PICTON (See "WATER SUPPLY").		
PLEBISCITE VOTE (See "LICENSING").		
POINTS OF ORDER:—		
Reported from Committee, 225.		
RULINGS OF SPEAKER:—		
That amendment moved on proposed Sessional Order in reference to Business Days to fix the hour of adjournment for 11 o'clock p.m. conflicted with the Standing Orders, 31.		
That he would not depart from practice in reference to the necessity for a resolution declaring a Member's seat vacant on the resignation of such Member, 51.		
That the motion for adjournment in reference to the absence of the Minister for Works from the House, while it is in Session, conflicted with a notice of motion already on the paper, and was out of order, also that such a motion could not be used for the purpose of attacking a Member, 57.		
That the Midwifery Nurses Bill did not require a Message, there being no provision in the Bill to appropriate money, 72.		
That amendment on motion in reference to Plebiscite Vote on Sunday Liquor Traffic to leave out the words "on Sundays," was in order, 87.		
That motion submitted as matter of Privilege in reference to charges made against the Minister for Works, was in order, 90.		
That the Municipalities Act of 1867 Amending Bill was not in order, as it proposed to amend an Act which had been repealed, 100.		
That he would not assume the responsibility of interfering or saying that an Honorable Member whose conduct was under censure should not remain in Chamber, 104.		
That he would not rule motion out of Order until submitted to the House, nor would he take the responsibility of preventing the House from considering it, 104.		
That general reference to Ministers of the Crown going to Electorates to influence Electors was not anticipating discussion on motion on paper, the case being one in which the conduct of the Minister was impugned, 104.		
That motion of censure in reference to conduct of Mr. Young did not revive a previous debate, and that the question of privilege previously discussed might be referred to, 104.

P		
POINTS OF ORDER (<i>continued</i>):—		
RULINGS OF DEPUTY SPEAKER :—		
That motion to dissent from Mr. Speaker's action in adjourning House for want of Quorum before the commencement of business, came under operation of S.O. No. 161, and was a ruling within the meaning of that S.O., 94.		
That amendment proposed in resolution to introduce Sunday Trading Bill to provide for classification of licenses was beyond scope of and irrelevant to the subject of the Bill, 130.		
That the objection taken to motion to introduce the Women's Franchise Bill on the ground that the Bill involved expenditure, and should have been introduced in Committee preceded by a Message, was premature, as the provisions of the Bill were not yet known, 111.		
That the proposed amendment on the motion to introduce the Women's Franchise Bill to abolish electors' rights was not relevant to the motion, 111.		
That amendment to alter hour of meeting of House on motion for precedence of business was not relevant, 193.		
That motion of adjournment in reference to administration of affairs at Norfolk Island anticipated discussion on the vote in Committee of Supply, and was out of order, 217.		
That the decision of the Temporary Chairman in Committee on the Distress for Rent Restriction Bill, that the omission of the word "female" extended the subject-matter of the Bill beyond its original bounds, was correct, 225.		
That motion of adjournment to discuss inaction of Ministers in reference to Government Advances to Settlers Bill, anticipated the debate on the second reading of that Bill, and was out of order, 265.		
That motion of adjournment to discuss inadequacy of accommodation at Redfern Railway Station anticipated consideration of a Notice on Business Paper, and of the Estimates, and was out of order, 270.		
That the decision of the point as to whether, on a motion for the adjournment of the House, under the 49th Standing Order, the matter was of "urgent public importance" did not rest with the Speaker, 296.		
That motion for adjournment in reference to Produce Business did not anticipate Notice on Business Paper, 296.		
That Member could not be interrupted in his speech by a motion of urgency, 296.		
POLICE :—		
CASE OF ELLEN BAKER <i>alias</i> PEASLEY:—		
Report on, laid on Table, 36.		
PORT KEMBLA (See "HARBOURS").

PRISONS (See "GAOLS").		
PRIVILEGE—NEWSPAPER ARTICLES :—		
Mr. Neild drew attention to articles in <i>Sydney Morning Herald</i> and the <i>Maitland Mercury</i> , making imputations against Mr. Young, the Minister for Works, and requested that extracts marked should be read; extracts read by clerk; motion then moved (<i>Mr. Neild</i>) for Select Committee to inquire into charges and imputations; <i>Point of Order</i> , That the matter could only be taken as privilege with the pleasure of the House, ruled against by Mr. Speaker; amendment moved (<i>Mr. Ferguson</i>) to substitute a Royal Commission for a Select Committee, and agreed to; further amendment moved (<i>Mr. Dacey</i>) to omit words, and agreed to; motion as amended agreed to, 89-90.		
PROBATE (See "WILLS, PROBATE, AND ADMINISTRATION BILL").		
PROBATE AND SUCCESSION DUTIES BILL — <i>changed from</i> PROBATE DUTIES BILL:—		
Message from Governor, 204; Ordered, on motion (<i>Mr. Reid</i>) founded on Resolution of Ways and Means No. 6, presented and read 1 ^o , 212; read 2 ^o , committed, reported with amendments; Report adopted, 231; read 3 ^o , passed, and sent to Council, 237.		
PROCLAMATION :—		
Opening Parliament, read by Clerk, 1.		
Proroguing Parliament	1	303
PRODUCE BUSINESS :—		
Adjournment moved (<i>Mr. Anderson</i>) in reference to providing the residents of Redfern, Alexandria, and Waterloo, &c., with requisite accommodation for transacting; <i>Points of Order</i> . (1) That matter was not of urgent public importance, upon which Mr. Deputy-Speaker ruled that that point did not rest upon the Speaker; (2) That the motion anticipated consideration of Notice on Business Paper,—which was ruled against; (3) That Member could not be interrupted in his speech by a motion of urgency, sustained by Mr. Deputy-Speaker; Motion negatived, 296.		
PROPERTY (See "CONVEYANCE AND LAW OF PROPERTY BILL").

S		
SPEAKER :—		
<p>Election of Sir Joseph Abbott, K.C.M.G., 5. Adjournment of House for Presentation of, to Governor 5. Presentation of, to Governor, 7. Commission of, to Administer the Oath of Allegiance, read by Clerk, 7. Reports attendance in Council Chamber, to hear Opening Speech, 12. Lays on his Warrants Appointing Elections and Qualifications Committee, 12, 38, 131 ; Maturity reported, 27, 55, 157, 175. Lays Papers on Table, 15, 185, 261. Appoints Temporary Chairmen of Committees, 15. Commission of Deputy to administer Oath of Allegiance, reported and read by Clerk, 17. Clerk informs House of unavoidable absence of, and Deputy Speaker takes Chair, 21, 117, 121, 125, 131, 137, 143, 151, 157, 161, 169, 175, 181, 183, 185, 191, 197, 206, 215, 221, 227, 233, 239, 251, 257, 261, 267, 271, 275, 291. Clerk informs House of the receipt of a letter from Mr. Speaker stating that he was too unwell to take Chair, and enclosing a memorandum from doctors recommending that he abstain from duty for the present week, 121. Deputy Speaker reads letter from Mr. Speaker in reference to his absence from his duties during the remainder of the Session, 143. Appoints first meeting of Elections and Qualifications Committee, 54. Reports issue and return of Writs, 50, 57 (*). Deputy Speaker takes Chair during motion of dissent to ruling, 94.</p>		
RULINGS OF :—		
<p>That Amendment moved on proposed Sessional Order in reference to Business Days to fix the hour of adjournment for 11 o'clock p.m. conflicted with the Standing Orders, 31. That he would not depart from practice in reference to the necessity for a resolution declaring a Member's seat vacant on the resignation of such Member, 51. That the motion for adjournment, in reference to the absence of the Minister for Works from the House while it is in Session, conflicted with a notice of motion already on the paper, and was out of order ; also that such a motion could not be used for the purpose of attacking a Member, 57. That the Midwifery Nurses Bill did not require a Message, there being no provision in the Bill to appropriate money, 72. That amendment on motion in reference to Plebiscite Vote on Sunday Liquor Traffic, to leave out the words "on Sundays," was in order, 87. That motion submitted as matter of Privilege in reference to charges made against the Minister for Works, was in order, 90. That the Municipalities Act of 1857 Amending Bill was not in order, as it proposed to amend an Act which had been repealed, 100. That he would not assume the responsibility of interfering or saying that an Honorable Member whose conduct was under censure should not remain in Chamber, 104. That he would not rule motion out of Order until submitted to the House, nor would he take the responsibility of preventing the House from considering it, 104. That general reference to Ministers of the Crown going to Electorates to influence Electors was not anticipating discussion on motion on paper, the case being one in which the conduct of the Minister was impugned, 104. That motion of censure in reference to conduct of Mr. Young did not revive a previous debate, and that the question of privilege previously discussed might be referred to, 104.</p>		
RULINGS OF DEPUTY :—		
<p>That motion to dissent from Mr. Speaker's action in adjourning House for want of Quorum before the commencement of business came under operation of S.O. No. 161, and was a ruling within the meaning of that S.O., 94. That amendment proposed in resolution to introduce Sunday Trading Bill to provide for classification of licenses was beyond scope of and irrelevant to the subject of the Bill, 110. That the objection taken to motion to introduce the Women's Franchise Bill, on the ground that the Bill involved expenditure and should have been introduced in Committee preceded by a Message was premature, as the provisions of the Bill were not yet known, 111. That the proposed amendment on the motion to introduce the Women's Franchise Bill to abolish Elector's Rights was not relevant to the motion, 111. That amendment to alter hour of meeting of House on motion for Precedence of Business was not relevant, 193. That motion of adjournment in reference to administration of affairs at Norfolk Island anticipated discussion on the Vote in Committee of Supply, and was out of order, 217. That the decision of the Temporary Chairman in Committee on the Distress for Rent Restriction Bill, that the omission of the word "female" extended the subject matter of the Bill beyond its original bounds, was correct, 225. That motion of adjournment to discuss inaction of Ministers in reference to Government Advances to Settlers Bill anticipated the debate on the second reading of that Bill, and was out of order, 265. That motion of adjournment to discuss inadequacy of accommodation at Redfern Railway Station anticipated consideration of a Notice on Business Paper and of the Estimates, and was out of order, 270. That the decision of the point as to whether, on a motion for the adjournment of the House under the 49th Standing Order, the matter was of "urgent public importance" did not rest with the Speaker, 296. That motion for adjournment in reference to produce business did not anticipate Notice on Paper, 296. That Member could not be interrupted in his speech by a motion of urgency, 296.</p>		
DISSENT FROM RULING :—		
<p>Motion made (<i>Mr. Sleath</i>) to dissent from action in declaring the House adjourned before 3-30 p.m. on previous Thursday. <i>Point of Order</i>.—That motion did not deal with the ruling of the Speaker, and did not come under operation of Standing Order No. 161. Ruled against by Mr. Deputy Speaker ; motion negatived, 94.</p>		
SPECIAL ADJOURNMENT (See "ADJOURNMENT").		
SPECIAL REPORT (See "COMMITTEES").		
SPEECHES (See "LIMITATION OF SPEECHES").

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DUDLEY COLLIERY EXPLOSION.

(REPORT OF THE COURT OF INVESTIGATION ON.)

Printed under No. 4 Report from Printing Committee, 29 September, 1898.

REPORT OF THE COURT OF INVESTIGATION.

Sir,

On the morning of the 21st March, at 9 a.m., an explosion took place at Dudley Colliery, in consequence of which fifteen men lost their lives. A Coroner's inquest was held subsequently on two of the bodies which had then been recovered. The taking of evidence extended over fourteen days, and fifty-one witnesses were examined. The verdict of the Jury was to the effect that the two men, Thomas Dorrity and John Benson, met their death in the Dudley Colliery on the 21st March, 1898, from carbon mon-oxide poisoning, and that there was not sufficient evidence before them to determine the cause of the explosion. They added:—

- “ We consider the natural ventilation insufficient and unreliable, and that the artificial ventilation of the Dudley mine is quite sufficient to ventilate the said mine, providing air-courses are in thorough order and bratticing is carried up to each working-face.
- “ We consider that sufficient examination was exercised for the safety of the workmen, according to Rule 4 of Part 2 of the Coal Mines Regulation Bill (referring to the deputy's inspections); but we consider a greater margin should be allowed for a more thorough inspection of the whole mine at all times, and with station farther back from the working-faces.
- “ We consider the question as regards naked lights a matter between management and inspection.
- “ We are of opinion, according to evidence, that all precautions necessary for the safety and comfort of the workmen were attended to by the Management, with the exception of Rule 1 of Clause 47, Part 2, of Coal Mines Regulation Bill, referring to ventilation being constantly produced, of which we consider ourselves unable to interpret.
- “ We consider that the Dudley disaster was quite unexpected, as not sufficient reports of danger were made to the Management prior to the explosion.”

Owing to a fire that manifested itself during the search for dead bodies, it was deemed necessary by those who undertook the management of exploring operations after the explosion to temporarily seal the pit down. This was done on 24th March, and it was unsealed on 17th June.

I received an appointment in June, under the hand of the late Secretary for Mines, Mr. Sydney Smith, to hold an investigation into the causes of the explosion, under the provisions of Section 23 of the Coal Mines Regulation Act of 1896. As the indications seen immediately after the unsealing of the pit pointed to a great confusion underground, and five bodies were not yet recovered, it was decided to postpone the opening of the inquiry until the hitherto unexplored districts had been opened up.

In the meantime, after the last body had been recovered, I spent the greater part of one day in the pit in company with Mr. Atkinson, Chief Inspector of Coal Mines; Mr. John Dixon, an Inspector of Collieries; Mr. Humphreys, Manager of the Dudley Colliery; and Mr. Turnbull, Manager of the A.A. Company's Colliery, who was then superintending the opening up of the mine; and I visited the chief points of interest in connection with the explosion.

Court of
Investigation.

The Court of Investigation was opened on Monday, 15th August; and sittings for the taking of evidence were held on thirteen days, when forty-five witnesses were examined orally. I used as exhibits the depositions of various persons who had been called at the Coroner's Inquiry, but whose evidence was not of sufficient importance to warrant the expense of bringing them to the Court by summons. [*Appendix C.*]

The following persons appeared before me, representing various interests:—
 Mr. W. H. Baker, Solicitor, appearing in the interests of Mr. Hugh Humphreys.
 The Hon. Alexander Brown, M.L.C., appearing for the proprietors of the Dudley Colliery.
 Mr. James Curley, Secretary of the Colliery Employees' Federation, appearing on behalf of that Federation, and also for some of the relatives of the deceased.
 Mr. A. A. Atkinson, Chief Inspector of Coal Mines, appearing to watch proceedings in the interests of the Mines Department.

They were afforded the opportunity of cross-examining witnesses, and, at the conclusion of the evidence, of addressing me on any matter they might think pertinent to the inquiry.

No evidence was obtainable as to the circumstances leading up to the explosion, inasmuch as no person survived who was in the mine at the time of the disaster; but a number of witnesses gave evidence as to the general condition and management of the colliery; of its examination (immediately after the explosion, and also after the unsealing in June) as to the presence of fire-damp; the finding of the bodies of the men who were killed; and there is no reason to suppose that any evidence which is material to the inquiry has been withheld.

Upon the facts so disclosed, I have the honor to submit my Report, under the following heads:—

- (1.) Description of the Mine.
- (2.) The Management and Working of the Mine.
- (3.) The State of the Mine just before the Explosion.
- (4.) The Explosion and its Results.
- (5.) Cause of the Explosion.
- (6.) Conclusion.

(1.) *Description of the Mine.*

The Dudley pit is situated some few miles south of Newcastle, in the locality known as Redhead. Sinking operations commenced somewhat more than nine years ago. There are now two shafts—the down-cast, 624 feet below the surface, and the up-cast or fan shaft, 553 feet deep. The coal is bituminous in character, and, as is general in the Newcastle district, it is the Borehole seam that is being worked. The height of the seam is 6 feet 3 inches, and it is worked to an extent of 5 feet 9 inches, 6 inches being left in the roof. Above the coal is a band, 2 feet 6 inches in thickness, consisting of rotten shale and ironstone. In places where the shale has not fallen the roof is supported by props; but falls have occurred from time to time in spite of these precautions. The mine as a whole is dry and dusty, more particularly so in Nigger's heading and the headings to the right of the second right main headings. The district to the left of the lastmentioned headings is wet. The main roads are watered,

Shafts.

Seam.

Roof.

Mine dry and
dusty.

watered, but it was admitted to be done more for the sake of convenience in travelling, and it is obvious that to water the roadway and to omit the sides where the fine dust collects, would be useless as a check upon the spread of an explosion. There is a rise, generally speaking, in the pit from the down-cast towards the up-cast shaft. The area that has been worked up to the present is acres. The plan appended hereto, and marked "A," will show the main features of the mine; the crosses with figures denoting the places where the dead bodies were found; the pencil arrows showing the directions of force or flame as deposed to by different witnesses; the small ink arrows giving the direction of the air-current. The lines coloured blue are the intake airways, those in red the return.

(2.) *The Management and Working of the Mine.*

The system of working is what is known as the "pillar and bord"; the wider oblong spaces on the plan indicate the pillars, and the narrow the bords. The mine, when working, has always given off fire-damp, more or less, especially in the winning places; and when the connection was being made between the two shafts, it was found advisable by the Management to introduce safety-lamps for that particular work. In recent years, however, naked lights have been used throughout the mine, except during the deputy's inspections, when safety-lamps are used. The working places have always been bratticed up to the face, even prior to the existing Coal Mines Regulations Act, and when it was not compulsory; but, nevertheless, numerous instances were recorded by witnesses of the presence of fire-damp in an inflammable state, manifesting itself by igniting at the naked lights of the men. The pit is ventilated by a fan situated at the mouth of the up-cast shaft, which usually runs when the mine is at work, at a speed of from forty to forty-five revolutions to the minute. There are five distinct ventilating districts, and the main intake current is distributed throughout the workings by means of splits. It has been the custom, when there were no men in the pit at the week end, to stop the fan on Saturday and Sunday, and, should all the men be going to work on Monday morning, to start it again on Sunday night. After the men had come out of the pit at 4 p.m., the fan would be idle daily until 9 p.m., when it would again be started—some hour and a half before the shiftmen went down.

The method of inspection under Rule 4 was as follows:—

It appears that since 1896, in addition to the miners who were working on contract, shiftmen were employed on day-wages in getting coal at night-time. Rule 4 provides, for the purpose of inspection, that a station or stations shall be appointed at the entrance to the mine, or to different parts of the mine, and no workman shall pass beyond any such station until the part of the mine beyond that station has been examined in the prescribed manner.

Section 46 of the Coal Mines Regulation Act provides for the division of a mine into parts, but there is no evidence that the Dudley pit has been divided in accordance with that section. As a matter of fact, at Dudley a station has been established at the bottom of the down-cast shaft, and beyond this point the miners on contract may not pass in the day-time till they receive the deputy's permission. The shiftmen and water-bailers, on the other hand, were in the habit of passing this station before any inspection of the mine had been made, and travelling with an intake current of air would wait at a flat or station in their respective districts for the deputy's report. At night the deputy would go down the pit half an hour before the men, and examine the working-places in each district where the men were to work, travelling with the air-current. If he found gas, his duty was to remove it before the men went in to that working-place; if all was safe, the practice was to mark the date in each bord or working-place. After this inspection he would meet his men at the station for that particular district, make a verbal report to them as to the condition of the district and set them to work, and subsequently make the prescribed entry in the deputy's book. Thus the men would very often be at work at their places before the deputy had made his report in his book in accordance with the Act. Later on, in the early hours of the morning, he would make a second inspection, as provided for in Rule 4, and would meet the miners going down at 7.30 a.m. at the station near the bottom of the down-cast shaft. The old workings were not examined unless the ventilation going through them subsequently passed through a district where men were at work. The deputy's duty was further to

replace

Reporting
presence of
gas.

replace immediately all brattice that was disarranged, and convey to the manager all information which he had with regard to the presence of gas and other sources of danger. There was a corresponding obligation imposed on all persons employed in the mine by the Special Rules of the colliery to report to the person in charge of the works the existence of fire-damp. In practice, it would appear from the evidence that the deputies recorded in their book the place and circumstances of their finding gas in the course of their inspections, but the books do not show any entry of an ignition of gas having taken place during the ordinary working hours. Many of the miners admitted that they made no report of the presence of gas which they experienced from time to time; some, indeed, stated that they did report such ignitions to the deputies, but the latter when so informed seem to have neglected to make these matters known to the manager. I shall have occasion to refer to these matters in detail later on.

(3.) *State of the Mine just before the Explosion.*

The places had been balloted for by the miners on March 17th, and Monday, 21st, was to be the first day of working under the new arrangement. Operations had been suspended in Nigger's heading since the previous October. On the 18th March some men had been at work laying rails in that part, in pursuance of the intention to resume work there immediately. In the second left district, Bob's heading had recently been worked by night and Star's heading by day. Work had also been carried on in the second right district. On various occasions since the beginning of the year fire-damp in a more or less inflammable state was proved to have been given off both in the face of the second right main headings and in the bords contiguous thereto; but in the previous ten days it had been detected in Bob's heading, in a bord opposite to the spot where the body of Hindmarch was subsequently found, and also in the last unholed bord, marked "AO" on the plan.

19th March.

The men came out of the pit on Saturday morning, the 19th. Up to that hour nothing unusual was noticed, nor was there any indication of the subsequent explosion. The fan, according to the usual practice, remained idle from then until Monday morning; it was to start at 6 a.m. that day. There was, however, some uncertainty as to what hour it did commence to work, and I have come to the conclusion that the time was undoubtedly later than usual. However, by 6:30 its speed was somewhere about 42 revolutions to the minute, thereby providing for a current of air to the extent of 100,000 cubic feet entering the mine every minute. And it was stated by several witnesses that this volume of air was sufficient to dilute and render harmless all noxious gases with which it came directly in contact; that although there might possibly be some accumulation of gas that morning in consequence of the fan having been idle for forty-seven hours previously, yet that current of air was ample, assuming that the brattice and ventilating apparatus generally were in proper order, to clear the mine of all noxious gases in less than one hour.

21st March.

Duties of
workmen.

Young was the examining deputy for the day. His work would take him down the pit about 7 o'clock. Towards 7:30 the other men descended. Amongst them were Hetherington, the deputy, and Hindmarch, the underground manager. The two deputies carried safety-lamps when last seen at the pit-mouth that morning; the other men, including Hindmarch, had naked lights. Benson, the pumpman, had been engaged at the pump. Hetherington had charge of a gang of men in Nigger's heading. Young would be in charge of the three water-bailers, Rudge, Jones, and Cook, whose work was in the left of the second right-hand headings. In the second right return airway there was a fall of roof some four stentons in by of the up-cast shaft. Haddon and Mowbray would be employed there filling skips, which M'Dougal wheeled round to Price and Dunn, who, in their turn, disposed of the contents in the stow-bord behind the up-cast shaft. Hetherington would probably examine the district called Nigger's heading for his men. Young would first examine the district where the water-bailers were about to work, and according to practice place the date, in chalk, upon the working-faces. Having disposed of them he would probably proceed with the examination for the other men. After completing this preliminary inspection, Young had some work to do near where his body was ultimately found. There would be then, some hours later, a second inspection provided for by the Act. Hindmarch's duties took him nowhere in particular

on

on that morning. In all fifteen men were in the pit at 9 o'clock, and as far as is known there was to be no shot fired that day, nor has any evidence been obtained since to suggest that a shot was fired before the explosion took place. Two youths, Croker and Parsons, were down below for a short time that day, returning to the surface just before 9 o'clock. About 8.45 Green was seen by Croker at the cross-cut end, and Dorritty in charge of a horse at the pit-bottom. None of these fifteen men were seen alive again.

(4.) *The Explosion and its Results.*

At ten minutes past 9 there was a loud report, and quantities of dust and dirt were forced up both of the shafts. These indications were noticed to proceed from the up-cast shaft some few seconds earlier than from the down-cast. At the up-cast the result was that the covering of the shaft was blown away and a door of the fan chamber was broken, and the timber baulks, on which rest the pulley legs, were plastered with mud on the underside. At the down-cast the cage, weighing 22 cwt., which was at the pit-mouth at the time, was thrown upwards some 23 feet, the chain of the cage was broken, some sheets of iron were blown off the roof, and dust and small coal were emitted in large quantities. The cage at the shaft-bottom was wrecked, and the guide-ropes were broken. The exploring parties descended the pit in the course of that same day. At the shaft-bottom there was evidence of very great force travelling outby; the ventilation was everywhere disarranged. Up to the 24th ten dead bodies had been recovered, but owing to the presence of what was deemed to be a fire it was decided to seal the pit down.

Up to that point the evidence indicated that the force had proceeded chiefly from the left-hand side of the mine, and it was thought by some that Nigger's heading was the initial point of the explosion. Since the unscaling of the pit in June, most parts of the colliery have been carefully and minutely explored, and further investigation has led the majority of the witnesses who offered an opinion on the matter to locate the starting-point somewhere on the right-hand side of the mine. Indeed, not only is there a difference of opinion as to the inference to be drawn from the facts disclosed, but in more than one instance there is a conflict as to the evidences of force. Moreover, thousands of tons of fallen roof were found after the pit had been reopened, and it was proved that many of these falls had taken place after the shafts were unsealed. The displacement of air so occasioned would have the same effect upon stoppings as the explosion itself. Care is therefore required in endeavouring to trace the course of the explosion to avoid attributing to the original force damage which has been caused subsequently.

After due consideration the following are the conclusions I have arrived at as to the indications of force:—

Proceeding first along the main narrow bords intake airway from the down-cast shaft, we find a set of full skips near the overman's cabin, which had evidently been blown along the road some distance by a force travelling outover. At the first overcast the wall on the left-hand side was standing, that on the right bore evidence of having been acted upon by two forces, one travelling outby, the other proceeding from the back heading of the first right-hand heading. Of the stentons between the first overcast and the cross-cut, three were standing, the stopping of the second going inby being blown into the return, that is from right to left. Opposite that stenton a set of loaded skips were standing; some of these had been blown against the right rib, indicating a force from left to right. Opposite the third stenton, which was standing, was another set of skips. Some of the skips in the middle of this train were forced against the right rib. Three skips at the rear, that is on the inby side and just opposite to the first cut-through, were spread out and partly turned round in the direction of the down-cast shaft. At the cross-cut the door marked "D" on the plan had been blown inover. Here again was a set of skips standing; those actually opposite to the cross-cut opening being moved against the right rib as if a force had come outby from the cross-cut. The first skip of this set was tipped on end and blown outby. Either the sixth or seventh stenton was standing, but with that exception all stoppings between the narrow bords from the cross-cut, and as far as the faces of the main narrow bords, were blown into the return. Standing opposite to the second cut-through was another set of skips, the rear skips being turned round from right to left, in a similar manner to those at the first cut-through. The second over-cast

Second
over-cast.

over-cast shows a force from left to right, the bricks being blown outby, and the timber from left to right. At the entrance to the second left headings there is a drift of dust driven from the heading into the main narrow bord. Yet, again, Mr. Humphreys says that some of the timber has not yet been recovered, and the only part hitherto unexplored where it can possibly be found is the return airway of the second left-hand heading. The door of the first stenton inby of the second over-cast was blown towards the left, and its remains were found in the return of the second left-hand headings. The third over-cast affords no clear evidence. We find the bricks are blown into the return towards the left, and some of the timber was found in the intake of the second right-hand headings to the right. Still travelling inby of the third over-cast, the stoppings to the right of the narrow bords are blown to the right; the first stopping has been blown to the right with some force, inasmuch as some bricks were found 44 yards away in that direction. The stentons further inby are fallen, but as no part of the stoppings has been found in the intake it is fair to assume that the force which must have displaced them was from left to right. Travelling along the main narrow bords return inby from second over-cast, the first two stoppings on the left are blown from right to left; the third was fallen.

Third
over-cast.

There are indications of flame in the stentons, both inby and outby of Star's heading.

Star's
heading.

Going along Star's heading there is a general indication of force and flame in the bords on either side of the heading, having travelled from the main narrow bords. In some bords the brattice has been blown up against the left rib, and has been subjected to great heat. The flame has travelled down the bords on the left towards the second left-hand headings. From the end of Star's heading to where Hindmarch's body was unearthed there is no evidence of flame, as the roof has fallen. In the bord to the right of Hindmarch the brattice-cloth is torn. Some props in the bord to the left show signs of flame having travelled towards the second left headings. From this point, generally speaking, there is evidence of flame, as seen by scorched props and coke-dust travelling towards the second left. In the going bord at the fourth pillar, down from Star's heading, a full skip has been driven some distance off the flat in the same direction. In the second left-hand return, the first stopping inby was standing, the second has fallen, and the third was blown into the intake.

Second
left-hand
headings.

In a bord directly opposite to the third stenton, and contiguous to the intake, some bricks were found which had been blown 20 yards from that stenton. Between the second and first left headings, coke-dust and other signs of flame are to be met with. The stoppings between the first left-hand headings have been blown from right to left with great force, the bricks of the first, second, and third being embedded to a depth of 3 or 4 inches in the opposite pillar.

First
left-hand
headings.

First cut-
through.

Returning again to the junction of the second left headings with the main narrow bords, travelling outby, in each of the three cut-throughs there is evidence of flame, and in the first cut-through inby of the first over-cast the tram of a skip was found close to the main narrow bords, some 20 yards inby the skip itself was found. There are indications that it had been loaded, and coal was lying about in the vicinity. Just inside this heading were also found the bottom of some empty casks, the other portions lying on the inby side of this skip.

Second
right-hand
headings.

Taking the second right main headings, going inby, the stoppings between the two headings are all blown from right to left, with four exceptions—that is, the third, fourth, seventh, and ninth, which are standing. The fourteenth stenton shows very strong force from right to left, the bricks of the stopping being embedded in the opposite pillar. The stoppings on the left-hand side of the intake do not present an uniform appearance. As far inby as the fan-shaft they are blown from left to right, inby of the fan-shaft many are standing; those which have been displaced are blown from right to left. On the flat at the first going bord on the left side of these headings a skip has been blown inover. Of the stoppings in the first going bord to the left, the first on the left is standing, that on the right is blown to the right. The stoppings on either side of the next two headings are blown right and left respectively. Further on inby of the second going bord a skip has been blown outover. In the going bord the stoppings of the first and second headings have all been blown to the left. In the third heading the left stopping is blown left, and the canvas stopping on the right is standing. From the main narrow bords the force has been towards the first going bord, and from the face of the second right headings the force is also towards that bord. In the whole of this district there is no evidence of flame, and the force is only slight.

First going
bord.

Second going
bord.

Returning

Returning to the third over-cast, and traversing the second right-hand return, the first, second, and fourth stoppings on the right inby are blown into the return, and a door on the second pillar behind the up-cast shaft has been blown towards the return. The first stopping on the right inby of the up-cast and such others as can be traced have been blown into the return. Second right return.

Taking next the bords off the second right-hand return, at the inner bord inby where Young's body was found, a skip has been forced inover. From this spot to the face of the heading there is no sign of force or flame, and there have been no falls. Travelling along the face, there are no indications between where Young's body was found and bord 21, as the roof has fallen. In the neighbourhood of the latter bord a skip has been tipped in the direction of the main narrow bords, and props in that vicinity indicate that flame has travelled outby. Between this point and the stow-bord the directions of force and flame are very conflicting—sometimes inby, at other times outby, and occasionally travelling opposite directions in two parallel bords. Going from the stow-bord towards the main narrow bords, the same conflicting evidences of flame are encountered. Stow-bord.

The body of Cooke when discovered was lying a pillar's distance from his water-tub. Haddon, Rudge, and Jones were found nearly 70 yards away from their respective working-places, and Mowbray some 35 yards. The rest all died close to their work. The immediate cause of death of every man whose body was examined *post-mortem* was attributed to carbon mon-oxide. In some instances the bodies were burnt or injured by falls of roof, which injuries might in themselves have brought about the death of the individual in the course of a few days had not the effects of after-damp immediately supervened. A detailed account of the circumstances surrounding the death of each man will be found in Appendix "D."

(5.) Cause of the Explosion.

All the witnesses were in substantial agreement that the explosion has been caused by the ignition of fire-damp at a naked light; that the quantity of gas was probably not large; but that the explosion has been intensified and extended by the action of coal-dust. The initial explosion must have stirred up some fine dust, which in its turn has been inflamed and exploded, thus leading to a series of almost simultaneous explosions. As to the seat of the explosion, there is much difference of opinion. Messrs. Atkinson and Humble make Hindmarch's light the starting-point; Mr. Croudace agrees with them—that the mine fired on the left-hand side, but does not actually say where. The Brothers Dixon, and Messrs. Humphreys, Henwood, Ross, Brown, and Mason say it originated on the right-hand side, the witnesses varying in making Young or Haddon or Price the initial point of the disaster, or leaving the matter entirely at large. Messrs. Turnbull and Thomas declined to commit themselves to either side. So long as it is established that this was a fire-damp explosion, the fixing of the exact point of ignition becomes a matter of secondary importance; and although there are difficulties in the way of adopting either theory, the balance of probability to my mind is in favour of the explosion originating at Hindmarch's light. From Hindmarch the general direction of the explosion was across the second and first left-hand headings, through the pump-drift, and up the down-cast shaft. Portion of this force was diverted when meeting the second left headings, and after driving the stenton stoppings into the intake, it it has travelled along the intake and blown the second overcast into the main narrow bords. Here the force has again subdivided after striking against the fast wall of the main narrow bords, part of it travelling inby has blown the door in the first stenton into the return, as described, thus allowing a portion of the explosion to travel along the return. As the force travelled along the main intake, it found a partial escape into the third cut-through. Continuing inby, it has distributed itself left and right through the stoppings on either side, thus reaching respectively Star's heading and the headings to the right of the main narrow bords. As it approached the face the force was gradually dying out, and in its last effort travelled against the air from the face of the main narrow bords to where the two air-currents met in that bord (No. 54). Returning now to the main narrow bords at the second over-cast. At this point the remainder of the force of the explosion took a direction outby, finding a partial escape at the second and first cut-throughs. In these headings to the right of the main narrow bords, the explosion has travelled in different directions, Fire-damp explosion.
Coal-dust.
Seat of explosion.
Left side most likely.
Course of explosion.

directions, finding an outlet partly at the first right headings, partly at the up-cast shaft, and also through the stoppings off the return of the second right-hand headings, eventually crossing these lastmentioned headings somewhere near the spot where Rudge and Jones were found; then travelling with slight force against the air and along the working-faces as far as bord 54, and outby as far as the second going bord.

The fact of dust issuing from the up-cast shaft earlier than from the down-cast does not assist us, for that is equally consistent with either theory. Again, the evidences of force and flame in the second right district are so contradictory as to afford little help in themselves.

Right-hand
side theory.
Difficulties.

The following seem to me strong objections to accepting the view that the mine fired on the right-hand side :—

- (I) The evidence of force having moved the second over-cast from left to right, and having carried a skip and casks along the first cut-through, is inconsistent with the idea that the explosion entered the main narrow bords from the right-hand side, and no explanation that has been offered has removed that difficulty from my mind.
- (II) If the explosion had originated on the right, one would expect a greater exhibition of force than the evidence affords, in the stoppings between the second right main headings; and some evidence of flame or force at the faces of the same headings.
- (III) The fact that all the men on the left-hand side were found close to their work, whilst on the right-hand at least five had travelled some distance from their places before they succumbed, suggests that those in the right heard the sound of the explosion, and, being alarmed, had dropped their lamps, and had had sufficient time to travel, in three instances, as much as 70 yards before they were overcome. Such an occurrence would not be probable if the explosion originated some 200 yards away, when the sound and force would reach them almost simultaneously.

On the other hand, the left-side theory presents a difficulty. If Hindmarch's light initiated the explosion, one would expect the flame to branch out in all directions when first seeking an outlet. It may be that Hindmarch, before being overcome by after-damp, travelled some short distance towards the second left headings, and that the explosion, after splitting at the second over-cast, has returned almost to the starting-point. It was suggested that, although Hindmarch entered to the pit with a naked light, he would be carrying a safety-lamp at the time of his death. To settle this question, I adjourned the Court for a week to give the Management an opportunity to make full search in the vicinity of his body and Young's, but up to the last day the Court sat no trace of any lamp or light in either spot had been found.

Cause of gas
accumulating.

There was, undoubtedly, some accumulation of gas upon which the ventilating current was unable to properly act on that morning. This may have been brought about by a fall of the roof liberating a quantity of gas, or the fall may have disarranged the brattice, and thus caused an accumulation of gas shortly before the explosion, or the brattice may have been disarranged on the previous Saturday in some bord where gas was exuding, and the accumulation of those forty-seven hours may have been uninfluenced by the air-current on Monday morning up to the moment that the naked light came into contact with it. There is no evidence upon the matter, and I can only say, judging from the history of the mine, that the last alternative seems the most probable.

Conclusions.

I find that—

- (I) The explosion was caused by the ignition of fire-damp at a naked light.
- (II) The explosion was intensified by the agency of coal-dust.
- (III) Evidence did not show what was the approximate quantity of fire-damp, or what the circumstances were under which it assumed an explosive character.
- (IV) Ventilation was not "constantly" produced in accordance with the terms, Section 47, Rule 1, of the Act.

(v)

- (v) Inspections were not conducted in accordance with General Rule 4.
- (vi) There was in the mine a quantity of fire-damp, which rendered the use of naked lights dangerous.
- (vii) Locked safety-lamps should have been used at the time of the explosion.

It is manifest, according to the decision of the English Courts in the case of *Knowles v. Dickinson* (2 E. and E., 705), that it is the duty of the Management to keep the fan constantly at work each day in the week, and whether the men are actually in the mine or not, so long as it is being worked as a going concern. The circumstances of that case are very similar to the present one; and the decision seems to me to be directly in point. A prosecution for a breach of the Act in this respect is at the present date barred by statute. However, the following remarks are noteworthy in this connection:—

- (I) The evidence proved that the stoppage of the fan from Saturday till Monday was not the cause of the gas being in an explosive state; on the contrary, that the volume of air was sufficient to dilute all noxious gases (assuming the brattice was in proper order so as to enable the current to reach all places where gas did exist).
- (II) The practice of stopping the fan at the week-end has been common for years to Dudley and other pits without any protest on the part of the colliery inspectors. In fact, the wording of the report of Mr. Inspector Humble, of 31st October, 1896 (Appendix E), reads as if he was then under the impression that the fan need not be worked unless men were actually in the mine.
- (III) A notice has been issued by the Chief Inspector of Coal Mines since the conclusion of the Coroner's inquest to Mr. Humphreys, drawing his attention to the duty of keeping the fan at work during any temporary suspension of work; and the Manager, since that notification, has complied strictly with the terms of Rule 1.

As to the method of inspection (Division V, page 24): A station with a deputy board in accordance with Rule 4 and Special Rule 11, has been established at the bottom of the down-cast shaft. Beyond that no person may pass until the part of the mine beyond that station has been stated by the deputy to be safe (see Rule 4).

The practice with regard to inspection before the miners enter in the morning, as above mentioned (see page 3), is strictly in accordance with the rule; but the system in connection with the night shift is undoubtedly not only irregular, but a breach of the rules. The deputy precedes the night-shiftmen down the pit by some half hour; they in their turn pass the station at the entrance to the mine and wait at different places or stations as they have been termed, till they see the deputy. My view of the provision as to stations is as follows:—

Where a mine is worked as a whole with one system of ventilation, then one station only is allowable—that is, at the entrance to the mine. If, however, a mine is divided into parts, under the provisions of Section 46 of the Coal Mines Regulation Act, so as to make each part a separate mine within the meaning of the Act, then a station may be established at the entrance to each different part. I find confirmation of this view in a passage of the judgment of Mr. Justice A. L. Smith, in *Wales v. Thomas* (16 Q.B.D. 340, page 348).

Therefore, to appoint stations in the various districts of Dudley, as deposed to in evidence, is a violation of the Act in two respects, for

- (1) Only one station is permissible as the colliery is at present worked.
- (2) That station must be at the entrance to the mine.

With the removal of these various so-called stations from the various flats, the examining deputy will then make a complete inspection of the working-places, &c., and will meet the shiftmen at the entrance to the mine, and sign his report in the same manner as he now does when the miners on contract go to work.

As to Division VII (page 9)—the use of safety-lamps: The evidence shows that from its earliest history the mine has always been giving off fire-damp, and to deal with it effectually it has been necessary to brattice the working-places. The history of the mine during the eleven months prior to the explosion shows that gas had been reported by deputies on sixteen different occasions in various parts of the mine.

mine. Miners had experienced ignitions of gas in the faces of the second right headings generally, in the first left, and, during the week previous to the explosion, in Bob's heading and in the bord next to where Hindmarch's body was found. After the explosion a quantity of fire-damp was discovered in the faces of the second right main heading. This might be due to the circumstances attending the explosion, yet since March 21st, we find that, though the faces of the coal have been undisturbed, gas was being still exuded as late as August 20th from the faces of the second right-hand main headings, and up to the end of the same month in the bords abovementioned in Bob's heading.

The deputies' books some years back, and after the fan was introduced, show that in different parts of the mine gas was found daily for periods extending over a fortnight (Appendix F). From the evidence it is clear that it was necessary to have both the fan at work and the brattice erected in order to prevent accumulations of gas. On different occasions when the fan has been working and the brattice disarranged gas has been discovered, and *vice versa*. Some twenty witnesses gave evidence of ignitions of fire-damp, which they had experienced. These ignitions may be divided into the following classes:—

Causes of gas lighting up.

- (1.) Those caused by the bratticing being damaged, or not being sufficiently close to the face.
- (2.) Those caused by the firing of a shot.
- (3.) Those caused by workmen going to the face with a naked light too soon after firing a shot.
- (4.) Those caused by a workman's light when drilling a hole.
- (5.) Cases of which no explanation is forthcoming.

Referring to these individually, the first may be dealt with by properly enforcing the provisions of Rule 1 as to ventilation. The means for detecting the presence of fire-damp require the constant attention of those in authority. In many instances the insufficiency of the brattice to carry off the gas should have been found out by the deputies, or, if discovered, should have been remedied. The necessity of strict attention to this part of their duty should be impressed upon the officials.

As to (2): Possibilities of that kind may be avoided by strictly adhering to the conditions of General Rule 12.

(3): May be obviated by more care on the part of the workmen, who, in more than one instance, admitted that they knew they were taking a risk in returning to the face with a naked light before the smoke had cleared away.

A number of cases unexplained.

There remain, however, a number of instances where an ignition of gas has taken place which could not be accounted for by any temporary defect in an otherwise perfect system of bratticing. These ignitions occurred sometimes in the early morning when the miner first entered his working-place; on other occasions after a temporary absence during the shift. In these cases there was no shot-firing, and the brattice was well up to the face. In most cases the flame was of small extent, with the exception perhaps of Harrison's, the flame in his bord ran back along the broken roof a distance of 12 yards. Nobody hitherto had actually been burnt. Several witnesses treated these flares-up, as they were styled, with great contempt (the Manager saying that 99 cases out of 100 there was no necessity to make a special report as the quantity was infinitesimal). The underground manager did not consider a flame 4 or 5 yards long dangerous to workmen. As illustrating the danger attending the lighting of a very small quantity of fire-damp, I will refer to the report for 1892 of Mr. Stokes, one of Her Majesty's Inspectors of Mines for the Midland Counties. Referring to fire-damp, he says: "With regard to what quantity might be considered dangerous, a clear proof of what might be the result of igniting a very small quantity of gas is given in the lists of non-fatal explosions, in which is recorded the ignition of a very small quantity of fire-damp at a gate-end lip by a naked light held by a workman. The quantity was so small that the man who ignited the gas was in no way injured, but the flame from the ignited gas passed along a break in the roof and exploded other gas in the goaf and burnt two men working 56 feet away from the point of first ignition. This accident clearly shows that a quantity of gas so small in itself as when ignited not to injure the person igniting it, is yet sufficient to prove dangerous to the mine and persons working some distance from it, due to its flame being extended by gas lying unknown in breaks in the roof."

Danger of fire-damp.

The

The above extract shows that a small quantity of inflammable gas may be a danger to workmen if there are surrounding circumstances of an aggravating nature.

Another element to be considered is the question of coal-dust. The Manager Coal-dust. says that the whole of the left side of the second right is damp, also Bob's heading and the lower portions of the second left and first left; but the remainder of the mine is both dry and dusty.

The Royal Commission on explosions from coal-dust in mines, in their Report published in 1894, are of opinion that the danger of explosions in a mine in which gas exists, even in very small quantities, is greatly increased by the presence of coal-dust; that air and dust with a very small quantity of fire-damp, such as practical people perhaps could not find with the ordinary safety-lamp, would cause violent explosions. Thus what might be a local explosion of a simple character is transformed through the medium of coal-dust into a widespread disaster. Increased danger from fire-damp.

Moreover, it appears that, from time to time, falls of roof may take place in the Dudley pit, which may either liberate some fire-damp or derange the brattice and cut off from the influence of the ventilating current those parts of the pit contiguous to the damaged brattice. The falls have not hitherto been frequent, yet, as Mr. Humphreys says in his evidence, "the falling of the roof on the brattice is a possibility that has to be reckoned with in the mine. The roof, as it is generally in the mine, is liable to fall at any time in spite of precautions." Falls of roof.

Up to the time of the explosion no measures had been taken by dumping the coal-dust to check the spread of a possible explosion.

The existence of these three sets of circumstances, namely,—

- (1.) The ignitions of gas in spite of proper and perfect ventilation;
- (2.) The liability of the roof to fall and derange the ventilation;
- (3.) The presence of coal-dust ready to transmit and intensify a fire-damp explosion,

suggests the question: Was the use of naked lights likely to be dangerous to workmen in the mine about the time of the explosion, and should safety-lamps have been used? My answer is, undoubtedly yes.

The Honorable A. Brown, on the question of safety-lamps, referred me to the Report of the Royal Commission on Accidents in Mines of 1886, where it appears, on page 117, they refrained from prohibiting the use of naked lights in mines giving off fire-damp. But it will be noticed that whilst the Commission do not advise safety-lamps merely because a mine gives off fire-damp, they assume that their adoption is essential when fire-damp is associated with coal-dust; and certainly the trend of expert opinion and legislation during the last ten years in England is to enforce the use of safety-lamps in every mine where fire-damp is found. Royal Commission, 1886, opinion as to safety-lamps.

Mr. H. D. Greene, Q.C., in his Report in 1890 on the Llanerch Colliery Explosion, advocates legislative prohibition against allowing or using naked lights in a mine where inflammable gas has been reported within a period of twelve months. Opinion of Mr. H. D. Greene, Q.C.

Mr. Robson, Her Majesty's Inspector of Mines for the South Wales District, in his Annual Report of 1890, states that in his opinion all mines known to produce fire-damp should be worked with safety-lamps of the best description, and all other lights excluded. Mr. Robson.

Mr. Martin, another Imperial Inspector, holds equally strong views. Mr. Martin.

Our own local Act, the Coal Mines Regulation Act, 1896; makes it compulsory under Rule 4 to conduct all inspections of the working-places with a locked safety-lamp unless the mine has been absolutely free from inflammable gas for a period of twelve months. Coal Mines Regulation Act, 1896.

The explosives in Coal Mines Order, 1898, supersedes the rule in England which corresponds to Rule 12 of the Coal Mines Regulation Act of this Colony, and indicates that in any mine in which inflammable gas has been found within three months in such a quantity as to be indicative of danger, or which is not naturally wet throughout, no explosive, other than those specially authorised by that order, shall be used. Statistics further show that whereas in Great Britain 1,561 persons lost their lives through explosions caused by a naked light between 1873 and 1893, during 1897 there were only fifteen deaths from the same cause, when 720,000 were engaged and the output of coal was 200,000,000 tons. Explosives in Coal Mine Order, 1898.

Opinions of witnesses called.

The Inspectors of Coal Mines, who up to the time of the explosion had not heard of these ignitions of gas detailed in evidence before me, stated that those facts demanded the use of safety-lamps throughout the Dudley Colliery. Mr. Turnbull says: "If you find gas and it lights up you ought to have safety-lamps." Mr. Croudace says: "If gas is given off and the ventilation working and the brattice well up, one should increase the ventilation or use safety-lamps." Mr. Henwood says: "If Harrison's evidence is true, the gas is a danger to workmen."

Manager ignorant of the ignitions of gas.

Mr. Humphreys swore that with the exception of Harrison's experience he had no knowledge of gas igniting at naked lamps when the ventilating appliances were in proper order. And in justice to himself, it should be mentioned that many of the men who gave evidence of these flares-up admitted that they failed to report them to the proper authority, and, further, when the matters were reported to a deputy, they were not recorded in any way. Thus the probabilities confirm the Manager's testimony. However, I think that the incident Harrison spoke of, and the other circumstance peculiar to this colliery, should have put him upon inquiry and prompted him to use safety-lamps in compliance with Rule 8. Such a matter as a prosecution for breach of this rule is now out of the question, as it is statute-barred after three months (see Section 62).

Prosecution.

Nor do I think I am justified in making any recommendation as to a prosecution for manslaughter, for the jury at the Coroner's Inquest had before them all the facts of the case and decided that no responsibility was to be attached to the Manager for the consequences of the disaster. In the first place I cannot say that such a finding was unreasonable, and secondly, I do not think it lies within the scope of this inquiry to suggest criminal proceedings for any offence other than what may be dealt with under the Coal Mines Regulation Act itself.

Future working of the mine.

For the future, the use of safety-lamps is entirely a matter for the discretion of the Management; responsibility in this respect is removed by Section 20 from the shoulders of the inspectors and transferred to the mine officials. And I have no doubt that they will show the same regard for the interests of all associated with the mine as has been exhibited in the past.

Coal-dust.

Side by side with the precautions taken to prevent the ignition of inflammable gas, strict measures should be adopted to prevent the possibility of a small local explosive becoming extensive through the agency of coal-dust, and some method either of removing the dust or of damping it, or both, is essential where the dust exists in any quantity.

Importance of reporting presence of fire-damp.

However, the true interests of the mine cannot be effectually safe-guarded unless all concerned strictly comply with the requirements of the Act and the Special Rules. Special Rules 15 and 71 impose upon the deputy and the miners respectively, the duty of informing those in charge of the existence of fire-damp whenever found. The tendency seems to have been for the individual to constitute himself the judge of what should be reported and what not. Mr. Humphreys said that in 99 cases out of 100 there was no occasion to make a special report as the quantity of gas was insignificant. A manager should clearly understand and likewise impress upon those under his control, that every discovery of gas of any quantity must be reported in compliance with the Special Rules under pain of instant dismissal. Had this course been universally adopted throughout the mine, it is possible that we should never have heard of the Dudley explosion.

I have the honor to be,

Sir,

Your obedient Servant,

C. G. WADE,

Sole Commissioner,

19th September, 1898.

The Honorable Joseph Cook,

Secretary for Mines and Agriculture.

1898.

(SECOND SESSION.)

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 32. THURSDAY, 27 OCTOBER, 1898.

12. CASE OF SIDNEY COOPER, AS TO MINING UNDER A ROAD, PARISH OF CLIVE, COUNTY OF GOUGH:—
Mr. Moore moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon all the circumstances attending the case of Sydney Cooper, who was the holder of an authority to mine under a road separating portions Nos. 330 and 413, in the parish of Clive, county of Gough, such authority being obtained by him as the holder of a document purporting to be a mineral license, but which was held by the Appeal Court, holden at Inverell, not to be a mineral license, as the "butt" was not attached thereto.
- (2.) That such Committee consist of Mr. Cook, Mr. Austin Chapman, Mr. Cann, Mr. Gormly, Mr. Thomas Brown, Mr. Macdonald, Mr. Cruickshank, and the Mover.
- (3.) That the Report, Minutes of Proceedings, and Evidence of the Select Committee of Session 1897 be referred to such Committee.
- Question put and passed.
-

VOTES NO. 40. TUESDAY, 22 NOVEMBER, 1898.

7. CASE OF SIDNEY COOPER, AS TO MINING UNDER A ROAD, PARISH OF CLIVE, COUNTY OF GOUGH:—
Mr. Cruickshank, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, the Select Committee for whose consideration and report this subject was referred on 27th October, 1898.
Referred by Sessional Order to the Printing Committee.

**CASE OF SYDNEY COOPER AS TO MINING UNDER A ROAD, PARISH OF
CLIVE, COUNTY OF GOUGH.**

—

REPORT.

—

THE SELECT COMMITTEE of the Legislative Assembly appointed on the 27th October, 1898,—“ *to inquire into and report upon all the circumstances attending the case of Sydney Cooper, who was the holder of an authority to mine under a road separating portions Nos. 330 and 413, in the parish of Clive, county of Gough, such authority being obtained by him as the holder of a document purporting to be a mineral license, but which was held by the Appeal Court, holden at Inverell, not to be a mineral license, as the ‘butt’ was not attached thereto,*” and to whom was referred on the same date “ *the Report, Minutes of Proceedings, and Evidence of the Select Committee of Session 1897,*”—have agreed to the following report:—

Your Committee having considered the Report and Evidence referred, find as follows:—

1. That Sydney Cooper, being the holder of a mineral license, was granted an authority, dated 28th August, 1893, to mine for tin upon and under a road, portion No. 1, parish of Clive, county of Gough, between portions 413 and 330.

2. That Cooper worked continuously on the ground from August, 1893, to March, 1896, and that no work had been done on the land in question at the time Cooper applied for the authority.

3. That subsequently it became evident that portion of the ground was mined under, as a serious subsidence took place, and Cooper ultimately took proceedings in the Warden’s Court against the holders of the adjoining land in respect of same. Pending the hearing of the case an injunction was issued restraining the defendants from dealing with the wash-dirt (estimated to contain from 4 to 5 tons tin ore) then in their possession, and supposed to have been taken from the ground in question.

4. That, at the hearing of the case at the Warden’s Court, a verdict was given against Cooper by Acting Warden Saunders on the ground that no encroachment had been proved. Cooper immediately appealed against this decision to the Mining Appeal Court.

5. That, prior to the hearing of the case in the Warden’s Court, Cooper had applied to the Acting Warden for the necessary order for an opening to be made, from the ground which had fallen in, to the defendants’ workings, in order to establish the connection and prove the encroachment; but the order given by the Acting Warden only permitted of a survey being made of the workings then open, which was obviously insufficient for the purpose in view.

6. That, on a similar application by Cooper, after the case had been dealt with in the Warden's Court, and prior to the appeal being heard, an order was issued to Surveyor Folkard to fully survey the underground workings; and Cooper was prepared to place the facts disclosed by such survey before the Appeal Court.

7. That a technical point was taken in the Appeal Court that Cooper was not the holder of a mineral license at the time he obtained the authority, as the "butt" was not attached to such license. The Judge held that the point was fatal, and Cooper was compelled to withdraw his case.

8. That the Judge thereupon dissolved the injunction, and that Cooper immediately applied for a further injunction, which was refused.

9. That a clause was inserted in the Mining Act Amendment Bill (then before Parliament, and which was subsequently passed) to remedy the defect in the law which resulted in the disallowing of Cooper's appeal.

10. That Cooper went to considerable expense in his appeal, his legal costs and loss of tin ore being estimated at £300.

11. Your Committee have not deemed it necessary to call further evidence in order to thoroughly investigate the subject-matter of the legal proceedings, but they are satisfied from the evidence taken that Cooper had good cause of action, that he adopted every possible means within his power to prove his case, and that he was prevented from proceeding because the mineral license issued to him by the Mines Department was held by the Judge of the Appeal Court not to be a mineral license within the meaning of the Mining Act, in consequence of which he suffered considerable loss.

Your Committee, therefore, recommend Cooper's case to the favourable consideration of the Government.

GEO. A. CRUICKSHANK,

Chairman.

*No. 1 Committee Room,
Legislative Assembly,
22nd November, 1898.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 22 NOVEMBER, 1898.

MEMBERS PRESENT:—

Mr. Cann,
Mr. Gormly,

Mr. Moore.

Mr. Cruickshank,
Mr. Macdonald,

Mr. Cruickshank called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, and referring the Report, Minutes of Proceedings and Evidence of the Select Committee of Session 1897, read by the Clerk.

Papers referred before the Committee.

Resolved (*on motion of Mr. Gormly*), "That the Report of the former Committee, dated 8th December, 1897, be the Report of this Committee."

Chairman to report to the House.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

STOCKTON COLLIERY DISASTER.

(RETURN RESPECTING EVIDENCE OF THE CORONER'S INQUEST ON.)

Printed under No. 13 Report from Printing Committee, 24 November, 1898.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 12th May, 1897, That there be laid upon the Table of this House,—

“ All papers, documents, evidence, and reports of inquiries in connection
“ with the Stockton Colliery Disaster.”

(Mr. Fegan.)

SCHEDULE.

Part I.—Inquest on bodies of C. Smith and G. Curran.

NO.		PAGE.
1.	Mr. Inspector Dixon to Under Secretary for Mines and Agriculture, reporting deaths of Smith and Curran (with minutes). 2 December, 1896	2
2.	Telegram—Under Secretary for Mines and Agriculture to Mr. Inspector Dixon, asking for report on deaths of Smith and Curran. 2 December, 1896	2
3.	Telegram—Mr. Inspector Dixon to Under Secretary for Mines and Agriculture, reporting adjournment of inquest. 2 December, 1896.....	2
4.	Telegram—Mr. Inspector Dixon to Under Secretary for Mines and Agriculture, reporting adjournment of inquest. 3 December, 1896.....	2
5.	Telegram—Mr. Inspector Dixon to Under Secretary for Mines and Agriculture, reporting result of inquest. 9 December, 1896	2
6.	The Coroner, Newcastle, to Under Secretary of Justice, forwarding depositions taken at inquest (with minutes). 19 December, 1896	2
7.	Under Secretary of Justice to Principal Under Secretary, forwarding copy of verdict and rider. 10 December, 1896	8
8.	Minute by Minister for Mines in connection with recommendation of jury	8

Portion only of this return printed, by order of the Printing Committee.

STOCKTON COLLIERY DISASTER.

PART I.

Inquest on bodies of Smith and Curran, and Eulogy on action of Jury and Coulson.

No. 1.

Telegram from Mr. Inspector Dixon to The Under Secretary for Mines and
Agriculture.

Newcastle, 2 December, 1896.

CHARLES SMITH, furnace-man, and George Curran, shiftman, were found dead about 4 o'clock this morning, near bottom of upcast shaft, Stockton Colliery; death evidently caused by breathing noxious gas from old workings. An inquest will be held this afternoon, which Mr. Inspector Humble and myself will attend.

JOHN DIXON,

Inspector of Collieries.

Seen. Ask for full report at once.—S. SMITH, 2/12/96.

No. 2.

Telegram from The Under Secretary for Mines and Agriculture to Mr. Inspector
Dixon.

2 December, 1896.

Re death of Smith and Curran, Minister desires full report at once.

No. 3.

Telegram from Mr. Inspector Dixon to The Under Secretary for Mines and
Agriculture.

Merewether, 2 December, 1896.

INQUEST on Smith and Curran adjourned till to-morrow morning, and may not finish to-morrow. Full report cannot be furnished until the evidence is closed, but as soon after as possible.

JOHN DIXON,

Inspector of Collieries.

Seen.—D. McL., 3/12/96.

No. 4.

Telegram from Mr. Inspector Dixon to The Under Secretary for Mines and
Agriculture.

Newcastle, 3 December, 1896.

INQUEST on the bodies of Smith and Curran at Stockton adjourned to Tuesday morning next. The jury is composed of business men, and this being pay-week end, they cannot leave business until after Monday.

JOHN DIXON,

Coal Fields Office.

Seen.—D. McL., 3/12/96.

No. 5.

Telegram from Mr. Inspector Dixon to The Under Secretary for Mines and
Agriculture.

Merewether, 9 December, 1896.

INQUEST on Smith and Curran concluded yesterday evening. Verdict: "Accidental death," by inhaling poisonous gas, but no evidence to show who left the doors open near furnace. Messrs. Jury and Coulson were highly praised by the jury for the manner in which they acted when they found the bodies near furnace in Stockton Colliery on Wednesday morning last.

JOHN DIXON,

Inspector of Collieries.

No. 6.

The Coroner, District of Newcastle, to The Under Secretary of Justice.

Sir,

Newcastle, 19 December, 1896.

I have the honor to forward this day by post, registered under separate cover, depositions of witnesses taken at an inquest held before me, at Stockton, on the 2nd, 3rd, and 5th days of December, instant, on the bodies of George Patrick Curran and Charles Smith.

I enclose application for an advance and obligation receipt for the sum of £9, to enable me to pay the jurors attending the inquest.

I also enclose death informations, and beg to submit myself,

Yours, &c.,

GEO. C. MARTIN,

Coroner, District of Newcastle.

Submitted. A copy of the verdict and rider in this case might be brought under the notice of the Chief Secretary.—G.M., 10/12/96. Approved.—A.J.G., 12/12/96.

NEW

NEW SOUTH WALES, }
to wit. }

County of Northumberland.

10 December, 1896.

INQUISITION held at the dwelling-house of Mrs. Chilvers, known as the sign of the "Federal Hotel," at Stockton, in the District of Newcastle, in the Colony of New South Wales, this 2nd day of December, continued on the 3rd of December, again continued and concluded on the 8th day of December, 1896, before me, George Cannon Martin, one of the Coroners of our Sovereign Lady the Queen for the Colony aforesaid, on view of the bodies of Charles Smith and George Patrick Curran, then and there lying dead.

Upon the oaths of—

Evan Rees,
James Hayler,
Lawrence Anderson,
Reuter Lavis,
Michael John Torply,
Richard Thomas,

Frederick William King,
Richard Lynn,
James Sutton,
William Bain Hill,
John Clement,
Charles Bruce,

twelve good and lawful men of Stockton aforesaid, who having been sworn, and charged to inquire (on the part of our said Lady the Queen) when, where, how, and by what means the said George Patrick Curran and Charles Smith came to their deaths, do, upon their oaths, say that we find that the said George Patrick Curran and Charles Smith, at Stockton, in the District of Newcastle, in the Colony of New South Wales, on the 2nd day of December, 1896, died in the Stockton Colliery, and that their deaths were caused accidentally from being poisoned by inhaling noxious gases, commonly called black-damp, the said gases being accumulated and caused by the doors Nos. 2 and 3 being left open; but there is no evidence before us to show how these doors came to be left open.

We, the said jury desire to place on record the brave, and heroic and courageous action of Robert James Jury and George Coulson, who risked their lives by carrying the bodies of George Patrick Curran and Charles Smith from a poisonous to a purer atmosphere.

In witness whereof, as well the said Coroner as the jurors aforesaid, have to this inquisition set their hands and seals this day and year aforesaid.

Geo. C. Martin, Coroner.
Evan Rees, Foreman.
Lawrence Anderson,
Reuben Lavis,
Richard Thomas,
Frederick William King,
John Clement,
Richard Lynn,
Michael John Torply,
Charles Bruce,
William B. Hill,
James Hayler,
James Sutton,

Jurors.

New South Wales—District of Newcastle—2nd, 3rd, and 8th December, 1896.

INQUISITION on view of the bodies of George Patrick Curran and Charles Smith. Finding that the said deceased died in the Stockton Colliery on the 2nd day of December, 1896, and that their deaths were caused accidentally from being poisoned by inhaling noxious gases, commonly called black-damp. Rider.

GEO. C. MARTIN,
Coroner.

CHARLES SMITH, labourer, aged 35, birth-place not known; was said to be sober when going into colliery; not temperate generally.

GEO. C. MARTIN, Coroner.

Newcastle, 8th December, 1896.

GEORGE PATRICK CURRAN, miner, born Ireland, aged 60 years; was said to be sober when going into colliery; usually a temperate man.

GEO. C. MARTIN, Coroner.

Newcastle, 8th December, 1896.

NEW SOUTH WALES }
to wit. }

County of Northumberland.

INFORMATION and depositions of witnesses, taken on oath, before me, George Cannon Martin, one of the Coroners of our Sovereign Lady the Queen for the Colony of New South Wales, this 2nd day of December, 1896, at the dwelling-house of Mrs. Chilvers, known as the sign of the "Federal Hotel," at Stockton, District of Newcastle, in the said Colony, on view of the bodies of George Patrick Curran and Charles Smith, then and there lying dead.

Robert James Jury, having been sworn, states:—I am a foreman and an attendant at the brattice in the Stockton Colliery, and I live at Stockton; I have seen, in the presence of the Coroner and jury this day, at the Stockton Colliery Office, the bodies of two men; I know one of them as George Curran, and the other I do not know his name, but I know that he worked at the Stockton Colliery for some time past; I went to work in the Stockton pit this morning at 4 o'clock, my usual time, accompanied by my mate, George Coulson; as soon as we opened the first separation door we found there was something wrong with the ventilation; as the air could rush straight away, from the downcast shaft to the furnace, we proceeded to the second separation door, and found it open; after we got through the second separation door we found the third door open and foul air coming from the old workings and going direct on to the furnace; as soon as we found that the foul air was coming in that direction, we knew something was wrong; our lamps began to burn badly; these lamps are carried in the caps; we pushed on to the furnace as near as we could get, on account of our lights showing so badly; just before our lamps went out we came across the bodies of the two men whose bodies have been viewed; I took up one in my arms; he was in a sitting position on a seat a few yards from the furnace; his head was leaning against a prop; the air there was very foul; this man was George Curran; this man did not speak; he felt quite limp and his body felt cold under the small inside shirt he was wearing; I carried him back to the second separation door, and my mate went back to the second separation door to get a light; my mate had got a light kindled, and we went back to the furnace to bring away the second man; as soon as we got there our lights went out again; my mate went back again to get a light, and I carried the other man to the second separation door, where my mate was getting a light; the second man, when I picked him up, was lying on the floor face downwards; he seemed the same as Curran did, and did not speak; my mate, George Coulson, went away for the underground manager, and I remained with the bodies, and within a few—say ten—minutes the underground manager, Mr. McDonald, was with me where the bodies were; we lifted the bodies into the cage, and brought them to the surface, and were carrying George Curran to the office from the pit-mouth when Dr. Hester came up; the second and third doors I have mentioned in my evidence should not have been open as they were unless specially ordered by the under manager or manager, because by being open the ventilation was interfered with; I can only imagine it might be the two men whose bodies we found who left the doors open as they passed through; these men would know that it was contrary to the rules to leave these doors standing open.

By Mr. Humble: We commence our daily inspection of the pit by visiting the furnace first; I do not remember ever finding the two doors open before; that is, the second and third doors; if we found the furnace-men at work and the current of air all right we did not inspect that part further; I have travelled down the old road four or five times during the past year, and I considered the air I found travelling there fairly good; I do not remember finding any foul air at the point I found it this morning, between the second and third doors, on any previous occasion; the furnace-men never made any complaint to me of finding foul air coming to the furnace; George Curran is an old experienced miner and district man, and should be fully acquainted with a matter of this kind; I was quite satisfied that the foul air we met was dangerous;

dangerous; I experienced a sensation of suffocation on meeting the foul air, and an acid taste in my mouth like a sort of acid taste, and having had a good experience of black-damp, and never having been overcome, it induced me to push along through to get the men out; there were no lights burning at the part where the bodies were; the lights in the men's caps were extinguished; I cannot guess how long the men might have been overcome by the foul air when we found them; I would not be sure about what kind of air it was I met, but at first I thought it was black-damp; the doors were not propped open I think, I cannot be sure; after we had taken the bodies out I think Mr. Coulson closed the doors; I went back to the pit some three or four hours after the bodies had been removed; I went to the furnace and found the air there all right as it is when the doors are kept shut.

By Mr. Curley: The opening leading into the old workings is between the second and third doors, the object of two doors is to supplement one with the other; George Coulson is a fireman, and acts the same as I do in other parts of the pit; we inspect the pit every morning, commencing at 4 o'clock; I cannot say if there is any other special inspection besides Coulson's and mine; the manager and under manager and deputies may go round to inspect; I did not know how many furnace-men are employed in the colliery; I think the two men whose bodies we found commenced work at half-past 9 last night; I do not know the men whom these two men relieved; I think these two men would have been relieved at 6 o'clock; the man whose name I do not know seemed to have a good knowledge of how to keep a furnace going—he always had a good fire on; I have had no conversation with the manager or under managers as to two inspections a day in the pit; I have seen the new Mining Bill, and have read it; I think there is in the pit at night a night overman and several shiftmen.

By Mr. O'Sullivan: I think myself from the position I found the bodies in that they must have been nodding, and did not notice the foul air stealing on them; I know the special rule No. 28, and what it applies to; I do not think the fatality would have occurred had the two doors I have mentioned been closed; I am sure it could not have happened.

By Mr. Curley: The old road I have mentioned, the rope-road, is where the foul air came from; it is possible that some of the officials in the pit may have gone up this road last night, but I do not know that they did; a partial stopping could be erected on this road, but there must be a small opening or manhole in it, and this might be left open thoughtlessly the same as the other doors; I have never found men at the furnace nodding; George Coulson was overcome, because he met the foul air; I should say that a furnace-man who went to sleep would not be a fit man to have at a furnace; I have been nearly two years a fireman at the Stockton Colliery.

Sworn and made at Stockton, this 2nd day of }
December, 1898, before me, — }

GEO. C. MARTIN, Coroner.

ROBERT JAMES JURY.

[Note.—This evidence was put in at the Court of Inquiry by Mr. Wilshire, as Exhibit No. 5, and read, 23/3/97.]

Jeaffreson William Hester, having been sworn, states:—I am a legally qualified medical practitioner, and reside at Stockton; at twenty minutes past 4 o'clock this morning, the 2nd of December instant, I received a message to go at once to the Stockton Colliery; I arrived at the colliery at half-past 4, just in time to find two men carrying another man on a stretcher between the pit-top and the colliery office; I examined the man on the stretcher immediately, and tried artificial respiration for about half a minute, but became perfectly certain that the man was dead, and I told the men to take him to the office: this was done: this man whom I examined was George Curran; whilst further examining him in the office a few minutes later a second body was brought in also dead; this man I knew by appearance, but not then by name; I had seen him in Stockton for some years; both bodies were cold, Curran's face being somewhat congested in appearance, the other man being pallid; neither of the men had any mark or sign of external violence: I think in all probability from the fact that *rigor mortis* had not set in, and yet that the bodies were cold, that they had been dead somewhere about four hours; this morning at 11 o'clock I made a *post-mortem* examination of both bodies; I opened the body of George Curran, and found the lungs completely engorged with blood, but otherwise healthy; the heart contracted and empty on the left side and full of blood on the right side, but otherwise healthy; the liver was also congested, but healthy; the kidneys and other organs healthy; the stomach was perfectly healthy; upon opening the skull I found the brain somewhat congested, but also healthy; in my opinion the cause of the death of George Curran was from asphyxia; I cannot say from what cause; probably from his appearance it was caused by carbonic acid poisoning; I then opened the body of the other man, whose name I was told was Charles Smith; I found his lungs healthy; his heart surrounded by very much fat, and with some fatty infiltration; both cavities were contracted and empty; the liver was normal and healthy; the stomach and intestines were also healthy; the kidneys were schirrotic and very hard; on opening the skull I found the brain healthy, but somewhat congested; in my opinion the cause of the death of Charles Smith was syncope, due to poisoning of some kind, and not to asphyxia; in all probability Smith died a short time before Curran, on account of his heart not being thoroughly sound, and the poison, whatever it was, taking effect on the weakened heart; Smith was a fairly healthy man, and might, even with his heart in the state it was, have lived for years except for any sudden shock; Curran was a great sufferer from rheumatism, but his prospects of living were quite sound in the usual way.

By Mr. Humble: In the body of Curran I noticed that the blood was darker than is usual; I did not notice any difference in his skin; the expression of the men's faces was perfectly calm; Curran, to my mind, died from carbonic acid poisoning, but it might have been mixed with carbonic oxide or other noxious gases; I cannot say if the men died suddenly, but the presumption is that they did not, as there were no signs of convulsions immediately before death; I think it is extremely probable that the men did not suffer at all, and probably did not know that death was coming to them.

Sworn and made at Stockton, this 2nd day of }
December, 1896, before me, — }

GEO. C. MARTIN, Coroner.

J. W. HESTER.

John Pary, having been sworn, states:—I am a labourer, and I live in Hunter-street, Stockton; I have seen this day in the Stockton Colliery office, in the presence of the Coroner and jury, the body of a man named Charles Smith; I have known him for about five years; he was a labourer, and has worked at the Stockton pit for about twelve months; he was about 35 years of age; I do not know where he was born; he was never married, as far as I know; he and I have hatched together in Stockton for about eighteen months; he used to take a drink occasionally; I have seen him drunk once or twice; I saw Smith at 8 o'clock last night; he was quite sober then; he does not leave any property that I know of; he has a mother alive in Guernsey, and I think he has a sister living there also.

By Mr. Curley: Before Smith went to work at the Stockton pit he worked at Donovan's lime-kilns; Smith told me that he worked as a furnace-man at the Stockton pit; I think he has been a furnace-man for about twelve months; Smith said to me yesterday morning that he was very near coming home at night, as he was overtaken with damp, and he had nearly spewed his inside out; he never complained about it but this once; he did not say he had complained of this to the pit manager; I told him he ought to: I work at the Stockton Colliery; I work along the main road; I knew the road to the furnace; I have been that way; I know the road that the rope goes up; I never worked on this road; I have worked near the furnace at night after the pit had knocked off; I was instructed to go there by Jack Gear; Jonathan Price went with me when I went to work there; I went through two small doors to get there; I would be about an hour at work there; I know that Jonathan Price looked after the rollers up there; I never saw any trappers at these doors to look after them.

By Mr. Humble: The small doors I have mentioned were manhole doors, about 3 ft. 6 in. x 2 ft. 6 in., as no skips go through them it is not usual to have trappers at them; I know that there are two large doors on the main road leading up to the furnace; there are no trappers at these doors that I am aware of.

By Mr. O'Sullivan: There are no trappers at these doors, as there is no traffic, except a few skips of small coal for the furnace.

Sworn and made at Stockton, this 2nd day of }
December, 1896, before me, — }

GEO. C. MARTIN, Coroner.

JOHN PARRY.

At this stage the inquest was adjourned, for the purpose of obtaining further evidence, until 10 o'clock on Thursday, the 3rd day of December instant, at Mrs. Chilvers' "Federal Hotel," at Stockton.

Dated at Stockton, this 2nd December, 1896.

GEO. C. MARTIN,
Coroner.
Inquest

Inquest resumed, in pursuance of adjournment, at 10 o'clock on the 3rd day of December, 1896, at Mrs. Chilvers' "Federal Hotel," at Stockton, in the District of Newcastle, in the Colony of New South Wales, on the bodies of Charles Smith and George Patrick Curran; the jurors having answered to their recognizance, the examination of witnesses was proceeded with.

Dated at Stockton, this 3rd December, 1896.

GEO. C. MARTIN,
Coroner.

This deponent, *James Errington*, on his oath, saith as follows:—I am the day-shift furnace-man at Stockton Colliery, and reside at Stockton; I knew Charles Smith, one of the deceased men; I do not know George Curran; I left the furnace at 3 o'clock on last Tuesday afternoon; no one takes my place, but afterwards the pumper comes and attends to the fire till my mate, Charles Smith, arrives; he is due for duty at half-past 9 at night; when I left the furnace was burning all right, and the current of air was good; I came out by the furnace way, and came through a big door, close on between 30 or 40 yards away from the furnace; I closed this door; it is my duty to do so; I then passed the rope-road, and came to a small manhole door, about 30 yards away from the big door; I closed this door after me; there was no foul air then; about 10 yards further on I came to another small manhole door; I passed through this, and closed it after me; there are no more doors on that road; I did not meet with any foul air; the air current was good all through; the pumper would be the only man to pass these doors after I left until Smith and his mate went to the furnace, but some of the officials of the pit might travel along the way to the furnace if they had anything to do there; there are two other big doors on the left side of the rope-road between the shaft and the furnace; these doors are only used to take small coal for burning at the furnace; I never noticed any foul air coming out of this rope-road; between the shaft and the furnace these doors are only used to take small coal for burning at the furnace; I never noticed any foul air coming out of this rope-road at any time; I have been a furnace-man at this part of the Stockton Colliery for about two years and eight months, and during the whole of that time have never felt any bad air there; I should say that foul air from any part of the old workings would be from black-damp, and would consist of carbonic acid; if these doors that I have mentioned were left open the men at the furnace would suffer from foul air coming from the old workings.

By Mr. Humble: We burn six skips of coal at the furnace every twenty-four hours; these skips must pass through the three big doors I have mentioned; there is no other material passed through these doors, except the skips of coal and the refuse from the furnace; I have never seen the door next the furnace standing open when I have gone to work there; at a portion of the shift there are two men at work at the furnace; all the coal is taken in at night-time for the furnace, and that is the reason there are two men there at night; as far as I know, Curran's employment was helping the other man to get the coal in; Smith never told me that he met any foul air at the furnace a day or two before the accident; I have never been down the old rope-road; I never leave the furnace; I have not been down to the furnace since the accident; I have never noticed any indication of noxious gases when I have been in the old workings; I have never seen the current of air reverse at the furnace.

By Mr. Curley: There is fresh air coming to the furnace-men looking through the doors, through the crevices, and under the bottoms of the doors; there is no other provision for fresh air than the return air; the sealing through the doors of air would be very good; I should say it would be 200 feet; I saw Mr. Dixon trying it some time ago; the fire in the furnace was a fairly good one; when I leave at 3 o'clock I leave a good fire banked up a little at one side; the pumper goes down to work at half-past 1, and I leave him there at 3; he leaves work at half-past 9, when the others come in; I am told to keep a good fire going, a workable fire, and that is what I do; the firemen visit the furnace for inspection every morning at 4 o'clock; I have seen them there when I was on the night shift; the overman and deputies have access to the whole of the mine, but no others would go along the road by the two large doors from the shaft unless instructed to go there—this I mean is where the coal is taken; the coal is taken in by a single skip at a time, two men at one skip; the men take the coal from between the first and second doors from the shaft at a siding; I saw Charles Smith on Tuesday morning last, when he left me at work in the pit; Smith did not make any complaint of being affected by black-damp or foul air; Smith would have certain orders that the doors must be kept shut, and I have told him so myself; I have never seen the fire at the furnace at any time affected by black-damp; if black-damp were there I must have felt it in attending the fire.

By a Juror: The doors, after being opened and passed through, would close of themselves unless banged open beyond their balance.

By Mr. O'Sullivan: The doors are hung against the air current, which closes them unless so opened that they get beyond their balance.

Sworn and made at Stockton, this 3rd day of }
December, 1896, before me,—

JAMES ERRINGTON.

GEO. C. MARTIN, Coroner.

This deponent, *Mary Curran*, on her oath, saith as follows:—I am the daughter of George Curran, and reside at Stockton; the body I saw lying in the office of the Stockton Colliery yesterday morning was that of my father, George Patrick Curran; he was 60 years of age, and was born in Ireland, and has been in this Colony about forty years; he was married in Newcastle when he was 40 years of age, and he married Bridget Gordon; he leaves four in family, two boys and two girls; he does not leave any property or invested money.

Sworn and made at Stockton, this 3rd day of }
December, 1896, before me,—

M. CURRAN.

GEO. C. MARTIN, Coroner.

This deponent, *Henry Burt*, on his oath, saith as follows:—I am a night deputy overman at the Stockton Colliery, and reside at Stockton; I knew the deceased men; I went down the pit with them at half-past 9 on last Tuesday night; I left the two men Curran and Smith at the pit bottom; they went along the travelling road in the direction of the furnace; I visited the furnace part after the accident had happened, at a little after 5 o'clock; the doors were then closed and the air current was good as usual; I did not visit this place at all during the night; no one could go along the road to the furnace after these men went in, except myself; no one had any right to go along that road; if the doors were left open it must have been by these two men; I have cautioned both of these men to be careful about seeing that the doors were properly closed after they had passed through; I have said this to them on several occasions; I considered them both steady, sober, and careful men; to the best of my belief, Mr. McDonald, the overman, was the man who first put these two men on to work in the pit.

By Mr. Humble: I have held my present position about three months; in the absence of the manager and under manager I have full control of the whole of the colliery and the men working therein; I visit this furnace and the men at work there every night; I have no fixed time for inspecting; sometimes I visit the furnace first, and sometimes the other end of the colliery; Tuesday night was an exception, as I knew Mr. McDonald had visited in and round the furnace and had reported to me that all was clear there; the visit of Mr. McDonald on this occasion was for a special purpose; this was done on account of a report I made to Mr. McDonald on the Tuesday morning; this report was first made by a shiftman named Gould to me; I had instructed Gould to go to the furnace on Monday night to empty the coal skips at the furnace, and he told me that whilst doing this he had felt very sick and giddy, but could not say what had caused this feeling; he said he had two of the doors open while having the skips taken in; I went at once to see what was the matter; I went direct to the furnace, and found everything correct, the doors shut and the air current quite clear; I went down the rope-road towards the old workings, and found the road all clear, but I reported what I had been told and what I had done to Mr. McDonald, when he came on duty at 6 o'clock on the Tuesday morning, and in consequence, I presume, that Mr. McDonald made his inspection; I did not attach any importance to Gould's report, as I had never found any foul air there; neither Curran nor Smith ever complained to me of feeling giddy or sick; on one occasion when Smith was with another man there, I found the big door nearest the furnace open; I did not notice anything in the air except a greater current of air on account of this door being open; I cannot say if it was propped open or merely swinging; I was down at the furnace last night, and the big door nearest the furnace was open, and that allowed a mixture of air and gas to get through from the No. 3 old workings to the furnace; there was black-damp coming through strongly; I did not stand in it; it put the light out at once; in all probability it was such a mixture as this that affected the two men from the same source, and from a door being left open; I am satisfied the mixture I felt was partly black-damp; the pumper never complained to me of anything; I did not notice anything hot in No. 3 workings, or anything likely to generate bad gas.

By

By Mr. Curley: Mr. McDonald did not give me any definite instructions to visit the furnace locality; I did not consider it necessary to go hurriedly to again see the locality, as Mr. McDonald had inspected the place, and I knew I should visit it again in the morning or during the shift; Gould mentioned the matter to me at about half-past 12; as I have said, I did inspect the locality after Gould's complaint, and found all right; I saw Smith on the Monday night at the furnace, after hearing Gould's report, and he said that he (Smith) had felt a little bit sick at the time he was fetching in the coal; when Gould was there; he did not say from what the sickness was caused; I told him he should not leave the doors open longer than possible: it was in my mind that black-damp might come from the old workings when I was speaking to Smith, on account of the door being left open; Smith said he would see that the doors should not be left open—it should not occur again; Mr. McDonald and I did not get into any conversation about the matter then; I did not make any special report of the matter; I made my report of doors being left open to the overman; I did not report it to the manager; I did not make a special visit to the furnace last night; I was merely firing up the furnace as I was ordered; I should regard black-damp in that locality as a special source of danger to be guarded against; when I have gone direct to the furnace at the commencement of any shift I have found the furnace burning, but well banked up.

By Mr. O'Sullivan: The special way to guard against black-damp in that portion of the pit is to keep the doors closed.

Sworn and made at Stockton, this 3rd day of }
December, 1896, before me,—

HENRY BURT.

GEO. C. MARTIN, Coroner.

Inquest adjourned, for the purpose of obtaining further evidence, until 10 o'clock on Tuesday, the 8th day of December instant, at Mrs. Chilvers' "Federal Hotel," at Stockton.

GEO. C. MARTIN,
Coroner.

Dated at Stockton, this 3rd December, 1896.

Inquest resumed, in pursuance of adjournment, at 10 o'clock on the 8th day of December, 1896, at Mrs. Chilvers' "Federal Hotel," at Stockton, in the District of Newcastle, in the Colony of New South Wales, on the bodies of George Patrick Curran and Charles Smith; the jury having answered to their recognizance, the examination of witnesses was proceeded with.

GEO. C. MARTIN,
Coroner.

Dated at Stockton, this 8th day of December, 1896.

This deponent, *George Coulson*, on his oath, saith as follows:—I am a fireman, and reside at Stockton; I knew the two deceased men, Charles Smith and George Patrick Curran; my mate Jury and I went down the Stockton pit at 4 o'clock on last Wednesday morning; we went along the road leading to the furnace, and came to the first door, which we found shut close; the door is about 30 yards from the downcast shaft; I noticed the plan now produced, and on it I can trace the road leading to the furnace; after passing through this door we came to the second door, which we found open; it is about 36 yards from the first door; when we got to this second door I said to my mate, "There is something wrong, we had better make up to the furnace"; I smelled something wrong, and this was the reason I used to him those words; we went up further and through a third door, about 28 yards from the second door; this was also open; we then went towards the furnace, and saw one body in a sitting position, and then when we got there our lights went out, and I ran back with our two lamps and lit them, and I came back to Jury and said to him, "Tackle one body, and I will try and keep the lights in"; as soon as we got the first body out we went back for the other, and I closed the doors as I came to them, after getting the bodies through; our lights went out twice; the lights were worn in our caps; I left Robert Jury with the two bodies, and went away for Mr. McDonald, the under manager, and then I sent the watchman away for the doctor; I thought the foul air we met with was black damp; I had never noticed on any previous occasion in this part any foul air; the foul air we met with must have come from the old working, and would travel along the rope-road and then along the furnace road; the object in having the doors I have mentioned is to force the air current round, so as to keep the air in its proper course; if the doors were left open the foul air would mix with the current of pure air; I have never seen these doors left open previously; no one goes along the road to the furnace except the manager and the pumpers, or anyone specially ordered to go; the two men, Smith and Curran, went into work at the furnace at half-past 9 o'clock on Tuesday night; there was no occasion for anyone to go along the furnace road after these men went in until Jury and I went to inspect in the morning; we visit the furnaces the first thing, so as to see that there is a good fire being kept up, and we then inspect all parts of the mine afterwards.

By Mr. Humble: I did not notice anything peculiar in the air a morning or two before the accident; none of the men at the furnace ever complained to me about there being foul air there; the men, instead of sitting where they usually sit at the furnace, could go further in, where the air is purer; I think the men would have been safer further in; I have not travelled along the rope-road to the old workings for some years; the last time I was there I was removing rails and timber, and I found the air very good; I came across one place that was particularly warm in the old workings in the top drive; I did not notice any smell or anything peculiar in it; I have been down the mine since we got the two bodies out; I was at the furnace; I found the same smell as I noticed on the Wednesday morning coming along the rope-road; my light did not go out on this occasion, so that I think there must have been a difference in the composition of the air; I did not then believe it was black-damp: it affected my head and my breathing.

By Mr. Curley: The second body was lying on its stomach; this was Smith's body; the bodies were close to each other; I can show the part where the bodies were on the plan; it is marked with two red crosses; it was about 9 o'clock when I went in on the Wednesday morning; I felt a sort of dizziness in my head then; the men generally take five or six skips of coal in; the road for the skips is pretty level; it rises a little going up to the furnace; the doors would have to be opened twelve times going in and taking out skips; I was in at the furnace on Monday morning, the 30th of November last; Jury was with me; the men did not make any complaint about anything; I was in on the Tuesday morning, but had no conversation with the men; there was another man there on the Tuesday; the man was Gould; he did not say anything to me; the warmth in the old workings was exceptional; it was a little warm; the warmth was not of sufficient importance for me to draw the overman's attention to it; I only visit a portion of the working-places; I did not notice any stagnant air in any of the other places I visited; I sometimes go round for inspection a second time in the landing-places to look after the bratticing.

By the Foreman of Jury: The coal is kept on a siding, and when taken to the furnace only requires the second and third doors to be opened to admit it; it is on a rise to the furnace from the No. 3 workings.

By Mr. Curley: The coal siding is between the first and second doors; the furnace stands higher than the No. 3 workings, even if they were open to the top drive.

By Mr. O'Sullivan: I know No. 28 special rule of the Stockton Colliery; I am fully acquainted with its purport; the part of the accident is about 5 yards from the main return; if the two men, Smith and Curran, had been sitting in the main return they would have been out of the way of the noxious air; there are two means of entry and exit for the workers, apart from the entrance of the furnace-men, but the travelling road is the one they are supposed to use; if there should ever be anything wrong with the travelling road the men could come out by the shaft siding and the main return; I do not think that the two men could have met with death had the two doors been closed—in fact, I am sure they would not have met with their death.

By Mr. Curley: The main return is worked and the route written on the plan; the shaft siding is not shown on this plan; if there was poisonous air in all the pit the men would not be safe anywhere; I know nothing of what caused the two men's deaths.

By Mr. O'Sullivan: I mean that I do not positively know what caused the men's deaths, but my opinion is it was caused by black-damp in their case; I think this was so from my own observation and experience.

By Mr. Humble: The plan produced shows the workings of the top drive; the travelling road and shaft siding are in the bottom coal; they are both intake airways, not return airways; the connection between the travelled road and shaft siding and the workings shown on this plan are separated by doors, and, supposing there are noxious gases in those workings shown on this plan, it does not follow that the travelling road and shaft siding would have noxious gases in them, and therefore I am sure the workers would have good air to travel in or out to the workings or shaft.

Sworn and made at Stockton, this day, the 8th of }
December, 1896, before me,—

GEORGE COULSON.

GEO. C. MARTIN, Coroner.

This

This deponent, *John Driscoll*, on his oath, saith as follows :—I am in charge of the steam-pump in the colliery, and reside at Stockton ; I knew the deceased men, Curran and Smith ; I believe I saw these two men at the bottom of the shaft on Tuesday night, as they came down with the relief ; I presumed that Smith was going to his work at the furnace ; I was going up, as I was leaving my work at the pumps ; I was at the furnace at 6 o'clock on the Tuesday evening, as it was my duty to see that the furnace was going all right between 3 o'clock and the next shift ; I went along the furnace road, and passed through all the doors ; I went right up to the furnace, and found the air the same as usual all the way ; I returned the same way, and closed every door after me ; we are instructed to be very careful in closing all doors ; this warning is on the doors—"Keep shut"—in white chalk ; I found, as I have said, that the air was pure and as usual ; I am always going along this road, and never found the air in any way but good ; I know what black-damp is well ; I have never met with it or any noxious gas that I know of on the rope-road.

By Mr. Humble : I go up to the furnace as often as I think the furnace requires ; I have been up as often as three times between 3 and half-past 9 ; I remain five minutes or more occasionally ; I do not recollect ever finding the door next the furnace open ; the men at the furnace have never complained to me of bad air.

By Mr. Curley : I have been at the pumps over three years ; the pumps are all pretty well together at the shaft bottom ; one of my pumps is in the main return on the bottom level ; there was a kerosene pump in the pit, about a mile away, some eight months ago ; it may be there now ; I have not heard of it lately ; I know it is not working, nor has it for some considerable time ; it was on the bottom level ; I have seen as many as sixteen men come down just as I am ready to go up ; I have been up the rope-road often, but I have not been up it for about two years—that is to say, right through it ; my shift last week finished at half-past 9 at night, and this week it will be at half-past 1 in the day-time ; a man—I think his name was Grimm—relieved me at the pumps on last Tuesday night, at half-past 9 ; he had no occasion to go to the furnace, though he might have gone there.

By Mr. O'Sullivan : I know by the special rules that Rule 24 prohibits anyone going to any part of the pit, on his own account, other than where he works, without special authority ; if Grimm went up to the furnace on Tuesday night he would be breaking this rule unless he was so ordered.

Sworn and made at Stockton, this 8th day of

JOHN DRISCOLL.

December, 1896, before me,—

GEO. C. MARTIN, Coroner.

Inquest adjourned for the purpose of obtaining lunch until a quarter past 2 o'clock in the afternoon, on Tuesday, the 8th day of December instant, at Mrs. Chilvers' "Federal Hotel," at Stockton.

GEO. C. MARTIN,

Coroner.

Dated at Stockton, this 8th December, 1896.

Inquest resumed, in pursuance of adjournment, at 2.15 p.m., on the 8th day of December, 1896, at Mrs. Chilvers' "Federal Hotel," at Stockton, in the District of Newcastle, in the Colony of New South Wales, on the bodies of George Patrick Curran and Charles Smith ; the jury having answered to their recognizance, the examination of witnesses was proceeded with.

GEO. C. MARTIN,

Coroner.

Dated at Stockton, this 8th day of December, 1896.

This deponent, *William McDonald*, on his oath, saith as follows :—I am the overman at the Stockton Colliery, and reside at Stockton ; I knew the two deceased men, Smith and Curran ; Smith was furnace-man and Curran assisted when required in emptying small coal at the furnace ; these men, Curran and Smith, went in at half-past 9 o'clock on Tuesday night, the 1st December instant, and I was at the furnace about half an hour before they got there ; I went to see that all was right ; it was not my usual duty—not at that time ; the reason of my going there was through a report I got from the night overman, H. Burt, on the morning of Tuesday, stating that one of the attendants of the furnace had complained to him of foul air ; then I went in and examined a part of No. 3 working, and found all as usual ; I went about 200 yards in from a little door under the rope-road, so, by finding all as usual there, I thought I would come back about the same time, as they had complained about getting the foul air on the previous night ; I examined all round the furnace, also the doors, and found all in perfect order ; I then went down the rope-road and went further into No. 3 working than I had done in the morning, and found everything as usual ; then I came back to the furnace again, and from there I went to the top ; I then saw the furnace-man, Smith ; from the appearance of Smith I thought he had had a drop of drink, and I questioned him ; he said "No, I have not tasted any" ; I told him then to be very careful, as his duty had been explained often enough to him, and he knew what it was ; Smith said that was all right, and he would be attentive to what I had said, so I left them ; it was then half-past 9 o'clock ; I saw Mr. Burt, the night overman, then ; I told him what I had been doing, and where I had been, and that all was as usual ; I never met any foul air, and did not attach any importance to the report after I had made my examination ; I have never met any foul air in this part ; I generally go up there every day ; Jury and Coulson inspect the working-places and the furnaces every morning ; they visit the furnaces first ; I merely told Mr. Burt on meeting him, after visiting the furnace, that I had been there and that everything was correct.

By Mr. Humble : I did not tell Henry Burt that he ought to go to visit the furnace after I had been there, but he knew it was his duty to inspect there ; I expected Burt would go there as usual ; when I was in No. 3 workings, as I have mentioned, I did not notice anything that smelled peculiarly, and my light burned very well ; both doors were closed when I was in No. 3 ; I was in No. 3 workings about a month ago ; I was in the face of the main ganning bord ; the air there was very pure ; it did not surprise me, as I had so often been there under the same conditions there ; I have often visited this part without making any special preparation for making any air extra current ; there was no additional heat or extra temperature ; no black-damp, or anything different to what I usually found there ; up to the time that I heard the bodies had been found I knew of nothing in this part of the pit that could cause any trouble ; I went into the pit at about a quarter past 4 on Wednesday morning, and saw the two bodies at the pit bottom ; I then went away to the furnace, and found the third door open—not very open only about 8 or 9 inches open ; I noticed a little black-damp there, and my lamp would not burn very well, and I knew by the smell it was black-damp ; I have found that black-damp has different smells ; if it was pure black-damp it would have no smell ; I regarded what I noticed to be in the air as something to be guarded against ; I found this door was only open through a piece of coal having got jambed against it ; I removed this and shut the door ; I came back to the shaft ; in the meantime the furnace had very nearly gone out ; I came back after leaving the bodies with the doctors, and then went to the furnace, and then went down to the No. 3 workings again and found in about 200 yards down from black-damp ; considering the doors had been open so long I did not wonder at this, as on account of the extent of these workings there would be bound to be some ; where there some black-damp . . . * the third door would be the only door that would have any effect in bringing any mixture from the No. 3 workings ; there was a little different peculiarity in the smell of this black-damp to what I had generally found in black-damp ; I came back to the furnace and had two men with me ; I kindled up the fire ; it was pointed out to me the place where the two bodies were found ; one was sitting, and the other on the ground as if he had fallen over that way ; this was not the only place where these men could keep watch on the furnace ; they could have gone some yards further in, and been in a large current of fresh air ; I then went back along the rope-road, and got a bit further in ; everything was the same except for the black-damp I had found previously ; I made further inspection afterwards, accompanied by Mr. Humble and Mr. Daniel McAuliffe, on the Wednesday morning at about 8 o'clock ; we went down the rope-road towards No. 3 district ; when we got half down, between the furnace and No. 3, I heard Mr. Humble say, "I smell something like fire-stink" ; we went right down into No. 3, and I found it fairly good until we went about 20 or 30 yards into the flat ; the air began to get thick then ; we did not lose our lights ; we did not go far in enough for that ; we returned and got on to the pit bottom ; we then met Mr. Dixon, the Chief Inspector, there, and we went back to the furnace with him ; a proposal was made by Mr. Dixon that the conditions prevailing at the time the bodies were found should be repeated by opening the third doors, the nearest door to the furnace ; the effect of this, after it had remained open ten minutes, was to bring black-damp to the furnace ; I am certain it was black-damp ; Mr. Humble and Mr. Dixon thought the mixture coming into the furnace was the product of some fire in the old workings ; I fancy Mr. McAuliffe was of the same opinion as Mr. Dixon and Mr. Humble ; I remember a naked light being placed in the road-end leading to No. 3 ; therefore, the mixture that I thought was black-damp had to pass over this light ; this light was not extinguished ;
this

[* "And when the doors were opened a current of air would be turned on."—Extract from notes of evidence taken by the inspectors.]

S

-this light was lifted by Mr. Dixon as soon as the smell came along ; I do not think the light remained sufficiently long for the mixture to affect it ; there must have been a large quantity of this mixture in the old workings to come along in ten minutes, the time the door was open ; a mixture like this coming along with the door open would be quite sufficient to account for the deaths of the two men ; we discussed the origin of the mixture : I thought it was common black-damp from its peculiar smell ; Mr. Humble said he thought it was carbonic oxide, given off by some combustible matter ; Mr. Humble considered this mixture extremely dangerous ; no mention was made of the danger of approaching it without a current of air, but I am aware it is dangerous to approach any of these gases without a current of air.

By Mr. Curley : When Burt reported to me about the air, he said a man of the name of Gould had spoken to him about it ; Burt did not say how Gould was affected : I did not ask Gould to come to the office to see me ; Burt did not tell me that Smith had complained to him : when Burt reported this to me, and after I had made my inspection and found nothing wrong, I thought the man reporting must have been drinking ; when Burt reported to me I asked him if he had examined the place, and he said, "Yes," and could not find anything wrong ; the ventilation of the colliery as a whole has been well kept up during the past two years ; the operations of the new Act did not cramp me ; we had no difficulty so far : I cannot say if our management asked for any exemptions under the new Act : the visiting officials in our pit are deputies ; Bailey and Jones and the fireman Jury, and Coulson and myself, as under manager these are the day visiting officials ; for the night there is Henry Burt, night overman ; none of these officials, or in fact anyone in the pit, has reported anything the matter with the return air, or the old workings, with the exception of the Tuesday morning's report ; the manager of colliery has not drawn my attention to anything ; the old workings have not been visited at any regular time, but are inspected occasionally ; I cannot say that I have ever smelled the same smell as I came across on the morning I have mentioned, but I have smelled something very near it ; I have noticed this in No. 45 district : this district is about 700 or 800 yards away from the rope road ; I have never noticed anything of any sort in other parts of the mine : if Burt had complained to me that men were sick and giddy, and that their lights were not affected, I should not have taken any more interest in the matter than I did ; I am acquainted with gases in mines, and I know something about carbonic oxide ; something less than 1 per cent. is fatal ; sulphuretted hydrogen is something about the same in regard to its deadly results ; I cannot say if either of these gases are in the Stockton pit ; I have no reason to believe there is a deadly gas in the Stockton mine other than carbonic acid or black-damp : the fresh air I have mentioned in my evidence comes from No. 3 shaft ; in the night-time this current of air travels over very few men ; in the day-time it will travel over 100 men, perhaps 130 men ; we have six different splits in the mine ; I cannot say just at the moment the quantity of air to each split ; we last measured our air a fortnight ago ; it is always registered in a book kept for the purpose ; I have never had any complaints from anyone of deficient air ; I told the manager of the report that Burt made to me the same day as Burt told me : in the afternoon about 3 o'clock the manager said to me "Be careful, and do not go too far" ; we had no discussion about what it was ; someone interrupted us while we talked ; the Government inspector was down the mine about a week ago ; he has been down the mine four times since the new Act came into force ; I went down the pit with the inspector the last time : we went into some of the old workings up by the new No. 3 shaft and up by Gardiner's heading, and we visited all the working-places ; we did not visit No. 3 district ; when I went down on Wednesday morning, at about a quarter past 4, I went direct to where the men were ; I went to the furnace about ten minutes later.

By Jury : Black-damp with a current of air with it from the main return would not put out the furnace ; carbonic oxide mixed with air would not put out the furnace either ; in the same way as I have stated as regards black-damp.

By Mr. O'Sullivan : The regulations and special rules as to the working of the pit are posted up in a conspicuous place ; I know that the two deceased men had copies of the special rules.

Sworn and made at Stockton, this 8th day of
December, 1896, before me,—

GEO. C. MARTIN, Coroner.

WILLIAM McDONALD.

[NOTE.—The evidence of this witness was put in at the Court of Inquiry as Exhibit No. 2, by Mr. Wilshire, and read, 22nd March, 1897.]

This deponent, *William McDonald*, recalled, on his oath, saith as follows :—

Recalled by Jury : Fresh air might mix with the black-damp coming from the No. 3 workings by coming through No. 1 door.

Sworn and made at Stockton, this 8th day of
December, 1896, before me,—

GEO. C. MARTIN, Coroner.

WILLIAM McDONALD.

No. 7.

The Under Secretary of Justice to The Principal Under Secretary.

Sir,

Department of Justice, Sydney, 10 December, 1896.

I am directed by the Minister of Justice to forward for the perusal of the Chief Secretary the accompanying copy of verdict and rider at inquest held before George Cannon Martin, Esq., J.P., Coroner, at Newcastle, on the 2nd, 3rd. and 8th instant, touching the cause of death of Charles Smith and George Patrick Curran, at Stockton, in the District of Newcastle.

I have, &c.,

GEORGE MILLER,

Under Secretary.

No. 8.

Minute of The Hon. the Minister for Mines in connection with the recommendation of the Jury.

I AM in accord with the view expressed by the jury that the action of Messrs. Jury and Coulson deserves to be recognised, and this should take the form of some tangible and permanent record. Brave deeds such as they performed, as well as the other courageous men who risked their lives in attempting to save their fellows, in the subsequent action, should not be allowed to pass by merely placing on official record a statement of the facts.

I think appreciation of their action should be shown by presenting them with a memento in the form of a gold medal, fittingly inscribed, to record the heroic action which won for them not only the admiration of their fellow workers, but the whole community. Conspicuous bravery such as they exhibited should not be allowed to pass without recognition, and the presentation of the mementos proposed will show them and others who may be placed in similar circumstances that such deeds as they performed are not allowed to pass unrecognised.

S. SMITH.

1898.
(SECOND SESSION.)
—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COAL MINES REGULATION ACT, 1896.
(OUTPUT OF COAL UNDER.)

Printed under No. 10 Report from Printing Committee, 3 November, 1898.

[Laid upon the Table in answer to Question No. 10, Votes No. 81, 26 October, 1898.]

Question.

- (10.) Output of Coal under Coal Mines Regulation Act, 1896:—Mr. Nicholson asked the Secretary for Mines,—
- (1.) Referring to information given by the late Secretary for Mines, Mr. Sydney Smith, *re* the report of the Chief Inspector of Mines, showing the gross output of coal from the various mines of the Colony,—is that report to hand?
- (2.) If so, what is the gross output of the various collieries since the Coal Mines Act came into force?
- (3.) What was the proportionate amount weighed at each colliery?

Answer.

- (1.) A report dealing with a number of the principal collieries was furnished by the Chief Inspector, and I will presently lay a copy of it upon the Table.
- (2.) The output for a broken period cannot be given, as the Act only provides for an annual return being supplied by the owners. A return is published in each Annual Report of the Department, giving the output of coal at each colliery.
- (3.) This information, so far as it has been ascertained, will be found in the document to be presently laid upon the Table of the House.

STATEMENT showing tubs or skips of round or large coal raised and weighed at the several large Collieries in the Northern, Southern, and Western Districts during the several periods named.

Northern District.

NEW SOUTH WALES.

GOVERNMENT METALLURGICAL WORKS AT CLYDE.

(RETURN RESPECTING.)

*Printed under No. 13 Report from Printing Committee, 24 November, 1898.**[Laid upon the Table in answer to Question No. 7, Votes No. 39, 17 November, 1898.]*

Question.

- (7.) Government Metallurgical Works at Clyde:—Mr. Hurley asked the Secretary for Mines,—
- (1.) What is the number of tons of mineral ore that has been treated by the chlorination process at the Government Metallurgical Works at Clyde since the works started operations?
 - (2.) What is the number of tons of mineral ore that has been treated by the cyanide process at the Government Metallurgical Works at Clyde since the works started operations?
 - (3.) What is the number of tons of ore that has been treated by what is known as freemilling or the battery process at the Government Metallurgical Works at Clyde since the works started operations?
 - (4.) What is the number of tons of mineral ore, of all classes, treated by all processes at the Government Metallurgical Works at Clyde since the works first started operations?
 - (5.) What has been the value of gold bullion or other metals extracted from all ores treated at the Government Metallurgical Works at Clyde since the works started operations?
 - (6.) What is the amount of money the Government has received for the treatment of all ores at the Government Metallurgical Works at Clyde since the establishment of the works at Clyde?
 - (7.) What is the amount of an average pay-sheet per month for salaries and all expenses in connection with the working of the Government Metallurgical Works at Clyde?
 - (8.) What have the Government Metallurgical Works cost the Government, including everything, up to date 15th November, 1898?

Answer.

- (1.) 61 tons.
- (2.) 81 tons.
- (3.) 369 tons.
- (4.) 488 tons.
- (5.) £2,822 4s. 3d.
- (6.) £559 15s. 9d.
- (7.) £226 17s. 2d.
- (8.) £12,203 15s. 9d., including wages and salaries.

In making these replies, it is necessary to point out that although the strictest economy is observed in carrying on the works, it cannot be expected that the establishment should be self-supporting, seeing that its operations are purely experimental, the results of which are of great commercial value to the miner. The object of the treatment to which the parcels of ores are subjected is to ascertain the best method of treating the ore at the mine, so that the process in operation there may be improved, if possible, or the installation of unsuitable methods may be prevented, and thereby incalculable waste to the Colony checked or altogether avoided. With this purpose, then, much more work is put into the treatment than is paid for by the fees charged, and the efficiency of the work done is not to be measured by the amount of fees received, nor by the total tons treated.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.

(ANNUAL REPORT OF THE RAILWAY COMMISSIONERS FOR THE YEAR ENDED 30TH JUNE, 1898.)

Presented to Parliament, pursuant to Act 51 Vic. No. 35.

*Printed under No. 1 Report from Printing Committee, 6 September, 1898.*Office of the Railway Commissioners of New South Wales,
Sydney, 13th August, 1898.

TO THE RIGHT HONORABLE THE MINISTER OF RAILWAYS,—

SIR,

In accordance with the provisions of the 45th clause of the Railways Act of 1888, 51 Vic. No. 35, we have the honor to present, for the information of Parliament, our Annual Report upon the working of the Railways and Tramways for the year ended June 30th, 1898.

GENERAL REMARKS.

The result of the year's working may be briefly summarised as under :—

	Railways.	Tramways.	Total.
Total Earnings ...	£3,026,748	£313,871	£3,340,619
Total Expenditure ...	1,614,605	259,141	1,873,746
Balance after paying } working expenses }	£1,412,143	£54,730	£1,466,873

RAILWAYS.

The total miles open for traffic on the 30th of June last, was 2,691 $\frac{1}{4}$.

The following extensions were opened for traffic during the year :—

Line.	Mileage.	Date opened.
	m. c.	
Nevertire to Warren...	12 33 $\frac{1}{4}$	January 1, 1898.
Bogan Gate to Condobolin ...	39 22 $\frac{1}{2}$	March 1, 1898.

Further extensions of the Pioneer class are now under construction, viz. :—

- Berrigan to Finley—13 miles 71 chains.
- Tamworth to Manilla—29 miles 41 $\frac{1}{2}$ chains.
- Moree to Inverell (first section)—35 miles.

The Berrigan to Finley extension will probably be completed and opened for traffic in September next. The construction of the Tamworth to Manilla line is progressing, and the Moree to Inverell line has been commenced.

The lines of the "Pioneer" class now open for traffic, which were fully described in our last annual report, have, on the whole, proved satisfactory both as regards working and traffic.

The increase of business on the Narrabri-Moree pioneer line has justified it being classed and worked as an ordinary branch line. For the pioneer coaching stock the ordinary carriages have been substituted, the platforms have been improved, and a gradual improvement will be made in the road formation.

As the line is not fenced it was originally intended that it should be worked by daylight only, but owing to the development of traffic night running has been introduced, the engines being provided with powerful head-lights.

The pioneer lines, Parkes-Condobolin, Jerilderie-Berrigan and Finley, and Nevertire-Warren, promise well.

The total capital cost of the lines open for traffic stands at £37,719,402. The interest on this sum at 3·661 per cent., the average interest payable on the debt of the Colony, amounts to £1,380,907.

The result of the year's transactions, after paying all working expenses and providing interest on the capital cost of the whole of the lines open for traffic, is a credit balance of £31,236.

The coaching traffic shows an increase of £27,561, and the Goods traffic, including wool and live stock, a decrease of £15,555, leaving a net increase of £12,006.

First class passengers increased, £2,045; second class, £19,430; parcels, £5,272; and miscellaneous, £814.

In connection with the increase in passenger earnings, 560,252 additional passenger journeys were made.

As anticipated in our Annual Report for last year the earnings under the head of Wool and Live Stock show a large falling off, the decrease amounts to £110,670, viz. :—Wool, £58,933 and Live Stock, £51,737.

Other classes of Goods traffic however increased to the extent of £95,115; Grain, Flour, &c., contributing £42,264; General Merchandise, £31,833; Minerals other than Coal and Coke, £14,792; Coal and Coke, £5,056; and Hay, Straw, and Chaff, £1,170.

Wool, Live Stock, and other traffics show a decrease of 97,950 tons; Minerals, other than Coal and Coke, an increase of 93,523 tons; and Grain, Flour, &c., 67,950 tons; the net result being an increase of 63,523 tons.

In consequence of the greater mileage of lines open, the additional volume of Passenger traffic, and the largely increased tonnage of less remunerative character, the Working Expenses increased £13,387.

The train miles run were 8,340,338, being an increase on last year of 209,933 miles. The increase is mainly due to the opening of new lines, the additional service on the North Shore Line, and improvements in other directions.

The earnings per train mile were 7s. 3d., and the net earnings 3s. 4½d., as compared with 3s. 5¾d. last year.

The percentage the working expenses bear to the gross revenue is 53·34.

The effect of recent droughts will still be felt in connection with the wool and live stock traffic, and it is feared that during the present year not much, if any, expansion can be anticipated from this source. The outlook, however, for the grain season is exceptionally good.

The following table shows the progress and results of the working of the Railways and Tramways for a period of years.

Year.	Open to 30 June.			TOTAL EARNINGS.			NET EARNINGS AFTER PAYING WORKING EXPENSES.			CAPITAL EXPENDED.

EXTENSION OF THE RAILWAY INTO THE CITY.

In our last Report this subject was referred to as follows :—

The proposed extension of the railway into the city is a matter which demands some mention in this Report, not with the object of advocating any particular route—our views on that subject having been placed most fully before the Public Works Committee—but because of the absolute necessity for a decision in the matter. The time has arrived when it must be emphatically stated that the passenger business cannot longer be conducted at Redfern with reasonable convenience to the public, or without unnecessary risk.

The accommodation is inadequate, and consequently there is, notwithstanding the exercise of the utmost care and the use of all modern appliances for safe working, an element of danger which would not attach to a terminal station arranged to meet traffic requirements.

For the daily business the accommodation is below what is required, and for holiday or exceptional traffic it is very deficient.

We trust that the question of the extension of the railway into the city will be finally dealt with on an early date.

The experience of the past twelve months has more fully impressed the Commissioners with the absolute necessity for a prompt settlement of this long-pending question.

Now that the Public Works Committee has reported in favour of the Hyde Park Scheme, which has been from the first recommended by the Railway Commissioners, we hope that there will be no delay in giving effect to the Report of the Public Works Committee.

UNIFORM GAUGE.

During the Federal Convention which met at Adelaide in April, 1897, the Right Honorable the Premiers of New South Wales, Victoria, and South Australia agreed that the Chief Railway Commissioners of those Colonies should meet and discuss the question, and bring up a report. At a meeting in Melbourne in August last year all the necessary details were agreed upon, and a report was subsequently made.

The matter is perhaps one which does not call for immediate final action, yet it should not be lost sight of, as the longer it remains altogether in abeyance the greater the cost will be eventually. That there must in the end be uniformity of gauge there can be no doubt, and it would be a step in the right direction to begin to prepare for the change. The Commissioners agreed that it could be conveniently effected within five years; but it is not imperative to adhere to this period.

Both economy and general utility suggest the adoption of the standard 4 feet 8½ inch gauge, which is that in existence in New South Wales.

The early settlement of the question would be of benefit to the colonies interested, as gradual preparations for this extensive change could be made.

SAFETY APPLIANCES.

Steady progress has been made with the work of interlocking of points and signals.

The fitting of the goods stock with the Westinghouse quick-acting freight brake appliances is drawing to completion, only a small balance now remaining to be fitted.

RATES.

Unfortunately, the conditions of some portions of the country through drought, necessitated the introduction of "Starving Stock" rates. Under these rates stock coming within that designation were carried at a reduction of 50 per cent. on ordinary stock rates from the drought-stricken districts to where feed and water could be obtained. Stock of which a forced sale was made by reason of the necessity to remove them from one district to another for the purpose of feed were similarly dealt with. Store stock requiring railway transit by reason of the travelling stock routes being impracticable were carried for distances of not less than 100 miles at a reduction of 25 per cent. on ordinary rates. A similar reduction was also made in the freight of fodder for starving stock.

ANNUAL REPORT OF RAILWAY COMMISSIONERS.

5

RETURN showing Mileage per Ton and Earnings per Ton per Mile of Goods Traffic carried during the years ended 31st December, 1879, 1883, 1891, 1894, and 1897.

Nyngan to Cobar	81 27 ¹ / ₂	324,334	11,642	9,927	10,436	20,177	18,961	1,392	2,885
Cootamundra to Temora ...	38 69	192,761	7,184	4,986	5,044	8,651	10,034	3,519	2,159
	1,257 24	14,124,479	515,100	363,709	363,358	529,595	521,423	349,214	357,093

In the aggregate these lines show a slight improvement; but the loss incurred has a serious effect upon the net result of the working of the system as a whole.

ACCOMMODATION FOR THE TRAFFIC AND CONDITION OF LINES AND ROLLING STOCK.

The passenger and goods rolling stock have been maintained in good order and increased.

The 1st class corridor cars referred to in our last report have been in traffic since October, and are much appreciated.

Similar cars of the 2nd class are now in course of construction. These will be placed upon the Southern express, and the train will then be a vestibule corridor train throughout.

Various additions have been made to the rolling-stock, included in which are six composite sleeping carriages, six 2nd class lavatory carriages, and eighteen suburban cars.

The expenditure in the renewal and repairs of engines, carriages, and waggons has been increased by £5,294 over last year, which showed an increase of £36,829 on the preceding year.

Among the renewals are nine new powerful goods engines and twelve suburban cars.

A new foundry has been constructed in connection with the Eveleigh workshops, and the building formerly used for the purpose has been converted into an addition to the Boiler-shop. Contracts have also been let for building a new Erecting-shop.

To meet the requirements of the large expansion of the grain traffic, and also the probable general increase of business, orders are about to be placed for ten additional powerful goods engines and four hundred goods waggons, half of the latter will be built in the railway workshops and the balance by contract.

The permanent way has been maintained in a satisfactory condition, and the expenditure in painting and renovating stations and buildings has been larger than usual.

The station and refreshment rooms at Newcastle have at considerable cost been much improved and enlarged, and the expenditure of a large sum in the further improvement of the yard arrangements and approaches has recently been authorised.

Important and extensive alterations and additions have been made at the Hamilton-Bullock Island Junction, which will facilitate the working of the coal traffic at Newcastle.

Complete relaying, also rerailing, resleeping, and lifting and ballasting have been proceeded with in a satisfactory manner.

A portion of the Wagga Wagga viaduct has been replaced by a steel structure, and the work will be steadily continued to completion.

Two important timber bridges have been wholly renewed in steel, and extensive repairs have been made to timber bridges throughout the lines.

As in the past, many works fairly chargeable to capital have been carried out and debited to working expenses.

During the recent inspection of the lines various works were authorised to meet traffic requirements.

IMPROVEMENT OF GRADES AND CURVES.

In connection with the improvement of the Main Western Line over the Blue Mountains, the line between Mount Victoria and Blackheath has been duplicated, and the grades improved in both directions.

Improvements in the grades between Blayney and Mullion Creek have been completed.

On the Southern Line similar work has been done in the vicinity of Exeter and Frampton, between Jindalee and Cootamundra, and Bethungra and Illabo. On the South-Western Line, between Junee and Narrandera, a considerable reduction in the grade is almost completed.

The grades on the Northern Line are also receiving attention. Those at Woy Woy and Carlingford have been cased, and work is in progress between Wyong and Morrisett, and Waratah and East Maitland.

The work of improving grades will be continued where the outlay will produce a profitable return.

These works are carried out by bodies of workmen under the immediate control of the Commissioners' officers.

RESULTS OF THE WORKING.

RAILWAYS.

Year ended 30 June, 1898, compared with 1897 and 1888.

PARTICULARS.	1898.	1897.	1888.
Total spent in construction and equipment	£37,719,402	£37,369,205	£27,722,748

Live-stock tonnage	166,836	191,457	68,101
Train mileage... ..	8,340,338	8,130,405	6,689,313

TRAMWAYS.

On the 30th June, 1897, 62½ miles were open for traffic, and on the 25th of April last the Electric Line from Willoughby Road to Victoria Avenue, Willoughby, a distance of 2 miles 45 chains, was opened, making a total of 65 miles of line in use.

The working of the whole of the Tramways for the year resulted in an increase of revenue of £7,176; the working expenses increased by £10,260, which was almost wholly caused by the increased cost of fuel.

The cost of the lines open for traffic upon which interest has to be paid is £1,478,251.

The return upon the capital invested is £3 14s. 9d. per cent.

The table on the following page will give further details regarding the year's operations.

CONDITION OF EXISTING LINES.

The lines are in good order. A fair proportion of relaying has been done, which in the case of Elizabeth-street necessitated the expensive work of repaving portion of the street.

ACCOMMODATION FOR THE TRAFFIC.

The rolling stock has been well maintained and increased. The Marrickville line from Enmore to Edinburgh Road has been duplicated.

Considerable reductions have been made in the fares, and improved services introduced in various directions.

Further improvement of services cannot, however, be attempted until a considerable amount of duplication of the line is carried out, the congested traffic in Elizabeth-street reduced, and some relief in connection with shunting at the Bridge-street Terminus obtained. The duplication work is under consideration, and will be carried out gradually. The difficulties in Elizabeth-street and the Bridge-street Yard will, to a limited extent, be removed by the opening of the George-street electric tramway about the beginning of next year, but the public requirements and those of satisfactory working can only be fully met when the conversion of the present steam system into an electrical system is carried out.

It is hoped that simultaneously with the opening of the George-street tram line the North Shore lines, which are now partly cable and partly electric, will be wholly operated by the latter power.

RESULTS OF THE WORKING.

TRAMWAYS—ALL LINES.

Year ended 30 June, 1898, compared with 1897 and 1888.

APPENDIX I.

Chief Mechanical Engineer's Report.

Sir,

Eveleigh, 20 July, 1898.

I have the honor to report, for the information of the Commissioners, that the rolling-stock, the machinery, pumping plant, and water supplies of the railways have been maintained in efficient working condition.

Locomotives.

Three tender engines—Nos. 84, 88, and 89—were rebuilt and converted into tank engines for suburban line work, and 10 goods engines, for main line service, were rebuilt with enlarged boilers. Three hundred and fifty-seven engines have been repaired during the year—186 of them at Eveleigh, 51 at Newcastle, and the remaining 120 at smaller depôts. Two hundred and thirty-eight of them received heavy repairs, and the remaining 119 had general repairs of a lighter character. Four boilers for “Q” class engines were built in the Eveleigh shops, and 13 new boilers taken from store and fitted to locomotives. Three hundred and thirty-three boilers were overhauled during the year—196 of them at Eveleigh, 47 at Newcastle, and the remaining 90 at smaller depôts. One hundred and eighty-four of them were internally examined, heavily repaired, refilled with tubes, and returned to locomotives. Thirty-seven stationary boilers were overhauled; 7 of them received heavy repairs.

Carriages and Waggon.

Ninety-seven vehicles were rebuilt as replacements in the Eveleigh shops, and 1 at Newcastle, during the year. Thirteen hundred and eighty-eight passenger vehicles were repaired; 1,110 of them at Eveleigh, and the remaining 278 at Newcastle. Two hundred and ninety-two of these vehicles received heavy repairs, and the remaining 1,096 had general repairs of a lighter character. Forty-two wagons of the open bogie type, class “G”, were rebuilt, strengthened, and converted into bogie bolster wagons, class “F”. Five thousand six hundred and fifty-three wagons and vans passed through the Eveleigh and Newcastle shops during the year, of which 1,864 were heavily repaired.

Two thousand two hundred and ninety-three axle-boxes of defective designs were abandoned and replaced by standard boxes, charged to working expenses.

New Stock charged to Capital Account.

Eighteen suburban cars, 3 first-class corridor cars, 6 second-class lavatory carriages, and 6 composite lavatory sleeping carriages were added to the coaching stock during the year. The corridor carriages were built in the Eveleigh shops, and the remainder by contractors. Twenty-six merchandise vehicles were built in the Eveleigh shops as additions to goods' stock. The cost of these vehicles, charged to Capital Account, is £50,365.

New Stock charged to Working Expenses.

Six powerful goods engines, Nos. 534, 535, 536, 537, 542, and 543, have been charged against working expenses during the year. Their collective tractive power equals 172,662 lb., and they replace 10 old engines of the least useful type, which have an aggregate tractive force of 141,876 lb.

Twelve new bogie suburban cars were built by contractors, having a total floor area of 4,200 square feet, and replace 21 old carriages with a floor area of 3,998 square feet. Fifty-three new goods vehicles, 15 of them being large bogie trucks of 24 tons carrying capacity, and 27 bogie live-stock vehicles, were built in the Eveleigh shops, and 20 goods brake-vans were obtained from contractors.

£52,357 were charged against the working expenses for the year on account of the above engines and vehicles.

The following statement shows the relative mileage executed and the working cost of the Locomotive Branch for the two years ending June, 1897 and 1898:—

	1898.	1897.	Increase.	Decrease.
Train miles	8,340,338	8,130,405	209,933
Engine miles	11,908,461	11,614,964	293,497
Percentage of unproductive miles on train miles..	42.78	42.86	0.08
Revenue	£3,026,748	£3,014,742	£12,006
Expenditure	£736,616	£727,140	£9,476
Do in per cent. to revenue	24.34	24.12	0.22
Cost in pence per train mile	21.197	21.464	0.267
Do engine mile... ..	14.846	15.025	0.179

To facilitate the boiler-shop work at Eveleigh a new foundry has been constructed during the year—300 feet by 60 feet—thus liberating the old foundry, and doubling the size of the boiler-shop; and contracts have been let for the construction of the new erecting shop which was asked for in my last year's report. It is anticipated that these additional facilities, when in full swing, will add greatly to the convenience of repairs, and avoid expenditure which, without them, must have continued and increased.

The attached statement shows the relative position of the locomotive, carriage, and wagon stock on 30th June, 1897 and 1898.

I have, &c.,

W. THOW,

Chief Mechanical Engineer.

The Secretary to the Railway Commissioners.

APPENDIX II.

RAILWAYS.—RETURN OF WORKING ROLLING STOCK, 30TH JUNE, 1898.

	LOCOMOTIVES.		COACHING.							MERCHANDISE.						DEPART- MENTAL STOCK.	TOTAL.
	Engines.	Tenders.	Special and Sleeping Cars.	First Class.	Composites.	Second Class.	Brake-vans.	Horse-boxes, Carriage- trucks, &c.	Total.	Goods open.	Goods covered.	Meat Trucks.	Live Stock Trucks.	Brake-vans.	Total.	Loco. Coal Railway, &c., Wagons.	
Stock, 30th June, 1897...	502	420	41	178	84	241	181	301	1,026	7,356	627	111	1,156	205	9,455	1,048	10,503
Stock, 30th June, 1898...	494	419	49	172	84	261	181	303	1,050	7,357	627	110	1,130	205	9,429	1,041	10,470

A. Nine powerful goods engines (3 of which were paid for out of Working Expenses last year) with a tractive power of 256,295 lb., replace 17 small type engines, with an aggregate tractive power of 214,378 lb.; 10 goods tender engines have been fitted with new boilers and rebuilt, and 3 passenger tender engines have been converted into suburban tank, fitted with new boilers, and rebuilt.

B. Three new corridor cars, 6 compo. lavatory, 6 second-class lavatory express, and 18 (first and second) suburban bogie carriages have been added to stock. Twelve suburban bogie carriages (first and second class), having a floor area of 4,200 square feet, replace 20 eight and six wheel radial stock and 1 sleeping car—having an area of 3,993 square feet; 9 (first and second class) suburban bogie cars and 1 carriage truck have been rebuilt; 12 carriages have been converted.

C. Fourteen wagons, with coal-boxes fitted to same, 11 open bogies, and 1 gas truck, have been added to stock; 220 goods vehicles have been rebuilt or replaced during the year—88 were rebuilt, and 132 were replaced by 73 of larger capacity.

APPENDIX III.

REPORT on the Condition of Permanent-way and Works for the year ending
30th June, 1898.

Sir, Office of Engineer-in-Chief for Existing Lines, 9 July, 1898.

In submitting for the information of the Commissioners the annual statement of the working of the Permanent-way Branch, I have the honor to report that the permanent-way, works, and buildings have been maintained in a thoroughly efficient state during the past year.

Relaying, Reballasting, &c.

During this period, 47 miles 32 chains have been completely relaid, rerailed, or resleepered; 170 miles 52 chains have been lifted and ballasted; and 76 miles 66 chains of fencing have been renewed, and 23 miles 7 chains of new fencing have been erected in connection with deviation works.

25,661 new sleepers and 33,003 good sleepers, recovered in relaying, have been used for partial resleepering and repairs, thereby adding a total of 27 miles to the length of road put into perfect condition during the year.

Special attention has been given to station and other buildings, a considerable expenditure having been incurred in their renovation by painting, &c. A number of works, adding to the accommodation for traffic, &c., which might fairly be charged to Capital, have been carried out and debited to Working Expenses.

Extensive repairs have been made on the timber bridges throughout the whole of the lines, and of the Wagga Wagga viaduct 76 spans have been replaced by steel superstructure and trestles on concrete foundations, and 59 spans additional are ready for erection. The bridge over Ironbark Creek, which consisted of three spans of 26 feet, and which has already been renewed twice through the ravages of the *teredo navalis*, has been replaced by a steel superstructure of 110 feet span on concrete abutments resting on piles driven to a depth of 45 feet. The bridge over Styx Creek carries three lines of rails, and was considerably damaged by a flood. It has been replaced by one span of 71 feet, in steel, on concrete abutments. The whole of these renewals have been charged to Working Expenses and were carried out without interfering with the traffic.

Improvement of Grades and Curves.

The Main Western line has been duplicated between Mount Victoria and Blackheath, the grade of the old line greatly improved, and deviations to improve the grade between Blayney and Orange and between Orange and Mullion Creek have been completed. On the Southern Line similar improvements have been carried out in the vicinity of Exeter and Frampton, between Jindalee and Cootamundra, and between Bethungra and Illabo; while on the South-western Line by alterations of a similar character the ruling gradient between Junee and Narrandera has been reduced to 1 in 80, with the exception of a length near Marrar, which is nearly finished. On the Northern Line heavy grades have been cased at Woy Woy and Carlingford, and similar works are in progress between Wyong and Morrisett and between Waratah and East Maitland.

Surveys have been completed and plans prepared for other grade improvements on the Southern and Northern Lines, and these will, as in the case of others completed during the year, be carried out departmentally.

Extensions opened.

The following extensions (pioneer lines) have been opened for traffic during the year:—

Nevertire to Warren	...	12 miles	33 $\frac{1}{4}$ chains,	on 1st January.
Bogan Gate to Condobolin	39	„	22 $\frac{1}{2}$ „	on 1st March.

Sidings laid in and extended... .. 5 miles 52 chains.

	New.	Second-hand.	Total.
Sleepers used in new sidings	1,222	10,233	11,455
Sleepers used in main lines—			
Relaying and resleepering	86,399	4,967	91,366
Repairs and respacing	25,661	33,003	58,664
Deviations to improve grades and curves	31,549	8,653	40,202
Total	143,609	46,623	190,232

	Blue-metal and other hard stone.	Sandstone and Gravel.	Total.
Ballast used in main lines—	Cubic yards.	Cubic yards.	Cubic yards.
For relaying	4,272	4,272
For ordinary ballasting	48,884	20,764	69,648
For deviations to improve grades and curves	39,143	39,143
Total	92,299	20,764	113,063

Length of new fencing erected... .. 99 miles 73 chains

Length of fences wired 40 chains.

Culverts and flood-openings constructed and extended 255 s. ft. additional waterway.

I have, &c.,

THOMAS R. FIRTH,
Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX IV.

The accounts were made up to the 31st December in each year up to 1887, since that time up to the 30th June in each year.

Camden and Sans Souci Tramways not included prior 1888 in this return.

APPENDIX VIII.

RETURN of the Total Amount paid for Wages on the different Branches of the Railways during the years ended 30th June, 1898 and 1897.

Branches.	1898.	1897.
RAILWAYS:—		
Maintenance Branch	£ 364,656	£ 362,611
Locomotive "	502,279	493,267
Traffic "	246,265	236,633
TOTAL	£ 1,113,190	1,092,511

NOTE.—Includes all wages paid by the Department, whether on Maintenance or New Works.

APPENDIX IX.

STATEMENT of the Staff employed on the Railways and Tramways of New South Wales in June, 1898, as compared with October, 1888.

Branch.	June, 1898.			October, 1888.		
	No. of Salaried Staff.	No. of Wages Staff.	Total Staff.	No. of Salaried Staff.	No. of Wages Staff.	Total Staff.
RAILWAYS.						
Commissioners' and Secretary's Office	15	4	19	40	8	48

TOTAL, RAILWAYS AND TRAMWAYS ...	1,269	10,733	12,022	1,375	10,018	11,393

^a Includes 47 officers in charge of locomotive running sheds, and timekeepers.

^b Includes 79 officers for additional stations and crossing places, 23 night-officers transferred from wages to salary list. Of the remaining 648, 355 are officers and night-officers in charge of stations and sidings, and 164 are clerks employed at stations.

^c Includes 35 telegraph operators.

The Wages Staff does not include gatekeepers with free house only, as the information was not kept in 1888.

APPENDIX X.

RETURN of the Mileage of Suburban Passengers on All Lines of Railway during the years ended 30th June, 1898, 1897, and 1888.

DESCRIPTION.	1898.	1897.	1888.
NUMBER OF ORDINARY PASSENGERS	11,392,304	11,323,539	7,413,868
NUMBER OF WORKMEN'S JOURNEYS	4,293,168	4,000,248	1,738,284
NUMBER OF SEASON TICKET HOLDERS' JOURNEYS	4,973,572	4,827,560	3,227,760
TOTAL NUMBER OF PASSENGERS' JOURNEYS	20,659,044	20,151,347	12,379,912
NUMBER OF MILES TRAVELLED	118,653,210	115,059,631	70,172,793
AVERAGE MILEAGE PER PASSENGER	5'74	5'71	5'67
AMOUNT RECEIVED FROM PASSENGERS	£261,333	£264,392	£186,393
AVERAGE RECEIPT PER MILE PER PASSENGER	0'53	0'55	0'64

NOTE.—Suburban Lines include only distances within 22 miles of Sydney and Newcastle, Liverpool and Morpeth included.

APPENDIX XI.

STATEMENT showing cost of Additions to Stations, Buildings, Siding Accommodation, &c., Machinery and Rolling Stock, the cost of which was charged to Capital Account, during the year ended 30th June, 1898.

Additions to Stations, Buildings, &c.	Amount, £ 36,399
Rolling Stock and additional appliances, including continuous brakes.....	66,784
	£103,183

APPENDIX XII.

STATEMENT showing the length in miles of the different sections of the Railways of New South Wales to 30th June, 1898.

APPENDIX XVIII.

REPORT of the Tramway Locomotive Superintendent.

Randwick, 14 July, 1898.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to submit, for the information of the Railway Commissioners, the following report on the working of the Locomotive Department of the Tramways for the year ending 30th June, 1898:—

SYDNEY CITY AND SUBURBAN LINES.

The rolling stock, machinery, and plant have been maintained in good order, although some inconvenience was experienced owing to a fire having occurred in the paint-shop, in March last; the requirements of the traffic, however, were fully met. Notwithstanding continued effort to reduce the cost of working, I regret to have to report a slightly increased outlay per train mile run during the past year; but this is solely owing to the higher price paid for coke, the extra expenditure under this head amounting to £7,149.

The rolling stock was overhauled in the following order:—

Motors: 64 received general overhaul; 81 heavy repairs; 615 general repairs, occupying from one to eight days each; and 377 light repairs.

Cars: 132 cars (106 steam, 24 cable, and 2 horse) thoroughly overhauled and repainted; 146 repaired and partially repainted; and 1,540 received minor repairs, occupying about one day each. In addition, 49 trucks and 33 cars for other lines were repaired.

NORTH SHORE CABLE AND ELECTRIC LINES.

Five electric motor cars have been added to the stock to work the extension to Willoughby, opened on the 25th of April last, as well as to cope with the increasing traffic of the Mosman line.

The whole of the rolling stock has been maintained in good order, 13 cable-line cars having been overhauled and repaired, while 3 motor cars received similar attention.

The cable from Milson's Point to the power-house was renewed on 13th April, the rope taken out having run 77,134 train miles, as compared with an average of 85,553 train miles for the two ropes immediately preceding it.

NEWCASTLE CITY AND SUBURBAN LINES.

The rolling stock and plant have been maintained in good order.

KOGARAH TO SANS SOUCI, AND MORPETH TO EAST MATTLAND LINES.

The rolling stock has been maintained in good order, and the traffic requirements fully met.

GEO. DOWNE,
Locomotive Superintendent.

APPENDIX XIX.

Report of Engineer for Tramways.

Office of Engineer for Tramways, 15 July, 1898.

To the Secretary to the Railway Commissioners,—

Sir,

I have the honor to report, for the information of the Railway Commissioners, that the whole of the Permanent-way, Buildings, and Works on the City and Suburban Tramways, for the year ending 30th June, 1898, have been maintained in good working condition.

The only additions during the year to the mileage were the extension from North Sydney Road to Willoughby, 2 miles 45 chains, single track (electric), and the duplication of the Marrickville line, from Enmore to Edinburgh loop, 37½ chains. In connection with the extension to Willoughby, advantage was taken to convert the existing cable track, between the power-house and North Sydney Road, a length of 60 chains, to electrical traction.

A moderate amount of relaying has been carried out during the year on the following sections:— Elizabeth-street, from Hunter-street to Market-street, 28½ chains, double track; Coogee line, Flinders-street, 37 chains, single track; Leichhardt, Australia-street to Nelson-street, 21 chains, double track; Waverley, Ocean-street to Denison-street, 20½ chains, single track. Total length of single track, 1 mile 76½ chains. This, however, includes the expensive work of repaving in Elizabeth-street, and the laying of 80 lb. T rails with specially-prepared non-expansion joints.

The total amount of metal used in ordinary maintenance during the year was 11,800 tons.

The Ocean-street cable line is in good order, the renewal of the crossings at the intersection of the steam and cable lines in King-street having been carried out early in the year.

The re-erection of the paint-shop at Randwick, destroyed by fire in March last, is almost completed.

The power-houses, waiting-sheds, bridges, &c., have been well maintained.

I have, &c.,

G. R. COWDERY,

Engineer for Tramways.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING 30 JUNE, 1898.)

Printed under No. 1 Report from Printing Committee, 6 September, 1898.

Offices of the Railway Commissioners of New South Wales,
Sydney, 16th July, 1898.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report for the quarter ending 30th June, 1898, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.						Quarter ending 30th June, 1897.	Quarter ending 30th June, 1898.
Miles open	2,639½	2,691¼
Revenue	...	1897. 1898. { Passenger ... £280,737 £283,221 } { Merchandise ... £395,227 £431,646 }		£675,964	£714,867

Earnings per train mile	6/7½	6/8½
Expenditure per train mile	3/10¼	3/9
Percentage—Expenditure to earnings	58·04	55·89
Number of passengers	5,855,284	5,913,045
Tonnage of goods traffic	1,086,538	1,146,283
Tonnage of live stock traffic	55,780	52,217

TRAMWAYS.						Quarter ending 30th June, 1897.	Quarter ending 30th June, 1898.
Miles open	62½	65
Revenue	£81,002	£81,535
Expenditure	£68,870	£67,236
Tram miles run	804,088	820,076
Earnings per tram mile	2/0¼	1/11¼
Expenditure per tram mile	1/8½	1/7¼
Percentage—Expenditure to earnings	85·02	82·46
Number of fares collected	19,004,820	19,167,438

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 3.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found as an Appendix, page 3.

IV.—STAFF.

These returns are given as an Appendix, pages 4 to 6.

GENERAL REMARKS.

The earnings are the largest on record, and although the June quarter of last year gave an increase of £80,392 over the corresponding period in 1896 the present quarter shows a further increase of £38,903; the expenditure, however, having only increased £7,184, the net result gives an increase of £31,719.

In the Coaching Department 57,761 additional passenger journeys were made, and the revenue shows an increase of £2,484.

In the Goods Department the increase is £36,419—general merchandise contributed £9,466; hay, straw, and chaff, £3,955; grain, flour, &c., £14,269; coal and coke, £4,722; other minerals, £7,444. Wool and live stock show a decrease of £3,437; 59,745 additional tons were carried.

The working expenses are 55·89 per cent. of the earnings, as compared with 58·04 in the corresponding quarter last year.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in good working order; satisfactory progress continues to be made in relaying, resleepering, and reballasting, and the grades have been improved at various places.

TRAMWAYS.

The earnings show an increase of £533, and the expenditure a decrease of £1,634, the result being an improvement of £2,167.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,
Chief Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

Report on Condition of Permanent Way and Works for the Quarter ending
30th June, 1898.

Sir,

Office of Engineer-in-Chief for Existing Lines, 7th July, 1898.

I have to report for the information of the Commissioners that the Permanent Way and works have been efficiently maintained during the past quarter.

Satisfactory progress has been made with relaying, resleepering, and reballasting operations.

The grade improvements between Millthorpe and Orange on the Western Line, and at Frampton on the Southern Line, have been completed. Those between Old Junee and Narrandera on the South-Western Line, with the exception of that between 297½ and 300½ miles (near Marrar) have also been finished.

Good progress has been made with similar works between Wyong and Morrisett on the North Coast Line, and between Waratah and East Maitland on the Northern Line.

I have, &c.,

THOMAS R. FIRTH,

Engineer-in-Chief for Existing Lines.

The Secretary to the Railway Commissioners.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

STATEMENT, in accordance with clause No. 44 of the Railway Act, showing the Special Rates which have been made, and the reasons for making such rates, Quarter ending 30th June, 1898.

Article.	Rate.	Reason for rate.
Copper ore	Condobolin to Darling Harbour, in lots of 25 tons, 33s. 6d. per ton.....	To secure traffic.
Animal pitch	"A" rates and conditions	New rate.
Coal.....	The rate of 6s. per ton for coal, on page 34 of the Goods Rate Book, to apply to coal sent to Parramatta from Northern Collieries within the 100-mile radius mentioned.	To encourage traffic.
Horses.	Horses will be conveyed in 4-wheeled boxes by goods train at the rate for cattle waggons, contained on pages 44 and 45 of the Merchandise and Live Stock Rates Book—By-law 141—of 1st June, 1897, if cheaper than Coaching Rates. By mixed trains on branch lines Coaching Rates will be charged.	New rate.
Sausages and butchers' small goods.	By passenger train, from Nowra to Sydney :— Up to 90 lb., 1s. 91 lb. to 112 lb., 1s. 3d. 113 lb. to 140 lb., 1s. 6d.	To secure traffic.
Wool (scoured)	Scoured wool from Emu Plains to Darling Harbour, which has been previously carried from Darling Harbour to Emu Plains in the greasy state, 8s. 9d. per ton, provided that not less than 1,500 bales per annum are forwarded in the greasy state from Darling Harbour to Emu Plains by the one consignor.	To equalise rates.
Coal.....	Coal in Commissioners hoppers for shipment at Darling Harbour to be allowed to stand under load as may be approved by Railway Commissioners.	

APPENDIX III.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.

RETURN, in accordance with Clause No. 44 of the Railway Act, showing the Appointments of Employees from the 1st April, to the 30th June, 1898.

1898.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS AND TRAMWAYS.

(REPORT OF RAILWAY COMMISSIONERS, QUARTER ENDING SEPTEMBER, 1898.)

Printed under No. 10 Report from Printing Committee, 3 November, 1898.

Offices of the Railway Commissioners of New South Wales,
27th October, 1898.

TO THE HONORABLE THE MINISTER OF RAILWAYS,—

Sir,

In accordance with the provisions of the 44th clause of the Railway Act of 1888, 51 Vic. No. 35, we have the honor to submit, for the information of Parliament, our Report, for the quarter ended 30th September, 1898, upon the subjects specified, viz. :—

I.—STATE OF THE TRAFFIC.

RAILWAYS.								Quarter ended 30th September, 1897.	Quarter ended 30th September, 1898.
Miles open	2,639½	2,705¼
Revenue	...	1897.		1898.		£699,481	£766,589
		Passenger	£251,186	£260,344	Merchandise				
Expenditure	£400,276	£436,498
Train miles run	1,990,554	2,092,857
Earnings per train mile	7s. 0¼d.	7s. 4d.
Expenditure per train mile	4s. 0¼d.	4s. 2d.
Percentage—Expenditure to earnings	57·22	56·94
Number of passengers	5,639,635	5,768,724
Tonnage of goods traffic	1,129,304	1,294,452
Tonnage of live stock traffic	34,083	44,173

TRAMWAYS.								Quarter ended 30th September, 1897.	Quarter ended 30th September, 1898.
Miles open	62½	65
Revenue	£73,423	£79,476
Expenditure	£62,431	£66,428
Tram miles run	807,330	852,019

RAILWAYS.

II.—CONDITION OF THE LINES.

A report as to the condition of the lines will be found as an Appendix, page 4.

III.—SPECIAL RATES.

A statement of the special rates, and the reasons for making the same, will be found attached. [Appendix, page 4.]

IV.—STAFF.

These returns are given as an Appendix, pages 5 to 8.

GENERAL REMARKS.

The Earnings for the quarter give an increase over the corresponding quarter of last year of £67,108; the Expenditure shows an increase of £36,222; the result being an improvement of £30,886.

In the Passenger department, Second-class passengers show an increase of £9,462; Parcels and other Coaching Traffic, £2,020; First-class passengers show a decrease of £2,324; the net increase being £9,158; 129,089 additional passenger journeys were made.

The increase in the Goods department is £57,950, nearly all classes of traffic having contributed thereto:—General Merchandise, £13,621; Live Stock, £21,940; Wool, £12,953; Coal and Coke, £3,004, and other Minerals, £6,432. For the increased revenue, 175,238 additional tons were hauled.

The Pioneer line from Berrigan to Finley, a distance of 13 miles and 72 chains, was opened for traffic on the 16th of September.

CONDITION OF THE LINES AND ACCOMMODATION FOR THE TRAFFIC.

The lines are in good order. Fair progress has been made with relaying, resleepering, and reballasting, and the reduction of grades. The renewal of the Wagga Wagga Viaduct is being proceeded with, and various improvements and additions continue to be made to meet the increasing traffic.

TRAMWAYS.

The Earnings show an increase of £6,053, and the Expenditure £3,997, the result being an improvement of £2,056.

We have the honor to be,

Sir,

Your most obedient servants,

CHARLES OLIVER,
Chief Commissioner.

W. M. FEHON,
Commissioner.

DAVID KIRKCALDIE,
Commissioner.

APPENDIX I.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

REPORT on Condition of Way and Works for the quarter ending 30th
September, 1898.

Sir, Office of Engineer-in-Chief for Existing Lines, 6 October, 1898.

I have to report, for the information of the Commissioners, that the permanent way and works have been efficiently maintained during the past quarter.

Relaying, resleepering, and reballasting operations have been steadily carried on.

The grade improvements between Old Junee and Marrar have been completed, and satisfactory progress has been made with those between Wyong and Morrisett, Waratah and East Maitland, and Werris Creek and Gunnedah.

Fair progress is being made with the work of renewing the Wagga Wagga viaduct.

The extension from Berrigau to Finley (pioneer type), 13 miles 72 chains, was opened for traffic on the 16th ultimo.

I have, &c.,

The Secretary to the Railway Commissioners.

THOMAS R. FIRTH,
Engineer-in-Chief for Existing Lines.

APPENDIX II.

NEW SOUTH WALES GOVERNMENT RAILWAYS.

List of Special Rates for quarter ended 30th September, 1898.

Article.	Rate or Particulars.	Reason for alteration.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EXTENSION OF THE RAILWAY INTO THE CITY OF SYDNEY.

(PETITION FROM CERTAIN CITIZENS OF SYDNEY AND SUBURBS IN FAVOUR OF.)

Received by the Legislative Assembly, 25 October, 1898.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Citizens of Sydney and Suburbs,—

HUMBLY SHOWETH:—

1. That in consequence of the large and increasing traffic on the railways it is found that the present terminus is wholly inadequate, so much so as to be a continuous source of danger to every railway passenger to or from Redfern Station.

2. That this danger has been pointed out by the Railway Commissioners in such manner as to practically relieve themselves of all moral responsibility in regard to future risks.

3. That it is now admitted on all hands that some provision must be made to bring the great bulk of the railway passengers nearer to the business part of the city.

4. That two Royal Commissions and the Public Works Committee have made inquiry as to the expediency and best methods of extending the railway system of the Colony into the City of Sydney. The Royal Commission appointed in 1896, after most extensive and careful inquiries, and after full consideration of various routes and schemes, and the relative costs thereof, recommended the extension by what is known as the St. James' Road scheme. This recommendation was subsequently endorsed by the Public Works Committee, and a full report of the evidence on which the same was based was laid before your Honorable House.

5. This scheme would afford facilities for an extension to the Circular Quay, to the Eastern Suburbs, and to North Sydney.

6. That in view of the foregoing, and particularly of the imminent danger to which the travelling public are daily exposed at the present terminus, it is most respectfully submitted that the work of extending the railway into the city should not be delayed a day longer than is absolutely unavoidable.

Your Petitioners, therefore, humbly pray that your Honorable House will take immediate steps to give effect to the recommendation of the Royal Commission and the Public Works Committee, by providing the necessary Legislative authority for the carrying out of the aforesaid railway extension to St. James' Road.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 840 signatures.]

Similar Petitions were received,—

On 26th October, 1898, from certain Residents of Sydney and Suburbs; 878 signatures.

“ “ from certain Residents of Sydney and Suburbs; 839 signatures.

3. That it is now admitted on all hands that some provision must be made to bring the great bulk of the railway passengers nearer to the business part of the city.

4. That two Royal Commissions and the Public Works Committee have made inquiry as to the expediency and best methods of extending the railway system of the Colony into the City of Sydney. The Royal Commission appointed in 1896, after most extensive and careful inquiries, and after full consideration of various routes and schemes, and the relative costs thereof, recommended the extension by what is known as the St. James' Road scheme. This recommendation was subsequently endorsed by the Public Works Committee, and a full report of the evidence on which the same was based was laid before your Honorable House.

5. This scheme would afford facilities for an extension to the Circular Quay, to the Eastern Suburbs, and to North Sydney.

6. That in view of the foregoing, and particularly of the imminent danger to which the travelling public are daily exposed at the present terminus, it is most respectfully submitted that the work of extending the railway into the city should not be delayed a day longer than is absolutely unavoidable.

Your Petitioners, therefore, humbly pray that your Honorable House will take immediate steps to give effect to the recommendation of the Royal Commission and the Public Works Committee, by providing the necessary Legislative authority for the carrying out of the aforesaid Railway Extension to St. James' Road.

And your Petitioners, as in duty bound, will ever pray.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EXTENSION OF THE RAILWAY INTO THE CITY OF SYDNEY.

(PETITION FROM CERTAIN CITIZENS OF SYDNEY AND SUBURBS IN FAVOUR OF.)

Received by the Legislative Assembly, 27 September, 1898.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Citizens of Sydney and Suburbs,—

HUMBLY SHOWETH:—

1. That in consequence of the large and increasing traffic on the railways it is found that the present terminus is wholly inadequate, so much so as to be a continuous source of danger to every railway passenger to or from Redfern Station.

2. That this danger has been pointed out by the Railway Commissioners in such manner as to practically relieve themselves of all moral responsibility in regard to future risks.

3. That it is now admitted on all hands that some provision must be made to bring the great bulk of the railway passengers nearer to the business part of the city.

4. That two Royal Commissions and the Public Works Committee have made inquiry as to the expediency and best methods of extending the railway system of the Colony into the City of Sydney. The Royal Commission appointed in 1896, after most extensive and careful inquiries, and after full consideration of various routes and schemes, and the relative costs thereof, recommended the extension by what is known as the St. James' Road scheme. This recommendation was subsequently endorsed by the Public Works Committee, and a full report of the evidence on which the same was based was laid before your Honorable House.

5. This scheme would afford facilities for an extension to the Circular Quay, to the Eastern Suburbs, and to North Sydney.

6. That in view of the foregoing, and particularly of the imminent danger to which the travelling public are daily exposed at the present terminus, it is most respectfully submitted that the work of extending the railway into the city should not be delayed a day longer than is absolutely unavoidable.

Your Petitioners, therefore, humbly pray that your Honorable House will take immediate steps to give effect to the recommendation of the Royal Commission and the Public Works Committee, by providing the necessary Legislative authority for the carrying out of the aforesaid railway extension to St. James' Road.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 856 signatures.]

A similar Petition was received on 28th September, 1898, from certain Residents of Sydney and Suburbs; 902 signatures.

NEW SOUTH WALES.

McSHARRY v. THE RAILWAY COMMISSIONERS.

(LETTER FROM THE CROWN SOLICITOR, DATED 6 MAY, 1898, *IN RE.*)

Printed under No. 6 Report from Printing Committee, 13 October, 1898.

The Crown Solicitor to The Under Secretary for Public Works.

McSharry v. The Railway Commissioners.

Dear Mr. Hickson,

Crown Solicitor's Office, Sydney, 6 May, 1898.

Referring to the conversation with the Minister this morning relative to the leader in yesterday's *Daily Telegraph*, I understand that Mr. Young is inclined to have an answer published; if he should do so, the two points discussed can be very easily disposed of. In the first place, there is no known method by which either the Railway Construction Branch of the Works Department, or the Railway Commissioners themselves, could have shortened the arbitration, except at the expense of making McSharry a present of the verdict. The plaintiff, by his counsel, sets before the Arbitrator the whole of his claims, and enters upon the evidence in support of them, and the defendant, when his turn comes, must go over the same ground, and follow the plaintiff, wheresoever he leads; that is to say, if his object is to make a successful defence. It is a matter for the presiding Arbitrator, who has the conduct of the arrangements in Court, to prevent the proceedings being unduly protracted. I should mention that if this were a trial at *nisi prius* the jury fees would have to be taken into account, and you would have to consider whether a jury of four or twelve men could sit continuously for months.

The Department really had no voice in the matter when the case was sent to arbitration by the Judge's order, of date the 18th December, 1895; for it was compulsory. Under the present system such a case as this cannot be tried before a Judge and jury. There would require to be an extra Judge appointed, and special provision made for the trial of lengthy cases; whereas there may be no similar action brought again. The McSharry case is unique.

The following is a copy of the section of the Arbitration Act under which the above-mentioned order was made:—

"12. In any cause . . . if it requires any prolonged examination of documents or any scientific or local investigation which cannot, in the opinion of a Court or a Judge, be conveniently made before a jury, or conducted by the Court through its other ordinary officers, or, if the question in dispute consists wholly or in part of matters of account, the Court or a Judge may, at any time, order the whole cause . . . to be tried before an Arbitrator agreed on by the parties."

Yours, &c.,

GEO. COLQUHOUN,
Crown Solicitor.

P.S.—The *Telegraph's* leader could not but be incorrect and misleading, for it deals with a subject of which the Pressman is entirely ignorant.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MCSHARRY v. THE RAILWAY COMMISSIONERS.

(STATEMENT OF THE VARIOUS STEPS IN THE CASE OF (COOTAMUNDRA-GUNDAGAI CONTRACT),
RESPECTING THE APPOINTMENT OF ARBITRATORS.)

Printed under No. 6 Report from Printing Committee, 13 October, 1898.

Statement of the various steps in the case of McSharry v. the Railway Commissioners (Cootamundra-Gundagai Contract) in regard to the appointment of Arbitrators.

AFTER issue had been joined it was conceded by both parties that the case would have to go to arbitration, more especially as section 12 of the Arbitration Act of 1892 now enables the Judges to decline to enter upon the trial of intricate cases such as this, involving a protracted examination of accounts.

In the previous case, although briefs had been delivered for the trial, the case was sent to arbitration at the last moment, when the parties assembled in Court, and after some remarks by the presiding Judge.

Mr. McSharry, on the 8th August, 1895, had an interview with the Crown Solicitor, and next day, by letter, nominated certain gentlemen for the appointment of Arbitrator. The first three were Messrs. Barton, Thornloc Smith (Brisbane), and C. G. Heydon.

After hesitating for some time the Government desired plaintiff to accept Dr. Sly. (Letter, 6th September, 1895.)

Eventually Mr. Heydon was agreed upon, and an order was made by the Court, by consent, on the 18th December, 1895, appointing him sole Arbitrator. [*Copy appended.*]

No arrangement at all was made between the parties and Mr. Heydon as to his fees, mainly because his time was occupied in clearing off interlocutory applications for discovery, particulars, &c., and, in fact, he never entered upon the hearing of evidence in the arbitration proper.

Mr. Heydon resigned his position on the 4th May, 1896, the reason stated by him being that he had received a message from the plaintiff intimating that he was dissatisfied with Mr. Heydon. Mr. Heydon estimated his fees at 60 guineas for about four months work hearing Chamber applications two or three times a week, generally after 4 o'clock, sometimes till late at night. We paid him 30 guineas apiece.

Another correspondence then ensued, the Government naturally being disinclined to go out of their way to suit Mr. McSharry's fancies in regard to Arbitrators. Plaintiff again refused to accept Dr. Sly.

On the 10th June, 1896, the Crown Solicitor invited plaintiff to make application to the Court to select and appoint an Arbitrator, as we had failed to agree.

There were then numerous interviews, and finally the Premier instructed the Crown Solicitor to agree to Mr. Barton. [*See letter herewith of 12th June, 1896.*]

The order was drawn up and signed on the 19th June. [*Copy herewith.*]

On the 22nd June, 1896, when we were about to go before Mr. Barton to fix a day for the hearing, Mr. McLaughlin told me that he had talked over the matter of fees informally with Mr. Barton, who wished to know what he would receive for his work, and that he had told Mr. Barton that he was of opinion that the rate should be fixed at 25 guineas per diem; and I have a note in my diary that Mr. Barton, on the same day when the conference was over, referred to this matter of fees, which had been mooted between himself and Mr. McLaughlin, and told me that he thought the Court, if referred to, would be inclined to sanction 25 guineas per diem. At this appointment Mr. Barton asked Mr. McLaughlin and myself to give him an estimate of the length of time the arbitration would occupy. Mr. McLaughlin reckoned sixty days—the same as the previous similar hearing before laymen, whilst I set it down at fifty days. In the event, it ran for 323 days, spread over twenty-three months. [*See Memo. annexed.*]

Then followed the two letters to the Department (*herewith*), and the rate above mentioned was agreed upon. It was calculated at that time that the Government share of the total payments to Mr. Barton for fifty days would be £687 10s.

It will thus be seen that the question of fees had been discussed between Mr. Barton and Mr. McLaughlin at or before the appointment; for Mr. Barton, properly enough, wished to know whether it would pay him to devote his time for two or three months exclusively to this case; but the rate of pay was not definitely decided until after the date of the order. It was fixed, however, before Mr. Barton entered upon the arbitration, which commenced 20th July, 1896.

A statement of the circumstances surrounding the claim for fees subsequent to the hearing is contained in the two letters herewith, dated 22nd August and 8th September last—and the last document in the matter is the telegram of 19th September, 1898.

H. P. CURTIS,
Managing Common-Law Clerk.

Appointment

Appointment of The Honorable C. G. Heydon, as Sole Arbitrator.

In the Supreme Court of New South Wales.

No. 524, A.D. 1894.

Between James McSharry, plaintiff, and the Railway Commissioners of New South Wales, defendants.
The 18th day of December, in the year 1895.

UPON reading the summons, dated the 30th day of November last, to refer this action to arbitration and the affidavit of the abovenamed plaintiff, James McSharry, sworn on the 30th day of November last with the annexure thereto filed in support of the said summons, and the affidavit of George Colquhoun, sworn on the 3rd day of December instant with the annexures thereto, and filed in opposition to the said summons, and upon hearing Mr. O'Connor, of counsel for the abovenamed plaintiff, and Mr. Bruce Smith, of counsel for the abovenamed defendants, and in pursuance of the arbitration Act of 1892, I do order that this action and the issues joined therein, and all matters therein in dispute between the parties thereto, subject to the reservations hereinafter provided by, and they are hereby referred to the Honorable Charles Gilbert Heydon, barrister-at-law, in the Colony of New South Wales as Arbitrator, to be tried by him under and in accordance with the said Act and the regulations thereunder. The said Arbitrator in his award to find specially for plaintiff or defendants as the case may be, on each count of the declaration, or part of such count where in the opinion of the Arbitrator the same is divisible, and on each item of the thirteen several particulars under the fifth count respectively, such award to be made and published in writing within one calendar month from the close of the said arbitration, and to be transmitted to the Prothonotary, and afterwards entered as the verdict in this cause, under, and in accordance with the said Act and the regulations thereunder; and I do further order that the said Arbitrator shall be at liberty to employ from time to time, and at such times as he shall think fit, a shorthand writer or shorthand writers for the purpose of taking down in shorthand and transcribing the evidence taken before him the said Arbitrator, and I do further order that the costs of this action so far as it has proceeded, and the costs of the arbitration hereby ordered, and the award thereon and incidental to the said action, arbitration, and award shall follow the verdict to be entered as aforesaid, such costs to be taxed in the ordinary way according to the practice of the Supreme Court provided that in the taxation of witnesses expenses the Prothonotary shall not allow more than seven days subsistence in each, of each witness examined once only during the said arbitration, and not more than fourteen days subsistence in the case of any witness examined more than once, unless in cases where the Arbitrator certifies under his hand that the detention of the witness for a longer period than seven or fourteen days as the case may be was necessary; and I do further order, that in the event of the said Arbitrator declining to act, or dying before he shall have made his award the said parties may, or if they cannot agree, this Honorable Court may upon application by either party, appoint a new Arbitrator; and I further order that the costs of and incidental to this application and order shall be costs in the cause to both parties.

FREDK. M. DARLEY, C.J.

John McLaughlin, plaintiff's attorney, 118, Pitt-street.

The Crown Solicitor to The Under Secretary for Finance and Trade.

McSharry v. The Railway Commissioners.

Sir,

Crown Solicitor's Office, Sydney, 12 June, 1896.

Referring to the interview with you this afternoon, I have the honor to inform you that I am now of opinion that it would not be expedient for the Government to continue to oppose the appointment of Mr. Barton as Arbitrator in place of Mr. Heydon in this case.

On the 9th instant, in a letter to the Minister for Works, I mentioned that I did not think any local barrister should be appointed; but since that time, and after having had an interview with Mr. Barton himself, and upon further deliberation, I have come to the conclusion that the only course now open to the Government is to concur in his appointment. There are a number of reasons that I cannot express within the limits of a letter, but I may say that it would be better to have Mr. Barton appointed now *by consent* than for the Court to select him on plaintiff's nomination. I have no doubt this is what would happen, and there is nothing to be gained by further opposition.

I should be glad if the Premier and the Minister for Works could instruct me hereon by Monday next, as Mr. McLaughlin is anxious to get a final answer immediately.

I have, &c.,

GEO. COLQUHOUN,
Solicitor.

The Under Secretary for Finance and Trade.

The Hon. The Secretary for Public Works.—G.H.R., 15. I concur in Mr. Barton's appointment.—G.H.R., 15. The Under Secretary for Public Works.—F.H., 15/6/96. Submitted for approval. Approved.—J.H.Y., 15/6/96. The Crown Solicitor.—J.No.P., 15/6/96. For Under Secretary for Public Works and Commissioner for Roads.

Appointment of Mr. Edmund Barton, Q.C., as Sole Arbitrator.

No. 524, A.D. 1894.

In the Supreme Court of New South Wales.

Between James McSharry, plaintiff, and The Railway Commissioners of New South Wales, defendants.

Friday, the 19th day of June, in the year of our Lord 1896.

UPON reading the order of reference made herein on the 18th day of December, 1895, and the affidavit of Albert Johnston Williams sworn herein on the 19th day of June instant, and the consent of the defendants' attorney endorsed hereon; and upon hearing Mr. John McLaughlin, the attorney for the plaintiff, I do order that Mr. Edmund Barton, Queen's Counsel, be and is hereby appointed Arbitrator under the above-mentioned order of Reference in the place or stead of the Honorable Charles Gilbert Heydon.

FREDK. M. DARLEY, C.J.

John McLaughlin, plaintiff's attorney, 118, Pitt-street, Sydney.

I consent to this order.—GEO. COLQUHOUN, Crown Solicitor, defendant's attorney.

Time

The Crown Solicitor to The Under Secretary for Public Works.

McSharry v. the Railway Commissioners.

Sir,

Crown Solicitor's Office, Sydney, 24 June, 1896.

I have the honor to report that an order has been made by the Court, appointing Mr. Barton Arbitrator herein in the place of Mr. Heydon, and we are engaged arranging the preliminaries for the hearing.

During the last few days the matter of the fees to be paid to the Arbitrator has been informally discussed, and it seems to be recognised that the parties should give Mr. Barton some idea of the amount to be ultimately decided upon when the award is made. The Arbitration Act requires the remuneration to be determined by the Court, but it is not likely that any decision would be come to in this heavy arbitration without the parties being consulted by the Chamber Judge who deals with the matter.

Mr. McLaughlin has intimated that he thinks Mr. Barton should receive 25 guineas per diem, bearing in mind that he intends to set aside the whole of his practice during the time this arbitration lasts.

I am desirous of taking the Government's instructions on this subject, and perhaps the Minister can confer with the Premier and let me know shortly whether I am at liberty to concur in Mr. McLaughlin's proposal. It may be that we shall be under some small disadvantage if we remain silent after plaintiff's attorney has suggested a liberal fee. The Government, however, may prefer to leave the matter entirely to the Court, and it is open to them to do so.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

Submitted.—R.H., 24/6/96.
Solicitor.—R.H., 24/6/96.

May be left entirely to the Court.—J.H.Y., 24/6/96. Crown

The Crown Solicitor to The Under Secretary for Public Works.

McSharry v. Railway Commissioners.

Sir,

Crown Solicitor's Office, Sydney, 6 July, 1896.

I have the honor to inform you that the date has been fixed for the hearing of this arbitration, viz., 20th instant, and at a meeting before the Arbitrator on the 2nd instant the question of the amount of his fees cropped up again for discussion. Mr. Barton plainly intimated that in a case of this kind the parties ought to let him know at once what amount of remuneration they were prepared to pay him for devoting many weeks to this case, instead of allowing the whole question to stand over until the making of the award. It was conceded by plaintiff's attorney and the three counsel present, that some understanding ought to be come to before the case commences; but I had to ask to be permitted to communicate again with the Department before agreeing to any fixed amount for fees.

If you so instruct me, I shall, at the opening of the arbitration, announce that the Government will agree to no stated sum for fees until the hearing is over; but this is a step that I respectfully submit should not be taken without grave consideration, especially in view of the fact that payments may have to be made to the Arbitrator in the course of the proceedings, as it can hardly be expected he should have to wait until the termination of the arbitration before he receives any fees at all.

Of course such fees would have, in the first instance, to be borne equally between the parties, leaving the final adjustment until after an award is made.

It will also be necessary to provide for all regular disbursements in the case, to be halved with the plaintiff, but every care will be taken to keep down such payments to those which are usual and proper and absolutely necessary.

To conduct the case otherwise may result in a loss of many thousands of pounds.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

96-1,640-260. Crown Solicitor, 25/6. May be left entirely to the Court. Submitted.

I saw the Crown Solicitor this morning in connection with this matter, and he informed me that to leave the question of fees to the Court would mean that nothing could be done until the inquiry was closed, and, as it is likely to last for some time, this would not be fair to the Arbitrator, Mr. Barton. Mr. Colquhoun stated that the other side had agreed to a fee of 25 guineas per day, and he recommends the Minister to approve of this on the part of the Crown. He said he was quite satisfied that if the matter was left to the Court a less sum than this would not be allowed.—R.H., Under Secretary for Public Works and Commissioner for Roads, 8/7/96.

I shall be glad if the Crown Solicitor will make a definite written recommendation to the above effect, and also a statement that the day to be paid for as such will consist of six hours work.—J.H.Y., 8/7/96. Crown Solicitor.—R.H., 8/7/96.

I beg to confirm the recommendations made verbally to Mr. Hickson yesterday, and as to the fees per diem, they will be calculated in the same manner as counsel's refreshers—that is to say, a working day is regarded as six hours, including the half-hour or so for luncheon.—Geo. Colquhoun, Crown Solicitor, 9/7/96. The Under Secretary, Department of Works.

Submitted.—R.H., Under Secretary for Public Works and Commissioner for Roads, 9/7/96.
Approved.—J.H.Y., 9/7/96. The Crown Solicitor.—R.H., 9/7/96.

The Crown Solicitor to The Under Secretary for Public Works.

McSharry—Cootamundra—Gundagai

Sir,

Crown Solicitor's Office, Sydney, 22 August, 1898.

I have the honor to forward attached memo. of Mr. Barton's fees, with minute signed by the Attorney-General. I am anxious to obtain instructions with as little further delay as possible.

We are in this position with regard to this matter of the fees: By the regulations under the Act no fees are payable until the award is ready; they are then assessed by a Judge; therefore Mr. Barton and Mr. McLaughlin in discussing the question at the outlet saw that it would be impracticable to follow the rules. Mr. Barton would have declined to act on these terms, as he would have been kept without any payment for over two years. That being so, we arranged to pay at intervals of a month while the hearing lasted. When the evidence concluded, Mr. Barton asked if we were agreeable to his being paid while preparing the award—that plaintiff's party had consented—and I replied through my clerk that defendants would pay their share. The rate and period were not then stated.

Since that time no fees have been paid to Mr. Barton by the Government, although Mr. McSharry has on two or three occasions sent the Arbitrator a cheque for his half without raising any objection whatever.

It is not for me to say that the action of the Government regarding the fees will have any effect on Mr. Barton's mind in making the award, but I should mention that he sends his clerk across three or four times a week for a cheque, and he returns to Mr. Barton empty-handed. I know, of course, that the amount of money the Government have been driven to spend already is outrageous—although small as compared with McSharry's expenditure—but it is unfortunate that we should seem to be running counter to the Arbitrator on the eve of the publication of the award.

With regard to the Attorney-General's minute and the suggestion to consult Sir Julian Salomons, I should have mentioned to Mr. Want that Sir Julian has been consulted—while preparing an opinion for us on the law points in the contract—and has repeatedly discussed the question of fees with my clerk during the last two months. Sir Julian, however, I am sure will refuse to advise definitely, for his mind is so impressed with the figures of the expenditure on both sides that the only consideration with him is how it should be stopped, and he cannot be brought to view the subject from any other aspect; in fact, he directed my clerk to send a notice immediately to Mr. Barton—that was at end of June—intimating that no fees whatever would be payable after 10th June, the last day of sittings in the arbitration. I could not see my way to do that, although it would have afforded pleasure to Mr. McLaughlin and all McSharry's friends:

I am only anxious that both sides of the question should be considered, and I would like to urge an early decision on the part of the Government, for until some specific answer can be sent to Mr. Barton we may possibly be making leeway in the arbitration. I do not say that we are, but a private individual might think so, and would endeavour to avoid it.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

Submitted.—R.H., 24/8/98. I shall be glad if the Crown Solicitor will ask Sir Julian Salomons to advise me on this matter, as suggested by the Attorney-General—J.H.Y., 25/8/98. The Crown Solicitor.—R.H., 25/8/98. Under Secretary for Public Works and Commissioner for Roads. Memorandum by way of reply herewith.—JULIAN SALOMONS, 26/8/98. The Minister told us to-day he consulted Mr. Reid again.—5/9/98.

Under the circumstances now disclosed, I shall be glad to know what the Crown Solicitor himself advises me to do. If he definitely expresses his opinion that these fees should be paid, I am prepared to accept that opinion and authorise the payment. Early attention will, I hope, be given to this.—J. H. YOUNG, Sydney, 7/9/98.

Crown Solicitor.—R.H., 7/9/98.

The Crown Solicitor to The Under Secretary for Public Works.

Sir,

Crown Solicitor's Office, Sydney, 8 September, 1898.

Having carefully considered the Honorable the Minister for Works' minute of the 7th inst., and also the papers thereto attached (all of which are returned herewith), as well as the circumstances in connection with Mr. Barton's memo. of fees of the 20th August last, in relation to his considering award in the McSharry case, and bearing in mind that the plaintiff has recognised and paid his half of a similar amount, I have now the honor to advise that this account be passed and paid, and shall be glad to have instructions in the matter.

I have, &c.,

GEO. COLQUHOUN,

Crown Solicitor.

Submitted.—R.H., 8/9/98.

May be paid.—J.H.Y., 8/9/98.

The Crown Solicitor.—Jno.P.,

for U.S., 8/9/98.

Telegram from Port Macquarie, addressed to Crown Solicitor, Macquarie-street, Sydney.

19 September.

McSHARRY *versus* Railway Commissioners. Take notice that in consequence gross aspersions cast on me by Minister Public Works, your client, I decline receive any further fees as Arbitrator in this case.

EDMUND BARTON.

1898.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TARRAWINGEE RAILWAY LINE AT BROKEN HILL.

(RETURN RESPECTING PROPOSED PURCHASE BY THE GOVERNMENT OF.)

Printed under No. 7 Report from Printing Committee, 13 October, 1898.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 11th October, 1898, That there be laid upon the Table of this House,—

“(1.) All correspondence between any person and the Government in reference to the purchase by the Government of the Tarrawingee Railway Line at Broken Hill.

“(2.) Also all reports by the Railway Commissioners, or any other persons, thereon, with a plan and estimate of the value of such line, and the probable cost of making this line secure for traffic.”

(*Mr. Perry.*)

SCHEDULE.

NO.	PAGE.
1. Minute Paper of the Department of Public Works on the proposal that the Government shall purchase the Tram-line from Broken Hill to Tarrawingee. 13 June, 1898	2
2. Minutes of the Railway Commissioners on the same subject. 7 July, 1898.	3

TARRAWINGEE RAILWAY LINE AT BROKEN HILL.

No. 1.

Minute Paper.

Subject:—Tram-line from Broken Hill to Tarrawingee.—Proposal that the Government shall purchase line; with all reports by Railway Commissioners and other persons, &c.

Department of Public Works, Sydney, 13 June, 1898.

THIS line, which was constructed by a private company (the Tarrawingee Flux and Tramway Co., Limited), was completed in 1891, and forms an extension of the Silverton tramway through Broken Hill. The distance from Broken Hill to Tarrawingee is under 39 miles; but from a report by Mr. Alexander in May, 1892, it appears that the total length of rails laid, including sidings, was 40 miles 4 chains 16 yards, the general direction of the line being nearly due north from Broken Hill.

In May last, Mr. Ferguson, M.P., represented to the Minister that the Tarrawingee Flux Company had called tenders for taking up this line, and as it was considered that it afforded considerable advantages to the Mount Browne people, and it was probable the company would sell at a very low figure, he suggested that it might be advantageous for the Government to purchase, and allow it to be worked under arrangement with the Silverton Tram Company.

A telegram was accordingly sent to the Secretary of the Flux Company in Melbourne, inquiring what amount would be accepted for the line as it stood, and a reply was received stating that they would take £15,000 for the works, including two large tank-dams, which had hitherto given an unfailing water-supply. It was also stated that the total first cost of line and tanks was £126,000.

A further telegram was then sent to the Secretary on 4th May, 1898, stating that if the company would put the line under offer to the Department for one month for purposes of inspection, &c., the matter would be considered, and a reply, dated 5th May, 1898, was received, agreeing to this course, and urging an early decision.

Mr. Alexander, who had inspected the line just after its completion, visited the locality and furnished a report on 18th May, 1898, in which he stated that the maintenance of the line had been very well attended to generally, the greatest deterioration being in the sleepers, which are chiefly of jarrah and karri timber, and as the result of his observation and inquiries he came to the conclusion that the limit of life had been nearly reached so far as the karri sleepers were concerned; the workmanship and construction of the line generally appeared to have been satisfactory; the rails (steel, 41 lb. to the yard) were in good order; the timber in the bridges was in fairly good condition; and he believed the revenue that may fairly be expected from the line would exceed the working expenses, apart altogether from the cost of renewals and additions of all kinds.

All the plant had been removed, and the bare line, with the two dams above mentioned, were left.

The arrangement which had existed between the Flux Company and the Silverton Tram Company as to the working of the line by the latter, are detailed in Mr. Alexander's report, and that officer estimates that to put the line in thorough working order there would be required—

Sleeper renewal	£14,000
Bridge timber renewal	500
Water-supply plant	500
Sheds and shelter	500
							£15,500

After perusing Mr. Alexander's report, the Minister asked the Railway Commissioners to furnish any information they might have as to the condition of the line and probable traffic to be expected if it were taken over, and in reply a letter was received stating that they had no information on either point. It was further pointed out that while there was no doubt the line was of considerable benefit to the residents of that part of the Colony who make use of it, the Commissioners could not recommend it be taken over and incorporated with the Government railway system.

In order to arrive at some idea as to the probable cost of working the line, communication was opened with the Silverton Tramway Company, and a reply has been received (see letter of 3rd instant 93/183, R.C.B.), in which that company expressed their willingness to undertake the working, maintenance, &c., on the terms set forth therein.

The Minister thereupon asked the Railway Commissioners to say whether the terms offered were reasonable, on the assumption that the Government decided to purchase, and in reply the following minute has been written by them:—

“From the limited information now before the Commissioners it would appear that the purchase of the line would result in considerable loss. The matter, however, could only be satisfactorily dealt with after having the line inspected and its condition reported upon, and the probable traffic ascertained.

“If the Minister for Works desires it the Commissioners will send reliable officers to investigate both matters.”

I shall be glad if the Railway Commissioners will send reliable officers to investigate these matters as early as possible. The Premier concurs with me in desiring that this should be done.—J.H.Y., 22/6/98.

The Secretary, Railway Commissioners.—R.H., Under Secretary for Public Works and Commissioner for Roads, 22/6/98. I enclose minute by Railway Commissioners and reports.—H.M.C.L., 7/7/98. Under Secretary for Public Works.

No. 2.

No. 2.

Minutes of The Railway Commissioners.

Tram-line from Broken Hill to Tarrawingee.

Office of the Railway Commissioners of New South Wales, Sydney, 7 July, 1898.

The Hon. the Minister for Public Works,—

FOLLOWING our previous minutes on the subject of the purchase of the Tarrawingee tramway, we now forward reports submitted by the two officers who were sent to the district to inquire into the condition of the line and the prospects of traffic.

These reports confirm the opinions we have already expressed—that the line would not be a remunerative one, and that it would not be desirable to purchase with a view to considering it as part of the general railway system of the Colony.

We recognise that the working of the line would be of material advantage to pastoralists and others in the surrounding country, and also for recreation purposes to the people of Broken Hill; and if the Silvertown Tramway Company would consent to lease it for a term of years, paying the Government a fair rental, and keeping the line in order, it might, no doubt, assist a more favourable consideration of the matter; but under the exorbitant terms they have submitted the purchase of the line must involve loss.

It may be added that, if the line is taken up, the material will not realise more than one-half the sum now asked for.

CHARLES OLIVER,
Chief Commissioner.
DAVID KIRKCALDIE,
Commissioner.

Forwarded for the information the Honorable the Treasurer.—R.H., Under Secretary for Public Works and Commissioner for Roads, 7/7/98. The Under Secretary for Finance and Trade. Already promised to submit to Parliament.—G.H.R.

No. 2a.

Statement of the Cost of Providing Requisite Accommodation, &c.

Tarrawingee Flux Company's Tramway.

Cost of providing requisite accommodation for traffic and loco. purposes, and carrying out the special renewals required:—

	£	£
1. Booking, passenger, and goods-shed accommodation at Tarrawingee...	500	
2. Loop for local traffic at McCulloch Park	120	
3. Sheep-trucking yards, Tarrawingee	150	
4. Engine tanks, pumping appliances, &c.	700	
5. Signals, McCulloch Park and Tarrawingee	300	
6. Renewal of sleepers—expenditure to be spread over five years ...	17,000	
7. Renewal of bridge-girders, &c.	2,800	
8. Equipment of fettling gangs	150	
	<u>£21,720</u>	
Add sale price of line at Tarrawingee Company's offer	15,000	
	<u>£36,720</u>	
Or about £900 per mile.		
Revenue—		
From passenger and goods traffic	2,000	
From excursion traffic	1,000	
	<u>3,000</u>	
Expenditure—		
For working ordinary traffic	3,120	
For working excursion traffic	500	
Interest, at 3 per cent., on £36,720	1,101	
	<u>4,721</u>	
Loss		<u>£1,721</u>

No. 3.

Report of Mr. W. H. Colquhoun to the Secretary to The Railway Commissioners.

Tarrawingee Flux Company's Tramway.

Sydney, 5 July, 1898.

I BEG to report that, as directed, I proceeded to Broken Hill with Mr. Fraser on Thursday, 23rd June, to look into the revenue and working arrangements of the Tarrawingee tramway.

Revenue.

Revenue.

According to the Tarrawingee Company's statements, the revenue for the last three years from traffic carried for the public has been as follows:—

	Years ended 31st December,		
	1897.	1896.	1895.
Passengers, parcels, &c.	£1,293	£1,577	£1,843
Mails	267	267	275
Special trams	962	178	262
Goods	751	785	1,614
Wool	274	425	516
Live stock	83	140	16
Total	£3,630	£3,372	£4,526

These figures include the revenue from traffic for and from the township of Tarrawingee, where about 200 men, employed in the quarries, resided. Now that the quarries are closed the township has almost disappeared, only an hotel, police barrack, and a few cottages remaining.

I went through the traffic for the year 1897, with a view to determine the revenue that was not dependent on the township, and found it to be about as follows:—

Passengers, parcels, &c.	£725
Mails	267
Special trams (McCulloch Park traffic)	1,124
Goods—Outwards, £354; inwards, £236	590
Wool	274
Live stock	83
Total	£3,063

It was, of course, impossible to distinguish the passenger traffic belonging to the district, and it is also difficult to estimate what it would yield. It is at present carried by a coach, which runs twice a week; but it is stated that many people who would use the tramway now drive their own vehicles. The passenger revenue would not, I consider, exceed £600, and the receipts from parcels, &c., would probably be about £125.

The Postal Department paid £400 per annum for the conveyance of mails three times per week, and one-third of this amount was allowed by the Tramway Company to the former coach proprietor. At present only £130 per annum is being paid by the Postal Department for two trips per week by coach.

The revenue from special trams was chiefly earned in carrying passengers to and from McCulloch Park, a recreation ground about 10 miles from Broken Hill, where the athletic and other organisations hold meetings. During the year the park was used on twenty-one occasions (*Return A*); but four of these were band picnics, held on Sundays. The McCulloch Park Co., who have spent about £1,200 in improvements, recently issued a prospectus (copy attached) for the purchase of the tramway as far as Stephens' Creek (9 miles), which, it appears, had been offered to them for £2,500 only.

The outwards goods traffic consisted chiefly of station stores, and included a considerable quantity of fencing wire. These goods were all charged at the rate of 10s. per ton, and, as they were weighed together, it was not possible to obtain the weight of each class. Among the outwards traffic was 123 tons of chaff, chiefly required on account of the drought.

In the inwards goods traffic the largest item was firewood, which was, however, nearly all carried during the last four months of the year, being part of a contract for a supply to the mines. The inwards sundries include some heavy machinery from Corona station, which was an exceptional consignment.

Returns enclosed (B) showing the tonnage of goods traffic for each month, and the revenue under the various headings.

The wool traffic was, owing to the drought, lighter in 1897 than in either of the preceding years. The number of bales was 3,861, and the weight 606 tons. Return enclosed (C) showing the stations from which it was received, and also a list, furnished by Mr. Brougham, of stations whose wool, he considers, could be brought over the line.

The live-stock traffic is light, and consists principally of stud sheep and a few consignments of fat stock for the Broken Hill and Adelaide markets.

The line as it stands at present would serve a district almost exclusively devoted to pastoral pursuits, which, owing to the limited rainfall, is not suitable for agriculture. The increasing of the wool traffic by securing additional clips is uncertain. When the Flux Company was in operation, teamsters had difficulty in obtaining water at Tarrawingee, but it is stated that this has now been overcome. It is to be feared, however, that many teamsters would, after a long trip, prefer to come to Broken Hill to remaining at a small township only 40 miles away, and some of them would probably compete with the railway rates for the short additional distance. There is also the river competition to be taken into account.

Some stress was laid on the mineral wealth of the district, and it is of course impossible to say what developments may occur, but the scarcity of water has also been a hindrance in this direction.

The passenger and goods traffic on the line would naturally fluctuate according to the seasons; but, supposing the present rates to be maintained, I do not think it could be relied on to yield more than £2,000 per annum, and an additional £1,000 could probably be earned from the traffic to McCulloch Park, provided no counter attraction arises.

Fares and Rates.

A return is enclosed (D) showing the comparison between the tramway rates and those for a similar distance (40 miles) on the New South Wales railways. The former are generally higher, except those for wool, which are, however, part of a through rate. In the petition from Broken Hill it is stated that prohibitive rates were charged which were three times as much as on any Government railway, and the petitioner's estimate of the probable traffic is based on the assumption that "reasonable" rates will be charged.

Working

Working arrangements.

The line is a continuation of the Silverton tramway, and commences about a mile north of that company's goods station at Broken Hill; there is no terminus or siding accommodation of any kind at Broken Hill.

If the line were worked by the Commissioners it would be necessary either to equip it with rolling stock (3 ft. 6 in. gauge), which would add to the capital cost, or to hire stock from the Silverton tramway or the South Australian railways, and passenger stock could hardly be provided or obtained to deal with the excursion traffic, which would be one of the chief sources of revenue. This traffic has usually been carried in ordinary goods waggons, fitted with forms or sleeper seats.

It would also be necessary either to provide a terminus at Broken Hill or to pay the Silverton Tramway Company for the use of their line and terminus. I spoke to Mr. McNicol, secretary to the company, with regard to using their line, but he could not state the terms without consulting his Directors.

In view of these disadvantages and the small ordinary traffic, it appears to me that the question of the Commissioners working the line could not be entertained.

The Silverton Tramway Company have offered to work the ordinary traffic by two trains per week for 7s. 6d. per train mile, not including cost of permanent-way material or damage by floods. The annual cost would be—8,320 train miles at 7s. 6d. = £3,120.

When in Melbourne I spoke to Mr. McNicol respecting the charge of 7s. 6d. per train mile, which he admitted was a high one, and he said he would consult his Directors, and as he expects to be in Sydney on or about Monday, 11th instant, he will call upon the Commissioners and say whether any other proposal can be made.

The Tramway Company ask 15s. per tram mile, equal to £15 per tram, for working the McCulloch Park traffic. This would, in some cases, exceed the receipts, and generally, so far as I am able to judge, the charge would amount to about half the revenue.

Under these arrangements the result of working would probably be:—

Revenue:—From passenger and goods traffic	£2,000
From excursion traffic	1,000
		£3,000
Expenditure:—For working ordinary traffic	3,120
For working excursion traffic	500
Interest at 3 per cent. on £36,720	1,101
		4,721
Loss	£1,720

It may be mentioned that under the Silverton Tramway Company's arrangement with the Flux Company they worked the ordinary traffic for half the revenue, and they also received half the revenue from excursion traffic after deducting their charge for the special trams, but they also worked the flux traffic, of which 7,000 or 8,000 tons per month was forwarded.

Mr. McNicol stated that his company would not entertain any proposal to lease the line unless they were secured against loss by a guarantee on a train-mileage basis.

W. H. COLQUHOUN.

PROSPECTUS of the McCulloch Park and Tramway Company (Limited). To be registered under "The Companies' Act.")

Capital—£5,000, in 5,000 shares of £1 each.

1,500 shares fully paid up are to be issued to the Vendors (The McCulloch Park Association) for the purchase of their interest in the McCulloch Park and their rights, who also guarantee to take 1,000 of the contributing shares.

3,500 shares are to be issued to the public on the following terms:—5s. on application and 5s. on allotment, and the balance by calls of 1s. per share every second month (if required.)

If the company be fully formed the Directors for the ensuing year will be appointed by the new company.

Provisional Directors:—A. Stenhouse, Esq.; Geo. Strachan, Esq.; W. F. DuRieu, Esq.; J. Sully, Esq.; W. J. Biggs, Esq.; G. W. Simpson, Esq.; A. E. Nott, Esq.

Bankers:—The Bank of Australasia.

Secretary:—Herbert T. F. Sayers, Esq.

OBJECTS.

The company is being formed for the purpose of—

First.—Taking over from the "McCulloch Park Association" all their right and interest in and to a Special Lease from the Crown for twenty-eight years of 18 acres of land, situated at Stephens' Creek, distant 9 miles from Broken Hill—the land is fully fenced with a substantial ring fence, and is subdivided—together with grand stand, with luncheon and dance rooms and necessary appointments, booths, running track, bicycle course, and other improvements,—the whole of which have been recently completed, at a cost of £1,200.

Secondly.—To purchase from the "Tarrawingee Flux and Tramway Company," the railway line laid down from Broken Hill to a point on Stephens' Creek, close to the Park, the whole of which is at present in good repair; and to acquire all the rights of the company to carry passengers and freight over the line, and all other rights relating thereto conferred upon the company by its Act of Incorporation.

The McCulloch Park Association (the vendors) have entered into an agreement with the Tarrawingee Company, which, having ceased operations and going into liquidation, had determined either to sell or take up the whole of the railway line from Broken Hill to Tarrawingee, for the sale of the section of the line to Stephens' Creek, and its rights in respect thereto, to the company now to be formed for the sum of £2,500, which sum is to be paid out of the capital.

The line has only been laid down for upwards of seven years, and is reported by experts to be fit for traffic with but little repair for some years to come. Its original cost was £2,000 per mile, or upwards of £18,000 for the 9 miles. The line is laid with the best steel rails, 40 lb. to the yard, and the present value of the rails as second-hand is computed at £2,500—the amount of the purchase money for the line; in other words, the company is afforded the chance of securing the line in good working order for the value of the rails alone.

The "McCulloch Park Association" during the last twelve months, under an agreement with the Silverton Tramway Company (Limited), arranged with it to carry passengers to and from the Park at the following rates:—Adults, 1s., and children, 6d. return. The gross receipts by the tramway to the creek for twelve months under this agreement amounted to no less a sum than £1,866 14s., as certified by the tramway books.

If the present company forms, arrangements have been made with the Tramway Company to supply engines, carriages, and rolling-stock, as before, and to run trains as required at the following rates:—Return, adults, 6d., and children, 3d.

It is proposed to issue return tickets for the Park, with right of admission to the grounds, as follows:—Adults, 2s.; children, 1s., the company receiving of these amounts 1s. 6d. and 9d. respectively.

The want of pleasant recreation grounds within easy distance is felt by all classes of the community. In nowhere in the colonies is there a town of the size and importance of Broken Hill without its park and recreation reserves, provided at the expense of the Government, such adjuncts being looked upon as the lungs of the city to which they belong, and as absolute necessities for the public health, Broken Hill with its trying climate and dust being the one exception; and there is no room for doubt that such a place of enjoyment as "The McCulloch Park" provides will be even more liberally patronised in the future than in the past.

The business of the company will be to run trains as occasion arises on Wednesday, Saturday, and Sunday afternoons, and during the hot summer months special moonlight excursion trains; to provide racing tracks for foot-racing and bicycles; grounds for cricket and football, and other athletic sports, with pavilions for dancing, &c., and to promote those sports and pastimes; to provide continental concerts and open-air musical entertainments. The

The Park contains a practically never-failing supply of good water, and the intention is to plant the land with ornamental shade trees and flowering shrubs, and make it in reality a park and pleasure ground. In addition to the above the company retain the right to carry passengers to the Broken Hill Show Grounds, which in itself will be a source of profit, and at a small cost a loop or branch line can be laid down connecting with the Broken Hill Racecourse.

Apart from the fact that the company will be conferring a great boon upon the community by providing a place of healthy recreation within at the most an hour's journey by rail, and at charges which will be within the reach of all, the object is to make it a sound paying investment, and as such it is confidently recommended to the public for the following reason: Basing the income of the year upon the Tramway Company's receipt of £1,866 for twelve months at 1s. and 6d. respectively, the return to the McCulloch Park Company at 1s. 6d. and 9d. will amount to upwards of £2,488, or a return of 100 per cent. upon its capital, and after deducting all costs of management, repairs, and other expenses, should leave a splendid return, far in excess of any mining speculation, and without any of the latter's attendant risks.

Application for shares are to be made in the form attached, to the Secretary, who will furnish any further particulars or information desired.

In the event of the company not floating, all deposits paid on application will be returned in full.

Immediate application for shares is necessary, as the time for completion of the contract with the Tarrawingee Flux and Tramway Company is limited.

THE McCULLOCH PARK AND TRAMWAY COY. (LTD.)

APPLICATION FOR SHARES.

To the Secretary,—
Please allot me
the allotment fee of

shares in the above company, in terms of the prospectus, and enclosed please find
, at the rate of 5s. per share.

(Signature of applicant).

(Name in full).

(Occupation).

(Address).

Date,

In the event of the company not being floated application money returned in full.

No. 4.

Report of Mr. James Fraser upon the Railway Line between Broken Hill
and Tarrawingee.

Sydney, 4 July, 1898.

THIS line starts from a junction with the Silverton Tramway Co.'s line at a point about 1 mile from the main Broken Hill Station, and runs northward to Tarrawingee, a distance of 39 miles 50 chains. The gauge is 3 ft. 6 in., maximum curvature, 15 chains; maximum gradient against up-loading 1 in 70, and against down traffic 1 in 50.

The line is practically unfenced throughout, though within the town boundaries a little fencing has been done to prevent stray animals gaining access to it. Elsewhere no fencing is provided, though where run or paddock boundary fences cross the line, cattle stops of good design are provided to preserve the continuity of these fences.

The line has been well constructed, being for the most part on low embankment, which ensures good drainage of the road-bed, and a sufficient area of waterway has been provided for all but exceptionally heavy rainfalls. The waterways are practically all of one type, abutments and piers being of cement concrete with hardwood girders on timber bed-plates and open sleeper deck.

The permanent-way consists of 41 lb. steel T rails laid on sleepers 6 ft. 6 in. x 8 in. x 4 in. spaced 1 ft. 11 in. at the joints, and 2 ft. 9 in. centre to centre through the rail length bedded upon sand ballast, which has an average depth of 4 inches under the sleepers, and is also filled in between and over their surfaces.

The line, though unused for some six weeks past, is in very good running order, having been kept to good line and level; and it is clear that, with a light traffic, maintenance in good running order could be economically continued. The rails are in very good order, but heavy renewals of sleepers would be necessary during the next four or five years. The sleepers generally are of karri timber, with a few of jarrah and South Australian gum. The two latter timbers are standing well, but a heavy percentage of the karri show signs of decay, and the whole of these would require renewal within five years.

The bridge timber, also of karri, is generally in fair order, though I found several girders and planks badly infested with and damaged by white ants, and immediate renewal of these would be necessary.

If the material in the permanent-way and bridges were all perfect, I consider the line could be maintained in good running order to carry a traffic of two trains each way weekly by two gangs of three men each with a foreman in charge of the whole length; but seeing that resleeping must be commenced at once, it would be necessary to ensure this work being carried on with sufficient expedition to appoint three gangs of four men each, with a foreman in charge, and a supply of about 60,000 sleepers would be necessary to replace those that are defective.

The bridge timbers should be replaced gradually by steel girders which would cost no more than timber, and would be practically everlasting in this dry climate.

Accommodation for Traffic.

Loop sidings, each capable of holding about sixty waggons, are provided at Maybell (14 miles from Broken Hill), and at Thompson's Dam (26 miles from Broken Hill), while at Tarrawingee, three loops are provided in the yard, and the sidings to the limestone quarries have been left in. As the yard loops would accommodate over 150 waggons, there is at Tarrawingee a sufficient length of sidings for a considerable traffic; but no sheds are provided for either passengers or goods, nor are signals erected. In addition to the traffic sidings mentioned, a dead-end road has been laid into Stephens' Creek (9 miles from Broken Hill) for ballasting purposes.

Accommodation for Loco.

Water supplies have been provided by the construction of large dams at Maybell and Thompson's sidings, each dam now holding about 4,000,000 gallons of water; and at Stephens' Creek a well has been sunk, which I am informed gives throughout the year a daily supply of about 9,000 gallons; but all tanks and pumping machinery have been removed.

No

No engine-shed or ash-pits are provided for locomotive purposes, nor is there a turn-table at the terminus; but in lieu of this a triangle has been laid-in on which engines can be reversed.

If this line were taken over by the Railway Commissioners it would be necessary to spend a considerable sum of money in providing necessary accommodation for traffic and locomotive purposes, and in putting the line in such order that the maintenance might be economically carried out; for though the sleepers would not require complete renewal in a less time than five years, the debit for the work should not be one to working expenses. The bridge timbers, too, though now in generally fair order should be replaced early by steel girders and bed-plates to ensure economical maintenance. Timber in bridges would cost about 7s. 6d. per cubic foot, and steel would cost no more per lin. foot of bridge; and while the latter would ensure a minimum of expenditure for maintenance and a perfect running top, the timber used, viz., karri, is liable to warp and twist, and a good top is maintained with some difficulty, the cross-sleepers to which the rails over the bridges are fastened being now packed on the girders with thin wedges of pine and old bagging. The sand ballast used on the line is of a very loamy nature, and a considerable proportion of it should be removed to give drainage from the sleeper ends, thus securing their better preservation, while the ballast removed should be stacked alongside the line for future use.

The cost of providing requisite accommodation for traffic and locomotive purposes, and carrying out the special renewals required, would be as under:—

1. Booking, passenger, and goods shed accommodation at Tarrawingee	...	500
2. Loop for local traffic at McCulloch Park	120
3. Sheep-trucking yards, Tarrawingee	150
4. Engine-tanks, pumping appliances, &c.	700
5. Signals, McCulloch Park and Tarrawingee	300
6. Renewal of sleepers—expenditure to be spread over five years	17,000
7. Renewal of bridge-girders, &c.	2,800
8. Equipment of fetting gangs	150
		21,720
Add sale price of line at Tarrawingee Company's offer	15,000
		36,720
Total capital cost	36,720
		Or about £900 per mile.

If made perfect as above-shown, the permanent-way maintenance cost would for many years be one of labour only, and would cost about £950 per annum, or at the rate of about £24 per mile, and pumping for locomotive purposes would add very little to this sum. £1,000 per annum would probably cover all but running expenditure, unless exceptional floods caused damage, which would at such periods add something additional. With regard to the latter point, I am assured by several local people that one of the heaviest registered rainfalls occurred since the Tarrawingee line was completed, and caused no damage.

JAMES FRASER.

No. 5.

The Secretary of the Silverton Tramway Company (Limited) to The Under Secretary for Public Works.

The Silverton Tramway Company (Limited), Equitable Building, 320 Collins-street,
Melbourne, 3 June, 1898.

Sir,
With reference to your telegram of 30th May, asking if my company would be prepared either to lease the Tarrawingee Company's line, if purchased by the New South Wales Government, or to work it at a cost per annum, or per train mile, I am directed to say that my Board, after the fullest consideration, are prepared to undertake the working of the line on the distinct understanding that the line is put in thorough repair and re-sleepered where necessary to the satisfaction of the company's engineer.

We would propose to run two trains per week between Broken Hill and Tarrawingee, on such days as might be fixed, each train to consist of not more than seven vehicles, viz., one carriage with accommodation for first and second class passengers, one brake-van and five trucks. For this service the price we require is 7s. 6d. per train mile, which would include the maintenance of the line (labour only), the supply of rolling stock, and the collection of revenue. Between Broken Hill and McCulloch Park, the traffic will be a purely holiday passenger traffic, and will require to be dealt with on a different basis. For this service we would propose to run trains as often as required, each train to consist of not more than thirty vehicles (trucks, brake-van, and carriages) at 15s. per train mile.

In connection with these rates, it must be distinctly understood that my company will assume no responsibility for flood damages; and in case of an agreement being made to work the line, we would submit the following schedule of rates at which we would be prepared to supply the various items enumerated below:—

	s.	d.
Sleepers, laid in road, each	6	10
Bridge timber, fixed, per cubic foot	7	6
Ballast, laid in road, per cubic yard	3	6
Labourers, including use of tools, per day	8	6
Gangers	9	6

In the event of extra trucks or carriages being required, we would supply the former (trucks) at 5s. each per day, and the latter (carriages) at 15s. each per day.

Our officers would collect in the usual way all fares and freights, and hand them over as often as might be arranged to any officer appointed by the Government to receive them.

The goods shed, office, and house for officer-in-charge at Tarrawingee, having been removed by the Tarrawingee Company, other buildings would have to be erected in lieu of them.

I am, &c.,

W. MACNICOL,

Secretary.

Submitted.

Submitted.—R.H., Under Secretary Public Works and Commissioner for Roads, 7/6/98. Perhaps the Railway Commissioners will say whether these terms are reasonable, on the assumption that the Government decides to purchase the line.—J.H.Y., 7/6/98. The Secretary.—J.No.P., 7/6/98.

From the limited information now before the Commissioners, it would appear that the purchase of the line would result in considerable loss. The matter, however, could only be satisfactorily dealt with after having the line inspected, and its condition reported upon, and the probable traffic ascertained. If the Minister for Works desires it, the Commissioners will send reliable officers to investigate both matters.—C.O., W.M.F., D.K., 10/6/98. Under Secretary for Public Works.—H. McL., 10/6/98.

No. 6.

The Secretary to the Railway Commissioners to The Under Secretary for Public Works.

Sir, Office of the Railway Commissioners, Sydney, 27 May, 1898.

With reference to your endorsement of the 25th instant, forwarding a minute from the Minister for Works asking the Railway Commissioners to favour him with any information in their possession as to the condition of the Tarrawingee tramway and the probable traffic to be expected if the line were taken over by the Government of New South Wales, I am directed to inform you that the Railway Commissioners have no information in their possession as to the condition of the line referred to, nor are they aware of the present or probable traffic.

The line is no doubt of considerable benefit to the residents of that part of the Colony who make use of it; but the Commissioners could not recommend that the line should be taken over and incorporated with the Government railway system of the Colony.

I have, &c.,

H. McLACHLAN,

Secretary.

Submitted for the consideration of the Minister. It would appear to me, before any determination can be come to upon this matter, that it will be necessary to know what the cost of working the line will be; and as the Silverton Tramway Company worked it in the past, I think it would be well to communicate with them. If the Minister so approves, I would suggest that a telegram, as follows, be sent:—"An offer has been made to the Government to purchase the Tarrawingee Flux and Tramway Company's Line. Before the Secretary for Works can come to a decision, it would be necessary for him to know what the cost of working the line would be. Is your company prepared either to lease it or to work it at a cost per annum or train mile, the line being in the first instance put in thorough repair? Any other information which you can give which would assist the Minister in coming to a decision, he will be much obliged for. Please consider the matter as urgent and let me have a reply as early as possible.—R.H., 30/5/98, Under Secretary Public Works and Commissioner for Roads.

Approved.—J.H.Y., 30/5/98. Telegraph at once.—J.P., 30/5/98. Wire,—Manager, Silverton Tramway Company, Equitable Buildings, Melbourne, 30/5/98. Await reply.

No. 7.

The Secretary to the Tarrawingee Flux and Tramway Co. (Limited) to The Under Secretary for Public Works.

Dear Sir, Tarrawingee Flux and Tramway Company (Limited), Prell's Building,
Corner Collins and Queen Streets, Melbourne, 5 May, 1898.

I have to acknowledge receipt of your telegram of 2nd instant as follows:—"What sum will your company accept for Broken Hill to Tarrawingee Tram-line as it stands?"

To which I replied on the same date as under:—"Your wire received; will take £15,000, including two capacious tank dams at Thompson and Maybell Sidings which have hitherto given unfailing water supply. Total first cost of line and tanks, £126,000. Tenders for taking up line are now before the Board. Immediate reply therefore necessary."

I have also to acknowledge your further telegram of 4th instant, reading as follows:—"If you will place tram-line under offer to this Department for one month for purposes of inspection, &c., matter will receive consideration."

The above telegram was considered by my Directors at a meeting held to-day; and, in reply, it was decided to place the line under offer to your Department for one month as desired by you, to enable you to have the necessary inspection, &c., made.

As intimated in my telegram to you of the 3rd instant, the price at which the line and two tank dams, respectively at Maybell and Thompson's Sidings, are offered is £15,000.

I might add that, to enable you to inspect the line, my Directors are holding back tenders which they have received for lifting the whole of the line, and also for the purchase of the rails, and we shall therefore esteem it a favour if you will oblige us with your early decision in respect of the above offer.

Yours truly,

ALFRED MELLOR,

Secretary.

Submitted.—R.H., Under Secretary for Public Works and Commissioner for Roads, 9/5/98. I have seen Mr. Deane, who agrees with me that Mr. Alexander would be the best man to send. He could leave to-morrow.—R.H., Under Secretary Public Works and Commissioner for Roads, 9/5/98. Send him.—J.H.Y., 9/5/98. Report herewith.—S.H.A., 23/5/98.

No. 8.

Extract from *Barrier Miner*, Saturday, May 14, 1898.

THE TARRAWINGEE LINE.

If Mr. Ferguson can induce the Government to take over the Tarrawingee line he will deserve the thanks of a great many, not only in Broken Hill and his own Sturt electorate, but in more outlying parts. For 45 miles of almost new line, £15,000 is asked—that is, only a little over £300 per mile. The line could not

not, of course, be put down for six times that sum. The value of a railway depends, however, upon the traffic to be secured; and it goes without saying that in ordinary circumstances the construction of a line between Broken Hill and Tarrawingee would not be justified. But if it were justified, it goes without saying, too, that the purchase money would be more than a trifle beyond £300 per mile.

The probability is that the Department, if left to itself, will draw up a statement of probable receipts and expenditure, and will purchase the line if it can be thus shown that, in addition to working expenses and maintenance charges, something like £1,000 per annum can be realised to cover interest and provide a sinking fund. Whether that can be done we do not pretend to know, nor do we pretend to know whether £15,000 is the lowest the company would accept. But we do know that, whether such a balance can be struck or not, a very liberal allowance ought to be made for other circumstances. From the Lands Department especially a strong support of the proposal might reasonably be expected; indeed every consideration of justice demands it. Practically every pastoral lease and selection to the north of Broken Hill right up to the Queensland Border has been reassessed during the past two or three years; and in every case the Crown has put forward the existence of the line to Tarrawingee as a thing to be considered in the fixing of rent. Sweep away that line, and the carriage of wool to the seaboard and of stores to the holdings is increased considerably; and *pari passu*, the equitable rent comes down. If the Government continues to draw the rents recently fixed when the line no longer exists an injustice will be done to all the settlers; and, moreover, on the next statutory reappraisal of rents, other things being equal, rents must fall.

There are a score of less considerations. The firewood supply of Broken Hill is most uncertain. What timber is left on leaseholds within 20 miles of Broken Hill has been specially reserved. There is necessity therefore, on account of this Government reservation, to go far afield; and the Tarrawingee line has permitted this to be done. If the line is removed—and there are still very fair supplies towards Tarrawingee—the wood must be drawn from South Australia; and, besides the loss of revenue from licenses, &c., still more industry would be driven out of the Colony. The development of the whole district must also be allowed for. No man can tell the future of the Broken Hill mines. The metallurgists are hourly at work upon experiments; and it is not at all unlikely that in the future it will be found preferable, in consequence of some development, to smelt at Broken Hill. It is therefore desirable, from that point of view alone, to maintain connection with the limestone-flux quarries. Thousands of acres of the country served by the line has been under mineral lease, returning considerable revenue to the Crown. Most of the shows are richer in lead than in silver; and as there is every likelihood of the lead market still further hardening, there is a better prospect of these mines being worked. At any rate, tear up this line and the prospect of successfully working the leases disappears; and with that disappears also the rent which the Crown now derives. Moreover, the future of the auriferous country in the north-west is still in doubt; it is hopeful, nevertheless, as that of any district is which yields such nuggets as those lately exhibited in Broken Hill. The Government itself has recognised the possibilities of the district. Thus, an application for the attachment of the resumed area of a large holding in that district was recently refused, on the Minister's own motion, on the ground that the land was not unlikely to be wanted for settlement in the neighbourhood of the goldfields. While there is this possibility, a line which runs out in that direction so far should certainly not be pulled up when it can be got for £300 a mile. Nearer at home there are other possibilities. The frontage to Stephens' Creek ought to be far more closely settled than it is. That it is not is due simply to an adverse but easily amended tenure. Mount Gipps Station has on its own account asked for a certain change; and it ought to be possible to make such arrangements as would permit the whole of the frontage to be settled. And this is apart altogether from the value of the Creek to Broken Hill as a pleasure resort. It has few beauties, perhaps; but as among the blind the one-eyed man is king, so to those on the Barrier Stephens' Creek, with its long line of gums relieving the wilderness in which Broken Hill is set, is almost what the mountains are to Sydney. Yet without railway communication this pleasure must be for the few; and that is not in accord with the policy which the present Government is credited with favouring.

Mr. Ferguson left this for the Minister to see.—R.H., 21/5/98. Under Secretary Public Works and Commissioner for Roads. Seen.—J.H.Y., 23/5/98. Put with Mr. Alexander's report.—J.N.O.P., 23/5/98.

No. 9.

Telegram from The Secretary Silvertown Tramway Company (Limited) to The Under Secretary for Public Works.

Melbourne, 3 June, 1898.

LETTER for you by to-day's mail.

W. MACNICOL.

No. 10.

J. R. Edwards, Esq., to The Secretary for Public Works.

The Tarrawingee Tram-line.

Sir,

Broken Hill, 26 May, 1898.

Owing to the absence of the Members of our district from Sydney, I am instructed and have the honor to hand you herewith a memorial, signed by some of the principal residents of Broken Hill, urging your Government to take over the Tarrawingee line. On their behalf, requesting that the memorial may receive favourable consideration,

I have, &c.,

JOHN R. EDWARDS.

[Enclosure.]

[Enclosure.]

PETITION FROM RESIDENTS OF BROKEN HILL.

To the Hon. the Minister for Works, Sydney.

The Memorial of the undersigned, residents of the town of Broken Hill and the district lying to the north and west, bounded by the river Darling on the north, and the Queensland and South Australian Borders on the north and north-west,—

RESPECTFULLY SHOWETH:—

1. That owing to the silver-mining companies having ceased smelting operations at Broken Hill the Tarrawingee Flux and Tramway Company (Limited) has gone, or is about to go, into liquidation; and tenders have been invited either for the purchase of the steel rails laid down upon its tramway-line from Broken Hill to Tarrawingee, or for the taking up and delivery of the rails at Port Pirie, in South Australia.

2. That the rail to Tarrawingee, a distance of 41 miles or thereabouts, was completed in the year 189 , at a cost of about £2,800 per mile, or equalling £114,800.

3. That the line, which your Petitioners are informed is at present in fair working order, can be purchased from the company at the present value of the rails alone as second-hand steel rails, or for about £15,000.

4. That the line is laid with the best steel rails 41 lb. to the yard, which for all practical purposes in their present position are as good as new.

5. That all the culverts and bridges on the line are in fair order and repair, the only parts of the way requiring renewing being the sleepers in places.

6. That the line, notwithstanding the almost prohibitive rates for passengers and freight charged by the Tarrawingee Company, has been of the greatest service to the residents of the back country, extending some 300 miles north to the Queensland Border, and lying between the Darling and the Paroo Rivers and the South Australian Border, including the towns of Warri Warri, Tibooburra, Milperinka, Eurowie, and Tarrawingee, and also including the gold-fields of Tibooburra, Warratta, Little Bendigo, and Mount Browne.

7. That, although the company charged for passengers and freight three times as much as on any Government railway in the Colonies, the line was largely used, and the district will sustain a very great loss if it is now torn up, and the residents compelled to revert to bullock drays for means of carriage.

8. That, as an instance of the freight that at reasonable rates can be carried upon the rail, the following are the Customs returns for wool alone received in Broken Hill during the last year, namely, 10,650 bales.

9. That the average annual outward freight of Broken Hill, consisting of station and storekeepers' supplies, amounts on a low estimate to 1,000 tons.

10. That the whole of this could be served by the railway to Tarrawingee if carried at reasonable rates.

11. That the greater part of the country to the north of Tarrawingee extending to Tibooburra and the Stanley Ranges has been proved to be mineral-bearing, and the destruction of the railway-line will in a great measure close this district against development.

12. That, owing to the fact that timber-getters supplying Broken Hill have been permitted by the Government under licenses to cut down and destroy for miles in every direction all the Mulga, almost the only natural feed in ordinary seasons for working bullocks, it is practically impossible for bullock waggons to travel the 40 miles between Tarrawingee and Broken Hill and draw ordinary loads.

13. That, with suitable trucking-yards at Tarrawingee, the line would be largely used by pastoralists in the district for the removal of their stock to pastures in South Australia, and thus save a repetition of the ruinous losses they are compelled to bear in years of drought and scarcity of feed, such as have been experienced almost without intermission during the last four years.

14. That, if the Government will take over the railway, satisfactory arrangements can, your memorialists are informed, be made with the Silverton Tramway Company (Limited), to supply all necessary steam power and rolling stock, and with care and maintenance of the line and use of stations and sidings.

15. That the only outlay the Government will be called upon to make is the cost of the line valued as that of the rails as second-hand, and the putting in repair of the permanent-way as regards sleepers.

16. That the earnings of the railway during the last twelve months on that portion of the line from Broken Hill to Stephens' Creek, a distance of 10 miles, under an arrangement with the McCulloch Park Association, amounted to no less a sum than £900 in merely carrying the residents of Broken Hill to this picnic ground at Stephens' Creek at the rate of 1s. adults, and 6d. children, return.

17. That taking into account, on the one hand, the enormous sums of money, running into millions of pounds sterling, received by the Crown from this district in the way of pastoral rents, rents from mineral leases, customs duties (in the past), income and land taxation (in the present), and other sources of revenue exceeding in amount very many times over that of any of the most favoured districts in the Colony, and, on the other hand, taking into the account the almost total absence of any Government expenditure in any public works of utility, or in the direction of in any way assisting in the development of this district, your memorialists consider that they have a right to ask that this railway may be secured to them.

18. Owing to the geographical position, the trade of the district has always and must necessarily flow towards the South Australian seaboard, and in taking over the railway the Government will not assist in diverting any trade from Sydney; at most it will give to the residents the privilege of carrying their produce and their supplies a part of the way by the train instead of by bullock teams.

Your memorialists respectfully ask that you will take the matters above set forth into your earnest consideration, and will advise your Government to accede to your memorialists' request to take over at once, whilst the opportunity offers, the railway to Tarrawingee on the present favourable terms.

And your memorialists, &c.

[Here follow 165 signatures.]

Acknowledged, 31/5/98. Submitted for approval. To reply that the matter is now under consideration.—R.H., Under Secretary for Public Works and Commissioner for Roads, 2/6/98. Approved.—J.H.Y., 2/6/98. Inform.—Jno.P., 2/6/98. J. R. Edwards, Esq., 6/6/98. Put with papers.

No. 10a.

The Under Secretary for Public Works to J. R. Edwards, Esq., Broken Hill.

Sir,

6 June, 1898.

With reference to your letter of the 26th ultimo, forwarding a petition from residents of Broken Hill and districts, urging the purchase of the tramway constructed by the Tarrawingee Flux and Tramway Company (Limited) from Broken Hill to Tarrawingee, I have the honor to inform you that the matter is now under consideration.

I have, &c.,

R. R. P. HICKSON,
Under Secretary and Commissioner for Roads.

No. 11.

Telegram from The Secretary to The Tarrawingee Flux and Tramway Co. (Limited) to The Under Secretary for Public Works.

Stock Exchange, Melbourne, 3 May, 1898.

Your wire received. Will take £15,000, including two capacious tank dams at Thompson's and Maybell Sidings, which have hitherto given unfailing water supply. Total first cost of line and tanks, £126,000. Tenders for taking up line are now before the Board. Immediate reply, therefore, necessary.

ALFRED MELLOR,

Secretary, Tarrawingee Co.

Submitted.—R.H., Under Secretary Public Works and Commissioner for Roads, 4/5/98. Say, if they will put it under offer to us for a month for purposes of inspection, &c., matter will receive consideration.—J.H.Y., 4/5/98. Inform.—Jno.P., 4/5/98. Wire sent, A. Mellor, Secretary, 4/5/98. Await reply.

J. Ferguson, Esq., M.L.A., Sydney.

Dear Sir,

Poolamucca, 11 April, 1898.

The Tamzie tender for taking up the line have to be in by the 16th instant. Instructions have gone to Melbourne to alter the conditions, and provide the Company have the right to take up only from Tarrawingee and Stephens' Creek.

Would it not be possible to get the Government to purchase the line? It could be got, I think, for £12,000, possibly less. This price is based on 42 miles at 70 tons of rails, fish-plates, bolts, and nuts per mile. The sleepers would above pay for taking up the line, and at (say) £4 10s. to £5 per ton at Broken Hill £12,000 would be a fair approximate.

Then, if possible, arrange with the Silvertown Tram Company to take the line, and run (say) one train a week at present tariff, or, if need be, a slight increase by getting the neighbouring stations with myself to guarantee the interest on the purchase at 3 per cent. (say) £360 per annum for five or seven years.

Should the river Darling cease being navigable, as it does at times, it means a serious loss to Mount Browne and station-holders not being able to get their stores and wool to market. In haste,

Yours, &c,

JOHN W. BROUGHAM.

Mr. Ferguson, M.P., represents the Tarrawingee Flux Company have called for tenders for taking up their tram-line from Broken Hill to Tarrawingee, a distance of about 42 miles. He suggests that as the line has considerable advantage for the Mount Browne people, and that probably the Company would sell at a very low price, it might be advantageous to purchase it, and allow it to remain to be worked under arrangement with the Silvertown Tram Company. Send wire to Tarrawingee Flux Company at Melbourne, asking what they will take for the line as it stands.—J.H.Y., 2/5/98.

Secretary, Tarrawingee Flux Company, 2/5/98. (Wire). Await reply.

No. 12.

Report by Mr. Stanley Alexander on the Railway from Broken Hill to Tarrawingee.

Department of Public Works, Sydney, 18 May, 1898.

This line was reported on by me on 20th May, 1892 (M.P. 92-2,839). The description of the line given in that report applies to it accurately in every respect to-day. The interval of six years has not produced any apparent depreciation except in materials subject to decay.

The maintenance has been very well attended to—the sleepers being still covered with ballast and the road well kept to line and level. Those points on which I remarked as being deficient in design and workmanship (paras. 17, 24, 25) are still in the same condition. The packing between the transoms and girders on the timber bridges has not been improved. Signals have not been provided—points have not been locked.

Waterways.

As to the remarks in para. 28 on the sufficiency of the waterways, experience has shown that the provision made has been sufficient hitherto, though it seems to have been tested to its full capacity.

Sleepers.

The material used in which deterioration has been marked is the timber of the sleepers. I reported (para. 14) that these sleepers are of Jarrah and Karri with a few Victorian Boxwood. As to the proportion or the number of each kind used, and as to their actual condition to-day, nothing less than a complete removal

removal of all the ballast above them and at their ends would suffice—even then the timbers are so alike in appearance that any distinction between them in the position in which they stand may be said to be subject to considerable difference of opinion. One point only of difference might be indisputable, that is, that the interval of seven years since they were laid down will probably not have affected the Jarrah sleepers to nearly the same extent as the Karri.

From all I hear on the matter I am inclined to believe that the number of Karri sleepers used exceeds very largely those of Jarrah, and in fact practically the line may be said to have been sleepersed with Karri timber.

There have been extensive renewals of these sleepers. I uncovered a number in the road and bored auger holes, and found the condition in all stages, but such a process of examination is limited in every way and not conclusive at all, as I could not tell whether it was a Jarrah or a Karri sleeper on which I was operating.

Referring to Karri timber underground.

By all I hear and by the precautions taken in running traffic (the speed has been limited by circular order to 10 miles per hour for the last few months), I am bound to believe that the limits of the life of the Karri sleepers has been nearly reached. I would place this life at ten years, of which seven (or eight) have elapsed. The line was opened for traffic in May, 1891.

Bridge timbers.

The bridge timbers were also reported to be of Jarrah and Karri—some renewals of these have been made, and there are still some faulty timbers in place, but in such situations the objection to use of first-class Karri timber is merely that better timber (with longer life) might have been used. As pointed out in paragraph 18 of my Report of 1892, there is considerable surplus strength in all the timber work.

I carefully examined a number of the bridges in detail, and I believe that the timbers are in fairly good condition with a few exceptions where splits, sun cracks, or large knots have weakened the baulks, and that their full life for the timber (which for Karri in such situations may be taken at twenty-five years) will be realised. The timber work above ground has been tarred every year, so its class is now almost undistinguishable (as between Jarrah and Karri).

Bridge foundations.

In paragraph 27 I remarked favourably on the foundations of piers and abutments. This opinion has, I believe, been fully borne out in the interval. For a first-class railway I think we should go deeper in the larger works. In one pier on which the scour has been concentrated it had cut down below the bottom of the concrete, but not to an extent to peril the stability of the pier, and this could be remedied at small cost. The clay bottom has been reached at least, if not sunk into deep enough. I believe that the works are trustworthy in respect of foundations.

Permanent-way.

(See para. 14 of report of 1892).

The rails are of steel 41 lb. per yard, branded N.E.S. Co. (Ltd.), 1890, Mbro. They show no wear at all.

Traffic.

The main dependence for revenue of this line must be on the wool from the stations to the north for 250 miles, as far as the Queensland Border. This loading is again contingent on the route being open—that is on the rainfall. It is now as nearly as possible impassable. The Darling River would probably under such conditions be low also, so in such seasons a large proportion of this loading would be taken to the railway at Bourke. The outward traffic in stores for stations is also a substantial quantity, and the mails will help to swell the revenue.

The McCulloch Park—an area on Stephens' Creek used for recreation purposes 9 miles out from Broken Hill—is certainly to be depended upon for supplying a traffic of a highly payable character in passengers on holidays especially. This traffic, which is independent of season, will largely compensate for deficiency in the through loading, and the necessity for securing the line as far as Stephens' Creek is very keenly felt in Broken Hill.

I conclude that the revenue that may fairly be expected from this line will exceed the working expenses apart altogether from the cost of renewals and additions of all kinds.

Additional plant.

In regard to additions, it is necessary to point out that the Tarrawingee Company has, since regular running ceased, removed all their plant from the line, the weigh-bridge at Tarrawingee and the pumping and watering appliances from all points. The bare line alone with the two dams (in which there is now a good supply of water, are left on the ground. In the event of the line being purchased by the Government, some appliances must certainly be provided.

Working.

The arrangement heretofore in force between the Tarrawingee Company and the Silverton Company as supplied me by Mr. Eloy, the Manager for the latter, given in a few words was as follows:—

The traffic has been worked by the Silverton Company.

The Tarrawingee Company have maintained the line in all respects at their own cost.

The Silverton Company supplied and worked all rolling stock including all staff and repairs.

Flux was carried at a charge to the Tarrawingee Company at 2s. 9d. per ton. The balance of receipts from this traffic was taken by the Tarrawingee Company.

For special traffic, such as excursion trains to Stephens' Creek, the cost of working the trains was deducted from the gross receipts, and the balance was divided equally between the two companies.

Proceeds from all other traffic of all kinds was divided equally between the two companies without any deduction being made.

The

15

The secretary to the Tarrawingee Company has supplied me with the lengths of line as in existence to day as follows:—

	miles.	chains.	feet.
Length of main line	38	51	61
Tarrawingee Siding	1	33	57
Maybell „	0	18	54
Ballast Pit „	0	6	27
Thompson's „	0	15	34
	40	46	45

STANLEY ALEXANDER.

The Railway Commissioners may be asked to favour me with any information in their possession as to the condition of this line, and probable traffic to be expected if taken over.—J.H.Y., 25/5/98. Will the Secretary to the Railway Commissioners please furnish the required information.—Jno. P. (for U.S.), 25/5/98.

No. 16.

Estimate of Mr. Stanley Alexander.—Tarrawingee Flux Tramway, Broken Hill.

I ESTIMATE the cost of putting the line in thorough working order as follows:—

Sleeper renewal	£	14,000
Bridge timber renewal		500
Water-supply plant		500
Sheds and shelter		500
		15,500

13 June, 1898.

STANLEY ALEXANDER.

No. 17.

Report by Mr. Stanley Alexander on the Railway Line from Broken Hill to Tarrawingee, the property of the Tarrawingee Flux and Tramway Company (Ltd.)

Sydney, 20 May, 1892.

1. This line of railway is an extension of the Silverton tramway through Broken Hill. The length from Broken Hill to Tarrawingee is under 39 miles; but the total length of rails laid, including the sidings, is 70,504 lineal yards—40 miles 4 chains 16 yards. The general direction of the line is nearly due north from Broken Hill. It is designed to carry limestone from Tarrawingee as flux for the smelting operations of the mines at Broken Hill.

2. The sharpest curve on the line has a radius of 15 chains.

3. The steepest gradient, rising northwards—that is, in the direction on which the empty return trains travel—is 1 in 50, and the longest of these measures 17 chains.

4. The steepest gradient against the road, viz., rising southwards in the direction of Broken Hill, is 1 in 70, and the longest of these is 25 chains.

5. The formation of the line is nearly all in low embankment obtained from side cutting. The land provided by the Act is fixed at a width of 16 feet within the limits of private lands, which lie practically within the Municipality of Broken Hill only, and a width of 1 chain on public lands.

6. The surface of the surrounding country, and of that passed over by the line, is undulating, and broken by sharp ridges and outcrops of rock. These undulations are very extensive.

7. There are some combinations of gradients on the line, rising against the roads, that make up a severe tax on the engine power available; but still the load actually taken into Broken Hill when the smelting furnaces are in full work, and require full supplies of flux, is 186 tons of paying load per train. This line has delivered 122,000 tons of limestone into Broken Hill since opening for this traffic in May of 1891.

8. The line will be supplied with rolling-stock, and worked by the Silverton Tramway Co., in all respects in accordance with the Rules and Regulations in force upon the South Australian Government railways.

9. There are about 200 employees of the Tarrawingee Company resident about Tarrawingee. The Poolamaca head station is about 3 miles thence.

10. The following gives the quantities of work done in construction of the line in some of the more important items, taken from the contractor's final certificate:—

Excavation from cuttings	13,539 cubic yards.
„ side cuttings	104,382 „
Surface-forming	1,840 chains.
Grade-posts at principal grades	43
Mile and half-mile posts	81

In construction of three reservoirs for storage of water, a total of 87,483 cubic yards of excavation has been done.

11. *Earthworks*.—Top width of embankment, 14 feet; bottom width of cutting, 12 ft. 6 in. The surface drainage has been carefully attended to by cutting of side drains, which are properly located and graded to carry off water. In accordance with the practice in force on South Australian Government railways of the narrow (3 ft. 6 in.) gauge, platforms have been dispensed with for passenger accommodation.

12. *Fencing*.—Fences have been erected within the municipal limits of Broken Hill only. The posts are of mulga-wood, from 4 to 6 inches in diameter, round, with bark attached, carrying seven wires of No. 8 gauge. The top wire is 4 feet above the ground surface. There are eight panels to the chain.

13. *Level Crossings*.—Outside the town of Broken Hill there are very few of these, and here, as the line is not fenced, they have not been protected. All, however, are provided with proper guards, inside of ordinary rails and outside of timber. At the street-crossings these guards extend the full width of the carriage-way, which is metalled with broken stone metal. Gates have not been used. Cattle-pits of good design and construction are built on each side of all crossings of streets, and also one at the crossing of all station fences. In these the rails are carried under the pits on longitudinal 12 in. x 12 in. beams—no sleepers—which rest on concrete abutments. The fencing is properly carried up to and across these pits. There are seven of these cattle-pits.

14. *Permanent-way and Ballasting*.—The rails are flat-footed, 41 lb. per yard, of steel, specially imported from Middlesbrough. The sleepers are of Jarrah and Karri—both West Australian timbers—6 ft. 6 in. in length x 8 in. x 4 in., sawn. A few Victorian boxwood hewn sleepers have been used. There are eight sleepers to the 21 ft. 2 in. rail (the longest length of rail in use). These are spaced 2 ft. 9 in. between the centres and 1 ft. 11 in. at joints. The rail is held down by dog-spikes only throughout. The fishing is effected by a flat, ordinary fish-plate on the outside, and by a deep plate on the inside, having an extra member depending 1½ inch below the rail-bed. The fish-plates are 15 inches in length, joined by four of Ibbotson's patent bolts with steel expansion nuts. The rail bed is inclined 1 in 26. The crossings are built of ordinary steel rails—workmanship very good—all, including tongue and stock rails, having been made in South Australia. These and the switch-handles are of the regular standard pattern in use in the lines of that colony. The sleepers were all adzed and bored by machinery. The crossings on the main line are 1 in 10.

15. The workmanship throughout, in the laying of the permanent-way, appears to have been very good. The ballast is of coarse sand from the bed of Stephens' Creek—a very good material. It is laid 4 inches in depth below the sleepers, and 1½ inch covering them, making a full depth of 9½ inches. The top width is 7 ft. 3 in. and bottom width 9 ft. 7½ in. The sides have been kept well trimmed. The road, as travelled over by me, is in very excellent running order, with properly-proportioned super-elevation at the curves, and fully ballasted. The maintenance-men for the whole length number twenty, and one inspector.

16. *Bridging*.—Three types of bridging have been used, viz.:—Spans of 10 feet, 11 feet, and 15 feet; and, in one case, a special design of 30 feet. The following is a summary of the bridging that has been created:—

5 bridges—single, 10 feet; total lineal feet,	50.
17 " " 11 " "	187.
17 " 2 spans 11 " "	374.
4 " 3 " 11 " "	132.
2 " 4 " 11 " "	88.
13 " single 15 " "	195.
6 " 2 spans 15 " "	180.
11 " 3 " 15 " "	495.
11 " 4 " 15 " "	660.
3 " 5 " 15 " "	225.
3 " 6 " 15 " "	270.
1 " 7 " 15 " "	105.
2 " 8 " 15 " "	240.
1 " 9 " 15 " "	135.
1 " 10 " 15 " "	150.
2 " 13 " 15 " "	390.
1 " 14 " 15 " "	210.
1 " 20 " 15 " "	300.
1 " 25 " 15 " "	375.
(Stephens' Creek)	
1 special 3 spans 30 } feet; "	165.
5 " 15 }	
Total lineal feet	4,926.

Pipe and box drains:—

9 drains of single 18-inch pipes.
2 " double " "
1 box drain.

17. The standard type of 10 and 11 feet spans is composed of two beams of 14 in. x 10 in., spaced 4 ft. 2 in. apart between centres (3 ft. 4 in. in the clear), resting on and bolted down to two timber bed-plates at each end, 9 in. x 6 in. These are carried by concrete abutments having concrete wings. The ballast boards are of 2-inch sawn stuff, spiked to the ends of the girders. There is no strutting or distance piece between the girders. The sleepers rest on the girders, being spiked down to them. The level of the road is obtained by packing between the sleeper and the girder of an inefficient kind, the packing pieces being of thin boards of irregular shape and size. Felt has been used in places, and the manager stated that he intended to substitute felt packing for the timber throughout. It is probable that the expense of attending to these wooden packings will soon necessitate adoption of some other material. The concrete is in most cases of cement, the proportions being 3, 2, and 1. The foundations are said to have been sunk into the clay, that is—that the surface sand and soil has been sunk through down to the compact clay bottom. Lime concrete was used in the foundations. The lime is from concretions found in the soil of these parts. By the analysis of this it is probably slightly hydraulic, and, if so, it is a suitable material for such work. In the superstructure the concrete was in most cases of cement. The piers in the bridges of more than one span are also of concrete.

18. The timber work is all sawn square of jarrah or karrj, tarred, and in good condition. The workmanship is rough but efficient, and in all respects faithfully done. The design is, if anything, in error on the side of superfluous strength having been provided.

19. The 15 feet spans are similar in design to the former, excepting that the girders are 16 in. x 12 in.—4 ft. 4 in. between centres—the spacing being the same, viz., 3 ft. 4 in. apart, and the bed-plates are 12 in. x 6 in. There are no struts or distance pieces between the girders.

20. The special 30-foot span at Tarrawingee Creek is similar in every respect to the design of the 15-foot spans, but, in addition, the girders are understrutted to the piers and abutments with 12 in. x 12 in. struts, and horizontally between the girders with 9 in. x 4 in. crossed struts, the girders being tied together with 1½-in. bolts. This strutting is well designed and executed. The concrete abutments and piers are of extra thickness in this bridge. The clear space underneath the girders is greater than in any other bridge, but even here it does not exceed 7 feet.

21. The locomotives in use are by Beyer and Peacock—they are tender engines—45 tons total weight, but no one was able to quote the weights on the driving wheels. Cow-catchers are carried by all locomotives.

22. The trucks in use are in all respects such as are admissible on first-class lines.

23. The line is forked at Tarrawingee, each arm being a quarter mile or more in length. This admits of a loop being put in between the forks, and thus a Y is formed, which is useful for reversing locomotives.

24. Two sidings or passing-places have been formed on this line, viz., at Maybell, 14½ miles from Broken Hill, and at Thompson's, 27 miles. These are each 20 chains in length between points. Watering arrangements and reservoirs are ready, but they are dry. There is no shed, platform, or signal or any other provision for traffic. There is also a ballast siding into Stephens' Creek, which requires protection. The fork at Tarrawingee should also be protected by signals. The junction station at Sulphide-street in Broken Hill, being on the Silverton Company's property, need not be noticed here.

25. I noticed that at every point locking arrangements, less the padlocks, were ready. There is no resident staff at the sidings to attend to signals.

26. The speed within municipal limits of Broken Hill is limited to 4 miles per hour, and a bell is kept ringing on the engine while traversing the town.

27. In conclusion it is necessary that, having inspected the line, I should express an opinion on its quality. I have already said in a telegram to the Engineer-in-Chief that the works of construction are good enough in every respect. It is not possible to be decided as to the sufficiency of the foundations from an inspection of this kind; but I am able to infer, from the general evidence of care and forethought shown by all the works above ground, that these have not been less carefully treated. The materials used are all of good quality in all the works. They were designed and supervised by Mr. E. J. Horwood, M.C.E., and carried out by Messrs. Baxter and Saddler, contractors, who are now engaged upon the Molong-Parkes line. I also examined all the plans in accordance with which the works were carried out, and I am satisfied that they have been faithfully executed with the intention of making as permanent a line of railway as the character of the requirements demand.

28. With regard to the sufficiency of the water-ways, the list given in para. No. 16 gives an average of about 126 feet (lineal) per mile, showing that all the local drainage has been amply provided for. The last four on the list represent the bridging of the main drains of the country. They are all capable of passing a very large body of water, and the character of the area drained is very highly absorbent. Considerable investigation is needed before it can be said positively that these bridges are not large enough for all requirements; but, judging from the position of the reputed flood line and the shape of the cross-section of the water-ways at the points bridged, I am bound to consider that as soon as the soil of the area drained has become saturated, there will be a danger of these openings being insufficient to pass the surplus water should the rainfall continue. I am, however, also of opinion that judgment has been used in fixing on these water-ways, as explained by Mr. Horwood. In such a district, all the information obtainable being imperfect and unreliable, and the traffic being confined to the hours of daylight, he did not consider that the company would be justified in incurring greater expense than seemed absolutely necessary at the present time.

29. On the matter of signals and such like, I do consider that their absence in this case is important to the subject under investigation. The traffic authority, whoever he may be, must be responsible for the safety of the working arrangements.

The Engineer-in-Chief, Railway Department.

STANLEY ALEXANDER.

No. 18.

The Secretary to the Tarrawingee Flux and Tramway Company (Limited) to
Wyman Brown, Esq., Castlereagh-street, Sydney.

Prell's Building, Corner Collins and Queen Streets,

Dear Sir,

Melbourne, 5 July, 1892.

I am in receipt of your favour of the 4th instant, covering letter from the Under Secretary, *re* By-laws, and note that he is not prepared to pass them in the form submitted.

I shall be glad if you will kindly see the Department, however, and request that they allow us to have the copy already sent for their approval, as we have unfortunately mislaid the rough draft; and as soon as we have gone through the form now sent by you we can return the former copy now in the Department's possession, together with the By-laws in the form required by the Railway Commissioners.

Yours faithfully,

ALFRED MELLOR,

Secretary.

The Secretary to the Railway Commissioners to The Under Secretary for Public
Works.

Government Railways of New South Wales, Secretary's Office,

Sir,

Sydney, 21 June, 1892.

I am directed to return herein the draft By-laws for the Tarrawingee tramway.

The Commissioners desire me to say that they consider the clauses in many instances too stringent, and suggest that the By-laws adopted by the Railway Commissioners might be extended to the tramway, modified where the Companies' Act renders such a course desirable.

I have, &c.,

H. McLACHLAN,

Secretary.

List to so inform.—R.L., 23/6/92.
25/6/92. Inform.—27/6/92.

Approved by Minister; with order No. 2,383.—D.McL.,
Wyman Brown, Esq., 29/6/92.

THE TARRAWINGEE FLUX AND TRAMWAY CO. (LTD.)

GOODS CLASSIFICATION.

The Tarrawingee Flux and Tramway Company (Limited), by virtue of the powers and authorities vested in it by an Act to amend the "Tarrawingee Tramway Act of 1890," doth hereby make the following charges and classification of goods to be carried by the tramway vested in the company, to take effect on and after the 1st May, 1892.

BY-LAWS.

1. Any person (unless having a free pass) taking a seat or remaining in or upon any carriage used on the tramway as a passenger, or travelling therein upon the tramway, without first having paid his or her fare and obtained a ticket, shall be liable to a penalty not exceeding £5.

2. Each passenger on paying his or her fare will be furnished with a ticket, which he or she is to show whenever required by a station-master or authorised porter, or by the guard in charge of the train; and if it be a journey or return ticket he or she must allow it to be marked when required; and every ticket (whether single, or return, or periodical) must be delivered up upon demand of any porter or other servant of the company who may be authorised to collect tickets. Any person guilty of a breach of this By-law shall be liable to a penalty not exceeding £5.

3. Tickets are not transferable. A ticket can only be used by the person for whom it may be issued. Any person using or attempting to use a transferred single, return, or periodical ticket, after being once used or travelled with, or a ticket the time for proper use of which has expired, shall be liable to a penalty not exceeding £5.

4. No passenger shall be entitled to re-book or to take a ticket at any intermediate station for the purpose of continuing his journey in the same train as that in which he shall have arrived at such station.

5. Any person knowingly attempting to defraud the company by travelling upon the tramway in or upon a carriage of a superior class to that for which he or she is provided with a ticket, or altering a return or other ticket, shall be liable to a penalty not exceeding £5.

6. Tickets, whether single or return, shall be available, and shall be used by passengers only to convey them to the stations named thereon, or to any station short of that destination. In no case, however, shall "cheap" or "excursion" tickets be used at or for any other station than those named thereon. Any person using, or attempting to use, a ticket in violation of this by-law shall be liable to a penalty not exceeding £5.

7. No ticket will be recognised by any collector or servant of the company authorised to collect or examine tickets unless the number, date, and names of the stations printed on such ticket be perfectly legible. The holder of any ticket which may be defaced or rendered illegible in any of the above particulars will be regarded as not having paid his fare, and will be liable to a penalty not exceeding £5.

8. Any person not duly authorised by the company who shall sell or offer for sale, any free pass, ticket, or portion of a return ticket, shall be liable to a penalty not exceeding £5.

9. No male passenger will be allowed to enter or to remain in any waiting-room or carriage set apart for the accommodation of females, and any person persisting in remaining in any such room or carriage after being warned to leave the same shall be liable to a penalty not exceeding £5.

10. Any person not being a servant of the company who shall open any carriage for the purpose of entering same with a key or other instrument after the tickets have been examined and the carriage-doors locked by the station-master, guard, or other person appointed for that purpose, or any person who shall let himself or herself out of any carriage on arrival at any station, or at any time during the journey, by use of a private key or other instrument, shall be liable to a penalty not exceeding £5.

11. No person shall be allowed to travel outside a carriage or vehicle on the tramway under any circumstances whatever, or to get into or upon, or quit any carriage or vehicle when the train is in motion; and any person doing so, or attempting to do so, shall be liable to a penalty not exceeding £5.

12. Smoking is strictly prohibited in any tramway sheds, yards, offices, platforms, or waiting-rooms; and any person found smoking in any goods or other shed, yards, platforms, offices, or premises, shall be liable to a penalty not exceeding £2.

13. Smoking is strictly prohibited in any tramway carriages, except those set apart for the purpose; and any person found smoking in a carriage not set apart for the purpose shall forfeit a penalty not exceeding £2, and may be removed from the carriage by any tramway servant.

14. Dogs will be conveyed and charged for according to printed conditions, but they will not on any account be allowed to accompany passengers in the carriages. Any person persisting in taking a dog into any passenger carriage, in breach of this by-law, shall be liable to a penalty not exceeding £5.

15. No gratuity is under any circumstances allowed to be received by any servant of the company, on pain of instant dismissal. Any person giving or offering a gratuity to any such servant shall be liable to a penalty not exceeding £5.

16. Any person making use of insulting or abusive language to any officer or servant of the company while in the execution of his duty, or any person making use of obscene or blasphemous language in any carriage, or upon any platform or premises of the company, shall be liable to a penalty not exceeding £5.

17. Any person driving or attempting to drive sheep or cattle, or attempting to ride or drive any horse across the line, either at an authorised crossing-place or elsewhere, when a train is in sight, shall be liable to a penalty not exceeding £5.

18. No carman, hackney-coachman, drayman, porter, carter, or other person, unless licensed by the company in that behalf, will be allowed to come into or upon the station, lands, or premises of the company for the purpose of plying for hire, or touting, or soliciting custom or hire, or removing passengers or luggage, either with or without a cab, car, dray, hand-cart, or truck, unless by permission of the station-master in charge of such station, lands, or premises, and any carman, hackney-coachman, drayman, carter, porter, or other person evading, or attempting to evade, or being guilty of a breach of this by-law, or refusing or neglecting to quit the premises of the company, when thereto requested by the station-master or other servant of the said company, shall be liable to a penalty not exceeding £5.

19. Any person found bathing, swimming dogs, or otherwise polluting the water in any of the tramway tanks or reservoirs, shall be subject to a penalty not exceeding £5.

20. Any person or persons, unless those duly authorised by the company, who shall be found posting or sticking bills, or other printed matter, within or upon any of the tramway property or premises, shall be subject to a penalty not exceeding £5.

21. All goods and merchandise (whether bonded or free), and all luggage arriving by train at any station, shall be removed from the platform, shed, or premises of the company within twenty-four hours of arrival, or such less time as may be fixed; and any free goods, merchandise, or luggage not removed by that time may be stored, or allowed to remain in the sheds or premises of the company at the risk and expense of the consignees or owners, and shall then become subject to the payment of the sum of 1s. per ton or portion of a ton per diem; and any bonded goods or merchandise which shall not be removed within the period aforesaid shall be subject to the payment of the sum of 1s. per ton per diem until the removal of the same from the premises of the company. And all goods, merchandise, and luggage unclaimed by the owner for the space of six weeks after arrival, may be sold by the company, and the company, after deducting what may be due to it for its tramway carriage, storage, and charges (including expense of sale), shall pay over the surplus, if any, to the owner on demand.

22. If any goods, produce, timber, or other merchandise shall be brought into any station either by the owner or consignee, or in the waggons or vehicles of the company, and which goods or merchandise, in accordance with the conditions of the published tariffs, it shall be the business of the owner, consignor, or consignee to load into or discharge from the tramway waggons or vehicles; and in case the owner, consignor, or consignee refuses or neglects to load into, or discharge from the tramway waggons or vehicles such goods within twelve working hours of their arrival at the station, they shall be subject to the payment of the sum of 30s. per truck per diem until loaded or unloaded as the case may be; or the company, by its officers and servants, may forthwith proceed to load into or discharge from the tramway trucks such goods at the risk of the owner, consignor, or consignee, and such goods shall be subject to the costs of such loading or unloading, in addition to the freight, and to such other costs or charges as may become due under the last preceding by-law.

23. Upon every parcel or package containing any of the articles mentioned beneath, brought or delivered, either to be carried for hire or to accompany the person of any passenger, and its value and contents declared, and where such value shall exceed the sum of £10, there shall be paid an increased rate of charge—that is to say, double parcels or excess luggage rate if the declared value be over £10 and under £50, and quadruple parcel or excess luggage rate if the value exceeds £50, as a compensation for the greater risk and care to be taken for the safe custody and conveyance, as the case may be, of such valuable articles, or any precious stones, jewellery, watches, clocks, or time-pieces of any description, trinkets, bills, notes of any bank in her Majesty's dominions, or of any foreign banks, order notes or securities for payment of money (whether foreign or otherwise), stamps, maps, writings, title-deeds, paintings, engravings, pictures, gold or silver plate, or plated articles, glass, china, silks in a manufactured or unmanufactured state, and whether wrought up or not wrought up with other materials, furs or lace, or any of them, contained in any parcel or package delivered either to be carried for hire or to accompany the person of any passenger.

24. Any horse declared to be above the value of £50, any neat-cattle above the value of £20 per head, any sheep, pig, or other small animal above the value of £1 per head, will only be carried by the company by special agreement, and at an increase over the published rates according to the value of such animal.

25. No claim for loss will be allowed or recognised unless the particulars of such claim be lodged with the secretary within fourteen days after such loss shall have arisen, and no claim for damage will be recognised or allowed after the removal from the tramway premises of the goods or merchandise alleged to have been damaged. And the delivery of such goods shall be considered complete when notice of the arrival has been given to the consignee, or where the address of the consignee is not known, the company will accept no liability for loss or damage after the goods shall have been at the receiving station twenty-four hours. All goods and live-stock to be carried subject to the printed conditions of carriage.

26. The company will not be responsible for articles left by passengers at any station unless the same be duly registered, for which a charge per article will be made, and a ticket given in exchange, and no article will be given up without the production of the ticket, or satisfactory evidence of the ownership being adduced, and any article will be delivered up to the bearer of the ticket unless previously delivered up to the owner. The company will not be responsible for any package exceeding the value of £10.

27. Every person writing, drawing, scratching, or cutting any letter, word, or figure, upon any of the stations or premises, or any part thereof, of the company, shall, on conviction, be liable to a penalty not exceeding £5. 28.

28. Any person in or upon any tramway carriage or station being in a state of intoxication, or committing any nuisance or gambling, or wilfully interfering with the comfort of any passenger, shall be liable to a penalty not exceeding £5, and to removal from such carriage or station as soon as shall be practicable.

29. The company will not be responsible for any luggage unless it be specially booked and paid for, and the name of the owner and its destination distinctly marked thereon.

30. No person shall be entitled to require any single article or goods to be conveyed by tramway exceeding the weight of 5 tons, or which, from its excessive bulk, would be inconvenient to transport, or any aquafortis, oil of vitriol, gunpowder, or other goods which, in the judgment of the company's officers, may be of a dangerous nature; and any such officer may refuse to take any parcel suspected to contain goods of a dangerous nature, or require the same to be opened to ascertain the fact; but nothing herein shall prevent the company or its officers from carrying any such goods if they think fit.

31. Any person who shall wilfully injure, wholly or in part, any of the linings, straps, cushions, or blinds, or break or deface any of the windows, or remove or injure any number, plate, advertisement, or notice, or remove or extinguish any of the lamps, or otherwise damage any tramway carriage, shall be liable to a penalty not exceeding £5, in addition to the payment of the amount of damage done.

32. No article shall be sold on any tramway premises without the consent of the company through their traffic manager, and every person offending against this by-law shall forfeit a sum not exceeding £5.

33. The owners of horses or other live stock will have to take all risks of conveyance. The company will not be responsible for any damage, however caused, occurring to horses or other live stock upon the tramway, or at any of the stations. No horse or live stock will be carried unless the contract form be issued by the company be previously signed by the owner or consignor. All live stock must be loaded by the sender and unloaded by the consignor or owners, at their risk respectively.

34. The authorised charge upon all goods or parcels must be paid on demand, and in default of payment being made, such goods or parcels may be sold by the company, and the freight and charges deducted from the proceeds thereof, and no credit will be given unless under special arrangement.

35. The company will not be liable for any damage to goods not delivered or misdelivered, in consequence of the same not being properly directed, described, or packed, or for damage or loss sustained through improper packing, leaking, fermentation, or fire.

36. Fresh meat, fish, poultry, dairy produce, eggs, fruit, vegetables, and other perishable articles will be conveyed, when practicable by the next train, but in all cases at the owner's risk, and if not promptly removed from the tramway premises (should they become offensive), will be disposed of or destroyed by the tramway servants.

37. All live stock must be removed from the tramway premises immediately after the arrival of the train, or, if left, they will remain at the owner's risk and expense, and may be sent to agistment or livery, the cost of which shall be paid by the owner, and such cost must be paid on demand as part of the authorised charges. And such stock, if not removed within seven days, may be sold by auction by the company, within the tramway premises, and the proceeds thereof applied in payment of all expenses incurred, and the balance thereof handed over to the owner on demand.

38. All goods, whether free or dutiable, brought to any tramway station for conveyance by the company, must be accompanied by invoices showing the contents and value of each case or package, otherwise the tramway servants may refuse to take delivery. From these documents a transire will be prepared, which will be in lieu of entries hitherto prepared and passed by licensed Customs agents. The rates charged for transires and payment of Customs duties will be as follows:— For each consignment entered on a transire, 1s.; for each payment of duties, 1 per cent. on the amount paid; minimum charge, 6d.

In testimony whereof the common seal of the Tarrawingee Flux and Tramway Company was affixed hereto by Alfred Mellor, Secretary of the said company, and such affixing was attested by the undersigned Directors of the said company, and by the said Alfred Mellor, Secretary.

DUNCAN GRANT, } Directors.
J. W. BYRON MOORE, }
ALFRED MELLOR, Secretary.

GENERAL REGULATIONS FOR CONVEYANCE OF GOODS AT CLASS RATES.

1. The Tramway Company are carriers only from and to the various stations on the said tramway, and goods addressed to other destinations are received only to be carried to the nearest or most convenient goods station on the tramway and there delivered; or they will be allowed to remain on the tramway premises, or be placed in a shed or warehouse, if there is convenience for receiving same, pending communication with the consignees. Advice given or sent to the consignee of the goods remaining on the tramway premises, or that such goods are placed in the shed or warehouse, will be deemed to be delivery of such goods, so as to relieve the company from all responsibility in respect thereof.

2. Every consignment of goods, when delivered for transmission by tramway, must be accompanied by a consignment note signed by the sender, or some person on his behalf. The goods must be plainly and legibly addressed with the name of the consignee and the place of destination. A charge of 2s. 6d. per ton, or part of a ton, per day, will be made on all trucks not loaded within six hours after they are engaged for carriage of goods.

3. The carriage of all goods must be either paid for previously to or on delivery; but in cases of persons who are under bond for payment of tramway charges, the company may allow time for payment.

4. No claim for loss or damage will be allowed unless made within twenty-four hours after the arrival of the goods, and the delivery of such goods will be considered as complete when the notice of the arrival is rendered to the consignee; or, if carted out by the company, when the goods are at the door of the consignee, ready to be delivered to him upon his signing the formal receipt adopted by the company, or when the goods are suspended to the consignee's crane, chain, or tackle; the cellaring or warehousing afterwards being at the owner's risk. The company hereby give notice that all charges for freight, &c., must be paid in cash on delivery or tender of the goods, &c., but the time may be given as in the case aforesaid.

5. The company will not guarantee to despatch goods by any particular train; nor will they agree to send a truck from one station to another with less freight than 2 tons.

6. The company will not be accountable for any articles or goods unless the same are signed for as received by their authorised officers, clerks, or agents; nor for the loss or damage arising from fire, the act of God, or civil commotion, nor for the loss of, or damage to, the following articles, namely:—Gold, silver, or any article composed, or partly composed, of those metals; precious stones or jewellery, watches, clocks, or time-pieces, Bank notes or bills, bills of exchange or promissory notes, securities for payment of money, stamps or stamped paper; title or other deeds, writings, paintings, engravings, plated articles, glass, china, silks, or articles composed of silk, shawls, lace, or other articles of a like nature, unless the nature and value of such articles shall have been declared by the sender, and an insurance rate of 1 per cent. over and above the tramway charge for carriage shall have been paid to, and accepted by some person duly authorised to receive the same on behalf of the company.

7. Neither will the company be liable for any loss or damages arising from goods being improperly or insufficiently packed, marked, directed, or described, or for packages containing a variety of articles liable by breakage to damage each other or other articles, or from leakage or loss caused by bad packages, or bad vessels or cooerage, or from fermentation.

8. Nor for the loss or damage to any goods put into returned wrappers, or boxes, or packages, described as empties, nor for the loss or damage to or for any goods or parcels left till called for, or to order, or warehoused for the convenience of parties to whom they belong, or by or to whom they are consigned.

9. Nor for any loss or damage to any goods whatsoever by reason of any accidental or unavoidable delay in transit or otherwise.

10. If sheets are supplied by the company for the covering of goods, the following charges will be made, namely:— For any distance not exceeding 25 miles, 9d. each sheet; for any distance exceeding 25 miles, 1s. 6d. each sheet; and an additional charge of 1s. each per day or part of a day will be made for each sheet detained more than twenty-four hours after arrival at receiving-station; but the company will not be responsible for damage arising from any alleged defects in the sheets thus supplied, nor will the company undertake to supply sheets in all cases.

11. Senders of any dangerous articles will be held accountable for any damage arising therefrom or thereto, unless the contents are described as such upon the direction, that due care may be observed in the loading; and in no case will the company be liable for the loss of, or damage to, any such article.

12. The company may correct any undercharges in any railway receipt or invoice.

13. All live stock, herbs, fish, fruit, meat, poultry, or other perishable articles will be conveyed at the owner's risk, and may be immediately sold to secure the freight, unless it be prepaid at the station from which they are forwarded, or if it be not paid on their arrival at the railway terminus, or when offered for delivery. If for shipment, charges must in all cases be prepaid.

14. The company may immediately upon, or at any time after their arrival at their destination, remove any goods from the trucks or carriages. Owners or consignees must remove all goods from the station or terminus of their destination within six hours after their arrival there, unless such arrival shall be between the hours of 6 in the evening and 7 in the morning; and, in that case, every such removal must be made within six hours after such hour in the morning; and, in default of such removal, the goods will be liable to demurrage at and after the rate of 2s. 6d. per ton; and, further, if not removed after the expiration of twenty-four hours, at and after the rate of 1s. per ton for each twenty-four hours or part thereof. And if such goods be not removed from such station or terminus of their destination before the end of one week after their arrival there, the sum of 2s. 6d. per ton for each subsequent week will be charged in respect of such goods for the warehouse room thereof.

15. All goods, from whomsoever received, or to whomsoever belonging, shall be subject to a lien, not only for the freight of the particular goods, but also for any general balance that may be due by the owners, consignors, or consignees.

16. If any person on demand fail to pay the charges due by him to the company, for or in respect of the freight or carriage of any goods then or at any time theretofore carried, the company may detain and sell all or any part of the goods from time to time, within the tramway premises, belonging to or consigned by or to the party so indebted as aforesaid; and out of the money arising from such sale the company may retain all the charges then due and payable to him as aforesaid; and all charges and expenses of such detention and sale, rendering the overplus, if any, of the moneys arising from such sale, and such of the goods as shall remain unsold, to the person entitled thereto; or the company may recover such charges and moneys by action at law.

17. In all rates calculated under the tariff any fractional part of a day will be charged as one day, and any fractional part of a mile as one mile.

18. All goods are conveyed at the owner's risk only.

19. Special arrangements may be made for the conveyance of exceptional traffic.

20. No person will be allowed to remove goods from any tramway station unless he presents an order from the consignee.

21. Mineral acids, gunpowder, naphtha, and other compounds of an explosive and highly inflammable nature, can only be carried at special rates and under special conditions, to be ascertained on application to the traffic manager.

WOOL RATES.

(Including loading and unloading and sheeting.)

TARRAWINGEE TO BROKEN HILL.

	s.	d.
Bales not exceeding 300 lb. each.....	3	0
Bales dumped, not exceeding 4 cwt. each.....	3	0
Bales undumped, not exceeding 4 cwt.	3	6

Each bale over 4 cwt. will be charged 25 per cent. per bale additional upon the rate for a 4-cwt. bale upon every hundredweight or portion of a hundredweight in excess.

All wool is carried at owner's risk as to condition, and will be signed for accordingly.

GOODS TARIFF.

All goods will be carried at 6d. per ton per mile (minimum charge, 5s.), with a terminal charge of 1s. per ton added.

Weight or measurement at company's option.

GUNPOWDER AND OTHER EXPLOSIVES, O.R.

As per arrangement (see clause 11 of General Regulations). Minimum charge for a consignment, 5s.

NOTE.—The weight of the whole package will be charged for. Station-masters and others interested are instructed not to accept for carriage by tramway to any station any package of explosives unless it is accompanied by the sender's written guarantee that consignee will take delivery of the same immediately on its arrival at the station to which consigned. In the event of consignees not complying with this guarantee, the package must be returned by first train to the sending station, from whence it must be promptly delivered to consignor, carriage being charged both ways.

1.—PARCEL AND LIVE STOCK RATES AND PARCEL REGULATIONS.

PARCEL RATES.

(Under £10 in value.)

	s.	d.
Any distance, weight not exceeding 14 lb.	1	0
" " 28 "	1	9
" " 56 "	2	6
" " 84 "	3	6

" " 14 "	0	6
" " 28 "	0	9
" " 56 "	1	3
" " 112 "	2	6
For every 28 lb. or portion thereof additional.....	0	6

Periodicals published at intervals exceeding one month will be charged ordinary parcel rates when sent by passenger train.

3. Dairy produce, eggs, fresh fruit, fresh meat, fresh fish, dewl poultry and game will be carried at a reduction of one-fifth on parcel rates when sent (in consignments not exceeding 300 lb.) by passenger trains. Minimum charge 1s.

All fish, fruit, meat, poultry, and other perishable articles are conveyed at owner's risk, and are liable to immediate sale if not claimed and charges paid on arrival.

4. Packed parcels in hampers, crates, bags, cases, or other packages are charged quadruple parcel rates, and the onus of proving that the parcels are not packed rests with the consignee or consignor.

5. The company will not be accountable for any parcel above the value of £10, unless the nature and value of the articles or property contained in such parcel shall have been declared by the sender, and an insurance rate equal to 1 per centum upon such declared value shall have been paid, in addition to the amount chargeable by the foregoing scale of rates.

6. Returned empties actual weight must be prepaid.

7. Double rates will be charged on furniture, musical instruments, fragile articles, and large packages weighing less than 10 lb. to each per cubic foot.

8. Parcels weighing more than 336 lb. cannot be forwarded by passenger trains.

9. In all cases it will be at the option of the company to proceed either against the sender or consignee to recover the amount due for the carriage of parcels.

10. All parcels to be delivered at the forwarding stations fifteen minutes previous to the departure of the train, for which they are intended, otherwise the company will not be liable for any loss, miscarriage, or detention of same.

11. PASSENGERS' LUGGAGE.

Luggage.—First-class passengers allowed 112 lb. ; second-class, 84 lb. Any excess and articles of merchandise will be charged at excess luggage rates.

12. No luggage will be allowed to be placed in the carriages, unless it is of such a size to admit of its being put under a seat or in the rack without inconvenience to other passengers.

13. Excess luggage should be in the booking office fifteen minutes before the starting of the train, so as to give sufficient time to have it weighed and stowed.

14. Passengers must have their names, and the station to which they are proceeding, distinctly marked on their luggage, and should see that it is properly labelled. If left behind and forwarded by a subsequent train through neglect of these precautions, ordinary parcels rates will be charged. To prevent mistakes they should have all old labels removed.

15. The company will not be responsible for any luggage, unless it is specially booked and paid for, and the name of the owner and its destination be distinctly marked thereon.

16. All unclaimed luggage kept at a station twelve hours after its carriage by tramway will be charged the usual cloak-room rates for each package, and the company reserve the right to sell the same, if unclaimed after three months.

17. EXCESS LUGGAGE RATES.

For every 28 lb. or part of 28 lb., 1s. additional.

18. COMMERCIAL TRAVELLERS' LUGGAGE AND SAMPLES BY PASSENGER TRAIN.

Commercial travellers' samples will be conveyed at half excess luggage rates, with a minimum charge as for 1 cwt., and a maximum weight of 15 cwt. If more than 15 cwt., a truck must be engaged at 1s. per truck per mile; the maximum weight of the load on the truck being 50 cwt.

Travellers intending to avail themselves of these reduced charges must be furnished with an authority from the firms they represent.

Travellers may forward the samples by any ordinary train at these rates, unaccompanied by themselves, on first signing (in person) a risk-note, a supply of which is kept at each station.

Charges must be prepaid at the station of original departure. Samples must be contained in tins or leather packages of handy size, and must have the firm's name or initials legibly painted on them. They must be booked at the parcels office at least fifteen minutes before train departure time.

19. CLOAK-ROOM CHARGES.

Every parcel 6d., for twenty-four hours; over that time an extra charge of 1d. per diem to be made. These charges to be strictly enforced on all parcels arriving at station addressed "to be called for" if such parcels are not taken delivery of in forty-eight hours after arrival at a station.

20. RATES FOR CORPSES.

The rate for a corpse is 1s. per mile.

Corpses will not be forwarded unless a certificate is produced from the medical attendant at the time of decease, setting forth that death was not caused by any contagious or infectious disease.

21. LIVE STOCK RATES.

In quantities not less than one truck load a sum not exceeding 6d. per head per mile, or for large numbers as per arrangement.

All horses, cattle, or other animals are carried by the company entirely at the owner's risk, except from any gross neglect on the part of the company or their officers. And the company are to be held free from all risk and responsibility in respect of any loss or damage arising on the loading or unloading, or from suffocation, or from being trampled on, bruised, or otherwise injured in transit, or from fire, or from any other cause whatsoever, not arising from such gross negligence as aforesaid, or where the loss or injury arises wholly or partially from fear or restiveness, and all fastening in either horse-boxes or trucks must be done by consignor, who will take all responsibility. Horses, cattle, or other animals to be carried must be at the stations one hour before the departure of the train by which they are intended to be forwarded, and the company do not undertake to forward any animals by any particular trains. Not less than thirty-six hours' notice must be given when a horse-box or cattle-truck is required, and 50 per cent. of the fare must be deposited when making the requisition.

22. DOGS AND GOATS.

Dogs and goats will be charged as follows:—Not exceeding 20 miles, 1s. ; exceeding 20 miles, 1s. 6d. They must be provided with chains or other means of securing them.

In all the above rates, part of a mile to be charged as a mile.

JOHN GRICE,
J. W. BYRON MOORE, } Directors.
ALFRED MELLOR, Secretary.

Wyman

Wyman Brown, Esq., to The Under Secretary for Public Works, Sydney.

Sir, 4, Victoria Chambers, Castlereagh-street, Sydney, 25 April, 1892.

I have the honor to hand you herewith a copy of By-laws and General Regulations for the working of the Tarrawingee Tramway, under the provisions of the Co.'s Amended Act.

I would respectfully ask that you will be good enough to take the necessary steps to obtain the assent of the Governor in Council, as provided in the second section of such Act.

I have, &c.,

WYMAN BROWN.

The Railway Commissioners should, I think, say whether these By-laws are sufficient.—D.C.McL., 26/4/92. Mr. Deane for report in the first instance.—B.S., B.C., 29/4/92. I have made arrangements for Mr. Alexander to inspect this tramway.—W.D., 10/5/92. Under Sec., B.C. Inform.—D.C.McL. (*pro* U.S.), 11/5/92. W. Brown, Esq., 11/5/92. Mr. Deane.—D.C.McL. (*pro* U.S.), B.C., 11/5/92.

Mr. Secretary Lyne will be obliged if the Minister for Railways will kindly submit these By-laws to the Railway Commissioners with a view of eliciting their opinion as to whether they can with safety be submitted by Mr. Lyne to the Executive Council for approval.

Seen.—W.D., 16/5/92. B.S., 19/5/92. F.K., Under Secretary for Finance and Trade. The Railway Commissioners. Approved.—J.S., 27/5/92. The Secretary for Railways.—F.K., 27/5/92. Please report on separate paper relative to the proposed By-laws attached hereto.—H. McLACHLAN (*pro* U.S.), 28/5/92. C. T. Manager.

Thomas Brown, Esq., to The Under Secretary for Public Works.

Sir, 4, Victoria Chambers, Castlereagh-street, Sydney, 15 June, 1892.

On behalf of the Tarrawingee Tramway and Flux Co., I have the honor to draw your attention to the great inconvenience the company is under in respect of their By-laws, and to ask you if anything can possibly be done to expedite the passing of the same as soon as possible.

I have, &c.,

THOMAS BROWN.

Inquire at Railways when these By-laws are likely to be returned.—D.C.McL., 16/6/92. Urgent. This matter has not been dealt with by Commissioners yet, but it is expected that the By-laws will be considered to-morrow.—T.D., 16/6/92. In three days, 17/6/92.

The Under Secretary for Public Works to Wyman Brown, Esq.

Sir, 30 June, 1892.

With further reference to your letter of the 25th of April last, enclosing a draft of the proposed By-laws for the working of the Tarrawingee tramway, I am directed by the Secretary for Public Works to inform you that the Railway Commissioners, to whom the matter was referred, report that in their opinion the clauses are, in many instances, too stringent. I am therefore to suggest that the By-laws adopted by the Commissioners for Railways might be extended to the Tarrawingee tramway, modified where the Companies Act renders such a course desirable.

I have, &c.,

J. BARRING,

Under Secretary.

No. 19.

The Secretary to the Tarrawingee Flux and Tramway Company (Limited) to The Under Secretary for Public Works.

Prell's Building, corner Collins and Queen Streets,

Melbourne, 10 August, 1892.

Dear Sir, Referring to your favour of 21st July, I now have much pleasure in handing you the company's cheque for £51 16s. 9d., to cover expenses incurred in the recent inspection of the company's line by your engineer.

Yours truly,

ALFRED MELLOR,

Secretary.

The Chief Accountant, with cheque.—D.C.McL. (*pro* U.S.), 12/8/92. Cheque for £51 16s. 9d. paid into credit of Salaries and Contingencies, Department of Public Works.—A.R.M., 12/8/92. Receipt forwarded to company. Under Secretary.—W.H.Q., 12/8/92. Place with the other papers.—D.C.McL., 12/8/92. Seen.—W.D., 15/8/92. Accountant.—W.H.Q., 25/8/92. Seen. Bookkeeper to please note.—H.C., 25/8/92. Entered; journal folio, 358; Treasury Receipt, No. 23,086.—W.N., 1/9/92. Seen; put by.

The Under Secretary for Public Works to The Secretary, Tarrawingee Flux and Tramway Company (Limited).

Sir,

Public Works Department, Sydney, 20 July, 1892.

With reference to the inspection recently made by Mr. Alexander, of this Department, of your tramway, in connection with granting the certificate required by the first clause of the Tarrawingee Tramway Act of 1890, I am directed by the Secretary for Public Works to request that you will be so good as to forward, without delay, a cheque to cover expenses incurred in the matter, which were as follows:—

	£	s.	d.
Travelling expenses	30	11	0
Salary of Mr. Alexander for eleven days	21	5	9
	<hr/>		
	£51	16	9

I have, &c.,
J. BARLING,
Under Secretary
(per D.C.McL.)

Passed for payment.— Chairman.

Mr. Stanley Alexander to The Engineer-in-Chief, Railway Department.

Sydney, 7 June, 1892.

In compliance with your request, I beg to submit a statement showing expenses incurred by the Department on the inspection of the Tarrawingee Flux and Tramway Company's railway by me during last month:—

	£	s.	d.
Amount of voucher for travelling expenses	30	11	0
Proportion of my salary chargeable to this duty—(Left Sydney on evening of 10th May; arrived Sydney mid-day of 20th May)—			
11 days of £60, monthly salary	21	5	9
<u>31</u>	<hr/>		
	£51	16	9

STANLEY ALEXANDER.

Will you please have the account forwarded to the company for payment.—W.D., 11/6/92. Under Secretary. List, to demand payment.—B.T., 23/6/92. Approved by Minister; with order No. 2,549.—D.C.McL., 8/7/92. B.T. Write, 9/7/92. Expenses paid temporarily from Railway Construction Branch Advance.—W.H.Q., 16/7/92. Alfred Mellor, Esq., 20/7/92. In two weeks, 20/7/92. End of month, 2/8/92.

The Under Secretary for Public Works to The Secretary, Tarrawingee Flux and Tramway Co. (Limited).

Sir,

21 July, 1892.

With reference to the inspection recently made by Mr. Alexander of this Department of your tramway, in connection with granting the certificate required by the first clause of the Tarrawingee Tramway Act of 1890, I am directed by the Secretary for Public Works to request that you will be so good as to forward without delay a cheque to cover expenses incurred in the matter, which were as follows:—

	£	s.	d.
Travelling expenses	30	11	0
Salary of Mr. Alexander for eleven days... ..	21	5	9
	<hr/>		
Total... ..	£51	16	9

I have, &c.,
J. BARLING,
Under Secretary
(Per D.C.McL.)

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EXTENSION OF RAILWAY FROM LISMORE TO CASINO.

(PETITION FROM THE RESIDENTS OF THE TOWN AND DISTRICT OF CASINO, IN FAVOUR OF.)

Received by the Legislative Assembly, 10 November, 1898.

To the Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned Residents of the Town and District of Casino,—

HUMBLY SHOWETH:—

1. That in the year 1890, upon the question of the construction of a line of railway from The Tweed to Grafton being referred to the Public Works Committee, the Sectional Committee of that body reported that, after due consideration of the evidence before them, and of the information obtained by personally visiting the districts, they were favourable to the construction of the proposed line as far as Casino.

2. That the carrying out of the said railway was subsequently authorised only as far as Lismore; but the extension to Grafton was again referred to the Public Works Committee in 1892, when another Sectional Committee visited the locality, and also reported in favour of the extension of the line to Casino.

3. That the following among other reasons were given by the Sectional Committee for arriving at their conclusions, and that such reasons apply with far greater force to the conditions existing at the present time:—

- (a) That whatever decision might be subsequently arrived at with regard either to the construction of the North Coast railway, or the adoption of one of the lines proposed for connecting the coast with New England, this connection must be made, and therefore its construction would not be money misspent. It would form portion of the North Coast line, a portion of the Grafton-Glen Innes line, or a portion of the Tenterfield connection, should any one of them be chosen.
- (b) That it would promote the cultivation of belts of excellent land between Lismore and Casino, and would develop the agricultural resources of the Upper Richmond—the lands in which district they testified from personal observation to be of superior character.
- (c) That if a railway were taken from Lismore to Casino it was more than probable that there would be a considerable settlement of farmers, as well as a better utilisation of the forests to the west and north-west of the last-mentioned town.

4. That the resolution adopted by the Public Works Committee, as reported to the Legislative Assembly on the 28th September, 1892, was in accordance with the opinion of such Sectional Committee, and in favour of the construction of the line to Casino, but no steps have been taken to give effect to their recommendations.

5. That recent estimates show that the proposed line could be constructed at considerably less cost than that at which it was estimated when the report above referred to was made in favour of the route.

6. That the district which would be served by the proposed line contains large areas of valuable Crown lands, partly locked up in reserves, which could be thrown open for profitable settlement, and the revenue derived from this source would be so considerable that the actual expense of the line to the Colony would be reduced to a minimum.

7. That within the last three years considerable impetus has been given to the trade of the district by the rapid growth of the dairying industry, for which the land is particularly adapted, as well as for agriculture, while the construction of the line would inevitably result in considerable areas of land being made available for occupation in small holdings, and a consequent large increase in trade and population.

8. That at the present time the further development of this rich and important district is materially retarded for the want of sufficient means of communication with outside markets, and such communication will be afforded by the construction of the proposed line, the traffic accruing to which should almost from the first be sufficient to pay the working expenses and interest on the cost of the work, while it is confidently anticipated that the line would very shortly return a profit.

Your Petitioners, therefore, humbly pray that your House will take the premises into your favourable consideration, and will take such steps as will ensure the construction of the said line of railway from Lismore to Casino with the least possible delay.

And your Petitioners will ever pray.

[Here follow 407 signatures.]

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PROPOSED RAILWAY FROM KOORAWATHA TO GRENFELL.

(PETITION FROM CERTAIN RESIDENTS OF THE TOWN OF COWRA AND SURROUNDING DISTRICTS IN FAVOUR OF.)

Received by the Legislative Assembly, 24 November, 1898.

To the Honorable the Members of the Legislative Assembly.

The Petition of the Residents of the town of Cowra and surrounding districts,—

HUMBLY SHOWETH:—

That your Petitioners, being deeply impressed with the existing necessity for the construction of a railway line from Koorawatha, a part of the Harden-Blayney line, to the important town of Grenfell, as approved by the Public Works Committee, the Secretary for Works, and the Railway Commissioners, would respectfully urge you to sanction the proposal when submitted for your consideration, for the following reasons:—

1. That the proposed route is the nearest and best that could be selected in the interests of the people of Grenfell and west thereof, seeing that it is thirty-three miles shorter than the proposed extension from Young per the "White line"; hence the freighting for all time would be considerably less than by the latter route.
2. That there are no engineering difficulties in the route favoured by your Petitioners, and the cost of construction would as a consequence be proportionately low.
3. That the proposed line would connect the fertile districts within reach of the Great Western Railway system with the large tract of pastoral country west of Grenfell.
4. That Koorawatha, being nearly midway between our two great railway systems, would give the people of Grenfell the great additional advantage of easy access to the Southern line, thereby making their commercial position stronger and better.
5. That in consequence of the large increase of agriculture on the route between Koorawatha and Grenfell, if the line is not constructed that way, a road would have to be made for the farmers and others to bring their produce to market at a cost of £14,000, which would afterwards take £9 per mile to keep in repair (see Superintendent Osborn's evidence, page 19, Public Works Committee's Report).

Your Petitioners therefore humbly pray that you will take the foregoing facts into consideration for the reasons mentioned.

And your Petitioners will ever pray, &c.

[Here follow 141 signatures.]

1898.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PROPOSED RAILWAY FROM TEMORA TO WYALONG.

(PETITION FROM CERTAIN RESIDENTS OF WYALONG AND SURROUNDING DISTRICTS, IN FAVOUR OF.)

Received by the Legislative Assembly, 30 November, 1898.

To the Speaker and the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned residents of the districts of Wyalong, Barmedman, Reefton, Kildary, Yalgogrin, Ungarie, Bena, Lake Cowal, Billy's Lookout, Marsden, Wollongough, Merringreen, Hiawatha, and Buddigower, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

That it is necessary for the immediate construction of the railway from Temora to Wyalong on the following grounds, viz.:—

That the route from Temora to Wyalong is the most direct and cheapest, and the most advantageous to the population of the surrounding districts.

That this district has become a large farming centre by the reason of there being under cultivation at the present time 11,000 acres of land, and which area would be increased tenfold by the construction of the railway to Wyalong.

That the permanency of the Wyalong goldfield is now undoubtedly assured, it having for the past four years and is at the present time supporting a population of 4,000 (four thousand) persons, and is on the increase.

That the output of gold for the past twelve months, ending December, 1897, was 34,370 oz., and the latest developments of the mines at the deep levels is showing a return of 20 oz. per ton at a depth of 400 feet, being 300 feet in the native rock.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to recommend the construction of the railway to Wyalong from Temora forthwith.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 683 signatures.]

(SECOND SESSION.)

CLAIM OF SAMUEL AND MARY LEMON.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on the 30th August, 1898,—“to inquire into and report upon the claim of Samuel Lemon and Mary Lemon regarding compensation for land resumed for railway purposes on Molong, Parkes, and Forbes Railway,” and to whom was referred on 31st August, 1898, the Return to Order, “Application of Samuel and Mary Lemon for compensation,” of Session, 1889,—have agreed to the following Report:—

Your Committee having examined the witnesses named in the list* (whose evidence will be found appended hereto) find:—

*See list, page 4

1. That in 1881 Samuel Lemon was the holder of additional conditional purchases Nos. 135 and 137, and Mary Lemon the holder of a 40-acre selection, No. 133, in the Land District of Molong.
2. That on the 5th of May, 1884, certain portions of the aforesaid additional conditional purchases and selection were resumed in connection with the construction of the Orange to Molong Railway.
3. That Samuel Lemon was offered £7 1s. 7d. for the 5a. 22p. resumed, together with improvements thereon, which amount he refused, on the ground that the compensation was inadequate.
4. That Mary Jane Lemon was offered £2 16s. 3d. for the 5a. 2r. 21p. resumed, which amount she refused, on the ground that the railway line cut diagonally through the selection, thereby rendering it useless.
5. That the Railway Land Resumption Act of 1874 did not allow compensation for severance, which undoubtedly occurred, as shown on the plans (Appendices A and B to the papers referred to the Committee).
6. That the land belonging to Samuel Lemon, at the time of the resumption was improved to the extent of £10 per acre.
7. That the amount of compensation offered to Samuel and Mary Lemon has never been applied for.
8. That Thomas and Mary Keenan were allowed at the rate of £24 per acre and £40 per acre respectively for land resumed for railway purposes at Borenore, which land adjoined that belonging to the Lemons.

Your Committee, under the circumstances, beg to recommend the claim of Samuel and Mary Lemon to the favourable consideration of the Government.

ANDREW ROSS,
Chairman.

No. 1 Committee Room,
Legislative Assembly,
4th October, 1898.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 8 SEPTEMBER, 1898.

MEMBERS PRESENT:—

Mr. Affleck,		Mr. Hurley,
Mr. E. M. Clark,		Dr. Ross.

Dr. Ross called to the Chair.
 Entries from Votes and Proceedings appointing the Committee, and referring the Return to Order of Session 1889, read by the Clerk.
 Papers referred before the Committee.
 Reassembling of the Committee to be arranged by the Chairman.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CLAIM OF SAMUEL AND MARY LEMON.

THURSDAY, 22 SEPTEMBER, 1898.

Present:—
MR. AFFLECK, | MR. HURLEY,
|
DR. ROSS.
DR. ROSS IN THE CHAIR.

Alfred Brown sworn and examined:—

1. *Chairman.*] In what department of the Public Works are you engaged? In the Valuation Branch. A. Brown.
2. Have you the papers in the case of Samuel and Mary Lemon? Yes.
3. Can you tell the amount of valuation or appraisal and the area of the land resumed in connection with the Orange to Molong railway? Yes; the area resumed from Mary Jane Lemon was 5 acres 2 roods 21 perches. 22 Sept., 1898.
4. What was the appraised value put on that area? £2 16s. 3d.
5. That was all the compensation allowed for the resumption of that area? Yes.
6. Did the extension of the railway interfere in any way with the 40-acre conditional purchase? Yes; it cut it diagonally through the middle.
7. Would that lessen its value for agricultural purposes? Certainly; it would be more difficult—very much harder—to work.
8. Was any allowance made for severance? No; no severance was allowed under the 1874 Railways Land Resumption Act.
9. Do you know the number of the conditional purchase of Mary Jane Lemon? The parish number is 256.
10. Do you know when it was taken up? C.P. 82/117, selected at Molong, 13th April, 1882.
11. Will you refer to the claim of Samuel Lemon, who has two selections of 60 acres and 40 acres;—when were they taken up? The 60 acres 1 rood is part of portion 246, A.C.P. 81/39, selected at Molong, 10th February. The 40 acres is part of portion 231, A.C.P. 79/265, selected at Molong, 20th November, 1879.
12. How much land has been resumed for railway purposes from those two selections? 4 acres 2 roods 5 perches out of the 60 acres 1 rood, and 2 roods 17 perches out of the 40 acres, making a total of 5 acres and 22 perches.
13. Do the papers show what compensation was allowed for the 5 acres 22 perches? Yes; £2 14s. 4d. was allowed for the 4 acres 2 roods 5 perches, and 7s. 3d. was allowed in both instances; and 7s. 3d. for the 2 roods 17 perches.
14. What was allowed for the improvements? £4; that makes a total of £7 1s. 7d. I may mention that Mary Jane Lemon's improvements were valued at nil.
15. I suppose the railway extended through this conditional purchase in the same way as it did through the other? There would be severance in the 60 acres 1 rood block. It cuts partly through the side of it. The 40-acre block was severed very little—only a little at the corner. A large strip was cut off from the 60 acres 1 rood block by severance.
16. Do you know much of the area was cut off? No, there is nothing on the papers to show.
17. Do the papers show what the £4 worth of improvements consisted of? There is nothing to show that—only Mr. Byrnes' report.
18. Is it a fact that both Samuel Lemon and his daughter have repeatedly refused to take the compensation, on the ground that it was not sufficient for the improvements they had put on the land? Yes.
19. In what year did the resumptions take place? They were gazetted on the 15th May, 1884.
20. And since then there has been no settlement of the case? No. 21.

- A. Brown. 21. And neither Samuel nor Mary Lemon have ever lifted the money? No.
22. Do you know how much has been lying in the Treasury for them? In the case of Mary Jane Lemon the amount would be £2 16s. 3d.; and in the case of Samuel Lemon, £7 1s. 7d.
23. That amount has been lying unclaimed since 1834? From the 14th November, 1834—the date of the appraisement.
24. Have they put in any claim for an increased amount of compensation for the land, thinking that the amount allowed for resumption and severance was inadequate? I have a *précis* showing that Samuel Lemon claims £131 for compensation, and Mary Lemon £25 an acre—that is, for the 5 acres 2 roods 21 perches.
25. The papers do not show that there were any buildings or improvements in Mary Lemon's case? No.
26. Are you aware whether she erected a two-roomed hut at a cost of £20? No; the papers do not show it.
27. Do they show whether there was any clearing or grubbing? They claim for clearing and grubbing.
28. Are you aware from the papers that, in another case—a land resumption—Mr. Lemon accepted £26 an acre for the resumption of 2 acres 1 rood and a few perches and it was allowed? I believe that is so. That was under the Act of 1858.
29. *Mr. Affleck.*] Was that resumption at the same time? Yes.
30. *Chairman.*] How much deposit money was paid on the land under the Land Act of Sir John Robertson—1861? £10 by Mary Jane Lemon for the 40-acre block, and £30 by Samuel Lemon for the 60-acre and 40-acre blocks.
31. Do you know whether any interest was paid on the conditional purchase? No.
32. Are you aware whether the selectors who have taken up land on the Orange and Molong railway were paid a higher sum for compensation for the resumption of the land? They would be paid the same if it were taken under the same Act. They would be paid double what they paid on their selections, together with the value of the improvements, but they would not be allowed for severance.
33. Are you aware that they have not been allowed for severance in former cases? Yes; if the land were taken under the same Act.
34. Will you look at the return laid before Parliament on the 10th September, 1885, in connection with land resumed for railway purposes; you will see there several cases in which the award has been very high for a small area; there is the case of Astill, who had 4 acres 1 rood 24 perches;—how much compensation was allowed in that case? I could not say. There may have been buildings on that land.
35. Have you any further information? No; I think Mary Jane sent a claim in under the Act of 1858 for £222 19s. 6d. Of course, we could not receive it, because the land was resumed under the 1874 Railways Resumption Act.
36. And that is the sole reason why this case has not been settled? Yes.
37. Is it customary in appraising land to allow anything for severance? Decidedly, under the 1858 Act; but not under the 1874 Act. I may mention that Mr. J. B. Thompson, the Land Valuer, reported—
- I have carefully inspected this land, and beg to report that no improvements were taken, and that the award made by Mr. Byrnes is correct.
38. *Mr. Affleck.*] What were his instructions on the matter? I have a minute here of Mr. Thompson, which says:—
- If authorised by the Commissioner, I would submit a report in this matter, which I would have an opportunity of doing so, as I must visit Molong to attend an arbitration in two or three weeks.
- That was approved by Mr. Goodchap, and then he visited the land. The date of that is 2nd September, 1887.

WEDNESDAY, 28 SEPTEMBER, 1898.

Present:—
MR. AFFLECK, MR. GORMLY,
MR. EDDEN.

DR. ROSS IN THE CHAIR.

Catherine Lemon, wife of the late Samuel Lemon, farmer, Amaroo, Molong, sworn and examined:—

- Mrs. C. Lemon. 39. *Chairman.*] Are you aware whether your husband owned any selections at Amaroo through which the railway line passes? Yes.
40. Are you aware whether your husband ever came to Sydney about the land through which the line passes? Yes; twice.
41. I believe that in consequence of the compensation offered for the resumption of the land being inadequate there has been no transfer of the land? No.

Charles Lemon, son of Catherine Lemon, Amaroo, Molong, sworn and examined:—

- C. Lemon. 42. *Chairman.*] Did your father take up land under the Selection Act? Yes.
43. Was any part of that land resumed for railway purposes when the line from Orange to Molong was constructed? Yes.
44. How many blocks did the line pass through? Six, I think.
45. Did your father get paid for them? Yes; for one or two blocks.
46. Do you know what he received for one block? £54.
47. How many acres were resumed? Two.
48. The amount of £54 was accepted by your father? Yes.
49. Does the paper produced refer to the resumption of 2 acres in one block? Yes.
50. And the amount paid was £54 1s. 8d.? Yes.
51. What is the date of that paper? October, 1887.
52. *Mr. Gormly.*] Does that block adjoin those in regard to which compensation has not been accepted? I think so.
53. How many acres are there in regard to which compensation has not been accepted? About 5½.
54. *Chairman.*] Do you know how much was offered as compensation for the resumption of the two blocks? £7 1s. 7d.

55. You are now referring to Samuel Lemon's land? Yes.
56. *Mr. Affleck.*] What amount of land was resumed for railway purposes out of the two blocks? 5 acres 22 perches.
57. *Chairman.*] And only £5 was allowed for the value of that land and improvements? Yes.
58. Did you assist anyone in preparing the land for cultivation? Yes; I assisted George Tilling and two others.
59. How much did you receive per acre for clearing it? It came to about £7 for clearing 12 acres in the 60-acre block.
60. Was it heavily timbered? Yes.
61. *Mr. Affleck.*] Which was the resumed land—the cleared or the uncleared? The land which was cleared; at any rate, the biggest part of it was cleared.
62. *Chairman.*] How long were you at work clearing it? About six weeks.
63. *Mr. Affleck.*] How many of you were employed? Sometimes five, and at other times three and four.
64. *Chairman.*] What became of the timber after it was grubbed? We made a fence of it.
65. Did you hire teams to put it together? Yes; my father hired a bullock team at 15s. a day, including rations.
66. How long was the team employed? About a fortnight.
67. *Mr. Affleck.*] Was the fence put on the boundary? Yes; on the boundary of the block which was cleared.
68. Then the resumption would only affect about 2 chains of it? Thereabouts.
69. *Chairman.*] Did you ever hear your father object to taking the compensation which was allowed? Yes; he thought it was not enough.
70. How often did your father go to Sydney about the land? Two or three times.
71. How far is Amaroo from Sydney by rail? 207 miles.
72. And he was put to expense travelling to and fro? Yes; it costs you over £2 to come down now.
73. Do you know how much deposit your father paid on the land? Five shillings an acre.
74. Do you know how much the person named George Tilling was paid? He received about 30s. a week.
75. What do you really think the cost of clearing the land would amount to? £9 or £10 an acre.
76. *Mr. Affleck.*] You stated a short time ago that the 12 acres only cost £7? That was for myself.
77. And there were four or five of you? Yes.
78. That would make about £35 for the 12 acres if you were all paid at the same rate? Yes; but I was not paid as much as the others.
79. *Chairman.*] For what would you have undertaken to do the work by contract? We gave £2 an acre to grub some of it.
80. What do you really think the clearing was worth per acre? £9 or £10; it was heavily timbered.
81. I suppose that all the timber which was grubbed had to be cross-cut and fixed up in the shape of a log fence, and that, of course, would cost money? Yes.
82. *Mr. Affleck.*] Did you make a fence of the timber? Yes.
83. *Chairman.*] Was the land, after it was cleared, grubbed and the fence erected? Yes.
84. Was any crop put in? No.
85. Naturally your father would lose a year's crop from it? Yes.
86. *Mr. Edden.*] Do you remember when the Government resumed the land? Yes; about fourteen years ago.
87. *Mr. Affleck.*] Was anyone sent from Sydney to appraise the value of the land? Yes; Mr. Thompson.
88. Did your father agree that he should be his valuer as well as the Government valuer? That I could not say.
89. *Chairman.*] Do you know whether the other selectors in the locality through which the line passes were allowed good compensation for the resumption of their land? Yes, they were.
90. More than your father? Yes.
91. *Mr. Affleck.*] Was the land belonging to the other people freehold or selection? Selection.
92. Are you positive it was selections? To the best of my knowledge Mr. Keenan got more than we got, and there were no improvements at all on his land.
93. Was his land a selection? Yes.
94. *Chairman.*] Have you heard your father say that the reason he refused to take the compensation was because it was inadequate to the loss sustained through the severance? Yes.
95. How does the line pass through your sister's 40-acre block? Diagonally.
96. *Mr. Affleck.*] How does it run through your father's selection? It cuts through as shown on the plan. [*Appendix A to the printed papers.*]
97. *Chairman.*] Have you any idea whether there were any improvements on your sister's block of 40 acres at the time it was resumed? I know a bit of grubbing was done.

John Roche Ardill sworn and examined:—

98. *Chairman.*] I believe you are at present an invalid in the Asylum? Yes.
99. Were you ever a resident in the district of Molong? Yes; since 1865 up to about twelve months ago.
100. Are you a licensed surveyor? Yes.
101. Did you know Samuel and Mary Jane Lemon? Yes.
102. Do you remember the time of the extension of the railway from Orange to Molong? Yes.
103. Did the line pass through any land belonging to Samuel and Mary Jane Lemon? Yes.
104. Can you explain from memory the blocks through which the extension took place? The plans show how the line went through the blocks. [*Appendices A and B to the printed papers.*]
105. I believe you did a large amount of Lemon's correspondence with regard to the land? Yes; I had valued two portions before for Lemon.
106. Do you know whether he ever received any money for any portion of the land which was resumed? Yes, for two portions. He received £54 1s. 8d. in regard to one block and £186 10s. 9d. in regard to another.
107. *Mr. Affleck.*] Had that land for which compensation was paid anything to do with the land under the consideration of the Committee? No; it adjoins it.
108. What was he offered for the land under the consideration of the Committee? Five shillings an acre, and £1 an acre for improvements.

C. Lemon.
28 Sept., 1898.

J. R. Ardill.
28 Sept., 1898.

- J. R. Ardill. 109. Can you tell us the reason for the difference between the compensation allowed for the land adjoining and the land under the consideration of the Committee? I think it arose out of some blunder by the late Mr. Byrnes, the valuator. I think he gave Mrs. Lemon the wrong papers. He gave her the papers belonging to Mrs. Keenan. According to what she says he was never at the place more than once. I never saw him at the place myself. After Mr. Byrnes died Mr. Thompson was appointed, and he valued the land on the ground. I met him there by appointment. We agreed to a compensation of £26 an acre, and that is the amount Mr. Lemon was paid for the other portions of the land through which the line has passed.
- 28 Sept., 1898. 110. *Mr. Gormly.*] That land adjoins the land at present in dispute? Yes.
111. Was it much the same quality of land? About the same. The best of the land is at present in dispute.
112. Do you consider the land under consideration of equal value with the other? Of better value. Upon the other land there were no improvements.
113. How much would you consider it worth to grub and clear the land on the two blocks under consideration? The grubbing, clearing, and fencing would be worth £10 an acre.
114. What would the grubbing and clearing alone be worth? £8 an acre.
115. *Chairman.*] Were there any improvements on Mary Jane Lemon's selection? Only the grubbing.
116. You do not know of your own knowledge how far the land was improved at the time the railway line was extended? It was not improved at all, excepting as regards the grubbing.
117. *Mr. Affleck.*] Was the whole of the 5 acres cleared? I think so.
118. And you value the clearing at £8 an acre? Yes.
119. The railway, of course, had to pass through other land? Yes.
120. Do you know any freeholders or conditional purchasers who were paid compensation for resumption? Yes; there were the Keenans, for instance.
121. *Chairman.*] How much did Mrs. Keenan get? £40 an acre for her land at Borenore.
122. Was it the same quality of land? About the same.
123. Do you know what Tom Keenan, of Amaroo, got? About £24 an acre. That was selected land.
124. *Mr. Affleck.*] Can you give us any idea why he should get £24, and the Government should only allow Lemon 5s.? Because of the Act passed by Sir James Martin in 1874, to the effect that people were only to be paid according to the deposit paid, and 10 per cent. added.
125. *Mr. Gormly.*] Referring to the plan produced [*Appendix A to the printed papers*—do you consider the severance of a portion of that land would be detrimental to it? Yes.
126. What injury would the severance cause? It cuts off a piece of land, and makes it of no earthly use at all.
127. How much was severed? About 5 acres.
128. With regard to Mary Jane Lemon's land—does the line run from corner to corner through the block [*Appendix B to the printed papers*]? Yes.
129. What damage would that do the 40 acres? It almost destroys it.
130. Is the land suitable for agriculture? Yes.
131. Would the severance mean additional cost in cultivation? Yes.
132. Thereby depreciating the value of the land? Yes.
133. Would the severance reduce the value of the 40 acres by one-fourth? It would reduce it by one-half.
134. *Mr. Affleck.*] Do you know where the residence is? It is on the cultivation portion of the land.
135. *Chairman.*] Had you occasion to come to Sydney with Mr. Lemon to try to get matters settled? Yes; twice.
136. And you obtained no satisfaction? No; some mistake occurred. We came to meet Mr. Thompson on the Wednesday, and the meeting was put off until the Thursday, but we did not see him.
137. Do you think the compensation offered to Lemon was inadequate? Certainly.
138. *Mr. Affleck.*] Did you ever receive from the authorities a decision of the Supreme Court Judge with regard to the question of severance? Yes; they said that the Supreme Court had ruled that people were not to be paid for severance. I said at the time that another Judge might say it should be paid. The Supreme Court Judges are not always to be relied upon.
139. Do you know that Mr. Byrnes was sent by the Government to value the land? Yes.
140. Did Mr. Lemon also accept him as his valuer? Yes.

George Tilling, farmer, Amaroo, Molong, sworn and examined:—

- G. Tilling. 141. *Chairman.*] How long have you resided at Amaroo? About four years.
- 28 Sept., 1898. 142. Did you know Samuel and Mary Jane Lemon? Yes.
143. Did you ever assist Charles Lemon to clear and grub the land through which the railway line passes? Yes.
144. What do you consider the land which was cleared worth per acre to clear it? I could not do it for less than £9, £10, or £11 an acre.
145. Was it very thickly timbered? Yes; a portion of it.
146. *Mr. Gormly.*] I suppose some of the timber was difficult to burn? Yes; it was apple-tree and gum.
147. And you cannot get the stumps out without grubbing? No.
148. *Mr. Affleck.*] Did you burn it off or make a fence with it? We made a fence.
149. Did you help to make any improvements upon Mary Jane Lemon's land? No; but there were some improvements upon it. There was a two-roomed hut; but that was not on the line—it was at the side.
150. *Mr. Gormly.*] Was there any grubbing where the railway line ran through? No.
151. *Mr. Affleck.*] Do you know where the line runs through Samuel Lemon's property? Yes.
152. Was that particular portion cleared? Yes.
153. How much land would be taken up for railway purposes? About 5 acres.
154. How much of that was cleared and stumped? Fully three-fourths at the time the line was pegged out.
155. *Mr. Gormly.*] Was it entirely cleared before the line was constructed? I cannot say, because I went away.

1898.

(SECOND SESSION)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GEORGE-STREET AND HARRIS-STREET ELECTRIC
TRAMWAY.

(RETURN RESPECTING.)

(Printed under No. 13 Report from Printing Committee, 24 November, 1898.)

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 2nd November, 1898, That there be laid upon the Table of this House,—

“ All papers relating to the calling for tenders for the circulating pumps
“ and feed pumps for the George-street and Harris-street Electric Tramway,
“ Contract No. 17, and the acceptance of the tender of H. P. Gregory & Co. ;
“ together with particulars of the names and amounts of all other tenders
“ in connection therewith.”

(Mr. Cann.)

SCHEDULE.

NO.	PAGE.
1. Minute, Electrical Engineer, Railway Department, to Engineer-in-Chief, Railway Construction, Department of Public Works ; 21 February, 1898. Respecting use of electric motors for feed-water and circulating pumps...	2
2. Minute, Electrical Engineer, Railway Department, to Engineer-in-Chief, Railway Construction, Department of Public Works ; 4 July, 1898. Report on specification prepared in the Works Department	2
3. Minute, Electrical Engineer, Railway Department, to Engineer-in-Chief, Railway Construction, Department of Public Works ; 7 July, 1898. Further respecting specification.	3
4. Minute, Engineer-in-Chief, Railway Construction, to Under Secretary, Public Works ; 14 July, 1898. Submitting notice inviting tenders to be opened on 2nd August, 1898	3
5. Letter, H. H. Kingsbury & Co. to Engineer-in-Chief, Railway Construction ; 26 July, 1898. Asking that time for receipt of tenders be extended	3
6. Letter, Arthur Brittain to President, Tender Board ; 27 July, 1898. Asking that time for receipt of tenders be extended	4
7. Minute, Under Secretary, Public Works, to Minister for Public Works ; 2 August, 1898. Recommending that the date for opening tenders be extended to 8th August	4
8. Schedule of tenders received ; 8 August, 1898. Report by Electrical Engineer, Railway Department ; 10 August, 1898. Letters from Morris Bros. and H. P. Gregory & Co. ; 19 August, 1898. Reports by officers of the Department and recommendation of Board of Reference ; 23 August, 1898. H. P. Gregory & Co's. tender accepted ; 29 August, 1898	4
9. Tender, Simpson Bros., representing the Worthington Pumping Engine Co. ; tender received ; 9 August, 1898	
10. Letter, Morris Bros. to the Under Secretary for Public Works ; 30 August, 1898. Respecting tender submitted by them	10
10A. Letter, H. P. Gregory & Co. to Engineer-in-Chief, Railway Construction ; 1 September, 1898. Applying for extension of time in which to complete contract	11
11. Letter, Morris Bros. to the Minister for Public Works ; 9 September, 1898. Giving their statement as to tenders submitted by them ; minute by Minister in reference thereto.	11
12. Minute, Assistant Engineer, Tramway Construction, to Engineer-in-Chief for Railway Construction ; 15 September, 1898. Report in regard to an interview between Mr. B. Morris and himself	12
13. Minute by the Engineer-in-Chief for Railway Construction ; 21 September, 1898. Report on letter of Messrs. Morris Bros.	13
14. Minute by the Engineer-in-Chief for Railway Construction ; 26 September, 1898. Further report	13
15. Minute by Board of Reference ; 26 September, 1898. Statement of facts in connection with case ; Minister's minute thereon, and further minute by Board	14
16. Letters, H. H. Kingsbury & Co. to Engineer-in-Chief, Railway Construction ; 4 October, 1898 ; 8 October, 1898. Respecting the use of G. E. 1,000 motors in connection with pumps. Minute by Engineer-in-Chief for Railway Construction thereon ; 13 October, 1898. Minute by Board of Reference, in which it is recommended that H. P. Gregory & Co's. contract be extended to comprise supply of motors. Revised acceptance issued, 21 October, 1898, and original acceptance cancelled.....	15

189—A

GEORGE-STREET

GEORGE-STREET AND HARRIS-STREET ELECTRIC TRAMWAY.

No. 1.

The Electrical Engineer, Railway Department, Sydney, to The Engineer-in-Chief for Railways.

Electric Pumps.

21 February, 1898.

BEFORE making any recommendation regarding the use of electric motors for feed-water and circulating pumps at the new power station, I should much like to discuss the matter with you. The adoption of electric feed-water pumps by the West End Company, of Boston, is quite a new departure in American practice, and appears to confirm the reported economy of electric pumps in English stations.

P. B. BLWELL,
Electrical Engineer.

H.D., 22/2/98. Mr. Fischer.

Acting under your verbal instructions, I beg to report as follows, on circulating and feed pumps for the power-plant for the George-street and Harris-street Electric Tramway:—

Circulating Pumps.—The quantity of cooling water required for the condensers when the plant is working at full load, *i.e.*, 4,800 I horse-power, and assuming a consumption of 16 lb. steam per I horse-power per hour, and the temperature of injection water 65 degrees Fah., will be about 4,000 British gallons per minute.

Considering the small load we shall have at the start, I would suggest putting in three electrically-driven centrifugal pumps, each capable of delivering 2,000 British gallons per minute, at a speed of about 550 revolutions per minute.

It will be far more economical to work one of the pumps at full load than to put in a large unit, capable of delivering 4,000 gallons per minute, and only working it at half load. Economy is also further ensured by having a small unit standing idle as a "stand by" than a large one of double the power.

Each pump would be driven by a 50 horse-power motor coupled direct, and I would suggest the motors be controlled by hand rheostats, as automatic control necessitates complicated gear. Estimated cost, £1,000 each.

Feed Pumps.—The quantity of feed-water required, assuming a consumption of 16 lb. per I horse-power per hour, will be about 130 British gallons per minute.

To do the work efficiently, I would suggest putting in two (one as a stand by) triplex electrically-driven feed pumps, each having three single-acting plungers 7 in. diameter by 8 in. stroke, to run at forty-five revolutions per minute. Each pump would be geared to a 25 horse-power motor.

With regard to controlling the speed of motors, it is possible to do this with rheostats worked by means of a float in the hot well, but as the pumps will be fixed in a very convenient position close by the boilers, I would recommend working the rheostats by hand, thus obviating unnecessary and complicated gear.

Vertical pumps will be preferable to horizontal, on account of the small space taken up by the former as compared with the latter. Estimated cost, £600 each.

Specification for these pumps is attached, and I would suggest that Messrs. Simpson Bros. (for Worthington Company) and Messrs. H. P. Gregory & Co. (for Blake Company) be asked to give a quotation, at the same time inviting them to submit alternative proposals if they desire to do so.—G.F., 29/6/98. Engineer-in-Chief.

Total, £3,200.—H.D., 30/7/98. Place with the tenders.—E.H. (for Engineer-in-Chief), 2/8/98.

Electric Pumps.

13 April, 1898.

I BEG to draw your attention to the description of a Worthington triple electric feed pump, illustrated in the *Street Railway Journal* for February last, as being an excellent arrangement for boiler supply. The raw hide pinion is a specially good point, as it insures silent working, and we have very satisfactory evidence of the durability of these pinions.

P. B. BLWELL,
Electrical Engineer.

Mr. Fischer.—H.D., 14/4/98.

No. 2.

The Electrical Engineer, Railway Department, Sydney, to The Engineer-in-Chief for Railways.

George and Harris Streets Electric Tramway Circulating Pumps and Feed Pumps.

4 July, 1898.

IN accordance with your verbal request of 1st instant, I have perused the proposed specification, and am of opinion that smaller pumps, both for circulating and feed, would prove more economical for the plant now being put down; but, as it is proposed to largely extend it, perhaps the adoption of comparatively large pumps in the first instance is a wise step. I would, however, draw attention to the following important points in connection with the general arrangement and regulation.

It is most desirable to standardise the motors used for various purposes in this power-station, and it can be conveniently done in the case of the pumps by adopting the G.E. "1,000" armature, which is to be used on the cars and for other purposes. This armature is capable of running continuously under any load up to about 20 horse-power at the specified speed of 550 revolutions, and will deliver a much greater power

power for short intervals. This is amply sufficient for the feed pumps, and if a pair of of these armature^s be used for each of the circulating pumps it will meet all requirements. The field-frames and bed-plates may be of any suitable form.

The proposed insulation of the pinion in the case of the feed pumps would be inconvenient and is quite unnecessary, as it is not proposed to insulate the motor-frame from the frame of the pump. For the same reason the insulated coupling between the motor and centrifugal pump is unnecessary. The gear-wheels and pinions should be accurately machine-cut, and the gear-wheels should be of steel or charcoal iron. I would prefer the raw hide pinion.

As regards regulation, it would be cumbersome and wasteful to use rheostats for regulating the work done, and I would propose using only a small starting rheostat for the armature circuit, to be cut out as soon as the normal speed is attained. The field might also be made adjustable within about 10 per cent. by the usual rheostat. It would be much better to make the speed of the motors approximately constant under all loads, and to adjust the flow of water by cutting off one or two of the cylinders in the case of the feed pumps, so that either one, two, or all three of them could be used at will. It would also be advisable to fit the delivery-pipe from the pumps, with an escape-valve, so that any excess of water pumped beyond requirements could flow back to the hot well. In the case of the circulating pumps I would also propose the motors running at a constant speed and the delivery of water regulated mechanically. Perhaps the best way would be by admitting air into the suction of the pipe by means of a carefully adjustable valve, but no doubt the makers provide for such requirements.

The adoption of standard railway armatures should considerably decrease the cost of this machinery.

In paragraph 23 the makers might be requested to give a list of the power-plants (not roads) where their pumps are used similarly.

I note the feed pumps are specified to be of the vertical type. If there is no special reason for this I would prefer the horizontal arrangement, as shown in *The Street Railway Journal* of February last.

P. B. ELWELL,
Electrical Engineer.

No. 3.

The Electrical Engineer, Railway Department, Sydney, to The Engineer-in-Chief for Railways.

Feed and Circulating Pumps, George and Harris Streets.

7 July, 1898.

REFERRING to our conversation on this subject, it would be a great convenience if these pumps were arranged so that the electric motor shafts were in line and short coupling pieces provided, so that either motor could be used for either pump or both motors for one pump; in the case of the feed pumps more especially. As regards the circulating pumps, it would not much matter.

The principal advantage of such an arrangement would be that we could drive the feed pumps at half the normal speed by means of two motors running in series, and this would not only be highly economical in power, but would also effect a saving in wear and tear.

P. B. ELWELL,
Electrical Engineer.

No. 4.

The Engineer-in-Chief for Railways to The Under Secretary for Public Works.

Subject:—Power-house, Ultimo, Feed and Circulating Pumps.

Railway Construction Branch, Engineer-in-Chief's Office, Sydney, 14 July, 1898.

HEREWITH is forwarded for insertion in the *Government Gazette* and daily papers a notification inviting tenders for the manufacture, supply, and delivery of feed and circulating pumps (electrically driven) for the power-house at Ultimo.

H. DEANE,
Engineer-in-Chief.

Submitted for approval.—R.H., Under Secretary for Public Works and Commissioner for Roads, 14/7/98. Appd.—J.N.B., 14/7/98. Insert.—Jno. P., 15/7/98. Notice to *Gazette*, 15/7/98. Tenders for, 2/8/98.

No. 5.

Messrs. H. H. Kingsbury & Co. to The Engineer-in-Chief for Railways.

Manufacture, Supply, and Delivery of Circulating Pumps and Feed Pumps for the George-street and Harris-street Electric Tramway.—Contract No. 17.

Sir, 54, Margaret-street, Wynyard Square, Sydney. 26 July, 1898.

We have the honor to apply for an extension of time till the 23rd August for receipt of tenders for the above plant.

We are arranging with our company to fit the armatures and pumps together, so that they can be thoroughly tested before they leave the factory. It will be necessary to wait till the abovementioned date, in order to give them time to receive and peruse the specifications.

We have, &c.,
H. H. KINGSBURY & CO.

Mr. Allan, of this firm, was here to-day, and I informed him that the Engineer-in-Chief could not see his way to recommend an extension of time.—E.H., 28/7/98. H. H. Kingsbury & Co., 30/7/98. File.

Gentlemen,

Gentlemen,

30 July, 1898.

Referring to your letter of the 26th inst., I beg to confirm my verbal statement to your Mr. Allan that the Engineer-in-Chief could not see his way to extend the time for receipt of tenders for pumps. Mr. Deane desires me to say that if a general wish had been expressed for an extension of time when the notice inviting tenders was first issued he would have considered it, but, much as he would like to oblige you, he cannot now take an action which might be unfair to other persons ready to tender on the advertised date.

Yours, &c.,

E. HUNGERFORD.

H. H. Kingsbury & Co., 54, Margaret-street, Wynyard Square.

No. 6.

A. Brittain, Esq., to The President of the Tender Board, Department of Public Works.

Tenders for Supply of Feed and Circulating Pumps for Power-house.

Sir,

Vickery's Chambers, Pitt-street, Sydney, 27 July, 1898.

Re the above subject, I wrote you yesterday, on behalf of my principals as above, making application that the time for receipt of tenders might be extended sufficiently to permit of specifications being sent to England and cable tender received, say, five weeks.

I think this letter cannot have come before you, for it was returned by my clerk with a merely verbal answer that the time allowed till 2nd August was sufficient for those firms having houses here.

If this means that those firms having merely representatives here are to be shut out from all opportunity of tendering for public supplies, even though they have in the past performed such considerable work for the Colony as the caisson at Cockatoo Dock, the sheerlegs at Garden Island, &c., &c., and are moreover able to give far more prompt delivery than most of the firms having houses here, I venture to think that the Public Service will suffer by such a regulation.

A case in point occurred with the lifts for the market buildings, the contract for which my principals were most anxious to secure, and would have taken at a very considerable reduction on the price of the accepted tender, but they were absolutely debarred from competing by the absurdly short time allowed for tenders to be sent in.

I hope that in future contracts this matter will receive your attention, for it is manifestly not in the public interest that competition should be restricted.

I have, &c.,

ARTHUR BRITTAİN.

File.—R.H., Under Secretary, Public Works, and Commissioner for Roads, 29/7/98.

No. 7.

Minute by The Under Secretary for Public Works.

Subject :—Manufacture, Supply, and Delivery of Feed and Circulating Pumps, Power-house, Ultimo.

Department of Public Works, Sydney, 2 August, 1898.

TENDERS were advertised to be received at 2 o'clock to-day, but Mr. Deane asked to have the receipt of tenders postponed, as he expected some further information from England by cable in the course of the week. Four tenders were in the tender-box, but these were not opened, and I informed the contractors present that the receipt of tenders for this work was postponed for one week.

Submitted for the approval of the Minister.

ROBT. HICKSON.

Approved.—J.H.Y., 2/8/98. Insert notice.—Jno. P., 2/8/98. Time for receiving tenders extended to 8th August, 1898. Await tenders.

Department of Public Works.

LUMP SUM TENDER FORM.

Manufacture, Supply, and Delivery of Circulating Pumps and Feed Pumps.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction and completion of circulating pumps and feed pumps for the George-street and Harris-street Electric Tramway, agreeably to the Specification, Schedule to Specification, Special Conditions, and General Conditions, which have been inspected by us, for the lump sum of £3,800, and to complete the same within the time stated in the said General Conditions; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and we hereby undertake that we will within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the General Conditions; and we enclose herewith our cheque for the sum of £38; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if in the event of this tender being accepted we fail to complete the abovementioned contract document within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations printed on the back hereof, and by which we agree to be bound.

Dated this 8th day of August, 1898.

MORRIS BROS.,
Sydney Engineering Works, Wattle-street, Sydney
(John, Benjn., and Wm. H. Morris).

Witness—LEONARD MORRIS.

This is the Tender marked " " referred to in annexed Agreement with Her Majesty the Queen,
dated the day of A.D. 189 .
Witness—

REGULATIONS REFERRED TO.

1. The Tender Board shall meet every Monday, at 2 p.m., unless otherwise arranged.
2. Two members of the Board shall form a quorum. The senior member present shall preside in the absence of the President or Vice-President.
3. In no case shall tenders be opened except in the presence of a quorum of the Board.
4. No tender shall be received after 2 p.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so. In the event, however, of a late tender being received, the question of its formality or otherwise shall be reported on by the Board of Reference for the decision of the Minister.
5. Each member of the Board must attend personally when called upon, but in the event of circumstances precluding his attendance at any time, the authority of the Vice-President must be obtained for another officer of the Department to act in his place.
6. The tender-box shall be secured with two locks, each lock to have wards diverse from the other, one key to be in the possession of the Under Secretary and Commissioner for Roads, and the other in that of another member of the Board, who shall be selected by the President.
7. It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but such publication shall not be taken as an acceptance of such tender.
8. The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position in the Public Works Office a full statement of the tenders received, showing the work, the names of the tenderers, and the amount of each tender.
9. All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.
10. Every tender, except tenders for the construction of roads, for which special regulations have been framed, must, as of a guarantee good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

	£	s.	d.
For amounts up to £50 inclusive.....	2	0	0
For amounts exceeding £50 and not exceeding £150 ..	3	10	0
For amounts exceeding £150 and not exceeding £500	5	0	0
For amounts exceeding £500 and not exceeding £1,000	10	0	0

For all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft.

11. All deposits, with the exception of that of the person announced as the lowest tenderer as per clause 7, shall be returned by the Secretary to the persons entitled thereto, as soon as possible after the Board shall have adjourned, and the required deposit made by the successful tenderer shall be returned to him on his executing the contract documents for the fulfilment of the contract.
12. Any tender which may be received without the required preliminary deposit shall, unless otherwise directed by the Board of Reference, be deemed to be informal, and rejected accordingly.
13. In the event of any tenderer failing to take up his tender, complete the necessary contract documents, and proceed with the contract, within the time specified in the General Conditions relating to the works, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.
14. Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders may be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.
15. In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.
16. In submitting a tender the full Christian name and surname and address of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. The omission of this information will render the tender liable to be declared informal.
17. If the tender declared to be the lowest, as per clause 7, shall be declared informal by the Board of Reference for non-compliance with any of the preceding clauses or any clause in the Specification or General Conditions, the preliminary deposit sent in with such tender shall be forfeited to the Crown, and be paid to the credit of the Consolidated Revenue of the Colony.
18. The Minister shall not be bound to accept the lowest or any tender.
19. The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

EDISWAN "ENCLOSED" MOTOR (PATENT) FOR CONTINUOUS CURRENT.

Manufactured at the Company's Works, Broadheath, near Manchester.

THIS motor has been designed to meet the demand for a motor which could be placed in situations where it would be subjected to damp or dirt.

The machine is entirely enclosed and proof against atmospheric or other influences.

The working parts being thus enclosed, are also completely protected against mechanical injury; at the same time, all the parts are readily accessible, and the armature can be removed in a few minutes.

The motor is reversible, and runs sparklessly at all loads without any movement of the brushes.

It can also be used as a dynamo. A list of the number of 60-Watts lamps that can be run from each size machine is given in the following table.

The bearings are provided with automatic continuous oiling arrangements.

The compact and special design of the Magnet, which has been patented, enables the upper half to be removed in sections, each section being easily lifted by one man.

The field winding is also removable, and thus the great advantage of the enclosed type of motor is obtained, without sacrificing accessibility for inspecting and cleaning.

All motors are sent out complete, with brushes and pulley, &c.

The Company will be pleased to quote for dynamos and motors for special purposes, on receipt of application with full particulars.

Dear Sir,

54, Margaret-street, Wynyard Square, Sydney, 2 August, 1898.

Herewith we beg to enclose you our tender for the manufacture, supply, and delivery of circulating and feed pumps, as per specification Contract No. 17. This plant will be supplied by the General Electric Company, who, having supplied the machinery for the engine-house, will meet your specification with every knowledge of your requirements.

We are prepared to undertake to supply this plant in four and a half months.

We have, &c.,

H. H. KINGSBURY & CO.

To the President, Tender Board, New South Wales.

Department of Public Works.

LUMP SUM TENDER FORM.

Manufacture, Supply, and Delivery of Circulating Pumps and Feed Pumps.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of circulating pumps and feed pumps for the George-street and Harris-street electric tramway, agreeably to the plan, Specification, Schedule to Specification, Special Conditions, and General Conditions, which have been inspected by us, for the lump sum of £4,923, and to complete the same within the time stated in the said General Conditions; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions abovementioned, and to provide the security required by clause 29 of the General Conditions; and we enclose herewith our cheque for the sum of £50; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same, or if in the event of this tender being accepted we fail to complete the abovementioned contract document within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations printed on the back hereof, and by which we agree to be bound.

Dated this 2nd day of August, 1898.

Report by Electrical Engineer, Railway Department.
 Feed and Circulating Pumps for Power-house, Ultimo.

10 August, 1898

In accordance with your verbal request, I have examined the attached tenders and considered the various points in favour of each.

Although the tender of Messrs. Morris Bros. is the lowest, it does not include the motors as specified, and they state that their price to include these would be £480 additional, making their tender £4,280 in all.

The next lowest tender, that of Messrs. H. P. Gregory & Co., includes the motors as specified, together with perhaps the highest class of pump in the market, and they state that if single motors are to be used instead of two motors for each of the circulating pumps, it would reduce their tender by £450, making it £4,230 in all.

I would, therefore, recommend that the tender of Messrs. Gregory & Co. be accepted, but that before deciding the matter, Messrs. Gregory & Co. be asked what further reduction they would make if the circulating pumps be only required for a total lift of (say) 15 feet, requiring only one G.E. 1,000 motor to give the required power. I feel quite sure that it would be very much better to lay out more capital on reducing the lift of these pumps than on increasing their power. The cost of lifting circulating water anything like 30 feet would constitute a very heavy annual charge on the working expenses of the station.

P. B. ELWELL,
Electrical Engineer.

Mr. Finlayson called on me, and we discussed the matter suggested in Mr. Elwell's last paragraph. Mr. Finlayson does not think that any reduction could be made below the £4,230 mentioned.

I was convinced that it would be most unwise not to have the full power that might be required, in case of any emergency, such as air getting into the siphon-pipe, and so on. There is no objection to try and obtain the advantage in working due to the siphon, and I intend, if possible, to arrange for it, but the saving would be in the working, not in the primary cost. If less power were provided on the assumption that the siphon would always work, and it failed even once, it would be a most serious matter.

In view of the limited space, I think single motors should be used instead of two motors of the railway type. I may say that Mr. Finlayson is also strongly of this opinion.

Engineer-in-Chief for Railway Construction.

15 August, 1898.

The lowest tender provides for pumps which would not, in my opinion, be up to the work. The feed pumps shown in their sketch is, according to the makers' catalogue, only fit to work against 130 lb. pressure, while 140 lb. is specified. The motors also are not suitable, and a sum of £480 would have to be added to their tender to bring it up to specified requirements, making it £4,280. The next lowest is for Blake pumps, and is in every respect according to specification. Our experience with pumps of this make is such that perfect confidence can be placed in the manufacturers to supply a first-class job. I would, however, suggest that the circulating pumps be ordered with only one motor of 50 horse-power, instead of two G.E. 1,000, thereby reducing the cost of plant to £4,230. The spare parts are not included in this price, but they offer to supply them at nominal cost, which I estimate should be about £125.—G.F., 15/8/98. Engineer-in-Chief.

MEMORANDUM to P. B. Elwell, Esq., Electrical Engineer.

Power-house, Ultimo.—Feed and Circulating Pumps.

Department of Public Works, Railway Construction Branch, Engineer-in-Chief's Office,

Sydney, 19 August, 1898.

In consequence of suggestions made the other day, I have obtained prices from H. P. Gregory & Co. and Messrs. Morris Brothers for pumps without motors, but with the bed-plates arranged to take motors supplied by the Department.

I append comparative tables of the original and modified tenders, and shall be glad if you will let me have your opinion in the matter.

H. DEANE,

Engineer-in-Chief for Railway Construction (per E.H.)

[Enclosures.]

Tenders and papers.

CONSIDERING the very small difference now shown between the lowest and next tenders, I have no hesitation in recommending that of H. P. Gregory & Co., and as likely to prove more satisfactory than that of Morris Bros. Messrs. Gregory's tender shows better value for the money, and you would have a substantial guarantee of the faithful completion of the work in due time.—P. B. ELWELL, 20/8/98. H. Deane, Esq.

Morris Brothers to The Engineer-in-Chief for Railways.

Re Tender for Circulating and Feed Pumps for Power-house, Ultimo.

Dear Sir,

Sydney, 18 August, 1898.

We have pleasure, in compliance with your request, to submit to a deduction of one hundred pounds (£100) for each of the eight (8) motors required for the above plant, which your Department has offered to supply, thus reducing our tender to three thousand four hundred and eighty pounds (£3,480).

We remain, &c.,

MORRIS BROS.

H. P. Gregory & Co. to The Engineer-in-Chief for Railways.

Sir,

Sydney, 19 August, 1898.

Following on the conversation held yesterday with Mr. Fischer and Mr. Elwell, and in response to their request, we now beg to submit a price for circulating also boiler-feed pumps for power-house without electric motors or any electrical gear whatever.

That is to say, we are prepared to supply your Department with three (3) Blake centrifugal circulating pumps exactly similar in design to photograph sent with our previous tender, and which you have complete with base-plate, but without motor, for the sum of £2,589. Please note pumps would be made entirely of composition and mounted on cast-iron bed-plate extended to take motor.

Also two (2) Blake triplex feed pumps, single-acting, 7 inch x 8 inch, similar to photograph sent you. Connecting rods of forged steel and brass bushed of the locomotive type, gear wheel carefully cut, composition water-valves working on composition seats, valve springs of phosphor bronze, and valve bolts arranged so as to be put in from outside; in short, the highest type of this class of pump the Blake Company can produce. Price, £1,035.

We might mention that in the cablegram just received by us from the Blake Company in reply to ours for amended prices they again impress on us the high excellence of the pumps they would supply in the event of us securing the order.

Trusting we may be so favoured.

We are, &c.,

H. P. GREGORY & CO.

Original

Original Tenders.		£
Morris Bros.—		
Three circulating pumps with Ediswan motors	2,600
Two feed pumps...	1,042
Spare parts	158
		3,800
Extra for G.E. motors as specified	480
		£4,280
H. P. Gregory & Co.—		
Three circulating pumps with specified motors	3,450
Two feed pumps with specified motors	1,230
		4,680
Spare parts (say)	150
		£4,830
Modified Tenders, without Motors.		
Morris Bros.—		
Previous tender	4,280
Deduct for motors	800
		£3,480
H. P. Gregory & Co.—		
Three circulating pumps without motors	2,589
Two feed pumps without motors	1,035
		3,624
Spare parts now required (say)	36
		£3,660

With reference to the modified tenders, leaving out the motors, which are to be supplied separately by making use of portions of the standard G.E. 1,000 railway motors already in stock, the field frames, &c., to be made locally, it appears from the attached statement that the difference between the two tenders amounts now only to £180. In the case of H. P. Gregory & Co., the spare parts are estimated to cost £36, and they are quite prepared to supply them for this sum; also, they will undertake to make a reduction if they are found to cost less. Considering the excellent results obtained with pumps of the Blake type in our other power-stations; also bearing in mind the fact that the air-pumps of the new main engines in this station are "Blake," and were selected by the Atlas Company as being the most reliable, likely to give the best results, and certain to comply with the tests they have to guarantee under the specification, I am strongly of opinion that it would be most advantageous to the Department to accept H. P. Gregory & Co.'s tender, amounting to £3,660. I might also point out that the Blake Company will be fully responsible for the satisfactory working of the plant.—G.F., 22/8/98. Engineer-in-Chief.

After very careful consideration of the matter, I recommend the acceptance of H. P. Gregory & Co.'s modified tender for the pumps, without motors.—H.D., 23/8/98. Submitted to the Board of Reference, 23/8/98.

The Board very carefully considered the reports submitted, and the further details given verbally by Mr. Deane at the meeting held to-day, and decided that the most favourable tender was the modified one submitted by H. P. Gregory & Co. This offer, which is for the pumps without motors, amounts to £3,660—including about £36 for spare parts—is recommended by Mr. Elwell of the Railway Department, and Mr. Fischer of this Department. The pumps to be of the "Blake" manufacture.—W. F. MITCHELL, Secretary. Submitted for approval.—R.H., Under Secretary, Public Works, and Commissioner for Roads, 24/8/98.

Approved.—J.H.Y., 24/8/98. Accept.—Jno. P., 24/8/98. Plans, &c., required.—HAROLD F. NORRIE, Clerk-in-charge of Bonds and Contracts, 25/8/98. Mr. Deane. Mr. Fischer,—Very urgent; the Engineer-in-Chief is anxious for the letter of acceptance to go out in time for the contractors to write by the outgoing American mail.—E.H., 25/8/98. No plans; specifications herewith.—G.F., 25/8/98. Engineer-in-Chief. Mr. Norrie.—H.D. (per E.H.), 25/8/98.

Pumps for George-street and Harris-street Tram.—Contract No. 17.

H. P. Gregory & Co. Accountant, 29/8/98. Auditor-General.

Please note acceptance; then to Records.—HAROLD F. NORRIE, Clerk-in-charge of Bonds and Contracts, 29/8/98. Mr. Deane. Noted.—H.D. (per E.H.), 31/8/98. The Accountant to note.—H.D. (per J.P.), 31/8/98. Refund Morris Bros. deposit, and resubmit as to Vote to which this is to be charged.—T.R.S., 31/8/98. Morris Bros., D 313, £38.—O.C.

Acceptance of Tender.

MEMO.

Department of Public Works, Bonds and Contracts Branch,

Sydney, 29 August, 1898.

THE tender of Messrs. H. P. Gregory & Co., of Sydney, has been accepted for circulating pumps, feed pumps, and spare parts, Contract No. 17, George-street and Harris-street electric tramway, Sydney, for the sum of £3,660, to be completed in twenty weeks from date.

The security deposit required is the sum of £185.

HAROLD F. NORRIE,

Clerk-in-charge of Bonds and Contracts.

NOTE.—If the nominal cost of the said spare parts, delivered in Sydney, be any less sum than £36, the difference is to be deducted from the contract sum.

Paymaster

Paymaster to note, and refund all other preliminary deposits, unless otherwise instructed.—T.R.S., 31/8/98. Mr. Norrie, Assistant Accountant and Examiner. Refunded.—G.R. F.D.—Receipt for £185 received.—D.H.M., 13/9/98. Mr. Norrie.—O.C., 13/9. Seen.—H.F.N., 13/9/98. Contract papers required.—J.C., 20/10/98. Records. 98/2761-181, Papers herewith, Acct.—H.P. No. 9.

Simpson Brothers to The Chairman of the Tender Board.

Sir, 32, Clarence-street, Sydney, 8 August, 1898.
The alteration in form of tender made is to suit the Worthington type of electrical pumps, and does not include spares. Delivery to be at power-station, Harris-street.

The accompanying tracings show the general arrangements of Worthington electrical pumps tendered for, but any alteration made to suit the service as may be deemed necessary by the Worthington Pumping Engine Co. is not to invalidate the contract.

The Worthington Pumping Engine Co. will guarantee that the pumps quoted will perform the duties mentioned in the specification.

We have, &c.,
SIMPSON BROTHERS.

Department of Public Works.
LUMP SUM TENDER FORM.

Manufacture, Supply, and Delivery of Circulating Pumps and Feed Pumps.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction of circulating pumps and feed pumps for the George-street and Harris-street electric tramway, for the lump sum of £1,349, and to deliver the same in twenty weeks; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Prices annexed hereto, or, if not in Schedule, at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions abovementioned, and to provide the security required by clause 29 of the General Conditions; and we enclose herewith our cheque for the sum of £14; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same, or if in the event of this tender being accepted we fail to complete the abovementioned contract document within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations printed on the back hereof, and by which we agree to be bound.
Dated this 8th day of August, 1898.

This was handed in at noon to-day by Mr. Fraser, of the Worthington Co.—E.H., 9/8/98.

No. 10.

Morris Brothers to The Under Secretary for Public Works.

Re Tender for Circulating and Feed Pumps for Power-house, Ultimo.

Sir, Sydney, 30 August, 1898.

Referring to our tender for the above, of the 8th instant, amounting to £4,280, we respectfully draw your attention to the fact that for this amount we tendered to supply the whole of the machinery, as per your printed specification, and subsequently offered to supply pumps of the "Blake" pattern for feed pumps, and "Gwynne's" for circulating pumps, or any other of the best pumps of English or American make.

The general electric motors, as specified, were included in our tender as above.

Understanding from the printed reports that we were the lowest tenderers, we trust that we will not be passed, as we propose to supply the best possible machinery.

At an interview with Mr. Fischer, by appointment from the Department, he suggested that we should reduce our tender £300, as the Department wanted to supply the eight motors for the pumps.

If, by this means, the Department has allowed anyone to come below us by amending their price, we consider that the integrity of the tender-box has been violated and degraded.

Trusting to your fairness in this matter.

We are, &c.,
MORRIS BROS.
Would

Would Mr. Deane please see me when he comes back.—R.H., 31/8/98. Mr. Fischer for report. 3/9/98.

With regard to the statement of Messrs. Morris Bros., that I suggested that they should reduce their tender by £800, I wish to say that on Mr. Morris suggesting a reduction of £800, I said in reply that if that sum represented the value of the motors, the reduction would be a proper one.—G.N., 5/9/98. Engineer-in-Chief.

Mr. Benjamin Morris stated verbally that his firm would supply a Blake pump, or any other kind, if so desired, but did not confirm his offer in writing. As the Blake pump offered by H. P. Gregory & Co. is evidently most suitable, and there is an undoubted advantage in ordering from the acknowledged representatives of the manufacturers, not to speak of the doubt as to whether any other firm would be allowed to step in, I recommended the acceptance of Messrs. Gregory & Co.'s tender.—H.D., Engineer-in-Chief, 6/9/98. The Under Secretary.

No. 10A.

H. P. Gregory & Co. to The Engineer-in-Chief for Railways.

Sir,

Sydney, 1 September, 1898.

We are in receipt of a notification from the Under Secretary for Public Works to the effect that our tender for the supply of circulating and boiler-feed pumps for electric power-house at Ultimo has been accepted.

The notification specifies, amongst other things, that the "contract must be performed within twenty weeks from date" (29th ultimo), but as that period of time is manifestly taken from our first tender, which was in accordance with your original specification for these pumps, we would like to point out that the amended tender we submitted—and which has been accepted—cannot unfortunately be completed in same time, for the reason that we had forwarded a cable code to the manufacturers, designed on the basis of the original specification, and which we intended to make use of should our first tender have been accepted.

Unfortunately we cannot now use this code, nor any modification of same, in consequence of the alterations made from original specification, and we have therefore to rely on mail leaving here on 10th instant so as to transmit the order, and we would therefore like to have the time mentioned by us in our first tender extended to (say) twenty-five weeks.

Should this alteration in the acceptance of our tender be agreeable to you we shall be obliged if you kindly advise the Tender Department to that effect, so as we can complete the necessary sureties and bonds with them at the earliest opportunity.

Waiting your acknowledgment,

We are, &c,

H. P. GREGORY & CO.

Ack., 1/9/98. Urgent.—Mr. Fischer for immediate report.—H.D., Engineer-in-Chief (per E.H.), 1/9/98. See preceding sheet.—E.H. I recommend that this extra time be given.—H.D., 5/9/98. The Under Secretary. Submitted for approval.—R.H., Under Secretary, Public Works, and Commissioner for Roads, 6/9/98. Approved.—J.H.Y., 6/9/98. Inform.—Jno. P., 6/9/98. H. P. Gregory & Co., 7/10/98. Mr. Norrie to note in bond.—Jno. P., 8/10/98.

Gentlemen,

7 October, 1898.

I have the honor to inform you that Mr. Secretary Young has approved of the time for the completion of your contract for the supply of circulating and boiler-feed pumps for electric power-house, Ultimo, being extended from twenty weeks from date of acceptance of tender to twenty-five weeks, as requested in your letter of 1st ultimo.

I have, &c.,

Under Secretary and Commissioner for Roads.

Messrs. H. P. Gregory & Co., Clarence-street, Sydney.

No. 11.

Morris Brothers to The Secretary for Public Works.

Re Tender for Circulating and Feed Pumps for Power-house, Ultimo.—Contract No. 17.

Sir,

Sydney, 9 September, 1898.

We have the honor, in compliance with your request, to furnish herewith a statement relative to our position in connection with the above contract.

About the end of July last, when copying the specification for this contract at the Public Works Office, Mr. Fischer volunteered the statement to our Mr. B. Morris that he (Mr. Fischer) "would not have any of your cheap pumps," when he was informed "that we would tender for the best."

Subsequently again at his office he informed us "that contractors consider that I am very severe," to which we replied "that we were never afraid to meet any one requiring a good job."

On the 2nd ultimo we enclosed our tender to the Public Tender Board.

The President announced that four (4) tenders were received, but were not opened, and tenderers could have their tenders back if they desired.

We elected to apply for our tender, and received it from the Chief Clerk.

On the 5th ultimo we again tendered, and the President announced that three (3) tenders had been received, and our firm was announced as the lowest.

In our tender of £3,800 we did not offer to supply motors as specified, but our tender £4,280 was for eight (8) motors, as specified; three (3) circulating pumps by "John and Henry Gwynne," and the two (2) triplex feed pumps to be the "Gould's" well-known pumps.

All the pumps were to be equal to the specification, and in every respect in full compliance with it.

The first time after tenders had been opened, when Mr. Fischer met our Mr. B. Morris, he (Mr. Fischer) asked if we knew that the circulating pumps were entirely made of gun-metal, to which we replied, "Yes."

On the 17th ultimo we received a memo. for our Mr. B. Morris to call and see the Engineer-in-Chief for Railway Construction Branch, and at once our Mr. B. Morris waited on the Engineer-in-Chief at his office, Messrs. Fischer and Elwell being also present.

An

An illustration of a triplex feed pump of the Gould's type, which we were prepared to supply, was exhibited by us, which is in every way equal to the specification, and registered to work against a pressure of 150 lb. per square inch, being 10 lb. over and above the specification required.

Mr. Deane distinctly asked us if we would supply "Blake's" pumps, and we as distinctly stated, "Yes."

Mr. Fischer was present when this was asked and replied to, and we affirm that he must have heard it.

Mr. Deane finally asked both Mr. Fischer and Mr. Elwell if they wanted to ask Mr. Morris any further questions, and they replied, "No."

On the following day, 18th ultimo, we secured a verbal message that Mr. Fischer wanted to see us, and our Mr. B. Morris again waited upon him.

At this interview Mr. Fischer suggested that we should reduce our tender by £100 each for the eight motors required, as he stated the Department could supply them for £80 each, but (say) £100 to be deducted for the total cost.

Naturally thinking that this suggestion was sincere we agreed to it, and concluded that this was a settlement of the affair, and accordingly, in compliance with his suggestion, the same day we wrote the following letter:—

"Re Tender for Circulating and Feed Pumps for Power-house, Ultimo.

"Dear Sir,

Sydney, 18 August, 1898.

"We have pleasure in compliance with your request to submit to a deduction of £100 for each of the eight motors required for the above plant, which your Department has offered to supply, thus reducing our tender to £3,480.

"We remain, &c.,

"The Engineer-in-Chief for Railway Construction."

"MORRIS BROS.

On the 30th ultimo, learning that we were not likely to receive this contract, we wrote to the Under Secretary for Public Works upon the subject.

As it was suggested to us by Mr. Fischer, that we should submit to a deduction of £800, and now observing that the firm to which this contract has been given made a deduction of £1,020 from their original tender, which thus brings their amount very near to ours, we cannot but infer a thorough design, otherwise the whole affair is most inexplicable.

We would here respectfully draw your attention to the fact that we have since learned that owing to an alteration being made for driving the three circulating pumps by one motor each, instead of two as specified, the contractors will thereby secure a great saving in cost of manufacture.

Mr. Fischer never even asked us if we would make allowance for this deviation from specification.

The contractors' price being £3,660, which still leaves them £180 above our tender, and had we been informed of the alterations being required from double to single motors, our price would have been still further reduced by a considerable amount.

We regret that we are compelled to think that there existed all through this contract the full design to thwart us of our own just and legal right, and though we tendered to supply pumps to deliver British gallons of water as specified, we cannot but presume that no one but non-British could have meted out the justice as exhibited in this affair.

We have been honorable tenderers in all branches of the Public Service for the last twenty years, and must take this opportunity of stating that on all occasions we have received the greatest fairness, and we have pleasure in stating that our contracts speak for themselves; but we consider that on this occasion the greatest injustice has been done us.

We take the opportunity of thanking you sincerely for the courtesy of the interview which you granted to us yesterday, and the patient hearing you gave us, and we have pleasure in the assurance of your spirit of fairness which gives us the confidence in submitting our case to you.

We have, &c.,

MORRIS BROS.

At the interview alluded to in this letter, M. Harris, Esq., M.P., being present, I asked these gentlemen to put their complaint in writing—read to them the minutes of the Engineer on which the decision of the Board of Reference was arrived at, and stated that, as the matter came before me, I had no knowledge whatever of their having offered to supply a "Blake pump"; that, if any such offer had been made, I could only say I had been misled, and that I would promise to have the whole affair again considered by the Board of Reference with a view of arriving at the whole facts. Mr. Deane will remember that before the report of that Board, I specially mentioned to him that Mr. M. Harris, M.P., had asked me to look into the matter personally, as he had heard that some steps were to be taken by some one to ensure the contract going into other hands.—J.H.Y., 9/9/98.

Board of Reference.—R.H., 9/9/98. Mr. Deane to see.—R.H., 9/9/98.

No. 12.

The Assistant Engineer, Tramway Construction, to The Engineer-in-Chief for Railways.

Memorandum to the Engineer-in-Chief.

George-street and Harris-street Electric Tramway.—Tenders for Circulating and Feed Pumps.

Department of Public Works, Railway Construction Branch.

Engineer-in-Chief's Office, Sydney, 15 September, 1898.

WITH regard to the statement of Messrs Morris Bros. in their letter of the 9th instant, about a conversation between Mr. B. Morris and myself at the end of July, I find that I cannot at this distance of time remember all that was said, but am certain that my remarks were never intended to bear the construction now being put upon them.

It is a fact that, as a rule, contractors who have not previously carried out work under my supervision complain at first that I am very severe, and as Messrs. Morris Bros. have never worked under me, I may very likely have said something about it, but not with any intention of intimidating them, but rather in a friendly way.

As

As regards the interview of the 18th ultimo, I would refer you to my memo. on M.P. 98-2,289, to which I would add that on Mr. B. Morris asking me the value of the motors, I told him that the motors used on the cars cost £80 each. I made no suggestion whatever as to what they ought to do.

At this same interview I informed Mr. B. Morris that it was proposed by the Department to drive the circulating pumps by one G.E. 1,000 motor each. If he did not allow for a reduction of his price on account of the bed-plate being shortened, this is no fault of mine. At any rate, the value of it is very small.

G. FISCHER,

Assistant Engineer for Tramway Construction.

No. 13.

Minute by The Engineer-in-Chief for Railways.

Minute Paper.

Subject :—Feed and Circulating Pumps at the Power-house, Ultimo.—Messrs. Morris Brothers' statements.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 21 September, 1898.

At the interview referred to Mr. Elwell and Mr. Fischer were present. Mr. Morris made some explanations with regard to his tender. The Gould pump offered, as judged by the illustration given with the tender, worked against a pressure of 130 lb.—not 150 lb., as now stated—or 10 lb. under the specified amount.

The question of class of pump came up, and comparisons were made between Gwynne's, Blake, Gould's, and other pumps of repute. Mr. Morris stated that if the Department wished he would supply Blake or any other pump. It was all the same to him, as the prices of first-class pumps were practically the same, whatever the make. This was demurred to, I think, by both Mr. Elwell and Mr. Fischer, and I much doubt the correctness of the insertion. I distinctly deny that I asked Mr. Morris in the first place if he would supply Blake pumps. This he offered himself, as he found during the conversation that the preference was given to Blake or Worthington. When asked how he could undertake to supply a Blake pump when H. P. Gregory & Co. were the sole agents, he said he would do it without the agents, and described how he would purchase in England through his own agent and ship out direct.

It has been recognised as a principle in the Department that when once a party has sent in a tender he has no right to amend it, either as to price or material, and Morris Brothers in verbally offering to supply at a lower figure an article which another firm had tendered for were distinctly attempting to undercut and get the contract unfairly.

I submit that it would be most unfair to accept an order sought for in this way, unless the recognised agents were palpably overcharging. In any case it would be an unsafe proceeding, probably leading to lawsuits and delays if the recognised agents offered obstruction.

Mr. Finlayson, of H. P. Gregory & Co., had assured me that his firm were the only agents for the Blake pumps, and no order except through them could be carried out. There had been some trouble about some Blake pumps for the water supply at Chatswood, North Shore, where Morris Brothers went behind their backs and got the machinery in England, but the Blake Company, he said, had guaranteed to them that such a thing should not occur again. Under the circumstances it is highly unlikely that Morris Brothers would be able to get the pumps, either direct or through H. P. Gregory & Co.

Talking the matter of the pumps over with Mr. Elwell afterwards, he suggested that a saving could probably be effected by leaving out the motors altogether, as the Railway Commissioners would have a stock of the railway motors which could be fitted up here to work the pumps if the frames were made the same. I therefore took the opportunity of getting Morris Brothers and H. P. Gregory & Co. to tender under the new conditions, which they both did. It is noticeable that Morris Brothers, although they had an opportunity, did not confirm their verbal offer to supply the Blake pumps. I therefore paid little regard to their former verbal offer, but as after further discussion with Mr. Elwell the Blake pumps were considered the best, I recommended that the order should be given to H. P. Gregory & Co., who were recognised agents, and who could best undertake the responsibility of carrying out the order.

It will be seen by referring to Morris Brothers' letter of the 30th August that what they then proposed to supply was Blake feed pumps, and Gwynne's circulating pumps or any other of the best pumps, whereas the purchase recommended by me was for Blake feed pumps and Blake circulating pumps.

When reporting on this matter to the Board of Reference, I omitted to mention Morris Brothers' verbal offer to supply Blake or any other kind of pump. In consequence of this it is evident that the Board had no knowledge of the fact. This, I very much regret, but I submit that the recommendation must necessarily have been the same.

With reference to Mr. Morris' insinuations against Mr. Fischer, I must refer to that officer's own minutes of the 5th and 15th September, 1898.

The meaning of some of the paragraphs on pages 7 and 8 of Messrs. Morris Brothers letter is obscure. Messrs. Morris Brothers and Messrs. H. P. Gregory had precisely the same information given them. The alteration referred to would only be a reduction of the size of the bed-plate, the least costly part of the pump.

H.D.,

Engineer-in-Chief.

To be submitted to the Board of Reference in reply to the Minister's minute of 9th instant.

No. 14.

Minute by The Engineer-in-Chief for Railways.

Minute Paper.

Subject :—Feed and Circulating Pumps for the Power-house, Ultimo.—Morris Brothers' complaints.

Department of Public Works, Railway Construction Branch,

Engineer-in-Chief's Office, Sydney, 26 September, 1898.

In further reference to the subject of my minute of the 21st instant, I wish to point out that Messrs. Morris Brothers cannot truly claim that an injustice has been meted out to them. If

If the tenders had been dealt with by me without previous interview with the tenderers, the tender of Morris Brothers, which did not provide for the most approved pumps, would have been put on one side in favour of that of H. P. Gregory & Co., and had no modification, such as the leaving out of the motors, been suggested, the latter firm's alternative tender, which under the specification they were allowed to make, would have been the one to be recommended for acceptance. See my minute on M.P. 98/2,074-180. This is the one mentioned in Mr. Fischer's minute of the 15th ultimo, providing for a combination of motor and pump, which the firm strongly recommend as having been proved by actual use to be of undoubted efficiency.

It is very unfortunate that any hint of injustice should have been brought forward. Personally, I have always endeavoured to do what is right and just, and in this matter my chief object has been to secure the best interests of the Department—to adopt what is known to be good, and avoid experimenting.

The Under Secretary.

H. DEANE.

No. 15.

Minute by Board of Reference.

Minute Paper.

Subject :—Acceptance of Messrs. H. P. Gregory & Co.'s Tender for Manufacture, Supply, and Delivery of Feed and Circulating Pumps for the Power-house, Ultimo.

Board of Reference, Department of Public Works, Sydney, 26 September, 1898.

THE tender of Messrs. H. P. Gregory & Co. was accepted for the above service upon a recommendation made by the Board of Reference on the 23rd ultimo.

Messrs. Morris Bros., who also tendered, deeming that the contract should have been given to them, laid a statement of their claims before the Minister, and Mr. Young directed the Board to report upon the whole matter.

The following is a statement of the facts of the case :—

Tenders were originally invited for the 2nd August, but at the Tender Board meeting the Vice-President stated that the opening of tenders had been postponed, and that any tenderer could have his offer returned. Morris Brothers elected to take their tender, which was returned to them unopened.

The following tenders were received on the 8th August, 1898 :—

	Tender for specified Motors.	Alternative.
	£	£
1. Morris Bros.	4,280	3,800
2. H. P. Gregory & Co.	4,680	4,230
3. H. H. Kingsbury & Co.	4,923	...

A tender was received on the 9th August from Simpson Bros., representing the Worthington Pumping Engine Company, at £1,349, but the circulating pumps were not according to specification, consequently the offer had to be put aside.

Messrs. Morris Bros.' offer at £3,800 did not include the specified motors, but they submitted an alternative tender to supply these, adding £480 to their tender, making a total of £4,280. The circulating pumps were to be by John and Henry Gwynne, of London, or Drysdale & Co., of Glasgow, and the "Triplex" feed pumps, "Gould's."

The opinion of Mr. Deane, supported by Messrs. Elwell and Fischer, being that the "Blake" pumps, both feed and circulating, are the best for the work, and this opinion being confirmed by the experience already gained in the Department, it was decided that this type should be recommended. Messrs. H. P. Gregory & Co. are the local agents of the Blake Company.

Mr. Finlayson, partner in H. P. Gregory & Co., and Mr. B. Morris were asked to call on Mr. Deane to further explain their tenders.

Mr. B. Morris called on Mr. Deane on the 17th August, and had an interview with him, Messrs. Elwell and Fischer being present. The merits of the motors and the pumps offered were discussed. Opinions were strongly in favour of the Blake and Worthington types of pumps. Mr. Morris stated that if the Department wished he would supply Blake or any other pump—it was all the same to him, as the prices of first-class pumps were practically the same whatever the make. It was pointed out that this is not correct. When asked how he could undertake to supply a "Blake" pump when H. P. Gregory & Co. were the sole agents, he said he would do it without the agents, and described how he would purchase in England through his own agent and ship out direct.

Mr. Deane subsequently conferred with Mr. Elwell in regard to the question of the pumps, &c., and the latter gentleman suggested that a saving could probably be effected by leaving out the motors altogether, as the Railway Commissioners would have a stock of the railway motors which could be fitted up here to work the pumps if the frames were made the same as before—that is, large enough to take the motors. Mr. Fischer was instructed to ask Messrs. Morris Bros. and Messrs. H. P. Gregory & Co. to tender under the new conditions, which they both did. Morris Bros., in a letter of 18th August, reduced their offer by £800, making it £3,480, but made no offer to supply "Blake" pumps, while Messrs. H. P. Gregory & Co. deducted £1,020, making their offer for "Blake" pumps stand at £3,660, which also included about £36 for spare parts.

The Board of Reference had the matter before them on the 23rd August, and having considered the written offers and the verbal explanations of Mr. Deane as to the merits of the various makes of pumps (who, however, by an oversight omitted to mention that Morris Bros. had made a verbal offer to supply Blake or any other kind of pumps), it was resolved to recommend the acceptance of H. P. Gregory and Company's offer for Blake pumps, although £180 in excess of Messrs. Morris Bros.' written offer for the other types. The Board's recommendation was approved by the Minister on the 24th August.

The Board to-day considered the foregoing statement, and decided that it should be submitted to the Minister, and at the request of the Engineer-in-Chief for Railways desired to direct Mr. Young's attention to Mr. Deane's minutes of the 21st instant and to-day's date, which are with the papers.

ROBT. HICKSON,

Chairman.
The

The Board have no doubt given me the facts, as asked for by me. I now ask them to give me their advice as to the best means of avoiding such a mistake (or apparent mistake) occurring again.—J.H.Y., 29/9/98.

The Board of Reference.—J.No. P., 29/9/98. Submitted to the Board of Reference, 13/10/98.

The Board having considered the Minister's minute of the 29th September, 1898, decided to recommend, with a view of avoiding a recurrence of complications of the nature shown in the accompanying papers, that during the period between the opening of tenders and the submission of same to the Minister no departure shall be made in the specifications or conditions of tendering, nor in the tenders submitted, without the approval of the Minister on the recommendation of the Board.—W. F. MITCHELL, Secretary,

Submitted for approval.—R.H., Under Secretary for Public Works and Commissioner for Roads, 14/10/98. Approved.—J.H.Y., 17/10/98. Send a copy of the Board's minute to heads of Branches.—J.No. P., 17/10/98.

No. 16.

H. H. Kingsbury & Co. to The Engineer-in-Chief for Railways.

Sir,

54, Margaret-street, Wynyard Square, Sydney, 4 October, 1898.

We have the honor to inform you that we have received from the General Electric Company (in reply to our inquiry), particulars and quotations *re* the motors that are required to be fitted to the bed-plates of the pumps for the George and Harris Streets electric tramway.

For this description of work the G. E. Co. advise us that the tramway type of motor is not suitable. They recommend that their ordinary slow-speed type (which is universally used) would be far preferable for work of this description.

Since the Department is erecting this plant, it appears to us advisable that it should be thoroughly tested and proven in perfect working order before shipment. Upon this point we have already advised our firm, and are now in a position to furnish you quotations upon receipt of schedule of your requirements.

We have, &c.,

H. H. KINGSBURY & CO.

H. H. Kingsbury & Co. to The Engineer-in-Chief for Railways.

Sir,

54, Margaret-street, Wynyard Square, Sydney, 8 October, 1898.

We have the honor to inform you that we have received from the General Electric Company, in reply to our various inquiries, particulars and quotations for the motors which are required to be fitted to the bed-plates of the pumps for the George and Harris Streets electric tramway.

For this description of work the G. E. Company advise us that the tramway type of armature is not suitable.

They state in their letter of 24th August:—

"We enclose quotation confirming our telegram. We understand that the specifications call for pumps complete with motors. They also specify motors of the G.E. 1,000 railway type. These railway motors are designed for special conditions, and as shunt motors for continuous running their operation is unsatisfactory, even when a small fraction of their output is required. For pumping purposes, where continuous running is desired, therefore, we always use our slow or moderate speed motors. In this case we have quoted on slow-speed motors.

"Net weight of each pump will be 3,500 lb., and it will be geared to a 60-horse-power slow-speed motor type, M.P. 4-60 horse-power—550 shunt, wound for 500 volts.

"*Feed Pumps.*—These pumps will comply with your specifications, and will be complete with bed-plate, each pump being driven by a G.E. 25 horse-power slow-speed motor, mounted on the same bed-plate by means of gearing. The motor will be type M.P. 4-25 horse-power—650 shunt, wound for 500 volts."

And in their letter of 31st August, they also state:—

"We have your letter of 1st August, regarding circulating and feed pumps for George and Harris streets electric tramway. We await with interest your further advices as to the final awarding of the contract. We sincerely hope that nobody has contracted for the supply of our G.E. 1,000 motors for continuous operation, such as the driving of feed pumps, for we would not care to supply them for such work. By the time this letter reaches you, you will be in receipt of our previous advices on the subject, and they will doubtless serve to enable you to take the matter up with the authorities, and arrange for pumps to be driven by our slow or moderate speed type of motor. We have as yet received no inquiries from others regarding these motors for this purpose, though, we presume, if the contract has now been awarded that we shall receive such inquiries by next mail. If so, we will keep you fully posted."

In reply to a letter sent by us from Mr. Elwell, making inquiries on this matter, we received the following cablegram on 7th instant:—

"Please refer to your letter of 29th August. Blake requests drawings motors. We will not guarantee if you cannot make use of standard slow-speed motors. Telegram immediately by A1 code."

Knowing well that the plant will be thoroughly proven and tested by the G.E. Co. before shipment to us, we are quite ready to guarantee its most perfect working, if the type of motor as advised by them be accepted.

We are, however, willing to quote you for the railway type of motor; but under the circumstances we cannot guarantee their perfect working for this work.

We shall be glad to hear from you as soon as possible, to enable our replying to the General Electric Company's cablegram.

We have, &c.,

H. H. KINGSBURY & CO.

Minute

Minute by Engineer-in-Chief for Railways.

Minute Paper.

Subject :—Feed and Circulating Pumps at the Power-house, Ultimo.

Department of Public Works, Railway Construction Branch,
Engineer-in-Chief's Office, Sydney, 13 October, 1898.

I HAVE again discussed this matter with Mr. Elwell, as it appears that the General Electric Company do not approve of the use of the G.E. 1,000 motors for the purpose, as will be seen by the accompanying letters, and Messrs. H. P. Gregory & Co have expressed themselves somewhat to the same effect.

Mr. Elwell now agrees with me that it would be a mistake to have any divided responsibility in the matter, and I therefore recommend that H. P. Gregory & Co.'s order be extended to the supply of motors, as contained in their alternative tender of the 2nd August—that is to say, the amount will be £4,230 for the supply of electric pumps, including motors, as offered by them, the motors being of slow-speed type.

H. DEANE,

Engineer-in-Chief for Railway Construction.

Minute by Board of Reference.

Subject :—Manufacture, Supply, and Delivery of Feed and Circulating Pumps for the Power-house, Ultimo.

Department of Public Works, Sydney, 13 October, 1898.

IN accordance with a recommendation made by the Board on the 23rd August last, the modified tender of H. P. Gregory & Co., at £3,660 for pumps, exclusive of motors, was accepted, it being then considered that G.E. 1,000 railway motors already in stock might be utilised with advantage.

In view of the accompanying letter, dated the 4th and 8th instant, submitted by H. H. Kingsbury & Co., in which they give extracts from correspondence received from the General Electric Company of America, in which it is stated by the Company that their G.E. 1,000 motors are unsuitable for the continuous running involved in working pumping machinery, the Board concur in Mr. Deane's recommendation, viz. :—

“That H. P. Gregory & Co.'s order be extended to the supply of motors, as contained in their alternative tender of the 2nd August—that is to say, the amount will be £4,230 for the supply of electric pumps, including motors, as offered by them, the motors being of slow-speed type.”

W. F. MITCHELL,

Secretary.

Submitted for approval.—R.H., Under Secretary, Public Works, and Commissioner for Roads, 14/10/98. Approved.—J.H.V., 14/10/98. Inform at once.—Jno. P., 14/10/98.

Will Mr. Deane please peruse the engrossment letter of acceptance to be sent to contractors, in lieu of that forwarded to them on 29th August last, and, if he approve, initial? It will be seen that I have inserted the extended time of twenty-five weeks for completion. I have assumed, also, that the contractors' letter of date 19th August last does not apply under the altered conditions.—HAROLD F. NORRIS, Clerk-in-charge of Bonds and Contracts, 20/10/98. Mr. Deane.

H. P. Gregory & Co., 21/10/98; Auditor-General, 21/10/98; Accountant, 21/10/98. Please note acceptance, then to Records.—HAROLD F. NORRIS, Clerk-in-charge of Bonds and Contracts, 28/10/98. Mr. Deane. Mr. Fischer to note.—H.D., 29/10/98. Noted.—G.E., 31/10/98. The Accountant to note.—Jno. P. (per F.P.), 1/11/98. No preliminary deposit held.—H.C., 1/11/98. O.C. [Cancelled by mutual agreement this day, 21st October, 1898.—H. P. Gregory & Co.]

Gentlemen,

Public Works Department, Sydney, 29 August, 1898.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 2nd instant, as amplified by your letter of the same date and as modified by your letter of the 19th instant, is accepted for manufacture, supply, and delivery of “Blake” circulating pumps and feed pumps (complete with base-plate, but without motors) and spare parts, Contract No. 17, George-street and Harris-street Electric Tramway, Sydney, at the sum of three thousand six hundred and sixty pounds (£3,660), upon the condition that if the nominal cost, delivered in Sydney, of the spare parts—consisting of 1 fan, complete, for circulating pumps and 12 valve springs for feed pumps—shall be any less sum than thirty-six pounds, the difference shall be deducted from the said Contract sum.

The work is to be carried out in strict accordance with the several Contract exhibits relating to this Contract, and to be completed within twenty weeks from this date.

The security required on this Contract is a fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of one hundred and eighty-five pounds.

I have to refer you to the Engineer-in-Chief for Railway Construction for further information, and to request that you will call upon the Officer-in-charge of Bonds and Contracts at this office for the purpose of executing the necessary documents for the due observance of your Contract.

I am, &c,

The Under Secretary for Public Works to H. P. Gregory & Co.

Gentlemen,

Department of Public Works, Sydney, 21 October, 1898.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 2nd August last, as amplified by your letter of the same date, is accepted for manufacture, supply, and delivery of three "Blake" circulating pumps, with motors and rheostats and two feed pumps complete, with base-plate, motors, and rheostats, and spare parts, Contract No. 17, George-street and Harris-street electric tramway, Sydney, at the sum of £4,266, upon the condition that if the actual cost delivered in Sydney of the spare parts, consisting of one fan complete for circulating pumps, and twelve valve springs for feed pumps, shall be any less sum than £36, the difference shall be deducted from the said contract sum.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within twenty-five weeks from this date.

The security required on this contract is a fixed deposit receipt in favour of the Secretary for Public Works for the sum of £215.

I have to refer you to the Engineer-in-Chief for Railway Construction for further information, and to request that you will call upon the Officer-in-charge of Bonds and Contracts at this office, for the purpose of executing the necessary documents for the due observance of your contract.

This letter is to be read in lieu of my letter of date 29th August last, which said letter is to be delivered up for cancellation, as mutually agreed.

I am, &c.,

ROBT. HICKSON,
Under Secretary and Commissioner for Roads.

Messrs. R. W. Finlayson, H. Shaw Smith, and J. O. Smith,
trading as H. P. Gregory & Co., Contractors,
74, Clarence-street, Sydney.

This is the copy letter of acceptance, marked " " referred to in our annexed agreement
with Her Majesty the Queen, dated the day of A.D. 189 .

1898.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

Printed under No. 15 Report from Printing Committee, 8 December, 1898.

RETURN (*in completion*) to Order of the Honorable the Legislative Assembly of New South Wales, dated the 2nd November, 1898, That there be laid upon the Table of this House,—

“ All papers relating to the calling for tenders for the circulating pumps and feed pumps for the George-street and Harris-street Electric Tramway, Contract No. 17, and the acceptance of the tender of H. P. Gregory & Co., together with particulars of the names and amounts of all other tenders in connection therewith.”

(*Mr. Cann.*)

Copy of Contract Agreement with copies of Annexures.

AGREEMENT made this thirty-first day of October, in the year of our Lord one thousand eight hundred and ninety-eight, between Richard Wilson Finlayson, Henry Shaw Smith, and James Oliver Smith, all of Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of “H. P. Gregory & Co.” (hereinafter styled or referred to as “The Contractors”), of the one part, and Her Most Gracious Majesty Queen Victoria, of the other part.

WHEREAS the Minister for Public Works of the said Colony (hereinafter called the said Minister) recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed marked “A”) for the manufacture, supply, and delivery of feed and circulating pumps for the Power-house, Ultimo, Contract No. 17, George and Harris-street Electric Tramway, Sydney, aforesaid, according to the Specification and under and subject to the General Conditions which are hereunto annexed and marked respectively “B” and “C.” And whereas the contractors made the Tender hereunto annexed marked “D,” amplified by their letter hereunto annexed marked “E,” to provide the material and perform the various works required in and about the full and proper manufacture, supply, and delivery of the said pumps, agreeably to the said Specification and General Conditions, and at or for the price or sum in the said Tender mentioned, and within the time in the said letter set out, any additions or deductions to be paid or allowed for at the rates or prices mentioned in the Schedule of Prices annexed thereto and also hereunto annexed and marked “E.” And whereas the said tender, as amplified by the said letter, was accepted by the said Minister for the manufacture, supply, and delivery of three “Blake” circulating pumps, with motors and rheostats, and two feed pumps, complete, with base-plate motors and rheostats and spare parts, Contract No. 17, George-street and Harris-street Electric Tramway, Sydney, at the sum of four thousand two hundred and sixty-six pounds, upon the condition that if the actual cost delivered in Sydney, aforesaid, of the spare parts, consisting of one fan complete for circulating pumps, and twelve valve springs for feed-pumps, should be any less sum than thirty-six pounds, the difference should be deducted from the said contract sum, and such acceptance (a copy whereof is hereunto annexed and marked “G”) was duly notified to the contractors on the twenty-first day of October now instant, to the conditions of which acceptance the contractors have assented, as they do hereby admit and acknowledge. And whereas the contractors have deposited the sum of two hundred and fifteen pounds with the Union Bank of Australia, Limited, at Sydney, aforesaid, in the name of the said Minister, at interest upon fixed deposit, No. 79,702, dated the twenty-seventh day of October, one thousand eight hundred and ninety-eight, for twelve months, and have handed the receipt for same to the said Minister, to be held by him as such Minister, or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract and all other matters and things herein contained, and which on the part of the contractors are to be done and performed. Now this agreement witnesseth that in consideration of the premises the contractors do hereby, for themselves, their heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, Her Heirs and Successors, that they, the contractors, shall and will perform the various works required in and about the full and proper manufacture, supply, and delivery of three “Blake” circulating pumps, with motors and rheostats, and two feed pumps complete, with base-plate motors and rheostats, and spare parts, Contract No. 17, George-street and Harris-street Electric Tramway, Sydney, aforesaid, in accordance in all things with the said several annexures hereto within the time and at or for the price or sum in the said acceptance of tender mentioned. It being also hereby declared that if the actual cost delivered in Sydney aforesaid of the spare parts, consisting of one fan complete for circulating pumps, and twelve valve springs for feed pumps, shall be any less sum than thirty-six pounds, the difference shall be deducted from the said contract sum, and that any other additions to or deductions from the said works mentioned or

set

set out in the said Specification are to be paid or allowed for, as the case may be, at and according to the rates or prices in the said Schedule of Prices, as modified by the said letter, or if not in Schedule at a price to be agreed upon at the time, and added to or deducted from the bulk sum in the said acceptance of tender, as the case may be. And it is hereby agreed and declared between and by the said parties hereto, that the said several annexures hereto, all being marked as aforesaid, shall be read as incorporated in and forming part and parcel of these presents, in like manner as if the same had been herein written and set forth at length, and that the said annexures hereto and these presents shall together be taken to be the contract between the said parties in respect of the said works.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed, and delivered by the said Richard Wilson } Finlayson in the presence of,— GEO. CHAPMAN.	R. W. FINLAYSON.
Signed, sealed, and delivered by the said Henry Shaw } Smith, in the presence of,— GEO. CHAPMAN.	H. SHAW SMITH.
Signed, sealed, and delivered by the said James Oliver } Smith in the presence of,— JAMES L. BOLGER.	J. O. SMITH.

New South Wales Government Tramways.

GEORGE-STREET AND HARRIS-STREET ELECTRIC TRAMWAY.

MANUFACTURE, SUPPLY, AND DELIVERY OF CIRCULATING PUMPS AND FEED PUMPS.

Contract No. 17.

SPECIFICATION.

Nature of Contract.

1. The work for which tenders are invited and to which this Specification refers, embraces the manufacture, supply, and delivery of three circulating pumps and two feed pumps, with spare parts, at the Power Station, William Henry street, Ultimo, near Sydney.

2. The contract comprises the supply of all materials, tools, plant, carriage, labour, and everything which shall be necessary for the full and proper completion of the work embraced under the same, and the whole of the work to be constructed in a good, substantial, and workmanlike manner, in accordance with this Specification, to the full extent and meaning of the same and to the entire satisfaction, approval, and acceptance of the Engineer-in-Chief for Railway Construction and under the supervision and direction of such assistant or assistants as he shall appoint.

Materials, Workmanship.

3. The whole of the materials and workmanship under this contract shall be of the best quality and description of their respective kinds. All materials intended to be used in the work shall be subject to the approval of the Engineer, and if not approved of shall be removed from the neighbourhood of the works without delay.

4. All castings are to be of the first quality iron or steel, sound and free from blow-holes; surfaces of same to be smooth and free from scabs, sinks, or other defects. All pieces at joints to be dressed fair with each other and joints well finished; nuts and heads of bolts to be hexagonal and case-hardened. All unfinished surfaces of castings to be well filled and rubbed down to an even surface, and to receive two coats of lead paint in the shop. All unpolished planed work to be finished free from heavy tool-marks. All finished surfaces to have a good polish. All parts of a similar nature to be made and finished to true templates, and to be absolutely interchangeable.

Inspection.

5. The whole of the work under this contract shall be subject to the inspection and testing by the Engineer during all the stages of manufacture; and the said Engineer shall have full power at any time to select any of the materials to be used, and have cut from same specimen pieces of such size and form as shall be directed and subject them to any reasonable test. Should the pieces so tested fail to bear the same, or the work found to be defective in any way, and not in compliance with the requirements and intention

intention of this Specification, the same shall be absolutely rejected. The cost of applying the test as to labour, plant, and material shall be borne by the contractor, who will also be required to forward samples to such public testing works as shall be nominated by the Engineer, and have them tested at his own expense.

Pumps.

6. Circulating Pumps.—Three electrically-driven centrifugal pumps, each capable of delivering not less than 2,000 (two thousand) British gallons per minute when driven at about 550 revolutions per minute.

7. Each pump to be mounted on the same bed-plate as, and coupled direct to, two general electric motors. The motor armatures to be of the standard G.E. 1,000 railway motor type. The bed-plate to be of cast-iron.

8. The motors to be shunt wound, and designed to work on a 550-volt circuit. Motors to be complete with hand-starting rheostat, and also rheostat for regulating the fields within 10 per cent.

9. The discharge and suction nozzles to be 12 inches in diameter, and the flanges made and drilled to the departmental standard templates. The pumps to be made entirely of gun-metal or salt water-resisting composition. All bearings to be self-lubricating.

10. The maximum suction lift will be about $14\frac{1}{2}$ feet, but the pumps must be capable to do the work on the basis of a total head of about 36 feet.

11. As it is proposed to run the pumps at practically constant speed, each pump must be fitted with adjustable air-valve on suction pipe, or other means for regulating the delivery of water.

12. The necessary holding-down bolts and sole-plates to be supplied, together with a complete set of spanners to fit all bolts and nuts, and fitted in a polished wrought-iron rack.

13. Spare parts.—The following spare parts to be supplied:—Six brush-holders, 10 complete sets of brushes, 1 fan complete.

14. Feed pumps.—Two electrically-driven triplex pumps, each capable of delivering one hundred and thirty-five (135) British gallons per minute against a boiler pressure of 140 lb. per square inch.

15. Each pump to have three single-acting plungers, 7 in. diameter by 8 in. stroke, and to be mounted on same bed-plate as, and geared to, one general electric motor. The motor armature to be of the standard G.E. 1,000 railway motor type. The bed-plate to be of cast-iron.

16. The discharge and suction nozzles of pump to be 4 in. and 5 in. respectively, and the flanges made and drilled to the departmental standard. The plungers to be made of hard, close-grained cast-iron, and to be externally guided to relieve them of excessive strain.

17. The connecting rods to be of forged steel, brass bushed, with adjustment at either end to take up wear. The shafts to work in babbitted boxes, well hammered and bored out to an exact fit.

18. The gear wheels and pinions to be accurately machine-cut and to run noiselessly. The pinions to be made of raw hide and the gear wheels of steel or charcoal-iron.

19. The water valves and valve seats to be of gun-metal or composition; valve springs to be of phosphor bronze. All bolts which hold the valves and seats in position to be put in from the outside.

20. The motor to be shunt-wound and designed to work on a 550-volt circuit. The motor to be complete with hand-starting rheostat and also rheostat for regulating the fields within 10 per cent.

21. The necessary holding-down bolts and sole-plates to be supplied, together with a complete set of spanners to fit all bolts and nuts, and fitted in a polished wrought-iron rack.

22. Spare parts.—The following spare parts to be supplied:—

- 6 brush holders,
- 10 complete sets of brushes,
- 1 set of pinions,
- 12 valve springs.

Conditions of Tendering.

23. Tenderers must state in their tender within how short a time they are prepared to complete the work.

24. Tenderers are requested to submit with their tender a list of power-stations where plants of similar nature to that specified, which have been designed and manufactured by them, are working.

25. Tenderers are invited to submit, if they desire to do so, alternative suggestions and prices for the above requirements.

26. The overall dimensions in all cases to be furnished as space is somewhat limited, and tenderers are requested to submit such drawings and photographs as they have available.

H. DEANE,

Engineer-in-Chief for Railway Construction.

This is the Specification marked "B," referred to in our annexed agreement with Her Majesty the Queen, dated the thirty-first day of October, A.D. 1898.

Witness,—

GEO. CHAPMAN,
JAMES L. BOLGER.

R. W. FINLAYSON,
H. SHAW SMITH,
J. O. SMITH.

"C."

GENERAL CONDITIONS.

Interpretation of Terms.

1. Whenever the terms hereafter explained in the present clause occur in these or any Special Conditions, or in the Contract or Specification, or Schedule to Specification, they shall be held to mean, and shall mean, as follows:—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time being.

"Engineer" shall mean the Commissioner for Roads or the Engineer-in-Chief having the principal charge of the works, as the case may be, or the person acting as such for the time being respectively.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special

"Special Conditions" shall mean any "Special Conditions" hereto attached and forming part of the Contract; and such Special Conditions shall be read with the General Conditions as part and parcel of the Contract.

"Schedule of Prices" shall mean the rates at which the Contractor has offered or agreed to execute the Contract, where the same is based on a Schedule of Prices, and be the basis on which the value of any extra works or of any deductions shall be calculated, and progress payments made, whether the Contract be one of a Schedule of Prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the Specification and Schedule to Specification.

"Works" shall mean the works set out in the Specification, Schedule to Specification, and Plans, or, in the event of there being no Plans, in the Specification or Schedule to Specification only.

"Net Claim" shall mean the sum claimed by the Contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Board" shall mean the Board of Reference for the Department of Public Works, consisting of the Under Secretary for Public Works and Commissioner for Roads, the Engineer-in-Chief for Public Works, the Engineer-in-Chief for Railway Construction, the Government Architect, and the Engineer for Sewerage Construction; provided that any member of the Board who may give his decision in the first instance shall not be qualified to vote on the Board upon the matter referred to it for decision.

Supply of Labour, Materials, and Plant.

2. The Contractor shall, except in so far as the Specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this Contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

Plans, Specifications, &c.

3. The Plans, Specifications, and Schedules to Specifications represent generally the forms, dimensions, and description of the several works. Where any discrepancy exists between the dimension, as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the Plans, and the dimensions and materials given in the Specification or the Schedule to Specification, the directions of the Specification or Schedule to Specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the Contractor. Also, anything contained in the Plans, and not in the Specification or Schedule to Specification, or anything contained in the Specification or Schedule to Specification, and not shown in the Plans, shall be equally binding as if it were contained in both. If neither Specification, Schedule to Specification, nor Plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the Contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are included in this Contract.

All works described in, or implied by, the Specification, or Schedule to Specification, shown on any of the Plans, or set forth in any lists or tables thereon, or attached thereto, as well as those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared, or which may be prepared hereafter for the purpose of this Contract, in strict accordance with the provisions of the Specification, Schedules to Specification, and Conditions, and to the entire satisfaction of the Engineer.

Copies of Plans, &c.

4. A copy of all Plans, Specifications, and Schedules to Specifications required by the Contractor for carrying on the works will be provided by the Government, but must be returned before a final certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the Contractor at a rate to be fixed by the Engineer.

Setting out Works.

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the Contractor—except in the case of buildings, when, in the absence of setting out, a block plan will be supplied, from which he must work; but the Contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

Protecting and Maintaining Signals and Marks.

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the Contractor's work, will be confided to the care of the Contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the Contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the Contractor.

Possession of Ground.

7. In giving the Contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession—that is to say, such possession as will enable him to perform the works comprised in this Contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The Contractor must procure for himself all other land which he may deem requisite for any temporary purposes or for his own convenience.

Access

Access to Works.

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this Contract. The Contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this Contract, and shall facilitate in every way the inspection of the same.

Contractor's risk.

9. The Contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the Plans, Specification, and Schedule to Specification.

Contractor to be represented.

10. The Contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the Contractor for all purposes of this Contract.

Any notice or any written instructions to be given or delivered to the Contractor under this Contract shall be deemed to have been so given or delivered when given or delivered to the Contractor or his representative at the work, or left at the Contractor's usual or last known place of abode or business.

Order of Procedure.

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this Contract shall be carried out.

Power of Entry.

12. The Engineer shall have the power, at his discretion, without vacating this Contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this Contract, and his doing so shall in nowise be held as a waiver of the responsibility of the Contractor in respect of this Contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the Contractor shall be free from liability on account thereof, but not otherwise.

Instructions to be obeyed.

13. Should the Contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

Power to dismiss men.

14. The Engineer may require the dismissal within twenty-four hours by the Contractor of any agent, overseer, foreman, workman, or other person employed on the works, and in the event of the Contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

Bad Materials or improper works to be removed.

15. The Contractor shall be bound to remove within twenty-four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description; and, in case of refusal, the Engineer shall have the power to get such materials or work removed at the Contractor's expense, and to withhold all payments until such instructions have been complied with.

Extra Works—Omissions of Works.

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this Contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the Contractor if of the class of works provided for in the Schedule of Prices, at such Schedule Prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this Contract, or extend the time for the completion thereof, unless such extension shall have been given as provided for in clause 24; but such additions or alterations shall be measured and paid for, or deducted from the Contractor's account as the case may require, according to the Schedule of Prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the Schedule of Prices, the same shall be executed by the Contractor at such prices as may be agreed upon with the Engineer; but if the Contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the Contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the Contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the Contractor. The Contractor shall not be entitled to any other rate than the Schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than that shown on Plan or described in Specification or Schedule to Specification, or carried out under circumstances not contemplated in the Specification, unless an agreement entitling him to payment by other than the Schedule rates shall have been previously made and signed by the Engineer and the Contractor.

Valuation

Valuation of Omissions.

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the Schedule rates, or in the event of there being no Schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum.

Net Measurements.

18. The whole of the work shall be executed and paid for according to the Contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock-faced masonry all measurements will be taken to the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or sawn timber or round logs be paid for.

Contractor liable for injury to adjoining Lands, Properties, &c.

19. The Contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any such trespass be committed, or any such loss, damage, or injury occur, the Contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the Contractor under this Contract, or may be recoverable from the Contractor as liquidated damages in that respect incurred.

Damages, &c., to be paid for by the Contractor.

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the Contractor at his own expense; and the whole of the works must be delivered up, complete in every respect, according to this Contract, and the care and maintenance of all works under this Contract shall remain with the Contractor until the Engineer shall, by notice in writing under his hand, inform the Contractor that he has taken charge thereof; and until such notice shall have been given the Contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

Contractor not to Sublet Works or Assign Moneys.

21. The Contractor shall not assign or underlet this Contract, or any part thereof, or assign or mortgage, charge or encumber, all or any of the moneys payable, or to become payable, under this Contract, or any other benefit whatsoever arising, or which may arise, under this Contract, to any person, without the consent in writing of the Minister being first obtained. The Contractor for each and every breach of this Condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages, and the sum or sums payable as such damages may be deducted from any sum or sums due to the Contractor under this or any other Contract with the Government. And any permission to assign or underlet works to be done under this Contract shall not discharge the Contractor from any liability in respect of this Contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this Condition; and all rights under these Conditions shall remain in full force, and shall be available as against any such subsequent breach.

Truck System not allowed.

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the Contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquor, or goods; nor shall the Contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The Contractor for each and every breach of this Condition shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the Contractor under this or any other Contract with the Government.

Power of the Government to pay Workmen and Tradesman.

23. Before the payment of any money to the Contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the Contractor until such declaration has been made and delivered to him.

If the Contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister, or the Engineer, as often as the same shall happen upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the Contractor under this Contract.

Delay.

24. If the Contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this Contract, or if from the non-delivery, or any delay in the delivery to the Contractor, of any materials which under this Contract the Minister is to supply,

supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accidents happening to the said works during their progress not arising from the neglect or default of the Contractor or his servants or workmen, the Contractor shall be delayed or impeded in the execution of his Contract, the Contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Minister for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Minister shall, if he think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as he shall think adequate; and the penalties, sets-off, and deductions to which under this Contract the Contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the Contractor shall become liable to the same, from the date of the expiration of such extended time or times. And unless the Contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the Contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this Contract specified; and, in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these Conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this Contract he is entitled to make, deduct, set-off, or receive from the Contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these Conditions given to or vested in him be in any way affected.

Patent Rights to be included.

25. The Contractor is to include in his Tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

Free Passes, &c.

26. No free passes on any of the Government Railways will be granted either to the Contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

Conditions not to be waived.

27. None of the Conditions of this Contract shall be varied, waived, and discharged, or released either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

Progress Payments without Prejudice.

28. No progress payment given to the Contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the Contractor to remove or amend at any future time previously to the final payment on account of the work, any work that may be found not in accordance with this Contract; and the Contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due to the Contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made, for any period which he may consider necessary for the purpose of such inquiry.

Security.

29. Within fourteen days after the notice of the acceptance of his Tender shall have been given to the Contractor, or posted to the address of his last-known place of business or residence, he shall deposit with the Minister, or at the option of the Minister in some bank or banks in Sydney, upon fixed deposit in the name of the Minister, a minimum deposit of £2 if his Tender be £40 or under, or a sum representing £5 per cent. on the pounds if his tender be over £40 and under £200; but if £200 or over then a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his Tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this Contract until the Engineer has certified that the whole of the work in the said Contract has been completed to his satisfaction and the period specified for the maintenance of the said works has expired, or until this Contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these Conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this Contract shall not have been cancelled under the said clause, and if the works comprised in this Contract are not completed within the time mentioned in clause 34 of these Conditions, the liquidated damages which, under the last-mentioned clause are made payable to the Minister, may be deducted and taken from the money so deposited.

If the Contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the Tender, or if he fail to execute the Contract for the due performance of the works mentioned in the said Tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the Regulations of the Tender Board.

No Tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required Contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the Contractor before the due execution of the said Contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim, or demand against the Minister.

The

The Contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a Bank at fixed deposit, as such interest becomes payable; but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited, or for any loss of interest from the fixed deposit not being renewed.

Payments.

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these Conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the Specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted, when the retention money, in addition to the cash security, will be paid to the Contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the Contractor has been executed and completed to his satisfaction, the Contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this Contract, or to the final payment upon the whole of the works being finished.

Delay or Bad Work, Bankruptcy, &c.

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, or in case the Contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under Condition 15, or in case the Contractor shall assign or underlet this Contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this Contract, or any other benefit whatsoever arising or which may arise under this Contract, without the consent in writing of the Minister being first obtained, or in case the Contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these Conditions, or in case the Contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this Contract, and without prejudice to any right that may have accrued to liquidated damages under any of these Conditions, to take the works wholly or partially out of the hands of the Contractor and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and together with any sum payable as liquidated damages under these Conditions shall be deducted from any money that may be then due or may thereafter become due to the Contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the Contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the Contractor to the Minister, and may be recovered accordingly.

Cancellation of Contract.

32. In any or either of the events mentioned in the last preceding clause of these Conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these Conditions, to cancel this Contract whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the Contractor on account of the works executed shall be taken by him as full payment for all works done under this Contract; and upon notice in writing under the hand of the Minister that he, under the authority of this Condition, cancels this Contract being given to the Contractor, this Contract shall be cancelled, and thereupon all sums of money that may be due to the Contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this Contract within the time specified shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of Contract.

Insurance.

33. The Contractor shall from time to time, when required to do so by the terms of the Specification, insure the works against loss or damage by fire, in an office to be approved, in the name of the Minister for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the Contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the Contractor to deliver up the works to the Minister completed in all respects according to the Contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the Contractor in the final settlement of accounts in the event of the Contract not having been previously cancelled under these Conditions.

Time of Completion, &c.

34. The Contractor shall complete the whole of the works comprised in this Contract within weeks from the date of the acceptance of his Tender, and in the event of their non-completion at the specified times, should the Minister not have proceeded under clauses Nos. 31 and 32 of these Conditions,

or either of them, the Contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of twenty pounds sterling for every week, or for every part of a week that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the Contractor under this or any other Contract. The Contractor shall have no right to a Certificate for payment after the date specified in these Conditions for the completion of this Contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this Contract shall have been extended as hereinbefore provided, in which case such extended time shall become the time for the completion of this Contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this Contract, or as annulling or setting aside this Contract in any respect, nor be taken as releasing the Contractor from any of the responsibilities or obligations of this Contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the Contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

Maintenance.

35. The Contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the Contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this Contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the Contractor during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the Contractor of any liabilities or obligations whatever in respect of his Contract.

Settlement of Claims.

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final, viz. :—

- (1.) All questions and disputes when the net claim shall not amount to the sum of £1,000.
- (2.) All questions and disputes (irrespective of the amount involved), which shall arise respecting the true construction or meaning of the Plans, Specification, or Schedule to Specification; or the quality or sufficiency of the workmanship; or the quantity, quality, or sufficiency of materials necessary for the whole or any part of the Contract; or the true value of any extra works that have not been previously agreed upon; or the value of any works omitted from the works specified to be done under the Contract.

37. Where the amount of any net claim in respect of any matter relating to the said Contract (other than and excepting those mentioned in class 2 of the last preceding clause) shall amount to the sum of £1,000 or upwards, the Contractor shall, within one month from the date of the expiration of the period of maintenance referred to in clause 35, furnish to the Engineer "full particulars" in writing of any such claim, giving distinct and separate items and the amount, if any, claimed under each item, and the same may be accompanied by any such explanatory matter as the Contractor may consider necessary. The Contractor shall be bound by such particulars, and no claim not included in such particulars shall be taken into consideration or become the subject of any action. All such claims amounting to £1,000 or upwards shall in the first instance be referred to and decided by the Engineer, and if the Contractor and the Engineer cannot agree upon the amount to be paid in respect of such claims, the Contractor shall then be allowed to appeal to the Minister, who shall refer the matter for the consideration of and final adjudication by the Board, whose decision shall be final when so expressed by the said Board to be final, and the Contractor shall have no right of action or suit under the contract or these Conditions for or in respect of any such claims, saving for the amounts that may be so certified to be due. Provided always that if, in cases where the said Board shall not arrive at and make a final decision, the Contractor may require the Minister to state, and he shall state, a special case without any pleadings for the opinion and final decision of the Supreme Court, with power to the Judges, upon the hearing thereof, to draw conclusions of fact, and to review and vary or refer back the claim to the Minister; but in case of any such special case being so stated the taxed costs of both parties, incidental thereto shall be borne by and divided between them respectively in the inverse proportion which the amounts actually awarded and disallowed respectively shall bear to the total amount in dispute; and no action, suit, or other proceeding shall be instituted in respect of the premises, except for the purpose of enabling such special case to be stated as aforesaid.

The Minister shall not be called upon or be bound to make any payments out of the retention money or the money deposited as security for the due carrying out of the Contract, or to give up any bond that may have been given or entered into in connection with the Contract, before or until all questions and disputes shall be finally settled; and should the Minister in his discretion make any payments out of the retention or deposit money to the Contractor, the making the same shall not in any way prejudice the Minister's rights under the Contract, or be taken as an admission of any claims made by the Contractor.

DEPARTMENT OF PUBLIC WORKS.
LUMP SUM TENDER FORM.

Manufacture Supply and Delivery of Circulating Pumps and Feed Pumps.

In pursuant of advertisement in the *Government Gazette* (I or we), the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction of circulating pumps and feed pumps for the George-street and Harris-street Electric Tramway, agreeably to the Specification and General Conditions, which have been inspected by (me or us), for the lump sum of four thousand six hundred and eighty pounds, and to complete the same within the time stated in the said General Conditions; and (I or we) do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and (I or we) hereby undertake that (I or we) will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 29 of the General Conditions; and (I or we) enclose herewith (my or our) cheque for the sum of fifty pounds; and (I or we) agree that such sum shall be absolutely forfeited if (I or we) at any time within thirty days after the said tender is opened withdraw same, or if in the event of this tender being accepted (I or we) fail to complete the above-mentioned contract document within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations printed on the back hereof, and by which (I or we) agree to be bound.

Dated this 2nd day of August, 1898.

"F."

H. P. Gregory & Co., to The Department of Public Works.

Engineers and General Machinery Merchants, Sydney, 2 August, 1898.

A MEMORANDUM, explanatory of accompanying "Lump Sum Tender Forms," submitted by the Undersigned for three (3) circulating pumps and two (2) boiler feed pumps, with spare parts.

We are prepared to supply the following electric-driven pumps, all to be manufactured by The Geo. F. Blake Manufacturing Company, of New York and Boston, and in general accordance with Specification referred to in said Tender Form, and to deliver same at Electric Power Station, Ultimo, near Sydney, as follows:—

Circulating Pumps.

The three (3) circulating pumps we propose to supply are of the electric-driven centrifugal type, each driven by two (2) motors, as called for in Specification. The required capacity of pumps at speed stated in Specification, we are of course prepared to guarantee. So far as we have data and illustrations beside us, we are unfortunately unable to give particulars of the pumps as we propose to supply, excepting those driven by single electric motors. Of this style of pump we attach photograph, marked No. 531, showing one of a number recently manufactured by our Company for the Edison Electric Companies in America. We are, however, prepared to supply pumps to perform the work specified with two (2) motors, at the price given in accompanying "Lump Sum Tender Form," or, as an alternative, we are prepared to supply pumps arranged, as per photograph, at £150 each less—that is, for £1,000 each.

As

As regards overall dimensions of the pumps we offer to supply, we fear we can only give these approximately, having no scale drawings of similar pumps of required capacity. Each pump, with one (1) motor, however, we would estimate to measure overall 11 feet long by 5 ft. 6 in. wide by 5 feet high, and to weigh about 13,000 lb., while same size pump with two (2) motors would, we should imagine, measure approximately 16 feet long by 5 ft. 6 in. wide by 5 feet high, and weigh about 14,500 lb.

Feed Pumps.

The two (2) feed pumps we propose to supply would also be electric-driven, but of the vertical triplex single acting plunger-type. Plungers would be 7-inch diameter, and of 8-inch stroke, and motor would be of sufficient capacity—say, 25 h.p. Accompanying photograph, No. 533, of a smaller size pump, shows general arrangement, while the details would be strictly in accordance with your Specification throughout, the complete plant representing in every way the result of the latest up-to-date practice. Overall dimensions of these pumps, judging from blue prints of other sizes we have by us, would be about 10 ft. long by 4 ft. 6 in. wide by 7 ft. high, and the weight of each would be, approximately, 10,000 lb.

Unfortunately, we have no data by us from which to get at prices for the "extras" you ask for, but these would be ordered by us as specified, along with the pumps, should we be the successful tenderers, and price of same would be the nominal cost of such articles in this market.

We would be pleased to accept your instructions to supply the work we now tender for, in strict accordance with your Specification in every detail, and we undertake to complete same in, say, twenty (20) weeks from date of your acceptance of our tender.

It must be understood that any duty which might be demanded by the Government, and paid by us in consequence of any alteration in the present tariff, would have to be added to the total amount of
H. P. GREGORY & Co.

"G."

The Under Secretary for Public Works to Messrs. H. P. Gregory & Co.

Gentlemen,

Department of Public Works, Sydney, 21 October, 1898.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 2nd August last, as amplified by your letter of the same date, is accepted for manufacture, supply, and delivery of three "Blake" circulating pumps with motors and rheostats, and two feed pumps complete with base-plate motors and rheostats and spare parts, Contract No. 17, George-street and Harris-street Electric Tramway, Sydney, at the sum of four thousand two hundred and sixty-six pounds (£4,266), upon the condition that if the actual cost delivered in Sydney of the spare parts, consisting of one fan complete for circulating pumps, and twelve valve springs for feed pumps, shall be any less sum than thirty-six pounds, the difference shall be deducted from the said contract sum.

The work is to be carried out in strict accordance with the several contract exhibits relating to this Contract, and to be completed within twenty-five weeks from this date.

The security required on this Contract is a fixed deposit receipt in favour of the Secretary for Public Works, for the sum of two hundred and fifteen pounds.

I have to refer you to the Engineer-in-Chief for Railway Construction for further information, and to request that you will call upon the Officer-in-charge of Bonds and Contracts at this office, for the purpose of executing the necessary documents for the due observance of your Contract.

This letter is to be read in lieu of my letter of date 29th August last, which said letter is to be delivered up for cancellation, as mutually agreed.

I am, &c.,

ROBT. HICKSON,
Under Secretary and Commissioner for Roads.

This is the copy Letter of Acceptance marked "G," referred to in our annexed agreement with Her Majesty the Queen, dated the thirty-first day of October, A.D. 1898.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

METROPOLITAN BOARD OF WATER SUPPLY AND
SEWERAGE.

(TENTH REPORT, FROM 1ST JULY, 1897, TO 30TH JUNE, 1898.)

Printed under No. 18 Report from Printing Committee, 22 December, 1898.

14 September, 1898.

To the Honorable the Secretary for Public Works,—

Sir,

The Board of Water Supply and Sewerage have the honor to submit to you their Tenth Report, embracing the period from 1st July, 1897, to 30th June, 1898.

WATER SUPPLY.

2. The average daily consumption of water per head of estimated population supplied, was 42 gallons, as against 42·2 gallons during the year 1896-7. The average daily supply was 18,283,000 gallons, and the estimated population supplied 434,810.

3. During the year 2,559 houses were connected to the water supply, making a total at present supplied of 89,749 houses. The total number of properties, including vacant land, liable for water rates is 112,086.

4. The work of extending the benefits of a proper and permanent water supply to new districts in the outlying suburbs has been vigorously carried on. The total length of trunk and reticulation mains, of sizes varying from 42 inches to 3 inches in diameter, laid was 60·6 miles. In addition to the above, over 18 miles of water-mains were cleaned, and the hydrants in connection with the same overhauled. One hundred and forty-three screw-down, and 997 ball hydrants were fixed. The total length of water-mains, exclusive of trunk mains, now under the Board's control, is 967 $\frac{3}{4}$ miles, with 1,858 screw-down, and 18,740 ball hydrants.

5. With a view to preserving the purity of the water supplied to the citizens, a considerable amount of attention has been given to the settlements scattered over the catchment area.

Formerly the duty of visiting and inspecting the holdings on this area was entrusted to one officer, but it became apparent that the work could not be satisfactorily carried out by one man, owing to the extent of country to be traversed, embracing an area of nearly 500 square miles. A second ranger was, therefore, appointed, which has enabled every holding to be visited at least once a month, at uncertain intervals, to watch generally over the interests of the Board, and the results have been eminently satisfactory.

6. The Board regret to have to report that the masonry weir thrown across the Cataract River, at Broughton Pass, was, on 14th February last, swept away by floods. Owing to the abnormal rainfall, the river rose to a height of 16 feet over the crest of the weir, or 4 feet higher than any flood since the construction of the works. The disaster is attributed by the engineer to the battering action of the timber and boulders brought down by the flood-waters. No interruption whatever to the supply occurred, and repairs as detailed in the report of the Engineer attached hereto, promptly effected.

It is satisfactory to know that a weir of similar design, but constructed of concrete, thrown across the Nepean River at the Pheasant's Nest, was in no way affected, although the flood-waters in this stream rose to a height of 64 feet over the top of the weir.

7. The canal, as well as the various tunnels, aqueducts, &c., have been maintained in a satisfactory condition. Certain portions of the canal in embankment which proved defective, have been strengthened and relined with concrete. It is the intention of the Board to deal in this way each year with other portions of the canal, until the whole has been so treated, when it is anticipated that the annual cost of maintenance will be very materially reduced.

8. For the better working of the canal line it was found necessary to duplicate the telephone line, and this work is now almost completed.

9. The puddle wall of the bank, and also the by-wash of the Prospect Reservoir, have been raised sufficiently to permit of the depth of water stored in the reservoir being increased by 1 ft. 6 in., representing an additional quantity of water impounded of over 700,000,000 gallons.

10. The canal between the Prospect Reservoir and the Pipe Head Basin has been emptied and thoroughly cleaned out, and the 72-inch diameter pipes between the latter place and Pott's Hill Reservoir have been covered with a cement wash, and the bands painted.

11. The Pott's Hill Balance Reservoir and the Screening Chamber are in an efficient condition.

12. No fractures or bursts of any consequence have occurred on either the trunk or reticulation mains.

13. Improvements in the existing supplies at the following places have been affected:—Leichhardt, Balmain, Rookwood, Granville, Five Dock, North Sydney, Mosman, Neutral Bay, Enfield, Hurstville, &c.

14. The number of water-meters fixed during the year was 967, 267 were removed, the net increase being 700. The total number now fixed is 7,544.

838 meters of various sizes were issued out on hire, and 50 were sold outright. The total number issued on the hire system since April, 1894, is 3,304, of which 2,788 are still in operation.

15. 61,227 water fittings of various kinds were tested at the Board's shops at the Crown-street Reservoir, of which 56,080 were passed and stamped, 5,028 returned defective, and 119 condemned.

16. The various pumping plants at Crown-street, Ryde, Chatswood, Carlton, and Richmond are reported by the Engineer to be working satisfactorily.

17. The cost of pumping 1,000 gallons 100 feet high, as compared with former years, was as follows :—

	1890.	1891.	1892.	1893.	1894.	1895-6.	1896-7.	1897-8.
Crown-street	d. ·75	d. ·70	d. ·48	d. ·32	d. ·35	d. ·347	d. ·345	d. ·387
Ryde	·324	·312	·422
Chatswood	1·025	·805
Carlton	·984	1·149
Richmond	1·452	1·788

The Engineer, in his report, explains the reason of this increase.

The quantity of water pumped was 3,260,364,989 gallons, being an increase of 171,596,816 gallons over the quantity lifted during the previous year, and representing very nearly 50 per cent. of the total discharge from Prospect.

18. The service reservoirs and tanks have been cleaned and are in good condition. The new steel tank at Wahroonga, of a capacity of 1,000,000 gallons, referred to in last Report as in course of construction, has been completed.

19. The Board note with pleasure the approaching completion of the Centennial Park Reservoir, which will enable them during the coming summer to efficiently deal with the ever-increasing demand for high-level water in the city and higher portions of various suburbs. The rising and delivery mains have been laid by this Board and are ready for use.

20. In consequence of the Amending Bill drafted some time ago, which contains, among other things, provision to extend the jurisdiction of the Board outside the county of Cumberland, not yet having been passed into law, the Board are still unable to comply with the repeated requests of the Camden Municipal Council to afford the residents a supply of water from the canal at Kenny Hill.

The success of the Richmond scheme is also dependent upon the passing of this measure, and quite recently a request made by the Windsor Borough Council for the Richmond mains to be extended to their town has had to be refused from a like cause.

The Board, therefore, trust the Minister will see his way to introduce this Bill to the Assembly at the earliest possible date.

21. The works in connection with the supply to the following country towns are giving satisfaction in every respect:—Liverpool, Campbelltown, Smithfield, and Richmond.

At the town of Liverpool a number of dead-ends of water-mains have been coupled up, thus improving the circulation, while at the local reservoir the orifice of the outlet pipe has been covered with a fine screen to prevent the entrance of foreign bodies.

22. Portions of the old Botany Water Reserve, not now required for water-supply purposes, have been leased for trade and agistment purposes, resulting in a very substantial increase in the annual revenue of the Board.

23. The tabulated results of a monthly analysis of samples of water from various points, by Mr. William M. Hamlet, Analyst to the Board of Health, is attached hereto, showing, notwithstanding numerous complaints which have appeared from time to time in the daily papers, that the water still continues to maintain its reputation for purity and excellence.

SEWERAGE.

24. During the year 10·29 miles of sewers were transferred from the Public Works Department to the control of the Board, 3·354 miles were taken over from local Municipal Councils, and 50·85 miles of reticulation sewers were constructed by the Board. The total length of sewers now under the jurisdiction of the Board is 320·254 miles. In addition to these 2·03 miles of storm-water ducts were handed over from the Government, and 1·52 miles constructed by the Board. The total length of storm-water channels now maintained by the Board is 20·591 miles.

25. The number of houses connected to the sewers during the year was, in the city, 1,147, and suburbs, 2,685, making a total of 51,425, representing a population of about 257,125 persons.

Although this record exceeds that of any previous year, it is anticipated, now that a portion of the Western Suburbs Scheme, as well as the North Sydney and Double Bay Systems, have been completed, that there will be still greater activity in the coming year in connection with house-drainage work.

26. The whole of the main and reticulation sewers and works connected therewith, have been maintained in a very satisfactory condition. A few cases of flooding of premises during heavy rainstorms occurred, but these have now been fitted with reflux traps, and measures taken to avoid a repetition of the evil.

27. The total quantity of silt removed from the sewers was 2,568 tons, 1,450 tons being taken from the sewers of the old system, 665 tons from Bondi, and 453 tons from Botany. This result is regarded as satisfactory.

The quantity of sand lifted from the various storm-water channels was—Metropolitan area, 2,300 loads; suburban area, 2,430 loads. The necessity for this work

work considerably increases the cost of maintaining these ducts, and an experiment has been tried of constructing automatic flushing stations at different points, which have so far worked efficiently.

28. The work of repairing the old city sewers, referred to in last year's Report, has been completed ; as the cost is chargeable to maintenance, a portion of the work was carried out each year since 1891, and the Engineer reports all of the main branches to be now in good condition, and likely to last for many years.

29. The plant at the low-level ejector station at Alexandria, which is the first installation of its kind in connection with the Metropolitan Sewerage System, has worked efficiently and economically as regards consumption of coal.

30. The sludge removed from the chambers of the outlet house at Cook's River amounted to 2,005 cubic yards, as against 1,975 cubic yards during the previous year. The building, machinery, &c., at this station are in good order.

31. The average daily flow of sewage on to the farm at Cook's River, was 2,675,000 gallons, as against 2,361,000 during the preceding year.

Thirty-five acres of additional filtering area have been provided, and the main carrier and railway extended to the same.

The sludge has been disposed of without difficulty on the cultivation area, and no nuisance created. The crops taken from this area have been satisfactory, notwithstanding the destruction wrought by a severe southerly gale and storm, which passed over the district in February last. The crops are eagerly sought after, and are as a rule sold as they stand at lucrative prices per acre. The soil of the farm consists of hungry sea-sand, and although no doubt most suitable for the disposal of sewage, which after all is the main consideration, as a crop-yielder is not all that could be desired, yet the Board hope, now that the farm is recovering from the disastrous effects of the experiment of leasing, to in a short time obtain from it a very fair revenue to set against the cost of its maintenance.

Stock rearing, principally pigs, and agistment have proved very profitable, and the Board intend to still further extend their operations in this direction.

The total revenue from all sources was £199 2s. 3d., as compared with £105 10s. 3d. during the previous year.

The area at the Rockdale end, which has been acquired by the Government as a Sewage Farm for the Western Suburbs, has lately been handed over to the Board, along with the outlet works, and already a large amount of work, consisting of fencing, under-draining, erection of break-winds, &c., has been carried out. On the advice of Mr. Maiden, F.L.S., Director of Botanic Garden, about 2,000 trees of various kinds have been planted, the whole of which were kindly supplied by Mr. Maiden from the Government Nurseries. The Board intend to make this tree-planting a feature on the farms, and will set apart a small sum annually for the purpose.

32. Samples of the effluent water from the Sewage Farm have been analysed by Mr. W. M. Hamlet, by permission of the Board of Health, and his report, which is attached, shows the result of the filtration to be all that can be reasonably expected.

33. The total number of premises connected to the sewers by the Board was 195, of these 91 were dealt with under the compulsory clauses of the Act, and 104 under the deferred-payment system. The average cost per house was £9 12s. This latter system is working well, and the privilege is now being availed of by a large number of small property-owners in the Western Suburbs and North Sydney districts, which are about to be dealt with.

34. The difficulty of dealing with the evil of defective city drainage, referred to in last Report, still continues, owing to the delay in passing the Amending Bill.

35. The public appear to fully appreciate and take advantage of the system inaugurated by the Board of granting to owners of property, certificates that the licensed drainers have carried out their work in accordance with the By-laws and Regulations, no fewer than 7,275 of these documents having been issued.

36. Although strong opposition was evinced in some quarters to the erection on houses, &c., of ventilating-shafts from the public sewers, and all manner of ills prognosticated as a consequence of their erection, the complaints as to bad smells from the sewers in districts where the ventilation system has been completed, have been practically nil; and sickness due to preventable diseases, among the residents of such localities, instead of increasing, has been, as shown by the report of the Medical Officer, very materially reduced. The total length of sewers now ventilated is 270 miles, and the metal shafts erected 124,201 lineal feet.

FINANCIAL.

WATER SUPPLY.

37. The following table shows the working of the Water Branch:—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, excluding item City Council's Water Fund.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after Paying Expenses.
	£	£	£	£				
1888	125,486	19,205*	3,004,557	2,623,837	20·40	0·97	4·78	3·81
1889	138,923	36,568	3,088,068	2,707,500	26·32	1·35	5·13	3·78
1890	145,990	34,788	3,189,080	2,808,412	23·82	1·23	5·19	3·96
1891	165,831	38,291	3,306,649	2,925,987	23·09	1·30	5·66	4·36
1892	155,886	45,078	3,394,581	3,013,919	28·91	1·49	5·17	3·68
1893	157,426	37,141	3,409,731	3,029,059	23·59	1·22	5·19	3·97
1894	161,167	39,274	3,440,614	3,059,957	24·36	1·21	5·26	4·05
1895 for six months.	85,364	19,693	4,078,979	3,698,323	23·06	1·06	4·60	3·54
1895-6	174,357	37,495	4,154,261	3,776,879	21·50	0·99	4·61	3·62
1896-7	175,984	40,821	4,244,550	3,867,168	23·19	1·05	4·55	3·50
1897-8	178,881	45,220	4,327,543	3,950,161	25·27	1·14	4·52	3·38

* For nine months only.

38. There is an increase in the total revenue of £2,897, but the revenue from assessments is £900 less than the previous year.

In last year's Report it was shown that notwithstanding the fact that 55½ miles of new mains had been laid the revenue from assessments had been reduced by £5,364, which was attributed to the decreased assessments of the various councils, on which the Board's rates are based. It is to be regretted that this shrinkage in values still continues. It was confidently believed last year that the values had reached bed-rock, and it was anticipated that there would this year have been experienced an upward tendency, and any new mains laid result in a substantial increase in the revenue; but this desire has not been realised, as, although over 60 miles of new mains have been laid, opening up districts not previously reticulated, the result is, as already stated, £900 on the wrong side.

Another cause which contributed to this disappointing result was the writing back of the rates, in accordance with the decision of the Privy Council, on land situated more than 150 feet from water-mains, which land it has previously been the custom to charge. The amount involved was £2,496.

39. It is satisfactory, however, to note that the meter revenue has not only maintained the lead of £2,015 recorded in last Report, but has been increased still further during the year just ended by £3,165. Of course, this cannot be set down altogether to increased consumption, but is partly due to the fact that the assessed rates having been reduced, the value of excess consumption over assessments is greater.

40. There is an increase of £332 in the revenue from water used for building purposes, which is a healthy sign, also in the special, stock, and garden fees.

41. The working expenses have increased by £4,399, due principally to the extra cost of maintaining the additional mileage of water-mains, rebuilding the weir at Cataract River, cleaning and fettling and restoring, almost as good as new, old water pipes taken up out of ground after many years service, and also to cost of extra pumping on account of increased consumption of high-level water.

The expenses of management are only £159 in excess of the previous year.

42. The capital cost has been increased by £82,993, being the value of the new works constructed during the year.

43. The revenue was £178,881 and the working expenses, £45,220, or 25·27 per cent. of the gross revenue, leaving a net revenue of £133,661, or a return of 3·38 per cent. upon the capital cost.

44. The towns of Campbelltown and Liverpool are supplied direct from the main canal above the Prospect Storage Reservoir. For the supply of the former place, a penstock has been built in the canal for the purpose of conserving sufficient water for requirements in the event of the supply to Prospect being shut off for any purpose, while for the Liverpool supply a small service reservoir has been constructed adjacent to the canal. These towns are debited with an annual instalment sufficient to pay off in 100 years with interest the actual cost of all local works; and with expenses of maintenance and management they are also charged at the rate of 3d. per 1,000 gallons as their contribution towards the cost of the main works above their off-take for the water supplied calculated at the rate of 32 gallons per head of the estimated population, per day.

45. The following tables are worked out on this basis:—

CAMPBELLTOWN WATER SUPPLY.

Year.	—	Annual Instalment required to pay off Cost of Reticulation and Interest thereon in 100 years.	Maintenance (including proportion of Head Office expenses)	Charge for Water supplied from Canal, 32 gallons per head per day at 3d. per 1,000 gals.	Total Charges.	Revenue.

1896-7	Reticulation, £13,264 } Population supplied with water, 2,111 }	479 12 6	369 16 2	308 4 1	1,157 10 9	906 2 7
1897-8	Reticulation, £13,543 } Population supplied with water, 2,137 }	480 14 3	364 1 8	312 0 0	1,165 15 11	924 8 9

46. The following is the table in connection with the Richmond Water Supply, the cost of which is not charged against the Board, the source being altogether distinct from that of the Metropolitan Supply, who are simply managing the scheme on behalf and at the request of the Minister. The source of this supply is outside the County of Cumberland, and consequently beyond the jurisdiction of the

the Board; the properties not actually supplied cannot be charged, nor can they be compelled to connect, and until the amending Bill, which contains a provision to set this matter right, has been passed into law, the financial results must continue to be unsatisfactory.

RICHMOND WATER SUPPLY.

(Date of Transfer to Board, 26th May, 1893.)

Year.	Capital Cost.	Annual Instalment required to pay off Cost of Works and Interest in 100 years.	Maintenance (including proportion of Head Office Expenses).	Total Charges.	Revenue.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1893	12,340 0 0	446 4 3	314 16 1	761 0 4	399 15 3

SEWERAGE.

47. The following table shows the working of the Sewerage Branch :—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, exclusive of items paid from Revenue.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after paying Expenses.
	£	£	£	£				
1890	81,800	22,249	1,281,045	1,177,614	27.19	1.88	6.94	5.06
1891	81,302	25,411	1,447,287	1,343,856	31.25	1.89	6.05	4.16
1892	87,927	27,305	1,605,948	1,503,517	31.05	1.81	5.84	4.03
1893	93,661	27,092	1,691,462	1,588,031	28.92	1.70	5.89	4.19
1894	93,134	28,053	1,745,120	1,641,689	30.12	1.70	5.67	3.97
1895	43,110	14,250	1,831,611	1,728,180	33.05	1.64	4.98	3.34
(six months)								
1895-6	85,486	30,304	1,892,256	1,788,825	35.44	1.69	4.78	3.09
1896-7	87,652	29,680	2,018,120	1,914,689	33.86	1.55	4.57	3.02
1897-8	89,688	30,564	2,116,306	2,012,875	34.07	1.51	4.45	2.93

48. The Sewerage revenue has been increased by the sum of £2,036. Seeing that during the last two years there has been such activity displayed in extending the benefits of the sewerage system to new districts, it was only reasonable to expect that the increase in the revenue would have been much greater, but here again the reduction in the Municipal assessments has affected, detrimentally, the result.

49. Notwithstanding the increased mileage of sewers to be maintained, and the additional expenditure on the Rockdale Sewage Farm, lately transferred, the working expenses are only £884 more than the year ended June, 1897.

It is gratifying to note that, owing to the rigid economics practised by the Board, the expenses of management are £5 less than the previous year.

50. The capital cost has been increased by the sum of £98,186, being the value of new sewers and storm-water ducts transferred by the Sewerage Construction Branch, and constructed by the Board.

51. The revenue was £89,688, and the working expenses £30,564, or 34·07 per cent. of the gross revenue, leaving a net revenue of £59,124 or a return of 2·93 per cent. on the capital cost.

WATER AND SEWERAGE.

52. The following table shows the working of the two Branches taken together:—

Year.	Revenue.	Working Expenses.	Capital Cost.	Capital Cost, exclusive of Items on which Interest has not to be paid.	Percentage of Working Expenses to Revenue.	Percentage of Working Expenses to Capital Cost.	Percentage of Revenue on Capital Cost.	Interest on Capital Cost after paying Expenses.
	£	£	£					
1890	227,790	57,037	4,470,125	3,986,026	25·08	1·43	5·71	4·28
1891	247,133	63,702	4,783,936	4,269,843	25·77	1·49	5·78	4·29
1892	243,813	72,383	5,001,529	4,517,436	29·68	1·60	5·39	3·79
1893	251,087	64,233	5,101,183	4,617,090	25·58	1·39	5·43	4·04
1894	254,301	67,327	5,185,734	4,701,646	26·47	1·43	5·40	3·97
1895 (6 months).	128,474	33,943	5,910,590	5,426,503	26·42	1·24	4·72	3·48
1895-6	259,843	67,799	6,046,517	5,565,704	26·09	1·21	4·67	3·46
1896-7	263,637	70,502	6,262,670	5,781,857	26·74	1·21	4·56	3·34
1897-8	268,569	75,784	6,443,849	5,963,036	28·21	1·27	4·50	3·23

53. The capital cost, as far as it is known by the Board, of the combined water and sewerage schemes on 30th June, 1898, amounted to £6,443,849; deducting therefrom as in former years (which practice it is not considered advisable to depart from, until the true debt as provided for in the draft Amending Bill, now in the hands of the Minister, has been definitely ascertained) what is known as the City Council Water Fund, and the cost of certain sewerage works which were paid for from revenue, both of which items are consequently not carrying interest, leaves £5,963,036 as the amount upon which interest has to be paid.

54. The total revenue was £268,569, and the working expenses of both Branches £75,784, or 28·21 per cent. of the gross revenue, leaving a net revenue of £192,785, or a return of 3·23 per cent. on the capital cost.

55. The amount required to pay interest, calculated at rates varying from 6 per cent. to 4 per cent. on the Municipal debentures taken over by the Board, and 3·789 per cent. on moneys provided out of Government loans raised for general purposes, is £222,096 9s. 2d., to which must be added £4,765 15s. 11d. for depreciation in the value of machinery, working plant, buildings, &c., and £75,784 15s. 8d. working expenses, making the total expenses of the Board £302,647 0s. 9d., whilst the revenue actually receivable was £268,569 14s., but to this latter sum must be added

£20,000,

£20,000, representing the value of water which the Board are required by the Act to supply free of charge to public hospitals, charitable institutions, public parks and gardens, and for street washing and watering, gutter-flushing, &c. The gross earnings of the Board were, therefore, £288,569 14s., leaving a net deficiency on the year's transactions of £14,077 6s. 9d.

56. As hereinbefore pointed out, the deficiency is due entirely to the shrinkage in the Municipal valuations, which unfortunately is still taking place, but to a much less extent than hitherto.

This deficiency is after all a matter of very small concern when it is remembered that the Board is not a dividend-paying institution, but a body engaged upon a work of a national character, viz., the reduction of the death-rate of the community and the improvement of the health of the Metropolis generally, which work, although carried out ostensibly for the benefit of dwellers in the city and suburbs, is an advantage also to residents of the Colony as a whole.

57. The North Sydney and portion of the Western Suburbs Sewerage Systems having been transferred to the control of the Board, the premises liable thereto will be charged rates from 1st July, 1898.

The Board have given very careful consideration to the question as to whether these systems should be treated along with the original metropolitan system as one scheme, and one general rate struck over the whole area, or be dealt with as entirely separate and distinct schemes, and a special rate struck to meet the requirements of each, and after very mature deliberation have decided on the latter course.

The principal reasons which impelled the Board to this decision are that the works were asked for by the representatives of these districts, and they then expressed the willingness of the residents to pay the expenses in connection with the same; the works were estimated for, and reported upon as separate schemes, and when the Western Suburbs Sewerage Scheme was approved by the Public Works Committee in 1889, it was clearly understood that the liabilities attaching to the scheme would have to be borne entirely by the Western Suburbs Districts, the following extracts from the Committee's Report of 27th August, 1889, being most emphatic and convincing on this point:—

“It has been necessary for them to take evidence to a large extent on the entire scheme, because ultimately the entire scheme will have to be carried out, and on the scheme as a whole must be calculated the sewerage-rate which the residents of the Western Suburbs will eventually have to pay.

“The money required for the proposed works will have to be obtained by loan, and to that extent the public indebtedness of the Colony will be increased. But the interest, and within a fixed period the principal, will be paid by the residents of the Western Suburbs; the general public will not be called upon to contribute in any degree.

“The sewerage rate chargeable upon the cost of the entire scheme when completed would be, under the existing Act, 9½d., under the suggested amendment of the Act, at 4 per cent. interest, 7d., and with the interest at 3½ per cent., 6½d. The sewerage-rate upon the cost of the works immediately before the Committee, £830,304, would be, under the existing Act, 6.68d., and under the extended period for repayment of the loan 5.12d., but as this deals with only a portion of the entire
scheme,

scheme, and the entire scheme must eventually be carried out, it is advisable that the people of the Western Suburbs should understand what they ultimately will be called upon to pay, and that, as already stated, will be 7d. or 6½d. This rate will provide interest, repayment, and working expenses."

The reports of the Public Works Committee were adopted by the Parliament, and the necessary funds appropriated by a special Act in each case.

It has been estimated that to charge one general rate over all the districts would necessitate raising the charge on the city and other districts at present sewered from 7d. in the £, to 10¾d. in the £., which would mean that the property-owners in the city of Sydney would be charged a rate of 3¾d., in the £, in order to provide a sewerage-system for (say) Strathfield or Burwood. This surely could not be considered by any stretch of imagination an equitable arrangement.

A careful calculation has been made, and it has been found necessary to strike the maximum rate of 1s. in the £ on all premises liable to sewers draining into the main outfalls at Arncliffe and North Sydney; and even this rate will be insufficient to meet the interest on the outlay, and working expenses.

The exact rate required cannot be ascertained until the whole of the works are completed and handed over. In the amending Bill, now in draft, provision is made for rating up to 8 per cent. on the assessments.

When the reports on these schemes were first submitted it was estimated by the engineer who designed them, that a rate of 7d. in the £ would be amply sufficient, but it was then anticipated that the annual valuation of assessable properties in the Western Suburbs, which in 1887 was £1,460,000, would in 1889 be £2,000,000, in 1894 £2,200,000, and on the completion of the scheme £3,300,000. But this rather over-sanguine estimate of the probable development and increase in the population of these suburbs has unfortunately not been by any means realised, as it is found the actual valuations, owing to the shrinkage in property-values that has taken place in recent years, which in 1889 were £1,656,842, have fallen to £1,478,595 for the current year.

This then is the explanation of the high rate which it is necessary to charge, but, after all, only the same amount of revenue will be collected, as instead of paying a low rate on a high assessment, the tax-payer will be charged a higher rate on a reduced assessment.

Furthermore, it must be remembered that immediately the sewerage rate is charged the storm-water drainage rate now levied on most of the premises will cease, as will also the fees paid to the local Municipal councils for attending to the existing pit and pan systems. Then again, it is only reasonable to suppose that on the substitution of a proper modern sanitary system of water-carriage sewerage, for the present abominations, the general health-rate of the community will be very materially raised, the value of which, if it could be reduced to figures, would far outweigh the extra burden imposed.

58. The amount of revenue outstanding to 30th June, 1898, was £38,885 19s. 1d., or £4,193 1s. 8d. less than the amount unpaid at the end of the preceding year.

This result cannot but be regarded as very encouraging, especially in view of the fact that the discount which it has been the custom for a few years past to offer as an inducement to persons to pay promptly was abolished from 1st January last.

The

The principal items of arrears are meters, £15,605, representing the value of water consumed in excess of assessments to 30th June, accounts for which were not rendered until after the commencement of the present financial year. Churches and charities, £8,828; Government rates, £1,456; house properties, £4,283; vacant land, £6,656.

59. The gross receipts paid into the Consolidated Revenue, exclusive of Richmond, amounted to £272,762 15s. 8d., as against £260,364 8s. 6d. during the previous year, or an increase of £12,398 7s. 2d.

Legal proceedings were taken for the recovery of £8,276.

60. The total amount actually expended by the Board was £253,797 7s. 11d., made up as follows:—

Chargeable to Loans	£181,194	0	3
Chargeable to Revenue	72,603	7	8

61. The number of premises which became liable for water-rates was 2,989, and sewerage and drainage rates 4,894, making the total number, including vacant land, now rated—water, 111,856, sewerage and drainage, 65,094.

Rate notices to the number of 290,013 were delivered.

62. The report of the Medical Adviser to the Board shows that the health of the officers and employes of the Board continues satisfactory, and again he brings under notice the fact that no case of disease could be traced to any defect in the sewers, or was attributable in any way to work on which the men were employed.

63. The usual quarterly reports, by Dr. T. Mailler Kendall, Medical Adviser to the Board, on the health of the metropolis, are appended hereto, together with reports on the following subjects:—

- (a) The outbreak of diphtheria during 1897,
- (b) On the incidence of diarrhoea during the period of the Board's operations, and
- (c) The sanitary value of the operations of the Board in reducing and avoiding the mortality from typhoid fever.

64. The Comptroller of Stores reports that the value of goods received by him for the services of the Board was £43,404 4s. 7d., and issued, £43,885 6s. 4d. The value of stock on hand is £16,325 1s. 9d.

The work of cleaning and restoring old cast-iron water-mains taken out of ground on replacement by new and larger ones has been vigorously carried on, 1,400 tons having been treated in this way at an average cost, including material and labour, of 11s. 2d. per ton.

65. On 22nd March last the period of office of Colonel Thomas Rowe as President expired, when he was reappointed for a further term of two years.

Mr. John Macpherson, official member, was also reappointed for a term of four years.

The seats of Aldermen Francis Buckle, city member, and David Davis, suburban member, also became vacant by effluxion of time on 22nd March; the former gentleman did not seek re-election, and his place was filled by the election of Alderman Henry Chapman.

The

The election for a suburban member resulted in the return of Alderman Davis to his old seat on the Board.

66. During the year all the works, both completed and in progress, have been visited and inspected by the Board, and, in addition, 56 meetings have been held at the Board's offices, at which the attendance was as follows:—

MEETINGS OF BOARD FROM 1ST JULY, 1897, TO 30TH JUNE, 1898.

	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apl.	May.	June		
Meetings held	4	5	5	5	4	5	4	5	5	5	4	5	56 meetings.	
													Present.	Absent.
T. Rowe, President	4	5	5	5	4	5	4	5	3	5	4	5	54	2
J. Taylor, Vice-President	4	5	5	5	4	5	3	5	5	5	4	5	55	1
G. A. Mansfield	4	5	5	4	4	5	4	5	5	5	4	5	55	1

*H. Chapman	1	5	4	5	15	Nil.
†F. Buckle	4	5	5	4	4	5	4	5	3	39	1
D. Davis	4	5	5	5	2	5	4	5	4	4	4	5	52	4
J. Ahearn	4	5	5	5	4	3	4	4	5	4	4	5	52	4

* Mr. Chapman elected 22nd March. † Mr. Buckle retired 21st March.

67. The Balance-sheets prepared by the Accountant, and reports by the Board Engineer, Mr. J. M. Smail, M. Inst. C.E., and other officers, are attached hereto.

68. As a fitting conclusion to this record of the operations of the Board during the year just ended, which in importance far outweigh the work of any previous year, the Board point with pride and satisfaction to the Report of the Royal Commission appointed to inquire into the management of the Department.

This Commission, consisting as it did of three gentlemen so well qualified by previous experience for an inquiry of this nature, held its first meeting on 15th March, 1897, and after a most critical and searching investigation into all the details connected with the work of the Board and the duties of the staff, extending over a period of seven months, forwarded to His Excellency the Governor such a testimonial as must effectually set at rest any doubts that may possibly have existed previously as to the efficient and economical manner in which the Board were discharging the important trusts committed to their hands.

THOMAS ROWE, Col., F.R.I.B.A.,

President.

WILLIAM HOLMES,

Secretary.

Description

Description of Sydney Water-works at end of June, 1898.

THE source of supply is from the Nepean River, and two of its tributaries, the Cordeaux and Cataract Rivers. The catchment area is about 354 square miles. Across the Nepean River is built a concrete dam 10 feet high, which is designed to divert a portion of the stream only into the tunnel, and lift it to level of crown of the same. The water is then taken by a tunnel $4\frac{1}{2}$ miles in length to the Cataract River. Another concrete dam, similar to that on the Nepean, is thrown across this river just below the outlet of the tunnel from the Nepean, and the water is thence conveyed by a tunnel for about $1\frac{1}{4}$ mile, and then by a series of open canals and tunnels, making a total distance from the source of about $40\frac{1}{2}$ miles to Prospect Reservoir. There are $11\frac{1}{2}$ miles of tunnels and about $28\frac{1}{2}$ miles of open canal from the off-take to the Prospect Reservoir. Several gorges are crossed—some by inverted siphons, others by pipe aqueducts.

Prospect Reservoir.

This reservoir covers an area, when full, of 1,261 acres, and has a capacity of 10,812,313,000 gallons.

The dam is earth with a clay-puddle core, and is 7,300 feet long, maximum height 84 feet, with slopes of 3 to 1 on the water side, and $2\frac{1}{2}$ to 1, with two 15-foot berms, on the outer side, and is 30 feet wide on the top; the water-face is covered with heavy bluestone pitching. When quite full there are 6,744,343,000 gallons available by gravitation.

The water is drawn off from the reservoir through a valve-tower into pipes placed in a brick tunnel, carried outside and round the northern end of embankment, and is discharged through controlling valves into a basin (at the end of this basin is placed a gauge-weir, from which can be read the quantity passing over daily), from which it then proceeds by an open canal for 5 miles to the Pipe Head Basin, situated $16\frac{1}{2}$ miles from Sydney, and is then conveyed by a wrought-iron pipe, 6 feet in diameter, to Potts' Hill, a distance of 5 miles.

Potts' Hill Balance Reservoir.

The water is delivered here into a 100,000,000-gallon tank, built partly in excavation, partly in bank, the bottom of which is lined with hydraulic lime concrete, and the sides, which are laid to slopes of 1 to 1, are lined with dry-coursed rubble. This work is designed to tide the city over any interruption of supply from Prospect, as well as to prevent fluctuation of head of pressure.

Screening Tank and Trunk Mains.

This screening-tank is of brick, built in two concentric rings. The water is delivered into the outer ring, and passes through a series of copper-gauze screens of 840 meshes to the inch. These screens are arranged so that the orifice which they fill can be closed, and the screen taken out and scoured. From these tanks the water passes into two 48-inch cast-iron mains.

The 48-inch main first laid continues with same diameter to Lewisham, whence it bifurcates, one branch (48-inch) leading to Petersham Reservoir, the other (42-inch) to Crown-street Reservoir. The new 48-inch main was completed in 1893, and is worked alternately with the old. The two trunk mains are connected at New Cantorbury road, Petersham.

Crown-street Reservoir and Pumping-station.

Crown-street Reservoir is built of brick, and contains 3,250,000 gallons. The top-water level is 141 feet above high-water mark. At this place is situated the main pumping-plant, consisting of three compound high-duty pumping-engines. No. 1 Worthington pumping-engines are capable of raising 500,000 gallons per hour to the Paddington Reservoir, a height of 70 feet above the pumps; No. 2 Worthington pumping-engines are capable of raising 210,000 gallons per hour to Woollahra Reservoir, a height of 140 feet above the pumps, and also of raising 200,000 gallons per hour to Waverley, a height of 220 feet above pumps. Owing to the small storage capacity at Paddington and Woollahra these engines are not being worked to their greatest advantage, as they have to start and stop at short intervals. No. 3 pumping-engines, of the horizontal compound condensing rotative direct-acting type, designed and erected by Mort's Dock and Engineering Company, are capable of raising 100,000 gallons per hour to a height of 210 feet.

Four 142-h.p. Babcock and Wilcox boilers generate the requisite steam.

Paddington Reservoir.

Paddington Reservoir, top-water level of which is 214 feet above high-water mark, or 73 feet above Crown-street, is built of brick, and contains 2,000,000 gallons, and is supplied by a 36-inch cast-iron main from Crown-street pumps, and distributes the water through a 24-inch cast-iron main *via* Begg-street, and a 36-inch *via* Park-road.

Woollahra Reservoir.

Woollahra Reservoir, top-water level of which is 282 feet above high-water mark, or 141 feet above Crown-street, is built of brick, and contains 1,000,000 gallons, and is supplied by a 24-inch wrought-iron main from Crown-street, and distributes the water through a 20-inch main.

Waverley Reservoir.

Waverley Reservoir top-water level is 360 feet above high-water mark, and 78 feet above Woollahra, is built of brickwork, and contains 1,087,000 gallons. Water is distributed therefrom through two outlets of 24-inch and 15-inch diameter respectively. Supplemental tanks in Waverley Park, erected at an elevation of 20 feet above the present reservoir, now supply the upper zones of the district.

Petersham Reservoir.

This reservoir is built of brick, and contains 2,157,000 gallons. The top-water level is 166 feet above high-water mark, and receives its supply by gravitation from Potts' Hill through a 48-inch cast-iron main, which branches off the 48-inch main at Lewisham, and distributes the water through two 18-inch and one 20-inch outlets.

North

North Sydney Supply—Ryde Pumping-station, Ryde Hill Tank, and Chatswood Tanks.

North Sydney, which was supplied from Paddington by a submarine pipe up to the end of 1891, has since received its supply from Potts' Hill, the water being delivered through a cast-iron pipe partly 24-inch and partly 20-inch diameter into a balance reservoir, near the Ryde Railway Station, containing 2,116,000 gallons. Here a pair of powerful pumps raise the water through a 24 $\frac{1}{2}$ -inch wrought-iron rising main into a 1,000,000-gallon wrought-iron tank to Ryde village, at a level of 23 $\frac{1}{2}$ feet above high-water mark, and by a continuation of the same main into a pair of each 1,500,000-gallon wrought-iron tanks at Chatswood, at an elevation of 370 feet above high-water mark.

From the first-named tank the whole of Ryde, Gladesville, and Hunter's Hill get their supplies, and a 9-inch branch was extended over the Parramatta River and Iron Cove Bridges for the supply of the heights of Balmain.

The pair of iron tanks at Chatswood afford a liberal supply to Willoughby, North Sydney, and Mosman, and the newly-reticulated district of Gordon and Hornsby, Thornleigh and Beecroft.

Gordon, Wahroongah, Hornsby, Thornleigh, and Beecroft.

This popular residential district, extending from Chatswood to Beecroft, *via* Hornsby, and adjacent to the Milson's Point Railway and Northern Railway Lines, is now supplied with water from the Board's works. Two pumping-plants—one being the old Woollahra pumps from Centennial Park and a newly-built high-duty pumping engine, by Blake, having a capacity of 30,000 gallons per hour, have been erected at Chatswood, from whence water is pumped to Wahroongah into a 40,000-gallon elevated tank, at a height of 720 feet above sea-level. The pumping-main, which is also used as a main distributory, is 10 in. in diameter, and is 7 $\frac{1}{2}$ miles in length; a further extension, also of same diameter, was laid to Hornsby. From Pierce's Corner an 8-in. steel main branches off this 10-in. pipe, and supplies Thornleigh, Beecroft, &c. About 12 miles of reticulation mains of 6-inch and 4-inch diameters have been laid along such streets in the various centres of population as are sufficiently built upon to warrant the outlay.

Campbelltown.

Campbelltown is supplied direct from the main canal by gravitation, a 6-inch pipe from the canal at 16 miles 40 chains being laid to the town, a distance of 2 $\frac{1}{2}$ miles, and the reticulation consisting chiefly of 4-inch mains.

Liverpool.

Liverpool receives its supply by a 9-inch pipe from the main canal at Cecil Hills, which is extended as far as Mount Young, and thence by a 6-inch main to the town. In order to tide over any possible interruption to the flow in the canal a 4,000,000-gallon earthen reservoir has been constructed close to the canal, and is filled from the canal.

Smithfield.

The Smithfield water-works, completed in July, 1895, were designed to supply the township of Smithfield, which is situated on the Prospect Creek, about 3 miles south-east of the reservoir. The works included may be briefly summarised as under:—

An off-take on the main canal, about 3 miles below Prospect Reservoir; a circular concrete tank on the bank of said canal, having a capacity of 100,000 gallons; a 4-inch main to the township; and mains totalling about 3 $\frac{1}{2}$ miles of the same diameter laid in all streets occupied by dwellings. The works cost about £2,900, and supply a population of 300.

Rookwood, Granville, and Auburn.

Rookwood and Auburn receive their supply from an 18-inch main along Joseph-street from Potts' Hill.

Granville is supplied through a 15-inch branch from the 72-inch wrought-iron trunk main laid along Woodville-road for a distance of 2 $\frac{1}{2}$ miles, and an 18-in. and 15-in. main laid along Parramatta-road from John-street, Rookwood.

Ashfield.

A part of Ashfield is too elevated to receive a supply by gravitation from Potts' Hill level; therefore the loftier parts are supplied from the Woollahra Reservoir by the Petersham trunk main, which conveys the water to a 100,000-gallon wrought-iron tank, erected on a brick circular support, at an elevation of 223 feet above high-water mark.

Hurstville, Kogarah.

The bulk of the supply to Kogarah is given by gravitation from 12-inch mains connected with the Petersham Reservoir system. The higher portions of this district are supplied with water from Penshurst, where is erected an elevated steel tank having a capacity of 1,000,000 gallons; and also a 20,000-gallon cast-iron tank, built on brick piers. The pumping-plant consists of small Blake's duplex pumps, having a capacity of 12,000 gallons per hour, and Worthington compound high-duty pumps, having a capacity of raising 30,000 gallons per hour. The water is raised to Penshurst from the Carlton pumping station.

Richmond.

In July, 1893, the Board assumed the temporary management of the Richmond water-works, which were completed in 1892, and had since then been worked locally by the Richmond Municipal council. The scheme, which is entirely unconnected with the Sydney supply system, consists of a small pumping-plant—two horizontal 6-horse power engines, coupled and geared, working two brass-lined single-barrel deep-well pumps (Tangyes), fixed 61 ft. 6 in. below floor of engine-room—erected on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean; a circular brick service tank, 60 ft. in diameter, having a capacity of 225,000 gallons; a 6-in. supply main to Richmond, 4 miles in length; and 5 $\frac{1}{2}$ miles of reticulation mains, 3 in. and 4 in. diameter, within the town.

Description

Description of the Metropolitan Sewerage System.

THE Metropolitan Sewerage System, under the control of the Board of Water Supply and Sewerage, comprises the old and new systems, the former having been initiated by the old City Commissioners in 1853, and was carried out by their successors, the present City Council, which was incorporated in 1857. The City Council had control of the water and sewerage works within the city until the year 1888, when the waterworks were transferred to the Board. The transfer of the existing sewerage-works followed in 1889.

The old system comprised four main outfalls, with subsidiary sewers along the principal streets, which in turn received the reticulation sewers of the minor thoroughfares. The four main outfalls discharged the sewage of the city into the various parts of the harbour at Blackwattle Bay, Darling Harbour, Sydney Cove, and Woolloomooloo Bay, respectively. This system was designed on the principles of what is termed the "combined system." The pollution of the freshness of the harbour, by the discharge of the sewage of the city, and consequent danger to public health, led to the appointment of a Commission to inquire into the best means of diverting the sewage from the harbour and otherwise disposing of same. The new intercepting system was the outcome of the labours of the Commission. The main works were carried out by the Government, and on completion were transferred, with all other existing works, to the control of the Board by Act of Parliament. The system, which is on the lines of the partially "separate system," intercepts all sewage, which heretofore was discharged into the harbour, at a level of 40 feet above high-water mark. This is termed the gravitation zone. The sewage from the low-level area—*i.e.*, between high-water mark and 40-foot contour—will eventually be pumped into the gravitation sewers, and discharged into the ocean or into the sewage farm.

The system consists of two main outfalls, named the northern and southern respectively, the former discharging into the Pacific Ocean, at a point named "Ben Buckler," at Bondi, and the latter discharging into a sewage farm at "Webb's Grant," on the shores of Botany Bay. These works are of considerable magnitude, and have not been constructed without considerable difficulty and outlay.

Northern Outfall.

The northern system commences at "Ben Buckler," where a large chamber was constructed in the sandstone rock. From this chamber two channels bifurcate, so as to ensure a free discharge during the prevalence of either northerly, easterly, or southerly gales. From the chamber a shaft extends to the surface for ventilation and escape of air when the sea breaks into the discharge channels. The dimensions of main outfall at chamber is 8 ft. x 7 ft. 6 in., and decreases by decrements to 6 ft. 10 in. x 5 ft. 10 in. at Oxford and Liverpool Streets junction. The scheme for drainage of Double Bay Low Level is almost completed, the sewage from which will be discharged into a submain of the Bondi sewer which meets it near Harris-street, Paddington. There is a large chamber at Oxford and Liverpool Streets into which three different branches discharge, *viz.* :—The northern branch, which passes under Hyde Park to Castlereagh-street, where it bifurcates, one submain intercepting the sewage from main outfall at Macquarie Point, and the other intercepting the sewers discharging at Queen's Wharf. 2nd. The western branch, which extends along Liverpool-street to and along Kent-street to Miller's Point, intercepting the sewage which discharged into Darling Harbour. 3rd. The south-western branch, which passes under Belmore Gardens, Benevolent Asylum, and along George-street West to Carlton-street, where it bifurcates into two sub-mains, one passing through Darlington, University Grounds to Camperdown, Newtown, and Petersham, intercepting old city sewers and draining new areas; the other submain passing along George-street West by a long siphon, on account of a depression. Connected with this siphon is a scour chamber and valves for periodic cleansing. This branch extends to the Glebe and boroughs of Leichhardt and Balmain. At Foucart-street the sewer bifurcates, one branch now being constructed will drain the north-western slopes the other the south-eastern, the latter which is nearing completion has several submains discharging into it. The scheme for the drainage of the low levels on these slopes is now under construction. The whole of the sewage below the 40-foot contour line, which now flows into Johnstone's Bay, will be intercepted by this branch and discharged into the ocean. 4th. The Potts Point branch, commencing at Bourke-street, near rear of Darlinghurst Gaol, and extending along same for some distance, then passing along Victoria-street, and terminating at Challis Estate. This sewer intercepts a considerable quantity of sewage formerly discharging at Woolloomooloo Bay. 5th. Elizabeth Bay branch, which extends along western bank of Lacrozia Creek and Rushcutter's Bay, intercepting sewage formerly discharging into them. 6th. The Woollahra and Waverley branch, extending along east side of Double Bay valley, passing under Edgecliff Road, and terminating at present at Denison-street, Waverley; this sewer drains the northern watershed of Woollahra and Waverley.

The work was carried through varying formations—in some instances the stratum was indurated sandstone; in others shale, clay, and water-charged drift-sand. Concrete enters largely into the construction of the works, the lining of rock tunnels being principally bluestone concrete rendered with cement mortar. Wherever the outfall sewer crossed natural creeks or watercourses outlet and scour valves were provided. An overflow sewer discharging into Rushcutter's Bay is connected with the main outfall to take surplus water during heavy rain-storms. This sewer was carried across low-lying swampy land on arches and circular piers; the latter were constructed on the same principle as carried out in India.

Southern Outfall.

The southern main outfall commences at the inlet chamber, which is constructed on the north bank of Cook's River, near its junction with Botany Bay. The sewer is 5 ft. 6 in. in diameter, constructed of concrete, with brick lining rendered with Portland cement. In places the sewer is above the level of the adjoining land, and in others it passes through low sand-hills and swampy ground. Where natural

watercourses are passed over, concrete culverts and overflow chambers and valves are provided. The outfall sewer extends to Botany-road, where the size is decreased for a short distance to 4 ft. 6 in. x 3 ft. 6 in. Hawksley Section: From Botany-road the sewer extends along Bourke-street, through the boroughs of Waterloo, Redfern, and the City of Sydney to Nobbs-street, where the submains from different districts join. This outfall drains the southern watershed of the city and boroughs of Redfern, Waterloo, Alexandria, Macdonaldtown, and Newtown.

Inlet House.

The sewage passes from the main outfall into the straining-chambers of inlet house. The chambers are in duplicate and controlled by inlet valves, so that when one series is in use the other is being cleaned out. The sewage is strained by means of three circular screens; the mesh varies from 3 inches to 1 inch. The screens are worked by one central shaft, with gearing fixed on the platform at one end, and intercept all extraneous matter before the sewage passes into the siphon-well. From the siphon-well the sewage passes under the bed of Cook's River by a cast-iron siphon, 3 ft. 9 in. in diameter, laid in a trench and surrounded with concrete. The siphon is connected with a well in outlet house on south side of river, from which the sewage flows along a main carrier, and is distributed over the irrigation-beds and settling-tanks by valves. The valves are of simple construction, and the distribution of the sewage is easily controlled by the farm manager.

Botany and Rockdale Sewage Farms.

The Sewage Farm is situated on a neck of land called Webb's Grant, on the eastern end of which the southern outfall discharges, while the western outfall discharges on the western end. The formation is raw drift-sand, originally covered with low dense scrub.

For agricultural purposes, to be worked at a profit, the soil is useless, but as a filter for crude sewage—this being the state in which the sewage is distributed over it—it cannot be surpassed.

At the eastern end the farm is laid out on one side in irrigation-beds, at different levels, so as to enable the manager to command the whole area. On this area the sludge, which is dredged from the inlet house, is conveyed in trucks by a small locomotive to the various beds, and is used as manure. This sludge is also used as a top dressing to the newly-formed sand-banks to prevent them being demolished by wind. On the other or southern side the ground is laid out in a series of filtering-tanks, the number admitting of their being used intermittingly. To facilitate filtration some of these beds have been under-drained with satisfactory results, and at times, when circumstances admit, they are cultivated, which assists in keeping the ground clean and improves the soil as a filter. Cattle and pigs are reared on the surplus products of the farm. The pig-styes are built of concrete, and kept clean by daily washing. Cattle and horses are also taken for agistment. The daily discharge on to the eastern or Botany farm for the last year has averaged 2,680,000 gallons; this is disposed of over 71 acres of land prepared to receive same, the irrigation and filtration tanks and beds being specially formed and subdrained, the effluent water discharging above high-water mark at Botany Bay.

The western outfall, delivering on the western or Rockdale farm, has just recently come under the control of the Board, and owing to the whole system not being in full operation the flow is somewhat limited.

This outfall terminates on the farm in a screening chamber, the coarser matter being separated from the sewage which at this point is diverted on to filtering beds, of which about 75 acres have been prepared similarly to those at the Botany farm. Contracts are now being prepared for the under-drainage of the beds. The planting is being vigorously carried out, and will form a feature on both farms. The Rockdale farm is specially reserved for the disposal of sewage from the western suburbs system.

Western Suburbs.

The sewerage system for this district is now being carried out by the Government Sewerage Department under a special vote as regards the main ducts. The outfall works and the eastern branch sewer are now completed. This sewer drains portions of Marrickville, Petersham, and Leichhardt, and will also receive the sewage from low-level system which will be pumped into it at Meeks' Road pumping-station. The contract for the construction of the main sewers in connection with the latter system has been let and work commenced. The northern branch will drain parts of Leichhardt, Petersham, Ashfield, Marrickville, the first section which extends to the New Canterbury Road, Petersham, is nearing completion. The western branch will serve parts of Marrickville, Petersham, Ashfield, Canterbury, Enfield, Burwood, and Strathfield, the first and second sections are nearing completion, the latter extending to Arthur-street, Ashfield. The sewage from the whole of the above areas will discharge on a portion of the sewage farm.

North Sydney.

The Government Sewerage Branch are carrying out a scheme for the drainage of the above borough which will eventually be extended to Mosman, the sewage from the whole of this area will drain to the outfall works at Middle Harbour. The sewers for the drainage of all the area surrounding the Recreation Reserve and extending to Kirribilli and Blue's Point are completed, the submain for the drainage of Neutral Bay will shortly be commenced.

Randwick and Waverley.

The outfall sewer to serve the above boroughs will discharge into the Pacific Ocean north of Coojee Bay. The first section is now in course of construction and terminates near Perouse Road, Randwick.

Rates and Charges for Water, Sewerage, and Stormwater Drainage.

WATER RATES.

1. The following rates and charges are those which the owners and occupiers of houses, tenements, and lands shall pay in respect of water supplied by the Board, that is to say:—

For water supplied for domestic purposes otherwise than by measure.

2. (I.) In respect of lands and tenements of which the assessed annual value is £17 or under, 10s. per annum.
- (II.) In respect of lands and tenements of which the assessed annual value is over £17, a rate of 7d. for each pound sterling on the amount of the assessed annual value up to £300 inclusive; 5d. for each pound sterling on the amount of the assessed annual value in excess of £300 up to £700 inclusive; 4d. for each pound sterling on the amount of the assessed annual value in excess of £700 up to £1,000 inclusive; 3d. for each pound sterling on the amount of the assessed annual value in excess of £1,000 up to £4,000 inclusive; and 2d. for each pound sterling on the amount of the assessed annual value in excess of £4,000.

3. The following rates shall be paid in each year in respect of lands and tenements which are not supplied with water for domestic purposes, and which are not more than 60 yards distant from a main constructed by or vested in the Board, that is to say:—

- (I.) In respect of lands and tenements of which the assessed annual value is £10 or under, a rate of 1s. in the pound.
- (II.) In respect of lands and tenements of which the assessed annual value is over £10, a rate of 10s. per annum up to the assessed annual value of £17 inclusive.
- (III.) In respect of lands and tenements of which the assessed annual value is over £17, a rate of 7d. for each pound sterling on the amount of the assessed annual value.
- (IV.) In respect of lands on which no building is erected for human habitation, a rate of 4d. in the pound of the assessed value.
- (V.) The like rates as those above mentioned shall be charged on all lands and tenements not included in any valuation by the Municipal Council of the City of Sydney or Redfern, or of any Borough or Municipal District, and on all lands for the time being valued by the said Municipal Council of the City of Sydney or Redfern, or by such Borough or Municipal District, at a sum less than the true value thereof.
- (VI.) When any lands or tenements become liable to a rate, or to an increased rate, during the currency of any half-year by reason of the extension of a main or for any other reason whatsoever, then a part of such rate or increased rate, as the case may be, proportionate to the unexpired period of the current half-year, shall become due and be paid forthwith.

Supply of water by meter.—Charges for water supplied by meter.

4. The charge for water supplied by meter shall be 1s. per 1,000 gallons for all water consumed up to 20,000,000 gallons per annum, and 9d. per 1,000 gallons for all water consumed in excess of 20,000,000 gallons per annum: Provided that the minimum quantity of water to be charged for, where water is so supplied, shall be 10,000 gallons per annum. Her Majesty's ships will be supplied free of charge.

5. All charges for water supplied by meter shall, unless otherwise provided by a contract made between the Board and the person to be supplied, be paid within one month after service by the Board upon the person liable to pay such charge of a notice in writing setting forth the amount due for water so supplied, and demanding payment thereof within the period of one month aforesaid. Service of any such notice may be effected by serving the same personally on the person named therein, or by sending such notice through the post to the person named therein at his last known place of abode or business; and where the place of abode and the place of business of such person are unknown to the Board, by sending it through the post addressed to him at the lands and tenements to or in respect of which the water is supplied, or by leaving it on such lands and tenements.

For water for other than domestic purposes otherwise than by measure.

- (VI.) The charge for water supplied to gas-engines or oil-engines shall be 5s. per annum for each engine of two horse-power and under, and for every additional horse-power beyond two horse-power an additional charge of 2s. 6d. per annum for each horse-power.
- (VII.) The charge for water supplied to steam-boilers shall be £1 per annum for each steam-boiler up to three horse-power. And for every additional horse-power beyond three horse-power an additional charge of 5s. per annum for each horse-power.

(VIII.)

(viii.) The charge for water supplied for actuating ventilators or refrigerators shall be by special fee, according to the following scale, namely:—

Class A.—Passing 60 gals. per hour at 65 lb. pressure—	
1 nozzle,	£6 per annum.
2 nozzles,	£4 10s. per annum each.
3 " "	£3 10s. "
4 " "	and upwards, £3 per annum each.
Class B.—Passing 40 gals. per hour at 65 lb. pressure—	
1 nozzle,	£3 15s. per annum.
2 nozzles,	£3 per annum each.
3 " "	£2 10s. per annum each.
4 " "	and upwards, £2 per annum each.

Supply for twelve hours only in each day.

Provided, however, that the supply of water under this By-law shall be for twelve hours only in each day, and no person having such supply shall continue to use the same for more than twelve hours in any one day.

Water for trade purposes, &c.

(ix.) The charge for water supplied for purposes of the under-mentioned or other trades shall be at such rates, upon such terms, and subject to such conditions as may be agreed upon by the Board and the person requiring to be supplied, provided, however, that for any year or part thereof, the minimum charge for water supplied for the under-mentioned trades shall be that in each hereunder case set opposite the trade, viz. :—

Photography, and any like process...	5s. per annum.
Tripe-cleaning	5s. "
Tyring purposes	5s. "
Laundries	5s. "
Dyers	10s. "
Condiment-making	5s. "
Bottle-washing	5s. "
Small goods (sweets)	5s. "
Waterfalls and fountains	5s. "
Shop-fronts, by hose	5s. "
Organ motors and such like mechanisms	20s. "

Washing Vehicles.

(x.) The Board may supply water for the washing of vehicles with a hose, without meter, at the rate of 5s. per annum for each vehicle.

In all cases where special fees are charged the Board reserve to themselves the right of insisting upon a meter being fixed at any time, notwithstanding the fact that the special fee may have been paid. All special fees are in addition to the assessed annual rate of the premises on which such fees are charged, and are payable in advance. All premises on which water is used for other than domestic purposes, and upon which special fees are paid, shall be open for inspection by the inspectors of the Board at any reasonable hour.

2. Assessed rates shall be paid half-yearly in advance, whether a meter is used or not. In the case when a meter is used the meter account will be rendered only when it is in excess of the assessment. Cheques and Post-office orders will be received in payment of rates; but if the cheque tendered by any person as payment for rates due is dishonored, the Board may cut off his service, and proceed for the recovery of the amount by warrant for distress or otherwise. Cheques and Post-office orders must be crossed in favour of the Board.

3. The minimum charge for water, whether supplied through meter or otherwise, for domestic purposes and for purposes other than domestic, is the assessed annual rate. If the water is supplied by meter, and the meter account exceeds the assessment (calculated at the rate of 1s. per 1,000 gallons), then such excess shall be charged in addition to the assessment.

4. One meter may be allowed to supply several tenements when such tenements are occupied by one person or firm as a place of business or abode, and the meter account will be credited with the assessments of all such tenements. One service only will be allowed under these conditions, upon which the meter will be fixed, and all the water for such tenements must pass through such meter. Where peculiar circumstances entail a departure from the above, and two services are absolutely necessary, then there shall be a meter on each service pipe.

Building Charges, &c.

(xi.) The charge for water supplied for building and plastering purposes, for buildings to be used either wholly or partly as dwelling-houses, shall be at the rate of one half-penny per cubic yard on the cubical contents of each building. The Board will supply water for all other buildings either by meter or at the rate abovementioned per cubic yard on the cubical contents of each building as the Board shall determine: Provided that before any water shall be used through meter for building purposes such meter shall be submitted to the Board in each case for examination, and must pass the sensitive test; and the minimum charge in each case for water so supplied through meter shall be 10s.

(1.) The charge for water supplied for plastering rooms only shall be 2s. 6d. for each room, and for the building of wash-houses, water-closets, coppers, and chimneys only, 2s. 6d. each.

(2.) The charge for water supplied for making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, shall be at the rate of £1 1s. per 1,000 square yards by superficial measurement of road surface, and for all other concrete, brickwork, or masonry, at the rate of three half-pence per cubic yard, as measured on the work.

(xii.)

- (XII.) Any person who maintains horses or cows may be supplied with water, without meter, from the domestic service for the sum of 5s. per annum for each animal, in addition to the assessed annual rate of the premises on which such animal is maintained or supplied with water.
- (XIII.) All lands or premises actually supplied with water by the Board, on which any one or more head of horses or cattle shall be kept or maintained, shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises) of 5s. per head for each head of horses or cattle kept or maintained on such lands or premises. And where such lands or premises are not actually supplied with water by the Board they shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises) of 2s. 6d. per head for each head of horses or cattle kept or maintained on such lands or premises.
- (XIV.) The Board may supply water for gardens (and for such purpose may permit a hose and stand-pipe to be used), without meter, at the rate of 10s. per annum per 1,000 square feet superficial area, or part thereof, and 2s. 6d. for every additional 250 square feet superficial area, or part thereof, in addition to the assessed annual rate of the premises to which such garden belongs or is attached.

SEWERAGE RATES.

1. The following rates and charges are those which the owners and occupiers of houses, tenements, or lands shall pay for or in respect of sewerage, or for or in respect of the liability of such houses, tenements, or lands to rates and charges for sewerage, that is to say :—

- (i.) Where the premises are of the assessed annual value of £17 or under, 10s. per annum.
 (ii.) Where the premises are above the assessed annual value of £17, a rate of 7d. for each pound sterling on the amount of the valuation.

2. The following rates shall be paid in each year in respect of vacant and unoccupied lands and tenements, on which no building is erected for human habitation, and which are not connected with any sewer or drain under the control of the Board, and which are situated within 150 feet from a sewer or drain belonging to the Board, that is to say :—

- (i.) A rate of 4d. for each pound sterling on the amount of the assessed value.

Western Suburbs Outfall Sewer, Rockdale.

The following rates and charges are those which shall be paid by the owners or occupiers of houses, tenements, or lands liable to be rated in respect of the Western Suburbs Outfall Sewer at Rockdale and reticulating sewers connected therewith, that is to say :—

A rate of 1s. for each pound sterling on the amount of the valuation of such houses, tenements, or lands.

North Sydney Sewerage Works.

The following rates and charges are those which shall be paid by the owners or occupiers of houses, tenements, or lands liable to be rated in respect of the North Sydney Sewerage Works and reticulating sewers connected therewith, that is to say :—

A rate of 1s. for each pound sterling on the amount of the valuation of such houses, tenements, or lands.

METROPOLITAN DRAINAGE BY-LAWS.

Whereas by the "Metropolitan Water and Sewerage Act Extension Act of 1894" the Board of Water Supply and Sewerage is authorised and empowered to make, alter, and repeal By-laws: Now, the Board of Water Supply and Sewerage, under and by virtue of the powers contained in the above-mentioned Act, do hereby make the By-laws following, that is to say :—

Assessment and Rates.

1. For the purposes of these By-laws the value of lands and tenements in each year shall be the value (if any) at which the same are for the time being assessed for rating purposes by the Municipal Council of the City of Sydney or the Borough or Municipal District respectively in which such lands or tenements are situated, on the 1st day of January and the 1st day of July respectively, as the case may be, in each year; and such value shall continue to be the value of such lands or tenements for the purposes aforesaid during such year.

2. The rates which are respectively set opposite to the descriptions of stormwater drains hereunder mentioned are those which shall be paid by the owners or occupiers of the lands or tenements situated within the boundaries of the drainage areas respectively proclaimed in respect of such stormwater drains, and for the purpose of assessing such rates, the valuation of such lands and tenements by the Municipal Council of the City of Sydney or the Borough or Municipal District respectively within which the same respectively are situated, shall be taken as the valuation thereof by the Board under the said Act. The minimum rate payable under these By-laws shall be in each case 1s. per annum :—

Rushcutter's Creek Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Willoughby Falls, Neutral Bay, and Careening Cove Drains.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Blackwattle, Globe, and Denison Ward Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Beattie-street, Balmain, Drain.—A rate of 2d. for each pound sterling on the amount of the valuation of such lands or tenements.

Iron Cove Creek, Ashfield, Burwood, Enfield, and Canterbury Drain.—A rate of 6d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class A, and a rate of 4d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class B.

Shea's Creek, Waterloo, Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Iron Cove Creek Extended, Ashfield, and Burwood Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Homebush Creek, Burwood, and Strathfield Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

Long Cove Creek, Leichhardt, Ashfield, and Petersham Drain.—A rate of 3d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class A, and a rate of 1d. for each pound sterling on the amount of the valuation of all lands or tenements situated within the drainage area described as Class B.

Erskineville and Munni-street, Newtown, Alexandria, and Erskineville Drain.—A rate of 7d. for each pound sterling on the amount of the valuation of the lands or tenements.

3. All such rates as before-mentioned shall be paid in advance by equal payments on the first day of January and the first day of July in each year, and the first payment shall be made at the time when an owner or occupier becomes liable to pay such rates.

FOR COUNTRY DISTRICTS IN COUNTY OF CUMBERLAND.

For water supplied for domestic purposes otherwise than by measure :—

- (i.) On every house, tenement, or land of £10 assessed annual value and under, 10s. per annum.
- (ii.) On every house, tenement, or land above the assessed annual value of £10, a rate of 1s. for each pound sterling on the amount of the valuation.
- (iii.) Vacant or unimproved lands are subject to a rate of 4d. for each pound sterling on the amount of the valuation.
- (iv.) The like rates as those above mentioned shall be charged on all lands, tenements, and hereditaments not included in any valuation by any Borough or Municipal District, and on all lands for the time being valued by any such Borough or Municipal District at a sum less than the true value thereof.

For water supplied by measure :—

- (v.) The charge for water supplied by measure shall be 1s. per 1,000 gallons for all water consumed up to 20,000,000 gallons per annum, and 9d. per 1,000 gallons for all water consumed in excess of 20,000,000 gallons per annum.

Appendix.

RESULTS of Analysis of the Sydney Water Supply; by WILLIAM M. HAMLET, Government Analyst, Government Laboratory, Sydney.

Date, 1897-8.	Description of Water.	Expressed in Grains per Gallon.				Expressed in Parts per Million.				Appearance in standard 2-foot Tube.	General observations on the character of the Water.
		Total Solid Residue dried at 220°	Chlorine as Chlorides.	Nitrogen as Nitrates and Nitrites.	Phosphates from animal impurity.	Free Ammonia.	Albuminoid Ammonia.	Oxygen absorbed in 15 min.	Oxygen absorbed in 3 hours.		
1897.											
13 July	Crown-street Reservoir	6.16	2.35	Trace	.00	.00	.05	.28	.53	Clear	Sustains its uniform excellence.
	Belmore-road, Randwick	5.83	2.35	do	.00	.00	.05	.28	.53	do	
	Inlet end, Prospect Reservoir	6.16	2.40	do	.00	.00	.07	.30	.60	do	
	Basin at the head of the Canal	6.02	2.40	do	.00	.00	.07	.30	.60	do	
	Mean for July	6.05	2.37	do	.00	.00	.06	.28	.56	do	
16 August	Crown-street Reservoir	6.02	2.35	do	.00	.00	.08	.42	.93	do	A water fit for drinking and all household purposes. The only noticeable variation is a slight increase in the oxygen required for the oxidation of the organic matter present.
	Belmore-road, Randwick	6.02	2.35	do	.00	.00	.09	.42	.93	do	
	Inlet end, Prospect Reservoir	6.16	2.35	do	.00	.01	.07	.42	.93	do	
	Basin at the head of the Canal	6.02	2.35	do	.00	.00	.03	.42	.93	do	
	Mean for month of August	6.05	2.35	do	.00	.00	.08	.42	.93	do	
23 September	Crown-street Reservoir	6.02	2.4	do	None	.00	.09	.46	.95	do	The analyses show that the quality of the Sydney water supply is quite up to the standard of what good drinking water should be.
	Belmore-road, Randwick	6.16	2.4	do	do	.00	.06	.46	.95	do	
	Inlet end, Prospect Reservoir	6.02	2.4	do	do	.00	.08	.46	.95	do	
	Basin at the head of the Canal	6.02	2.4	do	do	.00	.08	.46	.95	do	
	Mean for month of September	6.05	2.4	do	do	.00	.077	.46	.95	do	
12 October	Crown-street Reservoir	6.02	2.4	do	do	.00	.07	.35	.78	do	Maintains its usual standard of excellence.
	Belmore-road, Randwick	6.16	2.4	do	do	.00	.08	.35	.78	do	
	Inlet end of Prospect Reservoir	6.02	2.4	do	do	.00	.09	.37	.78	do	
	Basin at the head of the Canal	6.02	2.4	do	do	.00	.09	.36	.78	do	
	Mean for the month	6.05	2.4	do	do	.00	.082	.367	.78	do	
22 November	Crown-street Reservoir	5.60	2.4	do	do	.00	.05	.34	.70	Clear and bright	Maintains its high character as an excellent drinking water.
	Belmore-road, Randwick	5.83	2.4	do	do	.00	.08	.34	.70	do	
	Prospect Reservoir, near Inlet	6.02	2.4	do	do	.00	.07	.34	.70	do	
	Basin at the head of the Canal	5.83	2.4	do	do	.00	.06	.34	.70	do	
	Mean for the month	5.84	2.4	do	do	.00	.07	.34	.70	do	
21 December	Crown-street Reservoir	6.20	2.5	do	.00	.00	.09	.52	1.01	Clear	Fit for drinking and all domestic purposes.
	Belmore-road, Randwick	6.02	2.5	do	.00	.00	.07	.30	.60	do	
	Inlet end of Prospect Reservoir	6.93	2.7	do	.00	.00	.03	.30	.60	do

Sydney, 22nd August, 1898.

MELBOURNE GREEN,
Accountant.

Report on the Health of the Officers and Employees of the Board.

Sir,

Sydney, 28 July, 1898.

I have the honor to report that 122 of the employees and officers of the Board reported themselves for examination by me during the financial year ending 30th June, 1898.

Ten presented themselves for examination as to their fitness for employment in the Board's service. One was reported as suffering through his own fault.

Eight were ordered to return to work.

Twenty-five were suffering from accidents.

Seventy-eight were suffering from general ailments.

Nine hundred and fifty-three days were recommended for sick leave, 248 of which were granted for accidents.

Of the 705 days granted for general sickness, 233 were recommended for cases of influenza, 56 for a case of typhoid fever, 105 for cases of erysipelas, and 60 for cases of mumps.

The general health of the employees was very good, and among the sewer maintenance men it was not only very good, but no case of disease could be traced to any defect in the sewers, nor was any disease caused through their work.

I have, &c.,

THEO. MAILLER KENDALL,
Medical Adviser.

The Secretary.

Report on the Health of the Metropolis, 1897.

To the Secretary, for presentation to the President and Members of the Board,—

SIR,

I have the honor to report that during the year 1897 just ended the death-rate from such diseases as diphtheria, phthisis, diarrhoea, and enteric fever shows a great decrease as compared with former years. The population of the metropolis, which declined in numbers during the previous years, shows great signs of recovering its former numerical strength.

	1895.	1896.	1897.
City	103,870	100,000	95,850
Suburbs... ..	319,730	308,500	314,150
Metropolis	423,600	408,500	410,000
Density per acre in City	48·7	46·9	45·93

The mean temperature, 53·7° F., for the year just ended was somewhat higher than the mean for the year 1896. The highest temperature for the year, 99·4° F., was registered on 20th November, 1897; the lowest temperature, 41·4° F., on 18th July; and the greatest range, 36·2° F., on 12th November. The excessive temperatures registered during the year 1896 were fortunately not reached, although the heat was oftentimes oppressive owing to the great amount of humidity present in the atmosphere. The rainfall for the year was not so great as during the year 1896, and though it was greater than that of the year 1895, it was not so well distributed, and fell upon a fewer number of days.

1897 ...	410,000	1,551	38·0	1,976	48·2	5,231	130·0

The zymotic death-rate for the city stood, at the end of the year 1896, at 1·3 per 10,000 of the population. It fell at the end of January, 1897, to ·7, and remained at this point till the month of March, when it fell further to ·4. During the month of April the increase in mortality from diarrhœa caused the rate to rise to 1·2, but it fell again during May to ·4, and although it rose during June to ·6, it fell again in July to ·5, rose in August to ·6, and fell during September to ·2 and in October to ·1. The warm wave of heat in November increased the diarrhœal diseases, and raised the rate to 1·7, but it fell again during December to 1·4. For the suburbs this rate was 1·1 at the end of 1896, 1·2 at the end of January, 1897. For February it was ·9; for March, ·9; for April, ·7; for May, ·9; June, ·6; July, ·6; August, ·6; September, ·3; October, ·8; November, 1·6; and the increase in the mortality from enteric fever during December brought the rate up to 1·8. The mortality from diarrhœa shows a marked decrease as compared with the two previous years. An exhaustive inquiry into the incidence of diarrhœa during the period of the Board's existence showed most conclusively that the operations of the Board had tended to mitigate those evils which conduce to this disease; but there are other causes of the disease beyond the scope and the control of the Board. The east central group of suburbs were most attacked by the disease, and of the various boroughs, Enfield, Willoughby, and Mosman showed the highest rate of mortality as compared with the population. Diarrhœa has been traced to contaminated water, but the water supplied by the Board has been shown by the monthly analysis of the Government Analyst to be so pure that it is placed beyond the suspicion of contamination. Diarrhœa has often been ascribed to changes occurring in food, and "the English Public Health Service believe that diarrhœa is produced by changes taking place in food, produced probably by several allied organisms, and that the *materies morbi* is swallowed rather than breathed." It is, however, through fermentative changes in itself that milk is a frequent cause of diarrhœa; and much of this change is due to individual neglect in exposing this food to the influence of telluric emanations, and of the emanations of accumulations of domestic filth. How often do we see the jug left handy overnight, to be filled by the milkman in the morning, just in the position where it may become contaminated by street dust, prowling dogs and cats. To discover many causes of disease requires very little searching, for in very many, if not most, instances individual neglect is the great factor of disease.

DEATHS from Diarrhœa.

Newtown	5·2	3·0
Paddington	10·5	5·0
Redfern	15·0	12·0
Waterloo	27·0	20·0
Woollahra	9·1	5·0

The mortality from diphtheria shows a marked decrease, being considerably lower than it has been during the past twenty years. The presence of this disease cannot always be ascribed to defective sanitation, as the removal of faulty sanitary circumstances has not always been followed by a diminution of the

disease. The question of school attendance has an important bearing on this subject, and without doubt also there ought to be exercised by individuals some form of co-operation to inculcate that cleanliness which will tend to the promotion of public health. The bacillus of diphtheria has never yet been discovered in sewer air, and the causes of the disease are in most instances beyond the scope and control of the Board.

RATE of Mortality from Diphtheria per 10,000 of the Population.

	1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.	1897.
Number of deaths	188	149	179	120	128	134	88	85	55
Rate	5.2	4.62	4.5	2.9	3.1	3.1	2.7	2.07	1.3

It, of course, must be remembered that since the beginning of the operations of the Board wonderful aid in the treatment of diphtheria has been discovered, but the fall in the death-rate began before the discovery of antitoxin, and therefore some of the credit of the reduction in the mortality of this disease may be given to the operations of the Board.

The above table shows the number of deaths occurring in the years 1894, 1895, 1896, and 1897. It is to be noted that the greater portion of the mortality occurs during the first half-year.

The discussion which arose during the year on the subject of phthisis caused much thought to be exercised with regard to the infectious nature of this disease, more especially as touching upon its cure and prevention. The danger existing through the presence of the disease is now fully recognised, and it is to be hoped that active measures will be taken to assist in its suppression. It is well-known that this disease may be disseminated by means of milk, and it is very doubtful whether the so-called Pasteurisation is any safeguard against the germs of disease; consequently, our existing Dairy Supervision Act should be enforced with more rigour than at present, and more supervision should be exercised over the milk vendor. In my report on phthisis I noted the dangers which arise from the filthy and pernicious habit of expectoration. Recent reports show that in England, France, and Germany measures are being taken to abolish this habit, which is aptly described as disgusting, dangerous, and unnecessary. The operations of the Board have tended to diminish the mortality from phthisis, probably through that drying of the soil which always follows the laying of deep sewers.

The year 1896 was notable for a disastrous epidemic of typhoid fever, which, fortunately, did not recur during the year 1897. Temperature as expressed in high degrees of heat does not affect the spread of typhoid fever, except in that great heat promotes putrefaction and thus indirectly influences the progress of disease. Had it not been for a want of foresight and proper municipal care in certain of our suburbs, the year 1897 would have been a record one for the smallness of mortality from typhoid fever.

DISTRIBUTION of Deaths from Typhoid Fever according to Age.—Metropolis.

Under 5 years.	5 years to 10 years.	11 years to 20 years.	21 years to 30 years.	31 years to 40 years.	41 years to 50 years.	55 years.	59 years.
3	5	19	26	11	10	2	1

Five deaths occurred at the age of 22 years, five deaths at the age of 41 years, six deaths at the age of 27 years, 4 deaths at the age of 18 years, and four deaths at the age of 28 years. I have before mentioned that owing to a want of appreciation of progressive sanitation, or owing to a want of funds, some of the suburban areas have again been subject to a typhoid epidemic. In connection with this I would draw attention to my former Annual Reports, in which I stated my opinion that typhoid fever is in some way connected with the soil, and in my Report for 1896 I quoted the statements of Sir Charles Cameron, of Dublin, in support of my opinion. Recently Sir Richard Thorne Thorne has drawn attention to the steady diffusion of this disease, which sets in after the appearance of a case in an insanitary area. "This prevalence of the fever," he says, "goes to show that enteric fever, though mainly distributed in epidemic form by water or by means of milk, is by no means always a water-borne disease, and it raises anew the question as to how far recurring prevalences of enteric fever in one town or in one spot can be due to the persistence, in more or less active form, in certain soils of the organism of the disease." Dr. Sidney Martin has ascertained that "the behaviour of the microbe is very different when, in the absence of competing micro-organisms, it is implanted in organically polluted soil, than when it is implanted in a soil from an altogether uninhabited and uncultivated area. In a soil of the first description the bacillus rapidly increases and spreads abroad, whereas, in virgin soil, under like conditions of temperature and moisture, it languishes and quickly dies out." Such a knowledge should rouse all municipal bodies into action, so that the soil of attractive and fast growing suburbs should not become sewage sodden through individual carelessness and neglect. Questions such as these are of paramount importance, and must not be shelved as they have been in time past. Ratepayers must prepare for united action, so that their respective boroughs may prosper through the fostering of the public health.

During the year 1897 461 cases of typhoid fever were reported to the Board, as against 616 cases in the year 1896, 381 cases for 1895, and 542 cases for the year 1894.

Quarters ending—	1894.	1895.	1896.	1897.	Total.

December 31st	133	96	102	113	444
Total	542	408	616	466	2,032

Of the 461 cases reported during the year 1897, 408 cases were admitted to the various hospitals, and fifty-three cases were treated at their own homes. The number appears greater than usual when compared with that of 1895, but the apparent increase is due to the fact that the partial notification of infectious disease instituted by the Board has been taken more advantage of than formerly.

.Of the 461 cases reported to the Board during the year 1897, 77, or 17 per cent., proved fatal. Of these 77 fatal cases, 34 were treated at the various hospitals and 43 cases were treated at their own homes.

Died at—	Jan.	Feb.	Mar.	April	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
Sydney Hospital	0	1	0	1	0	1	0	0	1	0	0	2	6

Total... ..	11	5	2	7	9	11	2	2	1	5	4	18	77

An inspection of the environment of these cases showed—

	Jan.	Feb.	Mar.	April	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
No sewers were available	9	3	1	2	3	5	0	1	0	2	3	7	36
Houses were in an insanitary state	2	2	1	3	5	6	0	1	1	3	1	10	35
Owners had complied with the regulations of the Board	0	0	0	1	1	0	1	0	0	0	0	1	4
Came into port suffering from fever... ..	0	0	0	1	0	0	0	0	0	0	0	0	1
No fixed abode	0	0	0	0	0	0	1	0	0	0	0	0	1
Total	11	5	2	7	9	11	2	2	1	5	4	18	77

So that only 5·2 per cent. of the fatal cases came from dwellings which were properly supplied with sanitary fittings according to the Board's regulations. Two of these cases have been conclusively proved to have contracted the disease away from their own residences, and therefore the percentage may be safely reduced to 2·6.

Notwithstanding that in certain quarters complaints have been made as to the purity of the water supplied by the Board, inquiry has found that such complaints have no firm basis, and that with the exception of iron rust in small quantities, the water maintains a high standard of excellence and purity. Recent research directed by Dr. Sims Woodhead has shown that the old-fashioned filter, with a filtering medium of charcoal, stone or iron, not only does not confer protection against disease germs, but even affords a fruitful breeding-ground for these organisms. The filter which is the most easy to clean and renders the filtrate continuously sterile is the Pasteur-Chamberland porcelain filter, and next to this is the Berkefeld filter, composed of compressed diatomaceous earths, with a larger output than the Pasteur-Chamberland, but does not render the filtrate continuously sterile. This last filter is, however, a very good filter for all practical purposes. It is wonderful to find, even in this enlightened age, how little the value of cleanliness is appreciated, and that there are individuals who think that because they have installed a good pressure Pasteur-Chamberland filter in their houses, it will go on for ever rendering the water pure, without any care or trouble on their part, forgetting that disease germs, if left to their own devices, may grow into the substance of the filtering media, and be driven by pressure into the filtrate. Everything needs care and attention, and no filter will continue to yield clear filtered water unless a due amount of care and cleanliness is exhibited. The retrospect of the period of the Board's operations is a very favourable one, and although there may be other influences which have been, and are at the present time, assisting in obtaining the good results, still it is a very significant fact that none of this came about till the Board commenced to extend their operations, and that much of the many benefits derived can be directly traced to the operations of the Board.

I have the honor to be,
Your obedient Servant,

THEO. MAILLER KENDALL,
Medical Adviser.

January 31st, 1898.

Report on the Health of the Metropolis for the Quarter ending March, 31, 1898.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

I have the honor to submit my report on the health of the metropolis during the first quarter of the year 1898.

The population remains the same as regards total as it was for the corresponding quarter of last year, but there has been a decrease in the city and an increase in the suburbs.

POPULATION.

	1894.	1895.	1896.	1897.	1898.
City	103,870	103,870	100,000	95,850	95,250
Suburbs... ..	319,730	319,730	308,000	314,150	315,050
Metropolis	423,600	423,600	408,000	410,000	410,300
Density per acre in city	48·7	48·7	46·9	45·9	44·6

The temperature showed a great amount of variation, and the quarter was notable for the great humidity of the atmosphere.

TEMPERATURE.

	1896.		1897.		1898.	
	Date.	Temperature	Date.	Temperature.	Date.	Temperature.
January	13th ...	108·5	18th ...	51·6	19th ...	93·1
"	16th ...	105·2	22nd ...	90·3	22nd ...	58·3
"	30th ...	63·0
February	1st ...	98·0	6th ...	61·3	9th ...	94·8
"	4th ...	58·0	24th ...	90·5	20th ...	59·8
March	5th ...	80·0	11th ...	51·8	2nd ...	83·8
"	31st ...	52·6	14th ...	92·9	16th ...	55·6

The highest temperature, 93·1, was registered 13th January, 1898; the lowest temperature, 55·6, was registered 16th March, and the greatest range, 33·2, occurred on 19th January.

The rainfall was distributed over 36 days, or 1 day less than during the corresponding quarter of last year. The amount registered was 11·61 inches, or 5·66 inches more than fell during the corresponding quarter of last year.

RAINFALL for quarter ending 31st March.

1894.		1895.		1896.		1897.		1898.	
Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.
17·25	61	16·20	59	9·97	43	5·95	37.	11·61	36

The total number of deaths from all causes was greater than during the corresponding quarter of last year, the excess being due to the increase in the number of deaths from scarlet fever, typhoid fever, diarrhœa, cancer, phthisis, and enteritis.

DEATHS from all Causes, quarter ending 31st March.

	1894.	1895.	1896.	1897.	1898.
City	377	448	474	341	401
Suburbs	1,049	825	1,141	872	955
Metropolis	1,426	1,373	1,615	1,213	1,356

The zymotic death rate for the city rose from 1.4 per 10,000 of the population at the end of December, 1897, to 2 at the end of January, 1898, fell to .9 at the end of February, and stood at .9 at the end of March. For the suburbs this rate fell from 1.7 at the end of December, 1897, to 1.2 at the end of January, 1898, to 1.07 at the end of February, and rose again to 1.3 at the end of March.

The mortality from diarrhœa shows a decided increase upon that for the corresponding quarter of last year. The summer rise coincided with the rise in the 4-foot earth temperature which reached the height of 68°. Humidity of the atmosphere, more especially during the existence of a high temperature, favours putrefactive change. Want of cleanliness in the home tends to lower the vitality of the human being, and renders the individual in this way more prone to contract disease. Irregular removal of house garbage allows festering heaps to exist, and the present system which obtains in our principal thoroughfares of displaying inadequate and unsuitable receptacles teeming with filthy garbage upon the public pavements is pernicious in the extreme, more especially as the contents are raked over by the itinerant rag and bottle merchants and scattered upon the footpath. Such things are factors of preventable disease.

MORTALITY from Diarrhœa, quarter ending 31st March.

	1895.	1896.	1897.	1898.
City	21	36	8	26
Suburbs	74	108	55	62
Metropolis	95	144	63	88

The theory that has been advanced that diphtheria increases with the extension of sewerage systems is not strengthened by the experience of our Metropolis. Year by year the mortality from this disease has become smaller, and during the quarter just ended it has been very small indeed.

MORTALITY from Diphtheria, quarter ending 31st March.

	1895.	1896.	1897.	1898.
City	2	0	3	0
Suburbs	23	10	12	11
Metropolis	25	10	15	11

The dangers arising from the filthy and pernicious habit of expectoration have been before pointed out by me. Such dangers are emphasised by the fact that it has been positively established that phthisis is frequently communicated through the spores, derived from desiccated sputum floating in the air.

MORTALITY from Phthisis, quarter ending 31st March.

	1895.	1896.	1897.	1898.
City... ..	56	41	31	31
Suburbs	107	43	59	87
Metropolis	163	84	90	118

The necessity for care in dealing with this disease may be better appreciated through the experience of a French military hospital. Two patients suffering from tuberculosis died in one of the wards of the hospital; about six months after a healthy soldier suffering with a sore heel was placed in this ward; and about six months after this another healthy soldier suffering from a sore heel was also placed in this ward. Both of these soldiers contracted phthisis, one dying very quickly. In 1897, L. Woodruff, writing on the subject of school hygiene, counsels that no one suffering from tuberculosis should be allowed to teach or attend at a school. He cites a case where a school-teacher contracted phthisis in a room infected by his predecessor, who had died of phthisis. In New York steps are taken for actively dealing with this disease, and for isolating such infected persons as will submit to this measure. Dr. Hermann Biggs states that one-fourth of all the deaths among the working classes is due to tuberculosis, and Dr. Sims Woodhead, in his address to the Cheshire Chamber of Agriculture, urged the desirability of including tuberculosis in the schedule of infectious diseases. Brown, in his report on the health of Carlisle, in 1897, points out that the tuberculous lesions in cattle have the same localisations as in the human subject, and he lays great stress upon the great necessity for the periodical inspection of dairy cattle, because of the undoubted propagation of tuberculosis by milk. In our Metropolis, out of 1,356 deaths, 118, or 7.8 per cent., were due to tuberculosis. The ages of the fatal cases ranged from 1 year to 73 years; the greatest number of fatal cases (9) occurred at the age of 28 years; 8 cases proved fatal at the age of 38 years; 6 at the age of 27 years; 6 at the age of 60 years.

DISTRIBUTION of Mortality in Metropolis, according to age, for the quarter ending 31st March, 1898.

1 year.	15 to 19 years.	20 to 29 years.	30 to 39 years.	40 to 49 years.	50 to 59 years.	60 to 69 years.	70 years.	73 years.
2 deaths	8	33	34	19	9	11	1	1

In the sewered districts the death rate is much lower now than it was formerly, before the sewers were laid, and the increase in mortality occurred during the present quarter beyond the sewered area.

DISTRIBUTION of Mortality from Phthisis in the various Boroughs.

	Rate per 10,000 Population.		Rate per 10,000 Population.		Rate per 10,000 Population.

With regard to enteric or typhoid fever this year marks a new era, for it is now compulsory to notify this disease, and consequently more cases have been reported to the Board than during former years.

During the first quarter of the year 1894, 214 cases of typhoid fever were reported to the Board; in the year 1895, 186 cases were reported; in the year 1896, 253 cases were reported; in the year 1897, 150 cases were reported; and in the year 1898, 339 cases were reported during the first quarter of the year. Of the 339 cases reported during the quarter just ended, 145 were treated at the various hospitals, and 194 at their own homes.

	January.	February.	March.	Total.
Sydney Hospital	9	8	12	29
Prince Alfred Hospital	12	13	13	38
Coast Hospital	26	17	18	61
St. Vincent's Hospital	4	2	2	8
Children's Hospital	9	0	0	9
Own Homes	86	54	54	194
Total	146	94	99	339

A careful inquiry was made into the environment of these 339 cases, with the following result:—

	January.	February.	March.	Total.
No sewers were available	120	60	61	241
Houses were in an insanitary state	19	18	20	57
Owners had complied with the Board regulations	7	11	12	30
No fixed abode	0	0	4	4
Came into port suffering from disease	0	5	2	7
Total	146	94	99	339

In 30 cases therefore, or 8.8 per cent. of the total number reported, the owners of the dwellings from which the cases were taken had complied with the regulations of the Board. An analysis of the occupations of these 30 cases shows:—Labourers, 4; school children, 11; hospital nurse, 1; married women, 3; butcher, 1; domestic servants, 3; bootmakers, 2; clerks, 2; dealers, 2; plumber, 1. In so scientific an age as the present it becomes necessary for every individual to recognise his true position of responsibility, and endeavour to make the best use of those benefits which are the outcome of scientific investigation. The very dog who quests around a post is making abstractions and drawing inferences, and to properly discharge the duties of citizenship it is necessary for man to use his reasoning powers, for it is through ignorance and indifference that infectious material is scattered broadcast, diminishing the chances of recovery of persons suffering from disease, and imperilling the safety of others. The number of putrescible substances is not great, still they are universally distributed, and are derived from every organised being. Injurious smells are caused by the hordes of anaerobic microbes which invade decaying matter with dangerous activity, but germ life is ubiquitous, and pathogenic germs are of so delicate a nature that they soon perish in the struggle with the swarms of saprophytes which simultaneously come into existence. The nasty smells which issue from street grids or sewer openings often give rise to exaggerated fears, but it is not always the rank smelling sewer air which causes disease, but rather those dangerous, insidious, non-smelling gases, the formation of which cannot be altogether avoided. There is absolutely no need for sewer gas to enter any house if only all householders would see that their house drains were properly connected with the sewers, and that all their intercepting traps were

were in good working order. The system of ventilating houses and sewers by long pipes and shafts carried well up into the air has been shown to be most efficient system known, and all competent observers are agreed that the bacilli of disease have never been found in the air issuing from such ventilators. Dr. Vivian Poore has drawn attention to the evils of over-crowding in cities and towns, and he is of opinion that this over-crowding, which is one of the most powerful factors in shortening the duration of life, is encouraged by the modern conveniences of water supply and well sewered streets. Sir Richard Thorne Thorne, however, says: "It is manifest that an enormous saving of life has resulted through the establishment of public water supplies and sewers. Before the institution of public works typhoid fever was mainly endemic, now it was occasionally epidemic, and although the epidemics are certainly startling, the total amount of typhoid fever is trivial compared with what it used to be. Towns with a systematic sewerage have, as a rule, a lower death-rate than towns which are not sewered at all, and drainage works beneficially influence public health by preventing the systematic pollution of the air, under our houses and in their vicinity, through decaying waste matters."

The number of deaths from typhoid fever during the quarter just ended exceeds the number for the corresponding quarter of last year.

Quarter ending March 31st.	1894.	1895.	1896.	1897.	1898.
City	6	18	5	5
Suburbs...	26	39	13	24
Metropolis	50	32	57	18	29

Of these 29 cases 19 were treated at the various metropolitan hospitals, and 10 at their own homes.

Lane Cove47	52.1
Manly	1.69	30.3
Ryde39	4.4
Mosman	1.14	4.1
Hunter's Hill	2.62	18.1

The evidence of typhoid fever, therefore, during the quarter was greatest at Lane Cove, which reported 52.1 cases per 10,000 of its population, next greatest stands Manly, 30.3, then in order: Annandale, 29.1; St. Peters, 23.4; Botany, 20; Ashfield, 19.2; Hunter's Hill, 18.1; Leichhardt, 17.7; Erskineville, 14.4; Drummoyne, 13.4; Petersham, 11.1; North Sydney, 10.9; Enfield, 9.0; Concord, 8.7.

In some instances, although the sanitary fittings were in accordance with the Board's regulations, the soil around was in such a condition, owing to being composed of refuse matter and garbage, that the dwellings were rendered unhealthy. The operations necessary for the installing of a proper sewerage system undoubtedly disturbed the disease germs lying in such soils, and gave some impetus to the disease, but the benefit of such a system is exemplified in the case of the borough of Erskineville, which in the year 1894 reported 65 cases of typhoid fever per 10,000 of its population, and now reports only 14.

It is very necessary to recognise the fact that although science has done much for all, yet the application of the truths which have been thus revealed must not be made rashly, and that common sense must play an important part in the carrying out of sanitary laws. Dr. Oliver Wendell Holmes has well said that "Science is an excellent piece of furniture for a man's upper chamber, if he has common sense on the ground floor," and it is only through using this ground floor equipment that the benefit of scientific knowledge can be obtained. The neglect of sanitary laws, however, is a fault—

"Which neither God nor man can well forgive."

and nature will surely exact the penalty for such neglect.

I have, &c.,

THEO. MAILLER KENDALL,
Medical Adviser.

30th April, 1898.

Report

Report on the Health of Metropolis, Quarter ending 30th June, 1898.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

Sydney, 31 July, 1898.

I have the honor to submit my report on the health of the Metropolis during the second quarter of the year 1898.

The population remains almost the same as for the corresponding quarter of last year—that for the city having diminished, and that for the suburbs having increased.

	1894.	1895.	1896.	1897.	1898.
City	108,870	103,870	100,000	95,850	95,250
Suburbs	319,730	319,730	308,000	314,150	315,050
Metropolis	423,600	423,600	408,000	410,000	410,300
Density per acre in city	48·7	48·7	46·9	44·6	44·7

The temperature showed a great amount of variation, and some low temperatures were recorded. The highest temperature, 83° F., was registered 23rd April, the lowest temperature, 41·5° F., 28th June, and the greatest range, 23·7° F., occurred 3rd April. The quarter on the whole was colder than the corresponding quarter of last year.

	1895.		1897.		1898.	
	Date.	Temperature.	Date.	Temperature.	Date.	Temperature.
		° F.		° F.		° F.
April	8	83·9	12	88·0	3	83·0
"	15	51·0	22	50·0	22	48·5
May	3	81·0	9	44·0	22	66·8
"	13	45·2	17	78·8	25	42·4
June	22	42·5	10	68·0	11	65·8
"	28	67·0	30	44·8	28	41·5

The rainfall was distributed over forty-five days, or twelve days more than during the corresponding quarter of last year. The amount which fell was 17·53 inches or 17 inch less than fell during the corresponding quarter of last year.

RAINFALL for the quarter ending June 30th.

1894.		1895.		1896.		1897.		1898.	
Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.	Inches.	Days.
6·63	38	5·12	41	18·70	34	17·70	33	17·53	45

The total number of deaths was higher than for the corresponding quarter of last year, the increase being due to the higher mortality from measles, influenza, scarlet fever, phthisis, and diphtheria.

	1895	1896	1897	1898
City	358	361	444	429
Suburbs	962	840	954	980
Metropolis	1,320	1,240	1,398	1,409

The zymotic death-rate for the city fell from 9 per 10,000 of the population at the end of March to 6 at the end of April, rose to 8 at the end of May, and, owing to the increase in mortality from measles and diphtheria, to 1·6 at the end of June. For the suburbs this rate stood at 1·3 at the end of March, 1·2 at the end of April, 1·1 at the end of May, 1·4 at the end of June.

The

The mortality from diarrhœa, was the lowest known for many years past.

	1895	1896	1897	1898
City	18	7	7	6
Suburbs	46	35	25	25
Metropolis	64	42	32	31

Recent scientific investigation has discovered that street scavenging is of great importance in this disease—not the badly managed scavenging which we see in our city, but proper, thoroughly carried out street scavenging assists greatly in diminishing the mortality from diarrhœa. When the moisture evaporates from street refuse, a poisonous dust is blown about, and Professor Klein has discovered a peculiar, previously undescribed anaerobic bacillus in the horse-dung voided in the street. Klein states, that this bacillus is of a highly pathogenic character and is one of the causes of acute diarrhœa. The mortality from diphtheria was much higher than during the corresponding quarter of last year. The causes of diphtheria, as before pointed out, are really beyond the scope of the Board's operations, and the incidence of the disease generally follows continued wet weather. Of all known diseases diphtheria is probably the most closely allied to filth, and it is important to guard against the infection of articles of diet. Professor Trevelyan has drawn attention to the occurrence of the micro-organisms of this disease in articles of diet especially milk. He points out that milk is a good cultivation medium for the bacillus of diphtheria, and that it is possible that cows suffer from this disease, and communicate the bacillus directly to the milk. He also mentions the possible propagation of the disease through some of the domestic animals, especially the cat. Diphtheria is a disease which, in its epidemic form, attacks the inmates of well-regulated dwellings as readily as it does those of a dirty dwelling. Various reasons have been assigned for such epidemics, and they have been traced to dirty school floors, milk being exposed for sale in uncovered vessels, and to misuse of ash-pits. In ash-pits there are all the conditions necessary to breed diphtheria, and, unfortunately, it is not necessarily those who have sinned that suffer, as the currents of foul air from these ill-managed and dirty receptacles are conveyed to innocent people.

MORTALITY from Diphtheria, quarter ending June 30th.

	1894.	1895.	1896.	1897.	1898.
City	4	4	2	2
Suburbs	25	39	14	30
Metropolis	75	29	43	16	32

During the quarter just ended, 73 males and 42 females died from phthisis in the metropolis. This mortality is slightly higher than that occurring during the corresponding quarter of last year. At the Twelfth International Congress of Medicine, which has just concluded its session at Moscow, it was unanimously agreed that "tuberculosis is a disease, which, if taken in time, is comparatively easy to cure, and that all houses which have been inhabited by phthisical patients ought to be disinfected. It was also recommended that phthisical patients should not be allowed to expectorate in streets or public vehicles, because the expectoration, when dry, became an infectious dust.

MORTALITY from Phthisis, quarter ending June 30th.

4	11	25	29	26	12	4	4

ORDER of incidence in the various Boroughs of the Mortality from Phthisis for the quarter ending June 30th, 1898.

	Rate per 10,000 of Population.		Rate per 10,000 of Population.		Rate per 10,000 of Population.
1 Enfield	9.0	9 City of Sydney	3.9	17 Glebe	2.3
2 Lane Cove	8.8	10 Waverley	3.8	18 North Sydney	2.2
3 Woollahra	5.8	11 Marrickville	3.6	19 Redfern	2.1
4 Ryde	5.0	12 Erskineville	3.5	20 Paddington	2.0
5 Newtown	4.4	13 Petersham	3.1	21 Balmain	1.6
6 Waterloo	4.4	14 Canterbury	3.1	22 Annandale	1.5
7 Leichhardt	4.3	15 Ashfield	3.0	23 Camperdown	1.4
8 Hurstville	4.0	16 Hunter's Hill	2.5	24 Alexandria	1.2

The origin of the infectivity of phthisis is hidden in the night of time, but that it is infectious is now admitted. The theory of treating phthisis with an abundance of fresh air is no new doctrine, and was, apparently, appreciated in ancient times before the desire to control Nature, rather than to assist her, crept into the treatment of disease, and created a great obstacle in the way of improvement. Impure and re-breathed air, undoubtedly, assists in propagating this disease, and is one of the causes of debilitation, and renders the individual vulnerable to the attack of tubercle bacillus. To banish and to avoid this air sewage, it is necessary to legislate for a proper Building Act, which will prevent the erection of jerry-built houses and the formation of narrow lanes and streets.

During

During the quarter ending June 30th, 216 cases of typhoid fever were reported to the Board in the year 1896; 165 cases in the year 1897; and 252 cases in the year 1898. As the law for the compulsory notification of disease came into force this year, it was only to be expected that a greater number of cases would be reported. Of the 252 cases reported, 115 were treated at the various hospitals, and 137 cases at their own homes.

Treated at—	April.	May.	June.	Total.
Prince Alfred Hospital	21	16	7	44
Sydney Hospital	6	7	2	15
Coast Hospital	20	22	7	49
St. Vincent's Hospital	1	2	1	4
Children's Hospital	0	0	3	3
Own Homes	52	71	14	137
Total	100	118	34	252

An inquiry was made into the environment of each of these cases with the following result:—

	April.	May.	June.	Total.
No sewers were available	62	87	18	167
Dwelling were in an insanitary state	14	19	8	41
Owners had complied with the Regulations of the Board	20	10	7	37
No fixed abode	2	1	1	4
Came into port suffering from the disease	2	1	0	3
Total	100	118	34	252

Thirty-seven cases, or 10·6 per cent. of the total number, came from dwellings in which the sanitary arrangements were in accordance with the Board's Regulations. An analysis of the occupations of these cases shewed—

Laundress ... 1	Domestic servants ... 3	Nurse 1
Tutor 1	Dressmaker 1	Labourers 4
Dealer 1	Blacksmiths 2	Engineer 1
Housewives ... 2	School children... .. 20	

True sanitation is based upon two principles: 1. Common sense; 2. Scientific research. The advances in chemical science have given rise to more correct theories than those formerly in acceptance, and although it seems a vast pity to upset those notions of sanitation which have taken a deep root in men's minds, and to demolish suddenly pet theories, still the truth must be told, in order to restore comfort, to avoid unnecessary alarm, and to place those very notions and theories upon a more enduring basis. In view of the dire results of epidemics and the seeming impotence of medicine to effect a cure, it would appear necessary to consider public health as more a question for statesmen than for physicians. Such may be the case, and no doubt politicians having the care of the public purse are able to help in very practical manner, if only their judgment is not biassed through ignorance and prejudice. At the present time the most pressing work of the sanitary reformer is not to legislate but to educate. He must endeavour to make the mass of the people, in some degree at least, participate in the knowledge of the causes of preventable disease and death, so that ignorance and prejudice may be abolished; for it is through a want of knowledge that people fail to appreciate the immeasurable results of sanitation. Putrefaction is a process of vast importance, for it is to be noted that, in the neighbourhood of human habitation, the results of putrefaction do not remain in the locality itself, but are carried away by the power of diffusion and distributed in atmospheric space, and this air sewage, loaded with morbid matter, may be carried by the air currents beyond its own district into a healthier zone. Cleanly people therefore should be protected by the municipal authorities against the ill-doing of their unclean neighbours. There is marked degree of difference in the incidence of typhoid fever upon houses with different types of closets, and it is greatest upon those provided with the pail closet and common privy. The difficulty experienced with these two kinds of closets is that of keeping them clean, and although the pail closet is much to be preferred to the other, still there is the danger that some of the contents is spilled upon the ground adjoining; and that this may be a source of danger is accentuated by the fact that as faeces dry, the particles thereof may be carried into the atmosphere or into drinking water, and "happy is the man who neither breathes the one nor drinks the other, when so contaminated." People living in towns do not sufficiently object to the accumulation of refuse matter in the wrong place. If they would show their appreciation of the danger, they would cease to see the unsightly and noisome dirt-boxes in the streets and on the pavements, foul ash-pits, and that pestilence-breeding heap which is controlled by our City Corporation, and called the "Moore Park Tip." The responsibility of the health of the citizens ought to be cast upon the right shoulders, and this municipal abomination should be got rid of, for the offensive emanations which arise from such heaps of refuse not only increase the impurity of the atmosphere, but these deposits themselves afford a nidus for disease and other germs, which are often highly inimical to human life. The general unhealthy influences of dirt, impure air, and foul drinking water, are admitted by all to increase the virulence of epidemic diseases, and the weakly condition of the body. It is therefore necessary that homes should be clean, that there should be proper ventilation and flushing of sewers and drains, and that every precaution should be taken to preserve the catchment area and source of water supply free from human

human habitations and from any fouling through man or beast. Unfortunately, to carry out all these provisions money is needed, and taxes must be imposed; and although the taxpayer may feel these impositions irksome, and think that these imposts are unnecessary, it must be markedly pointed out that although economy is a good thing, and the cutting down of taxes is a good thing in its way, the cutting down of the death rate is a higher and better thing, and that it is a false economy which, for the sake of the few, sacrifices the many, and injures the public wealth through public health. During the quarter just ended 13 males and 13 females died from enteric fever; 16 of these cases died at the various hospitals, and 10 at their own homes.

Died at—	April.	May.	June.	Total.	Rate per cent. of admission.
Sydney Hospital	3	3	per cent. 20
Prince Alfred Hospital	1	1	...	2	4.4
St. Vincent's Hospital
Children's Hospital	1	1	33
Coast Hospital	2	2	2	6	12
St. George's Cottage Hospital	1	1	...
Western Suburbs Cottage Hospital	1	1	2	...
North Sydney Hospital	1	...	1	...
Own Homes	3	5	2	10	7.3
Total	10	10	6	26	...

MORTALITY from Typhoid Fever, quarter ending June 30th.

	1894.	1895.	1896.	1897.	1898.
City	2	13	4	3
Suburbs	17	32	22	23
Metropolis	27	19	45	26	26

An inquiry into the environment of these 26 cases showed—

	April.	May.	June.	Total.
No sewers were available	6	7	5	18
Dwellings were in an insanitary state	4	3	...	7
Owners had complied with Board's Regulations	1	1
No fixed abode
Came into port suffering from disease
Total	10	10	6	26

Only 1 case, therefore, of all those which proved fatal is supposed to have come from a dwelling in which the sanitary arrangements were in accordance with the Board's Regulations. It is, however, conclusively proved that the person in question did not reside at the address given.

In sanitary science the aim is to prevent putrefactive change, not so much by those agents termed antiseptics as by the application of natural laws. It is not germ life which is in itself dangerous to the health of mankind, but the danger arises from those poisonous products of putrefactive change. Cleanliness of the body is of paramount importance, and there is every necessity of securing pure air and pure water, two of the essentials of sanitation. It should, therefore, be the care of every individual to prevent and arrest the spread of infection by inducing and maintaining sanitary conditions. Of late years the subject of filtration, both of drinking water and sewage, have occupied a great deal of public attention. House filters for drinking water have been brought as near perfection as possible by the introduction of the Pasteur-Chamberlain pressure filter, but the question of the filtration of water in large quantities has not yet been placed upon a firm basis, so as to be altogether devoid of danger. The disposal of sewage is a gigantic problem, and is not yet satisfactorily solved. The sewage farm is without doubt an excellent method of getting rid of and utilising sewage, but it is costly, and consequently much thought has been bestowed upon investigation as to whether some cheaper method may be substituted. The future treatment of sewage will resolve itself into a biological process, so that it may be applied to small as well as large quantities. The cheapest sewage filter, which combines the biological process, yet suggested is Garfield's coal filter, of which Dr. Bostock Hill remarks:—"The medium is cheap and easily obtained; and although in the past I have looked upon filtration of sewage, otherwise than through land, as of partial and limited value, I strongly believe that the death-knell of the costly sewage farm has been rung, and, what is of far more importance from an economic and sanitary sense, the problem of sewage disposal has been at last solved. The science of hygiene and public health is not founded upon fads and fancies, but for the most part upon solid facts; and if the public were wise, they would support those public men and public bodies whose policy and practical endeavour, in the light of their teaching, were directed to secure the best conditions of life, both moral and physical, for the community in general."

I have, &c.,

The Outbreak of Diphtheria.

To the Secretary, for presentation to the President and Members of the Metropolitan Board of Water Supply and Sewerage.

Sir,

I have the honor to report that Diphtheria has been very prevalent this year and that I have investigated the cases reported in reply to your letter to the various hospitals. The reappearance of this disease at certain intervals in any particular district points to the specific organism having either a saprophytic tendency or to its retaining its vitality in dust, thus rendering the site of previous cases more or less permanently infective. This disease favours damp soils and often appears after cold, wet winds. The disease in former years was strictly a rural one, but owing to certain conditions and changes of environment the habitat of the disease has become extended, and it is now very frequently met with in large towns and cities. During the present year 122 cases have been reported to the Board—25 cases from the city proper, and 97 from the various suburbs. The greatest incidence of the disease, after taking account of the city, as shown by the reported cases, occurred in the north-western suburbs, of which Balmain showed a proportion of 4 per 10,000 of the population, and Glebe, 4.5, while the city showed 2.5. Of the eight cases reported at the Glebe four came from one dwelling. After the north-western suburbs in order of incidence come the west central and the northern suburbs upon equal terms. Camperdown shows a proportion of reported cases 5.5 per 10,000 of the population; North Sydney, 5. The eastern suburbs follow next on the list, and then the east central, of which Botany shows the high rate of 12 per 10,000 of its estimated population. Last of all come the western and southern suburbs. There is not any very great appreciable difference in the proportion of the incidence of the disease between the sewered and unsewered districts, and Mr. Longstaff discounts the idea of its connection with sewers and is of opinion that the cause "should not be sought for primarily in any high developments of civilisation, such as sewers, but rather in some condition associated with a more primitive form of life." The removal of faulty sanitary circumstances has not always been followed by a diminution of this disease, but in many instances the contrary has obtained; still the bacillus of diphtheria has never yet been discovered in sewer air, although exposure to the emanations of foul drains induces an adynamic state of health which renders the individual more prone to disease.

Dr. Thorne Thorne, Chief Medical Officer of the Local Government Board, London, remarks:—"When in such outbreaks of diphtheria as I have investigated some obvious defect leading to the pollution of respired air by sewer or drain emanations was regarded as the cause of the disease, I have in almost every instance found it not only impossible to eliminate other and better established sources of infection, but also that some alternative sources of infection were generally found to have had obvious causal relation to the disease."

Dr. David Hardie, of Brisbane, says: "Diphtheria appears to originate and to spread independently of insanitary conditions, and is not commonly found co-existent with a disease usually associated with such conditions, but it is intimately connected with atmospheric conditions such as a high tropical rainfall."

My very interesting investigations of the 122 cases reported shows that although defective drainage could not be made wholly responsible for the present outbreak of this disease, still a want of appreciation of domestic sanitation was in a great measure the cause, and there was very distinct evidence of individual neglect.

The milk supplied to the several reported cases came from so many widely distributed centres that it would be impossible to charge any one of them specifically with disseminating the disease. Condensed milk was very largely used, and goats also were mentioned as a source of supply. Milk, however, of all foods is very readily contaminated by contagious particles, and becomes a potent disseminator of disease. If, therefore, this food becomes exposed to contagion through individual neglect it becomes a very dangerous element, and consequently a very strict supervision of milk shops is necessary. How great this necessity is, is emphasised by the fact that one of the reported cases came from a milk shop, the proprietor of which continued to sell this article of food although the evidence of the disease being present on the premises was quite established. In a former report I pointed out the public danger which might arise through the establishment of creameries, and how easily one infected dairy might contaminate many, thus showing the need for strict supervision of these places. The case above quoted shows the need for the supervision of milk shops and the need for the immediate proclamation of the present Health Act. Many of the dwellings which were reported in the city were very dirty and showed signs of individual neglect; fowls being kept in small yards and allowed to run about the houses, cows also and horses were stabled in close proximity to the dwelling. These facts are important when we consider that cats, pigeons, horses, and fowls are often attacked during the prevalence of human diphtheria by a disease closely resembling diphtheria itself; and infection of milk may, and according to Dr. Klien, often does arise from the disease being present in the cow itself.

Another powerful influence on the diffusion of diphtheria is school attendance. Recent observation has shown that the aggregation of children in school constitutes one of the conditions under which this disease of particular potency for spread and death may be manufactured. Dr. Thorne Thorne on this point remarks: "School attendance has a powerful influence on the diffusion of diphtheria for it brings together those members of the community, who are, by reason of age, most susceptible to the disease, into exceptionally close relation to each other for many hours of the day." The closer the aggregation the greater the hindrance to the free movement of air and the greater the risk. These statements are applicable to places other than schools, and the crowding of sleeping rooms which at the present day obtain among the poorer people cannot but prove a dangerous evil for public health.

I have on another occasion remarked on the great desire of the child population to project their heads and the major part of their bodies into gully shafts and stinking places; one of the greatest sources of pleasure being to sample the contents of rubbish boxes and to superintend the cleaning out of any stinking place. If parents are too indolent to correct such propensities, which are fraught with evil, they shirk their individual responsibility and must be prepared for a bad result. During this investigation I have traced in two cases the inception of this disease to the abovementioned cause.

Although the constant breathing of the emanations from foul drains induces a condition of health which renders persons more prone to contract diphtheria, the relation is by no means so universal as the public has been led to believe, for many cases of diphtheria occur in premises in which no defect of sanitation can be found. Instances of individual neglect, however, were found during my investigation where bath wastes were allowed to get choked and to become foul and stinking, thus forming a nidus for the propagation of disease.

Since the institution of this Board some influence has been working for the good of the community, by the operations of the present water supply and system of sewerage, so that the mortality from this disease has, in our Metropolis, greatly decreased; and as this decrease began before the powerful aid of the antitoxin treatment was made use of, it is only fair to attribute a portion of the good result to the operations of the Board, perhaps through drying the soil by laying deep-seated sewers.

In the year 1889 the mortality was 5·2 per 10,000 of the population, and it now stands at 2·6.

1889.	1890.	1891.	1892.	1893.	1894.	1895.	1896.
5·2	4·62	4·5	2·9	3·1	3·1	2·7	2·6

That premises may be permanently infective has been verified in many of the cases investigated, for very many of these cases occurred in houses where the disease had been present within a range of three to six years.

An organic form of any kind, vegetable or animal, will remain unchanged only so long as the environment in which it is placed remains unchanged. Should an alteration in the environment occur the organism will either be modified or destroyed.

By individual action that environment, which is necessary for the fostering and propagation of disease, may become changed, so that disease may be modified or destroyed; but it is evident from this investigation that individual responsibility must be more thoroughly recognised and appreciated than it is at present, for it is useless to complain of choked drains, stagnant water in yards, collections of slop waters from other dwellings being massed in back lanes and against the wall of houses. A stinking drain is an object of danger, an instance of individual neglect, and a disgrace both to the tenant and the house-owner. As such it becomes a subject for individual action and a question of public good, so much so that instant action should be taken to abate the nuisance and to remove the cause.

Light, God's eldest daughter, is too little appreciated as a factor of health, and there is no doubt but that deficient light and a want of free access of fresh air has much to do with the propagation of disease, and to remedy this a proper Building Act is required.

During these investigations I could trace no case, of those reported, to any defect in the Board's operations; on the contrary, those operations have been productive of good, and have caused a decrease of disease. No matter how well our public sanitary works are carried out, we will, unfortunately, always be subject to epidemics of disease, and in most cases the cause will be traced to some neglect on the part of the individual. It remains, therefore, for the individual members of the community to show their appreciation of the sanitary works now established by co-operating to inculcate that cleanliness which will tend to promote the public health and increase the happiness of the community.

I have, &c.,

THEO. MAILLER KENDALL,
Medical Adviser.

Sydney, July 10th, 1897.

On the Incidence of Diarrhœa during the period of the Board's operations.

To the Secretary, for presentation to the President and Members of the Board.

Sir,

I have the honor to lay before you the result of my inquiry into the incidence of diarrhœa during the period of the Board's operations.

Diarrhœa is a disease which has relations to many other diseases, and has only of late years been properly classed as separate disease through the progress of that science which has discovered many a crimson thread to guide the way through the labyrinthic difficulties surrounding the relations of certain diseases.

Diarrhœa is present at all times and seasons of the year, and in its epidemic form is essentially a disease of towns and crowded areas. In our metropolis it prevails very greatly during the months of January and February, diminishing gradually during the succeeding months till it reaches its lowest point in September, and gradually increases again through the months of October, November, and December. It is fatal at both extremes of age, and no age is exempt from attack, for Dr. Tomkins, of Leicester, is of opinion that "infants and young children form only a small proportion of those attacked, although they furnish nearly the whole of the deaths." Healthy children suffer most, but the disease is most fatal among the weakly. In our metropolis of Sydney over 5 per cent. of the total number of deaths are due to diarrhœa, and of the total number of deaths from diarrhœa more than 77 per cent. occur among children under the age of 5 years. Since the institution of the present water supply and sewerage system there has been a considerable lowering of this death rate.

Metropolis.

RATE of Mortality per 10,000 of the Population.

		Under 5 years.	5 years and under 10 years.	10 years and upwards.

Since laying sewers	5·8	0	·6

A high atmospheric temperature conduces to a high diarrhœal mortality, but this influence, although very great, is exerted in a very indirect manner. It has been stated by Dr. Springthorpe, of Melbourne, that diarrhœa becomes epidemic only when the mean temperature has reached an elevation of 60° F.; from my own experiments I am inclined to place this elevation of temperature in Sydney at 65° F. Dr. Ballard, who has conducted an elaborate series of experiments, has found that the earth temperature is an important condition, and that the summer rise of diarrhœa does not occur until the mean temperature recorded by a 4-ft. earth thermometer has attained somewhere about 56° F., no matter what may have been the mean temperature attained by the atmosphere. As the result of the experiments which have been made at Erskineville, I have found that the summer rise of diarrhœa in our metropolis occurs when the mean temperature recorded by the 4-ft. earth thermometer reaches an elevation of 64° F., and I expect that further experiments will confirm this result. Of course, the atmospheric temperature and the temperature of the superficial layers of the earth exert an influence upon diarrhœa, but this influence is not apparent until the 4-ft. earth thermometer has recorded the temperature before stated. The stability of the soil temperature is greater at greater depths and does not follow the variations in the atmospheric heat in the same manner as the surface soil temperature. Soils obtain a considerable amount of heat by virtue of the chemical actions which are constantly taking place in them. Rainfall does not exercise an equal influence at all periods of diarrhœal attack, and the diarrhœa mortality is greater during a comparatively dry or a comparatively wet season, especially if the drought on the one hand or the rainfall on the other be remarkably protracted and excessive. Elevation of site is said to have an influence upon diarrhœal mortality, but I have no evidence upon this matter, and its influence is probably lost sight of amid other greater ones. In the year 1859 Greenhow conducted a series of experiments which caused him to conclude that, in epidemics of diarrhœa, some local cause could always be traced; either the air was tainted by the products of decomposition, especially of ordure, or the water which people habitually drank was impure. Greenhow's opinions, however, gave rise to much comment, and in the year 1873, Crane, of Leicester, denied the truth of this statement, and Dr. Buchanan, while he did not refute the truth of the association of this disease with filth, thought that it was really due to a specific poison developed by heat at a particular season. Dr. Tomkins, of Leicester, believes that epidemic diarrhœa is due to a soil-bred organism, which at times escaping from the earth becomes air-borne, and thence gains access to the human body. Dr. Ballard, who is perhaps at the present time the greatest authority on this subject, is of opinion that "the essential cause of diarrhœa resides ordinarily in the superficial layers of the soil, where it is intimately associated with the life processes of some micro-organism not yet detected, captured, or isolated." Soil has without doubt a great influence upon the incidence of diarrhœal disease. Upon solid rock it is said to be less frequent, but rocks with deep, wide, and frequent fissures are not so immune, as they offer opportunities for the collection of organic filth. Towns, villages, houses, &c., built upon such places are subject to a high diarrhœal mortality, and this may explain the high diarrhœal mortality exhibited by Balmain and North Sydney, both of these suburbs being built upon rock. Soils, such as are found in Waterloo, Alexandria, and Paddington, composed of sandstone and clay, are specially favourable to diarrhœa, and the death rate from this disease in these suburbs is high. Of all soils, pure sand

most

most favours diarrhœa, and the nearer gravels approach to sand on the one hand and rock on the other, so they favour diarrhœa or to the contrary. Botany, which has a pure sandy soil, shows a high death-rate. The presence of organic matter in any soil renders it distinctly favourable to diarrhœa, as vital processes are constantly exchanging in such soil material from the organic matter to the surrounding medium. It is not necessary that such pollution should be of a fœcal or excremental nature to exert an evil influence, and it is an indisputable fact that made soil, composed of the refuse of towns, the soil of market gardens, and such sites as have been made through filling up the inequalities of the land with house garbage and street refuse, exercise a powerful influence over diarrhœa, is absolutely dangerous for a building site, and should never be adjacent to buildings. It is highly probable that this culpable fouling of the soil by our forefathers, and persisted in by ourselves, has more to do with the fostering and propagation of disease than any property of the virgin soil itself. Excessive dryness or complete wetness of the soil both appear to be unfavourable to diarrhœa. A degree of habitual dampness which, while being marked, is not sufficient to preclude the free admission of air between the constituent physical elements of the soil is specially favourable to diarrhœa. Such a degree of dampness obtains when in the season of diarrhœa, the subsoil water stands sufficiently near the surface to maintain by capillary attraction, the dampness brought about by previously greater nearness of the water to the surface, or when the soil contains a sufficiency of the clayey element to imprison enough of the water saturating it at some time previously. It is in connection with this habitual dampness of the soil as a factor of diarrhœa that the laying of sewers plays so important a part, by drying the soil and so affecting the variation of the earth temperatures. Before the institution of the works at present under the control of the Board, the mortality from diarrhœa stood as high as 10·5 per 10,000 of the population, but since these works have been in operation this rate has been reduced in the metropolis to 5·9, notwithstanding the fact that those years during which this reduction has been effected have been hot and only had a diminishing rainfall.

Rate of Mortality from Diarrhœa (per 100,000 of the Population) in the Sewered Districts.

	Before laying Sewers.	After laying Sewers.
City of Sydney	6·7	5·8
Darlington	6·6	2·6

Redfern	15·0	12·0
Waterloo	27·0	20·0
Woollahra	9·1	5·0

Density of population is said to affect the death-rate from diarrhœa, but this influence is also noticed in respect to infant mortality from other causes. The city of Sydney with a density of 45·93 persons per acre shows a higher mortality than any of the separate groups of suburbs. Of the various groups of suburbs the Eastern Central with a density of 7·4 per acre shows the highest rate of mortality, and are followed by the Western suburbs with a density of 4·49 persons per acre, then come the Northern suburbs with a density of 1·49 persons per acre, then the Eastern suburbs with a density of 4·07 persons per acre; next come the Western Central suburbs with a density of 20·39 persons per acre, then the Southern suburbs with a density of ·7 per acre, and last of all the North-Western suburbs with the largest density of all, 26·4 persons per acre.

It will be seen, therefore, from the foregoing table that, as far as the individual suburbs are concerned, density of population does not exert a large influence upon the diarrhœa death-rate. The incidence of diarrhœa is promoted by the density of buildings irrespective of the density of population.

Dr.

Dr. Ballard found that "in a town crowding of buildings of any sort in such a way as to cover an area more or less closely with buildings promotes diarrhoeal mortality. It is probable that this difference of density of buildings upon a given area is one of the circumstances which have to do with the difference in diarrhoeal mortality in large and small towns." Of the different groups of suburbs in the metropolis of Sydney, the East Central shows the highest death-rate, and the greatest density of buildings. Of the individual suburbs the death-rate from diarrhoea does not seem to be affected by the density buildings, as it is very high in suburbs with a very low density of buildings. It is probable, however, that in certain areas of such suburbs the buildings may be denser, and that it is in such areas that the mortality from diarrhoea occurs; consequently some means ought to be found for securing adequate open space about every building. Want of ventilation and deficiency of light are conducive to a high diarrhoea mortality. These conditions are very general in crowded and poor parts of towns, and are often associated with individual neglect. For cleanliness, fustiness and darkness, are never associated with one another. Density of buildings is associated with these conditions, for this is usually the cause of narrow thoroughfares and the impeding of free circulation of air. Individual neglect has a great influence upon diarrhoea, especially such neglect as allows of domestic filth, and fails to cleanse the necessary receptacles of house garbage, &c. This cleansing of dust-bins, &c., is a matter of great importance, and should be the subject of great municipal care until some proper and efficient system of garbage destruction can be installed. The emanations of cess-pools and sewers may, according to Ballard, cause attacks of fatal diarrhoea, but unusual diarrhoeal mortality is observable in many localities where there are no sewers to emit foul air. Such a mortality is to be observed in some of our suburbs where no sewerage system is in existence. Water-pollution has no very direct influence upon the diarrhoea death-rate, but tainted water does certainly cause diarrhoea, and there can be no doubt whatever that our improved water supply has been an important factor in the reduction of our diarrhoea death-rate. In Rotherham an outbreak of diarrhoea was traced to an impure water supply, and the evidence was most conclusive, for the town was supplied with water from two sources, and the epidemic ceased as soon as the supply from one of the sources was discontinued. Gresswell, of Melbourne, has also traced an epidemic of this disease to contaminated water. The incidence of diarrhoea is greatest among the poor, and this is not to be wondered at when we consider that, as compared with the dwellings of the rich, the dwellings of the poor are ill-provided with any means for storing food away from the living rooms. Dr. Vaughan says that healthiest children suffer most from diarrhoea because they are the greatest feeders. He is of opinion that the diarrhoeal attack is due to a poison, and that the poison is taken in to the body very largely through medium of milk. "The English Public Health Service believe that diarrhoea is produced by changes taking place in food, produced probably by several allied organisms, and that therefore the *materies morbi* is swallowed rather than breathed. Such would explain why it is most rife in crowded, dirty and insanitary places, and fits with its undoubted relationship with soil and temperature." It is, however, through fermentative changes in itself or to contamination by effluvia, that milk is a frequent cause of diarrhoea; and much of this change is due to individual neglect, exposing food to telluric emanations, and to the emanations of accumulations of domestic filth. Milk diarrhoea in children is frequently caused by maternal neglect, for breast-fed children thrive better than bottle-fed children, the reason being that the bottle is not always clean, and the selection of food is not always judicious. Diarrhoea among children is very frequently due to the injudicious selection of food, and parents are slow to recognise the necessity for proper selection of nourishment if the child is to be kept in health. Watering of milk involves the risk that organisms pathogenic to man may pass into the milk and even multiply there. Sterilising milk should tend to prevent diarrhoea, but the process must be very carefully carried out, as Flügge states that the use of milk sterilised in the usual way is not without danger. Without doubt pure milk is the best of all foods, and when proper care is exhibited in controlling the supply there is absolutely no danger in its use. In conclusion, it is to be remarked that diarrhoea is not a disease which is directly controlled by efficient sewerage, and therefore cannot altogether be ascribed to faulty sanitation such as comes within the scope of the Board's operations. Many important influences are at work which may promote a diarrhoeal mortality, but as the result of this inquiry I have found that where it was possible for the Board's operations to exert a good influence over the avoidance of this disease, a remarkably good result was very evident.

I have, &c.,

THEO. MAILLER KENDALL,

Medical Adviser.

15th October, 1897.

The Sanitary Value of the Operations of the Board in Reducing and Avoiding the Mortality from Typhoid Fever in the Metropolis of Sydney, N.S.W.

To the Secretary, for presentation to the President and Members of the Board,—

Sir,

I have the honor to lay before you the result of my inquiry into the sanitary value of the operations of the Board as regards the decrease in mortality from, and the avoidance of, Typhoid Fever in the metropolis.

"The science of public hygiene," says Dr. Wilson, "enlists the services of the people themselves in continuous efforts at self improvement, and the general well-being of the people must mainly depend upon their own exertions and self-restraint;" in fact, the people must be interested systematically in the general results of sanitary progress, and become more intimately acquainted with the social and material causes which may and do impede such progress.

In the year 1612, Henry Prince of Wales died of a disease, which was fully described by his physician, Mayerne, and is now supposed to have been Typhoid Fever. In 1734 Gilchrist of Dumfries described a similar disease under the name of "slow nervous fever," and Lancisi mentions cases occurring more than 200 years ago. It is thought that it was not unknown to Galen, and that it corresponds to his "Hemi triteus," mentioned in his writings. It was first properly differentiated from "Typhus" in the year 1848 by Dr. Stewart, and is now considered to be a preventable disease, which there is every reason to believe will be eventually banished from our midst. It is endemic in all parts of Europe, Asia, America, and Australia; and is diffused generally throughout the civilised world. According to Wynter Blyth, the most reasonable theory is that "the cause of Typhoid fever is a vegetable parasite, capable of having an independent existence, of propagating its kind, and completing its cycle of existence quite independent of the body. Hence the impossibility of tracing Typhoid from one person to another, hence its endemic prevalence in certain parts, and hence the mysterious isolated outbreaks which sometimes occur." This statement is open to some comment, and it has been maintained that Typhoid Fever is always the result of infection from an antecedent case of the disease. Its incidence is heaviest where drainage defects exist: although it is very difficult to dissociate their influence from that of co-existent hygienic defects, such as a want of personal cleanliness, impurity of the soil, and impurity of water. The contagion is usually carried by sewage, but direct contagion is not unknown. The virus may be transported by air, sewer gas, and polluted water—a single enteric stool entering a source of water supply being sufficient to infect a whole town. One of the most striking instances of recent date of the danger due to polluted water supply is the disastrous epidemic which lately has devastated the population of Maidstone, in England. This epidemic was distinctly traced to contamination of the water supply through a party of hop-pickers pitching their camp close to the springs forming the source of the water supply, and, as enteric fever broke out in this camp, so the water supply became contaminated. A properly ventilated sewer is not a source of danger, and must be distinguished from a house drain, which, owing to misuse, gross carelessness, and neglect of proper flushing, may become choked and foul, so that it engenders danger, and a system of sanitary engineering which is intended to prevent, and does prevent, the development of disease, not unfrequently furnishes the readiest means for its propagation—for sewer air, laden with morbid ferments, quickly finds its way into the houses in consequence of bad drains. Drain effluvia, sewer gas, and emanations from manure heaps will cause outbreaks of typhoid fever; therefore there is very great need for a distinct recognition of the responsibility of the individual, and necessity for active and intelligent co-operation on the part of the people themselves, not only in safeguarding against filth and its consequences, but also in checking the spread of dangerous infectious disease. According to Mr. Parry Laws and Dr. Haldane, sewer-air is disagreeable but innocuous; and sewage in itself is an innocent and much-maligned benefactor, as the air of sewers contains fewer germs than the open air. But here again there must be no confusion, for the air of a foul drain will deteriorate the air with which it comes into contact, and persons living in deteriorated conditions of air, though they do not of necessity suffer from any definite disease, are prejudiced as to their health when the air has been subjected to devitalising influences, such as the organic exhalations given off from animal bodies or extricated from organic substances undergoing change. The evil effect in such cases is increased when epidemic-producing poisons are introduced into such devitalised air. It is of the greatest importance to any community that there should be uniformity of water supply, uniformity of removal of sewage, and uniformity of garbage destruction, so that foul refuse matters may be removed speedily and continuously from the neighbourhood of dwellings in order to prevent unnecessary disease and unnecessary mortality. It has been remarked by competent observers that the rapid growth of large towns and villages has, in many instances, a most prejudicial effect, for often the necessity for additional houses arises, and is to a great extent met, before the ruling authority of the locality is prepared with efficient means of regulating the arrangement of new streets and houses. Such evil is to be observed in many of our fast-growing and attractive suburbs, which, owing to gross neglect of sanitary precautions, soon become hotbeds of disease. These suburban dangers arise chiefly through the absence of some regulation dealing with the disposal of domestic slopwaters, for the absence of fæcal matter makes but little difference, as domestic slopwaters contain urine, soapy, greasy, and other solid matters, in which, when they are allowed to accumulate in and around houses, decomposition takes place, and foul-smelling substances escape into and contaminate the air, the soil, and the water around. Truly, "infectious diseases belong to the people, and not to the place," and well may Pettenköfer remark that "the ground round our houses is more contaminated by ashpits, privies, cesspools, and drains than a churchyard is by bodies which have six years and more for their decomposition." The occupation of houses surrounded by such soil is dangerous, for pernicious damp exhalations rise up from the soil with the effect of increasing the severity of many diseases. The subsoil, beneath a house, may, if dry, contain in its pores or air spaces a vast amount of air, or if wet, a considerable quantity of water; consequently there is a great need for taking precaution so that such subsoil shall not become

become contaminated with house refuse or human excreta, for Typhoid Fever is especially spread by means of excremental matters, and is very prevalent upon pervious soils. Pettenköfer says that the conditions requisite for an outbreak of Typhoid Fever are: a rapid fall, after a rise, of the ground water; pollution of the soil by animal impurities; a certain earth temperature, and the presence of a specific organism. The best pabulum for the supposed microbe is contained by a warm, moist, well-aerated soil. Porous soils (sand or gravel) with a low level of ground water, are the warmest, and, in the main, the healthiest soils, but they are most liable to organic pollution; and Sir Charles Cameron points out that "it is in the low-lying districts and on the gravels where there is most Typhoid Fever," and he is of opinion that "the disease is a soil disease, resembling in its propagation malarial diseases." This relation between this disease and telluric conditions is very strongly supported by many observers, but without doubt depends upon contamination, for the dissolution and distribution of dilute sewerage throughout the soil would be favourable to the development of Typhoid bacilli, and there can be no doubt as to the truth of Sir Charles Cameron's statement that "a filth-laden soil is a good nidus for the bacilli of Typhoid Fever," and that "just in proportion as we preserve our soils from human excreta, may we expect to find a diminution of the amount of Typhoid Fever." In country towns and fast-growing suburbs, this question of soil contamination is even more important than in well-drained cities, for the subsoil water may become polluted and through this the source of water supply. Sewage polluted water may acquire the property of causing Typhoid Fever without access of Typhoid excreta; consequently the great necessity for keeping the water-courses free from impurity, so that there may be no truth in the words of Tennyson when he sang:—

Feeding the budding rose of boyhood
With the drainage of your sewer,
Send the drain into the fountain
Lest the stream should issue pure.

For sometimes it would appear that people were afraid lest they should drink pure water, since in many places a great desire is evident to pollute the watercourses by turning sewage into them. Such being the case, what wonder was it that in times past diseases frequently spread so rapidly that they became epidemic, and devastated whole kingdoms and changed the face of history? But it may be that even in this there is much to be thankful for, and that Nature, our great schoolmistress, who teaches us wisely by little and little, was only admitting us to a new fact, and giving us a fresh lesson in the jurisprudence of self-preservation. In our city the institution of the present system of sewerage has been followed by such excellent results that it only remains for the people to avail themselves of its privileges to the fullest extent, not only by installing proper sanitary fittings in their houses, and having properly connected and ventilated house-drains, but also by recognising their individual responsibility, and by exhibiting a due share of precaution in keeping all these fittings in an efficient working state. Our suburbs may learn from the city the lesson of the curse of the Midden System, which allowed excremental matter to soak anywhere into the soil, so that it frequently happened that the subsoil became saturated with impurities through carelessness in not continuously removing the filth collecting in these pestiferous receptacles. The danger arising from such a practice is to be emphasised, as not only does such soil give out dangerous emanations, but the germs of disease may be present during all periods, and can be roused into an increased activity by changing the influence of their environment, as may be done, during the carrying out of sanitary operations. As milk is one of the principal foods of man, more especially during childhood, it is most necessary that a due precaution should be exhibited in regulating the supply and distribution of this food. Milk readily becomes infected with Typhoid Fever, and when so infected is a ready vehicle for the disease; but milk becomes infected only if it is actually contaminated, either through polluted water or when it comes in contact with specific infection derived from an antecedent attack of the disease in man. It is in this direction that so much has been achieved by the establishment of a pure, continuous water supply, which should obviate any necessity for washing cans with dirty water, and so prevent infection of the milk with germs pathogenic to man, as so often happens through the use of polluted water. The question of preserving the milk supply is most important, for of what avail is it to make the homo healthy if the food we eat is robbed of its life-sustaining properties?

Population does not appear to have any very great influence upon the incidence of Typhoid Fever, except in so far as the aggregation of people causes a greater amount of faecal accumulation, house refuse, and street garbage, which, if allowed to remain in or about dwellings, readily becomes, especially in a warm climate, a source of pestilence and disease. Judging from our city, however, it cannot be said that population has had much influence.

DEATHS from Typhoid Fever, City of Sydney.

Year.	Population.	Density per Acre.	Rate of Mortality per 10,000 of Population.
1889	116,490	57.4	5.07
1890	113,470	53.2	3.79
1891	109,090	51.1	2.66
1892	107,730	50.5	1.76

1895	103,870	48.6	1.92
1896	100,000	46.8	4.2
1897	95,850	45.93	1.6

In Notter and Firth's work on Hygiene it is stated that "weather has no clear relation to the prevalence of Typhoid Fever, except in so far that meteorological conditions may act by modifying the moisture and temperature of the soil, and the rain may increase or diminish the chances of an outbreak according to the previous condition of the ground." Sir Charles Cameron is of opinion that a high rainfall causes a diminution of Typhoid Fever, and that although there are many factors affecting the disease,

still it is probable that cold wet years lessen, and hot dry years increase, the disease. Dr. David Hardie, of Brisbane, is inclined to believe that a comparatively high temperature and continued dry weather during the winter and spring months, is almost certainly followed, other things being equal, by an increased number of deaths in the following summer; and that during a rainy season comparatively few cases are met with. In our metropolis the greatest incidence of Typhoid Fever has rarely followed the sequence noticed by Dr. Hardie; in fact there has not been any constant relation between the rainfall and the prevalence of the disease. There are so many other more definite causes to be considered, that the influence of meteorological conditions cannot be very great, although it is quite possible that the combination of excessive heat with scanty rainfall may have some influence; or it may be that since rain increases the amount of atmospheric moisture, it thus assists the devitalising influences of a tropical climate by increasing putrefactive tendencies, for it is well known that in tropical climates the temperature and humidity of the air are highly favourable to putrefactive change, and tend to intensify those pollutions of air and water which are so inimicable to health in all climates.

High or low temperature of the air in itself is said to have no clear relation to the prevalence of Typhoid Fever, except so far as it tends to modify the temperature of the soil; for as solar heat is the source of all energy, so it exercises supreme control over climatic conditions. Dr. David Hardie is of opinion that "the prevalence of Typhoid Fever in Australia has been distinctly shown to be intimately associated with the atmospheric conditions that obtain, not only at the time of the occurrence, but for many months previous." He remarks that "a person whose backyard is untidy or uncleanly in summer does not usually show more intelligent interest in matters pertaining to sanitation during the winter months, or, if so, the difference is not sufficient to account for the prevalence of Typhoid Fever at one time or another." Transportable miasmata are originally due to internal local conditions of soil and water; and although Hirsch has pointed out the devitalising influence of a tropical climate, and Wilson has attributed to a prolonged residence in it shortening of the duration of life and weakening of the constitution, still there is much in the opinion of Surgeon-General Lane Nottter, who attributes "these evils to causes other than those of climate, and points out that, by restraint in the indulgence in alcoholic drinks, by regulation of the amount of animal food, and by simple hygienic precautions, the deadly effects attributed to climate have disappeared." The great improvement in health, as adduced by the lowered death rate, which has in English towns, and in our City of Sydney, followed upon the execution of sanitary work, bears witness to the truth of Nottter's assertion.

The incidence of Typhoid Fever is directly influenced by season, the greater number of cases occurring during the summer and autumn. Little is known of the exact climatic conditions upon which this seasonal rhythm depends, but there is without doubt some relation to heat and cold. In our metropolis the highest mortality usually occurs during the first four months of the year—January, February, March, and April—these months forming the hottest third of the year. Up to the present time this disease is not so prevalent during the winter months, and is almost absent till the end of spring, when it begins to increase during October, and gradually becomes more evident during the months of November and December.

SEASONAL Rhythm of Typhoid Mortality.

This table is the mean seasonal rhythm for seven years, and is calculated for each 10,000 of the population.

Typhoid Fever is especially a disease of young adult life, but no age is entirely free from it. During childhood the liability to the disease increases from year to year till after 20 years of age, when the liability is said to decline. In our metropolis during eight years 970 deaths from Typhoid Fever have been reported. One-sixth of these occurred among children under 10 years of age, and one-half among persons under 20 years of age. About one-third were persons under the age of 16 years; but the disease has been known to be fatal at 76 years of age, and even at a greater age. MORTALITY

ANNUAL CURVE OF MORTALITY FROM TYPHOID FEVER.

VI.

It will be seen from this table that the mortality per 10,000 of the population began to fall steadily after the institution of the present sewerage system, and that the fall was maintained till the year 1894. No system of notification of disease was in vogue during these years, and therefore it is impossible to say how

how many cases of Typhoid Fever occurred during this period. Inquiry, however, has been made at the various hospitals, and as far as possible the number of cases treated has been obtained. It is impossible, however, to locate the cases as we do at the present time, and therefore the numbers only are given, without any attempt being made to locate the several cases, as it was not until the year 1894 that any attempt at notification was made; and even now the notification is only partial, as the Health Act, though in existence for some time, has only been partially proclaimed.

Treated at—	1889.	1890.	1891.	1892.	1893.	Total.
The Sydney Hospital	114	106	58	43	35	356
Prince Alfred Hospital	250	162	105	81	82	680
The Coast Hospital	241	342	140	61	83	867
St. Vincent's Hospital	136	77	42	36	30	321
Sick Children's Hospital	29	17	14	6	8	74
At Home	134	73	71	48	44	370
Total	904	777	430	275	282	2,668

The mortality during this period of years was at first very great but decreased annually.

Died at—	1889.	1890.	1891.	1892.	1893.	Total.
The Sydney Hospital	23	18	11	4	2	58
Prince Alfred Hospital	30	15	17	14	14	90
The Coast Hospital	13	24	21	10	10	78
St. Vincent's Hospital	7	12	7	2	3	31
Sick Children's Hospital	2	1	0	2	1	6
At Home	134	73	53	48	44	352
Total	209	143	109	80	74	615

The effect of the sewerage system can be noticed each succeeding year as the sewerage became extended in the different suburbs.

DEATHS FROM TYPHOID FEVER.

	1889.	1890.	1891.	1892.	1893.	Total.
Sewered Districts	24	14	13	18	15	84
Unsewered Districts	185	129	96	62	59	531
Total	209	143	109	80	74	615

"Any epidemic of Typhoid Fever," says Dr. Wilson, "in a sewered town points to imperfect ventilation, faulty construction of sewers or drains, deficient flushing, to contamination of the water supply, or to polluted milk." In unsewered districts it points to bad drainage, filthy privies, and cess-pools, all of which may be the means of originating the disease and propagating the specific contagion when it is developed or introduced. Whatever difference of opinion there may be as to the microbial relations of Typhoid Fever, no one doubts that it is essentially a filth disease; and such being the case, it is not wrong, nor is anyone guilty of repetition, when great emphasis is laid upon individual responsibility. No one can possibly take care of his neighbour's dwelling, for he has quite enough to do in seeing that his own home is kept clean; but, if the neighbour will not also be clean, then the law must step in and protect the clean against the unclean—against people who hurl the house-refuse anywhere, to the danger of the community, and foul the soil with human excreta. Such persons are guilty of criminal acts, and are the propagators of disease and the destroyers of their fellows. Until this individual responsibility is thoroughly recognised it will never be possible to avoid Typhoid Fever, which Professor Huxley has described as a scourge and a disgrace to a nation. Mr. Ernest Hart has said that "every death from Typhoid Fever is a violent death, and should be the subject of a sanitary inquest." If such is the case, how shall the punishment be meted to those whose fault it is through carelessness and neglect, ignorance and prejudice? It often happens in a district which has been recently sewered that epidemics of Typhoid Fever will break out through some faulty house connections or careless misuse of house-drains. It has been shown in Table VI that the mortality from Typhoid Fever decreased annually until the year 1894. The operations of the Board were extended greatly during the year 1894, and much contaminated ground was opened up in installing proper sanitary house connections with an increase of Typhoid Fever. This increase caused the Board to institute a partial system of notification of Typhoid Fever, and to make some attempt

attempt at locating the cases, so that a systematic inquiry might be made into the environment of each case, and a sanitary inquest held upon each fatal one, with a view to effecting a remedy for any existing evil. The revelation which followed this inquiry was astounding. People imagined that if in their old system of sewerage a trap existed the supreme end had been attained, forgetting that wherever you get stagnation you get putrefaction, and that the trap was useless unless properly ventilated and continually cleansed; for the efforts of modern sanitary engineers are directed towards ensuring that the gases which inevitably result from putrefaction in sewers and house-drains should be as much as possible diluted with the external air before we breathe them. In many of the hotels and principal eating-houses of the city sewer gas was being absorbed by the man who was dining in what he thought was a properly ventilated, comfortable, and first-class dining-room. Supplies of drinking water stored for domestic purposes were collected in tanks which were so situated that leaky and faulty water-closets, placed on the floor above them, contaminated them with plentiful supplies of foul matter. The internal communications of a house, besides serving as a means of entrance and egress from the rooms also, especially staircases, doors, passages, and fanlights, serve as the means for supplying pure fresh air; but if the sanitary arrangements of a house are bad, and the sanitary fittings are not arranged with due care, foul emanations will filter from wrongly-constructed drain-pipes, from ill-ventilated drain-pipes, from old-fashioned water-closets, having no proper flush of water, and from untrapped house-connections leading no one knows where; and the internal channels of communication in a house will, instead of serving for the supply of fresh air, merely facilitate the exchange of foul air. These revelations, the result of the Board's inquiry, showed a gross neglect of individual responsibility, and a want of due appreciation of the sewerage system which had been installed. It was only to be expected that such neglect would be followed by dire disaster, and that in the endeavour to set matters right the latent germs of disease would be roused into activity, and would propagate rapidly. During the years 1894, 1895, 1896, and 1897, 2,027 cases of Typhoid Fever were reported to the Board, of which 1,833 cases were treated at the various metropolitan hospitals, and 194 cases at their own homes.

Quarter ending.	Cases Reported.				
	1894.	1895.	1896.	1897.	Total.
March 31st	214	186	253	150	803

That so large a proportion of these cases occurred among school children caused attention to be drawn to the school buildings, more especially as this fever is not readily transmitted by school attendance, unless the sanitary condition of the school premises is at fault. An inspection of the various schools showed that there were many existing sources of danger, and that masses of children were exposed to the risk of drinking water stored in filthy tanks, and to the foul emanations of latrines not provided with proper sanitary fittings. Some of the private schools also called for examination, and sewers were found ventilating into the bedrooms either through faulty pipes or through rain-water pipes and ill-arranged water-closets. Such glaring faults could only prove a source of discomfort, evil, and even death to the occupants of such houses. The markedly beneficial effect of drainage and water supply upon public health is the great characteristic of the latter half of the present century; but the maintenance of a water supply in a pure state is not of itself sufficient to eliminate typhoid fever unless the local hygienic conditions are good as well, otherwise the resisting powers of the human organism will be lowered and less able to oppose the invading germs which may come from some other source. There can be no doubt but that the efficient treatment of house garbage becomes more important every year, and that the practice of piling all rubbish indiscriminately into a dust-box and exposing it upon the public highway to be torn about by the rag, bone, and bottle collector is highly mischievous, and I agree with Dr. Vivian Poore: "When I see grimy gentlemen in fan-tailed hats engaged in the marvellous operation of climbing over spiked railings with the object of filling a huge lumbering cart with a mixture of some of all such things as rags, excrement, bones, cinders, straw, paper, ashes, &c., I feel that they are occupied in a bit of wilful mischief, and that they are merely increasing the difficulties of that sorting which is inevitable." The systematic house-to-house inspection is without doubt the best means of rectifying existing evils, but the baneful influences of prejudice, ignorance, and a disinclination to spend money has prevented the carrying out of all necessary improvements. Sanitary science aims at preventing putrefaction, together with all the evils that are apt to follow its course when that occurs in or near human habitations. In order, therefore, to further these aims, it is very desirable that people in general should be instructed in such a knowledge of the nature and cause of disease as the science of the day can afford in order to counteract ignorance and prejudice. It is very easy to instal an efficient system of sewerage with proper ventilation, but it is very difficult to make people appreciate, not only its value, but also those conditions which are necessary for its proper working. People do not seem to grasp the fact that although water may prove an efficient seal against sewer gas entering a house, still this water may evaporate, and that unless a proper system of flushing is carried out the trap not only becomes useless, but also a very fruitful source of disease. It is said that many of our pressing social problems are inextricably united with our duty to the soil, and that any country in which the fertility of the soil does not increase cannot rightly be regarded as really in the van of civilisation and scientific progress. If, however, it is intended to use this argument in favour of the indiscriminately digging of human excreta into the soil, except in such cases where a rigorous supervision is carried out, the evidence is against it; for it has been most conclusively proved that fouling of the soil with human excreta and household slop waters has led to the propagation of disease. Besides the many faults of sanitation which have been before mentioned as having been discovered in the city, there were many others of an equally glaring nature. Leaky soil pipes, either worn through age or opened by the depredation of rats, pouring out their filthy vapours to contaminate food and air in the living rooms. House drains were also found opening into badly jointed pipe sewers, where sections of the pipe were falling

falling away from the rest, and allowing the sewage matter to escape into the soil beneath the basement. These evils as seen in the picture were found in a large city hotel, and the sewer gas permeated the bar, the dining-room, the pantry, and the lift. Bath wastes were found which directly ventilated the sewer into the bathroom, as they were untrapped and unventilated. Rain water pipes were also found which opened directly into the sewer and thus became sewer ventilators. These faults emphasise the remark made earlier in this report, that a perfect system may, through misuse or through want of a proper appreciation, become the introducer of disease. This was a partial cause of the epidemic of the year 1896, for it is useless to provide houses with a perfect system of water supply unless this is supplemented by strict cleanliness in the house itself, and it is impossible to attain the perfection of cleanliness if the sanitary arrangements as regards sewers are not properly installed, or if they are faulty, either through age or neglect. The vapours which escape from sewers will surely, if it be possible, find their way into the houses, and will contaminate whatever they come into contact with, whether it be food, milk, water, or the circulating air. No room in a house is of greater importance than the sleeping room, and as a man spends the greater part of his life there, great attention should be paid to its sanitary arrangement, so that there may be no opportunity for sewer gas to penetrate into such a room, and that the air supplied for breathing purposes should be as pure as possible. In arranging the ventilation of a water-closet care should be taken so that the ventilating pipe does not terminate inside the roof, for if it does the foul gases will collect in the roof space and pass again into the house. All these faults were found to exist in this city after a proper sewerage system had been installed. The main sewers were well laid and properly ventilated, but the house connections were at fault, and the owners of houses had failed to appreciate the value of the sewerage system, and the fact that death was often the consequence of faulty house sanitation. No wonder then that a disastrous epidemic occurred in the year 1896 when such a disregard of individual responsibility existed and one might say with the poet Campbell:—

Is this improvement? where the human breed
 Degenerate as they swarm and overflow,
 Till toil grows cheaper than the trodden weed,
 And man competes with man like foe to foe,
 'Till death that thins them scarce seems human woe?

The continuance of the earth-closet and cess-pit systems in the suburbs, especially in those planned upon low-lying lands, favours the propagation of Typhoid Fever. The carelessness of people in allowing collections of putrescible matter to remain in or near dwellings, especially in a climate where the temperature promotes putrefaction, is highly reprehensible. No person is willing to pay taxes for sewers and roads if the outcome is to be alleys and jerry-built houses. The facilities which have been afforded by building societies for jerry-building and overcrowding in the newer suburbs by selling land in preposterously small allotments, with narrow streets and lanes, have been very great. And it must be remembered that, great as is the moral and social harm which results from such overcrowding of given areas, the sanitary evils are equally great, if not greater, for the parcelling out of small allotments of land and the jamming together of buildings, means the propagation of disease, and that instead of sweet smelling residences, malodorous houses are brought into existence. Many persons hold the opinion that if latrines, sinks, yards, and dust boxes can be made to smell sweet by means of disinfectants, a great triumph has been gained, but they are quite wrong, as a well-managed water-closet, sink, or outhouse needs no disinfectant, and if such is used it only hides foul smells which should not exist, and by covering up a danger prevents its detection and remedy. In all places where it is possible to obtain a proper service of water supply, care should be taken to immediately disconnect any old tank service, otherwise mistakes will be made, the two services will be confounded, the health of the occupants will suffer, and blame will be cast upon the permanent water service regarding the purity of the water. Dr. Haviland says that "Typhoid Fever has no reason for existing at all"; but Dr. John Drysdale remarks that, "although the area of its operations may be circumscribed, still it can never be hoped that good food, drainage, and ventilation will extinguish it altogether as long as man is a social animal." It is, however, permitted us to hope on that a better state will yet exist, and is reassuring for our city to note that, although some in our midst have cavilled, the city of York, England, has adopted our upcast system of sewer ventilation as the best possible system known.

During the years 1894, 1895, 1896, and 1897, 424 cases of typhoid fever proved fatal.

Quarter ending.	1894.	1895.	1896.	1897.	Total.
March 31st	50	32	57	18	157
June 30th	26	19	45	27	117
September 30th	14	6	16	5	41
December 31st	38	24	25	27	109
Total	123	81	123	77	424

Of these 424 fatal cases of typhoid fever, 223 were treated at various Metropolitan Hospitals, and 201 cases were treated at their own homes.

Died at	1894.	1895.	1896.	1897.	Total.	Rate per cent. of Admissions.
Sydney Hospital	16	9	24	6	55	17
Prince Alfred Hospital	20	13	32	10	75	11.3
Coast Hospital	12	6	19	13	50	8.3
St. Vincent's Hospital	11	1	9	4	25	17.1
Sick Children's Hospital	2	2	2	1	7	6
At own homes	61	50	57	43	201	
Total	123	81	143	77	424	

An inquiry into the surroundings of these cases showed :—

	1894.	1895.	1896.	1897.	Total.
No sewers were available	74	48	99	36	257
Dwellings were in an insanitary state	40	30	31	35	136
Owners had complied with the regulations of the Board...	2	3	5	4	14
Arrived in port suffering from the disease	1	0	0	1	2
No fixed abode	6	0	8	1	15
Total	123	81	143	77	424

The small percentage (3·3) of fatal cases coming from dwellings, the sanitary arrangements of which were in accordance with the regulations of the Board, is an emphatic testimony to the value of the present system of water supply and sewerage, and demonstrates clearly the greater improvement which might be expected if all the houseowners would rectify all faults existing in the present sanitary house fittings. Two at least of these cases had no relation with the sanitary state of the homes of the patients, and one case was that of the promising young physician before mentioned. Further testimony in favour of the operations of the Board is to be found in the remarkable decrease of the mortality of typhoid fever in those districts which have been provided with a proper sewerage system; and where districts fringe upon these sewered portions, although they are unsewered themselves, a marked result for good is to be noticed which will, without doubt, be enlarged with the extension of the sewerage system.

RATE OF MORTALITY PER 10,000 OF POPULATION FROM TYPHOID FEVER.

	Before Laying of Sewers.	After Laying of Sewers.
City of Sydney	5·07	2·4
Glebe	2·5	1·1
Darlington	4·0	·6

Woollahra	2·1	·9

The triumph of advance in health due to progressive sanitation is very great, and the saving of life very considerable. Perhaps no better sign of the importance of preventive medicine and the science of hygiene can be shown than by the intelligent interest displayed by our public press in following all discussion on subjects relating to public health, and in making considerable comment on the same.

I have, &c.,

THEO. MAILLER KENDALL,
Medical Adviser.

Sydney, January, 1898.

Report of Assessor's Branch for the year ending 30th June, 1898.

Sydney, 5 September, 1898.

I HAVE the honor to submit a report of the working of this branch for the year ending 30th June, 1898.

While no appreciable improvement in general property values can be recorded, it is pleasing to note that the amount received by the Board for water used for building operations shows an encouraging increase, being £328 in excess of that received during the previous year.

Rate Notices.

290,013 notices were served upon ratepayers, including those for new mains, new sewers, and finals for payment of overdue rates.

New Assessments.

The assessments of new buildings, &c., numbered 2,009, and the fees for the use of water for building purposes amounted to £2,346 17s. 2d.

New Mains, Sewers, and Storm-water Drains.

980 properties became liable for rates from new water-mains, 3,955 from new sewers, and 1,067 from new storm-water drains, making a total of 5,302 properties liable from new works.

Rates on Vacant Land.

Owing to a recent decision of the Full Court it is confidently expected that the arrears owing on vacant land will be considerably reduced. This decision clearly establishes the right of the Board to recover from the registered owner of the property.

Summons Work.

This work has been very heavy during the period under review, 39,010 final notices were served and 5,976 summonses issued from the various courts, as under:—

Balmain Court	280
Campbelltown Court...	6
Central Court	644
District Court	93
Glebe Court	641
Hunter's Hill Court...	33
Liverpool Court	39
Newtown Court	1,646
North Sydney Court...	435
Paddington Court	487
Parramatta Court	243
Redfern Court	623
Richmond Court	1
Ryde Court	36
Water Police Court	769
Total	5,976

Properties rated to 30th June, 1898.

	<i>Water.</i>			
	Houses.	Vacant Land.	Total.	Supplied with Water.
City of Sydney and Suburbs	88,350	21,329	109,679	88,519
Campbelltown...	214	16	230	193
Liverpool	449	71	520	237
Richmond	230	...	230	230
Smithfield and Fairfield	92	6	98	66
Parish of Gordon	703	626	1,329	504
	<i>Sewerage.</i>			
City of Sydney and Suburbs	51,425	2,045	53,470	51,425

It will be noticed that the number of properties shown here as liable is less than that returned on 30th June, 1897. This may be accounted for in a number of ways. The councils have in some cases rated a number of adjoining lots conjointly instead of separately, as formerly. In other instances whole terraces have been demolished, and more pretentious buildings have been erected on the land. It will be seen at once that although these alterations may or may not tend to decrease the revenue they certainly reduce the number of properties liable for rates. Moreover, the decision of the Privy Council regarding the 150-ft. limit has had some effect in this particular.

The Secretary.

H. J. BEAUMONT,
Assessor.

No. 1.

No 2.—STOCK, GARDENS, AND SPECIAL FEES.

Table with columns: Ward or Borough, Stock (1896-7, 1897-8), Gardens (1896-7, 1897-8), and Special Fees (1896-7, 1897-8). Rows include various wards like Double Ward, Brisbane Ward, Cook Ward, etc.

68

No. 4.—GENERAL SUMMARY OF RATES, FEES, &c.

Summary of Sewerage and Drainage Rates. General Summary for Rates, Fees for Water and Sewerage, for year ending 30th June, 1898. Table with columns for Ward or Borough, No. of Properties, Sewerage Rates, New sewers, Revenue for year, etc.

70

Annual Report of Stores Branch.

Sir,

9 August, 1898.

January last terminated the 5-year contracts for the supply of locally-manufactured pipes and special castings, and new contracts for a further 5-years' supply were entered into between the Government and the former contractors, who were the only local tenderers, and whose prices were not only lower than those of the merchants tendering for goods of British manufacture, but were considerably lower than the rates paid to them during the previous five years. In April a contract was let by the Board, for the first time, for the local manufacture and supply, during the ensuing five years, of the whole of the stop, reflux, and air valves that may be required. This contract is at once a distinct economy over former cost for similar imported goods, the slightly reduced rates for which were only secured at the expense of a burdensome and perhaps extravagant stock.

The material on the Board's works that passed through this Branch is shown in the following table:—

Article.	Contractor.	Rate.	Value.
General stores	Briscoe, Drysdale, & Co.....	26½% below Schedule	£ s. d. 927 13 6
Do	J. Keep and Sons.....	5½ do	1,226 3 11
Uniforms	Hatfield Bros.	Schedule	169 11 8
Pig-lead	Sydney Lead Works	£11 18s. 6d. per ton	1,024 15 7
Do	Briscoe, Drysdale, & Co.....	£13 5s. do	1,393 2 2
Iron pipes	Pope, Maher, & Co.....	£7 2s. 6d. and £6 9s. per ton...)	8,502 13 5
Do	G. and C. Hoskins	£7 12s. and £6 14s. 6d. do ...)	39,743 1 8
Castings	do	£10 5s. and £9 9s. do ...)	1,306 9 9
Stop valves.....	Milne Bros.	Schedule	267 3 6
Ball hydrants,.....	Pope, Maher, & Co.....	At 8s. 3d. each.....	
		Total	54,580 15 2

Old Mains recovered.

Of the numerous mains recovered from the ground on replacement by new and larger ones, about 1,400 tons were re-stored, and taken on to stock at the equivalent value of new goods—approximately £10,000. The cost of fettling and repairing these mains was,—labour, £696; stores, &c., £88; total, £784, or, roughly speaking, 11s. 2d. per ton. Other mains, chiefly 3" diameter, known to have been more than 30 years underground, and shown to be too far decayed for further use, were sold as scrap iron at £1 per ton. The ordinary cast scrap iron was sold by public tender, and realised £2 16s. per ton.

Stock Balance.

(Exclusive of material charged direct to Works).

Stock in hand, 30th June, 1897	£ s. d. 16,746 3 6	Issues	£ s. d. 43,885 6 4
Receipts	43,464 4 7	Stock in hand, 30th June, 1898	16,325 1 9
	£60,210 8 1		60,210 8 1

Pay Branch.

The sum expended in this office during the past year was about £91,000 on account of fees, salaries, wages, compensations, petty cash, and refunds.

Examination of the daily post each morning showed that 12,739 letters contained remittances in payment of rates to a total value of about £61,000.

Three hundred and ninety-eight tenders were received in respect of seventy-nine contracts, and in all cases security for the due performance of the contract took the form of cash deposit; the total security thus held at the close of the year was £6,710 15s.

Ten of the latest scientific publications have been added to the library, making a total of 440 volumes.

The customary examination for admission of junior clerks to the Board's service took place last March. Twenty-three candidates presented themselves, and of these only seven obtained sufficient marks to qualify for any vacancies arising during the ensuing twelve months.

A. ELLICE FLINT,
Paymaster and Comptroller of Stores.

Engineer's Report.

Sir,

Engineer's Office, 10 August, 1898.

I have the honor to submit, for the information of the Board, the Annual Report of the working of the Engineer's Department for the period ending 30th June, 1898.

1. WATER SUPPLY BRANCH.

Catchment Area and Head Works.

The catchment area was originally under the supervision of one ranger, but subsequently it became evident that the patrol was not sufficient to safeguard the purity of the water supply, and the Board approved of the area being divided, and placed under the supervision of two rangers. The monthly reports of these officers show that the various landholders and others using the grazing-lands on the watershed are kept under vigilant supervision. It has been the habit in the past for settlers and others to turn cattle on to the various swamp lands to live or die, as the case may be; the owners of same are now traced, and dealt with under the provisions of the Act. The duties of the rangers, although of an arduous nature, have been efficiently performed.

Various applications for alienating areas of land within the watershed area for mining purposes have been referred to the Board by the Mines Department for their consideration; in each case applications have been refused at the instance of the Board. Any alienations of land within the area for either residential, mining, or manufacturing purposes should in all cases be opposed, and on this point the Board of Health are in accord with the Board of Water Supply and Sewerage; and it is a question of the future that the recommendation of the Board of Health, *re* resuming those areas which were alienated prior to the proclamation of the boundaries of the catchment area, be carried into effect.

Wherever it was considered that there was a possibility of water being polluted by picnic parties, tourists, or road gangs, notices were posted in conspicuous places warning same against such pollution, and steps have been taken to more definitely mark the boundaries of the watershed.

A scheme for supplying the town of Wollongong with water was designed by the Government County Towns Water Supply Branch, which included the interception and diversion of water from the metropolitan supply. The question was considered by the Board, and was not opposed owing to the comparatively small quantity which would be diverted. The weir across the Nepean River at Pheasant's Nest is in good order, and successfully withstood the February flood with a depth of water of 6½ feet over crest of weir. This weir is constructed in concrete, and on inspection after flood was found to be perfectly intact.

The grating protecting the inlet of Nepean Tunnel was damaged by the flood, and has been put in good order.

The tunnel is in good order generally; the outlet above Cataract weir requires attention by arching of channel, which will be provided for in Loan Appropriation for 1898-9. This work will prevent the accumulation of drift wood in Cataract River and blocking of Nepean Tunnel.

The various shafts on the Nepean Tunnel which had been left unfinished have been domed over on good rock foundations, and shafts finished with manhole grating; this ensures ample ventilation to the tunnel.

Cataract Weir.—There was a serious mishap at this weir on the 14th February. The same flood which passed over the Nepean weir without damage almost entirely destroyed this one.

The water rose 16 feet over the crest of weir—which exceeded by 4 feet any previous flood since it was built.

The extra height flooded timbered areas which had not been swept since records have been kept, and brought down immense quantities of timber; some of the logs were of large dimensions. Not only was timber carried down, but hundreds of tons of boulders were dislodged and carried to positions below the site of the weir; some of the boulders weighing 3 to 4 tons must have been carried a distance of 600 feet. The weir was built in coursed masonry with cement joints, and by the constant impact of the battering force of boulders and timber was destroyed course by course. On receipt of the news, and when flood had subsided sufficient to see the extent of the damage, an inspection was made, and it was decided to rebuild the weir with concrete composed of 1 cement, 2 of sharp river sand, and 4 of hard sandstone. The foundation of the old weir, which was found to be sound, was allowed to remain, a central block being removed to form a key for the new work; holes were drilled into the foundations, and steel rails of 18 lb. sections were inserted and set in neat cement mortar. The rails were set at all angles and projected well up into the new work. Pudding-stones were incorporated so as to save concrete, and the work was arranged in carrying out so as to avoid continuous joints, whether longitudinal, horizontal, or vertical. The work was somewhat hampered by the necessity of supplying the towns of Campbelltown and Liverpool with water, these places being supplied from the canal; the latter had to be replenished about every two weeks. By means of a sand-bag dam, the supply was effected within a week of the weir being destroyed.

The weather was fortunately favourable during the reconstruction, no fresh occurring in the river until after completion, when the river rose and passed over the new weir to a depth of 2 ft. 6 in. without damage.

The total quantity of concrete in the weir is 650 cubic yards, and about 50 cubic yards of pudding-stones. The cost of reconstruction, renewing sluice valve, cleaning up, &c., was £1,550, or about £150 below the office estimate. The work was done by day-labour, under the immediate supervision of the Resident Engineer, Mr. Jacob, and Inspector Best.

In addition to the reconstruction of the weir, improvements have been carried out in making a safe approach to valve house in lieu of the ladders which formerly existed.

Upper Canal and Prospect Reservoir.

A considerable amount of work has been done in the way of repairs—trimming slopes of cuttings; opening out and raising puddle wall of Liverpool Dam and tree-planting in enclosure; fixing screening apparatus and constructing platform; pointing the pitching of No. 9 section of canal; constructing road from canal through Mr. Darley's property to Appin Road, painting aqueducts; and other minor works outside ordinary maintenance.

About $4\frac{1}{2}$ miles of fencing has been renewed. The fence is four wires with top rail, the posts and wire being new material, and the top rail being selected from the best of the old material, the contract amount being £282.

The work of strengthening and relining the defective portions of the canal in bank has been vigorously pushed on.

Hamilton's contract was completed in June. This contract was stopped at times to allow water to be passed down canal to replete the Prospect Reservoir.

The contract extended over a length of 5,432 lineal feet, and, owing to the irregularity of the sides through scour and slips, necessitated the use of 733 cubic yards of extra concrete to make the work solid. The cost of this section was £7,895. The carrying out of this section by contract made it evident that in all future work of relining the same should be carried out by day-labour, as it is of the greatest importance that the control of the water should be in the hands of the Board's officers without any interfering interests. This question having been submitted to the Board, who made a visit to the section to be dealt with, they approved of the system of day labour as the best under the circumstances. Operations were commenced by dealing with the worst sections first, which, being detached and generally on curves, made the work more expensive than it otherwise would have been. The work done in section No. 10 by day labour aggregates 1,700 lineal feet, and expenditure £3,100. This amount includes a large quantity of material in hand—cement, sand, and broken stone; also work stripped preparatory for concrete lining. The Board having taken over Contractor Hamilton's plant, at a valuation, it will enable the Department to make better progress, and with anything like approaching continuous work the cost should be less than that already done.

As this work can only be carried out at intervals of season, and maintaining a safe supply at Prospect, dispatch is of the greatest import, and, consistent with economy, this is what is aimed at.

The necessity for a duplicate telephone line between Prospect and head work and to various stations along the line of canal became apparent during the year; and the Board having approved of the work, it was put in hand, and is almost completed. This will be of great service in working the staff in case of accidents.

Quarters for officers on duty have been erected at Kenny Hill, adjoining Inspector Whalan's residence. The accommodation will save time during inspecting tours, and be convenient for officers engaged on survey work when necessary.

Prospect Reservoir.—The work of raising the puddle wall of bank is drawing to completion; the work has been carried out by day labour. The foreman and majority of men worked on the dam while being constructed, and were, therefore, the best for the occasion. The work, together with raising the by-wash, will admit of raising the level in reservoir 1 ft. 6 in., and increase the quantity of water impounded over 700 millions of gallons. The expenditure has been to end of year about £4,600.

As a result of this work there is a large quantity of pitching spawls and kerbing which has been stored in the quarry, and can be used in the improvements contemplated in connection with the lower canal.

A quantity of pitchers from bank was used in pitching the by-wash between the 30-inch main and concrete apron.

The dam has not shown any signs of movement of import. The adits and other main drains continue to fulfil the object for which they were made.

With regard to storage, the year opened favourably with water level at 193.04 R.L.; in April the water level touched 183.85 R.L.; on 24th April rain fell, which raised the level nearly to 186.00 R.L.; a slight recession with some variations was experienced until the rains of 1st June and following dates, which caused the water level to rise to 193.5 R.L., or 20 inches below top water level. Owing to upper canal having to be shut off to carry out relining of canal the water level was not raised above this point, and was maintained at levels varying between 192.00 and 189.00 R.L., until February, 1898, when copious rains set in, and upper canal works were advanced so as to admit of reservoir being repleted, the water level rose to 195.06 R.L., or $1\frac{1}{4}$ inch from by-wash level. Since then the lowest level touched was 189.54 R.L.; but the June rains furnished an abundant supply, with the satisfactory result that the water was flowing over the by-wash.

The necessity for dealing with sections of the upper canal compelled the Department to forego the dry-weather flow of the rivers and the maintenance of a satisfactory level in the storage reservoir.

The inlet house and valve chamber are in good order, and valves kept in working condition. The covered-way showed signs of weakness, but was temporarily strengthened. In the contemplated improvements to Lower Canal, this length of arching will be dispensed with.

The favourable season enabled the officer-in-charge to increase the number of agistment stock on the reserves, the constituents of the Board availing themselves of the opportunity to such extent that the revenue amounted to £415 18s. 3d., which is the highest return for one year yet recorded.

It is contemplated during next year's operations to clear several paddocks which have not yet been touched; this will increase the agistment area and diminish the quantity of bark, leaves, and other surface rubbish which is washed into the reservoir every heavy rain.

Supply from Prospect Reservoir.

The quantity of water supplied to the various districts under control of the Board is recorded at 6,673,514,000 gallons, which is equal to a daily average supply of 18,283,000, or 42 gallons per head per diem for an estimated population of 434,810, the total quantity being an increase of nearly 228,000,000 gallons over the preceding year.

Lower Canal and other Works below Prospect Reservoir.

The Lower Canal was emptied and cleaned out, and advantage taken to construct an offtake for the supply of district of Holroyd Park and Sherwood.

The 72-inch pipes forming the pipe-line have been covered with cement-wash, and bands painted. This cement-wash has been found to be the best for the preservation of this work after trial of different materials for coating. Beyond this work, only that of ordinary maintenance has been carried out, in view of the contemplated alterations to canal.

A contract has been let by the Public Works Department for the manufacture and fixing in position of a duplicate line of 72-inch pipes from Pipe-head Basin to Potts' Hill Reservoir. This work, although under the control of the Board, was taken in hand by the Ministerial Department under a clause in the Act which empowers the Minister to carry out work.

Potts' Hill Reservoir is in good condition, as also the screening chamber.

Additional drainage inlets were carried out in connection with Potts' Hill Reservoir at the request of the local Borough Council.

Trunk Mains.

No reports were made during the year of damage to any of the trunk mains beyond a few drawn joints, which were attended to without interruption to the supply.

General Reticulation.

The whole of the reticulating system is in satisfactory condition. The work of this branch has been brisk during the year, as shown by the following returns.

The number of miles of trunk and reticulating mains laid, varying in diameter from 42-inch to 3-inch, aggregates 60.6 miles; 18 miles of mains cleaned and hydrants overhauled, &c.; $\frac{3}{4}$ mile lowered to suit altered conditions of roadways; and about 15.4 miles of mains of different sizes removed to make way for those of larger diameter to meet increased demands of districts. The number of hydrants fixed were 997 ball hydrants and 143 screw-down ditto.

Included in the aggregate mileage is the new rising main from Paddington to Centennial Park Reservoir, and the 42-inch supply main from same to Oatley-street. This will be connected to the new trunk main about to be laid through City, Redfern, Camperdown, and Petersham for the supply of the western suburbs and high-level zone of Balmain and Glebe Point. The areas of the city now supplied from Paddington Reservoir will receive the benefit of increased head from the Centennial Park Reservoir.

The new main for the supply of the low-level zone of Leichhardt and Balmain was completed and brought into use. This is connected to the 42-inch trunk main from Potts' Hill at Catherine-street and Parramatta Road. It is proposed to connect the original main to the new trunk main about to be laid from Centennial Park Reservoir, so that the high-level zones will have the benefit of the superior head, and obviate the necessity of supplying the latter district from Ryde Tank.

The supply to the districts of Rookwood, Granville, and Five Dock has been improved by laying larger arterial mains of 18, 15, and 12 inches diameter respectively.

At North Sydney the rapid development of the Neutral and Mosman Bays districts necessitated larger arterial mains, and the 15-inch main along the Military Road was extended, reducing in size to 12-inch at terminal point.

Mains of 10 inches diameter have been laid in Sydney, Enfield, Hurstville, Mosman, Newtown, North Sydney, Redfern, Strathfield, Waterloo, and Willoughby.

Mains of 9-inch diameter have been laid in Alexandria, Amundale, Balmain, and Redfern; and of 8-inch diameter in the districts of Balmain, Beecroft, Sydney, Petersham, and Willoughby.

The length of 6-inch mains laid was 10 miles, and 4-inch main 23 $\frac{1}{2}$ miles.

The general condition of the mains and fittings is satisfactory. During the year the number of bursts totalled 95 in the smaller and 5 in the larger mains. This is lower than previous year, and may be considered as satisfactory, considering the mileage of mains now in operation.

Analysis of Water.

The usual monthly analysis has been carried out by the Government Analyst. The points of observation were extended so as to embrace centres from which complaints were received. The reports show that the water supplied to the consumers was of good potable quality. Complaints were received at various times as to impurity of water at residences. In all cases the complaint was carefully investigated by the officers, and samples obtained. These were submitted in the first instance to the Medical Adviser for his opinion. His reports indicated that water was generally of good quality; any exception was found to be due to local causes, which were at once attended to. The general cause was due to water being drawn from dead-ends, which, notwithstanding the flushing by turncocks, caused a lot of suspended matter to accumulate which passed into the house service. To minimise this evil the Board directed that a report be prepared showing the extent and cost of coupling up the various dead-ends. The report was submitted and a sum was appropriated for the work by the Board, which has been taken in hand and will be systematically carried out. It is also intended to substitute an improved dirt-cap on ball-hydrants, as well as laying the hydrants on the footway in lieu of roadway as heretofore. The foregoing will prevent the possibility of organic matter finding way into the mains from the surface and ensure proper circulation.

House Services.

The number of drillings for house service carried out during the year was 2,933, of which 198 were in the Gordon-Hornsby district. The number of extensions and alterations to existing services for which permits were issued was 10,118. The inspections made in official routine were 1,200. The increase in the reticulated area, as well as increase in building operations, necessitated the inspecting staff being augmented. The position was filled by promotion of an employee in the Meter Branch, who had passed the special examination at the Technical College. The additional inspector admits of stricter supervision than heretofore.

Meter

Meter Branch.

The operations of this branch show increased development and the results are very satisfactory.

The number of new meters received from the contractors after being tested and passed was, 615 $\frac{1}{2}$ -in., 92 1-in., 80 $1\frac{1}{4}$ -in., 18 2-in., 4 3-in., and 2 2-in. metered standpipes for attachment to ball hydrants. The whole of the work was satisfactorily carried out.

The number of meters sent to the testing-shop for examination was 71, and for repairs 228, showing a decrease of 128 of number repaired previous year. The gradual adoption of the Board's pattern is responsible for the decrease in number.

The Board decided that all meters when disconnected for repairs, if of a class which would not fulfil the standard tests, were to be condemned. In compliance with this order, 114 meters were condemned and were replaced by meters of Board's pattern—principally under the hired system.

The number of meters issued on the hired system was 838 of various sizes and 50 were sold right out.

The number of meters tested and examined for country districts was 270 and 28 were repaired. This work is carried out on charge.

The total number of water fittings of various kinds dealt with was 61,227, of which 56,080 were passed and stamped, 5,028 returned as defective, and 119 condemned. The small quantity condemned, as compared with the number submitted, shows an improvement in manufacture, but it must be stated there are still some manufacturers who have an inclination to scamp their work. Owing to complaints *re* fittings after leaving the shop, the instructions as to testing were altered to include an examination of every part. The mechanical branch also carries out fitting work in connection with the engineering department, electrical indicators, telephones, and electric lighting, &c.

The Meter Clerk's report shows a satisfactory result on the year's working. His return shows that during the year the number of meters dealt with were:—

City and Suburbs, fixed	912
Government Departments, fixed	25
					<hr/>
					967
Meters cut off	267
					<hr/>
Increase for year	700

The total number of meters in operation in metropolitan area is 7,514.

Of the number of meters fixed (967) 880 have been rented, which makes the total issued on the hire system since April, 1894, 3,304, of which 2,788 are still in operation.

The number of meters which became defective during the year was 385. In all cases these were promptly repaired or replaced with new meters.

The financial result of this branch is of a highly satisfactory nature, as will be seen from the following:—

- Revenue from meters in excess of assessments, £47,006 1s. 3d., as against £43,823 17s. 8d. for previous year. Increase for year, £3,182 3s. 7d.
- Revenue due to earnings of Board meters included in above, exclusive of rents, is £7,822 4s. 1d., as against £6,297 1s. 3d. for previous years. Increase for year, £1,525 2s. 10d.
- Revenue from rent for hired meters for year was £977 14s. 11d., as against £910 7s. for previous year. Increase, £67 7s. 11d.

With regard to the sub-section *c*, it must be taken into account that the operations for the year have been conducted on a very much reduced tariff. After sufficient experience had been gained, based on first cost, maintenance, &c., accounts were taken, and the result showed that the Board could make concessions to the ratepayers, and at same time provide for their responsibilities under capital account.

On presentation of report to the Board the following scale of rents was approved of:—

Meter.	Old rent.	New rent.
$\frac{1}{2}$ inch	...	7s. to 5s. 6d. per annum.
$\frac{3}{4}$ "	...	9s. to 7s. 0d. "
1 "	...	11s. to 8s. 3d. "

This reduction is equal to 22 per cent. on the original rates, and allows a small margin for contingencies.

The quantity of water supplies free for public parks and charitable institutions during the year amounted to 76,579,000 gallons. The value to the Board if they could, under the Act, take credit for same is £3,828 19s., being an increase over previous year of £598 14s. 9d.

In connection with the adoption of a uniform type of meter, I would like to remark that, when it is taken into consideration the numerous types of meters and their high first cost to the consumer in the first instance, in addition to cost of fixing and maintenance, the tangible results of local manufacture, with indestructible material as compared with cast-iron, must in time force itself on the consideration of the public. If this applies to meters purchased right out, it will apply with greater force to the system of hired meters, where the consumer pays a low rental, and, after fixing, is entirely relieved for cost of maintenance.

Fires.

Only 52 fires were reported by the turncocks as requiring their attendance during the year.

Pumping Plant.

With exception of the usual overhaul to No. 1 Worthington engine, no work of importance was carried out in connection with the Crown-street engines.

The details of work done are shown in report of Chief Mechanical Engineer.

Ryde Station.—Considerable amount of work has been carried out by the staff, under Mr. Westcott, in overhauling the western engine, and are more particularly described in Mr. Fyff's report.

A smithy has been provided for the use of staff, and has proved very useful.

Gas has now been laid into the engine and boiler house, which will be beneficial in working the establishment.

The increased pumping necessitated an increase in the staff. This can be attributed to the rapid development in the North Sydney district.

Carlton Station.—The engines here are in good working condition. The new Worthington pump has given satisfaction since it was erected; only repairs incidental to ordinary wear and tear were carried out. Repairs have been effected to the boiler setting, and alterations made in combustion chambers, which has improved the results in steaming.

Chatswood Station.—The contractor for supply of new pumping plant and boiler has satisfactorily carried out his contract. The pump has been working continuously for over six months, and gives every satisfaction. They work easy and almost noiseless. Considering the intermittent nature of the pumping, owing to small tank accommodation and the long length of small rising main, the duty obtained can be considered as satisfactory. The engines are Blake's compound duplex, direct-acting, high-pressure type, with air-pump and jet-condenser, and were imported from Blake and Knowles, the English representatives of the American firm. The boiler was manufactured locally, and is of the multitubular type.

Under contract the plant was required to lift 500 gallons per minute to a height of 370 feet, through a 10-inch steel-riveted main, and 13,640 lineal yards long. The following are the leading dimensions of the engine:—H.P. cylinder, 11 inches; L.P. cylinder, 22 inches; stroke, 18 inches; pump-plungers (externally packed), 9 inches diameter; working pressure in boiler, 110 lb.

Richmond Station (Country Supply).—The plant has been working without overhaul since 1891. Repairs have, however, been carried out this year which have improved the working and raised the duty.

Cost of Pumping.

The cost of pumping at the various stations is given below:—

Pumping Station.	Name of Reservoir to which Water is raised.	Total Volume pumped during year.	Cost of Lifting 1,000,000 gallons 100 feet high.	Cost of Lifting 1,000 gallons 100 feet high.
			£ s. d.	d.
Crown-street	Paddington	1,858,043,700	} 1 12 3	} 387
	Woollahra	432,468,150		
	Waverley	328,456,620		
Ryde	Ryde Hill	111,425,000	} 1 15 2	} 422
	Chatswood	392,208,000		
Carlton	Penshurst	65,137,529	4 15 9	1 149
Chatswood	Wahroonga	60,561,990	3 7 1	805
North Richmond	North Richmond	12,064,000	7 9 0	1 788

Coal Consumed.

	Tons.	cwt.	qrs.	lb.
Crown-street pumping station	2,800	13	3	7
Ryde " " " " " " " " " " " "	1,272	16	2	14
Carlton " " " " " " " " " " " "	261	6	0	0
Chatswood " " " " " " " " " " " "	399	16	2	0
North Richmond " " " " " " " " " " " "	56	17	0	0
Total for year	4,800	9	3	21

There is an increase in the cost of pumping at all the stations. At the Crown-street Station the increase is about 12 per cent. Last year the contract was let for the supply of Helmsburg Mine coal only.

The returns of water pumped and coal consumed show that the superior steaming qualities are only about 5 per cent. above the coal used the previous year. The cost of pumping, reduced to per 1,000 gallons 100 feet high, is 12 per cent. above last year; so that it is questionable whether the small difference in the work done justifies the difference in the price of coal. This question will be considered when a new contract is being prepared.

Duty of Engines.

From Crown-street to Paddington... ..	61,310,925 ft.-lb. per cwt. of coal.
" " Woollahra	61,235,766 " "
" " Waverley	48,411,112 " "
From Ryde to Ryde Village	60,259,000 " "
" " Chatswood	66,060,570 " "
From Carlton to Penshurst... ..	29,527,438 " "
From Chatswood to Wahroonga	38,231,104 " "
From North Richmond to North Richmond Tank... ..	28,323,831 " "

The quantity of water lifted by the above pumps during the year was 3,260,864,989 gallons; an advance of 171,596,816 gallons over that pumped last year.

There is a general improvement in the duty observed in the working of the plant. In connection with the Richmond plant, the coal used for banking fires and raising steam was not hitherto taken credit for. This year this has been done, and a marked improvement in the duty has resulted.

Length

Length of Mains under Board's Control.

The length of mains, exclusive of trunk and pumping mains, under the Board's control is 967·7 miles, and the number of screw-down hydrants 1,858, and ball hydrants 18,740.

Reservoirs and Service Tanks.

The reservoirs and service tanks have been cleaned out, and are in good serviceable condition.

The new steel tank at Wahroonga, having a capacity of 1,000,000 gallons, for the Gordon-Hornsby district, is completed all but painting; the delivery pipes and other fittings will be shortly fixed in position. This tank will take the place of the existing 40,000-gallon tank for general service; the latter will be retained for the supply of the adjacent high-level zone. Residences for the local officers are being erected at Wahroonga and Penshurst; these will be placed under rental, and while receiving a return for the money expended, will ensure protection for the Board's property. The enclosures will be planted and made ornamental as well as useful.

The new Centennial Park reservoir has been completed by the Public Works Department, and will be handed over to the Board in a few months. The pumping main and trunk supply main have been carried out by the Board. The improved storage will be available for the metropolitan area during the next summer.

New Districts.

Beyond the completion of the schemes for the supply of Thornleigh, Pennant Hills, and Beecroft, and for Sherwood and Holroyd Park, no new districts have been opened up.

The schemes formulated for the supply of country towns of Camden and Narellan, also for metropolitan districts of Mobb's Hill and Eastwood, are still in abeyance; the former on account of the existing Act not applying to same, and the latter because the financial aspect has not improved.

Country Towns Water Supply.

The various works in the towns of Richmond, Smithfield, Liverpool, and Campbelltown are in good working order.

Owing to the death of the local turncock at Campbelltown, a vacancy occurred, which was filled by appointing one of the men trained in the service, and locating him at Liverpool in lieu of Campbelltown.

During the year several complaints were received from the local Council *re* the unsatisfactory quality of the water in some portions of the town. On the matter being investigated, the cause was attributed to the number of "dead ends" in the reticulation system, and the presence of numbers of small shrimps, which passed from the reservoir into the supply main. The Board having approved of a large number of the "dead ends" being coupled up to ensure constant circulation, and providing screening arrangements at the Liverpool dam, the work was carried out, and a marked improvement in the quality of the water resulted; the analysis by the Health Board indicated a higher state of chemical purity than that supplied to the metropolitan area. No complaints have been received since. The Richmond tank was cleaned out, and the mains in the town thoroughly flushed. This work will be more regularly taken in hand by giving additional assistance to the local officer, who has to pump water and attend to collection of rates, &c.

Complaints were received from residents to the effect that the waters of the Hawkesbury River, from which the town supply is obtained, was being polluted by a woolwashing establishment higher up, near the town of Penrith. The matter was thoroughly investigated by the Health Board and the assistant engineer on behalf of this Board.

The outcome of the inquiry being a recommendation to the Board to construct filter-beds in connection with the town supply. This matter was, however, taken over by the Minister for Works, as the system was not transferred to the Board, the latter only managing the works until the amending Act is passed, giving the Board the full control.

Botany Reserves.

No further steps have been taken to lease the spare land on the old water reserve, although inquiries have been made anent same.

The five establishments at present located are in good order—additional plant has been made to two of the premises—the tendency being in the direction of improved machinery.

A lease has been effected to the military authority of an area of the vacant land for a resting place for artillery horses, at a rental of £75 per annum.

The fences, drains, wharf, and other improvements are kept in good condition.

The overseer reports that the rainfall for the year was 46·75 inches, and during last six months the rains necessitated the opening of the flood-gates, and an enormous quantity of water flowed into Botany Bay. The quantity stored for use of lessees is estimated at 340,000,000 gallons.

Contracts let during year.

The contracts let or in progress during the year were, viz., relining strengthening, upper canal supply of coal; cartage; general pipe-laying; supply of 2,000 ball hydrants; supply of steel and cast-iron water-pipes; supply of ball and socket submarine pipes; supply of material and erection of 1,000,000 gallons steel tank at Wahroonga; new pumping plant and boiler, Chatswood; extension of building, Chatswood pumping station; supply of 42-inch and 36-inch cast-iron and steel mains in connection with Centennial Park Reservoir; overhauling Blake pumps, Carlton Station; officers' quarters, Kenny Hill; fencing

fencing Botany Reserve; fencing upper canal; supply of stop valves, 20-inch to 3-inch; erection of smithy, &c., Ryde pumping station; supply of wrought-iron gates, upper canal; erection of cottages, Penshurst and Wahroongah tanks; and supply of wrought-iron bands for Ryde pumping main.

A considerable amount of work has been carried out by day labour, viz., main laying in the city; making additions to workmen's cottages; raising puddle wall of Prospect Dam; relining of upper canal, and general maintenance work—incidental to the proper care of Board's property.

Expenditure on Loan Vote.

	£	s.	d.
New mains, including arterial mains	58,303	9	11
Buildings, machinery	7,491	9	4
Relining of upper canal... ..	10,087	16	8
Raising Puddle-wall, Prospect Dam	3,901	8	11
Sundry works	3,223	18	0
Total	£83,008	2	10

Expenditure on Revenue Vote.

The expenditure on maintenance of works during the past year was £30,460 7s. 4d.; of this amount, £1,672 13s. was expended in reconstructing the Cataract Dam destroyed by flood of February.

The reports of Chief Mechanical Engineer and Resident Engineer at Prospect, also summary of mains laid are submitted herewith:—

Report of Chief Mechanical Engineer.

Sir,

Waterworks Reservoir, Crown-street, 11 July, 1898.

I have the honor to submit the following report upon the working of pumping engines, &c., and water supplied for the year ended June 30th, 1898. The only work of any moment during the past year was that of general overhaul to No. 1 Worthington pumping engine on 17th June to 21st July, 1897; for renewals and adjustments where found necessary; and which consisted of opening out cylinders, steam valve casings, air pumps, and main pumps; H. and L. pistons were drawn, piston rings done up and readjusted; two defective studs drilled out of cylinder, new ones fitted; steam valves done up and adjusted; air pump pistons done up and fitted with V.I. valves throughout; all valve gear connections and air and main pump connections were stripped and adjusted; two compensator pistons rebushed with gun metal, and one done up by removing bushes; four compensator glands rebushed with gun metal; eight new compensator gland bolts; compensator connecting rods lined with plastic metal and fitted to gudgeons; compression air-pump rod rebushed; steel connecting pin fitted to opposite end; compensator water pump connecting-rod bush trued up, and new steel connecting pin fitted; all valves removed from main pumps, and pumps thoroughly scaled and painted internally; valves replaced; defective iron spring caps replaced by new brass ones, and several new springs; a quantity of jacketing steam-pipes and couplings renewed; Nos. 3 and 4 boiler safety-valves dismantled and done up. All boilers have been attended to in the way of cleaning, &c., as required. The renewals and repairs to Nos. 2 and 3 pumping engines for the year have been of the usual nature incidental to ordinary wear. No. 2 pumping engines being due for general overhaul is now being proceeded with. The hydrant connections for safety in case of fire have been attended to and periodically tested in order to maintain their efficiency. The electric light and power was installed, and in use now about a year, giving light to engine-house, offices, and yard, and giving dynamo power for driving machinery of motor shop in day-time.

Water pumped during the year ended and for the quarter is given in tabulated form, herewith attached, and as under, viz.:—Water pumped by Crown-street pumps during the year to Paddington reservoir was 1,859,743,700 gallons, being 63.49 million gallons more than the year previous; and for the quarter, 452,753,000 gallons, being 45.88 million gallons more than the corresponding quarter of the year previous. The quantity of water pumped to Woolahra reservoir during the year was 430,486,550 gallons, being 12.2 million gallons less than the year previous; and for the quarter, 95,703,100 gallons, being 7.7 million gallons less than corresponding quarter of previous year. The quantity of water pumped to Waverley reservoir during the year was 328,459,170 gallons, being an increase on the year previous of 47.19 million gallons; and for the quarter, 80,403,250 gallons, being 13.54 million gallons more than corresponding quarter of previous year. The quantity of water pumped at Ryde works for the year to Ryde Hill was 1,11,375,000 gallons, being 20.13 million gallons less than the previous year, owing to part of Balmain having been taken off this source of supply; the pumping for the quarter was 24,057,000 gallons, being 81 thousand gallons less than the corresponding quarter of year previous; to Chatswood, was 392,208,000 gallons, being an increase on the year previous of 60.96 million gallons. The pumping for the quarter was 94,512,000 gallons, being an increase of 19 million gallons on corresponding quarter of year previous. This rise was somewhat expected, seeing that North Sydney is supplied from this source.

Considerable repairs and renewals have been effected by the staff at Ryde works during the year, and consisted of strengthening eastern valve-chamber by a band clip on branch leading to pump, it being cracked. The blow-off connections have been altered, consequent to their being defective. The sediment tubes were taken off and welded up on the lower end, then refixed, and blow-off connections connected thereto. A new supplementary injector feed has been installed. The main feed-pipes were defective, and having to be renewed were fitted with copper pipes. The post joints of H.P. cylinder, western engine, have been rejoined. Gas is being laid on throughout the engine and boiler house. A smithy has been added to the works, and is of great convenience. The work of doing up valve-chamber, seat-bearings, and seats is about to be taken in hand, when a good opportunity will be given to examine the main pump barrels.

The

The quantity of water pumped at Carlton during the year was 66,866,210 gallons, being an increase of 5.94 million gallons on the year previous; and the quarter's pumping, 19,042,070 gallons, being 2.68 million gallons more than corresponding quarter of previous year. The usual renewals incidental to wear has been attended to, and the boiler-setting had some repairs effected.

Chatswood pumping for the year amounts to 60,442,190 gallons, being an increase of 23.8 million gallons on the year previous; and pumping for the quarter was 15,331,200 gallons, being 8.57 million gallons more than corresponding quarter of previous year. The new Blake pump supplied by Morris Bros. has been doing the pumping at these works for the last six months, and running satisfactorily.

The pumping machinery at all the works is in fair working order and condition.

The Engineer-in-Chief.

J. FYFE,
Chief Mechanical Engineer.

Superintendent's Report.

Prospect, 2 July, 1898.

THE year opened favourably here with the water level at 193.04, the situation in April, 1897—the water then having touched R.L. 183.85—having been relieved by rain on April 24th, which raised the level almost to 186.00. A slight recession was then experienced, with some variation till the rains of 1st June and following dates, which resulted in a rise to R.L. 193.50, or 20 in. below top water level.

Owing to works in progress the water was not then raised above that level, and was maintained at levels varying from 192.00 to 189.00 till February, 1898, when a favourable opportunity enabled it to be lifted to 195.06 or 1½ in. from by-wash level. Since then, the lowest level touched was 186.54; but last month's rains furnished an abundant supply, with the result that at date of writing the reservoir is overflowing.

The maintenance of a high level during the whole of the past year was considerably interfered with by the existence of a contract for lining portion of the Upper Canal, several opportunities of raising the level of the water being foregone owing to reluctance to interfere more than was necessary with the operations of the contract, while the low level flow of the rivers was almost wholly unused.

The contract for lining is now finished, and further operations in that respect are being carried out by day labour, a course which I unhesitatingly endorse, as it is of the greatest importance that the control of the water shall be in the hands of the Board's officers only, without any intervening interests.

One mishap of note occurred during the year, and that was the destruction of the Cataract Dam by the flood of February 14th. This flood rose to a height of 16 ft. above the crest of the dam, being 4 ft. higher than any flood experienced since its construction. This extra height invaded timbered country which had not been so swept since records have been kept, and brought down immense quantities of drift timber accumulated above previous flood levels. Not only did it bring this timber, but it also dislodged probably hundreds of tons of boulders; and of these, many were swept along by the water from positions above to positions below the dam. Several of these, weighing individually 3 or 4 tons, may now be seen 100 feet below the dam, which, prior to the flood, are known to have been 500 feet above it. The dam, which was of masonry, was by these means battered to destruction course by course. It is notable that the Nepean dam, which is built of concrete, at the same time withstood a flood passing 6½ feet in depth above its crest without the least injury. The Cataract Dam has now been rebuilt in cement concrete of hard sandstone, mixed in the proportions of 4 stone, 2 sand, and 1 cement. The foundations of the old dam, found to be undisturbed, were allowed to remain, but deep holes were drilled into or through them, and steel rails of 18 lb section set in cement at all angles, and allowed to project well up into the

new

new work. Pudding-stones were introduced to save concrete, and the whole so carried out as to avoid continuous joints, whether longitudinal, horizontal, or vertical. The amount of concrete used was about 650 cubic yards (exclusive of pudding-stones, which are estimated at 50 cubic yards), and the total cost, including the removal of damaged portions of old work, repairs to gear, cleaning up, &c., &c., was £1,550. The work was somewhat hampered by the necessity of providing for the water supplies of Campbelltown and Liverpool, which had to be replenished about every two weeks, and, in fact, water was supplied to them by means of a sandbag dam within a week after the dam carried away.

The weather was fortunately favourable, no fresh occurring till near the completion of the work, when it passed 2 ft. 6 in. over the new work for some hours without doing any damage.

Work on the lower canal has been reduced to the minimum, consistent with effective maintenance, in view of the proposal to raise the sides, which will entail an entire revision of the works. Otherwise attention has been given to all parts of the line, the chief works (apart from details attended to in the ordinary course by our maintenance men), carried out during the year being as enumerated below:—

Relining canal, Hamilton's contract, 3,171 lineal feet, at a cost of £6,481.—The cost of this work per foot run—as, indeed, of all relining—is enhanced by the irregularity of the sides, when stripped, necessitating considerable extra concrete, while the spaces to be filled are not large enough to be effectively filled with either earth or stone packing. The whole work under the contract was 5,432 lineal feet, and 703 cubic yards extra concrete, at a cost of £7,874 18s. 11d.

Doming shafts on Nepean Tunnel.—Domes have been constructed of concrete, on a good rock foundation, in each of six shafts on this tunnel, with ventilating and manhole shafts carried to the surface of ground. Total cost in round figures, £500.

Fencing has been renewed on Upper Canal to the extent of $4\frac{1}{2}$ miles. The new fence is of four wires and top-rail, posts and wire being new, the top-rail being selected from the best of the old timber. This was contract work, and cost £282.

Relining canal, section 10, day labour.—Of this work 1,700 lineal feet have been completed, at a cost of £3,100. This includes a large quantity of material on hand—cement, sand, and broken stone—and work stripped ready for concrete. The cost of this work is increased, as before-mentioned, by irregularity of section, and further, in this case, by the fact that we are treating first the bad banks, separate pieces of work necessitating constant removal of plant; and it has nearly all been curved work, requiring double centering. With the increased plant (Contractor Hamilton's gear having been purchased), and opportunity for more continuous work, the cost per foot run should be considerably reduced.

Raising puddle-wall, Prospect Reservoir.—About two months of fine weather should see this work finished, giving an extra capacity of 1 ft. 6 in. to the reservoir, or an increased storage of over 700 million gallons. The expenditure to date on this work has been £1,600 (approximate). As the result of this work, we have large quantities of kerbing, pitching, spawls, and road metal stored in the quarry, most of which will be available for raising the lower canal, and necessary work connected therewith. This should not be lost sight of, as it is a most valuable lot of material, stored in a convenient position.

Among minor works may be mentioned the following:—

July, 1897.—Lower canal emptied and partially cleaned out; some repairs effected to covered way.

August, 1897.—Offtake to Holyroyd Park put in; thinning timber and cutting out underscrub at Prospect; alterations and extensions of surface drainage at Potts' Hill.

September, 1897.—Painting bands and cement coating 72-inch main; drainage, &c., to brick cottages at Prospect.

October, 1897.—Pitching by-wash at Prospect from Bridge to 72-inch main; leakages in lower canal reduced; telephone line rearranged and straightened.

December, 1897.—Repairs to Veteran Hall; additional water-holes in front paddocks; flattening slopes of cuttings on upper sections; additions to cottage at Kenny Hill.

January, 1898.—Puddle core in Liverpool dam opened up, raised, and made good where some small leaks showed at the top.

February, 1898.—Heavy floods; Cataract Dam carried away, and considerable damage done to fences, telephone line, roads, approach to Nepean Tunnel, &c.; repairs in hand.

March, 1898.—Roads extended from Prospect embankment to Dog Kennel Road and end of Section 10; relining canal (day labour) started; repairs to Cataract Dam, and doming shafts on Nepean Tunnel in hand; upper canal cleared out where necessary; painting aqueducts started; pointing pitching on Section 9 in hand; Nepean and Cataract Tunnels inspected throughout and found in good order.

April, 1898.—Cleaning and coating 72-inch main with cement wash and painting bands; painting ironwork on aqueduct; repairs to gate and grating, Nepean Tunnel entrance, and repairs to approach to Nepean Tunnel.

May, 1898.—Clearing and preparing ground for tree-planting, Liverpool Dam; all concrete placed in Cataract Dam; forming road from canal through Mr. Darley's place; approach to winch house, Cataract, in lieu of temporary ladders; ford below Nepean Dam.

June, 1898.—Reservoir filled and overflowed on 20th instant, and is still running over; scours also open; Liverpool Dam emptied and refilled; Hamilton's contract for relining finished; Buttenshaw's contract for fencing finished; duplicate telephone line in hand.

Agistment fees for the year have amounted to £415 18s. 5d., being the largest year's taking yet recorded. I have submitted a proposal to appropriate a sum from Loans for further clearing the watershed area and other paddocks, which have never yet been cleared. This would not only admit of increased revenue from agistment, but would tend to do away with large quantities of rubbish, bark, leaves, &c., which are washed into the reservoir with every heavy rain.

The Board Engineer.

A. F. JACOBS,
Superintendent.

II.—SEWERAGE BRANCH.

During the year the following storm-water drains, constructed by the Government Sewerage Branch, have been transferred to the control of the Board under the provisions of the Amending Act of 1894, viz. :—

Double Bay storm-water channel.
 Homebush Creek storm-water channel, Albyn-street branch.
 " " " Homebush-road branch.
 " " " Russell-street branch extension.
 Willoughby Creek channel.
 " " Falcon-street branch.

During the same period the following main sewers, constructed by the Government Sewerage Branch, have been transferred to the Board under the provisions of the Amending Act of 1889, viz. :—

Western Suburbs System.—Constructed under Act 54 Vic. No. 17, viz. :—

Western System.—Outfall sewers, divisions 1, 2, 3, and 4.

Renwick-street sub-main.
 Sydenham-road sewer.
 Edgeware-road sub-main.
 Little Tupper-street sub-main.
 " " extension.

Nelson-street sub-main.
 Parramatta-road sub-main.

Northern System.—Main sewer, division No. 3.
 Foucart-street sub-main.

North

North Sydney Sewerage.—Constructed under Act 52 Vic. No. 22, viz.:—

North Shore outfall sewer.
 " " Earnest-street branch.
 " " extension.
 McDougall-street sub-main.
 Willoughby-street sub-main.
 Lavender Bay sub-main.
 Glen-street sub-main.
 Blue's Point sub-main.

No municipal storm-water drains have been taken over during the year.

A portion of the sewerage system carried out by the Glebe Local Council was taken over under the provisions of the Amending Act of 1889.

The total length of sewers and storm-water ducts transferred to the Board were, viz.:—

Sewers—13·64 miles. (*Vide Appendix A. Tables 1 and 3.*)
 Storm-water ducts—2·03 miles. (*Vide Appendix A. Table 2.*)

Surveys, &c.

Surveys have been carried out to determine the position and level of side inlets for the Government Sewerage Department in connection with the reticulation sewers, which are carried out under the Board, for the following sewers:—

South Willoughby sewer.
 Neutral Bay sewer.
 Marrickville low-level sewer.
 Western Branch, 4th division.

Surveys have also been made for extension of storm-water drains at Rushcutter Bay, Victoria and Gresham streets, and for reticulating sewers in Annandale, Ashfield, Balmain, Canterbury, Glebe, Leichhardt, Marrickville, North Sydney, Paddington, Petersham, and Waverley. Surveys are also in progress for dealing with the balance of the above districts, as well as Newtown, St. Peters, and Willoughby.

New Sewers.

The total length of sewers constructed by the Board during the year is 50·85 miles, and of storm-water ducts 15 miles. (*Vide Appendix B.*)

The aggregate length of sewers and storm-water ducts under the Board's control is 340·83 miles.

The usual procedure is followed in throwing open the sewers for the use of the public so as to make them revenue-bearing at the earliest moment. This applies only to where the main sewers constructed by the Government Sewerage Department are available.

Contracts in Progress.

The work of constructing the reticulating sewers has been vigorously pushed on, during the year 26 contracts were in progress as against 22 for the previous year, the total length of sewers aggregating 445,000 lineal feet of various sizes, in formations varying from hard rock to water-charged sandy soil. Construction of wrought and cast iron for sewers and construction and erection of metal ventilating shafts in the city and suburbs.

Contracts for erection of two brick main ventilating shafts, one at Bellevue Hill, on Main Bondi Sewer, and the other in Victoria Park on the Camperdown branch of the Bondi Outfall.—These shafts are ornamental in appearance and, while being useful, do not detract from the appearance of the surrounding locality.

Additional filtration tanks with underdrainage and extension of main carrier have been constructed on the sewage farm. Trapped gullies have been constructed in former open inlets of Iron Cove storm-water duct, these were constructed by the Board on account of the nuisance set up and danger to health, by the foul air emitted from the openings of covered portions of the storm-water duct. Flushing-gates were fixed at Long Cove Creek storm-water duct.

Storm-water Sewers.

The loss on the storm-water sewers still continues to be a drag on the sewerage revenue of the Board. Owing to the large size of some of the ducts and the quantity of sand and silt carried into them, the cleansing by hand becomes expensive. In order to reduce the cost of maintenance as much as possible, a pair of flushing-gates, worked by water power obtained from the adjacent water main, and controlled by one man, were erected on the Long Cove Creek duct, near Battle Bridge. Since the gates were erected the District Inspector reports that they are efficient for the purpose and labour saving, inasmuch as he was enabled to detach two men for other duty. This system has been so far successful, that the Board approved of erection of another gate on the Beattie-street Channel, Balmain.

Other channels will be dealt with in the near future, as it is necessary to reduce the cost of maintenance to a minimum; this applies with greater force to the Rushcutters' Bay storm-water duct.

Outfall Sewers.

With the exception of two lengths of the Bondi Outfall Sewer, which are scoured in the invert, all the main ducts are in good condition. The various penstocks, valves, &c, are regularly attended to and kept in order for any emergency. The construction of the storm-water sewer through the Double Bay Valley provides an overflow and safety-valve for the Bondi Outfall. This provision formed part of the original system. The automatic flow-recorders continue to give satisfaction.

Reticulation

Reticulation Sewers.

The whole of the reticulating sewers in the old and new systems are regularly attended to. Some of the former had to be replaced and made water-tight, the fault principally lying in defective jointing. New cast-iron covers have been fixed on lamp and man holes to replace old timber covers which had become dangerous for traffic. Two old sewers had to be lowered to suit improved conditions of buildings requiring greater depth.

Owing to the surcharging of the Wattle-street and other sewers during heavy rainfall, some of the premises connected thereto had to be provided with reflux sink-traps in house drains to prevent flooding, and to afford egress for the surcharge water. The manhole covers were filled with guide-rods so as to admit of same lifting with the pressure and reseating when same was spent.

The addition of the sewers transferred by the Government and new reticulating sewers necessitated augmenting the maintenance staff.

The various flushing-tanks placed at terminal points of slow grades are acting effectively.

Removal of Silt from Sewers, &c.

The quantity of silt removed during the year from the old system was 1,450 tons. The quantity from main outfalls, new system, was: Bondi, 665 tons; Botany, 453 tons. Considering the extensions made, this quantity cannot be considered as large.

The silt is disposed of on Government reclamation works, being conveyed thereto by the sludge punt "Ino."

The quantity of sand removed from the stormwater-ducts for the year was, viz:—

Metropolitan	2,300 loads.
Suburban	2,430 „

As before mentioned, the introduction of flushing-gates will effect considerable reduction in the cost of maintenance.

Repairs to City Sewers.

The repairs to Pitt-street sewer were completed during the year. This work closes the repairing work of the old system of city sewers. It was commenced in 1891, and carried on every year by the staff as the work of the Department permitted. The whole of the main branches of the old system may now be considered in a good condition, and will stand for years. The work consisted of renewing invert where scoured out through the erosive action of street-metal and sharp sand, which has extended over a period of years prior to the Board taking control. The sides and intrados of arch have been repointed, where necessary. Manholes have been brought to the surface and fitted with cast-iron covers. Where same occurred under tramlines, which were constructed long after the sewers were built, side entrances were made; so that, under the altered conditions, the sewers can be maintained with the same facility as those on the new system.

The work done since repairs were commenced is, viz. :—

	Invert repaired.	Pointing.	Arch repairs.
	Feet super.	Feet super.	Feet lineal.
1897-8	6,165	30,238	nil.
1896-7	1,418	1,255	nil.
1891-6	35,817	209,351	1,817
	<u>43,400</u>	<u>240,844</u>	<u>1,817</u>

This work has been paid for out of revenue, and the staff will be distributed over the maintenance work generally.

Pumping Station.

The plant at the ejector station is in good running order; the ejectors continue to work well. The Engineer-in-charge, Mr. Brown, has, by attention and management, reduced the working expenses to a satisfactory point. The consumption of coal to the work done, as represented by sewage lifted into the outfall, has been considerably reduced since the works started.

Outlet Works, Cook's River.

The building is in good condition, and the strainers, valves, and other working gear in good working order. No stoppage occurred during the year.

The quantity of sludge removed from the chambers was 2,005 cubic yards, as against 1,975 cubic yards for previous year.

The quantity of lime used was 11 tons, as against 2 tons for preceding year. The increase was necessary to render the sewage more adaptable for cultivation on the Farm. The appearance of the crops since the change justifies the increase.

The workmen's cottages are in very fair order, but will shortly require painting and overhauling.

The locomotive and trucks are in very fair condition.

The temporary bridge across the river has been repaired, and is periodically examined to ensure safety.

Sewage Farms.

Botany Farm.—The disposal of the sludge from inlet-house has been carried out without difficulty or nuisance. The sewage, which now amounts to 2,675,000 gallons daily, is satisfactorily disposed of.

Additional filtering areas—35 acres in extent—have been added during the year, the main carrier and railway being extended in connection with same. The planting has been pushed on, and means taken to form breakwinds on the more exposed portions of the farm. The trees have been carefully selected, only those suitable for the climatic conditions of the place being planted.

The plantations formerly made are showing up well, and enhances the appearance of the place.

Very fair crops have been produced during the year. Several crops were lost owing to a severe gale and the exposed situation of the farm. This would have been an absolute loss if pig-raising did not form part of the establishment; but under the circumstances, what could not be disposed of was consumed by the pigs.

The growing crops look thriving, and if the manager has any luck, a return can be expected when they mature.

The piggeries and stock sheds have been extended, and are in first-class condition; these are equal to any in the colony, as there is every facility for keeping them clean and airy.

The Manager reports that the proceeds of the farm are:—Agistment, £107 1s. 6d.; sale of produce, £67 5s. 9d.; and sale of stock, £24 15s.; total, £199 2s. 3d. The revenue for the preceding year was £105 10s. 3d. The amount expended on sale of stock was £80 10s. 3d., and the present value of same is £125. There is no doubt that the best results in the way of revenue-producing lies in the direction of pig-raising, as there is every facility for producing clean, wholesome pork on the farm.

As heretofore, the whole of the ploughing and harrowing is done by contract. A system of deep-furrow ploughing is carried out, which, with the underdrains, assists in the aeration of soil, and tends to keep it from becoming sour.

The cattle have increased from four to thirteen. Only one case of sickness occurred, and the cow was, on the advice of the Health Board, destroyed, as tuberculosis had developed. With regard to the pigs, no case of sickness occurred, the number at present being eighty of all ages.

The fencing, which was destroyed by a severe gale, is being re-erected in a more secure place.

Rockdale Farm.—As this farm is in connection with the Western Suburbs system, all accounts of expenditure, &c., will be kept separate, and it will be dealt with separately in reports.

The farm was transferred to the Board in the early part of the year, so as to dispose of the sewage which would be discharged into the main sewers from the districts thrown open for public use.

Although transferred, the work of forming the beds by the Government was continued, there being sufficient area prepared to deal with the amount of sewage coming down.

In order to obtain best results from the ground, under-drainage will be necessary, and steps will be taken to have this work carried out shortly.

In order to provide breakwinds for the future, and enhance the appearance of the place, systematic planting is necessary, and to carry same to a successful issue the advice of Mr. Maiden, F.L.S., Director of Botanic Gardens, was obtained. This gentleman kindly visited the farm and gave valuable advice as to position and nature of trees suitable; he also supplied about 1,500 trees for the purpose.

The Board approved of an appropriation for this work, and it was put in hand at once so as to catch the season.

I have no doubt that, with judicious care and management, this farm will be ornamental as well as useful, and not the nuisance as anticipated by some persons.

Contracts will be let for fencing and extending permanent-way to the western boundary of farm.

It is also contemplated erecting residences for the employees on the farm, in such position that all parts will be overlooked. As these buildings will be let at a rental, there will be no undue charge on the revenue account.

The various places under lease are in a satisfactory state. The water-main has been lately extended for the convenience of the lessees.

The effluent water has been periodically examined by Mr. Hamlet, Government Analyst, and maintains its former purity.

House Drainage Connections.

The following is the number of houses which are connected with the metropolitan and suburban sewers under the control of the Board:—

	1890.	1891.	1892.	1893.	1894.	1895-6.	1896-7.	1897-8.	Total.
City...	961	541	1,070	1,223	1,050	1,384	971	1,147	8,347
Suburbs...	3,804	3,578	3,443	3,437	2,853	3,113	2,160	2,685	25,078
									33,425
									18,000
									51,425

The subjoined list shows the number of properties connected with Board's sewers during the past twelve months:—Alexandria, 138; Annandale, 204; Balmain, 28; Camperdown, 8; Glebe, 302; Erskineville, 298; Leichhardt, 163; Marrickville, 227; Newtown, 615; North Sydney, 91; Petersham, 135; Paddington, 65; Redfern, 138; Randwick, 26; Waterloo, 17; Waverley, 129; Woollahra, 101.

House Drainage Plan Fees.

The fees received for house-drainage plans, and plans prepared, were—

	1890.	1891.	1892.	1893.	1894.	1895-6.	1896-7.	1897-8.	Total.
Plans...	2,213	2,303	2,485	2,669	2,119	2,624	2,557	3,219	20,189
Fees ...	£1,933.	£1,938 15s.	£1,937 13s. 6d.	£1,107 6s. 6d.	£918 15s.	£369 5s.	£708 7s. 6d.	£800 2s. 6d.	£1,891 17s. 6d.

The number of houses surveyed and charted in permanent records was 2,391, and the number of building plans lodged was 38.

The

The contract for compulsory drainage work commenced on 1st January, and terminates on 31st December next; and, as only one payment has been made, the comparisons of cost per house, as compared with previous years, would not hold good. Future contracts will provide for period of contract to correspond with financial year.

Great activity is shown at present in the work of house drainage, owing to the large additions which have been made to the sewers available for public use. This applies to case of application by the owners and those under the deferred-payment system. Under the deferred-payment system, 156 estimates have been prepared for submission to the Board.

Owing to the Amending Bill not being in force, the Board cannot move direct in enforcing the By-laws within the city in connection with premises connected with the old sewerage system, the sanitary arrangements of which are defective and dangerous to the health of the occupants. The existing machinery is too complicated to ensure anything like active results. It is to be hoped that the Act will be passed as soon as possible.

House Drainage Certificates.

The number of official certificates issued to owners since inception of the system is—

	1891-6-7.	1897-8.	Total.
City	1,670	536	2,206
Suburbs	4,500	560	5,060
Total...	7,275

Defective Drainage.

During the year the officers smoke-tested 25 premises which showed the drainage to be defective. Through the action of the Municipal Council, the local Authority under the Health Act, many places came under the supervision of the Board in connection with the reconstruction of drainage and sanitary plumbing. No less than 821 approved gullies were fixed in connection with house-drains. Under the defective Act under which Board works no further alteration could be enforced. Out of 111 notices to reconstruct the drainage, only 27 complied with same.

Sanitary Plumbing.

During the year 2,584 jobs have been supervised and passed, and 983 official certificates issued for same. Fifty-nine notices were served to alter fittings, and action was taken in 25. The Inspecting Staff smoke-tested the fittings of twelve places and hydrostatically tested 223. The Inspector reports that in the course of testing by hydrostatic pressure a considerable number of leaky joints were detected, some in the bedding of closet pans, some in the cast-iron pipes, both in the bodies and sockets—the latter through careless caulking. As leaks in sanitary plumbing cause considerable expense and trouble to cut out and make good, it has the effect of ensuring greater care by the workmen. This would not be the case if the water test was not insisted upon. The general experience is, that cases of bad work are on the decrease.

Among the many cases which have come under the observation of the officers, the following is quoted as a sample of defective fittings, &c.

In a large boarding establishment, the upstairs closet and bath were connected to the soil pipe. When the closet became choked—the closet being of the old pan and container type—the copper pan was completely eaten away, as was the lead soil-pipe in many places. The vertical joints of soil-pipe were slipped without being soldered. When the closet choked, which it frequently did, a quantity of faecal matter was forced into the bath. There was no lock-off trap or ventilation, and it is needless to say that the inmates were constantly ill from the effects of sewer gas. This place was put in a safe condition through reporting the matter to the City Council, as the Board could not force action, notwithstanding the absolutely dangerous state of the premises. In another boarding establishment the following defects were found, viz. :—Upstairs closet and bath connected with soil-pipe and a small 1-inch compo. pipe carried from bend of soil pipe to the eaves, terminating close to a bedroom window. The soil-pipe was of galvanized sheet iron, in bad condition. On the ground floor the lavatory and bath wastes were connected together and discharged into a low level down-pipe, thence direct to the sewer. There being no "lock off" trap, the sewer gas was laid on direct to the interior of the premises. Several instances were found that in attempting to ventilate, the sewer gas was either led to the interior of the house or up the rain-water pipes which terminated near bedroom windows.

Ventilation of Sewers.

The efficiency of the shafts erected have been tested, and the results are shown in the accompanying returns. The complaints as to nuisance from the shafts are decreasing. The maintenance staff has been kept busy effecting repairs, attending to water spray inducts, and altering sites of shafts, necessitated through alteration or improvements to buildings to which they were attached. During the year there were some severe gales, and out of 3,000 shafts only twelve sustained any damage. These were erected over seven years. Eight of the twelve were injured by falling trees. The "Hereward" gale injured three shafts only. All repairs were effected by the staff.

The combined induct-spray and flushing-tanks act efficiently and are all in good working order.

The two main brick shafts are doing good work. The influence on the main sewers affected is seen by the steady current of air and general drying up at previously wet surfaces.

The District Inspector reports that where the sewers have been ventilated the improvement has been marked.

Where practicable, dead-ends are connected up so as to ensure movements of air within the sewers.

Special Shafts.

These have been tested, and the results are shown in the following table. The results are satisfactory —

STEAM-SHAFTS, WATER-SPRAYS, AND STACKS, 1897-98.

Date.	Instrument.	Time	Anemometer.			Lineal Feet per Hour.	Cubic Feet per Hour.	Miles per Hour.	The Pressure per Square Foot.	Locality.

The erection of ventilating-shafts and arrangements for induced currents of air have been pushed on during the year.

It is satisfactory to report that the shafts are erected with very little friction with the general public, and I have to acknowledge courteous assistance on the part of the local municipal councils.

The total mileage of sewers ventilated is 270 miles; the total length of metal shafts erected is 124,201 lineal feet; as against 210 miles of sewer and 99,397 lineal feet of shafts last year.

The whole of the material used in the construction of the shafts is manufactured in the Colony.

Drawings.

During the year 536 record tracings have been made. This represents the same number of original drawings which, in order to expedite work, are only prepared in pencil. The tracings are heliographed for office and field use. This system is not only economical, but satisfactory.

Heliotypes printed, 1,625; plans mounted, 1,108; and photographs taken and printed, 361; 93 lantern slides of works and defective sanitary fittings prepared.

Expenditure

Expenditure on Loan Vote.

The amount expended on Loan Account during the year was £98,185 17s. 5d.

Expenditure on Revenue Account.

The amount expended on this account for maintenance, repairs, &c., was £19,897 8s.

Cement-testing Room.

The parcels of cement tested during the year was 24, representing 11,283 casks and 9,590 bags, the whole of which passed the standard tests.

Stoneware pipes, 66 of various sizes, tested ; 55 passed, 11 rejected.

Paving material—3 tests.

Sands—14 tests.

In addition to the above, the officer-in-charge tests the ventilating-shafts annually, and the following is a *résumé* of the work done :—

53 observations of temperature of sewers.
33 " " soil.
2,160 vent-shafts tested and 29 chimney-stacks and water sprays.

Diagrams.

Sewerage reticulation.
Zymotic death-rate.
Death-rate, city and suburbs.

Temperature of sewers.
Silt removed.

The information furnished by the Government Astronomer and Government Statistician has been of the greatest assistance to the Department, and I take this opportunity of returning my thanks for the courtesy shown by them.

The Assistant Engineers and other officers of the Department have ably assisted me in carrying out the various works, and I wish to tender my thanks for same.

Appendices, diagrams, and photographs herewith.

I have, &c.,

J. M. SMALL, M. Inst. C.E.,
Board Engineer.

The Secretary.

APPENDIX A.

TABLE No. 1.

SEWERS constructed by the Government Sewerage Department and transferred to Board.

NEW SOUTH WALES.

HUNTER DISTRICT WATER SUPPLY AND SEWERAGE BOARD.

(REPORT FROM 1st JULY, 1897, TO 30th JUNE, 1898.)

Newcastle, 9 September, 1898.

To the Honorable the Secretary for Public Works,—

Sir,

The Hunter District Water Supply and Sewerage Board have the honour to submit to you their Report for the year ended 30th June, 1898.

WATER SUPPLY.

2. The average daily consumption of water per head of the estimated population supplied was 20·89 gallons, as against 21·10 gallons during the year 1896-7. The average daily supply was 781,004 gallons, and the estimated population supplied was 37,375.

3. During the year there were 544 houses connected with the mains.

4. The number of properties rated at the close of the year was 13,537, of which 7,315 were connected, leaving 4,779 houses and 1,443 vacant lands not connected. The Board have not considered it advisable to exercise the powers conferred upon them by the Principal Act under which the occupiers of houses could have been called upon to connect with the mains. During the year 28,666 rate notices were served.

5. The deferred payment system, by which ratepayers are enabled to have water laid on by the Board, and repay cost by quarterly instalments extending over three years, continues to be used by persons who would not otherwise, owing to the expense, be able to connect their premises with the mains. Since the initiation of the system in August, 1894, 511 houses have been connected. The Board desire to point out that the terms offered are sufficiently easy to enable the poorest ratepayer to connect, and so derive the benefit of the water supply for the rate charged.

6. The lengths of mains now under the Board's control are as follows:—

<i>Suction Mains</i>	...	From River to Walka (old),	18 inches,	968 yards.
		" " " (new),	20 $\frac{3}{4}$ "	968 "
<i>Rising Mains</i>	...	Walka to Buttai (old),	15 "	5 miles 1,060 "
		" " " (new),	20 $\frac{1}{4}$ "	5 " 983 "
		" " East Maitland,	10 "	4 " 310 "
		" Newcastle to High-level Tank,	6 "	814 "
<i>Gravitation Main</i>	...	" Buttai to Newcastle,	15 "	17 " 762 "
<i>Reticulation Mains</i>	...	Laid at inception of Board,	105 "	1,442 "
		Laid by Board to 30th June, 1893,	32 "	14 "

Total	171 "	281 "

7. Extensive repairs to the main pipe line bridges, crossing swamps between Buttai and Lambton reservoirs, were commenced during the year.

8. The steps taken by the Board to keep up a circulation of the water in the storage reservoir at Walka have considerably improved the quality of the water. The circulation is kept up by using the water from the storage reservoir as well as from the river, replenishing the storage by pumping from the river. At times large quantities of water are also run off from the reservoir through the scour pipe. To remove the sludge which has accumulated on the bottom of the reservoir beyond the action of the scour-pipe, the Board have decided to construct a syphon scour-pipe with a long flexible jointed suction length, which will be made to operate on the bottom of the reservoir wherever required, by means of floats and a pontoon. To provide for the running off of the water and sludge taken out, the Cook's-lane drain will be extended to the reservoir embankment. The Board anticipate that, when these works have been completed, and the sludge removed, the quality of the water in the storage reservoir will be much improved, and the facilities will be then permanently available for systematic circulation of the water, and regular removal of weeds, sludge, &c.

9. On the 10th day of May last a notification was made in the *Gazette* that the duplicate rising main to Buttai, and the duplicate suction main from the river to the pumping station, had been completed, and in accordance with the Act, 59 Victoria No. 9, these works thereupon became vested in the Board. The new mains are constructed of riveted steel pipes 20 $\frac{3}{4}$ inches in diameter. The suction pipes have flange joints, and the rising mains are spigot and socket with lead joints. The works were carried out by the Department of Public Works to enable the increased consumption of water in the district to be met, and, with additions and alterations of the pumps effected by the Board, have greatly facilitated pumping operations.

10. The facilities for pumping from the river and from Walka to Buttai and East Maitland are now quite sufficient; but it is anticipated that the increasing consumption of water in the city and the suburbs of Newcastle will render necessary the duplication of the gravitation main from Buttai to the district service reservoirs. This matter is now being looked into by the Board engineer.

11. A peculiar decay in a number of cast-iron water pipes in some parts of the suburbs of Newcastle was observed and thoroughly investigated. It was found that the decay was principally caused by the action of acid liberated from the copper ore slag used for roadmaking. The mains laid in streets so formed have been examined, and limestone placed in the trenches with good results.

12. The Meter Hire System continues to give satisfaction to consumers. Since the initiation of the system in January, 1896, 321 meters have been hired out, 158 of which were issued during the year under review. The hire charges are moderate, and the best pattern of meter is supplied by the Board. The Board use the class of meters specially designed by the Metropolitan Board of Water Supply and Sewerage, and take the opportunity of recording their appreciation of the courtesies extended to them by the Metropolitan Board in this and other matters of mutual interest.

13. In accordance with the provisions of the Amending Act, the Board revised the terms upon which water had hitherto been supplied to the local Municipal Councils for public purposes. During the year 1897 no less than 8,709,206 gallons of water were supplied to the Newcastle, Wickham, and West Maitland Councils for street watering. At Newcastle a large percentage, and at Wickham the whole of the water supplied, was used for watering the tram-lines, for which the Councils received payment from the Railway Commissioners, whilst, under the Principal Act, the Board were compelled to supply the water to the Councils free of charge. As every gallon of water supplied has to be pumped, the Board decided to make a charge sufficient to pay out-of-pocket expenditure, and fixed the price at 6d. per 1,000 gallons for street or tram-line watering and for public baths, supplying water free, as hitherto, for gutter-flushing and cleansing sumps, sewers, and drains.

14. The pumping plant at Walka pumping station is working satisfactorily. The alterations and additions to the machinery recently made by the Board have largely increased the pumping capacity of the engines and reduced the expenses hitherto incurred when heavy pumping was rendered necessary by continuous dry weather.

15. The cost of pumping 1,000 gallons 100 feet lift at the Walka pumping station, compared with former years, was as follows:—1892, 790d.; 1893, 741d.; 1894, 691d.; 1895, 565d.; 1896, 499d.; 1897, to 30th June, 377d.; 1897–8, 439d. The cost of pumping per 1,000,000 gallons 100 feet lift was, for 1892, £3 5s., and for last year, £1 16s. 7d. The total quantity of water pumped during the year ending 30th June, 1898, was 285,066,720 gallons, as compared with 164,616,850 gallons for the year ending 30th June, 1893. The large increased consumption of water has correspondingly reduced the average cost of pumping 1,000 gallons 100 feet lift, as practically the same expense had necessarily to be incurred at the pumping station in 1892–3 for the smaller output. The cost of coal per ton has also been considerably reduced, 5s. 6d. being the price paid last year, as against 8s. in 1892–3.

16. The quantity of water pumped at Walka during the year was as follows :— From the river to the storage reservoir, 233,369,509 gallons; from the river to the settling tank, 138,050,637 gallons; from the storage reservoir to the settling tank, 165,755,127 gallons; from the clear water tank to the service reservoirs, 285,066,720 gallons; making a total of 822,241,993 gallons. The quantity of water pumped from the Newcastle reservoir to the high-level tank supplying the highest parts of Newcastle was, approximately, 2,400,000 gallons.

17. The different service reservoirs and the high-level tank are in good order, and repairs to the caretakers' cottages have been effected.

18. Frequent inspections of the watershed, for a distance of 20 miles above the intake at Walka, have been made for the prevention of pollution.

19. Regular monthly analyses of the water have been made as usual by the Government Analyst, Mr. William M. Hamlet, F.I.S., F.I.C. The samples are taken from the river, storage reservoir, settling tank, and clear water tank at the Walka Pumping Station, and from different points of the reticulation mains. The reports indicate that the water, as delivered into the mains, is a good wholesome water, fit for drinking and all domestic purposes. The water is moderately hard, and the question of softening it is receiving attention.

FINANCIAL.

20. The revenue struck for the year was £28,117 12s.; but included in this amount is £5,390 representing rates on properties assessed by the Board in respect of which appeals received were not determined before the close of the year. The figures given above cannot, therefore, be regarded as final, as the revenue for the year will be affected if the valuations of the properties referred to be reduced on determination of the appeals. The provisions of the Amending Act in regard to the rating of property came into force from the 1st July, 1897, and as the basis of rating was entirely altered a comparison with the revenue struck for the preceding year would be of no value.

21. The arrears outstanding at the 30th June, 1897, amounted to £6,748 8s. 4d., which, with the revenue struck for the year—£28,117 12s., gave a total of £34,866 0s. 4d. receivable to the 30th June last. Of this amount £20,009 9s. was collected and remitted to the Treasury, leaving £14,856 11s. 4d. outstanding at the close of the year.

22. The Board desire to explain the reason for such a large amount being outstanding. Consequent on the adverse decisions of the Privy Council, and, later, of the Full Court, in the actions taken by the Board to recover rates from the owners of the large colliery and landed estates in the Water District, an Amending Bill was introduced into the Legislative Assembly on the 21st May, 1896, but owing to the exigencies of public business it was not passed into law until the 13th November, 1897. As previously pointed out, its provisions in respect of assessments and rates were retrospective, operating as from the 1st July, 1897, and the Board were consequently unable to commence service of the rate notices for that half-year until the requirements of the Amending Act in the matters of the assessment of ratable property and the making of the rate had been complied with. It was not until the 10th January last that the Board were able to commence the service of the rate notices for the preceding half-year. This delay seriously affected the collection
of

of the revenue, and accounts for the large amount of revenue uncollected at the close of the year. Special steps will be taken to collect all outstanding rates as soon as possible, and with this object in view the departmental regulations dealing with legal proceedings for the recovery of rates and charges are now being revised.

23. The Board are unable at present to submit a proper balance sheet showing the Revenue and Expenditure for the year, as the Capital Debt has not yet been determined. The Amending Act (No. 14, A.D. 1897) repeals the provisions of the Principal Act in regard to the Capital Debt, and enacts that the Debt at the 30th June, 1897, shall be ascertained, reported upon by the Board, determined by the Minister, and then gazetted. On the 26th August, 1897, a deputation from the Board waited upon the Minister and requested a substantial reduction of the Capital Debt. Mr. Secretary Young asked the members of that deputation to wait and see how much increased revenue the Amending Bill would give, and that if they found it did not give sufficient additional revenue, he would be disposed to treat them as fairly and generously as he had treated any municipality in the country. The Board understand that these figures are now being prepared by an accountant of the Department of Public Works, and will be available shortly.

24. The Management Expenses for the year amounted to £4,221 5s. 9d., and the Working Expenses, £4,517 7s. The amount of interest for the year on the Capital Debt and the statutory instalments to the Sinking Fund for the maintenance and reconstruction of renewable works, cannot be ascertained until the Capital Debt is fixed.

25. The total amount expended by the Board during the year was:—

	£	s.	d.
Chargeable to Loans	2,672	12	7
Chargeable to Revenue	9,515	17	7
	<hr/>		
	£12,188	10	2

SEWERAGE.

26. No sewerage works have yet been carried out in the district under the Board's control, but the Board are advised that a scheme for the sewerage of Newcastle and suburbs is now being designed by the Sewerage Construction Branch of the Department of Public Works.

GENERAL.

27. Before dealing with the revision of the salaries of the staff, the Board felt, in view of the strong impression amongst a large section of the community that the Board's service was over-manned and over-paid, that it would be much more satisfactory to all concerned if the Public Service Board were invited to go fully into the whole question. A recommendation was accordingly made, and the Minister appointed the Public Service Board as a Royal Commission to make full inquiry. After an exhaustive investigation, the Commissioners presented their report on the 22nd November last, and it was gratifying to the Board to observe that the evidence submitted to the Commissioners satisfied them that the staff was not over-manned
and

and over-paid, but that, on the contrary, it was pointed out that a number of junior officers were not sufficiently paid. A thorough revision of the whole of the salaries and wages of the Board's officers was made, and the recommendations of the Royal Commission have been carried out.

28. The Board desire to draw the attention of the Minister to that portion of the report of the Royal Commission dealing with the control of the staff, reading as follows :—“ During the course of our inquiry, several of the members of the Board drew attention to the unanimous desire on the part of the staff to be placed under the control of the Public Service Board. The principal officers, on behalf of the others, also submitted the matter for our consideration. They point out that at present their scope is entirely limited to the Hunter District Board; that they are not ‘officers’ within the meaning of the Public Service Act; and that the Public Service is closed to them. Your Commissioners have no desire to express an opinion on the subject, but merely draw attention to the request made.”

It will be observed that the Commissioners did not desire to express any opinion on the subject, no doubt in consequence of the fact that they themselves formed the Public Service Board. This Board fully expressed their views on this matter in a letter addressed to the President of the Royal Commission under date the 8th November last (see page 36 of Report), and hope that their recommendation will meet with the Minister's approval, and that the necessary legislation will be passed to give effect to same.

28. The Board have made regular inspections of the Pumping Station and Buttai Reservoir, and fifty-three meetings have been held during the year, at which the attendances were as follows :—

MEETINGS OF BOARD FROM 1ST JULY, 1897, TO 30TH JUNE, 1898.

	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apl.	May.	June.

ALFRED E. FRY,
Accountant.

Report of Assessor's Branch for the year ended 30th June, 1898.

Newcastle, 31st August, 1898.

I HAVE the honor to submit a report on the work done in this branch during the year ended 30th June, 1898.

The total amount of revenue struck for the year was £27,787 1s. 10d., as under:—

REVENUE STRUCK.

Revenue struck for year ending 30th June, 1898.	Amount.
	£ s. d.
Water Rates on properties where the municipal valuations have been adopted ...	13,988 5 8
(a) On properties assessed by the Board and subject to appeal, where no appeals were received ...	1,576 16 8
(b) Where appeals were determined before close of year ...	1,745 3 4
(c) Where appeals were not determined before close of year ...	5,390 16 8
Meters—	
Meter accounts in excess of rates on properties ...	2,526 12 7
Water supplied by measure ...	1,982 0 5
Special fees—	
For gardens ...	43 0 0
Live stock ...	183 0 0
Trade purposes ...	87 12 6
Building purposes ...	62 19 4
Drilling fees ...	72 6 0
Re-connection fees ...	12 0 0
Meter hire—Rent of meters... ..	112 12 7
Deferred payments—	
Supervision fees ...	19 5 0
Interest on instalments ...	16 1 4
Miscellaneous receipts ...	18 9 9
	£27,787 1 10

APPEALS.

Under the Amendment Act, which came into force as from 1st July, 1897, it is provided that where the Board adopt the Municipal valuations no appeals shall be heard, unless it can be satisfactorily shown that the right of appeal from such Municipal valuations could not have been exercised. No such cases have arisen, but thirty appeals have been received in respect of valuations made by the Board's assessors. Of this number, twenty-five appeals were settled by mutual agreement between the Board and the appellants, and five, involving rates to the extent of £5,390 16s. 8d. per annum (including the appeals made by the Railway Commissioners against the assessments of their properties), have been referred to the Appeal Court for determination, as required by law, the Board and the appellants having been unable to come to any mutually satisfactory agreement.

PROPERTIES RATED AND SUPPLIED AT 30TH JUNE, 1898.

Property.	Rated.	At 30th June, 1898.	
		Connected.	Not connected.
Premises	12,094	7,315	4,779
Vacant lands	1,443	1,443

NOTICES SERVED.

28,666 notices were served upon ratepayers during the year as under:—

Rate notices	25,612
New main notices	37
Notices to connect to main	637
New assessment notices	1,425
Final notices	250
Special fee notices	624
Notices to affix meter	6
Notices of water shut off	75
Total	28,666

NEW MAINS.

During the year 637 properties became liable for water rates from new mains laid.

New

NEW ASSESSMENTS.

1,425 assessments of new properties ratable from old mains were made during the year.

SUMMONSING WORK.

250 final notices were served, but owing to the delay in passing of the Amending Act no summonses were issued.

REVENUE COLLECTED AND OUTSTANDING.

During the year £20,009 9s. revenue was collected, leaving £14,856 11s. 4d. outstanding at the close of the year.

This large amount of outstanding revenue is due to the delay in passing the Amending Act, in the absence of which no legal proceedings for recovery of revenue could be taken. The necessary steps are now being taken to recover arrears, and I anticipate that the collections for the current year will prove satisfactory.

The Secretary.

P. DE MESTRE HART,
Assessor.

Rates and Charges for Water in force for the year ending 30th June, 1898.

1. By-laws Nos. 1, 2, 3, 5, 6, 7, and 8, of the Water By-laws, published in the *Gazette* of 14th September, 1892, are hereby repealed, and the following by-laws shall be substituted in lieu thereof, and shall take effect as from the 1st July, 1897: Provided that such repeal shall not prejudice or affect the payment or recovery of any rate, charge, or sum now due under the repealed by-laws.

2. The following shall be the rate which the owners and occupiers of ratable property shall pay in respect of water supply, whether such property is connected with the mains or not, or is supplied by meter or otherwise, for domestic purposes or for purposes other than domestic.

WATER RATES ON PROPERTY.

- (I.) Where the land or premises are of the assessed annual value of £10 or under, 10s. per annum. Lands and premises.
- (II.) Where the land or premises are above the assessed annual value of £10, a rate of 1s. for each pound sterling of the amount of the assessed annual value.
- (III.) Vacant lands of the assessed annual value of £10, and under, a rate of 3s. 4d. per annum; Vacant lands. and on all such lands above the assessed annual value of £10, 4d. for each pound sterling of the amount of the assessed annual value.

WATER SUPPLIED BY MEASURE.

3. The charge for water supplied by measure shall (except in the case of shipping), unless otherwise determined by special agreement between the Board and the consumer, be 2s. per 1,000 gallons. Supply to property by measure.

4. The minimum charge for water, whether supplied through meter or otherwise, for domestic purposes or for purposes other than domestic, shall be the rate hereinbefore imposed. If the water be supplied by meter and the meter account (calculated at the rate prescribed by the By-laws) exceed the rate, then such excess shall be charged in addition to the assessment: Provided that, should the occupier of property supplied by meter vacate the property before the close of the half-year, the meter account shall be credited with that portion only of the rate proportionate to the period of his occupancy. Minimum charge by meter or otherwise, the assessed rate.

CHARGES IN ADDITION TO RATE ON UNMETERED SERVICES.

5. The charges to be paid in addition to the rate in respect of property where water is used for other than domestic purposes, and the supply is not through a meter, shall be at such rates, upon such terms, and subject to such conditions as may be agreed upon by the Board and the person supplied or requiring to be supplied: Provided, however, that for any year or part thereof the *minimum charges* for water supplied to such property (hereinafter referred to as Special Fees) shall be, in addition to the rate, the amount in each case hereunder set forth:— Special fees.

(I.) The charges for water supplied for:—

Photography and any like process shall be...	... 10s. per annum.	
Tripe cleaning 10s. "	
Tying purposes 20s. "	
Small goods (sweets) 10s. "	
Waterfalls and fountains 20s. "	
Shop fronts, by hose 20s. "	
Organ motors and such-like mechanism 40s. "	
Washing vehicles, by hose 10s. "	
Washing yards, by hose 20s. "	

Trade purposes.

Vehicles.
Yards.

- Nozzles and waste pipes. (II.) No person shall use water in connection with any motor unless the nozzle supplying such motor has been first approved of by the Board. The waste-pipe from each motor shall be so fixed that the waste water can be measured at any time.
- Gardens. (III.) The charge for water supplied for watering gardens or lawns, by hose, shall be at the rate of 5s. per annum for every 500 square feet, superficial area, or part thereof, and 2s. 6d. for every additional 250 square feet, superficial area, or part thereof.
- Meter may be insisted upon. 6. In all cases where special fees are charged, the Board reserve to themselves the right of insisting upon a meter being fixed at any time, notwithstanding the fact that the special fee may have been paid. All special fees shall be payable in advance. All premises on which water is used for other than domestic purposes, and upon which special fees are paid, shall be open for inspection by the Inspectors of the Board at any reasonable hour.
- Building charge, &c. 7. (I.) The charge for water supplied for building and plastering purposes, for buildings to be used either wholly or partly as dwelling-houses, shall be at the rate of 1d. per cubic yard on the cubical contents of each building. The Board will supply water for all other buildings, either by meter or at the rate above mentioned by cubic yard on the cubical contents of each building, as the Board shall determine: Provided that before any water shall be used through meter for building purposes such meter shall be submitted to the Board in each case for examination, and must pass the sensitive test; and the minimum charge in each case for water so supplied through meter shall be 40s.
- (II.) The charge for water supplied for plastering rooms only shall be 5s. for each room, and for the building of wash-houses, water-closets, coppers, and chimneys only, 2s. 6d. each.
- (III.) The charge for water supplied for the making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, shall be at the rate of £3 per 1,000 square yards, by superficial measurement of road surface; and for all other concrete, brickwork, or masonry, at the rate of 6d. per cubic yard, as measured on the work.
- Shipping. 8. The charge for water supplied to shipping shall be 4s. per 1,000 gallons. Her Majesty's Navy will be supplied free of charge.
- Premises where horses and cows kept liable to extra rate. 9. All lands or premises actually supplied with water by the Board, on which any one or more head of horses or cattle shall be kept or maintained, shall be liable to an extra rate or charge (beyond and in addition to the rates and charges hereinbefore imposed) of 5s. per head for each head of horses or cattle kept or maintained on such lands or premises. Where such lands or premises are not actually supplied with water by the Board, they shall be liable to an extra rate or charge (beyond and in addition to the rates and charges hereinbefore imposed) of 2s. 6d. per head for each head of horses or cattle kept or maintained on such lands or premises.
- Rates payable half-yearly in advance. 10. Assessed rates shall be paid half-yearly, in advance, by equal payments, on the 1st day of July and the 1st day of January in each current year, whether a meter is used or not. In the case where a meter is used, the meter account will be rendered only when it is in excess of the assessment. Cheques, post office orders, or postal notes will be received in payment of rates or charges; but if the cheque tendered by any person as payment for rates or charges due is dishonoured, the Board may cut off his service, and proceed for the recovery of the amount by warrant for distress or otherwise. Cheques and post office orders must be crossed in favour of the Board.

Board Engineer's Report.

Sir,

Newcastle, 5th September, 1898.

In accordance with your request, I submit herewith a general description of the water-works, and a review of the principal operations from the time the Board took control to the 30th June last.

THE SCHEME OF WATER SUPPLY.

The supply of water for the district under the control of the Board is pumped from the Hunter River, at the apex of the Hunter River Delta, about $1\frac{1}{2}$ mile up stream from Belmore Bridge, West Maitland. Between this point and the sea coast at Newcastle the river is subject to tidal influence, and the water is unfit for domestic purposes.

The drainage area of the Hunter River above the intake is 7,090 square miles, on which the average annual rainfall is about 25 inches.

The Hunter River and its principal tributary, the Goulburn River, rise in the Great Dividing Range. There are no permanent snow-fields on the mountains, and no lakes in the valleys. The river for about 50 miles of its course above West Maitland, where it is at about sea level, has an average surface grade of 2 feet per mile, and consists in ordinary summer weather of long reaches of deep still water separated by gravel and rock bars, over which the water rushes; it is subject to floods which at times are severe and destructive, and prolonged droughts have been known during which it is said the flow of water was so much diminished as to be scarcely observable. The immense stores of water in the long deep pools would afford an inexhaustible supply should the river actually cease running during a prolonged drought.

A natural bar of gravel extends across the river immediately below the intake, and is the limit to tidal influence. From this bar up stream there extends a long reach of deep water.

The

The greater part of the drainage area consists of sedimentary strata of carboniferous and permo-carboniferous age. In the north-west, along the Liverpool Range, there is an extensive area of eruptive rocks, and isolated masses of similar rock are distributed over the eastern and north-eastern parts of the river basin. The Hawkesbury sandstone measures extend into the valley from the south at its extreme western end, and cover a fair extent of country. These measures overlie the carboniferous beds, and afford a superior class of soft water, but are too remote for their capabilities in this respect to be directly availed of. Limestone is comparatively rare; a few isolated outcrops of limited area occur in the valley of the Upper Hunter. The lime and magnesia, which cause the hardness of the river water, together with salt, are probably derived mainly from the marine beds of the permo-carboniferous measures.

The productive coal measures of the Hunter Valley extend over a considerable portion of the contributing drainage area, but actual coal-mining operations are at present of a limited extent above the intake. In course of time, no doubt, a greater development of this industry will take place, and precautions will have to be taken to prevent pollution of the river water, especially at periods of minimum flow. The principal coal workings of the Hunter District are situated between Maitland and the coast.

The river water is moderately hard, but the dissolved substances contained in it vary from time to time with the rainfall over the drainage area, increasing in time of drought, partly to the long continued evaporation, and partly to the streams being principally fed with spring and subsoil water, which in its passage through the ground has become charged with soluble minerals. In times of flood, although the amount of material washed down by the current will show a large increase in the suspended matter, yet the dissolved matter is not so noticeable, owing to the greater dilution over a given volume of the water.

The number of persons now settled on the drainage area is approximately 30,000, which gives 4.23 persons per square mile. The Board have jurisdiction over the river for a distance of 20 miles above the intake, and frequent inspections are made for prevention of pollution. There is comparatively little settlement of population in the neighbourhood of the river along this length.

The existing scheme of water supply was designed by the late W. Clarke, M.Inst.C.E., in the year 1877, and its construction, with some modifications in the details, was commenced by the Government in the year 1879. Towards the end of 1885 an urgent demand for water arose in the Newcastle District, caused by a prolonged drought, and the main pipe lines being completed, a temporary pumping plant was erected at the intake on the Hunter River, and water was in this way first delivered into Newcastle on the 23rd day of November, 1885. The temporary pumping plant was kept almost constantly at work until January, 1887, when it was superseded by the permanent engines.

The scheme provided for the water supply of the City of Newcastle and suburbs, and the municipalities and townships on the southern side of the Lower Hunter River from the sea coast to West Maitland.

The pumping engines are situated above flood-level on a hill-side about 44 chains back from the right bank of the river. The suction-pipe is of cast-iron, 18 in. diameter. At the pumping station are a settling tank of 1,390,500 gallons capacity, which receives the water pumped from the river; four filter-beds, 100 feet by 100 feet each; a clear water tank of 589,500 gallons capacity; and a storage reservoir of 172,408,100 gallons available capacity, all uncovered. The latter has been formed by constructing an earthen embankment with puddle core across an old lagoon. It contains a reserve supply of clear water, which is resorted to when the river-water is turbid, and is replenished by rainfall on its catchment area of 200 acres, and by water pumped up from the river.

Water is pumped into the settling tank, from which it descends to the filter-beds; the filtered water is collected in the clear-water tank.

The pumping plant consists of three independent Woolf compound beam pumping engines of about 150 horse-power each. Each engine works two main pumps of the bucket and plunger type, one on each side of the beam centre.

Two engines are designed to force water to the summit reservoirs, the third to raise water from the river or the storage reservoir to the settling tank, or to raise water from the river to the storage reservoir as required. The boiler-house contains five 50-horse-power Lancashire boilers, two of which ordinarily supply sufficient steam for the engines. A coal store is attached, having a capacity for 120 tons. A residence is provided for the engineer in charge, and five cottages for workmen.

The filtered water is pumped from the clear-water tank into two summit reservoirs—one at East Maitland and one at Buttai. The latter is on the top of a range about $5\frac{1}{2}$ miles distant from the pumps. These reservoirs are built of brick and concrete, and are covered over.

East Maitland Reservoir is supplied through a 10-inch cast-iron rising main 4 miles 310 yards in length, and has a capacity of 463,430 gallons. It commands East Maitland, West Maitland, Morpeth, and neighbouring places. Buttai Reservoir is supplied through a 15-inch cast-iron rising main 5 miles 1,060 yards in length, and has a capacity of 1,051,010 gallons. The district commanded comprises the following places:—City of Newcastle, Carrington, Wickham, Hamilton, Waratah, Merewether, Adamstown, New Lambton, Lambton, Wallsend, Plattsburg, Minmi.

There are six district reservoirs which are supplied by gravitation from Buttai Reservoir, and receive the water for distribution. Their location and respective capacities are as follows:—

Minmi, 62,209 gallons; Hamilton, 402,909 gallons; Wallsend, 452,472 gallons; Newcastle, 523,613 gallons; Lambton, 402,610 gallons; Obelisk Hill, Newcastle, 137,125 gallons. All these reservoirs are built of brick and concrete and are covered over.

The gravitation main from Buttai Reservoir to Newcastle is cast-iron, 15 inches diameter, and 17 miles 762 yards in length. On the hill at Newcastle there is a high-level tank constructed of iron on timber supports, which has a capacity of 20,000 gallons; it is supplied with water by a small duplex steam pumping engine placed on the roof of Newcastle reservoir.

A cottage is provided for the caretaker in charge of the three reservoirs at Newcastle, and similar provision is made for caretakers at each of the other reservoirs.

The works, as described above, were constructed before the Hunter District Water Supply and Sewerage Board was formed and took control, at 1st July, 1892. At that date the mileage of reticulation water-mains laid in the Maitland District was 30 miles 1,599 yards, and in the Newcastle District 73 miles 1,603 yards, together making a total of 105 miles 1,412 yards. The reticulation of the city of Newcastle was done by the Municipal Council; with this exception, the water-works were constructed by the Public Works Department.

At the inception of the Board the number of assessments for water rates was 10,965, representing an approximate population of 54,825 persons contiguous to the water mains, the total number of houses actually connected to the mains was 3,018; the estimated number of inhabitants supplied being 15,090. The total population in Maitland and Newcastle Districts, according to the 1891 census, was 61,000; many of these, however, resided in houses beyond the reach of the water-mains.

The general management of the whole works, except the Newcastle reticulation, which was in the care of the City Council, was conducted by officers of the Harbours and Rivers Branch of the Public Works Department in conjunction with their other duties, and, on the transfer of the works to the Board, officers were appointed to take over the water-works duties.

OPERATIONS OF THE BOARD.

During the six years which have elapsed since the Board took control, the various works under their jurisdiction have been maintained in good order, and some important additions and improvements made; the more noteworthy will be referred to in the general description which follows of the operations of the Board during the above period.

Systematic chemical examinations of the water were instituted and deterioration in the quality of the filtered water was observed, investigations were made and remedial measures adopted. These comprised aeration of the water immediately before filtering it; refilling the filter-beds with filtered water slowly from the bottom after they had been dried off for skimming, &c., instead of the former system of applying water to the top, and washing the sand in the older beds. For the latter purpose a special sand-washing plant was constructed, the sand being lifted from a hopper in the filter-beds, washed and returned to hopper trucks for distribution, all by means of high-pressure jets of filtered water. The plant proved efficient and economical. The best result was obtained on one lot of 787 cubic yards, which cost 14/12 pence per cubic yard to wash exclusive of interest on cost, depreciation of plant, and cost of water used; 328 cubic yards of new sand tipped from carts at the washer, cost 10d. per cubic yard, to wash and distribute in the filter-bed.

The effect of the above operations on the quality of the filtered water was highly satisfactory, and the water continued to improve. Subsequently, on 24th June, 1896, the Government Analyst reported as follows on samples of filtered water forwarded to him during April and May:—"There is a marked improvement in the samples of filtered water submitted, those from the clear-water tank and the mains at Newcastle being especially good. Their bright and clear sparkling appearance, almost without any tinge of colour, and the presence of so small a quantity of nitrogenous matter of any kind, point to a supply approaching perfection in these respects as delivered at the mains."

Six samples comprising raw and filtered water are regularly taken every month and forwarded to the Board of Health at Sydney for examination and report. The results of analysis made during the past year have been tabulated and annexed, and clearly show the effective action of the filters and the satisfactory character of the filtered water.

The variations in the soluble matter and the high percentage the permanent hardness bears to the total hardness render impracticable the successful and economical application of any process for materially softening the water supplied to consumers.

Consideration has been given to the possibility of obtaining a softer water—if not to replace the present water to at least dilute it at the times of its maximum hardness. Two areas have been noticed which present some favourable features in this respect—one is at Maitland, and consists of an extensive deposit of sand and gravel, extending from the intake along the western bank of the river northwards. The other is the sand dune country lying parallel to the coast north from Stockton.

If impounding reservoirs for flood mitigation are ever constructed in the upper valley it might be found practicable to arrange for a suitable percentage of water to be retained for a time and then gradually liberated to refresh the river below. The geological formations indicate that the Goulburn River water will be softer than that from the Upper Hunter—possibly little benefit would be derived from storing the latter.

The character of the water in the storage reservoir has been a matter of serious concern ever since its construction. The natural conditions and artificial environment of this reservoir rendered it a difficult matter to obtain the amount of circulation and change of the water which are necessary to its maintenance in a healthy state. Aquatic weeds and low vegetable organisms, principally algae, flourish in great abundance; these, doubtless, in growing tend to purify the water, but by their decay the water becomes charged with organic matter, the grosser particles settle on the bottom and form an ever-increasing layer of black sludge, which cannot be drawn off by the scour-pipe except from a very limited area in its immediate vicinity. The river being liable to sudden floods at all times of the year—during which times the water is too heavily charged with silt to be used—renders it impracticable to empty, clean, and refill the storage reservoir, an operation which would occupy many months.

The Board gave early attention to the state of the reservoir, and decided to operate on the following lines to secure an amelioration of its condition:—Remove, dry, and burn the larger weed growths, pump in river water, run off water from the scour, and use the water mixed with river water more freely for supplying the filter-beds. Operations were carried out accordingly; large quantities of weed were removed, and this—together with the dilution of water effected—caused some of the most troublesome vegetation to permanently disappear. The use of the scour-pipe, which under the conditions originally prevailing discharged into a land-locked lagoon, was attended with a risk of flooding farm lands; this necessitated the construction of a drain, 2 ft. in diameter, from the lagoon below the storage reservoir to the Hunter River—a distance of 2,430 ft.—to afford a ready escape for the water. The drain fully accomplishes the object for which it was constructed, and has enabled large quantities of water to be discharged from the reservoir and replaced with water pumped from the river. The attention thus given to the storage water has secured a gradual improvement.

A scheme for removing the accumulation of sludge which lies on the bottom of the storage reservoir beyond the range of action of the present scour-pipe has been approved by the Board; it includes the extension of Cook's Lane drain to the reservoir embankment, the construction of a syphon scour-pipe having a long flexible jointed suction length, which, by means of floats and a pontoon, will be made to operate on the bottom wherever required. The completion of this work it is confidently anticipated will be followed by a large measure of improvement in the quality of the storage water.

The

The changes made in the working of the filter-beds, together with the special aeration of the water supplied to them, have enabled them to effectually purify the storage water and make it fit for all domestic purposes.

The water-works were originally designed to supply a population of 35,069; the rapid increase which subsequently took place caused attention to be directed to the improvement of the pumping plant, and at the time the Board took control, the Public Works Department had decided to carry out some important additions. These comprised a second suction-pipe 20 $\frac{1}{2}$ inches diameter from the river to the pumping station, a second rising main 20 $\frac{1}{2}$ inches diameter from the pumps to Buttai Reservoir, and enlargement of the pumps. The pipes were subsequently laid by the Government and handed over to the Board. They are made of riveted steel plates—the suction-pipes have flange joints, the pipes in the rising main are spigot and socket with lead joints. The alterations and additions to the pumping plant were carried out by the Board from designs furnished by Mr. F. H. Houghton, M.I.M.E., Consulting Engineer, who tested and reported on the plant for the Public Works Department shortly before the Board took control. The improvements comprised the substitution of a 19-inch pump barrel for the 15-inch barrel at the crank end of beam of the high-lift engines Nos. 1 and 2, and the addition of a 24-inch double action third pump to the low-lift engine No. 3, including a delivery pipe laid to the storage reservoir. The duty of this third pump is to replenish the storage reservoir from the river. Since their completion the new additions have worked satisfactorily.

The intake works at the Hunter River were washed away during the flood of March, 1893, and were reconstructed by the Public Works Department when the second suction-pipe was laid; they have not suffered any damage during subsequent floods, and are in good order.

The total extent of reticulation pipes laid by the Board during the past six years amount to 32 miles 14 yards. The principal work carried out in the Maitland District was the extension of the water supply to Lorn and Bolwarra, on the northern side of the Hunter River. The most important extension made in the Newcastle District was the construction of a special 10 and 6 inch main, 4 miles 1,025 yards in length, from Wallsend, to supply the Sulphide Works at Cockle Creek.

Trouble and expense have been caused by a remarkable decay of the metal in cast-iron water-pipes in some parts of the Newcastle suburbs and at Plattsburg, resulting in the pipes bursting under the water pressure. Local investigations were made, and the matter was also referred to the Government Analyst for report, the outcome of which clearly showed the decay to be due to the action of acid liberated from copper ore slag used for coating roads along or near which water-pipes were laid. At Plattsburg, however, the decay was traced to the use of refuse ashes from coke works and furnaces, for forming road surfaces. The remedy applied is, to place limestone in trenches where the decay takes place, and when practicable to drain the soakage water from the bottoms of the pipe trenches.

During last year it was found necessary to commence extensive repairs to the main 15 in. pipe-line bridges, crossing swamps and creeks between Buttai and Lambton. The present design of bridge has proved to be not altogether suitable, and this feature has been considered in connection with the repair work now being done.

A constant supply of water has been maintained throughout the Maitland and Newcastle districts, at a satisfactory pressure, notwithstanding the large increase in the number of consumers, and the extra demands for water during dry periods which have been experienced.

The consumption of water in the Newcastle district is gradually increasing, and in view of its overtaking the capacity of the present supply pipe from Buttai a few years hence, preparations will be necessary to meet further demands. This subject is receiving attention, and a report will be submitted for the information of the Board at an early date.

At the commencement of the Board's control, 802 water meters were in use on private service pipes. A special inspection was made, and a large percentage found to be in a defective condition. Meter-testing tanks and appliances were provided at Newcastle and Maitland, and steps taken to have all meters put in correct working order. Meters requiring repairs or adjustment have to be sent by the owners to the Metropolitan Boards' repairing and testing shop at Sydney. In 1895 the Board decided to purchase meters and let them out on hire. At the 30th June last 301 hired meters were in use. The innovation has succeeded admirably; the use of meters should be encouraged. The total number of meters now in use is 1,014. The Metropolitan Board's standard class of meter was adopted for use—other makes will gradually be eliminated.

From information supplied by the Assessor I find that the total amount of water used by meter for railways, factories, shipping, collieries, and other similar purposes, excluding metered supplies for domestic purposes, small gardens, stock and free supplies was—73,567,210 gallons, or a little over one-fourth of the total water pumped.

Early attention was given to inspection for waste and misuse of water, and much good has resulted. These inspections are continued. The use of the Metropolitan Board's standard fittings was made compulsory.

At the commencement of the Board provisional licenses were issued to plumbers who were following their trade in the Board's district. Subsequently practical examinations were held, which all plumbers desirous of having their licenses confirmed, had to attend. A very low standard was fixed, but with few exceptions, the results of the examination were unsatisfactory, and it was seen that steps to secure a radical improvement were imperative. The Board accordingly made strong representations to the Technical Education Department, and classes for instruction in practical plumbing were formed. Attendance at these classes by licensed plumbers was made a condition of the issue of license, until they had reached an approved standard of skill. Most of the plumbers attended, and eventually reached the necessary standard of efficiency. The classes are still carried on, and all new applicants must have passed the second year practical and theoretical examination in plumbing, and submit evidence of practical experience in plumbing work before licenses will be issued to them. The number of plumbers who held licenses during the past year, was 27, and for the preceding year, 28.

Tabular statements of operations and results are annexed, also plan of the area supplied with water.

The Secretary.

J. B. HENSON, Assoc. M. Inst. C.E.,
Board Engineer.

Statistics.

QUANTITY of Filtered Water pumped to the District Reservoirs, and the Population supplied for the six years ending 30th June, 1898.

Period—Year ending.	Average daily supply.	Total quantity pumped during the year.	Houses supplied.	Estimated population supplied.	Average daily supply during the year.	
					Per house.	Per inhabitant.
30 June, 1893	451,005	164,616,850	3,421	17,105	132	26.37
30 " 1894	418,766	152,849,650	3,848	19,240	109	21.76

QUANTITY of Water pumped during the year ending 30th June, 1898, and Coal used.

At Walka Pumping Station—		gallons.
River to storage reservoir	...	233,369,509
" settling tank	...	138,050,637
Storage reservoir to settling tank	...	165,755,127
Clear water tank (filtered water) to Buttai Reservoir	...	248,338,137
" " " East Maitland Reservoir	...	36,728,533

The coal used during the year amounted to 1,656½ tons; the price, delivered at the works, was 5s. 6d. per ton. During the previous year, the quantity used was 1,650½ tons, and the price 6s. per ton for the first half of year and 5s. 6d. for the last half. The coal is of fair quality for steaming purposes; it contains 15 to 20 per cent. of ash. The quantity of water pumped from Newcastle Reservoir to the High-level Tank was, approximately, 2,400,000 gallons; the coal used cost 11s. per ton during the first half of the year, and 10s. per ton during the last half.

Results of Analysis of Water.

Tabulated from Reports by W. M. Hamlet, F.C.S., F.I.C., Government Analyst, Sydney.

Description of monthly samples as numbered in column 2:—No. 1, Storage Reservoir, Walka; No. 2, Settling Tank, Walka; No. 3, Clear Water Tank, Walka; No. 4, Tap, Board's Office, Newcastle; No. 5, Tap, Hydraulic Power House, Carrington; No. 6, Hunter River at intake, Walka. Nos. 1 and 6 are raw waters; No. 2 is raw water specially aerated for immediate filtration, and may be No. 1 or No. 6, or a mixture of both. No. 3 is No. 2 after it leaves the filters. Nos. 4 and 5 are the filtered water as supplied to consumers, and are taken from the water mains at points distant over 20 miles from the filter beds.

Date sample taken.	Description and origin.	Expressed in grains per gallon.				Expressed in parts per million.				Hardness Clarke's degrees.		Appearance in standard 2-foot tube.	General observations on the character of the water.
		Total solid residue dried at 320°.	Chlorine as chlorides.	Nitrogen as nitrates and nitrites.	Phosphates from animal impurity.	Free ammonia.	Albuminoid ammonia.	Oxygen absorbed in 15 minutes.	Oxygen absorbed in 3 hours.	Before Boiling.	After Boiling.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REFUSAL OF WATER AND SEWERAGE BOARD IN RE
HOSPITAL FOR FEMALE INSANE AT RYDE.

(RETURN RESPECTING.)

Printed under No. 15 Report from Printing Committee, 8 December, 1898.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 20th October, 1898, That there be laid upon the Table of this House,—

“ All papers connected with the refusal of the Water and Sewerage Board to supply water free of charge to the Hospital for the Female Insane, known as Mount St. Margaret, at Ryde.”

(Mr. Lyne.)

No.	SCHEDULE.	PAGE.
1.	Agreement to rent meter, 12/8/95.....	2
2.	Letter—F. B. Frechill to Secretary to Water and Sewerage Board, 24/6/96, respecting demand for payment of Water Rates, claiming exemption.....	3
3.	Minute—Assessor to Secretary, Water Supply and Sewerage Board, 10/11/96. Report on Institution.....	3
4.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 25/11/96, inquiring on what grounds the Institution is not exempt from payment of rates	5
5.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 3/12/96, stating that as the Board is determined to levy rates the overdue rates should be sued for in the District Court	5
6.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 10/12/96, respecting Board's intention to cut off water supply	5
7.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 11/3/97, respecting rate-paper claiming £5 8s. 5d.....	5
8.	Minute—The Assessor to Secretary, Water Supply and Sewerage Board, 20/3/97, suggesting that Chief Secretary's Department be asked to say whether Mount St. Margaret is registered as an Asylum for the Insane. Reply to Board's letter, 1/4/97	6
9.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 30/8/97, further respecting claim on Institution	6
10.	Letter—F. B. Frechill to Secretary, Water Supply and Sewerage Board, 14/10/97, further respecting Board's claim, and again suggesting that matter be referred for the decision of a District Court Judge.....	7

No. 1.

Agreement to Rent Meter.

METROPOLITAN BOARD OF WATER SUPPLY AND SEWERAGE.

THIS Agreement, made the 12th day of August, 1895, between the Board of Water Supply and Sewerage (hereinafter designated the said Board) of the one part, and St. Margaret's Roman Catholic Convent of Good Counsel, Gladesville Road, Ryde (hereinafter designated the said Consumer), of the other part, witnesseth that for the mutual considerations herein expressed the said Board agree to let and the said Consumer agrees to take and hire a 1-inch water meter and couplings at a yearly rental, payable half-yearly in advance on the 1st day of January and the 1st day of July, of 11s. per annum upon the terms and conditions set forth on the back hereof, which conditions, together with the by-laws and regulations of the Board, are intended to be read as part of this Agreement.

In witness whereof the said Board of Water Supply and Sewerage have hereunto set their Common Seal, and the said Sister M. Joseph O'Regan has hereunto set her hand and seal the day and year first before written.

The Common Seal of the Board of Water Supply and Sewerage was fixed hereto on the 10th day of September, 1895, in the presence of,—
C. W. DARLEY, T. ROWE, and G. W. LANDER.

C. W. DARLEY,
President.
T. ROWE,
G. W. LANDER.

Signed, sealed, and delivered, by the said Sister M. Joseph O'Regan in the presence of,—
SISTER M. ANTONIO O'DALY.

SISTER M. JOSEPH O'REGAN.

CONDITIONS.

I. The Consumer shall cause the Meter and all piping and other work necessary for properly affixing the same, and for conveying water from the mains of the Board to the lands and hereditaments of the Consumer, to be fixed and laid down at his own cost and expense by a duly licensed plumber under the direction and to the approval of some authorised officer or representative of the said Board.

II. The scale of charges shall be as follows:—For $\frac{1}{2}$ " Meters, 7/-; $\frac{3}{4}$ ", 9/-; 1", 11/-; $1\frac{1}{2}$ ", 13/-; $1\frac{3}{4}$ ", 15/- per annum.

III. The said Board and all officers, workmen, and servants employed by them shall have full right and liberty to enter upon the said premises of the said Consumer from time to time at all reasonable hours for the purpose of fixing the said Meter and keeping the same in repair and in proper working order and of taking the register thereof, and for the purpose of making any inspection, alteration, or disconnection, or removal thereof, or of any water piping cocks cistern or apparatus in connection therewith or for any other purpose in connection with the said supply of water which the said Board may think necessary.

IV. The said Meter, with the fittings connected therewith, shall be and remain the absolute property of the said Board, and shall, with the pipes and fittings from the main of the said Board to the exterior of the said premises of the said Consumer, be subject to the sole control and governance of the said Board.

V. The said Consumer shall and will keep the said Meter properly protected from all accident or damage from fire or other causes, and hereby agrees to be responsible to the said Board for its safe keeping and condition and answerable for any damage or injury which may be done to or sustained by the said Meter.

VI. The said Consumer shall not either himself or by any workman or others disconnect the said Meter or fittings connected therewith or interfere with the same for repair or otherwise than by these presents is provided, and in the event of any repairs to the said Meter being at any time found necessary the said Consumer will immediately thereupon give Notice thereof to the said Board and the said Board will with all convenient speed effect such repairs to the said Meter as shall be found necessary.

VII. The said Board will at their own cost and expense maintain and repair the said Meter to the extent of ordinary wear and tear, but if in any case it shall be found by the said Board that any repairs to the said Meter have become necessary in consequence of such Meter having been wilfully or accidentally damaged the said Consumer shall be liable for the cost of such repairs and he hereby agrees to pay the same to the said Board on demand.

VIII. The said Board shall be at liberty at any time they may think fit or from time to time by their Officers, workmen, or servants, at their own expense, to disconnect and remove the said Meter and to affix and substitute any other Meter of like dimensions and capacity in its place and to disconnect and remove any Meter supplied by them under these presents for the purpose of testing the accuracy thereof or for examination or repairs, provided that in so doing they shall cause as little inconvenience as possible to the said Consumer, and it is hereby agreed that where in any case the said Board shall remove the said Meter and affix and substitute any other Meter in its place under this Clause then and in any such case this Agreement and every Clause and provision thereof shall be taken to apply to any such substituted Meter in like manner as if such substituted Meter had originally been described in this Agreement instead of the Meter herein described.

IX. The quantity of water which shall be registered by the said Meter as having been supplied shall be taken as the quantity actually supplied and the said Consumer shall except as hereinafter provided be estopped from disputing the correctness of such registration or alleging that the said Meter was not in good working order and condition, provided always that if the said Consumer shall at any time be dissatisfied with any particular reading of the said Meter and shall be desirous of having the same tested he shall give written notice thereof to the said Board within seven days of such reading and thereupon the said Meter shall be tested by passing through it into a vessel of known capacity sufficient water to fill such vessel and if upon such testing it shall appear to the satisfaction of the said Board that the said Meter registers above 5 per cent. more than was actually passed through it at such testing, then the said Board will bear the expense of and incidental to such testing, and will also adjust the charge for water supplied to the said Consumer, but if the said Meter upon such testing shall not register more than 5 per cent. more than the quantity that shall have actually have passed through it then the said Consumer shall pay to the said Board in addition to the sums hereinbefore agreed to be paid by him all the expenses of and incidental to such testing, provided further that such expenses shall not exceed the following sums, namely: if the Meter shall be tested at the Board's testing rooms at Crown-street, Sydney, the sum of two shillings and sixpence if the Meter be a half-inch Meter, the sum of three shillings and sixpence if the Meter be a three-quarter inch Meter, the sum of five shillings if the Meter be a one-inch Meter, the sum of five shillings and sixpence if the Meter be a one-inch and one-quarter of an inch Meter, and the sum of six shillings and sixpence if the Meter be a one-inch and one-half an inch Meter, but if the Meter be tested on the premises of the said Consumer the cost of material and labour required or employed in such testing will be charged to the said Consumer, provided, however, that the maximum charge for such testing shall not exceed forty shillings in the case of each Meter.

X. The said Consumer shall not be at liberty to avail himself of the right to test the said Meter provided by the said last Clause of these presents for any quarter of the year other than the one next preceding his giving written notice within seven days of the last reading of the said Meter to the said Board of his dissatisfaction and desire to have the said Meter tested as aforesaid.

XI. The said Consumer shall not transfer this Agreement to any other person without written consent of the Board.

XII. If the said Consumer shall be at any time desirous of discontinuing the use of the said Meter he shall give to the Board fourteen days' notice to that effect, and at any time after receipt of such notice the Board may remove the said Meter from the said premises, but the said Consumer shall be and remain liable to the said Board for the rent of the said Meter at the rate beforementioned until the end of the half year current at the time of the expiration of such fourteen days' notice.

XIII. Upon breach or non-observance of any Clause or condition of these presents the said Board shall be at liberty without a previous notice to discontinue the supply of water and remove the said Meter, and to immediately sue for and recover from the said Consumer the amount of any loss or damage which the said Board may have sustained through such breach or non-observance and of any money which may be then due to them for water supplied or otherwise, and the said Consumer doth hereby for himself, his heirs, executors, and administrators covenant with the said Board and their successors that he the said Consumer, his executors and administrators will well and truly observe, perform, fulfil, and keep all and singular the covenants, conditions, and agreements hereinbefore contained, and will duly and punctually make all payments as hereinbefore appointed, and further will observe in connection with such supply of water all the provisions of the Metropolitan Water and Sewerage Act of 1880, the Metropolitan Water and Sewerage Act of 1888, the Metropolitan Water and Sewerage Act Amendment Act of 1889, and any further Amending Act hereafter to be passed and any By Laws and Regulations of the said Board in force at the date of these presents, or which the said Board may hereafter from time to time make or apply in connection with water supplied by them or any matter relating thereto.

No. 2.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

(96-7,357.)

Devon Chambers, Hunter and O'Connell Streets,

Dear Sir,

Sydney, 24 June, 1896.

The Lady Superior of the Mount St. Margaret Hospital for the Insane has handed me a notice demanding payment of the water rates upon the said Hospital. This Institution is conducted by the religious Order of Nuns known as the Little Company of Mary, the same Order which conducts the Lewisham Hospital for Women and Children and the Night Refuge in William-street, Sydney, and the said Hospital is for the reception of insane patients, who are provided with accommodation and necessaries by the Sisters without charge, these ladies having devoted their lives to the service of their patients. The Institution is exempt from the payment of water rates under the provisions of the 63rd section of the Act 43 Vic. No. 32.

It seems singular that the Board should find it necessary to harass the conductors of these various Institutions by making demands for rates, and then on the claim for exemption being pointed out admitting it, and subsequently making a fresh claim; and I shall be glad if the Board will deal once for all with these matters, and thus prevent an amount of unnecessary correspondence.

Yours truly,

FRANK B. FREEHILL,

Hon. Sec.

Assessor for report.—W.H., 25/6/96. S/C.—F. PAWLEY, 25/6/96. Mr. Pringle to defer.—K.V., 28/6/96 Reg. No. 102,560, Ryde.—H. C. DE WITT, 26/6/96. 102,560.—E.L.C., 4 p.m., S.C. Deferred 173.—J. PRINGLE, 26/6/96. Position showing any arrears. D.C. for report on "form."—K.V., 26/6/96. Report attached.—H. C. DE WITT, 17/7/96.

S.C. This property is shown in Meter Clerk's book of Charitable Institutions, and I am told by the Mother Superioress that they have been informed that the Board have exempted them from the payment of rates, provided they fix a meter, which they have done.—HENRY C. DE WITT, 18/7/96.

No. 3.

Minute Paper.

Subject:—Rates—Mount St. Margaret Hospital, Ryde.

Sydney, 10 November, 1896.

HEREWITH is forwarded a report on the Mount St. Margaret Hospital for Insane, Glebe-street, Ryde, which Mr. Freehill, in his attached letter, contends should be relieved from liability for rates.

H. J. B.,

Assessor.

The Secretary.

Submitted to the Board, 12/11/96. Deferred for a week, Mr. Taylor promised to make some inquiries.—W.H., 13/11/96. Submitted to the Board, 17/11/96. The

The Vice-President reported that he had made some inquiries into this matter and found that this Institution could not, in any sense, be classed as a charitable one. It was a convent school, and although there were two insane patients there, they were each paid for, and therefore the place should be treated in the same way as other similar institutions, and charged. He had also ascertained that the premises were not exempt, as reported by the Assessor, from the payment of Municipal rates. The Board therefore resolved to reply that the request for exemption could not be complied with.—W.H., 18/11/96.

Inform. Informed.—No. 7,220 of 18/11/96. Assessor to note, and for report as to error in report. D.C. Who made this report?—H.J.B., 19/11/96. H. C. de Witt.—K.V., 20/11/96.

I am only able to say, in reply to this report, that I received the information contained in my report from the lips of the Lady Superior in charge of the Institution herself, and she impressed upon me the fact that Mr. Freehill had received a notification from the Board stating the Hospital should be exempt, and actually showed me a post-card from Mr. Freehill to her to that effect.—HENRY C. DE WITT, 20/11/96. The Assessor.

Name and address of Institution—Mount St. Margaret Hospital, Glebe-street, Ryde.
 Object of Institution—Care of insane females.
 How many inmates?—Four.
 What work is done by inmates for their support?—None.
 What amount is realised by work?—Nil.
 What other sources of revenue?—Nil.
 What Government endowment?—Nil.
 What fees are charged inmates?—What they can afford.
 Are any salaried persons employed?—Medical attendant and two male servants.
 Is this Institution self-supporting?—Supported from their own resources.
 Is the water used as a matter of profit?—No.
 Estimated quantity of water used per annum—Domestic only.
 Is the property owned by Institution?—Yes.
 Is the property exempted by Municipal Council?—Yes.
 Register No.—102,560.
 Meter No.—Meter fixed, but no number quoted.
 Annual assessment—£126.

Name and address of Institution—Mount St. Margaret Hospital, Glebe-street, Ryde.
 Object of Institution—Care of insane females.
 How many inmates?—Four.
 What work is done by inmates for their support?—Nil.
 What amount is realised by work?—Nil.
 What other sources of revenue?—Nil.
 What Government endowment?—Nil.
 What fees are charged inmates?—Nominally what they can afford.
 Are any salaried persons employed?—Medical attendant and two men servants.
 Is this Institution self-supporting?—Only from their own resources.
 Is the water used as a matter of profit?—No.
 Estimated quantity of water used per annum—Domestic only.
 Is the property owned by Institution?—Yes.
 Is the property exempted by Municipal Council?—Yes.
 Register No.—102,560.
 Meter No.—Meter fixed, but no number quoted.
 Annual Assessment—£126.

This property is shown in Meter Clerk's book of Charitable Institutions, and I am told by the Mother Superior that they have been informed that the Board have exempted them from the payment of rates, provided they fix a meter, which they have done.—HENRY C. DE WITT, 18/7/96.

I cannot trace these papers—F. PAWLEY, 14/9/96. Mr. Roseby. Assessor.—T.R., 15/9/96.
 Mr. Pawley. These papers must be found.—H.J.B., 15/9/96.

I interviewed the Lady Superior of the Convent *re* this matter, 9th inst., and saw a letter from Mr. Freehill to her, dated July 8th, stating that he had received a communication from this Department informing him that the authorities would not be further troubled for these rates, as they were exempt from payment of water rates.—HENRY C. DE WITT, 13/10/96. Assessor.

Received.—30/10/96. Record Clerk. Let me see a copy.—T.R., 30/10/96. Assessor. Mr. Parker states no letter left the Secretary's Branch stating these premises were exempt.—F. PAWLEY, 31/10/96.

(91/172-245.)

22 January, 1891.

Sir,

In reply to your letter of 14th instant, stating that a demand had been made by the Board for water rates on the Children's Hospital, Petersham, I have the honor to inform you that the account was sent in error. The Institution is exempt from the payment of rates, and a credit has been passed for the amount.

I have, &c.,
 F. B. Freehill, Esq., Solicitor, 25, Castlereagh-street.

R. BLOXSOME.

Having read the previous records, I find that this Institution—"The Mount St. Margaret Hospital for the Insane," Ryde—has never been exempted by the Board. The attached report shows that it is devoted to charitable purposes, and exempted by the local Council. Perhaps this might be considered as an application for exemption. In reference to the last part of Mr. Freehill's letter, it appears that subsequent to the exemption of the Lewisham Hospital a rate-notice was served there in error, and the error acknowledged.—T.R., 2/11/96. Assessor.

Write minute to Board for exemption.—H.J.B., 2/10/93. Written.—W. PURCELL, 10/11/96.

Mr. Freehill states that when he received the notice for rates he immediately wrote and protested against the payment, as the premises were exempt, being for charitable purposes. The Sisters who have charge of St. Margaret Hospital have also under their charge Lewisham Hospital and the Night Refuge, Sydney. Mr. Freehill handed me a letter from Mr. Bloxsome, No. 91/171-245, which was as follows:—"In reply to your letter of 14th, *re* payment of rates, I beg to state that we sent notice in error, as the premises are used for charitable institutions." Freehill says he would be glad if the Board were to make a test case of this. Under the Act the premises are exempt, being charitable institutions.

No. 4.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 25 November, 1896.

Sir,

Re Mount St. Margaret's Hospital, Ryde: I beg to acknowledge having received, on the 20th inst., a reply to my letter addressed to you on the 24th June last, in reference to exemption of above Institution from water rates, in which you inform me that the Board regret that the request cannot be complied with.

As there is no matter of favour in the application, but as the exemption is claimed as a matter of right, I shall be obliged if you will let me know upon what grounds the Institution is held not to be exempt.

I have, &c.,

FRANK B. FREEHILL.

Submitted to the Board, 1/12/96. The Board saw no necessity for furnishing their reasons for the action they have taken in this matter.—W.H., 2/12/96. Ackg. and inform. Written, No. 7,534, of 2/12/96.

No. 5.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 3 December, 1896.

Dear Sir,

Your letter No. 96-7,534,14,446. As the Board have determined to charge the water rates on the Mount St. Margaret Hospital for the Insane, and as the Board is unwilling to give the reasons for its determination—the matter being an important one—I would propose, so as to have the rights of the parties decided beyond question, that these overdue rates should be sued for by the Board in the District Court at Sydney, the defendants consenting to the jurisdiction of that Court.

Yours truly,

FRANK B. FREEHILL.

Assessor. What is the amount owing?—W.H., 4/12/96. Mr. H. SOLOMON.—F. PAWLEY, 4/12/96. E.C., Registered No. 102,560.—H. SOLOMON, 4/12/96. To December, 1896—M. 8,440; water, £3 13s. 6d.; rent, 5s. 6d.—C. T. HANCOCK, 4/12/96. Detailed account herewith.—H. SOLOMON. Mr. Roseby. The Secretary.—T.R., 5/12/96. Submitted to the Board, 8/12/96. The Board resolved that Mr. Freehill be informed that if the rates due are not paid the water supply will be shut off from the premises.—W.H., 9/12/96. Informed, No. 7,639, of 9/12/96. Assessor, for report as to the distance which these premises are from the main (give sketch).—W.H., 9/12/96. Distance from main in Glebe-street, 254 feet. Sketch herewith attached.—LOUIS E. THOMAS, N.M.C., 15/12/96. The Assessor. The Secretary.—H.J.B., 15/12/96.

Metropolitan Board of Water Supply and Sewerage, 341, Pitt-street, Sydney, 4th December, 1896.

The Secretary, Mount St. Margaret Hospital, Ryde,—

Dr. to the Metropolitan Board of Water Supply and Sewerage for rates for the half-year hereunder named, on the property numbered in the Rate-book as under:—

Total	£3	19	0

No. 6.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 10 December, 1896.

Dear Sir,

Re Mount St. Margaret Hospital: I am very much surprised to find that your Board should be unwilling to have a matter of principle settled in the only way in which it can be settled, *i.e.*, by a competent Court. As you state that you intend to cut off the water supply, I have to warn you that should such a step be taken, I shall apply to the Supreme Court for an injunction restraining you, and for damages.

Yours, &c.

FRANK B. FREEHILL.

Attach papers.—W.H., 14/12/96. Submitted to the Board, 15/12/96. Further action deferred until Assessor's report on the general question is received, when a special meeting of the Board will be held to deal with the matter.—W.H., 16/12/96. Assessor.

No. 7.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 11 March, 1897.

Dear Sir,

Referring to previous communications, I beg to inform you that a rate-paper has been served at St. Margaret's Hospital at Ryde, claiming water-rate, £1 14s. 11d., and arrears, £3 13s. 6d.

As I have already intimated, this Institution is entitled, I contend, to exemption under the provisions of the Act of Parliament under which the Board has been called into existence. It seems to me

me extraordinary that there should be so much trouble in settling this question. In previous communications it was promised that the matter should be taken into consideration at an early date, and I shall be glad to know what your Board intends to do in the matter.

If you take legal proceedings, I shall be very glad to accept service of process.

Yours, &c.,

FRANK B. FREEHILL,
Hon. Secretary,
(per W. KNIGHT).

Assessor states his report on Charitable Institutions will be ready for next Board meeting.—E.P., 12/3/97.

No. 8.

Minute Paper.

Subject:—Hospital for Mental Invalids, Mount St. Margaret, Ryde.
Sydney, 20 March, 1897.

I THINK it advisable that a letter be sent to the Chief Secretary, asking whether this Institution is registered as a private asylum for lunatics, and if so, the number of patients resident there.

I visited the Hospital on Wednesday last, for the purpose of obtaining all possible information to enable me to complete my report on the Charities, called for by the Board, and was told by the Superior that she had been advised to give no further particulars.

W. J. BEAUMONT,
Assessor.

The Secretary. Write Principal Under Secretary.—W.H., 22/3/97. Written No. 1,959 of 24/3/97. Resubmit in a week.—W.H., 24/3/97. Resubmitted.—E.P., 1/4/97. Secretary. In another week.—W.H., 2/4/97. Letter from Colonial Secretary herewith.—H.J.B., 2/4/97. The Secretary.

The Principal Under Secretary to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Sir, In reply to the inquiry contained in your letter of the 24th ultimo, I am directed by the Chief Secretary to state that the house known as "Mount St. Margaret," Ryde, is a licensed house for the reception of the insane, and at the time the license was renewed, on the 20th October last, for a further period of twelve months, it was understood that there were five patients in the house.

Chief Secretary's Office, Sydney, 1 April, 1897.
I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Assessor.—W.H., 2/4/97.

No. 9.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 30 August, 1897.

Dear Sir,

The Rev. Mother Antonio O'Daly has handed me a notice from your Board with respect to College and land on the Gladesville-road. As your Board must be aware, there is not any such thing as a college. The Institution is a charitable one for the reception of female insane, and I have already informed you that it claims to be exempt from the payment of water rates under the provisions of the Act under which your Board operates.

Some time since, I applied to you in order to have some steps taken to have a definite settlement of the question of the exemption from liability of this and other similar institutions, and would be glad if your Board would have the matter settled one way or the other.

Yours, &c.,

FRANK B. FREEHILL
(per W. KNIGHT).

Assessor.—W.H., 31/8/97. I cannot identify this property. I have telephoned several times to Mr. Freehill, but I cannot catch him now.—C. SMITH, 1/9/97. Papers herewith.—E.P., 9/9/97. Meter Clerk please supply account showing consumption of water since first laid on.—H.J.B., 12/9/97.

Meter No. 8,440, Convent of St. Margaret (Hospital), Gladesville-road, Ryde; fixed 13th August, 1895:—From August 13, 1895, to June 29, 1896—62,000 galls., at 1s. per 1,000, £3 2s; Cr. by allowance (assessment), £3 2s. From June 29, 1896, to June 16, 1897—105,000 galls., at 1s. per 1,000, £5 5s.; Cr. by allowance, £5 5s. To rent of meter to—Dec., 1895, 5s. 6d.; June, 1896, 5s. 6d.; Dec., 1896, 5s. 6d.; June, 1897, 5s. 6d.; Dec., 1897, 4s. 3d.; total, £1 6s. 3d. By payments, 11s., leaving balance owing of 15s. 3d.—E.R.A. (per W. G. HUGHES), 20/9/97. Assessor.

This property has not been exempted by the Board as a charity: I would therefore suggest that Mr. Freehill's request be complied with, viz., that a writ be issued for the recovery of the rates due.—H.J.B., 21/9/97. The Secretary.

Submitted to the Board, 29/9/97. Recommendation of Assessor adopted.—W.H., 29/9/97. Assessor. S.C. proceed.—H.J.B., 30/9/97. D.C., serve final notice, giving forty-eight hours.—J.P., for Assessor, 1/10/97. What amount is owing to December, 1897? Reg. No. 119,115.—HENRY C. DE WITT, 7/10/97. Summons Clerk. Accountant, for amount due.—K.V., 7/10/97. Rec., 9/10/97. Rates, £7 7s.; meter 8,440, rent 15s. 3d.; £8 2s. 3d.—J.H.F., 9/10/97. Assessor. S.C., H.J.B., 11/10/97. D.C., for final.—K.V., 12/10/97. Final notice served to-day, to expire on 20th inst.—HENRY C. DE WITT, 13/10/97. Assessor. P.S.—The only name I can get as tenant of this house is Rev. Mother Joseph. The nun in charge would give me no other information. Is this sufficient for the purpose?—H.C. DE W.

No. 10.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Re the Licensed House for the Insane, Mount St. Margaret, Ryde.
Devon Chambers, Hunter and O'Connell Streets,

Sydney, 14 October, 1897.

Dear Sir,

The Rev. Mother Joseph has handed me a notice in reference to the water rates which your Board claims to have the right to recover in respect of water supplied to the Licensed House for the Insane, Mount St. Margaret, Ryde. As there is only one possible way in which the matter can be set at rest, and as I understood from a report I read in the daily Press that your Board was willing to have the matter submitted to legal decision so that the rights of the parties could be established, my clients are prepared to consent to have the matter tried at the Metropolitan District Court, so that a District Court Judge could give a decision which would settle the matter once for all. The necessary facts could be admitted, and a final result arrived at without delay or inconvenience.

I shall be glad if you will let me know whether the Board is prepared to take this course.

Yours, &c.,

FRANK B. FREEHILL.

Assessor,—What has been done?—W.H., 15/10/97. H.C. de Witt reports that the only name he can get as tenant is Rev. Mother Joseph, and that the nun in charge would not give her own name, nor any further information. Final expires on 20th instant.—K.V., 15/10/97. At the expiration of the final notice, action will be taken; final expires on 20th instant.—H.J.B., 18/10/97. The Secretary. Assessor please see me.—W.H., 19/10/97. S.C. for account.—H.J.B., 29/10/97.

Final served in name of Rev. Mother Joseph, and Mr. Freehill in his last letter gives the name of Rev. Mother Antonio O'Daly. Acting under instructions, I called at Mr. Freehill's office this date for further particulars *re* name, and find that Mr. Freehill is in Melbourne, and will not return to Sydney until Monday week. Can matter stand over until then?—K.V., 29/10/97.

S.C.—Are not the two Mothers one and the same person?—H.J.B., 1/11/97. D.C.—K.V., 1/11/97. No; Rev. Mother Antonio O'Daly is the proper authority to be sued.—HENRY C. DE WITT, 5/11/97.

Memorandum.

RATES due on Mount St. Margaret Home, Ryde: What action is being taken?—W.H., 22/11/97. Assessor. Final notice served on Rev. Mother Joseph; Rev. Mother Antonio O'Daly is the lady (D.C. says) to be sued. Summons herewith. S.C.—L. SOLOMON, 24/11/97. Assessor,—Summons and papers, 97-11,445. sent to solicitor.—K.V., 25/11/97. The Secretary.—H.J.B., 25/11/97. Assessor,—What was the result?—W.H., 28/12/97. Other papers.—K.V., 5/1/98. Assessor,—Summons withdrawn from the Ryde Court (see papers), and sent to District Court. Hearing February next.—K.V., 7/1/98. The Secretary.—H.J.B., 8/1/98. Assessor,—When will this case come on?—W.H., 15/3/98. The Board solicitor is awaiting reply from Mr. Freehill as to date of hearing. I think it will be heard about beginning of next week.—H.J.B., 16/3/98. The Secretary.

No. 12.

Memorandum.

Board *v.* St. Margaret's Home.

341, Pitt-street, near Bathurst-street, Sydney, 2 December, 1897.

Ask Mr. Freehill to kindly say on this paper if he will admit the service of a final notice in the above matter; and, if he will not, whether he will accept a final notice on behalf of the parties liable.

I will accept service of final notice on behalf of all trustees.—FRANK B. FREEHILL. K.V. P.T.C. for summons.—K.V., 2/12/97.

Trustees, Mount St. Margaret, Ryde:—Most Rev. Patrick Francis Moran, Cardinal Archbishop of Sydney; Right Rev. Joseph Higgins; Very Rev. J. J. Carroll; Venerable Samuel Austin Sheehy; Hon. Thomas Dalton, M.L.C.; Gerald Thomas Dalton; Francis Bede Freehill.

Memorandum.

From the Ryde Municipal Council to Mr. Beaumont.

Council Chambers, Ryde, 2 November, 1897.

Dear Sir,

The name on our Assessment-book for house and land, St. Margaret's, is Sister Antonio O'Daly; owner, Cardinal Moran.

Yours, &c.,

JOHN FORSYTH,

Acting Council Clerk.

Final served on Rev. Mother Joseph. Rev. Mother Antonio O'Daly is in charge, and is the Lady (D.).

Assessor,—This case might be taken in the Small Debts Court. Please ask Mr. Freehill whether he will admit the service of a final notice, and, if he will not, whether he will accept a final notice on behalf of the parties liable.—H.S.W., 26/11/97.

S.C.—Final served this day on Mr. Freehill, to expire on 15th December, 1897. Butt with Mr. Solomon.—P. BOLAND, 8/12/97. Assessor,—Final served on Mr. Freehill, and expires on 15th.—K.V., 9/12/97. S.C.—I understood this summons was issued over a week ago.—H.J.B., 10/ 2/97.

Assessor,—See solicitor's minute, 26/11/97, and Freehill's reply, on front herewith. A number of calls had to be made at Mr. Freehill's office before he could be seen, and a fresh final also served.—K.V., 11/12/97.

S./C.—Proceed without delay.—H.J.B., 13/12/97. P.C., for action on expiry.—H.V., 14/12/97. Summonses herewith.—L. SOLOMONS, 17/12/97. S./C. Mr. Pearce.—K.V., 17/12/97. Date of hearing, Jan. 4, 1898, Ryde Court.—A. H. PEARCE, 28/12/97. Board's solicitor.—K.V., 28/12/97.

Assessor.—Mr. Freehill called to-day and stated that he objects to accept service of summonses in the Police Court, as he agreed that the case should be heard in the District Court. As the defendants live in various districts, I think you had better withdraw this summons and sue in the District Court.—H.S.W., 29/12/97.

No arrangements were made as stated.—K.V., 29/12/97. Mr. Purcell (*per* Assessor).—Write withdrawing case from Ryde Court, inform Mr. Freehill, and return papers for further action.—K.V., 29/12/97. Written.—T. PURCELL, 30/12/97. Mr. Pearce.—Hold for Court. See that everything is ready. Asst. Bks. Signed, &c.—K.V., 19/1/98.

F. B. Freehill, Esq., to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,
Sydney, 29 December, 1897.

Dear Sir,

Re Mount St. Margaret's, Ryde. Without prejudice. I have received a summons to attend the Small Debts Court for the recovery of the rates herein, at Ryde. I never, under any circumstances, agreed to have this question submitted to the adjudication of magistrates. I did agree to have the matter decided in the District Court, which would procure an authoritative decision, and be more satisfactory to all concerned. I therefore object entirely to the jurisdiction of the Court at Ryde, and have seen Mr. Williams, the Board's solicitor, and have informed him that I am prepared and still ready to agree to have a case tried at the District Court in February next, and thus to secure a judicial interpretation of some value.

I shall be glad, therefore, if you will make arrangements to withdraw the proceedings at Ryde.

Yours, &c.,

FRANK B. FREEHILL,
(*per* F. W. KNIGHT.)

No. 15.

The Solicitor to the Metropolitan Board of Water Supply and Sewerage to The Secretary.

Re case "Board v. Mount St. Margaret's Home, Ryde."

Sir,

Sydney, 25 March, 1898.

I have the honor to report that this case came on for hearing at the District Court to-day and resulted in a verdict being entered for the defendants.

The action was brought by the Board against the Trustees of Mount St. Margaret's Home for Female Insane, Ryde, to recover £8 2s. 3d. due for water rates and rent of meter in respect of such premises, and was defended on the ground, "That the premises in question being used as a public hospital and a charitable institution the plaintiff is compelled by the provisions of the Act 43 Vic. No. 32, sec. 63, to supply water without charge."

It was in the first instance arranged between Mr. Frechill, the defendant's solicitor (and one of the trustees of the Institution), and myself, that the case should be tried on admissions, and a set of admissions were prepared by me and submitted to him for approval; but as he required admissions by me that the Institution is a non-sectarian charitable institution, which makes no charge to patients, but is open for the reception of female insane persons without respect of creed, and without condition, and relies for its subsistence on voluntary donations only, and as I refused to make such admission this arrangement fell through.

In the course of preparing the case for hearing, I saw the late Mayor of Ryde, Mr. Potts, and the present Council Clerk of that municipality, Mr. Short, and questioned them as to the nature of the Institution, and although they were not in a position to give very much information on the subject, I learnt from them that the Council's rates had been paid under an informal protest up to last year, and that a day-school for children is conducted on part of the property, but they could not say whether or not fees were charged the school children; however, the defendants admitted that in the case of some children small fees are charged.

I could, however, obtain no evidence as to whether fees are charged for the insane patients. I contended, on the hearing of the case, that the property is liable for rates, inasmuch as it cannot be regarded as a public hospital or charitable institution.

Firstly,—Because it pays rates to the local Council, from which it would be exempt under the Municipalities Act if it were a charitable institution.

Secondly,—Because school fees are charged to certain of the children attending a day-school conducted on part of the property.

Thirdly,—Because being a registered lunatic asylum the friends of patients can be made to contribute to their support under lunacy law.

Fourthly,—Because the Institution is not supported out of municipal rates, as apparently required by the Metropolitan Water and Sewerage Act, before it can claim exemption.

Fifthly,—Because the Lady Superior of the Institution had signed an agreement for the hire of a meter to the property, and therein agreed to pay all moneys due under such agreement and abide by the provisions of the Metropolitan Water and Sewerage Acts.

And Sixthly,—Because the name of the Institution, viz., "The Convent of Our Lady of Good Counsel," indicates that it is a Roman Catholic institution and not a public hospital.

Mr. Frechill, the defendant's solicitor, in the capacity of a trustee of the Institution, gave evidence in the case, and stated that, to his own personal knowledge, the Institution is entirely charitable, and is conducted by some five or six Sisters of Charity for the care of female insane persons. That it makes no charge for admission, but that persons up to the licensed number (six or thereabouts) are admitted unconditionally and without reference to creed, the place being entirely unsectarian, and its objects being public charity. He added that the rates to the Council had been paid under protest, and produced letters from the Council acknowledging his protest, but insisting upon payment, as they had been advised that the Institution was ratable. He stated that the defendants are willing to pay a fair rate on the part of the property used as a school, but contended that the assessment cannot be divided, and that if it is bad in part it is bad altogether. He repudiated the authority of the Lady Superior to bind the trustees by her agreement for hire of meter, and stated that the trustees never had any knowledge of such an agreement, and that it had been sprung upon him in this case, and contended that his letters to the Board, as one of the trustees, repudiating the liability of the trustees for rates must be taken as notice to the Board of termination of the agreement. I cross-examined Mr. Frechill, and elicited that the land on which the Institution stands had been given to the Church by the late Mr. Thos. Dalton for the formation of this Institution, but could not shake his evidence, which was given in a most decided and emphatic manner.

I contended that in any case the agreement must stand, as the occupier, who might fairly be treated as the agent of the trustees, had signed it, and even if the place had been admitted by the Board to be a charity (which it was not), such an agreement would be required, because of the school conducted on part of the property.

After considerable argument on the cases quoted. His Honor held that he must accept Mr. Frechill's uncontradicted evidence that the Institution for the insane is entirely a charity, relying entirely upon voluntary support, as conclusive that it is a charity, and stated his opinion to be, under such circumstances, that it is entitled to exemption under the provisions of the Act. He did not think that the Act required a hospital or charitable institution to be supported out of municipal rates to bring it within the exemption from rates, and he considered that the provisions of the Lunacy Act do not apply to a private lunatic asylum, such as this. (I have since learnt privately that the Master-in-Lunacy does deal with the property of an insane lady in this same institution under the provisions of the Lunacy Act.) His Honor further held that he could not give the Board a verdict for rates on that part of the property on which the school is conducted, because he has no power to divide the assessment of the whole property. He also held that the payment to the local Council being (according to Mr. Frechill's evidence) under protest could not be regarded as a payment at all. He also held that the agreement for hire of meter signed by the Lady Superior became nullified by Mr. Frechill's letters protesting against payment of rates, even if it were binding on the trustees at all, and that even if it were binding, it was for payment of

of moneys due, and as he held the place to be a charitable institution entitled to exemption from rates no moneys became due. Under these circumstances His Honor held that the Board could not recover, and found a verdict for defendants.

From His Honor's decision no appeal lies, as the amount in dispute does not exceed £10, and I do not see that the Board can take any further action until they are in possession of evidence as to the true nature of the Institution, and I have already advised the Assessor to have a searching inquiry made in the matter, and suggested that a letter be written to the Master-in-Lunacy for information as to the character of the Institution. I could see that both the Council Clerk and the late Mayor knew in their own minds that fees are charged at this Institution, and that the Institution is not such as Mr. Freehill swore it to be, but they had no authority on which they could give evidence on the point, but (as indicating his opinion on the matter), the Council Clerk stated to me that "he never would have thought Mr. Freehill would have the audacity to swear what he did in his evidence." The impression both the Mayor and Council Clerk have is that the Institution is for the reception of wealthy insane ladies of the Roman Catholic faith, who can pay well for the care they receive at the Institution.

I certainly do not think that the matter should be allowed to rest in its present state, but that the Board should direct that no pains be spared in ascertaining the true nature of the establishment, and if it be ascertained that as is thought, and as I believe it will be found, fees are charged for treatment of patients in the Institution, I would have no hesitation in advising that the water should be disconnected from the place until the rates have been paid.

As the amount in dispute was under £10 no costs are payable. I may add that the 63rd section of the Act is a complicated and difficult section to understand, and that the sooner it is amended by legislation which may be clearly understood such as is contained in the present amending Bill, the better for both the Board and the ratepayer. I return all papers.

Yours, &c.,
H. S. WILLIAMS.

Submitted to the Board, 30/3/98. Read and ordered to stand over pending receipt of further information from Master-in-Lunacy.—W.H., 30/3/98. Resubmit on Monday, 4th April.

In the Metropolitan, Suburban, and Hunter }
District Court, holden at Sydney. }

No. 98-139.

Between the Board of Water Supply and Sewerage, plaintiff, and His Eminence Patrick Francis Cardinal Moran and others, defendants.

TAKE Notice that we intend to defend this action and to rely upon the following grounds of special defence, namely,—

1. Not indebted.

2. That the premises in question being used as a Public Hospital and a Charitable Institution, the plaintiff is compelled by the provisions of the Act 43 Vic. No. 32 section 63, to supply water without charge.

Dated this 27th day of January, A.D. 1898.

The Chief Clerk, Master-in-Lunacy's Office, to The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Master-in-Lunacy's Office, Supreme Court, Chancery Square,
Sydney, 30 March, 1898.

Sir,

In reply to your letter of the 28th instant (No. 98/2,183), I am directed to inform you that in the case of Kathleen Dowley, a patient in the licensed home for the insane, Mount St. Margaret, Ryde, the Master-in-Lunacy pays maintenance to the Lady Superior from funds to the patient's credit in this office at the rate of £18 10s. per quarter.

I am to add that the records of this office show that in other cases the relatives of patients at Mount St. Margaret defray the cost of their maintenance.

I have, &c.,

F. B. Freehill, Esq., to The Solicitor to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,

Sydney, 16 April, 1898.

Dear Sir,

Re Mount St. Margaret's, Ryde. I beg to acknowledge receipt of your letter of the 14th inst., and must express my astonishment that the Board should have the audacity to attempt to override a judicial decision. It seems to me to be a very fortunate thing that this Board cannot trample upon the rights of the public, as they evidently feel inclined to do in the case of the various institutions which I have the honor to represent. It is a notorious fact that the Board dare not proceed against an institution, such as the Prince Alfred Hospital, although a claim is made for a very substantial sum for water supplied to that institution.

I am prepared to fight the Board in every possible way, and shall take the earliest opportunity of exposing the contemptible manner in which the Board has endeavoured to treat, not only the Mount St. Margaret's Home, but also the Lewisham Hospital, the St. Patrick's Blind Asylum, and the Night Refuge in William-street, Sydney.

As one of the public, I would suggest that the Board might get a measure passed through Parliament enabling it to trample upon the rights of all the citizens, irrespective of the denomination to which they belong.

Yours, &c.,

FRANK B. FREEHILL.

Received.—H.S.W., 19/4/98.

Secretary.—I understand that a further sum of £1 16s. 9d. is due for rates upon this property, and would suggest that the matter be brought to a determination in the Supreme Court, by a formal notice that the water will be disconnected unless such sum be paid; otherwise, I presume, the matter will remain in abeyance until the liability or otherwise of institutions, such as the present, for rates has been more clearly defined by legislation. The object of a notice that the water will be disconnected is to give Mr. Freehill an opportunity of applying to the Supreme Court in Equity for a mandamus to compel the Board to supply water free of charge to the Institution. On such a motion the matter would be finally settled by an authoritative decision.—H.S.W., 19/4/98.

Submitted to the Board, 4/5/98. It was resolved to adopt the advice of the Board's Solicitor.—W.H., 4/5/98. Assessor attach account. Account herewith.—W. J. PURCELL, for Assessor, 5/5/98. Board's solicitor. Secretary.—The usual rate notice should first be served upon the property—has this been done?—H.S.W., 6/5/98.

No. 20.

Minute Paper.

Subject—*Re* Home for Mental Invalids, Mount St. Margaret, Ryde.

341, Pitt-street, near Bathurst-street, Sydney, 5 May, 1898.

As the District Court decision in *re* rates hereon has been against the Board, will you please say whether the amount sued for can yet be recovered, as, if not, I think it would be well to write off the same.

To Board Solicitor.

H.J.B.

Assessor.—This amount cannot be recovered, but it would be well not to write it off at present until it is seen how the matter develops. It should not, however, be charged in any accounts rendered.—H.S.W., 6/5/98. S/C. and C/C., also D/C. to note.—H.J.B., 18/5/98. Noted.—K.V., 19/5/98. Register No. 119,115. Solicitor's remarks noted in Register.—J.R.N., 20/5/98. The Assessor. D/C., to note. Noted.—HENRY C. DE WITT.—21/5/98. Attach papers.—H.J.B., 23/5/98. Assessor. Attached.—W. H. DANSEY, 26/5/98.

No. 21.

Memorandum.

I SEE that a rate notice was served on 2nd March last for—

Current rates	£1 16 9
Arrears	7 7 0
Costs	0 9 0
									£9 12 9

Have another notice served for the current half-year's assessed rates only, and do not mark it "duplicate;" the District Clerk to serve it personally on the lady in charge, and record this fact on these papers. This to be done at once.

Assessor.

W.H.,

6/5/98.

D/C. to carry out at once.—H.J.B., 6/5/98. These instructions I have carried out, on Saturday, as instructed by you.—HENRY C. DE WITT, 9/5/98. Assessor. The Secretary.—T.R., 9/5/98. No. 119,115.

Metropolitan Board of Water Supply and Sewerage, 341, Pitt-street, near Bathurst-street, Sydney.
To Sister Antonio O'Daly, or the present Occupier, Lessee, Owner, Agent, Trustee, &c., &c., of the undermentioned Property.

Notice is hereby given that by virtue of the Metropolitan Water and Sewerage Acts of 1880 and 1888, the Amendment Act, 1889, and the Metropolitan Water and Sewerage Act Extension Act of 1894, the Board of Water Supply and Sewerage have ordered and directed the undermentioned premises to be rated for the half-year commencing 1st January, 1898, at the sums and for the purposes hereunder set forth:—

Premises Rated.	Assessed Value.	Charges.	Description of Rates.	Amount for Half-year.
	£ s. d.	Particulars of Water and Sewerage Charges can be obtained at the Head Office.		£ s. d.
College and Land, Gladesville Road	126 0 0		Water Rate	1 16 9
			Sewerage or Drainage Rate
L. A. No. 127.			Total	£

You are requested to pay the amount of the above rates at the Office of the Board of Water Supply and Sewerage, 341, Pitt-street, near Bathurst-street, within one month from date of service of this notice. If the same be not paid by that date, legal proceedings will be taken for the recovery of the amount due with costs.

WILLIAM HOLMES,
Secretary.

Date of service, 1898.

N.B.—You are requested to bring this notice with you when you come to pay, and, to prevent inconvenience, the exact amount of change.

Office hours—9 to 3; Saturday, 9 to 12.

None but the official receipt on printed form bearing the Board's stamp will be recognised.

Rates for special fees are not included in this notice.

The right of the Board to proceed for recovery of arrears (if any) of rates overdue not to be prejudiced by the service of this notice.

Cheques, Postal-notes and Post Office Orders will be received and duly acknowledged; and when sending remittances please state where the receipt is to be sent.

REMITTANCES SENT BY POST MUST BE ADDRESSED TO THE SECRETARY.

No. 22.

The Solicitor to the Metropolitan Board of Water Supply and Sewerage to The Secretary.

Re Mount St. Margaret Home, Ryde.

Sir,

39, Castlereagh-street, Sydney, 31 May, 1898.

I have the honor to report that I have not received any reply from Mr. Freehill to my letter to him of 14th instant, and to suggest that a further letter be now written him, limiting a time for payment of the rates owing, and notifying that the water will be disconnected from the property after the day named unless the rates be paid.

Yours, &c.,

H. S. WILLIAMS.

Submitted.—W.H., 1/6/98. Board recommend.—T.R., 2/6/98. Submitted to the Board, 8/6/98. The suggestion of the solicitor was adopted, and it was decided that fourteen days be given in which to pay.—Board solicitor.—W.H., 8/6/98. Letter written to Mr. Freehill.—H.S.W., 9/6/98. Secretary. The fourteen days' notice given has expired, and I have had no reply. I suppose that nothing remains now but to disconnect the water if the Board intend to press the matter.—H.S.W., 24/6/98. Submitted for approval.—W.H., 25/6/98. Approved; take action.—T.R., 27/6/98. Please write Mr. Freehill, saying that as rates are still unpaid, the water will now be cut off.—W.H., 27/6/98. Board solicitor. Secretary. Letter written.—H.S.W., 29/6/98. Assessor.—W.H., 30/6/98.

No. 23.

F. B. Freehill, Esq., to The Solicitor to the Metropolitan Board of Water Supply and Sewerage.

Devon Chambers, Hunter and O'Connell Streets,

Sydney, 29 June, 1898.

Dear Sir,

Re Mount St. Margaret Hospital for Female Insane. Referring to previous correspondence herein, I see no reason whatever to withdraw anything that I have written with regard to this matter.

The Board propose to disregard a judicial decision, which was arrived at after agreement between the Board and the trustees of the Institution that the matter should be left to the decision of a Judge of the District Court. You seem to consider that the Board is justified in charging this Institution for water because the Master-in-Lunacy has paid some money for the support of a patient. If Mount St. Margaret's Home does not come within the Act, then it seems to me that the long list of institutions which are supplied free of charge by the Metropolitan Board of Water Supply and Sewerage are not entitled, because, as far as I know, all the large hospitals do receive money from patients, and in some instances actually have rooms which are only let to persons who are able to pay a weekly sum.

I have written strongly on the matter because I can only come to the conclusion that the manner in which the Board has treated the Institution at Ryde, and the other institutions conducted by the same Order, is so different from the manner in which many of the other public institutions in the metropolitan area have been treated.

It seems to me to be a most outrageous thing for the Board to cut off the water.

Yours, &c.,

FRANK B. FREEHILL,

(per F. W. KNIGHT.)

Secretary.—I have already written Mr. Freehill so fully on this matter that I do not consider that this letter needs a reply.—H.S.W., 30/6/98. Submitted.—W.H., 30/6/98. Noted.—T.R., 1/7/98.

The Superioress, Convent of Mercy, North Sydney, to The Secretary to the
Metropolitan Water Supply and Sewerage Board.

Convent of Mercy, "Monte Sant Angelo,"

North Sydney, 22 July, 1898.

Dear Sir,

We have given land at Waitara (on the Peat's Ferry Road) for a foundling hospital, and I have been desired to write and ask you to place it on the list of charitable institutions exempt from water rates. Apologising for troubling you,

I am, &c.,

S. M. ALOYSIUS,

Superioress.

Assessor,—W.H., 25/7/98. I cannot identify.—S.O.C., 25/7/98. D/C.—K.V., 25/7/98. 57,291. Gordon. There are papers *re* this.—HENRY C. DE WITT, 26/7/98. Papers herewith.—F.P., 28/7/98. Other papers. I cannot trace.—F.P., 2/8/98. S/C. D/C.—K.V., 3/8/98.

A paper was marked to me from you to ascertain the number of inmates and all particulars of this institution, a few weeks back, which paper I returned, as the authorities were not then in possession. The Meter Clerk sent an officer to get the same information.—HENRY C. DE WITT, 4/8/98.

Papers. S/C. Inspector Wilson.—A.M., 5/8/98. Report attached.—H. A. WILSON, 9/8/98. Assessor,—A.M., 9/8/98. Papers herewith.—W. H. DANSEY, 9/8/98. Assessor,—T.R., 10/8/98. Report herewith.—H.J.B., 12/8/98. The Secretary.

Reg. No. 57,291, Foundling Hospital, Peat's Ferry Road, Gordon.

The above new building has been assessed, and a permit issued this day for domestic purposes, without reference to rates, the owners claiming exemption from water rates, on the grounds that it is a charitable institution. A report as to the nature of the Institution, &c., might be obtained in the usual way.—S.E., 23/6/98.

The Assessor. Defer. D/C. Report on usual form.—K.V., 23/6/98. Deferred. Please return for further action. 57,291.—J. PRINGLE, 27/6/98. The authorities are not yet in occupation of this place, please resubmit in a week.—HENRY C. DE WITT, 28/6/98. The Assessor. One week. Resubmitted.—F. PAWLEY, 5/7/98. D/C.—K.V., 6/7/98.

Inspector Wilson has been instructed to report on this case, and has, I believe, sent in his report. Will you please ascertain from Mr. Absell what are the particulars, or shall I make an independent report. The authorities have not yet entered into possession, nor will do so for another three weeks.—HENRY C. DE WITT, 5/6/98. Assessor.

Mr. Wilson's report will suffice; this paper can now be filed.—T.R., 7/7/98.

Name and address of Institution?—Foundling Hospital, Waitara.
Object of Institution?—To rescue foundling children.
How many inmates?—Thirty-eight infants and twelve adults (six servants included).
What work is done by inmates for their support?—Not any.
What amount is realised by work?—Not anything.
What other sources of revenue?—Charitable contributions only.
What Government endowment?—Not any.
What fees are charged inmates?—5s. per week each child, if friends are able to pay.
Are any salaried persons employed?—Yes; six servants at 3s. per week.
Is this Institution self-supporting?—No.
Is the water used as a matter of profit?—No.
Estimated quantity of water used per annum?—546,000.
Is the property owned by Institution?—Yes.
Is the property exempted by Municipal Council?—Not any Council at Gordon.

LEGISLATIVE ASSEMBLY—*Hansard*, 24th August, 1898.

METROPOLITAN WATER AND SEWERAGE BOARD.

Mr. LYNE: It will be in the recollection of the Secretary for Public Works that a few nights since I asked him a question with regard to the action of the Metropolitan Water and Sewerage Board in cutting off the supply of water to an institution at Ryde. The honorable gentleman said that he was going to bring in a Bill to amend the law. I wish to draw his attention to the fact that the Board has taken the extreme course of cutting off the water supply, and that the Institution is now actually without water.

Mr. YOUNG: I have a perfect recollection of what took place the other evening. Yesterday I received a letter from a gentleman, who, on behalf of the Institution, pointed out the exact state of affairs. It appears that there is some difference of opinion as to whether it is or is not a charitable institution. I have sent this letter on to the Board for such statement as it may choose to make, and after that I will consider if it is my duty to interfere with the administration of the Board in reference to this matter.

Mr. LYNE: I wish to know whether the honorable gentleman will suspend the action of the Board until a Bill to amend the law is brought in?

Mr. YOUNG: It is somewhat difficult to do that, because I do not know how long it will be before the Bill is brought in. I unhesitatingly say that the Board has no right to treat one charitable institution differently from another charitable institution. I understand that the Institution does a great deal of work—washing, or something of that kind—for payment. I am not sure whether the money is used for charitable purposes. It is a matter which requires serious consideration, and I should not be justified in interfering with the discretion of the Board without having a full knowledge of the whole subject.

Put with papers. JNO. P.—30/8/98.

Sydney Morning Herald, 18th August, 1898.

Mr. LYNE said he would like to ask the Minister for Works to make an effort to prevent the Water and Sewerage Board at Ryde from cutting off the supply of water from certain institutions. The supply had been cut off on the ground that the Water Board could not legally grant the supply free of the cost. It had been promised to introduce an amending Bill, in which the illegality would be removed. He desired that the Water Board should take no action pending the introduction of the proposed Bill.

The MINISTER FOR WORKS said he would inquire into the matter immediately, and he would introduce a Bill, as promised, at the earliest opportunity.

The motion was carried, and the House at 10:35 p.m., adjourned till the usual hour on the following day.

Daily Telegraph, 25th August, 1898.

WATER FOR BENEVOLENT INSTITUTIONS.

The leader of the Opposition asked the Minister for Works, in the Legislative Assembly yesterday afternoon, why the Water and Sewerage Board had stopped the supply of water to a charitable institution at Ryde. Mr. Young, in the course of his reply, said that there appeared to be some difference of opinion as to whether this particular Institution could come under the general definition, inasmuch as it was supposed to do some work for payment. But the matter had been referred to the Water and Sewerage Board, and when the reply was received it would be for him to decide as to how far he would be justified in interfering with the decision of the Board in the matter.

Daily Telegraph, 26th March, 1898.

A CLAIM FOR WATER RATES.

The Mount St. Margaret Hospital.

In the District Court, before Judge Backhouse, the Water and Sewerage Board brought an action against the trustees of Mount St. Margaret Hospital for Female Insane, which is situated on the Gladesville Road at Ryde, for the recovery of £8 2s. 3d. for rates and rents for a water meter for two years, ending December, 1897. Mr. H. Williams appeared for the Board, and Mr. F. B. Freehill for the trustees of the Hospital.

The Board claimed payment of the water rates as stated, and a contract, which was signed by the Mother Superior of the community, agreeing to pay what rates were due, was submitted. It was claimed that this contract was binding on the trustees, and it was further pointed out in support of the Board's case that municipal rates had been paid, showing that the Hospital was not regarded as a charitable institution.

Mr. Freehill, for the defence, pleaded not indebted, with the special defence that the premises in question being used as a public and a charitable hospital, the plaintiffs were compelled, under section 63 of the Water and Sewerage Act, to supply water without charge. He pointed out that the Institution was non-sectarian in character, and was supported entirely by voluntary contributions. The average number of inmates was between five and six. The point for his Honor to decide was whether the Institution was a charitable one, and, if so, whether it was not exempt under Act. In June, 1896, he had written to the Board, repudiating any claim they might have against the trustees for rates; and in December of that year a communication was received from the Board to the effect that if the rates were not paid the water would be cut off. He had replied, stating that if the water were cut off he would bring the matter before the Supreme Court. Some further correspondence had passed between them, and he invited the plaintiffs to take proceedings in the matter in order that the question might be settled.

His Honor ruled against the plaintiffs. He pointed out that the covenant which had been signed by the Mother Superior was binding on the trustees, as she was a responsible person connected with the Institution. But the covenant was to pay rates which were due, and he (His Honor) held that no rates were due, as, in his opinion, the Hospital was exempt, being a charitable institution. The verdict would be for the defendants.

Daily

Daily Telegraph, 26th March, 1898.

CLAIM FOR WATER RATES.

The right of Mount St. Margaret's Hospital for Female Insane at Ryde to the free use of water was determined by Judge Backhouse in the District Court yesterday. The Water and Sewerage Board brought an action against the trustees of that Institution for two years' water rates and rent of meter, and based their claim on the fact that the Mother Superior of the Hospital had covenanted to pay rates, and that as municipal rates had been paid, it could not be claimed that the Hospital was exempt from the payment of water rates on the ground that it was a charitable institution. The demand for rates was opposed, it being argued that the Hospital was maintained by voluntary subscriptions, was non-sectarian in character, and was in every respect a charitable institution. The Judge sustained the contention raised by the defence, and with regard to the covenant pointed out that the contract entered into by the Mother Superior was to pay rates which were due. As there were no rates due the covenant did not touch the case at all.

No. 27.
Rate Notice.

RYDE.

(Duplicate.)

No. 119,115.

Metropolitan Board of Water Supply and Sewerage, 341, Pitt-street, near Bathurst-street, Sydney.
To Sister Antonio O'Daly, or the present Occupier, Lessee, Owner, Agent, Trustee, &c., &c., of the undermentioned Property.

Notice is hereby given that by virtue of the Metropolitan Water and Sewerage Acts of 1880 and 1888 the Amendment Act, 1889, and the Metropolitan Water and Sewerage Act Extension Act of 1894, the Board of Water Supply and Sewerage have ordered and directed the undermentioned premises to be rated for the half-year commencing 1st July, 1898, at the sums and for the purposes hereunder set forth :—

Premises Rated.	Assessed Value.	Charges.	Description of Rates.	Amount for Half-year.
	£	Particulars of Water and Sewerage charges can be obtained at the Head Office.		£ s. d.
College and Land, Gladsville	126		Water Rate	1 16 9
			Arrears	1 16 9
			Sewerage or Drainage Rate
L. A. No. 127.			Total	£ 3 13 6

You are requested to pay the amount of the above rates at the office of the Board of Water Supply and Sewerage, 341, Pitt-street, near Bathurst-street, within one month from the date of service of this notice. If the same be not paid by that date, legal proceedings will be taken for the recovery of the amount due with costs.

WILLIAM HOLMES,

Secretary.

Date of Service, August 25th, 1898.

N.B.—You are requested to bring this notice with you when you come to pay, and to prevent inconvenience the exact amount of change.

Office hours—9 to 3 ; Saturday, 9 to 12.

None but the official receipt on printed form bearing the Board's stamp will be recognised.

Rates for special fees are not included in this notice.

The right of the Board to proceed for recovery of arrears (if any) of rates overdue not to be prejudiced by the service of this notice.

Cheques, Postal-notes, and Post Office Orders will be received and duly acknowledged, and when sending remittances please state where the receipt is to be sent.

REMITTANCES SENT BY POST MUST BE ADDRESSED TO THE SECRETARY.

No. 28.

F. B. Frechill, Esq., to The Secretary for Public Works.

Devon Chambers, Hunter and O'Connell Streets,

Sydney, 23 August, 1898.

Sir,

Re Mount St. Margaret's, Ryde, and the Water and Sewerage Board. On behalf of the trustees of the Institution known as Mount St. Margaret's, Ryde, I have the honor to place before you the following facts :—

The Institution in question was established for the purpose of forming a Hospital for Female Insane, to be conducted by the Sisters of the Little Company of Mary. The Sisters give their services entirely without any charge or salary whatsoever. They receive patients whether they are able to pay or not. Where they can get some payment on account of the maintenance of the patients they accept it. In one particular instance they receive some payment from the Master-in-Lunacy in respect of a patient under their charge.

The Water and Sewerage Board have for some time past contended that the Institution is not entitled to receive water free of charge, and the trustees believe that the Institution is so entitled. Correspondence between the Board and myself (on the part of the trustees) was carried on for some time, with the result that the Water and Sewerage Board, on the 9th December, 1896, wrote, saying that they would cut off the water supply immediately unless the rates claimed were paid. I wrote in reply, protesting against this action, and threatened to apply to the Supreme Court for a mandamus to compel the water to be so supplied. Before this letter of the 9th December, 1896, I had written to the Board, inviting them to take proceedings in some competent Court for the recovery of the rates for the purpose of

of having a judicial decision on the subject. On the 17th January, 1898, a plaint was issued by the Board in the Metropolitan and Hunter District Court, holden at Sydney, to recover the sum of £8 2s. 3d. for rates and hire of meter. Certain admissions were made and certain evidence was given, and the case was heard before His Honor Judge Backhouse on the 25th March, 1898, when he decided, on the evidence and admissions, that the Institution was entitled to exemption from payment of water rates, and accordingly he gave a verdict against the Water and Sewerage Board.

For some reason or other, the Water and Sewerage Board have again made a claim for rates, and on the 17th instant cut off the water from the Institution.

According to the return furnished towards the end of last year by yourself, although the Board supplies almost every conceivable institution of a charitable nature in the metropolitan area with water, it makes an exception with regard to this particular Institution. If the fact of the Institution being in receipt of payments from some patients who are able to pay is sufficient ground for refusing the exemption, then I think, in fairness, that all institutions which receive any payment on behalf of any patients should likewise be excluded. The Board, however, apparently draws a distinction, but upon what grounds I am unaware.

The trustees of the Mount St. Margaret's Home do not receive any State aid whatever. The majority of institutions which do receive water free from the Board are in the habit of accepting payment from any person who may be in a position to pay. In their case, apparently, the Board does not consider this circumstance as in any way destroying the right given to charitable institutions, under the Act, to receive water free of charge.

As I understand an Act of Parliament is to be introduced dealing with the whole question shortly, the trustees ask me to appeal to you to compel the Water and Sewerage Board to continue to supply the water pending the introduction of a Bill to deal with the whole matter. I send herewith copy of the report of the case heard before His Honor Judge Backhouse.

I have, &c.,

FRANK B. FREEHILL.

See Water and Sewerage Board.—R.H., Under Secretary Public Works and Commissioner for Roads, 24/8/98. Urgent. Received 27/8/98.—W.H. Board solicitor,—Will you please prepare a reply to this for the Minister's information.—W.H., 27/8/98. Secretary,—Draft of reply containing full information herewith.—H.S.W., 30/8/98. Letter to U.S.P.W., No. 6,021 of 31/8/98.

No. 29.

The Secretary to the Metropolitan Board of Water Supply and Sewerage to The Under Secretary for Public Works.

Sir,

Sydney, 31 August, 1898.

I have the honor to acknowledge the receipt on 27th instant of Mr. Freehill's letter on the above matter, addressed to the Hon. the Secretary for Public Works, and referred to me by you on 24th instant, and am directed to supply you with the following information in connection with the matter:—

On the 12th August, 1895, the Lady Superior of the Mount St. Margaret's Convent, Ryde, signed an agreement with the Board to hire a water meter at 11s. per annum, and take a supply of water for the Institution through meter, and the Board accordingly fixed a meter and supplied water to the Institution. No payments were received by the Board for the water supplied to the Institution, but upon service of the usual rate notice in about the month of June, 1896, the Board received a letter from Mr. Freehill claiming exemption from rates for the Institution.

The Board thereupon made inquiry as to the true character of the Institution, the result of which has made it clear to the Board that the property rated cannot properly be considered to be a charitable institution or public hospital and entitled to exemption from rates.

Under the Metropolitan Water and Sewerage Act the Board is authorised to supply water free to "public hospitals" or "charitable institutions."

On inquiry of the local Municipal Council the Board ascertained that the Council did not regard or treat the Institution as a charitable institution, but had always insisted upon and received payment of municipal rates by such Institution, from which it would be exempt under the Municipalities Act if it were a charitable institution, and that such rates had been paid to the Council up to the end of last year. Further the Board found that a day-school is conducted on part of the property, and that school fees are charged for the children attending such school. Again, subsequently, on inquiry of the Chief Secretary, the Board learned that the Institution is registered as a licensed house for the reception of the insane, and that at that time there were five patients in the house.

The name of the Institution as appearing on its gates being "The Convent of our Lady of Good Counsel," the Board considered as indicating that the place was a Roman Catholic convent and not a public hospital or charitable institution in any proper sense. The Council Clerk of the municipality, further, informed the Board that the Institution was really a Roman Catholic convent, in which Roman Catholic insane ladies were taken for treatment.

The Board having informed Mr. Freehill that it could not comply with his request for exemption of the Institution, insisted upon payment of the rates and rent owing, and subsequently (in December, 1896) as the amount due had not been paid, the Board gave notice of its intention to disconnect the water supply from the property unless such moneys were paid, and Mr. Freehill then wrote the Board threatening to apply to the Supreme Court for an injunction to restrain the Board from cutting off the water from the property for non-payment of rates. Eventually it was agreed that the Board should sue the trustees of the Institution in the District Court for the rates owing. In January last an action was commenced by the Board, and the case was heard on 25th March last, and resulted in a verdict, on Mr. Freehill's evidence, for the defendant; but the Board considers that this case cannot be regarded as settling the question of liability at all, inasmuch as further information, which the Board has since the hearing of the case obtained, with reference to the Institution, appears to make it clear that the facts of the matter were not correctly represented to the Judge by Mr. Freehill's evidence.

In

In giving evidence in the case, in the capacity of a trustee of the Institution, Mr. Freehill swore that to his own personal knowledge the Institution is entirely charitable, and is conducted by some five or six Sisters of Charity for the care of female insane patients; that no charge is made for admission; but that persons up to the licensed number (six or thereabouts) are admitted unconditionally and without reference to creed, the place being unsectarian, and its objects public charity. Mr. Freehill repudiated the authority of the Lady Superior to bind the trustees by her agreement for hire of a meter, and further swore that the Council's rates had been paid under protest.

Although the Board had as witnesses the Mayor and Council Clerk of Ryde, who stated that they knew that the Institution was not such as Mr. Freehill had represented it to be (the Council Clerk going so far as to state that "he never would have thought Mr. Freehill would have the audacity to swear what he did in his evidence"), neither witness had really any authority on which he could contradict Mr. Freehill's evidence; and although legal argument was used on the Board's behalf, the Judge held that he must accept Mr. Freehill's uncontradicted evidence that the Institution was entirely charitable, relying entirely upon voluntary support, as conclusive that it was entitled to exemption. It was argued on behalf of the Board that this Institution being registered as a lunatic asylum, the relatives of patients could, under the Lunacy Act, be compelled to pay for their treatment and support; and further, that as a day-school, for which fees were charged, was conducted on the property, it could not properly be considered a hospital or charitable Institution; and the case of the "Attorney-General v. the Borough of Newcastle" was referred to in support of the Board's contention, which case decided that a lunatic asylum is neither a public hospital or charitable institution. The Judge, however, held that the provisions of the Lunacy Act do not apply to a private lunatic asylum such as this, and further, that as he held the Institution to be a charity, he could not divide the assessment of the whole property and give the Board a verdict for rates on that portion used as a school. The Judge also held that the payment to the local Council having been made under protest, could not be regarded as payment at all, and further that the agreement for hire of a meter signed by the Lady Superior did not bind the trustees.

From the Judge's decision there was no appeal; but inquiry was afterwards made by the Board of the Lunacy Department as to the nature of the Institution, and it was learned that the Institution and its inmates do come under the provisions of the Lunacy Act, and are dealt with by the Master-in-Lunacy, whose duty is, amongst other things, to ascertain what means exist for payment for the treatment and support of patients and to take such steps as may be necessary to provide or compel provision for the maintenance and support of patients. On the 30th March last the Board received, from the Chief Clerk in Lunacy, a letter in the following terms, viz. :—

Reg. No. 98-12,294.

Sir,

Master-in-Lunacy's Office, Chancery Square, 30 March, 1898.

In reply to your letter of the 28th instant (No. 98-2,183), I am directed to inform you that in the case of Kathleen Dowley, a patient in the Licensed Hospital for the Insane, Mount St. Margaret's, Ryde, the Master in Lunacy pays maintenance to the Lady Superior from funds to the patient's credit in this office, at the rate of £18 10s. per quarter. I am to add that the records of this office show that in other cases the relatives of patients at Mount St. Margaret's defray the cost of their maintenance.

I have, &c.,
H. EDWARDS,
Chief Clerk.

The Secretary, Metropolitan Board of Water Supply and Sewerage, Sydney.

Upon receipt of this information the Board caused to be written to Mr. Freehill a letter, as follows, viz. :—

Re Case of Board of Water Supply and Sewerage v. Mount St. Margaret's Home, Ryde.

F. B. Freehill, Esq., Solicitor, Sydney,—

Dear Sir,

39, Castlereagh-street, Sydney, 14 April, 1898.

Since the hearing of this case the Board of Water Supply and Sewerage have caused further inquiries to be made relative to the character of the Institution known as Mount St. Margaret's Home, Ryde, and the result of such inquiries has convinced them that the Institution named cannot properly be regarded as a charitable institution, and leads them to believe that you could not have been fully aware of the facts when you gave evidence on the hearing of the case.

Inquiry at the office of the Master-in-Lunacy has disclosed that the Institution is dealt with by the Master under the provisions of the Lunacy Act in the same manner as all other licensed houses for insane persons, and that regular payments are made by the Master for the maintenance of persons in the Institution.

In the case of Kathleen Dowley, a patient in the Institution, the Master has informed the Board that he pays maintenance to the Lady Superior from funds to the patient's credit in his office at the rate of £18 10s. per quarter, and that, according to the records of his office, in other cases the relatives of patients in the Institution defray the cost of their maintenance. It appears that when a return is made to the Master, in terms of the Lunacy Act, of the admission of a patient into the Institution, he forthwith takes steps to provide for the maintenance of such patient in the same manner exactly as he does in the case of all other lunatic asylums, and that this Institution is not regarded by the Master as differing in any way from other registered houses for the insane.

The Board consider that had this evidence been called on the hearing of the late case, His Honor the Judge could not have held that the defendants were a charitable institution; and, in view of the further information now to hand, they cannot regard the decision given by His Honor as binding upon them. The Board consider that the rates lately sued for should be paid, and they instruct me, under the circumstances, to request payment thereof, and, at the same time, to inform you that rates will be charged upon the Institution in the future.

Yours, &c.,
H. S. WILLIAMS.

And in reply thereto, the Board received from Mr. Freehill a letter as follows, viz. :—

Re Mount St. Margaret's, Ryde.

Dear Sir,

Devon Chambers, Hunter and O'Connell Streets, Sydney, 16 April, 1898.

I beg to acknowledge receipt of your letter of the 14th instant, and must express my astonishment that the Board should have the audacity to attempt to override a judicial decision. It seems to me to be a very fortunate thing that this Board cannot trample upon the rights of the public, as they evidently feel inclined to do in the case of the various institutions which I have the honor to represent. It is a notorious fact that the Board dare not proceed against an institution such as the Prince Alfred Hospital, although a claim is made for a very substantial sum for water supplied to that institution.

I am prepared to fight the Board in every possible way, and shall take the earliest opportunity of exposing the contemptible manner in which the Board has endeavoured to treat, not only the Mount St. Margaret's Home, but also the Lewisham Hospital, the St. Patrick's Blind Asylum, and the Night Refuge in William-street, Sydney.

As one of the public, I would suggest that the Board might get a measure passed through Parliament enabling it to trample upon the rights of all the citizens, irrespective of the denomination to which they belong.

Yours, &c.,
F. B. FREEHILL.

H. S. Williams, Solicitor for the Water and Sewerage Board, Sydney.

And in reply thereto the Board caused to be written to Mr. Freehill a letter as follows, viz. :—

Re Mount St. Margaret (or Convent of our Lady of Good Counsel), Ryde.

F. B. Freehill, Esq., Solicitor, Sydney,—

Dear Sir,

39, Castlereagh-street, Sydney, 14 May, 1898.

I beg to acknowledge receipt of your letter of 16th ultimo, which I have referred to my clients for consideration. I am instructed by the Board to inform you that there is no desire on their part, nor do they wish to attempt, to override any judicial decision—their only wish, on the contrary, being to protect the ratepayers from any charge or burden which should not be made upon or borne by them, and to properly carry out their duties under the Act which they have been appointed to administer.

The Board desire me to state, although they think it hardly necessary to do so, that no question of denomination enters into the case so far as they are concerned, and to add that they do not feel called upon to reply to or notice the insulting and intemperate expressions and statements contained in your letter, beyond saying that they think that there is altogether no occasion for the remarks which you have thought fit to make.

The position of the Board is that since the hearing of the case in the District Court they have received information which appears to prove that the evidence given by you, on which such case was decided in your client's favour, did not truly represent the circumstances of the case, and they therefore desire to have the matter determined upon the further facts which they are now in a position to place before the Court, so as to obtain a decision by which they may be guided in all matters similar to the present. The Board consider, and are advised, that the best way of doing this will be to give you an opportunity of bringing the case before the Equity Court, where an authoritative ruling may be obtained. In the course of previous correspondence you stated your intention of applying to the Supreme Court for an injunction to restrain the Board from disconnecting the water supply from the premises, and with the above object the Board now invite you to do this. The Board are unwilling to actually discontinue the supply of water to the Institution, which might cause harm; but for the purpose of enabling you to proceed for an injunction, if you think fit to do so, I beg to give you notice, under the Board's instructions, that unless the rates now due, and for payment of which notice has been served upon the premises, be paid forthwith, the water will be disconnected from the premises.

Yours, &c.,

H. S. WILLIAMS.

Some further correspondence ensued, but the foregoing really shows the position of the matter. On the 8th June last, further rates having accrued, due for water supplied to the property since the District Court decision, fourteen days' notice to pay such rates was given, and no reply having been received, or payment made, a further notice was given on 27th June last that the water would be disconnected if the rates were not paid. No notice having been taken of this further intimation, the water was disconnected from the property on the 16th of August instant.

I trust that the foregoing facts will clearly place the circumstances of the case before you, and prove that Mr. Freehill is fully aware of the reason of the Board's action.

I have, &c.,

WILLIAM HOLMES,

Secretary.

(per E.P.)

Mr. Freehill might be informed that, from inquiries made, it would appear the Board has acted within its rights, and under these circumstances the Minister sees no reason why he should interfere.—R.H., Under Secy. Public Works and Commissioner for Roads, 6 Sept., 1897. Approved,—J.H.Y., 6/9/98. Inform.—Jno. P., 7 Sept., 1898. Francis B. Freehill, Esq., 9/9/98.

Sir,

9 September, 1898.

With reference to your letter of 23rd ultimo, respecting the action of the Metropolitan Board of Water Supply and Sewerage in cutting off the water supply from Mount St. Margaret's Convent, Ryde, on account of non-payment of water-rates, and asking, on behalf of the trustees of the Institution, that the Minister compel the Board to continue to supply the water pending the introduction of a Bill in the Legislature to deal with such matters, I am directed by Mr. Secretary Young to inform you that, from inquiries made, it appears the Board has acted within its rights, and that under these circumstances he sees no reason why he should interfere.

I have, &c.,

Francis B. Freehill, Esq.,

Under Secretary and Commissioner for Roads.

Devon Chambers, Hunter and O'Connell Streets, Sydney.

No. 30.

The Superioress, Licensed House for Insane, Mount St. Margaret, Ryde, to The Secretary to the Metropolitan Water and Sewerage Board.

Licensed House for Insane, Mount St. Margaret, Ryde,

23 September, 1898.

Sir,

I enclose cheque for amount of rates, £3 13s. 6d., charged by the Water and Sewerage Board to this Institution, and demand a return of supply, which doubtless you know has been cut off some time.

I do this under protest, and without prejudice to the action taken by the trustees in the matter.

I have, &c.,

SISTER M. ANTONIO (O'DALY).

Assessor to see me at once and attach copy of account rendered.—W.H. Rec. 12.767 posted — W.R., 24/9/98. Forward receipt, and send cut to day and turn on the water.—W.H., 24/9/98. Inspector Robertson,—I understand the water was turned on on Saturday last by the local turncock.—T.R., 27/9/98. Inspector of Water Service for report as to whether water was turned on by turncock.—C.W.S., 28/9/98. Water turned on last Saturday.—J.S. Assistant Engineer. Assessor to note.—C.W.S. These papers might now be filed till called for again.—T.R., 6/10/98. The Secretary.

19

No. 31.

F. B. Freehill, Esq., to The Secretary for Public Works.

Sir,

40, Hunter-street, Sydney, 8 October, 1898.

I have the honor, on behalf of the Superioress in charge of the Hospital for Female Insane (known as Mount St. Margaret, Ryde), to forward herewith the enclosed declaration.

The information furnished to you that the Institution is being carried on as a laundry, and doing work for the receipt of money, is entirely without foundation.

I trust that this will enable you to have the Institution declared entitled to receive water free of charge.

I have, &c.,
FRANK B. FREEHILL,
Hon. Secretary.

[Enclosure.]

STATUTORY DECLARATION.

I, MARY JOSEPH O'REGAN, of Mount St. Margaret, Ryde, in the Colony of New South Wales, do hereby solemnly and sincerely declare as follows:—That I am the Superioress-in-charge of the Hospital for the Female Insane, known as Mount St. Margaret, at Ryde; that the said Institution is conducted by myself and other members of the religious order known as the Little Company of Mary, and all of us give our services to the work of the Institution without any fee or reward whatsoever; that the Institution depends for its support upon the voluntary contributions of the friends of the Institution and of the patients, and that some of the patients have never paid anything whatsoever for their support or maintenance; that it is utterly untrue that the Institution in any way engages in any work other than attending to the patients of the Institution, and that it is also absolutely untrue that the Institution does any kind of work whatsoever—washing for instance—for payment; that the Institution is a purely charitable one, inasmuch as it is not conducted for gain, and no one is paid in connection with the Institution except the gardener. And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

MARY JOSEPH (O'REGAN).

Subscribed and declared at Sydney, this 7th }
day of October, 1898, before me— }

THOMAS DALTON, J.P.,
A Justice of the Peace.

Submitted. Might be forwarded to the Water and Sewerage Board, and Mr. Freehill so informed.—R.H., Under Secretary and Commissioner for Roads, 14 Oct., 1898. Approved.—J.H.Y. 14/10/98. Inform.—Jno. P., 14 Oct., 1898. F. B. Freehill, Esq., 17/10/98. The Secretary Metropolitan Board of Water Supply and Sewerage—Jno. P., 17/10/98.

Under Secretary for Public Works, &c.—There appears to be some misunderstanding in this matter, as the Board's officers have never reported that laundry work was carried on at this establishment; on the contrary, the papers clearly show that the water is not used as a matter of profit. The only reference I can find in the papers to the supposed use of water for laundry purposes, is the extract from *Hansard*, of 24 August last, containing a reply of the Minister to a question asked in Parliament by Mr. Lyne. This reply was no doubt given under a misapprehension, as the Minister had not then received the Board's full explanation of the whole case.—W.H., Secretary, 20/10/98.

Ask Mr. Williams to see me.—R.H., Under Secretary for Public Works and Commissioner for Roads, 25 Oct., 1898. H. S. Williams, Esq., 26/10/98. On the general question of this being a charitable institution, the Minister would like the Board's opinion.—R.H., 4/11/98. The Secretary to the Metropolitan Board of Water Supply and Sewerage.

Sir,

26 October, 1898.

I shall be glad if you will kindly call and see me with reference to the matter of supply of water to Mount St. Margaret, Ryde.

I have, &c.,

H. S. Williams, Esq., 39, Castlereagh-street, Sydney. Under Secretary and Commissioner for Roads.

17th October, 1898. 8th instant, forwarding a declaration from the Superioress in charge of the Hospital for Female Insane (known as Mount St. Margaret, Ryde) with reference to work performed therein. This is a matter for the consideration of the Metropolitan Board of Water Supply and Sewerage, to whom your communication has been forwarded.—Under Secretary and Commissioner for Roads. F. B. Freehill, Esq., 40, Hunter-street, Sydney. Submitted to the Board, 8/11/98.

Minute Paper.

Subject:—Mount St. Margaret, Ryde.

It was resolved to reply that the opinion of the Board on this matter was so fully and clearly set forth in their letter of 31st August last, addressed to the Under Secretary, that they desire to add nothing further to the same.

W.H.

Under Secretary for Public Works, &c.

Submitted for approval, to say the Minister sees no reason to depart from previous decision, conveyed in letter of Sept. 9.—R. H., Under Secretary for Public Works and Commissioner for Roads, 12 Nov., 1898. Approved.—J.H.Y., 14/11/98. Inform.—Jno.P., 14 Nov., 1898. F. B. Freehill, Esq.—B.R., 15/11/98.

15 November, 1898.

Sir,

With further reference to your letter of the 8th ultimo, forwarding a declaration from the Superioress in charge of the Hospital for Female Insane (known as Mount St. Margaret), Ryde, in regard to work performed there, and asking that the Institution may be declared entitled to receive water free of charge, I have the honor to refer you to my letter of the 9th September last, and to inform you that the Minister sees no reason to depart from his decision conveyed therein.

I have, &c.,

F. B. Freehill, Esq., 40, Hunter-street, Sydney.

Under Secretary and Commissioner for Roads.

No.

Extract from *Evening News*, 15 October, 1898.

MOUNT ST. MARGARET, RYDE.

IN the pleasant, healthy suburb of Ryde the "Sisters of the Little Company of Mary" are carrying on a most important work, too little known to the general public. In a beautiful house, standing on a splendid elevation, amidst 32 acres of ground, they are gently and tenderly caring for those so unfortunate as to be mentally afflicted. The Rev. Mother Joseph and her assistant, Rev. Mother Antonio, have been trained for this special work in the best institutions in Europe, "The Crichton" Royal Institution, Scotland, being one.

They are assisted by the nursing sisters from Lewisham Hospital, also of the "Little Company of Mary," who come and go at intervals from the Hospital, only the rev. mothers being permanently established in the home; and truly a home, in the real meaning of the word, they seem to make it for their afflicted charges.

Fourteen inmates can be accommodated at one time, either women or children; and such is the care bestowed that within one year five patients were discharged cured—really cured.

Every care and thought is taken for the comfort and relief of the invalids. They are encouraged to employ themselves in various ways, a piano and organ being provided for those musically inclined. Walks and drives are arranged to take them out into the fine fresh air. Even picnics are organised, one taking place on St. Patrick's Day down to the river.

Great care is taken to provide tempting, well-cooked food, so as to coax the too often capricious appetite. Some needing great attention, as far as possible they are trained to eat nicely; for lack of reason, alas! makes one fall back on untrained habits. So much constant, incessant watchfulness and patience are required that one wonders at and admires the unceasing devotion of the good Sisters. To develop their instincts of affection, pets of all kinds are provided—dog, cats, cockatoo.

Visitors to this pretty home are warmly welcomed, and shown through the house and grounds—such pleasant rooms, so nicely furnished, four sitting-rooms, corridors, double and single bedrooms, all lofty, well ventilated, and nicely shaded from heat and glare, and most scrupulously clean. The views from the windows are very pretty, and add to the charm of the dainty rooms. The bedsteads are so constructed that they are free from iron posts or framework, against which it might be possible for excited inmates to inflict bodily injury to themselves.

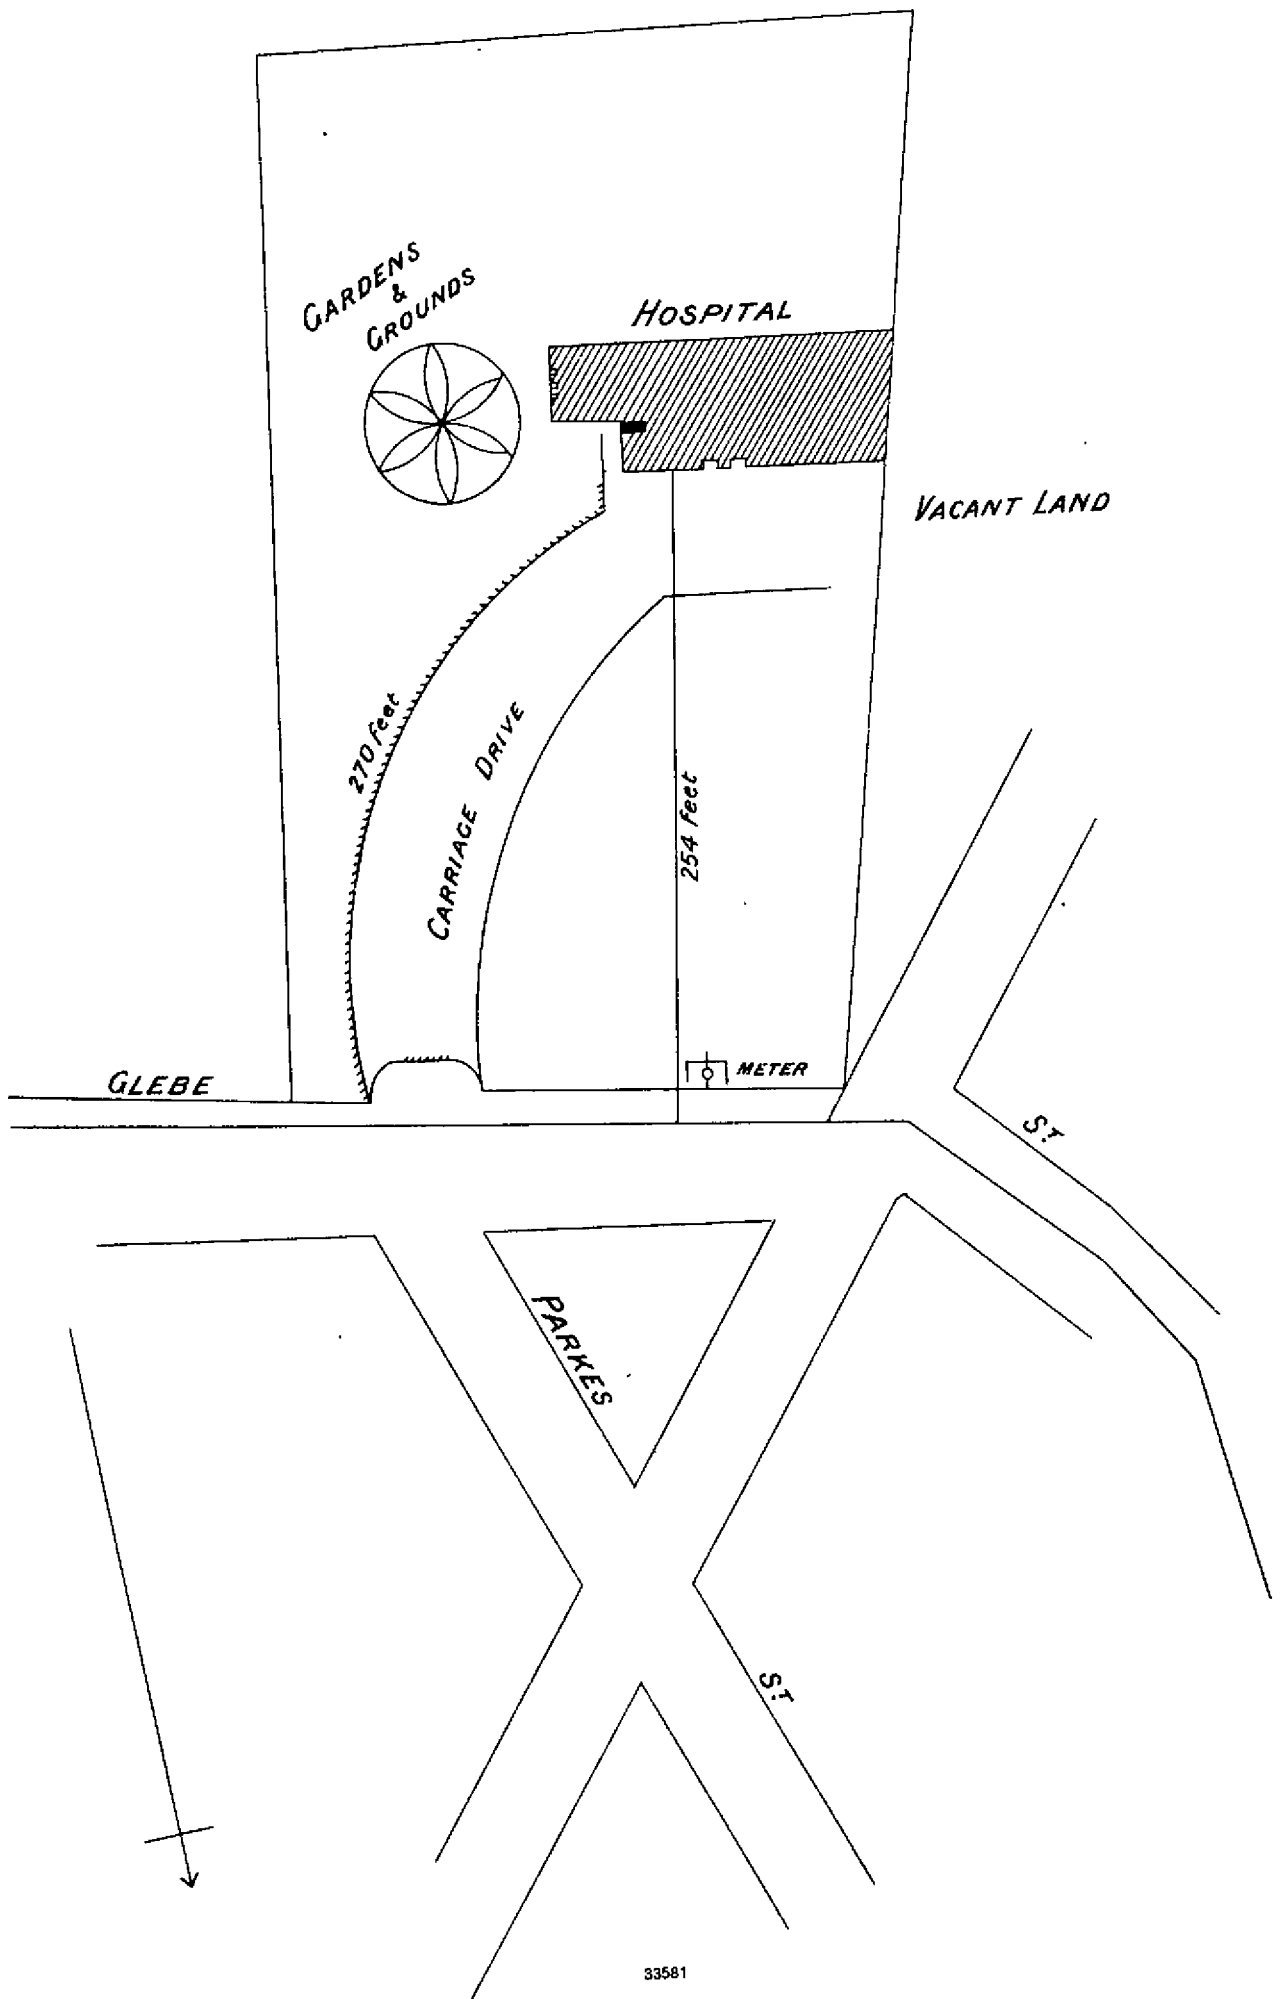

For a small extra fee a Sister sleeps with a patient, and, if desired, meals can be taken alone, the charge being very moderate—2 guineas a week. The home is under the patronage of His Eminence the Cardinal Archbishop and the Right Rev. Bishop Higgins. It is under Government, but receives no grant. When Dr. Manning, whose portrait hangs on the walls of the reception-room, was in New South Wales, he was a frequent visitor at the home, and expressed his appreciation of the system adopted for the relief of the afflicted. Of course medical attention is provided, Dr. W. C. Gordon Smith giving individual attention to each case.

The house and grounds were the generous gift of the Hon. T. Dalton, and cost between £6,000 and £7,000. Since its establishment more has been expended on needed improvements by the Sisters.

The home is easily reached from Sydney by rail, steamboat, or omnibus. If by rail, get out at Meadow Bank Station; it is the nearest. A pretty walk leads from it to the home, and every inhabitant seems interested in directing one's steps towards the home.

All creeds are received, and in one of the rooms a beautiful little chapel is arranged; but it is found it is not always wise to allow the patients to attend the services, as it intensifies some forms of derangement.

[Two plans.]

MILITARY FORCES OF THE COLONY.

REPORT for the Year ending 30th June, 1898, by Major-General
G. A. FRENCH, R.A., C.M.G., Commanding Military Forces.

To the Principal Under Secretary,
Chief Secretary's Office,—

Sir,

I have the honor to submit the following Report on the Forces and Defences of the Colony for the year ending 30th June, 1898, for the information of the Chief Secretary:—

PERMANENT FORCES.

(1.) "A" Battery Field Artillery has received a complete equipment of six 15 pr. guns, with cordite ammunition; pole harness. The strength of the battery is only sufficient to man four guns, but it is hoped that ere long provision will be made for a full six-gun battery. Colonel Smith strongly recommends it now, and, while sympathising with his wish, I am forced to the conclusion that extra training for the whole Force is a more pressing claim.

PERMANENT GARRISON ARTILLERY.

(2.) A considerable addition was made to this Force during the year, and a very excellent class of recruits engaged. This branch is now strong enough to man all the principal guns of the Defence.

It is organised in three complete Companies of five Officers and 130 Non-commissioned Officers and men each, in addition to District Staff, Artificers, Bandsmen, &c.

Two Officers and one Non-commissioned Officer are under instruction in England.

Two Non-commissioned Officers returned from England this year, having attained the high position of 1st and 2nd at the Long Course of Instruction, Shoeburyness.

A local Long Course is carried out at South Head, open to all Australia, and several of the other Colonies are again represented this year.

PERMANENT SUBMARINE MINERS.

(3.) I have nothing new to remark of this Branch, except that the necessity for a Submarine Mining Steamer has become still more marked.

It seems highly desirable that some provision should be made for educating a Junior Officer in this special work. A Major in charge of twenty-five men is, in proportion, a somewhat expensive luxury.

PARTIALLY-PAID FORCES.

MOUNTED FORCES.

(4.) In my Report last year, I went fully into the *pros* and *cons* as regards Cavalry and Mounted Rifles for service in Australia, and summed up the case as follows:—"I have no hesitation in advising that any extension of our Mounted Forces should be in the direction of Mounted Riflemen, and that every encouragement should be given for the formation of Volunteer Mounted Corps, in which the fire-arm would be the only, or at least the primary, weapon."

(5.) Since then the 1st Australian Volunteer Horse has been formed (reported on under head of "Volunteers"), and we now have three full regiments of Mounted men—grand material for the Service, and actuated by the best spirit. All ranks find
horses

horses for the Public Service without remuneration; and so anxious are many of them to become proficient in their duties, that 100 men of the Lancers have volunteered to go to England for six months to serve there at English rates of pay, to pay £10 per man towards general expenses, asking nothing from the Government but their passages (£25 per man return).

(6.) The present size of the Mounted Branch, and its prospective extension, makes it highly desirable that an Officer should be placed at the head of it, whose duty it would be to look exclusively after its drill and training, and take command in camp or elsewhere.

FIELD BATTERIES.

(7.) Here we have an entirely different state of affairs for a Mounted Force. Few of the members possess horses, and not alone has Government to find horses for the guns, but for Officers and Non-commissioned Officers to ride. Since my last report, we have managed, instead of hiring horses for the guns, to purchase them, turning them out to grass when not wanted; and by continuing this system during the present year, we will be able at last to horse all the guns without using hired horses.

(8.) In future it should be the object to engage in this portion of the Force to a large extent those whose occupations require their keeping horses, and thus having them available for the Public Service, as in the Cavalry and Mounted Rifles.

Further particulars as to the Artillery generally will be found in Appendix "A."

ENGINEERS.

(9.) I would again draw attention to the recommendation of the Commandants' Conference of 1896, advising the engagement of an Officer of the Royal Engineers to supervise the Submarine Mining Defences, Electric Lighting, and Engineer Work generally.

(10.) A large amount of important work was carried out under the supervision of Captain Owen, including the erection of very fine Magazines at Newington. This Officer is deserving of great credit for the zeal and attention shown, and for his constant supervision of all works under construction.

INFANTRY.

(11.) In my remarks last year on this Branch, I alluded to the organisation of the Infantry Regiments of ten companies each, with several Companies at Headquarters, and the others along a line of railway, as a very suitable one. Unfortunately, it seems to have been so expressed that the Colonial Defence Committee concluded that the gist of the matter, from my point of view, was the ten-company organisation, and consequently, in a long Memorandum, have pointed out the superior advantages of an eight-company organisation.

(12.) As a matter of fact, I strongly agree with them on this point, and should not be sorry to see our four Regiments of ten Companies converted into five of eight Companies, adhering to the present general principle, viz., a strong nucleus at the Headquarters of the Regiment, the detached Companies along one main line of railway. The advantages of this change of organisation would be considerable, and the cost not much, involving only the provision of an Adjutant, Sergeant-Major, and Quartermaster-Sergeant on the Permanent Staff, a Partially-paid Lieutenant-Colonel and Major, and a small sum for offices, &c.

(13.) I should much like to see all our Infantry Companies raised to a strength of 75 instead of 60 as at present; but more training seems to be requisite at present rather than more men to train; and if funds cannot be found for both purposes, I should prefer to arrive at the Minimum Annual Training laid down by the 1896 Conference of Commandants at Melbourne, viz., 16 days for Infantry, and 20 for other Branches, instead of 12½ for all, as now the rule in New South Wales.

(14.) The issue of magazine rifles to our Infantry, now about to take place, will necessitate something more than two half-days for "Musketry." The provision of musketry prizes for each Infantry Company I look on as an absolute necessity. A sum has been placed on the Estimates for the purpose, which I hope will meet a better fate than a similar sum last year.

VOLUNTEERS.

VOLUNTEERS.

(15.) The development of this Branch still goes on, the principal feature of the past year being the formation of the First Australian Horse under Lt.-Colonel K. Mackay.

This Corps seems to have been raised on a thoroughly sound footing. The immediate appointment of inexperienced Captains and Majors has been avoided, and no Regimental Officer has been given higher rank than Lieutenant, nor is it intended to promote any till their qualifications for promotion are apparent. Officers and men are almost wholly taken from employes on stations—men who ordinarily live in the saddle, and who, with a little training, should form ideal Mounted Troops. Apart from the military point of view, I am informed by persons outside the Force that the formation of this Regiment has had an important social aspect on the stations where there are detachments, bringing masters and men into close intercourse, class prejudice and distrust being supplanted by a feeling of *camaraderie* and *esprit de corps*.

Though the youngest of the Volunteer Corps, this regiment set all the others an example by remaining in camp for eight days instead of four.

(16.) My remarks as to musketry prizes for Infantry Companies apply with still greater force to Volunteer Companies. Men who serve the public without pay of any sort should certainly be found in the means necessary for encouraging rifle shooting under Service conditions.

(17.) Although the Volunteer Infantry only attended camp from Good Friday to Easter Monday, their attendance compared very unfavourably with the Partially-paid Infantry, as the following table shows:—

	Present.		Absent.			
	Officers.	Men.	Officers.	Men.		
1st Regiment	34	566	...	37		
2nd Regiment	34	601	...	4		
3rd Regiment	31	554	...	47		
4th Regiment	32	562	...	34		
5th Regiment	{	Scottish Rifles	10	227	1	131
	{	Irish Rifles	7	131	3	158
6th Regiment	17	316	1	221
7th Regiment	21	337	1	220

I am of opinion that inducements should be held out to Volunteers to attend camp for the full time. A small bonus would, I have no doubt, have the desired effect in most cases.

CAMPS.

(18.) In April last, after a lapse of seven years, a general encampment of the whole Force again became possible. A heavy price had to be paid for it—not in cash at the expense of the public, but in drills lost at local head-quarters. It was, however, well worth the price.

(19.) According to our system, pay is provided for twelve and a half days drill and training in the year. As two half-days are allowed for musketry and one for Queen's Birthday parade, this leaves eleven for all other purposes; taking eight of these for a camp left three days, or six half-days, or in other words, half a day every second month for local drill and instruction. What I want to arrive at is eight days in camp and eight days local training, or sixteen in all. This is the minimum recommended by the Commandants of Australia.

(20.) It was only possible to have a camp by the Treasurer finding a sum of £4,000 above what was provided on the Estimates. This was mainly required to pay the Railway Commissioners for the transport of men and horses by rail. As they also carried some tens of thousands of visitors to see the Encampment, it is to be hoped that they made an honest penny out of the Encampment one way or another. The Forces in this Colony are at a very great disadvantage as compared with those in Victoria and Queensland in thus having to pay for all services rendered by the Government Railways.

(21.)

(21.) In my remarks on "Camps" last year, I pointed out the manner in which our old Rifle Range at Paddington had been cut up, that we had no place for the Troops to parade, and that I hoped "before it is too late the Church and School Lands beyond Randwick, which still remain public property, may be reserved as a training-ground for our Defence Forces." I regret that since that Report a large part of the Church and School Lands, and even a portion of the Randwick Rifle Range Reserve, have been offered for sale. A portion of the lands subdivided for sale are sites of proposed Field Works in case of invasion from the south—the most probable quarter.

(22.) The Main Camp at Rookwood at Easter, extending over a period of nine whole days, represented the largest concentration of men and horses which has ever taken place in Australia.

It has not been possible since 1891 to mobilise the Troops owing to the lack of funds, and it was only by forfeiting a large proportion of the detached drills throughout the year that sufficient were retained for Camp.

(23.) Among the visitors who attended were the Principal Staff Officers from the Queensland Defence Force, viz. :—

Lieut.-Colonel Lyster, Assistant Adjutant-General.

Lieut.-Colonel Ricardo, Staff Officer, Mounted Rifles.

Brigade-Surgeon Lieut.-Colonel Thompson, Principal Medical Officer.

PARADES, MANŒUVRES, &C.

(24.) During the Camp the Troops, in addition to the duties attendant on the ordinary routine, were exercised in Divisional, Brigade, and Battalion Parades and Manœuvres.

Two Reviews were held, one in the presence of His Excellency the Governor and Commander-in-Chief, who at the conclusion desired the General Officer Commanding to convey to the Troops his appreciation of their general turn out and steadiness on parade. He considered the marching of all branches showed such marked improvement on previous parades at which he had been present that he could only attribute it to the beneficial effect of steady, continuous training in Camp; and he sincerely hoped that the nine days camp, now introduced after a lapse of seven years, would for the future be an annual fixture in the interest of the Force and of the defence of the Colony.

Portions of the Troops were detailed for Outpost Duties, which were carried out fairly well.

On Easter Monday the attack on a selected position was practised by the whole Division—seven Infantry Regiments, two Mounted Regiments, and two Field Batteries. The advance was steadily made, beginning some 2 miles away, and was well carried out, though at the finish the instructional value of the work was marred owing to the vast crowds of spectators breaking through the lines.

(25.) On Thursday, the 14th, the Troops were exercised in attack and defence by advanced and rear guards. By 7 a.m. on that morning all the Troops had breakfasted and left the Camp in the direction of Prospect Reservoir, one portion representing a retiring force under Lieutenant-Colonel Ranelaud, the other a pursuing force under Lieutenant-Colonel Waddell. The retiring force halted and defended several naturally strong positions till driven out by the superior numbers of the attack, the whole finally forming up in some paddocks near the Reservoir, where they rested and had dinner. On the return to Camp the following idea was carefully carried out, and as the troops were working over ground which very probably would have to be defended in case of invasion, the practical lesson was most valuable. Most of the men marched over 20 miles this day.

IDEA.

(26.) An enemy has landed to southward, and is advancing rapidly towards Sydney; it is not clear whether he may not try to destroy the Prospect Dam.

The enemy is known to be very strong in Infantry, but has few mounted troops or guns, and comprise—

4 Battalions of Infantry (1st, 2nd, 3rd, and 4th Infantry Regiments).

1 Squadron of Cavalry.

4 Field Guns.

The

The defence, the balance of the Mounted Brigade, and such details as can be got together, including Engineers and 1st Garrison Division Artillery available.

It will be assumed that the attacking Forces are followed by other Troops, and that therefore the Cavalry of the Defence cannot swing round their rear.

For the Defence, it will be assumed that the enemy's landing has been in the nature of a surprise, that the Mounted Brigade has been hurriedly pushed forward to find and delay the enemy, and that Infantry and other Troops are being sent forward with all despatch to strengthen and hold the line from Saltpan Creek to Duck River.

Attack—Colonel Holborow, C.M.G.

Defence—Colonel Smith, R.A.

It will be for the Officer commanding the Defence, by reconnoitring, to divine the intentions of the attack, and act accordingly.

REMARKS OF THE MAJOR-GENERAL COMMANDING WITH REFERENCE TO THE ABOVE "IDEA."

(27.) Infantry Advanced Guard not pushed far enough ahead, and leading files not extended enough.

Cavalry Scouts were pushed well ahead but did not watch the flanks; they found the Defenders and reported in good time.

Attack commenced in the vicinity of Cumberland Farms, and apparently the Defence was somewhat taken by surprise at this point, there being no guns available and but few Mounted Troops. This showed bad scouting by Cavalry Defence, and the Infantry of the Attack had no difficulty in brushing away the small forces at this point and advancing along Park Road, where they had practically little opposition.

Their advance along this road might have been stopped by a couple of guns on the hill firing down this road, but the Artillery of the Defence were, by the nature of the country, forced to retire by the Prospect Road, and head the enemy further back. The guns of the Attack, however, enfiladed this road, firing over their Infantry, and owing to the narrowness of the frontage available it is quite likely they could have held their own with the Artillery of the Defence, even if they had been on the opposite hill.

Considering the small opposition, the Infantry should not have reinforced their firing line when in the hollow, and lost much valuable time in doing so.

In the advance up the hill more men should have been extended in the woods to the left, and the supports formed in echelon on that flank to reply to the small parties of Mounted Infantry that occasionally attacked from that quarter.

On topping the hill the Infantry of the Attack came at once under a heavy fire of eight guns from Denham Farm on left front and from a company and a half of Mounted Infantry, the latter at a range of about 800 yards. The Infantry must have suffered severely.

The guns of the Defence were well posted, horses and limbers were well under cover. The guns of the Attack (which were very slow coming up), assisted by the heavy Infantry fire, forced the guns of the Defence to retire to their second position; the retirement was well executed. The Mounted Infantry and Cavalry (dismounted) remained too long, and eventually had to retire across left front of Infantry firing line, and must have suffered heavily at a range of about 700 yards.

It is but fair to state that under Service conditions these men might have retired direct to their rear and under cover by pulling down fences.

In the further advance from this point the attack missed a good chance by not bringing up guns to enfilade the road leading to Merrylands Crossing which here became a defile.

The Newcastle Company of the 4th Regiment, however, did good work by firing volleys down the road at a range of 800 yards.

The Artillery of the Defence did good service in covering the retreat of their men beyond the railway.

The advance from the railway was well done by the portion of the 2nd Regiment on the right, but it was pushed too rapidly, getting too much in advance of the Companies of the 4th on their left. On topping the hill the 4th Regiment
came

came under Artillery fire at a range of 1,200 yards, and two Companies were kept in what was called "open order." This consisted of four ranks of men about a yard apart, and an ideal target for shrapnel shell; even when pointed out no change was made, and half the men were placed out of action.

Moving on from this point the attack on the guns, supported by the Mounted Infantry on Park Hill, was pushed home, with the result that on topping the hill the Infantry had the guns in column of route below them at a range of 800 yards, and Lancers and Mounted Rifles at about 400 yards in close formation. The latter kept their close formation, and were retiring at a deliberate pace, and apparently considered themselves safe when formed up in full view about 1,000 yards off. Here they remained still in close formation till the guns of the attack topped the hill and opened fire; then they moved off in the same deliberate fashion, but did not clear the ridge till nine rounds had been fired at them.

Beyond Park Hill there is nothing to note except the fact that "C" Company of the 4th Infantry Regiment, managed to get a mile ahead and wage war on its own account at Duck River Bridge, against eight guns, two Companies of Mounted Infantry, and a Squadron of Lancers.

It was quite wrong of this Company to fix bayonets when charged by Cavalry at Manœuvres. A Company of the 1st Infantry Regiment was also noticed doing this previously in the day.

GENERAL REMARKS.

(28.) Cavalry dismounted kept horses too close to firing line, commonly in close formation. Mounted Rifles little better in this respect.

Section Commanders of Infantry in several instances were heard giving Range 800 when it was about 1,500 hundred yards, and *vice versa*.

The Infantry had so little opposition that they need not have brought up either second or third lines. Flanks were not properly watched. One Company Commander was heard giving the command to a Company of extended order, "Right Form," though within 500 yards of the enemy firing. Movements direct to a flank of men when in firing line were noticed.

Patrols sent out to get information should consist of only a few men in extended order; whole troops in close order were observed on this duty.

In the last Artillery position the guns seemed to be firing on their own men. Generally speaking it would seem:—

(1.) That for want of proper scouting on the part of the Defence, the guns were not in position at first to oppose the advance.

(2.) That as the attack took three hours to cover 3 miles, Colonel Smith was successful in holding and delaying the advance.

(3.) That the advance was well carried out by Colonel Holborow.

(4.) That the attack could not have passed Duck River Bridge, even if darkness had not put a stop to operations, and that several hours must have been lost in forcing the crossing at some other point.

ANNUAL FIELD FIRING.

(29.) The Annual Field Firing of the 1st, 2nd, 3rd, and 4th Infantry Regiments was also carried out in Camp.

DISCIPLINE.

(30.) The discipline throughout the whole Camp was excellent, and there was a general absence of crime, grumbling, or complaints.

SICKNESS AND CASUALTIES.

(31.) The medical arrangements throughout were complete.

There were no deaths, and the number of admissions of Non-Commissioned Officers and men into the Field Hospitals was comparatively small, being only forty-six during the whole period of the Encampment.

The casualty list was also light, in view of the large number of troops (nearly 6,000), four serious cases only being treated, viz. :—One gunshot wound, one broken collar-bone, one fracture of left ankle, and one fracture of left leg.

MOBILISATION.

MOBILISATION.

(32.) The mobilisation of the Forces, with the co-operation of the Railway Authorities, was well and smoothly carried out, especially considering the large number of men and horses that were carried, in addition to the ordinary railway traffic at Easter time, the busiest holiday season of the year.

TRANSPORT.

(33.) The transport in connection with the camp equipment and stores to and from Darling Harbour Railway Station, and from and to Rookwood Railway Station and Camp, was satisfactorily performed by "A" Battery, Brigade Division Field Artillery, assisted by the Permanent Section of the Army Service Corps, under the supervision of Major Miller.

Consequently a very considerable saving was effected, as compared with cost of similar services at previous camps, when the work was performed by hired horses.

A great deal of unnecessary labour and transport was entailed owing to the authorised scale of baggage in many instances being greatly exceeded, with the result that the horses were overworked. Orders relative to indents did not receive sufficient attention. In requisitioning for transport on day when troops arrived in camp, 8½ tons were demanded by Lancers and Australian Horse, while the amount actually carried was 29 tons.

SUPPLIES.

(34.) The demands upon the supply branch of the Army Service Corps were exceedingly heavy and harassing, owing to the fact that certain regiments, in camp for the first time, were inexperienced in this department.

The supplies were of excellent quality, and gave general satisfaction.

Complaints were made by some of the newly-raised regiments that the rations were insufficient; but this was owing to the inexperience of those whose duty it was to cut them up and make divisions in messes.

The necessity for affording instruction in cooking was very apparent through the camp; frequently good and sufficient food was wasted or spoiled in the cooking.

In connection with the scale of rations, I would point out that it far exceeds that of the English or any Foreign Army, as Appendix E will show.

The water supply, which was excellent, was laid on to the various branches of the camp from the mains. One or two regiments in the Volunteer camp were short for the first day or so. This was, however, due in a large measure to the recognised allowance being very largely exceeded, and the transport being overworked was unable to keep the tanks continuously full; but as the stand-pipe was within a short distance of the camp, a little foresight on the part of Commanding Officers in detailing a few men as water-carriers would have quickly overcome the difficulty.

CAMP SITES.

(35.) The sites chosen for the various camps were good; but the nature of the ground (clay soil) would have made it very uncomfortable for men and horses if much rain had fallen, especially in the case of the Infantry Brigade.

(36.) Very great credit is due to the Army Service Corps for the work performed by it in the face of great difficulties, officers and men working fourteen hours at a stretch.

That the present Establishment of the Corps is totally inadequate to carry out the duties devolving upon it is evident from the fact that the Corps does not represent 1 per cent. of the Forces (which, since its first formation, have been increased by, approximately, 3,289 officers and men), which proportion is out of all comparison with similar Services in any other Army.

GENERAL REMARKS.

(37.) Thanks are due to the Officers who acted as Umpires on the different Field Days, to the Railway Authorities for the facilities afforded in bringing men and horses from all parts of the Colony at a time when their Service was congested with a large holiday traffic, and also to Post and Telegraph Department for the efficient assistance they rendered.

(38.) The general muster and turn out of the Partially-paid Troops were excellent, and the purely Volunteer Regiments and Corps deserve credit for the manner in which they profited by the short time (four days) in Camp.

The 1st Australian Horse showed great energy and zeal, which alone rendered it possible for the Corps to attend the Camp under conditions and difficulties that were almost insuperable in consequence of the short time which had elapsed since its formation.

It is hoped that the nine days' Camp reintroduced this year may become a permanency, and that in future there will be no necessity for a forfeiture of parades during the year to admit of sufficient funds being retained from the Annual Vote in order to secure a Camp.

(39.) On the breaking up of the Encampment the Troops were marched through the city.

A Military Rifle Meeting, the Matches chiefly made up of those under "Service Conditions," was very successfully carried out, a large percentage of Troops in Camp competing, and generally evincing great interest in the Meeting.

Military Sports were also held. The entries were numerous, and the many events on the programme were keenly contested.

A Military and Naval Tattoo took place on the Agricultural Society's Grounds on the Monday evening following the breaking up of Camp, when all the principal Bands took part.

DRILL-HALLS AND ARMOURIES.

(40.) I am glad to say that a good deal has been done in the provision of these most necessary adjuncts.

Drill Halls have been erected at Paddington, Parramatta, Bathurst, Kiama, and one is in course of erection at Richmond.

Provision is made for Drill-halls at Goulburn, Wagga, Cooma, Maitland, Penrith, and work will be gone on with when sites can be obtained.

(41.) The introduction of the magazine rifle and cordite ammunition necessitates a change in the system by which every man was allowed to take his rifle home and clean it or not, as he felt disposed. Neglect of this sort would be ruinous to these weapons, and now arrangements have to be made whereby they will be constantly under the eyes of the Permanent Staff. This necessitates the further development of Drill-halls and Armouries till every corps has one. A very large one is much required in the vicinity of Chancery-square, Sydney, where so many corps have their headquarters. The money is available, but the site is the difficulty.

RIFLE ASSOCIATIONS.

(42.) I went into this subject thoroughly last year. Affairs have now reached such a head that I think the Government must come to a decision in the matter.

I maintain that the encouragement of rifle shooting in the Military Forces of the country is a matter for the Military Authorities rather than for a civil body, over whose actions neither the Military Authorities nor the Government have any control whatever. If the Government think it an advantage to furnish a number of prizes for the *sport* of rifle-shooting, well and good; but this should not interfere with prizes for those whose *business* it is. Furthermore, Government having put definite sums on the Estimates for Rifle Associations, I distinctly object to their having, in addition, *from the Military Vote* some £880 worth of free ammunition and £675 worth of free railway passes, although we cannot move any of our men by Railway for military matches for want of funds.

(43.) The interest taken by the so-called National Rifle Association of New South Wales in the encouragement of the shooting of the Defence Forces may be judged by the fact that, although notified last April that some five regiments would be armed with the '303 rifle before their October meeting, they flatly refused to place on the programme even one match for men so armed.

(44.) There is a widespread fight at present going on throughout the Empire between those who put "defence before diversion" and those who do not. Some of our Rifle Associations appear to have got into the hands of rings, who make the programmes for the advantage of themselves or their friends. It seems to me that

it is about time for the Government to step in and insist that the public money granted to these Associations should be expended in the manner best calculated to advance the public interests.

(45.) The National Rifle Association of England receives no Government grant, and is wholly dependent on private subscriptions, and consequently its Council may be considered free to expend their funds as they think fit; but our Associations are on a very different footing, and it ought not to be possible to say of them: "As for the influence of the National Rifle Association for good on the musketry of the mass of Volunteers, it is simply nil; and it will continue so until some more encouragement is given to collective practices under proper military conditions."

(46.) As to my mind the encouragement of rifle shooting under Service Conditions is a matter of primary importance, I submit the following extracts, which I hope will show the necessity for this matter being taken in hand and finally dealt with by the Government.

EXTRACT from Report of a Committee appointed by the General Officer Commanding the Military Forces of New South Wales to report upon the subject of "Rifle Shooting under Active Service Conditions," in connection with a Question asked in Parliament by Mr. Price, M.L.A., on the 9th December, 1897.

IX. THE "RESPONSIBILITY" OF THE NATIONAL AND OTHER RIFLE ASSOCIATIONS.

(47.) As already explained, it is absolutely necessary that radical changes be made before match-shooting can be considered to be of any military value. The Committee can conceive no justification for the large annual expenditure (£3,307), which now keeps in existence the various Rifle Associations of the Colony, unless these bodies are prepared to recognise the grave responsibility devolving upon them as national institutions.

They must, moreover, be prepared and able, by an entire reformation of their present system, to elevate what they themselves regard as a "pastime," to the status of a valuable adjunct to the peace training of our soldiers.

The Committee regret that they cannot hope to see the needed reforms carried out by the existing Council of the Rifle Associations of New South Wales.

This opinion is based upon the present constitution of these governing bodies, their responsibility in reality to the voters who have elected them, and their actual personnel. The last point, although but the natural result of the two former, is of such importance as to call for special analysis.

The Council of the National Rifle Association at present consists of 20 members, of whom—1 is an active member of the N.S.W. Mounted Rifles, 3 are active members of the N.S.W. Infantry, 5 are active members of the N.S.W. Naval Forces, 8 are civilians or members of Civilian Rifle Clubs, and 3 are retired officers of the N.S.W. Military Forces.

Thus it will be seen at a glance that those branches of the land Forces (Cavalry, Mounted Rifles, and Infantry) which are pre-eminently expected to be expert with the rifle or carbine, and who, numbering 6,000, form two-thirds of the whole Defence Force, are represented on the Council by only four out of twenty members.

Again, the Naval Forces, numbering under *six hundred* are represented by five members, as compared with four from the *six thousand* (6,000) before-mentioned.

It is most inadvisable, too, that an Association formed "for the encouragement of rifle shooting in the Defence Forces of the Colony," *eight* out of the *twenty* members (nearly half the Council) should be civilians.

The three retired officers can scarcely be taken to represent any section of the present Defence Force; and, however enthusiastic they may be individually, it is a question whether officers who have ceased to be active members of the Force for several years, and are inexperienced in the progress of later reorganisation, can be expected to be in touch with the present requirements of military training.

It is not, under such circumstances, difficult to understand the repudiation by this body of their responsibility for the soldier's training in shooting.

The Committee are of opinion that, in the best interests of the Colony, and to ensure a proper return to the Government for the public money devoted to rifle shooting, one-half of the members of the Council should, to ensure expert knowledge and experience, be appointed by the General Officer Commanding the Military Forces of New South Wales, the remainder to be elected by the members of the Association as heretofore.

Under any circumstances, the Committee consider that a portion (say £500) of the aid at present granted to rifle shooting should be devoted to a Rifle Meeting of an entirely Service character.

X. SUMMARY.

(48.) It appears to the Committee that the prejudicial conditions which obtain in the present system of match-shooting may be summarised as follows:—

- (1.) Irresponsibility of Rifle Associations to the Military Authorities.
- (2.) Defective constitution of the Councils of these Associations.
- (3.) Absence of any control over the expenditure of Government aid to Rifle Associations.
- (4.) Failure of Rifle Associations to keep pace with the progress of military training.
- (5.) Almost entire neglect of controlled and collective fire.
- (6.) A general absence of a proper attempt to shoot under service conditions.
- (7.) The almost universal adoption of a most pernicious system of slow aiming.
- (8.) Habitual reliance upon ridiculous and unserviceable adjuncts to the rifle.
- (9.) The disproportionate appropriation of prize money to matches for professional shots, as compared with those for beginners, and also those under Service conditions.
- (10.) Unsatisfactory method of distributing railway passes.
- (11.) The encouragement of professional shots from other Colonies to the discouragement of our own beginners.
- (12.) Denial by Rifle Associations of any encouragement to young shots by a judicious system of handicapping.

XI.—PRIZES FOR MUSKETRY.

(49.) In the Imperial Service, regiments are granted 2s. 6d. for each soldier who fires through his musketry, and 1s. for each recruit so exercised. The total sum thus obtained is distributed throughout the regiment in prizes, for the encouragement of shooting generally, as the Commanding Officer thinks best; but it is directed that *at least one-half* of the total is to be devoted to the encouragement of shooting in *sectional practices*—that is, controlled fire and other means of improving fire-discipline. Even the balance must not be wholly devoted to individual shooting, but is also to include rapid individual fire and moving target practice.

The Committee are strongly of opinion that if such grants were made in New South Wales the annual musketry course would be popularised, and an interesting means of further instruction and competition provided. If a portion of the sums annually granted to Rifle Associations were devoted to this purpose, it is considered that, from a military point of view, the result would be out of all proportion greater than that now secured.

EXTRACT from *The Brisbane Courier*, dated Thursday, 11 August, 1898.

THE RIFLE ASSOCIATION.

(50.) "Among the subjects of importance which have to be discussed with an eye upon developments in the Far East and elsewhere, is the condition of the Colony as regards defence. Invasion may be nearer than the average onlooker at the war game supposes. The world has drawn closer during the last decade of the century, and Queensland finds herself uncomfortably near a quarter of the globe in which the mother country may be attacked, or where attack may be necessary, at any moment. Such being the case, it is imperative to count up our munitions of war, and take stock of our possible defenders. The efficiency of the latter as marksmen must receive a prominent place in the general review. An invader is not likely to come upon us with his worst men, but rather with a picked contingent; and, if we are to make anything like successful resistance, our soldiers must be good shots under modern service conditions. It is fair to insist that everything should lead up to that. . . . Interest is increased, moreover, by the knowledge that elsewhere in the Empire a debate is in progress between those who would put defence before diversion, and those who would perhaps place profitable diversion first. It is not intended to discredit crack shots by this statement of the case; but, as we understand the position, experts think that Rifle Associations should give more help to the majority of the men who must fight when an enemy lands, and less to the minority who find profit in cultivating a hobby, and who may not be called out in an emergency till last. This view of the case is supported by an extract from an authoritative Home journal, the *Broad Arrow*, of 4th June, which runs:—'It cannot be denied that the present operations of the National Rifle Association are chiefly directed to the providing prizes for the comparatively few expert individual rifle shots who year after year find their way to Bisley. It is true that additional encouragement is given to tyros, but the fact remains that collective firing is not encouraged—indeed, it is generally known that such military practices are discouraged by the management, because they give some trouble and are not so remunerative as the unlimited individual competitions. As for the influence of the National Rifle Association for good on the musketry of the mass of the Volunteers, it is simply nil, and it will continue so until some more encouragement is given to collective practices under proper military conditions.' May not this be accepted as true of New South Wales and Queensland? Is it not a fact that the representatives of Rifle Clubs or Volunteers—the crack-shot class—carried off most of the prizes at the recent meeting of our own Rifle Association. We do not argue from this that discredit attaches to the prize winners. Far from it. But the question is, whether the interests of the Colony cannot be better served, and whether the prizes which are offered year by year should not be so distributed that young shots would be more inclined to spend and be spent in qualifying as marksmen, though they may have hobbies in other directions."

EXTRACT from the *Singleton Argus*, dated Saturday, 11th June, 1898.

A PECULIAR BODY.

(51.) The vagaries of the Council of the Northern Rifle Association, and the conduct of its paid officer, are matters so generally known to the public, and so universally condemned, that there would be no excuse for further reference thereto but for the fact that this is a public institution, subsidised by the State, hitherto recognized by the Military Authorities, and therefore a fair subject for public scrutiny. We will admit here that the Council is composed of estimable gentlemen personally, and it is in their capacity as a governing body that we find fault with their extraordinary conduct. The taxpayer has a right to demand that such an institution should be so conducted that the disbursement of State funds should be made in the best possible manner, and that its management shall be economical and efficient. That during the last of its eight years' existence the first condition has been observed is certainly not to be placed to the credit of the Council as a body, because a majority of the members fought bitterly against the reform. That the second condition is being most flagrantly disregarded is a matter which should bring down upon the Council the blame of every taxpayer whose money is being dealt with. When the "Service" programme was agreed upon some time ago, the Secretary proceeded, publicly and privately, to bring about its abandonment, and, failing that, its failure. Every device, every subterfuge, by which he could injure the authors of the reform, or the reform itself, was resorted to. . . .

EXTRACT from the *Daily Telegraph* (Sydney).

NEW ZEALAND.—THE DEFENCE FORCES.

(52.) Wellington, Tuesday.—The Commandant of the Military Forces, in his Annual Report, says he cannot recommend that any assistance be given in future to the New Zealand Rifle Association, because, from a defence point of view, the results of the meetings are disappointing." . . .

WARLIKE

WARLIKE STORES.

(53.) The methods of supply of warlike stores is still unsatisfactory. Not merely months but years elapse before we can get stores from the Imperial Government. This is specially applicable to our electric search light equipment.

We are still waiting for ammunition for our magazine rifles, which, instead of being issued at once out of Imperial stores when indented for last February, had to be contracted for specially, without regard to the loss of time and extra cost incurred.

These Colonies are put to sufficient disadvantage geographically in the matter of supply of warlike stores without the added delays of the War Office, which I venture to assert are quite unnecessary, unless departmental convenience is to be considered of more consequence than the defence of the more distant portions of the Empire.

The above forms an additional reason for our making our own ammunition. I sent a full report on the probable cost, &c., on 25th July, 1898, and I hope an early decision may be arrived at.

RIFLE CLUBS.

(54.) While strongly in favour of encouraging rifle shooting, I am equally averse to the proposition that the members of these clubs, who for the most part have no military experience whatever, should be considered the first reserve of an active Force. The Colonial Defence Committee have plainly shown the futility of this idea, and I thoroughly agree with them. A reserve of men already trained can readily be formed, and, in my opinion, should be formed without further delay.

DEFENCES, THURSDAY ISLAND AND ALBANY.

(55.) The condition of affairs at these outposts of Australian defence are known to be unsatisfactory. I am not aware of any improvement having been made since the matter was referred to in my last Report.

NAVAL BRIGADE AND NAVAL ARTILLERY VOLUNTEERS.

(56.) Suggestions for the conversion of the Naval Artillery Volunteers into Garrison Artillery have been repeatedly put forward, and is again recommended by Colonel Smith in his report (*Appendix A*). I hope that the Government will take some decided action in the matter.

Last year I pointed out how the Naval Brigade might be utilised in manning one of the spare vessels of the Australian Squadron, and the Colonial Defence Committee purposed dealing with that question in a separate memorandum (which has not yet been received).

(57.) I believe, myself, that the best solution of the matter is to utilise the services of the Naval Brigade afloat, and the Naval Artillery Volunteers ashore, and that these latter should be converted to Garrison Artillery, and instructed properly in matters pertaining to coast defence. It is lamentable to see the manner in which these fine bodies of men waste their time in work of little or no use towards the defence of the Colony, and to think that this goes on year after year at an expense of over £10,000 per annum.

DISCIPLINE.

(58.) The general discipline of the Force is satisfactory. The main exceptions are the Imperial "old soldier," who desires to take advantage of the comparatively easy conditions of our service here, and occasionally the Volunteer Officer, suddenly jumped from civil life into a comparatively high military position, and who imagines he can carry with him all the freedom of civil life without being hampered by any of the rules and regulations which centuries of practical experience have shown to be necessary for the maintenance of military discipline.

(59.) I am sorry to say that military offenders have too great facilities for ventilating trifling grievances in the Press; and some of them, who ought to know better, seem to think that a Member of Parliament, and not their Commanding Officer, is the person to apply to.

I may mention that during the past year, when a Court of Inquiry was taking evidence with regard to a complaint against a sergeant-instructor, for using objectionable language to Volunteer recruits, he calmly informed the Court, "Parliament will decide this!"

(60.) It seems scarcely necessary for me to point out how destructive to military discipline it would be if members of this Force were encouraged in the idea that they could appeal to Parliament regarding every little grievance, real or imaginary. Instead, however, of putting forward any views of my own on the subject, I would respectfully submit for consideration the following extracts, showing how such matters have been dealt with by the Imperial Parliament; and I sincerely trust that the sound ruling therein laid down may be considered a sufficient precedent for similar action by the Parliament of this Colony.

CLUDE'S MILITARY FORCES OF THE CROWN.

Vol. 1, Chap. VIII, paras. 89-90, pp. 175-176.

(61.) 89. It is of course open to any Member of either House of Parliament to move an Address to the Crown for a copy of the proceedings of any Court-Martial to be laid before it, but it may lead the House beyond the legitimate sphere of duty. Earl Russell, in opposing the appointment of a Select Committee of the House of Commons in Captain Robeson's case, laid down the constitutional rule in these words:—"There can be no doubt that under that kind of superintendence and supervision which this House ought to exercise there might arise cases which which would require such a proceeding as I have hinted at; but I can hardly believe it possible that any case whatever should induce this House to say, 'We think the proceedings before this Court-Martial were not justifiable; that the conduct of the officers composing it was not according to military law; and therefore we will appoint a committee of our own number, to whom these proceedings shall be referred, and before whom this case shall be tried over again.'"²

Not to Parliament.

² 30 H.D. (3), p. 147.

(62.) 90. I think almost the only cases—there may be others—but I think the only cases in which this House should call for the proceedings of a Court-Martial are those of gross corruption, or of some very gross violation of the law. . . . What I wish to guard the House against is assuming an authority which is properly given to Courts-Martial of this country, without extraordinary necessity, and without any sufficient reason, so that any person who may hereafter be led into improper conduct which may expose him to a Court-Martial, may be told that he may have the whole question reopened before this House, by whom there will be a different finding and a different sentence, not acknowledged by the tribunal which had formerly tried and condemned him. Sir, I think that to establish such a precedent would be to shake the discipline of the Army, and not only to relax obedience, but to make all officers on Courts-Martial afraid to do their duty, in certain cases, under the apprehension of their being retried before a Committee of this House.

Grounds on which Parliament should ever interfere.

³ The interference of Parliament in Sergeant-Major Lilley's case occasioned an expenditure of money and official labour that must be reckoned in thousands, besides inflicting a heavy blow to the discipline of the Army

Vol. II, Chap. XXV, paras. 29-31, pp. 328-330.

(63.) 29. The power of appointing and dismissing officers and soldiers is vested solely in the Crown (?); but though this constitutional rule is incontrovertible, none in its exercise is more imprudently canvassed in Parliament. The Secretary of State is plainly responsible; while the interference of Parliament, except by vote of censure against the Minister, relaxes the discipline of the Army and tends to weaken the authority of the Crown. Of all the Royal prerogatives, this was unquestionable the one which a well-informed and well-intentioned House of Commons would be the least inclined to meddle with; for he was sure that the House would see that the gradation between the frequent interference with the exercise of that prerogative and taking the prerogative entirely into their own hands, was so easy, that if they indulged in the former they would soon virtually do what substantially they would never be disposed to agree to. Before the House could be induced to enter into any investigation of the exercise of the prerogative connected with the command of the Army, there must be a strong presumption of abuse in that exercise (?).

As to appointment and dismissal of officers.

(64.) 30. In all matters of discipline the Royal authority is supreme and the decisions of the Crown final; but after the sentence of a Court-Martial has been confirmed, Parliament is often invited to review and constitute itself a Court of Appeal from the decisions of the Court and of the Crown. In Captain Robeson's case Earl Russell prevailed upon the House to refuse such an inquiry (1): "I do not think that were the House convinced of the existence of such circumstances in this case it would proceed in the manner proposed, viz., the appointment of a Select Committee, but that it would rather proceed by asking for the minutes of a Court-Martial, and then, addressing His Majesty, to take such steps as might be necessary in case of injustice, partiality, or illegality of sentence." There can be no doubt that, under that kind of superintendence and supervision which this House ought to exercise, there might arise cases which would require such a proceeding as I have just hinted at, but I can hardly believe it possible that any case whatever should induce this House to say, "We think the proceedings before this Court-Martial were not justifiable; that the conduct of the officers composing it were not according to military law; and therefore we will appoint a committee of our own number, to whom these proceedings shall be referred, and before whom this case shall be tried over again."

In matters of discipline—Court-Martial sentences.

(65.) 31. In other cases the House of Commons has sought to punish officers that have not been brought to Court-Martial. A motion for inquiry into the conduct of an officer was alleged to render him fit to serve Her Majesty was resisted by Lord Macaulay on these grounds:—"His first objection

For inquiry into conduct of officers.

was

(2) Chap. XV, para. 111. XVI, paras. 129-141.

(3) Lord Palmerston, 6 H.D. (2), p. 311

was a very obvious one. It was a constitutional objection. While there was no prerogative of the Crown which that House was not entitled to offer its advice upon, yet, in offering advice upon such points, it should be guided by a very sound discretion. Indeed, none but the most imperious reasons, in the most extreme cases, could warrant such interference with the Royal prerogatives; and he believed that, above all other prerogatives, in all well-organised States, the control of the Army, and the awarding of rewards and punishments to military men, were considered most exclusively to belong to the supreme executive authority; that such matters ought not to be submitted to large popular assemblies of men, who are too apt to be influenced by party and factious impulse. . . . Into the merits and demerits of the officer's conduct he would not go; but, viewing that conduct in whatever light it might deserve, he still said that the "present motion was highly objectionable because, in all matters of this kind, they should be guided by rules; they should beware how they hastened to take advantage of the unpopularity of an individual to induce a precedent which, if once established, would lead to the most fatal effects to the whole of our military system, and work a great injustice to all officers in Her Majesty's service. . . . As to the proposition for erecting that House into a penal Court of Inquiry, he must protest against it as a species of tribunal dangerous and revolutionary. It would make that House, which had not the power to administer an oath to witnesses (?), or punish them if they prevaricated, a Court for passing a sentence which might ruin a poor man, in the shape of a pecuniary fine, or in attaching a stigma to his name almost worse than death itself." By the division the House adopted this view.

(1) Parliamentary Committees now have power to administer oaths. (2) 53 H. D. (3), p. p. 339-41.

I have the honor to be,

Sir,

Your obedient Servant,

G. A. FRENCH, Major-General,

Commanding N.S.W. Forces.

Sydney, October 5th, 1898.

APPENDIX A.

Colonel S. C. Smith, R.A., Commanding Artillery, to The Assistant Adjutant-General.

Sir,

Artillery Staff Office, 9 July, 1898.

(1.) I have the honor to forward a report on my command for the past twelve months.

BRIGADE DIVISION, FIELD ARTILLERY.

"A" Battery (Permanent).

(2.) This Battery has, during the last year, been equipped with six 15-pr. B.-L. guns, and in this respect is as up to date as any Imperial Field Battery. It is, however, now my duty to point out that the strength of the Battery in personnel is quite inadequate. Its strength of 76 officers and men renders it impossible to give proper effect to the excellent armament it possesses, and I strongly advocate the addition of 12 Drivers and 12 Gunners, together with a few N.-C. Officers, necessary to convert it from its late establishment of a 4-Gun Battery to a 6-Gun Battery.

Under present circumstances, in order to raise the Battery to war strength, either the whole of "B" Battery would be absorbed, and one-third of "C" Battery (thus practically eliminating "B" and "C" Batteries from the effective strength of the Colony), or close on 100 Reservists and Recruits would have to be taken on, thus entirely cancelling the efficiency of this Battery.

I have, during the past year, had to attach 8 men of the Garrison Artillery to this Battery, simply to ensure the proper care of the armament and equipment. This arrangement, although doubtless an assistance, is, of course, unsatisfactory.

(3.) In the matter of horses, a successful beginning has been made to the proposal made last year of gradually increasing the number of permanent horses. We have now a strength of 88, and this has been attained without any initial increase of expense to Government, they having been purchased out of the sum allowed for "hire of horses," and the permanent gain to the Colony is considerable. Not only is a permanent gain effected, but there has been a gain during this the first year of its trial. The transport work for the Easter Camp was performed almost entirely by utilising these horses, thus saving a sum of about £1,000, which would have otherwise been claimed by a contractor.

(4.) The feeding of this increased number of horses has been kept within the sum passed on the Estimates for sixty horses. This has been effected by the hire of a grass paddock, into which some thirty horses have been turned out, and where they have been fed at about 2s. per head per week. The paddock has not turned out quite the success anticipated, as it carries so small a crop of grass, and the £75 a year paid for it is rather exorbitant. It has been necessary to supply extra grass from the Forage Vote to supplement the deficiency.

(5.) I was enabled at the Easter Camp, with the number of horses now on charge, to turn out all three Batteries with four guns each and four horses in each gun, without having recourse to the previous unsatisfactory plan of hiring.

I would, however, still like to increase the number to at least 100, which might then remain the permanent establishment in peace time. For the increase on mobilisation the system of registration, as adopted in England, should be in vogue. The local omnibus proprietors keep the stamp of horses required.

(6.) I have postponed the Field Battery Annual Course and Camp this year until September, when the weather is more suitable for camping out, both for horses and men, than in the winter. I hope in the meantime to discover some suitable ground where practice can be carried out under Service conditions in conjunction with tactical movements, a combination which is essential to the efficiency of Field Artillery.

(7.) I have great pleasure in reporting that the discipline of this Battery is highly satisfactory, a fact particularly evidenced during the incessant hard work and long hours required of it doing transport work immediately preceding the Easter Camp.

(8.) The detachment that went to England for the Jubilee Celebrations went subsequently to Aldershot, where it was attached to an Imperial Battery, and the reports received from the Home Authorities were most satisfactory.

"B" and "C" Batteries.

(9.) These Partially-paid Batteries, as reported last year, suffer from the paucity of parades allotted to them. I fear that the majority of the personnel join, not so much from the love of soldiering, as from a desire to receive the small extra emolument to be obtained.

The result is, that it is only on a recognised parade for which pay is received that any appreciable number will turn out.

As I reported last year, I am unable to convey the impression that these Batteries are efficient.

The Easter Camp was made up of sixteen half-day parades, leaving only nine half-day parades throughout the year. This Camp, though doubtless of great instructive value to them on many heads, consisted to some extent of tactical manœuvres in conjunction with troops of all arms, a very important part of their training, but one which requires thorough preliminary Artillery training to enable full value to be extracted. They had the great advantage of being horsed by permanent trained horses, instead of, as heretofore, by hired horses, which added greatly to the interest taken in the work by the men, and eliminated the time usually wasted in attempting to break the horses to Artillery work.

I would strongly urge the necessity of increasing the parades for this branch.

(10.) In addition to the increase of personnel advocated for "A" Battery, it would be a great advantage to have one permanent gunner and one permanent driver to each subdivision of the P.-P. Field Batteries. This would ensure a better care of the guns, harness, &c.—a point in respect of which these Batteries are undeniably weak.

(11.) The riding and driving in these Batteries is not good, due to the fact that the men forming these Batteries are all Sydney men, and have, with few exceptions, neither the facility nor opportunity of riding, except on parade.

On the other hand, the men are, as regards physique, intelligence, and keenness (when paid), all that could be desired, and constitute material equal to any in the Imperial Service, and with greater encouragement in the matter of parades, would form the ground-work of two very useful Batteries.

(12.) I have applied for four more 15-pr. B.-L. guns, to replace the R.M.-L. armament of one of these Batteries, and hope later on, if the Howitzer proves a success, to try and get four 5-in. B.-L. Howitzers for the second. These latter would be of great use, particularly for the defence of the Hawkesbury Bridge.

In the meantime, possibly Q.-F. armament for field guns may have developed sufficiently to justify its adoption in this Colony.

1ST GARRISON DIVISION.

(Permanent.)

(13.) Since last year the Permanent Garrison Artillery have had a much needed increase in personnel and now numbers 460 of all ranks, and I trust that any tendency to altering this figure may only be one of increasing it. For the present this strength is sufficient; but should in the future further defences be erected, either on the Hawkesbury or to protect the proposed harbour at Kembla, a suitable increase will be required.

(14.) The three companies have been satisfactorily organised, and each consists of 135 of all ranks.

(15.) The recruiting for the increase commenced in January last and was extended over four months, and the result has been most satisfactory, an exceptionally good lot of men having been enrolled.

(16.) With three Service Companies now complete, I have inaugurated a system of exchange of station, by which each company will serve two years at either Middle or South Heads and one year at Headquarters.

(17.) I have also been enabled to increase Newcastle and Bare Island detachments, and these will become Captains' Commands and are allotted to the two Outlying Companies.

(18.) The months of May, June, and July have been selected for the Company Courses, one month to each company, the Competitive Practice to take place early in August.

No Competitive Practice has taken place since my last Report owing to the above alteration.

It was found last year that, in order to get this practice over before the end of the financial year, (30th June), Company Courses had to be compressed into fourteen days, which did not prove satisfactory.

(19.) The Long Course of Gunnery lasted from the beginning of July to the middle of December, and proved very satisfactory, as already reported on, the principal feature being the inclusion of N.C. Officers from Victoria, Queensland, and Western Australia, in which the Victorian representatives especially distinguished themselves.

This year this Course commenced in June, in order that it may conclude before the weather becomes oppressive. Victoria and Queensland have again answered to our invitation.

(20.) The detachment sent to England for the Jubilee Celebrations went subsequently to the Isle of Wight, and the Imperial authorities reported most favourably on the work done by them.

(21.) Two N.C. Officers of the Regiment, Sergeant McNamara and Sergeant Foy, returned from England, where they had been sent by the local Government to go through the Long Course at the School of Gunnery. With considerable credit to themselves and to this regiment they obtained the first and second places at the conclusion of the Course; and I am glad to say the local Government saw fit to emphasise their satisfaction at the result by giving each of them a small present.

(22.) Two officers are still in England undergoing instruction—Captain Sandford and Lieutenant Lamb. The former passed through the last Long Course with credit and is now qualifying as a Fire-master; the latter is going through the present Long Course. Both these officers will return in February next and should be of great use to the regiment.

(23.) The conduct of the Permanent Artillery has been good throughout the year. Desertions have diminished, due, to a certain extent, to the adoption of my recommendation last year that the sum required to purchase discharge should be lowered. As I stated last year, desertions in certain numbers are bound to take place in a localised corps.

(24.) As the result of further experience on the subject of the men being allowed to wear plain clothes, I am gradually restricting the privilege, which, from a disciplinary point of view, will be to the advantage of the regiment.

(25.) I think it would be advisable to periodically "cry down" credit, as I am inundated with tradesmen's bills which are alleged to be unpaid, principally for plain clothes supplied to the men. Although, for the credit of the regiment, I am prepared to assist tradesmen to recover money due to them by my men, still I prefer not to be considered a bill collector for those who are opposing my wishes and the men's own interest by supplying goods on credit.

(26.) As a tentative measure, I have inaugurated, on a small scale, a school for the educational improvement of such N.C. Officers and men as care to avail themselves of it. A civilian teacher attends in the small lecture room of the Headquarters School of Gunnery three nights a week. I think the idea will become popular, and will, I am sure, be of considerable advantage to the men.

2ND GARRISON DIVISION.

(Partially Paid.)

(27.) This branch has benefited greatly by an eight days' camp which took place the week before Easter, at South and Middle Heads. Although fourteen half-days were taken from the annual allowance of parades, which of course is greatly to be regretted, still I consider that the advantage gained by this continuous training is much greater than when the fourteen half-days are distributed over the year.

If only this eight days' camp could be granted as an addition to the usual allotment of parades we should then have made great strides towards efficiency.

The improvement noticed in the men after the few days in camp has made it clear to me that such a period of continuous training is worth more than four times the number of half-day parades.

It was very gratifying to see the great interest in the work taken by all ranks, and the strenuous and uncomplaining manner in which all strove to satisfactorily get through the somewhat severe programme.

All four companies arrived with a very large proportion of, their Establishment, and in this connection I have to thank all employers who so readily gave the men leave of absence at a time that must in many cases have been most inconvenient.

The men were, unfortunately, so backward on commencement of the Camp, and so much preliminary work had to be brushed up, that very little shot practice could be carried out, but still much useful work was done.

Two night attacks were arranged, the first representing a few cruisers approaching the harbour from various directions and entering the same, running up the Eastern and Western Channels respectively, the second representing a combined attack of two squadrons, one engaging the seaward forts and the other running up the harbour. The co-operation of the Submarine Miners and the working of all the search-lights was of great instructive value.

(28.) In the Competitive two Companies qualified for 3rd-class prizes. Although the shooting was hardly an improvement on last year's, the fire discipline and drill generally was a great advance in the right direction.

(29.) In the new Manning Details for the defences, certain guns have been told off complete to this portion of the Force, who are capable of undertaking all the duties in this connection and is more satisfactory. The guns told off are those second in the scale of importance and which are not likely to require great rapidity of service.

(30.) The strength of this Division has been slightly reduced, and is now 430 of all ranks; but the abolition of the band and its conversion into fighting men has only caused the reduction in fighting strength to be about forty men.

(31.) The physique of the men of this Division is not quite what it should be, and it is found difficult to keep the standard up. This used not to be the case, from all accounts, in the days when more parades were allowed, and would doubtless again be satisfactory when these days are reverted to, as I hope will shortly be the case.

GENERAL.

(32.) I think it would be advisable to contemplate a different system of pay for partially-paid troops. By the present system each man attending a parade is paid a certain sum for such parade, with the result that only on paid parades do the men turn out. In addition to this, men can become efficient on a smaller number of parades than are allowed to the particular branch.

I would suggest that the pay be a certain fixed sum per annum, or per quarter, and that the number of parades represented by such sum be the minimum number of parades for efficiency. This would ensure at least two or three casual parades per quarter being fairly well attended. This, of course, is only a suggestion, but I think something in this direction should be done.

(33.) The question of the Naval Brigade should again be pressed on the Government. About 150 of these men are allotted to the Artillery Defence, and it is only reasonable to insist on their method of drill being the same as that of the other men with whom they are associated. It would be preferable to increase the Partially-paid Artillery by the number required.

(34.) I would also again urge the advisability of some retirement scheme for the Permanent Officers of the Forces.

(35.) I append a few general remarks of the Forts and Armament (Confidential).

I have, &c.,

S. C. SMITH, Colonel,
Commanding Artillery.

APPENDIX B.

NEW SOUTH WALES MILITARY FORCES.

Report of the School of Musketry, 1897-98.

(1.) Three Courses of Instruction were held at Randwick during the year 1897-1898, two being Class A for Staff Officers, and one Class C for Warrant and Non-Commissioned Officers.

Courses.	Numbers.		Results of Examination.					
			Officers.			W. & N.-C. O's.		
	Officers.	W. & N.-C. O's.	Class A Certificate.	Failed.	Total.	Class C Certificate.	Failed.	Total.
No. 1. Staff Officers Sept. 6-21, 1897.	2	2	2
No. 2 Staff Officers Nov. 29-Dec. 21, 1897.	3	3	3
No. 1. Staff W. and N.-C. O's April 25-May 17, 1898.	10	6	4	10
Total	5	10	5	5	6	4	10

(2.) The instruction given at Randwick to the Officers and Warrant and Non-Commissioned Officers attending the Classes in the theory and practice of Musketry, during the year 1897-98, comprised, in addition to the theory of Musketry, thorough grounding in firing exercise drills; also, how to instruct others, and practically to drill and instruct a squad of recruits.

Fire discipline and control of fire.

Range finding with the Mekometer.

Judging distance by sight and sound.

Complete courses of individual range practices with both the Lee-Enfield and M.-H. Rifles.

Collective firing in all its branches, including long range volleys at distances of 2,000 yards and upwards, volleys at unknown ranges, &c.

Revolver practice.

Care of arms and ammunition, and special instruction in the mechanism of the Lee-Enfield and Martini-Henry Rifles and Webley Pistol.

Aiming drill.

Testing rifles and ammunition, and working out the diagrams in connection with same.

Selection and construction of rifle ranges.

Morris Tubes,

And instruction in the practical keeping and completion of the various Returns, Registers, &c.

(3.) Special interest in these Courses has arisen from the same individuals firing with the Lee-Enfield and Martini-Henry rifles; the results show the superiority of the new weapon, both as regards its accuracy and as a Service weapon. Not one case of a jamb has arisen with the Lee-Enfield, whilst many have occurred with the M.-H.

(4.) The following is the result of the shooting:—

Individual Practices.
Lee-Enfield.

	Recruits' Course.			Trained Soldiers' Course.			
	1st C.	2nd C.	3rd C.	M.	1st C.	2nd C.	3rd C.
Officers	4	1	0	0	2	2	1
W. and N.-C.O's.	10	0	0	4	2	3	1

Martini-Henry.

	Recruits' Course.			Trained Soldiers' Course.			
	1st C.	2nd C.	3rd C.	M.	1st C.	2nd C.	3rd C.
Officers	2	3	0	0	1	1	3
W. and N.-C.O's.	8	1	1	1	5	4	0

From this Table, the marked superiority of the Lee-Enfield rifle as regards its accuracy is very apparent, more especially when it is taken into consideration that this Course is more severe than that of the Martini-Henry.

Collective Practices.
Lee-Enfield Rifle.

	Number of Rounds.	Number of Hits.	Percentage.
Officers	590	176	30
W. and N.C.O's.	1,200	664	55

Martini-Henry Rifle.

	Number of Rounds.	Number of Hits.	Percentage.
Officers	479	155	32
W. and N.-C. O's.	630	336	53

In these practices the superiority is not so noticeable; but taking into consideration the more difficult Course of the Lee-Enfield, and the fact that the weapon is a new one, the result is extremely satisfactory.

23 July, 1898.

M. BOAM,
Captain and Brevet-Major, D.A.A.-G.

APPENDIX C.

The Principal Medical Officer to The Assistant Adjutant-General.

Medical Department, Victoria Barracks, Sydney, 11 August, 1898.

SUBJECT:—YEARLY REPORT ON MEDICAL SERVICES.

Sir,

I have the honor to forward, for the information of the General Officer Commanding the New South Wales Military Forces, the Annual Report on the Medical Services for the year ending 30th June, 1898:—

1. *Garrison Hospital.*

Admissions.

There were 364 admissions to the Garrison Hospital during the year, which were contributed from the Permanent and Partially-paid Corps as under:—

General Staff (Staff Sergeant)	1
Brigade Division, Field Artillery	82
N.S.W.A. Regiment, 1st Garrison Division, No. 1 Company	96
No. 2 "	71
No. 3 "	98
Engineers, No. 3 Company, Permanent Section	6
Permanent Army Service Corps	1
Medical Staff Corps	2
N.S.W. Lancers	2
Mounted Rifles	1
1st Infantry Regiment	1
2nd " "	2
Victorian Permanent Artillery	1
Total	364

Cases

Cases admitted for treatment were detained as follows:—

Duration of cases
in Hospital.

Not over				Over
1 day.	3 days.	7 days.	14 days.	14 days.
9	60	144	85	65
Total, 364.				

There was one death in the Garrison Hospital.

No. 1690, Gunner William Wright, No. 1 Company, 1st Gar. Div., N.S.W.A. Regiment, was killed accidentally at South Head by 80-pr. gun on 19th September, 1897.

Three men were discharged from the N.S.W. Artillery Regiment as "medically unfit" for further military service.

There were 189 attendances on officers, 31 on their wives, and 24 on their children.

There were 1,063 "daily sick," in addition to cases admitted for treatment. This number was made up as follows:—Five hundred and sixty attendances on Warrant Officers, Non-commissioned Officers, and men, 208 attendances on their wives, and 295 attendances on children, either at the Garrison Hospital or at their own residences and quarters within the Head-quarters District.

In addition, as in previous years, cases of women and children requiring special or operative treatment were admitted, under my care, at St. Vincent's Hospital.

2. Recruits.

Three hundred and eight recruits presented themselves, of whom 241 were passed as "fit," and 67 rejected as "medically unfit" for military service. Of those accepted, 33 were re-engagements, and 14 had seen service other than in the New South Wales Military Forces. For their distribution and physical averages, see Appendix No. 1.

The number of recruits who presented themselves, together with all particulars, is given in Appendix No. 2, and by which it will be seen that a fine physical standard has been maintained in the recruiting of the Partially-paid Forces.

The Recruit Registers, with one exception, viz., the New South Wales Corps of Engineers, in which the weights of recruits have been omitted, have been very well kept.

The total number of recruits examined for the Partially-paid Services during the year throughout the Colony amounted to 1,026, of whom 965 were accepted as "fit," and 61 as "unfit."

3. Schools of Instruction.

Two Schools of Instruction for Officers of the Medical Staff Corps were held during the year, one at Head-quarters, in which 7 Officers attended and 3 Officers passed with honors (the 4 Officers who did not pass did not go up for examination, but intend to go through next School and then do so), and a second at Newcastle, in which 4 Officers passed with honors.

Nine Classes of Instruction in First Aid and Stretcher Drill for regimental stretcher-bearers were also held, made up as follows:—

	Officers.	N.C.O's.	Men.
Mounted Rifles (2)	3	8	14
2nd Garrison Division Artillery	2	4
1st Infantry Regiment	2	7
3rd " (2)	9	11
6th Volunteer Infantry Regiment	2	13
National Guard...	7
Railway Volunteer Corps	2	14
Total	3	25	70

The above having duly qualified by examination, were granted the usual Certificate of Efficiency in "First Aid and Stretcher Drill."

4. Continuous Training.

The benefit which all ranks of the Medical Staff Corps derived from the Continuous Training was very marked, and every endeavour was made to bring it as nearly under Service conditions as was possible; but, owing to the necessity of the curtailment of a number of parades in each quarter, everyone came into Camp more or less rusty, and time was taken up in regaining lost ground, which time could have been well spent in more advanced work.

5. Mobilisation.

The distribution and details of Mobilisation for the Medical Services (Partial and Full) have been worked out and adapted to the amended Scheme of Defence.

On a War Mobilisation, the present establishment of the Medical Staff Corps, Partially-paid Service, of two Companies would be quite inadequate, as it only numbers 113 all ranks, and would require at least another Company to work in efficiently with the Reserve System; otherwise the proportion of Reservists to the Partially-paid Force would be too great for the service to be considered highly efficient and reliable.

6. Ambulance Equipment.

(1.) Provision has been made during the past year to complete the ambulance waggons for the Bearer Company, and also to equip a Half-field Hospital for the Sydney Fortress Movable Column, and the Newcastle Defences.

(2.) In the last Annual Report, I pointed out that some provision would require to be made for Regimental Ambulance Field Equipment for the newly formed purely Volunteer Regiments at a cost of £130; but as this has not yet been carried out, I would suggest that it may be included in the Warlike Stores indent of this year.

(3.)

(3.) I also pointed out in last year's Report that the four Infantry Regiments (1st, 2nd, 3rd, and 4th) each require 10 stretchers (1 per Company), and suggested that this expenditure might be met from the capitation savings of each Regiment, about £30 from each; but, as far as I know, nothing has been done in this direction. These stretchers can be made locally, equal to imported, and as cheap.

7. Reserves.

Reserves. (a) The Reserve system of the Medical Staff Corps is now in good working order, becoming more popular every day, and shows every sign of really becoming an efficient adjunct to the Service.

The inexpensive but serviceable khaki drill uniform has given every satisfaction.

Army Nursing Service Reserve. (b) The Regulations for the conduct of the Army Nursing Service Reserve have been submitted, and when approved of candidates will be enrolled.

I anticipate that this movement will be very popular, and its practical value to the Service in time of war would be incalculable.

8. Medical Inspection of Recruits of purely Volunteer Regiments and Corps.

When the purely Volunteer movement was started, I wrote on the question of the medical examination of the recruits, but was informed that it was not intended to have any medical examination of recruits for this branch of the Service.

From what I saw of the purely Volunteer Regiments during the four days of the continuous training at Easter, and from the number that paraded sick—in fact requiring more medical attention than the remainder of the troops put together—I was convinced that some medical inspection was necessary prior to enlistment; otherwise, were they in their present condition to be called out for active service, the proportion of those “unfit,” and the number who would soon become ineffective from illness, would be a matter of great import.

I would submit that a somewhat lower standard of physique than that governing the Partially-paid Forces be laid down, and that, in future, the medical inspection of recruits be carried out by the Medical Officers attached to the purely Volunteer Regiments; and as these officers do not receive any pay nor allowances for their services, that they be granted the usual Government rate of 2s. 6d. for each recruit examined.

9. Vaccination.

Out of the 308 recruits examined for the Permanent Services, 88 were found to have never been vaccinated, principally young men from the country districts. This is a very serious question, and in the event of any small-pox epidemic is fraught with danger.

Vaccination in New South Wales is not compulsory; but it might be insisted that any recruit not showing satisfactory evidence of previous vaccination should submit to be vaccinated immediately, or otherwise not be accepted.

A return of those not previously vaccinated can be furnished; and I have no doubt that the bulk of them would willingly be vaccinated, when it was pointed out that there is a constant, fresh, and ample supply of pure calf lymph now available in Sydney from the Pasteur Institute.

Conclusion.

The present general efficiency of the Medical Service is, I believe, of a higher standard than in previous years, all ranks having endeavoured to do their best; and were more opportunities afforded for drills and exercises, a still better condition would maintain.

I have, &c.,

W. D. C. WILLIAMS, Surgeon-Colonel,
Principal Medical Officer.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY,

NEW SOUTH WALES.

MILITARY.

(PAPERS RESPECTING RIFLE-SHOOTING UNDER ACTIVE SERVICE CONDITIONS.)

Printed under No. 13 Report from Printing Committee, 24 November, 1898.

R. A. Price, Esq., M.P., to The Chief Secretary.

Dear Sir,

Parliament House, Sydney, 7 December, 1897.

I forward herewith an article from the Sydney *Daily Telegraph* of the 2nd instant, and shall be pleased if you cause an inquiry to be instituted into the subject, and a report prepared *re* same.

The importance of this matter cannot be over-estimated, as upon the inducements offered to the Volunteer Forces will they become good shots.

I desire to direct your attention particularly to the urgent necessity for a fair proportion of the matches being carried out under similar conditions to those which would occur in actual service, being convinced that you will cause an alteration to be made in the present system.

Yours, &c.,

R. ATKINSON PRICE.

[Enclosure.]

The Daily Telegraph, 2 December, 1897.

A PLEA FOR PROGRESS IN RIFLE-SHOOTING.

To the Editor.

SIR,—In your issue of the 29th ultimo there appeared some remarks by "One of the Officials of the National Rifle Association of New South Wales," which, taken generally, may be accepted as a protest against that portion of the Annual Report of the General Officer Commanding the Military Forces which referred to this and other similar Rifle Associations in this Colony.

The New South Wales Government grants annually to the several Rifle Associations the following sums:—The National Rifle Association of New South Wales, £1,000; the Northern Association, £250; the Western Association, £250, and the Southern Association, £250; railway passes, £675; free ammunition, £882; making a total of £3,307 paid by the Government to encourage rifle-shooting. I propose to show how this money is spent, and I take it that the public expects to find some useful return for their money.

In the Report mentioned, the General points out that, whatever the cause may be, the proportion of soldiers, as compared with civilians and others, and more especially Infantry and Mounted Rifles, who avail themselves of these Rifle Meetings is so small as to lead to the conclusion that there must be some good reason for their absence. The facts are that at the last Rifle Association Meeting, in October, the individual prize money was distributed as follows:—New South Wales Infantry, £159; New South Wales Forces (other than Infantry), £358; New South Wales Civilian Rifle Clubs, £687; other Colonies, £654; Out of 264 prize-winners, twenty-eight belonged to the Infantry and Mounted Rifles of the Colony, who between them won £167; so that more than one-third of the total individual prize-money was secured by the crack shots of the other Colonies, and only one-tenth by those members of the New South Wales Forces who are armed and would fight with the rifle. The General further points out in his Report that at these meetings "there is no pretence at handicapping; the same crack shots are allowed to enter match after match on equal terms with beginners, the consequence of all this being that very few of the rank and file of the Defence Forces have much chance of obtaining good prizes. From all this I infer that, if it is the desire of the Government to bring up the general average of the shooting of the Defence Forces, rather than furnish fancy prizes for a favoured few, it will be necessary to modify considerably the conditions on which grants are now given to Rifle Associations." Nearly all the prizes fall to those individuals who make a profession of shooting at known distances and stationary objects, which are quite distinct

from soldier conditions. A very large proportion is won year after year by gentlemen who make a business of attending these meetings all over this and other Colonies, and who certainly do not by such means become more useful to their country. The professional rifle shot of this kind is characterised by the General as a "pot-hunter," to which term the Rifle Association takes exception. They claim that rifle-shooting of the kind they provide is a "sport" which is taken up by a large number who practice assiduously from year to year at considerable inconvenience and loss of time to make themselves expert, not from motives of gain, but simply out of patriotism and love of sport." Is the Government of this country justified in spending a large sum of money annually upon what is described by the Rifle Association themselves as a "sport" and "an expensive pastime"? Might they not, with equal reason, endow our cricket and football clubs, who, at all events, spend their time in healthy exercise? I maintain that the conditions of shooting at these meetings cannot be accepted as of value from a soldier's point of view; and, if not, should the public funds be devoted to encourage the efforts of a few professional match shots? In my opinion there are two very sound reasons for the want of interest that appears to be taken in these meetings by our Colonial soldiers—first, because the delicate machinery introduced, the Verniers, coloured lines, ventometers, patent sights, &c., has brought target shooting to a gallery science, in which only a few can ever hope to excel; and, in the second place, because the nature of the shooting is so absurdly limited that it naturally conveys no idea to a soldier that by becoming a competitor he may also expect to become more useful to his country; and this opinion I am convinced is held by the thinking portion of the public. Who for a moment supposes that any of the rifleman's paraphernalia carried about at our matches and meetings could or would be used in the face of an enemy? And if these things are not of any practical value in the field, are we not wasting time in perfecting a few men in impossible details, and neglecting that kind of training without which no soldier can lay claim to be truly called an expert rifleman? In the last number of *The Journal of the Royal United Service Institution* (October, 1897) there is a paper "On the instruction of our soldiers in shooting under active conditions of service," by Colonel Browne, commanding the 21st Regimental District. The writer argues that, after the recruit has been instructed in individual firing at known ranges and under conditions which will satisfy him of the accuracy of his rifle, he should spend every round fired at his subsequent musketry courses in a variety of practices as nearly as possible under active service conditions. (In the discussion which followed Colonel Browne's paper, Sir James De Hoghton, Bart., an officer who for twenty-one years was connected with musketry training in the Army, and who also served as D.A.A.G. at the School of Musketry, Hythe, expressed himself as follows:—"I quite agree with Colonel Browne in his remarks, but he rather disguises the question of shooting at Bisley. I am fond of shooting, but I never decline to speak my thoughts, and to say that I consider Bisley one of the great enemies to progress of musketry in the Army. Our men fire there under conditions which can never obtain on service, and they gradually get the impression that if they have not favourable conditions, if they do not know the range, if it is a cloudy day, and there is a changing light, they cannot shoot. It also produces this effect: that the men consider that if they are not amongst the prize-winners of the great shows they are of no use as soldiers. I do not think that is right. I am certain it is wrong. I am certain that in practice the well-trained man, the ordinary shot of the battalion, is in action every bit as useful and good as is the marksman. I have tried it practically. I have taken sections of marksmen and tried them against sections of ordinary shots in the field under service conditions. The difference is nothing.")

General Sir Gerald Graham, V.C., apropos of range rifle-shooting, has expressed himself as follows:—

Fire discipline requires special training and much practice in peace time. It will not do to assume that because a man moves with faultless precision on parade, or makes good practice at a fixed target, that he will be able to control himself so as to expend his cartridges with judgment in the excitement of action, or listen coolly to orders from his officer under conditions entirely unlike those of his ordinary musketry practice. The conditions could indeed be scarcely more dissimilar than those of ordinary target practice and a battlefield. Let anyone visit the Wimbledon Camp on a fine July afternoon, and watch the perfect order and composure that prevails in that admirably organised shooting exhibition. He may perhaps notice a veteran champion, who looks as if he were laying himself down for a comfortable nap, but whose piece presently goes off with good result at 1,000 yards. Can anything be more unlike the crashing roar, confusion, and excitement of a fighting-line, when life is most intense in the presence of death, and when the strongest bonds of discipline and confidence in authority are necessary to draw men to listen for commands and to obey them?

Colonel Brownrigg, formerly Commandant of the Victorian Volunteer Forces, on the occasion of the presentation of prizes won at a former meeting of the Victorian Rifle Association, said:—

When he arrived in the Colony nothing in military matters struck him more than the advanced state of rifle shooting. Since then it had continued to improve, and he could congratulate volunteers upon having just completed one of the most successful meetings held in Australasia. He, however, regretted to see that some of the purely military matches had not received the support to which he thought them entitled. He alluded to the rapid firing match, the firing at unknown distances, and, above all, the volley and skirmishing competitions. He wished the volunteers to ask themselves what was the aim and object of rifle shooting. Was it simply to make money? He did not think so, because no charge was felt by volunteers to be more opprobrious than that of being a "pot-hunter." The object of the Forces should rather be to strive for such proficiency with the rifle as would enable them to meet an enemy on equal terms, at all times, and under all circumstances. They were told by the newspapers that his Celestial Majesty intended to invade the Colonies in three years' time. They were also reminded by what were called war scares, which did much good—only the term "scare" was inappropriate—that the Colonies might be also invaded at any time by even a more formidable foe. It was not likely that Corporal Ah Sin or Colonel Menchikoff would, when landing at Port Phillip, place himself on a little mound at 800 yards distance, and expose the regulation length of body, while Private John Brown assumed a prone or backward position, fired off a shot to warm his barrel, and threw up pieces of paper to ascertain the direction of the wind. To have a body of men who could do good shooting with twenty rounds of volley firing, twenty rounds at skirmishing, advancing, and retiring, thirty rounds at disappearing objects, and thirty rounds at unknown distances, would be more gratifying to a commander than to know that he had a Corporal Dick or Bombardier Harry who could make 98 out of a possible 100. He did not wish to cry down individual firing, but it was desirable that the men should get out of the recruit stage. There was not a single range that he had yet visited in the Colony on which unknown distance firing could not be practised.

Both Lord Wolseley and General Roberts have repeatedly solicited the English Rifle Associations to encourage service matches, and exclude unsoldierly conditions from their meetings, and yet the British Government give no monetary assistance to these bodies. It is recognised by every military authority all the world over that under modern conditions of warfare individual firing is of very small value against an enemy armed with the modern breechloader, and that independent firing by moving troops is positively dangerous. For this reason three-fourths of the number of rounds expended in the musketry training of our soldiers is devoted to controlled fire and field practice under service conditions. Let us see, then, in what way the Rifle Association keeps pace with modern ideas. At the late meeting sixteen matches were fired

fired under shooting-gallery conditions (*i.e.*, one round per minute time allowance, painted paper sights, Verniers, sighting shots, &c.), and all in the lying-down position. For these the prize money and medals amounted to £2,267. On the other hand, only four matches were arranged to be shot under service conditions, and the prizes for these totalled £286. Can such shooting ever be termed "sport"? Range shooting as a "sport" (compared, *i.e.*, with shooting game in the field) bears the same relation as bowls to cricket, and is best suited to elderly gentlemen who cannot take violent exercise. Are our riflemen never to get beyond the recruit stage? Can it be said that because we have a few crack shots who can hit a bull's-eye under conditions absolutely impossible in war, that the country receives anything like a fair return for its large expenditure of money at Rifle Meetings? It is pointed out by the Rifle Association that £1,560 was divided in prizes in the "A" series open to the Empire, and of this amount £1,440 was subscribed by the competitors themselves, with the result that the Association was only put to the cost of £85 in one particular series of matches. If these figures are correct, whence the necessity for a Government subsidy? Under the heading of cost, should there not be added the expenses of these matches, which have been met by Government grant? It would appear from the statistics quoted by the representative official of the Rifle Association that this body is really independent of Government aid, and that the subscriptions received from the crack shots who take part in their meetings are really in the nature of sweepstakes, to which the Government subsidy is added. This sort of "expensive pastime" is quite beyond the reach of the average soldier of the New South Wales Forces. If the Government are prepared to accept a satisfactory balance-sheet as indicative of good work done, then the Rifle Association is beyond comment. On the other hand, if the *raison d'être* of these Associations is as stated in their Rules, *viz.*, "To encourage the members of the Defence Forces of the Colony to become proficient in the use of the weapons with which they are armed," it can hardly be said that the result is satisfactory.

At the meeting held last October, fifty-one individuals secured £894 in prizes, of which thirteen members won £435. Perhaps the fifty-one gentlemen referred to are identical with those fifty fortunate match-shots whom the New South Wales Association anticipates have only repaid themselves for the money and loss of time involved in practising. I have noted that at a former meeting, out of £3,417 given away in prize money, £1,000, or nearly one-third of the total sum, was won by forty members, and over £400 by six members—that is to say, that half of the £2,000 granted by the Government that year went to forty men. Similar results will be found in any previous year. Are we to be satisfied that out of a force of 6,000 men we have about a dozen who can hit a bull's eye oftener than any other dozen in Australia? If this is "sport," I rather think that the proverbial Frenchman who goes out to shoot sparrows *a la chasse* is employed in a more sportsmanlike and useful, if less profitable, manner than the habitual range rifle-shot.

I find that the New South Wales Rifle Association set apart the sum of £850 to two competitions (for which they charge entrance fees)—*viz.*, the "Association Aggregate" and the "Queen's Champion Aggregate." As a matter of fact, not a single shot is fired in these two competitions; but the sum named is divided exclusively among those riflemen who have scored successfully in previous matches during the meeting. It is claimed by the Association that these aggregate prizes are intended to reach such steady shots as have not secured prize places in matches, but who have shot up to a good average standard. A little investigation, however, will show that this large sum of money is merely an additional inducement to our so-called crack shots. In the "Association Aggregate" this year only £11 out of £200 was awarded to men who had not already profited by previous prizes. The "Queen's Champion Aggregate," of £650, which is only open to the 150 highest scorers in previous matches, and in which those who have already profited in the "Association Aggregate" are allowed to participate, I notice that only £21 went to men who had not already gained considerable sums individually at this meeting.

It is claimed that certain matches, such as the Nursery and Tyro, are set aside for the encouragement of young shots. The magnanimity of the Association is displayed in this direction in the outlay of about £350 out of £2,565, which includes £125 in the "Richardson Aggregate," confined to the best of the so-called young shots. Whether it is really the inexperienced shot who receives encouragement may be judged from the following data:—The Paddington Match, which is open to the whole of the Defence Forces and civilian riflemen of the British Empire, was won with 42 points out of a possible 50, the lowest scorer obtaining 37 points. Compare these figures with those in the Sheridan Match, which is open to the young shots, and it is found that the top scorer there scored 42 out of a possible 50, and the lowest scorer got 37. If the Rifle Association is sincerely anxious to encourage young shots, why does it not, as suggested by Major-General French, handicap the crack shots, who are at present allowed to enter on equal terms with beginners? In what possible way can it be considered that this Colony is advantaged, for instance, by paying big prizes to such as the Officers Commanding the Victorian Artillery and a few others, principally civilians and non-combatants? It will be argued by the Association that although the other Colonies have taken away one-third of the prize money, they, nevertheless, have paid a large sum in entrance fees. I maintain, on the other hand, that the exclusion of our own men from the prize list must have a discouraging effect. It is argued that the service matches do not pay, and, therefore, by inference, do not deserve encouragement. The extent of the encouragement given to them appears from the following data:—It is open to any member of the Association who chooses to enter in the Individual shooting to obtain prize money to the amount of at least £100; whereas the best shot who fires under service conditions can at the most obtain £10 in the Rapid Firing Matches, or in the Battle Firing £4, and in the Duff £3. In 1894, twenty-six teams entered for the Battle Firing Matches, whereas this year only sixteen competed. For the Duff, in 1894, thirty-five teams entered to compete for a total of £24. For this match 140 men came to Sydney, paid forage for their own horses, and accepted risk to themselves and their mounts, in order to participate in the soldiers' event over jumps and at targets placed at unknown distances; but because the results brought no pecuniary advantage to the Association, the mounted men of the Colony were told this year that they could compete if they themselves paid the freight on their horses to and from Sydney, and three-fourths of each team subscribed £2 5s. as entrance fees to other matches competed for by the crack shots of the Colonies. The result was that, instead of thirty-five teams being entered, as was the case formerly, only five put in an appearance this year. Owing to a similar disability only fifteen men of the Mounted Rifles competed this year, as compared with 110 who were present in 1896. It has cost the officers of the New South Wales Mounted Rifles £100 annually towards accommodation and forage whilst their men attended this meeting in Sydney. I hardly think that this indicates "an utter want of interest taken by officers generally in rifle shooting," as stated by an official of the Association.

At a recent meeting, by dint of repeated request, the New South Wales Cavalry persuaded the Rifle Association to add a carbine match to encourage their men to become proficient in the weapon with which they are armed. This match was, however, thrown open by the Association to members of Civilian Rifle Reserves, who, by borrowing the necessary weapon, were enabled to compete in this event; and thus the professional shots again secured the prizes to the exclusion of those for whom they were rightfully intended.

Can the Association justify the result achieved in the Rifle Clubs' Match, for which £250 was devoted? This match is open to teams of five from any *bonâ fide* Rifle Club in the British Empire. The first prize was won by a club of "Queensland Rifles," who competed against the *bonâ fide* Rifle Clubs of this Colony. I understand that the "Queensland Rifles" consisted in men who came from different parts of Queensland, and who would, therefore, appear to have been formed into a club for the occasion.

In conclusion, let me urge those members of the Council of the New South Wales Rifle Association who are known to be opposed to the unsoldierly, ridiculous, and impossible conditions which have crept into match shooting to continue the fight for progress and utility to the bitter end. Though they are in the minority on the Council, they have the moral support not only of every true soldier in the Colony, but also of a very large proportion of the members of the Civilian Rifle Clubs; and I say this as one who has had a more than ordinary opportunity of discussing the subject with riflemen in most parts of the Colony.

Small blame to any man who has the inclination and time to devote to the necessary practice if he elects to attend every Rifle Meeting that is held, and go home with his pockets full of money again and again; but the ruling majority of the Council of the New South Wales Rifle Association are very wide of the mark if they imagine that those who collar the prizes from year to year believe for a moment in one-round-per-minute shooting as a means of training for war. It is only a question of time when the Government of the day will come to realise the true state of affairs, and refuse to encourage, by an annual distribution of large sums of the people's money, what is acknowledged to be an "expensive pastime."

Thank God, their military adviser, General French, has put the matter before them quite plainly, and without reserve.

Yours, &c.,

SMALL-BORE.

The Principal Under-Secretary to R. A. Price, Esq., M.P.

Sir,

In reply to your note of the 7th instant, I am directed by the Chief Secretary to refer you to certain replies given to questions asked in the Assembly, which will perhaps afford you the information you desire.

Chief Secretary's Office, Sydney, 10 December, 1897.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Question.

LEGISLATIVE ASSEMBLY, 9 DECEMBER, 1897.

(11.) Grants to the New South Wales Rifle Association:—*Mr. Carroll*, for *Mr. Price*, asked the Colonial Secretary,—

(1.) What amounts have been granted to the New South Wales Rifle Association during the years 1895-6, 1896-7; and also the amount proposed for 1897-8; and for what purpose have such amounts been granted?

(2.) Is it the intention of the Government, when issuing such grants, that the amounts shall be applied to the encouragement of rifle shooting, with a view to developing the marksmanship of civilians and members of the Defence Forces under what is known as "active service conditions" (or such conditions as would exist during actual service), or are such amounts given for the purpose of advancing club shooting under conditions which would be inapplicable in modern warfare, viz., the use of wind-gauges, Verniers, coloured lines, &c.?

(3.) Has his attention been directed to the extracts from the report and speeches of Colonel Brown; Sir James de Hoghton, D.A.A.G., School of Musketry, Hythe; General Sir Gerald Graham, V.C.; Colonel Brownrigg, Lord Wolseley, General Roberts, and others, forwarded to his office by *Mr. Price*, on the 7th instant; if so, will he be good enough to have a report prepared upon the subject during the recess, and published in the newspapers for public information prior to the meeting of Parliament in March next?

(4.) Is it a fact that out of the sum of £3,417 given as prize money, nearly one-third of the amount was won by forty persons under such conditions as would be practically useless in active service?

(5.) What is the reason that the amounts allotted for "battle firing" and "shooting under conditions of active service," such as "judging distances," "disappearing targets," "volley firing," &c., are so disproportionate when compared with the prizes given for individual shooting under club rules?

(6.) Will he be good enough to cause an inquiry to be instituted into this matter also, with a view to developing the "fire discipline" and "fire efficiency" of our Defence Forces?

(7.) Is he aware that the individual expenses incurred by country corps and mounted troops, desirous of competing at the Rifle Association Meeting, debars a large number from entering the military competitions?

(8.) Will he take steps to inquire into the advisability of making provision for the issue of free passes by rail for the infantry and mounted troops desirous of participating in such Rifle Meetings?

(9.) In view of the importance of the subject, will he be good enough to cause a full inquiry to be made into the various matters, with a view to encouraging our Defence Force to become more efficient in rifle-shooting under such conditions as would apply in active service?

Mr. Brunker answered,—

(1.) £1,000 in each year for prizes.

(2.) The amount granted was for prizes, no condition being attached.

(3.) Yes; and the matter will receive consideration.

(4.)

- (4.) No.
- (5.) Because the amount received for entrance fees does not cover the expense of conducting these matches; whereas in the matches for individual shooting the entrance fees and revenue from "sighters" pay the cost of conducting the matches and more than 80 per cent. of the prizes.
- (6.) This is very desirable, and will be carried out at an early date.
- (7.) I am not aware, but probably it is so.
- (8.) This has been dealt with as regards the present year, and the necessary free passes were granted.
- (9.) The matter will receive attention.

The Major-General Commanding the Military Forces.—C.W., P.U.S., B.C., 10/12/97. The A.A.G.—Major Bayly and Major Boam to be a Committee to go thoroughly into these matters, and prepare a report for my consideration.—G.A.F., 14/2/98.

REPORT of a Committee, appointed by the General Officer Commanding the Military Forces of New South Wales, to report upon the subject of "Rifle-shooting under Active Service Conditions," in connection with a Question asked in Parliament by Mr. Price, M.P., on the 9th December, 1897.

THE Committee, having carefully considered the subject, submit the following Report for the consideration of the General Officer Commanding.—

I.—GOVERNMENT GRANTS FOR RIFLE-SHOOTING.

We find that the Government grants for the encouragement of rifle-shooting in New South Wales, outside the ammunition supplied for annual musketry courses, are as follows:—

- (1.) Free ammunition to "efficient" of the Defence Forces for practice purposes, not exceeding 50 rounds per efficient soldier annually.
- (2.) Free grants of ammunition to reservists, not exceeding 150 rounds per efficient reservist, and a bonus of 200 rounds to each during his first year of service.
- (3.) Monetary grants annually to the National Rifle Association, and the Northern, Western, and Southern Rifle Associations, of £1,750, railway passes to the value of £675, and free ammunition costing £882.

These Associations are further assisted by the free use of Government ranges and equipment (where available), as well as the services of any supervising staff they may require.

II.—MODERN FIRE-DISCIPLINE.

The experience of modern warfare shows that when troops become engaged the result of the combat almost entirely depends upon the better "fire-discipline" maintained on either side.

"Of all the incidents of a modern fight, that of which it is the hardest to give any conception to anyone who has not seen infantry possessed of the enormous facilities for firing which are supplied by modern arms, is the intense absorption, in the mere fact of firing, which, almost like a catalepsy, takes possession of the man who is using his weapon against an enemy, or, as may often happen in close country, against nothing at all. We want to educate men so that they do not fire under the conditions of catalepsy. Experience has shown that this can only be done by having men, who are not themselves firing, trained to look after those who are firing, so that the fire may be regulated. The men themselves must be trained only to fire under orders, and never under the influence of a tendency to relieve their feelings. We cannot put better what is involved in these necessities than in the words of Colonel J. H. A. Macdonald of the Queen's Edinburgh Rifle Volunteer Brigade (now Lord Kingsburgh). How is this to be done? How, but by so regularly, consistently, and persistently putting the soldier through the action of firing by orders, that it shall be a second nature to fire only under control of his superior, and not otherwise. What is wanted is the conviction in the mind of every instructor, from the highest to the lowest, that his men should never leave a parade without having gained something in fire discipline—that is, that fire control drill be one of the main points in view as a necessary part of the work to be performed on every occasion when men are being drilled; exercised, or inspected, from the moment that they know the rifle exercises until the day when they leave the Service. Let some of the time which formerly was spent in a perpetual form drill to produce a military machine, that had a steadiness in formation which nothing could shake, be now spent in producing, by a perpetual control drill, a fire organism which shall have a steadiness in the use of fire which nothing can shake. The troops that shall be found most in the hands of the commander in the matter of fire will, *ceteris paribus*, be invincible."—(From the article "War" in the *Encyclopedia Britannica*, by General Maurice, late Professor of Military Art and History, Royal Staff College.)

It has been found in every war since 1870 that the natural tendency of the troops engaged is to expend vast quantities of ammunition in wild *uncontrolled fire*, and that this kind of fire, when once begun, is most difficult, if not impossible, to check, produces a minimum effect, is demoralising to troops using it, and encouraging to the enemy.

In order to subdue this state of indiscipline, every endeavour is now made, by peace organisation and training, to accustom men to fire by word of command, until by constant habit it becomes a second nature. It is further recognised that control is more difficult, and is yet more important, when troops come into closer contact; hence fire-groups of fifteen to twenty men have been organised, this being the largest number that can be directly kept in hand by one commander during the later and decisive period of the fight. On these principles the independent fire of individuals is not only discouraged but prohibited, and is only practised in peace training in order that, when it is no longer possible to prevent it, it may be regulated to a certain extent. (In *Appendix A* the comparison between the effect of controlled and uncontrolled fire is more fully explained.)

III.—MUSKETRY PROGRESS IN RECENT YEARS.

It should be borne in mind that, when Rifle Associations were first formed, musketry training was not only generally regarded as quite distinct from drill, but even as a troublesome adjunct to a soldier's routine work, and it was almost entirely left to these Associations to endeavour to popularise rifle-shooting.

"The whole of our old system of musketry (1877) was based on the assumption that every man with good eyesight could be made a good shot, and the individual fire of a single man was accordingly raised to the highest place. The falseness of this hypothesis was amply proved in our late campaigns, where our shooting is reported to have been as bad as it could possibly be." (This was written in 1888.) "The fact of the matter is that only *very few men are individually good shots*, especially when under fire, and those that are such have *their skill nullified* in the field by the excitement of the fight and by *not knowing the ranges exactly*, the almost *all-important point* for accurate shooting." (*Mayne's Infantry Fire Tactics*.)

Considerable progress has been made during recent years in musketry instruction in the British Army, and, following continental precedent, the various courses for the recruit and trained soldier have been amended, in order to bring the shooting as nearly as possible up to modern conditions of warfare. Thus, whereas in former days individual fire was considered all that was necessary for a soldier to learn, it is now recognised that this portion of his training can only be regarded as preliminary to his further instruction in controlled fire and shooting under varying and difficult conditions.

We have to consider, therefore, whether the assistance given by the Government in the present day towards the encouragement of rifle-shooting is expended in conformity with these modern principles.

Up to 1887 the Imperial musketry course consisted almost entirely in individual deliberate shooting, and this was the class of shooting carried out by the National and other Rifle Associations.

The musketry training which came into force in 1892 introduced essential changes. The recruit was allowed to fire only 84 out of 200 rounds in individual deliberate shooting, and the trained soldier only 45 out of 200.

A still greater proportion of the rounds fired by the Imperial soldier is now devoted to controlled fire and rapid shooting, and it is yet in contemplation by the Imperial authorities that this proportion shall be further increased.

Following the Imperial Regulations, the military authorities of New South Wales have directed that only 49 rounds out of 151 are to be expended in deliberate uncontrolled fire—*i.e.*, to teach the soldier to readily adopt the various military positions in firing, standing, kneeling, and lying down, and to give him, by aiming deliberately at a fixed target, sufficient confidence in the accuracy of his rifle. The whole of the remaining rounds are now expended in instruction in rapid, controlled, and collective firing—that is, under conditions resembling those to which a rifleman would be subject in the face of an enemy.

There being no prizes in connection with the annual musketry courses, as obtains in the Imperial Service, it naturally follows that the nature of the shooting conducted by Company, Regimental, and Civilian Rifle Clubs is confined almost wholly to the one class of match which is encouraged by the various Rifle Associations. It is to be regretted that these bodies, who it will be seen (para. 1) monopolise Government aid, not only in respect to cash subsidies, but also in the matter of free railway passes, and who, being thus favoured, are also endowed with the greatest responsibility—should virtually be quite beyond any control by the Military Department.

IV.—RIFLE MEETINGS OF TO-DAY.

Until the year 1887 the deliberate individual firing carried out at the meetings of the several Rifle Associations could hardly be considered other than in conformity with the authorised musketry course then laid down by Regulations. On the other hand, it must be recognised that, in continuing to devote nearly the whole of their meetings to very deliberate individual fire, these bodies are not now at all in touch with the later principles, which regulate the peace training of a soldier in the use of his rifle for war purposes.

In order that this distinction may be clear, it is necessary to point out in what essential ways the matches now conducted at Rifle Meetings are not of the character required by a soldier in peace training.

(1.) *Slow Aiming.*

Excepting the five so-called service matches, the whole of the ammunition expended is in slow shooting—*i.e.*, within their time limit of one round per minute, *vide* General Regulations of the National Rifle Association, 13 (e).

Until a soldier understands the elementary principles of shooting, it is necessary that he should have *ample time*, not only to aim, but to fire. This, however, is a matter for *recruit instruction*.

On the other hand, as soon as his preparatory training is complete, and he becomes a portion of a fire-unit—*i.e.*, a number of men firing by one man's word of command—the soldier's individuality must give place to disciplinary action, his will being entirely subordinated to that of his commander; otherwise he becomes not only useless, but an encumbrance and a source of danger to his comrades.

A soldier, therefore, who habitually takes very deliberate aim, is quite unable to comply with service conditions which require instant obedience and immediate action. It is very seldom, indeed, that a man who is successful as a deliberate firer shows to advantage in rapid shooting.

"I am certain that in practice the well-trained man, the ordinary shot of the battalion, is, in action, every bit as useful and good as is the marksman. I have tried it practically. I have taken sections of marksmen and tried them against sections of ordinary shots in the field under service conditions. The difference is nothing."—(Sir J. De Hoghton, Bart., late D.A.A.G. at the School of Musketry, Hythe.)

In fact, the slow aimer refuses almost invariably to compete in rapid-firing matches, because he knows that constant practice in the former not only avails him nothing in the latter, but even unfits him for the change.

However

However pleasing it may be to the old and conservative rifle-shot to take his own time in aiming and pressing the trigger, his peaceful effort cannot, by any stretch of imagination, be taken to represent a rifleman's duty when faced by an impatient foe. This manner of shooting is, of course, not practicable in war. At the last meeting of the National Rifle Association, in the Rapid-firing Match, about two-thirds of the prize money went to men who had been altogether unsuccessful in the deliberate competitions, although opposed by many of the so-called "crack shots" of *six colonies*.

Out of 124 rounds fired in individual competitions, 112 rounds were fired in slow shooting, and twelve rounds in rapid.

Out of £2,015 5s. allotted for prizes in individual competitions, £1,937 5s. were for slow shooting, and £78 for rapid.

This unsoldierly condition of shooting which prevails at Association meetings, viz., slow aiming (that is, an allowance of one minute for each round fired), has further reduced the nature of shooting to a gallery science, in which artificial aids have been introduced in order to make the result of each shot more profitable to the firer. The slow aim and artificial aids are equally impossible from a military point of view.

(2) Artificial Aids.

A permanent rest for his rifle not being allowed, the match rifleman adopts every other contrivance that will assist him, regardless of its applicability, not only in war, but even in shooting game.

Thus, not satisfied with the weapon issued to him, notwithstanding that it has passed the most severe tests and been adopted by experts as best fulfilling a soldier's requirements, the match rifleman is invariably accompanied by the following elaborate paraphernalia:—A cedar box or leather case containing cartridge-racks, grease-pot to oil his cartridges, black and white paints with camel-hair brushes to nullify the effect of the varying natural conditions of light and atmosphere upon his sights; chalk pencils by which, with the aid of a mathematical instrument, known as a *ventometer*, he marks a new sight upon his rifle, gauged to one-hundredth part of an inch as an allowance for the strength of the breeze; a *Vernier* similarly accurately gauged to give the elevation to a minute fraction; a *blow-tube*, with which he moistens his barrel after each shot; an *orthoptic*, or specially-constructed metal screen, to concentrate his vision on the target; coloured glasses to protect his eyes from the strain of ordinary daylight; and a *temporary rest* to support his elaborately garnished weapon between rounds, and to prevent it from undue contact, which, by accident or otherwise, would derange its minute appointments, and result in the discomfiture of the "crack shot."

With all these aids, the match rifleman, under Regulations laid down by his own representatives on the Rifle Association's Councils, objects to shoot in any but the "prone" or lying-down position at all ranges, notwithstanding that the Musketry Regulations forbid this position, except at ranges over 500 yards. He, as a matter of course, vilifies any unfortunate comrade whose passing shadow may derange his equanimity, and a range official further protects his nerves from desultory conversation in his vicinity.

Is it likely that a soldier, imbued with a knowledge of what will be required of him on service, will consent to have recourse to these utterly impossible conditions and adjuncts, except with a view to monetary advantage?

Can such pastime, which is unworthy of the name of sport, appeal to the soldier as either worthy of his time and attention, or calculated to improve him as a part of a military machine? The kangaroo-shooter is infinitely more entitled to Government aid.

Constantly firing with a slow aim, and relying upon artificial aids, renders a soldier unfit to cope with the varying conditions which he must meet with on service, and to which he should endeavour to be accustomed by peace practices.

V.—SERVICE MATCHES.

In the Annual Meetings of the various Rifle Associations of New South Wales we notice that service matches are in a very undue minority.

They are even acknowledged by the governing bodies as undesirable, because, to them, unprofitable items. Thus, at the last meeting of the National Rifle Association in 1897, out of a total of twenty-seven competitions, only five (viz., the Regimental Bugle, Battle-firing, "Duff" Rapid-firing, and Running-man events) could be considered as approaching service conditions, and three of these were service matches rather in name than reality, inasmuch as they were conducted under conditions and with accessories impossible to a soldier in war.

In the Regimental Bugle Match a bull's eye target was employed instead of a figure; slow aiming and artificial aids to the rifle were permitted.

In the Rapid-firing Match a bull's eye target was employed, and artificial aids were permitted.

In the Running-man Match artificial aids were also permitted. Even the remaining two events, under so-called service conditions, viz., the "Duff" and Battle-firing Matches, were not under service conditions in many respects. The ranges were known in the latter, and it was conducted with a deliberation, 45 seconds for two volleys, which would have been suicidal to men under fire; the targets in both cases were stationary; fire concentration, casualties, and delegation of command were not practised; and in the "Duff" the target (6 feet x 6 feet, bull's eye, &c.) was arranged as for slow individual fire, and could not be conceived to represent any enemy, either in size or position.

Out of a total of at least £2,483, distributed in prizes (excluding Continuous Matches) at the 1897 meeting of the National Rifle Association, the Council saw fit to devote only £286 to the matches approaching service conditions.

Thus, the kind of shooting that should have formed the main portion of the meeting was valued at only one-ninth ($\frac{1}{9}$) of the whole.

It will further be noted that in the matches arranged by the Council of the National Rifle Association, there is an abnormal disproportion between the amounts which it is open to an *individual* to win as first prize in the individual slow-shooting contests, as compared with those under so-called service conditions.

The total amount devoted to each of these events is also worthy of comparison :—

Slow Individual Matches.	First Prize.	Total Prizes.	So-called Service Matches.	First Prize.	Total Prizes.
<i>A Series.</i>					
Randwick	£ 6	£ 70	Regimental Bugle, Teams	£ 2/10/-	£ 90
Paddington	7	85	Battle-firing, Teams	3/10/-	96
Sydney	8	100	“ Duff ” Teams.....	2	20
Association, Aggregate	15	200	Rapid-firing	8	78
Members.....	10	100	Running-man, Continuous.....	1	50 per cent. of entrance fees.
Jaques.....	10	110			
Manning.....	10	115			
Dangar	25	130			
Queen's, Aggregate	50	650			
<i>B Series.</i>					
Nursery	5	50			
Sheidan.....	6	60			
Lewington	7	70			
Richardson, Aggregate	10	125/5/-			
Tyro	5	40			
Rifle Clubs.....	8	250			
Parliamentary	3	7			
Affiliated Clubs.....	5	25			
Continuous.....	1	50 per cent. of entrance fees.			

Thus one individual can in the individual slow-shooting matches win a total sum of £187 (exclusive of Continuous Matches), or if ineligible, by former success, for the B series, a total of £152; whereas in the service matches the highest possible total is £16 (inclusive of Continuous), the proportion being again as 9 to 1.

Quoting from the results of the Annual Meetings of the National Rifle Association, we find that, in—

1896	£	1897	£
24 of the competitors won...	693	19 of the competitors won...	537
1st man won	119	1st man won	72
2nd man won	81	2nd man won	51
3rd man won	51	3rd man won	42

It will be found that certain individuals continue to win large sums from year to year—*e.g.*, Lieutenant * * * at the annual meetings of the National Rifle Association in 1895-96-97, and exclusive of prizes won by him at Association meetings in the country districts and other Colonies, won £49, £81, and £51, a total of £181, averaging £60 a year.

The following may be taken as instances of the large amounts that have been won since 1891, by individuals at single meetings of this Association :—£143, £119, and £100.

The whole of the above figures exclude prizes in the Continuous and some of the Teams Matches.

Is it intended that the Government should continue to subsidise individuals, who have apparently long since acquired all that can be learnt about this kind of shooting?

It has often been stated by members of the Council of the National Rifle Association, as a reason why they devote so small a portion of their meetings to service matches, that, as compared with other events, the receipts for entrance fees in the former do not realise so large a proportion of the prize money. This may be so; but can a large number of entries be expected for a series of matches, the prize money of which is so out of proportion to that given for shooting under the slow-aiming and unsoldierly regulations of the National Rifle Association, especially when the style of shooting is so absolutely different as almost to debar a good “service” shot from any chance of winning distinction in these gallery practices?

It is worthy of note that the soldier is further impeded in his effort to win the small prizes offered for service matches, by the refusal of the National Rifle Association to issue him a railway pass until he has expended a sum of at least 15s. in entrance fees for the individual slow-shooting matches, in which, as already pointed out, he can hope to meet with small, if any, success.

This disability is so pronounced as almost to be prohibitive in the case of the country units of the mounted troops. Thus, a team of four men, belonging to the Cavalry, who desire to enter for the “Duff” competition, which is the only match in which their own firearm (the carbine) is used, are either refused railway passes, or compelled, in order to obtain them, to enter three men for *at least* the series of matches included in the “Richardson Aggregate.” This means that, in addition to the entrance fee of 10s. for the “Duff,” a further sum of at least £2 5s. must be paid, attendance and shooting for an extra day and half is rendered compulsory, and the Cavalry soldier is expected to compete under disadvantageous conditions with men armed with rifles, and aided by the many contrivances so repugnant to a service shot.

Under the same rules, a team of infantry desiring to shoot in their special event, the Battle-firing Match, must pay, in addition to the entrance fee of £1, a similar additional sum of at least £5 5s., or pay their own railway fares.

At the last meeting of the National Rifle Association, twenty-seven men of two country companies of the Second Infantry Regiment were refused railway passes in this way, and obliged to pay their own fares to and from Sydney. How many others were debarred from attending for the same reason?

Would not the expenditure in bringing a professional shot from the Victorian Border to Sydney be laid out to more advantage by the issue of railway passes to a number of our own men, resident within the Colony?

It militates greatly, moreover, against the number of entries in service matches, that general attention is concentrated upon the results of the other matches by means of “aggregate” prizes, and that service

service matches are set down for a time when the other matches are in progress, with the result that, as men have to fire in the latter or stand out of the aggregates, they are naturally led to pass by the service matches, which have thus been rendered a sort of side-show.

It is not always impossible, certainly, for men to shoot in both classes of match; but the conditions are so inconvenient as to prejudice a man's chances in both, and cause him to declare, as has often been heard lately, that he would avoid any service matches in future.

VI.—AGGREGATES.

The Committee are of opinion that the so-called competitions which appear under the name of "aggregates" are undesirable and quite unworthy of Government support. Generally, their views are expressed in the following quotation from a letter by "Small-Bore," published in the *Sydney Daily Telegraph* of the 2nd December, 1897:—

"I find that the New South Wales Rifle Association set apart the sum of £850 to two competitions (for which they charge entrance fees), viz., the 'Association Aggregate' and the 'Queen's Champion Aggregate.' As a matter of fact, not a single shot is fired in these two competitions, but the sum named is divided exclusively among those riflemen who have scored successfully in previous matches during the meeting. It is claimed by the Association that these aggregate prizes are intended to reach such steady shots as have not secured prize places in matches, but who have shot up to a good average standard. A little investigation, however, will show that this large sum of money is merely an additional inducement to our so-called crack shots. In the Association Aggregate this year only £11 out of £200 was awarded to men who had not already profited by previous prizes. The Queen's Champion Aggregate of £650, which is only open to the 150 highest scorers in previous matches, and in which those who have already profited in the Association Aggregate are allowed to participate, I notice that only £21 went to men who had not already gained considerable sums individually at the meeting."

The system thus alluded to of giving additional bonuses to individuals who have, in the opinion of the Committee, already won enough money in the single matches, appears to be quite unwarranted, and even without reason, unless it is assumed that the Council of the National Rifle Association find the Government subsidy (together with entrance fees, &c.,) amounts to a much larger sum than they require as prize money for the number of matches they can get through in a week. Even if this is so, is the National Rifle Association justified in distributing any surplus money among the so-called crack shots, when this amount could be well devoted, even under their own system, to reducing entrance fees or multiplying the small prizes? *The inducement to the so-called crack shots to attend would be less, but their presence does not appear to the Committee to be any importance from a national point of view.*

VII.—ADMISSION OF RIFLEMEN FROM OTHER COLONIES AT THE MEETINGS OF THE RIFLE ASSOCIATIONS OF NEW SOUTH WALES.

The inducement to riflemen of other Colonies to compete against those in New South Wales is no encouragement to the young shots of those Colonies, and, on the other hand (on account of the expense involved in attendance), serves merely as an annual attraction to the ubiquitous and professional pot-hunter. The Committee are furthermore of opinion that outside competition of this nature eventuates only in the discouragement of our own inexperienced men, and is of no profit to the Colony. Out of about £2,483 paid in prize money at the last annual meeting of the National Rifle Association, at least £654 was won by riflemen from other Colonies—*i.e.*, considerably more than one-fourth ($\frac{1}{4}$) of the total, and one-third of the amount in prize money offered for those competitions which were open to them.

VIII.—HANDICAPS.

From the point of view that the Government grants in money, &c., to Rifle Associations are with the object of some return being given, in the improvement of rifle-shooting *generally* throughout the Colony, rather than, as in sporting competitions, when, for spectacular purposes, it pays to offer large sums to induce champions to give an exhibition of their prowess, it appears to the Committee that every reasonable encouragement should be afforded to the largest number—first, in order that beginners may be induced to enter, and second, that the medium men may have opportunity to improve. With a view to popularity, and to attract large numbers, the medium and young shots must be given an equal chance with those who have had greater experience.

This can only be done, in individual matches, by a judicious system of handicapping competitors by their previous performances.

IX.—THE "RESPONSIBILITY" OF THE NATIONAL AND OTHER RIFLE ASSOCIATIONS.

As already explained, it is absolutely necessary that radical changes be made before match-shooting can be considered to be of any military value. The Committee can conceive no justification for the large annual expenditure (£3,307), which now keeps in existence the various Rifle Associations of the Colony, unless these bodies are prepared to recognise the grave responsibility devolving upon them as national institutions.

They must, moreover, be prepared and able, by an entire reformation of their present system, to elevate what they themselves regard as a "pastime" to the status of a valuable adjunct to the peace training of our soldiers.

The Committee regret that they cannot hope to see the needed reforms carried out by the existing Councils of the Rifle Associations of New South Wales.

This opinion is based upon the present constitution of these governing bodies, their responsibility in reality to the voters who have elected them, and their actual personnel. The last point, although but the natural result of the two former, is of such importance as to call for special analysis.

The Council of the National Rifle Association at present consists of 20 members, of whom—1 is an active member of the N.S.W. Mounted Rifles, 3 are active members of the N.S.W. Infantry, 5 are active members of the N.S.W. Naval Forces, 8 are civilians or members of Civilian Rifle Clubs, and 3 are retired officers of the N.S.W. Military Forces.

Thus it will be seen at a glance that those branches of the land forces (Cavalry, Mounted Rifles, and Infantry) which are pre-eminently expected to be expert with the rifle or carbine, and who, numbering 6,000, form two-thirds of the whole Defence Force, are represented on the Council by only four out of twenty members.

Again, the Naval Forces, numbering under *six hundred*, are represented by five members, as compared with four from the *six thousand* (6,000) before mentioned.

It is most inadvisable, too, that an Association formed "for the encouragement of rifle shooting in the *Defence Forces* of the Colony," *eight* out of the *twenty* members (nearly half the Council) should be civilians.

The three retired officers can scarcely be taken to represent any section of the present Defence Force; and, however enthusiastic they may be individually, it is a question whether officers who have ceased to be active members of the Force for several years, and are inexperienced in the progress of later reorganisation, can be expected to be in touch with the present requirements of military training.

It is not, under such circumstances, difficult to understand the repudiation by this body of their responsibility for the soldier's training in shooting.

The Committee are of opinion that, in the best interests of the Colony, and to ensure a proper return to the Government for the public money devoted to rifle shooting, one-half of the members of the Council should, to ensure expert knowledge and experience, be appointed by the General Officer Commanding the Military Forces of New South Wales, the remainder to be elected by the members of the Association as heretofore.

Under any circumstances, the Committee consider that a portion (say £500) of the aid at present granted to rifle shooting should be devoted to a rifle meeting of an entirely service character.

X.—SUMMARY.

It appears to the Committee that the prejudicial conditions which obtain in the present system of match-shooting may be summarised as follows:—

- (1.) Irresponsibility of Rifle Associations to the Military Authorities.
- (2.) Defective constitution of the Councils of these Associations.
- (3.) Absence of any control over the expenditure of Government aid to Rifle Associations.
- (4.) Failure of Rifle Associations to keep pace with the progress of military training.
- (5.) Almost entire neglect of controlled and collective fire.
- (6.) A general absence of a proper attempt to shoot under service conditions.
- (7.) The almost universal adoption of a most pernicious system of slow aiming.
- (8.) Habitual reliance upon ridiculous and unserviceable adjuncts to the rifle.
- (9.) The disproportionate appropriation of prize money to matches for professional shots, as compared with those for beginners, and also those under service conditions.
- (10.) Unsatisfactory method of distributing railway passes.
- (11.) The encouragement of professional shots from other Colonies to the discouragement of our own beginners.
- (12.) Denial by Rifle Associations of any encouragement to young shots by a judicious system of handicapping.

XI.—PRIZES FOR MUSKETRY.

In the Imperial Service, regiments are granted 2s. 6d. for each soldier who fires through his musketry, and 1s. for each recruit so exercised. The total sum thus obtained is distributed throughout the regiment in prizes for the encouragement of shooting generally as the Commanding Officer thinks best; but it is directed that *at least one-half* of the total is to be devoted to the encouragement of shooting in *sectional practices*—that is, controlled fire and other means of improving fire-discipline. Even the balance must not be wholly devoted to individual shooting, but is also to include rapid individual fire and moving target practice.

The Committee are strongly of opinion that if such grants were made in New South Wales the annual musketry course would be popularised, and an interesting means of further instruction and competition provided. If a portion of the sums annually granted to Rifle Associations were devoted to this purpose, it is considered that, from a military point of view, the result would be out of all proportion greater than that now secured.

XII.—SUGGESTED MILITARY RIFLE MEETING.

As an immediate step towards the encouragement of useful rifle shooting, the Committee suggest that a rifle meeting should be held of an entirely military character, and arranged by the Military Authorities.

With a view to avoiding additional railway expenses, this meeting should take place immediately after the encampment at Easter; and, to obviate unnecessary transport and loss of time, somewhere in the vicinity of the selected camping ground—by preference on a Government site. The Committee do not anticipate any difficulty in securing ground suitable for such purpose.

While the date suggested is probably well suited to country troops, it may be that some of those employed in the metropolis will have some difficulty in prolonging their absence from work.

This could be met, if found advisable, by holding a meeting on subsequent and more convenient dates specially for metropolitan men. The expenses of the latter meeting, at which tentage, rations, and forage would not be required, would be so small as probably to render it self-supporting.

A fatigue party of sufficient strength would be required, which might be furnished by the New South Wales Artillery, to carry out preliminary arrangements (fix targets, tentage, &c.), as also during the meeting to find the necessary picquets and fatigues.

The

The arrangements which obtain at Shoeburyness Rifle Meetings might be taken as a guide in these details.

Discipline should be maintained under regimental and corps administration.

The additional cost of rations and forage would be inconsiderable.

It is believed that the programme submitted could be carried out in two days, and that a variety of interesting and instructive competitions, of a tournament character, could be included for the benefit of men when not actually engaged in shooting.

PROGRAMME SUGGESTED.

No.	Name of Match.	Nature of Fire.	No. of Rounds	Distance in Yards.	Time.	Position.	Nature of Target
1	Beginners ..	Individual deliberate	10	400 and 500	1 minute per round.	Lying down	Second-class Musketry target, 6 ft. x 6 ft. bull's eye, &c.
2	Do ... do	do do (carbine)	10	400 and 500	do do ..	do	do do
3	French	Individual deliberate.....	6	800	2 minutes...	do	Three standing men.
4	Do ... do	do do (carbine)	6	600	do	do	do do
5	Roberts ...	Individual rapid	7	500	70 seconds..	Kneeling ..	Three kneeling men.
6	Do ... do	do do (carbine)	7	500	do	Sitting	do do
7	Scouts	Individual	5	Unknown, 800 to 500	4 minutes...	Any military	Kneeling and lying men.
8	Darghai ...	Section deliberate volleys...	6	Unknown, 800 to 600	2 minutes	Lying down	Three standing men.
9	Ulundi	do rapid volleys	7	Unknown, 700 to 400	70 seconds..	Any military	A company in column.
10	Coomassie ...	do attack.....	15	Unknown, 700 to 250	As laid down	Kneeling men disappearing.
11	Duff	do attack mounted ...	15	Unknown, 600 to 200	do	Three kneeling men.
12	Malakand ..	Company attack..	15	Unknown, 800 to 300	do	Disappearing targets.
13	Hutton	Controlled fire mounted ...	15	Unknown, 600 to 200	do	Three kneeling men.
14	Luck	Mounted pistol practice ..	6	25	At gallop	Onestanding man (vitals to count 2, rest 1 point).
15	Burnaby ..	Dismounted pistol practice	12	25	Standing ..	do

Details of Matches.

No. 1. *Beginners*.—Open to members of the Defence Forces who have not fired through Table B in musketry, or who are 3rd-class shots. To be fired under musketry conditions, 5 rounds each at 400 and 500 yards. Target and scoring as in musketry.

No. 2. Same name and conditions as No. 1, but for carbine only.

No. 3. *French*.—This match represents the fire of selected shots on outpost duty, firing at an enemy's patrol, the approximate range having been obtained by the range-finder. Six shots will be fired at about 800 yards, in 2 minutes, at a target representing 3 standing men, from a lying down position. Other conditions as in musketry.

No. 4. Same name and conditions as No. 3, but for carbine only, and at 600 yards.

No. 5. *Roberts*.—This match will instruct a soldier to load rapidly and fire as he would have to do against an enemy at decisive ranges. Seven rounds will be fired in 70 seconds, kneeling, at about 500 yards, the target representing 3 kneeling men.

No. 6. Same name and conditions as No. 5, but for carbine only, and in a sitting position.

No. 7. *Scouts*.—This match displays the fire of men selected for scouting duty, on account of their aptitude as field shots and in estimating ranges. Five shots will be fired at selected points, the ranges being unknown and between 800 and 500 yards, in 4 minutes, and from any military position and at targets representing kneeling and lying men. Other conditions as in musketry.

No. 8. *Darghai*.—This consists of section deliberate volleys, such as would be employed for the covering fire of Infantry against an enemy in position, at an unknown range. Six volleys will be fired as in musketry, at unknown ranges between 800 and 600 yards, in 2 minutes, at 3 standing men.

No. 9. *Ulundi*.—Section rapid volleys. These would be employed at any time against an unusually exposed enemy, if within reasonable range. Seven volleys will be fired in 70 seconds at unknown distances between 700 and 400 yards, position as laid down for the distance. The target will be standing men arranged as a Company of Infantry in column.

No. 10. *Coomassie*.—Section attack—representing the advance of assaulting Infantry within decisive ranges. To be carried out as in musketry; distances unknown and between 700 and 250 yards; targets, kneeling men disappearing, and with 15 rounds per man; teams of 8 men and a commander. There is no time limit, but a certain number of points will be deducted from the score for each appearance of the target.

No. 11. *Duff*.—In accordance with musketry instruction for Martini-Henry rifle, 1894, section 138. Conditions as at National Rifle Association Meeting, but 50 points for time, and kneeling men targets.

No. 12. *Malakand*.—Similar to section attack, except that the Company commences the advance beyond decisive ranges, and it is therefore left to the Company Commander to determine when he is justified in opening fire. Ten rounds to be carried by the men, and five per man by ammunition carriers, who will not start before the first line reach 600 yards range; nature of fire to be at discretion of the commander. Four sections will be in the firing line throughout. Otherwise as for No. 10. Points will be deducted for unnecessary exposure of individuals or part of the command. (It is hoped in future years to include supports, casualties, &c.)

No. 14. *Luck*.—Mounted pistol practice. Three targets, standing men: three shots to be fired to the right advancing and three to the left returning at these; distance 25 yards.

No. 15. *Burnaby*.—Dismounted pistol practice. To run 100 yards, and load and fire 6 rounds with each hand as in musketry instructions.

APPENDIX A.

ACCORDING to Captain Mayne (Infantry Fire Tactics), "there are two methods of allowing men to fire:—

1. *Uncontrolled or independent fire*, in which each man fires at his own convenience and judgment as to *range and objective*.
2. *Controlled or collective fire*, in which the independency of the fire of the individual man is *controlled and directed* according to the will of their commander.

Controlled fire can only be executed when the men are collected into organised tactical groups. . . . as "units of fire," because under an enemy's fire one leader alone cannot control a large number of individual men, although he can a smaller number of organised groups, each under a recognised subordinate leader.

Uncontrolled individual fire is naturally independent fire, and anything *independent* should be avoided in war as much as possible. Practically, it has been found that uncontrolled fire is very pernicious, is conducive to great waste of ammunition, and, what is far worse, to great loss of moral force in the men using it.

1. Uncontrolled fire, when once begun, especially when near the enemy, can neither be regulated nor moderated.

The late Colonel Brackenbury, describing the action of Iscadio, in the Ashantee War, 1873, writes (p. 274):—"For some time all proceeded favourably, but a few shots fired by the enemy upon the left flank immediately drew a most terrific fusillade from the Cape Coast allies, which the officers vainly endeavoured to stop, and in which Abrahs soon joined. Fire of this nature once commenced spreads rapidly, and both Houssas and Kossoos, as well as the others, had soon expended nearly all their ammunition (p. 275). We subsequently heard that as many as fifty of the Cape Coast allies were missing after this action; if so, it is probable that a large number of the casualties among them were due to their own fire."

Captain Bromhead, being ordered to remain in the track of the Ashantis, found it quite impossible to do so. "In the first place, in a two hours' action his men had fired away all their ammunition; and in the next place, in their wretchedly demoralised condition, it would have been impossible to keep them close upon the trail of the enemy."

"In Ashanti, our men in the bush-fighting sometimes fired away 100 to 150 rounds with independent firing, with very small result—that is, they fired away more ammunition individually than in some of the most hotly-contested European battles."—(Mayne, p. 416.)

2. Further, in uncontrolled fire there is no check as to what the men are firing at, if they are using the proper sights, or even if they are aiming.

After the action on Majuba Hill, in the Boer War (1881), many of our men's rifles were found to have been sighted for 800 yards, yet the fight really began under 100 yards. The English fired independently throughout.

3. It soon produces in front of stationary men such a thick smoke that the object fired at is completely hidden.
4. It renders any offensive advance almost impossible.
5. It has a very bad effect on the moral spirit of the men, as it tends to increase the excitement by causing an impression that danger is near, and as the ammunition decreases so does the courage of the men engaged.
6. The fire cannot be readily directed from one object to another, and therefore the power of concentration is lost.
7. It is the least terrifying to an enemy, especially at the longer ranges, both because it gives poor results, and also because it is scattered.
8. Its efficacious use at all ranges requires a higher state of discipline and training than is usually possible.

Prince Kraft, in "Letters on Infantry," p. 78, says:—"It seems to me that a line of skirmishers which, during a hot fight, pays so much attention to the shrill whistle of the lieutenant that it ceases firing for a moment, looks towards him, and obeys his sign to rise and rush on, or his order to fire on another object, or with another sight, *proves at once that it has attained to a high degree of fire discipline.*"

9. Once an uncontrolled fire is allowed to begin, especially if the enemy is near at hand, it will continue unchecked until the last round has been spent, from the natural tendency of the men to fire as hard as they can.
10. In very heavy firing neither bugle nor voice can be heard to put a stop to it.

"When once the fire of skirmishers has grown hot it is no longer possible to exercise any influence over it. . . . When the fighting-lines have got so close to each other that each individual skirmisher can see his enemy aiming at him, when losses begin to get heavy, and when certain sections have lost their leaders, then, at first in these sections, but soon along the whole front, a hot fire begins to 'roll,' as those men say who have experienced it. Then all directions with regard to economy in ammunition cease, since no word of command can be heard above the noise of battle. I do not wish to say anything against the courage of our excellent infantry soldiers, but there are always some among them who are but too glad to keep up their pluck by a noise, for no one wants to be killed, and most men feel the need of silencing the fear of death by a shock of some other kind, such as a great noise. At times, when it would be premature to charge in with a cheer, this uproar will continue, in order that the excitement created by it may compensate for the chilling effect of the fear of death."—(Kraft.)

11. To practice independent fire at drill is considered by some writers not only needless but positively harmful. At short ranges, in close contact with the enemy, controlled fire will of itself degenerate into rapid uncontrolled fire; the men will no longer pay any attention to orders for control. There is no need to order independent fire, for no prohibition will prevent it.

On the other hand, by the use of *controlled fire*—

1. Not a round of ammunition can be fired without orders.
2. It gives the means of seeing that all the rifles are directed on the same spot, and that the men use the sites ordered, and the fire can be rapidly directed from one object to another.
3. The fire can be stopped to allow the smoke to clear off, and the pauses in the fire can be as long as the commander pleases.
4. The pauses have a quietening effect upon the men when they are getting out of hand.
5. As the fire can be stopped at will on an order, an immediate offensive advance can be conducted.
6. It gives a better result at *all* ranges.
7. It has a very terrifying effect on the enemy when the range is found and the fire is well delivered, as it suddenly pours in at once a searching, concentrated mass of bullets at one spot, while uncontrolled fire cannot be concentrated, and so the bullets fall here and there.
8. It shakes the moral force of the enemy by the sudden loss of a number of men.
9. It requires less discipline and training on the part of the men to get good results.

"All the advantages of volley-firing must not be expected in war. It is none the less certain that the more troops have been trained in time of peace to pay attention to the slightest sign or gesture of their leaders, the greater will be the discipline and power of control in the fight. *It is a matter of peace-training and constant practice.*

"*Troops which have not been broken in to it will not possess fire discipline, however much they may have been disciplined in other respects.*"

These statements are not the outcome of theoretical conjecture. They are based on the experiences of modern warfare, and supported by the musketry regulations of the leading armies of Europe. Prince Kraft, one of the most experienced soldiers of the present day, says (p. 74):—"I have very often observed how in battle, in the presence of danger, troops which are not properly instructed do not aim—they do not even shoot—they simply make a noise. Even before I had ever seen an action, men with experience of war assured me that it was a proof of a certain standard of training in infantry if, in a hot fight, they put their rifles to their shoulders before firing. During the battle of Koeniggratz I witnessed some most irregular fire, which, as the rifles were held vertical, all went up into the air."

It is quoted as an instance of extraordinary presence of mind that, in one of the actions in the 1870 war, a non-commissioned officer was observed, throughout an attack, to caution his men from time to time how to adjust their sights.

"In the battle of the Solferino it is estimated that 8,400,000 shots were fired by the Austrians, occasioning a loss to the French and Sardinian troops of 2,000 killed and 10,000 wounded; so that 4,200 shots were required to kill and 700 to wound *one man*, showing an expenditure of 278 lb. of lead for each man killed. In the Franco-German war, however, the Germans appear to have shot much better, for the average number of shots required to kill a Frenchman was reduced to 1,300."

Can we Australians arrogate to ourselves any superiority over the German or any other nation in respect to fire discipline? If not, by all means let us remember that it will take a good many more than a handful of our crack shots to account for a single company of the enemy.

"At present our men and non-commissioned officers, and even officers, do not know the true necessity for working in groups. It has not been impressed on them by fire experiments, as is done abroad, and the whole duty of fire direction may be said to be almost unknown among us, as the question of infantry fire tactics has been sadly neglected in England." (This was written in 1888.) "*Now that such a system has been instituted, let us hope that it will be rigorously insisted on, and then it will be found that wild firing will cease, or, at least, be minimised.*"

"The whole of our old system of musketry (1877) was based on the assumption that every man with good eyesight could be made a good shot, and the individual fire of a single man was accordingly raised to the highest place. The falseness of this hypothesis was amply proved in our late campaigns, where our shooting is reported to have been as bad as it could possibly be. The fact of the matter is, that only *very few men are individually good shots*, especially when under fire, and those that are such have their skill nullified in the field by the excitement of the fight, and by *not knowing the ranges exactly*—the almost *all-important point* for accurate shooting."

Lord Wolseley has said that he does not believe 10 per cent. of the soldiers of an army can see at 1,000 yards, much less hit an object at that distance.

"In Afghanistan our troops, as a rule, opened an independent fire at ranges between 700 and 900 yards (as we had not then any such thing as fire discipline in our service), and killed very few for the number of rounds fired."

"One notable instance was at Del Sarak, when 28,000 rounds were expended on fifty killed, at ranges under 400 yards."

"Two hundred of the enemy were really killed that day, but 100 were shot down by a *single volley* from one company at about 100 yards range, and another fifty were killed in a cavalry charge. Except the one volley, this was wholly independent firing."

"In this action there was no fire discipline, control, or direction. Officers were to be seen taking rifles from the men and making practice for themselves. The result was that the whole of the ammunition with the force was fired away, and the troops had to retire back to camp for want of ammunition, followed up by the enemy the whole way."

"When our troops were shut up in Sherpur, on several occasions when independent fire began, it increased to such a pitch that neither bugle nor voice could be heard, and the men did not stop until they had fired their last round."

"In Egypt, in 1882, complaints invariably came after every action of the bad shooting of our troops; and why? Because it was independent, unconcentrated fire."

Six hundred and ninety-three men were engaged in the action on Majuba Hill, every man having received seventy rounds of ammunition. The official statement of the affair makes no reference to the Boer casualties, who, however, acknowledge to have lost *one* man killed, and *five* wounded.

About 1,000 British troops attacked the Boer position at Lang's Nek. The Boer casualties are estimated at sixteen killed, and twenty-four wounded.

At the Ingogo River, about 550 men, after fighting from mid-day to 7 p.m., accounted for nine Boers.

Certainly,

Certainly, in the Zulu War, our men made better shooting; but no one would claim that the Zulus, however brave, were a well-armed body.

Numerous instances of individual bravery and traditional British pluck have been recorded in every recent war in which our troops have been engaged. May we not accept this as an indication that it is to the system of peace-training adopted in past years, and recently revised, rather than to the men themselves, we should attribute our reverses.

"The independent firing of the French in 1870, and of the Turks in 1877, may be taken to heart by all as a warning of how not to act."

Let us see then what our Regulations say on this all-important subject of fire-discipline:—

(Infantry Drill, 1889, p. 338):—"To ensure that fire is always under control, *independent firing* will be *deferred* as long as possible. The march before the fight, the subsequent rapid advances, and the fatigues of frequent firing, will tax to the utmost the physical strength, endurance, and courage of all concerned. It is, therefore, evident that prompt obedience to orders, and strict fire discipline are of *paramount importance*. These ends can only be obtained by *constant practice during peace*

(Infantry Drill, 1889, p. 205):—"The more carefully troops are trained to do during peace what will be required of them in time of war, the more efficient they will prove when they take the field."

(Infantry Drill, 1892, p. 177):—"No time should be wasted by attention to details which are not of practical use in the field, and the aim of teaching should be to imbue all ranks with a knowledge of the principles upon which movements under fire are conducted."

Signed this 20th day of January, 1898, at Victoria Barracks, Sydney, New South Wales.

Military Rifle Meeting at Randwick.—Saturday, 16th April, and Monday, 18th April, 1898.

FINAL PROGRAMME.

1. The Duff.—(Mounted Section attack).

Open to teams of four men, which must not include more than one Non-Commissioned Officer, from any Mounted Corps in New South Wales.

Entrance, 4s. per team.

Six prizes.—£20, £12, £6, three at £4; total, £50.

Trophy, value £3 3s., presented by Messrs. F. Lasseter & Co., to the leader of team winning 1st prize.

New South Wales Mounted Challenge Cup, or "Section Firing" Prizes.—Individual Practice.

A Challenge Cup, presented by the late Right Hon. Sir Robert Duff, P.C., G.C.M.G., to the best Half-Squadron or Half-Company team of New South Wales *Cavalry or Mounted Rifles, each team to consist of four, including Group Leader, for riding and shooting, to be competed for annually under the following conditions:—

The Cup to be held for one year by the Half-Squadron or Half-Company of the winning team, and finally by any Half-Squadron or Half-Company winning it for three years in succession; previous wins to stand good.

Half-Squadrons and Half-Companies may enter as many teams as they please.

Dress.—Drill Order.

Course.—About 2 miles.

Target.—Life-size figures, each hit to count two points.

Distances.—Three firing points; hurdles or ditches between each firing point. Distances unknown, between 600 and 200 yards.

Shooting.—Five rounds to be fired at each distance by dismounted men in individual practice.

Fire Discipline and Command.—An Umpire, who will award points to each team for fire discipline and command, will be stationed at each firing point. Maximum points—five.

Time.—The team doing the course in best time will receive twenty points; one point will be deducted from this total by each team completing the distance for every five seconds more than best time.

Winning Teams.—The teams making the highest aggregate total points for (a) Shooting; (b) Fire discipline and command; (c) Time,—will be the winners in the order in which they stand.

The Match will be carried out in accordance with Cavalry Drill.

2. "Coomassie" Battle Firing (Infantry Section attack).—Representing the advance of assaulting Infantry within decisive ranges.

Open to teams of eight, commanded by a Troop, Battery, or Company Sergeant-Major, Colour-Sergeant, Sergeant, Lance-Sergeant, or First Class Petty Officer, from any Half-Squadron of *Cavalry, Half-Company of Mounted Rifles, Battery of Field Artillery, or Company of Naval Forces, Garrison Artillery, Engineers, or Infantry serving in the New South Wales Defence Forces (the Royal Marines or the Blue-jackets on any of Her Majesty's ships to be considered a "Company of Naval Forces").

Entrance.—9s.

Seven

* Includes Australian Horse.

Seven prizes.—£45, £27, £18, and four at £9; total, £126.

Trophy, value £3 3s., presented by Captain Oldershaw, to the N.C.O. of the winning team.

Silver Trophy, value £10 10s., presented by Major-General French, C.M.G., Commanding Military Forces, to be held for one year by the Officer Commanding the Company to which the winning team belongs, and to become the property of any Company or Half-Company winning it twice. (Previous wins to count.) After being won finally by a Company or Half-Company the Trophy to be disposed of in the Company, under such conditions as the Committee may approve.

Challenge Cup, presented by Mr. Charles Anderson, to be held till Easter, 1899, by the Officer Commanding the Company to which the winning team belongs.

The object of this competition is to find the team which makes the greatest number of hits in an attack on a small position, represented by disappearing targets, after marching a distance of about 5 miles, and firing at various unknown ranges between 700 and 250 yards. In the preliminary march, points will be deducted for marching at a slower rate than that laid down by regulation in Infantry Drill. In the rank and file two may be Corporals or Second-class Petty Officers, but not more. (Corporals does not include Lance-Sergeants.)

Dress.—Field Day Order.

Targets.—Life-size, disappearing. Kneeling men.

Position.—Any Military, to 500 yards inclusive; kneeling or standing at shorter distances.

Hits.—To count five points each.

Conduct of Match.—Teams will fall in at a place to be indicated, and will be inspected and marched off. The time allowed for the march, and the method of conducting it, will be explained previous to marching off. Fifteen rounds of ammunition will be issued to each man.

Teams will be halted by an Umpire upon arriving in the vicinity of the position to be attacked, and will receive final instructions. The general direction and position of the targets will be indicated. The first appearance of the targets will be the signal to commence.

During the advance the targets will appear and disappear at intervals of ten seconds; this will continue for a period of about three minutes, after which the targets will appear and disappear at intervals of five seconds. Each appearance of the targets will count eight points against the team, and will be deducted from their score.

Section Commanders may open fire whenever they consider it advisable, but no team will be allowed to advance more than 50 yards between volleys; any team exceeding this distance will be disqualified.

The number of rounds to be fired at each halt, as well as the rate of advance, will be optional.

All loading must be from the pouch.

Firing to be by volleys only. Words of command in accordance with "M.-H. Rifle and Carbine Musketry Regulations, 1894."

As soon as a section has completed firing the fifteen rounds (per man), the Section Commander will order it to "cease fire" and "order arms," after which, the appearance of the targets will not count against the Section.

Points, not exceeding twenty, will be deducted for careless or unnecessary exposure of the Section. A deduction of two points will be made for a "very" bad volley, and of one point for each bad volley.

3. The "Beginners."—(Individual deliberate fire.)

Open to any member of the Defence Forces under the following restrictions, viz., that—

- (a) He must have been enrolled subsequent to the 1st January, 1897.
- (b) He has never shot out of the third-class, Table B, of the Musketry Course.
- (c) He has not won a prize at any recognised Rifle Meeting.

Entrance, 1s.

Thirty-seven prizes, for men armed with rifle—£5, £4, £3, three at £2, six at £1 10s., eighteen at £1; total, £45.

Eleven prizes, for men armed with carbine (if number of entries justify)—£3, two at £2, eight at £1; total, £15.

Distances. }
Rounds. } 400 and 500 yards; five rounds at each distance; time limit, one minute per round.
Time. }

Position.—Lying down.

Target.—2nd Class Musketry.

Scoring.—As in Musketry.

4. The "French."—(Individual deliberate fire.)

Represents the fire of selected shots on outpost duty, firing at an enemy's patrol, the approximate range having been obtained by the Range Finder.

Open to all members of the Defence Forces and H.M. ships.

Entrance, 1s. 6d.

Distance.—Within 800 yards.

Rounds, Time, and Targets.—Six rounds will be fired in two minutes at a target representing three standing men.

Position.—Lying down.

Scoring.—Each hit on any of the figures to count five points.

Thirty-seven prizes, for men armed with rifle—£5, £4, £3, three at £2, six at £1 10s., eighteen at £1; total, £45.

Eleven prizes, for men armed with carbine (if number of entries justify)—£3, two at £2, eight at £1; total, £15.

5. The "Roberts."—(Rapid-firing.)

To instruct a soldier to load rapidly, and fire as he would have to do against an enemy at decisive ranges.

Open to all members of the Defence Forces.

Entrance, 1s. 6d.

Distance.—About 500 yards.

Rounds and Time.—Seven rounds, to be fired in seventy seconds.

Position.—Kneeling.

Target.—Representing three kneeling men.

Scoring.—Each hit on any of the figures to count five points.

Thirty-seven prizes, for men armed with rifle—£5, £4, £3, three at £2, six at £1 10s., eighteen at £1; total, £45.

Eleven prizes, for men armed with carbine (if number of entries justify)—£3, two at £2, eight at £1; total, £15.

6. The "Scouts."—(Individual rapid fire at various unknown ranges.)

Representing the fire of men selected for scouting duty, on account of their aptitude as field shots, and in estimating ranges.

Open to all members of the Defence Forces. Entrance, 1s.

Rounds.

Distance.

Time.

} Ten rounds to be fired in six minutes from selected points at unknown ranges between 800 and 500 yards.

Position.—Any Military.

Targets.—Representing men kneeling and lying down.

Scoring.—Each hit to count five points.

Forty-three prizes—£10, £6, £4, £3, five at £2, fourteen at £1 10s., twenty at £1; total, £74.

7. "Ulundi."—(Rapid volleys at an unknown range.)

This fire would be employed at any time against an unusually exposed enemy, within reasonable range.

Open to teams of eight, commanded by a Troop, Battery, or Company Sergeant-Major, Colour-Sergeant, Sergeant, Lance-Sergeant, or First-class Petty Officer, from any half squadron of Cavalry (which will include Australian Horse), half company of Mounted Rifles, Battery of Field Artillery, or Company of Naval Forces. (The Royal Marines or the Blue-jackets on any of Her Majesty's Ships to be considered a "Company of Naval Forces.") Garrison Artillery, Engineers, or Infantry serving in the New South Wales Defence Forces. Entrance, 9s.

Five prizes—£18, two at £13 10s., two at £9; total, £63.

Target.—Standing men, arranged as a Company of Infantry in column of fours.

Rounds,

Distance, and

Time.

} Seven volleys to be fired in seventy seconds at an unknown distance between 700 and 400 yards.

Position.—Kneeling.

Scoring.—Each hit to count five points.

GENERAL REGULATIONS.

1. Should the number of entries exceed the estimate of the Committee, additional prizes may be provided.

2. In the event of ties, prizes will be divided at the discretion of the Committee.

3. All firing will be carried out with the Martini-Henry rifle or carbine as issued, and as regards "sights," subject to the conditions laid down in the "Musketry Regulations, M.-H. Rifle and Carbine, 1894," section 130 (f), and "Musketry Instruction, N.S.W. Military Forces, 1896," chapter IV, section I, paragraph 33.

4. Except in Match No. 2 the dress will be Drill Order.

5. In Nos. 4, 5, and 6, and 7 matches, every shot fired after the time limit will be penalised by the deduction of the value of one hit for each shot so fired.

6. Matches Nos. 1 and 2 will, if possible, be completed on Saturday, 16th April. Match No. 3 will be fired on the 16th April. Matches Nos. 4 to 7 on 18th April.

7. The General Officer Commanding trusts that Officers will take part in the individual events, and specially desires that inter-regimental teams of Officers may be arranged for Matches 1 and 2.

As the amount of money at present available for this meeting is limited, Officers will not be eligible to compete for prizes. Special Trophies will be provided if funds permit.

8. In order that arrangements may be duly completed, it is necessary that the names of intending competitors should be submitted forthwith as per entry form enclosed.

9. Register-keepers will be responsible that each competitors' rifle is tested immediately before or after firing in each match. Any score obtained with a rifle which does not stand the test will be disallowed. Rifles of teams will be similarly tested before shooting. Minimum pull, 6 lb.

10. Arrangements have been made for a caterer to supply meals at 9d. per meal. Accommodation for Officers will be similarly provided at 1s. 6d. per meal.

11. Tentage and camp equipment for Officers, N.C. Officers, and men will be provided free of charge.

12. Forage can be obtained on the ground at contract rates.

13. Officers Commanding Regiments and Corps are requested to make arrangements for the sale of service tram tickets to competitors.

14. No. 1, "The Duff."—Competing teams will proceed by the march route from Rookwood on Saturday, 16th April, at an hour to be notified.

15. No. 2, "Coomassie."—Teams other than those encamped at Rookwood will assemble at the Redfern Railway Station Goods Yard on Saturday, the 16th April, at an hour to be hereafter notified. Teams proceeding from Rookwood will entrain as may be ordered, and will march thence to the position indicated by an Umpire.

16. No. 3, "The Beginners."—Competitors in this match from the Camp, other than those taking part in "The Duff" or "Coomassie," will entrain at Rookwood on Saturday, 16th April, proceed to Redfern, and thence to Randwick by tram. Time of departure from Rookwood to be hereafter notified. Other competitors in this match will proceed direct to Randwick and report themselves on the Rifle Range by 8 a.m. that day.

17. Competitors in matches to be fired on Monday, 18th April, other than those encamped at Randwick, will report themselves to their Regimental Adjutants at the Range by 8 a.m. that day.

By Order,

Head-Quarters, Victoria Barracks,
Sydney, 24 March, 1898.

M. M. BOAM,
Captain and Brevet-Major, D.A.A. General,
Secretary, Military Rifle Meeting Committee.

Report of a Committee appointed to carry out a Military Rifle Meeting, April 16th and 18th, 1898.

THE Committee of the Military Rifle Meeting, appointed by G.O. 33, of 16th March, 1898, have the honor to submit, for the information of the General Officer Commanding, the following report upon this year's Rifle Meeting, the first held in New South Wales under service conditions:—

A report upon rifle shooting under entirely service conditions having been drawn up by a committee appointed under the G.O.C.'s authority, which included certain suggestions for a Rifle Meeting under military conditions, the same committee, with the addition of Captain Oldershaw, 1st Infantry Regiment, were then directed (G.O. 33 of 1898) to carry out a meeting on the lines suggested. A programme of matches was drawn up, and promulgated by authority. Notwithstanding that this took place only three weeks before the matches, it is very gratifying to note that the Defence Forces of this Colony took advantage of the opportunity to an extent quite beyond what might have been expected for an innovation of this character. The matches were carried out upon Saturday and Monday, 16th and 18th April, 1898, immediately following the annual Easter encampment.

Eight hundred and seventy-three (873) individual officers, N.C.O.'s, and men entered for the seven (7) competitions which comprised the programme. This far exceeds the average number of competitors at the National Rifle Association's Meetings, among whom civilians are included.

The several naval and military units were represented as follows:—

N.S.W. Lancers	101 entries.
First Australian Horse	7 "
Mounted Rifles	221 "
1st Garn. Div., N.S.W. Artillery	67 "
2nd Garn. Div., N.S.W. Artillery	3 "
Corps of Engineers	24 "
1st Infantry Regt.	375 "
2nd Infantry Regt.	683 "
3rd Infantry Regt.	255 "
4th Infantry Regt.	123 "
5th V.I. Regt., Scottish Rifles	32 "
6th Vol. Infantry Regt.	9 "
7th Vol. Infantry Regt.	3 "
Railway Vol. Corps	9 "
National Guard	141 "
Naval Forces	125 "
Staff	9 "
Post entries	152 "

It may be reasonably concluded that if longer notice had been given, which would have afforded better opportunity for previous practice, the number of competitors would have been yet more satisfactory, and representative of the keen interest taken in this class of shooting by the members of the Defence Force generally.

The several competitions were conducted in the manner and with the results given hereunder:—

Saturday, 16th April, 1898.

The "Coomassie."—(Infantry section attack.)

Representing the advance of assaulting Infantry within decisive ranges.

The exceptional interest shown in this event is worthy of record. This was evidenced by the entry of sixty-five teams, representing twelve warships, regiments, and corps—in all 535 officers, non-commissioned officers, and men.

The ground selected was about $\frac{1}{2}$ mile to the south of the Randwick Rifle Range enclosure, being rough and undulating, with bushes, heath, and long grass.

The targets, five groups, 50 yards apart, each of four figures, were of disappearing pattern, designed by Lieut.-Col. M. W. Bayly, and made of steel and canvas. The figures were shaped and painted to represent kneeling men in blue uniform, height 3 feet, breadth 2 feet. The groups of figures appeared and disappeared simultaneously, and were worked from pits in the intervals. Upon the conclusion of the 5-miles' march in field-day order, the competing teams arrived, in batches of five, at a hollow 700 yards from the targets, and out of sight. Here they received ammunition and final instructions, which gave to every section-commander the widest possible discretion as to method of advance and conduct of fire. Upon a signal from the umpire, teams moved to the nearest crest, about 50 yards to their front, and opened fire upon the figures, which had just appeared. (For the first three minutes these figures appeared and disappeared at intervals of 10 seconds, and afterwards, the distances being less, at intervals of 5 seconds.)

It was noticeable, on the first appearance of the targets, that their life-like character and action caused no little astonishment. The objective was so unusual, that in several instances fire units failed to seize the earliest opportunity to open fire.

On the first disappearance of the targets the teams moved rapidly half-right to the next crest, where they again came under fire, and, for the remainder of the advance, were more or less exposed. The targets were placed immediately before the match, and teams had therefore no possible opportunity of ascertaining the distances, which were between 650 and 250 yards.

No team was allowed to approach closer than 250 yards from the objective; but the majority were satisfied to remain at distances between 450 and 350 yards, when they found their fire was effective. The intervals between teams allowed of their advancing independently without risk.

To simulate the effect of an enemy's fire, and to prevent unnecessary delay, eight points were deducted from scores for each appearance of the targets, and five points credited for every hit; these deductions ceased when the team had expended its allotted number of rounds. Section-commanders who did not take advantage of their opportunities to fire, or who unnecessarily exposed their commands, naturally found their credit in hits reduced to a minus quantity by the points given against them.

Further details and the list of prize-winners will be found in *Appendix A*.

The "Duff"—(Mounted section attack.)

The course for this event was selected in rough and hilly ground to the south-east of the Randwick Rifle Range, about two (2) miles in length, and with three separate firing points and corresponding objectives, at different unknown ranges and in different directions. Solid timber fences, brushed, and ditches were distributed throughout the course, which was marked by flags. The targets in each instance were groups of three (3) standing men, of steel and canvas, 6 feet high and 21 inches wide, in red and blue uniforms. The match was conducted in accordance with cavalry drill and special attention paid to the horse-holder of each section taking cover.

Twenty-six teams entered, representing 101 N.C.O.'s and men, from the N.S.W. Lancers and Mounted Rifles. No doubt, next year, entries from the newly established First Australian Horse will considerably augment the numbers.

For further details and prize-list, see *Appendix B*.

The "Beginners."—(Individual deliberate fire for young and 3rd class shots.)

This match was intended to encourage young shots to become proficient in elementary musketry training. The shooting and targets were as laid down in the Musketry Regulations for individual deliberate fire.

For further details and prize-list, see *Appendix C*.

Monday, 18th April, 1898.

The "Scouts."—(Individual rapid fire at various unknown ranges.)

This match was arranged for the encouragement of individual field shots, under strictly service conditions. The ground was similar to that for the "Coomassie" Match, and the ranges entirely unknown to the competitors, who were drawn up, out of sight of the targets, with considerable intervals, and five at a time. The line of advance was marked for each man by five small flags, which became visible successively during the advance. The course extended from 650 to 250 yards from the targets, and a maximum of 6 minutes was allowed for the practice, during which two rounds were to be fired at each flag. For the first 3 minutes, targets representing a kneeling enemy in size, shape, and colour were visible to the competitors, and for the remainder of the time head and shoulder targets only; the latter, however, were nearly hidden by the long grass.

Considering the exceptional and unaccustomed difficulties under which they fired, a highly satisfactory standard of shooting was displayed by the competitors.

For further details and prize-list, see *Appendix D*.

The "Ulundi."—(Rapid volleys at unknown ranges.)

The objective represented a small company of Infantry, advancing in fours at a slight angle from the firing point, and consisted of life-size figures, in red and blue uniforms, with the usual intervals and distances. The range, which was nearly 900 yards, was unknown to the competing teams, and the intervening ground not only difficult in estimating the distance, but of such a character as to preclude the observation of fire, except when the distances named were approximately correct. The majority of the section-commanders showed a not unnatural inexperience in judging the distance, which, from the nature of the ground, could only be estimated by the size and appearance of the targets, and was therefore of undoubted difficulty.

For further details and prize-list, see *Appendix E*.

The "French."—(Individual deliberate fire.)

This competition was intended to represent the fire of selected shots on outpost duty, firing at an enemy's patrol, the approximate distances having been found by the range-finder. Six rounds were fired, at a range of about 800 yards, from the prone position, the maximum time limit being 2 minutes.

The targets were steel frames, canvas covered, shaped like standing men, and painted to represent red and blue uniforms. Each competitor fired at a group of three of these targets, which were separated by small intervals, and of the same dimensions as in the "Duff."

For further details and prize-list, see *Appendix F*.

The "Roberts."—(Rapid firing.)

The object of this competition was to instruct the soldier to load and fire rapidly, as against an enemy at decisive ranges. Seven rounds were fired at about 500 yards, in the kneeling position, and with a maximum time limit of 70 seconds.

The targets were three kneeling men, similar to those used in the "Duff" and "Ulundi," but only 3 ft. 9 in. high, and painted steel-grey.

For further details and prize-list, see *Appendix G*.

It was laid down by the Committee, in the General Rules, that:—

- (a) That the Committee were empowered to increase the number of prizes if the number of entries justified it.
- (b) In the event of ties, the Committee were to exercise a discretion in respect to dividing the prizes.
- (c) All firing was to be carried out with the M.-H. rifle, or carbine, as issued, subject to the provisions as regards sights laid down in the Musketry Regs., 1894, sec. 130 (f), and Musketry Instruction, N.S.W., 1896, c. 1V, s. I, para. 33.
- (d) The dress was drill order, excepting the "Coomassie," in which field-day order was laid down.

The

The umpiring and scoring throughout were carried out by the Committee, with the assistance of a large number of officers and N.C.O.'s of the Staff, Permanent, and Volunteer Forces, who were not among the competitors.

The Committee desire to especially record their thanks for the assistance rendered by Capt. Honey, 2nd Inft. Regt.; Capt. Leggatt, 1st Inft. Regt.; Lieut. Deed, R.M.L.I.; Lieut. Lamb, 5th Dragoon Guards; Lieut. Jenkins, N.S.W. Art.; Lieut. Griffiths, R.M.L.I.; and W. O. Cooper, assistant superintendent at Randwick Rifle Range.

Notwithstanding that a rifle meeting under service conditions was somewhat of an experiment, when it is considered that the entries were entirely voluntary, and that other Rifle Associations had constantly alleged this class of shooting to be unpopular, it has now been established, beyond doubt, that the riflemen of our Defence Forces keenly appreciate the advantages of such practice. We have had, so far as can be ascertained without knowing the names of members of non-winning teams, at least 873 *separate competitors*, of whom over 600 were Partially-paid Infantry. This branch of the Defence Force, which must rely entirely on the rifle in the field, was represented by one-fourth of its numbers at the meeting; and another year it may be reasonably expected that a similar proportion of entries will be received from the purely Volunteer Regiments.

Many difficulties were experienced by the Committee in arranging and carrying out all the details of the matches at very short notice; but it is a source of congratulation that everything was performed as arranged, and within the time allotted.

The Committee have experienced the greatest encouragement from the members of the Defence Forces generally, and the many remarks expressed during and since the meeting augur a still larger number of competitors if this series of matches is continued next year.

In the hope that such may be the case, and that the Government assistance may be increased, it is submitted that, in addition to the matches carried out this year, at least two others should be added, of such a character as to bring about competition between larger bodies of men than individual sections. It is suggested that, for the Mounted Troops, this should take the form of the present "Duff" competition, each team being composed, however, of four sections, with an officer and N.C.O.; and, for the Infantry, a competition between teams composed of three sections of ten men each and a N.C.O., the whole under an officer, and with details so arranged as to afford a test of fire discipline, in addition to practice in different methods of fire and at different objectives.

Revolver pistol practice, mounted and dismounted, might also be included with advantage.

The attendance at the meeting was doubtless aided by the fact that the Defence Forces were at that time assembled for continuous training, and were therefore available as competitors without loss of time in travelling.

On the other hand, from the same cause, no expense was incurred in railway passes.

A statement of accounts is attached (*Appendix H*), made up to date, there being still a few small amounts outstanding.

Signed at Victoria Barracks, this 25th day of May, 1898,—

M. W. BAYLY, Lieut-Colonel,	Comdg. P. Vol. Corps, President.
M. M. BOAM,	
Captain and Brevet-Major, D.A.A.G.	} Members.
G. L. LEE, Captain,	
Adjutant, N.S.W. Lancers.	
W. OLDERSHAW,	
Captain, 1st Infty. Regt.	
J. G. LEGGE, Captain,	
Adjutant, 2nd Infty. Regt.	
G. J. GRIEVE, Lieutenant,	}
Adjutant, 6th Regt.	

Remarks by the General Officer Commanding N.S.W. Military Forces.

From what I saw of the Rifle Meeting I am of opinion—

- (1) That, for a first meeting, when men had little opportunity to practise under new conditions, it was a mistake to have targets appearing and disappearing every 5 seconds, with heavy penalties in case of the team failing to fire during any appearance of the targets, with the result that in most cases the penalties exceeded the score.
- (2) The "Beginners" I think a very sound match for encouraging young shots.
- (3) "Ulundi."—It was a mistake to have a firing point close to the 700 yards mound, when the range was nearly 900 yards. Most of the teams naturally supposed that the range must have been somewhere about 700 yards. The ground selected for this match was not to my mind at all satisfactory, as owing to the quantity of scrub and undergrowth it was impossible to observe the effect of fire.
- (4) On the whole, I consider the meeting, got up at such short notice, was a great success, some 873 men competing, and prizes being well distributed.

APPENDIX A.

THE "COOMASSIE."

Conditions.

Open to teams of 8, commanded by a Troop, Battery, or Company Sergeant-Major, Colour-Sergeant, Sergeant, Lance-Sergeant, or First-Class Petty Officer, from any Half-Squadron of Cavalry, Half-Company of Mounted Rifles, Battery of Field Artillery, or Company of Naval Forces, Garrison Artillery, Engineers, or Infantry serving in the New South Wales Defence Forces (the Royal Marines or the Blue-jackets on any of Her Majesty's ships to be considered a "Company of Naval Forces").

Entrance—9s.

Seven Prizes—£45, £27, £18, and 4 at £9; total, £126.

Trophy, value £3 3s., presented by Captain Oldershaw to the N.C.O. of the winning team.

SILVER TROPHY, value £10 10s., presented by Major-General French, C.M.G., commanding Military Forces, to be held for one year by the Officer Commanding the Company to which the winning team belongs, and to become the property of any Company or Half-Company winning it twice (previous wins to count). After being won finally by a Company or Half-Company, the Trophy to be disposed of in the Company, under such conditions as the Committee may approve.

CHALLENGE CUP—Presented by Mr. Charles Anderson, to be held to Easter, 1899, by the Officer Commanding the Company to which the winning team belongs.

The object of this Competition is to find the team which makes the greatest number of hits in an attack on a small position, represented by disappearing targets, after marching a distance of about 5 miles, and firing at various unknown ranges between 700 and 250 yards. In the preliminary march points will be deducted for marching at a slower rate than that laid down by regulation in Infantry Drill. In the rank and file two may be Corporals or Second-Class Petty Officers, but not more. ("Corporals" does not include Lance-Sergeants.)

Dress—Field Day Order.

Targets—Life size, disappearing. Kneeling men.

Position—Any Military to 500 yards inclusive, kneeling or standing at shorter distances.

Hits—To count 5 points each.

Conduct of Match—Teams will fall in at a place to be indicated, and will be inspected and marched off. The time allowed for the march and the method of conducting it, will be explained previous to marching off. 15 rounds of ammunition will be issued to each man.

Teams will be halted by an Umpire upon arriving in the vicinity of the position to be attacked, and will receive final instructions. The general direction and position of the targets will be indicated. The first appearance of the targets will be the signal to commence.

During the advance the targets will appear and disappear at intervals of 10 seconds; this will continue for a period of about 3 minutes, after which the targets will appear and disappear at intervals of 5 seconds. Each appearance of the targets will count 8 points against the team, and will be deducted from their score.

Section Commanders may open fire whenever they consider it advisable, but no team will be allowed to advance more than 50 yards between volleys: any team exceeding this distance will be disqualified.

The number of rounds to be fired at each halt, as well as the rate of advance, will be optional.

All loading must be from the pouch.

Firing to be by volleys only. Words of command in accordance with "M.H. Rifle and Carbine Musketry Regulations, 1894."

As soon as a section has completed firing the 15 rounds (per man) the Section Commander will order it to "cease fire" and "order arms," after which the appearance of the targets will not count against the Section.

Points, not exceeding 20, will be deducted for careless or unnecessary exposure of the Section. A deduction of 2 points will be made for a "very" bad volley, and of 1 point for each bad volley.

Entries.

There were 65 teams entered: in all, 585 officers, N.C.O.'s, and men.

Prize List.

Order of Merit.	Commander of Team.	Company.	Corps.	Prize.
1	Sgt. Boles	E	2nd Infantry Regiment.....	£ 45 0 0
2	Cr.-Sgt. Finlayson	E	2nd " "	27 0 0
3	Cr.-Sgt. Robinson	G	1st " "	18 0 0
4	Cr.-Sgt. Creary	J	2nd " "	9 0 0
5	Sgt. Seymour	D	1st " "	9 0 0
6	Sgt. Edney	G	1st " "	9 0 0
7	Sgt. M'Veigh	I	1st " "	9 0 0
Total				£126 0 0

APPENDIX B.

THE "DUFF."

Conditions.

Open to teams of four men, which must not include more than one Non-Commissioned Officer, from any Mounted Corps in New South Wales.

Entrance, 4s. per team.

Six Prizes—£20, £12, £6, three at £4; total, £50.

Trophy, value £3 3s., presented by Messrs. F. Lassetter & Co., to the leader of team winning 1st prize.

N.S. WALES MOUNTED CHALLENGE CUP, OR "SECTION FIRING" PRIZES.—Individual Practice.

A Challenge Cup, presented by the late Right Hon. Sir Robert Duff, P.C., G.C.M.G., to the best Half-Squadron or Half-Company team of New South Wales Cavalry or Mounted Rifles; each team to consist of four, including Group Leader, for riding and shooting, to be competed for annually under the following conditions:—

The Cup to be held for one year by the Half-Squadron or Half-Company of the winning team, and finally by any Half-Squadron or Half-Company winning it for three years in succession; previous wins to stand good.

Half-Squadrons and Half-Companies may enter as many teams as they please.

Dress—Drill Order.

Course—About 2 miles.

Target—Life-size figures, each hit to count 2 points.

Distances—Three firing points; hurdles or ditches between each firing point. Distances unknown, between 600 and 200 yards.

Shooting

* Includes Australian Horse.

Shooting—Five rounds to be fired at each distance by dismounted men in individual practice.

Fire Discipline and Command—An Umpire, who will award points to each team for fire discipline and command, will be stationed at each firing point. Maximum points—5.

Time—The team doing the course in best time will receive 50 points; 1 point will be deducted from this total by each team completing the distance for every 5 seconds more than best time.

Winning Teams—The teams making the highest aggregate total points for:—(a) Shooting; (b) Fire discipline and command; (c) Time—will be the winners in the order in which they stand.

The Match will be carried out in accordance with Cavalry Drill.

Entries.

There were twenty-six entries, aggregating 104 N.C.O.'s and men.

Prize List.

Order of Merit.	Commander of Team.	Company.	Corps.	Prize
1	Sgt. Small	Camden.....	Mtd. Rifles	£ 20 0 0
2	Sgt.-Maj. Underhill	Bega	"	12 0 0
3	Cpl. Armstrong	Bega	"	6 0 0
4	Sgt. McAlister	Tenterfield..	"	4 0 0
5	(L.-Cpl. Zeigler	Bega	"	4 0 0
6	(L.-Cpl. Miller	Molong	"	4 0 0
Total				£ 50 0 0

APPENDIX C.

THE "BEGINNERS."

Conditions.

Open to any member of the Defence Forces under the following restrictions, viz., that—

(a) He must have been enrolled subsequent to the 1st January, 1897.

(b) He has never shot out of the third class, Table B, of the Musketry Course.

(c) He has not won a prize at any recognised Rifle Meeting.

Entrance, Is.

Thirty-seven prizes for men armed with rifle, £5, £4, £3, three at £2, six at £1 10s., eighteen at £1; total, £45.

Eleven prizes for men armed with carbine (if number of entries justify), £3, two at £2, eight at £1; total, £15.

Distances

Rounds } 400 and 500 yards; five rounds at each distance; time limit, one minute per round.

Time

Position—Lying down.

Target—2nd Class Musketry.

Scoring—As in Musketry.

Entries.

There were 211 individual entries in this match.

Prize List.

R. A. Price, Esq., M.P., to The Chief Secretary.

My dear Mr. Brunker,

Parliament House, Sydney, 28 June, 1898.

In reference to our conversation in Parliament last evening, *re* "Rifle Shooting under Service Conditions," I desire to bring under your notice the value of a peace training in volley-firing in connection with Infantry in action; to quote the words of a high authority, "Fire is everything."

I submitted certain extracts to you some time since bearing on this subject, and a very valuable report was furnished by the Military authorities in reply to a series of questions submitted by me to Parliament. I desire to supplement the arguments in favour of volley-firing, and forward herewith an extract from *Cassell's Saturday Journal*. I cannot too strongly urge upon you the value of this branch of training in connection with our Defence Forces; and, knowing the deep interest you have always felt in connection with the Forces of the Colony, I shall be glad if you will make the necessary provision for an increase in the subsidy towards the holding of a series of rifle competitions under "service conditions."

Yours, &c.,

R. ATKINSON PRICE.

May be referred to the Major-General.—C.W., 15/7/98. Approved.—J.N.B., 15/7/98. The Major-General Commanding the Military Forces.—C.W., P.U.S., B.C., 18/7/98. I strongly support Mr. Price's recommendation, and hope provision will be made for prizes for matches under Service conditions.—G.A.F., 21/7/98. The Principal Under Secretary. May be considered with Estimates.—C.W., 22/7/98. Approved.—J.N.B., 22/7/98.

[Enclosure.]

HOW THE RUSH IS STOPPED.

Volley-firing and its Effect.

AN old soldier, who served in the Zulu, Afghan, and Nile campaigns, explained to the writer how, on several occasions in his personal experience, British forces have been saved from annihilation by well-directed volley-firing.

"At Abu Klea," he says, "not a man would have escaped but for the coolness of a musketry instructor. The British were firing wildly in all directions, when this instructor rallied a company on a face of the square, and coolly, as if on parade, insisted upon his men firing in volley. This had a strong moral and physical effect on the Arabs, and since Abu Klea desultory firing is not permitted, and the fire discipline largely consists of volley-firing.

"At Rorke's Drift the little company of British were saved from extermination by the same means. At every rush of the Zulus, a well-directed simultaneous volley drove them back time after time, until the savages, thoroughly disheartened, sulkily withdrew.

"At Maiwand, for a couple of hours, a company of the gallant 66th, by means of volley-firing, kept at bay thousands of Ayoub Khan's fierce tribesmen, and it was only by sheer weight of numbers that the little band fell. Had our native troops fought with the same determined united efforts, the name of Maiwand would have been the symbol of a glorious victory instead of a disaster."—*Cassell's Saturday Journal*.

Total	£ 1,388 19 4	

No. 3.

The expedition was not undertaken as a commercial enterprise, consequently the value of the returns cannot be accurately estimated; but there is no doubt that if the fish that were caught had been sold the proceeds would have gone far to recoup the expense incurred by the Government. It was not, however, considered advisable to interfere with the livelihood of the licensed fishermen.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SUNDAY TRADING BILL.

(PETITION FROM HIS GRACE THE ARCHBISHOP OF SYDNEY, AS CHAIRMAN OF THE COUNCIL OF CHURCHES, AGAINST.)

Received by the Legislative Assembly, 19 October, 1898.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the Council of Churches, a body comprising the official heads and accredited representatives of six (6) of the largest Protestant Churches,—

RESPECTFULLY SHOWETH:—

That your Petitioners see with deep regret that a proposal, by the Honorable the Member for Phillip Division, is before your Honorable House to consider the expediency of introducing a Bill to regulate and restrict Sunday trading.

That your Petitioners earnestly protest against any alteration of the law that will open public-houses on Sunday and give increased facilities for Sunday trading.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to withhold consent to the introduction of this Bill.

And your Petitioners will, as in duty bound, ever pray.

Signed on behalf of the Council of Churches,

WM. SZ. SYDNEY,

Chairman.

Sydney, 18th October, 1898.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRADING BILL.

(PETITION FROM WILLIAM BAIN, PRESIDENT, AND RICHARD MORRISON BOWLES, SECRETARY OF THE MINISTERS' ASSOCIATION OF NEWCASTLE AND DISTRICT, AGAINST.)

Received by the Legislative Assembly, 26 October, 1898.

Unto the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the Ministers' Association of Newcastle and District,—

HUMBLY SHOWETH:—

1. That your Petitioners have observed with much concern and regret the introduction into your Honorable House of a Bill by Mr. Copeland having for its objects the opening of public-houses for the sale of intoxicating drinks on the Lord's Day; also the opening of shops for the vending of articles on the Sunday as on any other day of the week.

2. That the opening of public-houses on Sunday is sure to result in drunkenness and crime, resulting in the demoralisation both of publicans themselves and their unhappy customers.

3. That the opening of shops on Sunday will deprive a large number of shop employees of the requisite weekly rest ordained by God for man, resulting in the demoralisation of his soul, and disease and early death of his body.

4. That instead of opening shops on the Sunday, your Honorable House should enforce the law against the Sunday opening of shops, which practice is chiefly pursued by foreigners and aliens, by which not a few of our own citizens are compelled to open their shops too, in order to protect their trade and themselves from the ruin arising from the loss of their customers.

Your Petitioners therefore humbly pray your Honorable House to refuse to pass the aforesaid Bill into law, and thus to save our Colony from the Continental Sunday.

And your Petitioners, as in duty bound, will ever pray.

By the authority of the Association,—

WILLIAM BAIN, President.

RICHARD MORRISON BOWLES, Secretary.

17/10/98.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRADING BILL.

(PETITION FROM E. A. RENNIE, PRESIDENT, AND ROBERT DEY, HON. SECRETARY, OF THE COUNCIL OF NEW SOUTH WALES BRANCH OF THE EVANGELICAL ALLIANCE, AGAINST.)

Received by the Legislative Assembly, 2 November, 1898.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the Council of the New South Wales Branch of the Evangelical Alliance,—

HUMBLY SHOWETH:—

That your Petitioners deprecate the proposal of the Honorable Member for the Phillip Division of the City of Sydney to introduce a Bill giving increased facilities for Sunday trading. They object to this both on grounds of humanity and religion. The opening of the shops on the weekly rest day will go to deprive many of that respite from toil which the Sabbath Day is so eminently adapted and intended to secure. They solemnly feel that it is a serious thing for any legislative body to enact a law in open and direct opposition to a law of the Supreme Being.

They very earnestly protest against the proposed opening of the public-houses on any part of Sunday, believing that such a course will be the taking of a retrograde step, and will result disastrously to the morals and social well-being of the community.

Your Petitioners, therefore, pray your Honorable House not to pass the said Bill.

And as in duty bound your Petitioners will ever pray.

Signed on behalf of the Council,

E. A. RENNIE, President.

ROBERT DEY, Hon. Secretary.

Similar Petitions were received,—

On 2nd November, 1898, from William H. George, President, and James Ernest Francis, Secretary, of the Grafton Band of Hope.

Do do from William H. George, President, and Percival John Young, Secretary, of the Grafton Wesleyan Young People's Society of Christian Endeavour.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRADING BILL.(PETITION FROM JAMES MILROY, CHAIRMAN OF A MEETING OF THE "HASTE TO THE RESCUE"
LODGE OF INDEPENDENT ORDER OF GOOD TEMPLARS, AGAINST.)*Received by the Legislative Assembly, 3 November, 1898.*

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South
Wales in Parliament assembled.

Your Petitioners, members of the "Haste to the Rescue" Lodge of Independent Order of Good
Templars, meeting in Balmain, Sydney, humbly pray that your Honorable House will not sanction the
opening of public-houses on Sundays, but that you will at an early date adopt such provisions as are
necessary to make the Sunday-closing clauses of the existing Licensing Act more effective.

Humbly praying that your Honorable House will give the subjects of this Petition your favourable
consideration.

And your Petitioners, as in duty bound, will ever pray.

Signed on behalf of the meeting,

JAMES MILROY,

Chairman.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRADING BILL.—TOTALISATOR LEGALISING BILL.

(PETITION FROM THE REV. W. M. DILL-MACKY, PRESIDENT OF THE NEW SOUTH WALES CHRISTIAN ENDEAVOUR UNION, AGAINST.)

Received by the Legislative Assembly, 22 November, 1898.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in
Parliament assembled.

The Petition of the undersigned, Chairman of the United Consecration Service, held in the Town
Hall, Sydney, on Friday evening, September 9th, 1898, in connection with the Annual Conven-
tion of the New South Wales Christian Endeavour Union,—

HUMBLY SHOWETH:—

That the following resolutions were unanimously carried by the great gathering of 4,000
persons, representing the 11,209 members of the New South Wales Christian Endeavour Union:—

1. That we express our unabated opposition to the liquor traffic, and deeply deplore the proposal of
Mr. Henry Copeland to legalise the sale of intoxicating liquors on Sunday, and pledge ourselves
to do our utmost to defeat it.
2. That, realising the enormity of the gambling evil, we hereby express our antagonism to it in every
form, and would urge upon our Legislature to emphatically reject any proposal to legalise the
totalisator in this Colony; and we would also urge our societies that they place before their
respective Parliamentary representatives their views on the matter.
3. That we stand for the due observance of the Lord's Day, and deeply regret the apathy of the
authorities in carrying out the law.
4. That the above resolutions be signed by the Chairman and presented to Parliament.

Humbly praying that your Honorable House will give the foregoing resolutions your most favour-
able consideration.

And your Petitioners, as in duty bound, will ever pray.

G. E. BODLEY,
Convention Secretary.

W. DILL-MACKY,
Chairman of Meeting and President of Union.

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEEP-WATER HARBOUR AT PORT KEMBLA.

(PETITION FROM CERTAIN COLLIERY PROPRIETORS, MINERS, WORKMEN, AND OTHERS, IN FAVOUR OF.)

Received by the Legislative Assembly, 27 October, 1898.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned Colliery Proprietors, Miners, Workmen, and others directly
interested in the progress of Illawarra and the Southern Coal Trade,—

SHOWETH:—

Your Petitioners, the owners of and the workmen employed at the Southern Collieries, humbly pray to bring under the notice of your Honorable House the hardships that they are subjected to on account of the great loss of time occasioned by the impossibility of loading a large class of steamers now seeking cargoes at the colliery jetties.

The loading of such steamers is impossible except during perfectly calm weather, or favourable weather conditions, while the loading of sailing ships is impossible.

Solely on account of the want of protection to the colliery jetties disastrous loss of trade and workmen's wages have been sustained. During the six months ending August last your Petitioners have lost no less than fifty days' work, representing between 80,000 and 90,000 tons of trade, and between £20,000 and £22,000 in wages.

On account of the larger class of steamers that now ship southern coal, the loss of time, trade, and wages is increasing every year, and, we feel, must continue.

We earnestly petition your Honorable House to adopt measures to at once build a deep-water port or harbour at Port Kembla, that the work of loading any class of steamer or sailing ship may proceed constantly and independently of the weather. By so doing your Petitioners would be enabled to work constantly, to their material benefit, while the trade of the southern collieries would be nearly doubled, with a corresponding increase in the number of workmen employed, and this without in any way injuring or interfering with the coal trade at Newcastle, which your Petitioners would humbly remark has been developed and fostered by the liberal and continuous expenditure of money that successive Governments have spent on that port.

The revenue derived from harbour dues, as well as increased royalties to Government, would pay large interest on any outlays which the Government might require to spend in order to protect the loading jetties at Port Kembla from the effects of the wind and sea.

Your Petitioners, who have very large invested interests in the district and the collieries, and who know and can alone supply the traffic of any southern harbour that may be built, would respectfully remind your Honorable House that the proposed private harbour at Lake Illawarra would be of no material, or, in fact, of any service to them. They have for years held the opinion that the formation of a harbour at Lake Illawarra will not obviate the pressing necessity of a deeper and less expensive and more convenient harbour at Port Kembla, and that to delay the work at Port Kembla until a private syndicate can raise funds to begin the former is but imperilling a great and important district, and an industry that employs a very large number of workmen.

The necessity of a protected harbour at Port Kembla is so urgent that we pray your Honorable House will lose no time, and adopt such means as may be necessary to give effect to their request.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 911 signatures.]

1898.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR YEAR 1897.)

Presented to Parliament, pursuant to Act 42 Vic. No. 7, sec. 73.

Printed under No. 17 Report from Printing Committee, 15 December, 1898.

The Inspector-General of the Insane to The Chief Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 30 November, 1898.

I do myself the honor, in accordance with the 73rd section of the Lunacy Act of 1878, to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1897.

I have, &c.,

ERIC SINCLAIR,

Inspector-General.

On the 31st December, 1897, the number of insane persons under official cognizance was 3,957, and their distribution was as follows:—

Institution.	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville	514	324	838	11	22	33
Do Parramatta (Free)	686	375	1,061	5	8	13
Do do (Criminal)	46	8	54
Do Callan Park	448	399	847	14	32	46
Do Newcastle	145	152	297	1	1
Do Rydalmere	351	151	502	2	1	3
Do Kenmore	200	107	307	2	7	9
Licensed House for the Insane, Cook's River.....	15	22	37	1	3	4
Do do Ryde	7	7	1	1
Do do Picton—Swiss Cottage
Do do Picton — Woodland Cottage	1	1
South Australian Hospitals	3	3	6
Total.....	2,408	1,549	3,957	35	75	110

The number at the close of 1896 was 3,845; so that the increase during the year 1897 was 112, made up of 52 males and 60 females.

This increase is considerably less than has been customary during the past few years, and approaches more the average of twenty years.

During the twenty years, 1872 to 1891 inclusive, the proportion of insane to population, though varying slightly from year to year, remained practically stationary; but the six years, 1892 to 1897 inclusive, have added 823, or an average of 137 annually, to the number of insane persons under care.

The proportion of insane to population, which at the end of 1891 was 1 in 371, or 2.69 per thousand, was at the close of 1897, 1 in 334, or 2.99 per thousand. This compares favourably with other countries, the proportions being—for Great Britain, 1 in 308, or 3.24 per thousand; for Victoria, 1 in 271, or 3.69 per thousand; and for Queensland, 1 in 321, or 3.10 per thousand.

Of the total number of insane persons on the register at the close of the year, 3,841 were in the Hospitals and Licensed Houses in this Colony, 110 were absent on leave under the provisions of the Lunacy Act, and 6 were in Hospitals for the Insane in South Australia under the provisions of the Lunacy Convention Act of 1894.

The returns from the hospitals and licensed houses show that there was an increase of 36 at Rydalmere, 153 at Kenmore, 3 at the licensed house at Cook's River, 2 at the licensed house at Ryde, and 2 under care in South Australia, whilst there was a decrease of 30 at Gladesville, 7 at Parramatta, 33 at Callan Park, 9 at Newcastle, and 4 at the hospital for criminals at Parramatta. There was still 1 patient under care at the Licensed House, Picton.

*219—A

Admissions.

[725 copies—Approximate Cost of Printing S L. (labour and material), £8 14s. 8d.]

Admissions.

The number of patients admitted during the year was 692—401 males and 291 females; less than has obtained for several years past. The number of admissions of late years has always exceeded 700 (during 1896 there were 740); and it may be that the reduced number is due to the improvement in the general condition of the Colony and the recovery from the financial depression which undoubtedly was the cause of a large number of cases of insanity.

The ratio of admissions to the general population of the Colony—"occurring insanity"—was 1 in 1,912, a better proportion than last year, and worthy of note as showing that the actual proportion of insanity to the population is not really increasing, although the number in the various hospitals may be.

Transfers.

The number of patients transferred from one hospital to another under the provisions of the Lunacy Act was 304. The larger number of these was transferred to the Hospital for the Insane at Kenmore, where the newly erected hospital buildings were filled by the transfer of patients who had been admitted from the southern districts of the Colony. Other transfers were made to Rydalmere to relieve the overcrowded wards of other institutions, and from one hospital to another to promote the recovery of the patients.

The following return gives particulars of transfers for the year:—

RETURN showing Transfers for year 1897.

Transferred from—	Transferred to—																										
	Gladesville.			Parramatta (Free).			Parramatta (Criminal).			Callan Park.			Newcastle.			Rydalmere.			Kenmore.			Cook's River.					
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.

Rydalmere.....	1		1	2	2	4														13	13						
Kenmore.....				1		1										1		1									
Cook's River.....		1	1																								
Pictou.....		1	1																								
Total.....	3	4	7	20	12	32				3	2	5	3	4	7	71	24	95	54	104	158						

Discharges.

The number of patients discharged during the year was 327, and of those 287 were reported as recovered, and 40 as relieved. The recoveries give a percentage of 41.47, and the cases relieved a percentage of 5.78 on the admissions—a rather smaller recovery rate than has been found in the last few years. This, however, is due to the smaller number of admissions during the year, and should show improvement in the current year. The rate, however, is still a very satisfactory one as compared with other countries, that of Great Britain being 38.35, of Victoria 27.96, and of Queensland 41.

Deaths.

The deaths numbered 249, and the percentage on the daily average number resident was 6.51.

In Table 4 the causes of death are set forth in detail, and it will be seen there that 134 were due to diseases of the brain. The other deaths were due to various bodily diseases, consumption and heart disease being with old age the most common. One death from accident and one from suicide occurred during the year—a very satisfactory result when the large number of dangerous and suicidal patients under treatment in the various hospitals is considered. The suicide occurred at Gladesville Hospital, and was the subject of an inquest at which a verdict was returned that all proper precautions had been taken with regard to the care of the patient. The fatal accident occurred at Kenmore, and was the result of snake-bite. A patient, who was at work at fencing on a distant part of the farm, was bitten in the leg by a brown snake, and returned to the hospital to have it treated. The usual remedies were adopted, and with apparent success, no immediate ill effects resulting. During the following day, however, the more remote symptoms caused by the action of the poison on the kidneys supervened and resulted in death.

Accidents.

In addition to the fatal accident there have been several less serious ones, mainly fractures caused by accidental falls.

All were at once reported by the Medical Superintendents, and were made the subject of such inquiries as were deemed necessary. With the large population of nearly 4,000 patients more or less irresponsible, and many of them violent and suicidal, some accidents must occur, and the smallness of the number is evidence of the care and watchfulness of the staff in the various hospitals.

Leave of Absence.

By the provisions of section 82 of the Lunacy Act, leave of absence was granted to 155 patients during the year, making, with the 58 who were on leave at the end of 1896, a total of 213. Of this number 48 were discharged recovered on or before the time when their leave expired, 54 were returned to hospital, 1 died, and 110 were still on leave at the close of the year.

The following return gives particulars as to leave of absence during the year:—

RETURN showing particulars as to Leave of Absence during the year 1897.

Institution.	Remaining on leave 31st December, 1896.			Number granted leave during the year 1897.			Discharged recovered.			Returned to Hospital.			Died whilst on leave.			Remaining on leave 31st December, 1897.

Total	19	39	58	47	108	155	13	35	48	18	36	54	...	1	1	35	75	110

Total number under Care.

The total number of patients under care during the year was 4,837. The average daily number resident was 3,822, of whom 2,355 were males and 1,467 females. These numbers are exclusive of 6 patients belonging to this Colony who are under care in the Hospitals for the Insane in South Australia.

Changes in Staff.

No changes have occurred among the senior officers of the Department.

Mrs. Watson, Matron at Rydalmore, was promoted to the position of Matron of the Hospital for the Insane at Kenmore, and was succeeded by Miss Pope, one of the Sisters on the staff of the Prince Alfred Hospital, Sydney. Mr. Charles Jones was appointed as Chief Attendant at Kenmore.

As usual, a number of changes have occurred in the general staff, attendants and nurses resigning their positions for various reasons, and probationers being appointed to succeed them. There has been no difficulty in selecting suitable women for the position of nurse, but to fill vacancies among the attendants the number of desirable applicants has been much smaller. As the financial condition of the Colony improves, it is always harder to get suitable men to apply for these positions. The service is an exacting one and has many drawbacks, and as extreme care is exercised in making a choice a large number of those applying is passed over.

Early this year Dr. F. Norton Manning retired from the office of Inspector-General, which he had held since its creation in 1876. His services are too well known to need recounting here. From his first appointment the improvement of the condition of the insane had been his one aim, and the present high state of efficiency of the hospitals and the intelligent system of treatment carried out in them are entirely due to his untiring energy and ability. On his suggestions the several Lunacy Acts have been largely framed, the more recent hospitals designed, and the older ones remodelled and practically rebuilt. To his great administrative ability is due the organisation of the staff in the hospitals and the system under which they are worked, and the higher officers have been in most cases selected by him. The loss to the Department through his resignation is irreparable, and will be keenly felt by the officers, to whom he was ever accessible and ready to help with advice in emergencies.

The following tables show the admissions, discharges, and deaths; the proportion of recoveries, the rate of mortality, the causes of insanity in those admitted, those who recovered, and those who died; the causes of death, the length of residence in those who recovered and those who died, and also the ages, condition as to marriage, religious profession, nationality, and previous occupation of those admitted and of all under care, as well as the form of mental disorder in those admitted, those who recovered, and those who died during the year:—

TABLE 1.

SHOWING the Admissions, Re-admissions, Discharges, and Deaths in the Hospitals and Licensed Houses for the Insane during the year 1897.

	Male.	Female.	Total.
In Hospital on 31st December, 1896	2,353	1,488	3,841
Admitted for the first time during the year	342	235	577
Re-admitted during the year	59	56	115
Transferred during the year	154	150	304

Receipts and Expenditure.

The receipts of the Department from all sources amounted to £14,590 19s. 11d., and were made up as follows:—Collected by the Master in Lunacy towards the maintenance of patients in hospitals, £13,849 5s. 1d.; paid by the Imperial Treasury for the maintenance of convict patients, £145 4s.; received from sale of fat and old stores, £533 0s. 10d.; and from rent of land, £63 10s. The details are shown in the following return:—

TABLE showing Total Receipts on account of Institutions for the Insane during the year 1897.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of Fat and old Stores.	Rent of Land.	Total.
Hospital for the Insane, Gladesville.....	£ s. d. 3,671 6 1	£ s. d.	£ s. d. 187 10 9	£ s. d.	£ s. d. 3,858 16 10
Do Parramatta	1,883 4 2	108 18 0	192 11 1	2,184 13 3
Do Callan Park	5,903 18 3	97 14 0	6,001 12 3
Do Newcastle	800 19 9	36 6 0	19 8 3	856 14 0
Do Rydalmere	1,258 4 6	35 16 9	1,294 1 3
Do Kenmore	304 10 11	304 10 11
Do South Australia	21 13 4	21 13 4
Reception House for the Insane, Darlinghurst	5 8 1	5 8 1
Inspector-General's Office	63 10 0	63 10 0
Total	£ 13,849 5 1	145 4 0	533 0 10	63 10 0	14,590 19 11

The total expenditure amounted to £109,623 5s. 0d., and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £105,444 17s. 1d.; maintenance of patients in the Reception House at Darlinghurst, £1,487 0s. 6d.; maintenance of patients in South Australian Hospitals, £326 6s. 6d.; and general expenses—including cost of Inspector-General's Office, payments to official visitors, maintenance of steam-launch, &c.—£2,365 0s. 11d.

The average weekly cost per patient was 10s. 8½d., without deducting collections, and 9s. 3d. when these were deducted. The cost at Kenmore is still higher than that at other hospitals, owing to the many initial expenses incidental to a new institution.

The

The following returns show—(1st) the average weekly cost of the hospitals for the last ten years, 1888 to 1897 inclusive; (2nd) the weekly cost at each hospital from 1870 to 1897 inclusive; and (3rd) the particulars of expenditure at the hospitals during the year 1897.

The following return shows the number of Insane Patients under care on 31st December of each year, the number of Admissions for each year, and the Total Expenditure in the Lunacy Department for each of the ten years from 1888 to 1897 inclusive:—

Year.	No. of Patients on 31st December.	Admissions.	Total Expenditure.
1888	2,898	588	£ 89,895
1889	2,974	550	100,302
1890	3,102	611	96,138
1891	3,134	596	100,112
1892	3,312	666	102,519
1893	3,425	688	101,077
1894	3,587	712	99,425
1895	3,720	715	104,846
1896	3,845	740	103,928
1897	3,951	692	109,623

Reception House for the Insane, Darlinghurst.

The statistics of this institution are not included with those for the Hospitals and Licensed Houses, as the patients are for the most part only admitted for temporary care and treatment on their way to the hospitals, or whilst awaiting the signature of the certificates and orders necessary for their admission to these institutions.

The number of patients remaining on December 31, 1896, was 6, and the number admitted during the year 559, making a total of 565 under care and treatment. This number, which was somewhat less than for several previous years, was made up of two classes—those under certificates of insanity (322 in number) and those under remand under section 1 of the Lunacy Act Amendment Act, of whom there were 243. Taking these classes separately—of the 322 under certificate, 8 were discharged recovered, and 314 were sent to Hospitals for the Insane; whilst of the 243 under remand, 115 were discharged recovered, 122 were sent to the Police Court, certified as insane, and returned to the Reception House, 3 died, and 3 remained at the end of the year. It will be seen that 122 of the number were first admitted in one and subsequently in the other class. The Superintendent of the Reception House reports that 2 cases under certificate, and 9 cases under remand, were admitted twice during the year 1897, and that no less than 70 of the patients admitted during the year had in some one of the thirty years during which the institution has been in existence previously been inmates. The large majority of these recurrent cases were suffering from the temporary insanity due to drink. The institution has done good and useful work. The total number of patients discharged as recovered was 123, and the deaths were 3 only. Considering that a very large proportion of the cases was in an acute stage of the malady, the death-rate is a very small one, and the fact that no case of serious accident or suicide has occurred is creditable to the management.

The following table gives the detailed statistics of the Reception House for the year 1897:—

RETURN showing the Admissions, Discharges, Deaths, &c., of Patients in the Reception House for the Insane during the Year 1897.

	Remaining on 31st December, 1896.		Admitted during 1897.		Total Number of Patients under care.		Patients Discharged, Transferred, Died, &c.											Remaining on 31st December, 1897.

The Observation Wards at H.M. Gaols, Darlinghurst and Parramatta.

The statistics of these wards are as follows :—There were at the ward at Darlinghurst on December 31, 1896, 15 inmates, and 67 were received during the year, making 82 under care ; 52 were discharged of sound mind, 13 were sent to Hospitals for the Insane, 3 were sent to Police Court and discharged, 3 were transferred to the Observation Ward at Parramatta, and 11 remained at the close of the year.

In addition to these inmates, for whom the ward was specially set apart, 133 other prisoners were for short periods inmates, the majority of these being cases suffering from temporary mental symptoms due to alcohol, whilst serving sentences of a few days, or whilst under remand.

At the ward at Parramatta there were on December 31, 1896, 14 inmates, and 33 were received during the year, making 47 under observation. Of these, 29 were discharged as of sound mind, 2 were sent to Hospitals for the Insane, 1 was discharged at Police Court, 1 died, 3 were transferred to the Observation Ward at Darlinghurst; and 11 remained at the close of the year. Into this ward, also, a number of similar cases to those received at Darlinghurst was admitted, the total number of these being 42.

The Lunacy Act provides that these wards should be visited by the Inspector-General of the Insane, and special visits of inspection were paid to the ward at Darlinghurst on January 27, April 28, June 2, July 12, October 20, and November 30, and to the ward at Parramatta on January 28, April 12, July 22, September 13, October 11, and December 2. The wards have also been visited at other times to see individual prisoners, or at the request of the visiting medical officers. At the visits of inspection care has been taken to see and speak to every prisoner, and to inquire into the circumstances of his case, as well as to make a careful examination into the general management of the ward.

The Comptroller-General of Prisons has courteously furnished the following returns, showing the general statistics of the two wards for the year 1897 :—

RETURNS showing the number of Persons received into the Observation Ward, H.M. Gaol, Darlinghurst, during the year 1897, the places whence received, and their disposal.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith and so forth,—

To Our Trusty and Well-beloved—

JOSEPH BARLING, Esquire, Chairman of the Public Service Board, and one of Our Justices of the Peace of Our Colony of New South Wales, Associate of the Institution of Civil Engineers;

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony; and

JAMES POWELL, Esquire, Deputy Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting:—

KNOW Ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two of you, as hereinafter mentioned, to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which Grants of public money to charitable objects under the control of the Government are administered, including Grants for the Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the public Treasury, including the Hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing: And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do within three months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary under your or any two of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And We appoint you the said JOSEPH BARLING, Esquire, to be President of this Our Commission; which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria, No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the year of Our Lord one thousand eight hundred and ninety-seven, and in the sixty-first year of Our Reign.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

VICTORIA,

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our Trusty and Well-beloved—

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our
Justices of the Peace of Our said Colony,—

Greeting:—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did, *inter alia*, appoint JOSEPH BARLING, Esquire, to be a Member, and also President of the Royal Commission of Inquiry in connexion with Charitable Institutions: And whereas the said JOSEPH BARLING has now resigned the Office of President: Now, therefore, know You, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint you, the said GEORGE ALEXANDER WILSON, to be President of such Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this eighth day of February, in the year of Our Lord one thousand eight hundred and ninety-eight, and in the sixty-first year of Our Reign.

(J.S.)

CRITCHETT WALKER,
Principal Under Secretary.

ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of six months,—to take effect from the 10th February, 1898.

Given under my hand at Government House, Sydney, this second day of March, one thousand eight hundred and ninety-eight.

HAMPDEN.

By His Excellency's Command,
JAMES N. BRUNKER.

ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS the time appointed for the return of the Commission in the above matter was by an Instrument dated the second day of March last, extended for a period of six months; And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commission are to make their return to, and for a further period of three months beyond the time in and by the aforesaid instrument appointed for the purpose,—to take effect from the 10th instant.

Given under my hand at Government House, Sydney, this second day of August, one thousand eight hundred and ninety-eight.

HAMPDEN.

By His Excellency's Command,
JAMES N. BRUNKER.

ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS the time appointed for the return of the Commission in the above matter was by an Instrument dated the second day of August last, extended for a period of three months; And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commission are to make their return to, and for a further period of three months beyond the time in and by the aforesaid Instrument appointed for the purpose,—to take effect from the 10th instant.

Given under my hand at Government House, Sydney, this eleventh day of November, one thousand eight hundred and ninety-eight.

HAMPDEN.

By His Excellency's Command,
JAMES N. BRUNKER.

ROYAL COMMISSION ON PUBLIC CHARITIES.

SECOND REPORT.

To His Excellency the Right Honorable Henry Robert, Viscount Hampden,
Governor and Commander-in-Chief of the Colony of New South Wales
and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,

We, your Commissioners, appointed by Letters Patent, dated the 10th day of November, 1897, to inquire into and report upon the financial administration and general management of the Government and State subsidised Charities of the Colony, have the honor to submit to your Excellency our second Report.

Although our general Commission is dated 10th November, 1897, our duties were delayed by the issue of a separate Commission, under which it was considered necessary that we should, in view of the importance of the issues involved, make inquiries immediately into the management of the Institution for the Blind at Strathfield. These entailed a protracted investigation, the examination of a large number of witnesses, and the preparation of a separate Report, which was presented to your Excellency on the 22nd March last.

On the 29th March, 1898, we were able to resume inquiries under our general Commission, and we furnished on 29th June our first Report in connection therewith, which dealt with Institutions for the Blind and the Deaf and Dumb.

In that Report it was stated "your Commissioners propose, for the sake of clearness and despatch, to group the institutions as follows, and to furnish interim reports on each group, but not necessarily in the order here given":—

- I. Institutions dealing with the Blind and with the Deaf and Dumb.
- II. Subsidised charitable bodies, such as the Benevolent Societies and kindred institutions.
- III. The Hospitals.
- IV. The Aborigines.
- V. Government Institutions controlled by the Director of Charities, and also the operations of the State Children's Relief Board.

We at the same time mentioned that it may be "found desirable to report separately on any institution in the event of immediate reforms of policy or of management being considered necessary." Such an occasion has arisen in dealing with the second section of the above groups in the case of the Benevolent Society of New South Wales, an institution occupying the important position of being the chief medium for the relief of the poor in the Colony, apart from the Government Institutions, and we have, consequently, to present you with a report dealing solely with its operations.

THE BENEVOLENT SOCIETY OF NEW SOUTH WALES.

Historical Sketch.

The records of the Benevolent Society of New South Wales, which date as far back as the year 1813, have been preserved in a sufficiently continuous form to admit of a reliable history being presented of the origin and development of this the oldest of our existing charitable institutions.

Your

Your Commissioners accordingly present a concise statement of the methods of this Society's operations from its initiation, because these operations now practically constitute the groundwork of the system which generally prevails throughout this Colony for relieving the necessities of that large section of the poor not provided for in Government institutions.

The New South Wales Benevolent Society was originally known as "The Society for Promoting Christian Knowledge and Benevolence," and it was founded on the 8th of May, 1813, "because," as stated at the first meeting of its promoters, "notwithstanding the humanity of the Government in providing hospitals, &c., still numerous instances of distress out of the reach of this provision continually occur which it becomes the benevolent to mitigate." The founders of the Society appear to have been much divided as to its scope and objects, one section desiring that relief should be confined to New South Wales, and the other urging that a portion of the funds should be devoted to the protection of the natives, in the neighbouring colonies, from fraud and oppression. The supporters of the latter proposal were, however, in the minority, and the result was that an ordinary system of outdoor relief within the Colony was decided upon. To show the precise nature of the work undertaken, it may be of interest to quote two of the first cases relieved.

The records of May 29, 1813, show that "Robert Jones, 60 years of age, infirm, helpless, and rather deranged in mind, secured trousers and a flannel jacket"; and that "Murray, an old soldier, wounded in Egypt, aged, suffering from dysentery," was allowed "1 lb. sugar, 1½ oz. tea, and 3 oz. of arrowroot weekly."

The Society for Promoting Christian Knowledge and Benevolence continued its operations in a limited way until the year 1818, when it was considered desirable to change its title. On May 6, 1818, His Excellency Governor Macquarie presided over a public meeting, at which the leading citizens of the time were present, including Judge Wyldc, Rev. W. Cowper, W. Redfern, S. Terry, Major Antill, Captain Piper, and others, all of whom were members of the Society, and it was then resolved that the organization should be merged into a Society to be thenceforward known as "The Benevolent Society of New South Wales." The resolutions agreed upon at the meeting were published in the *Sydney Gazette*, the semi-official organ of the day, and signed by the Governor, thus indicating that the new Society had been launched under the patronage and with the assistance of the Government, a position which it has ever since held.

One of the principal objects of the Society, as laid down in the original rules, was "to take such measures as may be deemed proper to ascertain the real objects of charity in the respective districts of the Colony, such as the blind, lame, and infirm, who are thus rendered unable to provide for their own support." For two years outdoor relief only was administered to these classes of suffering humanity, but it then became evident that something more was needed to meet the necessities of the helpless poor of the Colony, many of whom required shelter and nursing as well as clothing and food. The Committee therefore determined to pay for lodgings in special cases, and in one year they expended £60 for this purpose. As the population of the Colony increased, this method of housing the poor became inadequate, and the Benevolent Society's Committee, which appears to have been a very energetic body, decided that a central asylum was absolutely necessary in the public interests, on grounds of economy, and to afford opportunities for ready visitation and imparting religious instruction. To this end Governor Macquarie was approached for aid to erect a building somewhat on the lines of the English almshouses, in which the poor of the Colony, who could not be sufficiently provided for under an ordinary outdoor relief system, should be accommodated and properly attended to. In accordance with the Committee's request, His Excellency, who appears to have always willingly responded to appeals for assistance from State funds to carry out the objects of the Society, caused the main building of the present Benevolent Asylum to be erected at the public cost. The original inscription, "This Asylum for the Poor, Blind, Aged, and Infirm was erected 1820, L. Macquarie, Esq., being Governor," still remains over the main entrance, and indicates the purpose to which the institution was first devoted; but, although the building was erected in 1820, it was not occupied until 12th October, 1821, on which date nineteen out-pensioners were received as inmates.

It has already been said that the building was erected at the public expense. The records also show, with regard to the cost of maintaining the institution, that "Major-General Macquarie was pleased to inform the Committee that the master and matron

matron should receive rations from the King's stores, and salary from the Police Fund," and the Governor also approved of the arrangement "that all persons who should be admitted by the Committee to the Asylum who might be considered as chargeable to the Crown, either by former services in Government employ, or from being advanced in age at the expiration of their sentence of transportation, not having become settlers by receiving land or other indulgences, should be victualled from His Majesty's stores."

It appears that, apart from the outdoor relief division, the institution has always been carried on at the cost of the State, in buildings erected from the Consolidated Revenue, on Crown land. Indeed, the statistics show that during a period of twenty-four years, after the occupation of the existing building, the Government contributed altogether £45,000 for the maintenance of inmates. The amounts received from the public, however, for the general purposes of the Society, in response to appeals from the Committee, were very small, "notwithstanding that the Colony was moving forward in opulence." The reason of the smallness of voluntary contributions, which averaged only £400 a year during the seven years, 1820-26, was accounted for by the Committee on the ground "that, as nearly all the beggars were removed from the streets of Sydney into the Asylum, the utility of the Society was lost sight of." The real cause probably was that at that remote time, as at the present day, the liberality with which grants were made from the public Treasury tended to largely stifle private charity, and to leave a burden upon the State which would otherwise have been borne by private philanthropy.

Increase of population caused applicants for admission to the institution to become so numerous that it was found impossible to provide adequate accommodation for them in the Asylum. Representations to this effect were made to the Government, with the result that, in 1851, the use of the Liverpool Hospital was granted to relieve the overcrowding at the Sydney institution, which up to that time had sheltered all the destitute aged men, women, and children of the Colony, as many as 500 persons having been inmates at one time in a building which only possessed sufficient proper accommodation for 190. During the year 1851, 250 aged inmates were accordingly removed from the Sydney Benevolent Asylum to the Liverpool buildings, which were first under the control of the Benevolent Society's Committee as an auxiliary of the main institution in the metropolis.

In 1852 it was found necessary to take further steps to lessen the strain upon the accommodation of the Sydney Asylum; and the evil of permanently associating children with adult paupers was so fully recognised by the Committee that arrangements were made to remove a number of them to Ormond House, Paddington (the present boarding-out depôt of the State Children Relief Department), where they were placed under the control of the Society for the Relief of Destitute Children, which carried on its operations at the Paddington buildings while the institution at Randwick was in course of erection.

Three years later it was considered desirable to more definitely define the relationship of the Government to the Sydney Benevolent Asylum and other institutions with which its operations were to some extent interwoven, and as a consequence, in 1855, a Royal Commission, consisting of Mr. Mayne (Inspector-General of Police) and Mr. E. C. Merewether (Agent for Church and School Lands) was appointed to make investigations "into the operations and general management and condition of the Institution for Destitute Children at Randwick, and likewise the Benevolent Society (as well the Liverpool as the Sydney branch), with the view, amongst other things, to determine the position the Government ought to occupy with respect to charities which are subsidised from public funds."

Nothing practical resulted from the recommendations of the Commission, and the Sydney Benevolent Society continued its work under the old system until 1861, which year is alluded to in the Society's records as "the most important epoch in its history, for it was signalled by the appointment of a Select Committee whose investigations led to most drastic reforms in the work of the institution." Up to the year 1861 the Sydney Benevolent Asylum sheltered the aged poor of the Colony, but as a result of the Select Committee's inquiry it was determined that "the aged persons in the Sydney Asylum were to be removed—the old women to the Hyde Park Barracks, and the old men to the Asylums at Liverpool and Parramatta." The management of these institutions was vested in a Board appointed by the Government, apart from the Sydney Benevolent Society, and this action was practically the initiation of the present system of carrying on the Government Asylums for the infirm and destitute.

It was decided, upon the recommendation of the Select Committee, that the children then remaining in the Sydney Asylum, together with women admitted for lying-in purposes, should be left in charge of the Benevolent Society, and that the Society should also retain the management of the outdoor relief, this being a branch with which it was considered the Government ought not, under any circumstances, to interfere. It was also arranged that the Government should in future annually propose to Parliament that the amount contributed by private subscriptions for relieving outdoor objects of charity should be supplemented by means of Government subsidies under the usual method of "grants in aid" of Charitable institutions; that "all fines and other funds placed by law at the disposal of the Society should not be interfered with"; and official correspondence, dated 11th March and 7th June, 1862, shows that an undertaking was entered into by which the whole cost of maintaining children and lying-in women would be paid by the Government, and that "there would be no objection," on the part of the Government, "to pay for such destitute women having children under two years of age as the Committee of the Benevolent Society might deem it expedient to admit into the Asylum." Although, as stated above, the Government at that time considered that it should not interfere with the administration of outdoor relief, it is now, and has been for some years past, giving assistance to destitute persons in the shape of money allowances and rations, and in providing cost of conveyance. In the year ending June last a sum of over £7,000 was expended in this manner, apart from the amount paid for conveyance of destitute persons by rail, or nearly as much as was spent by the Benevolent Society in outdoor relief in 1897.

In the year 1873 a Royal Commission on Charities, consisting of seven members, of which the late Sir William Windeyer was the President, made an exhaustive investigation into the management of the Society; but beyond drawing attention to defects, under which it was considered possible for the charity to be imposed upon, and the expression of an opinion that it was not desirable for children to be retained at the institution, no recommendations of importance were made with reference to any alteration of the principles adopted by the Society in connection with the administration of the various departments then under its control.

Therefore, since the year 1862, the system under which the Society was then reorganised has not been departed from, although its operations have been enlarged in order to embrace some minor branches, which are fully described in the course of this Report.

Objects of the Society.

In the year 1896 the by-laws were revised, in order to extend the scope of the Society's work in connection with the midwifery division; and the plan and objects which now guide the operations of this charity are as follows:—

1. The purpose of its original foundation, namely, to afford outdoor relief to the poor in the form of provisions, boots, &c., and small sums of money to assist in payment of rent.
2. Temporary receiving depôt for destitute women with children, and for destitute and deserted children (including foundlings).
3. Lying-in hospital for married and single women, in connection with which is carried on,—
 - (I) Training institution for midwifery nurses.
 - (II) School for practical instruction in midwifery for medical students of the University of Sydney.
 - (III) Department for treatment of midwifery cases of poor women in their own homes.

Constitution and Management.

The Society, which is under the control of a Board of Directors, does not possess an Act of Incorporation, but is carried on under regulations and, by-laws which are made, and may be altered from time to time by the Directors, subject to the approval of the subscribers. The constitution provides for the retirement of one-third of the Directors annually. The retiring Directors are to be those who have attended the least number of times during the past year, but such retiring Directors are eligible for re-election. Yearly reports upon the operations of every division of the Society's work are printed and circulated by the Board. Any subscriber of

of £1 per annum is qualified to act as a Director, if elected as such at the annual meetings. The Directors meet as a full body monthly; but sub-committees are appointed from their number, who meet weekly to deal with matters of detail, which are reported to the monthly meetings of the Board for final action by that body. The Directors appoint a Ladies' Committee, which practically directs all matters of domestic economy and internal management, subject to the approval of the governing Board. There are also life Directors, who are qualified for the position by payment personally of £30 or upwards at one time or within twelve months, or by the collection of £50 towards the funds. Any person making a bequest of £50 may nominate a life governor, and, in the event of no such nomination, the executor first named in the will shall be a life governor. The only special privilege attached to this position appears to be a plurality of votes to the extent enjoyed by a contributor of £5. Thus, a member contributing £1 per annum has one vote; £2 per annum, two votes; £5 and upwards, three votes; life Governors have three votes.

One of the by-laws providing for the election of the honorary officers and Directors is as follows:—

Should the number of Members and Governors proposed for the vacant offices be equivalent to the vacancies, the election shall be completed when their nomination is proposed, seconded, and carried by the meeting.

This is evidently the usual manner in which the annual appointments are made, as it would appear from the following evidence of the Hon. Secretary that there has been no contested election for six or seven years; moreover, it would seem that the appointments largely rest with those in office at the time.

231. There is a rule that no member shall be entitled to vote in any election whose subscription has not been paid three months previously;—has that been adhered to? I do not think we have had an election for the last six or seven years, but if there was an election, and anyone attempted to vote who had not paid, I should stop him from voting, or I should drop a note to him beforehand to say that if he wished to vote he must pay up.

234. You say that there has been no election for many years;—the question is, how are vacancies filled? There is an annual meeting, and if A, B, C, and D have attended the lowest number of times they cease to act. If they are good men they are re-elected. We think it far better to have men we know something about than to have strangers. There have been several new ones, men we know to be good men. Sir Arthur Renwick might say I know so-and-so, he will make a very good man. It is a personal guarantee. We want men of a peculiar kind there, men with feeling hearts and intelligence, because there are cases that come before us at times that are very painful, and if we had hard-hearted men to deal with them it would be terrible. We want men with some sort of soul in them.

There is an evident lack of active interest on the part of the subscribers in the election of officers, which, however, is no new feature, for we find it was observed and commented upon by the Royal Commission on Charities in 1873.

All the foregoing offices are honorary; and your Commissioners are of opinion that their duties are performed in a careful and humane manner.

The Official Staff.

The paid official staff consists of a manager, a matron, inspectors, and servants of the outdoor relief division; office clerks, collectors; midwives and nurses of the lying-in department. The salaries are moderate. The duties of the various officers are clearly defined by regulations and by-laws, and they appear to be efficiently performed. The staff is not excessive numerically, and in the outdoor relief department it is insufficient. This matter, which is of very great importance, not only in its bearing upon the requirements of the poor, but in regard to possible imposition upon charity, is, however, more fully dealt with under another heading. All the officials work harmoniously together, and ample evidence was afforded of their uniform kindness to inmates of the Asylum and to the recipients of outdoor relief. The officials who have control of the Society's funds are placed under fidelity bonds. In regard to the nursing staff, there is evidence of a great improvement having been made in recent years. It is mentioned by some of the medical officers as having at one time been very inefficient, and that the nurses in several instances were women who had entered the institution as pregnant patients, and had "assumed the rôle of nurses." The system now being inaugurated is more on the principle of that prevailing in modern hospitals.

The Medical Staff.

Until the last four years a paid medical officer was, in addition to the honorary staff, attached to the institution, at a salary of £250 per annum, whose duties were

confined to the indoor divisions of the Asylum. This system prevailed for many years, during which the medical requirements of the institution were not nearly so large or important as at present. In the year 1894, for reasons which have not been made very clear, beyond the fact that at that time there appears to have been a disagreement between the paid and the honorary officers, it was determined to dispense with the paid medical officer, and leave the medical administration in the hands of an honorary staff. There is a conflict of testimony among the witnesses best qualified to express an opinion as to the efficiency of the present system. The Hon. Secretary says in effect :—

824-6,
Penfold. There are four unpaid medical officers, but as those gentlemen cannot always attend, he would prefer a paid officer (not to reside on the premises). The medical officer was formerly paid £250 a year. Many of the children who have to be attended to are of the lowest class as far as health is concerned; some of them are eaten up with disease from their very birth.

The Manager says :—

668-72,
E Maxted. The medical officers are honorary. The arrangement is not entirely satisfactory. They are very independent, and attend irregularly, except in the case of one, who is most regular. It would be better to go back to the old arrangement and pay one officer a smaller salary than formerly to attend every morning. The change was not made as a matter of money. There was a dispute between the paid medical officer and the two consulting officers and the Directors when puerperal fever broke out, and the staff resigned.

The Matron stated :—

1554-60,
Mrs. Graham. There is not sufficient work for a resident medical officer. It would be a good thing to have a medical officer receiving some small salary to visit the institution daily, especially as there are a number of young children, some of whom may be well one hour and ill the next.

1937-40,
Renwick. The President of the institution, who, both in an official and professional capacity, has had very large experience of the requirements of the institution, approves of the Society having a paid medical officer, but is of opinion that it is desirable to have honorary officers as well—men of large experience, who could give assistance in a critical state of affairs, or when operative interference is necessary.

Sir Arthur's evidence on this point is of exceptional value, as he was the Society's medical officer for some years, during which it was customary for him to attend the institution twice daily, and oftener when required, and to personally take charge of the accouchement cases.

One member of the honorary staff gave the following testimony, which endorses the foregoing evidence :—

Crago,
17-8, 2143. I do not think, on the whole, that the practice of having only honorary medical men quite meets the case; we have in the past recommended that a house-surgeon should be appointed; there is a great deal of work which honorary men can scarcely be expected to do, such as looking after this epidemic of measles, and examining children for boarding-out; they should either appoint a resident house-surgeon, or give someone an honorarium to ensure attendance every day. If there was someone who could visit every day it would be all right. I go myself five or six times a week; on the lying-in side, as a rule, we have to go when we are sent for. I generally study every temperature chart; if the chart shows there is anything out of the normal I investigate the case, but not otherwise.

Another member of the honorary staff expresses a more qualified opinion :—

Foreman,
2209-11. From the point of view of the Benevolent Asylum, the present arrangement of honorary medical officers meets all requirements. It seems to answer fairly well. It is just a matter of opinion as to whether it would be better to have a resident surgeon or house-surgeon; there are always two medical men now on—one for the children and one for the lying-in department.

The evidence, on the whole, indicates *that while the work of the Society is carried on as at present* there should, in addition to the honorary staff, be a paid medical officer, who might have the privilege of private practice, to attend daily at the institution and give that close attention to the sick inmates, and to sanitary matters, and to dietary arrangements, which appears to your Commissioners to be necessary, and which it does not seem reasonable to expect the honorary staff to bestow.

If the Commission's recommendation that the operations of the Benevolent Society of New South Wales be confined in future to the administration of outdoor relief and the casual housing of destitute women and children not otherwise provided for, be given effect to, there will be no necessity for a paid medical officer for Asylum inmates.

The question of medical attendance on the recipients of outdoor relief is dealt with on p. xxvi.

It should be mentioned that while there is no remuneration for medical attendance at the Asylum, an honorarium of £50 a year is given for midwifery lectures delivered to the nurses, and this is received in turn by members of the honorary medical staff, who in rotation undertake the duty of lecturer for one year. The medical students of the University also occasionally receive clinical instruction at the Asylum.

Absence

Absence of Government Supervision.

Although the whole cost of the indoor divisions, and a very large part of the expenses in connection with the outdoor relief department, are defrayed from the Consolidated Revenue, the Government does not exercise any supervision or control over any branch of the Society's work.

Your Commissioners have expressed a very emphatic opinion upon the undesirability of similar conditions in connection with other State-subsidised institutions; and their views in this particular apply with equal force to the New South Wales Benevolent Society.

The functions of the Government officials merely extend to the passing of accounts against the Government for maintenance of inmates and to reviewing claims for subsidies upon voluntary contributions. The Director of Government Asylums has power to issue orders for the admission of women and children to the institution, and, as Chief Boarding-out Officer under the State Children Relief Board, he withdraws children for boarding out, but in no case is any control exercised in regard to management or to the expenditure of funds. In our Reports to your Excellency upon the institutions for the blind we have recommended some reforms in the direction of securing State supervision, and we make similar recommendations in this Report.

Provision is already made under the "Public Institutions Inspection Act of 1886" for inspection, inquiry, &c., in regard to charitable institutions, as follows:—

1. It shall be lawful for the Governor, with the advice of the Executive Council, to appoint an Inspector of Public Charities, the duty of which officer, under the instructions of the Colonial Secretary for the time being, shall be to visit and inspect all hospitals, infirmaries, orphan schools, and charitable institutions which are wholly or in part supported by grants from the public revenue, and to conduct inquiries and examinations in respect to the management of the same, and also in special cases to appoint with such Inspector any other person or persons to aid in the performance of the said duties: Provided that all such visits, inspections, inquiries, and examinations shall have reference and be directed solely to the proper appropriation of the public grants in aid and the efficient conduct of such institutions.

This Act, however, has only been put in force on special occasions, and it has not been made part of the duty of any officer to systematically visit the institutions.

Financial.

The extent of the financial operations of the Benevolent Society will be realised from the following table of receipts and expenditure for the past four years:—

		<i>Receipts.</i>			
		1894.	1895.	1896.	1897.
From Government	£7,935	4,976	*11,085	5,313
Subscriptions and donations and proceeds of entertainments	1,016	3,489	2,865	2,035
Legacies	16	905	1,068
Interest (balance of account)	834	844	821	679
Midwifery fees (less lecture fees)	149	119	217	316
Other receipts	401	207	319	460
		£10,335	9,651	19,242	9,901
		<i>Expenses.</i>

It will at once be noticed from the above table what a very large proportion of the Society's funds is received from the Consolidated Revenue of the country. We have mentioned elsewhere that the total cost of the indoor Asylum work is borne by the Government, in addition to a large percentage of the outdoor relief expenditure, and we ascertain that in the period of the past ten years the Government has contributed an amount equal to 60 per cent. of the whole expenses.

Masted,
595.

The

* Includes £3,750 grant for unemployed.

† Relief to unemployed included.

The fact that the Government has been willing to so largely support the Institution evidently accounts for the comparatively small interest taken in it by the public. We do not find that it is so richly endowed as might have been expected from its long existence, and the annual subscriptions and contributions are comparatively small. Efforts have been made in recent years to stimulate public interest by circulating pictorial and other pamphlets throughout the country drawing attention to the Society's operations, and appealing for funds. These have been successful for a time, but the response of the public to such appeals appears to decline as their novelty wears off. The ordinary "general subscriptions" in 1896 amounted only to £1,238, and in 1897 to £1,153. Of the first amount, £253 only was received from the country.

Maxted,
599.

Two lady collectors are employed by the Society, and their canvass in 1896 resulted in obtaining £1,049 from the Metropolitan district and £215 from the country. These collectors are paid by salary and commission, and they receive a free railway pass from the Government.

Maxted,
1259-60.

Maxted,
1259-62,
1267.

The Manager states that in canvassing the country they do not go far off the railway line, and they are not away long enough for their work to be done effectually. He points out that in districts where local Benevolent Societies exist it is difficult to obtain contributions, and states that although the argument is used in collecting that many of the recipients of the Society's relief come from the country, it is without effect. The Manager is of opinion that a systematic canvass of the country would be productive of good results.

Maxted,
1270.

The books of account are audited, in an honorary capacity, by three members of the Board of Directors. It is an unsound business principle for any institution to employ its own officials, or those connected with its management, for the audit of accounts. The Honorary Secretary and Manager think the audit should be performed by a professional accountant. This Society would have no difficulty in obtaining a professional auditor, but institutions away from Sydney might experience a difficulty in that direction. In any case, however, there should be a competent, independent audit, and in every instance the accounts of charitable institutions receiving aid from the Government should be subject to the scrutiny of officers of the Audit Department.

Penfold,
262.
Maxted,
556-61.

The salaries and gratuities paid in the past ten years amounted to between 19 and 20 per cent. of the whole expenditure in that period. In 1897 the proportion of salaries and gratuities to total expenses was about 2 per cent. less than that. Bearing in mind that there is a considerable amount of hospital work performed at the Asylum, the amount paid for salaries we do not consider excessive.

The other working expenses are, on the whole, moderate, and one of the largest amounts is for repairs, much of which, no doubt, would not have been incurred but for the age of the buildings.

Maxted,
580-1.

A somewhat heavy charge appears for interest on overdraft on the current account, but we ascertain that arrangements are made with the Bank by which the Society is charged the same rate of interest on its overdraft as it receives on its fixed deposits.

We called for a return from the Society showing the manner in which their invested funds had been derived, and were supplied with the following information:—

Particulars showing sources from which Investment Fund has arisen—position of Fund, 31st December, 1897.

	£	s.	d.	£	s.	d.

Add sale debentures						
				£27,794	7	0
Deduct interest, City Bank overdraft				98	1	3
				£27,696	5	9

The

The actual financial position of the Society at the end of last year is then ascertained as follows (excluding from consideration the value of stock, furniture, &c.) :—

Invested funds	£27,696
Due from Government on account of 1897	5,510
Interest due	185
Cash on hand	5
										£33,396
Overdraft	£8,378	
Unpaid accounts	768	
										9,146
										£24,250

A large amount of interest is shown in the statement on the preceding page to have been added to the invested funds. This practice we are glad to see has been discontinued, and the interest is now put to what, in this case, is its legitimate purpose—that of meeting current expenses. Such was not the case when the Royal Commission on Charities of 1873 inquired into the affairs of this institution, and we find in their report the following remark, with which we quite agree—“It is questionable, in our opinion, how far this system, which is growing up in several of our charitable institutions, is consistent with their annually receiving a large portion of their income from the Government, and we think that it should not be countenanced.”

A certain portion of the invested funds of the Benevolent Society is not available for expenditure, that is to say, the Society is entitled to use the interest only. This applies to £1,050 (as far as is ascertainable) of the amounts received by legacy, and also to the sum of £9,574, proceeds of land sold. This land appears to have been a part of the site occupied by the asylum, and when it was disposed of many years ago the Government allowed the Society to invest the proceeds, and to use the interest. Penfold, 278.

At the beginning of 1888 the working account of the Society showed a debit balance of £7,084. This steadily grew until at the commencement of 1893 it reached the large sum of £13,264. In that year the Society drew from its invested funds £10,569, which was placed to the credit of its current account. The debit balances at the end of each of the following years were—

1893	£5,052
1894	5,377
1895	5,148
1896	4,480
1897	9,141

and there is a prospect it seems of a further addition during the present year.

The arrangement which the Society has with the Bank in regard to the payment of interest on its overdraft is a satisfactory one, so far as the Society is concerned, but we think that at the end of each year, any debit balance which may arise on the working account should be adjusted by transfer from its free credit balances or fixed deposits.

The question of the accumulation of funds by subsidised charitable institutions has naturally come under our attention.

Sir Arthur Renwick, whose large experience in charitable work lends great weight to his remarks, apparently does not view with any favour the building up of such reserve funds. He says, when referring to some recently established societies, “If you look at their reports, some of which have appeared in the papers, they are putting money to their credit at the end of the year. That I consider a rather objectionable feature.” Renwick, 1977.

So far as the Benevolent Society is concerned, the funds which it has at its credit were mostly received several years back. During the past ten years the reserve funds have been augmented by £1,678—£710 in 1896, and £968 in 1897, being certain legacies bequeathed.

Leaving out of consideration permanent endowments, if a society is able to accumulate funds, it either shows that it is raising more money than is needed for current wants or is not fulfilling its proper responsibilities. We understand that the ordinary yearly Government subsidies upon private subscriptions are intended to meet current requirements, and therefore it is a question for the Government to consider how far its aid should be extended to institutions which are accumulating funds.

OUTDOOR RELIEF.

Method of Administration.

The practice adopted by most of the Benevolent Societies throughout the country in administering outdoor relief is to issue to persons seeking their aid tickets, having a specified face value, to be presented to the local tradespeople in exchange for provisions, &c. This is not the course followed by the Sydney Benevolent Society. That Institution obtains its supplies of food, &c., in large quantities under contract, and distributes them from its own store. The advantages claimed for this method are that the goods can be purchased cheaply, that it gives control over the quality of the stores, and secures to the recipients of relief the full measure of weight allowed. It also affords an opportunity of questioning the recipients on their circumstances when they appear at the Asylum once a week for their provisions. This is regarded by the management as a valuable aid to inspection.

Penfold,
470-1, 498.
Maxted,
1158-66.

On the other hand, the ticket system, in the case of the Newcastle and Northumberland Benevolent Society, an institution distributing a large amount of relief, is said to work satisfactorily. The respective advantages of the two systems depend largely on the extent of the institution's operations, upon local conditions, and the system of inspection adopted. To a Society giving relief on a small scale the store system would be inapplicable. In the case of a larger institution, whose field of operations is divided into small sub-districts under the supervision of visiting members of Committees, having a more or less intimate knowledge of the persons assisted, any abuse of the ticket system on the part of tradespeople would in all likelihood quickly be detected. In the Newcastle district, where the administration is conducted in this way, it is found there is a "disposition on the part of the local storckeeper to behave well," and that "distributing the purchasing" helps to increase the contributions of the Society. The manner in which the ticket system is controlled by the Newcastle Society will be described in our Report dealing with that institution.

The St. Vincent de Paul Society which, we are given to understand, institutes local supervision over each of the different districts covered by its operations, also adopts the ticket system.

There can be no doubt that the store system secures an effective check in regard to the quality of the stores, and we were pleased to note the excellence of the provisions we saw on a visit to the Sydney Benevolent Asylum.

Against the saving, however, which may result in purchasing large quantities of goods, has to be set the cost of providing storage accommodation and of a staff of officials for the management and distribution of the stores.

We feel it necessary to draw attention here to what we consider a serious evil in connection with the Benevolent Society's system. As it would manifestly be too costly to distribute the provisions at the homes of the persons assisted, those whose names are enrolled on the books for the receipt of relief are required to come to the Asylum, unless prevented by sickness or other sufficient cause, in which case relatives or friends may apply on their behalf. The stores are distributed on one day of the week, and it is arranged that the applicants shall, as far as possible, appear before the officer controlling the distribution in the alphabetical order of their names. With from 1,100 to 1,200 cases to deal with in this manner much time is occupied, and there is a large crowd of people gathered together at the Asylum for several hours. The influence of this public dispensation of charity is one which we believe must be highly injurious in its pauperising effects, and the evil is aggravated when children are sent to obtain the provisions, and have to mingle with the crowd around the Asylum doors. The officers of the Benevolent Society have recognised this grave evil in regard to the children, but find a difficulty in coping with it. We quote the following evidence of the Honorary Secretary on this point:—

463. There is another matter: It creates a very painful impression (at least it did on us) to see children come there on the day on which relief is given as boldly as if they were entering a grocer's shop, go up to the counter, and take provisions away without any feeling of shame at all? We have passed resolutions, time after time, to the effect that children are not to be supplied; but mothers come and say, "Wednesday is a day in the week on which I can get work; will you let my boy come, otherwise I cannot obtain the relief?" Mr. Grant (the Chief Inspector) refuses to supply children time after time.

464. Could not the rule be made more elastic, by allowing the parents to come any time they choose? No; we cannot always have supplies and our officers there.

465. You would only have to have one officer there? We could not possibly extend it through the week. We should have to increase our staff to do that.

466. Could not the case of these people be met by giving them the stores in the evening? Our officers are there from 9 until 6 o'clock. The storeman is there from 8 o'clock.

The difficulty exists in regard to the sick and infirm and others who are unable to go to the Asylum themselves on the day of distribution, and who can only obtain their allowances through the assistance of children. For such cases special provision would have to be made if children are not allowed to receive the rations. Even now, the Hon. Secretary admits, there is danger of actual starvation where the people are unable to attend personally at the store, but he says, "We do the best we can under the circumstances." Penfold, 513.

The Manager of the Asylum says the difficulty could be overcome by instituting inquiries at the end of the day to ascertain who had not applied. The next step, of course, would be to deliver the provisions at the homes of the recipients who are not able to attend at the Asylum, which, however, could not be done without an increase in the present staff. Maxted, 1176-7.

The Committee sit once a week to deal with applications for outdoor relief, and upon the information laid before them relief is granted or refused. Urgent cases may be dealt with at once by the officials, but must be reported to the next meeting of the Committee before a continuance of the relief is allowed. The inspector visits the home as soon after as possible. Until the last three months immediate inquiries used to be made, but the Hon. Secretary states this cannot be done so promptly now because of the increased work. Penfold, 207-11.
Grant, 1755-7.

Nature of Relief.

The relief afforded by the Society consists of food, boots, blankets, &c., and allowances of money towards payment of rent. Some idea of the extent and nature of the work will be gained from the following statement of the provisions and clothing issued in 1897:—

Bread, 245,024 loaves.	Oatmeal, 7,695 lbs.
Flour, 119,542 lbs.	Boots, 1,701 pairs.
Meat, 127,695 lbs.	Calico, 10 yards.
Sugar, 64,968 lbs.	Milk, 470 quarts.
Tea, 16,096 $\frac{1}{4}$ lbs.	Blankets and wrappers, 230 $\frac{1}{2}$
Sago, 5,600 lbs.	pairs.
Rice, 4,008 lbs.	Rugs, 50 pairs.
Arrowroot, 59 lbs.	Nestle's Food, 25 tins.

Weekly rations are given in accordance with a scale, which is slightly departed from to meet particular cases. Maxted, 998.

A ration for a single person consists of—2 loaves of bread and 2 lbs. of flour or meat. Grant, 1725-8.

A woman with one child receives—3 loaves of bread, 1 lb. of flour, 2 lbs. of meat.

A woman with two children receives—4 loaves of bread, 2 lbs. of flour, 2 lbs. of meat.

A woman with three children receives—5 loaves of bread, 2 lbs. of flour, 3 lbs. of meat.

A woman with four or more children receives the maximum allowance of—6 loaves of bread, 3 lbs. of flour, and 3 lbs. of meat.

1 lb. of sugar and $\frac{1}{4}$ lb. of tea is added in each case, and light food, such as sago, arrowroot, or rice, for infants and invalids.

As a rule, no allowance is made for children over the age of 14, as it is presumed they can obtain employment at that age. There seems to be no difficulty in maintaining this rule in regard to girls, as it is stated to be easy for them to get work, but the Manager states it is not insisted on so much in the case of boys, for whom employment is not so readily obtainable. Penfold, 419-21.
Maxted, 1000-6.

Maxted,
1010-11.

The rations mentioned above, according to a return furnished to the Commission, are estimated to cost respectively 11d., 1s. 2½d., 1s. 6d., 1s. 10¾d., and 2s. 2¼d., purchased at wholesale prices; their retail value is considerably higher.

Observing the smallness of the rations, we sought to obtain evidence as to the principle on which they were granted.

Renwick,
1906.

The President of the Society says the great aim "has been to keep people from starvation, but not to supply them with the full amount of assistance that they might possibly require"—"in other words, the aim has been not to create a class that would become permanently dependent on the State." He is quite sure that the Society has done its very best for the poor under the circumstances, "but whether the relief afforded has been adequate or not is quite another question."

Penfold, 435.

The Hon. Secretary says the assistance they can give is most inadequate;—he had been an eye-witness of the existence of great destitution, and found that firing and necessaries other than those provided by the Society were much needed.

Maxted,
1169-72.

The Manager of the Asylum says that he can readily believe that some of the out-pensioners are enduring great privation;—the inspectors had reported cases of starvation, and the people had been removed to the institution. He admitted that unless help was received from the neighbours, the allowance granted for one week was not sufficient to keep the recipients from the brink of starvation by the time the next allowance was given.

Grant,
1733-4.

The Chief Inspector does not consider the maximum ration a sufficient one, but it is often found that the assistance of neighbours and friends supplements the allowance. The fact that the same quantity of tea and sugar is given regardless of the extent of the family led to our inquiring the reason, and it was ascertained that the limitation was due to want of funds. It is an anomaly that a family of four, five, or six persons should receive only the same allowance of tea and sugar that is given to a single man or woman. 1 lb. of sugar and ¼ lb. of tea is evidently insufficient for such a family. These articles must be regarded as necessaries of life, and should be provided in proportion to the needs of the families.

Grant, 1730.

Some of the members of the Commission have visited a number of the homes of those assisted by the Society (reports upon which appear in the Appendix). These homes were selected at hazard, and the condition of things revealed was very painful, and sufficient to show that, in some cases at least, adequate provision was not made for the requirements of the people, particularly where sickness had added to their distress.

The inspecting staff of the Society is too small to enable it to ascertain the particular conditions of each case with sufficient promptitude, and we think much help might be rendered to the Society, as well as to the poor, if the assistance of voluntary district inspectors could be called into aid. The question of inspection is dealt with more fully further on in this Report.

Rent Allowances.]

Penfold, 459,
514.

In addition to rations, allowances in money are made towards the payment of rent. The assistance is only given in the case of widows, deserted wives, and aged people, and after inquiry by the inspectors. In July last 373 people were receiving rent allowances ranging from 1s. to 3s., as under:—

				s.	d.
60 persons receive 1	1	0 each.
99 " "	1	6 "
137 " "	2	0 "
59 " "	2	6 "
18 " "	3	0 "
<hr/>					
373					

Grant, 1721-3.
Maxted, 1123.
Penfold, 251.

The demands upon the Society's funds have become so great that the Committee have not always been able to grant the allowance to deserving cases. It was found necessary some years back, through the lack of funds, to reduce the maximum allowance from 5s. to 3s., and to define a limit to the total amount which could

could be granted ; consequently, although there has been an increase of 140 per cent. in the number of cases relieved since 1890, there has been no corresponding advance in the amount paid for rent allowances ; in fact the amount paid in 1897—£2,000—is slightly less than in 1890. The money is given on the same day as the food is distributed, and the recipients are required to produce receipts for the last rent paid by them for the premises they occupy. The staff is not large enough to permit the testing of the genuineness of these receipts, and it is admitted there is a liability to fraud, and that there is no guarantee that the money finds its way into the pockets of the landlords. It had been found in two or three cases that the receipts were signed by some person other than the landlord, and the allowance had in consequence been discontinued.

Grant, 1817.
Penfold, 463.
Grant, 1811.
Maxted, 1031.

The Chief Inspector thinks there is very rarely any reason to suspect that deception occurs ; but it must be apparent that, with a knowledge that inquiry is not made, dishonest persons would be left open to the temptation of misapplying the grant. A case was brought under our notice where the recipient of the allowance was residing with her daughter, who signed the receipt, and we were subsequently furnished with a return showing several similar instances. Such an arrangement may be perfectly *bonâ fide*, but the doubt that must naturally be raised on the production of a receipt of the kind should cause investigation to be made.

Grant, 1813.

The fact that there is no systematic inspection in the matter may show that there is a tendency to consider the money granted merely as one supplementary to the food allowance, and the Manager states that “the relief is so small that we give that, even if these unfortunate people use the rent money, it would not be a very serious matter.”

Maxted, 1031.

We cannot agree with the view taken by the Manager, that deliberate fraud is not a serious matter, and think there should be the most careful oversight in regard to all money allowances.

Of the 373 persons who were granted rent allowances, it will be seen that 137 received only 2s., and 159 under that sum, each.

In the opinion of the Hon. Secretary and another Director of the Society, the rent allowances are insufficient.

Penfold, 433-8.
Anderson, 2168.

Allowances for Fares.

In several instances allowances for fares are made to enable persons living at a distance to come to the Asylum for their rations. The expenditure in this direction in 1897 was £44 18s. 10d., and on the 6th July last 51 persons received fares for that day as under :—

4 received	4d. each.
23	„	6d. „
1	„	7d. „
5	„	8d. „
8	„	9d. „
10	„	1s. „
—						
51						

The necessity for the payment of fares is said to be occasioned, in some instances, by the inability of local benevolent societies to provide for the needs of the poor in their own districts, and consequently the aid of the Sydney Society has to be sought. It is a bad arrangement which compels the payment of a fare, costing sometimes as much as the ration granted, and it would be much more satisfactory to place the local Society in a position to afford this relief.

Maxted, 1185-6.

Extent and growth of Operations.

The following Table, compiled from the Society's Annual Reports, shows, with a classification of the cases relieved, the increase which has taken place in the administration of outdoor relief since the year 1890. A family is here regarded as one case.

OUTDOOR RELIEF.

Classification of Cases receiving Relief during each year, 1890 to 1897.

* In 1896 the unemployed were, to a large extent, dealt with separately.

From the table on page xx it will be seen that in 1890 the average number of cases relieved each week was 483, and in 1897 it had grown to 1,196—an increase of 147.6 per cent. This increase is out of all proportion to the increase in population, which was only 18 % in the same time. The years in which the greatest increases are shown to have taken place are 1896 and 1897, and we have sought the opinions of the officers of the Society as to the causes which have operated in producing this seeming growth of destitution.

The President of the Society ascribes it to a wave of poverty that has passed over the country, and to a lack of employment. The Hon. Secretary says that employers will not now engage men of 60 years of age and upwards who sometime back could find occasional work. The demand also for the services of women has decreased owing to private people reducing their household expenditure.

The Manager could not account for it except on the grounds that the labour conditions were not so satisfactory as formerly. The increased number of people assisted, he said, was not due to greater attractions being offered by the Society, inasmuch as the allowances (for rent) had been decreased.

The following Table shows more clearly the sections in which the greatest increases have occurred:—

	1890.	1895.	Increase in 5 years	1897.	Increase in 2 years.
Widows, old and infirm	260	409	149	634	225
Aged, destitute men	22	49	27	106	57
„ „ couples	48	93	45	138	45
Widows with children	256	421	165	610	189

Husbands sick and afflicted (including a few single men)	186	264	78	604	340

enwick,
1852-5.

unfold, 278.

Maxted,
1103-10.

Under section 10 of the State Children Relief Act of 1896 assistance is afforded to widows and deserted wives by payments to them of allowances to aid in the maintenance of their children. According to the reports of the State Children Relief Board, there were 378 women in receipt of such allowances on the 5th April, 1897, and 770 on the 5th April of the following year. In spite, however, of the assistance now rendered by the State in this direction, which it was to be expected would have reduced the number relieved by the Benevolent Society, there has been an increase in the number of widows and deserted wives assisted by that institution.

An increase of a remarkable character is that which appears under the head of "husbands sick and afflicted." The figures are as follows:—

1890	186	1894	216
1891	180	1895	264
1892	173	1896	372
1893	224	1897	604

The number of persons applying for the Society's aid in 1897 on the ground of sickness does not appear to have specially attracted the attention of the officers, and they could not furnish any explanation of the increase. Penfold, 52
Maxted,
1113-6.

We felt so dissatisfied with the opinions expressed in evidence regarding the probable causes of the general increase during the past two years in the number of cases relieved by the Benevolent Society, and particularly in the cases of "husbands sick and afflicted," that we again examined the Manager upon the matter, but with no better result.

He suggested a cause might be found in there having been a greater number of discharges from the Government Asylums consequent on a closer inquiry into the condition of the inmates, and also in more stringent measures having been adopted to prevent persons from entering the Asylums. We are, however, informed by the Acting Director of Government Asylums and by the Government Medical Officer for Sydney that neither in regard to admission nor discharge have any changes taken place in the practice which has prevailed for years. The following table shows the number of admissions and discharges for the past six years:—

	Total Admissions.	Total Discharges, &c.
1892-3	3,341	2,978
1893-4	3,655	3,589
1894-5	3,670	3,506
1895-6	4,059	3,774
1896-7	4,084	3,976
1897-8	4,699	4,504

As shown on p. xx, the average number of persons relieved by the Benevolent Society in 1897 was 147·6 per cent. greater than the number assisted in 1890. In the case of the Government Asylums the average number of inmates in the year ending 30th June, 1891, was 2,601, and in the year ending 30th June, 1898, 3,651— an increase of 40·4 per cent.

It was thought that the overcrowded state of some of the Asylums may have led to admission having been refused in some instances, but we are told that no one has been refused admission on the ground of want of room.

We consider the increase shown in the Benevolent Society's figures so serious as to be deserving of further consideration, and we shall continue our investigation in regard thereto, and report upon the matter at a later date. With reference to the cases of "husbands sick and afflicted," some light may possibly be thrown upon the subject by the statistics of the Metropolitan hospitals.

Financial.—Outdoor Relief.

An agreement was made many years ago that the Government should bear the whole cost of the Asylum (that is, the Lying-in Home and receiving depôt for women and children). As a matter of convenience, it was arranged that the Government payments to the Society should be made in accordance with certain rates

rates fixed for different sections of the inmates, and the rates which were then agreed upon have since been adhered to. Occasions have arisen, the Manager says, when the Government payments on the basis of those rates have not covered the total cost of the Asylum, and the Society has, therefore, been at a loss; but for the last three years, at any rate, the payments have been sufficient to do so. Consequently, with the exception of the payments thus received from the Government, the whole of the Society's revenue (including moneys received from the general public, the Government subsidies, and special grants), is available for outdoor relief, and the expense of its administration.

The following Table, compiled from the Society's annual reports, shows the Government subsidies and grants in comparison with the voluntary subscriptions from the public and other receipts for the years 1890 to 1897. The Government maintenance allowances for inmates are not here included:—

Year.	Subsidies and Grants.	Voluntary Contributions, including Legacies and Proceeds of Entertainments.	Other Receipts, including interest.	Total.
	£	£	£	£
1890	500	1,640	1,463	3,603
1891	3,500	1,292	1,251	6,043
1892	3,500	1,455	1,330	6,285
1893	2,500	1,970	1,561	6,031
1894	2,500	1,016	1,384	4,900
1895	1,500	3,505	1,170	6,175
1896	5,700	3,770	1,387	10,857
1897	2,100	3,103	1,455	6,658
	21,800	17,751	11,001	50,552

In 1896, in addition to the amount mentioned in the table, the Government granted £3,750 to the Society for distribution amongst the unemployed.

It will be seen from this table how largely the burden of outdoor relief falls directly upon the Government.

The cost of provisions, &c., and the rent money granted in each year since 1888 is given in the following table, which also shows that while there has been an increase in the weekly average number of cases the cost per case has diminished mainly owing to the grants for rent having been reduced:—

COST OF OUTDOOR RELIEF.

Year.	Weekly Average of cases.	Cost of Provisions, &c.	Rent Money.	Travelling Allowances, &c.	Total.	Average Weekly Cost per case.	Average number of Individuals represented by one case.
		£	£	£	£	s. d.	
1890	483	2,252	2,058	4,310	†3 5·2	3·6
1891	471	2,210	2,214	4,424	3 7·4	3·8
1892	519	2,515	2,313	4,828	3 6·9	3·6
1893	633	2,806	2,278	5,084	3 1	3·6
1894	719	2,819	1,822	4,641	2 5·8	3·3
1895	743	2,587	1,648	4,235	2 2·3	3·4
1896	1,011	4,567	2,163	18	6,748	2 6·8	3·3
1897	1,196	5,534	2,000	46	7,580	††2 5·3	3·5
Increase since 1890..	147·6 %	145·7 %	Decrease. 2·8 %	75·9 %	Decrease. 28·0 %	Mean average, 3·5

Average weekly cost per case.

	†1890.	††1897.
Provisions	s. d. 1 9·5	s. d. 1 9·4
Rent, &c.	1 7·7	0 7·9
	3 5·2	2 5·3

A return furnished by the Society gives the total working expenses of the outdoor relief department as £1,713 19s. 3d. in 1896 (excluding working expenses in

* Compiled in similar manner to figures in table on p. xi.

in connection with relief to the unemployed), and £1,619 10s. 11d. in 1897. From these figures it is shown that for every £1 distributed in relief there was therefore a cost of 5s. 0 $\frac{3}{4}$ d. in 1896 and 4s. 3 $\frac{1}{4}$ d. in 1897.

Inspection.

Until about two and a half years ago there was but one inspector attached to the outdoor relief staff. The present number is three, but as there is a considerable amount of clerical work connected with their duties, not more than about two-thirds of their whole time is now available for outdoor visitation.

The following information supplied by the Society gives the time occupied in visiting by each inspector from 4th May, 1897, to 30th April, 1898, and the weekly average number of cases visited :—

1. Chief Inspector, 31 weeks; cases visited, 879; weekly average of	28
2. Forty-eight weeks; cases visited, 3,226; weekly average...	67
3. Forty-three weeks; cases visited, 1,731; weekly average	40

135

The total number of cases (that is, separate families) receiving relief in the first week in July last was 1,174. The number of separate homes would be nearly the same. Many of these cases are what may be termed "chronic," that is to say, owing to old age or permanent infirmity their condition would not improve and the assistance offered by the Society would in all probability be needed for some years. The inspection required in such instances is not so great as that which is necessary where the recipients of relief are able-bodied and capable of helping themselves. The main objects of inspection are, speaking generally, to prevent imposition, and at the same time to see that cases of genuine distress are adequately assisted.

The present inspecting staff is not numerically strong enough to exercise proper supervision, after making due allowance for the chronic cases. This fact is freely admitted by the Society's officials.

Immediate inspection cannot be made when new applications for relief are received, and intervals of between six weeks and two months or more must intervene between the visits made. It is claimed that the interview which the Chief Inspector has with the recipients once a week at the Asylum on the day of the distribution of the rations, is a great help to the work of inspection, but we think it can be but little safeguard against imposition in cases where the assistance continues to be sought, in spite of improved conditions of the recipients. Unless the inspection is sufficiently frequent, great distress, on the other hand, may not be adequately relieved, and a particular instance of this was brought under our attention by a visit, made without previous notice, to the home of a sick man, who with his wife and a young family were suffering most extreme hardship. [See *Appendix* .] This home was not visited by the Society's inspectors between the 22nd March and 1st July, 1898, and on both occasions the inspectors' reports show a knowledge of the circumstances of the family.

In other parts of the world, as well as in these colonies, the services of voluntary inspectors are largely availed of by benevolent institutions, but no effort has been made by the Sydney Benevolent Society to adopt a similar course in connection with their work. The organisation of local committees and bodies of voluntary inspectors in the several districts within the field of the Society's operations we believe would be of great assistance, not only in preventing imposition and bringing the Society into closer touch with the needs of poverty, but in widening the scope of their work in the direction of securing to the poor a helpful influence in promoting their future welfare.

A lady who has taken a prominent part in charitable work in the mother country, Miss Octavia Hill, says, in "The Homes of the London Poor":—

If the poor are to be raised to a permanently better condition they must be dealt with as individuals, and by individuals. For this hundreds of workers are necessary; and this multitude of helpers is to be found amongst volunteers, whose aid, as we arrange things at present, is to a great extent lost. The problem to be solved, therefore, is how to collect our volunteers into a harmonious whole, the action of each being free yet systematised, and how thus to administer relief through the united agency of corporate bodies and private individuals—how, in fact, to secure all the personal intercourse and friendliness, all the real sympathy, all the graciousness of individual effort, without losing the advantage of having the relief voted by a central committee, and according to definite principles.

This

This states the position very concisely, and we think the help of a very large number of ladies in Sydney and suburbs might be secured to act in co-operation with the Benevolent Society. In Newcastle the district is divided into twenty-five sections, each of which is under the supervision of two lady visitors, who make themselves thoroughly acquainted with the circumstances of each case relieved. If a similar practice were adopted in the Metropolis we believe it would be attended with most beneficial results, and would greatly aid the Society in its work.

We are aware that many ladies at the present time render a great deal of assistance to the poor; but if this assistance could be organised, it would, we think, be more efficient. In the case of the sick poor it would be of great help to obtain the assistance of ladies in supplying such necessary foods as the Benevolent Society cannot possibly distribute.

These honorary workers might be provided with tickets or orders on local tradespeople, which could be given in cases where the ordinary relief afforded by the Society might need to be temporarily supplemented by additional or more suitable food. The visitors would, of course, be made responsible for the proper distribution of the tickets, and a proper system of checks upon the recipient of the ticket and the tradespeople would require to be instituted, in some such manner as we shall show in our report on the Newcastle Society prevails with that institution.

The principle of obtaining the voluntary assistance of lady visitors has already been recognised by the State Children Relief Board, which receives considerable help from ladies in all parts of the country in visiting the homes in which State children are boarded-out.

The question has arisen as to whether a female inspector should be attached to the staff of the Society. The President of the Society states that "where there are domestic arrangements women are much better for the work, and they go into domestic details which a man does not always understand," and the appointment of a female inspector, in addition to the present male staff, would be a step in the right direction. Under the present conditions, we think the appointment of a suitable lady inspector to the existing staff, which it is admitted should be increased, would be of advantage, but how far the services of such an officer would be required if the assistance of voluntary lady workers were obtained remains to be seen.

Benwick,
1924-6.

Organisation, overlapping, &c.

The multiplication of the charitable institutions in the Metropolis has for some time past caused attention to be directed to the necessity for organisation in their efforts to adequately cope with distress and at the same time to avoid imposition. Efforts have been made by some of the institutions to ascertain particulars of the relief afforded by others, so that they might check the systematic abuse of charitable aid which has on several occasions been brought to light, but united action is necessary to a successful accomplishment of this end. It was to secure this co-operation that a society has been recently called into existence by the Right Hon. G. H. Reid, Premier, the objects of which are stated to be as follows:—

1. The establishment of a Metropolitan Charities Association, with a local Committee in every Municipality within the Metropolitan area.
2. Efficient and constant inquiry into the circumstances of persons soliciting charity within the Metropolitan area. Requests for such inquiries from Charitable Societies or private individuals welcomed, and information to be promptly given.
3. Co-operation amongst Charitable Societies to be promoted.
4. The exposure of all persons who impose upon the public under the pretext of distress.
5. Indiscriminate giving to be discouraged, and as far as possible the overlapping of relief to be prevented.
6. Relief from the funds of the Association to be given in cases of immediate necessity only.

It is evident that proper organisation demands central registration of the recipients of relief, and the limitation of the operations of each society performing similar functions to a specified area.

The Benevolent Society appears to have some difficulty in confining its operations to any defined area, from the fact that some of the suburban charitable institutions are unable to meet the needs of all the poor in their own districts, and the aid of the metropolitan institution has to be sought to supply the want. The position of the local societies is of course largely dependent on the general character of the population in which they are located. In large and poor centres, where they have a greater destitution to deal with, their power of raising funds is considerably

less

less than in the case of societies situated in more favoured localities. Under the present system of granting Government subsidies of £1 for every £1 privately subscribed, the societies in poor districts are consequently in a relatively less advantageous position.

For many years past an organisation movement has been in progress in England, which appears to have done a great deal towards reforming the methods of charitable administration and protecting the public from an indiscriminate distribution of its money.

The object of the Society, which is called the Charity Organisation Society, is, according to the latest information we have :—

TO IMPROVE THE CONDITION OF THE POOR.

I.—On the part of the Council of the Society.

1. By propagating sound principles and views in regard to the administration of charity.
2. By promoting the co-operation of charitable institutions for the furtherance of their common work.
3. By convening Special Committees to inquire into, and report on, comparatively technical questions connected with the administration of charity, such as the education of the blind, the legal provision for the afflicted, convalescent homes, artisans' dwellings, &c.
4. By making inquiries for persons legitimately interested and collecting information regarding the utility, objects, and mode of working of charitable institutions.
5. By investigating, on behalf of persons legitimately interested, and reporting on the appeals of begging-letter writers, whose operations are of a metropolitan or general, rather than of a local character.
6. By supplementing the resources of the District Committees of the Society, by the personal assistance of officers appointed and paid, in all or part, by the Council, by grants for general purposes, and, when necessary, for relief, and by obtaining adequate help in cases of difficulty.

II.—On the part of District Committees.

1. By careful inquiry regarding all applicants for assistance (whether they be referred to the District Offices or apply of their own accord), in order to ascertain how and by whom they should be helped, and to test the truth of their statements.
2. By applying to each case, susceptible of permanent benefit, and suitable for assistance by charity rather than by the Poor Law, such remedies as are likely to make the applicant self-dependent.
3. By obtaining the various kinds of help required from those interested in the applicants, from their relatives, from charitable institutions, and from private persons; by assisting by loans, or, when necessary, by grants.
4. By sending (gratuitously) to legitimate inquirers, whether charitable agencies or private persons, reports on cases of distress.
5. By bringing into co-operation with each other, and with the Poor Law authorities, the various charitable agencies and individuals in the district, and by making the District Committees representative of local charities and a centre of reference for all interested in charitable work.
6. By repressing local mendicity by means of investigation tickets and otherwise.

It is not itself an agency for dispensing relief except in urgent cases, but it is the centre for the receipt of all applications. After thorough investigation has been made, the required means of relief are obtained from other bodies. The details of management may be described in the words of Mr. Loch, the Secretary to the London Charity Organization Society :—

In London there are forty district committees of the society. The area of these committees is that of the Poor Law Unions or Parishes, but in very large unions or parishes there are sometimes two or more committees. If the large population in most of these districts be taken into account, the committees might fairly be considered as separate societies. In four suburban districts, Eltham, Streatham and Tooting, Stoke Newington and Holloway, the society has no committees, though in the last-named district, which has now a large population, a committee is much wanted. The society is a federation of these committees, each of which, in order to be in union with it, must act on certain general principles, and must appoint representatives on the General Council. The honorary secretaries and chairman of the committees are *ex officio* members of this Council. This Council and its committees conduct the general business of the society. Some twenty district committees receive grants from the Council towards their expenses of management. Some are chiefly maintained by these grants. In some instances, besides these grants, assistance is given to a committee on the poorer parts of London by paying for a special officer, a district secretary, who is appointed by the Council with a view to developing organisation in districts in which it has not made progress, ensuring good "case-work," promoting co-operation, and enlisting volunteers. About £1,300 a year is now spent by the Council in this way. Those who are appointed are educated men and women, who are trained for the work and have a special interest in it, and are ready, for a comparatively small salary, to give up their whole time and thought to it. Apart from these grants and this assistance, the district committees are financially independent. In 1887-8 the office expenses of all the district committees amounted to £9,481, or, on an average, £237. This money is spent, apart from necessary expenditure in printing, &c., in (1) officers and (2) rent. It is found that, to deal properly with a large number of cases, to hear in private the tales of those in distress, and to provide accommodation for volunteers who help in the work by seeing applicants, arranging about relief, writing letters, and so forth, at least three or four rooms are necessary. These rooms include a committee-room and one that serves as a waiting-room. But the main condition which governs the question of accommodation is the necessity of hearing facts of each case in a private manner, and without undue delay. Next as to officers, the officers in charge of the work in most districts are honorary secretaries—men and women who give a very great deal of time to the work, treating it indeed in many instances

instances as the business of their lives. Upon them the progress of the committee very largely depends, and to their patient and unsparing labour the society owes a full measure of thanks. There are often two and sometimes three honorary secretaries in one committee. Often members of committee take special departments of work, such as the accounts, or the general care of pension or loan cases. In the poorer districts for which honorary secretaries able to give sufficient time to the work cannot be found, the district secretaries to whom I have referred are appointed. Sometimes where the work is heavy they work with and under honorary secretaries. The committees also in richer districts often have paid secretaries.

Besides secretaries there are in a district office, according to the amount of the work, one or more agents or inquiry officers. On these men devolve the major part of the work of inquiry. The point at which the volunteer takes up the case is different in different districts. As a rule, the applicants for relief come to the district office. Their statements are then taken down, sometimes by the honorary or the district secretary, sometimes by the agent, sometimes by members of committee. Then follows the inquiry, made usually by the agent or inquiry officer, but sometimes in part by a volunteer in part by the paid officer. Then the case, with the inquiries complete, is submitted to the committee. Formerly the volunteers did not as a rule intervene till this stage. Now volunteers take a larger share in the work throughout.

At some committees the applicants are seen at committee; at others care is taken that the secretary or some member of committee should see them before the meeting; but they do not themselves attend. Opinions differ as to which is the better plan. Personally, I prefer the latter. When a decision has been arrived at, if the case has to be visited or relief obtained, the labour of making the necessary arrangements is undertaken by the secretary and the members of committee. The bulk of the money required for relief is raised, as we say, "specially" for the case from charitable societies and individuals. In 1887-8 the relief thus raised amounted to £18,114. Loans were made amounting to £1,570, and grants from the general funds of committee were made to the amount of £3,581. The committees consist of members of all denominations and of all political creeds. There is no question whatever of the use of relief for any proselytising purposes. Consideration is indeed paid to religious differences. Thus a committee would not think of sending the child of a Catholic to a Protestant home, or *vice versa*; but otherwise religious differences are, so far as the Society is concerned, set aside for the common ends of charity.

It is desired that the committees should contain representatives of the Board of Guardians and of all charities (including in that term parochial and chapel charities) at work in the district. In many, probably most, districts, one or more members of the Board of Guardians are on the charity organisation committee, and there is sometimes close co-operation with them. . . . With charitable institutions our co-operation is chiefly in connection with individual cases. We have special arrangements with only one or two, but every year more is done by way of practical co-operation. In one or two districts working men serve on the committees. We get comparatively little help from the tradesmen class. Many members of our committees in poor districts come from the West End; and one of the chief difficulties in the way of forming committees really representative of these districts is that of arranging hours of meeting which will be convenient to all alike. The average attendance at a committee would, I think, be eight or ten. There are sometimes a number of semi-detached members of committee who are called associates. Often the committee is large, and the attendance of a section of its members is irregular. The size of the committee is no index of the number of the people with which it is in co-operation as occasion offers.

The Council of the London Society has formed for its executive work an administrative committee, which is elected by the Council out of members of Council, nominated by the district committees. It consists of twenty members, fifteen thus elected and five co-opted. One of its sub-committees supervises the work of district committees, and, subject to the approval of the administrative committee, passes the estimates of annual expenditure, which each committee is required to furnish, and makes grants for the maintenance of committees in the poorer districts. Subject to the approval of the districts' sub-committee, in cases in which district committees are unable to raise the sum required for adequate relief—*e.g.*, in cases of long illness, maintenance for a long period in a home or school, and pensions—funds are raised by the insertion of advertisements in the *Charity Organisation Review* and in the general Press. About £1,300 was thus obtained last year. In connection with another sub-committee, special arrangements have been made for co-operation with hospitals, and for assisting district committees in obtaining suitable convalescent and surgical aid with promptitude. Another sub-committee deals with emigration. Another branch of the work of the Council consists in publishing periodically a Charities Register and Digest of Charities and Benevolent Institutions, by whose aid cases from the metropolis may be dealt with, in furnishing to inquirers legitimately interested reports in regard to appeals, more particularly appeals from charitable institutions, and in registering cases of fraud and imposture, and, as far as possible, warning the public against them. Besides these branches of work, the Council, by means of special committees, has dealt with many questions of special importance connected with charity organisation, such as charity and cheap food, soup kitchens, the dwellings of the poor, the training of the blind, the education and care of idiots, imbeciles, and harmless lunatics, voting charities, medical relief, the employment of Italian children for mendicant or immoral purposes. At the present time there is a special committee on the preparation and audit of the accounts of charities, and another committee is promoting a Parliamentary inquiry into the management and common organisation of hospitals and dispensaries and poor law infirmaries and dispensaries in the metropolis. (A Select Committee has since been appointed by the House of Lords to make inquiries in regard to the hospitals of the metropolis.)

The effectiveness of this organisation lies in the knowledge which it secures of each case requiring assistance and its power of bringing to bear the best forces for giving the most fitting form of relief, while, at the same time, it guards against dishonesty and abuse.

It may be well that we should here refer to opinions expressed by a few of many authorities on the effect of the State administration of out-door relief in England and elsewhere.

The English Poor Law Commission of 1832, which recommended the total abolition of out-door relief, reported under the heading of "General Remarks on Outdoor Relief":—

"We have dwelt at some length on outdoor relief, because it appears to be the relief now most extensively given, and because it appears to contain in itself the elements of an almost indefinite extension—of an extension, in short, which may ultimately absorb the whole fund out of which it arises. Among the elements of extension are the constantly diminishing reluctance to claim an apparent benefit, the receipt of which imposes no sacrifice except a sensation of shame, quickly obliterated by habit, even if not prevented by example—the difficulty often amounting to impossibility on the part of those who administer and award relief of ascertaining whether any, and what, necessity for it exists; and the existence in many cases of positive motives on their parts to grant it when unnecessary, or themselves to create the necessity. The first and third of these sources of mal-administration are common to the towns and to the country; the second—the difficulty of ascertaining the wants of the applicants—operates most strongly in the large towns.

From the preceding evidence it will be seen how zealous must be the agency and how intense the vigilance to prevent fraudulent claims crowding in under such a system of relief; but it would require still greater vigilance to prevent the *bonâ fide* claimants degenerating into imposters; and it is an aphorism amongst the active parish officers that "cases which are good to-day are bad to-morrow unless they are incessantly watched." A person obtains relief on the grounds of sickness. When he has become capable of returning to moderate work he is tempted by the enjoyment of subsistence without labour to conceal his convalescence and fraudulently extend the period of relief. When it really depends upon the receivers whether the relief shall cease with its occasion, it is too much to expect of their virtue that they shall in any considerable number of instances voluntarily forego the pension.

Mr. Loch, the gentleman already referred to, writes in his work on Charity Organisation, published in 1890:—

So far, then, as experience may be taken as a test, we may consider that the case is proved. Relief given to meet the ordinary contingencies of life, such as outdoor relief must be, is by the nature of things inadequate. The community cannot afford to provide such relief on any sufficient scale. It must take the form of a dole, and leave to "fervid speculation" a search for possible bounties on the part of the poor, and it will thus prove itself to be in reality no relief at all. Therefore, though the community try to help the citizens in this way, it cannot really do so, and may as well acknowledge outright the impossibility of the task. It cannot supplement wages effectually; while it thinks that it is doing so it is often in reality lowering the whole wage standard for the class of labour whose earnings it supplements. On the other hand, there is positive good in the refusal of such relief. The Royal Commission on Friendly Societies reported, in 1874, that "If outdoor relief could no longer be reckoned on with comparative certainty, a great stimulus would be given to exertions towards making some provision for old age. . . . There is no single point in which those best acquainted with the subject more entirely concur than in recommending a more stringent administration of outdoor relief as the best encouragement of providence. The adoption of this course in the Atcham Union had made people put money into savings banks with a view to laying up for old age." And it is generally admitted that no more potent agent can be devised for inducing a man to join a friendly society than the dread of the work-house. Speaking of the Bradfield Union, Mr. Bland Garland writes (1888) of the system of refusing outdoor relief, "I can reply with perfect confidence that the condition of the people has much improved; that it never was so good as now, although wages are considerably less than they were in the earlier years of the period mentioned (about 1871-2). They have learned in a great manner to depend on their own exertions to provide against a rainy day; to support their aged parents; and the demands on private charity are much less than when they were recipients of the miserable pauper dole, or were looking forward to obtaining it."

Professor A. and Mrs. M. P. Marshall, in their work "Economics of Industry," write:—

Outdoor relief is often the booty of the idle, the dissipated, the crafty and the hypocritical, * * * and on the whole it has been found that wherever outdoor relief has been given freely, a large part of the population has become idle, thriftless and base; in short, pauperised.

Mrs. Bernard Bosanquet, in a work entitled "Rich and Poor" (1896), speaking of outdoor relief, says:—

So with the unfortunate people who are subjected to this sprinkling charity, they are always on the look out for the little gifts which come dropping casually in, and they never get a chance of developing resource and self-reliance.

The following passage, referring to help given in time of sickness, appears in the same work:—

Then there can be no better work for charity to step in and keep the home together until the family can recover itself. But this cannot be done by means of a few tickets and half-crowns, unless the family is to pawn and sell, to be half-starved and to accumulate a burden of debt; in other words, to sink to a lower level, from which it may never raise itself; we must make an allowance sufficient to meet all necessary expenditure as it arises, and be prepared to continue this until the invalid is in a position to earn again. Then, and then only, may we hope to have applied charity, so as to preserve instead of to undermine the independence of the recipient.

Coming nearer home, we have the opinion of Dr. MacGregor, Inspector-General of Asylums, Hospitals, and Charitable Institutions, in New Zealand, who, when referring to the Report of the English Commission of 1832, from which we have quoted, says :—

Even in New Zealand the baneful system of outdoor relief is pauperising our people to an extent that is incredible to any except those who know the facts and are able to estimate their significance. Everyone of the chief evil results in England I could abundantly illustrate in any of our large towns.

In a report presented to the New Zealand Parliament in 1897, Dr. MacGregor states :—

All over New Zealand the State subsidy for indiscriminate outdoor relief is the most effective scheme that could be devised for the systematic cultivation of social parasites. We carefully hatch them out, and lay them down in the alimentary tracts of society, and we call the insane proceeding philanthropy. No man feels more deeply than I the fact that those of our people who have lapsed from self-respect and independence have probably been "more sinned against than sinning."

In judging of the above opinions we must bear in mind two significant differences which exist between the State administration of outdoor relief in England and its administration by charitable institutions here. In the former the assistance takes the form usually, if not entirely, we believe, of a money allowance, and is granted to able-bodied men and women as well as to the aged and infirm; here the relief is mainly afforded by rations of food, and is very largely confined to the relief of the aged and infirm, and destitute women with children. Moreover, in England there is indoor accommodation available for the poor throughout the country.

We have deemed it, however, fitting, in view of the increasing number of dependents on outdoor relief in this Colony, to refer to these expressions of authoritative opinion on this important subject, with a view to showing the dangers which would attend an undesirable extension of outdoor relief here. That these dangers have already in some cases become apparent is evident from the statement of the Manager of the Benevolent Asylum that he has "no doubt that outdoor relief is demoralising to a large extent."

Maxted, 1055.

In face of such testimony as is given above it must be admitted that the dispensation of outdoor relief may frequently be attended with evil results, and the most stringent supervision is necessary in its administration. It is not, however, without arguments in its favour, inasmuch as it leaves the recipients their liberty and enables homes to be kept together which would otherwise be broken up. In any case, the absence of other provision renders it necessary to continue outdoor relief to certain sections of the poor.

Outdoor Medical Attendance.

Maxted, 724.

Medical attendance on the sick poor, other than in maternity cases, does not come within the scope and aim of the Benevolent Society; and the officers assert that they have occasionally had difficulty in obtaining the immediate aid of a Government medical man when required. This aid when obtained, however, we are informed, only extends to formal examination of the patient, and the granting of an order for admission to a hospital, if the case is one for hospital treatment.

The members of the medical profession already render very valuable gratuitous services to the poor, and the calls on their attention must be considerable in this direction; but, from the want of a recognised authority to which the sick poor may appeal for medical aid in their own homes, much hardship is no doubt at times occasioned.

This might be prevented if the services of a Government medical officer were at disposal for attendance on the destitute sick who were unable for any reason to obtain hospital treatment as indoor or outdoor patients, or arrangements might be made by the Benevolent Society to employ a medical man for the purpose. Whatever arrangements are made, it might perhaps be found desirable for the doctor to attend at the Asylum during certain hours on the day the relief is distributed.

LYING-IN HOSPITAL AND ASYLUM FOR WOMEN AND CHILDREN.

In the first part of this Report we have referred to the circumstances which led to the establishment of the Asylum and to the subsequent limitation of its operations to the admission of women for lying-in purposes and the reception of destitute women and children. We have now to deal more particularly with the management of the Institution, the extent of its work, and the future performance of its functions.

Management and Extent of Operations.

The Asylum occupies the peculiar position of being entirely maintained out of the public funds, without the Government exercising any control whatever in its administration. This arises from the arrangement entered into many years ago under which the Government agreed to bear the whole cost of maintaining the children and lying-in women, and to pay for such destitute women having children under 2 years of age as the Committee of the Society might deem it expedient to admit. From that time the Society has received from the Government allowances for the inmates of the Asylum at the following rates per annum :—£28 for a single woman, £26 for a married woman, and £14 per child over the age of two months. The reason for the distinction in the payments for married and single women is not apparent. There has been no adjustment at the end of each year to bring the Government payments into agreement with the actual cost of the Asylum, so that in some years the Institution may have gained, and in others lost by the arrangement. The Manager says he can “call to mind that some years ago the Society lost a very large amount because the allowances did not cover anything like the expenditure.” He has made an analysis of the last three years’ accounts, however, and finds that the Government payments during that period have covered the whole cost of the Institution. In the past ten years the payments have amounted to £41,779, or an average of about £4,178 a year. Seeing that the cost per head to the Government for women at the Newington Asylum amounted in the year ending 30th June, 1898, to only £10 10s. 10d., and that the allowances paid by the Government to the Benevolent Society for the maintenance of women is £28 and for children £14, the transfer, as we suggest later on, of such inmates to Newington as cannot be provided for by other means, would lead to a large saving of public money.

Maxted, 626.

Maxted, 820.

Maxted, 634,
817-20.

The internal work of the Asylum is managed by the Matron, who is assisted by a staff of nurses and inmate servants. Her duties are defined by the printed rules and do not come into conflict with those of the Manager, who exercises a general superintendence over the Institution. A Ladies’ Committee, the members of which are appointed by the Directors, go over the Asylum “not less than once a month.” They sit once a week, and hear applications for admission to the lying-in hospital, when admission is sought some time before confinement. Cases of destitution and urgency the Manager may admit on his own responsibility, but inmates thus received, as well as the others, appear before the Ladies’ Committee on leaving the Asylum. It is in evidence that applicants for admission sometimes find it a painful ordeal to state their position before the Ladies’ Committee, and we think the object sought might be just as well attained by leaving it to the Matron to ascertain from them whatever information is required.

Mrs. Graham,
1456.Mrs. Graham,
1458-65.Mrs. Graham,
1460-71.

There is an honorary staff of three medical officers, whose duties are similar, and who perform the work in rotation. Each one gives his services to the lying-in hospital for two months, and after an interval of a month attends the children’s division for a like period. Another month then elapses before the work is commenced *de novo*. This method of dividing the duties to a certain extent equalises the work; but it is adopted, we are informed, principally to avoid the risk of conveying infection from one division to the other. We have referred in the beginning of this Report to the opinions expressed relative to the advantages of appointing a paid medical officer, and have also spoken of the improvement which has in recent years taken place in the nursing staff.

Crage,
2093-5.

One of the objects served by the lying-in hospital is the training of nurses in practical midwifery. A course of instruction is imparted to them by the medical officers, and, if proved proficient by the examinations which are conducted, a diploma is granted.

Clinical instruction is also given to medical students of the University. Fees are received by the Institution both from the nurses and the medical students, and the lecturer is paid an honorarium for his services.

For

Dr. Graham,
2280.

For many years the Benevolent Asylum was the only institution of its kind in Sydney, and it has consequently had a large and important work to perform. Some idea of the extent of its operations will be gathered from the following table, showing for the past ten years the number of women and children admitted to the Asylum, the number of women accouched, and the number of births:—

	Total number admitted.		No. of Women Accouched.	Births.
	Women.	Children.		
1888	365	454	281	263
1889	339	511	252	241
1890	353	497	279	259
1891	451	501	324	303
1892	493	616	339	319
1893	519	661	*407	378
1894	484	534	†389	370
1895	519	330	385	356
1896	507	356	354	323
1897	414	568	302	282

The proportion of single to married women accouched in the whole period covered by the table is about 4 to 1.

According to a return furnished by the Society, the number of beds in the Asylum is 189, 55 of which are in the lying-in wards; the daily average number of inmates in 1896 was—women 117, and children (including births in the Asylum) 107. The number in residence on the 31st December last was—women 88, and children 116.

It will be observed that the number of lying-in patients diminished in 1896 and 1897, and the Manager of the Asylum stated, in July last, that the work of that division had decreased wonderfully during the last twelve or eighteen months. There had been a reduction in the number of births from twenty-five or thirty a month to fifteen or eighteen. This he thought was due to the establishment of other lying-in homes in Sydney.

Maxted,
673-5.

Admission is given to all classes of women for lying-in without distinction as to character, and readmission is granted as often as it may be applied for if the applicant "has nowhere else to go to." It is stated that very few of the inmates have relatives who could support them, and they come to the Asylum in absolute poverty.

Maxted,
794, 872-4.

Although many of the inmates come from the country, it is thought the bulk of them belong to Sydney. A few—the Matron thinks from 10 to 13 a year—are drawn from the other Colonies, but these she finds are generally provided with means to go back.

Maxted,
836-7.
Mrs. Graham,
1496-9.

It appears to be a rule not to admit inmates earlier than one month before confinement, and to discharge them, with the medical officer's sanction, fourteen days afterwards if they have a suitable home to go to, but, as a consequence of their destitute and friendless condition, the Asylum becomes, in several instances, a place of refuge for them for several months before and after confinement, and a considerable difficulty the Society has to contend with is to secure their removal without inflicting hardship. This might easily be done, it is said, if the women were allowed to leave without their children; but we quite agree with the opinion expressed by the Manager that such a step would be most undesirable.

Mrs. Graham,
1385-90, 1561.

Maxted,
884-9.

We are of opinion that women for whom no other provision can be made should be handed over, with their infants, within 30 days of confinement (if certified by the medical officer to be fit for removal) to the Department of Charities for transfer to Newington Asylum, where suitable arrangements can easily be made for their reception, and where, as already pointed out, the cost to the Government for maintaining women in the year ending 30 June, 1898, did not exceed £10 10s. 10d., as against £28 per annum in the case of the Benevolent Asylum. The children should as early as is advisable be boarded out by the State Children Relief Board.

Some of the most useful of the inmates are employed in the Asylum as wards-women and in positions to which some degree of responsibility attaches, and they are

* Includes 71 women accouched at a branch home.

† Includes 59 women accouched at branch homes.

are paid small gratuities for their services. The others who are capable of working are required to perform the rougher domestic duties of the Institution without payment, but their time is employed only to a limited extent. There are now some fifteen or twenty able-bodied women, practically unemployed, who have been maintained in the Asylum with their children "for a very long time." The Manager says these women make not the slightest effort of their own to get away.—"I muster them every month, ask if they have any friends, and tell them they must go out, but they show a kind of indifference, never saying a word. The same thing occurs the next month, and so it goes on."

Mrs. Graham,
1409-1415.

Masted,
918-948.

Masted, 951.

The inmates are allowed at times to go out and seek work, but whether when out they do or do not make any attempt to obtain employment really rests with themselves.

Mrs. Graham,
1492-5.

The Manager states: "Our only method is to advertize and coax them to go to some of their friends." "I telephoned to all the laundries some years ago to see if they could give employment to women with babies, but with no result."

Masted, 657,
661.

The Manager of the Asylum, who has recently been in Brisbane, gave the following evidence of what is done by institutions in that city for lying-in women:—

890. Do you not think that the same state of things might be brought about if the hospital were simply a lying-in hospital, and a woman had to go out with her child at the end of a reasonable time; she would then find a home in some other institution, and they would probably have greater facilities than you have for obtaining employment for her? The other institutions are all so crowded that they cannot take them. In Brisbane it could be done.

891. Do you not think that the chances in those institutions of obtaining employment for these women will be greater than any that you possess? Far greater.

892. Do you think that if you had a properly-organised employment agency it would facilitate the finding of employment? A kind of Labour Bureau for that particular class of work?

893. Yes? It would if it could be brought about.

894. Could you not make use of the existing Labour Bureau? No; they do not deal with that class of cases. A few months ago we advertised in one of the Bathurst papers, thinking that the farmers might want girls. We advertised for employment for unmarried women with infants at a nominal wage, but we got no response.

895. Then, whilst the present system is not perfection, you really have nothing better to propose? I cannot propose anything.

796. Have you had any experience of other institutions of the same kind elsewhere? I have.

797. What difference have you seen in reference to the management? There is a great difference in regard to the way the work is carried out in this respect. In Brisbane, at the Lady Bowen Hospital, which receives as many confinement cases as the Benevolent Asylum does, they take absolute labour cases. They cannot go and wait a long period before confinement, nor stay a long period afterwards. They are simply there for their actual confinement. We found that we could not manage that in Sydney. In Brisbane, where there is a small population, the Rescue Work Societies, the Salvation Army, and the Infants' Home receive these women first of all at the first stage, and as the period of labour approaches they are sent on to the Lady Bowen Lying-in Hospital, and each Rescue Society takes its own subjects with the infant back again. It struck me that if that could be managed in Sydney a great expense would be saved to the Government, because the Government is really the life of the Benevolent Society.

798. That would involve that there must be some organisation to keep the woman until she was very near confinement, then send her to the hospital and to care for her as soon as she was fit to be moved again? Yes; then in Brisbane the Government have expense in another way, because the places where they do this work are subsidised by the Government. They get a lump sum.

799. Do you see much advantage in that if a woman has to be maintained so many days before confinement and so many weeks after—is there any advantage in her being maintained outside instead of inside the lying-in home; suppose you applied the system to Sydney;—can the women not be maintained for a few days before confinement and a few weeks after as cheaply in the lying-in home as scattered all over the place? I do not know that they could be. In our case the Government would absolutely keep the woman at the lying-in hospital, but if the Salvation Army had a patient and took her away when she could be removed from the lying-in hospital, the Government would be greatly relieved in a case of that kind.

800. Some of those institutions are partly self-supporting? They are. The Infants' Home, Brisbane, I was speaking of, where they receive cases before confinement, has a Government subsidy of only £200. The work of the inmates amounts to nearly £800, and the public subscriptions to only £8.

801. So that the women may be employed up to a certain time? Yes; if you can get the work.

802. Could you do that in the Benevolent Asylum? No; with the mixed character of our work it would be impossible there. In our case so much labour is lost. Suppose a woman in good health has a child, and she is capable of earning something. In Brisbane she is made to do so, and they have obtained first-class results. Very little is obtained by public subscription. The place is supported by hard work.

The question has arisen as to the propriety of paying, for service rendered, gratuities to certain women retained in the Asylum for long periods at the Government cost. Some of these inmates have been maintained in the Institution with their children for several years. It is claimed that they are particularly suitable for

Masted,
917-21,
932-42.

the

Mrs. Graham 1534-47. the work performed, and that if the practice were not permitted it would be necessary to engage ordinary paid servants at a much greater cost. While we think gratuities may in a few instances be allowed with advantage for short periods, the custom tends to a relaxation of effort on the part of the recipients to obtain employment elsewhere. To keep inmates employed in the Asylum for a longer period than it is possible to secure situations for them outside does not appear business-like, especially when there is a constant flow of fresh inmate labour available which should be put to useful service.

On the 30th April last there were twenty-eight inmates receiving weekly gratuities amounting in all to £3 16s. 6d. The four highest payments were respectively 8s., 7s., 7s., and 5s., these higher rates being paid for service involving some responsibility. Except in the case of two of these twenty-eight inmates, the Society was receiving the usual Government allowances for their maintenance, and also for that of their children, numbering twenty-five.

Maxted, 956-66. In making inquiries regarding the practice of granting gratuities, our attention was specially drawn to a case where a child of one of the inmates who had been appointed to the staff of the Institution had been maintained at the cost of the Government since its birth, some nine years ago. The inmate in question was also paid for by the Government for some years whilst she was in receipt of a gratuity, and before her appointment to the staff. We certainly think the cost of the maintenance of this child was no proper charge against either the Government or the Institution after the mother was in a position to support it from her salary. The same view was taken by the Government, and the amount paid for the child since 1891 was recently deducted from moneys due to the Society.

Hanson, 1987-1994.

Outdoor Midwifery Cases.

Mxated, 839-40, 845. Mrs. Graham, 1342-5. Provision has recently been made for attending women in their own homes in cases of confinement. A qualified midwife is sent to the patient, accompanied by a pupil nurse, or student, and the nursing extends over a period of ten days. It is said that the women who have been attended have been mostly in extreme destitution, but in spite of their poverty they have objected to go into the Asylum for treatment. Occasionally bed-clothing and also nourishing food have to be given by the Institution. Only from six to eight women a year have availed themselves of this provision, and the number is not increasing. This is no doubt due to the extensive work carried on in the same direction by the Women's Hospital, Crown-street.

Admission of Destitute Women.

Mxated, 1211-19. In addition to lying-in cases, admission is occasionally given to destitute women with children—in several instances on the order of the Director of Government Asylums. Women without children are not received, except in cases of emergency, and then only for one night, as accommodation is provided for them elsewhere. If there are two or more children, and amongst them an infant, the elder children are boarded-out, and the mother is allowed to stay in the Asylum with her youngest child under the same conditions as those which apply to the ordinary inmates.

Reception of Children.

For many years the Benevolent Asylum has been a temporary receiving-house for large numbers of destitute children thrown upon the care of the State. In the past, we understand, it was the practice to transfer the children to the Randwick Asylum, where they were maintained at the expense of the Government, but with the innovation of the boarding-out system, this practice was discontinued, and the children after a period of residence at the Benevolent Asylum are now sent to Ormond House, Paddington, the receiving depôt of the State Children Relief Board.

Mxated, 1204-10, 1224-35.

Children are admitted to the Asylum, as a rule, up to the age of about 12 years. Most of them are received on the order of the Chief Boarding-out Officer, and they remain at the cost of the Government for about two months on an average, except in the case of sickly children, who are retained longer.

Notification is sent each month to the State Children Relief Department that a certain number of children are ready to be boarded-out, and these children are

are

are presented to the Department's officer for inspection. The selection of the children thus rests with the Asylum officers. One member of the medical staff states that the medical officers are required to see the children prior to being boarded-out, and "sometimes there are six, sometimes a dozen, to examine." The Manager says there may be as many as fifty at any one time of an age to be sent to the State Children Relief Board. Why so large a number should be kept at the Asylum is not apparent, when it is in evidence that there are many more private homes available for the reception of State children than are required.

In the opinion of the Matron it is undesirable to have the children there, as they cannot be isolated from the women. She would rather be without the children, and does not think it any necessary part of the Society's work to receive them at all.

Apart from the question of the unsuitability of the Asylum premises for children, with which we shall deal later on, we do not see that there is any necessity for the continuance of the present arrangement, which grew up under totally different conditions to those now prevailing. The State Children Relief Board have their own receiving depôt for children, and we are of opinion that it would be preferable to make provision at Ormond House for the direct reception of healthy children, as is done in some instances now, instead of first sending them to the Benevolent Asylum, and allowing them to remain there for an unnecessarily long period.

With regard to the sickly children, the medical evidence is to the effect that the Asylum is a most unsuitable place for them in every respect, and that they should be removed as early as possible to the Government Cottage Homes at Mittagong. We agree that the asylum is unsuitable, and, further, that the children should be sent to Mittagong, or to some other suitable homes.

Unsuitability of Premises and Removal of Lying-in Hospital.

A fact which could not fail to impress itself upon our attention at the outset of our inquiries is the unsuitability of the Asylum premises for the purposes they are required to serve. The defects are recognised by the Society's officers to be serious, and they have approached the Government on several occasions with a view to obtaining buildings elsewhere in which to carry on their operations. Sir Arthur Renwick points out that the matter had been impressed upon the Government "by letters, deputations, and otherwise. In the time of Sir Henry Parkes it was postponed in consequence of a scheme that he (Sir Henry) had for erecting large public buildings in prominent parts of the city, and in the case of Sir Alexander Stuart, because they were going to bring the railway into the city." At present he does not know why it is postponed.

The evidence in support of the unsuitability of the premises is somewhat voluminous, and the witnesses are practically unanimous in their objections, in respect to the age of the buildings; the want of facilities for the proper classification of the inmates; and the evils arising from carrying on all the branches of the Society's work in close association one with the other.

This evidence is so definite in character, and has so large a bearing on some of the recommendations contained in this Report, that we give here a summary of the statements made by the principal witnesses.

Dr. Foreman, one of the honorary medical officers, says the building is "in every sense most unsuitable." "It is in no way up to modern requirements." "It is only with the greatest care, and it reflects very greatly to the credit of the Institution, especially of the nursing, that outbreaks of puerperal fever have not been more frequent." "It is only with the greatest difficulty in the world that it is possible to avoid it," and he feels sure that it might at any time break out again. He thinks the place is insanitary. "The building seems to be saturated, as we often find old buildings, with bacteria."

With respect to the association of the lying-in ward with the other departments of the Asylum, he says there is a possibility, particularly in the case of children, of the introduction of infectious diseases, and the attendants must of necessity circulate between the children and the women. As an instance of the danger of infection, several nurses are down with measles, and there are over twenty cases amongst the children.

Foreman,
2243-4.

He says, "this hotch-potch higgledy-piggledy system that we have here is the most awful that it is possible for a medical man to conceive," and he hopes some means will be brought about to have a proper lying-in place devoted entirely to its proper uses.

Foreman,
2202.

He thinks it a most unpardonable thing, and against all ideas of modern medicine, that the inmates of the lying-in division should be exposed to the "very great danger" of infection from the attendance at the Asylum of the outdoor relief recipients.

Foreman,
2226-8.

Classification of the lying-in women is very desirable, but it is not possible under present circumstances.

Foreman,
2235, 2242.

The Asylum is a most unsuitable building for children in every respect, and it is a fault of the present system that the women inmates are in sight of the children.

Graham,
2280.

Dr. Graham, another of the medical officers, informs us that "to carry on delicate scientific work like midwifery, in an institution that also houses a large number of destitute women and children, and around which hundreds of unwashed people gather to receive doles of food, is an anomaly, and a violation of the canons of medical and surgical science"; and again "It is utterly foreign to all conceptions of medical propriety to have dirty women and dirty children coming into a building which approximates a department where the very presence of dirt or contagious matter means death to these (lying-in) women." "The fact that we have had no epidemic recently has been due to our extra vigilance."

Graham,
2344.

Crago,
2097-8.

Dr. Crago, also a member of the honorary medical staff, does not approve of the association of the various departments in the same building. He says that "where so many people are constantly coming round it is impossible to keep away infection."

Crago,
2101.

Three or four years ago the whole medical staff considered the matter and recommended that the women's hospital should be distinct from the other parts of the Institution and on a separate lot of ground. The present old buildings are unsuitable and out of date, and patching them up would be of no use.

Crago,
2106.

There is some slight risk of infection being introduced by children, but he does not know that it is very real, because when they get inside the building they are kept separate—it is really only when they are going through the hall that there is any risk.

Crago,
2131-2.

He does not think it desirable to retain sickly children at the Asylum for some months, but he believes that practically as soon as it is safe they are sent away to the cottage homes.

Crago,
2136-9.

It seems almost impossible to classify the lying-in women in the present buildings, but it would be a desirable thing, and arrangements should be made for it in the erection of any new hospital.

Renwick,
1927.

Sir Arthur Renwick, the President of the Society, says, "It is impossible in the building that we have there now to carry out the work in what we should consider an adequate or satisfactory way. The buildings are old; they never were adapted for the purposes to which they are now applied; and if we had proper buildings and proper arrangements the poor could be attended to more satisfactorily than they are at present."

The evidence of this witness in regard to the sickly children maintained at the Asylum we have already referred to.

Penfold,
256-7,
339.

The Hon. Secretary of the Society says the buildings are totally unfit for the lying-in department. The inmates cannot be classified, and "there are some women there whose characters are unexceptionable, and they are obliged to herd with the lowest of the low, and the language of some of the women is something disgusting."

Penfold,
343-8.

The various departments of the Institution should be kept separate, and it would be far better to have them thoroughly independent of each other.

Penfold,
374.

For the last fifteen years a deputation had waited upon each Premier in office relative to the unsuitability of the place for a lying-in hospital.

The evidence of the Manager is to the same effect, and both he and the Matron point out particularly that it is very desirable to have the children's quarters isolated from those of the women.

No more emphatic evidence than the foregoing could be adduced to show the unsuitability of the present buildings, and the necessity for the separation of the various

various divisions of the Asylum. Different views are, however, expressed as to whether or not the control of the whole of the operations now carried on by the Society should, under altered and improved conditions, be retained by the Society.

Dr. Foreman says that what is wanted badly in a city of this size and character is a lying-in hospital pure and simple, with all other things dissociated in every way. The patients should be received just a little before confinement, and when they have recovered they should be transferred to some other place. Foreman,
2242.

He is of opinion that the Government should assume the responsibility of the management of such an institution, and that the business should be conducted on the lines of the Government hospital at Little Bay, or of the Sydney and Prince Alfred Hospitals. He advocates the amalgamation by this means of all the lying-in homes in Sydney. Foreman,
2245-52.
Foreman,
2255-8.

Dr. Graham has "no hesitation in saying that the midwifery portion should not be at the Benevolent Asylum, and should not be carried on by them" (*i.e.*, the Directors). The impression that forced itself upon him was, "that while the Board of Directors . . . could be of great service in managing the affairs of an Asylum for destitute people, they could not appreciate the difference in the management of a highly scientific department like a midwifery hospital, for the subjects were wide apart, and from the point of view of management, incongruous." Graham,
2280.

Dr. Graham also says that "In the past, whilst this work has been carried on largely by the Benevolent Asylum, there has really been no intelligent effort made to guide it in a scientific way, the Society have been so burdened with the tremendous work of providing for the destitute women and children, that the maternity portion seems a kind of something thrown in, which they simply had to look after. They have not risen to a conception of its scientific importance. It has been allowed to drag along as best it could. The fact that for years they never had any charts and took no records, and allowed pregnant women to take up the role of nurses, proves that they did not attach any great scientific importance to the work, neither could they, seeing that this business was taken up in connection with the work of affording relief to the destitute on a large scale." Graham,
2283.

The proposal of the President, which is endorsed by other officers of the Society, is that some such site as that of Ultimo House should be secured, and that provision should be made for carrying on the whole of the Society's present work in three departments kept entirely separate. There should be (1) a maternity hospital; (2) an outdoor relief department; and (3) a receiving house for women and children, and for women who must be retained a certain time after their confinement. This scheme, which provides for a continuation of the present administration, Sir Arthur Renwick explains, has been drawn up very fully and submitted to the Government. In regard to the lying-in hospital, it is contended that the Benevolent Society has the machinery already in existence for carrying on the work, and that "it is done at a much less expenditure to the State by the Society than it would be if a separate institution were started by some other people." Renwick,
1927.

This contention, however, is hardly tenable seeing that the whole cost of the lying-in division of the Benevolent Asylum is borne by the Government, and that there is already established in the city an institution, conducted solely as a hospital for women, which has been carried on wholly by means of public subscriptions and nurses' fees, the only assistance received from the Government having been used to purchase furniture and surgical instruments. This institution, in the twelve months ending June last, treated 229 indoor patients (120 of which were obstetrical cases) and 1,177 women were attended in the out-door department.

We think that it is inadvisable for any charitable institution to carry on a variety of operations, any one of which, to be properly administered, is of sufficient importance to demand the whole of such attention as can be given to it by an honorary governing body. The administration of a women's hospital is of a character so different to that of an ordinary benevolent institution that, while we in no way wish to impugn the Benevolent Society's management, we are of opinion that the foundation of a distinct institution will best meet the wants of the community.

During the course of our inquiries the urgency of immediate steps being taken in this direction so impressed itself upon us that we felt impelled to approach the Chief Secretary with a view to obtaining his consent to our taking a course of action that we considered lay somewhat beyond the scope of our commission.

We subsequently addressed to the Minister the following letter embodying a proposal, the adoption of which we have here to strongly recommend :—

Sir, Chief Secretary's Office, Sydney, 11 October, 1898.
As the Royal Commission on Charities, we have been for some time engaged in an investigation into the operations of the Benevolent Society of New South Wales.

The plan and objects of this Society are laid down in its By-law No. 1 as follows :—

- 1st. The object of its original foundation, viz., to relieve the poor, the distressed, and the aged, by affording them assistance in the form of provisions, &c., and small sums of money to assist in payment of rent, &c.
- 2nd. As a receiving asylum for homeless and deserted children and foundlings, and children awaiting removal to other asylums.
- 3rd. As a receiving hospital for sickly infants, with mothers who cannot be received in the infirmary or other hospitals, or who may be suffering from the diseases of women.
- 4th. As a lying-in hospital.
- 5th. As a training institution for midwives and nurses.
- 6th. As a school for practical instruction in midwifery in affiliation with the University of Sydney.
- 7th. Department for treatment of midwifery cases of poor women in their own homes.

A great mass of evidence has been taken regarding this Society's work, upon which the formal report of the Commission will be made in due course to His Excellency the Governor. But our inquiries in reference to one particular branch—the Lying-in Hospital—forced us to certain conclusions which we deemed it advisable to bring at once under your notice, and the President of the Commission waited upon you recently with that object.

The Lying-in Hospital has accomplished excellent work, but for some years past it has been recognised by the Society's officials that the premises occupied are unsuitable for a continuance of their work, and they have approached the Government on several occasions with the object of securing more suitable premises elsewhere in which to carry on their various operations. They have expressed an opinion to the same effect under examination by the Commission, and from our own observations we see the urgent necessity that exists for the removal, particularly, of the lying-in department. In support of this we have the evidence of Sir Arthur Kenwick, the President of the Society, and of Doctors Foreman, Graham, and Crago, the medical officers, all of whom affirm that the present building is unfit for a maternity hospital.

The building, which was not designed for the purposes of a hospital, is very old; it does not admit of the classification of the inmates—a very essential feature—and evidence has been given to show that there is danger of infection from the fact that the hospital occupies a portion of the Asylum premises.

The necessity for this change was impressed upon a Medical Board, which was appointed by the Government in 1894 to inquire into all matters relating to the Benevolent Asylum, at a time when an outbreak of puerperal fever occurred at the institution. This Board consisted of Professor T. P. Anderson Stuart, then Medical Adviser to the Government, Drs. Mackellar, MacLaurin, and Foreman, and their report, which is attached, stated as follows :—

“The present Benevolent Asylum building is so old and dilapidated that it would be impossible to repair it so as to fit it for carrying on the work of the Society without a very large expenditure of money. Moreover, the site upon which it stands is now too valuable to be retained for such purpose, and thus it is necessary to find other premises on a less valuable site.”

With regard to the Maternity Hospital, they recommended that the School of Industry in Darlinghurst Road should, if possible, be secured for that purpose.

Prior to seeing this recommendation we had, as a result of inquiries and of a visit to the Darlinghurst Institution, formed the same conclusion; and it was with a view to laying before the Government an arrangement by which this end might be attained, that the President of the Commission, at his interview with you, asked and obtained your authority to confer with the Trustees of the School of Industry on the matter.

We find that the School of Industry property is vested in Trustees under Act 34 Vic., No. 5, for the sole purposes of that Institution, the right being reserved to the Governor of the removal and appointment of Trustees as may be required. The site now occupied was given by the Government in exchange for land fronting Macquarie-street, and an amount of £7,000, as provided by the aforesaid Act, was granted for expenditure upon buildings and offices in the years 1872-3-4. The only sum since granted by the Government to the Institution was £160, in 1886, for paving the frontages of the building and ground.

In the Report of the Board just referred to it is stated “the present School of Industry building would form “the administration building” of the proposed hospital, “and would also contain certain wards. The necessary additional ward accommodation could be easily built adjacent to the existing building, for the site—about 2 acres—is ample. The position is central and convenient of access from all parts of the city. It is high and healthy, and surrounded with good roads. At one extremity of the site is a public park, and at the other a church. In this way, the position is admirable, being easy of access and well isolated. These advantages are of no special benefit to the School, which might therefore be removed elsewhere, while on the other hand they are very special advantages for a maternity hospital.”

The evidence of Dr. Graham, who has paid special attention to the matter, is entirely in accord with this view. He suggests a similar arrangement of buildings, which, he states, would give ample opportunities for classification of the inmates in the most approved way.

As to the question of the cost of the proposed buildings, and the accommodation to be provided, we quote here the following evidence of Dr. Graham on these points, as we think the matter is of sufficient public importance to warrant our doing so at this stage:—

When we were at your Institute, you showed us that you had given considerable attention to the question of the cost of the proposed building to be used for a maternity hospital? Yes.

Could you give us a rough idea of what it would cost to add two wings to the School of Industry? I think a sum of £5,000 should do it.

Would that be sufficient to build the two wings, and put them in proper order? Yes; the type of building that is wanted for a work of that kind has to be very simple. It should be a building which you would look forward to demolishing. The first principle of a women's hospital is that it must not be too old, and it must be easily demolished, because the germs of putrefaction, puerperal germs, if allowed to get hold in women's hospitals, will play havoc. In Berlin, in a women's hospital which had got too old, 300 women were carried off.

How many beds should be provided to start the thing in a proper way? From 60 to 100. Sixty should be ample for present needs, and there should be a portion set apart for special cases.

There should be thirty beds in each wing? Yes; provided that you carry on your external department. That would be essential. If you did not do that you would have these women flocking to the hospital.

Do you mean that sixty should be accommodated in the wings, and a certain number in the central part of the building? Yes; I think the present building as it stands is a little too big for administration. Some portion could be utilised for classification purposes.

Dr. Graham's estimate of the cost applies to the new wings only, and we think the amount which would be required to effect the necessary alterations to the present buildings, and thoroughly equip the hospital, would be largely in excess of that. Even, however, if the total expenditure were double the sum mentioned, the cost must be considered a moderate one for the advantages to be derived.

We have communicated with the Trustees of the School of Industry, and ascertain that they are willing to negotiate for the transfer of the property conditionally on their being placed in a position which will enable them satisfactorily to continue the operations contemplated by the Trust. With this object in view they are prepared to hand the property over to the Government for the sum of £14,000, being somewhat under the amount at which the property was valued by Messrs. Richardson and Wrench in February, 1896, a copy of whose valuation we attach hereto.

As a preliminary step towards the end sought, we would recommend that the opinion of the Crown Solicitor be obtained on the two following points:—

1. Whether the School of Industry property can be resumed by the Government under the provisions of sections 18 and 19 of Act 51 Vic. No. 37.
2. The legal position of the several parties interested, viz., the Government, the Trustees of the School of Industry, and the Benevolent Society.

If the answer to No. 1 be in the affirmative, and the Crown Solicitor advises that there is no legal obstacle to carrying out the proposal, we have the honor, after very careful thought in this matter, to recommend the resumption at a price to be first agreed upon with the Trustees. We consider that the sum of £13,000 would be a fair consideration for the property, and that this amount should be the total compensation paid.

With regard to the management of the proposed new institution, the President and the Honorary Secretary of the Benevolent Society favour the continuance of the lying-in hospital under the control of the Society. Dr. Foreman says in evidence that "what is wanted badly in a city of this size and character is a lying-in home pure and simple, with all other things dissociated in every way." He is of opinion it should be under Government control with a staff of honorary medical men.

Dr. Graham expresses the view that it should be a distinct institution supported, as far as possible, by the public.

We learn from the Trustees that in the event of the removal of the School they would desire a position in one of the suburbs, and we would recommend an endeavour being made to obtain the property now held by the Institution for the blind at Strathfield, which, we believe, would be most suitable for the School, and which might be handed to the Trustees in place of part of the monetary consideration named.

In respect to the Strathfield Institution, we have already in a recent report strongly recommended, in the public interest, a change that would lead to the vacation of the building, which is at present occupied by a few blind women. A copy of that recommendation is attached. The failure, however, of obtaining a successful issue to negotiations in the direction of securing that property should not, we are of opinion, hinder the proposal for acquiring the School of Industry property for the special object in view.

The land belonging to the Institution at Strathfield was purchased for £2,150, £1,650 of which was contributed by the Government. The buildings and improvements cost about £9,500. As shown in our Report on this Institution, the Government have been very large contributors to it.

The total expenditure from 1887 to 1897, inclusive, was £28,112, including cost of land and building, and the Government contributions in the same period amounted to £12,189.

We append, at foot hereof, a list of the papers which accompany this letter.

The Honorable James N. Brunker, M.P.,
Chief Secretary, &c., &c., &c.

We have, &c.,
GEO. A. WILSON, President.
J. BARLING.
JAMES POWELL.

1. Report of the Board appointed to advise the Chief Secretary in the matter of the Benevolent Asylum, Sydney, 24 January, 1894.
2. Copy of the "Sydney Female School of Industry Removal Act."
3. Summary of Conditions of Deed of Grant, referred to in section 2 of above Act.
4. Copy of valuation of School of Industry property by Messrs. Richardson and Wrench.
5. Recommendation of Royal Commission on Public Charities in Report of 29 June, 1898, regarding the Institution for the Blind at Strathfield.

1. Report of the Board appointed to advise the Chief Secretary in the matter of the Benevolent Asylum, Sydney.

Board of Health Offices, 127, Macquarie-street, Sydney,
24 January, 1894.

Sir,

We have the honor to report as follows in accordance with your minute of the 13th November last, which directed inquiry into the establishment, by the Directors of the Benevolent Society, of a temporary lying-in hospital; and with your further minute of the 15th idem, which required examination "into all matters relating to the Benevolent Asylum, especially in regard to its future work."

The Board has held six meetings, and has had the advantage of receiving information from the principal persons connected with the following institutions, viz.:—The Benevolent Asylum, the School of Industry, the Randwick Asylum, and the Shaftesbury Reformatory, all of which institutions it visited and inspected. The Board also received valuable information from the Director of Government Asylums for the Infirm and Destitute, and Boarding-out Officer, Mr. Sydney Maxted.

The first duty that fell upon the Board was to inspect and approve of premises for a Lying-in Establishment in connection with the Benevolent Asylum. The Board inspected and approved of "Floodgate," in Botany-street, Moore Park, as a temporary lying-in house, and the premises were put into order and fitted for lying-in cases, under the advice of the Chief Medical Inspector of the Board of Health. These premises are now in occupation, and are working satisfactorily. But as this is only a temporary arrangement, it was necessary at once to look ahead, and to provide permanent accommodation for the three departments into which the work of the Benevolent Society may be divided.

The present Benevolent Asylum building is so old and dilapidated that it would be impossible to repair it so as to fit it for carrying on the work of the Society without a very large expenditure of money. Moreover, the site upon which it stands is now too valuable to be retained for such purposes, and thus it is necessary to find other premises on a less valuable site.

The Benevolent Asylum and grounds, though still vested in the Government, nevertheless have been so long occupied by the Benevolent Society, that probably the Government, on resuming the site, would favourably regard somewhat generous treatment of the Society. On the other hand, the facts that the whole was, and is, the property of the Government; that the Benevolent Society can neither use it for any other purposes, nor let nor sell any part of it; that the Society retained the proceeds of the sale, in 1854, of certain lands which had been given to it by the Government; that 47 acres of land at Randwick have been reserved for the Society by the Government, and that from three-fourths to nine-tenths of the annual income of the Society is derived, directly or indirectly, from the Government, would seem to warrant a forbearing attitude on the part of the Directors of the Benevolent Society as against the Government.

In its endeavours to advise on the best arrangements for the accommodation of the different departments of the Benevolent Society's work, the Board has been anxious to, as far as possible, utilise existing buildings, and with the exception of certain comparatively unimportant extensions, chiefly by way of providing increased dormitory or ward accommodation at three existing institutions, no expenditure on building is recommended by the Board.

The work of the Benevolent Society, as at present carried on, may be divided into three parts:—1st—The Lying-in or Maternity Hospital; 2nd—The care of about 150 children; 3rd—Outdoor Relief.

With regard to the Maternity Hospital, the Board recommends that the School of Industry in Darlinghurst should, if possible, be secured for that purpose. The present School of Industry building would form the Administration building, and would also contain certain wards. The necessary additional ward accommodation could be easily built adjacent to the existing building, for the site—about 2 acres—is ample. The position is central, and convenient of access from all parts of the city. It is high and healthy, and surrounded with good roads. At one extremity of the site is a public park, and at the other a church. In this way, therefore, the position is admirable, being easy of access, and well isolated. These advantages are of no special benefit to the School, which might therefore be removed elsewhere, while, on the other hand, they are very special advantages for a Maternity Hospital. The Board therefore recommends that, if possible, an arrangement be made with the authorities of the School of Industry, by which the School may be removed to the Randwick Asylum Reserve, where it might occupy the Reception-house, which has been empty for the last eight years. This building is well adapted to the needs of the School of Industry, and without additions would accommodate thirty children. But as the number for whom accommodation would be needed is fifty, an additional dormitory might be built at comparatively small outlay. This house faces a main road, at one end of which, some two minutes' walk distant, is the tramway. A piece of land between the house and the road frontage might be added to the present enclosure, so as to make an area of about 5 or 6 acres. The site is in every way well adapted to the work of the School of Industry, for it is easy of access, in a secluded position, and in a healthy locality. If any consideration should be required by the Directors of the Randwick Asylum for this piece of land with the house, such consideration, together with the cost of erecting the additional dormitory at the Reception-house, would probably be much less than what would be reasonably allowed for the Darlinghurst site of the School of Industry.

CHILDREN'S DEPARTMENT

There is a steady population in the present Benevolent Asylum of about 150 children, ranging from the new-born to 12 years of age. The average residence in the Asylum of an individual child is one month. This number of 150 includes children born in the institution and those taken to it by the police and otherwise. The larger number (about 100) merely pass through the Asylum on their way to be boarded out by the State Children's Relief Board. This department of the Benevolent Society is thus a sort of reception-house to the State Children's Relief Board, and there is no reason why the latter department should not itself conduct the work, all the more since the Government already pays the Benevolent Society for the maintenance of these children. This it could do most readily at the Shaftesbury Reformatory, which the Board understands will be emptied in a week or two by the transfer of its present inmates to the Industrial School at Parramatta. The accommodation of the Shaftesbury is for about 100 so that it would just receive the requisite number of children. The site is admirably adapted to the purpose, and the management and furnishings are practically identical with what would be required for its proposed work. In this way, therefore, this excellent institution would be profitably and immediately utilised.

Of

Of the 150 children, some thirty are those naturally with their mothers in the lying-in house, and for whom, therefore, no special accommodation is required. The remaining twenty are the waifs and foundlings, who would at first require to be accommodated in some central place in the city, where the out-door relief department could also be carried on.

OUTDOOR RELIEF DEPARTMENT.

This department could quite well be carried on in the same building as that in which the twenty foundlings, &c., would be lodged, and this central depôt would thus be a combined receiving-house for children and a depôt for the distribution of relief. It would of necessity be in one of the poorer districts of the city, and could be nowhere better placed than near the present Benevolent Asylum.

Some compensation would doubtless be agreed to by the Government to be given to the Benevolent Society, as a set-off against its occupancy of the present house and site, and to enable it to make the necessary additions to the School of Industry, and to secure the central depôt before referred to; but, on the other hand, there would be the value of the School of Industry and its site, which would be handed over to the Society to be deducted for such compensation paid to the Benevolent Society.

The Board is fully alive to the fact that objection may be taken to its recommendations on account of the difficulty which may be experienced in securing the consent, where necessary, of the several parties interested in the various recommendations. But, on the other hand, the Board has reason to believe that the proposals here put forward will in the main meet with the approval of these parties. It is true that various matters, especially the amounts of compensation to be given, will need careful adjustment, but in view of the need for economy now being felt in the public services, the Board relies on the sense of justice and patriotism of the several parties to aid as far as in them lies the realisation of a scheme which aims at promoting much needed accommodation for the poor and afflicted without adding appreciably to the burdens of the State.

We have, &c.,

T. P. ANDERSON STUART, M.D.,
Medical Adviser to the Government.
C. K. MACKELLAR, M.B.
H. N. MACLAURIN.
J. FOREMAN.

The Honorable the Chief Secretary.

2. An Act to authorize the Resumption for public purposes of the present site and premises of and to provide a more suitable site and premises for the Sydney Female School of Industry. [Assented to 5th December, 1870.]

WHEREAS by a deed of grant under the hand of Sir Charles Augustus Fitz Roy dated the third day of October one thousand eight hundred and fifty-four a portion of land containing by admeasurement one acre and seven perches more or less situate in the city of Sydney and more particularly described in Schedule A hereto was granted unto Charles Cowper John Campbell John Bayley Darvall and Thomas Ieely Esquires and to their heirs and assigns as a site for the Sydney Female School of Industry upon the trusts in the said deed of grant declared And whereas the said land is required by Government for public purposes and the site has become unsuitable and the buildings erected thereon are unfit for the requirements of the said School And whereas the said Trustees have for the considerations hereinafter described assented to the resumption by Her Majesty of the said site together with the buildings thereon and the appurtenances thereto Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—

1. So soon as the provisions of the next two succeeding sections hereof shall have been fulfilled the portion of land described in Schedule A hereto and all buildings erected thereon and all appurtenances thereto belonging shall be resumed by revested in and become the absolute property of Her Majesty Her Heirs and Successors free from all trusts conditions reservations rights-of-way and other easements to which the same may heretofore have been subject.

2. For the purpose of providing a suitable site for the Sydney Female School of Industry in lieu of the land so described as aforesaid and the buildings thereon it shall be lawful for the Governor with the advice of the Executive Council to grant unto the Trustees for the time being of the said Female School of Industry upon the like trusts conditions reservations and provisions as are declared by or contained in the deed of grant heretofore recited the portion of land described in Schedule B hereto together with all buildings and offices to be erected thereon in pursuance of the provisions of the next succeeding section.

3. And to provide for the erection on the said portion of land of suitable buildings and offices for the said School of Industry it shall be lawful for the Governor with the advice aforesaid to set apart out of the Consolidated Revenue Fund the sum of seven thousand pounds which shall be expended in the erection of such buildings and offices with their appurtenances.

4. All such buildings and offices with their appurtenances shall be constructed under the superintendence of and according to plans and specifications to be prepared by the Colonial Architect and approved by the Governor with the advice aforesaid.

5. Nothing in this Act contained shall affect any existing enactment relating to the Sydney Female School of Industry or the apprenticing of the inmates of such School.

6. This Act may be cited as the "Sydney Female School of Industry Removal Act."

SCHEDULE A.

Commencing at the northern junction of a lane nearly opposite Hunter-street with the eastern building line of Macquarie-street and bounded on the west by that building line bearing northerly 3 chains and 87 links to the outside of a circular wall on the north-west by the outside of that circular wall bearing north-easterly to the entrance of Government Domain On the north-east by a line dividing it from the Government Domain running along the outside of a wall and bearing east 32 degrees 30 minutes south 3 chains 50½ links and thence bearing south 23 degrees 30 minutes east 1 chain 47 links On the south by a line bearing west 3 degrees 30 minutes south 2 chains 18 links along the outside of wall On the east by the outside of a wall bearing south 3 degrees 30 minutes east 77 links to the lane aforesaid Again on the south by that lane bearing west 3 degrees 30 minutes south one chain 80½ links to its junction with Macquarie-street at the point of commencement and containing by admeasurement one acre and seven perches more or less.

SCHEDULE B.

Resumption of present site of Sydney Female School of Industry.

Government to grant new site for said school (See particulars attached.)

And to provide funds for erection of buildings, &c.

Plans &c., to be approved by Governor.

Act not to affect apprenticing of inmates of said school.
Short title

SCHEDULE B.

Commencing at a point on the eastern building line of Darlinghurst Road being the north-west corner of a grant to the Roman Catholic Church of 21 perches and bounded on the west by the said building line bearing north 32 degrees 42 minutes east 6 chains 90 links to the south-west corner of a grant to the Asylum for Destitute Females of one acre Thence on the north by the south boundary of said grant of one acre being a line bearing north 92 degrees 5 minutes east 2 chains 53 links to the western building line of Victoria-street Thence on the east by the said building line bearing south 33 degrees west 7 chains 62 links to the north-east corner of a grant to the Roman Catholic Church of 29 perches Thence on the south by the north boundary of the said 29 perches and the north boundary of the aforesaid 21 perches being a line bearing north 73 degrees 2 minutes west 2 chains 24 links to the point of commencement and containing by admeasurement one acre two rods twelve perches more or less.

3. Sydney Female School of Industry.

Grant 3 October, 1854 (Domain Site).

Know ye that for the promotion of education in the territory of New South Wales, and for providing a site for the Sydney Female School of Industry, being a society established in the city of Sydney which has for its object the moral and religious improvement of female poor children, We, &c.

[Then follows description of land granted—1a. Or. 7p.]

together with the building erected and built and now standing thereon, and now and for some time past used as a Female School of Industry, and all other buildings, rights, members, and appurtenances thereto belonging and held unto and to the use of the said C. Cowper, J. Campbell, J. B. Darvall, and T. Icely for ever as trustees for the purpose hereinafter mentioned * * * upon trust for the said society, called the Sydney Female School of Industry, for ever, and for no other purpose whatsoever, provided that they, the said trustees, their heirs and assigns, shall not erect or permit any building or erection to be built within 25 feet of the inside of the boundary line of the said land; and upon further trust that they, the said trustees, their heirs and assigns, do and shall when they are required by our Governor for the time being of our said territory convey and assure the said piece or parcel of land unto and to the use of such other person or persons as shall from time to time have been appointed by our said Governor as trustees in their place and stead; and upon further trust that such person to whom the said piece or parcel of land shall have been so aforesaid conveyed or assured shall hold the same subject to all the trusts hereby created and so on *toties quoties* to the intent that the said land shall be for ever vested in the trustees for the time being appointed trusts hereto.

* * * * *

FITZROY.

4. Valuation by Messrs. Richardson and Wrench.

Richardson and Wrench (Limited), 98, Pitt-street, Sydney, 12 February, 1896.

ESTIMATE of value of Property, Darlinghurst, occupied by the Female School of Industry.

THE land has about the following dimensions, viz. :—

503 ft. 8 in. to Victoria-street.
452 ft. 9 in. to Darlinghurst-road.
170 ft. 9 in. depth on Northern side.
144 ft. 4 in. depth on Southern side.

We estimate the value of the land alone at £7,555 (seven thousand five hundred and fifty-five pounds).—R. and W., Limited.

Upon part of the land is erected the Female School of Industry, substantially built of brick, cemented, on massive stone basement comprising three floors in all, and containing verandahs and areas.

On ground floor—Hall, four rooms, large dining-room, schoolroom.

On first floor—Three large dormitories, three bedrooms, linen press.

In basement are large storeroom, pantry, clothesroom, bathroom, lavatory, and kitchen scullery.

Detached is a building of brick, slate roof, being laundry, washhouse, bakehouse, and fuel-shed.

Also detached of brick and wood are play-shed, forage and fuel areas and w.c.'s.

The situation of the property and its general design appear very suitable for the good work carried on therein, while convenient of access there is comparative privacy. The structure is faithfully erected, and will remain for long years, as it is only about twenty years old.

The whole of the land is enclosed with brick wall on stone foundations, and having stone top coping, except as touching part of the frontage in Victoria-street immediately opposite the School, which has a stone wall with iron railing and gates.

We estimate the value of the land and building and other improvements for the purposes of their use at £14,555 (fourteen thousand five hundred and fifty-five pounds); and in the circumstances of having to procure another site and erect buildings thereon, a further charge might be made of 10 per cent. on the above, or equal to £1,455 10s.

Say drainage provision, as this is a very particular feature in regard to the School, £250.

RICHARDSON AND WRENCH (Ltd.)

5. Recommendations contained in Report on Institutions dealing with the Blind and Deaf and Dumb, dated 29th June, 1898.

INSTITUTION for the Blind at Strathfield.

THAT, in view of the fact that two industrial establishments for the blind are unnecessary, and that their maintenance separately causes great waste of public money, the Committees of the Sydney Industrial Blind Institution and the Institution for the Blind at Strathfield be invited to meet and discuss with the Government proposals for the amalgamation of their institutions, in order that the women now employed in the industrial division of the Home at Strathfield may be transferred to the Sydney Institution at Boomerang-street, and boarded and lodged in respectable homes, and utilising the buildings at Strathfield for other public purposes. As stated on page 13 of our Report on the Institution for the Blind at Strathfield, in view of the limited scope of the Home-teaching Department, and the large expenditure incurred upon its administration, we fail to see any necessity for continuing its operations.

FUTURE

FUTURE OPERATIONS OF THE BENEVOLENT SOCIETY.

We have already suggested proposals for a women's hospital, which shall continue the maternity work of the Benevolent Society; we have proposed other means than those which now exist at the Benevolent Asylum for dealing with lying-in women, and we have also advocated the direct reception by the State Children Relief Board of children to be boarded out. As regards the future control of the other branches of the Society's work, but little difficulty presents itself.

We cannot but speak in terms of great praise of the manner in which the gentlemen controlling the Society have so unsparingly devoted time and attention to carrying out the beneficent work of relieving the poor of this city, but it is evident that for some time past their resources have not been adequate to cope with the immense and increasing strain which has been placed upon them by greatly increased demands for assistance and the natural growth of the Colony. The great diversity of the Society's operations, which has already been pointed out, was not a matter of so much moment when the calls for assistance were less numerous, but with the expansion of each branch to a considerable magnitude the difficulties of administration generally and of obtaining sufficient funds to meet the demands for outdoor relief have grown accordingly.

Under the section dealing with outdoor relief the evidence of the officials is quoted as showing that the poor need more adequate assistance than the funds of the Society will permit, and although the Society appears to have done its best with the means at its command to prevent imposition, it is also there made apparent that the administration of the relief is open to much abuse from the insufficiency of inspection.

In regard to the indoor administration we find, evidently as a consequence of pressure of work upon the officers, that there are no efficient methods adopted for procuring employment for the inmates; and that there is neglect, for the same reason, of other and important duties. On this the following evidence of the Manager may speak for itself:—

547. The duties that you have mentioned, and those laid down in the rules, take up a great deal of your time; does it leave you time for general supervision? Not latterly; it does not allow me proper time to do the clerical work which I used to do. It is growing rather too large.

548. You attend to the accounts, the correspondence, and to a great many other matters;—what I want to know is, does that take up so much of your time that you cannot give a proper general supervision? I will give an instance of how I am falling short lately. Some time back I had more time to attend to the affiliation of children in the institution. I had more time to question the women and get a grasp of the work, but latterly it is falling behind.

549. I suppose you consider the affiliations as a very important part of your work? I do, and especially if I could have induced the directors to petition the Government to make alterations in the present affiliation laws. We could then get good results. I consider it necessary that a child should be affiliated before its birth, for this reason: A woman comes into the institution, and if you have no other means of disposing of her she remains two or three months—at any rate, generally for a month; and at the end of that time, although there may be a good case against the man, there is no chance of affiliating the child. Another reason for the alteration is, that the woman might be compelled by the directors, or by the manager, to take proceedings against the father of the child whether she liked it or not; that is to say, if we find a good case against a man we ask the woman about it, but she says, "No, I will not prosecute." In America it is the law that the manager or the directors of an institution can subpoena the mother as a witness and put her upon her oath.

850. I think you said the other day that that part of your business which you consider very important had been interfered with by other duties? Yes, by the growth of the general work of the institution.

851. What method do you adopt to do this, and how far has it been interfered with by your other duties? First of all, the application for admission comes before the Ladies' Committee; then the next morning she comes to me for an admission ticket, and I ask her about the history of the case, and whether there is any chance of affiliation. That would need a good deal of time, because the women are reluctant to tell anything. You have to coax it out of them. Possibly, the time taken would be about a quarter of an hour to one case. I find that I cannot do that now. What I am doing now is this: when a woman is going out she comes to me for her discharge, then I question her, but I soon find a lot of people waiting in the hall to interview me with regard to food, and I have not proper time to attend to it.

852. You find that the growth of business is so great, and the staff is so small, that you have not time to attend to this, and you consider it almost important part of your duty? I do.

It is evident, therefore, that the sphere of the Society's operations should not, in future, embrace so extensive a work as it has in the past.

The Benevolent Society should, we think, continue to receive destitute women and children who require shelter in cases of emergency. The women, unless they can be otherwise provided for, should be handed over to the care of the Director of Government Asylums, and the children should, as early as possible, be boarded out.

With

With the exception of providing such accommodation, the Society should be left free to devote its whole attention to the administration of outdoor relief. In this field there is, as we have seen, considerable room for improvement, which the Society, hampered as it has been by other cares, has not been able to effect. A work involving the annual expenditure of some £8,000 to £9,000, and having the welfare of many hundreds of persons at stake, needs a greater concentration of effort than can possibly under the circumstances be bestowed upon it. There is considerable scope for labour in securing co-operation of effort in the administration of outdoor relief generally in the metropolis, and in invoking the assistance of voluntary workers to aid in promoting the welfare of the poor in a manner which cannot be accomplished by the distribution of doles of food and money alone. English experience teaches us also that it is no easy task to guard against imposition and the pauperisation of the recipient of relief, and, in this respect, the Directors of the Society have a grave responsibility to the public cast upon them. That this statement is not inapplicable may be shown by the fact that a Royal Commission in reporting on the administration of outdoor relief by the Benevolent Asylum in 1873 said: "Out of 269 cases specially inquired into, in consequence of information received, it appears that 152 were cases in which the institution had been more or less imposed upon. One witness, with ample opportunities for observation, states that the charity of the institution is abused, in many cases, by persons seeking and obtaining assistance from it whose circumstances in no way entitle them to such relief." "These facts and figures show how great is the necessity of narrowly watching over a system of eleemosynary assistance, which is open to great abuse, and eminently calculated, if laxly administered, to the most pernicious development of a pauper spirit in the community." While no doubt since the publication of that report much greater care has been exercised, still it is evident that the inspection is insufficient. And it is insufficient not only to prevent abuse, but also to bring under the notice of the management cases of hardship where a little extra assistance might mitigate great suffering, as we ourselves have experienced on visiting some of the homes of the poor.

We think, therefore, for the reasons we have stated, that the future operations of the Benevolent Society should be confined to the administration of outdoor relief and the temporary housing of destitute women and children under the conditions we have referred to.

Transfer of Society to other Premises.

If the proposals made by the Commission are adopted, we would recommend that, upon such terms as may be agreed upon, the property at present occupied by the Society be taken over by the Government, and the Society be transferred to suitable premises elsewhere.

The new premises should be easy of access, and in a central position; but they would not need to be extensive, as they would only require to provide temporary accommodation for destitute women and children, a store for the outdoor relief department, and offices for the clerical staff.

Concluding Remarks.

With regard to the fifth group of subjects, mentioned at the commencement of this Report, with which we have to deal under our Commission, we may remark that a very exhaustive investigation is being made under the auspices of the Public Service Board, which will much facilitate our work in that direction. Groups 3 and 4 and the remainder of group 2 will be dealt with in our subsequent reports, but before closing this report we should like to refer to some very valuable evidence which has been given on the necessity for some central representative governing body in connection with the whole of our charitable work which is supported entirely or in part by the State.

Sir Arthur Renwick's evidence on this point is as follows:—

1962. Is there any suggestion you can give us, not only in connection with the Benevolent Society and the State Children Relief Board, but on the subject generally. If you cannot give any suggestion, you might be able to indicate lines of examination that would produce valuable results? I think it would be a very good thing if the charities which now act in such an irregular sort of way were

were all brought under one head. This Charity Organisation Society is going in that way, but you can see that the Government money is spent in a rather haphazard fashion. There is no definite control in connection with the dispensation of public money. It is true that you have gentlemen at the head of all these charities who make annual reports, but you want a more direct control than there is at present. Then I consider, further, that it would be a very excellent thing if instead of having the State Children's Department looking after a certain class of children, a Minister looking after children in reformatories and industrial schools, and other authorities looking after the action of the Children's Protection Society, if all these were placed as they are elsewhere under one Board, I think it is very desirable that that should be done as speedily as possible. Of course, the work would be immense in connection with it. In South Australia all the State children in the country are placed under the State Children's Relief Board. If that were done here it would be a move in the right direction; there would then be better control over the expenditure. We should know exactly how the money goes, and there would be a responsible body dealing with the matter. As it is now in this Colony some of these children are under one authority and some are under another; in fact, under different Ministers, which, I think, a great mistake, as regards both economical and efficient administration.

1963. Would you propose the establishment of a new Government Department, or would you propose that the system should be under the control of independent gentlemen, like yourself, for instance? I think that eventually it would be a very good thing if you could have a Board who could take charge of the whole of the charities dependent upon the State, having one gentleman sufficiently expert to look after the lunacy department, another to look after the relief department, a third to look after, perhaps, the prisons, or something of that kind. A Board of that sort could take all these dependents of the State under complete control. I would not destroy the private Boards throughout the country, but I would give these Boards a controlling influence in regard to the disbursing of money and in regard to inspection.

1964. Would you have a sort of Minister of Charities? Eventually it would be that, but instead of having a separate Minister I would make one Minister deal with it, having the Board under him.

1965. An independent Board? Yes; an independent Board.

1966. You would not have Government officers, but a Board under the Ministry? Quite so.

1967. It would take complete control of all the charitable institutions of the Colony? Yes; that is the system in the United States of America. There they call it the "Board of Charity and Correction." They deal with the prisons, schools and other institutions containing children dependent on the State.

1968. The Board would have supreme control? Yes; I would point out that the inspectorship of charities has always failed, because the person appointed has not been in touch with the charities. They have regarded him as a kind of spy, instead of as a friend and guide.

1969. Are you assuming that there should be paid officers? They could not do the work without pay.

1970. They must be a paid Board? Yes; the work I am doing in connection with charities takes up three-fourths of my time. It could not be done by anyone else unless he was paid.

1971. If such a body as that were created, in the event of a new charity being started it might be referred to the Board, and the Board might recommend as to whether that charity should be subsidised; would not the Board then be able to say there is an institution of exactly the same kind carrying out exactly the same work, and it would be throwing money away to establish another? Yes; it would prevent all this overlapping, and take the place of the Charity Organisation Society.

1972. It is a large subject? It is a very large subject, but to have charities properly administered that is the only course to adopt.

Dr. Graham's evidence in connection with the matter is as under:—

2352. The question of the overlapping charities has, of course, come under your attention. We have taken a good deal of evidence on the point, and the suggestion has been made that there should be a general Board appointed to take the oversight of all the charities? Yes.

2353. Have you ever thought the matter over? Yes. Of course, you know that Mr. Reid brought an organization society into existence, but it has always appeared to me—and I attended one or two meetings of that committee—that any organization is helpless unless it has the authority of law behind it. If such a society is to do any good it should be appointed by the Government, and it should have absolute control over the funds provided by the Government.

2354. There should be a general body having control of the charities of the Colony which are subsidised by the Government? Yes.

2355. What kind of a body should that be—should it be composed of Government officers? No; I think it should be a Board very much like the Board of Health. There you have one permanent officer who presides; then you have six or seven men who are respected in the community, and who possess a reasonable knowledge of the work. The Board might sit systematically once a week or so. It ought to be a Board of that kind.

2356. And that body should have practically the distribution of the Government subsidies to charities? I think so. Every little charity goes to the Government now, and gets assistance; but every farthing which goes to any charity ought to filter through some such Board as that.

2357. Could we get gentlemen on the Board who would give their time to that—gentlemen like yourself? I think there should be no difficulty, but I do not think you would get them to take the trouble to form a Board of that kind unless they had authority from the State to deal with the matter in an effectual way.

2358. That is to say, they should have the power of saying yes or no? Yes; they would have to be men of discreet judgment who would not interfere with the administration of any building, but who would have a right to criticise and report to the Government in reference to any defect in connection with any institution subsidised by the Government.

2359. It would be a Board that would be the means of administering the subsidy? It ought to be that. Little organizations have arisen from time to time, and they have written to the Colonial Secretary, or they have got a Member to apply, and they have received a £ per £ subsidy. That is how it has grown up.

2360. Would you have a permanent official at the head of the Board? No; I think you ought to have a permanent secretary, but all the members of the Board should be honorary. It should be a small Board, worked very much like the Board of Health.

2361. We are using the word charity in a wider sense than you are using it—we include not only charities proper, but also the asylums and gaols? Of course that means a great work. It would have to be undertaken by men who could devote their whole time to it. If, however, you could map out a certain line of charities, such as hospitals, the Benevolent Society, and all those institutions which receive Government aid, apart from the purely Government institutions, such as gaols, I think you might get people to do the work. You might get the work done in the metropolitan area in that way.

2362. Would not a Board of this kind do—one comprising the Director of Charities, the Comptroller-General of Prisons, the Inspector-General of Insane, and the President of the Board of Health? Yes. The only fault of that would be that it would be so essentially a Government Board that there would be apt to be grumbling on the part of disappointed institutions and the public. I think that a lay Board, properly selected, is a better type of Board for work of that sort, although what you suggest would be a very strong Board, and could do their work well. I think that the introduction of the lay element, and as much as possible the honorary element, would commend itself more effectually to the community. Of course, if you are going to have a Board of that kind, there is no reason why they should not have the supervision of all the charities.

We hope in our final report to be able to offer some practicable suggestions on the subject.

We hope also that our suggestions as to voluntary organised help being secured by the Benevolent Society, which is more particularly referred to on pages xxi and xl of this report, will bear good fruit.

The following is a summary of our recommendations:—

RECOMMENDATIONS.

1. That the operations of the Benevolent Society of New South Wales be confined in future to the distribution of outdoor relief and the reception and casual relief of destitute women and children.
2. That a Maternity Hospital on modern lines be established at Darlinghurst, as recommended in our letter of 11th October, 1898, to the Honorable the Chief Secretary, and that the property now known as the School of Industry be resumed for that purpose, and the necessary additions and alterations made to the building.
3. That the constitution of the proposed new hospital should be framed on lines somewhat similar to that of the Sydney or Prince Alfred Hospital, so as to invite and elicit from the public support for its maintenance.
4. That in order to provide the School of Industry with other premises, negotiations be opened by the Government with the Trustees of the Institution for the Blind for the acquisition of that institution's property at Strathfield.
5. That so long as the lying-in department is carried on at the Benevolent Asylum women confined there shall be required to leave the institution within thirty days after confinement, if certified by a duly qualified medical man to be fit for removal. Mothers with their infants, not otherwise provided for, should be handed over to the Department of Charities for transfer to the Newington Asylum; the children as soon as they reach a suitable age should be boarded-out by the State Children Relief Board.
6. Children when received at the Benevolent Asylum should be handed over without delay to the State Children Relief Board, upon which body the responsibility of dealing with such children has been placed by law.
7. That while the work of the Society is carried on as at present a paid medical officer be appointed, in addition to the honorary staff, to attend daily at the institution.

8. In view of the evidence which has been given to the effect that some of the recipients of outdoor relief are living in a state but little removed from starvation, we recommend for favourable consideration the giving of a larger grant for outdoor relief.
9. That the inspecting staff of the outdoor relief division be increased. Of the increased staff, one should be a woman.
10. That in connection with the administration of outdoor relief, the Society obtain the voluntary assistance of committees of lady inspectors in the several districts within the field of its operations, in order to secure a more efficient dispensation of charity.
11. That the accounts of the Society be audited by a competent independent auditor, instead of as at present by members of the Board of Directors.
12. That as long as State aid is continued, a responsible officer of the Government shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, with due regard to economy; (3) to see that the by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
13. If the first recommendation be given effect to, the present site and premises will not be required for the operations of the Society. We recommend that, in that case, the Society be provided with suitable premises (a store, offices, and casual refuge for destitute women and children) in exchange for those now occupied, which would then become available for any public purpose that may be determined upon.

We are conscious that considerable time has been spent on the subject of our inquiry, but we trust not unprofitably; and when its wide scope and far-reaching ramifications are taken into account we are sure that Your Excellency will not think our several applications for extension of time unreasonable, especially when it is remembered that two of your Commissioners are engaged in other equally important work, and that no expense attends the devotion of their time to this inquiry.

We again cheerfully acknowledge the valuable aid rendered to us by Mr. Sydney Maxted, and also by our indefatigable Secretary, Mr. Walter Wilson.

We have the honor to be,

Your Excellency's most obedient Servants,

GEO. A. WILSON, President.
JOSEPH BARLING,
JAMES POWELL.

WALTER WILSON,
Secretary.

2/12/98.

ROYAL COMMISSION ON PUBLIC CHARITIES.

PROCEEDINGS OF THE COMMISSION.

MONDAY, 11 JULY, 1898.

The Commission met at the Offices of the Public Service Board, at 10.15 a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

Mr. E. T. Penfold, J.P., Hon. Secretary of the Benevolent Society of New South Wales, was sworn and examined.

The Commission adjourned at 1 o'clock p.m., and sat again at 2.15 p.m.

The examination of Mr. Penfold was continued.

Mr. E. Maxted, Manager of the Benevolent Asylum, was sworn and examined.

The minutes of the last meeting were read and confirmed.

The Commission adjourned at 5 p.m.

FRIDAY, 15 JULY, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

The examination of Mr. E. Maxted was continued.

The Commission adjourned at 1 o'clock, and sat again at 2 p.m.

Mr. Maxted's examination was continued.

The minutes of the last meeting were read and confirmed.

Correspondence read and received.

The Commission adjourned at 4.30 p.m.

FRIDAY, 22 JULY, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

James Powell, Esq., J.P.

Mrs. J. Graham, Matron of the Benevolent Asylum, was sworn and examined.

The Secretary was instructed to apply for an extension of the Commission for a period of three months from the 10th proximo.

The minutes of the last meeting were read and confirmed.

The Commission adjourned at 12 noon.

TUESDAY, 26 JULY, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

Joseph Barling, Esq., J.P.

James Powell, Esq., J.P.

Mr. J. Grant, Chief Inspector of the Benevolent Society of New South Wales, was sworn and examined.

The minutes of the preceding meeting were read and confirmed.

The Commission adjourned at 12.30 p.m.

TUESDAY, 2 AUGUST, 1898.

The Commission met at the Offices of the Public Service Board, at 11 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.

Joseph Barling, Esq., J.P.

James Powell, Esq., J.P.

The Hon. Sir Arthur Renwick, Kt., M.D., M.L.C., &c., and Mr. B. Hanson, were sworn and examined.

The Commission adjourned at 1 o'clock p.m.

FRIDAY,

FRIDAY, 5 AUGUST, 1898.

The Commission met at the Offices of the Public Service Board, at 11 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Dr. W. H. Crago was sworn and examined.

The document extending the Commission for a further period of three months was received.

The minutes of the two preceding meetings were read and confirmed.

The Commission adjourned at 12 noon.

MONDAY, 8 AUGUST, 1898.

The Commission met at the Offices of the Public Service Board at 10 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Mr. R. Anderson was sworn and examined.

The minutes of the last meeting were read and confirmed.

The Commission adjourned at 11 o'clock a.m.

THURSDAY, 11 AUGUST, 1898.

The Commission met at the Offices of the Public Service Board at 2:15 o'clock p.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Dr. J. Foreman and the Reverend Father O'Driscoll were sworn and examined.

The minutes of the previous meeting were read and confirmed.

The Commission adjourned at 3:15 o'clock p.m.

FRIDAY, 12 AUGUST, 1898.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission, accompanied by the Chief Medical Officer of the Government, visited the Asylum for Destitute Children, Randwick, at 3 o'clock p.m., and made an inspection of the property.

The Commission adjourned at 5 o'clock p.m.

WEDNESDAY, 17 AUGUST, 1898.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission waited on the Chief Secretary at 3 o'clock p.m. to lay before him a suggestion as to the use of a portion of the Randwick Asylum for Destitute Children to relieve the much congested state of the Government Asylum at George-street, Parramatta.

The Minister concurred in the Commission approaching the Authorities of the Randwick Asylum in the matter, and in their taking all necessary steps towards the formulation of a scheme for the consideration of the Government.

The President subsequently interviewed the Chairman of the Randwick Asylum who declared his intention of discussing the subject with the Committee and Manager of the Institution.

FRIDAY, 19 AUGUST, 1898.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P.

The Commission, at 3 p.m., inspected the Women's Hospital, Crown-street, accompanied by Dr. Graham, M.P., who explained the operations of the institution.

SATURDAY, 20 AUGUST, 1898.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission paid a visit of inspection to the Asylums at George and Harris Streets, Parramatta, and at Newington, in the forenoon.

MONDAY,

xlvi

MONDAY, 22 AUGUST, 1898.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission inspected the building and site occupied by the School of Industry, at Darlinghurst, at 11 a.m.

MONDAY, 22 AUGUST, 1898.

The Commission met at the offices of the Public Service Board at 3 o'clock p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Dr. James Graham sworn and examined.

The minutes of the meeting held on the 11th instant, and those of subsequent meetings, were read and confirmed.

Correspondence read and received.

It was decided that the President should wait upon the Chief Secretary to secure his concurrence in a course of action which the Commission proposed to follow, with the object of laying before the Government a scheme for the use of the School of Industry property for the purposes of a Women's Hospital.

The Commission adjourned at 4.45 p.m.

SATURDAY, 27 AUGUST, 1898.

The Commission met at the Newcastle and Northumberland Benevolent Society's Asylum, at Waratah, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 James Powell, Esq., J.P.

The Commission inspected the Asylum.

The following witnesses were sworn and examined:—Dr. J. Stapleton, Miss Blanche Milligan (Matron), and Mr. William Arnott.

The Commission adjourned at 11 o'clock a.m.

SATURDAY, 27 AUGUST, 1898.

The Commission met at the Offices of the Newcastle and Northumberland Benevolent Society at 2.30 p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 James Powell, Esq., J.P.

Mr. G. P. Loch, Honorary Treasurer of the Society, was sworn and examined.

The Commission adjourned at 4 o'clock p.m.

TUESDAY, 6 SEPTEMBER, 1898.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 Joseph Barling, Esq., J.P.

The Commission visited the Sydney Rescue Work Society's Institution, the "Home of Hope," Newtown, at 3 o'clock p.m.

THURSDAY, 8 SEPTEMBER, 1898.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Commission met at the Offices of the Public Service Board at 10.15 a.m., for consideration of the question of the proposed acquisition of the School of Industry property for the purposes of a Women's Hospital. The President reported having received the Chief Secretary's concurrence, on the 23rd ult., to the Commission's taking preliminary steps towards this end.

The minutes of the meeting on the 22nd August and subsequent meetings were read and confirmed.

WEDNESDAY, 14 SEPTEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
 Joseph Barling Esq., J.P. | James Powell, Esq., J.P.

The proposal to secure the School of Industry property for Women's Hospital was further discussed, and it was decided that the President should interview Mr. Consett Stephen, a member of the School of Industry Committee, as a preliminary to the preparation of some basis of agreement for discussion.

The Commission adjourned at 11 o'clock a.m.

THURSDAY,

xlvii

THURSDAY, 22 SEPTEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

Dr. Walter Spencer and Mr. G. E. Ardill, were sworn and examined.
The Commission adjourned at 1.15 o'clock p.m.

FRIDAY, 7 OCTOBER, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Further consideration was given to the proposal to resume the School of Industry property for a women's hospital.

The Minutes of the last three meetings were read and confirmed.
The Commission adjourned at 11 a.m.

MONDAY, 10 OCTOBER, 1898.

The Commission met at the Offices of the Public Service Board, at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The terms of the draft letter conveying to the Chief Secretary the particulars of the action taken by the Commission in regard to the proposed resumption of the School of Industry property, and the recommendations which had been arrived at were discussed and approved.

The Commission adjourned at 11 o'clock a.m.

SATURDAY, 15 OCTOBER, 1898.

The Commission met at the Offices of the Public Service Board at 9.30 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The proposal submitted by the authorities of the Asylum for Destitute Children, Randwick, for the use of the unoccupied portions of their buildings for an Asylum for the Infirm and Destitute was discussed, and it was decided to transmit it to the Chief Secretary for consideration.

The minutes of the last two meetings were read and confirmed.

THURSDAY, 10 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 10.15 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell Esq., J.P.

Consideration was given to the Draft Report on the Benevolent Society of New South Wales. Mr. Powell was examined in reference to his visits to the Maitland Benevolent Society's Asylum, and to the Homes of the Sydney Rescue Work Society.

The minutes of the last meeting were read and confirmed.
The Commission adjourned at 1 o'clock p.m.

THURSDAY, 10 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board at 3 o'clock p.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

Further consideration was given to the Draft Report on the Benevolent Society of New South Wales.

The Commission adjourned at 5 o'clock p.m.

FRIDAY, 11 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board at 10 o'clock a.m.

PRESENT:—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

The Draft Report on the Benevolent Society of New South Wales was further discussed.
The Commission adjourned at 1 o'clock p.m.

SATURDAY

SATURDAY, 12 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 9.45 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

The Draft Report on the Benevolent Society of New South Wales was further considered.
The Commission adjourned at 11.30 o'clock a.m.

MONDAY, 14 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 9.30 o'clock a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

The Draft Report on the Benevolent Society of New South Wales was further considered.
The document extending the appointment of the Commission for a further period of three months was received.

The Commission adjourned at 10 o'clock a.m.

THURSDAY, 24 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 9.30 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

Mr. E. Maxted, Manager of the Benevolent Asylum, was re-examined.
The minutes of the meetings on the 10th November and of subsequent meetings were read and confirmed.

The Commission adjourned at 10.45 a.m.

MONDAY, 28 NOVEMBER, 1898.

The Commission met at the Offices of the Public Service Board at 9.30 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
James Powell, Esq., J.P.

Mr. E. Maxted was further examined.

The Draft Report on the Benevolent Society was considered by the full Commission.
The Commission adjourned at 12.15 p.m.

THURSDAY, 1 DECEMBER, 1898.

The Commission met at the Offices of the Public Service Board, at 9.30 a.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

Further consideration was given to the Draft Report on the Benevolent Society of New South Wales.

Correspondence read and received.

The minutes of the last two meetings were read and confirmed.

The Commission adjourned at 10 a.m.

FRIDAY, 2 DECEMBER, 1898.

The Commission met at the Office of the Public Service Board at 2 o'clock p.m.

PRESENT :—

George Alexander Wilson, Esq., J.P., President.
Joseph Barling, Esq., J.P. | James Powell, Esq., J.P.

The Report on the Benevolent Society of New South Wales was passed and signed.
The minutes of the last and present meetings were read and confirmed.

LIST OF WITNESSES.

ROYAL COMMISSION ON PUBLIC CHARITIES.

MINUTES OF EVIDENCE.

FRIDAY, 28 JANUARY, 1898.

[The Commission met at the Offices of the Public Service Board at 10.15 a.m.]

Present:—

J. BARLING, Esq., J.P. (President).

G. A. WILSON, Esq., J.P.

J. POWELL, Esq., J.P.

Frederick Norton Manning, M.D., sworn and examined:—

1. *Mr. Wilson.*] You are the Inspector-General of the Insane? Yes.
2. You were for some time Medical Adviser to the Government? Yes, for about four years.
3. In that capacity did you have an opportunity of observing the administration of charitable institutions and of subsidised institutions? I had, particularly of hospitals; other charitable institutions did not come under the medical adviser.
4. Have you, independently of that, given the question some consideration? I have given the question some consideration, because it has been to some extent part of my general work. I consider the hospitals for the insane charitable institutions in their way, and in administering these I could not help feeling an interest in the general question of charities.
5. Would you like to make a statement and then be examined by the Commission? I am quite in the hands of the Commission. I have made a few notes under certain headings, and if the Commission likes, I will deal with these separately, then answer any questions. The first subject that I should propose to speak on is that of out-door relief. I find that a very large amount of money is now spent in out-door relief, and I see that there are difficulties in the proper administration of this kind of relief. I doubt very much whether out-door relief should ever be administered by a central Government, because I do not see that any thoroughly efficient system of inspection of the people who are receiving it can be devised. Even in England where the whole of the people of a village, at all events the ratepayers of the village, are persons interested in the question of out-door relief—it comes out of the pockets of individual ratepayers, and therefore they are interested in seeing that it is properly administered—even there great difficulty occurs in regard to the matter of out-door relief, so much so that in many of the unions in England under the Poor-law system it has been absolutely stopped, and everyone receiving parish relief has to go into the poor-house and receive it there. I will give you one case that came under my own observation which I know is a fair sample of a good many cases. This was a case in which 10s. a week or 10s. a fortnight was granted to a man in the village of Gladesville, and the only condition attached to it was that a magistrate was to certify to the continued existence of this man. There was no inspection as far as I am aware, and he was months on this relief. It was a perfect scandal to the neighbourhood. He was an invalid, but he could walk to the public-house, and he spent a great deal of time in the public-house; and, as you know, there are always plenty of people to treat persons in public-houses. We had the spectacle of this man drunk frequently about the village. He was a person receiving relief from the State; that is not an isolated case. If he had been receiving relief from some local institution or from some society whose members lived in the district, and out of whose pockets the money came, or if it was relief that was administered out of the pockets of ratepayers there would have been much more efficient inspection.
6. Before you leave that subject, I understand you to say that even in England, where the relief comes out of local rates, the thing has been abused? I happen to know people who are members of Boards of Guardians, relatives, and I may say that in the parish of Brixworth, in Northamptonshire, out-door relief has been absolutely put a stop to with economy to the rates, and as the Guardians think—many of them being men of standing and position, some of them clergymen, and all of them ratepayers—without any evil resulting to the persons who received relief—without any inhumanity.
7. Would it not follow, from the total abolition of out-door relief, that aged couples would have to be separated? It would, unless you had cottage homes.
8. Having cottage homes for aged couples would be the only way of obviating it? It would. In this case I am speaking of, the wife was not a pauper; she could get her living by charring and things of that kind, so she would not have to be provided for. There are many cases of that sort where you would not have to take both man and wife and keep them.
9. In this particular case it would have been a happy thing if the man had been put into an institution and the wife had been left to earn her living? Yes.
10. *President.*] I think the relief at Home is administered entirely under the Borough Council? It is to a certain extent under the Borough Council, but the active agents in connection with it are the Boards of Guardians.
11. The rates come from the borough but are administered by the Board of Guardians and overseers? The overseer is a paid officer of the local council, but the Board of Guardians, who form the body who shall say whether relief is to be granted or not, are ratepayers, are unpaid, and they carry out the work.

F. N.
Manning,
M.D.

28 Jan., 1898.

F. N.
Manning,
M.D.

28 Jan., 1898.

12. Still it is a municipal organisation practically? It is a local organisation.
13. A local organisation provided for by special rates;—by poor rates? Yes.
14. Do I understand that you recommend that some such system as that should be adopted here to displace the present system of outdoor relief? That would necessitate a system of local government in the first place.
15. Could not that be tacked on to the present municipal government? The present municipal government only covers a very small area of the Colony.
16. Still it covers a populous area? Yes; but a very great number of our poor come down from the areas that are not under any local government at all. It seems to me that before you get any Poor Law system here you would have to have a local government system. It might follow readily on that as it has done in New Zealand.
17. It could not be efficiently done without a local government system covering the whole of the Colony? I do not think it could.
18. *Mr. Powell.*] Is it your opinion that only absolute destitution should be provided for? I do not quite see the trend of the question.
19. In connection with outdoor relief which you spoke of, do I understand you to say that only cases of absolute destitution should be dealt with; I intend to follow that question with another;—would not that relief be better given by residents? I think I may answer your first question by saying that only absolute destitution should be provided for, because the Government can scarcely be expected to provide for anything but absolute destitution.
20. That is the principle, that the Government can only provide for absolute destitution? Yes.
21. You are of opinion, from your experience, that the only relief given should be by residence in the place provided for the purpose? I think that that should be the principle. Of course that will be supplemented everywhere by a certain amount of local charity.
22. I am assuming that we are not interfering with local charity, but simply dealing with relief as a State matter? Exactly.
23. Are you aware that in the Poor Law districts of Stepney and Poplar, by judicious reduction of outdoor relief, the rates have been reduced by quite £8,000 a year in each case? I was not aware of that, but I know that the case which I have mentioned, that of Brixworth, is not an isolated case by any means, and I know more of the working of the country districts in England, especially of the Midland counties, than of any other parts. I am aware that it has been the experience throughout the midland counties that the rates are very much reduced when outdoor relief is stopped.
24. Are you aware also that by the administration of the Poor Law in England the cost of pauperism to the State has been reduced by one half in twenty-two years? Yes; but I do not think that that has been altogether a matter of administration. The condition of the poorer classes in England has so vastly improved of late years. I think that a good deal of the saving in Poor Law expenditure has been due to circumstances other than the administration.
25. But side by side with the improvement of the condition of the people, is it not possible that the refusal of outdoor relief has contributed to a great extent to the reduction of pauperism? I think that that may be the case.
26. From your knowledge of the poorer classes in England, is it not a fact that they will submit to almost any privation rather than go to what they call the "House?" Yes, that is the case.
27. And if they do submit to such privation they must not have been in a position of absolute destitution? No; or they manage at all events to get help from local organisations—from charitable people apart from the rates.
28. And the general result of experience is that indiscriminate outdoor relief encourages pauperism? I think it does.
29. *President.*] With regard to the case you referred to at Gladesville—that of a man receiving 10s. a week;—can you tell us how long that lasted? I cannot tell you how long it lasted. His wife did not come to me for a certificate. I have seen the man very far from sober, and I know from another magistrate, and from what others said, that he was in receipt of 10s. a week or a fortnight.
30. How long ago was that? The man has only been dead about three months.
31. So it was continued almost up to the present time? Yes.
32. Was that outdoor relief provided from the Charitable Vote taken under the Chief Secretary's Department? I understand so.
33. Have you not any idea what the modus has been of obtaining this outdoor relief? Yes. I gather that there has first of all been an inquiry from the Department of Charities, then an inquiry from the police in the district. I think that in the main there has been an inquiry in every case and perhaps a very careful inquiry, but I do not think that inquiries with regard to the absolute necessities of the case in the first instance are of use unless you go on inspecting the case afterwards.
34. Could you give us the name of this man? I can get you the name.
35. *Mr. Wilson.*] Will you proceed with the next point? The next note that I have is with regard to State children. I may say that I think the system of boarding-out State children is altogether an advance upon the system of placing them in barracks. I think that that cannot be denied. I saw them when they were under the barrack system, and I have seen them repeatedly now that they are in homes, and taking into consideration the whole question, I think it would be the greatest possible mistake and a retrograde step altogether ever to go back to putting those children into big institutions. I think the system itself is an admirable one. I can see also that it is liable to abuses and I think that the new Act which enables children to be boarded out to their own parents is liable to great abuse. Before that Act came into force a woman strove and did all sorts of things on behalf of her children. Now she sticks to her children and makes as much out of the Government as possible. I will instance cases in which I have seen this. The widows of deceased attendants in the hospitals for the insane on the death of their husbands used to come to me and ask for re-employment. I was very glad to take them. They were trained women who had had experience of the world and of family life in addition and they disposed of their children by handing them over partly to their sisters or other relatives, remunerating those relatives out of their wages. Now they stop at home and keep their children with them. The State therefore, has to pay for the support of the children, whereas their mothers paid for it before. Then it tends also to keep the elder children of the family at home. I have had one or two cases like this in which I knew that

that the widows of deceased attendants were receiving State aid, when I should, if they had applied to me, have been glad to take them back as laundresses or nurses, and with the money which they earned they could have fairly supported their children with their relatives. Then I found also that this system tends to keep at home the elder members of the family who could very well go out to service. There is a case at present at Gladesville. There is a woman—I cannot tell you how many children she has—who gets about 25s. a week. She gets a comparatively large sum from the State Children's Relief Department, and keeps all her children at home. The elder children have got to an age when they ought to be earning their own living, but the mother is so well off under these conditions that she keeps the children at home, and they are supported by the State, when they ought to be getting their own living. The only other matter that occurs to me with regard to the State children is that I cannot understand why they should not be taken out of the Department of Charities and placed under the Education Department, so that the school attendance officers could be the inspectors. They have to see that the children go to school.

F. N.
Manning,
M. D.
28 Jan., 1898.

36. *President.*] I do not think they have school attendance officers now; the teachers attend to that? Well, the teachers would know the children, and know where they came from. I should have thought that there was an organisation under the department that would deal with them. I do not think that should exclude inspection by the ladies living in the neighbourhood, because I think that ladies living in the neighbourhood would take an interest in the children; they take an interest in the people who are living in the same village, and are able to see things better than the inspectors, who would only go occasionally, and they would see more with regard to the bedding and clothing of the children than a man visiting them could possibly be expected to see. I would not take the opinion of the ladies altogether with regard to the fitness of the people to receive the children, because their hearts outrun their heads, and they may be guided by kind feelings rather than by other considerations.

37. *Mr. Wilson.*] They might be influenced by local considerations in some cases? Partly. I should not take their recommendations as to expenditure at all. That, I think, should come entirely from a Government officer.

38. With regard to the liability to abuse, the key of the situation would, of course, be a proper system of inspection? Undoubtedly.

39. That would be a departmental inspection, assisted by ladies committees? Yes.

40. Would you have lady inspectors? Yes; I think that women make excellent inspectors in many ways—that is, if they are Government officials.

41. How many cases come under your notice of widows of these attendants preferring to take State pay to working under you? There have not been many cases, because the number of deaths in a body of men like that is small.

42. The Act has only been in force about twelve or eighteen months? Yes; but I know of two cases.

43. *Mr. Powell.*] I do not think that the boarding-out system was found to be a success in England? I think it is on its trial there.

44. You will remember that Dickens wrote on the subject in "Oliver Twist," and Oliver had a bad time of it? Yes; but I think that that was in quite the dark ages.

45. The system was very severely criticised? It was. Then for many years the pauper children were all brought up in poor-houses quite under the barrack system. That was proved conclusively to be a great disadvantage. The children went out into the world with poor-house manners; they were branded almost when they started in life. It has only been quite of late years that the boarding-out system has been reintroduced in England. It was subsequent to the introduction of the system here.

46. Up to what age do you think children should be kept in those homes? That has not occurred to me; I have not thought it out.

47. Is it not possible that they may lose the advantages of school training which the children under the barrack system certainly get? Yes; but I do not think that that compensates for the home life and the knowledge that they gain in little matters of cookery, house management, and things of that kind.

48. Is there any restriction as to the number that any woman can take, so that she may not take so many as to make it doubtful whether they are properly attended to? I know that there is a restriction as regards the number of strangers they may take. The number is either three or four; but I do not know whether there is any restriction as to the number of their own family that they may be paid for.

49. The value of the boarding-out system would be very much increased under judicious and proper supervision? Undoubtedly. As the President remarked, the keystone of the whole system is a proper system of inspection.

50. Without that it is very likely to be commonly abused? Yes, it is.

51. *Mr. Wilson.*] Will you give us your next point? The next point upon which I made a note is the subsidies to hospitals and other charitable institutions. I believe that since I was in office as Medical Adviser very considerable improvements have been made, and that much more care is taken in the Chief Secretary's office in going into details, and making the committees show that they have received the money for which they ask an equivalent subsidy from the Government, and also to make them show that the money is from *bond fide* contributions. I have had the advantage of seeing the other side of the question. I have been a member of the Board of Directors of a hospital, and I have been hon. secretary to a large hospital, therefore, I know both sides of the question, and I know that years ago the Government subsidy was claimed first of all upon the donation, say £100. Then that that £100 was put away and they got a subsidy from the Government on the annual interest on that, so that they got it twice over. In some cases they funded the £100 that they got from the subscribers and the £100 from the Government, and they got the interest on the £200; so that the Government was absolutely paying interest upon the money that it had itself given.

52. So that if the hospital was getting 5 per cent. on £200, they would get another 5 per cent. from the Government? Yes. I expect that all these are things of the past; I do not know. I know also that for many years the payments made by patients towards maintenance were counted as subscriptions, and the Government paid a subsidy on them. Of course, that was quite wrong, because they were payments for value received. They were not subscriptions in any shape or form. I know also that this has been done: The committee of a country hospital get up a ball for the institution, they pay the expenses of the ball from their funds, and reckon among their contributions for which they would get a subsidy from the Government of the day, the gross instead of the net proceeds. If they made £200, and the expenses amounted to £100, they would claim a subsidy on the £200. I know that that has been done.

F. N.
Manning,
M.D.

28 Jan., 1898.

53. *President.*] Taking our benevolent institutions as a whole, could you tell whether the contributions obtained and the subsidies are sufficient to cope with the purposes for which those institutions are established? Apart from all other Government subsidies?

54. Altogether. Are our institutions sufficiently supplied and equipped with money to enable them to deal with all the necessities of the country in connection with the objects for which they are established? I can only speak of the hospitals. They certainly, especially the metropolitan ones, are admirably equipped and the country hospitals as a rule are so also. I have a personal knowledge of only a few of them, those of Kiama, Mudgee, Wallsend, Newcastle, Bathurst, Goulburn, and a few others. I think that they are very efficiently equipped.

55. Are they extravagantly equipped? I do not think so. They had a great want some time ago. For instance, there was a great need for special wards for infectious diseases, and during the time that I was Medical Adviser I took steps to get almost every hospital in the country a small isolated ward put up so as to enable them to deal with cases of infectious disease, and these have been of very great service, because it has enabled cases of infectious disease to be taken out of families and treated in the hospitals, and so stopped the diseases in the families. Almost the whole of them have that now, and on the whole I should say that they are up to the requirements; but I think that there ought to be a more efficient inspection of those hospitals than there is at present, because, practically, of late years there has been no inspection.

56. Inspection in what direction? You ought to have someone to go and look round occasionally and see that the hospitals are up to the mark, and that the number of officers is sufficient, and that should also include an inspection of the accounts. I believe that the accounts are inspected by the Colonial Secretary's Department, and the whole of the returns are drawn upon special forms; that the hospitals have to make out a return of the whole of the expenses on special forms, so as to have a comparative statement; but I do not know how far these are utilised afterwards. There ought to be a proper inspection, and if one hospital has cost an extravagant sum per bed the inspector going round ought to find out why that is, whether the staff is too large or the dietary too costly, because the great criterion, as far as expenditure is concerned, and of management also, should be the cost per bed. Of course it would be greater in places where the number is small than where there is a larger number to divide by.

57. I gather from your answer that you are of opinion that the hospitals are efficiently managed and adequately equipped? Yes, on the whole. I should think that they have improved since the time when I knew much about them—four or five years ago. I know that in those days whenever I instructed Dr. Thompson to visit any town for the purpose of making inquiries into sanitary matters he was instructed also to visit the hospital and to make such report as seemed to be necessary on the subject. Though it was no part of his real official duties, still, as the hospital subsidy papers were referred to me, I was desirous of knowing what was going on at those places so that I might object to the subsidy if I thought that the hospital was badly managed, but there was no absolute system about it. I may say also that if I objected to subsidies, which I did on several occasions, especially to extra subsidies, it did not have much effect. I think it should have had effect. There are subsidies and extra subsidies—subsidies of £ per £ and occasionally subsidies given on special representations; all these extra subsidies were referred to the medical adviser, and I think that the medical adviser in the majority of instances reported against them, but they were always obtained, because the member for the district got them.

58. There is another important question which I should like to ask you;—you have told us that as a whole the hospitals are efficiently managed and adequately equipped, now I should like to know whether you think the hospitals that now exist are sufficient to meet the needs of the country—that is to say, if more money were available, could it be advantageously expended? I think on the whole that the hospitals are sufficient for the needs of the communities in which they are placed. I know that in some cases the beds are not filled, and that the average number of patients is less considerably than the average number of beds available.

59. Do you think that the number of beds available is excessive? No, I do not think so; because you always have to have a few in excess to provide for epidemics and accidents and things of that kind, but I mean that there is no pressure on the space of the majority of the hospitals.

60. We have just come to this, then: that the hospitals are efficiently managed and adequately equipped, and that they are not beyond the requirements of the Colony? No. If you get them too large then there is a temptation to the hospital committee to take in mere destitute cases which could be maintained very much more cheaply in the poor houses. All these hospitals, if they are too big, and beyond the immediate requirements of the place, become benevolent asylums to a certain extent. That is what you should try not to have them if possible, because hospital expenditure must be very much in excess of benevolent asylum expenditure. A man who is a mere pauper and has a bad leg does not need hospital treatment. His place is the benevolent asylum.

61. *Mr. Wilson.*] Have you known cases of that sort? You will find a large number of benevolent asylum cases detained in country hospitals, but I do not think that hospital committees detain them longer than they can help.

62. *President.*] If those hospitals are not extravagantly managed or equipped does it not show that all the moneys obtained, no matter how, is actually needed? I think it is.

63. Then it is merely a question of how the money should be obtained, your evidence, to a certain extent, would mean that it was dishonestly obtained. I use the word in a very restricted sense—your evidence shows that the money is necessary, but that in some cases it is obtained in an improper manner? Yes; I quite sympathise with the members of the hospital committees, they see the necessity, they cannot get the money in a perfectly straightforward way, and they are tempted into subterfuges.

64. The object of our Commission is to inquire into the management of charities with a view to their more economical management; your evidence shows, as far as the expenditure is concerned, that all the money is required which they obtain;—could you assist us in suggesting how these hospitals could be managed in a more economical way by any combination or by any other system? I am quite sure that considerable economy could be obtained by a comparative examination of the accounts of these hospitals. It may be pointed out to them the way in which the leakages occur, because they do occur and will occur even in well-managed places, and it is only by a comparative examination of the accounts that you can deal with it. I am not sure also that some saving might not be effected in inducing these hospitals to get rid of their benevolent asylum cases as soon as possible. Of course there must be a receptacle in the first instance

F. N.
Manning,
M.D.

28 Jan., 1898.

instance for benevolent asylum cases. When those cases are found you cannot send them to gaol, as they have done no wrong. They are simply paupers, and the hospitals must be the receptacles for them in the first instance. But they should get rid of those cases as quickly as possible, because there is no good in maintaining a person at £1 a week in a hospital if you can maintain that person in a benevolent institution at 10s. a week. I am quite sure that there is extravagance in that way. Of course there are cases that it is not worth while to send down to the Benevolent Asylums because the ailments that they have are easily dealt with and cured in the hospital. Such people may be treated effectually and sent about their work, and their railway fares may be saved. There are other cases that are kept much too long in the country hospitals.

65. Do you think that any economy might be effected by a different system of management in the way of the collection of subscriptions? The different hospitals have so many different ways of collecting subscriptions that I cannot suggest anything which they have not tried.

66. Do you know anything about the blind institutions? No; absolutely nothing.

67. You have never visited any of them? I have been once in the School of the Blind in Newtown-road, but I have not been in any of the others.

68. You know there is an institution in Boomerang-street? Yes, that is the Industrial School for the Blind.

69. Have you ever been in it? No; I have only seen it from the outside.

70. In that institution work is carried on in the way of brush-making, mat-making, and so on. I dare say you have observed that it is a very expensive building, made of beautifully cut stone, and it is built in the most perfect style. Do you think that that expenditure is necessary for a mere workshop;—would any manufacturer go to the expense of shops of that kind for the purpose of doing brush-making and mat-making; would he not rather have sheds? I have no doubt that he would, but then you have to take into consideration the circumstances under which the place was built. I do not quite know them, but I am inclined to think that the original money was given with the idea that there should be some little outside show, just the same as in the case of the Walker Hospital; that is a monument to Mr. Walker as well as a hospital. A very great deal has been expended on it in outside adornment, which is of no service—which does not help the sick in the slightest degree. I think that if that Boomerang-street institution was inquired into you would find that a fund was left for the purpose of building it, and when persons leave funds for buildings of that sort they want to have something to show for their money.

71. Still if the money had been spent in another way, it would have left a much larger fund for the help of the destitute? Undoubtedly.

72. Therefore, a great deal of our charitable funds are used simply for display? That is the case no doubt. A great deal of money has been wasted in the country in the outside adornment of all these institutions.

73. Would that apply to the Newtown institution? That is brick and stucco, and, I should say, not a very expensive building. In the case of a large number of hospitals a great deal too much has been spent in outward adornment. It is extremely difficult to keep your architect from doing that.

74. Do you know whether there are any large debts on the city hospitals? I do not.

75. Would it not be a useful subject of inquiry to ascertain what debts there are on these institutions, and what interest is being paid on the sums for which they are mortgaged? Yes. Then, I think, you may find some of them have property which they do not realise anything upon, and which they are not able to sell. I think that is the case at Goulburn. I do not know that they have a debt there, but the site of the old building in the centre of the town is still vacant; they have not been able to either sell or let it.

76. They have abandoned the old institution and built a new one? Yes.

77. Was that necessary? I think it was. The old institution was a very wretched building. It was in the centre of the town near the railway, where there is a great deal of noise. I think there were good reasons for making the change.

78. But still you are of opinion that if more care were taken in the building of hospitals to keep down expenses with regard to the mere purpose of ornamentation, we should have just as efficient hospitals as we have now, at a very much less expense? I am quite sure of that. I consider that the hospital at Kiama, which is built entirely of galvanized iron, is a model hospital for the country districts. It could be extended to a very large extent on the same plan. It is a plan, which was first of all, drawn by Dr. Ashburton Thompson, and it was modified afterwards. When I was Medical Adviser I issued a little pamphlet containing instructions with regard to country hospitals. I do not mean to say that the Kiama Hospital is perfect because it is all galvanized iron, with iron stoves that go out through the wall. I think it ought to have had brick fireplaces and brick chimneys. But the larger part of a hospital may be built of galvanized iron. The Coast Hospital and the Leper Quarter are built of galvanized iron. The country would have saved very large sums of money if that way of building had been adopted.

79. Do you know whether the Government pays £ for £ on the subscriptions for the erection of hospitals? I do not think so; but a certain sum having been raised, the Government then often gives special subsidies.

80. For the purpose of building? They do not make it £ for £. Only a few of those were built during the time I was in office. The plans were all sent to me, and I went carefully over them. They collected a sum of money, and I believe that in that case the Government followed what I understand was the usual custom. They gave them a special subsidy—not £ for £, but a building vote.

81. Do you think it would be advisable for the Government to make it known that they would not give any subsidies on account of buildings for hospitals unless the plans had been previously submitted to the Government authorities, to enable them to say whether they were too extravagant? The plans are all submitted now before the hospitals are built.

82. Do you think that sufficient attention is now paid to the point as to whether they are extravagant in construction or not? I do not think that engages the Medical Adviser's attention so much as the question of the general arrangement and that the sanitary appliances are properly placed and are of a proper kind. I do not think that the question of the materials of which it is to be built or the ornamentation outside has been so much a matter of consideration. I know it was not when I was in office. I confined myself mainly to the question of whether the wards were properly placed with regard to the aspect, whether the ventilation was sufficient, and whether the sanitary appliances were of a proper kind and

in

F. N.
Manning,
M.D.
28 Jan., 1898.

in the proper situation. It was left to the local committees to say what materials they would have, and they rather resented too much interference in that direction. There is a feeling that they like to have a little monument, and it is very difficult to repress that feeling. But I think the Government might fairly say, "We will not give you a subsidy beyond so much per bed. We do not mind what you collect. You present us with plans of a hospital to hold so many people, and we will not go beyond so much per bed."

83. You think it would be advisable to look into that aspect of the case in the future? Undoubtedly. I may mention that there were two little hospitals proposed to be erected, one for the Illawarra Line suburbs and one for the Western suburbs. The two were planned whilst I was in office, and the question of the site was left to the medical adviser as arbitrator between the conflicting parties, because each wanted the hospital in their own particular locality. I had to visit and fix upon a site. The pamphlet on the question of iron buildings was given to the committees, but they were not ready to listen to advice as regards the material or ornamentation. Of course if the Government had said we will only give you £30, £40, or £50 for each bed, they would have had to listen.

84. So you think it would be advisable for the Government to estimate the accommodation before giving the subsidy—to see that the buildings be put up in accordance with an economical design? Yes.

85. Would it be possible to decide upon a type of design for hospitals? I do not know that it would save much expense if you did, because the difficulty of site comes in. Each site differs from every other site.

86. I mean as to the material to be used? I do not think you could quite do that, because stone is cheaper in one district and bricks are cheaper in another. You must be guided by local considerations.

87. That would not be practicable? I do not think so.

88. Can you tell us what is a fair cost per bed for a hospital? It is difficult to fix the amount exactly. I should think that most hospitals could be built, and well built, for something like £100 a bed.

89. A hospital built in the fashion of that at Kiama? That would be very much less.

90. What would the cost of it be? I cannot tell you. You could easily get information on the subject from the hospital committee. Some hospitals have been built quite recently. Those at Mudgee, Bathurst, Goulburn, Kiama, and Wallsend, and there are others from which you could easily get the cost per bed.

91. You say that the Kiama Hospital has been built at a much less cost per bed than any of the other hospitals? Yes, much less.

92. Is there any reason why more costly buildings should be put up in country districts than that at Kiama? I think there is decidedly no reason.

93. Then might not the Government say,—“Here is a sample at Kiama; it costs so much per bed, and the cost of other hospitals ought not to exceed that”? Yes; I do not mean that you could fix the cost at the cost of that at Kiama; there ought to be some additions to the cost of the Kiama Hospital.

94. The Government might fairly say,—“Here is a sample hospital; it meets all requirements, and we take that as a basis on which to give special subsidies”;—would it not be a fair thing for the Government to do, and would it not result in considerable economy? I think it would.

95. Is the Kiama Hospital one you would advise us to visit so as to get some idea as to the type? If you get the little pamphlet which Dr. Thompson will give you, you will see exactly what it is without going to see it.

96. And you think that that might fairly be taken as a basis on what hospital construction in the future should be carried on? Yes, I think so for country districts.

97. Might I suggest that the cost of hospital construction could be reduced by one-half? Oh, more.

98. How much more? I could not say, but I am quite sure that it could be reduced by one-half.

99. And it answers every purpose efficiently? It certainly does.

100. Then, if the construction of hospitals in the country could be reduced by more than one-half, would it not be a means of economical gain to the country? It certainly would be.

101. And every requirement of the case would be met? Yes. I do not think you would find the hospital committees falling in with it altogether, because they would want, as they say, “something to show.”

102. Could not the Government say, “We shall only go on the basis of the type of the hospital at Kiama,” and, “We will not give anything unless you conform to something like that type.” Though the additional cost of a more expensive structure would not come directly from the Government funds, it would put an undue strain on the whole district, and the aid of the Government would be required in other ways which would not be called for if there were less strain put on the district by extravagance in the erection of the hospital? I am afraid you will not be able to do that. Suppose a man likes to leave his money for a hospital, you could do nothing in a case like that; and it would be difficult to draw a line between what a man leaves at his death and what he gives in his lifetime.

103. Would it not be fair for the Government to say, unless there are special circumstances, we approve of this simple type of hospital and we shall set our faces against other types and only give our subsidies on this basis? I do not know that you could do that, because the ultimate cost of the hospital would be no more, and the annual maintenance rate would be no more, and if the inhabitants liked to build a hospital of a more ornate character, as long as they pay for it and do not receive more than the Government think a fair sum for building purposes I do not think you could prevent them.

104. You could not prevent them, but would it not be a good plan to put this before them? It would, but you would be doing it quite as well by saying the Government will only pay so much per bed, that really brings the case forcibly before the people, and I think that the majority of sensible people would see its force.

105. And, probably, it would bring about a reform in that direction? I think it might.

106. *Mr. Wilson.*] Do you think a hospital of the type of the one at Kiama would be suitable for such places as Broken Hill, Albury, Dubbo, Wagga Wagga, and other important towns? It is found to be fairly cool. It has a double skin, and the ventilation takes place between the two skins. The heat on the roof draws the air up between the two skins. There is a perpetual current of air between the two skins.

107. Do you think that the Government could get important towns to accept hospitals of a type like that of Kiama? That is what I doubt.

108. *President.*] Can you tell me what kind of hospital would be proof against pathogenetic germs which adhere to the walls? You cannot have anything better than galvanised iron.

109. Could not galvanised iron be more effectually treated in order to prevent the adhesion of these infectious

F. N.
Manning,
M.D.

28 Jan., 1898.

infectious germs than any other substance? Yes, undoubtedly; you get a non-absorbent surface, and you get a clean surface.

110. Could you not absolutely disinfect it? Yes; that is one of the advantages of galvanised iron. If you built a wall of brick you would have to coat it with expensive cement then paint it. Galvanised iron need have no coat of paint, but a coat of paint looks nice and is absolutely clean.

111. And it is as cool as a hospital built of brick or stone? It can be made as cool.

112. Is it not almost an impossibility to get rid of infectious germs in a brick hospital no matter how you plaster the walls? No. You can tile the walls, and coat them with Parian cement or with ordinary cement painted. If you get an absolutely smooth surface, that can be washed down with proper disinfectants and made perfectly clean.

113. Still, on the whole, you would suggest that galvanised iron walls are the most simple kind of walls and the best to guard against infection? No doubt they are the best for country districts. I suppose that the Building Acts or Municipal Regulations would not allow them to be put up in the centre of towns.

114. *Mr. Powell.*] I suppose we cannot compare the ordinary cottage hospital, such as that at Kiama, with the richly endowed hospitals? Oh no. A country hospital, and a large town hospital must be built on totally different plans.

115. People would not be satisfied in the large towns unless their hospitals had a showy and commanding exterior? They would not.

116. Then generally I suppose the percentage of cost is really not in proportion to the accommodation provided, if these costly exteriors are provided it must be at a sacrifice of accommodation? Undoubtedly. If, with limited funds, you erect an ornamental outside you must diminish the accommodation inside.

117. Should not Government aid of a permanent character be on the basis of the advantages offered to the public, that is to say the amount per bed as you have suggested;—would that not be better than granting £ per £ on the subscriptions? I see difficulties about that because I think there would be inequalities in dealing with the matter.

118. Would it not get rid of some of those matters which you have suggested about the manner in which subsidies are obtained if the amount were fixed according to the accommodation provided? I think that that matter might be considered. I really have not considered it, and I should not like to answer the question without consideration.

119. Are these cottage hospitals under the control of the Medical Adviser of the Government? No; only in an incidental way. His advice is constantly sought by the Colonial Secretary with regard to them and other matters, but they do not form a part of his department.

120. Then there is really no responsible inspection by the medical adviser of those country hospitals? Whenever the Government wishes an inspection they ask for it; and if any scandal arises, or anything of that kind, then the Government Adviser is almost always asked to inquire into it.

121. But it is not a duty thrown upon his department? No, it only comes under him in an incidental way.

122. Is the auditing of the accounts understood to be an established matter with the Audit Department? I cannot tell you that; I believe that there is a very much more accurate examination of the accounts made by the Chief Secretary's office than there used to be.

123. But you are not aware whether there is any thorough inspection of the accounts? No, I cannot tell you that. There are one or two points with regard to asylums for the infirm and destitute which I would mention. It seems to me that some law is necessary to prevent the egress of people from these institutions. At present they go into the institutions, and there is nothing whatever to prevent them from going out. They go out when they are quite incapable of earning their own living to wander about the country, and to be returned again by the police at an expense to the Government for railway fares, and so on; to get into mischief, to breed children, and to cause expense to the Government in every way. It seems to me that there ought to be some law here similar to that in Tasmania, under which, when persons become inmates of an asylum for the infirm and destitute, they should not be able to get out of that institution unless the medical officer certifies that they are in a condition to earn their own living. This is constantly brought before me, owing to the fact that a person recovering in an Hospital for the Insane, or getting into a chronic condition which no longer necessitates his being kept in the hospital, can be just as well kept in the Benevolent Asylum; but if I discharge him to the Benevolent Asylum, he walks straight away, declines to stop any longer there, and there is no way of keeping him. Then, being quite unable to earn his own living, he is found by the police, and may be taken back to the Benevolent Asylum, or he may perhaps have got a little worse in his mind and may be brought back to the Hospital for the Insane. There are a number of imbecile girls whom it is impossible to keep in the hospitals for insane. They are able to earn their own living in a way under prudent mistresses, but they are often erotic in temperament, and they have illegitimate children, one, two, and three, one after another. There ought to be a way of keeping, within the Asylums for the Destitute, people of that class who are not fit to be at large and not fit to earn their own living. I think such a law is a great want. It would not be difficult to administer. The medical officers would be quite able to certify whether they are in a condition to go out or not and earn their own living, and it might be that it would prevent some people from going into the asylum if they knew they could not get out.

124. *Mr. Wilson.*] Do you know whether it is a fact that men and possibly women who are admitted to the institutions, perhaps in a very low state of health, and who are restored, then walk out and are in a few days returned? It occurs over and over again, but I am afraid that you would never quite get rid of that chronic class. There are men who go into every hospital in the country, into every benevolent asylum, and who spend their whole time between the benevolent institutions and the gaols.

125. You are aware that at the institution in George-street, Parramatta, and at Liverpool, there are some hundreds of hospital inmates? Yes. I know that something like from one-third to two-fifths of the inmates are hospital cases. At Liverpool there are something like 400 people in bed, and that, I think, is the great argument for having these places more under a medical head.

126. Do you think that some 300 or 400 at Parramatta, and 400 at Liverpool are properly placed there, or that they should be removed? I think that the acutely sick should be accommodated in one institution, but manage as you will there will always be in all those institutions a large number of people who are really chronic hospital cases. There will always be amongst an old and feeble population a large number

F. N.
Manning,
M.D.

28 Jan., 1898.

number of hospital cases, cases that you cannot transfer all in a minute, cases that want treatment. In the Asylums for Infirm and Destitute you have an enormous hospital population.

127. Have you any idea as regards the classification of the inmates of these institutions? There is an attempt at classification. There is a cancer ward, and there are certain wards for cases of consumption and certain wards devoted to bladder cases that occur in the aged, but there is no very systematic classification at present, not owing to the officers of the Department, but owing to the buildings,

128. Do you know whether there are in the asylums men and women who are well able to do continuous labour? I know that there are those who do continuous labour, and it seems to me that there are some who might fairly get their living outside who are kept at work in the institution; but that is rather difficult to judge of. In the early days of the Colony, when work was scarce people were content to employ an inefficient man because the employment of an efficient man meant high wages; but now, if an efficient man can be got for moderate wages they will not put up with an inefficient one, therefore a good many of the inmates of the Asylums for the Infirm and Destitute would have a difficulty in getting situations so as to work for their living.

129. Would you recommend some system of labour test for those able-bodied men and women? I do not think you will find any able-bodied men there except those who are convalescing from diseases. It is the system to transfer from the Coast Hospital, the Sydney Hospital, and Prince Alfred Hospital, those who are convalescing from acute diseases, and who have no homes and who cannot be got into a convalescent institution. They are transferred to one of the asylums for the infirm and destitute for a time, but I do not think they stay beyond the time necessary to get strong and well. I should not think there are many people whom you could call able-bodied in the Asylums for the Infirm and Destitute, though there are a large number who can do a little work.

130. Of light labour? Yes.

131. Do you think that the superintendent of the institution should be a medical man or a lay superintendent? Certainly, in those that have the largest number of hospital cases you want a medical man. I am quite sure that it occupies the whole time of one medical man to attend to the number of cases that are in bed at Liverpool.

132. Suppose there is a medical man who has nothing else to do who is not superintendent—I am speaking now of a business manager? If you have not a medical man in charge, I think you ought to have a medical man at the head of the whole system. If you have a medical man at the head of the whole system, I think that you could do with a lay superintendent and a medical officer. Unless you have a medical man in charge of the whole group of asylums, I think you want a medical man as superintendent.

133. Assuming that it is a lay superintendent, what would be the proper relations of a lay superintendent with the medical man as regards jurisdiction within the asylum? The lay superintendent would have to be the superior officer.

134. Supreme in all except medical matters? Yes. No doubt friction would, and does, arise under such circumstances.

135. Do you think that at Liverpool and Parramatta, where there are hundreds of hospital cases, there ought to be trained nurses in attendance? Undoubtedly the nurses ought to be trained.

136. At Parramatta there are no trained nurses—at Liverpool one has recently been appointed; you think that these people should be in charge of trained nurses? There can be no shadow of a doubt that for a large number of sick like that you must have trained nurses. It has been one of the greatest scandals in England and Ireland the employment of pauper labour—untrained labour—in nursing the pauper sick; it has been found to be a complete failure.

137. You are perfectly satisfied on that point? Yes; I am very strong upon that point. Of course the nurses can get some help from the inmates, this can always be done.

138. For the more menial offices? Yes; but the nursing and responsibility ought to be entirely in the hands of properly trained nurses—nurses who have had two or three years' training in a proper training institution.

139. Assuming that there are 400 inmates in the Liverpool Asylum, what would be a proper staff of trained nurses for them? That would depend upon the class of patients; no one, except they worked in the place, could tell you.

140. Do you think that the law of the country is defective as regards the obligation of relatives to contribute to the support of their relations? As the law is worked by the Master in Lunacy I do not think it is so defective. There is no special provision for that under the Lunacy Act, but he works under the Common Law, which makes parents responsible for their children, husbands responsible for their wives, and sons responsible for their fathers and mothers. In some of the other colonies special Acts have been passed, but I think only as far as relates to the Lunacy Department, to make brothers of insano people responsible for the maintenance of those people, but that seems to me to be a hardship. I do not think you can carry the thing very much beyond the Common Law, and this has worked very well indeed as far as the Lunacy Department is concerned. The Master in Lunacy here is a very active officer, who does administer the law, and he gets a large amount of contributions.

141. There is no reason why the Director of Charities should not invoke the Common Law to get contributions just the same as is done by the Master in Lunacy? No, if he sets about it in a proper way. The Master in Lunacy collects some £13,000 a year. Of course that is not all got from relatives; a good deal of it is got from the estates of the patients themselves; but I know that a very large proportion is got from relatives, and is got without suing them in the courts, because, the question having been once tried before the magistrates, and decisions having been given, it is only necessary to threaten to put the law in motion, and the people concerned pay according to their means.

142. You receive a good many inmates from charitable institutions? A very large number.

143. When these inmates come to you do they show that they have been fairly well treated as regards clothing and personal cleanliness? Well, I think that as a rule they might be better fed, and, though they have come to me fairly well clad, I have had to complain very bitterly at times of the state of their clothing, which has not been either creditable to the officials or conducive to the health of the individual. I have known them to be clothed in a manner which was unsuitable to the weather.

144. Is that recently? Yes, comparatively recently. There was a case a few months ago. Then, what makes me think that the diet is not quite as good as it might be, is that I find the patients that I discharge to the

the care of the Asylums for the Infirm and Destitute are a little liable to run down in health, and then their illness recurs. It may be that where there are such large numbers they do not get the necessary attention and the little extra diet that would save them from this, but they run down and they come back to me when I think they should not come back.

145. Do you consider this dietary scale [*produced*] suitable? That requires some consideration. I could not give you an opinion on that offhand; I will consider it *

146. As regards the women at Newington, it is probable, I suppose, that women who are reduced to poverty from misfortune have to associate to a great extent with women of very bad character;—do you see any means of preventing that by any system of classification? That should be possible by classification. Of course that has always been a complaint in every large institution, and it must be. It is a complaint in hospitals and in asylums for the insane. In the asylums for the insane the classification has to be largely mental, though we do try to classify the patients according to their former social status. But you will always have the question raised as to the association of people of bad character with people of previously good character. It might be met by having plenty of wards and plenty of dormitories, but it is difficult to meet it.

147. At Newington they do attempt it? I should expect that they did.

148. Do you think that epileptics should be kept in the Government asylums? Undoubtedly, if there is no special institution for epileptics, or special colony. By colony, I mean those farm communities that are established in some parts of Germany, and in some parts of England, for the treatment of epileptics. An epileptic is a very helpless being, who cannot be maintained at home. Very often he cannot get his living owing to his infirmity. He is fairly one of the infirm and destitute, and he is not insane in many cases, he may be dazed a little after each fit, but comes to himself again in a few minutes. He cannot be transferred to an hospital for the insane, and there is no reason why he should not be kept in the asylum for the infirm and destitute when you have no other institution. I do not say that that is an ideal way of dealing with him. The ideal way would be to have a farm on which he can work under supervision; but that is an elaboration of charity that we have not got to here.

149. Do you find in your department that you have many inmates who properly should not be in this Colony, but should be chargeable to some other colony? No, not now. Some years ago we were unfairly charged with a great many cases, because they had laws in all the other colonies preventing insane or dependent people, who arrived by ship, from landing. Some four or five years ago I got an Act of Parliament passed, in which there was a section providing that, if a person was taken to one of the hospitals for the insane within so many days of his landing, or was obviously insane when he landed, then the captain of the ship bringing him, or the company who owned the ship, were made responsible for his maintenance, under a bond in the sum of £400. As regards the Hospital for the Insane the Master in Lunacy insists on the execution of the bond, and also upon maintenance, and the shipping company take very good care to remove these people the first moment that they can be allowed to go. They take them home very often when they are still insane. Our law on that point is now in accord with the law in the other colonies, and I do not think that we are charged now with more than our fair number of insane.

150. That applies only to insane; it does not extend to those who have become inmates of charitable institutions? No I do not think there is any law which prevents a pauper from landing here or a man who is absolutely sick, and has to go into charitable institutions. There is such a law in most of the other colonies. There have been complaints from time to time that lunatics are passed on from one colony to another. The other colonies have complained that we have sent patients away, and we have complained that the other colonies have done so, but there is really nothing in it. There are people who, having been a failure in one colony, are anxious to go to another, and often have friends in other colonies. A medical superintendent occasionally helps them, because they wish to go to, and have friends in other colonies, but the thing is done by all the colonies. There is no systematic getting rid of the patients. We are all alive to it, and if the thing were made a matter of system, or there was any imposition on this Colony, I should immediately inform the Government, as I have no doubt the superintendents in other colonies also would do. There is really no imposition in the matter.

151. Going back to the subject of hospitals, do you know of hospitals having in recent years been opened when there was no occasion for it? No, I do not. I have no doubt that Dr. Thompson could give you more information on that point than I can.

152. Do you consider that the asylums for the infirm and destitute are too large? With efficient management we ought to be able to manage 800 or 1,000 people under one roof.

153. Supposing that the building is properly constructed? Yes; 800 or 1,000, or even more than that, with properly constructed buildings. The administration ought to be quite equal to that, but you do not get economy, as a rule, where you have got more than from 600 or 700.

154. You think that 600 or 700 would be the maximum, consistent with economy? You have to increase your officers, and you do not get any real economy when the number exceeds about 700. That is what is found in the hospitals for the insane. The economical number to administer for is about 700, though they have gone up to 2,000 in England under one roof, but that is not an economical state of things.

155. Could you not manage a larger number in a charitable institution than in an institution for the insane? You could, but I still doubt whether you can get economy if you have more than a certain number. I do not quite know what is the limit of economy in charitable institutions, but I know what it is in the asylums for the insane.

156. Would it be a somewhat higher number? Yes, I think so.

157. Do you consider that the question of charitable organisation here is too much centralised;—I am referring now to the Charities Department? I think it is; that has arisen from the fact that we have no local government. It would no doubt be very much better instead of sending these people down to the big institutions by rail to provide for them in their own districts, but you must have local government to do that. Our system has arisen from the fact that we have no local government, and you cannot apply local government to towns when you do not apply it to country districts.

158. Do you think it would be an advantage to have visiting committees in all these big institutions as they have at Newington? Well, candidly, I do not think the visiting committees are much use—in Government institutions I mean.

159

* NOTE (on revision) :—I have examined the dietary scale, which appears ample, and on the whole sufficiently varied, though butter might be given instead of treacle, with advantage.

F. N.
Manning,
M.D.
28 Jan., 1898.

159. *President.*] I think you said that certain imbeciles displayed erotic tendencies? Yes.
160. I want to know whether that applies to blind people? I cannot tell you that particularly. I know that blind people have always the reputation of being more or less erotic, and I know they are very difficult people to manage in their way. They are difficult in hospitals for the insane, and they are extremely difficult in asylums for the infirm and destitute. They are amongst the most discontented people to deal with. I know that there have been frequent complaints in the institutions for the blind in the old country of sexual perversions.
161. You can understand why I ask this question? Yes. I do not really know that there is anything that should make a blind person sexually display erotic tendencies except that the pleasures of life to them are small, that they are cut off from many outside enjoyments and they are induced to find enjoyment in sexual things. I do not know that there is anything physiologically or pathologically in a blind person to account for it—that blindness itself is in any way calculated to excite erotic tendencies and proclivities; but I think it arises from the fact that they are cut off from so many of the pleasures of life that they seek for them within themselves.
162. As to the management of the blind, in what particulars have you found them unsatisfactory? Generally I have found them terribly discontented and difficult to manage in every possible way. I know that if I have a blind patient that person is almost always a difficult person to manage, and I think you will find that the Superintendent of the Asylums for the Infirm and Destitute will tell you that their blind people are difficult to manage too.
163. Are they liable to be carried away with fancies, fancying that things have occurred that really have not, so that in their minds what was really at first a fancy becomes a fact? That is so, undoubtedly; that is the reason why they go insane. They get fancies and they are deprived of one of the great correctives—the greatest corrector, sight. They are deprived almost of all that makes life real. All sorts of fancies may arise in your mind but you correct them by your sight. They are deprived of that means.
164. Would you think that in a case where two or three blind persons have deposed to certain things their statement, even if they all agree, should be looked upon with extreme caution just from the fact that they are blind? No; I would not say that if they all agreed. I do not think that you should consider their evidence on any given point taken as a whole is any less reliable than that of other persons.
165. They are not likely to evolve from their own consciousness something of that sort? No, not collectively. If you get the same story told you by three consecutive people who are blind I should believe that story as readily as I should believe it if it were told to me by people who are not blind. I merely meant that people who are deprived of one sense—the sense of hearing or of sight especially—are more liable to become insane and subject to delusions than people who have all their senses, but if three blind people told me the same story I should attach the same credence to it that I should if they were not blind.
166. I think you referred to paying patients in your hospital,—do you know if sufficient attention is paid to the question as to whether the patients are able to pay for their keep? I do not think that sufficient inquiry is made anywhere on that point either in England or here. There is a constant outcry in England that people are admitted to the hospitals who can very well afford to pay, but who do not pay for their maintenance. This complaint is made especially with regard to the out-patients' department. I feel sure that there are a great many people here who could pay and who do not pay. Some inquiries are made here at our main hospitals by the secretary into the circumstances of the patients, but he has no machinery that he can put into very active work in the matter.
167. Do you think that if an officer were appointed whose special duty it would be to inquire into all these cases, considerable economy might be effected;—would it be worth while to establish such an office? I think you might get economy in that way. Such an officer should be made use of by perhaps all the hospitals. When a case arose which they had any doubt about they might make inquiries through this officer. The police do a deal of that for the Government, but they are not set in motion by the ordinary hospital committee. The Inspector-General of Police would not allow his men to be set in motion by purely private bodies.
168. You think there would be some justification for the appointment of an officer, say, attached to the Chief Secretary's Department whose duty it would be to carefully look into all these cases? I think so.
169. It would very much promote the economical working of these institutions if such a system were carried out? It would, I believe.
170. Do you know anything about the Benevolent Asylum? No; nothing whatever.

MONDAY, 11 JULY, 1898.

[The Commission met at the Offices of the Public Service Board at 10.15 a.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT.)
J. POWELL, Esq., J.P.

Edward Thomas Penfold, J.P., sworn, and examined:—

- E. T.
Penfold, J.P.
11 July, 1898.
171. *President.*] You are the hon. secretary of the Benevolent Society of New South Wales? Yes.
172. How long have you held that position? Nearly three years.
173. How many years have you been connected with the society? Twenty-five years, last February.
174. As a director? I was connected with it for two years, then I went to England, and was absent three years, but on my return I was re-elected.
175. Can you say that the account given in this book of rules and by-laws is a correct statement of the constitution of the society? I have not the slightest doubt about it. It was issued in 1896.
176. But was it correct at that date? Yes; but I think we have had some amendments made in some of our rules since that.
177. In what direction? Merely as to the election of directors and the status of some of the officers.
178. Having been so long connected with the institution as a director and secretary, I suppose you have an intimate knowledge of all its affairs? I think I have.
179. I presume that this short historical notice is correct? Yes; I have read it at different times.

180. What are your duties as secretary? You may say general superintendence, with a general knowledge of the outdoor relief; that is the most important part of the work, and all matters of internal management. Of course, as regards the midwifery department, I do not take any part in that. If anything of importance takes place the matron will refer it to the House Committee and ask advice; but, as a matter of fact, we leave the internal part of the business to the matron. She is a very superior woman, and understands the business better than men would. Any suggestions that she makes as to improvements are instantly complied with. I go occasionally through the wards, but I cannot say that I often go. I think it is more for the ladies' committee than for men.

F. T.
Penfold, J. P.
11 July, 1898.

181. Rule 40 says:—

The secretary shall cause to be properly minuted all proceedings of the society, carry on its correspondence, sign all orders of the board and house committee, and jointly sign all cheques for the payment of money?

Yes; that is what I perform.

182. You do not do it yourself, but you see that it is done? Yes; the manager does it, and the minutes are read at the weekly meeting, and I am generally there, and know whether they are correct or not.

183. Are all the paid officers of the Society under your direction—I presume that you are really the mouthpiece of the committee? Yes.

184. Instructions to the paid officers are conveyed through you? Yes.

185. Are all the paid officials under your direction in that sense? Yes; I instruct them to do anything that I think necessary.

186. You say that you instruct them—do you mean that you instruct them of your own motion, or simply as conveying the instructions of the committee? The committee places a great deal of responsibility upon me in these matters. They know that I am often there. I go there on an average four days a week, and of course I go through the institution, not through the women's part, but through the other portion, and I see what the officers are doing and where they are. Some of the most important work is the inspection of the out-door pensioners. That I look upon as the most important work we have to do.

187. I understand that as honorary secretary you are the mouthpiece of the committee, you convey their instructions, but I want to get at your relations with the manager;—what responsibility has he? He has a considerable amount, but he never does anything of importance—does not make any change without consulting me. If anything of importance comes before him he refers to me. I go there four mornings of the week, and he will say "So-and-so has taken place, what had we better do?" If the matter is very important I postpone it until it can be dealt with by the house committee or by the board.

188. In regard to matters in which you think you should exercise your judgment, you instruct him; but in regard to more important matters that you think the committee should deal with, you refer to the committee? Yes; I never intentionally take anything upon my own shoulders further than I think I ought to do, as I consider that the committee have a right to know everything that takes place in that institution.

189. Then you attend there about four days a week? Yes; on an average during the year.

190. How long do you stay there? It all depends upon the work. On Tuesdays I sometimes look in in the morning, then get there at a quarter to 2 in the afternoon. I then remain there until the close of the business, sometimes as late as 7 o'clock in the evening; not often so late as that, but occasionally. That is our busy day, when people come for out-door relief. We are not often there until 7 o'clock; till about 5 o'clock is the usual thing.

191. Rule 1 says:—

Under the direction of the board and house committee the manager shall have the general superintendence and management of the asylum; he shall be responsible for the safe keeping of all property belonging to the Society, and for the full and effective discharge of the duties of all the paid officers and servants except the matron and the medical officers.

? Yes; those are his duties.

192. As laid down by you? By myself and by the committee. I do not wish to indicate that I am both secretary and committee. I am not. I never trench upon what I consider to be the province of the committee.

193. I quite understand your relations with the committee;—what I want to get at is your relation with the staff? I go there in the morning, and the first question is, "Is there anything fresh this morning?" They will say, perhaps, that a letter has arrived; will you look into this or that. Perhaps something at the back wants inquiring into. I go and see, and if it is not anything of importance, we settle it there and then. If it is a matter of importance, it is brought before the house committee.

194. The manager looks to you for advice? Yes. I do not think he does anything without consulting me.

195. Then the manager takes no responsibility in any matter out of the ordinary routine? He does not attempt it.

196. Suppose you were not conveniently accessible, what would he do? He would go and see the president, or communicate with him by telephone.

197. If the matter was absolutely urgent, would he not have to take some responsibility? He does; but it is of very rare occurrence. You can almost say that it never does occur.

198. Then the manager's duties are carried out as laid down in this book? Yes.

199. Do you give directions to the staff through the manager or otherwise? I give any directions that are necessary. I speak to Mr. Maxted. Sometimes I go and see the men, and ask what they are doing, but it is a very rare thing.

200. Are all directions given through the manager, or do you direct the officers occasionally, not through the manager? Sometimes through the manager, sometimes myself directly. The thing goes on so smoothly that it is hardly necessary for me to give instructions. Each man has his particular duties to do, and Mr. Maxted sees that he does them.

201. It is laid down in the rules that the manager is responsible for the carrying out of their duties? He is responsible, and if they should not do their duty, he would report to me immediately.

202. He is responsible for the paid officers, but how can he be responsible if directions are given to those paid officers, not through him? I do not give any important directions, but merely on trivial matters. I might say to an officer, "Where have you been; have you been in such a district? It is wise for you to go round that district if you have not been there lately."

E. T.
Penfold, J.P.
11 July, 1898.

203. Then suppose that a man was doing work that Mr. Maxted set him to do, you would not take him off that work? No; not unless I consulted Mr. Maxted, I should never think of interfering with an officer without first speaking to Mr. Maxted. I have such confidence in Mr. Maxted, in his ability and integrity, and love of the work of the institution, that I feel that he does not require looking after.

204. Who is the principal executive officer of the institution? There are four executive officers—the president, the vice-president, the hon. treasurer, and the hon. secretary. I have always considered these the executive officers.

205. I mean the officers really engaged in the daily business of the institution? The manager, who is responsible for everything. I never speak to any subordinate officer without speaking to him in the first instance. We give instructions to Mr. Maxted with regard to external work, and with regard to internal matters we give orders to the matron.

206. Do you ever deal with the admission and discharge of inmates or with out-door relief cases yourself? Not unless there is no one else there. If anyone came for relief under those circumstances I should deal with the case the same as Mr. Maxted has power to do. If anyone should come in—a case of distress—I should hear the case, and order certain rations. We never turn anyone empty away unless he is an utter imposter.

207. This is the process: On Tuesday the board meet, and applications come before them for consideration; some are granted and some are declined; but on relief day somebody comes, and you, representing the committee, considering it an urgent case, or Mr. Maxted would take the responsibility of giving relief and reporting to the committee? Yes, on the following Tuesday. We never turn anyone away except imposters. We sin on the right side rather than send people away to starve.

208. So that in any case in which you or Mr. Maxted gave relief the matter would be reported to the Committee? Yes.

209. And, I presume, the inspector would pay a visit? Yes, as soon afterwards as possible.

210. It is only in cases of urgency that either you or Mr. Maxted would give relief except in the ordinary way? Yes; and then it is only for once. They must come before the committee on the following Tuesday, or they cannot receive relief a second time.

211. *President.*] In the meantime the inspector makes inquiries? Until the last three months they made immediate inquiries; but since then we have had so much to do that the work could not be done so promptly.

212. How is the correspondence dealt with;—is it addressed to the hon. secretary or to the manager? As a rule it is addressed to me.

213. And how is it dealt with;—suppose a letter comes on Wednesday morning, and requires an answer? If it is an ordinary letter it is replied to at once.

214. Are letters addressed to you as hon. secretary opened by the manager? Yes; I delegate the authority to him to open them all.

215. So that there is no delay as far as that goes? No.

216. Then, if this correspondence opens up any question of action in any important matter, I presume that he refers to you? Yes; he does not answer any letter without referring to me.

217. He does not answer any? Not unless it is a letter from Mr. Hanson of the Charities Department and requires an immediate reply, he will then telephone to him. Anything of importance he remits to me.

218. And you superintend that correspondence under regulation 2, which says:—"The manager shall conduct the correspondence"? Yes.

219. You have said that you attend on the average four times a week; if there is any pressing matter in the correspondence Mr. Maxted would ask for instructions? Yes, he would telephone to me, and if he could not find me he would refer to the president.

220. Are letters occasionally addressed to the asylum in your own name? As a rule they are directed to me as secretary. Sometimes a private friend may write to me in my own name, sometimes a person does that who knows me personally in making a recommendation, then I lay it before the Board, but it is very seldom that such a thing happens.

221. You treat it as an official letter? I treat everything as official.

222. *Mr. Powell.*] Do you sign all the correspondence in reply? Yes, every letter. Some letters are signed by the vice-president or the president, but I sign all ordinary letters.

223. *President.*] Are you aware whether the returns asked for by the Commission some time ago are ready? I do not know; there are so many. We have been inundated with demands for returns from your department. Mr. Maxted said he had a report to send in. But he will be able to give you more information than I can. He has been instructed by the board to give this Commission every information they require, to withhold nothing.

224. Who was in charge of the asylum when the manager was away? Mr. J. Grant and Mr. Roseby.

225. Were those returns we asked for delayed by the absence of the manager? I daresay they would be. He was away three weeks, but everything was carried out to the letter.

226. In his absence, I presume, they were pretty well at a standstill? We have not been able to touch the returns. I am sure I could not go into the details of the institution.

227. So that in his absence the returns would have to be at a standstill? Yes; I think I wrote you a letter to that effect. We wrote to another department and told them that we could not give them some returns they were writing for.

228. Is the institution administered under an Act of Parliament or simply under this constitution? Under this constitution.

229. Under the by-laws and regulations, a copy of which we have here? Yes.

230. I understand that there is no Act of Parliament under which the institution is carried on? No; I do not think there is.

231. There is a rule that no member shall be entitled to vote in any election whose subscription has not been paid three months previously;—has that been adhered to? I do not think we have had an election for the last six or seven years, but if there was an election, and anyone attempted to vote who had not paid, I should stop him from voting, or I should drop a note to him beforehand to say that if he wished to vote, he must pay up.

232. If an election was held, I presume that it would be on the basis of the subscription list? Yes; we should have our books there, and no one would be allowed to vote who was not eligible.

E. T.
Penfold, J.P.
11 July, 1898.

233. You say that there has not been an election for some time;—how are vacancies filled? I think three members have to go out every year. Those are the ones who have attended the smallest number of times. There are some first-class men, such as Mr. Crane, the late Stipendiary Magistrate; also Mr. Ewan, and three or four others, who do not attend regularly, but when there is anything of great importance to be dealt with, they always come. We are never without a quorum, or considerably more than a quorum.
234. You say that there has been no election for many years;—the question is how are vacancies filled? There is an annual meeting, and if A, B, C, and D have attended the lowest number of times, they cease to act. If they are good men, they are re-elected. We think it far better to have men we know something about than to have strangers. There have been several new ones, men we know to be good men. Sir Arthur Renwick might say I know so-and-so, he will make a very good man. It is a personal guarantee. We want men of a peculiar kind there, men with feeling hearts and intelligence, because there are cases that come before us at times that are very painful, and if we had hard-hearted men to deal with them, it would be terrible. We want men with some sort of soul in them.
235. How are the collectors paid? I think they receive 5 per cent.
236. They are paid partly by salary and partly by commission? Yes; a fixed salary of £50 a year and 5 per cent. They get something for travelling expenses when going up the country. The expense is considerable. It amounts to 20 per cent.; but we get the other 80 per cent., which we should otherwise never get. We have collected a great deal of money in the country during the past few years. I have a report before me to show what they have done.
237. Do you know what part of the country the collectors visit? All parts. I do not think they go so far as Broken Hill, but they go very nearly to Broken Hill. They go to the north and to the south. The Government give them free passes for that particular work.
238. Do they go far from the railway-line? Yes; they get squatters to drive them about. They go miles from the railway, and they find a great deal of sympathy; hotelkeepers will merely charge them a nominal amount for board and lodging.
239. Do they furnish receipts for their expenditure when away? Yes; detailed receipts.
240. Do they give receipts for every subscription, however small? Yes; they have a book for the purpose.
241. Some of the institutions do not give receipts for small subscriptions? We give receipts for every shilling.
242. How long has the work of the institution been carried on in the present building? From 1820, or thereabouts, I think.
243. In 1819 it was recommended that a suitable building should be prepared? Yes; I think you will find that it was started in 1820.
244. Are the land and premises the property of the society? We consider so.
245. Is the land vested in trustees or whom? I am not prepared to say. It has been acknowledged, I believe, by Mr. Cribbett Walker that it is our building, and Sir George Dibbs acknowledged it was our building. I do not think we have ever had a grant from the Government.
246. The institution carries on, first of all, outdoor relief; secondly, it is an asylum for homeless and deserted children and foundlings, and for children awaiting removal to other asylums; then, a lying-in institution. Consequent upon its being a lying-in hospital, there is a training-school for midwives and nurses, and a school for midwifery? Yes; we have a large school for midwifery.
247. And lately you have added a new department for the treatment of women in their own homes? Yes. In a serious case we get one or two doctors to attend.
248. The Government, of course, subsidise the institution; do they exercise any control as regards the management and expenditure? No; but we frequently report as to what we are doing. We give a detailed report.
249. That is this printed annual report, I presume? We go further than that. We go into full details as to what we do from time to time. We have had continuous begging from the Government, and we have had to send in detailed statements of what our work is.
250. The Government do not exercise any control over the institution at all? They do not exercise any control.
251. In paying a subsidy, what do the Government require? They give us so much per head for each woman and child in the institution. We have had a large lot of money left us at one time and another, and we have sold land to the Government. I may mention that some short time after my return from England, a woman, who was a deserted wife, applied for assistance. I was then not well up in the by-laws, and I proposed that she should have 2s. 6d. a week, but the chairman ruled that we had no power to grant the money in that case unless she was a widow with two children or more. I thought that was very hard, considering the number of deserted women there are in the town, and I proposed that we should alter the by-laws, and take power to allow, in addition to food, a sum not exceeding 5s. a week in any deserving case. That would include deserted wives. There are a good many deserving of assistance. During the last three or four years—in fact, since the catastrophe of 1893—the demand has very much increased. We used to give away £50 a week, but we have reduced the maximum now to 3s. a week, and the total amount is about £35 a week, instead of £50 a week, and we have more than double the number of applicants that we had formerly.
252. *Mr. Powell.*] Are those what you call pensioners? Yes.
253. *President.*] You give a return to the Government of the number of people that you claim for? That we relieve. That is the indoor arrangement.
254. The Government pay so much per head for those whom you claim for? Yes.
255. Do they check your returns? Indeed they do; they are always round checking and looking them over to see that they are not overcharged. I am having a controversy with Mr. Hanson now; he knocked off £130 last year which I consider he ought not to have knocked off. If we cannot get it a deputation will have to go and see Mr. Reid about the matter. Mr. Hanson is only doing what he considers his duty, whilst we are fighting to get as much as we can for these poor creatures.
256. Now, as regards the locality of the institution, is it considered by the Committee that the institution is well situated? Yes; but we have always thought it was too valuable a site for such an institution. It has been valued at from £60,000 to £100,000. If it could be sold the Government would be able to save money. With that money and what little money we have they could buy land and give us a more suitable

- E. T. Penfold, J.P.
11 July, 1898.
- suitable building altogether. I may state that the buildings are totally unfit for the work of the institution. I am talking now about the lying-in department. We have had that terrible disease amongst women—puerperal fever—there.
257. The site is a very good and convenient one, but the building for certain purposes is very unsuitable? Totally unfit.
258. Has the committee at any time made a proposal to dispose of the property? We have been to the Government I could not tell you how many times. We have been to Sir Henry Parkes, to Sir George Dibbs, and to all the Governments down to the present time, and we have had promises. They say you are quite right, but they do nothing. If we had a few Members of Parliament to back us up we could have got it carried.
259. How many of your officers are under a guarantee? I could not tell you. Very few of them have anything to do with money. Mr. Grant, Mr. Maxted, and, I think, Mr. Roseby, pay the money out weekly.
260. Who audits the accounts? Messrs. Hammond, Henson, and Anderson, our own officers. We sometimes get a professional auditor in. Our books were audited about three years ago by Messrs. Ford and Troup, who opened a fresh set of books. The books are so simple that there is no difficulty in carrying the system on.
261. With such a great number of transactions I should think you would require professional auditors? Perhaps so, but we have not thought it necessary. Mr. Hammond goes through the books time after time. He is a most careful, painstaking man, and he goes through every item.
262. Of course, there is a question of principle involved? Yes, I agree with you. I have said that we ought to pay some firm to audit the books professionally, but the members of the board have thought otherwise.
263. Either that or a Government audit? I do not care which it is.
264. The Audit Office do not audit the accounts? No.
265. You are disposed to favour a professional auditor? Personally, I am. I have always thought that we should be, like Cæsar's wife, above suspicion.
266. In your balance-sheet for 1897 there are two items, one of £73 for rent of coffee and fruit stall, and one of £273 13s. 4d. for rent of hoarding;—are these things put up to competition? Yes; it was put up to competition. We might have got more, but we do not know how long the institution will remain there. We can dispossess the tenant at any time by giving six months' notice. The Government might resume the place, and we did not feel inclined that those who got the contract should have any claim upon the Government. We could have got 50 per cent. more at least if we had given a five years' lease. We would not commit the Government, because, if we did, the parties might come on the Government for heavy compensation.
267. When were tenders last called for? The man that has it tendered. He is only a monthly tenant; we could at any time dispossess him. He has spent £400 or £500 there, so I think it would be dishonest to interfere with him. He wrote to me about it, and I said, "Whilst I am on the Board I will do all I can to prevent your being dispossessed, as you are paying a fair rent."
268. Did he get it for a term of years? No; for six months only. He pays monthly, and he could not retain it more than six months. I think that on a month's notice he would have to give up possession.
269. Have you any idea when tenders were called for? Three or four years ago.
270. And you think it would not be fair to this man to call for fresh tenders and dispossess him? I think not. He said, "If I spend all this money on it, in what position shall I stand with you?—you could turn me out at a minute's notice." We said, "We will act fairly with you. We make a promise that we will do all we can for you to retain it."
271. This man had to spend a considerable amount of capital before he could earn anything; therefore, you consider it would be unfair to call for tenders and dispossess him? Yes.
272. As regards the £73 rent for the coffee and fruit stall, is that thrown open to competition? No; two or three people applied, and we have got a very respectable tenant. He pays us 25s. a week for that box, and I think we are well paid for it.
273. It is not a matter of competition? No; but we advertise. We act towards this man as we would in regard to our private affairs, liberally and honestly with him.
274. Then there really was competition? There was in the first instance. We have an agreement with this man that if a circus comes there he has to give up part of his place to make an entrance, and he has always done it. We have received a considerable amount of money at one time or another from circuses.
275. The assets amounted, at the end of 1897, to £34,139, and there was a liability against that of £9,146, making a credit balance of £24,993? Yes.
276. Are the funds increasing? No.
277. You are living on capital to some extent? We are indeed. We are living on the promises of Mr. Reid. We can get no positive promises, but I must say that he has been the most kind and considerate Minister that we have ever had to do with, and the most sympathetic with our work. He gives us more kind words than any Minister ever did before, and he gives us more money than any other Minister has ever done. Not merely at election time, but he has done it long ago.
278. Have these funds been accumulated from bequests chiefly? Some years ago there was some land sold. You may remember the old toll-bar. We sold the land there. The price came to about £10,000, and the Government allowed us to have the use of it. We were not to spend the principal, but we were to have the use and the interest, and there have been bequests. This sale of land took place about forty years ago. Our funds went on increasing for a number of years. The management then would give as little as possible to the poor; some twenty years ago it was thought that the poor should be deriving more from the funds, and that we ought not to go on hoarding this money. The management said we want to have a fund, we never know what may take place, but we said that it was never intended that we should keep the money, but that we should give it to the poor, and we adopted a different system altogether. We increased the amount given to the poor, and the report which I have before me shows what we gave in those years. It is taken from our book. In 1892 our weekly average number of cases was 518; in 1893, 633; in 1894, 718; in 1895, 743; in 1896, 1,011; in 1897, 1,196. I have been round to see many of these cases, and I can assure you that it is really heartrending to see the poverty of these people, and the patience with which these poor creatures bear their poverty. The great increase is caused, in a great measure, by this,

this, that prior to the crisis of 1893 men could get a day's employment when they were sixty years of age and upwards, but now people will not employ them because they cannot get a day's work out of them. That is what they all tell us. It is the same with regard to women. A number of them used to go out as charwomen. Now they say that ladies have reduced their expenditure, and instead of giving these women a day's work the servant has to do the washing. From these causes arise the great increase in the number of persons sixty years of age and upwards who are receiving relief.

E. T.
Penfold, J.P.
11 July, 1898.

279. Did the directors have to draw on their accumulated funds for current expenditure during 1897? Yes; they reduced their expenditure from £50 a week, the amount in 1893, to the present amount £35 a week, and we have more than double the number of cases that we had then, but we do not give within 30 or 40 per cent. the amount that we used to give them.

280. As regards the increase in the number of cases, is it possible that you are relieving the distress of other colonies to some extent? I do not think so. We have not had any reports of recent arrivals applying for relief, but if there are destitute people here from other colonies we must not let them starve. We could not say, as you come from Victoria or from Queensland, we will not assist you.

281. No; you are powerless in the matter. It is a question whether the law should keep these people from coming here;—that is what I am driving at? I cannot see how that would do it, I am sure.

282. To go back to the question of expenditure, you have had to draw on your own accumulated funds for current expenditure, and you have an overdraft of £9,000? We had, about fifteen or sixteen years ago, £45,000 on fixed deposit. Last year we had £27,000 on fixed deposit. We have been working upon that fixed deposit at from £1,000 to £2,000 a year for the last fifteen years. Last year we over-ran the constable to the amount of £2,000.

283. I presume that the conditions of some of the bequests would prevent you from doing so? There is only about £1,050 bequeathed with the condition that we are only to have the interest.

284. Do you know what proportion of the expenses of the Society the Government pay in the form of subsidy? They pay a large proportion.

285. We make it out to be about 60 per cent.? I would not question it. We have got a very excellent manager, Mr. Maxted, who has worked well for the institution, and he took up the question whether we should start a little newspaper three or four years ago. That paper was started, and was very successful until the last twelve months.

286. In the last ten years the Government contributions have amounted to £71,829, the amount collected from the public to £19,685? I do not think we ever had £7,000 a year from the Government.

287. Yes, you have had it? I had no idea of it.

288. You had £14,000 one year? That was not for outdoor relief.

289. I am talking about the whole system? I concern myself a great deal more about outdoor relief than about other departments.

290. The outdoor relief requires watching? Yes; that is what I do watch.

291. How do you account for the fluctuations in the subscriptions;—are they due to the collectors, or what? About three years ago Mr. Maxted started this little paper. From it we received a large sum. We also got large sums from the public school children; but, to our surprise, we received an intimation that for the future those children would not be allowed to collect. Mr. Roseby and myself went and saw Mr. Garrard about it, and he said he thought it was demoralising, and there was an end of the matter. We lost £600 a year through his veto.

292. Your subscriptions in 1894 amounted to £1,016; in 1895, £3,429; 1896, £2,659; 1897, £1,935? That large increase was in a great measure caused by this paper. Mr. Maxted is deserving of great credit for that. When he first pointed out what could be done, I did not think it would be so successful as it has been. It has been very successful until the last six months.

293. Then you think that the publication of the *Charities Gazette* is really a good thing? It has been a splendid thing for the institution until the last three months. Lately it has just paid its way. One month there was a loss on it. About Christmas time is our best time. We decided to continue it for a few months, provided there was not any loss. There is no loss now, but rather a gain.

294. How can you say what is received on account of the *Charities Gazette*? They send out little papers, and persons go round to the doors, asking for subscriptions, and these are all kept entirely separate.

295. On the whole, it has been very profitable to the Institution? It has been wonderfully successful, but now several other institutions are adopting the same plan.

296. *Mr. Powell.*] How many do you circulate? 5,000 every month, and 10,000 at Christmas time.

297. And the Government treat it as a newspaper? Yes.

298. So you advertise at the Government expense? We save the Government money.

299. *President.*] There has been a considerable increase in salaries during the last two years? Those whom we have employed for a long while we have given small amounts. I do not know exactly what the increases are.

300. In 1894, the expenditure for salaries was £1,992; in 1895, £1,627; in 1896, £2,518; in 1897, £2,294? I do not know how these amounts have arisen, but until four years ago we had only one inspector—that was before the crash came. We put on another inspector, and then another, and now we have put on another inspector. We pay them only £150 a year, including travelling expenses.

301. The increase in the amount of salaries may be attributed to the increased inspection? Yes; and also to the work. One man and a boy used to do all the work; now we have three extra hands on indoor work.

302. Are the extra hands in the distributing part of the Institution? Yes.

303. Has that increased expenditure anything to do with special grants by the Government? It all comes in.

304. Under the special grant? We go on spending money, and we go to the Government, and they give us a £1,000 sometimes.

305. To cover the expenses? Yes.

306. The increased business is one of the reasons for your greater expenditure in salaries? Yes.

307. *President.*] You have three hands in the store, and three inspectors? Yes; we have more than we had before the crisis occurred; there is also a young lady we have as clerk there; she also is an addition.

- E. T. Penfold, J.P.
11 July, 1898.
308. There has been a considerable increase in expenditure on stationery and printing in 1896 and 1897? That stationery and printing would be on account of the *Charities Gazette*.
309. In 1895 the amount was £286; in 1896, £533; in 1897, £450? I do not know how that has occurred. We call for tenders for everything.
310. In the accounts there is an item of £149 trust money received in April, 1895, from the A.S.N. Co.? Mr. James Ewan was a member of our Board, and he was Chairman of the A.S.N. Co. The A.S.N. Co. divided certain amounts amongst two or three institutions, and they gave us £149 on conditions that if ever the people claimed the money we were to pay it back.
311. That is, on the liquidation of the old Company certain sums were distributed, and you got £149? Yes; and it was distinctly understood that if these people ever applied for it we were to repay, but it is not very probable that it will be claimed.
312. Up to the year 1895 you received £ for £ from the Government up to £500; in the following two years you received £3,300? Yes; that was on account of our great increase.
313. That is the increase in the demand upon the funds? The increase in poverty in the city and suburbs.
314. In addition to the £ for £ subsidy on private collections and special grants for outdoor relief, you were paid by the Government so much per head for maintenance of women and children in the Asylum? Yes; we have kept an account. We find it just about comes to what they pay us—there is neither profit nor loss on that.
315. What are the rates of those payments? I do not know, but Mr. Maxted could tell you. I think about £23 for a woman.
316. In that department I understood you to say that you came out square? Yes; just about square.
317. You do not know the details of the cost? No.
318. Is it a fact that in the case of children born in the institution the Government is charged for those children after they are two months' old, at the rate of 5s. a week? I do not know.
319. To go back to the question of people from other colonies, are you aware of many instances of destitute females from other colonies receiving indoor or outdoor relief here? We have a great many women during the year who come to be confined. Many come to hide their shame. We have had several cases from Queensland and Victoria. I have no doubt that poor girls here go to Victoria and Queensland for the same reason. It is one of the most painful matters we have to deal with. These girls will not give information. It is very painful for us to ask the poor girl who is the father of her child.
320. Are there many such cases? No; about once a month we get such cases.
321. Of course, you have no choice in the matter—if these girls come to the committee they must take them in? We do take them in. We never turn a case away. If we find that the girl's parents have means we do not like to hurt their feelings, but we write a kind letter, and ask if they will contribute towards the girl's support.
322. When you have taken them in, what steps are taken either to return them to their own Colony, or to get friends to assist them? A few years ago we had no difficulty at all. We could always get situations for them, but during the last four or five years there has been such a plethora of servants that ladies will not take girls of this class. We have had eight or nine girls waiting who should have left the institution, but we do not force them out—we try to get them situations. Their position is painful enough, without their being thrown upon the mercy of the world to have another child.
323. Do you know what is the practice in the other colonies in regard to the same thing? I do not. I think Mr. Maxted has made a thorough inquiry. We suggested to him that he should obtain all the information he could upon these matters, and he brought in a report.
324. Have you any paid medical officer attached to the institution? No; we have four unpaid medical officers.
325. The medical officers used to be paid? Dr. Warren was paid £250 per annum.
326. Does the present system answer? I would prefer to have one paid medical man, because these gentlemen cannot always come. We have no fault to find with any of them, but it would be better to have one to whom you could say, we want you on a certain day and you must come. I prefer to have one paid medical officer, but not resident on the premises. The medical officers attend all the little children, and those children are of the lowest class as far as health is concerned, some of them are eaten up with disease from their very birth. It is painful to read in our medical reports of the condition that a number of the children are in, and in which frequently they are born.
327. Is the work of the division increasing? No; it is about the same.
328. It is really limited by the extent of room? We could not take many more in—we adopted a different system last year. The Committee of the Prince Alfred Hospital communicated with us, and asked whether we could not allow their young men to come and study midwifery at certain times of the year. A certain number of students come, and pay so much for being allowed to attend for about three months in the year, and we have from twelve to twenty young women from different parts of the country who come and study midwifery also. They pay us £15; but we board them during the time, so that we make nothing out of them. It just about pays the expenses, but it enables those young people to earn their living in the future.
329. Who passes the stores? The storekeeper.
330. Who is the storekeeper? We call him William.
331. The stores seem very good? Yes; the meat is the only thing that we have any difficulty with, and that is in summer time. I frequently go and see to the quality of the bread, as I look upon it as most important.
332. Who is responsible for the issue of the stores? The storekeeper, who has to keep an account of them.
333. Do you know what checks there are upon the issue? We are obliged to trust the man as being an honest man. His books are checked. There are so many loaves for outdoor applicants, and so many for the institution.
334. You talk of so many thousand loaves of bread? Yes.
335. Suppose there are 5,000 loaves, so many would go to the outdoor people and the indoor people would be debited with so many, and the books would show whether these balance or not? I am told that that is the system. Mr. Maxted could tell you more about it than I can. I never saw the book, but I know that the men are thoroughly trustworthy. I do not think they would rob the institution.
336. What check is there on the receiving of the goods? They cannot have a loaf of bread. A requisition is written out and sent to the contractor. When the stores come in the storeman is responsible. For the drapery the matron is responsible.

E. T.
Penfold, J.P.
11 July, 1898.

337. Do you know whether stores are often rejected as not being up to sample? No; meat would be the only thing; the sugar and bread are excellent. The tea is good for the price we pay—7d. or 8d. a lb.
338. You do not make your own bread? No; it does not pay. We did at one time, but we found that it was a bad thing. We had so much bad bread that it paid better to have it made by a tradesman.
339. As regards the lying-in, I understand that in the home there are some married women occasionally—single women with their first child, and women who have had two or three children; how do you classify them? We cannot do it. We desire to classify them; there are some women there whose characters are unexceptionable, and they are obliged to herd with the lowest of the low, and the language of some of the women is something disgusting. They are obliged to listen to that filthy talk because we cannot classify them.
340. You fully acknowledge the propriety of making some classification? Yes; we have represented that to the Government. It is a thing that we are most earnest about.
341. Do you know of other institutions in Sydney which deal with cases of the kind? Yes; there is one under the charge of Dr. Graham at Surry Hills.
342. I understand you to say that the lying-in institution is in quite an unsuitable building? Yes.
343. Suppose you had a good building there, do you consider it is a desirable thing to have out-door relief, a lying-in home, and an asylum all in the same building? They should be kept separate.
344. Should they be in the same building? It would be far better if you could have them thoroughly independent of each other.
345. The things are so different? Yes.
346. There is the out-door relief and the asylum, then there ought to be a hospital for women;—assuming that you had to build anew, would you recommend, with your experience, that they should all be in the same building? The out-door relief and the lying-in home should be kept as separate as possible. In London there are lying-in hospitals entirely to themselves.
347. Have the two things any connection at all? I do not see that they have.
348. You think that the time has come when they should be separate? I think it is advisable.
349. I suppose it may be assumed that the outdoor relief and the asylum work have some connection? You must have an institution. There are so many little children brought in at all hours of the day and night by the police that you must have a receiving-house for them. They should all be under the same management, but should be kept as distinct as possible.
350. As regards the children who are inmates of the institution, are you of opinion that if they are to be in the same building they should be removed altogether from the outdoor relief? Yes, and also from the lying-in department.
351. I am assuming that the lying-in department should not be there at all, but that the outdoor relief and the asylum should be there;—if that is the case, should not the children and the inmates be entirely separate from the out-door relief department? At present they have no connection with it. They never see them at all. The most objectionable thing is that these low women are not models of propriety, and their conversation is very bad.
352. *Mr. Powell.*] About dividing the institution;—the lying-in department is wholly supported by the Government? Entirely.
353. That is an additional reason why it should be separated from the other, is it not? Yes; I think so. They might be all under one management, but it should be like three different institutions, because you must have a supervising body, and the house committee or board can always supervise if it is to be continued on the present system. If they have a fresh system, and everything is taken over by the Government, that is another matter.
354. The only question is, whether your committee should not be relieved of the control of a department entirely supported by the Government? We have no desire for it.
355. *President.*] Your committee would practically have no interest in it, because the lying-in home is entirely supported by the Government? Yes; and entirely managed by a ladies' committee. All that we do is to buy the stores.
356. Do you know of any applicants for relief or inmates of the lying-in home with relatives who could support them? We have sometimes written to relatives and asked for assistance, and fathers, and some have contributed, but those who have done that are a very small percentage.
357. Beyond writing letters, have the committee taken any action? Yes; we have tried to get these girls to prosecute, but you cannot believe one statement out of ten that they make.
358. They attempt to shield the father? Yes; and they tell such lies that when you go into the police court they will not swear to the same statement that they had previously made to Mr. Maxted. That is one of our great difficulties.
359. Legal proceedings have been taken? Yes, frequently.
360. You have frequently taken proceedings? We have tried, but we were generally unsuccessful.
361. Have the committee reported that to the Government? I cannot tell you. We have a person who takes up the cases in court for us.
362. There is an item in the last balance-sheet of £366 9s. 6d. for fees? Yes.
363. Does that represent the fees paid by women admitted to train as midwives? Yes; and the young men also.
364. These women are supported there? Yes; there is no profit; they are there for six months for £15. Of course they are expected to work; not scrubbing floors, but making beds.
365. To do work in the lying-in wards? Yes, as a nurse would.
366. A young woman who comes in pays £15 for six months and gives her services in the ward attending to the patients for six months? Yes.
367. So this does not cost the institution anything? Then, in addition to that, we give the medical officer £50 a year for lectures. Dr. Graham will take it one year, and Dr. Crago another year. It is not what they agree to, but this is a comparatively new departure, and we think they have a right to it. We lose money by these young men and women, but we know that we are doing the public good.
368. You say they remain for six months? I think that is the time for women, and it is three months for the young men.
369. When they leave is a diploma given to them? Yes; a diploma signed by a medical officer, the President, and Secretary.

- E. T. Penfold, J.P.
11 July, 1898.
370. *Mr. Powell.*] There was a considerable decrease in 1897 in the number of lying-in patients? Yes. Dr. Graham started an institution, and it takes a great many.
371. *President.*] As regards the male students, what arrangement is made for them;—do they pay too? Yes.
372. Do they reside on the premises? No; they are not allowed to sleep there. I do not think they are allowed to have any food there. I know there are rules for them, because they must be there at all hours of the night.
373. Do you know the opinion of the medical officers in regard to the lying-in home? No; I scarcely ever see any of them.
374. Have any representations been made to the Government about the unsuitability of the place for a lying-in hospital? Yes, for the last fifteen years, a deputation has waited upon every Premier who has been in office about it.
375. The cost of the lying-in home is wholly defrayed by the Government? Yes.
376. If a woman is able to pay, the institution collect what they can, I suppose? Yes.
377. I suppose it is not much? It is very small. They put off till the very last hour to come there. We do not receive them, unless they are thoroughly friendless. A poor girl came down from the country and slept a night in the Domain, having no place to go to. She was three months off her confinement; what could we do in a case like that but admit her; that occurred two or three weeks ago.
378. As regards attending women in their own homes, what is the experience to that? There have been very few cases so far. We supply applicants, but I am sorry to say that they are all in the most extreme condition of destitution. We have to provide them with food and everything for the time being.
379. Is that branch increasing at all? I do not think we have had many cases. When they have come for outdoor relief, I have noticed their condition, and asked what provision they had made, and told them that they could come into the institution, but they say they would rather be in their own homes. We offer them every facility in their unfortunate position.
380. Single women you say go there time after time, there being no limit? I did not say single women; there are a few cases where they have been there more than once.
381. It was in connection with the classification;—I do not say that you used those words? It is not even when a woman has a second or third child, that she is necessarily a depraved character. A poor woman came for outdoor relief the other day, and some members of the Board thought we ought not to encourage her, but we assisted her.
382. *Mr. Powell.*] You would not refuse them, no matter how many times they came? No; if they came four or five times, we should not.
383. *President.*] As a matter of fact, may they not say they are having their first child, when perhaps it is the second or third? The matron would know whether they had been there before.
384. Have those women to mix together, not only in the ward, but also elsewhere in the institution? Everywhere indiscriminately. We try to separate them, but it is utterly impossible. Our accommodation is so small. One set ought to be kept like prisoners in gaol, entirely separate from others.
385. *Mr. Powell.*] Are the women known to each other when they come in? I do not think so.
386. *President.*] When women have been confined there, what is the process, if employment is found for the woman, what becomes of the child? She takes the child with her.
387. In all cases? Yes; if we know that the woman is a desperately bad character, we should let her go and keep the child. It is best that the child should be separated from such a mother, but those are exceptional cases.
388. Have you ever known a case of a woman from another colony being confined here, and leaving a child to be supported by the State? No; we do not keep any children, unless the women desert, but that is a rare occurrence. Many of them show affection for their children.
389. Have the committee ever considered the question of employing some work test in connection with outdoor relief? We have no facilities for it.
390. When we were through there one morning we saw some young men who seemed as if they could do some work? If there are any young men there they have a doctor's certificate. Our outdoor department does not give relief to young men unless they can show, by a doctor's certificate, that they are physically unfit for work. The unemployed question is another matter altogether.
391. As regards some of the people relieved here, would they not be fit for light employment of any kind;—have the Committee ever considered the question of a work test? We have tried; our inspector goes round, and we know that they cannot get employment.
392. What I mean is, have the Committee ever considered the question of finding a work test for the men and women? No. If a man wants a pair of boots we say, come and cut some grass; do something for it.
393. You have no systematic plan? No.
394. Do you know whether it is done elsewhere? Dr. Langley does it, but he assists able-bodied men who cannot find employment. We refuse to assist able-bodied men in the outdoor department. Now the Government have sent them to us; that is a separate matter. We do not give strong able-bodied men assistance regularly, though we would not turn them away without a loaf of bread.
395. Some of the women are retained in the institution for some time after their confinement? Yes.
396. Are they employed? Yes; they are all employed. That is a matter about which we are having a little difficulty with Mr. Hanson. Suppose there is an exceptionally good woman, who is friendless, and has a child 2 or 3 years old. The woman is kept in because she is a good cook, or is good at something. The matron thinks she is a good woman, and, therefore, she keeps her, as it is cheaper to employ her. We made a calculation recently in regard to a woman whom Mr. Hanson objected to, and we found that we saved £10 or £12 a year that we should not have saved had we turned her away.
397. You kept her as a servant? Yes; she worked hard. Every woman there has to do a good day's work.
398. You keep the children as well? Yes; the mothers are attached to their children, though they are illegitimate.
399. Some women have been kept there for years? Yes; three or four women, but they are exceptional women, useful to the institution. Mr. Hanson objected to one, and I asked the matron how much she cost.

cost. She found that the woman cost about £20 a year. The matron said she could not get a woman to come and do her work under £1 a week and her board.

400. *Mr. Powell.*] Do the Government pay for that woman? Yes; it is as broad as long; if they did not do that they would have to pay £50 and board another woman. We have this woman for about 8s. a week, and we keep her child, saving 13s. a week.

401. *President.*] Do you charge in the account for the woman's keep and her child's? Yes.

402. *Mr. Powell.*] Twenty-eight pounds for the woman and £14 for the child? Yes; it may be that.

403. The Government are paying you £42 a year to save 10s. a week? Yes; but this is an exceptionally good woman. We cannot get a woman to do her work under £1 a week.

404. How much does the institution give this woman? Four or 5s. a week.

405. *Mr. Powell.*] She is boarded there and the child also? Yes. If we had another woman she would have to be boarded also.

406. *President.*] She costs £1 a week? Yes.

407. The Government pay £42 for the woman and child? She gets 5s. a week with board. We should have to get a woman in her place at £52 a year, and we should have to support her, which is another 10s. a week. We do not give the officers the same food as those other women. They have a better class of food; all the officers dine together.

408. *Mr. Powell.*] I do not follow your calculation? Say the woman and child cost £42 a year, we give her 5s. a week, that makes £55 a year, and we should have to give a woman from outside £52 a year and her board.

409. I doubt that to begin with? The matron says that she could not get a woman to do that work for less. The matter came before us, and we went into it and found that the Government gained by keeping that woman there. It is better to have a woman you have trained than one who knows nothing about the work.

410. *President.*] You said that the Ladies Committee tried to find employment for these women—is it difficult? It is difficult. We put advertisements in the country papers. A report is handed in showing how many women are beyond their time in the institution. We allow them a month or five weeks.

411. You say that in all cases they take away their children when they leave? Yes; unless we think it is better for the child's future welfare that it should be separated from the mother.

412. Do you act in co-operation with the Labour Bureau to get employment for these people? We frequently send men there. Mr. Creer has certain conditions under which he gives relief. He will send them down to us. Unless they are on his books he will not give them anything at all. If a woman's husband is up country, and he is not registered, we assist her. She is not supported by the Labour Bureau.

413. In distributing outdoor relief, is the amount regulated according to the number of children? It all depends upon the circumstances. The amount of rent money we are giving is very small. There were 60 persons receiving 1s. a week on the 6th instant, 99 receiving 1s. 6d., 137 receiving 2s., 59 receiving 2s. 6d. per week, 18 receiving 3s.—making a total of about £34 per week disbursed. We also pay them when they come for rations. We contribute towards the cost of carrying the provisions away. These poor creatures are old and infirm. Take Cook's River; that is a long distance for a woman to travel in search of food; we always allow them the tram fare. There are only 51 who receive assistance in that way: 4 persons are receiving 4d. per week; 23, 6d. a week; 1, 7d.; 5, 8d.; 8 receive 9d. Ten receive 1s. a week for travelling. We know exactly where they are, and what it costs them for travelling. Some come from Rookwood. To walk from there to the Benevolent Asylum and back would be too much. We allow them 1s., as there is no assistance for them in that district.

414. Is there not a Benevolent Society at Rookwood? I do not think so; the Government give them so little now under this new system which Mr. Reid is initiating. The amount for Newtown is only about £250 a year; the Society gives temporary assistance.

415. What is that for? For all the poor of Newtown.

416. It costs 1s. to bring a person in from Rookwood;—would it not be better if the Society could arrange for a Society to relieve them locally? It would be better.

417. The shilling which this Board pays goes to the railway? Yes.

418. Would it not be better to arrange with the local Society to relieve those persons and give them the shilling? The local societies only do it for a short time. They do not do it permanently. The older the recipients get the more they require assistance. Take the case of a man 65 years of age. The longer he lives the more infirm and incapable he is of earning money. I have known cases which have been ten years on our books. I will give one typical case. There was a man who was a fettler on the railway, and he was killed leaving work on a Saturday whilst crossing a line where he had no business to be. The Department would not assist the family. He had his house all but finished when he was killed, but two-thirds of the money was in St. Joseph's Building Society. A man came and told me about the case, and I said, "I will go and see the woman." I went, and found that she was left with three children, and was pregnant. They are all young children. I spoke again to the man, and we endeavoured to raise money, the result being that we collected about £120. The woman was near her confinement. I gave her £20 to carry her over that, and also paid sufficient to keep the Building Society quiet. Then I used to give her 10s. or 15s. a week till the balance of £40 was gone. A woman cannot do much with four children, and I proposed to our institution that we should assist her, and we did. Instead of giving food we gave her 5s. a week. I used to take it down to her. That woman went on very well; she has been able to pay off the debt on her house, nearly all the mortgage on her house, and she has not received a penny from us for four or five years. Her children are growing up a credit to her. If she had not had the 5s. a week she would not have been able to keep her children. I proposed to her to have her children boarded out. She replied, "I would rather starve than have my children boarded out."

419. At what age does the Society disallow relief with regard to children? When they are 14 years of age. We consider that they ought to be out at work then. If they are girls we say, "You must get employment for them." We do not provide rations for any boys over 14.

420. *Mr. Powell.*] Is that a strict rule? Yes.

421. *President.*] I know when I was at the institution I saw certain cases there in which persons were receiving relief up to 16 years of age? The child must be sickly. It is merely a nominal amount that is given at all.

Penfold, J.P.
11 July, 1898.

422. What is the maximum allowance for rent? Three shillings per week.
423. Does the committee make any use of the police or the Director of Charities? We make use of the police; we frequently apply for their assistance.
424. The Director of Charities has several inspectors going about, could you not get their help? We prefer our own inspectors; we have 200 cases reported on in some weeks by the different inspectors.
425. How often are the inspectors supposed to visit each case? People that we know are likely to be on the books for years we do not often send to, but every month or six weeks every case is visited.
426. Except in chronic cases, the inspector visits them every month or six weeks? I do not think that more than six weeks elapse without a visit in any case.
427. Have you considered the question of out-door relief in England or elsewhere? Yes; my brother occupies the same position in connection with one of the Unions in London as I do here. The Wandsworth Clapham Union. I gave Mr. Brunker a return as to what they are doing in their Union. I find that in some cases they are giving double and treble there what we give here. I have applied to Mr. Brunker for the return of the papers, but he cannot find them.
428. Talking about the amount contributed here being very small, do you consider that it is doing permanent good? I am sure it is. It keeps the houses over the heads of these poor people. They could not pay the rent without that money, small as the amount is.
429. How have the finances of the institution been affected by section 10 of the new Act, by which children may be boarded out to their own mothers;—has that relieved your finances to some extent? Yes, it has; but they allow such a small amount now it is not enough. It is really most inadequate. They allow 1s. 6d. to 2s. a week for each child. A woman with five or six children gets about 12s. a week, but it will not keep them.
430. It does not follow that the family must be entirely supported by that? A woman who has five little children cannot go out to work and earn a day's wage. The 7s. or 8s. would be a very small amount to pay the rent, because she would want a house with at least three rooms.
431. Do you know to what extent section 10 has relieved your institution? I do not. It has relieved us of a number of cases. We are allowed in some cases by the Department to supplement the allowance with food. When a woman has four or five children, and has no food, we give her a little food, and write to the Department pointing out that the woman is starving, and they have granted food.
432. You have occasionally to relieve the unemployed, but at the request of the Government? Yes.
433. Then, I suppose, you get a special grant for that? Yes. I want to point out some things that have been on my mind for years. I have tried to get more relief for the people. I want them to have more food and more money.
434. The out-door pensioners? I have been round to their houses, and seen the state of destitution that they are in.
435. I asked if the small amount allowed is really adequate? You asked if it was of any use. I say it is. Take the case of an aged couple 70 years old. We know that they cannot get employment, and many of them are respectable. I have known them come there to seek relief, and it makes one's heart bleed to see them. One came last week, and he said, "We cannot get work." Of course, we allow them a little money. There are other things besides. I should like to give the maximum amount of provisions. The amount of assistance we can give is most inadequate. It just keeps body and soul together. Our rule in all cases is to allow 1 lb. of sugar and $\frac{1}{2}$ lb. of tea. It is only in cases of sickness that we allow sago. Suppose a woman has four or five children—or an aged couple—we all know that there are many things besides tea and sugar that they require. There is firing and other things. I went to one poor fellow's house the other day; he was a man who had been in business as a chemist in Sydney. I said, "Where is your fire?" he replied, "We never have fire except to cook our food with; we cannot have fire." He could hardly go about, and his wife is older than he. They cannot get fire, and other absolute necessaries. It is terrible to see these poor things as I have seen them. I consider that we should do something more than we do in deserving cases. I think the rent money should be increased, and the tea and sugar should be increased.
436. That implies that Government assistance should be increased? I do not care how it is; in a country like this we ought not to see people starve.
437. There is another way to look at it. The Government may say we do not want them to starve;—we have provided places for them? It costs £13 per annum for them in Liverpool Asylum.
438. *Mr. Powell.*] If you increase your assistance you will bring it up to the Government amount? At Parramatta it is £15. Suppose you give a man and wife 10s. between them, that would only just come up to the £26, and it would keep them together. Is it not better to leave them together than to separate them. When men came there I would always be writing to Mr. Hanson, and he would give an order for their admission to the Government institution; but a man would say, "No; I will not go there: I like my liberty." They keep their liberty and they starve. I have been to the Liverpool Asylum, and I consider that it is well conducted.
439. What do you reckon the value of a single ration per week? Eleven pence. The value of a maximum ration is about 3s. 6d. per week.
440. You have to divide that by six for six persons? Yes.
441. Then that is under 7d. each? Yes. There is an inconsistency in the boarding-out system; they allow a stranger 5s. for each child, but if a child is boarded with its mother they will not allow her more than 2s. on the average; why there should be that distinction I cannot understand.
442. *President.*] Have you any statement to make about the unemployed? During the last three or four weeks, at the request of Mr. Reid, we have taken up the relief of the unemployed. In most cases they are recommended by two of the leaders of the unemployed—the President and the Vice-President. They give a note, recommending a man to come to us, and we tell them distinctly that if we have to assist those people they will have to make inquiries as to whether the parties are really deserving and require assistance. It is on their guarantee that we give the assistance.
443. On the guarantee of those two men? Not on those two men only—they have a committee. These men give a scrap of paper, on which is written, "Please assist so-and-so," and stating how many he has in family. Then when they come to us we ask them how long they have been out of employment, their occupation, their country, and what their prospects are. We were doing the same work about two years ago. We are now continuing the same scale of assistance that we gave then. We are giving just double
to

to these people what we give to our own ordinary poor. We have been requested by Mr. Reid to deal with them liberally, but not extravagantly. His words are: "I wish you to deal liberally, but certainly not extravagantly, to these men." To a man with a wife and six children we give twelve loaves of bread per week, 6 lb. of meat, 3 lb. flour, $\frac{1}{2}$ lb. tea; for man and wife and family of five there is very little difference; a man and wife and three children get nine loaves of bread per week, 4 lb. meat, 4 lb. flour, 2 lb. sugar, and $\frac{1}{2}$ lb. tea.

444. These people are being relieved on a much higher scale than your own people? Fully double.

445. *Mr. Powell.*] Do you give them any money? Not a penny.

446. *President.*] You relieve them on the order of the committee? Yes.

447. Do your own inspectors check them at all? They do now. We have not been able to do it until lately. Last week the inspector went through about 100 cases, and his report was that they were really better off than our own class, but still there was a deplorable amount of want amongst them, and many of them were very deserving people. There are many men over 60 years of age, with perhaps one child, and, I am sorry to say, some old men with three or four little children. For a man, wife, and one child we allow six loaves of bread per week, 2 lb. meat, 2 lb. flour, 2 lb. sugar, and $\frac{1}{2}$ lb. tea. For a man and wife only, four loaves of bread, 2 lb. of meat, 2 lb. of flour, 1 lb. of sugar, and $\frac{1}{4}$ lb. of tea.

448. This relief has been given under instructions from the Premier? Yes; he has paid £500 into our account, and that will last eight or ten weeks. We shall not go beyond that amount. He has also sent us 100 pairs of blankets.

At 1 p.m. the Commission adjourned for lunch.

Proceedings were resumed at 2:15 p.m.

449. *President.*] About the issue of meat in summer, it must be a very troublesome matter to regulate the supplies in the hot months? We give more flour—4 lb. flour and 2 lb. meat. We leave it in their option, but we expect them to take half and half.

450. Will not the meat go bad on your hands? We only get it every morning fresh in for the day.

451. Do you send back what is not used? If there is more than we require; but they know within a trifle what we require. If there is any left it does for the inmates the next day.

452. As regards the rents, of course you say that that allowance is liable to some abuse—I mean fraud—what check do you have to see that the rent is properly paid? They must bring a receipt for the rent for the previous week.

453. The receipt may be any sort of receipt? Yes, we are liable to fraud; but these people would tell on each other if there was fraud going on.

454. It would appear to outsiders that during the hours of business the clerks cannot closely scrutinise every receipt, and that the possibilities of fraud are considerable? They are compelled to bring their receipts.

455. You would, of course, find it out by taking any suspicious-looking receipt and making inquiries afterwards? Yes.

456. Do you know whether that is done? I really do not know, but Mr. Grant and the others are very strict.

457. *Mr. Powell.*] Suppose there are women living together in a house, and the house is rented by one of the three—two of the three draw rent from your Society, and the woman who is nominally the landlady gives them receipts to bring to you once a week;—would you consider that satisfactory? I take it as such. I quite understand that there may be collusion.

458. Do you not think it would be safer not to give money at all? No; I do not know what they would do.

459. *President.*] How long would you continue the payment of the rent to any of those people? Everything depends upon circumstances. For the aged people I should continue to pay as long as they wanted. We do not give this money except to widows, deserted wives, and aged people.

460. Then, speaking as a whole, outdoor relief is not continuous for a term of years except in chronic cases or the cases of aged people who are unfit to do any sort of work? Yes; we strike twenty or thirty a week off the books.

461. *Mr. Powell.*] If any relief is given in any other way than that you have indicated, it is in opposition to your wishes, and your inspectors fail in their duty? We give it ourselves; we do not allow the inspectors to do it.

462. If your inspectors report on these matters, and relief is given through their reports to other persons than aged people, it is in opposition to your wishes? They bring up a report, and he will say such a case is receiving 1s. 6d. a week, so many in family. We do occasionally increase it; but our funds are so short that we rarely do that. I do not suppose that we increase the amount in three cases in a week. If we do, it is only where the inspector recommends it.

463. *President.*] There is another matter: It creates a very painful impression (at least it did on us), to see children come there on the day on which relief is given, as boldly as if they were entering a grocer's shop, go up to the counter, and take provisions away without any feeling of shame at all? We have passed resolutions, time after time, to the effect that children are not to be supplied. But mothers come and say Wednesday is a day in the week on which I can get work, will you let my boy come, otherwise I cannot obtain the relief. Mr. Grant refuses to supply children time after time.

464. Could not the rule be made more elastic by allowing the parents to come any time they choose? No; we cannot always have supplies and our officers there.

465. You would only have to have one officer there? We could not possibly extend it through the week. We should have to increase our staff to do that.

466. Could not the case of these people be met by giving them the stores in the evening? Our officers are there from 9 until 6 o'clock. The storeman is there from 8 o'clock in the morning until 6 at night. That is quite long enough.

467. I am only suggesting this on behalf of those people who, you say, could not come on Wednesday? There are not many cases. Mr. Grant turns children back time after time, because we have impressed upon him that he must do so. We consider that coming there pauperises children.

E. T.
Penfold, J.P.
11 July, 1898.

- E. T. Penfold, J.P.
11 July, 1898.
468. There is another way in which it might be met: Suppose a child came on Wednesday and said, "My mother is ill in bed"; it might be made known that children would not under any circumstances get relief at the Institution; but that a case of that kind would be immediately investigated by the inspector? We could do that; but I know that Mr. Grant is very particular, and unless he believes in the truthfulness of what they say he will not comply.
469. There must have been at least 50 or 60 children there that day? Yes; we have done all we could to try to keep them away.
470. *Mr. Powell.*] Have you given any thought to the ticket system which the St. Vincent de Paul Society adopt,—they give tickets, and the recipients go to the contractors for the food; have you thought of that? We think it better to buy in large quantities.
471. The St. Vincent de Paul Society give tickets, and the advantage is that it takes away the necessity to keep up a staff, and the people get what they want at any time? We buy cheaply; we could not get 1d. and five-eighths per lb. under that system. We take contracts for thousands of loaves. Our bread bill amounts to from £250 to £300 a month. The contractor could do it cheaper by delivering the loaves to one party than by delivering them to different people.
472. *President.*] Suppose you have a widow with a lot of children, are any of those children ever handed over by your Society to the State Children's Relief Board? No; but we recommend them. We have received information from that Department that they would object to our recommending them, they are so overwhelmed with cases. To get over that we ask others to recommend cases.
473. The average weekly cost per case has been as follows:—In 1890, about 3s. 5d.; in 1897, 2s. 5d., made up in this way—in 1890 provisions, 1s. 9d.; rent money, 1s. 8d.; in 1897, provisions, 1s. 9d.; rent, 8d.? Yes. I have explained that to you. In consequence of the want of funds, we had to decrease the rent money.
474. You are of opinion that these amounts ought to be increased? Yes.
475. But to do that you must have from some source very considerably-increased funds? Yes. I consider the relief given in the deserving cases totally inadequate.
476. *Mr. Powell.*] A case came to my knowledge lately,—a widow renting a house at 10s. a week. She had a son 17 years old, earning 12s. or 14s. a week, one son younger, earning 6s. a week, a daughter, 16, who has been employed as a dressmaker, doing nothing, and will not go out to service; and the woman has been getting 6s. 6d. a week relief from you for nine years? She must have children younger than those.
477. Do you think that relief should be granted in such a case? Their income is about 24s. a week. We do not recognise the 17 years old son. He could not be supported under 10s. a week. He could not give his mother more than 2s. after clothing himself; that would leave 12s. for the family, and there is the 10s. rent to pay. Where are they to get clothing?
478. This woman has been going on for nine years drawing relief;—I am using this as an illustration;—the President says that families become pauperised; it seems that this family will go on for ever drawing relief? She must have been a widow nine years. The eldest child, nine years ago, would be 8 years of age. Look at the struggle the woman must have had whilst those children were young. They are just beginning to lift themselves up.
479. *President.*] What check have you against people who come to be relieved by you, and who are being relieved by other societies? We have sent circulars round to ask the other societies to give us a list of those whom they are helping.
480. Have they sent to you in the same way? No.
481. Are you aware of cases of women relieved by you who have children under the State Children's Relief Board? Yes; there are very few such cases. A woman might have five children, and the State might take two of them, then she has three young ones left. If a woman has three little children, we should give her food.
482. Supposing a woman has been relieved under Section 10 of the Act with regard to some of her children, would your Society also relieve her (that is, the section which authorises them to board children out with their own mother)? No, we should not. They are not allowing more than 2s. each. For four children they allow 8s. a week. We send to the Department, stating the circumstances in some cases, and asking if they would allow us to supply the woman with food. If they say no we do not do it.
483. If you do it it is in exceptional cases, and with the knowledge of the Department? Yes.
484. The Department is not in ignorance that you are relieving those whom they are relieving with regard to the children? No. A widow will come to me with four or five children, I then give her a card and advise her to go to the clergyman that recommended the case, and go to the Department. I say if you get assistance from there it will be more than we can allow you. You must not come to us without the consent of the Department. I do not think we are relieving any such cases.
485. How many paid inspectors have you? Four.
486. Has the fourth been added recently? One is away ill, and we are employing another in his place.
487. What check have you upon these inspectors? They all have a book, and they keep a record of all the places they have visited during the week.
488. Do you make them check each other by changing their districts? There is one living at Balmain, he will take all that district; another lives at Marrickville, he will take the Marrickville district; another takes the unemployed, he is only temporary.
489. You have really to rely on these inspectors reports? Yes; the same as the bank manager has to do.
490. Except that the bank manager and the head man can see how things are going pretty well, they can check inspectors better than you can? We must rely upon each other in this world. I believe them all to be men of first-class character, very truthful, and very sympathetic as regards the poor.
491. Do the inspectors keep a journal of their movements? Yes.
492. Are these submitted to the Directors? They tell us each week where they have been. We used at one time to have their reports read to the whole Board, but our work is now so heavy that we have found it necessary to have a sub-committee to go in and hear the reports read. It takes two hours to read them.
493. Have you any volunteers in the work of inspection? No.
494. You rely entirely upon your own officers? Yes.
495. You have no volunteers at all? No.
496. Has it ever been tried? No.

497. Do you not think it would be an advantage to the Society, if they had such help—not to take the place of the inspectors? It would be difficult to get suitable persons. In Victoria it is done entirely by ladies. Their system was explained to me by a gentleman. They apportion the money, and if they recommend a case to go on it does. They state the case to the Board, and their recommendation is carried out; but they do not give in any case more than 2s. 6d. a week, and only for a short time.

E. T.
Penfold, J.P.
11 July, 1898.

498. I understood you to say, in reply to Mr. Powell, that you do not favour the ticket system? I have heard of people receiving tickets who were not at all satisfied with what they got. I think there is quite as much to be said against as for that system.

499. To go back to the reduction in the distribution per case, the amount now appears to be about 2s. 5d. per week? Yes.

500. And Mr. Powell has made a calculation that, on an average, there are three and a half individuals to each case, and that reduces it to somewhere about 1d. per head per day? Yes; about 7½d. per week. It is not enough to keep body and soul together.

501. Your argument is, that those suburban societies have such small means that they can make no impression on the thing at all, and the burden of it falls upon the central society? Yes. The intentions of those local institutions are good, but they have such small means that it is impossible to do much.

502. *Mr. Powell.*] Do you think the local people would have better opportunities of inquiring into the cases, and would know more than you about the people requiring relief? We have very few people from Burwood and those places.

503. *President.*] The people whom you relieve live in Newtown, Woolloomooloo, Botany, and Balmain? Yes; and many at Ultimo. From my inquiries I find that not a quarter of them pay rent. As for the unemployed, I do not think that 5 per cent. of them pay any rent at all. They pay 2s. 6d. or 5s. for the first week and no more afterwards. Then they get notice to quit, followed by police court proceedings extending over four or five weeks, and the landlord gets nothing.

504. You feed them and the landlord houses them for nothing? We do to a small extent.

505. You said you had visited these homes and found the greatest poverty in some of them? Yes; most distressing poverty. I went round with an inspector on one occasion and found a poor fellow with five children, utterly destitute. The only furniture was a table and a few chairs, but the house was so clean that you could eat off the floor. The man was in a bad state. The whole of the lower part of his face had been cut off, owing to cancer. His wife had to leave him, his temper was so outrageous, and I can quite understand that from his complaint.

506. Would not that be a proper case for a hospital? They will not take him in.

507. They would at Liverpool? He has a wife and four or five children.

508. Would it not be better for him? Yes, but they will not go into asylums.

509. In your annual report for 1897, you say that poverty is now slightly on the decrease;—"it will be found that for the first half of the year there was but a small diminution in the extent of the distress compared with a similar period for 1896." I find that although it is said there was a decrease in poverty there were 1,196 cases per week relieved in 1897 as against 1,071 in 1896? Perhaps, one month there would be a little falling off, and another a slight increase. Four weeks ago we had 120 cases, the next week the number dropped down to 60. Summer time is not so bad as winter time.

510. Have you visited many of these homes? Not a very great many. I have had quite enough of it.

511. This is a point we should like some information about. Regulation 44 says:—

All applicants shall present themselves at the Asylum at the hour of meeting of the House Committee, when their cases shall be considered and dealt with in order.

What provision is made for those who are too infirm to come? We have such cases, but they are very rare. When they cannot come they will send a friend. We hear what they have to say, and then the Inspector visits the applicant. The cases are all inquired into.

512. So that any person who cannot personally attend at the Asylum, can, by means of a friend, bring his case under the notice of the Committee, who will send an inspector to furnish a report, and, that being satisfactory, the Society will give relief? Yes, that is the case.

513. There is always a danger that some of these people may actually starve? Yes, but still we do the best we can under the circumstances.

514. Regulation No. 47 says:—

Money for rent may be allowed on special recommendation of a subscriber after a full inquiry by the inspectors in necessitous cases.

Do you always require the recommendation of a subscriber? I will not say of a subscriber; we will say of a clergyman, or any other respectable person. Suppose you and I are on the Board, and you know that a case is genuine, then we should grant relief at once, but not without inquiring into the case.

515. Section 51 says:—

No written communication shall be sent by any inmate out of the Institution except through the Matron, and all letters addressed to the inmates shall be opened in her presence.

Does that rule apply to respectable married women who go in? I should think so. No cases ever come before us, no complaint ever having been made.

516. Seeing that it is not a prison, this seems a little hard? The Matron is very liberal; she used to be the Matron of the Sydney Infirmary.

517. *Mr. Powell.*] What object is gained by that regulation? I think it is like a great many more, more honoured in the breach than the observance. It is intended to prevent only improper communications.

518. Is it a dead letter? I think so. The Matron is a very discreet and kindhearted woman.

519. *President.*] You will admit that to a respectable woman it would be looked upon as vexatious that her letters should be read by anyone? Yes.

520. Regulation 59 says:—"Parents and relatives shall only be allowed to see the children in presence of the matron, or an official of the Asylum.";—is that true? Yes; it is quite right. Many parents are not, though they have the name of parents, desirable persons. It is not desired that they should see the children. The Boarding-out Department does not allow the worst class of parents to know where their children are, for the good of the children, and of the people they are boarding with.

521. The number of cases receiving outdoor relief where the husbands were sick and afflicted, in 1890, were 186; in 1891, 180; in 1892, 173; 1893, 224; 1894, 216; 1895, 261; 1896, 372; 1897, 604;—can you

F. T. Penfold, J.P. you account for that large increase? No, I cannot; if it is down there it is a fact. We have the average there about 1,100 a year; perhaps there are really 1,600 cases of different people who leave.

11 July, 1898. 522. The number of widows, old and infirm, increased from 260 in 1890, to 634 in 1897. Yes; that is, as I explained, on account of the hard times.

523. What is your opinion regarding the staff generally? I think it is scarcely possible to improve upon it. Mr. Maxted is a most efficient, painstaking officer, and a kindhearted man to the poor, which is a great thing. Mr. Grant is the same. The Inspectors are the same; and as to the Matron, I do not think it is possible to get her superior. We thought we had a splendid matron in the previous one, but I do not think it possible to get a woman better adapted for her duties than the present matron. She is very capable, kindhearted, and sympathetic to the poor. I do not believe she would say a hard word to any of them, although she is a very strict disciplinarian.

524. Have you anything further to say about the unemployed? There is a great deal of distress amongst those men. Some of them, to my knowledge, have known better days. They are mostly labourers, and they are apparently a respectable class of men—not the mere scum of the country, but men who would be only too glad to work if they could get work. They are all extremely grateful to the Government for what it is doing for them.

Edward Maxted sworn and examined:—

E. Maxted. 525. *President.*] You are manager of the Benevolent Asylum? Yes.

11 July, 1898. 526. Does that include all the departments? Yes; the whole of the institution.

527. I presume that the list of officers on this printed report is correct? Yes, that will be correct.

528. How long have you been manager? Just upon fourteen years.

529. Do you know how the property is held by the Society? Yes; it was a grant by the Imperial Government, through Governor Macquarie, about the year 1820.

530. For this particular purpose? The original purpose was an Asylum for the Poor, Blind, Aged, and Infirm. That inscription is over the door now. Of course the purpose, aims, and objects of the institution have changed during the course of years. In 1862 there was quite a change in the constitution of the Society's work—that is to say, that a portion of the original intention with which the Government gave the site to the directors has changed. Originally, it was for old men and women. In 1862 the old men were sent to Liverpool and Parramatta, and women to Hyde Park.

531. It was a grant to whom? To the Board of Directors.

532. Is the property vested in them? No; not by a trust deed. A deed was prepared, and it was the intention of the Government to make it a deed of grant. The deed was lost, and that intention was not carried out; but we have an affidavit from a former manager of the institution that he had actually seen the grant, but it was unsigned.

533. The grant was made by the Imperial Government, but it was never carried to a conclusion? Not so far as the signature to the deed of grant was concerned. We have letters showing the intention of the Government with regard to the vesting of the property in a Board of Directors.

534. Do the Government exercise any direct supervision over the institution? No actual control. An officer comes every quarter and checks off our financial claims.

535. For the purposes of subsidy? Not only that, but with regard to the maintenance of the inmates, and the outdoor subsidy as well. They check the cash-book.

536. Do you consider that the home of the Society is well situated for the purpose? No, I do not. I think the institution has grown out of date. As far as the site is concerned, I should think it is conveniently situated.

537. It is central for means of communication? Yes, it is well situated.

538. Now, as to the buildings? The buildings are very unsuitable. I have a report drawing attention to the mixed character of the work of the institution, and to the objections as to keeping pregnant women alongside of children, for instance.

539. You said the building was quite out of date;—does that apply to all branches of the business? You would not want much accommodation for outdoor relief work; a room and a store would do.

540. Next comes the asylum for these women and children—is it suitable for that purpose? Not whilst the other departments are carried on there; not whilst the pregnant women are there.

541. Is the lying-in home suitable for its purpose? If you took away the other departments you could pick out a portion of the building that would be very suitable.

542. *Mr. Powell.*] Do you condemn the building as a whole? I would. The Directors have written to the Government, and suggested what they considered a suitable site—"Ultimo House," Ultimo. They think that the site with proper buildings thereon could be made suitable for the carrying on of the work of the institution, and it was suggested that the present buildings of the Benevolent Society be resumed under the Lands Resumption Act; that compensation be given; and that the Ultimo site should be resumed for the general purposes of the institution. It was considered that with the means which the Society would have in hand, and the compensation for the resumption of the present site, that they could carry out the objects of the institution.

543. *President.*] Whose property is the Ultimo site? I think it is Matthew Harris's.

544. Describe the nature of your position and your duties? My duties are the general supervision of the staff of the institution, and I keep the financial books of the institution and the histories of the cases.

545. Do you keep them yourself? I keep them myself.

546. Do you keep the accounts yourself? I keep all the accounts myself. I may say that I have the entire charge of all moneys coming in and going out. If anything is wrong in regard to any of the moneys of the institution I am responsible.

547. The duties that you have mentioned, and those laid down in the rules, take up a great deal of your time; does it leave you time for general supervision? Not latterly; it does not allow me proper time to do the clerical work which I used to do. It is growing rather too large.

548. You attend to the accounts, the correspondence, and to a great many other matters;—what I want to know is, does that take up so much of your time that you cannot give a proper general supervision? I will give an instance of how I am falling short lately. Some time back I had more time to attend to the affiliation of children in the institution. I had more time to question the women and get a grasp of the work, but latterly it is falling behind.

549.

549. I suppose you consider the affiliations as a very important part of your work? I do, and especially if I could have induced the directors to petition the Government to make alterations in the present affiliation laws. We could then get good results. I consider it necessary that a child should be affiliated before its birth, for this reason: A woman comes into the institution, and if you have no other means of disposing of her she remains two or three months—at any rate, generally for a month; and at the end of that time, although there may be a good case against the man, there is no chance of affiliating the child. Another reason for the alteration is, that the woman might be compelled by the directors, or by the manager, to take proceedings against the father of the child whether she liked it or not; that is to say, if we find a good case against a man we ask the woman about it, but she says, "No, I will not prosecute." In America it is the law that the manager or the directors of an institution can subpoena the mother as a witness and put her upon her oath.

E. Maxted.
11 July, 1898.

550. If you had *prima facie* evidence you would wish to have power to compel her to go on with the case? Yes, in her own interests and in the interests of the State. The bulk of the women refuse, as a matter of sentiment.

551. *Mr. Powell.*] Do you get the history of the cases? Yes, I get the history of each case. They are taken before the Ladies Committee, then I see the woman and formally admit her and question her.

552. Do you take the history of cases of outdoor relief? No; that is done by the outdoor inspectors who report.

553. *President.*] Do you control all branches of the Institution? Yes; subject to the direction of the Board. I may say that the Committee are fully advised of all the work of the institution every Tuesday afternoon. When I say by direction of the Board, I have not entire power in that respect. The Information Committee get information from me every Tuesday afternoon as to how the work stands. There is a list of cases put before the Committee every week, and they have an opportunity to ask why did so and so come in. Any correspondence during the week, or anything of importance that happened, is brought before them; and apart from that the hon. secretary is there very frequently during the week and questions me upon what has transpired.

554. Do you get the instructions of the Committee at the Committee meeting or do you get them through the honorary secretary? I get them both ways; but if it is necessary to get instructions from the House Committee, I ask them for instructions.

555. You are present at the meetings? I am present at all meetings, and the honorary secretary comes down from time to time and directs me about various matters.

556. I see that the accounts are audited by some of the directors of the institution? Yes; that always has been the practice.

557. Not by a professional auditor? No.

558. Is it your opinion that the accounts ought to be audited by a professional auditor? Decidedly; for this reason: apart from the expert check which there would be upon the work that you would not get from an amateur auditor, I should have an opportunity of consulting a professional man as to how certain accounts ought to be kept. I should say that that is an essential feature of proper management.

559. Are the auditors paid? No. No directors are paid. I do not wish to convey that the work is not done conscientiously or properly; but I am not a professional accountant, and I think that, if a professional accountant audited the books he would exercise a good influence.

560. Mr. Penfold told us that the books had been opened up by a professional firm? Yes; it is a professional system of double-entry by Messrs. Ford & Troup four or five years ago.

561. You think it would be an advantage to you, as manager, if the books were audited by a professional firm of accountants, because you could get advice from them? Exactly.

562. How many officers are under a guarantee? Myself, the collectors, and the outdoor inspectors.

563. What is the amount of your guarantee? £600.

564. And the inspectors? One inspector, £250; and the collectors, £100 each.

565. Are these all the officers who have the handling of any money? Yes.

566. Do you keep a time-book? Only for those employed in the institution. The storekeeper and his assistants, and the clerks, sign the time-book.

567. As regards the outdoor officials, their journals would be their time-book? The amount of work they bring in.

568. And do they not keep journals? They write reports and journals of their day's visits.

569. That would be their time-book? Yes; the Committee would have an opportunity every Tuesday afternoon to ascertain from the reports whether the men did a fair week's work.

570. Can you tell us how many visits of inspection were paid in 1897 by the inspectors? It says in the annual report—"Cases visited and reported upon"—there were 8,267 cases visited and reported upon. We should have to dissect the number that were reported upon and not visited, to show actually how many homes the inspector went to. A report does not necessarily mean a visit. The applicant for relief may be questioned at the counter, and no further relief may be required; but the case would be reported. I know there are some cases of that kind.

571. I want to see what each inspector does, and how many inspections are made by them? That is shown each Tuesday afternoon, when they bring their reports in. They read from a book how many inspections they have made during the week.

572. Do you not take out these visits, and see whether each man is doing a fair day's work? I have it in the House Committee's book every week. That was done on the recommendation of the honorary Secretary, and I thought it a very good idea. Suppose a man puts down forty cases visited and reported upon, if the actual visits number twenty, and the rest were mere conversations with the applicants, that would not be anything like the value of as many visits made by the Inspector to the different homes. It says here, "So many cases visited and reported upon." Take them at forty. Suppose only twenty visits have been made to the home, and twenty other cases were reported upon without having been visited. These would not be anything like the value of the other twenty.

573. You mean that if we get a detailed statement from the inspectors it would not be sufficient evidence of the work they are doing, because there are inspections and inspections? Yes.

574. Forty inspections may be worth more than fifty other inspections? Yes. If a man went 10 miles, and took half a day to visit a case, that would be worth more than a number of other inspections where no visit was made.

- E. Maxted.
11 July, 1898.
575. I understand that they have bicycles? Yes; two of them have bicycles, and the other has a buggy.
576. According to the last balance-sheet, your receipts from the Government, in 1897, amounted to £5,542? Yes; but there is a footnote stating that there is some money not paid in.
577. Your disbursements were about £10,400 14s. for provisions, stores, and rent relief money; and for salaries and expenses, about £3,617; total, £14,018. Is that correct? The actual disbursements were £14,986. That includes £968 invested in Savings Bank.
578. You increased your debit balance from £4,480 to £9,142. Yes; but that does not actually represent the position of affairs, because the following amounts from the Government fell due to the Society, but were not received;—Government maintenance, £2,095; Government outdoor relief subsidies placed on the Estimates, £4,000, &c.; total for 1898, £6,280. If we had received it on the 31st December, 1897, we should have had to wait eight or nine months before we could get a further subsidy from the Government.
579. Have you occasionally drawn on your accumulated funds for current requirements? They have only been drawn upon once since I have been connected with the institution. They drew £10,500 in 1884. There was then an overdraft at the bank of £15,000, and the directors held a meeting and decided to draw that amount from the accumulated funds.
580. As against any overdraft that you have at the bank is it a fact that the bank allows you to draw upon security of your fixed deposit at the same rate of interest? Yes.
581. So you are allowed a set-off against your overdraft? Yes, we are allowed 3 per cent. for our fixed deposit, and we are charged 3 per cent. for the overdraft.
582. In the balance-sheet there is an asset consisting of certain lands at Bankstown, what is the extent of it? 190 acres.
583. What is it put down at in the balance-sheet? £480. That is the amount that was lent on mortgage on the land in 1843. The Society foreclosed.
584. It is worth more than that? Undoubtedly much more than £480.
585. By what title does the Society hold it? Torrens' title.
586. Have the Society ever had a valuation of the land? No, I cannot recollect that they have had any valuation of it. Some years ago the honorary treasurer proposed that the increased value should be put down for the land, being under the impression that £480 did not nearly represent its actual value, and that it was misleading to the public. The majority of the directors, however, decided that as £480 was the original amount of the mortgage that should stand as the book value.
587. Have the directors ever considered whether they could use the land to any advantage;—is it used now? No; it is lying to waste. At one time it was let for a farm, but the revenue from it was almost nothing.
