners addressed the following minute to the Premier:—

Office of the Railway Commissioners of New South Wales, Sydney, 28 April, 1896.

The Hon. G. H. Reid, M.P., Premier and Minister for Railways.—

City Railway Accommodation.

We would invite your serious consideration to the question of the long talked of extension of the railway system of the colony into the city. The matter is one calling for immediate settlement, as the difficulties of working the station at Redfern have increased—and are still increasing—to such an extent that a considerable improvement in the terminal arrangements is, in the interests of safety as well as to provide for the comfort of the travelling public, absolutely necessary.

There are two ways of meeting the difficulty:—

- (1) To extend the railway into the city, which course we would strongly recommend.
- (2) To build a new terminal station on the Benevolent Asylum grounds and the Cemetery adjoining.

If the increased accommodation is given on the Benevolent Asylum grounds, the estimated cost of the works would be about £400,000. If, however, the line were taken through the south-west section of Hyde Park, bounded by Elizabeth-street, Liverpool-street, Park-street, and the central footway in the park, the works and resumptions could be carried out for a sum of about £550,000.

It will be unnecessary for us to go into the details showing the urgency for providing extended accommodation for the carrying on of the traffic at Redfern, but we can give our assurance that the change is now absolutely necessary and should not be delayed.

The bringing forward of the line to Park-street is now suggested in lieu of the original proposal in connection with King-street, as considered by a Royal Commission in 1890 and 1891, principally in consequence of the considerable expenditure that has since that date been incurred on the Supreme Court and St. James' Church; and we think that the restricting of the interference with the park in connection with this scheme will not create so much opposition as would perhaps be raised if the section nearest the Supreme Court were taken.

We may point out that later on, when railway extension to the eastern suburbs will in all probability take place, the additional cost of the Benevolent Asylum grounds site and that in Hyde Park would have to be incurred, so that, therefore, the difference in the cost of the two schemes is only a postponement of the expenditure of £150,000 to some future date; this postponement, however, would for all time place the city to the disadvantage of having its main station far removed from the heart of the business centre.

The views of the Commissioners in regard to the accommodation necessary to be provided in connection with the new station and junction arrangements have been worked out very carefully by Mr. Deane, the Engineer-in-Chief for Railway Construction, and provide for most convenient arrangements for carrying on a large traffic.

The scheme which brings the station into the city combines with it a considerable improvement of Park-street by levelling the road and also widening it materially in front of the station, and also includes the widening of Elizabeth-street, as between Park-street and Liverpool-street, by 33 feet. We should also propose to run an electric tram service from the top of William-street along Park-street in front of the station and junction with the proposed George-street and Circular Quay electric tram service. This new service and the existing lines would therefore place the whole of the tram services in connection with the proposed new central station.

As pointed out by the Chief Commissioner in his evidence before the Royal Commission to inquire into the City Railway schemes, all large cities in Great Britain have several railway termini. Melbourne has three large stations, but the whole of the traffic in connection with the railways of this Colony, coming into the capital, has to be concentrated in one station, and that station of a most primitive character.

In connection with the providing of the station on the Benevolent Asylum site, we would point out that no additional revenue would be derived from the large expenditure that would be incurred, whereas if the railway were brought into the city an additional revenue would be derived for the extra distance; and when it is borne in mind that the Colony can raise money at 3 per cent., an expenditure of £550,000 would only entail an annual cost for capital of £16,500. There would be provided in connection with the station, office accommodation for the whole of the administrative staff, and rents to the extent of quite £1,500 a year would be saved thereby, thus calling for an additional revenue of only £15,000 per annum from the railway traffic to provide for the capital outlay. This sum and the increased working expenditure would be fully covered by adding one penny to each single journey fare and two pence for each double journey fare, and a small sum to the season ticket rates, for the extra distance the passengers would be carried.

Another point which would have great weight in settling the subject is the fact that quite ten or fifteen minutes would be saved by a large proportion of the passengers travelling by the railway. This alone in connection with suburban residents and travelling to and from the Mountains, &c., would, we feel sure, lead to a very material increase in traffic.

Attached hereto are maps and plans showing the proposals referred to.

E. M. G. EDDY,
Chief Commissioner.
CHARLES OLIVER,
Commissioner.
W. M. FEHON,
Commissioner.

11. *President.*] The map on the easel does not appear to show this last scheme? No. This map was prepared in 1894, and there is already so much on the map that I thought it better not to put any more on it. This new scheme differs in some respects from the previous proposal to carry it to Hyde Park independently

- H. Deane.
16 Feb., 1897.
- independently of the shortening of the line. It is proposed in this new scheme to carry six lines instead of four lines up to the terminal station. The whole of the station arrangements and buildings and office accommodation have been carefully revised, and the scheme is a much more complete one than the one which was previously submitted to extend the railway to Hyde Park.
12. *Mr. Wright.*] Practically it takes up a fourth of Hyde Park? Yes.
13. *President.*] Does it carry with it the lowering of Hyde Park? Yes.
14. *Mr. Wright.*] Would you have to lower Liverpool-street also? Neither Goulburn-street nor Liverpool-street would be touched.
15. *Mr. Trickett.*] Does that scheme stand by itself, or is it to be worked in with an eastern suburban scheme? No; that is capable of being worked in with both an eastern suburban scheme and an extension to Circular Quay. I have arranged in the design that the two eastern roads should be made so that they can be lowered, and after passing Park-street you can turn round on the right to the eastern suburbs, or continue right on to Circular Quay.
16. *Mr. Hoskins.*] Who is responsible for the estimate of the cost of that scheme—£550,000? I made out the estimate.
17. Did you make an allowance for compensation to be paid for resuming the Cemetery? No. This estimate has been somewhat added to; I think I can give you the details later on.

In view of these representations, the Minister directed that the necessary plans and estimates be prepared with a view to submitting them to Parliament and the Commission. The instructions of the Minister were carried out and information furnished to the Railway Commissioners to enable them to make the report required by law. This report is as follows:—

Office of the Railway Commissioners of New South Wales, Sydney, 11 September, 1896.
Proposed Extension of the Railway into the City, 71 chains.

In accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as under:—

<i>Cost of Construction—</i>		
The Engineer-in-Chief for Construction estimates the cost of construction, inclusive of land and compensation, at		£600,000
<i>Annual Cost—</i>		
Capital expenditure, at 3 per cent.	£18,000	
Estimated cost of maintaining permanent way, and for traffic, locomotive, and other expenses	8,000	
	Total annual cost.....	26,000
<i>Traffic Estimate—</i>		
By adding 1d. for each ordinary-passenger journey, and 1s. 6d. and 1s. per month for 1st and 2nd class season ticket-holders, with a percentage reduction per month for tickets taken out for 3, 6, and 12 months; and 3d. per week for workmen's tickets,—a revenue on existing traffic would be realised of	32,000	
Saving in rents for offices for the administrative staff	1,365	
	Total annual revenue.....	33,365

The estimated revenue from the extension is based upon the existing traffic carried to and from Redfern station; but we fully expect that the shortening of the time required for journeying to and from the suburbs, and the reduction in cost by avoiding the daily charges for cabs, trams, and omnibuses will very soon lead to a great increase in the suburban traffic. Increased rents would also be obtained for the refreshment-rooms.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed this 11th day of September, 1896, in the presence of,—
H. M'LACHLAN, Secretary.

{ J. M. G. EDDY,
Chief Commissioner.
CHARLES OLIVER, (L.S.)
Commissioner,
W. M. FEHON,
Commissioner.

18. *Mr. Humphery.*] Why are six roads required? The Railway Commissioners want to have six roads. There will be two engine-roads, as well as the passenger-roads.
19. *Mr. Wright.*] It is a dead end? No; they go up to the station.
20. *Mr. Hoskins.*] Do you propose to have six roads in the extension to Park-street? Yes.
21. *Mr. Wright.*] What width will you want for six roads? About 75 feet, I think it is.
22. *Mr. Hoskins.*] You will want a little more than 75 feet, because you will not use all the land? Yes.
23. *Mr. Wright.*] You will want 100 feet for six roads? Not so much. You will notice that on that scheme additional lines are shown between Goulburn-street and Liverpool-street. There is a widening of the line between those two streets in addition to the six roads. There are ten roads there.
24. What I meant by the expression a "dead end" was that you would have to work the line with points? It will be all shunting.
25. *Mr. Hoskins.*] It is only intended to take passengers and not goods? No goods. The other four roads are for station purposes—for additional rolling-stock in case of need.
26. A more economical scheme would be to keep the rolling-stock at Redfern and send it up to the terminus when it was needed? Redfern is a long way off from the terminus; it would introduce complications.
27. Do they not do that at Euston Station and Paddington Station, London? Yes. The view of the Commissioners is that when you are making an alteration you should make it as complete as possible.
28. *President.*] You have given us an estimate of £600,000;—does that include the cost of land resumption? That includes £100,000 for land.
29. It includes the £100,000 which the Commissioners propose to pay in for the park? No.
30. Is it the work which is estimated to cost £600,000 alone? No; it includes £100,000 for the resumptions between Belmore Gardens and Liverpool-street. I am not responsible for that. I have not estimated the value of the land myself.
31. Who did? I think Mr. Thompson made the estimate; but it possibly may be added to now, because I am not sure that it allowed for the whole width which it is now proposed to take.
32. *Mr. Humphery.*] Where are the resumptions shown on the plan? The resumptions will be simply covered by the work shown on the plan. There will be no necessity to resume a much wider strip than is already taken up by the roads. It will be necessary, of course, in some cases to take up the corners, but practically that is the width which is required. I will furnish the Commission with some details of the estimate if they like to have the information.
33. *Mr. Hoskins.*] Will your estimate allow a margin for probable actions for compensation for alleged damage to the foundations of houses adjacent to your tunnels? There will be nothing of that sort here.

34. You know that in some countries serious actions have been brought for compensation for damage done to houses by the construction of underground tunnels? But we do not interfere with any buildings which we do not resume.

H. Deane.
16 Feb., 1897.

35. *President.*] Will you now resume the statement which you were making to the Commission? Yes. The following is the official description of the proposal:—

City Extension Railway—Redfern to Park-street.

(Estimated cost, £600,000.)

Length, 71 chains from front of building, Park-street, to end of main building, Redfern. From end of present rails to end of new line, about 69 chains.

LEAVING Redfern Station, six lines of road will be carried over Devonshire-street. To get a headway of 16 feet, Devonshire-street will have to be cut down 9 feet; it will then have a rising grade to Castlereagh-street of 1 in 25, and to George-street 1 in 60. Through the Cemetery the lines will be in bank and cutting and over Belmore-road, and other roads, including Goulburn-street, with a headway of 16 feet 6 inches. From half-way between Goulburn and Liverpool streets the line runs into cutting and under Liverpool-street, where there will be an over-bridge of an average width of 78 feet and 131 feet long. The level of Liverpool-street it is not proposed to alter. From Liverpool-street to Park-street, by the width from Elizabeth-street to centre-walk of Hyde Park, the ground will be excavated for an average depth of 22 feet for the terminus. Park-street will be cut down to a depth of 11 feet in the deepest part for access to front of station, giving a down grade for that street of 1 in 166 and 1 in 310 from Elizabeth to College-street. There will then be one grade from Elizabeth to College-street. The station building fronting Park-street will be 350 ft. x 60 ft. deep, three stories in height and attic, with central tower 200 feet high. This portion of the building will contain central hall, 65 ft. x 36 ft.; booking hall, 96 ft. x 55 ft.; refreshment room, 96 ft. x 38 ft.; and basement under same, general waiting and ladies' waiting rooms with lavatories, &c. The upper floors are offices for the Railway Commissioners and staff, and the various traffic branches. Three lifts will be provided. Facing Park-street will be a colonnade for foot passengers, and a covered way for cabs 25 feet wide, extending the whole length of this frontage. The platforms (five double, 30 feet wide, two single, 21 ft. 9 in. each, and 700 feet long) will be covered with a steel roof 363 feet wide, rising in the centre to a height of 75 feet above platform. On the Elizabeth-street frontage the buildings will be two stories high, extending from Park-street for a length of 700 feet. The lower floor on level of platform will be used for parcels, cloak rooms, inspectors, porters, &c., and the upper as offices for the Traffic Branch. Opposite Bathurst-street and through the building over the platforms there will be two steel foot-bridges with asphalt floors, one 15 feet wide for the general public in direct line from Bathurst to Oxford streets, the other 20 feet wide from the Railway, with stairs for access to the various platforms. The parcels office, 200 ft. x 40 ft., has a basement floor on level of platform, and a ground floor of same size on Elizabeth-street level. From this office Aspinall's patent overhead luggage carrier will be constructed so as to communicate with the various platforms. The cab road through the building between the platforms will be 25 feet wide, and will have entrance and exit at Liverpool and Elizabeth streets. The horse and carriage docks, 400 feet long by 20 feet in width, will be approached from Liverpool-street by ramp 20 feet wide.

The quantities of work to be done are approximately as follows:—Earthwork excavations for Hyde Park Station, lowering Park and Devonshire streets, in addition to cuttings at Nithsdale-street and Benevolent Asylum, 460,000 cubic yards; for foundations, 16,000 cubic yards; concrete in foundations and backing to arches, 11,500 cubic yards; brickwork in retaining-walls, Hyde Park Station, between Liverpool and Goulburn streets, at Park and Devonshire streets; abutments to bridges over Liverpool-street, Goulburn-street, Wexford-street, Campbell-street, Elizabeth-street, Devonshire-street, Belmore-road; arches on piers from Campbell to Elizabeth streets and over Belmore Park—44,500 cubic yards; masonry in copings and string courses, 3,000 cubic yards; steel-work in bridges over above-named streets and station platforms, 1,750 tons; cast-iron columns and parapets, 150 tons; ballasting, 22,800 cubic yards; ordinary sleepers, 13,500, No. and special, 10,000 cubic feet; steel tails and fastenings, 1,400 tons; wood-blocking, 21,000, asphaltting, 27,000 superficial yards; kerbing and guttering, 2,500 lineal yards; removing and relaying portions of tram-line, gas-pipes, water-mains and sewers.

The differences in the present proposal and that first approved by the Royal Commission are shortly as follows:—The previous proposal was for a terminal station at King-street, involving a tunnel through the south-west corner of Hyde Park, and the resumption of the north-western corner, St. James' Church, the Registrar General's Office, and the Supreme Court building. The present proposal involves the resumption of the south-western corner of Hyde Park and the erection of a building fronting Park-street. Provision is also made in the design for an extension of two roads to Circular Quay or the eastern suburbs if required.

Shortly put, the advantages of the extension now proposed are stated to be as follows:—

1. It will provide a new and satisfactory terminal station, Redfern being not suitable for the present large and increasing traffic, and urgently requiring alteration.
2. It will bring the passenger traffic into the city.
3. It will not spoil the most frequented portion of Hyde Park.

Reference to pages 55, 56, and 57 will show that the previous Royal Commission investigated the question of the utilisation of the park for railway purposes very thoroughly, and arrived at the conclusion that the advantages far outweighed the disadvantages. The scheme recently formulated to bring the railway to Park-street is to be looked upon as inferior to the proposal which brought the railway up to King-street. On the ground plan which is now brought before the notice of the Commission I have shown in lighter colour an extension of the railway up to St. James' road. This, it is thought, would be as practically as good as going up to King-street, but it would leave St. James' Church and the Supreme Court buildings intact. On the other hand the removal of the Registrar-General's Office would be rendered necessary. The Supreme Court buildings have been condemned for many years past. They seem to do their work, however, and I have on that account avoided interfering with them. If, at some future time, it should be thought desirable to remove that building altogether, and St. James' Church as well, a fine open space will result, across which the handsome front of the railway terminus building can be viewed.

With regard to the question of extending the railway into the city there are three considerations to be borne in mind: first, there is the necessity for the improvement to station accommodation at Redfern; secondly, the extension of the passenger lines into the city; while in the third place, the extension for goods purposes must be looked upon as quite a separate matter.

The extension into Hyde Park is, from an engineering point of view, by far the best scheme that can be put forward. On the other hand, the extension of the railway station across Devonshire-street into the grounds now occupied by the Benevolent Asylum, Cemetery, Police Barracks, &c., may be looked upon as effectively dealing with the question of station accommodation, but it does not deal with the question of bringing the passengers into the city.

It has been said that if the railway had been brought into the city there would have been no necessity for the tramway along George-street. This is, however, a mistake. It is true that one of the objects of the George-street tramway was to keep the railway traffic off Elizabeth-street, and thus relieve the Elizabeth-street traffic. It will, however, have the effect of taking off the traffic of the western tramways as well; and it will, undoubtedly, carry its own proper traffic, and thus, railway or no railway, have sufficient work to do.

At the request of the President, I have looked into the matter of other proposals in substitution or in further extension of the Hyde Park scheme. I am preparing a map, on which will be shown possible extensions for passenger traffic down the eastern and western side of the city and to the eastern suburbs, and, further, an extension of the railway for goods purposes to Woolloomooloo Bay, Pyrmont, and Glebe Island.

With regard to passenger extension other than the Hyde Park proposal, I wish most emphatically to point out that, in my opinion, if the lines are extended underground the traction must be effected by electricity and not by steam. Underground steam lines in cities are rarely put down now. All, or nearly all such railways and tramways that are being now carried out underground are intended to be worked by electricity; and I think I may say that it is only a question of time, and possibly a very short time, before the metropolitan and metropolitan district railways in London will be also thus worked. It is well known to those who have visited London how intolerable a nuisance is the coal smoke in those tunnels. London has an average temperature of, I think, about 47 degrees. How much more intolerable would be the use of steam locomotives in a climate like ours, with a mean temperature of 62·8 degrees, and a maximum temperature of over 100 degrees.

That

H. Deane.
16 Feb., 1897.

That the combination of steam and electricity in different systems on a railway is not impracticable is to be seen by the working of a part of the Baltimore-Ohio railway in the United States of America, where, on a short length of line about 2½ miles long, on account of the smoke nuisance, the goods trains, locomotive and all, are drawn through the tunnels by electric locomotives weighing from 35 to 90 tons. The introduction has been completely successful, and it has now been decided to apply the same method to the passenger traffic.

Our railway traffic could be dealt with in the same way. When suburban trains came into Redfern, the steam locomotive could be unhitched and an electric locomotive attached. This is an easy way of getting over what might be a serious difficulty. Another method would be to work the suburban system throughout by electricity. This is a question, however, which the Railway Commissioners will no doubt consider at the proper time.*

In the event of Hyde Park not being adopted as a terminus, and extensions on either side of the city of two lines each were to be made, the proper places for these extensions would, I think, be under the roadway instead of going under the property on each side. I have no hesitation in recommending such a course after seeing in 1894 what was done in the city of Glasgow. Such work could be carried out comparatively economically, and almost without any interruption of the street traffic.

36. The schemes you have placed before us are limited altogether to passenger traffic? Yes.

37. There has been no endeavour made to extend the railway system to the waters of Port Jackson? No; for some time past nothing whatever has been done.

38. That has not been taken into consideration? No.

39. *Mr. Hoskins.*] Did the Railway Commissioners view with favour your suggestion to disconnect the steam locomotives at Redfern and to propel the trains by electricity to Liverpool-street? I have mentioned the matter to Mr. Eddy, but as the proposal which the Railway Commissioners view with favour is the Hyde Park scheme, it really has not come up for decision from a traffic point of view.

40. Do you intend, if the extension of the railway system to Park-street is sanctioned, to press your view as to the propriety and good policy of having the extensions worked by electricity? No; I do not think it is necessary, if the line is only extended to Park-street, because it will be all in the open; there will be no tunnel. Supposing that the Park-street proposal is objected to by this Commission, and they wish to consider any other scheme involving tunnels under roads, or under the park, and so on, I wish to express the opinion that the locomotives should be electric locomotives, but only in that case.

41. You would then press that view? Yes.

42. *Mr. Farnell.*] You are aware that in England, at the present time, a company is about to construct a railway underneath an existing railway? Nearly all the new projects are underground projects, and electricity is invariably adopted.

43. *Mr. Wright.*] I suppose with these tunnels you could not use steam? I think it would be a great pity to use them with steam. They will be made of the proper dimensions to run ordinary trains through, but it is the inconvenience to the passengers I am looking to.

44. If you were to run ordinary locomotives, partly through open cuttings and partly in tunnels, would there not be great inconvenience caused to thousands of citizens as well as passengers? I think there would be some.

45. *Mr. Roberts.*] There are no tunnels in the Commissioners' park scheme? None; I would not propose any alteration.

46. *Mr. Wright.*] Have you any scheme prepared yourself? No; I do not propose to submit any scheme. I merely propose to take any instructions from the Commission to look into matters.

47. I suppose you are prepared to criticise any scheme which may be submitted? From an engineering point of view.

WEDNESDAY, 17 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHRY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
The Hon. DANIEL O'CONNOR, M.L.C.
HENRY CLARKE, Esq. M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

H. Deane.
17 Feb., 1897.

48. *President.*] Have you a plan showing your proposal to convert the Benevolent Asylum estate into a station? Yes; I furnish a plan of a scheme which was worked out some time ago for extending the railway terminus at Redfern across Devonshire-street. This plan has not been so well worked out as the plan of the Park-street scheme, and the few copies which I now furnish to Members of the Commission have some notes on them showing some alterations which it is intended to make if this scheme is eventually carried out. Before the completion of the inquiry I expect to be in a position to furnish fairly correct plans.

49. Will you first describe the area? The area is bounded by Devonshire-street and Pitt-street and Belmore-road; and a considerable width of the Cemetery beside the Benevolent Asylum grounds and the Police Barracks is taken in.

50. How far does it go to the south-east—to Elizabeth-street? The area includes the blue-tinted portion on the large wall map before you. The railway terminus would absorb a little more than half the area lying between Pitt-street, Devonshire-street, Belmore-street, and Elizabeth-street.

51. *Mr. Humphry.*] Do you take in the whole of the Cemetery? The greater part of it.

52. *President.*] Will you prepare a rough plan showing the various improvements, how the various areas are held, what you intend to take, and your idea in regard to the disposal of the residue? Yes.

53. It has been suggested that any provision you may make for passing over Devonshire-street carries with it the lowering of that street 7 feet or 9 feet. Have you taken into consideration the question of interference with vested interests, or is any property affected by it? Yes; but it is all Crown land with the exception of the Cemetery. In the estimate that was submitted some time ago no provision was made for any compensation or for new buildings. 54.

* NOTE (on revision):—I should like to add that the Chief Commissioner, at a subsequent interview, expressed the opinion that the change of locomotive would be productive of delay.

54. The work itself is absolutely enclosed by Crown lands on either side? Yes.
55. Does it affect the grade of the street to the south-east? Yes; in lowering the street there will be altered grades in consequence.
56. Does it materially affect them? It does not make them bad.
57. Will the approach to Devonshire-street from the north-west be inferior to the approach from the south-east? If you will allow me to explain the scheme you will see how Devonshire-street is dealt with. Several lines are carried over Devonshire-street, and a portion of that street is lowered. It is proposed to divert the greater part of the traffic of Devonshire-street, reserving only a comparatively narrow subway for cabs and smaller vehicles to pass through, but all heavily-laden vehicles would probably go round the other side. A reference to the plans I have furnished will show that on the eastern side of the station there is a wide and new street, which will not only admit all the traffic, but will also take the tram-lines. In the proposal is included a diversion of the Botany tram-lines. What is left of Devonshire-street is a subway about 30 feet wide, and in consequence of the width that is required for the station, and the length that the street has to be lowered, the resulting grade on the eastern side will be very much steeper than what I pointed out yesterday as necessary for the Hyde Park scheme. In carrying over six roads to run into Hyde Park they are more concentrated than in this scheme, where you have roads passing over the whole width of the station; consequently there is a greater length of Devonshire-street to be lowered to the maximum depth. It would be very difficult to lower that street so as to take all classes of traffic; and it was thought that, although it is desirable to keep the subway at Devonshire-street for cabs and light vehicles, the bulk of the traffic should be turned round by Belmore-road and along the new street, as being an efficient substitute.
58. The new street would be at the junction of the blue and green on the big plans? It would be just within the blue area.
59. Does it mean this, that the lowering of Devonshire-street is likely to obstruct any but light traffic going to the north-west from Redfern to Darling Harbour;—does it render Devonshire-street undesirable for heavy traffic going between Redfern and Darling Harbour? Yes.
60. Have you taken into consideration the effect of this new street on the Redfern traffic? I do not think the effect would be serious; at any rate it is an effect which cannot be avoided. Redfern station must have something done to it. If it is extended over Devonshire-street on to this new site Devonshire-street must be partially blocked. I do not see really how it could be retained by any amount of lowering and leaving proper grades at the eastern end for heavy traffic.
61. *Mr. Lee.*] What would be the grade at that end? As shown on the plan it is 1 in 12.
62. What is the present grade? It is not level, but it is very easy.
63. From Castlereagh-street the grade is rather heavy? Yes; but as far as Castlereagh-street it is light.
64. If it is lowered I suppose it will be lowered from the George-street side? Yes.
65. Then there will be a dip-in? Yes; and the drainage has to be provided for.
66. That will practically block all traffic? Cabs and light vehicles will be able to pass along there well enough.
67. It would be a perfect block to all the heavy traffic which you wish to go from the eastern side of the city round to Parramatta-street? Yes.
68. *President.*] You have a grade of 1 in 12 in and out? No; the grade the other way is easy.
69. *Mr. Humphery.*] Where would it commence;—at the Railway Institute, or nearer the railway station? Nearer the railway station.
70. *Mr. Wright.*] Would it not begin almost at George-street? There would be a lowering commencing from George-street.
71. *President.*] Does any extension from Redfern towards the city involve the alteration of Devonshire-street? Yes; any extension affects Devonshire-street, but in the Hyde Park proposal I have arranged to lower Devonshire-street, so as to be suitable for all kinds of traffic, with a 16-foot headway. The worst grade is 1 in 25, which is a good grade. The level of Devonshire-street would be affected by any scheme which went across that street; but if you remove the terminus to Hyde Park, Devonshire-street can be lowered and the grades and headways rendered suitable for all classes of traffic.
72. But with this scheme, in that the extending lines cover a greater length of Devonshire-street, it increases the difficulty, because you cannot get the grade I suppose? Yes; the grade at the eastern end is shortened, and consequently is steeper. The difficulty in all these questions of extension, especially the extension of a terminus, is the difficulty of keeping up the existing traffic while you are connecting with a new station. If you could create a temporary terminus somewhere else, and you had a free hand to do what you like at Redfern, possibly the simplest way would be to raise all the lines some feet up in the air.
73. *Mr. Wright.*] What is the difference between the railway level at Redfern station and the crown of Devonshire-street? 10 feet on the lines of the present station.
74. What is the difference in grade between the platform at Redfern station and the first tunnel going out? I think the lines are exactly level—64 feet above high-water.
75. How far back would you now have to go to raise the lines 2 or 3 feet? You would not have to go back very far.
76. To Eveleigh? No. You would have to go back only halfway from the station. It will depend on the amount you require to rise. If you had a free hand you could raise the line by starting back some chains beyond the southern end of the present station. You could raise the line sufficiently high to get over Devonshire-street without interference with the road traffic.
77. You could not do that without stopping the traffic? No; it is entirely out of the question. Continuing my description, I may mention that this section, which was got out on a large scale so as to be easily visible, shows the line between Devonshire-street and Belmore Road. It will be seen there that immediately after passing Devonshire-street the ground begins to rise, and when you get from the Benevolent Asylum to the Police Barracks you are in a cutting. The ground does not give you any opportunity of getting a road around or underneath in any way. The section of Devonshire-street shows the lowering of that street.
78. *Mr. Black.*] Has that map any connection with the Hyde Park scheme? Yes.
79. *President.*] Or any scheme involving the crossing of Devonshire-street? Yes; but the levels crossing Devonshire-street would be practically the same.

- H. Deane.
17 Feb., 1897.
80. *Mr. Wright.*] Would it be possible to abolish Devonshire-street, and provide an overhead bridge for the traffic? That would mean rising to a great height, because George-street is 14 feet below the surface of the rails.
81. What is the difference between the crown of Devonshire-street and your rail level now? It is about 10 feet.
82. An overhead bridge would not necessarily be very high? It would mean rising up to that rail level, and then rising another 20 feet, or in all 34 feet, which, from George-street, must be considered out of the question.
83. *Mr. Hoskins.*] It would cause great difficulty in working, too? It would be impossible.
84. *President.*] The grades on that would be a long way worse than the grade in a cutting? Yes.
85. *Mr. Wright.*] What length of 1 in 12 grade would there be? Probably 120 or 130 feet.
86. *Mr. Humphery.*] Would any scheme mean practically the closing of Devonshire-street for heavy traffic? No; the extension beyond to Hyde Park would not involve it. There are worse grades in Sydney than 1 in 12, but it is introducing a steep grade on a road which had previously good grades.
87. *Mr. Wright.*] I suppose as a matter of fact nineteen-twentieths of the heavy traffic to the railway station come from the north along Belmore-road from the city proper, and not from the southern portions? I should think so.
88. The only traffic which a steep grade would affect would be the traffic which comes from the south to the railway? Yes. It would only affect a very small portion of the traffic, and what traffic it does affect could easily go round by the new street. It would have no heavy grades to deal with in going by that way, and it would be simply going a little further.
89. *President.*] Will you be good enough to proceed now with your description of the plans? The platforms are shown as 600 feet long, but they are intended to be 700 feet long. At Park-street the platform is shown as 700 feet long and these others will be brought in accord with that one. Taking the western side of the station first, there are two lines for country traffic, and between those two lines and the next there is a cab-road, which has its approach from Devonshire-street, and a return on to the wide approach to the station proper. Then comes a platform 33 feet wide, on the other side of the cab-road. Then come three roads, and then another platform of 35 feet. Then come three more roads and another platform of 30 feet. Then come three more roads and another platform of 30 feet; and then two roads; another platform of 30 feet and another road. It will be seen that there will be eleven platforms and eleven roads, besides the three docks.
90. Why do you say eleven platforms? The first pair of roads on the western side gives practically two platforms. A double platform is really two platforms. There are three single platforms and four double platforms. Between the end of the buildings and the platforms there is a width of 80 feet. That main building is situated right at the end. On the western side of the station there are offices. At the north-western corner there is a cloak-room 100 feet x 40 feet, and the accommodation can be increased in the basement. Then there is a large refreshment-room and closets, a large booking-office and general waiting-room, and on the north-eastern corner there are urinals and water-closets.
91. *Mr. Wright.*] Is it not rather awkward to have the cloak-room and large offices separated from the platforms by a cab-road? They are not; the offices at the side are intended for clerks and porters, and will not be required by the public at all.
92. Your cloak-room will be required by the public, and it is separated from your platform by a carriage-road? No; it is separated from one of the platforms, but you must have a separation somewhere. That passage out is a foot-passage.
93. *President.*] Have the Railway Commissioners approved of that provision? Yes; this has been worked out with the Commissioners.
94. You had better describe now the way your trams are going to leave? The Botany Bay tramway is diverted across the Belmore Park into the new street, and then round into Devonshire-street. On the western side of the station there is a large space for approaching the station and a cab-departure road shown with an incline from George-street up to the north-western end of this approach, going over Pitt-street. Then as regards the George-street tramway, the line working towards the station will be diverted alongside that cab-departure road and go underneath the approach to the station until it gets up close to the station, and then it rises on to the level. It will discharge passengers and take passengers on the same platform. There will be no crossing of the lines or any interference at all because people will be able to get off and on at the same platform. It will be extremely convenient to people. The trams as they depart work round the curves shown near Devonshire-street and get back on to the line again. If it is required to connect with the western suburbs, a connection can be made with the other trams, but it was only thought necessary to show the connection with the George-street tram.
95. In the opinion of the Commissioners is the accommodation shown on these plans ample for Redfern? Yes.
96. *Mr. Lee.*] Will you indicate where they exceed the existing accommodation? I will get the length of all the existing platforms. Recently a new platform has been built.
97. *President.*] Will you furnish a comparison between the present accommodation and the suggested accommodation? Yes.
98. *Mr. Lee.*] Through the tunnel under Regent-street, at the end of the railway yard, the whole of the traffic has to pass inwards and outwards? Yes.
99. If you increase the accommodation at Redfern Station or at 100 yards beyond the station, will not the congestion always be at that tunnel? There will be always a congestion at that tunnel.
100. Is there more space afforded by passing over Devonshire-street than the Commissioners now have? Yes. There is not sufficient length at Redfern. With a greater length a great deal more could be done. At Redfern it is exceedingly inconvenient and it is very difficult to work.
101. *Mr. Black.*] Do any of your schemes propose an increased tunnel? No; but this plan will give the length that is required to do the shunting operations.
102. *Mr. Humphery.*] Is there accommodation through the tunnel at the present time for more than the existing number of roads, which I understand to be six? I believe it would be much more convenient for the traffic if there were more room in the tunnel. The Commissioners consider the traffic is very much pinched up there.
103. I do not think that quite answers my question. I think it is the different classes of traffic coming in through

through the tunnel which it is difficult to accommodate—that is, after the trains had passed through the tunnel? Yes; and although the traffic is pinched there, if you could lengthen the station at Redfern you would ease the shunting at the station and you would give the accommodation which is really required. For instance, at present some of the trains have to be split up. There is not room for the northern train to draw up at one platform, and, therefore, it has to be divided into two parts. With the exception of two platforms, I think there are no platforms sufficiently long to suit long trains.

104. *Mr. Hoskins.*] If you extended the platforms at the existing station you would increase the difficulties? You cannot lengthen the platforms, because the crossings would interfere.

105. *Mr. Humphery.*] What is needed is increased space and accommodation for trains after they have passed through the tunnel? Yes; you want greater length between the tunnel and the station, and greater length at the station itself.

106. *Mr. Black.*] Has the advisability ever been considered of diverting the goods traffic before coming to Redfern tunnel by means of a cutting or tunnel, making more directly for Darling Harbour? I think it has been under consideration.

107. *Mr. Wright.*] If the city railway were extended by a circular line there would be no necessity for all this accommodation, would there? I think some accommodation would be necessary.

108. If you had a line from Redfern to the city, running by a circular route, would not the Redfern yard be big enough for marshalling purposes? I do not think that has been considered. If the Commission wish that point to be considered, I should have to consult the Railway Commissioners, and then I could report later on.

109. Have you ever considered the question of a circular railway into the city? Yes.

110. *Mr. Roberts.*] Is it possible to get sufficient accommodation at Redfern, without crossing Devonshire-street, by land resumption? No.

111. *Mr. Hoskins.*] Not by taking the park? No; you cannot get at Prince Alfred Park.

112. *Mr. Lee.*] Could you not resume land on the tunnel side, so as to enable the yard to be widened? Yes.

113. *Mr. Hoskins.*] Why could not part of Prince Alfred Park be taken? Because you cannot get round to it; it is sharp off to the right as you pass through the tunnel.

114. *President.*] Is it not possible to shift Devonshire-street to the north and give the desired accommodation? The question of shifting Devonshire-street to the north, and thus lengthening the platforms, has been under consideration; but I know the Commissioners are of opinion that would be only a partial relief—a makeshift. What they want to do, if possible, is to make a complete new terminus, giving the extra length not only in the station but outside of it.

115. Do you submit a sketch-plan of the proposed terminal station at Park-street as suggested by the Railway Commissioners? Yes.

116. Will you be able to explain that plan to-morrow to the Commission? Yes.

117. Are you prepared to hand in an estimate of the cost of extending the railway system to Park-street? I will read the estimate. It is as follows:—

Land resumption between Belmore Park and Liverpool-street	£100,000
Buildings (600 feet roof)	200,000
Construction of line.....	£260,000
Signals and interlocking	15,500
Electric lights	4,500
	280,000
Shelter-sheds and alterations.....	20,000
	600,000
Add for extension to St. James' Road ..	50,000
	£650,000

THURSDAY, 18 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

118. *President.*] You placed before the Commission yesterday a plan of the proposed extension to Park-street, and an estimate of the cost of the extension? Yes. I have handed in some plans of Park-street for distribution to Members of the Commission, and the plans on the wall will give all the information that may be required.

119. With regard to the item of £100,000 for land resumption, you have said that it is very probable that it will require to be increased, as the width of the line has been increased;—is there any other cost, excepting the value of the park land, which we need add to your total estimate of £600,000? Not unless prices go up very much. That estimate was cut down so as to be adapted to the prices that prevailed some months ago; but prices are beginning to show a considerable rise.

120. Your 10 per cent. allowance would in all probability cover it? I do not think so. I have cut that down also to a minimum. This estimate of £600,000 includes a certain amount of contingencies and engineering expenses, but I should not like to reckon too much on that.

121. What will cover it? I cannot tell how prices will go up.

122. If an estimate were made to-day, is that £600,000 plus what has to be added to the £100,000 the amount? Yes.

123. *Mr. Hoskins.*] Based on an estimate made some months ago? Yes; I think it would fairly cover it now.

H. Deane.
18 Feb., 1897.

doubt you can tunnel if you are deep enough without disturbing the buildings, I doubt very much whether any extension into the city we can make would be deep enough to avoid interfering with the buildings altogether. I do not quite see how a suitable or practicable line could be made far enough down with sufficient cover of sandstone so as to avoid the possibility of damage to houses. All the large and more important buildings in Sydney are carried down to the sandstone, and there is a considerable amount of excavation through the top clay and made ground. In Hyde Park that amounts to about 25 feet I think on the average. If you make a tunnel so as to get under the sandstone down below you get a platform level at a very great depth—probably at from 40 to 50 feet down in places. That means a great number of steps to get up to the surface. If you want to keep near the surface you get partly into sandstone probably and partly into the softer material on top through which the foundations of the important buildings go. As regards the lighter buildings whose foundations do not go down to the sandstone I doubt very much whether you can tunnel under them without the risk of causing settlements.

144. Does it mean that you must either be under the park or under the streets? Yes, generally speaking.

145. *Mr. Wright.*] Or resume? Yes.

146. *President.*] Under the streets would it be safe enough? Under the streets it would be all right.

147. The Commissioners' scheme is a surface one? It is all open.

148. And the Hyde Park terminus is a surface terminus? —

149. *Mr. Wright.*] How much would the platform be below the level of Elizabeth-street? The station starts with the rails say about 18 or 19 feet below Liverpool-street and rises up to near the altered level of Park-street. The level is below Park-street, but you will have no steps to go down.

150. *Mr. Lee.*] That would be with the object of keeping the line level? I have given a tip-up. Stations are made on a slight grade. There is no harm, but an advantage in having a starting-station made on a grade downwards, because it is then easier to start the trains. As long as the grade is not steeper than the rolling-stock will stand on, then you are all right.

151. *Mr. Hoskins.*] If you had a tunnel to carry eight roads, would it not be so wide that it must interfere with the foundations of the houses on the sides of the streets? Yes; there would not be room, to do it comfortably, for more than two lines.

152. *President.*] Could you put four lines down? Only with difficulty.

153. *Mr. Wright.*] The whole block, from where the lines cross Elizabeth-street till you come to Liverpool-street, must be resumed to the full width you want? Yes.

154. *President.*] How many lines can you put down in a tunnel under a street like Elizabeth-street? There would be room for four lines if you open out the street and cover it in again.

155. Would that affect the buildings? Not unless there are cellars under the pathways.

156. *Mr. Hoskins.*] I do not think the buildings in the lower part of Elizabeth-street are aligned, and therefore it is very irregular in width? There will be of course that difficulty to deal with; but in a 66-foot roadway you can just about squeeze four lines in, but you would have to be very careful with your foundations.

157. *Mr. Wright.*] Have you a 66-foot roadway? There are some in Sydney, but mostly they are about 60 feet.

158. Is Elizabeth-street or Castlereagh-street a chain wide? King-street is 60 feet wide, and Elizabeth-street, I think, is a 66-foot road. The proposition of the Commissioners to carry the railway down to the Custom House comprised only two lines. I would much rather have to deal with two lines of way than four. At the same time I think four lines with care could be laid, but it would be very difficult to avoid damage to houses on each side.

159. *President.*] With two lines of way you could do it? Easily.

160. Would they carry all the passenger traffic in the city? No.

161. How is it the Commissioners suggested a scheme which is not likely to carry the traffic? I have given a description of the scheme. Up to Hyde Park there were four lines of rail, but beyond Hyde Park only two lines. Some of the traffic would stop at Hyde Park; two lines would be taken on to Circular Quay and two lines round to the eastern suburbs.

162. *Mr. Lee.*] From an engineering point of view do you favour a terminus at Park-street or one at St. James' Road? Both are equally good for traffic purposes and from an engineering point of view.

163. Which of the two do you prefer? There is no doubt that the St. James' Road extension is better than the other, because it brings the line further into the city, but as regards accommodation and from an engineering point of view they are precisely similar.

164. If it were extended to St. James' Road how would Park-street be affected? The lines would go under Park-street without altering the level.

165. Would not that give you a sunken station at St. James' Road? No, you would rise up in the same way. There is a fall in the ground from Park-street down to St. James' Road.

166. Is there not a block of Government property in the vicinity of St. James' Road—on the western side of Elizabeth-street? Yes; but it is not large enough for a main terminus.

167. Could it be utilised in any way in connection with this scheme? Not with this one.

168. *President.*] The area owned by the Government in the block is about an acre and a half; an acre of land is in the hands of private owners;—the Railway Commissioners require 14 acres for a surface station, I think? Twelve acres, I think.

169. Does it appear that there will be a sufficient area of land at present in the possession of the Government in the block bounded by Market, Castlereagh, King, and Elizabeth Streets to make a daylight station? Yes, under the modified scheme.

170. And from that going towards Redfern Station there would be no resummptions at all, and no danger of interfering with any interests until you pass Liverpool-street? No. You can keep clear of any property till you pass Liverpool-street.

171. Just opposite the Public Works Office, at the corner of Phillip and Bridge Streets, there is an area of Government land about 150 feet square? I do not know how wide it is, but I think it is about 150 feet long.

172. That is not long enough for a daylight station? No.

173. *Mr. Wright.*] Does not Lady Young terrace belong to the Government? I do not know. I have not inquired.

174. Could you put four lines of rails in the piece of land between Elizabeth-street and Castlereagh-street, where St. James' School stands, and then produce two of the lines to Circular Quay? I do not think you would be able to get in there and out again in the space.

H. Deane.
18 Feb., 1897.

175. Supposing you could put four lines into that area near King-street, could you work the whole of the Sydney traffic in the space available between the two streets? I can only go by what the Railway Commissioners stated in their report to the previous Railway Commission when they recommended that modified scheme.

176. What did they say then? They proposed then, I think, to run some of the trains down to King-street with four lines, and to continue two lines on to the Custom House.

177. It appeared reasonable to the Commissioners that four lines to King-street would do the traffic? I do not think it would be quite that.

178. Would it be possible to run four sets of rails from King-street to Circular Quay? No.

179. Two lines can go on to the Custom House, and four cannot? Yes. I am not sure that you can get two lines on without resuming some of the houses along Elizabeth-street. I will look into this matter and report to the Commission.

180. Supposing that two lines were carried right through the city by one route and came back by another, would that be wide enough to work the traffic? I should think it would.

181. That is with two sets of rails going right round? I should think it would.

182. There would be no necessity for large resumptions for station purposes—no shunting would be required, and hardly any yard accommodation? You would require to have your main station at Redfern. Any shunting required or marshalling of trains or distribution would have to be done at Redfern.

183. *President.*] It would mean a circular resumption right round the city? If you can get under the houses without materially damaging them, of course the houses are left to be used, and you can get a rent from them. You have to resume on account of the damage which you will do, but still the damage, although it occurs, may not render them uninhabitable or unsuitable.

184. *Mr. Hoskins.*] You have heard that the proprietors of underground railways have had to pay large sums to compensate people for alleged damages to foundations of their houses, even though the railways did not interfere with the foundations? I know that there has been a lot of compensation paid. I would wish the Commission to understand that I am not advocating any of these schemes. I am recommending no scheme. I am merely reporting on the feasibility and desirability or advantages of one or the other from an engineering point of view.

185. *Mr. Wright.*] I suppose you are prepared later on to criticise any schemes from an engineering point of view? Yes; but I cannot give an opinion on traffic questions or questions whether a site for a station is desirable without infringing on the rights of the Railway Commissioners. According to the Railway Act they have the power to fix the stations and so on; my duties really comprise the engineering part of the business. I produce a plan of the city of Sydney, in answer to the request of the President, to show what I consider possible lines of railway. It is to be remarked that nearly all these lines shown here have been suggested more or less in one or other of those schemes which have been previously submitted. I have got out what appears to be practicable. I have shown a line from Redfern, in answer to Mr. Wright's inquiries, crossing Liverpool-street into Hyde Park, and turning up into the north-western corner of Hyde Park to Elizabeth-street, and then turning off to the right so as to tunnel right under Macquarie-street, and with a turn come round to Circular Quay. The levels are right enough for a line like that, but as a surface line at Circular Quay was not reckoned desirable, I suppose it to be carried on overhead over Circular Quay, and then to get under the ground on the other side of the city, near Harrington-street, and then follow under Church Hill from Wynyard-square, following as much as possible under the roads—unfortunately you cannot follow the roads altogether—and then coming into daylight about Liverpool-street, and curving round and entering the main station again. That line, where it passes under the Domain, could be lowered and continued down to Fort Macquarie, if required. Then the line on the western side was to be laid down so that it could be continued across by bridge to North Shore; that is the same position, for that purpose, as I submitted to the other Royal Commission. Then there are other connections shown, branching off from the northern end of Hyde Park. There is a line shown turning round to the eastern suburban line, and a double connection is made there by a fork to Circular Quay and Hyde Park also. Starting again at Redfern, there is an extra set of lines starting from the goods side of Redfern station and running parallel to the other lines as far as Liverpool-street, and then turning off to the right to get down to Woolloomooloo Bay on the other side. That line will pass under the line branching off to the eastern suburban line, but a connection with it can be made by the lower fork. Then, I have shown on the plan some lines off to Pyrmont and Glebe Island. I have a larger plan to show what has been done in regard to Glebe Island. Under instructions from the Minister, I had surveys made, some years ago, from Stanmore and Petersham to connect with Glebe Island and Long Nose Point; it is not shown on this plan, because the plan is not wide enough.

186. That will serve Bahmain? Yes.

187. *Mr. Barnell.*] Do you not propose to go beyond Longnose Point—across Parramatta River? No.

188. *Mr. Black.*] Is the line under Wynyard Square merely a return line, or is it for setting down and picking up passengers? It can be used for picking up passengers, of course.

189. I suppose it would not serve the purpose if run along the waterside? I do not think anything would be gained by running it along the waterside.

190. *Mr. Wright.*] Is it possible to continue a passenger line with a traffic line round the wharfs? I think it would be a great mistake. I think, in any case, the passenger traffic must be separated from the goods traffic; it is done all over the world. It would be most inconvenient to mix them up.

191. Could not a circular line, with a branch to the wharf, be utilised for that purpose? No; it would be too high. A line for goods purposes must be a separate line, and it is immaterial as regards expense whether it is by itself along the wharfs or alongside another line; but the two kinds of traffic cannot be mixed up.

192. You think the goods line must be distinct from the passenger line? Yes; that opinion seems to be held all over the world. Different railway companies, in other parts of the world, I know have gone to very great expense indeed to get the two kinds of traffic separated.

193. Have you made an estimate of the cost of these schemes? No.

FRIDAY, 19 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
CHARLES ALFRED LEE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

194. *President.*] You promised to find out whether it would be possible to run four trains into the block bounded by King, Castlereagh, Market, and Elizabeth Streets, and for the trains to return? I have tried that on paper, and I find that the area is too restricted. To make a proper scheme it would be necessary to encroach on some of the properties at each end, fronting Elizabeth-street. There is no room to get in the lines and out again and get in two dead-ends.

H. Deane.
19 Feb., 1897.

195. *Mr. Wright.*] It is not wide enough? It is quite wide enough, but it is not long enough.

196. *President.*] Supposing the line stopped absolutely there, would it be possible to get two trains backwards and forwards—for you have the width of the road and you have the space under the road on both sides, which gives you another 2 chains? You do not want any width on the Castlereagh-street side, because there is not length to get across there. I think it would be possible to scheme out something if they were dead-ends—if you were not carrying the line on any further.

197. *Mr. Hoskins.*] Is there room there for a large station? No; it would be a very small station. The length of the Government land in that block is 360 feet, reckoning from Market-street to the High School boundary.

198. *Mr. Wright.*] What length is it from that point to King-street? 160 feet.

199. Supposing the Government resumed all the land in that block on the northern side of the High School, would that give you sufficient room? I think it would make a fair wayside station, but it would not be a very roomy one.

200. *Mr. Hoskins.*] With a small station, would you not be reviving all the difficulties of working the traffic which are experienced at Redfern Station? This extension in any case will involve the construction of a new station on the Benevolent Asylum grounds.

201. In addition? Yes; you could not get over that; Redfern must be improved.

202. Do I understand that any city extension will necessitate the resumption of the Benevolent Asylum grounds, and that you must have a station there under any circumstances? Yes, unless you bring the terminus on to Hyde Park; but otherwise you must do something at the Benevolent Asylum grounds.

203. Is the Commission to understand that if you extend the railway to the city, say to King-street, or anywhere else, the Benevolent Asylum site, and, perhaps, the Cemetery ground, must be resumed to have a large station there, because the existing station at Redfern is too small? Yes; you are bound to have an improvement of the present terminus station, either by shifting it across Devonshire-street, or by making a new one in Hyde Park.

204. *President.*] Have you taken into consideration the moving of Devonshire-street further north, and, instead of virtually abandoning Redfern Station, working that station in with your proposed improvements? I wish to point out, in the first instance, that any alteration of Redfern Station will entail an entire reconstruction of the passenger platforms and docks; and the easiest way of dealing with it is to make a new station beyond. It is a mistake to suppose that the ground on which the present station is will be wasted. The space will be necessary for the distribution of the trains and for bringing them into the station. Referring to the plan of the Hyde Park scheme, the station is not merely that part lying between Liverpool-street and Park-street, but practically it starts from a point near Goulburn-street. From that point where you begin to manipulate your trains, to the end of the docks at Park-street, the distance is 1,800 feet. Now, if you measure 1,800 feet from where the lines branch off say at the carriage-shed in the yard at Redfern Station towards Belmore Park, it will carry you nearly to Belmore-road. With the existing heavy traffic at Redfern it will be extremely difficult, and perhaps almost impossible, to make a partial extension into the Benevolent Asylum grounds. The platforms at Redfern are not properly arranged. The station-building was erected a long time ago, when the requirements of the railway traffic were nothing like what they are now. The amount of the traffic then was extremely small compared with what it is now.

205. *Mr. Wright.*] Supposing that Devonshire-street were closed, and a street were run obliquely across the cemetery in its place,—would that give you sufficient room? I do not think that such a deviation could be worked in. I have here a plan—it is rather a rough one—which I have had prepared in compliance with the wish of the Commission to show the proportion of ground which will be taken up by the Benevolent Asylum scheme. It is proposed to take up the space which is tinted red on the map, and which it will be seen forms a very large proportion of that area. The only way of getting the traffic round will be by taking it right round Garden-road. On the eastern side of the station it is proposed to have a wide street (which goes into Devonshire-street) to take the converging traffic.

206. *President.*] Supposing that you drew a line on the map from the old police-station in George-street, parallel with Belmore-road, what amount of line would it cut off? About 150 feet of line, and you lose the end platform and the building and the approach at the end.

207. *Mr. Wright.*] Adding on the space occupied with buildings and with the roadway, what length will it cut off? 320 feet.

208. *President.*] How much platform is wanted? I think it is 70 feet.

209. *Mr. Wright.*] You must have a parcels office and a ticket office at one end available for all the platforms? Yes.

210. *President.*] What is the length from Devonshire-street to the end of your line? About 700 feet.

211. Towards the end you have another 300 feet for your offices? Yes.

212. Surely it would be better to move Devonshire-street further north and keep them altogether? By running the station over Devonshire-street you do not separate the lines.

213. It means either cutting the station in two or abandoning everything in Redfern Station? It would mean the abandoning of the buildings and offices.

214.

- H. Deane. 214. The platforms and all the buildings? Yes. When you want to make a change it must be a radical one; it is no good to botch the thing.
- 19 Feb., 1897. 215. Is it not a pity to have the thing cut in half by the street? No; it is not cut in half by the street. There will be no gap there, because the lines will be carried over the street.
216. *Mr. Hassall.*] Would any great inconvenience be caused by closing Devonshire-street, as long as you provide access to the trucking-yards and produce-sheds by means of the new road you propose to make? I do not think very much inconvenience would be caused. It was thought desirable to avoid any complaints in the matter, and a subway for light traffic was provided.
217. *President.*] Supposing you had to put your railway-station on the northern side of Devonshire-street, would it not be better if you had no Devonshire-street? It would save expense.
218. *Mr. Wright.*] If there was no Devonshire-street, would you design your buildings so far to the north as you do? Yes.
219. *Mr. Hoskins.*] The proposed station either at the Benevolent Asylum site or at Hyde Park will be for passenger purposes only? Yes.
220. A portion of the yard at Redfern Station is used for the arrival of produce and merchandise. Supposing the passenger-station were shifted to the Benevolent Asylum site or to Park-street, would there not be more room left at Redfern station for the arrival of merchandise and produce from the country? I think not.
221. Not if you did away with the platforms? No. I think the same space would be required as at present. It is all occupied now. If you did away with the platforms you would do away with a comparatively small width.
222. You do not propose by the alterations which the Commissioners suggest to give any additional accommodation for the inland produce trade? No.
223. *Mr. Black.*] How many feet is it from the Devonshire-street end of the existing platforms to the fence round the Benevolent Asylum grounds? About 120 feet.
224. How many feet do you require to be added on to the space from the mouth of the tunnel to the inner end of the railway platforms to give you room for marshalling your trains? About 1,800 feet.
225. *President.*] Will you be good enough to state what is wrong with the Redfern station? The length is not sufficient, and there is not room to make the distributing roads right for shunting purposes.
226. *Mr. Hoskins.*] Do they propose to have carriage sheds at Park-street? No.
227. *President.*] If it is too short from the tunnel to the platforms it is impossible to make any alterations to the south? I understand that the best arrangements of the space have been already made, but they are most unsatisfactory.
228. It is not a question of the site which exists, because that is cut off by Devonshire-street? You would get length of platform, but you would not get proper arrangements for running into the platforms.
229. *Mr. Hoskins.*] You would have a smaller station at the Benevolent Asylum site than the proposed station at Park-street? The building would be of less height.
230. *Mr. Humphery.*] Have you any estimate of the cost of the Park-street building? £200,000.
231. What would be the exact cost of the building which you think would be necessary on the Benevolent Asylum site? Including the foundations, which would be very much heavier at the Benevolent Asylum site, I make it £185,000.
232. Practically there is an inappreciable saving? There is not much saving.
233. There would be a saving of £15,000, but on the Park-street site you would provide offices for the Commissioners? Yes.
234. Which would not be provided on the Benevolent Asylum site? No. I think that is a fair statement.
235. *Mr. Hoskins.*] Why would the foundations be so very expensive at that site? Because you are so high above the ground at that end. There is a great drop in the ground. The platform at Redfern Station is 64 feet above the level of the sea and Belmore Road, right in line with the station, is only 33 feet above sea-level.
236. You would have to build up the foundations? There would be a great deal of foundation in the north-western corner; but the space below would be utilised.
237. *President.*] At King-street, supposing the railway was to be extended underground to the north, how deep down would you be? With good grades it would be about 35 feet.
238. If it was not to be extended to the north it would be about 20 feet? Yes, at Market-street.
239. You would be deeper at King-street? Yes.
240. Supposing the Government determined to make a railway station at Fort Macquarie, there are two ways to get to the port, namely, either by going straight ahead or by going under the park. To go straight ahead would simply mean very heavy resumptions to get down to Fort Macquarie? Yes.
241. Would you be deep enough, passing from King-street towards Hunter-street, by keeping easterly so as to get under the park as soon as possible;—would there be enough for cap for your tunnel to enable it to be made without any interference with the building? If you follow the line I showed on the map yesterday, and get from that corner in Elizabeth-street, and then turn round you get plenty of depth there to tunnel without disturbing the houses.
242. You would get into the Park somewhere near Governor Bourke's statue? Yes, somewhere near there.
243. Therefore, there would be no resumptions? I do not know about resumptions, but you would not injure the buildings, I think.
244. Parliament could pass a law which would permit the Government to tunnel, always providing that they did not interfere with the buildings? Yes; I am pretty well sure that it could be done, but I would like to look into the matter before I expressed a definite opinion.
245. *Mr. Wright.*] The old surveys by Mr. Whitton show that that could be done? Starting from the north-eastern corner of the Park we could tunnel, but this is different.
246. The rail level was 60 feet below the surface? I know there was great depth; we were right into the sandstone.
247. *President.*] From the Domain, would it be possible to have an underground railway coming out on the surface at Fort Macquarie? Yes.
248. That is apparently the only way you could approach the harbour from Redfern in a northerly direction without heavy resumptions? Without injuring property, because the necessity of resumptions would have to be dealt with afterwards.
249. *Mr. Black.*] In that case I suppose it would not be wise to have a central station at Fort Macquarie? That would not be a central station; it would not dispose of the Benevolent Asylum station.

TUESDAY, 23 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.		JOHN LIONEL FEGAN, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.		THOMAS HENRY HASSALL, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.		FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
HENRY CLARKE, Esq., M.P.		FRANK FARNELL, Esq., M.P.

John Parry, Outdoor Traffic Superintendent of Southern Lines, Department of Railways, sworn, and examined:—

250. *President.*] What is your position? I am Outdoor Traffic Superintendent of the southern system, Government Railways. J. Parry.
251. Do you come here at the instance of the Railway Commissioners? Yes. 23 Feb., 1897
252. You desire to place a return before the Commission? I wish to lay before the Commission a return showing the number of trains in and out of Redfern daily. [*Vide Appendix.*] I have taken two ordinary days, namely, the 25th and 29th of January, and the last Eight-hour Holiday. On 25th January the total number of trains and engines in and out for the day was 555, and when the business people were coming into the city between 8 a.m. and 9 a.m.: the total number of trains in and out during the hour was forty-six, and between 9 a.m. and 10 a.m., thirty-nine; the two busiest hours of the morning.
253. What proportion of these is passenger trains in and out of the station? Between 8 a.m. and 9 a.m., of the forty-six trains I mentioned, there would be twenty-two in and eleven out.
254. Does that represent one of your busiest hours at Redfern? Yes; between 8 and 9 would be the busiest hour on an ordinary morning, but on a holiday there would be more.
255. How much would the traffic increase on a holiday? On last Eight-hour Day, which was a heavy holiday, the total number of trains in and out was 701 and between 9 a.m. and 10 a.m. there were no less than fifty-two trains.
256. Will you now state the number of passenger trains between 9 a.m. and 10 a.m. on the separate lines on an ordinary day? Between 9 a.m. and 10 a.m. out of Redfern on the slow lines there were three trains, on the fast lines five trains, and on the goods lines two trains, and into Redfern on the slow lines there were six trains, on the fast lines six trains, and on the goods lines nil—ten trains out and twelve trains in.
257. Out of forty-six trains it appears that thirteen are engines running free? Yes.
258. So that there are thirty-three passenger trains between 9 a.m. and 10 a.m.? Yes.
259. Will you now divide up the thirty-nine trains, in and out, between 9 a.m. and 10 a.m., in the same way? Between 9 a.m. and 10 a.m. ten passenger trains out and twelve in.
260. The difference would be engines and goods trains? Yes.
261. Fifteen engines and two goods trains? Yes.
262. Supposing that instead of the engines running back out of the platforms towards Redfern it was possible to run them ahead towards the city; that would lessen the traffic by about thirty, would it not, in the two hours? Of course light engines would have to go to their shed at Eveleigh.
263. If it were possible to arrange the Redfern yard by an extension towards the city, so that instead of an engine running back at the busiest hours of the day she could go towards a shed further on, you could lessen the number of engines passing on the lines by fifteen in each hour? Although they would not run on these lines, you would have to deal with them in Redfern yard all the same. It does not matter at which end you have your engine-shed.
264. *Mr. Hoskins.*] Do they not run on lines on which trains do not run? As a rule, only goods trains run on these lines, except on special occasions.
265. *President.*] If the work in Redfern yard is limited to passing passenger trains in and out, it is perfectly clear that you have got rid of shunting seventeen in one hour and thirteen in another? We get rid of the shunting of these engines if the trains run through.
266. You would lessen the pressure in your yard very materially? We should if we could run them through to another station; that would relieve the working at Redfern station, as the engines would not have to shunt about the yard.
267. If the main station is moved to Hyde Park, Redfern then would not be congested? No.
268. There is plenty of room for them all to pass through? Yes; with a modification of the lines there would be ample room for them to pass through.
269. And still to be used, we presume, for an ordinary passenger station? Yes, there would be ample room for an ordinary through station.
270. *Mr. Hoskins.*] And still the engines would be running down to Eveleigh? Yes. I understand the point of the President to be that if the terminal station were removed to the city there would be no difficulty in passing the engines through Redfern from the terminal station to the engine-shed.
271. Redfern would then cease to be congested? Yes.
272. You have chosen the busiest hours? In the morning.
273. Are there busier hours in the afternoon? On the same date, 25th January, between 5 p.m. and 6 p.m., there were forty-five trains, and between 6 p.m. and 7 p.m. thirty-nine trains.
274. That represents your present maximum traffic? On an ordinary day but not on a holiday. On the last Eight-hour Day the total number of trains and engines in and out of Sydney was fifty-two between 9 and 10 a.m. and fifty between 5 p.m. and 6 p.m. and forty-four between 6 p.m. and 7 p.m.
275. That is, engines running free and trains? Yes.
276. How many engines were there out of the number? There were six engines out of the number between 5 and 6 p.m.; seven between 6 and 7 p.m.; and nineteen between 9 and 10 a.m.
277. I presume there are continual operations going on in the yard in addition to the number of trains? Yes. In addition to the number of trains in and out, every passenger train coming in during busy hours has to be drawn out to liberate the engine which has brought it in. If the coaches have done their work they are simply drawn out and shunted into the carriage-shed sidings. If not they may be run out direct or shunted to another platform, another engine being attached, or the same engine which brought it in, to take it out to form another train. The figures in the return of the number of trains are exclusive of shunting operations and represent trains passing between Redfern tunnel and Eveleigh. The shunting operations are carried on between the station platforms and the tunnel. 278.

- J. Parry. 278. *Mr. Wright.*] Do not some of the suburban engines push an outgoing train as it is leaving the platform? No, trains are never pushed out; they are always drawn out.
- 23 Feb., 1897. 279. *President.*] They follow up closely? Yes; the coaches are drawn out by another engine, and the engine which brought them in follows up closely.
280. How many of these shunting operations take place in an hour? It would be almost impossible for me to tell you the number of operations. In the morning, for instance, the trains are so thick coming in at times that an engine not required immediately may have to be shunted to two or three different lines to clear other trains, or if a train comes into No. 6 platform the engine may have to shunt out of that platform and go to No. 1 or No. 2 to lay hold of a train to go right away.
281. Have you got a list of the goods trains coming into Redfern Station for a week or a day, or would you prefer to give all this information in the form of a return? It would be better for me to furnish a return now that I know the form in which you desire the information to be given. The return, however, to be furnished, will not give the Commission an adequate idea of the full amount of work actually done in Redfern yard in dealing with trains, because it will not convey to you the large amount of shunting to be done, as previously explained.
282. Presuming it was possible to take 12 acres of land or some such area to the north of the present station, would it be possible to equip it with lines so that it would relieve some of the congestion to the south of Redfern Station? Yes, materially, if sufficiently far away from the present station.
283. Supposing the Redfern Station is to remain as it is, and that you are given an area ahead of that station to make what use you can of it—either in extending the station or in laying down shunting yards—will it do away with the pressure or congestion at the throat of the present yard? I would bring the six main lines straight through Redfern station—the ordinary bay platforms at Redfern would not then be required. If you get away from the tunnel you can widen out and arrange your platforms and roads in such a way as to reduce the amount of shunting very considerably by providing proper refuge-sidings for the engines to stand in, and for carriages to stand in to strengthen trains.
284. Are we to infer from your statement that it means the abandonment of Redfern Station and the erection of new buildings? Yes, as a terminal dépôt.
285. Supposing that it were found necessary to utilise the platforms and buildings at Redfern with the extension would it be possible, ahead of the station, to carry out any shunting operations to relieve the congestion to the south of the station;—is it possible to utilise it? Not without entirely remodelling it.
286. Have you any estimate of the cost of remodelling it? No.
287. As far as the public are concerned, there is really no difference between a station at Redfern and a station on the Benevolent Asylum site? No.
288. Supposing that each of your thirteen platform-roads were carried on to a point, say 1,000 feet north of the station and brought to another "throat" so that you could work the trains from both ends, would not that obviate a great deal of the difficulty which you now experience? It may assist the shunting operations; but I would respectfully suggest that you can make no alteration to the existing station which will in any way compensate for the expenditure without entirely remodelling the whole thing.
289. *Mr. Hoskins.*] Would not the difficulty which you now experience at the narrow neck where the engines cross over from the different platforms still continue? Yes.
290. That is the most dangerous part of the yard? Yes.
291. Could that be obviated by extending the station further north and removing a number of these platforms so that there would not be such a convergence of roads and engines to one narrow point? In my opinion to extend the present platforms a short distance north and converge the roads again into through roads at the southern end would not be a satisfactory arrangement.

WEDNESDAY, 24 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P., (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
	FRANK FARNELL, Esq., M.P.

John Parry, Outdoor Traffic Superintendent of Southern Lines, Department of Railways, further examined:—

- J. Parry. 292. *President.*] You wish to make a statement bearing upon the evidence you gave yesterday? I do.
- 24 Feb., 1897. 293. Will you be good enough to read the statement? It is as follows:—

- I have prepared, for the information of the Commission, some returns (*Vide Appendix*) showing,—
- (1 and 1A.) The number of trains and engines arriving and departing through Redfern tunnel on up and down lines during each hour of two ordinary days, viz.:—25th and 29th January, 1897.
 - (2.) The number of through-passenger trains, and number of suburban-passenger trains, arriving at and departing from Sydney during each hour on an ordinary day.
 - (3.) The approximate number of passengers arriving at and departing from Redfern Station during the busy hours of morning and evening on an ordinary day.
 - (4.) The number of trains and engines arriving and departing through Redfern tunnel during each hour on last Eight-hour public holiday, 5th October, 1896.

By referring to statements Nos. 1 and 4, it will be seen that on an ordinary day, 29th January, the total number of passenger and goods trains and light engines passing through Redfern Tunnel to and from the station and Darling Harbour was 561, and the number during the busiest hour was forty-five. On last Eight-hour holiday the number of trains increased to 701, and the number during the busiest hour of the day was fifty-two.

Statement No. 2 shows that the number of through and suburban-passenger trains in and out of Redfern during an ordinary day was 324. Of this number thirty-eight were dealt with in the busiest hour of the day. The

The number of through and suburban-passenger trains passing through the tunnel in and out of Reelfern on last Eight-hour holiday, 5th October, 1896, was 476, and the greatest number during an hour of the busiest time was thirty-seven.

The number of trains and engines shown as arriving and departing, however, does not represent the work done in the passenger yard, as a large proportion of the passenger trains arriving have to be drawn out from the platforms and shunted to liberate the engines which brought them in, or to place the cars at other platforms to form other trains. There is also a great deal of shunting of the engines to keep them out of the way of incoming and outgoing passenger trains, as there are no refuge sidings between the platforms on the main running lines to allow of the engines being readily shunted clear to take water or stand while other trains arrive and depart; nor are there any sidings between or handy to the platforms where spare coaches can stand, so as to be readily available to strengthen trains, and considerable shunting across the main running lines is occasioned to get to the carriage sidings.

The distance between the ends of the passenger platforms and the junctions of the goods yard and the Darling Harbour branch with the main passenger lines is much too short, and frequently causes delay to shunting operations, both in the passenger yard, the goods yard, and to the goods trains on the branch. The arrangement of the points and crossings is also unsuitable to conduct the traffic satisfactorily in consequence of the limited length, and being hemmed in by the Darling Harbour branch, the yard having been added to, piecemeal, from time to time.

The sidings between Darling Harbour branch and Mountary for storing carriages necessitate trains of cars to be shunted through the tunnel in the face of the incoming passenger trains when drawing the empty trains out of the sidings to set back into the passenger platforms, besides blocking goods traffic on the branch while the shunting is being done.

Platforms.

There are thirteen platform-roads (including the two recently constructed), but of these, two, viz., Nos. 4 and 7, are useless for trains to arrive at or depart from, they being only 173 feet and 233 feet long in the clear respectively. Nos. 9 and 10 platforms are also much too short to accommodate ordinary seven-car trains without fouling other roads, they being only 313 feet, and 248 feet long in the clear, whereas the length of a seven-car train with engine is 410 feet and 424 feet long, according to the class of engine, and it is frequently necessary to run trains up to nine cars, the length of which is about 530 feet, and on holidays it would be an advantage to run even up to twelve cars at times, the length of same including engine being 689 feet.

The lengths in the clear of the eight platforms, Nos. 1, 2, 3, 5, 6, 8, and A and B, are as follows, viz., Nos. 1 and 2, 469 feet each; Nos. 5 and 6, 624 feet each; No. 8, 405 feet; A, 436 feet; B, 482 feet; so that it will be seen that only Nos. 5 and 6 platform-roads will hold trains of more than eight cars and engine clear of other roads. Much difficulty is, therefore, experienced at holiday times by trains standing on one line blocking the entrance to other roads.

None of the platforms are provided with roofing or awning sufficient to admit of passengers' luggage and parcels of long country trains being discharged under cover, and in wet weather this gives rise to complaints.

Main-entrance Platform.

The end platform at the front of the station is most inconvenient and too narrow. There are no means of keeping it clear of persons who are not travellers, but who congregate and stand about blocking the way and inconveniencing passengers. Passengers arriving and departing meet each other on this narrow platform, which at busy times becomes so congested that the porters and officers are unable without much difficulty to pass along from one platform to another, and it is only with the greatest difficulty and risk to passengers that parcels and luggage barrows can be got through.

294. *Mr. Hoskins.*] Is not that the fault of the railway officials;—cannot they prevent stragglers and idlers walking about the end platform? It is all open, and if an officer spoke to a stranger and he said, "I am going away by the train and am going to get a ticket," you could do nothing with him. I tried energetically once to deal with these people, but I found that I had to drop back; you cannot deal with them. It is the same with the latrines; the building is frequently filled with loafers who simply go there to use the place—they are not passengers, but we cannot challenge them as it is impossible to ask every man who goes there, "What brings you here; have you a ticket!" You may possibly challenge one who had a ticket; you cannot demand to see their tickets before going in.

295. *President.*] Will you now resume the reading of your statement? Yes.

The approach from the streets to this platform also involves much inconvenience and risk to passengers in crossing the main cab approach.

Cloak-room.

This room is too small, most inconveniently situated, and gives rise to much irritation to passengers at busy times. On one of the recent busy days no less than about 1,385 to 1,500 different parcels were dealt with by passengers depositing and calling for same. A great proportion of these parcels were dealt with between the busy hours of morning and evening, and although the maximum number of men who could work in the space were employed, still delay to passengers could not be avoided.

Parcels Office.

The Parcels office is small, and the cart approach to same is too contracted in space to admit of a sufficient number of carts to draw up to the platform to deliver and receive parcels during busy times, and delay to carts takes place in consequence. The difficulty of conveying the parcels on barrows to and from the trains through the crowds of people on the end platform is very great.

Refreshment-room.

The present room is much too small and inconvenient, both from a public and Departmental point of view.

296. *Mr. Roberts.*] Have you a record of the number of passengers carried on Eight-hour Day? No; I am unable to give the number of passengers carried into Sydney on that day.

297. You have, I think, a record of the number carried on an ordinary day? I obtained it simply by counting the passengers in the trains. I had special officers out to count the passengers as the trains were coming in. My opinion is that on the last Eight-hour Day we dealt with about 100,000 passengers,—50,000 in, and 50,000 out.

298. How would that compare with the traffic on an ordinary day? That would be about 150 per cent. more. On an ordinary day the total number arriving in Sydney would be, approximately, about 20,000.

299. *President.*] Nine-tenths of that number would be suburban passengers? More than that.

300. Will you ascertain what proportion are suburban passengers, and what proportion are long-distance passengers? I will get the information, approximately.

301. Would there be 20,000 passengers in and 20,000 out? 20,000 passengers in, and approximately the same number out.

302. *Mr. Hoskins.*] Have they not some arrangement in Victoria at the railway stations by which they do not allow persons not going by train to go on a platform unless they get a special ticket? I believe that is so, and we do so here as far as possible. For instance, we do not allow people to go on No. 3 platform unless they have either a railway ticket or a platform ticket, because we are able to fence off that platform and put a man at the gate; but the end platform, where the cabs approach, we are unable to fence off, and in consequence of the refreshment-room being on No. 5 platform we are unable to fence that off.

303. *Mr. Lee.*] The chief trains start from that platform? Yes.

- J. Parry. 304. You do place a barrier across that platform when the principal trains are starting? On the tunnel side of the refreshment room we do for the mail trains only.
- 24 Feb., 1897. 305. The inconvenience to the working of the Department is not caused by the influx of loafers, but because the station is too small to give egress and ingress to the passengers? The difficulty of keeping people clear of the main entrance platform and the space is too small. Referring to the plan of the new station, you will see that no one will be able to pass on to the general platform, which is 57 feet wide, without obtaining a ticket; the whole of the people coming in with tickets will go on to the general platform, and everyone who wishes to go on to another platform from the main platform will have to show his ticket to a porter, and the tickets will be checked to see that the people go to their proper trains. The main platform will be fenced off from the other platforms.
306. The whole of the station will be absolutely under the control of the officers? Yes.
307. And they will be able to control the traffic which they are unable to do now? Yes.
308. No ordinary alteration of the present station would enable you to do that? You would have to take in Devonshire-street to make the alteration necessary to the present station and then it would be defective.
309. *President.*] You could lengthen the platform too? Yes; but after you have improved the entrance to the station the question of safe working will arise.
310. It is the yard behind the station which becomes the trouble then? Yes.
311. The extreme length you gain is 12 chains, that is twelve carriages? Even then it is inconvenient to have the general waiting-room, the ladies' waiting-room, the refreshment-room, and all other buildings on these two platforms between No. 3 and No. 5, and No. 6 and No. 8.
312. Where are you going to put the buildings in the new station? In the front.
313. Why cannot you put these buildings in the front too? Even then it means remodelling the whole of the portion of the yard between the platform and the tunnel. Supposing you take up all the sidings you will not have room enough. Even supposing you extended the platforms for a considerable distance north, you would not have room between the ends of the platforms and the tunnel junction to make a proper and convenient passenger yard.
314. Supposing it were possible to move Redfern Station up bodily, how much room would you require between the tunnel and the southern end of the platforms to give you room for a suitable yard? The plan of the new station shows the way in which you get proper arrangements in for working the trains. It is about 1,900 feet.
315. How far from the turning shown on that plan would be the southern end of the proposed station in Park-street? About 1,200 feet.
316. The station proper is 1,200 feet long? 1,200 feet from the outside of the shunting-points to the southern end of the platform.
317. How far is it from the tunnel in Redfern yard to the southern end of the present station? About 980 feet.
318. Therefore, it is 220 feet shorter than you believe is necessary? More than that, because, as you will see, the goods branch to Darling Harbour joins the main rung lines about 240 feet back from the mouth of the tunnel and this restricts your yard space to the north of the tunnel.
319. But supposing that this point were brought nearer the tunnel, in shunting your carriages into and from the platforms you would have a considerable amount of shunting into the tunnel again? You would have trains shunting through the tunnel in drawing out and setting back.
320. Your first objection is that it is too short by 220 feet? The distance is too short.
321. Will you now explain how the goods line turning off into Darling Harbour further blocks the yard? Inasmuch as the goods trains passing to and from the Darling Harbour branches have to travel on these passengers lines up to that distance.
322. *Mr. Hoskins.*] And have to cross the arrival passenger lines? Yes; the arrival and departure a great deal.
323. *Mr. Humphery.*] Your calculation is that 980 feet, less 240 feet, which is taken up by the approach to Darling Harbour, would be available in Redfern yard as compared with 1,200 in the new station? Between the southern end of the old platform and the tunnel we have only 960 feet, but that space is further restricted by this Darling Harbour branch which joins the passenger lines 240 feet back from the tunnel. That gives us a space of 720 feet.
324. *President.*] Would it be possible to cheaply devise any scheme by which the yard could be lengthened towards the south? I do not think so.
325. Did you ever look at it carefully? Yes. It would mean an enormous cost in land resumptions.
326. You have no land there? Practically none, I think, that would be of any use; it would have to be resumed.
327. *Mr. Lee.*] Is it possible to devise a scheme to widen the tunnel by taking land on the eastern side and utilising Prince Alfred Park; if that were done, would it give the relief which is desired? It would mean an enormous cost in land resumptions.
328. *President.*] Can you get 1,200 feet to the south of the present platforms along the main line;—is there no way by which you can devise it at all? I would not like to suggest it.
329. Supposing it is suggested, have you any idea of what it would cost? No.
330. The crucial thing is not the station itself, but the yard behind the station, and you state that you want 1,200 feet;—will you be good enough to explain why you cannot get 1,200 feet to the south of the station? I believe the tunnel would come practically in the middle of your yard, and I do not think you would get the height and that it would cause a considerable alteration of the streets to get depth for girders which would span over a sufficient width to admit of a clear space for these additional roads and sidings necessary to widen the yard out. Assuming for a moment that it is possible to extend the yard in a southerly direction with the large number of trains we have coming in day by day, amounting on an ordinary day to 500 or 600, besides the enormous amount of shunting going on continually during the day the inconvenience it would cause would be such that it would be almost impracticable to carry out the alterations in that direction so as to provide a proper station.
331. Will you prepare a statement showing the reasons why it is not possible to extend the yard to the south? I would suggest that it is purely an engineering matter, and although I should be pleased to do anything you may wish I think the engineer would do it more readily and equally well. If you ask me from a traffic point of view whether it is feasible to extend the station in that direction, I would strongly urge that it should not be done because of the enormous inconvenience which must of necessity

J. Parry.
24 Feb., 1897.

necessity arise to the general public to say nothing of the risk attendant in carrying out the works in the middle of so much traffic. Assuming for a moment, for the purpose of argument, that it is possible to extend the yard in a southerly direction and get the required yard accommodation you will see that the platforms shown on this plan of the existing station have only two roads between them, that is, one for each as a main arrival and departure road. There is no third road between these platforms, and therefore, every train which runs into the platform must, of necessity, be drawn out before the engine can be liberated; whereas, if we had a central independent road, between these platform roads, a train would run into the platform, the engine could cut off, cross over to the middle road, and run back to the southern end of the train and couple on, and thus save an enormous amount of shunting. A second train could arrive at the opposite platform, and its engine could be cut off and use the middle road in the same way.

332. There are only two roads between the platforms at Redfern? Not more than two, and in some cases only one.

333. You regard that as a salient defect, which you cannot get over? It is a very serious defect in a terminal station, where so many suburban trains are arriving and departing. If you will refer to the plan of the new station you will see that that great defect is obviated by having a middle line. That will do away with an enormous amount of shunting. It is a most important point to have three roads between the platforms for suburban traffic.

334. *Mr. Hoskins.*] I believe you despatch the express train to Melbourne from one of the western platforms? From No. 5.

335. You have another platform still further to the west? Yes.

336. When you are despatching the Melbourne express from No. 5 platform, or when you are despatching trains from the more western platforms, each train has to cross over the arrival line to get on to the departure line at the end of the platform? The Melbourne express starts from No. 5 platform.

337. It has to cross over the arrival line? No, it runs straight away on the same line.

338. But some trains departing from the western platforms have to cross over the arrival road to get on to the departure road if they are going to the south? But when you come to the mouth as it were of a large terminal station like Sydney you abandon your arrival and departure roads, because trains when they arrive at the entrance to the yard simply branch off so that you can run them into any platform.

339. There would be no danger if the trains were diverted from the main road on to a siding parallel with the arrival main road; but supposing that they have to be taken across an arrival road is there no danger of a collision occurring? There should be no danger because the lines would be properly signalled, and if a train were departing from one road, and in order to get on to its proper departure road it had to cross an arrival road, the signals controlling the trains on the arrival road would of necessity be at danger and if the drivers observed these signals there would be no risk of a collision.

340. To ensure a prevention of accidents it is necessary that the driver of an arrival train should be exceedingly careful to look at the signals, and the signalman must be careful to see that the trains are properly signalled? Yes.

341. Is it not unusual at a railway terminus in Europe or Great Britain for trains leaving a station loaded with passengers to have to cross a road on which passenger trains are arriving very frequently? No; it is the usual arrangement in terminal stations. At the Liverpool-street terminus, one of the most modern stations in London, you would find that existing there in just the same way.

342. That is to say, that outward trains cross the arrival train roads with great impunity? Yes, because to conduct a large traffic you must of necessity be able to run the arrival trains to any platform, and also to start trains from any platform to either of the departure roads.

343. Is it not a fact that trains are sent into sidings from the main departure roads where they do not have to cross other roads? No; it is the usual thing at a terminal station to work in that way. Supposing a train was brought into a platform on the west; if it was started with passengers from a platform on the west, it would have to cross the arrival road to get on the departure road; but supposing it does not depart from the platform the engine would still have to draw the coaches out to cross the arrival road in order to place them on some other road to enable them to be put in position for the train to start from another platform road which does not cross an arrival road, so the coaches would have to cross the arrival road any way.

344. If there is a minimum of danger of trains not coming into collision by crossing roads on which other trains come in, how is it that the last accident happened at Redfern Station? That was purely because the driver started without his signal being lowered; the signal stood at danger, and if the driver had waited until the arm fell nothing could have happened because the incoming train itself locked the levers so that the man could not pull the signal down while the train was coming in.

345. Is it proposed, do you know, at the new station either at Park-street or at the Benevolent Asylum site that the trains shall be so arranged and ordered as they are now, that trains from one side of the line shall cross over the arrival roads or other roads coming in in an opposite direction? Of course in the arrangement of the station every effort is made to prevent that as much as possible; but in order to get the maximum work from the station it must of necessity be that trains will cross each other as you say.

346. If the railway is extended to Park-street, will there not be less probability of trains having to cross other lines where engines or trucks are being moved about and where there is a possibility of a collision taking place? There would be very much less liability, because you would remove a very large amount of the shunting across the running lines which has to be done at Redfern Station.

THURSDAY, 25 FEBRUARY, 1897.

GEORGE BEACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

John Parry, Outdoor Traffic Superintendent of Southern Lines, Department of Railways, further examined:—

J. Parry.
25 Feb., 1897.

347. *President.*] You desire to make one or two statements pertinent to your last examination? In regard to your inquiry as to the proportion of long-distance passengers who arrive at Redfern per day, I have ascertained that the number of through passengers on an ordinary day would be, approximately, about 1,800—that is, from stations south of Campbelltown, west of Penrith, north of Hornsby, and south of Sutherland. I simply took the trains, counted the passengers, and averaged the number, as I have no means of getting at the exact number without counting the passengers. I have based these figures on the passengers coming in on a Monday. On other days the number would be slightly less perhaps, but it is the maximum traffic which we have to deal with, and which causes the inconvenience.

348. *Mr. Lee.*] You have special excursion trains at intervals through the year which bring in many passengers? We run special excursion trains from the country to Sydney once a month, and sometimes oftener, and on these days have brought in as many as from 1,100 to 1,200 passengers from the south, I suppose from 1,200 to 1,300, or even more, from the west, and 600 or 700 from the north. Then, I suppose, on some occasions we would get equal to five or six of these cheap excursions coming in on the same day.

349. Then the capacity of the station is very much taxed? Yes. On last Christmas Eve, for instance, from nearly 4:30 p.m. to 6:30 p.m. it was with the greatest difficulty the passengers could move about on the end platform next to Devonshire-street, and it was next to impossible to get the luggage and parcels barrows through the crowd. I was there, and I walked backwards and forwards with the object of seeing what more I could do to distribute the passengers. We had special transit officers to regulate the cab traffic and the vans, but even then we were unable to control the traffic properly.

350. *Mr. Fegan.*] Not with a double shift of men? Not with a double shift of men on the station. A cab, for instance, would drive up to the station with a passenger and say two portmanteaus to go to the south; a porter would take hold of the portmanteaus, and then lose his passenger, and it would be a very long time before he would be able to get through the crowd and return to take another passenger's luggage. It was due to the porters not being able to get about the platforms. Although we had a double shift on, and an extra staff as well, still we were not able to keep down complaints in consequence of not being able to move about and properly supervise the traffic on the platform.

351. *Mr. Hoskins.*] Surely these difficulties occur on stations in England during holiday times? During holiday times, unless you have very ample room, you do get difficulties, but I do not think they are anything compared to what we get at Redfern Station in consequence of the defective design and arrangements at that end.

352. *President.*] We wish to know the number of suburban passengers per day, speaking approximately;—is it 18,200? The traffic fluctuates, but I think the estimate of suburban passengers from stations up to Campbelltown and Penrith, Sutherland and Waterfall at 18,200 a day it would not be far out.

353. The figures you have given in regard to passengers and trains show that the suburban traffic is the real weight of the whole business? Yes.

354. That is really what provision requires to be made for? The suburban together with the through traffic.

355. *Mr. Hoskins.*] Do you not think that in any arrangements which might be made for traffic at a head station here the suburban traffic should be separated from the long-distance traffic? No; my very strong opinion is that the whole should be dealt with at one central station.

356. *President.*] What are the other statements you wish to make? The number of through trains arriving here on a Monday is about fifteen; but that number, of course, is increased when we are running cheap excursion trains and on holidays. On last Eight-hour Day the number of through trains arriving in Sydney was about twenty-six—a very considerable increase on the ordinary number. On that particular morning the trains would be made up to the maximum load of the engines, which makes the trains very long, and therefore they cannot be accommodated at short platforms. Both in the busy hours of the morning and in the busy hours of the evening the shunting staff in the station-yard are taxed to their utmost to get the trains in and send the trains out without causing delays. Frequently incoming trains have to stand outside the station-yard before they can get a platform clear, or the shunting-road or the main lines clear from shunting, to get to their platforms. All these cases come before me where delay takes place through trains being blocked outside the station-signals. I look into the causes of the delays, and I am quite satisfied that although the shunting staff do their very best to get trains through it is impossible to avoid delays to trains at the signals during busy times.

357. Is there anything else you wish to state? As regards the information asked for of the tonnage of goods arriving at Darling Harbour, and what proportion is for shipment and what proportion for local distribution, the Secretary to the Railway Commissioners has arranged for Mr. Harper to appear before the Commission. You also wished me to speak to Mr. Deane as to what were the objections to extending the station in a southerly direction. I have spoken to Mr. Deane, and he will be prepared to give you further information. I have also seen the Secretary to the Railway Commissioners on the question as to whether or not any plan has been prepared for extending the branch to Darling Harbour further south, so as to keep clear of Redfern yard, and he has promised to look the matter up and see if there are any plans.

358. Supposing Redfern Station were removed, would you be able to deal easily with all the goods you have going down to Darling Harbour on the present track? Yes, as far as the branch itself is concerned.

359. Taking it for granted that Redfern becomes satisfactory, either by removal to the north or by extension to the south, would you be able to work the traffic down to Darling Harbour without any trouble? Yes, so far as the branch is concerned.

360. Could you work twice the traffic without any trouble? As far as the branch is concerned I consider ^{J. Parry.} yes. 25 Feb., 1897.
361. Could you do four times the amount of work? I would require to consider that matter. But supposing that we got fourfold the traffic, the only difficulty would be in crossing the main lines, and bringing it over the main suburban lines. It would not affect Redfern station in the least if the junction were sufficiently far from the shunting-yard.
362. *Mr. Lee.* At the present time you get over the difficulty to some degree by running the goods traffic in at night when there is little suburban traffic to be dealt with? Yes; we could accommodate an enormous increase of goods traffic.
363. Without interfering with the passenger traffic? Yes.
364. Do you remember that the congestion in Redfern yard has come about during the last three or four years? No; it has been a source of complaint from the time I can remember. In 1881 I interlocked Redfern yard, and the cry was almost as great then as it is now in regard to not being able to deal with the trains. Temporary alterations were made and additions given which provided for the circumstances, not perfectly, but so that they could get along. Again a further extension was made between 1886 and 1887. Then again the Commissioners, after they took office, made further extensive alterations to bring the four lines direct into the station, by which an enormous amount of crossing and recrossing of the Illawarra trains across the main line trains and the main line trains across the Illawarra trains was obviated.
365. I wish to know whether the quadrupling of the suburban lines has led to further complication in Redfern yard? No, it simplified it.
366. It involved the construction of more points in crossing the lines? Yes; but before the four lines were extended to the platforms the Illawarra trains joined the suburban line at the tunnel—all the traffic, from the Illawarra line and from the main suburban line, simply came on to two roads there. They had to cross each other's track at the tunnel, and after doing that they had to cross each other's track going into the various platforms at the station. Then, instead of the traffic on the four lines having to go on two lines, and then branching out again, the Commissioners extended four lines straight away to the platform, which enabled the Illawarra trains to come into the station direct, and go away direct, thereby minimising crossing of the main suburban lines.
367. The additional line outside has not led to any complication inside the yard, but, on the contrary, has made the working of the traffic there easier? Yes.
368. And the congestion arises from one cause, and that is the increase of traffic? Yes.
369. Will it be possible, by the resumption of land, to extend the Redfern yard? I have thought over this question since I was last before the Commission, and my own opinion is that it is practically impossible to extend the existing yard and make anything like a satisfactory arrangement.
370. I suppose if the line were brought into the city, Redfern station would become a suburban station—an outer city station? Yes, it could be made a very good intermediate suburban station.
371. You admit that a shift has to be made,—do you think it will be more desirable in the interests of the railway traffic to go on to Park-street than to stay at Devonshire-street? I think it would be better to go on to King-street; but failing that I am strongly in favour of going to Park-street.
372. You think a station at Park-street or at King-street is preferable to a station at Devonshire-street? Yes.
373. It means a certain amount of cost and inconvenience to go 150 yards from Redfern to Devonshire-street? Yes.
374. The additional facilities to Sydney people will be nil? Exactly.
375. It would be no more inconvenient to city people to be put out at Redfern than at Devonshire-street—would it not be better to bring them straight into the city at once? I say decidedly yes; and, further than that, if the railway were extended to Park-street or King-street, in my opinion the traffic would increase enormously, for I have no doubt many business men at the northern end of the city do not go out to live on the Illawarra or suburban line, or on the north coast line, because they have to take an omnibus or tram to reach the station. As omnibuses are not very reliable, they have to leave a margin of time to get the omnibus, and leave a margin of time at the station, in order to catch the train. There is not the slightest doubt but that from ten minutes to a quarter of an hour, or even more time is lost by a business man in getting from this end of the city to Redfern and catching the train; whereas if he could get into his train at King-street, knowing exactly when his train would start, he would just leave himself sufficient time to allow him to jump into his train, and it would not take more than three or four minutes to go between Redfern and the city.
376. How will the railway fare between Park-street and Redfern compare with the tram fare and the omnibus fare? I understand that the Commissioners proposed to charge a fare of 1d. single and 2d. return, 2nd class.
377. Unless the charge is made equivalent to the fare charged by the trams and omnibuses, would there not be a danger of a number of the suburban passengers leaving the train at Redfern station and availing themselves of the trams and omnibuses? The fare would not exceed 1d. 2nd class single, and 2d. 1st class single, 3d. 1st class return, and 2d. second return.
378. That would be less than the street rates? Yes. As regards season-ticket holders, their charges would be almost infinitesimal per day.
379. A large proportion of the suburban fares are collected in the form of season tickets? Yes, very largely.
380. Does not that very largely facilitate the working of the railway traffic? It saves an immense amount of trouble for passengers to show their passes instead of tendering tickets. With a season-ticket a man is saved the trouble of going to the ticket-office every day to get a ticket.
381. You are clearly of opinion that the traffic must increase if the railway system is brought into the city? I am clearly of opinion that the traffic would increase very largely, and that residents who now live in the eastern suburbs and who have to come by tram and omnibus would take the railway to the western suburbs.
382. I suppose the Commissioners do not contemplate any branch line for the western side of the city for passenger traffic? Not to my knowledge.
383. *Mr. Hoskins.* Have you ever thought of this view: to make a large station suitable for all requirements of the railway on the site of the Benevolent Asylum, Carter's Barracks, and the Cemetery, and to extend two,

- J. Parry. two, three, or four lines with a small station at the terminus for the suburban traffic, and to have the through traffic at the terminus I spoke of, seeing that a large number of the passengers who come from long distances do not make for the offices in the northern part of the city, but have their business in all parts of the city or go out to the eastern suburbs? I cannot say that I have given much consideration to that view. In my opinion it would lead eventually to complaints and inconvenience.
- 25 Feb., 1897. 384. You would have plenty of room for shunting on the site I spoke of? Yes; but we bring a large number of suburban passengers in in some of our through trains. For instance, the Penrith train in the morning will pick up 100 or more suburban passengers at Strathfield, and that train will require to go down to the city, because practically it is then a suburban train. So that to be satisfactory there would not really be many trains left at Redfern if you brought all the trains that carried suburban passengers down to the city.
385. I asked that question for this reason: if a large central station were made with sidings and every accommodation, on land resumed at that particular place, very little compensation would have to be paid by the Government, but directly you extended the line further if you wanted a large station in town even though you did take a portion of Hyde Park you would still have a lot of land resumptions? I should still consider it worth the effort to get a city station.
386. *President.*] You promised yesterday to ascertain the smallest area on which such suburban traffic as is required to come to Sydney could be worked? I have thought that matter over, but I am not in a position now to state what area will be able to accommodate the suburban traffic as purely separated from the ordinary traffic, because it would require very careful consideration as to what was country traffic and what was suburban traffic.
387. No goods traffic would go down? No.
388. What area will be required to work all the rest of your traffic? I prefer not to express an opinion at this moment; I could only give a very rough guess.
389. Would four or six lines be necessary to come in? Four lines at the least.
390. Suppose you bring in all the traffic how many lines would you require? We should require six lines.
391. Motive power becomes more powerful every year and the tendency is to have longer platforms and to make bigger engines? Until recent years one of our small engines, which ran the Melbourne express, would only haul right through to Goulburn about three vehicles,—that is, three of our ordinary lavatory type; but the engine of to-day will haul six vehicles, so that the length of your train is doubled.
392. With a population growing, the tendency will be to have stronger engines and, therefore, longer trains? At race time the length of our Melbourne train, including one engine, is about 587 feet. With our cheap excursion trains we use the ordinary old style of vehicle, and the length of an excursion train is about 540 feet. The platforms require to be long to accommodate trains of that length and to leave a little margin for coming and going.
393. We know pretty well what length of yard and width of platforms are required;—now, with six platform lines, what width would you require to carry on the traffic? I would like to have some time to reflect before I answer the question, because it is purely a question of what we would consider suburban trains and through trains.
394. Would the accommodation provided in Mr. Deane's plan of the proposed extension be sufficient to enable you to work your traffic? I have seen the plan which Mr. Deane has submitted to the Commission, and I am of opinion that the accommodation provided is required now and that it will enable the traffic to be dealt with for a very long time.

FRIDAY 26 FEBRUARY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN JONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, surveyor, Department of Lands, sworn, and examined:—

- S. E. 395. *President.*] What position do you hold? I am a surveyor in the Civil Service of the Colony.
Perdriau 396. You have prepared a description of the foreshore of Sydney harbour? I have.
26 Feb., 1897 397. Will you be good enough to read the description to the Commission? It is as follows:—

STATEMENT of the ownership and present occupation of the principal business portion of the water frontage of the City of Sydney, extending from Potts' Point, Sydney, to Jones' Bay, Pyrmont, and illustrated by a map of Sydney.

Commencing at Potts' Point, at the north-western corner of M'Quade's land; from this point, without any break, the Government are the owners of the foreshore extending along the whole of Woolloomooloo Bay, the Domain, Mrs. Macquarie's Chair, the Botanical Gardens, Farm Cove, Port Macquarie, Sydney Cove, and Circular Quay to the southern side of Dawes Battery, a total length of about 16,460 feet.

WOOLLOOMOOLOO BAY.

The eastern foreshore of this bay, from the above-mentioned commencing point at M'Quade's land, southerly to the eastern end of Cowper wharf at the head of the bay, was resumed by Government for wharfage purposes on the 1st February, 1890, at a cost of £172,275, the length resumed was about 1,350 feet, with an average width of about 200 feet, and a total area of 6 acres 3 roods 12 perches. This land is in course of development, and pile wharfs are being constructed to provide five broadside berths, each about 300 feet long, for use principally for discharging timber and coal metal. These wharfs will be approached landwards *via* Cowper wharf, and the two at the inner end are to be available for use by about the middle of April next. By dredging the mud a depth of 28 feet of water at low tide will be obtained at these berths, and the whole of Woolloomooloo Bay is gradually to be dredged to that depth; the work proceeding as the plant can be spared from more urgent work.

Cowper Wharf.

Continuing westerly, Cowper wharf, about 1,400 feet long, with a jetty in the middle about 260 feet long, occupies the head and south-western corner of Woolloomooloo Bay, it is now used almost entirely for over-sea vessels, the Gulf Line for example, cargo steamers of over 3,000 tons gross. These pay no rent for the wharf, but the dues collected by Government under the Wharfage and Tonnage Act during 1896 for Cowper wharf amounted to about £6,000; this includes £250 per

per annum for the two sheds used for wool-dumping, and situated at the western side, on what was formerly known as the Admiralty wharf. It also includes the £15 per annum paid by P. Ireland, waterman, for permission to occupy a small area having a water frontage of about 15 feet adjoining the north-western end of Cowper wharf.

The next occupation of the foreshore northerly is by the Health Department, about 370 feet, for a quarantine reserve or depôt; thence bordering the Outer Domain, the remainder of the western side of the bay is used for men's and women's swimming baths, and rowing club and other boat-sheds. This length, about 1,400 feet extends to what may be considered the outer limit of Woolloomooloo Bay, viz., the Domain footpath at the water's edge immediately to the north of the Sydney Rowing Club shed. Close to high-water mark along this 1,400 feet the water is shallow, but the soundings show a depth of about 18 feet to mud at low tide at a distance of about 200 feet off.

398. *Mr. Hoskins.*] Have not the corporation an engine shed there? Yes; but it is on Crown land.

From the commencing point at M'Quade's to the said outer limit, the length of the foreshore of Woolloomooloo Bay is about 4,535 feet.

399. *President.*] That is all available for wharf frontage if required? Yes.

400. *Mr. Roberts.*] Are all the baths the property of the Crown? The structures themselves are not the property of the Crown; but the land on which they stand is Crown land.

From the commencing point at M'Quade's to the said outer limit, the length of the foreshore of Woolloomooloo Bay is about 4,535 feet, or the same length as a straight line in Darling Harbour, drawn from the north-western corner of the Australian Gas Company's wharf through Pymont Bridge to the foot of Bathurst-street.

WATER FRONTAGE OF THE OUTER DOMAIN AND BOTANICAL GARDENS, FARM COVE.

Continuing from the Sydney Rowing Club shed, the foreshore, being that of the Outer Domain and the Botanical Gardens, about 5,200 feet in length, is used exclusively for public recreation, and for the greater part is delimited by an ornamental stone sea-wall. Skirting the peninsula, at the end of which is Mrs. Macquarie's Chair, it extends along the head and western side of Farm Cove (embracing the 200 feet length let to F. Cavill, on lease for baths, at a rental of £20 per annum) to the gate of the Botanical Gardens, at the southern end of the road lying between Government House grounds and the sea-wall. The depth of water at 150 feet out from high water-mark, on that part lying between the Sydney Rowing Club shed and Mrs. Macquarie's Chair, is from 26 to 31 feet, to mud at low tide. Thence along the remainder of the 5,200 feet the water is shallow close to the sea-wall of Farm Cove, but in the middle of the cove there is a depth of from 16 to 36 ft. at low tide. Borings have not been taken in this cove to test the depth of the mud.

AT AND NEAR FORT MACQUARIE.

From the said gate northerly, and again westerly, the sea-wall is continued along high-water mark bounding, *en route*, the road last referred to and the reclaimed and level land of Fort Macquarie peninsula, a distance of about 1,680 feet to the North Sydney horse ferry dock. The fort of course is obsolete; and no practical use, but for public recreation, is made of this 1,680 feet, with the exception of the four small portions occupied respectively by the Men of War jetty, the watermen's boat dock, the jetty for shipment of explosives, and the large sewer at the northern extremity of the point. The water is very shallow at places along this wall. At a distance of 100 feet out it varies from 13 feet to 20 feet in depth at low tide, and borings at that distance out, recently made along a considerable length at the north-eastern corner of the point, show rock bottom at about 13 feet from low tide level.

CIRCULAR QUAY.

From the North Shore horse ferry dock at the outer end of Sydney Cove, south-westerly, lie, in the order mentioned, the berths of the mail steamers of the Peninsula and Oriental Co., Messageries Maritimes Cie., and the Orient Co., a length in all of about 1,500 feet, commanding the depth common to all the berths for over-sea vessels at the Circular Quay, viz., 28 feet at low tide. From the Orient Co.'s wharf, the remaining berth, about 500 feet long, extending to the floating jetty at the foot of Phillip-street, is occupied by ships and steamers promiscuously, bringing general cargo and shipping wool and other Colonial produce.

The floating jetty is used for the casual requirements of harbour steamers carrying principally excursionists; and thence westerly the whole of the head of the Circular Quay to the site of the old Queen's Wharf, at Pitt-street north, about 980 feet is occupied by passenger jetties, and with the exceptions of the Princes' Stairs, located about the centre of the Quay, and the jetty immediately to the east of same, the jetties are let at fixed rentals to the ferry companies, viz., Watson's Bay Co., Manly Beach Co., and the North Shore Ferry Co., who occupy the two most westerly jetties. On the western side of the Quay considerable improvements have recently been effected in the erection of new wharfs and sheds, and others are in progress. The most southerly berth, about 460 feet long, is occupied by the Nord-Deutscher-Lloyd line of steamers. It was here that the German steamer "Friedrich der Grosse," of 10,000 tons burden, was berthed, the largest steamer that ever came south of the line. The next berth northerly, about 440 feet long, is under improvement in preparation for the Eastern and Australian line of steamers which now berth at Smith's Wharf, Miller's Point.

The third and most northerly long broadside berth on this side of the Quay, about 409 feet in length, is occupied by the German-Australian line of steamers. This berth, together with the 550 feet (about) in continuation north-westerly, comprised the frontage of the A. U. S. N. Co.'s land, which was resumed by Government in October, 1887, at a cost of £275,000. Two jetties, one of which is 400 feet long, and used by the Port Line and other vessels for general cargo, extend into the Cove from the last-described frontage; and this adjoins on the south the 120 feet now used to berth the Marine Board launches and other harbour steamers of the Government, reaching to the southern side of Dawes Battery. This land, having 120 feet frontage to the water and about 275 depth and 75 feet frontage to George-street North, was purchased by Government on the 8th of October, 1887, for £29,000.

The total length of frontage to the Circular Quay, from the horse-ferry dock to Dawes Battery, is about 5,045 feet.

401. *President.*] What is the length of water frontage from the northern end of the Botanic Gardens to the horse-ferry dock? About 1,680 feet.

The average earnings for each of the seven long berths at the quay, four of which are on the eastern and three on the western side, was about £4,500 for the year 1896.

DAWES BATTERY.

Dawes Battery at Dawes Point and the smaller area of land westward of George-street north, whereon the Artillery Barracks and public baths are erected, is held under lease at a nominal rental by the Government of New South Wales from the Imperial Government, who are the owners by deed issued to the Ordnance Department. The total water frontage is about 1,980 feet. A proposed exchange, which will in all probability be effected, cedes this land to the Colonial Government.

402. What proposal do you refer to? There has been a proposal made that all the property held here by the Imperial Government shall be ceded to this Government, with the exception of Garden Island, and they leave it to the generosity of the Government to purchase Admiralty House for them at North Shore.

403. Can we take it for granted that the 1,980 feet of water frontage you mentioned will become the property of the Colony in the future? I got that information from the Chief Surveyor, who has gone into the matter fully, and knows the details of the proposal.

THE ASSOCIATED WHARFS.

These are of course private property, except where the reclaimed land has not been purchased from the Crown. Commencing with Walker's wharf, at the Artillery Barracks above referred to, they extend westerly and round Miller's Point, and thence south-easterly, finishing with Dibbs' wharf at Clyde-street, a total length of about 4,370 feet. These have

S. E.
Perdriau.
26 Feb., 1897.

S. E.
Perdriau.
26 Feb., 1897.

have thirty-three berths in all, and are known as the back wharfs. Circular Quay being the front wharf. The gradients of the roads of access to these wharfs are very steep, varying from 1 in 10½ to 1 in 15. Ships and steamers berth here, bringing general cargo from England and the Continent, and taking in wool and other colonial produce. There are large wool stores on nearly all these wharfs, notably at the Central, Dalgety's, and Dibbs', and since the increased measure of freetrade in the fiscal policy of the Colony, some of the buildings formerly used as bonded stores are also available for wool, &c. The wharfs are associated to prevent undue competition for business among their owners, also so that vessels consigned to any proprietor in the Association can berth at any wharf that may happen to be vacant at the time of their arrival. All the berths are valued by the Association, and the wharfages collected by the Secretary, and dividends *pro rata* are distributed at intervals throughout the year. Except during the wool season, lasting about five months, these wharfs could do more business than they get, and the secretary to the association, Mr. Benson, stated before the Public Works Committee, about three years ago, that the wharf accommodation of the port of Sydney was four times as great as the requirements, and that at the associated wharfs they only get 270 over-sea vessels a year, whereas they could berth 500.

Some of the associated wharfs, including the land and the stores and jetties, are worth as much as £100,000 each. The value varies very much with the business connection of the proprietor, and evidence on oath is available, showing that, when one of these wharfs was used by a business house in the city, doing a large import trade, the wharfages, if collected, would have amounted to about four or five times the value to be derived by placing the wharf in the Association.

EASTERN SIDE OF DARLING HARBOUR.

FROM CLYDE-STREET TO THE GAS WORKS.

This frontage—about 675 feet—has not been used for shipping, probably on account of the great difference in level between the Kent-street frontage and high water-mark, and the precipitous character of the land.

The holdings are of comparatively narrow width, with the exception of the site for ferry and landing place—about 260 feet frontage—dedicated 15th August, 1871, which, however, has never been used for that purpose. It is under the control of the Sydney Municipal Council, and the part of it fronting Kent-street is used as a depot for wood-blocks.

AUSTRALIAN GAS-LIGHT COMPANY'S WORKS.

This property has considerable frontage to Kent-street (whereon are the offices and coke yard), and to the harbour about 575 feet. I am informed by the chairman of directors that at a very rough estimate the claim by the company, if this property were resumed, would be about £400,000 for the land, buildings, machinery, and disruption of business.

FROM THE GAS-WORKS TO PYRMONT BRIDGE.

(About 3,200 feet.)

Upon this frontage are located the wharfs of the principal coasting and intercolonial steamship companies, which necessarily must find accommodation in close proximity to the Sussex-street stores, where their cargoes of farm and other produce are sold. Three short lengths of this frontage, viz., that of the sewerage reserve, the Balmain Ferry Company's wharfs, and the Patent Slip wharf, belong to the Crown; and two other portions, viz., those of the Lime-street wharf, about 330 feet, and the Market wharf, about 260 feet, also are Crown property, but are vested in the Municipal Council of Sydney. The Grafton wharf which adjoins the Gas-works is now used for over-sea vessels. It was until a few months ago occupied by the A.U.S.N. Co. who have removed to the Lime-street and Patent Slip wharfs situated further up the harbour. The principal companies occupying the wharfs along this very important trade centre are the North Coast, Union of New Zealand, Huddart Parker, Illawarra, A.U.S.N., Howard Smith's, and the Hunter River New S.N. Co.

FROM PYRMONT BRIDGE TO THE HEAD OF DARLING HARBOUR.

(About 2,080 feet.)

Several of these holdings embrace valuable portions of land reclaimed from the harbour which have not been alienated from the Crown. These are referred to in full detail in a schedule prepared by me and read before the Public Works Committee in 1894, when the proposal to remove the Pyrmont and Glebe Island bridges was under consideration.

There are some valuable wharfs on this southern side of the bridge, viz., the Albion, Mellwraith's two (now R. Reid), the Union Co's., and Russell's wharf (now J. Taylor and others). About a dozen properties are comprised in this length of frontage, and they are used respectively for almost every kind of wharf business. Coastal, intercolonial, and foreign steamers and ships berth here. Some are used for timber, others as coal depôts, and on one is a flour mill.

Since the bridge opening has been widened to 51 feet, cargo steamers of from 3,000 to 4,000 tons gross register berth at Mellwraith's new wharf; but as the depth of water in the bridge opening is only 22 feet at low tide, the largest vessels must pass through at high water.

WESTERN SIDE OF DARLING HARBOUR.

From the head of Darling Harbour to the western boundary of Darling Island the whole of the water frontage, a total of about 6,810 feet, belongs to the Government.

IRON WHARF AT THE DARLING HARBOUR RAILWAY-YARDS AND NEW PILE WHARF EXTENDING TO PYRMONT BRIDGE.

The iron wharf, commencing at the Fresh Food and Ice Company's Works at the southern extremity of Darling Harbour, extends on a flat curve north-westerly about 1,450 feet, having projections 60 feet wide, extending 40 feet into the harbour, dividing the berths which are each about 240 feet long. The width of the wharf is 3½ feet to the railway which follows it throughout. The principal business at this wharf is in timber (for despatch by rail) discharged from small coasting vessels, and in railway material lightered from over-sea ships. These berths are not long enough for modern over-sea vessels and the depth of water commanded is insufficient. The depth of water at the bridge opening is only 22 feet at low tide.

Reference might here be made, in passing, to the fact that the wool, tallow, hides, wheat, and other colonial produce brought by rail to Darling Harbour is there placed upon lorries or drays and carried through the streets to the various stores in the city to be afterwards carted and shipped. The delay and inconvenience to business caused by this process will be avoided by continuing the railway as proposed and hereafter referred to, to Darling Island, which is to be made the shipping depot.

A new pile-wharf occupies the 1,150 feet of space between the end of the iron wharf and Pyrmont Bridge. Here also the depth of water is insufficient, being not more than 20 feet at low tide; but at the one berth, 250 feet long, which projects 40 feet into the harbour, the rock is being excavated to provide a depth of 26 feet, to admit of the direct shipment of frozen meat which will be carried from Geddes' store close by, by means of an overhead tramway.

PYRMONT.

(From Pyrmont Bridge to Darling Island.)

The land from the bridge north-westerly to Murray-street, having about 890 feet water frontage, and bounded by Union-street, was resumed for railway purposes on 14th June, 1881, at a cost of £117,829. Some years ago it was wharfed, and two piled railway jetties, each about 460 feet long and 60 feet wide, and carrying three railroads, were thrown out into the harbour. They are used for shipping coal, shale, horses, &c., carried by rail. Two railroads from Darling Harbour yards cross Union-street at the bridge abutment.

The water is being deepened at these jetties to 28 feet at low tide. That depth has been reached along the greater portion of the eastern side of the more eastern jetty, and the wharf. At the other berths it is not more than about 23 feet. The deepening will proceed as soon as the plant can be spared from work which is considered more urgent.

At the foot of the more western jetty and on its western side the pontoon is berthed to receive the refrigerating railway car containing frozen meat from the country. Thence it is towed to the Pastoralists' Association Stores at North Sydney. The meat is shipped from the stores direct for Europe, &c.

Continuing north-westerly, the block of land bounded by Murray, Union, and Edward Streets, and Darling Harbour, and that bounded by Edward, Alma, Alma extended, and John Streets, a total water frontage of about 1,205 feet, were resumed on the 7th August, 1896, for a public wharf and approaches thereto for the extension of the railway system to Darling Island.

The

The demolition of buildings on the site of the proposed railway lines at the corner of Edward and Alma streets has already been effected. The claims for compensation have not been settled; consequently the cost of the resumption cannot be stated. This frontage was used principally in connection with the timber trade, but several important portions of the reclaimed land abutting the water had not been purchased from the Crown.

Crossing John-street, Darling Island is reached—an area of 8 acres 1 rood 37½ perches, having about 1,900 feet of water frontage. It cost £135,000 when purchased by the Government on the 4th June, 1839.

The patent-slip and appliances of the old A.S.N. Co., whose repairing shops were located here, have been removed, and the island quarried down to a uniform shipping height.

The scheme for improvement of the berthage includes the construction of a solid quay of concrete, along the water frontage of the island. The depth of water to be provided is, as usual, 28 feet at low-tide. The outer limit of the quay-wall has been located some distance from the present shore-line, so as to curtail the amount of dredging and excavation as much as possible.

S. E.
Perdriau.

26 Feb., 1897.

CONCLUSION.

Finally, this investigation shows that of the water frontage between Potts' Point, Sydney, and Jones Bay, Pyrmont, the Government own and are in possession of about 23,500 feet. About 9,800 feet is held by private persons, and three portions, fronting Crown lands, totalling about 870 feet, are held by the Municipal Council of Sydney as trustees. By the addition of the frontage of Dawes Battery, the length owned by the Government will be increased by 1,980 feet (about).

Dividing the total water frontage into sections, according to the uses to which it is put, shows:—

1. Woolloomooloo Bay, from M'Quade's to Domain roadway, immediately north of the Sydney Rowing Club shed—about 4,535 feet.
2. From said roadway to entrance gate to the Botanic Gardens, opposite Government House grounds—5,200 feet.
3. From said entrance gate to the horse-ferry dock at Fort Macquarie—1,680 feet.
4. Circular Quay, from the horse-ferry dock to Dawes Battery—5,045 feet.
5. Dawes Battery—1,980 feet.
6. Associated wharfs, from the Artillery Barracks at Dawes Battery round Miller's Point to Clyde-street—4,370 feet.
7. Eastern side of Darling Harbour, from Clyde-street to Pyrmont Bridge—4,450 feet.
8. Pyrmont Bridge to head of Darling Harbour at railway yards—2,080 feet.
9. Western side of Darling Harbour, from the railway yards along Pyrmont to western boundary of Darling Island at Jones Bay—6,810 feet.

401. *Mr. Hoskins.*] Does your statement of the water frontage in the hands of private owners include the sinuosities of Darling Harbour? I have not followed them closely. At the Central Wharf, for instance, vessels are moored, although the frontage itself is not large enough. This statement does not indicate the berthing frontage; it shows the length of frontage of the land; it does not follow the sides of the wharfs.

405. *President.*] It is the ordinary way in which you measure water frontages? Yes.

406. If Government and private properties are measured in the same way the comparison is a correct one? Yes.

407. The State is in possession of three-fourths of the foreshores of Sydney proper? Yes.

408. *Mr. Hoskins.*] Some of the other owners have not a legal right to the foreshores of their holdings? That is so.

409. They have not obtained the permission of the Crown to reclaim the land? In many cases that occurs.

410. *President.*] Have you prepared a description of the frontages to Blackwattle Cove? Yes; it is as follows:—

BLACKWATTLE COVE.

Blackwattle Cove lies between Pyrmont and the Glebe; it is within 1½ mile of Redfern Railway Station, and ½ mile of the nearest point on the railway at Darling Harbour.

The water-frontage land on the northern shore of the cove is nearly level, being reclaimed land. It forms part of the Harris estate, and access to the water is very convenient from Bank-street and Gipps Crescent, which bound the water-frontage allotments. About half the total length of the foreshore, which is about 2,500 feet long, is leased to various persons, and used principally as timber-yards. The freehold value of these allotments varies with their position and depth, from about £30 per foot near the bridge to about £70 per foot at Pyrmont Bridge Road.

The southern foreshore of the cove is about the same length as the northern, but is much steeper, the gradients of the roads leading to the water being very severe. The southern shore is inferior to the northern shore for business, and the design of subdivision of the locality is inconvenient for access to the water, consequently land values are much lower than on the northern side. There is one large timber yard on this side of the bay at the Pyrmont Bridge Road, and about half the remainder of the water frontage is occupied for businesses of less importance, and the rest for residential purposes.

The Government wharf at the head of the bay lies between the Pyrmont Bridge Road and the cove. It is 1,075 feet long, all in one straight line, and forms the head of the cove. The wharf is used for discharging road metal from vessels carrying up to about 320 tons, and was built when the natural head of the cove was reclaimed from the harbour, and formed into the recreation reserve called Wentworth Park.

Direct access from Blackwattle Cove to the city is provided through Pyrmont, and thence by the bridge to Market-street; but the gradients of the roads traversed and which cross the backbone of the Pyrmont Peninsula are somewhat steep.

The gradient is easy from Blackwattle Cove, *via* Wattle-street, to Redfern Railway Station.

The Glebe Island bridge connects that Island with Pyrmont, and obstructs the natural access to the cove. The bridge opening is situated at the Pyrmont end, and is sufficient to allow of vessels up to 34 feet beam passing through. In the opening there is a depth of 12 ft. 6 in. of water at low tide. I was informed that a new pile recently driven at the western side of the opening required to be 50 feet long to reach the rock.

On the 21st November, 1894, the Public Works Committee, after inquiry, reported against the replacement of the bridge by a new structure.

DEPTH OF WATER AND BORINGS TO ROCK.

The depth of water in the cove is from 7 feet to 13 feet at low tide; in a few places it reaches 20 feet. This is sufficient for the present requirements, *viz.*, for vessels up to about 400 tons burden, laden with the timber and road metal referred to above.

The dredge is now at work in the cove lifting mud which is taken to the large reclamation work in progress about half a mile away, at Johnstone's Creek, Rozelle Bay.

Soundings north of the bridge show a depth of from 18 to 19 feet. Seventeen borings upon two longitudinal sections extending across the bay show a depth varying from 21 feet to 86½ feet in the middle of the bay. At one place there was only 8½ feet to rock. These sections were located respectively north and south of the bridge and distant therefrom about 100 feet. Borings have not been taken to test the depth to rock throughout the bay.

I desire to point out to the Commission that the assessment of wharf properties by the Municipal Council of Sydney is made on the buildings and land alone; it does not include the machinery, nor the trade done, nor the value of the pile structures extending beyond high water-mark.

411. It does not include the disturbance of trade or the destruction of trade? No.

412. Will you prepare a separate estimate of the value of the wharfs? I will.

413. What is the area of the Gas Company's property? It has an area of about 6 acres (by scale on this map, which is drawn to a very small scale), with a frontage of 575 feet to Darling Harbour.

MONDAY, 1 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
 The Hon. JAMES HOSKINS, M.L.C.
 The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
 HENRY CLARKE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.
 THOMAS HENRY HASSALL, Esq., M.P.
 GEORGE BLACK, Esq., M.P.
 FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

John Harper, Goods Superintendent, Department of Railways, sworn, and examined:—

J. Harper.
 1 Mar., 1897.

414. *President.*] The Commission desire some information with regard to the import and export of goods to and from New South Wales, so as to ascertain the quantity that goes direct from the ships to the railways and from the railways to the ships? It will be absolutely impossible for me to give that information.

415. How far can you go? I can give the Commission information as to the number of bales of wool which came to Darling Harbour last wool season. The number of bales during the period ending last wool season was 429,390. That number of bales was delivered to the various warehouses in town by waggon; 83,816 bales were lightered in Darling Harbour to various wool warehouses, chiefly to Kirribilli, where there is the Australian Pastoral and Finance Co.'s store. During the same period 172,601 bags of wheat and flour passed over the wharfs at Darling Harbour.

416. That is inward? Yes; and there were 140,758 tons of coal and 21,634 tons of shale shipped.

417. That is shipped direct from the railway? Yes. The timber I could not get. Then there were 236 trucks of chilled beef passed out of Darling Harbour, but that does not necessarily mean that it was for direct shipment, as a large portion of it was taken by lighters to Kirribilli, there to be stored and frozen. This practically represents all I can give you, beyond this—that approximately 75 per cent. of that wool was offered in Sydney for sale, necessitating its being shown in the various warehouses.

418. There would be a good deal of the wool in the remaining 25 per cent., I suppose, sent down to Sydney dumped, but even that would not be put on board ship direct? Only a small portion. The Orient Company takes some direct to the ship's side.

419. Nearly all is stored in the warehouses for some time? Yes; it either passes into the hands of wool-brokers or goes into the dumping stores. The 75 per cent. I have referred to represents wool actually offered in Sydney for sale.

420. *Mr. Humphery.*] About how many bales already dumped arrive in Sydney by rail? About 12,000 or 14,000 bales.

421. *Mr. Hoskins.*] You have no hesitation in saying that only a small proportion of the wool which is sold here is not taken to warehouses before it is shipped? The greater portion of it is sent to warehouses to be dumped; the smaller portion is taken direct to the ship's side. Over 60 per cent. of the whole wool export from Sydney is loaded into ships leaving wharfs on the eastern side of Darling Harbour.

422. *President.*] Where is the residue shipped? Either at Woolloomooloo or Circular Quay; nothing from Darling Harbour railway wharf. Sixty per cent. of last year's clip, if not more, was shipped from wharfs on the eastern side of Darling Harbour, between Dawes Point and the bridge.

423. *Mr. Hoskins.*] Is not that wool sold at auction? It is chiefly wool that has been sold at auction which is sent there for shipment. Most of the foreign buyers ship from Miller's Point.

424. *President.*] Can you divide the remaining 40 per cent.? No, I could not; that is distributed about the city.

425. *Mr. Hoskins.*] Do you think that if warehouses were built, and proper shipping appliances provided at Darling Island, buyers would be disposed to send their wool there for shipment, thereby diverting the trade from where it is now? It will be a long time before it is diverted from its present channel, but there is no room at Darling Island. Two of our modern warehouses would cover Darling Island. Then there is another difficulty. The Pastoral and Finance Association at Kirribilli Point were anxious that all their wool should be loaded in trucks by itself, so that it might be shunted down on to the wharf, and there placed in the lighters, but after two years' experience that was found impracticable, because in picking up the wool at the stations it was found impossible to get a truck load at one station. Wool sent to different consignees would be put into the same truck, so that one truck would contain wool for three or four different consignees, and ten bales of the quantity in the truck might be all that a consignee desires to have lightered. The contents of the truck have therefore to be split up.

426. *President.*] From what you have stated, it would appear that all that could be saved by bringing the railway down to the wharfs is the cost of the dray carriage? I could not say that, because the wool would have to be distributed at the wharfs again.

427. What does it cost the railways to send the wool from Redfern? Threepence per bale all over the city, the contractor providing all the loading and unloading. Roughly it comes to 1s. 6d. a ton.

428. Therefore, the delivery by railway would save 1s. 6d. per ton, but it would be surrounded by conditions which make it impracticable? Yes, that is the position.

429. Do you see any likelihood of any change in the present conditions? I do not, the warehouses being scattered all over the city, and there being a growing disposition for buyers to purchase at different places.

430. The only cure would be to have the whole of the wool trade done adjacent to some particular wharf, and for all the wool to go to that wharf? That is the only remedy. With reference to the figures I have, I was going to add, with regard to the export merchandise trade, that I cannot give the Commission any idea of that at all, even in regard to tallow and hides. What I have said with regard to the conditions surrounding the wool relates also to these two things, tallow and hides. With regard to general merchandise going up the country, I cannot give the Commission any definite idea of that either.

431. How many tons of wool are shipped from Sydney? About 100,000 tons per annum. We carry about 70,000 tons by rail.

432. Therefore, there would be £5,000 a year saved in cartage were it possible to bring the railway to the wharfs? That would not be all saved, because certain services in connection with it would still have to be rendered.

433. Would four-fifths of it be saved? Yes, under the ideal conditions you have mentioned—that is, that all the wool should be brought to one wharf and the whole of the wool trade carried on there.

434.

J. Harper.

1 Mar., 1897.

434. You say that you carry 70,000 tons? Yes.
435. And $\frac{1}{4}$ of the 1s. 6d. per ton for carriage would be saved by an ideal system which would place the wool direct into warehouses adjacent to the ships? Yes.
436. And the total amount would be about £4,000 a year? Yes.
437. That is about 4 per cent. on £100,000, at the very best? That would be saved to the consignees of wool, but it is impracticable because of the existing conditions of the large warehouses dealing with the traffic.
438. What is the total production of wool in New South Wales? It is estimated at 850,000 bales.
439. How much goes to Victoria? I could not tell you. A great deal goes to Newcastle, which we do not see at all here.
440. How much do you carry to Sydney? 429,000 bales were carried last season.
441. How many did you carry to Newcastle? 66,000 bales were shipped direct from Newcastle, and from Morpeth 69,000 bales.
442. And some from Grafton? About 2,000 bales.
443. *Mr. Wright.*] That 69,000 bales from Morpeth comes direct to Sydney? Yes; but a lot of it goes direct on board ship. The residue of the wool, apart from what I have stated, finds its way to Victoria and South Australia.
444. *President.*] What is the coal shipment at Darling Harbour;—that is the coal that goes direct on board from the railway? 140,000 tons.
445. There is no wheat export? No.
446. What about ores? There is nothing shipped from Darling Harbour direct. Not very much ore comes to Darling Harbour. A great deal of it is treated locally, and that which comes to Sydney is shipped from different places, and not from one particular point.
447. What becomes of copper and minerals of that kind? That comes to Sydney, of course, and is shipped, but not from one wharf; it is not shipped from Darling Harbour wharf.
448. What you have said up to this point deals with the export trade. Now, in relation to the import trade? I cannot give you any impression of that.
449. What of the junction of the train service with the water carriage, beyond what it is at present, in relation to sending goods into the country? The necessity for any alteration in the present state of things is very little indeed, for the simple reason that there are very few country houses which indent direct from home. Most of them are supplied by the distributing houses in Sydney.
450. The goods received become broken packages in Sydney? Yes.
451. With regard to supplies of a heavy description, such as wire netting, wire fencing, woolpacks, and so on? Those are just as likely to go from the wharfs on the eastern side as from Darling Harbour, but I could not give you any definite idea on the subject. Captain Jackson would probably be better able to give you the information.
452. If the railway were extended to Darling Island, and suitable wharfs and warehouses were erected there, do you not think that a good deal of the loading for Sydney would be taken there, seeing that the island is in a central part of Sydney? As a matter of fact it is quite possible for ships to go alongside there now, but if Darling Island were made fully suitable for the loading and unloading of vessels it would not really give greater facilities than we have now. It would give increased space, but we do not find vessels going alongside there now.
453. *Mr. Wright.*] Would it not give increased depth? Yes, it might; but we had the flagship, "Orlando," I think it was on one occasion alongside the wharf at Darling Harbour to take in coal there; so you see we do not want much increased depth.
454. *Mr. Hoskins.*] Is it a fact that half the private wharfs in Darling Harbour are almost empty half the year? I could not say that of my own experience.
455. *President.*] Have you the necessary appliances by which, if required, you could do an export and import trade from the wharfs at present in existence in Darling Harbour? Yes.
456. Have the Railway authorities noticed any tendency to doing a direct import trade? No, except in grain.
457. To what extent? I have given the figures already.
458. That is imported grain? Yes.
459. *Mr. Hoskins.*] If the cultivation of wheat largely extends in this Colony, and Darling Island be properly utilised, could not wheat be brought down by railway and loaded there? That most undoubtedly will be done, but as we have not yet commenced exporting wheat Darling Harbour is not being utilised for that purpose.
460. *President.*] You have a large frontage for the trade now, and you do not consider that any addition to that frontage is, at present, necessary? No.
461. *Mr. Wright.*] What is the wharfage accommodation at present provided by the Department of Railways at your terminal point north of the bridge? Two jetties.
462. How many berths for ships of a good size are there at those jetties? Four.
463. Are they ever filled? It is quite exceptional.
464. What is principally loaded there now? Coal and shale.
465. What is unloaded? Chiefly railway material, and, during an exceptional season, grain.
466. So that absolutely you have now more wharfage accommodation than you require? Yes.
467. And if your present wharfs were extended to Darling Island you would have an increased wharfage equal to a trade perhaps four times as large as could be dealt with at the present wharfs? Yes, we should decidedly.
468. As a matter of fact, when the railway connection with Darling Island is made, you will have a very long length of wharf sufficient for any trade you may get? Yes; provision is made for six berths there which will accommodate any vessel.
469. You have already four berths, and with the six you speak of you would have ten berths each sufficient to accommodate the largest vessels; and then, in addition, you have the berths which are above the bridge? Yes.
470. So you would have berths to accommodate sixteen or eighteen ships? Yes.
471. Would not that be sufficient for the trade of Sydney? I should think so. I might mention that I was a member of a Board who considered the question of utilising Darling Island, and our recommendation was that the lines of railway should be extended to the island, but that, as the Government had sufficient wharfage accommodation, the space provided by the island for warehouses and wharfs should be submitted to

- J. Harper.
1 Mar., 1897.
- to public offer, in order that it might be leased by private persons, and warehouses of proper design erected and wharfs built, as the lessees might consider necessary, it being considered by the Board that we had more than ample wharfage accommodation for the purposes of the Government.
472. Do not the wharfs at Darling Harbour, both north and south, point conclusively to the fact that there is more wharfage accommodation in Sydney than is required? Decidedly.
473. And if you were to construct the additional wharfs you have just mentioned, you would have more than ample requirements for any trade? Yes.
474. Can you tell me if any inconvenience was felt in the past season from want of wharfage accommodation? I have never known of any.
475. Then you believe that Sydney at the present time is amply provided with wharfage accommodation for the Government and for the private wharf owners? Yes, I do.
476. If we had the railway connecting with the private wharfs in Darling Harbour, what proportion of the goods coming from England or other countries would go direct on to your trucks? A very small proportion.
477. Do you think 5 per cent.? I daresay that arrangements might be made to send the heavier goods direct from the wharf.
478. And do you think that the total amount would represent 5 per cent.? With a comprehensive scheme to embrace the whole of the wharfs, I think it would exceed that quantity; but under other circumstances I think that the question of freight so largely controls the vessels that bring out the cargo that the question of cartage from the wharf is only a very small consideration.
479. What proportion of wool do you think would go direct from the trucks to the ship? Only a small portion would go to the ships, and the rest would go into the stores to be dumped.
480. So that, with any possible scheme to supply the goods traffic of Sydney, there would be considerable handling of the goods under any circumstances? Yes.
481. *President.*] Do you know the average charge made for carting goods from the stores to the railway? Two shillings a ton.
482. *Mr. Wright.*] What is the charge for carrying the goods from the ships to the bonds? I could not say.
483. *President.*] Can you tell us what proportion of loading taken from Sydney into the interior represents the heavy class of goods, such as wire and salt? I could not tell you offhand.
484. You might give us the gross amount the railways carry up and down from Darling Harbour? From Redfern, 35,910 tons. That is all goods of all classes.
485. Going inland? Yes. From Darling Harbour, 224,564 tons. That, of course, includes everything that may be sent from Darling Harbour, including coal and timber.
486. How much comes down to Sydney for Darling Harbour? 40,000 tons of hay, straw, and chaff into Redfern and Darling Harbour, exclusive of wool and coal—375,000 tons.
487. *Mr. Wright.*] Does the Government land its own material at Darling Harbour? Yes; it is all landed by contract; it is lightered.
488. Then the ships that bring the material out do not go to the wharf? No; only in the case of having heavy locomotives on board; all the rest is lightered.

TUESDAY, 2 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.

The Hon. JAMES MOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

- H Deane.
2 Mar., 1897.
489. *President.*] Have you any further statement to make? No; I came to-day to reply to questions.
490. You now furnish a map showing a complete scheme of city railways? Yes; showing practicable routes for city railways.
491. You have had all the schemes before you? Yes.
492. Any information which you think we ought to have you will see that it is furnished to us? Yes; I have considered the engineering question only.
493. Some days ago you were asked for a comprehensive scheme which would enable the railway to reach the central portions of the city, and which it would be possible to extend to Woollomooloo Bay, Circular Quay, Darling Harbour, and also to such wharfage accommodation as might eventually be placed in the western portion of the city, and which would be no bar to an extension towards the eastern suburbs? Yes.
494. This plan which you now place before us pretty well embraces those various objects? Yes. The map on the wall is an enlargement of the map which I produced the other day, and has marked on it the same lines which are located to suit the various purposes mentioned.
495. The map on the wall shows a line extended from Redfern to a central passenger station at Hyde Park; and turning off at Redfern yard to the east is a line which can be constructed by means of tunnels? Yes.
496. From Hyde Park it will reach Woollomooloo Bay and form a connection with the eastern suburbs? Yes.
497. From Hyde Park, at the central station referred to, it can be extended by means of tunnels towards Farm Cove, and then turning round be run abreast of Circular Quay, and can, partly by means of a tunnel and partly by an overhead way, be taken to Redfern station, thus forming a circular railway? Yes.
498. From the vicinity of "The Rocks" the elevation will be sufficient to enable it to pass from Dawes Point to McMahon's Point by means of a bridge? From the vicinity of Wynward-square.
499. From the line already mentioned as going to the eastern suburbs it is possible to connect with the circular railway under the Botanic Gardens, and this line can also be extended, after passing Government House, to Fort Macquarie? I should say under the Domain instead of the Botanic Gardens.
500. From Darling Harbour there are shown two lines in red which will reach Johnston's Bay, or any wharfage accommodation which may eventually be placed in the vicinity? Yes. 501.

H. Deane.
2 Mar., 1897.

501. *Mr. Wright.*] What is the object of the two lines? To utilise the frontages over there, and to reach Glebe Island by means of a bridge.
502. And to go to Balmain if necessary, I suppose? Yes.
503. *President.*] Does that appear to you pretty well the scheme which will eventually be accepted for the development of the trade? I cannot go so far as that.
504. Do you know anything better? I think if it should be shown the lines are required in this direction, these will be practically the routes which will have to be adopted, because these are the routes along which suitable levels will be found.
505. They are all practicable from an engineering standpoint? Yes.
506. If Woolloomooloo Bay is to be approached, this, in your opinion, is the way to approach it? Yes.
507. If Circular Quay is to be approached, this is your idea of approaching it? Yes.
508. If there is to be a bridge taken to North Shore, this, in your opinion, is the best way to take it? Yes.
509. And that a circular railway, passing under portions of Sydney, in your opinion is the best? Yes.
510. In regard to Blackwattle Bay and Glebe Island, you think that is the best way to approach them if they ought to be approached? Yes. In regard to the proposal to approach Glebe Island I may say that I have had surveys made—of course under instructions—going down by Rozelle Bay. The lines of these surveys are shown on the map in purple tint.
511. The map also shows an approach from near Stanmore station to Glebe Island, passing over White Bay and eventually reaching Longnose Point? Yes.
512. It also shows an alternative line keeping westerly from Whitehorse Point and junctioning on to the previously described line at Rozelle Bay? Yes.
513. Can you suggest anything better? No.
514. You believe that eventually those will be the routes if these be the localities to be reached? Yes; with that proviso.
515. *Mr. Lee.*] If you want to get to Woolloomooloo Bay, where are you going to start your tunnel? From Liverpool-street.
516. There would be two separate and distinct lines in Hyde Park? Yes; it would be essentially a goods line to Woolloomooloo Bay.
517. *President.*] You regard it as wise to separate passengers and goods as far as possible? As far as I can see, it must be done.
518. This line might eventually reach Port Jackson at Fort Macquarie;—would it be possible to bring that as a surface line to the northern end of Hyde Park—that is, to the south of St. James' Church—and then enter a tunnel? Yes.
519. To get to a surface line near St. James' or at the north-western end of Hyde Park, it would be a surface line all the way, or a "cut and cover," or something of that kind? Yes; it would be an underground line between Liverpool-street and Park-street, and from Park-street you would rise till you got to St. James' Road. Your terminus would be a ground level station.
520. You would really be in your station yard after you passed Park-street? Yes; it would be open.
521. How deep would the cutting be? At Park-street it would be about 20 feet.
522. It could be "cut and cover" and give as much ventilation as is necessary? Yes; up to Park-street.
523. How far south from Liverpool-street could it be "cut and cover"? There would be no tunnel till it reached there; it would be in a cutting to about half-way back to Goulburn-street, which would be crossed over.
524. Supposing you have a surface station at St. James', from there could you reach Fort Macquarie by means of a tunnel? Some of the lines would have to be lowered in order to get properly under King-street and under St. James' Road, and then there would be no difficulty about reaching Fort Macquarie or the eastern suburbs, or any other part.
525. How much would they require to be lowered? Just sufficient to get in the approach to the station—that is, about 15 feet.
526. *Mr. Humphery.*] If you continue the line which is to stop at Park-street to St. James' Road would it be a surface station? It depends upon what you want to do at St. James' Road.
527. How far is it from St. James' Road to Park-street? It is 1,120 feet from Park-street to what is shown on the plan as the end of the station.
528. Would you have sufficient space there for your terminal station and necessary platforms? Yes.
529. *President.*] And for your yards, and all that sort of thing? Yes.
530. *Mr. Humphery.*] Approximately, what would be the additional cost of making that your terminal station instead of Park-street? £50,000.
531. Would you have as much or sufficient accommodation there? Equal accommodation.
532. For six roads? Yes.
533. *Mr. Hoskins.*] How many buildings would you have to resume? The Registrar-General's Office only.
534. *Mr. Humphery.*] That is on the other side of St. James' Road? Yes; but it would interfere with it.
535. My question is based on the assumption that it would be unnecessary to resume any portion of the Government buildings fronting St. James' Road? It would be difficult to get a station in unless you did that, because St. James' Road runs very obliquely.
536. Taking the shortest distance from St. James' Road to Park-street, what is the measurement? To where it bends off it is only 960 feet.
537. Would it be possible, without any resummptions, to provide the necessary accommodation, including station buildings, between St. James' Road and Park-street? I doubt whether it would, because if the front had to be shifted back 100 feet it would interfere with the arrangements altogether at the Park-street end of the station.
538. *President.*] In your opinion it would be wiser for the State to take down the buildings than to impair the beauty of the new structure? It is not a question of beauty.
539. It is not a question of yard or platform, but a question of the accommodation—the buildings and the appearance of the new station? Yes.
540. It means an alteration in the design of the buildings, or taking in the Registrar-General's Office? It means cramping the buildings and spoiling them altogether.
541. *Mr. Hoskins.*] It would be repeating the difficulties at Redfern? The design has been well worked out, and the accommodation is not any too large, and it would be cramping the station; and, in a sense, it would be repeating what we have at Redfern.

- H. Deane. 542. *President.*] Do you propose to have a street on the eastern side of the platform following down from the Park? No.
- 2 Mar., 1897. 543. Only a footway? We should leave the Park avenue as it is.
544. The approach on the side would be a foot-bridge? Yes.
545. From a surface-station at the southern side of St. James' Road, is it possible to go to Woolloomooloo Bay? Yes, by lowering the roads.
546. The same lowering which would enable you to get to Fort Macquarie would enable you to get to Woolloomooloo Bay? Certainly.
547. *Mr. Wright.*] The trains coming into your surface-station do not go on to Woolloomooloo Bay or Circular Quay? If you lowered some of the roads you could take them round.
548. You would require to have roads on different levels? For that purpose.
549. Would not that be very inconvenient in working your station? I think not, because they could be dropped down from the Park-street end, so as to get the distance down which is required.
550. It would mean that passengers wishing to go beyond that point would have to go in one train, and the passengers to King-street in a separate train? Yes.
551. It would be inconvenient therefore to the travelling public? Passengers coming to King-street, of course, could come by either train, but some of them would stop at King-street.
552. Those going beyond King-street would have to go by a special train? They could travel by certain trains only.
553. *President.*] Would that extension, lowered 15 feet, do for the circular railway which you show on the plan? Yes.
554. Would it also do to connect with the eastern suburbs? Yes.
555. In this approach to the station through the Park, how do you propose to protect the ventilating places in the "cut and cover," between Liverpool-street and Park-street? I have not thought that out very much, but I suppose it would be necessary to enclose certain spaces by walls or some other means. I think that probably one way of doing it would be to enclose the open places by walls, and leave long stretches covered over, so that the view might be less interrupted.
556. Presuming it was regarded as unwise to erect stone structures in the Park, would there be any objection to using iron-gratings over the cutting? They would be very subject to corrosion.
557. Would there be any other objection than the one that they would not last very long? I do not know that there would; I think the question of durability would be the chief question. It would be rather an expensive arrangement.
558. *Mr. Wright.*] They would not necessarily have to be above the surface? No; but they would have to be protected by strong iron railings.
559. The walls you spoke of would only rise a small distance above the surface? They would have to be high enough to prevent boys from looking over. Where boys can see over they like to throw stones, if they do not see over they are not subject to the same temptation to throw stones.
560. *Mr. Hoskins.*] Would not there be a danger of the smoke from the engines damaging the trees in the Park? I do not know that it would be sufficient for that.
561. *President.*] There would be no more smoke from the engines than from the trams running along Elizabeth-street? More.
562. *Mr. Hoskins.*] Is it not a fact that the smoke from some of the shafts on the Metropolitan Railway, through Temple Gardens in London, has destroyed the foliage of the trees? Smoke is, of course, very detrimental to vegetation. It chokes the pores of the leaves. The less concentrated it was, the better it would be, because, if the smoke were concentrated in funnels or ventilating shafts the trees immediately around there would suffer considerably, but if the whole or nearly the whole space were left open there would be less damage done.
563. *Mr. Wright.*] Would it not be possible to have an opening through the Park guarded by ornamental iron railings on either side? Yes.
564. So as not to interfere with the view of the Park and only taking in that bit occupied by the cutting? I am afraid that if you leave it open to the view altogether you will lead the larrikins into temptation.
565. Not if it is railed off? Not if it were screened off so that they could not see through.
566. The larrikins do not interfere with the trams running through the streets? No; but this is the case of a pit sunk below the surface of the ground.
567. Would not the smoke be less destructive to vegetation if it were distributed? Yes.
568. *President.*] That would mean taking a great deal more of the Park? Yes; I am inclined to think on further consideration that it might be sufficient only to protect the spaces with a dwarf wall and iron railing, because it is not as though there were a large supply of stones for the boys to throw down. There are no stones unless the boys bring them from a distance.
569. A grating might do? I do not care about a grating very much.
570. *Mr. Wright.*] Suppose this subway were covered most of the distance and some openings were left for the smoke to escape through; even with the best vents you could provide, would not the ventilation and the atmosphere be very bad with the number of trains which would be passing through? I am not in favour of ventilating shafts. I do not think the ventilation would be sufficient. I do not know that I have advocated them before the Commission.
571. You spoke of the place being walled off? They would not be mere funnels or ventilators; they would be large openings walled round.
572. *President.*] Your idea is to have a "cut and cover"? For this particular section, I think, the greater part of the space ought to be left open. I was under the impression that I had conveyed that view to the Commission.
573. *Mr. Wright.*] You think it should be an open cutting protected on either side by rails? Yes. If you left large places open you might have a considerable length covered over (say 50 or 100 feet at a time) so that people could easily pass across the line and still leave the bulk of the cutting open. There would be no difficulty about the ventilation in that case.
574. *President.*] Is there anything else you desire to tell us? I wish to say that the plan of the station at Park-street has been worked out quite independently of the superstructure. The superstructure with its architectural features has been placed on top. The architectural design has been adapted to the ground plan which was worked out.

575. *Mr. Wright.*] The whole of the ground floor would be required for the working of the traffic and the accommodation of the staff? Yes. The ground plan will be exactly the same as it is if no tall building is erected at Park-street.

H. Deane.
2 Mar., 1897.

576. I suppose you do not care to say which scheme you would prefer if left to yourself? I do not think I would care to go any further than I have said—that the Hyde Park scheme is the most satisfactory from the engineering and traffic points of view.

577. *Mr. Hoskins.*] You mean the Park-street scheme? I mean the St. James' Road scheme.

578. *Mr. Wright.*] From an engineering and traffic point of view would it be better, in your opinion, than the circular railway sketched on the map to suit the requirements of the city of Sydney? I am quite convinced that the Hyde Park scheme (putting on one side any objections, sentimental or otherwise, that there may be to using Hyde Park, the carrying of the station to Hyde Park, and the construction of a large central station there) will be a much more satisfactory scheme than any of the others. It might not meet all the requirements but it would be satisfactory in itself.

579. What I want to know, if you care to express an opinion on the point, is whether, in your opinion, the city would be better served by a circular railway than by the Hyde Park scheme? That I would rather not give an opinion about. I am quite satisfied that the Hyde Park scheme is an excellent one—one which would probably stop agitation for very many years.

580. *Mr. Roberts.*] If you take in the Registrar-General's Office, would it not make a much more complete and satisfactory scheme to go as far as King-street? No, I believe it is better to stop at St. James' Road.

581. *Mr. Hoskins.*] Do you not think if that view of yours were carried out, and the Registrar-General's Office were resumed for railway purposes, it would lead to the judges of the Supreme Court and the lawyers finding fault with the noise at the terminus, and the whistling of the trains, and finally to the resumption of the court buildings? I do not think they would hear a sound because it would be all covered in. The building at the front of the station would be a break to any sound or whistling, and the platforms and lines would be covered by a large roof. I do not think that any inconvenience would be experienced from the whistling of the trains.

582. *Mr. Roberts.*] Would St. James' Church be left intact? Yes.

WEDNESDAY, 3 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

583. *President.*] You desire to give some information which was asked for yesterday by a Member of the Commission? I desire to hand in a return showing the acreage of Hyde Park, the area required for the Park-street station, the area required for St. James' Road station, and the small portion required from the Registrar-General's Office, and what is supposed to be the value of the Registrar-General's Office. It is as follows:—

H. Deane.
3 Mar., 1897.

	a.	r.	p.
Acreage of Hyde Park	40	0	0
Do required for Park-street Station.....	12	0	31
Do do St. James' Road Station	13	2	38
Do resumed from Registrar-General's Office	0	0	25
Cost of Registrar-General's Office, £14,000.			

I was also asked to give some information as to the possibility of improving the Redfern station yard, especially by widening the tunnel. I find that there is no difficulty about doing that; it is only a matter of expense; but whether the widening of the tunnel would effect the desired easing of the traffic arrangements is, of course, a different question. If the tunnel were widened on the eastern side, it would interfere with St. Paul's School, but there would be some considerable expense in the work of lengthening the tunnel, resuming the properties, and building retaining-walls. Again, on the other side, if the tunnel were widened there the Darling Harbour traffic and Mortuary traffic would be kept off the six roads. An alteration of that kind, it seems to me, would not have the desired effect of really lengthening the station. It will be seen from the plan on the wall that the roads leading to the station are very much pinched up a long way on the northern side of the tunnel; and without making a very radical alteration no real improvement could be effected. Then again you will have the consideration that Redfern station, even supposing it could be altered so as to bring the trains in comfortably to the passenger platforms, is scarcely large enough to meet present requirements. As the goods traffic increases more accommodation will be required for it; as the passenger traffic increases more accommodation will be required in the carriage yard and carriage sheds,—for there is barely room there now, I understand. So that, even supposing that Redfern station could be made so that the passenger trains could be brought in and out without any great difficulty, it would not be a station which would provide for the future like the proposed stations in Hyde Park. A rearrangement of the station at Redfern would be a tremendous undertaking. To alter six roads and make them suitable while the traffic was going on would be almost a dangerous operation. During the reconstruction and alteration of the roads rendered necessary by the building of the two additional platforms A and B, very considerable difficulty was experienced.

584. *Mr. Hoskins.*] Even suppose that you widened the tunnel and necessarily widened the road approach to the widened tunnel, would not there still be the same difficulties you now complain of in shunting from arrival platforms to departure platforms, and shunting in the station yard? Yes; even if you widened the tunnel in order to make a proper and convenient arrangement for the trains you would have to remodel the whole yard. There would be room then to remodel the yard, but that would be a very great undertaking indeed.

585. If you continued the present arrival platforms; if you did not extend them further to the west by taking in a portion of Regent-street, you of necessity would be compelled, even though you widened the station and the approaches at the tunnel, to cross over from one road to another? Yes. 586.

- H. Deane.
3 Mar., 1897.
586. The frequent crossing of engines would exist then almost as badly as it does now? Yes.
587. *President.*] If Redfern became only a station through which the trains passed, the terminal station being removed elsewhere, it would be no difficult matter to equip Redfern with the traffic going on so as to serve for a great goods station? If Redfern were left merely as a passenger station—a station of considerable magnitude, but still only a wayside station—there would then be room for the expansion of the carriage sidings and the goods, both of which are required.
588. *Mr. Hoskins.*] If the tunnel were widened considerably, of necessity you must widen the approaches to it, and therefore you would have to resume a good deal of land and house property in Regent-street, and further on towards Eveleigh? Yes; there would be a great deal of land to be resumed.
589. Do you not think it would be quite as expensive to widen the tunnel as desired and to resume all the land required for improving the approaches to the tunnel as to make a terminus in Park-street where so little private land would have to be resumed? Yes; I am quite of opinion that the cheapest arrangement in the long run is to bring the station into Hyde Park—to St. James' Road rather than to Park-street—and to provide for the loss of any public recreation ground in some way.
590. You entertain very little doubt, I suppose, speaking without having examined the matter minutely, that it would cost twice as much, if not more, to resume the land, widen the tunnel, improve the approaches, and make a wider road, than to take the railway across Belmore Park and skirting Hyde Park to take a small portion of the park? Yes; that is to say, to re-arrange the whole station yard and to provide the accommodation which is proposed in Hyde Park.
591. *Mr. Lee.*] After that was done it would then only be a temporary station? Yes.
592. It would not meet the requirements of a great terminal station? No, and it would be only sufficient for just a few years.
593. You have now exhausted, from every point of view, the question of the probability of extending Redfern yard and making it answer the purposes of a terminal station? Yes.
594. You are clearly of opinion that whatever decision the Commission may come to it is very clear that there must be a removal from Redfern? Yes.
595. Are you very clear about that question? I am quite convinced of that.
596. *Mr. Hoskins.*] I suppose you are of opinion that with the probably increasing traffic at Redfern there will be a great danger attendant upon working the traffic? Undoubtedly.

James Powell, late Collector of Customs, sworn, and examined:—

- J. Powell.
3 Mar., 1897.
597. *President.*] You were Collector of Customs for New South Wales for many years? Yes.
598. You are a Commissioner of Customs at the present time? I am.
599. The Commission will be obliged if you will be good enough to state your views as to the distribution of goods for export and import—that is, products and ordinary commodities? The quantity of goods sent direct to the country is and has been for many years very small. Sydney is a distributing depôt, and the houses outside Sydney importing directly from Europe and other countries are but few. I think the direct importations for the country are so small as to be scarcely worth consideration. The goods from the country—that is, wool and produce generally other than agricultural produce—do not go direct to the ships. I find that it is almost an exception for wool to be sent direct to vessels for transport. If the Commissioners wish to have more accurate information on this subject they should examine the master carriers, such as Shortland & Sons, Mr. James M'Mahon, the Suttons, Permewan Wright & Co., Wright, Heaton, & Co., and Mr. John Meloy; but certainly, as far as the goods shipped to the interior are concerned, I think that where we have direct shipments they are mostly transmitted by water—that is to say, to the Hunter or the Richmond Rivers.
600. But they all become broken packages? They come as original packages and the bulk of them goes to the Hunter.
601. *Mr. Lee.*] I suppose the largest item of export would be wool? Yes.
602. Is it not the practice for wool to come to the city as the depôt, to be there sorted, classed, offered for sale, and, as a general rule, exportation takes place when the producer fails to get a market in the Colony? That is more frequently the case now than it was years back.
603. Is not Sydney becoming more largely a sale depôt for the produce of the country? All statistics go to show that.
604. That of itself would necessitate the wool being conveyed to the warehouses to be dealt with? That is so.
605. It is sent to its destination by the respective buyers? Yes.
606. You know that more than three-fourths of our wool is exported to London by the second-hand man rather than by the producer? That is so.
607. Would not that prove the fact that the wool has to be dealt with in the city in some warehouse? It has to be, for the purpose of sale, and also for dumping and preparing for shipment.
608. That would preclude the possibility of the wool coming direct by train, and being taken to the ship's side? I am of that opinion.
609. Have you given any consideration to the question of the Government resuming the wharfs on the western side of the city, and constructing a railway round there for the purpose of dealing with the goods traffic to and from the shipping? If with a view to feed the railways, I think the time is not opportune. I do not think the time has arrived for it.
610. If the imported goods have to go into the warehouses for distribution it is not likely that they will be put on the railway? No.
611. They will be conveyed by dray from the ship's side to the warehouse, and the bulk of the wool traffic will be dealt with in the same way? Just so.
612. Therefore, it would appear that there would be very little traffic for a railway if constructed round that portion of the city for that purpose? That is the view I have always taken of it.
613. You have had an extended opportunity of judging of these things? I have had forty-four years' experience of it.
614. You have been able to watch the growth of the trade of the port? Yes.
615. Do you think there is an inclination on the part of the producers to more largely use the port of Sydney than they did a few years ago? I do; I think the railways have helped it.

J. Powell.
3 Mar., 1897.

616. The more the railways have been extended, the more the produce has come here? Sydney has benefited.
617. I suppose Sydney must now be looked upon as really a depôt for the country? I think so.
618. For other than coal? Yes.
619. What would best facilitate the receipt and despatch of goods and produce in the shape of a city railway extension;—do you think it is necessary to extend the railway to the city for the goods traffic? I do not.
620. Do you think it is necessary, in the interest of the passenger traffic, to extend it? I do not feel myself competent to offer an opinion on the subject.
621. Will you confine yourself to the goods traffic? If the goods have to be removed by dray there is no more expense for a long distance than there would be for a short distance. The handling of the goods increases the expense.
622. If goods have to be handled it will make very little difference in cost whether they are handled from Darling Harbour to Mort's buildings, or whether they are brought from Miller's Point Wharf to Mort's buildings? I do not think there would be any difference in the cost of dealing with them.
623. Therefore it would be impossible to expect a revenue to be derived from the goods traffic on a railway along the western side of the city? I see no possibility.
624. Nor do you see how it is going to facilitate the export of the produce? I do not; that is altogether apart from the resumption of wharf frontage.
625. What I want to get at is whether you, after your very long experience, think that the trade of this port could be facilitated in any way by the construction of a line of railway along the western side of the city? I do not.
626. *President.*] If the Government purchases the wharfs on the eastern side of Darling Harbour, and subdivides them, and puts a railway down adjacent to them, and resells them, would it in your opinion be a profitable operation to the State? I think not.
627. You think the operation would end unsatisfactorily, from a commercial standpoint, to the Government? From a commercial standpoint, I believe the Government would be large losers.
628. Why? Because the merchants, and those who would receive payments for their wharfs, would compete with the Government in other parts of the harbour.
629. *Mr. Hoskins.*] Suppose that the Government wished to let these resumed wharfs to private individuals, do you think the Government would be able to get a rent sufficient to pay the interest on the money they had paid for the wharfs? I do not; the rents are being reduced at the Circular Quay.
630. *President.*] You have spoken so far with regard to the present trade of Sydney? Yes.
631. Do you see any probability in the near future of such an expansion of the import trade as would alter your view as to the value of joining the harbour with the railway system—is trade likely to alter in any way? As cities increase in population, and new cities are created, I believe the distributing trade of Sydney will decrease.
632. As the towns inland become larger they will indent more? They will draw their goods direct from the old country.
633. Is that going on to a very great extent? To a large extent, but not to a very great extent.
634. Can you give us any idea of the percentage? No; I do not think anyone can do that.
635. Is it a quarter of the goods? Nothing like it.
636. Is it 10 per cent.? I could not arrive at it at all.
637. *Mr. Wright.*] It is not more than 5 per cent.? I have no statistics to work on, but I am sure it is very small. If you say it is 5 per cent. I am quite sure you are within the mark. I wish to make a few observations as to the possible trade of the future. I believe as the country increases, the importations will not increase in proportion to the increase of population. I believe that we shall manufacture our own goods, and that we shall not be so dependent on foreign countries as we now are. I do not speak of any fiscal policy.
638. *Mr. Lee.*] You think that as the population of the country increases we shall supply our wants more than we do now? Yes.
639. And that a railway will not be required to the wharfs to take the stuff away? No.
640. *Mr. Wright.*] Is it within your knowledge that the large firms which existed in the interior are gradually disappearing? From my experience they are disappearing. We had more large firms in the country twenty-five or thirty years ago, I think, than we have now.
641. So that, instead of the distribution taking place in country towns, owing to the railway facilities, it takes place in Sydney, and it has decreased in large country towns? I think so; or the large firms in the country have absorbed the smaller.
642. Such a firm as the firm of Dickson Bros., of Mudgee, has ceased to exist, and no firm has taken its place? Yes.
643. The large firm of Webb & Co., of Bathurst, is now doing a comparatively small business? Yes; in direct shipments.
644. It is the same with Dalton Bros., of Orange? Yes.
645. It does not appear likely that direct importations to country towns will largely increase under any circumstances? The importations will continue, as Sydney is, and will continue to be, a distributing centre. It affords an opportunity to people in the country to keep a smaller stock and to work their business with a much smaller capital.
646. The inference is that there will be a diminishing quantity of goods going direct from the ship to the railway? That is the view I take.
647. From your experience as Collector of Customs, has there been ample wharfage accommodation in this port? I went into the question before a Royal Commission some years ago, and I see no reason to alter the opinion which I then formed, namely, that the wharfage accommodation is quite ample for the trade of the port.
648. That has been your experience for some years past? It has.
649. In the rush of our business, notably in the wool season, has the wharfage accommodation, as far as your knowledge extends, been sufficient to meet requirements? I have never heard any complaints about lack of accommodation.
650. You are aware that recently additional wharfage accommodation has been provided at Pyrmont by the railway authorities, and that they contemplate providing further accommodation at Darling Island? Yes.

J. Powell.
3 Mar., 1897.

651. Is there any likelihood in the near future—say, within the next quarter of a century—of the wharfage accommodation of Sydney being largely deficient to accommodate the shipping? Things have altered very much. The running of the lines of steamers has made a very great difference in the trade of the port. These vessels take up berths at Circular Quay or Woolloomooloo Bay by arrangement with the Government, and supposing that each of the lines has two ships a month running, that throws out of employment a corresponding number of the sailing ships which we had years ago, and which used to take a very much longer time to discharge their cargoes. These big steamers will put out a cargo in from twenty-four to forty-eight hours. In the old times the ships were at the wharf for a month and sometimes six weeks discharging; so that far less wharf accommodation is required to get through the work than was wanted years ago.

652. The advent of large vessels, taking from 12,000 to 16,000 bales of wool in place of the vessels which took 4,000 or 5,000 bales of wool, has diminished the wharfage accommodation required at the port? The necessity for wharfage accommodation is diminished by the rapidity of loading. Statistics will show that the sailing tonnage is decreasing almost year by year, and that the steam tonnage is increasing.

653. As a matter of fact, the ocean liners—the P. & O. boats, the Orient boats, the Messageries boats, German Lloyds boats, and the Anchor & Gulf lines—are practically capable of doing all the trade of this port? They do the bulk of the trade.

654. For this purpose there already exists ample wharfage accommodation? The bulk of the oversea trade is done by the Government wharfs at Circular Quay and Woolloomooloo Bay.

655. Do you happen to know if the wharfs round towards Miller's Point—Smith's wharf and Moore's old wharf—have been much employed of late years? I have had no opportunity of knowing what they are doing. At one time I was secretary to the Wharf Association, and had to do with wharfs. I do not think they are fully employed.

656. So that there is at all times in Sydney a certain amount of wharfage accommodation over and above its requirements? Always, and a very brisk competition to get the ships.

657. Has not there been a very large discount paid by wharf owners? I do not know what the discounts are now; but in my time, that is eighteen years back, 75 per cent. was the maximum allowance.

658. Is not that proof positive that the wharfage accommodation at all times has been more than abundant? Most undoubtedly; no better evidence can be given.

659. If the outward and inward trade of Sydney were to increase by 25 per cent., do you think that there would still be wharfage accommodation for the trade? There would be ample accommodation on the eastern side of Darling Harbour, and with the increased accommodation at Woolloomooloo Bay I think there would be quite sufficient for the Government work.

660. At the present time, do you think it would be wise for anyone to build wharfage accommodation as a commercial speculation? I do not think so.

661. As it would not be wise for a private individual to do so, therefore it would be unwise for the Government to do so? That I cannot say.

662. From a commercial point of view, if it would not pay a private firm to build additional wharfage accommodation, it would not pay the Government to do so? The Government do not charge themselves anything for the capital.

663. If they treated it from a commercial stand point would it pay them? It would leave a loss.

664. No railway system which could be devised would prevent spirits and other dutiable goods from going into bond? Under the present tariff the bulk of the goods would go into bond under almost any circumstances, because there are no inland country bonds.

665. Have you ever taken part in the agitation to extend the railway from Redfern to the deep waters of Port Jackson? I have had nothing to do with it. As a public officer I have always abstained from taking part in any agitation.

666. But there was a time when you were not a public officer? I never interfered with the matter; I had a fixed opinion which I have not seen reason to alter.

667. *Mr. Humphery.*] Has there been a large increase of inward and outward tonnage during the last ten years? A very considerable increase. The figures showing the commerce for last year will be published almost immediately by the Government Statistician. There has been a gradual increase every year for the last ten years.

668. Notwithstanding the increase, there has been always ample wharfage accommodation? In my opinion, yes.

669. You have expressed an opinion that in all probability our imports would not increase to any large extent in the future, owing to the probability of our being able to supply our own wants;—now, judging from past experience, would not the exports largely increase? I presume, and hope that the exports will increase with the increased prosperity of the country.

670. Having regard to the probable increase of our exports, would any advantage arise from connecting our railways with the various wharfs and distributing centres? I take it, as far as we know at present, by selling wool in Sydney, or having the opportunity to sell wool in Sydney, the producers have a chance of testing two markets, and they can elect which they will sell in; but generally, in order to do that, they store their goods for inspection. The wool must go into a store to be handled and dealt with before it is shipped, and therefore a railway would be no advantage to the shipper.

671. Your view is, that the connection of our railways with the various wharfs would not be sufficiently beneficial to justify the expenditure for either the import or export trade? That is my opinion at the present time.

672. *Mr. Lee.*] The articles of produce which it would appear possible to be exported direct from the railway by ships are grain, frozen meat, butter, minerals and fruit? Yes.

673. Are you sufficiently acquainted with the railway connection with Darling Harbour and Darling Island to be able to say whether enough accommodation is available there to carry on that business? I think more than sufficient.

674. If it were necessary to run these things down by train to the ship's side, the wharfage accommodation already exists? Yes.

675. I think the Collector of Customs licenses some barges to carry railway trucks—to carry goods generally? Yes.

676. Are not railway trucks of frozen meat conveyed from the head of Darling Harbour to the Pastoral Finance Co.'s stores at Kirribilli Point? I think they are, but the Collector of Customs has no control over the meat.

677. The frozen meat is transferred from the trucks into the ships? So I understand.
678. If the P. and O. boats, and other large boats, have their wharfs at Circular Quay, it will be quite possible for them to bring their frozen meat alongside in a truck on a barge and put it on board? No difficulty about it at all.
679. *Mr. Humphery.*] You stated that the various lines of mail steamers could nearly do all the trade of the port;—could you say what is the proportion of these mail boats to the whole of the tonnage arriving here? If I referred to public statistics it would be misleading, because these large vessels only bring a portion of a cargo to each port. Although a vessel may be of a very large tonnage, she may only bring a small tonnage of goods to this port—she may bring only 200 tons.
680. In replying to Mr. Wright's question, you were only considering the tonnage of vessels, and not the tonnage in connection with the trade of the port? I kept that in mind also.
681. Are we to understand that that tonnage exceeds all other tonnage? It is superseding the sailing vessels. These liners make three trips to a sailing ship's one trip, possibly.
682. What you wish to convey is, that the wharfage accommodation at the port will be increased because these steam vessels will put out cargoes perhaps three times in the year to an ordinary sailer's one cargo, and therefore the wharfage accommodation does not require to be increased in proportion to the increase in the tonnage of the port? That is so.
683. Can you speak as to the number of sailors entering the port, as compared with the number of steamers? The information is given in the Statistical Register. Speaking from memory, the steam tonnage is larger than the sailing tonnage.*
684. Not the steam tonnage but the number of vessels? The steam tonnage and the number of vessels would be shown.
685. Is that the experience of Newcastle also? No; at Newcastle the bulk of the tonnage is sailing ships. I do not mean intercolonial traffic but oversea traffic.
686. Your advice would apply to Port Jackson only? Yes.
687. *Mr. Hoskins.*] Although the steam tonnage has largely increased, and may still further increase where they can get valuable cargoes like wool, there are cargoes of minerals and other things requiring low rates of freight, which will always use sailing vessels—such as cargoes of shale and ores? Yes.
688. *Mr. Fegan.*] You spoke of the probable loss which the Government will sustain if they resume the private wharfs;—is it not a fact that the Government wharfs are paying well? I cannot say, because I do not know what they cost. I went into the question once, and I found that there had been an enormous outlay at Circular Quay. I went back to the time when the wharf was extended under a contract with Mr. Randal. That was a very heavy expense, and year by year money has been spent on the Quay. If an account were made out I am afraid that there would be a very large loss on the Quay as a commercial matter.
689. I understood you to say that you returned 75 per cent. of the wharfage dues to sailing vessels? I did in a few instances during the time I was secretary to the Wharf Association, but the rates were higher at that time.
690. You do not think the wharfs at North Sydney would compete successfully with wharfs at Circular Quay? I think they might do so. Steam punts and lighters would bring the goods across from the ships.
691. Do you think that they could compete under present conditions, seeing that the ships can lie alongside the wharfs without requiring lighters or tenders? Suppose the Government maintains a high rate of wharfage it would pay anyone to compete with them.
692. I think you will admit that in a commercial fight the Government would be able to retain their position as against private wharf-owners? If the Government competed, of course they would.
693. If it came to a question of returning one-half or three-fourths of the wharfage dues, private owners would not stand in a very good position? The Government could lower the rates, as they have done already. I am better acquainted with the English practice in London. The Government have nothing to do with the wharfs; the dock companies provide the accommodation. But even there outsiders compete with the companies; they put the goods into small steam lighters, and they land them at wharfs on the Thames, and at less rates than the dock companies' charge.
694. The rates are more excessive there than they are here? I think some of the rates are very heavy; but you have to look at the value of property there.
695. A few years ago there was an agitation against some of the most powerful dock companies because of the excessive rates they charged? Yes; and they lowered the rates. The dock companies are about the worst paying speculations a man can go into in London. I think the less the Government interferes with these matters the better.
696. *President.*] Do you think there is anything else which it would be of importance to the Commission to know? I am not aware of anything.

J. Powell.
3 Mar., 1897.

FRIDAY, 5 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
The Hon. DANIEL O'CONNOR, M.L.C.
HENRY CLARKE, Esq., M.P.
CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
FRANK FARNELL, Esq., M.P.

Captain John Jackson, Manager of Public Wharfs, made an affirmation, and was examined:—

697. *President.*] You are the Manager of Public Wharfs? I am.
698. You desire to hand in a return? I wish to hand in a return showing the earnings of the public wharfs for the year 1895. The total is £46,434 7s. 11d. [*Vide Appendix.*]
699. What wharfs have you in Woolloomooloo Bay? Only Cowper Wharf.
700. What wharfs is the Government erecting there? Two berths on the eastern side where the land was resumed.

Capt. J.
Jackson.
5 Mar., 1897.

701.

* NOTE (on revision):—1876, sailing vessels, 1,512; steam, 801. 1894, sailing vessels, 689; steam, 2,270. 1895, sailing vessels, 706; steam, 2,415.

Capt. J.
Jackson.
5 Mar., 1897.

701. How many berths will you have there when the work is complete? Nine when the whole of what is in contemplation is complete.
702. Does that embrace the whole of the eastern side of the bay and the southern shore? Yes.
703. Where the southern shore takes a bend to the north and on to the rowing-shed will also be available some day for wharf frontage? Yes, to about the Corporation Baths.
704. How many berths could you have then in Woolloomooloo Bay? I think it would give about four more.
705. For first-class ships? They would be large berths, fit for the largest ocean-going boats coming here.
706. Is there ample room there? Yes; we could get any depth by dredging.
707. Between the Domain gates and Fort Macquarie, is there an area available for berths? Not very much.
708. Is it a suitable place for shipping? A part of it.
709. How many berths could be put in there? One good berth.
710. What berths have you in Sydney Cove? Including the P. and O. berth, there are seven berths; one is not quite completed.
711. Does that include the whole of the Government land? No, not the late A.S.N. Co.'s wharf.
712. What berthing-room is there there? It is being reconstructed; there will be five berths there.
713. How many berths does that give you in Sydney Cove? Thirteen altogether.
714. Following down the eastern side of Darling Harbour, right to the southern termination of the Darling Harbour bay, has the Government any wharfage accommodation? Not on the eastern side.
715. On the western side, how many berths have you as far the bridge? Eight berths.
716. You have eight berths inside Darling Harbour, suitable only for small vessels? Yes, to the southward of the bridge; but they are suitable for very large boats, too.
717. If the wharfs are properly constructed, what berthing-room will you have there? You could berth four very large ships and four medium-sized ships. You could berth eight ordinarily-sized ships there of, say, 2,000 tons each.
718. Between the northern side of the bridge and the wooden jetties running out into the harbour, what berthing-room have you there? There are three berths on the eastern side—that is, between the jetty and the bridge.
719. What have you at the jetties? The berths include the eastern side of the eastern jetty.
720. What, in addition, is there? There are three large berths and one smaller one.
721. The three berths to the north of the wharf include the land between the bridge and the land side of the jetty on the eastern side of the eastern jetty? Yes.
722. How many more have you at these jetties? Taking from the bridge, six large berths and one small one.
723. The Government has resumed a large portion of land, extending from these wharfs to the western side of Darling Island? Yes.
724. What room will you have there when the proposed scheme is completed? About twelve large berths.
725. No small berths? The small berths would come in between the jetties.
726. That includes the whole of the Government property, including the places where the ferries are carried on, and the frontages to those areas which are laid aside for public recreation? Yes.
727. Your statement, is that there is a possibility, without interference with private land, of thirteen berths being provided in Woolloomooloo Bay, one berth on the eastern side of Fort Macquarie, twelve berths in Sydney Cove, four large and four medium berths on the southern side of the bridge in Darling Harbour, and three berths to the north of Pyrmont Bridge and embracing the eastern side of the easternmost jetty, three berths and a small one at the jetties, and twelve berths between these wharfs and Darling Island for large boats, and also accommodation for the small ones? Yes.
728. Is there enough trade to keep all your wharfs employed? Not all the year round.
729. Is there any time when the Government wharfs are not sufficient to do the trade? Yes, between four and five months in the year.
730. How many more wharfs would you have required to accommodate them this year? I could have done with four more berths.
731. Therefore, if Woolloomooloo Bay had been available and in a suitable position you would, with these extra wharfs, have had sufficient to do the trade for this year? Yes, ample.
732. And those extensions which we have described round Darling Island and Woolloomooloo Bay appear to be sufficient for a very considerable time? I should say for thirty years. It is an immense area.
733. You make that statement after full consideration? Yes; ships are getting so much larger, and they carry immense cargoes.
734. Are you always fully equipped? Well equipped—equal to any wharf in the world—except at Pyrmont wharf.
735. They are shipping coal at the jetties at Pyrmont? Yes.
736. The coal trade there is regarded as temporary? Not that I know of.
737. There must be some alterations for the coal trade, either at these jetties or elsewhere? Yes.
738. Can you suggest a new site for the coal trade? I have not thought of the subject, but I will communicate my views to you in a few days.
739. Have you any suggestion to make in regard to wharfs for the export of wheat? I believe within a very few years the whole of the export trade will go from Darling Island.
740. It is ample for thirty years ahead? From the present Pyrmont wharf to Darling Island, including the island, will be ample for the next thirty years, if it is properly equipped.
741. The only drawback to the port at the present time is the unsuitability of the coal-loading appliances on the jetties at Pyrmont? Yes.
742. That is all that is wrong, in your opinion? Yes; my idea is that in a very few years all the Government wharfs in Woolloomooloo Bay and at Circular Quay will be wharfs for nothing else than importing, and Pyrmont wharf, including Darling Island, will be used exclusively for exporting.
743. Would it be an advantageous thing to connect Woolloomooloo Bay with the railway system? I do not think it would be wise to connect Woolloomooloo Bay.
744. You see no great advantage in bringing the railway closer to the port than at present? No.
745. Do you believe that the connection with the western side of the harbour is sufficient for this purpose? I think so.

Capt. J.
Jackson.

5 Mar., 1897.

746. With the large wharfage you have at Woolloomooloo Bay, ought a railway to Woolloomooloo Bay be constructed at once, or had it better be delayed? I think it will admit of delay.
747. *Mr. Lee.*] The revenue derived from the Circular Quay wharfs for 1895 was £32,000? Yes.
748. What interest does that represent on the capital? I am not able to say. I tried to get the information this morning, but I am informed that it will have to be obtained officially from the Treasury.
749. What are the working expenses of Circular Quay? I can give you the expenses as far as my Department is concerned. I do not know what the dredging might cost.
750. Will you state the annual expenses of the working of Circular Quay? I will have to refer to the Estimates before I can answer the question.
751. Are all the berths from the North Shore horse-ferry right round to Dawes Point permanently let? No.
752. How many berths are vacant? Only one of the large berths. It is the one at the south-eastern corner of Circular Quay. It is used for general purposes—that is, for sailing ships.
753. The berth is only casually let, as it is required for a sailing ship? Yes.
754. I suppose there are times when the berth is vacant? Yes; particularly in the dull portion of the year.
755. I suppose we may draw a great distinction between a permanent rental and a casual rental in this way—that is, in the wool season this berth will be fully occupied by sailing ships? Yes, and by steamers.
756. But there may be four or five months when there will be only an occasional vessel? Quite so.
757. The rented wharfs would be paying the same revenue every month throughout the year? Yes; but we collect the wharfages, which vary according to the quantity of a ship's cargo.
758. Any others? Yes; the old A.S.N. Company's wharf, which is being reconstructed. The old jetties, which are completely rotten, are being taken up. They are doing half of it this off season, and the other half will be done next year.
759. That means the erection of new jetties and new sheds and the deepening of the water to admit of large vessels coming in there? Yes.
760. How many berths are vacant there? When it is completed there will be no berths vacant, because they are all bespoken.
761. Are there any others? Not at Circular Quay.
762. Would that casual berth be suitable for berthing a line of large steamers? Yes; it is the longest berth at the Quay.
763. Is it capable of accommodating ships equal to the Orient and the P. and O. boats? Larger ships.
764. If any company wished to get a permanent wharf they could? Yes. It is 560 feet long.
765. These wharfs are let on an annual rental? Yes; an annual rental is paid in lieu of the usual tonnage dues which would otherwise be paid.
766. Do you collect the wharfage rates? We collect all wharfage inwards and outwards.
767. You get the rent and the wharfage on the stuff exported and imported? Yes.
768. At the vacant berth I suppose they pay tonnage rates and wharfage dues? Yes; the ship pays the tonnage dues, and the consignees either inward or outward pay the wharfage dues.
769. In fixing the rental of a wharf at Circular Quay, how do you arrive at what is a fair charge? We calculate how much tonnage dues a ship would have paid in ordinary circumstances. If she had been charged ordinary tonnage dues she would not have had an exclusive right to the wharf. We charge so much extra in order that the company should have an exclusive right to a berth. The calculation was worked out three years ago. I think the Orient Company would have paid between £1,500 and £1,600 a year in tonnage dues.
770. For having the absolute right to so many feet of wharfage they pay a percentage over and above what they would pay in tonnage dues? Yes.
771. Is there any growing desire on the part of shipowners to secure additional berths at Circular Quay? There has been of late. The E. and A. Co. go there for a berth and pay the ordinary tonnage dues, but they have not an exclusive right to the berth. When they are not using the berth I can use it for any other purpose.
772. If they desired to get an absolute right to the berth could they rent it? Yes.
773. It suits their business arrangements not to rent it? Just so; it is cheaper for them not to rent it.
774. Is the tendency of the export trade to concentrate itself at Circular Quay or to divide itself at Miller's Point and round Darling Harbour? I think it has a tendency to go over towards Pyrmont.
775. Why? I could not say why; but for years large warehouses have been built at Pyrmont, and I presume it is for the convenience of getting the wool in there for sale. I do not know of any other reason.
776. You know pretty well how the goods are handled which come here from the country? Yes.
777. Suppose a railway were built along the western side of the city and the wharfs became Government property, do you think that a large percentage of the produce of the country could be taken direct to the ships and be sent straight away? No.
778. Why? Wool, for instance, has to go from the railway into the warehouses to be sorted and sold. Then, after the auction sale is over, it has to go from the warehouses to the dumping-places, and then it has to go on board the ships.
779. In other words, it is a product which has to be handled and dealt with before it is shipped? Yes.
780. Wool, I take it, is the largest item of export? No doubt.
781. Consequently it will bring the largest amount of traffic to the railway? Yes.
782. Taking the items which may be shipped direct, such as grain, frozen meat, minerals, and butter, have you seen any of these dealt with directly? I have seen frozen meat dealt with.
783. Will you be good enough to say how it is dealt with at the present time? I do not know how it is dealt with before it comes from Riverstone.
784. Is it the practice to freeze meat in the country? I cannot say.
785. Is it not nearly all frozen in Sydney? I think so.
786. How do they deal with it here? They take it in ordinary carts from the freezing works and bring it alongside the ship—even the Orient Co.'s boats—at night-time; and so they do at Pyrmont wharf and at McIlwraith's wharf—in fact, all the frozen meat is shipped in the way it is done in Darling Harbour.
787. Do Geddes' freeze their meat at Kirribilli Point? It comes from the country in a railway truck which is put on a punt at Pyrmont wharf and taken over to North Shore.

- Capt. J. Jackson.
5 Mar., 1897.
788. If that is possible would it not be equally possible to bring that car on a barge to the P. and O. or the Orient wharf, or to Woolloomooloo Bay, and ship the stuff direct out of the cars on to the boats? It is possible, but I think it would be more expensive.
789. The frozen meat is transferred to ships in this way by ordinary vehicles as well as by refrigerating cars? Yes.
790. Does that appear to be ample for the business;—do you think it is retarding the business? The only complaint I have had—and that was only a few days ago—was received indirectly from the Riverstone Meat Works, and it was that the Railway Commissioners' objected to allow their carts to go through the railway yard at Darling Harbour, because they could have shipped the meat more quickly at Pymont wharf than by going round all the way to M'Ulraith's.
791. Is that item of export of such weight and importance that it would justify the construction of a railway round the western foreshore for the purpose of shipment? I do not think so.
792. Do you think if a railway were made there would be two trainloads of frozen meat in a week for shipment? I am sure there would not.
793. Consequently that item of export is not so large as to justify any great expenditure? No.
794. It has to depend for exportation upon the available space which can be found in the mail steamers? Yes.
795. And in the specially constructed steamers which have come here occasionally? Yes.
796. But there is no such thing as a daily exportation of frozen meat? No.
797. If it were to increase 100 times, what then? Then it could be accommodated in the new berths at Darling Island. There is no doubt that that will be the great export depôt for wool and frozen meat.
798. You are very clear in your mind that there is no justification for resuming wharfs or constructing railways to deal with that? No; I am sure they would not put it into a truck.
799. The movement of butter is very much easier than that of frozen meat? Yes; it is packed in small cases.
800. Has there been any direct exportation of grain from this Colony? Not to my knowledge.
801. If it should become an item of exportation how could it be dealt with under existing arrangements? It could go by rail to Pymont wharf, and be shipped direct from the trucks.
802. Suppose that there was a constant trade, how many ships a year could be berthed at Pymont and Darling Island, allowing ample time for a ship to unload and load? I should say 500, but it would all depend upon the despatch which a vessel would get. It would all depend on the appliances and the despatch.
803. Do you think that will be sufficient to deal with the trade of the port for the next twenty-five years? I have no hesitation in saying yes. I do not suppose the Colony will go ahead any faster than it has done during the thirty years I have resided here.
804. Suppose that got filled up, would it then be possible to fall back upon Woolloomooloo Bay if it were all wharfed? Yes.
805. Which would give almost as much accommodation as the two places you have spoken of? Yes.
806. Practically for twenty-five or forty years ahead the Government has ample accommodation for the shipping to take the produce of the country? I thought I was very much within the mark in saying thirty years.
807. Is that your opinion? It is my opinion.
808. I suppose it would be very difficult to calculate the cost of resuming all the wharfs along the foreshore? I think so. I have given some thought to this question, and it seems to me that if the Government resumes all the private wharfs it will unhinge all the importing and exporting business for years. It affects not alone the wharfs, but all the warehouses. It seems to me that if the Government resumes all the wharfs it will have to act for a certain time as a middleman between the producer and the consumer.
809. Is there not existing among the wharf-owners a system of differential or graduated rates? As far as I know the Wharf Association charges full rates. An agreement was made some years ago that no refunds should be made, but there are wharfs outside the Association which do give very large rebates—50 and 60 and even 75 per cent.
810. *Mr. Humphery.*] Are they important wharfs? Yes; they take a very large number of import ships, and some of the export ships as well.
811. *Mr. Lee.*] If the Government resumed these wharfs it would be necessary to make a rate for wharfage or tonnage or fix a rental or have some uniform rate? The Government has that now.
812. If the Government once departed from that and began to make differential rates I presume the wharfage business would result in endless confusion? Not always.
813. Is there not a class of trade carried in ships of a cheap and unimportant character where they cannot afford to pay heavy tonnage or wharfage rates? Yes, there are goods on which the wharfage is very heavy.
814. Where they will have to go to some remote part of the harbour to get cheaper wharfage accommodation? No. It is not the unfortunate importer, but a ring in London that gets the benefit of the refunds, so I understand.
815. Suppose that all the wharfs on the western side were resumed, is there not a class of small shipping trade which would not be able to go to these wharfs? There are all the coasting traders and the different companies which have a fixed business; it would unhinge the whole of their business.
816. *Mr. Wright.*] They pay no wharfage? It is added into the freight in most cases.
817. *Mr. Lee.*] Do you think the Government should resort to that sort of business? I do not.
818. Do they resort to that sort of thing at Circular Quay? No.
819. It is not likely that the State could pursue any such underhand policy as that? No. In order that you may not be under a misapprehension, let me add that I have recommended a refund of the wharfage on the wheat coming from California. If I had not done so, the wharfs outside the Wharf Association would have taken my business away; and the railways besides the wharfs would have been losers.
820. Do you think that if the Government were to resume the western wharfs and put them in a good state of repair and keep them well equipped, and construct a railway at the back of them to convey the stuff to and fro, it would attract any more shipping to them than goes there now? No.
821. *President.*] Which, in your opinion, is the more valuable wharfage frontage in Sydney—Sydney Cove, Circular Quay, or Darling Harbour, embracing also Miller's Point to the north and that area abutting on the bridge to the south. Taking it foot for foot which is the more valuable? Circular Quay.
822. Is it twice as valuable? Yes.

823. Would it rent for twice the money taking it right through? I think so.

824. You cannot tell us exactly what it cost you to earn £32,000 at Circular Quay in 1895? I think it cost about £2,500.

825. The distance embracing Miller's Point and Darling Harbour, right to the end of the harbour, is twice the area of Circular Quay? I think so.

826. If your calculation be correct, then the gross earnings of that extent of foreshore, if it were in the hands of the Government, would be £32,000? Yes.

827. *Mr. Roberts.*] What allowance did you make on the Californian wheat? Thirty per cent.; if I had not done it, I should have lost some thousands of pounds.

Capt. J.
Jackson.
5 Mar., 1897.

TUESDAY, 9 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C. |
The Hon. JAMES HOSKINS, M.L.C. |
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C. |
The Hon. DANIEL O'CONNOR, M.L.C. |
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Captain John Jackson, Manager of Public Wharfs, further examined:—

828. *President.*] You have obtained some information which was desired by the Commission on Friday? I beg to hand in a return showing the cost of the management and collection of the revenue for the year 1895. [*Vide Appendix.*]

829. Does it show the interest on the capital expenditure on each wharf? No; that information is being prepared.

830. *Mr. Hoskins.*] Have you the cost of all the Government wharfs? The Treasury is getting that information prepared, and I am preparing the whole of the revenue returns since 1874.

831. *President.*] Will you be good enough to give the figures for each wharf? In 1895 the cost for Circular Quay was £2,201 19s. 6d; for Cowper wharf, £667; for Pyrmont wharf, £583; for Darling Harbour, £314 4s.; for Blackwattle wharf, £354; for Byron Bay, £125; for Woolgoola, £125; for Coff's Harbour, £125; and for White Bay, £65. I may state that the cost of the collection in the case of the two wharfs to the northward is more than the revenue—the cost exceeds the collection by about 50 per cent.

832. You were asked to consider the respective values of the foreshores of Sydney Cove and Darling Harbour, right from Miller's Point to the end of the harbour, for leasing purposes, and to submit a comparative statement based on what is obtained by the Government for the Sydney Cove wharfs, to enable us to form an opinion as to what may be reasonably expected from the wharfs from Miller's Point to the head of Darling Harbour? I must qualify the statement slightly. Circular Quay is of far greater value if all things were equal. Circular Quay is of the greatest value for the present trade, but some of the Darling Harbour wharfs—that is, the intercolonial wharfs—are of greater value for that purpose than Circular Quay would be, because Circular Quay or Farm Cove would never be suitable for the intercolonial trade. The whole business of the intercolonial trade is centred in Sussex-street.

833. Can you make a comparative statement, taking 4,000 feet of frontage in Sydney Cove and 4,000 feet of frontage in Darling Harbour—that is, 2,000 feet above the bridge and 2,000 feet below the bridge? It is only guesswork, but I should say that the wharfs in connection with the intercolonial trade at Sussex-street are of equal value with Sydney Cove wharfs.

834. Taking it right through, does the State get a fair return from Sydney Cove? I think so.

835. Can you make a statement as to 4,000 feet in Sydney Cove and 4,000 feet in Darling Harbour, taking an average of their respective values? There are some parts of Darling Harbour which are of very little value. There are 4,000 feet at Darling Harbour, above the bridge, not worth, I suppose, one-fourth of what Circular Quay is; but there are other parts of Darling Harbour which are—for instance, the Union Company's wharf, Huddart Parker's wharf, and the North Coast company's wharf.

836. Would 8,000 feet in Darling Harbour, taking the length we have described, be twice as valuable as 4,000 feet in Sydney Cove for leasing purposes? I think 4,000 feet of the wharfs I mentioned would be of equal value to 4,000 feet at Circular Quay.

837. Would the other 4,000 feet be one-half, or one-third, or one-fourth of the value? It all depends upon what business there is to do.

838. Is it one-half the value? I should say about half.

839. Taking the whole of Darling Harbour right through, a foot of Darling Harbour would be worth, for leasing purposes, about three-fourths of a foot in Sydney Cove? That would be it, approximately.

840. Have you taken into consideration that, generally speaking, in Sydney Cove the boats are berthed parallel to the frontage, whereas in Darling Harbour they are generally berthed at right angles? Nearly in all cases.

841. Does not that fact alter your statement in any way? I do not think so. I do not consider the boats at all; I consider the frontages for leasing purposes.

842. If it were in the hands of the Government, you think you could collect for a length of the foreshore we have described, foot for foot, three-quarters of what you get for Sydney Cove? I think so.

843. If it were resumed, could we base the returns on that proportion? Yes; I would leave the jetties out altogether.

844. Is it your opinion that if the Government were to resume the frontages to the extent of 8,000 or 9,000 feet you would get between £40,000 or £50,000 a year from the lessees, or would you get more? I think we would get £40,000 a year; but, of course, it would depend a great deal upon the business done.

845. We cannot separate your reply from the information upon which you base it? There is no basis to go on except the value of the Circular Quay wharfs.

Capt. J.
Jackson.
9 Mar., 1897.

- Capt. J. Jackson.
9 Mar., 1897.
846. Do you consider that is a fair basis? The only basis we have is the public wharfs.
847. Taking the basis of the public wharfs, do you think it is reasonable to suppose that you would get £40,000 or £50,000 a year if the wharfs were resumed? I think so.
848. *Mr. Hoskins.*] Is it not a fact that a great many of the wharfs in Darling Harbour have scarcely a vessel lying at them for six months in the year? The principal part of Darling Harbour is taken up with intercolonial ships.
849. I mean the wharfs where the foreign vessels lie? Those wharfs are round at Miller's Point.
850. *Mr. Humphery.*] In estimating the value of Darling Harbour have you taken into consideration the fact that the jetties berth a larger number of vessels than can possibly be berthed if the vessels lie broadside on at the quay? I have thought of that; but I would rather leave the jetties out altogether.
851. How can you leave the jetties out in estimating the value of the wharf frontage? If we take Circular Quay as a basis it is all frontage.
852. *Mr. Wright.*] You have jetties at the lower end of Circular Quay? Yes; but we do not use them very much. Jetty berths are never anything near the value of a broadside berth. At a jetty of, say 35 to 40 feet, they put two vessels to discharge inward cargo. In my estimation that is not right. When two vessels discharge inward cargo at a narrow jetty the cargo all becomes mixed.
853. *Mr. Humphery.*] At Circular Quay, lying broadside on, what frontage would you require for one of the Union Co's largest boats? About 300 feet.
854. With 300 feet frontage at Darling Harbour how many jetties could you have? Two.
855. Which would accommodate four vessels? Probably.
856. Does it not follow, if you are using jetties at Darling Harbour and not at Sydney Cove, that for business purposes Darling Harbour must be more valuable to the lessees? It is of as much value I think as Circular Quay for that particular business. For the Union Company and the coasting boats in the intercolonial trade I think it would be fair to say that it would be of equal value to Circular Quay, but I do not think it would be of any greater value.
857. Is this what you wish to convey: that the rent obtained from one berth at Circular Quay would be equal to the rent obtained from four berths in Darling Harbour? As you put it, I think it is right. A large berth at Circular Quay would be equal in value to two jetties at Darling Harbour.
858. In estimating the leasehold value of the frontages to Darling Harbour, does your estimate of an annual rent of £40,000 or £50,000 include Sydney Cove, Miller's Point, and Darling Harbour? The whole of Darling Harbour, which starts from Miller's Point.
859. What properties would you include in your estimate? I would take from Smith's wharf right up to the iron wharf in Darling Harbour.
860. Upon what do you base your estimate? It is only an approximate estimate.
861. Would it not be more correct to say it is a random guess? It is very random.
862. It is not based on any figures or any knowledge? Except the value of Circular Quay. I told the Commission on Friday that I know nothing about the collections they have.
863. The opinion you have expressed as to the annual value of these frontages may be regarded as a random estimate? It is simply my own idea of what it would be.
864. *President.*] Regarding that opinion as an approximate statement of the value of the frontages in Darling Harbour, can we apply it round to Dawes Point on the same basis? Round by Dawes Point there are some very large broadside berths.
865. Is it as valuable as Circular Quay? No.
866. Would your three-quarters value still pretty well hold? Yes.
867. You were also to think over the question of broken goods and the value of a railway to the foreshores of the harbour;—can you make a statement in regard to those matters? I have made a statement as to the exports. I do not think the goods put from the ships into the railway trucks would be enough to pay for the greasing of the wheels. Nearly all the cargo which arrives here is taken to the warehouses.
868. Do you know the dray freight from the ships to the railway? It varies, but I think it is 1s. 4d. a ton now.
869. Can we take 1s. 6d. a ton as a fair estimate? I think so.
870. A comparison between the cost of 2 miles carriage, road and rail, would not be a fair one, because the route is not direct? No. It has to go to warehouses to be repacked, but of course there are a few exceptional cases where it goes direct.
871. With regard to a general principle or general expenditure, those cases are not worth considering? No.
872. We infer from your evidence that Sydney is a distributing depôt for the Colony? Undoubtedly.
873. The goods are broken here? Yes.
874. Have you formed any opinion as to which will be the best shipping depôt for coal in the port? I think Glebe Island.
875. How would you get to Glebe Island? By train.
876. If the coal has to come from Eveleigh to get to Glebe Island without passing over a bridge, you would have to turn back along the southern line some little distance? I do not know anything about the lines of railways.
877. In forming an opinion as to the best place in the harbour to carry on the coal trade you have to consider the accessibility of the place? A branch railway would have to be constructed from a main line to Glebe Island.
878. You propose, in reaching Glebe Island, to cross over a bridge near the present bridge? Yes; but I could not say where.
879. Why do you believe it is the best place to ship coal at? In the first place because it belongs to the Government, and in the second place because there is deep water. There is plenty of room for constructing shoots on the island. I think the coal could be shipped by shoots instead of cranes, which would save an immense deal of labour and cost; I mean something on the same principle as the Stockton Coal Company has at Stockton wharf at Newcastle. It saves all the hydraulic machinery and everything else.
880. In your opinion the present coal-shipping appliances in this port are unsatisfactory? Yes.
881. And after considering the question you have come to the conclusion that the best shipping place will be Glebe Island? Yes.
882. Where do you think that wheat will eventually be shipped? I think it will be shipped from the wharfs which will be constructed between Pyrmont wharf and Darling Island, including the latter.

883. Where is frozen mutton to be shipped? At the same place, and the railway will bring it to the warehouse if necessary.

884. Where is the wool to be shipped? At the same place.

885. There is ample room there in conjunction with what you have got elsewhere? Yes.

886. You regard Woolloomooloo Bay as an import bay? Yes.

887. You do not believe it is necessary to connect the bay with the railway? No; I consider Woolloomooloo Bay and Circular Quay will in a very few years be used exclusively for importing.

888. And no connection is necessary with the railway, because there will be no trade direct from the wharfs into the interior at present? No.

889. *Mr. Hoskins.*] Do you think there ever will be a large trade done through the Woolloomooloo wharfs? There is a good deal of trade done there now.

890. All you are doing now with the new wharfs is to unload broken metal there for the streets? It is past the wool season now; but Woolloomooloo Bay has been pretty fully occupied during the past season.

891. With three berths; but what about the berths which are going to be built round towards Potts' Point? Only two berths are going to be built, and I think there is a firm in Sydney which will take the two.

892. As regards the import trade and export trade of Sydney, is it your opinion that Sydney is amply supplied with wharfs, and will be supplied for many years to come? Yes.

893. *Mr. Clarke.*] In your estimate of the annual revenue to be derived from Darling Harbour, did you include the associated wharfs from Walker's wharf to Smith's wharf? No.

894. Then there would be a further income derived from those associated wharfs? I think so.

895. Do you think that Darling Island would not be a very good place to ship coal from? I think it would be a pity to put coal there. I think it will be occupied by other products.

896. Do you give any rebates on wharfages? Yes; on wheat.

897. It is the custom, I believe, for the owners or agents of vessels to receive rebates? Yes, where they can get it.

898. And sometimes something is given to the captain as well? I do not know.

899. Are you aware that sometimes as much as 50 per cent, and even more, has been refunded? I am quite sure it has been as much as 75 per cent.

900. If the Government resumed the wharfs that would put an end to any rebates? I do not think so.

901. Would the Government give rebates? No; but even if the Government did not there would be plenty of foreshore where private people would put up wharfs and give rebates and compete with the Government.

902. *Mr. Hoskins.*] Suppose that the wharfs in Darling Harbour were resumed by Government, do you or do you not think that people would start wharfs in other parts of the harbour with the view of attracting customers? Of course they would.

903. Therefore, the expectation of the Government that they would get all the trade would not be realised? No; it would pay people to put wharfs on North Shore and punt the things across.

904. *Mr. Clarke.*] Are you aware that some of the associated wharfs in certain parts of the year are almost idle? All wharfs—the Government wharfs as well as the others—are.

905. That is not the case in Darling Harbour? Not at the Pyramont wharfs, which are nearly always occupied.

906. I mean at the private wharfs? They are not fully occupied; no more are the wharfs in Woolloomooloo Bay or Circular Quay in the off season.

907. Are you aware that nearly all the private wharfs in Darling Harbour are pretty well occupied at the present time? Yes.

908. Do you think that the appliances at the private wharfs in Darling Harbour are quite sufficient for the public? I think so. Private owners seem to me to improve their properties as they are required.

909. Do the steamship companies charge wharfage in Darling Harbour? I do not think they do. In some cases they may, and in other cases they do not. I think it is generally added on to the freight.

910. Are you aware that most of the butter when it comes from the country, either by rail or sailing vessels, is sent to refrigerating rooms in various parts of the harbour, and that it is then carted to the various shipping places? Yes.

911. It would not be any benefit to the butter trade if a railway were made round the wharfs? I do not think so.

912. *Mr. Hoskins.*] Is it a fact that a number of the private wharf-owners at Miller's Point and Darling Harbour have not obtained a permit from the Government to build their wharfs in the harbour? I am not prepared to say that.

913. You do not know whether they pay any rent to the Government for the right to occupy the foreshores? I think they do; I think the Department of Lands looks pretty well after that.

WEDNESDAY, 10 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT)

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

William Thow, Chief Mechanical Engineer, Department of Railways, sworn, and examined:—

914. *President.*] What position do you hold? I am Chief Mechanical Engineer for Railways.

915. Have you any knowledge of the various schemes of railway extension before this Commission? I have no distinct knowledge of them, except what I have gathered from the press from time to time.

916. You are aware of the Commissioners' proposal to extend the railway system to a site in Hyde Park? Yes.

W. Thow.
10 Mar., 1897.

W. Thow.
10 Mar., 1897.

917. You are not prepared to make a statement on the relative merits of a surface line and a line in a tunnel? No. Generally speaking, I consider a surface line very much better than a line in a tunnel. I should always prefer a station that had not to deal with a line running through tunnels. My experience of the underground railway in London would lead me to think that where tunnels could be avoided they ought to be avoided.

918. Take, for instance, the question of a station site, and then divide that question into two, namely, the convenience of passengers and the convenience of working such a station, and then draw a comparison between an underground station and a surface station? Both the convenience of the public and the convenience of working are much greater on a surface station.

919. Why? The fact that passengers have to ascend and descend, even though you may give them the best appliances for that purpose, is an immense objection to a station underground.

920. The approach to the station is better on the surface than it is underground? Unquestionably. Then for the working of the station you have the thing before you in daylight; whereas, if you adopt a tunnel as an entrance to the station, you can see no further than the mouth of the tunnel. The simplicity of working a station in daylight, as compared with a station which is approached by a tunnel, is very great indeed.

921. Is it a very vital thing, in your opinion? For successful working, I think it is.

922. You think it is almost vital? I think so. I should consider it so if I were choosing between a station on the level and a station approached by tunnels.

923. You do regard it as a vital question? I regard it as being a most important question. I do not say that both stations cannot be worked, because we know that they can. In that sense, perhaps, the word vital would be an improper one to apply to it. We know that a station may be approached by a tunnel and still be worked; yet the difference is so great that, generally speaking, I should say the importance of a station not approached by tunnels is very great.

924. In regard to efficiency, there can be no doubt about a surface station? None whatever.

925. In regard to the cost of working, is there any doubt in regard to a surface station? The cost of working is less.

926. Therefore, in regard to efficiency, convenience, and cost of working, a surface station, in your opinion, is infinitely better? Yes. Now, let me say what I meant by approaching stations in tunnels. I am speaking upon a question which would be illustrated by an underground line such as the underground line in London, where the tunnels approach the station from each side, and where the tunnels are long and continuous. A short tunnel is an inconvenience; but then it is not an objection to the same extent that long continuous tunnels are. Another distinction; tunnels on both sides of a station must make it much more difficult to work than one tunnel on one side of the station, especially if that tunnel is a short one. I want you to understand the idea of a station approached by tunnels that I had in my mind when I was speaking just now.

927. Why will an underground station be more costly than a surface station;—do you mean that it will require more hands to work it? Undoubtedly, simply because your view is limited of the working which has to be brought in to it and taken out of it. It would require an increased number of signals, I take it, as well as an increased number of hands.

928. Would it be a serious matter to have the suburban traffic brought into a terminal station in Sydney by a great length of tunnel, say a tunnel 30 chains long? I should very much prefer to have an approach without a tunnel unless the tunnel were a long way off.

929. Is there any objection to a tunnel on the line of route not immediately contiguous to the station? It depends upon how far it may be from the station. I think, for instance, the tunnel at Redfern is a very great inconvenience. That will give you an idea of what I mean. All the traffic has to pass through the neck of a bottle as it were, just a short distance from the station, and anything of that kind must incommode the traffic.

930. Imagine a tunnel midway between the stations leaving a distance of 2,000 feet between the end of the tunnel and the terminal station? I should think it would be a great inconvenience.

931. What objection would there be to working a line with a tunnel in it provided that you had the same width of line and that it was contiguous to the station? No difficulty unless it congests the traffic. On the Hawkesbury line there is no inconvenience in having a tunnel beyond the inconvenience of increased capital cost.

932. Take the question of the inconvenience to the passengers travelling in a tunnel 30 chains long? With regard to ventilation, I do not think there would be any difficulty.

933. You could keep the tunnel clean? I think so.

934. You could construct the tunnel so that it would not affect the travelling public? Not materially.

935. How would you propose to ventilate a tunnel of that kind? That would depend a good deal on its position. There are various ways of ventilating a tunnel. An ordinary fan and other means which produce a current of air are tried. The descent of water, for instance, carrying down a current of air with it, where the natural conformation and the supply of water are suitable, has frequently been used for the ventilation of tunnels, and very successfully, too.

936. In your opinion, a tunnel, as far as the travelling public are concerned, can be sufficiently ventilated? As far as that length of tunnel is concerned, I do not think there would be much objection to it in the way of ventilation.

937. Have you travelled through the tunnels on the Illawarra line? That is a single line, and you can never get a single line tunnel clear because of its width. The tunnel in which it is proposed to carry the suburban traffic could be ventilated much more easily than a tunnel on a single line. I do not think there would be any difficulty in keeping a tunnel to accommodate four sets of rails moderately free.

938. Are there any other means by which you can ventilate a tunnel? Other means are used. Fires, for instance, are sometimes used, but it depends on the position, the conformation of the ground, and the construction of the tunnel, what means are used. I do not think there is any difficulty in finding a mechanical means for ventilating a tunnel.

939. Suppose that instead of passing through the parks with a cut and cover, or an open cutting with abundant ventilation, you were 30 feet under the park going from Liverpool-street towards St. James' Church, and the tunnel were 30 chains long, how would you ventilate it? I am not prepared at present to say what means I should adopt, but I have no doubt that mechanical means could be used to ventilate such a tunnel.

W. Thow.
10 Mar., 1897.

940. There is an idea abroad in the community that the moment you enter a tunnel you suffer some inconvenience, and the question is whether that inconvenience is sufficiently great to justify huge land resumptions? I think the question is simply one of convenience to the public.

941. Why, in your opinion, is a surface line better than a line in a tunnel? Simply because you have a free open line, and you are not submitting the traffic or the public to the inconvenience of a tunnel.

942. What is the inconvenience of a tunnel? There are various inconveniences.

943. Would there be any inconvenience in regard to ventilation? That you could make the ventilation in a tunnel as pure as the outside air I do not believe, but I do believe that the ventilation of such a tunnel could be effected. In the Mount Cenis tunnel there is good ventilation. There is no inconvenience, comparatively speaking, in passing through that tunnel.

944. *Mr. Hoskins.*] The locomotives do not burn coal? They use the ordinary locomotives, and the ventilation is very good. That people travelling through the tunnels would not prefer to travel in the open air I do not believe for a moment, but still there you have an example of ventilation in tunnels.

945. Have you ever travelled by the London and North-western Railway from London to Liverpool? Yes.

946. You are aware, I presume, that as you approach the terminal station at Liverpool you have to go through a tunnel on an incline? Yes.

947. There is very much traffic on that railway? Yes.

948. Is there any great inconvenience caused by that tunnel? I think so. I would very much prefer an open cutting.

949. Have you ever heard of the authorities of that railway saying that great inconvenience is caused by the tunnel? I am quite sure that railway people would prefer an open line. There is no railway man who would prefer a tunnel in entering an important station if he could get rid of it.

950. In the case of the underground railways in London, is the smoke in the tunnels an inconvenience? It is a great inconvenience.

951. Why? Because they cannot ventilate the tunnels to any extent; they have to trust simply to natural ventilation.

952. Why cannot they be ventilated? They have not the means of doing it without going to very heavy expense; it has never been provided for.

953. What would the heavy expense be? They would have to acquire property, put down engine-houses and fan-houses, and carry their fuel and go to a very large expense indeed for every length of tunnel.

954. If it be so expensive a thing to do in London, why is it that it may be done so simply here? Because we would have only one tunnel, I take it, to deal with, whereas there they have tunnels right along the whole route.

955. *Mr. Hoskins.*] They have air-holes in the Temple Gardens? They cut their tunnels where they are able to do it, and allow the air to pass out. There is nothing more than mere natural ventilation in those tunnels.

956. *President.*] In the underground railways in London the smoke is a great public inconvenience? The gases passing from the engine are.

957. There will be as much smoke from an engine in Australia as there is from an engine in London? Just about the same, I think.

958. There would be the same amount of smoke in a railway tunnel in Sydney as there is in an underground railway in London? Yes.

959. Unless some special trouble were taken here which has not been taken in London there would be serious inconvenience here? Unless you ventilate the tunnel by special means I think it would be a serious inconvenience.

960. Is there a special need for ventilation in London? I think so. Wherever you have a long tunnel there is a special need.

961. Notwithstanding that fact it has not been done? Not in the underground tunnels.

962. Although it has been so serious a matter, it has been regarded as wiser to allow the public to submit to the inconvenience rather than go to the expenditure of ventilating the tunnels? No. I do not think the difficulty which has since arisen was properly understood when the tunnels were made. It was assumed at the time the underground railway was inaugurated that locomotive engines could be constructed so as to confine the gases in the fire-box and smoke-box of the engine until they came to an open place, and then allow them to escape. That was the idea on which the engineers who constructed the underground railway worked, and the fact that the gases could not be confined in the engine became apparent afterwards. The tunnels have since become very foul indeed from the escape of those gases and the enormous increase of traffic which took place.

963. *Mr. Hoskins.*] I suppose you know that it is proposed to substitute electric railways under the underground railways in the metropolis? I think it is very likely that they will. The idea at the time was that they would not have to abandon the use of steam in the tunnels. Instead of allowing the steam to pass up the chimney they took it back into tanks and condensed it there, so that steam could be used all the time the train was in tunnels. The only object they had in view was to confine the gases from the fire-box in the engine, so as to prevent their emission in the tunnels.

964. *President.*] Is it a fact that in some of the recent legislation in London the Board of Trade has prohibited the use of steam, and that in a recent Act, which was obtained by the proprietors of some important underground railway, it was made imperative that no steam should be used? I have no doubt that was the result of their experience of the underground railway.

965. Of a tunnel? Pardon me, sir, not of a tunnel, but of the underground railways. You have a special system which is totally different from ordinary railway tunnels.

966. The members of the Board of Trade are presumed to be men pretty well up to date? Precisely so; but I should think that the Board would never say that no railway company was to construct a tunnel.

967. You grant that the Board of Trade did say, in connection with tunnel work for carrying passengers in London, that they should use electricity, or rather, that they should not use steam? Where they have a repetition of the underground railway, certainly I should think the Board of Trade tried to get the best accommodation for the public that they could.

968. Does it not appear to you that the Board of Trade regarded the working of steam engines for passenger traffic in tunnels, in London, as a serious matter? Judging from the experience it has had with the underground railways, I should say yes.

- W. Thow. 969. The Board of Trade has as full a knowledge of means of ventilation as it is possible for anyone to obtain? I think so.
- 10 Mar., 1897. 970. Notwithstanding that, they believe that it was unwise to extend the system of tunnels worked by steam in London? Apparently.
971. Will you explain how you can ventilate an underground railway in Sydney and not in London? I do not think you will succeed any better in the ventilation if your underground railway here is similar to the underground railway in London.
972. Therefore, if it be an underground railway in Sydney, the differences, which are sufficiently strong to weigh with the Board of Health, ought to prevent us from constructing here a railway worked by steam? Certainly. I would not recommend an underground railway for Sydney.
973. You would have no objection to a portion of the railway being underground? That would depend on the length of the portion.
974. Will you limit your length? If it was a long tunnel I think it would be an objectionable thing; but if it is only a short tunnel ventilation can reduce the objection.
975. Give us an idea between a short tunnel and a long tunnel? I have no doubt that a tunnel, say half a mile long, would be an objectionable thing, as far as the passengers are concerned; but I do not say that even a tunnel half a mile long it is impossible to ventilate.
976. *Mr. Humphery.*] Will you explain how the tunnel through Mount Cenis is satisfactorily ventilated? That tunnel is constructed with two inclines, ascending from a lower level to a higher level; they are not equal inclines in length, and towards the centre of the tunnel there is a natural draught.
977. *Mr. Hoskins.*] Have they not fires at the end? I am not quite sure that they use any other means than the natural means I mentioned; but I think they have openings near the apex of the tunnel.
978. *Mr. Lee.*] Have they an exhaust fan there? I do not think so; I do not think they have any mechanical appliances, unless it be fires.
979. *Mr. Roberts.*] Is there any difference between the ventilation of that tunnel and the ventilation of the St. Gothard tunnel in Switzerland? I have not been through the St. Gothard tunnel, but I know the other very well.
980. *Mr. Humphery.*] How is the smoke disposed of? It simply passes out with the air.
981. By what means—by openings to the surface? By the draught through the tunnel to the points where the air escapes.
982. What distance apart are the shafts? I am not sure; I do not think there are many shafts.
983. How wide is the tunnel? It is only for two pairs of rails.
984. It would be much easier to ventilate a tunnel able to accommodate three pairs of rails than to ventilate a tunnel to accommodate two pairs of rails? It would give a better chance for ventilation.
985. *President.*] The pollution of the air depends on the amount of smoke introduced into the tunnel? Yes.
986. How many trains a day pass through the Mount Cenis tunnel? I am not able to tell you just now; but it is not a very rapid traffic.
987. Would there be half a dozen trains a day? Fully that, I should say.
988. It is probable that every train entering that tunnel would go into pure air.—that the tunnel would have had time to clean itself between the departure of one train and the arrival of another? I think that is very likely.
989. Do you know the traffic which comes into Redfern? Yes; we have 300 or 400 engines passing through Redfern tunnel every day.
990. *Mr. Perry*, in his evidence, said:—"On the 29th January, an ordinary day, the total number of passengers and goods trains, and light engines, passing through Redfern tunnel, to and from the station, and Darling Harbour, was 561, and the number during the busiest hour was forty-five. On last Eight-hour holiday the number of trains increased to 701, and the number during the busiest hour of the day was fifty-two." Suppose that thirty trains an hour pass through the Redfern tunnel in the morning, that is a widely different thing to consider from one train passing through a tunnel in an hour? Yes.
991. Then the question of ventilation becomes a serious question? The adoption of a tunnel is a thing which I could not recommend, but at the same time I think there are means of ventilating tunnels which might mitigate very considerably the evil you suggest.
992. The evil would still exist? To a certain extent it would undoubtedly; but that it would allow the tunnel to be as foul as a Wollongong tunnel or the underground railway tunnels in London, I do not believe for a moment.
993. Although the Board of Trade appears to regard the question of ventilation as almost insuperable, you do not think it is? I do not think it is under certain circumstances. As far as an underground railway is concerned it seems to be insuperable, and if you have a similar case in Sydney it will be insuperable here too.
994. What is your opinion with regard to using electric engines as far as Burwood or Strathfield on the western line, and Hurstville on the southern line, and running these electric engines right into the central station wherever it may be? I do not see any necessity for it. I think it will be a great mistake to introduce two systems of traction on these railways.
995. You dismiss that idea if it carries with it the extension of electricity to the suburban lines? Yes. The evil of having two systems of traction between Eveleigh and any terminal station you may erect in Sydney will be enormous. I think it ought to be placed altogether out of consideration.
996. Do you think we could apply electric traction to the whole of the suburban traffic? I do not think it would be a good thing to do. I think it would be almost as great an evil as to have a break of gauge there.
997. It is not worth consideration, you think? I do not think there is any necessity for adopting it, as far as the Sydney traffic is concerned.
998. *Mr. Wright.*] The suburban traffic is quite distinct from the through traffic? Yes, as far as the engines and carriages are concerned.
999. You do not think we should adopt electric traction for the suburban traffic alone, leaving the through rails for the through traffic? I do not see any necessity for it. To introduce it as a novelty would be a mistake, I am sure.
1000. *Mr. Lee.*] Would it be necessary, if it were applied to suburban traffic, to apply it to the long distance

distance traffic also? I do not think it would be necessary. I think the importance of having steam traction for the long-distance traffic would certainly never bring about a substitution of electricity for steam.

W. Thow.
10 Mar., 1897.

1001. Why would it be as bad as a break of gauge to have an electric engine run out to Hurstville on the line on which steam traction is now used? Simply because you introduce two systems of traction instead of one. At present we can take any engine we have and put it on to any train.

1002. Why cannot you do that with an electric engine? You cannot.

1003. *Mr. Hoskins.*] If you had a sufficient number of engines you could? It would make another system. It would be worse than running tram-motors and our locomotives on the same road.

1004. *President.*] Therefore we can dismiss the question of working the suburban traffic by electricity at present? I do not see any necessity for it.

1005. *Mr. Hoskins.*] I suppose you know that a portion of the Pennsylvanian railways—a large system in America—is now worked by electric engines? I know that they have been using it on some parts of their lines, but only as a trial.

1006. But they do work them? I think they have been making experiments with it, but I do not think they have adopted it yet.

1007. *President.*] An underground system of railways may become necessary in Sydney some day; electric traction in a tunnel is not a serious matter, and therefore it may be possible to do the whole of the passenger traffic from the suburbs by means of a system of tunnels, whereas if you preserved the steam you had to have a surface line or a specially-ventilated line? I think the steam will deal with our passenger traffic on the suburban line or the main line sufficiently well for the next half century at all events. Therefore I do not see any necessity to introduce electric traction unless it be on the ground of economy, and I am not aware that there is any economy in it. Unless it be on account of economy there would certainly be no attraction in introducing electricity in place of steam, as far as I can see.

1008. *Mr. Hoskins.*] In America they hold that economy is power? I doubt that. I do not think they have got very much out of electricity on railways in that respect. What I am looking at is simply economy of working. Unless electricity can be put in place of steam, for say 90 per cent. of the money which steam costs, I do not think there is any attraction for it.

1009. *President.*] Will you state the length of tunnel which you believe can be advantageously ventilated, and which will not be any inconvenience to the travelling public? I said that a tunnel under half a mile long might be ventilated by mechanical means in a way which would not be disadvantageous to the public.

1010. Would you say more than half a mile in length? I do not know that I should. I think half a mile is quite long enough for any tunnel to be ventilated by mechanical means; but if the question were put before me as to whether I should prefer a line with no tunnels to a line with tunnels, I should say, undoubtedly, the open line is by far the better.

1011. Suppose that a surface line will cost £500,000, and a tunnel will cost £250,000, then you have the question of cost also to weigh? I can only say that an open line would still, in my opinion, be worth a very great deal more than a tunnel.

1012. From a working standpoint, and also from the standpoint of comfort to the passengers, what do you think? It would be justifiable, I think, to spend more money on an open line than on a line with a number of tunnels in it.

1013. Is it possible to shut off steam at Redfern, and by any contrivance—by the attachment of an electric motor or by cable, or by any other contrivance—to satisfactorily work the line into the city, or must the train go right on with the steam locomotive? It is quite possible, but it is not satisfactory.

1014. *Mr. Humphrey.*] Is it being done anywhere at the present time? It has been done in several places. It used to be done on some of the earlier lines in England.

1015. *Mr. Hoskins.*] At Lime-street station? It used to be done there, and I think also at Buston. I think the Glasgow tunnel from Queen-street station is still worked by rope. A cable is used, but the locomotive is also used, and has been used to my knowledge for thirty or thirty-five years. It used to be worked separately by a rope, and when the train arrived at the top of the incline the rope was taken off and the locomotive was put on, but the inconvenience of the delay to the public—the waiting to change the system of traction was so great that they sent the locomotive down into the station, and they now work the trains by locomotive and cable combined.

1016. *President.*] They are all abandoned? They are all abandoned, practically. At Lime-street station and at Buston they have put on powerful engines to do the work.

1017. *Mr. Lee.*] The one in Glasgow was used for the purpose of getting up a grade? They are all used more or less for that purpose, but the Glasgow grade was stiffer than the grade at other places. The first purpose was to do away with the locomotive in the tunnel at Glasgow, and they worked the train by a rope; and then they found the delay was so great that they now put the locomotive on and unhook the rope when they got to the top and let the train go on.

THURSDAY, 11 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, G.M.G., M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL Esq., M.P.

Hugh McLachlan, Secretary to the Railway Commissioners, sworn, and examined:—

1018. *President.*] You are the Secretary to the Railway Commissioners? Yes.

1019. Have you a return showing the number of passengers in the railway trams which comes as far as King-street and beyond it? No; but I will furnish a return to the Commission. [*Vide Appendix.*]

H.
McLachlan.
11 Mar., 1897.

1020. Can you state the number of passengers that arrives at and departs from Sydney station? For the year 1896 the total number of passenger journeys in and out of Sydney was 11,670,000. That includes it. Each season-ticket-holder made one journey in and one journey out each day.

1021.

H.
McLachlan.
11 Mar., 1897.

1021. Have you divided the number into long and short distance passengers? I have divided them in the same way as the return was divided for the Royal Commission in 1890. The number of passengers booked to and from all stations within a circle embracing Ryde, Parramatta, Loftus, and Sydney, was 7,916,000—that is, what you may call suburban passengers. The journeys of the season ticket holders came to 2,550,000.

1022. That is within the suburban area? All season ticket holders. There are a few outside the suburban area but I did not separate them. The number of passengers outside the stations I mentioned was 1,204,000.

1023. The suburban traffic represented 10,500,000 passengers? Practically.

1024. Therefore 1/3ths of the passengers traffic to Redfern is suburban traffic? Short traffic, that is in passenger journeys, but of course the money would be different.

1025. You will furnish the other information I asked for? I will furnish a return showing the number of passengers who arrive and depart from Redfern Station by tram and the number of tram passengers who go as far as King-street. [*Vide Appendix.*]

1026. What does it cost per train-mile for the suburban traffic? That has never been worked out to my knowledge.

1027. Would that be a fair index to the cost of the whole traffic of the Colony? I should think so.

1028. What does it cost per train-mile for the whole Colony? According to the last report it was 4s.

1029. *Mr. Hoskins.* It would be practically less in the suburbs? I would not like to say; it has never been worked out.

1030. *President.* If the railway station is to be so situated that you will run half a mile beyond the distance to which you now carry passengers, it will cost you 8s.—that is for the journey and the return—for every mile you run? That is based on the same average.

1031. Supposing the railway station were placed down towards Fort Macquarie and it should turn out that very few passengers went down to that point;—if that station were half a mile beyond the needs of the passenger traffic you would do 8s. worth of unnecessary running in every journey of the train? I do not know if you could actually work it out in that way.

1032. Can you make any suggestion? A good deal would depend on the cost. You may require to have a very expensive staff at the station, and a very large number of men in addition to your officers, and you may only run a small train mileage, consequently the cost would be heavier than 4s. The locomotive details of running come to perhaps 1s. 4d. or 1s. 6d. per mile, and the traffic details perhaps come to 1s. 4d. per mile; but then of course if you had a very expensive terminal staff the cost per mile for each additional mile, if the mileage was a short one, would come to more than 4s. It would be a very difficult question to average right through.

1033. Taking, for instance, a station at King-street, and presuming that a train is useful to suburban passengers as far as Bridge-street. If the main station be established down towards Fort Macquarie, and there be no passengers to be carried beyond Bridge-street, you will have done that amount of unnecessary running of the distance between Bridge-street and Fort Macquarie? Yes.

1034. Taking that into consideration, and imagining a large terminal station near Government House grounds, with the present set of traffic in Sydney, what would be the extra cost to the railways? The extra cost would be very largely made up of the terminal expenses.

1035. But you require to have terminal expenditure somewhere? You would require to have two terminal expenditures there, I take it. You would want an additional station.

1036. Suppose the King-street station remains a wayside station, through which your trains run, it would not mean additional expense, but a transfer of terminal expenses? No. You would have the expense at both places.

1037. The same expenses? No.

1038. If your terminus is at Redfern, or at Hyde Park, or down towards the Governor's residence, in each case you have terminal expenses? Yes.

1039. There will not be a very great difference? Still the maintenance and management of two stations must necessarily cost a great deal more than one. For instance, if you extended the railway into the city you could not do away with the whole of the staff at Redfern station.

1040. Redfern would be simply a wayside-station, and the expenses there would just be the expenses of an important wayside-station? Yes, for the passenger business.

1041. You could better make a comparison with such a station as Newtown than with a terminal station? Yes.

1042. It is a question simply of the running mile? Yes.

1043. What would the running of a train-mile cost? I would not like to say offhand, but the average throughout the Colony is 4s.

1044. What does that include? It includes repairs of stock, management—it practically includes everything. That is the whole train mileage divided into the working expenses. If you ask what is the cost of running between Newtown and Sydney, or between Bourke and Byerock, of course the same average applies to both. It would take a lot of time to work out the exact cost between different points.

1045. This extra mile into the city would cost exactly the same as a mile between Macdonaldtown and Strathfield. Suppose that Redfern were pushed a mile further ahead, and that the terminal expenses were the same in each instance? There would be the extra cost of the additional station, which must be fairly heavy, and the running expenses of a mile.

1046. What are they? I would not like to answer a question of that kind offhand.

1047. Have you any idea? In working out the estimated cost of the Sydney extension to Hyde Park the Commissioners have not attempted to work it out on the basis of an average train-mile of 4s.

1048. Suppose that Redfern were extended 1 mile towards the south, would it cost you 4s. for every train which ran over that one mile? If you want to know the cost, I think the matter will have to be gone into very carefully; it would not do for me to hazard a guess.

1049. Would it be 4s.? It would be simply absurd for me to attempt to give an answer. The question will have to be considered very carefully. If you want to know the estimated cost of another station a mile ahead from Hyde Park, you will have to consider how many trains you are going to run, and how many men you are likely to want. Any information which I might give on those points at the present time would be absolutely misleading to the Commission. You cannot average the question. It seems to me

H.
McLachlan.
11 Mar., 1897.

me that it would be rather an idle expenditure to go a mile beyond King-street for the shunting. One object of the Commissioners is to have a station central for all the general business of the railways—for booking, parcels, and offices. You would want a considerable area for a central station; but if you had to duplicate that shunting accommodation somewhere else a mile away it would mean a very heavy expenditure, without much corresponding benefit.

1050. It would mean no great expenditure in regard to shunting, because the same operation has to take place wherever the terminal station is? You would require to have two establishments.

1051. There would be a terminal station and a wayside station? This wayside station would be a central station. I cannot see much advantage in going on an additional mile for a shunting station.

1052. Can you furnish any information in regard to that aspect of the case? I will mention it to the Commissioners. It would want a great deal of working out.

1053. *Mr. Lee.*] I suppose it is owing to the urgent necessity for some change being made for Redfern that this question of city railway extension now becomes one of pressing importance? Yes; that is one of the principal causes.

1054. What are the other causes? The other is to give the public the benefit of a central railway—to bring the railway into the city.

1055. One cause is the overcrowded state of Redfern yard, and the incapacity of Redfern station; and the other is the desirability of giving the travelling public—the passenger traffic only—closer connection with the city? Yes.

1056. If it were possible to overcome the difficulties at Redfern yard, and give the Commissioners all the accommodation they require to carry on the traffic, would there be any urgent necessity to bring the railway into the city? As the Commissioners point out, to do that would cost nearly as much as to bring the railway into the city, that is, provided that Hyde Park is given to them. They point out that they could enlarge, and get the accommodation they want, by extending the railway over Devonshire-street, if they are granted the Benevolent Asylum ground.

1057. I am not speaking of that, because then it becomes a question, if you are going to move the station to the north, whether it is worth while to go 100, 300, or 400 yards? Yes.

1058. The pith of my point is, that if Redfern yard, by the resumption of land adjacent to it, could be made sufficient for all railway purposes, would there be any urgent necessity to extend the railway system to the city? I think there is, for the convenience of the public.

1059. For any other reason? Not if you are going to give the accommodation at Redfern by the acquisition of land to the south of the station. Your proposal is to acquire an extensive area of land to the south of Sydney station, to give the accommodation required at Redfern. That would cost an enormous sum, and you would get no benefit from it. You would not convenience the public; you would be absolutely spending that money for nothing. But if you extend the railway into the city the Commissioners think that it will return the interest on the capital outlay.

1060. Your point then is this: that it is possible to acquire land south of the railway yard to give the required accommodation? I should think it would be; but it would be a most inconvenient thing to do, because you would interfere with the whole of the working at Redfern. To attempt to remodel Redfern, and at the same time to be carrying out improvements on the existing site, would be a most confusing and a risky, dangerous thing to do.

1061. It has been shown to the Commission that the remodelling of Redfern yard could not proceed simultaneously with the working of the traffic;—is it held by the Commissioners that it would be impossible to remodel the yard, no matter what additional land is given to them? I do not say that it would be altogether impossible, for nothing is impossible, but it would be a most risky proceeding.

1062. We have strong evidence on that point. The Engineer-in-Chief for Railways says that it could not be done? I do not think that anything is impossible, but I think it would be a most risky and dangerous thing to attempt to do.

1063. Your next point is that, even if you did acquire that land, it would be acquired at an enormous cost, and the Commissioners would get no extra revenue from it? No; and it would be no convenience to the public either.

1064. All things considered, the better plan is to go north? Yes.

1065. And, when shifting to the north, in the long run it would be more economical to go right on to Hyde Park? Yes.

1066. At Hyde Park you would deal solely with the passenger traffic, parcels, and small goods of that kind? Yes.

1067. Redfern station would be retained for a goods station, as usual? No; at Darling Harbour we deal with our goods.

1068. You would still receive at Redfern? We make up certain truck-loads, and deal with the hay traffic there.

1069. Would you not carry on the same business then as you do now at Redfern, as regards the goods portion? We might do that. The greater part of the goods business is done at Darling Harbour; it is only a limited traffic which is dealt with at Redfern. Full truck-loads of general goods, and the hay and straw business are dealt with at Redfern.

1070. Do we understand that, even under these altered conditions, you require nearly all the Redfern yard for the purpose of the traffic? The Commissioners propose to do the marshalling of trains, and the washing of trains at Redfern as at present.

1071. More so than to contemplate any increased accommodation for the despatch or receipt of goods? I think so.

1072. That is chiefly why it will be confined solely to Darling Harbour? Yes.

1073. Do the Commissioners view the introduction of the goods traffic into the city at any point as a serious matter in connection with city railway extension? No; not to my knowledge. They think the requirements are fairly and reasonably met by the existing arrangements, as far as I am aware.

1074. Have they formulated a scheme; or do they favour the extension of the railway on the western side of the city to bring them in direct contact with the wharfs and the ships? Not at the present time.

1075. Are they of opinion that the facilities which exist at Darling Harbour, and which may be offered at Darling Island, will be sufficient for the export trade of this country for some years to come? Yes.

1076. Is that the basis they are working on? That is, I understand, their opinion.

H.
McLachlan.
11 Mar., 1897.

1077. With regard to a possible extension of the railway from Redfern to North Shore, would it not be necessary to make that extension along the high land by Church Hill? I believe you would have to go back nearly to the Town Hall to get a proper level for a bridge.

1078. Practically, that is the only way the goods traffic can be dealt with? The proposal more seriously considered some years ago was to have an underground line to North Shore.

1079. If a line were made across the harbour, either on a bridge or under the water, do you think it would be largely used for goods traffic? I do not see that it would be.

1080. Would it not be confined almost absolutely to passenger traffic? I should think it would be a passenger line.

1081. Would we be right in inferring that, inasmuch as the railway policy of this country for years has been to concentrate the goods traffic at Darling Harbour and make that place a depôt for the receipt and despatch and shipment of goods, it is not very likely that they will create a great extension to North Shore to do what they already have the facilities to do? I should think not. It would be an expensive thing to do, and I do not think it is required.

1082. And it would give no more accommodation? Where you concentrate your business it is more economical to deal with it. Instead of having two staffs you have one.

1083. Has not that been the policy of the Railway Commissioners for years—they laid out the Darling Harbour scheme? Yes.

1084. Was not Darling Island resumed at an enormous cost to give that accommodation? Yes.

1085. If there is any departure from that policy now, then a large amount of the expenditure in the past will be thrown away? Yes; it seems to me that that is the policy which is continuing—to conduct your goods business at Darling Harbour.

1086. And the Commissioners have adopted that after very full consideration, believing that it will offer every accommodation for the import and export trade for many years to come? Yes.

1087. There are some large works at Kirribilli Point, North Shore, dealing with wool, meat, and other produce? Yes.

1088. Has there been a tendency to send that stuff down by the North Shore line? No. The tendency has been to send it from Darling Harbour.

1089. For what reason? I do not know. It may be more convenient to ship it from there. The Meat company did at one time talk of having a connection with the railway. I do not know how far they got with it so that they might get direct railway shipment.

1090. Is it not a fact that the Department of Railways now permits its refrigerating cars to be carried on barges from Darling Harbour to Kirribilli Point? Yes, they are so carried.

1091. The refrigerating cars come down from the country and are wheeled on to the barges by rails and towed to Kirribilli Point, where the produce is unloaded into the ships? Yes.

1092. Could any system be devised which would move that refrigerating car more cheaply than it can be moved in that way? That is their interest. No doubt they have looked at that question and adopted what they believe is the cheapest plan.

1093. Could any possible railway extension be carried out which would admit of a refrigerating car being moved as cheaply as it is now moved? If they had a railway direct to their works it would be cheaper.

1094. But there is the initial cost? That is entirely their affair.

1095. You do not have to bear the cost of towing the cars across the harbour? No.

1096. You simply have to put your trucks on to their barges, and away they go to any part of the harbour? Yes.

1097. Of course you look forward to a large development in the shipment of meat? That is expected to happen.

1098. Suppose that it did increase very largely;—if it is possible to convey your refrigerating cars on barges to Kirribilli Point, would it not be possible in the future, even if Darling Harbour and Darling Island should become overcrowded with vessels, to convey your trucks in the same way to the ships at Circular Quay or any other part of the harbour? It would be possible, but of course the accommodation at Darling Harbour and Darling Island ought to suffice for very many years to come.

1099. But if it were necessary to convey that produce to the P. & O. boats, the Orient boats, the North-German Lloyds boats, and the other boats, it could be very easily transhipped by adopting the barge system? Yes.

1100. And avoid, if necessary, the carriage of produce in vehicles? It could be done.

1101. Therefore the Commissioners do not view with favour the extension of the railway into the city beyond Hyde Park for goods business? No.

1102. And they rely entirely on that extension for passenger traffic? Yes.

1103. They say that as they are forced to make an alteration in consequence of the inconvenience at Redfern station it will be more economical, in the interests of the State, to remove the station, not to Devonshire-street, but to Hyde Park? Yes; they think that the best plan in every way, looking at the whole of the circumstances, is to take the railway to Hyde Park. They would prefer to go to King-street if it could be done.

1104. If it were possible to give the Commissioners all the accommodation they require at Redfern, would it not be possible to so arrange the tram service there as to suit the passenger traffic almost as well as it would be suited by a central station? No.

1105. If they had a tram system extending through the main streets of the city, would not that offer very much larger accommodation to city people than the existing state of things? Of course you could improve the tram facilities, but at the same time it certainly is not so convenient as a railway.

1106. But after all with your central railway station you will still be some distance from many city residences? Yes.

1107. If you had a tramway system, such as I suggested, you could take them to their own streets, or, possibly, to their own doors? The Commissioners propose to have a connection with the railway station. The trams will run alongside our station in Elizabeth-street. The Commissioners propose, sooner or later, to have electric trams running, and in one of their reports I think they propose to run an electric tram along Park-street to connect with the George-street and Elizabeth-street trams.

1108. *Mr. Hoskins.* Mr. Lee asked you a question about constructing a bridge from Sydney to North Shore, and I understood you to say that you believed that the approach to the bridge would have to be started

started from about the Town Hall, have you well considered that reply? It is an engineering question, but I understand that it will be necessary to go right back to the Town Hall to get the proper approach for an overhead railway bridge to North Shore.

H.
McLachlan.
11 Mar., 1897.

1109. Have you had that information imparted to you by persons who may be regarded as competent to give an opinion on the subject? I am simply stating my recollection of some evidence which was given before the Royal Commission in 1890. I think it was Mr. Foxlee who said in his evidence that they would have to go right back to near the Town Hall.

1110. *Mr. Wright.*] Can you state if the Commissioners have ever thought to any extent about using electric traction for the suburban traffic? It has been thought of, but no scheme has been worked out.

1111. Would it be possible to work the suburban traffic by electric traction while the through traffic was still conducted by steam? I would not like to answer a question of that kind, but I know that the Commissioners have had electric working of one sort and another under their consideration, but I do not know what views they have formed on the subject.

1112. Are you aware whether the practice is pursued in any other part of the world? Not to any extent. There are one or two connections I think in America worked by electricity, but even the Metropolitan company of London has not yet started to use electricity in its underground railways.

1113. Are the underground railways still worked by steam? The Metropolitan company's I think are.

1114. *Mr. Lee* spoke about the conveyance of meat by lighters from Darling Harbour to various parts of the port;—is not that rather an expensive mode of transit? It does not affect us.

1115. It affects the consumer to a certain extent;—is it not rather an expensive system of traffic? Naturally. It would be much more convenient and cheaper if the railway ran to the works. The Meat company at North Shore had an idea of running a railway to its works, but, as *Mr. Lee* pointed out, you would have the initial cost of the railway extension.

1116. Still all the meat companies have to employ steamers to tow the barges? Yes.

1117. Is there any possibility of a line being made to connect the northern foreshores of Port Jackson with Sydney, so that the northern traffic could come in by that line in preference to coming round by Homebush? I think that is very far ahead, because with the northern traffic coming in by the suburban line, it gives you an opportunity of disembarking suburban business and making your connection better, otherwise you would split up your traffic.

1118. You would save a considerable mileage by the North Shore extension? I do not know that there would be much difference in mileage, because the people would simply get into a local train at Hornsby.

1119. Suppose you had a connection with the city from North Shore, no doubt you would have frequent trains from Hornsby to the city, and passengers coming from the north would disembark there? I do not think there is any proposal to bring the goods.

1120. If people desired to bring their goods in by that route, there would be a necessity to break the trains at Hornsby? As they do now the trucks would have to be shunted off at Hornsby and brought on by the local service to Milson's Point.

1121. That would entail extra expense? Yes.

1122. It would be most inconvenient to attempt to bring your terminus goods business down in that way? Yes.

1123. Have you any idea of the passenger traffic which you are likely to obtain, judging from what the North Shore ferry boats now carry? The Commissioners lately have not given consideration to the extension of the city railway to North Shore; we have had no figures worked out.

1124. In their opinion is it desirable that eventually there should be a connection between the North Shore railway and the Redfern railway? It might be desirable in years to come, but there is no immediate necessity for it now.

1125. We can leave out of our consideration any possible connection between those two points? For the present, certainly.

1126. I understand that after duly considering the whole situation, the Commissioners approve of the Hyde Park scheme in preference to any other? Yes.

1127. Would that be in preference to a circular system of railways? Yes. In their report the Commissioners point out that ultimately, when the necessity arises, you can extend from the central station to the suburbs, but there is no pressing necessity for the work to-day.

1128. *Mr. Roberts.*] What extra revenue per passenger do the Commissioners expect to receive if the railway is carried as far as Park-street? They propose to charge a penny for each passenger on each journey, and then to add a certain amount on to the prices of season tickets. The price of a workman's ticket they propose to increase by 3d. a week. A workman who lives at Petersham is now brought into Redfern Station for 1s. 3d. a week, so that if the railway is extended to Park-street a workman can go from Petersham to Park-street for 1s. 6d. a week.

1129. *Mr. Hoskins.*] On what basis do they estimate the number of passengers? On the actual number of passengers who travelled last year.

1130. *Mr. Roberts.*] Do you think the Commissioners would expect to get any more revenue if the railway terminus were located at St. James' road rather than at Park-street? They would charge the same amounts as I have quoted, but it would be more convenient to have the stations at King-street. The opinion of the Commissioners is that King-street is the better position.

1131. You are in a position to say that the Commissioners favour King-street as a terminus for passengers? It has been their opinion right through that it is the most central and convenient situation, but seeing that so much opposition was raised to their proposal on the ground that it would absorb so much of Hyde Park, they said give us half of what we ask for, as it is the next best thing to do.

1132. *Mr. Fegan.*] It is not the intention of the Commissioners to take the terminus down to Circular Quay? No.

1133. They are decidedly against the terminus being located at Circular Quay? What they suggest is that a terminus at Hyde Park or King-street will be quite sufficient with a central station.

1134. And that Darling Harbour will do the goods traffic? Yes.

1135. *Mr. Hoskins.*] Suppose that the railway is extended to Sydney, do the Commissioners, taking your estimate of the number of passengers, make any allowance for the probability that a number of those passengers will get out at Redfern? No. They have simply taken as an estimate the number who travel to-day to Sydney. No doubt some of the passengers will get out at Redfern. But, on the other

- H. McLachlan.
11 Mar., 1897.
- hand, the additional accommodation will induce additional people to come into the city; for instance, people at Eveleigh, Macdonaldtown, and Newtown, if they could get into Sydney by train rather than by omnibus, would come in by train. Besides, there is the additional growth which is going on. There has been a very big growth since the figures were obtained for the Royal Commission, 1890. The estimate is based on the number of persons arriving at Redfern station to-day.
1136. What is the increase? Four million passengers per annum.
1137. *President.*] Is it not the intention of the Commissioners to alter the steam traction on the trams? Yes.
1138. Is it their intention to preserve existing routes? There is no proposal to alter the routes at present, except the one which they outlined along Park-street.
1139. You have no information in regard to what the route should be? You would have the trams alongside the proposed station, and you would bring in a tram from William-street to Park-street, and that would intersect the Elizabeth-street tram and the George-street tram.
1140. As far as you know, it is their intention to preserve the routes of the trams? As far as I am aware, it is.
1141. You will no longer have the railway trams running along Elizabeth-street? No; but you will have the other trams. The railway trams would run along George-street.

FRIDAY, 12 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
HENRY CLARKE, Esq., M.P.	GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

- H. Deane.
12 Mar., 1897.
1142. *President.*] In regard to the ventilation of tunnels, Mount Cenis has been cited as an example;—will you explain why with regard to such traffic as we have in Sydney, Mount Cenis tunnel is not a good example, and how the natural conditions there enable ventilation to be possible that would not obtain under such circumstances as we have here? At Mount Cenis the natural conditions are favourable. The traffic through the tunnel is not very great, and being open at the end to the natural air-currents, the tunnel generally gets pretty well ventilated; but sometimes it is not, because I have been through the tunnel and found it rather stuffy. Generally the ventilation is fairly satisfactory.
1143. The reason why it is satisfactory in your opinion is, first, because of the sparseness of the traffic, and secondly because as one entrance is higher than the other there is a natural draught which cannot be expected in all circumstances? No. In the case of a metropolitan line you do not have the same favourable circumstances, everything being below ground, and at the ends you are, in addition, more or less surrounded by buildings which will stop your current.
1144. The metropolitan is the better example for us to reason from? The metropolitan district railway would be. I notice that at Mount Cenis, although the ordinary ventilation of the tunnel is left to natural causes, there is an 8-inch pipe, with cocks at intervals, and there is an arrangement also for drawing off the bad air along the bottom of the tunnel. It may interest the Commission to hear something about the St. Gothard tunnel. I will give some particulars from a report of Dr. Stapff, which are to the point. He says:—"Natural ventilation depends on differences of atmospheric pressure at the two ends—temperature and moisture. The difference of level acts according as the internal air is lighter or heavier than the external, and the augmentation of the volume of air entering and becoming warmer interferes with the circulation and friction does as well. Very slight atmospheric differences alter the directions of currents." That of course is easily to be understood. You would get that in all tunnels where you depend on some atmospheric influence to clear them. "In the worst case you get a current of 4 feet per second which would clear the tunnel of smoke in three hours and three quarters; so that to ensure ventilation it would be necessary that once, at any rate in twenty-four hours there should be that interval between the trains. Unfortunately at each change of direction of the wind there is an interval when the air is at rest, and sometimes the changes are so frequent that the current may be arrested for four days at a time." It is in cases like that where artificial ventilation arises. You get that condition occurring in all tunnels—in the Mount Cenis as well as the St. Gothard. Dr. Stapff says:—"Such a state of things will only arise about once a year, and when the ventilation of the tunnel is very bad it will be better to stop the traffic rather than go to the expense of having ventilating arrangements." Of course, to do anything of that sort in lines which have a large traffic upon them, is altogether out of the question. "It will be foolish to provide costly methods of artificial ventilation, and the best plan will be to provide compressed air through a pipe with cocks at intervals, or supplying the workmen, so that they can get what air they want at any part of the tunnel." That is what seems to be provided at the Mount Cenis tunnel. The difficulty in tunnel ventilation can be seen from this report, and from general considerations. If the traffic is very great, and there is no time to clear the tunnel between the passage of the trains, the next train that goes through gets into the smoke left by the previous train; and it is all the worse if the next train goes in an opposite direction and churns up the air, as it were. Ventilating-shafts are not by any means satisfactory; or, at any rate, they are rarely satisfactory. At the St. Louis tunnel in America there is a large ventilating-shaft in the centre; and it has been observed that when a train enters the tunnel at one end there is a great column of air from the tunnel rising up through the shaft, and after the train has passed the shaft the air is drawn down again and follows the train. It has not always the effect of carrying the smoke out of the tunnel. In this case you may say it brings in fresh air (which is an important thing), but it leaves the tunnel behind the train (which was supposed to be ventilated by the shaft) unventilated. One of the

most

most efficiently ventilated tunnels is, undoubtedly, the Mersey tunnel. I think there are four ventilating fans, two of them being 40 feet and two 30 feet in diameter. In special cases it may be easy to ventilate the tunnel, and when the traffic increases there will be very great trouble. It is anticipated that sooner or later there may be very great trouble with the Mersey tunnel.

H. Deane.
12 Mar., 1897.

1145. Which do you quote as the best example? The Mersey tunnel is about the best example of a well-ventilated tunnel for suburban traffic. There is an apprehension even there that with increasing traffic it will get choked. I suppose the means adopted now are about as complete as they possibly can be. When I was in England, I went to see the ventilating fans in that tunnel.

1146. *Mr. Lee.*] How long is the tunnel? It is 4,960 feet long under the river.

1147. *President.*] They have got that tunnel ventilated, with how much traffic going through a day? About 300 trains a day pass through the tunnel.

1148. If in the Mersey tunnel—with the very best appliances, with 300 trains a day—they are apprehensive that very soon they will require better means of ventilation, it will appear reasonable that even the ventilation in the Mersey tunnel—which you suggest as being the best obtainable—would not do for a tunnel here? It might not. I do not know whether, if you made a tunnel here, that number of trains would go through the tunnel; but then, as I pointed out previously, there is always the difference in climate to be considered. Liverpool is in a cool climate, in about latitude 53° or 51°, whereas we are in a very much lower latitude, having a very much higher mean temperature, and a very much higher maximum temperature in summer.

1149. *Mr. Fegan.*] During half the year they have fogs at Liverpool? Yes.

1150. *President.*] Is this the position—that with suitable conditions and few trains it seems possible to keep a tunnel perfectly clear, but that with unsuitable natural conditions or a heavy traffic, the trouble at once becomes apparent? Yes.

1151. And, notwithstanding all the appliances which science has in attendance, where the traffic would be similar to such as would be coming into Sydney, they view the future with apprehension? Yes.

1152. And the engineers are hoping to devise some scheme by which the tunnel would be kept clear—by electricity, or something else? Yes. A metropolitan railway tunnel is either broken up into a number of sections, in which case you would want a ventilating apparatus for each section, or else you have one or two long sections, and then the longer the section the greater is the difficulty, because of more trains passing through at the one time, or the shorter the interval between them.

1153. What is your view in regard to tunnels in which steam is used in connection with the passenger traffic of Sydney? I should not like to see them here; I should not like to see them used with steam traffic. I think they ought to be avoided, if possible.

1154. Do you view it with serious apprehension? Yes.

1155. Would you recommend to the Commission any scheme in which there is a large amount of tunnels at present? No, I should not, until some arrangement could be made to work it with some other kind of motive power.

1156. Can you explain your views in regard to some other scheme by which the work could be done, or in regard to electric traction? Before I answer your question, will you allow me to add that tunnels on the ruling grade, as I pointed out at the time of the Zig-zag inquiry, are specially bad, because the boiler is doing its best, and there is the maximum amount of fuel being burnt, and very likely some priming, which makes it all the worse. Then again, the engines always, at some time or other, have to carry a maximum load. The rails may get greasy, and the engines may get stuck up in consequence in the tunnel, and then it is particularly unpleasant to the passengers.

1157. Generally speaking, you dismiss tunnels as unsatisfactory? Yes; I think they should be avoided.

1158. Will you now state your view with regard to the use of any other motive power, or with regard to electricity as a motive power? I should think it is probable that in future the Railway Commissioners will consider the question of using electricity. It is a point on which I have some hesitation in giving a definite opinion, but I think there is no doubt, from the way in which traction questions are being considered in America for short service trains, that electricity is coming into favour.

1159. The question of motive power really does not come under your consideration? No. If you do not have steam you will have electricity. Electricity is undoubtedly used. I mentioned on the first day of the inquiry the Baltimore and Ohio railway. I saw a report, which was made last year, in which the working of the trains by electricity was pronounced to be perfectly satisfactory.

1160. *Mr. Hoskins.*] There are heavy grades on that line? I do not know that there are heavy grades. I have not seen a section of the line, but they have three electric locomotives working through there now, and they work all the goods and passenger traffic as far as I can make out. There was a very favorable report about this time last year of the working of these locomotives, which led to the conclusion that they are at least as economical as steam locomotives.

1161. *President.*] They were brought into use because of the difficulty of ventilating the tunnel? On account of the difficulties of ventilating the tunnel.

1162. And on that line they preferred to use electricity rather than to ventilate the tunnel? The difficulties were too great in the way of ventilation. In the *Street Railway Journal* of March, 1896, there is an account of the experience with electric locomotives in Baltimore.

1163. *Mr. Hoskins.*] Is not there a railway in America in which an electric motor is attached to a train within a mile or two of the terminus to take the train into the station? That is probably the one which you are thinking of. The electric motor is run on in front of the whole train.

1164. *President.*] Is steam shut off? Yes. They apply that to goods and passenger trains. Whether that is applicable to our case in Sydney, in case we had tunnels, is a matter for consideration. There is no doubt that it could be done. There might be an objection to the delay of putting the locomotives on, but it is perfectly practicable.

1165. The objection would be to the delay and the cost of the locomotive? Yes.

1166. You would want a good number of locomotives? I stated, in regard to the Baltimore line, that the working of that line is cheap enough—that it is worked as economically as with steam locomotives.

1167. *Mr. Hoskins.*] Have they ascertained that electric motors can be worked as cheaply as steam locomotives? That is what they say in this report. There has been very little done elsewhere in the way of large electrical locomotives, but where electric motors are placed under the cars they are worked very cheaply. An example of cheap working is undoubtedly given by the Liverpool overhead railway.

1168.

H. Deane.
12 Mar., 1897

1168. Is that worked cheaply? Yes. There is a long account of that in the Proceedings of the Institution of Civil Engineers, vol. 117. There is a great deal about the use of electricity on tramways and railways in different volumes of the Proceedings of the Institution. The advantage which is claimed for electricity as applied to motors under the carriages is that instead of having a big locomotive, and having to take a long train, you can run your trains just as you want them, short or long.

1169. *President.*] Are you speaking of the accumulator system? No; of the usual system, with an electrical conductor laid along the line overhead or between the rails.

1170. Is it virtually the trolley system? The trolley or shoe system.

1171. *Mr. Hoskins.*] It would not be applicable to running long passenger trains through Sydney from Redfern? No; it would not be very applicable in that way, but what is claimed for the electrical working of tramways or railways, if carried out properly, is that the trains would be short and run at more frequent intervals. I cannot say what the difficulties may be in the way of altering the suburban system some day; it may have to be considered. It is really a matter of traffic working, on which I cannot give an opinion.

1172. On a long-distance journey—say, from Bourke—the accumulator system could not be made applicable to a train running up to King-street? No; it would never do to use electricity for long-service trains.

1173. *President.*] You advise the Commission not to have tunnels if they can possibly be avoided? Yes.

1174. The same thing applies to a surface station as against an underground station? Yes.

1175. You also advise the Commission not to have an underground station if it can possibly be avoided, but to have a surface station? Yes. That is one reason why I think the Hyde Park scheme is so much preferable to anything else, until it is settled definitely what other method can be substituted for steam in working the suburban railways or bringing the traffic into the city.

1176. You can go on from Park-street in any direction? Yes.

1177. *Mr. Lee.*] You cannot go east without a tunnel? You can eventually go east by sinking and going in a tunnel, but if you can do without tunnels for the present until that question is decided you are all right.

1178. *President.*] What you told the Commission before was this: That if you go as far as King-street, and eventually electricity or some other power is used on the lines which enables the tunnels to be used pleasantly for passenger traffic, then by lowering 16 feet the lines which are required to go on you can then tunnel, and go down to the Circular Quay, or go round by a circular railway, or in an easterly direction? Yes.

1179. Would that be a difficult operation? No.

1180. Therefore an extension of a surface line, or as far as possible a surface line to Hyde Park, would fit in eventually with a tunnel scheme, and a circular railway, and an extension to the eastern suburbs? Yes.

1181. *Mr. Humphery.*] Your remark applies to a central station at either Park-street or St. James' road? Yes.

1182. *President.*] Would you regard the lowering of some of the lines 16 feet as a very serious operation? It would not be a very serious operation. In the design for the buildings I would provide for the foundations being arranged so that the lines could be sunk and carried through the buildings—that is to say, the basement of the buildings would be arranged so as to form tunnels in future for the railway.

1183. *Mr. Wright.*] Would your sunken extension be continuous with the lines leading from the station? They will be part of those lines.

1184. There will be no break? No.

1185. *President.*] Do you believe that a tunnel half a mile long—say, from King-street towards Fort Macquarie—could be ventilated? I do not like the idea of it at all.

1186. Have you any idea how long it would be? I think it is a little under a mile from the Queen's Statue to Fort Macquarie.

1187. It would be a tunnel all the way? No; it would be open at the end. There would be about 60 chains of tunnel I should think.

1188. You regard it as a serious matter? Yes, I should, especially as that tunnel would be on the ruling grade, whatever that might be.

1189. Would the same objections apply to a tunnel to North Shore? Yes; for steam locomotives.

1190. How deep is the harbour—80 or 100 feet? I have sections across the harbour, but it is not 80 feet. I think with a depth of about 80 feet we can have a tunnel right under the bottom.

1191. I saw some soundings taken there up to 150 feet? That is a deep hole off Blue's Point, that is between Blue's Point and Dawes Point. Recently I have had some borings obtained between Dawes Point and M'Mahon's Point, and we ran just on the edge of that hole.

1192. You believe that a tunnel across the harbour is practicable? You would not go across there; you would go across further east, but I do not believe in a railway tunnel at all; I do not see the necessity for it.

1193. At a depth of 80 feet you believe you would have sufficient cover to make a tunnel? I am sure of it. I went into that question in connection with a tramway scheme I proposed.

1194. A scheme to embrace the wharfs could not possibly fit in with a tunnel scheme if the tunnel were 80 feet below the surface of the water? No.

1195. You would have to go a long way back to get a fall of 80 feet? Yes.

1196. A railway to serve the wharfs cannot go under the harbour? You cannot get down.

1197. You want to go back so far as to fall 80 feet with a reasonable grade, which might be very far removed from the wharfs? Yes.

1198. How high would a bridge to go over the harbour be? That depends on what the authorities decide. I recommended some time ago that it should be 160 feet. I have gone into the matter with Mr. Darley, and we are of the opinion now that it ought to be a little higher than that.

1199. Will you take 200 feet as an extreme limit? It would not be more than 200 feet; it would be between 160 and 180 feet.

1200. Taking it at 180 feet, where would your approach start from to get that height? That again depends on the grade. If I remember aright, with a grade of about 1 in 30, you could start from Wynyard-square and get up there without any difficulty.

1201. From the level, say 20 feet below the western side of Wynyard-square? I am speaking from memory, but I am quite certain that you could get up from that level.

H. Deane.
12 Mar., 1897

1202. If it were decided that a grade of 1 in 30 was unsuitable and you wanted a grade of 1 in 60 it would take you back between Wynyard-square and the Town Hall. I do not know whether you would get it, because the ground falls away very rapidly. The further you carry your grade back the further you might be off the surface.
1203. *Mr. Lee.*] Admitting that you could get into a tunnel on the Sydney side 80 feet below the surface of the harbour, where or how would you get out on the other side? You could get out at the upper end of Lavender Bay with a railway tunnel.
1204. On the level? Yes; with a steep grade.
1205. What would the grade be? About 1 in 40 would do it.
1206. *President.*] Where would the entrance to your tunnel be on the Sydney side? If you insist upon having a tunnel, which I think is objectionable, you would start down from the station at Hyde Park, and dip under the harbour at Fort Macquarie, and passing under Milson's Point, come up again at the head of Lavender Bay.
1207. Somewhere near the steps? Yes.
1208. *Mr. Humphery.*] And strike the existing railway? Yes.
1209. *President.*] With regard to a tunnel to connect the railway system with the railway at North Shore, it is possible, starting from the northern side of Hyde Park, to pass under the harbour at a depth of about 80 feet by way of Fort Macquarie, and gradually rise until the North Shore line is joined at the head of Lavender Bay? Yes.
1210. But in your opinion a tunnel $1\frac{1}{2}$ mile long, with a grade of 1 in 40, would be a matter not to be seriously contemplated at present? Yes.
1211. Can you give us the cost? No.
1212. What is the cost of a running-yard? A running-yard of tunnel would cost about £70, and when you came into mud it would cost at least £125 or £200 a foot. There might be all sorts of difficulties to encounter. It might cost between £600 and £1,000 a yard to take the tunnel through the mud.
1213. On this tunnel there will be about 450 yards of mud;—how much is that going to cost, approximately? I should think the minimum cost would be about £600,000. There are between 450 and 500 yards through the mud, and the rest would probably be all rock.
1214. Is that fully equipped with the lines laid in the tunnel? It would be fully lined and the rails laid.
1215. Therefore, your estimate of the approximate cost would be about £600,000? Yes.
1216. *Mr. Lee.*] Is that the only possible route for a tunnel across the harbour? I think it is.
1217. Would it be possible to get under the harbour from near Miller's Point or Dawes Point? No; there is a very deep hole there.
1218. You do not think that is a possible route for an underground railway? No.
1219. If a bridge connection with North Shore is contemplated, it must be by way of Church Hill? Yes.
1220. And if a tunnel connection is contemplated it must be by way of Fort Macquarie? Yes.
1221. *Mr. Humphery.*] It was never at any time contemplated to take a tunnel from Miller's Point to North Shore? No.
1222. What is the greatest depth of your soundings between Fort Macquarie and North Shore? It was a little under 60 feet.
1223. *President.*] In regard to the cost of a bridge, it is not possible to give any definite estimate? Yes.
1224. But with a grade of 1 in 30 the approach on the southern side of the harbour would require to start from Wynyard Square, and would necessitate a considerable amount of resumption? Yes.
1225. On the northern side where would you come out? You would land north of M'Mahon's Point on some jutting crags which are about 120 feet above the water.
1226. Where would you join the North Shore line then? Opposite the head of Berry's Bay.
1227. *Mr. Lee.*] If an underground railway were made by way of Fort Macquarie to Lavender Bay, would it be possible to connect a railway going round the western foreshores of the harbour—round Miller's Point, Dawes Point, and Sydney Cove—with that underground railway? There would be very great difficulties in the way. An ordinary railway with steam locomotives you could not carry round Miller's Point and Dawes Point, because the curves are too sharp.
1228. If a railway were made round the western foreshores would it be possible to connect it with a railway under the harbour? No; you could not get down fast enough.
1229. *President.*] Since you have to lose 80 feet to fall 80 feet, and your ruling grade is 1 in 40, the fall must commence 3,200 feet, or considerably over half a mile from the harbour, and, therefore, for over half a mile, at least, you must be falling all the way back towards the wharfs? That is so.
1230. *Mr. Lee.*] To make it possible you would have to make a loop-line to join the underground line at half a mile back? Yes.
1231. *President.*] The approach must be fully half a mile back? Yes.
1232. *Mr. Lee.*] Therefore, that scheme is out of the question? I think so. As regards the estimated cost of the proposed station at Hyde Park, I wish to explain that the roof, which is an expensive structure, would cost £67,000, leaving about £133,000 for the building. No doubt the building could be cut down, but it would not look at all nice not to have a fine building there. It need not be as large as the building shown on the plan here, because there is spare accommodation in that building.

TUESDAY,

TUESDAY, 16 MARCH, 1897

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
 The Hon. JAMES HOSKINS, M.L.C.
 The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
 The Hon. DANIEL O'CONNOR, M.L.C.
 HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
 JOHN LIONEL FEGAN, Esq., M.P.
 THOMAS HENRY HASSALL, Esq., M.P.
 GEORGE BLACK, Esq., M.P.
 FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

S. E.
 Perdriau.
 16 Mar., 1897.

1233. *President*] You have brought some information which the Commission desires to have on various points? Yes.

1234. Will you describe the Benevolent Asylum site and the Cemetery? I will read a description of the tenure of the lands and of the improvements thereon comprised in the Benevolent Asylum site, Devonshire-street Cemetery, and contiguous areas:—

THE land referred to embraces the block of about 24½ acres on the opposite side of Devonshire-street from Redfern station, within the following boundaries:—On the north-east by Garden-road, on the east by Elizabeth street and private properties, on the south by Devonshire-street, and on the west by George and Pitt streets.

The following institutions, &c., are located upon the land:—The Benevolent Asylum, Christ Church Parsonage, the Police Barracks and the residence of Superintendent Brennan, the Sydney Female Refuge, the Convent of the Good Samaritan (formerly called the House of the Good Shepherd), the Pitt-street tram-cleaning yards and coke depôt, the Devonshire-street Cemetery, and the South Sydney Morgue and caretaker's residence.

THE BENEVOLENT ASYLUM.

THE Asylum is managed by a Board of Directors, with the Governor as Patron, and Sir A. Renwick as President.

The land occupied by the Asylum lies at the corner of George and Devonshire streets, and is about 3 acres 2 roods 28 perches in extent, including a proposed street 1 chain wide extending along the eastern boundary. By a plan of survey made in 1848 the area at this site proposed to be granted was 3 acres 1 rood 15 perches. The difference between the two areas—2 roods 13 perches—is that of the proposed street, which has apparently never been used as such, and is occupied in common with the 3 acres 1 rood 15 perches. Several of the out-buildings are erected upon the proposed street. The old papers in the case cannot be found; but it appears from the Half Monthly Returns of 1848 that it was decided to issue a grant for the 3 acres 1 rood 15 perches. This was not done, however, and an application for a grant made by Mr. W. Briggs, a Director, on account of the Board of Directors, in 1893, was not complied with. The Minister (Mr. Copeland) decided that the matter should stand over.

I was informed that the land has been used for its present purpose continuously from the year 1818. The main building bears the date 1820. It is about 150 feet long and 25 feet wide, with two wings of about the same dimensions. All are of brick on stone, two-storied, and with slate roofs. In the court-yard, between the wings, there is a building 55 feet long, 25 feet wide, and of similar construction to the main building. There are three other brick buildings of one storey each with iron roofs, which do not look quite so old as the main building. They are about 50 feet by 20 feet each, and used as kitchens, laundry, &c. Also several other inferior one-storied out-buildings, parts of which are of wood and brick, with galvanized iron roofs.

The whole of the buildings bear evidence of considerable age, but are well preserved, and in good repair. As above stated, the main building is seventy-seven years old.

I would estimate the value of the buildings on this site at the present time at £

The directors, considering the buildings antiquated and unsuitable for their requirements, petitioned the Government on the 20th February, 1895, to resume the property, purchase another site for them with part of the money, and give them the balance to provide funds for carrying on the work of the institution.

The institution is supported by contribution from the public and Government aid.

Of the total receipts for 1896, £19,530, the Government contributed £14,000.

Perhaps it would be well to read the said application of which I have a copy.

The Hon. J. N. Brunker, Esq., M.P., &c., &c., &c., Chief Secretary,—

Sir,

Benevolent Society of New South Wales, 492, Pitt-street, Sydney, 20 February, 1895.

Referring to the difficulties connected with the management of the lying-in department of this Society, regarding which a deputation waited on you on the 26th October, 1894, I have now the honor, in accordance with the wishes of the Board of Management, to submit for your consideration certain important matters in connection with the institution. As you are aware, steps have been taken by the Board and staff to make the best provision possible for the inmates; but the medical staff have been assured that these arrangements were merely of a temporary character, the medical staff threatening otherwise to resign, in view of the serious responsibilities which rest upon them in the discharge of their duties, as medical attendants, in an old and now dangerous building.

The Board therefore suggest that the Government resume the Benevolent Asylum site, in accordance with the terms and conditions of the Lands for Public Purposes Resumption Act, and that the Government also resume simultaneously "Ultimo House," Harris-street, Ultimo. The latter property is situated next the Technological College, and comprises the same area of land as that on which the last named building is erected. It is believed that the cost of resuming the land for the purposes of the Technological College was £25,000. Valuations had been made of the Benevolent Asylum property, and the average of these valuations amounts to £73,333.

The Board would therefore respectfully urge upon the Government the expediency of resuming the Benevolent Asylum site, and granting compensation to the Society. From this amount the Government could deduct a sufficient sum wherewith to resume "Ultimo House" property, which could be made suitable for the general purposes of the Benevolent Society. The balance remaining to the credit of the institution, after the completion of the suggested resumptions, could be applied to the erection of the necessary buildings, and towards carrying on the operations of the Society.

The Board respectfully call your attention to the fact that various applications have been made to them by several persons, who are offering large amounts, for leases of portions of the asylum grounds for building and other purposes, which would largely augment the Society's funds. The Board, however, are not desirous of doing anything until they have an answer from you upon the subject generally.

I have, &c.,

ARTHUR RENWICK,
President.

Submitted, 22/2/95. For the consideration of the Cabinet.—J.N.B., 22/2/95. To stand over until question of railway extension is decided.—G.H.R., 23/11/96. Inform.—J.N.B., 23/11/96. The President informed, 25/11/96.

CHRIST CHURCH PARSONAGE.

THE allotment occupied by Christ Church Parsonage is the property of the Church, having passed from the Crown many years ago by deed of grant. The land has a frontage of 100 feet to Pitt-street, and adjoins the northern boundary of the Benevolent Asylum grounds; the depth of the land varies from 180 feet to 278 feet, and the area is 2 roods 14 perches.

This is a good site, having a gentle fall from the back line to the road. The position is suitable for some businesses, and is probably worth £70 per foot = £7,000.

The parsonage is a large two-storied house, built of brick on stone, plain in design, and is said to be about thirty years old, but is in very good repair. I was informed that a year ago about £300 was expended on it in general repairs and painting. At the present time the house is worth, perhaps, £800 to £1,000.

Say £8,000 for the house and land.

POLICE

POLICE BARRACKS AND SUPERINTENDENT BRENNAN'S RESIDENCE.

THIS land, total area about 5 acres 3 roods 11 perches, is bounded on the north by the Sydney Female Refuge and Garden-road, east by the Devonshire-street Cemetery, south by the Benevolent Asylum and Christ Church Parsonage, and on the west by Pitt-street, the Sydney Female Refuge, the Convent of the Good Samaritan, and the tram depôt.

Police Barracks.—This site comprises about 4 acres 8 perches of the above, with a frontage of about 345 feet to the south side of Garden-road. The barracks (about 140 feet long and 23 feet wide) are of stone, two-storied, stables being on the ground floor and living rooms on top. The building is old but substantial and in good repair. The other buildings on the site are dormitories of weatherboard with iron roof (length about 83 feet x 22 feet), stone one-storied building (about 33 feet x 23 feet) used as an armoury, police stores of two-stories weatherboard and iron roof (about 40 feet x 20 feet), hay and corn store, small brick dwelling, and various stables built of stone, brick, and weatherboard. On the Garden-road frontage there is a drill ground about 240 feet x 80 feet.

Superintendent Brennan's residence occupies the remaining area of about 1 acre 3 roods 3 perches, in shape nearly a square, and having about 276 feet frontage to Pitt-street. The residence is a cottage of ten rooms and out-offices, about thirty years old. Present value about £600.

SYDNEY FEMALE REFUGE.

THE land—area, 2 roods 15 perches—occupied by this institution was formerly part of Carter's Barracks. It is Crown land, and has been held by the institution since the year 1848, under what may be termed "permissive occupancy."

This area is bounded on the north by the Convent of the Good Samaritan, on the south by the grounds occupied by the Police Department in connection with the residence of Superintendent Brennan, and on the east by the Police Barracks grounds.

In the year 1858 the Government undertook to reimburse the society the value of the improvements on the land, if at any time the same should be resumed. When the society entered into possession there were old buildings on the site, but these were demolished and the present buildings erected, it is said, between the years 1867 and 1875; these are of brick on stone, two-storied, and with slate roofs. The building occupies the whole of the Pitt-street frontage of about 95 feet, and has two wings extending along the northern and southern boundaries for lengths of about 102 feet and 120 feet respectively. All the buildings are about 25 feet wide.

The present value of the buildings is about £

The object of the Refuge is to reclaim unfortunate and abandoned females. It is supported by contributions from the public and by the proceeds from the work of the inmates. The total receipts for the year 1895 amounted to £696.

CONVENT OF THE GOOD SAMARITAN (formerly House of the Good Shepherd).

THE tenure under which this 3 roods 1 perch (which also originally formed part of Carter's Barracks) is held in connection with the abovementioned convent is one of "permissive occupancy" on terms precisely similar to those of the Sydney Female Refuge.

The land has a frontage to Pitt-street of about 120 feet, and a depth of about 275 feet.

The Pitt-street tram-cleaning and coke yard adjoins this land on the north; on the east it is bounded by the grounds of the Police Barracks; and on the south by the Sydney Female Refuge.

The buildings hereon are very extensive, consisting of a convent of 32 rooms, two school halls, and a chapel for the nuns and others resident upon the premises. The main building is a handsome structure of red brick and stone, and was erected in 1869; the chapel and school adjoining the convent on the north were erected in 1860, as were also two of the large outbuildings; another large outbuilding was erected in 1849. All the buildings are in good repair.

TRAM DEPOT.

THE Pitt-street tram-cleaning sheds and coke depôt—area about 2 roods 31 perches—embrace the land lying between the Convent of the Good Samaritan and Garden-road, and is bounded on the west by Pitt-street, and on the east by the Police Barracks ground.

This site is Crown land, and also formerly formed part of Carter's Barracks.

The Railway Commissioners are in possession, but have no title except "permissive occupancy."

DEVONSHIRE-STREET CEMETERY AND SOUTH SYDNEY MORGUE.

THE total area of this cemetery is 11 acres 3 roods 11½ perches, according to the original plan of subdivision showing the areas as granted to the various denominations.

The cemetery was closed about ten years ago, and now presents a deserted and neglected appearance. Upon the portions allotted to the Roman Catholics and the Congregationalists there are small sextons' residences, value respectively about £60 and £30; and on that of the Hebrews a small weatherboard shed or office, value about £10. Upon the Quakers' portion there is a small brick meeting-house, erected in 1868, and a brick dwelling of two rooms with an iron roof over shingles. This is evidently much older than the meeting-house. The two together are probably not worth more than £250. Upon the Church of England portion, and near Garden-road frontage, are erected the South Sydney Morgue and caretaker's residence. These are about fourteen years old, and, I was informed, cost about £1,800, the cottage costing £1,000 of that sum.

In the event of this land being resumed and used for any other purpose it is not likely that any claim for compensation could be sustained; but the duty would no doubt devolve upon the Government of carefully removing the mortal remains, and of re-interring them satisfactorily elsewhere.

1235. At whose cost was the morgue built? It was built by the Government.

1236. *Mr. Wright.*] Is not the road you speak of as Garden-road also known as Belmore-road? It is also known as Belmore-road and Carter-road.

1237. *Mr. Humphery.*] What buildings would be interfered with by the extension of the railway system to Park-street? Three or four outbuildings of the asylum, the barracks, the dormitories, some of the stables, and the hay and corn shed.

1238. Approximately, what distance would the nearest rail be from Pitt-street? Speaking roughly it would be about 500 feet.

1239. *Mr. Hoskins.*] You cannot speak with any precision of the buildings which would be taken, because it may be necessary to extend six or eight sets of rails? I am guided by the plan on the wall before you.

1240. *Mr. Humphery.*] Any buildings within 400 feet of Pitt-street would not be interfered with? It would not interfere with any important buildings except the barracks.

1241. *Mr. Hoskins.*] Would not the parsonage be interfered with? No; the grounds of the parsonage are altogether clear. The Sydney Female Refuge, the Convent of the Good Samaritan, and the superintendent's residence are all clear.

1242. That scheme would not take the Benevolent Asylum building at all, but only some of the outbuildings? According to the plan on the wall here three or four of the outbuildings will be affected.

1243. *Mr. Humphery.*] Will you now proceed with the other statement you wish to make? The next is a statement of the population within a radius of half a mile of two central points from the city. Taking the junction at Elizabeth-street and St. James' Road, as the centre of the half mile radius, the residential population is 15,000.

1244.

S. E.
Perdriau.
16 Mar., 1897

S. E.
Perdriau.
16 Mar., 1897.

1244. You do not include any persons who come within that radius for business purposes? No. I asked the Statistician to supply me with a number of people who sleep on the premises within that radius. Taking Carter's Barracks as the centre of a half-mile radius, the population is 31,000. I thought that that information was required to give an idea of the value of a piece of recreation land to the public near those centres.

1245. Will you now state the parks, together with their area, which are easily accessible to the people within those centres? The parks within a short distance of the intersection of Elizabeth-street and St. James' Road are—the Outer Domain, 90 acres; Garden Palace grounds and Botanic Gardens, 60 acres; Cook and Phillip Parks, 8 acres; Hyde Park, 40 acres,—making a total of 198 acres; that is not including Government House grounds, which measure 40 acres. The parks within easy distance of Carter's Barracks are—Belmore Park, 10 acres, and Prince Alfred Park, 18 acres 3 roods, making a total of 28 acres 3 roods.

1246. Will you now state the difference in level between the point opposite Sydney railway station and Christ Church? From a point in the centre of Devonshire-street, immediately opposite the steps at Redfern station, to the tram signal-box in George-street, the fall is 5 ft. 9 in.; to a point opposite the old police station the fall is 11 ft. 4 in., and to a point in Pitt-street, opposite Christ Church, the fall is 17 ft. 6 in.

1247. Will you now give the Commission some information as to the value of the Benevolent Asylum ground? I have made a very rough estimate of its value—I have not gone into the matter carefully. In my opinion £73,333 is a low estimate of the value of the land as it stands; but the Benevolent Asylum is practically a Government institution.

1248. *Mr. Wright.*] How much is that an acre? About £20,000 an acre.

1249. What would be the street frontage of the block if it were cut up for sale? I have not got the length.

1250. The value is very much governed by the fact whether the railway is taken further on or not? Yes.

1251. *President.*] You have made some valuations of different blocks in the city according to the municipal assessments? Yes.

1252. *Mr. Hoskins.*] Are you taking present values or boom values? I am taking the most recent assessment—for the year 1897-8. It was used for 1896-7, I think, for the first time; so that it is quite a recent assessment.

1253. *President.*] Will you read your estimate of the value of the different blocks? My statement is as follows:—

Valuation (by adopting the municipal assessments for 1897-8) for the block of the City of Sydney, bounded by Elizabeth, King, and Castlereagh streets, and the High School—not owned by the Government. Area 2r. 12p.

The total of the municipal assessments for the above-mentioned portion of the city for the municipal year 1897-8 is £4,053.

Capitalising £4,053 at twenty years' purchase.....	£81,060
If twenty-five years' purchase be adopted, the amount would be.....	101,325

NOTE.—The above is calculated adopting the recent municipal assessments, which are based upon rentals received during times of commercial depression. No allowance is made in the above valuation for disruption of business, nor for the 10 per cent. increase always allowed by Government for a forced sale.

Valuation (by adopting the municipal assessments for 1897-8) of that block of the City of Sydney bounded by Castlereagh, Market, Pitt, and Park streets. Area, 5a. 1r. 13p.

The total of the municipal assessments for the above-mentioned portion of the city for the municipal year 1897-8 is £26,248.

Capitalising £26,248 at twenty years' purchase.....	£524,060
If twenty-five years' purchase be adopted, the amount would be.....	656,200

NOTE.—The above is calculated adopting the recent municipal assessments which are based upon rentals received during times of commercial depression. No allowance is made in the above valuation for disruption of business nor for the 10 per cent. increase always allowed by Government for a forced sale.

Valuation (by adopting the municipal assessments for 1897-8) of that part of the City of Sydney bounded by Elizabeth, Park, Pitt, and Liverpool streets. Area, 10a. 2r. 2p. Area, if the streets are included, 12a. 3r. 29p.

The total of the municipal assessments for the above-mentioned portion of the city for the municipal year 1897-8 is £34,832

Capitalising £34,832 at twenty years' purchase.....	£696,640
Add for St. Andrew's School-room, St. George's Church, and the Pitt-street Congregational Church and School-room, not included in the above.....	52,000

£748,640

If twenty-five years' purchase be adopted, the figures would be.....	£870,800
	52,000

£922,800

NOTE.—The above is calculated adopting the recent municipal assessments which are based upon rentals received during times of commercial depression. No allowance is made in the above valuation for disruption of business nor for the 10 per cent. increase always allowed by Government for a forced sale.

1254. Therefore, to resume an area contiguous to the Park large enough to meet what the Railway Commissioners say are their requirements—namely, 12 acres—would cost, approximately, £1,000,000? A great deal more than £1,000,000, I think, with the disruption of business and the 10 per cent. increase.

1255. Have you prepared a rough estimate of the value of the private wharfs from Dawes Point to the head of Darling Harbour? Yes. A rough estimate of the value of the private wharfs on that line of frontage, extending from Dawes Point to the head of Darling Harbour, is £2,037,300. This estimate is for the wharfs and water-frontage properties alone, and does not include any sum which might be demanded by the municipal council or other property owners for the closing of streets, nor does it include any sum for disruption of business, nor the 10 per cent. increase of value always given by Government in cases of resumption.

1256. Previously, going about 400 feet back from the water, you gave us an estimate approaching £3,000,000? Yes.

1257. What proportion of this estimate of £2,037,300 is included in the former estimate of £3,000,000? For that other estimate I took the municipal assessments, which do not include anything for land occupied below high-water mark, because that is beyond the city boundary.

1258.

1258. Can you tell us what that amount is approximately? No. In the other case I included a number of small properties which have been excluded from this estimate.

1259. You cannot tell us the bare value of the wharfs which were excluded from the previous estimate, not being included in the municipal valuations? I have not separated them. The solid land—that is, the freehold—is included in both estimates, but the jetties are only included in this estimate.

1260. What portion of that second estimate represents the value below high-water mark, and therefore is not included in your previous estimate? To give you that information I would have to estimate the value of all the different wharfs and piers.

1261. Does half of it represent the jetties and piers? I do not think so. It will be very difficult indeed to separate the wharfs from the freehold.

1262. It is not possible to say what the resumptions would be? I would not like to give an opinion offhand.

1263. Beyond the sum of £3,000,000 which you first mentioned, there is an unknown quantity in such interests as may exist below high-water mark? Yes. I do not think that the whole of these frontages could be resumed under £5,000,000, paying for disruption of business and giving the 10 per cent. increase.

1264. *Mr. Hoskins.*] And including the liberality of assessors against the Government? Yes. My experience is that it is possible to show figures to prove the value of a wharf to a particular individual so much more than people generally think it is worth.

1265. *President.*] That is from Dawes Point to the head of Darling Harbour, and going, roughly speaking, about 400 feet back from the water? Yes.

1266. You desire the Commission to understand that that is an approximation of the value? It is a very rough estimate.

1267. What rentals do the Government receive for special leases in that portion of Darling Harbour extending from Dawes Point to the head of Darling Harbour? The total is £7,387 per annum. The frontage from Dawes Point to Potts' Point is Government property.

1268. Have you a statement of the passenger traffic by the ferry steamers from Circular Quay? The passenger traffic by the ferry steamers from Circular Quay for the year 1896 was as follows:—

By the North Shore, Neutral Bay, and Mosman's Bay ferries	5,000,000
Manly ferry	900,000
Watson's Bay ferry	115,000
Floating Jetty, at Phillip-street	38,000
Prince's Stairs and the public jetty eastward thereof	155,000
Total	6,208,000

This is the number of individuals; the number of passages would be double, viz., 12,416,000. The number of passengers by the North Shore ferry was supplied by Mr. Goddard (chairman of directors), and the number of passengers by the other ferries was supplied by the managers on the wharfs.

WEDNESDAY, 17 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

1269. *President.*] You desire to give further information to the Commission on several points? I was asked to say what the approximate cost of a bridge to North Shore would be. An estimate without details will be a very rough one, but I should think that a bridge starting with approaches about Flagstaff Hill, rising over the harbour with a headway of 180 feet, and falling on the other side in the way I pointed out the other day would be necessary, and with accommodation for rail and road traffic would cost about £765,000.

1270. What would the grade be—1 in 40? I find that a grade of 1 in 30 will be necessary to get up from Wynyard Square.

1271. Where will a grade of 1 in 40 take you? On to the surface of York-street.

1272. Would you approve of a 1 in 30 approach? If the bridge had to be made I do not see how one could get out of it; it is quite practicable.

1273. *Mr. Hoskins.*] Would it not be very awkward to erect a bridge with such a steep approach? You would want more motive power.

1274. *Mr. Lee.*] Would you have that grade on the bridge also? No; it would be practically level.

1275. *Mr. Hoskins.*] Would that bridge permit of vessels being towed underneath without having to strike their masts? Yes; all but very few. Only the topgallant masts would reach the bridge if they were not struck. Some few might, but I think if a bridge had to be made, a height of 180 feet might be considered a considerable height.

1276. *President.*] If it were thought wise or necessary to have a grade of 1 in 40 the approach must come down to York-street? Yes; but they would come on the level, and it would be a very difficult thing to deal with the grades. When I said a grade of 1 in 40 the other day I was speaking only from memory, and I find that a grade of 1 in 40 gives a headway of only 150 feet.

1277. Does your estimate include the cost of land resumptions? I do not know what that would be.

1278. Would it be considerable? I expect it would. The buildings would not be of a valuable class.

1279. How long would your approaches be? Taking the two sides the approaches are 4,000 feet; that is 2,200 feet on the Sydney side and about 1,800 feet on the other side.

- H. Deane. 1280. That is above the surface? Yes.
1281. It means the resumption of half a mile of land of the width necessary? Yes.
- 17 Mar., 1897. 1282. Of that cost you have no estimate? No.
1283. *Mr. Lee.*] Suppose that Hyde Park is adopted as a central station for passenger traffic, and in the future it is desired to have bridge or railway connection with North Shore, could the railway be extended from that central station? No; not to go across there direct.
1284. Therefore, if Hyde Park is adopted at the present time as a central station, and railway communication across the harbour is required in the future, it will have to be by means of a separate line? Yes.
1285. Why is the underground traffic in London carried out with such small station accommodation as compared with the station accommodation which is proposed to be provided at Park-street according to the plan on the wall? On the underground line in London the trains run all the way round; there is no terminal station at all. Only certain portions of the traffic which come in from outside terminate at the same place—Margate-street. For instance, the Great Northern trains, the Midland trains, and the Great Western trains come into Margate-street, and the South-Western trains come into the district line at Gloucester-road, I think, so that very little of what might be called terminal accommodation is required.
1286. It is rendered unnecessary in consequence of its being a circular railway? Yes.
1287. And the terminal stations are situated on the outskirts at convenient places? Yes.
1288. Taking into consideration the different circumstances existing in this country, where the State owns the railways, where there are so many large public buildings, and where the railway offices are accommodated in existing buildings, can you explain the necessity for having such a large central station, which is to include the whole of the administrative offices? I can explain what is necessary and what is not, and the different purposes for which the offices are necessary. Of course it is understood that the accommodation which is provided in this proposed station is for the future as well as the present—at any rate for a good many years to come. The accommodation provided is really more than ample for the immediate necessities, but when you are building it will be a very false policy not to provide a little for the future.
1289. In other words, you adopt it as a central station for all time? I will not say for all time; that just depends upon how Sydney increases. I think a report which was made by the Railway Commissioners to the previous Commission will show that.
1290. The main object being to get away from Redfern and to get into the city, I wish to know why a less important station would not be sufficient to meet the requirements? As to the ground plan, I reply that it will be undesirable to lessen the accommodation. It will not only be undesirable to lessen the number of lines coming in and the area of the platforms, but it will also be undesirable to lessen the space given for passenger accommodation in the big halls, the waiting-hall, and the refreshment-rooms, and so on. As regards the storeys above of course it is a question of expediency. Those are not absolutely necessary for the station itself, seeing that the railway offices are now accommodated elsewhere, and can no doubt be accommodated in the future; but it would be a very great convenience, and, I think, altogether desirable, that accommodation should be made for the Railway Commissioners and their officers, and that has been done. I know the Railway Commissioners are of opinion that that should be done. In the building that is shown there on the easel there is a storey which is unnecessary, and which, in fact, I have assumed to be cut out in this estimate of £200,000. That estimate includes the roof, which is to cost £67,000, and the building itself, which is to cost £133,000. The building would consist of ground-floor, two storeys, and the roof.
1291. You are clearly of opinion that it is wise to make this ample provision? Yes.
1292. *Mr. Humphrey.*] Would the only difference in the cost be the saving of the two storeys provided for the accommodation of the Railway staff? No; the ground-floor and the roof would remain the same, but —
1293. Therefore the only saving would be in the cost of the one storey? I think you could cut out half of the £133,000.
1294. In what way could you cut out half the £133,000 if you had to provide good foundations and a roof as shown on the plan there? By cutting out the unimportant storeys; but, as I say, I think it would be a very undesirable thing to do.
1295. How would you do it? You would have the foundation, the main floor, and the roof. The ground floor will have to give the same accommodation, but the walls need not be as heavy, nor need the walls of the basement be as heavy.
1296. How many storeys could you omit? You could omit two.
1297. You say the cost of the two storeys would be equal to £65,000? I should say, without going carefully into the matter, that the building might be cut down to about one-half. I should like to have an opportunity to consider the matter in detail before I expressed a definite opinion; but, speaking approximately, I should think that about half could be cut out.
1298. Instead of saying one-half, will you be good enough to express the amount in figures? About £65,000.
1299. £65,000 might possibly be saved by a sacrifice of two storeys of the proposed design? On account of the thinning of the walls, the cutting out of the storeys, and the cutting out of the tower, and the lessening of the roof; but it has to be borne in mind that if this be done you could never put the other storeys on unless you provide the wall of the right dimensions. If, in the future, it were decided that more accommodation was wanted, extra storeys could not be put on safely.
1300. Therefore there would be no economy in effecting a saving now if it should be contemplated at any future time to raise the building? No; it would be actually a loss.
1301. Suppose the terminal station is placed at St. James' Road, have you considered whether it is possible to avoid taking in a portion of the Registrar-General's Office? I do not consider that it could be conveniently done. Everything is packed in as tightly as possible on that plan. There is the parcels office in the corner of Park and Elizabeth streets, which is a very necessary part of the station accommodation. And on the other side there is a loading-bank for carriages and horses, which is also a very necessary part of the station accommodation. If the front of the station is moved back towards Park-street that accommodation would have to be limited, because there would not be room for it.
1302. What would be the difference in cost if the terminal station were placed at St. James' Road instead of at Park-street? £50,000.

1303. Would £50,000 cover the injury done to the Registrar-General's Office, and the bridge over Park-street, and all the additional work in connection with the terminal stations? £50,000 would not cover the injury done to the Registrar-General's Office. The injury done to that office would be probably about £14,000. H. Deane.
17 Mar., 1897.
1304. Are we to understand that £64,000 would be the difference in cost between a terminal station at St. James' Road and a terminal station at Park-street? Yes.
1305. You would be obliged to have a bridge at Park-street? The roadway will be replaced by a bridge, but the level of Park-street will remain just the same as it is. The £50,000 I mentioned as being additional cost is a correct estimate. The extra works will come to more than £50,000, but then there will be some savings.
1306. Can you furnish the details of that sum of £50,000? I ran them out roughly, but I have not the details here.
1307. Would it make any difference in the lines between Park-street and Liverpool-street? It would not be exactly the same. There would be the extra cost of the Park-street bridge, and the length of the lines between Liverpool-street and Park-street, for these six lines will be carried on further; but against that cost, Park-street will be kept at its present level instead of being cut down and made a wide street, as was proposed in the other scheme; and there will be a saving in excavation and foundations by taking the railway on to St. James' Road. The ground is lower there, and consequently there will be less excavation and less walls to build up. The result is, that the net extra cost is £50,000.
1308. Plus the injury done to the Registrar-General's Office? Yes.
1309. Are we to understand that you regard St. James' Road site as a better site for a terminal station than the Park-street site? Yes; and the Commissioners much prefer it.
1310. Will you briefly state your reasons for that preference? It will bring the traffic practically on to King-street, which is a better centre than Park-street.
1311. In regard to a comparison of the cost of the two sites, why do you regard the one as better than the other? A station at St. James' Road will accommodate the traffic better; it will bring the passengers further into the city, and it is worth while to bring them from Park-street to St. James' Road.
1312. The cost of a terminal station at St. James' Road will be less, if anything, than the cost of a similar station at Park-street? It will be less.
1313. *Mr. Hoskins.*] Even although you have to pull down and rebuild the Registrar-General's Office? That is not included. The actual cost of the station *Mr. Humphery* was referring to will be less, but the total cost of the line will be more.
1314. *Mr. Roberts.*] Would all the platforms be on the surface at St. James' Road site? The platforms would be at the surface.
1315. How far south would you have to travel from St. James' Road before you went into a tunnel? You have to get under Park-street; you are about 20 feet below Park-street where you cross.
1316. From Park-street to Liverpool-street? It would be underground.
1317. Not necessarily a tunnel? Most of it open.
1318. When you come out at Liverpool-street do you go overhead then? You emerge about half way between Liverpool-street and Goulburn-street; then you go over Goulburn-street by a bridge; and from that point to the Benevolent Asylum grounds you are on a viaduct.
1319. Will it be necessary to have a large station at the Benevolent Asylum grounds? If you have a terminal station at Hyde Park you do not want a large station on the Benevolent Asylum grounds. I presume the accommodation at Redfern will be more than ample.
1320. Would there be any station between Redfern and St. James' Road? I do not think so.
1321. *President.*] A station could readily be arranged at Liverpool-street? Yes.
1322. *Mr. Humphery.*] Would it be possible to prevent the cutting down of Devonshire-street to the extent which you mention is necessary? Not if the line is carried over, and the street retained in its present position.
1323. It would not be less than 9 or 10 feet? No. If Devonshire-street could be abolished a road might be made from about where the Female Refuge is, and you could deviate it to the east of the line as shown in this plan of the Benevolent Asylum site.
1324. Will it not be possible to bring the new road from a point opposite the old police station? No.
1325. We were told yesterday that there is a considerable fall between Devonshire-street and Pitt-street, opposite Christchurch? So there is.
1326. In that case would it not be possible to bring the new road from a point opposite the old police station? No.

William Robson Benson, Manager of the Wharf Association, sworn, and examined:—

1327. *President.*] What position do you hold? I am the Manager of the Wharf Association. W. R. Benson,
17 Mar., 1897.
1328. We are informed that the length of the wharfs under your control is 4,370 feet;—will you be good enough to enumerate the different wharfs? Parbury's, Walker's, Hoffnung's, Dalton's, the Central, Dalgety's, Towns', Moore's, the Adelaide, Smith's, and Dalgety's, formerly Dibbs'.
1329. How many ships could you berth at the associated wharfs? Twenty-nine.
1330. Are they usually full? No.
1331. What proportion is used—a half? For the last two or three years these wharfs have not all been filled with ships.
1332. In the wool season are they full? In the wool season there is a strain on the wharfs; but still I have never had to make any extraordinary provision for berthing ships.
1333. Generally speaking, will you say that half the berths are used? Taking all the year round, I think one-half would be a fair average to take.
1334. And in the wool season? They are fairly well filled.
1335. How long does the wool season last? About four months.
1336. For eight months in the year you use one-half of your accommodation, and for the other four months you use pretty well all of it? Yes.
1337. Can you give the values of these wharfs and the returns which they yield? No; I did not know that I should be called upon to furnish this information. It is rather a difficult matter to value the wharfs

W. R. Benson. wharfs as a whole. You would have to take each wharf individually; because if one particular wharf had a particular business connected with it, it would be of more value than another wharf which was used for ordinary business.

17 Mar., 1897.

1338. *Mr. Humphery.*] How many berths in connection with the wharfs controlled by this Association would be available for ships of large tonnage? About one-half; that number would berth ships of 3,000 or 5,000 tons carrying capacity.

1339. *Mr. Lee.*] How does your Association view the proposal of the Government to resume all those wharfs? The Association as a body has not given the matter any serious consideration; in fact, as a matter of discussion, it has never been brought before the Board officially.

1340. Would a line of railway, running round the wharfs, facilitate the shipment and discharge of goods? I cannot see how it would facilitate either one or the other. When we take into consideration, first, the fact that not 10 per cent. of the imports go to the country, and secondly, that nearly the whole of the wool which comes by rail is sent to the warehouses for sale, and that afterwards it has to be dumped for shipment. From the 1st July, 1896, to the 3rd March, 1897, the arrivals by rail were 470,328 bales, and by sea 124,648 bales, and out of that number 421,000 bales went into the warehouses and were offered for sale by auction. Nearly the whole of the wool which comes by rail is first sent to the auction-room and submitted for sale.

1341. Therefore, wherever you had your railway, as far as the wool was concerned there would be the same cost in cartage? The wool would have to be carted to the warehouses and the auction-room.

1342. *President.*] Does the same remark apply to hides and tallow? Yes.

1343. To frozen meat? No; it is shipped direct; but then it is pretty well dealt with in warehouses specially prepared for its reception, and then it is taken straight from the freezing chamber into the freezing chamber of the ship.

1344. *Mr. Lee.*] Then you hold that there is no present necessity for the construction of a goods line of railway round the wharfs? I cannot possibly see where the benefit would come in at all. I think that figures could easily be procured to support this statement. Most of the goods which are imported for the country are small lines which are taken into the warehouse here and repacked. Only a proportion of the original contents of a case are forwarded to the country, and the remaining portion of the case is filled with other goods.

1345. In consequence of expensive land resumptions the construction of a railway line round the wharfs would be a very costly matter? Very costly indeed.

1346. Consequently, you do not see where the revenue is to come from to pay the interest on the cost of construction? Speaking from my present knowledge I cannot see how it could return a fair interest on the money expended.

1347. The imports are not carried direct by rail from the ship, and the exports are not carried direct from the railway to the ship, and therefore you do not see how the revenue is to be got? Precisely.

1348. *Mr. Hoskins.*] I suppose the wharf-owners place different values on different wharfs? Decidedly; there would be great difference of opinion as to the value of a wharf.

1349. That difference of opinion is based frequently on the superior facilities afforded by one wharf over the other for discharging and loading ships, and also on the fact that one wharf is used more than another? Exactly.

1350. *President.*] Is the state of things you have mentioned in regard to your wharfs, there being for two-thirds of the year twice as much wharfage as you require, significant of all the wharfs in Sydney? Of the private wharfs especially.

1351. You have no doubt of that? No.

1352. *Mr. Lee.*] When articles such as minerals, coal, shale, and frozen butter, and possibly grain, require to be exported, are they not sent direct from Darling Harbour? Yes; coal especially, and grain probably. Of course there are the Government wharfs there specially equipped for shipment of coal. There are also other wharfs in Darling Harbour belonging to the Government where the ships can go alongside and take the grain out of the trucks.

1353. Under these circumstances your wharfs cannot compete with the Government wharfs? At our wharfs we do not compete with the Government so far.

1354. For the export of such articles as I mentioned, the requisite facilities already exist, and are being increased, at Darling Harbour and Darling Island? Yes; I presume they would be quite ample. I do not know exactly what quantity of grain is exported just now. The quantity of shale, I think, is not great. Coal is another matter. Whether these quantities are going to increase is another question. Whether the increase of wharfage accommodation in that particular direction is equal to the increased requirements I am not prepared to say. I presume it would be, from my personal observation in that direction.

1355. Do you know whether any of the produce of the country, or the shipping coming to the ports, has suffered in any way from the want of railway communication to the wharfs? No; I am not aware of that.

1356. Is it handicapped in any way by the dray carriage? No; that is a matter I have not given consideration to.

1357. It is not handicapped, to your knowledge? I do not know a ship which has been refused a berth from want of accommodation.

1358. *Mr. Hoskins.*] You have not heard in recent years, I suppose, of vessels having had to wait some time to be able to get a berth for discharging cargo? No. There have been occasions, probably, when ships have been booked for a particular berth; but at the same time I have had perhaps twelve or thirteen berths vacant. A ship which has been booked for a particular wharf has had to wait to get a berth there.

1359. *Mr. Humphery.*] In speaking of the export of grain, did you wish to convey that the grain would be sent direct from the country to the ship, or to a depôt, to be collected there and then shipped? It is very possible, if improvements are made at Darling Harbour, that provision will be made there for granaries contiguous to the wharfs. As far as my knowledge enables me to say, there is ample accommodation just now for ships to go alongside and take all the grain that is likely to be exported.

1360. *Mr. Hoskins.*] Have you ever heard of the export and import business of the port being retarded in consequence of the absence of railway communication to the wharfs? As a matter of conversation, probably; but, from a business point of view, I do not know that I have heard a remark made about it.

1361. *President.*] Do you think that your views in regard to this matter have fairly well been brought out? I think so. We have twenty-nine berths, and if we reserve seven berths for loading purposes, that leaves us twenty-two berths for working purposes. The average rate of discharge at a berth is 400 tons per day, and taking 300 working days for the year—which is a liberal allowance—that means the discharge of 8,800 tons per day, which is equal to the discharge of 2,640,000 tons per year. Allowing each ship a capacity of 3,000 tons cargo, the associated wharfs could berth 880 ships a year; but where you are going to obtain those ships outside the P. and O. Co., the Orient Co., the North German Lloyds, the Messageries, and other companies, I do not know.

W. R. Benson.
17 Mar., 1897.

1362. How many vessels do you obtain? I cannot give you the figures just now.

1363. Under 300? Outside the intercolonial ships and the big steamers, I do not believe that 300 over-sea ships arrive in this port in a year.

THURSDAY, 18 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, sworn, and examined:—

1364. *President.*] You are the Engineer-in-Chief for Public Works? Yes.

1365. You have prepared a statement showing the shipping and wharfage accommodation in Sydney in comparison with the shipping and wharfage accommodation in other ports where a large trade is done? Yes; I have prepared a return in respect of fifteen leading ports. You cannot get information about all the ports. All of which I could get the length of wharfage I have completed to date. I am only able to make up the returns to the year 1888. I could get later information about some of the ports, but I thought it well to put all of them on the same footing. I could only get the tonnage of shipping up to the year 1888 in the edition of Mulhall in the possession of the Department.

C. W. Darley.
18 Mar., 1897.

1366. Will you read your statement? It is as follows:—

STATEMENT showing the total wharf frontage and the business done in connection therewith in some of the principal ports of the world.

Port.	Wharfage.		Tonnage.		Tonnage per foot of wharf.
	Year.	Lineal feet.	Year.	Tons.	
London	1888	133,121	1888	12,040,000	97.20 tons
Liverpool	1888	182,631	1888	10,310,000	56.46 "
Newcastle-on-Tyne	1888	18,099	1888	5,220,000	288.55 "
Cardiff	1888	26,780	1888	8,080,000	301.71 "
Shields	1888	1,814	1888	1,990,000	1,037.02 "
Hull	1888	38,616	1888	3,400,000	88.04 "
Glasgow	1888	34,267	1888	2,540,000	74.12 "
Bremen	1888	14,824	1888	2,370,000	159.87 "
Bordeaux	1888	28,809	1888	2,930,000	101.70 "
Havre	1888	46,084	1886	4,030,000	87.44 "
Antwerp	1888	40,967	1887	3,665,000	89.46 "
Sydney	1893	36,960	1893	3,490,785	94.44 "
Newcastle, N.S.W.	1893	11,580	1893	1,753,485	151.42 "
Melbourne	1893	23,888	1893	4,158,773	174.09 "
Port Adelaide	1893	24,961	1893	1,923,911	77.07 "

In making a comparison with Sydney such ports as Cardiff and Newcastle-on-Tyne must be omitted, because they are coal-shipping ports, which are used night and day. In both Newcastle and Cardiff some of the wharfs are double-decked. Shields shows an immense tonnage, but that is a fishing trade. The ships lie possibly 50 feet deep at the wharf, and to get on one ship you have to cross a number of others. Although there are only 1,800 feet of wharfage at Shields, it is said to be all given up to fishing boats. Melbourne and Adelaide must also be struck off the list for the purpose of comparison, because every P. and O. boat which comes to Sydney is entered twice in those ports. We know there is not the amount of shipping at Melbourne as there is at Sydney.

1367. *Mr. Hoskins.*] Have you the figures for the port of Hamburg? I could not get the tonnage of the shipping at Hamburg.

1368. *President.*] Such ports as London, Hull, Glasgow, Bremen, Bordeaux, and Antwerp are a fair example of the trade which is done in Port Jackson? I think so.

1369. In estimating your 94 tons to the foot available, what amount of foreshore in Sydney did you take as a basis? I did not take the foreshore in Sydney. I took the frontage of the wharfs actually available for ships to lie at.

1370. Will you state the length of the wharfs you took in Sydney? 36,960 feet.

1371. Is that all foreshore, or did you take the jetties into consideration? All the jetties were taken into consideration. In the case of a double jetty I took both sides.

1372. If a jetty was 40 feet or 100 feet long you counted both sides? Yes; if both sides were available for ships to lie at.

1373. Not the length of the foreshore? No.

1374. If you have the foreshore at (say) Antwerp or Hull, and the foreshore at Woolloomooloo Bay, an estimate becomes possible, for the same amount of foreshore available at either place will enable the same amount

- O. W. Darley. amount of wharfage to be constructed; but if you take the number of wharfs where ships lie on both sides, and the wharfs in Circular Quay where ships lie abreast on, and in other places the wharfs are run out a considerable number of feet into the water, you have a false comparison? It seems to me you must take what is known in England as "quayage." I do not see what good the length of foreshore would be to you all. If you go into Liverpool you will find the docks are one inside the other. The actual room for ships to lie at is the only basis on which you can go to make a comparison.
- 18 Mar., 1897.
1375. If you take a comparison of Woolloomooloo Bay properly equipped, with all the water frontage utilised, the eastern side of the bay might show, not 1,350 feet of direct foreshore, but 3,000 or 4,000 feet if the wharfs are run out into the bay? It is not possible to make a comparison with other ports if you take any fanciful thing for Sydney, and it is not in our power to take the same for other ports; you must take the actual quayage. To make a comparison, we can but get the quayage in other ports. If you ask me the possibilities of Sydney I will answer you. I am dealing with the wharfage at Sydney as it is. At Bremen and Liverpool they are increasing their wharfage every year, as we are doing.
1376. With regard to the present, the amount of trade at Sydney is 94 tons to the foot of wharfage available, and it stands about midway among the ports of the world? Yes.
1377. That is a very fair comparative position? A very fair position.
1378. Therefore the present wharfage of Sydney, compared with that of other ports of the world, appears to be not more than is usually necessary to do such a trade? Yes; it is working fully up to its capacity, as compared with most other ports. The wharfage is worked better here than at Liverpool, Hull, Glasgow, Havre, or Antwerp. It shows better results than do all those ports, getting more actual tonnage per foot of the wharfage.
1379. *Mr. Hoskins.*] At Liverpool they have docks inside the docks? Yes; but we allow for the quayage of the docks.
1380. *President.*] In Woolloomooloo Bay how much foreshore is occupied by the wharfs you have included in your return? All the wharfs constructed from the west side round to the south-east corner, and the first wharf on the eastern side.
1381. Does it include the Admiralty Wharf, Cowper Wharf, and the first wharf round towards Challis-street? Yes.
1382. In the return you have embraced about 1,400 feet lying between Challis-street and the northern end of Admiralty Wharf in Woolloomooloo Bay? Yes, together with the two sides of the pier there.
1383. It includes all the wharfage lying within that area? Yes.
1384. There is nothing else in Woolloomooloo Bay? No.
1385. There is nothing else till we come to Fort Macquarie? Not till we come to the P. and O. Co.'s wharf.
1386. From there it embraces the whole of the foreshore going round the associated wharfs down the eastern side of Darling Harbour to the point of the harbour, and then up along the western side of the harbour to Pymont Bay, at the western side of the two "T" wharfs? It excludes Dawes Point, where there is no wharfage.
1387. You have excluded those portions of Woolloomooloo Bay which eventually may be used for shipping; all that area fronting the recreation ground and Botanical Gardens to the Governor's Steps; that area between the Governor's Steps and the end of Fort Macquarie; and that area lying west from the jetties in Pymont Bay and embracing Darling Island? Yes.
1388. You have excluded all those places? All I took was the actual finished wharfage available for shipping to lie at.
1389. With regard to wharf extension on the eastern side of Woolloomooloo Bay;—what wharfage have the Government at present unutilised; a length of 1,360 feet is shown here as suitable for wharf extension? Yes.
1390. Beyond the Admiralty Wharf, going north, we have a distance shown of about 2,000 feet to the pumping-station, which eventually may be used for wharfage, if it becomes necessary—that is where the baths stand? Yes; it has not, so far, been contemplated to put wharfs there. It is under the public park, and it was thought undesirable to encroach any further on that side of the bay.
1391. In Woolloomooloo Bay, from the pumping-station to Potts' Point, we have unutilised, at present, a distance of about 3,000 feet? Yes.
1392. From the end of the Gardens, near the Tarpeian Way, to the western end of the point of Fort Macquarie, there is a distance of about 1,680 feet, a portion of which might be used where the Man-o'-war Steps are located? I do not think there is any site available there. I think that is required for Man-o'-war Steps and for the North Shore Ferry. A wharf could be made there, but it is wanted for an approach to the Man-o'-war Steps, and we are going to construct a new ferry dock on that side for the North Shore Ferry Company.
1393. That is there, available for State purposes if required? It is State frontage.
1394. At Dawes Point there is a distance of about 1,980 feet which is not very well situated, but which will be available for State purposes when the arrangements between the Imperial Government and this Colony are completed? Yes.
1395. From the western end of the jetties in Pymont Bay, round to the termination of the Government property in Darling Island, there appears to be a length of about 2,000 feet approximately? I have nothing before me, but no doubt that is correct.
1396. It appears there is a length of nearly 2,000 feet at present unused for wharfage purposes? Only partly available and of doubtful utility. That sharp curve of Dawes Point is not, I think, a suitable place to put ships or wharfs. Ships would project out into the navigation too much. I do not think Dawes Point is of much use for shipping.
1397. *Mr. Hassall.*] It would be right in the fairway? It is very close.
1398. *President.*] Taking, for instance, 5,000 feet in Sydney Cove, 1,400 feet in Woolloomooloo Bay, and 11,000 feet to the end of Darling Harbour, the foreshores abutting on to the wharfs which you have chosen for your present statement with regard to Sydney Harbour cover approximately 20,000 feet of foreshore? I will see if the figures are correct.
1399. It appears that the available State-owned property, not including the Gardens or recreation-ground, is about 9,000 feet? I will verify the figures.
1400. That means that the State has in its possession, without going beyond Jones' Bay or Potts' Point, contiguous to the city of Sydney, an area pretty well equal to half the foreshore that is at present utilised? Yes.
- 1401.

C. W. Darley.
18 Mar., 1897.

1401. That being so, the present foreshores under the same system of utilisation would enable half as much more trade to be done from Sydney as is at present carried out? No; you cannot draw that conclusion from it, because the wharfs in Darling Harbour are very largely used for the coastal trade; they are in constant use and they are crowded very thickly together. If the Government makes use of every wharf we could not construct a series of jetties such as exist in Darling Harbour.

1402. You utilise 20,000 feet of foreshore, and there are pretty well 10,000 feet yet to be utilised? I will look into the figures. I do not think we will get a very great length of practicable wharfage frontage available after the wharfs in course of construction are filled up. There is the whole of Darling Island to be added on, for it is all available. I think the whole of Dawes Point and the western side of Fort Macquarie must be excluded.

1403. Do you feel inclined to express an opinion with regard to the amount of work done off the Sydney wharfs? This return shows that the wharfs are fairly well worked up to their capacity.

1404. We are informed on all sides that they are not? It depends on circumstances altogether. Some sort of loading, such as wool, is slow to take in. It could be worked off more rapidly.

1405. *Mr. Lee.*] Is it not correct to say that some of the wharfs are not worked to their full capacity—that they are vacant during some months of the year? No doubt; they are built for a certain trade.

1406. You are charged with the construction of wharfs in Port Jackson? Yes.

1407. You are now constructing one wharf or more at Woolloomooloo Bay? Two berths are in course of construction.

1408. Are they being erected in consequence of some special demands for berthing there? Yes.

1409. Special demands from new lines of steamers? Special demands from the Treasury. Captain Jackson brings pressure to bear on the Treasury. He reports that he has not berths enough to meet the demands, and the Treasurer then asks the Minister for Works to construct more berths.

1410. But it does not follow that it means the making of preparations for some new line of steamers coming here? There are certain companies coming here and asking for big berths.

1411. There is a difference between a large ocean-line of steamers and casual sailers; for instance, a regular line of steamers requires a permanent wharf? That tells against them to some extent, because companies like the P. and O., the Orient, North-German Lloyd's, the Messageries Maritime, and the Eastern Australia—the Japanese Company are asking for a wharf now—permanently occupy a large length of wharf, and pay a rent which represents a very large interest, I believe, on the cost of the work.

1412. The wharfs at Woolloomooloo Bay will be used more for the general trade of the port? Yes. Some of them may be leased to some of the companies which are coming here. One of the two American lines used to be berthed in Woolloomooloo Bay, but I expect that it will have to come back there.

1413. Is there any special reason for the shipping requiring to go to Woolloomooloo Bay;—does it offer any advantages over the wharfs on the western side of the city? Woolloomooloo Bay is better than what are known as the private or "back" wharfs, because it has a good approach.

1414. How do you account for the shipping desiring to get to Woolloomooloo Bay, and thus necessitating the erection of new wharfs, when the associated wharfs on the western side of the city are not fully occupied? Because there is an extra charge of 6d., I think, for every ton taken away from the "back" wharfs. Goods taken away from the Government wharf at Circular Quay or Woolloomooloo Bay are taken 6d. a ton cheaper than are goods from the "back" wharfs on account of the very bad approach and the steep hills.

1415. It offers an advantage to ships? Yes.

1416. That is one reason why the demand is for Government wharfs? When we have to import a large quantity of pipes we always stipulate that the pipes must be landed at a Government wharf. In one or two cases a large quantity of our pipes was landed to suit the ship and the shipowners at a "back" wharf, and the carriers charged us 6d. per ton extra for the carting; this charge the owners had to pay.

1417. It is done so much cheaper than it can be done by the Wharf Association? That is one reason.

1418. That is one reason why these ships want to go to the Government wharfs? Woolloomooloo Bay has a better approach; the grades are good.

1419. *Mr. Hoskins.*] There is more water there than there is in Darling Harbour? There is plenty of water there; it is a mere matter of dredging if any place shoals up.

1420. *Mr. Lee.*] When your frontage at Woolloomooloo Bay is filled up with jetties, and you have made provision at Darling Island, do you think there will be sufficient wharfage in this port for the next twenty-five years to come? It is hard to say what will happen in twenty-five years, but I fancy it will be sufficient for some time.

1421. It will be more than sufficient for present requirements? Yes.

1422. Apparently it will offer accommodation for the next twenty years? There is no doubt that it will answer for some time.

1423. If all these sites are filled up and all the berths are occupied, how can we extend the wharfage so as to accommodate extra ships? In different ways. The wharfage could be distributed and spread by going further to the west, making more use of Blackwattle Bay and utilising Roselle Bay.

1424. Do you think there is any probability of the foreshore of North Sydney being used? I doubt where you could utilise it to any extent. Lavender Bay might be used in connection with the railway; but the approaches to North Shore are not good. A good deal of railway traffic might be done at wharfs in Lavender Bay.

1425. One drawback would be that it would be separated from the city where all the depôts and distributing houses are? Yes.

1426. As far as the produce of the country is concerned at the present time, and making an ample estimate for its increase in twenty-five years, you think, when all the Government sites are filled up, there will be ample accommodation? When the wharfs in Darling Island and Woolloomooloo Bay are completed, there will be ample accommodation for the next ten or fifteen years.

1427. Have you given any attention to the question of the desirability or otherwise of the Government acquiring all the wharfs on the foreshores of Port Jackson? I have often expressed the opinion that the private wharfs on the east side of Darling Harbour should not be interfered with—that they are better in private hands. I do not think the Government could utilise them to the same extent as they are utilised now.

- C. W. Darley. 1428. You think that they should remain in private hands? That has always been my opinion. If they were taken over by the Government, pressure would be brought to bear at once to commence reconstructing them, and I am satisfied that no engineer could design a set of wharfs right off on a sheet of paper which would answer or suit conveniently all the various trades that are now carried on there. The different companies have designed their wharfs, and have carried them out exactly to suit their particular trade and their steamers, and no one system of wharfage which could be constructed would answer that purpose. One company, for instance, has its jetties a certain distance apart, which exactly suits its steamers and the steamers again suit its trade. Then the wharfs are arranged as regards both length and position, and fitted with appliances and connected with warehouses exactly to suit the trade. You will find the Hunter River wharfs fitted up in a certain way to deal with hay. The Clarence River wharf deals with another class of trade and another class of boats, and the wharf was built for that trade. To attempt to do what Sir John Coode was asked to do some years ago—to design a whole series of wharfs in Darling Harbour—would upset the trade and yet not give the necessary accommodation. He prepared a scheme to cost a very large sum which I do not think after all gave anything like the accommodation which at present exists.
1429. As a matter of fact the accommodation there has originated and has grown according to the requirements of the trade in the port? According to the requirements of the trade and the various requirements of the individual companies.
1430. And if the Government were to devise a set system of wharfs there it might so happen that it would not suit a portion of the trade? There is no doubt that a large amount of space would be wasted; you could not get the same amount of trade into one set design.
1431. *President.*] Can you furnish the Commission with Sir John Coode's report? Yes; it was never printed.
1432. *Mr. Lee.*] Have you ever made an estimate of what it would cost to resume these wharfs? No.
1433. You have never had occasion to do that? No.
1434. Therefore you would not like to express an opinion as to whether a revenue might be derived sufficient to pay the interest on the cost of construction, and the working expenses of the wharfs? No. I was in England when Sir John Coode was preparing his scheme. I went into his charting office and he showed me the first scheme he had prepared. I pointed out some weak points, and he so agreed with me after I had explained the matter to him—he was not here long enough himself to study the trade of the port—that he laid aside his first scheme and prepared another. I explained to him that no doubt it made a very nice-looking design, but it would never answer the trade of Sydney; and that no one connected with the Government could think of recommending the scheme he submitted.
1435. If it were thought necessary for the State to resume these wharfs for the purpose of constructing a railway along that foreshore, it would involve the resumption of considerably more land than the wharfs stand upon? It would require the land necessary for the railway too.
1436. At the present time it would be most difficult to form a correct estimate of what the cost of such a railway would be? I have not gone into that at all.
1437. Has it ever come under your knowledge that there has been a demand on the part of the wharf-owners at Darling Harbour to have railway connection with the wharfs for the purpose of facilitating the business of the port? I know there has been a demand from some, but on the other hand there are some wharf-owners there who, I suppose, rarely send any of their goods to the railway.
1438. Have you studied the question of the receipt and distribution of goods? Not to any great extent.
1439. Are you prepared to express an opinion as to the desirability of taking a railway there? I would leave that to experts who have gone into the matter. I have my own opinions, but I have not gone into the matter.
1440. It has never come under your knowledge officially to deal with? No.
1441. *Mr. Clarke.*] Are you aware that a great many of the private wharfs, particularly the wharfs under the control of the Wharf Association, are not fully occupied for nearly two-thirds of the year? I can quite understand that a portion are not occupied out of the wool season; but at a certain period of the year, when there is a rush, we have hardly wharfs enough to berth the ships.
1442. We have had evidence that a great many of the private wharfs are not fully occupied for about two-thirds of the year? I would not have thought that it was so much as that.
1443. In the event of the Government resuming the private wharfs in Darling Harbour, would it not be very inconvenient—in fact almost impossible—for the trade to be carried on in that particular place while they are being reconstructed? It would interfere with the coastal trade very largely no doubt.
1444. Would it be possible to carry on that particular trade during the course of their reconstruction? A certain portion of the trade must be interrupted and interfered with and temporary provision made for the time.
1445. What wharfs could you take them to where they could carry on their business without suffering considerable inconvenience? You stated just now that a number of wharfs are vacant for eight months in the year; those wharfs might be made use of.
1446. Would those wharfs be suitable for the trade which is carried on in Darling Harbour and which chiefly comes by steamer from various ports on the coast north and south? They could be made use of, but they would not be so suitable as the present wharfs, because they would not have special stores to deal with the trade. There is no doubt that in reconstructing the wharfs for private services inconvenience must be caused during the process of reconstruction.
1447. It would be almost impossible to carry on the present trade in Darling Harbour without causing great inconvenience to the general public? Yes; as you came along to reconstruct each wharf in its turn, each company must be interfered with and put to inconvenience.
1448. If these wharfs to which you allude are occupied for four months in the year for their own purposes, there will be no room at those wharfs during that period for the present trade in Darling Harbour—will they not be shut out from those wharfs for four or five months in the year? I dare say, if it were absolutely necessary, some place could be found. For instance, if the wharfs of the Clarence River Company came to be reconstructed there is no doubt that some place could be found to carry on their trade temporarily while their wharfs were being reconstructed. What I hold is, unless they were reconstructed on the same lines as they are on now, a large number of companies would have to be squeezed out. I think that quite a third of the companies would be squeezed out of the frontage unless the wharfs were reconstructed exactly on the same lines as they are on now. 1449.

1449. Do you not think that the wharfs in Darling Harbour suit the public quite as well as they would if they were resumed by the Government? That is and always has been my opinion. C. W. Darley.

1450. *President.*] Have you taken into consideration the future trade of Port Jackson? Yes. I say the future ocean trade, if it grows to a very great extent—and no doubt it will grow as the Colony will grow—must be provided for in other parts of the harbour, but you cannot make that provision and sacrifice the coastal trade. The bringing of produce into Sydney must be provided for for all time. We cannot squeeze that out or sacrifice it to the ocean trade. 18 Mar., 1897.

1451. At present it appears that the future trade of the Colony from Port Jackson will be in coal, wool, frozen mutton, wheat, timber, and things of that kind; are your present coal jetties suitable? No. There is no coal trade yet to speak of. The cranes were only erected on the jetties in a tentative manner, to see how the trade would grow.

1452. It is not your intention to permanently ship the coal at Pyrmont? No.

1453. Where do you intend eventually to ship the coal from? It just depends. These cranes were put up simply to test the trade, and see whether it would grow; but since they were put up there seems to have been a tendency for the trade to decrease rather than to grow. I think it is rather less now than it was then. If it grew to any great extent we would have to devise some other scheme. My idea was to get a good coal shipping depôt at Long Cove, and to bring the railway down to that point from Petersham.

1454. That will not do for Illawarra coal? We could bring the branch line to Long Cove under the western railway at Petersham.

1455. It appears probable that eventually some considerable coal trade will be done from this port? Yes.

1456. It appears probable also that a large wheat trade will eventually be done from Port Jackson? Yes.

1457. There will be a large wool trade, and then there will be ores and other things to ship;—can you advise the Commission where, in your opinion, a great wheat-shipping place should be? The wheat will come down by rail, and therefore Darling Island will be a very suitable place for carrying on a trade such as that.

1458. You have already pointed out that you cannot depend on Darling Island and Woolloomooloo Bay to meet the requirements of the port of Sydney with certainty for much more than fifteen years? Yes.

TUESDAY, 23 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, further examined:—

1459. *President.*] You wish to hand in some plans? Yes; a plan of the west side of Farm Cove, showing soundings and borings, and also two plans of Darling Harbour and Sydney Cove, showing works recommended by Sir John Coode in his report dated 28th February, 1889. Sir John Coode's estimate of the cost of his whole scheme was £800,000. C. W. Darley. 23 Mar., 1897.

1460. Under that scheme would the accommodation be more than is at present afforded? According to Sir John Coode's scheme there would be 11,050 feet of frontage, giving accommodation for thirty-two vessels averaging 300 feet each. The number of berths at present available on the same space is forty-six, as against thirty-two available under the new scheme.

1461. Are we justified in believing, then, that the accommodation furnished by Sir John Coode, after an expenditure of over £750,000, would be less than we have at present? It would be better for large ships, but less for small ships, and altogether what I call unsuitable for the trade that is required. It would simply drive away the Darling Harbour produce trade, for the greater portion of the proposed wharfage would be accessible only to railway traffic.

1462. Are there any resumptions under Sir John Coode's scheme? It includes resumption; but that is not included in his estimate. It includes resumption of the whole of Darling Harbour between Pyrmont Bridge and Dibbs' Wharf, but does not interfere with Dibbs' Wharf.

1463. His estimate is about £750,000, not including resumption? £800,000, not including resumption.

1464. And after paying for resumption, and this sum of money for construction, the port would be very little better than at present for the purposes for which it is used? It would not be suitable for the present traffic. Quite half of the frontage would not be accessible for dray traffic, and seeing that a large proportion of the produce landed in Darling Harbour is distributed by means of drays into the city, the accommodation for so distributing cargo would not be improved. Fully half of his frontage would be accessible only to railway trucks. You could not get drays and trucks along the wharfs properly.

1465. You have already informed the Commission that after a series of years Darling Harbour has been adapted for a certain sort of traffic, and had better be left alone? Yes.

1466. And those remarks apply to Sir John Coode's scheme or any other? Yes; that is my opinion.

1467. *Mr. Humphery.*] What has actually been expended in connection with the accommodation which has been supplied in lieu of Sir John Coode's scheme? We have done nothing on that side where he proposed to carry out his scheme which did not clash with anything the Government proposed to do, but dealt only with improvements on the eastern portion of Darling Harbour at present occupied by coastal trade.

1468. Has any expenditure been incurred in connection with that portion of Darling Harbour with which Sir John Coode's scheme deals? A large private expenditure, of course, but no Government expenditure.

C. W. Darley. 1469. What is the next point? I wrote a minute, which, perhaps, I may read to the Commission. You asked me to express an opinion about wheat-shipping, and also as regards dealing with coal, also the frontage and number of berths, which I have put in a separate return [*vide Appendix*]:

WOOLLOOMOOLOO BAY.

Frontage available east side, 1,450 feet, along which five eschelon berths—four each 300, and one of 280—are partly constructed. Two of these are now being completed, thus providing five good berths for large vessels. South side or head of bay there are 1,710 feet of wharfage, including 520 feet frontage to a jetty suitable for small vessels. On west side, assuming that the space now occupied by baths, boatsheds, &c., was to be set apart for shipping berths, a length of about 1,500 feet could thus be made available for five more berths, without encroaching very seriously upon the Park. I cannot, however, recommend that this Park frontage should be so utilised. Altogether, in Woolloomooloo Bay there is 4,300 feet frontage, and a possible quayside of 3,187 feet.

From the northern bath site around Mrs. Macquarie's Point, Farm Cove to Fort Macquarie, a length of about 6,250 feet is wholly frontage to the inner Domain and the Botanic Gardens. I do not look upon any of this frontage as being available for shipping purposes. It has very properly been set apart for public purposes as park frontage, and should be inviolably kept as such.

CIRCULAR QUAY.

The Government wharfage in Circular Quay, exclusive of the head of the Cove (1,000 feet), which is devoted to ferry traffic, amounts to 4,835 feet, providing twelve good berths, nearly all suitable for steamers of the largest class.

Round Dawes Point, from and including the Marine Board boatsheds to end of George-street, a distance of 1,600 feet, is Government property, but cannot be looked upon as available for wharfage purposes, being too near the fairway and entrance to the Cove; besides, owing to its exposed position, vessels could not lie alongside a wharf there very comfortably.

DARLING HARBOUR.

Inside Pyrmont Bridge the Government owns a wharfage of 2,600 feet, which is almost wholly set apart for general railway purposes.

North of Pyrmont Bridge, including the two jetties now used for shipping coal, &c., there is a wharfage of 2,440 feet, equal to five good berths. When the coal trade, now temporarily carried on there, can be moved to a more permanent coal-shipping wharf, these jetties will be available for the frozen meat trade, and will probably more than suit the requirements for some years to come.

I was asked the other day what position was suitable for the frozen-meat trade. I do not think the Department could possibly get a better position than those jetties. There are five good berths, and rails laid on the wharf, which is suitable for the frozen-meat export trade. Some meat is shipped there now, and if the trade developed it could all be done there.

DARLING ISLAND AND PYRMONT BAY.

Around Darling Island it is proposed to construct a concrete quay wall, which will provide 2,550 feet frontage. In the bay between Darling Island and Pyrmont jetties a timber wharf with two jetties can be constructed, providing four large and one small berths. It is not, however, proposed to construct these berths at present, until it will be seen how the trade develops, and to what use they could best be put.

The concrete wall around Darling Island is now about to be commenced. When the eastern side, 1,350 feet long, is completed, it is proposed to try leasing it in three berths, with room for stores on shore, as it has been represented that a better revenue could thereby be secured.

No determination has yet been come to as regards the use to be made of the western side, but probably if a wheat-shipping trade springs up this will be the place to locate it, having railway connection and a concrete wharf wall, with good foundation. Large granaries could be constructed for receiving and storing the grain in bulk and rapidly loading vessels when they come alongside.

With a proper system of elevators, large hoppers, &c., truck-loads of wheat can be rapidly taken into the store and weighed, and held in readiness for issue to vessels coming to load.

Should a permanent coal trade be developed in Sydney for shipping railway-carried coal it will be necessary to provide a suitable site for the trade, and I am of the opinion this can best be done in Long Cove. Over a mile of good water frontage can be obtained above Long Cove Bridge, where quite three-fourths of the water frontage is already Government property.

I may here say that I have doubts as to any trade for railway-carried coal ever springing up in Sydney; but if it does, that is the place for its shipment.

1470. Is there any reason for bringing coal to Sydney by rail if you have a good port at Newcastle and another at Kembla, and the coal trade develops? If a good port were established at Kembla I think there will be no longer any need for providing for coal-shipping in Sydney. At present some coal is coming forward to Sydney, simply owing to the absence of a good port in the south to ship from.

1471. The coal for shipment comes chiefly, I suppose, from the Metropolitan mine? Yes.

1472. And the western coal is used for household purposes? Nearly all.

1473. And not for export? I do not think it is shipped to any extent.

1474. *Mr. O'Connor.*] Did I understand you to say that if a good port for coal shipment were established in the south there would be very little need for one in Sydney? Yes; if there were a good port in the south I think the coal would gravitate to the south rather than to Sydney. I think the Metropolitan coal would go south, the gradients being in favour of its going to Kembla rather than to Sydney.

1475. If a good harbour were established at Kembla, or south somewhere in that direction, do you think that the coal would go in that direction, and not to Sydney? I think it would.

GLEBE ISLAND.

As the trade of the port develops, and demands for greater shipping space arise, it will be possible to cut down Glebe Island, and convert it into a valuable shipping depot.

A scheme has been outlined which shows it possible to provide 4,150 feet of wharfage below Glebe Island Bridge, but this can be increased by construction of shipping jetties at north end, where eight berths could easily be obtained.

Inside the bridge, about 2,000 feet of wharfage can be provided, making in all, including White Bay, some 7,330 lineal feet—nearly a mile and a half—without any resumption.

1476. *President.*] Would it be a serious matter to have a swing-bridge across to Glebe Island, to be used for railway purposes? No; it would not be a serious matter.

1477. In many parts of the world there are swing-bridges over which railways pass? Yes; at nearly all the ports in England some railway traffic crosses opening bridges.

1478. It would not be a serious matter to pass over by means of a railway swing-bridge? No. Glebe Island has a great future in providing for the development of the trade of Sydney.

1479. Now, in regard to the cost of wharfage at Woolloomooloo Bay, can you divide it into two,—namely, the cost of what is already completed, and what has yet to be carried out? Up to the present, in Woolloomooloo Bay £71,290 has been spent on wharfage.

1480. Since what date? From 1860 to the present date—that is, from the time when the circular wharf, originally known as Cowper Wharf, was commenced. C. W. Darley,
23 Mar., 1897.
1481. And your present scheme? An expenditure of £12,696 will complete the wharfs on the eastern side. There is a contract let now for £5,000 for two berths, and £7,400 would complete the northern three berths on the eastern side.
1482. Have you a full scheme for Woolloomooloo Bay? Yes, for the east side.
1483. Does it extend past the Admiralty Wharf on the western side? No; I do not propose at present to go on the western side—the scheme is drawn up only for the eastern side.
1484. What will the full scheme cost when complete? £12,696—that is, for five berths.
1485. In Woolloomooloo Bay do you include the cost of dredging? No; intermittent work is generally charged to the dredge service.
1486. You have no estimate of the cost of dredging? No.
1487. Can plenty of water be obtained in Woolloomooloo Bay by dredging? Yes; there is no rock there down to 28 or 30 feet.
1488. Now, as to Sydney Cove on the eastern side, from January, 1879? I put that down as the date when the present permanent wharfs were commenced, excluding the old wharfs that have since been removed. On the eastern side £136,807 has been spent—that is, upon the P. and O., Messageries Maritime, the Orient Company's Wharfs, and the wharf on the south side. On the western side we have spent £93,441, and the completion of the berths at the old A. S. N. Company's Wharf, which work is now in course of completion, will cost £15,512. That is, of course, exclusive of land resumption.
1489. Does that include the whole of Circular Quay, or right to the point of the land known as Dawes Battery? Yes. The total cost of the existing wharfs, including the sheds—everything charged to the vote—and adding thereto £15,000, the estimated cost of completing the wharfs, amounts to £245,761. That is since 1879. Previous to that—that is, between 1860 and 1879—there were £40,460 4s. 11d. spent. But a great deal of that was spent on wharfs which have been pulled down when other wharfs have been constructed.
1490. They form no part of the present wharfs? No.
1491. £215,000 has been spent in the construction of various wharfs? Yes, since 1879.
1492. What has been the resumptions? For resumption of land on Circular Quay and Dawes Point, £304,008.
1493. Therefore the total amount spent on Circular Quay up to date which you think it is reasonable to include—that is, excising previous expenditure on things which have outlived their usefulness—is £549,000? The total expenditure reported to me in the construction of Circular Quay up to date, including the £40,000 I spoke of, and the land resumption, is £574,722 1s. 10d. That is the total expenditure from 1860; and the liabilities on account of the completion of work in hand, by the reconstruction of jetties at the old A. S. N. Company's Wharf, makes a total expenditure, when complete, of £590,234 9s. 4d.
1494. In your opinion there is a sum of £40,000 for previous works which should not be taken into account now? Yes; that I think should be written off, because the expenditure has gone through reconstruction.
1495. Then, in addition to that, there has been some dredging, has there not? There has been dredging and rock removal; but of those items I have no record here. I think that this expenditure includes removal and deepening of rock, but not the dredging of mud.
1496. So, roughly speaking, there is £600,000 invested in Circular Quay? I think that would be a fair way of putting it.
1497. *Mr. Humphery.*] We have had £442,753 revenue from Circular Quay, but there are annual charges against that? The annual charges are, I think, comparatively small.
1498. *President.*] Now for the expenditure on the western side of Darling Harbour? The construction of wharfs and jetties and the extension of wharfs in Darling Harbour, from 1864 to date, have cost £254,127 2s. 4d.
1499. Between what limits;—between the southern end of the bay and what point to the north? Including the Pyrmont jetties.
1500. To the north-western end of the Pyrmont jetties? Yes.
1501. Then, from those jetties all round Jones' Bay, have you a comprehensive design for the whole of that portion? Yes.
1502. What is that to cost? £101,872.
1503. Has the whole design been approved of by Parliament? No.
1504. But you are going on with a portion of the design? The Minister has approved of a small portion being commenced.
1505. Although there has been no approval of the whole of it? No approval of the whole of it.
1506. Then the Department is going on with an expenditure which forms part of an expenditure that will amount to over £100,000? Yes; if the whole work is completed.
1507. *Mr. Hoskins.*] Two or three years ago the Public Works Committee, after a long inquiry, at which you gave evidence, recommended the construction of a new bridge at Pyrmont, from Sussex-street, and also recommended that it should be undertaken as soon as possible, mainly on account of the evidence of Mr. Hickson, who represented that although the bridge had been repaired and might last two or three years it might give way at any moment; and yet we do not hear of anything being done in the matter;—can you tell us what is being done in reference to that bridge? The bridge is being carefully watched, and certain work done to give it as long a life as possible; but no money having been voted by Parliament for reconstruction, no reconstruction can be done.
1508. Is it in contemplation to give effect to the recommendation of the Committee? I think Parliament will have to be asked to vote money very soon for the reconstruction of the bridge.
1509. *Mr. Wright.*] Would it be possible to furnish the Commission with a statement showing the total expenditure on the different wharfs in Sydney, say, from 1850 up to the present date, out of Loan Votes; I think, if my memory serves me rightly, the first improvement on the Circular Quay was made in 1853—from Queen's Wharf to Campbell's Wharf? Yes; I think that such a return could be obtained. The return which I have to hand in to the Commission is complete from 1860. Our books go back only to 1860.
1510. Are there any means of ascertaining what was spent before that time? A good deal of that was Imperial expenditure; but a statement concerning it might be obtained from the Treasury.

- C. W. Darley. 1511. I suppose that the expenditure prior to 1860 was not very large? Not very large. I think I am right in saying that the whole of this expenditure is from Loan Votes.
- 23 Mar., 1897. 1512. I want, if possible, to ascertain the total expenditure from 1850 to 1860;—that could be obtained, I suppose, and, if added to this, would give us the total expenditure? I will make inquiry, and see if that can be obtained.
1513. Are you personally in favour of the construction of a coaling wharf in Iron Cove? Certainly not in favour of doing anything now; but I say that if a trade sprung up I would be inclined to recommend that a coaling wharf should be constructed there.
1514. Would there not be sufficient space at Darling Island for it? No.
1515. Well, what about Glebe Island for the coal trade—at the head of Johnson's Bay? I think Glebe Island is too valuable for the coal business. It is better to use it in connection with the city. If the city trade increases in connection with the shipment of wool, produce, and merchandise, it would be better to let it spread out towards Glebe Island rather than use it for the coal trade.
1516. In the event of Glebe Island and all the foreshores being utilised would any more wharfage be required for the next century almost? We do not know how the trade may develop; but I have grave doubts as to whether we are going to have in Sydney a railway-borne export coal trade. Some coal may be won on the harbour, and it may be shipped from places near where it is won.
1517. You think the bulk of the coal sent to Sydney by rail will be for local consumption? Yes.
1518. *President.*] Have you any knowledge as to what is the nature of the bottom of Blackwattle Bay? The greater part of the bay we can dredge 28 feet or 30 feet without touching rock.
1519. So there appears to be no reason why Blackwattle Bay could not be used for the coal trade; you do not want to build a new railway if you can possibly help it, and tunnelling through the hill would bring you on to Blackwattle Bay? Yes.
1520. And if there are 28 feet or 30 feet of water available there, and there is no trouble in working a swing-bridge between Johnson's Bay and the Cove, why should not coal shipping be done there? There is no Government land available, except at the head of the bay, and that would not be suitable for coal shipping. I now put in a return showing the water frontage and quayage at Sydney Harbour, and also a return showing the expenditure on Government wharfs in Sydney Harbour, up to date.

Walter Liberty Vernon, Government Architect, Department of Public Works, sworn, and examined:—

- W. L. Vernon. 1521. *President.*] The Commission desire to know from you the value of the various buildings in the area immediately north from Devonshire-street, known as the Benevolent Society's grounds;—have you a statement? Yes.
- 23 Mar., 1897.

1522. Will you read it?

In accordance with a request of the Chairman (handed to me yesterday) to the effect that a rough valuation of the buildings set forth in the list accompanying it was required, I have the honor to report that a preliminary inspection has been made, and approximate valuations set down, as follows:—

Benevolent Asylum, buildings, fences, &c.	£16,400
Christ Church Parsonage, fences, &c.	1,800
Police Barracks and Superintendent's residence.	6,000
Sydney Female Refuge.	7,000
The Convent of the Good Samaritan.	13,000
Tramcar sheds, &c.	600
South Sydney Morgue and residence.	2,400
Friends' Meeting-house, &c.	500
Sextons' cottages.	200
Railings, gates, &c., to Cemetery.	1,000
Total.....	£48,900

1523. That is for every building on that area? Yes. The greater portion of the buildings is old and obsolete, and generally only suitable for present uses; and I estimate that if similar accommodation had to be provided in new buildings the cost would probably be between £75,000 and £80,000, as against £48,900, the present values. This of course does not include the value of the land.

1524. That would be the cost to the State if it were necessary to find the same amount of accommodation as you have at present in these old buildings? Quite so.

1525. There is no question of title at all—you only include the bare value of bricks and mortar? Yes, that is all.

WEDNESDAY, 24 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. DANIEL O'CONNOR, M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
	FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

- S. E. Perdriau. 1526. *President.*] What is the first information you have to give us to-day? As regards the cost of resumption of a strip of land 100 feet wide between the Redfern railway station and Circular Quay. The shortest distance from Redfern station to Circular Quay is 130 chains. If the strip taken be 100 feet wide the area included would be within a fraction of 20 acres, without including any land required for stations. The municipal assessments for the present year show that if that block of the city bounded by Elizabeth, Park, Pitt, and Liverpool streets, comprising an area of 10 acres 2 roods 2 perches, were resumed, the compensation, at twenty years' purchase, would be £748,640, and at twenty-five years' purchase, £922,800. If the value of the 20 acres comprised in the strip 130 chains long and 100 feet wide
- 24 Mar., 1897.

S. E.
Perdriau.
24 Mar., 1897.

wide be estimated in the same way, and *pro rata*, it would cost £1,424,285 to resume at twenty years' purchase, and £1,755,624 at twenty-five years' purchase, without allowing anything for severance, for disruption of business, or for the 10 per cent. for forced sale always paid by Government. No doubt many valuable properties would be severed if such a strip of land were resumed, and under section No. 78 of the "Public Works Act of 1888" the constructing authority could be compelled to purchase many large and expensive buildings situated wholly or partly upon the area resumed, and thus the cost of same would be greatly increased.

1527. *Mr. Wright.*] If I understood you rightly, you have based the valuations on the valuations for the best portion of the city? I do not think it is the best portion of the city.

1528. You have valued the portion between King-street and Market-street? No; between Liverpool, Park, Pitt, and Elizabeth streets. That is not the best part of the city.

1529. You do not take in King-street? No.

1530. Then that is a medium part? Yes, a medium part.

1531. *Mr. Lee.*] Do you know if that passes through any very expensive buildings? I did not try to locate the area, but of course a great many buildings would be affected.

1532. *Mr. Humphery.*] That starts from Redfern railway station and terminates at Circular Quay, and avoids the Park? You may fairly say that is an imaginary strip.

1533. You propose to take a strip 100 feet in width from the Redfern railway station to the Circular Quay, on the western side of Elizabeth-street? Yes.

1534. It might appear from the evidence that in estimating for the 100-foot strip you have taken the cheapest portion of the city west of Elizabeth-street? I do not think that is the cheapest portion of the city. When you get nearer the head of Darling Harbour there is much cheaper property there; but I think that the value of property on this line is rather under the average than over that of city property.

1535. *Mr. Lee.*] Can you tell us what the practice in this country is when land is taken underneath a building—can you tell us how the compensation is arrived at;—is the surface value paid? I do not know what powers the Act gives in that respect.

1536. You have no precedent in the office to guide you where land has been resumed underneath a building for a tunnel? I believe that the Water and Sewerage Board do not pay anything for tunnelling.

1537. *President.*] What is your next statement? You asked me to ascertain the area comprised in Glebe Island.

1538. What is the area? The area of land comprised in Glebe Island is 34½ acres, and the Government's reclamation at the head of White Bay, adjoining the island, and lying between it and Balmain, comprises 12 acres, all level land, making a total area of about 46½ acres.

1539. There will be a good deep-water frontage for a great deal of it? The deepest part would be on the eastern side of the Island—about from 18 feet to 19 feet.

1540. It includes the whole of Glebe Island? Yes; road, abattoirs, and everything else there.

1541. What next? You asked me to ascertain the principal landing-places for passengers by steamer at North Shore. The chairman of directors of the North Shore Steam Ferry Company has informed me that before the tram service was started two-thirds of the passengers by their ferry steamers landed at the Lavender Bay wharf, at the head of that bay. The traffic is now diverted to the tram, and at the present time four-fifths of the passengers by steamer go to Milson's Point. The population of the borough of North Sydney, according to the Government Statistician, was 18,180 in February, 1896. The town clerk of the borough has stated to me that at the present time the population is, approximately, 19,483.

1542. Have you brought a map showing the position of the borough of North Sydney? Yes.

1543. What is the gross amount of fares collected by the North Shore Ferry Company? About £40,000 a year, reckoning the passengers at a penny per head.

1544. *Mr. Lee.*] Is there any parcel of Crown lands within the city boundary that could be converted into a park for the city people? Of course there is the Devonshire-street Cemetery.

1545. That is not Crown land at present? If what remains of the bodies buried there was removed the Government could get control of that land again, of course.

1546. Is there any other land, vacant or otherwise, that could be utilised for a city park? No; I do not think so.

1547. Do you know of any site that could be given to the public in substitution for what they would be deprived of if a portion of Hyde Park were taken away to be used for railway purposes? You could give them part of Government House grounds. Government House, they say, is tumbling down, and a substitute must be found for it pretty soon. It is in a very ricketty state, the Architect says. They are now spending money on it, and are always doing so.

1548. If the Government House grounds were devoted to reserve purposes, do you not think that they would be more likely to become absorbed in the Botanical Gardens than be made a park somewhat on the same lines and for the same uses as Hyde Park now? Yes, perhaps they would; but there are 40 acres there.

1549. Do you think it would be desirable to set up another park in the city, to be used in the same way as Hyde Park is now used? Well, if land had to be resumed it would be, of course, at enormous expense; and there is a very large area of land available now for recreative purposes, extending from Liverpool-street northward to the water—for the parks practically extend from Liverpool-street to the water—their total acreage being, I think, 230 or 240 acres including the 40 acres of Government House Grounds.

1550. And the public have access to a portion of that land at all times, day or night, and to the Gardens all day? Yes; Sundays and all other days.

1551. Take Hyde Park, for instance;—you know it pretty well? Very well.

1552. Is it really used at the present time for the recreation of the citizens or their children? I do not think so; it may be by the children.

1553. Is it not largely taken possession of by the loafing classes? Yes, it is, almost entirely.

1554. As a matter of fact, does it offer to the citizens or their children that recreation which it was supposed to afford? I do not think it does, except where the band plays on the eastern side. A good many children collect there in the afternoons when the band plays; but the western portion of it is used almost entirely by loafers.

1555. Are you of opinion that the citizens would suffer no serious loss if they were deprived of that portion of Hyde Park which it is proposed to take for railway purposes? I do not think they would.

S. E.
Pordriau.
24 Mar., 1897.

I think that the suburban residents would be benefited to a very great extent indeed by the railway coming right into the city, and also that a very large proportion of the inhabitants of the Colony would receive a direct benefit by being brought right into the heart of the city by the railway.

1556. What portion of the community would suffer, and in what respect, if that portion of Hyde Park were taken for railway extension purposes? I think, principally, the Domain loafers.

1557. The average citizen would not be deprived of any right whatever? I think not.

1558. That is to say, that irrespective of the portion required for railway purposes there would be ample room for recreation purposes? Yes. It so happens that at that particular place there are many large and contiguous reserves.

1559. Not very far from there is a smaller park? Yes; Cook Park and Phillip Park.

1560. Hyde Park has not been used for many years for vehicular traffic;—it is used only for pedestrian traffic? That is all.

1561. And has not the construction of the Centennial Park had the effect of attracting a large number of the citizens to that park for recreation purposes, particularly driving? No doubt it has, because there is a road there specially made for the purposes of driving.

1562. In that respect the Centennial Park has advantages far beyond anything that could be offered by Hyde Park? Yes. People living within an equal distance of Hyde Park and Centennial Park would never go to Hyde Park for recreation, but would go to the Centennial Park.

1563. The Centennial Park has a large area? Yes.

1564. Do you remember how much? Under the Centennial Celebrations Act the area to be left for a park is a square mile.

1565. It has been very largely improved, and is being beautified? Yes; more than £250,000 has been expended there.

1566. At the time that park was granted to the public there was no demand for extra park sites in the city, was there? I think not. I do not think it was intended particularly as a park for the city, but more for the surrounding suburbs; but of course it is very close to the city.

1567. But all those suburbs, now you may say, are part and parcel of the city—connected with the city by tram and every other means of conveyance? Yes.

1568. And it is no more a park for the suburbs than for the city—it is available for all? Yes.

1569. Is it not largely used by the city people? Yes. I have seen thousands of the city people there, especially on Saturdays, Sundays, and holidays.

1570. If this large park has been conferred on the citizens of Sydney recently at enormous expense, do you think that the citizens would suffer in any way if a small portion of Hyde Park were taken for necessary railway purposes? I think the taking of 10 acres out of Hyde Park would hardly be noticed by the citizens.

1571. It is only proposed to go up to about the middle walk? Yes; the south-western corner of the Park.

1572. Therefore it would leave all the facilities for pedestrian communication between Oxford, College, and other streets as well as it does at present? Yes.

1573. It would only prevent people from going direct through to Elizabeth-street between Liverpool and Park streets? Yes.

1574. But they could get to either of those points by taking a diagonal path? Yes.

1575. Therefore there could not be any great inconvenience to those who use the Park for pedestrian purposes? I do not think so.

1576. You are of opinion that the location of a railway on that portion of the Park would be a benefit not only to the citizens but also to the Colony at large? Yes.

1577. *Mr. Humphery.*] Supposing, instead of having a terminal station between Park and Liverpool streets, it were placed between St. James' road and Park-street, would your replies to Mr. Lee's questions be equally pertinent? I think so. I suppose that the same quantity of the Park would be taken—10 or 12 acres—and it would not much matter which portion were taken. Of course there is a good deal more pedestrian traffic across that portion of the Park towards King-street than there is across the southern portion of the Park.

1578. You mean diagonally? Yes; from Boomerang and College streets. That part of the Park is more used.

1579. I am speaking now of the north-western corner? Yes, the north-western 10 acres of the Park, bounded by Macquarie-street.

1580. Then the pedestrian traffic will come out at St. James' road instead of in Elizabeth-street;—is that what you mean? Yes; somewhere about the Queen's Statue, instead of going diagonally.

1581. *Mr. Wright.*] As a matter of fact the bulk of the pedestrian traffic goes that way now, does it not? Yes, I think the greater part of it does.

1582. *Mr. Humphery.*] How many acres are there of the Devonshire-street Cemetery that might be utilised for a park? About 11 acres.

1583. Comparing that area of land that might be made available for a park at Belmore-road—I mean the site of the Devonshire-street Cemetery—with the portion of Hyde Park which it is proposed to be taken for railway purposes, there would be twice the population inconvenienced? There would be, according to the Government Statistician's figures.

1584. Have you been over that land? Yes, I have been into it from various points; it is subdivided by fences.

1585. Would it be a suitable position for an addition to Belmore Park? I think it would be, certainly. It is very suitable land for a park, being elevated.

1586. And very central? Yes, it is central. There is a very dense population, especially to the east of it.

1587. And you think that as far as utility goes—not intrinsic value—it would be a fair exchange for the north-western corner of Hyde Park? Yes. I think the figures prove that the population benefited would be twice the number.

1588. *Mr. Wright.*] I gather from your remarks that you consider that the outcry against utilising a portion of Hyde Park for railway purposes is more sentimental than anything else? Yes, I do.

1589. And that the citizens would practically suffer no loss by the appropriation for railway purposes of that portion of Hyde Park asked for by the Railway Commissioners? Yes.

1590.

S. E.
Perdrian.

24 Mar., 1897.

1590. And you think that the land to be taken from the Devonshire-street Cemetery would be in every way as suitable, or even more suitable, for the requirements of the citizens of that part of the city than the portion of Hyde Park proposed to be taken? Yes.
1591. In making your calculation of the cost of the resumption of land you include resumptions right from Devonshire-street, do you not? Yes.
1592. And you are aware that there is a large portion between Campbell-street and Devonshire-street which is to a certain extent Government property, including Belmore Park and the Cemetery grounds, the resumption of which would not necessitate any great expense? It would of course depend entirely upon where the railway ran. You might interfere with Christ Church Parsonage, and the Convent, and the Refuge.
1593. But if you can avoid interfering with the Parsonage, and the Benevolent Asylum, and the Convent of the Good Samaritan, by taking a railway to the back of them at a sufficient distance, and then passing through Belmore Park, how many chains of resumption would you save? There would be something saved there.
1594. Can you give us any idea of the number of chains that would be saved? At a rough guess I should say perhaps 25 or 30 chains.
1595. That would reduce your total then to a little over 100 chains? Yes.
1596. And it would correspondingly reduce the cost of resumption? Yes. I am afraid that those figures do not convey anything like the extent of the probable cost of such a resumption.
1597. Of course to those figures would have to be added the cost of severance and destruction of buildings? Yes.
1598. Allowing for the lesser distance going through Belmore Park, you think that the original figures would be more than borne out by the result? Yes.
1599. So there is no hope of getting a railway through the city for less than £2,000,000 for resumption alone? No; under a clause of the Public Works Act, if a building is touched at all the owner can compel the Government to take the whole of it.
1600. Can you tell me what is the resident population within a certain distance of the north-western corner of Hyde Park? Within half a mile radius of the junction of Elizabeth-street and St. James' road the total resident population is about 15,000.
1601. And those are the only people who can actually claim any particular right to this Park? Yes, I think so.
1602. And you are under the impression that depriving those people of the convenience of having the Park close to their door would be more than counterbalanced by the gain to the population of the Colony generally if this railway were constructed? Yes.
1603. Very much more? Yes, I think so.
1604. *Mr. Fegan.*] Whom do you call loafers. You say that this Park is chiefly used by loafers. You do not call a loafer an unfortunate man out of work who is doing his best to get work, do you? Certainly not.
1605. Well, what reason have you for saying that the majority of the people who frequent this portion of the Park are chiefly loafers? That is the opinion I formed of the people there; I have seen them for twenty years, and that is what their appearance was. They are not working-men, but men that will not work.
1606. *Mr. Black.*] If the Park were closed would they cease to exist? No; if you take 10 acres they will go on to the remaining 30 acres.
1607. Well, if the closing of that portion of the Park would not wipe out those men whom you call loafers there would not be any benefit to the public in that direction if it were closed? I did not suppose that we were going to effect any reform in that respect.
1608. In fact you would only make the evil worse by concentrating them in a smaller area, if there is any evil? Well, at that particular place you have over 200 acres of land available for those particular people, and if you distributed them over the remaining 190 acres you would hardly notice any difference there.
1609. You have no idea in your head of having admission to the Parks by ticket? No.
1610. *Mr. Fegan.*] In answer to Mr. Lee you said there never was any agitation for more park room when the Centennial Celebrations Act was passed? I do not know that I said that directly, but I do not remember any.
1611. Do you know there was an agitation against taking away any portion of this Park? I believe there was an agitation some years ago.
1612. And a very strong agitation; even some of the most prominent people in Sydney took a part in the agitation against taking any portion of this Park for railway purposes? The gentleman I particularly remember is Mr. Macintosh.
1613. He occupies a very prominent position in the public life of the Colony? Yes; and no doubt his opinion is very valuable.
1614. And there were Sir Alfred Stephen and others? Yes. Sir Alfred Stephen was one of the trustees of the Park.
1615. Therefore, so far as the agitation was concerned, it was not owing to these unfortunate men but to some of the leading men of the time? Yes; there were some of the leading men connected with it.
1616. I think you will admit that the feeling is almost the same yet? I daresay it is.
1617. When the Bill was before Parliament I suppose you heard that a number of the representatives of the people were against handing this Park over for railway purposes? Yes; they thought that the taking of a quarter meant eventually the taking of the whole of it. That was the principal reason, I think; but I read the Railway Commissioners' statement, and they said they would not dream of asking for any more than 10 acres, because they would not make the Hyde Park station the main terminal station. Redfern would continue to be that, or rather the depôt.
1618. *Mr. Lee.*] This is for passengers only? Yes.
1619. You do not think that 10 acres near Belmore Park would compensate for 10 acres in the heart of the city, do you? I think the figures giving the population in the two portions show that 10 acres at Devonshire-street Cemetery would benefit twice as many people as 10 acres on the north-west corner of Hyde Park.

S. E.
Perdriau.
24 Mar., 1897.

1620. But you know it is really not those people who live in the near vicinity of Hyde Park who avail themselves of the advantages which Hyde Park gives to the people for recreation and other purposes, under the beautiful shade-trees such as there are not in the Domain? I think the Inner Domain is preferable to Hyde Park for shade-trees.
1621. But is it not a fact that no other park in the Colony gives the same facility for shade and enjoyment as Hyde Park? I must say that I have not seen very many people using Hyde Park for that purpose—I mean that I have not seen many people whom I would consider to be respectable people using it for that purpose. They mostly go into the Domain or the Inner Domain.
1622. Does not that statement bear out what I have said, namely, that the people who live in the different business places near and around Hyde Park do not frequent the Park, and that other unfortunate people come from other parts of the city because they appreciate the shade and the surroundings of the Park? Yes. It is not unlikely that a good many of those people whom I call "loafers" would collect where the cemetery is now if that were made into a park.
1623. Many people go to Hyde Park who are homeless, but are not loafers, and who walk about from morning till night looking for work? Very likely.
1624. And I have seen people go in there the state of whose pockets would not afford them any other means of getting rest? Yes; but they would not have to go much further to get to some other part of the Park.
1625. To be waylaid, perhaps, by tricksters? I have seen as many tricksters on this portion as elsewhere.
1626. Do you think there is the same protection in the Domain as in Hyde Park? We only propose to take a quarter of Hyde Park.
1627. But at the present time the Park is open to the public gaze, and in the daylight a man cannot commit robbery without being detected;—the police are there, and the public are on the alert? Yes; they are nearer than they are in the Domain.
1628. Do you not think that it is much better in that respect? There is no doubt that some people would be inconvenienced by the taking away of 10 acres, but I think that on the whole it would be of benefit to the country generally.
1629. How would it benefit the suburban people? It would avoid the necessity of changing from the train to the tram at Redfern.
1630. The expense of travelling would be about the same? I suppose the expense would be about the same—not much difference.
1631. Not having to change from train to tram would be the principal benefit? Yes.
1632. How much time would that save—about a minute? I think more than that. Even in the morning it takes fully a minute I think to change, but at other times in the day it must sometimes mean a loss of six, seven, or eight minutes.
1633. Do you think it is fair to go to the enormous expense of constructing a railway from Redfern to Park-street or Market-street, as the case may be, and take perhaps one of the most valuable sites for recreation in Sydney, in order to save that short space of time, seeing that you are about to construct an electric tramway along George-street? That will serve the people to some extent, no doubt.
1634. And you have also the steam tram service in Elizabeth-street? The railway, of course, would compete with the present tram service.
1635. And successfully, too, would it not? Yes.
1636. What is to become of the tramway then—there would be a loss on that portion of it, would it not? I think that portion of the tram service would hardly be wanted at all—that is the railway tram.
1637. In your calculation you have not informed the Commission the amount of loss that would be sustained by the pulling up of the tramway? No; that would be a matter for the Engineer-in-Chief for Railways.
1638. Perhaps you could estimate the value of that property? I could find that out for you.
1639. *Mr. Roberts.*] Is it not true that since the extension of the tramways into the various suburbs business people now have residences for their families in the suburbs who used fifteen or twenty years ago to live at their place of business with their families? I believe that is a fact. In fact the population of the city proper is not growing so fast on that account.
1640. Is it not a fact that the families of at least (say) 75 per cent. of the business people of Sydney now reside in the suburbs? I daresay that is about the proportion.
1641. And therefore is it not fair to assume that there is not the demand for Hyde Park as a recreation-ground at the present moment that there was twenty years ago? Yes, I certainly think that is the case.
1642. *Mr. Hassall.*] The traffic through the north-western portion of Hyde Park principally comes from Woolloomooloo, does it not? Yes.
1643. And in the event of that portion being resumed for railway purposes no very great inconvenience would be caused to anyone by being obliged to make a detour along College-street into St. James' road? No; it would not make half a minute difference.
1644. So the resumption of that portion for railway purposes would not, to any great extent, inconvenience the public who use that short cut to the city? No.
1645. Is it not a fact that that particular portion of the Park is, to a certain extent, infested by people who do not care to work? I have always thought so, especially at night-time.
1646. There must be, of course, some amongst them who would be only too glad to obtain employment, but as a rule, is not Hyde Park overrun—day after day, week after week, and month after month—by people lying about there to the detriment of those persons who would like to use the Park for recreation purposes? Yes; lying about on the benches and elsewhere.
1647. From what you yourself have seen you think it is not a desirable place to send girls and children to at the present time? No; very undesirable.
1648. How far is it from that portion of Hyde Park to the Domain? About 200 yards.
1649. So that even if the public were deprived of that portion of Hyde Park they have the Domain right alongside of it, which they could make use of? Yes. I think that is the principal reason why they would not feel any inconvenience, because at that particular place there is such an enormous area of park-land available—from Elizabeth-street right down to the waters of Port Jackson.
1650. You may say that it is a continuation of park-land right from Elizabeth-street to the waters of Port Jackson? Yes.

1651. And if an area of 10 acres were taken out of it it would hardly be missed? Hardly at all.
1652. You think that in view of the largely-increased convenience to be conferred on the public by the extension of the railway to that particular point it would more than counterbalance any little inconvenience the people might suffer by being deprived of that portion of the Park? Certainly.
1653. *Mr. Clarke.*] Do you consider that, as a whole, with Moore Park, the Centennial Park, the Domain, and other parks, the people of Sydney are as well situated in that respect as are the people in any other part of the world? I have not travelled enough to express an opinion on that, but I have always thought that it would be a valuable thing if they had a piece of park land in the western portion of the city, which is not very well served.
1654. Which part do you mean? Well, we have Wynyard-square there, but that is about the only piece of available land in the western part of the city until you get to Blackwattle Bay—Wentworth Park.
1655. But in the eastern portion the people are well off for parks? In the eastern portion of the city the park-land extends from Dowling-street, Surry Hills, up to Randwick and Waverley—that is, including Moore and the Centennial Parks.

S. E.
Perdriau.
24 Mar., 1897.

THURSDAY, 25 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Norman Selfe, M.I.C.E., M.I.M.E., sworn, and examined:—

1656. *President.*] What are you? I am an engineer.
1657. At present practising in Sydney? Yes.
1658. You are aware of the project before the Commission to extend the railway into the city for the conveyance of passengers and for the conveyance of goods? Yes.
1659. You have given the matter some consideration? A great deal of consideration.
1660. And have a scheme you believe to be a satisfactory solution of the matter we are considering, and desire to place it before the Commission;—will you explain it? I have been asked to place it before the Commission—I have placed it before the country—and I shall be glad for the Commission to consider it. I think it will be better for me simply to outline my scheme, and then leave you to ask me to come here again, for it took the other Royal Commission three days to go into it. I may say that the scheme was misrepresented then in a way that I am sure it will not be represented before this Commission. I should like to say before going into an explanation of the scheme that I am not an advocate of any hard and fast line to a few feet or chain or two. I am an advocate more of certain definite principles which I laid down, and I show in my scheme a solution of the difficulties which they involve. I am prepared to admit at once any improvements if they achieve the same results.
1661. You approach the matter simply on general principles—you are willing to accept any amendment in regard to details? Yes; with regard to small details.
1662. The plan which you have now placed before the Commission shows your proposed line going down towards Darling Harbour, and then going northerly; you have an alternative scheme starting from Eveleigh station;—do you desire to consider that at all, or do you consider this is the better one? I only know of one scheme.
1663. There is an alternative loop-line? That alternative loop-line, which was referred to by some of the Government officers, is merely Mr. Deane's line; it was only drawn on my plan as showing how goods could be brought from Darling Harbour to Circular Quay apart from the passenger line.
1664. As far as you are concerned we say nothing about that? Excepting for goods. That is a scheme that belongs to two or three other plans. I think you mean the loop that terminates at the Commissariat Stores, and goes round by Miller's Point.
1665. On the western side of southern George-street station there is a loop? That is part of Sir Henry Parkes' scheme.
1666. It appears here on this plan of yours? I put it here as it is for the Commission to consider it, but that really was a suggestion on Sir Henry Parkes' plan that was submitted to the previous Royal Commission.
1667. Your main scheme turns off on the western side of Redfern station? At the tunnel.
1668. And follows down to the first George-street station;—will you give us a rough description of it, first of all? My whole scheme is based on five leading points: First, the distribution of the present suburban passengers throughout the city. Secondly, a provision for the connection of all the eastern suburbs with the city extension. Thirdly, that the extension should go hand in hand with the improvement and not the disfigurement of the city, and that, if possible, the improvement of the city should accompany the carrying out of any scheme. Fourthly, that the connection of the North Shore line should be an integral part of the whole scheme, whether it be carried out now or in the future. Fifthly, that the cost of any system should be estimated on a rational and business-like basis, and not in the way in which the cost of my scheme was estimated on previous occasions.
1669. Will you describe the route, and then we will turn to the various heads? The route I propose is to turn off at the Redfern tunnel, follow the Darling Harbour branch down as far as George-street, widening it and easing the grade, and making a station somewhere opposite Christ Church, on the ground where Pommel's store used to be, or in that neighbourhood; then proceed by means of a viaduct right across the Haymarket valley, on a level over the top of the premises held by Hoskins and Tangye; and so on over Hay-street, striking Brickfield Hill about Messrs. Goodlet and Smith's yard, where the railway would enter a tunnel. The corner of Goulburn and Kent streets is so much below the corner of Bathurst and George streets that it is possible for a train to go over the lower corner and be underground at Bathurst-street—the ground rises so much. My original intention was to utilise the site on which the new market buildings are now erected.

N. Selfe,
M.I.C.E.,
M.I.M.E.
25 Mar., 1897

N. Selfe,
M.I.C.E.,
M.I.M.E.

25 Mar., 1897.

1670. Before that, between Bathurst and Liverpool streets, do you enter your tunnel? Yes. I intend to make an easy curve, as shown on the plan. The line goes in amongst what are practically slums in this district—pig-pens, and so on, where the stock is sold—and then it gets out about Goodlet and Smith's yard. It then goes into a short tunnel under the very widest part of George-street, where ventilators could be placed in the middle of the roadway—very long narrow openings—which would ventilate the tunnel. That is between Druitt and Bathurst streets.

1671. Now you have come to the station? Yes. The city council having now built on that site it becomes a question whether the basement of those large market buildings could or could not be used for a station. That was the site that I selected as being the most central site in Sydney, and at that time practically vacant, for when I designed this scheme that was practically a waste site. The whole scheme is now subject to revision from the fact of the markets being there. This matter is apart from the object of this Commission; but I hold the opinion that that basement is totally unsuited for the markets, and it would be better to blast out all the brickwork put in there—hundreds of tons—and utilise it for a station. That basement is 22 feet deep.

1672. How deep down would you put the running road? The line only needs to have 15 feet clear over it, and the basement is about 4 feet deeper than is necessary for a railway.

1673. Will that seriously interfere with the buildings now up? That is a question I have never gone into. It would be no difficulty to put the whole of the upper part on columns, for the underground railway in London runs in amongst buildings, at the Mansion House and many other places. But that opens the question that if that building is not to be used as a station there is nothing to prevent the line going at the back of the Town Hall—going a little further west. That would not interfere with my scheme, as a whole. I merely selected that site because at the time I proposed this scheme it was a vacant site awaiting something to be done with it; and to my mind it appeared that—it adjoining the principal civic buildings of the country—there could be nothing more suitable than to put a railway station there.

1674. You practically transfer it from George-street to York-street? Yes; and go at the back of the Town Hall. It does not alter my scheme, except in the details.

1675. Your tunnel still continues about 40 feet deep? No; only deep enough to get covering. York-street, from Market-street to Wynyard-square, is very level, and I had alternative schemes either to go under York-street—in “cut and cover” as it is called—that is, you open one side and build a wall, and then open the other and make an elongated Redfern tunnel, or you resume property right through from Lassetter's to the Savings Bank which would, of course, involve considerable expense in separating properties. That is another question of detail, and not of principle, because the tunnel under York-street, from Market-street to Wynyard-square, could be very well ventilated.

1676. At the south-western side of Wynyard-square you propose to have another station? As much of Wynyard-square as is necessary. That would be a daylight station.

1677. You would still be in a tunnel, but would open the station right out? Yes; open the station right out.

1678. You then proceed by a tunnel to Charlotte-place? Yes, there would be a very short tunnel beyond Wynyard-square to get to Charlotte-place. The line would, at Wynyard-square, practically divide into three branches—the left-hand side going up by the old “Three Crowns,” to go along to the Princes-street Bridge for connection with the North Shore line; the central part going down to 30 acres, which I propose should be resumed on the Rocks, and which is illustrated by plans I have here. Plan No. 3 shows 30 acres of slums, where you can shake hands across the streets in many places. Plan No. 4 shows the same site as Baron Hausmann might have treated it if he had ever been in Sydney. From the eastern side of Princes-street, taking in Gloucester, Cumberland, Cambridge, and Harrington streets, up to Argyle-street, I propose to resume 30 acres. At the time I drew up this scheme I was told on very good authority—some land agent friends—that £30 a foot would be the maximum price for any property there. Then, from Hunter-street, where now George-street runs, turning and twisting about, going down to the old Queen's Wharf and Commissariat Stores, I propose to make a new George-street a chain and a half wide, running straight and level right through to Dawes Point, not interfering with the old street at all, but going right over the site of the present Harrington-street. Then on the block bounded by the new George-street and Argyle-street, and by a new Gloucester-street at the back, and by an extension of the street which has just been widened, coming from the Circular Quay near the fire-station, you would have a Circular Quay railway station which would be within a biscuit throw of all the harbour steamers. This is a matter I do not go into details about, but speaking from a general passenger's point of view, I would say that such trains as the Liverpool and Penrith trains might start from a station like that, and that, with the suburban, would give you a regular service of trains up and down the western side of the city, not more than a chain or two from George-street. The line to the left hand, running along the backbone of the ridge, continues until it crosses Argyle-street almost level with the present Princes-street Bridge. From Princes-street the ground runs level to where there is a wall looking into Dr. Mitchell's garden (now Trinity Church Parsonage), and then the line would run on until it got above Dawes Battery high enough to go to the North Shore. Whether carried out now as part of the scheme, or five or ten years hence, my scheme provides for that North Shore extension as an integral part of it, and does not delegate it to someone in the future to spend two or three million pounds to get to North Shore because we had a city railway which did not take such connection into account. (The reason why I worked this part of the scheme out was because the Chief Commissioner for Railways, in giving evidence before the other Royal Commission, said that if the railway had to go to North Shore we would have to have another western line, and I thought it would be better to have one city scheme instead of two.) Then going around the back of St. Patrick's Church the line crosses over Essex-street by a bridge and goes across Circular Quay on a viaduct, there being a station at about the present site of the Water Police Court, from which point the scheme becomes common with Government schemes, going round into Paddington, Waverley, and Woollahra, and taking a route on which there does not seem to be any difference of opinion—the eastern suburbs scheme. The central point of my scheme is this: that having got to Wynyard-square—whether the line so far follows my direct route or goes a little more to the west—I have from that square three connections—one being to the North Shore, another to the terminal station, where 30 acres could be resumed cheaply, and to which point the railway would bring all the suburban passengers who might want to go down to the harbour steamers, and the third to the eastern suburbs. All the harbour steamers from Manly, Hunter's Hill, and Parramatta are making the Circular Quay a focus, and my opinion is that any railway scheme that does not give you a station in close proximity to Circular Quay would not meet the requirements of a large bulk of the passengers.

1679.

1679. *Mr. O'Connor.*] I suppose you know that at the Circular Quay there is a large parcel of land which now belongs to the Government? I am aware of that. My own opinion, given for what it is worth, is that you could buy land for £30 a foot and sell it for £300 a foot, although not, perhaps, to-day. But before the previous Royal Commission they debited me with £1,500,000 for the resumption of land, and so many thousands of pounds for levelling it, and yet gave me no credit for a resale of 20 acres with the new George-street frontage.

N. Selve,
M.I.C.E.,
M.I.M.E.

25 Mar., 1897.

1680. We have now ascertained the general principles of your scheme? Yes, except this: that in connection with that scheme—more as a negative value than as a positive one—there is this which, I think, cannot be too forcibly brought before you: I am now exhibiting to you a bird's-eye view, showing the present railway buildings at Redfern, the Darling Harbour line, the place where the new bank is at the corner, the Cyclorama, the Benevolent Asylum, Belmore Gardens, and so on. Approximately, there are 50 acres there. Now, if a line is run across there, and there is a series of brick arches to carry it, there will be 50 acres of the centre of the city converted into slums in one act; because, what can you do with it if you take this site and build arches all over it for the railway. You can only back carts through those arches—you cannot lay out streets. I say that there is a future value in that land which would pay for the whole city railway. This is the way it could be done: Our city is most peculiarly situated, because from Liverpool-street, at this end of the town, to Cleveland-street, Redfern, there is only one cross thoroughfare by which you can get from the east to the west—that is Devonshire-street. Under many schemes that have been brought forward Devonshire-street is to be practically shut up, because it is going to be made into a gutter; but I say, instead of making it into a gutter, make it into a magnificent thoroughfare 120 feet wide, build a grand station facing this grand thoroughfare, carry a 120-ft. avenue right through the site of the present burial-grounds, and make a square there—call it Trafalgar-square or Maddison-square, according to which city you take the name from—and then you have 10,000 feet of frontage either for Government buildings or for sale; and surely the taking away of 10,000 feet of frontage, with all these squares and wide streets, is a point that should be considered when it is proposed to have a lot of brick viaducts for the railway. Do not carry the railway there, when the great cost will be the loss to the city of that magnificent site.

1681. *Mr. Wright.*] It is not proposed to carry the railway over brick arches? The plans show brick arches. Belmore Gardens is 30 feet below the high part of the Burial-ground, and under my scheme if 10 feet were taken off the top of the Burial-ground and put in Belmore Gardens you would have a most magnificent site of 30, 40, or 50 acres, which could be tastefully laid out, and on which you could erect public libraries or museums, or anything else.

1682. *President.*] The reason why you are making this explanation and showing the present state of things adjacent to Belmore-road is to show why you desire the railway to keep west and not to go into that portion of the city? That is it. I desire to show that whether Hyde Park is taken or the site of the present burial-grounds, a fair estimate should be made of the value of the ground, not only its present but its prospective value, because I say that we should be able to make what the city has not got now—a grand centre. It is a fact that we have not got what you may call a centre of the city. Now there is a possibility of making a grand central square, which you might call Trafalgar-square, and around which grand public buildings could be put, and you would have a large avenue from the station, and in the course of a very little time that property would sell at very high prices. However, that is only a detail; but my contention is, that judging by the experience of London, Paris, New York, and Berlin, four typical cities, this site is nearer the centre of the city for long-distance travellers than are the main termini in those cities, and it is only the suburban passengers we want to bring round the city.

1683. Let us now turn to your scheme itself: Your scheme proposes to leave the Redfern yards on the western side, and your first station lies about opposite Christ Church. How many lines do you propose to bring into the city? Four lines.

1684. Have you any idea what the cost of that first portion would be? Only the Commissioners' estimate.

1685. You have made no estimate yourself? No.

1686. Are you prepared to accept the Commissioners' estimate for that portion as correct? Yes.

1687. What was the Commissioners' estimate for that portion? On page 115 of the Report of the previous Royal Commission, the Commissioners laid out the Hyde Park scheme, but they left out any provision to compensate for taking St. James' Church, the Supreme Court, and the Registrar-General's Office. For the land that they then required at Hyde Park, Belmore Gardens, and the burial-ground, I put down £500,000. I also put down £250,000 for the new sites, and the rebuilding of St. James' Church, the Supreme Court, and the Registrar-General's Office, and I brought the net cost out at £1,600,000. That came to £17,000 a chain. On my own scheme Mr. Foxlee's estimate, made on behalf of the Railway Commissioners, was £2,600,000, but he put nothing down for the resale of this new site. From information which I have obtained from experts, I put down the value of New George-street at £500,000, and New Gloucester-street at £150,000, and the capitalised value of the sites under the Haymarket viaduct at £50,000, making total credits to the western scheme amounting to £700,000, which were omitted altogether. That brought out the net cost at approximately £1,900,000, or £14,000 a chain as against £17,000 a chain for the Hyde Park scheme.

1688. You agree with Mr. Foxlee's estimate of £2,667,770, but you think you should have a credit of £700,000? Yes. They naturally made my scheme cost as much as they could.

1689. But you have no estimates which you think would be likely to be more reliable? No; I am not in a position to impugn the correctness of their estimate.

1690. What area do you propose to take at George-street station, opposite Christ Church—the first stopping place? It would only be a passenger station. I should take whatever is necessary. A platform, I think, would be about 600 feet long.

1691. But you would want more than one platform if you had four lines? Yes; but I do not suppose that fast trains would stop there.

1692. You cannot work four lines with only one platform about 600 feet long? If the Railway Commissioners want 1,000 feet they would have to have it. I would not presume to give any opinion on that.

1693. In your opinion is 600 feet long, and as wide as necessary, sufficient for an ordinary passenger platform? Yes.

1694. What area that would be you are not prepared exactly to say? No.

1695.

N. Selfe,
M.I.C.E.,
M.L.M.E.

25 Mar., 1897.

1695. Then coming to the next station, contiguous to the Town Hall, in regard to the area, and the cost of that, you are not prepared to express an opinion? That is all included in the £2,000,000.

1696. But the position is altered now to some extent, because you were hoping to get a pretty well vacant place—the property of the city council—which now you would have to resume? I reckoned that site would cost pretty well £250,000. We have a good criterion for that value. The corporation gave the Government £120,000 for the market site, and I take that as being something definite from which we could estimate values in that locality.

1697. Then your passing central station, adjacent to the present new market buildings, in your opinion, would cost £250,000? I think pretty well that. I do not think it would actually cost that now, because things are much lower in price than they were at the time I made my estimate.

1698. At Wynyard-square you propose to take such portion of the reserve as may be necessary? Yes.

1699. You do not exactly define the area? No.

1700. Then passing Charlotte-place you come out into the open, and pass into the Rocks as you mentioned? Yes.

1701. What area do you propose to do your shunting upon in the Rocks? I propose to take 10 acres, but under my scheme there will be no shunting wanted there. I propose to have what are called traversers. When an engine runs to the end of a line, instead of as it does now at Redfern, stopping for a train at the entrance of the station in order that the engine may run down and take up another line, if traversers are used, the same as in Eveleigh yard, the engine can be pushed out and put on a middle line. There would be three lines between two platforms, instead of two.

1702. That would necessitate a third line, and therefore your four lines down there would become six? Yes; I would have six lines on that station.

1703. In your opinion will six lines deal with all the suburban traffic that should go down to your terminal station at Circular Quay at present? They will until the population is four times what it is at present.

1704. You believe they will;—you have made the necessary calculation? Yes they will, because you will have the other stations for the passengers to get out at. You will have passing stations all down the side of George-street and the railway would go across the Circular Quay. It would only be some trains that would run into that station. Of course the railway management would not run more trains into that station than they could deal with there, because they would have a line on each side of it.*

1705. Did you not inform the Commission that the North Shore line was a matter to be kept well in view, but it might not necessarily be constructed at present? Yes.

1706. That being so you could not utilise that for traffic at all? No; not until it was built.

1707. For the time being, for a city railway, without taking into consideration the North Shore extension and the eastern suburbs extension, this terminal station would require to do your reversing work? All the reversing work that was required there; but that would be limited in quantity, because you would have the line to Circular Quay and the station on the Water Police Court site as well as this, and there would be no shunting at the Water Police Court site, because it would be a wayside station there.

1708. You reverse there and go back? No. I go right to Paddington and go in a circle.

1709. But, except so far as the future is concerned, we have not at present under consideration the eastern suburbs or the North Shore extensions, excepting that they must be kept in view if any railway works were carried out, and must fit in with them and not be antagonistic to them;—therefore, if your city scheme embraces one station at the Rocks and another down near Circular Quay, until the eastern suburbs extension or the North Shore extension is built, all the shunting or reversing must take place at those two stations for the time being? Just so.

1710. Therefore you would have to keep some of your traffic from Circular Quay; in other words, at Charlotte-place, and whatever trains are required to go to Circular Quay until the eastern suburbs extension was made would require to shunt there, or reverse there, and go back? As the Mansion House station on the underground railway in London sufficed for years for all the shunting of the enormous traffic of that railway before the circle was completed, and considering that Sydney is only a very small fraction of the population of London, I see no difficulty in dealing with the traffic at this station in the meantime as was done at the Mansion House station. I was in London and travelled on that line the very day the extension was opened. I travelled dozens of times whilst the enormous traffic of twenty different lines was running into the Mansion House station, and the shunting was properly regulated. What could be done there could be done here, and the Rocks station would suffice with proper management if it were necessary to make it suffice.

1711. *Mr. Hoskins.*] They have a reversing line at the Mansion House station, have they not? If provision is made by having six lines instead of four an engine could be at the other end of the train ready to go out before the passengers were all out of the train.

1712. *President.*] How long is your tunnel—about a mile? It is about 40 chains from entering at Goodlet and Smith's down to Essex-street, from which two stations have to be taken out. It is about half a mile from the time it enters the tunnel to the time it finally leaves it; but during that, it is in daylight all in front of the Town Hall; it has a station at the Markets site or behind it, and if it ran between George-street and York-street it would be in daylight the whole way, there not being any tunnel at all except of course under Market and Barrack streets.

1713. It would be an open cutting between the buildings? Yes; just walled in. In the report of the previous Royal Commission I see there is a section, the scale being 10 chains to the inch, and according to that the distance from the entrance to the tunnel to Essex-street is 75 chains.

1714. It is nearly a mile is it not? Yes; it is nearly a mile. I took the other scale just now.

1715. The distance, therefore, is nearly a mile, out of which will come the stations where you propose to have them open, and you can, you think, have an open cutting? It can all be open. The question whether it is open or a tunnel is a mere matter of expediency and cost; it is no part of my plans.

1716. *Mr. Hoskins.*] What is the length of tunnel altogether under your proposed scheme? There is a little under half a mile of tunnel altogether, but from the time you enter the first tunnel to where you leave the last the distance is 75 chains—that is, approximately, a mile.

1717.

* NOTE (on revision):—I do not desire to give any opinions on railway management, but base my opinion as to the adequacy of this station on the fact that the Chief Commissioner, Mr. Eddy, approved of a Circular Quay station (see Report of Royal Commission) with only two lines instead of six, and 1½ acre area instead of 10, and stated in answer to Question 22 (3 July, 1891) that such a scheme was equal to forty trains an hour each way.

N. Selfe,
M.I.C.E.,
M.I.M.E.
25 Mar., 1897.

1717. *President.*] In your opinion would there be any difficulty in ventilating tunnels? I do not think there would, but I think it very desirable not to have tunnels.
1718. You would avoid them if you could? Yes.
1719. Your first point was distribution. You maintain that your line distributes the passenger traffic better than any other proposal? I do not say that. There is a number of other schemes, such as Mr. John Young's and Mr. Mountain's and that run on the western side of the city.
- 1720-1. You believe that it would satisfactorily distribute the passengers coming in from the suburbs? Yes, where they would require to go.
1722. And that is made clear from its contiguity to the Circular Quay and the main business parts of the city? Yes.
1723. Your second point is that you could readily connect the eastern suburbs with it? Yes.
1724. You are borne out in that by a contemplation of the Government schemes? Yes. What is called Sir Henry Parkes' scheme was afterwards adopted in the Works Department. I take no credit for suggesting a scheme connecting Paddington, Waverley, and Woollahra. I may say that my original circular railway returned up through Woolloomooloo, and through Bourke-street, Surry Hills. That was the railway I proposed twelve or fourteen years ago.
1725. Your third point is that such a line as that, with the utilisation of the property near Belmore Park, will make the city more beautiful rather than less beautiful? It will improve the city rather than disfigure it, and at less actual cost.
1726. Your fourth point is that from or adjacent to Wynyard-square or Charlotte-place the best approach to a bridge to North Shore could be commenced;—it fits in with that? Yes; it fits in with that, because I would not make any portion of this city railway of steeper grade than 1 in 50. I understand that proposals have been made for inclines of 1 in 30, but as the Railway Commissioners have spent money all over the country in reducing the grades it would be a retrograde step to contemplate any portion of this railway, or the North Shore railway, being steeper than any other grades in the country.
1727. Your last point is that you believe that the result obtained will be commensurate with the amount of money spent? If the estimate is made out on a businesslike basis it will be found that this scheme will not cost any more for extra accommodation than the Hyde Park scheme costs for limited accommodation.
1728. With regard to your resales, they are all made perfectly clear by the plans you have put before the Commission? Yes.

FRIDAY, 26 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
	FRANK FARNELL, Esq., M.P.

Edward Maxted, Manager of the Sydney Benevolent Asylum, sworn, and examined:—

1729. *President.*] What are you? Manager of the Sydney Benevolent Asylum.
1730. The building at present situated immediately to the north of Devonshire-street is under your control? Yes.
1731. Will you explain to the Commission the operations of that institution? Yes. The objects of the Benevolent Asylum are:—
1. The object of its original foundation, namely, to relieve the poor, the distressed, and the aged, by affording them assistance in the form of provisions, &c., and small sums of money to assist in payment of rent, &c.
 2. As a receiving asylum for homeless and deserted children and foundlings, and for children awaiting removal to other asylums.
 3. As a receiving hospital for sickly mothers with infants, who cannot be received in the infirmary or other hospitals, or who may be suffering from the diseases of women.
 4. As a lying-in hospital.
 5. As a training institution for midwives and nurses.
 6. As a school for practical instruction in midwifery, in affiliation with the University of Sydney.
 7. Department for treatment of midwifery cases of poor women in their own homes.

E. Maxted.
26 Mar., 1897.

- So there are seven divisions of work in connection with the Benevolent Society.
1732. Before entering into the question of the use of the institution will you tell the Commission your revenue, and how you derive it? The revenue of the Benevolent Society is obtained from general subscriptions by the public, from midwifery fees, from Government subsidies, legacies, and from interest on invested moneys. Those are the principal items of revenue.
1733. And the amount? Last year the revenue amounted to £19,000.
1734. How much of that was contributed by the Government, and how much was received from the public? £14,000 was contributed by the Government, and the balance was made up in the way I have mentioned; but I may state that last year was a special year. The Society undertook the relief of the unemployed, and the Government paid wholly for that work, so that there was, I may say, a special revenue of something like £4,000 that we would not get under ordinary circumstances.
1735. Well, give us an idea of what you regard as a fair average amount. As it appears at present, the contribution is about £3 by the Government to £1 received from private sources? Yes. £4,000 received last year as a special subsidy from the Government cannot, of course, be regarded as ordinary revenue, and therefore the £19,000 received last year is not a fair index of the general revenue of the Society, which is approximately £15,000, or, in other words, roughly £3 contributed by the Government to every £ received from private sources.
1736. With regard to all your objects excepting the first one—the relief of the poor—is it necessary that you should have so central a position; the distribution of alms might perhaps require a central situation

E. Maxted.

26 Mar., 1897.

situation such as you have, but excepting that particular work these seven appear to be purposes that could be discharged just as well a couple of miles away? No, I think not. For instance, take the lying-in hospital. Large numbers of women are brought to the doors of the asylum in labour. They are confined probably within half an hour, or a few hours, of admission.

1737. How many women are confined there in the course of a year? Approximately, I should think, in that way about one hundred and twenty.

1738. How long does a woman generally remain there? She comes in destitute, and after confinement we endeavour to get a place of service for her as soon as possible.

1739. How long would she remain there? It depends on circumstances; sometimes a month, sometimes six. If you take an average I suppose the time would be six or eight weeks.

1740. She would be able to be removed in a month? After fourteen days in the ordinary course.

1741. You say that there would be perhaps one hundred and twenty women who would come there in actual labour; and therefore to take them a greater distance would be an important matter, and, dividing the twelve months equally, you would have about six beds occupied at the same time by women of that class? I think about twenty beds.

1742. It is possible at the end of a month to remove them to anywhere else, where they could wait as well? In the ordinary course it is possible to remove them after a fortnight; a month would be the full limit.

1743. Now, with regard to the third object? That is "as a receiving hospital for sickly mothers with infants." It is not necessary, absolutely, to have a central position for that.

1744. You would not require to be central in connection with object No. 2? You would want a central position for foundlings.

1745. To which they could be taken? Yes.

1746. They do not require to live at a central institution? No; it is better they should not live there, on account of health. They want more fresh air. I have in my spare time, during a long period, compiled a history of the institution, dating from 1813, when it was under another name. In 1818 it was founded by Governor Macquarie as an asylum for the poor, blind, aged, and infirm, and the present building was erected in 1820, and I have written a complete history of its operations to within a few years back. I have it in a printed form, and will forward a copy to you.

1747. In regard to objects 1 and 4 there is some reason for having a central position? Good reason for having a central position.

1748. But with regard to the other objects a central position is not absolutely essential? Quite so.

1749. And in regard to object No. 4 only a limited number of the cases that would come under that head would make a central position absolutely essential? Those are the labour cases; but after a time they might be removed to where there are healthier surroundings.

1750. The matter resolves itself into this: The purposes of the Benevolent Asylum could be met by having a central position where alms could be distributed and a limited number of labour cases—say, a dozen—could be dealt with at the same time, and the residue of the work that is carried on in the present institution could be done at some place not quite so central? That would be possible. But it is the opinion of the Board of Directors that it is not desirable to do that. The opinion of the Board is that the site of Ultimo House, at Ultimo, which is centrally situated and retired, on a hill, would meet all the combined purposes of the Benevolent Society. There would be opportunities of proper classification by shutting off the different departments by means of high walls and so forth, and if that property were resumed the Board of Directors consider it would meet all the purposes of the institution, provided that the Government were to supply the necessary funds by resuming the present site and were to grant compensation under the Land for Public Purposes Resumption Act.

1751. It has been stated in a letter received by Mr. Brunker from your President that your Society requires £73,333? That was merely an average estimate.

1752. And as much more as you could get? Yes. It has been variously estimated at something like £97,000, £65,000, and £57,000.

1753. You have no title-deeds, I believe? A title was prepared in the year 1849. It was in the Colonial Architect's Department, and it was seen by a former manager of the institution, who has sworn an affidavit that he has seen it, but we have not been able to trace it since. It was prepared, but not signed.

1754. You believe then it was the intention of the Government to issue it, but it has never been issued;—that is your position? Quite so.

1755. And you are in possession? Yes, since 1820.

1756. Have not the same Board of Directors under their control a large building at Randwick where 700 people could be housed? No; some land was granted conditionally that the Society should erect a building and remove some of its inmates there. It was dedicated to the institution for that particular purpose, and it is a grant the deeds of which we applied for fourteen years ago, but a reply was sent to the institution to the effect that the original conditions had not been fulfilled, and that the land had been leased or loaned to the Randwick Asylum for grazing purposes.

1757. Still, your ownership of your institution is simply an incidental ownership—the State owns it after all. In fact I may say that both institutions are State properties to all intents and purposes, but are vested in your Board for management? The Board of Directors dispute that; they claim absolute ownership of the Benevolent Asylum site.

1758. Well, they are really the possessions of the people of the Colony for general purposes? Yes; the purposes of the Benevolent Society and the Government are practically one so far as the interests of the poor are concerned.

1759. Therefore we have two institutions, one working at Devonshire-street—which you have already described—and another lying almost empty a few miles away at Randwick? There are no buildings at Randwick.

1760. There is a large industrial school? That is the Randwick Asylum—a private Society altogether. There are 49 acres of land at Randwick that have not been built upon at all.

1761. I was not speaking of those 49 acres, but of the building that has been erected at Randwick for the children? That has nothing whatever to do with the Benevolent Society.

1762. Would it serve your purposes? To some extent.

1763. All these purposes, except 1 and 4? Not so well as the property at Ultimo; in fact I think it would be inconvenient, on the whole.

1764.

1764. Does it not strike you, that if the community has a large building that must have cost many thousands of pounds, and was probably built by the State, it will be a wise thing to use that building? I think it would be wise to use it for purposes for which it would be suited; but it would not be suited for all our purposes. The work would be split up, whereas now it is concentrated. If the various departments of the Society were separated that would be objectionable.

E. Maxted.
26 Mar., 1897.

1765. Supposing that you had a place at your present position in which there were twelve beds, and also had accommodation there where alms could be distributed, and then some suitable accommodation elsewhere to deal with the other cases which you have enumerated under the several heads, could not your institution go on well enough;—I presume you would say, "Yes, if it is at Ultimo"? I do not think it is wise to split up the departments of the institution. I think we could have proper supervision at Ultimo.

1766. But apparently the State would have to provide £73,000 to give you that accommodation, whereas all the accommodation you require for the distribution of alms and certain other purposes could be afforded on 200 feet or 300 feet of land at the present site, at a cost of £3,000 or £4,000;—if it were possible to give you proper accommodation elsewhere for those cases that need not be dealt with on a central site you could surely carry on your business? Not so well, I fancy.

1767. Will you tell us why? Because we would have separation of the various departments of the institution, and would require more supervision, and would not have the work so well in hand. We would have to go to one district for one class of work, and to another district for another.

1768. *Mr. Lee.*] Surely in the present building the accommodation is very limited? Yes; it is very limited, and very bad altogether. That is why we want other premises.

1769. *President.*] You believe the present building is unsuitable? Yes, quite.

1770. It is about seventy years old? Seventy-seven. In case a single woman comes in for her first confinement we have to place her perhaps with a woman who has been in four or five times. That is objectionable on moral grounds. Besides, the children whom we shelter there, waiting to pass through, are constantly in view of pregnant women. That is also objectionable.

1771. This all proves a change is necessary? Certainly.

1772. *Mr. Lee.*] Surely under modern conditions those are cases that should be treated in a more private place than in the centre of a great city? It would be more private at Ultimo.

1773. I should like you to look at the question from this point of view: If the present insufficient premises should be required for railway purposes, and you have to move, what will you do then? We have already asked the Government to take the place and give us compensation and enable us to put up another building at Ultimo.

1774. That narrows it down to what the President says—that all your business could be just as well done there? Much better.

1775. *Mr. Wright.*] When you speak of Ultimo, I suppose you mean the old Ultimo House? Yes.

1776. *President.*] Your Board contemplates removing to Ultimo? If we can get the Government to do what the Board require.

1777. *Mr. Lee.*] Is this exactly the position: The directors are quite willing to give up the present site; all they wish to be sure of is that the Government will either provide them with another and a more suitable site of equal value, or will allow them compensation for this site, and then they would purchase another for themselves? That is precisely the position the directors take up.

1778. *Mr. Clarke.*] Are you aware what title the Randwick Asylum holds? No; I do not know what their position is.

1779. Is it not the same as that of the Benevolent Society? I have no idea.

1780. The Randwick Asylum is a semi-Government institution? At the present time they do not get any Government subsidy, but I do not know what their position is.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

1781. *President.*] You wish to make a statement in regard to Mr. Selfo's evidence, which has been brought under your notice? Yes. In my previous evidence it will be remembered that in my opinion the cost for land resumption for any line passing through the city from Redfern to Circular Quay, where the land is privately owned and occupied, would not be less than £1,750,000. I have explained that such a valuation was, at best, an approximation. I have looked carefully into Mr. Selfo's scheme, and, taking that as the route, I see no reason to alter my opinion, and believe to provide room for even four lines of rail and the necessary station accommodation (with respect to which Mr. Selfo gives no definite opinion regarding area or exact location, one of his sites being now occupied by the new markets, which would necessitate resumption, I presume, towards York-street) would certainly bring it up to these figures for an open cutting. The Commission will of course understand that figures of this kind are only given as an approximation of what it would cost to resume. In any resumption cases the total amount which the Government will have to pay is never known till their conclusion, and interests which appeared to be of little moment prior to resumption frequently become expensive ones before the case is settled. In verification of my valuation I would direct the Commission's attention to evidence given by Mr. Foxlee, based upon figures furnished apparently by the Government Valuator, which are almost in accordance with mine. Of this valuation I was not aware until asked by the Secretary to inquire into the matter. The question of the resumption and resale of the locality known as "The Rocks" may reduce the figures somewhat, but my experience with regard to the resumption and resale by the Crown is that it is not usually attended with profit.

S. E.
Perdriau.
26 Mar., 1897.

1782. *Mr. Lee.*] Do you think that £30 per foot for the 30 acres proposed to be resumed at the Rocks would cover the cost of resumption? A very large portion of that property is used for residential purposes, and I do not think that on the average perhaps it would cost more than that, provided you did not take the George-street frontage.

1783. But have you figured out what taking those 30 acres means? No; I have not gone into the matter. I know the locality well, and that the tenements are of a very poor character.

1784. But 30 acres of the city anywhere must include an enormous number of buildings? Yes; but I think that is one of the inferior portions of the city.

1785. That is very true, but 30 acres is a very large area to resume in the city? Yes, it is indeed.

1786.

S. E.
Perdriau.
26 Mar., 1897.

1786. And I presume that it would be almost impossible at the present moment to fix a price per foot by way of valuation for 30 acres of land in that locality? I do not think it would be very difficult.

1787. You would first of all have to make frontages to the various properties and treat them all as frontages irrespective of their depth? Yes.

1788. And I presume that the depths are not uniform? No.

1789. Therefore you would have an enormous area to deal with? Yes.

1790. Do you think that £30 per foot would cover the cost of resuming property in that part of the city? I really do not think it is worth very much more. That is of course for the land only.

1791. Thirty acres of land in that part of the city includes the rocks or slums, but it also includes a number of very valuable buildings. It is an enormous area in the city, and it is one mass of streets, and I am sure that you would be astounded when you came to measure up the frontages? There is a great deal of frontages. That is the oldest portion of the city, and in those days they divided the land, as they did in London, into very small allotments.

1792. If you were to figure out the frontages included in those 30 acres, and take it at £30 per foot, what do you think the grand total would be? I should like to measure it first.

1793. Taking the value of the land on the basis given by Mr. Selfe, what is your opinion as to the value of the buildings on those 30 acres? I have not looked at them carefully, but the majority of them are certainly not first-class buildings.

1794. *President.*] Have you any further information to give us now? The question asked by Mr. Fegan relative to tramway and rolling-stock affected by the extension of the railway into the city will be answered by Mr. McLachlan on behalf of the Railway Commissioners. I think that the only portion of the tramway that would be rendered unnecessary would be the curve from the station to the present main tramline.

1795. And the railway would relieve the Elizabeth-street traffic a little? It would relieve the Elizabeth-street traffic a good deal, and that is very necessary.

1796. Have you anything else? Yes; a statement Mr. Lee asked for—a statement of the value and present occupation of that block of the city of Sydney bounded by King, Elizabeth, Market, and Castlereagh streets: The area of this block is about 1 acre 3 roods 12 perches. The High School property, together with that portion of the block extending thence to Market-street, comprising an area of 1 acre 1 rood, belongs to the Crown; it was resumed in November, 1880, at a cost of £88,940. The High School, said to be at least forty years old, is a two-storied brick building about 100 feet long, by 47 feet wide, with iron roof, and was formerly known as St. James' School. The grounds have frontages of about 177 feet to both Elizabeth and Castlereagh streets, with a through depth of 155 feet. After the resumption some of the buildings were demolished and a galvanised-iron school-room erected, occupying about 120 feet of the Castlereagh-street frontage, adjoining the High School ground on the south. The shops upon the remainder of the 1 acre 1 rood remain much as they were when resumed; they front Elizabeth, Market, and Castlereagh streets. The gross rental now received by the Government for them is £25 5s. per week. I have already given evidence before the Commission relative to the value of the remainder of the block under description—2 roods 12 perches—lying between the High School and King-street, showing that the resumption of the same would probably cost £100,000. At the time of the resumption the High School building was valued at £5,500. I have here a valuation of that building by Mr. Vernon, the Government Architect, which is as follows:—

In accordance with the instructions of the President, I have the honor to report I have made an approximate valuation of the High School and the iron building adjoining it in Elizabeth and Castlereagh streets.

I value the buildings as at present as follows:—

The brick buildings, including walls, closets, sheds, pavings, &c.	£5,300
The iron buildings, fences, pavings, closets, &c.	2,100
	<u>£7,400</u>

The brick building is old and inconvenient, and the wood requires repairs. The closets and fencing are old and very much out of date.

To provide similar accommodation in new buildings would cost about £12,000 or £13,000.

The value of Castlereagh and Elizabeth streets property in that locality is about £70 or £80 a foot.

1797. It would come to about £90,000 an acre? Yes.

1798. If you take that as a fair index of the value of city land, and if 20 acres are required for a running road down to the Quay, you have to reckon £1,800,000 for your running road, if you have an open cutting—that is, without taking severance into consideration? Yes.

1799. That pretty well agrees with what you have previously said? Yes, I think it agrees pretty well with it. Disruption of business is also an important item.

1800. Have you any other information? The number of passengers by the railway tram has already been stated before the Commission by Mr. McLachlan. It is 3,000,000 per annum. I understand that the North Shore tram traffic is as follows:—Cable, 2,083,496; electric, 388,686.

1801. But those two trams are virtually the same service? Some passengers would no doubt go on both trams.

1802. *Mr. Humphery.*] The electric tramway is an extension of the cable? Yes, from Bridge-street, North Shore, to Mossman's Bay.

1803. *Mr. Wright.*] The cable tram carries practically the whole of those passengers? There are many who travel on the electric tram who do not go down to Milson's Point.

1804. *President.*] Anything else? You asked for the number of passengers in and out of Milson's Point Railway Station. Mr. McLachlan says he will supply that information.

TUESDAY, 30 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.
 The Hon. JAMES HOSKINS, M.L.C.
 The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
 The Hon. DANIEL O'CONNOR, M.L.C.
 HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
 JOHN LIONEL FEGAN, Esq., M.P.
 THOMAS HENRY HASSALL, Esq., M.P.
 GEORGE BLACK, Esq., M.P.
 FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

George Pile sworn, and examined:—

1805. *President.*] You have been in business in Sydney for a considerable number of years? Yes.

1806. Do you desire to make a statement in regard to the subject under the consideration of the Commission? Since I first moved in this matter—and that is fully twenty years ago, possibly more—what I might term the axis of employment, that is, the centre of employment for the majority of the people who use the railway to come from their homes in the suburbs to their places of business in town, has been considerably changed. When I first interested myself in the first City Railway Extension League I considered that Pitt-street was the centre of employment; that almost as many suburban residents were employed at places on the eastern side of Pitt-street as were employed on the western side; and I had a plan prepared showing a suggested route for an extension of the railway under Castlereagh-street. Since that time, however, the axis of employment has shifted greatly to the west, and from Market or from DrUITT street on to Bridge-street, or even further, more people have their offices and places of business to the west of George-street than to the east of it. I should say that the centre of employment is not in any case to the east of York-street, and if you want the city railway to give the greatest convenience to suburban residents, for whose benefit chiefly it would be made, I think you would serve most people by taking it somewhere along the line of York-street. All the large drapery warehouses in the town are in York and Clarence streets. That part of the town I might call the St. Paul's churchyard of Sydney. All the produce trade of Sydney, which is enormous, is done in Sussex-street, and most of the shipping, or at any rate sufficient shipping to give employment to a very large number of men and clerks, comes to Darling Harbour; while a very large number of people are employed at Pyrmont, which is a rapidly-growing manufacturing centre. On the other side of York-street we have George-street, where the shops do chiefly a retail business; Pitt-street, where there are a number of offices; Elizabeth-street, in which a good number of solicitors have their offices; and Phillip-street, where there are a number of Government offices. In these places there are not so many people employed as in the places of business west of George-street.

G. Pile.
 30 Mar., 1887.

1807. By what route would you extend the line? In giving evidence on this subject before a former commission, I suggested that the railway should commence at Dawes Point, to the west of Harrington-street, and that it should go underneath York and George streets. Unless you took the line very largely underground the cost would be so enormous that it would be idle to ask Parliament to sanction the work. If the Government are not prepared to meet the expense of constructing this line, they had better be content to bring the railway as far as Belmore, and there connect it with a good tramway system.

1808. Do you regard a connection with the waters of the harbour as of any value? We have that connection now at Darling Island.

1809. Do you believe that that western connection will be sufficient? I am inclined to think that the cost of taking the railway to Dawes Point, which would enable a connection to be made with Circular Quay, would be so great that the suburban residents might be as well served by a complete and efficient system of tramways.

1810. But you would advocate the extension of the railway to Dawes Point if the scheme could be carried out for a reasonable sum? Yes.

1811. You are speaking now only upon general principles; you are not prepared to go into details in regard to this proposal? On a former occasion I made some calculations in regard to the cost of resumptions, which I put down at over £600,000, and careful inquiries into the cost of tunnelling, and so on, made me estimate the cost of the whole work at over £1,000,000.

1812. *Mr. Roberts.*] Where would you propose to have the principal station? I think that the head passenger station should be between Charlotte-place and Argyle-street, somewhere near the southern end of Wynward-square.

1813. Would the station you speak of be sufficiently large to do the work of the present Redfern station? In my opinion a railway into the city is only required for the suburban traffic, not for long-distance trains. A person going 200 miles into the country could take his luggage in a cab up to Redfern.

1814. We have it in evidence that the accommodation at Redfern is at the present time not sufficient for the proper conduct of the traffic there, and that it is absolutely necessary for the safety of the public that that accommodation be increased? Ample ground for a station might be got at the place which I suggest. Between Charlotte-place and Dawes Point you could, with a little resumption, get a piece of land nearly as wide and a good deal longer than the station-yard at Redfern.

1815. Would you resume the whole of the locality known as "The Rocks"? I would not take the whole of that part of the town, only a portion of it. There is a large piece of land there on which are built small low houses, which is not very valuable. Then, too, you could reclaim largely.

1816. Where would you reclaim? To the east of Dawes Point, where Pile's or Cunningham's wharf used to be, and where the boatsheds are now. That part of the harbour is not put to much use at the present time. I have examined the whole of that ground well, and I know that there are a good many acres there. The length of the portion of which I speak would be more than a quarter of a mile; in fact, nearly half a mile.

1817. *President.*] In estimating the cost of resumption at £600,000, did you propose the resumption of so large an area as 10 or 12 acres? I do not recollect the area which I proposed should be resumed. My estimate was based on the value of land per foot, extending from Charlotte-place. Of course, a portion of the ground to be taken would be comprised in streets. You would take much of Gloucester and

G. Pile.
30 Mar., 1897.

Cambridge streets. I had the levels taken, and I find that they would suit. It would be rather low at Argyle-street to take the railway under there, but, at the same time, you could do it.

1818. Your scheme then does not differ very widely from part of that of Mr. Norman Selfe? My original suggestion was that the line, starting from Redfern, should go between Pitt and Castlereagh streets as far as Goulburn-street. Goulburn-street would have to be closed, because the levels would not suit, and you would have to go under Liverpool-street. Since I made that suggestion, several valuable buildings have been erected in that part of the town, including the very expensive market buildings in George-street. I originally proposed to take the railway under the site of the markets.

1819. *Mr. Humphery.*] You propose to resume the whole of the land between Charlotte-place and Dawes Point. Would not that render necessary the closing of that part of George-street which merges into Fort-street? The line would cross George-street somewhere about where Union-street comes in—a little to the west of Campbell's gates. You would bridge that part over.

1820. So that the shunting operations would take place on overhead bridges? The trains would pass underneath iron viaducts.

1821. You would not close any street? Several streets would have to be closed—the lower portion of Gloucester-street and Cambridge-street, for example—and some little lanes. You would also have to stop Goulburn-street between Castlereagh and Pitt streets.

1822. *President.*] Adopting your alternative system, where would you propose to extend the railway? The Government have already tramways running along Elizabeth-street as far as Belmore Park. These tramways I believe they intend to run on the electric system in future. Parliament has also voted money for a line of electric trams down Harris and George streets. I think that a tramway should also be made along Kent-street, from its lower end. Such a tramway would serve the people engaged about Kent and Sussex streets and on the wharfs.

1823. But where would you fix upon as the best site for a railway station? I would take part of the Benevolent Society's grounds, and make Pitt-street from 80 to 100 feet wide, as far as Hordern's refreshment-room. I would also widen Belmore-road to the same extent, and then I would recommend that the railway terminus should be moved from Devonshire-street to Belmore-road. The land taken near where the Female Refuge now stands could be used for a cab-stand, while part of the Benevolent Society's ground could be used for offices connected with the railway.

1824. That arrangement would bring Redfern railway station a quarter or half a mile nearer the city? This morning I estimated the distance at about 30 chains.

1825. How would you extend the tramways from this new railway station? The Government have already a tramway along Elizabeth-street. The Botany tramway turns down Devonshire-street, but I should recommend that Castlereagh-street South be continued to join Elizabeth-street opposite Toohey's brewery, and that the Botany trams should go along that new piece of road. I understand that the Railway Commissioners contemplate removing the western traffic into George-street as soon as the George-street line is finished, leaving Elizabeth-street for the eastern traffic. I would advise that the railway trams, which now go along Elizabeth-street, should go along Elizabeth-street as far as Toohey's brewery, and turn down opposite the proposed new station. I would also suggest that the trams going along George-street should turn round by Hordern's, and have their terminus in Belmore-road, opposite the new station. The Kent-street tramway I would take up Liverpool-street to join the eastern line. Anyone coming from Kent-street and wanting to get to the railway could get out at George-street and take another tram, while if he lived in the eastern suburbs he could go straight home in the same tram. I think that in this way the convenience of the citizens would be better served than by the construction of one line of railway through the city. I do not think that the Commissioners' scheme considers the convenience of a large number of the citizens at all.

1826. Are you opposed to the use of Hyde Park for the purposes of a railway station? I do not think the citizens of Sydney are much interested in that proposal. Hyde Park is used most by country people who are staying in Sydney for a time.

1827. *Mr. Hoskins.*] It has been stated in evidence by the railway authorities that if the railway were extended into the city a track 100 feet wide would have to be made to accommodate six lines of rails. Can you give the Committee any idea as to the cost of making a tunnel 100 feet wide through sandstone? No. In the estimate which I mentioned just now I allowed for a roadway 40 feet wide, which I was told by a railway expert at the time would be ample.

1828. What did you allow for the cost of tunnelling a road 40 feet wide? Ten shillings per cubic yard.

1829. Have you calculated the difference in cost between a tunnel and an open cutting? Well, a great deal of the open cutting might be through clay. It all depends upon the depth. In any case if you can blast you can get out mixed stuff—sandstone and clay—at 1s. 3d. a cubic yard.

1830. You consider open cuttings much cheaper than tunnelling? Yes; but you could not have an open cutting through George-street.

1831. Have you considered that if a tunnel were taken through Sydney the Government might have to defend a great many actions for damage alleged to be done to the foundations of houses by vibration and in other ways? If the line was properly packed there would be very little vibration. I have travelled for many years past the School of Arts at Newtown, which was so flimsily built originally that before it was finished the walls tumbled in; but notwithstanding the immense traffic near there now the vibration is not felt.

1832. You know that the London railway companies have had to defend many actions for alleged damage to foundations? I daresay that that is so, but then London is built on clay. I believe you have to go down several hundred feet to get to the solid chalk there.

1833. It has been stated in evidence that to resume a much smaller piece of land than you were talking about would cost £1,750,000? If I recollect Mr. Perdriau's evidence, he was speaking of land in a much better part of the city. I am speaking of land that you can buy for from £10 to £15 a foot.

1834. When the claims for compensation were brought before the Court, evidence might be given to show that this was the best situated land in the city and the most likely to improve in value? I have had a good deal of experience in cases of this kind, and I know that the judges always expect the evidence given to be as to the value of the land at the date of resumption. You cannot go into the box as a prophet.

Edmund Compton Batt (Batt, Rodd, and Purves, Limited, Sydney), sworn, and examined:—

1835. *President.*] You are in business in Sydney as a partner in the firm of Batt, Rodd, and Purves? E. C. Batt.
Yes.

1836. Can you make a statement in regard to the scheme before the Commission? Well, first of all I may say that I do not consider that an extension of the railway into the town by either the eastern or the western route alone will be of any great practical use to the citizens of Sydney. A line following the eastern route would leave the whole of the western suburbs and that part of the town where the people are poorest, and could least afford to pay additional fares, absolutely without better communication than they have now, while a line following the western route would leave the whole of the eastern suburbs practically unsatisfied. From measurements that I have made many times I am confident that a station at Hyde Park would be as much out of the way for most people on the west side of George-street as the present station at Redfern. 30 Mar., 1897.

1837. *Mr. Hoskins.*] But suppose the George-street tramway is made? Well, a tramway means another fare, and involves the changing of vehicles.

1838. *Mr. Humphery.*] Do your remarks apply to the proposed terminal station at Park-street? Yes; I do not think that it is necessary to have a terminal station there at all. What I would suggest is a circular railway to serve both the eastern and the western parts of the city. The trains would then run in opposite directions round the city, and they would pass through Redfern as they now pass through any of the suburban stations. This would relieve the congestion of traffic at Redfern, which is caused mainly by the suburban traffic. If the greater part of that traffic were taken away from Redfern there would be plenty of room there for a terminal station. People going long distances—to Melbourne, or back into the country—could as easily get a cab and drive to Redfern then as they do now.

1839. *President.*] The suggestion to bring the line through Hyde Park, parallel to Castlereagh-street, round by the Circular Quay, and back by a route parallel to George or York streets, meets with your approval as a scheme for dealing with the suburban passenger traffic, and you think that people going long distances might start from a central station at Redfern? Yes. That is practically the suggestion which I made to the Railway Commissioners some months ago.

1840. That scheme, if carried out, would mean either very long tunnels or a great deal of expensive resumption? I have been over the route; and some years ago, when a former Commission was sitting, with the assistance of a surveyor, I made out an estimate of the cost of a line on the west side of George-street; but the papers were burnt in the big fire of 1891, and I have now no notes except those taken lately. I do not think that the western extension would cost more than the eastern extension. Any quantity of land is to be got there at a reasonable price, just as on the eastern extension, until you get up to Market-street; towards the northern end there is no land of very high value.

1841. Are you able to express an opinion as to the total cost of resumption or of construction? No.

1842. Do you desire to express an opinion with regard to the question of dealing with goods traffic? No. I quite agree with the Commissioners that the narrow neck of land at the Redfern tunnel is a great source of danger and inconvenience; but I do not see why this should not be remedied by making some alteration in the Mortuary arrangements and resuming a little land there. The cost, I think, would be immaterial. I would either resume St. Paul's church or take a piece of land on the other side of the line, whichever suited the purpose best. If this were done I think you would have all the room you wanted for the rearrangement of the line now going under George-street, and to give access to the Redfern yard. I remember speaking about this matter to the Commissioners years ago, and I hold that with this improvement the Redfern yard will be big enough for all the traffic for the next 100 years, that is if the passenger traffic is taken on into the city in the way I have suggested.

1843. A circular line through the city would save shunting? Yes. I do not suppose they would have to interfere with the trains once a month, unless to take off an extra or defective carriage. I was asked the other day what I would do with the through trains under this arrangement. I say that the express traffic must stop at Redfern, and the fast trains when they come on to the city lines must go round the circle just like the ordinary suburban trains.

1844. *Mr. Humphery.*] Is it your view that it is necessary only to make provision for the ordinary suburban traffic, which can be done by the construction of a line down the west side of George-street, turning round at the Circular Quay, and coming back on the east side of George-street, under Hyde Park? Yes; without resuming any city land at all. For a large central station I have seen it stated that 20 or 30 acres will be required; but I do not think so much land will be wanted. The Commissioners have already shown us that a large area is not required for a suburban station, and all that would be wanted on this line would be a platform from which the passengers would walk on to the trains. People going long distances would have to drive with their luggage to Redfern.

1845. *President.*] Do you desire to express any opinion in regard to the goods traffic? I think that is a matter altogether apart from the present scheme. The carrying out of the scheme I suggest would not interfere with any project for dealing with the goods traffic. I might add that in this matter I am not pledged to any particular detail of route; I am simply speaking of the scheme as a whole. I have seen several estimates of the approximate value of the land to be taken; but I do not think any of them are correct, or that correct estimates can be made until it is determined exactly where the line shall go. In my opinion the cost of the western route has been very much over-estimated. I believe that it would be much less than people think.

1846. *Mr. Wright.*] Are you acquainted with the railway facilities of other cities? Yes. I have been all over the Continent, and know all the railways in Great Britain.

1847. Is there any city in the world where everybody has a railway station within a few yards of his door? No; and in London, Glasgow, and Paris I know of no main-line stations except at the outskirts of the city.

1848. A twenty minutes' walk would take you from one end of Sydney to the other? I would not say that; but Sydney is situated on a narrow peninsula.

1849. Would not a railway down the middle of the city serve all purposes? Not so well as a railway on both sides of George-street.

1850. But with a railway down the middle of the city would not the commercial people of Sydney be as well served as the commercial people in other parts of the world? No. They had to build the underground railways in London in order to take people from their business-places in the city out to the suburbs in which they resided, and that is what we want here.

1851. But London is a very much larger city than Sydney? Yes, I admit that; but we want something like the Metropolitan railway to supply the wants of our citizens. It has been a crying shame that for years

- E. C. Batt.
30 Mar., 1897.
- years, while we have been multiplying our tramways, which I think are of comparatively little use, we have done nothing to carry out a comprehensive scheme to provide for the city traffic.
1852. Do you think that the circular railway you speak of would not cost more for land resumption than an extension requiring a large central station? I think that more land would be required for a central station than for a circular line. I saw by the newspaper that it has been estimated that a line going down the western side of the city would require the resumption of 20 or 30 acres of land; but I think that ridiculous. I fail to see why you should require a tract of land more than 30 feet wide.
1853. The Commissioners say that for a terminal railway they would require six lines of rails, and for a circular railway four lines? Well, they run the London railways with less than four lines.
1854. You think that a double track would be sufficient for a circular railway? Yes.
1855. And that for intercolonial and interior traffic Redfern should be the terminal station? Yes.
1856. You contend that this accommodation is absolutely necessary to meet the requirements of the city traffic? Yes. To show how the traffic has grown I may say that I can remember when one 4-horse bus was sufficient to carry the passengers arriving at Redfern by any particular train, while now five omnibuses and a double tram are sometimes insufficient, independent of those walking and using other vehicles.

WEDNESDAY, 31 MARCH, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P., (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
CHARLES ALFRED LEE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Edward William Knox, sworn, and examined:—

- E. W. Knox.
31 Mar., 1897.
1857. *President.*] What evidence have you to offer? Evidence more particularly with regard to amalgamating the passenger and goods traffic.
1858. Are you aware of the proposal of the Railway Commissioners to take a portion of Hyde Park for a railway terminus? Yes.
1859. Do you approve of this? No; I am altogether opposed to it, on the ground that no one has the right to dispose of the Park in that way, but principally because I think there is no justification for moving the railway terminus into that position in the city. The cost would be very considerable. The station could not at any time be anything but an eyesore, and it would be, in fact, moving the station—which we may now regard as central—to a position where it will be more or less eccentric, so far as the resident population are concerned. In other words, I think that, for the long-distance traffic, between the present station and the Haymarket is, and is likely to be, the most convenient spot for a central station.
1860. You propose to have your central station so that no railway communication shall come into the city a distance further north than the Haymarket;—you propose to stop all passenger traffic there? I said the central station.
1861. How then do you intend to serve the city? I did not give any consideration to that question, because I think that traffic is amply provided for by the present and projected tramway service, and provided for in a way which will be much more efficient than a railway service could be, as no railway will have stations at the corner of every street.
1862. What do you mean by the Haymarket? Belmore Market stands on the site of the old Haymarket.
1863. What land do you propose to use for your terminal station? I think the station might be extended northwards, or, if it were decided to build a new one, it might be placed in the Belmore Gardens or their immediate neighbourhood.
1864. Your idea, then, is to come as far north perhaps as Belmore-road? Not further.
1865. Because if you come further you have the same objection with regard to Belmore Gardens as you have with regard to the Park? I thought the Belmore-road was on this side of the Park.
1866. It is on the southern side of the Park? I do not put Belmore Gardens on the same footing as Hyde Park.
1867. But still you recognise the same principle exists? Not altogether; because I think, if the station be made on the Belmore Park, almost a similar area might be added to the Prince Alfred Park from the present railway-yard.
1868. Why do you see any reason why Belmore Gardens may be used for railway purposes and not a part of Hyde Park? Because if you give the Railway Department a footing in Hyde Park the whole of it will be occupied by shunting-yards in ten years. It would be found when a quarter of it was gone that the Park would be disfigured with buildings and advertisements of all descriptions, and the general feeling would be that having unwisely let a portion of the Park slip the rest of it might just as well go.
1869. You think that although the public feeling might be strong in the first instance with regard to the first quarter, the other three quarters might go easily? So much damage would be done that it would not be worth while preserving the rest.
1870. And you take the whole of Belmore Gardens at once? There is a street railway through the Belmore Gardens at the present time.
1871. You urge then that we should bring the Redfern station as far as Belmore-road, and from there serve the passenger traffic of the city with a tram service such as is projected, with such alterations as may be necessary? Yes.
1872. You do not think it a material thing that the 20,000 or 40,000 passengers from the suburbs who use the railways daily should be asked to trans-ship, as it were, into trams at the site you suggest? I think that wherever you put the station there must always be a certain amount of vehicular traffic to the destinations of the passengers. In other words, if you land a man, whose office is at the Custom House, at Hyde Park he will want some means of conveyance, especially if the weather is wet.
1873. And you would give him a tram? I would, because he would have the option of getting off at any street corner he wished.

1874. Then it would require to be a very different tram service from that in existence from the railway at present? I do not know why. E. W. Knox.
31 Mar., 1897.

1875. Do you think that is satisfactory? But there is another tram service which is to come into existence through George-street. I used the words "present and projected" when I commenced my statement.

1876. Do you think any suburban passenger loses half an hour a day—a quarter of an hour on each trip—because of the absence of a city railway? My opinion is that the residents in the southern and western suburbs are carried into town on much better terms than are the residents of any other suburbs, and they are carried at the expense of residents of the other suburbs. I know of no reason why the man who lives at Double Bay should pay twice as much for his fare into town as the man who lives a further distance in the other direction, both being carried in vehicles run by the Government.

1877. What is the fare from Double Bay? Threepence.

1878. How far is Double Bay from Sydney? Two miles to the corner of Pitt and King streets.

1879. How far is it from King-street to the railway station? I do not know; but I have just been informed by a man living at Summer Hill, 6 miles from Sydney, that it costs him 3d. a day to get in by train and tram.

1880. Losing sight for the time being of the comparative services in various parts of the city, you believe there is no justification for the extension of the city railway much beyond the present terminus? I think, when the question is fairly considered, that it will be found that the extension of the city railway much beyond the present terminus cannot pay, taken by itself.

1881. The Railway Commissioners are of opinion that it will? I thought they said that if they were given Hyde Park, and could make the central station there, they could make interest on the cost which would have to be met.

1882. Your proposal is to allow the railway system to terminate, approximately, at Redfern. In order to get into the city passengers have to pay a fare of 1½d. each. It is probable that they would continue to pay that for any tram service which is given them. Therefore the tram would be doing for a fare of 1½d. a service which the railway should certainly get something from if it lands them (say) at the corner of King and Pitt streets. Why should the railway carry them for nothing? It should not. The passengers would save nothing, because most of them would take some other means of conveyance.

1883. From where? From Park-street. The distance from there to the Custom House is 1 mile.

1884. You say you do not see where the returns will be? I said that when the question was fairly faced the return would be found to be inadequate for the cost of the line.

1885. Because of the presence of the George-street tram and other means of communication? Yes.

1886. Are you aware that the Elizabeth-street tram cannot be well worked with the present traffic upon it? I know it is very heavy.

1887. And to relieve it of the present railway service you would provide a more efficient service for the suburbs? But the probability is that the George-street tram will take almost the whole of the railway service.

1888. Do you think a passenger from Summer Hill or any other suburban station would get out at Redfern and enter the electric tram running along George-street, or would continue to King-street and get out there and walk the distance separating the two systems, it not being much more than 200 yards? I understood that the proposal to have a station at King-street was altogether withdrawn. In wet weather the bulk of the passengers would unquestionably leave the station at Redfern and take the tram.

1889. Even if the railway station were at the junction of Elizabeth and King streets? Yes.

1890. You believe that George-street is more centrally situated? It goes without saying.

1891. The question is how much? It would be more central probably for three-fourths of the people. There is a very large office population on the western side of George-street.

1892. Are you aware that there is a necessity for the railway authorities to move from Redfern? I understand it is necessary to provide additional accommodation, which is a different thing.

1893. Are you aware that the Railway Commissioners believe that if the railway is not extended a new station will require to be laid out somewhere about the Benevolent Asylum ground? I have heard that stated. At the same time I do not accept it.

1894. *Mr. Hoskins.*] It has been stated that in extending the Redfern yards southward and in making the yard wider the cost of resumption would be as great as the cost of resuming land in the city? That might be, but I did not suggest that the railway-yard should be extended southward, but northward, over Devonshire-street. You would get no more revenue from it, but you would get additional accommodation at a very small cost. I hold that money expended on a large railway station, with important buildings around it, is money thrown away.

1895. *Mr. Dumphery.*] Is there any other city in Australia where the terminal station for suburban passengers is so far distant from the centre of the city as ours? There is no other large city in Australia which is situated like ours. The business part of Sydney is on a narrow tongue of land.

1896. Is not the terminal station in Melbourne close to what is regarded as the heart of the city? It is at least half a mile from the post office. It is a mile from Goldsbrough-Mort's woolstore, and it is three-quarters of a mile from Parliament House.

1897. How far is the Brisbane terminal station from the heart of the city? The heart of the city of Brisbane is the steamer-wharfs, which are three-quarters of a mile or a mile from the station.

1898. How far is it from the Post Office to the Brisbane station? Probably half a mile. The Brisbane station is quite outside the business of the town.

1899. How far is it in Adelaide? It would be hard to get far in Adelaide from the centre of the town.

1900. As a matter of fact, is not our terminal station for suburban passenger traffic less convenient than the terminal station in any other city in Australia? Not considering the proportion of the traffic which comes by it.

1901. Have you ever lived in the railway suburbs? No.

1902. Would it not be more convenient for the thousands of people living in the suburbs to be deposited at or not far from King-street? Yes, if they were prepared to pay for it; but they wish to be carried to the corner of King-street at the cost of the rest of the community, who I think might well object to that being done.

1903. Is it fair to say that, if we are told by the Commissioners that they are prepared to make an additional charge for transit from Redfern to or somewhere near King-street? But the suburban people ask for a very large expenditure for a central station, which I maintain is not required.

- E. W. Knox. 1904. You think it is unnecessary to make any change beyond providing the additional accommodation which is found to be absolutely requisite for the management of the railways? That is so.
- 1 Mar., 1897. 1905. And that it would be better to spend as much money at Redfern in making the necessary alterations as would be needed to give a terminal station in the city? Yes; if that expenditure is necessary at Redfern.
1906. If we are told that it will be necessary to spend almost as much on the site of the Benevolent Asylum as to bring the railway into Sydney, are you still of opinion that it would be better to spend the money, as suggested, upon the old station site? Somewhere between the present station and the Haymarket.
1907. Although that would not give any greater convenience to suburban-railway passengers than the present station? Yes.
1908. Have you considered the question of the goods traffic? Yes.
1909. Are you prepared to express any opinion as to the desirableness of connecting the railway with the various wharfs of the city? Yes. I would first say that I think the goods traffic and the passenger traffic should be kept altogether apart. Then, as regards the proposal which has been made that the wharfs on the eastern side of Darling Harbour should be resumed, in order that the railway line should be taken along that side of the harbour, I would say I think there is not the smallest justification for such a proposal. The cost would be enormous, and the convenience problematical. There is not now, nor is there likely to be in the immediate future, any unbroken trade between the country and the sea—in other words, there would neither be traffic inwards nor outwards direct between the country districts and the sea, and under those circumstances the wharfs which the Government already control at Darling Harbour are adequate for the present, or for a very considerable expansion of the trade which requires wharfage premises adjacent to the railway line.
1910. Is it within your knowledge that there has been any difficulty in obtaining all necessary wharfage accommodation for our shipping? The wharfage accommodation in Sydney is at present considerably in excess of the trade.
1911. Is it likely to continue so for any long period? I think the present wharfage accommodation is equal to a very much larger trade than we have now, and there is ample room for expansion.
1912. What is your opinion as to the probability of any direct trade, which would not need intermediate handling, reaching the shipping, or passing from the shipping into the country;—take the wool traffic and all our produce, and give a little attention to the coal traffic, and also to the dead-meat traffic? So far as the wool trade is concerned, I think the tendency is entirely towards the sale here of the whole clip. I think the proportion of wool which will go direct from the station to the ship is likely to diminish rather than increase. So far as the coal business is concerned, I think the present arrangements are adequate for a long time to come. The mines on the coast can ship more cheaply than any mine can ship in the harbour, and I think it extremely improbable any further provision would have to be made for coal during the next five years. The only other commodity which is likely to be shipped would be wheat, in the event of the production considerably exceeding the consumption. That may come to pass this year or next year, but I think it unlikely that any considerable quantity would ever have to be shipped, because when you come down to export values on the basis of 1895 prices you will find that the production of wheat is an unremunerative industry so far as the Colony is concerned—in other words, it could only be grown at those prices by the exhaustion of the land upon which it is cultivated.
1913. What about the meat trade? I think it will be found that private enterprise is quite ready to deal with the meat trade if it is secured from Government interference. At present I am disposed to think that private enterprise is prevented from entering on the business by fear of Government interference.
1914. With regard to the produce from the country, your opinion is that it must reach a distributing depot before finding its way to the shipping? Yes; and that applies in the same way to the imports.
1915. And the imports, in the same way, would not be sent direct from the ship's side to the country, but must pass through a distributing medium? Except for a very small proportion.
1916. Have you formed any opinion as to the probable value of all the wharfs which would be necessary to have a complete system of railway communication? The probable value is the probable sum the Government would have to pay for them. I could not say what figure would be asked for the wharfs.
1917. Do you think it would run into millions? Yes.
1918. Do you think, as a commercial transaction, there would be any appreciable return for the outlay which must be incurred in carrying out a scheme of this kind? The only way in which the interest could be paid would be by an increase of the wharfage rate, which would hamper the trade in Sydney in the same degree as the higher wharfage rate in Melbourne hampers the trade there.
1919. Therefore it would be more economical to allow the existing state of things to continue than, by making a connection with the railway, to largely increase the cost of shipping, especially as the Government already holds the larger proportion of the wharfs in Sydney, and can thus keep down the wharfage rates and prevent any combination to raise them;—are you aware that several new wharfs are being constructed in Woolloomooloo Bay? Yes.
1920. Do you think they will be fully occupied? Not unless they give rebates much in excess of what the private wharf-owners are prepared to give.
1921. Are you of opinion that Woolloomooloo Bay is as convenient for shipping as Sydney Cove, Miller's Point, and Darling Harbour? It certainly is not.
1922. Why? Because it is further from the principal stores and the railway station.
1923. Is the storage accommodation in proximity to the wharfs sufficient to attract shipping? There is no storage accommodation in Woolloomooloo Bay except the wharf-sheds.
1924. Of course any complete system of wharfage connection with the railway must include Woolloomooloo Bay? I do not think there is any reason for that.
1925. Assuming such a thing as the resumption of all the wharf frontages for the purpose of railway connection, would you omit Woolloomooloo Bay from such a scheme? I do not see any particular advantage in carrying the railway to Woolloomooloo Bay, because I think the Government own sufficient water frontage in Darling Harbour for any railway works they wish to carry out.
1926. You concede that it would be an incomplete system? I cannot see that the Colony would derive any advantage from throwing away more money by connecting the Woolloomooloo wharfs with a service from which they could get no business.

1927. *Mr. Black.*] Are you of opinion that as regards population Redfern station is centrally situated? It is more central than any other position you could get about Sydney. E. W. Knox.
1928. Do you know the Flinders-street station, Melbourne? Yes. 31 Mar., 1897.
1929. Do you know the low-lying lands away from the city towards Port Melbourne, St. Kilda, and East Melbourne? Yes.
1930. Is there not a radius, on each side, of from 1 to 1½ miles, nothing more nor less than a desert waste, hardly built upon, and in some cases merely a depôt for rubbish? Within, I think, half a mile of the river it is all built upon, and to a great extent with stores, most of which are, however, empty.
1931. I mean on the other side going towards the sea, as it were. There is a large quantity of land taken up by public parks. There is a Government reserve; there are the banks of the Yarra and a sort of common which lies between the railway station and what used to be known as Emerald Hill. Further along there is a great deal of desert waste land behind where Langland's foundry used to be situated? Yes; I was speaking of on or about the Falls Bridge, where the ground is thickly built upon; but above the railway station there is a great expanse of vacant land.
1932. In fact, almost from Spencer-street right up to what is known as Jolimont? Yes.
1933. Would you not say that, so far from the Flinders-street station being in a central position, possibly the Melbourne Public Library would be more nearly the centre of the city? The post-office, I think.
1934. Do you know Adelaide? Yes.
1935. The Adelaide railway station used to be situated on the North Terrace—would you consider that the centre of the city? It has the city on one side and the parks on the other.
1936. Then to say that the Sydney railway station is less central than that of any other city of the Colonies is to make a misleading statement? I do not think it quite squares with the facts of the case.
1937. Is it not a fact that the extension of the city of Sydney to the north is barred by the waters of Port Jackson? Yes.
1938. Is it not likely that in years to come the Redfern station will, so far from being central, be situated much more to the north of the virtual centre than it is now? The trend of the trade of Sydney is towards Redfern, south of the Town Hall.
1939. You might alter the centre of population by building a bridge to the North Shore which would induce a large settlement on the northern shores of the harbour? No; because you would get too far away; then the settlement would have to be on the crest of the ridge to a great extent.
1940. But suppose you did alter the centre of population—that would not necessarily make the removal of the Redfern station compulsory, because it would simply mean that the bridge could be used as a means of carrying a railway, which would lessen the concentration of traffic at Redfern, and thus make that station more equal to the requirements than it is now? I think you can never make Redfern station anything but central.
1941. Do you see any advantage to be gained to the public by bringing the railway to Hyde Park? To the general public, no.
1942. Do you think there is any advantage to be gained for administrative purposes? No.
1943. Do you know of any demand from the country people for conveyance to the water's edge? No.
1944. The demand is from suburban residents? From residents in the southern and western suburbs—not in the eastern, northern, or north-western.
1945. Is it not evident that if it is the demand of the suburban residents which has to be met, no matter where they may be situated, the country cannot be benefited by the removal of the railway station. Would not a loop line—something which would take the traffic out of Redfern station in one direction and return it to Redfern station by another—be more likely to meet the demands of the public? I think, considering the material of the ridge upon which Sydney is built, and the way in which the town is laid out, that the convenience of the public can for the future be more easily met by the extension and improvement of the tramway system than by any extension of the railways into Sydney.
1946. In other words, by a system of light railways running more continuously than they do now, and on the streets? Yes.
1947. *Mr. Clarke.*] Do you think the accommodation for passengers would be increased by bringing the railway to Hyde Park? I do not think any advantage corresponding with the cost would be gained.
1948. You object to any portion of Hyde Park being taken for railway purposes? Entirely.
1949. You know that the traffic at Redfern is very much congested, and that it is necessary to have increased accommodation? I believe that to be the case.
1950. You think the extension of the railway over Devonshire-street, and placing the station on the site of the Benevolent Asylum and the Cemetery, would be sufficient? Yes, for the next few years. There will always be a difficulty at the Redfern tunnel, whether the station is on the Benevolent Asylum site or Hyde Park.
1951. Are you of opinion that it would not be to the public interest to resume the wharfs on the eastern side of Darling Harbour, from Dawes Point to the railway station? I am.
1952. Do you consider that for export business the wharfs, now in the possession of the Government, give sufficient accommodation? I think that if carefully managed they would be sufficient for the entire trade of the port—that is, assuming, of course, extra wharfs are put on Darling Island.
1953. Do you think you could do away with private wharfs altogether? I would much prefer to do away with the Government wharfs.
1954. Do you think the wharfs at present in Darling Harbour, and in fact all over Sydney Cove, give sufficient accommodation? Yes; and I am quite sure that any business is conducted more cheaply and better by a private enterprise than by any Government.
1955. Is Woolloomooloo, for some portion of the trade, not a very convenient place for landing goods? It is as convenient as any other place, only you have to pay a little more for cartage. You cannot get out of Woolloomooloo Bay without going up a fairly steep hill.
1956. *Mr. Fegan.*] You say a necessity exists for greater accommodation at Redfern on account of the congested nature of the traffic? I said I understood that was the case.
1957. You say the traffic is so congested that you would remove the station northward? If I said that, I said what I did not intend. I said that more land might be taken there in order to allow the increase of the station accommodation.

E. W. Knox. 1958. One proposition is to resume the ground upon which the Benevolent Asylum is situated, and to erect a station and platforms there at an estimated cost of £400,000;—would it not be better to carry the line to Hyde Park, in order that the Commissioners may obtain a return upon the capital expended? I am quite against the expenditure of £400,000 upon the Benevolent Asylum site, and I am quite confident that such an expenditure is unnecessary. The traffic can be worked with wooden platforms covered with galvanised iron just as well as with big brick buildings. Anyone who has seen the traffic go out of Spencer-street station on a busy day knows what can be done with a station which I should not think cost more than £20,000.

31 Mar., 1897.

1959. If the evidence of the Railway Commissioners goes to prove that the extension is necessary, and that the proposed buildings are not out of the way of the requirements of the day, you would, I suppose, give some consideration to that evidence? Yes; but if I had to find the money I would not find it.

1960. But if the Railway Commissioners can show that by their proposed scheme they will be able to recoup themselves for the outlay, is not their proposition a fair one? No; I do not approve of their having Hyde Park at all, and I do not think they say they can recoup themselves unless they get Hyde Park.

1961. Do you think there is any more opportune time than the present for the resumption and buying of land for the construction of the railway? It is quite certain the value of land is being depreciated; but it seems to me quite probable that its value will be further depreciated if, for instance, there is any further addition to the land tax.

1962. You have stated that the Railway Commissioners are asking the general public to pay for the extension of the railway when only a comparative few will benefit by it? I stated that the extension would be built at the cost of the general community, rather than at the cost of the people who profited by it.

1963. If the Commissioners have shown that by charging a fare of 1d. or 1½d. into the city they can pay the interest and redeem the capital, will not the charge be upon the shoulders of those who travel by the railway? I do not think the Commissioners propose to redeem the capital out of the fares.

1964. If our railways pay interest on the money borrowed, are they not doing fairly well? Yes.

1965. If it is shown that the proposed extension will pay the interest on the capital expended, would you not admit that those who will profit by it are those who pay for it? But I hold that the expenditure is not warranted on any ground. If the country has the money to spend, it would be much better to spend it in the extension of railways into the country. A railway down the valley of the Lachlan, for instance, would attract a large amount of trade to Sydney which is now lost to it.

1966. As a whole, you are against the extension of the railway into the city? Yes.

THURSDAY, 1 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

William Greenwood, Assoc. M.I.C.E., sworn, and examined:—

W.
Greenwood
Assoc.
M.I.C.E.

1 April, 1897.

1967. *President.*] Have you been occupied on any works in the Colony? Yes; I built the Pott's Hill reservoir, for the Government, and the Circular Quay. I have been engaged on a good number of works.

1968. Have you a scheme which you desire to lay before the Committee? Yes; I produce a plan and section of it. I take it that this Commission has to deal with the City Railway, consequently I have only shown a line from Redfern to the Circular Quay, but it forms part of a circular railway which will go round the eastern suburbs—to Woolloomooloo, Paddington, Woollahra, Waverley, and Randwick.

1969. Your levels are so situated that they will permit of that? Yes.

1970. Will the same remark apply to an extension to North Shore? Yes. The proposed line, which was designed 10 years ago for a double line of railway, traverses the heart of the city; it passes through the busiest portions and accommodates all the western and northern ferries. It is capable of extension to the North Shore by a high-level bridge, or train ferry, or subaqueous tunnel, through either Dawes Point or Fort Macquarie, and forms part of the circular railway through the eastern suburbs—Randwick, Kensington, North Botany to Erskineville. The line being circular is easier and cheaper to work. The cost of the land, buildings, &c., is light, owing to the non-interference with valuable buildings. It passes through a considerable amount of vacant land. The cost of construction is very low, as the material from the cuttings will be utilised for the buildings. There will be stations at the Town Hall, Wynyard-square, and Circular Quay. They are all wayside stations for passengers only. Goods depôts will be provided at all the eastern suburbs—Randwick, North Botany, Waterloo, &c. I propose a loop line from about Petersham to the east of the Warren Brick Company's works at St. Peters, resuming about 70 acres of land for gravitation sidings, to accommodate all the goods traffic, whether suburban, Illawarra, Belmore, southern, western, or northern. Circular railway:—

The line about to be described forms a portion of a projected railway from Redfern *via* Circular Quay, Woolloomooloo, Darlinghurst, Paddington, Woollahra, Waverley, Randwick, Kensington, Botany, and Erskineville, joining the Illawarra branch, through Eveleigh to Redfern. Route:—A railway commencing at the northern end of Redfern terminus, passing over Devonshire-street; thence across the Benevolent Asylum grounds and tramway-sheds, passing on a viaduct over Garden-street, Belmore-park, Hay-street, Belmore Markets, and Campbell-street; thence in open cutting east of the Natatorium, under Goulburn-street, passing west of the New Masonic Hall, under Liverpool-street, turning in a north-westerly direction under Pitt-street, Union-lane, and Wilmott-lane, and passing west of Water and Sewerage Board Offices; thence under the junction of Bathurst and George streets, passing in front of the Town Hall, and by a tunnel from Druitt-street under York-street to Wynyard-square; thence in an open cutting under Margaret-street and lane, passing east of the Scots' Church, under Jamieson-street and

W.
Greenwood,
Assoc.
M.I.C.E.

1 April, 1897.

and Church Hill, through the reserve; then under Charlotte-place, skirting the east side of Harrington-street, and curving under George-street, at its intersection with Essex-street; then in a north-easterly direction under Pitt-street and Alfred-street, passing under the crown of the road in front of the Custom House; thence under Phillip-street at its intersection with Albert-street. It is called Alfred-street at one end and Albert-street at the other. Future extensions:—If it be decided to connect with North Sydney by a bridge a junction would be effected at the Wynyard-square station; but if a tunnel be decided upon, then by a junction at Circular Quay station. Stations—Redfern station:—A new station to be built in the Benevolent Asylum grounds—terminal as to all long-distance traffic, but through for local or suburban trains. The suburban traffic, which is 90 per cent. of the whole, would go right through. Benevolent Asylum station, being terminal only for long-distance traffic—and all the suburban trains passing through this station will be relieved of all the shunting. Mr. Parry stated before the Commission that it was not the traffic so much as the shunting in the Redfern yard which caused the difficulty. The local traffic being 90 per cent. of all the traffic, it follows that much less siding and shunting accommodation will be required at the Benevolent Asylum station than would be the case at Hyde Park station, because there it would be dead-end station. Shunting at a terminal station blocks the incoming and outgoing trains, whereas by trains passing through all lines are left free. There is no terminal station on my line in the sense of a dead stop, because it forms part of a circular railway. The Town Hall station would be through or wayside station, extending from Bathurst-street south towards Willmot-lane. It would be a daylight station, and the booking-office would be at the south-eastern corner of Bathurst and George streets—that is to say, that the building now occupied by Hepworth, the tailor, would have to be resumed, remodelled, and made into a station. Wynyard-square would be a through or wayside station, extending from Wynyard-street northerly, with a booking-office at the south end of Wynyard-square. It is possible it might be better to resume the building at the corner of Wynyard-street and York-street, and utilise it as a booking-office, instead of building on the Wynyard-square portion. At Circular Quay there would be a through or a wayside station extending from the west side of Pitt-street to Loftus-street—that is to say, from Crane's store to the Paragon Hotel—with a booking-office opposite the North Shore Ferry. Pending the extension to the eastern suburbs, provision for shunting would have to be provided on the proposed extension east of Circular Quay station. If you made the line to Woolloomooloo or to Paddington at the same time it would not require it.

1971. Let us take it for granted that the only question this Commission deals with is the line for passengers into Sydney. You have got to Circular Quay, and you require some area for shunting purposes? Yes.

1972. You lose the benefit of the loop line by temporarily stopping at the end of the Quay? I do not presume you would stop at the Quay. I presume when you are making the railway you will make the circular railway.

1973. But supposing it was determined to stop at the Quay? I would continue the railway forward beneath Phillip-street towards Woolloomooloo, and would use what would form the main line in the future for the shunting-ground.

1974. Would you put four lines right ahead? No; only two.

1975. And you think they could be used for shunting purposes? Yes.

1976. They would be in a tunnel? Yes.

1977. And anything beyond the two lines which eventually went round the eastern suburbs would be a heavy expense? For the eastern suburbs certainly two lines would be ample.

1978. Could you shunt on those two lines? I do not think for one moment you would stop at the Circular Quay. The line through Woolloomooloo, Paddington, Woollahra, and Waverley would pay from the start.

1979. Then you say you would only require a wayside station at the Quay, because if your scheme is accepted you believe it would be wiser to carry out the eastern suburbs extension at the same time? Assuredly. I may say that my estimate of the cost is with regard to a line from Redfern to the Circular Quay. With regard to the advantages of the line I may state that the line would serve the heart of the city—a district at present unprovided with tramways. Hence it would create its own traffic without abstracting traffic from the existing Elizabeth-street tramway. Redfern Station:—Long-distance travellers encumbered with luggage would invariably take cabs from this station, which is as central for Sydney as any point you could name. The Town Hall station being in close proximity to the new markets would be very convenient for the general public. Wynyard-square station being within 100 yards of the General Post Office would be very central for the general public, and in addition to accommodating the numerous offices, warehouses, and manufactories in York, Clarence, Kent, and Sussex streets, would also give convenient access to the ferries at King, Line, and Erskine streets. The Circular Quay station, in addition to affording accommodation to the northern portion of the city, would also give direct access to the numerous ferries plying to the northern shores of the harbour, Manly, &c. A projected station at the main entrance to the Botanical Gardens, near Lady Macquarie's Drive and the Art Gallery, would accommodate a large amount of pleasure traffic. The cost of this line would be cheaper than that of any other route, as it does not necessitate the purchase of any valuable buildings, and for a considerable distance passes through vacant land. The most valuable building on the whole route is the one at the corner of George and Bathurst streets—Hepworth's, the tailor. Next to that, the Naval Brigade Hotel, at the corner of Essex-street and George-street is the most valuable. With regard to the George-street electric tramway, I do not think my proposal will make the slightest difference to it. When the first tramway was laid down in Sydney, Mr. Goodchap had to give a distinct promise that when the Exhibition was finished he would take it up. On that promise the tramway to the Exhibition was constructed; we all know the result. The next tramway was for the racing people to Randwick. Following that the whole of the tramways have been built. At that time everyone said the buses and cabs would be ruined. I, myself, laid out the line in Oxford-street, and every cabman who came along did his best to run over me. At first it was single line, and was subsequently made into a double line. The fact is that the growth of Sydney is so great that you may put down an electric tramway in George-street and it will not make any difference to the railway. With regard to electric tramways, I may state that I rode from Falcon-street to the Military-road on the electric tramway nine months ago. If the tramway in George-street is the same as that, there will be a swaying, pitching motion of the cars like the pitching of a ship at sea, and the people will prefer the railway to the tramway.

W.
Greenwood,
Assoc.
M.I.C.E.

1 April, 1897.

1980. *Mr. Fegan.*] Instead of having an electric tram along George-street would it not be possible to give the convenience required by means of a train? I do not think so. Increased facilities cause increased traffic.

1981. *President.*] What will be the length of the line? One mile and 70 chains. The Benevolent Asylum station will be a true surface station. We have heard of stations in Hyde Park, passing beneath Liverpool and Park streets, described as surface stations, but as a matter of fact they are 20 feet below the level of Elizabeth-street. From Belmore-road to Campbell-street, across Belmore Park and the Market there would be a viaduct with 40-foot spans. In preparing an estimate of cost I had no borings, but I assume the foundations to go down 15 feet.

1982. What is the length of your viaduct? Twelve or 13 chains. I do not propose to disturb any of the streets excepting Devonshire-street and Pitt-street North. At Goulburn-street there are 20 feet of depth in cuttings, and from there to Bathurst-street it varies up to 30 feet.

1983. What is the length of the road which will be cut? With the exception of 30 chains of tunnel in York-street the whole of the line is in an open cutting. York-street and some parts have from 3 to 5 feet of shale and bastard rock. At the Circular Quay the rails will be practically 12 feet below the present road—6 feet below means high-water-mark. With regard to sewers I am somewhat at a disadvantage, because I cannot get information as to their locality. The main sewer which falls to Bondi, in Harrington-street, I go beneath. There is one in Liverpool-street which I am above. There is a small one in Devonshire-street, but that is common to every scheme which crosses Devonshire-street.

1984. Now with regard to the cost? I may state that you have had a statement of cost of land put before you which told you nothing but that the land would cost £1,200,000. How that was arrived at I do not know. The Government officials in valuing land for a scheme not suggested by themselves usually value it at ten times more than they would were the scheme suggested by themselves. I have prepared two estimates—one for a double line, and the other for a quadruple line; they are as follows:—

<i>Estimate of Cost—Double Line.</i>		
Land, 2½ acres at £103,600	£259,000	
		£259,000
Works	138,182	
Stations, &c.....	140,500	
	£278,682	
Contingencies, 10 per cent.	27,868	
Engineering, 5 per cent.	13,934	
		320,484
		£579,484
<i>Estimate of Cost—Quadruple Line.</i>		
Land, 3¾ acres	£370,000	
		£370,000
Works	224,928	
Stations, &c.....	156,500	
	£381,428	
Contingencies	30,000	
Engineering	15,000	
		426,428
		£796,428

FRIDAY, 2 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
The Hon. DANIEL O'CONNOR, M.L.C.
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
FRANK FARNELL, Esq., M.P.

William Greenwood, Assoc. M.I.C.E., further examined:—

W.
Greenwood,
Assoc.
M.I.C.E.

2 April, 1897

1985. *President.*] When we ceased yesterday you were about to give information with regard to the cost of your scheme? Yes. I should like to correct an impression that has got abroad that I propose a terminal station at Circular Quay. My proposal is that we should have a circular railway. With regard to the cost of the land: The area required will be 2½ acres for a double line and 3¾ acres for a quadruple line. On the double line there will be 45 chains, 36 feet in width; on the four lines there would be same length, 54 feet in width.

1986. The Departments say that the lowest estimate is 80 feet width? They only require 80 feet for six lines of rails.

1987. *Mr. Hoskins.*] But they require spare land on each side of the line? No; they build vertical walls about 4 feet 6 inches from the rails. There is no need to go beyond the ordinary bridge width.

1988. *President.*] You believe 54 feet is ample for four lines? Yes.

1989. And you propose to have perpendicular walls? That may or may not be. As a matter of fact the ground in many places is of such a nature that you would not require a wall at all.

1990. Is 54 feet sufficient if the walls are perpendicular? Yes, and it is if they are not.

1991. Then the question resolves itself into one of batter? That is a mere nothing.

1992. Are you prepared to give us the details as to the cost of the land? The way in which I got at it was this: I got the city assessments for the wards and I divided it by the number of acres of land in the wards; that gave me the assessment value. To that I added one-ninth, the assessment being nine-tenths of the rental.

1993.

1993. How do you get your result from that? The mean assessment value is £3,325 per acre; to that you add one-ninth, which gives you £3,695 per acre for the average rental—I take it at £3,700. I take it at twenty years purchase, and that gives me £74,000 per acre. I allow 10 per cent. for compulsory purchase; I allow 10 per cent. for lessees' compensation; I allow 20 per cent. for severance; and that gives £103,600 per acre.

1994. That amount is pretty well the same as we have had placed before us on several occasions, excepting that the area taken by you is much less;—supposing you had to resume 20 acres of land, the cost would virtually be £2,000,000? I hope to show the absurdity of doing that.

1995. You have reduced the width to 54 feet? Yes.

1996. If we had a basis of 100 feet in width, you would reduce it by one-half? Yes.

1997. If we had a basis of 80 feet, you would reduce it to 50 feet, or three-eighths? Yes.

1998. That explains a good deal of it? No; only a portion. Mr. Perdriau said it would take 130 chains to get from Redfern to the Circular Quay on the west side of Elizabeth-street. To get from Redfern to Hyde Park you have 50 chains in length, but you only pass through 20 chains of private land. He assumes that, if you go on the west of Elizabeth-street, you pay for the whole of it, but, as a matter of fact, you only pay for 45 chains. The saving in length is in 30 chains from Redfern to Campbell-street, no matter whether you go east or west of Elizabeth-street, for which you do not pay.

1999. Then what is the total length of your proposed line from there to the quay? From that point to Bathurst-street it is 20 chains, which I pay for. Then I begin to pay again from the northern angle of Wynyard-square to Pitt-street to Cranes, which is 25 chains.

2000. Your contention is that since from Bathurst-street to Wynyard-square the line will be in a tunnel, you do not require to pay for land? Certainly.

2001. What is the length of your tunnel? Thirty chains. It has been suggested that there may be compensation to pay. I point out, however, that the Postmaster-General has built a tunnel along Barrack-street, Clarence-street, and the whole length of Pitt-street, and I am not aware that he has paid one penny compensation for damage to buildings.

2002. What is the size of that tunnel? When completed it will be about 4 ft. 6 in. in width and about 7 feet high.

2003. I suppose you could not get a safer place in Sydney in which to make tunnels? You certainly could not get a better place than York-street.

2004. *Mr. Hoskins.*] I suppose there is a greater probability of injury to property from tunnels along which trains weighing hundreds of tons pass than there is from shallow tunnels used to convey the telephone wire? That is not the case. So far as vibration from a train running through the tunnel of sandstone rock is concerned, you will never know there is one there if it is once built. I have assumed that I have purchased the whole of the land all the way through, but in England I should not do so. I should pay for the easement to go beneath the property.

2005. *President.*] We have now got as far as Pitt-street? The rest is Government ground up to Circular Quay.

2006. Have you taken into consideration the ventilation of the tunnel? Yes.

2007. How will you ventilate it? By ventilating shafts along the street.

2008. Where would the outlet be? In the centre of the street.

2009. *Mr. Hoskins.*] Like the sewers? No; they might resemble the animals in the street.

2010. What cover would you have in the streets? From ten to twenty feet.

2011. *Mr. Humphery.*] What is the depth of the sewers in the streets? York-street is on the ridge, and the waters fall to Darling Harbour. There are no sewers in York-street, excepting small pipes.

2012. Do you go below the sewer in Pitt-street? There is only the Tank-stream there. There are pipe sewers, but the fall is so great that you can do anything you like with them.

2013. *Mr. Wright.*] Where do you cross Pitt-street? At Union-lane. There is only the Tank Stream at Pitt-street which could be diverted alongside the railway. There would be no difficulty about that.

2014. *President.*] Can you give us the cost of your construction? You may take it roughly that it is £42 per yard right through.

2015. What is the cost of the portion from Redfern to Bathurst-street? £65,000. That is for a distance of 60 chains. The next 40 chains, including crossing George-street, will cost £81,000. If you deduct that from £225,000 it leaves the balance—say £79,000—for the remainder. That is for works. Yesterday I gave you the stations at £156,500, or a total of £381,428. To that you have to add £30,000 for contingencies and £15,000 for engineering. It runs to about £42 per yard for the whole of the railway for double line, or £68 for quadruple line.

2016. Of which one-fifth is tunnelling? Yes. There are the contingencies and engineering to be added, which will make it about £50 per running yard for double line, or £76 for quadruple line.

2017. Even if this work which you suggest were carried out, it would not be complete nor effective until you joined Circular Quay with St. Peters. Therefore you have to continue that work at once, or provide a temporary terminal station at Circular Quay, or build enough of the southern extension to shunt upon? Yes, that is a very small quantity.

2018. Have you any estimate to enable you to judge what the eastern extension will cost? About £50,000 a mile for the whole distance.

2019. How many miles? One route makes it 14 miles—of which there would be only about 10 to construct from Circular Quay.

2020. It would cost, then, about £500,000 right through? Yes.

2021. What is the estimate for the shunting conveniences which would be necessary beyond your railway at Circular Quay? The railway would finish at the Paragon Hotel. From there to Phillip-street there are from 8 to 10 chains spare ground for shunting.

2022. You take it for granted that you could use that for shunting purposes? Yes.

2023. The question is whether you would be permitted to use it? I would point out that all the roads would cross to every point in the same way as they do now.

2024. But you first of all lay down four lines of railway. That means some obstruction. If you shunt and move the engines round it means that a considerable amount of traffic will be brought into existence which is not there now, and which might interfere with the ordinary traffic? No; cabs and other vehicles cross there now in such a way that you do not know where they are going. If they are confined to the roadway you will know where they are going.

- W.
Greenwood,
Assoc.
M.I.C.E.
3 April, 1897.
2025. You have stated that you will be 6 feet below high-water-mark at Circular Quay? Yes.
2026. How do you propose to get to the North Shore boats? The station will be somewhere near the revolving advertisement board. Being 12 feet below the roadway you could, if you thought fit, construct a subway for the whole of the passengers.
2027. Do you think that would be satisfactory for the 6,000,000 people who at present land at Circular Quay? Decidedly. I propose to shunt directly in front of the Custom House as far as Phillip-street. I then start upon a rising grade to take all the goods traffic from the Quay.
2028. Do you know how many passenger trains per day would require to come to Circular Quay? Probably 200.
2029. Spread over a period of fifteen hours? About that. I point out, however, that for every train coming in to the Quay there must be ten trams coming into the Bridge-street yard, where they can deal with the traffic without trouble.
2030. What area do you propose to shunt upon? Eight or ten chains in length and four lines of rails in width. Four lines with switches will be sufficient to do all that is required. The idea of shunting in front of the Custom House is only a temporary measure, my contention being that there should be a circular railway.
2031. *Mr. Hoskins.*] If it is a fact, as has been stated in evidence, that the railway station at Redfern is so cramped that it is no longer useful, except as a wayside station, where would you put all the rolling stock which is kept at Redfern Station for the service of trains? Ninety per cent. of the traffic will not stop at Redfern. If the line is made as a circular railway, Paddington will correspond with Ashfield, as regards a terminal station, for about 30 per cent. of the trains; 30 per cent. might go as far as Randwick, and the remaining 30 per cent. would complete the circle. The whole of the long-distance traffic, of course, would stop at Redfern.
2032. Then you do not propose any additional accommodation for the long-distance traffic? Yes; I propose a new station in the Benevolent Asylum grounds.
2033. How much land do you presume would be required at your proposed new station? As far as the rails and platforms are concerned, about 250 feet in width.
2034. Would that make provision for the large amount of rolling stock which of necessity must be kept at the station where there is the largest number of trains? You still have the old yard at Redfern left. You have the same room plus the room you get across Devonshire-street.
2035. Then, if the station on the Benevolent Asylum site were built, and the Department continued to use the Redfern station for keeping rolling stock, you would, when you were forming trains to be despatched from the Benevolent Asylum site, require to run carriages between it and the Redfern station? Yes; if you were marshalling a train to go to Bourke, you would do as you do now.
2036. What do you anticipate would be the cost of the Devonshire-street station? I have put down £100,000 for it.
2037. Then, in reality, you would have two shunting stations in addition to Redfern, namely, the Benevolent Asylum and the siding near the Custom House? The siding at the Custom House is merely temporary. I am assuming that the Government will carry the railway right round.
2038. You propose that the railway should be 54 feet wide? Yes.
2039. Is that sufficient for working the traffic between the Redfern station and the Benevolent Asylum? No. Although the railway itself would be only four lines wide, the Benevolent Asylum station platforms would be 250 feet in width.
2040. What would be the width of the road or roads between Redfern and the Benevolent Asylum? Between the building themselves there would be a width of 250 feet, occupied either by rails or platforms. There would be ten or twelve platforms to the whole length of that station.
2041. That would take up a large amount of ground, would it not? 800 feet by 200 feet is not a great extent. It would mean about 5 acres of ground being taken up by the rails and the platform.
2042. I gather you do not anticipate that the Government will be subject to actions-at-law for damages to the foundations of premises, caused by the construction of tunnels? I do not say so. They are liable, of course, but I would be glad to undertake to cut down the whole of York-street vertically, from top to bottom, for a very small amount of compensation.
2043. But would the contractors undertake to make good any actions-at-law brought against them for compensation? They would.
2044. If the contractors undertook to meet all claims for compensation would it not tend to increase the cost of the work? No; because there is no danger whatever. For instance, there was not one penny paid in compensation in connection with the excavation of the new markets.
2045. But that excavation does not abut on private property? No; but there was not a piece of stuff which fell.
2046. Will the whole of the tunnel be of solid rock? Yes.
2047. Is not some of the Sydney sandstone rock very jointed? Some of it may be.
2048. *Mr. Humphery.*] What would be the cost of your complete scheme, including compensation? £500,000 more than I have given for the line to Phillip-street.
2049. Have you estimated that that will cover not only the cost of construction but compensation for the resumption of land between Circular Quay and St. Peters? Yes; but the figures I have given with regard to Redfern and Circular Quay I am prepared to swear to. With regard to the others I am only expressing an opinion.
2050. What width of resumption have you between Circular Quay and St. Peters? Where land is dear you would merely buy a vertical strip for a double line, but where it is cheap you would buy more and would not erect retaining-walls.
2051. What portion of the 10 miles from the Circular Quay to St. Peters, *via* Paddington, would be in a tunnel? I could not say without taking a section.
2052. Then your estimates in connection with that line are approximate, and not the result of calculation or survey? Yes.
2053. From the Quay to St. Peters, *via* Paddington, you have adopted the plan and scheme of the Engineer for Railways? Yes.
2054. So that the only portion of the scheme for a circular railway which will be original in your design is from Redfern to Circular Quay? Yes. It is only ordinary engineering work to go round the suburbs. On

pages 48 and 49 of the report of the Royal Commission on the extension of the railway into the City and the North Shore Bridge connection, Mr. Deane boils down the whole of the schemes to three, and pins his faith on the scheme marked "L." My scheme betters "L." He says:—

The value of any proposal must be rated according to the extent to which it complies with the following requirements. For convenience of working the traffic, it should have either a large space for a terminal station, or should have a loop for returning trains, so that shunting may be avoided, or it must form a complete loop of itself. [I form the complete loop by making the circular line.]

It should be capable of extension to the North Shore, either by bridge or otherwise; it should pass through the present Redfern station, in order that this may form one stopping-place; it should be capable of extension to the eastern suburbs, and should be continuous with such a line, so that passengers may be able to travel without change between those two suburbs and to any part of the city. [That, my scheme does.]

The line should be in cutting or on viaduct all or nearly all the way, and tunnel or covered-way should be avoided as much as possible, on account of the difficulty of properly ventilating the same, a difficulty which, in the climate of Sydney and with the smoky coal, is a very serious one. [They told you the other day there was no difficulty in ventilating a 30-chain tunnel.]

Mr. Deane's scheme, marked "L," is to cost £2,000,000 to get to the Quay, and I propose to do it for one-third of the money, including land resumption. With regard to the "L" scheme the report states:—

On the condition that suburban traffic only is carried beyond Redfern, he sums up the *pro* and *con* of the proposal thus:—"Advantages of modified route—(1) Takes the western side of George-street, and therefore serves the suburban traffic best; (2) allows of terminal station if required at Harrington-street; (3) allows of loop if required instead of terminal station; (4) allows of connection with North Shore by bridge; (5) allows of connection with North Shore by any other method, as by tunnel, equally with any other scheme; (6) can be extended past Circular Quay; (7) can be extended to eastern suburbs.

The only disadvantage which he sees in regard to the line is the great cost in resumption.

2055. *President.*] It is further north than yours? That is the beauty of it. His line is too low down. Further on he says:—

The position of the loop, as suggested by Mr. Munro for the modified line, is quite practicable, but it misses the best station, Wynyard-square.

That is where I have a station. There is not one thing which Mr. Deane recommends which I do not do. The Chief Commissioner and Mr. Deane say in this report that the long-distance traffic is not to go beyond Redfern station, and that is what I say too. On the whole, there is not one objection raised by Mr. Deane in this report which could be applied to my scheme.

2056. *Mr. Humphery.*] Have you kept in view the strong opinion that the goods and passenger traffic should be kept separate? I do not lose sight of that. I propose that you should have your goods stations on the circular railway. There will be no goods stations at the Town Hall, Wynyard Square, or Circular Quay; but the trucks will go alongside the ships if the ships are at the Quay, and the produce can go straight into the ships. The wool also can go direct into the stores.

TUESDAY, 6 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Oswald McMaster, Civil Engineer and Contractor, sworn, and examined:—

2057. *President.*] Are you accustomed to the construction of railway works? Yes.

2058. Do you desire to lay before the Commission a scheme which you regard as the best for bringing the railway to the city? Yes. I will describe the scheme "A," which provides for a station at the position now occupied by the District Court, and also takes up 2 acres of the Domain at the rear of the Colonial Architect's present department.

2059. I believe the route you suggest is similar to that of the Railway Commissioners and all other routes, until you pass Liverpool-street, and then the line takes a turn to the north-east? Yes. I may explain that although I adopt the same route as the Railway Commissioners, I do not take the same amount of land. I allow the same amount of money in the resumption, although I only provide for four lines instead of six. The features of scheme "A" are as follows:—

This scheme, which is shown in red on plan, has for its principal feature the utilisation for the central station of the Government property at the top of King-street, now occupied by the District Court, &c., with a loop-line running round the Domain and back to the station for the working of the suburban traffic; and an extension to the North Shore, to connect with the North Shore and Hornsby railway at a point near the present terminus at Milson's Point. It also provides an intermediate station at the intersection of Albert and Macquarie streets, with a level approach from the Circular Quay.

Land required.

It is to be noted that the only land required for this scheme will be the 2½ acres of Government property at the top of King-street (together with a small piece of the Domain at the back, now but little used); a narrow strip at the King-street end of Hyde Park; and a belt, less than 1 chain wide, extending from near the Technological Museum round the lower portion of the Domain at the back of the Art Gallery—

2060. Would that be open? Yes; it would be built on piers.

The only resumptions required will be in that portion of the line between Redfern and Liverpool-street, and the extent of these to be used for railway purposes will be less than in the Railway Commissioners' scheme, owing to the reduction in the number of lines of way between Redfern and the central station, as subsequently explained. If it be deemed advisable to construct the railway through Hyde Park by the cut-and-cover method, as shown on plan, then the whole of Hyde Park will be left in its present state, and no portion of the line, on the Sydney side, will pass under any private building or through any private property between Liverpool-street and Fort Macquarie, or even to Lavender Bay.

Description of scheme.

The description of this scheme is as follows:—Starting from Redfern station, four lines of way will be carried over Devonshire-street and through the Benevolent Asylum grounds and Belmore Park to Liverpool-street, along the same route, and in a similar manner to that described by the Engineer-in-Chief for Railway Construction for the Park-street proposal. Passing under Liverpool-street, the lines will be carried under Hyde Park by the cut-and-cover method, where the depth below surface does not allow of tunnelling, and under Park-street to a point near the King-street end of Hyde Park; where they will curve into the central station at the top of King-street. My object in carrying the railway

W.
Greenwood,
Assoc.
M.I.C.E.

6 April, 1897.

O. McMaster.

6 April, 1897.

O. McMaster. railway underground is that there may be no interference with the surface of the Park. As far as cost of construction goes, I estimate that there would be a saving of over £60,000 by keeping the line in open cut throughout, and this would no doubt meet with the approval of the Railway Commissioners, by reason of the increased facility of working. Still, if, in the opinion of the Royal Commission, it is thought undesirable to encroach upon the Park, I would submit that the fact of the line being covered would not occasion any discomfort to passengers from smoke and fumes, such as might be the case with a deep underground railway. In the present instance the lines would be so close to the surface that very excellent ventilation could be obtained throughout by means of ventilating grids—suitably spaced at frequent intervals—and causing inconvenience to no one.

Central Station.

The central station, as proposed, will occupy the area of Government property bounded by Macquarie-street and St. James'-road—about 2½ acres in extent—and will also extend back a short distance into the Domain. The station-building will be three storeys high, the two upper storeys above the level of the street, to provide the office room required by the Railway Commissioners, and the lower one for station accommodation at platform level. Entrance to the station will be provided from King-street, at the present level of the street, by means of steps leading down to the different platforms, as in the present suburban stations, and also outlet to or from a new road to be constructed between retaining-walls from Elizabeth-street, at the junction of St. James'-road, passing under the lines and coming out in front of St. Mary's Cathedral, as shown by neutral tint on Plan A. This road will be 100 feet wide, and will give access to the station for cab and other vehicular traffic, as well as providing for the exit of passengers from the various platforms.*

The loop-line to which I refer, after passing out of the central station, goes in an easterly direction, and then north to within a short distance of Woolloomooloo Bay; it then turns round under the Botanical Gardens in a westerly direction, and returns to near the northern entrance of the central railway station, pretty well parallel with Macquarie-street. The tunnel commences about the Curator's house on the edge of the Botanical Gardens, and continues until the line returns to King-street.

2061. That is to say, the first half, as you go east from the proposed central station, is open? Yes; and from there, as it turns and enters the Gardens again near Woolloomooloo Bay, some of it will be open and some underground. The whole of it can be kept underground through the Gardens.

2062. If the Commission determine to adopt your scheme it will be possible to have the whole of your loop in tunnel excepting near to Woolloomooloo Bay, where there can be an open resting-place for your traffic? Yes.

2063. *Mr. Humphrey.*] Would a 12-chain curve lengthen the line? Yes, about one-eighth of a mile.

St. James'-road will be left in its present state, the levels being in no way interfered with. It is to be particularly noted, as a feature of this scheme, that the central-station-building will not require to be so large and costly as that proposed in the Government scheme, since, with the loop-line as shown, there will be no necessity to provide more than six, or at the outside ten, platforms under the main roof, and these, being required to accommodate only one train at a time, can be made considerably shorter than those shown in the Government proposal. With the loop-line there will also not be the danger of collision, essential to a scheme in which the central station is a dead end and where a considerable amount of shunting will be required.

From the back of the central station, as proposed, the line will be taken in open cut through the Domain to a point near the Art Gallery, and thence as an elevated railway round the lower portion of the Domain and adjacent to Cowper Wharf, Woolloomooloo Bay, passing into a tunnel (under the main drive to Mrs. Macquarie's Chair) at a point near the residence of the Curator of the Botanical Gardens. A station can be very easily provided at Woolloomooloo Bay if so desired, though, personally, I see no great necessity for one in such a position at present.

The dotted black lines on plan represent an extension which would be valuable for various purposes, including possibly coaling, shunting, and spare carriages.

If it be deemed expedient to proceed with the North Shore connection at the same time as the city extension—and I very strongly advise that this should be done—then three or four lines will be carried from the central station (as shown on diagram)—two to serve the North Shore traffic, and one or two for loop-line purposes only. After entering the Botanical Gardens the three (or four) lines will be carried below the surface to the stone wall which runs between the upper and lower gardens, whence the loop-line will curve back again (in tunnel) to the central station; and the two North Shore lines will sweep round under the Garden Palace grounds, in front of Government House stables, to the intermediate Circular Quay station at the intersection of Albert and Macquarie streets. With the 1-in-50 grade for which the line is designed, there will be no disturbance of the surface throughout the Botanical Gardens and Garden Palace grounds.

2064-5. Have you a platform in proximity to the Water Police Court in your scheme? Yes; and it will be 20 ft. below the surface, the proper depth for convenience of working, and more convenient than on the surface.

Circular Quay Station.

This will be an underground station, cut out of the solid rock and open to the air above, to which access will be obtained on the level of overbridge by an airy and well-lighted subway, to be constructed from the Circular Quay beneath Albert-street. It is thought that this station will prove a great convenience to passengers from the western and eastern suburbs who wish to travel by the various ferry steamers from the Circular Quay to Manly, Neutral and Mosman's Bays, &c., and especially so at holiday times.

From the Circular Quay station the two lines to North Shore will continue in tunnel to Fort Macquarie, as shown, and thence under the harbour in a double subway of special design to Beulah-street, Kirribilli Point, whence they will be taken underground on a rising grade to connect with the present North Shore and Hornsby line at a new station midway between Milson's Point and the head of Lavender Bay.

Subway under the Harbour.

No scheme for the city extension can be considered complete which does not provide for connecting with North Shore, and for bringing the rapidly-increasing traffic on the North Shore and Hornsby line, either over or under the water, into the city. In the present scheme provision is made for taking two lines under the harbour in a double subway, about 1,700 feet long, consisting of two cast-iron tubes, each 20 feet in diameter, encased in concrete, and having a concrete lining. By adopting two tubes in preference to a single large section of subway the ventilation will be much improved. Large ventilating shafts will be provided on either side of the water, and each train as it passes through will then draw the air in the tube after it, and there will be no confusion of air currents from trains travelling in opposite directions, as would be the case in a single subway with a double line.

Construction of Subway.

The method in which it is proposed to construct the subway is as follows:—First, a strip of the bottom of the harbour along the line of section will be dredged until the surface mud and silt have been removed and the surface of the underlying clay exposed. Then into the excavation thus formed the sandstone spoil obtained from the excavations for the line on both sides of the water will be tipped, and well rolled in layers, the finer portions of sandstone and sand being carefully filled in between the larger blocks of stone, so as to form a homogeneous mass. A layer of bluestone ballast 2 feet thick will then be spread on the sandstone, and the top surface rolled level and well consolidated by means of a heavy roller.

It may be thought that it is not practicable to roll under the harbour, but it is practicable if you load the roller with lead or other material; if the lead weighs 13 tons it will only weigh 1 ton less under the water. It is practicable to take a large roller underneath and roll the sandstone.

2066. *President.*] Has it ever been tested? Yes; it has been done in rivers. I have done it myself. The depth would be about 55 feet. 2067.

* NOTE (on revision):—This subway will carry tramways, if desired. It is required for convenience only, as it admits the traffic to the city descending in place of climbing; so that to enter the station you descend, and to leave the station you also descend.

2067. You have no doubt a 1-in-50 grade would bring you from the described station at Albert-street to the deepest part of your tunnel? Yes. O. McMaster.

6 April, 1896.

The subway will then be built on shore in lengths of 50 feet—complete all except the internal lining—floated out, sunk, and connected together under water by divers, no difficulty being anticipated in this part of the work. At the ends special arrangements will be made for the connecting up of the subway from bulkheads near the ends of the sections of tunnel on either side of the water. This method of construction is held to be both feasible and economical in a case like the present where shield tunnelling is out of the question, owing to the quantity of overlying silt, and the depth at which a shield-driven tunnel would have to be carried.

The clear waterway over the top of the subway when completed will be 40 feet below high-water-mark, a height far in excess of any probable requirements, and at the depth at which the subway will be founded the velocity of the tidal current will be so slight that the tendency to cause scour or silting-up will be practically nil. The maximum pressure, due to dead and live load, which can come upon the foundation of the subway will be less than a quarter of a ton to the square foot, a quantity well within the limits of safety, and it is not at all probable that there will be any subsidence in the foundation; however, to be absolutely on the safe side, provision is made for correcting any such variation that may occur by spraying in cement and sand through tubes spaced at frequent intervals over the bottom surface of the subway. The subway will be on the level throughout, the ruling grade of the line on each side of the water being 1 in 50, as against a gradient of 1 in 30, which, it has been stated in the evidence given before the Commission, would be required in approach to any bridge between the City and North Shore, giving the necessary clearance for masted vessels. The cost of the subway would also be considerably less than that of any bridge that could be built over the harbour.

The cost of my subway throughout, including the dredging and putting everything in place, will not run above £170,000—that is for two lines of railway. I estimate the cost of the line from Redfern station, including the loop-line, the station-buildings, and back again to King-street, at £536,000.

2068. That is the complete scheme to enable you to work a terminal station? Yes; it is a complete city scheme.

North Shore Approach.

The line on the North Shore side has been kept under the streets as much as possible, in order to avoid resumption.

It will rise from the Beulah-street end of the subway on a grade of 1 in 50 to near the front of the North Shore station, which it is proposed to construct at the position shown on plan.

The total cost from the loop to North Shore will be an extra £330,000, so that I should connect Redfern station with Milson's Point at a cost of £866,000.

2069. *Mr. Humphery.*] But the Circular Quay station would not be practicable unless you extended the line to North Shore? It certainly could be used in the city extension, but it would be in tunnel, and would not be very convenient to work; but it would cost so little extra to take it to North Shore, and the Circular Quay station would essentially be a North Shore station.

Scheme B.

If, in the opinion of the Commission, it is deemed expedient to have the central station in Hyde Park, then I would submit for their consideration the scheme shown on plan marked B, which embodies all the points of scheme A, viz., the loop-line, intermediate station at Circular Quay, and connection with North Shore by means of a subway. The resumption required on the Sydney side in this scheme would also be nil (between Liverpool-street and Fort Macquarie), since the route lies everywhere through or under park lands and Government property, with the exception of that portion of the loop-line which passes under the centre of Macquarie-street, and this portion will be kept everywhere well clear of the building-lines of that street, so that there will be no damage to property or disturbance of the foundations of buildings.

As will be seen from the plan, a central station is provided at the King-street end of Hyde Park, with a new roadway for vehicular traffic, similar to that shown on the Government plan. This station, however, can be made of smaller dimensions than in the Government proposal, owing to the reduction in the number and length of the platforms, due to the inclusion of the loop-line in the scheme, as before referred to; and the additional area of the Park, in front of the station, required by the Railway Commissioners for shunting purposes, will not be necessary in this scheme, so that the total encroachment on the Park will be only 6 acres, as against 12 acres stated to be required for the Government proposal.

Route B.

From Redfern to the central station the route followed will be similar to that in the Railway Commissioners scheme. After leaving the central station the line will curve under the District Court, &c., at the back of which it will come to the surface again, and it then follows practically the same route as in scheme A, with the exception that in this case the loop-line will return to the central station by way of Macquarie-street, as shown on plan.

The cost of this scheme will be, approximately, the same as for scheme A.

Suggestions for Working Traffic.

Should it be deemed advisable to adopt either scheme A or scheme B, including the North Shore connections, then I would suggest that the railway traffic might be worked in the following manner:—

1. Long-distance trains from the west and south, after depositing passengers at the central station, to run round loop and back to Redfern, for cleaning, inspection, &c.; long-distance trains from the north to come by way of North Shore line to the central station, and thence to Redfern for the same purpose.

2. Suburban trains from the western suburbs to Parramatta, from the Northern Line, between Strathfield and Hornsby, and from the Illawarra suburbs, to be so arranged that a certain percentage would run round the loop back to the central station, and start thence again to their respective suburbs, the loop being sufficiently long to allow of a number of trains lying there till their starting-times. The remainder to continue on (stopping at the Circular Quay station) under the harbour and by way of the North Shore line to Hornsby, thus providing a continuous service between the western suburbs, &c., and the North Shore and Hornsby line, and *vice versa*.

In conclusion, my opinion is, firstly, that the city extension is a very urgent matter, and should be proceeded with at the earliest possible date; secondly, that the route followed should be on the eastern and not on the western side of the city. Upon the question of whether the Royal Commission considers the utilisation of Hyde Park for railway purposes expedient or otherwise will depend the position to be adopted for the central station—and this is really the crucial point of the whole matter; but in any case I would strongly oppose the idea of any extension which stops short of King-street, and from the many persons I have conversed with on the subject I am certain that the majority of the travelling public are also of my opinion. Either of the schemes which I submit will serve the public convenience in this respect, and they also make provision for other requirements, which will certainly have to be dealt with immediately upon the completion of the city extension, and which should consequently be considered therewith.

2070. *Mr. Lee.*] You would come through the Benevolent Asylum and Belmore Gardens, as proposed by the Railway Commissioners? Yes.

2071. You would make no alteration until you got to Liverpool-street? No.

2072. At Liverpool-street you would keep deeper to get under the Park, instead of keeping on the surface, as proposed by the Commissioners? Yes.

2073. What would the cover be composed of? Brick arches or iron troughing.

2074. Will the cover be above the surface? No; 3 ft. or 4 ft. under.

2075. So that practically it will be a tunnel? Yes; but it will be much cheaper to construct.

2076. *Mr. Humphery.*] What will be the length of your longest tunnel? Two-thirds of a mile.

2077. *Mr. Lee.*] You propose to take 3 acres of the old Brigade Office? Two and three-quarters there, and 2 acres in the Domain.

2078.

- O. McMaster. 2078. Do you propose to take the present frontage to Albert-street? I would take the site now occupied by the District Court, the Barracks, round by the road to the Domain, and then take 2 acres square in the back of the Domain, never now used.
- 6 April, 1897. 2079. Would that interfere with the Mint? No.
2080. What would be the effect of having that railway station alongside the Infirmary? They would never know it was there. You could not see it from the Infirmary.
2081. It will practically be a city station? Yes; but there will be no outlet into the Domain. It will be in Macquarie-street and King-street.
2082. And there will always be the noise incidental to working a large station? There will be a noise, certainly; but I do not think it will be any greater than what is made by the tram traffic in Elizabeth-street—not so much.
2083. At all events you would take inside the Domain wall a square 2 acres? Yes; it would interfere only with one little road, which might be shifted a chain.
2084. It would block the road? Yes; but it could be moved out any distance, being on the level surface.
2085. Where is your next resumption? I have no more resumptions then.
2086. Would your trains be running above ground between that point and Woolloomooloo Bay? Yes; on brick arches, or you could fill the ground in.
2087. Would the arches be sufficiently high to admit of traffic underneath? Yes.
2088. Do you cross the head of the bay or keep to the foreshore? We keep inside the Domain the whole way.
2089. Above ground? Yes; until we get round near the Curator's house, and we go almost under his house.
2090. *Mr. Humphery.*] What is the estimated cost of the loop? First, fourteen chains would cost £5,000—that is what is above ground; the loop from the Domain would cost between £29,000 and £30,000.
2091. What is the length of the loop? About a mile.
2092. Would there be any platform? It has been proposed to put a platform opposite Cowper Wharf, but I do not think it is necessary.
2093. It would be practicable? Yes; you could come out almost level with the Art Gallery.
2094. With much additional cost? Only the cost of the station and platforms.
2095. *Mr. Lee.*] That could be done at any time? Yes.
2096. *Mr. Wright.*] Would it not interfere with the purpose for which you design the loop? No; but it would mean another station.
2097. *Mr. Humphery.*] How would it be practicable to have the station at the Circular Quay, in connection with your scheme, for a loop from King-street round Woolloomooloo and back to King-street? It will be easy, but you will have to go down near the wall in the Gardens, and the line would have to be out in the open in places.
2098. Do you mean it would be a lengthening of your loop? It would make the loop larger, and you would go nearer to the shores of the Gardens.
2099. Would it be practicable to have the loop larger and provide a station at the Circular Quay? Yes, and come up Macquarie-street.
2100. *Mr. Wright.*] Would it be practicable without destroying any portion of the Botanical Gardens? There are certain portions of the Gardens where you would have to run on the surface.
2101. *Mr. Humphery.*] What would be the increased length of your loop, and the additional cost? It would increase the loop about three-quarters of a mile.
2102. Would it double the cost? No; it would cost about £15,000 extra.
2103. Would you be able to provide all the necessary conveniences in connection with the terminal station in the same way in which you propose to provide them by the plans submitted? Yes; you could do everything else, but the curves at Circular Quay station would be rather sharper.
2104. What would be the difference in the curves? I think the curves rounding on Circular Quay station, in the loop, would be about 8 chains.

WEDNESDAY, 7 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
CHARLES ALFRED LEE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Frederick Harrison Quaife, M.D., sworn, and examined:—

F. H. Quaife, M.D. 2105. *President.*] Have you any scheme which you desire to place before us? Yes. I hand in a plan—portions of sections 33 and 34 of the city of Sydney—upon which I delineate a portion of my idea and also a tracing unincumbered by any buildings.

7 April, 1897. 2106. Will you read your statement? Yes; it is as follows:—

A modification of the 1890 Hyde Park scheme proposed by the Commissioners, saving a considerable area of the Park, and giving an area for the terminus equal to that stated to be required.

Levels of the important points are official, kindly supplied by Mr. Deane, who also supplied a practicable curve (railway).

My remarks refer to the area for the station and yard at Park-street, and some important ones to the levels and conditions of the southern quarter of the Park.

Plan is drawn on a copy of the large city official map—sections 33 and 34—on a scale of 40 feet to the inch.

Boundaries of the Land.

Castlereagh-street, north-west corner, to a point 60 feet along King-street East, beyond the Supreme Court about 400 feet; from that point to Park-street, parallel or nearly so with Castlereagh-street, about 1,440 feet; from Park-street point 145 feet to within 15 feet of south-east post of entrance to Park; thence curved line of 12-chain radius to a point about 30 feet from corner north-east of Synagogue; thence a line proceeding to that corner and along the northern boundary of the building to Castlereagh-street; thence back to starting point at King-street, about 1,205 feet, along east alignment of Castlereagh-street. It

It might be necessary to take about 45 feet more at Park-street, east of above, and thence to join the second line through the Park to a point about 580 feet from Park-street; and, also, a strip along Park-street east of that, sufficient for a roadway. The area of this land is nearly 13 acres, and includes all that is wanted for the station buildings, platforms, lines, and approaches.

To this should be added the rest of the site of St. James' Church, and that part of St. James'-road east of the line from King-street to Park-street, on the eastern boundary of the station ground. Of the above addition there are almost two-thirds of an acre, and it is meant to be added to the Park in lieu of some taken away. It is bounded east by a curved line from the church to the entrance of the avenue. It is shown by red and black lines in the plan.

F. H. Quaife,
M. D.

7 April, 1897.

Contents of Principal Area.

1. Tower and about one-fourth of the church.
2. Supreme Court and Land Titles Office.
3. Western half of St. James'-road.
4. Part of the Park—190 feet wide in the straight, and lessening at each end.
5. Elizabeth-street from King-street to the Synagogue.
6. Market-street, east of Castlereagh-street.
7. All the property from the Synagogue north boundary to King-street.

Appurtenances.

Area taken from Park is 5 acres, and 7½ acres to avenue are left, including two-thirds of an acre more, added as described above.

Of this area the State already owns a large portion, viz. :—1. The Supreme Court and Registrar-General's office.

2. The land on which the High School stands and on to Market-street.

The square block at King-street, between Elizabeth and Castlereagh Streets, and also all south of Market-street to Synagogue would have to be resumed; this should be now much lower in value than formerly. There is not much good property on it. The old Court-house would have to be replaced probably where the Mint is, and that could be moved out to spare ground in the Barrack area. Such an institution should not occupy so magnificent a site as it does. A good part of the ground in Castlereagh-street has only rookeries and hoardings on it. Of course the church would have to be paid for, and it is unfortunate that a fine new building should have been erected for an additional Court-house close to it; but that is after all a small matter if the great public convenience of a railway terminus is considered.

Four hundred feet are taken because I understand that Mr. Eddy considers it necessary, or less of the Park might be interfered with.

The expensive and fine Synagogue is to be carefully preserved and this limits our facilities of approach as we must enter the ground from the south to the eastward of the central line of the station. The gentle curve necessary on the western side conveniently causes the widening of Castlereagh-street by about 30 ft., making it about 92 ft. wide, which would give fine room for the great vehicular traffic which would be concentrated there. We still then get about 370 ft. of width for the station.

I have followed as closely as possible the published plan for the Park-street station, and have provided room for similar platforms and lines; also an interior cab-road to go in at Castlereagh-street and rise over two of the westernmost lines to a road out at the Synagogue, on a grade of about 1 in 13, for 170 feet, then a level or slight rise over the bridge. Beside the Synagogue, a road nearly 30 ft. leads out to Castlereagh-street, and has a gateway to Elizabeth-street; also a 5-ft. footpath along the Synagogue wall. There also on the Castlereagh-street front is provided a large luggage office, 100 x 85 ft., with a second front to a road-space opposite the Synagogue, but separated by a wall from the roadway mentioned above. Such an office is provided in the Park-street plan, and is to be on the surface of the ground, and have a lift from the long western platform to its floor. This may be done here, but I would have underneath this building a basement which might be used for electric power plant for the lighting of the station, and also for part of the power necessary for working the tramways proposed to be converted from steam ones into electric ones. It would be found probably more economical to run the current from this central point than from the Rushentler's Bay station as proposed, and if necessary, the room could be extended nearly up to the Synagogue, giving a very large space indeed.

Room in the yard is provided for seven distinct platforms from 20 to 27 feet wide, with the necessary room for the lines between, as proposed by the Commissioners' plan. The bridge at Park-street is also made wide enough for all the lines required with two supporting piers, each 3 feet 9 inches thick, with room for three lines between the piers and abutments and four lines between the piers.

The levels shown are official, and give plenty of headway by raising Park-street from 1 to 2 feet over the bridge, and an easy grade on each side to Elizabeth-street and towards College-street. I think a fall of about 1 foot in the 580 from the ends of the platforms will require a 2 feet rise at Park-street, more fall would of course require less. According to Mr. Deane, a rise of 2 feet 6 inches to 3 feet at Park-street would take them out level.

The level for the rails at the platforms is 64 feet, being 3 feet as required below the level of Castlereagh-street at Market-street, or 67 feet. The other levels at various points are shown on the map. The land rises on each side in Castlereagh-street. At King-street it is 74 feet, at Elizabeth-street 85, and near Phillip-street 95. At Park-street, near eastern boundary of the station land the level is 82 feet, and hence there would have to be a deep cutting with retaining-wall from Park-street to King-street. Hence there would be required the excavation of the whole land from Castlereagh-street to the eastern wall, and this would be advantageous, as tunnels to the Quay and the eastern suburbs could run out from the last pairs of rails under Phillip-street and so on into Macquarie-street with plenty of head over them—20 feet being required for a double tunnel but 15 feet or upwards for a bridge (10 or 11 feet left over the tunnel). A tunnel can run along Macquarie-street to the Quay without any compensation—payment by keeping it on the eastern side of the street. The level of the station would provide for all sanitary arrangements. The platforms are all of the same length as in the proposed plan, and the carriage road is 30 feet wide.

At King-street there is a widening of 10 feet for the extra traffic, and a roadway for cabs to the front of the station at the least part 35 feet wide, and as these cabs would be all taking people to the trains they would merely set down and drive away. The cab-stand would be in Castlereagh-street. I do not presume to go into station arrangements, except in so far as to indicate what seems practicable. The general level is so near that of the land at Castlereagh-street side that there would be everywhere very small descents to the platforms by either steps or inclined planes.

The traffic across the Park at Market-street, would be provided for by either an over-head bridge or subway, from which, if necessary, communication with the platforms can be made, and ticket offices provided for requirements.

The trams along Elizabeth-street would be diverted across the Park-street bridge, and would curve round to the east side of the railway ground, and be carried on an elevated railway to King-street, where, by a reverse, they would pass across the cable tram, as at present, and pass into Phillip-street, joining the present lines at the north side of Hunter-street, and the awkward and very expensive curve from that street to Elizabeth-street would be abolished. The viaduct would be as light as possible, and its eastern edge would rest on the railway boundary wall, the other on the ground and eastern platform on iron posts; it would have to be about 22 feet or 24 feet wide. The curve at Park-street could be made much easier than the present one at Hunter-street, and there would be a gentle rise from Park-street to King-street. Here note that as the trams are probably to be converted into electric, the works would be much lighter than necessary to carry the present steam trams.

As the great mass of traffic would pass to and fro, west of the station, it would be a great advantage to remove the trams as proposed, as the traffic would no longer have to pass over the tram lines, and the entire tram traffic would be virtually only the length of the Supreme Court further away. I consider this point of especial value.

In advocating this plan it is well to point out that there has been a great increase in important offices and buildings within an easy radius of the site. Castlereagh-street, Elizabeth-street, beyond King-street, and Phillip-street, are becoming more used, and as the area required becomes greater, Woolloomooloo, near the water, will be taken up more and more. Also the eastern part of the city, Darlinghurst, &c., should be considered.

If the station is west of George-street, the eastern part of the city and the eastern suburbs will be left out in the cold, as the people will have to cross the main business parts of the city to get to it, while a railway to the east will be rendered almost impossible by the tremendous cost of ground and destruction of important buildings.

The main features of advantage in this plan are :—

1. Its central position for a station, taking generally the city and suburbs, and the easy distance from it to the most important centres.

F. H. Quaife,
M.D.

7 April, 1897.

2. The ease with which lines can be taken to the east and the Quay, when required.
3. The comparatively small amount of valuable property to be resumed.
4. Half of the property required is already in the hands of the State.
5. About 7 acres of the Park are saved, and possibly more may be on revision by the experts.
6. The removal of the old Court-house and St. James' Church will be no loss, but rather a boon to the architecture of the city.
7. The station is close to the general traffic, especially since the cable tram has been introduced.
8. The cost of construction of the proposed electric tram in Park-street would be saved—some £12,000 or £15,000. I should think this may be put against the removal of the new Court premises built next the church.
9. The proximity of the station to the great hotels and boarding-houses, clubs, public offices, the Library, Domain, Botanic Gardens, Hospital, &c.
10. The widening of Castlereagh-street would be a great advantage, and would probably quite make up for the closing of Elizabeth-street at the part required.
11. The great advantage of ending at King-street, so much nearer the centres than Park-street.
12. The southern part of the Park, where the new station is proposed, is much the better planted and grown than the northern part. Along the middle of it is a high ridge, from Bathurst-street to the avenue, and on this are the finest trees, and there is such a height here that by curving the line east from the Unitarian Church a good head could be got over the line, and tunnelling might get under these very fine trees without injuring their roots. North and south of them the ground might be opened, cut down, and, as much as possible, re-covered in. Near Park-street there is no valuable timber, as an inspection will show. The trees in the northern section are mostly old: Numbers have lately been lopped to make them grow better. If the lake in the southern part is injured a new one might be constructed somewhere else in the Park to make up for it. The drainage will probably rather improve matters than otherwise in such a shaley soil. How little the presence of a high cutting injures trees may be seen near the Cleveland-street bridge, where there are some very fine and old trees in the grounds of St. Paul's Church, Redfern, which abut upon the railway yards.

The objections no doubt are:—

1. Mechanical—This the railway engineer alone can settle, but I have, so far as I know, avoided any.
2. The closure of streets—The gift of a fine railway terminus will quite make up for this.
3. The compensation—On any other route, the Park excepted, this will be simply enormous. It should be taken on the land tax returns sent in by the proprietors, and with the usual additions for compulsory resumption and for buildings.

The block next King-street no doubt is the most valuable. The High School might be removed to the vacant semicircle at the Colonial Architect's Office, a much more suitable and quieter place; and, as I said before, the Law Courts to the present site of the Mint.

It would be fully worth the money to bring the station to King-street, and the additional distance would be only so much nearer the Quay for any extension.

I do not see why so much provision for horses and carriages should be made as proposed; there are about 540 feet of line frontage in the Park-street plan. All the racing stables I think are out Randwick and Waterloo way, and room for horse-box trains could be most conveniently got at Redfern or on the Benevolent site; but a little room for casual purposes may be easily supplied, and in my plan would require a little extension of the width of the Park-street end of the enclosure; this is shown in the plan.

Values.

Taking Mr. S. Perdriau's values, as published, the area of the land from the Synagogue to Market-street is about £260,000, the King-street block £102,000—making £362,000. I would remove the Mint to Green's Road at the Barracks; remodel the whole site on which it stands, adding the space out to Albert-street from the Domain to Macquarie-street. On this area there should be room for fine law courts of all kinds, a new High School, in a much quieter and equally convenient position, and a New St. James' Church, equally convenient with the present. The whole might be named Victoria Crescent, to commemorate the glorious reign soon to be celebrated.

2107. You have made a statement with regard to the cost of the land to be resumed between Castlereagh-street and Elizabeth-street, but you have not given us any statement of the cost of the erection of a new St. James' Church, Supreme Court, and Registrar-General's Office? No. With regard to the law courts, some day—whether the railway goes there or not—the question of new buildings will have to be faced. As far as I can see, the only space suitable for them—to provide buildings worthy of the city—is the space where the Mint is.

2108. Your scheme carries with it the resumption of the block of land between St. James'-road and King-street, with buildings thereon, and also the block of land extending northerly from the Synagogue to King-street? Yes.

2109. But the amount of park resumption is limited to 5 acres instead of 12? Yes.

2110. You propose to widen King-street and Castlereagh-street? Yes.

2111. Your scheme, however, closes Elizabeth-street, and renders necessary a deviation of the tram-line? Certainly.

2112. What area, in addition to the 5 acres of the Park, do you propose to take? The whole area between Castlereagh-street and Elizabeth-street.

2113. Your central station, then, would be bounded on the west by Castlereagh-street, which would be widened, and on the north by King-street, which would be widened; then at Phillip-street you pass into the Park, and take that area until you come to a point pretty well north, or midway between Market-street and the Synagogue, and then you come down easterly to Elizabeth-street—or do you propose to extend your area from Phillip-street to Park-street? Yes. There will be a high retaining-wall right through to Park-street, excepting that there will be a little extension to the east at Park-street to accommodate horse-boxes and so on, if necessary. My area would be practically the same in extent as that proposed by the Railway Commissioners, with this addition: the area would be considerably longer than the Elizabeth-street and Park-street plan, and would, therefore, be in their favour. I understand from some of the evidence given the other day that one of the difficulties is to get a long enough position to enable them to have a clear sight and ways. This plan would, I think, be between 150 feet and 200 feet longer than the Liverpool-street to Park-street plan.

2114. As a medical man, how do you view the curtailment of parks in a city like Sydney? If Hyde Park were the only park within a long distance, I would be one of the last to meddle with an inch of it; but when I know there are upwards of 200 acres of park land, including the 40 or 45 acres of Hyde Park, within a stone's throw, which for beauty and sanitary purposes are infinitely superior to Hyde Park, and when I know that the convenience of millions of people is involved in bringing the railway into the city, I cannot for one moment hold the opinion that Hyde Park must be absolutely sacred. I look upon it as just as righteous and proper to take the necessary piece of Hyde Park for a great railway terminus, in order to bring about an improvement in the traffic conditions of the people, as to erect a great building like the Art Gallery in the middle of the Domain. If there was no objection to doing this, there can be no objection to taking this small area of the Park. At the same time I do not put my plan forward as a better scheme than the Hyde Park scheme of the Railway Commissioners, but I think you must come to

some

some sort of compromise. I would sooner not spend a large sum of money to shunt the railway to the west, in order to spare the Park; but I would sooner spend that large sum of money in having the railway than leave the Park alone and not have it. I cannot believe that any enlargement at Redfern will serve the people. I have a map of the city of Glasgow, which has a population of 600,000 to 800,000 people. I spent five years there thirty years ago; at that time there were two railway stations there—or, properly speaking, three, because there was a station on the south side of the Clyde, near the bridge, that belongs to the Caledonian Railway Company. They had another in the north part of the town, in a very awkward and inconvenient position, from which the mail trains to London started. The North British railway station was on a very convenient site, close to George-square. It is a small station, and they had to work the trains up and down a tunnel, on a steep grade, by means of a cable. What has been done since then. The old College—the University of Glasgow—not a stylish or handsome building, but one hallowed to generations of Scotchmen by the work it has done, and also the University grounds in the east end of the city, have been sold to one of the railway companies. There is now a fine station on that site. When I left they were building the Union station at Enoch-square, near the water. It communicates principally with the lines on the south side of the river. The Caledonian Company, finding they were out in the cold on the south side of the river, got power to resume a large block of land in Argyle-street, and they built a magnificent station there, simply because they had to compete with the Union and other stations round about. As a matter of fact there are now five central stations in the city of Glasgow, all within comparatively easy reach of the business centres of the city.

F. H. Quaife,
M.D.

7 April, 1897.

2115. *Mr. Fegan.*] The companies paid large sums of money for the lands you have described? Yes.

2116. The University, I suppose, profited by the large sum of money paid for the resumption of land for station purposes? Yes.

2117. In the present instance you propose to take from the people a recreation ground, without giving them anything in return? Do we not give them a magnificent railway station.

2118. The people who generally make use of the Park would not use the railway station? But there are 200 acres within a stone's throw.

2119. Not as convenient? Yes, as convenient and better. How many yards is it from the centre of this piece of land to the entrance of the Domain near St. Mary's Church, and how many poor people go into that part of the Park? Many are afraid to go into Hyde Park because of those who are there. Hyde Park itself—at any rate the part in question—is by no means an airy place. If the houses facing Elizabeth-street, opposite the part of the Park proposed to be taken, remain, there may be some objection to depriving them of their frontage: (I do not think so, however)—but, as all the property to Castle-reagh-street would be taken, that objection fails. Castle-reagh-street, is wholly and solely a business street, and will become more of a business street if the railway goes there. I believe Hyde Park contains from 40 to 45 acres, and surely to goodness 35 acres is enough to exercise in. Then there are the Botanic Gardens and the Domain within a stone's throw. The people who cannot walk from Hyde Park to the Domain to recreate themselves do not deserve to be considered.

2120. *Mr. Black.*] Some of them are too footsore to walk;—you are raising the question as to whether certain people have any right to a foothold on the earth at all? I should like to know why they could not walk 150 yards, and be in a better position and in a part of the Park that is better kept. This part of the Park which seems to be thought so desirable for these people is the very worst part. It slopes west. If you go there on a hot summer's afternoon you will find the people lying under the trees, such as they are, and all the wind they get there is the west wind, which is not a healthy one. On the other side of the avenue they get the east and south-east breezes, which are better. The question in my mind is,—Is it worth while to expend a large sum of money to buy land to escape taking part of the Park.

2121. Then there is another question,—Is it necessary to have another central station when you have one at Redfern? I do not consider Redfern in the city at all; it is one of the most stupid of places for a station.

2122. Is it not nearer the centre of the city than any other so-called central station in Australia? On the contrary, it is the worst possible place.

2123. Name one which is nearer to the centre of a capital city? I think both the Melbourne stations are nearer.

2124. I think if you struck the centre of the city you would find it very near to Redfern station? No; it is at the corner of Hyde Park. Then you have to look to the extension of the city northwards.

2125. What purpose is to be served by moving the station? Bringing the traffic to the main avenues of communication.

2126. *President.*] Your attitude is this—although you view with apprehension any curtailment of the park area, you believe that there are national interests which would justify us in taking 5 acres of it, seeing that there is so much other park land available? Certainly.

2127. You would take park land only as a last resource? Yes. I would be prepared to spend a good deal of money to escape it, but I do not think it would be wise to resume such properties as you find from Castle-reagh-street to Pitt-street; you would resume property which would cost no end of money. I think it is better to sacrifice a piece of the Park than to do that, especially in view of the fact that there will be so much left. I have seen it advocated that, if the railway went round the western side, the station might be placed in Wynyard-square. That is a beautiful little Park, with a great deal of advantage to the people round about, and I cannot for the life of me understand people arguing that a station should be put in it, seeing that they would not get one worthy of the name. That Park would be absolutely destroyed, but in Hyde Park we have a piece which, in my opinion, can be spared. If you were going to take the whole of Hyde Park I would be opposed to it.

THURSDAY, 8 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

THOMAS HENRY HASSALL, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Oswald McMaster, Civil Engineer and Contractor, further examined:—

- O. McMaster. 2128. *President.*] I want you to describe the advantages of the loop-line over such a dead-end platform as that at Redfern? My loop line saves the two lines running back to Redfern to take the engines to be cleaned. Another advantage is that it entirely avoids shunting arrangements, and does away with a large item of expenditure in the shape of points and crossings. It also affords more room for idle trains.
- 8 April, 1897. 2129. And reduces to a minimum any likelihood of danger in the station? Yes; that is impossible, because there are no points and crossings.
2130. *Mr. Hoskins.*] You propose that there should be some place in the neighbourhood of Lady Macquarie's Chair for cleaning engines? Yes; not so far down, but opposite the baths.
2131. Do you know how much room the Locomotive Department occupies at Redfern for that purpose? Yes. This would only be for the running trains, and quite different.
2132. Do they not occupy about 30 acres? Not so much. They use it for locomotives and tenders and for storage room. Mine would only be used for the daily traffic, for immediate use only.
2133. *President.*] Would a loop-line and a resting-line be sufficient? Yes, it would accommodate all the traffic which can be anticipated for many years.
2134. *Mr. Hoskins.*] I suppose you know there is very little flat land between the baths and Lady Macquarie's Chair? I do not go past the baths; only as far as the baths.
2135. *President.*] With regard to the extension to North Shore, you propose to pass round the loop in order to get a grade which will enable you to have a station at Circular Quay at sufficient depth to enable you to pass through the subaqueous way? Yes.
2136. What is the grade? The steepest grade I have anywhere is 1 in 50, and that is the ruling grade throughout the Milson's Point line.
2137. You also contend that your scheme can be extended, and join the North Shore line, between Milson's Point and the head of Lavender Bay? Yes.
2138. Supposing it is not wise, for financial reasons, to extend the line to North Shore at present, you can so locate it that it can eventually be extended? Yes; that is one of the features of the scheme.
2139. It would provide for a loop round Government House, which would meet present requirements? Yes. The proper thing to do then would be to take an 8 or 10 chain loop from below the Albert-street station and proceed in front of the Garden wharf in front of Government House, and return to the same station, at the Water Police Court, which would work the slow suburban traffic. The fast suburban traffic could be worked on the loop shown on the plan. The two loops would work admirably with each other.
2140. The first loop would not be wasted under any circumstances? No.
2141. And the second loop would not be wasted when you extended to North Shore? Certainly not.
2142. In your scheme, going to Woolloomooloo Bay, you take the people coming *via* Redfern, or eventually from North Shore, away from that part of the city lying between Circular Quay or Albert-street, and your central station near the statue. Might it not be possible to locate your central station more to the east, by which it would be closer to the city. By this means the people would be more in touch with the city all along? That could be done.
2143. Are there objections to it? Yes. One is that, bringing the line on a higher level than what I advocate at Circular Quay, would necessitate a further expenditure going to North Shore.
2144. Would that be a serious expense? No; but it would be of very little advantage, excepting that it would bring the Circular Quay station a few chains nearer to the Quay itself. The total distance from the floating-jetty on to the Circular Quay station, under my present scheme, is 8 chains, which might be reduced to 5.
2145. Perhaps it might be better to put your extension to North Shore under the Albert-street station? Yes; but in making the loop at Circular Quay, I propose that the train should come out on the surface. It might come out at the Man-of-war Steps.
2146. But that will not do to go to North Shore? No; but it would not increase the expense from this Circular Quay station to the North Shore, because it would be at the proper level.
2147. If the central station were in the Park, abreast of the mouth of Market-street, it would be 30 feet lower than where you propose to put it. Saving that 30 feet might permit you to take a more direct road to Circular Quay? It would. The 30 feet you gain by not rising to the top of Albert-street would allow you to come out on the surface at Circular Quay; but that would not permit you to go on to North Shore without further expense.
2148. I presume you claim for your station that it will be in closer touch with the people at Woolloomooloo, Potts' Point, and the eastern suburbs? Yes. I claim that the cable tramway running along there would be an advantage to my central station, and it will not be far from the Elizabeth-street station.
2149. Against that, you will grant this:—That people who are walking to the station or using any means of transit, except the tramways, are removed to a worse position, just the distance that Elizabeth-street is from your station. They have to walk that much further? It depends on which position you take as the centre of population of the city.
2150. *Mr. Lee.*] The bulk of the railway traffic would leave the train at your central station at Albert-road? Yes.
2151. That would be further away from the intersection of King and Elizabeth streets than the proposed Hyde Park station? Yes.
2152. It would be still further away for those passengers who get out at Market-street and Park-street by tram? Yes; but, against that, you are nearer Hunter-street and the north-eastern portions of the city, which are equally important with those on the south which now have Redfern. 2153.

2153. Would the people who now get out at Market or Park streets be likely to use a train which would put them down at Albert-road? No; but if you had a station at Park-street many people would want to take a tram on to Hunter-street. O. McMaster.
8 April, 1897.
2154. Your argument really is that it is impossible to devise any system which will serve the whole of the people? It is absolutely impossible. My scheme allows for an extension, and it is in an elevated and picturesque position, and capable of being enlarged to any extent as time will demand.
2155. *President.*] You recognise that the Redfern Station has become so dangerous that something must be done? There is no getting out of that argument; it is quite unsafe.
2156. And you propose to extend four lines into the city and to establish a central station at Albert-street, your reason being because of its accessibility to the eastern suburbs and the present and prospective means of transit by tram through the city. The land there is not valuable and it is an imposing central site? Yes, and it is not occupied at the present time and suits the eastern suburbs connection.
2157. From there for the fast traffic you propose a loop to go to Woolloomooloo Bay, and an extension to the eastern suburbs, which will be of benefit to shunting and working the fast trains into the central station? Yes.
2158. You propose to extend that to such a level towards Circular Quay that you will be able to pass under and to join the North Shore line as described;—you also intend to have a loop under the Government House grounds to shunt the slow traffic, which does not require to go over to North Shore; the scheme is complete in itself in giving access to Circular Quay, and it carries an extension to the eastern suburbs and North Shore? Yes.
2159. The question of a station-site at Albert-street, although you regard it as the best position, does not dominate the scheme? Certainly not.
2160. The general idea might be obtained, perhaps, just as well by taking a portion of the Park, or by resumption of some place a little to the west of the Park? Yes.
2161. You think that the loop-line round Government House grounds might be done away with, seeing that you are going to shunt your traffic on the loop near Woolloomooloo Bay? Possibly by a system of points and crossings, which would not be dangerous, because they would be past or at the rear of the platforms.
2162. *Mr. Lee.*] Where would the proposed subway from the central station to Elizabeth-street come out? About the back of the Lands Titles Office, in the Park.
2163. That would necessitate taking a little of the Park? Yes, about 100 ft.
2164. Would it interfere with the ordinary road traffic? No; it would give more facilities for it. It would be 100 ft. wide with a headway of 20 ft.
2165. Would it be an eyesore? Anything but that.
2166. I suppose the subway would carry a tram? Yes; but they are already there, and might just as well run over the top but may also run through the subway.
2167. I think you will admit that a tramway service in connection with the railway should be part and parcel of it? It might be worked with the present system by putting the tramway through the subway.
2168. Have you worked out your estimate of cost? Yes; it has been carefully gone into and checked. It is estimated on the basis of the work I did on the Milson's Point railway; and I would be prepared to put down a substantial deposit as good faith to carry on the work.

John Upward, Mayor of Ashfield, sworn, and examined:—

2169. *President.*] Can you give us any opinion as to local thought in your municipality with regard to the extension of the railway? The people along the western suburbs line are unanimous that the present terminus is not in the right place, and that their wants are very badly served. J. Upward.
8 April, 1897.
2170. You desire an extension into the city? Yes.
2171. Why? Passengers are at present put down about a mile from the centre of business, which is an inconvenience. For the majority of the people it means taking a 'bus or a tram. Transhipment from one to the other means a loss of over five minutes; then there is the slower conveyance, which means a further loss of seven or eight minutes. It means the loss of from fifteen to twenty minutes on each journey.
2172. Is it your opinion that those who travel to their business in the city, through the absence of a city railway, lose approximately half an hour of their time? Fully that.
2173. Where do the Ashfield people desire to have the station located? I think the majority would be better served by a station between King and Hunter streets.
2174. Do you regard King-street as a fairly central position? I think the block between King and Hunter streets is the most central in the city. The further away from there the more unsatisfactory it will be.
2175. Do you regard the junction of Castlereagh and King streets or King and Elizabeth streets as fairly central positions? Any part of the city ranging between Kent-street and Castlereagh-street.
2176. How would you view an extension on the western side of George-street? If taken in connection with a circular line I think it would be most satisfactory.
2177. What is your view with regard to a station approaching or somewhere near Circular Quay? It would be of immense use, because of the large traffic from North Sydney, Mosman's, Manly Beach, and Watson's Bay.
2178. You think the railway should be extended, if possible, to the Quay, because of the travelling public there, and those whose business lies with the ships and wharfs? Yes. My idea is that one of the various loop-lines which have been suggested would be the best. It would require a large amount of space for a terminal station. Such a scheme as that which Mr. Norman Selfe has suggested seems to be one which would serve the convenience of the public most.
2179. If the people of Ashfield could be placed by railway in the vicinity of Castlereagh and King streets, and then on to Circular Quay, they would probably be well satisfied? Yes.
2180. And if it were possible to bring the line closer to George-street, and terminate it at the Quay by a western route, they would also be satisfied? Yes.
2181. *Mr. Lee.*] Do you think a central station on the site of the old Brigade Office would be convenient for western suburban passengers? It would be more convenient than the present one; but I still adhere to my opinion that a circular line would be most convenient. 2182.

- J. Upward.
8 April, 1897.
2182. Supposing that, in the event of that not being practicable, it were brought in on the eastern side only, do you think a station in that position would meet the requirements of the bulk of the city and western suburban people? Of course it would be much better than the present terminus.
2183. Would it not place them in this position—that the saving in time between Redfern and the station point would be at least half the time it now takes to come down in the tram? Yes; there would be a saving of time.
2184. Do you think the passengers would be likely to leave the train at Redfern, and seek their offices by means of the tram down George-street—that is, if King-street were made the terminus? Only a few. I myself would have to take some other conveyance to the end of Circular Quay.
2185. If the line is brought in on the eastern side, you are of opinion that it should be extended to Circular Quay? Yes.
2186. Thereby giving the large number of business people on the northern end of the city easy access to their places of business, and enabling the traffic by ferry to get direct communication to and from the suburbs? Yes.
2187. You think it would be wiser to extend to Circular Quay than to allow the station to remain in the centre of the city? Certainly.
2188. Do you think the present and prospective traffic would justify the extension? Yes.
2189. *President.*] A scheme has been suggested to land the passengers somewhere near the new markets, and then extend towards Circular Quay;—would that meet with disapproval? No. One great reason why the western suburban people wish for an extension is that owing to the congested state of the traffic at Redfern there is a constant fear that the accidents which have happened of late may recur.
2190. Then you are always travelling with apprehension? Yes. With regard to the goods traffic, it appears to me to be absolutely unnecessary to consider a line for goods traffic round the waters of Port Jackson, Sydney being a distributing depôt. Every day I am brought in close contact with the discharging of cargoes around Sydney, and I know that only a fractional part of the quantity which comes into Sydney is ever required to go direct up country.
2191. *Mr. Roberts.*] Are you the proprietor of one of the bonded warehouses? Yes; the Metcalfe Bond.
2192. And you have a thorough knowledge of the shipping trade of the port? Yes.
2193. Do you think the present facilities for the export and import trade will be sufficient for the next twenty-five years;—you know the head of Darling Island, where the Government has built wharfs? Yes. I have no doubt that it will have to be availed of, or a better scheme provided along Darling Harbour than we have at present.
2194. Do you think there is not any necessity for bringing the railway round the wharfs of Darling Harbour or Circular Quay? No; not for goods. Of course, it is hard to say what the shipping will be in twenty years time, but as far as we can see ahead, we have plenty of wharfage accommodation.

FRIDAY, 9 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	GEORGE BLACK, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

John Stinson, Mayor of Burwood, sworn, and examined:—

- J. Stinson.
9 April, 1897.
2195. *President.*] The Commission wish you to give your views with regard to the extension of the city railway, and to refer to the inconvenience from which the Burwood people suffer, and which we may presume would be remedied by the extension? So far as I can gather it is highly desirable indeed that the railway should be extended. Anyone who travels regularly by the suburban trains will see the immense amount of inconvenience occasioned to travellers by being deposited at the outer edge of the city, and having to find their way down as best they can. They suffer not only inconvenience, but a loss of ten minutes each way, so that really out of a day's business hours, of seven hours, a business man loses twenty minutes each day going to and from his office. That is over and above what you would have to expend in travelling if the railway were extended to King-street.
2196. What about the question of the apprehension of danger? That is a matter which has prevented many people from settling in the western suburbs, and it is one strong reason why many of them are seeking a home elsewhere. They know from bitter experience that there is a certain element of danger in travelling into the Redfern Station, particularly in the busy hours of the morning. Knowing that a great deal of shunting is being done there, the danger is ever before them. I can speak of several residents who are looking out for a home elsewhere for that very reason.
2197. Are you prepared to express an opinion as to what portion of the city would be most suitable for the suburban residents to reach? With regard to the passenger traffic, I think the general impression is that the route should be by Hyde Park. The terminal station, for the present, at any rate, should be somewhere about King-street—on the site of the Supreme Court buildings. Of course I do not mean to say that that ought to be a permanent terminal station.
2198. Do you attach any weight to an extension to Circular Quay? I think that ought to be the ultimate object, possibly with a view to connecting with the North Shore railway. I think the old Supreme Court buildings might be profitably removed, and that a portion of Hyde Park might also be given up. Although it is spoken of as one of the lungs of the city, I think a portion of it might be lopped off, especially as the harbour constitutes such an immense lung, and one of which the city can never be deprived. I think sentiment ought to give way to commercial advantages in regard to the Park.
2199. *Mr. Lee.*] If the central station were placed on the site of the Benevolent Asylum would it meet the case? It would not; it might just as well be left where it is as go there.
2200. Would the extra fare into the city deter passenger traffic? No; because a large number of people who use the tram now pay more than what extra fare would be. At present the Government lose a very large amount from people travelling on foot, who would otherwise use the train right into the city. In the mornings, particularly, a large number of people walk from Redfern or take 'buses to their offices.

2201.

2201. I believe that in fine weather many walk as a matter of exercise? I do not think, if the train were running to King-street, many people would alight at Redfern for the purpose of walking as a matter of exercise.

2202. Does not the present tram service offer facilities which the railway would not offer by putting people down at certain streets? Yes; but it is indisputable that during the busy hours of the day most of the passengers get out at the same street. In the busy hours of the day King-street is the centre of all the tram traffic.

2203. *Mr. Wright.*] The Government have submitted a scheme for a permanent station at Hyde Park between Liverpool and Park streets;—in your opinion, would that position be central enough to meet the requirements of the citizens? I do not think it would. If we are going to have a city railway at all, we ought to have it at the most central point, where the traffic is concentrated.

2204. Do you think it is correct to contend that the centre of the city lies between King and Hunter streets? I am not prepared to say that is the most central portion, but I know there is a very great deal of traffic finding its way into the trams at Hunter-street and King-street—larger than is found at any other point on the tram route between King-street and Redfern.

2205. Is there not a larger traffic at Market-street than at Hunter-street? I think not.

2206. If the officials say there is, are they likely to be correct? Of course, I would not set up my opinion against theirs.

2207. At any rate, between Market-street and Hunter-street the great city traffic is conducted? Yes; so far as I have been able to observe.

2208. *Mr. Clarke.*] Do you say the Supreme Court would be the best site for a station? Yes.

2209. I presume you would remove St. James' Church and utilise that block? Yes.

2210. You do not think the proposal of the Commissioners to go to Park-street is suitable? I do not.

2211. You are aware that it is necessary to have more room at Redfern than there is at present? I am.

2212. Would a new station on the site of the Benevolent Asylum be suitable for the general public? I do not think it would be worth the trouble and expense of constructing it.

2213. You are aware that the electric tram is shortly to run down George-street? Yes; it will supply a different service from that which is now supplied from the railway station.

2214. Would not that suit the public equally as well as a railway into the city? I do not think so, because it will necessitate a change at the Redfern Station, loss of time, and so on.

2215. Do you not think the tram is quite as convenient to the public as a railway would be? I do not see why the George-street tram could not be worked in conjunction with the city railway.

2216. Would you then have as many passengers for the railway? I think so. If the passengers using the city railway did not get in at King-street or Market-street they might use the electric tram to Redfern and take the train there.

2217. Would not the tram and the railway be competing with each other? I do not think so, when they are both running in the same interests.

Hon. John Macintosh, M.L.C., sworn, and examined:—

2218. *President.*] I understand you desire to be examined purely from the Sydney aspect of the question before us? That is all.

2219. Do you wish to make a statement? Yes. Twenty-eight years ago, all to the north of the present railway-bridge at Redfern comprised the railway establishment of New South Wales,—that is from Devonshire-street to the railway bridge. That was hardly occupied; the result being that the Government gave Albert Park to the Corporation—not requiring it for railway extension. Since that time, Darling Harbour has been established. There are large works at Clyde, with 100 waggons frequently waiting there for produce to be delivered. I think, if the present railway were extended to Belmore-road, it would be the most central part of the city, and would be for the convenience of the people. I will point out that the Railway Commissioners require one quarter of Hyde Park on the north-west side. It is about 400 feet in width, and is a narrow spot for a railway station. 100 feet would require to be taken on the west side for a road to widen Elizabeth-street; a road would also be required on the eastern side. The Belmore-road site will give length and breadth for any permanent establishment. I take it that there must be no break on our railways from Perth to Townsville. It is inevitable that some day or other a bridge must be built across to North Shore. I think the Government should resume land on the eastern side of Darling Harbour parallel with the middle of Barker-street off Bathurst-street. When we make a through trunk-line to go across the harbour, there should be a platform at the bottom of Market-street. I think, if the Railway Commissioners use Hyde Park at all, they should use the whole of it. In view of the good "get away" there is at Belmore-road, I think that is the most suitable place for a station. The tramways are convenient to it, and the difference in cost between travelling in them and in a railway into the city would be only one-half penny or one penny. The time lost in travelling by tram or 'bus to any portion of the city would not be more than two or three minutes. If it is intended to get to the eastern portion of the city, a tunnel could be made from, say Margaret-street, underneath George-street, along to Circular Quay, and from there we could go to wherever is thought proper. I think a continuous line is desirable. Ten or fifteen minutes would take any passenger by train or 'bus from the furthest corner of Sydney to the present station, and the railway would not be more than two or three minutes quicker. Personally, I think we require an improved tramway service. I would have no objections to filling up Darling Harbour almost to the bridge, and to making a higher road where the present Pymont Bridge is situated. I do not think Darling Harbour is utilised as much as it ought to be. There is a large amount of empty space, and almost every owner has encroached upon the public land. The extension of population cannot be to the north of Belmore Park, but it is going on all round—west, east and south.

2220. *Mr. Hoskins.*] It has been stated that if a terminal station is constructed at Belmore-road it would cost about £350,000 and no revenue will be received, whereas if the railway is extended to Hyde Park the revenue from passengers will pay the interest on the money spent? I cannot conceive that that is correct. I look upon the matter as altogether beyond a money matter; we must look for the convenience of the general public.

2221. *Mr. Humphrey.*] A suggestion has been made that instead of the terminal station being at St. James'-road, it should be placed on the present site of the Government Architect's office, and that there should

J. Stinson,
9 April, 1897.

Hon.
J. Macintosh,
M.L.C.
9 April, 1897.

Hon.
J. Macintosh,
M.L.C.
9 April, 1897.

should be a loop-line at the back, so that, instead of having a great number of lines for shunting purposes, the traffic could be worked by means of a loop? That plan was considered by a Royal Commission some years ago, but there were a number of objections to it. I opposed it because it is not the way to get through to Brisbane.

2222. Assuming it would be possible to connect from there with the North Shore line would you see any objection to the plan? Yes; it is impracticable to make a bridge from the east of Elizabeth-street.

2223. What is your objection to the site I have mentioned? It would take up too much of the land about there. The Mint would have to go and also the law offices. I do not think it would be a desirable place, seeing that the Infirmary, which cost about £250,000, might have to be disturbed.

2224. I asked the question on the assumption that that property would not be greatly interfered with;—do you see any objection to the railway being brought from Redfern to that position, other than the fact that it would be impracticable to extend it to Milson's Point? Yes; it would not be central. It would be nearer Potts' Point, but it would be further from Balmain, the Glebe, and Surry Hills.

2225. Do you see any objection to the line passing through the Park, assuming the terminal station to be beyond it? Yes; the Park being for the use of the public ought not to be disturbed if it can be avoided.

2226. Do you wish to convey that you are of opinion that the passenger traffic should be carried to Darling Harbour? I have no objection to seeing a platform there.

2227. But do you propose that the railway should be extended there? It should follow the present line. A siding could be made at Eveleigh, and you would have a straight course onwards.

2228. Then your idea is that the passenger traffic, instead of coming to the Redfern terminus, should be deviated so as to turn off where the goods traffic goes to Darling Harbour? Yes; that is, for through traffic.

2229. Then you think there should be a different line for the through traffic, and that the suburban passenger traffic should be landed at Belmore-road? Practically speaking, the main railway station of Sydney should be a side station for through passengers. As I have already stated, there cannot be more than two or three minutes difference to a passenger going to any part of Sydney by tram, and 1d. difference in fare.

2230. Do you not recognise that instead of there being two or three minutes difference, the actual difference is about half an hour daily? I think it would be impossible for any man to prove it would be ten minutes difference.

TUESDAY, 13 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Frederick William Parsons, Mayor of Strathfield, sworn, and examined:—

F. W.
Parsons.
13 April, 1897.

2231. *President.*] Are you prepared to speak as to public opinion in Strathfield with regard to city railway extension? Yes.

2232. Why do you desire the railway extended, and have you any special part of the city which you desire to reach? It is unanimously thought by the people in the western suburbs generally that there should be some alteration to the present terminus. Some months ago large meetings were called in nearly all the western suburbs, and resolutions were unanimously carried to the effect that the time had arrived when some alteration should be made at Redfern, and when the railway should be extended to the city. All the meetings were agreed that it would not be wise for the residents in any way to hamper the Government by suggesting routes. The agitation was principally aroused through the accident at Redfern two years ago, and also because of the great inconvenience travellers are put to in changing. If you leave Strathfield at twenty minutes to 9 in the morning, you arrive at Redfern at five minutes to 9. If there is no extra delay on the trams, you are landed at King-street about ten minutes past 9. Therefore, it takes you as long to travel from Redfern station to King-street—which is practically the centre of the city for business purposes—as it does to travel 8 miles from Strathfield to Redfern. On the return journey it takes longer, because there is no dependence to be placed on the time you meet the trams. If you want to catch a particular train you must give it five or ten minutes' grace. It is very generally considered that the proposed extension to Park-street would not meet the difficulty, but that it should be further and more complete. The committee appointed by the Railway Extension League, under whose auspices the meetings in the suburbs were called, thought that if there was an extension anywhere it would be better than nothing, as it would, perhaps, be the commencement of a further extension. The committee, which consisted of the mayors of the boroughs and some of the aldermen, considered, however, that it was not in their province to suggest any route.

2233. Would we be justified in regarding the intersection of Castlereagh or Elizabeth and King streets as a fairly central position? I think that would meet the convenience of the majority of the travelling public. The largest number of people are landed about King-street.

2234. Approximately, would the present route of the tram-line suit them fairly well? It would.

2235. It has been suggested that the central station should be placed near the old Colonial Architect's Office? I think a station anywhere about there would be convenient. As long as the public could be brought within a reasonable distance of the Post Office, they would be satisfied.

2236. If you were given a choice between the corner of Castlereagh and King streets and the old Immigration Barracks, how would you decide? Upon the corner of Castlereagh and King streets, because it is nearer the Post Office. If there were difficulties in the way, however, I do not think the difference in distance would weigh very largely with the public.

2237. *Mr. Black.*] Do not the people of Strathfield seem to be inclined to think that the Government chiefly exists as a public means of lessening their private expenses? No; they are prepared to pay an additional price for being carried from Redfern to King-street, although we think we pay too much at the present time.

2238.

F. W.
Parsons.
13 April, 1897.

2238. If it were discovered that the Government, at the public expense, cannot provide the people with that convenience, except at a loss, would the people of Strathfield still be prepared to demand it? I do not think they want anything unreasonable; but they are given to understand that an extension to the central portion of the city would bear a handsome return.
2239. What do you call the central portion of the city? Say Castlereagh and King streets.
2240. Would not Park-street suit your purpose? It would not suit it as well, because you would be left a considerable distance away.
2241. Then there would still be an agitation to have it carried further on? There would. If the station is at Park-street, and the people have to get into a tram to go to Park-street, they might as well continue on to Redfern.
2242. Is there any necessity to remove the Redfern station in order to gain your end? We have two ends in view. We do not, for instance, care about the frightful risk which is run at Redfern every day. I speak personally, because I was in the accident which occurred two years ago. Again, we think we have every right to ask that we should be carried from Redfern to the end of our journey at a reasonable cost.
2243. The increase of room at Redfern is your first object? No doubt.
2244. Then the removal of the station is not necessary to achieve that object;—is it necessary to achieve the second object? Yes.
2245. Do not you think you could come to the city by train without moving the railway station? The people could only be brought to the terminus. Of course, you could construct a fresh line altogether, and bring the people in another direction.
2246. Could not you run out the train on one side and bring it back by another? Yes; if there is an objection to put a central station in an expensive part of the city, the difficulty could be overcome by constructing a loop-line.
2247. *Mr. Wright.*] Is it not a fact that Strathfield is better served than any other western suburb;—cannot you get from there in under half-an-hour? Yes; I think we are as well-served from Strathfield as anywhere. The people of Ashfield and Petersham have slower trains and take longer to get in.
2248. *Mr. Humphery.*] Is it not a fact that you lose fully twenty minutes a day travelling to and from Redfern? Fully that.
2249. Allowing ten minutes additional for a train to come to King-street, you would save twenty minutes a day? Fully.
2250. What is the population of Strathfield? About 2,500.

Charles O'Neill, C.E., sworn, and examined:—

2251. *President.*] Have you a statement to place before the Committee? Yes.

The scheme, as shown by the plan produced, connects the proposed line with the present railway at a point about 200 yards south of Eveleigh station; thence by tunnel to Prince Alfred Park (28 acres), which is proposed to be added to Redfern station.

From the exit of the tunnel the railway will be carried overhead across Devonshire-street and the Burial-ground, &c. on to Elizabeth-street at the junction of Hay-street (from this point an additional connection could be made with Redfern station); thence along Elizabeth-street, easing the grade by extra height of rail-level at the lower end; thence along Hyde Park, close to Elizabeth-street, to Market-street; thence curving round to the Government offices, head of King-street, which will be made a central station; thence along the outer Domain grounds to a station nearly opposite the Colonial Secretary's office, at head of Bridge-street. From this station a connection might be made with the North Shore railway by tunnels and lifts.

The line being overhead saves the cost of resumptions and other expenses, and the road along Hyde Park boundary, under the railway, will be more comfortable for pedestrians, as it will be sheltered from the rain and shaded from the sun.

The cost of a double line of railway, as shown, from Eveleigh to the station at Bridge-street, will be £300,000. The cost of a railway by tunnel from Bridge-street to the North Shore line at the head of Lavender Bay will be £320,000.

2252. You propose not to enter Redfern yards at all, but by a detour to the east to pass around and pick up the line proposed on the northern side of Belmore Gardens? That is so. It would go over Elizabeth-street to Hyde Park. At Elizabeth-street it is proposed to carry it over the street by putting in pillars at the edge of the footpath. That has been done with great success in New York. There is not much cart traffic in that street, and it would not interfere with existing arrangements.

2253. The first part passes to the eastern side of the present Redfern terminus. Then the line gradually approaches near the same locality as the scheme of the Commissioners, and your terminus is not far from the point suggested by Mr. McMaster, and from there it becomes a scheme somewhat similar to his? Yes.

2254. *Mr. Lee.*] As Devonshire-street will have to be crossed, what advantage will there be in diverting from the main line on the south side of the tunnel? I think you would not have the height to cross the street with the main line without lowering it.

2255. You would have to do that in any case? I would not touch it; I would cross over it.

2256. Have you taken the levels to show that it can be done? I am satisfied it can be done.

2257. But the engineer's evidence is to the contrary? With the present level of the railway, you would have to lower Devonshire-street to cross.

2258. Is that your only reason for suggesting a divergence on the south side of the tunnel? No; to ease the traffic. By connecting the line at Eveleigh, you would bring a great deal of the traffic away from Redfern station.

2259. Your chief reason for going round by Prince Alfred Park would be to get a better crossing over Devonshire-street? No; my scheme gives the whole Park as additional station room, and the railway would be carried overhead to Bridge-street.

Myles McRae, sworn, and examined:—

2260. *President.*] Have you given consideration to the question before the Commission? Yes.

2261. Would you like to make a statement? During the last ten years I have occupied the position of Mayor and alderman in several municipalities of the metropolis, and I have taken an active part in advocating the extension of the railway into the city. Some years ago, in the Kogarah Council, I passed a resolution urging the Government to extend the railway in accordance with the alternate scheme of the Commissioners of passing through the Devonshire-street Cemetery, Belmore Park, and Hyde Park, making provision for a model and a grand central station, worthy of the city, in Hyde Park, fronting King and Elizabeth streets. In the resolution I asked the co-operation of the metropolitan and the country municipalities, and received replies from about ninety-five of them, extending on the Great Northern,

M. McRae.
13 April, 1897.

M. McRae.
13 April, 1897.

Western, Southern, and Illawarra railways. I presented the replies to the late Sir Henry Parkes. Prior to that he was under the impression that the country was against the extension, and he was surprised. I acted as a member of the City Railway League for a number of years, and I may say that the travelling public, including the vast suburban country, and through passengers, are in favour of this extension. It savours of statesmanship, inasmuch as it exempts resumptions, and is calculated to return a surplus, over and above the interest required for construction and the working expenses, of something like £50,000 or £60,000. The surplus profit will go a long way in making up the deficits in connection with the railways in the interior. It is fortunate for New South Wales that we have such a grand position as Hyde Park. The assumed sentimentalists who, through a side issue, condemn the action of the Commissioners in taking a few acres of the Park, although the Devonshire-street area provides a larger area for recreation purposes than the Commissioners propose to take, consider that to be nothing. I believe that if Mr. Eddy—the greatest authority on railway matters in Australia—propounded a route which would pull down half the city, regardless of expenditure and the mutilation that would take place, we would have to-day the father of white elephants visible to the naked eye in all its hideousness, because no Government could withhold the pressure which would be brought to bear against them in favour of pulling down the city.

2262. *Mr. Black.*] Who is this father of white elephants? This railway. I venture the opinion that if Mr. Eddy had propounded a scheme which would have pulled down half the city, regardless of expenditure, it would have been a positive fact to-day. The pressure which the interested log-rollers and axe-grinders would have brought to bear no Government could have stood, but because Mr. Eddy's scheme exempts resumptions it falls flat, so far as interested persons are concerned. The whole body of the people have been in favour of the extension for the last twenty years. It will pay as well and better than any railway extension which can be proceeded with in Australia, putting New South Wales out of the question altogether. The Commissioners and those under them, have spoken in the plainest terms of the danger at Redfern. The confusion and the tension upon those who have the overseeing of the work at Redfern is so great that—not taking into consideration the transshipment and loss of time—relieving stations have become an absolute necessity. For directness, economy, convenience, and comfort, Mr. Eddy's route has no rival. As money can be borrowed at a low rate, and there are a large number of the working classes out of employment, it is a mystery to me why the work has not been carried out years ago. Even if the tunnel at Redfern were widened, the cost would, in my opinion, exceed the cost of extending the railway into the city, and it would only be a temporary expedient at best. The Chief Commissioner, in giving evidence as to the accident which resulted in the loss of so many valuable lives two years ago, stated that they did all that human ingenuity could do. I consider that Sydney is much worse off than Melbourne or Adelaide. For instance, Spencer-street station abuts on Bourke and Collins streets, the two principal streets of Melbourne, in the heart of the city; the Flinders-street and Princes' Bridge stations front Flinders-street—the main streets of the city, running at right angles, terminating almost in front of those two stations. Then, if you go to East Melbourne, Richmond, and North Melbourne, those stations are on a par with the Redfern station, as far as the city proper is concerned. Thus, instead of having one station, as we have in Sydney, they have five stations in Melbourne. In Adelaide, the station terminates at Rundle Terrace, alongside Parliament House.

2263. Do you call that a central station? Yes; in the heart of the city. Hindley-street is one of the principal streets of Adelaide. King William-street is another, and it is within 150 yards of the station. Parliament House, the principal banks of Adelaide, and Government House, are within a few hundred yards of it. Wood, Son & Co. are building an enormous warehouse opposite it. There are several large hotels, and McLean Bros. and Rigg have the largest ironmongery establishment in Adelaide opposite it. There is another railway line in King William-street. That street is 3 chains wide, and the railway which runs to Glenelg terminates within 100 or 200 yards of the General Post Office in King William-street.

2264. What is the difference between Glenelg railway and our steam tramways? There is a vast difference. Our streets were never adapted for tramways in the first instance. When the tramways were first being resorted to, I condemned the action of the authorities in interfering with the limited thoroughfares the people had to move in, especially so far as the eastern suburbs were concerned. In Melbourne they have a splendid tram service, but their streets are wider, and there is not the cut-throat business there which we have here between the tramways and the omnibuses. The difference between the railway at Port Adelaide and the tramways is, that they ring a bell there to warn people on the streets. Here they do not. There the streets are double and treble the width of ours, and they are adapted to tramways. The reason why the City Railway League did not suggest Mr. Eddy's scheme—although all were in favour of it—was because they did not want to hamper the Government. They did not want to give the Government the loophole of saying that they would not adopt this or any other route. The whole of the population of New South Wales is in favour of extending the railway into the city.

2265. Is it a burning question in the country districts? I received replies from ninety-five municipalities, including Tenterfield, Bourke, Albury, and Kiama. There is no doubt the country is in favour of the extension to the city.

2266. For passengers? Yes; but unfortunately some of their representatives are against the extension.

2267. Do representatives of the country constituencies usually run counter to the wish of the people? Their idea is a fallacious one. They were under the impression that if money were voted for the extension of the railway to the city it would prevent them getting an extension into the interior. That is a fallacious idea. The surplus profits derivable from this expenditure would assure them railway extension to the interior.

2268. *President.*] Your attitude is based partly on the danger of the Redfern station, and then upon the profitableness of the enterprise itself? Yes; and with the introduction of the cable tramway the confusion will be worse confounded. I have seen hairbreadth escapes during my residence in the suburbs, and I have seen elderly people receive shocks which they never got over. If they get out of the way of a tramcar, the chances are that they will run into a 'bus, cab, trap, or pedestrian.

2269. You approve of the Park-street site, rather than resume land? Yes. Twenty-eight years ago, when I came to Sydney, nearly the whole of the residences surrounding the Park were occupied by private families. To-day they are public offices, and the only persons to whom the Park is beneficial are the "Johnny Warders"; decent persons scarcely go there.*

2270.

* *Note (on revision).*—A portion of Hyde Park is urgently required in the public interest, in order to protect their lives from accidents, which will take place at Redfern if the railway is not extended into the city, and that quickly. The matter brooks of no delay.

2270. Will you furnish the Committee with a copy of the resolution you speak of, and the names of the municipalities which have replied to you? I will see the council clerk at Kogarah, and will endeavour to have them sent to you. I consider that, with the knowledge we have gained, if an accident takes place at Redfern, the Government will now be liable to impeachment as well as heavy damages. M. McRae.
13 April, 1897.
2271. *Mr. Hoskins.*] Why do you think the streets of Sydney are not adapted to tramways? They are too narrow. Take Oxford-street. If you are in a 'bus and the tramway is coming along the 'bus has to stop.
2272. You are aware that Parliament has sanctioned the laying down of an electric tramway in George and Harris streets? A greater mistake was never made; it will prove a calamity.
2273. Have you ever been in America? No.
2274. Are you aware that Broadway, New York, is not in the greater portion of it wider than George-street, and that there are two or three tramways besides an overhead railway in it? I know that the electric tramway will intensify the danger at Redfern, and I believe that it will injure business people in George-street.
2275. *Mr. Black.*] You say it is only the sentimentalists who will object to the taking over of Hyde Park for railway purposes? There is a number of assumed sentimentalists. They have not dared to question the utility of Mr. Eddy's route.
2276. Supposing the sentimentalists prove to be in the majority? But they are not. There are only a few. I know it from practical experience.
2277. You say that the Flinders-street station abuts on Bourke and Collins streets;—does not our station abut on George-street? But there are the Flinders-street and the Princes' Bridge stations at Melbourne.
2278. You also speak of Richmond and East Melbourne as being stations within the metropolis. Why did not you quote Eveleigh, Newtown, and Stanmore as being within the city of Sydney? They are not in Sydney. They have five stations, and we have only one at the west end of Sydney.
2279. If the Richmond and North Melbourne stations are metropolitan stations, so is Eveleigh? No; they are as much metropolitan stations as is Redfern. Again, the rates charged by the Commissioners for the metropolitan passengers is 20 per cent. more than is charged in Melbourne. That portion of the railway system of the Colony within the metropolitan district pays between 15 per cent and 20 per cent. on the expenditure incurred—this is accounted for by the enormous suburban passenger traffic—and it is unjust that they should be compelled to break the journey at Redfern, and lose valuable time there in transshipment from train to 'bus, tram, or other mode of conveyance. Take the cost of a workman's weekly ticket from Redfern to Auburn and from Redfern to Oatley stations,—price 2s. 6d; distance to each station 10 miles; the cost per week from Redfern into the city per 'bus or tram, a distance of a little over a mile, is the same, being an increase of from 800 to 1,000 per cent. on the mileage rate, not taking into account the jostling, danger, and confusion at Redfern, which is being intensified and increased every month.

WEDNESDAY, 14 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

2280. *President.*] Have you obtained the particulars which the Commission requested you to obtain? Yes; I have two plans, one of which shows the borough of North Sydney and the boundaries, and the approximate position of the junction of the railway over the bridge with the present line, and the junction of the railway by the tunnel at the head of Lavender Bay. The other plan is a plan of Sydney, showing the line proposed by Mr. Wearne. I also have the following information to furnish:— S. E. Perdriau.
14 April, 1897.

VALUATION (by adopting the Municipal Assessments for 1897-98) of that part of the City of Sydney extending from the Synagogue northerly to Market-street, bounded on the east by Elizabeth-street, and on the west by Castlereagh-street. Area about 2 acres 0 roods 8 perches.

The total of the municipal assessments for the above-mentioned portion of the city for the municipal year 1897-98 is £7,194. Capitalizing that amount at twenty years' purchase..... £143,880
If twenty-five years' purchase be adopted the amount would be 179,850

NOTE.—The above is calculated adopting the recent Municipal Assessments, which are based upon rentals received during times of commercial depression. No allowance is made for disruption of business, nor for the 10 per cent. increase always allowed by Government for forced sale.

If that portion of the block fronting Castlereagh-street for a length of 191 feet (area about 1 rood 10 perches), extending northerly from the Synagogue, be excluded, as shown on a plan recently prepared by the Engineer-in-Chief for Railway, the assessments would be reduced by £1,042, leaving £6,152 to be capitalized to show the cost of resumption of the block as proposed to be altered.

EXCLUSION OF PART OF THE BLOCK LYING BETWEEN THE HIGH SCHOOL AND KING-STREET.

UPON the plan recently prepared by the Engineer-in-Chief for Railways, and referred to above, a site for a proposed station is shown between Castlereagh and Elizabeth streets, and extending from the Synagogue to King-street. This proposal exclude properties at the corner of King and Castlereagh streets, having a total frontage of about 111 ft. to King-street and 107 ft. to Castlereagh-street—an area of about 36 perches—of which the assessments amount to £1,979 per annum.

Evidence relative to the value of the block of which this 36 perches forms part was given by me before this Commission on the 16th March, 1897.

It will be necessary to deduct £1,979 from the £4,053, leaving £2,074 to be capitalized, to ascertain the cost of resumption of the part of the block required if this proposal be adopted.

The site at "The Rocks," proposed by Mr. N. Selze to be resumed in connection with his scheme for extension of the railway into the city, comprises an area of about 24 acres in one of the poorest and least attractive portions of the city. The land fronts the following streets:—viz, Princes, Cumberland, Gloucester, Cambridge, Harrington, Grosvenor, Essex, Little Essex, Globe, and Argyle streets, and Charlton-court. The total length of frontage is about 14,870 feet.

The gross annual value for municipal assessments of this area is £31,117, which at twenty years' purchase would show a value of £622,340; at twenty-five years' purchase it would be £777,925. About £2,000 must be added for the Ragged School in Harrington-street, which is not rated.

The line as designed passes under St. Patrick's Church. This building would, perhaps, be affected. With the adjoining convent it is worth, probably, not less than £15,000.

The estimate above does not include anything for disruption of business, nor for the 10 per cent. additional always given in Government resumption because of its being a forced sale; nor for a claim which might be made by the Municipal Council for the streets closed; nor for detriment to neighbouring properties if depreciated in value by closing such streets.

If the 24 acres were resumed and the buildings demolished, and the streets rearranged as suggested by Mr. Selze, the depths of the new allotments would be much greater than at present; consequently there would be much less street frontage for resale.

Mr.

S. E. Perdriau,
14 April, 1897.

Mr. Selve estimates the area he proposes to be resumed at 26 acres—11 acres of streets and 15 acres of allotments. If laid out afresh according to his plan, he says, the station would occupy 8 acres, streets 8 acres, and allotments 10 acres. These 10 acres, subdivided into allotments for resale with an average depth of 80 feet, would give about 5,500 feet of selling frontage. A fair average price might, in my opinion, be estimated at about £50 per foot. Thus the amount derived would be about £275,000. The present value of the George-street frontages at this part is from £40 to £60 per foot. It is hardly possible to estimate the increment in value consequent upon the establishment of the railway station as proposed by Mr. Selve.

Mr. Foxlee, in his evidence given in the year 1891 before the Royal Commission on City Railway Extension, stated that the cost of excavation alone for this station would be about £120,000.

I have a letter from the Council Clerk at North Sydney, supplying the population of the borough at date as 19,483, distributed in the wards as follows:—Belmore, 4,680; Kirribilli, 5,250; Tunks, 1,742; Victoria, 4,933; and Warringah, 2,878. There are three replies from the Railway Commissioners. They are all addressed to the Secretary of the Commission, and are as follows:—

Sir,
Office of the Railway Commissioners, Sydney, 27 March, 1897.
Referring to your request to be furnished with certain particulars of the passenger traffic at Milson's Point Station, I am directed to inform you that the number of passengers arriving at Milson's Point Station during the year 1896 was 735,873, and the number departing 746,917, or a total of 1,482,790.

I have, &c.,
H. McLACHLAN,
Secretary,
per W. H. C.

The Secretary, Royal Commission on City Railway Extension.

Sir,
Office of the Railway Commissioners, Sydney, 29 March, 1897.
In reply to your letter of the 25th instant, I am directed to inform you that it is ascertained the total number of passengers travelling on the North Shore Cable and Electric lines is as follows—for the year 1896:—

Cable lines	2,083,496
Electric line	388,686
Grand total.....	2,472,182

I have, &c.,
H. McLACHLAN,
Secretary,
per W. H. C.

The Secretary, Royal Commission on City Railway Extension.

Sir,
Office of the Railway Commissioners, Sydney, 6 April, 1897.
I am directed by the Railway Commissioners to state in reply to the queries put in your letter of the 2nd instant, as under:—

- Q.—What effect the extension of the railway into the city would have upon the Railway Tram Service Rolling Stock?
A.—Five motors and thirteen cars would be released from their present work, and would be available for other services which require supplementing.
- Q.—What is the value of the portion of the tramway which would be superseded?
A.—No portion of the tramway would be thrown out of use, but a much needed relief would be given to the Elizabeth-street line, which is one of the reasons put forward by the Railway Commissioners as rendering the George-street line necessary.
- Q.—Whether any rolling stock now used for the railway tram would be unsuitable for the other tram-lines?
A.—No. None of the stock released would be unsuitable for the other tram-lines.

I have, &c.,
H. McLACHLAN,
Secretary,
per W. H. C.

The Secretary, Royal Commission on City Railway Extension.

I have been to see Mr. John Wearne, and he made a statement which I took down, and he also gave me a written statement. First of all he wrote the following letter:—

Gentlemen,
I beg to suggest that the Commission view a route from our flour-mills in Goulburn-street. It has been suggested by many practical men that there is a very practicable and inexpensive route this way from Redfern to the city.
Yours, &c.,
JOHN WEARNE,
Flour-mills, Goulburn-street, Sydney.

Royal Commission on City Railway Extension.

The statement which he handed to me, written by himself, is as follows:—

COME from the Railway, I think No. 9 and 10 platforms, under George-street, and under Inglis and Sons' yards, under Valentinc-lane, Ultimo-road, Engine-street to Hay-street, somewhere between the brewery and M'Ewan's stores; along by Dixon-street, taking Jones' wood-yard and others, to the mill; from here tunnel to Kent-street near Druiit-street, at the back of the Town Hall; from there to Wynyard-square. This would be very centra for the Post Office and banks.

- A station at Hay-street.
A station at the back of the Town Hall.
A station at Wynyard-square.

This is the statement I took down at Mr. Wearne's dictation:—

Proposed Extension of the Railway into the City of Sydney.

DESCRIPTION of the position of the railway, to be used as a passenger line only, as proposed by John Wearne, miller, of Goulburn-street West, Sydney:—Commencing at the western end of the Redfern railway terminus, and extending northerly, as nearly as practicable in a straight line, to the western end of Goulburn-street, at Dixon-street, at my flour-mill; thence north-easterly to a point on Sussex-street, a little to the south-east of Foley Brothers' new produce store, crossing Sussex-street and Liverpool-street still in a north-easterly direction, and so continuing and crossing Kent-street diagonally to a point a little westward of the Town Hall, where I suggest a station. From this point I suggest proceeding by tunnel in a nearly a straight line as practicable to Wynyard-square, which, in my opinion, should be the terminal station. I also suggest a station at Hay-street. I have carried on business at this site for the last fourteen years as a miller, and suggest the above-described route merely as a layman, unacquainted with railway construction. The advantages of the route are shortness, and the inexpensiveness of the land and buildings affected, and the large number of employees, &c., who would daily use a railway in this position. I have made no investigation, and cannot form an estimate of the probable cost of my scheme, nor of the revenue of the railway if constructed. The position of the railway suggested by me is that shown by a red line on the map of Sydney, by Mr. Surveyor Perdriau, to-day, at my direction, and is initialled by me

JOHN WEARNE,
April 1st, 1897.

Witness—STEPHEN E. PERDRIAU.

NOTE.—The line proposed by Mr. Wearne would be about 95 chains long, of which he proposes a total length of 60 chains should be in tunnel.—S.E.P.

The following is a description of Glebe Island:—

GLEBE Island comprises an area of about 34½ acres, being about 34½ chains long and about 10 chains wide. It extends into the harbour north-easterly from Balmain at a point near the south-western end of the borough, and was, as the name implies, an island. It is now a promontory, the greatest height being towards the north-east. Many years ago a causeway, about 1 chain wide, was built connecting it with the mainland. Within the last few years an area of about 12 acres, lying to the north-west of the island, and joining it with Balmain for a length of about 12 chains, was reclaimed from the harbour by the Crown. The reclamation was effected to abate the nuisance caused by the stench from the mud flat. This land is not used, except a small piece railed off for a cricket ground. The two areas combined are about 46½ acres. The island is bounded on the north by White Bay, dividing it from Balmain: east by Johnstone's Bay and Blackwattle Cove, dividing it from Pyrmont; and south by Rozelle Bay, dividing it from the Glebe and Annandale. The

The total length of the water frontage of the island, including that of the reclamation, is about a mile. The reclamation is, of course, level; but the whole of the island has a bold rocky foreshore—in fact the solid rock shows freely all over the surface, and at a few yards back from the shore line a height of 15 feet above high-water level is reached, the height rapidly increasing by rugged rocky slopes until the highest point is reached, which is 90 feet above high-water level. S. E. Perdriau.
14 April, 1897.

The central portion is a plateau from 70 feet to 90 feet above high-water level. Stone for Government works elsewhere is now being quarried at the northern end near the water.

The island occupies a peculiarly central position. It is within comparatively easy reach of the city and nearly all the populous suburbs.

From the city it is approached *via* Market-street, Pyrmont Bridge, Pyrmont, and Glebe Island Bridge, and is distant about $1\frac{1}{2}$ mile by road from the General Post Office.

The nearest point on the Darling Harbour railway is within seven-eighths of a mile of the island, in a direct line, and Petersham railway station is within $2\frac{1}{4}$ miles by road. The main Sydney road from the Ryde and Hunters Hill districts, *via* the four bridges called Five Dock, Long Cove, Glebe Island, and Pyrmont Bridges, crosses the southern portion of the island, and forms the frontage road of the Abattoirs.

The Abattoirs.

The Abattoirs for the Sydney and Metropolitan District occupy the area of about 7 acres lying southward of the road, and the small space on which the mutton houses are erected, northward of the same.

The desiccating works situated at the southern extremity of the island are now disused, the blood and offal being conveyed to sea in punts.

There are six dwellings of various sizes and material scattered over the more northern section of the island, all occupied by officials connected with the Abattoirs.

The small Post and Telegraph Office located here was closed a few months ago owing to the insufficiency of business.

Upon the high land northward of the road, and immediately opposite the abattoirs, there is a large tank or reservoir hewn out of the solid rock. It is about 240 feet x 35 feet, and 20 feet deep. Water for flushing the slaughter-houses is pumped from the harbour into this tank. The pumps are said to be capable of lifting 40,000 to 50,000 gallons per hour.

There is no permanent occupation of any part of the island excepting in connection with the Abattoirs. The Abattoirs are said to be thirty-six years old and antiquated, and it is held that nothing short of entirely new and much larger and higher buildings could bring them up to present requirements.

There is no railway to the island, and the cattle and sheep, &c., are driven here from the sale-yards at Homebush, a distance of from 7 to 8 miles; and as the total for the year is between 900,000 and 1,000,000, it is evident that the objections raised in the populous suburbs *en route* against the cattle-driving nuisance are not without foundation. It is considered by those competent to judge that no other site in the metropolitan district presents such advantages for abattoirs as Glebe Island. Its central position has already been referred to.

It is all high land, and being almost isolated by the surrounding broad stretches of salt water, objectionable odours are dissipated before they reach the surrounding residential districts. (Complaints have, however, been made from time to time with regard to the unpleasant smells, particularly at Glebe Point; but there does not appear to have been any sustained effort by the public for the removal of the Abattoirs.)

Such extensive deep water frontage affords unequalled facilities for the shipment of meat for foreign countries.

An advantage of a very peculiar nature is that the island is entirely free from blow flies. It is said that none have ever been seen there.

Cattle are sometimes brought by sea to the island, whence they have to be driven to the sale-yards at Homebush to be sold. They are then driven back and slaughtered.

A light line of railway leaving the main line at Stanmore station, *via* White Creek—a distance of a little more than 2 miles—has been suggested to overcome the nuisance arising from cattle-driving, and the reclaimed land might be used for sale-yards; but those engaged in the trade state that if the Abattoirs were removed any considerable distance from the city the result would be an increase in the price of meat.

For many years no blood nor offal has been allowed to go into the harbour, but no doubt pollution occurs to some extent from the surface drainage.

Soundings and Borings.

Commencing at the bridge on the east side and thence northerly and round the eastern end of the island, the depth of water at 100 feet out from high-water mark is from 7 to 15 feet at low tide, deepening to 19 feet in the middle of the bay between the island and Pyrmont; but that depth is not reached within 600 feet from the northern portion of the island towards Balmain. Along the north-western foreshore the water is shallow. At 200 feet out from high-water mark it varies from 5 feet to 12 feet in depth at low tide.

Borings to rock were taken in 1881 on the foreshore extending from the bridge north-easterly and round the eastern end of the island. These show that at 200 feet out from high-water mark rock is reached at a depth of 20 feet, and less from low-water level.

The officer in charge of such work is, however, doubtful whether the plan affording the information *re* borings stated above is correct.

From about the middle of the sea-wall of the reclamation above referred to, a pile jetty about 240 feet long and 30 feet wide has been thrown out into the harbour.

The locality of the jetty had previously been dredged, as well as a channel to the same from the harbour, so that now vessels drawing up to 20 feet of water can be accommodated.

Apparently no soundings nor borings have been taken on the south side of the island from the bridge.

Robert Smith, Solicitor, sworn, and examined:—

2281. *President.*] How long have you resided in Sydney? Thirty-six years.

2282. Do you desire to make a statement to the Commission of your views? Yes. What I have to say has mostly to do with the proposed extension of the railway to Circular Quay by way of Darling Harbour on the eastern side. It must be evident to anyone who studies the matter that to extend the railway from its present terminus at Darling Harbour round the eastern side of that harbour to Circular Quay or Dawes Point would be a wicked waste of public money. It would be a great interference with the actual traffic going on at those wharfs day by day. It would interfere with the mode in which the wharfs now get rid of their produce, by that produce having to cross the rails, and having to wait for the trains to get out of the way. It would also very much interfere with the lettable values of the properties on that side of Darling Harbour. Looking, however, at the necessity which may exist, either now or in the future, for connecting the railway at Darling Harbour with the Government wharfs at Woolloomooloo Bay and Circular Quay, I would suggest the propriety of connecting Darling Harbour with Cowper Wharf by means of a tunnel. Scarcely any expense would be incurred for land-resumption if a tunnel were carried under Liverpool-street to Elizabeth-street from the head of Darling Harbour, and then by tunnel or open cutting under Hyde Park and round to Cowper Wharf. The railway could thence be carried by a short tunnel to the western side of Farm Cove—that is, the Botanic Gardens—and it would then be within a stone's throw of Fort Macquarie. If Fort Macquarie were to be made a goods terminus—the line I speak of is entirely a goods line—the area of land could be increased considerably by the cuttings out of the tunnels. The line of railway, so far as it encroached on Farm Cove, need not interfere with the Botanic Gardens at all, because it would be carried over an extra line of filling with material taken from the tunnels. By this means the railway for goods traffic—and that is, so far as I can see, the only

R. Smith.
14 April, 1897.

- R. Smith: only object of carrying a railway at all to Circular Quay—would be carried close to Fort Macquarie, and it would then enable the goods which would arrive at Darling Harbour to be distributed either at Cowper Wharf or at the entrance of Circular Quay. If it were considered necessary to extend the railway round the Quay—although I am certain the public would find it a great inconvenience—it could eventually be carried round to Dawes Point, and could terminate there. By this means, without interfering with private property in any way (excepting a very little resumption at the head of Darling Harbour), the Government could have a line, or a double line, of railway for goods purposes connecting all their wharfs. Then all the outcry there has been about bringing the railway to the Quay would be met.
- 14 April, 1897. 2283. *Mr. O'Connor.*] Have you located that portion of the Quay upon which you propose to put a station? Fort Macquarie.
2284. Would you continue it round? I would not advocate that; but if it were necessary it could be carried round the Quay to Dawes Point. Personally, I do not think there is any necessity for carrying the goods lines further than Darling Harbour, but, if it is considered necessary, they can be continued in the way I suggest with the expenditure of a mere bagatelle for resumption. The line from the head of Darling Harbour to Cowper Wharf would be a very short and inexpensive one to construct, and it would meet the object the Government had in view, a few years ago, in resuming Cowper Wharf. They will have a second main wharf communicating with the railway. Of course, it is always open to the Government to widen the line to Darling Harbour by widening the George-street tunnel—that is, if the traffic renders it necessary.
2285. *President.*] Your first contention is, that if the Government wants to bring the railway system of the Colony into touch with the wharfs, they have wharfs at Woolloomooloo Bay, Darling Harbour and Circular Quay, where this work can be readily carried out? Yes.
2286. Your second contention is, that to resume Darling Harbour and to put a railway along it would leave it worse than it is at present? That is so. The vessels now have two ways of discharging. They discharge into lighters on the one side and on the wharfs on the other. If they want to get their goods to the railway, it is more economical to take them to the train than to bring the train to the goods, and that can be done by discharging the goods into lighters and taking them across to the present railway terminus. If the goods would not stand handling, railway trucks could be carried on railed lighters, and the goods could be loaded in them.
2287. *Mr. Hoskins.*] Do you propose to have a goods terminus at Fort Macquarie? No; I would leave it where it is at Darling Harbour, but I would have a branch to that point.
2288. Therefore, that terminus would be used not only for goods brought by vessels, but for the loading of produce into the vessels? No; that terminus would only be used for the purpose of receiving cargo, which would go to Darling Harbour and be made up into proper truck-loads, and taken up country. It would only be a terminus for receiving and discharging goods, but not a terminus in the same sense as is the Darling Harbour terminus for making-up trains for the country.
2289. Are you aware that vessels cannot lie within several hundred yards of Fort Macquarie on account of the shallowness of the water? I know that vessels come to within a comparatively few yards, where the P. and O. Co.'s boats lie, of Fort Macquarie—200 yards, or something like that. The cartage from there would be the same as it would be if the goods had to be carted 10 feet. It is not so much the cartage which costs the money as the handling. Goods could be trucked to the ships' sides from Fort Macquarie, or lines of trains could be carried—if the people are unwise enough to allow it—right round Circular Quay from that point.
2290. But, in consequence of the rocks projecting for some distance into the harbour at Fort Macquarie, vessels could not lie close? I would not propose that they should. I would take the goods to the vessels and not the vessels to the goods. It is more economical to carry goods on the water than it is on land.
2291. *Mr. Humphery.*] Your idea is that the present connection with Darling Harbour is sufficient? I think so.
2292. But if it be desirable to connect other wharfs, then the Government wharfs at Woolloomooloo Bay might be connected, and they would be ample for all commercial purposes? Yes; I believe that at the present time Darling Harbour is ample for all commercial purposes, but the Government have, at great expense, resumed Cowper Wharf, and if they have more traffic they can connect their railway with it.
2293. And you would not go beyond Cowper Wharf? No, unless the public called for it.
2294. And then an extension might be made in the direction you have pointed out? Yes.
2295. You say the cost would be inappreciable compared with other schemes;—you refer to the cost of the tunnel merely? Yes.
2296. You have made no provision in your estimate for compensation to property owners who might claim to be affected by reason of the tunnel; what is the law upon that subject? According to my idea, the Government could not undermine private properties without giving compensation. I think it would be most dangerous to attempt to do so, because many of the houses are so frailly built that quarrying underneath them would be sure to shake their foundations, and the Government would be let in for large compensation claims, and would have to pay more than if they resumed the land. But I do not propose to go under private property. I would carry the line under Liverpool-street. A very slight amount of compensation would have to be given to join the tunnel under Liverpool-street with the present terminus, and that would have to be provided for. Possibly it would amount to £20,000 or £40,000. Chadwick's property on the one side, or Kidman's property on the other, would be all that would be required in connecting the railway with a tunnel under Liverpool-street.
2297. Is it your opinion that there could be no claim for compensation by owners of property with frontages to the streets under which the proposed tunnel would be constructed? There could not, unless the construction was so badly carried out as to cause damage to the foundations. I only suggest a tunnel for a double line, which would not require a width of more than 24 feet. With regard to the passenger-traffic, I think it is a most important thing for the railway system, and for the credit of the city itself, that the railway should be in a more central position than it is at present.
2298. *Mr. Lee.*] Do you admit that there is any necessity for the removal on other grounds from Redfern? I do not know. I know nothing about the traffic or the engineering question.
2299. If good reasons exist for removing the station from Redfern, or giving increased accommodation at Redfern, to admit of the traffic being safely carried on, are you of opinion that it would be desirable to make that removal in the direction of an extension into the city, whereby a charge could be made to cover the cost of expenditure? I am of that opinion. I would point out that if the Government extend the area of the present

present site at Redfern they must deprive people there, who are very crowded together, of some of the ground which they would naturally expect to be in the Park. For instance, supposing it were possible, to take a line from the Eveleigh station into Prince Alfred Park, at George and Cleveland streets, we might then utilise a great deal more of Prince Alfred Park; but what would the people of Redfern say about it. We should be taking from them a park which they are in the habit of using, and for whom—practically for a few aristocrats who use the east end of the city. We would be taking air spaces from the people of Redfern because we grudge, out of our multitude of spaces, giving up a little bit of land on the east side of the city, where the resident population is very small indeed, and where the amount of recreation ground is excessive. It appears to me to be a possible but expensive deviation to resume a portion of the municipality of Redfern, and to carry the railway through George-street, Redfern, into the middle of Prince Alfred Park; and then to shut up Devonshire-street and take a portion of the cemetery where so many of our ancestors are buried, and to make the railway station out of that and the Benevolent Asylum site. If we could extend it in that direction, I for one would not advocate it, out of consideration for the women and children of Redfern who want air space.

R. Smith.
14 April, 1897.

2300. Admitting that it would be possible to resume sufficient area of Prince Alfred Park to give the accommodation, you see at once the enormous expenditure which would be incurred, and no revenue derived? Quite so. I would point out that Sydney is more inconveniently situated so far as her principal railway station is concerned than almost any modern city. Having regard to the climate, and the fact that you have to walk such a distance to get to Redfern, our railway station is, to my mind, at a great disadvantage when compared with the railway stations of Brisbane, Melbourne, and Adelaide. The people who really use the railway live too far away from the station.

2301. If the railway can be extended into the heart of the city, and a charge made low enough for the people to pay, and which will be sufficient to return the interest on the money expended, are you of opinion that it should be extended into the heart of the city? I have no doubt about it at all.

2302. Where, then, in your opinion, should the terminus be? The terminus ought to be at Hyde Park, and it should not go further north than Market-street. Park-street, which is only a new street recently opened through the Park, would then become an unnecessary street and could be closed. Bringing the railway station there would, of course, improve the value of property in Park-street. My idea is that if the railway terminates at Market-street we would save the Supreme Court, and all the objections to the sacred ground at St. James' Church would be taken away. We would also make immediate communication with Woolloomooloo. Market-street would be carried on to join Boomerang-street and Woolloomooloo-street. I would advocate the carrying of an electric tram from the terminus in Market-street, across Market-street, past the public Markets, over a new bridge which will have to be built at Pyrmont, and out to the Glebe. Thus the people of the Glebe will be brought into the centre of the city and have access to the railway station. If necessary, the electric tram could go down Woolloomooloo-street. I would leave a little boulevard of trees to front the railway station, and would continue Market-street parallel with St. James' road.

2303. You favour Market-street for a site rather than Park-street? Yes.

2304. How would the site of the old Immigration Barracks suit? My impression is that that site is not large enough. It would require the taking down of the Mint.

2305. No; but it would absorb a small portion of the Domain? One could do it then, but in such case I would not stop at the Barracks, but would take the old cricket ground—that is the ground on the Domain—which is really not wanted now. I would also carry Moore-street straight into the Domain, so that the real railway traffic could go down there. By this means you would give access from the railway station to the Post Office, Commercial Bank, and the Bank of New South Wales. If I could not get Hyde Park, I would take, not the Hyde Park Barracks, but the Domain. I would then have the railway station almost in front of the new Houses of Parliament, and in view of the harbour, Garden Palace grounds, Art Gallery, and other ornamental buildings, but still in a position which is not by any means as central as Market-street.

2306. Do you use the train daily? No; it is too far from the centre of the city.

2307. Are you in possession of any facts which would assist us in deciding whether the present traffic is carried on under great danger? No; I have heard it said that the traffic is carried on under great danger, but I suspect all that could be met by additional resumptions at Cleveland-street.

THURSDAY, 15 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, G.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEGAN, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANK FARNELL Esq., M.P.

William Cowper, sworn, and examined:—

2308. *President.*] Are you a resident of Sydney? Yes, I have been a resident for nearly twenty years. W. Cowper.

2309. Have you given the question of the extension of the railway into the city serious consideration. Yes.

2310. Will you explain your scheme? I have had a good deal of experience in the old country in resuming land for the large new Town Hall, Manchester, for the Sheffield-and-Lincolnshire and Lancashire-and-Yorkshire stations; also for improvements for the London and North-Western railway and the Oldham Bridge and Guide railway resumptions, and for the Manchester and Salford Corporation in widening Deansgate, which cost £2,500,000. We did that improvement and made a profit of about £250,000. My scheme is this:—I propose to give to the city one large goods station which will consist of three stories, and one large central station which will be 350 to 400 yards in length, running from Liverpool-street to Hay-street, and lying between Elizabeth-street and Pitt-street. That is what I term the principal passenger station. I then provide you five other small stations which will be something similar to the Gore-street station, London; only one or two will be open ones. I then provide you with a traffic scheme for Woolloomooloo, with a traffic scheme for Circular Quay, and for all the wharfs along Sussex-street to the terminus. I start at the present station at Redfern and extend all the traffic lines into what is now termed

15 April, 1897.

W. Cowper,
15 April, 1897.

termed the Burying Ground, the Benevolent Institution, including Belmore Park, and terminating at Hay-street. After getting all these lines down to a lower level, which I take from Hay-street and the present market, I there provide sidings for a goods station. I return then to Redfern station, and rise over Devonshire-street by one or two bridges—I have only provided one in my scheme there—on to a higher floor over and above the level of Hay-street, by about 15 feet as far as I can judge, which will give a clear headway underneath of 15 feet. I then level that floor which is 15 feet above Hay-street over the whole of Belmore Park, and all the grounds included in those streets—that is to say, between Elizabeth-street, Pitt-street, Devonshire-street, and Hay-street. I use that level entirely for a passenger traffic and continue forward on the same level up to Liverpool-street, where I get my central and principal station. I then take a lower level for two of the suburban lines. I give a fall of about 1 in 50, and so get a sufficient depth to strike with a tunnel underneath Liverpool-street and Elizabeth-street into Hyde Park. I then come underneath Hyde Park to Park-street, and I get there a small underground passenger station with staircases emptying into Park-street. I then go forward, still underneath, to the Domain gates on the left-hand side. Inside the Domain, I propose forming another station—not a very large one—sufficient for all the suburban trams to empty at, because I intend all suburban trams to run on these lines down to wherever they go. Then I go forward with a branch line to Woolloomooloo. I propose putting a small passenger station there, and then to continue goods tram-lines in connection with that station in the tunnel to different parts of the wharfs. Then I start at the Domain gates with another tunnel, and come to the Domain-road and get another small station there similar to Park-street station for the use of people wishing to go to the Gardens and elsewhere. I continue this tunnel to Fort Macquarie and there empty on to that ground which I propose to utilise for a goods tram-line in connection with this line, which would connect all Circular Quay and some of the wool warehouses with it. Then I return to Redfern railway station again and on to the siding which adjoins the siding running down to Darling Harbour, and I continue that with a rising grade up to what I term the third story. The third story extends only as far as Hay-street, and includes all the land, as before stated, up to the Redfern station, or nearly so. It might be needful to leave 50 or 100 yards adjoining Devonshire-street for the sake of getting a proper grade down to the lower station. Therefore, the upper story would not need to come quite so far as Devonshire-street. It would stop short 50 or 100 yards. I propose to use the upper story for wool, hides, and such goods as have auction sales attached to them. I get an outlet by a bridge across Elizabeth-street to Mary-street, or somewhere about there, so as to give an outlet for all the goods which come into that upper station. I think, as nearly as I can calculate, the bottom ground resumption will consist of 32 acres. Taking the three stories together, we should get 96 acres of station accommodation proper. I reckon the main station consists of about 11 acres, and I think I might put with it the Fort Macquarie fortification land of 10 acres. That will give about 117 acres of traffic accommodation.

2311. Where did you get your areas? I have estimated them. Then I start and branch out of the lowest story into Hay-street with two traffic tram-lines for the accommodation of goods along Sussex-street and Sussex-street wharfs. I continue that line through Sussex-street, through the Gasworks, down to the Kent-street wharf and two others. There might be some improvement difficulties to deal with, and I think the wharf-owners, as well as the Government, would have to yield very much, so as to bring the matter into working possibility. Most of those wharfs would then be on a level with this goods traffic tram-line; but there are others, before we get down to the lower part of Sussex-street, which would lie much lower than Sussex-street. I propose that the wharf-owners in these cases should provide a bridge or some means on a level with Sussex-street, so as to admit the trucks to go over and above the wharfs which are on a lower level, so that goods might be by such means wound up by steam power and placed in the trucks and the trucks run forward again into Sussex-street upon the Sussex-street goods-traffic line. This would bring all the goods in connection with my Belmore Park underground goods station, and could be put into communication with all the principal lines at present running into Redfern station.

2312. *Mr. Lee.*] What would be the cost of carrying out your scheme? Including the cost of the Belmore station, resumptions of land from Liverpool-street to Hay-street and from Pitt-street to Elizabeth-street, and the buildings and land connected with the Roman Catholic Schools or Church, and the tunnelling through the Park to Fort Macquarie only—I do not include anything outside the tunnel; and the same with Woolloomooloo,—I do not include anything beyond tapping the main outlet—and including six platform stations (I include the lower platform in the main station as one of the stations), and the large passenger station, the cost will be about £2,000,000.* I have tried to pass with single lines on the same principle by Wexford-street to Redfern station on two different forms—one is marked with a black cross line,—and I think I could get through to Redfern station by that line (that is, including the tunnel and stations) for £250,000.

2313. Additional? No; alone. I take that as a separate scheme. I tried then to pass down Wexford-street, making less or fewer resumptions, and only taking about 1 acre out of the land belonging to the Blind Institution and Police Barracks, and I think I could connect Redfern station by saving those resumptions for £225,000.

2314. Of course, all these are merely estimates of costs? That is all; there might be something saved or something to add.

2315. How do you propose to get goods to the third story? The two lines adjoining the line which runs to Darling Harbour I purpose continuing by a bridge across Devonshire-street into the upper story. From that point it would be convenient to run the sidings to all parts of the upper station. I may state that I have only seen one scheme, and that is Mr. McMaster's. I think his scheme for passing under the harbour is one of the best I have ever seen, and I think it might be attached to my scheme.

2316. You would accept Mr. McMaster's scheme beyond Fort Macquarie? I would.

TUESDAY,

* NOTE (on revision):—In this sum I have included £10,000 for the extension of Castlereagh-street into Elizabeth-street, with a careful grade, so as to get all the traffic to run through this new street, in place of continuing to run through Devonshire-street. I also intend to run the trams out of Castlereagh-street on to the second level portion of the station, along the Elizabeth-street side, and so to come out at the corner of Liverpool-street into Elizabeth-street. I also purpose diverting the George-street trams, at the corner of Devonshire-street, to the second level station, and to run them along Pitt-street side to Liverpool-street, or nearly so, giving a curve round the front of the station into Elizabeth-street; or to run them up Castlereagh-street to join Elizabeth-street at some other point. Thus I get all the trams and trains to come together at my new central station, Oxford-street trams excepted.

PLAN OF PROPOSED EXTENSION OF RAILWAY FROM REDFERN TO ST JAMES' ROAD.

Scale: 20 Chains to 1 Inch

TUESDAY, 20 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.

The Hon. JAMES HOSKINS, M.L.C.

The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.

The Hon. DANIEL O'CONNOR, M.L.C.

HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.

JOHN LIONEL FEOAN, Esq., M.P.

GEORGE BLACK, Esq., M.P.

FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

2317. *President.*] You have been asked to furnish some information with regard to Mr. Greenwood's scheme? Yes, as to the value of land. The amount to be resumed would be about 5 acres, allowing a width of 80 feet. That is the portion of land to be resumed which Mr. Greenwood calls the open cutting.

2318. You leave the question of the land which would be under an overhead railway or over a tunnel out of consideration? Yes.

2319. Suppose we take it for granted that the open cutting and the overhead railway would require the resumption of land, leaving the question of the land under which the tunnel is an undecided one at present, how much would the area be then? I have excluded the station in the open cutting; it would be 6 acres 2 roods 20 perches.

2320. Have you made the width greater down to Circular Quay? No; the same width all the way—80 feet.

2321. What would be the value of the 6½ acres? About £500,000.

2322. What does Mr. Greenwood estimate it at? He takes a smaller area—3½ acres—and he puts it at £370,000. I think his estimate of 3½ acres at that amount is fair, but it does not include the 10 per cent., nor compensation for the forced sale or the disruption of business.

2323. In that 3½ acres he does not include the land which would require to be resumed under an overhead railway nor any extra width necessary for stations? No, and he proposes to go under York-street; and Mr. Foxlee, in criticising Mr. Selge's proposal to do the same thing, said York-street was not sufficiently wide for four lines without interfering with the foundations of buildings. You would have to shunt at the Quay in a tunnel, and in a part of the city very much used for traffic, especially by omnibuses. I think the land between the Custom House and the water's edge is reclaimed land. Mr. Greenwood also takes 2 acres of Wynyard-square for a station.

S. E.
Perdriau.
20 April, 1897.

John Cash Neild, Esq., M.P., sworn, and examined:—

2324. *President.*] You represent the electorate of Paddington in the Legislative Assembly? Yes.

2325. Do you wish to make a statement? I wish to submit with a great deal of respect, and at the same time very strongly, that, in my opinion, and in the opinion of a great many citizens with whom I have conversed, to bring the railway line to the top of King-street and leave it there would be a highly undesirable plan to adopt in the interests of the public. I also wish to say that I am one of those who are strongly opposed to interfering with what I may describe as the garden of the poor—Hyde Park. Perhaps I am not out of order in recalling the fact that when, a few years ago, a proposal was made to interfere with the Park for railway purposes, a very large public meeting was held in the Park during the lunch-hour, attended by several thousands of persons, at which resolutions were unanimously adopted disapproving of any interference with the surface. That meeting was not organised by any agitators. It was presided over by the Hon. James Norton, M.L.C., and the resolutions were spoken to by a large number of influential citizens. Assuming that it is considered desirable to bring the railway into the city, I submit other things than the mere convenience of a certain section of the population residing on the railway line should be considered. It is impossible to get a line which will absolutely convenience all the community. I have thought out a scheme which I admit at once I cannot give any estimates for—for two reasons. One is that I am not a civil engineer; and another is that as far as the value of the properties is concerned I have not gone into the matter. The first part of my proposal differs very little from those which have been made by a great many persons. My proposal is as follows:—

J. C. Neild,
Esq., M.P.
20 April, 1897.

LEAVING the Redfern station (which is not in Redfern, but in the city), the line would cross over Devonshire-street and pass into the grounds of the Benevolent Asylum, on the site of which a large passenger station should be constructed. Thence, passing behind the Female Refuge, the line would cross Belmore Gardens and Hay-street on a viaduct, thus avoiding material interference with the gardens, and in no way disturbing the tram line.

Passing under Goulburn-street, the line would reach a slightly sunken station to occupy the area of land bounded by Goulburn and Liverpool, Castlereagh and Elizabeth streets. From this point the line would pass, in tunnel, under Hyde Park in a north-easterly direction, and enter Cook Park on the north side of William-street, near its junction with Boomerang-street. Neither Liverpool, Elizabeth, College, nor William streets would be interfered with. Boomerang-street would, however, be closed, and the cable tram line taken *via* William-street.

Cook and Phillip Parks, now absolutely useless and unused, and having, with Boomerang-street, an area of about 12 acres, would be cut down and levelled, providing a splendid site for the central station close to the top of King-street, and having access to the cable tram on two sides.

From the north-east corner of the station the line could be taken to Woolloomooloo Bay to accommodate passenger and goods traffic, and thence run eastward through Paddington, Woollahra, Waverley, Randwick, and westward through Waterloo to the Illawarra line, as has been frequently proposed.

The city line would cross Woolloomooloo-street, on a viaduct at the east end of the Cathedral grounds, and shortly after entering the Domain would pass, in tunnel, north-westerly to the south-east corner of the Circular Quay. An underground station, to accommodate passenger traffic to the Domain and Gardens, the new Houses of Parliament, the Public Library, &c., could be established between the Cricket Ground and the Bourke Statue, and another large underground station, with outlets by flights of steps to Phillip-street and very slightly ascending footways to the Circular Quay, could be placed at the site of the Water Police Court, thus amply providing for the waterside passenger traffic.

A short tunnel would take the line under Macquarie-street and the Inner Domain to Macquarie Point, where a goods station could be established.

From the south-east corner of the Circular Quay the line would pass, in cutting, to the western side of the Quay, where another station could be constructed on and about the site of the Old Commissariat Stores, from which point a short tunnel and open line, skirting George-street north, would enable the railway to reach Dawes Point, whence it could hereafter be taken, in steel tunnel, under the harbour, to unite with the existing line at Milson's Point. The Dawes Point branch would render valuable the large Government property formerly occupied by the A.S.N. Company.

J. C. Neild,
Esq., M.P.
20 April, 1897.

The main line would pass, in tunnel, westerly, under George and other streets, the Observatory Hill, and Kent-street, and a station could be constructed between the line of Kent-street and Darling Harbour, on the vacant land north of the Gas Company's premises, where any necessary reclamation could be readily carried out with the material from the tunnel. The erection of wharfs at this point would prove a most profitable expenditure, both as regards wharfage dues and railway traffic.

A short line, in tunnel, under Kent-street, would tap the goods' traffic of the Grafton wharfs, and another, that of Miller's Point.

The cost of removing the rock excavated in the construction of the line, might be reduced to a nominal sum by removing it in punts to, say, Rose Bay, and building an island in the useless shallow water there; an island which would, in time, become an added beauty to the harbour. It would cost as much to cart as to excavate, possibly more.

The length of the tunnels would be, approximately:—

1. Under Hyde Park, a little over a quarter of a mile.
2. Under the Domain, a little under three quarters of a mile.
3. Under the Observatory, a little over a quarter of a mile.

Say one and a half miles in all.

The city block to be resumed contains nothing but squalid and paltry structures.

One of the great costs of a city or suburban railway will be the difficulty of getting rid of the material excavated, and I submit that the cost of removing rock excavated in the construction of the line might be reduced to a nominal sum by running it in tramways to punts and removing it to the shallow waters of Rose Bay, now useless for shipping, and building one or more islands there, which would add to the picturesqueness of the locality, and probably have a use hereafter. The main points in favour of my scheme are these: There would be no buildings of any value destroyed. The cost of resumptions would be reduced to the smallest possible minimum, and no public park, or place of recreation of any value would be interfered with. I take it that it is impossible to obtain an absolutely central site. If you go to Melbourne, the stations are all at the side of the city. If you go to Adelaide and Brisbane, it is so, and if you go to London, the same thing obtains. You will find stations in London only just across the Thames; and the distance between the waterside stations—Charing Cross, Blackfriars and Cannon-street—and the Liverpool-street, Paddington, Buson, or St. Pancras station, or away to the west the Victoria station, is to be measured by miles, and requires from twenty minutes to half an hour of cab-driving to reach them.

2326. You believe that the city railway should be brought in touch with Woolloomooloo Bay, Circular Quay, and Darling Harbour? I do.

2327. And any extension to the city should carry with it the possibility of extension to the eastern suburbs? Yes. As an old business man I certainly think the goods traffic of the Colony has quite as much occasion to be considered as the passenger traffic, because there is steam, and there is to be electric tram communication with Redfern. There are abundance of 'buses and cabs. The time occupied in getting from any central portion of the city by any of these means is a matter only of a few moments, whilst for the goods traffic the time occupied amounts to an hour or thereabouts. The cost of moving a ton of goods to Redfern station is very much greater than to move a passenger or two.

2328. You, in your scheme, save resumption as much as you can. Then you save the people's park, and then you bring your scheme into touch with the Government wharfs at Woolloomooloo Bay, Circular Quay, and Darling Harbour. Those three things control your scheme, with the possibility of an extension to the North Shore and eastern suburbs? Exactly.

2329. And a scheme which does that—although not exactly on the same lines as yours—meets your approval? Yes.

2330. *Mr. Humphery.*] You mentioned the terminal stations at Melbourne, Brisbane, and Adelaide, as not being in the heart of the city: are we to understand that you mean they are not nearer the main street of the city than the position you propose for the Sydney terminus at Boomerang-street? Not materially.

2331. You do not desire to convey that the present Redfern station is as near the Sydney Post Office as are the Brisbane, Adelaide, and Melbourne stations near the post-offices there? No; the Melbourne, Adelaide, and Brisbane stations are much nearer the post-offices than ours is.

2332. Do you think the present station is sufficiently near to the main business centre? If nothing more is to be considered than the passenger traffic to and from the city. If the suburban extensions and goods traffic are to be excluded from consideration, a proper site for the railway station would be about the site of the present Benevolent Asylum. If only the passenger traffic from the western suburbs is to be considered, the Colony ought not to be put to the expense of bringing a line further than the site of the Benevolent Asylum. I admit that the present site is considerably inconvenient, as well as somewhat distant. It cannot be approached by foot passengers without considerable risk in connection with passing trams and vehicles. It is too busy and dangerous a point.

2333. The present position with regard to the Benevolent Asylum is this: That almost the same expenditure would be necessary there as to make a terminal station nearer to King-street, and there would be no return upon the expenditure, inasmuch as the travelling public would not be required to pay more than they pay at the present time, whereas by bringing the station nearer to King-street an additional charge could be made, which would cover interest on the cost of construction. Having that in view, as well as the present inconvenient position of the Redfern station, do you not think it would be desirable to extend the railway into the city instead of leaving it as you suggest at the Benevolent Asylum? I say plainly I am not in favour of keeping the station at or near Devonshire-street. I think it ought to be brought further.

2334. You think it should be somewhere near to St. Mary's Cathedral? Yes.

2335. That site would be as convenient to the public as the proposed Park-street or St. James'-road sites, or even the site of the Government Architect's Office? There is practically no difference between the site I suggest and that of the Government Architect's Office, but my great objection to bringing it to the position you describe would be the destruction of valuable buildings and Hyde Park. I do not think the short distance between St. James'-road and Cook and Phillip Parks sites would warrant the destruction of the buildings and park which I have spoken of.

2336. You regard the 10 acres of Hyde Park at the corner of St. James'-road and Elizabeth-street as much more valuable than Cook or Phillip Parks? I do.

2337. You would rather sacrifice Cook and Phillip Parks than the 10 acres along Elizabeth-street and St. James'-road? I would utilise instead of sacrifice. I do not know that beyond the feeding of a few stray

stray cows, either Cook or Phillip Park are put to any purpose. I think a great deal of care should be exercised in connection with tunnels. There has been any amount of difficulty with the Underground Railway in London, and it is the most filthy mode of travelling I have ever experienced, even though the engines are supposed to be free from smoke. My suggestion involves only about a quarter of a mile of tunnel to reach the central station. The ventilation could be accomplished by openings in the park which could be made ornamental. I am quite certain that if the George-street electric tram is as successful as we hope it will be, a large number of people will prefer to travel by it than to go through a tunnel.

J. C. Neild,
Esq., M.P.
20 April, 1897.

2338. Have you any hesitation in saying that if it is possible to avoid a tunnel, in extending the railway, it should be done even at additional cost? I think so.

2339. Is it your view that wherever the temporary station may be built in the city, we should keep in mind the further extension of the railway, so as to touch Circular Quay, and come round by way of the suburbs, to connect with the Illawarra line? Certainly.

2340. *Mr. Black.*] If money is to be spent on giving increased railway accommodation, the returning portion—that is to say, the line itself—will be that which carries the passengers? The passengers and goods.

2341. That is to say, the mere removal of the station to a point which may be considered more central, which will be merely a place of ingress and egress, would not of itself constitute any reason for asking people to pay $\frac{1}{2}$ d. or 1d. additional fare. It is not the station which benefits them but the line itself? Yes.

2342. Then if the central station is left where it is, and the passengers are carried further on by a line, that of itself will constitute a sufficient excuse for asking them to pay an additional fare? I take it for granted an additional fare will be paid.

2343. But not because of the removal of the station alone? No.

WEDNESDAY, 28 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

- | | |
|--|-------------------------------------|
| The Hon. FREDERICK THOMAS HUMPHERY, M.L.C. | CHARLES ALFRED LEE, Esq., M.P. |
| The Hon. JAMES HOSKINS, M.L.C. | JOHN LIONEL FEGAN, Esq., M.P. |
| The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C. | THOMAS HENRY HASSALL, Esq., M.P. |
| The Hon. WILLIAM JOSEPH TRICKETT, M.L.C. | GEORGE BLACK, Esq., M.P. |
| The Hon. DANIEL O'CONNOR, M.L.C. | FRANCIS AUGUSTUS WRIGHT, Esq., M.P. |
| HENRY CLARKE, Esq., M.P. | FRANK FARNELL, Esq., M.P. |

John Wright, Civil Engineer, sworn, and examined:—

2344. *President.*] I believe that for a number of years you were employed by the Government as a constructing engineer? Yes.

J. Wright.
28 April, 1897.

2345. Are you aware of the various schemes which have been from time to time suggested for the extension into the city of the railway? Yes.

2346. Do you desire to make a general statement? Yes. In the many proposals which have been made, with the exception of one, it has been found necessary to mine tunnels. As far as the railway practice of the old country and America is concerned, tunnels have been found most uncomfortable, and people now realise the fact that they are unhealthy. In addition to that, they involve great initial cost as well as great cost of maintenance. It has struck me for some years past that no proposal would be better than one to connect the north with the south.

2347. That is the present railway system in the south with the North Shore and Hornsby one? Yes. Complaint is made as to the congestion of traffic at Redfern. It does not matter from what part you come—south, west, or north—you meet a dead end. If any loop could be found—for example, a loop which will connect the Northern line with Redfern, so that there will be a clear way right through—the cost of making it would be warranted, because of the facilities which it would give for relieving the Redfern traffic. I do not think it is possible that any tunnel under the harbour would be less costly than an over bridge. So far as shipping is concerned, we are getting lower down with our masts. About six years ago I ascertained the heights of all the vessels. The "Cutty Sark" was the highest—about 171 or 172 feet. Now we get steamers under 100 feet. The largest steamers now afloat have masts of from 100 to 120 feet. The easiest way of getting out of our difficulty is, I think, to connect the north with the south as suggested. The various loops for eastern suburbs could be arranged from Redfern, but in what manner I am not prepared to say. That is a matter for the Railway Commissioners. My principal reason for giving evidence is to bring before you the fact that it would relieve nearly one-third of the traffic of the Colony if we had a loop and an overhead bridge going to North Shore.

2348. You understand that there might be a need to bring a large number of trains into the city to carry the suburban passengers who would not be required to pass to North Shore? Yes.

2349. Therefore, that does not cure the evil? No; but it takes away one-third of it at once.

2350. What is your idea with regard to the position of the bridge? One or two have been suggested, and I think the best will be one from the Observatory to Blue's Point, or from Dawes Point to McMahon's Point.

2351. What height? If the exigencies of the wool traffic demand that wool vessels shall go beyond it, it will have to be of such a height as to enable them to pass clear. It should be about 170 feet. If the vessels strike their topmasts 150 feet would be ample.

2352. What about the cost of the bridge? That was estimated by Sir John Fowler at about £750,000. When Sir Benjamin Baker was out here, however, he told me it could be constructed for about £500,000 or £600,000; that includes the approaches. There were two proposals—one with cylinders and the other with cantilevers—only one pier in the centre.

2353. What would be the cost of the resumption between Redfern and the southern approach to the bridge? About £800,000. That estimate was made in the year 1891 or 1892.

2354. Have you any idea of the cost of the North Shore resumptions? It would be very light now. There is only about a mile of line to construct from between Edwards'-road and Blue's Point, and it is not much built upon.

- J. Wright. 2355. What would be the cost of the construction of the line from Redfern to the bridge approach? According to the official estimate, made six years ago, it would be £26,000 or £27,000. That was for a double line only.
- 28 April, 1897. 2356. Was it all open? Yes.
2357. Any of it overhead? Yes; some of it about the Haymarket, and the residue was on the surface, or in slight cuttings in one or two places.
2358. Does the resumption include the area required for station sites? Yes; of course they would be limited, and as narrow as possible.
2359. Does the £30,000 carry with it the construction of the railway stations? Yes; I think only two were proposed.
2360. Therefore the works and the resumption required from Redfern until you reach the northern side of the harbour—say McMahon's Point—would cost £1,430,000? About £1,500,000.
2361. To that requires to be added the cost of the resumption on the northern side of the harbour, and the construction of the line on the northern side of the harbour? Yes.
2362. You believe that in both instances the cost would not be very great? I do not see how it could be on the northern side of the harbour, because it is not built over, except very slightly at one point. When I went over I do not think there were more than 200 houses, and I do not think 1 per cent. has been added since.
2363. How high would the cliffs be at the northern approach to the bridge? There is rather a long approach on the northern side. The cost of that approach is embraced in the £600,000 for the bridge.
2364. How far from the water would the bridge be at the point at which the railway would touch it? On the North Shore side about 30 to 35 chains from the water.
2365. You require that to get a grade to the bridge? Yes.
2366. *Mr. Hoskins.*] Do you think one-third of the people who now use the North Shore ferry would go so far out of their way to the Observatory to get to the bridge? I can only reply from the results of the construction of the Brooklyn Bridge in America. The ferry traffic there was reduced from about forty boats to four.
2367. *President.*] Would the bridge be fit for the carriage of all traffic? Yes; and the railway as well.
2368. *Mr. Humphrey.*] Have you considered the proposal to extend the railway from Redfern to Park-street or St. James'-road? Yes; I do not see how that will alter the present congested condition of Redfern; it will simply bring it a little further on.
2369. Then you have not seen the proposal to have a loop? Yes, I have. The one loop runs as far as there.
2370. One proposal is that there should be a loop near the Art Gallery, so as to render unnecessary the dead end to which you take exception? But supposing that for the next six or ten years, which is very likely, the increase of traffic is as great as it has been during the last six or ten years, you will still be in the same fix, unless you have something to take away some of the western, northern, or southern traffic.
2371. Would it be practicable to extend the railway from or near the central position mentioned in the direction of Dawes Point, and by bridge to North Shore? Yes.
2372. Therefore, although, perhaps, for present purposes, the terminal station might be regarded as being fixed in the vicinity of King or Park-street, it would not prevent any future extension if it were thought necessary? I think it would.
2373. Why? Because you would not have sufficient elevation in King-street to get across to North Shore.
2374. Could it be extended from the neighbourhood of King-street to Dawes Point? The levels are rather against it, because there is a great dip in George-street, and it would be some trouble to get over.
2375. Your idea is that a railway extended from Redfern must be kept to the west of George-street? Yes.
2376. Therefore, your extension would essentially be to connect with the North Shore railway? Yes; I simply suggest it as a means of relieving the present congestion at Redfern. It would be one means of taking away one-third of the traffic. Of course, the northern traffic will increase more than any other traffic.
2377. *Mr. Hoskins.*] What is the difference in the elevation between Redfern station and the Observatory? I do not know, but it is not very much.

J. Horbury Hunt, Architect, sworn, and examined:—

J. H. Hunt. 2378. *President.*] Have you considered the question of a city railway? Yes, for many years.

2379. Has the map on the wall been prepared under your supervision? Yes.

28 April, 1897. 2380. Do you desire to make a statement? I should like to read my views, which are as follow:—

As an old colonist—but more especially as an architect following my profession in this city these thirty-five years—and, further, having for the past twenty years devoted much thought to the subject before you, while during the same time advocating through the public Press the practicability and possibility of making Sydney a beautiful commercial city, prompts me, gentlemen, to come before you to-day for the purpose of entering my strongest protest against any attempt to insert the thin edge of the wedge of destruction to Hyde Park, which is certain to be its ultimate fate, by placing on any portion of that site a railway station—I care not how magnificent the conception of that building may be.

All of us must admit that there will be a great national and civic advantage to a young and fast-growing city like this by having its metropolitan railway station well placed.

Yet a chief city station with all its advantages is not the only, neither is it a paramount feature in either our civic or national requirements.

Let it be remembered, however, that the metropolis of any nation is in a way national property.

In all earnestness, I ask, shall one of the main features of a naturally beautiful city as Sydney undoubtedly is, I repeat, shall that feature be now taken from us; yea, lost to posterity for ever. Gentlemen, I submit that this is no trifling question—one not to be brushed to one side simply to satisfy the requirements of a few rabid advocates of this Hyde Park station. I make no hesitation in saying that nine-tenths of these advocates have never carefully considered this important question, while very few have any fitness or disposition of thought for matters of this kind, simply their own selfish wants ruling their determination; and to fully satisfy those wants these men would have no compunction whatever in placing this big station building in the midst of the Botanic Gardens.

With every respect to our brother civil engineers and especially our deservedly respected Railway Commissioners, I must say that these big railway structures are at best but ugly-looking fabrics, the larger in bulk the more intense in their inherent utilitarian ugliness.

On

On these grounds alone, a chief railway station should not be thrust into juxtaposition with our city architecture of the type that should adorn the frontages to Hyde Park. Big warehouses and a railway station are fitter companions. J. H. Hunt.

All this will by some be termed sentiment—in fact, several who have already given evidence before you and to a previous Commission have spoken jeeringly of sentiment. Those gentlemen are, I fear, just a bit ignorant of the fact that this particular trait of character was notably very prominent in our ancient city builders, and cannot well be set to one side by our modern city builders. 28 April, 1897.

Every true advocate for making Sydney a beautiful commercial city will require, and they will stoutly contend for the absolute preservation of the whole existing area of Hyde Park.

The advocates of the Hyde Park scheme can depend on it that any attempt to obtrude on the Park any railway station or open cutting will be resisted in a surprisingly effectual manner. There are hundreds and hundreds of citizens who in other ways than coming here to protest will make their power felt. Why, it is a fact that such a proposal of vandalism would not have forty-eight hours' life in Victoria.

The streets bounding the park will provide our coming architects with most valuable frontages for important future buildings in addition to several now surrounding the park.

The present or some closely-following Government will do well for the nation by making these sites secure for the purpose here advocated.

The necessity for preserving this our most important city square as such (and not to be turned into a railway yard) will, I am confident, when once brought straight home to your intelligence, be accepted in the manner and for the purpose which I now desire to set out.

If I were an autocrat as well as an architect, I would at once assign to our future Public Library the whole of the sites of the present Law Courts, St. James' Church, and the Registrar-General's Offices. Then, for our future Courts of Justice (to embrace all the Courts, except the Criminal), also the Attorney-General's and Registrar-General's Departments, I would give thereto the sites of the District Court, Equity Court, and the Mint.

No better position can be named for those important offices. The architecture of such a group could then to exceptional advantage be seen and enjoyed from the Domain on the one side and from the Park on the other.

We have on the next and adjoining site the Cathedral of St. Mary's, which, when completed, will be one other grand feature in the Park view.

Next comes the Museum, which, when finished, will be a very imposing building.

Following on comes our Sydney Grammar School. The site adjoining this should be taken for the Technical Museum. Then at the corner of Liverpool and College Streets I would place the Girls' Public High School (removed from its present position opposite the Registrar-General's Offices), thus completing the north and east side of our city square, while on the east side preserving that beautiful outlook over Cook Park. (Sentiment again).

On the south side, at the corner of Oxford and Liverpool Streets, I would place the future new Anglican Cathedral, this site to be in exchange for St. James' Church property, together with the old parsonage property site. Let it be remembered that the present St. Andrews is but a parish church. Permit me parenthetically to say that when the Church of Rome has completed its fine structure, then the Church of England will be aroused to a spirit of emulation; then this will be unquestionably the site for its cathedral.

On the west and fourth side we have the Synagogue, also the Oddfellows' Hall. This hall some of these days no doubt will be made more imposing architecturally, the remaining sites to be taken for various large public buildings, for instance, a grand opera house, while another will go for a grand theatre. Sites on this side of the park are eminently suitable for the last-named buildings, as they would have the protection of streets on all sides. Others of these sites, with those on the south side, to be in time taken for various important buildings here might properly be found homes for all our learned and scientific bodies.

Hyde Park thus surrounded on its four sides with buildings of the public character here set forth, and of good architecture, then this park would be a spot in our city which even the ultra-utilitarian man would be justly proud of—yes, as proud as all of us are of the harbour—while few cities could compete with us in two such fine civic features. Will it not, therefore, be a great national mistake—yea, a big blunder—to intrude into this city square such a building as proposed, with its surroundings. Do what you will with a railway station, it will be foreign to the architectural capabilities of this part of our city. On the other hand, to do anything that will prevent the future conception of what I have so imperfectly set before you, will be a positive disgrace to our intelligence, and a disregard to our trustship for our successors, who may, to our shame, ask where exists the proof of the need for destroying this city square.

REDFERN v. HYDE PARK.

On this plan of the city I have ventured to plot down my views of the extension of the railway into the city, with extended wharf accommodation, new sites for warehouses, together with some street improvements, all of which I respectfully submit should be taken up as one study, because they are each important features, and, from a commercial point of view, in any comprehensive plan of railway or other city improvement, they should not, in the interests of the whole city, be considered one aside from the other.

It is contended—and rightly so—that the railway terminus should be near the centre of the city, but what centre—that of 1897 or that of 1997.

In 1863 I was engaged in building a block of buildings near the Exchange, the site for those buildings having been fixed upon, because at that time (thirty-four years ago) that locality was considered to be about the centre of the city, while the old post office (standing on the present site) was spoken of as "up the town." Therefore, those of us who have had many years' practical experience of the growth of this city can best bear testimony to the fact that year by year the active commercial centre of the city is tending Redfernwards, where it will no doubt permanently fetch up ere fifty years have rolled by. On the other hand it must be remembered that our toilers for daily bread are not now all engaged in Pitt, George, and York Streets, as of yore. Do we not see springing up in every direction about Redfern places of business where thousands of employees will be speedily required; quick and easy access to the central station just as much if not more so than those of us in the north-west part of the city, where we are limited in city area, while to the south-east there is no such limit.

It will be admitted on all sides that a metropolitan station wisely placed requires plenty of space all about it, within and without its own boundary lines. This, I think, is well provided for by my scheme, which, in a great measure, is that of one of those set forth by the Railway Commissioners. The area embraced in my plan being about 35 acres taken within the station fences, while on the outside of those lines there will be a road 100 feet wide; also a large square at each of the three angles where the roads meet. The larger of these having an area of about 5 acres. By this plan the city would have for the present and far into the future ample provision for its railway requirements. In these proposed station grounds there will be about three and a half times the area of the proposed Hyde Park scheme.

To seriously compare the many and important advantages of the Asylum site, together with its ample future requirements and great capabilities as against the few and less important capabilities and restricted future requirements that this Hyde Park scheme possesses, might well be termed playing with such comparisons. Now, as against the Asylum site, there cannot be advanced and successfully supported any railway engineering or civil engineering difficulty, or any architectural or civic objections thereto, for it has not any. Whereas with Hyde Park site, neither railway engineering combined with civil engineering skill can make it a site for a station such as this city will be demanding ere long.

The Chief Commissioner says, in answer to 464 (previous inquiry), "How long do you think the Station (Hyde Park) you have proposed ought to last?"—"I should think it ought to last twenty-five years; but, as I have already said, I would rather suggest, if any further accommodation were required, that the scheme to the west of the city should be considered." On page 22 the Chief Commissioner further says, "It is absolutely necessary that the station should be on the street level. . . . It would be most unwise to adopt any underground station or anything of the kind to deal with the main traffic of Sydney." Here we have the most reliable evidence from the highest authority amongst us showing that Hyde Park is not a perfect spot for the terminus, because it will be good for only twenty-five years; while the fatal objection to it is that it is an underground station. Mark the Commissioner's words:—"It would be most unwise to adopt any underground station or anything of the kind." Mr. Eddy informed the Commission that the Lancashire and Yorkshire Company had recently spent £975,000 to bring their station to street level by only a few feet.

It will be found that after the novelty of the new station has passed away, which generally awaits upon new things, then the business public who are to be brought into the city from beyond Redfern and shot out at Hyde Park, 25 feet below the street level, there left to climb up innumerable steps, and wend their way to the vicinity of Wynyard Square—mark you,

J. H. Hunt. you, the 'buses, trams, and cabs are supposed to be dispensed with by the adoption of this Hyde Park site—then on the homeward trip to have to climb up the King-street hill, and of a hot summer afternoon to sit in a carriage sunk down into an excavation 25 feet deep; imagine all this, and the wail to follow, and the indignation that will be expressed for having adopted this what will be called "Dutch oven" terminus, or, on the other hand, "All-to-one-side-of-the-city terminus;" while the eastern residents will be severe in their censures for the unpardonable damage done to the park grounds.

FLAGSTAFF HILL.

For fully twenty years past I have advocated, through the public press, a scheme for resuming the whole of the Flagstaff Hill and its surroundings to the extent shown on this plan—by the neutral tint—and levelling the whole of that area down to the present level of the Circular Quay. This importantly-situated section of our city as now existing is, from a commercial point of view, all but useless to us. On this newly formed area of the city could then be placed with great present and future advantage a truly city station at street level—in the position, for instance, shown on the plan by a red tint—with one or two underground stopping places *en route* to Redfern.

TRAMS.

I am of opinion that our Railway Commissioners are capable of serving in a most efficient manner the wants of the city people as well as the near-at-hand suburban residents, by trams traversing the city streets north and south, east and west; picking up and putting down the travelling public almost at their will, to an extent that never could be attained by a railway service for such short distances. On this plan I have indicated some extension of our tram service.

FLAGSTAFF HILL FOR WHARF AND WAREHOUSE ACCOMMODATION.

Those who are alive to the future commercial importance of this city will commend Mr. Reid for his forethought in commissioning you to take into consideration the desirableness of resuming the whole of the wharf frontages of Darling Harbour, and reconstructing that line of wharfage and improved warehouse facilities. No doubt all this will appear to some men a stupendous order; however, it is not a work to be done in five or twenty-five years. In conjunction with the Premier's project, I submit my scheme as set out on this plan for resuming the whole of the Flagstaff Hill locality, and level it down, as before stated. We could then have one line of wharf frontage for circular Quay to the head of Darling Harbour, with an immense area for modern warehouses, thus making this important section of the city our chief seat of commercial activity.

As your Commission does not include the street question, it would be out of order in making any reference to what I have shown on this plan. It is, however, a question that cannot well stand out of the two subjects before you.

I may go further into this at a future examination; therefore, it will be well to omit alluding to so small a reform here.

THURSDAY, 29 APRIL, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
The Hon. JAMES HOSKINS, M.L.C.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
The Hon. WILLIAM JOSEPH FRICKETT, M.L.C.
The Hon. DANIEL O'CONNOR, M.L.C.
HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
JOHN LIONEL FEGAN, Esq., M.P.
THOMAS HENRY HASSALL, Esq., M.P.
GEORGE BLACK, Esq., M.P.
FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
FRANK FARNELL, Esq., M.P.

Alderman Charles Edward Jeanneret, sworn, and examined:—

Alderman
C. E.
Jeanneret.
29 April, 1897.

2381. *President.*] You are an Alderman of the City of Sydney? Yes.

2382. Are you aware of the proposal before the Commission? Yes. I know the details of the Hyde Park scheme, and I have seen reports of the other scheme.

2383. Do you wish to make a statement with regard to your views? Yes. My opinion is that the railway should not at present be extended into the city further than it is now. The existing site is the most central, and the centre will gradually extend towards the south-west, so that ultimately Newtown or Stanmore will become the central point of Sydney instead of Redfern, at any rate, at present, the railway should not be extended this side of Prince Alfred Park, which might well be resumed by the Government, or if necessary Devonshire-street could be closed, and the Benevolent Asylum taken in. My opinion is that Prince Alfred Park is of very little use in its present form to the City of Sydney, and the streets which surround it could also be taken.

2384. Lying east of the park? Yes.

2385. *Mr. Hoskins.*] We have had it in evidence that the railway cannot be taken into the park inasmuch as it would require too sharp a curve? I do not know what engineering difficulties there may be. I am only speaking as a citizen, and I think I know the views of most of the citizens on the subject. The majority of the citizens are strongly opposed to any resumption of Hyde Park for the purpose of a railway station. I will quote a resolution passed by the City Council on 21st January, 1891. I may say I am not authorised by the Council to appear here, but I think some one ought to be authorised to appear. The resolution states:—

That this Council protests most emphatically against any portion of Hyde Park being resumed for railway purposes, and urges the Government to reject any such proposal as inimical to the best interests of the people.

2386. *President.*] Was that resolution passed unanimously? Yes. I may say the matter has been brought up a good many times recently in the City Council, and I have never heard any expression of opinion on the part of any Alderman in favour of the extension to Hyde Park. I have heard many expressions of opinion against it. I think the opinion of the City Council is that the scheme is one which must be carried out, and that their objections should be made after the report of the Commission has been submitted. I dissent from that view. I think that now is the time for the Council to object.

2387. In your opinion would there be a protest from the City Council? There would be if they thought the park was going to be taken. I imagine a protest has been conveyed to the Government, and has not been brought officially before the Commission.

2388. Have you any information to lay before us with regard to an extension into the city, should it be thought desirable, from Redfern? I have no information of an engineering character, but speaking from a commonsense view of the question I think the establishment of the electric system of tramways does away altogether with the necessity of any extension into the city. It will be far more convenient for the majority of the people than any railway.

2388.

2389. That pretty well covers your case? Excepting that there is a possibility, for the purposes of goods traffic, of an extension round the harbour. I believe it would be desirable to extend the line by means of a new street between Sussex-street and Darling Harbour. I have been thirty-five or forty years doing business on the eastern shores of Darling Harbour, and I feel convinced that there is a need for some way of communication with the railway by means of iron rails round the harbour foreshores. I am not of opinion that there is at present a large traffic there which goes to the railway, but there is an immense amount of traffic to different parts of the city, and it is conducted under very difficult conditions indeed. It is raised from the water up to Sussex-street very suddenly. The congestion is increasing in the streets there every day. A large portion of the traffic which used formerly to come to Circular Quay has been moved to the head of Darling Harbour. The ships are crowded round those shores to an unprecedented extent. All the ships of the A.U.S.N. Co., which used to be brought to Circular Quay, and some of them to Grafton Wharf, are now centred close to the bridge. All the steam companies, in fact, are now seeking wharfage accommodation in Darling Harbour, on the eastern side. The consequence is that the traffic is increasing there to a marvellous extent. The question is, how is it to be carried out in the streets. In my opinion it could be met without much expense, and perhaps without any at all, by starting a street from the head of Darling Harbour, near the railway line, and carrying it between Sussex-street and Darling Harbour, as far as the gas-works. It would become part of Sussex-street at Dalgety's Wharf, before getting to the Gas-works. Then it could be continued by a tunnel under the Flagstaff or to Circular Quay, and thence, if need be, to North Shore; but not by means of a bridge. I do not think a bridge is necessary. I think it could be carried there without a bridge with less expense. I am strongly of opinion that another street is needed between Sussex-street and the Harbour, and it could be an iron or steel rail street. That would enable railway trucks or railway engines to be carried along the street, and there would be no great interference with the vehicular traffic which otherwise would be there. The idea of running railway lines and the railways in the public streets is not a new one. It is done all over the world. There is a number of streets and lanes which could be taken in, so that the resumptions would be very little, and the frontages which could be sold would, in my opinion, recoup the Government or the Municipal Council for any outlay they might make in creating the new streets. A great mistake is being made at Darling Harbour at the present time. There is an unwillingness on the part of the Government to increase what is called the line of reclamation in Darling Harbour. They give away a few inches at a time when, in point of fact, the matter should be dealt with in a bold spirit, and more room given there than there is at present. The vessels lying in Darling Harbour now overlap the line of reclamation by nearly half their length. If all these vessels are moored end on to the shore it might be just as well for the Government to extend the limit of reclamation, and give a great deal more room for the loading and discharging of cargo, and at the same time obtain more revenue for the State.

Alderman
C. E.
Jeanneret.
29 April, 1897.

2390. You are speaking rather of the extension of the wharfs than of the reclamation itself? This is with the view of making more room for the street, because if you take away a part of space which exists there for making the street wider, what are you going to do with the stores. You must make up for that in some way. There is nothing to interfere with vehicular traffic in the putting down of iron or steel rails to carry trucks, whilst they would be an immense convenience to all the shipping companies. I do not mean to say there is no large up country trade there at present, but what there is is increasing every day. Of course it does not follow that if you put rails of this kind down you will require regular sets of trains there.

2391. You are looking rather to the future? Yes; but there is a great necessity for a change now. It is more apparent now than it has ever been before.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

2392. *President.*] You have had the various matters which have come before the Commission placed before you from time to time? Yes. I propose to explain what has been done towards preparing an alternative scheme.

H. Deane.
29 April, 1897.

2393. The Commission understands that owing to the limited time at your disposal any estimate of cost of the alternative scheme must be regarded as approximate? It is very rough indeed.

2394. I suppose that the alternative extension, as far as the Park, is similar to the proposal which has already been explained? A proposal has been worked out, under instructions, to show what can be done as an alternative scheme to bring the railway into the neighbourhood of Hyde Park without materially interfering with the Park—abolishing the principal station in the Park and substituting one pretty close up between Elizabeth-street and Castlereagh-street, which, as far as position is concerned, will answer equally well.

2395. And also bringing the railway in touch with Circular Quay? Yes. The site is across Market-street, between the Synagogue and King-street. The station will be below the level of Market-street, between Castlereagh-street and Elizabeth-street, and it is proposed to close Market-street for traffic.

2396. You refer to that part of Market-street between Castlereagh-street and Elizabeth-street? Yes.

2397. Will you explain the scheme? The difference between this scheme and what is known as the Hyde Park scheme is very material. In the first place there are only four lines provided instead of six, from Redfern into the city.

2398. May we take it for granted that this scheme will do all that is claimed to be done with the scheme placed before us in the first instance? Not quite, I think. In some respects it does not do as much, and in other respects it does more. The line follows the same route, practically, as the other, until it approaches Park-street, where it diverges so as to pass under Elizabeth-street in the neighbourhood of the Synagogue, and to form a station between that point and King-street. The centre of the station will be very near the position which Market-street occupies between Castlereagh-street and Elizabeth-street. The station there will be an underground station with three double platforms, booking offices and waiting-rooms.

2399. Although underground it will be open above, I suppose? Yes; it is proposed to cover it with a large roof, properly ventilated.

2400. *Mr. Lee.*] What depth will the platform be below the surface? The depth below Market-street will probably be about 14 feet. At the end of the station, and just opposite the Registrar-General's Office,

H. Deane. Office, there will be a new and wide street, about 60 feet between the kerbs, so as to give proper access to the station. The station buildings will be on the level of the street there, and will be chiefly facing the new street.

29 April, 1897.

2401. *Mr. Humphery.*] Does that mean that King-street will be there widened 60 feet? No; King-street will not be touched. The station will stand back from King-street towards the High School.

2402. Is that south of the Monte de Piété? Yes; that would be left intact.*

2403. *President.*] The object being to save resumption? Yes.

2404. *Mr. Hoskins.*] How will you manage about tramways? They will not be interfered with. Although it has been suggested that they should be removed, I think the tramways in that position will be an advantage rather than otherwise, because people will be able to change from the railway to the tramways or *vice versa*. Northerly from the station the line will divide into two. Two lines will be carried in a loop under the Domain and come out into the open air, facing Sir John Young's Crescent. Two lines continue down in tunnel, making for Macquarie-street, and they enter the Inner Domain just to the north of the gates, emerge from the tunnel nearly opposite Bridge-street, pass under the entrance to Government House, and a terminal station is made from Bridge-street down, having its centre a little to the north of Albert-street. Here there are provided two double platforms, 500 feet in length, with booking offices near the top of Albert-street, and access to the platforms by overbridge from those booking offices, and also by subway under Macquarie-street from the level of Circular Quay. It will be seen that the Woolloomooloo loop crosses the other lines, and the object of it is this:—In bringing the lines from Redfern into the station, near Hyde Park, the quick trains will have to be brought on the western side, and the slow trains on the eastern side, so as to preserve the arrangement which exists at present. The quick trains—that is the country trains—will thus be brought in on the Castlereagh-street side of the station, but it will not be desirable to take them further down. That will be the terminus of that traffic. I may say that the whole of this arrangement has been made after consultation with the Railway Commissioners. It is arranged in this way: that the long distance traffic—that is to say the traffic to the Mountains, Moss Vale, and so on, should be brought in and terminate at the new station between Castlereagh and Elizabeth streets. In order to provide for the arrival and starting of those trains a loop is run round under the Domain, as shown on the plan. As that crosses the other lines, those lines have to descend at a more rapid rate, which can be done with a grade of something like 1 in 50, and pass underneath the lines running down to the neighbourhood of Circular Quay. The suburban traffic proper will be brought into the station on the eastern side—that is on the Elizabeth-street side, and will afterwards be run—some of them at any rate—through to the terminal station near Albert-street. The Chief Commissioner considers that an arrangement like this, shown on the plan, with two double platforms, and four lines will sufficiently provide for the traffic without any large station yard for shunting purposes. It will be seen that there are engine roads there, and when trains come in they can be backed upon them and run out again. The object of having a number of platforms is to allow the trains to wait there until it is time for them to start out again. It is quite clear that they could not run in and out immediately. If a train is late there must be an allowance in the time-table, so as to allow of its starting again punctually. That means that room must be given for the trains to stop while waiting for time. It will be seen that the only tunnel through which passengers will be conveyed will be on the line at the Albert-street station. The loop line into the Domain is merely for empty trains, and is a substitute for a large terminal station with sidings. On the Sir John Young's Crescent side of the loop, a number of sidings are shown for standing trains.

2405. *President.*] That is open? Yes.

2406. All the rest is tunnel? Yes.

2407. The open part would be under the fall of the hill, and would not be seen? It would not be seen much. In the Domain proper—that is to say the part most frequented by the public and the main drive down to Macquarie Point—the line is underground, and only emerges on the water side of the Art Gallery.

2408. *Mr. Humphery.*] How far will the nearest part of the loop be from the Art Gallery? About 150 feet. Of course, that line is not definitely fixed in position. It could be brought either nearer or further away.

2409. Would that be a convenient place for a passenger platform? It is not intended to construct a platform. That part is only intended for shunting purposes.

2410. *President.*] Could a station be put there if required? No doubt; but probably some further expense would have to be undertaken.

2411. Could the line be fitted on to the extension to the eastern suburbs? It could.

2412. It is the first step towards eastern extension eventually? Yes; I think it might be fitted on to that—or, rather, the eastern suburban line might be fitted on to this.

2413. *Mr. Fegan.*] What time would be lost in going round the loop? No time would be lost. The loop is only for standing trains. Passengers would arrive at the station between Castlereagh and Elizabeth streets, and in departing for the longer distances they would start at the same station. Passengers would not be conveyed round the loop unless some further provision were made for doing so.

2414. Then if a train comes in from the Mountains the passengers get out at the station between Castlereagh and Elizabeth streets, and the train runs round the loop, so as to be ready for returning? Yes; it runs round there, and waits in one of the sidings until it is wanted.

2415. Does that mean more rolling-stock than you have at present? No; certainly not.

2416. *Mr. Hoskins.*] How much land do you require for the proposed station? I have not gone into that question, but Mr. Perdriau has done so.

2417. *Mr. Wright.*] Is the proposed line from the Quay to the Domain gates underground all the way? Yes; it is underground until you come to Bridge-street.

2418. What is the length of the tunnel? 743 yards.

2419. Could it be successfully ventilated? Tunnel ventilation is never quite satisfactory, but it is not so serious a matter for the smaller number of passengers who would go down there.

2420. I suppose you cannot possibly get down there excepting by tunnel? You must go down by tunnel. I would point out that as there would be a smaller number of passengers going down there, the trains would be lighter, and the steam from the locomotives would not be so severe.

2421. What is the total length of the tunnels on the loop? I have not measured the length, but I may say passengers will not be conveyed there.

2422.

* NOTE (on revision):—I find that I was mistaken. The Monte de Piété building would be required.

2422. They may be conveyed there some day? Yes, eventually.
 2423. What do you imagine will be the length of the tunnel in the loop? About half a mile.
 2424. You said the platform in Market-street would be 14 feet below the level? Yes.
 2425. That being the case, could not Market-street be covered over? It would be very easy to arrange that it should be done, but it would be an extra expense. I do not think it would be necessary, and the Chief Commissioner thought it would be a pity to do it.
 2426. For a long time past there has been an agitation to continue that street through to St. Mary's Cathedral? Of course it could be done if the levels of the rails were kept down 2 or 3 feet more.
 2427. Where do you enter the Park? At Liverpool-street.
 2428. *President.*] Do you propose to "cut and cover" through the Park? As shown on the plan, it is proposed to cover half, and leave half open.
 2429. So that the area of Park land taken will be comparatively small? Yes; it may be said to be practically nothing, because there are lots of portions of the Park, such as flower-beds, where the people do not walk. Practically the use of the Park would not be interfered with, and the objection of running underground would be reduced to a minimum.
 2430. Would you interfere with any avenue of trees? No.

H. Deane.
 29 April, 1897.

TUESDAY, 4 MAY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	HENRY CLARKE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	GEORGE BLACK, Esq., M.P.
The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
The Hon. DANIEL O'CONNOR, M.L.C.	FRANK FARNELL, Esq., M.P.

John Young, sworn, and examined:—

2431. *President.*] Have you had a long experience of the city of Sydney? Yes.
 2432. And a full knowledge of the projects for the extension of the railway into the city? Yes.
 2433. I believe you submitted a scheme to a previous Commission? Yes; but I do not press it now.
 That scheme applied only to the mercantile traffic.
 2434. Before the previous Committee you stated:—

J. Young.
 4 May, 1897.

First.—I would like to consider the best position for the central station or terminus of the Southern, Western, Northern, and Illawarra main lines that converge into Sydney for the long-distance traffic, especially so as to be capable of extension hereafter. Second.—The suburban and local traffic taken in connection with the central station, but extended for local traffic only to suit both Sydney and suburbs. Third.—The resumption of the foreshores of the east side of Darling Harbour for the purposes of public jetties, wharfs, &c., as far as the gasworks—of giving a road to relieve the traffic of George and Pitt streets—selling the frontage to road for the purpose of erecting warehouses—and making a goods and passenger line in rear of same—to Circular Quay from Darling Harbour.

—? Yes. I desire to give evidence as to the best means of facilitating passenger traffic into Sydney. I may say I have seen Mr. Deane's plan of what he calls his western line. My idea is that the central station should be on that block of land comprised in the Cemetery and Benevolent Asylum, and bounded by Belmore Road, Elizabeth-street, and Pitt-street. That is a considerable area, and should give accommodation for the next twenty-five or thirty years. I built the present railway station in 1871, and what was thought sufficient in 1871 for the passenger traffic is, after twenty-five years, found to be totally inadequate. That shows that if this block of land is now a little more, perhaps, than is absolutely required, it will not be more than sufficient, at any rate, a quarter of a century hence. It has this advantage, namely, that the Government control the whole of it. They have control of the Cemetery, because they could remove the bodies to some other place and utilise the area. They have the Benevolent Asylum, which wants pulling down, and the police residence close to it, which is not of much value. There is the convent at the corner, and I presume the Government could make arrangements to get it, or they could do without it until it is convenient to remove it. A similar block of land could not be got in any other part of Sydney. I maintain there is not a sufficient area at Park-street for a central station unless the whole of the Park is taken up. In addition, there would be a great expense in getting to it. Compensation would have to be paid for the resumption of houses and land. The construction of bridges and culverts, the interference with water and sewerage, and so on, would be very expensive. In England the Great Northern and Great Eastern and other companies have areas in London, which are covered by the carriage-sheds alone, quite equal to the whole of the area we have at Redfern, and surely Sydney is going to be as large, at any rate, as one small district of London. The present station must cost an enormous amount of money in connection with shunting, because the space is so confined. With regard to accidents, —if you have sufficient room there is less liability to them. Everything is in favour of a large area. You could not get the necessary area at Circular Quay, for the simple reason that it is not there. These are the considerations which induce me to come to the conclusion that the spot I have mentioned is the most eligible for a central station. Now we come to other considerations. If a traveller comes with a portmanteau or two to Redfern, or the particular spot I have indicated, a shilling ride in a cab will take him to any of the hotels, the majority of which are within a mile and a half distance. If the railway station were at Park-street they would pay just as much to get from there to an hotel as from Belmore; therefore it cannot be said that the spot I name is unsuitable because it is too far distant. It is as central as any other place in Sydney—in fact, more so, because Sydney cannot extend northwards very much. The suburban traffic must concentrate to the same point. It may be objected that the suburban travellers wish to go direct to their places of business. I point out, however, that an unbroken line to Park-street would not enable them to do that, inasmuch as many people have to go as far as Bridge-street, Hunter-street, or the lower parts of Pitt and George streets. The manner in which the suburban passengers get to their places of business must be upon a totally different system from that. I desire to call attention to the elevated railways in America, and the application to them, during recent years, of electric power. I wish to show how similar

J. Young.
4 May, 1897.

railways can come into the city of Sydney, so that the whole of the city may be supplied. Mr. Deane's plan of the western route is intended for a steam line from Belmore Markets, Belmore Park, and the block of land which I consider should be the railway station. Mr. Deane, by means of excavations, embankments, and cuttings, to Circular Quay, makes that line a most expensive one. Being built for locomotives it cannot go beyond certain grades; therefore there is an immense amount of tunnelling and cutting. What I propose is—and it is not a novelty although it is new—that Mr. Deane's western line, instead of being one constructed with embankments and cuttings, should be an elevated line worked by electricity. In New York they have similar lines worked with cables and electricity. The old style is being abandoned daily for electricity. Mr. Deane's western route scheme has been surveyed with an immense amount of judgment. The whole of the frontages both to Sussex-street and Kent-street are preserved. That is the great merit of the plan. Most of you are aware that a warehouse fronting a particular street seldom goes to the full extent of its ground. There is generally a yard behind. In this instance nearly the whole of the properties are like that, and the elevated line could go to the rear of those properties. Another advantage of my plan also is this—that the inequalities of the line can be adjusted by the length of the columns, and not by the cuttings and embankments. That must make an enormous difference in cost. An elevated railway can be adapted to the contour of the land it passes over. With electricity you can also have steeper grades. The only objection which can be urged against that idea is that the suburban passengers have to change at the central terminus. If you make a line through any portion of Sydney they will still have to change. Again, if you have an elevated railway, not only could you have it on the route shown on Mr. Deane's plan, but you could have it anywhere—almost between any of the streets. In America they are put in the streets themselves, but I should not like to see that done in Sydney. I prefer that the line should be put in the position shown on Mr. Deane's plan. It would relieve the streets of a large amount of traffic. I have had a good deal to do with omnibuses. I was the chairman of the Omnibus Company for fifteen years. The company is now defunct. We had 1,000 horses, and ran 130 omnibuses. Members of the Commission may not know exactly how it is that so many omnibuses are running in the streets at present. If we had a cable or electric line, the cars on which ran every three minutes, it would knock all the omnibuses off. If, however, your services are twenty-minute services there is plenty of time for half-a-dozen omnibuses to run, because people will not wait.

2435. *Mr. Humphery.*] Has not the difference in fare something to do with it? I do not think so.

2436. *Mr. Trickett.*] What you say is borne out by Melbourne experience? Yes. I may say it does not pay to run omnibuses at 2d. I advocate an elevated railway on the site surveyed by Mr. Deane, and there is no reason why you should not have roadside-stations and stopping-places. I understand the Government is going to generate all the electric power for all the tramways in Sydney at Pyrmont. The same power could be applied to this and all other elevated railways in Sydney. I admit that some might say, "There is a store which goes right through from one street to another." There is no reason why the railway should not go right through it. It could be bricked over. There would be no steam and no noise. The store could go over it or under it, as is best. My scheme does not destroy property on either side; therefore it must be the cheapest. Pillars could be put in the back yards of the houses to support the line, and it would not interfere with the foundations. No doubt there would be some compensation to be paid, but it would be very small compared with what would have to be paid if you made embankments and tunnels. My scheme would be somewhat similar to a tramway scheme. The locomotives and carriages could be made as light as possible. The carriages might be made, as in America, so as not to weigh more than a ton. That would make a vast difference in the wear and tear of the railways, and, of course, that would mean economy. Of course, people would have to change at the central station, but docks could be put in the platforms, and it would mean simply going out of one carriage into another, and they would run every three minutes. There would be a continuous stream of traffic. At the terminus I would cut across the Domain to Woolloomooloo Bay. There would be a way then for the people to get to Cowper Wharf and other places without going halfway round Sydney. If it is not desirable to deface the Park by means of an elevated railway, go under it. When you come to Cowper Wharf you can go across the head of it, tunnel under Potts' Point, and then you are at Rushcutters' Bay. You could get from there to Circular Quay, I suppose, in less than a mile, and have a straight line. Then it would be quite possible to come up the valley by the Museum, thus making a circular railway.

2437. *Mr. Humphery.*] Is it your view that we should have an electric circular railway? Yes.

2438. Independently of our present railway system, but admitting of passenger connection? Yes.

2439. *Mr. Lee.*] How would you approach the overhead railway in the city in order to enter the cars? You would require staircases in order to get up to them. They do not find any difficulty about that in America. The railways there are in the streets themselves, and the staircases come down upon the sidewalks.

2440. *Mr. Hoskins.*] Was not the overhead railway in New York found to be a great nuisance? No; they are building them continually.

2441. Was it not found that the grease was continually dropping upon the people upon the pavements; that the shopkeepers could not show their goods; and that the trains were taken close to people's bedrooms? Yes. That is what I object to; but under my scheme there would be no oil, because there would be no engines. The line would not go close to people's bedrooms, because it would be at the back instead of in the front. In New York they are in the front, and over the footpaths, but they are altering them every day and converting them into electric railways.

2442. *Mr. Roberts.*] Do not the overhead lines spoil the appearance of New York? Yes.

2443. Would they not spoil the appearance of Sydney? Yes, if they were in the streets; but I would put them between the streets.

2444. *Mr. Lee.*] They must cross some of the streets? Yes; and with whatever system you adopt you must do the same.

2445. *Mr. Hoskins.*] How could large loads of wool, such as those you see in the streets of Sydney during the early parts of the year, be taken under the elevated railway? The line could be made sufficiently high to suit any load. It is done in other parts of the world, and why not here.

2446. Is there any place in the world besides New York where the elevated railways are run on the side of the street, level with the first floors of the houses? Yes; in Philadelphia. Of course, a year makes a vast difference in America, and great alterations are being made.*

2447.

* NOTE (on revision):—The physical conformation of New York is very much like that of Sydney, both being built upon narrow peninsulas bounded by their respective harbours, and the central depot being placed away from the crowded streets of each metropolis.

2447. Would an elevated railway be necessary if we had a comprehensive system of street tramways? I think, if you had a complete service of the kind proposed, you would not want the other.
2448. *President.*] You intend the elevated electric railway to work in combination with the railway system, but not in extension of it. The same carriages, of course, would not run? That is so.
2449. Do you know anything about the cost of it? I know it is the cheapest scheme you could adopt.
2450. *Mr. Lee.*] Do you wish us to understand that the cars to be used would be separate from those used on the railway lines? It would not matter if they were the same, but I would not advise it.
2451. If this is going to be an electric system for the city only, how are you going to pick up the suburban traffic and bring it in without a change of cars? I do not say there would not be a change of cars.
2452. Do you think the suburban passengers would ever use the line, if they had to make a break from one train to another? Yes. Of course, you could never make a line to suit everybody.

J. Young.
4 May, 1897.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

2453. *President.*] The Members of the Commission made an inspection, last Friday, of the vacant piece of land near Devonshire-street, and we now wish to get your opinion as to the possibility of cutting down the street to a depth of 8 or 9 feet, and letting the railway cross by an overhead bridge, without disturbing the traffic. We would like to know if you consider that that would be a wise way of extending the railway from the present terminus, or, whether you would suggest a solid embankment across the street, some deviation being made to provide for the traffic by a slightly different route. We also wish to know from you where you think it would be wise to place the trams, supposing such an arrangement were made. Another point in regard to which we shall want you to give evidence is this: Suppose the proposed loop-line is left out of the scheme, and part of the shunting is done down towards Circular Quay, how wide would the station in Hyde Park have to be. We want to know how wide it would have to be with a loop-line and without a loop-line. If this area were taken fronting Castlereagh-street, how far should we have to go into the Park to get the necessary width, and would it be possible to bring the train along the present route of Elizabeth-street, overhead. There will be two lines of rails, one from Hyde Park to the Circular Quay, so that not more than a width of 30 feet would require to be resumed between those two places? If you want to take both classes of traffic down to the Circular Quay—
2454. No, only one class—the long-distance traffic will stop at Hyde Park, while the suburban traffic would go down to the Quay? You would not gain anything by what you propose. You would want the loop line for shunting purposes.
2455. Suppose you determined to go on to the Circular Quay with the suburban traffic? You would want two lines for that, and two lines in addition for shunting the long-distance traffic.
2456. With no loop and no extension, it was proposed to have a dead-end station 5 chains wide; but it might be well to have a station as narrow, where it is adjacent to the Park, as it can possibly be, consistent with efficient working of the traffic. One way to narrow it is by shunting the suburban traffic elsewhere; but inasmuch as the long-distance traffic is not to go down to the Circular Quay, but is to stop short at Hyde Park, that will render it necessary to have a greater width than you have shown on your plan. I want you to tell us what that width would be—how wide the station would be without a loop, and how wide it would have to be with a loop:—will you look into these matters, and give us an opinion in regard to them later on? I will.

H. Deane.
4 May, 1897.

FRIDAY, 7 MAY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.	GEORGE BLACK, Esq., M.P.
The Hon. DANIEL O'CONNOR, M.L.C.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Stephen Edward Perdriau, Surveyor, Department of Lands, further examined:—

2457. *President.*] You have seen the exact area likely to be required for a station if the Hyde Park station were rejected and land were taken alongside of it for that purpose? I know the boundaries of the area, and I have made a valuation, which is as follows:—

S. E.
Perdriau.
May, 1897.

VALUATION of that portion of the city of Sydney lying between the northern side of the Synagogue and King-street, and bounded on the east by Elizabeth-street, and on the west by Castlereagh-street; excluding that portion now owned by the Crown, which embraces the High School property and the properties between it and Market-street; also excluding the Metropolitan Hotel, in King-street, and the adjacent properties easterly to within 45 feet of Elizabeth-street. Total, £190,000.

Separate valuations follow below for those two portions which Mr. Deane, Engineer-in-Chief, thinks might be excluded:—

No. 1.—We value the Monte de Pieta property and the two small properties between it and the Metropolitan Hotel at	£21,500
No. 2.—We value the Castlereagh-street frontage of the property lying between the Synagogue and the northern boundary of M'Carty's stables at	£20,000
Thus our valuation for the properties which would require to be resumed to provide the station site proposed by Mr. Deane as an alternative to the Hyde Park site is about	£150,000

This estimate is exclusive of the customary allowance of 10 per cent. for forced sale, and of any claims which may be set up for disruption of business; the claims, however, under the latter head cannot be very great. There are only three hotels included in the area proposed to be resumed, two of which are of a very second-rate order.

EDWD. J. SIEVERS.
STEPHEN E. PERDRIAU.

2458.

S. E.
Perdriau.
7 May, 1897.

2458. You believe your estimate is an ample one? Yes.
2459. It is not proposed to take the Monte de Piète property? No.
2460. Your valuation is £160,000 plus the incidental expenses which you think would not be heavy? Quite so. There is a good deal of vacant land in the block.
2461. You think it is as cheap a resumption as it would be possible to make for the purpose? Yes; I think so as regards locality, there is 200 feet frontage to Elizabeth-street which is not built upon, and 177 feet to Castlereagh-street.
2462. That explains to some extent the comparative cheapness of the resumption? Yes.
2463. Do you care to express any opinion as to the site of the proposed station from the point of view of city traffic? Speaking individually, I regard it as a good substitute for the park site.
2464. Would it suit the travelling public as far as you know? I believe it would do so very well indeed.
2465. Mr. Sievers has collaborated with you in making this valuation? Yes.
2466. And the Commission can regard your estimate as being reliable? Yes; we worked it out by taking the municipal assessment, and then by taking the values of the land, the values we put upon it are higher than are the owners' values. The municipal valuation came to about £180,000, the other valuation came to £200,000; we split the difference and made the value £190,000. I think £160,000 would be the full amount.
2467. *Mr. Hoskins.*] That does not include 10 per cent. for forced sale nor claims for disruption of business? No; there are no important buildings.
2468. *President.*] Would it be difficult to get another site in the neighbourhood suitable for railway traffic which would be as little occupied by buildings as is the site under consideration? I think there are very few blocks in the city in such a good position which contain so much vacant land.
2469. Can you suggest any place in the City of Sydney where a railway station site could be got for a smaller amount, of course, having in view the remainder of the line from that point to Redfern? I do not think there is any other place in the city as economically suitable.
2470. *Mr. Lee.*] You have now had ample opportunity of estimating the cost of the respective resumptions in various parts of the city in connection with this railway? Yes.
2471. You have inquired into the original scheme for Hyde Park? Yes.
2472. You have also inquired into the alternative schemes submitted by Mr. Deane, and one or two of the schemes which have been proposed by citizens? Yes.
2473. Are there any of these schemes in which resumption of land can be carried out as cheaply as it can in connection with the Hyde Park scheme? There is not the slightest doubt that the others are not nearly so cheap.
2474. That particular scheme stands out beyond all the others for cheapness of resumption? Yes.
2475. *President.*] Is there anything else you wish to tell the Commission? No, except that it struck me, when I was preparing the plan which I laid before you, that it was rather a coincidence that there should be such a piece of land in such a position, and so suitable for a railway station where the Crown owned so considerable an area, and where so large an extent of the land not owned by the Crown was not built upon.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined—

H Deane.
7 May, 1897.

2476. *President.*] You have had an opportunity of looking into the alternative scheme adjacent to that involving the taking of a portion of Hyde Park? Yes.
2477. Do you think that if Parliament were averse to the taking a portion of the Park, the alternative scheme to which I refer would be the best substitute? It seems to be the best alternative scheme.
2478. The proposal submitted to the Commission was for a line to Hyde Park. Would it be possible, by having a loop line such as is shown on the plan, going towards Woolloomooloo, to work the whole of the traffic on that single loop without going to the Circular Quay? Yes.
2479. Therefore the extension from Hyde Park to Circular Quay would be an extra expense, and would be common to both schemes? Yes.
2480. *Mr. Lee.*] If the loop were abandoned and the line were extended to Circular Quay, would it be possible to work the traffic without the loop? I believe that would be unsatisfactory, and I will explain why. The corresponding substitute or alternative to the Hyde Park scheme is a station between Castlereagh-street and Elizabeth-street with the Woolloomooloo loop. The extension to the Circular Quay is an addition, and would not provide the right facilities for shunting. The Woolloomooloo loop is a substitution for the shunting arrangements in the large station.
2481. *President.*] And is put in to make the station as narrow as possible? Yes. If you suppose for a moment that that loop is not constructed, and that you want to have a loop down near the Circular Quay, it means this—that the loop or terminus will have to serve a double purpose, because, if you construct both the lines as far as that, you will have to take some traffic down there, and if you take traffic and empty trains down there you will want four lines of way, whereas the Woolloomooloo loop is only a single loop; there will thus be no saving of expense by going down to the Circular Quay.
2482. Then the case is this—we can, by a loop towards Woolloomooloo, as you have explained, and by a station between Castlereagh-street and Elizabeth-street, do what was submitted to the Commission in the first instance by the Railway Commissioners, but perhaps not so satisfactorily? Quite so.
2483. The extension to Circular Quay is possible under the alternative scheme? Yes.
2484. Is it possible under the Commissioners' scheme? Yes.
2485. How would you get it under the Commissioners' scheme? It was proposed that two of the lines should be lowered so as to take them underneath the front of the station in tunnels. I think I explained that, and that the foundations of the building were to be made so as to permit of the lines being taken through afterwards without any further expense.
2486. The extension of the alternative scheme to the Quay, if the Commission determined that it could wait a little while, would be the same, whether from the alternative station site or from the Park? Approximately it is the same.
2487. Can you give us the cost of the railway in sections, cutting out the cost of the piece to the Quay, and giving that to us subsequently? Yes; but the figures are no more than a rough approximation. I have estimated for the Devonshire-street deviation, together with all the work involved, £40,000.

H. Deane

7 May, 1897.

2488. Is that common to any extension into the city? It might be considered so.
2489. *Mr. Lee.*] It would not be common to a scheme under which you had a central railway station at Devonshire-street? No.
2490. *President.*] What is the next section? For the next section up to Liverpool-street, I have allowed £95,000, from Liverpool-street to Elizabeth-street crossing £70,000, and from Elizabeth-street to King-street, including the station, £164,000: the Domain loop is put down at £72,500, and I have taken for signalling and lighting £14,000.
2491. Does that cover the whole of the work in the alternative scheme? Yes; the total is £455,500—that is, without the Circular Quay piece.
2492. The resumption from Belmore Park to Liverpool-street has been given at something like £100,000, and Mr. Perdriau estimates to-day that at least £165,000 will be required for the railway station site, making a total of £750,000 for the work? Yes.
2493. What was your estimate for the Railway Commissioners' scheme as far as Park-street? £600,000.
2494. How much would it take to bring that line from Park-street to St. James' Road? £50,000.
2495. Does that include the resumption? Between Belmore Park and Liverpool-street.
2496. Then the alternative scheme is dearer than the Commissioners' scheme by £55,000? Yes.
2497. Are you aware that the Railway Commissioners suggested that £100,000 should be debited to the railways if the Park site were given to them? I have heard so.
2498. If the railways were debited to that extent, then this scheme becomes cheaper than the Railway Commissioners' scheme by £45,000? Yes.
2499. What is the cost of the work from King-street to the Circular Quay? £91,000.
2500. That is common to and in addition to both schemes? Yes.
2501. Do you think you could get through from King-street to the Quay without any resumption? I think the line could be carried underneath without interfering with property, but there might be some liability for compensation if settlement occurred.
2502. From your knowledge of the formation and the depth, do you think that the line could be extended from King-street to Circular Quay without interfering with any buildings under which the railway would pass? Yes.
2503. You have no doubt about that? I have no doubt but that the thing could be done.
2504. Your knowledge of the formation and depth makes your mind absolutely certain upon that point? Yes.
2505. You desire to put in an estimate of the cost of the alteration of railway yards at Redfern? Yes, I omitted that. The total amount I make it would be £735,500, instead of £715,000. I should like to point out another thing in the other estimate. The estimate for the alternative scheme does not include any office accommodation; the other one does. In answer to Question 1298, I stated that if accommodation was not required the cost of the buildings would be cut down by £65,000, so that that would have to be deducted from the original amount; in order to make a comparison with the £650,000, which was the total to bring it up to St. James' Road, the amount must be reduced by £65,000. That would make £585,000, and now, as suggested by the Railway Commissioners, £100,000 could be debited for the Park. That makes a total of £685,000. I have made inquiries about that £100,000. I have not been able to see Mr. McLachlan, who is away, but I saw the Chief Clerk, and he told me that he was not aware that there had been any correspondence on the matter. He did not think that there had been anything in writing at all about it. It had been referred to by the Chief Commissioner at the annual dinner of the Commercial Travellers' Association, a report of which appeared in the daily papers. There he mentioned that it would be reasonable to debit the Railway Department with, say, £100,000, to provide for open spaces in crowded districts like Redfern. I do not think that that is the first occasion when it was mentioned. But it evidently expressed what was looked upon as a reasonable thing to do.
2506. How would the two schemes come out then? The scheme with the Hyde Park Station at St. James' Road £685,000, and for the alternative scheme £735,500, giving a difference of £50,500.
2507. *Mr. Humphery.*] Are we to understand that the difference in the entire cost and compensation for the disturbance of business, and the resumption of land between the Castlereagh and the Elizabeth streets site, and a similar site at Hyde Park, would be £50,000? No, no. I am comparing the original scheme brought up to St. James' Road with this alternative scheme.
2508. You make this distinction—that in the St. James' Road scheme you would have 10 acres? Yes.
2509. And you would have besides the buildings for offices? Yes.
2510. Which you have not taken into consideration in estimating the difference of £50,000? Yes. I have deducted £65,000 for the buildings.
2511. Have you taken into consideration in the Castlereagh-street scheme the value of land already owned by the Government? No. These figures were given to me this morning as Mr. Perdriau's estimate. That is all that I know about it.
2512. *President.*] Keeping in view what you previously said with regard to the area under consideration on the northern side of Devonshire-street, will you explain what you believe will be the wisest course, and give your reasons? If provision is to be made for extending the station accommodation at Redfern across the site of Devonshire-street, I am of opinion that Devonshire-street should be diverted, because it will be impossible to leave it in its present position and to lower it sufficiently and to get under all the roads that would require to be extended. Lowering the whole of Devonshire-street would be impracticable. It would have to be lowered throughout the whole of its length to provide for the extension of the yard. If the station yard is not extended, and only four or six lines, as the case may be, carried towards the city, Devonshire-street need not be diverted. The lowering then would not be a serious matter, as I have already explained; but if it has to be diverted, I consider that it should be done in one of the ways sketched on the map.
2513. *Mr. Humphery.*] You did not tell us why it should be diverted? It would have to be lowered for nearly the whole of its length in front of the station, and that would not be impracticable, but the grades at the end would be unworkable.
2514. *Mr. Lee.*] In other words, if you want to extend the yard across Devonshire-street, and make the same use of the Cemetery site as you are now making of the Redfern yard, then you would have to take entire possession of Devonshire-street? Yes.
2515. *Mr. Humphery.*] Do you say it is necessary to extend the Redfern railway yard across Devonshire-street to the Cemetery? It is not absolutely necessary for the scheme.

- H. Deane.
7 May, 1897.
2516. Therefore, if it is not necessary, it would not be necessary to divert Devonshire-street? Yes.
2517. And by taking the four lines from the railway across Devonshire-street, you could lower Devonshire-street, and render unnecessary the deviation? Yes.
2518. If you deviate Devonshire-street, there would be a great gain resulting in increased accommodation to Redfern station yard? In the future.
2519. *Mr. Lee.*] I think you have already shown us that at Hyde Park four lines of railway would be sufficient for the passenger traffic? Yes; under this modified scheme.
2520. That being the case, where would be the necessity for extending the Redfern yard across the whole of Devonshire-street? It would be very desirable to provide for the future.
2521. If four lines of railway are sufficient, with your proposed additions there to carry on the passenger traffic, why would it be necessary to take Devonshire-street? I should say it would not become necessary, but I was asked to look into the matter by the Commission.
2522. *President.*] Is this your attitude: that the platforms at Redfern are not sufficiently long. To extend the platforms it becomes necessary to extend Devonshire-street further north, because then if you do not do so, you have too contracted a space between the end of the platform and the road. That is point one. Point two is, that if you put a cut of 8 feet down in Devonshire-street you leave it worse than it is at present. Point 3 is, that it is absolutely certain that if you want a compact yard you cannot have a street running through it; therefore if you can get a better street and lengthen the platforms, and get a compact yard, and make provision for the future by extending the street to the north, that is what should be done;—you, therefore, recommend that it should be extended to the north? Yes; that is about it. I considered at first in connection with the extension of the line by carrying four or six lines into the city, Devonshire-street might be lowered, and I was asked to look into the matter of deviating Devonshire-street. It will be remembered that I pointed out when we were considering the question of making a large terminal station on the site of the Benevolent Asylum, that it was then proposed to deviate the bulk of the traffic of Devonshire-street right round by Garden Road, leaving only a passage for cabs on the line of Devonshire-street. At the request of the Commission I have looked into the matter of the deviation of Devonshire-street, and although I consider it is much more costly than to lower Devonshire-street, it makes a much better job, and provides for the future, which the lowering of Devonshire-street would not do. If Devonshire-street is lowered, and afterwards the Railway Station has to be extended, the whole of that work will be thrown away, because it would have to be deviated sooner or later. If this line comes to be constructed it would be a fitting time to deviate Devonshire-street, and this plan shows how I propose that it should be done. I do not think it is a necessary part to either one or the other of these schemes, and perhaps it is not fair to debit to the one estimate the whole cost, and not to debit the other.
2523. *Mr. Wright.*] It is your opinion that under any circumstances the Redfern railway yard should be extended northwards? Yes.
2524. That the yard is too small altogether for the purposes for which it is designed? Undoubtedly.
2525. Therefore it is necessary that it should be extended to the north over Devonshire-street? Yes, sooner or later.
2526. And whatever extension will take place ultimately that piece of ground will be required for railway accommodation? No doubt about it.
2527. *President.*] How much is the amount of the other item which you put into your estimate? £40,000.
2528. You can say it is not part of the scheme; it belongs really to something else? It does.
2529. So that £40,000 should be taken out? Yes; a good part of it.
2530. *Mr. Lee.*] The closing of Devonshire-street would necessarily involve the use of the whole of Devonshire-street Cemetery for railway purposes? Up to the deviation.
2531. All that portion except the part required to give a roadway? There is a portion between the deviated road and Belmore Road which would not be used.
2532. Therefore the question of utilising any portion of Devonshire-street Cemetery as a park comes to an end? The northern part would be available.
2533. You have no necessity to take that portion, what you would take would be the southern portion, nearly up to the boundary wall between the Church of England portion and the Roman Catholic? Yes.
2534. That would be required for railway purposes if Devonshire-street were closed, would it not? Yes; the southern part would be available for the extension of the station.
2535. If you had to fill in Devonshire-street to the level of your railway yard, or to excavate the Cemetery to the level of the railway, you would have possession of that part as you have of the Redfern yard? Yes.
2536. Therefore we can hardly look upon Devonshire-street as a recreation ground in substitution for any portion of Hyde Park that may be taken? Of course it need not be taken if the Railway Commissioners say that they do not require the extra area.
2537. *Mr. Hoskins.*] If Devonshire-street were lowered 6 or 10 feet to take four lines of railway, would it not cause a great difficulty with regard to the traffic between George-street and Devonshire-street? If Devonshire-street were lowered.
2538. Yes; only to permit of four lines of rails? No; we could make the grades quite satisfactory. I think the deviation makes the best job, although it is much more expensive than lowering the street. Whether we utilise the whole of the Cemetery as a park, or only the northern portion of it, I do not think it will very much matter. Suppose the whole of the Cemetery were converted into a park, it would be accessible from the deviated road just as well as from the present street.
2539. *Mr. Lee.*] The residents of Redfern would be put to very little inconvenience if Devonshire-street were closed, and the proposed new road made? Yes.
2540. And closing Devonshire-street would necessitate the diversion of the tram down past Devonshire-street, to join at the northern corner of Belmore Park? Yes; that forms a considerable portion of the expense.
2541. There are no engineering difficulties in taking that tramway there? No.
2542. *Mr. Wright.*] In your opinion, is there any necessity to deviate Devonshire-street; if it is closed could not the traffic go by Belmore Road just as well? I do not think that would do very well; it would be a long way round.

H. Deane.
7 May, 1897.

2543. Would it not be the most direct route into the city? Yes; but for any traffic from Parramatta-street that would go along Devonshire-street to Surry Hills it would be rather a serious inconvenience. If the traffic goes round Garden Road, or Belmore Road, as it is called, it would be dropping down into a hollow and rising up at the corner of Elizabeth-street, which is quite a steep hill.
2544. There would then be a space of land between Cleveland-street and Belmore Road without access to Parramatta-street? Yes; without any proper access.
2545. If you could get through from Castlereagh-street North into the Cemetery, would you not have the most direct track into the city? You would; but there would be a nasty grade and heavy work where the deviation of the tramway is shown.
2546. Could not the trams now running to Botany be diverted altogether from their present course, and go up Elizabeth-street? That is what is proposed.
2547. Then the connection between Redfern, Botany, and Sydney would be shortened by the proposed route? Yes.
2548. *Mr. Lee.*] Have you shown the difference of cost between the covered way across the portion of Devonshire-street and the entire resumption of it? I have given the particulars as to the lowering of the street.
2549. *President.*] What would be the grade of Devonshire-street after it was lowered? One in twenty-five; that is for four lines.
2550. *Mr. Lee.*] Would the six lines of railway admit of general passenger traffic coming into the city from long distances as well as the suburban traffic? Yes.
2551. *President.*] Four lines would bring in everything, would it not? Yes, in connection with the alternative scheme.
2552. *Mr. Lee.*] Then you have made provision for four lines as your alternative scheme? Yes, there were six lines in connection with the Hyde Park scheme.
2553. With four lines could all the passenger traffic be dealt with at the terminus in the city? I believe it could, but that is one of the points on which I have to consult the Railway Commissioners.
2554. We will come now to Liverpool-street, where you first touch the Park;—will the railway going through the park there be all cut and cover? I propose that it should be half open and half covered in.
2555. Of course the open portion of it must be looked upon as a resumption of the Park? I do not think that it is exactly the same.
2556. The portion that will be open will not be available to the public? Not to walk over, but it will be open for them to view the park. I think I am correct in the view that it is not necessary to walk over the entire park.
2557. Would it not be possible to put the line entirely out of sight—entirely under the Park? Certainly, it would be possible; but it was the ventilation that I was thinking about.
2558. I should like to know whether the whole of the line could not be kept under cover going through Hyde Park? Yes, it can be done.
2559. Would it be at a greatly increased cost? It would be more expensive.
2560. Would it be much more? I can give an approximate idea.
2561. *President.*] How far is it? Altogether, 508 yards to the crossing of Liverpool-street. Where the rails are shown in blue lines on the map, I have intended the line to be open, the other parts to be covered over and the surface restored. The whole line can be covered over, of course, from Liverpool-street to the crossing at Elizabeth-street; but I am afraid it would make the atmosphere more choky and disagreeable.
2562. But would it not be possible to provide for extra ventilation to get over a difficulty of that kind? I do not consider that the ventilation of lines of this kind is ever successfully carried out.
2563. Can you not devise a scheme by which we can pass through that park without depriving the public of a foot of the surface? We can do it by covering the whole of it over; but I do not recommend it. I think that leaving small spaces interferes very little with the comfort of people using the park.
2564. What is the length of each of the openings in Hyde Park? 150 feet.
2565. How many are there? Four openings, making altogether 600 feet.
2566. Then the portion to be covered between those intervals would be about 600 feet, so that while you are taking that portion away from the public you might as well take the whole? I do not agree with that. I do not think that the taking of little patches like that is anything like taking a strip or a large patch.
2567. Does that loop go under Parliament House? Yes, but it is a long way down.
2568. I suppose it is deep enough to prevent any inconvenience? Yes, it is right down in the solid sandstone, far below the foundations.
2569. What would be the cost of lowering and bridging Devonshire-street? The estimate is £21,200.
2570. *President.*] And what is the cost of the other? The other I put down at £40,000. That includes the deviation of the tramway.

TUESDAY, 11 MAY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHREY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.	GEORGE BLACK, Esq., M.P.
The Hon. DANIEL O'CONNOR, M.L.C.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Edward Miller Gard Eddy, Chief Commissioner for Railways, sworn, and examined:—

2571. *President.*] Would you like to make a statement? Perhaps it will simplify the matter if I do so. It has been recognised for many years that the accommodation at Redfern is quite insufficient for the business which has to be conducted there, and of recent years the traffic has grown very materially indeed. Generally, the public cannot obtain that amount of comfort in travelling that they are entitled to expect: but at holiday

E. M. G.
Eddy.

11 May, 1897.

holiday

E. M. G.
Eddy.
11 May, 1897.

holiday times everything is in a state of congestion, the public are much inconvenienced, and the traffic is not conducted with that regularity that the Commissioners would like to see. It is not only the dealing with the trains, but the minor facilities; such as cloak-room accommodation, the obtaining of tickets, waiting-rooms, refreshment-rooms, and all that sort of thing—everything is too small for the business which has to be conducted. Again, it is quite clear that Redfern is not the terminal point at which the bulk of the passengers wish to arrive. The outpourings from the trains into the trams, and the large numbers of people carried by the trams and the omnibuses into the city, show clearly that it will be far more convenient to the public for the trains to go into the centre of the city. That has been the experience in all parts of the world. Railway companies have spent very large sums of money in all directions in endeavouring to bring their passengers as near to their destination as they possibly can. That has not only been a great convenience to the public, but it has been a source of very great profit to the railways, as the tendency in all big centres of population is for the people to go away from their places of business, and to reside in the suburbs. It is a complete change from the old system, when the owners of shops and businesses used to make it a point to reside on their premises. That has been going on in Sydney in very much the same sort of way as it has been going on in other parts of the world. That brings us to the point as to which would be the most convenient part to which to extend the railway.

2572. The Commission have been given to understand, that the congested state of traffic at Redfern is not only a matter of inconvenience, but is fraught with some danger? Undoubtedly. Where you have to conduct your business under continual stress for want of time, and want of platform accommodation, there must be the element of risk which you wish to see eliminated, in spite of every precaution being taken to carry on the business with perfect safety, which has been fairly successfully accomplished at Redfern.

2573. Working at full pressure, and under great stress? Absolutely great pressure.

2574. *Mr. Hoskins.*] Has there been great danger from the probability of collisions between shunting engines and carriages in the confined space at Redfern yard? There is not much risk in connection with shunting operations, so long as the men obey the signals. Everything at Redfern is interlocked, so that you cannot have the signal "off" for an engine to come into collision with an operation going on in another part of the yard. But, of course, if a driver runs past a danger signal, he is liable to come into collision with some other operation that is going forward. It appears from the watching of the tram and omnibus traffic, that a station abutting on King-street would be the most convenient position for a terminal station, and that was the reason for the Commissioners putting forward the scheme which has been inquired into by a previous Royal Commission. Although an alternative scheme was put forward towards the end of the sitting of that Commission, it was simply put forward because it was stated that there was a strong feeling against taking so much of the Park. But we cannot depart from the opinion which was so clearly emphasised at that last inquiry, that Hyde Park is the right and proper position for a general station of the dimensions which you have had placed before you in plans.

2575. *President.*] If there be nothing else to consider, for the traffic and the public that is the place? That is the place. Then, with regard to the point which has been raised as to open spaces, it is not as though the only open space there was Hyde Park. There are open spaces of about 227 acres surrounding this block of 10 or 12 acres, which it is proposed to take, and at the end of that open space you have the waters of the harbour. Of course the Railway Commissioners would not for a moment think that the open space question should be entirely ignored, and therefore we recommended before the last Royal Commission—and we wish to place it before you gentlemen—that there should be open space, to the extent of the open space taken from Hyde Park, given to the public elsewhere; and, if necessary, that open space should be increased. If it were possible to obtain the necessary amount of land from private individuals on the site proposed for this station we would not suggest taking the Park. We would say, "Purchase that amount of property." But we do think, in the interests of the people—because the whole of the people will have to pay for any unnecessary expenditure incurred—it would be unwise to purchase buildings for the purpose of pulling them down to create an open space. Therefore, as private property cannot be obtained for the site, we, with all respect, suggest that the merits of the case be met by taking from a part of the city where there is a surplus of open space the amount required for the convenience of the people, and to provide elsewhere, where it would be of much greater value, open space to the same extent, and, if necessary, to a greater extent, than that which is taken from the people here. I also wish to place before the Commission the necessity, in dealing with railway traffic, especially when it is going long distances and people take a large amount of luggage with them, of having your platforms on a level with the surrounding streets. In other parts of the world, where stations have been made above the level of the streets, and in some instances below the level, there has been the greatest possible amount of difficulty experienced; and every effort has been made later on to get rid of the different levels. In Liverpool, for instance, the Lancashire and Yorkshire Company spent from £350,000 to £400,000 simply to lower the rails to the level of the adjoining streets, and then they extended the station at the same time by spending another £600,000. I only mention that to call attention to the necessity, in dealing with a terminal station for long-distance traffic, of the passenger platforms being on a level with the streets, up which the cabs will drive, and deliver their luggage to the trains. Again, looking at the fact that it must be generally admitted that Redfern station is totally insufficient for the traffic, I would point out that it would be unwise to spend a very large sum of money in connection with the present site, or any site closely adjoining, because you could not charge any additional fare to recoup the interest on the large expenditure. But if, by bringing the line into the city, you convenience the public, and save them expense in travelling along the streets, you can wisely and justly make them pay a small additional fare; and by charging a fare of 1d. to each passenger taking ordinary tickets for each journey, and adding a small sum per month to the season-ticket-holders, and about 3d. a week to workmen, you bring them into the city at a less cost than at present, and you get sufficient revenue to recoup the country absolutely for every penny of expenditure incurred in carrying out this great improvement. Those are the main points I wish to bring under your notice, and I would strongly urge that the scheme for placing a big general station in Hyde Park should be adopted.

2576. With regard to the reason you mention as a sentimental reason, presuming that dominates the whole case, and that Parliament decides that Hyde Park must remain intact; assuming also that Parliament decides that a small portion of Hyde Park shall be given;—can you advise, in those two cases, what would be the wisest thing to do, so far as the traffic is concerned? With regard to the first condition, I think

E. M. G.
Eddy.
11 May, 1897.

think the wisest course would be for the Railway Commissioners to spend a reasonable sum of money in connection with the existing station at Redfern until such time as public opinion will force the railway forward to the centre of the city. I am certain that will come. Under the second condition, I think it would be possible to make a scheme which would be fairly satisfactory, but it would not be so satisfactory as the putting of the large station in Hyde Park. A scheme which would be fairly satisfactory could be worked out by taking about one-half the area in Hyde Park already suggested, and placing in that area a station for long-distance traffic, with about five platforms, and a cab-drive between two of the principal arrival lines. Then, in the space now occupied by the High School, a local station could be created, at which all the suburban trains could be dealt with. You have this advantage under a scheme of that nature: that practically the terminus is at one spot; but if you were to place a suburban-line station in the city, and leave the long-distance traffic at Redfern, from the moment the new arrangement came into operation there would be nothing but dissatisfaction expressed by those people who found themselves left at Redfern, and who wanted to get down to King-street, which they would be able to do in about two minutes if their trains were sent forward in the same way as the local trains would be sent forward. Therefore, I would very strongly urge that there should be no separation of the two classes of traffic by a distance, such as from Redfern to King-street.

2577. Would that be your main objection to the long-distance traffic remaining at Redfern? Yes.

2578. Therefore, the case stands thus: without taking the Park it is possible to deal with the suburban traffic, but it is not possible to deal with the long distance traffic, or with a combination of the two? No.

2579. There is not width enough, in point of fact, between Castlereagh and Elizabeth streets to take comfortably more than the suburban traffic; therefore, there must be an encroachment on the Park if the whole system finds its terminus approaching King-street? That is so.

2580. Could you shunt your suburban traffic between Castlereagh and Elizabeth streets;—I ask that because the map shows an extension to Circular Quay? Yes; I think the suburban traffic could be dealt with at that station.

2581. What is your view with regard to an extension, for general purposes, such as is shown on the map, to Circular Quay? I do not think the time has come for that extension. The extra traffic which would be gained would not, in my opinion, pay for the outlay.

2582. But still it would be some convenience, but not sufficiently great? It would be a traffic which would be carried without charge, because whether you took the line to King-street or Circular Quay you would have to charge the same fare.

2583. I presume you are aware that 6,000,000 persons land at Circular Quay yearly, which must mean some traffic for the railway, and the extension of the railway almost in touch of that landing place would be very convenient for the public, but you think it is not sufficient? I do not think you would get sufficient return at the present time to justify the large additional outlay.

2584. I suppose that the two stations would be practically parallel? Yes.

2585. We have had under consideration the question of a loop;—is it possible to get such relief from such loops as have been proposed, to enable a station, such as is shown between Castlereagh and Elizabeth streets, to bring the whole of the traffic in—that is to say, without encroaching on the Park at all? It would be impossible. At present there are thirteen platforms at Redfern. They are insufficient for the business now. Therefore, it would be impossible to deal with all the traffic on six platforms.

2586. The relief a loop gives is not sufficient? That would be a mere nothing as compared with the accommodation of the passengers on the platforms alone.

2587. The loop remains perhaps for relief at some future time? Yes.

2588. How many lines of rails do you propose to bring in? Six; if we bring the long-distance traffic in.

2589. *Mr. O'Connor.*] Does your scheme in any way propose to interfere with St. James' Church and the Courts? No.

2590. *President.*] Would you approve of a long-distance station down towards Government House? No; I do not think it would be as convenient as Redfern. People would have to go out of their way to get to that point.

2591. Would there be any other reason why it would be unsatisfactory? No; nothing beyond the fact that it would not suit the public, and we are trying to make a station to accommodate the public.

2592. The approach to Circular Quay must be by a tunnel? Yes.

2593. Would there be an objection in that? I have the strongest objection to tunnelling work in Sydney. It is found very disadvantageous in other parts of the world where the temperature is not nearly so high as here. I am sure it would be found most unpopular in Sydney.

2594. If electric traction were possible, would your objection to tunnelling be removed to a certain extent? I do not think that we can deal with a state of things which does not exist.

2595. If we had electricity, would a good deal of the objection be removed? Undoubtedly; but we have not arrived at that state of things yet.

2596. We must consider the matter on the basis of the traction we have at present? Yes.

2597. You see no immediate chance or likelihood of the suburban traffic being run by electricity? It is not suburban traffic only which has to be considered; you would have to deal with trains going outside the suburbs. The people, for instance, living at Campbelltown, would expect to come forward to the full extent of the railway. Even if electricity could be adopted for purely suburban work, it would be a long time, I think, before we should be able to work long-distance trains economically by that power. That question has not been solved in any way yet.

2598. Do you think it is reasonable to anticipate that the suburban traffic could, in the future, be worked by electricity? I think we might be able to experiment with the purely suburban traffic before many years are over.

2599. But we must not regard it as a certainty for the purposes of this inquiry? No.

2600. When you speak of long-distance traffic, what do you mean;—can you form any idea as to what trains would not go to the railway station between Castlereagh and Elizabeth streets? For the present, it might be possible to work the Campbelltown trains and trains going to the Mountains at slack times, but I fear it would not be possible to work those at busy times. There would be too much luggage to be dealt with. In dealing with the suburban traffic I think you should deal with the purely suburban service, like that to Homebush, Hornsby, and Hurstville.

E. M. G.
Eddy.
11 May, 1897.

2601. For the present it might be possible in slack times to bring Mount Victoria and Moss Vale to the suburban station site? Yes.
2602. And the South Coast trains? No; I think there is too much milk traffic in those trains.
2603. Could the Newcastle trains come in? No; none of the mail or express trains.
2604. Would it be possible to locate the station at the top of King-street, in the Domain, at the back, as it were, of the Hospital and Mint? I think it would be very disadvantageous to put a railway station alongside the Hospital. When anyone is dangerously sick in a house we go to the extent of putting straw and tan down so as to deaden the sound of the ordinary traffic. Here you concentrate all kinds of people who are sick—many of them in a dangerous state—and it would not be wise to locate the station alongside them, so as to annoy them with the whistling, vibration, and movement of trains. In addition to that, I do not think the site is altogether as convenient as we could wish. Again, we should be taking up a site which I have always understood has been decided upon for many years past for the whole of the law courts—a most advantageous position for them.
2605. Would it be possible to stop your long-distance traffic at Liverpool-street? It would be very costly to provide a station there; the levels are so much against the scheme.
2606. There is not sufficient level before you commence to fall towards Belmore Park? No; the fall is very rapid there.
2607. The length is only 400 or 500 feet, and you want more than that for your stations? Yes; the platforms must be 700 feet.
2608. Supposing a railway station was projected on the southern side of Belmore Park, how would you view it? Unless we can come forward to Hyde Park, I would strongly deprecate spending any very large sum of money. I would only advise the judicious expenditure of a moderate sum—say £70,000 or £100,000—to make Redfern station answer its purpose until such time as it is decided to bring the railway forward into the city.
2609. You insist that if suburban traffic comes in all traffic should come in? Yes.
2610. What proportion of the whole of the traffic is suburban? A very large proportion.
2611. Would it be seven-eighths? A return which I had prepared some time ago showed that there were 203 purely suburban trains, twenty-five trains running to places like Campbelltown, Penrith, and the Mountains, and twenty-eight long-distance trains. Then, of course, at holiday times those long-distance trains are duplicated in nearly every instance.
2612. Therefore about three-fourths of the traffic is suburban? Yes.
2613. Supposing Parliament is disinclined to approve of the Park being taken, would it not be of great benefit to three-fourths of the travelling public? If Parliament takes the responsibility of the complaints of the long-distance public, I am sure the complaints will be very continuous and very strong.
2614. Can you suggest anything but the Park? No; I wish I could.
2615. *Mr. Wright.*] Would the proposed station in the Park for long-distance traffic be a surface or underground station? A surface station. The cabs would drive to the front of the station.
2616. The station would extend from St. James' road nearly to Park-street? Yes.
2617. *Mr. Trickett.*] That would block up Market-street as a through street? Market-street would end where it is to-day. It does not go through the Park, and the station does not interfere with it.
2618. But for the suburban traffic you could make it sufficiently low to let Market-street go over it, or you could block the street? The scheme before you provides for a low-level station for the suburban passenger traffic. Market-street need not be interfered with. In coming from Redfern under the Park, you must be sufficiently low to go under Elizabeth-street, which necessarily places you under the level of Market-street.
2619. *Mr. Humphery.*] What is your opinion as to the question of annual cost, by way of comparison between a suburban passenger station in the city and the country station at Redfern, and both stations in the city;—would it be more economical to work the two stations at St. James' Road, or have the suburban station there and the other at Redfern? I think it would be about the same, because having a station for the suburban traffic would require you to keep two independent sets of men.
2620. Assuming you could have a terminal station for long-distance passengers and suburban passengers at the Park, you then would have surface stations, and the cost would be less than having them separated by Elizabeth-street? The cost of working would be decidedly less, and it would be more convenient for the public also.
2621. Have you considered that? I think I have made myself clear—that in my opinion the large station should be built near King-street; that everything should be under one roof.
2622. That was your evidence before a previous Commission; but I speak of your evidence to-day. You are of opinion that the terminal station for long-distance passengers might be at St. James' Road? I say distinctly that in our opinion every line should be in the one station at Hyde Park, and the alternative of putting the local passengers on one side of Elizabeth-street, and the through passengers on the other side, is simply because it is urged sufficient space will not be given in Hyde Park for the whole of the traffic to be dealt with there.
2623. I think, by your former scheme, you proposed to come up to King-street;—do you think you could get sufficient accommodation between St. James' Road and Park-street? Yes; that is the modified plan before you now, as prepared by Mr. Deane.
2624. That is the plan you favour? That is the plan which has been worked out.
2625. That is to say, you will take 10 acres of the Park instead of 5 for the country trains, and I suppose a sufficient area between Elizabeth and Castlereagh streets for the suburban trains? Yes.
2626. In the event of the scheme for the suburban station being placed between Elizabeth and Castlereagh streets, could provision be made for ultimate extension? To where.
2627. Northward, to join any bridge which may be made to connect Sydney with the North Shore? I should not propose that, because I am decidedly of opinion that there should be no bridge to the North Shore; therefore, I am not proposing that this station should be considered a proper connection for the North Shore.
2628. If you have a surface station at St. James' Road for the long-distance trains, would it be possible to extend the line northward? The foundations could be so arranged for the station that two of the lines, or perhaps four, if necessary, could be lowered so as to go forward to the eastern suburbs or to the Quay at any future time.

E. M. G.
Eddy.

11 May, 1897.

2629. Then the Hyde Park scheme, as far as St. James' Road, would admit of the extension of the line northward, or to include the eastern suburbs? That is so.

2630. Your opinion is that it should be so carried out? Yes; Mr. Deane has promised to arrange the foundations so that that could be done.

2631. In the event of an expenditure for the temporary improvement of Redfern station being decided upon, would the carrying out of the improvement involve the interruption of railway operations to any extent? All alterations interfere with the working of the traffic.

2632. Would it seriously interfere with it? We should have to carry it out in such a way as to interfere as little as possible; but you must see that if you are working a station where everything is carried on at high pressure, and there is no leisure time, if you put a lot of workmen in to pull the place about, you must necessarily interfere with the regularity of the service.

2633. And in that way there would be more expense than would be necessary if you made a terminal station at a distance from Redfern? It is always much cheaper to begin with a clean sheet of paper, and let your men go on without interruption, as opposed to a scheme under which you would be interrupted by the trains every few minutes.

2634. *President.*] Have you seen the plan showing an extension of the railway station over Devonshire-street; you are aware that the level of Devonshire-street from the railway level is not sufficient to allow traffic to pass readily under it; therefore, there will require to be a dip in Devonshire-street of about 1 in 25; the amount to be taken out will be from 6 to 9 feet; we have discussed the question whether it would be better to deal with the whole of the area bounded by Devonshire-street on the south, and going into Belmore Park on the north, and whether it would be wise, in view of future contingencies, in connection with the railway, to leave Devonshire-street as level as it was in the first instance by projecting the road a little to the north? Anything which can be done to add to the area of railway property at Redfern will be of immense value in years to come.

2635. You want all you can get? Every yard which can be given.

2636. Have you seen the plan? Yes.

2637. Would that meet with your approval? Yes.

2638. Or any modification of it? That gives the maximum amount of ground.

2639. As close to that as possible would meet your views? Yes.

2640. Would it be useful to you to be able to extend the length of the station in a northerly direction? Yes. Redfern has to deal with goods traffic as well as passenger traffic, and it also has to store a large number of carriages for the general working; and additional space is much required for all purposes.

2641. If Devonshire-street were filled up and moved bodily northwards, you would be able to lengthen your platforms without interfering with your yard? Yes.

2642. Would that be of any advantage? Yes. If Parliament definitely decides not to extend the railway into the city, that is the direction in which we shall have to alter the station. The platforms require to be lengthened. The space in front of the station, in which all the passengers land from their cabs or buses, requires to be greatly enlarged, and the waiting-room and cloak-room accommodation also requires to be increased. Therefore, the only way to deal with that work is to lengthen the station towards the Benevolent Asylum.

2643. Therefore, you approve of Devonshire-street being moved to the north? I should like to see it done.

2644. Presuming Parliament thought it wise to bring the suburban traffic to the city, would it then be of advantage to you to have Devonshire-street—that is, if Redfern remained the terminus for the long-distance traffic? Under any conditions, the giving of that additional land to the railway property would be of immense advantage.

2645. Do you suggest any reason why the Cemetery should not be laid out as a park? No; I think it would be a very admirable thing to do.

2646. *Mr. Wright.*] Would it not be better to keep the whole of them for future railway requirements? I dare not suggest that myself; but I should be glad, of course, to have every acre we can get at Redfern in addition to what we have already. It will certainly be of service in years to come.

2647. *Mr. Humphery.*] Would it not be fairer to exchange that portion for any land you take from Hyde Park? That is what I suggest.

2648. *Mr. Hoskins.*] You require an extension of room at Redfern? We should very much like to see Redfern enlarged.

2649. *Mr. Wright.*] How long do you suppose the accommodation provided between Castlereagh and Elizabeth streets and at the Park would be sufficient to meet the growing requirements of our traffic? If you have the two stations as suggested, I think you might safely calculate to go on for twenty years.

2650. If the traffic increases as it has done during the last six years, do you think the Redfern yard will be capable of conducting your business? It is not capable of conducting the business of to-day.

2651. But I mean with the proposed extensions? The extensions will not give us any more room for the goods traffic or for standing passenger vehicles than we have to-day.

2652. Therefore you think, under any circumstances, an extension of the Redfern yard is very desirable? Yes.

2653. *Mr. Humphery.*] Mr. Wright has asked you how long the proposed stations in Castlereagh-street and Hyde Park would meet all possible extension of traffic, and you have stated twenty years;—assuming that you had 10 acres of the Park, for which you first asked, and had your complete terminal station there, both for long and short-distance trains, how long do you think the provision you could make there would meet all possible developments? I think it would meet the requirements for about the same period of time.

2654. You could not make better provision on the 10 acres than would be possible on the two sites? Not with the scheme as it stands. We have eleven platforms in the big station. It is proposed to have six platform lines in the local station, and five platform lines on the reduced plan for the long-distance traffic, so that practically the accommodation is equal.

2655. And without taking any more of the Park it would be possible to provide for additional accommodation for the expansion of the traffic? As I have previously said, I would not contemplate taking any more of the Park for railway purposes than is now suggested. When the time came for increasing the accommodation, it would have to be increased by adopting some other scheme. A very considerably increased traffic could be dealt with in the general station by projecting two or four lines, as was originally contemplated, forward to the eastern suburbs or elsewhere. That would make those platforms simply platforms

E. M. G. Eddy.
21 May, 1897.

platforms for calling at, instead of having to stand for five minutes to get rid of passengers, and to load up again and go back. Another way to relieve the station would be practically to adopt the scheme which is now under your consideration for putting a local station between Elizabeth-street and Castlereagh-street. You could then throw out of the big station, which required more accommodation for its long-distance traffic, a very large proportion of the trains to the side station; but if the traffic of Sydney had grown to such a state that that large station could not deal with it, very likely relief would be afforded in other directions. Sydney will become so large that there will be a necessity to relieve it in other ways. I do not look with any apprehension to the idea that the Railway Commissioners will ask for more of the Park by-and-bye.

2656. You are aware that it is assumed that once you are placed in the Park, and get 10 acres, it will not be very long before you take the whole;—is that fear groundless? I think so. In my opinion it is.

2657. *Mr. Trickett.*] If you got that portion of the Park about St. James's Road for the long distance traffic, and the site opposite for the suburban traffic, would you require the loop line to Woolloomooloo Bay, shown on the plan, for the purpose of shunting? For the moment it need not be made; but it should be a part and parcel of the scheme which could be carried out later on, with this modification, that instead of making it a loop, I would terminate in a group of sidings into which the trains could run, and then by keeping one line in each group free as an engine line, the engines could run round the trains and go back in the same direction. I say that, because of the necessity for working the suburban trains always with the carriages in the same relative positions to the platforms. You can see that if some of the trains were to run down to Circular Quay, and returned with their carriages in the opposite relative positions to what they had gone there, and then other trains went into a loop and ran round, the two sets of trains when they got to the first halting place would be changed in their positions. One would have the first class and the other the second class in the front, so that there would be confusion all along the line. The people would never know whether the first or the second class was coming in front. Therefore there would be a continual running up and down to adjust matters. Now the carriages are run on the suburban lines with their classes in their proper positions to correspond with the notice boards on the platforms requesting first-class passengers to wait in one place and second-class passengers in another place.

2658. You have stated that you are averse to any proposal for a bridge to North Shore;—are you in favour of any connection between Sydney and North Shore for railway trains? Not at the present time. I do not see the necessity for it.

2659. *Mr. Egan.*] You stated in your opening remarks, that, as a rule, business people left their business houses and lived in the suburbs; therefore it is not those people who get the benefit of open-air spaces such as Hyde Park;—if the Commission saw its way to recommend the use of Hyde Park, or as much of it as is required for railway purposes, would it not be possible to convey the old Cemetery and the Benevolent Asylum grounds to the people for use in place of the portion of Hyde Park which you require? That is what I would recommend the Commission to do. I have proposed that there should be provided in other districts, where open spaces are more necessary than about Hyde Park, a space equal to or greater than is taken from Hyde Park.

2660. And chargeable, of course, to the cost of the proposed line? Yes; of the railway construction.

2661. *President.*] You made a statement on one occasion with regard to an amount of money which should be set aside for the purchase of parks? The only thing given in evidence by me was a recommendation that the Cemetery should be laid out as a pleasure ground, and that £1,000 a year should be debited against railway expenses for keeping these grounds in order. But I would even go further now, and say that, if necessary, as much as £100,000 might be added to the railway capital to provide open spaces in districts needing them more than this part of Hyde Park is needed for the purpose.

2662. *Mr. Roberts.*] Have you considered whether Cook Park and Phillip Park would be suitable for a terminal station, or do you regard their position as too much out of the centre of the city? I do not think their position is so convenient as the top of King-street; and, again, the formation of the land is not so convenient for making a station.

2663. The fact of Hyde Park being so level would, I imagine, render it favourable for a terminal station? Yes.

2664. *Mr. Lee.*] What is your opinion as to the desirability of railway extension for the conveyance of goods to the deep waters of Port Jackson? That is a very big question. I have not gone into the matter with the view of formulating any scheme, because it is not an urgent one, so far as the railways are concerned. The bulk of the goods traffic to and from the railways breaks bulk in Sydney, and any future development of railway traffic in connection with the sea within a reasonable period of time can be met most amply by the extension of the Darling Harbour lines to Darling Island.

2665. For which you are making special provision? The Department of Public Works is now carrying out the railway extension.

2666. Therefore, the urgent necessity for extension is confined entirely to passenger traffic? Yes.

2667. If, in the far future, the contemplated extension does not meet requirements, they can be met by an extension to the western side of the city, which could also be made available for further goods traffic, if necessary? I would not like to give an opinion with regard to the goods traffic and a line which does not exist, because all railway experience is in favour of absolutely separating the goods and passenger traffic when you get into a densely populated neighbourhood.

2668. But, inasmuch as the City of Sydney is the depôt for the commerce of the country and for the shipping of the port, and also the depôt for the railway system, the question of dealing with the goods traffic will arise. You have already told us that sufficient provision has been made for dealing with the exports of the country, such as frozen meat, at Darling Island, and Darling Harbour;—if it were thought necessary to utilise the Government property on the eastern side of Woolloomooloo Bay, could that be reached by an eastern extension from the proposed terminus in Hyde Park? No; it would have to be an absolutely independent line. It would never do to take any of the goods traffic along the proposed city extension.

2669. Are we to understand that this line must be looked upon as a passenger line for all time? Yes.

2670. But if it were found necessary to connect the Government shipping property with the railway system for the carriage of goods, I presume there would be no insuperable difficulty in making the connection from some portion of the railway system? No.

E. M. G.
Eddy.
11 May, 1897.

2671. Therefore, with the facilities which you have on the western side of Darling Island for the exportation of goods, and the large areas held by the Government on the western side, you are of opinion that in the future, if required, all the convenience for the exportation of the produce of this country can be offered from the Government centres which can be connected with the railway system? Yes; it is possible to make an enormous development with the railway system, and export and import at Glebe Island by making a branch line from somewhere about Petersham, and running to Glebe Island. An enormous amount of wharfage could be provided.

2672. But you are of opinion that the traffic at present does not warrant it? There is nothing at all urgent with regard to the matter.

2673. What is your opinion with regard to the contemplated proposal to resume all the wharfs on the eastern side of Darling Harbour, and to extend the railway along those wharfs? I have not considered it, and I would not like to give an opinion.

2674. You think it is not necessary to go outside the accommodation provided at Darling Harbour for railway purposes? No.

2675. And so far as produce arriving from the country for direct shipment is concerned, you are capable of dealing with it at the present time? At Darling Harbour and the proposed extensions at Darling Island.

2676. Will you be able to deal with the exportation of meat in large quantities if the rate should increase? Yes; with an enormous quantity at Darling Island.

2677. Therefore, there is no need to anticipate any difficulty in the future from that point of view? No.

2678. As a matter of fact, you have for several years past been organising the railway extension at Darling Harbour, and Darling Island has been acquired for the express purpose of providing for exportations? No; Darling Island was acquired for the export business largely, and up to now we have found that the extensions which were carried out at Pymont have met all the requirements; but now there are indications that the export business will increase, and therefore the Department of Public Works is moving on with the preparation of Darling Island for its original purposes.

2679. And your Department will be prepared to deal with them when they are completed? Yes.

2680. In short, then, you are not in favour of the extension of the city railway to the deep waters of Port Jackson;—you are not in favour of the extension of the railway for the conveyance of goods, but you are in favour of the extension of the railway for both long and short-distance traffic to a centre at Hyde Park if possible? Yes; as close to King-street as possible.

2681. *Mr. Hoskins.*] Is it intended to extend the proposed George-street electric tramway to the railway platforms from which the steam tramways now leave? Yes.

2682. Seeing that the tramway will take the large majority of people engaged in business in the city nearer their places of business than the Elizabeth-street tramway does, have you considered whether that tramway will not carry a good many passengers whom you probably anticipate will travel by the extended railway to Hyde Park, and, therefore, reduce your estimate of receipts? No. I think the number of people travelling will be in excess of the estimate, because a good many people who now come in, say, from Newtown by omnibus, will go in the railway train, as they will be taken into King-street so much more quickly than they can now travel by the road. Again, with regard to the tram, the difficulty in dealing with an electric tram system is the enormous number of people who will be turned out of the trains to be carried away by the trams in a few minutes. The electric trams, I am afraid, will not in the busy times be quite equal to the necessities of the case, because they will be required to do what railway trains have been doing up to Redfern station, and a tram service is not capable of doing that. Therefore, I would be very pleased indeed to see the George-street electric tram service relieved of a very large proportion of the present railway traffic, so as to be able to give much more satisfaction to the local traffic in George-street, which will, we think, be very large.

2683. *Mr. Fegan.*] Have you any reports from your officers in reference to the delay which has been caused during holiday times to trains leaving and coming into Redfern station? Yes; we see the working every day.

2684. Can you let us have those reports? They are in the shape of returns. I do not think they would be of the slightest value. The Commission could only learn broadly that at holiday times the trains are so numerous that the insufficient platform accommodation causes them sometimes to be blocked back as far as Hurstville, and it has taken trains an hour or more to come from there to Sydney, the whole key of the position being the insufficient platform accommodation at Redfern.

2685. *Mr. Roberts.*] If there were two distinct stations—one for the long distance, and the other for the purely suburban traffic—would the working expenses of each station be considerably increased? There would be a considerable increase over the expenses of working the whole of the traffic in the one station.

2686. *President.*] Three-fourths of the traffic is suburban; that can be worked between Castlereagh and Elizabeth streets;—the proposal to put a station on the other side of the road, taking 180 feet of the Park, you do not view with favour? I would much prefer to see the whole of the traffic under one roof. Failing that, I should like to see the scheme referred to carried out in preference to leaving the question unsettled.

2687. Then, since three-fourths of the traffic is suburban traffic, the commercial basis of the extension is the suburban traffic? Yes.

2688. The suburban traffic passengers, if they could get to King-street, would come there irrespective of what happened to the long-distance traffic? Yes.

2689. Although it would inconvenience one-fourth of the travelling public, it would really be a better paying line by being a suburban line only? I do not think so. You would have to eliminate a very large number of passengers from the calculation as to the revenue. I would also point out that the land for this suburban station is estimated to cost £160,000, and I fancy the works will be very heavy.

2690. *Mr. Humphery.*] Is the land between Elizabeth and Castlereagh streets, and King-street and the Synagogue, of less commercial value than a similar area taken out of the Park? Not the land. If the land were there free from buildings, like the Park, I would say "buy it."

2691. *Mr. Wright.*] I suppose you think it is unfair that the railway expenditure should be burdened with a large sum of money, when there is vacant land which would cost you nothing? I do not look at it from the point of view of railway capital, but from the point of view of the people who own the railways. It does not matter what is put upon the railway capital, so far as the Commissioners are concerned. It

E. M. G.
Eddy.
21 May, 1897.

seems to me an unwise thing to burden the users of the railway for all time with an unnecessary amount of capital, which means, of course, paying more rates every year than are necessary.

2692. If the scheme of double stations is adopted, will there be a station at Liverpool-street also? Yes; I think there should be booking-offices facing Liverpool-street, so as to drop all those who want to go to that neighbourhood about the Town Hall.

2693. I suppose there would be a platform? Yes.

2694. You are aware that a portion of the land on the site of the proposed Castlereagh-Elizabeth street station is already Government property, and that the Government are getting next to no revenue from it? Yes.

2695. Therefore, the same remark would apply to that property as applies to the Park? Yes.

2696. *Mr. O'Connor.*] Supposing Parliament decided not to concede your request with regard to the resumption of a portion of Hyde Park, would the portion Mr. Wright has alluded to as already belonging to the Government meet all requirements? It would only meet part of the requirements of a local railway station, which local railway station would not meet the requirements of the long-distance traffic.

2697. If, in the future, the city extends towards where the railway station is at the present time, would not that site meet all requirements? Although buildings for residential and other purposes may increase in the direction of Redfern, the business of Sydney will demand that those people shall come into the heart of the city and go out from the heart of the city. Therefore, the argument that the city is extending that way is not an argument against the extension of the railway, because, although the people do not reside in the city, if Sydney business increases, as we expect it will, the number of people coming into business every day will increase, and those people will have to go home at night.

2698. You state that if you take 10 acres of Hyde Park you have ample accommodation for twenty years;—is it not fair to assume that in twenty years land will increase in value, and would it not be better to take up sufficient land now for 100 years? No, I think it would be more desirable to modify the arrangements, and take the people nearer to the destinations they wish to get to under the altered conditions of the city. It will be necessary to review periodically the requirements of the travelling public, and to meet them as circumstances change.

2699. Is it not clear, from your own statement, that the portion of the Park referred to will only give accommodation for twenty years, and that eventually you must take the whole of the Park? No. I think the arrangements would have to be modified. As I have pointed out, that station could be made to accommodate a large and increased number of trains by projecting a part of the lines out of the station towards the eastern suburbs or towards the harbour, or across the harbour if the business increased very largely; and then when it gets beyond that stage you could create a local station alongside, on the site now discussed, and so relieve the big station of a large number of trains, and thus enable it to accommodate the long-distance traffic for a very much longer period of time than would otherwise be possible.

2700. Have you considered a scheme for the continuation of the railway from the present site in Darling Harbour along the wharf, on the eastern side as far as Market-street; a proposal has been made to carry the railway round;—have you studied that side of the question? No; because there is no necessity in connection with the railway traffic at the present time to have such communication. The amount of direct export and import is comparatively small, as compared with the amount of business which breaks bulk in Sydney, or has to be dealt with in Sydney for some purpose or other.

2701. Do I understand that the goods freight, as distinguished from passengers, is not of sufficient importance, in your estimation, to warrant a departure of that kind? The goods traffic must be kept absolutely separate. As I have pointed out, the accommodation at Darling Harbour and Pyrmont, plus the accommodation now being provided in connection with Darling Island, will meet the necessities of the export and import business direct with the railways for a long period of time.

2702. Would you make the terminus at Darling Island? Yes, for the present.

2703. Supposing there is a consignment to Goldsbrough, Mort, & Co., of Circular Quay, would they not have to go for their goods to Darling Island? To Darling Harbour.

2704. Would it not be better for them to be able to get their goods somewhere nearer home? You could not do it. Because there happened to be one package from the interior consigned to them you could not run a truck to them. The trucks come down loaded with consignments to a number of people.

2705. I only mentioned Goldsbrough, Mort, & Co. as an instance;—nearly all the stores of the city are centred at Circular Quay? Yes; they are spread about. They are even at Pyrmont, so that the running of the trucks to Circular Quay would not suit the whole of them. A great deal of the wool is delivered in Macquarie-street.

2706. If you get 10 acres of the Park, you think it sufficient to carry you on? Yes; for many years to come. Then other arrangements could be made. If we found the station was insufficient for business requirements, other arrangements in the direction of relieving it would be made.

2707. If, at the end of twenty years, it was found that the 10 acres were inadequate, what course would you suggest? The extension of some of the lines through the station to the eastern suburbs; and, when that was found insufficient, the construction of a local line either alongside, or on the western side of the city, or wherever it was found the then largely-increased business required the new accommodation.

2708. *Mr. Clarke.*] In the event of the main station being formed at St. James' Road, might not objection be taken to it by those who attend the Supreme Court, St. James' Church, and St. Mary's Cathedral, as an eyesore and an annoyance, because of the smoke? I do not think the station would be an eyesore. I think it would be an ornament, and there would not be enough smoke to cause annoyance. The Supreme Court is recognised by everyone as being rather too noisy at the present moment, and the sooner it is removed from its present position the better.

2709. You do not want to go further than St. James' Road at present? No; but I look forward to the time when the ground occupied by the Supreme Court and St. James' Church will be thrown open, so as to form a large open space in a very busy part of the city.

2710. Might it not cause those who attend the Supreme Court, St. James' Church, and St. Mary's Cathedral—the latter of which is not likely to be removed—annoyance? I think not. We will take care not to run the trains during service time. We do not do so now.

2711. *Mr. Humphrey.*] Would not the initial expense be very much greater if you had two station sites upon which to provide buildings than it would be if you concentrated the whole of your terminal arrangements and buildings on one site? Everything, both in regard to cost of construction, working, and convenience of the public, would be better met by having one station instead of two.

2712.

E. M. G.
Eddy.

11 May, 1897.

2712. *Mr. Black.*] In making your statement, you said you thought the country could be recouped for its expenditure by a system of penny fares to King-street? What we would do would be to add 1d. to all the fares of the public travelling into Sydney.

2713. Have you considered that the penny increase on the railway would, in a large number of instances, mean a reduction of nearly 2d. on the tramway? Yes.

2714. If that be so, where does the gain to the country come in? We are anxious to get rid of some of the traffic in Elizabeth-street and George-street, because it cannot be conducted satisfactorily, and when we get rid of the railway trams we shall be able to give better services to the various suburbs, which will bring us in more revenue than we shall lose by the short distance railway traffic.

2715. Do you mean you will tempt more people to travel? We shall carry by the trams more people than we carry to-day. We cannot efficiently carry on the business with the different suburbs, because of our inability to put more trams on the lines; therefore, the omnibus people are carrying more people than they otherwise would.

2716. You expect that with increased facilities there will be a sufficient number of passengers carried between Redfern and King-street in excess of those who now travel by tram between Redfern and King-street to recoup the country in its expenditure in railway extension? Yes.

2717. In your proposal, are you actuated by a desire to relieve the over-burdened Redfern Railway Station, or by a wish to carry the public further into the city? The overburdened condition of Redfern causes us to make some alteration to carry on the business satisfactorily. That necessarily raises the question: what is the best thing to carry out? The public continually complain of being landed at Redfern when they wish to come into Sydney, and having to pay a tram fare, and occupying twenty minutes to do what a railway train would accomplish in about three minutes. Therefore we felt that we should be acting unwisely in the interests of the country, to propose a large expenditure at Redfern without raising for settlement the broader question of whether there should be an extension into the city.

2718. Could you not accomplish your object of carrying people to King-street more rapidly simply by an extension of the railway line without the removal of the central railway station? Yes, if you have sufficient accommodation at the terminus to deal with all the traffic; but we are not proposing to remove Redfern station—it will remain there for everybody's use as it is to-day.

2719. But you are proposing to make another station somewhere else as a main station? Yes:

2720. I suppose you consider that the chief station of any city should be central? Yes.

2721. Do you not think that Redfern is near the centre of the city of Sydney? It is not where the people wish to get to, and what we require to do is to put the station at the spot to which the people wish to travel, and the bulk would be accommodated by having it at King-street.

2722. Do you not think you could take the people where they wish to get by running a line of rails past the place to which they wished to get? Yes, a certain class of traffic; but not long-distance traffic. Long-distance travellers wish to get to the railway station, and take their seats in comfort, and they always make a point of getting there when they are travelling with their wives and families fifteen or twenty minutes before time. You cannot deal with that traffic at a roadside station.

2723. Supposing you had a connection with North Shore by a bridge or tunnel to convey trains across, and that Redfern could thus be fed from the north as well as from the south—would not that attain some of the demands of those people? It does not want to be fed, but it wants to be relieved.

2724. If there were an extension to North Shore, and perhaps another in the Paddington, Waverley, and Woollahra direction, possibly Redfern would be better than any other central point you could name? I do not think so. I think King-street is the most convenient point for the eastern suburban line. The people in the eastern suburbs want to come to King-street and not to Redfern for business.

2725. Then the difficulty of route presents itself? No; a route has been worked out for an extension through Paddington, and out ultimately to Double Bay, Rose Bay, and South Head.

2726. Would not that mean very heavy resumption? Necessarily, and the time has not come for it. The tram service meets the requirements of the people at the present time.

2727. *Mr. Hassall.*] The extension of the railway into the city is only to deal with the passenger traffic? That is all.

2728. In view of the facilities afforded at the present time, which are likely to be materially increased by the construction of the electric tramway down George-street, do you think it is absolutely necessary to bring the railway further into the city? Yes.

2729. Which then, in your opinion, is the best site for the railway to be brought to? Hyde Park.

2730. The alternative proposals are merely submitted in case the Hyde Park site may not be agreed to? That is all, and they are submitted with very much regret.

2731. In view of the large areas of land available in the vicinity of King-street, you think you would be justified, taking into consideration the benefits which would be conferred on the whole Colony by the extension of the railway into the heart of the city, in asking the people to give you one portion of Hyde Park, in order to afford them facilities for getting into the city? Yes; to use it for their own purposes. If public feeling is so strong as to require the maintenance of the same open spaces as we have to day, I would recommend that the railway capital should be debited with the cost of providing an equal amount of space or more elsewhere, where it would be of more service to the masses of the people than the space taken away for the railway station.

2732. In other words, you are of opinion that the space you ask for in the corner of Hyde Park can be put to better use, and utilised in a far more profitable manner than it can be under existing conditions? Yes.

WEDNESDAY,

WEDNESDAY, 12 MAY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.	CHARLES ALFRED LEE, Esq., M.P.
The Hon. JAMES HOSKINS, M.L.C.	JOHN LIONEL FEGAN, Esq., M.P.
The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.	THOMAS HENRY HASSALL, Esq., M.P.
The Hon. WILLIAM JOSEPH TRICKET, M.L.C.	GEORGE BLACK, Esq., M.P.
The Hon. DANIEL O'CONNOR, M.L.C.	FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
HENRY CLARKE, Esq., M.P.	FRANK FARNELL, Esq., M.P.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, further examined:—

- H. Deane. 2733. *President.*] If we take a small portion from the Park for a station for the long-distance traffic, and the area between Castlereagh and Elizabeth streets for a station for the suburban traffic, will Elizabeth-street be left intact between the two stations? Yes; and there would be subways underneath. The station for the long-distance traffic will be a surface station as near as possible. The other one would be sufficiently below the ground to allow of an extension afterwards under King-street, if required.
- 12 May, 1897. 2734. *Mr. Hoskins.*] Is it proposed to have very elaborate station buildings? No; not more than is necessary. Of course in those positions they would have to be presentable buildings.
2735. *Mr. Lee.*] Are the proposed stations to face the same street;—is it proposed to make a new street, or to continue St. James' Road through the High School building, and make a street through there, and then let both stations face that street? That would probably be done.
2736. *President.*] That is on your plan? Yes.
2737. *Mr. Lee.*] Therefore, anyone approaching the stations could drive to one or the other? Yes.
2738. Although they would practically be separated, they would for all purposes be together? Yes; and there would be subways to connect them. I understand that you wish to know whether the fronts of the two stations will be in one line. If they were to be actually in one line it would be necessary to pull down a part of the Registrar-General's Office.
2739. Without having to go so far as that, and making St. James' Road the northern boundary of your extension, how will the station then stand in relation to the proposed station on the High School ground? If the site between Castlereagh and Elizabeth streets is taken for the suburban trains, and an additional station is made for the main-line traffic without interfering with the Registrar-General's Office, I think the main-line station would have to stand a little back from the other.
2740. Then it is proposed to make a new road from Castlereagh-street to Elizabeth-street, which would give access from the western side of the city to the long-distance passenger station? Yes.
2741. Without compelling people to go through King-street? Yes.
2742. That is the intention? Yes.
2743. Under the original proposal—that is, the Hyde Park scheme—how was it proposed to cut off the remainder of the Park from the portion taken—by an iron fence or a wall? That is a detail which could be suitably arranged. One day when I was before the Commission that matter was discussed, and I think the conclusion was that an iron railing would serve perfectly well round the openings.
2744. Would the same remark apply to a lesser portion of the Park being taken for the alternative scheme? Of course that would be entirely blocked by the station walls. I doubt whether anything would be gained there by the construction of iron railings. A complete corner of the Park would be taken—not mere isolated patches such as you would have in carrying the line between Liverpool and Park streets. I think it ought to be fenced or walled off securely.
2745. If it is necessary to erect a wall I suppose it would not be a very costly matter? No.
2746. How far will the Castlereagh-street platform be below the ground? Fifteen feet.
2747. Necessarily an important station like that will require a good access to it by means of steps, and steps which are not of a steep character;—would you be able to get a sufficient pitch there from the station to the surface without intruding upon the kerb in Castlereagh-street? Yes; there would be a staircase down to each platform. The arrangement would probably be as indicated on the plan. The plan shows the new street with a footpath and verandah running in front of the building. Passengers would enter through the booking offices.
2748. At which end is it proposed to have the booking offices? In the middle, facing the new street.
2749. Where would be the entrance to the Castlereagh-street station? There would be two entrances. The main entrance would be from the new street, and it would probably be in the centre of the building.
2750. Will that be the only one? No; it is proposed to have one at the other end of the station.
2751. Will there be no entrance from the street between those two points—either in Castlereagh or Elizabeth street, or both? It is not proposed to have them, and I do not think they will be required, but I am quite sure the Railway Commissioners will endeavour to serve the public interest in that respect.
2752. In sinking there to get your levels, are you likely to interfere with the existing sewerage and gas and water communications;—will you interfere with the sewerage at the top of Bathurst-street, where there is a ventilating shaft? No. I may add that passengers coming from the station through the new street will get on to a bridge or verandah running along the building, and from that bridge there will be staircases to each platform. There will be three platforms and three sets of staircases. The same will be the case at the further end of the station.
2753. You will enter at one end and leave at the other? You could enter or leave at either end, as passengers required.
2754. If that is going to be the dead end of the extension, how is the shunting to be carried on? There will be engine roads—that is to say, short spurs, where an engine could stand and be run back on to the train after it comes in and when it is time for it to go out again; and when the engine which brought the train in is thus relieved, it can run out and take up its position for the next train.
2755. You have sufficient room to admit of that being done? Yes; that can be arranged.
2756. And more accommodation will be provided at the long-distance passenger station to enable the trains to be properly marshalled? Yes.

H. Deane.
12 May, 1897.

2757. Why would it be necessary to encroach on St. James' Road, assuming you could take that corner of the Park for a terminal station? It would only be necessary if you wanted to bring the fronts of the two buildings up in a line.
2758. What length have you provided for terminal station platforms for suburban passengers? The platform are arranged for 500 feet; the length of the station would be 660 feet.
2759. Would you require a greater length than that if, instead of putting your station between Elizabeth and Castlereagh streets, you put it in the Park, for suburban and country passengers? I do not think they could be placed both together.
2760. Did not your original plan propose that the terminal station for all passengers should be in Hyde Park? Yes; but then the accommodation was very much larger.
2761. Assuming that the whole accommodation you originally intended to provide were provided at that corner of Hyde Park, why would you require so much greater length there than you appear to require in the suburban passenger station now under consideration? The arrangement for the original station was much more extensive and more complete and being an end station, a good deal of room was taken up in having the buildings at the end and having an end-crossed platform. The station in Castlereagh-street, being sunk below the surface of the ground, the buildings will be on the street level over the lines. I understand it will be necessary in this case, if the line stops here now, to provide for its future extension towards the harbour.
2762. There is a suggestion before the Commission that the long-distance passengers should have accommodation at St. James' Road? Yes.
2763. What length will you require to provide that accommodation? About the same length as was provided before. The platforms were about 700 feet in length. Probably the length will be a few feet more than is shown on the first plan.
2764. What would be the maximum length of the space required for the long-distance passenger station between St. James' Road and Park-street? It will take up the whole of that length.
2765. Why do you require so much greater length there than for the suburban passenger station? A great deal of that will be above the ground. The other will be covered over. In the case of the suburban traffic the length I have given you—660 feet—is really only that part of the station which the public use; but the approach to that station under Elizabeth-street from Park-street is just as necessarily a part of the station, although a good deal of it is covered over.
2766. But is the width of the approaches greater for the suburban passenger station than would be necessary for a long-distance passenger station? No, it is not. The width is rather less, because there are only four lines coming into the suburban station.
2767. According to the evidence you have given, you must encroach upon St. James' Road, and it will be necessary to take a portion of the Registrar-General's Office? I said you would have to take a portion of the Registrar-General's Office if you wanted to bring the two stations in line, but it is not necessary to do so. The long-distance station could be set back.
2768. If the long-distance station could be set back by separating the suburban from the long-distance passenger traffic, would not it be possible to set back the general terminal station, supposing you had both stations adjoining in Hyde Park;—why cannot you put your general station on the 10 acres of land without rendering it necessary to take any portion of the Registrar-General's building? I think I pointed out that if the station was set back there would not be as much room for a parcels office, and a horse and carriage dock. With a big station there is a big splay, and you want to go further back for a big splay than you would for a narrower one.
2769. If you had the whole of the passenger traffic concentrated on the one terminal station, would not it be possible to construct your station as to avoid that resumption of the Registrar-General's Office which you first thought was necessary? Looking at that plan which has been worked out for the big station, I do not see how it could be brought further back, because it takes up the whole of the length between Park-street and the Registrar-General's Office.
2770. *Mr. Hoskins.*] Where do you propose to diverge from the main line to go to the proposed station in Castlereagh-street? We should have to diverge on the southern side of Park-street.
2771. Would not you require to resume a good deal of valuable property to do that;—how would you get across the level of the street to the High School? The property which you would have to take to carry out that scheme has been reported upon by Mr. Perdriau.
2772. *Mr. Humphery.*] Will you make it clear why it is necessary to have so much greater length for the general station than you appear to require for two stations? It is rather difficult at the present time for me to give any detailed explanation, seeing that the details have not really been worked out; but I might point out that when you separate the long-distance traffic from the other you virtually make a smaller station—you have that portion of the station. That portion of the station will require a smaller approach for itself, and a narrower approach than will the big station; that is to say, the splay will not be so great—it will only be one-half. I am assuming that the passenger traffic diverges south of Park-street. Then one can take the other portion as a distinct thing by itself; and for that portion there will be less splay. If you have to move the station buildings a little further back from the Registrar-General's Office there will very likely be room for a parcels office in the corner, between the two sets of lines.
2773. *President.*] How close would your line go to the Synagogue? As close as we could without affecting the construction?
2774. *Mr. Trickett.*] Practically, within a few feet? Yes.
2775. Would that interfere with public worship in that building? I think they will hear the rumble of the trains.
2776. *Mr. Clarke.*] Do you think it would be advisable to resume the whole of the land up to King-street in lieu of the proposed new street? I do not think there is any necessity to go up to King-street. In my opinion, it is better to stop clear of it.

THURSDAY, 13 MAY, 1897.

Present:—

THOMAS THOMSON EWING, Esq., M.P. (PRESIDENT).

The Hon. FREDERICK THOMAS HUMPHERY, M.L.C.
 The Hon. JAMES HOSKINS, M.L.C.
 The Hon. CHARLES JAMES ROBERTS, C.M.G., M.L.C.
 The Hon. WILLIAM JOSEPH TRICKETT, M.L.C.
 The Hon. DANIEL O'CONNOR, M.L.C.
 HENRY CLARKE, Esq., M.P.

CHARLES ALFRED LEE, Esq., M.P.
 JOHN LIONEL FEGAN, Esq., M.P.
 THOMAS HENRY HASSALL, Esq., M.P.
 GEORGE BLACK, Esq., M.P.
 FRANCIS AUGUSTUS WRIGHT, Esq., M.P.
 FRANK FARNELL, Esq., M.P.

J. Horbury Hunt, Architect, further examined:—

J. H. Hunt.
 13 May, 1897.

2777. *President.*] I understand you desire to place further evidence before the Committee? I desire to add to my previous remarks by bringing to your immediate consideration my proposal for a city railway station, and other matters, as shown on my plan; when I say station I do not mean terminus. The site I suggest will eventually be the very eye of our future city business life, for it is a certainty that this section of the city known as Dawes Point will be levelled down and relaid out as here indicated by this plan. It looks to be a big undertaking. However, it must be carried out before long. Therefore any railway extension to the city—regardless of the future rebuilding of this part of the city, I submit, will not be wise. A station placed as here indicated, with the proposed improvement of this section of the city is, I think, self-evident as being the proper site both from a commercial and general point of view. The station as here placed would be entered direct from the higher ground at back from a tunnel without interfering with any streets—it would also be midway between the harbour portion of Circular Quay and Darling Harbour—which must be admitted a good feature. To lay down any railway scheme by which it will be required to complete such scheme in the future—by bridging the harbour from Dawes Point to Milson's Point—would clash with this proposed improvement, which I repeat must ere long take place at Flagstaff Hill and Dawes Point. I was prompted to ask for this further opportunity of speaking to you, because of the present proposal to tunnel across or bridge the harbour. I maintain that if any attempt is made to bridge the harbour from this point, then this proposed station improvement will clash with it, and, if at some future date it should be undertaken, then it will involve a tremendous expense. Any railway project fixing on Dawes Point as a bridge site, will have to fight this city improvement project on the one hand, while it will have on the other Darling Harbour interests to contend with. The future of Darling Harbour and the Flagstaff Hill section of the city, are two big factors in the future helping onward of Sydney to her great commercial position. Anything that may be done with our new railway station, which will interfere with us as architects in dealing with this important section of the city, will be a very serious matter. I contend that the North Shore railway connection should be as indicated on my plan—by a suspension-bridge from the city to Balmain, Goat Island, and Ball's Head, thus taking the traffic to a broader area of North Shore—namely, to the west of St. Leonards. The platform elevation of a bridge at this position would not interfere with the waterway to the docks. Any form of tunnel communication I would condemn. When the public came to experience the fact of having to travel underground four or five times the distance represented by the initial difficulty—namely, some 30 or 40 chains of harbour surface—depend on it then the fat would be in the fire. The land connection for a bridge at Ball's Head is naturally all that can be required for such a project, while the approach from Sydney *via* Balmain will be easy for railway and all other kinds of traffic. Do what you may, pray look well to the future position of this city.

ROYAL COMMISSION ON CITY RAILWAY EXTENSION.

APPENDIX.

C.

[To Evidence of H. McLachlan, Secretary to the Railway Commissioners.]

TRAM TRAFFIC BETWEEN REDFERN RAILWAY TERMINUS AND KING-STREET.

Sir,

Office of the Railway Commissioners, Sydney, 15 March, 1897.

In compliance with the request of the President of the Royal Commission on City Railway Extension, relative to the tram traffic to and from the railway, I am directed to inform you that the number of passengers travelling to and from the railway by tramway is 3,000,000 per annum.

With reference to the point of entering and leaving the trams, I am to say that the principal stopping-places are King and Market streets, and it is estimated that about one-fourth of the passengers travel beyond King-street.

I have, &c.,

H. McLACHLAN,

Secretary.

The Secretary, Royal Commission on City Railway Extension.

C1.

THE SYDNEY AND BRISBANE TRAFFIC AND THE NORTH SHORE RAILWAY.

Sir,

Office of the Railway Commissioners, Sydney, 5 May, 1897.

With regard to your question as to whether the through traffic between Sydney and Brisbane could be carried over the North Shore railway, I am to point out that it would not be practicable to work the traffic in the way indicated. In the first place, the traffic in connection with the Sydney main suburban line is much greater than that on the North Shore railway, while the traffic from the Southern and Western lines has also to be considered. Further, the facilities on the main suburban line are much superior to those existing on the Milson's Point line, the latter being a single one only.

I have, &c.,

H. McLACHLAN,

Secretary.

The Secretary, Royal Commission on City Railway Extension.

C2.

NUMBER OF TRAINS RUNNING ON NORTH SHORE RAILWAY.

Sir, Office of the Railway Commissioners, Sydney, 20 May, 1897.
 With further reference to your letter of the 3rd May with regard to the number of trains running on the North Shore line, I am directed to inform you that the following are the passenger trains run on the Milson's Point line :—

Sundays, Milson's Point to Hornsby, and return	5
Mondays to Fridays, Milson's Point to Hornsby, and return ..	14
Do do do Chatswood, and return	2
Saturdays, Milson's Point to Hornsby, and return	16

I have, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Royal Commission on City Railway Extension.

C3.

FLUCTUATION OF CITY POPULATIONS.

Sir, Office of the Railway Commissioners, Sydney, 20 May, 1897.
 I am sorry I omitted to send you earlier an extract from the *Bulletin* of the International Railway Congress, March number, in regard to the population of London (city). In a paper on European tramways, by Ernest Gerard, Belgium State Railways, it is stated :—

As noticed by Mr. E. Trevert in his treatise, growth of population in towns leads to extension of their suburbs. On the other hand, in some cases the centre of the city tends to become less populous; for instance, in London the city had in 1860 a night population of 112,000, and now has only 32,000. The day population has increased from 170,000 to 310,000.

I have, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Royal Commission on City Railway Extension.

C4.

THE TRAMS AS A SUBSTITUTE FOR THE CITY RAILWAY.

Sir, Office of the Railway Commissioners, Sydney, 17 May, 1897.
 With reference to your inquiry as to the ability of the tram service to conduct the railway traffic to and from the city and the railway station, I am directed to refer you to the evidence given by the Chief Commissioner in reply to Q. 2682 (Mr. Hoskins) on this point, viz.:—

Again, with regard to the tram, the difficulty in dealing with an electric-tram system is the enormous number of people who will be turned out to be carried away by the trams in a few minutes. The electric trams, I am afraid, will not in the busy times be quite equal to the necessities of the case, because they will be required to do what railway trains have been doing up to Redfern Station, and a tram service is not capable of doing that. Therefore I would be very pleased indeed to see the George-street electric-tram service relieved of a very large proportion of the present railway traffic, so as to be able to give much more satisfaction to the local traffic in George-street, which will, we think, be very large.

I have, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Royal Commission on City Railway Extension.

C5.

FACILITIES OFFERED TO WORKMEN.

Sir, Office of the Railway Commissioners, Sydney, 17 May, 1897.
 With reference to conversation relative to the value of the proposed city extension to workmen, I am directed to point out that if the railway is extended to King-street it will be a great boon to the large numbers of workmen who have homes in the railway suburbs, and who have now necessarily to leave and rejoin the trains at the station at Redfern. Very many of these workmen are engaged in the city, and if the extension were carried out it would be of great benefit in saving them walking into town and the time that is lost in consequence.

The additional charge will also be a most moderate one, as it is proposed that the usual weekly rate for 1 mile, viz., 3d., shall only be added to the existing fares—that is to say, a workman living at Petersham, and who now pays 1s. 3d. per week for his journey from Petersham to the present terminal station, will pay only 1s. 6d. per week to King-street, that is, only 3d. per day for the double journey for the extra distance.

I have, &c.,

H. McLACHLAN,
Secretary.

The Secretary, Royal Commission on City Railway Extension.

[To Evidence of S. E. Perdriau.]

STATION SITE FOR LONG-DISTANCE TRAFFIC.

THE total length of the land suggested as a site for a station for long-distance traffic is 665 feet, and the width is about 130 feet, giving an area of 1 acre 3 roods 18 perches.

This includes the block above described bounded by Liverpool, Elizabeth, Goulburn, and Castlereagh streets, and that part of the block lying immediately to the south thereof referred to above as portion No. 1, together with the intervening portion of Goulburn-street.

The municipal assessments for this area amount to £3,913. This at twenty years' purchase would represent a value of £78,260.

If twenty-five years' purchase be adopted the value would be £97,825.

13th May, 1897.

STEPHEN E. PERDRIAU.

E 1.

CITY PROPERTY VALUATION.

VALUATION (adopting the municipal assessments for the year 1896-1897) of that block of the city of Sydney bounded on the north by Liverpool-street, on the east by Elizabeth-street, on the south by Goulburn-street, and on the west by Castlereagh-street—Area, 1 acre 1 rood 36 perches.

THE municipal assessments for the above mentioned block amount to £2,865 per annum, and this at twenty years' purchase would represent a value of £57,300.

If twenty-five years' purchase be adopted the value would be £71,625.

NOTE.—The above valuation is exclusive of the customary allowance of 10 per cent. for forced sale and for compensation for disruption of business.

There is not a first-class building in the whole block—they are mostly small, inferior, and old-fashioned, and the businesses carried on are comparatively unimportant.

13th May, 1897.

VALUATION (adopting the municipal assessments for the year 1896-1897) of that block of the city of Sydney bounded on the north by Goulburn-street, east by Elizabeth-street, south by Campbell-street, and west by Castlereagh-street. Total area, 1 acre 1 rood 14 perches.

As requested, I have subdivided the block into three portions as follow:—

Portion No. 1.—The northern portion—area 1 rood 22 perches—embraces the frontage to Goulburn-street, and extends southerly 130 feet along Elizabeth-street and Castlereagh-street. The municipal assessments for this portion amount to £1,048. This at twenty years' purchase would represent a value of £20,960.

Portion No. 2.—The south-eastern portion—area 1 rood 36 perches—extends from portion No. 1 southerly along Elizabeth-street to Campbell-street, a total length of about 320 feet with an average depth of about 65 feet, backing on to portion No. 3. The municipal assessments for this portion amount to £1,044. This at twenty years' purchase would represent a value of £20,880.

Portion No. 3.—The south-western portion—area 1 rood 36 perches—extends from portion No. 1 southerly along Castlereagh-street to Campbell-street, a total length of about 320 feet with an average depth of about 65 feet, backing on to portion No. 2. The municipal assessments for this portion amount to £1,279. This at twenty years' purchase would amount to £25,580.

The total assessments for the block amount to £3,371, and this at twenty years' purchase would be £67,420.

13th May, 1897.

STEPHEN E. PERDRIAU.

F.

TOTAL COST OF GOVERNMENT WHARFS.

Sir,

The Treasury, New South Wales, Sydney, 18 March, 1897.

In compliance with your request, I am directed to hand you, enclosed, copy of a return which has been furnished by the Department of Public Works, showing the total cost of Government wharfs, &c., in Sydney Harbour up to the present time.

I have, &c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

The Secretary, Royal Commission on City Railway Extension.

H.

YEARLY EXPENDITURE ON GOVERNMENT WHARFS.

Sir,

The Treasury, New South Wales, Sydney, 8 April, 1897.
With reference to your letter of 24th ultimo, I have the honor to hand you, herewith, a statement showing the yearly expenditure on (the Government wharfs in Sydney Harbour up to 31st December, 1896, so far as can be readily ascertained from the books of the Department of Audit.

I also enclose, for the information of the Commission, a copy of the Audit Department memorandum which accompanied such statement.

I have, &c.,

F. KIRKPATRICK,
Under Secretary for Finance and Trade.

The Secretary, Royal Commission on City Railway Extension.

PAYMENTS from the Account Charges on Collections, the Annual Vote "Public Wharfs," and other Votes under the Colonial Treasurer for the service of Public Wharfs generally, from 1874 to 31st December, 1896.

Year of Payment.	Amount.		
	£	s.	d.
1874	1,077	15	1
1875	1,593	17	4
1876	1,788	2	1
1877	1,395	11	1
1878	1,341	6	3
1879	1,801	12	5
1880	1,497	15	8
1881	1,652	14	4
1882	2,019	3	10
1883	2,546	1	1
1884	3,192	14	11
1885	2,846	7	0
1886	4,399	0	11
1887	3,680	17	2
1888	3,379	17	0
1889	5,031	8	5
1890	5,031	4	9
1891	4,518	5	3
1892	7,990	9	7
1893	6,458	19	5
1894	5,656	19	3
1895 (January to June)	2,804	16	7
1895-6	5,220	1	9
1896 (July to December)	2,267	16	1
Total expenditure on salaries, &c., exclusive of payments under Public Works Department and interest on loan expenditure.	79,192	17	3
Total revenue received, as per statement compiled by Captain Jackson	533,939	10	10
Net revenue	£ 454,746	13	7

Memo.—It is not possible to furnish information of expenditure on each wharf without very considerable labour. A return, however, has been prepared which shows approximately the salaries, &c., paid in administration of the Sydney wharfs; the sum, however, is exclusive of payments under the Public Works Department and interest on loan expenditure. I may point out that the bulk of the expenditure incurred for wharfs was out of loan moneys, hence the amount of interest owing by this service must be considerable, and instead of any net revenue, as mentioned in a letter of the Secretary of the Public Works Committee, dated 24th March, 1897, there must be a larger net expenditure.

Sir,

The Treasury, New South Wales, Sydney, 5 May, 1897.

With reference to your letter of date 24th March last, I have now the honor to hand you, enclosed, a statement prepared by the Department of Public Works, showing the yearly expenditure under the Public Works Department upon Government wharfs in Sydney Harbour from 1st January, 1874, to 30th December, 1896, exclusive of purchase of land.

I have, &c.,

F. KIRKPATRICK,
Under Secretary for Finance and Trade.

The Secretary, Royal Commission on City Railway Extension.

Department of Public Works, Account Branch, 27 April, 1897.

RETURN showing the Yearly Expenditure under the Public Works Department, upon Government Wharfs in Sydney Harbour from 1st January, 1874, to 30th December, 1896 (exclusive of purchase of land).

Year.	Amount.			Year.	Amount.		
	£	s.	d.		£	s.	d.

* Reducing the net revenue stated above to £62,391 4s. 2d.

I.

[To Evidence of H. Deane, Engineer-in-Chief for Railway Construction.]

ESTIMATED COST OF LOOP-LINE SCHEME.

THE following are the particulars of the estimate for the alternative scheme for bringing all traffic, except the Melbourne expresses and mail trains, into a station between Elizabeth and Castlereagh streets, at or about the site of the High School :—

Lowering Devonshire-street	£21,200	
To Liverpool-street	95,000	
Elizabeth-street	70,000	
Station	164,000	
Signalling and lighting	14,000	
Shelter-sheds at Redfern	20,000	
Loop, Inner Domain	72,500	
		456,700
Resumption		260,000
		£716,700

I 1.

ESTIMATED COST OF DUAL SCHEME.

THE following is an estimate of bringing the Suburban traffic into a station below Elizabeth-street and Castlereagh-street, and all long-distance traffic, including expresses and mails, into the corner of Hyde Park :—

Lowering Devonshire-street	£21,200	
To Liverpool-street	95,000	
Elizabeth-street	70,000	
Station, High School site	80,000	
Signalling and lighting (say)	12,000	
Shelter-sheds at Redfern	20,000	
		298,200
Resumption		260,000
Widening for two lines	122,000	
Station work, Hyde Park	39,000	
Station, Hyde Park, with two storays above ground-floor	122,000	
Signalling and lighting (extra)	9,000	
		292,000
		£850,200

I 2.

THE ST. JAMES' ROAD STATION.

THE station at St. James' Road can be constructed so that there will be no interference with St. James' Road, St. James' Church, or the Registrar-General's offices. Park-street may require to be raised slightly, but not more than 2 or 3 feet, if anything.

The level of Park-street, where the line passes under it, is 90.50, and the level of the rails at the same point is 72.50, which is nearly the same as Elizabeth-street where Market-street abuts, so that although the ground rises along St. James' Road, it will be seen that the entrance to the station at that place will be practically at the street level.

H. DEANE,

Engineer-in-Chief for Railway Construction.

23th May, 1897.

J.

Department of Taxation, Sydney, 25 May, 1897.

ESTIMATED COST OF RESUMING CITY PROPERTY FOR RAILWAY PURPOSES.

Sir,

As desired by you, I have devoted as much time as possible, at so short a notice, to reviewing the figures supplied by Mr. Perdriau to your Commission in connection with the City Railway Extension.

Regarding the resumption of a strip of land 100 ft. wide from the present terminus to the Circular Quay, I am of opinion that, provided the surface is to be resumed, the cheapest route will follow that reported upon in 1891, crossing the Benevolent Asylum, Belmore Park, and running between Castlereagh and Elizabeth streets, and having as a terminal point the Custom House. This route would probably be 50 per cent. cheaper than a western scheme.

I hesitate before giving you even a rough estimate without a plan of some sort showing a proposed route and buildings required to be taken.

As to the resumption of a strip of land round the foreshores of Darling Harbour from Dawes Point to the present railway terminus, I have perused the figures of Mr. Perdriau, amounting in all to £5,000,000; and, stupendous as they may seem, I question whether they are at all over-estimated.

The taxing of the unimproved value of this property has naturally given us a large insight into the money sunk in these water-frontage properties, and when the disturbance to business is taken into account the figures are enormous.

Two claimants would have cases aggregating some £700,000, which they could possibly substantiate. In this connection, I would like to point out that the wharfs when resumed would not be of equal value to the State as to the individual; as they are used as an adjunct to other businesses, and, worked conjointly with other branches of mercantile business, they have special values.

Should such a gigantic scheme as the resumption of the foreshores of Darling Harbour be carried into effect, such sums would be claimed, and possibly sustained as damages, as would prevent the wharfage, as a Crown asset, paying interest for many a long year to come.

I do not think a strip of land 100 ft. in width, extending from Redfern to the Quay, comprising an area of 20 acres, could be obtained for an expenditure of £1,800,000 on the western side of the city.

In the case of the North Sydney Railway to Milson's Point, no claim was made for land through which the tunnel was constructed, except where the surface was prejudicially affected.

EDWARD J. SIEVERS,
Government Land Valuer.

The Secretary, Royal Commission on City Railway Extension

RAILWAY EXTENSION FROM REDFERN TO ST. JAMES'-ROAD.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, and the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, to whom was referred the duty of considering and reporting upon "the expediency of extending the Railway system of the Colony from the present Terminus at Redfern into the City, including the erection of a large central station in the north-western division of the Park, fronting St. James'-road," have, after due inquiry, resolved that it is expedient the proposed scheme be carried out; and, in accordance with the provision of sub-section (IV), of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

THE ROYAL COMMISSION'S REPORT.

1. The reference of the proposed work by the Legislative Assembly to the Committee being consequent upon the report of the Royal Commission on City Railway Extension, the present Report should be read in conjunction with that of the Commission.

Briefly stated, the report of the Royal Commission described the conclusions arrived at by the Commission of 1890 and 1891, and the proceedings which led to further inquiry; the condition of the Redfern station and yard, and the difficulty of improving it; the Park-street scheme submitted to the Commission, with its alleged advantages and the objections put forward against it; and several alternative proposals; and it stated the reasons which led the Commission to recommend the adoption of the scheme which would bring the railway through Hyde Park to St. James'-road.

By inquiries in all directions in which the Commission were likely to obtain reliable information, they ascertained it to be impossible to find a route, for both long-distance and suburban traffic, through the City west of Hyde Park, with a suitable site for a central station, unless at great and practically prohibitive expense, and they were convinced that if the railway were to be brought into the City for the purposes stated a portion of Hyde Park must be taken.

To them it was proved that an extension citywards was necessary; that Park-street was not far enough into the City; that to approach a main city station by tunnel, while steam is used for traction, is objectionable, and to substitute another motive power at Redfern is also open to objection; that other suggested schemes were from one reason or another impracticable; and that, without interfering with any buildings between St. James'-road and King-street, the portion of the Park between St. James'-road and Park-street would be eminently suitable as well as sufficient for all terminal arrangements, including a surface station for both suburban and long-distance passenger trains. If this portion of the Park were appropriated for this purpose the station building would extend square-off from Elizabeth-street, fronting St. James'-road, to within 20 feet of the central avenue of the Park, and the station appurtenances would go back as far as Park-street. But while this would be the case,

case, 44 feet of the Park section would be added to Elizabeth-street from Park-street to St. James'-road, thus widening this portion of Elizabeth-street to 110 feet. St. James'-road also would be widened considerably by a portion of the Park being added to it.

Park-street would be raised at the level portion between the central avenue and Elizabeth-street, to permit of the lines approaching the station running under it; and where the lines would pass through the portion of the Park between Liverpool-street and Park-street, portions of the cutting would be open, and portions covered, the arrangements with regard to the covered portions being that the existing pathways in this part of the Park would not be interfered with, and the present facilities for crossing or frequenting the Park not affected to an extent that would cause inconvenience, only sufficient of the route being left open to provide for ventilation and signalling purposes.

If it should be thought desirable to extend the railway to the Circular Quay, it could be done by carrying two lines on the eastern side of the station in tunnel, under Macquarie-street, down to a point near the Water Police Court; and in the same manner by sweeping round in tunnel branch lines could be extended to the eastern suburbs. An extension could also be made to North Sydney.

In no respect, the Commission were assured, need the station or the movements of the trains be an eyesore or a source of annoyance to anyone in or near Hyde Park. Arrangements would be made to completely and attractively cut off the station from the central avenue, and neither it nor the shunting or passing of the trains was likely to be objectionable in any sense. The station buildings, themselves, it was explained, ought to be an ornament to the city.

The report showed also that if this section of the Park were taken for railway purposes there would still be nearly 30 acres of the Park left for public recreation, and that in addition to this there were, within a short distance of the intersection of Elizabeth-street and St. James'-road, 158 acres in other park areas, and also the grounds surrounding Government House, containing 40 acres, which sooner or later are likely to be added to the Domain or the Botanic Gardens. Further, in lieu of the portion of Hyde Park wanted for the railway, it was pointed out that the Railway Commissioners were willing that the railway revenue should be debited to the extent of £1,000 per year, or the railway capital charged with a lump sum of £100,000, for providing open spaces in districts needing them, or for the formation and maintenance of a park in some other part of the metropolis where it may be wanted; and, in connection with this, it was suggested that a very suitable site for such a park would be the old cemeteries in Devonshire-street, together with adjoining lands of greater area than that proposed to be taken from Hyde Park.

In concluding their Report, the Commission observed that the facts set forth in the document, including the certainty that no other route but one taking a portion of Hyde Park could be obtained unless at an enormous expense for the resumption of valuable city properties and the increased cost for severance and the disturbance of business, were strong features in favour of the St. James'-road scheme; and they explained that if this scheme should not be adopted, the only course then open would be to spend a large sum of money in improving the present terminal station at Redfern, which could never give satisfaction, as it would produce no return for the capital expended, involve a serious interference with the traffic, and the necessity for an extension of the railway into the city would still exist. The present terminus they found is dangerous, in consequence of the limited space available in which to work the trains and the congested nature of the traffic, the condition of affairs there being such that the travelling public are constantly exposed to the risk of injury or loss of life.

THE COMMITTEE'S INQUIRY.

2. In dealing with the reference by the Legislative Assembly to them of the proposed extension of the railway the Committee decided to adopt the evidence given before the Royal Commission, with the Appendices to that evidence, and to attach it to the record of the proceedings of the present inquiry, so that the two might be read together. Any further evidence that might be taken they desired should be only such as would make essential parts of the evidence given before the Royal Commission more complete, or such as opponents of the scheme entitled to be heard might wish to put forward; and, in order that it should be known to all that the Committee were

were prepared to hear anyone who could submit for consideration a scheme preferable to that by which the railway would come through Hyde Park to St. James'-road, the unusual course was adopted of advertising the inquiry for much of the time it occupied. Ample opportunity was afforded for protest or suggestion. No person expressing a wish to give evidence was refused a hearing; and in cases in which schemes were submitted in writing, without an expressed desire to appear before the Committee in support of them, the proposals received careful attention.

Some of the witnesses examined came forward to supplement the evidence given by them before the Royal Commission in favour of the schemes they advocated. His Worship the Mayor of Sydney attended to protest, on behalf of the City Council, against any portion of Hyde Park being taken for railway purposes; and the Secretary of the Great Synagogue, Elizabeth-street, laid before the Committee a statement from the Executive of the Synagogue as to the effect which, in their opinion, any extension of the railway through Hyde Park would have upon the services in the building.

The Mayor of Ashfield gave evidence in support of the proposed scheme, and informed the Committee that he had been authorised by thirty-three Municipal Councils near Sydney to state their willingness to send representatives to give similar evidence if the Committee desired their attendance. These Councils strongly favoured the scheme, but not wishing to overburden the inquiry had decided to refrain from sending representatives for examination unless invited to do so.

Further evidence was also taken with regard to the condition of Redfern Station and the delays to trains, and in relation to the details of the scheme referred to the Committee; and the Engineer-in-Chief for Railway Construction and an official land-valuer were examined in respect to some of the schemes for bringing the railway into the city by routes which would not touch Hyde Park.

In several instances, it may be mentioned, witnesses who were examined showed themselves to be wholly unacquainted with some of the principal details of the St. James'-road scheme, and under a wrong impression regarding others.

ESTIMATED COST.

3. The estimated total cost of the extension to St. James'-road is £650,000, which amount includes £100,000 for land resumption. This estimate is regarded by the Engineer-in-Chief for Railway Construction as ample. From the evidence of a witness who has had many years' experience in valuing property in Sydney, both in private business and as a consulting valuer for the Government, it will be seen that the actual sum required for land resumption may prove to be considerably less than £100,000. The details of the estimate, apart from the sum for land resumption, are as follow:—

<i>Construction of Line.</i>		
Excavation—General	...	£41,500
Viaduct, piers of bridges and retaining-walls in brick with concrete foundation and backing	...	130,000
Steel superstructures and bridges	...	31,600
Covering to Hyde Park between Liverpool and Park streets	...	18,720
Alteration and renewal to surface of streets, wood-blocking, asphalt-ing, kerbing, &c.	...	26,380
Miscellaneous	...	9,000
Permanent-way	...	24,000
		284,200
Signals and interlocking	...	15,500
<i>Terminal Station.</i>		
Main building	...	98,900
West wing to main building	...	20,200
East wing to main building	...	2,500
		121,600
Roof over platforms	...	67,000
Platforms	...	13,300
Miscellaneous offices	} Previously under construction of line	6,000
Luggage-carriers		6,500
		25,800
Parcels office (previously under building)	...	11,400
Electric lighting	...	4,500
Shelter-sheds and alterations at Redfern	...	20,000
		25,900
Total	...	£550,000

RAILWAY

RAILWAY COMMISSIONERS' REPORT.

4. The Railway Commissioners' report upon the scheme is in most respects similar to that contained in the proceedings of the Royal Commission, but differs from that report in regard to the estimated total cost of construction and the estimated annual expenditure on interest and maintenance. The report before the Royal Commission related to the proposed extension to Park-street, and gave the estimated cost of construction as £600,000, and the estimated annual cost as £26,000. The further extension from Park-street to St. James'-road increases the cost of construction to £650,000, and the annual cost to £27,500. The traffic estimate remains as before—£33,365. The difference in the present scheme between the traffic estimate and the annual cost is £5,865. The estimated revenue, the Commissioners explain, is based upon the existing traffic carried to and from Redfern Station, but it is fully expected that the shortening of the time required for journeying to and from the suburbs, and the reduction in cost by avoiding the daily charges for cabs, trams, and omnibuses, will very soon lead to a great increase in the suburban traffic. This traffic, it is stated in evidence, has increased during the past year by fully 1,000,000 journeys travelled. Additional revenue is looked for also from increased rents for the refreshment-rooms.

DESCRIPTION OF THE ROUTE TO ST. JAMES'-ROAD.

5. The details of this scheme are identical with those put before the Royal Commission, but a description of the route to St. James'-road in the present Report may be serviceable.

Six lines of railway—the two centre lines in the old portion of the Redfern station buildings, a line at No. 8 platform, and those at Nos. 3, 2, and 1—will be extended from the station over Devonshire-street, through a portion of one of the Devonshire-street cemeteries, towards the main building of the Benevolent Asylum, within 100 feet of which they will pass. The area of the cemetery proposed to be taken is 3 roods 10 perches, and that of the Benevolent Asylum grounds 2 roods 14 perches, a portion of one of the out-houses connected with the asylums being interfered with. Near the Benevolent Asylum the six lines, which occupy a space of 100 feet wide in crossing Devonshire-street, will converge, and from the Benevolent Asylum to near Park-street run parallel to each other. From the Benevolent Asylum the lines will be carried through the police grounds in connection with Carter's Barracks, taking up an area of 1 acre 3 roods 1 perch, and interfering with some of the police buildings to such an extent that the barracks will probably have to be removed. Belmore-road will be crossed upon a steel bridge with a headway above the road of 15 ft. 6 in. minimum, and thence the lines will proceed across Belmore Park, and onwards, upon a viaduct with brick arches where streets are not intersected, and steel bridges where streets are intersected. The viaduct will end on the northern side of Goulburn-street. Halfway between Goulburn and Liverpool streets the lines will enter a cutting, which will absorb Nithsdale-street, and, near the Unitarian Church, pass under Liverpool-street into the Park, through which they will proceed towards St. James'-road in a cutting of an average depth of 27 feet. The levels of Liverpool-street will not be altered, as the street will be continued over the cutting upon a bridge. The running road through the Park will absorb a width of 85 feet, about half of the cutting being left open, but neatly railed with iron railings.

LAND RESUMPTIONS.

6. The resumption of private property on the route commences after passing Elizabeth-street, at the north-eastern corner of Belmore Park; the freehold land taken up between Elizabeth-street and Liverpool-street being 2 acres 13 perches, and Nithsdale-street and some lanes 1 rood 39 perches. The estimated cost of the resumptions is £100,000, which, as previously stated, may prove greater than the amount actually required.

THE ST. JAMES'-ROAD STATION.

7. In connection with the new central station, which has been planned, it is stated, upon the very latest and best information, it should be clearly understood that the station platforms will be roofed in, and the remainder of the distance from the
platforms

platforms to Park-street enclosed by a neat wall. These provisions of themselves will exclude the operation of the trains at the station from the observation and, to some extent, the hearing of persons outside; but this exclusion from sight will be further assured by the circumstance that the portion of the Park occupied by the station will be excavated from Elizabeth-street to the central avenue of the Park to a depth varying from the surface level at Elizabeth-street to as much as 19 or 20 feet near the Park avenue. The Park land near St. James'-road rises considerably from Elizabeth-street, but the station on both its street frontages will have a surface approach. Then, as the station will be entered from under Park-street, and up to Park-street from Liverpool-street through a cutting, partly covered, the trains as they pass and re-pass will practically be concealed from view after entering the Park from Liverpool-street.

APPROACHES TO THE STATION.

8. The approaches to the station will be by way of St. James'-road, by King-street and Elizabeth-street, by Market-street (which can be widened by taking a portion of the land owned by the Government on the northern side) and Elizabeth-street (which will be widened 44 feet), and by Park-street. In addition to these, another approach can be provided by means of a new street across the land now occupied by the Public High School and owned by the Government. People arriving at the station by cab, to leave by train, will drive to the main entrance, which will be in St. James'-road, under a covered way. Cabs awaiting the arrival of trains will be stationed in a cab-road entered from Park-street, and will leave by way of Elizabeth-street.

The idea is entertained by some persons that to make the approaches to the station sufficiently convenient King-street will have to be widened. But, it may be pointed out, King-street will be only one of a number of streets by which the station will be approached. Traffic necessarily takes a variety of routes; and from the east the station will be approached by way of St. James'-road, from the north by Macquarie-street, Elizabeth-street, or Castlereagh-street, and from the south by way of Castlereagh-street or Elizabeth-street.

Ample provision will therefore exist for satisfactorily dealing with the traffic wherever in the vicinity of the station it may concentrate.

POINTS CALLING FOR NOTICE.

9. Apart from a somewhat more detailed description than was contained in the evidence before the Royal Commission of the route for the railway extension by the St. James'-road scheme, the extent to which Hyde Park will be affected, and the proposed arrangements with regard to the new terminal station, the principal points which call for notice in this Report are:—

- (I) The amount of traffic with which the St. James'-road station will be capable of dealing;
- (II) The methods which may be adopted to meet traffic requirements of the future, and the facility with which extensions may be made from St. James'-road to the Circular Quay and to the eastern suburbs, and, if necessary, to North Sydney;
- (III) The unsuitableness of the schemes advocated in place of that which will bring the railway through Hyde Park to St. James'-road; and
- (IV) The objections raised to the St. James'-road scheme.

TRAFFIC CAPACITY OF ST. JAMES'-ROAD STATION.

10. So complete in all respects for dealing with a large traffic will St. James'-road station be that it is confidently believed it will not only meet satisfactorily all ordinary daily requirements, but also be capable of dealing with the maximum amount of traffic the six lines of railway will be able to carry.

The

The Committee are assured that it will be equal to four times the traffic now entering Redfern. It will be clear of surplus engines and carriages, spare rolling-stock finding accommodation at Redfern station or Eveleigh. This capacity for satisfactorily meeting the requirements of a largely-increased traffic proves that for many years to come the station will be sufficient for all purposes.

The late Chief Commissioner for Railways stated before the Royal Commission that the station would be sufficient for, at least, twenty years. This, however, is a very moderate estimate of its ability to cope with the increase which naturally will take place in our railway traffic as time goes on. The rate at which the passenger traffic has increased during the last few years would indicate that the station will meet all ordinary requirements for a much longer period. During the last nine years the increase has been about 50 per cent.; and, bearing in mind that the station will be capable of dealing with four times the present traffic, it would, even if the rate of increase should be greater than it has been—which is not unlikely—take forty years before the station will be taxed to its utmost capacity, and by that time population will have so increased in various localities around Sydney that other railway stations, in addition to the extensions which, sooner or later, will be made to the Circular Quay, the eastern suburbs, and North Shore, will probably have relieved, to a great extent, the station at St. James'-road.

Expert evidence from those best competent to judge enables the Committee to state that the St. James'-road station will for all time accommodate the whole of the traffic which should require to be dealt with from the main city centre.

METHODS OF MEETING FUTURE TRAFFIC REQUIREMENTS.

11. With regard to the extensions to the Circular Quay and the eastern suburbs, it was explained, in the course of the inquiry made by the Royal Commission, that these could be brought about by arranging the station foundations at St. James'-road so that two of the lines, or perhaps four if necessary, might be lowered and carried forward to the Quay, or round towards Woolloomooloo. Further investigation has shown that when it shall be found necessary to extend two of the lines in either of the directions mentioned, it can be done without any lowering whatever, the level of the rails being such that these extensions can readily be constructed.

Their exact routes have not been determined in detail, but may be stated approximately. To reach the Circular Quay, the railway would be carried in tunnel under Macquarie-street and the western boundary of the Domain, to a surface station extending from a point nearly opposite Bridge-street and to the north of the entrance to Government House, and having its centre a little to the north of Albert-street. The extension to the eastern suburbs could, without difficulty, be carried out by passing under King and Macquarie streets and the Outer Domain, to a point south of the Art Gallery, and thence by viaduct, tunnel, and surface line, to the different suburbs, eventually joining the existing railway system on the Illawarra line, in the neighbourhood of St. Peter's.

An extension to North Sydney in connection with the St. James'-road scheme, could be made either by tunnel or bridge. A tunnel scheme would carry the railway under the harbour at Fort Macquarie, and, passing near Milson's Point, bring it up again on the other side at the head of Lavender Bay, where it would join the existing North Sydney line.

Though these extensions involve considerable tunnelling, their mention must not be regarded as an approval of the tunnel system; they are merely an admission that underground construction is inevitably connected with railway extension in the directions indicated.

A railway across the harbour by bridge could branch from the St. James'-road railway at a point near Liverpool-street, and, proceeding along the western side of the city, pass by or through Wynyard-square to Dawes' Point, the bridge being erected between Dawes' Point and some high land on the other side near McMahon's Point. On the North Sydney side of the harbour the railway would join the present line there opposite the head of Berry's Bay. This route is indicated on the map published with the Report of the Royal Commission.

UNSUITABLE

UNSUITABLE SCHEMES.

12. A number of schemes were put before the Committee either in evidence or by letter, some not devoid of merit, but, from one cause or another, open to objection, while others had little to recommend them.

The unsuitableness of most of the schemes which have been put forward as preferable to that which will bring the railway through Hyde Park to St. James'-road was explained by the Royal Commission, but as some of these have been pressed upon the attention of the Committee as worthy of adoption it is necessary that something further should be said about them.

One is a scheme in which it is proposed to retain Redfern station as a permanent terminus, and to take four lines into the City, from Redfern, by a route west of George-street, through Wynyard-square, to the locality known as the Rocks, and thence, if required, onward to Dawes' Point, and across by bridge to North Sydney, and also round to the Circular Quay, and on to the eastern suburbs. The present station at Redfern would be enlarged by adding to the station-yard the land occupied by the cutting in which the branch line to Darling Harbour runs, and resuming sufficient property on the south and west of the tunnel, as far back as Eveleigh, to enable the present tunnel to be abolished, and the Darling Harbour branch to run from a point near Eveleigh in another tunnel, west of where the branch line is now, and thence to its destination. By this means there would be, it is contended, ample room for station purposes at Redfern, including sufficient space for twelve lines to run through from Eveleigh.

The extension into the City would branch off the present lines at the Redfern tunnel, following the direction of the new Darling Harbour line as far as George-street, and thence proceeding to a station at Hay-street, reaching Brickfield Hill at about Goodlet and Smith's yard, where it would enter a tunnel and either pass under or close to George-street to the new Markets or to the back of the Town Hall, in which latter case some portion of the tunnelling in the scheme would not be necessary, and thence on, still in tunnel, to Wynyard-square. At Wynyard-square the line would divide into three branches—one proceeding near Princes-street to connect with the North Sydney line; the central branch going down to 30 acres proposed to be resumed on the Rocks; and the third branch passing round the Circular Quay on a viaduct to about the present site of the Water Police Court.

The first objection to this scheme is that it does not bring the whole of the passenger traffic into the city, the long-distance traffic coming no further than Redfern, and it is considered by the Railway Commissioners that long-distance passengers as well as those from the suburbs should be dealt with in any extension that may be carried out. In the opinion of the Commissioners it is very desirable that both these classes of traffic should be brought to a central station for the sake of economy of working, and also because there is a class of long-distance traffic which is of a suburban type and requires to be brought into town as much as the purely suburban traffic does. A second objection to the scheme is its great cost. By taking the route of the railway through blocks of land obliquely the scheme makes it necessary to resume all the frontage of those blocks; and several large and important places of business, two of the principal churches of the city, three other churches, and a similar number of Sabbath schools, together with other properties, are affected. The expenditure that would be entailed by improving the Redfern station in the manner the scheme proposes would probably not fall short of the estimated total cost of the extension which will bring the railway to St. James'-road. For this expenditure there would absolutely be no return. But even if the proposed reconstruction of the Redfern station were not objectionable on the grounds of inadequacy and expense, it would be impossible to carry out the work without so inconveniencing the traffic that it would be far preferable to construct a new station somewhere else.

Another of the schemes put before the Committee, which calls for special mention, proposes that four lines of railway, for suburban passenger traffic, and goods traffic if desired, commencing at the northern end of the present terminus at Redfern, shall pass over Devonshire-street, and across the Benevolent Asylum grounds and

and land occupied by tramway-sheds, and thence, on a viaduct, over Garden-road Belmore Park, Haymarket, Belmore Markets, and Campbell-street, into an open cutting, east of the Natatorium, under Goulburn-street, passing west of the New Masonic Hall, under Liverpool-street, turning in a north-westerly direction under Pitt-street, Union-lane, and Wilmot-lane, and passing west of the Water and Sewerage Board offices; thence under the junction of Bathurst and George streets, passing in front of the Town Hall, and, by a tunnel, from Druitt-street, under York-street, to Wynyard-square. From this point the line would proceed in open cutting under Margaret street and lane, passing the Scots' Church, under Jamieson-street and Church Hill, through the reserve there; then under Charlotte-place, skirting the east side of Harrington-street, and curving under George-street at its intersection with Essex-street, round in a north-easterly direction under Pitt-street and Alfred-street, passing under the crown of the road in front of the Custom-house, and thence under Phillip-street, at its intersection with Albert-street, to the Circular Quay.

In connection with this extension it is proposed that the Redfern station shall be removed to the Benevolent Asylum grounds, where it would be terminal for long-distance traffic and a through station for trains from the suburbs. Extensions to North Sydney and the eastern suburbs are also part of the scheme.

This scheme is open to the same objections as are applicable to the other. It does not deal with long-distance passenger traffic; it proposes to expend a large sum of money in removing the Redfern station to the Benevolent Asylum grounds, for which expenditure there can be no return, and the extension into the city would be very costly, for it would affect important and valuable properties, including the Town Hall. Other objections to it also present themselves. Though the scheme is chiefly one of open cutting it may be regarded as a tunnel scheme, as for thirty chains of the route the line would be underground, and tunnel schemes, at least as far as the main central station, should, if possible, be avoided. The Circular Quay would practically be the terminus, and there the railway would be considerably below high water level, the roadway being excavated for this purpose from Pitt-street to the eastern side of the Quay. There, according to the scheme, on an area quite inadequate, it is proposed the shunting shall take place, an alternative to this being to continue the extension towards the eastern suburbs and find a waiting-place for the trains in that direction. The difficulties that would be experienced in working the traffic would be very great, and, if goods traffic, as suggested by the author of the scheme, were also carried on the extension, they would prove insurmountable. The scheme does not meet requirements, and did not commend itself to the Committee.

A third scheme is to construct a circular railway of two lines from Redfern around the city to deal with the whole of the passenger traffic, one of the lines being used by trains running round in one direction, and the other by trains going in the direction opposite. By this proposal the Darling Harbour Branch Railway would be used as far as Macarthur-street, at which point the circular railway would commence. The route crosses Sussex-street and proceeds to Bathurst and Druitt streets; thence under George, Pitt, and Castlereagh streets to the site occupied by the Public High School near King-street, and under Elizabeth-street, Phillip-street, Macquarie-street, and the Mint, into open cutting at the rear of the District Court; from there it runs under the road leading to the Domain, and, by cutting and viaduct to Phillip and Cook Parks, which would be entered near the junction of St. Mary's-road with Woolloomooloo-street. From Phillip and Cook Parks, a considerable portion of which would be taken for station purposes, the route crosses Boomerang-street, goes under the junction of William and College streets, and takes a portion of the south-eastern section of Hyde Park, in open-top tunnel or cut-and-cover, to Liverpool-street, under which it passes, and then proceeds, by cutting and viaduct, to the north-east corner of Belmore Park, across the Park near its eastern side, and over Devonshire-street to the extreme east side of the Redfern station-yard. Provision is made for stations at Bathurst-street, on the High School site near King-street, and on Phillip Park, the principal one being the last.

To this proposal there are a number of objections which prove its unsuitableness. Using the Darling Harbour branch as part of the proposed circular line would mean working the traffic on an objectionable grade, and as this branch commences a rapid

rapid descent from Redfern yard at about half-way between the present platforms and the tunnel, the trains going to Redfern by way of the Darling Harbour branch would miss the present station—a difficulty which could not be met by stopping at any temporary station near George-street, as the grade would be too steep to permit of such a plan being adopted. It would also be undesirable for trains to start from or arrive at platforms on the extreme east side of the Redfern station, as to work passenger traffic there with any satisfaction it would be necessary to remove the present arrangements for dealing with produce traffic, and that could only be done by taking it to Darling Harbour, which is said to be fully occupied now. On several parts of the route the levels present difficulties which, among other things, would bring about the diversion of Boomerang-street with the cable tramway and traffic at present running along it. Then any attempt to accommodate all the passenger traffic of the railways on two lines, the Committee are assured, would lead to serious difficulties. Even if the two lines were capable of carrying the whole of the traffic, the proposal to run the trains round the circle in opposite directions is, in the opinion of the Railway authorities, undesirable, for the reason that the trains do not arrive at and depart from Redfern station at intervals common to them all. The scheme, it is pointed out, might suit very well as a circular line around which all the trains are to run at a uniform rate of speed and with the same interval of time between them; but under conditions by which some trains pass certain stations without stopping, while others are partly through trains or stop at all stations, it would be impossible to run them around a loop as proposed without causing great confusion. Further difficulties would arise from the absence from the scheme of any stopping-place in the circle where trains could wait the necessary time before taking their departure—an arrangement indispensable in the working of the traffic on the New South Wales railways.

With regard to these and other schemes submitted to the Committee, which entail the resumption of private property and a certain amount of tunnelling, it must be pointed out that, in resuming a city property, the Government, though only requiring a portion, are compelled to take the whole, and that while they have the power to tunnel under private property, it is very doubtful whether they can do this without being compelled to resume the surface over and within a certain distance of the tunnel. These obligations on the part of the Government, it will be seen, are likely to increase the total cost of any scheme for railway extension through the city by any route to the west of Hyde Park far beyond the estimates of its author.

Extensive tunnelling is also objectionable because of its unsuitableness in a climate like that of New South Wales, where steam is the motive power on the railways. With electricity, compressed air, or some other means of smokeless traction, such schemes might be favourably regarded; but the utility of these methods of working the heavy traffic which enters Redfern has not yet been proved sufficiently to warrant their adoption here, and under present circumstances railway extension must be based upon steam as the motive power. Worked by steam, city railways in tunnel have not apparently proved satisfactory in England, and within the last eighteen months the London Metropolitan Railway Company, not satisfied with the tunnels in which their railway runs, have been endeavouring to have extra ventilating-shafts erected. To effect this they have been trying to acquire more land; and at the instance of the London County Council a Committee has been appointed by the President of the Board of Trade to "inquire into the existing system of ventilation of tunnels on the Metropolitan Railway, and to report whether any, and if so what, steps can be taken to add to its efficiency in the interests of the public."

In connection with some of the schemes that have been proposed or suggested it has been urged that a terminal station could be placed on one or other of the following sites:—

- (a) The area occupied by Cook and Phillip Parks and Boomerang-street.
- (b) The block of land now occupied by the Girls' High School between King and Market streets.
- (c) The Government land on the western side of Circular Quay.

(d)

- (d) The block of land south of Hyde Park, bounded by Liverpool, Goulburn, and Macquarie streets.
- (e) The land occupied by the District Court and the Mint.
- (f) Fort Macquarie and the grounds of Government House.

The unsuitableness of any one of these localities as a site for such a station as is required was ascertained by the Royal Commission, but the fact that they still have advocates makes it necessary to explain here what the difficulties connected with them really are.

(a) Cook and Phillip Parks are divided by Boomerang-street, but if used for a site for a central railway station that street would be closed and the area then available would be 9 acres 2 roods 30 perches. In the opinion of the Engineer-in-Chief for Railway Construction, not only is the length insufficient for a central station with suitable approaches, platforms, and necessary buildings, but there is a very great difference of level between the College-street frontage and the eastern side of the land, there being a fall from College-street of nearly 60 feet. The site offered by these two parks is, therefore, deemed unsuitable; and its unevenness is such as to make it exceedingly difficult to construct a satisfactory railway station there.

(b) The idea of having a terminal station on the site occupied by the Girls' High School is disposed of by making a comparison between the dimensions of the area available there and that required for the station. The width of the land between Castlereagh and Elizabeth streets is nearly 150 feet, and that of the station proposed in Hyde Park 380 feet. The length of the land between the Mont de Piété Co.'s premises and Market-street is 365 feet, and from King-street to Market-street—which comprises the whole block—515 feet, while that of the station in Hyde Park will be 1,100 feet.

(c) The Government land on the western side of the Circular Quay is about the required length, but altogether too narrow and too small in area. From the southern end of the Queen's Wharf to the northern end of the offices occupied in the past by the A.U.S.N. Co. there is a length of 1,100 feet, but the width varies from 185 feet to 65 feet, and the total area is a little over 3 acres. Described more in detail, the land suggested to be used in this locality for a railway station site commences at the Queen's Wharf, at the south-western corner of the Circular Quay, and lies between George-street and the dray-road which borders the Quay, and, being necessary for the shipping trade at the wharfs, must be retained. It is intersected by Argyle-street and Bethel-street, which divide it into three small blocks of about equal length. The width of the land varies. At the Queen's Wharf it is 185 feet, at Argyle-street 133 feet, at Bethel-street 92 feet, and at the northern end of the A.U.S.N. Co.'s offices 65 feet. By including the roadway leading to the Quay at this spot, and resuming some private land which extends thence to George-street North, the width of 65 feet might be increased to 195 feet; but while this could be done, the width at the southern end of these offices is only 100 feet. Additional land is available at Dawes' Point, but a terminal station there, even if it were practicable, would be too far away from the city and inadequate. On a portion of the land which would be required for a station upon the western side of the Circular Quay, are the Mariners' Church and the Sailors' Home.

(d) The block to the south of Hyde Park, which some persons regard as suitable for the purposes of a terminal station, has a mean length of 535 feet, and a mean width of 490 feet, with an area of 6 acres. These figures show that it is much too small, but it is unsuitable also because of a great fall in the ground from Liverpool-street southwards, that street being $31\frac{3}{4}$ feet higher than Goulburn-street on a section down the middle of Nithsdale-street. With a length of 1,100 feet the fall in the ground would be very much greater, for a station on this site would then extend to Belmore Park.

(e) A suggested District Court and Mint site in itself is also much too small, not having half the length required, and could only be used for a terminal station by encroaching considerably upon the Domain.

(f)

(f) Government House grounds, or what is called the Inner Domain, together with the land available at Fort Macquarie, would provide an area sufficiently large for a terminal station, but if the station were constructed there it would not be in a central position, and it would mean the erection of a new Government House somewhere else—a work not immediately necessary, and the utilisation of an area equal in extent to, and of greater beauty than, the portion of Hyde Park referred to in the St. James'-road proposal, and likely in the future to be used for park purposes; and it would necessitate an approach to the main central station by tunnel, which is very undesirable.

OBJECTIONS BY THE CITY COUNCIL AND THE EXECUTIVE OF THE SYNAGOGUE.

13. A majority of the members of the Municipal Council of Sydney protest against any portion of Hyde Park being taken for railway purposes, on the ground that the Park has been dedicated for public recreation, and should not be used in any way in connection with railway extension. The Mayor appeared before the Committee on behalf of the Council, and admitted himself to be "a most firm believer in a city railway," but did not, except in a very general way, suggest any scheme to take the place of that under the consideration of the Committee. The park lands which will be available for public recreation after the railway has been constructed are described in the Report of the Royal Commission, and the description need not be repeated here. It is important, however, in connection with the taking of part of Hyde Park, that it should be understood that while a little less than 13 acres will be affected by the railway only 10 acres will be used by the railway exclusively. The portions of the Park that, as stated by the Engineer-in-Chief for Railway Construction, will be required are as follows:—

Hyde Park (openings in south-west section)	a.	r.	p.
Hyde Park (openings in south-west section)	1	0	20
„ (station arrangements)	10	0	23
„ (widening Elizabeth-street)	1	0	23
„ (widening of St. James'-road	0	2	13
Total	12	3	39

Of this area only the 10a. 0r. 23p. required for the station arrangements between St. James'-road and Park-street will be so occupied by the railway that it will be available only for railway purposes. The remaining 2a. 3r. 16p., though used in connection with the extension, will remain open space, and most of it accessible to the public. Only 1a. 0r. 20p. will be used for the cutting through the south-western portion of Hyde Park, and parts of that cutting will be covered, the surface on the covered portions being restored to the condition it is in now. The remaining 1a. 2r. 36p. it is proposed to take for the purpose of widening a portion of Elizabeth-street and St. James'-road.

The Executive of the Synagogue in Elizabeth-street are apprehensive that, should the proposed extension of the railway to St. James'-road be carried out, the constant running of the trains and the noise attached thereto will so seriously interfere with the services held in the Synagogue as to render the building almost useless for the purpose for which it was erected. But until the secretary of the Synagogue was informed by the Committee of some of the details of the scheme he and the Executive were unaware of the facts that the nearest line of rails passing through the Park will be 175 feet from the building, that the trains will be hidden from sight in the cutting through which they will run slowly, and that their movements opposite the Synagogue will be concealed from view, and, to some extent, excluded from hearing, by the circumstance that the station will be roofed and covered in. Probably about 50 trains will pass and re-pass during the hours in which the Synagogue is occupied on a Saturday, but the noise arising from this amount of train traffic is likely to be much less than that caused at the present time by the railway trams, 48 of which, out of a total of 252 trams, now pass and re-pass within 28 feet of the building during service-hours. The trains will, of course, displace the railway trams; so that the Synagogue will be subjected to the subdued noise from 50 trains, the nearest of which will be 175 feet away and concealed from view, as compared with the disturbance from 48 trams within 28 feet of the building and on the open roadway.

MARKET VALUE OF HYDE PARK LAND.

14. Seeing that Hyde Park is Crown land, and taking a portion of it for a railway is but transferring that portion from one public purpose to another, it is not necessary to give the park land taken a money value in order to increase by that amount the estimated cost of the railway; but if the block were subdivided so as to obtain from it the best return, its market value would not be more than £180,000.

The Government Valuer and Mr. Surveyor Perdriau are of opinion that these methods of subdivision show the most advantageous treatment of the land from a commercial point of view, and that by the most judicious handling the block would not realise more than £200,000 in the present state of the property market. From this sum must be deducted the cost of forming the new streets and lane proposed in the subdivisions; and allowing for this the most that could be made out of the transaction would be £180,000.

CONCLUSION ARRIVED AT BY THE COMMITTEE.

15. It will be seen from what has been said that, while a number of schemes have been brought under notice, not one among them is such as, in the opinion of the Committee, could justifiably be recommended as preferable to that referred to them by the Legislative Assembly. Instead of showing that the St. James'-road scheme should not be adopted, the evidence in the inquiry, by failing to disclose any better method of extending the railway into the city, strengthens the recommendation of that scheme. With every desire to avoid interfering with Hyde Park, were it possible, the Committee must adhere to the conclusion arrived at by them at the close of their inquiry as a Royal Commission—that, if the railway be brought into the city, a portion of Hyde Park must be taken. Unless park land be taken the Government must pay for the value of land resumed and the value of the buildings upon it, for the disruption of business, and for forced sale, and also pay the City Council such demands as may be reasonable for streets closed or to any extent interfered with. The Committee are further of opinion that no scheme will meet requirements that does not provide for dealing with the whole of the passenger traffic—long-distance as well as suburban.

A COMPARISON OF THE SCHEMES.

16. A comparison of some of the features of the St. James'-road scheme with those of other schemes which have been before the Committee may be stated as follows:—

OTHER SCHEMES.

- (1.) They are inadequate, as in no instance does any one of them provide satisfactorily for bringing more than a portion of the traffic into the city.
- (2.) In most cases they are inconvenient, in consequence of an excessive amount of tunnelling, or of the station sites and shunting accommodation being too limited in area, or the stations being constructed much below the surface of the ground.
- (3.) They are unduly expensive on account of the extensive resumptions of property that would be necessary, together with the payment of compensation for severance and disturbance of business, and the addition of the usual percentage allowed by the Government to property-owners in matters of this kind.
- (4.) They would entail excessive expenditure on improving or reconstructing the present terminal station either at Redfern or on the grounds of the Benevolent Asylum, for which expenditure there could be no return to provide for the payment of interest.
- (5.) In some instances the schemes are of such a character that they could not be seriously entertained.

ST. JAMES'-ROAD SCHEME.

- (1.) It provides ample facilities for bringing to the chief business centre of the city four times the present passenger traffic.

(2.)

- (2.) At any time the scheme can without difficulty be made to fit in with an extension to the Circular Quay, the eastern suburbs, or North Shore, or with a circular railway round the city.
- (3.) The amount of property resumption necessary in connection with the scheme will be small.
- (4.) The scheme is the least expensive, and the route the most direct.
- (5.) A substantial return will be obtained from the expenditure.

RESOLUTION PASSED BY THE COMMITTEE.

17. The resolution passed by the Committee is shown in the following extract from their Minutes of Proceedings of Wednesday, 25th instant :—

“ Mr. Lee moved—

‘ That, in the opinion of the Committee, it is expedient the proposed extension of the railway system of the Colony from the present Terminus at Redfern into the City, including the creation of a large central station in the north-western division of the Park, fronting St. James’-road, as referred to the Committee by the Legislative Assembly, be carried out.’

“ Mr. Humphery seconded the motion.

“ Mr. Black moved—

“ That the motion be amended by the omission of all the words after the word ‘ expedient ’ with a view to the insertion of the following words :—

“ (a) For the safety of the public and railway officials, that the Redfern station should be altered by removing the railway workshops and carriage-sheds to some more convenient position, by a deviation of the Darling Harbour traffic, by the resumption of land on the western side of the line between Redfern and Eveleigh, or by such other means as may afterwards suggest themselves ;

“ (b) For the convenience of the public, an extension to the city should be made by means of viaduct and tunnels to some site which would permit, when necessary, of a connection with the Milson’s Point line, providing, in this way, an entrance to the city for the northern traffic and a loop line to Redfern.’

“ Mr. O’Connor seconded the amendment.

“ The amendment was negatived on the following division upon the question, ‘ That the words proposed to be omitted stand part of the question ’ :—

Ayes, 11.	Noes, 2.
Mr. Ewing, Mr. Humphery, Mr. Hoskins, Mr. Roberts, Mr. Trickett, Mr. Clarke, Mr. Lee, Mr. Fegan, Mr. Hassall, Mr. Wright, Mr. Farnell.	Mr. O’Connor, Mr. Black.

“ The motion was passed on the following division :—

Ayes, 11.	Noes, 2.
Mr. Ewing, Mr. Humphery, Mr. Hoskins, Mr. Roberts, Mr. Trickett, Mr. Clarke, Mr. Lee, Mr. Fegan, Mr. Hassall, Mr. Wright, Mr. Farnell.	Mr. O’Connor, Mr. Black.”

THOS. EWING,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 25th August, 1897.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY EXTENSION FROM REDFERN TO ST. JAMES'-ROAD.

TUESDAY, 13 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FEGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee proceeded to consider the expediency of extending the Railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park fronting St. James'-road.

Charles Lyne, Secretary, Parliamentary Standing Committee on Public Works, sworn, and examined:—

1. *Chairman.*] What position do you hold? I am Secretary to the Parliamentary Standing Committee on Public Works, and I was secretary to the late Royal Commission on City Railway Extension. C. Lyne.
2. Do you produce a copy of the Report of the Royal Commission, together with the evidence and the appendices to the evidence contained on pages 1 to 146 of the document? I do. 13 July, 1897.

Robert R. P. Hickson, Under Secretary for Public Works, sworn, and examined:—

3. *Chairman.*] You are Under Secretary for Public Works and Commissioner for Roads? Yes. R. R. P. Hickson.
4. You desire to submit a statement? I desire to submit a statement introducing the scheme.
5. You have no desire to express an opinion as to the engineering aspects of the proposal, or as to the profits? No. 13 July, 1897.
6. You will leave those questions to the engineering department and to the Railway Commissioners? Yes.
7. Will you proceed to read the official statement you desire to make? It is as follows:—

As this matter has been so recently gone into by a Royal Commission, composed of the Members of the Parliamentary Standing Committee on Public Works, it is unnecessary to give a very elaborate description of the work.

The following few facts, however, in connection with the early history of the proposal to extend the railway into the city, may be of interest.

The first movement for extension into the city took place, apparently in 1856 or 1857, when Mr. Whitton was appointed Engineer-in-Chief. There is a small plan, dated 1857, on which is a pencil sketch of a street crossing at Elizabeth and Wexford streets, and a map of the city showing in pencil a site for a proposed station in Hyde Park, between Park-street and St. James'-road.

A movement was made in 1861 or 1862 for extension from Redfern into the city. Plans and sections were then prepared for a line to the Circular Quay, through Hyde Park.

Later on a proposal was made and carried out of a horse tramway from Redfern, along Pitt-street, to the Circular Quay—then called Queen's wharf. This tramway ran for about four years, and was taken up about 1860, as it was found to be objectionable in a number of ways.

Between 1866 and 1878 several lines of survey were made, but definite action was brought about by the decision to establish an Exhibition (the Garden Palace), when a tramway was laid down along the present route of the tramways, from Redfern as far as Hunter-street. This was worked by horses—until the steam-motors were provided—for the accommodation of visitors to the Exhibition.

About 1883-84 a proposal was submitted to Parliament, supported by plans and estimates, of an extension of the railway from Redfern through Hyde Park to a principal station between Park-street and St. James'-road; thence a branch was designed along Macquarie-street, in tunnel, nearly all the way to Fort Macquarie. Working plans for this scheme were in process of preparation when a change of Ministry caused a postponement.

Between 1884 and 1889 several schemes were advocated, including more than one traversing the western side of the city along Darling Harbour.

Public agitation on the subject, however, still continued; and, in response to the pressure brought to bear on them, the Government, in 1890, determined to refer the whole question to a Royal Commission.

No definite action, however, was taken after the submission of the Commissioners' report to Parliament, though the question has been brought before successive Governments since that time.

In consequence of a letter, dated 28th April, 1896, from the Railway Commissioners to the Minister for Railways, again urging serious consideration to the subject, the Royal Commission already referred to was appointed; and in the course of the inquiry the question of the extension of the railway to Port Jackson, and eventually to the eastern suburbs, became involved in the discussion.

Several fresh schemes by engineers and others were considered by the Commission, and eventually the plan recommended was for a new terminal station in Hyde Park, at St. James'-road.

According to this proposal, which is now submitted, six lines of rails are extended from Redfern station over Devonshire-street. To get a headway of 16 feet, Devonshire-street is cut down 9 feet; the altered street has a rising grade to Castlereagh-street of 1 in 25, and to George-street of 1 in 60. Through the Cemetery and Benevolent Asylum and police grounds the lines are on bank and in cutting, and after this they are carried on a viaduct as far as Goulburn-street.

R. R. P.
Hickson.

13 July, 1897.

Belmore-road, and other roads and streets, including Goulburn-street, are spanned by steel bridges, leaving a headway for the road underneath of 16 feet 6 inches. Halfway between Goulburn and Liverpool streets the lines run into cutting and pass under Liverpool-street, where an overbridge of an average width of 78 feet and 131 feet long is provided. The level of Liverpool-street remains unaltered. From Liverpool-street to Park-street the lines are at an average depth of 27 feet below the surface, and it is proposed that on this section they shall be partly open to the air and partly covered over in alternate lengths, about half of each. Park-street has to be raised about 3 feet 6 inches. Between Park-street and St. James'-road a width of ground is taken up for the terminus, extending from Elizabeth-street on one side to near the centre walk of Hyde Park on the other, the average depth of the excavation being 12 feet. The station building fronting St. James'-road is 380 feet wide x 60 feet deep, with basement, ground-floor, two upper storeys and attic, and central tower 200 feet high. The main portion of the building on the ground-floor contains a central hall, 65 x 36 feet; booking-hall, 96 feet x 55 feet; refreshment-room, 96 feet x 38 feet; general waiting and ladies' waiting rooms, with lavatories, &c. On the upper floors are placed the offices of the Railway Commissioners and staff, and various traffic offices. Three lifts are provided. On the St. James'-road front is a colonnade for foot passengers, and a covered way 25 feet wide for cabs, extending for the width of the building. There are four double platforms 30 feet wide, one single one 30 feet, and two single ones, 21 feet 9 inches wide each, and they are mostly 700 feet long, and are covered over with steel roof 363 feet wide, rising in the centre to a height of 75 feet above the platforms. On the Elizabeth-street frontage the buildings are two stories high, and extend for a length of 700 feet. The ground-floor on this frontage is divided up into cloak-room, offices for inspectors, porters, &c.; and the upper floor is arranged as offices for the traffic branch. A telegraph office and information bureau are provided on the platform at the end. Opposite Market-street and carried through the building over the platform are two steel foot-bridges, one 15 feet wide, to enable the general public to cross into the Park, the other 20 feet wide, with stairs for access to the various platforms. A parcels office, 210 feet x 40 feet, is placed at the corner of Elizabeth and Park streets and possesses two floors, one on the street-level and the other on the level of the platforms below.

From this office Aspinall's patent overhead luggage carriers can be laid out so as to communicate with the various platforms. There is a cab road 25 feet wide through the building between the platforms, with an entrance at Park-street and exit in Elizabeth-street.

Horse and carriage docks, approached by a ramp 20 feet wide, are placed at the south-eastern corner.

The terminal station faces St. James'-road, and a clear width between kerbs of 60 feet is left opposite the end of the Registrar-General's Office. That office, the Supreme Court, and St. James' Church are left intact, and it is to be observed that, the end of the railway being shut off by a massive building and the lines and platforms being roofed over, no fear of disturbing noises to interrupt the work of the courts or the services of the church need be anticipated.

Elizabeth-street is widened 30 feet from Park-street to St. James'-road.

The length of the railway is 1 mile 10 chains measured from front of building, St. James'-road, to front of existing main building, Redfern. From the end of the rails in the new station to the end of the existing ones at Redfern is about 1 mile 7 chains.

The Railway Commissioners' Report on this scheme is as follows:—

Proposed Extension of the Railway into the City, 1 mile 10 chains.

In accordance with the provisions of the "Public Works Act of 1888," section 13, we beg to report as under:—

Cost of construction—

The Engineer-in-Chief for Construction estimates the cost of construction, inclusive of land and compensation, at £650,000

Annual cost—

Capital expenditure, at 3 per cent. £10,500
Estimated cost of maintaining permanent-way, and for traffic, locomotive, and other expenses..... 8,000

Total annual cost £27,500

Traffic estimate—

By adding 1d. for each ordinary passenger journey, and 1s. 6d. and 1s. per month for first and second-class season ticket-holders, with a percentage reduction per month for tickets taken out for three, six, and twelve months; and 3d. per week for workmen's tickets, a revenue on existing traffic would be realised of £32,000
Saving in rents for offices for the administrative staff 1,365

Total annual revenue £33,365

The estimated revenue from the extension is based upon the existing traffic carried to and from Redfern station; but we fully expect that the shortening of the time required for journeying to and from the suburbs, and the reduction in cost by avoiding the daily charges for cabs, trams, and omnibuses will very soon lead to a great increase in the suburban traffic. Increased rents would also be obtained for the refreshment-rooms.

E. M. G. EDDY,
Chief Commissioner.

CHARLES OLIVER,
Commissioner.

W. M. FEHON,
Commissioner.

8. *Mr. Hoskins.*] Is anything said about a tramway running in front of the station towards Woolloomooloo? No; it is not intended to have one. If the station had been located at Park-street there was a tramway to be run in that street. I hand in a detail plan which Mr. Deane prepared showing the station arrangements.

9. *Mr. Humphery.*] Was the report of the Railway Commissioners which you read to the Committee made subsequent to the finding of the Royal Commission on City Railway Extension? Yes; it was signed by Mr. Eddy a few days before his death. I believe it was one of the last official papers which he dealt with.

Henry Deane, Engineer-in Chief, Railway Construction Branch, Department of Public Works, sworn, and examined:—

H. Deane.

13 July, 1897.

10. *Chairman.*] You are the Engineer-in-Chief for Railway Construction in the Department of Public Works? Yes.

11. Have you a statement to make to the Committee? I have a statement, but I expect that it has been embodied in the Under Secretary's statement.

12. Do you desire in any way to modify or refer to the evidence which you gave before the late Royal Commission? I have an important piece of information to add to my evidence.

H. Deane.
13 July, 1897

13. You do not desire to alter your evidence? I do not wish to alter my evidence, except to say that in working out the estimate the details will be slightly differently arranged, but the total will remain the same, a few pounds more in one item, and a few pounds less in another. The total cost of the extension to St. James'-road is £550,000.

14. Will you state the cost of constructing the running-road and the buildings? I will furnish the information in a day or two.

15. What is the information you desire to add to your evidence before the Royal Commission? I should like to add to my evidence the following: That if it is required at any time to extend two of the lines to Circular Quay or to the eastern suburbs, it can be done without any lowering whatever. The two lines on the eastern side of the station will just be brought together and carried through the end of the building. The level of the top of King-street would be sufficiently high to enable this to be done without interfering with the surface.

16. You regard that as very important—the ease with which the eastern suburbs and Circular Quay can be approached from the station without any alteration of the level of the station? I think it is a very important point. I did not notice it before.

17. The amount of cover being sufficient from the natural surface of the ground? Yes. I can explain the reason.

18. Your attitude is this: Although you were aware of it, the significance of the question has been brought more closely home to you lately—the ease with which it can be done? Not exactly. I did not consider that point. When the Park-street station proposal was laid before the Committee I pointed out that by lowering two lines they could be carried either to Circular Quay or to the eastern suburbs, and when I recommended the extension to St. James'-road, I was asked by the Commission whether it would be equally possible to carry these lines on, and I said it would. But, as a matter of fact, it is very much easier. I did not go into the question at that time, but I noticed, after the Commission had finished their inquiry, that those lines could be carried through without lowering and without alteration of the road.

19. Are the Committee justified in believing that the proposed station at St. James'-road is in a particularly favourable position for an extension to the eastern suburbs and to Circular Quay? Yes.

20. *Mr. Trickett.*] If you will refer to page 130 of the Royal Commission's report you will see that Mr. Eddy gave the following evidence:—

2628. If you have a surface station at St. James'-road for the long-distance trains, would it be possible to extend the line northward? The foundations could be so arranged for the station that two of the lines, or perhaps four if necessary, could be lowered, so as to go forward to the eastern suburbs or to the Quay at any future time.

2629. Then the Hyde Park scheme, as far as St. James'-road, would admit of the extension of the line northward, or to include the eastern suburbs? That is so.

2630. Your opinion is that it should be so carried out? Yes. Mr. Deane has promised to arrange the foundations so that that could be done.

Will you kindly say whether the present intention agrees with that, or in what way it differs? I had already arranged, when it was proposed to have the terminal station facing Park-street, that the foundation should be arranged with an opening, so that in the event of two lines being lowered they could be lowered there without disturbing the building or the surface of the street; and later on, I explained, I think, that the same thing could be done, or at least that the St. James'-road extension would not make that any more difficult. I state now, as a matter of fact, that it makes it very much easier—that there is no necessity to lower the line at all; and the reason of it is this: Park-street, with a terminal station facing it, is nearly on a level; the terminal station platform is as nearly as possible on a level with Park-street, and it would be impossible to get under Park-street without lowering some of the lines; but in the other case, St. James'-road, instead of being a level road, has a very great drop. From the Queen's Statue down to Elizabeth-street, where St. James'-road abuts, there is a difference of 19 feet. At the eastern end of the station, the ground on the road itself will be quite high enough to allow the lines to pass underneath. The arrangement of the levels will be made so that the roadway in front of the station will be fairly level for the traffic; but outside, of course, the slope of the street will have to be maintained. On the map here the Committee will see a double line, which indicates a retaining wall. There is a little difference of level between the roadway in front of the station and the roadway at the upper end of St. James'-road.

21. *Chairman.*] Then an extension from the northern corner of the Park site would be by tunnel to Circular Quay? Yes, it could be carried anywhere from there along Macquarie-street, or diverged to the right if that be preferred.

22. And terminating somewhere to the north of the Treasury? Yes.

23. So that this extension to St. James'-road is a great link in the connection of the railway system of the Colony with Circular Quay? Yes.

24. Have you got the approximate cost of the extension to Circular Quay? The amount is not worked out in detail, but it is about £94,000.

25. Will you describe how your line branches away from the north-eastern corner of the station towards the eastern suburbs? The extension to the eastern suburbs would branch from the two lines I described after leaving the station, pass in tunnel under the Outer Domain and come out to the south of the Art Gallery.

26. You made such surveys as were necessary, and you found that to be a perfectly practicable approach to the eastern suburbs? Yes.

27. Are the Committee justified in believing that this is the first link to connect the railway system of the Colony with the eastern suburbs? Yes.

28. And if the people of the eastern suburbs desire to come into the city they must have the railway station in Hyde Park, or in some similar place adjacent to it? I think they must come that way. I do not see how else they could be provided for.

29. It has been suggested that the terminal station should be placed in Cook Park and Phillip Park, closing up Boomerang-road, and using that area as a railway station;—have you considered that question? I have.

30. What is the length of the two parks along College-street? Six hundred feet.

31. How long do you require a platform to be to give you ample room for such trains as will use a terminal station? We propose to make the platforms 700 feet in each case.

32. Therefore, Cook Park and Phillip Park are 100 feet shorter than a platform? Yes; it is altogether inadequate.

33. To locate a railway station in these parks, one end would be under the Australian Museum and the other under St. Mary's Cathedral? I suppose that is what it would amount to.

34.

- H. Deane.
13 July, 1897.
34. Cook Park and Phillip Park are 100 feet shorter than a platform that would stand in the station, and to talk of putting platforms, refreshment-rooms, ticket-boxes, and all the ordinary apparatus of the railway station in these parks is an absurdity? Yes; it is altogether out of the question.
35. What height is College-street over (say) the eastern portion of Cook Park and Phillip Park? The level of the intersection of College-street and Park-street is 79 feet, and the level of the intersection of William-street and Boomerang-street is 42 feet.
36. Therefore, on the southern side of the two parks one side is 37 feet above the other? Yes.
37. On the northern side, what is the difference? On the northern side the intersection of Boomerang-street and College-street is 83 feet, and the intersection at the lower end is 15 feet.
38. Therefore, not only is this site too small, but one side of it is 68 feet higher than the other? Yes.
39. From an engineering standpoint, it does not recommend itself to you as a suitable site for a railway station? No.
40. Because it is too small, and because it is on a slope? Yes.
41. Speaking as an engineer, without taking into consideration the suitability of the site for commercial purposes, is the suggestion perfectly absurd? Yes. I may state that the length is 800 feet between College-street and Riley-street. On the side facing William-street it is nearly 500 feet.
42. There is not room enough in a northerly and southerly direction (which would be the way the railways would require to approach it) for a platform? No.
43. What is the distance from St. James'-road to Park-street? The length from the front of the colonnade in St. James'-road to Park-street is 1,150 feet.
44. Are Cook Park and Phillip Park as satisfactory a position from which to approach the eastern suburbs as the proposed Hyde Park site? For that purpose that site could be utilised as well as the other, I think. The facility of getting away to the eastern suburbs would not be affected.
45. Does it furnish as good an approach to Circular Quay from Cook Park and Phillip Park as the other does;—I presume you could not approach the Quay? Yes; you could tunnel there just as well, I expect. The great point is that it is perfectly impracticable to make a railway station there. If you approached under William-street, I think you would interfere seriously with the levels of that street.
46. *Mr. Humphery.*] Will you explain how it will be necessary to approach the terminal station, assuming it to be placed at Cook Park and Phillip Park? I do not know how you would arrange the approach. If the face of the station were against Woolloomooloo-street, you would have to approach it from the Australian Museum, or underneath it.
47. *Chairman.*] Do you say that it would be an awkward place to approach? Yes.
48. And that the whole scheme is impracticable? Yes. It is the wrong shape altogether.
49. It has been suggested also that between Macquarie-street and Elizabeth-street on the east and west, and Goulburn-street and Liverpool-street on the south and north, a railway station could be made just south of the Park;—does your contour map show you the level between Liverpool-street and Goulburn-street? We have the levels of those streets on a section. I should like to point out here that one object to be gained with a terminal station is to bring it up as near as possible to the level of the street facing it, and therefore if it were brought up to the level of Liverpool-street you would get a very great drop from there southwards, but the distance between Goulburn-street and Liverpool-street is not sufficient.
50. What is the difference in the height of the streets? On the centre line of the railway at Liverpool-street the level is 85 feet, and Goulburn-street is about 55 feet.
51. What is the length between Goulburn-street and Liverpool-street? It is only about 500 feet.
52. Not room there for a platform? No.
53. Therefore, there is not length enough to put a platform in the blocks, and it has the serious objection of one end being 30 feet above the other? Yes.
54. The thing is impracticable? To get enough length you would have to go back as far as Campbell-street.
55. What fall have you got to that street? You have there a difference of 48 feet.
56. One side of the station would either have to be cut down 48 feet, or the other be up in the air 48 feet—the thing is perfectly impracticable, is it not? It is impracticable. I looked into that matter some time ago at the request of the late Chief Commissioner, who was desirous of knowing how the levels would suit. I found that it was impracticable, and he quite agreed, of course, that it was.
57. No railway to be extended to North Shore could be of service, with regard to any traffic, passenger or otherwise, on the Sydney side? No; it would either be a long way above it or a long way below it.
58. A bridge must be about how high approximately? 180 feet.
59. If the railway be going to the northern suburbs across the harbour it must be 180 feet above the foreshores approximately? Nearly.
60. And if you should be going to North Shore by tunnel it must be 60 feet under the foreshore? Yes.
61. And the tunnel would require to commence a considerable distance back from the foreshore? Yes.
62. Therefore, no railway to be extended to North Sydney could be part and parcel of any scheme to carry passengers or traffic between the foreshores of the harbour? No.
63. I think the railway-station building you proposed was to cost a large sum;—how much was that sum? £133,000.
64. Is that the cost of the building we see on the plan here? Yes.
65. *Mr. Lee.*] That building was estimated to cost £200,000? By getting rid of the superfluous offices, it brought the cost down to £200,000, including the roof over the platforms.
66. *Chairman.*] Will that estimate of £133,000 enable the Commissioners to have their offices at the railway station? Yes. The original proposal was to have three storeys and the roof; but the present proposal is to have two storeys above the ground-floor.
67. Does your present proposal give ample accommodation to the Railway Commissioners? It gives ample accommodation to the Railway Commissioners, and to the whole of their staff.
68. The design you show us gives all the accommodation that is required, and the Railway Commissioners will be able to save office rent by being located at that place? Yes.
69. *Mr. Clarke.*] Do you know the difference in cost between the old design and the present design? No; but I suppose to add another storey would make a difference of £20,000.
70. *Chairman.*] Did the taking out of a storey save £20,000? Yes.
71. What are the Commissioners now paying for office rent? On page 3 of the Report of the Royal Commission, the Commissioners say that they would save rents to the extent of quite £1,500 a year.

72. Will the station be roofed in right to Park-street? No; only about 600 or 700 feet back. The roof, made of glass and iron, will extend nearly the length of the platforms. H. Deane.
73. Will you explain the construction of the main roof? It is a segmental roof of iron and glass, supported by steel columns. 13 July, 1897.
74. *Mr. Trickett.*] What kind of appearance will the exterior roof present? A very nice appearance; it will be in one arch.
75. *Mr. Lee.*] Like the roof of the Exhibition building in Prince Alfred Park? Yes. It is all in one, so that you will be able to see from one end of the building to the other without interruption, except by standing trains. Anyone crossing on the footbridge in the middle over the platforms will have a very good view of the station. I think it will have a very presentable appearance.
76. *Mr. Black.*] Do you intend to have an engine-shed in connection with this proposed station? No; the engines will have to go up to Redfern and Eveleigh.
77. *Mr. Humphery.*] Have you amongst the designs the Elizabeth-street elevation? It is shown best by the perspective drawing. The buildings in Elizabeth-street have only two storeys, and they run to about the end of the platforms. I have included the cost of that right to the end, although it is possible that a few bays might be cut out.
78. *Chairman.*] In your opinion, will the buildings be an ornament to the city? They will.

WEDNESDAY, 14 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FIGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee further considered the expediency of extending the Railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

Henry Deane, Engineer-in-Chief, Railway Construction Branch, Department of Public Works, sworn, and further examined:—

79. *Chairman.*] Will you describe in detail how you propose to extend the railway system of the Colony from Redfern station to Hyde Park? Six lines of railway, as shown on this plan, are extended over Devonshire-street. H. Deane.
14 July, 1897.
80. *Mr. Lee.*] Will you identify the six lines? The two centre lines in the old building, the line at No. 8 platform, and the lines at platforms Nos. 3, 2, and 1.
81. *Mr. Wright.*] What length of Devonshire-street will you cover over with these six lines? The most westerly line will take about 18 feet, the central pair of lines will take about 28 feet, and the next three lines will take about 46 feet.
82. Not more than 100 feet of Devonshire-street will be covered? That is the length approximately. After crossing Devonshire-street the lines converge to a point along the boundary of the Benevolent Asylum grounds.
83. *Chairman.*] Will you state the area of land taken in the Cemetery and the Benevolent Asylum grounds? The area of the Cemetery taken is 3 roods 10 perches, and the area of the Benevolent Asylum grounds taken is 2 roods 14 perches.
84. With regard to the Benevolent Asylum, do you interfere with the buildings there? Not with the main buildings; only with a portion of, one of the outhouses.
85. How far to the east do you pass from the main building of the Benevolent Asylum? About 100 feet. From that point to near Park-street the lines are approximately parallel to one another. The extension next passes through the police grounds, and the area taken up is 1 acre 3 roods 1 perch. Some of those buildings will be interfered with.
86. Are the buildings of any importance? I think the barracks will have to be moved.
87. *Mr. Humphery.*] In what way do you pass over Belmore-road? With a steel bridge.
88. *Mr. Lee.*] Will it be necessary to lower Belmore-road? No; we do not interfere with any streets until we get to Park-street.
89. *Mr. Wright.*] Will you mention here the headway of the bridge above the road? There will be a minimum of 15 feet 6 inches.
90. *Chairman.*] The viaduct commences on the eastern side of Belmore-road? It commences really on the southern side of Belmore-road, because the bridges over the roads form part of the viaduct. After leaving the police grounds, till it passes over Goulburn-street, the line is in viaduct with brick arches where streets are not intersected, and steel bridges where the streets are intersected.
91. The viaduct ceases at Goulburn-street? It ceases just on the northern side of Goulburn-street.
92. After you pass Elizabeth-street, which bounds Belmore Park on the east, your land resumption commences? Yes.
93. The resumption being necessary either with a viaduct or for a tunnel? Yes.
94. In both instances you propose to resume land? Yes.
95. Will you describe the route from passing over Elizabeth-street at Belmore Park? Elizabeth-street will be crossed by means of a steel bridge; it will be on the skew.
96. *Mr. Lee.*] It appears to be a series of arches? You are looking at the elevation facing the line, and you see the projection of the sides. The arches are designed to save brickwork.
97. The crossing of Devonshire-street and Belmore-road will have one span, whereas the crossing of Elizabeth-street will comprise a number of openings? Not necessarily. It is shown on the plan from one side to the other. The reason why you see that work shaded dark is that in looking through the bridge, and it being on the skew, you see the face of the abutment. In order to save such a tremendous lot

H. Deane. lot of brickwork that there otherwise would be, I have shown it broken through. That is how it is that these arches are shown on the plan. The other streets are for the most part practically square, with the exception, I think, of Wexford-street.

14 July, 1897.

98. It has two openings? No; Wexford-street is intended to be exactly the same.

99. *Mr. Wright.*] Are the brick piers arched themselves to save brickwork? Yes, where possible. I do not intend those to be the actually-adopted design. They are merely sketches to show what might be done.

100. *Mr. Hoskins.*] You do not propose to take any portion of Elizabeth-street after you have crossed here? No; it will be entirely bridged over.

101. And in regard to Nithsdale-street, what do you propose to do? We have to take Nithsdale-street.

102. *Chairman.*] Will you now describe your land resumptions in full? The area of Belmore Gardens, which is taken up by the piers, is 1 rood 18 perches; the freehold land taken up between Elizabeth-street and Liverpool-street is 2 acres 13 perches; and Nithsdale-street and the lanes which are taken up make 1 rood 39 perches.

103. *Mr. Wright.*] Can you tell us the number of buildings to be demolished between Elizabeth-street and Liverpool-street? No.

104. *Chairman.*] The resumptions approximate to £100,000? Yes. The reference book will show the number of properties the railway would go through.

105. *Mr. Hoskins.*] Do you come out near the Unitarian Chapel? Yes; we have to absorb Nithsdale-street. From about halfway between Goulburn-street and Liverpool-street we enter into a cutting, and the lines pass under Liverpool-street. Liverpool-street will be covered over by a bridge, but the levels of the street will be unaffected.

106. *Mr. Roberts.*] How far east of Elizabeth-street does the proposed line cross Goulburn-street? About 195 feet.

107. Would that be the corner of Nithsdale-street and Liverpool-street;—about what point would it enter Hyde Park? Nithsdale-street runs down about the centre of the location of the railway; the railway enters into a cutting about halfway along Nithsdale-street.

108. *Chairman.*] You then pass into the Park under Liverpool-street, which remains unaltered, and you proceed through the Park parallel pretty well to Elizabeth-street at a depth of—how much approximately? At an average depth of 27 feet.

109. How much is left open? About half; and the area is 1 acre 20 perches.

110. How wide is the space occupied by the running-road through the Park? I think it is 85 feet.

111. What is the length of the opening you leave in the Park? The area of the openings is 1 acre 20 perches, and the area closed is about the same. That is to say, 1 acre 20 perches will be restored as surface of the Park, and 1 acre 20 perches will be left open.

112. Do you apprehend any difficulty in preserving the paths in the Park for pedestrian traffic as at present? No; I do not think there will be much difficulty.

113. As an air-space, is this land taken from the Park, or does it still remain as an air-space? I do not think I quite understand the term, because you would be able to see across the space if it is guarded with iron railings. The store of atmosphere is there for the use of the public. We do not take it up.

114. *Mr. Black.*] You temper it with smoke? I daresay.

115. *Chairman.*] What is the length of your first opening? I would rather not give these lengths, because they are subject to variation. I pointed that out to the Commission. I do not wish it to be understood that these have been definitely fixed.

116. You desire to have an open area of 1 acre 20 perches to adjust it, so that you can do it with the least injury to the Park? Yes.

117. Will that area be increased? I do not think so; I do not see how it should.

118. There is no reason why it should be increased? No.

119. *Mr. Lee.*] Will these openings be placed in such a position as to interfere least with the traffic? I desire to leave the position open for that very purpose.

120. How will they be protected from the public? I propose to close them round with iron railings. This matter was discussed before the Commission, and I gave evidence to show that they could be railed round instead of walled round, as at first proposed, so that the view across the Park would not be interrupted.

121. *Mr. Humphery.*] Does that mean that the total area to be taken for the use of the railway will be 1 acre 20 perches, and the 10 acres for the terminal station? Yes; that is in addition to the 10 acres for the terminal station.

122. *Chairman.*] Do you propose to make any alteration in the level of Park-street? Yes; it will be necessary under this proposal to raise Park-street.

123. Will it materially interfere with the grade of the street? No.

124. How much will it interfere with the street? About 3 feet 6 inches.

125. It will not be detrimental to the street? No; it will not hurt it.

126. *Mr. Wright.*] I suppose you will restore Park-street to its original level? I suppose that will be about it. I shall endeavour to make it as small as possible.

127. *Chairman.*] Immediately north from Park-street the lines begin to spread? Yes.

128. Do you desire to add anything given to the description of the station as given by the Under Secretary? No.

129. It is explained in this statement that you propose to extend the width of Elizabeth-street? Yes.

130. *Mr. Hoskins.*] Would it not be a good thing to explain how you propose to get at the central station by approach roads? St. James'-road will not be interfered with. I do not interfere with any of the existing roads.

131. You propose to make an approach road through the school-yard? Yes.

132. I think it would be a good thing to take in a house or two at the corner of Market and Elizabeth streets, and come round in a half-circle;—your roads which skew round will cause a very considerable turn? I do not think so.

133. *Chairman.*] Will you be good enough to explain your views on this point? The cab road shown on the plan will have its entrance in Park-street. The cabs will wait for the arrival of trains, and they will have to pass out into Elizabeth-street, which street is widened under this arrangement by 40 feet. As soon as the cabs get outside they can diverge along Elizabeth-street, south or north, or pass across the

tramway

H. Deane,
14 July, 1897.

tramway into Market-street, or pass away along St. James'-road, or cross the tramway and go into the new street I recommend opposite the front of the building.

134. The cabs to which you referred are only those cabs which deal with the long-distance traffic, and which are the only ones likely to run between the long-distance platforms, and the main approach to the station will be at St. James'-road? It is only the cabs meeting the arrival trains which have to be dealt with. People who are reaching the station by cabs to leave by the trains will have to go up to the main entrance, and they will go under the covered way in front of the station. They can approach from that direction, or they can get down St. James'-road, or come up across from Castlereagh-street, as I suggest, by means of this new street to be opened out across where the High School stands. I think it will be found that every facility is given to the traffic.

135. What is your view of that as a commercial transaction, the Government being the owners of the land between the Mont de Piété and Market-street? If I were the owner of the land it is just the thing I should do, because I would get more frontage, and would recoup myself by the sale of the balance. I think the Government have a very good property there. If this station is made that land will become very valuable, and the proceeds of sale or lease of the new frontage as well as the old will be increased by the new street. It would more than recoup them for any expense they would be under in making the road, or building a new High School.

136. In your opinion, would it be a wise thing to widen Market-street between Castlereagh-street and Elizabeth-street? I do not think there is any necessity for it.

137. *Mr. Hoskins.*] Do you not think that you could make a better approach to the station than by that sharp turn through the school-ground? No. I think the proposed road through the High School ground is the best, because you can drive direct on to the front of the station, which you want to get at.

138. *Mr. Wright.*] Do all the passengers enter from that front? All passengers arriving in cabs.

139. Including passengers going to catch mail-trains? Those going by mail-trains will all go to the front of the station.

140. *Chairman.*] Cabs to meet people arriving by long-distance trains will go up Market-street and along the cab-road, and, therefore, will not go to the front of the station? No.

141. What is the width of the land between Castlereagh-street and Elizabeth-street? It is nearly 150 feet.

142. What is the width of your station, as designed in Hyde Park? 380 feet.

143. That is two and a half times as wide as the distance between Castlereagh-street and Elizabeth-street? Yes.

144. Therefore that width between Castlereagh-street and Elizabeth-street is one and a half times too narrow for the terminal station? Yes.

145. It would require to be two and a half times as wide as it is to accommodate a terminal station? Yes.

146. What is the length of the land from the Mont de Piété Company's northern boundary to Market-street, being the land owned by the Government? The length from the Mont de Piété boundary to Market-street is about 365 feet, and from King-street to Market-street 515 feet.

147. What is the length of your station in Hyde Park, which we presume is a suitable length, including buildings and platforms? About 1,150 feet.

148. It has been suggested by some persons that the block of land bounded by Market, Castlereagh, King, and Elizabeth streets should be utilised for a railway-station site. Is this your statement: That the width of the block is 153 feet, whereas you require a width of 380 feet; that the length of Government ground in the block is 365 feet; that the total length from King-street to Market-street is 515 feet; that since a length of 1,150 feet is required, it is clear that it is only half as long as it ought to have been, and the width stated proves that it is one and a half times too narrow, and therefore that it is simply ridiculous to locate a station there? Yes.

149. Will you explain how, with the additional importance of the eastern suburbs traffic and the traffic to Circular Quay, you propose by these two lines—one to the eastern suburbs and one to Circular Quay—to relieve Hyde Park station;—you propose to take some of your suburban trains before very long down to Circular Quay? The lines are capable of extension to Circular Quay and to the eastern suburbs.

150. *Mr. Black.*] How will it relieve Hyde Park station? By doing the shunting at Circular Quay, and in other ways.

151. *Mr. Lee.*] Will an extension to the eastern suburbs or to Circular Quay necessitate taking any further portion of the Park? No.

152. *Mr. Wright.*] Will an extension to Circular Quay or to the eastern suburbs relieve the Hyde Park station? Yes; an extension to Circular Quay would, because you could do some shunting down there.

153. Suppose the present traffic increased fourfold, would the proposed station at Hyde Park, with an extension to Circular Quay, be sufficient to cope with that traffic without taking any more land? Is that not rather a traffic matter?

154. It strikes me that it is also an engineering matter? This station is capable of accommodating a very large amount of traffic—very much larger than we have at present.

155. You would rather leave that matter to the Traffic Branch? I think it might be left to the future. I think it has been stated before the Commission that this station would be good enough for the next twenty years.

156. If the traffic should increase fourfold, do you think the proposed station would be large enough? I think that four times the amount of traffic we have at present on the railways could be brought into this station at Hyde Park.

157. *Mr. Black.*] Where are you going to find room for shunting at Circular Quay? Not on Circular Quay itself, but in Government House grounds.

158. *Chairman.*] A little below the Treasury, where the row of fig-trees runs down towards the Tarpeian Way? Yes; you will remember that I submitted a plan which I was asked to prepare, and the Chief Commissioner for Railways quite agreed with the feasibility of that scheme if it were necessary to do it.

159. It has been suggested by some people that it might be possible to have the terminal station along the western side of Sydney Cove, towards the A.U.S.N. Co.'s property;—have you ever thought of that? Yes.

160. Are you aware of any area of land which the Government own there? Yes; they have the Commissariat Stores.

- H. Deane. 161. What area have they got? I have not the particulars here, but I will get the information for the Committee if desired.
- 14 July, 1897. 162. Have you considered at any time the possibility of putting the terminal station between Circular Quay and Dawes Point? Not such a terminal station as is provided here.
163. You do not know what area of ground the Government have got;—could it be done without expensive land resumptions? It depends on what you want to do. You could not put a terminal station like this down there without expensive resumptions.
164. Why? The site would not be suitable. It would be too far down through the city.
165. And it must be approached by tunnel? No doubt it would.
166. *Mr. Wright.*] You could not put a terminal station there without utilising a portion of George-street? No; there would not be enough width.
167. *Chairman.*] What is the width between the eastern side of George-street at the intersection of Argyle-street and high-water mark in Sydney Cove? By the scale it is 230 feet.
168. That embraces the approaches to the wharfs and the wharfs themselves? Yes.
169. If you built a terminal station you would still want some way to approach the wharfs? Yes.
170. If you take off 50 feet, it gives you 180 feet between the eastern side of George-street, and a fair approach to the wharfs, and if you want 350 feet for a terminal station, and there is only a width of 180 feet in there, it is clear that it is not more than half as wide as it requires to be? The width of the block only scales 160 feet.
171. It is not much more than half the width you require, and it would obstruct the approach to the cove? It is only about the same width as the land between Castlereagh-street and Elizabeth-street.
172. You regard it as impracticable to have a big station there? It is quite impossible to have a general terminal station there.
173. Do you regard it as an impracticable thing? To have a terminal station there for general purposes, certainly. Some years ago it was proposed to bring a line round there, and to terminate there, but that scheme, which was marked L before the Commission, did not embrace bringing the whole of the traffic into the city. It was made a good many years ago, and since then the traffic has largely increased.
174. Could the site you have been referring to recently be approached otherwise than by tunnel? No; I think a tunnel would form part of the approach.
175. Unless you incurred a very large expenditure in land resumptions? Yes, in any case.
176. Then the scheme itself would be costly, and as a terminal station it would be defective—in fact, impracticable? Yes.
177. The size of the land renders it impracticable? Yes; it is in the wrong place for a terminal station.
178. What area of Government land is there along there? I could not say at the present moment.
179. What is the length of the A.U.S.N. Company's land in a northerly and southerly direction? It is about 680 feet measured along George-street.
180. What is the fair width? The average width would be about 320 feet.
181. Even if you were prepared to discard everything else, and you could get there, the area of land is not sufficient if you take the whole of the A.U.S.N. Company's land? No.
182. Have you considered Dawes Battery as a possible site for a terminal station? I would not consider any of those sites for a terminal station for the whole of the traffic, because it is too far through the city.
183. The adoption of any of those sites means either a tunnel or heavy land resumptions, and carries with it the subdivision of the traffic, the long-distance traffic still remaining outside the city at Redfern? Yes.
184. Your objection to the Government House site is that a railway station in that position means directly the erection of a new Government House, that it destroys a better park than Hyde Park, that the approach is by tunnel, and that it is not a central position for a railway station? Those are objections I have already given.
185. It is suggested also that the station site should be located south from the Sydney Hospital between that building and the top of St. James'-road, that is occupying the Mint and the District Court;—will you give the length of that block? From the front of the old Government Architect's building to the division of the Mint and the Sydney Hospital the distance is 420 feet.
186. To put a railway station in that position is ridiculous, the site not having half the length you want? Yes. If it were allowable to go anywhere near there, the only place which would be at all suitable would be the Domain grounds.
187. Is your view that it would be rather too close to the Hospital building, that it would interfere with the Domain, which is almost as important as Hyde Park, and that you would locate your station out of the way rather than close to the traffic? Yes, I have given evidence on this before the Royal Commission.
188. *Mr. Clarke.*] As you intend to widen Elizabeth-street by 40 feet, is there any necessity to have a road from Castlereagh-street to Elizabeth-street near the Mont de Piété property;—I understood you to say there was no necessity to take any portion of that block for a road? I think I have always recommended that an approach should be made from Castlereagh-street.
189. I suppose for the purpose of accommodating the passenger traffic and cabs? Yes; then they would be able to get access to the station without running alongside the tram-line between King-street and St. James'-road.
190. You think it would be absolutely necessary to have that road made? I should strongly recommend it.
191. *Mr. Fegan.*] You must ultimately require, as the traffic increases, all that space where the buildings are erected on Government land between Elizabeth-street and Castlereagh-street? I do not think it will be wanted for traffic purposes. I do not see why it should be wanted.
192. As an open space for the convenience of the public? I do not see that there is any necessity for it. It would be too large a space to leave entirely open. If it were cleared, it would have to be partly enclosed and part left for roadways.
193. I suppose that space would not be large enough for building the offices? There would be no object in doing that. It could be much better utilised in another way.
194. Nothing would be gained by building on that space? Nothing whatever—in fact, it would be a loss, because if you have the ground in Hyde Park the most economical way to utilise it is to build the offices over the station and use the other ground for something else.
195. *Chairman.*] You stated before the Royal Commission that you believed it is desirable that the approach to the main central station should be in open air as far as possible, not in tunnel? I did.
196. Do you desire to amend that statement in any way? No.
- 197.

H. Deane.
14 July, 1897.

197. You still maintain that position? I still maintain that position. I am only sorry to have to recommend that any portion of the Park should be covered in. It would be very much better to leave it open as far as the railway traffic is concerned.
198. You feel that you must keep it as intact as possible? Yes.
199. Have you had an opportunity to see the estimate of the cost of resuming an approach from Hyde Park as far as Circular Quay through the city of Sydney? No.
200. Have you not considered the cost of the land resumptions? No; I have only heard what Mr. Perdriau said. I have not had time to look into the matter.
201. I presume any extension which necessitated a resumption of property between Circular Quay and Redfern would be tolerably expensive? Yes, no doubt.
202. Have you any reason to doubt Mr. Siever's and Mr. Perdriau's estimates? I have no reason to doubt their estimates. I have not looked into them.
203. *Mr. Roberts.*] In the event of the railway being extended from St. James'-road, what route would you adopt for an extension to the eastern suburbs? The map which is attached to the report of the Royal Commission was made at its request, in order to show what lines were possible. It is not to be understood that I recommend that all these lines shall be carried out; nor should I, if I had to consider any one particular line, necessarily follow the location of these lines put down there to a few feet, or even to a chain or two. With regard to an extension to the eastern suburbs, the line which is shown there roughly indicates the way the extension would curve off to the right. It is very likely that it would be shortened, and might have a location further south; but there is no difficulty about getting away under the District Court, or the Hospital, or the Houses of Parliament, or wherever we may like to go. You only have to continue the lines on the eastern side of the station without altering their levels, and you get under King and Macquarie streets with plenty of depth.
204. *Chairman.*] It will turn off a little to the north of the station in tunnel and pass over Woolloomooloo, and then how will it proceed? I think the dotted line on the map shows the line which was examined some years ago. It passes over Woolloomooloo with a viaduct, then enters a tunnel, and goes under William-street, and emerges somewhere near the Public School in Liverpool-street, then goes for some distance roughly parallel to Glenmore-road, then close to Hargrave-street, and under Edgecliffe-road, and so on.
205. Eventually it will join the Illawarra line about St. Peters? Yes.
206. *Mr. Lee.*] Is it intended to continue the tram-line along Devonshire-street, or will any alteration be made? I propose to keep the tramway along Devonshire-street. I have not provided for any diversion of the tramway in this scheme.
207. Will the scheme necessitate an alteration in the route of the tramway? No; the tramway will be lowered with the road.
208. It will still run down Devonshire-street? Yes.
209. Is there to be a level entrance to the terminal station from St. James'-road and down Elizabeth-street? You will get in at the platform-level at St. James'-road and at the cab entrance or exit opposite Market-street. Otherwise the whole of the railway will be below the surface of the ground. The platform-level approaches the level of the street at the corner of St. James'-road. The main building will be at the level of the street. The ground from the end of St. James'-road up to Park-street, rises 10 feet and the lines have a falling grade, so that there is an increasing divergence between the levels of the railway and the road and the railway and Elizabeth-street. On the Park side of the line the ground is very much higher; it is, roughly, about 20 feet higher than Elizabeth-street is, opposite the end of St. James'-road, so that there the station will be sunk below the surface of the ground about 20 feet.
210. As a matter of fact, on the Park side, when you have excavated to the required depth, and your railway is on the boundary-line, the train-work will go on there and the public will not see it? Yes.
211. Practically, it will be out of sight? The greater part of it will be enclosed by the big roof.
212. And it will be out of sight? Beyond there, there will be a neat wall up as far as Park-street, which will shut in the rest of the station.
213. As far as the levels are concerned, the points of exit and entrance are on the platform-level? Yes.
214. *Mr. Roberts.*] Have you provided for a station between St. James'-road and Redfern? No, not in this arrangement.
215. *Chairman.*] One could be arranged at Liverpool-street? It could easily be arranged if required.
216. *Mr. Fegan.*] That would involve additional cost? Yes; but I do not think it would be very much.
217. *Chairman.*] It is only a passing station? That is all.
218. *Mr. Humphery.*] Have you included in your estimate of cost the expense which will be involved in the alteration of Redfern terminus so as to work in with your proposed extension? Yes; I have £20,000 down for alterations at Redfern and additional accommodation.
219. Do you regard the estimate you have given the Committee as ample to cover the whole cost of the terminal station, the extension from Redfern, and compensation, together with the resumption of land? As regards the construction, I think the estimate is ample. As regards the resumption of land, I have really had very little to do with it. The land valuer furnished the estimate some time ago, since which the value of properties has fallen. Against that again, we are proposing to take a little more land, but I believe that that item in the estimate for land resumption is about sufficient.
220. Will there be any difficulty in providing a level station at or near Liverpool-street? No; it could be arranged. You would only want platforms for two of the lines.
221. Can that provision be made without additional cost for resumption of land? I think an extra width would be required if the station were placed between Goulburn-street and Liverpool-street. You would have to widen out, so as to permit of the platforms coming in.
222. What additional width of land would be required? I suppose you could arrange that by putting in two 15-foot platforms.
223. You would require a strip of land from 30 to 35 feet wide between those two streets? Yes; but I think it is very possible that after all there would not be as much land as that to resume in addition, because, in taking the land for the lines we have laid out, some additional amount would have to be purchased on account of the interference with property.
224. Are you prepared to say it is probable that the resumptions which will be necessary for the railway extension will provide you with sufficient space for a passenger station near Liverpool-street? Yes; I think it is probable, except at the frontage of Liverpool-street and Goulburn-street.

- H. Deane. 225. You propose to raise Park-street about 3 feet;—what is the present gradient of the street, and what will be the gradient of the street when it has been raised as you propose? I would rather give you these figures after careful consideration of the levels, but I think it will be roughly this: That, instead of having a grade, as we appear to have on taking the measurements in this map, of about 1 in 40, we should have a grade of about 1 in 28.
- 14 July, 1897. 226. That is for a short distance between Elizabeth-street and College-street? Yes. For Sydney, at any rate, it is a very easy grade.
227. Is that the only street which will be materially affected by the extension after passing Devonshire-street? Yes; the others are retained at their present levels.
228. *Mr. Lee.*] How do you think you would dispose of the spoil from the excavations in the tunnels? It would have to be carted through the city. I have considered the matter of the spoil. It might be utilised in the case of any further reclamation, say round Glebe Island. Some might be used for filling in the resumed area in Pyrmont Bay. If it came to the worst, and there was no place to put it, it might be run down and put into lighters, and taken outside the Heads.
229. Would it all be carted away from the respective sites? Yes. I would prefer to run it away by rail, if I could get it away conveniently.
230. I suppose a portion of the spoil might be taken away in that way if necessary? It might be done at night by running it away on the tramway, but it would have to be done after the traffic ceased.
231. *Mr. Fegan.*] You said you could not say approximately what the resumptions would cost? The amount in the estimate is £100,000, which I think is a fair one.
232. You allow £100,000 for resumption, and £550,000 for construction? Yes.
233. It would mean an extra amount of rolling-stock as well? I think so.
234. It is estimated to cost £650,000 apart from the proposal of the Commissioners to resume the Cemetery at a cost of £100,000, and to make a park there in exchange for a portion of Hyde Park? Yes.
235. So that the total cost is estimated at £750,000? Yes.
236. Would the formation of the new street you recommend from Castlereagh-street to Elizabeth-street mean the destruction of the High School? Yes. The rest of the ground, which is not wanted for the street, could be utilised for buildings. The land could be let or sold for building purposes. It would be very valuable land.
237. In that way the Government would recoup themselves for the destruction of the High School? Yes, it would more than do that.
238. Have you altered the original plan of the central station which you exhibited before the Commission? If you are referring to the perspective sketch of the building, yes. I have cut out a storey.
239. And the difference in cost will be what? The difference is already provided for in the recommendation of the Royal Commission. The original idea of the building giving an extra storey would have made it about £25,000 more.
240. The estimate of £650,000 does not cover that? It does not cover the extra storey. It covers two storeys above the ground-floor and the roof.

THURSDAY, 15 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.	CHARLES ALFRED LEE, Esq.
The Hon. JAMES HOSKINS.	JOHN LIONEL FEGAN, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	THOMAS HENRY HASSALL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	GEORGE BLACK, Esq.
The Hon. DANIEL O'CONNOR.	FRANCIS AUGUSTUS WRIGHT, Esq.
HENRY CLARKE, Esq.	FRANK FARNELL, Esq.

The Committee further considered the expediency of extending the Railway system of the Colony from the present Terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

John Parry, Outdoor Traffic Superintendent of Southern Lines, Department of Railways, sworn, and examined:—

J. Parry. 241. *Chairman.*] What position do you hold in the Railway service? I am Outdoor Traffic Superintendent of Southern lines.

15 July, 1897. 242. The Redfern station is under your control? Yes.

243. Have you a statement which you desire to make? I have prepared a short statement to emphasise the evidence I gave before the Royal Commission on the 23rd February last. In my evidence I gave a very full description of Redfern station. In order to emphasise the necessity for increased accommodation, I think I could not do better than read a few extracts from a report I made to the Railway Commissioners in connection with the holiday traffic on Eight-hour Day in 1896. The traffic on that day was particularly heavy. There were some delays to trains in the evening, and the Commissioners asked me to report as to the cause of the delays, and from that report I will now read some extracts:—

The whole of the trains in and out of Sydney worked well during the day until about 7.30 p.m., after which time the return trains from the South Coast line suffered delays between Harstville and Sydney, in consequence of Sydney yard becoming congested through not being able to stow away empty trains, after being discharged, quickly enough; and due to marshalling of mail-trains and to the principal platforms being occupied by mail-trains, &c., loading up passengers for departure.

The whole of the vehicles of the Northern, Southern, and Western mail-trains had been in use for excursion traffic during the day, and these had to be remarshalled after arrival in the evening into proper order to go out at night, two divisions of which had to be run for South, and one West, and a special South Coast at 7.30 p.m.; a louvered van had to be shunted on to the Western mail, one louvered van and two horse-boxes on to the Southern mail, and these had to be shunted from the horse-dock sidings, across the whole of the lines, to No. 5 platform. This shunting and marshalling appears simple in itself, but the work occupied the lines a considerable time, and caused delay to incoming trains.

J. Parry,

15 July, 1897.

It is only possible to run trains into Nos. 1, 2, and 3 platforms from the up slow line inside the yard, and as Nos. 1 and 3 are used for down Homebush, Belmore, and Illawarra suburban trains, it will be readily seen that the accommodation for the large number of additional excursion trains is very limited. To cross the trains from the slow to the fast lines at the tunnel and Illawarra Junction involves blocking back trains on the up and down fast lines; and after arriving in Sydney the trains have to be shunted right across the whole of the lines again to store the carriages either in Redfern carriage-sidings or goods-yard, or run to Eveleigh shunting-yard, for it must be remembered we have no extensive sidings on the up side where trains can be run into direct and stored on a busy day, such as this was.

The platform accommodation on the fast-line side of the station is also very limited. No. 5 platform was occupied by the Southern and Western mails to load up, and No. 6 with Parramatta trains arriving and standing ready to depart again, for it must be understood that they cannot be shunted away and brought back again at such a busy time as this was. Nos. 8 and 11 were used for trains arriving from the fast line; but having to shunt the empty carriages across the whole of the yard to the carriage-sidings, or to go to Eveleigh, involved delays to other trains; but Nos. 4, 7, 9, and 10 platforms are useless for trains to arrive at, they being too short.

Eleven up Roschill trains were run into the goods-yard to the temporary platform to discharge passengers.

At the goods-yard loading-stage these trains had to be diverted on to the goods line at Illawarra Junction; and to pass through the goods-yard sidings, and over points which are not provided with signalling or interlocking appliances to ensure safe working, and this is very undesirable, but which was absolutely unavoidable under the present conditions.

I have prepared a statement showing late arrivals into Sydney between 7 p.m. and 9.30 p.m. of trains from the Illawarra line.

I am quite satisfied that the staff did their best to get through the exceptionally heavy traffic with the least possible delay, and in my opinion did very good work with the facilities available; but the platform accommodation at Redfern is totally inadequate for dealing with the ordinary daily business, and it is therefore a matter of surprise to find the largely-increased number of trains above any previous day on record having worked so smoothly as they did. I would, however, respectfully urge that the question of largely-increased accommodation be taken seriously into consideration, for, under existing circumstances, the shunting and directing staff are under the greatest tension in dealing with the trains; in fact, I am strongly convinced that the factor of safe working is largely exceeded, and unless relief is afforded, I am unable to see how the growing business can be satisfactorily dealt with. I recognise the largely-increased facilities which have been given by the Commissioners since 1888, and their readiness to suggest and provide additional relief, but the requirements cannot be met by altering and adding to the existing station and I feel it my duty to report in no uncertain language what I strongly feel in regard to the risk to safe working we are incurring by continuing in the present contracted space.

In this report I have not dealt with the inconvenience to the general travelling public through want of accommodation, as that was fully reported on by me on the 27th April last, but simply in reference to the difficulty of dealing with trains and the safe working of same.

I attached to my report a statement showing the delays which had been occasioned to the Illawarra trains. For the information of the Committee, I will state a few of the delays. The trains kept fairly good time until the whole of the people began to return from excursion places into Sydney after 6.35 p.m. The report shows that the Illawarra trains were greatly delayed, and, in analysing the delays, it was found that they were directly traceable to the impossibility of dealing with a number of trains, as they arrived in Sydney yard, and by the shunting which is going on, and not having sufficient platform accommodation to receive them, they had simply to stand out. A train at Redfern tunnel would, of course, block another train at Eveleigh; the train at Eveleigh would block a train at the Illawarra Junction; the train at the Illawarra Junction would block a train at the preceding station, and so on right through up to Hurstville. I have here a list of the trains which were delayed. The time for each train to run from Hurstville to Sydney should not have exceeded thirty-two or thirty-three minutes—and sometimes less—but it actually took for the journey from Hurstville to Sydney as follows:—58 minutes, 73 minutes, 66 minutes, 61 minutes, 53 minutes, 55 minutes, 59 minutes, 55 minutes, 64 minutes, 76 minutes, and 80 minutes. Or, to put it a little more concisely, the time taken in excess of the time allowed by the time-table, was as follows:—27 minutes, 17 minutes, 32 minutes, 29 minutes, 20 minutes, 23 minutes, 21 minutes, 24 minutes, 27 minutes, 23 minutes, 31 minutes, 55 minutes, and 48 minutes.

244. *Mr. Wright.*] Can you give the average delay? The delays would average, roughly, about twenty-five minutes. I was in the yard myself the whole of the evening, and, therefore, I am quite satisfied that the staff in the yard could not have worked harder, or dealt with the traffic with greater energy or discretion than they did. We had the Southern, Western, and Illawarra down through trains—which had to stand at the platforms to load up with passengers, parcels, and luggage—occupying the principal platforms for a certain time, and we had not sufficient platform room to receive the large excursionist traffic coming in. The Commissioners authorised the construction of another platform, which has been completed, and that has assisted very much, but still it is only a very small matter compared to what is required to provide for the safe working of the traffic.

245. *Mr. Lee.*] Are you aware of the details of the proposal to bring the railway system to St. James'-road? I have seen here the plans of the proposed terminus at Park-street.

246. You know how it is proposed to work the traffic from that central station? Yes.

247. Are you prepared to tell the Committee that if the railway system is extended to St. James'-road in the manner proposed, there will be no possibility of blocks occurring similar to what occur at Redfern station? If a central station had been provided according to the plans I saw before the Royal Commission, these delays would not have occurred, because the platform accommodation would have been such as to have enabled them to deal with the trains as they came in, and to despatch them away quickly.

248. Do you believe that the extension of the line in the manner proposed will be the means of preventing these blocks from occurring in the future? Yes. I do not say that on a very busy day, such as that was, no blocks would occur, because other factors may come in. But I do say that the delays as shown on this return—I might say almost the whole of them—would have been avoided.

249. But you have shown a most serious difficulty in the working of the railways that necessitated the blocking of your trains as far back as possibly Newtown on the one side, and Hurstville on the other? Yes.

250. In other words, trains were stuck up at other stations because the incoming trains could not be dealt with sufficiently expeditiously at Redfern yard? Exactly.

251. If we grant an extension of the system to Sydney, will we overcome that difficulty? Yes; because you will provide at the new central station such platform accommodation as will allow the through trains to be standing at their platforms loading up passengers—and they have to stand there from fifteen to twenty minutes at least—while, at the same time, you will have ample accommodation to receive your excursion traffic.

252. Will you also be in a position on crowded days like Eight-hour Day to marshal your trains for suburban traffic, and to get in and out of the station without creating a block? Yes.

253. Where would you marshal your trains? Chiefly at Redfern station. The present station at Redfern has, of course, to be then given up to the storage of trains, carriages, and in these sidings the marshalling of trains would be effected.

- J. Parry. 254. In other words, the passage of the trains from Redfern yard to another destination would enable you to make such arrangements at Redfern yard as would put your carriages in the position of being placed in the central station without difficulty? Yes.
- 15 July, 1897. 255. That is what you anticipate will occur? Yes.
256. *Mr. Hoskins.*] The less liability of accidents in the new station at St. James'-road would arise from the platforms being much longer than the platforms at Redfern station? To a great extent. The platforms in the new station would be of sufficient length to accommodate the longest trains without fouling the other roads to other platforms.
257. And the spare carriages not in use would be kept up at Redfern station? Yes.
258. The spare carriages required to form trains being kept at Redfern station would be brought in on arrival lines at the new station, and consequently there would be no crossing of lines as there is at Redfern station in the forming of trains? Not in the marshalling of trains. I would like it to be understood by the Committee that it will not dispense with the whole of the crossing, if you wish to attach a carriage; but the great proportion of the marshalling will, of course, be avoided at that station.
259. Some of the departing trains from Redfern station have to take a very serpentine course to get on to the main line? Yes.
260. Is there not some danger in that process, seeing that suburban trains have to come on those lines into the station, and the engine-driver of an outgoing train having to take a serpentine course may not see an incoming train, and an accident may thus occur? That risk exists now at Redfern. At Redfern you have no refuge-sidings in which to store away your surplus engines, and, therefore, to get your engines to some road which will clear the incoming passenger trains, you have to shunt from road to road, frequently twice, and sometimes three or more times. The shunting of these engines from road to road, of course, necessitates what we call hand-signalling; you cannot provide a fixed signal for each operation, and therefore it has to be done under the direction of the shunter, and with, of course, a risk of the shunting engine, perhaps, being taken into a road through which another passenger train may be passing.
261. And the risk of danger has increased a good deal of late years through your increasing the number of your platforms out towards the Institute, so that trains leaving the outside platforms have greater difficulty in getting round on to the main line? Yes.
262. That risk keeps increasing by your increasing the number of platforms in a circumscribed space? Yes; without proper facilities for dealing with the engines being provided between the main lines.
263. In the proposed new station at St. James'-road the platforms will be 700 feet long, and the trains will have a straight run in and out;—the trains will not require to take such a serpentine course as they have to do at Redfern station? That is so.
264. *Mr. Lee.*] In the new station the engine which brings in a suburban train can be shunted by means of a central line to the front of that train and take it out again? Yes; you will not need another engine to pull it out; if a suburban train is not going out at once, it is a great waste to keep an engine locked in at the platform by the train. In the new station you can liberate that engine, and employ it in some other way. If a train is timed to depart within five minutes of its arrival, it may pay to keep another engine on the station to pick up that train and take it away. At Redfern yard we have no place to put the engines. They have to be shunted about from one place to another on the main running lines.
265. *Mr. Hoskins.*] If the railway system is extended to St. James's-road, and Redfern station becomes only a wayside station, and a dépôt for empty carriages, and so forth, I suppose, in the interest of good management, it will be necessary almost to remodel the roads in that yard? It would, because you would have a great surplus of points and crossings, facing points, and of interlocking gear, which would be taken out. You would save a very large number of points and crossings, which would not then be required.
266. And you can have better and more readily accessible sidings for shunting carriages on to without at the same time having so many points and crossings as you have now? Yes.
267. *Mr. Humphery.*] Are you prepared to say that by the proposed extension, and with the terminal arrangements at St. James'-road, as shown on the plan, all the complications at present existing in the working of the traffic would be removed? Yes, if the arrangement of road is similar to the Park-street plan.
268. Will there be ample provision for a great increase in the traffic? Yes.
269. Approximately, what increase could be provided for? I estimate that the accommodation proposed at that station would enable us to deal with the maximum traffic which we could bring in on those lines. Our ordinary traffic could be dealt with easily fourfold. Of course, on a day such as Record Reign Day or Eight-hour Day, we could have facilities at the present Redfern station. The present platforms, which would not be utilised for other purposes could be used on such a day as Eight-hour Day or for Rosehill or particular excursion trains.
270. *Mr. Hoskins.*] From your evidence I gather that it is your opinion that if the terminal station is constructed as shown on the plan, and the roads of access are similar, a largely increased traffic could be successfully dealt with? Yes.
271. Does not that necessarily presuppose that all spare carriages and horse-boxes are all taken into Redfern yard and kept there? Yes, except a few for strengthening trains.
272. You would keep no dead stock at St. James'-road station? No. At the present time we have not sufficient siding accommodation to receive our existing rolling-stock at Redfern, and therefore the space we have at Redfern station will, as the traffic increases, be absolutely required, not for station accommodation, but for the storage of rolling-stock.
273. *Mr. Humphery.*] With any alterations that would be possible at Redfern could you provide sufficient accommodation to cope with the increased traffic that could be provided for by the terminal arrangements and extension to St. James'-road? Not on the present site.
274. *Chairman.*] In your evidence before the Royal Commission you said that the Redfern yard was altogether unsuitable, because of the shortness of the platforms, the shortness in the approach, the want of a third line between the running-roads into the platforms, the want of shunting appliances, and the necessity to shunt your trains right across the various approaches? Yes.
275. You informed the Commission that Redfern station was very inconvenient to the travelling public, because of the inferior platform accommodation; that it was almost impossible to avoid accident; that with trains entering Redfern at any place the passengers in them were continually menaced with danger;—do you still maintain that position—that Redfern is not only inconvenient, but is dangerous? Yes. A railway officer never likes to talk about absolute danger. While we run great risk, we always like to avoid using the word "danger."

J. Parry.
15 July, 1897.

276. Redfern station is undesirable in that it is inconvenient and there is a very considerable risk? Yes. What I desire to point out is that the shunting staff are working under such extreme tension during the busy hours of the morning and evening that, supposing any accident did occur, it would be very difficult indeed to blame the man who made the mistake.

277. The station is so situated, or so circumstanced at present, that it is a little too much to expect of any staff of men, however competent they may be, to avoid accidents sometimes? Yes. The risk is in the enormous amount of shunting of engines from road to road after they have brought in their trains and have been placing them on other trains within fixed signals, and for which hand-signalling has to be resorted to.

278. *Mr. Hoskins.*] And of necessity they have to cross other roads that trains are coming in on? Yes, in shunting.

279. *Chairman.*] You think that the new station at St. James'-road will be capable of doing fourfold the traffic which is now done at Redfern station? Yes, of the ordinary business.

280. The eastern roads can be extended to Circular Quay, where there may be a platform and shunting appliances provided? Yes.

281. This platform at Circular Quay and the shunting appliances provided there will relieve the Hyde Park station, in that it would enable shunting operations to be carried on at Circular Quay which otherwise would be carried on at Hyde Park—in other words, by the extension of the line from the central station to Circular Quay, a certain proportion of your trains will simply pass through the central station as a wayside station and go down to Circular Quay, and there be marshalled and pass away on the opposite journey through the central station as a by-station? Yes.

282. If there is an extension round to the eastern suburbs Hyde Park will be a passing station for them? I feel that I am now asked to speak theoretically. I have no plan of the proposal before me, and therefore I am not prepared to offer any opinion to the Committee.

283. Will you give the Committee your views with regard to a possible extension of the Hyde Park railway-station grounds, having in view the portion of the city it is likely to serve, and what, from your experience of the railway systems of the world, you think is likely to be done when Sydney grows so much in population as to render necessary an extension of these yards if all traffic for the metropolitan area were done from that centre? I think, as far as can be foreseen at the present time of the extension of Sydney, that the new station will accommodate all the business which will require to be brought to it. If, in the course of twenty or thirty years, Sydney has expanded to very much larger proportions than, perhaps, anyone could foresee, then I say the whole of the people would not require to go into this particular spot, because the city itself would have expanded, and it would be necessary to have new centres from which the traffic for certain portions would require to start. Take your provincial towns at Home—take Liverpool, Glasgow, and the other stations which the late Chief Commissioner mentioned in his evidence. You would not think of centralising the whole of the traffic of these various lines into one big station, because they serve different districts. While it may be possible to bring in an enormous increase of population, at the same time the chances are that the traffic will develop in certain directions, which you could hardly foresee at the present time, and necessitate a different sort of station altogether being provided. Suppose, for instance, North Shore develops to an enormous extent. The bulk of the passengers coming from North Shore will be suburban passengers. They will require to come into the city in the morning to do their business, and to go out again at night. The through traffic, compared to the suburban traffic, will be infinitesimal even then. Therefore, you might well have a separate terminal station for your traffic coming from North Shore; in all probability it would accommodate people better on the western side of the city.

284. The same thing might apply to Balmain? Yes.

285. The same thing might apply to the other side of Woolloomooloo? Yes. If Sydney is going to increase to such an enormous extent certainly the people will not be able to get down about King-street. The business will be distributed in a larger area. What is convenient to-day may not be convenient at all at that time.

286. Then you regard this station at Hyde Park as the terminus for the railways of the Colony for the present? Yes.

287. You regard the area taken as ample to do all the trade which legitimately should be done from that centre? Yes, if it is to be the same as the station I saw before the Royal Commission.

288. And the commercial development would not be an expansion of that station, the absorption of more of the Park, but the choosing of new centres from which to deal with populous areas? Yes.

289. Is it your opinion that no more of Hyde Park will ever be required to be taken? It is. Six lines of rails will, of course, accommodate a very large traffic, provided you have a suitable terminal to receive your trains from those lines.

290. Which this is? Yes.

291. *Mr. Hoskins.*] Provided that you keep your empty carriages and engines away from the station? Yes. These six lines would be ample for the maximum traffic which can be brought in on those lines to the station. The question of remodelling Redfern station disposes of itself in this way: That you will require absolutely the room which you have there for the storage of your rolling-stock—for storage purposes only. Therefore, to attempt to extend the existing station, and take up more of the room from that accommodation, you would simply be spending money and taking up room which is required for other purposes.

292. *Chairman.*] It is suggested that a portion of Prince Alfred Park could be taken for the extension of the railway platforms in that direction;—is it practicable in your opinion? In my opinion it is out of consideration.

293. It is not worth considering? No.

294. You believe no practical man would suggest it? I would not suggest it.

295. *Mr. Lee.*] Is it not a fact that not only on record days, but in the busy part of every day, in consequence of the limited accommodation at Redfern station, the short narrow platforms, and only one means of approaching the platforms, the passengers incoming and outgoing are always meeting, with the result that at times it is almost impossible to catch your train if you are in a great hurry? That is so.

296. Take the case of a busy man, with limited time at his disposal;—if he wanted to catch his suburban train by a minute or two, on a busy occasion he would have to take the previous tram? That is very pronounced. In fact, I frequently have had to miss my train through not being able to get through the crowd. Of course, it was in busy times.

J. Parry.
15 July, 1897.

297. In addition to the great difficulties of dealing with the trains and engines, when you get those trains to the platforms great difficulty occurs in handling the passengers on the end platform? Yes.

298. And at times is it not almost impossible to get through the crowd either going to or coming from the platform? It is.

299. On the days preceding great holidays—say, at Easter-time and Christmas-time—when the luggage-rooms, remote from some of the long-distance trains, are so largely availed of, is it not a fact that passengers frequently have to wait from twenty to twenty-five minutes to get their luggage before they can go to catch their trains? I am afraid that last year that was felt to a very serious extent, and on one or two occasions the passengers missed their trains. A gentleman who was going to the Mountains—I think to Leura—in consequence of not being able to get through the crowd to get his luggage out of the cloak-room, missed his train, and to prevent him from being so seriously inconvenienced we arranged to stop the mail-train afterwards to set him down.

300. *Mr. Black.*] Would that not happen under any circumstances if there was a great deal of traffic at any station, unless a luggage-room was provided for each platform? Take the new station here. You would have such facilities that you would be able to get your luggage overhead. It would be brought into one large receiving-depôt, and from that cloak-room it is arranged to be lifted up overhead, so that it goes free from the passengers. It does not mix with the passengers. It is sent to the train direct.

301. Does not delay occur through a man who has a ticket for his luggage not being able to get a place at the counter, or to communicate with the man in charge of the room? Nothing to the extent of the disability we suffer under at Redfern, where you have people waiting six deep.

302. They cannot get to the counter? We have neither sufficient room to store the luggage nor counter-space to accommodate the people to receive their luggage.

303. Could it not be enlarged? Since Easter it has been enlarged to its full extent, but it is not anything like sufficient to cope with such traffic as we have.

304. Is there anything to prevent further enlargement in the cloak-room? There is no space, as you will observe from this plan, to enlarge the cloak-room.

305. *Mr. Lee.*] The difficulty which has been mentioned by Mr. Black could be overcome if sufficient accommodation were provided for the luggage, and for access to it by the people? Yes.

306. But it is impossible for you, under existing circumstances, to give that accommodation at Redfern station? Yes. The main entrance to this cloak-room is from No. 6 platform, which is only about 17 feet wide. The whole of the crowd requiring to go to the cloak-room for their luggage have to pass in on to this narrow platform, and the whole of the people, after getting their luggage, have to pass through the incoming people in order to get out again. In going out and coming in they meet each other with this large amount of luggage. I think I informed the Royal Commission that at Easter-time I myself had to go and suspend all operations in regard to collecting excess luggage, or even labelling it, because the traffic was becoming so congested that the people themselves could not get through it.

307. *Mr. Fegan.*] I had to wait there for twenty-five minutes? I think I saw you there that night.

308. *Mr. Black.*] If the entrance were made from the end of the building facing Devonshire-street, would not that do away with some of the difficulty? That portion is already used for an inquiry office, and for lost property.

309. The inquiry office could be dispensed with? It is the most important office we have.

310. Could you not find a place for it at the end of No. 1 and No. 2 platforms, which is about the quietest part of the station? It is not only an inquiry office, but also the lost property office. The man who is in charge of the inquiry office also deals with lost property, and there would not be room at the other end for the lost property.

311. It seems to me that there is a good deal of vacant space at the far end of the platform where the train runs out to the National Park? It may appear so to you, unless you see it in a great crush, and then you will find that that end of the platform becomes simply black with people.

312. *Mr. Lee.*] The fact remains that all the outgoing passenger traffic and the incoming passenger traffic have to be marshalled on that space between the front of the station and the kerb, no matter whether it comes by tram, by bus, or afoot? Yes; and the whole of the parcels from the parcels office, tons of butter, tons of meat, and tons of all sorts of produce have to be wheeled in barrows round that narrow end to get to any platform to reach the mail-trains, and this has to be dealt with at the very time when the great crowd of passengers are coming to take their trains.

313. The accommodation at the station is altogether insufficient to properly deal with the present traffic? Yes.

314. If that is the position of affairs now, and it is reasonable to suppose that the traffic will increase by at least 50 per cent. within the next fifteen years, do you see any possibility of dealing with that traffic at that station? No, not satisfactorily.

315. Something very much more extensive than the present accommodation will have to be given? Yes.

316. That is a necessity against which no argument can be used? Yes.

317. *Mr. Trickett.*] Do you remember being examined on 23rd, 24th, and 25th February last before the Royal Commission on City Railway Extension? Yes.

318. With the exception that the proposed extension of the railway system is to St. James'-road instead of, as then proposed, to Park-street, do you wish to alter the evidence you gave on those occasions? No; I understand that the station which I saw then on the plan here is simply moved along from Park-street to St. James'-road.

319. Therefore, your evidence applies with that one alteration? Yes; it does not affect my evidence if the station which I described to the Royal Commission is placed at St. James'-road.

320. *Chairman.*] Do you desire to add anything at all to your evidence? I think not.

321. *Mr. Fegan.*] How many accidents have you had at Redfern station this year? We had one rather serious accident in February.

322. A large number of your own men have been knocked down there very often? I do not think so.

323. Is it not a fact that a large number of accidents take place in Redfern yard through the traffic being so congested there? No; in Redfern yard, due, I am bound to say, to the carefulness of the men, accidents are very rare.

324. Can you furnish the Committee with a return showing the number of accidents which have been caused there during the past twelve months? Yes.

325. *Chairman.*] That is, accidents to individuals, not accidents to trains? Yes. I do not believe there is a passenger shunting-yard anywhere where the men undergo such risks as they do in Redfern yard. It speaks volumes for the carefulness of the men that they do not get hurt, because they are simply standing in amongst the lines, dodging one train coming in and moving out of the way as it goes out—even the men directing the traffic.

J. Parry.
15 July, 1897.

Stephen Edward Perdriau, Surveyor, Department of Lands, sworn, and examined:—

326. *Chairman.*] You are a surveyor in connection with the Department of Lands? Yes.

327. Have you prepared a statement as to the removal of the remains from the Cemetery on the site on which the Town Hall was built, and as to one or two other matters which were brought under your notice by the Secretary? Yes.

S. E.
Perdriau.
15 July, 1897.

328. Will you read the statement? It is as follows:—

RECITAL of the circumstances and proceedings in connection with the closing of the old Burial-ground or Cathedral Close, City of Sydney, and appropriation for municipal purposes of the site whereon the Town Hall is built.

The site of the Sydney Town Hall area, 2 acres 30 perches, was the old burial-ground or Cathedral Close.

The burial-ground appears to have been unenclosed in 1802. About the year 1804 it appears to have been enclosed with a fence, because the "pigs rooted up the graves." Afterwards it was surrounded by a brick wall.

In the year 1819 the cemetery was closed, and the Devonshire-street Cemetery opened.

The latest date which appeared on any tombstone in the "old cemetery" is said to have been 1818.

Persons of all creeds and conditions lay in the old cemetery, and no person nor church appears to have had any power to exercise authority, consequently the place became dilapidated and the tombstones disappeared; the place became a resort for undesirable people and a public nuisance.

In 1866 the land was proclaimed a recreation reserve, and trustees appointed, but, as no funds were provided, the trustees were unable to effect the necessary improvements, and it was not used for that purpose.

By an Act of Parliament, dated 1869, the old burial-ground was resumed, and a portion thereof, comprising 2 acres 30 perches, was authorised to be appropriated for municipal and other purposes, and the following conditions were imposed upon the Municipal Council of Sydney, viz.:—

A sum of £25,000 to be expended in building on the land a Town Hall, to be completed and fit for use on or before the 1st day of January, 1872. Half an acre to be set apart for the erection of the Town Hall, and the residue as a place of recreation, to be enclosed with a dwarf wall and iron palisading, gates and entrances, and shall, on or before the 1st day of January, 1870, embellish the portion not set apart for a Town Hall with such walks, ornamental trees, and shrubberies as the Director of the Botanic Gardens for the time being shall recommend. The Act states the penalty recoverable if the abovementioned conditions are not carried out.

A *verbatim* copy of clause No. 8 of the said Act is as follows:—"The Municipal Council shall, within three months after the passing of this Act, cause the remains of all persons buried in the ground authorised to be granted (so far as they can by reasonable search be discovered), together with all slabs or tombstones in relation thereto having any legible inscription thereon, to be collected with due care and removed to the Necropolis, and shall there cause such remains to be reverently interred in such a manner as the Minister for Lands shall direct. And if the same be not done within the time limited as aforesaid, the said municipality shall be liable to a penalty of £200 monthly until such be done, and any colonist may through any competent Court sue for and shall be entitled to the said penalty or penalties."

On the 30th April, 1869, the Under Secretary for Lands informed the Town Clerk that the Secretary to the Necropolis, Rookwood, had been instructed to set apart the land required for the purpose. This was accordingly done, by providing an area 36 feet x 16 feet in the Church of England portion, and the records show that twenty-two interments were made therein of bodies which were removed from the old cemetery.

An effort was made by the Secretary to the Necropolis to obtain the usual charge for interments, but without success.

A handsome stone monument is erected over the remains. It is 8 feet square at the base, and about 15 feet in height, surmounted by an urn. A marble panel on the dic bears the following inscription:—

"Erected by the Municipal Council of the City of Sydney over the remains removed from St. Andrew's Cathedral Close, George and Druitt streets, Sydney, used as a cemetery prior to the year 1822.

"WALTER RENNY, Mayor."

The monument is kept in repair by the City Council, and has recently been renovated and painted.

From what I could learn at the Town Hall, no complaints were made about the manner in which the municipal authorities removed the human remains.

329. There seems to have been no difficulty in carrying out this operation? No.

330. The Municipal Council of Sydney desiring the site for the purpose of erecting a Town Hall, obtained power to remove the bodies, and those persons who were interested in the remains in the cemetery were apparently satisfied? As far as I can find out they were. The Assistant Town Clerk told me that he was not aware of any complaint which had ever been made.

331. That confirms the opinion you expressed before the Royal Commission, namely, that the same operation could be carried out at the Devonshire-street Cemetery were it necessary to convert that Cemetery into a park? Yes; but it would be a very much larger operation there.

332. Have you any idea of the cost of removing the remains? No; this would be no indication, because while there were only twenty-two in George-street, there will be some hundreds in Devonshire-street.

333. *Mr. Lee.*] When was Devonshire-street Cemetery closed? I understand that it was closed about ten years ago, but there have since been one or two interments in the Cemetery in vaults. For instance, the widow of Dr. Lang was buried there.

334. I presume the respective denominational portions of the Cemetery have been dedicated and vested in trustees? Grants have been made to some of them.

335. The issue of a grant is the conveyance of a freehold? Yes, but in this case it would be for the specific purpose of a cemetery, and for no other.

336. In that case, even if the remains were removed, some compensation would have to be given to the trustees? No doubt they would expect some compensation. I do not know that they would ask for the actual value of the land.

337. No other compensation beyond the land, I presume? I do not think so. I think all the relatives would be satisfied if the bodies of their friends were carefully removed and re-buried reverently elsewhere.

338. You understand that a denomination which may have received a grant for its portion looks upon it as a church asset? Yes.

339. And consequently, if it were taken away, it would require compensation? Yes, but in this case it would be for the specific purpose of a cemetery, and no other.

340. What course do you consider necessary to be taken to enable the Government to obtain possession of this land? It would depend upon whether a grant has been issued. In my evidence before the Royal Commission, I mentioned some of the denominations which got grants. I do not think there would be anything

S. E.
Perdriau.
15 July, 1897.

anything further required than a careful removal of the remains from the Cemetery. No doubt the trustees will make a claim for compensation if you deprive them of the freehold of the land.

341. *Mr. Hoskins.*] Not if they were given freehold land where the remains are interred? I do not think the right to inter a body in a cemetery carries with it the freehold of the land. They do not get a deed for the land.

342. Can you furnish any information as to the probable cost of removing the tablets and monuments? No. I consulted the Chief Surveyor as to the removal of the remains. I think he had some experience of the kind before, and he said that all that need be done would be for the Government to carefully remove the remains.

343. Will you ask the Chief Surveyor to look into the matter? I will make further inquiry.

344. *Mr. Lee.*] Do you remember the old Cathedral Close in George-street? No.

345. You know the present site of the Town Hall? Yes.

346. Do you think it is any offence to the public that the Town Hall is erected on the site of the old cemetery? No; I think it is a thing of beauty and a joy for ever while it lasts.

347. If it were possible in the heart of the city to convert a cemetery into such a valuable site, and there to erect a valuable building as a town hall for the City of Sydney, is it not equally possible to convert the Devonshire-street Cemetery into a beautiful park for the recreation of the people? Certainly.

348. Without having any features objectionable to the people? Certainly. The records show that the area fronting the Town Hall was set apart for recreation purposes in those days.

349. Are you of opinion that if one of the old burial-grounds was good enough to erect a Town Hall upon for the City of Sydney, the Devonshire-street Cemetery is a good enough site to be converted into a recreation ground for the people? It is a very suitable place for a recreation ground. It is very suitable land.

350. *Chairman.*] Will you state the width between the western side of Sydney Cove and George-street? It will be necessary to retain the present road to the wharfs under any circumstances. You cannot utilise the immediate approach to the wharfs for railway purposes.

351. What is the width of the Government land lying east of George-street towards Sydney Cove at its southern end? From the point to the Circular Quay roadway it is 185 feet, and from Argyle-street to the Circular Quay roadway it is 155 feet. The length from the Queen's Wharf to Argyle-street is 380 feet.

352. That is, approximately, about the same as the area of the Government land lying between the Mont de Piété Company's property and Market-street? I daresay it is.

353. That clearly is not large enough for a railway station? It is not long enough.

354. Then north of it, how does the Government land run? There is some private land on the northern side of Argyle-street, then you come to the Sailors' Home and the Mariners' Church.

355. How wide is it from the roads running along the foreshore of Sydney Cove to George-street, taking it across by the Sailors' Home? 105 feet.

356. What is the width of land the Government have in the old A.U.S.N. Company's property? The old A.U.S.N. Company's offices extend from George-street to the Quay, and at the other southern end it is 95 to 100 feet wide.

357. How far is it from George-street to high-water mark? From George-street to the present high-water mark along the southern boundary of the A.U.S.N. Company's stores it is 220 feet.

358. To utilise this property it is necessary to have a road along the foreshore? It could not be done without. With these large foreign-going steamers they have an enormous amount of cargo to go into the city, and they want at least 50 feet room for the drays.

359. If it were intended to locate a railway station there it would be 160 feet in width? I do not know that there would be that much room available, because the width of 220 feet which I gave you includes the plank wharf, and it is behind the plank wharf that they want a roadway of 50 feet for the drays. I should not say that there would be more than 100 feet available.

360. It is clear that along the western side of Sydney Cove there is no position without interfering with George-street and making extensive resumptions to place a railway station in which great traffic could be done or approaching in magnitude a great terminal station? No. From the length and distances I have given it cannot be.

361. I presume these properties are used already for other purposes? The old Commissariat Stores are not used fully. They are almost useless; they want a lot of repairing before they could be used.

362. There might be a width of from 100 to 150 feet if you had the whole of the land with the buildings cleared off? Yes.

363. If you closed up Argyle-street could you give the length? You would have about 690 feet to the northern side of the Sailors' Home land at Bethel-street.

364. Would that require to be approached by tunnel? Unless you resumed a good deal of the surface to form an approach.

365. To get that position your own estimate was that with proper running roads you would require a length of 130 chains, and it would cost £2,000,000? Yes, 100 feet wide, and wholly through private property and an open cut to the west of George-street.

366. With regard to a site near Dawes Battery, if you go back 3 chains along George-street North, you then have a width of what? Nearly 400 feet to the foreshores of Port Jackson.

367. From that point down to the termination of the Dawes Battery land—that is, near to the A.U.S.N. Co.'s property—what is the length? It is about 540 feet to the end of Dawes Battery reserve.

368. Have you a description of the site lying south of Hyde Park which has been suggested for the principal station for the city railway? Yes.

369. Will you read the description? It is as follows:—

The site is bounded by Liverpool, Elizabeth, Goulburn, and Macquarie streets, Sydney.

The total of the municipal assessments for that block of the city indicated above for the municipal year 1897-8 is £9,840.

Capitalising £9,840 at twenty years' purchase	£196,800
If twenty-five years' purchase be adopted the amount would be	246,000
Add for the Lutheran Church (approximate estimate)	£2,000
Unitarian Church (this building not being rated)	13,000
Public School	9,000
	<hr/>
	24,000

The mean length of the above block is 535 feet, and the mean width is 490 feet, and the area is 6 acres.

At this place Liverpool-street is 3½ feet higher than Goulburn-street, on a section down the middle of Nithsdale-street.

370. Will you now furnish a description of Cook Park and Phillip Park? The area of the two parks, if Boomerang-street is closed, is 9 acres 2 roods 30 perches, and the length is 635 feet in a north and south direction, and 700 feet in the middle in an east and west direction. It is a trapezoid in shape.
371. These are fairly well the full lengths? Yes. The fall from College-street—that is, from the old corner of the park before Boomerang-street was taken out to the north-east corner of Phillip Park—is 59½ feet.
372. You gave evidence before the Royal Commission on the City Railway Extension? Yes.
373. Do you desire in any way to alter or to add to your evidence before the Commission? No.
374. You believe that your evidence before the Commission is correct? Yes.*

S. E.
Perdriau.
15 July, 1897.

TUESDAY, 20 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.
The Hon. JAMES HOSKINS.
The Hon. CHARLES JAMES ROBERTS, C.M.G.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. DANIEL O'CONNOR.
HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.
JOHN LIONEL FEGAN, Esq.
THOMAS HENRY HASSALL, Esq.
GEORGE BLACK, Esq.
FRANCIS AUGUSTUS WRIGHT, Esq.
FRANK FARNELL, Esq.

The Committee further considered the expediency of extending the Railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

Norman Selfe, M.I.C.E., M.I.M.E., sworn, and examined:—

375. *Chairman.*] You are a civil engineer? Yes. I am also a Member of the Institution of Mechanical Engineers, England, as well as of the Institution of Civil Engineers.

376. Have you a statement to make to the Committee? I have.

377. You gave evidence before on the 27th March, 1897, before the Royal Commission on City Railway Extension? I did.

378. That evidence is correct to the best of your belief—you revised your evidence? Yes; but it is not the evidence I should give. A great deal of that evidence was given in answer to questions. I had not an opportunity to make a statement, and therefore what I had to say did not go before the Royal Commission. I can conceive that there are many points in connection with the city railway extension which have not yet come out.

379. *Mr. Hoskins.*] Were you not asked by the Commission to make a statement? I do not think so. I did before the former Royal Commission; but I came very hurriedly before the recent Royal Commission in this room.

380. *Chairman.*] You have a statement which you wish to read? Yes. It is as follows:—

HAVING been much interested in the city railway extension for over twelve years, having been honored by the late far-seeing statesman, Sir Henry Parkes, with the task of formulating his views on the question for presentation to a Royal Commission, and having spent several hundreds of pounds of my own money in an endeavour to have the question of route and stations settled in the true interests of the majority of the people of New South Wales on a broad and fair commercial basis, I respectfully ask the attention of this honorable Committee to a few notes on several points connected with the subject which do not appear to have hitherto been adequately brought before it. When appearing before the recent Royal Commission I stated that I had made no personal estimate of the cost of the scheme formulated by myself, but took Mr. Foxlee's estimates. I now propose to submit some estimates based on Mr. Perdriau's valuations as laid before, and adopted by that body. I do not intend to make any reference to the sentimental value of Hyde Park in connection with the proposal to divert it from the purpose to which it was sacredly dedicated so many years ago.

The large plan, exhibited on a scale of 2 chains to the inch, shows clearly, among other things, the terrible, black trail that an extension of the railway from Redfern to St. James'-road would make through the city if carried out by way of Hyde Park, and also makes it clear what a magnificent investment and improvement might result if the same strip of land were opened out as a wide thoroughfare to improve and relieve the traffic through the City of Sydney, opening up new frontages just as the Northumberland and Shaftesbury Avenues, costing millions of money, have done for London.

Mr. Perdriau's general estimate for city land amounts to about £70,000 per acre, and the land proposed to be taken between Devonshire-street and Elizabeth-street would certainly be worth this amount for the purpose of forming a wide and grand business avenue. If we take it at only half this amount, however, and allow the other half for the severance of this fine city centre, the value of the 4½ acres required would be (say) £279,500.

There is no doubt this whole site could be sold for a million, but taking the strip only, a fair charge would be (say)	£279,500
Thirteen acres of Hyde Park, if laid out in avenues, would give a much greater area and much longer frontage than the block bounded by Elizabeth, Park, Pitt, and Liverpool streets (25 per cent. more at least), and is therefore worth in prospect, <i>pro rata</i>	1,153,500†

Or a total of

£1,433,000

Quite apart from the cost of the private land, the official estimates for which amount to £100,000, between Elizabeth-street and Liverpool-street.

If it is argued that these figures are absurd, as the property has no valuable buildings on it and is mostly in the hands of the Crown, then it must be equally absurd to charge any western scheme on a similar scale with the value of sites like Wynyard-square, the Church Hill reserve, and so on, which has been done in recent comparisons officially made.

In comparing an extension to Wynyard-square with one to St. James'-road it must be remembered that the former is 25 chains further to the north, and thus 25 chains more towards a complete city railway; it also gives three wayside stations,

* NOTE (*au revision*):—Since giving the above evidence—

(a) I have had a sight of four of the grants of land for cemeteries at Devonshire-street, viz., those for the Church of England, Presbyterian, Congregational, and Wesleyan denominations, and in these grants it is stated that the land is granted to be used for a cemetery, "and for no other purpose whatsoever."

(b) I was asked by Mr. Hassall to ascertain what amendments, if any, had been made in the "Cathedral Close Act," under which the Town Hall site was granted to the Sydney Municipal Council: I learn by an amending Act that an additional quarter of an acre was granted for the Town Hall site, adjoining and to the west of the half-acre mentioned above. Also that the Act of Parliament dated 1879 under which the City Corporation is now working, repeals to some extent the obligations laid upon the City Council by the "Cathedral Close Act," but to what extent could only be ascertained by complete investigation into the meaning and intention of the various Acts.

† NOTE.—This is much less than one-half the price, *pro rata*, which the Government charged the City Council for the old Police Court site.

N. Selve,
M.I.C.E.,
M.I.M.E.

20 July, 1897.

stations, or two stations and a terminus, if the extension is to terminate there temporarily, and these all in the centre of dense business localities, instead of one terminus out of the business part of the town altogether, as under the Hyde Park proposal.

The late Mr. Eddy stated that four lines would be required for a western city extension, and Mr. Deane has given evidence (Q. 154) that these can be got in a chain wide, the lines at most not taking more than 48 feet. Mr. Perdriau has stated (Q. 1534) that the property at the head of Darling Harbour is much cheaper than that nearer Hyde Park, and it is evident that its average value is not one-half, and probably not one-quarter as high. If we take it at one-half, or as £35,000 an acre (it will then be a higher rate than is set down for the Nithsdale-street land), and we apply it to my original scheme, the cost comes out as under:—

From Redfern station to Bathurst-street, 50 chains — 5 acres, at £35,000	£175,000
George-street covered way	250,000
Market site	28,000
Markets to York-street, 8 chains—no frontage, back property	140,000
York-street covered way	140,000
Wynyard-square, 2 acres at £70,000	140,000
	£593,000

or actually a great deal less than one-half, as the cost of land required for getting north to Margaret-street, that it required to extend to St. James'-road by the rival route.

It must be noted that no deduction has been made in this latter estimate for the thirteen street-crossings which intervene, the amount of which would more than provide ground for the platforms, 600 feet long, on the cheap land near Engine-street.

If the basement of the Market building cannot now be converted into a station, and the block to the west of it, bounded by Market, Kent, Druitt, and Clarence streets, is taken for a station, as shown on the plan and as an alternative to the original proposal, then the 12-chain tunnel from Goodlet's yard to Market-square is done away with, and an open line substituted at the rear of the Town Hall. The cost of this line to Wynyard-square on Mr. Perdriau's figures works out as follows:—

Redfern station to Druitt-street station	6.2 acres.
Druitt-street station	2.0 „
Market-street to York-street	1.2 „
	9.4 acres.
Say, 9½ acres at £35,000	£332,500
Wynyard-square, as before (at £70,000)	140,000
	£472,500
Or, if ground for Druitt-street station is taken at £70,000 per acre, instead of £35,000, then add	70,000
	£542,500

That is, only a little more than one-third of the cost of the Hyde Park resumptions, if valued on the same basis.

If an extension to the Circular Quay is to be estimated for, and a large station on the "Rocks" is to be considered, then business principles should again be applied; and if the railways are not to be debited with the value of land at Hyde Park, then the route through the triangular site of old St. Phillip's Church will cost nothing, and Wynyard-square nothing.

Coming now to the 30 acres of the "Rocks," which at present cry aloud for a Baron Hausman or a Metropolitan Board of Works to convert them from slums into a site which might be a pride and boast of the city, it will be found that the present frontage of Cumberland, Gloucester, Cambridge, and Harrington streets, and Argyle-lane, amounts to, approximately, 194 chains—say, 200 chains 13,200 feet. Thus, at Mr. Perdriau's estimate of £30 per foot, equals £396,000. (Incidentally, it may be mentioned that St. Patrick's Church is improved by additional ground being given to it on the western side, instead of being destroyed, as understood by Mr. Perdriau.)

Now this whole "Rocks" site, as shown remodelled on the plan, provides, after giving 10 acres for railway purposes, and laying out wide and level streets, the following frontages:—

To new George-street	40 chains.
„ New Gloucester-street	56 „
„ New Harrington-street	6 „

Total 102 chains

or, say, 100 chains = 6,600 feet, at £60 per foot, £396,000—the same as the cost—and, in fact, makes the 10 acres site for a station a gift to the Railways as the result of the city and Colony having their interests looked into on the broad and statesman-like basis approved by the late Premier of the Colony before referred to.

It will thus be seen that it is not instituting a comparison at all. When a "western" route to the Circular Quay is charged with half as much greater a width of land as was stated by Mr. Eddy to be necessary, and charged with 130 chains in length, including all the area taken from public reserves, the route under streets, &c. (all of which reduce the actual length of resumption down to 84 chains at the most, instead of 130 chains), and that it cannot fairly be brought into competition with a Hyde Park route, which is not charged with public land at all, and which extends to only a fraction of the distance up the city, and which does not admit of future extension to the Circular Quay and the North Shore without lengthy and expensive tunnels.

Before leaving this portion of the subject it is well to append the following particulars as to lengths of tunnels. In the western scheme, proposed by author, to the first Royal Commission, there were the following tunnels:—

Under the York-street scheme—	
Goodlet's yard to Market site, with plenty of ventilation	12 chains.
Market station to Wynyard-square, do	21 „
North from Wynyard-square	7 „

Tunnel total 40 chains.

Under the resumption scheme, with open cut from Market-street to back of Savings' Bank, total tunnel	22 chains.
--	------------

The modified scheme, now shown, to avoid the Market site and run at the back of the Town Hall—

King-street to Wynyard-square	11 chains.
North from Wynyard-square	7 „

To Circular Quay, total tunnel 18 chains.

Under the Hyde Park scheme, as recommended by the recent Royal Commission, the extension to Circular Quay involves a tunnel of (say)	60 chains.
From Hyde Park to North Shore a tunnel (say)	180 chains.

Thus showing that while a western route to the Circular Quay is far the cheapest, it also has far less length of its line in tunnel.

So much has been said as to the utter unsuitability of Redfern terminus for the work now carried on there, and the difficulties that arise from the "bottle-neck" at the Redfern tunnel, that the bottom portion of the plan exhibited has been drawn to show a way out of these difficulties—First, by doing away with the "tunnel" altogether; secondly, by making room for, at least, twelve lines of rails right in from Eveleigh; and, thirdly, by providing a magnificent site for a new terminal station of the same size as that approved of by the Commissioners for Hyde Park, on about one-third of the whole Redfern site. These improvements are accompanied, incidentally, with such a widening of the open space in front of the new building as to make a far finer centre than would be established at Hyde Park, unless St. James' Church and the Supreme Court are to be removed and King-street widened.

According

According to this plan, a portion of Regent-street is modified to bring it into line with Eveleigh-street, Redfern, and in such a way as to give the railways a strip of land a clear 3 chains, or 200 feet wide, north-westerly from the present retaining-wall of St. Paul's Church property, while an ordinary bridge over the whole 200 feet of width, instead of a tunnel, would enable twelve lines to be run through, and as this bridge need only be 1 chain wide, it would probably not cost as much as the late alterations to the tunnel did, while the approach from the low ground of West Cleveland-street would be improved by the retaining-walls shown.

As the Darling Harbour line is now on a steep grade, it can be eased back towards Eveleigh to advantage, so as to be low enough to be covered over where it passes through the yard, and then all the present waste ground abutting on Terminus-street can be utilised. At some future time, perhaps, the whole northern side of Regent-street could be absorbed into the station; but even without this resumption it will be clearly seen that the grand terminus, which has been approved of by the Railway Commissioners for Hyde Park, can be commenced on the south-western side of this site, and be gradually extended up to the present station until it is completed, and that it will then leave the enormous area which is shown for future extensions. It is of course assumed—the author not being a railway expert, and being only guided by the opinions of the Commissioners and their officers—that if the Hyde Park terminus can be worked with six lines of approach there will be at least equal facilities at Redfern when twelve lines can be put in from Eveleigh. It is universally acknowledged that Redfern is near enough to the city for a permanent terminus, but some doubt has been expressed as to the room available there. The Railway authorities having stated that the Hyde Park terminus would be large enough for the next twenty years, and that no further resumptions there would ever be wanted, it must be satisfactory to see the Redfern yard can be made to give three times that area at a moderate cost. The estimate, from the best sources available to me, places the resumptions at Regent and Cleveland streets at £56,000. That the present Redfern yard is dangerous, is the evidence of the authorities, and if the land costs £100,000, it would be cheap to make twelve lines at that price for the land, in order to restore the public confidence that has been so rudely shaken lately by the official evidence of Railway officials.

If your Committee should decide that after all the recommendations of the recent Royal Commission are to be endorsed—that a terminus should be made at St. James'-road, and, further, that that road should be continued into Castlereagh-street, and Elizabeth-street be widened—it will no doubt be further recommended that under a special Act of Parliament the betterment principle should be applied to the surrounding properties, as was done at Martin-place. In such a case the actual cost to the country of the property taken up by the extension thence from Redfern might be most materially reduced by the set-off, because the increased value of many surrounding properties would be immense. Whether the Hyde Park scheme would then be the cheapest I am of course unable to say; but in the absence of knowledge as to probable credits from such betterment of the neighbouring properties, I respectfully submit that I have clearly shown, from the figures set out in the Report of the recent Royal Commission, that a western scheme is a cheaper one than the Hyde Park proposal; that it would tend to the improvement instead of to the disfigurement of the city; that it would be of much greater value to the great bulk of suburban passengers who contribute so largely to the returns; that it would provide at the same time for an extension to the North Shore by a bridge, goes without saying, as such is already admitted by the Railway authorities. It can also be worked in with a complete circular railway at any future day, embracing the eastern suburbs.

In conclusion, gentlemen, I have to state that I am not now advocating any particular route, but rather the following broad principles:—

1. The chief terminus of the New South Wales railways should still be at Redfern.
2. Any extension should be part of a circular railway with wayside stations at short intervals in the centres of business.
3. That an extension to North Sydney should be an integral part of any scheme commenced, even if not carried out for another ten years.
4. That all lands taken should be debited to the Railways on the basis of an ordinary commercial valuation, and the same principles should be applied to all the routes considered.
5. That if properties injured by railway extensions have a right to compensation, then all properties improved by such works should contribute, on the betterment principle, towards their construction.

381. *Mr. Hoskins.*] You have admitted, I think, that you do not consider yourself an authority on the values of the properties which might be resumed? No. That is why I take Mr. Perdriau's estimate. I have given no opinion as to values. I am merely dealing with certain evidence which was given before a public body lately. That evidence, which was given by experts, has been applied to certain routes. I contend that what is sauce for the goose should be sauce for the gander.

382. You state that the western route would be a cheaper route;—you make an estimate of the values of the properties along your own route? I beg your pardon; I take Mr. Perdriau's valuations.

383. *Mr. Wright.*] You have halved Mr. Perdriau's valuations? I take the whole of his estimate for this part, but I only take half of his estimate for the block between Belmore Gardens and Devonshire-street. If this part is laid out by the Government it will become the heart of the City of Sydney; no one can deny that. If you make a square of 500 feet, and make Devonshire-street 100 or 120 feet wide, and run a broad avenue down through the block, there is no doubt that it will make a great city centre. Take the Commissioners' new station and put it at Redfern as shown on the plan; it sets back so far that it gives a 3-chain road in front across to the corner of the Benevolent Asylum. I refer to the large open space which will be given there, and which will be nearly equal to what will be gained by throwing in St. James' Church, the Registrar-General's Office, and the Supreme Court.

384. *Chairman.*] Did you draw that plan? It was drawn in my office.

385. Under your supervision? It was drawn in my office some years ago; it is from an official plan.

386. How much traffic do you intend to bring down to Circular Quay station—only the suburban traffic, or do you intend to bring down all the country trains? I intend to bring down all the traffic which Mr. Eddy in his evidence said required to be brought down.

387. All the passenger traffic which Mr. Eddy wanted to bring to Hyde Park you are prepared to bring down to Circular Quay? Mr. Eddy said the original proposal for the Circular Quay railway was to have only two lines.

388. Do you intend to bring down to Circular Quay as much of the traffic as the Railway Commissioners intended to bring down to St. James'-road? Certainly not—the whole of the public do not want to go to Circular Quay. Only a portion of them want to go there.

389. Will you bring as many people past Redfern as the Commissioners intend to bring to Hyde Park? Certainly not.

390. What proportion of the traffic will you retain at Redfern? I would take certain trains which would stop here. All the long-distance trains I would retain at Redfern.

391. Is it only for the suburban passengers? The principal object of the extension to Wynyard-square is no doubt for suburban passengers.

392. Therefore your scheme for bringing the railway into the city is really a scheme to bring the suburban traffic into the city? It is a scheme to adopt the principles which are found to meet the requirements of other large cities.

393. Is it a scheme to bring the suburban traffic into the city, or to bring the terminus of the whole railway system of the Colony into the city? It will bring in all those passengers who desire to go down there.

394. Suppose a train comes from Melbourne, Goulburn, or Bourke, and it stops at Redfern;—it is clear, that the passengers cannot go on in that train? I beg your pardon. The train which comes from Melbourne, Goulburn, or Bourke stops at Strathfield to collect tickets, and the passengers, as they do now, and as they do all over the world, would change into a suburban train.

N. Selfe,
M.I.C.E.,
M.I.M.E.
20 July, 1897.

395. You say that long-distance trains are not to come into the city from Redfern, but that passengers must make other arrangements if they desire to pass beyond Redfern? I say if the passengers want to get from the main line on to the local line they must change from one train to the other.
396. Therefore it is not intended to be any convenience to the long-distance traffic? Certainly not.
397. You stated that the scale of your map is 2 chains to an inch;—will you state the width of the red line on your map? The route is for Mr. Deane or other officials to point out. That line is only a centre line to show that the railway can be brought in a certain direction.
398. You have shown a black line of the full width? I have shown what I understand is the width to be taken. From what I have seen in the Press, I understand that it is proposed to take a strip 100 feet wide, for, I believe, six lines. I have drawn that width on this map.
399. Do you know what proportion of the traffic is suburban? No; but I know it is the suburban passengers who require to get to their places of business in Sydney.
400. You do not know the amount of the traffic? I know it intimately, as I am there every day.
401. You cannot tell the Committee what proportion is long-distance traffic and what portion is suburban traffic, and therefore you cannot tell us how many trains you intend shall stop at Redfern, and how many you intend shall come down to Circular Quay? It would be of no use to tell you that, because it is given in evidence by Railway officers.
402. You do not know that? I know it from the evidence of the Railway officials, but I do not know it of my own knowledge.
403. I wish to get at what will be the width of your line to Circular Quay? It would go easily in a chain.
404. Will you show us how wide a chain will be on your map? If this red line is drawn for two lines it will be double the width of that line.
405. In making the comparison between the two railway lines, your statement is that one would be how wide? The western resumption would be 1 chain wide instead of 100 feet, and 84 chains long instead of 130 chains.
406. Instead of showing it for comparative purposes as 66 feet wide, you have shown it as about 30 feet wide? I have only shown a centre line. When this map was drawn there were only two lines of railway proposed on the western side of the city.
407. You recognise that if you require the map for comparative purposes you have not drawn it perfectly fairly? I tell you this map was drawn three years ago.
408. Has it been shown anywhere else except to this Committee lately? It has never been shown anywhere to any public body.
409. Your line, you contend, will be 66 feet wide, and you have shown it not half the width; therefore your map, as far as the public are concerned, for comparative purposes is valueless? It is not exhibited to the public. I do not think you are dealing fairly with me. I told you clearly that it shows the route only.
410. *Mr. Trickett.*] It is a most unfair comparison? It is the simplest thing in the world to make that red line wider. Where it comes out into two stations you can see the double line there.
411. *Chairman.*] The map you bring before the Committee shows the running-road of one scheme to be wider than the area required for station purposes on the other? It does not. The western side route, being only a prospective one, was shown by red lines. The Hyde Park route, as recommended by the Royal Commission, was shown in black, and the width taken from the plans of the Railway Department.
412. Will you look at the map? This black route shows the width which I understand is proposed to be taken for six lines of railway to Hyde Park.
413. Seventy feet is all the width that is required to be taken? Then this black route is too wide. I understood from both the Press and official report that 100 feet was proposed to be taken as the route for six lines of railway, and this black line is drawn 100 feet wide.
414. The width of the six running lines, which the Commissioners say is necessary, is 70 feet; but when you are passing through private property, and have to carry out works of various kinds along the line, it seems that 100 feet certainly will be taken in order to have a full width for your roads—that is, leaving 15 feet on either side;—you could not have houses built right to the end of your embankment or cutting? Four lines would require 44 feet, and if you deduct 44 feet from 66 feet it would give you 6 feet on each side.
415. Mr. Deane, the Engineer-in-Chief, is of opinion that, approximately, 70 feet is wanted; and the Royal Commission were of opinion that, since you could not build quite to the end of the running-road, or right to the end of the embankment or cutting, a strip 15 feet on either side would certainly require to be taken up somehow or other? I think that is only a question of degree. I do not think it modifies the thing. I will quickly convert that black line into any width which the Committee may think desirable.
416. As your plan shows, the running-road in one instance is wider than the whole of the area required for your station appliances in the other? My station is shown 2 chains wide.
417. What is the red patch? That is Wynyard-square station.
418. What is the area of that station? Four lines and three platforms—the same as the Strathfield station.
419. Is that red patch wider or narrower than the black patch, being the running-road in either instance? This has ten roads in it.
420. I am not talking of that; I say that on this plan you have shown in red your station of a lesser width than the running-road required in the other? Certainly, this station does not require to be so wide. This southern portion of Hyde Park is the approach to what is to be the terminus of the New South Wales Railways. But this Wynyard-square station is merely a wayside line, just the same as Strathfield, with four lines and three platforms. You want no more room at this wayside station than you have at any other station on the suburban lines with three platforms and four lines.
421. You will grant that your map shows that your station arrangements require less width than the running-road required by the Commissioners' scheme? I do not say it.
422. Will you put your scale on the red patch on your map? This black patch is merely a piece of paper stuck on the plan. I had to get it out very hurriedly. I said to one of my assistants, "Put a strip representing a width of 100 feet on the plan."* But if the width is to be only 70 feet, I will alter the plan. I have no sentimental objections to the resumption of Hyde Park. I am only arguing on a pure business basis, and, therefore, I shall be the very first to cut this out. This red line is not to show, and was never intended to show, the width to be taken. It is simply what we call a centre line.
423. If you desire to convey accurately the effect of the construction of one line, as you do in black there, you want to show also, to be perfectly fair about the matter, the exact width in the other instance;—are you aware that four-fifths of the passenger traffic coming into Redfern is suburban? Yes, in the morning and evening.

424.

* NOTE (on revision):—The official plan of the Park-street terminus from which the data was obtained showed 132 feet reserved right back to Goulburn-street.

N. Selfe,
M.I.C.E.,
M.I.M.E.

20 July, 1897.

424. Will you show the Committee where you intend to shunt this passenger traffic if you take it down to Circular Quay? There are three platforms there with six lines, and by having such a large area, from eight to ten acres, at this Rocks station, besides the triple lines between the platforms, there is ample provision for shunting ground right back to Charlotte-place being available for the purpose.

425. What are the green marks you show near the Rocks? Those are all new streets.

426. Will you show the width of the area on which you intend to shunt this traffic? The whole station; it is between 16 chains and 18 chains long. There is practically an area of 10 acres there for railway purposes.

427. What is the width, as your plan shows it, where you intend to shunt your traffic? The whole of that is available for shunting.

428. Show us the end of your station? The northern end of the station-building itself is at Argyle-street.

429. Do the trains go up into that space? Yes; but from the northern to the southern end of the station yard is more than 1,000 feet long.

430. How wide is the place they go up into as shown on the map? That is about double the width of the present Redfern station building.

431. How many feet wide is it? It is about 3 chains wide, but the station-building is 140 feet wide by 500 feet.

432. How much have you scaled between the two green streets? It is about an inch and a quarter.

433. Is the station in red an inch and a quarter? The scale of the plan is 2 chains to 1 inch, so that an inch and a quarter would be 148 feet 6 inches for the station, at the narrow end abutting on Argyle-street; but you can make it as wide as you like, because I have devoted very great space to the westward of it. I have kept that new westward street 2 chains wide for cab-stands, so that you can easily make the station another chain wider if you want to do so, by lessening the open space.

434. Do you say that the road on your map between the two buildings is an inch and a quarter wide? It is an inch and an eighth wide. The building can easily be made an inch and a quarter wide without altering the street from the present arrangements. The length of the railway property is 17 chains.

435. But what have you shown on the map in red—is it an inch and an eighth wide, or what width is it? I have shown the building itself an inch and an eighth wide at the northern end.

436. How many feet is it? 148 feet in average width.

437. The whole of the suburban passenger traffic, which comprises four-fifths of the passenger traffic coming into Redfern station, has to come into an area 148 feet wide as shown by your plan? Certainly not; not one-tenth of the trains will be occupied by the time they get there. The people get out at Brickfield Hill, the Town Hall, and Wynyard-square.

438. Will you explain where you are going to shunt them;—I think you told me a moment ago that the trains were to go to that little red patch between Essex-street, Argyle-street, Princes-street, and Harrington-street? Any trains the Commissioners desire to send there they will send there. If they send four trains in at once they can get the four engines out at once, and put them on the front end and make them go off with the trains immediately. The red patch measures 8 acres.

439. But if all the passenger traffic of the Colony has to pass Redfern, it has to go somewhere? A great deal of it will go to Paddington, Waverley, and Woollahra. I am assuming that the Commissioners are going to continue the sensible arrangement they have adopted in the past, and will only run trains down there in proportion to the traffic which they have to accommodate. If they want to make a station there for more shunting, they have a great deal more room to do it in at that site than at other sites approved by them. I assume that one line of trains will come from North Shore.

440. When you commence to talk of trains coming from North Shore, and trains going to the eastern suburb, you have got a little distance into the future—we want to deal with the traffic as we have it to-day?—the suburban passengers at the present time are not delivered close enough to the city; therefore the trains pass Redfern, and having passed Redfern with four-fifths of the passenger traffic, what do you do with the passengers—where do you shunt the trains, and how do you get them back? I take the trains into the station and back again on the principle which the late Chief Commissioner approved when he gave his sanction to a station at the rear of the Custom House, comprising an acre and a half in extent. If he could do the work of shunting there—and I take Mr. Eddy as an authority—then I contend that his successor can do it on 10 acres. That is the basis I adopt. I am not putting myself up as an expert on the running of trains. I do not want to usurp the functions of any officer. Although I am an engineer, I come here as a citizen, and look on this from a citizen's point of view. If we had the authority of the Chief Commissioner that the proposal which received the sanction of a former Royal Commission—that a station at the back of the Custom House was sufficient for a terminal station—then I say that 10 acres to the westward of the Circular Quay, is as good as an area of 1½ acre at the rear of the Custom-house.

441. It was never intended as a terminus station, but as a station for the convenience and comfort of Circular Quay passengers? Whatever that was intended for could be done here in a much better way.

442. However, you intend to bring the passenger traffic into a width of 148 feet, but you would shunt the trains a little to the south of that place? I do not think you are right in putting words into my mouth. I have simply provided an area of 10 acres, on which I have shown, by way of illustration, a station of that width.

443. Will you show us where your 10 acres are? The portion coloured deep red—100 square chains is equal to 10 acres.

444. Does it not appear to you, as shown on this plan, that this area of 10 acres is separated by a couple of roads at least? No. Essex-street would probably go under it.

445. Do you desire the Committee to understand that you have fairly shown the 10 acres on the Rocks by a red patch? Yes; the red patch comes right up to Essex-street and Charlotte-place.

446. Does not the black patch by which you show Hyde Park seem to be a larger area than the red patch you show? Yes, it does look so, because it is square and compact.

447. Have you any doubt at all? I have no doubt at all that you can have 10 acres there when it is cleared.

448. I refer to your plan;—have you any doubt in your mind that the areas are wrongly shown comparatively? I do not think they are wrongly shown comparatively. They are shown illustratively. I have said that this block is about 10 acres, but it might be 9½ acres.*

449.

* NOTE (on revision):—On actual measurement it was found that there were over 11 acres shown for railway purposes, and coloured red, the strip taken for the extension to North Shore making it look smaller. This portion of the plan was over 10 feet from the floor at the time of my giving evidence, and hence it was not very clear to the Committee, perhaps, what a large area of ground was shown as set apart for the railway yard and station buildings on this Rocks site.

N. Selfe,
M.L.C.E.,
M.J.M.E.
20 July, 1897.

449. You cannot look at that plan and tell the Committee that the red patches you show near the station are as big as that black patch? I keep on explaining that the ground comes down to Charlotte-place.
450. *Mr. Black.*] What do the green areas represent on your map? They are new streets. The point which the Chairman is making so much of is one on which I do not wish to be very definite, because that is a matter, I take it, for the Engineer-in-Chief. If the scheme is worth consideration, it is worth being worked out by the proper authorities. If I were to draw these things in detail—that is, the sidings and station arrangements for shunting and regulating the traffic—I should be usurping somebody else's functions. But I have a right, as a citizen, to say that the new George-street shown on the plan straight and level, instead of the present crooked street going down to the Queen's Wharf, would be an improvement to the city, besides which it would be almost double the width of the present street.
451. *Mr. Hoskins.*] How much land at the Rocks will the Government have to sell? I suppose 18 or 20 acres, less the streets.
452. Less the streets? In that paper which you read there are so many chains put in. There would be about half the frontage there is now under the new arrangement I propose.
453. *Chairman.*] You will not misunderstand the position. When a professional man brings a plan here for any purpose, it is supposed to carry to the lay mind a correct interpretation of the case as it stands. In that the area proposed to be taken as a running-road, in one instance, is shown four times as wide as the running-road in the other; and since the railway-station yard in one instance is shown to be, I dare say, a third larger than it is in the other, it is perfectly clear that it does not carry to the eye of the layman a correct interpretation of the case. One would not suggest that you had that intention? There is no intention of that kind at all. I am acting entirely in good faith. I reckon that if I were to spend as much money on the plans I bring before the Committee as was spent on the beautiful plans I see here, I should want to be as rich as Croesus.
454. How long would it take you to make the red running-road as wide as you grant it should be? I will quickly get that red centre line made the full width of the roads, and the other made narrower if it is now too wide. The Committee must clearly understand that I have no personal object whatever to serve in this case, for I do not own a pennyworth of city property.
455. On your plan you show an extension from North Shore;—that extension will not pass through the main station you show on your plan? It will not pass through the local terminus. It would not be a terminus if the lines passed through it; but the North Shore line does pass through the main station and junction at Wynyard-square.
456. Where do you propose to start to rise in going to North Shore? I find a number of large bridges are being built now for ships that are 150 feet high. I have maintained from the beginning that 150 feet is sufficient head-room to provide in a bridge, and I can get that height from Wynyard Square on a grade of one in fifty.

Isaac Ellis Ives, Mayor of Sydney, sworn, and examined:—

I. E. Ives.
20 July, 1897.

457. *Chairman.*] You are the Mayor of Sydney? Yes.
458. Do you desire to present a statement showing the views of a majority of the City Council on the proposal before this Committee? I wish to read an extract from the minutes of a meeting of the City Council on the 17th June last:—
- Moved by Alderman Burdekin, seconded by Alderman Booth:—"That this Council approves of the proposal to set apart a portion of Hyde Park for the purpose of the extension of the railway into the city."
- Moved as an amendment by Alderman Taylor, seconded by Alderman Buckle:—"That this Council protests against the proposal to take any portion of Hyde Park for railway purposes, and empowers the Mayor to express the same before the Public Works Committee."
- Division on above amendment:—

<i>For</i> (13).		<i>Against</i> (5).
Alderman Beare,	Alderman Sir W. P. Manning,	Alderman Booth,
Buckle,	Penny,	Burdekin,
M. Chapman,	Rainford,	H. Chapman,
M. Harris,	Smail,	Jessep.
J. Harris,	Taylor,	Kippax.
Landers,	Waite.	
Lees,		

459. How many constitute a full Council? Twenty-four. There were nineteen, including myself, present on that occasion. Some of the aldermen were in England, and others in other places.
460. Has the City Council any control over the parks? No. The City Council has no control over Hyde Park; but some of the aldermen are on the Trust of Hyde Park.
461. That virtually has no connection with the City Council? None whatever.
462. You do not maintain the Park in any way? No.
463. What, then, is the ground on which you oppose the utilisation of the north-western corner of Hyde Park for railway-station purposes? The stand which the City Council takes is that the Park has been dedicated for recreation purposes.
464. Having been dedicated for that specific purpose, you, as a City Council, believe that it should be used for no other? The majority of the Council believe that.
465. The deed of grant controls the case, in your opinion? Yes; and further than that, in all cities under municipal government the great object has been to give more park room. In various cities the corporation has spent large sums in securing these breathing-places instead of contracting them.
466. The strong position you take, from your standpoint, is that the deed of grant having set forth that the land be set aside for a specific purpose, the Crown should use it for no other purpose? I am clearly of that opinion.
467. That is a view which the Council would take in similar circumstances? I think so.
468. I wish to direct your attention to an area of land around the present Town Hall site;—have you any knowledge of the area which was originally given round the present Town Hall site to the Municipal Council of Sydney? I cannot speak positively as to what it was, but I know that it was originally more than we did possess a little while ago.
469. An area of 2 acres and about a rood (part of the old Cathedral Close and the old burial-ground) was given to the City Council on these terms:—

That of that area half an acre only should be used as a site for a Town Hall, and that the Municipal Council should embellish the portion of the same not set apart as hereinbefore provided for a Town Hall, with such walks, ornamental trees, and shrubberies as the Director of the Botanic Gardens for the time being shall recommend, and the said Municipal Council shall preserve, maintain, and keep in a cleanly and orderly state and condition the said land and the said walls, palisading, gates, entrances, walks, trees, and shrubberies thereto belonging.

That

That is to say that out of the 2 acres $1\frac{1}{2}$ acre shall be used for park purposes adjacent to the Town Hall;—is that park in existence? There is no park in existence at the present time. I do not know the date of the document you are quoting from. I. E. Ives.
20 July, 1897.

470. It is the Act 32 Victoria No. 4, passed in 1869;—I presume, in your opinion, adjacent to the Town Hall would be a very good place for an open space? There is a considerable open space there now. Out of the land we purchased from the Government two or three years ago we have widened the street very considerably.

471. At the time that grant was made authorising the Council, on certain terms, to receive these 2 acres the Mayor of Sydney stated that it was so nice and close to the Town Hall that, being under the eye of the aldermen, the park would be kept in good order? I am not aware.

472. This one park which the City Council had charge of apparently is not in existence now? If they had charge of it—if ever it was a park—they have made use of it for the benefit of the city by widening the roadways.

473. An area of 2 acres was given to the City Council under a definite arrangement with the Government that $1\frac{1}{2}$ acre should be used for one purpose, and apparently it has not been used for that purpose, for if it had been it would be in existence? That matter I was not aware of until you mentioned it.

474. Taking that as an instance, the City Council cannot fall very strongly back on a deed of grant even with regard to parks, in respect of which they disregard their obligations? I do not think so. I think they have every reason to do so. I am negotiating, and have been for more than six months, with the Government to take over all the parks in the city. I was not aware that there was a grant made on the condition that there should be a park in the middle of George-street. I recollect years ago, when the burial-ground extended nearly to the opposite side of the road, and a temporary cathedral stood in the middle of what is George-street, but I am not aware that it was dedicated as a park.

475. If a deed of grant absolutely controls the case as regards the Crown, it should also control the case as regards the City Council;—however, that park has disappeared? If that park has disappeared, that is one very strong reason why another park should not disappear under similar circumstances. It cuts both ways; it teaches the Municipal Council a lesson. I have learned something to-day.

476. There is an area of 1 acre 1 rood 39 perches dedicated as a site for a ferry and a public landing-place a short distance from the Gasworks? Quite right.

477. Is the Council using it for that purpose? Is it practicable for it to do so.

478. Is it using it for that purpose? Is it practicable to do so.

479. You might tell me that it is not being used for that purpose? Certainly not; it is impracticable. That is another matter I have under consideration with the Minister for Lands.

480. That would make a very excellent park? A beautiful park it would make. It is straight up and down like the Hassan Walls outside Bathurst.

481. It is adjacent to a very crowded part of the city, and has a water-frontage. However, it is not being used for the purpose for which it was dedicated because it is impossible to do so? It was given to the Council for a purpose for which it has no value.

482. Where the Hotel Métropole now stands was given as a Town Hall site originally to the City Council? I have heard of it.

483. Do you know what the Council did with that land? They sold it, I believe.

484. There is a property known as the Market Wharf also, which was granted under a definite arrangement between the Crown and the City Council that it should be kept for all time for the convenience of people sending market goods to Sydney;—I presume you are aware it was vested in the Municipal Council for that purpose? Yes, and I am also aware that the Pyrmont Bridge occupies one-half the place; it severed the property.

485. The bridge was eventually placed across the harbour; but some of that land remains? Yes.

486. Are the Council using it for the purpose for which it was granted? It seems to me that this catechising must have emanated from the Department of Lands. All these details for the last nine months I have been endeavouring to clear up with the Government. All the questions you are asking me are questions of detail which are before me on my office table at the Town Hall, and I am only waiting for an interview with the Minister for Lands to clear them up. I have already taken the necessary steps to put all these matters into proper order in accordance with a promise from the Minister.

487. The Market Wharf was given to the City Council for a certain purpose;—the Council leases a portion of the Market Wharf for about £1,000 a year, and the residue of the area brings in a very considerable sum? That is so.

488. Is not this the fact of the case: That the Municipal Council, having received certain areas of land from the Crown for the benefit of the city as a whole, have not kept them for the purposes for which they were granted, but have utilised them in the best interests of the country to the best of their belief? Undoubtedly.

489. Paying no attention whatever to the deeds of grant? The Corporation has progressed with the city, and has endeavoured to benefit the city in every possible way. There are other pieces in the same way. From an inquiry which was made into the deeds of title of all the water-frontages round the city it was found that the City Council, among other sinners, have used land for other purposes than those for which it was granted; but still in the best interests of the city.

490. If there be any point in your first contention, that land granted for one purpose should not be used for another, then the City Council are serious delinquents? There are other sinners besides the City Council.

491. These lands are used for these other purposes because the City Council believed that they were better so used? Undoubtedly. We do not want a wharf for landing at. We could not use Kent-street land for a landing-place. You could build a landing-place there, but no one would go there.

492. Have the Council made any attempt to extend the area of park land? Yes; we have taken over Wynyard Park.

493. But not to extend the area of park land? No, not at present.

494. Some of these areas down there which are thickly settled—the population is very thick down about Sussex-street—would do nicely for an open place? I do not think you will find very many people living down that way in comparison to what were there a few years ago.

495. Do you know the extent of open land of which Hyde Park forms part? I am not aware of the exact acreage of it.

- I. E. Ives.
20 July, 1897.
496. Taking a line from the southern end of Woolloomooloo Bay, and coming down to Liverpool-street, the total area in that block is, I think, 800 acres, including streets and parks;—do you know that area to be correct? I could not say.
497. Are you aware that a third of that area is open space, not counting streets? I do not know the acreage of the place you mention.
498. In your opinion, is the area of open space on the eastern side of the city proper extensive? I do not consider that it is any too large—it is none too large; and in the course of twenty years you will find that it will not answer the requirements of the people.
499. The portion which is wanted for railway-station purposes is a twentieth or a twenty-fifth of that area, and you say you cannot spare that much? I say it would be wrong to touch the Park.
500. Because it would reduce the park area of open space? Yes.
501. Are you aware of the number of the population living round Hyde Park? No.
502. It is 15,000;—do you know the population living within half a mile of Carter's Barracks? No.
503. It is 32,000? When you speak of 15,000 persons living within half a mile of Hyde Park, what do you allow for the thousands of people who come into the city to do their business, and who turn out of the shops and warehouses between 1 and 2 o'clock to go into Hyde Park for a breath of fresh air. Have you ever counted the population of Hyde Park during the dinner-hour.
504. We will come to that in a minute, because it may be these are the people really we will specially convenience. Taking the same area in each instance, there is a population of 32,000 people within half a mile of Carter's Barracks, and a population of 15,000 within half a mile of Hyde Park. The area of park land adjacent to Hyde Park is, roughly speaking, 200 acres, and the area of park land around Carter's Barracks is 28 acres. Where, in your opinion, is the greater need for a park—at Redfern or at Hyde Park? Belmore Park is, I should think, 100 feet lower than the level of Hyde Park, and the people who go there certainly would go up to the higher place.
505. You believe that a park should have a certain elevation, and that the higher park is the better park? Yes. I say that if any person wants to breathe fresh air, instead of going round to Paddy's Market or into Belmore Park, he would go on to Hyde Park if he had the time.
506. Because it is more elevated there? I have already said that people would not go down into the hollow where the smell and everything of that kind is to be found.
507. Are you aware that the Cemetery and beyond Carter's Barracks, where the park is proposed to be made, is higher than any part of Hyde Park which is proposed to be taken? There may be one notch which may be a little higher.
508. From Carter's Barracks across to Elizabeth-street is higher than the Park? It is; but that would not be of use. It would be altered. You would send your sand-shifters to level it down, and bring it down to the level of the Park.
509. Do you know the levels of Redfern station and Hyde Park? No, I have not gone into that question.
510. You believe a park is more required near St. James'-road than it is at Redfern? You have already Prince Alfred Park at Redfern.
511. Prince Alfred Park has an area of 18 acres; Belmore Park has an area of 10 acres; and around that total area of 28 acres is a population of 32,000 persons, while around Hyde Park is a population of 15,000 persons, with an area of perhaps 200 acres of park land;—where, in your opinion, is the greater need for a park, one having a larger population and a lesser area of park than the other, if it is wanted for the poor, as I suppose it is? The necessity for the park is shown by the number of people who visit it. The persons who visit Hyde Park are 10 to 1 more than those who visit Belmore Park or Prince Alfred Park. The appreciation of a park is shown by the persons who resort to it.
512. Have you any figures showing the number of people who visit the various parks? No.
513. It is from personal inspection you believe it to be so? Yes.
514. The area proposed to be taken from Hyde Park is about 100 yards wide;—would it be a serious inconvenience to a person desiring to enter the Park that he should have to walk 100 yards further than he has to do at present? Yes, if he had to do it often.
515. They do not all come from the western side of the city on to the Park? From the western side, and from the eastern side they cross the Park.
516. Would it be an advantage to the poor of the city to have such an area as is embraced in Carter's Barracks and the Benevolent Asylum thrown into a park? You have already the Prince Alfred Park on one side, and Belmore Park on the other.
517. It appears to me a remarkable thing that an area of 28 acres should be abundant for a population of 32,000 persons, and that an area of 200 acres is not abundant for a population of 15,000 persons? Suppose that the area of park land adjacent to Hyde Park consists of 200 acres, as you state it does, I say that it is one of the beauty spots of the city to our visitors, and to our country friends. It is required not for the 15,000 persons who immediately surround the Park, but for the 150,000 or 450,000 persons who like to go there.
518. We are talking of those persons primarily interested in the Park, and the persons really most interested in the open space are the poor people who cannot get away to the country;—would you regard it as an important adjunct to the lungs of the city if the area I described adjacent to Belmore Park were laid out as a park? Undoubtedly it would be a very good thing, but I would not exchange any portion of Hyde Park for it.
519. Although you are prepared to grant that the residential population, or the poor population, is twice as great in the vicinity of Carter's Barracks as it is in the vicinity of Hyde Park? I have already stated that on one side of Carter's Barracks we have Belmore Park, and on the other side Prince Alfred Park.
520. Do you believe that there should be a city railway? I am a most firm believer that there should be a city railway, and have been so for the last quarter of a century.
521. Can you suggest a route for the city railway;—can you suggest something which would be likely to solve this question? I am not an engineer, and therefore I am not prepared to suggest any route. If a city railway were mooted on some definite plan whereby the whole of the suburbs would be served, even if we only did a certain portion in one year, and a certain portion the next year, and one portion of the scheme should be an ultimate connection with North Sydney, I would devote my untiring zeal to see it accomplished.
522. You have no route to suggest? I have an idea in my mind, but I am not an engineer.

I. B. Ives.
20 July, 1897.

523. We would like to hear your idea? I think if we want to serve the city, instead of bringing the whole of the work to Redfern, a line should start off about Stanmore, at the bottom of the Annandale Estate, and go through that estate, following the watercourse along through Forest Lodge, coming down to Darling Harbour, going round Darling Harbour into the city (at some place or other giving convenient stations), and going out to serve the eastern suburbs and back. All the trouble at Redfern is caused by that narrow outlet in the yard. It may be a work of the future; but still, if a scheme of that sort were worked out, we should not only be providing for present wants, but in twenty years the people would say that we had shown some little foresight. That is my opinion of what should be done.

524. You will allow me to suggest, on the spur of the moment, one difficulty in regard to a scheme of that kind, viz., that no line turning off at Stanmore could be of any value to the suburban passengers who come along the Illawarra line and the Burwood-road line? I did not for a moment suppose that Redfern station would be done away with.

525. The Railway Commissioners bring on to Redfern station a considerable number—thousands of passengers—every day: they are at present concentrated there;—do you believe it is well to extend the railway from Redfern to the city? I think, unless you are going in for some general scheme by which the whole of the suburbs and water-frontage are going to be accommodated, it should be a temporary scheme at present at Redfern. You should make sufficient room there—you should take the Cemetery and the Asylum grounds, and make a loop in order to do away with the shunting in Redfern yard. There is plenty of room there.

526. That does not solve the question of the city railway? No; but I say for a temporary measure it would answer. The yards at Redfern are so cramped.

527. Does it seem probable to you that since these suburban passengers are concentrated at Redfern it might be well to look for an extension to the city from that point? If it were possible to do so.

528. Suppose Hyde Park were an open space, not used for any purpose; suppose it were not a park, then would you extend the railway from Redfern? Not unless I could see my way to continue it to the suburbs, and to the waters of the harbour.

529. That is to Circular Quay and to the eastern suburbs? Yes.

530. Are you aware that the Engineer-in-Chief for Railways regards it, and that the late Chief Commissioner for Railways regarded it, as one of the salient advantages of this St. James'-road scheme that it could be readily extended to Circular Quay and to the eastern suburbs? No; I was not aware that it was intended to extend it to Circular Quay from Hyde Park.

531. Were you aware that it was possible that it could be extended? There is nothing impossible in engineering at the present time.

532. It was designed exactly with that end in view;—does that remove from your mind the objection you had with regard to the ultimate possibilities of the line—I am not now talking of the Park at all? I do not think it is a suitable place, and as you are laying a line of electric tramway up George-street from Circular Quay to carry the 6,000,000 passengers who travel from North Shore in the year, there is no necessity to bring the railway down there.

533. On the 10th April, 1896, you gave evidence with regard to the construction of that electric tramway? Yes.

534. And you pointed out very clearly that no tramway could do the work of the city, and that one of your principal reasons against the construction of that tramway was that it would delay the extension of the city railway? Yes. That is what I say now, that one is cutting the throat of the other. We should never have both.

535. On that occasion you gave the following evidence:—

1829. According to the evidence of scientific men electric tramways are better than any other system that has yet been discovered;—do you not think that Sydney should be as well off as other cities in regard to modes of transit? I quite agree with that view, and I think that we are a long way behind now; but if you want to bring Sydney ahead you must extend the railway from Redfern to Circular Quay. It costs me as much to travel from Redfern to my office as it does to travel 14 miles on the railways.

? Yes.

536. Since an electric tramway is to be built from Circular Quay to Redfern, is there any need, in your opinion, to extend the railway from Redfern to Circular Quay? I think we should certainly have a goods line to the waters of the harbour.

537. But for passengers? I would point out that, as you are going to run an electric tramway from Circular Quay to Redfern station and to Harris-street, it would be a suicidal policy to bring a railway merely for the passenger traffic down to Circular Quay.

538. In your opinion, is an extension of the railway from Redfern to Circular Quay justifiable for passenger traffic, in view of the construction of the electric tramway? If you are going to run an electric tramway along George-street to carry the 6,000,000 passengers who travel by the North Shore ferry, and you make a point of saying that your railway should come to Circular Quay to carry the same number of people, one or the other of them will certainly not be of very much use.

539. Speaking as Mayor of Sydney, with a full knowledge of the trade and the business and the traffic of the city, in view of the fact that almost immediately an electric tramway will be constructed up George-street from Circular Quay to Redfern, is it justifiable, in your opinion, to extend the railway system of the Colony to Circular Quay? Personally, I would prefer to see a railway to Circular Quay, and not an electric tramway.

540. But since the electric tramway is to be constructed, in your opinion should the railway be extended? I would not give way to anybody in saying that the railway should not be extended. I say it should be extended.

541. With an electric tramway in existence, you maintain that there should be an extension of the railway from Redfern to Circular Quay? It is quite probable that in a short space of time there will be work for them to do.

542. We understand that that influences you in giving your reply, and that you maintain your old position? Exactly.

543. Will you tell us the route by which you would propose to go from Redfern to Circular Quay? No. I am not an engineer, and I will not pretend to enter into the question of the route.

544. Can you give us an idea of the value of what the resumptions would be, in one instance with bare land,

I. E. Ives.
20 July, 1897.

land, and in the other instance with buildings on the land, taking any area you see fit in the city—for instance, taking the area along Elizabeth-street between Market-street and Park-street, how much of the value is made up of buildings, and how much is made up of land;—the Government proposal is to take bare land or park land with no buildings on it; but in the case of any other city railway you must for a site for the station take land with buildings on it? I could not give you that information at the present moment, but I could get very near to an approximate value later on by making inquiry.

545. Can you give us an idea of the price for which an area of 10 acres required for the central station could be obtained? I have not gone into the matter.

546. Would £1,000,000 be too much to pay for it? I could not give you any idea. Values, as everyone knows, are very different from what they were a few years ago.

547. An area of 10 acres will approximately be required for a central station similar to the station shown on the plan here;—do you believe that £1,000,000 would be a cheap amount to pay for such an area? It all depends on the situation of the land. If you tell me the area you have in your mind's eye I might give you an idea of its value.

548. I imagined that you might have had an area and a site which you have thought would be a suitable one, in order to make a comparison from the standpoint of cost. Are you aware, also, that in choosing any site except the Park there is a difficulty to get the length and the width required to make a suitable station;—for shunting purposes and for platforms a certain area is wanted, and it is difficult to get that area? Yes.

549. Adjacent to Hyde Park there is an area where the High School stands, and people suggest that there should be a station there, but it is neither wide enough nor long enough; you would overlap your streets. A city railway has to be a good piece of work to do properly the work of the Colony, and therefore you have not only the question of compensation, but also the question of closing the streets to consider;—suppose the Government were to take from the Municipal Council streets which have been wood-blocked, and on which you have spent large sums, for the purpose of absorbing the area into the city railway-station site, would you require compensation for that? Undoubtedly, unless you gave us other streets in the same order in return.

550. You want compensation in one form or other? Yes.

551. It amounts to this: That unless park land is taken, the Government will have to pay for the value of the land, for the disruption of business, for forced sale, and also pay the City Council such demands as may be assessed as reasonable for the streets that are closed, and, of course, the value of the buildings? That is so; but in purchasing the land there is always a residue which the Government has. The Government is in no worse position than private enterprise in other parts of the world, where they buy up, and pull down, and make streets, and pay themselves handsomely for it.

552. That may be correct with regard to the approach to the station—that is, the running-road—but I am speaking now of the station site, where you absorb all the area taken into the station grounds;—there would be no residue there to sell? No; any block between Castlereagh-street and Elizabeth-street, I take it, would not be wide enough for a railway station.

553. It is not only a question of resuming property, but also a question of resuming streets, and it becomes a serious thing to go across a street like Castlereagh-street? Yes.

554. Do you believe the extension of the city railway should be for the whole country—that the whole of the trade should come in? I believe the city railway should be constructed in such a manner that a man who loads his goods at the most remote part of the railway from the city should not have them disturbed until they are alongside, or as nearly as possible alongside, the warehouse or ship they are consigned to. I also believe that a man who imports goods should be able to have the trucks taken alongside the vessel, and to send the goods to Dubbo or Bourke straightaway from the ship's slings.

555. We, as a Royal Commission, looked into that aspect of the case rather fully. We found that Sydney being a distributing depôt, the goods were brought in very many instances into various warehouses and bonds, and there bulk was broken and the goods distributed. As far as we could gather from men competent to judge in regard to the trade, such as Mr. Powell, the late Collector of Customs, they were of opinion that a very small percentage—5 per cent.—of goods imported into Sydney go direct to the country? I think those gentlemen who gave you that evidence are a long way out in their estimate. I do not think anyone has had more experience in that line than myself. I have been nearly a lifetime at the business, and I could give you a return showing you the amount of stuff which I have sent up to Darling Harbour direct since the first of this month.

556. With regard to the export trade, the Commissioners believe that, being in touch with Darling Harbour and with Darling Island, as they will be presently, and being brought into touch with Woolloomooloo Bay, they have ample accommodation to do for a considerable time;—however, you believe a railway is necessary, and that the State should resume and pay for the land, buildings, business, and all that sort of thing? I believe in any other course except taking Hyde Park. It is not absolutely necessary to go to that particular portion of the city, because the traffic will be served equally as well if it is taken a great deal further westward.

557. But almost everything west of Hyde Park is covered with a pile of splendid buildings. Suppose you raze the buildings off the land, and it costs the people £1,000,000. Well, at 3 per cent., there is £30,000 a year, which someone has to pay;—your Worship, I think, sees the seriousness of the position? I think we pay a great deal too much. I think we are trying to do too much in the present generation, and leaving too little for the following one to do.

558. Does your Worship see that every pound spent in resumption of land, as far as railway purposes are concerned, is so much waste? No; because if you wanted to take my place, I should have to build another. If you did not give me sufficient for the place I occupy, I should have to find money somewhere else to spend to keep my business on.

559. You do not want the store, you want the land under the store under which to put your railway or running-road;—if you pull the store down, that much is waste, and it is that much more costly than if you have bare ground? But is it absolutely necessary that the railway should go over where these buildings stand, instead of under them?

560. Would you suggest a tunnel to carry the great population of Sydney? We should never have such underground railways here as they have in London. We have only a narrow neck of land, in any case, in Sydney.

561. Would you regard the question of tunnels as somewhat seriously affecting the convenience and comfort of the travelling public? I do not think there would be any inconvenience to the travelling public for the short tunnel which would be necessary.

I. E. Ives.
20 July, 1897.

562. It would not be a short tunnel once you got down under Sydney; the trouble is to get a suitable station site and a running-road by which to approach that station;—do you know the value of Hyde Park? No; and I do not think anyone else does.

563. You do not know what it would fetch if it were put up for sale? No; I should not like to put a value on Hyde Park without some consideration.

WEDNESDAY, 21 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. JAMES HOSKINS.

The Hon. CHARLES JAMES ROBERTS, C.M.G.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY CLARKE, Esq.

CHARLES ALFRED LEE, Esq.

JOHN LIONEL FEGAN, Esq.

THOMAS HENRY HASSALL, Esq.

GEORGE BLACK, Esq.

FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the expediency of extending the Railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

William Greenwood, A.M.I.C.E., sworn, and examined:—

564. *Chairman.*] You are an Associate of the Institute of Civil Engineers? I am, and have been for about twenty years.

565. Are you engaged in the practice of your profession in the metropolis? No, I am contracting. I have not been engineering for some years.

566. On the 2nd April last, before the Royal Commission on City Railway Extension, you gave certain evidence;—do you regard that evidence to be substantially correct? Yes. I only wish to add to my evidence.

567. As regards the land resumption on your scheme, you estimated for an area of $2\frac{1}{2}$ acres, and the amount at £103,000 per acre? Two and a half acres for a double line, and $3\frac{3}{4}$ acres for four lines.

568. On that occasion you said "On the double line there would be 45 chains 36 feet in width; on the four lines, three would be the same length, 54 feet in width"? Yes.

569. Your length of resumption is about 45 chains? The length of resumption is 45 chains by a width of 54 feet. Where my line passes through freehold property, it is 45 chains long, no matter whether it passes over it, under it, or through it.

570. How far is it from Redfern to Circular Quay? 150 chains.

571. Of that length you make provision for resuming 45 chains? That passes through freehold property, and the remainder is either in Government land or streets, or something which is not freehold.

572. Will you describe where the length of 45 chains is situated? Between Campbell-street and Bathurst-street is 20 chains; from the northern portion of Wynyard-square to Pitt-street is 25 chains. These are the only two pieces of the line which are freehold.

573. From Campbell-street, let us take your resumptions? To the junction of George-street and Bathurst-street it goes at the back of the swimming-baths, at the western end of the new Masonic Hall, across Liverpool-street curves round across Pitt-street near to St. Andrew's school, crosses Pitt-street between that point and Union-lane, goes to the back of the Water and Sewerage Board's office, and winds up to the corner of Bathurst-street and George-street.

574. Have you an estimate of the cost of resuming those 20 chains? Roughly speaking, £100,000 an acre.

575. How have you defined your area? Fifty-four feet wide by a length of 20 chains.

576. Are you aware what powers the owner of an allotment has if the Government put a railway through any portion of it? Yes.

577. What are those powers? I believe here you are compelled to take the whole, but it is also possible in passing a Bill for the construction of this railway to pass a Bill which gives you power not to do that.

578. Will you explain how you make up your estimate of £100,000 an acre? I have put down £70,000 as the market value of the land, 10 per cent. for compulsory purchase, 10 per cent. for lessee's compensation, and 20 per cent. for severance. That is ample, as there is very little lessee's compensation in this Colony. Ten per cent. is what Mr. Perdriau puts down for compulsory purchase, but I have also put down 10 per cent. for lessee's compensation. In Sydney there are very few lessees; they are mostly yearly tenancies or weekly ones.

579. You state that, to the best of your belief, if the State take a portion of an allotment the owner can compel the State to take the whole of it? Just so.

580. Therefore the initial cost of the resumptions may not be limited by the area absolutely required for railway purposes? Certainly not.

581. Did you make these valuations yourself? I made them, without knowing it, in precisely the same way as your valuer did. I did more than Mr. Perdriau did. He took the city assessments at twenty years' purchase, whereas I took the city assessments, and added one-ninth to them for the simple reason that they are one-ninth less than the rental value.

582. From the point you mentioned, at the corner of George-street and Bathurst-street, how then does your line proceed? I cross under George-street at an angle in front of the Town Hall, and by the side of the markets. That takes me to York-street.

583. Are you under streets still? Yes.

584. *Mr. Roberts.*] Will you describe the situation of the station? The station is really at Hepworth's tailor shop. It extends back from there towards the Water and Sewerage Board's building. The building would

W.
Greenwood,
A.M.I.C.E.

W.
Greenwood.
A.M.I.C.E.
21 July, 1897.

would be nothing more than a big office, and a flight of stairs to the railway station. It would be a metropolitan station, and no waiting-rooms.

585. *Chairman.*] From there you pass under George-street by tunnel until you get into York-street? York-street is in tunnel; George-street is not in tunnel.

586. What is it? It is in what you people term "cut and cover."

587. You would still have the surface of the street over you? Yes; but George-street at that point is 90 feet wide. I propose to divide the two lines of traffic, and take a portion for a ventilating-shaft.

588. You are sure that that is a feasible idea? It is quite feasible.

589. Your first ventilating-shaft is in the middle of George-street, which you think will not interfere with the traffic? Yes.

590. Will you proceed under York-street by tunnel to Wynyard-square? Yes, 30 chains.

591. Where would your next ventilating-shaft be? That is a matter of detail.

592. Will there be a ventilating-shaft somewhere? Yes.

593. The tunnel is under the street, and therefore the ventilating-shaft must be somewhere in the street? Probably, but not necessarily.

594. Are you prepared to say where the next ventilating-shaft would be in York-street? There is room for a ventilating-shaft at Market-street and York-street. York-street is not a parallel street. Market-street end is not parallel to Walter Friend's stores.

595. *Mr. Humphery.*] How do you avoid the buildings between George-street and York-street? There are no buildings at all—only one leg of the porch of the Town Hall.

596. Do you curve your line there? It is nearly straight across the street. There is a slight curve between the Markets and the Town Hall.

597. *Chairman.*] You think it may be possible to put a ventilating-shaft somewhere out of the street—in York-street? Yes.

598. Are you aware that engineers and authorities in all parts of the world are pretty well unanimously against tunnels if they can possibly be avoided? Yes.

599. Why do you believe tunnels are undesirable? Because I prefer daylight, most assuredly.

600. Do you think the smoke will cause any difficulty? No.

601. Are there satisfactory ventilating-shafts used in other parts of the world? Yes.

602. Are you aware that the Board of Trade has refused to have any more underground railways worked by steam in Great Britain? I am aware that the Railway Commissioners in this Colony have no Board of Trade to control them; they can do just as they please.

603. I ask you whether, in those countries where they have had most experience of underground railways and the working of them, you are aware what the attitude of the authorities is? I do not know; but Mr. Thow in his evidence before the Royal Commission has told you that there is no difficulty in ventilating a tunnel 30 chains long.

604. We have got by tunnel as far as Wynyard-street;—from there what happens, in your scheme? A daylight station at Wynyard-square. The resumption begins at the northern side of Margaret-street.

605. Where does the open-air line terminate? Wherever the line terminates—at Macquarie-street.

606. Where you commence to descend towards Circular Quay, what do you propose to do there;—do you follow the contour of the country right down, or is the line, abreast of the Quay, above or below the level of the street in front of the Custom House? The highest point of the line is at Wynyard-square station, so that in the future if a bridge be built to North Shore the junction will be at Wynyard-square station. From there I start to fall, and I fall down to Circular Quay. At the Quay I am 13 feet below the roadway at the Custom House. The object of that is to go by tunnel to North Shore in future, or by horse-ferry or by a sub-aqueous tunnel.

607. Do you know how much space you require to have between a running-road and a bridge to enable ordinary engines to pass under it? About 4 ft. 3 in. or 4 ft. 4 in. from the running-road.

608. What height will the bridge require to be? I think Mr. Deane's height is 15 feet. In England every railway company has to work to Board of Trade rules. At home 14 feet is the standard height, but here there is no Board of Trade, and it has been a case of go-as-you-please.

609. Will the top of the funnels of the engines be above the level of the surface at Circular Quay? Yes. I do not think the funnel is the tallest point.

610. *Mr. Wright.*] Is not 13 ft. 6 in. the recognised high gauge for all railway bridges here? No. The Metropolitan Railway constructed their lines with a headway of 13 ft. 6 in. I have built them with a headway of 13 ft. 9 in. and passed the Board of Trade myself.

611. But here it is 13 ft. 6 in.? It is more than that.

612. *Chairman.*] Taking the standard here at 14 ft. 6 in., what height is your road below the surface of the roadway in front of the Custom House at Circular Quay? Thirteen feet roughly.

613. You have to lift the road 18 inches? No; I am in open cutting from Wynyard-street to Macquarie-street.

614. There is a considerable amount of traffic to the Custom House and on Circular Quay? Yes.

615. If trains requiring a headway of 14 ft. 6 in. are to run through there, and your open cut is only 13 feet deep, a height of 18 inches is rendered necessary to enable the traffic to be carried on? That section shows that Loftus-street and Elizabeth-street are coupled together and taken over the top of the railway.

616. Are you going to lift the road in front of the Custom House? Yes; the two cross roads, Loftus-street and Elizabeth-street, will be carried across the railway.

617. Where it is necessary, in front of the Custom House, and between the Custom House and North Shore Ferry, and other places where your road is running, you are going to raise the roadway 18 inches? Yes, for the width of the road itself. If it is a 66-foot road, I will raise a width of 66 feet.

618. For such widths as are necessary you are going to raise the road 18 inches? Yes.

619. How wide will your railway works be in front of the Custom House? Forty-eight feet. In England I have built them 46 ft.

620. Over a portion of that 48 ft. there will have to be a crest in the road, or an alteration made? There is the bridge raised 2 ft. above the roadway.

621. Do you regard that as any obstruction to the traffic? Not the slightest. The level of the road, in a line with the Custom House, either at Loftus-street or Elizabeth-street, is as high as the road will be over the crown of the railway.

W.
Greenwood,
A.M.I.C.E.
21 July, 1897.

622. What will be the grade of the line from Wynyard-square to Circular Quay? It is 1 in 60. According to that section it can be improved to 1 in 66.

623. Your first cost is £259,000? Yes; but the land per acre is valued at £103,600.

624. How much do you add on to that? Fifty per cent.

625. That brings it up to £370,000;—is it reasonable to infer that if the width of the line is increased to 100 ft. it will increase the cost to £740,000? You are starting on the assumption that there is 100 ft. of land.

626. Mr. Sievers states that he does not think a strip of land 100 ft. wide from Redfern to Circular Quay can be obtained for £1,800,000 on the western side of the city? Mr. Perdriau and Mr. Sievers value their land at market value—at a lower price than I value the land per acre.

627. I want to know what will be the cost of the line if it goes through private land all the way, and is 100 ft. wide? It will be £2,466,000.

628. In a letter to the Secretary to the Royal Commission on City Railway Extension, Mr. Sievers, Government Land Valuer, says:—

I do not think a strip of land 100 feet in width extending from Redfern to the Quay, comprising an area of 20 acres could be obtained for an expenditure of £1,800,000 on the western side of the city.

What comment do you make on that statement? It confirms what Mr. Perdriau said.

629. That is correct? It is not correct to say that you cannot get the land for that sum. I say you can.

630. You quite agree with Mr. Sievers and clearly with Mr. Perdriau in regard to that statement? For 20 acres, that is £90,000 an acre; but I have reckoned at £103,600 an acre.

631. You say a strip of land, being 100 feet wide, extending from Redfern to Circular Quay and embracing an area of 20 acres could be obtained for an expenditure of how much on the western side of the city? £2,072,000.

632. That is your estimate if it be necessary to take a strip of land 100 feet wide from Circular Quay to Redfern? Yes, if it is on private land.

633. By the route you suggest you say you can get from Redfern to Circular Quay by taking a length of only 45 chains of privately-owned land? Yes, and that will cost £370,000.

634. *Mr. Wright.*] If the width of the strip is doubled, what will it cost? It will be in proportion; but the width is ample for the work to be done.

635. *Chairman.*] Having got down to Circular Quay you are down 13 feet under the level of the road; and how do you propose to get your traffic back to Redfern? I do not propose to stop there; I propose to go round to the eastern suburbs. My line is a circular one; there is no terminal station, except at the Benevolent Asylum station.

636. Do you bring the long-distance traffic on from Redfern? No; I stop it at Redfern.

637. You bring along only the suburban traffic? Yes, and it is 91 per cent. of the whole of the traffic.

638. Having got to Circular Quay you explain that your scheme is not complete, and that it requires to be extended to the eastern suburbs? Yes.

639. Have you any idea of the cost of that extension? Roughly speaking about £50,000 a mile for the remainder of the distance.

640. What is the length from Circular Quay to the eastern suburbs? It depends on how small or large a circle you have, but approximately it is 12 miles.

641. You only have the cost of construction, not the cost of resumption? No. Approximately, from Circular Quay round to Woolloomooloo, Darlinghurst, Paddington, Waverley, Woollahra, and Randwick, joining the main line at St. Peters or Erskineville, the distance will be 12 miles.

642. Suppose the State is not prepared to build more than a city railway at present, how does your scheme stand then? You can only, for the time being, get as far as the Quay; but it is an incomplete scheme then.

643. Will you explain to the Committee the temporary shunting arrangements until the eastern suburbs railway is constructed? The station reaches from Pitt-street to the "Paragon Hotel," and the ground from the Paragon Hotel to Phillip-street will be sufficient for shunting the trains.

644. What length is that ground? Eight or 9 chains.

645. And the width? If you make a temporary shunting-ground, you can make it any width you like.

646. You are going to shunt all your suburban passenger traffic, which is 91 per cent. of the whole of the trains, on a certain area which you describe? I merely say that that is a portion of a circular line, and it is an incomplete line. If you say that you are going to be a year or two before you complete that line, you must make some temporary arrangements. If I were Engineer-in-Chief for the Railway Commissioners, I should have no difficulty in making those arrangements.

647. It is perfectly clear, without defining it by one year or two, that your scheme is not complete until the eastern line is built;—and since the State may not, for a number of years, be prepared to extend the railway to the eastern suburbs, you have to make shunting arrangements in order to deal with 91 per cent. of the passenger traffic at Circular Quay? I could make temporary shunting arrangements in the 8 or 9 chains I spoke of. If I had not sufficient room there, I could go further under the Domain, making a portion of my eastern suburbs extension, and utilising that ground, for the time being, for shunting purposes.

648. *Mr. Wright.*] It may be permanent shunting-ground for ten or twenty years? No. The Chief Commissioner for Railways said seven years ago that it was a scandal that the tramways to the eastern suburbs were doing railway work.

649. *Chairman.*] You say your length is 8 or 9 chains, and for shunting purposes you can use any width you like? For a temporary purpose, most decidedly. The rest of it would be done beyond the station.

650. Would it be underground? No; it is in open cutting.

651. Will you tell us exactly where you propose to shunt your trains? I do not propose to shunt; I propose to make a railway.

652. We want to know exactly where you propose to make temporary provision for shunting? I would shunt on the 10 chains which are beyond the station.

653. How many lines would you have beyond the station? The temporary lines are only intended to be two; but as regards permanent lines, you could put down four if you liked.

654. Would they be on the surface? No, they are 13 feet below the road.

655. You proposed to shunt 91 per cent. of the railway passenger traffic of this city in a cutting beyond Circular Quay? Yes. On my line all the shunting is done behind the traffic, but at Redfern station all the shunting is done before the traffic.

656.

W.
Greenwood,
A.M.I.C.E.
21 July, 1897.

656. How many lines would you propose to lay down to do this shunting? Perhaps two more lines.
657. You think that four lines will do all the shunting that may be necessary? The ground I referred to would be five times the size of the tramway shunting-yards in Bridge-street. A tram consists of three cars, a train probably has eight carriages at the most. I should think five times as many trams are shunted in Bridge-street as trains are shunted in Redfern station.
658. *Mr. Wright.*] 1,100 trams a day are shunted in Bridge-street and from 700 to 800 trains a day are shunted in Redfern yard? No; only about 120 suburban trains a day come into Redfern station.
659. *Chairman.*] You say that with two more lines beyond what you intend to put down beyond Circular Quay, you will be able to do the shunting? Because I am behind my station, and not in front of it, as at Redfern.
660. You think you can? I am certain; I do not think.
661. What will it cost? £2,000, which is a mere nothing.
662. You are going to put an open cutting to extend 8 or 10 chains beyond Phillip-street towards the eastern suburbs to shunt your traffic beyond the Quay? Not beyond Circular Quay, I said beyond the Paragon Hotel. If there were three times the number of trains that come into Redfern station I could shunt them on that ground.
663. How wide would the ground be? If there were four lines of rails, it would be about 54 feet wide.
664. Would you want two more lines? I do not want two more. There is not the slightest difficulty about doing the shunting there.
665. You think four lines will be sufficient for your ordinary road? You have only four lines now in any part of the Colony.
666. Do you think that four lines will be sufficient for your ordinary road? I am certain that two lines will be sufficient if there was no provision made for a North Shore connection.
667. You think it will bring in all the suburban traffic? Yes.
668. Have you any idea whether there will be any need to have a resting place to keep to the time-tables? Certainly not; you have no resting place now. Your trains come in to Redfern, and are due to go away in two minutes with another engine. In a busy time you never keep a train standing at Redfern station.
669. We get down to Circular Quay as you describe, and there we make a temporary shunting arrangement until such time as the eastern suburbs line is constructed? Yes.
670. But on this line you do not intend to bring in any of the long-distance traffic? It is accommodated either at Redfern station or at the new station at the Benevolent Asylum grounds. I do not confine myself to Redfern station. I say you cannot make an up-to-date station on that site, and that it will be advisable to make a new station for long-distance traffic at the Benevolent Asylum grounds, where the suburban trains will all call.
671. Have you taken into consideration the fact that an electric tramway up George-street is to be constructed, and that your line will be rather close to that electric tramway? It will not make one pin of difference. There are just as many cabs and buses in Sydney now as there were before the trams were built. The electric trams in George-street will deal with only local traffic. The bus runs parallel with the tram down Crown-street and Oxford-street, and the fact of the electric tram being in George-street will make no difference to the railway.
672. *Mr. Humphery.*] In your scheme, you allow practically all terminal arrangements to continue at Redfern, but on a new site? On a new site, but not necessarily at once.
673. And you provide for 9-10ths of the whole traffic (which you estimate to be about the proportion of the suburban traffic to the whole) by a line from Redfern to Circular Quay, as shown on your map? Yes; I practically provide four city stations in lieu of one. On the first page of the last report the Chief Commissioner says that there ought to be several stations in the city instead of one, and instances Melbourne and other places where there are several stations.
674. You propose to have on the Benevolent Asylum site your principal station and all terminal arrangements, with the exception of a continuous line from Redfern to Circular Quay for the suburban traffic? Yes.
675. And eventually to continue that line to St. Peters by a circular railway? That is so.
676. Your proposal really amounts to the original scheme—to place a new station on the Benevolent Asylum site? Yes.
677. But you say that in order to meet the requirements of the suburban passenger traffic you continue the line from Redfern as shown on your plan? Yes. The Benevolent Asylum station was intended to accommodate 100 per cent. of the traffic, because it was a terminal station. In my case it is not a terminal station, except for long-distance traffic.
678. That, briefly, is your case? Yes. In reference to the cost, I have put it down at £750,000. The Chief Commissioner said that the line ought to go on the western side of the city, but that the only objection was the great cost of the necessary land resumptions, and the cost of the resumptions was put down at £1,583,000. But my line can be constructed for a third of the cost of any line put forward by the Department. Mr. Deane's line was to cost £2,583,000. I propose to do it for a third of the money. That removes the Chief Commissioner's objection to taking the railway on the western side of the city.
679. *Mr. Black.*] With reference to the proposal to divide George-street for the purpose of light and ventilation, how do you propose to do that? I would take a portion of the street away and let daylight down into the railway. George-street is 80 or 90 feet wide at that point, but at King-street it is only 40 feet wide. If you take away 20 feet in the middle it will leave George-street 60 or 70 feet wide by the Town Hall.
680. Do you propose to divide the traffic at that point in George-street by means of an open iron railing? Yes.
681. Is it a necessity with your scheme to do that? It is not a necessity, but I think it is advisable to let daylight down whenever you get an opportunity.
682. Is there any other place in your route where it could be done with greater advantage? You could get several ventilating-stations on the line of tunnel.
683. Could it be done with more advantage in some place where you are passing through blocks of land? I am never in tunnel in blocks of land.
684. *Mr. Wright.*] Will your proposed opening in George-street have any effect on the electric tramway to be constructed in that street? No.

W.
Greenwood,
A.M.I.C.E.
21 July, 1897

685. Would you fork your line at that point? Yes; you have a separate wire for each road, and the wires will simply separate at the ventilating-shaft.
686. If your roadway at Circular Quay is $13\frac{1}{2}$ feet below the present roadway, you will be 5 or 6 feet under high-water mark? Yes.
687. Do you know the nature of the country down there? Yes; I have put drains all over the Quay.
688. Would there be any difficulty experienced in going to that depth? Not the slightest difficulty. In the case of a viaduct it is necessary to go down to the rock for the foundation, but in the case of the cutting you will merely put in concrete walls and invert.
689. Are you conversant with the traffic requirements? Yes.
690. Very often a number of trains come in which do not want to go out again. Suppose you have six or seven trains, each 700 feet long, where would you accommodate them on that 10 chains of roadway? Your longest train is 400 feet.
691. All the platforms on the proposed station at Hyde Park are to be 700 feet long? Your engines will not pull a train more than 400 feet long on your suburban lines. Your long distance trains might by chance be longer than 400 feet.
692. They pull six or seven carriages? Carriages of 48 feet each.
693. I think the length of the carriages is nearer 60 feet. We are told by the traffic authorities that they require 700-foot platforms for the trains to run up to? That is for long distance trains.
694. Do you think your proposed double roadway will give you anything like sufficient room to accommodate the traffic which streams into Redfern yard, outside the mail trains. Take a holiday for instance when we are told the trains are so numerous, that Redfern yard with thirteen or fourteen platforms is unable to accommodate them, and they have to run passenger trains over to the goods side. Whether you do your shunting behind or before your train, you must have standing room for your trains which it is necessary to retain in the yard;—have you anything like sufficient standing room on the road you propose to provide for the accommodation of all the traffic which comes into Redfern? Yes, with this proviso, that you may make a portion of the line towards the eastern suburbs of whatever length you like to make room for those trains.
695. That is, to go under the Domain? Yes.
696. Your contention is that if the accommodation for shunting which you propose to provide is not sufficient, you can, by fresh expenditure, by a prolongation of the eastern line provide any amount of accommodation? Yes.
697. But suppose some two or three disabled engines should come in with half a dozen carriages attached? Which cannot happen.
698. An engine may arrive in such a state that she is unsafe to go out again? Then either one of two things can take place. You can either put on another engine to pull that engine down as far as you like out of the road and leave her there until night, or have a steam-crane and pick the thing up out of your road if it is in the way.
699. Your contention is that the accommodation you propose to provide is sufficient in the event of contingencies of this kind arising, to enable a damaged engine to be drawn to Redfern? There is no trouble about that.
700. *Mr. Hoskins.*] Would you have a movable crane to lift up the carriages? If an engine breaks down in the bush, she has to stop there until you send for a steam-crane.
701. Would it do to have the delay which happens to an engine in the country, that is on a holiday or a busy time when you are sending out trains every 10 or 15 minutes? If the engine cannot work in steam, you have to uncouple her, and push her down with another engine.
702. To Woolloomooloo Bay? Would there be room there for that? Push her down to the dead-end of the siding and leave her there.
703. To Woolloomooloo? Under the Domain.
704. *Mr. Roberts.*] Does it not appear to you that great inconvenience would be experienced by passengers in long-distance trains in having to alight at the Benevolent Asylum station? No. There is no more central point in Sydney than the Benevolent Asylum, and in years to come it will be still more central than it is. There is no place you can mention where the cab fare will not be precisely the same whether the station is at St. James'-road or at the Benevolent Asylum site.
705. Is it not a fact that most of the long-distance passengers will find it more convenient to go to King-street? Most assuredly not. They have luggage which has to go into a cab, and Redfern station is most central.
706. Does it not appear to you that great dissatisfaction will be expressed by the travelling public on finding that they have to change at the Benevolent Asylum station to get to the northern portion of the city if your scheme is carried out? No.
707. They will have to change, or to take a cab? People who travel long distances as a rule have luggage. They cannot carry their luggage they must take a cab.
708. Assuming that an agitation is got up by long-distance travellers, and the Government are anxious to meet their wishes, will you be able under your scheme to continue the line from the Benevolent Asylum site to Circular Quay with a view to bringing down the long-distance traffic to that point? The rails being there, you can run trains if you like. You would never think of doing such a thing. Only 4 per cent. of the long-distance passengers would use the station.
709. Why? The 9 per cent. long-distance traffic includes every train which comes from beyond Parramatta, and the Campbelltown trains will presently become suburban trains.
710. Will it be practicable to extend this long-distance traffic to Circular Quay, or even to Wynyard-square? No; the long-distance traffic is provided for at the Benevolent Asylum site.
711. Does that not appear to you to be a weak point of your scheme? No; I have been in Sydney eighteen years, and I know Sydney as well as anyone does, and there is no point to which you wish to get for which Redfern is not quite as central as St. James'-road is.
712. I suppose it will be possible to continue the long-distance traffic to Circular Quay by your scheme, but the expense will be very much increased? No; you must provide a long-distance station somewhere.
713. Do you not think it would be an improvement to your scheme if a long-distance station were provided north of the Benevolent Asylum? Most assuredly not.
714. Have you prepared an estimate of what the cost would be? No; because I would not adopt such a scheme.

W.
Greenwood,
A.M.I.C.E.
21 July, 1897.

715. Why,—on the ground of expense? Sydney is situated on a peninsula. It is useless to take everybody to the point of that peninsula; they do not want to go there. If a man resides at the Glebe, or at Woollahra, why should I bring him out of his way for nothing.

716. Undoubtedly the cost would be enormous, even compared with your estimate for dealing only with suburban traffic? The cost of the line would be no more. The only cost would be the cost of a railway station to accommodate that traffic.

717. There would be the cost of the land resumption? No; I have four lines, and you have only four lines anywhere in the Colony.

718. Would four lines be sufficient to deal with the long-distance traffic in addition to the suburban traffic? I say I do not propose to bring them there. It is only 9 per cent. of the total traffic, and in time it may grow to 5 per cent. The line is sufficient to carry the traffic for the next 100 years.

719. Until the eastern suburbs extension takes place—and none of us knows whether it will happen in five or twenty years—will not great inconvenience be experienced in shunting;—will it not be a dead-end station at Circular Quay? Yes; the Railway Commissioners proposed to make a terminal station on the site of the Custom House.

720. Do you feel perfectly satisfied in your own mind that at this dead-end station, which you regard as a temporary one, the work will be satisfactorily carried out if your scheme is adopted? Yes; I have plenty of room there for shunting purposes.

721. *Mr. Fegan.*] Will you state definite reasons why you oppose the scheme to extend the railway to St. James'-road? In the first place you cannot earn one penny of revenue. Whatever revenue you get you take from the tramways—you rob the tramways. I am dealing with the present, and not with the growth of population.

722. I want you to deal with the proposal before the Committee;—have you any other reason to adduce why it should not be adopted? You say that at Redfern the trouble is with the shunting. Under this proposal you have just the same trouble, except that you shift it half a mile or a mile further down. You have precisely the same thing to do there as you have to do at Redfern, and what is more, you have to do it in two-thirds of the room you do it in at Redfern. Redfern yard has an area of 27 acres. Three acres of that area are occupied by the Darling Harbour branch and the goods line, so that there are 23 acres available for the passenger traffic. At Hyde Park you have only 10 acres. The length from Cleveland-street tunnel to Devonshire-street is about 25 chains; from the back crossing of Darling Harbour goods branch is roughly 22 or 23 chains. The total length you have in St. James' yard is 1,000 feet, which is roughly 15 chains. You have 15 chains of room at Hyde Park as against 23 chains in Redfern yard.

723. Can you define any other reason against the proposal? You cannot possibly get to North Shore by a bridge from there; that is admitted by everybody. At the present time the population of New York is 1,750,000, and the population of Brooklyn is 1,000,000. Fifty years ago, New York and Brooklyn were identical in population with Sydney and North Shore, so that looking forward fifty years, we shall be in the same position in regard to population as New York and Brooklyn.

724. Do you really think so? I think the growth of Sydney will be greater as a freetrade port than the growth of New York and Brooklyn.

725. Do you think that the reason of that increase was the proximity of over-populated countries to America? Yes.

726. You cannot expect the same immigration to take place to Australia as has taken place to America? There is the natural increase in population. I take it that the growth of Sydney and North Shore will be quite equal to the growth of New York and Brooklyn in fifty years. 70,000 passengers a day come in from Brooklyn to New York. You have only 15,000 passengers a day coming into Redfern.

727. *Chairman.*] That is incorrect; but it does not matter? I do not make a misstatement. I take the figures which Mr. McLachlan gave in his report.

728. The Railway Commissioners statement to the Committee is that 20,000 passengers a day come into Redfern? I base my statement on Mr. McLachlan's evidence which is published in this book.

729. You get your result by adding Sundays in and dividing the total by 365? Just so. At the present time 70,000 passengers a day come in from Brooklyn to New York, and I believe that in fifty years there will probably be the same number a day crossing from North Shore to Sydney. By my scheme you can make a bridge from Wynyard-square station, but by the other scheme you cannot cross by a bridge.

730. Nor by a tunnel underneath? Whether you can get a tunnel or not, it means 2½ miles of tunnel. The first Royal Commission decided in favour of a bridge. Mr. Deane has favoured a bridge. Mr. Hickson, and I think Mr. Darley have favoured a bridge. I think no one has favoured a tunnel except the Chief Commissioner. To get a tunnel means a grade of 1 in 35, and you can guess what that will mean in working the traffic. To Circular Quay you can get from that station, but it will be quite impracticable to do so; it has a grade of 1 in 40. It will mean a further terminal station in Government House grounds. It will be in tunnel the whole way—from 40 to 50 chains of tunnel on a grade of 1 in 40 or 1 in 45.

731. *Mr. Fegan.*] Which will not be inconvenient, and which I understand from your evidence, can be thoroughly ventilated according to Mr. Thow's opinion? That one can be ventilated, but it will only take you from there to the Quay. To get to the eastern suburbs you must go through a tunnel from the Domain. It will necessitate a junction in that station-yard and on the plan which accompanies the report of the recent Commission you will find three junctions shown in tunnels,—three things which no engineer would put his name to. I think you will find from Mr. Deane's replies and the reply of the late Chief Commissioner (questions 2655, 2649, and 2707) that there is no intention to make a line to Circular Quay or to the eastern suburbs for the next twenty years.

732. Do I understand that another reason why you oppose the scheme is that no provision is made to extend the line to the eastern suburbs, or to Circular Quay? Yes, it is not shown on the Departmental plan of the St. James'-road scheme. Assuming the growth of the traffic to be fourfold, Mr. Deane in reply to questions said when St. James'-road station grew to be too small, he would relieve that station by lowering a line to Circular Quay, and taking a line to the eastern suburbs, and the late Chief Commissioner in reply to Mr. O'Connor gave similar replies. Another reason is that the Chief Commissioner (question 2707) says when his station gets too small he will make a new line, probably a line on the western side of the city.

733. One of your reasons is not because it is intended to resume or take part of Hyde Park for railway purposes? No, not necessarily.

W.
Greenwood,
A.M.I.C.E.
21 July, 1897.

734. As an engineer, and a business man, you believe that sentiment should not stand in the way if it is the best site in your opinion? If that ground were of no value at all, and it were given to me as an engineer to put a station on, and I had to ask people to subscribe the capital, I would not go to them, because I could not say to the public that there would be any revenue to be earned.

735. On the other hand, if it can be shown to you that from its opening a line from Redfern to Hyde Park would pay not only the interest, but the working expenses, the trouble would not be with the Park as far as you are concerned? No, not necessarily.

736. One of your reasons is not because it is proposed to lay violent hands upon the Park? No; it is quite clear that three-fourths of the traffic which comes into Redfern station goes by other means than the railway tram. I contend that those passengers would be taken by the line I suggest. If you take the 3,000,000 railway passengers who now go by tram to the city, you will simply be transferring the money from one pocket to another. As regards the 9,000,000 passengers who now walk or take a 'bus from the station, a working man who wishes to go to Wynyard-square has to pay 2d. each way by 'bus or 2s. a week, but a workman's ticket is only 3d. per mile per week, and by my route it would cost a workman 3d. a week, instead of 2s. by 'bus. I am certain that the bulk of those who walk or get into a 'bus would take the train I provide on my route.

737. You think the proposal you advocate would pay better and be more convenient than the other, and that it would be easier to cross to North Shore from your line than from the other? Yes; you can go over by bridge, or by tunnel, or by train ferry. In addition to the 9,000,000 passengers who arrive at Redfern, and do not travel to the city by tram, 6,000,000 passengers a year are landed at the North Shore and Manly ferries, and I take it that a great portion of those passengers would ride possibly to Wynyard-square. Then you have 3,000,000 or 4,000,000 passengers who come to the ferries at the foot of Erskine-street and King-street. You would get a lot of local traffic along the line which passes from Redfern to the Quay, but you could get no local traffic on the Government line, except railway passengers. A number of people in George-street, who are not railway travellers, will take the train at the Cathedral and ride to the Quay.

738. They might be tram passengers on the construction of the electric tram? It is a recognised thing amongst railway men that increased facilities cause increased traffic. No matter what facilities you give, you find that traffic grows to it. I do not think the electric tram will make one penny difference.

739. *Chairman.*] You contend that the electric tram will not affect your line, but the steam tram will affect the Government proposal? What I said was that that railway will take passengers from the tramway and carry them by railway.

740. It will not happen with the electric tram in the case of your proposal? No; it will create new traffic.

741. *Mr. Fegan.*] Did it never strike you that the objections you raise to the St. James'-road extension can be raised to an extension to Bathurst-street or the other streets you mentioned—that no revenue will be derived from that portion of the traffic? The 9,000,000 passengers who come to Redfern, and who do not use the tram, will travel by my line.

742. You think your line would cope with that traffic, while the present tramway would still cope with the 3,000,000 passengers who ride? No; the tramway traffic would be transferred into the railway.

743. You cannot have both lots? These 3,000,000 passengers would then go by the railway. The tramway traffic does not grow; it has been stagnant for years.

744. On account of the insufficient accommodation? No; it is on account of the charges, I take it. A few weeks ago the *Herald* published a long article in its commercial column on the growth of the traffic. There has been no growth of tram traffic for some years past. The passenger traffic to Redfern by train is doubled every eight years; but the tram traffic from the railway station is stagnant. In 1888 the total number of passenger fares collected on the tramway was 51,000,000, and in 1896 it was only 53,000,000, or a growth of 4 per cent in eight years. In 1888, on the suburban railways, the number of miles travelled was 70,000,000, and in 1896 it was 104,000,000, so that the growth was practically 50 per cent. If in eight years' time the traffic from Redfern station is doubled, and the same proportion maintained, there will be only 3,000,000 passengers travelling by tramway, but there will be 21,000,000 passengers travelling by some other way, and these I say will go by my line and the electric tram.

745. You think your scheme would cope with that traffic more successfully than would this proposal? Yes.

746. Have you exhausted your reasons why you oppose the St. James'-road scheme? Again my line permits of goods and trucks being taken alongside every wharf or every ship at Circular Quay, and if you like you can take the line round to Darling Harbour. My rails are 13 feet below the road at the Paragon Hotel, and from there I put in a rising grade which brings me out on the Quay, roughly speaking, at McMahon's store, where the sailing ships are berthed. From that point you can lay a siding along the eastern side of the Quay with a back shunt to the warehouses, and lay another line to the western side of the Quay, and continue that line round the Government land.

747. In your estimate you have not made provision for these extensions? No estimate is put down for the cost of the extensions, but I show you that my scheme is capable of carrying the trucks to the ships side. The other scheme cannot do anything of the kind.

748. *Mr. Black.*] Do you think it wise to mix up the goods traffic and the passenger traffic? On that question a good deal of nonsense is talked. Goods and passengers travel on the same lines all over the country.

749. Do you think your four lines will be capable of doing it? You have only four lines to do it now. If the four lines were not capable of doing it in the daytime, you could do it at night-time.

750. *Mr. Fegan.*] Have you any more reasons to give why you oppose the St. James'-road scheme? No, except to say generally, as far as my scheme is concerned, that it is comprehensive and provides for all time.

751. It may be expanded? Yes.

752. You think there is no difficulty in ventilating your tunnel of 30 chains length? None.

753. You rely to a certain extent on Mr. Thow's evidence as to the ventilation of your tunnel? My opinion is that you certainly can do so.

754. As a professional man you say it can be thoroughly ventilated without causing any inconvenience to passengers? Yes.

- W. Greenwood, A.M.I.C.E.
21 July, 1897.
755. *Mr. Hoskins.*] Have you ever travelled by the underground railway in London? Not for the last twenty years.
756. Did you ever experience any inconvenience in travelling in the trains in the summer? Not sufficient to make me walk instead of travelling by train.
757. Is not the atmosphere very disagreeable in the tunnels? Not as bad as that.
758. You refer to Mr. Thow's evidence;—did you read his evidence? Yes.
759. Do you not remember that Mr. Thow stated in his evidence that he was very much opposed to the construction of tunnels, and preferred having railways in the open? So do I.
760. Did he not say so? I do not know, but I will admit that he did if you like. I agree with him if he did say so.
761. Did I hear you say that you proposed to have an open cutting from Campbell-street to the corner of Bathurst-street and George-street? Yes.
762. Do you propose to provide any means to prevent young children from going down into the cutting or playing on the embankment, and to prevent horses from falling into it? Yes; it will be fenced. It will most likely be protected with brick walls.
763. Do you think the people of Sydney would quietly submit to have such a valuable portion of the city taken up by an open cutting? I think they would only be too glad of the chance of selling their land.
764. I suppose you express that opinion because you know that the Government, when they resume land, nearly always pay a great deal more for the land than do private individuals? They have in the past, but I do not think they will in the future. Boom time has gone.
765. Do you not think that if you take so valuable a portion of the city as the portion from Campbell-street to Bathurst-street, or from York-street to Lower Pitt-street, it will materially affect the course of trade in the city and interfere with business? No; there is no business place on the whole length, except one at the corner of George-street and Bathurst-street.
766. What are they? They are back premises, fig-trees, Chinamen's places—in fact, all kinds of premises.
767. Are there fig-trees and Chinamen's places between Margaret-street and Circular Quay? The property at the back of Vinegar-lane was nearly all burnt down, and it is nearly all vacant land.
768. Where is the place you refer to? From the junction of Essex-street and George-street to Crane's is vacant land, with the exception of Crane's buildings, which are one-storey sheds.
769. Would it not be a rather unusual proceeding to see a railway taken through the centre of a large town by means of an open cutting? Certainly not.
770. Can you give me an illustration where it exists? There is no difficulty in naming a place where it does exist. Take Birmingham, for instance, as the centre of England. The approach to the Great Western station or to the New Street station is in a cutting first and then in tunnel.
771. They are very short tunnels, caused by the erection of the station-buildings, but you propose to take a long cutting, nearly a mile long, right through the centre of Sydney? No.

THURSDAY, 22 JULY, 1897.

Present:—

THOMAS THOMSON EWING, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.	CHARLES ALFRED LEW, Esq.
The Hon. JAMES HOSKINS.	JOHN LIONEL FEGAN, Esq.
The Hon. CHARLES JAMES ROBERTS, C.M.G.	THOMAS HENRY HASSALL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	GEORGE BLACK, Esq.
HENRY CLARKE, Esq.	FRANCIS AUGUSTUS WRIGHT, Esq.

FRANK FARNELL, Esq.

The Committee further considered the expediency of extending the Railway system of the Colony from the present terminus at Redfern into the City, including the erection of a large Central Station in the north-western division of the Park, fronting St. James'-road.

Norman Selfe, M.I.C.E., M.I.M.E., sworn, and further examined:—

- N. Selfe, M.I.C.E., M.I.M.E.
22 July, 1897.
772. *Chairman.*] You have made a slight alteration in the plan of the railway you propose? I have put a white border round the portion to be used for railway purposes, so as to be more easily seen by the Committee.
773. You have excised one small road in the lower patch? It is not in the proper plan. It was only put on on Tuesday morning by mistake.
774. Do you desire to make a statement of any kind to the Committee? Yes. You, sir, and other Members of the Committee asked me certain specific questions, and I thought it was best to write down the answers, and then if further questions are asked I shall be happy to answer them.
775. Will you be good enough to read the memorandum you have prepared? It is as follows.—

THE Chairman having asked me on the 20th instant for certain specific information with regard to the proposed station or terminus on the "Rocks," I now supply same and the authority on which it is based.

On the 3rd July, 1891, the late Mr. E. M. G. Eddy submitted certain proposals to the Royal Commission for an extension of the railway to the Circular Quay, which he stated would, in the opinion of the Railway Commissioners, "be a perfectly satisfactory scheme so far as the suburban traffic is concerned." And this scheme was recommended in the final report of the Royal Commission, dated 10th July, 1891. As explained by the Chief Commissioner, the line to the Circular Quay passed under Bridge-street and the N.Z. Loan stores, "to a terminal station with three platforms at the Custom House, the main buildings of which it is suggested to adopt for railway offices. It is considered a station in the position indicated will be found most convenient for dealing with the across-harbour and ocean-going traffic." Further on, he says, a station "at the Circular Quay would be an enormous convenience." Now a measurement of that site shows an extreme breadth of 2 chains. A length from the back of the Custom House to the N.Z. Loan building of about 5½ chains, or 1·3 acres, and a total length of level line at the bottom of the descending grade of less than 8 chains. On the Rocks site, as shown on my plans, there are much more than 11 acres given up to the railways in the re-modelling. Out of this area about 1·8 acres are required for the extension to North Shore, which leaves 9·5 (nine and a-half) acres instead of 1·3 (one and a-third) acre available for station purposes; a piece 16 chains long by, say, 5 chains mean width = 8 acres, being in one block. The station building shown on this plan (referred to in the Chairman's questions 424 to 438) is drawn the same width as the whole site at the Custom House, and has room for six lines, a centre platform 30 feet wide, and side platforms 25 feet each in width, but it can be made practically anything required when laying out the new streets. With

With regard to the other question of the Chairman as to what trains I would run through Wynyard-square and into this Circular Quay terminal station on the Rocks, I must again quote the late Chief Commissioner, whose printed statements have chiefly warranted me in submitting this plan to the Public Works Committee. Speaking of the station, he proposed on the site of St. James' School for "the main metropolitan station," and from whence the lines extended to the Circular Quay, he said, on the occasion before referred to:—"At that station there would be four through lines and also a bay line. . . . From this station forty trains per hour each way could be worked with the greatest ease at the busiest hours of the day. The accommodation thus provided should answer all the requirements of city and suburban traffic for many years to come." Now what that experienced and lamented railway manager proposed to do on the St. James' School site I propose to have done on Wynyard-square, where a bay line is also possible, but with the following important advantages not possessed by the St. James' site. First, Wynyard-square provides for a direct connection to the North Shore. Secondly, it is public property not yet built upon. And thirdly, the extension to the eastern suburbs thence brings the whole system into connection with the Circular Quay on a direct-circular railway route.

In answer to Questions 4, 17, and 22, Mr. Eddy reiterated as follows:—1. That it was an admirable scheme for the suburban traffic. 2. That long-distance passengers must keep to the new main terminus at Redfern. And 3, that the running capacity of the scheme was equal to eighty trains per hour. Now, I would respectfully and forcibly impress upon this Committee that on Mr. Eddy's scheme there were 725 yards, say 33 chains, of tunnel on the Circular Quay extension alone; much greater than there would be on the whole western route if the line runs at the back of the Town Hall instead of in George-street; also that the grade to the terminus in the western scheme is 1 in 117 instead of 1 in 45, advantages not to be lightly put aside. While the covered-way under York-street and the extension through Wynyard-square and St. Phillip's reserve would cost nothing, if Hyde Park costs nothing.
