(2.) Supplementary Notes upon *Calea*, *Tridax*, and *Mikania*. By B. L. Robinson and J. M. Greenman. (*Proc. Boston Soc. Nat. Hist.*, 1899.)

PUBLICATIONS OF COLONIAL AGRICULTURAL DEPARTMENTS.

New South Wales.

- Annual Report of the Department of Mines and Agriculture for the Year 1898. (From the Department.)
 Notes on pine-thinning, based on Foresters' and Surveyors' reports, compiled and annotated by R. D. Hay. (From the Author.)
 Forest Department—List of exotic and indigenous trees and shrubs for cultivation. (For issue in connection with the collection and exchange of seeds, 1899.) (From the Under Secretary for Lands.)
 Report of Royalty on Timber Board, 1899, by Messrs. Cheeseborough, Scott, and Walters. (From the Forest Department, Sydney.)
 Hawkesbury Agricultural College (Richmond, New)—Annual Report for 1898. (From the Principal.)

Queensland.

- Annual Report of the Department of Agriculture for the years 1892-1893, 1894-1895, 1896-1897. (From the Under Secretary.)
 Bulletin No. 5, Second Series—A half century of notes for the guidance of amateur fruit-growers, &c. (From the Under Secretary.)
 Bulletin No. 10, Second Series—Report on the olive-tree and olive oil of Tuscany; by Major Chapman.
 Bulletin No. 13, Second Series—Spraying; by H. Benson.
 Bulletin No. 17—Tree-planting for shade and ornament; by E. M. Shelton.
 Bulletin No. 25—Report of Agricultural Conferences held at Beenleigh, Bundaberg, Rockhampton, and Mackay. (From the Board of International Exchanges, Sydney.)

Victoria.

- First Progress Report on the Royal Commission on State Forests and Timber Reserves on the question of sleeper-hewing in forest reserves and Crown lands, 1898.
 Second Progress Report of the Royal Commission on State Forests and Timber Reserves on the Victorian Forest—its resources, management, and control.
 Third Progress Report of the Royal Commission on State Forests and Timber Reserves—The red-gum forests of Barmah and Gunbower; their resources, management, and control.
 Fourth Progress Report of the Royal Commission on State Forests and Timber Reserves—Wombat Forest; its resources, management and control, 1899.
 Fifth Progress Report of the Royal Commission on State Forests and Timber Reserves—The Otway Forest; its resources, management, and control, 1899. (From the Commissioners.)

Victoria Department of Agriculture.

- Manures and manuring, including rules for valuation of manures; 2nd edition (by A. N. Pearson), 1899.
 Modern dairying; by Messrs. D. Wilson and R. Crowe, dairy experts, 1898.
 Report by Mr. D. Wilson, Dairy Expert, &c., on the export of frozen produce from Victoria, 1898-1899.
 Guides to growers:—
 32. Fungus diseases of the raspberry.
 33. The Peanut.
 34. Canaigee.
 35. Rust in wheat experiments, 1894 to 1896-7.
 36. The San Jose scale.
 37. Wheat experiments, season 1897-8.
 38. Experiments with fodder plants.
 39. Raisin-making.
 40. Fruit flies.
 41. Cider-making.
 42. Horse-breeding.
 43. Fruit-pulping for export.
 44. Bunt, or stinking smut of wheat, and its treatment.

Adelaide.

- Annual Progress Report upon State Forest Administration in South Australia for the years 1897-8 and 1898-9. (From the Conservator of Forests.)

Western Australia.

- The Forests of West Australia and the development, with plan and illustrations. (By J. E. Brown.)
 Annual Progress Report of the Woods and Forests Department for the financial year 1897-8. (By J. E. Brown.)
 (From the Conservator of Forests.)

New Zealand Department of Agriculture.

- The Seventh Report of the Department of Agriculture, 1899. (From the Secretary.)
 Cape of Good Hope.
 Reports of the Conservators of Forests for the year 1898. (The *Agricultural Journal*, Vol. xiv.)
 Agricultural and Live Stock Returns for 1897-1898. (From the Department of Agriculture.)

Zanzibar.

- "The Shamba" Journal of Agriculture for Zanzibar January and February, 1899.
 Annual Report of the Agricultural Department, 1898. (From the Director of Agriculture.)
 West Indian Imperial Department of Agriculture—West Indian Bulletin No. 1 of Vol. I. (From the Imperial Commissioners.)

INDIAN GOVERNMENT PUBLICATIONS.

- Agricultural Series No. 28: Manures and manuring.
 Veterinary Series No. 27.
 Veterinary Series No. 28: The cattle of Kurndon.
 Veterinary Series No. 29: Measurement of cattle in Europe.
 Medical and Chemical Series No. 23. No. 5: The use of Indian Henbane as an intoxicant in Sindh.
 Mineral and Metallic Series No. 12.
 Miscellaneous Series No. 4. No. 6: System of ledgering economic information.
 (From the Government of India.)
 Madras Agri-Hort. Society. Proceedings of the Agri-Horticultural Society of Madras, October, 1898, to March, 1899. (From the Hon. Secretary.)

AUSTRALASIAN SERIALS.

- Report of the sixth meeting of the Australasian Association for the Advancement of Science, held at Brisbane (Q.), January, 1895. Vol. VI.
 Report of the seventh meeting of the Australasian Association for the Advancement of Science, held at Sydney, 1898. Vol. VII.
 (From the Association.)
 Proceedings of the Linnæan Society of N. S. Wales. Vols. I to XXIII, also Vols. XXI, XXII, and XXIII, to complete the set already in the Library. (From the Department of Public Instruction, Sydney.)
 Martin's Home and Farm (Sydney). (From the Publishers.)
 The Farm and Dairy: An Australasian Products Journal. (From the Publishers.)
 Proceedings of the Royal Society of Queensland, Vol. XIV. (From the Society.)
 Proceedings of the Royal Society of Victoria. Vol. XI. (New Series.) Part II. (From the Society.)
 The Australasian Journal of Pharmacy for the years 1890-1-2-3-4-5. (From Mr. F. J. Bernard.)
 The Victorian Naturalist. The journal and magazine of the Field Naturalists' Club of Victoria. (Melbourne, 1899.) (From the Society.)
 The Australasian Journal of Pharmacy. (Melbourne, 1899.) (From the Pharmaceutical Society of Australasia.)
 Transactions and proceedings of the New Zealand Institute, 1898. Vol. XXXI. (From the Institute.)
 Bulletin de L'Union. Agricole Caledonienne Organe de la colonisation. (From the Society.)

MISCELLANEOUS SERIALS.

- Hooker's *Icones Plantarum*. (From the Bentham Trustees.)
 The Journal of the Board of Agriculture. (Miscellaneous parts from the Board of International Exchanges, Sydney.)
 Royal Horticultural Society, London, Journal. Vol. XXII, Part IV. (From the Society.)
 Quarterly Record of the Royal Botanical Society of London, and Journal of the Royal Botanic Gardens Club. (From the Society.)
 Tijdschrift over Plantenziekten. (Bos Prof. Dr. Kitzema en Staes G.) Vierde Jahrgang, 1898.
 Transactions and proceedings of the Botanical Society of Edinburgh. Vol. XXI. Parts I and II. (From the Society.)

- Stuart, Prof. Anderson. Medicine as a Career. The Annual Lecture, delivered before the Medical Students' Society of the Melbourne University, 1898. (From the Author.)
- Queensland.
- Annual Progress Report of the Geological Survey for the years 1896-1898. (By R. L. Jack.)
- Report on the Geology of Collaroy and Carmilla, near Broad Sound; with notes on the mining operations and mineral resources of the district. (By B. Dunstan, Assistant Government Geologist.)
- Report on a visit to the Palmer Gold-field, with three maps. (By R. L. Jack.)
- Report on Mount Morgan and other mines in the Crocodile Gold-field. (By R. L. Jack.)
- Report on the delimitation of the Artesian Water Area north of Hughenden (by A. Gibb Maitland), and note by the Government Geologist (with geological map and three sections). (From the Government Geologist, Brisbane.)
- Fourteenth Annual Report of the Hydraulic Engineer of Water Supply. Brisbane, 1898. (From the Hydraulic Engineer.)
- British Parliamentary Papers—
- (1.) *Re* the transfer of Norfolk Island to the Government of New South Wales.
 - (2.) Straits Settlements papers *re* the Cocos-Keeling and Christmas Islands.
 - (3.) Further Correspondence *re* the Island of Tristan da Cunha. (From Board of International Exchange, Sydney.)
- Handbook of information for Western Pacific Islands. Sydney, 1899. (From Burns, Philp, & Co.)
- The Engineer Directory, London. (From the publishers.)
- Report of the Council of the Zoological Society of London for the year 1898. (From the Society.)
- Leeds. Yorkshire College. Report on the work of the leather industries department, for the session 1897-8. (From the Protcor.)
- Annual Report of the State Geologist of the South African Republic, for the year 1897. (Translated from the Dutch, and edited by the Secretary of the Geological Society of South Africa.) Johannesburg, 1898. (From the State Geologist.)
- UNITED STATES DEPARTMENT OF AGRICULTURE.
- Publications of the *Division of Botany*, as follows:—
- Circular No. :—
13. Observations on cases of Mushroom-poisoning in the district of Columbia.
 17. Notes on the plant products of the Philippine Islands.
- Bulletin No. :—
17. Legislation against weeds.
 18. The Water Hyacinth and its relation to navigation in Florida.
 21. Vanilla culture, as practised in the Seychelles Islands. The superior value of large, heavy seed. (Year Book of the Department of Agriculture for 1896.)
- Additional notes on seed-testing. (Year Book of the Department of Agriculture for 1897.)
- Contributions from the U. S. National Herbarium, Vol. III, No. 2, issued June, 1894.
- Vol. III, No. 7, issued April, 1896.
- Division of Agrostronomy, as follows :—
- Circular No. :—
1. A note on experimental grass gardens.
 2. Hairy Vetch, Sand Vetch, or Russian Vetch.
 4. The Flat-pea.
 7. Gram, Chick-pea, or Idaho-pea.
 8. Experiments in Range Improvement.
 9. New species of North American Grasses.
 13. Florida Beggar-weed.
 14. The Velvet-bean.

Bulletin No. :—

2. Fodder and Forage Plants, exclusive of grasses.
 11. Studies on American Grasses.
 12. A report upon the grasses and forage plants and forage conditions of the Eastern Rocky Mountain Region.
 13. The Red Desert of Wyoming, and its forage resources.
 15. A report upon the forage plants and forage resources of the Gulf States.
- Grasses as sand and soil binders. (Year Book of the U. S. Department of Agriculture for 1894.)
- Lawns and Lawn-making. (Year Book of the U. S. Department of Agriculture for 1897.)
- Forage plants for cultivation on Alkali Soils. (Year Book of the U. S. Department of Agriculture for 1898.)
- Division of Vegetable Physiology and Pathology, as follows :—
- Circular No. 17. New spraying devices.
- Report No. 59. Curing and fermentation of Cigar Leaf-tobacco.
- Hybrids and their utilisation in plant breeding. (Year Book of the U. S. Department of Agriculture for 1897.)
- Bulletin No. 11. A report on the culture of hemp in Europe, including a special consular report on the growth of hemp in Italy, received through the Department of State. (By C. R. Dodge.)
- Division of Forestry, as follows :—
- Circular No. :—
18. Progress in timber physics.
 19. Progress in timber physics.
 21. Practical assistance to farmers, lumbermen, and others in handling forest lands.
- Bulletin No. :—
9. Osier culture.
 17. Check-list of the forest trees of the United States, their names and ranges.
 21. Systematic plant introduction, its purposes and methods.
- Experiment Station Record, as follows :—Vol. IX, part 12; Vol. X, parts 1, 2, 3, 4, 5, 11; Vol. XI, part 1; Year-book of the United States Department of Agriculture for 1898; Report of the Secretary of Agriculture, Washington, 1898.
- Division of Soils :—
- Bulletin No. 14. The alkali soils of the Yellowstone Valley, from a preliminary investigation of the soils near Billings, Montana.
- A preliminary report on the soils of Florida.
- Farmer's Bulletin No. :—
25. Peanuts: culture and uses.
 26. Sweet potatoes: culture and uses.
 28. Weeds; and how to kill them.
 30. Grape diseases on the Pacific Coast. (By Newton B. Pierce.)
 68. The black rot of the cabbage.
 70. The principal insect enemies of the grape. (By C. L. Marlott.)
 91. Potato diseases and their treatment.
 101. Millets.
- Division of Entomology :—
- Circular No. 37. Second series. The use of hydrocyanic acid gas for fumigating green-houses and cold frames.
- Insect life, Vol. VII, No. 3.
- Bulletins of American Agricultural Stations.*
- Alabama (Auburn).
- Bulletin No. :—
2. Directors' report.
 3. Experiments with corn, sweet potatoes, ground peas, turnips, and grapes. Analyses of fertilisers, soils, &c. Woods of Alabama (*continued*), meteorology.
 5. Cotton, figs, meteorology and fertilisers, soils, and feed-stuffs.
 6. Grasses and their cultivation.
 9. Biology (Nematode Root-galls).
 12. Co-operative Soil Trusts.
 13. Microscopic study of certain varieties of cotton.
 15. Insecticides.
 16. Corn, cotton, rye, chufas: Conclusions from six years of experiment.
 17. Dry applications of Paris green and London purple for the cotton worm.
 18. Climatology of Alabama.
 19. Roads and road-making: Meteorology.
 22. Experiments with cotton.
 23. Co-operative soil tests of fertilisers. (Report of Alabama weather service.)
 27. Black rust of cotton.
 28. Watermelons and cantaloupes.
 31. Irish and sweet potatoes.
 32. Corn, wheat, and oats.
 34. Comparative soil-test experiments for 1891.
 36. Some leaf-blight of cotton.

39. Wheat.
 42. Comparative soil-test experiments for 1892.
 49. Varieties of wheat and grasses.
 62. Corn and cotton.
 64. Tobacco.
 66. Cane-syrup.
 70. Flora of Alabama—V.
 71. Experiments with foreign cotton.
 74. Flour considered from the standpoint of nutrition.
 76. Experiments with corn.
 77. San Jose scale and other insect pests.
 78. Co-operative fertiliser experiments with cotton in 1896.
 83. Hybrids from America, and foreign cotton.
 84. Turnips.
 86. San Jose scale, sweet potato pests, carbon bisulphide, insecticides, and pumps in general.
 87. Soil inoculation for leguminous plants.
 88. Experiments with corn.
 89. Experiments with cotton.
 90. Peach-borer, fruit-bark beetle.
 91. Co-operative fertiliser experiments with cotton in 1897.
 92. Experiments with lime on acid soils.
 93. Peanuts, cow-peas, and sweet potatoes as food for pigs.
 94. Strawberries.
 95. Experiments with oats.
 96. Experiments with crimson clover and hairy vetch.
 97. Dairy and milk inspection.
 98. Orchard notes.
 99. Cotton-rust.
 100. Lawns, pastures, and hay.
 101. Experiments with cotton, 1898.
 102. Co-operative fertiliser experiments with cotton, 1898.
 103. Experiments in syrup-making.
 104. Velvet beans.
- Index, Vol. VI, Bulletins, 89-100, January, 1898, December, 1899; Vol. V, Bulletins, 76-88, January, 1897, December, 1897; Vol. IV, Bulletins, 59-75, January, 1895, December, 1896; Vol. III, Bulletins, 22-53, January, 1891, August, 1894.

Arizona (Tucson).

- Bulletin No. 30. Sugar-beet experiments during 1898. Tenth Annual Report for the year ending June 30, 1899.

California (Berkeley).

- Bulletin No. :—
9. Zeinfandel wines.
 11. *Re the Census Report on the Physical and Agricultural Features of California.*
 14. Artesian waters from the San Joaquin Valley.
 16. Entomology in the College of Agriculture.
 17. Muscat grape on the Southern Mesas.
 18. J. A. Bauer's phylloxera remedy.
 19. Phylloxera.
 22. University seed-distribution.
 29. Distribution of plants and scions.
 34. Experiments on the growth of cuttings from wild American vines.
 36. Examinations of soils and sub-soils.
 41. Olive.
 42. Vintage work in the Viticultural Laboratory, 1885.
 47. Seed distribution.
 51. Wines of 1885.
 53. Irrigation, drainage, and alkali.
 54. Condensed grape-must and its uses.
 61. Distribution of seeds and plants.
 63. Experiments on methods of fermentation.
 72. Sugar-beets at Fresno. Hessian Fly.
 73. Use of hydrocyanic acid against scale insects.
 74. Vintage work and instruction in the Viticultural Laboratory, 1887.
 76. Distribution of seeds and plants.
 78. Report on the establishment of outlying stations.
 80. Progress of the Experiment Station work.
 81. Distribution of seeds and plants.
 82. Lakes of the San Joaquin Valley.
 83. Rise of the alkali in the San Joaquin Valley.
 85. Observation on olive varieties.
 86. Preservative fluids for fresh fruits.
 88. Use of fertilisers in California.
 89. Distribution of seeds and plants.
 91. Port, sherry, and Italian grapes, and the importation of olives.
 94. (a) Composition of the Ramic plant.
(b) Fertilising value of greasewood.
 95. Distribution of seeds and plants.
 96. (a) Sulphuring in fruit-drying.
(b) Fig-trees at the experiment station.
(c) Notes on Persian palms.
 98. Distribution of seeds and plants.
 99. Root knots on fruit-trees and vines.
 101. Further examination of California prunes, apricots, plums, and nectarines.
 102. Analyses of figs and fig soils.
 120. The olive knot.

122. Orchard fumigation.
123. Olives.
124. Lupins for green manuring. Partial Report of work of the Agricultural Experiment Stations of the University of California for the years 1895-6, 1896-7.

Carolina North (Raleigh).

- Special Bulletin No. 50. Catalogue of herbarium specimens for exchange.

Colorado (Fort Collins).

- Bulletin No. :—
28. Russian thistle.
 29. Strawberries and grapes.
 30. Farm notes for 1884: Notes on tomatoes.
 31. Hemiphera of Colorado.
 32. Sheep-feeding in Colorado.
 33. Seepage or return waters from irrigation.
 34. Cattle-feeding in Colorado.
 35. Alfalfa.
 36. Sugar-beets.
 37. Birds of Colorado.
 38. Sheep-scab, and a few insect enemies of the orchard.
 39. Alfalfa and other hays.
 40. Barley.
 41. Blight and other plant diseases.
 42. Sugar-beets in Colorado in 1897.
 43. (1) Colorado Lepidoptera.
(2) A few new species of *Deltocephalus*.
(3) Original types, &c., in collection.
 44. Further notes on the birds of Colorado.
 45. Loss of water from reservoirs by seepage and evaporation.
 46. A soil study. Crop-grown sugar-beets.
 47. Colorado's worst insect pests and their remedies.
 48. Losses from canals from filtration or seepage.
 49. Meteorology of 1897, with illustrations.
 50. Notes on plum culture.
 51. Sugar-beets in Colorado in 1898.
 52. (a) Pasturing sheep on Alfalfa.
(b) Raising early lambs.
- Annual Report (Tenth) for 1897.
" (Eleventh) for 1898.

Connecticut (Newhaven).

- Annual Report for the years 1884, 1885, 1886, 1888, 1889, 1890, 1892, 1893, 1894, 1895, 1896, 1897, and 1898.

Dakota South.

- Fifth Annual Report, 1892.
Sixth " 1893.
Seventh " 1894.
Eighth " 1895.
Ninth " 1896.

Bulletin No. :—

49. Shallow artesian wells.
50. Fruit culture.
51. Silos and Silage.
52. Irrigation in South Dakota.
53. Forestry in South Dakota.
54. Subsoiling.
55. Feeding sheep in South Dakota.
56. Sugar-beets in South Dakota.
57. Four injurious insects.
58. Moisture investigations for 1897.
59. Forage and garden crops in James River Valley.
60. Millet.
61. Forage and garden crops in James River Valley.
62. Sugar-beets in South Dakota.

Florida (Lake City).

- Bulletin No. 50. Pineapple fertilisers.

Georgia (Experiment).

Bulletin No. :—

1. Announcement.
 2. Factors in Agricultural investigation.
 4. Analyses of cattle foods.
 7. " feeding stuffs.
 8. Irish potato culture.
 9. Potash and paying crops.
 10. Fertiliser experiments on corn.
 11. Fertiliser experiments, culture and variety tests in cotton, sweet peas, garden vegetables, &c.
 12. Field experiments in forage plants.
 - 12½. Special circular to the farmers of Georgia from the Board of Directors.
 13. (i) Analyses of feeding stuffs.
(ii) Forage plants.
 14. Variety and fertiliser experiments with oats, wheat, and vegetables.
 15. (i) Fertiliser experiments on corn.
(ii) Culture of small fruits.
 16. Fertiliser experiments on cotton.
 17. Irish potatoes, sweet potatoes, tomatoes, and forage plants.
 - 17½. The air and the soil in their relation to Agriculture.
 19. Culture of tobacco.
- Bulletins 20 to 27. Vol. 3.
" 28 to 35. Vol. 4.
" 36 to 43. Vol. 5.

Idaho (Moscow).

Bulletin No. :—

16. The San Jose scale in Idaho.
17. Construction and management of hot beds.
18. Sugar-beet investigations in 1898.
19. Miscellaneous analyses.

Illinois (Urbana).

Bulletin No. —

1. Introductory.
2. Ensilage.
3. Experiments in oats in 1888.
4. " " corn " Effects of ripeness on yield and consumption.
5. Grasses and clovers. Effects of ripeness on yield and consumption.
6. Backrail disease of corn.
7. Biology of ensilage.
8. Experiments with corn.
9. Milk and butter tests.
10. Investigations of milk tests.
11. Experiments with wheat.
12. Experiments with oats, 1890.
13. Experiments with corn, 1890.
14. Milk tests : methods of testing milk.
15. Fruit bark beetle.
16. Experiments in pig-feeding.
17. Experiments with wheat, 1890-1891.
18. Dairying experiments.
19. (a) Experiments with oats in 1891.
(b) Chinch bug in Illinois, 1891-1892.
20. Experiments with corn in 1891.
21. Horticulture : a general Report.
22. Field experiments with wheat, 1891-1892.
23. Experiments with oats, 1892.
24. Variations in milk.
25. Experiments with corn, 1892.
26. Forest tree plantation.
27. New points in the manipulation of the Babcock milk test.
28. Grapes : tests of varieties.
29. Orange rust of raspberry and blackberry
30. Blackberries and raspberries : variety tests and management.
31. Corn and oats experiments, 1893.
32. Acid test of cream.
33. Chinch bug in Southern Illinois, 1894.
34. Experiments with wheat and oats, 1893-1894.
35. Russian thistle in Illinois.
36. Stock-feeding in Illinois.
37. Corn experiments, 1894.
38. Experiments with the Muscardine disease, of Chinch bug, and with the trap and barrier method for the destruction of that insect.
39. Russian thistle and some plants mistaken for it.
40. Experiments with potatoes, 1892, 1893, and 1894, with statement of some results obtained at other stations.
41. Experiments with wheat and oats, 1888-1895.
42. Corn experiments, 1895.
43. Composition of and digestibility of corn ensilage, cow-pea ensilage, soja-bean ensilage, and corn fodder.
44. Insect injuries to the seed and root of Indian corn.
45. Varieties of apples.
46. Corn, crimson clover, retentive clays ; physiological requirements of the animal body ; results of an attempt to grow cattle without coarse feed.
47. Broom corn smut.
48. San Jose scale in Illinois.
49. Sugar-beet in Illinois.
50. Cost of production of corn and oats in Illinois, 1896.
51. Variations in milk and milk production.
52. Orchard cultivation.
53. Chemistry of the corn kernel.
53. (Abstract.) Chemistry of the corn kernel.
54. Spraying apple-trees with special reference to apple-scab fungus.
55. Improvement in the chemical composition of the corn kernel.
56. Recent work on the San Jose scale in Illinois.

Indiana (La Fayette).

Bulletin No. :—

67. Wheat and corn as fed for pigs.
70. The relation of water supply to animal diseases.
71. (1.) Corn meal and shorts as food for pigs.
(2.) Skim milk as food for young chickens.
73. Tests of strawberries, raspberries, blackberries, and grapes.
74. A native white bedding plant.
76. Skim milk as food for young growing chicks.
77. Field experiments with corn.
78. The San Jose scale and other scale insects.
79. Roots as food for pigs.

Iowa (Aimes).

Bulletin No. :—

4. Wild plum, &c.
5. (1.) Sorghum.
(2.) Important injurious insects.
19. Experiments with new orchard fruits.
26. The Russian thistle.
40. The relation of fermentation to butter, flavour and aroma.

Kansas (Manhattan).

Bulletin No. :—

1. Announcement.
 2. Cultivated grasses and flowers in Kansas.
 3. Observations on two insect pests.
 4. Experiments with wheat.
 5. Some comparisons of varieties of sorghum.
 6. Silos and silage.
 24. A new crop for Kansas farmers.
 25. Alfalfa hay for fattening cows.
 28. Treatment of winter-injured trees.
 29. Milking scrub cows.
 34. Get ready for the drought.
 35. Dysentery in calves and other young animals.
 36. Experiments with swine plague or hog cholera.
 37. Kaffir corn, alfalfa hay, and soy beans for pork.
 39. Skim-milk calves
 41. A digestion experiment with alfalfa hay.
 43. Selection of seed wheat.
 44. The profitable strawberry bed.
 57. Kansas weeds. · III.
 58. Cornstalk disease of cattle.
 60. Steer-feeding experiment.
 62. Corn smut.
 68. Soil moisture.
 82. The potato-stalk weevil.
 83. Sugar-beets.
 84. Cold storage for fruit.
 85. Investigations of the growth of alfalfa in Kansas.
 86. Press Bulletins Nos. 1-34.
 88. Keeping milk in summer.
- Annual Reports for the years 1889, 1891, 1892, 1893, 1894, 1895.

Kentucky (Lexington).

Bulletin No. :—

31. Some strawberry pests.
36. Commercial fertilisers.
48. Commercial fertilisers.
78. Ginseng its nature and culture.
79. Commercial fertilisers.
80. Some pests likely to be disseminated from nurseries.
81. A method of avoiding lettuce rot.
82. Commercial fertilisers.
83. Wheat.

Maryland (College Park)

Annual Reports for the years 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, and 1897-1898.

Bulletin No. :—

1. History, organisation, and work of the Society.
6. Commercial fertilisers.
7. Farm manures.
8. Some feeding trials.
12. Pig-feeding.
13. Strawberries.
14. Wheat.
18. Sweet potatoes.
20. Report of the Maryland Station.
21. Soils of Maryland.
22. Steer-feeding.
23. Injurious insects of Maryland.
24. Composition of commercial fertilisers.
26. Tobacco.
26. (Supplement.) Effects of different fertilising elements in the composition and combustibility of tobacco.
29. Further investigations on the soils of Maryland.
31. Potato experiments.
32. San Jose scale.
33. Horticultural and agricultural departments—small fruits, vegetables, and corn.
34. Composition of commercial fertilisers.
35. Wheat, barley, oats, and hay experiments.
36. Steer-feeding. A well-balanced *versus* a poorly-balanced ration.
37. Composition of commercial fertilisers sold in Maryland.
38. Potato experiments.
39. Spray calendar.
40. Composition of commercial fertilisers sold in Maryland.
41. Test of methods for preparing corn fodder.
42. Maryland "Trees and Nursery Stock Law," and other information of interest to nurserymen and growers.
43. Report upon the value of a new corn product.
46. Corn and potato experiments.
47. Dairy farming.
48. Common injurious plant lice, with suggestions for their destruction.
49. Composition of commercial fertilisers.
50. Rust and leopard spots—two dangerous diseases of asparagus
51. Horse-feeding.
52. Composition of commercial fertilisers sold in Maryland.
53. Special investigations of the so-called new horse disease in Maryland.
54. Tomatoes.
55. Black-peach aphid ; but-worms in young tobacco ; law providing for the suppression of insect pests and plant diseases in Maryland.
56. Wheat, winter oats, barley, and lime experiments.
57. Report on San Jose scale in Maryland, and remedies for its suppression and control.

58. Hessian fly and wheat diseases.
59. Sweet potato insects.
60. Some diseases of sweet potato, and how to treat them.
61. The sugar-beet in Maryland.
62. Experiments with wheat, corn, and potatoes.

Michigan (Agricultural College).

Twenty-fifth Annual Report of the Secretary of the Board of Agriculture of the State of Michigan from October 1st, 1885, to September 30th, 1886.
(From the Board of International Exchanges, Sydney.)

Minnesota (St. Anthony's Park).

Bulletin No. :—

1. Russian apples, wheat experiments and potato culture.
2. Silos and ensilage. Tests of varieties of corn for feeding values. Beets and other roots for sugar and feeding values.
3. Horticulture and etymology.
9. Russian willows and poplars. Descriptions and value for Minnesota insects affecting willows and poplars.
10. Onions on land ploughed and unploughed; cabbage; London purple to kill curculio on native plums; bagging grapes; rollingstone plums; potatoes; oak caterpillars.
12. Meadows and pastures in Minnesota; American-grown cauliflower seed; preserving vegetables in carbonic acid gas; circular letter No. 2, protection for frost.
13. Treatise on flax culture.
14. Swine-feeding for profit; swine-breeding; sugar-beets.
15. Wheat.
16. Sheep scab, and how to cure it.
17. Migratory locusts, 1891.
18. Strawberries and raspberries in 1891; land cherries, buffalo berry, and Russian mulberry; evergreens from seeds; summer propagation of hardy plants.
19. Dehorning; cream-raising by cold deep setting; experiments in cheese-making; incorporating cream into cheese, &c.; the Babcock test and churn.
20. Fertilisers; improvement of Timothy rape in Minnesota; peas and oats; field peas.
21. Sugar-beets; sorghum.
22. (a) Comparisons of corn and barley; corn and shorts; barley and shorts; corn, shorts, and oatmeal; barley, shorts, and oatmeal in the ration of growing pigs; (b) corn *versus* barley for fattening pigs; (c) corn meal, barley meal, and oil meal compared; (d) wet *versus* dry food.
23. Wheat.
24. Ornamental and timber trees, shrubs and herbaceous plants in Minnesota, their hardiness and desirability.
25. (a) Small fruits; (b) notes from trial stations; (c) renewing old strawberry beds; (d) shading strawberry beds; (e) seedling fruits; (f) analysis of grapes and spraying grape vines.
26. Milch cows; pigs (feeding experiments and digestion)
27. (a) Composition of fodders, wheat, and milled products and dairy products; (b) sugar-beets.
29. Wheat.
30. Soils.
31. Lambs, wheat-screenings, wheat, oats, corn, and potatoes.
32. Late blight and rot of the potato.
33. Russian thistle or tumble weed.
34. Chemical development and value of red clover; Russian thistle.
35. Dairy herd record for 1893; cost of butter production in winter; prairie hay *versus* Timothy; dairy calves; co-operative creameries; experiments in sweet-curd cheese work.
57. Fattening lambs in winter.
61. Butterflies and moths injurious to our fruit-producing plants.
62. Wheat varieties; breeding; cultivation.

Missouri (Columbia).

Bulletin, No. :—

1. Announcement to farmers; the so-called "Hatch Bill"; assent of Governor; plan of organisation; work and experiments proposed this season; personnel of the station.
4. Missouri's legislation concerning animal diseases.
5. Soil, weather, field trials with corn.
6. Experiments of seed germination; pea weevil and apples
7. Experiment on green *versus* dry storage of fodder.
8. Experiments on feeding ensilage against dry fodder.
9. Study of the life-history of corn at its different periods of growth.
10. Analyses of apples at various stages of growth; Bordeaux mixture for grape rot; comparative tests of small fruits and potatoes.
11. Texas fever.
12. Black-leg.
13. Reports on spraying for the codlin moth, black rot of the grape. Reports on strawberries, raspberries, blackberries, tomatoes, peas, and potatoes.

14. Field experiments with corn.

15. (1) Wheat—tests of varieties, 1889, 1891.
(2) Oats—tests of varieties, 1889, 1891.
(3) Change of seed—wheat, oats, and potatoes.
16. Covering fruit-trees to protect the fruit-buds; spread of pear blight; temperature and rain tables; strawberry tests; potato trials; seedling fruits.
17. Sugar-beets.
18. Strawberries.
19. Soils and fertilisers, Part 1.
20. " " Part 2.
21. Field experiments with wheat.
22. Seedling strawberries.
23. Grape-culture.
24. Comparative tests of different breeds of beef cattle.
25. An inquiry into the composition of the flesh of cattle.
27. Spraying apple-trees.
29. Feeding wheat to pigs.
30. Spray calendar.
31. Spraying.
32. Field experiments with corn.
33. Inquiry into the principles of potato-growing and tests of varieties.
44. (1) Fruit-tree bark beetle.
(2) The common apple-tree and peach-tree borers.
45. The sugar-beet.
46. The grape.
47. The tarnished plant bug.

New Hampshire (Durham).

Bulletin No. :—

1. Ensilage.
2. Feeding Experiments.
3. When to cut corn for ensilage.
4. The science and practice of stock-feeding.
5. Fertilisers and fertilising materials.
6. Experiments with fertilisers.
7. Test of dairy apparatus.
8. Feeding experiments.
9. Effect of food upon milk.
10. Co-operative fertiliser experiments.
11. Pig-feeding experiments.
12. Fertiliser experiments.
13. Effects of food on butter.
14. Ensilage in dairy farming.
15. Patent cattle foods.
16. Effect of food on composition of butter.
17. Stock-feeders' guide.
18. Effect of food on milk.
19. Spraying apples and pears against fungi.
20. Effect of food on milk.
21. Farmyard manures and artificial fertilisers.
22. Prevention of potato blight.
23. Some dangerous fruit blights.
24. The flow of maple sap.
25. The composition of maple sap.
26. Analyses of fertilisers and wood ashes.
27. Spraying experiments in 1894.
28. Remedies for the horn-fly.
29. Remedies for flea-beetles.
30. An experiment in road-making.
31. Seventh Annual Report.
32. Studies of maple sap.
33. Two shade-tree pests.
34. Surface and sub-irrigation.
35. The codlin moth and the apple maggot.
36. Analyses of three common insecticides.
37. Crimson clover.
38. The tent caterpillar.
53. The farm water supply.
54. The winter food of the chickadee.
55. The feeding habits of the chipping sparrow.
56. Poisonous properties of wild-cherry leaves.
58. Cost of raising calves.
59. Tenth Annual Report.
60. Green corn under glass.
61. The inspection of fertilisers in 1898 in co-operation with the State Board of Agriculture.
62. Forcing pole beans under glass.
63. Third potato report.
64. The forest tent caterpillar.
65. Notes on apple and potato diseases.

New Jersey (New Brunswick).

Bulletin No. :—

- A. Yellow tobacco.
- C. Pollen *versus* rain.
- E. Oyster interests of New Jersey.
- F. The horn-fly.
- G. The potato rot.
- H. Cranberry scald.
- I. Questions relative to farm practice.
- J. Sweet potato rot.
- K. Insects injuriously affecting cranberries.
- L. Observations upon the peach for 1890.
- M. Field experiments with soil and black rots of sweet-potatoes.
- N. Insects injurious to the blackberry.
- O. Experiments with nitrate of soda upon tomatoes.

- P. Experiments with fertilisers upon white and sweet potatoes.
- Q. Some fungus diseases of the celery.
- R. (1) Catalogue of reports and bulletins; (2) index of reports, 1880-1897.
- XI. Ensilage.
- XII. Valuation of fertilisers.
- XIII. Land plaster; ground bone.
- XIV. Clover-seed midge.
- XVIII. Sorghum; sugar-cane.
- XIX. Green fodder corn; dried fodder corn; ensilage.
- XX. Valuation of fertilisers.
- XXI. Chemical fertilisers.
- XXII. Commercial fertilisers.
- XXXI. Nitrate of soda or Chili saltpetre.
- XXXII. Prices of nitrogen, phosphoric acid, and potash.
- XXXIII. Commercial fertiliser.
- XXXIV. Fertilisers.
- XXIX. Stations valuations and trade values for 1886.
- XLI. Extraction of sugar from sorghum at Rio Grande, Cape May County, New Jersey.
- XLII. Analyses and valuations of complete fertilisers.
- XLV. Prices of nitrogen, phosphoric acid, and potash.
- XLVI. Insect pests and the means for destroying them.
- XLVII. Analyses of samples collected by the officers.
- XLVIII. Analyses and valuations complete fertilisers.
- XLIV. Analyses and valuations of complete fertilisers, ground bone, and miscellaneous samples of other fertilising materials.
- LI. Extraction of sugar from sorghum at Rio Grande, Cape May County, and New Jersey.
52. What are the worst weeds of New Jersey.
53. Prices of nitrogen, phosphoric acid, and potash.
54. Potash as a fertiliser.
55. Entomological suggestions and inquiries.
57. Experiments with different breeds of dairy cows.
58. Analyses of incomplete fertilisers.
65. Experiments with different breeds of dairy cows.
66. Fertilising materials.
67. Note on the wheat louse.
68. Experiments with different breeds of dairy cows.
69. Analyses and valuations of incomplete fertilisers.
70. Some fungous diseases of the spinach.
71. Analyses of incomplete fertilisers, and the value of home mixtures.
73. Analyses and valuations of complete fertilisers.
74. Ground bone and miscellaneous samples.
77. Experiments with different breeds of dairy cows.
80. Experiments with fertilisers on potatoes.
81. Incomplete fertilisers and home mixtures.
83. Analyses and valuations of complete fertilisers.
84. Ground bone and miscellaneous samples.
85. Farm practice and fertilisers to control insect injury.
86. Spraying for insect and fungus pests of the orchard and vineyard.
87. Analyses of commercial seeds.
88. Analyses of home mixtures and incomplete fertilisers.
89. Analyses and valuations of complete fertilisers and ground bone.
93. Analyses and study of home-mixed fertilisers and fertilising materials.
105. Gluten feeds—their source, composition, and methods of use.
107. Some fungous diseases of beets.
108. Field experiments with fungicides (turnips, cabbages, tomatoes, potatoes, and beans).
110. The Hessian fly.
112. Field experiments with tomatoes.
116. The pernicious or San Jose scale.
117. (a) Analyses of fertiliser supplies and home mixtures.
(b) Commercial fertilisers and ground bone.
118. Suppression and prevention of tuberculosis and its relation to human consumption.
119. Apple-growing in New Jersey.
120. Field experiments, with potatoes, for 1896.
121. Harlequin-cabbage bug and melon-plant louse.
122. Cost and feeding value of dry matter, of dried corn fodder, and silage.
123. Milk—its value as food, and studies which suggest a different method of sale.
125. San Jose scale, and how it may be controlled.
126. Small fruits.
128. Peach-borer, experiments with hydraulic cement.
129. Asparagus rust; treatment and natural enemies.
130. Forage crops.
131. Feeds rich in protein. Advantage of guaranteed composition.
132. (a) Analyses and valuations of commercial fertilisers and ground bone.
(b) Analysis of fertiliser supplies and home mixtures.
133. Peach-growing in New Jersey.
134. Fermentation and germ life.
135. The poisonous plants of New Jersey.
- New Mexico (Mesilla Park).
- Bulletin No. :—
1. Announcement.
 2. „
3. A preliminary account of some insects injurious to fruits.
4. Horticultural division.
5. Notices of importance concerning fruit insects.
6. Agricultural division.
7. Scale insects in New Mexico.
9. Insecticides and their appliances.
10. Insects of 1893.
11. Notes on Canaigre.
12. The value of Rio Grande water for the purpose of irrigation.
13. New Mexico weeds.
14. Canaigre.
15. Entomological observations in 1894.
16. Russian thistle.
17. Principles of stock-feeding and some New Mexico feeding stuff.
18. Some New Mexico forage plants.
19. Report of the Entomologist—Part I.
20. Seeds.
21. Results of experiments at the San Juan sub-station.
22. Alkali in the Rio Grande and Animas Valleys.
23. Sugar-beets.
24. Life zones in New Mexico—Part I.
25. Preliminary notes on the codling-moth.
26. New Mexico sugar-beets in 1897.
27. Report on plums.
28. Life zones in New Mexico—Part II.
29. New Mexico sugar-beets in 1898.
- New York (Cornell University).
- Bulletin No. :—
1. Aims and methods of the College of Forestry.
 - V. (a) Production of lean meat in mature animals.
(b) Does heating milk affect the quality or quantity of butter.
 - VI. (a) Determination of hygroscopic water in air-dried fodders.
(b) Determination of nitrogen by the azotometric treatment of the solution from the Kjeldahl digestion.
(c) Fodders and feeding stuffs.
 - VII. Influences of certain conditions upon the sprouting of seeds.
 - IX. Study of wind-breaks in their relations to fruit-growing.
 - X. Tomatoes.
 - XXV. Sundry investigations made during the year 1890.
 29. (a) Cream-raising by dilution.
(b) Effect of delay on efficiency of creaming.
(c) Application of Dr. Babcock's centrifugal method, to the analysis of milk, skim-milk, butter-milk, and butter.
(d) Relation of fibrin to the effectual creaming of milk.
 31. Forcing of English cucumbers.
 34. Dewberries.
 37. Sundry investigations during 1891.
 42. Second report on electro-horticulture.
 43. Troubles of winter tomatoes.
 44. Pear-tree pysalla.
 46. Mulberries.
 52. Cost of milk production.
 109. Chantanqua grape belt.
 147. Fourth report upon chrysanthemums.
 148. The quince curculio.
 149. Some spraying mixtures.
 150. Tuberculosis in cattle and its control.
 151. Gravity or dilution separators.
 152. Studies in milk secretion, drawn from officially authenticated tests of Holstein-Frisian cows.
 153. Impressions of our fruit-growing industries.
 154. Tables for computing rations for farm animals.
 155. Second report on the San Jose scale.
 156. Third report on potato-culture.
 157. The grape-vine flea-beetle.
 158. An inquiry concerning the source of gas and taint producing bacteria in cheese curd.
 159. An effort to help the farmer.
 160. Hints on rural school-grounds.
 161. Annual flowers.
 162. The period of gestation in cows.
 163. Three important fungous diseases of the sugar-beet.
 164. Peach-leaf curl, and notes on the shothole of peaches and plums.
 165. Ropiness in milk and cream.
 166. Sugar-beet investigations for 1898.
 167. The construction of the stave silo.
 168. Studies and illustrations of mushrooms. II.
 169. Studies in milk secretion drawn from the records of the University herd, 1891-1898.
 170. Emergency report on tent caterpillars.
- New York (Geneva).
- Bulletin No. :—
1. Analyses of fertilisers.
 4. Oats.

5. Cooked *versus* raw food for stock.
 6. Hay *versus* damaged hay.
 7. Slug shot.
 15. Methods adopted for the systematic testing of new fruits.
 26. Fertiliser analyses.
 27. " "
 32. " "
 33. " "
 36. Small fruits.
 40. Black knot of plum and cherry.
 42. Analyses of commercial fertilisers.
 44. Strawberries.
 45. Experiments in the manufacture of cheese in.
 48. Some bean diseases.
 49. (1) Treatment of potato scab.
(2) Use of Bordeaux mixture for potato blight.
 51. Some celery diseases.
 56. Experiments in the manufacture of cheese.
 57. Feeding experiments with laying hens.
 58. Analyses of commercial fertilisers collected in Long Island in the spring of 1893.
 66. Analyses of commercial fertilisers collected in the fall of 1893.
 68. Investigation relating to the manufacture of cheese.
 70. Some reasons why the legal milk standard of New York State should be changed.
 71. Some reasons why there should be a legal standard for cheese in New York State.
 72. Preventing leaf blight of plum and cherry nursery stock.
 74. Observations on the application of fungicides and insecticides.
 79. Comparison of different breeds of dairy cattle.
 80. Alfalfa forage for milch cows.
 83. (1) Insects affecting late cabbage.
(2) Notes on the stalk-borer.
(3) Insecticides.
 84. Spraying pear and apple orchards in 1894.
 85. Analyses of commercial fertilisers collected during the fall of 1894.
 86. Treatment of common diseases and insects injurious to fruits and vegetables.
 87. The San Jose or pernicious scale.
 88. (1) Forcing lettuce in pots.
(2) Mushrooms as a greenhouse crop.
 89. Comparative profits derived from selling milk, butter, cream, and cheese.
 90. Feeding experiments with laying hens. A comparison of rations containing moistened ground grain with others containing dry whole grain.
 91. (a) A new strawberry.
(b) Notes on strawberries, blackberries, and dewberries.
 93. Comparative field test of commercial fertilisers used in raising potatoes.
 94. (a) The composition and use of fertilisers; science applied to plants.
(b) Chemistry of plants, plant-foods, and soils.
(c) Descriptions of materials used as fertilisers.
(d) Purchase and use of fertilisers.
(e) Arithmetic of fertilisers.
(f) Average composition and value of fertilisers and farm crops.
 96. Report of analyses of commercial fertilisers collected during the fall of 1895.
 97. Corn silage for milch cows.
 98. (a) Plum leaf spot.
(b) Cherry leaf spot.
(c) Fruit spot.
 99. The spinach leaf maggot or miner.
 100. Combating carnation rust.
 101. Potato diseases on Long Island in the season of 1895.
 102. Silage and silos.
 103. Provisions of the new fertiliser law of New York.
 104. Notes on the recent invasion of the army worm.
 105. Effects of drought on milk production.
 106. Feeding experiments with laying hens; the relative efficiency of whole and ground grains.
 108. The real value of "natural plant-food."
 109. Strawberries.
 110. Milk, fat, and cheese yield.
 111. Variety tests with blackberries, dewberries, and raspberries.
 112. Economy in using fertilisers for raising potatoes.
 113. The cucumber flea-beetle, as the cause of "pimply" potatoes.
 114. Gooseberries.
 115. Directors' report for 1896.
 116. Report of analyses of commercial fertilisers for the fall of 1896.
 117. Treatment of leaf spots in plum and cherry orchards in 1896.
 118. Alfalfa.
 119. The downy mildew of the cucumber. what it is and how to prevent it.
 120. A practical method of fighting cut-worms in onions.
 121. Spray pumps and spraying.
 122. Pistol-case bearer.
 123. Spraying potatoes in Long Island, in 1886.
 124. Anthracnose of the black raspberry.
 125. Forcing tomatoes; comparisons of methods of training and trenching; note on a tomato disease.
 126. Feeding experiments with chicks and capons: the relative efficiency of whole and ground grains as commonly fed.
 127. Strawberries in 1897.
 128. Variety tests with raspberries, blackberries, and dewberries.
 129. Report of analyses of commercial fertilisers for the spring of 1897.
 130. A bacterial disease of sweet corn.
 131. Results with oat smut in 1897.
 132. The source of milk fat.
 133. Spraying in 1897, to prevent gooseberry mildew.
 134. Report of analyses of commercial fertilisers for the fall of 1897.
 135. The composition and production of sugar-beets.
 136. Inspection of nurseries and treatment of infested nursery stock.
 137. Commercial fertilisers for potatoes.
 138. Experiments and observations on some diseases of plants.
 139. Plant lice: descriptions, enemies, and treatment.
 140. Wood ashes and apple scab.
 141. Digestion and feeding experiment.
 142. Directors' report for 1897.
 143. Cottonwood leaf beetle; green arsenite.
 144. A spraying mixture for cauliflower and cabbage worms.
 146. Some experiments in forcing head lettuce.
 147. Variety tests of strawberries, raspberries, and blackberries.
 149. The economy of using animal food in poultry-feeding.
 150. (a) The raspberry saw-fly.
(b) Preliminary notes on the grape-vine flea-beetle.
 151. Experiments in ringing grape-vines.
 152. Two destructive orchard insects:—
(a) Apple-tree tent caterpillar.
(b) Spraying experiments against the spring canker worm.
 153. Directors' report for 1898.
 154. Commercial fertilisers for potatoes.
 155. Sugar-beet investigations in 1898.
 156. Spraying cucumbers in the season of 1898.
 157. Self fertility of the grape.
 158. Combating the striped beetle on cucumbers.
- Ohio (Wooster).
- Bulletin No. :—
95. Seventeenth Annual Report for 1898.
 96. The army worm.
 97. Some diseases of wheat and oats.
 98. Small fruits.
 99. Sugar beet investigations in 1898.
 100. The home mixing of fertilisers.
 101. Oats.
 102. Seed and soil treatment and spray calendar.
 103. The San Jose scale problem in Ohio in 1898.
 104. Further studies upon spraying peach-trees, and upon diseases of the peach.
 105. Further studies of cucumber, melon, and tomato diseases.
 106. The Chinch bug.
 107. The Hessian fly.
 108. Bovine tuberculosis.
- Oklahoma (Stillwater)
- Bulletin No. :—
1. General information.
 2. Express and freight station, Wharton, Indian territory.
 3. Station notes; insects.
 4. Tests of varieties of oats, corn, and spring wheat.
 5. Some soil analyses.
 6. Notes of progress.
 7. Water analyses.
 8. Test of varieties of wheat.
 9. Test of varieties of vegetables.
 10. Corn.
 11. Press bulletin excerpts.
 12. Wheat.
 13. Wheat-feeding in Oklahoma.
 14. Grapes.
 15. Garden vegetables.
 16. Oats.
 17. Oklahoma weeds.
 18. Irrigation for Oklahoma.
 19. Destroying Chinch bug.
 21. Experiments in corn-culture.
 22. Field experiments with Kaffir corn.
 23. Cotton-culture in Oklahoma.
 24. Oklahoma soil studies.
 25. Loss by exposure of corn stover and tessinte.
 26. Some injurious.
 27. Glanders; Texas fever; symptomatic anthrax.

28. Experiments with wheat, 1896-97.
29. A study of waters for irrigation. The irrigation plant.
30. Oklahoma weather and crops for 1897.
31. Strawberries; grapes.
32. Practical chemistry of soils and crops.
33. Experiments with field crops, 1897.
34. The San Jose scale in Oklahoma.
35. Summary of digestion experiments with Kaffir corn.
36. Summary of experiments with corn and wheat, 1898.
37. Digestion experiments with steers.
38. Analyses of water for irrigation.
39. Texas fever.
40. Bacteriology of milk.
41. Weeds of Oklahoma.
42. Oklahoma soil studies.

Oregon (Corvallis).

Bulletin No. :—

1. History and organisation.
 2. Horticultural.

Texas (College Station).

Bulletin No. :—

47. The effect of food on economic dairy production.
 48. The grape.
 49. Part I. Corn experiments.
 50. Cotton experiments.
 51. Fertilisers and fertiliser analyses.
 52. Report on cabbage and cauliflower.
- Tenth Report of the Texas Agricultural Experiment Station for the year ending the 30th June, 1898.

Utah (Logan).

- First Annual Report of the Utah Farmers' Institutes for the year ending 30th June, 1897.
- Ditto for 1897-1898.
- Ditto for 1898-1899.

Bulletin No. :—

5. Potato trials
6. Trials of sleds and tillage tools.
8. Ensilage.
10. Experiments with strawberries, peas, and beans.
11. Blanketing horses and cattle.
12. Experiments with garden vegetables.
13. Feeding hay and grain mixed to horses.
14. Horticulture and entomology.
15. Soiling steers, or green *versus* dry food.
16. The digestibility of green and dry Timothy.
17. Feeding root crops *versus* dry food.
18. Notes on forest and fruit trees.
19. Feeding ensilage *versus* food.
21. Feeding ruminants on grain alone.
22. (a) Grass *versus* non-grass fed pigs.
- (b) Exercise *versus* non-exercise of pigs.
- (c) Value of natural waters for crop growth.
23. (a) Shelter of stock.
- (b) Exercise *versus* non-exercise of stock.
- (c) Early *versus* late irrigation.
24. Irrigation.
25. Fruit and forest, shade and ornamental trees.
27. Irrigation: early, late, and usual.
28. (a) The value of grass in the production of pork.
- (b) Exercise *versus* non exercise of pigs.
30. Narrow *versus* wide nutritive rations for horses.
32. Roots and plants of farm crops.
39. (a) Farm irrigation.
- (b) Orchard irrigation.
40. The economic production of pork.
47. The climate of Utah.
52. The economical composition of Utah soils.

53. Utah sugar-beets.
54. Cattle-feeding.
55. Orchard pests.
56. Field experiments with wheat, oats, and barley.
57. By-products of the dairy.
58. The chemical life-history of lucerne.
59. Utah sugar-beets in 1893.
60. Poultry experiments.
61. Alfalfa or lucerne.
62. Tree-planting in Utah.

Vermont (Burlington).

Bulletin No. :—

2. Analyses of fertilisers.
4. Cow-pea and seradella.
5. Fertilisers.
6. Ashes (potash, &c.).
9. Smut in oats.
10. New organisation.
11. Tent caterpillars.
12. Insecticides: seed tests and miscellaneous analyses.
13. (a) Method of cutting and planting potatoes.
(b) Fertiliser analyses.
14. Analyses of fertilisers on sale in Vermont, 1889.
15. (a) Effect of fertilisers on the composition of corn.
(b) Analysis of hay.
17. Test of dairy cows at Vermont Fair.
18. Pig-feeding.
20. Analyses of fertilisers on sale in Vermont, 1890.
21. Testing of milk, and laboratory notes.

DEPARTMENT OF AGRICULTURE CANADA (OTTAWA).

Annual Report on the Experimental Farms for the year 1898.

Report of a visit to Great Britain and the continent of Europe in the winter of 1897-1898. (By Dr. Duncan McEachern.)

Evidence of Dr. Wm. Saunders, Director of the Dominion Experimental Farms, before the Select Standing Committee on Agriculture and Colonisation, 1899.

Evidence of Dr. James Fletcher, Dominion Experimental Farms, before the Select Committee of the House of Commons on Agriculture and Colonisation, May, 1898.

Aviary.

PRESENTATIONS.

- D. A. Porter, Esq., Tamworth—1 duck-billed platypus (*Ornithorhynchus anitus*, Shaw, New South Wales).
 G. Bradshaw, Esq., 106, Carrington-road, Waverley—1 pair black fan-tail pigeons.
 Mrs. Foster, "Ravensthorpe," Stanmore-road, Stanmore—1 landrail.
 J. Horbury Hunt, Esq., Pitt and Bond Streets—1 laughing Jackass (*Dacelo gigas*, Bodd, Australia).
 Miss Senior, "Bebington" Mosman's Bay—1 pair black swans (*Chenopsis atrata*, Latham, Australia).
 T. Cummins, Esq., "Taringo," Bennett-street, Bondi—1 pair black swans.
 Miss K. Lyons, "Branksea," Johnstone-street, Balmain—1 pair black swans.
 Master Luckett Marks, 9, Bayswater-road, Darlinghurst—1 seagull.
 Mr. Phillips, s.s. "Port Moresby"—1 wheathed hornbill (*Rhytidoceros plicatus*), Forst, New Guinea).
 Mr. W. Wilkin, s.s. "Oroya"—1 hawk (caught in the Red Sea).
 F. H. Moore, Esq., Wentworth Falls—1 native porcupine (*Echidna hystrix*, Australia).
 G. A. Brodie, Esq., Fisheries Department, Sydney—1 porcupine (*Echidna hystrix*, Australia).
 Miss Agnes Cullen, 15, Stanley-street, Hyde Park—1 rosella (*Platycercus eximius*, Shaw, New South Wales).
 Master H. Maiden, Botanic Gardens—1 owl (from New Guinea).
 Mr. Wells, carpenter, s.s. "Oruba"—2 hawks (caught in the Red Sea).
 Jesse Gregson, Esq., A. A. Co., Newcastle—1 morepork (*Podargus strigoides*, Lath., Australia).

EXCHANGES.

- 1 pair silver pheasants for 1 pair paradise ducks, 1 pair piebald fan-tail pigeons, 1 domestic hen, which has assumed cock's feathers—G. Bradshaw, Esq., 106, Carrington-road, Waverley.
 2 Gouldian finches (*Poephila mirabilis*, Humb. and Jacq., var. *Gouldiana*, N. and N. W. Australia).
 1 king parrot (*Aprosmictus cyanopygius*, Viellott, E. Australia) for Maori hens received on a previous occasion—Mr. James Dall, Collingwood, New Zealand.

PURCHASES.

- 8 white Java sparrows.
 10 blue Java sparrows (*Munia orizava*, Linn., Java).
 4 red-billed Liothrix (*Liothrix lutea*, Scop., Asia).
 6 black-throated finches (*Poephila cincta*, Gould, N. E. Australia).
 12 spotted-sided finches (*Stagonopleura guttata*, Shaw, E. Australia).
 8 Gouldian finches (*Poephila mirabilis*, Humb. and Jacq., var. *Gouldiana*, N. and N. W. Australia).
 1 king lory (*Aprosmictus cyanopygius*, Viellott, E. Australia).
 3 wood hens (*Ocydromus sylvestris*, Lord Howe Island).
 2 cardinal finches (*Paroaria cucullata*, Lath., South America).
 8 chestnut-breasted finches (*Donacicola castaneothorax*, Gould, E. Australia).
 3 white-bellied bronzewing (*Lophophaps leucogaster*, Gould, Central Australia).
 4 black nun finches.
 2 silver-eye finches.
 4 pectoralis finches.

BRED BY AVIARY-KEEPER.

- 3 carrier pigeons (*Columba domestica*, Gmelin).
 3 black fan-tail pigeons.

CAUGHT BY AVIARY-KEEPER.

- 1 king lory (*Aprosmictus cyanopygius*, Viellott, E. Australia).
 1 laughing jackass (*Dacelo gigas*, Bodd, Australia).
 1 blackbird (*Merula merula*, Linn., Europe).

ESCAPED FROM CAGE.

- 2 black-throated finches (*Poephila cincta*, Gould, N. E. Australia).

PRESENTATIONS.

- To Zoological Gardens, Moore Park—1 porcupine (*Echidna hystrix*, Australia).
 The Australian Museum, College-street—1 pea-hen (dead) (*Pavo cristatus*, Linn., India).
 1 duck-billed platypus (dead) (*Ornithorhynchus anitus*, Shaw, N. S. Wales).
 1 black-fronted plover (dead) (*Sarciophorus pectoralis*, Curvier, Australia).

DEATHS.

- 2 beautiful grass finches (*Poephila mirabilis*, Humb. and Jacq., N. and N. W. Australia).
 1 cardinal finch (*Paroaria cucullata*, Lath., S. America).
 2 white-bellied bronzewings (*Lophophaps leucogaster*, Gould, N., N. W., and Central Australia).
 2 spotted-sided finches (*Stagonopleura guttata*, Shaw, E. Australia).
 1 duck-billed platypus (*Ornithorhynchus anitus*, Shaw, N. S. Wales).
 1 pea-hen (*Pavo cristatus*, Linn., India).
 1 rosella (*Platycercus eximius*, Shaw, N. S. Wales).
 1 India-red munia (*Sporophila amandara*, Linn., India).
 2 common pheasants (*Phasianus colchicus*, Linn., China).
 2 blue Java sparrows, 1 white Java sparrow (*Munia orizavora*, Linn., Java).
 1 silver pheasant (*Gemnaeus nycthemerus*, Linn., China).
 3 red-billed liothrix (*Liothrix lutea*, Scop., E. and S. E. Asia).
 1 dotterill quail (*Turnix varia*, Lath., Australia).
 1 chestnut-eared finch (*Tanopygia castanotes*, Gould, Australia). Killed by a cat.
 2 wood ducks (*Chenonata jubata*, Lath., Australia). Killed by cats.
 1 seagull.
 1 laughing jackass (*Dacelo gigas*, Bodd., Australia).
 1 dragon bird (*Pitta strepitans*, Temm., Queensland).
 3 black-throated finches (*Poephila cincta*, Gould, N. E. Australia).
 1 wood hen (*Ocydromus sylvestris*, Lord Howe Island).
 1 magpie (*Gymnorhina tibicen*, N. S. Wales).
 1 black-fronted plover (*Sarciophorus pectoralis*, Curvier, Australia).
 1 black swan (*Chenopsis atrata*, Latham, Australia).
 1 warbling grass parrakeet (*Melopsittacus undulatus*, Shaw, Australia).
 1 cut-throat finch (*Amadina fasciata*, Gmelin, S. Africa).
 1 blackbird (*Merula merula*, Linn., Europe).
 3 Pennant's parrakeets (*Platycercus elegans*, Gmelin, Queensland).
 1 silver-eye.
 1 hawk. Killed by owl.

Government Domains.

(MR. JAMES JONES, Overseer.)

Carriage Roads.—These have received constant attention in the way of metalling or asphaltting as has been found necessary.

The roads have been subjected to extra heavy traffic during the last twelve or eighteen months, on account of the extensive improvements in progress at the offices, museum, &c., at the Botanic Gardens, and the massive additions to the Art Gallery.

Long spells of drought are also detrimental to macadamised roads, causing the loosening of metal and necessitating frequent watering and other attentions.

In the Inner Domains during the year, 3,105 square yards of worn-out roadway have been broken up and renewed with 2-inch hand-broken metal, and 100 loads clay and ironstone blinding; besides various repairs to preserve a smooth surface over other portions.

Footpaths.—A number of footpaths, amounting in the aggregate to 13,580 square yards, have been tar-painted, and several repairs effected where required without actual renewal. The main central avenue, leading from St. Mary's entrance to the principal Botanic Garden gates, which last year was stone-kerbed on both sides to a width of 24 feet, has this year been considerably advanced towards completion by asphaltting two-thirds of its entire length (420 yards), but the funds at our disposal would not allow us to proceed further.

The ground on the lower side of this avenue, which was very hollow, has been levelled to an even surface by the use of hundreds of loads of soil, and grassed wherever grass would grow. Trees

Trees and Tree-planting.—The old indigenous gum-trees are dying out and have to be removed, to secure the safety of the public, and as opportunities occur, trees are planted to replace them. The avenue from St. Mary's gates to the main entrance of the Botanic Gardens had so many gaps that in places it did not deserve the name of avenue at all.

During the year thirty young trees were planted, as follows:—

1 <i>Calodendron capense</i> (Cape Chestnut).	1 <i>Pinus pinaster</i> (Cluster Pine).
1 <i>Corynocarpus laevigatus</i> (New Zealand Karaka).	1 <i>Podocarpus elata</i> (Native Plumtree).
1 <i>Dysoxylon Frasierianum</i> (Rosewood).	1 <i>Quercus Ægilops</i> (Valonia Oak).
1 <i>Eucalyptus botryoides</i> (Bastard Mahogany).	1 <i>Quercus glyoa</i> .
1 <i>Eucalyptus robusta</i> (Swamp Mahogany).	1 <i>Quercus skinneri</i> .
3 <i>Ficus rubiginosa</i> (Port Jackson Fig).	1 <i>Quercus virens</i> (Evergreen Oak).
1 <i>Ficus macrophylla</i> (Nymphæa-leaved Fig).	1 <i>Salisburia adiantifolia</i> (Maiden-hair tree).
1 <i>Flindersia Bennettiana</i> (Bulbero N.S.W.).	1 <i>Scolopia Brownii</i> .
1 <i>Grevillea Hilliana</i> (White Yiel Yiel).	1 <i>Tarrietia argyrodendron</i> (Silver Ironwood).
1 <i>Grevillea robusta</i> (Silky oak).	1 <i>Taxodium mexicanum</i> (Montezema Cypress).
2 <i>Harpephyllum caffrum</i> (Kaffir Date or Eschenhout).	2 <i>Tristania conferta</i> (Brush Box).
1 <i>Liriodendron tulipifera</i> (Tulip-tree).	1 <i>Juniperus virginiana</i> (American Red Cedar).
2 <i>Pinus insignis</i> (Californian Pine).	30

Besides various small trees and shrubs in plantations, &c.

Of the above, twenty-four have been enclosed in isolated iron hurdle tree-guards, the remainder by wooden picket squares, fences, &c. Up to three years ago, cheap tree-guards were in use in the Outer Domain, with unsatisfactory results. Nothing short of unclimbable fences, extending a safe distance beyond the browsing height of horses and cattle, will reasonably ensure safety of the trees, and even then, we have had occasional mishaps. Further tree and avenue plantings are in contemplation.

The letting of a contract for a further addition to the National Art Gallery has necessitated the removal of the following trees:—

2 <i>Pinus pinea</i> (Stone Pine).	2 <i>Ficus macrophylla</i> (Moreton Bay Fig).
1 <i>Pinus insignis</i> (Californian Pine).	2 <i>Ficus rubiginosa</i> (Port Jackson Fig).
2 <i>Syncarpia laurifolia</i> (Turpentine).	1 <i>Tristania conferta</i> (Brush Box).

Some of these trees were well worthy of preservation, and their removal was a source of much regret to me.

Acacia or Wattle plantation.—Some plants have been added to make the collection more complete; most of the species are thriving but do not require special note at present.

Rosarium.—I have nothing to say, except that the rosarium is now thoroughly established and is the admiration of many visitors.

Weather.—On 4th April, after a four months' spell of great heat and dry weather, heavy rain commenced, accompanied by a strong and boisterous wind of 70 miles an hour, which did some damage to several trees; causing a perfect litter of branches, leaves, and miscellaneous débris, all over the Domain; necessitating several days' work for all hands. The rain was, however, much required and more than neutralised the damage caused by the storm.

In June and July we had some splendid rains. From 28th May to 6th June, in ten days, no less than 10½ inches fell. 13th to 16th July were continually wet, trying the roads very much.

During the month of August, there was much more rain than was generally wanted in the Sydney district, the rainfall of the month finishing up on the 24th with a heavy downpour.

Water Supply.—A small drinking fountain, with double jets, has been erected on a much-frequented and convenient spot at the intersection of the Riley-Macquarie Streets path with the central avenue. This evidently supplies a much-felt want, being rarely out of use. I am more anxious than ever to erect additional fountains to satisfy the requirements of the public in this thirsty climate of ours.

Following is the registered water supply during the year:—

Meter No. 222.—Enclosure near Macquarie-street entrance	Gallons.
Meter No. 223.—Cattle trough, St. Mary's entrance, Domain	6,000
Meter No. 219.—Enclosure near St. Mary's entrance, Domain	20,000
Meter No. 220.—Cattle trough near cricket ground	41,000
					15,000
Total	82,000

Lighting.—I am delighted to state that the hope expressed in my last report of better lighting of the Domain has advanced a stage towards realisation. Parliament, towards the close of the year, voted £2,500 for the purpose, and the Chief Secretary (Hon. J. See) and the Minister for Works (Hon. E. W. O'Sullivan) have expressed themselves very warmly in favour of this improvement, which will render the Domain accessible to greater numbers of people than use it at present. The public press has unanimously hailed the proposal as a step in the right direction, and I trust that the work may be shortly proceeded with.

Seats.—During the year seventy-two new seats have been made and fixed in various positions, making a total of 260 permanent 6-feet seats now in the Outer Domain, and there are still certain places where more seats are desirable.

Railings and Fences.—Twenty-seven rods of new one-rail fencing have been erected along the sides and covers of roads to prevent people from walking on the grass edgings.

Public Latrines.—These useful places have been altered and greatly improved by the Government Architect's Department. The latest improvement in self-acting cisterns, automatic flushing-troughs, and extra light have been introduced. I am afraid, however, that there is still room for improvement in regard to the conduct of some of the visitors using them.

Music.—The band stand is greatly appreciated by some musicians, and by the general public; yet it has hardly been availed of as much as it might have been.

Besides the Royal Australian Artillery Band, which is expected to perform here three Wednesdays in each month, the stand is available to other bands upon application.

During the whole of 1899, there were only four Sundays, as against fourteen in 1898, on which the band stand was made use of.

The Royal Australian Artillery Band occupied the stand twenty times in the twelve months, and played eight times in the Botanic Gardens. The Domain audiences has generally ranged from 1,000 to 2,000 persons.

The Hillgrove Prize Band played on the 14th November to an appreciative audience of 2,000 people.

Bathing—Attention has been given to this important subject during the year, and the question of utilising suitable water frontages for the purpose has engaged the attention of the Land Board. The matter is still *sub judice*; but I hope that the matter will not be settled until the question of dealing with suitable Domain frontages on a comprehensive scale has been dealt with. The structure on the Woolloomooloo Bay side require remodelling, more sightly structures, and buildings more suitable for advancing the art of swimming whether as a healthful exercise or for natatorial contests on a large scale, should be erected. I desire to reiterate my protest against any floating structure in Farm Cove. Any building in this beautiful situation is a defacement of the landscape, and the existing building is especially hideous.

Towards the close of the year a proposal was submitted to the Public Works Committee to resume some of the Domain's (Woolloomooloo Bay) frontage for wharf purposes. As my report is that of 1899, I am sorry that discussion of this question must stand over.

Visitors, &c.—Sunday visitors to the Outer Domain appear to be on the increase, and consist generally of from 10,000 to 15,000 people who either remain in the Domain or pass through to the Botanic Gardens.

The public speakers confine themselves to topics that are agreeable to the greater number of their audiences. A few occasionally endeavour to create factious feeling, but on the whole the crowds are well behaved and the intervention of the bailiffs or police is very seldom necessary.

The Domain night-sleepers and habitual loafers are gradually diminishing in numbers, every discouragement being bestowed on them. I hope that, in the early future, more stringent measures will be taken to deal with those who are able-bodied and who are known to habitually refuse work.

Government House Gardens.—(Mr. James Helps, Head Gardener). The grounds have, in addition to current work, been improved as much as has been possible with the limited funds at my disposal. Although it is obvious, and to no one more than myself, that many improvements are still desirable, it is a source of satisfaction to me that on the arrival of His Excellency the Governor, Earl Beauchamp, in May, I was told by many well-informed citizens that the grounds looked better than they recollected to have seen them. I have found it necessary to cut down some old and handsome trees, but they impeded the view from Government House where distant vistas are now desired. One very fine *Magnolia grandiflora* on the lawn, 30 years old, 37 feet high, with an equal spread of branches, and measuring 9 ft. 7 in. of stem circumference near the ground, was sacrificed with this object. It was of perfect shape, and was believed to be the finest in the Colony.

A large and healthy *Pinus insignis*, 7 ft. 11 in. in circumference near the ground and 39 feet high was also removed. Others of less consequence were *Tristania conferta*, *Callistemon salignus*, *Salix babylonica*, *Erythrina indica*, two *Casuarina glauca*, *Cupressus sempervirens*, four large Camellias, which were transferred to other quarters, although some of these involved personal regret on my part, it must be said that the immediate surroundings, as well as the distant vistas of Government House, have been greatly improved thereby.

Miscellaneous.—The principal outside work supervised by the Overseer has been tree-planting at Garden Island; tree-planting on the Railway Commissioners' Sand-drift reclamation at Bondi Beach (Mr. G. R. Cowdery, Engineer for Tramways in charge); remodelling of the garden, &c., at the Royal Mint, Sydney.

Garden Palace Grounds.

(MR. J. H. CAMFIELD, Overseer.)

A comparatively large amount of new work has been accomplished during the year, which I venture to hope will, for some time to come, enhance the convenience and appearance of these grounds.

Weather and Water Supply.—The usual routine work has been performed under about average climatic conditions, so that although towards the latter part of the year the weather was such that it was necessary to frequently irrigate plant borders and shrubberies, &c., no plants of any consequence were lost, and the shrubs and trees are making growth quite up to the average.

In time of drought the lawns of these grounds unfortunately assume a very dried up and scorched appearance, but owing to the light nature and shallowness of the soil, especially in the upper part, this cannot be remedied until an unlimited supply of water is available.

The following is the registered water-supply during the year:—

Meter No. 216	gallons.
Meter No. 218 (Lawn near Governor Phillip's Statue)	733,000
						57,000
					Total	788,000

Gravelling of main road.—This road extends from the principal entrance, opposite the Governor Burke statue, and proceeds entirely round what is termed the upper part of the grounds, *i.e.*, that part upon which the Exhibition building of 1879 was erected, terminating at a spot on the fig-tree road, about 200 yards east from the principal entrance, where there is a gate opening into the Domain, but which is used only for convenience in the working of the grounds. The length of this road is rather more than one-third of a mile, or to be exact, 600 yards, while its width is 15 feet. About two-thirds of the road is already completed, and it is expected that the remaining portion will soon be done. The gravel used is of a somewhat fine character, with a large proportion of binding material in it, not of course that which would be employed on a road liable to much vehicular traffic, but on a gravelled road or pathway, upon which the greater part of the traffic is pedestrian, it is essential that as even and smooth a surface as possible be preserved to secure the comfort of visitors.

Draining of main road.—Just before work of gravelling was put in hand, the drainage of the road was reorganised and improved, *e.g.*, the existing catchment-pits have been made good, and, where necessary, in

in part adoption of a more perfect system, new ones have been built, while the necessary pipes conducting into the main drains have been laid down. The whole of the catchment-pits have been provided with uniform machine-dressed sandstone covers, which, after heavy rains or at intervals, can be lifted so as to permit the removal of débris and silt.

New Paths.—In my last report it was pointed out that in consequence of the removal of the iron railing fence between the grounds on their northern boundary with the Botanic Gardens some alterations would be necessary. In part these alterations have been effected by the laying out, ballasting, and asphaltting of two new paths, connecting with those of the two gardens. This has necessitated the removal in great part of the path in the grounds which originally ran parallel with the railing, and has considerably simplified the path system in this situation to the great convenience, daily expressed, of visitors.

Removal of Fountain.—The erection of the Governor Phillip statue rendered the small basin fountain at the principal entrance unnecessary, owing to the larger fountains of the statue—about a hundred yards away—dwarfing the smaller one. Furthermore, being so near the road, it was a standing temptation to children to throw rubbish into it. Its removal improved the appearance of the entrance, which formerly had a rather cramped appearance. The site was ballasted and gravelled in the usual manner.

Top-dressing of lawns.—In consequence of only small quantities of soil being available from town excavations in the vicinity of the grounds during the past year, not so much has been done as desired. What was obtained was utilised on the small lawn on the right hand as one enters the principal gate. As sufficient to complete this work was not obtainable, even when supplemented by our own resources, it is hoped that circumstances will permit of its being finished at an early date. On the lawn known as the Macquarie-street lawn (from the circumstance that it runs parallel with that street) about a hundred loads of top-dressing were also deposited, bringing it into a fairly finished state.

Widening of shrubbery border.—The somewhat narrow shrubbery border, situated on the north side of the broad walk about midway between the eastern entrance to the Botanic Gardens, and the large flight of stone steps, was widened about 4 feet, which will provide additional room for the cultivation of border flowering plants.

New Azalea bed.—A large piece of ground, situated between the two new paths already mentioned, has been thoroughly well trenched between 2 and 3 feet deep, and liberally supplied with a fairly good strong loam—about 150 loads having been used in the trenching process. A great deal of worthless stuff had to be carted away, while the best of it was made available for top-dressing the adjacent grass, and filling up the old path already referred to. The superficial area of the bed thus formed is about 350 square yards. It has been planted with azaleas; five dozen of the best varieties obtainable having been secured from the nurserymen, and the remainder from the Botanic Gardens' nursery. Interspersed between these a large number of good tea roses have been planted. These latter are not to be considered permanent; but until the azaleas have grown into good sized specimens, they will be afforded some amount of protection by the roses, most of which are already growing strongly, and ultimately they will be removed altogether. This bed is on a gentle slope, and from its situation can be seen for a considerable distance in both the Garden Palace Grounds and Botanic Gardens. In a season or two it should form a charming feature.

Planting of trees and shrubs.—The border recently made in the south-eastern corner of the grounds, adjoining the Outer Domain, has been planted principally with pot plants from the Botanic Gardens' nursery, and since planting they have been carefully looked after, being copiously irrigated when necessary, so that notwithstanding the almost continuous dry weather since the planting, they have all started into growth fairly well. From a circle bed in the lower part of the grounds, on the large lawn on the north side of the broad walk, an old specimen *Cordyline (Dracæna) Australis*, Hook, F., was removed and replaced with a young and vigorous specimen of *Quercus virens* Ait (Evergreen oak), which was carefully removed from another part of the grounds. It may be of interest to note that this particular plant was selected about six or seven years ago, from a batch of five or six hundred seedlings in pots, as possessing the largest foliage, the size of the leaves in that batch being very variable, and up to the present it has maintained that characteristic, the largest of its leaves being fully 5 inches long, the normal size of the leaves of this particular species being of course very much less. From another bed on the same lawn an old and worn-out double-flowering peach was also removed, and in its place a young palm (*Washingtonia filifera*, Wendl.) has been planted. It may be noted that there are several good plants of this species in these grounds and in the Botanic Gardens, the Sydney climate suiting it remarkably well. It is a native of California.

Centennial Park.

MR. WILLIAM FORSYTH, Overseer.

Tree-planting.—The labour entailed on the staff by this work last spring was considerable, as the large number of trees planted will testify. The names and numbers of the species are as follows:—

Large-leaved Tea-tree (<i>Melaleuca leucaudendron</i>)	142
Swamp Mahogany (<i>Eucalyptus robusta</i>)	52
Bastard Mahogany (<i>E. botryoides</i>)	10
Port Jackson Fig (<i>Ficus rubiginosa</i>)	20
Moreton Bay Fig (<i>F. macrophylla</i>)	4
Live Oak (<i>Quercus virens</i>)	10
<i>Pinus massoniana</i>	4
Norfolk Island Pine (<i>Araucaria excelsa</i>)	2
Total	244

A large number of the *Melaleucas*, which are moisture-loving trees, have been planted in two rows—one on either side of what is in wet weather a small watercourse—a little below the Queen-street entrance to the park, and not far from the refreshment pavilion. To the west of the *Melaleucas* a large clump of *Eucalyptus robusta* has been planted so as to contrast and enhance the effect of the avenue of *Melaleucas*, while

while a little lower down on the eastern side a small clump of *Eucalyptus botyroides* has been made. The plants of both these Eucalypts are doing splendidly, some of them being already 4 feet high. It is hoped that they will form a beautiful feature of the park, and also afford much required shade for the public.

All the other trees enumerated were planted to replace failures, and in some instances to fill up blanks caused by the plants having been stolen. In addition to those trees, forty-nine plants of a Tea-tree (*Septospermum flanescens*, Sm.), were planted in a clump or group, in a piece of swampy land close to the foot of the embankment of one of the largest dams in the park. The *Septospermums* can only attain to the height of shrubs; but planted as they are, it is hoped that they may make a show in the early spring on a portion of the park where the ground is so sour as to render tree-raising difficult.

Of the trees planted last year I have to report favourably, nearly every one being alive and growing nicely. The seedling acacias (wattles) and casuarinas (the oaks) planted in 1897 are thriving well, especially the latter. *Acacia binervata*, which I stated in my last report had not flowered, did so freely during last season. *Acacia longifolia*, however, has proved a decided failure, and will have to be replaced during the coming spring by some other species. In the park it has shown itself especially liable to insect pests, few of the naturally-growing plants of this species within the park boundaries being free from attacks.

Protection of Native Vegetation.—A sum of money has been provided on the estimate for this work, so I hope to be shortly in a position to state that this work, which I have had in view for some time, will soon be in progress.

Native Flower Plantation.—Owing to the large number of trees planted last spring, and the consequently large amount of extra labour thrown on the staff, it was found impossible to proceed with the work of preparing the native flower plantation. However, it has been decided to fence off the most easterly of the three large tongues of land jutting out into No. 5 Dam, near the centre of the park, and to lay out thereon an arrangement of flower-beds, giving, if possible, one bed for each of the larger natural orders. It is intended to give the public access to this ground in the daytime, shutting the gate leading to the beds at night.

The Weather.—The weather conditions for the past year, although better, have not by any means been favourable to plant-growth in the park. We had good rains during the winter and early spring; but during the last four months of the year not a single shower of any value has fallen. Consequently, the grass has turned very brown, and many of our plants are only kept alive by periodical waterings supplied by means of a water-cart—a laborious method, but the only one available. During the month of March we experienced a very severe storm of wind and rain. The effect on the trees in the park was disastrous; over 80 per cent. of those along the Grand Drive were more or less injured, and in some cases severely; some fine young Port Jackson Figs (*F. rubiginosa*), with beautiful umbrella-shaped heads, having some of their largest branches torn clean away, disfiguring them for years to come.

Tarring and Metalling of Roads and Paths.—The usual repairing and floating with tar of roads and paths has received due attention, and with the exception of the path which runs parallel with the Grand Drive, all the roads and paths have been so treated. In addition, the approach from the Market-street entrance to the Grand Drive has been put in first-class repair. This road is about 25 chains long and 25 feet wide, and was in very bad repair, never having been properly finished. The whole road has been covered with a coating of 2½-inch metal, and instead of the usual layer of tarred blue-metal screenings being put over the 2½-inch metal, a layer of tarred ashes has been tried. This material has hitherto not been considered of a sufficiently lasting nature to be used with success for road-making purposes; but bearing in mind the light traffic on this road, and the saving on the initial outlay, it was resolved to make the trial referred to.

The result, so far, has been satisfactory. In addition to the work of this road, 5 additional chains of the macadamised portion of the Grand Drive have been converted into an asphalt road; and I am in hopes that, during the ensuing year, we may be able to get much more of this useful work carried out, as, after a month or so of dry weather, the portion of the Drive not asphalted becomes very unpleasant to drive upon, and, indeed, must be injurious to horses from the numbers of stones which break loose from the surface.

Road between Queen and Ocean Streets.—I regret to have to state that this road is in the same impassable condition in which it was last year. It seems a pity that a road commanding some of the finest views in the park should be practically closed to the public—at all events, so far as driving is concerned. To pedestrians its condition is an eyesore. I am very anxious to see this absolutely necessary road put in proper order.

The Ride.—The weather for the last few months has been very trying to the Ride, and in many places it is being cut up into ruts and otherwise showing the effects of wear and tear. It was found necessary in the early part of the year to close, for about nine weeks, a portion of the Ride leading from Cleveland-street entrance. This part of the Ride is so situated that the Rangers frequently cannot readily see equestrians who infringe the regulation against galloping, consequently this portion gets much more cut up than the rest. Truly, some of the public are as thoughtless as school-boys, and it is a pity that they do not have more regard for their own property.

Cyclists.—It is not pleasant to have to state that only the fear of a police-court prosecution will deter some cyclists from breaking the regulations, and thereby causing danger to themselves and others. As a very general rule the members of cyclists' unions use their endeavours to see that the Park Regulations are respected.

Erection of buildings.—The cottage referred to in my last report, for the official residence of the senior Ranger, has been completed, and is now occupied by him. It is a pretty dwelling, position is an ornament to the park, and worthy of the fine situation it commands. The Government Architect is to be congratulated on his successful endeavours to design beautiful buildings for this beautiful park.

Latrines.—No progress has been made with this matter, and it is hoped the subject, which is of considerable importance, will not be allowed to drop.

Statuary, &c.—I very much regret to report that considerable damage has been done to some of the statues in the park during the past year. The vandalism consisted in the breaking-off of arms, fingers, and other pieces of terra cotta statues, apparently by stones being thrown at them. In some cases the pieces were found lying where they had fallen. The statues were not the only things that suffered from vandalism,

vandalism, many of the seats and iron tree-guards having been torn up and thrown about in the most wanton manner. One of the beautiful vases which are situated at the end of the piece of straight footpath leading from Cleveland-street entrance was knocked down by a vehicle and smashed altogether past repair, I am afraid. Only last year I congratulated myself on the freedom from vandalism amongst visitors to the park; if I can again express such a sentiment next year I shall be very glad.

Plants Stolen.—For a few years past the Centennial Park has been the victim of some chrysanthemum enthusiasts who several times a year help themselves to our plants, taking the entire plants, labels and all. It seems almost impossible in the remote plantations of the park to catch the offenders in the act, and that is about the only way to put an end to the depredations. The matter is the cause of no little chagrin, as the chrysanthemums are depended on to relieve the rather dull appearance the plantations assume towards the end of the autumn. If well-disposed visitors will help our rangers to detect these mean thieves, I do not doubt that we shall make a capture at an early date, when I shall press for the infliction of imprisonment without the option of a fine.

Water Fowl.—A person was convicted of stealing water fowl during the year, and a heavy penalty inflicted.

State Nursery, Campbelltown.

(Mr. J. McEWEN, Superintendent.)

Distribution of Plants.—The plants raised and sent to the Botanic Gardens for planting out and distribution during the year, numbered 90,132 trees, shrubs, bulbs, and tubers, &c. Upwards of 25,000 of these were in pots, all hardy and fit to plant out in the coldest parts of the Colony.

Preparation of Plants for Season of 1900.—The stock of plants being prepared for distribution next winter is very large and of fine quality, thanks to our permanent water supply, which is of very great advantage to our work, besides enabling us to save much labour.

Seeds and Plants received.—Seeds and plants have been received during the year from fifteen contributors, besides which a large quantity was collected by the Superintendent in the Moss Vale, Goulburn, and Queanbeyan districts.

The Weather.—The year again opened in the midst of a rather severe drought, although the temperature was not so high as at the same period of the preceding year. Good rains fell during the months of March and April, and these rains greatly benefited the plants in the open ground, and left the ground in fine order for the winter work of lifting stock, planting cuttings, transplanting seedlings, &c. This work progressed most favourably during the months of May, June, July, and August, and the amount of stock in preparation for next season's distribution is very large, and likely to meet more than all demands.

Spring Frost.—On the night of the 30th September, there occurred very much the heaviest frost the Superintendent has known, so late in the season, at Campbelltown. The thermometer registered 13 degrees, and the following night 8 degrees. Much damage was done to young growth and seedling plants, but no permanent injury resulted except the loss of tender seedlings.

Water Supply.—Following is the registered water supply during the year:—Meter No. 245, 308,000 gallons.

Improvements.—During the winter months a small arboretum (about 1 acre) was planted, as a test of the suitability for timber and other purposes of certain species and varieties of trees. Over seventy trees were planted, comprising *Juglans Carya*, *Acer*, *Fagus*, *Ulmus*, *Fraxinus*, *Tilia*, *Platanus*, &c. To do this work thoroughly a large block of additional land is required to test exotic timber trees in large plantations.

Phylloxera-resistant Vine Stocks.—The Department of Agriculture, through its viticultural expert (Signor M. Blunno), having requested me to undertake the cultivation of certain vine-cuttings, there were received at the nursery, at the end of April, 50,000 phylloxera-resistant cuttings, in eight varieties, imported from France. These were planted in ground prepared for the purpose, at the expense of the Department of Agriculture, but solely under the supervision of the Superintendent. Much success has attended the propagation of these vines, for, in spite of the severe frost already alluded to, there are, approximately, 40,000 rooted plants growing strongly, and at least 100,000 cuttings may be prepared from next winter.

*The Valonia Oak (*Quercus Ægilops*).*—During the winter eighteen Valonia oak plants were planted in specially-prepared ground. They are now well established, but are making slow growth so far. I drew special attention during the year to the value of this tree for tanning and also for shade purposes; and acorns, chiefly from G. Cunnack, of Castlemaine, Victoria, were distributed to approved applicants.

Hill View, Sutton Forest.

Mr. R. A. PROUDFOOT, Gardener-in-charge.

This, the country residence of His Excellency the Governor, and "Wotonga," or Admiralty House (Mr. Weston, Gardener-in-charge), the town residence of His Excellency the Naval Commander-in-Chief of the Australian Station, are private houses, and cannot be discussed in detail. Endeavour has been made to expend the money available for their up-keep to the very best advantage.

Maitland Gaol Reserves.

At the end of the financial year (30th June) the care of these reserves was handed over to the Department of Justice, and I was relieved from responsibility in regard to them.

NEW SOUTH WALES.

GOVERNMENT LABOUR BUREAU.

(REPORT OF, FOR THE YEAR ENDING 30TH JUNE, 1900.)

Printed under No. 12 Report from Printing Committee, 20 September, 1900.

The Superintendent, Government Labour Bureau, Sydney, to the Honorable
the Minister for Works.

Sir,

Department of Labour and Industry,
Government Labour Bureau, Sydney, 22 August, 1900.

I have the honor to submit for your information the eighth Annual Report of the Government Labour Bureau for the year ended 30th June, 1900.

The Drought.

The first part of the year was marked by a continuance of the drought from which the Colony has been suffering for the last four or five years. The aspect of everything was gloomy and disheartening. Pastoralists, farmers, dairymen, and others in all parts of the Colony, who had suffered such serious losses (amounting to several millions of pounds) in stock, crops, and wool, were almost despairing for the future. The great mining industry throughout the Colony also, naturally felt the want of rain. Through the scarcity of water several mines were compelled to stop work. Enterprise and industry was dull, while labour and employment generally became scarce and irregular in the country districts. Large numbers of men tramped to Sydney in the hope of getting something to do on the Government works.

Towards the end of the year, however, the long-expected and much-desired rain began to fall for several months. In the beginning of 1900 we experienced a most copious and beneficent fall, spreading all over the Colony (excepting in the western districts, where further rains are still much needed), cheering the hearts and brightening the hopes of all those connected with the great producing interests of the Colony.

The prospects of the coming season promise to be, I am pleased to say, the best we have had for many years, although it is questionable if the area under cultivation is so large as that for the preceding year, which may be attributed to the failure and discouragement occasioned by the late drought. Grass has been plentiful during the winter months, which will naturally have an improving effect on the wool clip and stock, although the numbers of the latter have been much reduced through the cause already mentioned. The aspect of the approaching season is full of hope for a favourable and bountiful harvest. If our anticipations are realised, it will largely benefit labour and industry in the country districts, providing increased employment, and thus relieve the metropolis of a considerable number of the unemployed, who always flock to Sydney when work is scarce in the country.

The Plague.

In February last, Sydney received a very severe attack of bubonic plague, which continued up to June, resulting in the sacrifice of many valuable lives. Thanks to the promptness and energy of the Government, in grappling with the work of cleansing those portions of the city most affected, the epidemic was subdued, and it is hoped eradicated, and the Colony saved from the terrible desolation and death which have so generally characterised its existence in those Eastern countries from which this fearful disease was conveyed. It is hoped the sad lessons of the plague will not be forgotten by the citizens, but will serve as a warning to individuals of the urgent necessity for personal and domestic cleanliness in the future.

The large amount of labour occasioned by the cleansing operations, and the liberal wages paid, had the effect of bringing numbers of men from all parts of the country to Sydney, as well as from the other Colonies. In addition to these, all those living within the quarantined areas obtained employment on this Government work for the first time. This considerably increased the ranks of the unemployed attending the Labour Bureau for other Government work. However much we regret the necessity of these operations, it must be admitted that in hundreds of cases it enabled deserving men to tide over the winter months, and

provide for their families at a time when other employment was difficult to obtain. On the other hand, large numbers of men connected with the shipping trade were thrown out of work. The plague scare rapidly spread, dislocating and disorganising all trade and commerce, labour and industry feeling it most. Traffic from the interior and from the other colonies was almost suspended, occasioning great loss to business men and the Railway Commissioners. But with the disappearance of the plague; the break-up of the drought; the prospect of a prolific season; the resumption and construction of public works; the resumption and the laying out anew of that portion of the city adjoining the wharves; and the present vigorous policy of proceeding with such reproductive works as railways, tramways, &c., there is every assurance of increased employment for all, which should materially reduce the number of unemployed in and around Sydney.

Federation.

I may be permitted to add that Federation—happily now being an accomplished fact—will prove a strong factor in the settlement of the unemployed difficulty which has been for some years, and is at present, so much in evidence in this and the other colonies of Australasia.

It will remove all the jealousies of provincialism, and create an Australian nation with one destiny.

It will break down and for ever remove the barriers that now exist, impeding the trade of one Colony with another.

It will multiply and broaden the avenues of employment to the industrial classes.

It will create additional markets for the producers and facilitate their using them.

It will enormously increase the number of producers within the Commonwealth, as well as add considerably to the consumers, both in and outside the continent.

It will give a most powerful impetus to the further development of the immense national resources with which these colonies are blessed, equal, if not superior, to those in any other part of the world.

It will create confidence and give security to capitalists in all the various channels of trade and commerce.

It will induce the investment of English capital to a very large extent—the expenditure of which will provide increased employment, and benefit all classes of the community.

It will be the one great lever that will lift New South Wales far above any of the other colonies by reason of its greater and richer mineral and other resources, making it the great manufacturing centre of the group, because of its boundless deposits of coal and iron, the two minerals which, above all others, if utilised, go to build up a nation's greatness.

With all these; its immense areas of rich agricultural and pastoral lands; its splendid coast line, with its numerous excellent harbours for import and export; and all its other advantages of climate, &c., Federation will most assuredly make New South Wales the premier State, with Sydney as the commercial capital of United Australia.

Irrigation and Water Conservation.

The work of irrigation, above all others, is the greatest and most important in connection with the western districts of the colony, where there are millions of acres of rich fertile lands which would grow sufficient cereals, vegetables, and fruit to supply the whole Colony, and leave a large surplus for export, if it had plenty of water, which it can only have by irrigation. This important question has for some time agitated the public mind. Experiments have not been wanting to show the beneficial effects of this system if carried out on a larger and more complete scale to that now in existence.

Where irrigation from rivers is impracticable, or is confined to limited artesian boring, water conservation (which is, I understand, about to be commenced) might prove of immense value to the Colony if the surplus flood waters of our rivers and creeks could be conserved and secured for future use during periods of drought, &c. These flood-waters instead of being, as at present, elements of destruction would then become the saviour of millions of stock and crops, and bring into use and settlement immense areas of rich lands in the western districts. The work would be reproductive and of national advantage; would provide profitable employment for a large number of men; and could also, probably, be made a means of permanent settlement to many of that section of the unemployed, suitable for the work, by giving them plots of land on easy terms, with some assistance to be repaid when they had made their homes. Industrious, persevering men, with such an opportunity, may be able to succeed in life, and thus relieve the Government of the necessity for providing relief works. The matter of assisted settlement, in my opinion, should always be kept in view and carried out, wherever practicable, in connection with the work of water conservation, as one of the most suitable means of dealing with the unemployed difficulty.

The question of locking our principal rivers by weirs or locks is also an important one. The whole question will, doubtless, receive full consideration and attention from the Commission recently appointed for the purpose. Should the Government decide to carry out any part of these works it will absorb a large number of the unemployed in an undertaking which, I have little doubt, will ultimately prove to be reproductive.

Registrations.

The total number registered for the year, at the Head Office, was 5,487, or an increase of 1,644 to that for the previous year. The single men numbered 3,062, and married men 2,425, representing 6,456 children, of whom 4,527 were depending on the parents, and 1,928 self-supporting. The country branches registered 516, making a grand total of registrations for the year 6,003.

It will be seen that the number of single men greatly exceed the married. This is neither a healthy nor satisfactory state of things, and in the interests of the men themselves should be discouraged. In the case of married men only, with families depending on them, should it be reasonable to expect the Government to provide special relief works to relieve distress existing among them through want of work. But in the case of strong able-bodied single men this should not apply. All such, willing to work, should be able to find employment in a country like this, where there exists such a large variety of ordinary general works going on constantly throughout the Colony. The single man who cannot make a living at these is not deserving of much consideration.

City life is, no doubt, a great attraction for them, and employment even on temporary relief works tends only to encourage, and instead of proving a benefit to them will, I fear, only tend to undermine their manhood and sap their independence, energy, and industry, which is neither beneficial to the State nor to the encouragement of a robust manly citizenship, but which will tend rather to accentuate than solve the unemployed difficulty.

Assisted and sent to work.

The number of men assisted and sent to work for the year from the Head Office was 6,495, or 733 less than that for the preceding year. Those sent from our branches numbered 319, making a grand total of 6,814. The distribution of the 6,495 sent from the Head Office will be illustrated by the following :—

Work.	City and Suburbs.	Country.	Total.
	No.	No.	No.
Government	2,823	1,481	4,304
Private	403	1,788	2,191
Totals.....	3,226	3,269	6,495

The 4,304 sent to Government works were employed at quarrying, drainage, scrub-clearing, forest-thinning, quarantine cleansing, painting, road, tunnel, and reclamation work, and railway construction and deviation.

The following will show the number registered and sent to work each year from the Head Office and branches since the inauguration of the Department, 17th February, 1892 :—

Year.	Head Office.		Branches.	
	Registered.	Sent to work.	Registered.	Sent to work.
	No.	No.	No.	No.
1892-1893	18,600	8,154
1893-1894	12,145	10,349
1894-1895	13,575	16,380
1895-1896	14,062	21,576
Intermediate period.....	3,283	5,327	1,104	143
1896-1897	6,427	13,718	1,253	534
1897-1898	4,167	7,817	715	288
1898-1899	3,843	7,228	686	224
1899-1900	5,487	6,495	516	319
Totals.....	81,589	96,014	4,274	1,508

The intermediate period referred to was between 18th February and 30th June, 1896. In making our year assimilate with the financial year, the above period of four months was occasioned. The country branches were opened in March, 1896.

One would imagine, from the constant agitations and appeals to the Government for work, that when employment was provided for them at the liberal rate of 7s. per day, that those sent would be only too glad of the opportunity to work, and remain at it till completed. With a certain proportion this is, unfortunately, not the case, especially when the work is in the country. At least, from 20 per cent. to 25 per cent. of the men sent out abandoned their work of their own accord. Others left through sickness, family troubles, or were dismissed for various causes. They come back direct to Sydney, and thus the ranks of the unemployed are being continually renewed by the same men. There is no valid reason why men sent to work in the country should not remain at it, as every provision is now being made for the convenience of the men by the Government in the supply of tents and blankets, and facilities are afforded to enable them to obtain food, and for their families in Sydney to draw a fair proportion of their husband's earnings. Under these most favourable circumstances, those who decline to remain at work when provided for them should be debarred from participating in other public works, and thus afford an opportunity to others more deserving.

Fossicking and Mining.

The fossicking industry has been in existence since August, 1893, since when no less than 27,322 have been sent by the Labour Bureau to different parts of the Colony, some to work on old gold-fields, and some to prospect and fossick for new. It is a healthy, independent occupation, and many of those sent have been very successful. Others have made a comfortable living. Several have sent for their families, and have settled down in the country, combining fossicking with the cultivation of a small block of land, raising poultry, &c. During the last three years, the drought has naturally interfered with this industry. Now that more water is available, I think an extension of the system might be made with advantage on behalf of the unemployed. Instead of sending one man at a time, parties of suitable reliable men should be assisted with tents, tools, and rations, and despatched to suitable places, if possible, under the supervision of the local mining warden, who would hold them responsible for all advances made to them and the refund of cost of same. The adoption of some such system would be of great advantage to unfortunate old miners and others among the unemployed. Care should be exercised as to the general fitness of all parties receiving such assistance, which should be granted only upon the advice and approval of the Chief Inspector

Inspector

Inspector of Mines, who has an extended knowledge of the mining districts, and could recommend the men to fields where they are most likely to succeed. Under the existing system, Mr. Snee, the Chief Inspector, recommends all fossickers for passes, miner's rights, and rations.

I regret to say, that the assistance hitherto rendered to fossickers by the Government has, in some cases, been abused by a number of undeserving men. In the event of payment being due for one or two passes by any man, I would suggest that payment of same be made a condition precedent to the issue of further assistance.

The following table will show the number sent fossicking each year since 1893:—

1893-1894	4,516
1894-1895	10,718
1895-1896	7,093
Intermediate period	1,733
1896-1897	1,647
1897-1898	937
1898-1899	360
1899-1900	318
Total	27,322

It is worthy of note that since the inauguration of fossicking there has been a steady increase in the amount and value of gold won in the Colony, as the following table amply testifies. I think the system is entitled to some credit for the large addition to the wealth of the Colony:—

Year.	Oz.	Value.
1891	153,336	£558,305 12 3
1892	156,870	569,177 17 4
1893	179,288	651,285 15 8
1894	324,787	1,156,717 7 7
1895	360,165	1,315,929 0 0
Intermediate period	111,024	402,590 0 0
1896-1897	275,285	1,014,077 2 3
1897-1898	318,692	1,178,492 0 0
1898-1899	371,584	1,308,219 0 0
1899-1900	472,322	1,675,696 0 0

There are still large areas of unexplored gold-bearing land in the Colony which the latest inventions for the treatment of ore might profitably open up. River dredging is being largely developed, and a considerable number of men are already being employed thereat. From current reports and the amount of capital invested, there is every prospect of its becoming a large industry.

Coal-mining throughout the Colony has seldom, if ever, been so active as at present. Almost the whole of the collieries are working full time. The demand largely exceeds the supply, especially in the Newcastle district, where the harbour is full of ships awaiting their turn to be supplied. It has been a great relief to the general community of that district that, through the successful friendly intervention of the Honorable the Premier, the recent probable strike has been averted. The promised increased selling price of coal by the mine-owners, which carries with it an increase in the hewing rate to the men, is satisfactory, not only to those immediately concerned, but to the Colony generally.

The Building Trade.

The building trade has for some time been more active and flourishing than it has for many years. The variety of labour required in this particular trade affects the labour market, perhaps, more than any other calling, and it is always a true index to the state of labour and industry generally.

Wages in the building trade have, on the whole, increased. There was recently a brief strike among the carpenters and joiners, which I understand resulted in their favour, for an increase to 10s. per day. Carpenters have been sent from the Bureau at 11s. per day, which is, I think, over the union rate, notwithstanding all the prating and talk on the part of some as to the Bureau reducing wages and being a white-slave market.

There is reliable evidence of increasing prosperity in the number of new buildings which have been and are being erected for business premises and private dwellings. People invest in this line only when they see a prospect of a good return for their outlay of capital. Real estate and property generally (which has been dead and a drag on the market for so many years), are now becoming saleable, and there is reliable evidence of improvement in the sales and values of freehold property, particularly in the city and suburbs. Capitalists and financial institutions have immense sums of money available, and are waiting and alert for profitable investment when the opportunity offers. The federation of the Australian Colonies will do much to increase and insure large investments in this Colony, which will provide increased employment to the great body of workers.

Wages.

The action of the Honorable the Minister for Works in fixing the minimum rate of wages of all manual general labourers at 7s. per day, and that of all mechanics at union rates, on Government works, has had the effect of bringing about a slight increase of wages in most, if not every, branch of employment throughout the Colony. There is still room for further increases, especially in the cases of clerical and shop hands. A fair and liberal wage for duties performed creates harmony and satisfaction between employer and employee, and the former never loses by a liberal wage to an honest and faithful servant. The reverse of this by either is the cause of strikes, which should be avoided by every possible means, because of the terrible losses and creation of bad feeling resulting therefrom. It is sincerely to be hoped that the Arbitration and Conciliation Bill will prove efficacious in averting strikes and settling disputes on a just basis for both sides.

The

The Bureau does not interfere with the rate of wages ; its duty ends with bringing employers and applicants together. It does not associate itself, in any way, with fixing the terms, such as wages, hours, &c., of any contract of hiring, or other agreement between the parties. It has, however, at times obtained a higher rate of wages to that offered, by pointing out to an employer that he could not expect a good man at his rate. The Bureau is often blamed and cited by those who do not trouble to ascertain the facts of the case, as an agency for the reduction of wages, &c. This representation I most emphatically deny, and unhesitatingly say, that the average rate of wages offered by employers to men engaged through the Bureau is equal, if not greater, than that paid by any firm or industry in the Colony. Of course, among the number registered at the Bureau (viz., 81,589) there are numbers of old and feeble men. The remuneration in their cases is not large ; but, small as it is, it enables them to live as citizens, free from the taint of asylum pauperism, and independent of the State.

Casual Labour Farm.

The following report from Mr. A Hutchinson, Manager of the above, gives an outline of the operations of the Farm for the year :—

Report from Manager of Casual Labour Farm to Mr. Creer, Superintendent, Labour Bureau, from 1st July, 1899, to 30th June, 1900.

Sir,

I have the honour to report as under :—

Numbers.—On June 30th, 1900, we had on farm, casuals, 28 ; passed through our book during the year, 135.

Time.—Average time spent on the farm, 2½ months.

Money Payments.—Average money payments, after deducting for food and shelter, 3s. 6d.

Cost of Food.—Food cost per week per man, without vegetables, 3s. 3d.; with vegetables, 4s. 4d. NOTE.—We grow all vegetables, only this year, on account of drought, we are short of potatoes. Vegetables are computed at wholesale prices, as shown by daily press, always rather under than over.

Class of Men.—Men who have lost their wives, or living apart from them, old soldiers, sailors, cooks, drapers, compositors, some fairly good bushmen. We have those that will do a fair day's work ; all think they earn what they get. Many would do very little, if not kept up to it ; others are no trouble, they know their work and do it.

General Conduct.—May be said to be good. They erect a hut—boss failing to do so. I appoint one ; he has to see hut regulations observed. There are always some respectable men amongst them, which tends to keep order should any be disposed to be rowdy. They know also that the slightest misbehaviour may lead to their dismissal. I can say, as a matter of fact, I have no trouble.

General Effect of Work.—In many—most cases—men come here run down in body, and sometimes almost naked ; many of them are very helpless. I can, however, say with confidence, all leave here improved in every way ; good men often leave reluctantly.

Maximum Number.—The maximum number was fixed during the year at 30, on account of the likelihood of the farm being given up ; hence field operations have been all but suspended, and attention confined largely to wood-cutting.

Orchard.—For the same reason, nothing has been done to the orchard for some months. Instructions have just been received that it is to be cleaned and pruned, which I will very gladly attend to as soon as weather will allow. I have always been sorry to look at it going behind.

Result of Labour.—During the year about 20 acres were cleared.

Fencing.—Over 2 miles put up ; this is a real good improvement ; I think more should be done. We took for agistment in the year, £28 ; at present we have 24s. a week for cattle.

Another large pig-run fenced, and 16 large new styes ; I can run 150 to 200 pigs ; raising their food gives employment.

Cut and sent to market 1,718 tons of firewood, and secured good prices. Hope to double this next year.

Grew 30 tons of wheaten and oaten hay. Thrashed some of the wheat for pigs and seed ; put in 4 acres with it.

Have hay for horses on hand for twelve months yet.

Grew 200 bushels of corn without manure ; had I had rain and manure, would have been 400. Have enough for horses and pigs.

Potatoes.—Grew 6 tons ; rain and manure would have given over 12.

Fruit.—Most of it was sent to Shaftesbury and given to pigs ; prices very low in Sydney.

Vegetables for kitchen, £97.

Grew for pigs—turnips, mangolds, pumpkins, &c., &c., 20 tons. Some acres now growing.

Sold 20 pigs, have 84 on hand ; more to follow. Hope to sell 100 at Christmas.

Sold top wood to £25 18s.

Miscellaneous, £15 18s. 2d. Gravel and timber for culverts, hitherto taken as a right, now I make road contractors pay.

Yours obediently,

A. HUTCHINSON.

The men are sent to the Farm from the Bureau, and consists of those who are mostly unfitted for heavy manual labour. They are well fed and housed, and receive from 2s. to 4s. per week. Three months is their limit on the Farm, and they cannot return unless they have been at least two months away from it. The change and improvement in the physical appearance of the men at the expiration of their period is conspicuous. Most who have been there desire to return, if nothing better offers. Several of those on the Farm have been selected and sent to scrub-clearing and other work, making a fresh start in life.

I understand that the Commissioners for Labour are erecting shelter-sheds on the Bunnerong Road, the object being, so far as I can judge from the Press, somewhat similar to that of the Casual Labour Farm. Time and experience will alone prove its value.

Relief.

The following is a statement of relief issued during the year, which is small in comparison with the past :—

	£	s.	d.
Special rations...	1,167	9	7
Free rations ...	49	17	4
Bogan rations ...	32	12	8
Forest and railway rations	13	6	9
Special mining rations...	29	2	0
Christmas gift coupons	131	1	6

£1,423 9 10

The Bogan, forest, and railway rations were supplied to families in Sydney of men on these different works till they were in a position to remit money to their homes. The cost remained a charge against them, and was refunded out of their earnings. Special mining rations were issued to men proceeding fossicking, and the cost thereof was met by the Mines Department.

At

At the approach of Christmas it has become somewhat of a practice for the unemployed to look to the Government to make some special provision to assist them over the festive season. The painting of rails enclosing all Government buildings and parks was resorted to the previous year. Last Christmas the Honorable the Premier decided to present all unemployed applying and registered at the Bureau with coupons authorising any storekeeper in the metropolitan area to provide goods and groceries to the following values :—

Married men	2s. 6d.
Single men	1s. 6d.
Coupons were issued as follows :—							£ s. d.
Married men	815	at 2s. 6d. =	101	17 6
Single men	428	at 1s. 6d. =	32	2 0
							£133 19 6

These coupons were then presented at this office for payment, to the extent of £131 1s. 6d.—the orders for the balance having been probably lost. In many cases it was ascertained that the married men sold their coupons for 2s. and 2s. 3d., and the single men for 1s. and 1s. 3d. On the whole, however, there can be no doubt the Premier's gift proved most acceptable to and was thoroughly appreciated by many households.

In addition to the above, through the kindness of the Secretary of the Y.M.C.A., breakfast tickets for Christmas Day were issued to 400 men.

Registry Offices.

I understand the Minister for Labour and Industry has prepared a Bill to license registry offices. When passed into law it should be of great value in protecting members of the working-classes and the unemployed generally from being victimised, as they frequently are, by these offices. My experience of them during the existence of the Bureau has not been favourable. A great many abuses exist in connection with them which might—and no doubt will be—remedied if the Bill referred to were passed. Several of these offices have been prosecuted for obtaining money under false pretences.

In cases which have come before my notice from time to time, two, three, and four applicants have paid fees for some situation, which in the end proved to be a bogus one. Others have been sent to places to be told they were not wanted. In some cases it has been found that the employer had forwarded the fare to a registry office keeper for the despatch of an employee, and instead of using it to pay the man's fare, he has held the money and endeavoured to obtain a railway fare through the Bureau; but by wiring to the employer from this office the fraud has been detected, the pass declined, and the registry office debarred from all future Bureau assistance.

Refunds.

The amount of refunds for rail and steamer fares, miners' rights, rations, and miscellaneous items, received at the Bureau and its branches for the year came to £2,605 9s. For rail and steamer passes alone £2,540 16s. 5d. were refunded, which equals 66 per cent. of the cost represented. The grand total of all refunds to end of June came to £23,203 8s. 6d. There is still, however, a considerable amount due to the Department. A strict system of monthly circulars is in force to those indebted to the Bureau.

In the collection of fares I am much indebted to the assistance (in extreme cases) of the police, who, through the courtesy of the Inspector-General, Mr. Fosbery, have collected amounts in remote districts, which would otherwise have been lost.

In the summary of my report will be found a few remarks on the refunds collected exceeding the actual cost of working the Bureau.

Number of Unemployed.

The number of unemployed in the city and suburbs within a radius of 20 miles is about 3,000. It is impossible to give the exact number at any given time, owing to so much intermittent work. I had a fairly good opportunity of forming an estimate during the month of July, on the occasion of a ballot for 500 men, which was advertised in the press, and well notified throughout the district. On that occasion from 2,000 to 2,500 were present, and 1,674 were selected as eligible for the ballot. Thus, making an allowance for any who may not have seen the notice or were unable to attend, I do not think I am far wrong in approximating the number at about 3,000.

Notwithstanding the many we have sent to work, and the large number of young men we have sent to the wars in South Africa and China, there does not appear to be any appreciable difference in the number of unemployed.

The plague scare and cleansing operations was responsible for a very large addition to their ranks. The liberal wage, and easy class of work, brought men from all parts of the country, and from the other colonies, who, having tasted Government work, were all anxiously wanting and agitating for more. The drought in the country made work scarce and ill-paid, and it is not to be wondered at that men flocked to Sydney, where work was being carried out for the purpose of meeting the depression. The Government has provided such a variety of works recently that in a short while there should be few unemployed if those sent to work remain at it.

The average daily attendance at the Bureau was from 300 to 400; but on occasions when ballots were being conducted it rose to from 1,000 to 2,000.

Unemployed agitation is fast becoming a profession. We now have them forming themselves into leagues, unions, &c., with constitutions and executive officers. Contributions of 1d. and 2d. per week are made for the purpose of paying these officers to bring pressure to bear on the Government to provide work. Meetings are being continually held at the Queen's Statue, and rooms hired for discussion. The chief object is employment as near Sydney as possible, at 7s. per day, whether the men are suitable for the work or not, and a preference for those belonging and contributing to the league or union.

Country

Country Branches.

The reports of the agents speak favourably of the approaching season. All indicate that the late rains are likely to produce one of the best seasons the Colony has experienced for many years. This is sure to give heart and encouragement to farmers, pastoralists, and miners, with every prospect for increased employment all over the Colony. There does not appear to be many unemployed in the country at the present time, indeed, in some parts labour is said to be scarce. The least encouragement there is given for labour in the country to come to Sydney the better for the Colony as a whole.

Many of the reports furnish valuable information as to labour and industry in the country. For some reason the branches have not to any large extent been availed of by either employers or employees. Only 516 were registered, and 319 sent to work at the whole of the forty-two branches.

The largest number was registered at Newcastle. At several of the branches no business was transacted.

I have to thank the country agents for their monthly and annual reports, which have enabled me to regularly report to the Minister the state of labour and industry throughout the Colony.

Summary.

Perhaps no institution under the Government has received so much criticism as the Labour Bureau. Many have been favourable, while others severely adverse. The press has always been fair, because it had the justice to ascertain the facts first. Others have been adverse in their criticism without having troubled to inquire. I care little for criticism, so long as it is fair and manly. The best and only effective answer that can be given to all that has been said against the Bureau is the work of the Institution. It has now been in existence for eight and a half years, during which time 81,589 persons have been registered, and no less than 96,044 sent and assisted to employment. The excess in the number sent out to that registered is because some have received work more than once. The whole of this work of assisting men to employment in the country has been done without ls. cost to the State. The railways would have run just the same if no unemployed had been sent, while the Department has been the means of causing to be repaid to the Treasury, in the shape of refunds of fares, &c., the sum of £23,203 8s. 6d., which is £10,800 in excess of the actual cost of working the Department. I do not think the most unfair critic will say this is a bad record. Someone, who knows better, has said quite recently that the Bureau has got into disfavour with the men seeking work. The latest attendance on the occasion of a ballot show quite the reverse. We have had as many as 2,500 here, which is larger than at any previous time.

What is wanted most in these colonies is the promotion and establishment of large manufacturing industries, where the youth of Australia could be trained in all the art and science of manufacture. Thousands of youths annually leaving our public schools and entering the paths of manhood, and seeking some calling whereat to make a living, have at present little open to them except the professions, which are not within the reach of thousands, or clerical labour, which is already overdone. Manual labour is open only to the physically strong, and in this the supply far exceeds the demand. If we had large manufacturing industries, our young men could be trained and employed, and I have no doubt thousands of them would make their mark in the multiplicity of avenues these industries would open up.

The Australian native is not wanting in brain power or ambition. This has already been shown by the superiority he has established in not only the science of sports and athletics, in courage and endurance, but also in learning and culture. And if in these, why not in the arts of manufacture.

It is to be hoped that the policy under Federation will bring into existence a large field for the employment, opportunity, development, and expansion of the best talents of our brightest native Australians.

There is another class to which I desire again briefly to refer to. I allude to the number, daily increasing, of bootless ragged boys and girls, many of them mere children, who are roaming our public streets by day and up to all hours of the night, selling papers, matches, boot-laces, studs, and other trifling articles, chiefly to attract the sympathy of passers by. Many of these children are exceedingly smart, bright, and intelligent, and exhibit more tact and industry in their own way than many of our adults. But if they are encouraged to pursue this dangerous course of life, it can only lead to a worthless, and, perhaps, degrading future, and should, if possible, be prevented before it is too late. There is a wide field for philanthropists in taking up this work, in which I have no doubt the Government would assist. If these children could by any lawful means be trained and given the opportunity of earning in a different way the few coppers they do at present, and so prevent them from pursuing a path so dangerous to their future welfare, it would be well for the Colony. There are far too many already about the city, and it will result in their preferring to make a living, however poor, by idleness or any means other than honest labour.

The Labour Commission recently appointed would here find a field worthy of their best attention and consideration.

I have the honor to be,

Sir,

Your obedient servant,

JOSEPH CREER,
Superintendent.

The Labour Agent, Armidale, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Department of Labour and Industry, Armidale, 10 July, 1900.

I have the honor to submit herewith my report for the year ending 30th June, 1900. No business of any kind was transacted at this branch during that period. There are few, if any, unemployed about the town and district. This is largely due to the high prices given last year for New England wool, which has enabled farmers and others to improve their holdings, thus absorbing the surplus labour. The principal industries are agriculture and mining. A considerable impetus has been given to the latter on account of several fairly good discoveries of tin, &c., as well as dredging having been commenced in some of the rivers and creeks. The rainfall during the year has been considerably above the average, and it is expected that the ensuing spring will be the best here during the past seven years. The current rates of wages are about as follows, viz. :—

Bakers	35s. to 40s. per week.	Labourers	6s. to 7s. per diem.
Blacksmiths ..	7s. to 8s. per diem.	Miners	7s. to 8s. "
Bricklayers	8s. to 9s. "	Ploughmen	20s. per week and found.
Carpenters.....	8s. to 9s. "	Station hands	15s. to 20s. per week and found.
Clerks	35s. to 50s. per week.	Wheelwrights	40s. to 50s. per week.
Farm hands	15s. to 20s. " and found.	Tool sharpeners.....	7s. to 8s. per diem.
Fellmongers	30s. to 45s. "	Truckers	7s. to 8s. per shift.
Grooms	15s. to 20s. " and found.		

I have, &c.,

C. SMITH,

Agent.

The Labour Agent, Albury, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Court-house, Albury, 4 July, 1900.

I have the honor to report that, during the year ending 30th June, 1900, the following business was transacted at this branch :—Registrations, 2 ; railway passes issued, 2.

Inquiries, instituted from time to time, confirm the fact indicated in the small operations of the Bureau since its inception, that practically no surplus labour has accumulated in or found its way into this district. This may be expected in a district whose chief industries consist of agriculture and grazing, which, while absorbing the temporary local unemployed, offer little or no attraction for surplus labour of other districts.

No appreciable variation has occurred in the rates of wages during the year mentioned, as shown upon comparison of the following schedule of existing rates with those as previously reported :—

Rates of Wages.

Bakers	£2 10s. per week.	Farm labourers	15s. per week and board.
Blacksmiths	£2 10s. "	Farriers	£2 10s. per week.
Bootmakers	£2 "	Fencers	7s. per diem.
Bricklayers	9s. per diem.	Gardeners	£1 per week.
Brickmakers	7s. "	Gasfitters	£2 5s. per week.
Builders.....	£2 15s. per week.	Grocers	£2 "
Butchers	£2 "	Hairdressers	£2 "
Carpenters.....	9s. per diem.	Labourers	7s. per diem.
Coachmakers	£2 10s. per week.	Married couples	£60 per annum.
Compositors	£2 "	Miners	6s. 6s. per diem.
Coachpainters	7s. per diem.	Plasterers	9s. "
Cooks	£1 10s. per week.	Plumbers	£2 5s. per week.
Cordial-makers	£2 "	Saddle and harness makers	£2 10s. "
Drapers	£2 10s. "	Slaughtermen	£1 "

Agriculture.—Wheat is the chief cereal grown in the Albury district, but oats is grown in small quantities for hay. The rainfall during the past year exceeded the average, and fell so opportunely as to produce good crops. The estimated area under wheat last season was 260,000 acres, and the average yield per acre, 12 bushels. There is likely to be a decrease in the area placed under wheat in the coming season, as a number of station-holders, who have carried on share farming, have, in view of the low price of wheat and high price of wool ruling at the commencement of the season, withdrawn a considerable area from cultivation, wool-growing then promising to become more remunerative than farming. Should, however, the depreciation in the price of wool now noticeable still continue, and an appreciation in the wheat market take place, as it may do in consequence of the large consumption of flour in South Africa, and the probability of complications arising in the East, the farming industry in the district will receive a healthy impetus. This industry is not likely to provide employment for the surplus labour of other districts.

Grazing.—The pastoral industry had a successful career during the year just closed. The summer was the best known in the district for many years, there being an ample supply of grass and water. The wool clip being heavy, and the local markets providing a profitable outlet for stock, those engaged in this industry were enabled to reap the fullest benefit of the high prices obtaining last season. The copious rainfall of last month has assured a favourable spring, and the prospects of a good and sound clip in the coming wool season are most encouraging.

Mining.—Mining of a prospecting nature has been energetically carried on in the district. The Government boring operations at Black Range to test the existence of deep leads, previously referred to in my reports, are being continued. In several of the bores, I am informed, good prospects—eight to ten colours of gold—were obtained. If the results so far obtained are borne out when the series is completed, it is understood to be the intention of the Government to throw the land open to lease under the Mining Acts. It is the general opinion that the land would be taken up and the leads exploited. Prospecting

for tin at Basin Creek, Dora Dora, about 50 miles from Albury, disclosed extensive deposits of stream tin, and a company, with a capital of £40,000, which has procured leases of a considerable extent of country, has decided to equip the property with a Jennings' gravel pump and vigorously open up the deposits; preliminary operations have already been commenced, and the machinery will be in working order within two months. This property has been worked for a number of years by a local syndicate, who spent a considerable amount of money in making a thorough test, with encouraging results, which led to the formation of the company referred to. Should those results be confirmed in the more extensive working of the property, the company must have a profitable career, and a wide field of employment in the dredging industry would probably be opened up.

General.—The building trade has shown marked activity in Albury during the year, but it has not provided employment to outside labour.

Land values in Albury and the vicinity have experienced an increase of about 10 per cent. within the past twelve months, in anticipation of the accomplishment of Federation, with its concomitant stimulus to business in border towns, by reason of the removal of the border duties and the opening up of wider spheres of business.

In reviewing the prospects of the industries dealt with in regard to the opening up of fresh avenues of employment during the forthcoming year, it is hopeful that the mining industry may present an outlet for the unemployed of adjoining localities.

With reference to the recently-published scheme of the Government of classifying the unemployed, as a solution of the labour problem, I might, perhaps, in view of the proposal to place men who, by reason of age or infirmity, are unable to earn a living, and those styled as habitual loafers, who would not take work, even if offered them, upon State and penal farms respectively, be permitted to invite attention to the suitability of this district for the purposes of such farms. Crown land of a highly productive character, specially adapted to agricultural and gardening pursuits, easy of access, with railway communication to large commercial centres and local markets near at hand, in close proximity to large supplies of timber, which may be used for building, firewood, and other purposes, with a permanent water supply close by, as well as an adequate rainfall and favourable conditions, is available; and, should it be intended to extend the proposed system to the country districts by establishing depôts at suitable centres, I can confidently express the opinion that this locality possesses all the conditions necessary to the success of the new scheme.

I have, &c.,

M. J. McMAHON,

Local Agent.

The Labour Agent, Bega, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Court-house, Bega, 3 July, 1900.

I have the honor to forward herewith the annual report, and, in so doing, would point out that, as I have only been here some eight weeks, my data is based to a great extent on the monthly reports of my predecessors.

This is essentially a dairying district, and the farmers employ very little outside labour; the prosperity, or otherwise, of the district depends on the regularity of the rainfall. During the twelve months ending the 30th ultimo the rainfall totalled 48·18 inches, which was, in the first seven months of the year, fairly evenly distributed; grass was abundant, and stock recovered from the drought of the preceding twelve months. February was a dry month, and the crops and stock both suffered; good rains, however, fell in March and April, and in May some 23 inches were recorded, which, although doing considerable damage to roads and crops, assured good grass and water for the winter months.

There are very few unemployed in this district, and they consist principally of men who do not seek constant employment.

From inquiries I have ascertained that about six weatherboard and two brick cottages have been erected since the last annual report. The Bega Co-operative Cream Company have erected a large creamery, in which active operations will shortly commence.

The heavy rains in May caused much damage to the main roads, and a large number of men are at present employed in repairs.

No new industries have been started during the past twelve months.

The transactions of this office have been nil.

I have, &c.,

H. NEWMAN,

A.C.P.S.

The Acting Labour Agent, Bathurst, to The Superintendent, Government Labour
Bureau, Sydney.

Sir,

Department of Labour and Industry, Bathurst, 4 July, 1900.

I have the honor to furnish the following report as to the operations at this branch during the year ended 30th June, 1900.

The business transacted was light, the services of the branch not having been availed of by employers of labour at all, and in but a few instances by persons seeking employment. Of the latter, six made inquiries, four registered, and all were assisted to employment.

Throughout the year the labour market has been in a normal state, there having been no marked activity in any industry demanding more labour than could be supplied locally, nor such an amount of surplus labour available as would call for comment.

As far as can be seen at present there is no probability of any other demand for labour arising than that which will be required by agriculturists in consequence of the excellent season which has been experienced, but this, it is considered, can be obtained locally.

Inquiries

Inquiries made of the police elicit that there are few, if any, unemployed persons in the district. The current rates of wages are as follows:—

Accountants.....	40s. to 60s. per week.	Farm hands	15s. to 20s. per week and keep.
Bakers	35s. to 40s. "	Fellmongers	30s. to 45s. "
Blacksmiths.....	7s. to 8s. per day.	Gardeners	15s. to 25s. "
Bootmakers	35s. to 45s. per week.	Grocers	30s. to 60s. "
Brickmakers	7s. to 8s. per day.	Grooms	15s. to 20s. "
Bricklayers	8s. to 9s. "	Ironworkers	45s. to 60s. "
Carpenters	8s. to 9s. "	Labourers	6s. to 7s. per day.
Clerks	35s. to 50s. per week.	Miners.....	7s. to 8s. "
Coachmakers	45s. to 55s. "	Station hands.....	15s. to 20s. per week and keep.
Coachmen.....	15s. to 20s. "	Stonemasons	10s. to 11s. per day.
Drapers.....	30s. to 65s. "	Wheelwrights	40s. to 50s. per week.
Engine-drivers	50s. to 60s. "		

I have, &c.,

D. R. JAMIESON,

Acting Labour Agent.

The Labour Agent, Bourke, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Department of Labour and Industry, Bourke Branch, 5 July, 1900.

I have the honor to submit my annual report for the year ending 30th June, 1900.

During the past twelve months this country has suffered very severely from the bad seasons experienced. Nearly every station in this district has suffered a loss of close on 50 per cent. of stock, and as a consequence, the state of the labour market has been low. The country has been too bad for men to travel through to look for work, and there has been no demand for men, though, I believe, a man travelling around can obtain a few days' work here and there, but no settled employment.

The Bourke Meat Works was employing a large number of hands, but the works were shut down about eighteen months ago on account of the difficulty of obtaining stock, and they have not been re-opened since. These works are the only large works of any kind in this district.

The ruling rate of wages is:—Mechanics, from £3 to £4 a week; carters, 10s. a day; labourers, 8s. a day; rouseabouts at the shearing sheds, £1 a week and find themselves, wet days taken off. Shearers work under contract.

This district is very free from unemployed—in fact, I might say there are no unemployed here, as the state of the country precludes them from travelling around, and there is nothing to keep them in the towns.

There have been three registrations in this branch since May, 1899, and four assisted.

I have, &c.,

G. N. STEVENSON,

Local Agent.

The Labour Agent, Broken Hill, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Labour Bureau, Broken Hill Branch, 3 July, 1900.

I beg to report that the work under your Department for the past year has been confined to registering a few names of unemployed in my books (as per monthly returns), and forwarding reports to you.

No railway passes have been issued by me. This labour office has not the slightest influence upon the local labour market. Employers of labour do not use it, and the few unemployed who come in from time to time to register their names are bewildered when, in answer to their invariable inquiry, I inform them that I cannot immediately supply them with work—that I can, indeed, only register their names and particulars and supply them with a Bureau ticket. In spite of this, however, they usually entertain a hope that employment will somehow be obtained for them, and for some time after registration come in, in some instances from distant parts of the town, to make what must be regarded as fruitless inquiries. In not a single instance has a man been supplied with work through the instrumentality of this branch.

The mines and other large employers of labour have their own labour bureaux.

I attach hereto a statement showing the rate of wages obtaining here.

I would estimate that there are about sixty unemployed in this district. As previously stated, these are nearly all old or enfeebled men, and unfitted for hard work.

I have, &c.,

JAMES WATT,

Labour Agent.

Rate of Wages at Broken Hill.

Apprentices, machine shop	4s. to 5s. 6d. per day.	Locomotive, drivers.....	10s.	per day.

Lathe hands, machine shop	8s. to 10s. 6d.			

The

The Labour Agent, Braidwood, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Department of Labour and Industry, Braidwood, 1 July, 1900.

In submitting my annual report for the year ending 30th June, I have the honor to state that no advantage has been taken by the public generally, nor, in particular, by those in search of employment, of this branch during the year. I have not had any applications for employment during the year.

The demand for skilled mechanics is not very large, there being only a few extensive industries in the district, excepting dredging. This industry at present is going ahead at a great rate; several dredges are at present working with excellent results.

A large quantity of dredges are also in course of construction, amounting to several thousand pounds.

The majority of land suitable for dredging has been taken up, largely by Melbourne and Sydney people, and the prospects of the district point to a very bright future.

The present season has been very good, the rainy season having set in at the proper time, and the district looks well.

Cattle are bringing good prices, averaging as much as £10 per head.

The crops are in good condition, grass and water being plentiful.

The following scale of wages is at present generally followed in this district:—

Farm labourers	15s. to 20s. per week.
Miners	40s. ,, 50s. ,,
Labourers	30s. ,, 35s. ,,
Carpenters	60s. ,, 65s. ,,

I have, &c.,

WILLOUGHBY MARSH,
Labour Agent.

The Labour Agent, Coonamble, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Court-house, Coonamble, 2 July, 1900.

During the year ended 30th June, 1900, at this branch of the Government Labour Bureau there was no business whatever. The only work in connection therewith was the furnishing to you monthly of nil returns. There has been no complaint to this office direct or through the police by the unemployed. Apparently, those who really desire work can get it. No employers of labour have ever made use of this branch.

Copious rains have recently fallen, consequently there is a good growth of herbage, and the winter is assured so far as sheep are concerned. There is, however, very little grass at present for large stock, but if the rain continues through July and August, as there is every indication of, there will be plenty of feed for all kinds of stock, and the season will undoubtedly be better than any in this district for the last three or four years. The drought appears to have entirely broken. The rate of wages is the same as in previous years: Carpenters and builders, 8s. per day; coachbuilders, wheelwrights, and blacksmiths, from 1s. to 1s. 3d. per hour; saddlers, from £2 to £2 10s. per week; bakers, £2 per week; and labourers and station hands, no fixed rate.

Another saddler's shop has opened in the town, in which two men, who came from another district, are employed.

There has been no new industry opened up during the year.

I have, &c.,

C. DILLON, C.P.S.,
Coonamble.

The Labour Agent, Cowra, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Cowra, 16 August, 1900.

I have the honor to furnish herewith a return of business transacted at this branch of the Labour Bureau for the year ending 30th June last.

During the past year there has been only one man registered for employment, to whom a free pass was issued to Hay, and no employers in this district have made use of the office to obtain workmen.

Since submitting my report for the year ending 30th June, 1899, a marked improvement is evident in all avenues of labour, due to the great improvement in the seasons, the higher price obtaining for wool, and the influx of Victorian purchasers of land, and, consequently, renewed energy in clearing large tracts of country for the plough. This class of work forms a large outlet for labouring classes, inasmuch as the work is of a nature that may readily be undertaken either by artisans or general labourers.

For miles along the banks of the Lachlan a great many men are at present engaged in repairing and re-erecting the fencing destroyed by the late floods. Although in many instances loss was sustained by the farmers and graziers of the district through the recent floods, the corresponding improvements to the land far outweigh any such loss, and it is admitted on all sides that this is the best season for the last ten years, work being easily obtainable. There are few, if any, unemployed.

The

The following rate of wages is generally paid in this district :—

Farm labourers	from 15s. to 25s. per week.	Wheelwrights	from 50s. to 55s. per week.
Station hands	15s. ,, 25s. ,,	Blacksmiths	50s. ,, 60s. ,,
Cooks	12s. ,, 22s. ,,	Carpenters	50s. ,, 60s. ,,
Shearers	20s. per 100 sheep.	Drapers	30s. ,, 80s. ,,
Rouseabouts	18s. to 28s. per week.	Grocers	25s. ,, 60s. ,,
Miners	45s. ,, 50s. ,,		

Fencing and general road work are invariably done by contract.

I have, &c.,

JAMES MILLER,
Agent.

The Labour Agent, Cobar, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Department of Labour and Industry, Cobar, 30 June, 1900.

I have the honor to report that, during the year ending 30th June, 1900, there have been only two registrations at this branch.

The condition of the local labour market during the past year has been fairly satisfactory. The protracted drought has, of course, seriously affected labour, but, perhaps, not to such a degree as in districts entirely dependent upon the pastoral industry.

The splendid mineral resources of the district alone provide employment for the greater number of the working population ; and although the rainfall for the past twelve months totalled only about 13 inches, most of the mines, by judicious water conservation, have been enabled to continue their workings full-handed.

The new water-works were commenced during the year, and have given employment to about 150 men, most of whom came from other districts. The works should be completed during August or September. The dam, when full, will hold 450,000,000 gallons. I mention this fact because of its great importance to every resident. During last summer our only water supply (the town reservoir) was so low as to cause the greatest alarm—you might remember the serious position we were placed in during your visit last year—but with the new scheme a very ordinary rainfall will ensure an ample water supply, both for domestic and mining purposes.

I estimate that there are only about fifty unemployed in this locality.

During the year refunds amounting to £17 18s. 6d. have been collected from persons who have been assisted by the Bureau.

The following is the average rate of wages :—

Miners.....	8s. 4d.	per day.	Clerks	£1 to £3 15s.	per week.
Engine-drivers	8s. to 10s. 6d.	,,	Compositors	to £2 5s.	,,
Firemen.....	7s. to 8s.	,,	Butchers	£1 15s. to £2	,,
Engine-fitters	9s. to 12s.	,,	Slaughtermen	£1 5s. to £3	,,
Slag-wheelers	7s. to 9s.	,,	Carters	£1 to £1 5s.	,,
Labourers	7s. to 7s. 6d.	,,	Cooks (hotel)	£1 5s. to £2	,,
Bricklayers	10s. 6d. to 14s.	,,	Grooms	£1 to £1 5s.	,,
Carpenters.....	9s. to 10s.	,,	Barmaids	£1 to £1 5s.	,,
Painters.....	8s. to 9s.	,,	Waitresses	12s. to 15s.	,,
Plumbers	8s. to 9s.	,,	Housemaids	12s. to 15s.	,,
Blacksmiths	8s. to 10s.	,,	Station hands	£1	,,
Grocers	to £2	per week	Boundary-riders	£1	,,
Drapers	to £1 7s. 6d.	,,	Married couples	£65 to £75 per annum.	,,

I have, &c.,

A. B. C. BURKE,
Agent.

The Labour Agent, Cooma, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Department of Labour and Industry, Cooma, 5 July, 1900.

I have the honor to submit my report for the year ended 30th June, 1900 :—

1. Registrations of unemployed, nineteen.
2. Passes issued (including two and a half to a married woman, to enable her, with her children, to rejoin her husband at Bethungra), twenty and a half.
3. Refund of railway fare paid direct to this office, £3 7s.
4. Applications for assistance to proceed to work have been much fewer during the past year, and apparently work can be found for those seeking it, but I am informed that there is a good deal of poverty in this town and district.
5. Monaro is more a pastoral than an agricultural district, but every year more land is being cultivated, and owing to the favourable winter, ploughing operations will be brisk from this out.
6. The gold-mining industry is precarious, and the precious metal is patchy. For this reason, the gold-mines about Cooma and Cowra Creek are at present dull and stagnant. Under the Gold and Mineral Dredging Bill of 1899, some good river areas have been applied for, and, so far, the prospects about Kiandra and Gungarlin River are very good. With the introduction of more capital to work the reefs and river beds, I trust there will be a diminution in the number of the unemployed, and a larger circulation of money.

7. There are no factories in this district employing large numbers, but the trades usually found in country towns are all represented, and the current rates of wages are :—

Gold and copper miners	£2 2s. per week.	Carpenters	£2 2s. per week.
Contract labourers.....	£1 10s. to £2 per week.	Saddlers	£2 to £2 2s. per week.
Ordinary general labourers	£1 10s. per week.	Bush labourers, boundary riders, &c.,	from 12s. 6d. to £1
Blacksmiths.....	£2 „	per week, with board and lodging.	

I have, &c.,
EDWARD GOMM,
Agent.

The Labour Agent, Cootamundra, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Department of Labour and Industry, Cootamundra, 6 July, 1900.

I have the honor to report that for the year ending 30th ultimo, two names have been registered in the records of this office, and a railway pass was granted in each instance. There are practically no unemployed in this district. After several years of severe drought, good rains have fallen, and the country looks splendid. A little stir has taken place in mining matters around the locality known as Cullinga. I enclose a list showing the rates of wages.

Rates of Wages.

Grocers	£2 10s. to £3 per week.	Bakers.....	£1 15s. to £2 10s. per week.
Drapers	£2 10s. to £3 „	Slaughtermen.....	£1 15s. „
Barbers	£1 5s. to £2 10s. „	Labourers	£1 „
Blacksmiths	£2 5s. to £3 „	Farm hands	£1 to £1 15s. „
Painters	£2 10s. to £3 „	Plumbers.....	£2 to £3 „
Saddlers	£2 10s. to £3 3s. „	Carters.....	£1 10s. „
Collar-makers	£2 10s. to £3 3s. „	Carpenters	£2 10s. to £3 „
Butchers.....	£1 10s. „	Harness-makers	£2 10s. to £3 3s. „

I have, &c.,
LACHLAN W. BROUGHTON,
Labour Agent.

The Labour Agent, Dubbo, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Labour Bureau, Dubbo Branch, 2 July, 1900.

I have the honor to report as follows on transactions of this branch for the year ending 30th June, 1900 :—

Registration of Unemployed.—Only seven men registered their names at this office during the past twelve months, and they only did so with a view of obtaining railway passes.

Passes issued.—Seven passes issued.

Refunds.—£4 18s. 9d.

State of Labour Market.—No demand for labour here; local supply sufficient. Informed that there are a good number of unemployed in the town and district.

Employers of Labour.—No advantage whatever has been taken of this branch.

Rates of Wages.—Farm hands, good, 15s. to £1 with rations; day labourers, 5s. to 6s. per diem.

Town Industries.—Flour-milling, coach-building, saw-milling, brewing, wool-washing, cordial factories, chaff-cutting, vineyards, harness-making, brick-making, and lime burning—wages average 8s. per diem.

Remarks.—Scrub-cutting, ringbarking, timber-getting are done by contract. Wage earned varies a good deal. As far as I know, and from inquiries made, late rains have made no difference in the labour market.

I have, &c.,
R. T. MACNEVIN,
Agent.

The Labour Agent, Forbes, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Court-house, Forbes, 30 June, 1900.

I have the honor to report that during the year ending to-day no transactions of any kind have taken place in connection with this branch of the Labour Bureau.

The rate of wages paid in this district is the same now as has prevailed for some years past.

The district has within the last few months been visited by good rains, but this has not affected the labour market in any way, at least in so far as this branch of the Bureau is concerned.

As reported last year, employers never make use of the agency in obtaining employees.

I have, &c.,
W. BUTLER LUSK,
Agent.

The Labour Agent, Grafton, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Court-house, Grafton, 9 July, 1900.

I have the honor to submit the annual report as to the operations of the Grafton branch of the labour market for the year ending 30th June, 1900.

The work done during the year has been very little indeed, as only one person has applied to the branch for work, when his name was registered.

No employers have applied for labour.

There are very few unemployed in the district owing to private contracts, road work, and work in connection with the sugar-mill, which usually absorb all surplus labour.

Cane-cutting

Cane-cutting is done by contract at so much per ton, and the average rate of wage is from 20s. to 50s., with board and lodging. For private mills the cane is also cut by contract with a wage at from £2 to £3 per week and find themselves.

The Colonial Sugar Company employ during the season about 170 men at the mill and about 230 in the field, cutting and carting cane, giving from £2 to £3 with board and lodging. In the building line there are several private contracts, and at times there is difficulty to get tradesmen. The rate of wages to carpenters is 8s. per day; bricklayers, 10s.; plasterers, 10s.; painters, 8s.; plumbers, 8s.; and labourers, 6s. The Ramornie Meat Works is at present practically closed on account of scarcity of cattle, only having about twelve hands employed, but when in full swing there are about 150 employed. Ordinary labourers there get from 18s. to 25s. a week and a cooked ration; butchers make about £3 a week but no ration. The various branches in the works are let by contracts, viz., slaughtering, cutting-up, tinsmithing, and packing.

The Fresh Food and Ice Company employ a good many hands, and have a fair number of applicants for work on their books.

The rate of wages at the saw-mills is—circular sawyer, 8s. 4d. a day; machinist, 7s.; drayman, 6s.; and ordinary hands, 6s.

Mining is very quiet, only a few men prospecting.

The present outlook of the district for the coming spring is very encouraging, and bids fair to a prosperous season.

I have, &c.,

H. PERCIVAL,
Labour Agent.

The Labour Agent, Glen Innes, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Department of Labour and Industry, Glen Innes, 2 July, 1900.

I have the honor to forward herewith my annual report for the twelve months ending 30th June, 1900, hereto annexed.

I have, &c.,

F. BURNE,
Labour Agent.

ANNUAL Report by the Labour Agent at Glen Innes for the twelve months ending 30th June, 1900.

Number of registrations, nil.

Number of men obtaining passes, nil.

Number of men receiving miners' rights, nil.

Amounts received on account of railway fares, &c., nil.

Number of men obtaining employment through this branch, nil.

Unemployed in the district, nil.

There are no unemployed in this district with the exception of the usual number of swagmen travelling through, either to the Western or Coastal districts. The past twelve months has been an exceptionally good season; work has been carried on continuously on the farms, mines, &c., thereby absorbing all spare labour within the district.

Rainfall.—The rainfall during the past twelve months has been sufficient to give a fair supply of grass for stock during the coming winter. Thirty inches of rain have been registered at the Post Office during the past twelve months.

New industries in the district, nil.

Industries in full work.

62 dairy farms.	1 gas-works.
3 saw-mills.	3 brick-works.
2 tanneries.	2 flour-mills.
2 wool scours.	2 saddlery establishments.
1 iron foundry.	1 chaff-cutting establishment.

Rates of Wages in District.

Carpenters.....	8s. per day.	Miners	7s. 6d. per day.
Labourers (ordinary)	6s. "	Blacksmiths	8s. "
" (farm)	15s. per week and found.	Painters	8s. "
Butchers	40s. per week.	Drapers	50s. per week.
Station hands	12s. 6d. per week and found.	Bricklayers	9s. per day.
Tinsmiths	7s. to 8s. per day.	Stonemasons	9s. "
Carters	30s. per week.		

Inquiries by employers of labour, nil.

F. BURNE,
Labour Agent.

The Acting Labour Agent, Goulburn, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Goulburn, 4 July, 1900.

I have the honor to submit my report for the year ended 30th ultimo.

Thirteen persons registered with this branch during the past year, and employment was found for four; four railway passes were issued during the same period.

The current rates of wages are, I understand, as follows, viz. :—

Bootmakers	30s. per week.	Millers	60s. per week.
Carters	30s. to 40s. "	Miners	25s. to 40s. "
Cooks (men)	20s. to 40s. "	Shop assistants	20s. to 70s. "
Drovers	15s. "	Slaughtermen	25s. "
Labourers	30s. "	Wheelwrights	40s. to 50s. "

Owing

Owing to the recent excessive rain, work has been very slack amongst the labouring classes, but the prospects for the spring are very promising, and with the return of fine weather work should be obtained by most of those at present unemployed.

The prospect of obtaining work on the Goulburn to Crookwell railway has attracted a large number of men to Goulburn; but owing to the rain, work has been stopped, and consequently some hundreds of men are at present unemployed. Most of these men do not belong to this district, and probably, if the work is not carried on at present, will return to their homes.

It has been reported that work on the railway is not to be proceeded with for three months on account of the wet weather, but I have not been able to obtain definite information in regard to the matter.

The number of genuine unemployed belonging to this district would be less than 100.

There are no large manufactories in this district, and the principal industries are grazing, farming, and dairying.

There is some mining done in the outlying parts of the district, but very little close to Goulburn.

I have, &c.,

CECIL C. VINDIN,

Acting Labour Agent.

The Labour Agent, Hillston, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Hillston, 30 June, 1900.

In submitting my annual report for the year ended 30th of June, 1900, I have the honor to state that the assistance of this branch was not sought in any way, either by employers or would-be employees, and no transactions of any kind took place.

The industries are mainly pastoral and agricultural, wages ranging from 10s. to 20s. per week with rations, and the supply of labour is equal to the demand, whilst at the same time the district may fairly be said to be free of genuine unemployed.

In portions of the district, viz., Mount Hope, Mount Allen, and Gilgunnia, the mining industry is being steadily prosecuted, and there are indications that a great increase in this direction will shortly be manifested, owing to the purchase by wealthy syndicates of some of the best properties, the development of which has been retarded in the past through want of capital. If these anticipations are realised a great impetus will be given to the whole district; and with the assistance of good seasons (of which there is every appearance) and railway extension, claims for which are being energetically urged, Hillston and its surrounding country and towns should speedily attain that importance and prosperity to which, from position and natural resources, they are justly entitled.

In conclusion, I may state that the drought which has ruled in this part of the Colony for so many consecutive years has now entirely broken, the rainfall for this year so far having been 10.4 inches as against 9.57 inches for the whole of last year. The country in consequence presents a beautiful appearance, both feed and water being in abundance; whilst, on account of the shortage of stock through the recent heavy losses, the land will have a fair chance, by reason of the practical impossibility of over-stocking, to thoroughly recover from the bad effects of the past five or six years.

I have, &c.,

W. LION. VOLCKMAN,

Labour Agent.

The Labour Agent, Hay, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Hay Branch, 6 July, 1900.

During the year ending 30th June last there were no applications for employment or for labour, nor were there any refunds on account of railway fares, &c., advanced.

This pastoral district has suffered severely from the drought—at last, fortunately, broken up. The heavy losses in sheep have lessened the demand for shearers and rouseabouts, and the district will not reach its normal state in this respect for at least a couple of years. Ordinary station hands have in some cases suffered reduction of wages, and some have necessarily been dispensed with, but good seasons will soon remedy this.

No new industries have started, nor anything to increase the demand for men. There are very few resident labourers out of employment.

Rates of Wages.

Blacksmiths.....	8s. to 9s. per day.	Gardeners	20s. to 30s. per week.
„ strikers	25s. to 30s. per week.	Cooks	15s. to 30s. „
Wheelwrights.....	8s. to 9s. per day.	Horse-drivers	15s. to 30s. „
Bricklayers	10s. per day.	Ordinary labourers.....	6s. to 7s. per day.
Carpenters	10s. „		

I have, &c.,

J. BURNETT,

Agent at Hay.

The Labour Agent, Junee, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Junee, 31 July, 1900.

I have the honor to submit my annual report for the year ending the 30th June, 1900.

Only one person was registered for labour during the year, a pass having been granted him to Forbes, where he obtained work.

During the first eight months of the year work was very slack owing to the drought, but during the last three or four months, since the rain, the local industries have become brisker.

After

After a lapse of two years mining has become brisker also.

Last shearing was a failure, there being so few sheep to shear.

There were no unemployed in the district during the year, and no demand for labour.

The local industries are wool and wheat growing, mining, iron foundries, agricultural machinists, soap-works, builders, road contractors, tank-sinking, brickmaking, and monumental masons.

The rate of wages for the year were as follows:—

Blacksmiths	7s. to 12s. per day.	Gardeners	15s. to 20s. per week and keep.
Boilermakers	11s. to 12s. ,,	Generally usefuls	15s. to 20s. ,,
Carpenters	8s. to 10s. ,,	Grocers	35s. to 50s. ,,
Butchers	20s. to 25s. per week.	Grooms	20s. to 25s. ,, and keep.
Bootmakers	30s. to 40s. ,,	Hairdressers	40s. to 45s. ,, or 25s. and keep.
Brickmakers	40s. ,,	Ironmoulders	7s. to 10s. per day.
Cooks	15s. to 20s. ,,	Miners (gold)	40s. to 45s. per week, or 7s. per shift.
Drapers	50s. ,,	Shearers	17s. to 20s. per 100.
Engine-drivers.....	£1 to £2 per week.	Ploughmen—	
Engineers (mechanical)	8s. to 10s. per day.	1st class	20s. to 25s. per week and keep.
Farm hands.....	£1 to £1 5s. per week and keep.	2nd ,,	10s. to 15s. ,,

I have, &c.,

K. THEO. GARLAND,

Labour Agent.

The Labour Agent, Jerilderie, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Jerilderie Branch, 2 July, 1900.

I have the honor to report that no business of any kind was transacted at this branch during the year ending 30th June, 1900.

No inquiries were made by either employers or persons seeking employment.

There are very few unemployed in this district.

The industries are the pastoral and agricultural for the most part.

It is only at shearing and harvest time that extra labour is required, which is fully supplied from Victoria.

The rate of wages obtaining in this district are : Station hands, 15s. to 20s. ; farm labourers, 15s. to 25s. per week, with board.

I have, &c.,

JOHN CURRY,

Labour Agent.

The Labour Agent, Kempsey, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Kempsey, 2 July, 1900.

I have the honor to hand you herewith my Annual Report for year ending 30th June, 1900, and beg to report that, as far as this office is concerned, no business of any kind whatever has been transacted, nor have any inquiries been made by employers or employees ; indeed, neither the persons concerned nor the general public appear to take the slightest interest in the local Labour Bureau, and I very much doubt whether nine-tenths of the public are aware of its existence. I have made inquiries, as usual, from different employers of labour, and they report no difficulty in obtaining locally any casual extra labour required.

The district is in a fairly prosperous state, and no new industries of moment have been started. The new tin find at Canai is too far away to materially affect the local labour, though I hear there are a good many Kempsey miners there.

The Kempsey bridge has been completed, and is in use. Cessation of the work did not affect local labour, as the men were mainly permanent hands.

There has been no change in the rates of wages obtaining locally.

I have, &c.,

HERBERT PHILLIPS,

Government Labour Agent.

The Labour Agent, Lithgow, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Lithgow, 16 July, 1900.

I have the honor to submit the Annual Report of this branch for the year ending 30th June last.

During such period 31 names were registered, and unemployed persons, to the number of 29, were granted railway passes to enable them to proceed to, and search for, employment.

There is no demand for labour here at present, and the unemployed number about 50. The employers do not utilise this branch for obtaining the services of men ; they, apparently, experience no difficulty in obtaining workmen whenever there is a demand for labour. The operations of this branch are chiefly confined to applications by men who are in pecuniary circumstances, and are desirous of obtaining employment in other districts, as will be gleaned from the fact that the whole of the applicants registered during the past twelve months applied for passes—29 of them being granted, and 2 refused.

The coal mines have been working only a little better than half-time during the year, providing employment for about 300 men ; and for a period of about three months, at the beginning of the twelve months just passed, a number of them were closed on account of the miners' strike.

The ironworks and copper-smelting works have been working full time during the whole period, utilising the services of over 500 hands. The brickmaking, coke, and other works employ about 120 men; the woollen mills at Coorwell are the means of providing work for about 30 men, and 20 women, girls, and boys; and the two breweries afford occupation for about fifteen men and boys.

Since January last, there has been a copious rainfall here, and the outlook is far more promising than at this time last year; but the prospects of this district are not so materially affected by the rain as in other parts of the Colony, the holdings being mostly too small for grazing purposes, and in the winter the cold is too intense to allow a sumptuous growth of fodder for stock.

The current rates of wages in this district are as follows:—Smelters, 7s. 6d. to 9s. 6d. per day; labourers, 6s. 6d. to 7s. 6d.; bricklayers, 9s.; blacksmiths, 8s.; engineers and engine-drivers, 9s.; carpenters, 8s.; weavers, 22s. 6d. to 35s. per week at piece work; and coal-miners, 1s. 4½d. hewing rate, every-thing weighed, 1s. 9d. per ton for clean forked coal, and 1s. 3d. per hour when not weighed.

No refunds were paid into this office during the past year.

I have, &c.,
J. H. HASSALL,
Labour Agent.

The Labour Agent, Lismore, to the Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Lismore, 3 July, 1900.

I have the honor to submit the Annual Report for the year ended 30th June last. I have written to all the large employers of labour in the district, asking for information to enable me to give accurate details as to the progress of this district, but up to the present I have only been favoured with two replies, and consequently I am unable to give as complete a report as intended; however, should answers come in during the week I shall forward them as an addenda, and should they reach you in time they could be published herewith.

So far as the real work of the Labour Bureau is concerned, there is really no necessity for a branch here, as, notwithstanding the notice exhibited at the office calling attention to the Bureau, I am never asked by either employers or those seeking employment as to any particulars concerning labour. I have only registered one man during the year, and that was in connection with an application for assistance by railway to the Tweed. My monthly reports are chiefly confined to weather details, and the reiteration of the statement that the district continues to improve. The past summer has been an exceptionally dry one, the rainfall being much below the average; but during the past three months the supply has been good with warm days, resulting in splendid crops all round. Frosts are just beginning to make an appearance. Dr. Bernstein, who keeps a record of the rainfall here, informs me that for the year it has been 61·84 inches.

The cane-growing industry does not appear to be as extensively prosecuted as in past years, as an evidence of which it is generally stated that the Sugar Mills Company at Rous are disposing of their property with a view to a discontinuance of operations. Crushing is to begin there this week, and at Broadwater Mills also. The large number of Hindoos formerly to be seen travelling about in gangs are not nearly so much in evidence, and many fields formerly covered with cane are now being devoted to grasses.

Dairying, with which is associated bacon-curing, is the principal industry of the Richmond River now, there being constantly a demand for farms at good prices; as high as £28 per acre was paid this week for farm property at Rous. Additional creameries are being erected in the district, and though, in consequence of the winter, the milk supply has fallen off, there continues to be satisfactory returns. The following statistics were specially compiled in April last in connection with the Federal Electoral Districts Committee, and will serve to show the vastness of the operations:—

Comparison showing Returns in 1895, also in 1900.

	1895.	1900.	Increase.
Population...	25,843	31,384	5,541
Land under cultivation	7,280 acres.	91,632 acres	84,352 acres.
Milking cows	6,777	57,333	50,557
Registered dairies	200	710	510
Population of the municipal district of Lismore	3,300	4,100	800

Productions of Districts for 1899.

Sugar	£350,000
Butter, 3,000 at £90	270,000
Fat stock	150,000
Timber, estimated	60,000
Maize	55,000
Pigs, 20,000 at 30s...	30,000
Eggs...	20,000
Bacon	16,000
Horses, estimated	10,000
Sundries—such as potatoes, cheese, fish, oysters, fruit, &c. (say)	10,000
	<u>£971,000</u>

Timbers still standing, not including hardwood, are valued at five million pounds sterling.

Messrs. Hicks & Co. inform me that, in connection with their bacon factory at Lismore, the weekly output represents about 8½ tons of bacon, the pig market having increased fully 50 per cent. during the past three years; and the demand continues to be equal to the supply owing to the splendid outlet in Western Australia, where a large percentage of the bacon is exported.

Some

Some valuable tracts of land are to be thrown open shortly in this district as homestead selections, all of which will be eagerly taken up for dairying purposes, judging by the inquiries being made. The timber trade seems to be largely on the increase; the saw mills at present at work having added considerably to their plant, and are kept constantly employed, whilst another large mill is about being started close to Lismore. The building trade is another very lively business at present; for, standing on the hills overlooking Lismore, it is wonderful how many new buildings are to be seen in course of erection. The streets are being rapidly filled up with handsome cottages, whilst in the main business part improvements are being extensively carried out. Our post office clock tower has just been completed, and the clock-chimes vie with those of the G.P.O. in tone, and are quite a feature in the city.

The roads throughout the district, under Mr. Superintendent Fitzread's management, are being rapidly formed, and soon it will be difficult to find an impassable mile. During the year some tenders were let in connection with the roads surrounding Lismore.

It is generally considered certain that before long the railway will be extended to Casino, which will mean further progress all round.

The new telephone exchange, embracing the towns of Lismore, Casino, Ballina, and Coraki, is about being opened, there being over 100 subscribers in Lismore alone; this will be a great boon to the business people of the district.

Coming to the labour conditions, I am informed by all parties that there are no signs of any unemployed in the district, whilst there seems to be no difficulty in getting the necessary hands in all branches.

The rates of wages ruling at present are as follows:—Engineers, fitters, and engine-drivers, 27s. to 60s. per week; firemen, 27s. 6d. to 35s. per week and found; carpenters and blacksmiths, 9s. per day; bricklayers, masons, &c., 8s. per day; painters, from 6s. to 8s. per day; the average earnings of the cane-cutters is about 7s. per day; bullock-team and drivers, 15s. per day; ordinary labourers, working for contractors, get from 5s. to 7s. per day and found; farm labourers, 15s. to 25s. per week and found.

In conclusion I attach the annual return of the Lismore police patrol district for the year 1900, kindly supplied by the police authorities, which is a fair indication of the business being carried on all over the Richmond River District.

I have, &c.,

ANDREW T. COCHRANE

C.P.S. and Labour Agent.

Lismore Police Station, 1 July, 1900.
The following is a list of the manufactories within the Lismore patrol district at the present time, viz.:—20 creameries, 2 butter factories, 1 bacon factory, 1 tannery, 1 furniture warehouse, 1 ice works, 2 confectionery factories, 1 joinery, 1 gas-works, 3 aerated water factories, 3 printing offices, 1 iron foundry, 4 saw mills, 5 tailoring establishments, 3 saddle and harness makers, 3 coach builders, 3 tinsmiths, 1 agricultural implement factory, 3 boot and shoe making establishments, 4 dressmaking establishments, 1 stone-crusher, 1 waterworks.

The population within the same area is Europeans, 8,197; aliens, 85; Chinese, 16.

The Labour Agent, Mudgee, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Mudgee, 4 July, 1900.

I have the honor to forward herewith the Annual Report of this branch for the year ending 30th June last. The operations have been very small, two railway passes being issued, and one refund of £1 5s. received, which was due to your office. There have been no applications for labour by employers or for work by employees, and the supply of unskilled labour is locally ample to meet all requirements in this district. Practically, there are no unemployed who reside in the district, and the managers of the various dairy-factories state there is no difficulty in obtaining any labour the companies require.

During the past twelve months the rainfall has been over the average, and on the whole the graziers have very little to complain of, as the increased price of wool and stock has largely compensated for any other losses. The principal industries are mining, grazing, and farming. With regard to the former, the usual number of miners are employed, and at various centres small rushes have taken place, and the Mining on Private Property Act has been availed of to a great extent. Gold seems very hard to get; yet there are about 1,500 men in this district earning "tucker," principally on alluvial claims. The Warden is now holding inquiries in dredging leases, and some of them are expected to give good results. The graziers have done well all through, though, at one time, water was scarce amongst some of the smaller holdings, and for some time past this district has greatly benefited from the results of the disastrous droughts experienced in other parts of the Colony; witness the high price realised for wool and the stock sold, and at time of writing live-stock are bringing very high prices. The farming community is now busy ploughing. During the past year the returns were small; a great part of the maize-crop did not reach maturity; and the small price received for wheat did not nearly compensate for the labour expended, although increased areas were cultivated. For the past month or more rain has fallen continuously, and, with cloudy weather, no frosts have been experienced, the result being that the fruit-trees are commencing to bud; and as the winter may be said to be only half over in this district, it is hoped a few frosts will come and nip them back again, otherwise we may expect a repetition of the 1898 frost, which killed nearly all the fruit in this district. The outlook all round is good, and, with federation accomplished, the markets of the colonies should be open to our farmers, &c., who are very favourably situated as regards rainfall and climate.

I have, &c.,

D. G. McDOUGALL,

Labour Agent.

The

The Labour Agent, Molong, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Labour Bureau, Molong Branch, 4 July, 1900.

I have the honor to report that during the year ended 30th June, 1900, no applications, either by employers or by persons seeking employment, have been made at this office. This is the third year this report has been furnished.

No entries have been made in the Labour Register since the establishment of the branch. The only work performed during the year has been the furnishing each month of the usual nil returns.

The prevailing rate of wage for the class of labour usually employed in this district, namely, farm and station hands, is from 12s. 6d. to 15s. per week, with rations.

I have, &c.,

F. S. MURRAY,

Labour Agent.

The Labour Agent, East Maitland, to The Superintendent, Government Labour
Bureau, Sydney.

Sir,

East Maitland, 3 July, 1900.

During the past year twenty-three persons seeking employment have registered their names at this office. In each case application was made for a railway-pass, and twenty-one passes were issued.

I must call your attention to the number of men who obtain tickets, evidently without the slightest intention of refunding the cost of same, inasmuch as they never proceed to the party whose name they give as their intended employer.

Beyond a few Government contracts there is absolutely nothing doing in this district.

The Hunter is purely a farming district, farm labourers receiving from 10s. to 12s. per week.

The rate of wages is as follows:—Ordinary labourers, 5s. per day; miners, 8s. per day; carpenters, 7s. 6d. per day; farm labourers, 9s. to 12s. per week.

I have, &c.,

H. L. HORNIMAN,

Agent.

Unemployed Summary for Year ending 30 June, 1900.

Number registered, 23; married, 8; single, 15; number of persons dependent, 26. Cause of failure to get work:—Slackness of trade, 21; sickness, 2. Where from—Queensland, 1; country districts of New South Wales (north), 18; (south), 4. Number sent to private employment, 21.

Classification of Trades registered during period 1 July, 1899, to 30 June, 1900.

1, miller; 2, blacksmith; 3, carpenter; 4, labourer; 5, labourer; 6, painter; 7, labourer; 8, handy-man; 8, blacksmith; 10, mason; 11, groom; 12, labourer; 13, miner; 14, tinsmith; 15, butcher; 16, engineer; 17, engine-driver; 18, shearer; 19, farm labourer; 20, tinsmith; 21, station manager; 22, cook; 23, station hand.

The Labour Agent, Moree, to The Superintendent, Government Labour Bureau,
Sydney.

Sir,

Court-house, Moree, 5 July, 1900.

In attempting to give a review of the proceedings in the local labour world, during the past year, I am met at the outset by the difficulty of having very scant material upon which to work. In self-contained districts (in a labour sense) such as this, one year passes in very much the same way as another; and, in the absence of any demand for labour on the part of the capitalists, or for employment on the part of the workers, little is left on which to comment.

The Railway works (Moree to Inverell line) which, twelve months ago, were being carried on comparatively close to this town, have now been removed to the vicinity of Warialda, the first section of the line (35 miles,) being completed and open for traffic. This fact does away with about the only opening for unskilled labour which was available, and any influx of this class of worker, at the present time, would probably prove disastrous to the individuals concerned.

The recent beneficent rains have assured a good season to those engaged in pastoral industries, and in due time, no doubt, the country labouring class will correspondingly benefit; but a considerable period must elapse before the heavy losses in the past drought are overtaken.

The building trade in the town and district is progressive; but it is doubtful whether the carpenters and joiners at present on the spot are not sufficient for all probable calls upon this industry; in fact, in my opinion, this is the case, and I could not recommend any strangers in this branch of trade to come to this part of the country, unless they have certain work promised them to begin with.

I have to report that the work of the Moree Branch has only been of a routine character during the past year. No entries have been made in the Registers, and, so far as I am aware, no applications for workmen have been received.

The Schedule herewith, represents the average rate of wages during the past year; but unfortunately, there has been no demand for men at the rates mentioned. The district, however, I am pleased to say, has been singularly free from unemployed during the period embraced by this Report.

I have, &c.,

C. H. GALE, P.M.,

Acting as Labour Agent.

The Labour Agent, Muswellbrook, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Muswellbrook Branch, July, 1900

I do myself the honor to report that during the year just ended only one registration has been made at this office, and one railway pass issued, viz., 11/1/1900, Roger Ingham, pass to Tamworth, to employment.

During the period under notice, there has not been any lack of employment in this district, and the only unemployed to be seen are tramps passing through the town.

There is nothing to report as regards wages, &c.

The weather for the first few months of the year was very severe indeed, the want of rain being very severely felt; but the welcome change came, and such a fall of rain has not been known here for many years past, amounting as it did to 28.61 inches from July, 1899, to 30th June, 1900. The outlook is better than it has been for some years past.

I have, &c.,

J. J. KINGSMILL, C.P.S.,
Agent.

The Labour Agent, Newcastle, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

The Court-house, Newcastle, 20 August, 1900.

I have the honor to submit herewith my Annual Report of the business transactions of the Newcastle Branch of the Government Labour Bureau, and the state of the labour market in the district, for the year ended 30th June last.

The number of persons registered and assisted during the year was 278, of whom 177 were married and 101 single. The causes of their being out of employment were stated to be as follows, viz. :—Sickness, 2; and slackness of trade, 267. The number of persons dependent upon them was 708. Thirty-nine were sent to private employment, and 115 to Government works.

The trades of the persons registered were :—1 baker, 2 blacksmiths, 1 bootmaker, 2 butchers, 1 canvasser, 2 carpenters, 1 clerk, 1 cook, 1 coachbuilder, 1 coaltrimmer, 1 commission agent, 1 dairyman, 2 domestics, 1 drover, 2 engine-drivers, 1 engineer, 2 farm labourers, 3 firemen, 1 fletcher, 2 gardeners, 1 jockey, 205 labourers, 36 miners, 1 plasterer, 1 plate layer, 1 printer, 1 railway navy, 1 stoker, 1 shiftman, 1 telegraphist, and 1 wheeler.

There was a larger number of persons registered and assisted during the past year than in any previous year. This was on account of the employment afforded by the work of the construction of the two extensions of the Government tramways to Adamstown and Waratah respectively, the whole of the labourers for which have been engaged through the local branch of the Bureau on and since the occasion when you attended on the ground at Broadmeadow with Mr. P. W. Shaw, the engineer in charge of the work, and myself, for the purpose of balloting the men to be employed at the start. 109 pick and shovel men, and six carters, using their horses and carts, have thus been provided with employment for several months, and many of them are still so employed.

In the months of October and November last, when it was reported that 200 men were likely to be required on the railway construction works, Rock to Lockhart and Koorawatha to Grenfell, 300 men gave in their names as willing to proceed to those works. Some of them were men who had been out of work for a considerable time, others were only employed part of their time and hoped to better themselves by securing more permanent employment. There is, however, at the present, and there has been for several months past, plenty of work at fairly remunerative wages for every man in the district who is able and willing to work. For skilled workmen there is an evident demand, in almost every branch of trade; and with the employment of further skilled workmen, the work for ordinary labourers will be increased.

The

The city and district of Newcastle were never, it is safe to say, in a more prosperous condition than now; and it is satisfactory to note that the recent dispute between the colliery proprietors and the miners has been settled to the satisfaction of all parties concerned without resorting to the disastrous expedient of a strike.

The consequences of any stoppage of work just now would be very injurious to the Colony, and more especially to the people of Newcastle. They would also have a far-reaching effect on the world outside, as can easily be imagined when it is seen that there are upwards of 120 large ships now in the port awaiting cargoes of coal, and the harbour is becoming daily more crowded, notwithstanding that the twelve hydraulic and three steam cranes, and the several shoots, are kept busy day and night loading coal to the ships at the rate of from 75,000 to 80,000 tons per week. The forest of tall masts to be seen as the ships lie two, three, and even four deep, along the various wharves, and at the several moorings, indicates a large and ever-increasing trade in Newcastle coal.

From the accompanying Schedules it will be seen that there have been 1,368 deep-sea ships, of the tonnage of 1,879,188 tons, employing 41,452 seamen; and 2,714 coasting vessels, of the tonnage of 663,807 tons, employing 2,446 seamen, making a total of 4,082 ships of 2,542,995 tons, employing 65,913 seamen, in addition to the 14,556 persons employed on shore; in all, a grand total of 80,469 persons employed in connection with the trade of the port and district.

Much satisfaction having been expressed at the nature and extent of the information contained in my previous reports, some of which information had never previously been published in similar form, I have had the various Schedules, and other details of the labour employed, carefully revised and added to. I have also endeavoured to show, to some extent, the cost of living, including house rent, to the labouring classes, from which, I think, it will readily be seen that the population generally is in a happy and prosperous condition, and that there is a wide field opening for the employment of labourers of all kinds in the near future, in the district in which the coal-fields are so valuable and inexhaustible. Trade in this and every other branch is certain to be largely enhanced by the now accomplished federation of the Australian Colonies.

The following Schedule will show the number of persons employed and unemployed in the various trades and callings, and the ruling rates of wages therein, namely:—

Class of Employment.	Rates of Wages.	Employed	Unemployed.
Wharf labourers	1s. per hour	85
Carpenters	9s. to 10s. per day	350
Bricklayers	9s. to 10s. "	60
Plasterers	9s. "	40	10
Shop assistants	35s. per week	510	30
Carters	35s. "	570	20
Miners	2s. 11d. to 3s. 2d. per ton hewing rate*	6,632
Joiners	9s. to 10s. per day	75
Bricklayers' labourers	8s. "	60	10
Printers	8s. "	70	10
Stonemasons	9s. to 10s. "	70
Clerks	35s. per week	600	70
Plumbers	9s. to 10s. per day	75
Butchers	25s. per week and keep	180	10
Bakers	12s. per day	25	5
Licensed watermen	About £3 per week	18
Labourers	6s. to 7s. per day	560	20
Coal-trimmers	1s. 3d. per hour, average about £2 10s. per week.	200
Blacksmiths	1s. 2d. per hour	200
Wheelwrights	10s. per day	25
Ironmoulders	1s. 2d. to 1s. 4d. per hour	50
Tailors	£2 10s. per week	200
Bootmakers	£2 10s. "	120
Crane employees	By contract	81
Seamen engaged at port	See schedule	4,000
Seamen on ships trading to port	"	66,253
	Totals	80,469	195

* The miners' earnings, when in full work, average from 9s. to 11s. per day. The hewing rate is to be increased to 3s. 4d. per ton on 1st September next, and to 3s. 10d. per ton on the 1st January next, at which date the selling price of coal is to be raised to 10s. per ton.

The following are particulars relating to seamen employed on ships, and the shipping generally of the port, for the year under consideration, viz.:—

Class of Vessel.	Number of Vessels.	Tonnage.	Number of Seamen employed.
Deep-sea traders	1,368	tons. 1,879,188	41,452
Coasting vessels	2,714	663,807	24,416
Government steamers	10	400
Dredges	7
Punts (dredge)	10	17,500	128
Rock-smasher	1
Tug-boats	18	1,491	116
Harbour and river steamers	36	721	96
	4,164	2,563,206	66,253

Schedule of the different rates of pay to seamen employed on ships passing through the port during the same period :—

	Foreign-going Sailing Vessels.	Intercolonial Sailing Vessels.
Chief Officer	£7 to £8 per month.	£8 per month.
2nd Officer	£4 10s. to £5 per month.	£6 „
Carpenter	£5 per month.	
Sailmaker	£4 „	
A.B.	£3 10s. per month.	£4 per month.
Ordinary Seaman	£2 5s. to £2 10s. per month.	£2 „
Cook	£4 per month.	} £6 10s. to £7 per month.
Steward	£5 „	
	Foreign-going Steamers.	Intercolonial Steamers.
Chief Mate	£11 per month.	£15 per month.
2nd Mate	£7 „	£12 „
3rd Mate	£6 10s. per month.	£10 „
Carpenter	£6 10s. per month.	£9 „
Boatswain and Lamps	£5 „	£7 10s. „
Lamps and A.B.	£4 10s. per month.	£6 10s. „
Ordinary Seaman	£2 „	£2 10s. „
Chief Engineer	£16 „	£22 „
2nd Engineer	£12 „	£17 „
3rd Engineer	£8 „	£14 „
4th Engineer	£7 „	
Firemen		£8 10s. „
Donkeyman	£5 10s. per month.	£9 10s. „
Fireman and Trimmer	£4 10s. „	
Trimmer		£6 10s. „
Chief Steward	£6 to £6 10s. per month.	£8 „
2nd Steward		£3 „
Mess-room Steward	£2 per month.	
Chief Cook	£5 to £5 10s. per month.	£8 „
2nd Cook	£2 per month.	£3 „

The chief and most important industry of the district is, of course, coal-mining; and I am indebted to the Chief Inspector of Coal-mines for a copy of his last Annual Report, from which I have gathered the following figures :—

The number of collieries in the Northern district in 1899 was 58; number of persons employed therein was 7,815; quantity of coal raised was 3,259,708 tons; value of coal raised in the year, £1,005,420; the coke returns for 1899 amounted to 43,912 tons; value (at ovens), £44,651.

Export of coal to foreign and intercolonial ports, 2,478,397 tons, of the value of £882,857. Total value of exports, inclusive of coal to foreign and intercolonial ports, £1,598,825, and the revenue derived therefrom amounted to £111,129.

The managers of some of the principal collieries have been good enough to supply the following particulars in regard to the working of their respective mines :—

Name of Colliery.	Number of men employed.	Remarks.	Name of Colliery	Number of men employed.	Remarks.
Bore-hole	90	Rate of wages when working, 10s. 3½d. per day.	West Wallsend	311	} Last fortnightly pay for these mines totalled £4,900.
Sea-pit... ..	548	Rate of wages when working, 9s. per day.	Seaham	322	
Waratah	254		Killingworth	140	
Hetton	438		Pacific	175	
Wickham and Bullock Island.	270		Northern Extended... ..	103	
Wallsend	610		Teralba	12	
Co-operative	403		Rhondda	33	
Mary Vale	49		Fassifern	18	
Elmore	69		Glebe... ..	801	
Minmi Mine	774		Dudley	300	
Lambton	160		Burwood	350	
			Durham	50	
			Stockton	350	

Nearly all the pits are working full time, and there is a great scarcity of miners; in some instances, as many as 200 more hands could be profitably employed.

Of the other industries of the district, in the iron trade; the "Soho foundry," at Carrington, employs 97 hands; Barkley's iron foundry, at Hamilton, employs 26 hands; Rodger's engineering works, Newcastle, employ 30 hands; R. Gibson, iron founder, employs 25 hands; Donnan and Coy.'s foundry (late Hudson Brothers), at Wickham, employs 45 hands; Robbins, engineer and brass founders, employ 9 hands; Hammerton, shipsmith, employs 5 hands. In all of these establishments trade is reported to be very brisk, and that more good fitters, blacksmiths, turners, and ironmoulders are required.

In the coachbuilders' trade, Proctor's coach factory, at Wickham, employs 12 hands; Gilbert's coach factory, in Hunter-street West, employs 18 hands; Wade and O'Connor, coachbuilders, Newcastle, employs 7 hands; Rees & Sons, employ 7 hands, and trade is reported to be good.

Saw-mills.—Armstrong and Royce, at Wickham, employ 15 hands; John Ash and Sons, Newcastle, employ 12 hands; Ellis & Co. employ 9 hands, and Breckenridge and Sons, large timber yards at Hunter-street West, in all of which trade is good.

Building trade.—B. Pearce, builder at Hamilton, employs 40 hands; A. Cook, Newcastle, employs 15 hands; Patey and Wilson, Newcastle, employs 8 men. Trade is very brisk, and there is a scarcity of good carpenters.

Boot trade.—The Associated Boot Company, Newcastle, employs 25 hands; Pike's boot factory, Newcastle, employs 16 hands, turning out 250 pairs of boots weekly. This trade is said never to have been better in the experience of the local manufacturers in the district.

Ship building.—Peter Callen, at Stockton, employs 23 hands; M. A. and H. Callen, employs 6 men, and trade is to be good.

Brickmaking.

Brickmaking.—Merewether brickyards employ 30 hands; Adamstown brickyards employ 20 hands; Waratah brickyards employ 9 hands; Wallsend brickworks employ 10 hands, trade being very brisk at each of them.

The Newcastle Gas and Coke Company's Works employ 48 hands, and produced during the years 72,921,000 cubic feet of gas, 5,090 tons of coke, and 87,640 gallons of tar. The gas main has been recently extended to Merewether, thus employing an additional 28 hands for several months.

The Pacific Coke Company and the Co-operative Coke Company, at Wallsend, employ between them 40 hands; The English, Scottish, and Australian Copper Company, at Waratah, employ 35 hands. Trade is brisk and suitable labour is in demand.

The New South Wales Aerated Water Company employ 23 hands in the winter months, and 30 to 35 in summer time.

The Strand Meat Preserving Company's Works employ 9 hands. Trade is brisk.

The Slaughter Yards, at Waratah employ 29 hands; and during the year there were slaughtered at the yard 9,928 head of cattle, 600 calves, 47,572 sheep, 2,081 lambs, and 4,772 pigs.

Coghlan's cooperage works, at Wickham, employ 7 hands; Russell's stone crushing plant at the Queen's Wharf, employs 12 hands; Ireland's condiment factory employs 18 hands. Trade is very good and has increased by 30 per cent. during the last half year.

A. F. Moore's cordial factory employs 9 men; Ireland's creamery employs 18 hands, with an output of 919,750 lb. of butter for the year; Newcastle laundry, employs 24 hands.

Arnott's well known extensive biscuit factory at Newcastle, employs 550 hands, and the proprietors are now building a new oven which will afford employment to an additional 30 hands, at a very brisk trade.

Dark's refrigerating works, at Honeysuckle Point, employs 6 permanent hands and 3 casual hands. At these works a new boiler is being erected with a view to extending the business.

Davies' lolly factory employs 8 hands, and new machinery is being erected at the cost of £600.

Public Works (Construction Branch).—A new boat harbour off Scott-street, is being constructed, by which 39 hands are employed. A loop line is being laid at Broadmeadow, employing 19 hands. There is also a siding being put in at Bullock Island, on which 41 men are employed, and another siding at Hamilton. The tramway extensions at Adamstown and Waratah, as already mentioned, have given employment to 115 of the local unemployed.

Roads and Bridges.—During the year 71 contracts were let, costing £6,276, and employing 400 men; 5 miles of road were constructed; 7 miles cleared; 2 miles formed only; 6 miles drained. The number of permanent hands employed in this work was 12, and the temporary hands 15, the total expenditure being £12,555.

Works in progress.—A large bridge over Styx Creek; cutting down the road at Rugby Hill. The number of men likely to be employed on these works will be 80. A large bridge is in course of construction to Bullock Island, at a cost of about £4,500, and employing 62 men and 12 horses and drays.

Harbours and Rivers.—There are 330 men employed on the drainage works in the district, and in a general construction of harbour improvements, including the breakwater; and probably storm-water channels at Adamstown, New Lambton, and Waratah, will be completed during the coming year, as well as the work of the protection of the invert of the main channel, which will entail a cost of about £7,000 in all.

Smelting Works.—It is stated that large smelting works are about to be established in the district, and the old works at Port Waratah will probably be again started very shortly.

New Collieries.—A commencement is likely to be made during the ensuing year at the work of developing the Richmond Vale Mine. A bill has recently been passed through Parliament authorising the construction of a railway to connect the pit with the trunk line near Hexham. The coal from this mine will, of course, come to Newcastle to be shipped.

The Rhondda Colliery is being opened up in anticipation of the completion of a railway, $3\frac{1}{2}$ miles in length, to connect with the Government line. About 150 men will be employed on the construction of that railway, and when it is completed the Company expect immediately to put on 200 men at the mine, and afterwards to employ 400. The seam of coal is said to be 12 feet in thickness, and very easily worked.

The Sulphide Corporation Works, Cockle Creek.—The manager of these works, Mr. A. E. Savage, has very kindly supplied the following information with regard their operations. He says that during the past twelve months 31,528 tons of ore from the Corporation's Broken Hill Mine were treated, besides 9,790 tons of ore which they purchased from other mines. The bullion produced was 17,537 tons, containing 14,671 oz. of gold, 1,045,237 oz. silver, in addition to the lead. The approximate value of bullion is about £20 per ton. There was produced, in addition to this, copper matte containing 894 oz. gold, 11,825 oz. silver, and 254 tons copper.

During the year the Corporation has erected plant for the treatment of copper ore, and it is now regularly receiving this material from the different Colonies for reduction. The average number of men employed has been 350, of which 300 may be considered permanent, and 50 casual hands; these figures relate to the Cockle Creek Works only. The rates of pay received are as follows, viz., smelter hands, 8s. to 6s. 6d. per day; roaster hands, 7s. 6d. to 6s. 6d. per day; fitters and engine-drivers, 11s. to 8s. per day; carpenters, 9s.; bricklayers, 10s.; railway maintenance men, 8s.; skilled labourers, 8s. to 7s. per day; general labourers, 6s. 6d. per day; youths and boys, 5s. 6d. to 2s. 6d. per day.

Municipal Works.—From the last published accounts of the Newcastle City Council, a copy of which has been kindly supplied to me by Mr. E. S. Holland, J.P., Town Clerk, I find that the expenditure in the city for labour, materials, and the general maintenance and repair of the streets, public recreation reserves, public baths, and sea-bathing places, electric lighting, &c., has been £17,233, and the estimated expenditure for the current year for similar purposes is £17,548. The Council has at present in its employ 12 men at 8s. per day; 6, at 7s. 6d. per day; 1, at 7s. per day; 1, at 3s. 10d. per day, including 1 mechanic, 1 mason, 1 carpenter, 1 gardener, 1 quarryman, 1 pavier, 2 drainers, 12 ordinary labourers. In addition to these, the Council employs at the Electric Lighting Station the manager at £5 per week, 1 driver, 1 fireman, and a line repairer at £2 10s. per week each; 1 labourer at £2 8s.; and 1 engine-cleaner at £2 2s. per week.

There are also 116 licensed drivers of public vehicles, including 33 omnibuses, 17 cabs, and 36 spring-vans, within the city.

The

The suburban municipalities are those of Wickham, Hamilton, Wallsend, and Plattsburg, Adamstown, Stockton, Waratah, Lambton, and New Lambton. All of which employ a considerable number of hands in municipal works. The Hunter District Water Supply and Sewerage Board gives employment in various ways to a large number of men. There are 64 engaged in the plumbing shop, besides the Board's staff of officers numbering 35. Some idea of the extent of the Board's work may be gathered from the fact that during the year the total quantity of water supplied through the Board's various mains to the consumers representing a population of upwards of 80,000 people, was 331,651,180 gallons. This includes a supply to ships in the harbour, many of which share the benefit of the water supply to a very considerable extent, especially steamers, as much as 750 tons, and even 800 tons (180,000 gallons) having been taken at one time by a steamer.

Public Buildings.—Under the Government Architect's Department during the year 15 minor contracts for the repair, alteration, painting, and additions to public buildings, have been carried out, at a cost of £827, and employing about 40 men. At present there are in course of erection a new post and telegraph office at Stockton, costing £1,219, and employing 12 men under contract. And under the day labour system, a large chimney stack, &c., has been erected at the Hospital for the Insane, at a cost of £800, employing 5 men.

The Plague Hospital at Stockton, at which 50 men are engaged, and the cost of which will be £3,500; then there is the erection of the large post and telegraph office in the city, upon which about £20,000 is to be expended, giving employment to about 80 hands. All men, under the day-labour system, are paid at union rates.

Private Buildings.—A large flour-mill has recently been erected at Hamilton, at the cost of about £6,000, and will be ready to start work very shortly. It will then employ 10 hands. Many other business premises and private dwellings have been and are now being erected in the suburbs; and the work of the alteration and repair of buildings is in active progress. This latter has recently been particularly noticeable in the hotel buildings in the district, which have all undergone thorough repair, and given employment to a good number of hands in the process.

Government Railways.—The Railway Commissioners employ a large number of hands on the railways of the district, and at their large engine sheds at Hamilton and workshops at Honeysuckle Point, also on the working of the tramways.

Cost of Living.—First class provisions are retailed at the following rates, viz.:—Butchers' meat, 3½d. to 5d. per lb.; bread, 2½d. per 2-lb. loaf; flour, 4s. for 50-lb. bag, or £6 15s. per ton; butter, 1s. to 1s. 2d. per lb.; cheese, 8d. per lb.; sugar, 2½d. per lb.; tea, 1s. 6d. per lb.; bacon, 8d. per lb.; kerosene, 3s. 9d. per tin; coal, 10s. per ton, delivered. The miners get their coal for the cost of carting—about 2s. 6d. per ton.

House Rent.—Good four-roomed cottages cost from 7s. to 10s. per week rent, and they are in great demand at the present time. The houses are usually comfortable, and in many cases have water laid on. The miners generally live well up to their means, but quite a number of them have been provident enough to provide snug little homes for themselves and their families in the suburbs.

These various matters might have been considerably enlarged upon, but I have striven to condense them as much as possible, and I trust the information compiled in this Report will be a useful index to the nature and extent of the various channels through which the labour of the district is employed and of the results therefrom.

In conclusion, I desire to express my appreciation of the valuable aid which has at all times been given by Mr. Inspector Lynch and his staff of officers and police in the working of the local branch of the Labour Bureau, and in collecting information for me in connection with this Report. I have also to thank the officers of the Customs, Shipping, Roads and Public Works Departments, and the various business people who have so readily supplied information at my request.

I have, &c.,

W. ROBERTSON,

Clerk of Petty Sessions and Chamber Magistrate, Agent for Government Labour Bureau.

Unemployed summary for year ended 30th June, 1900.

Number registered, 278—married, 177; single, 101; number of persons dependent, 708. Cause of failure to get work—Slackness of trade, 267; sickness, 11. Where from—Victoria, 3; New Zealand, 1; Country districts of New South Wales—North, 258; South, 12; West, 4. Number sent to private employment, 39; number sent to Government works, 115.

The Labour Agent, Nowra, to The Superintendent, Government Labour Bureau,
Sydney.

Sir, Department of Labour and Industry, Nowra, 3 July, 1900.

I beg to submit my Report for the year ending the 30th June, 1900.

During the period referred to no business was transacted in connection with the branch of the Labour Bureau at this place.

The chief pursuits in the district being agricultural and pastoral, very rarely any change takes place in the state of the labour market. As a rule, sufficient local labour is available to meet all demands.

From reports received from the police, and inquiries made by me, I have ascertained that during the year there were very few unemployed in the district. Several men appeared to be unable to find permanent employment, but they could not be classed as unemployed.

Numbers of swagmen passed through the town on their way along the coast in search of work. General labourers or farm labourers can generally find employment, but it is a difficult matter for mechanics to do so.

The rainfall during the year was 60 inches. There was an abundance of grass in the district, and the yield from the crops is expected to be satisfactory.

The mines at Yalwal, Grassy Gully, and Nerriga showed good returns, and a number of men found employment. Several applications have been made for gold-dredging leases on the Shoalhaven River, which will shortly find employment for a number of men.

There was a slight improvement in trade throughout the district during the year.

The following is the current rate of wages paid :—

Bricklayers, carpenters, stonemasons	7s. to 9s. per diem.	Plumbers	7s. 6d. per diem.
Painters	7s. per diem.	Bakers	30s. per week with board.
Labourers	5s. to 6s. per diem.	Butchers	20s. to 25s. per week, with board.
Farm labourers	15s. to 20s. per week, or 10s. per week with board.	Storekeepers assistants	10s. to 30s. per week.

I have, &c.,
W. F. MARKS,
Agent.

The Labour Agent, Nyngan, to The Superintendent, Government Labour Bureau,
Sydney.

Sir, Labour Bureau, Nyngan Branch, 3 July, 1900.

In presenting this my Annual Report to you of the operations of this branch of your Department for the year commencing 1st July, 1899, and ending 30th June, 1900, I would, in the first place, do myself the honor to state that during the period some seventy-one names were registered, nearly all of which were in connection with the West Bogan scrub-cutting and clearing works.

The office was not availed of by any class of employer, not one person registering as having any position to be filled from the ranks of those registered at this office.

There were seven railway passes issued, but no refunds for such passes have, as yet, been refunded locally.

The main class of labour in this district is that of station, bush, and farm work, for which the usual remuneration is at the rate of £40 per annum, with one ration, the demand for which is more than met by the local residents.

The mining industry here is principally confined to the operations of the Girilambone Copper-mine, which, when the mine is in full work, employs some 200 miners or more. The mine practically closed down some three or four months back, and there are now only some five or six men employed to look after the mine, those previously employed having left either for Cobar or Burruga to seek employment at the copper and other mines there now working. There, no doubt, exists in the district good scope for mining prospectors with capital, but it would be utterly useless for those without capital to attempt the work. There certainly are some miners prospecting, or rather surface scratching, and no good results have so far been received, though those engaged in the work seem sanguine.

A great deal of work goes on in this large district in connection with ringbarking, scrubbing, and clearing of pastoral land, nearly all of which is done, by contract, by Chinese labour.

The West Bogan scrub-cutting department concluded its last contracts with the labour gangs, and finally closed the office here about the second week in June, most of the men, after payment for their labour, leaving for the metropolis.

The meat-preserving works here are still idle, and likely so to be whilst stock remains at the present high prices ruling, although great quantities of sheep and cattle are bought in this and the surrounding districts by the agents of meat-preserving works at Riverstone and other places.

The district here has, this year, received the best and most beneficial rain experienced for the last ten years, all the crops looking splendid, stock in good condition, and herbage plentiful; so that it is only natural to suppose that, with good returns for stock, pastoral and agricultural produce, the various holders of land will go in for more ringbarking, scrubbing, clearing, and fencing of larger areas in the near future, and thus employ a good deal of fresh labour.

There were not, during the year, any strikes or labour disputes in the district; so that the rate of wage ruling for all kinds of bush, farm, and station work remains at the rate usually quoted, viz., £40 per annum, with one ration.

I have, &c.,
JAMES C. THORNTON,
Acting Labour Agent.

The

The Labour Agent, Narrabri, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Narrabri Branch, 10 July, 1900.

The following are the particulars of the work done at this branch during the year :—

Registrations	1
Passes issued	5
Refunds	Nil.

This district is chiefly pastoral, but during nine months of the year past it has suffered very severely through drought, the losses in stock being great; consequently less hands have been employed in the tending thereof.

Agricultural pursuits have been undertaken to some extent, the result being very satisfactory, and there is a prospect of such industry developing considerably. A flour-mill has been fitted up and is now working, which no doubt will give encouragement to growers of wheat.

Timber-cutting has given employment to about 100 men all the year, and there are still some large contracts for railway-sleepers on hand.

The following wages have been paid in the town and district :—

Boundary-riders	...	£1 per week and ration.	Grocers	...	from £2 10s. per week.
Scrub-cutters	...	15s. "	Butchers—		
Carpenters	...	from 7s. to 8s. per day.	Slaughtermen	...	£2 5s. "
Bricklayers	...	8s. per day.	Assistant do.	...	£1 10s. "
Stonemasons	...	9s. "	Cart-men	...	£1 10s. and ration.
Painters	...	7s. "	Other employes	...	24s. to 30s. per week.
Wheelwrights	...	8s. to 10s.	Labourers	...	6s. per day.
Drapers	...	from £3 10s. per week.			

I have, &c.,

WALTER SCOTT,
Labour Agent.

The Labour Agent, Orange, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Orange, 14 July, 1900.

I do myself the honor to submit my Report for the year ended 30th June, 1900.

Five men were registered during the year, all of whom were assisted and found employment. There has been no demand for labour.

RATE of Wages.

Farm labourers	15s. to 20s. per week.
Miners	20s. to 45s. "

Orange is a mining and agricultural district, and is really the centre of commerce for the Western District.

The soil, which is principally red and chocolate, is suitable for the growth of all cereals, potatoes, and all farming produce, and is largely cultivated.

Potatoes are grown equal to those from any part of the Colony; turnips, rape, maize, pumpkins, and beet-root also grow well. I am informed that some of the land has been cultivated since 1857, and never manured; of course, it does not grow quite as good a crop as when it was new land. More suitable soil could not be found for fruit-growing, and the fruit yield proves the suitability of the soil. It is acknowledged that the cherries grown in Orange are superior to any in the Colony, and all other fruits compare favourably with those from other parts.

The average surplus produce sent out of Orange district per annum, is as follows :—

Potatoes	...	98,597 bags.	Oats	...	5,175 bags.
Turnips	...	870 "	Flour	...	9,662 "
Pumpkins	...	1,504 "	Chaff, hay, straw	...	13,367 tons.
Wheat	...	15,136 "	Fruit	...	38,010 cases.

Sheep and cattle come from all parts, and are sold in open market. Last year about 75,000 sheep, 5,000 cattle, and 800 horses were sold.

There are large deposits of basalt in the district. The basalt is excellent for foundations, gutters, &c.; blocks can be sawn 3 and 4 feet square. Limestone can be found 4 miles from the town. Sandstone, freestone, flagstone, slate, granite, marble, pottery and paint clays, are also to be found in large quantities. Timber is scarce, but cypress-pine, ironbark, and stringybark can be obtained in the vicinity.

The district is regarded by the medical faculty in Sydney as a health-resort. People come here from Forbes, Dubbo, Bourke, Hay, and other hot centres for the benefit of their health. The climate is healthy, bracing, and salubrious.

Orange has the finest gravitation scheme of water supply in the Colony. The reservoir, which is situated about 3 miles from the town, contains 121 millions of gallons; it has been overflowing for the last two months.

There are about 600 miners constantly working on the different fields, and the gold won during the year ended 31st December, 1899, is as follows :—

From alluviums	...	1,380 oz.	value £ 5,150
„ quartz	...	9,462 oz.	„ 36,665
Total	£41,815

The value of mineral products from the district, including gold (principally), silver, and copper, from 1857 to 1898, is estimated by the Department of Mines to be £1,758,799. Various gold and copper mines are now at work in the district.

I have, &c.,

HENRY J. LEARY,
Labour Agent.

The

The Labour Agent, Queanbeyan, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Labour Bureau, Queanbeyan Branch, 4 July, 1900.

I have the honor to report that, during the twelve months ending 30th June, 1900, there have been seven registrations of unemployed at the Queanbeyan Branch. Of these all have found employment.

These applicants were all from this and adjacent districts.

The limited patronage this agency receives may be explained by the fact that comparatively few unemployed strangers visit the district.

There are a large number of local men whose small holdings only occupy a portion of their time, and who are always on the look-out for a job. These are well known by the local employers of labour, and either party has little occasion to seek the assistance of the Labour Bureau.

During the past year the bridge over the Queanbeyan River has been completed.

There is every prospect of a good spring and an abundant harvest in this district; and, as a consequence, agricultural operations are in full swing, giving good employment for local agricultural labour.

The district has been free from industrial disputes during the past year.

The following are the current rates of wages obtaining in this district:—

Bakers	40s. to 45s. per week.	Housemaids	4s. to 8s. per week, with board.
Blacksmiths	30s. to 40s. ,,	Labourers (agricultural)	4s. to 6s. per day.
Boundary-riders	15s. ,, and rations	Laundresses	4s. ,,
Butchers	15s. to 25s. ,, and board.	Miners	20s. to 35s. per week.
Carpenters.....	7s. to 9s. per day.	Painters.....	8s. to 9s. per day.
Carters	5s. ,,	Saddlers.....	30s. to 35s. per week.
Compositors	30s. to 40s. per week.	Station-hands	15s. to 20s. ,, and rations
Cooks (female and general servants)	8s. to 14s. ,, with board.	Storekeepers' assistants	20s. to 50s. ,,
		Wheelwrights	40s. to 50s. ,,

I have, &c.,

S. H. JEFFREYS,

Labour Agent.

The Labour Agent, Tamworth, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Tamworth, 17 July, 1900.

I have the honor to report that no work has been done at this branch of the Labour Bureau during the year ending the 30th of June, 1900.

The beginning of the year was rather severe; but during the last few months splendid rains have fallen, and the surrounding country now looks very prosperous.

The areas under wheat have been considerably augmented, and farmers look forward to a good yield. The cultivation of tobacco has also been considerably developed.

Mining by dredging is shortly to be commenced at Nundle and on the MacDonald River, near Bendemeer, which is not far from here. Other mining operations are not characterised by any great activity. The few prospectors and fossickers about appear to gain a bare living.

At present there is great activity in building circles, and many tradesmen and labourers find constant employment on the different buildings in course of erection.

There are very few, if any, unemployed in this district. No demand has been made by employers for men at this office.

The rates of wages, as near as it is possible to obtain from the various local employers, are as follows:—

Drapers	30s. to 60s. per week.	Compositors and printers	40s. to 45s. per week.
Ironmongers	30s. to 60s. ,,	Hairdressers.....	30s. to 60s. ,,
Grocers	40s. to 70s. ,,	Coach-builders, &c.....	35s. to 75s. ,,
Store carters.....	20s. to 35s. ,,	Butchers	30s. to 45s. ,,
Millers	45s. to 90s. ,,	Labourers	5s. to 8s. per day.
Saddle and harness makers ...	40s. to 70s. ,,		

I have, &c.,

VINCENT BROWN,

Agent.

The Labour Agent, Tenterfield, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Tenterfield, 2 July, 1900.

I have the honor to submit herewith my Annual Report for the year ending 30 June, 1900.

During the year no persons have been registered, and no inquiries have been made for labour.

A fair amount of road and bridge work has been carried on by contract and day labour, and has fairly absorbed the supply available.

There is no demand for labour other than what can be supplied by the local market.

The following rates of wages paid in this district, are as follows, viz.:—

Bakers	25s. to 30s. per week.	Bootmakers	40s. per week.
Butchers	25s. to 30s. ,,	Drapers and grocers	40s. to 50s. per week.
Carpenters.....	8s. to 10s. per day.	Carters and stockmen ...	15s. to 20s. per week and rations.
Blacksmiths	8s. to 9s. ,,	Labourers (ordinary)	7s. per day.
Tinsmiths	8s. to 10s. ,,	Farm labourers	15s. per week and rations.
Compositors	40s. per week.	Domestic servants	7s. to 10s. per week and their keep.

There is a good demand here for thoroughly competent general domestic servants, as complaints are frequently made as to the incompetency of the ones obtainable in this district.

I have, &c.,

L. A. McDOUGAL,

Labour Agent.

The

The Labour Agent, Wagga Wagga, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Wagga Wagga, 5 July, 1900.

With reference to the state of the labour market, I have the honor to report that the demand for artisans in the building trade has been very large, owing partly to the increased number of houses being erected in the town. The erection of the new Court-house in Wagga Wagga, and the extension of the railway from The Rock to Lockhart have also absorbed a considerable number of tradesmen—carpenters, labourers, and others. The rate of wages has been fully up to previous years, *i.e.*, ordinary bush labourers, 15s. to 25s. per week, exclusive of rations. The supply of ploughmen is short, and great difficulty is experienced by the farmers in finding labour. The men employed upon the railway deviation works have materially reduced the demand for unskilled labour.

The favourable outlook, owing to the prospect of splendid seasons, has also been an important factor in the prosperity of the district. The rainfall for the past twelve months has been the most copious experienced here since 1894. During the past six months it has slightly exceeded 17 inches.

There have been no railway passes issued during the twelve months ended 30th June, 1900.

I have, &c.,

PHILIP E. ELDERSHAW,
C.P.S., and Labour Agent.

The Labour Agent, Walgett, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, 1 July, 1900.

I have the honor to forward herewith Annual Report of this branch for year ending 30th June, 1900. Only one applicant, a carpenter, has availed himself of the privilege of being registered, and obtained employment immediately afterwards. The advantages offered by this office are not availed of as much as the working man should like, as the employers of labour are more content to engage the surplus labour at their own door, thus avoiding expense. No works of any importance have been carried on owing to the terrible drought that has existed for so long. Road work, building, etc., has been at a stand still for want of grass and water for the horses. The main employment for labourers has been scrub cutting, and employment of general hands on stations a little ring-barking; but very little other improvement has been resorted to.

With the prospect of better seasons, as the drought appears to have broken, and thus saving the lambs to some extent, and plenty of herbage and grass appearing, the shearers and general labourers should reap a big reward during the coming year. The expenditure of money on improvements and artesian well-boring will also be large. The general rates of wages are as follows:—Married couples, £50 to £60 per annum; cooks, 20s. to 30s. per week; boundary-riders, 15s. to 20s. per week and rations; general hands, 20s. per week and rations; shearers, £1 per hundred; carpenters, 10s. per day. There is plenty of surplus labour to meet all contingencies.

I have, &c.,

E. ANGOVE.

The Labour Agent, Wilcannia, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Wilcannia, 30 June, 1900.

I have the honor to report that since the opening of the Government Labour Bureau at this place no business of any kind has been transacted.

The only labour employed in this district is station hands, and the current rate of wages is as follows:—Boundary-riders, 10s to 20s. per week; bullock and horse drivers, 25s. per week; cooks, 20s. to 25s. per week; married couples, £65 to £80 per annum. Shearers are paid at the rate of 20s. per 100 sheep, and rouseabouts are paid during shearing time from 20s. to 25s. per week. So far as I am able to judge, it does not appear that there are many unemployed in the district, although the supply of such labour as the district requires is easily met by the local supply.

I have, &c.,

J. LAIDLAW,
Labour Agent.

The Labour Agent, Wollongong, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Wollongong, 4 July, 1900.

I have the honor to report that during the year ended 30th June, 1900, the names of two men seeking employment at this branch of the Government Labour Bureau were registered in the books kept at this office, whilst several called seeking work, but declined to be registered when none was available.

On the whole, trade has been good in this district, the result being that there are comparatively few unemployed. In connection with the construction of the Port Kembla Harbour Works, initial operations have commenced, and after the question of the land resumptions, which is now engaging the attention of the Supreme Court, is settled, the works will be in full swing, and employment found for several hundred men. Local opinion here is strong that if the Labour Bureau is requested to furnish part of the labour in the construction of the works, those already registered in my books should receive the first consideration. On the completion of this gigantic undertaking, iron-works and several other important industries will spring up, and it is confidently predicted by experts and those best able to form an opinion, that Illawarra will be the great manufacturing centre, not only in New South Wales, but in the whole of Australasia.

Prospects for the ensuing year are exceedingly bright, and it is earnestly hoped the above predictions will be realised.

I have, &c.,

H. S. BINGLE,
Labour Agent.

The Labour Agent, Young, to The Superintendent, Government Labour
Bureau, Sydney.

Sir,

Young, 9 July, 1900.

I have the honor to report that during the year ending 30th June last four men obtained railway-passes at this branch, three of whom obtained employment. The labour market throughout the year has been, on the whole, fairly satisfactory. There would appear to have been but few unemployed in the district, a marked decrease in the number of men in search of work being noticed.

The rainfall for the year was 27 inches, of which 16 inches have fallen since the 1st January. The present season, I am informed, is the best experienced here for the past thirty years. Water and herbage are in abundance, and the young crops look most promising.

The rates of wages are as follows—Carpenters, 8s to 10s per day, miners, 50s per week, bricklayers, 9s. to 10s per day, blacksmiths and tinsmiths, 40s to 50s. per week, painters, 8s per day, stonemasons, 11s. per day; flour mill hands, 25s. to 80s per week, and farm labourers, 15s. to 20s per week.

I have, &c,
R. W. COLLINS,
Agent.

No. 1.

Minute by the Premier (the Right Honorable G. H. Reid, P.C., M.P.).

Sir,

Chief Secretary's Office, Sydney, 17 May, 1899.

I am directed by the Chief Secretary to transmit to you, herewith, copy of a minute by the Right Honorable the Premier, on the subject of the Unemployed, together with copy of a minute by the Honorable the Minister of Public Instruction appointing a Board to deal with the question. Dated 18th March, 1899.
Dated 10th May, 1899.

2. I am to add that you have been appointed Chairman of the Board, and that the other members have been duly requested to place themselves in communication with you in the matter.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Honorable Sydney Smith.

Subject :—The Problem of the Unemployed.

The Treasury, New South Wales, Sydney, 18 March, 1899.

FOR many years, at intervals, and constantly since 1890, the question of the Unemployed, and what to do with them, has been pressing itself upon public notice.

Public works have been pressed on from time to time, but the trouble has proved to be one which is not to be solved in that way.

On Monday last I received a deputation, consisting of a number of citizens and some representatives of the unemployed, who have devoted much time, and evident ability, to the subject; and these gentlemen have submitted an outline scheme.

Without entering upon the various proposals therein set forth, at the present time, I consider that something should be done at once to deal with the evils made so manifest.

By general consent, the persons to be dealt with can be roughly divided into three classes. (1) The able-bodied unemployed, equal to any reasonable degree of manual labour. (2) The unemployed who cannot do a fair day's manual labour mostly because of advancing years; and (3) Those who wish to live at the expense of others, without work—in other words, the "loafers."

For the first class there ought always be work available, if not in private employment, in carrying out Public Works, the term "Public Works" including the improvement of the vast public estate of the Colony, by means of an improved supply and distribution of water in the country districts, by means of drainage works, and by means of clearing and fitting lands for settlement and production. For the second class more advanced methods will be necessary. I allude especially to the older men. If many of these could earn a few shillings a week, their case would be provided for, in the homes of those related to them. That means work in some metropolitan area. Others of the same class without families settled in Sydney might find a home and work on some labour settlement farther off. In either case their labour to some small extent would come into competition with the labour of others, but that cannot be allowed to stop the way, though it may have to be considered in the methods of working.

So far as the able unemployed are concerned, there would not be so many complications, because clearly work can be found for them of advantage to all and of injury to none.

There remains the worst class of the unemployed—those who will not work, however destitute, if they can live upon the community; that is to say, upon people nearly as poor as themselves. At present many members of this class could be dealt with under the Vagrant Act, but the public would still have to support them. It does seem feasible that the system adopted in the case of vagrant boys with so much advantage to the State, might be adopted, in a modified form, in dealing with vagrant adults; in other words, instead of sending them to prison they could be sent to work, under healthy conditions, enabling them to learn an occupation, and compelling them to work for their food and shelter so long as they would not work upon their own account, as every other poor person has to do.

If the Cabinet concurs in these views, the next point is, what shall be done? I may say at once that I would be sorry to see these new departures carried out by merely and exclusively official agencies. A very high degree of ability, very rare qualities of discretion, and, above all, the most earnest zeal, are all vitally necessary in such difficult and, we must admit, experimental developments. At the same time the responsibility of the Government to the public for all that is done must be fully preserved.

Following upon these lines, I recommend that a Board be established to advise the Government and to carry out practically the objects herein set forth, and that the Board consist of three Ministers of the Crown and nine other members, with power to make rules for the conduct of their proceedings and to make proposals to give effect to the objects set forth, and with power to carry out the work subject in all respects to the approval of the Governor-in-Council.

G. H. REID.

No. 2.

Minute by the Minister for Public Instruction, Labour and Industry (Hon. J. A. Hogue, M.P.)

Subject :—Appointment of a Board to deal with the question of the Unemployed.

Sydney, 10 May, 1899.

IN view of the Right Honorable the Premier's minute of the 18th March last on the subject of dealing with the unemployed labour in the Colony, I beg to recommend to the Honorable the Chief Secretary that a Board be appointed, consisting of the undermentioned gentlemen, to advise the Government in the matter, and to be endowed with such powers as are particularly set forth in the Premier's minute :—

The Honorable SYDNEY SMITH (Chairman).
JOHN KIDD, Esq., M.P.
SAMUEL THOMAS WHIDDON, Esq., M.P.
JOSIAH THOMAS, Esq., M.P.
The Rev. THOMAS ROSEBY, LL.D.
The Venerable Archdeacon LANGLEY.

No. 3.

The Principal Under Secretary to The Chairman, Unemployed Advisory Board.

Sir,

Chief Secretary's Office, Sydney, 29 June, 1899.

I am directed by the Chief Secretary to inform you that Mr. George Black has been appointed as an additional member of the Board to deal with the question of the Unemployed, and that Mr. Black has been duly notified of such appointment, and requested to place himself in communication with you as Chairman of such Board.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Seen.—4/7/99.

No. 4.

First Progress Report of the Unemployed Advisory Board.

54, Bridge-street, Sydney, 14 July, 1899.

To the Right Honorable G. H. Reid, P.C., M.P., Premier,—

Sir,

We, the members of the Board duly appointed to advise the Government in accordance with your minute of the 18th March, 1899, and that of the Honorable the Minister for Public Instruction, hereinafter set forth, have the honor to submit the following Progress Report:—

The Board met on Tuesday, 23rd May, 1899, at 2:30 p.m. The Secretary read the following minutes:—

Subject:—The Problem of the Employed.

The Treasury, New South Wales, Sydney, 18 March, 1899.

FOR many years, at intervals, and constantly since 1890, the question of the Unemployed, and what to do with them, has been pressing itself upon public notice.

Public works have been pressed on from time to time, but the trouble has proved to be one which is not to be solved in that way.

On Monday last I received a deputation, consisting of a number of citizens and some representatives of the unemployed, who have devoted much time, and evident ability, to the subject; and these gentlemen have submitted an outline scheme.

Without entering upon the various proposals therein set forth, at the present time, I consider that something should be done at once to deal with the evils made so manifest.

By general consent, the persons to be dealt with can be roughly divided into three classes. (1) The able-bodied unemployed, equal to any reasonable degree of manual labour. (2) The unemployed who cannot do a fair day's manual labour mostly because of advancing years; and (3) Those who wish to live at the expense of others, without work—in other words, the "loafers."

For the first class there ought always be work available, if not in private employment, in carrying out Public Works, the term "Public Works" including the improvement of the vast public estate of the Colony, by means of an improved supply and distribution of water in the country districts, by means of drainage works, and by means of clearing and fitting lands for settlement and production. For the second class more advanced methods will be necessary. I allude especially to the older men. If many of these could earn a few shillings a week, their case would be provided for, in the homes of those related to them. That means work in some metropolitan area. Others of the same class without families settled in Sydney might find a home and work on some labour settlement farther off. In either case their labour to some small extent would come into competition with the labour of others, but that cannot be allowed to stop the way, though it may have to be considered in the methods of working.

So far as the able unemployed are concerned, there would not be so many complications, because clearly work can be found for them of advantage to all and of injury to none.

There remains the worst class of the unemployed—those who will not work, however destitute, if they can live upon the community; that is to say, on people nearly as poor as themselves. At present many members of this class could be dealt with under the Vagrant Act, but the public would still have to support them. It does seem feasible that the system adopted in the case of vagrant boys with so much advantage to the State, might be adopted, in a modified form, in dealing with vagrant adults; in other words, instead of sending them to prison they could be sent to work, under healthy conditions, enabling them to learn an occupation, and compelling them to work for their food and shelter so long as they would not work upon their own account, as every other poor person has to do.

If the Cabinet concurs in these views, the next point is, what shall be done? I may say at once that I would be sorry to see these new departures carried out by merely and exclusively official agencies. A very high degree of ability, very rare qualities of discretion, and, above all, the most earnest zeal, are all vitally necessary in such difficult, and, we must admit, experimental developments. At the same time the responsibility of the Government to the public for all that is done must be fully preserved.

Following upon these lines, I recommend that a Board be established to advise the Government and to carry out practically the objects herein set forth, and that the Board consist of three Ministers of the Crown and nine other members, with power to make rules for the conduct of their proceedings and to make proposals to give effect to the objects set forth, and with power to carry out the work subject in all respects to the approval of the Governor-in-Council.

G. H. REID.

Subject:—

Subject :—Appointment of a Board to deal with the question of the Unemployed.

Sydney, 10 May, 1899.

IN view of the Right Honorable the Premier's minute of the 18th March last on the subject of dealing with the unemployed labour in the Colony, I beg to recommend to the Honorable the Chief Secretary that a Board be appointed, consisting of the undermentioned gentlemen, to advise the Government in the matter, and to be endowed with such powers as are particularly set forth in the Premier's minute :—

The Honorable SYDNEY SMITH (Chairman).
 JOHN KIDD, Esq., M.P.
 SAMUEL THOMAS WHIDDON, Esq., M.P.
 JOSIAH THOMAS, Esq., M.P.
 The Rev. THOMAS ROSEBY, LL.D.
 The Venerable Archdeacon LANGLEY.
 The Very Rev. Dean SLATTERY.
 The Rev. G. D. BUCHANAN.
 The Rev. Dr. J. H. L. ZILLMANN.
 JAMES WATSON, Esq.
 CLEMENT LEWIS, Esq.
 WILLIAM FRANCIS SCHEY, Esq.

J. A. HOGUE.

George Black, Esq., was appointed an additional member of the Board on the 29th June, 1899.

Fourteen meetings of the Board have been held. Officers of various public Departments and several members of the public have attended the meetings and furnished information upon matters connected with the subject of the unemployed.

Efforts were made by the Board to obtain reliable information as to the numbers and classes of persons at the present time out of employment in the Colony. The Board, however, early recognised that, while there can be no doubt whatever as to the existence of deep and widespread distress resulting from the want of employment by a large body of willing workers, no really reliable data can be obtained as to the actual number of persons so unemployed, and of those more or less dependent upon them. The number registered at the Government Labour Bureau is very large, and the Superintendent (Mr. Creer) estimates the number of men at present unemployed in Sydney and suburbs at between 3,000 and 4,000, and from 8,000 to 10,000 in the whole Colony, with a strong tendency to increase, owing to the effects of the drought and the winter season. The Board feel, however, that the number registered at the Bureau cannot be accepted as any true indication of the extent of the evil.

The Board find that amongst the large number of men at present unemployed the proportion of skilled labourers is small, the great majority even of the able-bodied men being of the class usually termed "unskilled labourers."

A number of suggestions for dealing with the unemployed problem have been submitted to and considered by the Board, and in examining into the merits of these suggestions the Board have refrained from taking into consideration any schemes which could be regarded merely in the light of relief works, and have concentrated their attention only upon works which could be considered as reproductive.

In view of the serious outlook for the winter, the Board decided to ask the Government to give their consideration to several works, the expeditious carrying into operation of which might help to relieve the present necessity, leaving the larger question of providing permanent means for dealing with the unemployed to a later report. With this object in view, communications have from time to time been addressed to you, urging that the consideration of the Government be given to the following subjects :—

1. *Forest-thinning*.—Information has been furnished to the Board by an officer of the Forestry Branch, to the effect that upwards of 200,000 acres of forest land have been thinned, with satisfactory results. Not only has the expenditure on forest-thinning proved reproductive to the extent of increasing the number of trees, which averaged in a natural forest from eight to fifteen to the acre, to eighty marketable immature and fifty marketable mature trees to the acre in the thinned pine forests, but it has also resulted in increasing the grazing capabilities of the land, raising the assessed rent value in some cases from 2½d. to 5½d. per acre in red-gum forests, and increasing the rental fully 1d. per acre in the pine forests. At the very least, the value of our future timber crops has been increased 300 per cent. by reason of the thinning operations carried out. With such satisfactory evidence before them, the Board had no hesitation in suggesting that the work be proceeded with on as extensive a scale as possible. They further suggested that parties of five men, instead of ten, be formed, as there is less difficulty in arranging suitable gangs of five.

2. *Bogan Scrub Lands*.—The Board were pleased to learn that further blocks were to be thrown open, and urged that the work be carried out in as extensive a manner as possible, in order to provide work for some of the unemployed of both city and country. They also suggested that the men should be sent out in parties of five.

3. *Eradication of Prickly-pear*.—It has been represented to the Board that large areas of vacant Crown land are being rendered useless by reason of the growth of prickly-pear, and that although private owners and conditional lessees are required to eradicate the pest, it has been found impossible to fully enforce the provisions of the Act in respect to private lands, because the Government have virtually taken no steps to cope with it, except by letting certain land on improvement lease. Large areas of reserves and Crown lands thickly affected with prickly-pear remain uncleared, forming a menace to those who are making praiseworthy efforts to deal with the increasing pest. In many cases the reserves form a series of seed-beds from which the pear is distributed, causing serious losses. The Board, therefore, strongly urged that energetic measures be taken at once to operate on the more thickly-infested reserves in the Hunter District, leaving other lands to be dealt with later. This work, the Board were informed, will ultimately repay the Government, not only by improving the land operated upon, but by saving country so far not affected; and, further, it will afford employment to a number of able-bodied men.

4. *Conversion of the City Tramway system, a work already authorised*.—The Board considered that, if proceeded with on a larger scale, this work might afford employment to a number of the skilled labourers amongst the able-bodied unemployed.

5. *The Grading of the Southern Railway Line near Murrumburrah.*—The Board were gratified to learn that the carrying out of this work had been sanctioned, and that it was estimated to provide employment for at least 2,000 men. They were anxious that this labour should not be secured by recent arrivals from the other Colonies, and suggested that, in addition to the applicants being required to produce electors' rights, in this and similar classes of work, the whole of the men to be employed should be registered at the city or country agencies of the Labour Bureau. Learning that it had been decided to engage all the men on the spot, the Board respectfully pointed out, under date 12th June, that such a course would be very inconvenient to the unemployed of the metropolitan area, some of whom might go down at considerable expense, and then find that they were unsuitable for the work. The Board, therefore, suggested that a quota of the men from the metropolitan area should be selected through the Labour Bureau in Sydney, and that an officer of the Bureau should be instructed to attend at Harden and ascertain whether the country applicants could produce satisfactory evidence that they were residents in the Colony, and not recent arrivals from the other Colonies attracted by the announcement of the work, and also to facilitate the employment of the men.

6. *Duplication of the Milson's Point Railway Line beyond St. Leonards.*—The Board were gratified to find that the Railway Commissioners, recognising the importance of giving an improved service to this rapidly-growing district, had recommended the Government to ask Parliamentary sanction for the necessary funds to carry out this reproductive work. The sum of £50,000 was voted last year towards the duplication of portion of existing railway lines, and the Board, not being aware of any reason for delay in proceeding to carry out this work, respectfully urged that steps be taken to proceed with it as soon as possible.

This work has the merit of providing reproductive employment upon which the married, unskilled labourers of the metropolitan area, who find a difficulty in leaving their homes, could be employed in the neighbourhood during the most trying season of the year.

7. *Drainage of Land in the Gwydir District.*—The Board ascertained that some time ago proposals were made for the drainage of certain lands in the Gwydir District, a work which would benefit half a million acres at the comparatively small cost of £18,000. The proposal had already been favourably considered by the Ministers for Lands and Works, and the carrying of the scheme into operation would not only give employment to a number of unskilled labourers, but would render a large area of Crown land available for settlement. It appears, however, that there is a legal difficulty in the way, but the Board are hopeful that this may be overcome.

8. *Repainting Iron Bridges on the Ryde Road.*—The Board were informed that the three iron bridges on the Ryde Road are urgently in need of repainting, and therefore asked the Government if they could see their way clear to carry out this work, which would give employment to a number of men who are only able to perform the lighter class of labour.

9. *North Sydney Cemetery and Lane Cove River Bridge.*—The clearing of land for cemetery purposes at North Sydney, and the construction of a road and approaches to the proposed bridge over the Lane Cove River near Chatswood, it is estimated, will afford employment to 100 men during the winter months. The construction of the road and bridge would afford access from the Field of Mars to Chatswood and the new suburbs on the North Shore line.

10. *Repainting Public Buildings.*—It has been represented to the Board that considerable depreciation of property is resulting from delay in repainting certain public buildings, including the General Post Office, Public Works Office, Lands Office, Colonial Secretary's Office, Little Bay Hospital, and other public buildings in the country. The Board urged that this class of work be proceeded with as expeditiously as possible, as it would have the merit of preserving public buildings and giving employment to a number of men.

11. *Road to Burragorang Mining Field.*—Representations have been made to the Board that the mining field at Burragorang, although only in the prospecting stage, is deserving of the favourable attention of the Government. At least one of the mines has produced encouraging results, notwithstanding the expense the owners have been put to in consequence of being compelled to convey the ore over an almost impassable road in order to have it treated at the Dapto Works. It is said that the present condition of the road not only retards the development of the land already taken up, but also seriously interferes with other prospecting operations. The construction of this road would give employment to a number of the unemployed, resident in the district, or sent up from Sydney for the purpose.

12. *Glebe Island.*—The Board visited Glebe Island for the purpose of ascertaining whether employment could be profitably found for a number of able-bodied men, and in the course of their inquiries they were informed that about 225 men are at present employed in obtaining and carrying stone for the approaches to the Glebe Island Bridge and some reclamation works. The work in connection with the approaches will, it is stated, be completed in about four or five weeks time, when at least 100 men will be thrown out of employment, unless other work be found for them.

The Board were favourably impressed with the possibilities of doing valuable work on this Island by cutting part of it down and utilising the material for reclamation and the construction of walls round the Island for wharfage purposes. The execution of this work would render available valuable sites for warehouses, factories, timber yards, &c., and provide about 4,000 feet frontage to White and Johnstone's Bays, with a depth of water (after dredging the silt) varying from 28 to 38 feet, and about 2,000 feet frontage to Rozelle Bay, where the depth of water has not yet been definitely ascertained.

The area of Glebe Island is about 33 acres, and with the reclamations necessary to get deep water, without interfering with the fairway, an area of fully 50 acres would be available. With the exception of the portion used for the Abattoirs the Island is at present practically unoccupied.

It appeared to the Board a great pity that such a valuable asset as this could be made should so long have remained unimproved. The Government wharfs already erected are extensively used, and even the additional accommodation now being provided at Darling Harbour will, it is said, be readily taken up when completed. As the demand for wharfage accommodation is in a westerly direction the Board have no doubt that when the work now suggested is completed the Government will find no difficulty in putting it to practical and remunerative uses.

Although the Board were strongly of the opinion that the Island improvements, herein suggested, can be defended irrespective of railway communication, they nevertheless felt that the time is not far distant when the Government will think it desirable to take into consideration the question of extending the railway, from the suburban line near Petersham, to the Island, and possibly also connecting with the
Southern

Southern line. These connections would add materially to the value of the Government property by affording facilities for the growing export trade, enabling goods to be taken direct from the ship's side to the country, and to warehouses, depôts, or factories established on the Island for subsequent distribution.

The congested traffic in the tunnel from Redfern Station to Darling Harbour would also be relieved. The improved tram service to Harris-street, with the prospect of an extension westward, owing to the new bridge, will afford easy access to the Island from the business part of the metropolis.

The work of partly cutting down, reclaiming, and constructing walls on this valuable property should, in the opinion of the Board, be carried out without further delay. It would have the merit, not only of giving continued employment to the men already at work there, and whose time will shortly expire, but additional hands to the number of 300 or 400 could be profitably employed on this important undertaking.

The work could be carried on without interfering with the Abattoirs, although eventually, if it is decided to retain them on this Island, it might be found advisable to make alterations to suit the changed condition of the surroundings.

It will be seen that the foregoing include the suggested expediting of works for which money has already been voted or Parliamentary sanction obtained, and if expeditiously carried out they would afford relief to a large proportion of the unemployed during the most trying time of the year. Doubtless there are numerous works other than those mentioned by the Board which might be undertaken, and they suggest that the various public Departments be urged to expedite the carrying out of such as are in a sufficiently forward state of preparation for early execution.

In dealing with the larger question of devising some scheme by which the unemployed problem may be more permanently treated, the Board paid visits to the Government Asylums at Rookwood, Parramatta, and Newington, to the Hawkesbury Agricultural College, Pitt Town Casual Labour Farm, and other places.

During their visit to the Asylums the Board ascertained that a large percentage of the inmates were capable of performing light work—many of these men having been drawn thither owing to their inability to obtain suitable work in private employment. While these places offer a temporary home, there is evidence of unsuitableness in their surroundings, which renders it impossible to satisfactorily employ the men in any class of remunerative work.

The Board find that there is a considerable number of men similarly circumstanced who, from various causes, are unwilling to seek admission to the Government charitable institutions, preferring to suffer their privations in silence and unobserved, in the daily expectation that some light employment may become available.

Though some of the suggested works would furnish temporary relief to this class of labour, as well as to the able-bodied men, they will not offer a permanent solution of the difficulty. Before the question can be properly dealt with, a larger and more practical scheme will have to be submitted, and, with that object in view, the Board have now under consideration proposals which, it is hoped, will help to solve the difficult and complex question remitted to them.

Such proposals manifestly require the most careful investigation and earnest consideration, and further reference to them is reserved for a future report.

In the course of their investigations the Board deemed it to be their duty, although not properly coming within the scope of their inquiry, to make urgent representations to the Government with regard to the serious danger to the inmates of the Asylum at George-street, Parramatta, should a fire break out on the premises. The building is of five storeys; it was formerly a mill, and is entirely unsuited to its present uses. It is overcrowded with 1,100 inmates—no less than 400 of whom are helpless in hospital; and the Board were informed that in case of fire very few could possibly make their escape. The Board were pleased to learn, through their Chairman, that you had called for an inquiry with respect to the representations made, and had carried out your promise to visit the Asylum, with the result that instructions were given for the carrying out of such arrangements as would temporarily meet the requirements of the case.

The Board feel it to be unfortunate that their representations, when applied to railway matters only, have apparently been misunderstood. The recommendations of the Board were made in all good faith, and with the sole desire of doing what they could to suggest to the Government means by which the unemployed could be profitably employed, and with no wish to usurp functions or responsibilities which properly belong to trusted officers of the State. They must, therefore, conclude that the comments which appeared in the daily Press must have been made under a misapprehension of the facts. So far the Board's relations with Ministers and public Departments have been of the most cordial nature, one and all expressing an earnest desire to assist the Board in their endeavours to arrive at a solution of the unemployed question.

While anxious to work in harmony with the various Government Departments, the Board feel it incumbent upon them, even at the risk of appearing officious, to unreservedly communicate with you as the head of the Government, if in so doing they can assist in expediting the carrying out of authorised reproductive works in order to afford assistance to men whose condition, at the most trying time of the year, should appeal to the heart of every humane person in the community.

No. 5.

Appendix A.

ADDRESS BY THE CHAIRMAN OF THE UNEMPLOYED ADVISORY BOARD (THE HON. SYDNEY SMITH),
DELIVERED AT THE FIRST MEETING OF THE BOARD, HELD ON 23RD MAY, 1899.

THE CHAIRMAN: The Secretary has just read a copy of the Right Honorable the Premier's minute, authorising this Committee to inquire into and report upon the best means for dealing with the problem of the Unemployed.

It is a subject that I approach with mixed feelings of pain and pleasure—pain because of the regret I feel that any necessity should be found to exist in our extensive and rich territory for such an inquiry, and pleasure that I have, with you, an opportunity of giving a helping hand to assist in relieving those who are unfortunately in distressed circumstances.

We find that in the neighbouring Colony of Victoria, where the Unemployed question is said to be in a very acute stage, a similar inquiry is being conducted; and it is gratifying to know that here I have associated with me gentlemen of an earnest spirit, who will not be dismayed at being called upon to devise means to place this complex question on a satisfactory footing.

It should be a source of gratification to us to feel that we commence this inquiry under the favourable auspices of the Government and the sympathy of both public and press, who join with us in the desire that we will be enabled to achieve something to solve a question that has engaged the minds of thoughtful and philanthropic men in nearly every civilised country.

The fact that we are engaged in such a meritorious work for the benefit of suffering humanity should stimulate us to use our best endeavours to make our labours fruitful and of lasting benefit to those whose troubles and necessities appeal to our hearts, and whose condition claims the kind sympathy and practical help of all classes of the community.

On receipt of the Premier's minute I placed myself in communication with the Chief Secretary, who arranged with the Public Service Board for the appointment of Mr. Hull as Secretary to this Board, and that gentleman lost no time in reporting himself to me, and taking the necessary steps to acquire suitable premises wherein to prosecute our inquiry.

I also had an interview with Mr. Creer, the Superintendent of the Labour Bureau, who has promised to prepare a return showing the number of unemployed in the city and country, and to furnish other information which might be of value to the Board.

It will be as well, perhaps, in order to give as prompt relief as possible, to first consider schemes that can properly be charged to votes already sanctioned by Parliament, leaving the larger and more important questions, for which Parliamentary sanction will have to be obtained, to be dealt with later.

You will, doubtless, at this stage think that I will foreshadow some of the subjects that the Board might see fit to take up. Have no fear of my wearying you with a long address. I realise that in order to be successful our motto must be "Work, not rhetoric."

One of the matters specially referred to by the Premier is that of the unemployed whose age might prevent them from obtaining remunerative work, but who could perform light work if opportunity offered. Unfortunately, we have numbers of men of this class, many of whom have to seek temporary shelter in our charitable homes. As an indication of the extent of this class of labour, I may mention that casual inquiry from an officer of one of these institutions revealed the fact that about 400 out of 1,100, with a steadily increasing number, at present in that institution, could perform light work of a reproductive character if a suitable place were provided. And I am informed that these men would feel less hesitation about accepting Government assistance if they felt they were doing something, however little, in return for their support.

Now, I think the Board's attention might be directed to the extension of the labour settlements by setting apart areas of land where such men might be employed in producing milk, butter, vegetables, fruit, tobacco, silk, and other kinds of agricultural produce, or engaged in producing or manufacturing occupations which would not come into competition with outside trades, the surplus products, after furnishing the requirements of the settlements themselves, to be applied for the use of gaols, hospitals, and charitable institutions. If directed on practical lines, such labour should lessen the cost of these institutions and afford a light and healthy occupation for men who are at present the recipients of charitable support for which they are doing absolutely nothing in return; and thus putting them on an independent footing would tend to imbue them with a spirit of self-reliance. The selection of different climates for such settlements would also be of great benefit to those men who are suffering from such complaints as are capable of being alleviated by a change of air. An allowance might be made to the men for meritorious work, thus giving them a further incentive to exert themselves and providing them with something tangible to look forward to, and surrounding their unfortunate lot with an atmosphere of hope.

We have also been asked to consider the case of the unemployed who are able and willing to do a full day's work if opportunity offers. This at once opens up a very wide range of reproductive works for consideration, if intelligently dealt with. For the present it will be only necessary for me to refer to a few avenues of employment which might receive our consideration, although others may appeal to us as equally important, viz., the improvement of our forests, and reservation of lands unsuitable for agriculture for forest conservation and planting. Our forest lands open up an extensive field for profitable employment in timber-getting and preparation for use in connection with public works and export. The clearing of our scrub lands in a similar manner to the Bogan country is a remunerative work which can be defended on grounds of practical utility, although in this class of work, as Mr. Carruthers points out, immediate occupation is necessary to keep the scrub under in order to make the work reproductive. The clearing of reserves surrounding our public watering places, public stock routes, and other reserves ought also to find employment for a large number of men.

Then, again, more advantage might be taken under the Water Rights and Drainage Act and the Artesian Boring Act. You are doubtless aware that under these Acts the Government are empowered to borrow money to carry out national works, or works for the benefit of private landowners at their request, such as the drainage of lands, the conservation of water for agricultural, mining, or pastoral purposes,

purposes, the only charge being interest on the cost of construction, with a fair charge for maintenance, in no case exceeding 6 per cent. in all. I am satisfied that many important works under these heads could be carried out which would afford remunerative employment to thousands of men, and also be the cause of settling large numbers of families on the land.

I am aware that several large and important schemes have been suggested, and while in no way wishing to discourage such, I hope that the consideration of these will not overshadow the less extensive ones, such as the placing of weirs across our rivers, creeks, and other watercourses for the purpose of conserving water which could be turned to profitable use in the directions previously mentioned. Within the last few days a work has been approved on one of our mining fields which, at a cost of £400 (and upon which sum 5 per cent. has been guaranteed), will conserve several million gallons of water, thus enabling a considerable number of miners to be employed.

I also propose to bring under the notice of the Board several similar schemes which I think will be equally productive. During my visit to the North Coast my attention was directed to large areas of private swamp lands specially suitable for agriculture, which, if drained under the provisions of the Water Rights Act, would maintain a large population at a nominal cost per acre to the settler. A well-known resident of the Hastings and Macleay District estimates 90,000 acres available, which, with judicious outlay, could be made highly productive.

Another proposal which might receive consideration is that of improving our lands for closer settlement purposes, charging interest to occupiers on the capital cost. This is no new principle, and it has already been applied to the Bogan scrub lands, the construction of water-works, mining and other purposes, and putting down artesian bores. I am satisfied that the same course could be followed with marked success in clearing our lands for mixed farming.

To better illustrate what I mean, I would suggest that (say) 200,000 acres of good land should be set apart—a portion suitable for agriculture and a portion for grazing—divided into blocks of sufficient area to maintain a family (say) 300 acres. Clear 100 acres of it fit for the plough, ringbark part of the balance, and supply fencing wire to the occupier as is now done to the lessees of Government tanks, charging the settler interest on the capital expended and the unimproved value of the land. There may be difficulties to overcome with respect to prices for clearing, but any intelligent man with knowledge of the cost would be in a position to fix a fair price, and if thought desirable the work could be carried out under the butty-gang system, as in the case of the Murray Forest.

But these are mere matters of detail which can easily be dealt with. First let the principle of improving our land in this way be settled, and the details will naturally suggest themselves.

One of the drawbacks at the present time for successful development is the want of capital, and if the initial cost of preparing the land, &c., be overcome, there will be no difficulty in providing a class of men to become producers, contributing to the wealth of the Colony. The value of our estate will be enhanced, and we will receive fair interest on the cost; we will help to settle a happy and contented body of men on the soil, make small farms ready for occupation, which would place the land within the reach of men of small means, thereby increasing the number of producers and adding considerably to the national wealth. Concentration of settlement would also lessen the cost of administration, and enable the Government to give better facilities for bringing the produce to the seaboard—all tending to that improvement of the land which should be the aim of every Government. Private owners, who have to pay 6 per cent. for their loans, do not hesitate to borrow money for use upon the principle referred to, and why should the Government, who can obtain a plentiful supply of money at 3 per cent., hesitate to put the principle into practice also?

The third class.

To devise a method of treating the third class of men referred to in the Premier's minute requires our most earnest attention; but as this matter is surrounded with such manifest difficulties, I propose to make no suggestions at this juncture, being content to leave the full consideration of the question to the future deliberations of this Board. I would merely express an opinion, with which I feel sure you will agree, that every effort should be made to discourage the practice of relegating these men to houses of correction, but rather that strenuous exertions should be put forth to provide some home or establishment to which they might be sent for a short period and employed in reproductive work.

My remarks are merely suggestive of some of the lines upon which it might be desirable to direct our attention, along with others which will be submitted as the inquiry proceeds.

Appendix B.

STATEMENTS MADE BY WITNESSES TO THE UNEMPLOYED ADVISORY BOARD.

Tuesday, 23 May, 1899.

Mr. Creer, Superintendent of the Labour Bureau, called and examined:—

- Mr. Creer.** 1. *Chairman.*] It is a very difficult matter to give any definite information as to the number of the unemployed in New South Wales. I suppose we may have from 8,000 to 10,000, but the number fluctuates considerably from day to day. One day in Sydney we may have only 3,000 and a day or two after the number may increase to 5,000. Taken roundly, I would say that the number at present in Sydney is between 3,000 and 4,000, but the number is increasing. Over 3,000 were employed upon the Christmas work of painting the park railings. With the winter coming on the number of the unemployed will increase. Shearing operations will be much less extensive this year on account of the drought; squatters will employ as little labour as possible, so that the men usually employed in shearing, fencing, tank sinking, and other work, will flock to Sydney.
2. With regard to dealing speedily with the question, I would suggest that the Departments concerned should push on with the construction of the lines of railway already authorised; with the conversion of the city Tramways, and other authorised works. If by these means all the able-bodied men were absorbed, it would be less difficult to deal with the question of finding employment for aged men who are only capable of performing half a day's labour. Of this class I estimate that there are from 800 to 1,000, many being married men with families. If the authorised Government works were pushed on, it would relieve the great body of the unemployed.

3. *Archdeacon Langley.*] Included in the 800 to 1,000 old men referred to there are many clerks, accountants, &c., who are past heavy manual labour, yet are able and willing to work so far as their strength will permit. Outside of the able-bodied men there are upwards of 100 clerks, compositors, &c., who have registered as labourers in order to get work, and upwards of 100 retrenched civil servants are also registered as labourers; some of these have got work on the Bogan Scrub. There are between 200 and 300 clerks amongst the unemployed.
4. *Mr. Buchanan.*] I have heard it rumoured that some forest-thinning work is to be done. We are now sending 200 men to the Bogan.
5. *Chairman.*] Only twenty blocks are available for scrub-cutting operations on the Bogan. I do not know what amount of money is at present available for the purpose.
6. *Mr. Buchanan.*] We take every precaution to prevent any influx of unemployed from the other colonies, by giving railway passes only to men who hold New South Wales electors' rights, or who can produce a certificate in writing from responsible persons to the effect that they have known the applicant to be a resident in the Colony for twelve months. The system of requiring an elector's right has brought the curious fact to light that many men have never taken the trouble to apply for a right, and the adoption of this plan has resulted in a large number of electors being added to the roll.
7. *Mr. Thomas.*] I cannot give exact figures as to the number of unemployed in the country. About 200 would cover the number in the Cobar district, which I have lately visited: there are about 150 at Bourke, and 50 at Nyngan. I have not heard of any unemployed at Broken Hill.
8. *Mr. Kidd.*] I have forty-two country agencies.
9. *Mr. Thomas.*] The sending of city men to the country certainly interferes with the chances of the country unemployed to get work. I do not think that we should restrict the city unemployed to city works.
10. *Dr. Roseby.*] There are many difficulties surrounding the despatch of married men to the country, as their wives and families have to be provided for in the city.
11. *Mr. Whiddon.*] It would be most advantageous if we could provide employment for the 1,000 or 1,200 married men on the Tramway conversion or other city works. The forest-thinning and other country works could then be left to the single men, who are more suited for it. Some men have done remarkably well in the country, earning 12s. and 14s. a day at forest-thinning; others have not done so well, making only 6s. per day.
12. *Archdeacon Langley.*] If the works were put in hand, I could make arrangements by which the married men only would be employed on the Tramways.
13. *Mr. Thomas.*] In every case the starting of relief or other public works in the city has had the effect of attracting the unemployed from the country.
14. *Mr. Kidd.*] I will prepare a return of the unemployed registered at each of my agencies, showing class, married or single, trade, calling, and age of each person registered. I receive monthly returns from all the agencies.
15. *Mr. Buchanan.*] I am strongly of opinion that the aged men in Government Institutions should not be separated from their wives. I made a suggestion some time ago, and have since urged it in my Departmental reports, that an area of good land should be selected, say 2,000 acres in extent, with a barrack-square in the centre, composed of a number of two-roomed cottages surrounding a grass plot. Verandahs, a school, church, and other buildings should be provided, and a cottage should be allotted to each man and wife. The men could be employed in cultivating the land under proper supervision, thus earning the greater portion of their living, and they would be very happy in their old age. At present there is nothing but relief work for these old men who cannot do a full day's labour.
16. *Dean Slattery.*] I did not suggest that the work for these men should be on a co-operative basis.
17. *Chairman.*] If possible, I would suggest that some work about the city, such as labour in the Centennial Park, levelling, &c., should be at once authorised, in order to meet the pressing necessity for present relief.
18. *Archdeacon Langley.*] These old men could do stone-breaking work. We should establish stone-breaking depôts, and these men should be permitted to break so many yards per week for use on Government roads, railways, &c. The Railway Commissioners at present obtain their ballast by contract; it is broken by machines, and the argument is used that the employment of aged men to break stone for their purposes would only throw out of employment those men who are now doing the work for the contractors.
19. *Dr. Zillmann.*] The Railway Commissioners use a great many sleepers. We have sent men up to Narrabri to cut sleepers, but they complain that they cannot make a living out of it.
20. *Archdeacon Langley.*] The land at the Pitt Town Co-operative Settlement is not of good quality, and the water supply is deficient. It is of no use sending more men up there, as there is no room for them.
21. With regard to the Railway deviation works, on which a large number of men were employed through the Labour Bureau, many of these men resigned and returned, complaining of the attitude of the overseers. This question is now the subject of inquiry.
22. I understand that the deviation works on the Southern Line will give employment to 1,000 men.

Mr. R. D. Hay, Forestry Branch, called and examined:—

23. *Chairman.*] 115,300 acres of pine forest lands at Narrandera have been thinned at an average cost of 4s. 5d. per acre, and 97,300 acres of red-gum forest on the Murray River have been thinned at an average cost of 7s. 6d. per acre. Most of this work was carried out by contract and butty-gang system; but it has been found in some of our thinning operations it has been carried out more cheaply by day-labour, at a wage of 6s. per day.
24. The effect upon the thinned pine timber has been shown to be in two years a growth of 6 feet in height and 5 inches in girth, in comparison with 2 feet in height and 1½ inch in girth for unthinned pine in the same forest. The number of pines reaching maturity in a natural forest may be set down at an average of from eight to fifteen to the acre, whilst it is possible by consecutive thinning to achieve results averaging eighty marketable immature, and fifty marketable mature, pines to the acre. The present rate

R. D. Hay. for mature pine received by the State is 2s. 6d. per tree, so that the sale of two trees to the acre will more than cover the cost per acre of the thinning. The price for immature pine is 9d., and the time required for maturing is thirty years.

23 May, 1899.

25. With regard to the red gum, this variety is also a profuse seed-bearer; the seed, when shed, as a rule lies until washed by the annual overflow of the river and deposited with silt and debris in drifts, where it propagates, resulting in a dense growth of seedlings. These shoot up rapidly to the small sapling stage, when competition ensues, and if unassisted by thinning, with the exception of the more vigorous growths here and there, they die off, resulting in a small percentage of mature timber.

26. By actual measurement the growth of the red gum thinned in 1891 has been shown to increase as much as $\frac{1}{2}$ inch in girth per annum, in comparison with a scarcely perceptible increase in the unthinned portions of the same forest, and the proportion of crop to the acre that will reach marketable size promises to be very large, compared with the natural forest.

27. The cost of this class of thinning is heavier than pine, as the saplings require to be grubbed; but the value of the timber when marketable is very much greater.

28. Not only has the money expended on forest-thinning proved remunerative, to the extent already mentioned, but it has also resulted in increasing the grazing capabilities, and consequently enhanced the value of the land. In the red-gum forest some land that was let at 2 $\frac{3}{4}$ d. per acre, before thinning, was afterwards assessed at 5 $\frac{1}{4}$ d. per acre; and the increased rental on some of the pine forests would be fully 1d. per acre. At the very least, the value of our future timber crops has been increased 300 per cent. by reason of the thinning operations already carried out.

29. At the present time 200,000 acres of pine forest are ready to be operated upon, provided that a supply of water could be obtained. This would give employment to 2,000 men for at least three months; but owing to the drought it is doubtful whether this work could be carried out just now.

30. In the red-gum forests employment could be given to 200 men for two months; but, unfortunately, the forest is flooded from July; so that there could be no certainty of employment for a longer period.

Friday, 26 May, 1899.

Donald Black called and examined:—

D. Black. 31. *Chairman.*] I understand you have had a good deal to do with the unemployed? Yes.

26 May, 1899.

32. Have you formulated any scheme to meet the present needs of the unemployed? I do not know that I am in a position to give the Board an outline of the work the Government could put in hand at the present time. The Government Departments would be better qualified to deal with that subject than I. I think there is just as large a number of men out of employment now as there was this time last winter. It is impossible to form any accurate estimate. I do not consider the Labour Bureau any accurate index of the number of men actually out of employment. A very large number of the unemployed do not go there. So far as I am aware the Bureau has no method of finding out how many times a man attends that institution. Consequently, the presence of a crowd of from 200 to 500 men does not give the Bureau any opportunity of judging of the actual number of men out of employment. Roughly speaking—I base my statement upon the slight experience I have had of unemployed meetings and gatherings of that description—I should say that there are about 8,000 unemployed. That number will include all classes in the Metropolitan area at the present time. From time to time we have compiled rolls of the unemployed at the meetings. There might, at some of the meetings, not be more than 300 or 400 men present. Nevertheless, at other meetings it was the simplest matter possible to add 300 or 400 more names to the roll, clearly proving that, although there might not be more than 300 or 400 men at any particular meeting, the number of unemployed was very much in excess of that number. I think it is necessary to multiply the attendance at the Labour Bureau by 2. When the Christmas work was on, no less than 3,000 men attended there. If you multiply that number by 2, you may get a very fair estimate of the number of men out of work in the city. I may mention that fully one-half of the men known as the unemployed are not capable of doing the hardest kind of physical work, such as railway deviation work or labour of that kind. The matter is dealt with in the report of the Unemployed Citizens' Committee, and I naturally agree with that report as I have signed it. I think such work as forest-thinning, carried out by day-labour, would, to a certain extent, provide relief to those who are not capable of working on railway deviations. Everyone who has had any experience knows it is a much lighter class of work, and would absorb a very considerable portion of the unemployed. There are a number of roads requiring repair. I notice that the Long Bay Road, out towards Maroubra Bay, is in a very bad state. I think some work could be given on that road, which is formed of soft white metal, to a portion of the older men and those who are not capable of tackling the harder kinds of physical labour. Of course, all these things will fall very far short of meeting the unemployed difficulty.

33. We want to ascertain what work you consider desirable should be carried out at once in order to find employment for the men to whom you refer? I do not know that many men in my position could give a very satisfactory answer to that question. I think there is still an opening on the Bogan. That work, however, has not proved satisfactory to all the men who went there. The forest-thinning was a good job. I know from personal experience that there is a large amount of work to be done there yet. I believe the Government recognise that it is remunerative work, and I think it would meet the requirements of a very large section of the unemployed. The report of the Citizens' Committee suggested that those works which were placed on the estimates of the Government might be made available to a section of the unemployed, but the Board will recognise that when a work is given to contractors a large portion of those who attend the Bureau do not get the opportunity of being engaged upon it. By taking a work away from a contractor and giving it to the men attending the Bureau you would, of course, displace the contractor's men. It is, therefore, really very hard to suggest anything at the present time. I must admit that for some months past I have not given the question of getting employment for the unemployed much attention.

34. *Mr. Buchanan.*] I believe you frequently attended the meetings of the unemployed? I have not been at a meeting of the unemployed since the beginning of February.

35.

35. Did you notice whether those who attended were young able-bodied men or elderly men? They were of all ages, but I think fully one-half of them would be over 45 years of age.

36. Were there many old men? Yes, about one-half of them.

37. *Archdeacon Langley.*] Have you any information as to the classes of workers? I think that what I might call nondescripts predominated.

38. Do you mean unskilled labourers? Yes.

39. Can you tell us why a large number of the men will not go to the Labour Bureau? Personally, I have no objection to attending the Labour Bureau, if I can see that any advantage will accrue from my attendance. I recognise that the Bureau is simply an agency for distributing Government and private employment. If the employment is not placed in the hands of the Bureau, the Bureau cannot operate, and it is useless for the unemployed to attend. It frequently happens that upon the Bureau board, which is displayed daily in the yard, there are not so many jobs offering as there are at some of the registry offices in the city—Simmonds' or Hittmann's, for instance. Nevertheless there is a larger attendance of men at the Bureau, and the competition is keener. I know that on one occasion I attended there for about a month. I had tried very hard to get a billet, but I could not see anything in my line. I made one or two attempts, but I was crushed out. When there is anything worth having there is of course a great rush. On the other hand, there is a prejudice on the part of men who are in work, and who may never have been out of work, against the labour work. They look upon it as a semi-charitable institution. Some men consider—as was stated by a recent deputation—that they lose caste by going there. I know that a sentiment to that effect exists. Personally I do not consider it a vital reason why anyone should stay away from the Bureau. Again, there has been, and there is at the present time, an attendance of about fifty men in the Bureau who stay there from 9 o'clock in the morning until 4 o'clock in the afternoon, and who seem to make a sort of club of the place. These men are in a state of filth which is indescribable. I have no hesitation in describing them as confirmed loafers. The presence of these men makes the institution repugnant to the *bona fide* workman. In my dealings with the Bureau I have always received civility, although I have not made very much use of the place.

40. *Mr. Kidd.*] I suppose you recognise that we must have a register somewhere of the unemployed. If public works are started in order to give employment to the unemployed, there must be some check to prevent people from the other colonies taking advantage of those works. Do you think the Labour Bureau should be used as that check? I have always contended that if you abolish the present Labour Bureau you would have to establish another office for a similar purpose. Personally, I am not representing the views of the unemployed on that question. I hold my view in opposition to those whom I represent. The Labour Bureau is unpopular with the unemployed.

41. *Archdeacon Langley.*] If an arrangement were made by the Government that all persons assisted into employment should go through the Labour Bureau, would it not make the Labour Bureau the popular institution which it should be. Does not its unpopularity arise from the fact that many men apply for work there and are unable to get it? I have no doubt that if a man badly wants a job, and the Labour Bureau can find one for him, he will overcome any sentimental scruples in order to obtain it.

42. *Dean Slattery.*] You say that it is because a number of loafers remain there all day long that the place is unpopular? That is one of the reasons. I maintain that the vital reason why the great bulk of the unemployed do not attend the Labour Bureau is because the number of jobs offering is so limited that it is not worth their while.

43. *Mr. Buchanan.*] If they could all get work there, would that objection prevail? I have not the slightest doubt that it would not.

44. *Mr. Whiddon.*] Do you not think that the system of Members of Parliament giving letters to unemployed people to be presented to the heads of Departments has militated a great deal against the Bureau being used? I do.

45. Do you not think that the fact of the Departments taking up certain works for the unemployed has tended to diminish the influence of the Bureau? I believe it has.

46. Has not the forest-thinning work, the Bogan scrub work, and the Darling Island, and other works been done independent of the Bureau? That is so.

47. Has not that sort of thing militated against the influence of the Bureau? Certainly.

48. If it were understood that work of this kind could only be obtained through the Bureau, would not all its unpopularity disappear? I think so. I may state that another reason which possibly accounts for the unpopularity of the Bureau is the fact that the Labour Bureau men are very unpopular with the gangers on the railway deviations. I am not going to repeat the language which has been used, because it is not repeatable at this table, but I am told by several men that one of the gangers at Woy Woy used most uncomplimentary and obscene language towards the Bureau men. He called them, using a number of foul words, Bureau men, and reminded them that they were not sleeping in the Domain. Of course, when that stigma is attached to men it will account for much of the unpopularity of the Bureau.

49. *Mr. Kidd.*] The Premier proposes to have deviation works carried out which will give employment to 2,000 men. Supposing the Premier arranges with the Railway Commissioners that all the men put on those works shall pass through the Bureau, will it not remove a great deal of the objection you have mentioned? There are some works upon which that principle was carried out in the first instance, but it was not applied to the men who replaced the Bureau men who were sacked. That is where the trouble comes in. The gangers should not be given power to replace Bureau men by men coming along the road, or by their special friends.

50. *Mr. Schey.*] Is it not a fact that some men have camped near the jobs, and being known to the gangers have been taken on in place of Bureau men who have been purposely discharged? I believe so.

51. If that were put a stop to would it not remove a great objection? I think so.

52. And it would tend to do away with the stigma now attached to Bureau men? Yes.

53. *Mr. J. Watson.*] Have you heard amongst the unemployed any charges of unfairness at the Bureau? I have heard of hundreds of accusations, but I do not know that I could mention a single authentic instance.

54. *Mr. Whiddon.*] Were you at work on the Bogan Scrub? I was there, but I did not stop very long.

55. It is stated that it is a good place to which to send men in order to starve or kill them. What are your impressions as to the prospects of a man earning a living there? I would not undertake to make a statement about that matter, because I am not an expert at the work. I do not know that I could

D. Black.
26 May, 1899.

D. Black.
26 May, 1899.

assess a block. I am sure I could not. I have known instances, however, of gangs which went there and made fairly good money. I have known instances of gangs there, equally as capable, which made absolutely nothing. I believe the trouble in connection with the Bogan arose from the method in which the blocks were appraised.

56. Do you know any reason why certain men made absolutely nothing? I do not think the blocks were properly appraised. In other words, the men on some blocks received a larger amount per acre in proportion to what others, who had much heavier timbered blocks, received. Of course that was the mistake of the surveyor. The block I worked on was of 5,000 acres, at 9d. an acre. We did not make much at it.

57. Were you engaged in forest-thinning? Yes.

58. What could a man earn on the butty-gang system? The proper person to interview on that subject is the officer-in-charge of the Department. I was on day-work. I do not know how much profit the Government made out of the work we performed, but I think it was 7s. 6d. an acre. I might state that the overseers up there—some of them local and practical men—believed that if they had got the work at 5s. an acre they could have made a fair thing.

59. You are under the impression that under proper conditions the Labour Bureau is the proper agency for work to be done through the Government? Yes.

60. Rather than the Department? Yes.

61. You favour it all going through one channel, such as the Labour Bureau, under proper conditions? Yes; under proper conditions.

62. *Mr. Thomas.*] When the men were sent to the Bogan scrub, were they not sent for two months at a time? No; to finish the blocks.

63. I understand that after they had finished a block they were not allowed to do any more for some time? Some of them took up other blocks. I know a number of gangs which, if they had a low-priced block, were given the option of taking up another. Some of the men were there for a long time. I do not think any rule was adhered to in the matter. I know that some men were up there for two years. They finished their own blocks and then made a fair thing out of taking up abandoned blocks.

64. *Mr. Schey.*] Was not the object of preventing a man doing further work, after finishing the first block, to give others a chance? There was a rule at the Bureau that if a man had been at work for a certain period upon one of the Government jobs, such as the Bogan scrub, and came back to Sydney, he was not eligible to go back to the same work for three months.

65. But if he worked on the block he would be there for more than three months before it was finished;—therefore, it would only be in regard to those who, for some reason or other, abandoned the block, that the disqualification would exist? No; not necessarily. Take, for instance, the case of a man who had been there for twelve months, and who returned to Sydney. At the time he returned others might be going away to the Bogan, and if he applied he would be told that he could not do more work for three months. That would not prevent men who had finished their block being transferred to abandoned blocks.

66. Where there is not sufficient work to give every one a full job, is it not a good thing, after one man has had a fair share, to give another man a share? I have always objected to the intermittent system which was in vogue at Shea's Creek. There a man got a week's work, and after an interval of two or three weeks he got another week's work. I think that had a serious effect in breeding loafers.

67. Are you of opinion that any advantage would be gained by classifying the men who are to work on Government work in relation to their physical ability? I think it would be absolutely necessary.

68. Under present circumstances only first-class workmen have a show on public works? That is so.

69. Would you advocate that those who are found to be below the standard and are not able to do a day's work, should still be allowed to work on public works under a lower classification? Yes.

70. At some lesser rate of pay, owing to their physical disability? Exactly.

71. Supposing a man was found unable to work in the first class, he would then be sent to the second class? Yes.

72. Supposing he did not succeed in satisfying the overseer in the second class, do you think anything further could be done for him, or would you advocate his discharge? We did suggest the butty-gang system, but I have not much faith in it. Of course, we must always assume that the overseers in the first-class and second-class gangs treat the men fairly, and accurately gauge their capacities. It is quite possible for an overseer to discharge a man, not on account of his work, but from personal motives. I do not think the man who failed to give satisfaction in the first-class and second-class gangs would have much chance of making a success in the butty gang.

73. You would not, therefore, advocate that he should have the opportunity of going into the butty gang as a third class? I did agree to that suggestion in connection with the Citizens' Committee, but I would not urge the point myself.

74. Do you think it would be more advisable that if a man failed in two classes he should be discharged? I think so.

75. *Mr. Kidd.*] I understand you to say that the physically strong men might be absorbed in deviation or similar work. Those not so strong might be put to forest-thinning, and classified in that way. That would dispose of trying to classify them on a particular work? The question Mr. Schey put to me, and the one which you put to me, although somewhat similar, are not alike. I understood Mr. Schey to ask me a question about two different grades on one work. You now ask me if it is not better to provide one class of work for the first-class men, and another class of work for the second-class men. I think that is desirable. I do not think it would be wise to create a caste amongst labourers working together. With reference to forest-thinning, I did not say that was a job for weak men exactly, but that I believe a large number of men who would not be able to hold their own on a railway deviation would be able to do so on forest-thinning. As far as I can understand the matter, this question of dealing with the weaker element will never be successfully met by public work. It may be less of a failure under a well-thought-out scheme, but it is always bound to be a failure. That is my experience with regard to any very hard work of any description. Of course, people who work in factories are able to earn the current rate of pay in their particular industry without any severe bodily exertion, and they are not considered weak or strong men. They are simply capable of doing their work, but that remark cannot apply to public works.

76. *Mr. Thomas.*] I presume a number of women as well as men are out of work in the city? Necessarily; but if you look in the newspapers you will find that the number of billets offering shows that there are four or five vacancies for women to one vacancy for men. Two-thirds of the advertisements for servants refer to female servants. D. Black.
26 May, 1899.
77. *Mr. Whiddon.*] In your dealings with the men you have met in connection with the unemployed movement, have you met a considerable number of clerks? Yes; also grooms, coachmen, cooks, old soldiers, and ex-policemen.
78. Have you met many clerks or warehouse assistants? Yes, there was a fair sprinkling of that class.
79. *Mr. Schey.*] Do you not think that if the number of unemployed men could be largely decreased the number of unemployed women would not tend to decrease in consequence? That is probable.
80. Are there not a large number of women unemployed at the present time because of the fact that a large number of men are employed;—have not many women to seek employment because their husbands are out of work? Yes, that goes without saying.

Alexander Thompson called and examined:—

81. *Chairman.*] Are you employed in Sydney at the present time? Yes, as a stonemason. A. Thompson.
26 May, 1899.
82. Have you had much to do with the unemployed question? I have taken some interest in it.
83. Can you give us any idea as to the number of unemployed stonemasons? I should say there would be about 100. They might be employed a week or so now and again.
84. Do you know how many unemployed there are altogether? No; but I should say the Labour Bureau would be no index as to the number.
85. Why? A very large number of men in the city never frequent the Bureau at all. I do not believe there are twenty men in my trade whose names have been on the list-books.
86. Why do not they go upon the books? There is never any demand for their labour there. They may also have their private and personal reasons for not going there.
87. *Dr. Zillmann.*] Is the Bureau popular with the working-classes? I do not think it is.
88. *Chairman.*] What is the reason of that? It appears to be a place for men to congregate at and play cards. Men who are really anxious for work would not put in a whole day sitting in the yard there. I should say as a citizen of Sydney and as a worker, that it is a most objectionable institution.
89. Do you think there is a good deal of distress at the present time owing to want of employment? Yes, it is acute; the distress hides itself very much. There is a large section of the working-classes who are in a most acute state of destitution and who never parade it.
90. Are you aware of any works which might be put in hand at once to relieve that distress? I know of none beyond the works the Government have carried out of late, such as forest-thinning and scrub-cutting. I should think that men who were aged and inefficient from sickness and other causes might be employed (say) at Bondi or Lady Robinson's Beach in the improvement of the beach. Suggestions have been made for their improvement. These places are handy to the city and suburbs, and the work would be to a certain extent reproductive. There are also the tramway works; but I do not think if they were started they would affect the unemployed at all.
91. Do you not think that there are a large number of unemployed who could do that class of work? Yes, but outside of them there are people who follow that occupation regularly, and who are, as a rule, never idle. To meet the difficulty we require some new creation—something which does not exist at present.
92. *Archdeacon Langley.*] You do not think that any present work which can be carried out will even temporarily meet the distress? Yes; if it is something new—altogether apart from the ordinary work. To hurriedly put into operation some work would not meet the difficulty at all. There should be some new creation—some works which have not been proposed up to now. The tramway work would go on in any case, and would give abundance of work to men who are not already unemployed.
93. *Chairman.*] But still it would relieve the labour market? For a few weeks.
94. What are those who would not take that work doing at the present time? They are working on other Government work, such as railways, bridges, and wharves. They are, as a rule, men who are skilled in that particular business.
95. *Dr. Zillmann.*] Do you think there is much work done now by the contract system which could be done by the day-labour system? I think the Government could do most of their own work by the day-labour system. They would get as much in quantity, and a superior quality.
96. *Mr. Buchanan.*] Do you not think that that would create another class of unemployed? Yes; it means putting out the men who ordinarily follow that occupation.
97. *Mr. Kidd.*] You mean that it is necessary that some fresh avenues of employment should be opened? Yes; there is no demand for the labour of these men, and we require an entirely new creation.
98. *Mr. Whiddon.*] Is there much unemployed skilled labour? There is a fairly large percentage of skilled labour. The larger proportion are unskilled. For some reason or other they have become inefficient.
99. What were skilled men have become unskilled men for want of work? Quite so.
100. But the majority of them are really unskilled men? Yes; day labourers.
101. *Mr. Thomas.*] You have stated that about 100 masons are at present unemployed;—do you mean by that statement that 100 men are regularly out of work;—for instance, if one man gets work to-day, and another finishes a job, is he thrown out? No; I mean that they are temporarily unemployed. At present there may be 100 men idle with no prospect of getting work for months.
102. I take it that a stonemason would know better than the Bureau where to get work? Just so.
103. At the same time the Bureau might be of service to the casual labourer? Yes.
104. *Mr. Whiddon.*] Does the same remark apply to bricklayers? Yes; it applies to all in the building trade.
105. *Mr. Kidd.*] I suppose the bulk of those you speak of, in your trade, have not much prospect of getting any employment in that trade for some months to come:—if a work were opened up outside their own particular trade, would they be likely to obtain employment in connection with it? Yes; a very large number of them have worked as labourers at Shea's Creek. 106.

- A. Thompson. 106. *Mr. Thomas.*] I was informed the other day by the Postal Department that they had difficulty in obtaining bricklayers to do the telephone tunnel work? I would not say that there are a large number of bricklayers unemployed. Their prospects in the future are somewhat similar to those of the stonemason.
- 26 May, 1899. 107. *Mr. Kidd.*] If the Board is successful in opening up avenues of casual labour, I suppose those connected with your trade would have no objection to register themselves at the Labour Bureau? I do not think so.

Tuesday, 30 May, 1899.

John McIntosh, of Balmain, called and examined:—

- J. McIntosh. 108. *Chairman.*] Have you any statement to make to the Board? A few days ago I went to the Labour Bureau, and drew the attention of Mr. Creer to the fact that there were two iron bridges which had never been scraped nor painted for four years, and that that work would give immediate employment to people like myself.
- 30 May, 1899. 109. *Dr. Roseby.*] Where are these bridges? One is the Iron Cove Bridge, the other is the bridge across to Gladsville. The Darling Harbour Bridge also requires painting.
110. *Chairman.*] The only work you suggest is the painting of the bridges? I would draw your attention to the state of Lyon's Road, Five Dock; also the Long Bay Road. They require repairing, and would give employment to a number of men.
111. *Mr. Kidd.*] What trade do you follow? I have been working with boilermakers at Mort's Dock, Cockatoo Island, and other places. I have done painting work, but I am not what you call a thorough tradesman. I have painted boats at Mort's Dock.

Albery Edward Stewart, engineer, blacksmith, and boilermaker, called and examined:—

- A. E. Stewart. 112. *Chairman.*] Are you out of employment? Yes.
- 30 May, 1899. 113. Have you been out of employment long? I have worked about six weeks out of fifteen months.
114. I understand that one of the difficulties in connection with your obtaining employment is your age? Yes. I have applied for one or two situations. My last application was for the position of teacher in blacksmithing at the Technical College. I was informed that being over 40 years of age I had no chance. I may mention that during the time I was chief foreman at Beyer, Peacock, and Co.'s works, Manchester, a man who obtained a similar situation in Owen's College, Manchester, was over 50 years of age. That man worked with me before he got that situation, and I was very much surprised when I was told that I could not obtain a similar situation on account of being over 40 years of age.
115. What age are you? I will be 50 next birthday, but I am able to work, and my mental faculties are as good as—I might say better than—when I was 40.
116. *Mr. Buchanan.*] What positions have you occupied since you came to the Colony? The late Engineer in-Chief of the South Australian railways obtained a situation for me in Melbourne to manage the construction of twenty-five locomotives, and other rolling stock, and bridges, for the Melbourne Locomotive and Engineering Company. The twenty-five engines, 500 trucks, and several bridges were completed entirely under my management. My last situation in the old country was as chief foreman over the smithy and forging departments of Beyer, Peacock, and Co., Manchester. I did not come to this country until I was severely attacked with rheumatism, and the doctor advised me to take a sea voyage. I went to the New Zealand lakes. Whilst I was here Dr. Renwick told me that if I went home again I might be attacked by the same complaint, and he advised me to stay. As a result I brought my family out. The situation which I applied for, and to which I have referred, was one exactly in my line.
117. How long have you been in New South Wales? Three years this last time.
118. Have you an elector's right? Yes.
119. *Dean Slattery.*] Are there many men who are refused employment by the Government on account of being over 40 years of age? I could not say. I may state that the man who obtained the situation to which I have referred had a permanent situation. He was in employment at the time he applied for the billet.
120. *Mr. Watson.*] In your search for employment, have you found a tendency, if a man shows advancing age—no matter whether he is physically fit or not—for younger men to be given a preference? Yes. I may mention that I got a job with Mr. Chaplin, the engineer, in Druitt-street. He said to me, "You are an old man, and will not be of much good." I asked him why. He replied, "I want two sets of winding gear made for engines." I offered to do the work, and did it. He said he was quite surprised with the result, and that he had never had better work turned out in his place. Since then he has sent for me twice to do work.
121. Have you thought over anything which you think would tend to create employment? One thing which would give employment in the engineering line, would be for the Colony to make its own locomotives. I believe this is the only Colony in the group, with the exception of Western Australia, which is not manufacturing its own locomotives. I have been to two or three firms, but being grey haired they would not give me work. If it were not for my son I would be without a home, and yet I am as able and as willing to work as any man in the country.
122. *Mr. Kidd.*] Is it not a fact that you are not able to obtain employment on account of requiring a better position than that of an ordinary mechanic? No. I will take a workman's position.
123. Are there many in your trade who are out of employment? A good many.

Monday,

Monday, 5 June, 1899:

[The Board visited the Rookwood and Parramatta (George-street and Macquarie-street) Benevolent Asylums, and the Newington Asylum for the Destitute and Infirm.]

Alfred William Green, Chief Superintendent of Asylums, was examined as follows:—

124. *Chairman.*] How many inmates are there in the Rookwood Asylum? 804.
125. How are they employed? We do all our own farming. We milk 100 cows for the other institutions. We make all our boots and a good deal of our clothing. The cleaning of the place is done by the inmates. We have a staff of four nurses and three male attendants. The whole of the work of the institution is done by the inmates, who are of all ages, ranging from 22 years to 80 and upwards.
126. Have you any epileptics? Yes.
127. *Dean Slattery.*] Have you many old men in the institution? A large number.
128. *Chairman.*] Do you find the number increasing? Yes, rapidly. I have at present under my control, in the different institutions, 4,101 persons.
129. *Mr. Lewis.*] How many are you supposed to accommodate in the Rookwood Institution? Six hundred.
130. And you are accommodating 800? Yes; we are overcrowded.
131. *Dr. Zillmann.*] How many have you in each dormitory? We should only have sixty, but we are carrying eighty.
132. *Dean Slattery.*] Is there any danger to health on account of the over-crowded state of the building? The place is well ventilated. These are modern buildings.
133. *Mr. Whiddon.*] What proportion of the inmates are unable to do anything? About 40 per cent. They are aged and infirm, and are able to do absolutely nothing.
134. *Mr. Lewis.*] How many of the remainder would be capable of earning a living outside? It depends on circumstances. Some of those who come here are convalescents from the hospitals; they stay for a week or two until they become strong, and are then seen by the doctor, who certifies whether they are fit to go out. If they are fit to go out, they go. The inmates are sent here by the Government Medical Officer, and as soon as they are capable of working outside they are, if under 50 years of age, discharged.
135. *Mr. Kidd.*] Have you many who are on the sick list? Yes, 150. We have not any acute cases; we deal with convalescents.
136. *Dr. Roseby.*] How do you make up the 4,101 inmates in the different institutions? There are 804 at Rookwood; 1,114 at George-street, Parramatta; 376 at Macquarie-street, Parramatta; 925 at Liverpool; 44 at the Cottage Homes, Parramatta; and 838 at Newington. Of the latter 757 are women, the balance being made up of men and boys. The boys are received from the State Children's Department.
137. *Chairman.*] Do I understand you to say that you have 40 per cent. of incapables? Yes; that is in the whole of the institutions.
138. *Dean Slattery.*] What is the percentage of incapables at Rookwood? It is less than 40 per cent. here—not more than 30 per cent.
139. *Mr. Thomas.*] I understand you to say that the Government Medical Officer in Sydney sends men here? Yes.
140. How do those whom he does not send get here? Any man who declares himself to be destitute, and incapable of earning a living outside, can get admission here. They have to fill an application form and obtain a medical certificate.
141. *Chairman.*] What are the partially able-bodied men employed at? Farming, and cooking. We do the whole of the housework by inmate labour; also the farming, both here—Rookwood—and at Newington. The inmates also make boots, do the repairs, washing, and so on.
142. *Mr. Buchanan.*] Do you allow them wages? A small gratuity. We do not give them wages with the idea of encouraging them to remain in the asylum, but to assist them when they go out.
143. *Dr. Zillmann.*] Is that irrespective of the work they do? Yes.
144. How many of the inmates are married? At present we have twenty-two married couples at Parramatta and fourteen married couples at Newington. Very few of the others have a wife or husband living.
145. *Mr. Whiddon.*] Are the married couples housed together? Yes.
146. *Mr. Buchanan.*] What proportion of men and women have you? About 3,300 men and 757 women. The women are at Newington.
147. Have you tried any other industry besides farming? No. We have no industry which competes with the outside market; but we make our own boots and clothing.
148. *Mr. Whiddon.*] Do you produce vegetables? All ordinary vegetables, but not potatoes. We have not the soil or climate for producing potatoes.
149. *Dean Slattery.*] Are you improving the land? Yes.
150. Have you any cattle? We milk 100 head here at present, and forty at Newington.
151. Do you grow the fodder for the cows? Not the whole of it.
152. Have you to buy fodder? A good deal of it. I may mention that the cost per head of the inmates last year was as follows:—At Rookwood, £13 15s.; at Parramatta, £13 10s.; at Newington, £10 10s.; and at Liverpool, £14. Of course there are more sick at Liverpool.
153. *Mr. Kidd.*] Is the milk produced at Rookwood supplied to the other institutions? Yes, at Rookwood and Newington.
154. *Chairman.*] Do you get sufficient to supply them? Yes, with the exception of a little which we purchase at Liverpool for consumptives; but for the ordinary use of the inmates we produce more than sufficient.
155. *Mr. Buchanan.*] Have the inmates the option of leaving the institution when they choose? Yes.
156. *Chairman.*] Are all the men fully employed? We occupy the skilled men at bricklaying, carpentering, and making ornamental seats, drains, &c. We employ no skilled labour from outside with the exception of one carpenter and blacksmith. The majority of the inmates are not skilled.
157. Could you make any articles which are not imported to the Colony without competing with others? Not without having overseers and plant, and that would mean a great deal of expense. A man may start to-day to make half-a-dozen seats, and to-morrow he may get a job outside, and, of course, he will go. We have to deal with the question of employment from the point of view that our population is always shifting.

A. W. Green.

5 June, 1899.

- A. W. Green. 158. *Mr. Lewis.*] When they are fit to go outside do you discharge them? Yes.
- 5 June, 1899. 159. *Mr. Whiddon.*] What means has a man who is in here of getting a job outside? They are always in touch with the builders and employers generally.
160. Are you in touch with the builders, or are they? They are. Of course people often apply to us. The artisans who come here have generally been with contractors for a number of years, and they are always on the look-out for a job; they have means of communication. The builders do not come here and ask for men. We do not act as a labour bureau in any way. If we want a billet for a man we telephone to Mr. Creer, and tell him; but we leave the labour-agency business to the Bureau. We do not clash with it in any way.
161. *Mr. Thomas.*] If a man makes an application—say, to some Charity Board—for admission to the Rookwood Institution, what routine has he to go through to prove that he is entitled to admission? He is examined by the Medical Officer.
162. Does he require a medical certificate before he can come here? Yes; if he is under 60 years of age.
163. Then anyone who is 60 years of age can, because he is that age, demand to come here? Yes, and he is admitted.
164. If a man is under 60 years of age he must have a medical certificate to the effect that he is incapable of doing a full day's work before he is admitted? Yes.
165. *Dr. Zillmann.*] What medical attendance have you here? A visiting medical officer—Dr. O'Connor. He comes regularly three times a week, and when he is required at other times.
166. How long have you been in charge? Three years.
167. *Mr. Thomas.*] If a man is under 60 years of age, and is capable of doing a full day's work, he cannot come here? No; he may come for a night's shelter, like any other man on the road.
168. It does not matter how long a man has been out of work, if he is capable of doing a day's work he is not supposed to come here? No; we do not deal with the unemployed in any way. These places are simply the homes of the destitute, infirm, and aged.
169. *Mr. Whiddon.*] Are not many men of 60 capable of doing a fair day's work? Yes.
170. Supposing the authorities in Sydney see that men of 60 are capable of doing a fair day's work they still send them here? Yes.
171. Have you many malingerers? No; not so many as one would be inclined to suppose. My experience is that the malingerers are very few.
172. *Mr. Kidd.*] Is the reason of that the fact that you give them no encouragement to stay in the institutions? Yes, largely.
173. *Dr. Zillmann.*] Would it be advantageous to separate the men who are unable to work from those who are able? To do that you would require a big staff to look after them. At present they mix up with the others, which is far better.
174. *Dr. Roseby.*] Is there any difference between the George-street Asylum, Parramatta, and the one at Rookwood? No; excepting that there is no farming at George-street. We send the men who are regarded as the strongest to Rookwood. There are a good number of men at George-street who are able to do light work. They are nearly all labourers. There are very few artisans.
175. *Chairman.*] How many inmates have you in George-street? 1,114. Of this number 406 are in the hospital.
176. *Dr. Roseby.*] Is that an unusually large number? No; they are suffering from senile decay, and paralysis.
177. What work is done at George-street? Boot-making, laundry-work, tailoring, and so on.
178. *Dr. Zillmann.*] Is the laundry-work for the men on the premises? Yes; it is done for the whole institution.
179. *Mr. Buchanan.*] What is the death-rate per thousand? 8·17.
180. *Chairman.*] How many men in the George-street Institution could do light work outside? Sixty per cent. should be able to do work similar to that done at Rookwood.
181. How long do the men work per day? Six hours.
182. What is your opinion of the Government setting apart about 1,500 acres of land for them? I am thoroughly in favour of farming homes for these men. The great trouble we have with them is drink; that is what we have to contend with in the neighbourhood of towns.
183. If you had good land, and could employ 60 per cent. of the men upon it, you could, I suppose, produce a good deal? Yes.
184. Could you, by that means, almost supply the wants of the whole of the institutions? Yes; pretty well. At present we are making £500 a year out of pig-breeding; and if we had a farm elsewhere we could make a good deal of money out of pigs, poultry, and so on.
185. *Dean Slattery.*] Are these institutions self-supporting? No; we cannot make them absolutely self-supporting, because there are always 40 per cent. who must be maintained. I am satisfied that 60 per cent. could keep themselves. The proof of the pudding is in the eating of it. At Newington last year—taking the whole of the decrepits and invalids into consideration—the cost per head was only £10 10s.; that includes doctors' attendance, and everything else. That shows that the production of the healthy portion must largely pay for the sick portion, because the same patients could not be kept in the Sydney Hospital for less than £30 or £40 per year.
186. *Dr. Zillmann.*] Do you raise pigs at both Newington and Rookwood? Yes.
187. Are they used for feeding the different establishments? No; we sell them.
188. *Mr. Thomas.*] Do you give the inmates a fixed diet, or are they allowed to eat as much as they can? They have a fixed diet except in regard to bread, the allowance of which is unlimited.
189. *Mr. Buchanan.*] Do you supply them all alike? Yes.
190. *Chairman.*] Do you experience any difficulty in getting the 60 per cent., to whom you have referred, to do their work? A little moral suasion has occasionally to be used.
191. It can be overcome, I suppose? Yes. I do not find more than 3 per cent. of the inmates are troublesome. We have a few agitators whom we cannot satisfy, and you have to deal with them as a man would deal with anyone else under him. We have no means of inflicting punishment, except by stopping leave or gratuities of tobacco. No one is put on bread and water or anything of that kind.
192. *Dr. Zillmann.*] What is the tobacco allowance? Half a cake a week. That they receive under any circumstances. Those who work receive an extra fig per week.

193. *Mr. Thomas.*] I suppose that some of the inmates can eat more than others? Yes. If a man asks A. W. Green. for more there is always sure to be something left for him.

194. I suppose that an inmate who works out in the open can eat more than an inmate who cannot work at all? Those men are allowed cheese and extras of that kind. I can assure you that the inmates get more than you or I can eat. They are allowed 14 ounces of meat and 14 ounces of bread per day to start with. They are also allowed 12 ounces of vegetables.

195. If a fire broke out in the George-street institution, how many of the inmates do you suppose would be able to escape? Very few. The accommodation is altogether inadequate for our requirements. The building is over-crowded and is difficult to manage by reason of the large number of persons in it. I strongly favour the idea of establishing farm homes to utilise such labour as is available in institutions of this character.

196. *Mr. Whiddon.*] What proportion of skilled tradesmen come to the institutions under your charge? Not more than 3 per cent. With regard to the Macquarie-street institution, I may mention that the bakery there supplies bread to about 3,500 inmates connected with that and the other institutions, and we use 1½ tons of flour daily. The kitchen garden at Macquarie-street is rented ground. At Newington there are eight nurses and one matron. Not more than 3 per cent. of the inmates there can be said to be troublesome at all, and only about three altogether are very bad. More than one-half of the inmates at Newington are in the hospital on account of senile decay and other ailments. Those who are not under medical supervision are lightly employed.

Thursday, 8 June, 1899.

[The Board visited the Homebush Bay and Duck River Reclamation Works.]

James Walter Grimshaw, District Engineer, Sydney and South Coast, Harbours and Rivers, Public Works Department, was examined:—

197. *Mr. Thomas.*] What is the object of carrying out the Homebush Bay Reclamation Works? The object is to form land with the silt dredged from the Sydney Harbour. It was customary, at one time, to take the silt out to sea; and that, of course, was money lost. We now bring it to one of our reclamations, pump it ashore, and thus gain the land.

J. W.
Grimshaw.

8 June, 1899.

198. *Dean Slattery.*] What is the extent of the reclamation? 438 acres.

199. *Mr. Thomas.*] Is it the object of the Government to sell it as building sites? That could be done; but as a rule the reclamations are converted into parks. We formed the fascine-bank which is now in existence (but which is gradually being washed away by the current) and pumped silt into the bay. Before that work was completed the pump was required elsewhere. The current has broken through the fascine-bank in several places, and we are now repairing and facing it with stone. The work was commenced yesterday, when twenty men were put on. These men were obtained through the agency of the Labour Bureau.

200. Do you think the foundations would be good enough for building purposes? I think so. Of course the situation is low—5 feet above high water. The stuff pumped in is of a loose, silty nature, and as it dries it contracts and settles; and of course it will take time to consolidate.

201. It would not mean damp houses? No.

202. *Dr. Roseby.*] How will the scheme work out financially? We have not got so far as to be able to say definitely. When work of this kind has been completed, the land has generally been taken for the purposes of a park. At Rozelle Bay, where reclamation work has been carried out, a large timber mill has been erected, and revenue has been derived from it. Another place which is being made use of is White's Bay. There are timber yards there. Those works were undertaken from a sanitary point of view; they were absolutely necessary. Another place we have reclaimed is Rushcutter's Bay.

203. I presume you must have a sand-pump dredge at work? Yes; and to supply that sand-pump dredge we must have another dredge which will lift the silt from Sydney Harbour, put it into hoppers, and bring it here. Two dredges are required.

204. Would they have to be built specially? If this work were to be completed, independent of any other work, they would have to be built.

205. *Chairman.*] Could you not utilise other dredges? The dredging of Sydney Harbour is a continuous work—it is always going on; the silt is always accumulating.

206. Has not the dredging of the Parramatta River been talked of for some considerable time? Yes.

207. And the stuff you took out of Parramatta River would not only make the river more navigable, but would be useful in connection with the Homebush Bay reclamation? Quite true.

208. *Mr. Thomas.*] I take it that there are not sufficient dredges at the disposal of the Government; they would have to purchase or build? Yes, if this work is to be done at once.

209. And that would take time? Yes.

210. If more dredges were built you could utilise them? Yes.

211. How many more dredges could you utilise in doing such work as the Parramatta River improvement? We have barely sufficient for present requirements; but if we had two more—one for pumping and one for dredging—we could deal with the Parramatta River improvements.

212. What would you do with the dredges when this work is completed? We are buying and building dredges as fast as we can at present; not only Sydney, but the country districts require them.

213. *Chairman.*] When the work is completed at Homebush Bay, you will have any amount of avenues for the employment of the dredges elsewhere? In all probability. I may mention, however, that we have dredges lying idle now, because we have not the money with which to pay the necessary wages of men to work them. What is required is a larger Dredge Vote, and more money for the plant.

214. *Dr. Roseby.*] Then, as a matter of fact, we have the dredges, but we have not the money to pay the men to work them? We have them lying idle. We have not any for this particular reclamation work, because we have not an available sand-pump.

215. *Dr. Zillmann.*] How many men could you put on the reclamation work, in addition to those who are there now? About fifty. I could not put on more, because I have not the punts which would be required to bring up the stone.

216. Could the punts be made in Sydney? Yes.

217.

- J. W. Grimshaw. 217. And that would give employment to others? It would.
218. *Chairman.*] Would the cost of this work come out of loan expenditure? The Dredge Vote is not out of loan expenditure.
- 8 June, 1899. 219. But would you not charge the expense in connection with a work of this kind, to loan? I do not say that it should not be charged to loan. I do not know how far you could make this a remunerative work.
220. But you admit that it should be chargeable to Loan Vote? To a certain degree, because this is a reclamation work.
221. *Dr. Zillmann.*] I understand you to say the land will be suitable for building? I think it would, when completed.
222. *Archdeacon Langley.*] Would Homebush Bay be a good locality for factories? I think it is rather out of the way.
223. *Dean Slattery.*] Is the river deep enough to allow of large steamers coming up? Yes. The Parramatta steamers come up already. I think it would be many years before there would be a demand for building sites on this reclamation. People would naturally build first on the hills round about.
224. *Archdeacon Langley.*] Would not the reclaimed land be more available, being close to water? Yes.
225. *Dean Slattery.*] How high do you intend to build the bank-wall? To the height of the existing fascine bank.
226. *Dr. Roseby.*] Will not the stone facing be rather expensive? Not very.
227. Where do you get the material from? Some of it from the Sugar Company. They load it on the punt at Darling Harbour, free of cost, because they want to get rid of it. We quarry some of the stuff ourselves at Glebe Island.
228. Then it is not very expensive? In some instances we get the ballast for nothing. We shall be able to get a large quantity from Mort's Dock, which will not have to be paid for. The cost is about 1s. per ton landed here, but will be reduced when the men get accustomed to the work.
229. *Dean Slattery.*] Could you employ 100 men at Homebush Bay if you had the stone? Yes, if more punts were available.
230. Could you not employ that number at once? No, we have so many other works on hand. There are many works which we cannot delay and which are more important than this.
231. *Archdeacon Langley.*] What do you pay the men per day? Seven shillings. They are mostly local men, and they have all passed through the Labour Bureau.
232. *Dr. Zillmann.*] Could not soil be brought down from the mainland? That would be very expensive.
233. *Archdeacon Langley.*] What amount of work is there in the construction of the bank at Homebush Bay? It would give employment to fifty men for about twelve months.
234. *Chairman.*] What is your experience of the character of the work the men at Homebush Bay are able to do? I cannot say; they were only put on yesterday. A great many of these men pass through our hands, and the best will be kept on.
235. When do you expect to complete the Homebush Bay reclamation? It will take many years to fill it in—five, six, or perhaps, ten years.
236. What will be the extent of the Duck River reclamation? 67 acres.
237. What is being done in connection with it? Nothing at present. The fascine-bank was really constructed before its time. The Parramatta Council were to pay interest on the expenditure, as it was intended that the land should be used as a sewage farm.
238. Are they paying interest? I do not think so. The land was purchased in anticipation, and the fascine bank was constructed in anticipation, and then the Council declined to accept the sewerage scheme proposed, or to have anything to do with the reclamation.

Saturday, 24 June, 1899.

[The Board visited the Hawkesbury Agricultural College.]

George Valder, Superintendent, Hawkesbury Agricultural College, was examined:—

- G. Valder. 239. *Archdeacon Langley.*] How many pupils have you in the college? One hundred, which is the maximum number we can accommodate. The rule is to receive pupils between the ages of 16 and 25, but occasionally first-class men come here for instruction.
- 24 June, 1899. 240. *Dean Slattery.*] How long are the pupils supposed to remain? For two years; but if they require a special course, they stay another six months.
241. *Dr. Roseby.*] What is the acreage over which you have control? Three thousand five hundred acres.
242. How much is under cultivation? One thousand acres.
243. How many hours do the pupils work per day? About seven hours. They work indoors and out-of-doors on alternate days.
244. How many cattle have you? Two hundred and fifty head. Of these, 160 are milch cows. The rest are steers.
245. *Archdeacon Langley.*] Do you supply your own meat? I have commenced that lately.
246. *Dean Slattery.*] Have you any sheep? Six hundred stud sheep.
247. *Dr. Roseby.*] What industries are followed, apart from ordinary cultivation? Fruit-growing, dairying, pig-farming, poultry-farming, bee-farming, &c. We have 30 acres set apart for wine-grapes, and about 40 acres for fruit-trees.
248. *Mr. Watson.*] Do you cover your expenses? Not yet.
249. *Mr. Schey.*] Do the students and their instructors do the whole of the work of the place? Yes. The students are divided into gangs every day, in charge of instructors. Nearly all the minor buildings and appurtenances of the institution have been erected by the students.
250. *Dean Slattery.*] Have you a saw-mill? We had one, but we have done away with it, because we ran out of timber.
251. Have you many horses? About forty-five.
252. Do you do your own blacksmithing and carpentering work? Yes. When the pupils are working indoors they are engaged in lectures and class-work. If the subject is botany they take notes, and subsequently

subsequently are brought face to face with different plants with a view to identifying them; or, after a lecture on sheep and sheep management, they are engaged in wool-sorting, or in picking out what, in their judgment, are the best of a number of sheep placed in a pen.

253. *Archdeacon Langley.*] Do the whole of the students go through that course? Yes.

254. A student learns not only wool-classing, but ploughing, dairy-farming, and everything else? Yes; we first give them a general knowledge, and then they can specialise if they like. The great thing is to bring them into touch with farm-work. For instance, they listen to lectures on manures, and how to conserve them. They are afterwards shown the manures and how to use them. We connect the lectures with the outside work. After a lecture on pigs, I show them the points of a first-class Berkshire; afterwards I show them a "scrubber," and point out its defects.

255. *Dr. Roseby.*] What do the pupils pay? £25 per annum.

256. *Archdeacon Langley.*] Do you show your pupils how to manage in places where there would be a difficulty in obtaining manures? Yes; we teach them how to obtain other manures. We show them how to treat bones with sulphuric acid, and what to do with wood ashes.

257. Do you teach them how to make shift without appliances of any kind? Yes.

258. *Dean Slattery.*] How do they take to the work, as a rule? Very cheerfully; 90 per cent. prefer the outside to the inside work.

259. *Mr. Schey.*] Have the pupils to pass any preliminary examination before entering the college? No; they obtain a certificate before they enter, showing that they are qualified to a certain extent.

260. *Dr. Zillmann.*] How many lecturers have you? There is the Science Master, who deals with chemistry, geology, and surveying, and also, occasionally, agricultural engineering. Then there is the English Master, who deals with botany, vegetable pathology, entomology, book-keeping, and English. I take the whole of the agricultural subjects.

261. *Dean Slattery.*] Is there any cramming? No; about an hour's study at night is all they require to get through. A fairly-educated boy can get through the examinations.

262. *Mr. Schey.*] What standard of preliminary examination do you require? A University junior.

263. *Dean Slattery.*] If a boy did not pass the junior examination, would you take him? Yes; if he were fairly educated. I may state that, of late, the Minister has given me a freer hand. For instance, if I find a boy is not suitable, I have the power to get rid of him at once. I can tell in a few weeks whether a boy is or is not fit to remain.

264. *Archdeacon Langley.*] How are the boys admitted? By application to the Department.

265. Are they allowed in by preference of application? Yes; and also by selection according to qualification.

266. *Dean Slattery.*] Are the boys instructed in surveying? They are taught to lay down lines, take levels, and so on.

267. Have you an ample supply of water? Yes; there are $2\frac{1}{4}$ acres of roof here, and we obtain a good deal from that.

268. *Mr. Schey.*] How many people do you think your 3,500 acres would carry? About 350, and then it would have to be thoroughly worked. I reckon that 25 acres would keep a family of four.

269. If you gave a man, his wife, and two children 25 acres of land, could they make a living off it? Yes.

270. How much better would they be off, if, instead of giving 25 acres to the head of one family, several families joined together and worked the farms in that way? It would only make a difference of about one-fifth; each family would require about 20 acres under those conditions.

271. Then 400 people would require 8,000 acres? Yes.

272. Could more be supported on first-class land? No; that is about the average.

273. If land were heavily timbered, it would, I suppose, be necessary to employ gangs, under proper supervision, to clear it? Yes; you would find that to pay in the end. Before you start labour settlements you should have the land thoroughly cleared.

274. *Archdeacon Langley.*] There is no reason why the men placed upon a settlement should not themselves do the clearing, under direction? It should be done under direction.

275. And the timber could be conserved to help to pay expenses? Yes.

276. *Mr. Schey.*] I suppose it is hardly likely that we could find any large extent of good Crown land which is not heavily timbered? No.

277. Any land fit for a labour settlement would have to be cleared first? Yes.

278. *Archdeacon Langley.*] You have stated that from 20 to 25 acres of land are sufficient, if properly worked, to support a man and his family; do you not think that 25 acres of good land would find food enough for twenty-five people;—how many tons of potatoes, for instance, would such a farm produce? Perhaps from 3 to 5.

279. And 5 tons of potatoes would feed a good many people? Yes. Of course, it would often pay them better to grow things they would not eat.

280. Do you not think that 1,000 acres should find food for 1,000 people? A man who has 25 acres should support two besides himself; that gives about 8 acres to each individual. I am counting men only, not their families.

281. Would 2,000 acres of land find food for 2,000 people—men, women, and children? Not quite. I should say that 3,000 acres would keep 1,000 men, and the land would require to be carefully worked.

282. *Dr. Zillmann.*] What is the smallest allotment of land we should have in an agricultural settlement for a family? If worked on the co-operative system, you might do with 20 acres; if worked on "your own," 25 acres.

283. *Mr. Schey.*] And then it would have to be good land, cleared, and ready for the seed? Yes.

284. *Mr. Watson.*] If twenty men put 20 acres into one lot, and all worked together, they would make more than by working individually? Yes; but it all depends on the management.

285. *Dr. Roseby.*] Is your fowl department self-supporting? Yes; but the best paying department is the piggery, from which, last year, we made £300. This year we expect to make £500 from it.

286. How many acres do you devote to poultry-farming? Fifteen.

287. *Archdeacon Langley.*] What price do you obtain for the cheese you produce? Eight pence per lb. wholesale. Each student takes his turn at making cheese for the day.

[The Board subsequently visited Pitt Town Settlement.]

Alexander Hutchinson, manager of the Pitt Town Casual Labour Farm, was examined:—

- A. Hutchinson.
24 June, 1899.
288. *Dr. Roseby.*] How many men have you on the settlement? Forty-seven at present. The number fluctuates.
289. Are any of the men married? They are mostly single. We have no families on the settlement, excepting in the case of one of the old hands, whom we have retained. He is a very useful man, and the Department has allowed him to remain.
290. How long do you keep the men here? For about three months, or until they have made £2, when we send them away.
291. *Mr. Watson.*] What work is done? We clear the timber, cut wood, and do general farm work. On an average we send 50 tons of wood per week to Sydney, where it is sold by auction.
292. *Dr. Zillmann.*] Have you to pay for it going down? Yes; it would be a good thing for my returns if we had not.
293. *Dr. Roseby.*] I suppose the employment is not very remunerative? The men who cut wood work eight hours a day, and their earnings would average about 12s. a week.
294. *Archdeacon Langley.*] Does that include rations? We have a maximum and minimum wage. The minimum is 2s. 6d. a week and rations; the maximum is 5s. a week.
295. How many men work at cutting firewood? From ten to twelve. The cutting is done by hand.
296. How many acres have you under cultivation? About 60. A labour farm, pure and simple, will never consume a large amount of labour. It is the preparation of the land for farming which consumes the labour.
297. Do you conserve water? We have always plenty of water. One thing the original settlers did was to make some splendid dams.
298. *Dr. Zillmann.*] Do you think the settlement was a success? That opens up a broad question, and it would take a long time to discuss it. Before I came here I was asked to value the place and the work done, and I put a considerable value on the dams which had been made.
299. *Archdeacon Langley.*] What is the extent of the settlement? Two thousand and fifty acres.
300. Of which 60 acres are under cultivation? Yes; but we have an additional 100 acres nearly ready for the plough.
301. *Dr. Zillmann.*] What are the results of the crops? Up to this season the work has been largely preparatory. The seasons have been very bad. It was stipulated that I should raise, in the shape of potatoes, vegetables, &c., sufficient for our own consumption, and we are doing that now.
302. Are you raising flour? No.
303. Are you raising meat? We have cattle coming on. I have a gang of men who are getting timber to fence an area of 400 or 500 acres. To do that work, and to break up the ground, we require horses.
304. Could you employ an additional number of men? There is no end to the number of men we could employ. We are increasing the value of the land, and making it fit for cultivation.
305. If an additional number of men were sent here would their employment result in reproductive work? It would always be reproductive work to make land fit for the plough. The money the men are paid and their rations will be fully represented by what they will do.
306. *Archdeacon Langley.*] Have you any poultry here? I have a strong objection to poultry on a farm like this, for the reason that you require a practical man to take full charge of them and to devote the whole of his time to them.
307. Have you any pigs? Yes. We had three sows; now we have twenty-two; and we shall have about forty in the next few months.
308. *Dr. Zillmann.*] Why could you not have poultry on part of the farm? We should require a manager for them, and the regulations debar us from keeping men here for more than three months. You would be surprised at the dilapidated condition of some of the men who come here, but they soon improve in health.
309. Could you get 2,000 acres of the land fit for cultivation? One man could not do that.
310. Is the land good enough? I think so. Personally I would clear half the land. I would cut it up into blocks of various sizes, with so much cleared land to the front, and so much uncleared to the back. I would plough it and rent it to the men, and scores would take it. Scores of men go upon the land and are utterly ruined in a few months, because of the want of capital to prepare it for cultivation. Labour farms will never pay unless you first clear the land, and cut it up into blocks.
311. *Archdeacon Langley.*] Have you any men here who are making furniture for the huts? We make all our own furniture, such as it is.
312. *Mr. Watson.*] If you had a larger body of men here could you put them to the work of laying pipes for the purposes of irrigation? We could easily irrigate every inch of the land.
313. *Dr. Roseby.*] I believe the only industrial work you have here is in connection with the farm, the piggery, and the timber cutting? We have twenty head of cattle, and they are increasing. We have no dairy. I want to be able, some day, to fall back upon the cattle and break the contract with the butcher for six months. I have no sheep, but could do very well with some.
314. How many pigs have you? Twenty-two, from four.
315. *Archdeacon Langley.*] Are you able to grow plenty of vegetables for the forty-seven men whom you have here? Yes, and to feed the pigs as well.
316. *Mr. Watson.*] Have any engineers reported against the possibility of bringing the water from Cattai Creek to the settlement? I have never heard of that. I believe it could be done.
317. Would the cost of providing a permanent water supply, by the laying of pipes by the unemployed from Cattai Creek, be paid for by the additional value it would give to the land? I have no doubt of it, but I do not speak as an engineer. I think I see the utility of it.
318. *Dr. Roseby.*] In the meantime, with the teams you possess, you have the means of cultivating a very large area? In the very hot season we have never lacked cabbages or other vegetables. Of course, that meant an enormous amount of manual labour by hand-watering.
319. *Archdeacon Langley.*] Where do you get your manure from? Sometimes we have men here who are very helpless, and it is difficult to know what work to put them to. I generally give them barrows and shovels and send them over the common to obtain manure, of which hundreds of tons are lying about. The manure is worth 2s. 6d. a ton on the ground.

320. To what extent does the feed you obtain by means of cultivation sustain the horses? I do not require to purchase anything for them.
321. Do you grow corn for the horses? Yes.
322. How many horses have you? Nine.
323. How long have you been in charge of the place? For close on three years.
324. Have you any milking cows? Yes, two.
325. *Dr. Roseby.*] Of what does the cultivated area consist? Two acres of barley for green feed are coming on. There are also 20 acres of wheat, oats, and barley. We also grow turnips, potatoes, planter's friend, beans, and peas. We have an orchard of 20 acres.
326. How are the trees getting on? Last year was a bad one for them, and very little wood was made. There was practically no rain, but I lost none of the trees. The trouble is that there are not sufficient of any single sort of tree to enable us to make a market. The original idea was to have them more for our own consumption.
327. I understand that many of the fences were cut down before you came here? Before I came here there was a chock and log fence, but it was of no service, because men and cattle could knock it over. I am therefore cutting up the wood, and am erecting post and rail fences.
328. How many miles of that kind of fencing have you? About 6 miles.
329. What subsidy do you get from the Government? Nothing, but the Government supply everything.
330. What do they supply? Groceries, meat, &c., and any returns go to the Government.
331. Is the settlement paying its way? I think Mr. Clegg, of the Labour Department, could give you that information. I could hardly tell you without reference to figures. I do not keep the accounts.
332. Are the men giving a fair equivalent in labour for what they receive in the shape of rations? I am satisfied, taking into consideration the improvements which have been made, that the Government are not losing anything.
333. *Archdeacon Langley.*] Have you anyone to overlook the men? I overlook them myself. I am in the saddle most of the day.
334. If 100 men were sent to you at once could you employ them? I think so.
335. But you have no accommodation for them? We are making fresh accommodation. The last time Mr. Creer and Mr. Clegg were here we talked the matter over. The maximum number hitherto has been forty-eight, and it was resolved to increase it to seventy-five, and I am making accommodation for that number. We could, however, go on increasing accommodation.
336. *Mr. Lewis.*] Could you take on 150 men? We could when the huts are ready for that number.
337. I take it that directly the men learn anything and become useful to you they have to go away? That is so.
338. *Mr. Schey.*] What do you think is the average cost of the food of the men? With the vegetables we grew it cost me, last quarter, 4s. 4½d. per head per week.

Thursday, 29 June, 1899.

Ernest Samuel Hunt, engineer, was examined:—

339. *Chairman.*] I believe you have had a good deal to do with the unemployed question? I have dealt with the question in Queensland, and I have also given a lot of work to unemployed men. E. S. Hunt.
340. You have made certain suggestions to the Board with regard to the unemployed question? Yes. 29 June, 1899.
341. What are your views with regard to the solution of this difficult problem? Relief works, unless they are of a reproductive nature, can never solve the problem. Relief works, unless they are of a reproductive nature, should never be entered upon, as they leave the men, on the completion of the works, in the same position as that which they held at their commencement, the relief pay not being sufficient to enable them to effect any saving. Apart from that, there is nothing in prospect to act as an incentive to persevere. Only those who are too old to make a new start in life should be placed on such works. For the permanent solution of the difficulty, suitable areas must be selected, each possessing certain natural resources and advantages, and such industries only should be established as are not in competition with established trades. Provision should be made for an expenditure of £500 per man, extending over a period of five years—say £200 for the first year, £100 per annum for the next two years, and £50 per annum for the succeeding two years. This would include the current rate of wages for three or four and a half days a week, the cost of purchasing materials, stores, and machinery, and materials for barracks, workshops, and certain improvements. During this period trades should be established and the areas brought to the self-supporting stage. A system of State credit currency should be adopted until obligations are met or satisfied, thus ensuring domestic supplies and reasonable individual wants during the development period. It may be advisable to conduct work on the State improvements continuously. Then shifts of three days should be adopted, allowing the workers to follow their special trade, or to work on the land during the other three days, thus finding room for double the number of workers. Amongst the industries which might be established are such as are likely to be brought into existence by the development of the settlement.
342. *Dr. Zillmann.*] What do you think would be a good plan for meeting the present necessities of the unemployed? I understand that you have already dealt with certain works. I certainly think you should start industries such as coal and iron mines. They would take up a lot of useful labour. Almost any inexperienced man could work in them. My first suggestion is to start the able-bodied men upon the gold-mines or mineral areas.
343. A number of men are crying out for work, and we have made certain recommendations which we think feasible, but we would like to have advice from others; you are a practical man, and might know of some work? I may mention that some time ago I took ten men, on my own account, to Wyalong. Some of them obtained assistance from the Labour Bureau, and others had sufficient means of their own to enable them to go with me. Owing to the limited means at our command, and to other causes, the party soon broke up; but I think, if men had sufficient for themselves, and their families were provided for—say, for four or six months—the prospecting method would be found to be the best which could be adopted for giving immediate relief—that is, after you have exhausted any practical Government relief works which might be taken in hand.

- E. S. Hunt. 344. *Mr. Whiddon.*] Do you think the difficulty will be solved if we put the unemployed on the unoccupied land? I think the land should be occupied.
- 29 June, 1899. 345. *Dr. Zillmann.*] A labour and agricultural settlement could, in the first instance, be made almost self-supporting. There would be a larger timber industry at once? Yes, if you had a large timber district.
346. And then vegetables could be grown at once? Yes. Fruit-bearing plants and trees would take at least three years to mature.
347. *Mr. Whiddon.*] Are the majority of the unemployed with whom you have come into contact skilled mechanics or unskilled labourers? I should say that one-third of them have been mechanics or tradespeople of some kind or other.
348. But the majority of them are unskilled? Yes; but I think the greater part of the majority are capable of being drilled into skilled mechanics.
349. But as you meet them, the majority are unskilled? Yes.
350. Have you any practical suggestion to make for the employment of, say, 1,000 or 2,000 men at once? One of my first suggestions is to send those who are not mechanics or skilled labourers to various gold-mines and mineral areas. They should be sent in properly-organised gangs of ten or twelve men each, and should work for the food with which they are supplied.

Saturday, 1 July, 1899.

[The Board paid a further visit to the Pitt Town Settlement.]

Alexander Hutchinson, Superintendent, Pitt Town Casual Labour Farm, was examined :—

- A. Hutchinson. 351. *Chairman.*] What does it cost you to clear the land at the settlement? About £5 per acre.
- 1 July, 1899. 352. What is the character of the land? Patchy.
353. *Mr. Buchanan.*] When the men leave you, where do they go to? Sometimes I find employment for them. Occasionally contractors apply to me for men. The other day I sent a batch of three men to Rouse Hill, and the contractor told me he never had three better workmen in his life. They were paid 5s. a day. Subsequently I sent him three other men. Two of them found their way to Riverstone, and got drunk. The other finished his contract, and is now back here.
354. Do you have much trouble with men wanting to get drink? None whatever. They dare not go beyond the fence without my permission. I sent two men away to-day after dinner. I missed them from their work, and found them lying down near a log. I sent them off at once. I may mention that we are rebuilding the original huts on the settlement to twice their size, and are putting twelve men in each hut.
355. *Mr. Whiddon.*] What percentage of skilled mechanics—men who have learned a trade—come here? Not more than 5 per cent. A considerable percentage of old soldiers come here.
356. What percentage of the men do their work cheerfully? It varies; but I should say about 10 per cent. only.
357. How do they get here? If I am short-handed, Mr. Creer puts up a notice to that effect at the Labour Bureau, and arranges with them to come.
358. *Mr. Kidd.*] What is the character of the land which you are clearing? I believe it is the best on the estate.
359. What sort of timber have you? A considerable amount of boxwood.
360. What do you get for it? An average of 9s. per ton.
361. Do you get any ironbark? A little.
362. Is there any which would be available for posts and rails? We are splitting up thousands of posts and rails, but no sleepers.
363. *Chairman.*] What does it cost you per week to keep men? About 4s. 4½d. per man. I charge my vegetables against that amount. Less vegetables, the cost would be 3s. 4d. per week per man.
364. What revenue do you get from the labour of the men? The only direct revenue we receive just now is from wood-cutting. There cannot be much revenue from clearing land.
365. To what extent is the land improved by reason of labour? I have drawn up a statement concerning that matter for Mr. Clegg, and you would be able to get it from him.
366. It costs you 4s. 4d. per week to keep men, and you also pay them wages;—what do you get in return for the keep and wages of the men? Mr. Clegg has an estimate.
367. *Mr. Whiddon.*] How do the men spend their time in the evening? After I had been here for some time, I applied to the library for its disused books. We get the books sent here and the men read them.
368. Have you any trouble with the men? No; if they misbehave themselves in any way, they have to go.
369. Have you a code of rules? Yes, in every hut.
370. Have you had any experience of men who would breed discontent? Yes; but there is nothing for them to gain by it.
371. Have you many complaints from the men as to their fare and treatment? The bulk of the men are satisfied.
372. Do the men ever bring intoxicants here? No; it is contrary to rule, and they do not attempt it now.
373. Do you provide the men with tobacco? Yes; but its value is taken off their wages. The average man consumes a 10d. cake per week.
374. Do you think that you could so develop this place as to be able to allot certain areas to men and their families from which they could make a living? I do not see why you could not cut up into large blocks and give men portions of it.
375. Do you think a man with a fair area could sustain a wife and family upon it? Yes, with good seasons.
376. Could he do it under average conditions? I do not see why he should not. They are doing it all around us.
377. Do you regard the settlement as good land? There is worse.

378. It is on record that it is not fit to feed a bandicoot upon? I can grow any crops here if I have a fair amount of rain. It requires intense cultivation, and a little manure. There is nothing I have failed in growing. A. Hutchinson.
379. The land, of itself, would not produce unless it were fed? You must feed it; but I would not gorge it. 1 July, 1899.
380. Do you think it is below the average quality of land? Some of it may be.
381. But take it as a block? As a block, I think it is fairly average land for the district.

George Valder, Superintendent, Hawkesbury Agricultural College, was examined:—

382. *Chairman.*] What is your opinion of the land at the Pitt Town Settlement? I should say it is much below the average farming land. G. Valder.
383. Supposing the land was cleared and made ready for the plough, would it be suitable for agriculture? Yes, if it could be got on a large scale. 1 July, 1899.
384. At what rental? A small rental—from 1s. to 2s. 6d. per acre.
385. What would it cost to clear the land and make it ready for the plough? About £3 10s. per acre, in its present state; but if I was to clear that class of land I would ring it first.
386. Would you select such a place for the purposes of farming? Yes, provided it could be obtained at a nominal rent, and in large areas.
387. What area would be sufficient for a family to live upon it? From 200 to 300 acres.
388. *Mr. Buchanan.*] What do you think of the expediency of sending from 150 to 200 unemployed men to a piece of land like that? They would not do the work so cheaply as you could get it done by contract.
389. Do you think it would be an expedient thing to do under any circumstances? There may be certain conditions in existence rendering it advisable to get rid of a number of men in that way; but looking at the matter from a commercial point of view, I should say, "No; I can get the work done more cheaply by contract."
390. *Mr. Kidd.*] Supposing you had 2,050 acres of land like that; it would cost you £3 10s. per acre to clear, in addition to £1 per acre, its original value;—would you ever be likely to clear it for the purpose of letting it out in small farms at from 1s. to 2s. 6d. per acre? No; it would not pay to do it.
391. Then you would prefer to ringbark it, and make it suitable for a grass paddock? Yes.
392. That is the only value you attach to it? Yes.
393. *Mr. Buchanan.*] Is the Pitt Town Settlement a fair sample of the land about Windsor? There is a very large area of similar land until you get to the banks of the river, where it improves.
394. *Mr. Kidd.*] Could you say whether any large quantity of the settlement would be suitable for vines? I do not like it, even for vines. It would pay far better to go somewhere where the land is better, and pay more money.
395. Your opinion is, that we could not possibly undertake to clear land of that character and expect it to be reproductive? I would not think of it.
396. *Mr. Whiddon.*] Do you think there is any possibility of the settlement ever being self-supporting, so that it will cease to be a charge on the Government? No; I do not think so—that is, if it is worked on the co-operative system.
397. Do you think that, unless the Government part with large areas of it at a nominal rent, anyone will be able to make more than a living out of it? No.
398. An ordinary rental would handicap anyone who wished to sustain himself? That is so.
399. Do you think it would be better for the Government to look for other lands? Certainly.
400. And better results would accrue? Yes.
401. Do you think the energy bestowed upon the Pitt Town Settlement is wasted? Yes.

Tuesday, 4 July, 1899.

Wallace Webster, Forest Inspector, Walgett, was examined:—

402. *Chairman.*] Do you know the country referred to by Mr. Lomax in his letter to the Board? Yes. W. Webster.
403. Would it compensate the Government to clear it of prickly-pear? It would pay ultimately, by saving country so far not affected. 4 July, 1899.
404. *Dr. Zillmann.*] Does not prickly-pear grow from the root again, even after it has been cleared? Yes, if you drop the smallest portion of it.
405. *Mr. Kidd.*] Does it not grow from the leaf? Yes; the best thing is to burn it, or put it under water.
406. I suppose the best way to deal with the pest would be by letting the land under such conditions to the leaseholders that they would be able to take steps to exterminate it, and by the Government themselves dealing with the stock routes and reserves? Decidedly. If we deal with the scrub leases at all we should deal with them at once. It is of no use clearing half a patch of prickly-pear without clearing the other half, because it will spread again.
407. *Dr. Zillmann.*] Is the Queensland Government doing anything in the direction of eradicating the pest? I believe they are taking action now, but can give no positive information.
408. What is the condition of the reserves near Picton? There is nothing but prickly-pear there. The cattle feed upon it; but it is not good for them.
409. *Chairman.*] I believe there is some proposal to make ensilage of it? A few weeks ago Mr. Lomax had two large gangs of men ringbarking timber and clearing prickly-pear.
410. Whilst the Government are issuing orders for the eradication of the prickly-pear they are taking no steps to clear their own lands? Not to my knowledge.
411. *Dr. Roseby.*] Do you know whether the circumstances referred to by Mr. Lomax have been reported to the Government? I have no doubt the Government are aware of all the facts of the case from their inspectors in the district, and from reports furnished by the District Surveyor.
412. *Chairman.*] What area of land is included in the reserves in the county of Benarra? I could not say.
413. I suppose the reserves are more or less covered with prickly-pear? Yes; but there is not so much making towards Collymongool. Driving north you meet it first on the Meehi. 414.

- W. Webster. 414. And in nearly all the leases which have been issued recently provision is made that the runs shall be kept clear of prickly-pear? Yes, in all settlement leases.
- 4 July, 1899. 415. Is that carried out? The leases to the south have not prickly-pear upon them. Wirrah and part of the northern portion of Caidmurra are reserves which are more or less covered.
416. What would it cost, on an average, to eradicate the prickly-pear? 10s. an acre, on portions; an average cost could not be determined without actual inspection and knowledge as to acreage and extent of pear on it.
417. *Mr. Black.*] What does it cost to clear the worst portions? 30s. an acre; and then there are possibilities that it will have to be dealt with again.
418. In view of the rapid spread of prickly-pear in that part of the country, and the consequent depreciation in the value of Government land, do you think it would pay the Government to undertake the cost of eradicating it from the reserves? I think it would. Of course you have to consider the adjoining land which would be saved.
419. Do you know what private people pay for eradicating the pear? Generally a wage of about 15s. a week with rations.
420. Do they let out the work by contract? I do not know of that being done.
421. Do you think it would be better to employ labour, as Mr. Lomax does, or to work on the butty-gang system? That would be the better system if the Government did the work.
422. Would the reserves bring in more money if they were cleared of prickly-pear? Decidedly.
423. To what extent? Perhaps not to a great extent, because the rent of that land is not more than 1d. or 2d. per acre.
424. Is there not a danger of the prickly-pear spreading over the Crown lands by reason of the reserves being infested? Undoubtedly, by the agency of birds and floods.
425. If all the reserves were cleared of it would there be less likelihood of it spreading to private lands? Decidedly.
426. Therefore, the pastoral tenants would be more likely to give more money for their land? Yes. It will not pay the pastoral lessees to clear it on certain portions.
427. If it will not pay the pastoral lessees to clear it, would it pay the Government to clear it for them? I am speaking of small holders of homestead leases—not of pastoral tenants.
428. Will not the same thing hold good of every kind of holding? I do not think it will pay the Government to clear one holding for the sake of that one holding, but for the sake of the adjoining Crown lands to which the pest is spreading.

John Edgar Davies, in charge of the administration of the Prickly-pear Act, was examined:—

- J. E. Davies. 429. *Chairman.*] Has the Department spent anything of late years in the eradication of the prickly pear? No money has been spent for eradication purposes for the last ten years—excepting £500 for clearing isolated travelling stock and camping reserves.
- 4 July, 1899. 430. A large area of land about Muswellbrook and Scone is leased under prickly-pear leases? We have leased about 40,000 acres under the Prickly-pear Act. That averages £8 a section of 40 acres. We could have leased it in larger blocks, but we must cut it up in order to conform with the Act.
431. Is there a large area of land available to be operated upon in the same way? Yes. A good deal of it has been offered seven or eight times; but it has never been taken up. We have offered it at 1s. a year for 640 acres. Some of the land we have recently leased in the Hunter district will cost £7 an acre to clear. It will be good land when it is once cleared.
432. Then there is a lot of land in the same district which, even if cleared, would be worth very little? That is so.
433. *Archdeacon Langley.*] Is the clearing of the prickly-pear hard work? Men will not do it if they can get anything else.
434. Is it as bad as navy-work, or could it be done by elderly men? Elderly men could do it if they were properly accoutred. We have a reserve at Scone—the permanent common—2,000 acres of which are overrun with prickly-pear. It would cost £3 an acre to clear it.
435. *Chairman.*] And the land in proximity to it is being operated upon by private individuals? Yes. Most of them are doing good work.
436. I suppose the state of things on the reserve at Scone is causing the prickly-pear to spread? No doubt it is the seed-bed of the whole of the district.
437. Would not the Government be justified in clearing the reserve? I think so. You cannot expect private owners to do similar work if the Government will not do it.
438. What do you think the reserve would cost to clear at present? About £5,000.
439. Would the expense be justified? I cannot say that. Some of the land is good, and some of it poor.
440. But in view of the land improvement which would be effected, and prevention of the spread of the disease, would not the expenditure be justified? Yes.
441. Have you made any report in reference to this particular reserve? I have received a report from the inspectors about it.
442. What area of Crown lands have you in the Hunter district? Isolated patches of from 30 to 2,000 acres. Some of it is good land, and some of it would not pay for clearing.
443. Would it pay you by preventing the spread of the pest? Undoubtedly.
444. *Archdeacon Langley.*] It is only fair, if you compel private owners to clear, that you should stop the seed going to their land? That is so. We prosecuted a man the other day, as a warning to other land-owners, for non-compliance with the Act. Representations were made by the Member for the district, Mr. Dight, and it is intended to refund the fine and costs. The Act is a fairly good one in many respects, and we could do good work with it; but owing to the large expenditure required to clear Crown lands it has been rendered difficult to administer, and until the Crown undertakes the destruction of the pest on their lands it will be impossible to fully enforce the provisions of the Act in respect to private lands.
445. I suppose the Crown authorities cannot be prosecuted? No. It has been tried without success.
446. *Chairman.*] What other districts are infested? On the Castlereagh and Marthaguy Creeks, in the Dubbo and Coonamble districts, there is a good deal of it.

447. Is it spreading? Yes; and it has been for many years past. Since I have had charge of the working of the Act—now for ten years—the pest has increased, not for want of representation to the Government on the part of the Department, but because there has always been a lack of funds for carrying out the work. Bingara is another district which is being overrun with the prickly-pear. Representations are being made every day with regard to other noxious weeds, such as the sweet-briar, star thistle, and the Bathurst burr. The Bathurst burr promises to become worse than the prickly-pear.

J. E. Davies.
4 July, 1899.

448. *Mr Kidd.*] The sweet-briar only grows in cold climates? It is growing in the New England district.

449. *Chairman.*] Have you heard of any proposal for dealing with the pest? When you were Minister for Mines I was instructed to prepare an amended Bill; but the matter never went any further.

450. Has not some proposal been recently made by the Department to lease certain areas with a view to making use of the pear? One man has a patent for turning it into fodder; but it will cost about 25s. a ton to prepare the stuff, and in a good season you can buy lucerne more cheaply. Again, it would not give the same benefits to the cattle.

451. *Dr. Zillmann.*] For how many men could you find employment in the removal of the prickly-pear? 500 straight away, without any trouble.

452. *Mr. Kidd.*] Could you do with 500 on the Hunter? Yes, easily.

453. *Mr. Black.*] I understand that you have let a block of 640 acres in the Muswellbrook district for £8 per annum, or 3d. per acre? That is the average return we get from prickly-pear leases.

454. What is the usual rent? That is the average rent. In some instances we get £25, with clearing conditions.

455. People are willing to give you, for favourably-situated blocks, as much as £25 per section, even though they may be put to the expense of clearing it? Yes; over 40,000 acres are leased under the Act at the present time, and the average return per section is £8.

456. Is it a fact that the prickly-pear trouble is largely traceable to Queensland? Yes; in the north-west.

457. Is it fair to say that unless the Queensland Government take action it will be impossible for us to keep the evil within check? Yes.

458. If anything is to be done in the shape of clearing the land and assisting the unemployed, would it not be best to begin in some portion of the country near Sydney rather than out back, until better supervision can be exercised? I think it would be difficult to get a large body of men to the north-west.

459. Has the prickly-pear extended much along the North Coast? No.

460. Is not Riverina quite exempt? No; there is a little about the Riverina, near Berrigan. If land were cleared in the Hunter district, land which cannot now be leased would be taken up. A clearing condition could be inserted in any lease issued, which would compel the lessee to keep the land clear. At present people will not look at pear-infested land. A station owned by the late Sir John Robertson was given to a gentleman for twenty years without any rental, provided he cleared the prickly-pear.

Tuesday, 11 July, 1899.

[The Board visited the Glebe Island Bridge and Reclamation Works.]

James Walter Grimshaw, District Engineer, Sydney and South Coast, Harbours and Rivers, Public Works Department, was examined:—

460. *Chairman.*] What number of men are at present engaged in the works at Glebe Island? 227. These men are engaged in removing the stone from the island for the purpose of constructing the causeway to the Glebe Island Bridge. It is also proposed to utilise the stone of the island for reclamation works, extending 500 feet in a north-easterly direction.

J. W. Grimshaw.
11 July, 1899.

461. When will the bridge causeway be completed? In about a month's time. We shall then have finished as far as we can go until the main part of the bridge is completed, and 100 of the men will have to be discharged unless steps are taken to enable the Department to proceed with the reclamation work. The work which is now being done is charged to the Glebe Island Bridge.

462. Do you think the reclamation work would be a good work to proceed with? An excellent work.

463. Would it be reproductive? Yes; we are wanting wharfs every day. The area of the island is 33½ acres, and the reclamation will amount to 14¼ acres. There would be about 3 acres of wharfage around that. That means 2,190 feet of wharfage along White Bay, 560 feet at the head, and 1,400 feet along the Sydney side of the bridge.

464. Could not additional wharfage accommodation be provided on the Annandale side of the bridge? Yes.

465. What area? About 3 acres of land could be reclaimed there, fronting Johnstone's Bay, thus giving additional wharfage accommodation of 750 feet; or we could get an additional 2,000 feet of wharfage accommodation by extending the work from the bridge round the island on the south-east side.

466. Therefore, if the improvements are carried out you can give an additional wharfage accommodation of 6,150 feet? Yes.

467. At what cost? The cutting down of part of the island, at 2s. per cubic yard, will cost £40,000; and wharfage will cost £50,000—in all about £90,000. The quantity of material in the whole of the island, above 4 feet over high-water level, is 1,736,880 cubic yards, or 3,126,384 tons. The quantity of material necessary for the reclamation is 729,952 tons.

468. What depth of water would you have around the island when the wharfs were completed? Twenty-eight feet could be obtained at low water.

469. And a large vessel could come alongside the wharfs? Yes.

470. How long would it take to carry out the work? We could put on about 500 men, and could keep them employed for two years.

471. If the whole of the island were cut down, would you have any difficulty in using the stone on other works? No. Of course a large quantity of it would be required for the reclamation. None of it would be wasted.

472. *Mr. Whiddon.*] There is an outlet for the stone if only the money necessary to provide for its removal is voted? That is so.

- J. W. Grimshaw.
11 July, 1899.
473. *Mr. Lewis.*] I believe that wharfs give a large return to the Government? Nothing better.
474. *Chairman.*] Have you a large demand for wharfs at present? More than we can supply. There are only five Government wharfs under construction at present which are not let. They will be let as soon as they are finished.
475. If wharfage accommodation is provided at Glebe Island there will be ample demand for it? That is my opinion.
476. And they will give a good return for the outlay? Yes. Most of the others pay from 15 to 20 per cent.
477. *Dr. Roseby.*] Is any railway communication with the island contemplated? Not at present, that I am aware of.
478. *Chairman.*] Have you ever considered a proposal for bringing a branch line from somewhere between Petersham and Ashfield to the island? I can scarcely say I have considered it; but it has always struck me that it would be likely to be carried out some time.
479. Would it considerably relieve the difficulty at present experienced at the Redfern tunnel? I am not prepared to express an opinion, but very likely it would.

Thursday, 20 July, 1899.

[The Board visited the Salvation Army Farm, at Deewhy, Manly.]

Adjutant William Wright was examined:—

- Adjutant Wright.
20 July, 1899.
480. *Mr. Buchanan.*] How many men have you on the farm? Sometimes we have twenty to twenty-four; at present we have eighteen. The number fluctuates.
481. What is the area of the farm? 1,300 acres altogether. There are 60 acres in the block we are working on at present.
482. Is this a fair sample of the land? Yes; but the nearer the hills, the better the soil becomes.
483. Can you get any crop without manuring? Not much; we get a quantity of manure from our piggeries and stables.
484. *Mr. Schey.*] Do you make anything out of the land? I support all the men on the place from the produce—eighteen to twenty men from 20 acres under cultivation.
485. Does this cover all expenses? All except the annuity paid for the farm.
486. *Dr. Zillmann.*] What do you give the men? Board and lodgings, and a gratuity from 1s. to 3s. per week. I have paid from £2 to £3 per week in gratuities.
487. *Mr. Buchanan.*] Are the men contented? No; they are inclined to be a discontented lot.
488. *Mr. Schey.*] Do you take any account of women and children? No.
489. Do you get your recruits through the Salvation Army? No; this place is open to anyone. If a casual swagman came here and applied for admission, I would take him in.
490. Have you estimated the average cost per individual? Ten shillings per week.
491. Can a man earn more than his subsistence? Some can; but I and the other two officers work eight hours per day, and our living also comes out of the produce of the farm.
492. Taking it all round, have the men earned 12s. 6d. per week per man? Yes.
493. How much more do you think your men capable of earning, on an average? I am not in a position to say; it depends on the men; but I can always make them support themselves.
494. *Mr. Buchanan.*] How long have you been here? Two years last January. This place was then a swamp, pure and simple. It has been all cleared and underground drained. It never floods now; we have stone drains, and some are slabbed over, and ti-tree brush is placed on top, always leaving a free course for the water. There is about 50 feet of a fall in this paddock.
495. Have you done any fruit-tree planting? Yes; but we began too late in the season.
496. *Mr. Schey.*] Are the men above the average as labourers? No; they are just the ordinary class. Some have not the least idea of work; but they are not of the worst class.
497. *Mr. Kidd.*] What time do they stay, on the average? About a month; but there is no limit to the time we will keep them if they wish to stay.
498. *Mr. Schey.*] If you get a man who will not do a fair day's work, what do you do with him? I talk to him, reason with him, and point out that it is for his own good, and if he does not reform he is dismissed, but only if he is absolutely bad.
499. Have you contributed anything towards the capital cost of the farm out of the sale of your produce? I can hardly say. I have done some work for head-quarters in Melbourne, which, if done by an outside contractor, would cost £150 or £160.
500. *Mr. Black.*] Are these men doing immediately productive work? Yes; and also work that will eventually be still more productive. For instance, in addition to cultivating the land already cleared and drained, they are preparing fresh land for cultivation.
501. How long does it take to clear an acre? Six good men would mattock an acre in a week.
502. How many acres have you cleared during the last twelve months? I have been cultivating principally during the past twelve months, but have cleared 10 acres lately.
503. *Mr. Schey.*] Have you any live stock? About 150 pigs, and two cows for our own use. I have also five horses.
504. *Mr. Kidd.*] Are you utilising artificial manures? Yes; the Sugar Company's bone-dust, &c. I do not use night-soil, because it has a very bad effect on the vegetables grown on it.
505. *Dr. Zillmann.*] Have you any poultry? No; but we are thinking of getting some, and also establishing a dairy shortly.
506. Do the men work better;—are they better disciplined, as the result of religious influence? We have a number of men who know nothing of the Army or its religion. I find it is best to treat them as men, apart from religious convictions.
507. Would it be possible to manage a compulsory labour farm for the vagrant or loafer class, in conjunction with such an institution as this? No; I think they should be kept entirely separate.

508. Have you not had men here who have learnt something useful during their stay? Yes. I have had men who were clerks or book-keepers, and knew nothing of farming. They have so rapidly acquired useful knowledge that I could confidently recommend them to almost any position on a farm, after their experience here. Adjutant
Wright.
20 July, 1899.

509. *Mr. Schey.*] I suppose, by-and-bye, you anticipate growing your own meat and butter? Yes.

510. Would the production of meat reduce the cost of maintenance? Decidedly. It would be a saving so far, as direct cost is concerned, although you would have to reckon the cost of producing it in the expenses; but it would be beneficial to keep the money in the place, and the average cost per head of the men on the farm would be less.

511. *Mr. Watson.*] Do you supply the "People's Palace" in Sydney with vegetables? No; they prefer to buy them in the open markets, and I prefer to sell in the same way.

512. *Mr. Schey.*] Do you buy food for the pigs? Yes; I buy the butchers' waste, boil it down, and mix it with maize, barley, &c. I will, later on, grow my own maize and grain. I sell the pork at 4d. per lb. all round—fixed price—and buy the beef and mutton used on the farm at current market rates. One man takes all my pork; but I sell the bacon to different persons. I use all the pig manure on the farm. All the killing is done on the farm.

513. Where do you get your water? I have a well on a surface spring, and a force-pump to a tank, from which water is laid on to the piggeries, boilers, and slaughter-house.

514. Do you find any difficulty in allotting duties to the men? No; I examine them as to their capabilities, and use my own judgment as to what work I put them to. They never raise any objection to cleaning out the pig-sty.

515. Have you any black-list system? No; if the men behave badly, use bad language, &c., I caution them, but never punish them, I have so little cause. I take them aside and try to get them to see the fault of their conduct, and urge them to aspire to something higher. The greatest difficulty I have to meet with is their love of drink. For the first offence they are cautioned; the second time they are dismissed. I give them a day off whenever they want it. I do not object to half a day a week without lessening the gratuity. They have Saturday afternoons to clean up and wash their clothes.

516. Do you charge them for boots and clothing supplied? Yes; all such supplies are charged against their earnings; they are also required to pay for their tobacco.

517. How do you allot the money payable? I keep a book, and credit them with what I think their work is worth.

Appendix C.

LABOUR HOME, 557, HARRIS-STREET, ULTIMO.

The Labour Home at Ultimo was founded by Archdeacon Langley, some eight years ago, with a capital of £250, and, after having largely accomplished the work for which it was established, is to-day practically free from debt, and has assets fully equal in value to the primary capital. Throughout its career, this institution has been self-supporting, except in the matter of rent (£150 per annum), which has so far been raised by contributions from the church and friends.

No man in destitute circumstances is refused admission; all inmates are compelled to work in return for their maintenance; but none are permitted, except under special circumstances, to remain there for a longer period than three months without intermission.

The work performed by the inmates lies in the direction of cutting up sawn blocks into small wood for cooking purposes, of again reducing this timber into sizes suitable for fire-kindling, in caning chairs, covering couches and mattresses, and making cases of all kinds. The men, however, do not remain here long enough to acquire much skill at case-making. The inside average is 50 per man per day, while experts can turn out 200. The profit per case is about $\frac{1}{2}$ d.

The average housing at the Labour Home, according to the latest report, was 37 per day; 452 cases were altogether relieved; 168 of these found permanent employment, 144 left for temporary employment, 60 left voluntarily, 30 were discharged, 10 were sent to the hospital, and 40 now remain. Meals for the twelve months were provided to the extent of 41,179, beds 13,636.

No. 6.

Second Progress Report of the Unemployed Advisory Board.

To the Honorable William John Lyne, M.P., Premier of New South Wales,—

Sir,

We, the members of the Board duly appointed to advise the Government in accordance with the minute of your predecessor in office, dated the 18th March, 1899, have the honor to submit our Second Progress Report:—

On the 14th July last we had the honor to submit our First Progress Report, dealing exclusively with reproductive public works, which we considered might, if expeditiously carried out, help to relieve the present necessity of many of the able-bodied unemployed, as well as a small proportion of those physically incapable of performing the harder class of manual labour.

In that Report, amongst other matters, we dealt with the following works:—

1. Forest-thinning.
2. Bogan Scrub Lands.
3. Eradication of Prickly-pear.
4. Conversion of the City Tramways.
5. Grading of the Southern Railway Line near Murrumburrah.
6. Duplication of the Milson's Point Railway Line beyond St. Leonards.
7. Drainage of Land in the Gwydir District.
8. Repainting Iron Bridges on the Ryde Road.

9. North Sydney Cemetery and Lane Cove River Bridge.
10. Repainting Public Buildings.
11. Road to Burragorang Mining Field.
12. Glebe Island improvement.

Attention was also called to the danger from fire at the George-street Asylum, Parramatta; and we were gratified to learn that immediate steps were taken to provide accommodation elsewhere for a large number of the inmates, thereby lessening the danger and affording employment to a large number of men.

We also pointed out that there were numerous other public works which might be undertaken, and we again respectfully urge the expeditious carrying out of such as are in a sufficiently forward state of preparation for early execution.

Up to the date of our First Progress Report fourteen meetings of the Board had been held. Nineteen meetings have since been held, at which the Board have been engaged in earnestly considering various proposals for dealing with the problem given them for investigation.

With a praiseworthy desire to ameliorate the condition of the unemployed, several gentlemen have placed schemes at the disposal of the Board, the members of which have also, individually and collectively, spent much anxious time and thought upon the whole question.

The schemes submitted to us were of a varied nature; but the Board found, after careful consideration, that there were certain difficulties in the way of their practical accomplishment, either with regard to the funds necessary to carry them out, or for other reasons.

We found, however, that in some of the schemes, although impracticable as a whole, there were certain suggestions which we have used in dealing with the proposals which we now bring under the notice of the Government.

We realised from the first, as we are sure the Government also realised, the many difficulties which would beset us, and readily acknowledge our indebtedness to those who from time to time have given their assistance in the endeavour to arrive at a solution of the problem which has engaged the attention of prominent public men in all parts of the world.

Number and Class of Unemployed.

At the commencement of our inquiry, from information furnished by the Labour Bureau, and from other sources, we ascertained that there was a large number of men, both able-bodied and partially-capable—about 8,000 in all—in very distressed circumstances. These men, in the absence of private employment, appealed to the Government to do something, if only of a temporary nature, to relieve their pressing necessities; and therefore, in accordance with your predecessor's expressed wish, the early stages of our deliberations were devoted almost entirely to the consideration of reproductive public works. During the inquiry into these works much time was occupied in looking into proposals which, on the surface, appeared justifiable, but on closer examination were found from various causes to be undesirable, the standpoint taken up by the Board being that they would not recommend the Government to undertake works which could not be strictly regarded as reproductive.

Many suggestions were submitted in our previous report, both as regards the works themselves and the administrative measures desirable for their due execution.

Although the works which have been started since our first report was presented, and the improved season have done much to reduce the number of able-bodied applicants for work, there still remains a considerable number both of able-bodied and partially-capable men requiring employment.

In relation to the number of men out of work, no exact figures could be obtained from the Labour Bureau, owing to the defective system of registration. The Board, however, endeavoured to ascertain the class of labour most in need of employment, and were informed that a large proportion of unskilled workmen existed among the present unemployed. We also ascertained that 87 per cent. of the inmates of the Charitable Asylums hereinafter referred to belong to the unskilled class of labourers, having had no advantages in the way of technical education, skilled training, or instruction in any trade or calling. This seemed to us a striking illustration of the value of technical training, for it is evident that the skilled workmen of this Colony, on account of their trade knowledge, have been able either to earn sufficient in their younger days to render them independent in their declining years, or, that where they have failed to do this, their experience enables them to secure employment, though, perhaps, of a less remunerative character, at a later period of their lives. This fact, so strongly brought under the notice of the Board, will, we think, be helpful to the Government in dealing with some of the schemes which we propose submitting for their consideration.

In the course of inquiries at the various Government institutions, the Board ascertained that out of the large number of inmates at the Rookwood, Parramatta, and Liverpool Asylums about 50 per cent., or, say, 1,500 men in all, were capable of doing part of a day's work. These might be profitably employed, instead of, as at present, being a charge on the State, provided suitable land and premises were available.

While an effort is being made at Rookwood and Newington to provide profitable occupation for those inmates capable of doing light work, the unsuitable nature of the surroundings, soil, and buildings largely retards the success of such efforts. We are aware that some of these men are employed in light work, and we feel sure that a proportion of the less capable remainder are competent to perform such tasks, if those who now undertake them were removed to spheres of wider usefulness.

We would, therefore, suggest that one of the Industrial Farm settlements hereinafter referred to might be set apart for men transferred from the Charitable Institutions. The adoption of this course would result in a considerable saving in the cost of administration of the institutions, furnish a healthy occupation for the men, and an independent means of earning a livelihood. Eventually such a course of treatment might encourage a spirit of self-reliance, and fit them for light work in private employment.

The proportion of partially-capable men at the asylums does not in any way represent the total number of this class in the Colony. There are many just as physically incapable of performing a full day's work, who for various reasons are unwilling to seek the shelter of charity, but prefer to suffer their privations in silence and under conditions which should appeal to the sympathy of every humane person in the community.

If,

If, however, a fair opportunity were given to this comparatively large body of men to earn their livelihood without any suggestion of charitable assistance, they might gladly take advantage of it, and form a contented body of producers. These men, we consider, are deserving of the State's intervention, and under the scheme hereinafter detailed special facilities will be suggested for the profitable employment of this class of workers.

We also find that there is a number of men, both young and old, fully or partially capable of performing a day's labour, who prefer to leave work alone, and live on the charity of the public or that distributed through the medium of Government institutions. We do not refer to men of the criminal class, but to those who are either constitutionally lazy or have gradually drifted into the condition of chronic disinclination to work owing, perhaps, to long periods of enforced idleness or other causes.

While we have full sympathy for every grade of workmen, whether able-bodied or otherwise, who are unable to obtain employment, we cannot countenance equal consideration being extended to those who, if opportunity offers, decline to give a fair quota of labour in return for assistance or wages. Frequently we notice that men of this class are brought up under the Vagrancy Act, and sent to gaol for the first offence. We do not approve of the system which permits of such men, who, perhaps, have no natural tendency to become active criminals, being levelled down to the criminal class, because of the danger that the degradation thereby entailed may result in their falling into criminal habits and becoming a menace to society.

We do not agree with those who consider men of this stamp equally as bad as actual criminals, and that there is little hope of stimulating them to better efforts. We believe that, if properly taken in hand and placed under strict discipline, tempered with kindness, on a compulsory labour farm, and taught to perform various classes of useful work, many of them may be induced, under the stimulus of some incentive to better effort, to become a source of profit to, instead of a drag on, society.

Claims for State Aid.

While we do not for one moment desire to encourage the idea that the Government is a milch cow to be drawn upon at all times, we, nevertheless, feel that a large responsibility rests upon the Government of any country to turn its resources to the most profitable uses by the judicious employment of the labour of its people.

We have in this Colony large areas of land not at present utilised to the best advantage, owing to the difficulty of access rendering it impossible for the most suitable class of settlers to use it according to its full capacity of production. It therefore seems to the Board a proper thing for the Government to use its capital in offering facilities which will place upon the lands of our Colony a body of producers who can at the earliest possible time utilise their holdings to the best advantage of the State and themselves.

We fully admit that our land laws afford easy means for men possessed of capital to secure holdings, but at the same time there exists a numerically large class of deserving men who are debarred from making homes for their families by want of the necessary funds. For such men it is the duty of the Government to provide facilities, and thus to evolve, from a class of men who are drifting into a condition of poverty and ultimate dependence upon the State, a race of independent workers contributing to, instead of living upon, the wealth of the community.

Large numbers of the present occupiers of land have been called upon to suffer hardships and difficulties which have made their lives one long round of drudgery. Want of capital has delayed them in clearing the land, fencing, and otherwise improving it, so that years have elapsed before its productive capacities could be brought to that satisfactory condition which men assisted by means to overcome the initial difficulties could secure in, perhaps, one-tenth of the time.

These initial difficulties have driven the struggling settlers too often to obtain financial assistance at high rates of interest, resulting frequently in holdings becoming a source of income to the money-lender only, instead of to the pioneers, who eventually become so disheartened by the heavy load of interest that payments fall into arrear, holdings deteriorate, and utter ruin follows. Timely assistance from the Crown would, in most cases, have enabled settlers thus ruined to become prosperous colonists.

It is unnecessary for us to say that the more the people prosper the more prosperous the country will become; and it will, therefore, we think, be conceded, that a large responsibility rests on the shoulders of the State to give attention to the legitimate wants and requirements of the people, and we know of no better way to carry out such a laudable work than by assisting the people to take up and utilise land.

It is said that in this Colony the Government should not be called upon to pay the attention at present given to secure avenues of employment for the people, but that this should be left to private enterprise.

We have no desire to discourage private enterprise in any way, in order to unnecessarily load the Government with responsibilities which might properly be borne by other people, but if it be justifiable—and we claim that in many cases it is—to give the money and consideration which is bestowed upon labour questions in older countries, how much greater is the necessity in a young country like ours, where the resources have not been fully developed, and where we have millions of acres of land not occupied to the best advantage. Our territory comprises varied climates and soils capable of producing everything that its inhabitants require, and there is a steadily-widening prospect of a large and lucrative export trade being opened up, the different seasons offering material advantages to growers who can place their products on foreign markets during a time of local scarcity.

The Government have recognised the importance of extending railways to the settled districts, reducing freights to enable producers to send their produce to the seaboard, and of late years considerable attention has been given, not only to the question of placing within the reach of our farmers the latest developments with regard to agriculture by the establishment of agricultural colleges, experimental farms, and a staff of expert lecturers, but also by a system of affording to producers special facilities to send their goods to markets outside the Colony initiated by a Board of Exports, whose aim is to open up avenues for the absorption of our surplus products.

Recognising, as we do, the need of State assistance in the direction indicated, it may be permissible, as an argument in support of the principle that it is advantageous for a landlord to further his own interests by assisting his tenants in the improvement of his estate, to point out that private owners of land do not hesitate to borrow money or expend their own capital for the purpose of improving their property
by

by clearing, &c., so that it can be put to the most profitable use and return good interest for the outlay. This principle being recognised and adopted by private owners, there is even greater justification for the State to carry it out, more especially when it is taken into consideration that the Government secure an indirect as well as a direct advantage from a prosperous class of yeomanry.

This principle, we are glad to observe, has already received legislative sanction in the Colony, for legislation exists which has for its object the direct benefit of State tenants, and also that of private owners. In the Water Rights Act, power is given to the Government either to carry out water conservation and drainage works for the sole benefit of private lands, to develop mineral resources under guarantee of interest on the cost of such development, or to carry out national works for the benefit of Crown lands. These provisions have been availed of, and in the near future it seems to us certain that still larger advantage will be taken of provisions which manifestly tend to promote the welfare of the country.

In the case of the occupiers of the arid lands of the west where artesian water is known to exist, but where, owing to the initial cost, it has been impossible to take full advantage of such natural water supply, the sum necessary to carry out the works being exceptionally heavy, prohibitive in fact, to many individual landowners, the Government wisely came to the assistance of the people by passing the Artesian Boring Act, which empowers the Crown to put down artesian bores for the special benefit of landowners, with a guarantee of interest on the capital expended, or for the benefit of State lands.

Further, the difficulty of securing suitable tenants for the Bogan scrub lands has been recognised, and, in order to afford inducements to settlers, the Government have not hesitated to expend large sums of money in clearing such lands, and rendering them fit for occupation, in the expectation that such expenditure would be recouped by the profitable occupation of the land.

With regard to the forest-thinning, also the same principle of expending capital for the improvement of the Crown estate obtains. Evidence has been given that the value of future timber crops has been increased fully 300 per cent. by reason of judicious outlay in the thinning process, and that an immediate result has been the increase from 2½d. to 5½d. per acre in the rent value for grazing purposes of the land so operated upon.

The Advances to Settlers Act, passed this year, recites the expediency of making temporary advances to relieve settlers who have become financially embarrassed, owing to present and recent droughts, and authorises the advancing of loans to holders of freehold land, conditional purchases, conditional leases, homestead selections, homestead leases, settlement leases, &c. Such advances are required to be secured upon the holdings, and the rate of interest charged is 4 per cent.

We are glad to find that it is proposed to afford still further facilities to settlers under the State Bank system, by giving advances on approved security, a principle which meets with the strong approval of this Board, inasmuch as it will enable settlers to increase the productiveness of their holdings and to add largely to the number of labourers employed.

These instances are cited to show the many services rendered by the State and also those in contemplation. Like undertakings, it may be said, are vigorously carried out upon similar lines by every progressive country.

Labour Intelligence Department.

As a first step towards a practical dealing with the unemployed, it is of paramount importance that there should be a central office situated in Sydney, and placed under the supervision of an energetic and capable officer, possessed of some knowledge of the condition and requirements of the workers, and imbued with such a spirit of sympathy towards the unemployed as would tend to inspire those seeking work with confidence and assurance that their necessities would not be lightly regarded.

At this Labour Intelligence Department those in search of general employment should be enabled to secure all information as to where and what employment was available, and with regard to the laws affecting the industrial affairs of the Colony, such as the Land Laws, Mining Acts, Factories Acts, Conciliation and Arbitration, and other subjects bearing in any way upon the interests of labour.

The Superintendent should keep himself in touch with all the trade movements in the Colony, and, in order that the fullest information should be at his disposal to enable him to give advice as to the localities where employment could be found, agencies should be established in all the principal centres of population throughout the Colony. As far as possible these country agencies should be carried out by the Government Land Agents, who, it appears to us, in view of the fact that the land is the principal source of employment, are brought into close touch with the conditions and prospects of the districts where they are located. These officers should be required to send in regular monthly reports showing the number of unemployed, together with full particulars as to their trade or calling, and at the same time indicating whether a scarcity or surplus of any particular class of labour exists. Where any marked developments take place in either direction the various agents should send in interim reports as to the state of affairs. In this way, early intelligence would be gained as to the prospects of obtaining work in any particular locality, and by means of rapidly transferring the available labour to places where it could be readily absorbed, the supply and demand would be more evenly balanced.

The Superintendent and agents should encourage the interchange of information with the different local labour organisations, and invite them to advise the Department as to vacancies in particular trades or localities. Care should be taken, however, to avoid any attempt on the part of the Department to supply men to take the place of those on strike, or in any way to come into conflict with established trade protective organisations.

Every effort should be made to raise the status of this Department, and to secure its more general use by employers and employees.

Registration.

At the Intelligence Department a register should be opened, and the following particulars taken with regard to applicants:—Date of application, trade or occupation of applicant, whether married or single, number of persons dependent upon applicant, age, previous employment, period employed, reason for leaving work, and physical capacity, &c.

After registration, the applicant should be required to re-register at least once a month, either personally or by letter; and in case of failure to do so, the applicant should be considered to have obtained employment, and his name should be removed from the register. The formality of re-registration should be

be arranged so as to entail as little trouble or expenditure of time to the applicant as possible; and the effect of this provision would be to enable the Department to accurately state, at any given moment, the actual number of unemployed desirous of getting work through the agency of the Department.

Applicants whose names are in due form on the register should alone be eligible for work notified; and those applicants who hasten to register after notification of any particular work should not be considered in connection with that work until all previously registered suitable applicants have been engaged or have refused to accept the work offered. If, however, the demand is not then fully supplied, the applicants who registered after the notification appeared should be permitted to compete for the remaining vacancies, and for any works subsequently notified, so long as their names remain on the register.

Names should not be removed from the roll because their owners have refused to accept employment which, for some valid reason, has seemed to them unsuitable.

Although certain recommendations herein made with regard to the Labour Intelligence Department are either wholly or partially embodied in the existing regulations of the Labour Bureau, it nevertheless appeared to us necessary to refer to them in this Report in order to outline the scheme which we consider should be adopted.

Registry Office for Women.

There is one class of the unemployed whose claims appear to have been overlooked in some degree—we refer to women. The sweating system in connection with the engagement of young women seeking employment has been made the subject of severe strictures from time to time, and in order that some better provision may be made to safeguard the interests of those who should receive as much if not more care than the men, we suggest that, in connection with the Labour Intelligence Department, a registry office for women should be established and placed under the charge of a lady superintendent.

Servants' Registration.

It has been shown that in some countries provision has been made to prevent a system of extortion, which is in some cases unfortunately resorted to here, by passing a Servants Registry Act, under which those persons who carry on servants' registry offices are required to obtain a license, and to conform to a fixed scale of fees.

We strongly recommend the passing of a similar measure by the Legislature of this Colony.

Labour Gazette.

In connection with the Labour Intelligence Department, we suggest the issue of a monthly publication containing reports on the labour conditions in the various centres, rates of wages, number of unemployed, and the demand for labour in the various districts. This publication might also contain reports of decisions given under the Conciliation and Arbitration Act, of prosecutions under the Factories Act and other industrial laws, and articles of a general nature concerning industrial questions.

A nominal charge might be made for this journal, but no difficulties should be placed in the way of rendering it accessible to the workers free of charge, by posting copies at the various labour agencies, and in other ways.

The valuable aid rendered to farmers and others by the publication of the New South Wales *Agricultural Gazette* shows to what an extent the interests of the workers of the Colony can be furthered by the judicious distribution of official publications which are within the reach of all who care to take advantage of them.

Labour Depôts.

In order to provide for the class of unemployed who appeal for temporary assistance, we recommend the Government to establish labour depôts in close proximity to Sydney and other large centres of population. These depôts should be open to all persons, excepting those of notoriously bad character, as a temporary shelter, and their residence in the institutions should be for a limited period, and conditional upon good behaviour. The depôts should not be regarded as self-supporting institutions, although every effort should be made to reduce the expenditure as much as possible by employing those admitted in the performance of some work, until they can either find employment in outside channels—to which end every assistance should be afforded them—or until they are transferred to the Industrial Farm settlements hereinafter referred to, upon their suitability being ascertained. Owing to the difficulty of securing suitable land and the limited number of avenues of employment open at such establishments, we do not anticipate that the expenditure will be covered by the exertions of the inmates, but we nevertheless believe that it will be reduced to a minimum. The assembling of these men at places where they will be required to perform a certain quantity of work, will enable the superintending authorities to form some estimate of their character and suitability, and enable a process of selection to be carried out resulting in the separation of the deserving from the incorrigible idlers, the latter being subsequently transferred to the Compulsory Labour Colony hereinafter referred to.

Industrial Farm Settlements.

In order to provide not only a home and maintenance for the partially-capable and deserving men who find great difficulty in securing employment outside, but also an intermediate or probationary establishment for the able-bodied unemployed, we recommend that Industrial Farm settlements should be established, to be open to those who have applied at and conformed to the regulations of the depôts.

While it cannot be expected that these farms will be self-supporting from initiation, we think that the settlers should be required to endeavour to make them so by assisting in the work of the various industries to be established on the settlements. The Board is, however, of the opinion that these farms should eventually become self-supporting, but is also agreed that indirectly they will prove remunerative to the State as places where men may be instructed in the agricultural or industrial arts, and taught habits of self-reliance and steady application to work. The cost of maintenance will be considerably reduced if every effort be made to establish the greatest diversity of employment of which the land and inmates are capable, both agricultural and manufacturing, and if to the fullest possible extent everything consumed on the settlements be produced or made there.

While

While competition with outside industries should as far as possible be avoided, the maximum product of such settlements could do little to influence the market, and we therefore see no objection to poultry-raising, bee-keeping, dairy-farming, fruit-growing, the cultivation of potatoes, cereals, and other agricultural products, as well as different manufacturing industries, the surplus products of which, after meeting the requirements of the inmates, could be supplied to our charitable institutions and public departments. The balance (if any) might with advantage be exported to other countries, although if sold here, our home markets would be but little affected.

All persons who enter these settlements should be placed on an equality upon admission, but as it will be readily understood that a great diversity of capability will be found to exist amongst entrants, a careful classification should take place so soon as the skill and capacity of the settlers can be ascertained.

In addition to engaging in the work already referred to, the intending inmates could do much of the preliminary work, such as clearing, road-making, building, &c. Every incentive should be held out to deserving men who are able and willing to carry out the work allotted to them on the farm.

Intending settlers on the Industrial Farms should be admitted at the discretion of the Board of Control hereinafter referred to, and provision should be made requiring those who wish to leave to give such notice as the Board may prescribe.

The working hours on the farms might be fixed at eight hours per day for adults, with power for the Board to direct that in cases of emergency the settlers could be called upon to work additional time.

Remuneration should be made to the settlers in the form of board, residence, clothing, &c., on a scale of allowance in proportion to the work done and the resources available; and those who show the necessary aptitude and trustworthiness in connection with the work of the farms should be afforded an opportunity of taking up the Assisted Settlement blocks which form the subject of our recommendations hereinafter set forth.

In order to place every facility for obtaining practical knowledge in connection with agricultural and pastoral pursuits within the reach of the settlers, a system of technical education should be established, and every inmate should be required to attend the classes formed for such instruction. Every endeavour should be made to find employment for the settlers in the ordinary channels of industry, by furnishing the information necessary to the obtainment of such employment and assistance, where needed, to arrive at the place of work. The farms must be regarded merely as temporary places of residence for persons who may be able eventually to procure independent work, and who, in the meantime, would be giving their services in return for maintenance and the privileges referred to.

While the rules to be framed for the governance of these farms should not be unduly oppressive or inquisitorial, they should provide for prompt dismissal for disobedience, idleness, drunkenness, and immorality, and transfer to the Charitable Institutions in cases of incapacity. The sale of intoxicants on the settlements, except for medicinal purposes, should be prohibited.

The Board believe that many of the men who will seek admission to the Industrial Farm settlement will be of the unskilled class of labourers. It is important, therefore, that such farm should be fully equipped with serviceable machinery, implements, and good live stock, and that the settlers should have the advantage of both scientific and practical instruction, imparted to them through the agency of the Agricultural Department Inspectors on somewhat similar lines to those carried out on our experimental farms. This would in a short time enable many settlers who, even though not possessed of the physique necessary for the performance of a day's hard work, are nevertheless sufficiently intelligent to acquire such knowledge of production and manufacture as may fit them to carry out the less laborious work on their own account, to become useful producers, or to find employment in avenues not previously open to them. A large proportion of the unemployed lack the physical capacity to compete with the able-bodied men, and not possessing any qualification to engage in the lighter industries, they are prevented from obtaining employment. The removal of disabilities so far as knowledge is concerned will place many of them in a position to secure work in agricultural, pastoral, or manufacturing industries, resulting in the bettering of their condition and prospects with advantage to themselves and the country.

Assisted Settlement Blocks.

In order to provide permanent homes and an independent living for those men who have passed through the Industrial Farm settlements and others who have shown their aptitude for and ability to undertake mixed farming pursuits, we suggest that the Government should select and set aside such areas of land as may be deemed sufficient for the purpose of providing farms for such persons.

We admit that in this, as in other schemes for solving the unemployed problem, there are great difficulties to be overcome, but, in our opinion, these are not insurmountable. Experience in other countries and colonies has conclusively proved that, with suitable soil and under efficient management, such schemes can be carried to a successful issue, and the failures which have occurred only go to prove that the choice of locality or soil, or the method of management, were entirely responsible for such failures.

For the purposes of this part of our scheme, it would be necessary to secure large areas of suitable land, not too difficult of access, and with either a good rainfall or a permanent water supply. Such areas should be divided into blocks, whose dimensions are regulated by the climate, the quality of the soil, and position as regards a market; but care should be taken in making the subdivision that each block shall be equal to the support of a family. A part of each block should be cleared fit for the plough, fencing wire should be supplied, together with timber for erecting a residence, if none of a suitable nature can be obtained on the spot—a contingency which will seldom arise.

Interest should be charged on the capital expended, and also on the unimproved value of the land. This principle, as far as the capital expenditure is concerned, is the same as that embodied in the provisions of the Water Rights Act, 1896, in connection with the carrying out of water conservation and drainage works by the Government for the improvement of lands privately owned or leased from the Crown, also in those of the Artesian Boring Act, and with regard to Government lessees of tanks, and also in connection with the Bogan scrub-clearing.

The blocks should be rendered available to intending settlers of 18 years of age and upwards, upon terms of perpetual lease, subject to the payment of the interest charged, and the observance of the conditions hereinafter laid down.

Occupation and proper use of the land should be an obligatory condition, and all leases should be subject to forfeiture if continuous residence and the performance of a reasonable amount of useful work thereon be not observed. Power should be given to the controlling authorities to declare any applicant unsuitable; but, as a general rule, the applications of married persons should be considered prior to those of single men.

The amount of interest on the unimproved value of the land might be fixed at $2\frac{1}{2}$ per cent.,—payment to commence at the end of the second year of occupation. The land should be subject to reappraisal, but not so as to increase the rent value in consequence of any increment of values which may be caused solely by the exertions or expenditure of the settlers thereon.

So far as is possible the preliminary work of clearing, fencing, and building, should be carried out by the men residing on the Industrial Farm settlements, especially those who are intending applicants for the Assisted Settlement blocks. The cost of such improvements, together with that of tools, seeds, &c., which may be supplied to the settlers, should be a first charge on the said improvements, bear interest at the rate of 4 per cent., and be repayable after the second year of settlement has expired, in annual instalments extending over a period of twenty years. Where assistance is granted to a settler he should be required to place permanent improvements of an assessed value equal to the advance on his block; and where improvements are made at Government cost, their insurance should be provided for at the cost of the settler.

Provision should be made limiting each settler to one block, and power should be given to the controlling authorities to cancel any lease if the land is not being used to the best advantage, or if for any reason the continued residence of the lessee be not conducive to the interests of the settlement.

Leases should contain provisions as to the creation and maintenance of channels for drainage or irrigation purposes, the preservation or planting of trees for timber and shade, and such reservations of rights, powers, minerals, and materials as may be necessary.

Settlers should be permitted, subject to approval, to transfer their holdings and the rights appertaining thereto; but transferees should be subject to the same conditions as those which govern the transferors.

Provision should be made for the accrual of tenant-right upon the determination of a lease either by approved transfer or cancellation, and also for the protection of holdings from seizure under any process or constraint of law.

In any survey of land for assisted settlement, provision should be made for a village reserve, in which residential blocks could be set apart for lease to settlers desiring to avail themselves of the opportunity to reside in closer proximity to the school and other public buildings which would be erected in such village.

An experimental block might be set apart, supplied with the requisite machinery, for testing seeds, fruit-trees, &c., under the guidance of a thoroughly practical man, who would demonstrate the different systems of cultivation, the practicability of growing certain crops on commercial lines, and devote his spare time to visiting settlers and affording them instruction. This experimental farm should also be stocked with horses, cattle, sheep, pigs, and poultry.

Application might be made of the system, which has been in force in the Agricultural Department for some years, of encouraging settlers to improve their holdings by giving machinery and stock as prizes for the best kept farms, dairies, &c.

We have already referred to the difficulties with which unassisted settlers have had to contend, owing to the want of capital, and the delay that has resulted from their inability to get early returns from the land. If the initial cost of preparing the land for cultivation be provided for in the way herein suggested, there will be no difficulty in finding a class of men who will become producers contributing to the wealth of the Colony. The value of the Crown estate will be enhanced, a fair interest on the outlay will be secured, and a happy and contented body of men will be settled on the soil.

The resulting concentration of settlement will in many cases justify the Government in constructing light railways to the settlements, thus rendering them independent of the ordinary bush roads, placing them within easy reach of markets, or business centres, while also reducing the cost of administration by lessening the number of schools, post offices, and other public buildings.

Assisted Settlement on the Co-operative Principle.

As a further means of assisting deserving settlers who have acquired a knowledge of agricultural pursuits, and who desire to co-operate in the working of farms, we suggest that provision should be made to render Crown lands available for leasing to parties of co-operators, and also to obtain from the Government any advances that may be approved for the establishment of co-operative industries in connection with the assisted settlements.

Compulsory Labour Colony.

With a view to dealing effectively with the persistently idle and vagrant class, we recommend that a compulsory labour colony be established, to which such persons may be committed. This colony should be entirely separate from the industrial farms, both as to situation and management. It should be under the control of an officer appointed by the Government for the special purpose, and its aim should be to effect the reformation of the inmates as far as possible, and to compel them by their labour to earn an amount equivalent to the cost of their maintenance.

This establishment should provide the means for carrying out such industries as may be found suitable to the capacity and character of the inmates. The latter should be carefully classed, and any indications of a desire to reform, stimulated by such encouragements in the way of better food and small luxuries as may foster a spirit of industry among them.

To the compulsory labour colony should be sent all persons who are now committed to gaol for the offences of vagrancy, or having insufficient visible means of support; and the provisions of the Vagrant Act, with such amendments thereof as may seem necessary in the circumstances, should be made applicable to this establishment. The period of enforced residence in the colony should be fixed at not less than twelve months for the first offence, and two years for the second.

By the selection of a site supplied with permanent water and with cultivable soil, all vegetables required for the use of the inmates could be grown there, and as far as possible the establishment should be self-sustained, and maintained by the internal consumption of its own products.

Control.

In carrying out the several proposals already referred to, efficient management is absolutely essential, and without which these or any other proposals of a similar nature are bound to fail. We do not, however, for one moment anticipate failure under proper guidance.

If the principles laid down in this Report be adopted, it will be necessary to frame detailed regulations for the carrying out of the objects in view, a task to which this Board would be only too pleased to devote their earnest attention if the Government think fit to accept their suggestions.

The control of the Labour Intelligence Department and settlements should be placed in the hands of a Board, appointed by the Government, and including, if possible, the Minister for Lands and the Minister for Labour. The powers to be vested in this Board should include the making of periodical reports to the Government; the inspection of the various depôts and settlements; the suspension, and power to suggest the removal of employees; the offering of advice; and the general administrative control of the settlements, including their finances; subject in all cases to the approval of the Government.

Co-operative System of carrying out Public Works.

The method adopted in New Zealand of carrying out many of the public works of that Colony on the co-operative system, appears to the Board to have had highly satisfactory results, both to the men employed and to the Government. We, therefore, recommend that a trial of the system be given in the construction of such of the public works of this Colony as are capable of being carried out in the manner referred to.

Agricultural Education.

It may be considered that we are taking a wide view of the powers conferred by your predecessor's Minute, but in view of the statistics submitted to us showing the value of early training in connection with the various trades and callings, we strongly support the suggestion of the late Minister for Mines and Agriculture, dated 3rd May, 1897,* urging the desirability of extending a system of agricultural instruction to our primary schools. In view of our belief that to a large extent the land offers the best means of permanently solving the unemployed question, we consider that the sooner attention is given to the instruction of our youths in using the land to the best advantage the more success will attend their efforts in the direction of agricultural pursuits.

We availed ourselves of the opportunity of visiting the Hawkesbury Agricultural College, where lads of 16 years of age and upwards are given valuable instruction both in the scientific and practical aspects of agriculture, and were convinced of the advantages that would accrue from the extension of agricultural education on the lines laid down in the minute referred to, and from which the following may be quoted:—

“To complete the chain of education and bring it into harmony with the admittedly successful system adopted in the more advanced European countries, it is desirable that we should allow certain teachers to undergo a short course of instruction in agriculture at one of the Department's experimental farms. Then, when qualified teachers are available, a short course of elementary instruction could be given in the primary schools—no set course to be laid down, but each country school to adapt itself to local circumstances. Around these schools experimental plots could be established, and should this not be practicable, arrangements could be made with some reliable local farmer (should there not be a Government experimental farm in the vicinity) to devote a certain portion of his land for such a purpose, and the pupils could then be given practical as well as theoretical instruction on this experimental plot. I think these proposals should be first applied to districts in which agricultural pursuits are at present largely followed. It would appear desirable also to at first commence with the teachers of those districts, and gradually extend the system as opportunity offers. Subsequently a few secondary schools might be established to which lads could be admitted on leaving school and taking up a further study of agriculture, or they may be drafted to the experimental farms now being worked by this Department.”

Drainage.

In addition to the works recommended in their first Progress Report, the Board have devoted much thought and consideration to various schemes of drainage, having in view the improvement not only of private lands, but also the property of the Crown.

We have ascertained that there are large areas in the Grafton Land District, situated on the Hastings, Macleay, Bellinger, Richmond, and Manning Rivers, which are not utilised to the best advantage, owing to the fact that for long periods of the year they are covered with water. This land, if drained, would be of the highest producing quality; and instead of, as now, taking a large area to feed one beast, it is said that at small cost it could be made to maintain one beast per acre. Not only could it be made productive in this way, but also capable of producing heavy crops of maize, &c.

As an illustration of the value of this kind of work, we might point out that recently on land near the Manning River a survey was made of a work estimated to cost about £7,500, which would drain 6,800 acres—or at a cost of less than 1s. per acre per annum in interest, while the increased value would be at least 5s. per acre per annum, and we anticipate even more satisfactory results with regard to several schemes on the Hastings and Macleay Rivers. This is only one of several instances which might be cited in connection with works of this description.

We are aware that large areas of this land are in the hands of private persons; but if they do not think fit to improve the land at their own expense, or to ask the Government to do so under the Water Rights Act, under which they would be charged not more than 6 per cent. on the improved value of the land, and in no case more than 6 per cent. on the actual cost of the work, it seems not unreasonable that the Government should resume and improve it for the benefit of the State.

In dealing with such land, it will, of course, be necessary to take accurate levels, by allowing for the shrinkage when the land becomes drained. It would also be necessary to carefully ascertain the quality of the soil to be operated upon, because it is hardly necessary to point out that in this non-practical men are likely to be deceived—and never more so than on lands of this description, since, although a surface examination may disclose indications of good black soil, careful inspection may reveal that it is after all little else than sand, requiring large quantities of fertilisers to render it sufficiently reproductive.

As

* See Report of the Proceedings of the Agricultural Conference, Hawkesbury Agricultural College, July, 1897.

As a Board we have not visited the country districts named, and consequently our inquiries have not been as extensive or as searching as we would have liked; but from a general knowledge of the Colony we have no hesitation in stating that these river districts, as well as the lands on the Gwydir, near Moree, and other undrained lands, may provide an avenue for profitable employment for large numbers of the unskilled men, whose well-directed efforts would be the means of largely increasing the productiveness of extensive areas within our territory.

Mining.

Another avenue of employment which might, with advantage to the great industry of mining, be opened up in this Colony is the conservation of water on some of our mining fields. These are works which, of course, require report and inspection in order that definite recommendations may be made on the subject; but we feel that much good work may be done in this direction, especially where the expenditure of small amounts of money would result in the conservation of sufficient water to enable mining fields, languishing in times of drought for want of water, to be profitably worked.

One work in particular has recently come under our notice, where the Government obtained a guarantee of 5 per cent. on an amount of £500 advanced under the Water Rights Act for the construction of works which secured the conservation of 7,000,000 gallons of water, and the dam, if raised two or three feet, could be made to hold from 10,000,000 to 12,000,000 gallons. This supply enables the proprietors to view with indifference such times of drought as we have recently passed through, although previously a protracted dry season necessitated the abandonment of the field for several months. One mine-owner alone states that this reliable water supply has enabled him to keep sixteen men in active employment, and there will be occupation for an increased number as soon as the necessary machinery has been erected. In this case the Government have not only obtained the guarantee of interest on the outlay, but they also receive £1 per acre per annum for land which, for any purpose other than mining, is practically worthless. This instance affords a good indication of the importance of giving attention to works of this kind, in order to still further assist in the development of the mineral resources of the Colony.

We believe that many alluvial gold-fields, at present more or less deserted, would furnish at least subsistence to a large number of men by intelligent fossicking, and suggest that the Government might arrange small parties, find rations for a limited period, point out localities, and even loan simple sluicing and washing machines, on such terms as would secure control, and ultimate reimbursement for everything supplied, from those whose earnings were sufficient to allow of such payments.

Forest-planting.

Intimately associated with forest-thinning—to which we have referred in our previous Report—and forest improvement works, is the work of forest-planting, for which there is a large scope in many parts of the country, and a profitable field for the employment of labour. In some populated districts the pinch of scarcity is already felt; the supply of red cedar (one of the most valuable and extensively used of our timbers) is almost exhausted. As an indication that the supply of ironbark—the most durable of all timbers for sleepers and other constructive works—is being rapidly depleted, it may be mentioned that the Railway Commissioners have recently decided to accept other timbers for railway sleepers.

Forest-planting is known to be highly profitable to those who can afford to await the return. Although timber crops take a long time to mature, they are surprisingly remunerative; so much so that in many parts of Europe land, that cannot be profitably utilised for agriculture, owing to the low return for its produce, is being devoted to timber culture. Scientifically undertaken, and every allowance being made for the initial cost, interest, and loss of the use of the land in other directions, forest-planting ensures ultimate returns of a highly satisfactory nature.

In this connection it is also to be remembered that, apart from the climatic value of forest cover, statistics indicate that the world's supplies of timber are being rapidly depleted, owing to the increased uses to which timber is being put. A further inducement for undertaking extensive afforestation may be found in the fact that much of our land is unsuitable for agricultural pursuits, but eminently fitted for the growth and production of timber.

We, therefore, recommend that steps be taken to commence forest-planting in a systematic manner.

SUMMARY OF RECOMMENDATIONS.

PROPOSAL I.

1. This Board recommend for the alleviation of the unemployed evil a composite scheme, consisting of (a) Receiving Dépôt, (b) Industrial Farm, and (c) Assisted Settlement Blocks.
2. The areas should consist of blocks contiguous to Sydney and other large centres of population, for Receiving Dépôts; considerable areas for Industrial Farm Settlements, and large areas for cutting up into blocks for assisted settlers.
3. No land should be alienated; the State should be the sole owner.
4. The control of the Settlements should be under a Board to be appointed by the Government; including, if possible, the Minister for Lands and the Minister for Labour.
5. The Board of Control should have power to report to the Government; to inspect the various Settlements; to suspend or suggest the removal of employees; to offer advice; and generally to control the administration of the Settlements, including their finances, subject in all cases to the approval of the Government.

(a) *Receiving Dépôts.*

6. The Receiving Dépôts should be open to all persons, excepting those of notoriously bad character, as a temporary refuge, subject to their good behaviour. Every effort should be made to replace the inmates in the ordinary channels of employment.

7. The Receiving Dépôts should not be regarded as self-supporting Institutions, but every effort should be made, by the labour of the inmates, to reduce the expenditure as much as possible. Men and women, if found suitable, should be eligible for the Industrial Farm Settlements.

(b)

(b) Industrial Farm Settlements.

8. The proposed Industrial Farm Settlements should be managed by persons selected on the advice of the Board of Control.

9. Every endeavour should be made to find employment in the ordinary channels of industry, and every person desirous of taking up such employment should be afforded every assistance in reaching and obtaining the same.

10. Entrants should be on an equality, but subsequently a careful classification of the settlers should form a feature in the management of the Industrial Farm Settlements.

11. While the Industrial Farm Settlements cannot be expected to be self-supporting from their initiation, every effort should be made to make them so.

12. Intending settlers may be admitted at the discretion of the Board of Control, and no one should be permitted to withdraw from a Settlement without giving such notice as the Board may require.

13. All preliminary work,—clearing, road-making, building, &c., should be done by the settlers, each man being credited with his share of the work performed, the cost to be viewed as a charge against the Settlement.

14. Every effort should be made to establish the greatest diversity of employment of which the land and inmates are capable, both agricultural and manufacturing.

15. As far as may be, everything consumed or used on a Settlement should be produced and made there.

16. Except in cases of emergency, no adult should be required to work more than eight hours a day.

17. Remuneration and privileges should be made to settlers by board, residence, clothing, &c., on a scale of allowance in proportion to the work done and to the resources available.

18. So far as may be possible, competition with outside industries should be avoided.

19. As a part of the system, there should be a Department of Technical Education, to the classes of which every inmate should be required to attend.

20. Those settlers on the Industrial Farm Settlements who have shown the necessary aptitude and trustworthiness should be afforded an opportunity of taking up the assisted settlement blocks.

21. The rules should not be unduly oppressive or inquisitorial, but should include prompt dismissal for disobedience, idleness, drunkenness, and immorality; and transfer to the Charitable Institutions in cases of incapacity.

(c) Assisted Settlement Blocks.

22. For the purposes of assisted settlement blocks the Government should, as necessity arises, select and set aside such areas of suitable land as may be deemed sufficient.

23. Such areas should be divided into blocks, whose dimensions are regulated by the climate, the quality of the soil, and position as regards a market, but in all cases each block should be equal to the support of a family.

24. Occupation and use should be an obligatory condition, and all leases should be subject to forfeiture if these primary conditions be not carried out.

25. Intending settlers should be considered eligible for admission at the age of 18 years.

26. The Board of Control should have power to declare any applicant unsuitable; but, as a general rule, the applications of the married men should be considered prior to those of the single.

27. The tenant should pay as rent an amount equal to 2½ per cent. on the value of the land; such payment to commence at the end of the second year.

28. All lands thus leased should be subject to reappraisal. Provided that no such reappraisal should take place in consequence of any increment of values caused solely by the exertions and expenditures of the settlers thereon.

29. Where necessary, the Government should assist settlers to erect dwelling-houses, farm buildings, and other improvements, or with tools and seeds; such advances to be a first charge on the said improvements, to bear interest at the rate of 4 per cent., and to be repayable after the second year of settlement has expired, in annual instalments extending over a period of twenty years.

30. For every assistance granted to a settler, improvement of equivalent value, as assessed by the Board of Control, should be put upon such settler's block.

31. Where improvements made at Government cost are of sufficient value, their insurance should be provided for at the cost of the settler.

32. No settler should be permitted, unless under special circumstances to be decided by the Board, to hold more than one block, nor should he be permitted to sublet or subdivide such block.

33. Each lease should contain a clause providing that such lease may at any time be cancelled if, in the opinion of the Board of Control, it is not being used to the best advantage or for the best purpose; or if, in the opinion of the Board, the continued residence of the lessee be from any cause not conducive to the interest of the Settlement. In such case tenant-right, as hereinafter provided for, should accrue.

34. Leases should contain provisions to secure the creation and maintenance of channels for drainage or irrigation purposes, and the preservation or planting of trees for timber and shade, and such reservations of rights, powers, minerals, and materials as may appear to the Board of Control necessary in the interests of the Settlement.

35. In case the obligation to reside on the blocks or the payment of any sums due as rent be not duly performed, the lease should be subject to forfeiture.

36. Should any settler abandon his holding without repaying the advances made to him thereon, he should not again be eligible to take up land under this scheme, unless under extenuating circumstances.

37. A settler should, with the approval of the Board, but not otherwise, be allowed to transfer his holding and the rights appertaining to it. But no such transfer should be approved unless made *bonâ fide*, and not for the purpose of evading any forfeiture or penalty imposed or about to be imposed by the Board of Control.

38. No transfer of any block should be at any time made, except by the approval of the Board of Control, who must also approve of the proposed transferee, who should be subject to precisely the same conditions as those which governed the transferor.

39. Tenant-right should accrue upon the determination of a lease, and should entitle the person in whom, for the time-being, the tenant-right is vested to receive the value to an incoming tenant of the improvements from any persons who, subject to the approval of the Board of Control hereinbefore reserved, may take a lease of the land containing the improvements. The value of the improvements to an incoming tenant should be appraised by the Board of Control, and be calculated on the basis of the value of such improvements to the land leased.

- The improvements in respect of which tenant-right is conferred should in all cases be ;
- (a.) of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land ; and
 - (b.) the property of the person claiming to have tenant-right in respect thereof.

Provided always that—

- (a.) The tenant-right should lapse after the expiration of twelve years from the date of its first accruing, and thereafter the improvements become the property of the Board of Control ; but such lapsing should not affect any agreement, appraisalment, or order for payment previously made ;
- (b.) the incoming lessee of the land containing the improvements should pay the value thereof, as appraised by the Board of Control, by such instalments, and at such dates, as may be prescribed by the said Board ;
- (c.) in the event of such incoming lessee not paying the amount of such appraisalment upon entering into possession of the holding, such amount, or so much thereof as remains unpaid for the time-being, should be and remain a charge upon the land containing such improvements while in the hands of a lessee until payment thereof ;
- (d.) the Board of Control should have power to cancel the lease of any incoming tenant who fails to pay any amount due and owing in respect of such tenant-right within the period prescribed by the Board ;
- (e.) the value of any improvement should not be taken to exceed the first cost thereof, and no allowance should be made for any improvement not of a useful character.

40. In case of any settler dying intestate, power should be given to the Board of Control to make arrangements, subject to the legal administration of the estate, for the carrying on of the holding by the widow or other approved person, for the benefit of the family.

41. The Board of Control should have power to authorise the holding of any block by the wife and family of any lessee during his prolonged or enforced absence.

42. No holding should be sold under any writ of execution issuing out of any Court, nor vest in any official assignee or trustee, nor be ordered to be conveyed upon the bankruptcy of the lessee thereof, nor pass by any assignment for the benefit of his creditors ; nor in any other way be taken from the lessee thereof for the satisfaction of any debt or liability under process or constraint of law. Any transfer, assignment, alienation, conveyance, charge, or encumbrance of a holding, except so far as expressly permitted by sanction of the Board of Control, should be absolutely void.

43. The sale of intoxicants, except for medicinal purposes, should not be permitted.

44. In any survey of land for Assisted Settlement, ample provision should be made for a village reserve, in which small residential blocks of land should be set apart for lease to such of the settlers as may desire to avail themselves of them.

45. The Board of Control should be empowered, after the second year of settlement, to grant prizes for—

1. General efficiency in agriculture and farm improvements.
2. Taste in homestead decoration, or work done in vegetable and flower gardening.
3. Production and development of live stock of any and all kinds ;

or such other purposes as they may think fit.

46. The Board of Control should be empowered to carry out such features of co-operation as they may consider desirable, including the power to lease land to parties of co-operators, and to obtain from the Government any advances approved for the establishment of co-operative industries in connection with the Assisted Settlements.

PROPOSAL II.

Compulsory Labour Colony.

1. There should be established a Compulsory Labour Colony to which the persistently idle and vagrant may be committed with a view to their possible reformation, and the endeavour to compel them to earn as much as they consume.

2. The Compulsory Labour Colony should be under the control of an officer appointed by the Government for the special purpose.

3. The Compulsory Labour Colony should include such forms of industry as may be found suitable.

4. The inmates should be carefully classed, and provided with such encouragements by way of better food and other luxuries as may stimulate a spirit of industry among them.

5. All those persons who are now sent to gaol for having insufficient visible means of support should be sent to such establishment.

6. The provisions of the Vagrant Act with such amendments thereof as may seem necessary should be made applicable to this establishment.

7. The period of enforced residence should not be less than twelve months for the first offence, and two years for the second.

8. This establishment should be, as far as possible, self-sustained, and maintained by the internal consumption of its own products.

MISCELLANEOUS PROPOSALS.

1. A Labour Intelligence Department should be established on the lines laid down in the body of the Report.

2. An early opportunity should be taken to introduce a Bill to provide for the licensing of Servants' Registries, and to fix a scale of fees chargeable by and payable to license holders in respect of the hiring of servants.

3. A trial should be given to the co-operative system of constructing public works, so successfully carried out in New Zealand.
4. A system of agricultural instruction should be extended to our primary schools.
5. Efforts should be made to carry out extensive drainage schemes in the Grafton and other Land Districts.
6. The conservation of water on mining fields should be made the subject of investigation and report by Government experts.
7. Steps should be taken to commence forest-planting in a systematic manner.
8. Advances on approved security should be made to present occupiers of land.
9. The Government might arrange for the fitting out of small parties to fossick on the more or less deserted alluvial gold-fields.
10. An Industrial Farm Settlement might be established for partially-capable men transferred from the Charitable Asylums.

There remain those avenues of employment for both classes referred to, which we have but briefly touched upon in our Reports, and others which time has not yet permitted us to fully investigate. Such questions must be dealt with in a future report. We desire, however, to point out that, in submitting this Second Progress Report, we by no means claim to have completed the task assigned to us. The problem is far too complex and varied in its aspects to be fully dealt with in the limited time during which the Board have been in existence; but we think the suggestions herein made are, as far as they extend, reasonable, practicable, and advisable, and we confidently recommend them to the earnest consideration of the Government.

No. 7.

Appendices to the Second Progress Report.

Appendix A.

LETTERS ADDRESSED TO THE PREMIER.

Conversion of City Tramways; Forest-thinning; Southern Line grading; Bogan scrub lands; and Prickly-pear eradication.

Sir,

Unemployed Advisory Board, Sydney, 29 May, 1899.

I have the honor to report that the Unemployed Advisory Board met on the afternoons of Tuesday and Friday last, for the purpose of considering the best means of dealing with the problem of the unemployed.

Your minute, setting forth the reasons for the appointment of the Board, was read and considered.

The Honorable the Minister for Labour kindly authorised Mr. Creer, Superintendent of the Labour Bureau, to be in attendance at the first meeting of the Board, and he reported that the estimated number of unemployed men in the city and suburbs is at present between three and four thousand, and it is thought that the number for the whole Colony is between eight and ten thousand. Owing to the existing drought, and the winter season having set in, it is anticipated that the number of the unemployed will be largely increased during the next few months.

In view, therefore, of the serious outlook for the winter, the Board decided to ask the Government to give their kind consideration to several works which, it is thought, might help to relieve the present necessity.

One of the works suggested is the conversion of the City Tramways, already authorised; this, it is considered, if proceeded with on a larger scale, might afford employment to a number of the skilled labourers amongst the able-bodied unemployed.

The Board also considered the work of forest-thinning, and urge that the Government be asked to proceed with this class of work. From information received by the Board it was understood that many thousands of acres of forest land have already been dealt with in this way, and with most satisfactory results, the grazing capabilities of the land having been improved, and the number of matured trees will be materially increased. It has been pointed out that, so far as the red-gum forests are concerned, there is very little time available, owing to the annual floods occurring about July.

The Board were gratified at the announcement you were good enough to authorise me to make, that you had sanctioned the carrying out of deviation works on the Southern Railway Line, which will afford employment to at least 2,000 men; and also that further blocks of the Bogan scrub lands are to be rendered available for clearing. The Board are anxious, with you, in seeing that this labour will not be secured by recent arrivals from the other Colonies. In addition to the applicants being required to produce electors' rights, the Board are strongly of opinion that in this, and similar classes of work, the whole of the men to be employed should be registered at, and selected through, the city or country agencies of the Labour Bureau.

Another

'39

Another work which the Board are of opinion might be taken into consideration is that of eradicating the prickly-pear from Crown lands, and in order to make some more definite suggestions in regard to this class of work, the Board would be glad if you could kindly authorise Mr. Hay, an officer of the Lands Department, to be in attendance on Tuesday next, so that the area of such land to be operated upon may be ascertained, and definite proposals may be made to the Government on the subject.

While the Board are at present particularly engaged in the endeavour to suggest means for dealing with the present unemployed, they are at the same time not losing sight of several important schemes for dealing with the whole question of the unemployed as classed in your Minute.

I have the honor to be,

Sir,

Your most obedient Servant,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

SYDNEY SMITH,

Chairman.

Drainage of Land in the Gwydir District.

Sir,

Unemployed Advisory Board, Sydney, 31 May, 1899.

I have the honor to intimate that the Unemployed Advisory Board have ascertained that some time ago proposals were made for the drainage of certain lands in the Gwydir District, a work which will benefit half a million acres at the comparatively small cost of £18,000. The proposal, the Board understand, has already been favourably considered by the Ministers for Lands and Works, and the carrying of the scheme into operation would not only give employment to a number of unskilled labourers, but would render a large area of Crown land available for settlement.

It appears, however, that there is a legal difficulty in the way, but the Board are hopeful that this may be overcome.

I have the honor to be,

Sir,

Your most obedient Servant,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

SYDNEY SMITH,

Chairman.

Repainting Iron Bridges on the Ryde Road.

Sir,

Unemployed Advisory Board, Sydney, 1 June, 1899.

I have the honor to bring before you a further work which has been submitted to the Unemployed Advisory Board.

It is stated that there are three iron bridges on the Ryde Road which are urgently in need of repainting, and the Board respectfully ask the Government if they can see their way clear to carry out this work, which will give employment to a number of men who are only able to perform the lighter class of labour.

I have the honor to be,

Sir,

Your most obedient Servant,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

SYDNEY SMITH,

Chairman.

Duplication of Milson's Point Railway Line.

Sir,

Unemployed Advisory Board, Sydney, 1 June, 1899.

In further reference to the question of providing reproductive labour for the unemployed, the Board respectfully urge your favourable consideration of the proposal to duplicate the railway line beyond St. Leonards towards Hornsby Junction.

The Board are gratified to find that the Railway Commissioners, recognising the importance of giving an improved service to this rapidly-growing district, recommended the Government to ask Parliamentary sanction for the necessary funds to carry out this reproductive work. The sum of £50,000 was voted for the purpose, and the Board are not aware of any reason for delay in proceeding to carry it out, and therefore respectfully urge that steps be taken to proceed with it as soon as possible.

This work has the merit of providing reproductive employment upon which the married, unskilled labourers of the metropolitan area, who find a difficulty in leaving their homes, could be employed in the neighbourhood during the most trying season of the year.

I have the honor to be,

Sir,

Your most obedient Servant,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

SYDNEY SMITH,

Chairman.

George-street Asylum, Parramatta.

Sir,

Unemployed Advisory Board, Sydney, 7 June, 1899.

During the visit of the Unemployed Advisory Board to the George-street, Parramatta, Asylum, made for the purpose of ascertaining the number of men whose services could be utilised if provision were made for the establishment of labour settlements, the Board were very much concerned at the great and apparent danger to the large number of inmates should a fire break out in the building.

Although this matter does not fall within the immediate scope of their duties, the Board feel that you will not take it out of place if they respectfully draw your serious attention to the present position of affairs, it having been stated that barely 5 per cent. of the inmates of the Hospital, numbering about 400, could escape if a fire broke out in the night-time.

I have the honor to be,

Sir,

Your most obedient Servant,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

SYDNEY SMITH,

Chairman.

North

North Sydney Cemetery and Lane Cove River Bridge.

Sir,

Unemployed Advisory Board, Sydney, 9 June, 1899.

The Unemployed Advisory Board respectfully urge upon the consideration of the Government a proposal to set apart certain land for a cemetery for North Sydney and the clearing of the same, together with the construction of a road and approaches to the proposed bridge over the Lane Cove River near Chatswood, the site of which is now, the Board understand, under consideration, and also the approaches from Gladesville and Ryde.

It has been represented to the Board that the making of this road, bridge, and approaches would satisfy a long-felt want, and afford access from the Field of Mars to Chatswood and the new suburbs on the North Shore line.

If this can be held to be a necessary and reproductive work it would doubtless afford employment to about 100 men during the winter months.

I have the honor to be,

Sir,

Your most obedient Servant,
SYDNEY SMITH,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Chairman.

Engagement of Men for Murrumburrah Siding.

Sir,

Unemployed Advisory Board, Sydney, 12 June, 1899.

With reference to the employment of men on the grading of the Southern line near Murrumburrah, the Unemployed Advisory Board understand that it has been decided to engage all the men on the spot, and they therefore respectfully point out that this course will be very inconvenient to the unemployed of the metropolitan area, some of whom might go down at considerable expense and then find that they were unsuitable for the work.

The Board therefore suggest that a quota of the men from the metropolitan area be selected through the Labour Bureau in Sydney.

With regard to the country unemployed, who apply and are engaged on the spot, the Board urge that an officer of the Labour Bureau be instructed to attend and ascertain whether the applicants can produce electors' rights or other satisfactory evidence that they are residents in this Colony, and not recent arrivals from other colonies, attracted by the announcement of the work.

I have the honor to be,

Sir,

Your most obedient Servant,
SYDNEY SMITH,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Chairman.

Road to Burragorang Mining Field.

Sir,

Unemployed Advisory Board, Sydney, 12 June, 1899.

I have the honor to inform you representations have been made to the Unemployed Advisory Board that the mining field at Burragorang, although only in the prospecting stage, is deserving of the favourable attention of the Government.

At least one of the mines has produced encouraging results, notwithstanding the expense the owners have been put to in consequence of being compelled to convey the ore over an almost impassable road in order to have it treated at the Dapto Works. It is said that the present condition of the road not only retards the development of the land already taken up, but also seriously interferes with other prospecting operations.

It is understood that Mr. Pittman, of the Mines Department, who recently visited the field, and Mr. Warden Gibson, report hopefully of its future prospects. So well does Mr. Pittman think of the outlook of this field that he suggested an exceptional course should be taken, and a portion of the Prospecting Vote set apart for the purpose of providing additional facilities to the mine-owners in the district to continue their operations under something like satisfactory conditions.

The Board do not urge that this course be pursued, recognising that it is purely a road matter, properly chargeable to the Road Vote, but they ask that the Honorable the Minister for Works be consulted as to whether assistance could be given to those who, at considerable expense and under disadvantageous conditions, have done much prospecting work in the locality.

The construction of this road would give employment to a number of the unemployed resident in the district, or sent up from Sydney for the purpose.

I have the honor to be,

Sir,

Your most obedient Servant,
SYDNEY SMITH,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Chairman.

Forest-thinning.

Sir,

Unemployed Advisory Board, 19 June, 1899.

Adverting to my letter of the 29th May last, I have the honor to bring under the notice of the Government a suggestion of the Unemployed Advisory Board that the work of forest-thinning be proceeded with.

From information furnished to the Board, it is understood that many thousands of acres of forest land have already been dealt with in this way, and with most satisfactory results, the grazing capabilities of the land having been improved, and the number of trees which will eventually reach maturity materially increased.

The Board respectfully suggest that, in forming gangs of men for forest-thinning work, parties of five be despatched instead of any larger number, it having been pointed out to the Board that there is less trouble in arranging for and making up gangs of five.

I have the honor to be,

Sir,

Your most obedient Servant,
SYDNEY SMITH,

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Chairman.

Bogan

Bogan Scrub Lands.

Sir,

Unemployed Advisory Board, Sydney, 19 June, 1899.

Adverting to my letter of the 29th May last, I have the honor to bring under the notice of the Government a suggestion of the Unemployed Advisory Board that the scrub-cutting operations at the Bogan be carried out in as extensive a manner as possible, in order to provide employment for some of the unemployed of the city and country.

The Board were pleased to learn that a number of men have recently been sent away to this work, and respectfully suggest that, in forming future gangs, parties of five be despatched instead of any larger number, it having been pointed out to the Board that there is less trouble in arranging for and making up parties of five.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Repainting Public Buildings.

Sir,

30 June, 1899.

I have the honor to intimate that representations have been made to the Unemployed Advisory Board that considerable depreciation of property is resulting from delay in repainting certain public buildings, more especially with regard to the General Post Office, Public Works Office, Lands Office, Colonial Secretary's Office, Little Bay Hospital, and other public buildings in the country. The Board, therefore, respectfully urge that this class of work be proceeded with as expeditiously as possible, as it will have the merit of preserving public buildings and giving employment to a number of men who are at present unfortunately out of work.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Prickly-pear Eradication.

Sir,

Unemployed Advisory Board, Sydney, 12 July, 1899.

Adverting to my letter of the 29th May last, I have the honor to intimate that representations have been made to the Unemployed Advisory Board that large areas of vacant Crown Land are being rendered useless by reason of the growth of prickly pear, and that, although private owners and conditional lessees are required to eradicate the pest, it has been found impossible to fully enforce the provisions of the Act in respect to private lands, because the Government have virtually taken no steps to cope with it, except by letting certain land on improvement lease. Large areas of reserves and Crown Land, thickly affected with prickly pear, remain uncleared, forming a menace to land-owners who are making praiseworthy efforts to deal with the increasing pest. In many cases the reserves form a series of seed-beds from which the pear is distributed, causing serious losses.

The Board, therefore, strongly urge that energetic measures be at once taken to operate on the more thickly-infested reserves in the Hunter District, leaving other lands to be dealt with later.

This work, the Board are informed, will ultimately repay the Government not only by improving the land operated upon, but by saving country so far not affected, and further, it will afford employment to a number of able-bodied men.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Glebe Island.

Sir,

Unemployed Advisory Board, Sydney, 13 July, 1899.

I have the honor to intimate that the Unemployed Advisory Board visited Glebe Island for the purpose of ascertaining whether employment could be profitably found for a number of able-bodied men, and in the course of their inquiries were informed that about 225 men are at present employed in obtaining and carrying stone for the approaches to the Glebe Island Bridge and some reclamation works. The work in connection with the approaches will, it is stated, be completed in about four or five weeks' time, when at least 100 men will be thrown out of employment, unless other work be found for them.

The Board were favourably impressed with the possibilities of doing valuable work on this Island by cutting part of it down and utilising the material for reclamation and the construction of walls round the Island for wharfage purposes. The execution of this work would render available valuable sites for warehouses, factories, timber yards, &c., and provide about 4,000 feet frontage to White and Johnstone's Bays, with a depth of water (after dredging the silt) varying from 28 to 38 feet, and about 2,000 feet frontage to Rozelle Bay, where the depth of water has not yet been definitely ascertained.

The area of Glebe Island is about 33 acres, and with the reclamations necessary to get deep water, without interfering with the fairway, an area of fully 50 acres would be available. With the exception of the portion used for the Abattoirs the Island is at present practically unoccupied.

It appeared to the Board a great pity that such a valuable asset as this could be made should so long have remained unimproved. The Government wharfs already erected are extensively used, and even the additional accommodation now being provided at Darling Harbour will, it is said, be readily taken up when completed. As the demand for wharfage accommodation is in a westerly direction, the Board have no doubt that when the work now suggested is completed the Government will find no difficulty in putting it to practical and remunerative uses.

Although the Board are strongly of the opinion that the Island improvements, herein suggested, can be defended irrespective of railway communication, they nevertheless feel that the time is not far distant when the Government will think it desirable to take into consideration the question of extending the railway, from the suburban line near Petersham, to the Island, and possibly also connecting with the Southern line. These connections would add materially to the value of the Government property by affording facilities for the growing export trade, enabling goods to be taken direct from the ship's side to the country, and to warehouses, depôts, or factories established on the Island for subsequent distribution.

The congested traffic in the tunnel from Redfern Station to Darling Harbour would also be relieved. The improved tram service to Harris-street, with the prospect of an extension westward, owing to the new bridge, will afford easy access to the Island from the business part of the metropolis.

The work of partly cutting down, reclaiming, and constructing walls on this valuable property should, in the opinion of the Board, be carried out without further delay. It would have the merit, not only of giving continued employment to the men already at work there, and whose time will shortly expire, but additional hands to the number of 300 or 400 could be profitably employed on this important undertaking.

The work could be carried on without interfering with the Abattoirs, although eventually, if it is decided to retain them on this Island, it might be found advisable to make alterations to suit the changed conditions of the surroundings.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Sir,

Unemployed Advisory Board, Sydney, 7 August, 1899.

Representations having been made to the Unemployed Advisory Board that in selecting able-bodied men through the Labour Bureau for the Bogan scrub cutting, forest thinning, and other work, the practice is to ballot first, and then subject the successful men to a further selection, with the result that some are rejected on account of unfitness for the work.

The Board submit that if, out of the number of men applying, those considered physically fit to perform a fair day's work for the wage offered were selected before, instead of after, the ballot, much time would be saved in balloting, and there would be less ground for dissatisfaction on the part of the men who, after waiting the result of the ballot and being successful in the drawing, find themselves rejected on the ground of unsuitability.

With regard to those works where a fixed price has been settled on a fair wage basis, such as forest thinning, &c., there seems to be no objection to the men successful in the ballot being allowed to proceed to carry out the work so long as they are satisfied to take it. It is alleged that men successful in the ballot have been rejected before trial, because it was thought they did not possess the requisite physical qualifications.

The Board consider that if there are any amongst the applicants, who for good reasons should not be employed, the process of selection should be carried out before the ballot is taken, unless some disqualifying circumstance subsequently transpires.

I have the honor to be,

Sir,

Your obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Sir,

Unemployed Advisory Board, Sydney, 30 August, 1899.

I have the honor to inform you that several delegates from the unemployed waited upon me to-day, and suggested the advisableness of carrying out some of the works referred to in the attached advertisement by day-labour. Although tenders closed on Monday last, I am informed that the contracts have not yet been let.

While there may be considerable difficulty in performing all the works in the manner suggested, this Board think that it might be possible to carry out some of them by day-labour without injury to the public interest.

If this could be done, it would assist in giving employment to a number of men who have been registered at the Bureau for a considerable time past.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Sir,

Unemployed Advisory Board, Sydney, 6 September, 1899.

I have the honor to inform you that certain representations having been made to this Board animadverting upon the quality and manner of distribution of the rations supplied to the unemployed through the Labour Bureau, a sub-committee of the Board was appointed to attend on the occasion of last Friday's distribution, with a view to ascertaining whether the complaints made were well grounded.

The sub-committee reported that on investigation they found in one case the meat supplied was considerably tainted, but on this being pointed out by one of the members, good meat was substituted. The sub-committee found that the flour was not of good quality, being musty and dark in colour; the condensed milk issued had ceased to be soluble; and a piece of meat, supposed to weigh 8 lb., was found to contain a bone weighing nearly 3 lb., and was cut from the lower part of the shin. Complaints were made that children sent for the rations were imposed upon, inferior meat being given to them.

The

The place of distribution is an objectionable one; the rations are given out at a small window opening on a narrow lane. There is no shelter from the weather, and as the distribution occupies upwards of five hours, many applicants are kept waiting for a considerable time.

In view of this report of the sub-committee the Board respectfully suggest that if it is intended to continue the supply of rations, an officer be appointed to inspect and superintend the distribution, that fresh milk be furnished instead of condensed, and that more suitable premises be provided.

I have the honor to be,

Sir,

Your most obedient Servant,

SYDNEY SMITH,

Chairman.

The Right Honorable G. H. Reid, P.C., M.P., Premier, Sydney.

Appendix B.

REPORT ON LABOUR CONDITIONS IN NEW ZEALAND.

[Presented to the Unemployed Advisory Board by the Ven. Archdeacon Langley, 6th December, 1899.]

On arriving in New Zealand one is immediately impressed, not only with the entire change in the character and appearance of the country, but in the condition of its people. Coming from Sydney, with its parks and thoroughfares crowded with men waiting about without employment, many of them asking alms, at Auckland you mix with a population among whom there appears to be no real want—where for every able-bodied man there appears to be plenty of employment—and where the people seem exceptionally happy and well satisfied. This was certainly my first impression of New Zealand. The loveliness of the scenery, with green hills and trees, and foliage in the freshness of spring, give it the appearance of a Great Britain in the Pacific—the home of a wealthy, prosperous community, where every labourer can find employment, and every family a home. A closer investigation, and more intimate acquaintance with the people, showed, however, that, in spite of appearances, there was poverty which had to be dealt with; that here, as elsewhere, there were large calls upon the charity of the community.

But, so far as the unemployed are concerned, my earliest impressions remained. New Zealand has, practically, no unemployed problem to solve. The country at the present time knows nothing of the troubles that are pressing upon us.

It has not, however, been so always. I was assured that, years ago, things were very different; that that Colony suffered as we appear to do so, constantly, and that unemployed agitations were frequent.

All this has passed away. In writing to the Premier of New Zealand just before leaving, I said that in his Colony the unemployed problem had practically been solved, provided that the present condition of things proved permanent, and that it was not obtained at too high a cost.

It appearing to me that I could best assist this Board by seeking to discover the means by which such a result had been brought about, I made careful inquiries, which led me to the conclusion that this satisfactory position is attributable partly to certain things peculiar to New Zealand, and, partly, to legislation.

With regard to the first, the Colony is capable of supporting a large population in the cultivation of the soil and occupations upon the land. There is a great extent of good land available for cultivation; and the regularity of the seasons, the regular rainfall, and the entire absence of droughts such as devastate Australia, make it possible for pastoralists and farmers to expend money and labour with reasonable certainty of a return.

Though in some places the land is exceedingly rich, it is not better than some large areas which we possess. But the abundant rain, falling regularly, changes the whole character of operations upon the land. This applies to the grazier of sheep or cattle, but still more to the tiller of the soil. Men can take up small areas of land, and by judicious cultivation make a good living. As an illustration, I may mention the case of a settler I visited in one of the Government subdivisions at Hawke's Bay, who was doing fairly well on 21 acres of land, for which he paid interest and taxes amounting to £35 a year. He got an occasional day's work from the runholders, which helped him considerably; but he stated that had he 40 acres instead of 20, he could do well, and, at certain seasons, employ labour himself. This man keeps sixteen milking cows upon his farm, besides horses and pigs, and also grows some crops.

Then, in the North Island, the kauri gum-fields are a source of employment always open, where, though men cannot earn satisfactory wages, they can always obtain sufficient to keep them from pauperism. There is no need for a man to seek alms, as, with the most primitive tools, an unskilled labourer can always obtain the wherewithal to provide himself with food.

Another contrast between New Zealand and this Colony, which, I think, has something to do with its improved condition, is that the town population is not congested into one large city like Sydney or Melbourne.

Not only have they Auckland, Wellington, Christchurch, and Dunedin, each with its 50,000 inhabitants, more or less, but there are other large towns like Nelson, Napier, Timaru, and Port Chalmers. This, I think, tends to improve the condition of the country, and to provide more employment for the people.

In the matter of special legislation for the working classes, New Zealand is certainly an object lesson. Whether such legislation prove effective or otherwise, the legislators of that Colony have shown a courage that is remarkable. They have dealt with problems upon which we have only theorised, and the political student has there a field for observation and inquiry of the most intensely interesting character.

It is difficult, in writing upon the subject, to avoid the discussion of some of these questions, and expressing the opinions one has formed upon them; but I feel that I can render the best service to the Board by confining my remarks to such legislation as deals definitely with the employment question, and giving such information thereupon as I have been able to gather.

Labour Intelligence Department.

I had the opportunity of seeing something of the working of the Labour Bureau in several of the large towns, and it appeared to me that the system has much to do with the prosperity of the workers. It has no less than 200 agencies at work throughout the Colony. By this means full information of the labour condition of every district is kept before the officials, and workers are shifted from the congested districts to places where there is a demand for labour. An applicant, when registered, is required to report weekly, either personally or by letter, until employment has been found. Employers are encouraged to make use of the Bureau by the care exercised by the officers in their selections. The persons in the various districts who act as agents appear to take an intelligent view of their position, and to perform their duties satisfactorily. They are either Government officials or members of the Police Force. Men employed through the Bureau are sent forward to their destination by railroad, steamer, or coach, care being taken that the cost is duly repaid by the worker. It appeared to me that there was among the officers of the Bureau a very earnest sympathy with the workers, and a distinct sense of their responsibility.

A monthly paper, called the *Journal of the Department of Labour*, is issued regularly, and largely circulated. This journal gives full and interesting information upon all labour questions, not only in New Zealand, but in other countries. It appears ably edited, and I should think is a valuable agency in the work.

The usefulness of this Department is, however, considerably impeded by the comparatively small number of employers of labour who avail themselves of its aid. Out of 2,115 persons who were found work for the year ended 31st March last, only 638 were sent to private employment. This, doubtless, is due in some measure to the fact that many employers have their own agents, who in the past have supplied their wants, and whose services they do not care to dispense with; but I think it is also largely due to the bitterness of party spirit. The wealthy classes generally resent a good deal of the recent labour legislation, and, as a consequence, will have nothing to do with any of the machinery that it has provided; but I think that confidence in the Bureau is growing, and that in a few years much of the prejudice against it will pass away.

A large share of the time and attention of the Department is devoted to forwarding men to co-operative works, to which system I shall now proceed to refer.

Co-operative Works.

Whatever may be the advantage or disadvantage of co-operative works, there can be no doubt that to them the Colony is mainly indebted for its condition in the matter of the employment of the workers; and upon that subject it was my special desire to obtain all possible information. My time was too short, and my opportunities too limited, to enable me to form an independent judgment, and so I endeavoured to find out the opinions of all sorts and conditions of men. My great difficulty was that this, above every other ameliorating scheme, was the centre round which bitter party spirit raged. The friends and supporters of the present Government were loud in its praise; all persons, in the House and out, who were opposed to the Ministry, were strong in their denunciation of the system.

Those in its favour put it very much as Mr. Blow does in his little paper already in your hands. They say that, prior to the introduction of this system, large profits were made by the contractors, practically at the expense of the workmen; that this was not even the worst, but that these contractors largely let the work to sub-contractors, who took it at a lower rate, and either made money by sweating the workers, or lost money at the expense of the business people, from whom they purchased materials, or of the workmen to whom they failed to pay the full amount of their wages. Further, that a great deal of congestion was brought about in the labour market by the contract system; that when works were about to start, large numbers of men crowded to the locality; the contractor meanwhile brought his staff of navvies with him, so that the works were no relief to the local labour market, but rather otherwise.

It is contended by the officers of the Government that the effect of the co-operative system is not only to give men a fair day's pay for a fair day's work, but to enable them to secure the profit, which was previously secured to the contractor; that it places the workman on a higher level; that he is practically his own master, and is likely to take a greater interest in his work. Above all, they hold that it is advantageous to the State; that the works are carried out for their actual value, and that it gives the Government complete control over its own expenditure; that it enables the Government to have public works completed in due time, as, under pressing circumstances, they are able to put on as many men as the engineer can employ. It is also maintained that the work is done with greater efficiency; that there is no risk of scamping or putting in inferior material, and that work done under the system will show to advantage when compared with that done by contractors.

Another advantage claimed for it is that when, for financial or other reasons, it is considered desirable to delay for a time the completion of any work, such a course can be adopted without loss to the Government by way of compensation to contractors.

It is held by the opponents of the system that it can be made an instrument of political corruption; that by its agency large bodies of men may be removed to any one part of the country for a time, for voting purposes; that it was in the power of a Ministry, when an important election was pending, to set going some public work in that constituency in order to secure the election of the Government representative. It was further stated that political influence can be so brought to bear upon the Government officers that through fear of dismissal they would fail to exercise a proper supervision. It was also thought that the wages earned by the men were higher than could be obtained for similar work in private employment, and that the system had the effect of withdrawing men from every other class of employment to the detriment of the industry of the country. It was also constantly stated that inferior work was allowed to pass; that the system necessitated larger expenditure in supervision; and that the work cost considerably more than if it had been carried out under the old contract system. Another strong objection raised against it was that it was almost impossible to get gangs of men of equal strength and capacity, and that the system tended to discourage the more vigorous workers to do their best work; that the tendency was to bring all down to a common level. I was assured that in this respect some discontent existed among the workers themselves.

To what extent these objections, if valid, apply to the system itself, as distinguished from details in carrying it out, must be left for the consideration of those who propose to introduce it among ourselves.

Certain facts respecting it are beyond question.

- 1st. It absorbs the unemployed, and explains to a large extent the fact that since the adoption of the system, eight years ago, there has been no unemployed agitation in New Zealand.
- 2nd. It encourages the settlement of men and their families away from the great centres of population. When men are engaged upon the works in any locality, the officers of the Labour Department provide, when so desired, travelling expenses for the workmen's families, either by railway, coach, or steamer, deducting the cost from the wages of the men, the Railway Department allowing 25 per cent. on the amount of the railway fares. These people, in some instances, settle down in the district, and when the work comes to an end, find occupation among private employers in the locality.
- 3rd. In every case where it is impossible or undesirable to remove the family, each workman signs an authority for the officers of the Department to pay one-half of his wages to his wife and family during his absence. By this means, care is taken that those dependent upon the employees shall be duly provided for.

The extent to which the system has been availed of is interesting. In the month of September 3,348 men were engaged on these works.

Strong expressions of disapproval of the system might be heard among some of the most intelligent and thoughtful men in New Zealand; indeed, one clever and influential man, with whom I had a long conversation, stated that if, as the result of the general election shortly to be held, a new Government came into existence, one of the first things it would do, would be to put an end to the system. But he failed to suggest any other means of dealing with the unemployed, to take its place.

A leading dignitary of the Church of England, a man of wide sympathy and great influence, gave me his opinion upon the subject, in a conversation I had with him. He said that the co-operative works were more costly to the Government than the old contract system, but that it saved the Government and the country more than the extra cost, by its absorption of the unemployed; and that the men and their families were, by its means, saved from pauperism and encouraged in habits of industry.

The Levin State Farm.

Among the various schemes devised for relief of the unemployed, the Government of New Zealand decided upon establishing a State farm. After considerable inquiry they chose as its site a block of 800 acres of land at Levin, about 50 miles from Wellington, and in September, 1894, commenced work with thirty-seven men, with fifty-five dependents. The land was a forest of heavy timber and thick scrub, and the clearing was most expensive. The clearing was done under the co-operative works system, and the men paid full wages for their labour.

The timber on the estate was a valuable asset, and returned to the Government £1,250 in the first four years.

A great deal of work had necessarily to be done in road-making, fencing, erecting cottages for the men; and for all this labour, full rates were paid to the workers. While I approve of the course thus taken, it must be remembered that it involved a much larger expenditure than would have been incurred by private settlers taking up the land. I suppose that very few pioneers, either in Australia or New Zealand, could make 6s. 6d. or 7s. a day out of their land for the first four years of settlement.

The total amount voted by Parliament for carrying on the operations of the farm for the first four years was £8,289, which, in addition to the receipts, covered all expenditure for that period. By a curious coincidence this amount almost exactly corresponded with the wages paid to the workers for the same period.

The receipts for these four years amounted to £3,875, which may be stated thus:—

	1894-5.			1895-6.			1896-7.			1897-8.			Total.		
	£	s.	d.	£	s.	d.									
Timber	396	2	8	312	17	6	476	15	11	65	7	9	1,251	3	10
Agriculture and other sources	86	2	4	508	15	9	1,066	15	8	963	1	6	2,624	15	3

The assets of the farm at the end of the period named were as follows:—

	£	s.	d.	£	s.	d.	£	s.	d.
Fencing	528	0	0						
Roads made, &c.	459	0	0						
Bush felled	752	0	0						
Buildings	1,510	0	0						
Fruit-trees, vines, &c.	336	0	0						
Estimated value of 15 acres, used as an orchard, at £30 per acre	450	0	0						
Plantations fenced and planted ..	70	0	0						
							4,105	0	0
Estimated crops	160	0	0						
Pumps, water-troughs, windmills, separator, farm tools, &c. ...	442	0	0						
Cattle, horses, pigs, &c.	941	0	0						
							1,543	0	0
									5,651 0 0

This would show a loss to the Government of £2,650, which is more than made up by the improved value of the land. I was assured that were the Government desirous of disposing of the farm they could do so at a rate sufficient to pay all the amount of their expenditure, with interest added.

I have entered somewhat fully into this matter, because I had to convince myself that the opinion freely expressed in New Zealand, that the farm was a failure, was incorrect. I think, under the circumstances, it may be pronounced a success. On one or two points, however, I venture to make suggestions:—

1. In the clearing of the land it seems to me that much more might have been made of the timber on the estate. The amount received on that account was £1,251 for a period extending over four years; out of which I find that £456 was received for royalty on timber. Surely a considerable source of profit must have been lost. Had the course adopted elsewhere been carried out at Levin, a six-horse power-engine purchased, and a small sawmill plant erected, I should think that the timber might have become a valuable

valuable asset. Again, a flax-dressing plant might have been obtained as soon as the flax could be grown, and thus employment found for some of the people on the estate during the winter. Some other industries might also have been set to work to provide for a larger population to consume the produce, and thus considerably to increase the income; but I think it is probable that this latter suggestion may be contemplated by Mr. Mackey, who has the establishment under his control. I only make these suggestions in view of any experiments in the same direction, which may be decided upon by our Government.

2. I think it would have greatly saved expenditure if there had been from the first a system by which the men were paid a daily or weekly wage, with board and lodging. This would have been more economical, and, I think, equally satisfactory to the men. Then I would suggest that in connection with the farm a store should have been kept, where the men could purchase whatever they required at a reasonable rate, they being allowed credit up to the amount of their earnings. I believe that if some plan such as I have sketched had been adopted, the £2,600 of apparent loss would have been saved.

3. I think it is a good plan to pay the officers of the Institution by a commission instead of by salaries. In our Labour Home I have adopted this course with decided advantage, and I can see no reason why even the workers on this estate should not have been paid, partially, on similar lines. This would have given the men a deeper interest in the concern.

The latest information I had respecting the farm shows distinct development, from a financial point of view. The income to 31st March was £1,300, against an expenditure of £1,700, of which £1,200 was spent on permanent improvements.

The land is evidently very rich, capable of producing 14 or 15 tons of potatoes, 28 tons of carrots, 45 bushels of oats to the acre, and enormous crops of turnips, mangolds, &c., and gradually the land is being brought into cultivation. They have now eighty-five milking cows, with sixty-seven other cattle. Included in the income for last year was the amount of £400 for fat-cattle sold. There are 400 sheep, 200 pigs, and eight working horses. There are 25 acres of orchard planted out, which in a few years ought to bring in a considerable revenue. At present there are fifteen men on the Farm with thirty-four dependents, but Mr. Mackay states that in any great pressure he could at once take on 100 men for a short period, and usefully employ them.

On the subject of technical education for the men, Mr. Mackay, says "As every employee has to take a turn at the work that is going, the veriest new chum that goes on the place must, through having to do the work, acquire some knowledge of farming work. The men are called upon to do ploughing, reaping, mowing, sowing, bush-falling, fencing, road-making, trenching, digging, planting, &c., but there is no training given such as would be gained from an agricultural college, and there is no form of technical training given."

I think, that in any scheme for a State farm among ourselves, the matter of technical education should form an important element.

One of the most satisfactory features of the operations at Levin farm has been its effect upon the men who have been employed there.

In September, 1898, 129 men had passed through the farm. Almost without exception they were in destitute circumstances when they arrived there and the effect upon them has been most marked. Many of them have turned out excellent settlers, others have obtained suitable employment, and almost all have been benefited. I do not think that this point has been at all sufficiently emphasised in the discussion upon the question in New Zealand.

Another means by which the Legislature of New Zealand has endeavoured to prevent the colony from being overrun with paupers is by their regulations which prevent such persons from landing at any of the ports. Here, I think, we can see a valuable experiment being successfully worked out, and one that, with some modifications, might be usefully adopted in this Colony.

Another important means by which struggling men are assisted to improve their position, and to escape from that state of helplessness into which so many of our people fall, is the splendid opportunity offered by the land policy of New Zealand. Into that land policy I need not fully enter; sufficient for my purpose to refer to the special features available for working-people, which have had, as it appears to me, a considerable influence in producing the present prosperity of the country.

Allotments for Workmen's Homes.

This feature of help for working men was specially brought under our notice recently by the Rev. Dr. Roseby, as having greatly impressed him in his visit to South Australia. In New Zealand it is also in full operation. Land, the property of the Government, or purchased for that purpose, is cut up into small town allotments, no lot exceeding 3 acres, and no lease comprising more than one allotment. No person can hold any allotment who is the owner of more than one-eighth of an acre of town land, or, if rural, land exceeding 50 acres in area. Every applicant must prove to the satisfaction of the Land Board that he is a *bona-fide* workman—engaged in any form of manual, clerical, or other work for hire, and is not possessed of real or personal property to a value exceeding £150. He must also satisfy the Board that he can, with the assistance rendered by the Government in such cases, erect a suitable house for himself and his family, and fence and cultivate his piece of land. The lease is practically perpetual, for 999 years, and the Government advances the lessee £20 if a married man, or £10, if unmarried, towards the erection of his house or making of his improvements, such advance not to exceed one-half the value of his improvements, and to be repaid with interest at the rate of 5 per cent., by half-yearly instalments, for a period not less than five or more than ten years; the annual rent of the land being fixed at 4 per cent. on its assessed value, and not liable to reassessment. This provision for workers is being largely availed of, and, in the neighbourhood of Christchurch, a considerable number of settlers appear to be making comfortable homes for themselves.

But it is by the number of persons that each year are taking up land throughout the Colony that the efficiency of the land system is being proved. Land purchased from the Maoris, or waste land of the Crown, is being surveyed and opened up for selection, and may be obtained either by purchase, lease with right to purchase, or lease in perpetuity; and throughout New Zealand a large and industrious population is settling on the land, and appears generally to be prospering.

In 1894 there was a further development. "The Land for Settlements Act" was passed by which the Government was empowered to purchase land from private owners, cut it up into small farms, and let it to tenants on leases for 999 years. This Act was amended in 1896, and contains a provision by which the Government

Government is empowered to take possession of any large estate, at an assessed price, even though the owner be unwilling to sell, and divide it into small farms, to let it out on perpetual lease. To this provision great exception is taken by the larger landed proprietors, who complain of the wrong inflicted upon them by their being forced to give up their estates, whether they will or not. These gentlemen declare that the operations under this Act of Parliament have produced a widespread feeling of insecurity among the land-owners and capitalists of the country.

The effect of the New Zealand land system is certainly to settle a large number of persons on the soil. For the year ended 31st March, 1899, no less than 2,542 selectors took up areas of land ranging from 1 acre upwards. In addition to this, 37,398 acres were purchased by 534 persons.

In the disposing of land under the perpetual lease system, great care is taken; before an applicant is allowed to ballot for selection he is required to satisfy the Commissioner on the following points:—

That he is not under 21 years of age.

That he possesses means for stocking and cultivating the land, and erecting suitable buildings thereon.

That he has means sufficient, in his own estimation, to enable him profitably to work the land, and fulfil the conditions for improvements.

That he has had experience in cultivating agricultural land, or in dairying.

He has to state his present occupation,

if he is married, and if his wife has any experience in cultivating land, farm work, or in dairying, if he has any family, and the number and sex of the children he proposes to have residing with him,

if he holds or has an interest in other land,

if his wife holds or has an interest in land,

if he or his wife holds rural land, and if it is insufficient to provide for the maintenance of his family.

When the Commissioner is satisfied the applicant may proceed to ballot, both the man and his wife may be applicants; but there is no assurance that they shall obtain blocks next to each other.

I had the opportunity of seeing several of these settlements, and the men seemed to be doing well. In the Hawke's Bay district I visited some of the selectors who were paying a high rental for small blocks, and yet seemed to be making a good livelihood. They had only two grounds of complaint. 1st. That their blocks were too small (only 21 acres), and that they could only pay their way by obtaining occasional work from the run-holders. 2nd. That they could not obtain the fee-simple of their land, that no power of purchase existed. One of the settlers put this point somewhat forcibly. He said that during the previous year, when potatoes were at a high price, some of his neighbours had sold their crops at very high prices. Had they been allowed to pay off some portion of the value of the land, they could have reduced their rent during subsequent years, when the income from the farm was less. I am inclined to think that in years to come, under political agitation, the Legislature of the Colony will in some way change the system in this respect, and enable the settlers to secure the fee-simple of their properties. With regard to the quantity of land allowed to be held by one applicant, I do not think there is any good reason for allowing its increase. One of the men who complained in this matter, told me that he was able on his 21 acres of land to keep sixteen milking cows all the year round, and he was close to a butter factory.

On the whole, my visit to New Zealand and the observations I had the opportunity of making there, have strengthened my view of the wisdom of the suggestions made in our Second Report to the Government.

I desire to express my grateful thanks to the Right Honorable R. J. Seddon, Premier of New Zealand, and the officers of his Government for the courtesy and consideration I received as your representative.

Appendix C.

REPORT ON THE METHODS ADOPTED IN SOUTH AUSTRALIA TO PROMOTE THE SETTLEMENT OF WORKING MEN ON HOMESTEAD BLOCKS.

[Presented to the Unemployed Advisory Board of New South Wales by Thomas Roseby, LL.D., F.R.A.S., Sydney, 6th December, 1899.]

THE members of our Unemployed Advisory Board find that we have to provide for two classes of the unemployed. (I leave out of account for the present what may shortly be designated the "loafer" class; it is unfair that these should be named in the same breath with the two classes to which I am referring.)

There is—First—the class of able-bodied men, capable of doing a good day's work; and of those who, being able to rely on a trade or other occupation as the chief means of earning a livelihood, can only desire land for the purpose of a home, to be used only as subordinate to another as the chief means of obtaining a living; and

Secondly, "the weaker element" among the unemployed: those without capital, or resources, or a trade; those incapable of averagely-remunerated labour; the aged and comparatively helpless; those who, in the economic struggle, are the last to receive employment and the first to be deprived of it; those who, in depressed times, remain almost permanently unemployed, and who are, therefore, always more or less dependent for their maintenance on the support of others or on charitable aid.

The Legislature of South Australia has evidently been led, partly of set purpose, and partly by the guidance of experience, to make the same distinction between these two classes of labour. Whatever may have been the original intention, as a matter of fact the Legislature has made separate and distinct provision for each.

By the homestead block system, the South Australian people have made provision for the needs of a large and important class of the community in what seems a really wise and effective way.

Beyond question the most wholesome and natural life for men is one which will keep them in contact with what may be called life's "primitive conditions." The best home is the "homestead."

It

It is pleasant to notice to how large an extent the whole surroundings of Adelaide sustain this view of home life. The suburban life of Adelaide knows little of "terraces," where neighbours are forced into too close contact with one another. It is a common thing everywhere around Adelaide to see each substantial residence standing in the midst of an ample space of garden—sufficient for flowers and fruit, and kitchen garden—providing ample, wholesome, and profitable occupation for a good part of the leisure of the household, both parents and children.

Quite of a piece with this characteristic of the "suburbanism" of Adelaide is South Australia's wise provisions for the needs of its working classes—the tradesmen and artisans not only of Adelaide, but of all its considerable centres of population—by what is known as the system of homestead blocks.

Goldsmith speaks of a time in England,—

When every rood of ground maintained its man.

Mr. Joseph Chamberlain has expanded this into his famous formula of "three acres and a cow." Now, South Australia makes ample provision, under her general Land Laws, for such settlement as aims directly at obtaining this full and complete means of subsistence from the land; but her "homestead blocks," or as it is popularly called, her "Blocker" system, aims at something different from this. It is presumed that the grazier or the farmer with capital will avail himself of the general provisions of the Land Act. But the "Blocker" system has for its motto, "One family, one homestead," whether the man be a farmer or not. It is a provision by which working men, who are otherwise able to provide themselves with their chief means of subsistence, may nevertheless have, as a subsidiary help to a healthy and progressive condition, a homestead of their own. The block is, in general, not large enough to enable a family to make a living upon it; but it is near enough to the social centre to be reached with reasonable facility, and it thus becomes the toiler's home, while it is always large enough to find sufficient occupation for the useful employment of the blocker himself and his family.

The blocks in the neighbourhood of Adelaide itself range in area from less than 1 acre to 5 acres; but in the country districts the area may be as large as 20 acres. The area and rental are fixed by Local Land Boards (a Government official being, however, always included).

The blocks are all Crown leases; but while some—for example, all within a radius of 10 miles from Adelaide—are held under perpetual lease; others are held under right of purchase. But this "right of purchase," though popular with the average blocker, is regarded by many, and notably by the experienced inspector of the homestead blocks, as rather imperilling the homestead principle. He cites the case of a blocker who naively divulged his sinister purpose in the statement, "I believe in the perpetual lease, but, you see, if I had a right to purchase, I can buy my block; then I can rent it to somebody else, and take up another for myself." The inspector promptly and most justly replied that it was just the danger of a blocker making that illegitimate use of the system that made the real friends of the system averse to the purchase provision. He adds that he regards the provision—which was "not included in the original plans of the initiators of the movement"—as a mischievous one, and "one that will undoubtedly militate against the permanency of the system."

As it is, the report of the Surveyor-General for the year 1898 shows that, so far from its being wise to encourage the idea of purchase, a considerable number of blocks are forfeited or cancelled every year for non-payment even of rent.

I do not know that we need wonder at this. Working men are necessarily rather unsettled in their movements. They are often compelled to shift their quarters amid the fluctuations of industry. It is always to be remembered that South Australia is the nearest colony to Broken Hill, and the nearest colony to Western Australia. We are familiar, in New South Wales itself, with the moving influence, especially of Western Australia, during the last five years on our industrial population.

So large a part of the public estate in the neighbourhood of centres of settlement has, in South Australia, been alienated, that the supply of land for homestead blocks has only been maintained by the constant repurchase by the Government of land already alienated; and as the rental to the blocker of this repurchased land is computed at 4 per cent. or 5 per cent. on the price paid for its repurchase, this sometimes amounts to a considerable sum. Thus, the average rental of the blocks in the neighbourhood of Adelaide to within, say 10 miles of the city, is about £1 5s. 3d. per acre. In remoter parts of the colony, where the population is spare, and where the Crown has large tracts of unalienated land, the rent may not exceed 3d. an acre.

I have said that the Government keeps up the supply of these lands for homestead blocks by the purchase of suitable land from private owners. Where afterwards the demand slackens, the Government makes temporary use of the land under what is called a "miscellaneous lease," terminable on six months' notice, while still holding the land for blocker use if subsequently required.

The blocks are only tenable by those who gain their livelihood by their labour, who are the full age of 18 years, and they are limited to a maximum of 20 acres; the minimum near Adelaide, may be less than 1 acre.

There are conditions of residence—fulfilled by residence of the lessee's wife or family, however—and provisions, except in certain circumstances, of which the Land Board shall judge, against sub-letting.

There is a very helpful provision, under which the Government may make an advance to the "blocker" of a sum not exceeding £50 on the security of improvements on his block. The loan is repayable in easy instalments.

The blocker pays all rates and taxes on his holding, including, of course, the land tax. The payment of this tax, which is heavier in South Australia than in New South Wales, was regarded as reaching the same end as that which might otherwise have been attained by periodical appraisal. But I am quite indisposed to accept that view. If State experiments of this nature are to be compared—as they always are—with similar transactions between individual citizens, it is quite unfair that the Government (on behalf of the people at large, and the interests of the future) should be deprived of the powers which are held and used by private owners. The growing favour with which the principle of betterment is regarded as just and equitable, is a testimony to the fact that the unearned increment of land belongs to the State. There is no way in which the State can assert its right to this, except by periodical reappraisal.

No blocker is permitted to hold, or have any interest in, more than two blocks, which must be near each other.

On

On default of payment of rent, the land, with all improvements on it, reverts to the Crown.

There is a reservation of all gems, minerals, ores, coal, &c., with incident powers, to the Crown.

The provision that these homestead areas shall only be leased in the neighbourhood of places already settled seems to prevent their being generally used as the *sole* means of obtaining a livelihood, such means being presumably available in the neighbouring settlement. But it serves also another important use: it encourages the residence in the neighbourhood of small towns and centres of population of known and trustworthy neighbours, whom employers of labour may be able to engage as required. It is thus good for the employer of labour as well as for the blocker. It helps to prevent that serious danger that universally besets our Colonial life—the drifting of the unemployed into the city. It serves the purpose of a healthy decentralisation.

And though, generally, the area is insufficient of itself to maintain a family—for it is distinctly the purpose of this scheme not to do so—yet, in exceptional instances, with facilities for intense culture, and with exceptional industry and skill, some of these blockers with their families *do* even make a fair living on their 20 acres of land or so. In most cases, indeed, while the block is simply the homestead, and the bread-winner earns a maintenance for his family elsewhere, the cultivation of 3 or 4 acres of land serves to supply the household with many of the necessaries and comforts of life, and becomes, when the work is slack, a very substantial aid to the family's maintenance. It prevents the bread-winner from ever being *absolutely* idle; and it has saved many an honest but unfortunate toiler from drifting into a condition of chronic indolence and despair.

The land thrown open to homestead settlement in the neighbourhood of Adelaide is nearly all land which has been purchased from private owners for the purpose—the State being owner of very little land near the city. It is here, of course, that the demand for land for block settlement is most clamorous. In the country districts there is less demand; but even there the benefits of the system are manifest. Many a man has found in his homestead block a new and steadying centre for what had hitherto been a wandering and desultory life; and many an unmarried waif has found in it the nucleus of a future home.

The evidence goes to show that the system has been of benefit even to a lower grade of labour than that for which it was specially designed. It has helped many a social derelict to find a vocation. Men who in some profession have fallen behind in the race, or who have failed in business, or who have lost heart and energy for the competitive struggle, have been saved from sinking into the social abyss by the homestead block. They have found in it, at a lower and safer level than before, “another chance.”

This is no mere speculation as to what the system might be expected to do. The inspector has the facts and figures of twelve years' experience to show that these results have actually been attained.

It is evident, too, that the system is one that tends to set up new centres of “closer settlement.” It rests on the undoubtedly sound principle that land settlement, instead of being sporadic and isolated, which was the fatal mistake of Sir John Robertson's “free selection before survey,” should radiate from a social centre. The first beginnings of settlement in all these colonies illustrated the fact that this is the natural order. The colony starts with a mere handful of settlers; but they are a centre, and it grows by expansion and radiation from that centre.

It has been well pointed out by Mr. E. Wilson, the Inspector of Homestead Blocks, that the indefinite cry of “the land for the people” should be superceded by the motto, “One family, one homestead.” “The blocker, with his small holding, his house and three rooms, his supply of water, a horse, two cows, a sty of pigs, and a couple of dozen fowls,” ought to represent our lowest economic level. Yet how far beneath it is the condition of multitudes of our labouring population!

It is to be remembered that South Australia has suffered during the last six years as severely as the rest of Australia from the terrible drought which still oppresses us; and every social experiment wherein the land is concerned must in consequence be terribly handicapped. As a matter of fact, the very light harvests obtained, and the shortness of feed for their live-stock, not to speak of the difficulty of obtaining outside employment during these years of depression, have subjected the whole system to a severe strain; but again and again the settlers have summed up the situation in the words, “What we should have done without the block, I do not know.”

It is also to be remembered that much of the soil is only fairly good, and the rainfall over a large part of the Colony is very precarious. The sinuous course of “Goyder's line,” never receding farther than about 80 miles from the coast, and shutting out all the upper course of the Murray River from a point 60 miles from Adelaide, marks the limit of reliable rainfall.

On the other hand, where the blocks are exceptionally favoured by sufficient rainfall or other suitable water supply, and suitable land for the growth of fruit-trees, vines, vegetables, green fodder, &c., the maximum of 20 acres has been more than enough to enable the blocker to support his family. The smallness of the holding has stimulated more intense culture, more skill, more industry—with corresponding results.

I had the opportunity of seeing not only the blocks in the neighbourhood of Adelaide, but some of the country blocks also, where some of the best results of the system are to be seen; so that I had fair means of judging of the actual working of the system throughout the entire Colony. The holding, consisting of 1 acre, or 2 or perhaps 5 acres, always had some kind of residence on it; and even the humblest residence, when surrounded by an ample garden, with trees, with culinary plants, and bright with flowers, has an idyllic look which powerfully contrasts with the crowded slums, or even the shabbily-genteel terraces, of our city life.

The blocks are in all stages of cultivation; but it was always reassuring to remember that while a well-cultivated block might really testify to a man's misfortune in being unable to obtain that work in the city to which he was most accustomed, the scantier attention bestowed on a block might be a sign that its owner was too busy in the city to bestow much labour on his humble rural chateau. But how suggestive was the whole situation of the fact that the man had “two strings to his bow”!

I found a very strong consensus of opinion among all classes of the community as to the value and the reasonable success of the block system; and, from all the information about it I was able to gather from Government reports, from official communication, from inquiry of those otherwise familiar with its history and working, and from my own personal view of its results, I should feel disposed strongly to recommend it.

REPORT ON THE METHODS ADOPTED IN SOUTH AUSTRALIA TO PROMOTE THE SETTLEMENT OF THE UNEMPLOYED IN VILLAGE SETTLEMENTS.

[Presented to the Unemployed Advisory Board of New South Wales by Rev. Dr. Roseby, Sydney, 6th December, 1899.]

I.

Facts in regard to some of the Village Settlements on the River Murray.

My visit having been confined to the three settlements of Ramco, Waikerie, and Holder, I can only speak from knowledge of these; but I learn that the history, method, and experience of these are a fair sample of all. The other settlements on the Murray are Kingston, Moorook, Murtho, Pyap, and Lyrup.

These irrigation settlements on the Murray were intended for the relief of a class of settlers who were destitute of capital.

It was evident that such people could only be settled upon the land on the condition that the Government would consent to supply the initial outlay.

The settlements were all started on a co-operative basis. This was done, not so much from any *doctrinaire* preference for the principle, but on grounds of economy. Co-operative labour bestowed on the land is manifestly more economical than when each settler undertakes the task single-handed, and in irrigation settlements such as those on the Murray it became absolutely necessary. The machinery and irrigation plant were in each case to serve the whole settlement, so that from the beginning the very existence of the settlement implied co-operation.

It may here be mentioned that only irrigation settlements were in these localities possible. These settlements all lie far beyond Goyder's line, and their annual rainfall does not exceed 10 inches—a rainfall quite insufficient to make farming a success. The main reliance of the settlers was, necessarily, on the water of the river, which had to be raised to such a height as to enable the whole area of cultivation to be sufficiently irrigated. But there is a very general consensus of opinion that while irrigation may be remunerative in the case of orchard cultivation, and in the cultivation of fodder plants, it will not pay for mere field cultivation. These two considerations—that cultivation in these settlements was only possible at all by means of irrigation, and that irrigation is too expensive for mere field cultivation—are of the greatest importance in judging of the experiment. It suggests at once the serious question whether it was not running too great a risk to establish any but orchard and dairy settlements on the Murray. As a matter of fact, the history of the settlements shows that an unusually scanty rainfall during any season means, for that season, failure.

The character of the settlers was, as might be expected, very miscellaneous. Very few of them were farmers; nine-tenths of them were tradesmen and labourers. Hence the futility of leaving them, as they were at first left, to manage everything themselves. The need of skilled and firm direction is one of the most conspicuous suggestions of the situation.

The "ten-acre block" is a wise concession to the principle of individualism. The settlers spend their spare time there, and the labour of their wives and children thus become available.

One conspicuous outstanding fact about these village settlements is that they have added a new province to South Australia. The really cultivable area of the sister colony is severely limited. Vast areas of the interior have had to be abandoned even for use as pasture. The limited rainfall beyond Goyder's line is a stern fact, sustained by all subsequent experience since it was laid down in 1865. But the use of the Murray for purposes of irrigation has opened up a new possibility of settlement. It is like the discovery of the artesian bore in Central Australia. There are now at least 2,000 people between Morgan and the Border; and there is not an acre of land on the right bank of the Murray, from Morgan to the Victorian border, that has not been taken up for settlement. Prior to the starting of these settlements this area was an uninhabited wilderness.

I shall set down in parallel columns a number of facts in regard to these settlements, either ascertained on the spot, or subsequently supplied during my stay in South Australia.

II.

Those who have taken any deep interest in the problem of the unemployed know that the crux of the problem is how to deal with what may be called "the weaker element." There is a large class in every community who have fallen, from a variety of causes, below the average level. They are unable to do "a good day's work," it may be from advancing years, or from some physical disqualification, or from their having lost heart, and being, consequently, unable to "push their way" in the social struggle; but from whatever cause, it becomes necessary for the State to stand to them in some degree *in loco parentis*, if they are not to fall into the ranks of those for whom there is nothing left but charitable relief.

It is for this class especially that the village settlements of South Australia—in a tentative way, and on a small scale—make some provision, and that on a principle which is really new. That principle is that the State should make some other provision than that of charitable relief for those who are capable of earning some contribution to their own subsistence. The principle generally adopted throughout the colonies is to provide for the relief of those who are partially or wholly helpless *directly*, it being assumed that no one is to be permitted to starve; but any provision that those thus relieved should do something to contribute to their own support has been quite an afterthought.

Now the Village Settlements in South Australia reverse this order. They make provision by which persons without capital, and destitute of the ordinary means and capacity of earning their living in our present competitive industrial system, shall nevertheless be furnished with the means of contributing something towards their own support.

I do not say that this was the conscious purpose and intention of those who started the system; for it was not. Their purpose was to try to assist young farmers by a new experiment in industrialism, and they started with the idea that these settlements should consist of industrial groups of average workers, and that their organisation should be autonomous.

But I think it must be confessed that this idea has proved unfeasible.

The settlers were, as I have said, of a very miscellaneous character. They had not even any very enthusiastic appreciation of the principle of co-operation itself to hold them together, and the autonomy of the scheme broke down. It was found necessary to substitute for it skilled and firm control—I mean so far as the *labour* of the settlement was concerned. Otherwise there was perfect freedom.

The settlements, now greatly reduced in numerical strength, and placed under firm and skilled direction, seem to rest on a very satisfactory basis; and both the Commissioner for Crown Lands and those gentlemen most intimately connected with the movement regard the problem as practically solved. They think that the experience they have gained would soon enable them to make the experiment a success.

The *doctrinaire* questions so often raised in regard to these movements are clearly futile. The question which we have to face is not a speculative one. It is not a question of the "Industrial Reconstruction of Society." It is the very practical and urgent question of what to do with a large number of comparatively helpless unemployed people, so as to make the most of what capacity of self-support they still retain: how to help them without pauperising them.

It is here that the South Australian experiment makes some really helpful suggestions.

In regard to the financial success or failure of such an undertaking, this has to be estimated in the light of three important considerations.

First.—The experiment is not financially a failure unless more money is lost over it than would be expended in maintaining these people as they are at present for the most part maintained—in idleness.

Secondly.—It is still bad economy to feed people, who are not absolutely helpless, on the bread of idleness, even if the State may seem directly to lose less by it. Indirectly she must lose more, for vice, criminality, and lawlessness are all hatched in the nest of idleness. And

Thirdly.—One has always to remember that our whole industrial life is covered with the wrecks of failure. It is not only at Pitt Town that the selection of unsuitable soil has disappointed the hopes of the cultivator. It is not only on the Government irrigation settlements on the Murray, but even more conspicuously on the *private lands* of Chaffey Brothers, at Mildura, that bad seasons and inexperience have imperilled the success of a new industry. The six years' drought over all Australia that has reduced the flocks of New South Wales from 60,000,000 sheep to 35,000,000 may well have had some injurious effects on the homestead blockers and village settlers in South Australia.

	Ramco.	Waikerie.	Holder.
Distance from Morgan (104 miles from Adelaide)	40 miles.	42½ miles.	45 miles.
Quality of land	Only fairly good; sandy; more or less covered with mallee, pine, box, and needle-bush. But the low-lying flats, inundated by the river, are fertile; it is on these that the field cultivation succeeds.		
Facilities for irrigation	Good, but great mistakes made at first.	Two pumps here used; ample.	Mistakes made; old plant being now replaced by new.
Rainfall	About 10 inches annually; but heavy dews; and the soil seems very retentive of moisture.		
No. of settlers and No. of souls	11 [44]	15 [86]	21 [107]
How long established?.....	Since 1894.	Since 1894.	Since 1894.

Expenditure on the eight existing settlements, £82,311.

Receipts from the eight existing settlements, £6,753.

Improvements on the eight settlements:—Value of these in 1894, £13,836; in 1895, £19,430; in 1896, £6,257; in 1897, £2,925. Total for the four years, £42,450. [The varying values from year to year are instructive; largely due to the diminished number of settlers, and to varying seasons; showing also that time is necessary as a test of success.]

The realisable assets on the eight settlements are valued at £19,890; the permanent assets at £46,993; grand total, £66,883.

	Ramco.	Waikerie.	Holder.
History of settlers	Originally single men only; numbers much reduced.	Originally 65 settlers, now 15.	Originally 69, now 21.
Area of settlement	3,680 acres.	3,330 acres.	7,560 acres.
How far co-operative?.....	Wholly, except that each settler has been allotted 10 acres for his own homestead.		
How far autonomous now? ..	Practically the Government Expert directs, and each settlement has a local manager, who carries out the instructions of the Director. There are still elected local trustees, but with much reduced powers.		
Industries	Farming, viticulture, orchard, dairy, poultry, piggeries. Meat, bread, boots, and clothing all made on settlements. [In fact, only such items as tea, tobacco, kerosene, and patent medicines are imported.]		
Strong drink	Practically disallowed on all the settlements.		
The rabbit	Very troublesome; fenced out.	Very bad.	4,000 acres enclosed with rabbit-proof fence.
The drought	In many settlements seriously affecting success. A crop is alleged to be possible on 6 inches of annual rainfall.		
Industries best suited	Not farming, rain too uncertain; but dairying and orchard. Fodder crops will repay irrigation.		
Schools	One on each settlement:—		
	14 on roll (Ramco).	21, average attendance (Waikerie).	43 in attendance, to 5th standard (Holder).
Area under crop—Cereals ...	600 acres.	1,300 acres.	1,400 acres.
Vines.....	2 „	8 „
Orchard...	30 „	18 acres.	26 „

I desire to express, in closing, my deep sense of the courtesy extended to me by the Right Hon. C. C. Kingston, Q.C., the Premier of South Australia; the Hon. L. O'Loughlin, Commissioner of Crown Lands; and the various officers of such Departments as I had occasion to consult. The facilities afforded by the Government of South Australia to pursue the inquiries entrusted to me by the Board were all that could be desired.

Appendix D.

NOTES ON FOREST-THINNING.

THE value of this work depends largely upon the character of forests. Many of our coastal forests it would not pay to improve by thinning, as their habit of growth is not superabundant. The classes of forest which most require improvement in this way are red gum (*Eucalyptus rostrata*) and cypress pine (*Callitris*), and for the purpose of estimation and comparison, I will confine my remarks on the subject to the last named.

The cypress pines occur naturally in the Central and Western Districts of the Colony; the timber from them is the best adapted for general and domestic use under the conditions that exist there, and have the great advantage over all other indigenous varieties in those regions, viz., in being impervious to the attack of white ants. This pine is a profuse seed-bearer, so much so that it has from its spread been looked upon as inimical to pastoral pursuits, and therefore largely destroyed either in the early stages as scrub, or in its later stages for domestic use. At the present time mature pine is remarkably scarce, and only obtainable in out-of-the-way localities. There are, however, large areas so densely covered with this class of timber in the immature stages that we have practically forests of it in embryo, which, if they were not indigenous to the soil, would cost from 20s. to 25s. per acre to plant and produce artificially, and even then the stages of growth would be in advancement anything from one to ten years behind the present stage of advancement of these immature forests.

The principal difficulty we have though in transforming them into commercial forests is their superabundant habit of growth which necessitates thinning out and destruction of certain proportions of the timber. If left naturally the rate of growth is very slow, and only small percentages succeed in reaching maturity; the average is a natural forest, being from ten to fifteen to the acre.

By judicious thinning, which costs from 4s. to 5s. per acre, it is possible, within (say) thirty years, to rear an average of 80 marketable immature, and 50 marketable mature, trees to the acre; so that, coming to figures, the situation can be expressed somewhat as follows:—

Taking as a basis 500 acres to operate upon, the following statement, in which the estimates of expenditure have been based liberally and those of receipt meagrely, the debit and credit on operations would work out as under:—

DR.		CR.	
Expenditure.		Receipts.	
	£ s. d.	£ s. d.	
To cost thinning 500 acres, at 4s. per acre ...	100 0 0	By increased grazing value of thinned forests, at 1d. per acre per annum rental during 30 years	62 10 0
„ interest on expenditure, at 3 per cent., extending over 30 years	241 4 0	„ sale 80 immature trees per acre on 500 acres during 30 years, at 6d. each	1,000 0 0
„ cleaning off brushing, suckering, or other attention, 3 years from original thin- ning, at 1s. per acre	25 0 0	„ sale 50 mature trees per acre, at the end of 30 years, at 2s. 6d. each	3,125 0 0
„ interest on above, at 3 per cent., for 27 years	25 15 6		
„ supervision of further thinnings under permits or sales of immature timber, at 6d. per acre	12 10 0		
	£404 9 6		£4,187 10 0

The profit on improved (thinned) forest, on a basis of 500 acres, will, from the above, be seen to be £3,783 0s. 6d. The prices quoted for sales of timber are what are at present received; and it is reasonable to suppose they will largely increase in thirty years, as timber throughout the world becomes scarcer. The estimated crops are put at very low figures; for instance, the total marketable trees is put at 130 to the acre, which is leaving them a space of 18 feet apart to grow in; but the Crown, in first thinning cypress pine forests, leaves saplings at about 9 feet apart, which is equivalent to 538 to the acre.

For comparison, the following is set down as the amount approximately realisable on 500 acres of unimproved pine forest during thirty years:—

	£ s. d.
Full grazing value at 1d. per acre per annum, during 30 years	62 10 0
Sales of 30 immature trees per acre, at 6d. each, during 30 years	375 0 0
Sale of 15 matured trees per acre, at end of 30 years, at 2s. 6d. each	937 10 0
	£1,375 0 0

From which it will be seen that on the basis of 500 acres there is a realisable profit of £2,408 in thirty years in favour of thinned forests.

If the policy of the State will permit of land being retained permanently for the growth of timber, it can be made a highly profitable enterprise, largely repaying improvement outlay, and a lasting source of revenue, for, worked scientifically, the rotation of growth is continuous. Thinning natural forests is infinitely cheaper than artificially planting them, and there is no more infallible guide than Nature as to choice of situation. The beneficial occupation of much of our inland country is to a very extensive degree dependent upon supplies of timber, and this also is a forcible reason for its production, for the State lands are depreciated in their value by its absence. Timber crops, equally with agricultural, are capable of enormous expansion in productivity by scientific culture, and it is a matter of surprise to what a limited extent this is realised in young countries, and how little education on the subject is tendered. From statistics it is learnt that the demand for timber throughout the world has nearly doubled itself during the past thirty years, and that the natural forests of almost every country are being rapidly depleted.

CORRESPONDENCE SUBSEQUENT TO PRESENTATION OF SECOND PROGRESS REPORT.

No. 8.

The Chairman, Unemployed Advisory Board, to The Premier (Honorable
W. J. Lyne, M.P.).

Sir,

Unemployed Advisory Board, 7 November, 1899.

Adverting to the interview of the 5th ultimo, on which occasion you asked this Board to unreservedly communicate with you on matters which appeared to them likely to achieve the object for which they were appointed, I have now the honor, at the request of the Board, to strongly urge upon your consideration the importance of adopting their recommendations with respect to the Labour Intelligence Department embodied under the headings of "Labour Intelligence Department," "Registration," "Registry Office for Women," "Servants' Registration," and "Labour Gazette," in pages 5 to 7 of the Board's second Progress Report, a copy of which accompanies this letter.

The Board are induced to emphasise the importance of this, because they believe that the success of most of their suggestions, as well as others now under consideration, will depend largely upon the early inauguration of a scheme on the lines suggested.

I am also requested to urge the importance of carrying out the suggestions with respect to assisted settlement blocks (pages 8 to 11 of the Report) and the setting apart of areas of Crown Lands for mixed farming, in blocks sufficient to support a family, the dimensions being regulated by climate, quality of soil, and position as regards a market; such blocks to be partly cleared and to be available not only to those who have passed through the industrial farms, but, as stated in the Report, to others who have shown their aptitude for, and ability to undertake, farming pursuits. The Board consider, in view of the assistance proposed to be given under the scheme, that the Government should have some guarantee that the men taking up the blocks have some knowledge of the work in which they are to be engaged.

It is unnecessary to again refer to the reasons which actuated the Board in recommending State aid in this direction, for they are fully dealt with under the heading "Claims for State Aid" in pages 3 to 5 of the Report.

Several sites for depôts, farms, and assisted settlement blocks have been brought under the notice of the Board, and if you approve of the proposal, the members will be pleased to make recommendations under this head, as well as to suggest further means for the more efficient carrying out of their proposals.

The Board have caused a sketch plan of a suggested assisted settlement area to be prepared; this plan is herewith enclosed for your inspection. It is only intended to be an outline which will require to be modified according to the character of the soil, climate, and surroundings of the sites eventually selected.

I have, &c.,

SYDNEY SMITH,

Chairman.

No. 9.

The Chairman, Unemployed Advisory Board, to The Premier (Honorable
W. J. Lyne, M.P.).

Sir,

Unemployed Advisory Board, Sydney, 27 November, 1899.

I have the honor to intimate that at a meeting of the Unemployed Advisory Board, held on the 21st instant, Messrs. John Kidd and Josiah Thomas, Ms.P., Dr. Roseby, Dean Slattery, Rev. G. D. Buchanan, Dr. Zillmann, and Messrs. Watson, Lewis, Schey, and Black being present, the following resolution was unanimously carried:—

"That a letter be written to the Premier, in consonance with his request for unreserved communication, pointing out that, although officially uninformed on the matter, the Board has seen in the public Press a report of the proceedings of a recent deputation which waited upon him, in the course of which appears what purports to be a verbatim copy of a minute written by him appointing certain Under Secretaries and others to traverse the Reports of this Board. That if such be the fact, this Board respectfully suggests that the Chairman, the Hon. Sydney Smith, be added to such Board or Committee for the purpose of giving, at every stage, information as to the reasons, &c., which guided this Board in making the several recommendations, the major portion of which it was impossible to include in the Reports themselves, for obvious reasons of brevity, &c."

While in no way desirous of pressing my services on the Government, I, nevertheless, at the unanimous wish of the Board, acquiesce in allowing my name to be submitted as their representative, and if the Government think that the Board, through my representation, can be of any further assistance in helping to solve a question of such importance to the interests of the country, I am prepared, as hitherto, to freely give my services without remuneration.

I have, &c.,

SYDNEY SMITH,

Chairman.

No. 10.

The Under Secretary for Finance and Trade to The Chairman, Unemployed
Advisory Board.

Sir,

The Treasury, New South Wales, Sydney, 28 November, 1899.

I have the honor, by direction of the Honorable the Premier and Colonial Treasurer, to acknowledge the receipt of your letter of the 27th instant, conveying the terms of a resolution passed at a meeting of your Board, suggesting that the Chairman of the Board (yourself) should be added to the Committee of Under Secretaries and others, which, according to the newspapers, has been appointed to traverse the Reports of the Board.

I have, &c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

No. 11.

No. 11.

The Unemployed Advisory Board to The Premier (Hon. W. J. Lyne, M.P.).

Sir,

Unemployed Advisory Board, Sydney, 20 December, 1899.

We, the undersigned members of the Unemployed Advisory Board, have the honor to state that for some time past we have been seriously considering the position in which we have been placed since submitting our second Progress Report on the 29th September last.

From the time the Board was first brought into existence by your predecessor in office, they have been engaged in dealing with a number of reproductive public works, and have recommended them to the Government in the belief that they would afford relief to a large proportion of the unemployed. While several of the suggestions—including Glebe Island improvements, Parramatta Asylum, repainting public buildings, and other works—have been carried out or approved by the Government, of the more important proposals relating to the Labour Intelligence Department—legalised and periodical registration, a registry office for women under a capable lady superintendent, Servants' Registry Act, a Labour Gazette, Labour Depôts, industrial farm settlements, and assisted settlement blocks—the Government have dealt with none.

We believe that our proposals, if properly carried out, form a nucleus of schemes which would relieve the Government of the necessity for adopting temporary methods to afford relief, and might eventually as effectively solve the unemployed problem as has been done in New Zealand.

On the occasion of our interview of the 5th October last, when we detailed the work done by the Board, and asked whether the Government wished us to continue to act or not, you were good enough to express your sympathy with the objects of the Board, and to ask us to continue the work entrusted to us. In response to your expressed wish, and in view of the urgent necessities of the large number then out of work, we again, on the 7th November, urged the carrying into effect of our suggestions.

A few days subsequently we observed a report in the Press that you had decided to submit the Board's Reports to another Board, consisting of the Principal Under Secretary and the Under Secretaries for Works, Lands, and Public Instruction, for consideration, the Mines and Agriculture Department—fitted to play an important part in carrying out the proposals submitted by us—being, however, unrepresented. While not agreeing with this course, we believed that if the Government would appoint a representative from this Board to fully explain our proposals, they would have been safeguarded against any possible misunderstanding. We, therefore, on the 27th November, suggested the appointment of our Chairman in the capacity of representative. (*See Appendix.*) It was felt by the Board that a refusal of this suggestion would indicate such a want of sympathy on the part of the Government that we should have no alternative but resignation. Since then we have received a formal acknowledgment of our letter (*see Appendix*), but no official confirmation of the reference of our Reports to the Board of Under Secretaries.

The position of the Board and the advisability of resignation have been discussed at previous meetings, and on the 14th instant a majority of the members present notified their intention to resign, but it was decided, at the request of those opposed to resignation, and in the absence of other members, to postpone the consideration of the matter until the 18th instant, when a resolution against immediate resignation only found two supporters.

It may be pointed out in regard to the matter of fees, of which so much has been made in Parliament and the Press, that many members of the Board have from the very beginning declined to receive them; and that in the case of those who have received them, this has been in accordance with a perfectly honorable understanding with the late Administration, which has been honorably kept by yourself—an understanding based on the fact that some of our members are unable to give their services, often involving the loss of whole days together, without remuneration.

The unemployed difficulty is as acute as ever, and though we had laid down a broad basis for the settlement of the problem, our work was by no means completed by our Report of the 29th September; but while, as a Board, we were quite prepared to continue our deliberations, we feel, in view of the facts that three months have already elapsed without any definite effect being given to the more important of our recommendations, and that a regrettable lack of interest has been shown in the Board's efforts, it is futile to make any further proposals, or even to continue as a Board, and we therefore respectfully beg to tender our resignations.

We have, &c.,
 SYDNEY SMITH, Chairman.
 JOHN KIDD,
 THOMAS ROSEBY,

No. 12.

Minute by Mr. Schey.

20 December, 1899.

I REGRET that I am unable to concur in the decision of those of my colleagues who think it necessary to resign from the Board. I am bound to admit the cogency of much that they put forward as impelling them to such action; but, having been specifically assured by the Hon. the Premier that the Government has not yet come to any decision as to the status or continuance of the Board (which information I gave, with Mr. Lyne's authority, to my colleagues before their resignation), I am unable to join in their desire to break up the Board.

I am as deeply grieved as any of my colleagues can be that no step has been taken to act on the recommendations of our second Progress Report; and I am as ready as they to give up my commission whenever it becomes apparent to me that the Government so desire, or it becomes impossible to proceed further with the work confided to the Board.

In the meantime, I refuse to permit misrepresentation or abuse, either in Parliament or the Press, to interfere with my efforts to serve the cause of the unemployed; and while any chance exists for me to aid in the solution of this great problem, I shall not voluntarily deprive myself of it. I

I desire to record my opinion that the circumstances under which the present Government have had to carry on the business of the country during the brief term since their accession to office render it unreasonable to expect any decision on the sweeping reforms recommended in our Report, earlier than during the impending recess; and I will not be a party to anything which might have the effect of embarrassing the Government in the free consideration of the whole matter.

I again express my regret that I am unable to agree with the majority of my colleagues, and so that my motives may not be aspersed, I hereby offer to attend as many meetings as may be considered necessary from the date of my colleagues' resignation to the time when the Government shall decide upon the matter, free of all charges for fees or expenses of any kind whatsoever.

WM. F. SCHEY.

No. 13.

The Under Secretary for Finance and Trade to The Unemployed Advisory Board.

Gentlemen,

The Treasury, New South Wales, Sydney, 3 January, 1900.

I have the honor, by the direction of the Honorable the Premier and Colonial Treasurer, to acknowledge the receipt of your letter of the 20th ultimo, tendering your resignations. In intimating to you the acceptance of such resignations, Mr. Lyne desires me to convey to you the thanks of the Government for the conscientious labour which your Reports evidence have been devoted by you to the welfare of the Unemployed.

I have &c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

Hon. Sydney Smith (Chairman), Ven. Archdeacon Langley, Dean Slattery, and Messrs. John Kidd, M.P., S. T. Whiddon, M.P., J. Thomas, M.P., Clement Lewis, George Black, Dr. Roseby and Dr. Zillman.

No. 14.

The Secretary, Unemployed Advisory Board, to The Under Secretary for Finance and Trade.

Sir,

Unemployed Advisory Board, 1A, Bent-street, Sydney, 12 January, 1900.

I have the honor, by the direction of the Unemployed Advisory Board, to ask if you will be so good as to ascertain if the Honorable the Premier will grant an interview to the present members of the Board, as early as possible after Anniversary Day.

I am to intimate that the remaining members of the Board—the Rev. G. D. Buchanan, Mr. W. F. Schey, and Mr. James Watson—are prepared to continue their services under such instructions as the Government may be pleased to give, but if it is considered that there is no further scope for such services, those members are prepared to act upon any intimation the Government may address to them.

I have, &c.,

A. F. BASSET HULL,

Secretary.

No. 15.

The Under Secretary for Finance and Trade to The Secretary, Unemployed Advisory Board.

Sir,

The Treasury, New South Wales, Sydney, 29 January, 1900.

I am directed by the Honorable the Premier and Colonial Treasurer to intimate that, in compliance with the request made in your letter of 12th instant, he will grant the remaining members of the Unemployed Advisory Board an interview on Thursday next, the 1st proximo, at 12 o'clock.

I have, &c.,

F. KIRKPATRICK,

Under Secretary for Finance and Trade.

Seen.—W.F.S., 30/1/00.

No. 16.

Report of Interview with the Premier (Hon. W. J. Lyne); the Minister for Public Instruction, Labour and Industry (Hon. J. Perry) also being present.

THURSDAY, 1 FEBRUARY, 1900.

Present: Messrs. W. F. Schey, Acting Chairman, and Jas. Watson, and the Secretary to the Board.

MR. SCHEY apologised for the absence of the Rev. Mr. Buchanan, and read the following telegram:—“Engagement prevents attending. Hope Premier will continue Board, making new appointments, otherwise much labour lost. Willing to assist much possible. G. D. BUCHANAN, Goulburn.”

Mr. Schey said that some five weeks ago the majority of members of the Board had resigned, and their resignations had been accepted. The remaining three members (the Rev. G. D. Buchanan, Mr. James Watson, and himself) felt that their work was by no means completed, and were anxious to learn what were the Premier's views upon the matter. While they were fully prepared to continue in the work that had been carried on so far, they had no desire to remain as a Board should the Government consider that there was no further use for their services.

Mr.

Mr. Lyne, in reply, said that his views on the situation were that it was better to have a complete reorganisation of the arrangements in connection with the unemployed as now carried out by the Labour Bureau. In this view Mr. Perry concurred, and they were now engaged in considering whether arrangements could not be made under which the whole matter would be dealt with in a more satisfactory and permanent manner. He (Mr. Lyne) had written a minute appointing certain heads of Departments to review the Reports of the Advisory Board, with the object of devising some practical means by which the recommendations could be carried out. So far he had received no communication from those heads of Departments; why, he did not know. He hoped shortly to be in a position to make arrangements for the reorganisation referred to, and thought the matter had better be allowed to rest until proposals for the same could be formulated. His desire was to place matters on such a footing that the Government should be entirely relieved of the pestering applications which now so seriously interfered with the work of every Government Department. He wished the Board which he contemplated to take the entire management of the unemployed questions, but he thought that the matter should be allowed to rest for a week or so until his return from Tasmania, which would be about Tuesday week.

Mr. Schey pointed out that the Board's powers had been too limited to enable them to give any practical effect to their recommendations.

Mr. Lyne said that they had succeeded in coming into conflict with the Railway Commissioners.

Mr. Watson said that the Board were not altogether responsible for the conflict.

Mr. Schey: If the Board had more power —

Mr. Lyne said he wanted the Board to have the power and machinery to deal direct with the men. The Board should investigate every man's case, grading them in first, second, and even third class grades. The third class should be given piece-work, so that they should not interfere with the wages or status of first-class men.

Mr. Perry said that when painting work was given to second-class men at less than Union wages, the Union interfered with the appointment of such second-class men.

Mr. Lyne said that the new Board should be empowered to investigate and make recommendations to the Minister. The system of registration now carried out by the Bureau was simply ridiculous. If a man registered one year, and re-registered the next, they counted the one man as two, instead of classing him merely as a renewal of a previous registration, and hence a totally wrong impression was given as to the number of unemployed according to the published reports. He was of opinion that no ticket should be recorded twice.

Mr. Watson pointed out that the system adopted in New Zealand, where the men were periodically registered and their movements carefully traced and recorded, would obviate the difficulty. The Board had recommended that the New Zealand system be applied here.

Mr. Lyne said that the Board should continue for the present, until he could formulate the reorganisation contemplated.

Mr. Schey thanked the Premier, and the Board withdrew.

LIQUOR ACT.

(PETITION FROM CERTAIN RESIDENTS OF MORGAN HILLS, BLAXLAND RIDGE, FREEMAN'S REACH,
AND WILBERFORCE IN FAVOUR OF AN AMENDMENT.)

Received by the Legislative Assembly, 13 June, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

This Petition of Residents of Morgan Hills, Blaxland Ridge, Freeman's Reach, and Wilberforce,—

HUMBLY PRAYETH:—

That, in view of the many and serious evils connected with the Liquor Traffic, the Licensing Acts be so amended as to, firstly, cause such a reduction in the hours of sale in Public-houses and places held by wine licensees that they may be brought into harmony with those for ordinary shops; and, secondly, to ensure more effective Sunday-closing. That to bring about this better Sunday-closing your Petitioners pray for provisions of the law that will make it thoroughly efficient, and that will especially include the recommendations of the Intoxicating Drink Inquiry Commission, which, if adopted, would cast upon persons found in Public-houses during prohibited hours the onus of proof that they were there for a lawful purpose.

And your Petitioners therefore humbly pray that your Honorable House will take the premises into favourable consideration and grant such relief as may seem best to your Honorable House.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 148 signatures.]

Similar Petitions were received—

- On 13 June, from certain Members of the Mill Hill Presbyterian Church, Waverley; 48 signatures.

(PETITION FROM RESIDENTS OF PETERSHAM IN FAVOUR OF AN AMENDMENT.)

Received by the Legislative Assembly, 8 August, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

This Petition of the Residents of Petersham, in Public Meeting assembled, held on the thirty-first day of July, nineteen hundred,—

HUMBLY PRAYETH:—

That the Sunday closing of Public-houses being the declared law of the Colony, immediate steps ought to be taken to make the law thoroughly effective.

That, in the opinion of this Meeting, persons found in Public-houses during prohibited hours should have the "onus of proof" cast upon themselves that they are there for a lawful purpose, as in England.

That this Meeting is of opinion that the law as to the hours of closing Public-houses and Wine-shops should be brought into harmony with that for ordinary shops, especially in view of the manifold evils connected with the sale of intoxicants.

RICHARD C. JAMES,
Chairman.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LIQUOR ACT.

(PETITION FROM CERTAIN RESIDENTS OF COLLARENDABRI AND DISTRICT IN FAVOUR OF AN AMENDMENT.)

Received by the Legislative Assembly, 21 August, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

This Petition of Residents of Collarendabri District,—

HUMBLY PRAYETH:—

That, in view of the many and serious evils connected with the Liquor Traffic, the Licensing Acts be so amended as to, firstly, cause such a reduction in the hours of sale in Public-houses and places held by wine licensees that they may be brought into harmony with those for ordinary shops; and, secondly, to ensure more effective Sunday-closing. That to bring about this better Sunday-closing your Petitioners pray for provisions in the law that will make it thoroughly efficient, and that will especially include the recommendation of the Intoxicating Drink Inquiry Commission, which, if adopted, would cast upon persons found in Public-houses during prohibited hours the onus of proof that they were there for a lawful purpose.

And your Petitioners therefore humbly pray that your Honorable House will take the premises into favourable consideration and grant such relief as may seem best to your Honorable House.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 18 signatures.]

LIQUOR ACT.

(PETITION FROM RESIDENTS OF PETERSHAM IN FAVOUR OF AN AMENDMENT.)

Received by the Legislative Assembly, 4 September, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

This Petition of the Residents of Petersham, in Public Meeting assembled, held on the 20th day of August, 1900,—

HUMBLY PRAYETH:—

That the Sunday closing of Public-houses being the declared law of the Country, immediate steps ought to be taken to make the law thoroughly effective.

That, in the opinion of this Meeting, persons found in Public-houses during prohibited hours should have the onus of proof cast upon themselves that they are there for a lawful purpose, as in England. That this Meeting is of opinion that the law as to the closing of Public-houses and Wine-shops should be brought into harmony with that for ordinary shops, especially in view of the manifold evils connected with the sale of intoxicants.

M. J. WISE, President,
Petersham Women's Christian
Temperance Union.

MUNICIPALITIES (AMENDMENT) BILL.

(PETITION FROM CERTAIN PRODUCERS OF MUSWELLBROOK AND DISTRICT, PRAYING THE HOUSE
 TO OMIT CLAUSE 109 OF.)

—
Received by the Legislative Assembly, 24 October, 1900.
 —

The Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned Producers,—

RESPECTFULLY SHOWETH :—

That if Clause 109 of the Municipalities Act, 1900, is carried, it will do a vast amount of injury to us as producers, and cause us much extra expense in marketing our products. The general purchasing public will also be very much inconvenienced, annoyance and trouble will be the result, and, as far as country municipalities are concerned, we fail to see the necessity of introducing the clause.

We therefore pray your Honorable House to strike out or amend it, so that the above views may be embodied in the Bill.

And your Petitioners, as in duty bound, will ever pray.

MUNICIPAL COUNCIL OF SYDNEY.
(PETITION FROM J. M. CREED, CHAIRMAN OF A PUBLIC MEETING HELD IN SYDNEY, FOR REFORM OF.)

Received by the Legislative Assembly, 20 June, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

That at a Public Meeting held in the City of Sydney, on the 15th May last, the following Resolutions were passed:—

1. That, in the opinion of this meeting, it is urgently necessary that such action be immediately taken by the Government and Parliament as will ensure the prompt cessation of the existing mismanagement of municipal affairs in Sydney. That no measure of municipal reform will be satisfactory that does not provide for the creation of a Greater Sydney, for which the franchise shall be similar to the franchise for Parliamentary elections; the Council to be elected annually; the Mayor to be elected directly by the people; the Council to have power to demolish insanitary buildings, and to build dwellings for the people, fitted with all modern conveniences, to be let at rentals covering cost of construction and maintenance; and to have power to establish and operate any industry which the people may decide is advisable.

2. That in view of the menace to public health, the discredit to the metropolitan city, and the pecuniary loss entailed by the existing long-continued mismanagement of civic affairs, this meeting hereby authorises its Chairman to immediately present the foregoing Resolution to the Prime Minister, and to embody the same in Petitions to both Houses of Parliament for presentation at the earliest opportunity, and further authorises him to sign the Petitions on behalf of this meeting.

Your Petitioner therefore humbly prays that your Honorable House will give consideration to the above Resolutions, and will afford such relief as in your wisdom you may deem fitting.

And your Petitioner, as in duty bound, will ever pray.

JNO. M. CREED,
Chairman.

PROPOSED GOVERNMENT ALIGNMENT OF FLOOD-STREET, LEICHHARDT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 6th September, 1900, "to inquire into and report upon all matters affecting the interests of property-owners on the west side of Flood-street, Leichhardt, by the proposed Government alignment of the said street," and to whom was granted on 30th October, 1900, "leave to sit during the sittings of the House,"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* *See List, page 4. (whose evidence will be found appended hereto), find:—

1. That, judging by the evidence of the witnesses examined by your Committee, the owners of the so-called Flood Estate, which is on the east side of the street in question, have sold land which for over fifty years was outside the boundary of their fence, and up to the time of the sale of the Flood Estate was used as a public road, and kept in repair by the Municipal Council of Leichhardt.
2. That Messrs. E. J. H. Knapp and J. G. Griffin, two well-known and reliable surveyors, surveyed the allotments which are alleged to encroach on Flood-street, and the evidence of witnesses examined by your Committee proved beyond doubt that both surveyors coincided. Mr. Knapp prepared the plan of the estate, and his name is attached to the lithograph produced by one of the witnesses, who procured it at the time of the first sale from the auctioneers, Messrs. Withers and Callaghan, of Pitt-street, Sydney.

Your Committee, in view of the foregoing evidence, are of opinion that, while the street should be made a uniform width of 66 feet, any reasonable claim by the owners of the property in dispute, whose aggregate frontage only amounts to about 200 feet, should receive the favourable consideration of the Government.

J. STUART HAWTHORNE,
Chairman.

No. 1 Committee Room,
Legislative Assembly,
29th November, 1900.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 20 SEPTEMBER, 1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PROPOSED GOVERNMENT ALIGNMENT OF FLOOD-STREET,
LEICHHARDT.

WEDNESDAY, 26 SEPTEMBER, 1900.

Present:—
MR. FERRIS, MR. E. M. CLARK,
MR. NOBBS, MR. MILLARD,
MR. NIELSEN.

J. S. HAWTHORNE, Esq., IN THE CHAIR.

Arthur James Stopps called in, sworn, and examined:—

1. *Chairman.*] What is your position? I am Chief Draughtsman in the Roads Branch, Department of Lands. A. J. Stopps.
26 Sept., 1900.
2. You have been in that position for some time? Nearly twenty years.
3. Were you in your present position at the time the Flood-street alignment was brought under the notice of your Department? Yes.
4. How many years ago would that be? The alignment, I see from the plans, was under consideration in 1887.
5. Was any protest made at the time the alignment was thought to be interfered with? Yes; there was a petition against it.
6. From whom? The petition was signed by a number of residents in the street. There are ten signatures altogether, and I see that they call themselves landowners.
7. What is the substance of the petition? It is in the form of a protest against the alignment, seeing that it interferes with their properties under the metes and bounds of their holdings. That is the gist of the petition. I will hand it in. [*Appendix A.*]
8. *Mr. E. M. Clark.*] Notwithstanding that petition, the alignment was made? Yes.
9. Are you aware of any other petition against the alignment? No.
10. *Chairman.*] Did Mr. Brunker, when Secretary for Lands, deal with this matter? He had the matter brought under his notice, and, I understand from the papers, that he visited the *locus in quo*, but I am not aware that anything was done at that time.
11. Was his report favourable to the petitioners? I do not think he made any report. I have among the papers a report of the deputation which waited upon Mr. Brunker.
12. When was that? On the 14th November, 1889.
13. Who introduced the deputation? It was introduced, I see, by Mr. Garrard, Mr. Hawthorne, Mr. Smith, and Mr. Clubb, the Members for Balmain and Leichhardt; there were also representatives of the Council.
14. What was the substance of the Minister's reply? The Minister, in reply, said that he was desirous of assisting the Council to the utmost of his ability in the matter. He said he would accept their invitation personally to inspect the locality, and he fixed the following Wednesday, I see, for his visit. He also desired me to prepare him a full statement of the case.

A. J. Stopps. 15. You prepared that statement? Yes; it was as follows:—

26 Sept., 1900.

In 1794, 100 acres of land on the Parramatta Road were granted to Prentice.

In 1810, 38 acres adjoining Prentice on the west were granted to Thomas. Within Thomas's grant, and along Prentice's western boundary, a road 1 chain wide was reserved in Thomas's deed. This road is now known as Flood-street, and it was reserved evidently to afford access to lands beyond.

Nearly fifty years after Thomas's land had been alienated from the Crown, namely, in 1859, a person named Ramsay, the owner of land at the back of Prentice's and Thomas's lands, which was approachable from the Parramatta Road by the reserved road in question, asserted his right to use it, and was resisted by one Dishington, who owned part of Thomas's grant. Legal proceedings were taken by the contending parties, and further action threatened, when the Crown was asked to define the position of the road, which was done, the survey adopting the general direction of a fenced line—that is, a right line between the extremities, as the eastern boundary of the road. This fenced line appeared to be the accepted boundary between Prentice's and Thomas's grants. The road as laid out was proclaimed and confirmed, and no objection was lodged within the time required by law. Subsequent to confirmation, however, an objection on behalf of Dishington was lodged, but the objection did not question the position adopted for the boundary of the grant, but the action of the Crown in opening the road through his land.

The more recent action of survey and alignment is merely the re-establishment of the road laid out and proclaimed thirty years ago, and the correctness of the alignment survey is not questioned.

Under these circumstances it appears inexpedient for the Department to accept any responsibility with the object of shifting the road further to the eastward at the cost of the Crown, for nothing has been adduced, and it is believed that nothing can be brought forward to prove the road to have been incorrectly located.

It is clearly to the advantage of those who have buildings and other improvements upon the street to endeavour to get it shifted to the east, and provided they can arrange to acquire a strip of land for the purpose, and the Borough Council will accept all responsibility in the matter, this Department might assist the object by surveying and proclaiming a road in lieu of the present Flood-street.

It should, however, be understood that the alignment of a street can be set aside only by an Act of Parliament.

I should explain that since that minute was written a new Roads Act has been passed—I refer to the Act of 1897. In that Act there is a provision under which we can alter the alignment of streets without a special Act of Parliament.

16. That being the case, what do you think about allowing these persons to retain the properties they have purchased on the west side of Flood-street, making a 50-foot street instead of a 66-foot street, instead of compelling the landowners, all of whom are comparatively poor men, to surrender the property in front of their respective holdings? That is a question that would require a great deal of consideration. In the first place I might mention that a street a chain in width was reserved in Thomas's grant. Consequently it is Crown land, and the Registrar-General might demur to giving a certificate of title to persons who, according to departmental representations, are encroaching on Crown land dedicated as a road.

17. How do you account for these persons purchasing their properties according to a plan, and getting their titles through the Land Titles Office for the area which they possess at the present time? It does seem at first sight an odd thing, but you must consider that the Land Titles Office gives no title to land which does not exist. The Land Titles Office only gives titles to such land as does exist. Titles have been given to land which had no existence at all. It is only in cases where the land is there, and is represented by a certificate, that the title is a good one.

18. Is no survey made? No survey is made under which the Lands Titles Office is responsible.

19. Are you certain that the wealthier proprietors owning the land on the eastern side of Flood-street have not encroached upon the street, instead of the encroachment being made by the poorer classes on the opposite side? We have reason to believe that they have not done so. We have, without consideration as to who the owners of the land were, established the position of the reserved road.

20. You are aware that the late Edward Flood, who was the original owner of the land on the eastern side, as well as those to whom he bequeathed the land—the Oatley family—had their fence back a considerable distance from where the street has been aligned? There is no doubt that there was a fence, the extremities of which only were co-ordinate with the eastern boundary of the road.

21. Is it not a very unusual thing for persons to put up a fence apparently robbing themselves of some acres of land which they really possessed? I think the mistake is quite as commonly found that way as the other way. The difficulty is in the fencing of the land. I daresay that at the time the fence was put up there were trees, and perhaps a good deal of bush on the land. The only marks of the ground were at the extremities, and that being so the intermediate portion could not be readily found.

22. *Mr. Nobbs.*] Does the road shown in red upon the plan you have produced indicate the boundaries of the land which you say has never been alienated? That is the reserved road on the eastern boundary of Thomas's land, and the eastern boundary of Thomas's land is the western boundary of Prentice's land. The reservation of the road was contained in the grant to Thomas.

23. Was the reservation shown upon the plan, or was there merely the usual reservation of a road? There was the specific reservation of a road along the eastern boundary of Thomas's grant.

24. *Chairman.*] Both sides of the reserved road were grants? Yes.

25. *Mr. Nobbs.*] What is the date of the grants? The date of Prentice's grant is 1,794, and of Thomas's 1,810.

26. In bringing the land under the Real Property Act they would have to lodge a surveyor's plan? I believe so.

27. Do you know whether the road was shown upon the plan lodged at the Lands Titles Office? I cannot say. I have not a copy of the plan. I think there could be no question in the matter, because the subdivision of Thomas's grant shows the road. It is only a question of location.

28. Can you produce the original grant and plan? I cannot produce any plans of the Lands Titles Office.

29. Was any minute written upon your report, which was made at the request of Mr. Bruncker in November of 1889? Yes; it was written by the Under Secretary. He says, "The position of the Crown in this matter is very clear. There is no ground whatever for entertaining the proposal to interfere with the alignment of the street through Thomas's Grant, this alignment being, as a matter of fact, no more than a re-survey of the street as proclaimed in 1859. The Council might, however, be informed in the terms of the marked paragraph of Mr. Stopps's memorandum of the 15th instant." That was approved by Mr. Bruncker, and the council clerk at Leichhardt was informed on the 21st December, 1889.

30. Did the Municipal Council of Leichhardt make any representations on the subject? Yes; it was in response to their application that the letter was written to them.

31. Did the Council protest against what was done? They wrote on behalf of the landowners, and interviewed the Minister to see if anything could be done to mitigate the injury which certain persons appeared to sustain.

32. *Chairman.*] If a caveat had been lodged by the Municipal Council as a body, or by the Mayor against the proposed alignment of Flood's Estate, which is really Thomas's grant, would it have stopped them from encroaching on the roadway in any way;—in other words, would it have stopped the Oatley family from selling up to the frontage beyond where their fence originally stood? I think it might have led to investigation, perhaps, and representations to the Department, but I cannot say at this moment.

A. J. Stöppts.
26 Sept., 1900.

33. You did not hear of any caveat? No. After the alignment was made the Council were, and are to this day, bound by it.

34. There is no means of getting away from it? No.

35. Whatever hardship may be inflicted upon the owners of property, it is simply forced upon the Council of Leichhardt by the alignment of the Government officials? Yes.

36. *Mr. Nobbs.*] The whole of the action you mentioned just now was taken as the result of a deputation, but some time before that occurred a petition was sent in? Yes.

37. What action was taken upon that petition? We declined to do anything in the direction of altering the alignment, because we considered we were justified in effecting the alignment as surveyed.

38. *Chairman.*] Suppose the Oatley family had made up their minds to take half of the street, and these unfortunate persons on the other side, through their ignorance of the law, and their inability to pay for a defence of their rights, had got the Lands Titles Office to give them titles to the land taken, would it have been possible for the Oatley family to take it? That is a question I do not feel that I ought to answer. It might imply that a proper investigation into the survey was not made, and that is not what I wish to convey.

39. Would it be likely that the sale of land in so many allotments on the western side of Flood-street could take place, and the whole of the titles pass through the Lands Titles Office, if these persons had actually bought the land in the original street? It is quite possible that it might be so, because they would not know from the location under a private survey where the land was. Suppose there was a length of 120 feet between one point and another, they might start the measurement of the 120 feet some feet to the eastward, and measure and sell the allotments accordingly. When the matter came to be investigated it might be discovered that they had overlapped the existing road. That is what was done in this case. They had not located the proper position of Flood-street before they subdivided the land.

James Powell Treadgold called in, sworn, and examined:—

40. *Chairman.*] You are Mayor of Leichhardt? Yes.

41. You are also a Justice of the Peace? Yes.

42. You know Flood-street, the alignment of which has been the cause of so much annoyance to the residents there? Yes, I know the place very well.

43. What action has your Council taken recently in connection with that matter? The action we took was to take down some of the fences that were encroaching upon the street.

44. By whose authority did you do that? It was done by the authority of the Council. We had the alignment as given us by the Government.

45. In other words, you did not act upon your own initiative; you acted after being supplied with the alignment by the Government Survey Branch? Yes. Persons erected fences on to the street, and we had of necessity to take action.

46. Who, in your opinion, have encroached upon the proper alignment of Flood-street—the owners on the western side or the owners of the property on the eastern side, known as Flood's Estate? I should say, from the information I have, that the landowners on the eastern side are the real encroachers upon the street.

47. Did your Council, as far as you can gather from the records, take any steps when the owners of Flood's Estate were subdividing their land to provide against what was considered locally an encroachment upon the proper alignment of the thoroughfare? I could not answer that question directly, because what was done occurred before I was in the Council. I know that the Council had several surveys made by their own surveyor—Mr. Harris—who is also a Government licensed surveyor. I presume, from the fact that instructions were given to make plans and effect a survey, that there was some reason for it; and I take it that the reason was that the encroachment was shown from the western side, and the Council wished to see which party was right.

48. Did Mr. Harris furnish a report? Yes; I will hand it to the Committee. From conversation I had with the present overseer—Mr. Newland—I gather that he is of opinion that the alignment of George-street is the key of the position. The whole of the deeds issued in connection with the land show so much frontage to George-street, with a depth of so many feet from that thoroughfare; and if that is absolutely the fact, then those on the western side are really the owners of all the land within their fences, notwithstanding that the Government appear to have made a mistake.

49. *Mr. Nobbs.*] Who was the original surveyor of the subdivision showing the encroachment? I could not say; but I have plans prepared by Mr. Harris, in which he shows the present alignment of the Government, also the alignment which he would suggest himself, and blue-dotted lines showing nearly the whole of the post-holes which originally constituted the fence on the eastern side of the street. You will see from the dotted blue line that it bulges from a certain point, and takes a circular form. The Government appear to me to have tried to straighten the road, instead of following the bend, and by doing so they have taken certain land from persons on the western side of Flood-street, and have given extra land to Flood's Estate on the eastern side.

50. *Chairman.*] Your information is gathered more from reports than from actual observation? Yes. I know nothing of the original state of the road.

51. The dispute started before you were in the Council? Quite so.

52. You are not in any way responsible for any apparent neglect which may have occurred with the alignment on one side of the street or the other? No.

53. Your own opinion, after reading the various reports, and making yourself conversant so far as you can with the whole facts, is that the encroachment has been on the part of the owners of Flood's Estate? That is my firm opinion from my observation, and from what I have heard from people all round. I have conversed with people who have lived there for almost fifty years. They are acquainted with the old lines of the fences, and it is apparent, from these lines, that the owners of Flood's Estate are the real encroachers.

54.

J. P.
Treadgold.
26 Sept., 1900.

- J. P. Treadgold.
26 Sept., 1900.
54. *Mr. Nobbs.*] Your own conclusion bears out the conclusions arrived at by your surveyor, who is a competent man? Yes.
55. *Chairman.*] You feel that in carrying out your instructions in making the alignment of this street, and in taking a portion of the property belonging to persons on the western side, you are doing an injustice to them? I think it is doing them an injustice.
56. You are actually taking land from these persons, most of whom are poor, which they have really purchased? Yes.
57. *Mr. Nobbs.*] You think that the Government in forming the alignment were wrong? Yes.
58. *Chairman.*] Your opinion is shared by the aldermen in the Council for the time being? Certainly. I have heard them say so. The whole Council are of opinion that the persons on the western side have been injured by the alignment. I am not an interested party at all. The persons affected are not constituents of mine, and I have always upheld the right of the Council, so that I am expressing an unbiassed opinion.
59. What is the opinion of the old residents generally? The old residents to whom I have spoken have on every occasion favoured the blue dotted line represented on the plan I have exhibited as the line of fencing. Some of the residents, who have been there for forty or fifty years, hold that opinion. I should like to say that the Council would think it unfair for the Government to so align the street as to make it narrower in any part. Persons on the opposite side would have rights in respect to damage, having bought to a street of 66 feet in width, if the width were subsequently reduced. A narrower street would also be detrimental to the borough. It has already too many narrow streets; and the Council strongly object to any more streets of less than the proper width being foisted on to the Municipality.
60. What would you suggest as the best way out of the difficulty? I think the only possible way would be for the Government to pay for the mistake, and compensate the persons injured.
61. You mean the persons on the western side? Yes.
62. *Mr. Nobbs.*] You think that, as a matter of fairness, they should receive compensation? Yes.
63. *Mr. E. M. Clark.*] Are there any extensive properties on the western side? No.
64. Are there many houses there? There are only one or two of any importance at all. There is one good two-storied house; the others are all small dwellings.
65. Any alteration of the alignment would result in the resumption of property on one side of the road? Yes. I think the better way would be to resume on the western side, and leave the eastern side as it is.
66. *Chairman.*] Do you know whether the owners of the property are prepared to treat generously with the Government? The Council have always advised them to be reasonable in their demands and expectations, and, if possible, to come to an arrangement with the Government. So far as I can gather, I think the owners of the properties will be reasonable in their expectations.

Samuel Darnley called in, sworn, and examined:—

- S. Darnley.
26 Sept., 1900.
67. *Chairman.*] You are a resident of Leichhardt? Yes.
68. You are living in Flood-street? Yes.
69. You were a purchaser of allotments on the western side of that street? Yes.
70. From whom did you purchase the land? From Withers, Callaghan, and Brown, the auctioneers. Mr. Brickwood was the owner.
71. Who was the surveyor? Mr. E. J. H. Knapp.
72. You produce the original plan of the estate? Yes. [*Appendix B.*]
73. Which allotments do you own? Nos. 15, 16, and 17.
74. The allotments you purchased had a frontage to George-street, and ran back to Flood-street, as shown on the plan produced, having a depth of 124 feet? Yes.
75. *Mr. Nobbs.*] You put up your fence in accordance with the alignment shown upon the plan you produce? Yes.
76. How long ago would that be? I bought allotment No. 17 sixteen years ago, and allotments Nos. 15 and 16 I bought two years and three months ago.
77. Allotments Nos. 15 and 16 were not fenced? No.
78. From whom did you purchase them? From the Commercial Banking Company of Sydney.
79. Is any of the land under the Real Property Act? Not that I know of.
80. How long were you in possession of the land before you received a notification that your alignment, according to the original plan from which you bought, was wrong? The only notice I had in regard to the alignment concerned allotments Nos. 15 and 16. I received no notice whatever in regard to allotment No. 17.
81. It was about two years ago, then, that you had information that you were encroaching upon the street? Yes.
82. According to the alignment to which your attention was then directed, how much did you encroach? A little over 14 feet.
83. Is it garden land? Yes.
84. What would be the distance between the alignment and the commencement of your house property? The alignment comes up to within a foot of the house.
85. I suppose that the same thing will apply to the other properties there? The alignment takes the front rooms off two cottages.
86. The owners of these properties are all persons in comparatively humble positions? Yes; so far as the two cottages which I mentioned are concerned, I know the man who built them. I do not know whether he owns them still.
87. If you were to give up the land necessary to make the street 66 feet in width, it would reduce considerably the value of your property? Yes; it would bring the bedroom right on to the footpath; that is one objection to it.
88. How long is it since the subdivision upon which you purchased was made? The date of the sale was 15th November, 1884.
89. Was Flood-street a new road when the subdivision was made? I believe so.
90. *Chairman.*] What was the reason given for not selling the frontages to Flood-street instead of to George-street? I could not say, except that George-street was the old street. The depth of the allotments was originally 190 feet from George-street.

91. *Mr. Millard.*] When the 66 feet was taken off it still left you the area you purchased—124 feet? Yes. S. Darnley.
92. *Chairman.*] You always understood, I suppose, that Mr. Knapp was a very careful surveyor? Yes.
93. You never heard any doubt expressed as to the correctness of his lithographs? I never heard any doubt expressed. 26 Sept., 1900.
94. The owners of the property, generally speaking, have not at any time had any difficulty raised by surveyors when they have gone to complete their purchase and obtain their titles? Not that I am aware of; I know that in one case a man borrowed money with which to build two cottages.
95. The society advanced him money to build upon land which turned out to be part of the street? Yes, according to present survey.
96. It is natural to suppose that the building society from which he borrowed would have a survey made to ascertain whether the land existed as represented to them? I should think that would be done, but I do not know.
97. How, in your opinion, has this difficulty arisen? In my opinion, it has arisen from the owners of Flood's Estate coming on to the street on the other side.
98. You think the mistake has been made on the eastern side? Yes; I believe the encroachment has been made there.
99. Did the owners of property on your side take any action when they saw the proposed encroachment on the part of the owners of Flood's Estate? I believe the Council took some action. The owners of properties, as far as I am aware, did not.
100. The action of the Council was taken at the instance of the property owners in the street? Yes.
101. *Mr. E. M. Clark.*] At what would you value your property, supposing the Government were about to resume it? I have not valued it at all; I do not want the Government to resume it; I want the land. The resumption would bring my house right on to the footpath.
102. You would prefer the Government to resume on the other side of the road? Yes.
103. You are not making this complaint then with any desire to induce the Government to purchase your land? No; I want the land myself.
104. In common with other owners of property on your side of the street, you think you have been injured by a faulty survey on the part of wealthy owners on the other side? Yes.
105. And you are of opinion that if any land is taken it should be taken from the other side of the street and not from your side? Yes.
106. Are there many houses on the other side of the street? About seven or eight, I think.
107. Do they stand any distance back from the road? Some of them stand a little way back.
108. *Mr. Millard.*] Would it be less expensive to resume on the opposite side of the street to your side? I cannot say. I do not know how far back the houses stand from the road.
109. *Chairman.*] Your fencing, and the fencing of other property owners on your side, has been chopped down at the instance of the Municipal Council of Leichhardt? Yes.
110. Consequently your property has really been taken from you? Yes.
111. Your land, for the past two years and three months, has practically been open to use by the general public, owing to the action of the Council? Yes. The fence in front of my house remains, but the fence of the two adjoining allotments has been removed.
112. And you are unable to use that land? Yes.
113. The land is common property, although you purchased and paid for it? Yes.
114. You obtained a certificate of title? Yes, and a surveyor's certificate.
115. The survey for allotments 15 and 16 was made by Mr. J. G. Griffin? Yes.
116. His survey and that of Mr. Knapp coincided? Yes.
117. Mr. Griffin did not intimate to you that you had purchased land to which you had no right? No.

Mrs. Rose Morford called in, sworn, and examined:—

118. *Chairman.*] You are a resident of Flood-street, Leichhardt? Yes.
119. You have lived there how long? I bought the property upon which we are living in Flood-street nearly twenty-two years ago. Rose Morford. 26 Sept., 1900.
120. Has your alignment been affected? Yes. They took 66 feet off the property.
121. Then were you supposed to have purchased the road as well as the property you now hold? Yes; I have my deeds.
122. The present alignment affects you in common with other owners of property in Flood-street? Yes; it will take away some of our property.
123. You say you bought originally the land which is now known as Flood-street? Yes.
124. When that land was taken it reduced your depth to 124 feet? Yes.
125. And since then an alignment has been made which has taken away a portion of the building which you have erected upon your property? Yes.
126. If the proposed alignment is carried out, you will, I understand, lose the verandah of your house? Yes.
127. So that this will be practically the second time you will have been deprived of property for which you have paid money? Yes.
128. In what way do you think the difficulty has arisen;—what is the cause of it? I think it is due to the owners of Flood's Estate. I know that they have shifted their fence three times since I have been there. Mr. Knapp surveyed the property we purchased, and took it right up to the fence.
129. He never expressed any doubt as to the accuracy of the survey? No.
130. You were a widow—Mrs. McLaughlin—when you married Mr. Morford? Yes.
131. Your husband, I suppose, purchased the land? Yes.
132. Who is the oldest resident in the street? Mr. Stafford.
133. How long has he lived there? Between forty and fifty years.
134. Were you at the sale of land at which Mr. Darnley and others purchased? No; when we bought there was no house there at all.
135. Your frontage was to George-street? Yes; we bought from George-street to Flood's fence.
136. And then the road was taken off your depth? Yes.
137. Did you raise any objection to it? No; we never bothered about it.
138. I suppose that 66 feet has been taken out of your property since your husband's death? Yes.

WEDNESDAY, 24 OCTOBER, 1900.

Present:—

MR. E. M. CLARK,

MR. NOBBS.

MR. MILLARD,

J. S. HAWTHORNE, ESQ., IN THE CHAIR.

William Montgomery called in, sworn, and examined:—

- W. Montgomery.
24 Oct., 1900.
139. *Chairman.*] You live at Leichhardt? Yes.
140. In Flood-street? Yes.
141. You own property there? Yes. I have a photograph of it, if you would like to see it.
142. It is not necessary to show the photograph;—about how long is it since you purchased the property? About 1887.
143. About twelve years ago? Yes, about that.
144. What was the depth and frontage of the property? I bought 20 feet frontage by 124 feet from George-street.
145. Through to Flood-street? Yes.
146. The alteration in the alignment of Flood-street deprives you of how much land? Nineteen feet 2 inches. That is about what will be taken from me?
147. It is the land you purchased from Callaghan and Withers? Yes.
148. *Mr. Clark.*] It is 19 feet 2 inches in depth? Yes.
149. *Chairman.*] The effect of taking this land of yours means what? It means that it depreciates the property to a certain extent.
150. You have a garden in front now? Yes.
151. It means taking the whole of the surface right up to the verandah? It leaves about 4 feet from the roadway.
152. Now that the alteration in the alignment is made, it will, practically speaking—several houses having been built on properties purchased about the same time—bring the road right to your front rooms? Exactly so.
153. Who do you think is right—the proprietors of the Oatley Estate? In my opinion, they are wrong; because this alteration will take 19 feet away from me.
154. Was there ever any question raised as to your boundary encroaching on the street? No; or I should not have bought the land.
155. Did you or any other property-owners in the street take any steps to protest against the new alignment or the encroachment of the Oatley people when they were laying out the place? Not to my knowledge.
156. Was the Council approached in the matter? Yes.
157. The Council of Leichhardt? They were asked to lodge a caveat at the time of the sale of the Oatley Estate. In my opinion it was not done.
158. What action has the Council of Leichhardt taken with regard to the matter recently? They took down two people's fences. For instance, my brother's and Mr. Darnley's.
159. Did they take them down or chop them down? They chopped them down.
160. Did they give any reason why they chopped them down? They notified the matter publicly. No; I am not sure about that.
161. Did you enter a protest against it? The people objected to it. I am not quite sure, because I did not get any notification.
162. *Mr. Clark.*] You say that you purchased your land in 1887? I did not purchase at the sale.
163. When was the Government alignment made on the road? Oh, it was in 1889 or 1890.
164. In 1889 or 1890? Somewhere about that.
165. You say that the alteration in the road means a depreciation in your property;—have you any idea what is considered the value of the depreciation? I brought the photograph to let the Committee see the property. There would be no harm in seeing it. You will see the property that was on the street. [*Photograph produced.*] That is the photograph, and you will see that it takes 19 feet.
166. Nineteen feet in depth? Yes.
167. What frontage have you? Twenty feet.
168. They take 20 feet by 19 feet 2 inches in depth? Yes.
169. I see they do not encroach on your house at all? It leaves 4 feet clear. There should be 24 feet.
170. And you really could not say at present what the value of the depreciation would be;—what would be your value of the depreciation of the property if they had taken it? Of course, I prefer having the land. If I could not get the land I should have to come to some terms.
171. You think, I take it from the evidence, that really you are not encroaching on the side of the road at all? No.
172. You think it is rather on the eastern than on the western side? Yes.
173. And you would sooner that your side of the road should not be touched at all;—you would sooner it was taken from the western than from the eastern side? For myself, I prefer having the land.
174. You prefer that the house and land should remain intact? Quite so.
175. Would it cost any more money to widen the road on the western than on the eastern side? In the way they have aligned the street, of course our side has projected.
176. Are there any houses on the eastern side? Three cottages and two large houses.
177. Built back from the road? No.
178. Built right fronting the road, I suppose;—they are the large properties, I presume? Yes; there are two of them.
179. On the western side there are a considerable number of houses? Down to the Parramatta Road there are a few; I should say about nine.
180. That is, nine houses in the western side? Nine or ten.
181. You did not enter any caveat with regard to the alignment at all? I did not know anything about it.
182. You relied on the Council itself to do the work? We did not know anything about it. When we purchased the land I thought that we had it all right.

183. And you do not read *Gazette* notices, and so on, I suppose? No, I do not.

184. You rather trusted to the Municipal Council to look after your interests? Yes.

185. But had you known anything of this, you would have lodged an objection? Yes. If you could see the street for yourself, you would see how the alignment was. I think it would be much better if the Committee could see it.

W.
Montgomery.
24 Oct., 1900.

Thomas Edward Colebrook called in, sworn, and examined:—

186. *Chairman.*] You are an alderman of Leichhardt? Yes.

187. You are one of three aldermen who represent the ward in which this Flood-street is situated? Yes.

188. You have taken considerable interest in this question for some little time past, both as an alderman of the Council and as a resident of the district? Yes.

189. Do you remember if your Council took any action when the Oatley Estate people were getting their estate ready for sale—having it surveyed, and all that? There was a resolution in the Council's books by which the Mayor was instructed to lodge a caveat on the alignment made by the Oatleys on the eastern side of the road.

190. On the eastern side of Flood-street? Yes.

191. Was the caveat lodged? No. The Mayor (Alderman Neal) says he did not lodge it, through having received some communication from the then Minister for Lands.

192. Who was the Minister at the time? Mr Brunker.

193. Can any trace be found of that letter? None that I know.

194. *Mr. Clark.*] You cannot find any trace of the letter from the Lands Department? No; we cannot find any official letter from the Department.

195. *Chairman.*] What is your opinion with regard to this property;—who do you think has made the mistake, the proprietors on the west side of the street—that is, the people who sought the creation of this Select Committee—or the Oatley people, who sold the property on the eastern side? The people on the eastern side. I should just like to say this—that up to a certain time I went against these people who are now seeking to get this matter altered, and I was one of the strongest in support of taking down what was then termed an obstruction.

196. By these people you mean, I suppose, the property-owners who are now appearing before the Select Committee? Yes. Perhaps no one supported the other side as strongly in the Council as I did. After that I went through the whole business, as far as the records of the Council disclosed it; and I also made inquiries from the residents of the district, with the result that I was convinced that my vote was unjust to the people who purchased from Callaghan & Co.—I forget precisely who the auctioneers were—from the George-street frontage.

197. So that now, instead of being an opponent of the claims of these people, who are appearing before the Select Committee, you are a strong advocate of them? Decidedly. I think if they do not get the 124 feet, they are being deprived of land honestly belonging to them. Quite recently one of them obtained deeds from the Lands Department which gave him about 24 feet off Flood-street.

198. Twenty-four feet off Flood-street? Yes; that is what the deeds show.

199. Who was the purchaser? Mr. Darnley.

200. So that he purchased the land only recently from George-street to Flood-street, and got a good title from the Registrar-General's Office? They gave him 124 feet depth right through, which means that if the Oatley people are right in their survey these people get 19 feet on to the roadway.

201. Your Council gave instructions to cut down the fence on the front of all these people's properties, treating them as trespassers? Two notices were given that the fences should be removed, and they were cut down.

202. What do you think would be a just solution of the difficulty? It would be a difficult matter to say. Some people would be satisfied with compensation; other people want their land. My idea is that if the street was re-aligned and made a 45-foot street, it would be a fairer way.

203. So that the street at one end would be 66 feet, and at the other, 45 feet;—that would be by way of a compromise? Yes.

204. *Mr. Millard.*] Would that give them all the land they purchased? Nearly all.

205. Is there a heavy traffic on the street? Originally there used to be; but the traffic is now more concentrated up at the other end.

206. How many property-owners would have to be compensated for encroachment on the street;—how many properties are affected, so that the owners would be justly entitled to compensation for the street being made 66 feet from end to end? About twenty property-owners. I could not say exactly.

207. So that there are only two alternatives to the solution of the question, one to make a street 45 feet in front of the properties affected by the survey of the Oatley Estate, and the other to compensate all owners? It may be done by altering the alignment, and taking a little off the eastern and a little off the western side.

208. Do you think that any compensation ought to be given on the eastern side for encroachment? The present owners have not encroached—that is, the people who purchased have not.

209. The Oatley people have now sold the properties? Yes.

210. So the people who bought the Oatley property would suffer from being deprived of their land? Yes.

211. They are not the aggressors? No.

212. *Mr. Nobbs.*] When was the road made? The fence on the eastern side of the road was recognised as the boundary between the two estates for years. The old post-holes show now where the fence was removed from the eastern side to the west.

213. *Chairman.*] As long as the oldest resident can recollect, the Flood-street people had their fence along the land considerably back from the newly-surveyed line from the estate? Up to twelve or thirteen years ago.

214. In 1810, Mr. Stopps, of the Lands Office, says that the street was laid down in Thomas's grant—that is the land which these people have purchased? I do not know about that.

215. Mr. Stopps, in his evidence, says:—"In 1810, 38 acres adjoining Prentice on the west were granted to Thomas, within Thomas's grant, and along Prentice's western boundary; a road 1 chain wide was reserved in Thomas's deed. This road is now known as Flood-street, and it was reserved evidently to afford

T. E.
Colebrook.
24 Oct., 1900.

- afford access to lands beyond";—so that all the allotments affected by the proposed new alignment are in Thomas's grant, according to Mr. Stopps' evidence? Yes.
216. *Mr. Nobbs.*] Would the alignment and the narrowing of the road be generally acceptable to the owners of property in the subdivision of which the properties form part? I am not one of the property-owners. I am merely an alderman representing the ward. Some of the owners want compensation, and some want the land. It is a difficult matter to say which would be more generally satisfactory.
217. Would you propose a realignment of the road? That would get over the difficulty.
218. And be acceptable to the municipality? Some of them would accept it.
219. Had the Council or the aldermen known of the case what they know now, the fences would never have been removed? I do not think so.
220. *Chairman.*] You think it was a mistake on the part of the Leichhardt Council to order the cutting down of the fences? They had nothing else to do, because the Government had aligned them from the street.
221. *Mr. Clark.*] Did you find any correspondence from the Oatley people with regard to this estate at the time the alignment was going on? No.
222. *Chairman.*] Did not one of your officers some years ago, who was known as the Borough Engineer and Surveyor—named Harris, I think—make the report on this street? Yes; the intention was to find against these people. The report was in their favour.
223. The appendix here shows that Harris's contention, many years ago, was altogether in favour of the present property-owners as against the Oatley family? The report shows that the post-holes could still be seen. You will find that in the report, I think. He decided that it was the Oatley people who had encroached.
224. The opinion of Mr. Sullivan, the surveyor of Leichhardt, twelve years ago, was certainly against the claims of the Oatley people? It was against the claim of those people.
225. If it is in favour of the people who sought this Select Committee, then it must be against the new survey made on behalf of the Oatley family? Yes.
226. Because the new survey of Flood-street went considerably to the west of the old alignment or the old posts that indicated the boundary of the Flood Estate? Oh, yes; they encroached. It is quite clear that they got the distance that they encroached.

John Callaghan called in, sworn, and examined:—

J. Callaghan.
24 Oct., 1900.

227. *Chairman.*] You reside where? 126, Pitt-street, Sydney.
228. You are in business there, are you not? Yes.
229. As what? As a financial agent, and a land agent.
230. As a property agent generally? Yes.
231. You are a partner in the firm of Withers and Callaghan? I was a partner in the late firm of Withers and Callaghan.
232. Your firm sold the property facing Flood-street, the property now in dispute? Yes.
233. Who was the surveyor of the land? Mr. Knapp.
234. Have you the plan of the estate with you? No, I have not. It is so long ago that I have not got it.
235. *Mr. Clark.*] You mean E. J. H. Knapp, do you not;—he is dead, is he not? No; I do not think he is dead.
236. E. J. H. Knapp died some time ago? Well, it was E. J. H. Knapp.
237. He was a most careful surveyor? One of the best in the Colony.
238. He was very conscientious at his work? Very.
239. *Chairman.*] That is the plan of the estate [*plan produced*]? Yes.
240. It contains forty-two allotments? Yes.
241. It was on the 15th November;—you do not remember what year? It was about sixteen years ago.
242. You are the Mr. Callaghan mentioned in the plan of the estate? Yes.
243. The alignment is facing George and Flood Streets;—you never had any doubt as to the accuracy of the alignment? No. I recollect distinctly speaking to Mr. Knapp about this matter. I said to him, "What about this Flood-street?" he said, "I am perfectly satisfied that it is quite correct."
244. *Mr. Nobbs.*] That was some time after the sale? Some time after.
245. Some years after? Yes.
246. *Chairman.*] You spoke to Mr. Knapp, and he had not the slightest doubt about the accuracy of the survey? No; he had not the slightest doubt about it. He said that he was prepared at any time, if it was necessary, to go before a Select Committee, and give evidence to that effect.
247. What is your opinion in regard to this matter;—how do you think that mistake has arisen to enable the Flood Estate people to go 18 feet or 19 feet to the west of the boundary as defined by this fence? My idea is that the other side is an old grant. It must be over 100 years old. When I talked to Mr. Knapp we had a general discussion about it. He said that they were quite satisfied with the boundary line between the properties for over 100 years.
248. They were satisfied that the fence defined the boundary correctly for nearly 100 years? Yes;—and they never took any exception to it, when the plans were got out.
249. *Mr. Clark.*] The plans were never submitted to the Floods? They were publicly advertised.
250. *Chairman.*] You conclude naturally that the estate having been sold, the people on the other side would see your alleged encroachments on the land as per plan? Exactly. And they would naturally take exception to it.
251. And although the land was sold some years before the sale or the survey for the sale of the Flood Estate, the family that owned the land, known as the Oatley family, never raised any protest against the survey according to this plan? Never, in the least. As far as I know, no question was ever raised about it.
252. And on the day of the sale, or subsequently, there was never any exception taken to the plan by which all this property was sold? They never, till some years after, when this matter cropped up.
253. Did your surveyor mark the street simply putting the tape down at the fence from Flood-street? From Flood's fence to the frontage of the allotments was 66 feet.
254. So that your surveyor took it for granted that the Flood Estate people had their fence put on the correct alignment? It has been so for years and years.
255. Would it not be a reckless way of laying out an estate to take an erected fence for a guide? They took the old land-marks. It would also be surveyed as a whole, and subdivided afterwards.
256. What was the reason that the land was sold to George-street instead of to the Flood-street frontage on that occasion? Because George-street was a made street; George-street was not wider. 257.

257. That was the reason you sold to George-street? Well this was an old made road. I suppose that J. Callaghan was the reason.
258. And George-street was, at time of the sale, a macadamised road? And a number of buildings were on it. J. Callaghan.
24 Oct., 1900.
259. And Flood-street, being in a primitive state, this land was likely to realise higher prices through being sold to a formed, instead of to an unformed, street? Yes.
260. So that you sold the land further along, still taking George-street frontage in each case? When we were selling the land there, George-street was supposed to be the same width all along. They came a little before the sale and objected to something about taking over the street. We agreed then to make a 66-foot street all along.
261. What do you think would be the correct solution of the difficulty? I was just going to remark that there would be no difficulty about the matter, assuming that Flood-street was the boundary. It has been so all along, and the fact was never disputed till the Government made some alignment. Then I believe instructions were given that a caveat should be lodged. The old ground and roads have been used for seventy or eighty years.
262. That is Flood-street? Yes. Flood could not possibly have got the ground; it was alienated from him. If a man allows a road to run through land for thirty or forty years he cannot close it.
263. So that your argument is this: that although the Flood's Estate people may not have put the fence on the western limit of the land, yet, having allowed it to be used for seventy or eighty years as a street, they could not after that encroach on it for building purposes? If it was alienated from them they would not have the power.
264. The whole difficulty has arisen through the caveat not having been lodged? If the caveat had been lodged, the whole width of the street would have been put as it is.
265. You believe that your firm was quite within bounds in selling the land according to the plan produced by one of the owners of the property? No exception to it was ever taken.
266. Had any exception been taken previously to the property being sold? No.
267. Mr. Knapp surveyed most of the property that you had to do with? He surveyed a great deal of MacIntosh's land. We always found him most accurate.
268. You never knew him to make a mistake? No.
269. Your opinion is that an injustice would be done to the people on the western side of Flood-street in the Government taking the land entirely from their side of the street, when you believed that the fault was attributable to the owners of the Flood Estate? Yes. Their boundary starts from where the road is 66 feet. It has been used for many years.
270. How many years? For sixteen or seventeen years. The old posts down there must have been down about sixteen or seventeen years to my knowledge; but the old posts must have been down for twenty or thirty years.
271. So that the alignment must have been there fifty years? It must have been there thirty years. I recollect it for seventeen years. I think I can go even farther back. It has always been used as a road. The Government make a fresh alignment and alter the boundary. Through no caveat having been lodged these people get this land.
272. *Mr. Clark.*] Had the Government road been previously aligned? No; it was not an aligned road.
273. *Chairman.*] There was a dedicated 66-foot street as between the Prentice and Thomas grants given in 1810;—then the inference is that the Flood Estate people put their fence according to the surveyor's mark originally, and having allowed this fence to exist there for fifty or sixty years, it becomes practically a front street for all this land? The boundary fence was recognised between the parties for seventy or eighty years.
274. *Mr. Nobbs.*] Even by Flood's representatives? Yes. This 66 feet comes right from off Flood's property to the point which we sold, carrying out the original intention for a 66-foot street.
275. And to take any of the property from the west side of the street—most of it in workmen's allotments—the Government or the Council would be doing an injustice? Oh, yes; there is no doubt about that. No exception, as I have said, was taken at the time of the sale.
276. And your firm did not sell land which it was not entitled to sell? Oh, no. The surveyor was, as I have said, prepared to prove what was the proper boundary of the estate. The Government seems to have been moved to act in this matter.
277. You never had any communication with the Oatley family at all? No; there was never any exception taken by them.
278. Never any exception taken to the plan of the estate, or its correctness? No.

Robert Montgomery called in, sworn, and examined:—

279. *Chairman.*] You are a resident of Leichhardt? Yes, sir.
280. You reside in Flood-street? In Flood-street.
281. You purchased some property there? Yes, sir.
282. Some years ago? Yes, sir.
283. Here is a plan which has been produced; the auctioneers were Withers, Callaghan, and Brown, the surveyor was Mr. Knapp? Yes, sir.
284. What is the size of your allotment? It is 124 feet deep by 20 feet.
285. Twenty feet frontage to Flood-street by 124 feet frontage to George-street? Yes, sir.
286. You purchased from the George-street frontage? Yes, sir.
287. What was the object in selling with the frontage to George-street? It was the original street.
288. And it was made a street while Flood-street was in its primitive state? Yes.
289. You have never had any question as to the encroachment on Flood-street previous to Oatley family subdividing their estate? No, sir.
290. When did you first get information of the property encroaching on the west side of Flood-street? A little over four years ago. When I put my fence up.
291. You erected a fence in front of your property? Yes.
292. At a later date, some two years ago, the Leichhardt Council gave instructions for it to be cut down;—did you enter a protest? I was not here at the time.
293. You were absent from the Colony? Yes.
294. But during your absence the property was broken into by the Council of Leichhardt? Yes.

R.
Montgomery.
24 Oct., 1900.

- R.
Montgomery.
24 Oct., 1900.
295. The reason given was that you were encroaching on the street? Yes, sir.
296. According to the Government alignment? Yes.
297. Your contention was that you were simply occupying the land that you purchased, and of which you were the rightful owner? Yes.
298. You never had any objection raised to your boundary by the owners of the property on the other side of the street? No.
299. And till recently you considered your boundary properly defined? Yes; and do so still.
300. You consider now that the Flood Estate people are encroaching on the east side of the street, rather than that the property owners on the west side of the street are encroaching? I am sure of it.
301. Supposing that Flood-street was made a full 66-foot street, how would that affect your property? It will bring the fence within 4 feet of my verandah.
302. Within 4 feet of your verandah? Yes.
303. Reducing your garden front? Twenty feet.
304. How many feet would be taken off you? Twenty feet. More would be taken off me than off anybody else.
305. So that your verandah is now 24 feet back from the front alignment? Yes, sir.
306. In other words, it takes away the whole of your garden space, and gives you a limited area of 4 feet by 20 feet? Yes.
307. That naturally reduces the letting value of your property considerably? I should think so. Oh, yes.
308. Is yours a cottage or a two-storey house? A cottage.
309. Your neighbour's is a two-storey? Yes, sir.
310. Is yours built of brick or weatherboard? Of brick.
311. Your property, then, for the last two years has been open to the public? Yes; it has been open to the public.
312. Did you make any representations to the Council when the action was taken? Mr. McQuade, a lodger at my house, entered a protest against the taking down of the fence from the original alignment.
313. Did the Leichhardt Council make any reply? No; but the matter has been taken up since.
314. You mean, in inducing the Member for the district to endeavour to obtain some redress from the Government? That is right.
315. You consider that the whole of the property-owners, of whom you are one, are being unjustly dealt with as compared with the owners of the property on the other side? Yes.
316. And you consider that if there is any error in the alignment the land should be taken from the property opposite rather than from your side? Yes; from the east side.
317. What did you pay for your land? £2 10s. a foot.
318. The land has gone up in value since? I could not say as to that.
319. It has not depreciated? No; it has not depreciated.
320. The district has improved in many ways since you purchased your property? Yes, sir.
321. *Mr. Clark.*] Supposing, Mr. Montgomery, there is any difficulty in altering the alignment as you and those connected with you now ask, would you be content to have the alignment 45 feet or so, or such a width in fact as would enable you to get the full benefit of your land? Yes, sir.
322. If you can get nothing better would you be content to have the road narrowed to 45 feet or 50 feet? Yes; rather than any compensation the Government could give me.
323. *Chairman.*] You have a plan in your possession now by which you bought the property? Yes.
324. Would you have any objection to leaving the plan in the possession of the Committee? No, sir; but I should not like to lose it, as it does not belong to me. [*Appendix C.*]
325. *Mr. Nobbs.*] What is the title? A freehold.
326. *Chairman.*] Your plan is the plan by which the estate was sold? Yes.
327. You have a title for your property, giving the full extent of the land as shown in the plan through the Registrar-General's Office? Yes.
328. No question at all was raised about the title? No question at all.

PROPOSED GOVERNMENT ALIGNMENT OF FLOOD-STREET, LEICHHARDT.

APPENDIX.

A.

[*To Evidence of A. J. Stopps, Esq.*]

IN the matter of an alignment of a road or street known as Flood-street, Leichhardt, situate in the parish of Petersham, county of Cumberland.

To the Honourable the Minister for Lands, Department of Lands, Sydney.

The 8th day of June, 1887.

The Humble Petition of the undersigned landowners in Flood-street, Leichhardt, in the parish of Petersham,—

SHEWETH as follows :—

1. That your Petitioners are landowners who are now, and have been for many years past, possessed of land and hereditaments situate, lying, and being on the western side of Flood-street, Leichhardt, aforesaid.

2. That at the time of the several conveyances to your Petitioners of their several lands in Flood-street aforesaid the land described in such conveyances stood within the dimensions therein described, and neither encroached upon nor were encroached upon by any other land, tenement, road, or way whatsoever, but were bounded in every case on the east by Flood-street, aforesaid.

3. That your Petitioners are informed and believe that the subdivision road known as Flood-street aforesaid was originally made through certain land known as Thompson's Grant, in the said parish of Petersham.

That the said road was preliminarily notified on the eighth day of August, in the year one thousand eight hundred and fifty-nine, and was confirmed on the fifth day of October in the same year.

That the road so notified and confirmed as aforesaid bounded lands owned by your Petitioners as aforesaid, and the parcels comprised in and described by the several conveyances to your Petitioners do not comprise any land which formed part of such road.

4. That a portion of the said original subdivision road notified and confirmed as aforesaid, being part of the eastern side thereof, has been encroached upon and wrongfully enclosed by a fence, which has been erected so as to enclose such portion of the said road with a piece or parcel of land known as Flood's Grant, situate on the eastern side of the said road, and the eastern alignment line of the said original subdivision road is visible at a distance of many feet west of the said fence.

5. That the Government surveyor has recently aligned Flood-street aforesaid, and has caused the newly-aligned road to encroach upon your Petitioners' land to a very serious extent, such encroachment extending, in the case of the lands owned by your Petitioner William Hall, to a distance of 20 feet from the eastern boundary line of the land belonging to your Petitioner William Hall, so that a great portion of the road so aligned will cut through his private property and actually interfere with the buildings erected thereon; and in the case of your Petitioner Patrick Burke, whose land consists of many acres covering a large area of land lying and being on the west side of Flood-street aforesaid, the said recent alignment will carry the road right through the centre of the said lands of your Petitioner Patrick Burke from south to north, causing great loss and deterioration in value to the said lands in consequence.

6. That the estimated value of your Petitioners' several properties which are affected as aforesaid by the recent alignment of Flood-street amounts to several thousand pounds, and that they are threatened with a serious pecuniary loss owing to the deterioration in the value of their lands if the recent alignment of Flood-street aforesaid is carried into effect.

7. That in many cases your Petitioners have erected tenements and houses on their lands, and the recent alignment of Flood-street will cause the road to pass through their said tenements and houses—that is, if the new alignment is finally determined on, will have the effect of compelling them to remove their tenements and houses.

8. That your Petitioners are informed and believe that a reference to the said subdivision road as preliminarily notified and confirmed is to be found on Roll 61-1603, Papers 75-1757, R.S.B., in the Surveyer-General's Department; and further, that your Petitioners are prepared to furnish evidence, if required, in support of the allegations herein contained.

And your Petitioners therefore pray—

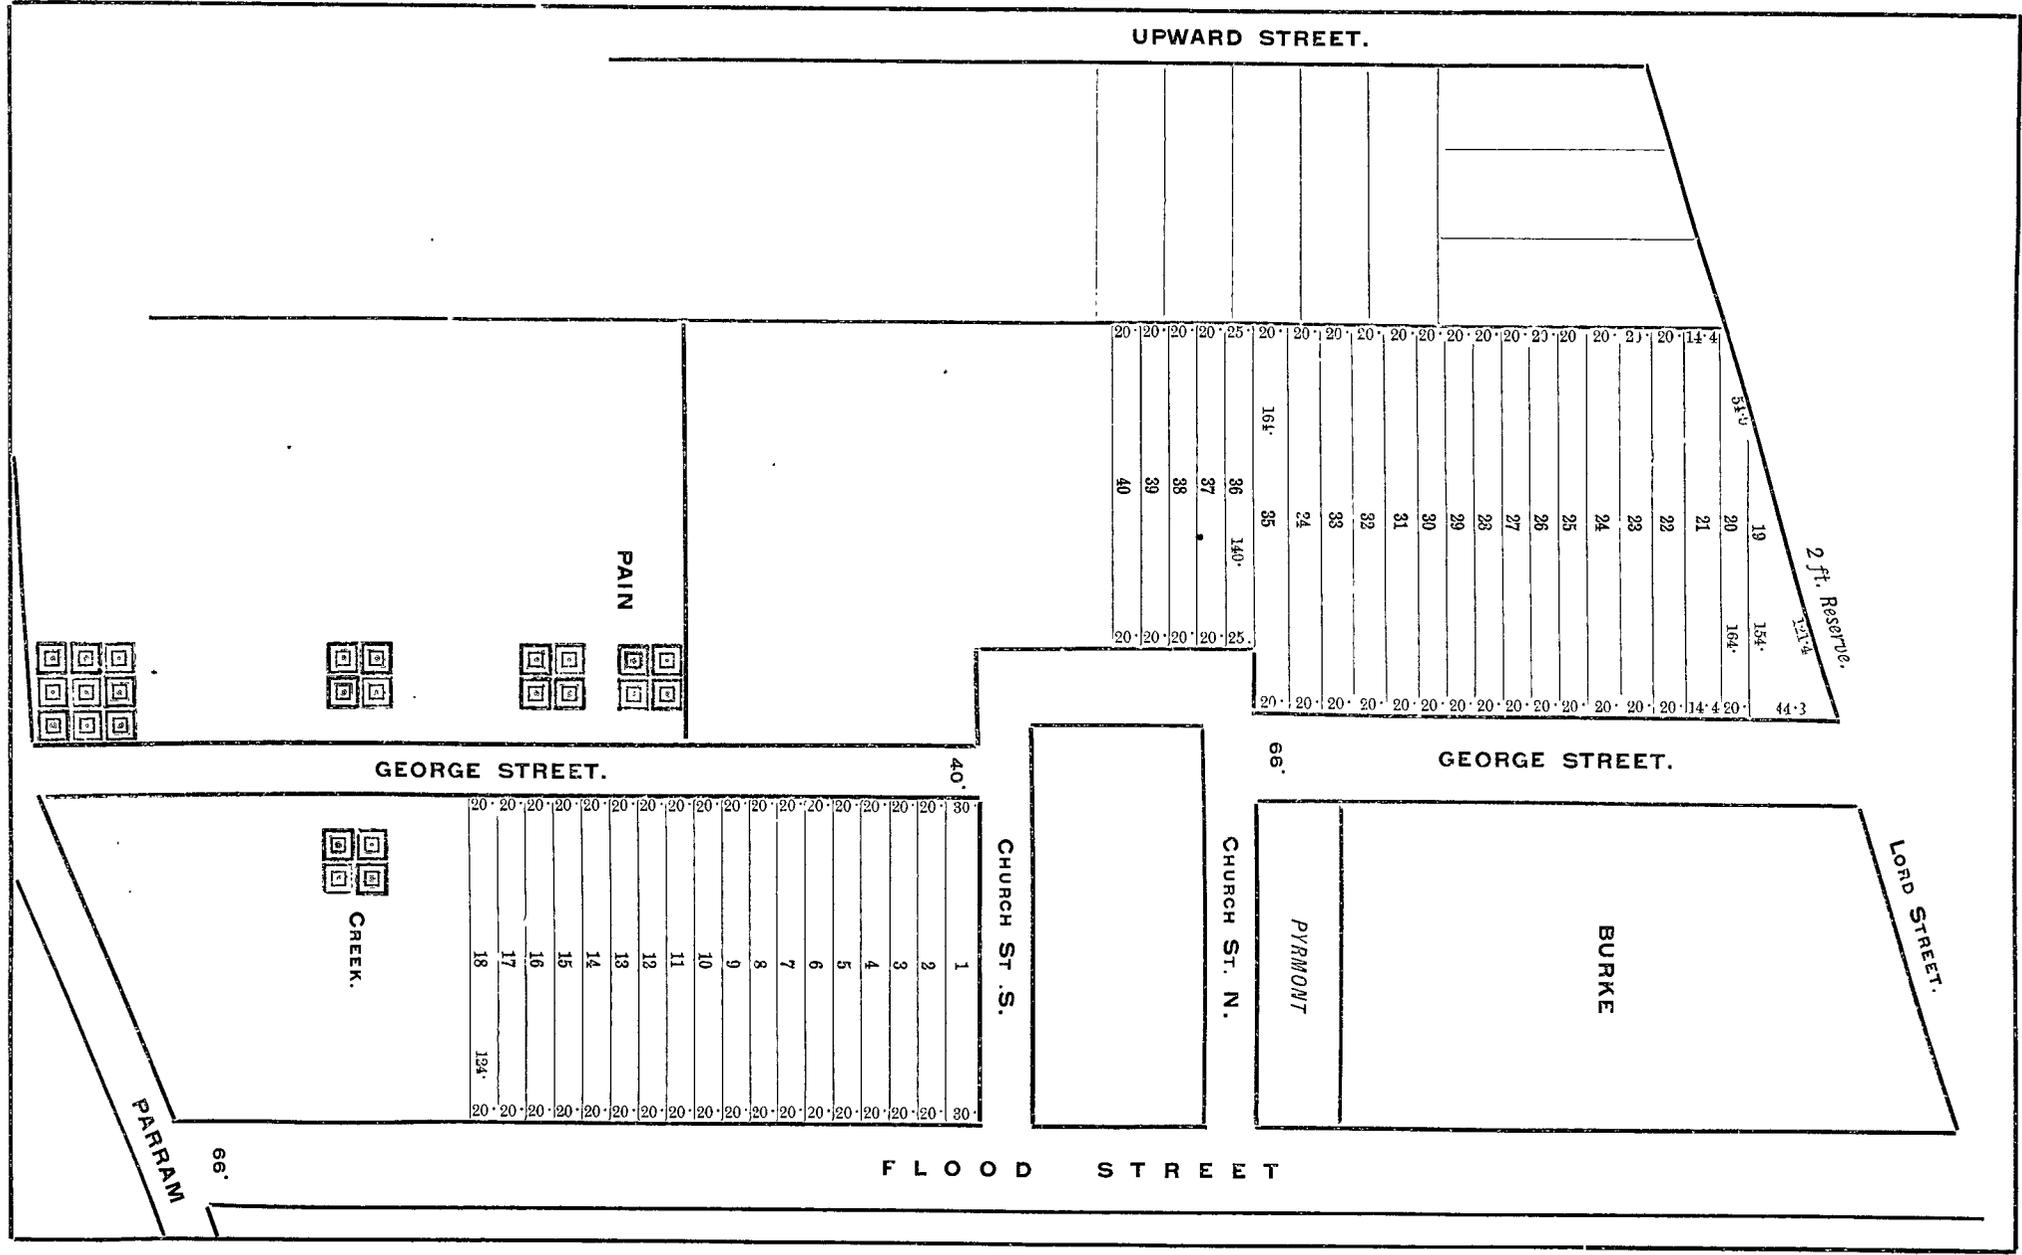

1. That the recent alignment of Flood-street, Leichhardt, be altered from the present course so as to avoid any encroachment on the respective lands of your Petitioners or any of them.
2. That in the event of any encroachment being occasioned to your Petitioners' lands, or any of them, compensation may be granted to such of your Petitioners whose lands shall be so encroached upon.

And your Petitioners will ever pray, &c.

Patrick Burke, Orange.
 William H. Hall, Flood-street, Leichhardt.
 Samuel Darnley, Flood-street, Leichhardt.
 Laurence Sharkey, Parramatta-road, Leichhardt.
 James Brown, Parramatta-road, Petersham.
 Mrs. T. Morford, George-street, Leichhardt.
 Anna Myers, Bostrevor Cottage, Flood-street, Leichhardt.
 Donald Kell, Parkway, Petersham.
 Newton Bungay, Moore-street, Leichhardt.

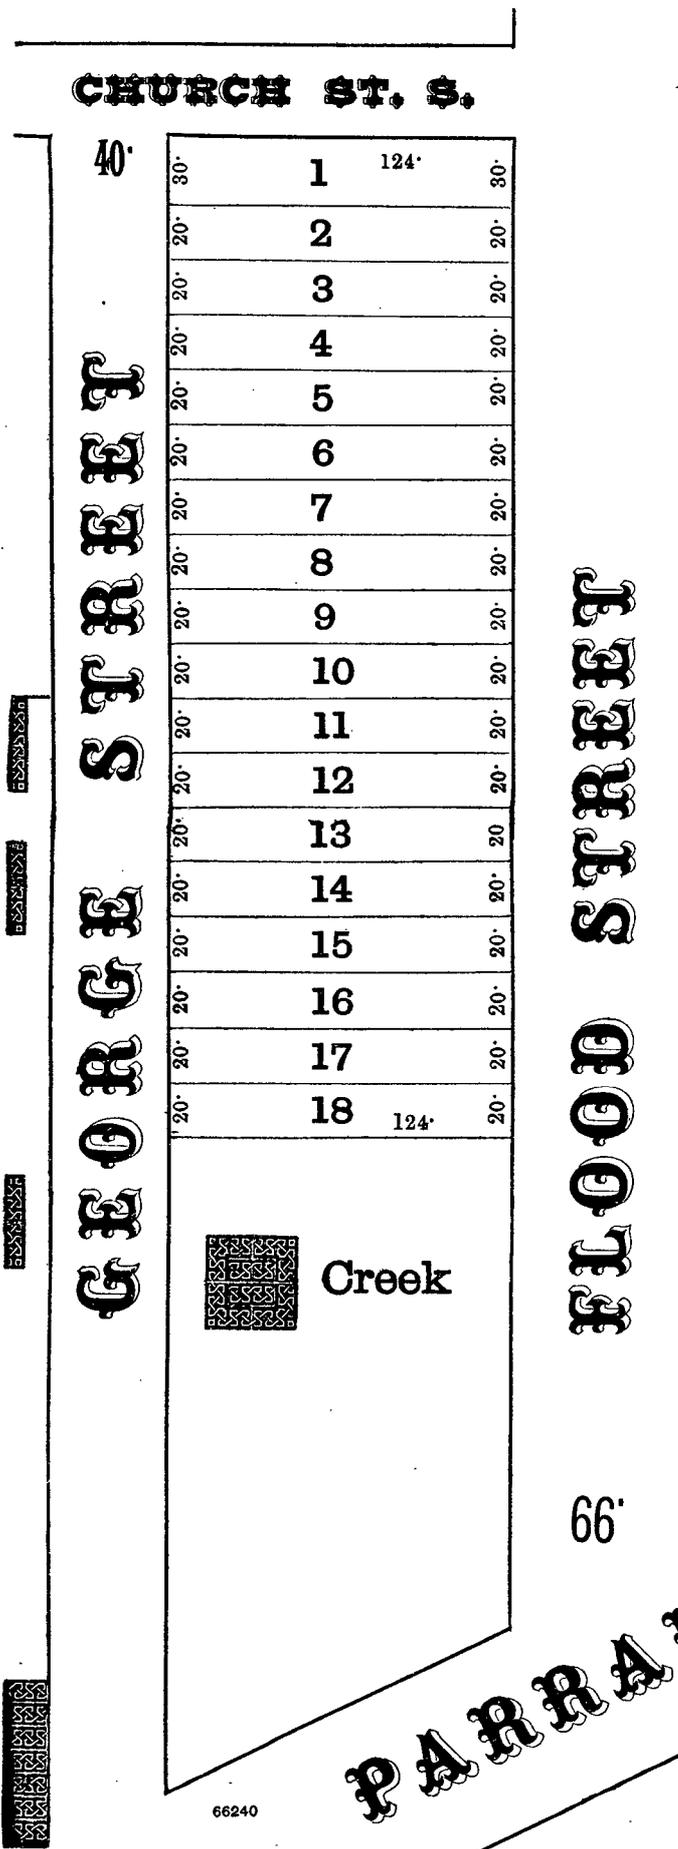

[Two Plans.]

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CONGESTION OF TRAFFIC IN GEORGE-STREET AND
OTHER THOROUGHFARES.

(POLICE REPORTS RESPECTING.)

Printed under No. 2 Report from Printing Committee, 28 June, 1900.

Congestion of Traffic in George-street and other Thoroughfares.

Police Department, Inspector-General's Office, Sydney, 6 June, 1900.

I BEG to submit reports from Superintendent Larkins and Inspector Potter on the above subject, for the Chief Secretary's information.

The chief difficulty is, of course, the necessity for an increased number of constables. I have applied for forty-two additional men on the Estimates for next financial year, but that number will not efficiently provide for new stations, increases in country towns, as well as the demands in the metropolis; but, if granted, it will enable me to make considerable improvements in the arrangements.

The number of police withdrawn for quarantine duties of course made the traffic for the time more congested.

The Principal Under Secretary.

EDMUND FOSBERY,

Inspector-General of Police.

Memo. :—

Police Department, Superintendent's Office, Sydney, 6 June, 1900.

I herewith forward Inspector Potter's report *re* condition of vehicular traffic in George-street. There is, in my opinion, good grounds for Mr. Wilks complaining of the regulation of vehicular traffic in congested portions of George-street and other places in the city; but with the present police strength it would be impossible to give the matter anything like the attention it requires. I attach a communication on same subject, dated 30th November, 1899, showing that there are thirteen points where police could be stationed to advantage for the greater portion of the twenty-four hours, regulating the traffic and attending to other matters that might occur in the vicinity of each post. For some time police were stationed at the points marked *; but, owing to the outbreak of plague and other pressing matters, they had to be discontinued. In fact, the regular beats could not be covered, notwithstanding complaints from the public regarding insufficient protection to life and property. However, the greater portion of the men have now returned to their ordinary duty, and I will try and cover a few of the most important points in the most congested parts of George-street; but I cannot hope to have the work performed in a satisfactory manner without an increase of about thirty men.

The Inspector-General of Police.

N. LARKINS,

Superintendent.

Re Tram Traffic in George-street.

Sir,

No. 1 Police Station, 3 June, 1900.

I respectfully beg to inform you that the absence of constables from the tram-line in George-street arises from the paucity of men available for preventive duty at this station.

Of the 118 of all ranks on the roll, after provision has been made for special posts, there are only forty-four left of all ranks (including two officers) for patrol, day and night reliefs, to take the places of the men sick, to do duty at the Criminal Court and Quarter Sessions, the races, conveyance of children to reformatories, attendance at band performances, together with numerous other emergencies constantly cropping up.

No one regrets the absence of the men from the tramway more than I do, being a firm believer in the point system of duty.

N. Larkins, Esq., J.P.,
Superintendent of Police.

I have, &c.,

ALFRED POTTER,

Inspector.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CENSUS OF AUSTRALASIA, 1901.
(CONFERENCE OF STATISTICIANS.)

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

Sydney, 3 March, 1900.

To The Honorable W. J. Lyne,
Premier and Colonial Treasurer of New South Wales,—

Sir,

The meeting of Premiers held in Sydney on the 25th January last having decided that a Conference of Statisticians should be held to arrange for the collection and compilation of the Census of 1901 upon a uniform principle, representatives were appointed by each of the Australasian Colonies to attend such Conference. We, the representatives thus appointed, have the honor to present the enclosed Report, signed by Mr. T. A. Coghlan as President, giving a resume of the proceedings of the Conference, and stating the conclusions arrived at.

We have the honor to be,

Sir,

Your obedient Servants,

T. A. COGHLAN, President.

JAS. J. FENTON,

J. HUGHES,

L. H. SHOLL,

MALCOLM A. C. FRASER,

R. M. JOHNSTON,

E. J. VON DADELSZEN.

REPORT.

To The Honorable W. J. Lyne,
Premier and Colonial Treasurer of New South Wales,—

Sir,

The Statisticians representing the Colonies of Australia and New Zealand, having desired me to draw up a formal account of their proceedings at the Conference held in Sydney to arrange for the collection and compilation of the Census of 1901 upon a uniform principle, I have the honor to report :—

That the Conference was attended by a representative from each Colony, and four morning and two afternoon sittings were held. The minutes of proceedings are attached hereto.

In order to facilitate the business of the Conference, three sub-committees were appointed. To the first sub-committee was entrusted the task of drawing up a uniform householder's schedule, to the second the revision of the classification of occupations, and to the third was given the duty of drawing up the reasons which led the Conference to recommend the 28th April as the day for taking the Census.

The question of the inquiries to be made at the Census was very fully discussed, and the Conference was of opinion that there should be only one addition to the inquiries made at the Census of 1891, viz., when the person enumerated is not born in the colony, he should be asked the length of time he has resided therein.

There were several suggestions for increasing the number of questions to be asked of the people, but the majority of the members of the Conference were of opinion that it would be unwise to extend the inquiries beyond the class of subjects usually prescribed in countries where the Census is taken upon schedules. If, as in some countries, the plan were adopted of appointing enumerators whose business it would be to make personal inquiry from house to house, and fill up their books from the particulars thus obtained, much more elaborate inquiries might be ventured upon.

The representatives of several of the colonies desired to incorporate with the householder's schedule a return relating to land and crops, particulars in respect of which are obtained annually in the majority of the colonies. The Conference, however, thought that the making of such inquiries should be left optional with the colonies concerned, but all were agreed that the occasion of a population Census was not the most opportune time for pursuing investigations relating to land and industries.

In order to ensure uniformity both in making the inquiries at the Census and in presenting the results arrived at, the Conference agreed, with slight amendments, to certain resolutions which I placed before it. These resolutions, which are set out in the Appendix "B" hereto, form the basis of the model schedule attached in Appendix "C,"* and, if strictly adhered to, will ensure the possibility of exact comparison being drawn between the conditions of the various colonies. The members of the Conference have pledged themselves to adhere, so far as it may be in their power, to these resolutions. They consider that uniformity is especially desirable at the present time, when five of the colonies are about to enter upon a federation, as there is every probability that the figures obtained in the coming Census will form the first population statistics of the Commonwealth, and be the basis of many important arrangements in regard to finance and electoral representation. The less deviation there is, therefore, from the accepted system of enumeration and compilation, the less trouble will there be hereafter in dealing with the population statistics of the States.

In view of the difficulties which arose at some previous enumerations, owing to the model schedule being attached to the Census Act, the Conference unanimously resolved to recommend that the heads of inquiry only, and not the Census schedule, be embodied in the Census Act in those colonies where such an Act is necessary.

The

* This Appendix not with the Report when laid upon the Table.

The Conference decided again to adopt the classification of occupations (Appendix "D") drawn up for the Census Conference of 1891 by Mr. R. M. Johnston and myself. The experience of ten years has suggested a few changes, but these are all of a minor character, such as may be looked for in the development of the population and industries of a young community.

According to the rule hitherto adopted for fixing the date, viz., the first Sunday following the first day of April, it would be necessary to take the next Census on the 7th April, 1901. This will be Easter Sunday. The Conference was of opinion that it would be unwise to adopt that date, owing to the great disturbance of population which always occurs at Easter time; and, after examining the circumstances of each colony, it was thought that the 28th April was the day most suitable. The Conference accordingly recommend that the day mentioned be that on which the Census should be taken. As the matter of date is very important, I have thought it desirable to insert the reasons drawn up by a sub-committee of the Conference for adopting the date now proposed. To the reasons given, I may add that at the last Census of New South Wales, taken on the Sunday following Easter, 1891, there were 26,000 heads of families, as well as a large number of single men, away from their homes, and it is probable that a large proportion of these would have been found at home had the Census been taken a fortnight prior to, or a week after, the day actually selected. In all the colonies there is a similar disturbance of population, and the Conference was strongly of opinion that the day appointed for the Census should be arranged so as to occur when there is the least movement of population. The reasons drawn up by the sub-committee, and concurred in by the Conference, were as follows:—

"The time of taking the Census being usually fixed for the night of the first Sunday in April is considered to be inappropriate and inconvenient for the forthcoming enumeration for the reason that it will be Easter Sunday, and it is well known that large numbers of persons leave their homes at that time to take advantage of the Easter holidays.

"To allow of the complete re-settlement or normal redistribution of the population in its usual place of abode after dispersion for such holidays, it appears to be certainly undesirable that any date in the immediate vicinity of Easter should be fixed upon.

"The climatic conditions of Queensland, especially of the northern portion, render travelling during March very doubtful of accomplishment, and on this account it is undesirable that any departure from the 7th April should be previous to that date.

"The advantages of fixing upon the 28th April as a date for enumeration are that the Easter vacation for school children will then be over, and scholars will have returned.

"Persons who have taken furnished houses or lodgings at a distance, for an extended Easter period, will also have returned to their homes.

"Volunteer encampments, and parties of excursionists living in tents, will have broken up by the time proposed.

"There are parts of New Zealand, too, where harvesters, who have left home, have not finished their work earlier than the latter part of April.

"The effect of taking a Census at a time of general migration like Easter would be to enumerate the population in places in which they do not usually reside, and to increase unduly the population of some localities at the expense of others.

"The result would be utterly misleading so far as localising the population, and would also affect the number of males resident in given areas."

The Conference desired me to record its sense of the excellent service rendered to it by the Secretary, Mr. H. A. Smith, an officer of the Statistical Department of New South Wales, appointed for this special duty.

I have the honor to be,

Sir,

Your obedient Servant,

T. A. COGHLAN,

Statistician of New South Wales,
President.

APPENDIX A.

MINUTES of Conference of Statisticians of the seven Colonies of Australasia, called for the purpose of making arrangements for the taking of a Census in each Colony during 1901, held at Sydney, on Monday, 26th February, 1900, at 10 a.m.

There were present:—Mr. T. A. Coghlan, representing New South Wales; Mr. J. J. Fenton, Victoria; Mr. J. Hughes, Queensland; Mr. L. H. Sholl, South Australia; Mr. M. A. C. Fraser, West Australia, and Mr. R. M. Johnston, Tasmania.

Mr. Coghlan announced that he had received word from Mr. von Dadelszen, that owing to illness he would not be able to attend that day.

On the motion of Mr. Hughes, seconded by Mr. Sholl, Mr. Coghlan was elected President.

Mr. Coghlan explained the occasion of the Conference, and read the resolution convening the Meeting, passed by the Conference of Premiers, at Sydney, on 25th January, 1900: "That it is desirable that a Census be taken in each Colony during the year 1901, and that a Conference of Statists be held at an early date, not later than the 20th proximo, to make all arrangements for carrying out the same."

Mr. H. A. Smith was introduced as the officer appointed to act as Secretary.

Mr. Coghlan moved: "That Mr. W. Ridley, Deputy Registrar-General of New South Wales, be invited to attend the Conference as advising Member, subject to the consent of the Registrar-General."

Mr. Johnston seconded.

Motion was carried.

Mr. Ridley, later on, entered the room, and was present during the deliberations of the Conference. The President laid on the table a series of recommendations as to the day on which the Census should be taken, the subjects of inquiry, and the method of compilation.

The proposals which were considered and dealt with *seriatim* were as follows:—

1. That as the Sunday next following the 1st April, 1901, is Easter Sunday, and large numbers of persons are away from home on that day, the Census be taken as for another day.—Carried.

Subjects of Inquiry.

2. That the subjects respecting which it is desired that inquiry be made at the Census be named in "The Census Act," but that the Schedule containing those inquiries be not attached thereto.—Carried.

3. That the subjects of inquiry be as follow:—Name, Sex, Birthplace, Age, Religion, Occupation, Conjugal Condition, Education, Sickness and Infirmity, Materials of Houses, Number of Rooms, Length of Residence in the Colony.—Postponed.

4. That the Return of Religion be not compulsory, and that it be optional to insert the word "object" instead, by anyone having an objection to stating his religious belief.—Carried.

5. That the inquiry be made as to whether the person returned is an employer, a worker on his own account, or an employee, or whether he is unemployed.—Carried.

6. That with reference to Conjugal Condition, inquiry be made as to the year of marriage, and the total number of children (living and dead) born to each couple.—Postponed.

7. That with reference to Education, an inquiry be made as to those able to read and write, able to read only and not write, and unable to read; also, as to those who may be graduates of any University, together with the designations of their respective degrees, and of the Universities at which such degrees were conferred.—Postponed.

8. That with reference to Sickness and Infirmity, an inquiry be made as to the numbers laid up or unable to pursue their usual occupation on account of illness or the effects of an accident, or who may be deaf and dumb, blind, insane, idiotic, paralytic, leprous, or who may have lost a limb or the sight of an eye.—Postponed.

9. That in the Return of Houses, those inhabited, uninhabited, and in course of erection, be separately distinguished.—Carried.

10. That the Householder's Schedule should specify that persons travelling or out at work during the night of the Census (and not elsewhere returned), and who return home on the day after the Census, are to be included as if they were present in the house on the night of the Census.—Postponed.

11. That in accordance with the foregoing resolution, the Householder's Schedule, drawn up by this Conference, be the basis of the inquiries to be made under "The Census Act."—Carried.

Compilation.

12. That, as far as possible, the Chinese, Kanakas, and other coloured races, as well as the Aborigines (including half-castes), be tabulated apart from the general population under every head of inquiry, so that it may be possible to combine their numbers therewith, or separate them therefrom, as may be desired.—Postponed.

13. That in working out proportions under any head of inquiry to show the ratio of the numbers in each line to the total, the items in the line for the unspecified be altogether excluded from the computation.—Carried.

14. That persons whose birthplace is stated to be "Australia, if under 12 years of age, be tabulated as born in the Colony to which the Census relates, and if 12 years of age, in the column for "Australia undefined."—Carried.

15. That children respecting whom the return of religion is unspecified be tabulated as of the religion of their parents, if the father and mother are stated to be of the same religion; or if the religion of only one parent is specified, as of the religion of that parent; but that if the parents are of different denominations, no assumption be made as to the religion of the children, who are to be classed as unspecified.—Carried.

16. That the ages of the people of either sex be tabulated in single ages up to 21, then in quinquennial periods of age up to 85, and after that in single ages; also, that a table be prepared showing the numbers of either sex in the whole population at each year of age.—Carried.

17. (A) That in tabulating the Occupations of the people, the numbers of either sex under 5 years of age; between 5 and 15; 15 and 20; 20 and 25; 25 and 45; 45 and 65; and over 65; be distinguished.—Carried.

(B.) That the Occupations be tabulated according to the system of classification adopted by this Conference.—Carried.

Also that subsidiary tables be compiled showing—

- (1) The ordinary Occupations of the unemployed of either sex, a person to be considered as unemployed if out of work for more than a week prior to the Census.—Postponed.
- (2) Employers of labour and persons in business for themselves, relatives assisting, and wage-earners; no person to be considered as belonging to one of the foregoing divisions who is not actually employed.—Postponed.
- (3) The ordinary or former occupations of inmates of either sex of (a) hospitals, (b) benevolent asylums, (c) hospitals for the insane, (d) other charitable institutions, (e) gaols and penal establishments.—Postponed.

(c) That in the main tabulation, in the case of a person returned as following more than one occupation, he be tabulated, as a rule, under the head of the first mentioned,—the exception being a Government officer following some other calling—as, for instance, “deputy-registrar and storekeeper,” in which case he is to be classified as a storekeeper; also, a person residing where one of his occupations is carried on which would warrant its being considered as the more important,—as, for instance, “farmer and publican,” living at the public-house, is to be classed as a publican, although that calling may be stated second; also, that a subsidiary table be prepared showing the persons who follow two or more occupations.—Carried.

The remaining proposals, Nos. 18 to 22 inclusive, were not considered.

18. (A) That in the table of Education the people be grouped in single ages up to 21 years of age, and after that in quinquennial periods to 85 years of age; those of either sex able to read and write, able to read only, and unable to read, being distinguished.

(B) That no child under 3 years of age be set down as able to read, and no child under 5 years of age as able to write; also, that no person be set down as illiterate who can read or write any foreign language.

(c) That a table also be prepared showing the degree of primary instruction possessed by children between 5 and 15 years of age of each religious denomination; and,

(D) That a further table be prepared showing the education of natives of the Colony.

19. (A) That in the tables of Conjugal Condition the people be grouped in single ages from 14 to 21 years of age—those of either sex never married, married, widowed, or divorced being distinguished; that Chinese be set down as never married, unless they have or have had wives in Australasia.

(B) That tables be prepared of the divorced persons of either sex, showing their birthplaces, ages, religions, and occupations; and also

(c) A table showing the relative ages of husbands and wives; also the number of wives whose husbands were absent, and of husbands whose wives were absent, on the Census night.

20. That a table be prepared in which the number of families with domestic servants be separately shown, in groups, distinguishing families with one servant, two servants, three, four, five, over five and under ten, ten and over.

21. That tables be prepared showing the numbers of either sex suffering from each description of sickness or infirmity, grouped in single years of age up to 21, and afterwards in quinquennial periods up to 85 years of age; that tables be prepared showing the occupations of those suffering from each description of sickness.

22. That houses, shops, stores, &c., occupied only by caretakers be separately shown.

The Conference adjourned at 12:50 p.m. until 10 a.m. on Tuesday.

T. A. COGHLAN,
President.

27 February, 1900.

TUESDAY, 27 FEBRUARY, 1900.

The Conference met at 10 a.m.

Present:—Mr. Coghlan (President), Mr. Fenton, Mr. Hughes, Mr. Sholl, Mr. Fraser, Mr. Johnston, Mr. E. J. von Dadelszen (representing New Zealand), and Mr. Ridley.

The Minutes of previous meeting were read and confirmed.

The Conference resumed consideration of the President's recommendations of the preceding day.

Proposition 18, sections (A), (B), and (C), were carried as moved.

Section (D) was amended to read as follows:—“That a further table be prepared, in age groups, showing the education of persons born in the Colony (exclusive of aborigines),” and was carried as amended.

Proposition 19, section (A), was carried as moved.

Section (B) was, on the motion of Mr. von Dadelszen, omitted.

Section (C) was carried as moved.

Proposition 20 was amended to read as follows:—“That a table be prepared showing the number of private families with domestic servants, distinguishing families with one servant, two servants, three, four, five, over five and under ten, ten and over; and also similar particulars in respect of hotels, boarding-houses, &c.,” and was carried as amended.

Proposition 21 was postponed till No. 8 should have been dealt with.

Proposition 22, as moved, was negatived.

Mr. von Dadelszen moved: That the following be a new resolution to stand in place of No. 22:—“That in the case of houses, public offices, banks, stores, &c., in which a person or family resides in order to take care of the premises, the number of rooms occupied by such person or family only is to be given, and not the whole number in the building. Where a shop is attached to a dwelling, the former is not to be considered a room without someone sleeps therein.”

Mr. Johnston seconded.—The motion was carried.

The Conference then considered the postponed recommendations.

Mr.

Mr. Fenton moved: That proposition 3 be amended by inserting the words "Federated Australia" in place of "the Colony" in the last line.—The amendment was negatived.

The proposition was carried as originally moved.

The Conference adjourned at 12:45 p.m., and resumed at 2 p.m.

Proposition 6 was further postponed.

Proposition 7 was carried as moved.

Mr. Fraser moved: That proposition 8 be amended by altering the word "numbers" in line 1 to "persons," by inserting the word "or" between "dumb" and "blind" in line 3, and by omitting all words after "blind."

Mr. Fenton moved as a further amendment: That the words "or who may have lost a limb," be retained.—Mr. Fenton's amendment was negatived.

Mr. Fraser's amendment was put and carried, and the proposal as amended: "That with reference to sickness and infirmity, an inquiry be made as to the persons laid up or unable to pursue their usual occupation on account of illness or the effect of an accident, or who may be deaf and dumb, or blind," was carried.

Proposition 10 was carried as moved.

Mr. Hughes moved, and it was carried: That proposition 12 be amended to read as follows:—"That, as far as possible, the Chinese, Pacific Islanders, and other coloured races, as well as the Aborigines (including half-castes), be tabulated with the general population under every head of inquiry, and separate tables be prepared, so that it may be possible to separate them therefrom, as may be desired."

Proposition 17 section (B), sub-sections (1), (2), and (3), were carried as moved.

Proposition 21 was carried as moved.

The Conference adjourned at 4 p.m. until 10 a.m. on Wednesday.

T. A. COGHLAN,
President.

28 February, 1900.

WEDNESDAY, 28 FEBRUARY, 1900.

The Conference met at 10 a.m.

Present:—Mr. Coghlan (President), Mr. Fenton, Mr. Hughes, Mr. Sholl, Mr. Fraser, Mr. Johnston, and Mr. von Dadelszen.

The Minutes of previous meeting were read and confirmed.

Proposition 6 of the President's recommendations of 26th February was considered, and amended to read as follows:—"That, with reference to conjugal condition, it shall be optional with each Colony to make inquiry as to the year of marriage, and the total number of children (living and dead) born to each couple,"—and was carried as amended.

Mr. von Dadelszen moved: "That the Census be taken as for the night of Sunday, 28th April, 1901."—Carried.

Mr. Johnston moved: "That Mr. Hughes, Mr. von Dadelszen, and Mr. Fraser be appointed a sub-committee to draw up a memorandum giving reasons for changing the date of taking Census."—Carried.

The President moved, from the chair: (1) "That Messrs. Johnston, Ridley, Sholl, Fenton, and von Dadelszen be appointed a sub-committee to draw up a uniform Census Schedule."—Carried.

And (2),—"That Messrs. Johnston, Fenton, and the mover be a sub-committee to revise the classification of occupations."—Carried.

Mr. Hughes was appointed convener of the Committee to draw up the memorandum; Mr. Johnston, of the Schedule Committee; and the President, of the Committee to revise the classification of occupations.

The Conference adjourned at 11:30 a.m. until the sub-committees should be ready to report.

T. A. COGHLAN,
President.

3 March, 1900.

FRIDAY, 2 MARCH, 1900.

The Conference met at 3 p.m.

There were present:—Mr. Coghlan (President), Mr. Fenton, Mr. Hughes, Mr. Sholl, Mr. Fraser, Mr. Johnston, Mr. von Dadelszen, and Mr. Ridley.

Mr. Johnston reported as to conclusions arrived at by the Committee appointed to draw up a uniform schedule, and presented a model schedule, giving the various heads of inquiry, with the directions thereunder, on the one side, and the General Instructions, and the instructions for filling up the Schedule in the column headed "Profession or Occupation," on the other side.—The Schedule was adopted.

In connection therewith, Mr. Johnston moved: That a new head of inquiry be included in the Schedule, to follow column headed "Country where born" with "Length of Residence" for title, and "If not born in the Colony state length of residence therein, in years. If less than one year insert a cross (X)" for direction thereunder.—The motion was carried.

Mr. Fenton moved: "That in addition to length of residence in the Colony, inquiry be made as to length of residence in federated Australia, and in the other Australasian colonies."—The motion was negatived.

Mr. Johnston moved: "That it be optional for any Colony to add a new column under the heading 'Religious Denomination' stating, 'If teacher at Sunday School write "T," if scholar at such school write "S".'—Carried.

Mr. Johnston moved: "That all particulars necessary for purposes of tabulation to locate the position of dwelling as to County, Electoral District, &c., be not considered part of model Schedule, but be added by each Colony to suit its own convenience."—The motion was carried.

Mr. Johnston moved: "That it be optional for any Colony to obtain particulars regarding assessed annual value of dwelling, and as to 'how occupied,' in addition to the information regarding materials of which it is built, and the number of rooms."—Carried.

Mr. Johnston moved: "That the Caution at head of Schedule be signed by Superintendent of Census."—Negatived.

Mr. Fraser moved: "That the columns of Schedule be numbered in sequence."—Carried.

Mr.

Mr. Johnston moved: "That the instructions to miners for filling-up Schedule in the column 'Profession or Occupation' be amplified or amended to suit the requirements of each Colony."—Carried.

Mr. Hughes presented the Report of the Committee appointed to draw up a memorandum giving the reasons for changing the date of taking Census, which was read by the President.

Mr. Fenton moved: "That the resolution of 28th February, fixing 28th day of April, 1901, as the date of the Census, be rescinded, and that the Census be taken as for the night of Sunday, 21st April, 1901."—Negatived.

Mr. Johnston moved:—That the Report be adopted.—Carried.

The President brought under the consideration of the Conference the classification of Occupations, and after deliberation it was resolved:—"That the systematic classification of Occupations drawn up for the Census of 1891, be adopted with the modifications suggested by the President, with the proviso that they should be submitted to all the Statisticians for their opinion, and that if they should make any further suggestions these should be referred by the President to each Statistician for his approval."

Mr. Sholl moved: "That the Shipping Schedule be the same as the Householder's, with the amendments necessary to refer to ships, and that in lieu of column headed 'Relation to head of family,' a column headed 'Rank or Quality' be introduced."—The motion was carried.

Mr. Johnston moved: "That the President draw up a Report of the proceedings of the Conference, and the conclusions arrived at, such Report to be presented to the Premier of New South Wales."—Carried.

Mr. Sholl moved, Mr. Fenton seconded: That a vote of thanks be tendered to Mr. Coghlan for his valuable services as President. It was supported by all the members and carried unanimously.

Mr. Smith was also thanked for his services as Secretary.

The Conference adjourned at 5:15 p.m. until 11 a.m. on Saturday.

T. A. COGHLAN,
President.

3 March, 1900.

SATURDAY, 3 MARCH, 1900.

The Conference met at 11 a.m.

Present:—Mr. Coghlan (President), Mr. Fenton, Mr. Hughes, Mr. Sholl, Mr. Fraser, Mr. Johnston, and Mr. von Dadelszen.

The Minutes of previous meeting, and of meeting held 28th February, were read and confirmed.

The Conference further considered the model Schedule, which was amended, and finally adopted.

Under the heading "Education," sub-heading "At present receiving instruction,"—

Mr. Hughes moved: That the first direction be amended to read as follows:—"Write 'C' if at College, Grammar, or High School."—The motion was carried.

Mr. Fenton moved: That "'C' if at College, Grammar, or High School" be struck out.—Negatived.

The President moved, That the third direction, "'P' if at Private or Denominational School" be amended, to read, "'P' if at Private School, 'D' if at Denominational School."—Carried.

The directions as amended—"Write 'C' if at College, Grammar, or High School, 'S' if at State School, 'P' if at Private School, 'D' if at Denominational School, 'H' if at home,"—were carried.

Under the heading "Country where born" the President moved that the words "Chinese or" be inserted between "add" and "C" in the second line of third direction.—Carried.

The direction, as amended—"In the case of persons of the Chinese race, no matter where born, add 'Chinese' or 'C' after the birthplace; for half-caste Chinese add 'H.C.'"—was carried.

The President moved that a new direction be added under the heading "Country where born," to read as follows:—"Where Australian aborigines are included in the Schedule, they are to be entered as such immediately after the birthplace, with 'H.C.' added for half-castes."—Carried.

The Conference, having concluded its business, adjourned *sine die*.

H. A. SMITH,
Secretary.
3 March, 1900.

T. A. COGHLAN,
President,
3 March, 1900.

APPENDIX B.

RESOLUTIONS OF THE CONFERENCE.

1. That as the Sunday next following the 1st April, 1901, is Easter Sunday, and large numbers of persons are away from home on that day, the Census be taken as for another day.

Subjects of inquiry.

2. That the subjects respecting which it is desired that inquiry be made at the Census be named in "The Census Act," but that the Schedule containing those inquiries be not attached thereto.

3. That the subjects of inquiry be as follow:—Name, Sex, Birthplace, Age, Religion, Occupation, Conjugal Condition, Education, Sickness and Infirmity, Materials of Houses, Number of Rooms, Length of Residence in the Colony.

4. That the Return of Religion be not compulsory, and that it be optional to insert the word "object" instead, by any one having an objection to stating his religious belief.

5. That the inquiry be made as to whether the person returned is an employer, a worker on his own account, or an employee, or whether he is unemployed.

6. That with reference to Conjugal Condition, it be optional with each Colony to make inquiry as to the year of marriage, and the total number of children (living and dead) born to each couple.

7. That with reference to Education, an inquiry be made as to those able to read and write, able to read only and not write, and unable to read; also, as to those who may be graduates of any University, together with the designations of their respective degrees, and of the Universities at which such degrees were conferred.

8. That with reference to Sickness and Infirmity, an inquiry be made as to the persons laid up or unable to pursue their usual occupation on account of illness or the effects of an accident, or who may be deaf and dumb, or blind.

9. That in the Return of Houses, those inhabited, uninhabited, and in course of erection, be separately distinguished.

10. That the Householder's Schedule should specify that persons travelling or out at work during the night of the Census (and not elsewhere returned), and who return home on the day after the Census, are to be included as if they were present in the house on the night of the Census.

11. That in accordance with the foregoing resolutions, the Householder's Schedule drawn up by this Conference be the basis of the inquiries to be made under "The Census Act."

Compilation.

12. That, as far as possible, the Chinese, Pacific Islanders, and other coloured races, as well as the Aborigines (including half-castes), be tabulated with the general population under every head of inquiry, and separate tables be prepared, so that it may be possible to separate them therefrom, as may be desired.

13. That in working out proportions under any head of inquiry to show the ratio of the numbers in each line to the total, the items in the line for the unspecified be altogether excluded from the computation.

14. That persons whose birthplace is stated to be "Australia", if under 12 years of age, be tabulated as born in the Colony to which the Census relates, and if 12 years of age or over in the column for "Australia undefined."

15. That children respecting whom the return of religion is unspecified be tabulated as of the religion of their parents, if the father and mother are stated to be of the same religion; or if the religion of only one parent is specified, as of the religion of that parent; but that if the parents are of different denominations, no assumption be made as to the religion of the children, who are to be classed as unspecified.

16. That the ages of the people of either sex be tabulated in single ages up to 21, then in quinquennial periods of age up to 85, and after that in single ages; also, that a table be prepared showing the numbers of either sex in the whole population at each year of age.

17. (A) That in tabulating the Occupations of the people, the numbers of either sex under 5 years of age; between 5 and 15; 15 and 20; 20 and 25; 25 and 45; 45 and 65; and over 65 be distinguished.

(B) That the Occupations be tabulated according to the system of classification adopted by this Conference; also, that subsidiary tables be compiled showing:—

- (1) The ordinary Occupations of the unemployed of either sex, a person to be considered as unemployed if out of work for more than a week prior to the Census.
- (2) Employers of labour and persons in business for themselves, relatives assisting, and wage-earners; no person to be considered as belonging to one of the foregoing divisions who is not actually employed.
- (3) The ordinary or former occupations of inmates of either sex of (a) hospitals (b) benevolent asylums, (c) hospitals for the insane, (d) other charitable institutions, (e) gaols and penal establishments.

(c) That in the main tabulation, in the case of a person returned as following more than one occupation, he be tabulated, as a rule, under the head of the first mentioned,—the exception being a Government officer following some other calling,—as, for instance, "deputy-registrar and storekeeper," in which case he is to be classified as a storekeeper; also, a person residing where one of his occupations is carried on which would warrant its being considered as the more important, as, for instance, "farmer and publican," living at the public-house, is to be classed as a publican, although that calling may be stated second; also, that a subsidiary table be prepared showing the persons who follow two or more occupations.

18. (A) That in the table of Education the people be grouped in single ages up to 21 years, and after that in quinquennial periods to 85 years of age; those of either sex able to read and write, able to read only, and unable to read, being distinguished.

(B) That no child under 3 years of age be set down as able to read, and no child under 5 years of age as able to write; also, that no person be set down as illiterate who can read or write any foreign language.

(c) That a table also be prepared showing the degree of primary instruction possessed by children between 5 and 15 years of age of each religious denomination; and

(d) That a further table be prepared in age groups showing the education of persons born in the Colony (exclusive of aborigines).

19. (A) That in the tables of Conjugal Condition the people be grouped in single ages from 14 to 21 years of age, those of either sex never married, married, widowed, or divorced, being distinguished; that Chinese be set down as never married unless they have or have had wives in Australasia.

(B) That a table be prepared showing the relative ages of husbands and wives; also the number of wives whose husbands were absent, and of husbands whose wives were absent, on the Census night.

20. That a table be prepared showing the number of private families with domestic servants, distinguishing families with one servant, two servants, three, four, five, over five and under ten, ten and over; and also similar particulars in respect of hotels, boarding-houses, &c.

21. That tables be prepared showing the numbers of either sex suffering from each description of sickness or infirmity, grouped in single years of age up to 21, and afterwards in quinquennial periods up to 85 years of age; that tables be also prepared showing the occupations of those suffering from each description of illness.

22. That in the case of houses, public offices, banks, stores, &c., in which a person or family resides in order to take care of the premises, the number of rooms occupied by such person or family is to be given, and not the whole number in the building. Where a shop is attached to a dwelling the former is not to be considered a room without someone sleeps therein.

APPENDIX D.

CLASSIFICATION OF OCCUPATIONS.

DEFINITION OF PRINCIPAL CLASSES.

Section A.—Breadwinners.

Classes.

- I. PROFESSIONAL—
Embracing all persons, not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the moral, intellectual, and social wants of its inhabitants.
- II. DOMESTIC—
Embracing all persons engaged in the supply of board and lodging, and in rendering personal services for which remuneration is usually paid.
- III. COMMERCIAL—
Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.
- IV. TRANSPORT AND COMMUNICATION—
Embracing all persons engaged in the transport of persons or goods, or in effecting communication.
- V. INDUSTRIAL—
Embracing all persons, not otherwise classed, who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding, as far as possible, all who are mainly or solely engaged in the service of commercial interchange.
- VI. AGRICULTURAL, PASTORAL, MINERAL, AND OTHER PRIMARY PRODUCERS—
Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.
- VII. INDEFINITE—
Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

Section B.—Dependents: Non-Breadwinners.

- VIII. DEPENDENTS—
Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others not otherwise engaged in pursuits for which remuneration is paid; and all persons depending upon private charity, or whose support is a burthen on the public revenue.

SYSTEMATIC TABULATION OF OCCUPATIONS UNDER CLASSES, ORDERS, AND SUB-ORDERS.

NOTE 2.—All persons who are both producers and dealers or sellers are classed as producers only, under Class VI. All persons who are both manufacturers and dealers are grouped as Industrial, under Class V.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CENSUS OF AUSTRALASIA, 1901.

(HOUSEHOLDER'S SCHEDULE.)

(To form part of the Report of the Conference of Statisticians respecting the collection and compilation of the Census of Australasia, 1901, which was laid upon the Table of this House on the 21st June, 1900.)

GENERAL INSTRUCTIONS.

THIS Schedule is to be filled up in accordance with the headings to the columns on the other side, BY THE OCCUPIER OR PERSON IN CHARGE OF THE DWELLING, with particulars respecting all the persons who slept or abode therein on the night of SUNDAY, the 28TH APRIL, 1901, together with those travelling or out at work during that night (and not included elsewhere), and who return home on MONDAY, 29TH APRIL. If the house is occupied by different families in separate stories or apartments, each such story or apartment must be treated as a separate DWELLING, and the OCCUPIER OR PERSON IN CHARGE of each must make a Return upon a separate Schedule. In the case of large Pastoral and other similar Establishments the Proprietor or Superintendent may fill in the Returns of his complete establishment, but a separate Schedule must in such case be filled for each of the Out-station Dwelling-houses or Huts in which a distinct family or

person resides, in addition to that for the Home Station; and if any Out-station is in a different Collector's district from that of the Home Station, the Schedule for it is to be delivered to the Collectors of the sub-district in which such dwelling is situated.

This paper will be called for by the Collector on Monday, the 29th day of April, or as soon after as practicable. By that date the answers should be written in the proper columns and the document duly signed by the Occupier or Person in Charge. It is the Collector's duty to verify the facts; and, if the form from any cause should not have been filled up, or should have been insufficiently or erroneously filled up, to record the necessary particulars or make the necessary corrections, from inquiries which he is authorised to make for that purpose.

INSTRUCTIONS FOR FILLING UP THE COLUMN HEADED "PROFESSION OR OCCUPATION."

ARMY AND NAVY.—If on actual service, state so. If retired, state present occupation.
 PERSONS IN THE SERVICE OF THE GENERAL OR LOCAL GOVERNMENT to state occupation, position, department; and if engaged in any other occupation, to specify its nature.
 JUSTICES OF THE PEACE, ALDERMEN, TOWN COUNCILLORS, &c., and other important public officers, to state their ordinary profession or occupation.
 MINISTERS OF RELIGION to state Denomination. They are requested not to employ the indefinite term "Clerk." Local or occasional preachers to return their ordinary occupations.
 MEMBERS OF THE LEGAL PROFESSION to state whether in actual practice; if not practising, to state present occupation. Persons employed in Solicitors' Offices to distinguish whether they are articled or other Clerks.
 MEMBERS OF THE MEDICAL PROFESSION to state whether they are Physicians, Surgeons, or General Practitioners, and return themselves as *practising* or *not practising*; if not practising, to state present occupation.
 TEACHERS, AUTHORS, PUBLIC WRITERS, AND ARTISTS to state the particular branch of science, literature, or art in which they are engaged.
 ENGINEERS to state whether civil, mechanical, electrical, mining, marine, &c., also the nature of work on which engaged. Surveyors to state whether land, mining, marine, &c.
 ENGINE-DRIVERS, STOKERS, FIREMEN, &c., to state the nature of the business in connection with which they are occupied, thus—"Engine-driver at Sawmill," "Stoker at Foundry," "Fireman on Railway," &c. "Engine-drivers" are not to be entered as "Engineers."
 MINERS to specify the nature of the mineral on which they work, and in respect of metallic ores to add whether *lode* or *alluvial*. A Miner working for another should return himself as "Miner," not as labourer.
 ARTISANS AND MECHANICS should always mention the particular branch of their trade, thus—"Ship Carpenter," "House Carpenter," "Shingler," "Coachsmith," "Locksmith," "Horse-shoer."
 CARTERS, CARRIERS, LABOURERS, SERVANTS, &c., to be described in connection with their usual employment, "Carter to Grocer," "Bullock Driver on Station," "Labourer making Roads," "Omnibus Driver," "Cabman," "Railway Porter," "Telegraph Messenger," "Domestic Servant."
 PERSONS ENGAGED IN TRADE OR COMMERCE, as Merchants, Manufacturers, Storekeepers, Retailers, Brokers, Agents, Auctioneers, &c., to state the particular business in which they are engaged, or the principal commodity in which they deal, thus—"Grain Merchant," "Hat Manufacturer," &c.
 CLERKS, BOOKKEEPERS, SALESMEN, SALESWOMEN, SHOPMEN, COMMERCIAL TRAVELLERS, &c., to be described according to the business with which they are connected—"Bank Clerk," "Railway Clerk," "Salesman in Soft Goods Warehouse," "Shopman to Grocer," "Traveller to Wine Merchant," &c.

The term "Farmer" or "Market Gardener" to be applied to all persons actually in occupation of land and tilling, whether proprietors or tenants; the term "Landowner" is too vague. "Market Gardeners" must not omit the word "Market." The term "Farmer" is understood to mean "Agricultural Farmer;" if "Dairy" or "Poultry" Farmer, &c., it should be so stated.

PERSONS NOT FOLLOWING ANY PROFESSION, TRADE, OR CALLING, and not holding any public office, but possessed of independent means, may designate themselves "Proprietor of Land," "Proprietor of Houses," "Capitalist," "Annuitant," as the case may be. The word "Householder" should not be used in place of "Proprietor of Houses," nor the word "Gentleman" or "Lady" in place of "No Occupation."

WIVES, SONS, DAUGHTERS, BROTHERS, OR OTHER RELATIVES habitually helping on farms and stations, or engaged in hotels, shops, or any other industrial pursuits, should be returned as "Wife assisting," "Son assisting," "Daughter assisting," &c., as the case may be.

WOMEN.—The occupations of women who are employed in any but domestic duties should be distinctly recorded; but they should not be entered as engaged in the occupations of their Husbands or Fathers, &c., unless they habitually assist them. When only in the capacity of Wife, Mother, Daughter, Sister, &c., write "Domestic Duties."

CHILDREN being educated to be designated "Scholar," if not engaged as well in any industrial pursuit; but, if following any such pursuit during portion of their time, as, for instance, delivering or selling newspapers, minding cows, &c., before or after school hours, to be set down as of that pursuit, the entry in the special column under the head "Education," sufficiently showing that they are also receiving instruction.

PERSONS IN HOSPITALS, ASYLUMS, GAOLS, &c.—The position of Officers in the Institution, as "Warder," "Nurse," &c., is to be given; and in the case of Inmates, "Prisoner," "Patient," their calling (if any) before they entered the Institution is to be inserted in the "Occupation" column.

N.B.—Great care must be taken in writing the name of an Occupation which is common to many kinds or branches of business, to add the name of the Employer's trade or business. The following names are of this type, and require the additional information suggested within brackets, thus:—

Assistant (to Draper); Accountant (to Ironmonger); Apprentice (to Baker); Agent (for Shipping Company); Cashier (in Bank);	Clerk (to Brewer); Carter (to Miller); Engine-driver (on Railway); Labourer (on Wharf, on Roads, &c.); and such like.
--	---

* * Every answer should be written in full.] The use of dots (.) or ditto (do.) leads to numerous mistakes, and is not to be accepted by the Collectors.

EXAMPLE OF THE MODE OF FILLING UP THE RETURN.

[MODEL SCHEDULE TO BE INSERTED HERE.]

CENSUS OF _____, 1901.—HOUSEHOLDER'S SCHEDULE.

Census District _____

Sub-District _____

Town, Village, or Locality _____

Street, and Name or Number of Dwelling _____

CAUTION as to Penalties, &c., should be inserted here.

BEFORE WRITING ON THIS PAPER, YOU ARE REQUESTED TO READ THE INSTRUCTIONS ON THE OTHER SIDE.

LIST OF MEMBERS OF THE HOUSEHOLD, OR FAMILY, VISITORS, SERVANTS, AND OTHERS, WHO SLEPT OR ABODE IN THIS DWELLING ON THE NIGHT OF SUNDAY, THE TWENTY-EIGHTH DAY OF APRIL, 1901.

Name and Surname.	Sex.	Age last Birthday.	Condition as to Marriage.	Relation to Head of Household.	Profession or Occupation.		Sickness and Infirmary.	Country where Born.	Length of Residence.	Religious Denomination.	Education.	Description of Dwelling.		
No person absent on the night of Sunday, 28th April, 1901, is to be entered here; except such as may be travelling or out at work during that night (and not elsewhere returned) and who returns home on Monday, April 29th. The name of the Head of the Household present to be inserted on the first line; Wife, Children, other Relatives, Visitors, Lodgers, and Servants following in their respective order.	Write M against Males, and F against Females.	Enter the age of Persons One year and over in years only. If the age be less than One year insert a cross (x).	Write— M for Married; W for Widow or Widower; D for Divorced; N.M. against all never married persons, except young children. <i>[Chinese are to be set down as never married, unless they have or have had wives in Australasia.]</i>	State whether Wife, Son, Daughter, or other Relative, Visitor, Lodger, or Servant, and in the case of Public or Charitable Institutions, whether Officer, Prisoner, Patient, Inmate, Nurse, &c.	Nature or Name. Grade, &c. Write— O if employer of labour or in business on one's own account, but not employing others for salary or wages. A if relative assisting head of household in his business, but not receiving salary or wages. W if carrying salary or wages. N (except in cases of lease of absence) if not at work for more than a week prior to census.		If laid up or unable to follow usual occupation by reason of illness or accident, write "Sick" or "Accident" (assigning cause); or if "Deaf and Dumb" or "Blind," state so.	Enter the Country or Colony (not Town, or any other subdivision); if in Australasia, give the name of the Colony or State. If born in Foreign parts, or at sea, and a British subject, add P if by parentage, and add N if by Naturalisation. In the case of persons of the Chinese race, no matter where born, add "Chinese" or C after the birthplace; for half caste Chinese add H.C. Where Australian aboriginals are included in the Schedule they are to be entered as such immediately after the birthplace, with H.C. added for half-castes.	If not born in the Colony, state length of residence therein in years. If less than one year insert a cross (x).	Do not use general terms that represent more than one Religious Body, such as "Protestant" instead of "Church of England," &c.; "Catholic" instead of "Roman Catholic," "Methodist" instead of "Wesleyan, Primitive, or other Methodists," &c. If a Freethinker, or of no Denomination or Religion, state so. Write against the names of children, however young, the Religion in which it is intended they are to be brought up. (If any person objects to state the Religious Denomination to which he adheres, the word "Object" to be entered.)	Degree. Write— C.R. for Cannot Read; R. for Read Only; R.W. for Read and Write. Add P if only able to Read, or Read and Write in a Foreign Language. If a University Graduate, state Degree and University.	At present receiving Instruction. Write C if at College, Grammar, or High School; S if at State School; P if at Private School; D if at Denominational School; H if receiving instruction at Home.	State whether the outer walls are built of Stone, Brick, Wood, Concrete, Iron, Canvas, or what other materials; also state number of rooms, including Kitchen, and exclusive of Shop, Office, Store, Bathroom, Pantry.

REPORT.

The Clerk-in-charge of the Department of Labour and Industry to The Honorable the Minister of Public Instruction, Labour and Industry.

Sir, Department of Labour and Industry, 31st January, 1900.

I have the honor to submit the Report of the Department of Labour and Industry for the year 1899, inclusive of the third Annual Report, furnished in accordance with the provisions of section 17 of the Factories and Shops Act, 1896, for submission to Parliament.

The Hon. J. Perry, Minister.

I have, &c.,
T. B. CLEGG,
Clerk in Charge.

ADMINISTRATION.

The enlarged duties of the office by the passage of recent legislation have made it advisable to extend the scope of this Report, to include references to matters other than those coming within the limits of the Factories and Shops Act.

The Labour and Industry Branch now includes the administration of the following Acts of Parliament:—

The Agreements Validating Act.
The Trades Hall and Literary Institute Act of 1893.
The Apprentices Act of 1894.
The Factories and Shops Act of 1896.
The Conciliation and Arbitration Act, 1899.
The Early Closing Act, 1899.

The Minister also controls the Labour Bureau, the Pitt Town Casual Labour Farm, and the Bogan Scrub Works, references to which are included in the Annual Report in connection with the Bureau with whose operations these works are associated.

NUMBER OF FACTORIES ON REGISTER.

Year.	Number registered.	Hands employed.
1897	1,673	29,595
1898	1,812	31,617
1899	1,909	34,235

These figures show, so far as the registrations under our Act are concerned, an increase of 4,640 men, women, and children employed in factories since the close of the year 1897. This increase has been relatively larger in the number of women employed than of men, thus apparently pointing to conditions in factory labour which tend to attract women to this class of employment. The figures also show that for every five to six adult employees in factories one lad or girl under the age of 18 years is employed. This proportion is naturally affected by the general prosperity of the community. In less prosperous days the young life of the household is earlier impressed into bread-winning service, whereas under better conditions children are, as a rule, left longer at school. It may, therefore be regarded as a sign of increased prosperity that the proportion of boys and girls under 16 years of age to adult males and females employed in factories shows a decrease in 1899 as compared with the year 1897.

The number of factories employing each from 100 persons upwards shows an increase of five during the past year.

Of the 1,909 factories registered on our books—

3 employ over	500 persons each.
1 employs between	400 and 500 persons.
3 employ	300 " 400 "
11 "	"	200 " 300 "
8 "	"	150 " 200 "
22 "	"	100 " 150 "
26 "	"	80 " 100 "
38 "	"	60 " 80 "
65 "	"	40 " 60 "
59 "	"	30 " 40 "
157 "	"	20 " 30 "
376 "	"	10 " 20 "
756 "	"	4 " 10 "
384 "	under	4 persons.

During the year 3,041 factory cards were served by the Inspectors on occupiers, the distribution being as follows:—

Inspector Burkitt	778 (Newcastle).
Inspector Miss Duncan	773 (Metropolis and Newcastle).
Inspector Armitage	752 (Metropolis).
Inspector Taylor	738 "

3,041

This does not, however, represent the total number of visits paid, as in some cases repeated inspections were required to secure the carrying out of the instructions conveyed by the cards; also, owing to the unsatisfactory registration sections of the Act, many fruitless visits were paid to factory premises which, when visited, were found to be vacant.

EXTENSION OF THE FACTORIES AND SHOPS ACT TO NEWCASTLE.

On the 6th February the Act was, by proclamation, extended to Newcastle East and West, Wickham, Waratah, Kahibah, Wallsend, West and East Maitland. An office was established in the London Bank Chambers, Scott-street, Newcastle, and Mr. W. M. H. Burkitt, appointed an Inspector under the Act.

The district covers an area of about 500 square miles. It is, therefore, in extent about equal to the Metropolitan District.

In January and February advertisements were inserted in the local Press calling upon occupiers of factories to give notice of registration within twenty-eight days of the date of proclamation, and at the close of the year certificates had been issued to 355 factories; of this number, 17 have since been cancelled on account of removals, &c., leaving 338 as the number of registered factories in occupation on the 31st December.

Many of these did not give the required notice within the time allowed, the majority pleading ignorance of the provisions of the Act. One firm owning a large engineering establishment declined to register on the ground that, as they manufactured nothing for sale, their workshops did not constitute a factory within the meaning of the Act, ignoring the fact that in section 2 a factory is defined as a place "in which four or more persons are engaged directly or indirectly in working at any handicraft, &c."

Legal proceedings were taken to enforce compliance with the law, but before reaching the point at issue the solicitor representing the firm drew attention to section 5, which directs all occupiers of factories to give notice to register within twenty-eight days of the commencement of the Act, which is defined in section 1 as the 1st day of January, 1897. He argued that as this district was not affected by the Act at that time it was impossible to apply that particular section to any other than the Metropolitan District. The result was that the case was dismissed, the magistrate holding that no offence was disclosed in the information. Subsequently pressure under other sections was brought to bear upon this firm, and the required notice was then given.

The defect disclosed by the police court proceedings was the consequent result of an amendment by which the annual registration contemplated when the Bill was introduced was done away with and registration once and for all substituted. It has been a frequent source of trouble in administration, and will need to be corrected in any future amendment of the Act.

The number of women employed in factories in this district did not necessitate the appointment of an additional female inspector, and arrangements were made by which Miss Duncan paid periodical visits of inspection.

In accordance with instructions the Inspectors took immediate steps to improve the sanitary conditions of the factories under their charge, and attention may be directed to Mr. Burkitt's remarks on the deplorable state of neglect into which these matters so essential to the health of the community have been allowed to fall in some of the outlying municipalities. It is not within the power of this Department to remedy the conditions pointed out beyond the four walls of a factory, but it considers it to be its duty to direct attention to the fact of their existence.

Of the 338 factories registered in Newcastle—

1 employed over	500 persons
1 " between	300 and 400 persons
1 " "	80 " 100 "
5 employed "	40 " 60 "
5 " "	30 " 40 "
15 " "	20 " 30 "
40 " "	10 " 20 "
143 " "	4 " 10 "
117 " under	4 persons.

HOURS OF LABOUR FOR LADS AND WOMEN.

Each year of administration of the Factories and Shops Act shows more emphatically the necessity for amendment being made in the present ineffectual provisions with regard to the hours of labour for women.

As the Act now stands the limitation is so vague and the opportunities for evasion, as well as the temptation to evade, so great that time after time the Department is put in the unfair position of being morally certain that the Act is being evaded, and yet, by the tacit collusion of the employer and employed, unable to secure a case that will stand the test of police court proceedings. As I have stated before, and now reiterate, it is unjust to place any woman in such a position that she must make an election between telling the whole truth frankly and being dismissed from the factory—thus becoming more or less marked in the eyes of other employers—or evading the truth in order to retain her means of livelihood. Yet that is what in plain language it means. Time after time letters are written to the Department signed by the familiar "Lover of Justice" or "One of the Victims" about women being worked for excessive hours in certain factories. Inspectors are sent at all hours of the day and night to detect these reported abuses. In some cases they are successful and prosecute, with the result that the unfortunate person whose interests the Act is supposed to guard is put in the witness-box to swear away her means of livelihood. The employer probably escapes with such a penalty as magistrates appear to regard as adequate punishment for this class of offence, and thus the matter ends.

To anyone who has at heart the real interests of those who are intended to be benefited by factory and shop legislation, nothing can be more discouraging than the present state of the law. What is needed is to bring it into conformity with the English and New Zealand practice. The principle in both these cases is similar to that incorporated in our Early Closing Act with regard to a fixed closing hour. The weakest and least operative part in the last-named Act is the limitation of hours with regard to schedule shops, and it is this element of weakness that permeates the whole of that portion of the Factory Act which deals with the hours of labour of lads and women.

In England, instead of saying vaguely to the factory owner "You may not work any woman in your employment more than forty-eight hours a week," the Act in effect says definitely and decisively "No woman shall work in your factory after a fixed hour in the evening or before a fixed hour in the morning, and if any woman is found there after or before those hours you shall be punished."

In New South Wales it is possible for a woman to be worked continuously for forty-eight hours with breaks only for meals. Our Factory Act contains nothing to prevent it.

It

It may be instructive to set the New Zealand and New South Wales provisions side by side:—

New Zealand.—No person shall employ in any factory or workroom any women or girl for more than forty-eight hours in any one week nor between the hours of 6 o'clock in the afternoon and a quarter to 8 in the morning.

New South Wales.—No female shall be employed in a factory for more than forty-eight hours in any one week.

From the administrative point of view the superiority of the former over the latter as a piece of machinery is incomparable.

In New Zealand the Inspector enters the factory before the commencing or after the closing hour, and, finding women at work there, his case is practically complete. In New South Wales an Inspector enters a factory and each woman has to be cross-examined as to her hours of work. She naturally parries his questions, for if she admits that she has under pressure worked beyond the limit allowed, her next appearance may be in the witness-box with probably her position forfeited. The temptation to deceive the Inspector and evade the truth is very great to many a poor creature who has, perhaps, children dependent on her. "If she sticks by the firm perhaps the firm will stick by her"; it means so much. The present system is a piece of refined cruelty, and just as ineffective as it is cruel.

I might direct attention to the remarks of the lady Inspector on this subject in the report appended.

Overtime.

The following extensions of overtime were granted by the Minister during the year:—

Class of Factory.	No. of extension granted.	No. of exemptions under Section 40.	No. of cases declined.
Biscuit	1
Printing	1
Bakers and Pastrycooks	1	1
Tobacco	1
Engineering	1
Jam	3
Dressmaking, Clothing, &c.	5
Totals	12	1	1

Wages and Employment.

The standard rates of wage show generally no marked variation on last year's rates. In two directions, however, the average indicates an upward tendency. One is the class of trades associated with the treatment of raw material and the product of pastoral pursuits. Wool sorters, pullers, washers, packers, &c., have been earning better rates, the result probably of the high prices secured for wool at the close of the year. The number of hands employed in these classes of factories shows a material increase, whilst the number of factories themselves remains almost stationary. The other direction in which the tendency to higher rates of wages is seen is the building trade; bricklayers, carpenters, painters, plasterers, plumbers, and stonemasons seem to be now having a more prosperous time than for years past. The number of persons registered as being employed in the various trades in connection with building:—

In 1899, was 2,311; and
In 1898 1,678

Showing an increase of 633

On the other hand, there are some trades which show a falling off in numbers. If this may be taken as an index of the decline in trades, then ship-building appears to be suffering severely in this Colony:—

Number of employees registered in 1897 ... 1,498
" " 1898 ... 1,201
" " 1899 ... 1,141

DAINGEROUS TRADES.

During the year the attention of the Department was directed to the conditions of employment in connection with the frozen meat trade. It was pointed out that the occupation was one attended by unusual risks to health. The men employed are continuously passing from the dry freezing-chamber, where they are subject to the penetrating blast of the fan, into the outside warm and humid air, and *vice versa*. The work is not carried out by any specially skilled class of men, but by ordinary wharf labour. No provision whatever, so far as this Department is aware, is made by those in charge of the work to protect the men from the consequences of violent changes of temperature. It is said that if the men were properly clad in woollen clothing the risks of their employment would be greatly reduced. As a matter of fact, this dangerous calling is but indifferently remunerated, and it is stated that the men receive only about half the rate of wages paid to labourers in the old country occupied in similar work.

Inspector Armitage, to whom the duty of making this inquiry was entrusted, reported as a result of his investigation that every wharf labourer interviewed who had been employed at this class of work complained of the nature of the work and its conditions. This work consists of bringing the frozen carcasses to the ship's side from the freezing-works and lowering them into the hold by slings. The men below then take the meat from the slings and stack them in the hold, continuing at this work from four to six hours at a stretch.

Whilst the work of packing is being carried on a blast of cold air is forced through the hold. "Whilst this blast is going on," the Inspector reports, "the air in a state of vapour is breathed by the men, and complaints are made as to the different injurious effects it has. In certain cases it has affected the hearing of the workmen; the commonest evil results, however, are pleurisy, pneumonia, and other lung diseases. Some men have been frost-bitten, owing to the length of time they were compelled to work. Young men whom I have met in the course of my inquiries have been stricken down with rheumatics, and

and made physical wrecks before reaching their prime. I may state that on interviewing the chief engineer on one of the mail boats I was informed that the men were never allowed to work whilst the blast is going on; but while this is practicable in the better class of steamers, owing to their excess of horse-power—for by this they can make up lost ground—in the ordinary frozen-meat carriers this cannot be done, as they have only sufficient horse-power to keep their cargoes at freezing point. The men are given bags to protect the cargo, but are compelled to work in their ordinary clothes, being, as a rule, too poor to provide themselves with suitable and necessary woollen underclothing. These causes of complaint arise more frequently when the stevedores or middle men carry out the work. When the shipping owners directly employ the men the conditions of work are much better, and the complaints consequently fewer.”

The average pay is stated to be 1s. per hour and 1s. 6d. per hour for overtime. Overtime starts after 4.30 p.m. in the summer and 5 p.m. in the winter. The rate paid is about 25 per cent. more than the men are paid for working in some of the large cold storage depôts. There is no restriction to the hours worked by the men, and once a ship is started they work on till she is finished if meat be available.

The following suggestions are made with a view to remedying the principal causes of complaint:—

- (1.) The shortening of the hours of labour in freezing-chambers.
- (2.) Where practicable, that the blast be shut off while the men are at work.
- (3.) Suitable clothing to be provided, or at the least some notice to be given before requiring men to work in the freezing-chamber, in order that they may put on warmer clothing.

The following extracts are taken from statutory declarations made by some of the men examined in the course of the inquiry:—

“I worked on the ——— in March, 1899; I started at 7 p.m. one day and worked on till 11.30 p.m. next day, being twenty-eight and a half hours, with one hour break for meals; during this shift I received a chill in the stomach; I have had over ten years’ experience in the meat trade, and now refuse to work in a freezing-ship, and am liable to be boycotted for refusing to work in the freezing-chamber, twenty men having been boycotted from the ——— for refusing to work at the meat.”

Another states: “I worked on the ——— loading frozen meat in April, 1899; I started work at 6 p.m. on Thursday, and worked till 8 a.m. on Friday; I started again on Friday at 6 p.m., and was taken bad at 11 p.m., and treated at the Sydney Hospital for pleurisy and pneumonia; I have worked on the ——— from 6 a.m. on Thursday till 11.30 p.m. on Saturday, being sixty-five and a half hours continuous work, excepting short breaks for refreshments.”

Another declares: “Whilst loading meat on one of the ——— boats through the blast being on whilst at work I was frost-bitten in the eyes and deprived of my sight for eight weeks; I now refuse to go into a ship to load frozen meat.” For this and any sickness that takes place while working in the freezing-room the men are not recompensed.

In connection with this matter, I communicated with the Department of Labour in New Zealand, and was informed that there was no provision made in the Factories Act, nor in any of the Public Health Acts in that colony whereby warm clothing had to be provided in the case of men handling meat cargoes in freezing ships and depôts, nor any provision as to the limitation of hours to be worked under these conditions. Freezing works were registered under the Factories Act, but unless they employed youths under 18 years of age the Inspectors had no control over the hours worked. A similar communication to the Chief Inspector of Factories, Melbourne, elicited the reply that there also no supervision was exercised over the conditions of work in this trade.

The Chief Medical Officer under the N.S.W. Board of Health is of opinion that this occupation is one attended by unusual risks to health, and that the persons engaged in it should be protected by warm woollen clothing, but the Board has no power to enforce such a condition.

The N.S.W. Factories and Shops Act also contains no power which would enable the Department of Labour and Industry to deal with such a trade.

Another dangerous trade in which young people are employed in certain departments is the manufacture of aerated waters, to which a reference will be found in the Inspector’s report. In England special regulations are made for masks and mittens being worn, not only by the men engaged in bottling, but for lads and girls who “sight” the bottles. In every case our Inspectors make representations to the proprietors as to the advisableness of providing these articles and insisting on the employees using them, but the Department has no power to enforce these means of safeguarding from accident.

The establishment of chemical works in the Colony is also a matter which will call for increased powers being given to the Inspectors.

What is needed to enable the Department to deal with trades of an exceptionally dangerous nature is a provision inserted in our factory legislation similar to that contained in the English Act of 1891, providing that the Secretary of State, in whose Department the administration of the Act falls, may make special rules, and enforce special requirements in the case of dangerous and unhealthy trades.

ACCIDENTS.

Metropolitan District.—The number of accidents reported to the Department in the Metropolitan District during the year 1899 was 116, and of this number five proved fatal to the victims.

	Injury to Hands.	Injury to Arms.	Injury to Legs.	Injury to Feet.	Miscellaneous.	Fatal.	Total.
Light, fuel, heat	1	1	1	2
Engineering	11	3	5	4	13	1	36
Metal works, &c.	8	1	1	1	1	11
Printing	4	1	2	7
Saw-mills	11	1	1	13
Clothing	1	1
Brickworks.....	1	1	2
Boots and shoes, &c,	7	1	8
Food, drink, &c.	12	2	1	1	1	16
Laundries	2	2
Miscellaneous.....	9	3	2	3	1	18
	65	13	7	10	21	5	116

Newcastle District.—The number of accidents reported to the Inspector at Newcastle during the year was seven. Happily none of them proved fatal.

Factory.	Cause of Accident.	Injury sustained.
Joinery works	Breaking of a worn-out belt	Fractured rib and cut.
Smelting works	Climbing on to lift while in motion	Broken thigh and injury to groin.
Biscuit factory	Hand caught under biscuit-cutting dies	Amputated finger.
Do do	Fall from top of press while endeavouring to remove basket from lift in motion.	Broken wrist.
Do do	Hand caught in belting	Abrasion of skin of hand.
Aerated water factory	Bursting of lemonade bottle while filling	Arm cut.
Do do do	Bursting of soda bottle while "sighting"	Injury to eye.

I would like to direct attention to the pertinent remarks in Miss Duncan's report with regard to the position of girls and women who are the victims of accidents in laundries and other factories.

CERTIFICATES OF FITNESS AND PERMITS TO WORK.

Metropolitan District.—During the year, 807 medical certificates of fitness were issued in the Metropolitan District to young persons working at factories included in Schedule IX to the Regulations.

Glass and bottle factories	29	Biscuit factories	22
Engineering, metal works, foundries ...	92	Brewery	34
Laundries	6	Broom	11
Confectionery	50	Tanneries	5
Tobacco factories	38	Furniture	18
Jam factories	120	Box	7
Meat-preserving works	18	Coopers	7
Printing works	100	Miscellaneous	205
Potteries	25		
Soap works	10	Total	807

Newcastle District.—In the Newcastle District 160 medical certificates were issued, distributed as follows:—

Engineering, metal works, &c.	36	Soap works	1
Aerated water factories	13	Meat-preserving works	1
Saw-mills, joinery, &c.	10	Condiment factories	2
Biscuit factory	56	Ship-building	4
Printing works	14	All classes	13
Bone-mill	1		
Brickworks and potteries	6	Total	160
Chaff cutting	3		

During the year permits to children between 13 and 14 years of age, to work in factories, were granted in the Metropolitan District in 66 cases, of which 58 were those of males, and in the Newcastle District in 8 cases, making a total of 74.

CHINESE AND OTHER LAUNDRIES.

In the last Report of the New Zealand Labour Department it is remarked, "Legislation is required at some near date to counteract, if possible, some unnecessary hardships to colonists employed in industrial work. One of these hardships is, that Chinese men are allowed to carry on laundry work without any restriction of time, whilst European women are prevented by the Factory Act from working beyond certain hours in laundries. This is an unfair handicap to an industrious and poorly-paid class of women."

The position in New South Wales is similar to that in the Colony whose Report is quoted, and during the year the Minister's attention was directed to it by a deputation. In consequence of statements made by some of the speakers at this deputation, special inquiry was made into the question of the growth of Chinese laundries in the metropolis. Less than six years ago there was only one Chinese laundry in Sydney. It was worked by one man, who carried on business for some years with very little opposition from his fellow-countrymen. At present, it is reported to me, there are twenty or more Chinese laundries, of which fully one-half have been started within the last two years. Many of those engaged in the trade have come from Melbourne and New York. The buildings in which the work is carried on are, as a rule, small, with very little yard-room and much in need of repair. The patrons of the Chinese are chiefly their own countrymen and labouring men who live in lodgings. The work is almost wholly in connection with men's clothing. Their trade seems to be done almost entirely over the counter, the parcels, as a rule, being so small and the work so uncertain that the steam laundries will not call for it. The hours of work are long and the wages poor. As the greater number of Chinese work on a sort of co-operative basis, it is difficult to clearly differentiate employer from employed, but clubbing them together there appear to be between forty and fifty Chinese and other aliens at present employed in this trade.

There are also numerous small laundries conducted by Europeans, employing fewer than four persons, and thus exempt from the operation of the Act.

"Most of the places," writes the Secretary of the Sydney Laundrymen's Association, "are small houses situated in small streets, lanes, and back slums, with filthy surroundings, and the sanitary appliances are often abominable. There is no space or accommodation to do laundry work in, and often a large family occupy the same house. Patrons might see their linen washed (or partly) in filthy utensils, dried in a small back yard steaming with all abominable smells, ironed or mangled in the living-rooms, and laid out (before packing up) on filthy beds or couches which, not unlikely, might have been occupied by diseased inmates. In Sydney, a family suffering from sore eyes has done mangling for the public for years."

The lady Inspector, under whose supervision the laundries are placed, reports to me: "There is a great deal of truth in the statements made as to the large amount of work done in small laundries which are not under supervision, and in which the sanitary conditions are bad. I am very much of opinion that all laundries, where even one person is employed, should be brought within the operation of the Factories and Shops Act, if only for the enforcement of cleanliness." In

In Victoria the Chinese question is dealt with on special lines. There, if any Chinese factory owner either works himself or employs any person to work for him before 7 a.m. or after 5 p.m., or on Saturday after 2 p.m., or on Sunday at any time whatever, he is liable to the following heavy penalties:—

First offence.—A fine of not more than £10.

Second offence.—A fine of not less than £5 or more than £25.

Third offence.—Cancellation of his certificate, which practically means the closing up of his business.

At present, all our Department can do in administering the Factories Act, with regard to Chinese laundry proprietors, is to see that certain sanitary precautions are carried out. It has no power whatever to limit the hours of adult Chinese, or interfere with rates of payment to them by their employers, or the rates charged for work done.

AMENDMENTS IN THE FACTORIES AND SHOPS ACT.

The Department has now had sufficient experience in the working of this Act to enable it to put its finger on the weak parts, and suggest amendments urgently needed to enable it to cope with the abuses that legislation of this class is intended to remedy.

In the first place the system of registration of factories should be brought into conformity with that in force in all other places where factory legislation is in operation. The tendency of the existing system where a factory is registered once for all is to stuff the roll with "dead" factories—that is to say, premises vacated and whose late occupiers have neglected to notify the fact to the Department. Time is consequently wasted in purging our books of vacated factories. In England and the sister colonies this difficulty is got over by a system of annual registration and a scale of registration fees.

Another defect in our Act is that no compulsion is placed on persons about to build factories to submit the plans to the Department for approval. Frequently this is done as a matter of foresight on the architect's part, but it is simply a voluntary act. In New Zealand and Victoria, before any such building is erected, a complete plan of it has to be submitted, with particulars and an estimate of the number of persons of each sex to be employed, and such place cannot be registered as a factory or workroom until it has been approved by an Inspector as suitable.

No provision is made in our Act for days to be observed as public holidays, consequently it has happened with some classes of employers that where a public holiday was observed during the week, the lads and women were called on to remain beyond the usual working hours on the other days of the week to make up the forty-eight hours. As the law stands there is no effectual way of dealing with employers of this class.

In England, Christmas Day, Good Friday, and every Bank holiday are required to be observed as public holidays in factories.

In New Zealand the occupiers of factories are required to allow every woman and every male person under the age of 18 years employed therein the following holidays:—

- (1.) Christmas Day, New Years Day, Good Friday, and Easter Monday, and the anniversary of the Sovereign's Birthday.
- (2.) Every Saturday afternoon or such other day as may be appointed from 1 p.m.

As pointed out elsewhere, it is also very desirable if the law is to be thoroughly enforced to have a fixed hour in the afternoon beyond which lads and women shall not be permitted to work except on overtime.

In our Colony it is usual for the Saturday half-holiday to be given, but it is not compulsory on the occupier of the factory, and in many cases brought under the notice of the Department it is not given.

The provisions in the Act relating to sanitation are defective and urgently require amendment, so as to make compulsory many desirable requirements with regard to health which find a place in the factory legislation of other countries but are absent from ours. Some of these, it is true, have by the representation of the Inspectors been secured, but as a matter of grace only.

Pending the passing of a comprehensive Land Boilers Bill, some provisions should be made to limit the employment, in connection with boilers and engines in factories, to qualified persons; and also to secure some thorough inspection of the boilers themselves. During last year in one case the extreme step was taken of prohibiting the use of a boiler till a further examination could be held. This was done under the power conferred on the Minister by Section 30 of the Act, but, as a condition precedent to his exercise of it, he must be satisfied that the machinery is in such condition that it cannot be used without danger to life or limb. As a matter of fact, however, defects that may be most serious are not always patent to the eye and cannot be detected without close and systematic inspection.

It would also I think be expedient to give the Department power to limit the employment of lads and women in connection with machinery of certain classes. The number of cases in which fingers are nipped off where lads are employed at power-presses and the difficulty of effectually guarding these machines without seriously impairing their usefulness suggests the alternative of prohibiting their use by lads under 16 years of age at least. Other machinery also such as circular saws should not be used by lads.

In England a child, young person, or woman is prohibited from being employed on Sunday in a factory or workshop. There is, I am sorry to say, no such restriction contained in our Act, and the Department is aware of cases in which young people are frequently employed on Sunday. This also is an amendment which might well be made.

APPRENTICES.

The Apprentices Act, 1894, consolidated and amended the law relating to apprentices. Its provisions, however, relate only to young persons legally bound by indenture, the number of whom does not advance in anything like relative proportion to the increase in the trades and manufactures of the Colony. On the other hand, the number of apprentices so called who are not legally indentured and whose chance of getting anything like a comprehensive knowledge of their trade is very remote, daily increases. At the same time it must not be overlooked that special opportunities for learning the *technique* of trades is now afforded by such institutions as the Technical College. These aids should, however, be regarded as supplementary to, and not in substitution for, a proper system of apprenticeship.

The attitude of the master craftsman towards apprentices has of recent years become somewhat exclusive. There has been a decided movement among the Unions in other colonies in the direction of limiting the number of apprentices to represent a fixed proportion to the number of master craftsmen employed. This movement has been strengthened by the consequential effects of certain legislation dealing with labour matters.

Under

Under the minimum wage clauses in the Victorian Factories Act, special boards were constituted to fix the minimum wage and rates to be paid in certain trades, and these boards were not only empowered to fix such wage but also to determine the proportionate number of apprentices and improvers to the hands employed.

In New Zealand the operation of the Industrial Conciliation and Arbitration Acts has had a somewhat similar effect, the question of the number or proportion of apprentices to be employed being a question referred for settlement as frequently almost as that of the wage to be paid.

One feature in connection with apprenticeship, both by indenture and in the looser sense, which has frequently been brought under the notice of the Department, is its very low remuneration or even the absence of any remuneration.

By ingeniously contrived systems of apprentices and improvers, it is possible for an unprincipled employer to carry on a business absolutely dependent on the labour of young people and children at a nominal cost. This evil has been met in New Zealand by the "Employment of boys or girls without payment Prevention Act of 1899," passed last October. This Act provides that

"Every boy or girl under the age of 18 years who is employed in any capacity to do any work in a factory or workroom shall be entitled to receive from the employer payment for the work at such rate as is agreed on, being in no case less than 4s. per week for girls and 5s. per week for boys, irrespective of overtime. If the employer makes default for 14 days in the full and punctual payment of any money payable by him as aforesaid, he shall be liable to a penalty not exceeding 5s. for every day thereafter during which such default continues." It is further enacted that "No premium shall be paid by any such boy or girl to, or be accepted by, any factory-occupier for employment in any factory or workroom, whether such premium is paid by the boy or girl employed or by some other person; and if any factory-occupier is guilty of any breach of the provisions of this section he shall be liable to a penalty not exceeding £10."

Another evil that will require to be met in connection with the employment of apprentices and juvenile labour generally is that of continuity of labour. From time to time hard and cruel cases of employers taking advantage of the helplessness of this class of labour are brought under the notice of the Department. The Apprentices Act, 1894, gives a scheduled form of Indenture to which the parties entering into the agreement must adhere as closely as possible. This form contains the words "the master shall also make payment to the said apprentice at the following rate of wages per . . . during which he shall diligently and faithfully labour in said trade, art, business or occupation."

During the year a case was brought under my notice in which the master paid a weekly wage, and it was his custom when business was a little slack to inform the apprentice that her services would not be required for the following week or two or more weeks, and as the Indenture expressed the payment to be "per week during which she shall diligently and faithfully labour," he claims that in doing this he was within his rights. So long, he contended, as he duly taught and instructed her in the trade and did his utmost to make her skilled and expert therein he had done all he was required to, and was not bound to find her in employment and pay her when her services were not required.

There seems to be no reasonable doubt that the Act contemplated something like continuity of employment during the whole period of apprenticeship, and this example shows how a certain class of employer will take advantage of the least loophole to escape from a duty imposed upon him where it is to his pecuniary advantage to do so.

MINIMUM WAGE:

During the year I made some inquiry with regard to the working of the minimum-wage principle in the neighbouring colony of Victoria.

This principle may be considered in regard to—

- (a) Government contracts.
- (b) Private employment.

Government Contracts.—With regard to public works the principle is already recognised in this Colony; but it has not yet, as in Victoria, been applied to Government contracts generally.

Some two years ago this Department, in reporting on sweating in the clothing trade with regard to Government contracts, urged—

- (1.) That in the case of every tender for making Government clothing the wages and piece rates to be paid to the hands employed on the various articles enumerated therein should be set out in a schedule or log to be attached thereto.
- (2.) That where the work to be done was in its nature indefinite, and a description not capable of being included in a schedule or log, a minimum remuneration per week should be stated—such minimum remuneration to be given whether the work done were to be paid for by the piece or by weekly wage.
- (3.) That the Board to whom such tenders were referred should take this schedule or log into consideration when determining the acceptance of any tender.
- (4.) That other things being equal, the acceptance of any tender should be determined by the factors of price and the wage paid.
- (5.) That in the case of every accepted tender the contractor with two approved sureties should be required to enter into a bond—
 - (a) To pay the schedule or log rates to all hands employed by him on the contract work.
 - (b) To make all and every portion of the articles enumerated in the contract on the premises of the contractor. Provided that it should be in the power of the Minister, for whose department the contract was taken, to grant permission on such terms as he might think fit to the Contractor, to give out work from his factory to be done by specified individual outworkers whose names and addresses should be supplied; who should be paid at schedule or log rates, and who should not sublet any portion of the work.

The effect of the above suggestions was to make the question of the wage paid by the contractor an element in the bargaining between the ultimate parties to the contract.

I find that in Victoria, in addition to the schedule of minimum rates of wages to be paid in connection with the various trades engaged on public works, the Government has extended the principle to all Government contracts, not in the way just suggested by taking the contractor's own rates into consideration when dealing with tenders, but by arbitrarily fixing a wage and making the undertaking to pay at such fixed rates a condition precedent to the acceptance of any contract. In like manner the hours of labour are fixed. For example the special conditions attached to the contract for, say, the supply of "candles" run thus: "No subletting will be allowed, all work must be carried out by the contractor; the hours of employment of any person engaged in the preparation or manufacture of the candles tendered for shall not exceed 48 hours per week, and every such person shall be paid at a minimum wage of not less than £2 5s. per week." Similarly with contracts for meat and milk; in the latter case the hours being fixed at 66 per week, and the minimum wage at £1 15s. per week, or £1 per week with board and lodging. In bread contracts the hours are fixed at 48 per week, and the wages are based on the "determination of the special board appointed under the Factories and Shops Acts to determine the lowest price or rate of payment for bread making or baking." In connection with the clothing contracts "No subletting will be allowed. All work must be carried out in the factory of the contractor, and the hours of employment of any person engaged in the manufacture of the articles tendered for shall not exceed 48 per week at a minimum wage for a man of £2 5s., and for a woman of a £1 per week respectively."

In each instance infringement of these conditions renders the contractor liable to a penalty of £50.

The principle applied in the cases quoted appears to be extended in all directions to which such extension is possible.

The system is, of course, open to the charge that the inclusion of these terms necessarily means that the State itself ultimately pays any difference there may be between the rates of wages fixed by it and the rates that would be paid under a system of unrestricted competition. In answer to that, it may be contended that the State is under a moral obligation to see that those who do its work receive fair remuneration, and to set the just standard of a living wage.

It may be of interest to note that, since 1891, when the House of Commons passed what is known as the "fair wages resolutions," the principle of payment of the current wage in each trade for competent workmen has been recognised in English Government contracts, and in France last year three decrees on this subject were published; one principle enunciated with regard to Government contracts being that all such contracts should contain provisions binding the contractor to pay all his employees the rate of wages current in the district in which the work would be carried out.

These instances are useful as illustrations of the recognition of the principle that the wage to be given is a factor to be considered in the acceptance of tenders for Government work.

Private Employment.—In his last report, the Chief Inspector of Factories in Victoria estimated that the minimum-wage provisions contained in that colony's factory legislation had increased the wage earnings of 10,135 employes by £100,644 1s., assuming them to have worked full time. He further declares that "With a full knowledge of the significance of the statement, I say I believe the system has been successful." He goes on to explain that whilst he does not claim that the system is perfect, he contends that it has, to a large extent, prevented the worst evils of free competition.

The minimum wage is determined by means of representative boards, and of these, five were in full operation during the year covered by this report, viz. :—

1. The bread making and baking Board.
2. Articles of men's and boys' clothing Board.
3. Boots and shoes Board.
4. Shirts, cuffs, and collars Board (females only).
5. Furniture Board (European males).

The Chief Inspector frankly admits that, in the boot trade, with the minimum fixed by the Board, the result was that only the best and quickest men were employed. The old and slow workers had no chance at all. Some of these cases were met by the Department allowing the old and slow men to work at less than the minimum wage. The statement is made "It is notorious that some of the men who are quite able to earn the minimum wage, and are, no doubt, actually earning more than that sum for their employers, sign on for the minimum wage and take less." Broadly speaking, the success of the Victorian system appears, even from the official report, which naturally would not view it from the least sanguine point of view, to depend ultimately upon the workers themselves.

The Chief Inspector complains "The men are not true to themselves." How far men under the pressure of keen competition in their own ranks, having to secure the daily necessities of life under the penalty of suffering in their own person and the persons of those dependent upon them, can be expected to play the high part they are called on to play if a minimum wage is to be upheld in its integrity is a question that may be left to our knowledge of human nature for its answer.

The Victorian Chamber of Manufactures claims that the experiment made in the Factories Act has been largely a failure on the Department's own showing, and declares that the effects of the extension of the present system will be—

1. The attraction to manufacturing centres of numbers of working country people, drawn thither, firstly, by the extension of manufacturing industries likely to follow the advent of federation; secondly, by the nominally increased rates of wages which it is to be assumed will be made statutory.
2. Consequent glut and disorganisation of the labour market, augmentation of the unemployed, and general distress amongst operatives.
3. The necessitous sacrifice of the slower worker to the quicker worker, even though the degree of difference be very slight; consequently, a diminution of hands employed, in proportion to work done.
4. An injurious bearing upon country interests, by creating an aristocracy of labour in towns, by drawing population thither, and by raising the cost of commodities to the country worker, without giving him a share in the increased purchasing power granted to the city worker.

An important Trade Association in Sydney last year wrote to members of a similar association in Melbourne, asking for their experience of the working of the minimum wage. One correspondent wrote, "I was, and am now, one of its staunchest advocates as a principle," and then goes on to point out that the

the failure (as he regards it) of the principle is due, not to the fact that it is unsound, but because it is evaded. "Unfortunately," he says, "there is no means of enforcing it; it rests entirely with the employee, and if he likes to work for less, how can you stop him? I believe it handicaps the good employer in the trade more than ever, because he knows it is the law, and he pays it. The other sort of employer knows it is the law, but he does not pay it. That is just the difference. So you see it is largely a matter of character after all."

Another correspondent wrote, "I understand you are troubled with undersellers, and you want our opinion on the working of the Minimum Wage Act. I may state that we are also troubled with undersellers, and have tried all sorts of ways to cope with the evil, including legislation and moral suasion, and we are in a worse fix than ever."

Against these statements must be set the apparent appreciation by those whom it immediately affects, of the working of the system, and the recently expressed desire to extend its principle. By these it is contended that broadly speaking the operation of the minimum-wage clauses has been beneficial.

PREVENTION AND SETTLEMENT OF TRADE DISPUTES.

On the 1st May last year the Conciliation and Arbitration Act of 1899 came into force.

This Act, where a difference exists, or is apprehended, between an employer or any class of employers, and his or their employees, or between different classes of employees, enables the Minister, if he think fit, to exercise all or any of the following powers:—

- (a) Direct inquiry into the causes and circumstances of the difference.
- (b) Take such steps as to him may seem expedient for the purpose of enabling the parties to the difference to meet together, by themselves or their representatives, under the presidency of a chairman mutually agreed upon, or, in the event of their failing to agree, nominated by the Minister, with a view to the amicable settlement of the difference.
- (c) Failing such amicable settlement direct a public inquiry into the causes and circumstances of the difference on the application of either party. All such public inquiries shall be conducted by a Judge of the Supreme or District Courts, or the President of the Land Court.
- (d) On the application of either the employers, the employees, or both, and after taking into consideration the circumstances of the case, appoint a person or persons to act as conciliator or as a board of conciliation.
- (e) On the application of both parties to the difference appoint an arbitrator.

The first case brought under the provisions of the Act was the strike among the coal-miners at Lithgow. In this strike seven collieries were interested. Both employers and employees were welded into strong associations, the mine owners under the name of the Lithgow Coal Association, and the miners under that of the Lithgow Miners' Association. The principle at issue was the fixing of a higher minimum hewing rate for the whole of the collieries in the district. For some time previous there appeared to have been dissatisfaction in the district with regard to the rates of payment, and this feeling was brought to a head by the reductions made by the owners, consequent, they affirmed, upon the operation of the weighing clause in the Coal-mines Regulation Act. This Act provides that where the men are paid by the weight of the mineral gotten, all such mineral shall be weighed before being passed over the screens, or, in other words, that the miners shall, in the case provided for, be paid for all the coal got by them whether large or small.

On the 3rd of June, a ballot of the miners was taken, with the result that fourteen days' notice was given to the owners of the intention to go out unless the hewing rate was increased to 1s. 10d. per ton for clean forked coal, everything weighed. The demand was not acceded to, and the men went out. Attempts to arrange a conference with the owners failed, and, on the 5th July, the Minister, under the powers conferred on him, invited the parties to the difference to a conference. Both parties accepted this invitation, and the demands of the men having been formulated, the representatives of owners' and miners' associations met in the Board Room, Lands Department, on 24th July, the Minister (the Hon. J. A. Hogue) presiding. Unfortunately the meeting, though it served to clearly formulate the issues between the parties, and allowed an opportunity for the expression of the views on either side, did not result in a settlement of the dispute. It was not till after a battle of about four months' duration, and after the introduction of "free labour," that the miners returned to work.

On 25th July, the Minister, in accordance with a request made to him on behalf of the miners then on strike at the Pacific Co-operative Colliery, Teralba, invited the parties to meet each other with a view to coming to an amicable settlement of their difference, as contemplated by section 2 (6) of the Act. This invitation being declined by the company through its secretary, inquiry was made as to the probability of an amicable settlement, and a reply being received from the company to the effect that there was no likelihood of that end being attained, an application was then made by the mine employees for a public inquiry into the causes and circumstances of the difference between them and their employers.

To this application the Minister acceded and appointed Alex. Oliver, Esq., President of the Land Appeal Court, to conduct such Public Inquiry. The inquiry was accordingly initiated on August 24th, in the Land Appeal Court, Darlinghurst. Mr. J. W. Johnson, as Chairman of Directors, appeared to conduct the inquiry on behalf of the Company, and Mr. J. Curley represented the interests of the miners. The grievance complained of was—That the price offered by the manager of the Company, namely, 1s. 9d. per ton for getting and filling round and small coal weighed all together, was too low.

The miners claimed that the price should be 2s. per ton.

After an exhaustive inquiry extending over six days, during which twenty-nine witnesses were examined, the proceedings closed, and on the 14th September the President reported to the Minister.

After fully reviewing the evidence the following conclusions were set forth in the Report:—

- (1.) The claimants have failed to establish their claim for a hewing rate of 2s. per ton of large and small coal.
- (2.) The claimants have failed to prove that the hewing rate in existence at the colliery immediately before the strike, or that the offer made by the Company shortly after the strike, was disproportionate to the selling price of their coal.

- (3.) The claimants have not succeeded in their attempts to show that the percentage of small coal was so much less than 20 per cent. as to justify a hewing rate of 2s. as claimed, and the Parliamentary return of sales of this colliery's coal for the period which it covers is not to be taken as an accurate return of the entire output for that period.
- (4.) The respondents under the circumstances referred to did not exhaust every reasonable possible *modus vivendi* before giving their ultimatum, and might with propriety have acceded to the request of the local directors for further consideration of the difficulty that had arisen in the working of the colliery.
- (5.) The dispute is one that might be quickly settled.

The inquiry had not the immediate result of settling this difference, as was hoped might be the effect. The miners, whilst not receiving the report with approval, signified their willingness to return on the Company's terms of 1s. 9d. per ton for "shandy gaff," provided they were not called on to sign individual agreements, but that the whole body of strikers were received back. The Company, however, insisted on the right to employ whom it would, and declined to employ certain of the men who had taken a prominent part in the conflict. Demonstrations were made against men who accepted employment on the terms of the Company, but the pressure of circumstances on the families of the miners who held out at last compelled a surrender, and the miners returned on practically the terms offered to them before the strike was declared. Nine of the strikers were refused employment, and the remainder agreed to sign the Company's agreement.

In the early part of July the manager of the Bulli Colliery notified that after the 15th of that month only ten pairs of men would be required till further plant was available which would enable each skip of coal to be weighed in accordance with the provisions of the Coal Mines Regulation Act. The miners regarded this action as in the nature of a lock-out. Early in August, at a meeting of the miners, they stated that they were prepared to go to work on certain terms, and that failing acceptance of this offer they were willing to submit the whole case to arbitration under the Act. The manager, after further correspondence, acquiesced in the proposal to submit the dispute to arbitration. The Minister, at the request of representatives of both parties, appointed Alex. Kethel, Esq., to preside over the proceedings. Mr. Kethel, proceeding to Bulli on the 29th August, met the following gentlemen, who, with himself, were to constitute the Board of Arbitration:—Messrs. C. Morton, Thos. Farrell, and John Wynn, representing the colliery proprietor; and Messrs. A. Black, W. Settle, and Jacob Glass, representing the miners. It was determined that both parties should enter into an agreement to submit to the finding of the Board. On the following day the proceedings were opened at the local Court-house, and after an exhaustive hearing, extending over seven days, the following award was delivered:—

1. That for four months dating from the reopening of the mine all coal gotten therein be filled with the shovel, and be paid for at the following rates; that is to say—
 - (a) at the rate of 1s. 5d. per ton (weighed in the gross) for coal taken from all sections of the big seam for a standard height of 5 feet; and
 - (b) at the rate of 1s. 11d. per ton (weighed in the gross) for coal taken from the 4-foot seam.
2. Provided that should it at any time appear to the proprietor desirable to substitute in lieu of the above the system of payment for clean round coal at the rate of 2s. per ton when gotten in the 5-foot seam, and 2s. 6d. per ton when gotten in the 4-foot seam, with 10d. per ton for small coal filled in keeping with existing wage and a nominal price for screen smalls, pillar differences and all existing usages being recognised, he shall have power to do so, assuming that such system may be carried out in accordance with the Coal-mines Regulation Act, 1896.
3. That the mine be reopened within one week from the publication of this award.

Subsequently reference was made to the Chairman for his opinion as to the true construction to be placed on certain provisions in the award. This was given, and ultimately the mine was reopened on the terms of the award.

There are records in the Department of seven mining strikes during the past year, as well as disputes settled without resort to extreme action; also of strikes and disputes in the coal-lumpers', shearers', engineering, upholstery, and carpenters' trades and callings, but probably this does not by any means exhaust the list of industrial troubles during the year.

As some doubt had been expressed to me with regard to the powers of the Court under the New Zealand Arbitration and Conciliation Act, I wrote during the year to the Department of Labour, Wellington, and received the following replies to my questions, which I now append, as showing the very full powers vested in this tribunal for the settlement of trade disputes:—

Question: Can the Court enforce its award against an employer who has not registered under the Act, and who is not a willing party to the arbitration, but is brought before the Court at the instance of his employees?

Answer: Yes. Indeed, except in the case of an incorporated or registered company, an individual employer cannot register under the Act. He is subject to the jurisdiction of the Board and Court, and may be a party to an industrial agreement, dispute, or award, but he cannot register himself individually. For the purposes of registration, he must form a society of not less than five members, and this society may be registered as a union of employers. The only effect of registration in the case of employers is to give the registered union a voice in the election of half the members of the Board, and in the appointment of one member of the Court.

Question: If such an employer refuse to attend, can the case be heard *ex parte*, and judgment go in default of appearance, and can such judgment be then enforced?

Answer: Yes.

Question: Where associations of both employers and employees are registered under the provisions of the Act, and a dispute arises between an individual member of the Masters' Association and his employees, is such a dispute referred to the Court—

- (1) As a dispute between the two associations; or
- (2) As between an individual master and his men; and, if the latter be the case, would the award bind him and his men only, or affect also the masters and men of the two associations?
- (3.) What would be the position, in the case of a judgment binding the Associations of employers and employees respectively, of a master employing non-union labour—would he be effected in any way?

Answer:

Sec. 17, Act 1894.
"42."

Sec. 3, Act 1894.

Sec. 2, Act 1895.

Sec. 32, Act 1894.

Sec. 48, Act 1894.

Sec. 66, Act 1894.

Answer: 1 and 2. The question speaks of "Associations," but as a registered "Association" under the Act is in effect merely a registered society of councils representing registered industrial unions, it will perhaps be simpler to treat the question as referring to "Unions" instead of "Associations."

If an industrial agreement existed between the two unions, and the dispute consisted of an alleged breach of this agreement, then the matter would be dealt with as a dispute between the two unions.

In any other case neither the individual employer nor his union nor the individual workers could move the Board or the Court, but the union of workers could do so, and the matter would then be dealt with as a dispute between the union of workers and the individual employer.

If the union of employers desired to take up its member's quarrel, it could do so by being joined as a party to the dispute.

The award specifies the unions and persons to be bound thereby, and may mention generally the members of a union as being bound, and in the latter case all future members of the union during the currency of the award will be subject to it. Sec. 14, Act 1894.

3. The position would not be affected in any way by the fact that an employer employs non-union labour or does not employ union labour.

Question: Does the employment of—(1) Men in a trade union not registered under the Act, (2) men who are not members of any trade union, and therefore not registered under the Act, relieve an employer from the jurisdiction of the Court of Arbitration?

Answer: No.

Question: Case:—"A" is a master baker in a town where a number of other master bakers compete. The masters are not united in an association, but the journeyman bakers are united, and their union is registered under the Act. A dispute arises between "A" and his employees. It is referred to the Court of Arbitration, and the award is given against him. Its terms may be such as to subject "A" to disability in competing against his fellow bakers who are not, presumably, affected by it. Has any remedy been provided against this? Sec. 4, of 1896.
Sec. 11, of 1898.

Answer: In the case stated "A" should protect himself by seeing that the other master bakers are joined as parties to the dispute before the award is made.

It has, however, been suggested that when the Act is next amended provision should be made for bringing employers and unions under the operation of an award at any time during its currency.

ALIEN SHOPKEEPERS AND HAWKERS.

The extent to which the retail fruit trade has in this city passed into the hands of Italians and Greeks in recent years has been the subject of special inquiry by this Department. The result, as a whole, has proved more satisfactory than at first it was anticipated would be the case, and shows that outside the city limits the English fruitsellers more than hold their own.

A house to house canvass of 528 fruit-shops in the city and suburbs was made. In the city the Italians were found to be in a majority, but in the suburbs the English shopkeeper far outnumbered his continental competitor.

The figures show:—

English—City	72	} Total	403	
Suburbs	331	
Italian—City	81	} Total	125	
Suburbs	44	
Grand Total						...	528

AGREEMENTS VALIDATING ACT.

The Agreements Validating Act (39 Victoria, No. 39) was originally passed to provide against doubts which had arisen as to the validity in the Colony of agreements for hiring and service made or entered into by persons elsewhere than in the Colony, but intended to take effect within its boundaries. Contracts for service made out of the Colony were declared to be valid within it provided that they were subscribed in the presence of some officer duly authorised by the Executive, were attested by him, and bore his certificate in the authorised form.

The Act also serves the purpose of protecting persons outside the Colony entering into agreements to work in it, by providing that the Validating Officer shall fully inform the person entering into the contract of service of the current rate of wages for persons of his trade or calling, and of the current prices within the Colony for house rent, food, and clothing, according to the latest advices received by him.

During the year Mr. Robert Blackwood Sibley was appointed Agreements Validating Officer at Bendigo, in the Colony of Victoria.

EARLY CLOSING ACT.

On 22nd December the Early Closing Act was assented to. The date fixed for it coming into force was the 1st of January, 1900. As the Act stands, it is probably the most comprehensive measure of its kind in operation in any part of the world. How far it will fulfil the expectations of its framers remains to be seen when its provisions are actively enforced.

PROSECUTIONS.

During the year a number of prosecutions under the Factories and Shops Act were instituted, and with few exceptions resulted in the imposition of penalties. The majority of the cases were brought under section 37 of the Act, relating to the employment of lads and women. It must, however, be remembered that the number of prosecutions does not represent the number of cases of differences between the Department and the occupiers of factories. Where, for example, such matters as the non-payment of overtime can be settled by the Department without recourse to the Police Court, and the withheld money is duly paid, such a course is preferable to placing employees in the witness-box to convict their employer.

REPORTS OF INSPECTORS OF FACTORIES.

Mr. Taylor reports :—

Sanitation.—Much less trouble was experienced during last year than in the two former years in enforcing the lime-washing clauses of the Act. Most of the owners of the larger factories, recognising the fact that they are compelled to lime-wash their work-rooms, &c., every fourteen months, have fixed dates for this operation, and on several occasions on visiting these places I found that some of them had been lime-washed without waiting for my instructions to do so. It is in the smaller places that difficulties are still met with. In some cases it may be that the occupier is having a hard fight to keep his business going, and cannot well afford to bear the extra expense of lime-washing and repairs; or, perhaps, it is that the structural condition of the building is such that a coat of lime-wash makes very little improvement, and in a few weeks the place is in as bad state as ever; or, perhaps, it is that the trade carried on is of such a nature that the walls, &c., always appear to be in a dirty condition.

In one of the large bakehouses in the city the whole of one wall was damp and, if not attended to, the dampness would be permanent. I gave instructions to the occupier to have the wall seen to at once. He informed me that he held the under-lease, and according to his lease the matter should be attended to by the landlord. I informed him that the occupier was the person I looked to, but at his request I interviewed the landlord, and pointed out that the matter was a serious one and would be pressed by the Department. To do the job properly necessitated a heavy expenditure, and the landlord tried to shift this expense on to the owner of the neighbouring property, from whence he alleged the water drained and caused the grievance. After a full and reasonable time had been allowed, and as the wall was in just the same state as at first, the Department took firm steps, and prosecution was only withheld on an assurance from the landlord that he would immediately have the grievance attended to and, as far as possible, remedied. The foundations were bared and drained and the inside wall heavily coated with cement. On visiting recently, I found the wall quite sound and dry, and the occupier personally thanked me for the steps taken in this matter.

In a suburb adjacent to the city is a very large building, which for a number of years was occupied, and in which business was carried on, by an old man and his son. In former years a fairly large staff of from twenty to forty hands were in regular employment in this building, but trade having died away from various causes, the business dwindled down so low that during the last few years the old man and son could barely make a living. On visiting about two years ago, I found that the building (a two-storeyed one) was very much out of repair, the flooring-boards in some cases being quite rotten and falling away. The machinery, through disuse and want of attention, had become rusty and was apparently unfit for use. In fact, the old man told me that for some time past he had only used two machines out of the whole lot. The boiler was in fair condition. The alterations and repairs, &c., necessary to put the premises and engine and machinery in a satisfactory condition would entail a heavy expenditure, which the Department, after taking all the circumstances into consideration, did not feel justified in enforcing, and the occupier was allowed to continue after a few minor details had been attended to. In the early part of last year however the man died and the premises found new occupiers. On hearing of this fresh occupancy, I visited and explained to the incoming tenants that before they put men to work it would be necessary to see that the building in which they were to be employed was in proper repair and safe condition.

I am pleased to say that they agreed to my suggestions; the building and machinery were thoroughly overhauled, repaired, and renovated, and the employees thus were enabled to start work in a building as safe as it was spacious, and with a plant as good as new, thoroughly guarded and fenced.

Accidents.—Amongst the many peculiar incidents that happen may be mentioned the following:—In the course of my usual round of inspection I had occasion to visit a factory of four storeys high; in each storey machines of different kinds are in use. The manager accompanied me over the premises, and, amongst other things, I called his attention to the condition of the railings of the lift-well on the lower floors; on the top floor, however, there was no railing whatever. I asked him to see that new railings were fixed on this floor, also that those on the other floors were properly adjusted. He questioned the necessity of this railing, and in doing so said, "Why, I am the only person that comes near here" (pointing to the well). I replied, "Well, you, perhaps, may meet with an accident, and are not your limbs and life worth protecting as well as those of any one else." He, however, promised to have the railing adjusted. Within a few weeks I had to call at this factory to inquire into an accident to the manager, who had fallen down the lift-well, fracturing his skull and receiving such injury that his life was despaired of. I am pleased to report that although he was confined to his room for months he has now completely recovered.

Some time ago on visiting a large jam factory I pointed out to the occupier that the existing steam-vent over the boiling pans was not sufficiently effective and could be much improved upon, also that the main shaft of the machinery was too low and in a very awkward position, and therefore, to a certain extent, dangerous. The manager informed me that the proprietor contemplated making additions to the premises, as business had shown good increase, and when these additions were being considered the matters mentioned would receive attention. As all my other requests were well carried out, and the management had shown an earnest desire to comply with the Act, these items were allowed to stand in abeyance. I am pleased to report that during last year the promise was in a large measure fulfilled. Extensive alterations were made, and a new and very satisfactory boiling-room has been erected with high and efficient steam-vents. It is also intended to raise the roof of the old building and erect additional filling and soldering rooms, so that when complete this factory will be one of the largest as well as one of the most convenient of its kind in the Colony.

Brick-works and Potteries.—An industry that received a great impetus during the latter half of last year was that of brick-making. Almost the whole of the yards were in full swing, and working full time. Some of the managers told me that the demand was so great that they did not know whether they would be able to complete the orders then on hand. Previous to this demand the yards had been very slack, and the price of bricks very low, but with the demand came also a rise in price, with the result that all the yards could be said to be doing well.

On going my rounds at this time I was pleased to find that, with few exceptions, my instructions (*re* the fencing and guarding), given at previous visits, had been fairly well carried out, and any further instructions given were complied with without any demur.

Potteries

Potteries.—The potteries also may be said to have had an increase of trade, and the various branches of this business have been extended, and new lines opened up. One in particular is worthy of mention, viz., that of earthenware.

The proprietors of one of the large works have made a speciality of this branch, and have seen their way clear to expend a large sum of money in erecting new buildings and a complete plant for this branch alone. A very large and varied assortment of articles is turned out at this factory, the goods ranging up to a high-class quality. For the sake of the employment such works give, it is to be hoped that the management will find that their enterprise receives the encouragement it deserves. A number of lads are engaged at this work, the rates of payment being very encouraging. Formerly these boys were paid a weekly wage; they are now paid in a different manner. For example, a "task" of 50 many dozen articles is given a boy to do in a week; for this task he is paid, say, 12s. When this task is completed, which may be in four and a half days, the boy keeps on at his work, and is then paid so much per dozen for the quantity made during the week over and above the task, thus he is enabled to earn, perhaps, as much as 16s. or 17s. This method, the manager informs me, pays both employer and employee much better, and is more satisfactory in every way. Where formerly the boys received 12s. per week, the employers would, perhaps, not receive value, through breakages, waste, &c. Now that the boys have an interest, as well as an incentive, for their work, they find their pay materially increased, and become much better workmen, whilst the employer obtains much greater value for his money in less breakages, less waste, and better quality of work. This branch has also opened up a new avenue for female labour in this Colony, and on going through the workroom I was pleased to find a very respectable and intelligent class of girls engaged in this work. The girls are employed in varnishing, painting, and decorating the articles after they come from the kiln or oven, and as the work calls for the exercise of taste and requires neatness and care in its execution, it is not to be wondered at that girls so employed appear to be above the ordinary class of factory hand. I may mention here that when erecting these workrooms the management had in view the employment of girls, and every convenience has been furnished for their accommodation.

Guards to Machinery.—I had occasion to visit one of our largest engineering factories for the purpose of inquiring into an accident which had happened to a lad employed in the workshop. It appears that a lad was standing near a lathe, and was waiting to use the emery stone. He unconsciously put his hand out to rest himself against the lathe; his finger was caught in some of the small gear, and was badly bruised and cut, the flesh being torn away, but fortunately no bones were broken. The foreman had only recently taken over charge of the workshop, and he expressed his sorrow that the accident had occurred. I asked him to give practical expression by guarding, as far as practicable, all the dangerous parts of the lathes and drills. He promised he would give the matter serious attention. I was indeed agreeably surprised, when, on visiting a couple of months later, to find that the majority of drills had been guarded, and also that a number of the lathes were ingeniously covered with wire netting guards, which had the effect of preventing accident without in any way detracting from the look or the proper handling of the machine. I spoke to some of the men who were working these lathes, and asked if the guards were suitable, also if the working of the machine was in any way interfered with. I received the answer that only for the first few days was there any difficulty, and now that the men had become accustomed to the guards, they knew the benefit of them, and added that if these or similar guards had been adopted years ago many an accident would have been averted. The foreman is rightly proud, not only of the manner of construction of the guards, but also of the manner in which they have been affixed. I may mention that the principal, after seeing how satisfactorily these guards have answered, has taken a great interest in the protecting of all machines and gearing, and, being a practical man, has given his personal attention and supervision to the guarding and fencing, as the case may be, of all machines and gearing that may have been overlooked in the past.

This is indeed a strong and illustrative answer to the numerous objections Inspectors have to listen to when occupiers are asked to guard these machines not nearly to the extent that has been done in the instance mentioned. There is an old proverb, "Where there's a will there's always a way," and if factory owners, instead of raising all kinds of frivolous objections, to the instructions of the Inspector with a view, perhaps, to saving a small outlay, were to set themselves the task of finding out how to prevent accident, then not only would the work of the Inspectors be much pleasanter and friction avoided, but the occupier would feel contented in his mind that if an accident did then occur, that he had done his utmost to prevent it.

The following will, on the other hand, serve as an example of how accidents will occur, although the occupier has apparently done all that was required to make his machinery comparatively safe.

In a boot factory there are several machines running side by side. The driving and other exposed gear of each one is guarded and fenced in a satisfactory manner. One of these machines is a power-press. Near this press a lad was employed sorting soles that had been cut during the day. The knocking-off time of the factory is 5:30 p.m. At about 5:25, this lad, preparatory to knocking off, was stooping down and cleaning his boots with a piece of cotton waste. He heard the foreman coming, and, not caring to be found rubbing his boots, he put his hand under the table of the press, and pretended to be cleaning the under-table gear. The machine was running at the time, and as he had the waste near the cogs, it caught and dragged his hand in. Fortunately, at that moment the engineer turned off steam, and the boy's hands acting as a clog to the gear, the machine stopped, otherwise he must have lost his arm, if not his life. He had been repeatedly warned not to attempt to clean any part of the machine while it was running. His indiscretion and disobedience cost him three fingers and more than half of his right hand.

Mr. Armitage reports:—

Sanitation.—The good effects of the last two years are now felt and appreciated by employers quite as much as by the employed.

With occupiers of factories lime-washing annually is now the rule, except in a few factories where strict inspection is still necessary. In flock-mills, owing to the dirty nature of their trade, the occupiers have been made to lime-wash their mills still more frequently. In one large mill, from which the occupier had to remove owing to the action of the Department, over fifty men were using one water-closet; in the new premises they are provided with six.

A further great improvement has been made in the sanitary arrangements of a few factories in the city. In one large factory there were upwards of 100 men who had practically no accommodation; this place is now satisfactory.

Marked improvements in ventilation and sanitation have been effected in many factories. In one case two floors have been added to the factory, and the whole of the water-closets have been removed outside the factory, each floor having distinct accommodation for both sexes. All the machines have been rearranged, the ventilation and light improved, and an outside fire-escape provided from the top floor to the ground. In my district, also, a large clothing manufacturer, after persistent pressure from the Department, has removed from his old factory, which could not be described as other than an insanitary den, to a new factory, where the occupants have ample room and light, with lavatories and water-closets outside, and a fire-escape from each workroom. This new factory is as good as the old one was bad.

In one large factory where medicines, &c., are compounded, the workroom is on the top floor, and on this flat a number of females are employed; the heat and gases from the steam-jackets, besides being at times offensive, make the room very hot. In compliance with section 23 of the Act, the occupier has now provided a 24-inch fan with a flue through the roof, the fan being worked off the shafting of the machinery.

Recently superphosphate works have been started in this district, and complaints have been made by the men working in the "dens." As this kind of work is new to the Colony, the following rough description may be of service:—The works are situated on the Iron Cove side of Balmain, on a steep, rocky piece of ground. At the top of the building the raw material, consisting of Florida or phosphatic rock, is received in bulk.

It is put into hoppers which discharge into a mill, where it is broken down to the required size and transferred by carriers and elevators to another large hopper; from this second hopper the crushed rock is drawn into a measuring box, from which it falls through valves into a mechanical mixer and into this the necessary proportion of sulphuric acid is admitted from a large supply tank. While this mixing is carried on, a very large quantity of gas (hydrofluoric and hydrochloric) is evolved, so that on opening the mixer, after it has been used for some time, the gas is very pungent. From the mixer the mass is run into two hot dens, 20 feet long, 10 feet wide, and 7 feet high, with four openings each.

The

The first of these admits a chute, 6 in. x 6 in., leading from the mixer ; the second and third, each 3 ft. x 1 ft., are for taking away the gases and fumes evolved, whilst the super-phosphates are cooling or being removed ; the fourth measures 4 ft. x 6 ft. in the clear, and is closed (whilst the chamber is being filled) by a wooden door, which aperture serves for the removal of the material.

After the mass in the hot dens has set and cooled sufficiently, it is dug out by the workmen. The contents of each den amounts to 40 tons, and are removed in fourteen working hours, three men at a time, and for two hours only each day. The temperature in the hot dens, which were being emptied, was 73° F., of the material being removed 150° F., and of the material in the second den (opened out only two hours before) 210° F.

On being removed from the dens the material is taken by elevators to disintegrators, and is then mixed to bring to the strength demanded in the local market. The output amounts to about 200 tons per week, and twenty-five men are constantly employed.

The sulphuric acid used is manufactured by the firm from New Zealand sulphur (no arsenical fumes are evolved).

It is whilst extracting the mass from the dens that the men suffer, and since my first visit the occupier has erected a 3 ft. 6 in. fan in the flue of the dens, which is an improvement.

Machinery and Accidents.—There has been a decrease in the number of accidents in my district reported during the year. Four were fatal. One of these happened at a foundry where the man went into the furnace before the gas had escaped and was suffocated. Another occurred at the coke elevator of the Gas Co., it was part of the man's duty to oil the bearings on the top platform (he was paid extra to do this during the meal hours) but on the day of the accident he went up ten minutes after the work had started ; the cup of the bearings is in the middle between two 15-inch sprocket wheels, which by means of link chains raise the coke buckets. It was in one of these wheels that his arm was crushed.

The third happened at Mort's Dock, Balmain. The deceased with others was working near a drilling machine. A segment of cast-iron, for the Sewerage Construction Works, was being raised to the table of the drilling machine, and when the casting was some feet from the ground the pin came out of the block, and the segment falling crushed the man.

The other accident happened at the Dock, near the forge of the fifty-ton steam-hammer, where the men were welding a steel ingot to part of a tail shaft. This ingot was held in a staff weighing about 3 tons, and was slung in the middle by a chain sling from the block of the same crane. In the lifting of the staff deceased was assisting to balance it, and put his whole weight on the staff, his arms were resting on it while his knees were underneath when the chain broke, his legs were caught under it and fractured ; the chain had a working test of 3 tons, and the breaking strain was 6 tons.

A bad accident happened at a tin-plate factory to a young man who had been working for ten years in this factory ; he was putting a 2½-inch belt on to a pulley while it was in motion. The shafting is about 10 feet from the floor, and to get up to the belt, he had to climb with one foot on top of a machine, and the other spread about 3 feet away, against the ledge of a door (only ½ inch) ; his foot slipped, and in trying to balance himself his right arm was caught between the belt and the pulley, and torn off at the elbow.

There have been two lift accidents in my district, one of a minor nature, in the other the man fractured his leg. He was lowering a goods lift with a case in it about 4 feet high, the man was sitting on the case, the edge of which was hanging about 4 inches over the floor of the lift, this caught on the side of the lift-well and tilted the case, jamming his leg between the cross-beam of the lift and the top of the case, and breaking his limb above the knee.

It is satisfactory to note that there has been a large decrease in the number, and no serious accidents at machines that it is possible to guard, and occupiers are taking more care to have their machines guarded, this due partly to their risk under the Employer's Liability Act, and to the pressure of this office. In several cases also for which the Act at present does not provide, the occupiers have all that is necessary to protect their employees. For example, in one large aerated water factory the manager has provided each "bottler" and "sighter" with a mask and woollen mittens. He has improved on the ordinary mask, which weighs about 3 lb., is similar to a fencing mask, and is so uncomfortable that the lads prefer to run the risk of a cut throat to wearing it. The mask in question is composed of very light gauze, edged with thin leather, and the weight of it is only 4 ounces ; the woollen mittens too are a great improvement on the India-rubber for suppleness and coolness, but even when provided by employers great difficulty is experienced in compelling the employees to wear the masks and mittens.

A large printing factory which was responsible for a great number of accidents last year has been less unfortunate to the extent of about 75 per cent. this year. The fact is attributable to increased space, and the rearrangement of machinery, and better provision in the way of light.

Hours of Labour.—There was one prosecution this year in my district for working lads more than 48 hours, and longer than 5 hours without an interval for a meal ; these lads were working 5½ hours per week for a wage of 5s., and their pay was stopped for all sickness, holidays, and loss of time. Some were making butter boxes, and another tailing out at a circular saw. One lad informed me that he had his breakfast at 5:30 a.m. and his lunch at 12:30 p.m.

In a fruit shop I found a man whose working hours were 5:30 a.m. till midnight on seven days a week, his only time off being a Sunday afternoon in the month ; and in another fruit shop, owned by a Greek, I found a lad fourteen years of age working the above hours, they being the usual working hours of the Italian fruit shops of this city.

Fire Escapes.—During the year, in company with Mr. Superintendent Webb, I have made 133 inspections. Several of these were fairly satisfactory, and in a number of cases little expense was required to provide an alternate means of escape.

In one case, where the occupier objected to provide an escape, there were about eighty females at work, and the only means of communication between the ground floor and the work-rooms was a narrow, winding wooden staircase (2 ft. 4 in. wide) situated in a corner at the back of the building. The structure containing these stairs was nothing better than a brick shaft, extending from the basement below the street level to the roof, and in the event of a fire occurring in any portion of the premises would virtually act as a flue, in which case all means of communication between the various floors would be cut off.

In an almost new factory, six storeys high, there are 360 hands, the majority being females. They have only one staircase down to the ground floor, but this occupier has promised to make provision for an alternate means of escape.

In several cases occupiers have erected outside ladders and stairs, some of these being the result of submitting plans to the Department before building.

Where men only are employed, a cheap escape is made by bolting a ladder to the wall, made of 4 in. x 2 in., and kept about 6 in. from the wall ; this is much better and safer, and almost as cheap as a rope ladder.

Miss Duncan reports :—

Hours of work.—More than one incident in this year's work has led me to believe that it is impossible to fully enforce the law, as it at present stands, in hand laundries, and that throughout the summer breaches are of frequent occurrence.

If these could be detected and checked by vigilance, I should be ashamed to make such a confession ; but I have long seen that, in the case of piece-workers especially, the interests of employer and employed are identical, and the Inspector has therefore to contend with a stolid but effective opposition difficult if not impossible to overcome.

The elasticity of the law, and the determination on the part of workers to give no evidence likely to have the effect of curtailing earnings, leads to the Inspector being met by the employees with a bland smile and a cheerful assurance that little or no overtime is worked ; and the explanation on the part of the employer that the long hours during which the laundry is alight is accounted for by the fact that Mrs. A. and Mrs. B. came in late this morning, or that the holiday this week, or the Monday (on which day ironers often do not work) are being made up, statements obviously impossible to disprove without the evidence of the persons concerned—evidence not to be obtained.

There are several reasons for the unwillingness to give evidence on the part of a class of women whose skill makes them almost independent of their employer :—

The desire to earn as much as possible during the summer which is their time of harvest.

The fear of ill-will on the part of their fellow-workers, and the dislike to moving from a laundry where they are fairly comfortable, and can command a plentiful supply of work.

Good shirt, collar, and dress ironers are much sought after, and the demand is greater than the supply in the summer season. A large proportion of them are married women and the bread-winners of the family, and they are willing to work long hours for the sake of earning from £1 10s. to £2 per week.

If it were not for this, united action on the part of such an independent body of women could compel employers to observe the law ; but for one or all of the reasons stated above, they neither desire nor assist in the carrying out of the provisions of the Act. Of

Of the numerous complaints which reach the Department, few, if any, come from piece-workers in laundries; they are usually received from competitors in the business, or from employees who, having had a difference with their employer, fall back upon the Inspector to help them out of their difficulties, and then fully and ingeniously relate how they have tacitly, if not actively, joined in deceiving her.

A flagrant instance of this kind occurred during the year. Numerous complaints having been received of long hours and under-payment of overtime, the matter was at length, after some trouble, sifted out, and the employer was required to make good the shortage in overtime payment, and to furnish the Department with the written receipts of the women. In due time receipts were forwarded to the Department, bearing the signatures of the women, who, when questioned, averred that they had received the money, and the matter was considered to be closed. Months after information reached the Department that the women, in collusion with their employer, had signed the receipts without receiving the money, and although the employer professed ignorance of the matter, there was ground for believing that deception had been practised.

I have tried to establish the custom in hand laundries of keeping a time-book showing the length of time worked every day by each piece-worker, but I am not satisfied with the result, as it is easily seen that like all other records which an employer is required to keep, an Inspector has really no means of testing its accuracy after a lapse of a few days. A few workers—very few—will take the trouble to keep a record of their time, but this record is seldom or never available to the Inspector and only comes to light after a disagreement with the employer; I have before me a copy made from a worker's time book kept by a worker showing overtime worked on as many as six consecutive days, and for more than three hours in a day, a record which by no means tallied with the record kept by the employer, yet this information came too late to be made use of, and serves no purpose but to show how easy is the concealment of flagrant breaches of the Act, so long as the workers connive at it.

Such are some of the difficulties experienced in trying to enforce a Legislative enactment which limits the period of employment to a certain number of hours in a week, without specifying the hour at which the ordinary working day shall cease, or without specifying the maximum length of a day's work, with or without overtime, or the number of days contained in a week.

Complaints are often made to the office that certain laundries "work all hours," and while it may or may not be true that individual workers are so employed, it is not surprising that those who loyally adhere to the law are discontented at a system which allows of so much evasion.

Sanitation.—In the matter of sanitation in factories there is little to add to the reports of last year; there are now fewer flagrant cases of insufficient or unsuitable conveniences, but the need of more stringent regulations as to position and construction is as pronounced as ever.

I have already pointed out that the powers of the Department do not extend far enough in this particular; that the powers of the Water and Sewerage Board are defective in that they do not control the lighting and ventilation of the room in which the convenience is placed, and that the very definite restrictions which the English authorities place upon the erection of these conveniences are altogether lacking here.

I desire to draw attention to this matter once more because in a rapidly growing city such as ours, the need of similar by-laws becomes daily greater; and if in the near future a considerable expansion of manufacturing industries should take place, the change cannot too soon come into force. The longer the reform is postponed the greater will be the difficulty and the hardship involved in its inauguration.

I would also draw attention to the great need that exists for a systematic inspection of all offices, warehouses, and indenting houses and school of typewriting, &c., where women are engaged in clerical work, with a view to seeing that proper provision of sanitary conveniences, suitably situated, is made for their use. It is within my knowledge that numerous places exist in this city where, either separate conveniences for women are absolutely lacking, or are so placed that the want of privacy makes them practically useless, or where the provision is so inadequate that the condition of things should not be tolerated. Unfortunately the long suffering endurance of women in this connection brings about a continuance of a very bad system.

I am occasionally appealed to in the matter, but it is only by straining my powers as an Inspector that I am able to make any inquiry, and even then the matter cannot, as a rule, be dealt with, except by the co-operation of the Municipal Authority.

As women sanitary Inspectors have not as yet been appointed by municipalities in Australia, I would suggest that in any future amendment of the Factories and Shops Act, this matter should be placed within the control of this Department, so that this very necessary matter should receive systematic attention. The Department should be vested with powers sufficiently extensive to allow of its requiring the landlord to provide separate and suitable conveniences in a position approved by the Inspector, in every place where women are employed. I would urge that the principle is the same, whether the number employed be large or small, and that the presence of even one woman entitles her to consideration.

I quote the testimony of two medical practitioners in Sydney whose opinion on this matter I sought. A says: "The absence of proper sanitary conveniences for women in offices is productive of far more serious evils to health than those arising from long standing; the latter it is true affects a larger number of women, but the former involves much greater suffering and entails in the future more disastrous consequences."

I can assure you that from my own experience I know of the existing deficiencies in this respect, and I trust immediate steps will be taken to apply a remedy.

B says: "Considering that constipation (so general among our working women) is so great a factor in causing female ailments, it is nothing short of astounding that no steps have been taken ere this to cope with the evil of want of sanitary conveniences." This correspondent mentions "two very ordinary cases which have come under my notice lately, viz., a typist suffering from fistula brought on by habitual constipation due to the absence of sanitary conveniences at the office; and a case of anæmia with ovarian congestion, a result of habitual constipation from the same cause," and says, "I could multiply instances."

Defective Walls.—Throughout the long wet winter there has been occasion to comment upon the number of brick walls, generally of a southern aspect, which have become saturated with damp from the driving rain. In all cases the attention of occupiers has been called to this, and they have been requested to paint the walls on the outside with two or three good coats of paint, which has been done with very satisfactory results. In some cases this request, though obviously a reasonable one, since mildewed and damp walls offer serious dangers to health, is disregarded by occupiers, because of the outlay involved. It is unfortunate that the injury to health from damp surroundings is not as easily perceived and traced to its right source as is the damage done to "stock" placed against a damp wall.

In the town of Newcastle this defect was especially noticeable, and will probably continue to be a cause of comment in the future, as the position of the town exposes it to the full force of the tremendous gales by which it is visited periodically. In more than one factory I noted large portions of walls on the eastern side thick with mildew and saturated with moisture. Bad building and guttering may be partly accountable for the mischief. Probably paint would not fully withstand the fury of the gales, and cement or "rough-casting" on exposed walls would be more efficacious.

Meal-times.—Section 43 of the Factories and Shops Act provides that "No male under 18 years of age and no female shall be employed continuously in a shop for more than five hours without an interval of at least half an hour for a meal." Infractions of this section of the Act have been found in shops where one or two shop assistants only are employed, and it is probable that many more exist. The formality of giving an interval of half an hour for a meal does not seem to be apprehended as a necessity by a shopkeeper when the work done is not very arduous, and he is satisfied that he is fulfilling all the requirements of the law by allowing his female shop-assistants or boys to snatch a meal behind a counter in the intervals of serving customers, because on some days their services may not be required at that time. They are, however, given to understand that they are expected not to leave the shop during the whole day. There are many shops in which the current of customers is intermittent, and the work of serving may therefore on some days be very light, while on others the rush may be incessant. But whatever the state of trade, the assistants must remain in the shop ready to jump up if required at any moment. This appears to me to be a direct infraction of the spirit and letter of the section quoted above, which is apparently intended to ensure one-half hour's freedom at the end of five hours of service. The immediate effect of this system is that women are kept from 8:30 or 9 in the morning till 6, 7, or even 11 at night in a shop which quite possibly is dark and badly ventilated. I have always contended that liberty to go out of doors and get a breath of fresh air in the time allotted for meals is contained in this clause, and that any other interpretation of it robs it of more than half its value from a hygienic point of view.

In a typical case which occurred in the early part of the year an occupier, who expressed his opinion that he fully complied with the law, and averred that neither Minister nor law would induce him to alter his ways, was prosecuted and fined. Within a very few weeks he was again prosecuted for a second offence, but the case was lost owing to a change of attitude on the part of the witnesses and to the fact that, although no alteration was made during the dinner-hour, a quarter of an hour was given in the course of the afternoon to break up the five hours between dinner and closing time. Thus the essential principle of a full half-hour's freedom, for which the Department was contending, was not upheld.

Accidents.—Three accidents to girls have been reported during the year, and in addition the occurrence of two serious accidents, involving the absence of the injured girl for some time from her work, was discovered. These latter were not reported by the occupiers in accordance with section 33 of the Factories and Shops Act, which requires that in the event of an accident of a certain class taking place, which prevents the employee from returning to his work in the factory within forty-eight hours, written notice shall forthwith be sent to the Inspector. There is reason to think that this omission was not the result of an oversight.

Two out of the three accidents happened in steam-laundries, and were traceable to some inattention or carelessness on the part of the injured person in the working of machinery moved by power; the most serious of them was the direct result of deliberate disregard of a warning. Certain steam-mangles require that the heated steel roller shall be rubbed with wax before using. In order to do this it is necessary to remove the guard, and in the case quoted the engineer having stopped the machine, warned the girl not to wax it while revolving. No sooner was his back turned than she proceeded to set the machine in motion, with the result that in a few seconds her hand and arm were crushed and burnt. She was four months under treatment, lost two fingers, the third being saved with difficulty.

This shows that while much can be done to minimise danger by fixing guards, it is impossible to prevent the occurrence of accidents. No dangerous machine can be made absolutely safe, and experience teaches that the care and constant attention on the part of the operator, which are necessary factors in the case, are not to be expected from the young girls who work at laundries.

I venture to think that when they suffer bodily injury some measure of compensation is due to those unorganised women workers, whose services are indispensable, because of the low rate of their wages, and who are placed in the way of danger in order to increase the output of the factory. In the present state of the law the employer can practically escape any penalty resulting from an accident, while the worker takes the risk of suffering, mutilation, loss of time and wages. Of what value is the Employers' Liability Act to a girl whose 6s. to 10s. a week, temporarily if not permanently stopped, make it impossible for her to institute any proceedings involving the outlay of money, especially as it can nearly always be shown that the accident was due in part, at all events, to "her own fault." I cannot but think that where an employer takes advantage of dangerous machinery (and all machinery is more or less dangerous) for his own profit, he should bear a fair proportion of the risk to life and limb attaching to its use. It is futile to argue that the worker has herself to blame, inasmuch as she willingly continues to work, knowing full well the risk she runs. The overcrowded ranks of women workers are "between the devil and the deep sea"—starvation on one hand, and low wages with bodily risk on the other.

It is fair to say that some employers, recognising their moral responsibility in the matter, insure themselves against accident, and pay expenses and the wages of their employees during their absence; but in other cases the girl is perhaps taken in a cab to the hospital when the accident occurs, is afterwards given a few tram tickets, and receives no more wages until she is able to go back to work; or, alternatively, is brought back to the factory long before she is fit to work, and made to do odd jobs—and keep out of the Inspector's sight.

The accidents which happened were as follows:—

1. In a box-making factory a girl pinched a piece off the top of her finger in a press moved by foot-lever.
2. In a steam-laundry a girl had her hand and arm crushed and burned from a hot steam-roller (the case quoted above).
3. In a steam-laundry, a girl feeding a steam-mangle put her hand on the indrawing steel cylinder, and had two fingers of her right hand crushed. In this case the roller was not hot, so that the injury was not complicated by burning.
4. In a clothing factory, a girl working a button-hole machine moved by power, attempted to clear the cogwheels with her fingers; the machine was not at first in motion, but she inadvertently put her foot on the treadle and started it, with the result that her fingers were seriously crushed. Having occasion to visit this factory soon afterwards, I was informed of the accident by the sub-contractor who employed the girl, and who expressed the intention of paying her half her wages during the time she was disabled; the promise was, however, not fulfilled, and the girl was out of work for some weeks. It transpired that some months previously the same girl had a serious accident when employed by the actual occupier of the factory, and was paid by him during her absence; the accident, however, was not reported to the Department, though it is difficult to believe that such a well-known and important provision of the Act was overlooked by the responsible person.
5. In a boot factory, a young apprentice had a portion of her hair torn cut and her hand seriously injured through attempting to mend the belting of her machine while in motion. For several weeks she was treated at the Sydney Hospital as an out-patient, during which time she was not able to go back to her proper work as a machinist, but was employed on light work of some sort in the factory within a few days of the accident. This accident was not reported to the Department, and it was a significant fact that the girl was taken from her machine and employed in an inconspicuous portion of the factory on the occasion of my visit some time after; she consequently escaped my notice, and it was not for some time that we became aware of the occurrence. I have little doubt that there was a deliberate attempt made to conceal the fact of this accident from the Department.

Undoubtedly the firm merited a sharp rebuke, as the accident was, in my opinion, due to the fact that there was no prohibition of the very dangerous custom of mending broken beltings without first disconnecting the machine from the main shafting. In commenting upon this incident, I would point out that I have year by year drawn attention to the danger run by girls who are allowed to wear their hair hanging down in factories where they work at machines running by power. I have repeatedly urged employers to make a hard and fast rule on the subject, and have again and again pointed out the danger to the girls, but with little success. I think this point might well be made the subject of a regulation, since it appears that employers will not take the matter seriously in hand. The girl above referred to escaped serious injury to her scalp, but the next sufferer may not be so fortunate. It is matter of common knowledge that several terrible accidents of this kind happened in Sydney before the Factories and Shops Act came into operation, by which a large portion of the scalp was torn away.

Recovery of Wages.—Repeated applications have been made to the Inspectors to assist in the recovery of unpaid wages; there is, of course, no power under the Act to intervene in this matter between employer and employed, except in the case of overtime pay, but the complaints bring into strong light the practical inability of women and girls to recover wages due, and it would seem as if some measure of protection should be afforded them other than that provided by the Small Debts Court.

Engagements appear to be made in a very loose manner and without any understanding as to length of notice on either side, which results in indignation on the part of the employer if his employee leaves him without notice, and possibly to his stopping her pay for the two days previous to her departure, or, on the other hand, to the dismissal of an employee at a minute's notice. It is not unusual to hear of an employer keeping so many days' wages in hand as a check on his employee, but it is very unusual indeed to hear of a week's pay being given in lieu of a week's notice. As usual in all such cases, the burden is borne by the party to the contract who is financially weak.

I would not have it thought that in thus pointing out the existence of abuses I wish it to be inferred that these are the rule; on the contrary, I believe them to be the exception, and to belong to a system which is discouraged by the best class of employers. I could name firms in Sydney whose treatment of their employees is beyond all praise, and I am well aware that the employer does not always receive the consideration which is his due, but one, probably, of the most important functions of an Inspector is to discover and note abuses, with a view to their being dealt with in the future.

NEWCASTLE.—During the year I have made seven visits to the Newcastle District for the purpose of inspecting the workrooms in which women are employed. The attitude of employers has been in most instances extremely satisfactory, and I have been met by a ready willingness to carry out suggestions, which has been very encouraging.

The majority of the very necessary reforms in all sanitary matters have, however, been carried out at the instance and under the direct supervision of the Inspector for the district, Mr. Burkitt, whose list of improvements for the year is a long and important one.

The

The sanitary arrangements existing in the Newcastle District are very inefficient, and in some of the adjoining municipalities, notably Lambton, it would be impossible to imagine anything more primitive and insanitary. In some low-lying parts of Maitland the pits are sometimes flooded after heavy rain to the level of the ground.

Most tailors' workrooms were found to be much overcrowded, to require attention from painter or paper-hanger, and to be much in need of systematic and thorough sweeping and scrubbing.

The provision of separate and suitable sanitary conveniences also was a matter in which immediate reforms were necessary, and there is now a marked improvement throughout the town of Newcastle in these points.

I was favourably impressed with the rate of wages paid to tailoresses, and I think it will be found that the average compares advantageously with that prevailing in Sydney. There does not appear to be a large amount of overtime worked. At present no clothing factory exists in or about Newcastle, and only one small boot factory, so that the manufacture of these articles is chiefly confined to the order trade.

Some of the workrooms are defective in light, owing partly to the very wide balconies, which are a feature of the country towns in the district; these balconies, however, are not without their advantages, as they are sometimes utilised as workplaces during pleasant weather, a practice quite unobjectionable from the point of view of an Inspector, as no workroom can be more healthy than that which is open to the breath of heaven, if shelter be duly provided for.

The very large number of unpaid apprentices is the most conspicuous feature in the dressmaking industry in this district, and the number of small dressmaking workrooms, often owned by mere girls, would seem to point to the fact that as soon as a girl has passed through the stage of tutelage, she sets up as a dressmaker on her own account, and, with the aid of two or three still younger girls, endeavours to carry on a small business of her own. The system known as "Scientific Dressmaking," which claims to reduce the art of fitting to a science by means of cardboard charts and measurements, seems to have many adherents among this class of dressmakers. Very good relations appear to prevail between employer and employed in these small workrooms; the hours are, as a rule, short, the weekly half-holiday being observed. In some of the country places girls are frequently to be found sitting out in the garden or verandah at their work. The cottage is often small and low-pitched, but situated in a garden in such healthy surroundings that one hesitates to insist upon compliance with the strict letter of the law in the matter of cubic space.

A few fairly large dressmakers' workrooms exist in connection with the shops in Newcastle, and although one or two were found to be overcrowded, the rooms are for the most part good. The system of excessive overtime, which calls for comment in Sydney, does not seem to exist to any great extent in Newcastle and its suburbs.

The hours worked in drapers' shops by millinery workroom hands were found to reach from fifty to fifty and a half on alternate weeks, an arrangement arising out of the old-established custom of keeping shops open late on "Pay Friday" night, when the services of the milliners were said to be required for the purpose of making alterations for customers, the wives and daughters of miners, who flock into town to do their shopping on the night when wages are paid.

In the early part of the year provision of seats for shop assistants received attention, and the employers for the most part fell in willingly with the requirements of the inspectors.

Mr. Burkitt reports:—

The number of factories in the Newcastle District is small compared with that in the Metropolitan, but owing to their being scattered over so large an area, my time has been fully occupied in paying the necessary visits. During the year 871 factory cards were served—93 by Miss Duncan, and 778 by myself.

Many of the factories, principally saw-mills and wine cellars, are situated from 10 to 18 miles from the nearest railway station, and in the early part of the year I found it impossible to visit these places except at an enormous sacrifice of time. In August, however, I was provided by the Department with a bicycle, which has proved an unequalled success, much valuable time and a good deal of expense in tram, bus, and coach fares having been saved thereby.

During this, the first year of the Newcastle Factories District, I have followed the example of the Metropolitan Inspectors, and have spent much time in instructing occupiers of factories in the requirements of the Act, many of them being absolutely ignorant of the fact that they were in any way affected thereby. The carrying out of the health clauses I insisted on from the beginning, and have but little cause to complain of the manner in which my instructions have been carried out. At a large number of factories it has been found necessary to order additional closets to be erected, as hitherto it had not been considered requisite to provide separate accommodation for the different sexes. This was the case with nearly the whole of the tailoring establishments. At many other places these conveniences were found to be in a dirty condition and out of repair. At one, the accommodation for male employees consisted of a long trough without either seats or partitions, while the 200 females were provided with only four old-fashioned pan-closets. Acting on my instructions, steps were taken to remedy this undesirable state of affairs, with the result that, after having overcome some difficulties with the municipal authorities, the trough was abolished, twenty new water-closets were erected, and the four old ones converted and brought up to date. Another bad case was that of a small factory employing some eight or ten hands, where the so-called closet consisted of an old packing-case (the lid of which had previously been lost) placed on end and furnished with a seat and pan. It was kept in an indescribable state of filth in spite of my frequent remonstrances, and finally it became necessary to take legal proceedings against the occupier, who was fined. I may add that the old packing-case has given place to a substantial weatherboard structure. Another case may be mentioned, viz., that of a pastrycook, whose bakehouse was nothing but a small back yard roofed in, the w.c., which was alongside the oven, opened directly into it, and in another corner was a copper, used for laundry purposes. On my pointing out to the occupier the provisions of the Act, he immediately made such temporary improvements as were possible, and set about looking for more suitable premises. Subsequently, he purchased a large building, which he has converted into an excellent bakehouse, packing rooms, &c., of which he is justly proud; moreover, I understand his business has greatly increased, as he is now able to employ more hands and take more contracts than formerly. One more instance should not be omitted from this report, as it proves that the benefits of the Act are not confined to persons actually working in establishments controlled thereby. It is that of a factory situated in the bush, wherein between thirty and forty persons are engaged, and which, until it was brought within the operation of the Act, was totally unprovided with closet accommodation. In compliance with my instructions, two were erected immediately. On visiting this place later, I found that the employees was subjected to an intolerable nuisance caused by the closets, used by some fifty surface hands at an adjoining colliery, being periodically emptied into a creek which flows through the premises occupied by the factory in question. Having experienced both ocular and olfactory evidence of this, I drew the manager's attention to section 18, subsection 1, which reads, "Every factory and shop shall be kept in a cleanly state, and free from effluvia arising from any drain, earth or water closet, urinal or other nuisance," and requested him to take steps to have it abated. At the same time I wrote drawing the attention of both the Health Officer and the local Inspector of Nuisances to the matter, with the result that the closets at this colliery are now provided with proper pans, which are emptied by the municipal authorities fortnightly.

With regard to sanitary matters in general, I feel that I cannot express myself too strongly in condemnation of the slovenly arrangements, and even criminal neglect, which obtains in some important portions of this district, and it is difficult to believe that the health of the community is not seriously imperilled thereby. The municipal authorities in most of the suburbs of Newcastle have adopted probably the best system of disposing of night-soil which is possible for small communities acting independently, viz., the use of duplicate pans, hermetically sealed, which are changed weekly or fortnightly, in the daytime, without causing offence to public health or decency. They are removed to the outskirts of the various municipalities, emptied, cleansed, and retarred, and the contents buried in trenches. In the city of Newcastle itself, however, of which the inhabitants are never tired of speaking as the second city in the Colony, the privies attached to a large number of factories, shops, and private houses are provided with the old-fashioned pans, which (except in the case of a few of the larger places, where the service is paid for in advance) are only emptied at the request of the occupiers, and on receipt of the somewhat large fee of 9d. In many cases these places are not used by the employers themselves, and, consequently, until their attention is drawn to it, they plead ignorance of their condition; but since the Act was extended here I have endeavoured, and frequently with success, to induce them to pay quarterly or half-yearly in advance, and so relieve themselves, in a measure, of the responsibility. In some portions of the city where a water service is in existence the sewers discharge into the harbour, which is a far from satisfactory state of things.

But if the sanitary arrangements in Newcastle are bad, what can be said of the municipalities of Merewether and Lambton, where no arrangements whatever exist? Some thirty or forty centuries ago Moses commanded the Israelites to bury their refuse *outside* the camp, but the responsible authorities in these benighted places have not yet reached even that degree of sanitary excellence, and though the streets of the latter of these places were lighted with electric light fo-

some

some years, the receptacles in the privies attached to the factories, shops, and private houses consist, in many cases, of kerosene tins, wooden boxes, &c., and each householder has to dispose of the contents as best he or she may, by burial in the few available square feet of back yard or garden. It is hardly conceivable that the aboriginal inhabitants of the district would have countenanced the practice in such close proximity to their gunyahs.

In East and West Maitland, Morpeth, and the many small townships in the district, the old fashioned cesspit is generally in vogue. In West Maitland the municipal council owns a suitable cart which, I understand, is lent free of charge to a man who makes his own arrangements with those requiring his services for the emptying of their pits or pans. As there is so much more space in these places than in the more thickly populated areas in and around Newcastle, this system appears to act fairly well, though, of course, I have sometimes had occasion to complain.

With the exception of some of the tailoring establishments, the question of overcrowding has not proved a very serious one in this district, and I am glad to be able to report that those who were found to be offending in this respect have spared neither expense, nor trouble, in providing the requisite space for their employees. In several cases the occupiers have removed to more suitable premises, and in one instance, where I found eighteen persons working in a room large enough for only ten, their employer leased a similar room in the adjoining premises, and opened archways in the party wall, thus providing ample space and adding considerably to their comfort and convenience. In many of these workrooms I found gas ironheaters, which were the means of vitiating the air to a large extent. These have now all been provided with hoods and flues to carry off the fumes.

Section 19, which deals with the painting or lime-washing of factories and approaches, has been rigidly enforced where necessary. In the case of one extensive building wherein about twenty-five persons are employed, I pointed out that, owing to the way in which the lining boards were ant-eaten, it would be waste of time and money to either lime-wash or paint them, and, on the matter being referred to the owners, I was invited to revisit the place with their architect, who was easily convinced of the necessity of relining the whole of the partitions, and this was eventually done, to the great satisfaction of the occupier, who had vainly endeavoured to persuade them to do it for a long time.

A very large majority of the bakehouses in the district are now in good order and kept spotlessly clean, many of the occupiers lime-washing the walls and ceilings five or six times a year. In several instances, where the walls are composed of slabs of rough timber to which the lime would not adhere satisfactorily, the occupiers were induced to line them on the inside with pine match-boarding, and they are as much pleased with the result as I am.

A difficulty has arisen with regard to a bakehouse situated in one of the outlying townships. The Act directs that every "bakehouse situate within a municipality" shall be lime-washed once in every period of six months. A number of these townships, however, are not incorporated, though that in which this particular bakehouse is situated contains some three thousand inhabitants. However, I requested the occupier to scrape and clean the floor and lime-wash the walls and ceiling of his bakehouse, which was in a disgraceful state of dirt and festooned with cobwebs, and from which a pig and a number of fowls emerged as I entered. This he declined to do, on the ground that the provisions of the Act were not applicable to his case. I subsequently drew the attention of the Health Officer to the matter, with which I believe he dealt. It is satisfactory to be able to report that the two other bakehouses in the township are in excellent order.

Before the Act was extended to this district the fencing of machinery had been almost entirely neglected; and though, as I am informed, accidents were of very frequent occurrence, I have found great difficulty in convincing men who have been brought up amongst it of the risks they run daily; those working in engineers' shops, for instance, appear to look upon the loss of a finger or two almost with indifference, willingly admitting that such accidents are due to their own carelessness.

As was the case in the Metropolitan District, all kinds of objections have been made, on the ground that occupiers did not see the necessity, interference with the workmen, want of space, &c., many even stating that the risks would be considerably increased if certain fencing was insisted on. It has been insisted on, however, and though much yet remains to be done, the flywheels, pulleys, belting, cogwheels, &c., are now for the most part substantially guarded. The machines used for cutting and stamping biscuits are a fruitful source of accident; they are attended to by a large number of lads, and it is the duty of one at each machine to see that the dough does not adhere to the dies, or if it does to remove it with a small stick. They are instructed to have the machine stopped when this becomes necessary; but, loath to cause trouble and delay, one lad recently, having mislaid his stick, attempted the operation with his hand, and had the misfortune to lose a finger in consequence of his rashness. I know of no effective guard for these machines. The bursting of bottles in aerated water factories has caused two accidents during the year—one lad being severely cut in the arm, and another sustaining an injury to one of his eyes, which I fear will prove permanent. It is unfortunate that the wearing of gauntlets and masks is not compulsory. In each of the cases mentioned they were provided but were allowed to hang on a nail.

A serious accident happened early in the year to a lad who, in contravention of the rules of the factory in which he was employed, endeavoured to scramble on to a lift intended for the hoisting of trucks of ore. It was in motion when he made the attempt, and he was badly crushed between it and the framework of the well. There are several similar lifts at this factory, and, in accordance with my instructions, carpenters were engaged in the erection of fences and automatically-closing gates at the time.

In the early part of the year much grumbling was indulged in at the limitation of the working hours of females and lads under 16 to forty-eight per week, as in some trades the hours had previously been greatly in excess of that number. This was not entirely confined to employers, as at one factory where a large number of young women are engaged on piece-work their weekly pay amounts to considerably less than heretofore, though many of them admit that their health has benefited since the change and they would be very unwilling to return to the old order of things. The guardian of one of these girls informed me that previous to the Act coming in force she and others frequently worked from twelve to fourteen hours a day, standing the whole day, and even taking their meals while working, and on returning home at night were unable to remove their boots without assistance on account of the swelling of their ankles. Apart from this particular factory, the dressmakers and tailors were the principal offenders. In the case of the former trade, it is quite the exception in this district to pay the assistants any wage whatever, the usual practice being to take young girls on at nothing a week for two years, nominally to learn the trade, and at the end of that term to replace them with others at the same rate. In spite of this one-sided arrangement, however, the employees did not hesitate to keep their "apprentices" at work for as much as sixty hours per week on some occasions, generously rewarding them with a pair of cheap gloves at Christmas time. I am glad, however, to report that there are a few honorable exceptions to this rule, who have always paid their hands a minimum wage of 2s. 6d. weekly after the first three months, and something extra for overtime. The Act fixes the payment for overtime at the rate of time and a half, but as this rate cannot be applied to those without wages, I have requested all dressmakers to pay at least 1d. per hour for such work. Many of them have, however, overcome the difficulty by employing former "apprentices" at a small wage for a few weeks during the busy seasons, and by this means doing away with the necessity for overtime at all.

No difficulty has arisen with regard to shop hours in this district, as for upwards of thirty years a weekly half-holiday, from 1 o'clock in the afternoon, has been observed in both Newcastle and Maitland, so that the ordinary working hours have not exceeded those allowed by the Act.

Suitable sitting accommodation has now been provided in all shops where females are employed; but I fear it is not availed of to any great extent. Customers are supposed to form a bad opinion of a shop wherein the assistants are seen "loafing," i.e., taking rest, which is a physical necessity, and so the practice is discouraged, if not actually forbidden.

The Chinese factory is conspicuous by its almost total absence in this district. Only two appear on the register, viz., one cabinet-maker, who employs a fellow countryman to assist in polishing, and one laundryman who, having been previously registered in the Metropolitan District, thought it better to be on the safe side when he removed here, as he hopes to employ an assistant shortly.

APPENDICES.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FRIENDLY SOCIETIES AND TRADE UNIONS.

(REPORT OF REGISTRAR OF, FOR YEAR 1898.)

Presented to Parliament, pursuant to sec. 4 of Act No. 31, 1899.

Printed under No. 2 Report from Printing Committee, 28 June, 1900.

The Registrar of Friendly Societies to The Chief Secretary.

THE tabulation of the returns received from Friendly Societies for the year 1897 was completed some time ago, but the preparation of the two accurate copies of so large a mass of figures, for presentation to the Houses of Parliament, has taken time. A few returns could not be obtained, owing to the loss of lodge books, either missing or alleged to be burnt whilst under the charge of a late secretary.

A large proportion of the returns received have required to be sent back, in some cases two or three times, for correction, and, in justice to the secretaries, it must be stated that in every case but one this office has been thanked for drawing attention to the errors which have been acknowledged. In that individual case indignation was expressed; but if this Department had possessed the power, as under the new Act, to examine the books, it is most likely that an error to a considerable amount could have been proved.

A large number of societies have been compelled to reduce their allowance of sick pay, owing to the alarming decrease of their funds. One society actually paid away for sickness more than twice the amount of contributions received.

Many leading members of Friendly Societies have suggested that all societies should be compelled to pay the same rate of contributions; but this is untenable.

The cost of management and medical attendance varies according to the carefulness of the officers, to the locality of the society, and to the supply of duly qualified medical men in the locality.

So far as the rates for sick and funeral benefits are concerned, these must also vary. The actuarial computation can be based, in all cases, upon the same set of tables; but it is of vital importance to take into consideration the rate of interest at which the funds are invested. The average rate earned during 1897 on all Friendly Society funds in New South Wales was only 3·37 per cent., and as the rate of interest, previously assumed for the sake of a general comparison, has been 4 per cent., evidently there must be an adjustment of the varying scales at present in existence.

Still further, to show the impossibility of the employment by all societies of the same scale of contributions to the sick and funeral fund, it may be stated that the rate of interest earned on the funds of the several orders, or groups of societies, has varied during the year 1897 from 1·07 to 4·94 per cent.

5 societies realised less than 2 per cent.
6 " " between 2 and 3 per cent.
4 " " " 3 and 4 "
1 only " nearly 5 per cent.

Another point may be mentioned with regard to the new Friendly Societies Act. At present some societies advertise that they will give new members the same advantages as given in sounder societies at a less rate of contribution than that charged by the latter. This is done to delude young men into bolstering up broken-down societies during the lifetime of the old members who have, by their inadequate subscriptions in the past, brought about the present deplorable condition of affairs. According to the provisions of the new Act, all rates of contributions must be certified by a competent actuary, not as a guarantee that the Government will be made responsible for the solvency of the societies, but as a sign to intending members that due care and skill has been employed. Future success must depend upon their economy and the diligence of their officers.

There are many societies, probably some hundreds, even now, which pretend to work on a contribution of 1s. per week, of which they set apart 6d. for a sick and funeral fund, the proper value of the benefits under that fund varying from 7½d. to 12d. The remaining 6d. is to provide doctor and medicine (the average cost per member of this item ranging in the Manchester Unity from £1 per annum in the Sydney District to £1 8s. in the Riverina District), and, in addition, out of this 6d. the expense of management is to be provided for, the lowest cost of which must be taken at 1½d. per week.

From a return for the year 1898, one branch of a society is proved to consist of twenty-nine members, all above the age of 50 years, which has only £40 of lodge funds, and last year drew the large amount of £187 10s. as funeral money from the district.

As showing the want of interest taken by trustees in regard to investments, it is proved that out of a total amount of Friendly Society funds to the extent of £596,463, only £58,000 has been invested on mortgage, while £338,145 has been left in the Savings Bank.

Trustees.

Trustees, as a rule, are not aware of the importance and responsibility of their position. They think that they are compelled to obey any instructions from the members as to the disposal of the funds under their charge, and they appear to be unaware of their personal liability to make good any deficiency in the funds caused by their wrongful or illegal investment or expenditure. It is pleasing to note, however, that on several occasions trustees have refused to advance moneys at the dictation of their society for various purposes, such, for instance, as for anniversaries, demonstrations, or balls, and in every case which has been brought under notice it has been found that their action was fully justified, and proved that they understood the responsible nature of their charge.

Affiliated Societies.

With regard to the affiliated societies, it appears from the evidence of Mr. Tompkins (then Chief Clerk of the Registry Office) before the Royal Commission, that the definition of "Society," as in section 5 of our recent Act, was originally intended to recognise in some degree their peculiarities. But the first English Registrar, Mr. Tidd Pratt, held that the definition was insufficient, and, of course, his opinion was the official guide; the question, however, does not appear to have ever received any judicial decision. In order, therefore, to settle it definitely, in the English amending Act of 1875 the necessary clauses were enacted.

The real position of members of branches is that they are members of the parent society, which allows them for convenience to meet in various places, instead of insisting on their attendance at the head office.

The Friendly Societies Act, 1899.

The effect of this Act is to repeal the Friendly Societies Act of 1873, so far as relates to Societies which have been or might have been registered under Part III of that Act. That part of the Act of 1873 could not be entirely repealed, as many of its sections are cited under the other parts relating to Building Societies and to Co-operative Trading Societies.

The Act of 1873, now partly repealed, is but a copy of the English Act then in force, without any alteration or correction of its bad wording and incongruities; and in amending it the intention is to place members of Friendly Societies in New South Wales on a similar footing to that occupied in the other portions of the British Empire.

The very unsatisfactory Act of 1873 was, in England, superseded by the Act of 1875, which was the outcome of the searching investigations made by the Royal Commission, which sat from 1870 to 1874. This Commission included, amongst others, such well-known names as Sir Stafford Northcote and Sir Michael Hicks-Beach, and had the advice of the Chancellor of the Exchequer, the President of the Local Government Board, the Secretary to the Post Office, the Assistant Controller of the National Debt Office, the Registrars and Actuaries, and numerous leading officials of Friendly Societies. It recommended certain alterations in the law, and these were embodied in the Act of 1875 (18 and 19 Vic., cap. 63), which, with a few subsequent amendments, resulted in the Consolidated Act of 1896.

This recent Act forms the basis of the present Act of this Colony, of which the principal features are the recognition in law of affiliated Societies with branches, the limitation of the amount of sick pay, the remission of fees on registration, and when required, Government assistance in audits and valuations.

One innovation only of importance has been introduced, viz., the empowering Societies to sue for six months' arrears of contributions; this has been done at the request of the Friendly Societies' Association, many members of which feel very strongly on the point, stating that on occasions members receive sick-pay for the longest period during which their Lodge retains them on the benefit funds, and that they then desert the Society, and refuse to pay up their arrears.

The importance of the measure can be estimated, seeing that at the end of 1897 there were in existence seventeen Orders of Friendly Societies in New South Wales, and twenty-seven single Societies, the total number of registered Lodges, Courts, Tents, &c., being 819, with a membership of 69,124, representing a population of considerably over 300,000 persons, including wives and families entitled to benefit, and an amount of £596,500 of invested funds.

An abstract of the annual returns received from Friendly Societies for the year ending December, 1897, is given in *Appendix A*.

Trade Unions.

Matters in connection with Trade Unions have been very quiet; they are, as a rule, unwilling to show their numerical strength, and in many cases they are only brought under notice by the appearance of banners at the Eight Hours Demonstration. A return compiled from the information available has already been supplied to the Government Statistician, and published in the "Statistical Register." The only registrations in this office during 1898 were eleven amendments of rules, of nine trustees, and of the dissolution of the Balmain Associated Labourers' Union.

A. DAVIS,
Registrar of Friendly Societies.

42, Young-street, Sydney, 20th December, 1899.

COMMISSION.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To our Trusty and Well-beloved—

GEORGE ANDERSON, EDWARD MANN CLARK, JOHN ROWLAND DACEY, JOHN CHARLES LUCAS
FITZPATRICK, RICHARD DENIS MEAGHER, BROUGHTON BARNABAS O'CONNOR, THOMAS
WADDELL, and WILLIAM HENRY WILKS, Esquires, Members of Our Legislative Assembly
of Our Colony of New South Wales,—

Greeting:—

KNOW YOU, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any five or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the case of WILLIAM CRESWELL, at present an inmate of the Parramatta Lunatic Asylum in Our said Colony:

And We do, by these presents, grant to you or any five or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises; and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited; and to inquire of the premises by all lawful ways and means: And Our further will and pleasure is that you do, within three months after the date of this Our Commission, certify to Us, in the Office of Our Chief Secretary, under your or any five or more of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony that they be assistant to you and each of you in the execution of these presents: And We appoint you, the said JOHN CHARLES LUCAS FITZPATRICK, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled "*An Act to regulate the taking of evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

(I.S.) Witness Our Right Trusty and Right Well-beloved Cousin, WILLIAM, EARL BEAUCHAMP,
Knight Commander of Our Most Distinguished Order of St. Michael and St. George, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twelfth day of January, in the year of Our Lord one thousand nine hundred, and in the sixty-third year of Our Reign.

By Deputation from His Excellency,

FREDK. M. DARLEY,
Lieutenant-Governor.

By His Excellency's Command,
JOHN SEE.

Entered on record by me, in Register of Patents No. 21, page 216, this thirteenth day of January, one thousand nine hundred.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

ROYAL COMMISSION ON CASE OF WILLIAM CRESWELL.

MINUTES OF PROCEEDINGS.

WEDNESDAY, 31 JANUARY, 1900.

[*The First Meeting of the Royal Commission appointed to inquire into the Case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present : John Charles Lucas Fitzpatrick, Esq. (President) ; George Anderson, Esq. ; Edward Mann Clark, Esq. ; John Rowland Dacey, Esq. ; Richard Denis Meagher, Esq. ; William Henry Wilks, Esq.

The President announced that Mr. Walter D. White, of the Charities Department, had been appointed Secretary and Shorthand Writer to the Commission.

The Commission under the Great Seal having been read, formal business was discussed.

The Secretary was instructed to write to the Clerk of the Legislative Assembly, asking him to obtain Mr. Speaker's authority for an Officer of the House to attend the next meeting of the Commission, and produce the Progress Report from the Select Committee on the case of William Creswell.

William Marshall, Esq., Estate Agent, was sworn and examined.

The Commission, at 12.40 p.m., adjourned until 11 a.m. on Friday, 2nd February.

FRIDAY, 2 FEBRUARY, 1900.

[*The Second Meeting of the Royal Commission appointed to inquire into the case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present : John Charles Lucas Fitzpatrick, Esq. (President) ; George Anderson, Esq. ; Edward Mann Clark, Esq. ; Richard Denis Meagher, Esq. ; William Henry Wilks, Esq.

The minutes of the previous meeting were read and confirmed.

The following witnesses were sworn and examined :—Richard Aldous Arnold, Esq., Clerk Assistant, Legislative Assembly ; Frederick Norton Manning, Esq., M.D., late Inspector-General of the Insane for New South Wales ; and John Dettmer Dodds Jackson, Esq.

The Commission, at 1.30 p.m., adjourned until 11 a.m. on Tuesday, 6th February.

TUESDAY, 6 FEBRUARY, 1900.

[*The Third Meeting of the Royal Commission appointed to inquire into the case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present : John Charles Lucas Fitzpatrick, Esq. (President) ; George Anderson, Esq. ; Edward Mann Clark, Esq. ; Richard Denis Meagher, Esq. ; Thomas Waddell, Esq. ; William Henry Wilks, Esq.

The minutes of the previous meeting were read and confirmed.

The following witnesses were sworn and examined :—John Dettmer Dodds Jackson, Esq. ; George Hartwell Gifford, Esq., First Assistant Librarian, Public Library of New South Wales ; Charles Elliott, Esq. ; Mrs. Nellie Smithers ; and Mrs. Bridget Wines.

The Commission, at 1.15 p.m., adjourned until 11 a.m. on Tuesday, 13th February.

TUESDAY, 13 FEBRUARY, 1900.

[*The Fourth Meeting of the Royal Commission appointed to inquire into the case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present : John Charles Lucas Fitzpatrick, Esq. (President) ; George Anderson, Esq. ; Edward Mann Clark, Esq. ; John Rowland Dacey, Esq. ; Richard Denis Meagher, Esq. ; William Henry Wilks, Esq.

The patient, William Creswell, was in attendance during the sitting of the Commission.

The minutes of the previous meeting were read and confirmed.

The following witnesses were sworn and examined :—James Robertson Firth, Esq. ; Thomas James Pickburn, Esq., M.D. ; Henry William Devlin, Esq., M.D. ; John Thomas Walker, Esq. ; and Walter Watson, Esq.

The Commission, at 1.40 p.m., adjourned until 11 a.m. on Tuesday, 20th February.

TUESDAY,

TUESDAY, 20 FEBRUARY, 1900.

[*The Fifth Meeting of the Royal Commission appointed to inquire into the case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present: John Charles Lucas Fitzpatrick, Esq. (President); George Anderson, Esq.; Edward Mann Clark, Esq.; Richard Denis Meagher, Esq.; William Henry Wilks, Esq.

The patient, William Creswell, was in attendance during the sitting of the Commission.

The minutes of the previous meeting were read and confirmed.

The Commission decided to summon the Hon. J. N. Brunker, M.P., and Mr. William Kite, of Bathurst, to give evidence at a meeting of the Commission to be held on Tuesday, 27th instant.

Accounts amounting to £8 5s. 2d. were passed for payment.

The following witnesses were sworn and examined:—Mr. Henry William Watts; Mr. Walter Lee; and John Dettmer Dodds Jackson, Esq.

The Commission, at 1:20 p.m., adjourned until 11 a.m. on Tuesday, 27th February.

TUESDAY, 27 FEBRUARY, 1900.

[*The Sixth Meeting of the Royal Commission appointed to inquire into the Case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present: John Charles Lucas Fitzpatrick, Esq. (President); George Anderson, Esq.; Edward Mann Clark, Esq.; John Rowland Dacey, Esq.; Richard Denis Meagher, Esq.; Thomas Waddell, Esq.; William Henry Wilks, Esq.

The patient, William Creswell, was in attendance during the sitting of the Commission.

The minutes of the previous meeting were read and confirmed.

The Secretary reported that the Hon. J. N. Brunker, M.P., had been duly summoned to attend that day's meeting of the Commission.

Accounts amounting to £10 10s. were passed for payment.

The following witnesses were sworn and examined:—Alfred Edwin Hellyer, Esq., Record Clerk, Master-in-Lunacy's Office; William Sutherland Gowen, Esq., Postal Detective, General Post Office; William Raleigh Sayers, Esq., Assistant Accountant, Commercial Banking Company of Sydney; Mr. Eugene Reilly, 211, Crown-street, Woolloomooloo; Mr. Thomas Tant, Macaulay Road, Petersham; William Kite, Esq., Kelso, near Bathurst; Robert Dear, Esq., Tumut; Edward Priestman, Esq.

The Commission deliberated as to the Report to be presented to His Excellency the Governor. The President was requested to prepare a Draft Report for consideration at a future meeting of the Commission.

The Commission, at 2:30 p.m., adjourned.

TUESDAY, 20 MARCH, 1900.

[*The Seventh Meeting of the Royal Commission appointed to inquire into the case of William Creswell was held in No. 3 Committee Room, Legislative Assembly, at 11 a.m.*]

Present: John Charles Lucas Fitzpatrick, Esq. (President); George Anderson, Esq.; Edward Mann Clark, Esq.; Thomas Waddell, Esq.; William Henry Wilks, Esq.

The minutes of the previous meeting were read and confirmed.

An account amounting to £3 10s. was passed for payment.

The Commission proceeded to consider their Draft Report for presentation to His Excellency the Governor.

Clauses 1 to 5 were verbally amended and passed.

Clause 6—Is Creswell the real Sir Roger Tichborne?

Mr. Clark moved, "That the clause stand part of the Report."

The motion was carried upon the following division:—

Ayes, 4.

Mr. J. C. L. Fitzpatrick,
Mr. Anderson,
Mr. Clark,
Mr. Waddell.

Noes, 1.

Mr. Wilks.

Clauses 7 to 9, and the "Decision of the Commission," were passed.

Mr. Wilks moved, "That the Progress Report from the Select Committee on the case of William Creswell be printed and incorporated with the evidence taken by the Royal Commission."

The motion was seconded by Mr. Clark, and passed.

The Report, as amended, was adopted.

The Commission, at 1 p.m., adjourned.

ROYAL COMMISSION ON CASE OF WILLIAM CRESWELL.

REPORT.

To His Excellency the Right Honorable WILLIAM, EARL BEAUCHAMP,
Governor and Commander-in-Chief of the Colony of New South Wales
and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the Commissioners appointed by Your Excellency on the 12th day of January, 1900, to make a diligent and full inquiry into the case of William Creswell, have the honor to submit the following Report :—

First Meeting of the Commission.

1. Owing to the fact that certain of the Members of the Commission were absent from the metropolis when the Commission was issued, it was found impossible to hold the first meeting until Wednesday, 31st January.

Absence of a Member of the Commission.

2. Broughton Barnabas O'Connor, Esq., M.P., appointed a Member of the Commission, was in South Africa at the time the Commission sat, and, therefore, did not attend any of the meetings.

Meetings of the Commission.

3. In all seven meetings of the Commission have been held, the number of witnesses who have given evidence regarding the matter under consideration being twenty-three.

The General Evidence.

4. A large number of persons in this and other colonies have sought to give evidence before your Commission, and discrimination has had to be exercised in order to avoid adding to the mass of conflicting statements made in connection with the Tichborne case. From the first it was seen that much of the testimony so freely offered was of little value. The object the Commission kept in view was to obtain evidence from persons who actually knew the patient during the early years of his residence in New South Wales. The testimony of the various witnesses does not harmonise on all points. On the contrary, it is rather conflicting. For instance, witnesses who knew Creswell in the early sixties assert that he both spoke and wrote French.

French. On the other hand, there are those who are equally positive in stating that Creswell never spoke French. Again; it has been asserted that the patient, who at the time referred to appears to have been a tall, well set up, military-looking man, used to perform the sword exercise, was fond of horses, a good shot and cricketer, generally comporting himself as a gentleman, although being at times eccentric in his demeanour. Witnesses have deposed to his having had a military training, and being "very military in his habits"; while others assert there is nothing about Creswell to lead one to suppose he is of good birth or breeding.

Education and Handwriting of Creswell.

5. In an inquiry such as that instituted by your Commission, consideration was naturally given to the question of the patient's education. This has an important bearing upon the case. The balance of evidence goes to show that Creswell (if he does not possess a knowledge of French), has received a very fair education. Indeed, taking into consideration the period at which he must have been at school—away back in the early forties—it becomes apparent that he received an education which might with reason be presumed to be far in advance of that usually possessed by those belonging to the farming community. The Commission have inspected letters written by him prior to his detention as being of unsound mind, and since he has been at the Asylum. The handwriting in both cases is good, and the language employed altogether in advance of that which would probably be used by a farming man of the period referred to. Experts in caligraphy are of opinion that the letters unquestionably indicate that the man at least had a clerical training. The letters in question have been closely compared with *fac-similes* of the Tichborne signatures. One of the experts noticed a remarkable similarity between the letter "P" in the early writings of Tichborne, and the letter written by Creswell in 1871. The other expert examined was of opinion, after a comparison of the *fac-simile* specimens of the handwriting of Tichborne with the handwriting in the two letters signed by Creswell that they did not agree in character, and were not written by the same hand.

Is Creswell the real Sir Roger Tichborne?

6. It is beyond question that there are those who regard the patient, Creswell, as the real Sir Roger Tichborne. Mr. Luke Cullen, who arrested Creswell at Tumut on a charge of being of unsound mind, has sworn that Arthur Orton told him that Creswell would become one of the wealthiest men in England if he would only stay at home and look after his own property. That was at Wagga, in the early sixties. Later on he saw Creswell in Tumut, and, believing Creswell answered to the description of Tichborne, claimed the £1,000 reward then on offer to anyone finding the whereabouts of Sir Roger. He wrote the then Inspector-General of Police, who replied: "From inquiries I have made I have no doubt whatever that you have pointed out the right man as the long-lost heir, Sir Roger Tichborne, for which you will be entitled to £1,000 reward." Cullen heard nothing further after that, and he has hinted that the official head of the police at that time seemed to hush the thing up. Mr. Marshall, a witness who was well acquainted with Creswell in Gundagai in the sixties, is of opinion that there was a resemblance between the Creswell of that day and the photographs of the ancient race of Tichborne. Further, Mr. Marshall stated his conviction upon oath that the patient is none other than Tichborne. Mrs. Smithers, a daughter of the late Mr. Joseph Eckford, M.L.A., who manifested a deep interest in the case, has declared that on one occasion she went with her father to the Asylum to see Creswell, and while there Mr. Eckford asked the patient to say if he was Sir Roger. To this Creswell made answer: "I will tell you nothing here; get me away and I'll tell you." Mr. Firth, who held a responsible position at the Asylum, "did not think he was Creswell, whom he made himself out to be." Another witness, Mr. Watts, who was employed at Gladesville Asylum at the time of Creswell's sojourn there, believed Creswell to be Tichborne, from a remark he had made

made to the effect that he (the patient) was like "the prodigal son, but never to return." Dr. Manning, who firmly holds that he is Creswell, admits there is a likeness between the photographs of William Creswell and Sir James Tichborne. Dr. H. W. Devlin's impression of Creswell is that he is a most remarkable-looking man, with "aristocratic-looking features, altogether out of the common," his manner being quiet and gentlemanly. Mr. Priestman in his evidence stated his absolute conviction that the Parramatta patient is none other than the long-lost Sir Roger Tichborne. His belief is based upon the fact that the patient made a certain statement to him, which he cannot be prevailed upon to repeat. Further, this witness asserts that Arthur Orton obtained his intimate knowledge of Sir Roger Tichborne's life from Creswell, who confided in him and was betrayed. He considers the patient has been cruelly wronged by unscrupulous persons, and "so foully deceived that his wrongs have sealed his lips as to his identity." Others who have been examined state he is William Creswell, *alias* Smith, and scout the idea of his being Tichborne.

The Medical Evidence.

7. The medical evidence is important. Drs. Pickburn, Devlin, Godson, MacCormick, and Manning have been examined. Drs. Devlin and Pickburn were given a set of questions referring to the natural and accidental marks and peculiarities which were existent on Tichborne. There were fifteen such marks said to be admitted by Lord Chief Justice Cockburn. The Select Committee specially deputed Drs. Pickburn and Devlin to proceed to the Asylum and conduct a personal examination of Creswell. This they did, with the result that twelve similar marks were sworn to exist on the body of the patient. In addition to this, Creswell was brought to Sydney, where, before the members of the Commission, the two medical men pointed out the several marks upon the patient's body. Twelve of the said marks appear to have been accounted for, and the absence of the other three are explainable—viz; the natural shrinkage in height, by reason of advancing years; the absence of tattoo marks, which may have been obliterated; and the lancet cuts on the ankle, which may have become indistinct through the friction and exposure to which the feet are naturally exposed.

Question of the Release of Creswell.

8. The question of obtaining the release of the patient William Creswell from the Hospital for the Insane has been brought prominently before the Commission by Mr. Edward Priestman, a resident of Sydney, who holds power of attorney to take possession of the man either as Tichborne or Creswell. The power of attorney here referred to was given to Mr. Priestman by the Rev. E. Williams, of Isleworth, London, who has interested himself in the case.

It should be stated that Mr. Priestman has for a number of years taken an active interest in matters connected with the famous Tichborne case, his chief reason for so doing being, as he states, his friendship for the late Sir Alfred Tichborne, with whom he was personally acquainted, and also his marked respect for Creswell, whom he believes to be none other than the long-lost heir to the Tichborne estates. In justice to this gentleman, it may be added that he has displayed remarkable tenacity of purpose in producing evidence and furthering what he patently believes to be a righteous cause. Also, Mr. Priestman is prepared to show his *bonâ fides* in the matter by entering into a substantial bond to properly safeguard Creswell's physical and material interests, provided the patient be released to him either as Tichborne or as Creswell. Further, Mr. Priestman informed the Commission on oath that in the event of Creswell's release from the Asylum he will take him to England.

Question of Creswell's Sanity.

9. One of the medical witnesses—Dr. H. W. Devlin—examined before the Select Committee gave it as his opinion that to all appearances Creswell is harmless. Dr. Manning, formerly Inspector-General for the Insane, who gave evidence before the Royal Commission, has stated that the patient is very demented. What particular form that dementia has of late assumed does not appear. Creswell was before the Commission in Sydney on three separate occasions, and the members have had an opportunity of judging as to his sanity or otherwise. Supposing him to be still insane, it cannot be gainsaid that he had remarkably lucid intervals when before the Commission. Some of the questions put to him were promptly answered. On other occasions he declined to speak. Judging from his conduct in Sydney, and at the Asylum, and also from the character given to him by those who have known him for a number of years, he would appear to be quite harmless. He is said to be a reserved man, being somewhat refined in his demeanour and general bearing. In the circumstances it would appear to be difficult to pronounce him as hopelessly insane; indeed it has been asserted that his presumed insanity stops short at eccentricity. It is possible his mental health might be improved by effecting a radical change in his surroundings. Presumably it will be readily admitted that the environment of this man's every day life does not tend to make him saner; on the contrary it may be expected to prolong his present condition mentally.

It is conceivable that were Creswell released from the Asylum and placed under proper control, with kindly treatment and the exercise of care he would benefit by such a change.

Seeing that the State has been put to great expense in maintaining the patient in the Asylum for so long a period, and seeing, further, that the Commission understand that a Sydney resident is willing to take control of him, and enter into a substantial bond for his safe keeping, it would appear best, in the interests of this unfortunate man, as well as of the State, to forthwith terminate the period of his detention.

Further, it will be apparent to your Excellency that if the recommendation of the Commission is given effect to, all future responsibility with regard to the patient will devolve upon those who execute the requisite bond for his safe custody.

DECISION OF THE COMMISSION.

1. The Commission are of opinion that, although it has been contended, and, indeed, sought to be proved, that the patient is the missing heir to the Tichborne Estates, the evidence before them is insufficient to enable them to declare him to be the lost Tichborne; in their opinion, he is William Creswell. This conclusion has been arrived at after careful consideration of the evidence adduced at the inquiry by the Select Committee, and a full consideration of that sworn before the Royal Commission.
2. The inquiries of the Select Committee and the Royal Commission have proved justifiable, as having had the effect of fixing the important and much vexed question of the identity of the patient now an inmate of the Parramatta Lunatic Asylum.
3. With regard to the question of the patient's sanity, the Commission are of opinion that he is of sufficiently sound mind to be released from the Asylum, provided the customary bond for his safe keeping and proper treatment be entered into by the person now seeking to obtain his release.

In

In keeping with this view of the matter, the Commission recommend that it is expedient that the said William Creswell, the subject of their said inquiry, be set at liberty forthwith.

In conclusion, your Commission desire to place on record their appreciation of the able and careful manner in which Mr. Walter D. White, the Secretary and Shorthand-writer to the Commission, has carried out the duties of his office.

We have the honor to be,
Your Excellency's most obedient servants,

J. C. L. FITZPATRICK (President),
GEO. ANDERSON,
EDWARD M. CLARK,
J. R. DACEY,
T. WADDELL,
WILLIAM H. WILKS,

Commissioners.

OBJECTION (BY MR. MEAGHER) TO CLAUSE 3 OF DECISION OF
THE COMMISSION.

As I am satisfied that the subject of this inquiry is no other than William Creswell, and am also satisfied that though perfectly harmless he is afflicted with chronic dementia, and, being of opinion that his present excellent condition of health is attributable to the good care and treatment he is receiving at Parramatta Asylum, I fail to see what good object can be obtained by releasing him to Mr. Priestman (whom, by the way, I regard as thoroughly estimable) or to any other person.

While I appreciate philanthropic motives, there is in evidence an avowed intention to take him to England (Q. 682), in my judgment (based on Mr. Priestman's admission and course of action), for no other purpose than to make Creswell a pivot upon which fresh litigation will be initiated in respect to the claiming of estates in which he has not the remotest interest.

If I had the slightest doubt as to his identity as Creswell, I would readily assent to clause No. 3. Holding this view, I respectfully differ from my fellow Commissioners in respect to the recommendation for release.

R. D. MEAGHER.

WALTER D. WHITE,
Secretary,
Sydney, 31st March, 1900.

ROYAL COMMISSION ON CASE OF WILLIAM CRESWELL.

APPENDIX.

Letter from Mr. Betts, Gladesville Asylum, forwarding extract from Asylum Case-book.	A.
Extract from Case-book, Hospital for the Insane, Parramatta, forwarded by Dr. Godson, Medical Superintendent	B.
Correspondence <i>re</i> Ship "Maid of Judah," &c.	C.
Letter from Mr. Edward Priestman, forwarding Statements and Affidavits	D.

ROYAL COMMISSION ON CASE OF WILLIAM CRESWELL.

MINUTES OF EVIDENCE.

WEDNESDAY, 31 JANUARY, 1900.

[The Commission met in No. 3 Committee Room, Legislative Assembly.]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, Esq. (PRESIDENT).

GEORGE ANDERSON, Esq.

JOHN ROWLAND DACEY, Esq.

EDWARD MANN CLARK, Esq.

RICHARD DENIS MEAGHER, Esq.

WILLIAM HENRY WILKS, Esq.

William Marshall, Esq., estate agent, 2, Australia-street, Newtown, sworn and examined:—

1. *President.*] You have some knowledge of the object this Commission seeks to achieve;—have you any knowledge of the man William Creswell? Yes; I knew him many years ago. W. Marshall, Esq.
2. Where were you residing at that time? At Gundagai.
3. About what year was that? I had better read a short statement I have.
4. The Commission will be glad to hear anything you have to say pertinent to the question? I carried on business as a general storekeeper at the Commercial Stores, Sheridan-street, Gundagai, from the middle of the year 1864 until the beginning of 1870, and during a considerable period of that time the person calling himself William Creswell was often in my store and transacting business, as also freely conversing on different subjects. I may here say that although I was perfectly aware at the time that a mate of Creswell's, later on than the above dates, claimed to be the owner of the Tichborne estates in England. I did not bring any testimony forward as to my knowledge of Creswell or his mate De Castro, or Arthur Orton, as my health at the time of the latter claiming the estates was very much impaired by overwork and financial difficulties in my business. William Creswell always appeared to me to be a better class of man than was to be found in country towns in the years indicated. His language was correct and kindly, and his conversation always good. His manner was a little eccentric at times, inasmuch as he would walk into my store, taking no notice of anyone on the premises until he had reached me at the inner office, when, without comment, he would take from a secret pocket in his clothes his gold watch (which was richly chased), a short gold chain, and seal, as carried in a fob pocket,—the articles being of superior workmanship—lodging same with me, intimating, by sign more than word, that he required cash, sometimes up to £10, returning same to me in one to six months; no writing used or interest charged. He would simply table the money, and seldom spoke at the time half a dozen words, never giving details of his absence, his large lustrous eyes doing what was required according to his view of the matter. His store purchases were always paid for in a similar quiet manner. Creswell borrowed a gun from the store often and would take the dogs belonging to a publican, going away into the hills for a day or two shooting. He was fond of a horse, and was reckoned a good judge of that animal. He would sometimes be in Wagga, Adelong, Tumut, or in the bush, always on the move, his nature being restless at all times, and his mind of an absent turn, not caring to speak or be spoken to. I have a distinct recollection that he hinted several times to me that I would never be sorry for any kindness on my part to him, and that people would know him better in time. These remarks I accepted to be further explained. The people of the township never seemed to me to understand Creswell. He was known by them as "Leather-jacket, the butcher." Having recently seen photographs of the faces of the Tichborne Baronets, I think the resemblance of William Creswell to them—as he appeared thirty years ago—not unlike in certain conduct and facial looks to that of the ancient race of Tichborne. I also produce a photograph of the store I formerly had at Gundagai.
5. *Mr. Wilks.*] Have you at any time taken an active interest in this matter, and, if so, to what extent? No; except through Mr. Priestman calling on me.
6. When was that? About two years ago, when Judge Manning was holding his inquiry.
7. Why did Mr. Priestman call on you? I went to him. I saw something in the papers; I had lived in Gundagai, and thought I would be glad to give any assistance I could about Creswell. I did not give evidence; I was too late in arriving at the court.
8. On this occasion did Mr. Priestman request you to give evidence? No; my action was voluntary.
9. You have spoken of the general demeanour of this gentleman you knew at Gundagai. You have also referred to his characteristics, which appear to have been those of a man who had moved in polite society. That was the impression you formed at the time you saw him? Yes.
10. Not since that date? No. For many years I dropped thinking of him altogether.
11. He did not seek in conversation to make you believe he was an important person. You formed your opinion upon his general bearing? He spoke in a suggestive way, that people would know him better by-and-bye. His bearing made me notice him, also he had a curious style of dress.
12. What do you mean;—can you describe the dress? In those days he wore a snuffy brown coat, more like a shooting coat, and a kind of leather jacket.
13. Was that the costume he generally affected? Yes. His breeches were very tight.

31 Jan., 1900.

W. Marshall,
Esq.
31 Jan., 1900.

14. You spoke about a watch being richly chased? Yes.
15. Was there any inscription on that watch? I have tried to bring it back to my memory, but I cannot quite call to mind that the watch bore an inscription. He would come into my office, place the watch on the table, and say "I want money." In those days gold diggings were breaking out, and if I knew anything about certain persons I would advance them money to open temporary places, such as stores.
16. Those being your trade relations with people in the district, you would naturally be more inquisitive when inspecting a watch such as the one you describe; if there had been an inscription on it, would it not have been strong in your recollection to-day? I cannot say. The watch was a valuable one, worth forty or fifty guineas.
17. Was there a monogram on the outside of the case of the watch? Yes; it was embossed—characters surrounded by scroll work. It looked like a family relic.
18. You only had the watch in your possession in what might be called times of indigency, when the man required a loan on it? Yes.
19. Did you ever have your suspicions aroused as to why a man of that character would have such a valuable watch upon him? I heard the man was of good family, also he was very secretive in his ways; at that time, too, there were bushrangers about.
20. The general impression you had was that he was a man of good family? Yes. He was a man with whom you could not get up a conversation. He was a strange man, and he seemed a mysterious looking person.
21. Did he look like a man of reserved and haughty nature? Yes.
22. What of his eyes; you said they were lustrous. Did you notice any other peculiarity about them? They were blue. He had a twitching about the eyes—that was when he looked firmly at you. He did not look at you long. He might have been nervous. He became insane a few years after that.
23. Have you seen him of late years? Not for thirty-one years.
24. Did you notice any other peculiarity about his features or person? Yes; he had a limp in the leg.
25. Was it very marked? Only when he walked; it would not be generally noticeable. He used to walk about my store as if he had a right to do so. He was always well-conducted and never impertinent.
26. Did it ever occur to you that he had anything on his mind, in short, that he was under a cloud? No. I thought him eccentric, what in my country we would call a little "daft."
27. You said he was fond of shooting. Was he a good shot? He was reckoned to be so.
28. He was looked upon as an enthusiastic sportsman and a good shot? Yes. He used to go out with a Mr. Phillips.
29. Did he ever refer to a military training? I cannot recall that he did.
30. Did you ever hear any remarks as to how he would adjust his stirrups? No.
31. You spoke about Orton; did you know anything about his acquaintance with Orton? I think the man they called Orton, from what I have heard, was the man who was with him in those days as a companion. There was a butcher's shop started on the hill, at the Kimo diggings, and this man Orton bought some cattle from a customer of mine. I did not like Orton. The two men were so dissimilar in manner. I had heard Orton was fond of carousing, and I think Orton over-ruled Creswell.
32. You think that Orton's was the master-mind—was the controlling force of the twain? Yes.
33. Was it your belief that Orton controlled Creswell? Yes. I remember on one occasion when they left my store after some transaction, Orton gave Creswell a black look. I did not like the man, and had a feeling of repulsion towards him.
34. Did your feeling of repulsion lead you to consider that Creswell would like it to be known that Orton had a hold upon him? My opinion then was that when Creswell got money from me, Orton wanted to control him in reference to the money. I did not follow it up, because I did not know anything about Creswell.
35. Did he have many transactions with you in the way of borrowing money, by way of pledging the watch? Three or four transactions.
36. He paid you back what he had borrowed? Yes; kept his word and paid religiously.
37. Did he ever do anything that would lead you to believe that he had remittances from home? No. Several men in those days had remittances from the old country, and I should have recollected it had he been a remittance man.
38. He was not like the average remittance man, then? No.
39. *President.*] Was there any signature of Creswell's in connection with these loans? No.
40. Did you ever have Creswell's signature? I once had it.
41. Would you have any recollection of it;—look at this paper, bearing the signature of William Creswell. Is this his signature (*pointing to the name "William Creswell" on another portion of the document*)? No. That is a photograph of a signature to a marriage certificate. The top signature is very like it. I think, in the first instance I got his signature, I told him I would not deliver up his jewellery unless his signature were produced.
42. *Mr. Meagher.*] In following this case, no doubt you have observed in the newspapers an account of the proceedings of the Select Committee which dealt with this matter? No. Being a business man, I have not had much time to follow it up.
43. Have you seen anything in the *Herald* of late? Nothing but a casual report.
44. You were aware of the trial in England, when Orton claimed the Tichborne estates? Yes.
45. You also know it was alleged that Orton was an imposter, who was endeavouring to obtain those estates? I formed a strong opinion that Orton was not the right man.
46. As an intelligent man, do you know it was possible for your evidence on the subject to have been taken by commission? Yes. But I never followed the thing up; my health was too bad to permit of my doing so at the time. Had I been offered the trip to England, I could not have gone home.
47. Although your health was bad, there would have been no trouble in making a statement about Creswell before a Commissioner for Affidavits in the town you were living in, Gundagai? I was not living in Gundagai then. I was secretary for the late Sydney United Omnibus Company.
48. You were still pursuing your avocation? Yes. It never entered into my mind to take action. It never struck me. I did not believe Creswell was Tichborne at that time.
49. Did you know Orton by any other name? Yes, De Castro.

50. Did it strike you that the man you knew as De Castro, and the man who claimed the Tichborne Estates was identical;—how many De Castros have you heard of in your time? I never heard of another. I thought the two identical. I did not believe that De Castro was Tichborne. W. Marshall,
Esq.
31 Jan., 1900.
51. Well, having that belief in those days that De Castro was identical with the De Castro you knew, did you form any belief that the man whom he had such power over was the right man—that he was a Tichborne? No; not in those days; no, I did not.
52. Have you had any idea that he was Tichborne? Well, I am convinced he is Tichborne.
53. When did you form such an impression? At the time Judge Manning dealt with the application in Lunacy I saw photographs of the male owners of the Tichborne Estate, and when I compared Creswell's face, as I remembered it, with the photographs, I thought the resemblance between Creswell, now in the Asylum, and the old Tichborne faces, very great.
54. That would be about 1897? Yes; two years ago.
55. You say Mr. Priestman called upon you? I got a note from him. I only saw him once.
56. Did he ever show you a book containing photographs of the father and Sir James Tichborne? He showed me several.
57. Do you remember the photographs he showed you of Tichborne's father and the man in the Asylum? Yes. I saw Tichborne's father, his grandfather, and a photograph of Creswell.
58. Were any of those photographs identical with the one you saw in the office of Mr. Wallace, the solicitor. I saw one photograph of Sir Roger when he was a boy. Mr. Priestman was in Mr. Wallace's office with me.
59. You spoke of being ill;—you were never confined to your house the whole time, were you? During the heat of the great inquiry I was ill. My mind was much upset; I had private difficulties.
60. Although you knew this imposter was claiming large estates, you did not come forward on account of private trouble yourself? No.
61. Do you speak French;—have you heard the French language spoken? I do not speak French, but I have heard it spoken.
62. Do you remember this man Creswell expressing himself in a foreign tongue? I believe he did speak French, but it was in a sort of muttering way. Having no one with whom he could converse, he would use certain French expressions, and then go off into English.
63. You are quite clear on this point, that you have heard him speak in a foreign tongue that you took to be French? Yes; quite sure.
64. In regard to Creswell's physical appearance, did you notice any peculiarity about him; was one ear larger than the other? I think that was so. I fancy there was something wrong with the lobe of one of his ears.
65. *Mr. Clark.*] I suppose you were under the impression that if Creswell had been Tichborne at the time of Orton's application in England, he would have disclosed his identity? Yes. Had there been any inkling in my mind that he was the Tichborne claimant, I would have come forward then.
66. If he had laid claim to the estates at that time, it would not have surprised you? No.
67. And you would have supported him? Yes.
68. Was the man Orton illiterate, rough, and uneducated? Yes; a rough, bullying sort of man.
69. When he did lay claim to the estates, you naturally did not give much credence to his statements? No.
70. You never knew Creswell as going under the name of Smith? No, I did not; but that signature on the marriage certificate was like the signature he gave me.
71. You have heard that Creswell, who had been known as Smith, took the name of Creswell before he got married? Yes. I think Creswell had a very cunning manner. He was an eccentric man.
72. *President.*] You were never approached with the object of inducing you to either make an affidavit here, or give evidence in the old country, in connection with the claim of Orton to the estates of the Tichborne family; no suggestion was made by anyone that you should pursue such a course? My brother-in-law, who lives in Gundagai, knowing that I knew Creswell well, said I should take some action.
73. *Mr. Anderson.*] Where is your brother-in-law now? In Gundagai.
74. What is his name? Augustus Jeremias.
75. *Mr. Clark.*] Then you have not seen the man since you left Gundagai? Never.
76. Would you recognise him now? I think I would; his face seems very familiar to my memory.

FRIDAY, 2 FEBRUARY, 1900.

[The Commission met in No. 3 Committee Room, Legislative Assembly.]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, Esq. (PRESIDENT).

GEORGE ANDERSON, Esq.

EDWARD MANN CLARK, Esq.

RICHARD DENIS MEAGHER, Esq.

WILLIAM HENRY WILKS, Esq.

Richard Aldous Arnold, Esq., Clerk Assistant, Legislative Assembly, sworn, and examined:—

77. *President.*] You produce the Progress Report from the Select Committee on the case of William Creswell, together with the proceedings of the Committee and Minutes of Evidence? Yes; I have been requested to do so.

78. Have you any other documents to place before the Commission? Yes; I produce the documents and affidavits, and other papers which were officially placed before the Select Committee by Mr. Hellyer, of the Master in Lunacy's Office.

79. You have no evidence to offer? No.

R. A.
Arnold, Esq.
2 Feb., 1900.

Frederick

Frederick Norton Manning, Esq., M.D., 147, Macquarie-street, Sydney, sworn, and examined :—

F. N.
Manning,
Esq., M.D.
2. Feb., 1900.

80. *President.*] You were Inspector-General of the Insane for the Colony of New South Wales? Yes; I was Medical Superintendent at Gladesville, and after that Inspector-General of the Insane for the Colony.
81. During what years were you associated with Gladesville? From 1868 to 1878.
82. Was it during your official existence that Creswell was admitted into the institution? Yes.
83. Of course you have been brought into contact with him at various times? Yes. I saw a good deal of him when he was a patient under my own care, and I have seen him a good deal since that, after his admission into the Hospital for the Insane at Parramatta.
84. What was the opinion you formed with reference to his mental condition? Oh, he was undoubtedly extremely insane. He was maniacal, and had delusions; my memory for dates is not very good, but I think he must have gone there first some time in 1870 or 1871. Then Creswell got quite well, and was discharged. He came back to the institution again, after an interval of some months, and then he was more chronically insane. After remaining in my care for a considerable time, and being looked upon as incurable, he was sent with other patients to the Hospital for Insane at Parramatta.
85. Of course, in your capacity as Inspector-General, you had repeated applications from persons outside for permission to visit him? Absolutely innumerable applications.
86. You had to shut down upon them? I had to. I had to do that, because of my duty to the patient. These visits annoyed him, and made him worse. Now he has become more or less demented, indeed very demented, and the visits do not irritate him to the extent they formerly did. I have not seen him for two years, perhaps more.
87. Were you present during the examination made by Drs. Fiaschi and McCormick? No, I was not.
88. Were you acquainted with the Dr. Taylor who was associated with Creswell? Yes.
89. There is a suggestion to the effect that he was desirous of obtaining the release of Creswell for the purpose of taking him to England;—what do you think of that? I do not think there was such a suggestion; he could not have taken him without an application to me as Inspector-General, and I think Dr. Taylor kept me informed as to what was going on about the hospital.
90. Have you ever examined Creswell for the purpose of discovering whether certain marks, alleged to have been on the body of Tichborne, were to be found on him? Yes; I examined him on two occasions. First of all, to convince myself that the entries in the case-book gave a fair description of the man; also to satisfy myself if the marks referred to were to be found on the man's body.
91. I suppose it would be making too much of a demand on your recollection to ask if you can give details of your examinations? Well, really I am not able to tell you at all. I am not able to give details. I cannot quite tell you when it was I examined him. I should think it was about four years ago I examined him particularly.
92. You would have no record of that? I have not a paper; all the official papers were left in the office when I vacated it; I have not a document of any kind.
93. With reference to one particular mark—a mark alleged to have been left on the left wrist, at the back of the arm, by recent removal of a tattoo-mark;—have you any recollection of that mark? Oh, yes, quite.
94. Would you be prepared to express an opinion as to whether that scar or mark could have been produced by the removal of a tattoo? I am prepared to state positively that it could not have been produced by the removal of a tattoo.
95. Can you venture to say how that mark originated? It could only originate as the result of some severe wound, following which there would be a considerable amount of suppuration; the whole aspect of the thing was that of, first of all, a severe cut or wound, then an opening in the wound to let out the suppuration on the other side. May I say my attention has been called very particularly to this. When this man recovered, as he did, under my care, it became my duty to ascertain if he was sufficiently well to be discharged, and, for the purpose of ascertaining that, I had frequent conversations with him—as Medical Superintendent, I always did have frequent conversations with the convalescents—and I asked particularly at that time how that wound had been caused. The account I got of it was that it had been caused by a blow from some butcher's instrument, a hanger, I believe, and that it was very bad; that he went up by rail from the part of the country he was then living in, in England, reached the Paddington railway station, and from thence went to St. Mary's Hospital, London, where he was under the care of Mr. Coulson, a well-known surgeon. This exact story was repeated to me many times, and was also repeated to Sir William Manning, at the time he examined Creswell in his private room at the Supreme Court, on which occasion I was present. At the time I was talking to the man, I obtained some little information from him with regard to his past history. This thing would have faded from my memory, except for the fact that it has been constantly recalled by applications for interviews with him, and for his discharge, and recalled also by the fact that for a long time there were letters coming from his supposed relatives in England.
96. Who received those letters? They generally came to Dr. Taylor, and, after his death, to Dr. Godson. Those letters kept before me facts that would otherwise, I have no doubt, have faded altogether from my remembrance. I should say also, that this man told me he was born near Reading, in Berkshire, and that he knew the Duke of Wellington's place, the Strathfieldsaye Estate, which is in the neighbouring county of Hampshire. I remember also, he stated that he expected some property from relatives in England. That was about 1870 or 1871. I gathered it was only a small amount, and that statement was repeated both from letters from the sister, a Mrs. West, I think, who wrote out, and from a man named Creswell, who came out to New South Wales. There was some small family property they expected to get.
97. With reference to this Creswell who came out, Thomas Creswell—you recollect his coming out here? Very well.
98. He made an application for the purpose of securing the man alleged to be his brother? I do not think he made application; I think the application was made by the Ortons, or by a man named Orton, (Charles Orton), and it so happened that Thomas Creswell was here about that time. Creswell expressed no wish to take the man in the Asylum home. Having seen William Creswell, and satisfied himself he was his brother, and seeing that he was well cared for, he had no desire to take him home.
99. There was certainly an application made by some one to take this man home;—you say the application was made by the brothers Orton to take him to England? Yes.

F. N.
Manning,
Esq., M.D.
2 Feb., 1900.

100. That application was refused, and another application was made to take him to England? I am not aware of that.
101. There were some letters you made reference to? Yes; I have seen half-a-dozen of them at one time and other. Some of them were printed in the Parliamentary papers. There were others subsequent to that.
102. Were any replies written by William Creswell to those letters? Not any, so far as I know.
103. Was an application made originally by Joseph Eckford for the release of Creswell, on the ground that he was Arthur Orton;—and was there a subsequent application by Eckford for his release as William Creswell? I was not aware of that.
104. Did you ever come into contact with Eckford? I believe I did. I cannot recall anything definite, however.
105. There is a suggestion to the effect that Eckford was under the impression from the first that this man was really Sir Roger Tichborne;—did he make any such statement to you? There was a suggestion at first that he was Tichborne; but whether made by Eckford I do not know. There were barristers on both sides sent out specially at the time of the trial. Those gentlemen saw Creswell, examined papers, transacted other business, and went back to England. I knew at that time there was a suggestion that he was Tichborne.
106. *Mr. Wilks.*] You said you examined the case-book in connection with Creswell's admission, to see whether the description was accurate, and you found the statement correct? I think it was a fairly accurate description: I do not think it went into minutiae. It might have done.
107. You had before you the well-known schedule of marks? Yes.
108. Did you find any close conformity to the marks enumerated in the schedule? I found that he had very few of the marks which were said to be upon the body of Tichborne. The ears were peculiar, and there was a lump on one instep. So far as my memory serves those were the only marks.
109. We have it that the left ear has a lobe, and the right is altogether devoid of it? I think that is so, I would not be certain.
110. Is that not sufficiently marked for even a casual observer to have noticed it? I cannot say.
111. Then, in regard to the disputed point of the linear scars over the temporal artery,—did you find them there? I do not remember that.
112. Dr. Devlin and Dr. Pickburn state the scar was visible to the naked eye, in the region of the auditory canal, but Dr. Fiaschi and Dr. McCormick did not detect it;—where is the temporal artery? The temporal artery is supposed to be wherever you can feel it coming across the temple. It first goes from the front of the ear to the ridge of the skull—the frontal ridge of the skull.
113. Would you describe it as over the temporal artery if you discovered a scar in that direction? Yes.
114. With regard to the tattoo marks—your impression is that the scar was caused by a cautery? No.
115. Was it the result of a surgical operation? The result of a wound which suppurated, and which had to be properly dealt with by a surgical operation.
116. Even from your first acquaintance with Creswell he adhered to the story of the treatment at St. Mary's Hospital for that wound? Yes. I remember the name of the surgeon very well. I know also the hospital was the nearest he would reach when leaving Paddington railway station.
117. That would prove the correctness of his statement? I think so.
118. I think you said that he was more rational on the first occasion, than on the second time he became a patient? The first attack appeared to be due to drink: after he had been under treatment, with the necessary abstention from drink, he got well, and I discharged him. It was when he was sane that these conversations took place.
119. Was he fairly communicative? He was. Of course I had to gauge his mental capacity and fitness before allowing him to go out.
120. At that period did his conversation revolve around any past history of his own? No; not very much.
121. He did not lead you to believe he had lived in a different sphere of life? No.
122. Did his bearing lead you to believe that he was of good birth and breeding? No. There was nothing about him to lead one to suppose he was what is usually known as a gentleman. His manner was that of a small farmer or tradesman.
123. You spoke of delusions of a maniacal character? Yes.
124. Were those delusions about blood and so forth? Yes. So far as I remember he had what are known technically as delusions of suspicion or fear.
125. There was nothing to be attached to them? No. They passed off when he got the better of the drink.
126. You say Thomas Creswell recognised him as his brother? I did not say he recognised him, but I understood he was perfectly certain he was his brother.
127. Did you get that from Thomas Creswell? No.
128. Was there a family likeness between the two men? Yes; I think there was, but it is a difficult thing to decide as to likenesses.
129. Have you ever compared the likeness of Sir James Tichborne with Creswell? No.
130. Here are two photographs—one is that of Sir James Tichborne, the other that of William Creswell—is there any similarity between them? There is certainly a likeness between the two photographs.
131. We had a likeness of Thomas Creswell? He was a stouter man, different altogether.
132. Then with regard to the twitching and general appearance of the eyes, you would notice them;—were they at all marked? Nothing peculiar about them.
133. Did he speak French? I never heard him speak French; I have never been able to ascertain that he knew French.
134. He did not seem to have any knowledge of French? Absolutely none.
135. *Mr. Meagher.*] In regard to the scar, do you say positively you consider it could not have been caused by cautery? I do say so.
136. After the lapse of a number of years, if a severe cautery had been used, would it not present the appearance you describe? There has evidently been a severing by some instrument of the tissues, and that no cautery could have caused.

F. N.
Manning,
Esq., M.D.
2 Feb., 1900.

137. But would not the consumption of tissues caused by a cautery clumsily used or done, produce such an appearance? It might; but if you were going to use a cautery for the erasure of certain letters, you would not use it in that way.
138. That might be; but would it not be quite compatible with every reasonable suggestion that an amateur could produce such a burn upon his arm as that we have seen? I do not think a man could have stood a cauterisation of that kind.
139. Among the papers before the Commission, there is an extract from the *Daily Telegraph*, dated 17th June, 1895, as follows:—"Speaks French fluently;"—does a similar entry appear in the Asylum case-book? I do not think that appears in the Asylum book. There is a person there who knows a good deal about Creswell. I refer to a Mr. Wharf, one of the attendants; he has seen a good deal of the man.
140. You say that he was discharged and readmitted again? Yes.
141. Do you remember those two barristers who came from England to make certain investigations in connection with the Tichborne case;—had they seen him previous to his first discharge? No; I feel sure not. I do not think the Tichborne case had got to an acute stage until the man was discharged, because if it had I should have asked some questions. I think the Tichborne case cropped up while the man was at large, and before his second admission.
142. Do you remember being furnished with a list of the marks;—I suppose you read the account of the Tichborne trial? Part of it.
143. Do you remember that a suggestion was made that probably the solution of the case rested in the Gladesville Asylum;—did you give attention to the marks referred to at the time of the trial? I cannot say I went into the question then.
144. Did this man impress you as having a military bearing at all? No; certainly not.
145. I mean when you first came into contact with him? No; he did not.
146. In regard to his character of dementia, did you notice that when he was taken away from the Asylum his lucidity seemed to be improved? Well, on the occasion he was taken to see Sir William Manning he was particularly lucid, and Mr. Wharf, whose name I have mentioned, said he had never seen him so lucid. But that is not unusual. The man was aroused for the time being.
147. No doubt the monotony of the man's surroundings would have an effect upon his mental faculties? Well, there is no mental effort as a rule.
148. Do you notice that lunatics often adhere to a most rational story, and repeat it, parrot-like, for years, which may be absolutely without foundation? That might be.
149. Did you, during the interview you had in the Judge's chambers, hear him say he came out to the Colony in the ship "Maid of Judah"? I do not remember.
150. Did he ever tell you that he came to New South Wales in the "Maid of Judah"? No. I never asked the question. One avoided asking such questions thirty years ago, for obvious reasons.
151. But in the early seventies, seeing that some investigation had been made confounding him with Tichborne, I suppose you endeavoured to satisfy yourself as to what truth there was in it? I think my mind was already made up from previous conversations with him. He was sane for all practical purposes at the time I had the conversations with him. I gave all the information I could to the barristers, and let them judge for themselves. Soon after that he went to Parramatta, where Dr. Taylor took a very considerable interest in him.
152. You are satisfied he is Creswell? Yes; quite satisfied.
153. I suppose if you were satisfied he was sane, you would have no objection to the State being relieved of him, and to his being handed over to his people? No, certainly not; though I could not have discharged him whilst insane. He could not have gone out of the Colony whilst insane without the authority of the Supreme Court.
154. As a matter of fact, his first incarceration there was through the drink, and when he recovered you discharged him? Yes.
155. During his second incarceration you observed no suicidal tendency? He is absolutely harmless, and never at any time, as far as I know, has he been dangerous.
156. Did you throw any obstacle in the way when his brother applied for him? I do not think his brother applied.
157. Do you remember a bond being signed for £500 by Joseph Eckford to take him home, under a power of attorney from his brother? No; I do not remember it. Mr. Arthur T. Holroyd was then the Master-in-Lunacy. It is quite within the bounds of possibility that a bond was signed.
158. At any rate, you did not throw any obstacle in the way of his brother receiving him? No.
159. You clearly understand that Eckford was acting on behalf of the brother? I am not sure of that; I am not clear as to Mr. Eckford's position.
160. Do you remember any members of the medical profession applying for permission to see the man on behalf of Mr. Eckford, and being refused? No; I do not.
161. Do you remember Drs. McDonald Kelly and Warren applying for an order to see him, and being refused? I do know orders were refused, but I cannot say those gentlemen's applications were refused. It is quite possible they may have been. Something had to be done; the Chief Secretary endorsed my recommendation that there should be absolute refusals in the case of persons applying to see the man.
162. I suppose you have read the statements in the paper, regarding the discrepancies in the evidence given by Drs. Fiaschi and McCormick, and Drs. Devlin and Pickburn? I understand there is some discrepancy.
163. Two of those doctors swore to the existence of these marks, and the other two say otherwise;—Creswell has some eruptions, or the traces of pustules about his body? Oh; there are little scars that would occur in the case of a man who had knocked about; such often occur in people of advanced age.
164. Have you noticed that when Creswell is talking he becomes cautious and suspicious in his demeanour? Yes; that exists. It is one of the ordinary common forms of the complaint.
165. His behaviour would not lead you to believe that there was something legitimate he had to fear, which was preying on his mind? Oh, no; one sees it daily.
166. *Mr. Clark.*] Were you ever present at any conversation between Creswell, and his reputed brother Thomas Creswell? No.
167. Did you have any conversation with Thomas Creswell? Yes; he came on one or two occasions to my office; I gathered from him that he was convinced the man was his brother.
- 168.

168. Did you, in the course of conversation, ask him any questions in confirmation of the statements made by Creswell? Well; I have no doubt I did, but I cannot give you any definite answer to the question. I ascertained, however, that this man, Thomas Creswell, came from near Reading, in Berkshire, and knew that part of England very well. I know that part of the country well, and arrived at the conclusion that Thomas Creswell did come from that part of England.

F. N.
Manning,
Esq., M. D.
2 Feb., 1900.

169. Did you say the Ortons visited him? I have no knowledge of having seen the Ortons except in Court.

170. Did Creswell show aversion when the name of Orton was mentioned? No.

171. Creswell spoke of "blood," and when the name of Orton was mentioned he said, "There is blood and crime attached to that name"? I do not think any importance could be attached to that.

172. *Mr. Meagher.*] Of course, it is a very limited sphere in an asylum yard to test a man's breeding? Yes.

173. Do you know it has been a matter of talk in the Asylum that this man displays, in comparison with other patients, very refined characteristics—for instance, it has been said that the patients are very fond of tobacco, and will steal it from each other, and do almost anything to obtain it;—is it not a fact that Creswell, although very fond of tobacco, will go without it rather than resort to any mean tricks to obtain it? Yes; I believe that is the case.

174. On the occasion of our meeting him he was handed a glass of liquor. The man would not drink it sitting down, but rose and said, "I thank you," and drank to us;—is it not a fact that this man does possess a rather refined demeanour? Yes; there is some degree of refinement, but not more than I should have expected in a man who had been decently brought up among the lower middle class in England.

175. *President.*] With reference to this statement about his birthplace, are you aware, seeing that Creswell was born in that locality, that the birthplace of the Tichborne and Creswell families would be close together? Yes.

176. With reference to the examination made by Sir William Manning on the occasion of the application by the Ortons, are you aware that the Judge expressed the opinion that Creswell did not bear any resemblance to Thomas Creswell at all, but if he bore any resemblance to any of the parties in the case it was to the Ortons? I think he was impressed with there being some likeness to the Ortons, because one or two of the medical witnesses spoke very strongly on it—Dr. Goode and another.

177. Do you ever recollect Dr. Taylor saying that if he could explain the absence of the tattoo mark it would absolutely convince him that Creswell was Tichborne? No. My impression has always been that Dr. Taylor considered this man to be Creswell. Of course, he interested himself very much in the letters sent from England by Mrs. West. I never heard him express any opinion that the man was Tichborne.

178. *Mr. Meagher.*] You saw Charles Orton? Yes; in Court; there were two of them.

179. Do you really think there was any resemblance between the Ortons and this man in the Asylum? Well, I did not see any resemblance.

180. *Mr. Anderson.*] At the time Creswell was admitted to the Asylum were there any marks of a tattoo visible on him? No.

181. Not on any portion of his body? No. I believe they certainly would have been put into the case-book had they been there.

182. Were there any special marks in the place where the tattoo should have been? No; the question of tattoo marks in relation to the Tichborne case had not cropped up when I first saw him.

183. Did you see him between the times of his admission? No.

Mr. John Dettmer Dodds Jackson, 12, Denham-street, Glebe, sworn, and examined:—

184. *President.*] What occupation are you? A pianoforte-maker.

185. Will you kindly give to the Commission such evidence as is important to the subject of their inquiry? I have spent thirty years over this matter.

Mr. J. D. D.
Jackson.
2 Feb., 1900.

186. Have you any knowledge of Creswell? Yes; I saw him on the 9th November, 1876, in the presence of Dr. Taylor, at Parramatta, and a Mr. Pass.

187. Had you seen him prior to that? Never saw him before to my knowledge.

188. Had you any acquaintance with Orton, or with any of the parties concerned in the Tichborne case? Yes; I knew Arthur Orton well.

189. Where? In Launceston, Tasmania.

190. What year was that? In 1855 and 1856.

191. What object had you in going to the Asylum to see Creswell? Because I had received information that the Ortons were coming out to identify him as Arthur Orton, and there was £1,000 offered for Arthur Orton at that time.

192. And when you saw him? He was brought out by the warders, and I said to Dr. Taylor, "He is not Arthur Orton nor Tichborne."

193. Did you know Tichborne? Yes; he was living with Arthur Orton in Launceston, Tasmania. He was at my house daily, and I was out with him night after night.

194. When did you last see Orton and last see Tichborne? I last saw Orton some time in 1856. I have never seen him since that time.

195. Then your contention is that the man in the Asylum is neither Tichborne nor Orton? Yes; that is so.

196. *Mr. Clark.*] Arthur Orton and Tichborne were companions when you knew them? Yes; they lived together in the same house—the "Royal Oak," kept by Mary Ann Tredgett.

197. Did you ever learn, later on, what became of Tichborne? He went home in 1864; I have letters from him. He went under an assumed name. He went under the name of Edward Caleb Souper. He did not sign himself Tichborne; he did not want it to be known that he was Tichborne; but there was no secret about it in Launceston.

198. Are you aware that correspondence passed between a number of individuals in Tasmania and Souper, and that he was written to, and told there were those in the Colony who contended he was Tichborne, and that he denied that he was Tichborne, or had any connection with the family? Yes; I am aware of that. I wrote him about it, and he replied and told me I was a liar.

- Mr. J. D. D. Jackson. 199. Have you any letters with you? Yes; I have here a diagram which I will show the Commission. It represents the arm and hand of Tichborne with the tattoo mark on the left forearm. [*Diagram produced.*]
 2 Feb., 1900. 200. Have you any letters from Souper? Yes; I will read one I have with me. It was written to a friend and refers to me:—

My dear Sir,

Withdeane Court, near Brighton, 22 August, 1878.

I was surprised, though not a little pleased, to see your well-remembered hand, subscribed to your letter of the 30th June last.

The purport, however, of your communication was not so pleasant. It is not the first time that that fellow, Jackson, has uttered his incomprehensible and idiotic falsehood about his having known me in Tasmania as Sir Roger Tichborne. From first to last, in everything he affirms, to use plain language, he lies, and I am utterly at a loss to conceive what can be his object. Not only does he lie in saying I was ever introduced to him as Sir Roger, but I can unhesitatingly assert no other person ever was.

Supposing for one moment he is confounding me with some one else, no such event could have occurred without its being known to dozens as well known to myself as to Jackson, and I certainly never heard of the name of Sir Roger (nor do I believe did anyone else in Tasmania) until the great trial took place in England, years after I had left the colonies.

From 1837 to 1865 I was known in the various colonies I visited as E. C. Souper, and as no one else—so I was known to you and others in Sydney, and I don't think there was anything mysterious about me. It really seems absurd that I should enter into any statements, and should not have noticed Mr. Jackson's insane letter but out of courtesy to yourself.

I enclose a letter from Lady Ogle, and a certificate from Dr. Carter, who has known me ever since my return to England, and as Mr. Jackson is an adept at fabrication, and might deny ever having received such communication, I think it would be wise if you would kindly read them to him, retaining them, however, in your own possession.

I shall write him a short letter referring him to you.

I hope you are prospering in Sydney, and your brother—I am not quite clear which one you are, but I shall be pleased to hear from you again. I have been ill almost continuously since I came home, but trust I may live to hear Mr. Jackson's mouth has been effectually "shut up."

Believe me, with very best wishes,

Yours very sincerely,

EDWARD C. SOUPER.

201. *President.*] Then you say that this Souper who wrote that letter is identical with the individual whom you claim to be Roger Tichborne, and whom you knew in Tasmania? Yes. I swear it; Tichborne took the name of Souper; he was very cunning; he didn't want anybody to know who he really was. He was cunning, astute, and inflexible.

202. Souper was introduced to you as Sir Roger Tichborne? Yes.

203. By whom? Mr. Robert Clabburn, a dentist over there; I said, "By Jove, that brings me close home again," as I knew Tichborne-street in London.

204. Are you still convinced, despite this letter from Souper, that he is Tichborne, although he distinctly states he is not? Yes; of course I am; I have a picture of Tichborne here; it is taken from a Santiago daguerrotype; he had lobeless ears.

205. What were Souper's eyes like? Greyish blue, with thick heavy eyebrows. He only assumed the name of Souper.

206. *Mr. Wilks.*] What occupation did he follow? He taught French; he was married, too.

207. Did he admit that he was Tichborne to you? Yes. He said he was Tichborne when I was introduced to him. He spoke with French accent; he used to drink; it was only when he was drunk that he used to call himself Tichborne; he knew a little Spanish.

208. *Mr. Clark.*] Orton spoke Spanish? Oh, yes, better than I can. I speak a little Portuguese.

209. *Mr. Wilks.*] What sort of a man was Orton? A big man.

210. Did he seem to have control over Souper? Yes; we used to call them a pair of hermaphrodites.

211. *President.*] You have other letters from him? Oh, yes; when I wrote Souper at Lady Ogle's, I was under the impression he was her secretary, and that he had gone to manage the estate for Lady Ogle.

212. You wrote to Lady Ogle? Yes. I have another letter from the real Tichborne, who still signs himself Souper.

213. You have published a pamphlet concerning this case? Yes.

214. Will you oblige the Commission by letting them have a copy? I will. I may say I am only anxious that this matter should be investigated, because this Souper is the real man. I also remember that this real Souper was charged at the Criminal Sessions, Melbourne, with horse-stealing. He was found not guilty, and discharged; that was some years ago, in April, 1854.

215. You saw Thomas Creswell when he was out here? When Creswell's brother came out here, I called on him, and told him my position. He said, "You are quite right, William Creswell is my brother." I had two or three interviews with Thomas Creswell.

216. *Mr. Clark.*] Did you notice any likeness between Thomas Creswell and the man in the Asylum? Yes; I said to Thomas Creswell, "Well, look here, had you told me you were not his brother, I would not have believed you, because I never saw two men with such remarkable blue eyes."

* NOTE (on revision):—Sir Roger Tichborne's introduction to J. D. D. Jackson.—In explanation, my most intimate friend in Launceston, Tasmania, was a Mr. Robert Clabburn, the dentist. It was our usual habit to visit each other daily. When Clabburn was not at my house I, in all probability, would be at his house. One morning, about 9 o'clock, I went to Clabburn's house, and on going into the back parlour, Clabburn, who was standing with his back toward the fireplace, exclaimed, "Hullo, Jack, allow me to introduce Sir Roger Tichborne to you—my noble Sir Roger Tichborne. There's a name for you; there he is," pointing to Souper, who was lying upon three chairs with both hands under his head. For the moment I was confused and wondered what it all meant, saying at the same time, "By Jove, the sound of that name takes me close home. I have never heard that name mentioned since I have been in the colonies" (I lived close to Tichborne-street in London), and I immediately went over to the other side of the room where Souper was lying with his eyes closed, and taking hold of his right leg, nearly pulled him (Souper) off the chairs upon which he lay stretched out at full length, saying at the same time, "Hullo, old chap! what have they been doing to you?" He (Souper) opened his eyes and said, "It—is—all—right. It—is—all—right." Thinking there had been a quarrel during the previous night, I said to Clabburn, "I cannot stay, I have business to attend to—will see you in the afternoon." Between 4 and 5 o'clock in the afternoon I called at Clabburn's house, as I felt curious to know what had happened to Souper. Clabburn said, "O, Jack, you should have been here last night. We were having 'a go in' at the old game. There was my noble Sir Roger Tichborne, Evan Roberts, Arthur Orton, the ship chandler, and one or two others. They got at their 'hanky-panky' work (cheating at cards). I caught Evan Roberts in the act, and I let him have it right in the eye—painting him for a week or two." I saw during the week perhaps two or three times Evan Roberts in the streets with his eye bandaged, showing he must have had a heavy blow on his eye. Clabburn told me that there had been a terrible row. Souper (Tichborne) became very indignant, and said he was the son of an English nobleman and belonged to the aristocracy of England, and if he (Tichborne) chose to open his mouth he could buy up all Launceston, and when his father died he would inherit the title and estates and be Sir Roger Tichborne.

TUESDAY,

TUESDAY, 6 FEBRUARY, 1900.

[The Commission met in No. 3 Committee Room, Legislative Assembly.]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, Esq. (PRESIDENT).

GEORGE ANDERSON, Esq.

EDWARD MANN CLARK, Esq.

RICHARD DENIS MEAGHER, Esq.

THOMAS WADDELL, Esq.

WILLIAM HENRY WILKS, Esq.

Mr. John Dettmer Dodds Jackson, 12, Denham-street, Glebe, sworn, and further examined:—

217. *President.*] I believe you have attended here to-day for the purpose of handing in certain documents in connection with the evidence you have already given, and to the publication of which you attach much importance? Yes. I have had printed a pamphlet, entitled "The Discovery of Sir Roger Charles Doughty Tichborne, *alias* Edward Caleb Souper, secretary to Lady Ogle, of Witheane Court, near Brighton, Sussex, England, and his Confederates."* It explains the action I have taken for a number of years past; I have spent a good deal of money in the hope of having the matter settled, and thought I might be of service to the Commission. I have here a letter written by this Edward Caleb Souper—whom I know to be the real man—to a Mr. Sandon; I will read it. It is as follows:—

Mr. J. D. D.
Jackson.
6 Feb., 1900.

My dear Sandon,

Hobart Town, V. D. Land, 22nd May, 1855.

After a pleasant run of three days I arrived here at the wharf, about 3 o'clock in the morning, thus missing, as I did at Sydney, a view of the river, which, I understand, was really a loss; and I can well imagine it to be so if the view along its shores is equal to those in the neighbourhood of the town. Although arriving at that early hour, and unable to land until 8 o'clock, the very liberal regulations of the company to whom the "Tasmania" belongs do not admit of breakfast or any other meal being prepared on board after the anchor is dropped or the ship brought alongside the wharf. If the arrival should take place at any reasonable hour, I do not imagine that any passenger, however poor, would prefer remaining on board; but I thought it extremely mean that not even a cup of coffee could be had during the many hours we were obliged to await permission to land. Treading terra firma, however, once more, and hunting up an eating-house, at a cost of 1s. 6d. I got anything but a pleasant meal. I set out on my travels in search of cheap lodgings, up one street, down another, poking into by-ways, half up to Heaven in trying to find the address of a place at New Town, with running up the face of a "Mighty Hill" then down to the bottomless pit almost; amongst a row of cottages that appeared to have rolled down the opposite hill, and by accident—not broken—had lighted on their right ends; in short, I wandered the whole day, until the painful truth was forced upon me that, as far as lodgings were concerned, Hobart Town was every penny as dear, if not more so, than Sydney. I could find nothing under 30s. a week, and this I have been paying since my arrival, as long as my small means lasted (I am now on tick); but with the exception of the people and the extreme cleanliness of the place, there is every other objection—neighbourhood and neighbours, grub, &c., &c. Any move for the better would cost from £2 to £2 10s. Clothing, washing, provisions, rent, wages (excepting the factory girls), I am informed, are all fully as high as at Sydney. And in such instances, where I have inquired for my own purposes, I have found it so. I am still paying 5s. a dozen to the laundress. All this is very disheartening.

On the day after my arrival I called at Government House with my letters. The Private Secretary, who is a very gentlemanly man, received me as a brother chip; he assured me I could not have arrived at a more unfortunate time. Every department of the Service had been or was being reduced, and that those who were affected by the retrenchment system would, of course, in the event of any future emergency, have prior claims to a stranger; still, he would place my name on the list and submit my papers to the Governor. I told him I was ready and anxious to take *anything* so long as it was not too subordinate to admit of my rising higher. A few days after I received a letter from the Colonial Secretary (with whom I had also had an interview) informing me His Excellency would be glad to avail himself of my services whenever an opportunity offered, which, as an old official, I knew how much to value. I have also sent in copies of my papers to the Clerk of the Council, whom I found, in a conversation I had with him, was an old friend of my old friend, Governor Hutt, and a fellow collegian with him and his brother, W. Hutt, M.P. I am much afraid, however, of danger in this quarter. Forgetting for a moment, in the warmth of confabbing with one so intimate with Mr. Hutt, I mentioned that Mr. Merewether was very nearly going out to the Swan with Mr. Hutt as Private Secretary, and I felt my blood run cold as Mr. Henslow (the name of the gentleman I am referring to) told me that he, the Hutts, and Merewether were all mutual acquaintances. Now, if they—Henslow and Merewether—correspond, and the former should by any chance refer to me, I am, *indeed, undone*. Altogether, my position is a most painful and dangerous one here. I have but 1s. 6d. left, owe a fortnight's lodging, have scarcely a hope of employment in any shape, with the *dread of discovery hourly hanging over me*, unable to move in any direction but upwards, if I could only seduce a dealer out of a pound or two of gunpowder. As you may imagine, I am wretchedly low, and last week really frightened the inmates here. I could not touch food, though they tried to tempt me—got into my place where I could be alone, thoroughly miserable, cut up and cast down. What in the name of God I shall do I cannot say. My appearance is against my finding an existence as a labourer—my sort are not wanted. I have offered all round the town to do anything, everything, for bread and shelter; but the very name of poverty is enough to shut me out of every house, and, what is worse, every hope of earning a livelihood. To-day I was going to see the Governor, but he had just received news of his brother's death, and was not visible, *so one more night of wretched sleepless anxiety and despair* (sic). Oh, my God, how bitterly do I judge and condemn myself! Alas! too late, too late! is the fatal cry of thousands when *remorse and suffering* follow the commission of wrong. Could I, *by my warning and example, but save one erring, unhappy wretch* from treading in my steps, I might, on my death-bed, have one green spot *in my desert life of folly and error, to look back upon—if I can I will, though I lay bare my shame*. Should anything turn up I will write. I remember gratefully all *your* kindness; you have a noble heart, Sandon, and I fervently wish you every success and happiness. Remember me kindly to your brother; the others will not care for me. I received a letter from Mrs. Smith—certainly a very kind one—to which I have replied by this mail. She has friends here, but with a consideration I had no right to expect, she says she does not wish to make my circumstances or conduct known to them by placing my debt to her in their hands for recovery. I have thanked her to the best of my power, and I can only assure her, as I do myself most sincerely and truly, that I will do everything that lies in my power to pay, pay, pay. I shall never know peace until I have accomplished this great end.

I suffer very much from the cold. You cannot conceive what it is, especially to one who has for so many years resided in a warmer climate, and moving latterly from warmer to warmer. I wish I could move to a snug berth in *Walmer Castle*, and then it might snow and blow till all was blue. Mount Wellington—just at the back of the town—has for many days been covered with snow, apparently to a considerable depth; and by way of warming myself I have been reading (as something new) Parry's "Voyages to the North Pole," something in the same spirit as a hungry devil will pore over a cookery book. Comfortable, is it not? I ought to explain that 30s. a week does not provide a fire in the sitting-room. I am

NOTE (on revision).—At the time I wrote the pamphlet, I was under the impression that the fictitious Souper was really the late Lady Ogle's secretary, and had the Chief Commissioner of Police in England replied to my first letter (which unquestionably he should have done), I could have given him further information, as I had received a letter from Dr. Carter (Lady Ogle's family doctor) in the meantime, and found that I had been imposed upon by the spurious "Souper," and that the genuine Souper, formerly of West Australia, was "Souper's" (Tichborne's) confederate in the conspiracy.

Mr. J. D. D. Jackson. am at times quite blue with cold, and if any old chum could only at that critical moment drop in and give me a good drubbing for past misdeeds, I should present a most noticeable appearance of a piebald, half-scraped nigger. Well, time, paper, and subject say stop! You have doubtless ere this wished me at the devil. (I am going, my good fellow). Write by Melbourne if you have no direct steamer at hand; the "Tasmania" is the only one on this line. Tell me all you know. Conceal nothing; it is better I should know all if anything does occur. Did you get the 10s. from the old cock where I last stayed? Say a kind word for me to Mason if you think he would care to know I esteemed him much—indeed I did so all—but things are not as they used to was. Jopplin was a real good fellow, and Edward Drewitt, and if I bored him or any of them I deeply lament it. God knows I suffer much. Good night, my dear Sandon; from my heart, believe me, I wish you every good. I shall never forget your generous, feeling kindness.

Yours very faithfully,
EDWARD C. SOUPER.

218. That letter is, you say, from Souper? Yes, the well-remembered Mr. Souper, who was known to me as Sir Roger Tichborne, and on whose left fore-arm was deeply tattooed an anchor, a cross, a heart, the letters "K.C.T.," and a tattooed blotch near the wrist. These tattooed marks were seen by me, and by other persons still living in Tasmania.

219. Anything further? Yes. I will give the Commission a description of Souper when in Launceston, in 1855:—Souper was a tall, lean, bony-built man, of very sallow complexion; his height about 5 ft. 9 in.; age, perhaps, 26 or 27; his hair very dark and straight, cut short; his eyes were greyish blue, rather full and dreamy; eyebrows and moustache were very dark, almost black; his nose was aquiline, with well-distended nostrils. His ears were well marked by not having detached lobes, the bottom part of each ear being closely attached to each cheek; he had a round determined chin, and the middle part of his upper lip slightly protruded. When standing his shoulders appeared somewhat high, and his head posed slightly to the left side. His hands exhibited bony knuckles; on his left fore-arm were deeply tattooed (crosswise) an anchor, a cross, and a heart, and "R.C.T." (lengthwise), and a tattooed blotch near the wrist; his legs were slender and straight, but, from a side view, seemed a little bent forward at the knees. He was usually attired in a black surtout coat, buttoned at the waist, wore a black silk hat, inclined a little forward as if to shade the eyes; and he had a peculiar unobtrusive walk. He spoke good English, but with French accent, and his voice was feeble. His manner was insinuating and of a gentlemanly demeanour. At times he was very melancholy, and seemed as if something greatly troubled him. He was an incessant smoker, and was not rendered incapable by small quantities of sprits. Occasionally he sang French songs. In my shop in Patterson-street, he, at different times, played a French horn, a post horn, a call bugle, and, particularly, an eight-keyed copper bugle—the only one I had. There was another coincidence: Souper wore, concealed under his shirt, suspended from his neck by a string, a piece of substance somewhat of an oval shape, a little over an inch in length, and about half an inch in thickness, covered with a dirty white material, like the end of a thumb of a soiled kid glove. He told me that it had been given to him in Paris. I afterwards heard that it was a piece of Jesus' cross.

220. You have some other documents? I have here an important document in support of my evidence. It is the sworn affidavit of Annie Shillington, of Zeehan, Tasmania, as follows:—

In the Supreme Court of New South Wales. In Lunacy.

In the matter of William Creswell, and in the matter of the Lunacy Acts of 1879-93, and the Lunacy Act of 1894.

And in the matter of the application of Edward Priestman.

On this twenty-ninth day of July, one thousand eight hundred and ninety-seven, Annie Shillington, of Zeehan, in the Colony of Tasmania, being duly sworn, maketh oath and saith as follows:—

1. I am the person referred to as the wife of Robert Clabburn.
2. In the year one thousand eight hundred and fifty-six I was living in Launceston, Tasmania, and became acquainted with Robert Clabburn and Edward Souper, through meeting them on many occasions at socials.
3. In the same year I married Robert Clabburn in Launceston, in Tasmania, who was a dentist.
4. For the following two years Edward Souper was a constant visitor at our house, and became acquainted with my sister, Elizabeth Bland.
5. When I first became acquainted with Edward Souper I knew him by no other name, and shortly after I was married my husband always addressed him as "Sir Roger" and "Sir Roger Tichborne."
6. He often washed his hands at our house, and used to turn his shirt sleeves up to his elbows, and on several occasions I noticed tattooed marks on his left arm on the inner surface. I cannot remember what they represented; one mark was below the elbow and the other just above wrist, and I said to him, "What did you put those marks on your arm for?" and he replied, "Only for mischief." He seemed ashamed of them.
7. He was a tall man, sallow complexion, slight build, dark skin, prominent nose, black whiskers. Well educated, of good address, could speak several languages. Was fond of talking about astronomy; fond of piano-playing and singing; addicted to drink.
8. He was in the habit of receiving remittances of money out from England, and said it was a Lady Ogilvy (Ogle?) sent it out. I do not know Lady Ogilvy's (Ogle's?) address.
9. He often told us about his travels to different parts of the world, and on one occasion the ship he was on caught fire, and all his things burnt.
10. He had peculiar shaped ears; the bottom part seemed to be close in to his cheek.
11. About the year one thousand eight hundred and fifty-eight he left Launceston for Port Sorrell, as tutor to a Mr. Hall there, and afterwards married my sister, who only lived seven or eight months, and died.
12. He then left and went to Melbourne, and I received a letter from him stating he was going to sail for England. That was the last I heard from him.
13. If I could see his photo. I feel sure I could recognise him.
14. He was a Roman Catholic.

Sworn by the deponent on the day first above-mentioned, }
at Zeehan, in Tasmania, before me, — }

ANNIE SHILLINGTON.

C. EATON BROWN,

A Commissioner of the Supreme Court of New South Wales for taking Affidavits in the Colony of Tasmania.

Also, there are two letters I should like to read. They are as follows:—

Sir, Lunatic Asylum, Parramatta, 8 February, 1877.
Concerning the lunatic patient named Creswell under my care, I have to state,—
1stly. That a Mr. Lock upon two occasions in September, 1876, visited this man by permission of the Colonial Secretary.
2ndly. That he has no letters or figures whatever tattooed upon either arm.
3rdly. His ears are not pierced.
Yours faithfully,
J. D. D. Jackson, Esq., CHAS. TAYLOR, M.D., &c.,
114, Stanley-street, Sydney. Medical Superintendent.

Sir,

Sir,

Lunatic Asylum, Parramatta, 26 September, 1877.

Mr. J. D. D.
Jackson.

In reply to your letter of the 25th instant respecting the patient Creswell, I beg to state,—

1stly. That Mrs. Jury left here expressing her conviction that Creswell was not her brother, Arthur Orton.

2ndly. I have received no information concerning this patient's removal to England.

3rdly. All marks, scars, &c., upon the person of this man are well known, and in the event of his removal will be carefully and officially recorded.

Yours very truly,

CHAS. TAYLOR, M.D.,

Medical Superintendent.

J. D. D. Jackson, Esq.,
Sydney.

6 Feb., 1900.

221. Is that all your evidence? I think that is all I have to say. I consider those letters of very great importance, and I have to request that the Commission will cause them to be printed and attached to my evidence.

George Hartwell Gifford, Esq., First Assistant Librarian, Public Library of New South Wales, sworn, and examined:—

222. *President.*] As an officer of the Public Library of New South Wales, you have attended for the purpose of producing for the use of the Commission certain volumes having reference to the Tichborne trial? Yes.

G. H.
Gifford, Esq.

223. Will you enumerate the volumes referred to? They are:—1. Kenealy's "The Trial at Bar of Sir Roger C. D. Tichborne, Bart.," 9 vols.; 2. "Charge of the Lord Chief Justice of England—the Queen against Thomas Castro," 2 vols.; 3. "The Tichborne Romance, &c.," 1 vol.; 4. "The Tichborne Trial: The Summing-up by the Lord Chief Justice of England," 1 vol.

6 Feb., 1900.

224. You have no evidence to offer? No.

Mr. Charles Elliott, 14, Victoria-place, off Liverpool-street, Sydney, sworn, and examined:—

225. *President.*] I understand you have some documents you desire to produce for the information of the Committee? Yes; first of all, I have a letter from Miss G. Baring, sister to the Baring Brothers, England, the great bankers.

Mr.
C. Elliott.

226. How did it come into your possession? I wrote to Miss Baring, enclosing a letter to Castro, knowing she had his address.

6 Feb., 1900.

227. Will you please read the letter? Yes.

Sir,

Elm-place, Surbiton, Surrey, England, 10 June, 1890.

I have received a letter enclosing a letter from yourself to the claimant, as "Tom Castro." I am sorry to be obliged to decline steps. In regard to that letter it is considered better that he should not communicate with any who might give evidence. His case is almost perfect. If you can give the date of the period of time you were connected with him—"Thomas Castro"—at Wagga Wagga, it must be by sworn document. Your address leads me to suppose that you reside near Melbourne. Mr. H. H. Browne, chemist, of Park-street, South Melbourne, would doubtless receive any communications from you with pleasure, as he is a staunch friend in the cause, and himself a witness of the highest importance.

Yours truly,

G. BARING.

Mr. Charles Elliott.

228. Anything else? Yes. I remember that Mr. Brown, a chemist, specially came from Melbourne to interview Creswell, the lunatic. I think that was during the time of the Robertson Ministry. Creswell had cut his arm in Launceston, and Mr. Brown stitched it up. When he came here he recognised Creswell at Parramatta. Mr. Brown was positive the man in the Asylum was Creswell, and not Tichborne. I desire to put in a declaration, sworn by myself, touching the matter of Tom Castro; also a declaration from Hannah Keppel, or Keppie, as the name is properly spelt:—

DECLARATION OF CHARLES ELLIOTT.

This is the sworn testimony of me, Charles Elliott, residing at Mewburn, Yarra Glen, Victoria, Australia.

I, CHARLES ELLIOTT, first became acquainted with Tom Castro (*alias* Thomas Castro) at Sale, in Gippsland, Victoria, in or about the middle of the year 1854; he was then in the employ of Mr. John Foster, or Forster, of the Boisdale Station, near Sale, Gippsland, Victoria. As a stockman, I had many opportunities of seeing him, and often in the township of Sale; also at Medburn Park, the adjoining station, owned by a Mr. Johnson. I was working with him at the same time and place, and often observed "Castro," "the new chum," as the Colonials used to say. Young Castro could throw the lasso well, a practice he learned in America, from whence he assumed the name of Castro, or "De Castro," for reasons of his own. Some time after I left Sale we met again at Deniliquin, New South Wales, when and where we renewed our acquaintance; we then boarded at Charles Lucas's boarding house, and were room mates for a long time. That was in the years 1862, 1863, long before he, the claimant, became publicly known as "Roger Tichborne." Our landlord, Charles Lucas, knew him to be a baronet's son from some remarks made to him by Tichborne, and Lucas himself coming from the same neighbourhood as the Tichborne Estates, took great interest; it was Charles Lucas who taught him ("Castro") what he knew about butchering when Lucas kept a butchering establishment himself in Deniliquin, on the Edwards River—this was before either of us went to live at Wagga Wagga. We often compared notes together, because Thomas Castro and myself had both been in Spanish countries. Many a time he (Castro) corrected me in my bad Spanish, as he spoke the pure Castilian. He also told me about his having been in the British Army in a Cavalry Regiment. I myself had seen some service in a mounted regiment in the United States of America. We had often argued about the difference in the drill exercise. He (Castro) confided in me many incidents of his boyhood travels at home; often and often did I advise him to write to his mother, "Lady Tichborne," if no one else; but no, he would say, "I will go home some day and surprise them all." He appeared to fancy the rough and ready life he led here, unconstrained and free from all etiquette which prevailed at home. I well remember on one occasion he ("Castro") was sent for in a hurry by a mate of his, named Arthur Orton, who had met with a severe fall from a horse on the other side of the Murrumbidgee River. I went with him at once to assist him in relieving his mate Arthur Orton. Some time after this he went to reside at Wagga Wagga, where Tom Castro, *alias* Roger Tichborne, opened a butcher's shop, and I followed my trade as a painter. I also well remember Tom Castro being laid up upon a sick bed, and at that time I had frequently the opportunity of seeing him undressed, and I can honestly and truly assert that he never had any tattoo-marks upon his arms, or any parts of his body; had he been tattooed I must have seen them; and the man who swore at the great trial in the Court of Queen's Bench that he (Castro, *alias* Tichborne) was tattooed must have been totally unacquainted with the facts, or have perjured himself to have uttered such remarks from his lips; in fact, to my mind, and to the mind of the greater part of Australia, this case

is

Mr.
C. Elliott.
6 Feb., 1900.

is the greatest conspiracy that ever came before the English Law Courts. A long time had elapsed before he ("Castro") had become publicly known as "Tichborne," and it would have taken a clever rogue and a much smarter man than "Castro" was to have planned and concocted such a swindle as it has been said Castro did at the trial.

I make this solemn declaration without fee or reward, because I am so positive that the claimant, who has undergone such a severe sentence unjustly, is no other person than the true and real Roger Tichborne, from the remarks he has made to me about his family connections, and which no other man upon the face of this earth could fabricate or have made up had he not been the very true and identical man himself. And I make, etc., etc.

(Signed) CHARLES ELLIOTT.

Declared at South Melbourne, in the Colony of Victoria. }
this 20th day of October, 1890, before me,— }
JAMES SWIFT, J.P.

DECLARATION OF HANNAH KEPPEL (KEPPIE?).

I, HANNAH KEPPEL (KEPPIE?), do solemnly and sincerely declare that I am the daughter of the late Mr. C. Lucas, formerly of Deniliquin, in the Colony of New South Wales, and I can perfectly well remember Thomas Castro, *alias* Roger Charles Doughty Tichborne, being employed as assistant butcher at my father's place, and residing at his house at Deniliquin (?), during the years of 1861 and 1862. I also remember that Thomas Castro made a statement to my late father, both verbally and by letters, to the effect that he, Thomas Castro, belonged to a very high and ancient family in England. And I make, &c., &c. (The New South Wales Government Form.)

Declared at Liverpool, New South Wales, this the 3rd }
day of December, 1890, before me,— }
H. L. M. KAYE, J.P.

HANNAH KEPPEL (KEPPIE?).

229. Have you anything further to say? I also exhibit certificates of character from well-known colonists in Victoria, and a writing signed by Miss G. Baring, as follows:—"This testimonial is creditable to any man, and in conjunction with his declaration, proves Mr. Elliott to be a true friend and a person whose evidence is unassailable."

Mrs. Nellie Smithers, 213, Macquarie-street south, sworn and examined:—

Mrs.
N. Smithers.
6 Feb., 1900.

230. *President.*] I believe you are the youngest daughter of the late Mr. Joseph Eckford? Yes; and from my earliest recollection, I have heard my father speak of the Tichborne case.

231. You know your father took a keen interest in this movement, and that he made application on two different occasions for the release from the Asylum of the man alleged to be William Creswell? Yes.

232. In the first instance he made application for his release as Arthur Orton? Yes.

233. On the second occasion, he applied for his release as William Creswell? Yes.

234. Your father was unsuccessful? Yes; but my father always believed the man to be Tichborne.

235. Do you know that your father was of opinion the man was Tichborne? Yes; father could not get him released as Tichborne, so he made application for him as Arthur Orton and as William Creswell.

236. Have you had repeated discussions with your father about this man? Yes; I have a good memory, and can remember when Thomas Creswell came out he stayed at my father's hotel, the "Langham," in Wynyard-square. Thomas Creswell went with father to the Asylum five or six times for the purpose of identifying the man. The day before the case came on at the Court, he said to my father, "I am leaving your hotel to-night." Father replied, "For what reason?" Thomas Creswell said, "This case is coming on to-morrow, and I would rather live in a private boarding-house than an hotel; it will look better." Father made answer, "Why have you stayed here all this time?" Creswell replied, "I am not in your debt; I have paid up to-day." My father replied, "That is all very well, Mr. Creswell, but you are not acting the part of an honorable man." Thomas Creswell then left the hotel. After he went, father said to me, "Nellie, this man is going to turn on us to-morrow; he is going to turn round and swear the man in the Asylum is his brother, William Creswell."

237. And did he do so? He did. A fortnight after that Thomas Creswell made an application to the Supreme Court for the release of his brother, William Creswell. He did not get him. Thomas Creswell went to England after he was defeated. My father then went to Tasmania. He had heard of the first mate of the ship "Bella" as being in that colony. Father was taken ill in Tasmania, and, acting on the advice of old Dr. Bowker, we brought him back to Sydney. As a consequence of his illness he did not see the mate of the "Bella." Father arrived in Sydney on the Wednesday and died on the following Saturday at half-past 9 o'clock. Mr. Brunker was sitting on the end of the bed, and my father said to him, "Watch this case, Jim."

238. *Mr. Anderson.*] What case? The Tichborne case. Mr. Brunker gave father a promise to do what he could, and after his death he did not bother one bit about it. I have also seen letters from Miss Baring, in England. She is a sister of the great bankers, the Baring Brothers. Mr. Brunker has read all these letters, and he knows just as much of the case as my father would if he were alive now. Mr. Brunker took his meals with our family at our private table, and as the English mails came in, father used to read the letters bearing upon the Tichborne case, afterwards handing them to Mr. Brunker. On one occasion, I went with my father to the Asylum. He was taking some tobacco to this man. I remember father saying to him, "Why do you not tell me your right name; are you not Sir Roger?" The man replied, "I will tell you nothing here; get me away from here; that is all I want; get me away and I'll tell you." Father also went to Wagga and took the dying depositions of a widow lady named Mrs. Clark. She married the man William Creswell, who then went under the name of Smith.

239. *President.*] He went by the name of Smith prior to taking that of William Creswell? Yes. Mrs. Clark told father she said to Creswell, "Why have you so many names?" He replied, "That has nothing to do with you; a great many people would like to know my proper name, but they never will." There is a Mr. Edward Lee, a wool-broker, living at North Sydney, to whom Miss Baring wrote for the papers my father held in the case. She wrote, "Now Mr. Eckford is dead, the papers are of no use to anybody; the case will die away." Mr. Lee, who is connected with our family, gave my mother a small sum of money for the papers. He sent them to Miss Baring, in England.

240. Then you are of opinion that Mr. Brunker was interested in this case? He seemed to be; he sided with my father. I am not prejudiced against Mr. Brunker in any way—not at all.

241. Do you know what Mr. Brunker's opinion was at that time with regard to the identity of this man? I cannot say. He told my father he would look after the case.

242. You saw both Thomas Creswell and the man said to be William Creswell? Yes.
243. Did you look upon them as having any resemblance to each other? No, not at all.
244. You have come before the Commission voluntarily;—what induced you to come? My husband said to me one day, "Nellie, why don't you try and find Mr. Priestman; you know a lot about your father's case." I ultimately wrote to Mr. Priestman and placed certain statements before him. I told him it was for my father's sake I was doing it. Mr. Priestman never tried to find me.
245. You have not the slightest doubt as to what your father's object was in trying to secure possession of Creswell? My father firmly believed he was Tichborne; but he could not get him as Tichborne.
246. *Mr. Wilks.*] Have you any idea of the reason which prompted your father to take interest in the matter at all? To get the man his own property.
247. I suppose he became interested in consequence of reading the reports of the proceedings of the Tichborne case? Yes.
248. Did you accompany your father to the Asylum? Yes; twice.
249. Do you remember any of the conversations he held with Creswell? Creswell used to ask for tobacco. One day father called him "Arthur" and "William." On another occasion he called him "Sir Roger," and he turned his head away with something like a sarcastic smile on his face.
250. Did your father have any discussion with Creswell as Orton? Yes. The two brothers, Charles and Edmund Orton came out, and they identified the man as their brother. There was also a person named Jean Luie at my father's place; this Jean Luie was a terrible man.
251. When he was called Orton, did he show any repugnance to the name? He did not take any notice.
252. Did he pass any remark as to the character of Orton when the name was mentioned? No.
253. Was he rational when you saw him? Yes. At times, when the warder would come along, he would say to father "Hush." That was when father was speaking about the Tichborne estates.
254. Your father applied for him as Arthur Orton; on failing in that, application he tried to get him as William Creswell, but he was not successful in that application? Yes; that is so.
255. How would that have assisted him in a claim that he was Tichborne? Father did not care what name he got him released by, if only he could get him out and take him to England.
256. With regard to your father speaking of Mrs. Creswell, *nee* Mrs. Clark, you know nothing more about what was said by him when she spoke of his having adopted another name? He said a lot would like to know his proper name, but they never would know it; a lot would like to know who he really was, and that there was a lot of property coming to him.
257. With regard to Thomas Creswell, you say he bore no resemblance to the man William Creswell? No; Thomas Creswell was a stout man with a rather reddish face; he seemed like a butcher.
258. *Mr. Meagher.*] You say your father and Creswell's brother had a little dispute;—Thomas Creswell left the hotel the night before the trial? Yes.
259. Did not your father know then that he was going to claim him as his brother? Yes; but father had been under the impression that he would play fair.
260. Do you remember that on the eve of your father's application he had trouble with the man Jean Luie? Yes.
261. Do you remember that shortly before the application the brothers Orton and Jean Luie had a dispute at your father's hotel, and Luie threatened to write to England stating he did not approve of your father's conduct in asking them to say he was Orton? No.
262. Did not Jean Luie claim that Tichborne was the man who was on the "Bella" with him, and that he would not be a party to having this man taken out of the Asylum as Orton? I cannot say. Luie was a very insulting man. Father told him to leave the hotel when he found out what he was.
263. Jean Luie came out from England, from Miss Baring, in 1883;—you know he went to the "Langham Hotel"? Yes.
264. You do not remember Luie and the Ortons falling out about the identity of the man in the Asylum? No. My father believed the man to be Tichborne; he never believed he was Orton.
265. Mr. Bruncker knows a good deal of this case if he likes to speak? He used to talk about the case with father.
266. Do you remember your father executing a bond for £500 to take this man home to England—that was in 1880? No.
267. Do you remember a Mr. Daniel Smith who came to the hotel? Yes.
268. Was he in the pay of Miss Baring? I cannot say.
269. Did not Daniel Smith and the Ortons come out together? I believe they did.
270. He was a man with a grey beard? Yes; but he, like Luie, got quarrelling, and father had to turn him out.
271. *Mr. Anderson.*] There must have been a very strong impression in your father's mind that Creswell was Sir Roger Tichborne? Yes.
272. Did you ever hear him say what led him to hold such a strong belief in the man as Tichborne? No; I am unable to say.
273. You never heard him express a reason for his assertion that Creswell was Tichborne? No; but I have heard him say this man was the real Sir Roger Tichborne.

Mrs. N.
Smithers.
6 Feb., 1900.

Mrs. Bridget Wines, 81, Cameron-street, Paddington, sworn, and examined:—

274. *President.*] You are a married lady? Yes; I am a widow now.
275. You desire to offer some evidence;—what have you to say regarding this matter? In the year 1869 I was in a situation at Shelbourne Villa, Nelson-street, Woollahra. There were five girls and a man kept at the house. The man left, and a young fellow took his place. One of the girls told me he was a gentleman, and had letters on his arm.
276. Can you give a description of the man? He had hair of the lightest shade of brown, blue eyes like the blue of the skies, very fair skin, rather a round prominent forehead, he wore a moustache and a little beard, the hair of which was a shade or two lighter than that of his head; I noticed tattoo marks on his arm. After he had been in the house for a week or ten days, he made no secret of his marks at all. He pointed out to us a mark in the middle of his left eyebrow, where a fish-hook had entered the flesh.

Mrs.
B. Wines.
6 Feb., 1900.

Mrs.
B. Wines.
6 Feb., 1900.

277. Any other peculiarities? Yes; there was a slight dent on the right side of his nose—he said he got the mark by falling off a horse at home; also he had a mark like a burn on the left side of the temple. I asked him how he got that mark, and he replied, “It was a gunshot wound.”

278. Was he a tall man;—what height was he? Short. He had well made shoulders, and a military style of walk. He seemed to be fond of me. One day he came to me and told me he was leaving, and asked me to write to him after he left. I tried to put him off; but he would take no refusal. Some time after that—it was on a Sunday night—he saw me and asked me to be his wife, saying, “I am a nobleman’s son; I ran away from Stonyhurst College, when I was a boy of 14; I am not whom you think I am; I got on board a ship amongst some sailors, and they tattooed me; later on I was away in Valparaiso, South America, and came away on the ship called the ‘Bella’; there was a mutiny; we were wrecked, and cast away; I was picked up, and brought to this country on the ‘Osprey.’”

279. Any more? Yes. He spoke good English with a French accent. He professed to be very fond of me, and pledged his troth to me. I went away to another part of the country, towards Singleton, and there I met and married my late husband, Robert Wines. We were back in Sydney again at the end of 1876: One day in George-street I met this man I have referred to, and whom I believe to be Sir Roger Tichborne. He stopped and spoke to me. I had my two children with me at the time. He was the same Roger. Once he wrote a note to me saying he was prevented seeing me, and at the end of the note he printed three letters; they were “R.D.T.” He said after that, “Did you notice the letters? They are my initials.” I replied, “If you are a nobleman’s son, why not go home to your friends?” He answered, “I will never go home.” He has a heart marked on the inside of his left wrist; the line round the heart is blue; the anchor going through the heart is red; on the side of the left arm there are three capital letters, “R.T.D.,” but they might be “R.D.T.”

280. *Mr. Wilks.*] Did you notice any other marks on the left arm—any scar? I did not. I believe the man to whom I have made reference is still in Sydney.

281. *President.*] Have you seen him lately? No; not lately.

282. Have you seen the man in the Asylum who is alleged to be William Creswell? No; I went to Mrs. Priestman two years ago. I wanted to see Creswell, but when Mrs. Priestman told me he was in the asylum from 1870 I was quite satisfied. I did not want to go, as I knew he could not be Tichborne.

283. *Mr. Wilks.*] Did he ever tell you he was Tichborne? No.

284. *President.*] And you still believe that this man, whom you knew years ago, is still in Sydney? Yes.

285. You believe him to be Tichborne? Yes.

TUESDAY, 13 FEBRUARY, 1900.

[The Commission met in No. 3 Committee Room, Legislative Assembly.]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, Esq. (PRESIDENT).

GEORGE ANDERSON, Esq.

JOHN ROWLAND DACEY, Esq.

EDWARD MANN CLARK, Esq.

RICHARD DENIS MEAGHER, Esq.

WILLIAM HENRY WILKS, Esq.

[The patient, William Creswell (attended by Mr. James Wharf, Chief Attendant, and Mr. William Algie, Attendant, Hospital for the Insane, Parramatta), was present throughout the meeting of the Commission.]

James Robertson Firth, Esq., Dutruc-street, Randwick, sworn, and examined:—

J. R. Firth,
Esq.
13 Feb., 1900.

286. *President.*] You were at one time Assistant Superintendent at the Parramatta Lunatic Asylum? Yes.

287. You know an inmate named William Creswell? Yes, well.

288. Do you recognise him as being present? Yes (*pointing to the patient*) that is he; but he has so wonderfully changed, I think, I should have passed him in the street. He has got so thin in the face.

289. *Mr. Meagher.*] In what particular way has he changed? His face seems to have shrunk very much. When I knew him he was a fine, strapping fellow.

290. *President.*] How long is that ago? A good many years ago.

291. Over twenty? About that time.

292. That was in the Asylum, at Parramatta? Yes.

293. During the time you were connected with that institution you naturally had frequent opportunities of seeing the man? Yes; I saw him every day—sometimes two and three times a day.

294. Speaking in general terms, what impression did you form as to his characteristics, and so forth? He was a very well-behaved man—a superior kind of man.

295. You say he was a superior kind of man? I always thought him to be a superior type of man. He was straighter and more upright in stature than he is now.

296. Would you take him to be a man who had undergone a military training? I do not know; he always walked bolt upright, and with a firm step.

297. Do you fully recognise the man now before the Commission as William Creswell? Yes, I do.

298. *Mr. Wilks.*] What led you to refer to him as being a superior type of man? His conversation and bearing.

299. Have you heard him speak French? He understood French.

300. Do you understand French? I do; I lived on the Continent for seven years.

301. Was the French he spoke Parisian or provincial? He had a *patois*. I considered it more provincial than Parisian. It was seldom you could get him to speak French.

302. You are certain you have heard him speak French? Yes.

303. Did he, during any of his lucid periods, refer to anything in his past history? No. Once I was saying something about my friends in Portsmouth, and he turned his head round and looked at me slyly.

304. Did he in any way refer to your conversation? No; he was a man extremely reticent about himself.

J. R. Firth,
Esq.
13 Feb., 1900.

305. Did he give you the impression that he had had an excellent early training? Yes; he did.
306. Would you think his habits and general bearing those of an agricultural labourer in England? No; certainly not; he was much above that—I should say he was a man who had had a very good home training.
307. Did you at that period know that there was a suspicion that he was Sir Roger Tichborne? Well, yes, I think so. There was something peculiar about the man. He was so reserved. When I asked him if he was Roger Tichborne, he only looked at me, but made no answer. I did not think he was Creswell, whom he made himself out to be.
308. Did he tell you anything about Arthur Orton, or did he say he had been in the other Colonies? I can hardly remember; I think he said he had been in South America and also in Tasmania.
309. Did he ever make reference to anyone by the name of Souper? No.
310. Did he mention anything about the vessel he arrived in? There is something running through my mind—I think I got it from him—about the “Bella” and the “Osprey.” He did not say he came out in either of those vessels, but his general conversation led me almost to conclude he had been a passenger in both of them.
311. The “Bella” and the “Osprey”? Yes.
312. *President.*] Did you examine Creswell;—did you notice any marks on him that you subsequently made a memo. of? I do not remember, though it runs in my mind that he has been tattooed.
313. That he has been tattooed? Yes.
314. Did you make a memo. in a book that you subsequently lent to Dr. Taylor? I made a great many memos. relating to him; Dr. Taylor kept the book.
315. Did Dr. Taylor convey his own impression with regard to the man to you? No; Dr. Taylor was the wrong man to do that, because he was always in hopes that he would get a trip to England.
316. *Mr. Meagher.*] With reference to this man's demeanour while under your observation, did he strike you as being anything above what you would expect from a man in ordinary middle-class life in England? Certainly he did.
317. Would you say he showed any refined characteristics more than would be associated with, or usual in the case of a young man of the agricultural class? He was far ahead of the average agricultural labourer.
318. Do you know that Creswell, if he be Creswell, comes from a farming family? I cannot say.
319. You were assistant to Dr. Taylor? I was, and to the doctor before him.
320. Your ejaculations about Dr. Taylor obtaining possession of a book of yours, and his anxiety to get a trip to England, would lead one to suppose you do not entertain kindly feelings towards him? Well, I do not know; he got me dismissed, but that would not make me tell other than the truth.
321. You stated you have an idea that this man had tattoo marks? I have an idea he has them on him.
322. When did you first get that idea? Long, long, long ago. He either has or had them, and they got obliterated; there may have been something done to them.
323. While assistant to Dr. Taylor, do you remember many people, both lay and professional, interviewing this patient at the Asylum—for instance, do you remember the old firm of Allen, Bowden, and Allen? Yes.
324. Do you remember them going up and pestering him? I cannot remember; but I remember a couple of ladies and a gentleman came to see him, and they began to talk to him as Tichborne.
325. Well, what followed? He looked at them, turned on his heel, and walked out of the room. It was one of the ladies that spoke to him, but he made no reply.
326. Who was it? I cannot say.
327. Do you remember if her name was Mrs. Jenkins? I think it was.
328. Do you recollect the late Mr. Eckford attending the Asylum? Yes.
329. Can you say if he visited the Asylum on more than one occasion? I am unable to say.
330. Among the numerous persons who journeyed to the Asylum to see this man, and for the alleged purpose of investigating the Tichborne case, do you know that the questions they asked the patient were commonly such as would bring some pregnant fact to his memory, if possible; for instance, they would refer to the “Bella” and the “Osprey,” and so forth? Yes; I believe it was so, and they used to get him into a bad temper, when they asked him those questions and he got teased a bit.
331. The man developed bad temper at times, being annoyed with the questions asked by them about the “Osprey” and the “Bella”? Yes.
332. When you told Mr. Wilks you heard him speak of the “Bella” and “Osprey,” it is quite possible he spoke of what had been dinned into his ears by his visitors? Yes.
333. You think it is possible that he merely repeated what was on his mind, as a result of those interviews? Such a thing is possible.
334. Do you remember, when you were assistant to Dr. Taylor, being present on an occasion when a woman named Mrs. Jury came to see him, and that particular interview was regarded as being the most lucid he had had in the Asylum? I can hardly say.
335. I will read an extract from a letter from Dr. Taylor to the Under Secretary, Colonial Secretary's Department. It is dated Lunatic Asylum, Parramatta, 14th April, 1878, and is as follows:—“On the 31st day of October, 1877, a lady now resident in Sydney called to see Creswell at the Asylum. She had known Creswell before he became insane, and had known members of his family in England. She had not seen Creswell for, I think, nearly ten years; he at once recognised her, and addressed her by name. After a brief conversation, this lady produced the photograph of a female, and asked Creswell if he knew it. He looked at it very carefully, and said, “That ought to be my sister, Mrs. Gough.” Then again, “In May, 1877, Mrs. Jury, a sister of Arthur Orton, arrived in this Colony from England for the express purpose of identifying Arthur Orton, supposed to be detained in the Lunatic Asylum at Parramatta, under the name of William Creswell. On the 7th of May, Mrs. Jury made her first visit to the Asylum, and was conducted to a room wherein Creswell was seated with six other patients, men of his own stature and general appearance. As a matter of fact, Mrs. Jury utterly failed to recognise Creswell; indeed she addressed all the others but Creswell, and ultimately I pointed him out to her as “the man she had travelled so far to see.” On the 9th of May, Mrs. Jury again interviewed the lunatic, again produced portraits of her family, and again examined his arms and ears. Having completed her investigations, she left the room saying to me she was quite satisfied that the man shown to her was not Arthur Orton, her brother, that he bore no resemblance to her family, and was wanting in the distinctive marks, by which she

- J. R. Firth, Esq.
13 Feb., 1900.
- she could have recognised him";—do you remember those interviews; do you remember his being shown a photograph, and asked to say who it was, and he made answer that it was his married sister, Mrs. Gough? I have a slight recollection of the interviews, but I cannot recall anything definite.
336. I suppose you will not be prepared to swear that on the 14th of April, 1878, Dr. Taylor was committing perjury? No; certainly not.
337. *Mr. Anderson.*] Have you a distinct recollection of the time Creswell first came under your notice in the Asylum? Yes.
338. You saw him then? Every day.
339. At the time of his admission, did you notice any tattoo marks upon him, and, if so, was the fact recorded in the books? I cannot say about the books, but it is in my mind that he had a sort of obliterated mark on his arm.
340. If the mark was there some of the attendants at the Asylum would have an opportunity of noticing it? Yes.
341. Have you any knowledge of tattoo marks decaying after a period of years? No.
342. Do you believe it is possible for them to decay without being removed? Yes.
343. *President.*] On the occasion of Creswell's admission to the Asylum, whose task would it be to take charge of anything found in his possession? Mine.
344. Have you any recollection of a ring? No.
345. Or a leather jacket? No.
346. A watch? A watch he might have had, but not a leather jacket. Dr. Taylor took away whatever there was in the shape of money or trinkets.
347. *Mr. Dacey.*] Did I understand you to say, in speaking to Mr. Wilks, that you have a distinct recollection of this man Creswell speaking of the ship "Osprey"? Yes; and the "Bella."
348. Also, you said you understood French, and this man spoke that language with a *patois*? Yes; but it is difficult to get him to speak French. He always seemed to have some object in concealing his knowledge of that tongue.
349. Would you expect an educated Englishman to go to France, acquire the language, and speak it with a *patois*? Well, at one time I spoke a *patois* myself.
350. You think it would not be strange for a college-educated Englishman in France to speak French with a *patois*? No.

Thomas James Pickburn, Esq., M.D., College-street, Sydney, sworn, and examined:—

- T. J. Pickburn, Esq., M.D.
13 Feb., 1900.
351. *President.*] You have already given evidence before the Select Committee on the case of William Creswell? Yes, in November last.
352. The Commission will be glad if you and Dr. Devlin will point out the several marks upon the body of the man now before us known as William Creswell, in order that the Members may personally inspect them? We are quite prepared to do so.
353. Will you first point out lancet cuts for bleeding on the temporal artery? Yes, there you may see them—"the two small linear scars directly over the temporal artery, near the auditory canal," as described; but marks of bleeding (even from the temporals) are not peculiar to Creswell. Some fifty or sixty years ago bleeding was a common practice, and so similar scars may often be found in other old men. These particular scars are on the main (temporal) artery, and not on the anterior branch, and the difference of opinion between Dr. MacCormick and ourselves may be due to the fact that he looked on the branch (the anterior) of this vessel—the usual site for arteriotomy—and not in the situation as described by us. This you will find stated by Dr. MacCormick himself in evidence.
354. *Mr. Wilks.*] The evidence given by Dr. Godson on the subject is to the effect that he did not see the cut or scar. Also Dr. Fiaschi and Dr. MacCormick did not see it? Well, there are the marks; you can see them for yourself.
355. *Mr. Meagher.*] Can you say, using your glass, there is any scar or mark on this man's nose? No, I do not find any.
- [*Creswell here interjected, "A wasp stung me; I pulled down a nest, and it stung me. It was on Bullsdown Farm."*]
356. *Mr. Wilks.*] In your evidence before the Select Committee you were questioned about an issue-mark? The questions and answers were:—"9. Are there the remains of an issue-mark on Creswell's left upper arm? There is a small white scar, slightly depressed, on the left upper arm, near the vaccination marks, and could have been due to an issue.—10. Are there lancet cuts for bleeding on both arms; and if so, how many on each? Yes; at the bend of the *left* arm there is the faint scar of a puncture directly over the vein; at the *right* bend there are two scars, one directly over and in a line with the vein, and another linear scar in a line with the vein, but a little ($\frac{1}{4}$ inch) to one side of it."—Both those marks were of importance in the Tichborne case. Drs. Fiaschi and MacCormick deny their existence. Will you and Dr. Devlin point them out to the Commission? Yes. You can see that they are quite easy to distinguish, and are as described in my evidence before the Select Committee.
357. *Mr. Meagher.*] You and Dr. Devlin have examined Creswell's sexual organs? Yes.
358. Are there any abnormalities? No, they are perfectly normal.
359. The question of a malformation has been raised, it may be as well to be perfectly clear on the point? He has been examined by both Dr. Devlin and myself, and we found no abnormality.

Henry William Devlin, Esq., M.D., Miller-street, North Sydney, sworn, and examined:—

- H. W. Devlin, Esq., M.D.
13 Feb., 1900.
360. You have already given evidence concerning this matter before the Select Committee? Yes.
361. You have assisted Dr. Pickburn in locating certain marks upon the body of the man known as William Creswell, and in conjunction with that gentleman have pointed the same out to the Members of this Commission? I have.
362. And you corroborate what he has said? Yes.*
- John

*NOTE (on revision):—I wish to add that, in company with Dr. Pickburn, I was asked to point out the discrepancy between Dr. MacCormick's evidence and ours with regard to cuts on the temporal artery. No discrepancy really exists, as Dr. MacCormick swore in his evidence that there was no cuts on the anterior branch of that artery (which we admit); but they exist on the main trunk of the temporal artery, where, Dr. MacCormick swore, he did not look.

John Thomas Walker, Esq., Verner-street, Goulburn, sworn, and examined:—

363. *President.*] What are you? I have a saddlery establishment in Goulburn.
364. Do you know the man before the Commission? Yes; William Creswell.
365. Where did you first know Creswell? In Tumut.
366. You are positive you knew him as William Creswell? Yes; and as James Smith, and by nick-name as "Leather Jacket," but he never answered to that name.
367. He was so nick-named because he wore a peculiar garment? Yes; but no one used the expression to his face.
368. Just tell the Commission what you know about Creswell? I became acquainted with him about the year 1864, through being in business in Adelong, and also at Tumut. At the time he was living with a Mr. Macnamara, of Snubba Station, and frequently with E. G. Brown, late Member for Tumut. He was what they would now call a "jackeroo"—that is, a gentleman getting colonial experience. I never knew him to work. He always assisted the squatters.
369. What opinion did you form with regard to him, what type of man was he? He was rather superior to the general run of men who would knock about the station. The squatters treated him as such. If ever he came into town he came with the squatters. He frequently returned with them, too. He was a man I never saw drunk. I have seen him the worse for liquor, but he never lost his legs.
370. He is alleged to have had a military bearing? I had a good deal of conversation with him. He would call at my place to see some racehorses I used to train and run. He was a great horse fancier. Saddlers use a 3 foot straight edge, and when he would be passing through my shop he would, in his playful way, take it up and do the sword exercise with it.
371. Did you ever meet him in company with a man named Orton? No. At one time I had about 20 tons of flour, and Creswell told me he was going to Wagga to see an old chum. I could rely upon him, so I asked him to inquire of Forsyth, at Wagga, as to the price of flour. On returning he told me the market price; also he informed me his chum had got married to a servant girl, who worked at the "Prince of Wales Hotel," Wagga, kept by a Mr. Simpson. He was always talking to me about making him a hunting saddle. He said when he had that made he would have a stamp or crest made too. He pencilled it out. I took it to be a crest. I said, "It would be foolish to do that." He replied, "When I got married in Queanbeyan I had a stamp made to brand the cattle belonging to my wife." Some time after this, Mr. John Macnamara, of Snubba, was managing the Snubba Station for his mother and his aunt. Later on, to my great surprise, I found Creswell was a butcher. That was about 1865, in Tumut. I said to Creswell, "How came you to be a butcher?" He replied, "I picked it up on the station; when they would kill a beast I helped them." During the time he was butchering in Tumut he cut one of his hands. The cut was on his left hand. I bandaged it up—
372. *Mr. Meagher.*] On the hand or arm? I almost forget now. The person who helped me to bandage his hand was Thomas McAlister, one of my apprentices.
373. Can you tax your memory a little? Yes; I distinctly recall it now. The cut was on the joint of the inside of the left wrist.
374. Do you recognise such a mark on this man now before the Commission? Yes. [*Witness pointed out the position of the cut and the mark left by it, and the patient Creswell agreed that the mark on his wrist was the particular one referred to by witness.*] Continuing: After the butcher's shop closed—I cannot say whether he took wages or not; I never knew him to take wages—he acted as groom at the "Mona Isle Hotel," in Tumut—
375. *Mr. Wilks.*] What inference are we to draw from the statement that he never took wages? I never knew him to work for money.
376. He was not a wage man? I never knew him to be.
377. *Mr. Dacey.*] He would appear to have had an income from somewhere without being under the necessity of working for wages? Yes; he always seemed to have money.
378. You are under the impression that this man received no salary? Yes; I always thought he received money from some other part.
379. You looked upon him as a jackeroo? To tell you the truth, I took him for a gentleman.
380. As a gentleman come out for colonial experience? Yes.
381. Anything else? Yes. I remember at the time he was a groom at the hotel, Robert Deer, the proprietor, gave a prize of £8 8s. for the best pigeon shot. Creswell was a member; I was one also. Mr. C. Guy, of Brungle, volunteered to lend me a gun that had been in his family for fifty years; the gun was one of Joe Manton's. When I entered the ground Creswell saw the gun, and he asked me to let him fire out of it, as he said he had shot with many a Joe Manton in England.
382. *President.*] How many birds did Creswell shoot? I cannot say. Some time after the shooting match Creswell came into my shop. He was a little elevated. I thought more of him during the time, over two years, I knew him than I did of many in Tumut. Well, he came into my shop, and went through the sword exercise with a saddler's knife. I got annoyed with him for keeping my apprentices from their work while he was drilling them, and wasting their time and my own. I lost my temper, and ordered him out of the place. He became very indignant, and went away; it was the only time he ever lost his temper with me. Half-an-hour afterwards a boy entered the shop and handed me a letter. I said to the boy, "Where did you get the letter?" he replied, "Creswell, at Deer's, gave it to me for you." Now, in the year 1844 I went to school in Sydney, and there was a French vessel lying at Moore's wharf. After school hours we boys used to go to the wharf, and after a fashion we taught the sailors a little English, and in return they taught us French. My father, who had been a captain the Navy, and was a French scholar, used to correct my pronunciation. I looked over the letter and said, "Why, Creswell has written the letter in French, and I cannot read it." I took the letter to Robert Deer, and said, "Can you read French?" He replied, "No, I read German." As I could not rightly understand the contents of the letter, I feared it contained a threat from Creswell, as he had left my shop in such an indignant fashion. Next day I saw Creswell on the verandah of the "Woolpack Hotel," with his leather jacket and leather vest. He was walking up and down, and you would think he was marking time; also he had his clothing on the verandah in the sun. An officer of police, Sergeant Tant, was on the opposite side of the road. I said to him, "Tant, poor Creswell is a little off his head"; he made answer. "He is properly off." I then asked Creswell what he was doing with his clothes spread out in that fashion. He said, "Drying them."

J. T. Walker,
Esq.

13 Feb., 1900.

- J. T. Walker, Esq.
13 Feb., 1900.
- them." I told Tant of the letter I had received from Creswell written in French, and which I could not read, also that his name was at the bottom of the letter, and I could not get anyone to read it. Tant asked, "Do you think it would be advisable to take him up for protection?" I said, "I think it would." He then authorised the watch-house keeper to bring him over. I was there when he was brought over by the keeper of the watch-house—Luke Cullen.
383. *Mr. Meagher.*] Can you state positively that the letter was in the handwriting of Creswell? No.
384. Was Creswell's name at the bottom of the letter? No; it was another name.
385. *Mr. Wilks.*] Was there a watchmaker, a Frenchman, in Tumut at that time? There was a Londoner.
386. What was done with the letter? I handed it over to Sergeant Tant in the Court-house at Tumut. I cannot say whether Creswell got one month to Gundagai or three months under medical treatment; but a few weeks afterwards he wrote me from gaol to go to Mr. William Bridle, senr., and pay for the paddocking of his horse, and to sell the horse, saddle, and bridle, and forward the money to the gaol at Gundagai, which I did. I fancy a Mr. Toohy, a storekeeper in Tumut, purchased them. I left Tumut, but afterwards, when the great Tichborne case came on, I thought of my connection with this man. It has always pressed upon my mind that "Roger Tichborne" was on the bottom of the letter he wrote to me in French. I had never heard the words "Tichborne" or "Roger" when I knew him in Tumut. I forgot to say that during the frequent conversations I had with him he told me often, when I used to remark about the way he was living, "I am not what I seem; I would be in England now only I married a woman beneath me in Queanbeyan, at Canberra Church." I have had all this published at my own expense in the *Melbourne Leader* and the *Albury Banner*. Eight years ago I opened business in Queanbeyan, and remembering what he told me about the brand he got made to brand his wife's cattle, I made inquiries of Thomas Larkin, of Queanbeyan, as to whether he had ever made a brand for Creswell. He replied that he did, and he believed the brand was knocking about amongst the old iron in the blacksmith's shop in Queanbeyan.
387. *Mr. Dacey.*] Did he give you the design of the brand? No. Eight years ago I called upon Mr. Dibbs, and asked permission to be allowed to see Creswell in the Asylum. I was referred to Mr. Gould; but he would not allow me to see him, because I was not related to the man. However, I subsequently saw the late Mr. Hugh Taylor, and went to see Creswell at the Asylum. The man at the lodge would not allow me in; but he showed me over twenty men cutting wood in a yard—there were Chinamen, blackfellows, and others, I had not the slightest difficulty in pointing Creswell out. The man said I had a wonderful memory. I did not speak to Creswell.
388. *President.*] Have you seen him since the occasion you refer to—eight years ago, at the Asylum? No.
389. Do you recognise the man? I do; I recognised him at once. I would pick him out of a thousand men. He recognises me, too.
390. *Mr. Clark.*] When you dressed the wound on the inside of his wrist, did you notice any other cut or mark? I cannot remember.
391. Did you notice any tattoo marks? No.
392. *Mr. Meagher.*] You are not prepared to swear that the letter which Mr. Deer's lad brought to you had Tichborne's name at the bottom of it? No; but I have always been under the impression that it was the name, though.
393. You could not say whether that letter was in even his handwriting? I have no doubt about it, on account of the boy saying he came from Creswell, at the hotel.
394. But so far as your personal knowledge goes, you cannot swear he wrote the letter;—so far as you are concerned he may not have known anything about the letter? Well, I do not believe he would have been where he has been for so many years only for that letter. I took it for a threat, and that letter was the cause of his being arrested.
395. You believe this mysterious missive in French has been the means of keeping him in the Asylum ———? For thirty years.
396. You never spoke to Creswell about that letter? I believe he acknowledged sending the letter; but it is only belief on my part.
397. *Mr. Clark.*] You handed the letter to the sergeant of police? Yes; to Sergeant Tant.
398. *Mr. Meagher.*] Mr. Luke Cullen, in his evidence given before the Select Committee, was asked (Question 321) if he ever heard Creswell make use of any French expressions, and his answer was:—"I once heard him speaking to a French watchmaker in Tumut. The watchmaker kept a shop, and Creswell kept a butcher shop next door. The shops were opposite the Court-house, Tumut, and belonged to Mrs. O'Mara. After Creswell went away I said to the watchmaker, 'That man seems to be able to speak French as well as you.' He replied, 'Yes, and better than I; that man is an educated gentleman'";—what do you say in regard to that? I now begin to remember there was a Frenchman in Tumut; but I do not remember his being there while Creswell was in the town.
399. *Mr. Wilks.*] Have you taken much interest in this case? No interest at all. I never saw Mr. Priestman until to-day.
400. Did you take any interest at the time of the trial of the Claimant? Yes: because I believed this man Creswell was the right man.
401. Did you take any action then? Yes; I had my statement published in the *Melbourne Leader* and the *Albury Banner*.
402. Do you think Arthur Orton got information from Creswell? Yes, I do. I never knew anyone in the Queanbeyan district but would say Creswell was the real Tichborne.
403. *Mr. Clark.*] Did it surprise you at all when he used to adopt these different names? He and his wife fell out.
404. Did he adopt the name of Smith after you knew him? He went by both names—Smith and Creswell.
405. *Mr. Dacey.*] Do you know his wife? She died years ago.

Walter Watson, Esq., Wombat, near Young, sworn, and examined:—

406. *President.*] I believe you knew the man known as William Creswell;—do you recognise him as being amongst the persons in this room? Yes; that's him [*pointing to the patient.*]
407. How long ago would it be since you last saw him? Not since he was tried in Queanbeyan for an assault. W. Watson,
Esq.
13 Feb., 1900.
408. How long ago is that? About thirty-six years.
409. Do you experience any difficulty in recognising him? A little; he is very much altered; he was a fine, straight, smart-looking man then.
410. Did you know him in conjunction with anyone else? William Davis, of Gundaroo.
411. How did he strike you when you first saw him? The first time I saw him he was playing at a cricket match in Queanbeyan; it was in the latter part of the year 1862. I was in the mounted police at the time. He came up to me and introduced himself, saying to me, "I should judge from your appearance you have been in the British army?" I said, "Yes." He replied, "I should say in the cavalry, from your appearance." I said, "Yes, you are right; I have been a cavalry soldier." He said, "I have served in the Sixth Carabineers; what was your corps?" I replied, "Do you know any regiment in Her Majesty's Service without a number?" and he answered, "Yes; the Royal Horse Guards." I said, "That was my corps." He said, "I have been a cavalry soldier myself," and put out his hand, which I took and shook. He said, "I have served in the Sixth Carabineers; my name is William Smith; we will have a drink."
412. Was that all that passed? That was all that passed. I saw him many times after that. He took the name of Creswell when he married Mrs. Clark. Mrs. Creswell, after she married, told me she would never have married him if she had known he had an *alias*.
413. Can you say when he was first known as Creswell? He was not known as Creswell until he married Mrs. Clark.
414. How long had you known him prior to his marriage? Twelve months; I knew him intimately.
415. You never heard of him as William Creswell until then? No; never. After he got married I shunned him a good deal—he took to drink greatly.
416. He married a lady who kept an hotel? Yes.
417. Is there anything more you would care to relate? No. Most of his conversation related to soldiering. He knew all the routine of a cavalry barracks.
418. *Mr. Dacey.*] Did he ever tell you he had been in France? No; he was not a man of many words; he was quiet and reserved.
419. *President.*] Did he ever convey to you an impression that he was better—more important—than he appeared to be? I was always under the impression he had had a good education and a middling good rearing.
420. Did you ever have an opportunity of noticing whether he had any tattoo marks? No; it rather runs in my head that he did, though. If he had them, it would be possible to take them out. I had a Union Jack in colours pricked in the left arm and an anchor on the right arm, and they have been removed.
421. *Mr. Meagher.*] How long ago is it since they were taken out? Fifty years:
422. What were they removed with? Chalk and water—it was some white stuff.
423. *President.*] Is it a fact that you had tattoo marks properly put in with Indian ink? Yes.
424. And they were removed? Yes. The first I heard about Creswell being Sir Roger Tichborne was when a gentleman named Lloyd came to me. He had been to the Queanbeyan police and they referred him to me. I could give him no information then, as I did not know where Creswell had gone to.
425. *Mr. Wilks.*] Did you ever see Creswell in company with Orton? No.
426. Did Creswell ever say anything to you about his prospects—what he had in view? Only once. He was talking to Mr. Byrne about buying him out of his hotel in Queanbeyan. Byrne said, "It would take more money than you have got." He replied, "Oh, I can find the money."
427. Does Creswell recognise you to-day? Yes; he recognises me right enough, but he will not speak.

TUESDAY, 20 FEBRUARY, 1900.

[*The Commission met in No. 3 Committee Room, Legislative Assembly.*]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, Esq. (PRESIDENT).

GEORGE ANDERSON, Esq.

EDWARD MANN CLARK, Esq.

RICHARD DENIS MEAGHER, Esq.

WILLIAM HENRY WILKS, Esq.

The patient, William Creswell (attended by Mr. James Wharf, Chief Attendant, and Mr. William Algie, Attendant, Hospital for the Insane, Parramatta) was present throughout the meeting of the Commission.

Mr. Henry William Watts, fruitgrower, Ryde, sworn, and examined:—

428. *President.*] Where do you reside? At Ryde.
429. What are you by occupation? A fruitgrower.
430. Were you at one time an attendant at the Gladesville Asylum? Yes; for about three years.
431. Can you fix the date definitely? I was there in 1869, 1870, and 1871.
432. You were there at the time of the admission of the patient, William Creswell? I will not be certain; I know he was there at the time I was there.
433. Do you recollect seeing him there? Oh, yes; he was very partial to me; he and I used to get on very well.
434. Do you recognise him here to-day? Yes, and he recognises me; I have not seen him since 1871.
435. You have not seen him since that year? No; when I entered the room to-day I went to him and said, "Good day, Creswell," he put out his hand and I shook hands with him; I then said, "Do you recognise me?" and he replied, "Yes," and mentioned my name. Mr.
H. W. Watts.
20 Feb., 1900.

Mr. H. W. Watts. 436. I understand that when you were leaving Gladesville Creswell gave you a letter;—do you produce that document? Yes; I have it with me. When I was leaving I mentioned to Creswell that I was going to try up country with fruit, and he said, "I will give you a letter which will show you the different roads and camping places, and a letter of introduction to Mr. Moxham, of Wagga Wagga."
20 Feb., 1900.

437. Will you read that letter? The introduction to Mr. H. Moxham, Wagga Wagga, dated "Hospital for the Insane, Gladesville, 17 October, 1871," is as follows:—

To Mr. Moxham,—Sir,

Henry Watts has some splendid fruit. I recd. him to you as being likely to trade with him. He is a good sort, and this is his first trip up to Wagga Wagga. If you can do anything for him he will be grateful. He is in want of sheepskins, back carriage. He grows the fruit himself. Hoping yourself and Mrs. Moxham is well.

I am, Sir, Yours truly,
William Creswell

To Mr. H. Moxham
"Wagga Wagga"

438. *Mr. Wilks (to the President)*: Will you endeavour to obtain a copy of Creswell's marriage certificate, so that the signatures may be compared?

439. *The President*: Yes.

440. *President (to witness)*: Have you anything else to say? Nothing more; only at the time Creswell wrote that letter if he had not been in the Asylum you would not have thought there was anything wrong with him. Sometime after, when the Claimant went to England, I said to my wife, "I always believed this man Creswell was the real man"—I mean Tichborne. There was one instance I remember which made me think this. One day at Gladesville he was sent down to feed the pigs. I went down and said, "Hullo, Bill, feeding pigs, eh?" He laughed and made answer, "Yes, I am something like the Prodigal Son, but never to return."

441. Anything further? Nothing of any interest that I can remember.

442. *Mr. Anderson*.] Did you ever ask him if he was Sir Roger Tichborne? No; I had no idea of the Tichborne case at the time I was at Gladesville.

443. *Mr. Clark*.] Did you hear him speak French at all? No; but he always had a nice manner with him.

444. He was noticeable in that respect? Yes.

445. *Mr. Wilks*.] Did he ever refer to his past life—did he tell you who he was, and what he had been? No. But I think he had a good bringing up.

446. What do you draw your inference from? From the remark he passed about never returning Home, and his nice manner generally.

447. You thought he was well connected at Home, but you had no special reason for believing he was Tichborne? No.

448. Then you only formed your conclusion from that off-handed statement of his about the Prodigal Son? Yes.

449. But is not that a statement that could be made by any man who did not wish to return to his people? I suppose it is.

450. As a matter of fact, you were struck by his gentlemanly manner and bearing, and that made you think he was someone superior? Yes.

451. *Mr. Anderson (to the President)*: I desire to put a few questions to the patient, William Creswell.

452. *President*: You are at liberty to do so, Mr. Anderson.

453. *Mr. Anderson (to William Creswell)*: Do you mind telling me your name?

454. *Creswell*: William Creswell.

455. What ship did you come out in? The "Maid of Judah."

456. Do you remember the year? In fifty-four.

457. In fifty-four? I think so.

458. Why did you come out—was it on business or pleasure? I came out to the colonies ———. I do not tell everybody my business.

459. Do you remember any stock or cattle being on board the "Maid of Judah"? Yes.

460. Who were you bringing them to? To Sydney.

461. Who were they consigned to? You can ask those questions in Sydney yourself.

462. Do you know Mr. Kite, of Bathurst? Yes.

463. Were you bringing the cattle to him? There were some cattle in the "Maid of Judah."

464. Were you in charge of the cattle at the time? Yes; I brought them to Sydney. I remember there was somebody in this Colony they were consigned to—I think it was Thomas Kite.

465. *Mr. Anderson*: That is all I have to ask, Mr. President.

Mr. Walter Lee, 24, Franklin-street, Glebe, sworn, and examined :—

465. *President.*] What are you? A labourer, employed at Tooth and Company's brewery.

466. I understand you were formerly a seaman? Yes; over fifty-five years ago I was in Her Majesty's Navy, on the "Trafalgar."

467. You have seen the patient William Creswell? Yes.

468. Do you recognise him? No, I do not; it is a long time since I was in the "Osprey." I will tell the Commission how I came to be on board the three-masted schooner "Osprey." In 1852, I came out in a barque called the "Bangalore" to Melbourne, as an able seaman; I ran away from her and went to the diggings; I did very well; I had a brother living in Adelaide, and after a while I went round there to see him. That was in May, 1853. I did not find my brother, although I advertised for him; I went to the house of a man named Oman in Adelaide, in 1854; it was a boarding-house; whilst there the captain of the "Osprey" and a young, smart, military-looking man came there and asked the men at the place if we wanted a ship. I said, "Where are you going?" the captain replied, "To Geelong." I told him I would ship with him if he would give me my discharge when we got there. He answered that he would, and I shipped on the "Osprey" under those conditions. On reaching Geelong I obtained my discharge and left the vessel. The smart-looking young man I have referred to made the voyage round in the "Osprey" with us. I asked the captain where he came from, and he said "From South America." He also told me the "Osprey" used to carry the mails from England to the West Indies and along the South American coast. The "Osprey" was a very old vessel. The captain and the young man were given to drink.

469. Did you have any conversation with this young man on the voyage? No, nothing of any interest; we had our work cut out to keep on pumping the water out.

470. Anything else? I remember we ran ashore going to Geelong. There was not sufficient of a crew to work the vessel. I remember when the seamen were brought on board the "Osprey" in Adelaide. One man made a mistake and brought the wrong kit with him from the vessel he had been on; I had to take back the bag to the vessel—a brig that had come from Hobart Town.

471. What was the name of the brig? I am unable to say. I can remember the names of the sailors on the "Osprey"; they were known as Bill, Harry, and Arthur.

472. Was there anything peculiar about either of those men? One of the men, known as Arthur, was no less than Arthur Orton, and he went to England as the Claimant. I wrote to Dr. Kenealy and to Onslow, and told them about it.

473. *Mr. Clark.*] Told them the man you knew as Arthur was Sir Roger Tichborne? No, Arthur Orton; and when the man whom they say is Creswell was brought to the Supreme Court I said, "He is not Tichborne ———"

474. Whom do you say he is;—do you think the man now before the Commission is Tichborne? If he will stand up I will see; if he is Tichborne he should be 3 inches taller than I am.

Witness and Creswell here stood close to each other, and it was apparent that the latter was about 2 inches taller than Lee.

475. *Witness to Creswell.*] Were you ever a shipmate of mine?

476. *Creswell.*] No.

477. *Mr. Clark.*] Are you of the opinion that the smart-looking military man whom you sailed with on the "Osprey" from Adelaide to Geelong was none other than Sir Roger Tichborne? Oh, yes; I say Sir Roger Tichborne was aboard of that vessel.

478. Did you know him as Sir Roger Tichborne? No; but I have seen a photo. of the real Sir Roger, and I can identify him as being the man.

479. Did you notice any tattoo-marks on him? No.

480. *Mr. Wilks.*] Did you know anyone by the name of E. C. Souper? No.

481. *Mr. Clark.*] Did this young fellow go by any name on the ship? I suppose he had a name, but I cannot recall it; I believe he had a share in the "Osprey."

482. *Mr. Meagher.*] Did you ever hear that the "Osprey" had been a ship, and that her rigging was altered? I did hear it; but I do not think her rigging was altered.

483. You say the "Osprey" went from Adelaide to Geelong? Yes.

484. Do you know that in the year 1854 the "Osprey" was a well-known vessel on that part of the coast of Australia? It was in July, 1854, that I arrived at Geelong in her.

485. We have it that the "Osprey" arrived in Melbourne in May, 1854; she was put into the inter-colonial trade for a time, and afterwards used as a hulk round Sandridge; ultimately she was, with three other vessels, ballasted and sunk in order to make foundations for the Sandridge Pier? Yes.

486. Did you know Jean Luie? He was not there.

487. Did you ever come across him? Yes; in the Haymarket. He wanted to make a tool of me. Old Smith introduced Luie to me. When Orton came out from South America, I was passing Eckford's Hotel, and I said, "Good day, Mr. Orton"; he seemed surprised to see me.

488. Your first appointment on the "Osprey" dates from the month of July, 1854;—who found her crew when she arrived in Australia, you cannot tell? No.

489. Jean Luie could have been among the crew without your knowledge? Yes.

490. *Mr. Wilks.*] You do not recognise William Creswell? No.

491. How old are you? Seventy-one next August.

492. You see nothing in the bearing of the man present before the Commission to lead you to recognise him as the man you sailed with on the "Osprey"? No.

493. You said the man you believe to be Sir Roger Tichborne was 3 inches taller than you? Yes.

494. Did you notice anything peculiar about the ears of this man who was with you on the "Osprey"? No. You see I had no idea he was Tichborne at that time. I have since seen his photograph in the *Sunday Times* and the *Town and Country Journal*, and I think the photographs I saw were those of the man I sailed with in the "Osprey."

Mr.
Walter Lee.
20 Feb., 1900.

Mr.

Mr. John Dettmer Dodds Jackson, 12, Denham-street, Glebe, sworn, and further examined :—

Mr. J. D. D. Jackson. 495. *President.*] The Commission would like to have the benefit of your opinion with regard to the patient, William Creswell, now before them; do you recognise him? Yes, as Creswell; the man I saw at Parramatta. I may say I have handed some notes to the Secretary, giving the substance of the conversation I had with Mr. Clabburn, and also with him whom I believe to be the real man. I should like them added to my evidence.*

20 Feb., 1900.

496. Have you anything further to add? No.

497. *Mr. Wilks.*] Do you recognise the man known as Creswell, now before the Commission, as Edward Caleb Souper? No

TUESDAY, 27 FEBRUARY, 1900.

[*The Commission met in No. 3 Committee Room, Legislative Assembly.*]

Present:—

JOHN CHARLES LUCAS FITZPATRICK, ESQ. (PRESIDENT).

GEORGE ANDERSON, Esq.

EDWARD MANN CLARK, Esq.

JOHN ROWLAND DACEY, Esq.

RICHARD DENIS MEAGHER, Esq.

THOMAS WADDELL, Esq.

WILLIAM HENRY WILKS, Esq.

[The patient, William Creswell (attended by Mr. William Algie, Attendant, Hospital for the Insane, Parramatta), was present throughout the meeting of the Commission.]

Alfred Edwin Hellyer, Esq., Record Clerk, Master-in-Lunacy's Office, sworn, and examined :—

A.E. Hellyer, Esq. 498. *President.*] You produce certain documents that have been asked for by the Secretary to the Commission? Yes; I produce a photograph of two persons—one is supposed to be that of William Creswell.

27 Feb., 1900.

499. And the others? I produce a copy of an entry in the books at St. Mary's Hospital, London, W., as follows :—

St. Mary's Hospital, London, W., 26 October, 1883.

WILLIAM CRESWELL, aged 26 years, single man, by occupation a butcher, residing at 84, High-street, St. John's Wood, Marylebone. Admitted to Thistlethwayte Ward, under the care of Mr. Coulson, on the 20th of August, 1852, suffering from inflammation of absorbents of the arm, caused by a punctured wound twenty-four hours previously; the treatment was incision and poultice, and the patient was discharged cured on the 24th of September following, having been in the hospital thirty-five days.

I

NOTE (*on revision*):—Clabburn and myself (J. L. D. Jackson) had frequent discussions after the row and fight over the cheating at cards, and seemed to enjoy the idea of "Souper being a nobleman." The gist of our dialogue or discourse ran (as near as I can recollect) as follows :—

Clabburn: "That's just the name for my noble Sir Roger Tichborne; I shall in future always call him by that name. Isn't that a fine name for him? Fancy, just fancy, this nobleman buying up all Launceston!"

J. D. D. Jackson: Well, I can't understand him; he is evidently a superior sort of man, and one who has travelled a good deal about the world."

Clabburn: He was very indignant, and told me that I didn't seem to know to whom I was speaking.

J. D. D. Jackson: In our usual confabs, he told me that he had travelled in South America; and as I myself had also travelled in different parts of Brazil, and lived for a short time in Rio de Janeiro, we had now and then a talk about the churches, the mules, Mexican spurs, the lasso, and beautiful plumage of the Brazilian birds, &c. He also told me that he came from Rio de Janeiro to Perth, West Australia, and thence, in coming to Melbourne, the ship caught fire, and all his belongings were burnt. He said the vessel was off Adelaide, and suffered shipwreck.

Clabburn: "Did he ever tell you about a duel he had fought? That makes him have those despondent fits so often; he can't shake them off. At times he's very bad."

J. D. D. Jackson: "No. But it was rumoured that he had murdered some one, and that it preyed fearfully on his mind and spirits, causing his long melancholy fits and sighs, lasting for an hour or an hour and a half."

Clabburn: "They're a nice lot up at the corner (alluding to 'The Royal Oak' public-house, situate at the corner of Brisbane and Tamar Streets, Launceston), Arthur Orton, Daniel Phillips, my noble Sir Roger Tichborne, and Happy Jack (Laws)." They were always together. You should have been there the other night. I never saw a man like Orton, the sailor. They were having a "go in—a shake in the hat." Arthur Orton is an hermaphrodite, or something of that kindred.

J. D. D. Jackson: I was there; but when they left off playing "Blind Hookey" I left and went home, as I had business to attend to in the morning. Dr. Campbell, who occupied a part of my premises, was curious about Sir Roger, and we both scrutinised him, and had several chats concerning the peculiar habit of Sir Roger Tichborne always wearing his surtout coat buttoned at the waist while out walking or visiting, as if to hide, perhaps, a deformity, which was very noticeable. Dr. Campbell remarked that Sir Roger's ears were very peculiar through having no lobes to them, and said he (Tichborne) was a man that nobody could understand. I suggested to both Dr. Campbell and Clabburn that the cause of Sir Roger wearing his coat buttoned was not to hide some malformation but to hide that he had no sign of shape or figure, the usual appendages of man were wanting, which accounted for the effeminate voice of "Sir Roger" and his excessive politeness, being an idiosyncrasy pertaining to the French people.

Several other incidents are well remembered by me. For instance, in chatting about Brazil, that even at Cera I stayed on shore all night with the engineers of the "San Sebastian" (a Brazilian steamer), and on the following morning, whilst early looking to buy some Cera parrots, on going into a house, as directed, I was nearly frightened out of my life; a large "gohana," about the size of a Newfoundland dog, stood right in front of me, when I quickly jumped back, and the inmates, hearing my frightened voice, came to my assistance, and assured me by stroking and patting the reptile that it was perfectly harmless. In describing this little adventure to Sir Roger Tichborne, and asking whether he had seen any "gohanas" while travelling in South America, he replied by correcting me in calling the animal a "gohana." He said, "Yes, I have seen them, but you are wrong in the word, it is 'Iguana,'—spelling it to me. Well, said I, the sailors always called them "gohanas," and that accounts for me picking up that word, pronouncing in their way.

Tichborne, the man that I knew, was a man of superior attainments and research. He told me so many things, which I remember as if but yesterday: His being at the Duke of Wellington's funeral, and having had a good view of it; was well acquainted with the various operas; had heard Mario, the tenor, also Lablache, the basso. "La Prophete" was a favourite opera of his, mentioning "Don Pasquale," "Norma," &c.

I also produce two copies from the Baptismal Register of the parish of Strathfield, Mortimer, as follows:—

William, son of William and Mary Ann Creswell, Mortimer, farmer.

23 June, 1826.

A.E. Hellyer,
Esq.
27 Feb., 1900.

H. ORD,
Vicar.

I CERTIFY that the above is a true copy from the Baptismal Register of the parish of Strathfield, Mortimer, Berks (page 60, No. 476).

(Signed) C. LOVETT CAMERON,
Vicar.

10 July, 1884.

Thomas, son of William and Mary Ann Creswell, Mortimer, farmer.

15 December, 1883.

C. S. BIRD,
Officiating Minister.

I CERTIFY that the above is a true copy from the Baptismal Register of the parish of Strathfield, Mortimer, Berks (page 94, No. 750).

(Signed) C. LOVETT CAMERON,
Vicar.

10 July, 1884.

Also, I have a copy of a statement made by Thomas Creswell.

500. The Commission would like to hear it;—please read the statement? It is as follows:—

Statement of Mr. Thos. Creswell at a personal interview at Elm Dean, Surbiton, England.

27 November, 1883.

NOTE.—After the accident at Mrs. Lee's, William Creswell returned home to 84, High-street, St. John's Wood, Marylebone. An order for St. Mary's Hospital was obtained and he was admitted twenty-four hours after the accident. The sinews were tied with silver wire, and it was successful with every finger but the third finger, which was useless and likely to remain so.

The accident occurred when hanging a bullock. Creswell's foot slipped, and he caught his wrist on the hook, and hung suspended until lifted off. The wound was severe and indelible. His brother Thomas constantly visited him and took him grapes.

G. BARING.

Personal Characteristics of William Creswell.

Height—5 ft. 9½ in.; Colour of hair, beard (if any)—Dark; Colour of eyes—Dark; If any injury to fingers—Third finger; If injured, from what cause?—By meat-hook; On which hand was the cut received in the butcher's shop, at and on what part on the inside of the wrist the sinews torn?—I think right hand; Mrs. Lee, Church-street, Edgware-road.

Signed by Thomas Creswell; witnessed by Georgiana Baring, 27th November, 1883, Surbiton.

William Sutherland Gowen, Esq., postal detective, General Post Office, sworn, and examined:—

501. *President.*] What are you? A postal detective.

502. You are an expert in handwriting? Yes; I have had a considerable experience in that direction.

503. You have examined a number of documents which have been submitted to you by the Secretary to the Commission? Yes. I have made a careful examination of two letters shown me, dated Queanbeyan, 22nd June, 1864, and Gladesville, 17th October, 1871, signed Wm. Creswell and William Creswell respectively, and I am of the opinion that beyond doubt these two letters were written by the same hand. The character of the handwriting, which is legible and regular, suggests a clerical* training prior to the date in June, 1864, as it seems thoroughly established on that date, as shown by the fact that in the letter written seven years latter the same character is clearly maintained. I have also carefully examined *fac similes* of the handwriting of Roger Charles Tichborne, both from his earlier and later letters, and I find that a settled character has formed itself there, showing clearly that letters written with intervals of five and six years between them were written by the same hand. I have carefully compared these *fac-simile* specimens with the handwriting in the two letters signed Creswell, and decidedly, in my opinion, they do not agree in character, and were never written by the same hand.

504. *Mr. Wilks.*] You have compared these Creswell signatures with the Tichborne *fac similes*? Yes.

505. Do they bear any resemblance to each other? No; they are entirely dissimilar.

506. *Mr. Meagher* (*handing the witness "The Charge of the Lord Chief Justice of England—the Queen against Castro"—vol. ii, in which the fac similes occur.*)] Are these the specimens you have examined? Yes; they are entirely dissimilar. It seems to me that the character in the case of the writing of Roger Tichborne is clearly and undoubtedly established. I should say that the Creswell letters are written by an entirely different hand.

507. *Mr. Wilks.*] Compare the signatures with that written by Creswell on the marriage certificate? The signature is not so firm, but the character of the handwriting is borne out.

508. There is an absence of the scroll? Yes; but the general character is maintained.

509. Do you notice that Creswell's letters are punctuated? Yes.

510. And that led you to form the opinion that he had had a clerical training? Yes; the handwriting of Roger Tichborne is of a literary character; it is more careless. I notice also in the Tichborne signatures there is great irregularity in the line of the letters; also there is an upward tendency.

511. Would you think the man that wrote those letters (meaning the letters signed by Creswell), was engaged as an agricultural labourer? No; I should think not.

512. *Mr. Clark.*] Take the early Tichborne signatures—take the "P's"—and those of Creswell's letter to Watts—do they bear a similarity? Yes; there is a resemblance of a general character.

513. There is a signature of Orton's shown here; do you think that in any way compares with Creswell's handwriting? The "C" is similar, but I cannot say there is any great similarity. There is a very noticeable break in the letters; I have also observed that in Creswell's letter—that is, the letters are disconnected somewhat.

514. *Mr. Meagher.*] I suppose you admit that some men who follow a manual occupation write a very good hand? Yes; it is so.

515. And other men who have no manual occupation write an awkward hand? Yes; clergymen and doctors are cases in point.

516.

NOTE (*on revision*):—The attached is correct. I would like, however, to draw attention to two points which were not made clear by me at the inquiry. Firstly, with regard to the clerical training, this term is not intended to convey the idea that the man had received a first-class education, but that he had been, probably, a book-keeper in a store, and thus acquired some practice as a penman. I thought afterwards that the term employed by me might lead to a misapprehension of my meaning. Secondly, as regards the use of capital letters, a few years ago it was admissible, and in common practice, to use capital letters in many places where they are omitted now.

W. S. Gowen,
Esq.
27 Feb., 1900.

W. S. Gowen, Esq. 516. In regard to the letter from Gladesville, if evidence has been given by Dr. Manning that judging from Creswell's demeanour, he should regard him as coming from a farming class, or the lower middle-class in England, would you, viewing this handwriting, and considering Dr. Manning's opinion of Creswell, arrive at an opinion opposed to his theory? I should be inclined to think he had had a clerical training.

27 Feb., 1900.

517. I suppose you admit, with Mr. Netherleigh, the great expert in England, that it is a significant fact that the man who has had only a primary training—that the ordinary man who has had an education just sufficient to make him intelligent—is usually careless in his use of the capital letters? I know it is so.

518. *President.*] That was notorious in Orton's letters? —

519. *Mr. Meagher.*] Look at this letter from Gladesville, and see how many capitals are there? There are "Camping Ground," "Camp," "New Bridge," "Fruit"—there are several words spelt with capitals that are not usually so spelled.

520. And in regard to that signature on the marriage certificate, it might be so written in consequence of the man standing or sitting in a peculiar way, or it might be owing to his having been drinking heavily? Yes.

William Raleigh Sayers, Esq., Assistant Accountant, Commercial Banking Company of Sydney, sworn, and examined:—

W. R. Sayers, Esq. 521. *President.*] You have had placed before you a number of letters with the object of ascertaining if the handwriting is at all similar? Yes.

522. Will you give the Commission your opinion? Yes. I hold in my hand a letter signed by Wm. Creswell, dated Queanbeyan, 22nd June, 1864, and a marriage certificate bearing the signature of William Creswell. The two signatures of William Creswell are undoubtedly written by the same person, for the reason that, although there is a dissimilarity between the "W," the "C's" in Creswell are exactly alike. Also there is a peculiar little trick in the small "s"—a peculiar sort of twist in that letter. I identify those two signatures as being by the same man.

27 Feb., 1900.

523. What about the Gladesville letter? Turning to the Gladesville letter of 1871, in comparing that with the Queanbeyan letter of 1864, I should say that, taking into consideration the lapse of time—seven years—between them, they would be written by the same man.

524. *Mr. Wilks.*] Have you compared the signatures? The same remark applies. I think it is possible they were written by the same man.

525. *Mr. Clark.*] Looking at those different letters would it strike you that he would be a man likely to be able to change his handwriting? No. I do not think it. He seems to me a man whose characteristics show out in his handwriting.

526. *Mr. Wilks.*] Do you notice the punctuation, or attempt at punctuation, in the letters;—would you think those letters were written by a man who had not received a fair education? No.

527. *Mr. Meagher.*] As regards the recurrence of capital letters in the 1871 letter —?

528. *Mr. Clark.*] But we must remember that the time the 1871 letter was written he was confined in the Asylum at Gladesville as a lunatic.

529. *Mr. Wilks.*] Would you think that Queanbeyan letter would be written by an agricultural labourer, or the son of a middle-class farmer of that period—1864? I should rather think it too good for a man in that sphere of life. I should hardly think a man would go in for punctuation unless he had a fair knowledge; it would be extraordinary if that letter were written by a man in the sphere of life you suggest.

530. *Mr. Clark.*] Here are some early signatures of Roger Tichborne;—do you notice any similarity between the capital "P's" in the early signatures and the letter of 1871? There is a remarkable similarity.

Mr. Eugene Reilly, 211, Crown-street, Woolloomooloo, sworn, and examined:—

Mr. E. Reilly. 531. *President.*] What are you by occupation? I am employed at Her Majesty's Theatre.

532. Were you in your earlier days in Her Majesty's army? Yes; I was in the 6th Dragoon Guards, or Carabineers.

27 Feb., 1900.

533. Do you recollect an officer of that regiment named Tichborne? Yes, Sir Roger Tichborne.

534. What year would that be? I think, as far as I can recollect, it was in either 1848 or 1849.

535. You have seen the patient, William Creswell, now before the Commission? Yes.

536. Do you recognise him;—have you seen him before? No; I am not able to recognise him—I do not think I ever saw him before to-day.

537. *Mr. Dacey.*] Is there anything about the man William Creswell that would lead you to think he had been an officer in the army? I cannot say there is.

538. Have you a distinct recollection of Sir Roger Tichborne? No.

539. *Mr. Clark.*] Can you recollect anything of the colour of Tichborne's eyes? No; it is a long time ago since I was soldiering.

Mr. Thomas Tant, Macaulay-road, Petersham, sworn, and examined:—

Mr T. Tant. 540. *President.*] You were at one time a member of the Police Force of this Colony? Yes.

541. Were you ever stationed at Tumut? Yes, for about four years.

542. What year? In about August, 1865. I was there until September, 1869.

543. Have you seen the man named William Creswell? Yes; [*pointing to the patient*] that's the man.

544. Do you recognise him? Yes; no doubt about it.

545. Did you ever see him at Tumut? Yes; thousands of times.

546. Were you ever brought into close contact with him? Yes; and I had several conversations with him.

547. What opinion did you form of him? He was for a short time butchering for John Macnamara, and at the time he supplied me with the writings—memos. giving a list of the cattle he slaughtered for his employer. He was a quiet man.

548. Did you notice anyone in his company at that time;—did you come across Arthur Orton? There was no man calling himself Arthur Orton in Tumut; but Tom Castro was there. I knew Tom Castro at Wagga Wagga.

549. *Mr. Meagher.*] What year would that be? The latter end of 1865 or 1866.

550.

550. *President.*] Did you know those two men, Creswell and Castro, as associates? I feel sure Creswell must have known Castro. When I first met Creswell, I had a chat with him as to where he had come from. He told me he usually went by the name of Creswell; but added, "That is not my right name; it is Arthur Orton." I replied, "What makes you go by that name?" He answered, "It is well to have a couple of names sometimes." He also said he came from Wapping, and his father's name was George Orton, of Wapping. I said, "Then you know all about the Docks, Ratcliffe Highway, and those places," and his answer was, "Well, I did not agree well with the old man; I was away from the old man for a time."
551. Did he ever tell you he was in any way associated with the Tichborne family? No.
552. Did you ever have any impression to that effect? No; I should not have an impression like that. I am a military man myself; I left the army fifty years ago, about the time Sir Roger Tichborne was in the Service, and I should know by looking at Creswell he was not a military officer.
553. *Mr. Wilks.*] Would you know that when you met him in Tumut? Yes.
554. *Mr. Meagher.*] Did he, to your knowledge, ever lay claim to have had connection with the cavalry? No. There was a man named Frizone, a Frenchman, living next door to Creswell. This Frizone was a pretty good swordsman; Creswell has seen him do the sword exercise.
555. Did you ever hear Creswell converse in French with this man you refer to? No; I do not think he could talk French; I never heard him speak in French to Frizone. I took him to be just a young man—nothing extra of a scholar. I should know he was not a college man. I should think he was about as good a scholar as I was.
556. If Dr. Manning describes him as probably being the son of a lower middle-class farmer in England, what would you say? That would be about it; his handwriting was nothing like what a gentleman like Sir Roger Tichborne would write.
557. You had plenty of opportunities of observing his handwriting;—did anything about it impress you as being that of Tichborne? No, never.
558. *President.*] Look at that letter, dated Queanbeyan, 1864;—can you recognise that as being anything like the memos. he used to give you in Tumut? I think so.
559. Is there any similarity in the handwriting? I think the memos., which I am unable to produce, would be something similar to the writing in that letter.
560. *Mr. Wilks.*] Do you remember that Creswell was reported to have sent a letter written in French to a Mr. Walker, of Tumut? I know nothing of the letter.
561. Did he frequent Walker's saddlery establishment? He might have gone there occasionally.
562. Did you ever hear of him practising the sword exercise at Walker's place of business? No.
563. Is that the gentleman [*pointing to Creswell*] who went under the name of Orton in Tumut while you were there? Yes; Creswell also told me he had been in Bathurst, and he asked me if I knew Captain Battye. He said, "I knew Captain Battye in Bathurst; I lived there a good while."
564. You are positive in your identification? Yes; that is the man I knew in Tumut as William Creswell and Arthur Orton.

William Kite, Esq., grazier, Kelso, near Bathurst, sworn, and examined:—

565. *Mr. Meagher.*] What are you? A grazier.
566. Your father was one of the old pioneers of the Bathurst district? Yes.
567. This morning, in the presence of this Commission and others, you identified the patient, William Creswell? Yes.
568. You experienced no difficulty in recognising him, although he was purposely placed in a room with a number of other men? Not the slightest.
569. Had you seen him before? Yes; in the Parramatta Asylum.
570. How long ago would that be? It might be twenty years ago; I cannot tell exactly.
571. Did you, when at the Asylum, pick him out from among a number of other people? I did. I identified him in the presence of Dr. Taylor.
572. You say he is Creswell? He is a man named William Creswell.
573. Have you any doubt about that? Not the slightest. He is the man whom my father sent out from London in charge of bulls.
574. *President.*] What year was that? 1855; I think towards the end of 1855.
575. *Mr. Meagher.*] Did he take those bulls to Bathurst? He first brought them to Sydney, and thence they went to Windsor for a time for a rest.
576. Eventually the bulls went to Bathurst? Yes, in charge of Creswell.
577. Did you see Creswell on his arrival with the cattle? I did.
578. How old would you be then? About 19.
579. How old did he appear to be? Eight years older than I was—perhaps more.
580. At any rate, you were a young man of 19 when he arrived with the bulls? Yes.
581. At the time of his arrival, were books kept at the station? Yes; a day-book and ledger.
582. Do you produce either of them? I produce the day-book containing the following entry:—"W. Creswell, one serge shirt." Then again I see an entry in the handwriting of my brother-in-law, the late Mr. Cousens,—“W. Creswell, one half pound of tobacco,” and underneath that “24th November, 1855.” Another entry is,—“22nd February, 1856, William Creswell, by expenses in Sydney with bulls, £2 10s.; medicine for bulls, 5s. 6d.; two halters, 2s.; expenses of man and self, three bulls, to Windsor, £1 19s.= £4 16s. 6d.” Under that again there is an entry, “6th February, 1856, William Creswell, to cash, £10.”
583. How long did Creswell continue in the employ of your father? I think he was engaged for twelve months, and he remained there for about that time.
584. During that time were you often in his company? Yes; I was frequently with him.
585. After your twelve months' experience of him, you have not the slightest doubt that he is the man you say he is? I am quite positive of it.
586. Did he ever refer to any mark or marks on his body? He mentioned the circumstance of his having a wound on his arm.
587. Did you see the wound? Yes. I think it is on one of his wrists—the inside of the wrist. He said to me, "I got caught in a meat hook."
588. Would you mind looking at the patient and seeing if you can recognise the mark at all? Yes. [*Witness here made an examination of the patient's arm.*] I cannot exactly locate the mark. I —

W. Kite, Esq. 589. *Mr. Clark.*] You thought it was further up the arm than the wrist? Yes.

589½. *Mr. Meagher.*] Had your brother Thomas any dealings with Creswell? On one occasion my brother Thomas came down from the station to "Woolstone," Kelso, and whilst there, one of my father's old servants said to him in the hearing of Creswell, "That mare is too small for you, Mr. Thomas." My brother replied, "I want to sell her." On his returning from town next day he was told, "That man—meaning Creswell—has sold your mare." Later on my brother saw Creswell, and asked him, "Why did you sell my mare—what did you get for her?" Creswell answered, "Seven pounds." My brother said, "If you don't bring me £12 or the mare, I will deal with you." Creswell went away and returned with the mare.

590. Do you know where he went after leaving you? Some two years afterwards father received a letter, addressed to "Tom Kite, Kelso," which letter was not intended for him but for my brother. When father opened it I saw it, and after looking at it I said, "It appears to me the letter comes from Creswell—the man who came out with the bulls." Father replied, "Why do you think so?" I said, "Because I see £7 in figures which refers to a mare of Tom's—my brother—he sold without his authority, and he has not forgotten it, and the hieroglyphics, and the sign of the cross lead me to believe he is insane."

591. What connection is there between the letter you refer to and the sale of the mare? I detected something in the letter.

592. What was it? It was £7 in figures, and it at once struck me as having reference to the mare he sold.

593. Had the letter any characteristics that might strike one as being peculiar? He signed with the sign of the cross.

594. *President.*] He did not attach any signature? No.

595. *Mr. Meagher.*] Prior to Creswell leaving your employ, did you form any opinion as to his sanity? I thought him an erratic individual. He was an excellent butcher. He killed a cow for me without authority.

596. Did he ever impress you as being a college man, or as having a superior education? No, not at all. He was a great man to talk. I was often with him.

597. Did you ever hear him speak French? No.

598. This note your father got,—was it a sensible production or —? It was the note of a madman—of a man who was a lunatic. It had hieroglyphics all over it, and on it also was the sign of the cross. I immediately said to my father, "That is from Creswell."

599. Subsequently to the receipt of that note I believe he turned up at the station? Yes; I saw him standing at the stable one morning, and said, "Good morning, Creswell." He replied, "Good morning, Mr. William;" I said, "What is the matter with you?" He answered, "I am looking for something to do, can you give me anything?" I replied, "No, I have nothing; I cannot give you any work." The fact is, I did not wish to give him work.

600. Why not? I had my suspicions aroused by that letter addressed to "Tom Kite."

601. The reason you did not offer him employment was on account of his mental condition? I could not give work to a man whom I thought half demented. He walked away some five or six paces, picked up a piece of wood—a chip—put it into a piece of blanket, and placed it in his pocket. That action convinced me he was mad.

602. And the man you speak of is, you say, in this room to-day? Yes—William Creswell.

603. *Mr. Wilks.*] You spoke of the year 1855;—are you quite certain? I have a book entry here; nothing can be more certain. This day-book shows it was the end of November, 1855.

604. Do you know the name of the vessel that brought the bulls out to the colony? I think it was "The Maid of Judah."

605. *President.*] I presume those entries in your day-book were made from day to day? Oh, yes; they were always entered every day.

606. *Mr. Wilks.*] You do not think it was a vessel called the "Destares"? That was not the name; I think it was "The Maid of Judah."

607. Do you remember what took place at the Asylum when you visited Creswell? When I went into the first yard I saw a number of men; I could not recognise Creswell there. I then entered the second yard, and there was a number of men sitting under a vine. One of those men rose and came towards me in the middle of the yard.

608. What occurred then? I said, "Good day, Creswell." He made no answer. I then went on, "Do you know me?" No answer. "Do you know William Kite?" "Kite—Kite—Kite," he said, and that was all. I then said, "Do you recollect Elegance?" "Elegance—Elegance—Elegance," he replied. "Elegance" was the thoroughbred horse my father sent out from England. I turned round to Dr. Taylor and my brother-in-law (Mr. M. Forrest), who was with me, and said to Dr. Taylor, "He knows me very well, but he pretends not to know me." I then said, "I will try and catch him." I turned round quickly, saying, "Do you recollect Dewdrop?" He replied, "Yes; a flea-bitten gray mare," which she was.

609. *Mr. Meagher.*] Creswell said that? Creswell said that in answer to my question.

610. *Mr. Wilks.*] Did he refer to Elegance? No.

611. Did he recognise you? No, but he knew me perfectly well, but he was what they call "put up" not to recognise me.

612. Do you mean "put up"—who by? I cannot say; I did hear there was some little influence going on.

613. What made you surmise there was some influence going on? It was my imagination only; I imagined such was the case. Creswell looked at me as if he was on his guard.

614. His general bearing led you to believe he was trying to suppress his identity—not to reveal it? Yes.

615. Was this mare Dewdrop well known to the general public or to the people on the station? She would not be known to the general public; she was a racing mare.

616. Creswell has had no other conversations with you since the time you refer to at the Asylum? No.

617. *Mr. Meagher.*] Ex-Sergeant Tant has told us to-day that Creswell on one occasion told him he knew Captain Battye in Bathurst? Captain Battye lived in Bathurst at the time Creswell was there.

618. *Mr. Clark.*] You say that when you visited the Asylum Creswell seemed to endeavour to hide his identity? I think so.

619. Would it surprise you to learn that at the Asylum if there is one thing more than another he insists upon it is that he is William Creswell? I do not know.

620. Did you think there were influences at work at the time you visited him? I did think so.

621. Then it is possible there may be influences at work now? I do not say so.

622. The man is most emphatic that his name is Creswell? Then he tells the truth.
623. You say he came out in "The Maid of Judah," and that he arrived at your station in 1855? Yes.
624. If you were told that the shipping records of the Port of London show that no ship of that name left before 1861, what would you say? I cannot say; I might be confounding the ships; other cattle came out to my father.
625. Did you tell any of the authorities at the Asylum twenty years ago that Creswell came out in "The Maid of Judah"? No, I did not.
626. Was Creswell fond of horses or shooting? Yes; he was fond of a horse, and could shoot well.
627. Could he play cricket? I cannot say. He could shoot well—he shot two pigeons flying.
628. In regard to the mare Dewdrop, I suppose there were other people in Bathurst who knew her as well as Creswell? Not a great number.
629. Supposing the lost Tichborne was in Bathurst about that time, he was just likely to know her? I do not think so.
630. Did nobody know Dewdrop but those on your station? Very few people.
631. *Mr. Dacey.*] I understood you to say that someone put Creswell up to refuse to recognise you? I said I imagined such a thing.
632. Did I understand you to say you heard something that warranted you in saying that? I believe I heard something like it.
633. You would not be too sure about it? No.
634. Oh, you would not? No.
635. You say Creswell was a great man to talk, and not the man to conceal anything;—he was pretty voluble? Yes, decidedly.
636. During your intercourse with him did he show any disposition to keep his affairs to himself? No, on the contrary. He was a very well-behaved man, though it is nearly forty years ago since the time I speak of.
637. You do not agree that he was a close man, and would give information to no one? Not at all.
638. *Mr. Meagher.*] Mr. Clark asked you about "The Maid of Judah"; all you can tell us is that those bulls arrived in Bathurst at the end of 1855;—does your book disclose the duration of their spell at Windsor? About a fortnight.

W. Kite, Esq.
27 Feb., 1900.

Robert Dear, Esq., cordial manufacturer, Tumut, sworn, and examined:—

639. *President.*] How long have you resided at Tumut? Between thirty-three and thirty-four years.
640. You have seen the patient, William Creswell, this morning? Yes.
641. Have you seen him before? Yes.
642. Where? He was in my employ at Tumut for between ten and eleven months.
643. In what capacity? As groom; I kept an hotel at the time.
644. What name did he go by? William Creswell. I may say I knew him some little time before he entered my employ, and he was then known as George Creswell. He was living at a place called Tarabandara, on the Tumut River.
645. Did you notice anything peculiar about him during the time he was in your employ? He went quite out of his mind; he was always a little off his head during the whole time; he was a first-class working man.
646. Did you ever have any conversation with him relative to his previous history? Yes; one day I was saying that the last horse-racing meeting I was at in England was at Reading, in Berkshire. He replied, "Reading, that's where I come from." He told me he knew all about Reading. After that he asked me for a job, and I put him on.
647. Did you have any further conversation with him? I did; but I have only a faint recollection of what was said. I do remember a great deal of what he said to me about butchering, because I was apprenticed to a butcher myself near the place he had been in in England. I was apprenticed in Portland Town, and he told me he was employed in St. John's Wood as a butcher. There was no doubt about his having been a butcher; he could dress a beast as well as anyone I ever saw.
648. Have you ever heard him say he was in any way associated with the Tichborne family? He went completely out of his mind while with me, and his mania took the form of letter-writing. He wrote to all sorts of people. Amongst others, he addressed letters to several Hampshire families. He knew something of the Tichborne family. He addressed a letter to Lord Mildmay, to Mr. William Day, the horse-trainer, in Hampshire, and to several others. He wrote the letters, and gave them to me. I pitched them into a box. I did not forward any of them. He went so badly out of his mind that I had to get rid of him. Sergeant Tant, who has given evidence here to-day, took him in charge, and he has been in the Asylum ever since.
649. Did you ever hear of him having written any letters in French? No; that is one thing I am positive of—I never heard him speak a word of French. I have no remembrance of the letter written in French, which Mr. Walker, who has given evidence before the Commission, said he received.

R. Dear, Esq.
27 Feb., 1900.

Edward Priestman, Esq., Accountant, City Mutual Life Office, Hunter-street, Sydney, sworn, and examined:—

650. *President.*] I understand you desire to read a statement to the Commission? Yes; having had an opportunity of seeing the evidence, I desire briefly to refer to certain statements that have been made. To this end, and in order to be clear in what I wish to say, I have placed my remarks in writing.
651. Will you read the statement? Yes. It is as follows:—

E. Priestman,
Esq.
27 Feb., 1900.

I am well aware that in dealing with the evidence which has been adduced in the first instance before the Select Committee, and more recently before the Royal Commission, I am undertaking a task which is a big one, but the same feeling which has animated me all through my five or six years' struggle will, I trust, help me to point out certain particulars which may have escaped the attention of the Members composing this Commission.

To take the evidence of the witnesses in their order, I commence with Drs. Pickburn and Devlin. Their joint evidence establishes the fact that every mark and peculiarity on Creswell corresponds exactly with the marks and peculiarities admitted by Lord Chief Justice Cockburn to have been existent in Roger Tichborne. The only exceptions being the height, the difference in which can and has been accounted for, the cuts on the ankles, and the tattoo-mark, the absence of both of which is explainable.

Now

E. Priestman,
Esq.
27 Feb., 1900.

Now I submit with great respect that, where a certain person may be lost for years, and has on his person, say, two or three distinguishing marks and peculiarities, in after years if another is found showing these same marks, &c., there is very strong proof that these two persons are one and the same. But what do Drs. Pickburn and Devlin say? A man is produced before them who has some thirteen or fourteen marks and peculiarities appertaining to a man who has been lost. Does not that form proof enough in all conscience that the men are absolutely identical? Fifteen marks and peculiarities were admitted as proved to have existed on Roger Tichborne, and twelve of these have been sworn, after a careful examination, to exist on Creswell. The only one of importance missing is the tattoo-mark. Two or three witnesses swear that Creswell had this at one period, and indisputable evidence can be, and has been, produced that such are easy to obliterate. And again it must be remembered that all marks, not natural ones, on Roger Tichborne were proved to have existed fifty years ago, and that such a long period would account for their almost total disappearance, and yet they are on Creswell.

The natural marks and characteristics are, according to the doctors mentioned, all there. The remarkable grey-blue eyes, the twitching of the eyebrows, the odd ears, the slight halt in the walk noticeable at times, and the lump on the right instep (sworn to by Dr. Manning in his evidence on the 2nd February). These were the only natural marks proved to exist at the great trial. But several others although not admitted as proved by Lord Chief Justice Cockburn were sworn to by members of the Tichborne family and others. They were a peculiar thumb-nail on the right hand, a habit of continually muttering; a habit of almost invariably sitting sideways on a chair; a very frequent stamping of the foot on the floor. Creswell, it must be admitted, has all these.

Therefore, I say, can any doubt possibly exist as to who he is? To proceed, Lady Doughty said of her nephew at the great trial "He was always most mysterious in his manner and actions, making mysteries out of nothing." Look at Creswell, he is the embodiment of mystery.

Dr. Godson, in his evidence before the Select Committee, page 15, referring to the wound on the back of Creswell's left wrist, said, "Creswell got it by cutting something with a butcher's instrument. He was attended by a well-known surgeon at St. Thomas' Hospital, London. There was a good deal of suppuration, and they made a counter opening on the front of the wrist." Yet Creswell tells us he received this wound on the front of the wrist at Tumut, through the knife slipping whilst slaughtering a sheep. And Mr. Thos. J. Walker, of Goulburn, tells us that his apprentice, bound up this very wound at Tumut.

I have here a copy of an affidavit sworn by Mr. Michael Lennane, of Tumut, also one sworn by Mr. Patrick Harlow, of Tarrabandra. In the latter it will be noticed that Creswell was known to him as George Creswell, and the latter told Mr. Harlow that the wound on the back of his left wrist was caused by a cutlass, not by a butcher's crop.

I also append an affidavit from Mr. Francis Devlin, of Temora. They are:—

Affidavit of Michael Lennane, sworn the 24th day of November, 1897, states:—

1. I knew Creswell in the years 1867 and 1868.
2. In the Tumut district, New South Wales, he worked for nearly two years in the butcher's shop kept by Arthur Orton (the Tichborne Claimant).
3. On one occasion in the year 1868, while travelling with me from Gundagai to Tumut, he took me into his confidence and told me that his real name was Sir Roger Tichborne.
4. He was, as a rule, a very reserved man.
5. He always led me to believe that he was a man of good family, and well connected in England.
6. I have seen what purports to be a photograph of the William Creswell now confined in the Parramatta Asylum, and recognised it as the likeness of the William Creswell I knew at Tumut, who told me he was Sir Roger Tichborne.

Affidavit of Patrick Harlow, sworn the 26th day of October, 1897, states:—

1. I first became acquainted with William Creswell, who is now confined in the Parramatta Lunatic Asylum, in 1866, when I was residing at Tarrabandra. He was engaged in October, 1866, by a Mr. James McEvoy to do some fencing. He had a mate working with him named James Buchanan.
2. He was engaged six months, and I often had conversations with him. Speaking one day of rank wheat, he told me that his people put their sheep on it to graze it down.
3. On one occasion he complained of his wrist. He said it was a cutlass wound. He wore a leather strap over it when lifting logs.
4. When the fence was finished Creswell was engaged by McEvoy as a boundary rider.
5. Soon after this Creswell, while in my yard, received a kick from his horse which nearly killed him. He stayed in his own cabin for a week, and then was taken to the Gundagai Hospital, which was about 10 miles away.
6. I went to see him at the hospital when he had been there a fortnight. He was very ill indeed. The nurse would only allow me to see him on condition that I should only say a few words to him. He did not recognise me at first, but afterwards asked me to get some clothes of his washed. I never expected to see him again.
7. About three weeks afterwards I saw him sitting on the bridge over the Murrumbidgee at Gundagai. He told me he was staying there at "The Bridge Inn Hotel" to recruit his strength. We drank together, and he gave me a receipt for his horse, which was in my paddock. I had never seen his writing before. I was surprised that a man in his position could write so well. I have since lost the receipt.
8. When I knew him he went by the name of George Creswell, not William, as he is called in the Lunatic Asylum.

Sworn, &c.

Affidavit of Francis Devlin, sworn the 1st day of November, 1897, states:—

1. I first became acquainted with William Creswell in Queanbeyan in the year 1861 or 1862.
2. In 1864 Creswell often used to visit the butcher's shop I then kept, and he frequently said to me, "I am Sir Roger. You will hear of me in future days"; and "I am Creswell and I am Sir Roger." I did not then know what he meant.
3. On various occasions I saw tattoo-marks on his arm. To the best of my recollection they were on the back of the left wrist.
4. He frequently, when in my company, naturally addressed me in a foreign language, which I believe was French.
5. I always knew him to be eccentric, and rather given to drink, but a thorough gentleman.
6. I visited Creswell at the Parramatta Asylum in 1884, and he after a short time recognised me, and we spoke of old times. He seemed down-spirited, and several times repeated the words, "Devlin, butcher." I tried to cheer him up, and said, "You will soon be out of this." He replied, "Well, I really don't know what they are keeping me here for."
7. Creswell also asked me about Mr. J. J. Wright, of Queanbeyan, and also the Messrs. Hunt, publicans.
8. In 1884 I was introduced in Sydney to a man named Thomas Creswell. I was told he claimed William Creswell as his brother. I conversed with him for some time, and came to the conclusion that he was no relation whatever to William Creswell.

Sworn, &c.

Turning to page 19, in the Progress Report of the Select Committee, we have in Mr. J. R. Moore's evidence an entry in regard to Wm. Creswell from the Reception House records, as follows:—"12th January, 1871. Patient's age, 42; religion, Roman Catholic, &c." Roger Tichborne was born on the 5th January, 1829, consequently on the 12th January, 1871, he would be 42 years and one week old. In addition, Tichborne was a Roman Catholic, whilst the Creswell family are Baptists. The real William Creswell was born in 1827, at Mortimer, in Berkshire.

That the patient Wm. Creswell speaks French fluently we have the sworn evidence of voluntary witnesses, men of known and proved integrity; that he is, or has been, a good writer we have ocular demonstration; and that he is polished and gentlemanly in his manner we have also ample evidence. Is it possible, then, that the patient can be the real Wm. Creswell?

I have here the latter's photograph as sworn to by Thomas Creswell in London in 1883. Is there the slightest trace of any resemblance between it and the patient?

In the affidavit sworn by Thos. Creswell as abovementioned he deposes to the fact that his brother is "5 feet 9½ inches in height, with dark hair and eyes, &c." Has the patient then shrunk 2½ inches in height, and what about his eyes? We have it that the real Wm. Creswell was apprenticed to a saddler named William Carter in Reading, and this Carter swore to the appended photograph as being that of Wm. Creswell, his one-time employee.

With the generous indulgence of the members of the Commission I will now mention one or two little episodes which occurred at my recent visits to the Asylum. On

On the occasion of my visit with Drs. Pickburn and Devlin, the former, when examining the cut on the front of Creswell's wrist, noticed a small scar close to and at right angles to it. Asked by Dr. Pickburn as to whether this small scar formed part of the larger wound, Creswell replied, "No; there was a blotch there, and the person who removed that removed the other mark." Now, a blotch on the front of the left wrist was a proved birthmark on Roger Tichborne. Then, as to the other mark mentioned by Creswell, does it not seem probable that he referred to the tattoo? The two doctors heard this, and can vouch for what I say.

On the same occasion Dr. Pickburn called him Mr. Creswell, pronouncing the name as though it were spelt "Crezwell." "My name is not Crezwell," the patient retorted, "it is Creswell." "Yes," I replied, "spelt with a double s, eh, my friend?" The patient nodded acquiescence. On my next visit, thinking that Creswell would repeat this, I said to him whilst Mr. Murray, of the *Sunday Times*, was sitting by my side, "What is your name, William?" "Crezwell," he replied. "Will you spell it for me?" I asked. "C r e s w e l l," he answered. This, to my mind, is proof that he has only assumed the name, as he did that of Wm. Smith, Roger Leslie, Chas. Hampden, &c.

A still more noticeable event occurred on this visit. I happened to be sitting beside the patient whilst evidence was being taken in another part of the room, and, pressing his hand, I said to him, "Why do you adopt all this disguise; you are no more William Creswell than I am." "Yes," he answered, "that is right; but don't say that here."

Now, regarding Creswell's stereotyped answer when questioned about his name, date he came here, and the name of the vessel by which he came here, viz., "William Creswell, 'Maid of Judah,' 1854." Inquiries were instituted in England long ago by the late Miss Baring, and she ascertained that no vessel called the "Maid of Judah" had left England previous to 1861. We have the evidence of Mr. Stafford Lett, with whom I had a long interview two years ago, that he knew Creswell as William Smith, in Sale, Gippsland, in 1858, and that the latter was in company with Arthur Orton (see Creswell pamphlet, page 26).

Regarding Creswell's taking a mob of cattle to Mr. Kite's station near Bathurst, I certainly admit that Creswell did take up cattle to Mr. Kite's in the early sixties; but he was in Victoria in 1854.

About the year 1865 Creswell came to Sydney with some £200 he obtained from Mrs. Creswell, and ran through the money in debauchery. When it was spent he was looking for means to go up country again, when he heard of a man being wanted to drive some cattle to Mr. Kite's. On his arrival at the station Creswell spent some seventeen weeks there, eventually clearing out about the time Ashton's circus, which had been giving performances in Bathurst, left. It was afterwards ascertained that the reason of his following the circus was because he discovered that one of the players in the band had been a bandsman in the 6th Dragoon Guards-Carabineers (Roger Tichborne's regiment), and the two of them were together for some time until the circus arrived in Wagga.

I now wish to call the attention of the Commission to the Creswell pamphlet. There, in a statement signed by Mr. R. Y. Cousins, of Kelso, it is made to appear that Creswell was in Mr. Kite's service from November, 1855, to March, 1856. This does not tally with Mr. Kite's affidavit.

Then, again, in the Creswell pamphlet, there appears a letter from Mrs. Mary C. Haigh. In this, Mrs. Haigh, who apparently knew the family intimately, says, "I cannot recollect when Wm. Creswell came to this Colony; but I think it must have been during my passage on return to England, about 1861. He brought letters to me. In London I renewed my acquaintance with the Creswell family, and was told that William was coming out to go to Mr. Kite's, at Bathurst."

Now, the Commission will admit the gross inconsistencies between Mr. Kite's affidavit and Mr. Cousins' and Mrs. Haigh's statements. I fully admit that William Creswell was at Mr. Kite's station, and that he took some cattle there; but it was in 1865. In 1854 the object of this inquiry was in Melbourne, and on Boisdale station, in Gippsland, as mentioned in Mr. Graves' statement, and verified by myself, with the late Mr. A. C. Fraser, Under Secretary for Justice, and a relative of Mr. Foster, of Boisdale.

The narrative referred to is as follows:—

STATEMENT OF MR. GRAVES, M.P. (PUBLISHED IN *Sydney Daily Telegraph*, JANUARY, 1895).

I visited Creswell twice at the time the Ortons, from South America, were brought over in the case by an hotel-keeper in Wynyard-square, Sydney. At the time of the first Tichborne trial an attorney's clerk, named Mackenzie, and a detective from London, came to Australia adverse to the case of any Australian claimant. This Mackenzie took up the case of Orton, who was called de Castro. He followed his career from the time he left his father, the Wapping butcher, to his final butcher's shop in Wagga. He traced him, without a check, from London to South America, back to London; then out to Tasmania, from there to Gippsland, in Mr. Johnson's cattle ships, to Port Albert; thence to Johnson's cattle stations, then round Sale (Gippsland); from there to an hotel at Sale, where he was ostler; then charcoal-burning near Sale. From charcoal-burning to horse-breaking, still in the vicinity of Sale, for Messrs. McLeod; and subsequently horse-stealing, and selling the horses at Bendigo and Castlemaine diggings. His movements were followed from there to Echuca, thence to Deniliquin, where he acted for a long time as pound-keeper for Mr. Robertson. He was, after that, in the employment of Mr. Heindt, an hotelkeeper, the Deniliquin pound being sold by Mr. Robertson to a Mr. Monk. From there he went to Wagga, as a butcher, and finally to England. All these years he was off and on engaged in butchering as a sheep-butcher. His favourite feat, when he was half-drunk, was to get a knife and a sheep, and for any wager he could get he would kill and dress the sheep in the London market manner in the shortest time on record. Mackenzie and his detective next turned their attention to the "Swell," as Tichborne, when on Boisdale Station, was called. He took up his career in Victoria, and followed it out as he had done Orton's, from the day he landed from the "Osprey," at Liardet's Stage, at Sandridge. His first new acquaintance was Captain Chessel, who went down to repair the "Osprey," and Tichborne was afterwards introduced to Captain Crawford, the Police Magistrate, who conversed with him in French. Captain Chessel got up a subscription for him, bought him an outfit, and sent him to board at the "Highlander Hotel," Flinders-street, where he met a lot of Gippsland drovers. He was in the habit of going each evening with these drovers to Kirk's Bazaar. He also went one or two short trips round Melbourne with the drovers, and made the acquaintance of a stockman employed by Mr. Foster, of Boisdale. This man, "Bill," asked Mr. Foster to take the "Swell" to Gippsland, and two days after Mr. Foster left Melbourne, after the sale of some cattle, "Bill," the stockman, started back to Gippsland with five horses. He took the "Swell" down on one of these. On the third day on the road Mr. Foster overtook the men, and rode down the rest of the way with them.

The "Swell," told him his history, and when he arrived at a public-house Mr. Foster would take him into the parlour with him for a drink, giving Bill, the stockman, his drink in the bar. Foster and the "Swell" talked a good deal about France. They went on to Boisdale station, and the "Swell" helped Bill to muster cattle. They used to kill for the station, and the "Swell" had not the most distant idea of any kind of butcher's work. He could not even cut up meat to salt. When they had been at the station for some weeks, Bill, at Mr. Foster's direction, took the "Swell" out with a mob of yearling weaners to an out-station, and he remained there for some months. He then came back to the home station, at Boisdale, and Mr. Foster paid him £5 by cheque on a Melbourne agent. The "Swell" had small feet, and was most particular to keep his boots clean, polishing them every morning. This was a most unusual proceeding for a station hand. One day, Mr. Johnson, of Tasmania, who lived on the next station, came over to Boisdale to look for some of his missing cattle, and de Castro (Orton) and two other stockmen came with him. This was the first time that Orton and the "Swell" ever met. They seemed to chum in together. Orton had a most untidy way of dressing. He wore a red handkerchief round his neck, a dirty jumper, and moleskin trousers, and had been in Gippsland about six or seven months before the "Swell" came down. The "Swell" could speak French, and rode with long stirrup-leathers like a trooper. He was very quiet and mysterious at times. Orton, or de Castro, as he was called, then took to frequenting Sale, and became ostler at an hotel there. He made the acquaintance of squatters, and was known as a skilful butcher and charcoal-burner. At the time the "Swell" was about Mr. Foster's station he had a great fancy for horses. He occasionally went into Sale, and was very thick with de Castro. Then he and Orton took to breaking-in horses and selling them. After staying at this business for a while they cleared out of Sale, the "Swell" going towards the Upper Murray and the Monaro, and Orton to the Bendigo and Castlemaine district. Orton then went to Deniliquin, from there to Wagga, and thence to England.

The "Swell," on his travels, fell in with a lady who was a nursery governess at some station. She had lived with a family in England, where she had met the "Swell," when he was a cavalry officer. She used to speak French with him, and it was said they were very good friends. This lady was alive a few years ago. I do not know if she is now. I have met her, and if anyone alive could identify the English cavalry officer, the Gippsland horse-breaker, and the Parramatta lunatic as one and the same person that lady could. I used a French expression twice at Parramatta in the presence of the lunatic. He looked at me very furtively, and he certainly understood what I said. Years ago, in consequence of the information I possessed, I came to the conclusion that the man at Parramatta was, first, a gentleman by birth; secondly, he never

E. Priestman,
Esq.
27 Feb., 1900.

E. Priestman, never had been a butcher; he was not a brother of the Ortons; that, although not set up like a cavalry officer, he had been drilled; that he had some innate fear of punishment; that he had a Frenchman's knowledge of French expressions never used by Englishmen; that he had not, in early life, earned his bread by manual labour.

27 Feb., 1900. Mr. Graves adds in his narrative that Bill, the stockman, of Boisdale, was in his employ in 1873 and 1874, and he was, through him, able to verify the particulars of the life of the "Swell" given above.

I may mention the fact that during my researches into this matter I have ascertained that the subject of this inquiry has taken different names at various periods. We have him first, after landing in Melbourne, in 1854, in July, adopting the name of Tom Castro; then at Boisdale he was known as "The Swell" and William Smith. After that he took the name of Charles Hampden; then he was known as "Gentleman Harry," the Frenchman; subsequently as George Speaker, Alfred Smith, "Ballarat Harry," Arthur Orton, George Frederick Smith, William Creswell, Roger Leslie, and George Creswell. During the whole period of the adoption of these names, extending from 1854, Creswell was on intimate terms with the real Arthur Orton up to 1865, and it is beyond question that from Creswell, Arthur Orton obtained all the knowledge which enabled him to make such a bold and partially successful attempt on the Tichborne-Doughty estates.

In studying the character of Roger Tichborne one is struck with the fact that he was, even before he left England, a perfect incarnation of contradictions. At one time we have him chumming in with noblemen, and we next see him drinking and debauching in some low pot-house with disreputable companions. He was met on several occasions in England by different people, and even at that period he made a practice of giving a fictitious name when asked who he was.

Regarding the patient adopting the name of Creswell. The first mention of his doing so was on the occasion of his marriage with the widow Clark. Strange, too, but absolutely true, is the fact that Mrs. Clark's maiden name was Ellen Oates. She was a native of Hampshire, England (the Tichborne estates are in Hampshire), and it was her brother, Thomas Oates, who carried Roger Tichborne, in a state of intoxication, on board the "Bella" at Rio Janeiro. This relationship of Mrs. Creswell to Thos. Oates can be verified on application to Mr. E. W. Johnson, solicitor, Goulburn.

Then, again, a Mr. Allen, of Lawson, in the Blue Mountains, wrote me, in 1895, to the effect that he and his wife were great friends of Mrs. Creswell, and the latter, on her death bed, informed them and a storekeeper at Cowra that when she married Creswell she fully expected he would have married her in his right name, and she would have been Lady Tichborne.

We have the evidence of Mrs. Smithers that her father, the late Mr. Eckford, was convinced that Creswell was the lost baronet. And Dr. Godson acknowledged to my wife and myself that his predecessor, Dr. Taylor, would have taken Creswell to England if he could have accounted for the tattoo marks. Who better qualified to form an opinion as to Creswell's identity than those two gentlemen?

As to the tattoo mark, it must have been removed by some means from Creswell's arm, otherwise Mr. Forbes, Mr. J. J. Wright (a magistrate at Queanbeyan), Mr. Walter Watson, and others must be looked upon as perjurers. I can produce abundance of evidence that tattoo marks have been and can be obliterated.

This, then, being the only mark not on Creswell out of fifteen marks and peculiarities, with the greatest confidence I leave it to the Royal Commission to decide who Creswell really is.

Let me remind the Members that when Sir Wm. Manning, in 1884, sent Creswell back to the Asylum, virtually nameless, he had far more abundant evidence than has now been advanced to prove the patient Creswell. And yet His Honor scouted the evidence of Thomas Creswell, Mr. Kite, Mr. McDonald, and others, and by his action told them that he did not believe them.

Look at Creswell—a man of mystery. So was Roger Tichborne. Where did Arthur Orton obtain his knowledge—his intimate knowledge—of Roger Tichborne's life? Creswell, to his sorrow, confided in him too deeply, and was betrayed.

I can only say, in conclusion, Mr. President and gentlemen, that I thank you deeply for your disinterested attention, and your freely given services in helping me to do justice to one who I consider has been cruelly wronged in the past; in fact, has been so undeservedly made a tool of by unscrupulous villains, so foully deceived, that his wrongs have sealed his lips as to his identity, and condemned him to a life of misery and suffering.

I can say no more, but simply thank you all, from the bottom of my heart, and plead, at the same time, for freedom for the alleged William Creswell, whom I am absolutely proud to call my friend.

652. *Mr. Wilks.*] You admit Creswell went to Mr. Kite's in the early sixties? Yes; I meant about 1865.
653. You have heard Mr. Kite swear it was in 1855? Yes.
654. You also saw Mr. Kite produce a day-book in which there are several entries made in 1855, of articles purchased by, and matters pertaining to, William Creswell? Yes.
655. That book was written up by Mr. Cousins, a brother-in-law to Mr. Kite? Yes.
656. Well, now, unless the entries in the book are forgeries—? Mr. Kite's affidavit in 1884 is to the effect that Creswell brought bulls on to the station in 1854.
657. That is a difference of one year only? I am not impugning Mr. Kite's story at all; but it is possible for dates to be altered.
658. But you cannot alter a day-book? What I say is, Creswell arrived at Mr. Kite's with cattle in 1865—not 1855; there is ten years' difference.
659. You heard Mr. Kite clearly say Creswell was with them on the station for twelve months; and you also heard him say he had been in close contact with Creswell for a month at a time? Yes.
660. You spoke of natural marks and tattoo marks, and, with the exception of the height, the cut on the ankle, and the tattoo marks, you claim the whole of the marks said to have been on Tichborne are observable on Creswell? Yes.
661. To which do you attach the most importance? To the natural marks.
662. Which—the twitching of the eyebrows, the remarkable blue eyes, and the odd ears? Yes.
663. Is it not a fact that the evidence before the Lord Chief Justice in England was to the effect that both ears were lobeless? It was alleged that one ear was lobeless, and the other was not; the two parties to the trial admitted that. The Tichborne family unanimously swore they were odd ears.
664. The Lord Chief Justice of England decided the original Tichborne had both ears lobeless? Yes.
665. Creswell has only one ear lobeless? Yes.
666. It has been said that you are a distant relative of the Tichborne family—is that so? I am a distant relative of the family in this way: my father's father married a lady whose sister was married to a cousin of Sir James Tichborne.
667. That is simply a distant marriage connection? Yes.
668. What has prompted you to take this case in hand? Chiefly because I knew Sir Alfred Tichborne when I was very young. It was the aim of his life to discover Sir Roger Tichborne, and I would do anything for him.
669. Are you acting on behalf of anyone in this matter? I am acting for a friend who was a friend of Roger Tichborne's mother. I have a power of attorney from a clergyman—the Rev. E. Williams, of Isleworth, London, England.
670. *Mr. Dacey.*] What power has he to give you authority? The Lunacy Act says: any relative or friend resident outside the Colony, can give power. At the same time I hold a power of attorney for the patient as William Creswell. I am willing to take charge of him under either of those powers of attorney, whether he be Creswell or Tichborne. The latter power of attorney is executed by Creswell's friends in England.

671. You remember the startling statement made by Sir William Ferguson, the great surgeon, who alleged there was a certain malformation — ? He only alleges it. There is a good deal to be said on that subject. Arthur Orton evidently was under the impression there was something of that sort, and, from what I can gather, purposely injured himself personally in England. E. Priestman,
Esq.
27 Feb., 1900.
672. From the time of your first acquaintance with Creswell until now, you appear to have got stronger in your opinion that he is Tichborne? I am. I am absolutely positive, from what he said to me. He will not speak now.
673. In your book, "The Tichborne Mystery", page 127, you say: "There is also his knowledge of French (Tichborne's mother tongue); and above all, in the writer's mind, Creswell's greatest characteristic—mystery"; you have heard witness after witness here, who were intimately acquainted with him, swear he never spoke nor wrote French? On the other side I have heard several witnesses swear they have heard him speak French
674. *Mr. Meagher.*] You have positively said in your statement that "The Maid of Judah" never left the port of London before 1861? Yes.
675. Would it surprise you if a gentleman now in this room were to go into the witness-box and swear that he saw "The Maid of Judah" in Sydney Harbour, after her passage from London, in 1855? It would surprise me greatly.
676. Who is your authority? I got my information from London.
677. *Mr. Clark.*] Have you made inquiry at the Shipping Office in Sydney? No.
678. *Mr. Meagher.*] Are you not aware that you could have obtained a copy of the records from the Shipping Office here to substantiate your evidence? I am of opinion that the whole thing rests upon the doctor's evidence; I would not give a snap of my finger for other evidence.
679. *Mr. Clark.*] You hold power of attorney to receive the patient as Tichborne or as Creswell? Yes.
680. That power of attorney with regard to Creswell — ? Comes from the same gentleman who gave me the power to get him as Tichborne.
681. Has Creswell any property, any estates, in England? I can only speak from hearsay. I have heard that he is entitled to a farm in Hampshire, and that Thomas Creswell has said he would rather that he should die in the Asylum than obtain possession of it.
682. What do you propose to do with this man if you get him out of the Asylum? I will take him to England at once.
683. Are you prepared to give security for his safe keeping and proper treatment? Yes; I am prepared to enter into the usual bond. I can get the money straight away.

Mr. Thomas Tant, Macaulay-road, Petersham, sworn, and further examined:—

684. *Mr. Meagher.*] You have heard the last witness, Mr. Priestman, say that "The Maid of Judah" never left London for Australia before 1861? Yes. Mr. T. Tant.
27 Feb., 1900.
685. Can you tell the Commission anything about that vessel? The first time I saw her was on 22nd September, 1854. She was then in the dock at London, loading for Sydney. She was a clipper-built vessel of about 700 or 750 tons. She was sister ship to the "Woolloomooloo." When I arrived in Sydney on 13th January, 1855, "The Maid of Judah" was lying at the Circular Quay. She was at that time loading wool for London. I left "The Maid of Judah" in the dock at London, and when I got out here she was here before us. She had outrun us on the passage.
686. *Mr. Clark.*] What ship did you come out in? The "Bangalore."
687. *President.*] What was the usual duration of the passage of a sailing vessel in those days? We were 116 days from London to Australia. The "Woolloomooloo" and "The Maid of Judah" were clipper ships, and faster than our boat.
688. What was the length of the passage of "The Maid of Judah"? I should say about eighty-five days.

ROYAL COMMISSION ON CASE OF WILLIAM CRESWELL.

APPENDIX.

A.

Letter from Mr. Betts, Gladesville Asylum, forwarding extract from Asylum Case-book.

Dear Sir,
The only description of William Creswell in our Case book is . "He is a tall, powerful man, grey hair and beard, and looks older than he is."
I can find nothing about marks.
Walter D White, Esq,
Secretary, Royal Commission on case of William Creswell.

The Hospital, Gladesville, 17 February, 1900.
I have, &c,
C. M. BETTS

B.

Extract from Case-book, Hospital for the Insane, Parramatta, forwarded by Dr. Godson, Medical Superintendent.

WILLIAM CRESWELL.

Age, 44 years; social condition, said to be married, No of children, nil; occupation, digger and butcher; nativity England, religion, Roman Catholic.
Admitted, 18th April, 1872
April 20th — He was admitted into the H I G, 15th August, 1871, for mania, having previously resided at Camden. The cause was intemperance, and the duration about two months.
He had a previous attack in 1870
On admission he was flighty in conversation, believed he had property in England; restless and eccentric in conduct, prone to collect rubbish and quarrel with those about him. He is subject to attacks of recurrent mania. At his worst he is restless and eccentric, but not very troublesome if permitted to remain in bed. At his best he is quiet, cleanly, assists in the ward, and appears very intelligent. Has been subject of repeated inquiry on the supposition of his being the "Arthur Orton" of the "Tichborne Case"

E. GODSON,
Medical Superintendent, 192/1900.

C.

Correspondence re Ship "Maid of Judah," &c.

Office of Royal Commission on Case of William Creswell,
No. 3 Committee Room, Legislative Assembly,
Macquarie street, Sydney, 1 March, 1900.

Sir,
I have the honor, by direction of the Royal Commission on the case of William Creswell, to request you to be so good as to favour the Commission by forwarding to them at this office, at your earliest convenience, information concerning the date of arrival at the port of Sydney of a vessel called the "Maid of Judah." It has been sworn that this vessel was at Sydney in 1855, and William Creswell has stated that he came out in her in 1854. Possibly the records at your office will show if the foregoing statements are correct. In any event, the Commission will be glad to have the required information (as asked for by me personally this day) from you officially. I have further to ask that you will be good enough to regard this matter as "Urgent"

I have, &c,
WALTER D. WHITE,
Secretary.

Captain Edie, Shipping Master, Shipping Office, Young street

Sir,
In reply to your letter of this date, I have the honor to inform you that the "Maid of Judah" arrived at this port on the following dates — 16 March, 1854; 2 January, 1855; 7 November, 1855. The name Creswell does not appear upon the two first lists, but on the list, 7 November, 1855, a name, "Mr Crosswell," appears as a cabin passenger. I enclose herewith a certified copy of this list

I have, &c,
J EDIE,
Shipping Master.

The Secretary, Royal Commission, re William Creswell.

INWARD

A List of the Crew and Passengers arrived in the ship "Maid of Judah," of Aberdeen, Merchant, master; burthen, 665 tons; from the port of London to Sydney, New South Wales, 7th November, 1855

Seamen's Names.	Station	Age	Of what Nation	Names of Passengers
James Lawson	Mate	31	Scotland	Mr. Rudd
John Smith Gillan	Second Mate	21	"	Hale
Alex. McDonald	Third Mate	24	"	Strachen
John Alexander	Carpenter	40	"	Ingram
Timothy Matthews	Boatswain	29	"	J Ingram

ISAAC MERCHANT,
Master of the "Maid of Judah."

I hereby certify that this is a true copy of the Inward List of the "Maid of Judah," 7/11/55
1/3/1900. J. EDIE, Shipping Master

D

Letter from Mr. Edward Priestman, forwarding Statements and Affidavits.

W. D. White, Esq., Secretary, Royal Commission on case of
William Creswell, Legislative Assembly, Sydney,—

Sir,

Sydney, 5 March, 1900.

In dealing with the evidence which has been adduced in the case of William Creswell in my statement last Tuesday, I only had the chance of doing so with that which at the time I wrote it had already been laid before the Royal Commission. May I now hope that I may be allowed to deal with the evidence which was tendered by Messrs. Kite and Tant on Tuesday last. Leave being granted, I beg to state as follows:—

The only flaw which I could discover in the mass of testimony which I have collected, or rather had collected, was that dealing with the arrival in this Colony of Creswell in the "Maid of Judah." But the fact was that feeling assured the medical testimony would settle the question of Creswell's identity definitely; I troubled less about corroborative evidence than I might have done.

That the evidence of witnesses is at times very contradictory seems to me to be exemplified thoroughly in this case. For instance, we have Messrs. Tant and Luke Cullen totally at variance. These two witnesses were both members of the police force, and both stationed at Tumut at the same time. The former states that Creswell had no claims to be thought a superior type of man, and had no military training, and had no knowledge of the French language. Whilst Mr. Cullen, who evidently knew more of Creswell, having met him with Arthur Orton in Wagga, speaks of him as a gentleman with a military bearing, and thoroughly conversant with the French tongue. In fact, he was so absolutely confident of Creswell's identity with the missing Roger Tichborne that he laid claim to the reward which was offered for the discovery of the missing heir in 1868 or 1869.

I leave the Commission to judge for themselves as to which of these two witnesses is the most reliable.

I will now allude to Mr. Kite and his evidence, and in doing so, will refer the Commission to his affidavit (as follows), which was put in at the time of my application in 1897:—

"AFFIDAVIT of William Kite, sworn the 3rd day of June, 1897, states:—

"1. In the early part of the year 1879, I think in January of that year, I, in company with the late Mr. Forrest, visited the Lunatic Asylum at Parramatta in the said Colony.

"2. Upon being conducted into the yard in which there were several patients I at once, amongst the said patients, recognised one of them to be a man named William Creswell, who had been in the employment of my late father, Thomas Kite, at Bathurst, in the said Colony, in the year 1854.

"3. The said William Creswell at once entered into conversation with me. He talked in an incoherent manner, but made allusion to a flea-bitten mare called "Dew-drop," which belonged to my late brother, and from his appearance and conversation, I had no doubt then, and have no doubt now, but that he is William Creswell, who was in the employment of my late father at Bathurst in 1854.

"Sworn, &c."

Mr. Kite swears in this that Creswell was in his father's employment in 1854, in fact, mentions the year twice over. In his evidence, given before the Commission last Tuesday, he quotes from a day-book said to have been kept on his father's station, wherein it is stated Creswell was supplied with tobacco in November, 1855, and then proceeds to contradict and nullify his affidavit given in my 1897 application, by stating that Creswell arrived from England with prize bulls for his father in November, 1855.

Hearing this new departure from his original statement by Mr. Kite, I at once employed a gentleman, in whom I can place absolute confidence, to search through the shipping reports for the years 1854 and 1855 in the columns of the *Herald* in the Public Library. This he has carefully done, and I append his two statutory declarations, Nos. 1 and 2.

In No. 1 it will be noticed that the "Maid of Judah" arrived in Sydney on the 30th December, 1854, with no William Creswell and no prize bulls on board.

No. 2 shows that there are several passengers, the last one on the list being a Mr. Croswell; and there is no mention whatever on the manifest of the ship of any bulls (prize or otherwise), or, in fact, any description of cattle whatever. Now, it may be said that Croswell is a misprint for Creswell, but that matter is negated from the fact of there being no bulls or cattle on board. Thus it is clearly proved that the Parramatta patient's stereotyped answer to questions as to his identity, "William Creswell, 'Maid of Judah,' 1/54," is absolutely without foundation, and I may say that just as much credence can be placed upon anything he says in his present position. For instance, he told Mr. Fitzpatrick and myself that he wanted to go to Melbourne to get some things he had left there at the "Treasury Hotel," in 1854, and to pay the landlord (Mr. Cooper) 14s. which he owed him since that time. This latter story he has since repeated. Now, if this story about Melbourne is correct, the patient cannot be William Creswell, but he can be Roger Tichborne, who landed in Melbourne in 1854. And to give this story a certain amount of credibility, it is known to Mr. Fitzpatrick that young Mr. Cooper has written to say that his father did keep the "Treasury Hotel" in 1854. Therefore, I leave it to the Commission to judge which story is the most feasible—that about the "Maid of Judah," which is proved to be wrong, or that about the "Treasury Hotel," which is, to a certain extent, confirmed.

The particulars on which the appended No. 2 statutory declaration is based are taken from the *Sydney Morning Herald* of the 8th November, 1855; and so that there might be no possible mistake, Mr. Huxham, who has sworn this statement, made a search through the *Herald* for the arrival of any live stock in any ship in 1854 and 1855, and there is no mention of anything with the exception of some rams. These are included in the ship's manifest, and their arrival is commented upon in the columns of the paper.

I append here a cutting from the Creswell pamphlet (this latter was laid upon the table of the House by Mr. Bruncker, in 1884):—

"From Mr. R. Y. Cousins, Kelso.

"Kelso, 7 April, 1883.

"William Creswell arrived in Sydney on or about the 24th of November, 1855, and brought bulls from England for the late Mr. Kite. He was in the service of Mr. Kite for seventeen weeks—namely, to March 21st, 1856. This would make twenty-eight years in November next from the time of his arrival in this country. Our London agents at that time were Messrs. Robert Brooks & Co., of St. Peter's Chambers, Cornhill, London, by whom, I believe, William Creswell was engaged. He went or was at Wagga Wagga some time after, and wrote to us from that place. I am not aware at present, or do not remember, if he went to the Braidwood district or not.

"R. Y. COUSINS."

This cutting consists of a statement from Mr. R. Y. Cousins, a relative of Mr. Kite, and in it Mr. Cousins states that William Creswell was with Mr. Kite from 24th November, 1855, to 21st March, 1856—in all seventeen weeks—whilst Mr. Kite swore, on Tuesday last, that Creswell was on the station for twelve months. With all due respect to the members of the Commission, I would suggest that the day-book, on which Mr. Kite seemed to place such great value, be handed over to the Commission for their careful perusal. And more especially would I urge this seeing that Mr. Kite described Creswell as a common man, with no claim to the title of gentleman, when the members of the Commission have had so many opportunities and so much evidence to prove otherwise.

Not being aware that evidence *re* the handwriting of Creswell was to be tendered last Tuesday, I append herewith copy of a Parisian expert's opinion, with letter accompanying same:—

"Rough Extract from Opinion obtained on Handwriting of Wm. Creswell, as shown in your Photograph.

"Having only obtained printed copies of Sir Roger's writing, it is impossible to form a fair comparison between the styles of the two men (C. and R. T.). The whole point turns upon certain 'flourishes' in Creswell's handwriting—the printed copy of Sir Roger's tends to show very faintly these same flourishes. If we can get hold of an original specimen of his writing, showing that these 'flourishes' were really used by him, then his caligraphy and that of 'Creswell' are identical."

“ Address : Birling Lodge, near Malling, Kent, March 3, '98.

“ Dear Mr. Priestman,

“ Your most interesting letter of January 23 reached me from home yesterday (I expect the newspaper by next post). *Last week* I wrote the editor of your *Sunday Times* a critical letter on the December trial, which I sincerely hope he will publish. If he does, I shall be glad to know whether you approve of the contents.

“ I am over in Paris for two or three weeks' change.

“ Father Williams tells me that he is working hard at the new plan of campaign, and he has, I know, put the whole case before Judge Bagshawe, a well-known County Court Judge in London.

“ Your noble sister, the Rev. Mother, and Father N. Jones, both remain staunch to you.

“ I append a criticism on the photo. of 'Creswell's' writing you kindly sent me.

“ What a most extraordinary coincidence, the meeting of C. Orton and Luie in the Benevolent Asylum.

“ I am very sorry, but I still hold the same views as to the futility of obtaining Creswell's release by again appealing to the law.

“ Father Williams is without doubt most plucky, courageous, and benevolent.

“ I am glad you agree with what my solicitor said ; it is quite likely that they were incorrect as to Roger being unable to recover his rights. It is a pity that 'Creswell' did not have a child—a son.

“ I agree with all you say about the conflicting affidavits of Messrs. Godson and Manning.

“ I wonder how I could get hold of an original copy of Roger Tichborne's writing to put before the expert.

“ Miss G. Baring's will has been recently published—(£20,000).

“ With best regards.

“ Sincerely yours,

“ PHILIP SIDNEY.”

I may say, too, that I submitted Creswell's letter, with a fac-simile of one written by Roger Tichborne, to a Mr. Kilburn, up till recently manager of the English, Scottish, and Australian Bank in Queen-street, Woollahra, and before that in a high position in the same bank at head office, and he unhesitatingly pronounced the two to be identical. Mr. Kilburn is, I believe, now residing in Victoria, and can be asked to confirm what I say.

I can only say, in conclusion, that if the members of the Commission will allow this letter to go in with the other papers I shall feel deeply grateful. Let me again reiterate that it is the Parramatta patient I want, be he, in the opinion of the Commission, either Wm. Creswell or Roger Tichborne. In any case, I hold power of attorney for either.

I have, &c.,

EDWARD PRIESTMAN.

P.S.—I have forgotten to call attention to Thomas Creswell's affidavit regarding his brother William, as read out to the Commission last Tuesday—viz., “Height 5 ft. 9½ in., dark hair and eyes, crooked finger and wound in *front* (not back) of left forearm, where he was caught by a meat hook.” Not one single feature in common with the Parramatta patient.—E.P.

STATUTORY DECLARATION BY MR. HUXHAM.

No. 1.

I, *John Brown Cove Huxham*, of 72, Gloucester-street, Sydney, in the Colony of New South Wales, do hereby solemnly and sincerely declare as follows :—On the 2nd March instant I searched for and found in the *Sydney Morning Herald*, of the 1st January, 1855, the manifest of the cargo of the ship “Maid of Judah,” which had arrived at Sydney on the 30th December, 1854, from the Downs, England, the 7th October previous, as appears in the shipping news of the said paper. And that I carefully examined the said manifest or list of cargo, and the same does not include any bulls or cattle of any kind. That a list of passengers by the said “Maid of Judah” on that trip is given in the said issue of the *Sydney Morning Herald*, and among them no mention is made of William Creswell. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of her present Majesty, intituled “An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits.”

Subscribed and declared at Sydney, this 2nd }
day of March, 1900, before me,—

B. J. MARKS, J.P.

J. B. C. HUXHAM.

STATUTORY DECLARATION BY MR. HUXHAM.

No. 2.

I, *John Brown Cove Huxham*, of No. 72, Gloucester-street, Sydney, in the Colony of New South Wales, solemnly and sincerely declare as follows :—Since making my declaration on the 2nd instant, I have searched the shipping record in the *Sydney Morning Herald* paper for the year 1855, and under date 8th November of that year I found the following entry :—“November 7. ‘Maid of Judah,’ 665 tons, Captn. Merchant, from the Downs, the 5th, and the Lizard, the 11th August. Passengers—Miss Barker, Miss Boniface, Miss Dowman ; Messrs. Rudd, Hale, Strachan, Ingram (2), and Creswell.” I also carefully examined the manifest or list of the cargo of the said ship on that date, and I say it contains no bulls or cattle whatever, nor any reference to any. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the fifth and sixth years of the reign of His late Majesty King William the Fourth, intituled “An Act to repeal an Act of the present Session of Parliament, intituled ‘An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the State, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial Oaths and Affidavits, and to make other provisions for the abolition of unnecessary Oaths.’” And also under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales made and passed in the ninth year of the reign of Her present Majesty, intituled “An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits.”

Subscribed and declared before me, this 5th day of March, }
in the year of our Lord 1900,—

B. J. MARKS, J.P.

J. B. C. HUXHAM.

Affidavit of Robert Dear, sworn the 20th day of October, 1897. Filed 2nd November, 1897, states :—

1. The William Creswell, who is at present confined in the Parramatta Lunatic Asylum, was about the year 1867 or 1868 in my employment for nearly twelve months.

2. Whilst in my employ he frequently wrote letters to members of the Tichborne family, to Lord Mildmay, to the Bishop of Winchester, and to other persons ; but these letters were never forwarded, and were ultimately torn up.

3. The said William Creswell while in my employment frequently told me that his right name was not Creswell.

Sworn, &c.

Affidavit

Affidavit of John Hands, sworn the 30th day of September, 1897. Filed 2nd November, 1897, states :—

1. I knew William Creswell during the years 1863 to 1867.
2. In 1864 or 1865 Creswell married a Mrs. Clark.
3. Previous to his marriage I knew him by the name of Smith. After his marriage he was known as Creswell.
4. About this time I was selling him some sugar, and remarked, "It's Creswell now, I see; some relation to Baron Creswell." He said, "Mind your own business; I may be a baronet, for all that."
5. Later I sold him a drab buckskin suit; it was on account of his wearing this suit that he was called Leather-jacket.
6. When at my uncle's station, Woodlury, I often used to go shooting with Creswell; he was a good shot, and a man of military bearing; I imagined he had been an officer; he was more than an ordinary linguist.
7. I have not seen Creswell since 1867 or 1868.
8. I have seen what purports to be a photograph of the portrait of William Creswell, now confined in the Parramatta Lunatic Asylum, and identify it as the portrait of the man whom I knew as Smith and William Creswell in the years 1863 to 1867.

Sworn, &c.

Affidavit of Michael Lennane, sworn the 24th day of November, 1897, filed _____, states :—

1. I knew Creswell in the year 1867 and 1868.
2. In the Tumut District, New South Wales, he worked for nearly two years in the butcher's shop kept by Arthur Orton (the Tichborne Claimant).
3. On one occasion, in the year 1868, while travelling with me from Gundagai to Tumut, he took me into his confidence, and told me that his real name was Sir Roger Tichborne.
4. He was, as a rule, a very reserved man.
5. He always led me to believe that he was a man of good family, and well connected in England.
6. I have seen what purports to be a photograph of the William Creswell now confined in the Parramatta Asylum, and recognised it as the likeness of the William Creswell I knew at Tumut, who told me he was Sir Roger Tichborne.

Affidavit of John Perrin, sworn the 22nd day of October, 1897, filed _____, states :—

1. In the years 1871 and 1872 I kept an hotel at Urana in New South Wales.
2. A frequent visitor to the hotel was one Charles or William Creswell. He was at one time called "Charles," at others "Bill."
3. The said Charles or William Creswell often told me that he came from Berkshire, in England.
4. The said Creswell had brown hair, brown eyes, an aquiline nose, and was about 5 ft. 10 in. in height; at the time I knew him he was a man about forty-five (45) years of age.
5. Towards the end of January, 1872, the said Creswell came to my hotel, and said he had had a row with the contractor of the station on which he worked, and that he hoped that he would be struck dead if he worked for him again. A day or two after this he told me he was going back to work at the station. I reminded him of his wish to be struck dead; he replied that he would not bother his head about that, and went off to work.
6. Within a week afterwards his body was brought back to Urana; he had been struck dead by lightning.
7. I was one of the jury at the inquest on his body; Coroner Armstrong held the inquest, and the verdict returned was that his death had been caused by his being struck by lightning.

Sworn, &c.

STATUTORY DECLARATION.

I, *John Brown Cove Huxham*, of No. 72, Gloucester-street, Sydney, in the Colony of New South Wales, do solemnly and sincerely declare as follows :—On the 5th March instant I searched the shipping record in the *Sydney Morning Herald* paper in the year 1865, and on 6th November in that year I found an entry of the arrival at Sydney of the ship "La Hogue," and in the manifest of her cargo there are "1 bull, 2 heifers, M. Joseph." I also searched her list of passengers, and the name Creswell is not among them. I also found in the same paper entries of the arrival at Sydney of the ship "Maid of Judah" on the following dates, namely, the 14th March, 1854; the 31st December, 1854; the 7th November, 1855; the 18th September, 1856. I carefully examined the manifests of her cargo on each occasion, and neither of them contained any bulls or cattle of any kind. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the fifth and sixth years of the reign of His late Majesty King William the Fourth, intituled "An Act to repeal an Act of the present Session of Parliament, intituled, 'An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the State, and to substitute declarations in lieu thereof, and for the more entire suppression of voluntary and extra-judicial Oaths and Affidavits, and to make other provisions for the abolition of unnecessary Oaths.'" And also under and by virtue of the provisions of an Act of the Governor and Legislative Council of New South Wales made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared before me, this 6th day of March, }

CASE OF WILLIAM CRESWELL.

 PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 7th November, 1899, "*to inquire into and report upon the case of William Creswell, at present an inmate of the Parramatta Lunatic Asylum,*" and to whom was granted on 12th December, 1899, "*leave to visit the Hospital for the Insane, Parramatta, for the purpose of taking evidence in connection with the inquiry,*" have agreed to the following Progress Report :

Your Committee having examined the witnesses named in the List* * See list, p. 7. (whose evidence will be found appended hereto), have resolved, owing to the advanced period of the Session, to report the evidence to your Honorable House.

JOHN CHARLES LUCAS FITZPATRICK,
Chairman.

*No. 1 Committee Room,
Legislative Assembly,
Sydney, 21st December, 1899.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 16 NOVEMBER, 1899.

MEMBERS PRESENT :—

Mr. Anderson,		Mr. E. M. Clark,
Mr. Dacey,		Mr. J. C. L. Fitzpatrick.

Mr. J. C. L. Fitzpatrick called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.

Committee deliberated.

Resolved (*on motion of Mr. Dacey*),—That the Chairman obtain the services of two medical practitioners to examine the man William Creswell, with a view to their reporting to, and giving evidence before, the Committee.

[Adjourned till Thursday next, at 11 o'clock.]

THURSDAY, 23 NOVEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.		
Mr. E. M. Clark,		Mr. Dacey,
		Mr. O'Connor.

Edward Priestman (*Accountant, City Mutual Life Association*) called in, sworn, and examined.
Witness withdrew.

[Adjourned till Tuesday next, at 11 o'clock.]

TUESDAY, 28 NOVEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.		
Mr. E. M. Clark,		Mr. Dacey,
Mr. Meagher,		Mr. Wilks.

Alfred Edwin Hellyer (*Record Clerk, Master-in-Lunacy's Office*) called in, sworn, and examined.

Witness produced report of Drs. Fiaschi and MacCormick ; also papers connected with the Creswell applications to the Supreme Court.

Witness withdrew.

Thomas James Pickburn (*Medical Practitioner*) called in, sworn, and examined.

Witness withdrew.

Henry William Devlin (*Medical Practitioner*) called in, sworn, and examined.

Room cleared ; Committee deliberated.

[Adjourned till To-morrow, at 11 o'clock.]

WEDNESDAY, 29 NOVEMBER, 1899.

MEMBERS PRESENT :—

Mr. E. M. Clark,		Mr. Meagher,
		Mr. Wilks.

The Clerk read a telegram from the Chairman, intimating that he was unable to be present.

Mr. Wilks called to the Chair *pro tem*.

Edwin Godson, M.R.C.S. (*Medical Superintendent, Hospital for the Insane, Parramatta*), called in, sworn, and examined.

Witness withdrew.

Edward Priestman recalled and further examined.

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY,

THURSDAY, 7 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.
Mr. E. M. Clark, | Mr. Dacey.

Edwin Godson recalled and further examined.
Witness withdrew.
Adjourned till Tuesday next, at 11 o'clock.

TUESDAY, 12 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.
Mr. E. M. Clark, | Mr. Meagher,
Mr. Wilks.

John Richard Moore (*Acting Superintendent, Darlinghurst Receiving House*) called in, sworn, and examined.

Witness produced Registers 1871, 1872, Darlinghurst Receiving House.

Witness withdrew.

Harold Mapletoft Davis (*Licensed Surveyor*) called in, sworn, and examined.

Witness withdrew.

Luke Cullen called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Resolved (*on motion of Mr. E. M. Clark*),—That the Chairman obtain leave of the House for the Committee to visit Parramatta Hospital for the Insane, for the purpose of taking evidence in connection with the Inquiry, and that the Committee proceed by 9.25 a.m. train to Parramatta to-morrow.

[Adjourned till To-morrow at 9 o'clock.]

WEDNESDAY, 13 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick (Chairman).
Mr. E. M. Clark, | Mr. Meagher,
Mr. Wilks.

Committee proceeded by train to Parramatta, thence to the Hospital for the Insane, and met in a room at that Institution.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.
Mr. E. M. Clark, | Mr. Meagher,
Mr. Wilks.

The man known as Wm. Creswell having been brought into the room,—

Harold Mapletoft Davis further examined.

Luke Cullen further examined.

Wm. Algie (*Warder*) sworn and examined.

Witness withdrew.

The Committee having returned,—

Re-assembling to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 19 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.
Mr. Anderson, | Mr. E. M. Clark.

William Ernest Forbes called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at 3 o'clock.]

WEDNESDAY, 20 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.
Mr. E. M. Clark, | Mr. Meagher,
Mr. O'Connor, | Mr. Wilks.

Alexander MacCormick (*Medical Practitioner*) called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Resolved (*on motion of Mr. Wilks*),—That the Chairman prepare a Draft Progress Report.

[Adjourned till To-morrow, at 2.30 o'clock.]

THURSDAY,

THURSDAY, 21 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. Anderson,
Mr. Meagher,

Mr. E. M. Clark,
Mr. O'Conor.

In the absence of the Chairman, Mr. Meagher called to the chair *pro tem*.

Mr. E. M. Clark moved,—That Drs. Pickburn and Devlin be awarded the sum of £7 7s. each, under Standing Order No. 374, for examining the man William Creswell, and giving evidence, in accordance with the Committee's Resolution of 16th November, 1899.

Mr. Meagher submitted the Chairman's Draft Progress Report.

Same read and agreed to.

Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Algie, W.	24
Cullen, L.	22, 24
Davis, H. M.	19, 23
Devlin, H. W.	12
Forbes, W. E.	25
Godson, E.	14, 18
Hellyer, A. E.	10
McCormick, A.	27
Moore, J. R.	19
Pickburn, T. J.	10
Priestman, E.	9, 17

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CASE OF WILLIAM CRESWELL.

THURSDAY, 23 NOVEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. DACEY,
MR. O'CONNOR.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Edward Priestman, accountant, City Mutual Life Office, Hunter-street, Sydney, sworn and examined:—

1. *Chairman.*] I believe you visited the Parramatta Lunatic Asylum yesterday in company with Dr. E. Priestman, Pickburn and Dr. Devlin? Yes.
2. Did you there see the man who is referred to by this Committee as William Creswell? Yes; I have ^{23 Nov., 1899.} seen him twice before.
3. I believe he is the man in connection with whose case this Committee was appointed? Yes.
4. And the man whom the doctors went to see? Yes.
5. *Mr. Dacey.*] Is the man whom the doctors examined reputed to be Sir Roger Tichborne? Yes.
6. *Mr. Clark.*] Do you allege that he is Sir Roger Tichborne? Yes.
7. And that is the man whom the doctors examined? Yes.
8. *Mr. O'Connor.*] Were you present during the whole of the examination by the doctors? Yes, for two and a half or three hours.
9. *Chairman.*] I believe you have taken an interest in this case for a number of years? Yes; for over five years. The very first day I saw him I was convinced he was Tichborne, on account of the family likeness.
10. *Mr. Clark.*] Did you know the family in England? Yes; I knew Tichborne's brother.
11. *Mr. Dacey.*] Were you personally acquainted with the family? Yes.
12. *Mr. Clark.*] I believe that in the course of five years you have gathered a great deal of information about the case? Yes; I will be able to give it to the Committee when they require it.
13. *Mr. Dacey.*] Have you any letters of the documents bearing on the case from England or elsewhere? Not from England. There have been so many resurrections in connection with the case during the last thirty years that the people at Home have got sick of it and cannot believe that there is anyone of the Tichborne family in the asylum. They tell me that if it is really proved that this man is Tichborne, England will be fairly staggered.
14. Were not the Tichborne estates settled by Act of Parliament so that this man can have no right to them? The Tichborne estates are settled on Sir Henry Tichborne to protect them against imposters, but the Doughty estates went into Chancery. I may mention that if the man in the asylum is proved to be Tichborne, he is Sir Roger Charles Doughty Tichborne. The present Sir Henry Tichborne is Sir Henry pure and simple. The man in the asylum is the only one who can assume the title of Doughty. He amalgamates the Doughty estates in his own person. Failing proof that he is Tichborne, or the discovery of the real Tichborne, the estates go to another branch of the family.

- E. Priestman. 15. He would virtually be entitled to the Doughty estates under any circumstances? Undoubtedly; he is the only man who can amalgamate the two estates.
- 23 Nov., 1899. 16. Have you discovered, in the course of your inquiries, that if this man is really William Creswell, he is entitled to property at Home? We have information that Thos. Creswell swore in the witness box here in 1884, that he came here to find the brother who is entitled to an estate in England—a large farm worth £2,000 or £3,000.
17. *Chairman.*] As the result of your examination yesterday, have you seen any reason to change your opinion with regard to the identity of the man? Not in the slightest degree. I am more convinced than ever.
18. *Mr. Clark.*] I suppose that you did not take part in the examination? No. I held up the man's sleeve that they might examine his arms.
19. *Chairman.*] I believe that during the greater part of the examination, Dr. Godson the Medical Superintendent of the Asylum was present? Yes; also a Mr. Wharf and another person whose name I do not know. There was also a warder present.

TUESDAY, 28 NOVEMBER, 1899.

Present:—

MR. E. M. CLARK,		MR. MEAGHER,
MR. DACEY,		MR. WILKS.
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.		

Alfred Edwin Hellyer, Record Clerk, Master-in-Lunacy's Office, sworn and examined:—

- A. E. Hellyer. 20. *Chairman.*] I believe the Department with which you are connected has been called upon to produce some papers in connection with the case of William Creswell? Yes. I produce the report of Drs. Fiaschi and MacCormick. Creswell was admitted to the Parramatta Asylum on the 18th April, 1872. I may mention that Drs. Fiaschi and MacCormick made an examination of Creswell about eighteen months ago. I also produce the papers connected with the Creswell applications to the Supreme Court. The first application was made on 30th December, 1879. An order was made directing that Creswell might go to England upon Mr. Eckford giving a bond. Two men, I think, came here from England to remove him, but they were discredited; subsequently an application was made for his release as Orton. A further application was made about 1885, by Charles Orton, claiming Creswell as his brother.
- 21.—*

Thomas James Pickburn, Medical Practitioner, sworn and examined:—

- T. J. Pickburn. 22. *Chairman.*] I believe you received instructions last week to visit the Parramatta Asylum for the purpose of examining a man named William Creswell? Yes.
- 28 Nov., 1899. 23. Did you do so? Yes.
24. Will you make a statement with reference to the matter? I was asked to reply to a list of questions which was submitted to me with reference to marks alleged to be on the body of this man, and to give my answers after making a careful examination on Wednesday, 21st November.
25. What length of time did you occupy in making the examination? About two or three hours. I was accompanied by Dr. Devlin, and made a careful examination so as to ascertain whether Creswell has certain marks and characteristics alleged to be identical with those on Roger Tichborne. I might state that in carrying out this somewhat tedious examination, no difficulties were experienced, so far as Creswell himself was concerned, for his behaviour was particularly quiet and docile; and when he once or twice exhibited a little impatience, a word from Mr. Edward Priestman had the effect of making him quite submissive, and ready to submit to any examination desired. The following are the questions submitted to me, along with my answers to the same;—
1. Is there a lancet cut for bleeding on the temporal artery? There are two faint linear scars directly over the temporal artery, just above the left auditory canal.
 26. Where is the temporal artery? Close to the auditory canal.
 2. Is there a slight blotch, about the size of a fourpenny piece, on the front of the left wrist, or any mark indicating the obliteration of such? No blotch on the front of the left wrist, but a linear scar over the radial artery, half an inch long.
 3. Do Creswell's ears correspond with the description of Roger Tichborne's, as follows:—"Ears not matches, the left being lobeless, the right having a normal lobe"? The right ear has a large pendant lobe, and the left none. The ears are not matches, the right ear being much larger altogether and measures $3\frac{1}{2}$ inches vertically, while the left is only $2\frac{3}{8}$ inches, and is smaller transversely.
 4. Has he large grey-blue eyes, with a pensive expression? Yes, as to large grey-blue eyes; expression more vacant than pensive; sometimes watchful and suspicious.
 5. Has he an ample but flat forehead, with bushy eyebrows? The forehead is ample, but not particularly flat; the eyebrows are decidedly bushy.
 6. Does Creswell limp at all when walking? Yes, a little, at times, when walking; the limp being apparently due to some marked bowing of the right leg, causing a slight shortening of that limb.
 7. Has he the habit of twitching or raising his eyebrows? Yes.
 8. Has he any mark on the eyelids which could have been caused by the insertion of a fish-hook? Was satisfied that there is a small roundish scar on the right upper eyelid, and might have been so caused.
 9. Are there the remains of an issue-mark on Creswell's left upper arm? There is a small white scar, slightly depressed, on the left upper arm, near the vaccination marks, and could have been due to an issue.
- 10.

* Question and answer expunged by order of the Committee.

T. J.
Pickburn.
28 Nov., 1890.

10. Are there lancet cuts for bleeding on both arms; and, if so, how many on each? Yes; at the bend of the *left* arm there is the faint scar of a puncture directly over the vein; at the *right* bend there are two scars, one directly over and in a line with the vein, and another linear scar in a line with the vein, but a little ($\frac{1}{4}$ -inch) to one side of it.
11. Are there lancet cuts for bleeding on the ankles? Unable to find any; but it is possible that, after the lapse of so many (fifty) years, and the friction and exposure to which the feet are subjected, the smaller punctures made in bleeding would become too faint and indistinct to discern.
12. Are there any tattoo-marks on Creswell's left arm, or marks indicating the obliteration of such by cautery? There are *no* tattoo-marks whatever on the arms. There is a large puckered elliptical scar on the back of the left hand and wrist, which is nearly 3 inches in length, and about 1 inch wide at its broadest central part.
13. Could such scar have been caused by cautery? Any powerful caustic or acid, causing great destruction of skin, might result in a similar scar.
14. Is there a "lump" on his right instep? There is no abnormal "lump," but the tarsal end of the metatarsal bone of the right great toe is more pronounced and thickened than the left. This is a fairly common appearance on both insteps, especially the right, and in Creswell's case the lumps are, no doubt, due to traumatism; the right foot, being naturally more exposed to injuries, would have the larger lump.
15. Are the feet of equal length, and what is the length of each foot? The difference in length between the two feet is very slight; the left foot (raised) is 10 inches; pressed on the ground half an inch longer ($10\frac{1}{2}$); the right foot (raised) measures $10\frac{1}{4}$ inches; pressed on the ground, the same as the left ($10\frac{1}{2}$ inches); but time and mode of life must have a marked effect on the measurements of the feet.
16. What is Creswell's height? His height, measured in his socks, is 5 ft. $6\frac{3}{4}$ in. Creswell no longer holds himself erect, and the progressive stooping of the head and shoulders would readily account for much decrease in height, even of an inch, or 2 inches, during the last ten or fifteen years.
17. Has Creswell a dent in the back of his head, just behind the left ear? Yes; but it is a natural depression, and can be found behind both ears; it is most marked on the left side.
18. Is there a strong resemblance between Creswell and the likeness of Sir James Tichborne, Roger's father? Could not see the slightest resemblance.
19. Has Creswell a dent in the centre of the eyebrow? Could not find any dent in the centre of the eyebrows, only the natural notches (supra-orbital) on the inner side of both brows.
20. Has Creswell a small wound, healed over, on the top of the third finger of the right hand? Could see nothing definite.

I may remark that Creswell's answers were given perfectly quietly, and without any resistance. Once or twice he seemed to be a bit tired of it, but that was all. I may state that when he sat on a chair, he sat in the way which has often been described—"he sat on the side of a chair, with his right arm thrown over the back of it."

27. I believe that is a peculiarity which has been attributed to Tichborne himself? I have read so.
28. Did you arrive at any conclusion as to Creswell's mental condition? I should say there is no doubt that he is hopelessly insane. He is in a state of chronic dementia, and always will be. Whether he is or is not harmless, I cannot say. He was, however, perfectly quiet whilst we were there. The only persons who could give evidence as to whether he is or is not harmless would be those who have had opportunities of continually watching him.
29. *Mr. Wilks.*] Did he express any desire to know the object of your inspection? No; I do not think he took the slightest interest in it. He seemed tired of it. It seemed to bore him, and he was anxious to get away.
30. You have stated that his height is a quarter of an inch less than it was on a former occasion when he was examined? Yes. He has shrunk a quarter of an inch since he was examined by Drs. Fiaschi and MacCormack about two years ago.
31. I suppose that is a thing which is quite possible to occur? Yes; I should imagine that in another year he will be a quarter of an inch shorter still.
32. What is the difference between the measurement of Tichborne and of this man? I think that when Tichborne was a young man his height was 5 ft. $8\frac{1}{2}$ in.
33. I suppose it is a general feature of all men that they shrink in stature as they grow older. Yes. Of course we are all taller in the morning than we are in the evening. The cartilages between the spine extend whilst we are lying down, and throughout the day they collapse a little.
34. *Mr. Meagher.*] I suppose you had the result of Drs. Fiaschi and MacCormick before you when you made your examination? Yes.
35. With regard to the marks on the temporal artery;—as a result of their investigation they say "there are no lancet cuts for bleeding over the situation of the temporal artery"? Yes.
36. Is it possible that they might have laboured under the misapprehension under which many people labour in regard to the situation of the temporal artery? I should say that they would not. I may mention that the marks were distinct, and they were verified when we enlarged them by means of a magnifying glass. The arteries are very easy to see, because they are in a state of disease. They are hard and large, like whipcord.
37. Drs. Fiaschi and MacCormick stated that they found no more marks on the eye-lid suggestive of injury by means of a fish-hook? That is so. We looked at the eyelids very carefully. We cannot say what the mark was originally. There might have been a pustule there which has left the little scar.
38. Is it possible that that mark might have been due to an injury caused by a fish-hook? It is quite possible. Of an injury sustained thirty or forty years ago there would be very little left.
39. I believe that the injury occurred fifty years ago? That is so. You can see a scar there, and you can also notice that the skin is a little thinner, because it is scar tissue.
40. Did you notice any appearance of Creswell being in-kneed? No; on the contrary, he is bow-legged. His right leg is bowed out. That makes one leg a little shorter than the other. I understand that during his time he has been a good deal on horseback.

T. J.
Pickburn.
28 Nov., 1899.

41. In view of the man's age and condition, there is no doubt that a shrinkage of his stature would be possible? Yes; the fact exists that he has shrunk a quarter of an inch since the last measurement. He was 5 ft. 7 in. when Drs. MacCormick and Fiaschi examined him two years ago, and since that time he has shrunk a quarter of an inch.
42. *Mr. Wilks.*] In what part of the day did you make the examination? In the middle of the day.
43. Do you know during what part of the day the other doctors examined him? No. If they examined him immediately after he had been in bed for eight hours it would make a difference.
44. *Chairman.*] In addition to yourself and Dr. Devlin, I believe that Dr. Godson, the Medical Superintendent, was present at the time of the examination? Yes; and he rendered us every assistance.

Henry William Devlin, Medical Practitioner, North Sydney, sworn and examined:—

H. W.
Devlin.
28 Nov., 1899.

45. *Chairman.*] Have you any evidence to offer? Yes; in conjunction with Dr. Pickburn, I made an examination of William Creswell, at the Parramatta Lunatic Asylum, on Wednesday last.
46. I believe your examination occupied a considerable length of time? About two and a half hours. I was asked to answer the following questions, to which my answers are attached:—
1. Is there a lancet-cut for bleeding on the temporal artery? Yes, two linear cicatrices (scars) directly over temporal artery, close to left auditory canal.
 2. Is there a slight blotch, about size of fourpenny-piece, on the front of left wrist, or any mark indicating the obliteration of such? No blotch, but a linear mark half-inch long, over radial artery.
 3. Do Creswell's ears correspond with the description of Roger Tichborne's, as follows:—Ears, not matches; the left ear lobeless, the right ear having a normal lobe? Yes, perfectly. Right ear, 3½ inches length; left, 2¾ inches.
 4. Has he large blue eyes with a pensive expression? Striking large grey-blue eyes, occasionally pensive.
 5. Has he an ample, but flat, forehead, with busy eyebrows? Ample forehead, not specially flat. Eyebrows very bushy.
 6. Does Creswell limp at all when walking? Yes, slightly; the limp being apparently due to bowing, causing shortening of leg.
 7. Has he the habit of twitching or raising eyebrows? Yes, in a marked degree.
 8. Has he any marks on the eyelid which could have been caused by the insertion of a fish-hook? Yes; mark on right upper eyelid could have been so caused.
 9. Is there the remains of an issue-mark on Creswell's left upper arm? Yes; small amorphous white scar near vaccination marks, probably resulting from issue.
 10. Are there any cuts for bleeding on both arms, and, if so, how many on each? Yes; one on left arm, two on right. One of two on right directly over cephalic veins; the other just beside it. At the bend of left arm there is a faint scar of a puncture over the vein.
 11. Are there any lancet-cuts for bleeding on ankles? Not visible.
 12. Are there any tattoo-marks on Creswell's left arm, or any marks indicating the obliteration of such by cauterization? No tattoo-marks; large puckered scar over the back of wrist, 3 inches long and over 1 in breadth in centre.
 13. Could such scar have been caused by cauterization? Yes.
 14. Is there a lump on his right instep? Yes; lump on both insteps, more marked on right.
 15. Are the feet of equal length, and what is length of each foot? Equal length horizontally, both being 10¼ inches. Perpendicularly, or as taken by a shoemaker—right, 10¼; left, 10 inches.
 16. What is Creswell's height? Five feet 6¾ inches in socks.
 17. Has Creswell a dent in the back of his head, just behind the ear? Yes; behind both ears, especially left.
 18. Is there a strong resemblance between Creswell and the likeness of Sir James Tichborne—Roger's father? Cannot see any.
 19. Has Creswell a dent in centre of eyebrow? Yes, in both; more marked in right.
 20. Has Creswell a small wound, healed over, in the top of the third finger of right hand? Nothing definite.
 21. How did Creswell behave in room? He seemed inclined to resent the examination; but on Mr. Priestman informing him it was for his good, he was very quiet and submissive throughout.
 22. Could cuts on ankles have become obliterated? Yes; the length of time (fifty years), the exposure the feet are subject to, the friction from boots, would all tend to obliterate lancet-cuts.
 23. Did Creswell volunteer any information *re* scars on front of arm? Understood Creswell to say that the one who removed blotch near the radial artery removed the other.
- I could not say whether he meant the other scar on the wrist or the one on the back of his hand. Dr. Pickburn thought he referred to the one on the wrist.
47. *Mr. Meagher.*] Did you know at that time that Creswell had made a statement to a medical gentleman some years before, stating the cause of those removals? No; but Mr. Priestman, who was present, drew my attention to what he said.
48. *Mr. Wilks.*] He did not give any details with regard to the removal? No; he said that the person who removed the one removed the other. There were several cuts and scars on the wrist, one of which did not resemble an ordinary scar; it was something like a blotch, and he said that the man who removed that removed the other.
49. In what manner could he have removed it? By cutting a piece of skin out elliptically. I may mention that in the case of birth-marks we now, instead of burning them out, make an elliptical incision, and draw the parts together.
50. How do you suppose a mark would have been removed at the time in question? Most likely by acid.
51. Would that leave a blotch? It would leave a scar.
52. In your opinion, surgical aid would be required to remove it? I think so. Of course a man with very little medical knowledge could do it. I have seen acid put on a birth-mark, and it has become white, and has shrivelled up.
53. What would be the object of removing a scar like that? If there had been a tattoo-mark it might have been removed with the object of concealing identity. If it had been a birth-mark, it might have been removed with the object of getting rid of disfigurement.

H. W.
Devlin.
28 Nov., 1899.

54. *Chairman.*] Still it would be competent for a man with an object to serve to remove a tattoo-mark;—is there any reason to believe that the mark that you found on his arm was not produced by that means? The front mark, I should think, was produced by that means, and the back ones possibly so.

55. The tattoo-mark, as a matter of fact, was on the back of the arm;—it is scarcely likely that it would be on the fore-arm? No; because the chief arteries are there, and in tattooing you would have to take great care that you did not injure them, and cause the dye to affect them.

56. *Mr. Wilks.*] Have you any knowledge as to how tattooing was carried out about that period? No.

57. Is there any scientific method of tattooing elsewhere than that which is adopted in Russia? Yes; a man whom I examined the other day in connection with a life office had a tattoo-mark upon him. It almost looked like an impression from his clothes. I asked him what it was, and he said, "I am hardly at liberty to explain, but it is the mark of a secret society in America where we are all tattooed." It was scientifically and neatly done.

58. *Mr. Meagher.*] Have you seen what are termed the "bracelets"—a tattoo-mark which goes right round the wrist? Yes; it is quite possible to do that sort of thing. It would require no scientific knowledge to do that, because a man, as a rule, would not know the danger he was incurring. On the other hand, he would probably take precautions in regard to the dye. Things which are dangerous are often done without bad results following.

24. Will the doctors state, in replying to the question as to Creswell's height, if it is probable that Creswell has shrunk; in fact, has every appearance of having shrunk fully from $1\frac{1}{2}$ inch to 2 inches during the last ten or fifteen years, having become considerably bent, &c.? It is probable that Creswell has decreased in height to the extent in question owing to age and stooping.

25. Will the doctors state how Creswell, during most of the time he was seated, sat sideways on the chair, with one arm thrown over the back of the chair, a marked characteristic of Roger Tichborne? This characteristic was distinctly noticed.

26. Can the doctors say that he mumbled a good deal to himself (another marked characteristic of R.C.T.)? Yes.

27. Is it not usually the case that a small lump is common on the instep of the left foot with many people;—in the case of Creswell it is on the right foot (this is where it was on R.C.T.)? Not aware of lump showing preference as a rule for either foot. In Creswell's case much more marked on right.

I have seen two or three shoemakers, and they say that the lump has no preference for either foot. It sometimes occurs on the right and sometimes on the left foot, and it occurs about once in thirty people.

28. Can the doctors state that though Creswell is eccentric he is harmless to all appearances? To all appearances he is harmless, but could not definitely state, having but limited opportunities of observing him.

My answers are practically the same as those of Dr. Pickburn.

59. *Mr. Wilks.*] With regard to the mark on the right eye, do you think it could be occasioned by a pustule? I do not think so, because there was a mark and a counter-mark. It appeared as though something had gone through the eyelid whilst it was in a folded state. When it was unfolded you could see two marks.

60. Could that have been caused by a fish-hook? It might have been. Of course it is a long time since it occurred, but it is fairly distinct under the glass.

61. You have stated that Creswell had a pensive look about him;—do you think it is possible for an insane man to look pensive for any length of time? Yes. I may state the attendants said he was brighter than usual on account of the excitement. Mr. Priestman brought him some tobacco and other things.

62. You state that he mumbled to himself;—is that a characteristic amongst insane people? Yes; it is a common characteristic.

63. It is looked upon at times as a sign of insanity? To some extent it is.

64. Is the mere fact of a man being for twenty-nine years in a lunatic asylum calculated to deprive him of that little reason he possessed when he went in? Yes; I do not think many would have stood the ordeal.

65. What impression did you form of Creswell as a man? He is a most remarkable looking man. You could never forget him if you saw him. He has aristocratic looking features—altogether out of the common, and his manner is quiet and gentlemanly. As a rule, men who are educated up to a certain standard lose all that sort of thing when they become partially insane, but he seems to have preserved it to a great extent.

66. Did he evince any interest in your examination? Very slight. When Mr. Priestman said that we were his friends, he raised his eyebrows in an extraordinary fashion. Mr. Priestman asked him to shake hands with us, but he would not do so. Mr. Priestman also asked him to be quiet, and to do what he was told, and he was quiet.

67. Do you consider him to be hopelessly insane? I should say he is a lunatic; but I did not see very much of him. I remember a patient of mine being in an asylum for six or seven years, and a year before he died he became quite sane.

68. *Mr. E. M. Clark.*] Do you look upon him as a dangerous lunatic? He seemed very harmless when we saw him.

69. *Chairman.*] Dr. Godson, I believe, made a remark to the effect that Creswell was particularly quiet and docile that morning? Yes. He also said that whether he was or was not Tichborne, he was no ordinary man. He stated that he was noted for his cleanly habits. He also stated, "This man is passionately fond of tobacco. The other inmates who are fond of tobacco will beg, borrow, or steal it, but Creswell will never get it in an underhand way. If he cannot get it in a proper fashion he will go without it."

70. *Mr. Wilks.*] Did you form an impression that he is a man who has had the advantage of a good early training? Yes; and even more than that, because some men who have had a good training lose all the effect of it when they become demented.

71. Did you form the impression that he was a man with a refined mind? Yes.

72. *Mr. Meagher.*] Can you understand how a medical man, looking at the temporal artery for scars, could possibly miss seeing them if they were there? I think I could explain that matter very satisfactorily. The temporal artery runs a great distance. It branches across the temple on the side of the head,

H. W.
Devlin.
28 Nov., 1899.

head. When we examined the man Dr. Pickburn looked at the artery over the temple, and I looked at it below. I remember an instance in which two doctors asserted, at first, that the temporal artery ran across the forehead, but, on thinking over the matter, they said it also ran up the side.

73. Is the portion of the temporal artery where the scars were found in any way obscured by hair? I think there is a little hair. I can easily understand that the anterior branch of the temporal artery, which crosses the temple, was what was examined on a former occasion.

74. *Mr. Wilks.*] Probably the doctors did not follow out its ramifications? I have no doubt they did, but the main artery may have been neglected. They examined the portion crossing the temple. I may mention that our examination lasted for two and a half hours, and Dr. Godson told me that the former examination lasted for only one hour.

75. *Mr. Meagher.*] I suppose that, in making a full investigation, you would naturally examine the whole of the surface which was traversed by the temporal artery? —

76. *Chairman.*] As a matter of fact, being unable to discover a mark immediately over the temple, you would follow the artery down until it reached the main trunk from which it sprung? Yes; we looked about a good deal on both sides, and then saw the mark. I may state that upon one occasion I saw a man bled at that particular spot, and I had that in my mind when making the examination.

77. *Mr. Meagher.*] Were these scars or marks visible without the magnifying glass? Yes; it is necessary to look minutely, but still they are visible to the naked eye.

78. With regard to the scar on the wrist: under the microscope would there be any distinction between a wound that has been healed and a birthmark, or any other mark, which has been obliterated by the aid of acid? I do not think there would be in this case, because there was great destruction of tissue underneath. I should say that when it was done a large area was scooped out by means of operation or cautery. That would granulate upwards from the bottom, and, under the microscope, would not show any difference.

79. I notice that Drs. Fiaschi and MacCormick, who examined the scar about which you have been speaking, said, in their report, dated 26th November, 1897:—

There is a broad scar on the back of left hand and wrist. This, Creswell told us, was cut by a butcher's crop, and was treated in St. Mary's Hospital. There is another lineal scar on the inside of left wrist, done by a knife, the result of a kick by a sheep whilst slaughtering it. This occurred at Tumut. These scars can be accounted in the manner described by Creswell to Sir William Manning.

Do you prefer to accept Creswell's explanation of this matter rather than the theory that the injury was the result of burning out by means of acid? I would rather accept the theory that it was burnt out by means of acid. It would be impossible for an uncomplicated crop injury to do it.

80. *Mr. Wilks.*] Did Creswell attempt to be communicative with regard to his scars? No.

WEDNESDAY, 29 NOVEMBER, 1899.

Present:—

MR. MEAGHER,

MR. E. M. CLARK.

W. H. WILKS, ESQ., IN THE CHAIR.

Edwin Godson, M.R.C.S., sworn and examined:—

E. Godson,
M.R.C.S.
29 Nov., 1899.

81. *Chairman.*] What are you? Medical Superintendent of the Hospital for Insane, Parramatta.

82. Would you care to make a statement, or would you prefer to answer a series of questions? I shall be glad to answer any questions that may be asked. Of course, I look upon Creswell as one of my ordinary patients.

83. *Mr. Clark.*] How long have you been Medical Superintendent there? I have been Medical Superintendent sixteen years, but I have been in the institution eighteen years.

84. *Chairman.*] Were you present at the last medical examination of Creswell? Yes.

85. And you witnessed the general behaviour of Creswell? Yes.

86. Did he exhibit then, or at any previous time, anything that would show that he was any other person than Creswell? Well, I have always looked upon him as Creswell. I do not know of anything in his general bearing that would lead me to believe otherwise. I have no opinion at all as to the identity of the man. He is there the same as any one else, and I identify him as Creswell.

87. Were you present at the previous inquiry conducted by Dr. Fiaschi and Dr. MacCormick? Yes.

88. Will you inform the Committee what was your impression in regard to the examinations—which was the more searching? The latter one—the one made by Dr. Pickburn and Dr. Devlin—was longer, but I do not say more searching.

89. *Mr. Clark.*] How long did the last examination take? From about half-past 10 until 1 o'clock.

90. And how long did the previous one take? I suppose an hour and a half.

91. We have evidence to the effect that it took about a quarter of an hour? That is altogether wrong. They were certainly there for fully an hour.

92. We also have it in evidence that Creswell was in the habit of muttering;—is not that common with general patients? No; but certain classes of patients often mutter to themselves.

93. There seems to be a diversity of opinion in regard to the scar on the temporal artery: Dr. Fiaschi and Dr. MacCormick failed to detect it, and the reason given is that they did not follow the ramifications of the temporal artery;—have you observed that scar? Well, I have not seen it recently. I examined the patient some years ago, and everything that was found was entered in the case-book. Whether that is entered, amongst other things, I could not tell.

94. They say that the scar on the temporal artery is very plain to the naked eye? I do not think it could be very plain when Dr. Fiaschi and Dr. MacCormick did not see it. I have here an extract from the case-book. It does not say anything about the scar over the temporal artery. According to this entry, there certainly is a very slight lineal scar, $1\frac{1}{2}$ inch long, below the outer canthus of the right eye. That will be a branch of the temporal artery.

95. *Mr. Meagher.*] When was that report made that you are reading from the case-book? The 22nd January, 1896.

96. I suppose there have been descriptions before that of the patient and his peculiarities? Yes; the records go back to 1879.

97. Is that scar remarked in all the reports? No; it is not in any of the previous records.
98. It does not appear to have been noticed until 1896? No. That mark may have been got at the hospital.
99. Did you notice any tattoo-marks on him? No.
100. If there had been any, could they have been removed by any process? They probably could have been removed.
101. Would that leave a blotch? It would leave a cicatrix.
102. *Mr. Clark.*] Do you know whether there is a scar, blotch, or a mark on the wrist? There is a cicatrix on both sides of the wrist.
103. *Chairman.*] Which could have resulted from the removal of tattoo-marks? It is possible to give a clear account of that. He said he got it by cutting something with a butcher's instruments. Whilst he was going through some butchering operations the instrument slipped, and he got a wound on the back of the arm. He was attended to by a well-known surgeon at St. Thomas' Hospital in London. There was a good deal of suppuration, and they made a counter opening on the front of the wrist. That explanation is quite feasible.
104. He is very coherent then in regard to his explanation? Yes; he never varies.
105. Does he display any annoyance during these inspections? Sometimes he gets a little impatient.
106. Does he show any inquisitiveness—does he ask the reason for these inquiries? No; he never asks about anything as long as he gets a bit of tobacco.
107. Something has been said about his having a peculiar pensive expression in his eyes? He has eyes of a peculiar blue—eyes which would draw anybody's attention.
108. His general bearing would lead you to believe that he has had a good early training? There is no doubt that there is something peculiar about his general bearing. He is different from the majority of them. He keeps to himself a great deal.
109. He is very reserved? Yes.
110. What are the peculiar characteristics that you have noticed? He keeps to himself, never associates with the others, is always clean and tidy and smart looking.
111. He is scrupulously clean? Yes.
112. Is he at all communicative? Not at all; he is very reserved.
113. Is he reserved with the officials? I do not think he speaks to them at all. He has been thirty years in the place. Years ago he was more communicative than he is now. I often speak to him, but he never answers me.
114. We have discovered that there is a difference of a quarter of an inch between his height at the time of the examination two years ago and his height at the recent examination;—is a decrease in height a common thing? Yes; it often happens. People become doubled up with age and the shrinking of cartilage.
115. Do you think it would be possible to decrease by 2 inches in stature in a life-time? I should hardly think so.
116. What would be the difference in an interval of fifty years; there is a difference between the supposed measurement of Tichborne and that of this man of something like $1\frac{1}{2}$ inch;—is it possible for that to occur? It is rather difficult to say. It may be possible, but I cannot think it probable.
117. *Mr. E. M. Clark.*] Have you Creswell's height when he was originally admitted to the asylum? I think so. He was admitted to Gladesville before he went to Parramatta.
118. *Chairman.*] You would give a general description of him when he entered the hospital? The description given is very vague. There is an entry dated 28th December, 1882, it says:—

This patient was interviewed to-day, by order of the Colonial Secretary, by Messrs. Eckford, M.L.A., and two gentlemen introduced as Messrs. Daniel P. Spaul and Charles Webb. Mr. Wharf was also present during the early part of the interview. Mr. Spaul (the smaller man) put many questions to Creswell, appearing to bear upon life at Wopping; but Creswell gave no reply or rational answers that could be interpreted to mean anything; indeed Mr. Spaul spoke so low and appeared so deaf that very little could be expected from such a conversation. Creswell was frequently pressed by myself and others to state whether he knew Mr. Spaul, and to mention his name if he did know him; but he gave no reply. Creswell's talk was rambling, incoherent, and low in tone, and only when asked to accept anything, as rum and tobacco, did he make anything like a rational or outspoken statement. He sat staring at Mr. Spaul, and muttering to himself, and asked Mr. Spaul when he would come again to see him, as he had been promised something nice if they came again.

There is also the following entry, dated July, 1884:—

By direction of the Inspector-General of the Insane, a most careful examination was made towards the latter end of this month of William Creswell's person, paying particular attention to all marks that might be found on his body. This examination was conducted by both the Medical Superintendent and Assistant Medical Officer, which the signatures will testify. The left hand was first examined. On the ring finger was found a small arrow-shaped cicatrix, between the second and third fingers was found a cicatrix on the web, and a scar was visible on the web between the thumb and fore-finger, and also at the base of the forefinger. The ends of the fingers were normal. A large scar was found on the back of the hand, and measured $2\frac{1}{2}$ inches long, while one of an inch in length was present over the inferior surface on the ulnar side of the wrist, and like an arrow in shape. A slight scar was also found on the middle third anterior surface of ulnar side of arm (left). On the right arm there are two vaccination marks, one of which is indistinct. On the right wrist there is an indistinct scar; on the ulnar anterior aspect of the wrist was a very slight mark on the internal aspect of the thumb. Ditto on forefinger, very slight, and a mark over the knuckle of the right ring-finger. On the right hand the finger ends are quite normal. The right cheek is pitted with skin vascular. The ears are of large size, while the lobes are not pierced. The left cheek is also pitted, and no tattoo-marks of any description can be found on his arms. There is a slight warty growth at the back of the shoulder blades; no marks on back, sides, or armpits. The right leg shows slight exotosis over the instep of the big toe; but no marks on the right leg or thigh. There is no mark between the scrotum and anus. The testicles are both normal; no marks are found on the left thigh or left leg. No marks of any kind are found on the head, and no tattoo-marks of any kind on any part of the body.

E. GODSON,
Medical Superintendent.

119. The nature of his insanity is chronic dementia? Yes.
120. I suppose he is perfectly harmless? Yes.
121. Has he ever spoken in the French language at all? He has never showed the slightest knowledge of French.
122. Are his ears at all peculiar? One is different from the other. One is a perfect lobe, and the other is lobular.
123. Is one larger than the other? Yes.
124. Is that a common occurrence? Yes; you find hands and feet one larger than the other, and it is the same with the ears.
125. We have received information that there is $\frac{1}{2}$ an inch difference between the ears;—if that is so, would it not be very apparent? Yes.

- E. Godson, M.R.C.S. 126. The right ear is $3\frac{1}{2}$ inches, and the left $2\frac{5}{8}$ inches;—that would be a very marked difference? Yes, very marked.
- 29 Nov., 1899. 127. *Mr. Meagher.*] The mark on the temporal artery would be close to the auditory canal;—that is used for bleeding purposes, is it not? I suppose that any portion of the temporal artery could be.
128. It has been stated that Sir Roger Tichborne had been bled, and that there is a cut on the temporal artery caused by a surgeon bleeding him at Canterbury; you would naturally look in that direction to see if there were any signs of his having been bled; do you say that no discovery was made before 1884? There was no record of it.
129. Does the mark there give you any indication that there has been a puncture made at a remote period? I forgot the mark. I have not examined the head for some time. It evidently is not a very conspicuous mark.
130. This examination would be conducted with the aid of a lens, but Drs. Pickburn and Devlin say that they do not require the aid of a lens to see this mark, and they refer to it as an old scar;—can you understand how, after careful examination only five years before, Drs. Fiaschi and MacCormick failed to find it? It was scarcely five years.
131. Can you give any rational explanation of these doctors stating that they found lancet cuts for bleeding on the situation of the temporal artery in 1899, and two other highly reputable medical gentlemen, who examined the patient two years before, saying that they could not discover those marks? They must be there. If present now it must have been there when Drs. Fiaschi and MacCormick examined the man. I cannot understand how they could have missed them.
132. The marks were there, apparently, some twelve years before they came to examine the man;—they were there, according to the records of the asylum, in 1884? Yes.
133. Of course, you know that Drs. Fiaschi and MacCormick were appointed by the Court to make the examination in consequence of an application to take this man to England? Yes.
134. Did they, to your knowledge, have access to the books of the asylum in regard to the description of the marks? No; I do not think they saw the book.
135. You have been there for eighteen years? Yes.
136. Do you know, as a matter of fact, that extracts from those books were furnished to the Court, giving the marks on the patient? Yes.
137. That, as a matter of fact, this report of 1884, containing the description of the mark, was before the Court? Yes; I know there was an extract taken.
138. It had been stated that the original Roger Tichborne had received an injury in the eye from a fish-hook;—have you noticed that on this man Creswell? There is no mention of it. When I examined him I had no list of things to find. Had I been supplied with the list I should have looked for the things referred to. I simply examined him as I would any ordinary patient.
139. He is without doubt the most noted patient that you have there? He has been notorious.
140. I do not suppose that any other patient has had the same amount of newspaper space devoted to him, and I suppose you take some interest in him? I take an interest in him as a patient; but not any more than I did in any of the other inmates.
141. Was it not known all the world over that there were certain scars on the body of Roger Tichborne? Yes.
142. Was not one of the scars, apart from the tattoo marks, a mark on the eyelid, caused by a fish-hook? Yes; I know that now, but I did not know it before. Had I known it when you sent for me I should have examined him in reference to these specific marks.
143. You say the reason why you have not seen that mark is that you had no specific question to answer? I do not say that the mark is not there; but I do not recollect it.
144. If you had had a specific question asked of you, you would have been in a better position to answer; in 1897 Dr. Fiaschi and Dr. MacCormick had that specific question put to them as to whether there was a mark on the eyelid suggestive of injury by a fish-hook, and the answer was, "We find no mark"? Yes.
145. Can you account in 1899 for these other two medical gentlemen having the same question put to them as to any mark on the eyelid which could have been caused by the insertion of a fish-hook, and answering, "Yes; there is a small rounded scar on the right upper eyelid, which might have been so caused"? He could not have had a fish-hook in his eye since; but some injury might have been done to his eyelid in the meantime.
146. Do you think those two gentlemen looking for this old scar would be on their guard against any recent one? You would suppose so.
147. Can you account for the discovery of the scar two years afterwards by those two doctors? No; I have no explanation to offer.
148. Dr. Devlin explains that the injury might have been done by a fish-hook, there being two marks as if the eyelid had been folded? Yes.
149. Did you ever examine the mouth of this man? Not internally.
150. Have you noted stunted nails on the right hand of this patient? I believe that one of his thumb-nails is peculiar.
151. About the tattoo-mark alleged to have been removed Dr. Devlin and Dr. Pickburn say it is quite possible that the mark on the inside of the wrist may have been caused by some acid used to remove such a mark; the patient has also given an explanation to you;—in your opinion, which explanation is the more probable one? The explanation which Creswell gave. I have never doubted it for a minute.
152. In the first place, it would be rather a delicate place for tattooing, and still more delicate for removing the tattoo with acid? Yes, very dangerous indeed.
153. *Chairman.*] According to the evidence, you found that Creswell was particularly docile at the last examination? Yes.
154. And you passed an opinion to that effect to the visiting doctors? Yes; I remember making the remark.
155. You say he is of a reserved nature? Yes.
156. Very fond of smoking? Yes.
157. But he will not attempt to obtain tobacco by surreptitious means; he would go without rather than take it out of another man's pocket? I think he would.
158. *Mr. Clark.*] Did you notice the peculiar manner in which he sat on a chair whilst going through the examination—a manner that is said to have been a peculiarity of Tichborne? Yes; but that is a very common attitude.

159. *Chairman.*] In regard to his walk, does he limp? I never noticed him limp. I have seen nothing very peculiar in his walk.

E. Godson,
M.R.C.S.

160. Are his legs bowed at all? I do not think so. I will examine him. I should not like to commit myself to definite answers without doing so.

29 Nov., 1899.

Edward Priestman recalled and further examined:—

161. *Chairman.*] Have you a further statement that you wish to make to the Committee? Yes; a written statement, which I will read. It is as follows:—During the five years in which I have fought for justice for Creswell, or rather Roger Tichborne (whom I am absolutely convinced Creswell really is), I have, I feel sure, carried the good wishes of all right-thinking men as regards the efforts I have made in furtherance of the end I wish to attain. When I visited the Parramatta Asylum five years ago I went there purely to satisfy myself by close observation that there was really some truth, or foundation of truth, in the theory that Creswell was in reality Roger Tichborne. In less than ten minutes I was satisfied on the point of identity. The family likeness is striking—the large light-blue eyes, the marvellous twitching of the eyebrows, the slight limp noticeable in the walk, all tended to assure me at this early stage; but when I looked closer and saw the mark of the fish-hook through the eyelid, the odd ears, the cut on the temporal artery, the lump on the instep, and last and not least, the air of mystery innate in the man, I was confirmed in my belief absolutely. The marks and peculiarities enumerated above, I have sworn to; and it may be better imagined than described what my sensations were when most of these marks and peculiarities were refuted by eminent medical men such as Drs. Fiaschi and MacCormick, and the publication of whose evidence rendered me an object of derision, if not worse. To remove this impression has since been the object of my life. I felt certain that, could I obtain a Select Committee of Parliament, the wrong which I considered I had received would be righted. That this is in a fair way of being accomplished, I feel certain, and I wish to tender my most heartfelt thanks to Mr. Fitzpatrick and several other Honorable Members for what they have done. During my long fight, I have discovered much that may be of interest. In the first place, Dr. Manning and several others assert that Creswell is Creswell pure and simple, and that he was proved so in Court before the late Sir William Manning in 1884. If the gentlemen present will turn to the book I lately wrote on the Tichborne case and read part vi, they will find that this latter assertion is not true, and that Creswell really went back to the Asylum from the Court without a name. This will be more fully realised if the Committee will cause the papers in the Equity Court connected with the 1884 movement to be laid before them. I understand that the Medical Superintendent at the Parramatta Asylum has been in communication with the alleged Creswells, brother and sister, up to the time of both their deaths—the brother having died some ten or twelve years ago, the sister more recently. Inquiries have been rigidly instituted by a friend of mine in London, on whom I can thoroughly rely, and he informs me that the remaining survivors of the Creswell family have very hazy ideas about any relationship with the Parramatta patient. When the late Mr. Justice Manning expressed himself in Court in 1897 as being absolutely satisfied that the Parramatta patient was in reality Wm. Creswell, of Strathfieldsaye, I at once wrote to a gentleman friend of mine in London, and asked him to procure for me, from the sole surviving son of the Thomas Creswell who was out here in 1884, a power of attorney to procure the release into my hands of his alleged uncle. The answer my friend received was, “Give me £300, and I will give Mr. Priestman the power of attorney.” Arrangements were attempted to be made, so that this money might be raised, but when at the point of success, my friend was told (so he informed me) that this Thomas Creswell’s uncle (the Parramatta patient) owned property at Strathfieldsaye, in Hampshire, which would revert to Thomas Creswell in the event of the patient’s death in the asylum, and Thos. Creswell was afraid that if the patient was released, he might will the property to someone else. This, added to the fact that the deceased Thos. Creswell swore before Sir William Manning, in 1884, “that he desired to find his brother William, because he was entitled to some of the Strathfieldsaye property,” is sufficient to show that if the Parramatta patient should be really Wm. Creswell the taxpayers of this Colony should be no longer saddled with his maintenance. Regarding the marks, &c., on the alleged Wm. Creswell, it rests with the Committee as to whether it is necessary to bring to Sydney any of the witnesses whose evidence was read at my application before the late Justice Manning, in 1897. Personally, I would recommend that the following very material witnesses come to Sydney to identify Creswell in the asylum as the man whom they knew, viz.:—Mr. John Thomas Walker, saddler, Goulburn; Mr. Francis Devlin, wholesale butcher, Temora; Mr. Luke Cullen, attendant at George-street Asylum, Parramatta; Mr. William E. Forbes, Riverstone Meat-works, Riverstone; Mr. William Marshall, house and land agent, Australia-street, Newtown. Those in my mind would be ample, as the evidence they can give is very strong. Anent the tattoo-mark which several of my witnesses swear to as being on the back of Creswell’s left wrist, I think if the Committee look through the evidence adduced at the 1884 trial, it will find that Thomas Creswell deposed to the fact of his brother William’s arm being ripped up by the meat-hook from the left armpit to the elbow, and in a different locality altogether to where the scar is on the alleged Wm. Creswell’s wrist. I would also like to suggest to the gentlemen of the Committee that they order the Receiving House books of 1870 and 1871 to be produced, as also the alleged Creswell’s belongings when he first entered the Asylum at Gladesville. Of course, at the time of writing this I am more or less in the dark as to the late examination of Creswell by Drs. Pickburn and Devlin. If the marks and peculiarities are deposed to by them as being identical with those known to exist on and in the lost Roger Tichborne, then the gentlemen composing the Committee must be convinced that Creswell is really Roger Tichborne; and I would respectfully suggest to the Committee that Drs. Pickburn and Devlin’s evidence is given on oath, whilst Drs. Fiaschi’s and MacCormick’s was a simple statement, and I was not permitted the privilege of having them put in the witness-box at the proceedings in the Equity Court, in 1897, before the late Judge Manning, and having them cross-examined. In any case, I would like to impress upon the Committee the fact that I am willing to take charge of Wm. Creswell, whether proved Roger Tichborne or not, and take him to England; and I can find sureties to enter into the necessary bond for his safe custody, transport, and future maintenance. I hold power of attorney from the Rev. E. Williams, of London, to act for him in procuring the delivery into his hands of William Creswell under that name simply. I have my own opinions as to Creswell’s sanity, and make free to say that I am absolutely convinced that his presumed insanity stops short at eccentricity.

E. Priestman.

29 Nov., 1899.

THURSDAY, 7 DECEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. DACEY.
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Edwin Godson, M.R.C.S., Medical Superintendent of the Hospital for Insane, Parramatta, recalled and further examined:—

E. Godson,
M.R.C.S.
7 Dec., 1899.

162. *Chairman.*] I think some reference was made on a former occasion to you making an examination of certain marks on Creswell? Yes.

163. Have you examined William Creswell for any marks or peculiarities since you last were before the Committee? Yes, I made a thorough examination yesterday afternoon.

164. Will you state the different marks and peculiarities which you noticed? On a former occasion I could not swear whether there was or not a mark on two particular places—the temporal artery or over the right eyelid. I examined him yesterday, and I could see neither of the marks. I was not satisfied with my own examination, but sent for Dr. Reid, who also examined him. There was nothing which we could swear to as being a puncture or wound, either on the eyelid or right temple. We not only examined him with the naked eye, but also with a powerful lens.

165. How long have you been connected with the Asylum? About eighteen years.

166. During the whole of that time, have you found Creswell to be perfectly harmless and amenable to discipline? Yes, he has caused us no trouble.

167. Is there any other feature of the examination to which you would like to make reference? On a former occasion I said I thought there was something peculiar about his right thumb, but I find that the fingers, thumbs, and nails are perfect, excepting that the right thumb is not so long or so deeply bedded at the matrix as the left thumb. That is accounted for from the fact that Creswell always breaks his tobacco with the right thumb. We do not allow the patients' knives to cut tobacco. That, however, is nothing abnormal. His thumb-nails and finger-nails are perfectly normal.

168. Is there anything further you wish to say? I think those are the principal things about which I was in doubt. The in-knees and the size of the feet and ear are absolutely proved. The right ear is very much longer than the other, half an inch. The feet are the same length. I measured him again, and he was exactly 5 feet 7 inches high.

169. *Mr. E. M. Clark.*] Did he go the full height? You might say so. Perhaps he was one-sixteenth or one thirty-second part of an inch less.

170. *Chairman.*] When the case was heard at the instigation of Mr. Priestman, some time ago, reference was made by Dr. Manning to the fact that two letters were found on Creswell at the time he entered the asylum, one alleged to be from his brother, Thomas Creswell, and the other from Mrs. West; are you aware of their existence? No, I am not personally aware of them, but I do not say they are not in existence. Any letters or property found on a patient are detained until he is either dead or discharged.

171. *Mr. Dacey.*] In whose possession will they be? In the possession of the Assistant Superintendent who keeps all the records and patients' property.

172. Was this officer there at the time of Creswell's admission? No; there have been several there since then.

173. Have you been there longer than the Superintendent? Yes.

174. How long was Creswell in the Institution before you joined it? About ten years.

175. *Mr. E. M. Clark.*] Are the records sent to the Master in Lunacy? They are always kept, and the Assistant Superintendent could produce them.

176. *Mr. Dacey.*] What was the date of Creswell's admission? I am not quite sure; but I know it was about twenty-eight years ago.

177. Have you noticed any alteration in him during the time you have been there? No, he is about the same mentally. He has altered a little in appearance, and has got greyer.

178. *Mr. E. M. Clark.*] I suppose that when you made your examination you were acquainted with the whole of the distinguishing marks which were supposed to be on Tichborne? Yes, I read Mr. Priestman's book a little time before.

179. Then, if Drs. Devlin and Pickburn claim that Creswell has certain marks over the eyelid and on the temple, you think they must be wrong? That is my opinion. I could not see anything there to which I could swear. Mr. Wilkes, on a former occasion, remarked that Dr. Devlin stated that a particular mark was so palpable that it could be seen without the aid of a lens, but, even with the aid of a lens, I could not swear that it was there. There are various puckerings of the skin. He is very weather-worn, and the blood-vessels are corrugated and enlarged, and I might easily mistake one of them for a scar. I do not say that the scar is not there, but it is not sufficiently clear for me to swear that it is there. Certainly I could not find it.

180. I suppose your examination lasted some time? For nearly an hour—fully three-quarters of an hour, and most of the time was spent about the eyelid and the region of the temple. He was a little difficult to examine at first. It was a terribly hot day, and it took me some time to examine his eyelid particularly.

181. *Chairman.*] I do not know whether you were asked, on a former occasion, a question as to the period of time which was occupied in the examination by Drs. Fiaschi and MacCormack? Yes; I was then not sure of the length of time occupied, but I am sure now that it was one and a half hours at least.

182. *Mr. E. M. Clark.*] The question was put to Dr. Pickburn, "Has Creswell any marks on the eyelid which could have been caused by the insertion of a fish-hook?" and his reply was, "I am satisfied that there is a small roundish scar on the right upper eyelid, which might have been so caused?" I could not find the mark. There was something like an injected capillary over the top of the eyelid, but I do not say the scar is not there, but I do not think it is there. I could not see it with the lens or without it. Is there any question of Creswell or Sir Roger Tichborne ever having a pustula eruption, such as small-pox, because this man is covered with some pustula eruption, which has come from small-pox or something of that kind? I asked him if he had had small-pox, and he said his mother would tell me.

183. *Mr. Dacey.*] Do you know how old he is? Yes; he always gives the same answer when you ask him. If you ask him, he will tell you that his name is William Creswell, that he was born at Mortimer, near Reading, in Berkshire, on 8th May, 1823. If you ask him when he came out here and by what boat, his reply is, "The Maid of Judah." He never varies in his answers.

184.

184. Have you seen or heard anything to make you alter your opinion that this man is no other than the man you believe him to be? None whatever.
185. *Chairman.*] Do you think that it is probable that certain statements have been made to him during the last twenty-five or thirty years—that have been so dinned into his ears—that he has learnt them parrot-like? To a certain extent his answers are parrot-like, because his mind is gone, and he could not learn anything. I, myself, do not doubt his story for one moment; I accept it as absolute gospel.
186. Would you doubt his story if you were aware of the circumstance that in the year in which he alleges he came out in the ship called "The Maid of Judah," there was no such ship in existence? He would not tell me the year he came out. I asked him, and he did not say.
187. *Mr. Dacey.*] Is it known when he was in the Colony before being admitted to the Institution? I do not think so. He was admitted from Gladesville about thirty years ago. He was there for twelve months, and was then discharged as recovered. It was at that time that he told Dr. Manning all about his left hand, and how the supposed scar was caused.
188. You have not heard him say how long he was in the country before he entered Gladesville? No.
189. *Chairman.*] With the exception of the statements he has made to you in the fashion he usually adopts, has he ever spoken rationally in regard to any other subject? Not to me. I may say that on Sunday I tried to examine his eye and the side of his face, but he would not let me touch him.
190. *Mr. Dacey.*] Is there any person now connected with the Institution, officially, who was there at the time of his admission? No.
191. Is he a man addicted to drink? He will not touch it, but it is on account of a delusion on his part, because he thinks it is poison. On one occasion I offered him some rum in my office, but he would not touch it.

E. Godson,
M.R.C.S.
7 Dec., 1899.

TUESDAY, 12 DECEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. MEAGHER,
MR. WILKS.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

John Richard Moore, Acting Superintendent, Reception-house, Darlinghurst, sworn and examined:—

192. *Chairman.*] I believe that intimation was given to the authorities to the effect that we desired to see the records for 1870 and 1871? Yes.
193. Will you kindly read them? The first entry in regard to Wm. Creswell is dated 12th January, 1871:—

J. R. Moore.
12 Dec., 1899.

From Braidwood Gaol, in transit to Gladesville; certificate signed by R. H. Gentle and Rees Llewellyn. Patient's age, 42. Religion—Roman Catholic. Native place—England. Late residence—Goulburn. Previous occupation—Butcher. Married, but separated from his wife. Form of mental disease—Monomania. Supposed cause—Not known. Has he any disposition to refuse food?—No. Is he disposed to injure himself or others?—No. Have any medical means been employed?—No. Is patient's bodily health good?—Yes. Describe particulars of disease—Continually writing to the Earl of Belmore. What property has he with him?—One gold ring, one knife, tobacco-pouch, opossum rug, quart-pot, and leather vest. Address of patient's friends?—Has no friends.

The entry for 12th January in the symptoms book is:—

William Creswell, aged 42. From Braidwood, in transit to Gladesville Asylum. Swarming with vermin. Some of his clothes have been buried as the only means of getting rid of the lice. Transferred to Gladesville, 13th January, 1871. Diet, ordinary.

That is one of the entries. Then there is another:—

William Creswell. Admitted 8th August, 1871, from Central Police Office. Medical certificate signed by Drs. Marshall and Egan. Age—43 years. Religion—Roman Catholic. Native place—England. Residence—Camden. Previous occupation—Gold-digger. Married; no children. Form of mental disorder—Mania. Has any personal restraint been employed?—Yes. Has the patient been insane before?—Yes. Have there been any lucid intervals?—Yes. Have you observed any change or peculiarity in his habits lately?—No. Has he shown any disposition to refuse food?—No. Is he disposed to injure himself or others; state which, or if both?—It is feared so. Has he ever been in any asylum for lunatics?—Yes; Gladesville, January last. Is the patient's bodily health good?—Yes. Describe the particulars of the disease?—Has various delusions about being entitled to money which is withheld from him, incoherent, and flighty. What property has he with him?—None.

Another entry is:—

William Creswell; aged 47. From C.P. Office. Very lousy, body and clothes. Clothes in such a filthy condition, alive with vermin, that they must be destroyed. Discharged to Gladesville Hospital, 14th August, 1871.

194. *Mr. E. M. Clark.*] There seems to be a discrepancy in regard to ages;—how are the ages obtained? From the patients themselves.
195. *Chairman.*] Is there any means of securing the presentation before the Committee of the articles enumerated in the first description? They would be forwarded with the patient to the Gladesville Hospital when he was transferred from the reception-house to Gladesville.
196. A ring and a leather vest are mentioned;—both play a prominent part in the Tichborne case? I do not know whether they will be at Gladesville or not. He was apparently discharged from there before 12th August. When a patient goes away his property is generally returned to him.
197. *Mr. Wilks.*] You have stated that one form of his mania consists in writing letters to the Earl of Belmore;—is there any chance of getting any of those letters, or of ascertaining their nature? I could not say. They are not at the reception-house. The only paper we keep at the reception-house is the order from the justice of the peace for admission. I could not tell you the subject-matter of any of his letters.

Harold Mapletoft Davis, licensed surveyor, sworn and examined:—

198. *Chairman.*] Some years ago you were, I believe, located in the Queanbeyan district? Yes, for a long time.
199. In what part of it? Gininderra and Queanbeyan.
200. During your residence there were you brought in contact at any time with a man who went by the name of Creswell? Yes; I knew him intimately.
201. Have you seen him of late years? Not for the last thirty-four or thirty-five years.

H. M. Davis.
12 Dec., 1899.

- H. M. Davis. 202. Will you state how you came in contact with him? When I first came in contact with him he was groom for Mr. George Campbell. I used to meet him at Gininderra, in cricket-matches. He was a great cricketer. He was a man about my own height; perhaps a little taller.
- 12 Dec., 1899. 203. Was there anything striking about him? There was a peculiarity about his eyes; he used to wink when he spoke to you. He remained with George Campbell for some time. He was very fond of drinking, and he caused several accidents through capsizing buggies. Campbell then got rid of him. My brother, who owned Gininderra, being an ardent cricketer, thought it would be a good thing to get hold of him. At that time, and until he was married, he went by the name of George Smith. My brother hired him on the understanding that he would give up drinking. I was living at Gininderra at the time, and saw a great deal of him. We had several conversations; but nothing was said about his family. There was something peculiar about him; I could not make him out at all.
204. Did he ever tell you anything with reference to his antecedents? No; excepting that he came from Strathfieldsaye. He appeared to know that place better than any other, and it was the only one about which he spoke to me.
205. I believe that some time after you got to know him he got married? Yes. At that time I was surveying on the property of Mrs. Clarke, the woman he married. She was a widow, and kept an hotel at Jerrabeggarie. It was not until after he met Mrs. Clarke that I got to know that his name was Creswell. Mrs. Clarke was at Gundaroo, and Creswell was at Gininderra. I was camping near to Mrs. Clarke's place. She had seen Creswell at a cricket-match at Gundaroo, and she took a fancy to him. He also took a fancy to her. He used to give me notes for her, and she gave me messages for him when I went home on Saturday. I did not think there was anything serious in the matter. On one occasion, however, he gave me a letter, and told me that he intended to "pop the question to the old widow," as he called her.
206. *Mr. Clark.*] I suppose that in those days he was not regarded as being mad? No. He was, however, always eccentric in his ways. She accepted him. Some time after that I drove him down to see her, and they named the day. On a subsequent occasion he got me to drive him down to see Mr. Smith, the clergyman. He wanted to get the license. It was on that occasion that he told me that his name was Creswell. We were about 7 miles from Mrs. Clarke's place when he suddenly stopped talking. After travelling some distance, he said: "Must I get married in my own name?" I replied: "I should think so. If you do not you will only perjure yourself." He remarked: "That is not pleasant," or, "That is awkward." I said: "If I were you I would give my right name." He then added that Smith was not his name, and after some consideration he added: "If I must have a name, I will have a good one. I will be Sir William Creswell Creswell, Bart.; I ought to be one if I am not." I did not take any particular notice of that at the time, but afterwards I thought more of it. He got the license, and gave his name as Wm. Creswell, and he always went by that name afterwards. I was at his wedding in Gundaroo. I saw very little of him afterwards. I went from Gininderra to Queanbeyan, and he always came to see me when he came to town.
207. And you have not seen much of him since? Not since he parted from his wife.
208. Did they live together long? I think not—twelve or eighteen months. There was one peculiarity about his marriage. As soon as he came back from the church, after the wedding, the first thing he did was to call his wife "Madam." I asked him why he did not call her by her Christian name. He answered: "I do not know what her Christian name is." He always called her Madam.
209. I think I saw a letter written by yourself to the *Daily Telegraph* or *Sunday Times* the other day? Yes; that was a letter I wrote to Mr. Priestman.
210. What are the circumstances associated with the writing of that letter? I was passing Dymock's, in George-street, last week, when I saw a book outside the shop, entitled "The Tichborne Mystery." One of the illustrations in the book was a likeness, and it attracted my attention, because I considered it to be a splendid likeness of Creswell, as he was when I knew him. I bought the book and took it home, and, to my astonishment, when I looked at it, the photo was not a photo of Creswell, but of Sir James Tichborne. The resemblance struck me so forcibly that in the afternoon I wrote to Mr. Priestman and told him about it.
211. There was a very great likeness? A very great likeness to what Creswell was when I first knew him. Creswell was rather broad-shouldered—a stout, strongly-made man.
212. *Mr. Wilks.*] You state that he had peculiar eyes—was there a pensive look in them? I do not know that I have noticed that. He had a very round, light-blue eye.
213. Was it more of a merry eye than a pensive eye? I do not know about that. He had a habit of winking when he was speaking; it was something like a nervous twitching.
214. You have stated that there was something peculiar about him,—what do you mean by that? I mean that he was eccentric.
215. Were you ever led to believe that he was "ratty" or not all right mentally? Not at all.
216. After he told you that if he were to have a name it would be Sir Wm. Creswell, Bart., did he again refer to the question of the baronetcy? No; I do not think that he referred to it again.
217. Did you pass any remark about the matter at the time? No.
218. *Mr. E. M. Clark.*] I suppose that when he told you he was Sir William Creswell he was in a jolly humour, seeing that he was about to be married? I suppose so.
219. Was he, generally speaking, a man of cleanly appearance and habits? Yes, very. He was "natty" and tidy.
220. How old would he be when you first knew him, thirty-five years ago? I used to take him to be about my own age, and I am 68 now. I should say that he was 30 or 33 when I last saw him.
221. Had you read anything about this case prior to seeing the book at Dymock's? No.
222. Were you aware of the Committee's existence? No.
223. You say you wrote to Mr. Priestman? Yes.
224. Do you know him? No; I have never had the pleasure of seeing him, but I have had letters from him.
225. Dealing with the Tichborne case? Yes; two years ago, when I was living at Gundaroo.
226. Did the letters from him ask for information? Yes; I was told by Mr. Jenkins, in the first instance, if I had any papers or letters, to forward them to Mr. Priestman, but I had none.
227. Did you notice any reserve about Creswell? He was very much reserved. He would not tell you anything about his private affairs at all.

228. Did you form the impression that he was a man who had had an excellent training in his youth? I thought he was considerably above his station. H. M. Davis.
229. Did he give you that impression on account of his conversation and general bearing? Yes. I used to think sometimes that he was rather overbearing in his manner. For instance, he regarded himself as being quite my equal. I was a new chum at the time, and did not like it. 12 Dec., 1899.
230. Your station in life was superior to his? I considered so. The more I saw of him the better I liked him.
231. Did you ever have any conversation with his wife after they were married? Yes; I saw her after she left him.
232. Did she ever say that he told her that he was anything but Creswell? No.
233. Was she a woman who was inclined to be chatty? Sometimes she was.
234. Do you think that if she knew that he was entitled to a title she would have been glad to ventilate the fact? I could not say. I do not think she was ambitious enough for that.
235. Do you think she would have made you acquainted with the fact if he had told her that he was entitled to a baronetcy? If he told her that I think she would have told me.
236. Did you see them together during their married life? No.
237. Do you know whether they were on terms of attachment or not? I do not. I do not think they lived happily together, because shortly after Creswell married her—in fact, on the very day he got married—he took to drinking again.
238. Was she older than he? I think so.
239. You say that he was about your height, or a little taller—what was your height? About 5 ft. 8 in. Standing by the side of him he appeared to me to be about my own height.
240. You have stated that he was a good cricketer;—was he a good all-round cricketer? Yes; a good all-round cricketer. He had a very peculiar way of standing on his left toe when he was going to hit a ball.
241. *Mr. Wilks.*] Did you notice any tattoo-marks on his arm when he was playing cricket? I could not say that I did. He always wore a very broad strap round his left arm.
242. Might that have covered any mark? It might; it was from 3 to 4 inches wide.
243. *Mr. E. M. Clark.*] Did he always wear the strap? Yes; round his left wrist.
244. *Mr. Wilks.*] Did you look upon it as a wrist-supporter? I suppose so.
245. *Mr. E. M. Clark.*] Was it an uncommon thing for people to wear wrist-straps of that kind in those days? Yes.
246. Did you ever notice any limp about him? There was a peculiarity in his walk, but he was not what I would call lame.
247. Did he hobble? Yes, at times; at other times you would not notice it.
248. Were his legs perfectly straight? I think so. He was very military in his habits. I feel sure that he had had a military training from the way in which he used to keep his saddle-room and his horses. He used to roll his saddle-straps through the buckle instead of leaving them slack.
249. I suppose he always adhered to the statement that he was born at Strathfieldsaye, even when he was going by the name of George Smith? I do not think I ever heard him mention Strathfieldsaye until I knew him as Creswell.
250. Did he appear to know a good deal about that part? Yes.
251. Did he ever speak of any other part of England? Not to me. He used to tell me about the Duke of Wellington's charger, and how often he had seen it.
252. Did he ever speak about coming to New South Wales, or of the ship which brought him? No; he was very reticent.
253. Did he ever mention the date of his birth? No.
254. *Chairman.*] Did he ever say that he had been on the Continent—France, for instance? No; I have heard him make use of French expressions. He told me he had seen a good deal of the world.
255. Have you seen his handwriting? Yes.
256. Did he write a good hand? Yes; very fair.
257. There is a copy of one of his letters in the book published by Mr. Priestman;—does that correspond with his handwriting, as you remember it? Yes; there was a peculiarity about his "t's," which I remember.
258. Were you in Queanbeyan when he was imprisoned for committing an assault? I remember that he once committed an assault; I think I must have been in Queanbeyan at the time. In the letter published in Mr. Priestman's book Creswell refers to me to give him a character. The person to whom he addressed the letter was Mr. Freestone, a solicitor.
259. *Mr. Wilks.*] What were the French expressions which you heard him make use of? They were short exclamations.
260. Were they French curse words? Some of them were.
261. They were not cultured expressions? No.
262. *Mr. Meagher.*] Do you speak French yourself? No.
263. What was the date of the marriage with Mrs. Clarke? Between 1862 and 1865.
264. Did Creswell ever tell you he had been in Victoria? I have heard him speaking of the Victorian diggings.
265. Did it strike you that he had had some experience of the Victorian diggings? He said he had been on the diggings in Victoria.
266. Did he ever, in the course of conversation, when relating his experiences in Victoria, mention the name of Arthur Orton? Not that I am aware of.
267. Did he ever mention the year in which he had been on the diggings in Victoria? No; he said casually that he had been on the diggings.
268. Were there many people present when the marriage with Mrs. Clarke took place? No.
269. How many? We had breakfast after we came back, and I think there were four of us—Creswell and his wife, somebody else who came from the church, and myself.
270. Did you ever meet a man called Stafford Lett, from Victoria; and was not Mr. Lett one of those who was present when Creswell married Mrs. Clarke? I do not remember him. I do not say he was not there; but I do not remember him.
271. Was there any man there whose name you did not know? No; there might have been some one in the other part of the hotel.

- H. M. Davis. 272. Did he ever speak to you of a Victorian friend whose name I have mentioned? —
 12 Dec., 1899. 273. When speaking of the Victorian gold-fields, did he mention the name of John Stafford Lett? Not that I know of.
 274. If Mr. Lett has sworn upon oath that he was present at the marriage ceremony, you would not care to say that he swore what was incorrect? No; at the same time I do not remember him.
 275. If he says that at the marriage ceremony he remembers Creswell, whom he had known as Smith in Victoria, stating that he was William Creswell, you would not deny it? No.
 276. Can you remember anyone being present who was surprised at hearing him declare his name at the marriage ceremony as William Creswell? No.
 277. You have stated that he called Mrs. Creswell "Madam"? Yes.
 278. Are you prepared to say whether he pronounced the word with the proper French accent? No; I think it was anglicised.
 279. Are you a sufficiently competent French scholar to say whether he pronounced the other French words he uttered with the accent of a man who has had a training in French? He struck me that he pronounced them as a Frenchman would pronounce them.
 280. Mr. Wilks has asked you whether you considered the expressions he made use of were coarse expressions;—is your knowledge of French limited? Yes.
 281. You are not in a position to say whether the words he used were of a high or low character? I do not think they could be of a low character, because I have heard ladies in the Old Country use the same expressions. They are French ejaculations which you often hear.
 282. Did Creswell seem to trust more in you than in anyone else? Yes.
 283. You have stated that when playing cricket he used to stand in a peculiar attitude;—I suppose you know that when boys at English colleges learn cricket they usually develop the peculiar attitude of their coaches? I have seen some of the old English cricketers at Canterbury adopting the same attitude as that which Creswell adopted.
 284. Have you seen Creswell since he has been in the asylum? No. I applied to Mr. Critchett Walker on one occasion for an order to see him, and he said that if Dr. Maurice O'Connor would give me a pass to see him I could see him. He subsequently asked me not to bother about the matter, because the man had been so worried that he had gone off his head altogether. He asked me why I wished to see him, and I said that I wished to see if he recognised me, or whether he was the man whom I remembered. However, I withdrew my application.
 285. *Mr. E. M. Clark.*] Did you recognise the writing in the letter which is published in Mr. Priestman's book as Creswell's handwriting? Yes.
 286. What was he doing when he wrote that letter? He was living with his wife at that time. I may mention that he had a little black pocket-book about which he was very particular. I do not know what became of it. He used to keep his papers in it, and was very careful not to let anyone see what was inside.

Luke Cullen sworn and examined:—

- L. Cullen. 287. *Chairman.*] You are at present employed at the Newington Asylum, Parramatta? Yes.
 12 Dec., 1899. 288. I believe that some years ago you were in the Police Force? Yes.
 289. Where were you stationed? At Tumut and Wagga.
 290. Did you ever meet a man named William Creswell? Yes; I arrested him.
 291. How many years ago? I think it was in 1863 or 1864, but I have had a sunstroke since, and it has affected my memory.
 292. Where did you arrest him? At Tumut.
 293. On what charge? Being of unsound mind.
 294. Had you ever come in contact with him before that time? Yes; I had spoken to him on several occasions at Tumut, and I saw him some years before that in Wagga Wagga when he was working with Arthur Orton.
 295. Did you know Arthur Orton? I saw him once. I was on a visit to Wagga, and I happened to meet the two of them in the "Commercial Hotel."
 296. Was there a considerable amount of difference between the personal appearance of Arthur Orton and Creswell? Yes; one appeared to be a fat, bloated, ordinary-looking man.
 297. Who was that? Orton; the other was a military, gentlemanly-looking man.
 298. Had you any conversation with Creswell at that time? No; but I had with Orton. I was a stranger in Wagga at the time. I was on bush duty. I went into the tap-room or parlour of the hotel, and called for a drink. Orton and Creswell came in whilst I was sitting there. Creswell went right through, as if he were going to the back-yard, and Orton sat down. He said to me, "Do you know that man who has gone through?" I replied, "No; I am a stranger here, and I do not know you or him." He said, "He is a strange card that." I asked in what way. He replied, "That man ought not to be knocking about the country. He ought to be at Home. That man would become one of the wealthiest men in England if he would only stay at Home and look after his own property." I put it down to a bit of "gas." Some time afterwards I happened to see Creswell in Tumut. I had been transferred to Gundagai and Tumut, and I saw him there butchering. What Orton had said to me had struck me, and a short time afterwards, in looking over the *Police Gazette*, I noticed that a reward of £1,000 was offered to anybody finding the whereabouts of Sir Roger Tichborne. On account of what I heard from Orton, in Wagga, I wrote to the Inspector-General of Police, stating that I believed Creswell was the man, and that he answered the description. The Inspector-General wrote back to this effect: "From inquiries I have made, I have no doubt whatever that you have pointed out the right man as the long lost heir, Sir Roger Tichborne, for which you will be entitled to £1,000 reward." After that, I never heard another word from the Inspector-General of Police. He seemed to hush the thing up. I wrote to him again, however, from the George-street Asylum. I was in the hospital there, and when I got well I wrote to Mr. Fosbery, asking him if he had made any further inquiry about the man. He replied, asking me to have nothing further to do with the matter.
 299. In what year was that? In 1869.
 300. I do not think Mr. Fosbery was Inspector-General then;—was it not Captain McLerie to whom you wrote? I do not think so.
 301. What did you do with the answer you received? I could not tell you; but I remember it well, and the Inspector-General of Police does not deny it. He told Mr. Priestman that if I applied personally for the letter or letters I wrote I should get them.

302. *Mr. Wilks.*] Did Creswell tell you on several occasions that he belonged to the best blood in England? Yes. The first time I heard him say that was after I brought him before the Police Magistrate and returned him to the cell. He said, "That fellow has ordered me here. He does not know me. I belong to the best blood in England." I have heard him say the same thing on several occasions.
303. *Chairman.*] You arrested him at Tumut on a charge of being of unsound mind? Yes.
304. What was the result? An order was made to have him forwarded to the Lunatic Asylum.
305. Was he violent at the time? When I arrested him he appeared to be very violent. He had an American axe in his hand and a bowie-knife, and was threatening to chop down anyone who came near him.
306. *Mr. E. M. Clark.*] Did you ever notice any marks on either of his wrists? He had marks upon him, but I forget what they were. There was one peculiarity about him which I could not forget. He had a habit of twitching his eye or eyes when speaking to me.
307. Was it a nervous twitching? It appeared to be so.
308. *Chairman.*] When did you last see him? About thirty years ago. I think I would know him again if I saw him. He gave me an impression that he had served in the army. When he was in the cells he tore a red, blue, and white blanket into strips, and put the strips around him as though it were a belt. He also made epaulettes for his arms. He marched up and down the cell and shouted out orders as though he were putting men under his command through their facings.
309. *Mr. Meagher.*] You say that it was in 1869 when you saw an advertisement offering £1,000 reward for the discovery of Sir Roger Tichborne? Yes.
310. Was there not a good deal of talk in the locality in which you were stationed about this advertisement? No. I never heard it mentioned by anybody but the police themselves. The police do not usually speak of these things publicly.
311. Was not the advertisement in the local newspapers? I do not think I ever saw it in the local newspapers? I saw it in the *Gazette*.
312. You received a reply from the Inspector-General to the effect that apparently you were on the right track? Yes.
313. Did you show his note to any of your friends? No. In connection with these matters letters are generally written to the officer in charge, who reads them, or gives them to the constable to read. He retains them, and does not hand them over.
314. Who is your superior officer? Sergeant Thomas Tant. He is now a night-watchman in Sydney.
315. *Mr. E. M. Clark.*] Do you know if there was any companionship between Orton and Creswell;—did you ever hear of their being in company after you saw them at Wagga Wagga? No. I heard that they were partners in a butchering business at Wagga Wagga.
316. *Mr. Meagher.*] It was in 1869 that you saw the *Gazette* containing the notification respecting Tichborne? —
317. Do you remember that in the early seventies the whole of the press was ablaze with the account of the great Tichborne trial? Yes.
318. Did you read in the Press at the time that those who were interested in keeping the estate were making out that the claimant was Orton, and not Tichborne? Yes.
319. Seeing those statements in the Press, did you communicate with the head of the police, or with anyone in England, stating that you remembered Orton as a butcher, and that you also remembered a man with a military bearing, and an air of superior training, being in his company;—did it strike you that you could have given information to show that Orton had the means of knowing the whole of the history of Tichborne? That was the first occasion on which I thought Creswell was Tichborne, and I communicated with the Inspector-General, and no doubt he has my letter yet. Having had a sunstroke I have been thrown out of my reckoning in regard to dates.
320. Seeing the reports in the newspapers to the effect that an attempt had been made to show that the claimant was Orton, a butcher, you communicated with the Inspector-General of Police? Yes.
321. Did you ever hear Creswell make use of any French expressions? I once heard him speaking to a French watchmaker in Tumut. The watchmaker kept a shop, and Creswell kept a butcher shop next door. The shops were opposite the court-house, Tumut, and belonged to Mrs. O'Mara. After Creswell went away I said to the watchmaker, "That man seems to be able to speak French as well as you." He replied, "Yes, and better than I; that man is an educated gentleman."
322. He seemed to have no difficulty in speaking fluently with the Frenchman? None.
323. And you were quite clear that the Frenchman afterwards told you that he was a highly-educated man, and could talk French better than himself? Yes. His expression was, "He is one school gentleman; he speak the French better than I do."
324. *Mr. E. M. Clark.*] Did you notice Creswell wearing anything around his wrist? No; he had no strap on him when I arrested him. If he had had any I should have had to take it off.
325. Had he any tattoo-marks on him? Yes, but I could not swear what they were. Of course, if he had been a criminal, I should have searched for every little mark or scar upon him.
326. *Mr. Meagher.*] But you are clear you saw some tattoo-mark, but where you could not say? That is so.
327. *Mr. E. M. Clark.*] Did you notice any peculiarity about his walk? He had a peculiar walk. He walked very erectly. He walked in such a way as to give you the idea that one leg was a little shorter than the other, or that there was something wrong with the knee.

WEDNESDAY, 13 DECEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. MEAGHER,
MR. WILKS.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Harold Mapletoft Davis, licensed surveyor, recalled and further examined:—

328. *Chairman.*] Have you seen William Creswell at the Parramatta Lunatic Asylum this morning? Yes. H. M. Davis.
329. Have you formed any opinion as to his identity? I have not the slightest doubt that he is the man whom I knew in Queanbeyan, and to whom I referred in my evidence yesterday. There are so many peculiarities

13 Dec., 1899.

- H. M. Davis. peculiarities about him that there can be no mistake. The colour and shape of his eyes, the twitching of his eyebrows, the peculiar way in which he occasionally taps his foot upon the ground, his height, facial expression, and general appearance, convince me that he is the man whom I knew.
- 13 Dec., 1899. 330. Have you any doubt about it? Not the slightest. In the course of conversation he mentioned an incident concerning the upsetting of some meat at Roberts' Hotel, Goulburn, many years ago. I may explain that a number of us were staying at the hotel, and we were badly waited upon. There were so many of us that there was a difficulty in attending to our wants at meal-times. On one occasion when a man named Hyde, who lived about 3 miles from Ginnindera, was present, my brother Syd. jumped up and said, "Come on, Hyde; I'll bet you a sovereign I get my meat downstairs before you." He took hold of the remains of a leg of mutton, and Hyde seized another dish. They started for the door, and Hyde having the advantage, my brother upset his dish, and threw its contents down the stairs over Hyde's head, remarking, "I got mine down first." Creswell mentioned this incident to me to-day.
331. *Mr. Wilks.*] Did you notice any peculiarity about Creswell's ears when you knew him at Tumut? No doubt I observed it, but it did not fix itself in my memory.
332. *Mr. E. M. Clark.*] Was his beard, when you first knew him, as it is now? It was shorter.
333. *Chairman.*] That would account for your recognising the photograph in the book so clearly? Yes.
334. *Mr. E. M. Clark.*] Creswell has spoken a good deal about criminals and blood;—have you any reason for thinking that he has been identified with anything appertaining to crime? No.
335. When was it that he arrived in Queanbeyan? I was there in 1856, and it must have been 1859 before I saw him.
336. Then, if there had been any rumour there that he had been mixed up in anything questionable, you would have heard it? Yes.

Luke Cullen, employed at the Newington Asylum, recalled and further examined:—

- L. Cullen. 337. *Chairman.*] Have you seen Creswell at the Parramatta Lunatic Asylum this morning? Yes.
- 13 Dec., 1899. 338. Do you consider that he is the man to whom you referred in your evidence yesterday? I believe he is the same man. I have no doubt about it, although he is very much altered. He is very much thinner.
339. Have you any doubt in regard to his identification? Not the slightest.
340. Is he the man whom you stated you heard speaking French to a French watchmaker in Tumut? Yes.
341. And the man whom you arrested as being of unsound mind? Yes.
342. *Mr. E. M. Clark.*] When you were connected with the police was there any suspicion surrounding him in regard to the commission of a crime? No.
343. *Mr. Meagher.*] Have you any doubt as to him being the man to whom you referred yesterday? No; there is something in the eyes, face, and general appearance which is so striking as to leave no doubt.
344. *Mr. Wilks.*] Did you notice this morning that he disliked being questioned about Orton? Yes.
345. You stated in your evidence yesterday that he and Orton were associated? So they were.
346. Did there seem to be any strong friendship between them? None that I know of. They did not seem to be friendly, and I do not think they ever were.
347. *Mr. E. M. Clark.*] Where did Creswell remain after Orton went Home? In Tumut. As soon as he went Home the conversation I had with Orton, to which I referred, came to my mind.
348. It was about the time that Orton went Home that you arrested Creswell on account of his being of unsound mind? Yes; I would not be positive that he had gone Home or that he went Home immediately afterwards.
349. Did he show any eccentricities before Orton went away? Not until the time I arrested him.

William Algie, warder in charge of the weatherboard division, Parramatta Lunatic Asylum, sworn and examined:—

- W. Algie. 350. *Mr. Wilks.*] I suppose you have been present on many occasions when Creswell has been examined? Yes; I was present when Dr. Manning, and Dr. MacCormick, and Dr. Fiaschi examined him.
- 13 Dec., 1899. 351. Were you present when Drs. Devlin and Pickburn examined him? Yes.
352. Have you been present when Mr. Priestman visited him on different occasions? Yes.
353. Have you noticed that he was rather communicative this morning? Very much more than I ever knew him before.
354. Do you consider that he was rather more lucid this morning than usual? Yes; he seemed to give vent more freely than usual.
355. Did you observe his readiness in recognising Mr. Davis, and hear the conversation he kept up with him? Yes; he seemed to recognise him, and then he seemed to desire to shut off the conversation.
356. Did you notice, when inquiries were made of him regarding Orton, that he shut off the conversation as if there was something strange about the career of Orton about which he did not wish to be reminded? Yes. There is something in that. When you touch him on that point he does not seem to care to answer questions.
357. Have you ever heard him remark, on former occasions, anything about criminal guilt and blood? That is his insanity. He has always done that. He seems to have a delusion concerning cutting off people's head or drinking their blood. Sometimes, if you put your hand on him, he will turn round suddenly and say, "You are a dead man, I will have your blood." Of course, that is his insanity.
358. Have you established any theory in regard to the remarks he makes of this character? No.
359. Is it your experience of insane patients that, when speaking, they usually dwell on some particular portion of their career? They vary a good deal. They seldom stick to one thing.
360. But Creswell does stick to one thing? Yes. Sometimes he appears to regard anything said to him as an offence; for instance, sometimes, if you say to him, "Good-day, Creswell," he will turn round and say, "That is not my name; it is William Creswell." He will follow you about, stamp his foot, and tell you he will have your blood.
361. *Chairman.*] What is his general demeanour? Very quiet. He has been more talkative this morning than I have ever known him to be.
362. Is he by any means what may be termed a violent patient? No; I have never known him lift his hand to any of the inmates.

363. Does his demeanour alter at all after a visit or an examination? Formerly it did, but not lately. Two or three years ago, after Mr. Priestman had visited him, he used to be very excited for two or three days, but lately he has seemed to calm down.
364. *Mr. Wilks.*] He kept on referring to crime to-day? Yes; and he always considers that what he says is correct—that whatever he says is law.
365. I suppose there is nothing in his remarks which would lead one to believe that he had ever been engaged in any crime? No; it is his imagination.
366. *Mr. Mergher.*] You say you were present on the occasions when the medical experts examined Creswell? Yes.
367. How long did Drs. MacCormick and Fiaschi take over their examination? I did not take particular notice, but I should say it must have been nearly two hours.
368. How long did Drs. Pickburn and Devlin take over their examination? About the same time, I think.
369. *Mr. Wilks.*] Which would you consider the most exhaustive examination? Both of them were pretty exact. I do not think there was much difference. All the doctors paid great attention to him. He was stripped, and they appeared to examine every part of his body.
370. Judging by his actions and demeanour, do you regard him as a man of superior training? Yes; I think he is a little superior to the general run of patients we have.
371. Have you ever heard him make use of any French phrases? No. I may mention that Dr. MacCormick had a French cook who came to see if he could speak French, or understand it. The cook put some questions to him. The cook stated afterwards that he asked him what he did not understand—that he asked him if he wanted a bit of tobacco, and that he seemed not to understand what he was saying. Subsequently, he asked him in English if he would have a piece of tobacco, and he replied, "Yes; have you got any?"
372. *Mr. Meagher.*] Is it a fact that some of the patients would beg, borrow, or steal tobacco from one another? Yes, if they had the chance.
373. Is it a fact that although Creswell is fond of tobacco he would scorn to borrow or steal it? Yes; I have never known him to borrow tobacco. If he wants any he will ask me for it, but he will not ask any patient for it, nor will he steal it.
374. *Mr. E. M. Clark.*] Does he mix much with the other inmates? No; he keeps to himself, and he amuses himself by sewing handbags.

W. Algie.
13 Dec., 1899.

TUESDAY, 19 DECEMBER, 1899.

PRESENT:—

MR. ANDERSON, | MR. E. M. CLARK.
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

William Ernest Forbes sworn and examined:—

375. *Chairman.*] What is your occupation? At present I am connected with the Riverstone Meat Preserving Company. Formerly I was station manager for the Commercial Banking Company of Sydney, and also for the Bank of Australasia, Melbourne.
376. During your career as a station manager, were you located in several places on the Southern line? Yes; in the vicinity of Queanbeyan, Tumut, Albury, and Wagga Wagga.
377. How long is that ago? Thirty-four or thirty-five years. Prior to that I was with my father, who was one of the largest agriculturists and graziers in Australia, at Gundaroo.
378. Did you come in contact with the man who is known by several names, but particularly by the name of Smith, and afterwards by the name of William Creswell? Yes.
379. Were you fairly intimate with him? Yes.
380. Have you seen him recently? Yes.
381. When? On Wednesday last I saw him in the billiard-room at the Asylum, Parramatta. Prior to that I had not seen him for thirty-four years.
382. Did you experience any difficulty in recognising him? Not the slightest.
383. I suppose he has altered very considerably? Yes; he stoops very much, and, of course, he is much grayer, but when I first knew him he did not wear a beard. The twitching of his eye cannot be mistaken.
384. Were there any other characteristics about him by which you could recognise him? Yes, the scar on the hand. It was on the 26th January, 1860, that I first met him in Araluen.
385. What type of man was he then? He was very active, very erect, and rather eccentric. He was then in the employ of Mr. Edward Smith, butcher, of Araluen.
386. Under what name did you know him then? As George Frederick Smith.
387. Were you brought into frequent contact with him? Yes, in 1861, 1862, and 1863 I played cricket with him for three seasons. He belonged to the Gininderra Cricket Club. Mr. Harold Davis, who was also at the Lunatic Asylum on Wednesday last, was one of his most intimate friends and also a club mate.
388. Did you have frequent conversations with him? Yes, but he was very eccentric. When his own team were batting he would be somewhere alone. He would seldom associate with anyone. The chances are that he would be lying on his back in the field, and throwing up a cricket ball and catching it. He was a very fair cricketer and a medium paced underhand bowler. Whilst playing cricket with him I frequently saw a tattoo on his arm.
389. On which arm? On the back of the wrist of the left arm. It consisted of a heart, anchor, and a cross, with the initials R.C.T. beneath it.
390. What space did the mark occupy? A space of about 2 inches—probably more.
391. Did you ever have any conversation with him with reference to it? I often asked him what it represented, and he used to put me off by saying it was a freak which had caused him to have it put on. The heart was in red ink; the rest was in blue ink.
392. I understand that at the time you were very much struck with the appearance of it? Yes. It was the first tattoo mark I had ever seen, and I thought it was very peculiar to see a picture on a man's arm. I was only a youth at the time—between 14 and 15 years of age.

W. E. Forbes.
19 Dec., 1899.

- W. E. Forbes. 393. Did you ever attempt to copy it? Yes; I gave a copy of it to Mr. Joseph Eckford when he was endeavouring to prove him to be Arthur Orton. This was in 1873 or 1874.
- 19 Dec., 1899. 394. Have you a copy of it now? Yes. (*Produced.*)
395. Is this the original copy? No; I gave the original copy to Mr. Eckford, but this is a copy from the original.
396. When did you first know this man by the name of Creswell? He took it on the 6th of April, 1863—the day on which he married Widow Clark.
397. Were you acquainted with Mrs. Clark? Yes, years before her husband died. They were personal friends of my parents.
398. What transpired after that? Some time after they were married they gave up the hotel. At the time of her marriage to Creswell she kept the hotel known as the "Farmers' Home," on Jerrabeggarie, Gundaroo, and went to Queanbeyan, where they kept an hotel. I did not see him from the time they left Gundaroo in 1863 until I met him again in Cowra in 1865. At that time he was staying at an hotel in Cowra, the name of which I cannot remember.
399. Did you have any conversation with him there? I may mention that Robert Livingstone and myself were in charge of some cattle. We had a cook, whom we sent on to camp at a certain creek on the south side of Cowra, and to get the fire ready for us. It was raining at the time, and when he got there the horses were tied to the waggonette, and the cook was lying underneath drunk. Some of the men sobered him by putting him in the creek. Livingstone discharged him the next morning, and we went back to Cowra to see if we could get another cook. We made inquiries of the landlord of the hotel, and Creswell at the time was walking up and down the verandah. When we came along the verandah he asked if we were looking for a cook, and said that if we would engage him he would do his best, although he was not a good cook. He added that he wanted to go to Wagga. We engaged him. He was then going by the name of Roger Leslie, and had separated from his wife. He went to Wagga Wagga with us. Whilst we were travelling from Cowra to Wagga Wagga he kept a diary, and on the fly-leaf of it was R. C. Tichborne. In this diary he used to write French and to translate it into English. He said he wanted to go to Wagga Wagga to see an old chum named Thomas Castro. After we delivered the cattle we stayed in Wagga Wagga for a few days, and frequently saw him and Castro knocking about together.
400. Did Castro go by any other name? Yes, by the name of Arthur Orton. Orton was then shopman to Mr. J. Higgins, butcher.
401. What happened after that? In 1865, whilst we were knocking about there, Orton said that Leslie was of England's best blood—in fact he said he was a baronet, and that his real name was Tichborne. Of course I never knew him as Tichborne; I only knew him as George Frederick Smith, William Creswell, and Roger Leslie. He had the tattoo marks on his arm, and I challenge anyone in the world to refute what I say.
402. Did you see anything of him after that? I wanted him to go back with us for more cattle. He said he did not care to go, and that he intended to stop with his old chum. He also said that he did not want money as he could get it at any time. I went away, and I did not come back to Wagga Wagga until thirteen months afterwards. Castro had then left to claim the Tichborne estates. I made inquiries as to what had become of Leslie. Some said that he had gone to Queensland, but I could not find out for certain that he had done so. In the meantime a headless corpse had been found in a quarry in Wagga. It was unearthed by a retriever dog, and from the description of the clothes I came to the conclusion that it was Creswell or, as he was then known, Roger Leslie. I was under that impression until I saw the photograph of Creswell while he was in the Lunatic Asylum at Parramatta.
403. I understand that you never saw him from the time you left him at Wagga Wagga, in September, 1865, until you met him the other day? That is so.
404. *Mr. Anderson.*] When you met him the other day, did you observe the marks you have described? I could not find the tattoo marks, but I found the other marks.
405. *Chairman.*] Did you ever look at his arm? Yes, and I saw a scar upon it.
406. Did that scar occupy the place once occupied by the tattoo marks? Yes.
407. *Mr. Anderson.*] Is it your impression that the tattoo marks have been removed? Yes.
408. *Chairman.*] At the time you knew him had he any jewellery? Yes. He wore a gold ring with the initials "A.O." upon it. I may mention that he also had a blue tattoo mark on the back of the middle finger of the left hand in the shape of a diamond.
409. Have you any doubt as to the identity of the man whom you saw the other day with the man whom you knew as Creswell, Leslie, and Smith? Not the slightest.
410. Did he ever tell you anything as to his antecedents or of his past career? No, he was very reticent. He made very few personal friends. When I asked him the other day whether he remembered me, he said "No." He did not remember me, but he remembered the name of Forbes. Of course, I was a young man then and wore a beard. He remembered the old cricketers, including Joe Styles, who was the captain of my club for fifteen years. He also remembered Mr. Davis and the Hon. Geo. Campbell.
411. *Mr. E. M. Clark.*] Knowing that Castro, or Orton, had gone to claim the Tichborne estates, did you follow the case up at all? I was going to upset the whole thing—at least, I wished to have a say in it. I had, however, only just got married at the time, and my wife wished me to say nothing about it as I would have had to go to England as a witness, and she did not care to cross the sea.
412. Then you really gave no publicity to what was then your knowledge? No, not until I met Joseph Eckford in 1873 or 1874. I was conversing with someone in the old Victoria Theatre, when someone remarked to me, "You are the very man whom Eckford would like to see about this lunatic; you seem to know all about him." I replied, "That if he was the man who married Widow Clark, I knew him."
413. *Mr. E. M. Clark.*] What did Mr. Eckford seek to do in connection with the case? He was endeavouring to prove that Creswell was Arthur Orton. I had mentioned the matter of the gold ring with "A.O." upon it.
414. *Mr. Anderson.*] Did you notice the tattoo mark on Creswell's finger when you went to see him the other day? No.
415. Did you notice any indications of the marks having been erased? I was not close enough to him, and I did not examine him. Of course marks of this kind can be erased. There are two men in the Riverstone Meat Co.'s works who have had tattoo marks removed. They were Indian ink marks, and they were taken off by means of new milk, and you cannot distinguish where they were. They say the removal of the marks was more severe than the putting of them on.

416. *Mr. E. M. Clark.*] This morning I saw the copy of an original statement made by an intimate friend W. E. Forbes of Tichborne at the trial in England, and he described the tattoo-mark as an anchor inside a cross, and the heart in the centre of it? That is not similar to what was on Creswell. W. E. Forbes.
19 Dec., 1899.
417. Were the letters underneath the tattoo-mark on Creswell printed letters? Yes, in blue ink; the heart was in red ink.
418. *Chairman.*] Had you a conversation with Mr. Eckford on the occasion to which you refer? Yes.
419. Did he give you any information as to his object in seeking to obtain possession of Creswell? No; he said he wanted to take Creswell Home in order to show that the other man was not Arthur Orton.
420. Did he convey to you the impression that he believed Creswell was Arthur Orton? Yes; he seemed to be overjoyed when I mentioned the gold ring with the initials "A.O." upon it.
421. Was there any great difference in the appearance of the two men, Orton and Creswell? Yes.
422. Was the difference so great that it would be impossible to mistake one for the other? You could not make any mistake. One was a fat burly man—as rough as any butcher you could find. The other was exactly the reverse; he was very reserved and very natty, and there was a military cut about him. His appearance led one to believe that he was a thoroughly trained soldier.

WEDNESDAY, 20 DECEMBER, 1899.

Present:—

Mr. MEAGHER,
Mr. WILKS,

Mr. E. M. CLARK,
Mr. O'CONOR.

J. C. L. FITZPATRICK ESQ., IN THE CHAIR.

Alexander MacCormick, Medical Practitioner, sworn and examined:—

423. *Chairman.*] I understand that some time ago you made an examination of William Creswell at the Parramatta Lunatic Asylum? Yes; in conjunction with Dr. Fiaschi, on 26th November, 1897. A.
MacCormick.
20 Dec., 1899.
424. I believe the examination was made at the instigation of the Court? At the instigation of Mr. Salisbury, connected with the Lunacy Department.
425. Can you say what time was taken up in carrying out the examination? I do not remember exactly.
426. *Mr. E. M. Clark.*] Did you make a careful examination? Yes. Of course it is two years since I made the examination, and I have never seen the man since. I cannot carry his image and every part of his body in my mind, but anything which was written down at the time I will swear to.
427. *Mr. Wilks.*] Drs. Pickburn and Devlin assert that there is a mark on Creswell's temporal artery, near the auditory canal, which you were not able to observe? There was no mark there.
428. They gave us a sort of diagram of it, and said they found it near the auditory canal, which is a branch of the temporal artery? The question which was asked Dr. Fiaschi and myself was, "Is there a cut indicating that arteriotomy has been performed." If that had been performed you would expect to see a scar on the anterior branch of the temporal artery.
429. *Chairman.*] The question put to Dr. Pickburn was, "Is there a lancet cut for bleeding on the temporal artery," and his answer was, "There are two faint little scars directly over the temporal artery, just above the left auditory canal"? That is a little above the ear. There are no marks there indicating that the operation of arteriotomy had been performed. That I will swear to.
430. Are you also confident that there are no marks there which might arrest attention? I cannot remember now what other little marks were there; but there were no marks which I could see indicating that an operation had been performed for bleeding.
431. *Mr. Wilks.*] There is a difference between Creswell's height and that of Tichborne of 2 inches. Is it possible for such a "shortage" as that to have taken place in Creswell. When Dr. Pickburn measured him he found he had lost $\frac{1}{4}$ inch in two years? When you measure a man roughly, against a wall, you can easily incline him one way or the other, so as to make a difference of $\frac{1}{4}$ inch.
432. *Chairman.*] He was measured with a proper measure. Did you measure him by means of a measuring machine? I forget what instrument I used.
433. *Mr. Wilks.*] It is asserted that the mark on Tichborne's eyelid was caused by a fish-hook. We have it in evidence that you failed to find any trace of it on Creswell? There was no mark on the eyelids.
434. The other doctors say that the mark is visible to the naked eye? It was not visible to the eyes of Dr. Fiaschi and myself.
435. Do you think there was any pus mark there? There were no marks suggestive of an injury by a fish-hook that we could find.
436. The other doctors state that there is a mark there; did you fail to discern it? Yes.
437. Did you notice the difference between Creswell's ears—one of them being without a lobe? I do not know what is meant by the lobe of the ear. We do not talk about the lobe of the ear, but I know the part you mean. It is spoken of as the lobule of the ear. On one side the lobule was well marked—that is to say it was distinct. On the other side it was attached to the face more.
438. Did you notice that there was a $\frac{1}{2}$ in. difference in the measurement of the two eyes from top to bottom? We did not measure; we were only asked about the lobule.
439. The other doctors speak about the right ear having a normal lobe? We never use the word "lobe" in the description of the ear.
440. With regard to the mark on the wrist—Supposing there had been some tattoo-mark there, could it have been obliterated by medical means? Not that I know of, except the destroying of the skin or cutting it away. You would require to destroy the dermis, and that would leave a scar.
441. And you observed nothing of that character? We observed no scars which would lead us to suppose that a tattoo-mark had been obliterated.
442. *Chairman.*] Did you observe no scar there at all? I will not say that. To the best of my ability, there were little punctated white scars, as if there had been small pustules there; but there are no scars there to indicate that tattoo-marks have been obliterated.
443. Can you remember whether there is a scar occupying a space of a 5s. piece? There is a broad scar on the back of the left wrist. That was caused by the cut of a butcher's crop—at least, that is the assertion. It did not look like a tattoo-mark that had been obliterated.

- A.
MacCormik.
20 Dec., 1899.
444. *Mr. Wilks.*] It is said that the tattoo-marks could have been removed by an elliptical incision? Then there would have been a linear scar left which could easily have been detected from an ordinary blotch. There is no linear scar on the inside of the left wrist.
445. *Mr. E. M. Clark.*] We were told yesterday that tattoo-marks can be removed by the use of new milk? I have heard of that, but it is a popular fallacy.
446. *Chairman.*] Do you regard it as a fallacy? Yes; you cannot destroy tattoo-marks unless you destroy the skin in which the pigment is placed.
447. If you had two persons brought before you who could absolutely prove that they had had tattoo-marks removed by that means, what would you say? I should say that the tattoo-marks were only superficial, and that they were not in the true skin at all. They would not be tattoo-marks similar to those which you see on sailors. You would require to skin a man before you got rid of such marks.
448. *Mr. Wilks.*] Did you not notice any peculiarities in the man's bearing which would lead you to believe that he had had an excellent early training? No.
449. Was there anything in his habit which struck you that he had followed an occupation different from that which he is supposed to have followed? No.
450. *Mr. E. M. Clark.*] Did you come to the conclusion that he was a genuine lunatic? Yes. I may mention that he was not very communicative, and I did not examine him for the purpose of discovering his mental condition.
451. *Chairman.*] How did you arrive at the conclusion that he was a lunatic? Because he was confined in a lunatic asylum. Of course we had certain questions to answer, and we answered them as correctly as we possibly could. We had no object in answering them other than correctly.
452. *Mr. Meagher.*] I take it that when you were asked by the judge to look for lancet cuts for bleeding you naturally looked towards the anterior branch of the temporal artery? Yes; that is where you would expect to find them.
453. You would not pay the same attention where the hair is near the ear? Nobody would dream of bleeding where the hair is.
454. If any other medical gentleman has stated that lancet cuts have sometimes been made there would you feel inclined to doubt him? I should like to know for what purpose they were intended to be made.
455. I suppose for the purpose for which lancing the temporal artery is usually carried out? I would not expect to find that in the region you have stated because there is an important nerve there which might be injured, and which might paralyse that side of the face.
456. At any rate you would confine your attention there? I would confine my attention to the place where the operation of arteriotomy is performed.
457. Would you like to swear that the marks which the other doctors have indicated are not there? There are no marks there which indicate that the operation of arteriotomy has been performed.
458. On any portion of the temple? Not on the temple.
459. Are you prepared to swear that there are no marks where the other doctors say they have located them. The doctors say "there are two faint linear scars directly over the temporal artery, just above the left auditory canal"? I will swear that there are no marks on the temple indicating that the operation of arteriotomy has been performed. How can I remember all the marks and scars on his body after two years?
460. You were asked certain questions, and you looked upon certain portions of Creswell's anatomy for certain marks, and you swear they are not there? That is so. Could not you bring the man here to simplify matters?
461. *Chairman.*] You were appointed for the purpose of making this investigation with the object of satisfying the court as to what was practically the identity of the man? And I had certain questions to answer, and I answered them correctly as far as my ability went.
462. *Mr. Meagher.*] I have no doubt you were asked to look for lancet cuts in the usual place in which the medical profession would expect to find them. Although it may be quite correct that there is no indication of lancet cuts of bleeding in the usual place on the temporal artery, are you prepared to say that Dr. Pickburn is wrong in stating that there are two faint linear scars? Above the ear?
463. Yes? No, certainly not.
464. *Mr. O'Conor.*] You would not expect two scars to be above the ear unless arteriotomy had been performed? No.
465. *Mr. Meagher.*] Did you see the asylum book when you examined Creswell? No.
466. Do you know whether there is any discrepancy between the examination of Dr. Fiaschi and yourself and that of the medical superintendent as to scars? No.
467. You and Dr. Fiaschi stated, "We find no marks of an issue on the shoulder or upper arm." If the asylum case books say, "Slight irregular scar one third of an inch in diameter on the left side of neck, also one vaccination mark near another ordinary small scar," what would you say? You talk of a scar due to an issue. An issue is generally not less than the size of a sixpence.
468. Is it correct to say that there is an ordinary small scar visible to the naked eye near the vaccination mark? There is no scar due to an issue on his shoulder or upper arm.
469. *Chairman.*] In making an answer of that kind you are adhering to the tenor of the question which you were asked? Certainly.
470. *Mr. Meagher.*] Do you think that after forty years an ordinary small scar near the vaccination mark can be positively stated to be the result of an issue? I should say that it was not the result of an issue. If there had been an issue there I could swear to the scar after forty years, or any length of time.
471. You reported that there was no scar of lancet cuts for bleeding on the arm? Yes.
472. If the case book at the asylum says there is one small scar on the inner side of the left fore-arm, what then? We say that there is one small scar on the inner side of the left fore-arm, but it is not in the line of any vein, so that it has not been bled.
473. Is it possible that it may have been caused by an unskilful attempt at bleeding? I could not give any information on that point.
474. I suppose there are cases of that kind? I never heard of a case of bleeding on the inside of the arm.
475. *Mr. O'Conor.*] Would you be prepared to say that no medical man would do it? Certainly he would not.

476. *Mr. Meagher.*] With regard to the marks on the arm, which are supposed to be the erasion of tattoo-marks—if the case book at the Asylum described the marks as a large puckered elliptical scar such as might well be caused by burning, would it fall in with your view? There is a broad scar on the back of the left hand and wrist. A.
MacCormick.
20 Dec., 1899.

477. Do you think it is possible that that was caused by cautery? It might have been caused by anything. It was not a wound which healed up well. What caused it no one could say.

478. Is it possible that it might have been a tattoo-mark erased by cautery? It is possible. I do not know what was there before. It might have been caused by cautery.

479. *Chairman.*] Were you not informed that it was caused by a hook? No. Creswell told us that it was caused by a butchers's crop, and that he was treated at St. Mary's hospital for it.

480. *Mr. Meagher.*] Mr. Wilks has asked you a question with regard to the injury to the eyelid by means of fish-hook, and he has told you that Drs. Pickburn and Devlin discerned a scar which might have been the result of an injury caused by a fish-hook;—you say that you found no mark at all on the eye-lid? No; we found no mark on the eyelid suggestive of an injury by a fish-hook.

481. Did you find any mark on the eyelid suggestive of an injury by anything? How do you expect me to remember all about his eyelids after two years? We examined him for an injury by a fish-hook, and we could not find any marks suggestive of it.

482. *Chairman.*] Yo cannot say that there were no marks there at all? It is not fair to bother me with minute details of that kind after two years.

483. You have no recollection of any mark being there? No.

484. *Mr. Wilks.*] Did you notice any raising or twitching of Creswell's eyebrows? Yes; he had a peculiar way of raising his eyebrows.

485. Is that a common thing? You meet it in some people, but it is not a common thing.

486. One of the doctors has stated that he formed the impression that Creswell was a man of good early training, and of the better class in life;—do you think that? No.

487. Is the peculiarity about the ears unusual? Unless you were examining him, you would not notice it.

488. Is it not a most unusual feature in anybody? Yes.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FIRE BRIGADES BOARD, SYDNEY.

(REPORT FOR 1899, BEING THE SIXTEENTH ANNUAL REPORT.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

The Chairman to The Chief Secretary.

Sir,

Fire Brigades Board, Castlereagh-street, Sydney, 26 February, 1900.

Pursuant to the provision of the 7th section of the "Fire Brigades Act, 1884," I have the honor, by direction of the Fire Brigades Board, to forward herewith the Board's report for the year 1899; "upon all matters within the scope of their administrative duties," that it may be laid before Parliament, in compliance with the Act.

I have, &c.,

CHARLES BOWN,

Chairman.

To the Principal Under Secretary.

[Enclosure.]

REPORT FOR THE FIRE BRIGADES BOARD FOR THE YEAR 1899.

During the twelve months ending 31st December, 1899, the fire service has maintained a very high state of efficiency, although severely handicapped by the extremely circumscribed space at its headquarters.

The constitution of the Board underwent no alteration, the biennial term of office for which the Board members were elected, not having expired.

In the list of contributory Fire Insurance Companies, the Cornwall Fire and Marine Insurance Company (Limited), and the Queensland Mutual Insurance Company (Limited), were replaced by the Eastern Counties Insurance Company (Limited), and the Magdeburg Fire Insurance Company of Magdeburg;—the number of contributory offices remaining at forty. The property assured with them, within the area of the Board's jurisdiction, represented a value of £61,861,909, an increase of no less than £1,435,739. To show the enormous growth of assured values, attention is directed to the first departmental report, wherein is furnished a return for forty-one Fire Insurance Offices, the sum of whose insured risks was £36,690,987 upon 31st December, 1883. No doubt some part of the addition has to be ascribed to the subsequent extension of the Metropolitan area under the Fire Brigades Act; but, after due allowance be made for that, the increase of the amount held at risk by the Companies is remarkable. Of the forty Companies now on the list of contributories only five are what are termed "local"—that is, have their headquarters within the Colony. These five are entitled to elect to the Board one of the Insurance Companies' representatives. Under the regulations, there cannot be a valid election unless three offices be represented—in the candidate, proposer, and seconder—and a quorum of three duly qualified representatives of the Companies, which can only have one representative for each office, is necessary at a meeting to elect. Under the circumstances it is obvious that a failure to elect might readily occur, and that, therefore, some amendment of the Act, or of the Regulations under it, which govern this set of elections, would be advisable.

The levy by the Board upon the Fire Insurance Companies was £8,000, and the proportion of this to the sum at risk 3·1d. per £100.

The sum of the returns of the assessed value of ratable property within the forty-three contributory municipalities was £4,594,551, a contraction of £17,044 upon the figures of the previous year. The contribution to the Board was equivalent to 4·18—approximately two-fifths of a penny,—in the £, or nearly 3s. 6d. per £100 of the assessment.

In pursuance of the intention mentioned in the last report, legal action was reluctantly taken to compel payment by Municipal Councils who for a long period had ignored the claims made upon them under the Fire Brigades Act. In every case a verdict was obtained for the amount sued for, together with the prescribed penalty of £50 for default. It is found that, although the Fire Brigades Act provides for recovery of any contribution, in a summary way before a Magistrate, the Justices Act does not give Magistrates more than six months' jurisdiction. It, therefore, would be difficult, if not impossible, to recover arrears of over six months' standing. Acting upon legal advice, the Board consequently finds itself compelled to insist upon every contributory, whether Municipal Council or Insurance Company, paying the quarterly contribution within the prescribed time.

In deputations to the Minister, in the public press, and elsewhere, some Municipal Councils have complained that the levy of two-fifths of a penny in the £ of the annual value of ratable property, was burdensome upon the Councils' funds. There is, nevertheless, no reason whatever for the complaint. It has frequently been pointed out that the Fire Brigades Act, in section 22, authorises any Municipal Council to increase the city or municipal rate; notwithstanding any statutory limit of such rate, by sufficient to raise the amount of the contribution paid for fire protection. It follows that no Council need be burdened to the extent of a penny, by payment of its contribution to this Department, unless by its own choice. They who voluntarily carry a burden, however small, have no right to complain. The fact is that the framers of the Act evidently saw that those whose property required protection were those who should contribute towards provision of the safeguard. The local Councils, having the machinery readily available, were made the mediums for the collection of the small contributions from the ratepayers, *i. e.* the owners of the said property. The Councils who pay the tax without obtaining a refund, voluntarily make a donation of the sum to the ratepayers; but the gift of two-fifths of a penny in the assessed value upon which the general rate is struck, is so small that the ratepayers can scarcely feel grateful; neither would they complain if the donation were withheld.

On 11th August, a conference of representatives of Suburban Municipal Councils adopted certain recommendations for amendment of the Fire Brigades Act, which were afterwards submitted to the Minister. One of these was "that it be compulsory for municipalities to levy a special rate to cover the amount of contribution." The Board understands that if that recommendation were carried into effect, the Councils' difficulty would disappear.

Salvage case, s.s. "Buteshire."

This important case, which was mentioned in the last report as *sub judice*, was decided in the Vice-Admiralty Court upon 30th June, when His Honor Mr. Justice Owen, Deputy Judge Commissary, clearly laid down the law upon the matter, and gave judgment that the plaintiff, *i. e.*, the Board, "were entitled to salvage for extinguishing the fire on board the 'Buteshire.'" The case is said to have been a novel one, and has established a precedent. The right of the Board to claim for salvage of any vessel in Port Jackson, which is saved from fire by this department, has unequivocally been upheld; and the Board proposes to exercise that right with regard to any vessel so saved, until the harbour waters be placed under its jurisdiction, and revenue provided to maintain a floating fire service for the protection of shipping. This question has been dealt with in previous reports; but the promised bill to establish the desired protection has not been brought forward.

Board's right to salvage.

Bill to extend act to harbour.

Fires.

Of 520 fires (exclusive of thirty-nine chimney fires) recorded in Appendix XII, four were upon steamships and one upon a sailing vessel. The total number of calls received, including sixty-seven false alarms, was 693, or 128 more than in the previous twelve months.

Electric tramway.

The electric tramway through the city, referred to in the last report, was opened for traffic upon 8th December. The Railway and Tramway Department have been at pains to minimise the apprehended risk in connection with it; but that in case of fire in George-street there would be increased hazard for firemen, especially for those using the escape ladders, is incontestible. This view was unfortunately illustrated in the death of a line-repairer by a fall from a ladder on 4th January last, the fall, apparently, being caused by a shock from the tram trolley wire.

Telephones and fire alarms.

The number of telephone fire alarms was increased from 171 to 177, and the length of wire connecting them and the fire stations, from 149 to 159 miles, for which a mileage fee for maintenance is paid to the Postal and Electric Telegraph Department. Improvements have been introduced, by which any of the Metropolitan Fire Brigade Stations can be momentarily turned out by the touch of a button at headquarters. The switchboard for this purpose was made, and the special electrical appliances fitted, in the workshops at headquarters; the whole installation reflecting high credit upon the Brigade.

Shops and Factories Act.

The Shops and Factories Act of 1896 came into operation at the beginning of the year 1897, and the assistance and advice of the Superintendent of Fire Brigades has since been freely given to the department administering it, in the matter of giving effect to the provisions for the safety of inmates from fire. This entailed a great deal of additional work, and occupied much of the valuable time of that officer.

Explosives and inflammable liquids. Fire Brigades Act amendment. Stations.

The long-desired bills to control the traffic in explosives and inflammable liquids, to extend the Fire Brigades Act to the navigable waters (referred to above), and to amend the Act in other directions, are still in abeyance.

No extension of Headquarters Fire Station has yet been granted by the Government. The congestion there is every year more severely felt, to the detriment of the Fire Brigade, and the valuable fire-extinguishing material with which it has been equipped. The Board sees with regret opportunities for the absolutely necessary extension being allowed to pass away, despite repeated earnest representations. It is unquestionable that an enlarged headquarters is becoming imperative for the welfare and efficiency of the fire service, and that loss of time is tending to make its provision increasingly difficult and costly. In his report, hereto appended, the Superintendent of Fire Brigades comments upon the difficulties under which the Brigade is placed in consequence of the narrowness of the space into which its headquarters is compressed.

The

The erection of an unprecedentedly large number of fire stations was entered upon during the year. In Redfern the Government converted the old court-house and police-station into a fire station, which is now occupied by the Metropolitan Fire Brigade. Upon the 29th January of this year, the Chief Secretary, the Honorable John See, formally opened the building, and handed it over to the Board. It had, however, by permission, been temporarily occupied by the Brigade on the 28th December, prior to the completion of the contract for the alterations. A station was built in Granville, which was opened for service on the 7th ultimo, and the Granville Volunteer Company transferred to it. The building is upon a site in Good-street, which was purchased by the Volunteer Brigade with money granted by the Government. At Chatswood, the newly-formed Willoughby Volunteer Fire Company were, on the 14th idem, placed in a building just completed in a good position on Gordon-road. A station was also built for the Rookwood Volunteer Fire Company, which was occupied in July, the Government having provided the cost of the site, and £150 towards the building. A thousand pounds having been granted by the Government for purchase of ground in Burwood, a fire station, now approaching completion, is being put up at the corner of Burwood-road and Belmore-street, at a contract cost of £1,257. This will be occupied by the local Volunteer Fire Company. At Paddington, a large station for the Metropolitan Fire Brigade, is being built upon a piece of the Paddington Reservoir Reserve, fronting Oxford-street, of which a favourable lease for a fifty years' term, had been obtained from the Metropolitan Board of Water Supply and Sewerage. A suitable site in Myahgah-road has been secured from the Mosman Municipal Council for the erection of a station for the protection of that district; and when funds will permit of the erection of a building, it is proposed to remove the Metropolitan Fire Brigade Station from Moncur-street, Woollahra, to a piece of ground at the corner of Ocean and Trelawney Streets, which the Woollahra Municipal Council has consented to lease to the Board. Negotiations for the establishment of a station to protect Randwick are in progress; and other districts are also receiving attention which will have practical effect as soon as means can be found for the requisite expenditure.

The Metropolitan Fire Brigade now numbers ninety men of all ranks, an increase of seventeen upon the figures of the previous year. The Superintendent and the Deputy-Superintendent have justified the confidence reposed in them, and under their control, the service, in a year whose record of fires exceeds that of any previous twelve months, has been most successful, and the salvage in many instances remarkable. The area under the Board's jurisdiction has been apportioned into five districts, supervised by district officers, for which purpose a new rank was introduced into the Brigade; the coachmen were also constituted a special class.

The partially-paid Auxiliary Corps was disbanded upon 31st December, after eight years' existence, to be reformed upon an entirely different footing, by the enlistment of a number of youths of from 17 to 20 years of age. These are being trained for ultimate service in the Metropolitan Fire Brigade.

In the latter part of the year two steam fire engines of 260 gallons' capacity, and of the most recent type, were ordered from Messrs. Merryweather and Sons, of London. It is proposed to station these at Darlinghurst and Marrickville, where they should be especially useful for covering long distances. A 45-foot extension escape ladder has also been ordered from the firm, which will be placed in the new fire station at Redfern. In January, 1899, as mentioned in last report, a 700-gallon double vertical steam fire engine arrived from Messrs. Shand, Mason, & Co., of London. It was stationed at headquarters, and has been used with advantage at fires in the city. On the 28th February a most satisfactory public trial of the engine, in conjunction with the 1,000-gallon equilibrium engine received from the same firm early in the year 1892, was given in the Town Hall enclosure, by kind permission of the Right Worshipful the Mayor. Both engines threw jets of water over the Town Hall tower, which measures 198 feet to the finial upon its summit.

In Willoughby a promising Volunteer Fire Company was formed, which this year has been registered, subsidised, and established in the newly-built station at Chatswood. The Paddington (No. 1) Volunteer Fire Brigade, which had been in existence since 11th April, 1878, was disbanded on the 31st March, 1899; its place being taken by a detachment of the Metropolitan Fire Brigade. The large new station mentioned above is being built upon the site of the old volunteer station. The subsidies to maintain the Volunteer Fire Companies amounted to £2,612, in addition to which there was the usual expenditure upon their equipment, stations, &c. The Companies were never more efficient than now; and the Superintendent of Fire Brigades records his cordial thanks for their assistance.

The Superintendent's report, returns furnishing a record of the fires during the year, and other information, are appended as customary.

CHARLES BOWN,
Chairman, Fire Brigades Board.

Adopted at a meeting of the Fire Brigades Board, at Headquarters Fire Station, Sydney, on Monday, 26th February, 1900.

CHARLES BOWN,
Chairman.

Z. COLLIS BARRY,
Secretary.

APPENDIX I.
MUNICIPALITIES.

Municipality.	Area in Sq. Miles	Assessment, 1898	Contribution, 1899	Municipality.	Area in Sq. Miles.	Assessment, 1898.	Contribution, 1899.

Z. COLLIS BARRY, Secretary.

Having examined the books and vouchers of the Fire Brigades' Board for the year ending 31st December, 1899, I certify the above-written Abstract of Receipts and Expenditure to be correct.

JAMES ROBERTSON, F.S.I.A., Auditor.

APPENDIX V.

APPENDIX V.

Report by the Superintendent of Fire Brigades.

The Fire Brigades Board, Sydney,—
Gentlemen,

Metropolitan Fire Brigade, Headquarters,
Castlereagh-street, Sydney, 9 January, 1900.

I have the honor to present the following report on the working of the Fire Brigade and of the Volunteer Fire Companies during the year 1899 :—

The number of calls for fires, or supposed fires, has been 626, of these 67 were false alarms, 39 proved to be only chimney fires, and 520 were for actual fires, of which 27 resulted in total destruction, 15 were of a serious nature, and in 478 cases the damage was slight. In addition to the above, the Brigade has attended to 67 calls chimney fires. The number of calls of all descriptions amounted to 693, an increase on the previous year of 128.

The most notable fires occurred on the following premises :—

January.—John Connell & Co., 355 and 357 Kent-street, City.
March.—Green Oaks Cottage, Darling Point Road.
September.—Tivoli Theatre, Castlereagh-street, City.
" W. E. Smith, Printer and Stationer, Bridge-street, City.
October.—Fuerth and Nall, 484 Kent-street, City.
November.—McLean Bros. and Rigg, George-street, City.

The fire on the premises of Mr. W. E. Smith spread by means of a lighting area from their windows through the unprotected windows of the Exchange Buildings and the Queensland Chambers, doing some thousands of pounds worth of damage, which, by the expenditure of a comparatively small sum for iron shutters, would undoubtedly have been avoided. People must have light to carry on their ordinary avocations; but when the windows affording the light are within a few feet of the unprotected windows of another business place, then some authority should step in to compel the erection of a reasonable safeguard against the spread of fire.

The operations of the Factories and Shops Act will ultimately have an influence for good in the saving of life and preventing the spread of fire. I have visited upwards of 200 factories during the year in company with an Inspector of Factories, and have made recommendations in each case for the better protection of life and property.

The year has been a very busy one, not only in the increased number of fires which have been attended, but in the additional work contingent to the fires, and in extra repairs to the plant. 14,000 watches of 8 hours have been kept, 4,500 hydrant inspections, 900 telephone inspections, and 198 inspections of buildings have been made. The engines, boilers, ladders, &c., have been kept in good repair, and new boilers have been fitted by the staff to two steam fire engines.

A new switchboard has been constructed at headquarters, and in connection with it are contrivances which I am pleased to think will materially assist us in rapidly concentrating the forces in the city.

There has been an increase of 6 street fire alarms, making a total of 177.

About 3,000,000 gallons of water were used in extinguishing fires.

The distance travelled by vehicles of the brigade was about 15,000 miles.

By an accident, one horse was killed, when going to a fire, two horses have been sold, and twelve have been purchased.

I have again to draw attention to the necessity for increased accommodation at headquarters. The property values in the city and suburbs have increased during the last fifteen years very considerably; but the boundaries of the headquarters are the same as when the station was erected. The office and board-room accommodation, the drill yard and workshop conveniences are too cramped for dealing with matters as effectively and expeditiously as is required for a fire brigade, and it is urgently hoped that steps will be soon taken to remedy the difficulties mentioned.

The old police station and court-house, at George-street, Redfern, has been altered to suit our requirements, and the result is most satisfactory. A steam engine and men were removed there on the 28th ultimo. I propose in the near future to recommend several positions round this station as being suitable for fire alarms. A horse fire escape for this station has been ordered from London.

A new station has been erected at Rookwood, and placed in charge of the local volunteer company. Other stations are being erected at Paddington, Willoughby, Granville, and Burwood. Land for a station at Mosman has been secured in Myahgah-road, and a site at the corner of Ocean and Trelawney Streets, Woollahra, is under lease to the Board. A fire station is urgently required at Randwick, and new structures are necessary at Alexandria, Ashfield, Glebe, and Leichhardt. Additions to the Circular Quay and Marrickville stations are desirable.

The Paddington Volunteer Company No. 1 disbanded in March, and the duty of protecting the district was taken over by the permanent staff, a steam fire engine and six men being placed there. As it is intended that the officer-in-charge of the eastern district should reside at this station, a larger number of appliances and men will be placed in the premises when they are ready for occupation.

A volunteer company has been formed at Willoughby, and the members have been undergoing a course of instruction from the permanent force. It is anticipated that the new station will be completed during the present month, and the company placed in charge with a manual fire engine, a horse, and all the necessary appliances for extinguishing fire.

On the completion of the Granville station it is proposed to place a light manual fire engine and a horse there, and also to run a telephone wire to it from Parramatta fire station. When this is carried out all the volunteer stations in the Metropolitan district, except Liverpool and Richmond, will be in telephonic communication with headquarters, and will also have horses to take the apparatus and members to fires.

On the 1st of January the city and suburbs were divided into five districts, an officer being placed in charge of each. This arrangement has been found of great benefit, a more complete supervision of the whole area under the jurisdiction of the board being carried out, and a greater knowledge of the requirements of the several districts being obtained.

During the year the drivers have been constituted a separate class, and a special set of rules for their guidance and qualifications for promotion from one rank to another have been drafted.

The auxiliary system, which was introduced some years ago, at the end of the year underwent considerable alterations, the partially-paid system being abandoned, and a number of youths being placed on the staff in their stead. A special set of rules have been prepared, and it is contemplated that the new arrangements will be productive of a system of apprenticeship to the business of a fireman. The alteration in the auxiliary system will allow of the number of men at several of the smaller stations being augmented.

The Brigade was strengthened during the year by the addition of 17 men, distributed as follows :—

No. 4	Station, Darlinghurst,	1 man.
No. 5	" Newtown,	1 man.
No. 6	" North Sydney,	2 men.
No. 7	" Marrickville,	1 man.
No. 10	" Redfern,	6 men.
No. 11	" Paddington,	6 men.

In January a 700-gallon steam engine ordered from London two years previously duly arrived, and was tested in front of the Town Hall with the large steamer purchased in 1892. Both worked satisfactorily. These engines have also done good work at fires during the year.

With the increase of the present force it has been found possible to a large extent to avoid calling in the suburban brigades to the city fires. It has always appeared to me a great risk to denude the suburban localities of all protection, and fresh arrangements have therefore been made.

The small steam fire engine built in 1871 has become unreliable, and I have withdrawn it from active service; and it is anticipated that the equilibrium steam engine, built in 1870, will not be of much further use except for pumping-out purposes. To replace the small engine, and to provide better protection for one of the Western suburbs, two steam fire engines have been ordered from London.

I am pleased to say that the pressure of water and the supply has generally improved during the year, and arrangements have been completed for materially increasing the supply of water to the higher parts of Petersham, Balmain, and Leichhardt.

There

There has been great activity in the building trade during the year, and, consequently, a large increase in the number of buildings to be protected.

Five ship fires have occurred during the period under review, and in each case the fires were extinguished with comparatively little damage to the cargo and vessel.

I have pleasure in acknowledging the valuable aid rendered to the Brigade at all times by the officers of the Police Force, and of the Board of Water Supply and Sewerage.

The officers and men of the permanent staff and of the volunteer companies have worked well together during the year, and every effort has been made to promote a good feeling between the forces. My cordial thanks are due to both for their efforts in assisting me to carry out the arduous duties imposed upon me.

I have to thank the Board very sincerely for the generous support accorded to me throughout the year. The knowledge that I possess their confidence has been of the greatest assistance in the carrying out of my work.

I have, &c,

ALFRED WEBB,
Superintendent.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE INTERNATIONAL COMMERCIAL CONGRESS OF PHILADELPHIA.

(REPORT OF COLONEL BELL, AS OFFICIAL REPRESENTATIVE OF NEW SOUTH WALES AT.)

Printed under No. 5 Report from Printing Committee, 19 July, 1900.

HON. W. J. LYNE, PREMIER, N.S.W.,—

Dear Sir,

Regarding the International Commercial Congress, recently held in the City of Philadelphia, United States, and my connection with the same as the official representative of the Colony, by the grace of your worthy predecessor, and the appointment by His Excellency the Earl of Beauchamp, Governor of New South Wales, I would respectfully submit the following, which I have made as brief as I have endeavoured to make it comprehensive:—

THE COMMERCIAL MUSEUM OF PHILADELPHIA.

As the recent "International Commercial Congress" was a child of the Commercial Museum of Philadelphia, I deem it wise, in the first instance, to give you some facts regarding this institution.

Towards the close of the World's Fair, or the Columbian Exposition of Chicago, 1893, a few very capable and enterprising gentlemen conceived the idea of establishing, at Philadelphia, a permanent institution for the collection, exposition, and comparison of the staple products of the whole world, and to establish a bureau of information on so broad and comprehensive a scale that all knowledge relating to shipping, manufacturing, industrial, or commercial affairs concerning any and all countries could be had from a most reliable source. This concern is conducted by some of the most sagacious and well-informed men of America, and their local managers, besides having the advice of an active Board of Directors, composed of some of our most noted men, have an International Advisory Board, composed of the most conspicuous commercial men in all parts of the world. The President of the Sydney Chamber of Commerce is a member of the Advisory Board.

The Museum has been built up very successfully. In the information bureau there is probably more extensive and valuable information relating to industrial and commercial affairs than has ever been collected at any one place by any concern, while its methods for preserving and imparting such information seem to be based upon the most sagacious and careful experience.

As an exhibition of products, it has excited much astonishment for its methods and its completeness. Arranged and classified with great care, there are ample samples of the products of the care, the skill, and the handicraft of nearly all the countries and people of the globe. But with the articles exhibited from the various countries, there is the information that belongs to the business side of the institution. You see

an article there, you may learn where it was produced, how produced, its cost of production, its value in the market when made, where it finds a market if exported, what quantities may be supplied and the like; while if it is an article imported into a country, one may learn where made, the extent of the demand, cost at factory, and selling price in local market. As a fact, one may learn there the class of goods exported from and imported into, almost any country, the tastes and demands of the people, with their ability to buy and to compete in the market. As a nucleus for an "Australian Department," most of the New South Wales exhibits at the Chicago Fair were purchased by the Museum, and it is now claimed by men of your own country that there is a more varied and complete list of Australian products in this Museum than is to be found at any other place, and in this exhibition New South Wales is especially richly represented.

Encouraged by the development of this concern, and the advantages so clearly resulting from a more general support of its aims, the City of Philadelphia, the State of Pa., and the general Government of the United States, have made liberal appropriations towards extending the operations of the Museum, and for placing it upon a broader and more secure foundation.

I am informed that some \$1,200,000, or, say, about £240,000, have been spent in giving the concern its present form and standing.

The Museum proper is most conveniently housed in very suitable and substantial quarters in the City, whilst for the Industrial Exposition, beautiful and appropriate buildings are permanently devoted to the purpose, in a most attractive park in a close and accessible suburb.

Briefly, this is the "Commercial Museum of Philadelphia," now one of the great attractions of the City and State, managed by gentlemen of great ability, with a trained staff of about 125 persons.

THE INTERNATIONAL COMMERCIAL CONGRESS.

Well, it was in response to an invitation of Dr. Wilson, the managing director, and Mr. Wm. Harper, head of the Bureau of Information, of the Philadelphia Commercial Museum, that the International Commercial Congress assembled in Philadelphia during October last.

As to my own connection with the Congress, I would respectfully remind you that soon after the invitations had been sent out to the Governments and business societies of the world, Mr. Reid, the then Premier of New South Wales, solicited my services as a representative of this Colony, and that in response to this suggestion, His Excellency the Governor commissioned me for the duties of such representative.

Upon receipt of said Commission, I sent a note to the Hon. Premier, thanking him for the great compliment to my country and to myself, and informing him that I would lay the matter before the Department at Washington, of which I was a servant.

I sailed from Sydney on the "Mariposa," 31st August, for America, and on 9th October I called at the Department and explained the situation to the Secretary of State. The Secretary expressed great pleasure for the honor paid us, and with evident satisfaction he reciprocated the high compliment of the Government of New South Wales by giving me written authority to comply with its expressed desire to represent the Colony at this International Congress.

On the 10th of October I reported at Philadelphia and tendered my credentials. As the Press of the United States had noted the action of the Government of New South Wales, I was the recipient of very many congratulations, not only while in Philadelphia, but in Washington, New York, and in many other parts of the country.

On 12th October, the Congress was opened formally at the Exposition Buildings, by the Hon. D. J. Hill, Acting Secretary of State, in the presence of some 10,000 people, nearly the whole Diplomatic Corps of the United States—having come by special train from Washington for the occasion—being on the platform. It was an imposing spectacle, for here were about 500 select delegates, intelligent and progressive men, of varied shades of complexion, varied habits of dress, speaking many languages, and believing in many religions, representing forty-eight separate and distinct nationalities, from all quarters of the globe. It was a most

most unique gathering. All these people of all these nationalities, had come from the most widely separated points to talk plain business, and to consider how humanity could be bettered by a firmer friendship and closer business relations.

The opening was a most successful event, and soon after the formal ceremonies were concluded the actual business of the Congress began.

Here it may be well to inform you of the personnel of this unique assemblage. Well, participating in the discussion, there were about 360 delegates, the following nationalities being well represented:—United States, United Kingdom, Russia, Germany, France, South African Republic, Arabia, Austro-Hungary, Belgium, Brazil, Ceylon, Chile, China, Denmark, Greece, India, Italy, Japan, Corea, Liberia, Madeira, Mexico, Norway, Persia, Portugal, Roumania, Spain, Sweden, Turkey, Hayti, Cuba, Jamaica, and, besides the Philippines, sixteen Central and South American States.

Canada was strongly represented, with all the other self-governing British Colonies—including six of the Australasian Colonies, three Presidencies of India, Cape Colony, Natal, and Hong Kong. Most of the leading Governments of the world were represented as political entities by special delegates. There were delegates representing the Russian Government, the United Kingdom, China, Japan, Chile, Greece, Mexico, Roumania, Persia, Turkey, and most of the South American States. Several British Colonies were represented by special delegates, including, besides five Australian Colonies, Newfoundland and New Brunswick.

The Colonies of Victoria, Queensland, New Zealand, South Australia, and New South Wales were represented by Sir Andrew Clarke, Sir Horace Tozer, Hon. Pember Reeves, and Dr. Cockburn, the Agents-General in London, and your humble servant, respectively, and I desire here to express my profound respect for the cordial and generous treatment of those eminent gentlemen towards me, as the official representative of the "Mother Colony." I have seen much of the world, but I never saw a more intelligent, enterprising, but unassuming assemblage of men.

I would like to remind you that while this Congress was called by the directing officials of the Commercial Museum, and convened under the auspices of that institution, in the City of Philadelphia, that it was only an American meeting to the extent that it met in America, and that it was, in fact, an "International meeting." As a fact, the Americans, save as spectators, took but a very modest part in the deliberations of the assembly, seeming to feel a greater interest in the conclusions of the body as a whole than in efforts to shape such conclusions. As a fact, the most active and aggressive delegation at the Congress was that of Canada; the most earnest and tireless in its labours was that of China; the most alert and critical was that of Germany; while the most genial, business-like, and popular, was that of Australasia. My colleagues, as official representatives of the Colonies of Victoria, Queensland, South Australia, and New Zealand, won golden opinions for the dignity of their bearing and the wisdom of their counsel, while the delegates representing the commercial bodies of Australasia made an excellent impression by their intelligence, candour, and business-like conduct. I think there were about twenty delegates from Australasia, and, as a body, they reflected credit upon their country, their calling, and their race. For that occasion I was an Australian, and I was proud of the duties imposed and also of the association, for the delegates were gentlemen of exceptionally high intelligence and character.

The deliberations, the discussions, and the conclusion of the Congress as a whole, presented many most interesting features. The methods of business were peculiar to private business men, unpracticed in public affairs. The daily meetings were well attended, the discussions were open to all, that each could have a free hand, and yet, though there were no parliamentary rules adopted or enforced, the deliberations were conducted with as much decorum and with less clash and confusion than any other public meeting of like numbers it was ever my pleasure to attend. All the speeches were short and directly to the point, while the papers, as a rule, were unusually brief and comprehensive. The work was well divided up, certain days being allotted to the discussion of certain questions, or given over to the use of the delegates of certain countries. For instance, Canada and the United States had a day, Australia a day, China a day, Japan a day, the Nicaragua Canal a day, &c.

The following was, in substance, the method of procedure:—Usually from each country carefully-prepared papers were read by an official or accredited delegate, setting forth clearly and briefly the conditions and requirements of the people of such country,

country, with systems of government, climatic conditions, industry, products, and the like; with statement as to surpluses and the deficiencies of the country, with suggestions as to means for furthering the desired exchanges with other peoples.

You will understand that while the deliberations of this Congress were held in America the delegates giving and seeking information were "foreigners," so that when a delegate from India, from Japan, from Cuba, from Cape Town, or from Australia, arose to set forth the conditions and the wants of his people, to describe the nature of their surplus, what they wanted from abroad, and how a greater trade could be carried on, he was being listened to, not by the people of the United States, but by intelligent and inquiring representatives of forty-seven other countries, scattered over the entire globe, and when the proceedings are officially published, the heads of these forty-eight Governments, the great journals, and the trade societies of all these countries, will be supplied with all of the eloquent facts set forth by all those participating in the deliberations.

The cosmopolitan character of the assemblage and the practical methods of the sittings may be seen by a reference to the *Bulletin* of the second day's proceedings, 13th October. Honorable Thos. B. Reed, ex-Speaker of the United States House of Representatives, presiding.

On being introduced as the Chairman for the day, Mr. REED said :

Gentlemen,—

We desire to become acquainted with you; we desire that you should become acquainted with us. To this generation and the next are open broader possibilities than were ever open in the history of the world. All the inventions which devour time and place are the harbingers of trade, and trade, when it has its senses, is always the harbinger of peace.

The character of Mr. Reed and the methods of the Congress may be rather correctly measured by this terse and sensible speech.

The speaker introduced the following gentlemen, who addressed the Congress during the day, to wit:—

Hon. H. LEWELLYN SMITH, Official Delegate, United Kingdom.

Lieut.-Gen. J. W. LAURIE, M.P., Chamber Commerce, London.

Hon. WILLIAM A. STONE, Governor of Pennsylvania.

Herr ED. ARNHOLD, Chamber of Commerce, Berlin.

Lieut.-Gen. Sir ANDREW CLARKE, Official Delegate, Victoria, Australia.

Mr. TING FING, Chinese Minister to the U.S.A.

M. DE ROUT ROWSKY, Agent of the Russian Minister of Finance, St. Petersburg.

Dr. ALEXANDER VAN DORN, Official Delegate, Austria.

Mr. K. YAMAMOTO, Official Delegate, Japan.

SEÑOR HENRY ALZAMORA, Official Delegate, Spain.

SEÑOR GENARO PARGOSA, Official Delegate, Mexico.

Herr WILLIAM MARKEIECKE, Official Delegate, German Government.

Capt. CORDEIRO DE GARCIA, Official Delegate, Brazil.

You see the assembly was not parochial, and the impressions among those participating in the proceedings may be fairly well appreciated by a declaration of one of the most tireless workers of the Congress :

Don ENRIQUE ALZAMORA, of Spain, said: The general feeling among the business men, the tradesmen, and the commercial bodies of Spain is to find a way to improve our trade with the United States and to give to Spain all the business possible. I will go back to Spain and I will have the pleasure to tell my countrymen that I have been among a great nation, with a great and kindly people, where I have found nothing but friendship and none but brothers.

Such an opportunity, to "chat" with the civilised world, about the affairs interesting usually only to the local mind, was never better enjoyed by man. By the means furnished by this Congress all the facts relating to the commerce, the resources, and industries, put forth by all delegates of all those countries will go into the hands of the most intelligent and interested class of people in nearly all the nations of the civilised world, backed by the prestige of this unique gathering. Every statement made at the Philadelphia Congress, by any representative of any country, will be read, carefully studied, and reduced to
practical

practical use, as far as may be, by those most interested in trade affairs all the world over. This is the utilitarian side. The ultimate benefits of this meeting to all concerned cannot be at present estimated, nor even guessed at, but in the nature of things they must be very great for the future. No event in the history of the existence of your colony—not even your magnificent exhibition at the World's Columbian Fair at Chicago—has ever done more to make Australia known among the commercial classes of the world than the work of the Australian delegates to this International Commercial Congress just held at Philadelphia.

As I was the Official Representative of New South Wales on this occasion, I suppose the Government and the people may feel some interest in the manner in which I performed my duty, and, if such a feeling exists, they also have a right to know how I performed that duty.

Well, to begin with, I must confess that I so utterly failed to satisfy myself that I sincerely hope the people of New South Wales will deal more generously with my conduct than I am able to do in my own conscience. I did the best I could under the circumstances, but among so many gifted men it was not possible for a man of my modest pretensions to perform conspicuous services. I did the best I could under the circumstances, and I now lay before those who trusted me, the results of my tireless efforts.

AUSTRALIAN DAY.

The first two days—following the opening day, at which very little business was done—were devoted to the discussion of general commercial topics, but the fourth day's session, 16th October, was set apart as "Australian Day," and the proceedings were conducted in the presence of a fine attendance of delegates as well as by a deeply interested audience.

A gentleman from Sydney, representing the Sydney Chamber of Commerce, Mr. Barre Johnson, was the first Australian heard, and his paper was well worthy of the occasion.

Messrs. Moxham and Asher Smith, of Sydney Chambers, also read papers which will appear in the official proceedings when published.

Then, as to my own part on this interesting stage. After the reading of the above-mentioned papers, and closing the case for New South Wales, to be followed by Sir Andrew Clarke, for Victoria, the Chairman introduced me as follows:—"The next address will be delivered by Colonel G. W. Bell. Colonel Bell is the United States Consul in Sydney. How thoroughly and fully he has identified himself with the actual interests of New South Wales is testified by the fact that the Government of New South Wales has made him their official delegate to this Congress. (Applause.)"

MR. CHAIRMAN, Ladies, and Gentlemen, Commercial men from all God's creation—and, Manilla—I greet you. (Applause.) I have seen very little of you since reaching Philadelphia, because I am a working member, and have had to deprive myself of your association. But when it comes to the active part of affairs, I am with you. I believe thoroughly in commerce. (Applause.) I believe commerce to be the basis—the very basis of civilisation, and I want, in the first place, to pay my tribute of respect to the tireless man who brought us together from the remotest parts of the earth. I hold that he who does most for commerce does most for our struggling race, and when Dr. Wilson has laid down his burden for ever, when his eyes have closed to the mockery of light, and his heart has ceased its beating, to him, who has led this grand movement and brought together in harmony so many representatives of so many nations, the City of Philadelphia will raise a monument. (Applause.) And when commercial men from afar meet here in council they will cast a flower on the mould above him, in token of gratitude. We can hardly appreciate the benefits that may arise from this, to be, historic meeting. Why have we come together? Why, but to study and strive to devise means by which our people may most readily exchange the products of all lands with a hope of satisfying all wants of an ever hungry and thirsty humanity. We are the unsatisfied animal, and yet so economical in our methods are we, that every man strives to secure the best possible living with the least possible expenditure of physical and mental force. That is the object of the meeting, and this we hope to do by means of "exchange." What a grand conception this meeting was. What a noble idea lies in the devotion of a man for the good of all men. As indicated by our worthy Chairman, I am for this occasion an Australian. Of course I am an American, very much of one, and if I have won the respect of the people with whom my lot for the last six years has been so pleasantly cast, it has not been by any sacrifice of my conceptions of true and dignified Americanism. (Applause.) I believe I have demonstrated the folly of a gentleman, in hoping to win the respect of strangers anywhere by lowering his own colours. (Applause.)

As a representative of a foreign country, in my own land, I find myself not unhappily surrounded. It seems to me that the real importance—yes, the real grandeur—of this occasion may be somewhat measured by the character of the response made to the invitations issued by those devoted men to the

commercial

commercial world. (Applause.) Old Britain is commercial, and from all parts of her vast empire came active and progressive men to join in the discussion of the civilising force of commerce. From the world's commercial centre, London, came gentlemen holding exalted social, business and official positions, to represent sections of "Greater Britain," and to join with manufacturers, merchants, modern business men, and tradesmen, in the discussion of exchange, of commerce, and of peaceful progress.

Here sits at my left, Major-General Sir Andrew Clarke, whose long, valuable, and devoted service to his country is so highly appreciated that his name is a household word throughout Her Majesty's vast domains, representing the beautiful Colony of Victoria. (Applause.) Here is Sir Horace Tozer, whose name is indelibly connected with the wisest laws of Queensland, representing that Colony, thirteen times greater in area than our Iowa. Here is the Honorable W. P. Reeves, an ex-Cabinet Minister, loved and honored by the whole citizenship of his country, representing picturesque New Zealand; while my dear friend, Dr. Cockburn, who carries patents of nobility from the Almighty, represents South Australia. (Applause.) All these gentlemen are the Agents-General of their respective colonies at London, and I am proud to be associated with these eminent men, as the representative of New South Wales, for my selection for that honorable duty was the highest possible compliment to my country. (Applause.)

But here, a few general remarks about Australia, or, possibly, I might better say, of New South Wales. I have prepared a report which gives in brief much important information touching many phases of the business, social, and commercial life of that beautiful land, which I have submitted to Dr. Wilson and his co-workers for their use. It will probably be published, and if you care to examine it, I assure you the books will be open. I will not consume your time in reading it, for statistics are "dry," and I will merely "chat" to you a little time about Australia. Of course, you know, as with other countries, most of the best people stay at home, so you cannot be sure of forming a true conception of Australia's worth by the few present at this Congress. (Laughter.) Let me tell you, in all candour, the Australians are splendid types of our race. They are a commercial people, and that means that they are an intelligent and progressive people. But more, they are, considering population, if measured by the same rules, the most commercial people on the globe, and that means that they are in all the essentials of civilisation, progress, and happiness, in the front rank of human progress. (Applause.) Commerce means progress, and as the Australians are the most commercial of all people, in their social intercourse, in their business methods, in their home life, and their political ideals, they are a people worthy of our study, of our respect, and, in many ways, I may say, of our imitation. (Applause.) Commerce is the mightiest force of civilisation, and the magic wand of commerce has lashed the Australians into a form worthy of our highest admiration. As a people trade, so are they; and if you will show me the open books revealing any nation's dealings, I will show you the true condition of the people of that nation, and write the history of her progress or her failure. (Applause.) Let me tell you, the Australians are not only progressive and commercial, but, *per capita*, they are among the most wealthy people on the globe. Further, let me tell you, they are, *per capita*, the greatest producers on the globe, greater than we, though that may hurt our pride. Then, let me tell you farther, you commercial men, that, *per capita*, the living expenses of the Australian are greater than that of any other people; and, being greater producers, having a greater buying capacity, they pay their "bills" according to contract. As a fact, there need be no losses in business in Australia, if business is done by business methods. As a fact, as a people with whom to do business, as a people with whom to trade, these four and a half million Australians are as valuable, yes, more valuable, than twenty million average Europeans. Think of that! Sydney has an in and out tonnage greater than London had when I came to "this country" (laughter); greater than New York had a little while before our "late unpleasantness." (Applause.) The change has come through the expansion of the commercial idea, through the shop-keeping instincts of our race, and the conditions of the people have improved with the commercial advancement of the times.

Genius has annihilated time and space; and Australia, but a few brief years ago the most distant and least known of all lands under the sun, is now "very much in evidence" (applause); and as commerce has begun her work of unifying and humanising the race, Australia shines forth as a beacon light for the struggling millions whose souls are but just touched with the fire of liberty. As the commercial ideal has been the motive force back of every civilising movement in the world's progressive history, so has commerce gradually emancipated man from his ancient superstition and his love of form and fetters. (Applause.) As Australia stands among the foremost in commerce, so stands she among the foremost in the social regeneration of the race. In legislation, she is called "advanced," but in just laws only can the noblest yearnings of the soul find expression. The heart of a nation is seen through its laws, so a people having high ideals usually express their conscious force through legislative enactments.

Americans know well the strength and the vigour of the British Empire as a political entity, but few of them realise that the chief strength of this grand empire rests in the loyalty, the vigour, and the virtue of the individual units of which the empire is composed; or that the strength of that unit, developed under a liberty, as well defined by law and as well acknowledged by authority, as that enjoyed by the people of our grand Republic. (Applause.) Now, as the Australians are the most commercial, so are they among the most free, and being the most commercial and the most free, they assert their superior man and womanhood in the most advanced social and political policy known among men. They not only hold that *government* should consist of the people in their organised capacity, but that the functions of government should be exerted in the promotion of the interests of the units of society composing the Government. With them, the Government is not a boss, but a handmaid. It is not a signboard for the direction of the individual in his journey, but a motive power to which he may attach his industrial machine, relying, however, upon his own effort and ability for success.

In Australia, the people, in their organised capacity, construct, own, and operate the many great utilities necessary to the industrial prosperity of the people in their individual capacity. In Australia, the railways, the tramways—street cars—the telegraphs, telephones, and many other modern devices for social betterment, are owned and operated by the people—in their organised capacity—for the benefit of the people in their individual capacity; and though these public utilities are conducted with a view of self-support, the charges are satisfactory; there are few abuses and no scandals. The lands are chiefly owned by the whole people, and leased to some of the people; but in their management there are few complaints, few abuses, and no scandals. The Government, or the people in their organised capacity,

build

build school-houses, run the schools and the highways, and exercise the chief authority in municipal management, but the public conscience, being but the reflex of the individual conscience, honesty prevails, and there are few cases of injustice, few abuses, and no scandals.

Now, you people who desire to trade with the Australians, who desire to enter that market for health, for pleasure, or for profit, must remember that they know what they want. (Applause.) If they ask for a spool of silk, do not offer them kerosene. (Laughter.) You cannot secure Australian confidence by promising pleasantly and looking wise. You cannot convince them by fair promises nor by boasting of your goods, but if you will patiently persevere, keep your wares up to sample, pack properly, deliver promptly, and not change your fashions too often, you may build a trade, and then if you play fair, the trade will stay with you.

Remember, Australia is the strongest competitive point on the globe, but with a people intelligent enough to choose and wealthy enough to pay for what they want, among competitors it must be "the survival of the fittest." (Applause.) Among *competitors*, I mean, it must be the survival of the fittest. (Laughter.)

Now, my friends, you may have noticed that I have spoken in a general way more of Australia than of New South Wales; but, you see, the grandeur and greatness of New South Wales—yes, the grandeur and greatness of the people of New South Wales—go without saying (applause), while I feared that these titled gentlemen would be too modest to claim the attention due this happy, sunny southern land. (Laughter and applause.)

But a word more about this interesting and unique gathering. This has no precedent. It stands alone in history, the first in all the ages of its kind. Think of it. The tireless men who shape the progressive movements of the race, men of all colours, all races, speaking all languages, and believing in many religions; men from more than forty different nations, meeting in this staid old city of Philadelphia, to eat Buzzard Bay oysters, to get acquainted with one another, and to discuss questions of business, business the success of which must secure the peace and happiness of the world, is unique indeed. If the ultimate aim of this meeting is accomplished, wars and conquests will vanish, for each people need the others, or modern civilisation is a failure.

Think of the grand future, if the hope of this meeting shall be realised, when the well-being of each shall be the care of all; when we shall nurture the interests of all men, that we may make money more easily by doing business with them (laughter); and when we realise that we can only be prosperous and happy when the world shares in the general joy. (Applause.) To me this seems like the dawn of a new era, in which the business sense of the world shall dominate, in which the products of man's patient toil shall no longer be wasted by war, but be distributed among the homes of the earth, that each desire shall be respected and each person shall render a just equivalent for what he or she receives from other hands. I thank you. (Applause.)

The following is a copy of the paper referred to in above "remarks," given the President, and published in the proceedings.

When we remember the number of countries entitled to a hearing, the large number of delegates expected to speak or read papers, and the desirability of keeping the full reports within reasonable space, I think, considering the scope of my paper, that I may expect commendation for my briefness, if for nothing else in its pages.

"A GLIMPSE OF NEW SOUTH WALES."

COL. GEORGE W. BELL: The self-governing colony of New South Wales is situated in Eastern Australia, in latitude from about 141 to 153 E. and longitude from about 27 to 37 S. It has an area of 310,700 square miles, or about 198,848,000 acres. Of this total area there has been 47,700,000 acres alienated, or in process of alienation, for which the Government has received the total sum of £43,821,000; the balance of the land being still owned by the Government and controlled through a cabinet minister. The Government has leased, of the unalienated lands, a total of 124,184,000 acres under different forms; 52,700,000 acres being pasture leases; 37,000,000 acres occupation leases; 13,000,000 conditioned leases, and other millions under six other forms of tenure. From these leased lands there comes an annual revenue of about £2,000,000, or nearly \$10,000,000 or about \$8 per capita for the population of the colony. The climate of New South Wales is very equable, in some portions semi-tropical fruits and vegetation is not uncommon. The mean temperature in Sydney, for forty years, has been 63 degrees Fahrenheit. Owing to topographical conditions, the rainfall in a large portion of New South Wales is rather slight, while a considerable country in Central Australia is well nigh rainless. This arid tract laps somewhat over the territory of New South Wales. The cause for this slight waterfall is obvious, as the mountains run in an unbroken chain parallel to the coast and only from 60 to 100 miles from the Pacific Ocean. This mountain chain is sufficiently elevated to force the chief precipitation along the east coast and "outside" the range. I would think about one-eighth of the Colony from this cause has a rainfall of from 30 to 40 inches unequally distributed; a rather larger area of what might be called table-lands lying inside, and parallel to this mountain chain has from 20 to 30 inches annually, while approximately one-half of the total area has not more than from 10 to 20 inches. This slight and rather irregular rainfall renders many industries rather precarious. The productions of New South Wales are varied. The chief cereal is wheat, but there is considerable corn, some barley, rye, and oats grown. Only in wheat is there sufficient production for home consumption. Most of root crops grow well in the Colony, but their cultivation is somewhat neglected, so there are considerable importations in onions, potatoes, and the like. The country is well adapted to the production of many kinds of fruits, especially oranges, lemons, grapes, limes, prunes, and the like, and a considerable industry in these productions will sometime be developed, but the people who should raise, or would be expected to give their attention to these products, are inclined to ignore their importance. Sugar in some of the northern districts does fairly well, but it is occasionally injured by frost, and has to be planted too often to enable the cultivators to successfully compete with more favoured countries.

AGRICULTURE.—

AGRICULTURE.—In 1898 there was a total area under crops of 1,821,800 acres; the value of the product being £6,205,900, or about \$50,000,000. Of this there was 995,300 acres under wheat, sown for grain, which yielded 10,560,000 bushels; and 213,720 sown for hay, yielding 181,645 tons. To Americans it seems strange to cultivate wheat for hay, but here the practice is common. There was for the same year 220,000 acres planted to corn, 175,000 to oats, and about 25,000 to sugar-cane. This last produced but 269,000 tons of cane, as about half of it, for some reason, was uncut. The value of the wheat crop was £2,200,000, or about \$10,000,000, of the corn £923,000, of sugar £127,000, of potatoes £302,500, of other products than those above enumerated £1,621,000. There are engaged in the pursuit of agriculture about 68,000 persons, as toilers. There is relatively little good agricultural land in New South Wales under present conditions, and such lands are mostly confined to the alluvial valleys in the coastal districts. However, with some system of irrigation, there are vast fertile districts in the interior that may, in the future, be utilised for agriculture. Then, as most of the richer lands are covered with dense scrub or forest, the cost of subduing them or placing them under cultivation in the first instance is very considerable. The price of land heretofore has also tended to retard agricultural growth, while the profits in other pursuits has left the lands rather bare of inhabitants. However, as recent land laws have been more liberal, the agricultural holdings have been increasing quite rapidly during the last year or two, and the number of holdings were in 1897, 65,278; under cultivation, 33,518,000; while in 1898 the holdings were 66,236 and under cultivation 43,935,115 acres. Farming in New South Wales, as a rule, is carried on, like other business and industries, on a large scale, and the most improved machinery, largely of American make, is generally used.

LIVE STOCK.—New South Wales is essentially a stock-raising country. For the year 1897 there was in the colony, of sheep, 43,952,000 head; of cattle, 2,085,000 head; of horses, 495,034 head; and of swine, 207,738. The number of sheep varies greatly during comparatively short intervals. For instance, in 1891 there were nearly 62,000,000 sheep in the colony, while at the present time, September, 1899, there is hardly more than 43,000,000. However, as the flocks will almost double in a single good season, the recuperative powers of New South Wales, and of Australia, is marvellously great. This possibility of rapid increase has a tendency to over-stocking in good seasons. The small number of swine in the list will surprise Americans, as would also the low price of horses.

PASTORAL PRODUCTS.—Wool, is not only the chief product of New South Wales, but a chief product of all the Australian Colonies. The wool clip for 1897 was 258,514,280 lb., or 722,427 bales, valued at £7,224,270, while owing to an increase in price, the clip of 1898, of 713,610 bales, was valued at £8,227,876. Great pains is being taken by all the chief breeders, here called "squatters," to improve the fineness and the value of the fleece, the Vermont merino rapidly gaining in favour and taking most of the prizes at the sheep shows of the Colony. About 69 per cent. of the New South Wales clip is now being sold in the Sydney markets.

MEAT, FROZEN, &c.—The export of frozen meat by this Colony has become, or is becoming, a rather important industry, and during 1897 a total of 1,372,373 carcasses of mutton, and 28,528 quarters of beef, were exported at a value of £275,647, while for the same year there was exported over 3,000,000 lb. of meat in other forms, valued at £636,000.

DAIRY.—As a branch of Agriculture, the dairy industry of New South Wales is also becoming an important one. The present number of dairy cows, as reported by Coghlan, is 411,498, and there was for that year 23,717,500 lb. of factory butter and 5,676,457 lb. of "farm butter," or a total of 29,409,966 lb. produced. This industry employs 25,413 persons about equally divided as to sex. The production of cheese is not increasing, the output for 1897 being 3,937,168 lb., or 187,339 lb. below the consumption. The dairy plants are fitted up with the most improved machinery, a fair portion of it coming from America. The dairy stock is usually of superior breeds and is handled with great care. The total exportation of pastoral and dairy products for 1898 was £11,430,975, or about \$57,000,000.

FRUIT.—This country is naturally well adapted to horticulture and viniculture, though there is no scientific attention given to either branch of this splendid industry. In 1898 there was 8,083 acres in grape-vines, 4,490 acres of which were for wine-making exclusively. This branch of industry is not in a very flourishing condition. It requires more skill and a more proper appreciation of the merits of the products by the people themselves. In the same year there was 13,943 acres of oranges, but results in this line are not reassuring, unless more skill is applied to the cultivation. The possibilities, however, are beyond question. In "fruit gardens" there were 31,019 acres, yielding a product valued at £155,524. For the year under consideration the Colony exported fruits, under various classifications, to the value of £188,000, but imported, the same year, about £314,000 worth. For the year 1898 there was a total of 120,014 persons engaged in the various branches of agriculture, pastoral, fruit, and dairy production.

MINING.—For the year 1898 there were engaged in mining 40,830 persons, distributed as follows:—In gold, 19,919; silver and silver-lead, 6,396; copper, 1,976; tin and others, 2,020; and coal and shale, 10,519. Gold won, 340,493 ounces; silver, 533,059 ounces; silver and lead, 398,569 tons; and coal, 4,706,251 tons. The value of plant is about £2,500,000, or, say, \$12,250,000. The total value of output for 1897 was £4,583,320, or, say, about \$23,000,000. The mining industry, on the whole, promises well for the future. The exports of mine-products from New South Wales for 1898 were £3,482,000, or about \$17,000,000.

MANUFACTURES.—In 1897 there were, of all classes of manufacturing enterprises in the Colony, 2,826 establishments, employing 51,439 persons, all of whom, but 7,106, were males. The horse-power employed in these establishments is estimated at 33,252, and there was invested in plants a total of £5,535,905. In these 2,826 establishments there was employed a "fixed capital" of £17,538,979. The total wages paid was £4,458,836, the material cost £7,874,682, the fuel £425,161, and the total value of the output was £16,095,629. The term "Manufactory" in the statistics, used in the last calculation, is rather loosely applied, especially does the amount specified as "fixed capital," seem to be out of joint with the former calculations of an investment in "plant" of £5,535,905. The manufacturing industries include a varied class of works, such as treating raw materials of the pastoral kind, those in connection with food and drink, of clothing, of building, of furniture, of vehicles, of boots and shoes, of light, &c., of books and paper, of leather, iron and many others of the nature. Most of the machinery and many of the appliances are well up to date.

TOTAL

TOTAL PRODUCTION.—The total value of the products of the Colony, the selling price for which constitutes the purchasing capacity of the people, foots up as follows:—

Manufactures	£8,872,800
Agriculture	6,206,000
Dairy and poultry	2,653,300
Pastoral—total... ..	11,823,400
Mining—total	4,853,300
Forestry and Fisheries	750,000
Aggregating	£35,158,800
Deducting raw material	215,300
Leaves	£34,943,500

This constitutes the buying capacity of the people of New South Wales, a *per capita* buying capacity greater, much greater, than possessed by any other people on the globe. The *per capita* production of Australia exceeds that of the United States as 20 is to 14, and production is the measure of a country's purchasing power. The population of this Colony, of 310,700 square miles, is about 1,250,000, nearly all being of English, Irish, Scotch, and Welsh blood. The population of the Colony, and I understand of the wealth also, has doubled during the last twenty years, and, notwithstanding unfavourable seasons, the industrial progress of the country is most promising. The productions, as above noted, gives the people of New South Wales a greater *per capita* buying capacity, from substantial incomes, than is enjoyed by any other people on the globe, possibly excepting those of some of the other Australian Colonies.

SOCIAL CONDITIONS.—New South Wales has a fairly good public school system; I might say an excellent one, from almost any standpoint. Judging by results, I think it would bear favourable comparison with the systems of the most advanced nations. One feature, however, does not strike Americans agreeably. There is here a law or custom requiring parents with means to pay for the instruction of their children, while those who are not may send them free. I fear there is an underlying danger in this distinction. The whole public educational system here is under and controlled by the Government through a Cabinet Minister. The "Minister of Education" is the sole director and responsible head of the school system, aided by a permanent staff now under a broad, liberal, non-partisan Civil Service Board. There were 2,577 State schools, with 4,626 teachers and an average daily attendance of 148,381 pupils in 1897. Besides the many schools, ranking with our "district schools," there are a large number of high schools, some furnishing careful technical training, besides several colleges and the great Sydney University. Well-informed educators from our country speak approvingly of the practical workings of the colonial schools. For 1897, this Colony expended, in the administration of her primary schools, £692,395, or about \$3,450,000, £73,684 of which was paid in fees by the better-to-do parents. There are some excellent reformatory and industrial schools in the Colony, and there are many well-patronised libraries in every city, town, suburb, and village in the country. The per cent. of illiteracy is very small, and the "well-to-do" classes are exceptionally "well-read." The country has several very able and very well managed newspapers, besides many periodical publications, having fair merit. As in other countries, there is an enormous amount of "trash" read, though the leading journals are exceptionally pure in tone and elevated in controversial discussion. There are a plentiful supply of poets and authors of light literature in Australia, but as yet there have been few attempts at serious literary labour.

CHARITIES.—I have never seen so charitable a people as those in New South Wales, and never so strong a tendency to dispel a feeling of humiliation from the minds of the unfortunates who receive "assistance." As there is a greater concentration of property in few hands here than in our country, there is considerable poverty, especially considering the newness of the communities and the vastness of the country. But the efforts made on every hand to alleviate the suffering of the poor excite the surprise and admiration of all observing visitors from other lands. What we in America call "Poor Houses," they of Australia call "Asylums," and theirs, like ours, are abundantly "patronised." These asylums are models of cleanliness and comfort, and few indeed are the scandals connected with their management. In asylums for the unfortunate, and hospitals, and kindred institutions, our own country might learn some valuable lessons from these young commonwealths. During 1897 the Government of New South Wales expended in charities £405,000, while private subscriptions for the same purpose run the total amount for the year up to £525,000, or nearly \$2,500,000. This means for charity alone a cost of nearly \$2.00 *per capita* for the whole population of the Colony.

TENDENCY OF LEGISLATION.—The tendency of legislation in all the Australian Colonies is decidedly democratic. Many Acts of these Colonial Parliaments, under a sturdy monarchical system, would surprise the great democracy of our country. The tendency is almost more socialistic than democratic; for democracy, to my mind, means a sturdy individualism. Here, I fear, while the greatest liberty is enjoyed, there is a growing inclination among a large class—of young men, at least—to lean on the Government for guidance and support. In the Colonies, where the Government owns, controls, and manages so many of the common utilities, to operate which it employs so many persons, a great and ever-increasing number of young men are inclined to strive for positions in the Civil Service; and this, to my mind, checks the growth of sturdy self-reliance. However, there are no dangers from communism, socialism, or any other deteriorating "ism" among a people so purely Anglo-Saxon. The opportunities for self-employment are not as great as they have heretofore been in the United States, but I see no more deteriorating effects from public employment in Australia than from public employment in the United States. The honesty, the impartiality, and the capability with which the Government-owned public utilities are managed must be a surprise to all impartial observers. In the borrowing and the investment of, say, \$250,000,000 in the creation of these public utilities and in their management there have been no scandals. Many Americans view with disdain this species of legislation; but my own observation is that for Australia, it was the wisest possible policy, as it has vastly accelerated the industrial development and progress of the country. I have thus briefly referred to the tendency of legislation in New South Wales and Australia, because I know of no other country in which business life is so intimately connected with and influenced by legislative enactments. Here political, social, and business life are closely allied.

PUBLIC UTILITIES.—In nothing does the intelligence, patriotism, and integrity of people shine forth with more hopeful lustre, or in which the untrammelled authority of a people to manage its own affairs demonstrate the quickening powers of responsibility, than may be found in the fidelity with which the public utilities of all the Australian Colonies are controlled and managed. Nearly all the public utilities of New South Wales, such as railways, telegraphs, telephones, street railways, school buildings, highways, wharfs, and sewers, and four-fifths of the lands in the Colony, are owned and operated by the Government of the Colony. In the Colony of New South Wales there are 2,691 miles of railways, having cost, with workshops, machinery, buildings, appliances, and rolling stock, £37,719,402, or about \$188,500,000. On these Government railways there are employed 10,574 men, receiving £1,113,190, or about \$5,564,000, annually in wages. These roads are under the absolute management of a non-partisan commission; the employees are under a semi-Civil Service system. They carried for 1899, ending 30th June, 23,233,206 persons, 4,463,728 tons of goods (freight), and 166,826 tons of live stock; while the gross earnings were £3,026,748, or nearly \$15,000,000, the working expenses \$1,614,605, or a net revenue of \$1,412,142, or fully 3 per cent. on "investment." These railways being built, owned, and paid for by the people, are operated in the interest of the people, the charges adjusting themselves to the public requirements—of course, always being managed with a view of self-support. There are 33,000 miles of telegraph and 7,500 telephones in New South Wales, all owned by the Government, and all well and cheaply managed by a non-partisan commission, and operated by Civil Service employees. The number of Government "servants"—employees—on the public pay-roll in New South Wales is enormous, considering population; yet there is little of the laxity, incompetency, or political evil feared by those unaccustomed to the system. The Government—which means an elected Parliament "supreme" in all its legislative enactments—while it has borrowed enormous sums of money, created these public utilities, owned and operated them, employing many thousands of persons; owned and managed four-fifths of the lands of the commonwealth, and retained a very large authority over all municipal affairs; there has never been a scandal, a proven case of favouritism, or a statesman known to have used his position for personal gain, in the history of the country. One of the credited railway experts of America, a gentleman who has seen more of the various railways of the world than any other living man, told me that he regarded the New South Wales railways as among the best and most efficiently managed on the globe. There is another feature of these Australian railways worthy of our praise. There is none of the careless, I will say almost wilful, destruction of baggage on these roads such as all travellers in America have witnessed. In Australia any baggage may be safely checked, while in the United States none should be—but dynamite.

AUSTRALIAN BANKS.—There are thirteen Banks of issue operating in New South Wales. These Banks are vast financial concerns, with branches in all the colonies and suburbs of the cities, in which the headquarters are located. Some of them have a few hundred branches, each being managed by a Board holding its sittings at the main office. As most of these concerns advance on quite a variety of securities, many of our people are inclined to regard them more as general loan offices than as Banks. The total assets of the Banks, operating within the Colony in the year 1898, were £42,638,224, while the liabilities were but £31,311,293, leaving a surplus of £11,326,931. The metallic reserve for the same year was £5,765,180, or about \$28,000,000. The advance (loans) made in this Colony for 1898, mostly secured on real estate, amounted to £34,403,700, and the deposits with these Banks for the same year, amounted to £29,852,711, £19,040,496 of which bears interest, usually at 3 per cent. All of these thirteen Banks of Australia are Banks of issue, and four of them have their chief headquarters in Sydney. The note circulation is not limited by law, but in New South Wales there is a note tax of 2 per cent., from which the Government receives about £25,000 per annum. This indicates the value, or amount of the paper money, in circulation in the Colony. The rate of exchange in Sydney is established by London, and it has been found that on some occasions money could be telegraphed to San Francisco cheaper than it could be sent through the process of exchange. However, as a rule, banking facilities are not unsatisfactory. There are two remarkably well-managed Government Savings Banks in Sydney, which are invaluable to the "common people" in the community.

PUBLIC DEBT.—The public debt of New South Wales is, on a population basis, enormously heavy, aggregating £63,112,720, being about \$250 *per capita*. Of this indebtedness, £54,431,800 is held in London, and but £8,680,000 in Sydney. The interest will average about 4 per cent. This seems a heavy burden for 1,250,000 people, but this only "seems," as from further inquiry will appear. It must be remembered that the Colony has constructed all its railways, its tramways and other utilities, that it owns very valuable wharf improvements, telephones, telegraphs, and other reproductive works. To construct these utilities, to stock and furnish them, nearly all this vast debt was incurred. The 2,691 miles of railway, up to date, have required £37,369,205 in their construction and equipment. But this is a valuable asset, and I am informed that the railways and tramways could be sold at the present time for a sum equalling their present cost to the community. From these reproductive works and utilities, created by the money for which the debt was made, there is a revenue of fully—I am informed—3 per cent. net on present standing cost, and as the £1,976,816 annual rents from leased lands come almost exclusively from values created by their increased accessibility, owing to the construction of the railways into the interior of the Colony, the burdens are greatly decreased. The net revenue from these reproductive national works were, in 1898, £4,610,546. Then, as a fact, New South Wales has reproductive assets, equal in value to every shilling of her indebtedness, and she actually receives an annual net revenue from the values created by the money for which her debt was incurred. Then, further, as a fact, I know of no country on the globe whose public finances are in so favourable a condition as those of this Colony. It is not the size of the debt, but the burden of interest that weighs upon a people, and a debt for which there may be credited an asset, reproductive to the extent of the interest on the debt, is no burden.

BUSINESS METHODS.—The business methods of New South Wales are peculiar to Australia. It is a country of "big things." As I have shown in the case of the Banks, so other business operations may be estimated. The better lands are mostly held in large tracts, and too many of the farmers are really but tenants. From fifty to one hundred thousand acre tracts are not uncommon in any of the Australian Colonies, and in the purely pastoral districts there are stations—called in America ranches—containing as high as a million acres. One person, a noble man—but not a "nobleman"—owns over 1,000,000 sheep, and over 1,000,000 acres of land upon which to pasture them. Several millions of the

40,000,000

40,000,000 sheep now owned in New South Wales are held in flocks of over 50,000. But to make this industry profitable, large expenses in improving the breed, in fencing "paddocks," in providing water, sheds, and machinery for shearing are necessary. As the upper thought guides the world, so does the most conspicuous business method set the pace of the business of the community. The mercantile establishments of the Colony are on like scale with the "sheep runs"; the stores, as we would call them, or the business houses that do \$2,000,000 worth of business or over per year, and keep from 500 to 1,000 employees, are not very uncommon in Australia. As the Government parcel post comes also to the assistance of the great merchants, by enabling them to extend their retail operations throughout the Colony, I am not sure these vast concerns are an unmixed blessing, but they evolved from the enviroing conditions. But business here is stable. The people are rather conservative and so are their business methods. It is not as easy to secure or to "step" into a thriving business here as in our country, but once build a business, by securing the confidence of the trade, and it will stay by you. "Flirtations" in trade are as unsafe as flirtations in social life. People here are not usually in a hurry. An illustration of how they regard haste may be interesting. Recently at a banquet I was seated by one of the most noted personages in Australia, when the conversation turned on the "bustle of American life." "What," said he, "is the use of hurrying through life at ninety miles an hour?" He was amused when I observed that "it would be very foolish certainly, if we could go one hundred miles an hour?" But there are many admirable features in Australian business methods. The people know what they want and they pay their bills promptly when due. There need be no losses in this country if business is conducted on business principles.

COMMERCIAL SYDNEY.—There are a few things to be kept in mind by manufacturers and business firms desiring to enter the Australian market. Remember Sydney, from a commercial point of view, is practically New South Wales. Sydney is one of the strongest competitive points on the globe, where one must meet the world's competitors on terms of perfect equality. This is one point. Another is, that the people are unprejudiced and they buy goods on their merits, or at least on their own judgment of what they want. Another is, that the people are not carried away with "new-fangled" notions, but want what experience has shown them to be reliable and worth the money paid. Still another point is, and this is an important matter, they are the most able to buy of any people of like numbers anywhere, and as there need be no loss in business transactions—this may be an interesting point. There is still another phase of this question to be observed, and that is that manufacturers or dealers in special articles should send special agents to introduce them, and when once brought before the public and popularised, they should either keep the special agents employed in special work or deal through well-established houses, whose staff know the demands of the trade, the vicissitudes of the seasons, the responsibility and reliability of the would-be purchasers, and all the ins and outs of the export trade. I will conclude by a brief review of last year's trade of New South Wales, with especial reference to the part the Americans played in such transactions. The last has been the fourth of a series of discouraging years for New South Wales, as scarcely has the drought been broken during this period, yet the resources of the Colony are so great, and the enterprise of the people so untiring, that business has shown some encouraging developments.

TOTAL TONNAGE.—The books show the total in and out tonnage of the ports of New South Wales to have been: 1897, 6,744,431 tons; 1898, 6,919,928 tons. Of steamers entering and clearing the ports of New South Wales for the year: 1897, 5,048 vessels, with 5,307,935 tons; 1898, 5,198 vessels, with 5,585,433 tons. Sailers: 1897, 1,417 vessels, with 1,436,496 tons; 1898, 1,383 vessels, with 1,334,695 tons. Of the total foreign vessels of all kinds entering and clearing, there were for:—

		1897.	
Steam—United States	17 with 32,738 tons.
Sailers—	"	"	123 " 123,223 "
			140 " 155,961 "
			140 " 155,961 "
Steam—German	69 " 211,001 "
Sailers—	"	"	85 " 110,096 "
			154 " 321,097 "
			154 " 321,097 "
		1898.	
Steam—United States	18 " 34,902 "
Sailers—	"	"	117 " 109,257 "
			135 " 144,159 "
			135 " 144,159 "
Steam—German	56 " 191,123 "
Sailers—	"	"	59 " 72,593 "
			115 " 263,716 "
			115 " 263,716 "

The French have a monthly service between Marseilles and Sydney, but the frequent trips of French steamers between Sydney and the island possessions render the statistics very confusing. The lesser total tonnage for United States for 1898 does not mean a smaller trade with the Colony, but a variation in the number and tonnage of vessels coaling at Newcastle.

COMMERCE.—The total trade of New South Wales with all the world for the last five years has been as follows, in sterling money:—For 1894, £36,379,614; for 1895, £37,927,200; for 1896, £43,571,819; for 1897, £45,495,422; and for 1898, £52,101,677. This shows an increase of the total trade of 40 per cent. As the chief interest of every nation in foreign trade is as a seller, I submit the following facts as to the importations or buying power of New South Wales. Her importations from all sources for the five years from 1894 to 1898 inclusive, were, in sterling money—£15,801,941; £15,992,415; £20,561,510; £21,744,350; £29,453,560—an encouraging increase. The total imports from "foreign" countries—

other

other than British, increased from £1,414,000, or about \$8,000,000, worth in 1894 to £3,377,635, or \$16,000,000, in 1898, while the following shows the importations from the United States, for each of the calendar years referred to, in manufactures and general merchandise, eliminating the abnormal importations of wheat and flour, to wit:—

				£	or	\$
For the calendar year	1894	543,427		2,636,196
"	"	1895	...	624,268	"	3,033,943
"	"	1896	...	1,019,987	"	4,957,113
"	"	1897	...	1,356,328	"	6,591,755
"	"	1898	...	1,546,607	"	7,516,511

The last year's sales of United States to New South Wales almost equals her entire purchases from all the other "foreign" countries on the globe. It will be seen that the United States market, for staple merchandise in the Colony, has steadily increased at a most unprecedented rate during the years under consideration, nearly the whole period of which has been marked by discouraging seasons. This market of staple merchandise and manufactured products, the chief value of which is labour, from £542,427 or \$2,636,196, worth in 1894, increasing in this short period to £1,546,607, or \$7,516,511, worth in 1898, means an increase in the five years of over 184 per cent., or a trade almost three times as great as it was but five years ago. The United States now supplies about 47 per cent. of the total merchandise bought by this Colony from "foreign countries."

On the 18th—on "China Day"—I addressed the Congress on "The Commercial Future of the Orient," but this I did as an American, and you will have no interest in my position on that occasion.

Among the most liberal and most enterprising of the delegates, there were many suggestions regarding the scope and influence of this "Conference"—as many called the assemblage—and a feeling that as the first idea of a general commercial Conference had been so successfully consummated, that another ought to be called in the no distant future.

If Christendom remains at peace, I will be surprised if there is not a meeting of substantially the same nature as this, either in London, Paris, or Berlin before the close of the first year of the coming century, as this Congress marks an epoch in the commercial advancement and the social unification of the race.

CONCLUSION.

While in Philadelphia, I carefully observed the character of the work done by, and the social bearing of, the delegates from the various Governments, trade societies, and business concerns of Australasia, and I assure you that the worth and the reputation of this country and its people were well advanced by the efforts of those able and loyal representatives. I have a very large acquaintance with the people and with the affairs of United States, and I assure you I lost no opportunity for improving the public or the private interests of your country or her citizens, during the period which I was officially entrusted with the confidence of the Colony of New South Wales.

I would further inform you that it is the purpose of the Philadelphia Commercial Museum, as the authors of the Congress, to publish in full the proceedings of that Conference, and to furnish copies, not only to the delegates, but to the Governments and societies represented at Philadelphia, so in due course I feel assured you will receive the fullest details regarding the matters of which this is necessarily but an imperfect report.

In conclusion, I would remind you, that there is to be no question of remuneration for this service, to be discussed or even considered, for while the duties of the position, as interpreted by my conception of duty, demanded an enormous amount of care, attention, and hard work, as well as considerable time and expense, to me it was a labour of love, a tribute of gratitude and respect for a people who, for over six years, have treated me with uniform courtesy and kindness. If, through my efforts on this interesting occasion, the material interests, the friendship, or the future happiness of our respective peoples are in the least advanced, I shall feel myself amply paid for this wearisome task.

I am yours,
GEO. W. BELL.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BREELONG BLACKS.

(PAPERS RESPECTING.)

Printed under No. 13 Report from Printing Committee, 27 September, 1900.

John Webster, Esq., to The Under Secretary for Finance and Trade.

Sir,

176, Glenmore-road, Sydney, 10 September, 1900.

As a practical man let me suggest a feasible way for capturing the Breelong blacks, who seem to be adepts at bailing up. Fit out and send to the district a Chinaman's vegetable cart, driven either by a Chinaman or a disguised one, and have two well-armed police officers concealed therein. That ought to fix them if they can only be induced to bail it up, and I have by same mail suggested this to Inspector-General Fosbery.

Yours, &c.,

JOHN WEBSTER.

Acknowledge please.—F.K., 13/9/1900. Mr. Robberds. Acknowledged.—C.E.F.R., 15/9/1900.
The Principal Under Secretary.—F.K., 17/9/1900. Seen.

R. H. Levien, Esq., M.P., to The Colonial Secretary.

Sir

Re the complaints of the Police and their pursuit to arrest the Breelong blacks.

Sydney, 13 September, 1900.

I have the honor to enclose you two letters on the subject, one from a gentleman and a magistrate, whose name I am not at liberty to disclose, and who resides in the Quirindi electorate.

And the other is from an old and respected resident of Nundle—Mr. W. Swan.

I hope you will have enquiries made and furnish me with an official reply at an early date.

Yours obediently,

HENRY LEVIEN.

[Enclosures.]

Dear Sir,

Nundle, 5 September, 1900.

Would you very kindly take measures to see that the Government keep a large stand of arms and ammunition in plenty at all police stations in the Colony, for the temporary use of civilians when murderers, and so forth, are raiding and terrorising a district. The Breelong blacks are here, and scarcely a rifle in the place. Could you have some sent to Nundle at once? I will write on this subject further on. But kindly have a quantity of rifles and revolvers sent to Nundle and police stations at once.

Kindly excuse haste.

I am, &c.,

To R. H. Levien, Esq., M.P.

W. E. SWAN.

P.S.—I had my rifle burnt when my hut got burnt down at the claim, or should have been on the trail myself.

Dear Sir,

Nundle, 9 September, 1900.

The blacks during the time they were here could quite easily have been taken, dead or alive, had there been any brains in vogue. Swain's place and Shorten's were left by Mrs. Alfred Swain and Mrs. Shorten with oceans of food in them, some of which the Governors took. These houses should have been garrisoned, and they would have got no food there. Then Pat. McKay's house was left with food in, and some of that was taken. Had all the houses been garrisoned, and the country patrolled, they would have gone no further than here. I gave all the information I could to the police where to cut them off above our claim, but they only sneered at me. However, they are past now, and on their way to Queensland, and we will deal with the question as it now stands; and I am earnestly asking you to press home upon the Government the following advice I am now offering, feeling confident you will do so at once:—

First, when the blacks are in a district, garrison every house round for 20 miles at the least; patrolling the country without a break night and day; one lot keeping the outside of circle patrols at their posts and boundaries, and a second party drawing the circle closer. Had this been done it would have secured them long ago.

Another point: Let Government rations be issued, with tobacco and light blankets, and ammunition and arms to those who wish to help; also, let pack-horses be used, conveying Government food to those who are hunting or patrolling these devilish murderers. They have to go to their homes (the people searching) for food, and this leaves a gap for the Governors to get away.

Again, let the civilians get paid. Mr. Byers, a gentleman—Kenneth Byers, of Sykes and Townsend's party, has been on the trail for seven weeks, doing good work, and spent over £10 of his own money, and Government has not even given him a cake of tobacco. Can you bring his case before the Premier, and get him some money sent. It is something scandalous that he cannot get any money from Government. He saw the bodies, and has sworn to follow to the end; but

what can he do now that his money is gone? I said I would ask you to help him in the matter. He is with Sykes, I think. He stayed with me two nights. "Mr. Byers (Kenneth, I think), Search Party, Breealong Murderers," would find him.

A lot of the inspectors are doing all they can to make the volunteers go back. Take the matter up of this determined trapper, Mr. Byers, at once, please, and see if Government cannot do something at once for him, and send him some money. Do try.

Again, married men who knew the country and can be of any assistance should have Government rations served out to their families until they return—many a man could follow them who cannot do so now. I know every foot of the way these blacks are going. But my family is large (8) and I have to toil for a crust, and the last two, most of it being dry has made matters very hard for me; but if I could get food for my family I would trail the fiends to the finish.

I have been on the job on the west coast of Africa. Was on a vigilance committee, and I know where these men will make, as I have been on the track; but I have not money to support my family if I leave, or would not let these dogs of blood and hell go another 40 miles. If you see any way to help my family to Government aid in my absence I will take the trail up. Tell the Government to garrison, and have an intercepting party all round Leonard's Creek, over Callaghan's Swamps, and right to Walcha and Tiara as close as it can be patrolled.

Garrisoning every house for a radius of 20 miles from the head of Leonard's Creek. These men will not go down the east coast country; but if compelled keep a little on the coast spurs, and if driven may keep a little lower down than they would wish, but always making on the higher shelves if they can. Tia gold-field and Yarrowitch, Nevison's station, Tiara, have garrisoned and patrolled, with instructions to all to leave no food in the house should they go out.

And now my dear friend I have done all I can in the matter. Had they stationed men where I asked them then this horrible scare to thousands of poor women and children would have been over. For God's sake wake up the Government—never mind the cost. Exterminate these fiends of hell; and give people who would go Government assistance for themselves and families while they are on the trail, and wipe this stain off the country, that they cannot protect what they govern—a most disgraceful stigma on our Government and all the vigilance committees. I have been on in other countries, and never knew a desperado or murderer to live two days. And there also should be Government vigilance committees of forty people in every district; it would cost little—men would ask nothing only for long distance service if they belonged to a committee. Do all you can for Byers.

I am, &c.,

To R. H. Levien, Esq., M.P.

W. E. SWAN.

Dear Sir,

I wish to draw your attention strongly to the conduct of the police in the pursuit of the Breealong blacks. The way the police have been acting is a complete disgrace to our powers of self-government. It is quite evident to those who have been in the line of march that either the majority of the police are afraid of their blessed skins being punctured, or are afraid that if the blacks were captured or killed the extra pay allowance, &c., would be stopped, together with the general picnic the police are holding, the reward for capture being in their eyes a mere bagatelle compared to the perquisites pertaining to the pursuit. Also the infamous way in which the police "commandeer" horse-feed and provisions from settlers on the line of march is so refreshing that were it done in the pursuit of any other cause there would certainly be ructions. The police proceedings ten days ago, as related to a son-in-law of mine, would be well worth rehearsing in the House. That gentleman, for instance, sent a man of his to guide about eighteen police to an outlying hut with all possible speed, and while en route, if the man was pushing along at all quickly, there would be police exclamations of "Oh, steady there; I say this is too much like work," &c., &c., and the result was when the man arrived at the destination out of the eighteen police he had only four or five in sight, and the blacks had just left, &c., &c.

Scandalous, ridiculous, and shaming to us as a community I call the whole police hunt.

Hoping you may not be one of those desirous of shielding these precious defenders of ours, who are so particular smart in knocking about and shopping poor harmless drunks, but on important occasions are far behind.

R. H. Levien, Esq., M.L.A., Sydney.

Mr. Police Superintendent Garvin to The Inspector-General of Police.

Police Department, Superintendent's Office, Tamworth, 19 September, 1900.

THERE really is no necessity for extra arms to be kept at stations. Some additional arms were sent up to the various districts. If the mobs of persons who went out in search of Governors had stopped at home it would have been much better, as they were under no control, and did more harm than good. Those who put themselves under police, in properly organised parties, were of great help. Houses in the Nundle district that were thought likely to be visited by the Governors were guarded, but they are too fly to be caught that way. They circle every place before entering to see if there are any tracks about, and if there are they will not go near it, or they watch a place for a long time before approaching. As for guarding all the houses and places for 20 miles round the Nundle district—a very rough country—it would take more police than there are in the North-Western District to do so. Five hundred men could not do it. Most of the other suggestions of Mr. Swan are impracticable. The police are working upon good lines, but it is no easy job to capture two smart aboriginals possessed of the cunningness of these offenders. The police are assisted by the very smartest bushmen in the respective districts they have passed through. There were two excellent chances of capturing offenders in the Nundle district lost through civilian parties not embracing the fine chances that offered.

As for the letter in type unsigned, I am satisfied if the police get a chance they will show the writer that they are not afraid, and will capture the Governors, even if some of them lose their life in the attempt. The men engaged in the pursuit are undergoing great hardships and privations. If the writer was out with either Mr. Cameron or Day's party he would very soon get full of the picnic, as he calls it.

THOS. GARVIN,

Superintendent.

Submitted for the Chief Secretary's information. This report might be shown to Mr. Levien, M.P.—EDM. FOSBERY, B.C., 20/9/1900. The Principal Under Secretary. Seen.

The Principal Under Secretary to The Inspector-General of Police.

Re Breealong blacks in the Gloucester District.

SOME few weeks since Mr. R. Atkinson Price, M.P., forwarded a communication to the Hon. John See, with enclosure from Mr. W. Flood, of Stroud.

Mr. Flood in his letter stated that a large number of blacks from the Port Stephens district had visited Stroud, and requested police protection, as they were under the impression that the Breealong blacks intended visiting their camp. Mr. Flood in his letter made an offer of service; but intimated that he would provide his own horses, rations, &c., and required no remuneration from the Crown, but only desired that arms and ammunition might be sent in order that a party of ten or twelve might be able to block the blacks from getting into that district. This would entail no expense upon the Crown. He further suggested that the character of arms required to be the old cadet rifles or carbines. He advised a short weapon being sent as being the best for the saddle. During the course of a personal interview which Mr. Price subsequently had with Mr. See, he pointed out that the most likely place where the blacks

blacks would travel would be either through Ben Hall's Gap, on the road to Glen Rock, or that they would make from Nundle, through Barry Gap, and on to the Barnard River, thence on to the head of the Paterson, the Chichester, or the Avon. This would give them the opportunity of continuing in the district which they particularly know, namely, the Paterson and the Upper Gloucester.

During that interview Mr. Price further pointed out the difficulties which the police would have in arresting them if they once were allowed to pierce the Dividing Range at either gaps mentioned, namely, at Hanging Rock or Glen Rock.

Mr. See at that time promised to place the matter before the Inspector-General, with a view to the arms being sent to enable Mr. Flood and the Stroud people to proceed to the gaps mentioned, with a view to intercepting the blacks.

Subsequently, it would appear from the correspondence that Mr. See called for a report by the Inspector-General. In the report sent to Mr. Price it states that, in the Inspector-General's opinion, it is unnecessary to send arms to Stroud, as there is no danger of the blacks reaching that portion of the country, and that there were no available arms in stock, as the whole of them had been sent towards the western portion, in the direction of Mudgee, Cassilis, &c.

At a subsequent interview, Mr. Price again pointed out during the course of conversation with Mr. See that the nature of the country referred to, and the knowledge which the Governors had of that country, justified him in urging the probabilities of their making for that place; but upon Mr. See's reassurance that the Inspector-General had carefully gone into the matter, he accepted that officer's views of the position. It now transpires that the views put forth by Mr. Flood in his letter to the Chief Secretary, and also those placed by Mr. Price before the Chief Secretary, were justified, as since that time the blacks have taken the identical course intimated, and have visited both Mitchell's house at Hanging Rock and Glen Rock station (Campbell's), and proceeded to Moonan Brook, and are now supposed to be proceeding in the direction of Paterson. This place being situated in the Gloucester district, Mr. Price naturally feels concerned as to the dangers which might result in consequence of the isolated position of the houses—some houses being 10 and 12 miles apart, and in some instances 15 miles.

Mr. See, during the course of conversation on the 12th instant, promised Mr. Price that he would have arms and ammunition sent to such places as suggested by him. Mr. Price now suggests that about five weapons be sent to the care of E. E. Campbell, Glen Rock, *via* Scone, together with ammunition; about ten rifles to W. Flood, hotel, Stroud (Mr. See having had an opportunity of meeting Mr. Flood, some two years since, is perfectly aware of the fearless character of the man, and his perfect knowledge of the bush); also five rifles and ammunition to Gloucester; and five to A. T. Laurie, J. P., Rawdon Vale.

Mr. Price forwards herewith a map, the places intimated being marked with a red cross.

Mr. Price would also suggest that a young man who is at the present time in the police force of this Colony, and who was born at the Paterson, and for many years engaged in droving stock throughout that country, and who was also a selector in conjunction with his father in the Upper Manning country, might be sent to that district, as he has a thorough knowledge of the bush, is a native of the place, is a capable athlete, and a splendid horseman. The young man referred to is W. Staunton, Darlinghurst (No. 3) Police Station, and Mr. See promised to send for him to have a conversation with him.

This matter wants to be expedited.

Mr. Price, from his own personal experience in going through that district, desires to point out that, in consequence of the hilly character of the country, very great care will be necessary in tracking, as every sound can be heard a considerable distance; in fact, a horse cantering can be heard for some miles off, and cooees are heard at a considerable distance. This is Mr. Price's experience in that country, and the young man referred to (Staunton) has been over every inch of the country, and can give considerable information with regard to it.

The Inspector-General of Police.—JOHN SEE, 15/9/1900.

C.W., B.C., 15/9/1900

Mr. Acting Police Superintendent S. J. Cotter to The Inspector-General of Police.

Re Bree-long blacks in Gloucester District.

Police Department, Superintendent's Office, West Maitland (Paterson temporary),

Sir,

18 September, 1900.

I have the honor to inform you with reference, in the first instance, to the paragraph with pencil mark on the margin on page 2 of the *précis*, that the main Ben Hall's Gap is almost where the Mount Royal Range branches off the Liverpool Range, 72 miles "as the crow flies" from Stroud, at least 80 by any practicable road. There is another Ben Hall's Gap in the Mount Royal Range a few miles, 8 or 10, nearer Stroud, and the gaps in the main range opposite Nundle are further from Stroud still. I think the long distance over rugged country would go in any case quite against the Stroud people going to these gaps to stop the blacks. I have not had anything to say on this subject before; but I do not think that even now the vicinity of the town of Stroud is seriously threatened; but if the Governors have any definite plan, it seems that of going north on one side or the other of the main range, and suggested by the route of the Dora blacks; but so far, if moving under that idea, their course has been turned several times—if hard pressed, they will turn anywhere—they may have no plan beyond evading death or capture as long as possible in the large tract of rough mountainous scrubby country they know so well, and no one can possibly say they may not reach the neighbourhood of Stroud any more than that of Morpeth. For reasons which will appear below, I had arranged to form "stand-by" parties at Copeland, Gloucester, and Stroud. I had arranged with Superintendent Garvin to send Sub-Inspector Saunders with some men from Nundle as a "stand-by" party at Copeland by Wednesday, 19th. The local constable tried at my instance to form "stand-by" parties at Gloucester and Stroud, but reported that they doubted they could do so. I, therefore, sent Sub-Inspector Sykes with Constable Staunton and others from here by Dungog to Gloucester to-day, and frankly the *précis* brought me to the conclusion that it would be well to post two constables as a "stand-by" party at Stroud, who are on their way. These are all exclusive of the usual police. Why all the steps but the last were already taken is:—I had been stationed at Copeland in 1881-2. In the latter half of the last week, I had a conversation with

with Mr. Ryman, Public School-teacher, Largs. He had been long in charge of the Barrington and Copeland schools, and is reputed to well understand the ways of aborigines. Mr. Ryman suggested to me that the Governors would be likely in a few days to make from about Lostock generally east as far as Bandon Grove and the Monkerai; thence north by the range between the Karuah and the head of the Avon to Berico; thence north-east to the mountains east of Gloucester, through country to suit them all the way, when they could either make north or into rough or scrubby coast country. Such knowledge as I retained of the country brought me to the same conclusion, and, after referring to Superintendent Garvin, I started a constable and some private persons from Stroud for Monkerai, two constables from Paterson for Bandon Grove, who joined one from Dungog, and formed with civilians two parties, and circulated Mr. Ryman's route among the police. It was the Dungog constable (Aden) and the civilians with him who came across the blacks, or at least their camp, on Monday morning last, near Bandon Grove and the Chichester River. The object of this relation is, Mr. Ryman's route proved the best forecast I yet know of, and it nowhere threatened the neighbourhood of Stroud. It has been unsuccessfully intercepted and turned, of course. Mr. Alexr. Laurie, J.P., of Rawdon Vale, has been known to me for many years, and he and his sons are gentlemen, who can safely be trusted with arms or anything else. From my long absence and recent return to the district, I do not know Mr. Flood. But as he lives at Stroud, there is no reason to depart from the regular course of placing any available arms at the Stroud Police Station, where it would be the duty of the police to keep them in order. If Mr. Campbell still wants arms, I do not know of any objection to his having any available. His place, Glenrock, is about 60 miles from Stroud; Nundle or Murrurundi is much nearer than Scone.

I have, &c.,
S. J. COTTER,
Acting Superintendent.

I have held the map.

P.S.—When last heard of, the blacks were at Smith's house, head of Williams River, 25 to 30 miles north-west of Dungog, 45 to 50 north-west of Stroud. They had so far left Mr. Ryman's route and doubled back.—S.J.C.

Submitted for the Chief Secretary's perusal in connection with a report I made on these papers on the 17th instant, 1292. Constable Stanton referred to is out with one of the parties; he applied to be sent. Mr. Price might be asked to read the report.—E.F., 20/9/1900. The Principal Under Secretary. Seen.

R. A. Price, Esq., M.P., to The Colonial Secretary.

Dear Mr. Sec,

22 September, 1900.

Some weeks since I pointed out that the police should take steps to intercept the "aboriginal murderers" at Barry Gap, Nundle, Hanging Rock, or at Glen Rock Gap (Campbell's), but you intimated that there was no danger in that direction, and arms were not sent to Campbell's. (The blacks adopted this route.)

Again, I requested that arms be sent to Mr. Flood, of Stroud, for a party of twelve, Flood finding the men and horses, &c., free, with a view to intercepting the blacks between the Gloucester and Williams; this was also refused, and I was advised that the blacks would not go in that direction; in fact, Mr. Fosbery, during an interview, informed me that "the blacks" were returning to Wollar. This I doubted, and I intimated to him that they would take a course in the direction of the Avon and Barrington. (This route has since been taken by "the blacks.")

Again, I requested that arms be sent to care of Mr. A. T. Laurie, Rawdon Vale, but I was advised that "the blacks" would not adopt that route, and the arms were refused. (The blacks were last seen in that direction, near Mr. J. Laurie's.)

I may point out that I thoroughly understand the country, and "the blacks" will make for the Cobark and Copeland spurs; they can then go to Nowendoc or take the coast spurs; there is abundance of brush, and except steps are taken to intercept them at the points indicated further outrages may result.

The local police are good bushmen, but I understand that operations are being directed from headquarters; this is a mistake.

I would suggest that two or three men be stationed at—

Curracabark.	Berrico.
Rawdon Vale.	Cobark.
Glen Rock.	Right-hand Branch, Copeland (so as to intercept the brush road).
Monkerai, head of Avon.	Left-hand Branch, Copeland.
Lawler's Creek.	Giro.
Ranthie.	Hungry Hill, Nowendoc.
Upper Gloucester.	Gloucester.
Coneae.	Bell Bowrie.
Barry.	Ward's River.
Barrington (Torley's or Higgins).	
Bowman River and corner.	

The local men could show the police the ridges and spurs along which the blacks would go.

The following local men know the country:—

Mr. A. T. Laurie, Rawdon Vale.	Mr. G. Brockwell, hotel-keeper, Quirindi.
Mr. W. N. Laurie, Rawdon Vale.	Mr. Corbett, Giro.
Mr. J. Laurie, Kerripit.	Mr. J. R. Higgins, Gloucester River, Barrington.
Mr. J. Cornish, Bowman.	Mr. Etheridge, Gloucester.
Mr. C. Taylor, Barrington.	

I can furnish other names if desired.

Hon. J. See, M.P., Chief Secretary.

Yours, &c.,
R. A. PRICE.

The Inspector-General of Police for report.—J.S., 24/9/1900.

The

The Inspector-General of Police to The Principal Under Secretary.

Police Department, Inspector-General's Office, Sydney, 24 September, 1900.

Report for the Chief Secretary on letter from Mr. Price, M.P.

I HAVE sent a copy of Mr. Price's letter (returned herewith) to Mr. Garvin—who will be at Copeland to-night—for report.

Operations are not directed from headquarters. Superintendent Cotter was for a long time stationed at the Barrington when he was a young man and knows the country well. Mr. Garvin was only temporarily absent.

Additional parties of experienced bush police, who volunteered for the duty, have been sent to the district, and further supplies of arms have also been forwarded, but it is obvious that I am unable to meet all the very numerous demands made upon me by private individuals for arms.

I did not inform Mr. Price that the criminals were returning to Wollar, or going in any other direction, merely that the local parties reported that their movements indicated such routes.

EDMUND FOSBERY,
Inspector-General of Police.

[Enclosure.]

Police Department, Armidale, Superintendent's Office, Northern District, 23 September, 1900.

Re Breealong Murderers.

[Memo.]

I SHALL leave by mail train to-night (the first train out after receipt of the Inspector-General's wire) for West Maitland, and start at once for either Copeland or Gloucester, I cannot say which at present.

My impression is that Governors will make from where they are towards Pegua, Barney, Giro, or Nowendoc districts, or by Cooplacurripa; thence between Yarrowitch and Kangaroo Flat, or Mooraback, and down the Macleay; all terribly rough scrubby country.

I am convinced that Governors always keep the tops, and that they never will be got by horsemen, as horses make too much noise; foot parties only will drop upon them. I have thoroughly impressed this upon police.

Cobark Creek (not River, as stated in wire sent me), where the girl Burley was raped by Jim Governor yesterday, is 12 miles west of Copeland and 3 miles north-east of Mr. T. Laurie's Rawden Vale station. It is thought offenders are making for head of the Bowman River.

The Inspector-General of Police, Sydney.

THOS. GARVIN,
Superintendent.

Armidale.

SUB-INSPECTOR Sykes wires from Copeland: At 6:30 last night, quite dark, when 200 yards from an empty house he was approaching to wait for Governors a rifle was fired in front of house. Police fired in direction of flash, and, running to house, found it broken open by Governors. Shot fired evidently as warning to brother. Provisions intact. House on upper part of Bowman Creek Ranges; other abandoned houses at intervals some few miles along route. Place is 8 miles west of Copeland, 3 miles from Burley's house. I have ordered Sydney foot police upon arrival to be sent Copeland by coach to-morrow.

THOS. GARVIN,
Superintendent.

The Inspector-General of Police.

Armidale.

WILL leave for Maitland by train to-night, and leave there for Copeland upon arrival if I can arrange for conveyance reaching there to-morrow night if possible.

THOS. GARVIN,
Superintendent.

R. A. Price, Esq., M.P., to The Colonial Secretary.

Dear Mr. See,

24 September, 1900.

Since writing I find that my estimate of the direction which the aboriginal murderers would take to be correct. I have expressed my regret that the arms, &c., had not been sent to Mr. Laurie, and I stated that "the blacks" would make for Cobark and the Copeland spurs; but Mr. Fosbery thought I was wrong, and, in fact, to prove to me that I was in error, he showed me a wire from his officers to the effect that "the blacks" were returning to Wollar; this I doubted, and I argued with him that "the blacks" would come down the spurs to the Avon, or Rawdon Vale, at Cobark; he, however, thought I was mistaken, and the arms were not sent to Mr. Laurie.

As the people in the Gloucester electorate are very anxious, I must strongly urge upon you the necessity of taking steps to intercept "the blacks" at the various points mentioned in my previous letters and interviews; if they are not prevented from crossing into the "brushes" between the Myall, Krumbach, and Port Stephens, their capture will be rendered still more difficult. I am informed that the noxious bodies of police are moving in large sections, and that there is an absence of cohesion between the various bodies. I cannot say if such is the case, but the best plan would be to place a few men not in uniform at the various points to intersect the murderers, and then arrange for visiting patrols between the points with some local men who know the country.

I would suggest that—

Mr. W. Galvin, Ward's River;

Mr. N. McNeill, Stroud;

Mr. Rudkin, Berrico;

Mr. Dan Ross, Berrico;

Mr. Etheridge, Manager, A.A. Co., Gloucester;

Mr. Titcume, jun., Monkerai;

Mr. Higgins, Glen Rock and Monkerai;

Mr. Dan Titcume, Glen Rock;

Mr. Dan Young, Copeland;

Mr. Franks, Curracabark;

all good bushmen, who know this country thoroughly, should be advised in this matter.

May I point out that horses can be heard at a considerable distance, therefore caution should be exercised. There is a steep spur from Cobark to the Right-hand Branch, Copeland, with scrub and brush on both sides, where "the blacks" could be intercepted, and there is another spur leading from the Avon to Monkerai and Wangat, where a similar course could be adopted, and the same towards Nowendoc.

I shall be glad if this matter is dealt with as early as possible.

Yours, &c.,
R. A. PRICE.

MEMO.—I understand that there are a large number of Winchesters in the O. Stores, Circular Quay, where they have been since the "Soudan Expedition."—R.A.P.

Telegram

Telegram from R. A. Price, Esq., M.P., to The Inspector-General of Police.

Rockdale, 24 September, 1900.

Just received urgent wire from A. T. Laurie, J.P., Barrington, urging extra police being sent to district immediately; also, arms and ammunition. District Gloucester in state of terror, consternation. Immediate action absolutely necessary. Must urge strong measures at once. Prompt action imperative.

R. ATKINSON PRICE.

The Inspector-General of Police to R. A. Price, Esq., M.P.

Sir, Police Department, Inspector-General's Office, Sydney, 25 September, 1900.
In reference to your telegram of last evening, I beg to inform you that Superintendent Garvin is now at Copeland, and has been instructed to see Mr. Laurie, J.P. Additional police and arms have been sent to the district already, and any further action thought necessary will be promptly taken.

I have, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

Submitted for the Chief Secretary's perusal.—E.F., 25/9/1900. The Principal Under Secretary, &c., &c., &c. Please hand to Mr. See at once.—E.F.

Telegram from The Inspector-General of Police to Mr. Police Superintendent Garvin.

Copeland, 25 September, 1900.

ATKINSON PRICE, M.P., states Mr. Laurie, Barrington, urges extra police and arms. Gloucester district in state terror. See Laurie. Arms and men already sent. Any recommendations you make will receive attention.

FOSBERY,

Inspector-General.

R. A. Price, Esq., M.P., to The Colonial Secretary.

Dear Mr. Sec,

25 September, 1900.

You will see by the enclosed that the Gloucester district is in a state of terror at the failure of the police to capture the black murderers.

I have for some time past been urging that men should be stationed at outlying places and the groups connected with patrols between the points. I would also point out the necessity of placing men near Mount Gangah and at Mr. Thomas', and Mr. Hook's, Bowman's, and Craven's; also, the necessity of watching the spurs leading to "The Cells" and "Nowendoc."

There is no telephone at Ward's River, thus 30 miles of country has no telephonic communication. I would suggest that a wire be run from Gloucester or Stroud to Ward's River at once, and an instrument placed at Mr. A. S. Phillips. There would be no necessity for the erection of poles, as the telegraph poles could be used, or the connection could be made with Dungog. My reasons for urging this telephonic connection at once being that it would facilitate the capture of the murderers should they make for the bush in the direction of the Myall.

Yours, &c.,

R. A. PRICE.

[Enclosure.]

Telegram from A. T. Laurie, Esq., to R. A. Price, Esq., M.P.

Rawdon Vale, 24 September, 1900.

COUNTRY in a state of terror. Urge more comprehensive measures.

A. T. LAURIE.

The Inspector-General of Police to The Colonial Secretary.

Police Department, Inspector-General's Office, Sydney, 25 September, 1900.

I HAVE already reported to the Chief Secretary, and taken action upon the within, except as regards the telephone, which would take some time to erect, and would be costly. Shall I obtain a report?

I expect, in the course of the day, to hear in reply from Mr. Garvin.

More armed police are in readiness to go if Mr. Garvin consider requisite.

E. F.

The Inspector-General of Police to The Principal Under Secretary.

Sir,

Police Department, Inspector-General's Office, Sydney, 25 July, 1900.

Referring to the murders committed by aborigines at Bree-long, near Gilgandra, on the 20th instant, I have the honor to recommend that a Government reward of £200 be offered for the arrest of each of the two offenders [£400] now at large, and submit herewith for the approval of the Chief Secretary draft notice of such reward. This, when approved, to be published in the *Government and Police Gazettes*, and posters issued for distribution.

I have, &c.,

EDMUND FOSBERY,

Inspector-General of Police.

Approved.—J.S., 25/7/1900. The Inspector-General of Police.—C.W., P.U.S. B.C., 26/7/1900.

In view of the fact that the most strenuous efforts of the police and others have failed to effect the capture of these murderers, I now beg to recommend that the reward be increased to £1,000 for arrest of each offender, and submit herewith draft notice for approval and publication in *Government Gazette*.—EDMUND FOSBERY, Inspector-General of Police, 25/9/1900. The Principal Under Secretary.

MURDER.

MURDER.

£2,000 REWARD.

WHEREAS on the 31st July last a Government reward of £200 was offered for the apprehension of each of the aboriginals—"Jimmy Governor" and "Joe Governor"—charged with the wilful murder of the Mawbey family and others, at Breelong, near Gilgandra, on the 20th July last, notice is hereby given that in lieu of the above reward a Government reward of £1,000 is now offered for the capture of each of the said offenders.

Chief Secretary's Office,
Sydney, September, 1900.

MURDER.

£400 REWARD.

WHEREAS on the night of the 20th instant Helen Josephine Kerz, Grace Mawbey, Percival Mawbey, Hilda Mawbey, and Mrs. Mawbey were wilfully murdered, and Elsie Clarke dangerously wounded, at Breelong, near Gilgandra, by aboriginals: And whereas at an inquest held on the 24th instant, a verdict of "wilful murder" was returned against "Jimmy Governor," "Joe Governor," "Jack Underwood" (aborigines) "Jack Porter" and "Ethel Governor." Notice is hereby given that a reward of £200 will be paid by Government for the apprehension of each of the two first-named offenders.

Chief Secretary's Office,
Sydney, 25th July, 1900.

JOHN SEE.

May issue.—J.M.G., 25/7/1900.

Gazette Notice.

SUPPLEMENT to the New South Wales *Government Gazette*, published by authority, Wednesday, 25th July, 1900.

MURDER.—£400 REWARD.

Chief Secretary's Office, Sydney, 25 July, 1900.

WHEREAS on the night of the 20th instant, Helen Josephine Kerz, Grace Mawbey, Percival Mawbey, Hilda Mawbey, and Mrs. Mawbey were wilfully murdered, and Elsie Clarke dangerously wounded, at Breelong, near Gilgandra, by aboriginals: And whereas at an inquest held on the 24th instant, a verdict of "Wilful Murder" was returned against "Jimmy Governor," "Joe Governor," "Jack Underwood" (aborigines), "Jack Porter," and "Ethel Governor." Notice is hereby given that a reward of Two Hundred Pounds will be paid by Government for the apprehension of each of the two first-named offenders.

JOHN SEE.

Memorandum by the Inspector-General of Police for The Colonial Secretary.

Police Department, Inspector-General's Office, Sydney, 25 September, 1900.

A CONSIDERABLE number of applications have been received from members of the Police Force to be allowed to proceed in pursuit of the aboriginal murderers, and many have been selected, armed, and despatched to the country from time to time. Six were sent on the 23rd, and six more (fully armed) are leaving this afternoon.

In addition to the ordinary police arms—rifle carbines, and revolvers—the Government has authorised the purchase of shot-guns and Winchester rifles, which have been distributed amongst the various parties.

Volunteer parties have been armed and assisted as far as possible.

Superintendent Garvin is now at Copeland controlling operations, and the District Superintendent Mr. Cotter, was for a long time stationed at that place.

The increased Government reward to £1,000 for each offender has been notified throughout the country.

EDMUND FOSBERY,

Inspector-General of Police.

Telegram from Mr. Police-Superintendent Garvin to The Inspector-General of Police.

Copeland, 25 September, 1900.

GOVERNORS' whereabouts being at present unknown, useless to send arms here. By time they reached this and were distributed Governors would probably be 30 miles away. To collect arms for redistribution in other parts would materially interfere with pursuit. If I require extra police will requisition you. From all I can learn, police are working well, but this is roughest country offenders have been in yet, with dense scrubs.

THOS. GARVIN,

Superintendent.

Submitted.—E.F., 25/9/1900. Hon. Chief Secretary.

NEW SOUTH WALES.

ALIENS ADMITTED TO NEW SOUTH WALES.

(RETURN RESPECTING.)

Printed under No. 5 Report from Printing Committee, 19 July, 1900.

[*Return in reply to Mr. Quinn's Question No. 14, of 5th July, 1900, Votes and Proceedings No. 12.*]

Questions.

- (1.) What is the number of aliens admitted to New South Wales since the passage of the Act for the restriction of aliens and undesirable immigrants?
- (2.) What is the nature of the test to which such immigrants are submitted?
- (3.) Is such test varied for individual immigrants?
- (4.) By what officer or officers are such immigrants tested?

Answers.

- (1.) 288.
- (2.) That provided by the 3rd section of the Immigration Restriction Act.
- (3.) No. The necessity for varying it has not yet arisen.
- (4.) By officers of Customs specially appointed for the purpose.

MANUFACTURE OF LYDDITE.
(REPORT RESPECTING.)

Printed under No. 13 Report from Printing Committee, 27 September, 1900.

[Laid upon the Table in accordance with promise made in answer to Question No. 3, of 12th September, 1900.]

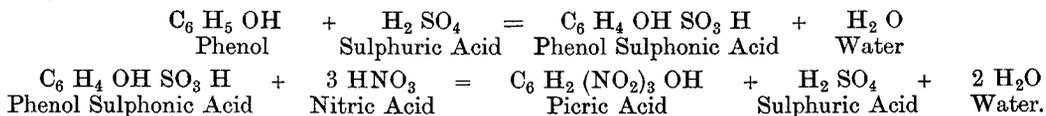

- (3.) Lyddite Factory :—*Mr. Carroll*, for *Mr. Quinn*, asked the Colonial Secretary,—
- (1.) Has his attention been drawn to a proposition to establish a lyddite factory in Melbourne, the material to be drawn from New South Wales, where, it is stated, such material is abundant?
- (2.) Will he inquire if such materials are abundant in New South Wales, with a view to having a lyddite factory started here, instead of allowing Melbourne enterprise to exploit our raw material in this respect?

Mr. See answered,—I will cause inquiries to be made.

Memorandum from The Acting Firemaster to The Assistant Adjutant-General.

LYDDITE is picric acid melted at a temperature of 290° Fahr., and poured into shells, when it crystallises, and is then known as lyddite.

Picric acid, $C_6 H_2 (NO_2)_3 OH$ is made by the action of sulphuric and nitric acids on phenol, generally called carboic acid, as follows :—

Phenol, or carboic acid, is extracted from coal tar purified by fractional distillation, and as there are large coal-fields in this Colony it could be easily and cheaply made.

Nitric and sulphuric acids are made in large quantities in England, and would probably be cheaper to import than to make locally.

A. H. SANDFORD, Captain, R.A.A.,
Acting Firemaster.

7/9/00.

Ask Captain Sandford to find out if these acids are made in quantity in the Colony.—J. E. D. TAUNTON, Bt.-Col., A.Q.M.G., 12/9/00. The Assistant Adjutant-General.—Mr. George Elliott, of the firm of Elliott Bros., of this city, manufacturers and importers of chemicals, informs me his firm is prepared to make sulphuric and nitric acids in any quantity.—A. H. SANDFORD, Capt., R.A.A., Acting Firemaster, 14/9/00.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CHURCH OF ENGLAND PROPERTY TRUST, DIOCESE OF GOULBURN.

(PETITION FROM CAPTAIN COMTE DE ROSSI PRAYING THE HOUSE TO GRANT A SELECT COMMITTEE OR SUCH OTHER RELIEF AS WILL FREE HIM FROM FURTHER VEXATIOUS AND HARASSING LITIGATION.)

Received by the Legislative Assembly, 3rd July, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

1. That, in consequence of a Petition, based upon what was alleged to be a compromise, presented by certain persons calling themselves the Church of England Property Trust, Diocese of Goulburn—Augustine Matthew Betts, Andrew Faithfull Gibson, and Joseph Smithers Hayes—to the Honorable William Owen, Chief Judge in Equity, on the 2nd of November, 1893, requesting His Honor to appoint the Right Reverend William Chalmers, Bishop of Goulburn, to be sole trustee of St. Saviour's three Crown grants, and all moneys and interests thereto pertaining, subject to litigation being settled.

2. The Church of England Property Trust, Diocese of Goulburn—Augustine Matthew Betts and others—plaintiffs, having no legal or statutory right to present the said Petition, their claims to the grant and moneys of St. Saviour's trust had been dismissed out of Court, with costs in favour of your Petitioner, on the 23rd day of July, 1893, three months previously.

3. Your Petitioner, Francis Robert Lewis, The Comte de Rossi, is the duly appointed trustee of St. Saviour's Church, three Crown grants, and moneys thereto pertaining, by virtue of his appointment, by an instrument in writing, by Frederick Barker, Metropolitan Bishop of Sydney, under his hand and episcopal seal, bearing date the 12th March, 1856, under the Act 8 William IV No. 5, sections 5 and 6. And by the operation of the Act 26 Vic. No. 12, section 63, and by two deeds of trusts, issued from the Equity Court in the years 1868, for the sum of £3,300, and in the year 1875 for the sum of £722 7s. 2d., which sums of money, less £300 for expenses incurred in relation to the Trust, were placed by your Petitioner, and others since deceased and resigned, in the hands of Augustine Matthew Betts, solicitor, Goulburn, to invest for the said trustees, who, at that time, in 1875, claimed to be a trustee of St. Saviour's.

4. In the years 1887 and 1888 four other trustees were appointed under the Act 8 William IV No. 5, section 5, and Act 26 Victoria No. 12, section 63, and duly registered, and were your Petitioner's co-trustees in 1888, in the room of Betts and Gibson, who have resigned.

5. The present Bishop of Goulburn's alleged appointment as sole trustee on the 8th of November, 1893, was made in contravention of the terms of the Act 7 William IV No. 3, sections 7 and 10, and preamble of the Act 8 William IV No. 5, and section 17.

6. The said Bishop of Goulburn, by virtue of his alleged appointment, wrested from your Petitioner and his co-trustees their trusts, which they held, and still hold, by statutory right, conferred upon them in the year 1888, and by your Petitioner since the year 1856 (covering a period of forty-six years).

7. Further, in violation of the terms expressed by the plaintiffs in their Petition in 1893, whereby they obtained an order appointing the Bishop of Goulburn sole trustee, your Petitioner has been sued by the said Bishop, and ordered to pay the sum of £129 and interest thereon from the year 1885, which sum had already been the subject of a suit in Equity, and paid into Court by your Petitioner on the 20th of March, 1894, and the same was received by Mr. Augustine Matthew Betts from the Court on the 16th April, 1894.

8. Also for the sum of £150, and interest thereon from the year 1890, which sum of £150 was obtained by your Petitioner and his co-trustees in effecting a sale to the Railway Commissioners, in the year 1890, of a portion of St. Saviour's glebe, for which a title of conveyance was given upon their right and title as trustees being submitted to and approved by the Crown Solicitor on behalf of the Railway Commissioners, who in April last paid your Petitioner the sum of £12 12s., which they had omitted to pay

for the conveyance of the said title given in 1890. The purchase money therefor was spent in legal expenses incurred during the years 1887 to 1890, and in drawing up conveyances to newly-appointed trustees aforesaid, drawing up lease and recoupment of portion of costs still due by the Trust to your Petitioner, as set out in the Trustees Act 26 Victoria No. 12, section 31, and the Trustee Act No. 4, 1898, section 69, which sum of £150 was the subject among other things of the litigation referred to as agreed should be settled by the plaintiffs.

9. That on the 5th June, 1900, your Petitioner sought by Petition for a rescission of the order appointing the Bishop of Goulburn sole trustee of St. Saviour's in 1893 in room of your Petitioner and his co-trustees without their consent, who are duly registered under the Act 8 William IV No. 5, sections 5 and 6, and Act 26 Victoria No. 12, section 63, but His Honor disregarded the right accorded in the 56th section of the Trustee Act No. 4, 1898.

10. The Court had no legal power to deprive your Petitioner and his co-trustees of their statutory rights by appointing a sole trustee in contravention of the statute law, and also contrary to law and equity, which does allow of the appointment of a single trustee where more had been originally appointed nor to remove a trustee who is willing to act.

11. Your Petitioner has twice been criminally prosecuted in defence of his rights as a trustee, and acquitted under the Criminal Law Amendment Act, 350, under which he was enabled, by his authority of appointment as a trustee of St. Saviour's Church, under sections 5 and 6 of the Act 8 William IV No. 5, to vindicate all his actions as set out in Snell's Principles of Equity. "If a matter has already been investigated in a Court of Justice according to the common rules of investigation a Court of Equity cannot take upon itself to enter into it again, and parties seeking redress by criminal proceedings were also the plaintiffs in Equity the Court would have restrained from proceeding upon the matter in both a civil suit and a criminal prosecution." Notwithstanding the foregoing, the plaintiffs in June and July, 1893, representing the same parties, with Augustine Matthew Betts, brought a suit in Equity upon the same charges of which your Petitioner had been twice acquitted after proving to the jury and the Attorney-General his statutory right as a trustee.

12. Your Petitioner does not owe the moneys ordered to be paid by the Honorable Court of Equity, nor does he admit the right of the said Bishop of Goulburn to any claim therefor.

13. Your Petitioner produced the receipts and expenditure of the two sums now demanded at his hands, thereby showing that in one instance the amount of £122 19s. 2d. had already been paid twice by your Petitioner out of pocket, and a balance is due to your Petitioner of £57 17s. 6d., costs paid out of pocket in the execution of his trust. Your Petitioner has been made to suffer a negation of natural justice by reason of his title and claim as a trustee being disregarded and his costs out of pocket incurred in the faithful execution and protection of his trust during the past forty-six years being disallowed by the Master in Equity, in consequence, as he stated, that your Petitioner and his co-trustees were not trustees.

Your Petitioner therefore humbly prays,—

1. That your Honorable House may be pleased to have laid before it the appointments of your Petitioner and his co-trustees as trustees of St. Saviour's Church and lands and moneys for examination by a Select Committee of Inquiry to report thereon and the statutory rights of your Petitioner and his co-trustees, together with two deeds of trust of moneys thereinbefore referred to, conveyances of title of land, portions of St Saviour's glebe sold to the Railway Commissioners, and all leases made of portions of said glebe.
2. That your Petitioner may have the protection which he seeks at the hands of your Honorable House against the unjust demands of the judgment order made on the 25th June, 1900, by the Honorable William Owen, Judge sitting in Equity, that order in its incidence being made contrary to law and statute as against a duly-appointed trustee for nearly half a century and through instrumentality all the trust funds of St. Saviour's was obtained.
3. That your Petitioner may have relief from further vexatious and harassing litigation to which he has been subjected for over thirteen years and still continuing, thereby depleting and expending the said trust funds in merciless litigation, persecution, and financial injury to your Petitioner, who during the period of forty-six years holding office as trustee has not expended, used, or lost one farthing of the trust funds which he has not honourably accounted for according to the Trustee Act No. 4 of 1898, section 69.
4. That your Petitioner may have such relief as in your wisdom you may deem fitting.

And your Petitioner, as in duty bound, will ever pray.

DE ROSSI,
Captain, Comte.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 43. TUESDAY, 18 SEPTEMBER, 1900.

16. RACING ASSOCIATION BILL:—The Order of the Day having been read,—Mr. Gillies moved, That this "Bill" be now read a second time.
Debate ensued.

Point of Order:—The Honorable Member for Paddington, Mr. Neild, submitted that the Racing Association incorporated under clause 3 was not referred to in the Title, and was therefore beyond the Order of Leave; and that as the Bill related to Trade it should have been introduced in a Committee of the Whole.

Mr. Speaker ruled that the Bill was in order.

Mr. Watkins moved, That the Question be amended by leaving out all the words after the word "Bill," and inserting the words "be referred to a Select Committee for inquiry and report."

"(2.) That such Committee consist of Mr. Reid, Mr. Hogue, Mr. J. C. L. Fitzpatrick, Mr. Crick, Mr. Levien, Mr. Gillies, Mr. Taylor, Mr. Gormly, Mr. Archer, and the Mover," instead thereof.
Question proposed,—That the words proposed to be left out stand part of the Question.

Debate continued.

Mr. Dick moved,—That this Debate be now adjourned.

Question put.

The House divided.

Ayes, 11.

Mr. Brunker,
Mr. Neild,
Mr. Cook,
Mr. Carroll,
Mr. Dick,
Mr. Arthur Griffith,
Mr. Ashton,
Mr. Cann,
Mr. Holman.

Tellers,

Mr. Morgan,
Mr. Thomas Brown.

Noes, 25.

Mr. Crick,	Mr. J. C. L. Fitzpatrick,
Mr. Hogue,	Mr. Fegan,
Mr. Anderson,	Mr. Phillips,
Mr. Millard,	Mr. Edden,
Mr. Watkins,	Mr. Macdonald,
Mr. Price,	Dr. Graham,
Mr. McLean,	Mr. Cohen,
Mr. Cruickshank,	Mr. Terry,
Mr. See,	Mr. Watson.
Mr. Bennett,	<i>Tellers,</i>
Mr. Hurley,	
Mr. Law,	Mr. Taylor,
Mr. Ferris,	Mr. Gillies.
Mr. O'Connor,	

And so it passed in the negative.

Question,—That the words proposed to be left out stand part of the Question,—put, and voices given,—Mr. Speaker stated his opinion that the *Noes* had it.

Whereupon, Division called for, and Mr. Speaker having, in accordance with Standing Order No. 213, directed the Members to take their seats to the right and left of the Chair respectively, declared the determination of the House to be in the *negative*, as there were only five Members in the minority who had challenged his decision.

The following are the names of the Members in the Minority, viz.:—Mr. Dick, Mr. Brunker, Mr. Arthur Griffith, Mr. Neild, and Mr. Cook.

Question,—That the words proposed to be inserted be so inserted,—put and passed.

Question then put,—That this Bill be referred to a Select Committee for inquiry and report.

(2.) That such Committee consist of Mr. Reid, Mr. Hogue, Mr. J. C. L. Fitzpatrick, Mr. Crick, Mr. Levien, Mr. Gillies, Mr. Taylor, Mr. Gormly, Mr. Archer, and the Mover.

The House divided.

Ayes, 29.

Mr. Hurley,	Mr. O'Connor,	Mr. Edden,
Mr. Crick,	Mr. Cohen,	Mr. Thomas Brown,
Mr. See,	Mr. Hogue,	Mr. Neild,
Mr. Taylor,	Mr. J. C. L. Fitzpatrick,	Mr. Fegan,
Mr. Morgan,	Mr. Ferris,	Mr. Terry.
Mr. Gillies,	Mr. Phillips,	<i>Tellers,</i>
Mr. Price,	Mr. Cruickshank,

Mr. Anderson,	Mr. McLean,	Mr. Watson.
Mr. Law,	Mr. Millard,	
Mr. Macdonald,	Mr. Cann,	

Noes, 2.

Tellers,
Mr. Dick,
Mr. Cook.

And so it was resolved in the affirmative.

VOTES No. 49. TUESDAY, 2 OCTOBER, 1900.

5. RACING ASSOCIATION BILL:—Mr. Watkins (*by consent*) moved, without Notice, That the Select Committee on "Racing Association Bill" have leave to sit during the sittings of the House or during any adjournment thereof.
Question put and passed.

VOTES No. 74. WEDNESDAY, 14 NOVEMBER, 1900.

15. RACING ASSOCIATION BILL:—Ordered, on motion of Mr. Watkins, that the following Message be carried to the Legislative Council:—

MR. PRESIDENT,—

The Legislative Assembly having appointed a Select Committee on "Racing Association Bill," and the Committee being desirous to examine the Honorable Henry Carey Dangar, a Member of the Legislative Council, in reference thereto, requests that the Legislative Council will give leave to its said Member to attend and be examined by the said Committee on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 14th November, 1900.*

VOTES No. 75. THURSDAY, 15 NOVEMBER, 1900.

9. RACING ASSOCIATION BILL:—Mr. Speaker reported the following Message from the Legislative Council:—

MR. SPEAKER,—

In answer to the Message from the Legislative Assembly, dated the 14th November, 1900, requesting leave for the Honorable Henry Carey Dangar, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly on the "Racing Association Bill," the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee if he thinks fit.

*Legislative Council Chamber,
Sydney, 15th November, 1900.*

JOHN LACKEY,
President.

WEDNESDAY, 31 OCTOBER, 1900.

MEMBERS PRESENT:—

Mr. Watkins in the Chair.

Mr. Gillies,

Mr. Taylor.

Mr. Hogue,

Thomas Willis (*Journalist*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till Friday, 2 November, at 11 o'clock.]

FRIDAY, 2 NOVEMBER, 1900.

MEMBERS PRESENT:—

Mr. Watkins in the Chair.

Mr. Archer,

Mr. J. C. L. Fitzpatrick,

Mr. Gillies,

Mr. Taylor.

Adrian Knox recalled and further examined.

Witness handed in copy of regulations for administration of Distressed Jockeys Fund (*Appendix B1*). Copy of New Rules with regard to trainers, to follow Rule No. 76 (*Appendix B2*). List of Dates of A. J. C. Racing Fixtures for 1900-1901 (*Appendix B3*).

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 7 NOVEMBER, 1900.

MEMBERS PRESENT:—

Mr. Watkins in the Chair.

Mr. Archer,

Mr. J. C. L. Fitzpatrick.

Samuel Robert Kennedy (*Commission Agent*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at 2 o'clock.]

THURSDAY, 8 NOVEMBER, 1900.

MEMBER PRESENT:—

Mr. Watkins.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 14 NOVEMBER, 1900.

MEMBERS PRESENT:—

Mr. Watkins in the Chair.

Mr. J. C. L. Fitzpatrick,

Mr. Gillies,

Mr. Hogue,

Mr. Taylor.

Samuel Robert Kennedy, re-called, and further examined.

Witness withdrew.

Alexander Armstrong Farthing, called in, sworn, and examined.

Witness withdrew.

Resolved (*on motion of Mr. Taylor*),—That the Chairman take steps to obtain the attendance of the Honorable H. C. Dangar, M.L.C.

[Adjourned till To-morrow, at 2:15 o'clock.]

THURSDAY, 15 NOVEMBER, 1900.

MEMBERS PRESENT:—

Mr. Watkins in the Chair.

Mr. Archer,

Mr. Gillies.

Mr. Leven,

Mr. Taylor.

Robert Fleming (*Secretary of the Newcastle Jockey Club*), called in, sworn, and examined.

Witness withdrew.

Chairman submitted claim from Mr. R. Fleming for £2 2s. 6d., witness' expenses.

Claim considered and passed.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY,

TUESDAY, 20 NOVEMBER, 1900

MEMBERS PRESENT —

Mr Watkins in the Chair

Mr Gillies, | Mr Levien,
Mr Hogue, | Mr Taylor

Entries from Votes and Proceedings, containing Message to Legislative Council, requesting leave for the Honorable H C Dangar to attend and be examined before the Committee, and Message from Legislative Council, intimating that leave had been granted to its said Member to attend and be examined if he think fit,—read by the Clerk

The Honorable Henry Carey Dangar, M L C (*Chairman of the Australian Jockey Club*), sworn, and examined

Witness withdrew

[Adjourned till To-morrow, at 2 o'clock]

WEDNESDAY, 21 NOVEMBER, 1900.

MEMBERS PRESENT —

Mr Watkins in the Chair.

Mr Gillies, | Mr Hogue,
Mr Taylor

William Lovel Davis (*Manager and Secretary, Canterbury Park Racing Club*), called in, sworn, and examined

Witness withdrew.

Joseph Burton (*Horse-trainer*), called in, sworn, and examined

Witness withdrew.

[Adjourned till To-morrow, at 2 30 o'clock]

THURSDAY, 22 NOVEMBER, 1900

MEMBERS PRESENT —

Mr. Watkins in the Chair

Mr. Aicher, | Mr. Gillies,
Mr Taylor

Henry Harris (*a member of the Committee of the Rosehill Racing Club, and a shareholder of the Kensington Racing Club*), called in, sworn, and examined

Witness withdrew

Patrick O'Mara (*Manager of the Kensington Racing Club*) called in, sworn, and examined

Witness withdrew

[Adjourned till Wednesday next, at 11 o'clock]

WEDNESDAY, 28 NOVEMBER, 1900

MEMBERS PRESENT —

Mr Watkins in the Chair

Mr J C L Fitzpatrick, | Mr Gillies,
Mr Taylor

Charles Septimus Guest (*Secretary of the Hawkesbury Racing Club*) called in, sworn, and examined

Witness withdrew.

Patrick John Hourigan (*Solicitor*) called in, sworn, and examined

Witness withdrew.

The Chairman submitted a claim from Mr C S Guest for £1 9s. 9d witness' expenses.

Claim considered and passed

Re-assembling of the Committee to be arranged by the Chairman

[Adjourned]

FRIDAY, 30 NOVEMBER, 1900

MEMBERS PRESENT —

Mr Watkins in the Chair.

Mr Crick, | Mr J C L Fitzpatrick,
Mr Gillies

Chairman submitted Draft Progress Report

Same read and agreed to

Chairman to report to the House

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RACING ASSOCIATION BILL.

THURSDAY, 27 SEPTEMBER, 1900.

Present:—

MR. J. C. L. FITZPATRICK,
MR. TAYLOR,

MR. HOGUE,
MR. GILLIES.

D. WATKINS, ESQ., IN THE CHAIR.

Walter Henry Stuart sworn and examined:—

1. *Chairman.*] You are here to represent the Under Secretary for Lands? Yes.
2. Is the land which the Australian Jockey Club use for a racecourse vested in trustees? It is.
3. For what purpose was it vested in trustees? For the purposes named in the grant: 1st, As a race-course on which horse-races might be run under the direction of the Australian Jockey Club or any other club or association now existing, or which may hereafter be founded, for the purpose of horse-racing; 2nd, As a training-ground for the purpose of training horses intended to race, for the erection of training-stables and temporary dwellings for the use of persons engaged in training racehorses; 3rd, As a cricket-ground upon which the game of cricket may be played; 4th, For the erection of butts or targets for rifle-shooting; 5th, And "for any other public amusement or purpose which His Excellency the Governor, with the advice of the Executive Council, may from time to time declare to be a public amusement or purpose for which the said land, or any part thereof, may be used."
4. Those are the purposes for which the land was granted? Yes.
5. After that land was vested in trustees, was there an Act of Parliament passed giving the Australian Jockey Club any special rights, apart from the conditions of that trust? There was the Australian Jockey Club Act of 1873.
6. Does that Act in any way alter that deed of trust? That Act enables the trustees to grant leases for a longer term than is provided for in the original deed. The period is seven years under the deed, but the Act provides for the granting of leases for a period not exceeding twenty-one years.
7. Can you say whether that Act permits subleasing—that is to say, can the trustees lease to the club; then, can the club sublease to others? I should not like to say that.
8. Have the trustees at any time let that ground to any cricket or rifle club, or for any other amusement? Not that we are aware of as a Department.
9. Is the Department satisfied that the deed of trust has been in no way violated by the trustees? There is no information before the Department to show that there has been any breach of the trust.
10. Has any application been made to the Department by any other club for the use of the ground? Not that I am aware of.
11. Are you aware for what length of time the trustees have granted the lease to the Australian Jockey Club? No. I have no information on this point.
12. Are you not supposed to have information as a Department with regard to the action of the trustees? No. They do not give us any information, especially where they get the private Act. As a matter of fact, this Act is not administered in any way by our Department.

W. H. Stuart.

27 Sept., 1900.

- W. H. Stuart. 13. Is it usual, in cases of grants like this, where land is vested in trustees for certain purposes, for any club to get an Act of Parliament giving them the sole right to the ground? There are instances.
- 27 Sept., 1900. 14. Could you name them? I think it was done in the case of the Hawkesbury Race Club at Richmond.
15. I want you to cite a case in which there was a deed of trust similar to this where the land was not set aside purely as a racecourse, but for other amusements as well? Various Acts have been passed with regard to show-grounds.
16. *Mr. Taylor.*] What about the Kensington Racecourse? That is held by lease.
17. *Chairman.*] Here is a case in which a certain portion of land is set aside for purposes covering various forms of amusement;—I should like to know whether we have had another case in which a horse-racing committee have got an Act of Parliament which gave them full control for one sport alone? I cannot think of any such case at present.
18. Do you know of any other plots of land throughout the Colony which have been vested in trustees for horse-racing alone? Yes, many.
19. Could you give us one or two cases? There is a case at Cowra; there they have a piece of land dedicated solely for racing purposes. That land would be dedicated in the same form: as a racecourse upon which horse-races may be run under the direction of any club or association now existing, or which may hereafter be founded, for the purpose of horse-racing, and as a training-ground for the purpose of training horses intended to race. These are the only purposes in this grant. They are added to in the grant for the Randwick Racecourse, where there are three other purposes provided for.
20. *Mr. Fitzpatrick.*] I suppose you have not the deed in connection with the grant of the Hawkesbury Racecourse? Not with me.
21. Have you any knowledge of the contents of that deed;—do you know whether it is based on the same principle as the Randwick Racecourse grant? I think it would be based on the same principle.
22. *Mr. Taylor.*] How about the Kensington Racecourse? That is not in the same position; it is held as a special lease from the Crown, and is not dedicated for public purposes.
23. *Mr. Fitzpatrick.*] Have you any knowledge of the terms on which this course is let to the Australian Jockey Club? No; we are not informed as to those matters in any case where there is a private Act. We are not informed of all the proceedings which the trustees may take under the Act.
24. Have you a copy of the Australian Jockey Club Act? Yes.
25. Perhaps you might give some information as to what powers are vested in the Australian Jockey Club through the medium of that Act? I have only just obtained the Act, and I should not like to interpret it without a close perusal.
26. Have you the names of the present trustees of the ground? I can only name one of them from memory, that is Sir John Lackey.
27. How many trustees are there? There were three originally—Mr. Thompson, Mr. Richard Jones, and Mr. W. B. Dalley.
28. *Chairman.*] Does not the deed provide that the trustees shall send in an annual report of what they are doing with the ground? No, the grants do not provide for that.
29. Does it simply mean that the land was vested in those three original trustees for them to do what they liked with it? Yes; but simply for the purpose of the grant.
30. Without furnishing any statement whatever to the Department? Just so,
31. Then, as far as your Department is concerned, it appears that once that deed was drawn up you lost all control over the land? No; if it was reported to us that there was any breach of the trust we should make inquiries into the matter.
32. It must be reported to you first? Yes.
33. *Mr. Taylor.*] As a Department you do not initiate any steps to see whether the deed is correctly carried out or not? No; we could not undertake the inspection of all the grants throughout the country for that purpose.
34. *Chairman.*] Then, as far as your knowledge goes, that deed of trust must be totally distinct from almost any other deed that you know of? I do not think that there are very many more drawn in this form, especially as regards the power to lease; in very few cases is there power to lease.
35. *Mr. Taylor.*] Are there any cases in which it is done? I do not know about racecourses, but there is power given in the case of the National Park.
36. *Mr. Gillies.*] For what term does that provide? From fourteen to twenty-one years, I believe.
37. *Mr. Taylor.*] But the National Park is subject to Government control? Yes, it is subject to the provisions of the Public Parks Act.
38. So that it is practically under Government control? Yes.
39. But it is not so in regard to the racecourse;—practically there is no Government control in that case? No, there is not, owing to the intervention of the private Act.
40. *Chairman.*] Then the passing of that private Act gave the trustees all the powers almost that a person would hold over a piece of private property? There is a provision in the Acts Shortening Act which is interpreted to preserve all the Crown rights over any private Act, but I think it has been practically a dead letter as far as administration goes.
41. *Mr. Fitzpatrick.*] Have you any knowledge as to what payment is made by the Australian Jockey Club for the land? No.
42. *Chairman.*] Has the land ever been used for any other form of sport? Not that I am aware of.
43. *Mr. Taylor.*] Does this private Act override the grant? It is intended to do so, but, as I have said, there is a provision in the Acts Shortening Act which we believe preserves the rights of the Crown over the ground, but that is a question for the Supreme Court.
44. Wherever the private Act is inconsistent with the grant a question of law would arise? Quite so.
45. *Chairman.*] Is there any concession or consideration given to the Government in consequence of the grant and the Act? I am not aware of any.
46. *Mr. Gillies.*] Do you consider that the trustees are fulfilling the conditions under which they got the land from the Government? As I said, since the passing of the private Act the Department has had no knowledge of the subject; it has not been reported to the Department that there was any breach of trust.
47. If any breach of the trust were reported to the Lands Department, would you then take steps to investigate the truth or otherwise of the complaint? Certainly.
48. Are the trustees supposed to file in the Lands Department a statement annually as to any alteration in regard to the trustees? Not that I am aware of.

W. H. Stuart.

27 Sept., 1900.

49. They are not supposed to do so? Not that I am aware of.

50. *Chairman.*] Are they supposed to notify the Department as to any alteration of the trustees;—supposing a trustee died, who would appoint a new trustee? The Governor-in-Council.

51. On whose recommendation? There is no fixed rule. The usual practice in regard to these matters is to accept the nomination of the Member for the electorate; but in regard to more national matters that rule is not followed.

52. You have no information bearing upon any vacancies filled up on this trust? No; but I could obtain it.

53. *Mr. Taylor.*] In the event of your finding that the conditions of the grant are not fulfilled, what action do you take;—would you forfeit the lease? There is a provision in the grant for forfeiture, in the event of any abuse, which we enforce if there is clear evidence of such abuse; but a difficulty arises as to whether it would be an abuse in this case owing to the powers given under this special Act.

54. *Mr. Fitzpatrick.*] Clause 10 of this Act says:—

The lands by this Act authorised to be demised to the chairman shall be held by the chairman and his successors in office only for the purpose of being maintained and used for a public racecourse or for one or other of the purposes in the said deed of grant mentioned under and subject to the provisions of this Act and any by-laws to be made under and by virtue hereof.

So the Act itself in that clause protects the deed of grant, because it provides that the land shall be used for the purposes stipulated and set forth in the deed of grant? That is just so. We might forfeit the grant if it were used for purposes not included under one or other of the four heads mentioned in the grant; but we could not dictate to the trustees that they should allow the second, third, or fourth to have precedence over the first as regards the use of the land.

55. *Mr. Taylor.*] Could you dictate as to whether they should have their fair share as to the occasional use of the ground for the purposes embodied in the grant? I think we could.

56. *Chairman.*] Suppose this Act were violated by the trustees, whose duty would it be to institute proceedings or to see that the Act was carried out properly? Under the grant it would be the duty of the Secretary for Lands.

57. As far as you are aware, there has been really no check by your Department and no investigation since the land was dedicated? I am not aware of any.

58. *Mr. Gillies.*] Is there any provision in the original grant for the Secretary of the Australian Jockey Club to use the place as a sale-yard? No.

59. Or as a stable for the accommodation of horses which he has for sale? It might be used as a stable for horses that are being trained for racing, but not for horses used for other purposes.

60. I am asking whether there is any provision in the original grant which permits the Secretary to the Australian Jockey Club, who is an auctioneer, to use the ground and stables in connection with sales of horses? There is nothing that expressly authorises it.

61. And if he has so used it for years past, does he violate the original deed of grant? That would be a question for legal consideration, I think.

62. You represent the Lands Department? Yes; but we have to refer to the Court in many cases.

63. What is your opinion about it? I think it would be an abuse of the trust.

64. *Mr. Taylor.*] Would it not equally apply in the case of the new Act? Yes, it would.

65. *Chairman.*] Do you know whether there are any other race clubs using that ground? Privately, I think perhaps the Sydney Turf Club uses it. I should not like to say they do not use it.

66. Who gave the authority to use the ground? I presume the Australian Jockey Club. I am not aware though.

67. *Mr. Taylor.*] Have they power under the Act to give that authority to another club? The management seems to be largely put in their hands under the new Act.

68. Are they under the Act permitted to charge a fee for any other club or institution using the ground for any of these three purposes, namely, racing, cricketing, or shooting? It is not expressly authorised, but it is generally conceded as a custom when grounds are occupied for these purposes that there is power to charge, and that is confirmed by a decision of the Privy Council in regard to the Royal Agricultural Society.*

69. *Chairman.*] In whose care would any funds thus accumulated be placed? The Department has no information as to that.

70. Have the Department at any time received from the trustees or from the Australian Jockey Club any rents? Not that I am aware of, and my experience goes back nearly twenty years in the Department.

71. *Mr. Taylor.*] Do they get no returns at all? Not that I am aware of.

72. *Chairman.*] I notice that under the Act the Australian Jockey Club Committee have power to make by-laws, but they must be published in the *Government Gazette*, and are subject to repeal by the Governor-in-Council;—would anything in that direction be done through your Department as an intermediary stage? It is a question whether it should come through us or through the Chief Secretary.

73. Have you any knowledge of anything in that direction having been done through the Department? No.

74. Then it appears from the evidence you have given that the land was vested in the trustees, who leased it to a racing club, and that the racing club afterwards got an Act of Parliament passed giving them certain powers under which they have acted since? Yes.

75. *Mr. Gillies.*] You do not admit that the private Act, as you call it, overrides the conditions of the original grant? My view is that the rights of the Crown are preserved by the Acts Shortening Act. There is power under the grant itself to lease.

76. *Chairman.*] Are you aware that any application has been made for the renewal of this lease? We have no record concerning it.

77. It is purely a matter for the trustees? Yes.

78. If the trustees choose to renew the lease the matter would not come before your Department at all? No.

79. *Mr. Gillies.*] Can you give us the names of the present trustees? Not from memory, but I can supply them readily from the register.

Harvey

* NOTE (on revision):—This answer was intended to refer to the powers under the *Deed of Grant*, not to the *Act*, which, apparently, the question referred to.

Harvey Roulston sworn and examined:—

- H. Roulston, 80. *Chairman.*] What is your occupation? Sporting journalist.
 27 Sept., 1900. 81. At present residing in Sydney? Yes.
 82. I understand that you have had considerable experience in the management of racecourses? Not particularly in the management of racecourses. I have had a good deal of experience of racecourses in one way or another. I was never manager of one.
 83. You have had experience of the working of racecourses? Yes, I have been steward of a racecourse; and, of course, I have had experience through working on newspapers and attending race meetings.
 84. You understand, I suppose, that it is intended to pass a Bill to control horse-racing in the Colony? Yes; I have seen the Bill.
 85. At the present time, horse-racing is largely controlled by the Australian Jockey Club? Yes; the Australian Jockey Club exercises all the control.
 86. You have had, I suppose, considerable experience in the working of the Randwick Racecourse and in racing generally in this Colony? Yes; I have attended the races for about ten years at Randwick.
 87. Are you acquainted with the manner in which the land is held out there by the Australian Jockey Club? I have read the charter by which the land was vested in the Australian Jockey Club. I never paid a great deal of attention to that, but I know that the land is vested in them by the Government for racing purposes.
 88. Have you read the Act under which they work? I have; but I should like to say that I only received my notice to attend this Committee about half an hour ago.
 89. From your ten years' experience in connection with the working and the management of racing in the Colony by that club, do you think that the present system could be improved upon? Yes, I think so.
 90. As regards that club, then, it seems that they have not done as well as a representative body might do under similar circumstances? I gather that they have done as well as any other representative body like them would do. They control racing by virtue of their prestige among the clubs in the Colony, being the principal club here, in the same way that the English Jockey Club controls racing in England. The Australian Jockey Club here takes the English Jockey Club for its pattern.
 91. Having obtained that position, I understand that, according to the rules, the Australian Jockey Club have power to levy charges upon other clubs throughout the Colony, upon all others engaged in horse-racing? They levy charges on other clubs for registration—so many guineas a year.
 92. And on all trainers? Yes; the Australian Jockey Club charge trainers' fees for training on Randwick Racecourse.
 93. Only there? Only there. Other clubs also charge fees for training on their courses.
 94. And what about the riders? The Australian Jockey Club license jockeys to ride.
 95. Throughout the Colony? Yes.
 96. Should a boy be not licensed, he is not permitted to ride at Randwick? No; he can ride outside the metropolitan area, but when he wants to ride in the metropolis he must be registered by the Australian Jockey Club.
 97. Can a boy who is not registered by the Australian Jockey Club ride on any other registered course? Not within the metropolitan district. He can ride outside that district, but when he wants to ride in the metropolitan district he must apply to the premier club for a license.
 98. Seeing that they impose charges upon other clubs, and upon other people, do the Australian Jockey Club give any compensating benefit to those people? They supply them with copies of the rules. The clubs race under their rules, and when a difficulty arises in the administration of the rules, the Australian Jockey Club undertake to decide exactly what the law is; they interpret the rules. In cases where there are disqualifications, and the parties concerned are not satisfied with the verdict of the local club, they appeal to the Australian Jockey Club Committee, who decide for them, and their decision is final.
 99. There is no appeal from that? No. In that way they do a service. The clubs that are registered under them have the privilege of applying for the information that they require in carrying out the rules.
 100. That is supposed to be all that they do for the other clubs? That is all that I can think of just now.
 101. Have you any idea how the inquiries are held in cases of dispute between the club and its patrons? Yes. In a case of malpractice or anything of that sort the parties concerned are notified to appear before the stewards, who then examine witnesses.
 102. And their decision is binding? The evidence is taken down and a copy of it is kept. In the case of a local club the evidence is transmitted to the Australian Jockey Club. The stewards after hearing the evidence give their decision.
 103. Is it possible to get evidence like that for publication in the press, if so required? Some of the clubs do not object to the press representatives being present at their inquiries.
 104. Do the Australian Jockey Club object? Yes; they do not permit the press to be represented at their inquiries.
 105. So far as the general working of the Australian Jockey Club is concerned, has the system given general satisfaction to those engaged in sports? I think opinion is very greatly divided upon that point. The proprietary clubs think that the Australian Jockey Club rules and regulations bear rather severely on them in some matters, and I think the country clubs consider that they do not get so much attention as they would like to have sometimes. They consider that some of the rules that suit the metropolitan clubs do not suit the country clubs at all. There is dissatisfaction in that way.
 106. Do they feel that they are compelled by circumstances to subscribe to the funds of the Australian Jockey Club, and that they are still unrepresented? Yes; I believe that some of the country clubs are very dissatisfied that they should have to subscribe anything to the Australian Jockey Club.
 107. Then, taking the other patrons of sport, trainers, riders, and others—I want you to speak in a general sense—are the majority thoroughly satisfied, in your opinion, with the methods adopted? I could not speak exactly as to that. I think that some of them consider that the regulations are a little bit severe upon them.
 108. Have the verdicts of the Australian Jockey Club in cases of dispute or malpractice given general satisfaction? As a rule, yes. There have been one or two decisions of late years about which there has been much difference of opinion.

109. Taking all you have told us into consideration, do you think that a better tribunal could be set up by any means to control horse-racing? Yes, I think so. H. Roulston.
27 Sept., 1900.
110. Have you gone through the Bill that is now before the Legislature? Yes; I have read it through.
111. Would you give the Committee your opinion upon the general lines of that Bill or tell us of any improvements that your experience might suggest? I think that the principle of having racing governed in a more representative way is good, and I should think it is a good idea that the Government should have some voice in the direct control of it. In America they have what they call racing boards of control. In certain states they are representative of the whole state. In New Zealand racing is governed by a kind of racing conference. In that Colony they have several large districts, and in each district all the clubs have a kind of general association, and then again all of them meet in an annual conference.
112. Are they in any way under Government control? Not directly. But I have not got specific information with me. Of course they administer the totalisator. As regards the Bill I have said that I think it would be better if the management of the racing were to some extent more representative, at the same time I think the Australian Jockey Club should have a preponderance of representation on any board that is formed. If a body is provided under the Bill to control racing and make racing rules, I would suggest that the Australian Jockey Club is a much more competent body than a lot of country clubs. The stewards of country clubs are not so well versed in the rules as many men that you can get in the Australian Jockey Club. Many of the local decisions will not tally with the rules. I should fancy that the country stewards not being so well posted in the rules and regulations as might be desired, it would be a mistake to put too much in their hands. The Australian Jockey Club should have a preponderance of representation; perhaps there should be a Government representative as well. The proprietary clubs and the country clubs should have representation, but I think the Australian Jockey Club should have nearly half the representation.
113. Has it struck you that we need not compel the country clubs to send one of their own members, as they could appoint a man in Sydney to represent them? That would be defeating the object in view; the country club would have a metropolitan representative.
114. It would give them a voice, and they would choose their own representative? As a rule, we consider that proprietary clubs have their own axes to grind, they are going in for profit. We do not put them on the same level as the Australian Jockey Club, whose work is all honorary.
115. Taking the racing under the management of the Australian Jockey Club as affecting clubs like the Hawkesbury, Rosehill, Canterbury Park, and others, have those clubs flourished since the Australian Jockey Club assumed these great powers, or have they gone back? Many of the country clubs have gone back. It is a common idea that they have gone back because there is such a great deal of racing in the metropolitan district, and most of the horses that might stay at home in the country districts are attracted to the metropolis by the amount of racing and the prizes to be obtained.
116. The Australian Jockey Club has power to fix the meeting days of the racing clubs? Yes. I think that, as a rule, they allow the country clubs to fix their own days of meeting as long as they do not clash with other meetings in the several districts. The Australian Jockey Club is strict in fixing the dates of the meetings in the metropolis.
117. Have there been any complaints on that score, any disputes about the dates so allotted by the Australian Jockey Club? I have not heard of any, but I think that as a general thing the proprietary clubs would like to have one or two more days than are allotted to them.
118. I would rather deal with the other clubs;—there are others besides the proprietary clubs, are there not? Yes, there is the Hawkesbury. The Sydney Turf Club does not act like a proprietary club. They give more liberal prizes than the proprietary clubs.
119. Would it not be an inducement in certain cases for the proprietary clubs to give big prizes? If they had holidays allotted to them I dare say they would. I do not think they can afford to give bigger prizes than they are doing as a general thing. The Australian Jockey Club compels them to give £400 a day, and I think that is as much as most of them can afford to give. I should like to say one thing, and that is, that the development of pony-racing within the last seven or eight years has had a great effect on country racing. I think that pony-racing has attracted more horses from the country districts to come and race about Sydney than horse racing has done. A lot of horses that are not quite good enough for the registered horse ranks are found to be good enough for the pony and galloway ranks.
120. I suppose that the Australian Jockey Club, being the pattern club, such things as the distances of their races are copied by the country clubs? No; the country clubs manipulate their own programmes. In the metropolitan district the Australian Jockey Club compels the proprietary clubs to have one race of a certain distance on each day's programme.
121. That is a long race? Yes.
122. Are you of opinion that short races have had the effect of deteriorating the breed of horses? I think it would give much more encouragement to the breeding of hardy horses if the distances of the races were a little longer. I think there are too many short-distance races.
123. There was some considerable discussion some time ago at a full meeting of the Australian Jockey Club about the extra power which they took to themselves, was there not? Yes; that was in reference to the licensing of bookmakers. The committee of the Australian Jockey Club made a regulation to the effect that a bookmaker having any shop or betting office in the city should not be eligible for registration to bet at Randwick. Mr. Barton in dealing with the matter took the point that the committee went too far when they laid down what a registered bookmaker could or could not do in the way of business outside the racecourse.
124. As a result of that, I believe the then president of the committee resigned? I do not know that it was on account of that.
125. You mentioned that there was some considerable discontent owing to some of the decisions in connection with racing transactions at Randwick recently, could you recite one or two cases? There was the Fielder case.
126. Do you know of any others? The Fielder case came particularly to light; that is the only one of late that there has been any doubt about.
127. What was it that gave dissatisfaction in that case? The stewards ordered the jockey before them on the presumption that he had pulled the horse; they took a lot of evidence, and after taking the evidence they came to a decision which, according to report, was against the evidence, for most of the witnesses

H. Roulston. witnesses were of opinion that the boy had not pulled the horse. The stewards were of opinion that he had, and in defiance of the evidence which they took, they decided that he ought to be disqualified, and they disqualified him for three years. They opened the case again on appeal, and took more evidence to a similar effect. Of course, what I am saying is from hearsay, the evidence was not given publicly. The inquiry was held in private, but it has leaked out that nearly the whole of the evidence was in favour of the boy, that it was to the effect that he did not pull the horse. Although they opened the case a second time the stewards still adhered to their finding. Most people think that the boy did not pull the horse, and that it was simply a case of very bad judgment in riding. There is also the case of a horse called "Clansman." Of course in nearly every case somebody disagrees with the official verdict.

27 Sept., 1900.

128. In either of these cases did they summon the jockey immediately the race was over? No; they did not summon Fielder until after the horse ran in another race about a week later, and ran much better.

129. You have stated that the general opinion was that the evidence was in favour of the boy, but under the powers conferred upon the Australian Jockey Club there was no right to appeal from that decision? No; there was no right of appeal from that decision. My own opinion about Fielder's case was that they should not have taken any evidence at all. The matter in question occurred where they could all see it, and if the stewards were competent to attend to the racing they did not need any evidence at all, they should have come to a decision without taking any evidence, and they should have acted on their own opinion. They took a lot of evidence in that case favourable to the boy, and still they gave a decision according to their own observation.

130. The public had no chance of getting that evidence? No.

131. *Mr. Hogue.*] Are not the stewards prosecutors, judges, and witnesses in such a case? Practically they are. It is a go-as-you-please inquiry.

132. Once they have given a decision they are not likely to reverse it? I think that if they thought they were wrong they would reverse it.

133. *Mr. Gillies.*] Do you think that if the Committee of the Australian Jockey Club gave a decision you could give them evidence afterwards that would induce them to think that they had given a wrong decision? It would be possible, but not very likely. No doubt if they found that they were absolutely wrong they would reverse the decision.

134. *Mr. Taylor.*] Do you think it is to the interest of the public and of racing that the Australian Jockey Club should have a strong control in racing matters, or do you think that a governing body on the lines of that proposed in the Bill would be better? I think it would be preferable to having a governing body on the principle embodied in the Bill, but not on the lines of this Bill.

135. Giving the Jockey Club a little larger representation? Yes; in the absence of any properly constituted tribunal there could not very well be any improvement on the present arrangements. It is the same in Victoria and in England. The Australian Jockey Club rules by its position.

136. Do you think the action of the Australian Jockey Club in fixing the prize money of other clubs is just and right in the interests of racing? They fix the minimum amount of prize money, and I think it is necessary that that should be done.

137. Do you think it is right that they should do it? Failing any other constituted authority such as you propose I think they should.

138. You do not think it is arbitrary? No, not if they do what is fair, and they are supposed to be a class of men who will; I do not think it is a bad arrangement. It is necessary that there should be some supervision.

139. Do you think that the other clubs should in any way participate in the fees derived from the licensing and obtained from jockeys and bookmakers? If the Australian Jockey Club is going to administer racing all over the Colony, and to do it properly they would require a fund, and I think that these fees ought to go to that fund.

140. Do you think that the other clubs ought to have a share? I suppose they would have a good claim to a share although they do not administer racing affairs and the Australian Jockey Club do. They collect their own bookmakers' fees.

141. *Mr. Fitzpatrick.*] Do you know the Hawkesbury Race Club? Yes.

142. Do you think the Hawkesbury Club has been affected detrimentally of late years in consequence of the regulations and restrictions imposed upon it by the Australian Jockey Club—in the matter of reducing the days for racing for instance? The Hawkesbury Club used to get two days twice a year, and they wanted two Saturdays, but the Australian Jockey Club would only give them one Saturday. No doubt Saturday would be better than Thursday for them; it might make a difference of £100 to them.

143. You are aware that the Hawkesbury Race Club has held its races at Rosehill on several occasions? Yes.

144. Do you know why they went to Rosehill? Because the Hawkesbury Course was not in a good condition.

145. That was the ostensible reason? Yes.

146. Are you not aware that the Hawkesbury Club held their races at Rosehill on more than one occasion to replenish their depleted coffers? I had an idea that they held their races at Rosehill, because they thought they would do better there than they could do at the Hawkesbury.

147. Do you know that one of the reasons that actuated them was that they did not think that they were being fairly treated by the Australian Jockey Club, and that, as a consequence, the attendance at their race meetings would not be sufficiently large to enable them to meet their obligations? Then they were compelled to give £400 a day in prize money, and they could better afford to do it at Rosehill than at the Hawkesbury, but since then the Australian Jockey Club has reduced the Hawkesbury minimum prize money to £300 a day, and they have reduced the amount of the Warwick Farm prize money, because that is another distant place that could not draw such a large crowd of people as some of the other racecourses.

148. With the exception of the Australian Jockey Club, I presume you know that the Hawkesbury is the only racing club that does not race for profits? Yes.

149. With reference to representation, you said in answer to one question, you thought that as a rule the country clubs were not satisfied with the present condition of things, that is as far as the treatment of them by the Australian Jockey Club is concerned, do you not think that a great deal of the cause of dissatisfaction would be removed if they had some representation on a board that would control racing generally? Yes; the country clubs feel that they ought to have some representation—some way of having their representations listened to if they want to make any.

150. And if they paid fees for registration they would be quite satisfied in view of the fact that they were afforded representation? I have no doubt that they would be.
151. At present they are paying fees without being directly represented? They are.
152. *Mr. Taylor.*] Are you aware of any member of the committee of the Jockey Club who is not a member of the Australian or the Union Club? I know that most of them are members of those clubs.
153. Do you know of one of them who does not belong to one of those clubs? I could not say; I know that those clubs have great influence.
154. *Mr. Hogue.*] You said you considered that the Australian Jockey Club, in any association that might be established by law, ought to have a preponderating voice—that it should have a voting power proportionate to the amount of stakes given? Something of that kind would be an improvement.
155. In the Bill that we are considering now, the Australian Jockey Club is placed on a level with all the suburban clubs? Yes.
156. Of course you know that the Australian Jockey Club exercises practically plenary powers in racing matters? Yes.
157. That although it is not established legally, it is a law unto itself? That is so.
158. That it has acquired those powers by a sort of prescribed right as the leading club? Yes, exactly.
159. That is to say, that powers it has invested itself with have been a growth from year to year from early times—it has found it necessary in the interests of racing to take upon itself certain powers? Exactly.
160. And those powers, pretty much like the British constitution, have grown up, and the Australian Jockey Club has exercised them by virtue of its own inherent strength? Yes.
161. On the whole, do you think the Australian Jockey Club has exercised these very extraordinary powers wisely in the interests of racing? I think that, as a rule, they have. In the matter of pony-racing I do not think they did.
162. But so far as all the clubs are concerned, do you think the Australian Jockey Club try to do justice as between the various clubs? I presume that they intended to do justice, but the clubs think that they do things rather arbitrarily at times.
163. But is it not impossible to give satisfaction to all? I do not suppose that either a racing board or anybody else would give all the clubs satisfaction.
164. Do not the clubs think that they ought all to have a little more latitude than the Australian Jockey Club allows? I think that the clubs would like to have representation on the general governing body of New South Wales racing.
165. In principle I presume you would say that it would be a proper thing to give the various clubs some sort of representation on a general central body, clothed with large powers? Yes; I think that proprietary clubs, for instance, should have reasonable representation.
166. You would make no distinction as between proprietary clubs and country clubs in the way of representation? No; I do not think I should.
167. Take the Moorfield, Warwick Farm, and Rosehill Clubs—what representation would you give them? I think it would be a fair thing to base it on the stakes given.
168. Are the powers which are exercised by the Australian Jockey Club similar to the powers exercised by the leading clubs throughout the world? Yes; similar powers are exercised by the racing authorities in Victoria, West Australia, South Australia, Queensland, and Tasmania.
169. Are there complaints in the other colonies as to the status of the leading club there, and the authority that is exercised? No; I have not heard anything particular in the way of complaints. Occasionally you hear something when the Victorian Racing Club does something which some club does not like; but, as a general rule, I think that their powers are considered to be satisfactorily exercised.
170. Touching the question of disqualification and inquiry into malpractices, do you think the Australian Jockey Club has always exercised its authority fairly? Do you mean in the case of stewards deciding on races?
171. Deciding, say, on foul riding and disqualifying jockeys? I am satisfied that they always intend to be fair.
172. From the nature of their position, do you think they can do justice? Well, I think it is always better that a man who is acting as a steward should have no direct interest in the races. He should have no interest in the betting that is going on.
173. But, as a matter of fact, they have? As a matter of fact nearly all the stewards, especially men of position who own horses, always have some sort of betting on.
174. Is it not natural that a man with a stake on a race, if he thought a horse was pulled, would have a bias against the jockey? I think it is possible.
175. Do they not, as a rule, decide these cases very quickly immediately after the race is over? Yes, they generally decide in a quarter of an hour after the race.
176. Has a jockey, as a rule, opportunities to produce evidence or to defend himself as he would have before a legal tribunal? He has an opportunity of calling any evidence immediately.
177. But has he any time to get up his case or to be defended by a trained advocate? No.
178. He is therefore under a disadvantage, and, as a rule, a jockey is not in a good position to defend himself, is he? He is generally catechised.
179. Is he not tongue-tied and not able to speak? He is not prevented from speaking; he is generally rather a poor hand at explaining his case.
180. Soon after a race they take a jockey into a committee-room and confront him with his judges and the witnesses, and is he not at a great disadvantage, almost paralysed and unable to open his mouth? Young boys may frequently be nervous, but some of the old hands will stand fire as long as you like.
181. Is not the jockey always rather in the position of one who bears something like guilt on his face, because he cannot explain himself properly, and does not that count against him? A boy is naturally at a disadvantage on being hailed before a lot of gentlemen of whom he is a little in awe.
182. If he does not speak out boldly and have his case prepared there is a probability of his being condemned? There is a possibility of his nervousness being misconstrued.
183. That might be taken as evidence of guilt. Are you prepared to believe that in some cases innocent jockeys have been punished? Yes; but it would be very seldom.

- H. Roulston. 184. There is no appeal? There is an appeal from the stewards of Randwick to the Australian Jockey Club.
 27 Sept., 1900. 185. That is an appeal to themselves? The stewards are some of the committee of the Australian Jockey Club.
 186. *Mr. Taylor.*] Do you not think it would be fair to allow the jockeys to have some representative before that tribunal? Yes, especially when he is a very young boy.
 187. You think it would be in the interests of justice to let him have someone there to represent him? Yes, his father for instance.
 188. You say that the country clubs have gone back because of the large amount of racing that takes place in the metropolitan district? Yes, that is one of the substantial reasons. There is not the same inducement now that there was at one time for the owners of good horses to travel them round the country centres. There is plenty of racing for good horses in Sydney so they do not need to travel so far.
 189. And many country horses go to the pony-races? Yes; a lot of country horses that might otherwise be kept in the country districts are attracted to the galloway courses where they have three or four meetings a week.
 190. You gave some evidence about pony-racing; has not pony-racing flourished largely of late years? It has.
 191. Is it desirable to encourage the breeding of small horses? I do not see any objection to pony-racing only to the undue extent of it; there is rather too much pony-racing.
 192. Are not ponies a very valuable class of animals? Yes.
 193. They contain a valuable strain do they not, and they furnish a very valuable class of stock? I think that a good breed of ponies may be developed by pony-racing.
 194. Take a light carriage pony, is it not a very useful little animal? Yes, and it is all the better for being well bred.
 195. Is it not more easily handled than a big horse? Yes.
 196. Is not a pony less liable to get out of order than a big horse? Generally speaking, small ponies are hardy and easily handled, they have a quiet disposition as a rule and are not liable to bolt, they are not so fiery as a thoroughbred horse.
 197. Does not pony-racing tend to improve the breed of ponies? It ought to.
 198. Has it largely increased the number of ponies in the Colony? A great deal of our pony-racing has been horse-racing under another name.
 199. Would not the proposed association be rather prejudicial to pony-racing? I presume that if the Racing Association were constituted it would fix the amount of pony-racing that should be allowed.
 200. The Australian Jockey Club does not? The Australian Jockey Club takes no stock of it at all. They ignore it.
 201. If a horse races at a pony meeting is it not disqualified? Yes; all that the Australian Jockey Club says is this—a horse that competes at any unregistered pony meeting shall be for ever barred from taking part in races on a registered course. They do not dictate to anybody, and say that they should adopt their rules. All they say is, that any horse that runs contrary to their rules or on any unregistered course is barred for ever from running at Randwick. They do not say that you shall not run your horse on an unregistered course, but if you do it and it turns out to be a good horse it is of no value, because it could not run on their course or other registered courses.
 202. *Chairman.*] What does the disqualification of a jockey carry with it;—has he no other punishments besides not being permitted to ride? He is not permitted to ride or to go on any registered racecourse.
 203. Is he not also prevented from riding horses in their training and from working about the stables? He cannot ride on a training-track.
 204. Could he work in the stable where the horses are? Yes; he can work there, but he cannot ride.
 205. In your opinion, is that an excessive punishment? No; if the stewards want to give a boy less punishment than that of disqualifying him they suspend him; then he can ride on the training-track, and he gets paid for it, but he cannot appear in a race.

TUESDAY, 2 OCTOBER, 1900.

Present:—

MR. REID,	MR. GILLIES,
MR. GORMLY,	MR. J. C. L. FITZPATRICK,
MR. TAYLOR,	MR. CRICK,
MR. ARCHER.	

D. WATKINS, ESQ., IN THE CHAIR.

Samuel Fielder sworn and examined:—

- S. Fielder. 206. *Chairman.*] Are you a horse-owner? Yes.
 2 Oct., 1900. 207. What experience have you had in connection with horse-racing? I have had nearly forty years experience of it.
 208. Has your experience of horse-racing been confined to this Colony? Yes, principally; but I have had experience of horse-racing in all the colonies. This is my native Colony.
 209. You have been racing under the rules and regulations of the Australian Jockey Club? Yes, since those rules and regulations have been in force.
 210. Have you seen the Bill which is at present before Parliament with regard to racing? Yes; I have read it.
 211. Will you give us your opinion as to whether the tribunal which it is proposed to establish would be a more representative and a better tribunal than that which governs racing under the present system? I did not know that I was to give evidence on that point, but I may say that anything that would give us something in the way of fair play would be better than what we have now.
 212. You think anything would be better that would give you fair play? Yes; under the present system we have no Court of Appeal. There is no remedy if injustice is done; the Australian Jockey Club do what they like; there is neither trial nor anything else. They do just what they please, and that ends the matter.

213. What is the usual method of procedure in case of a breach of the rules by a rider or a trainer? If a rider or trainer breaks the rules he is liable to be disqualified, but they are often disqualified when they do not break the rules. S. Fielder.
2 Oct., 1900.
214. *Mr. Crick.*] You know that their livelihood is taken away without their having a chance of being called on for an explanation? Yes, it often happens that their livelihood is taken away, and if they want to know the reason why they can get no satisfaction.
215. They are not called upon to show any reason why it should not be done? No.
216. And if the Australian Jockey Club are asked to give any reason for it, they decline to do so? They give no reason at all for anything that they do. If a jockey is refused his license and does not know the reason why, if he goes to the Secretary of the Australian Jockey Club and asks the reason, he is told to walk out of the room.
217. They will not tell him what charge he has to answer? No, they tell him nothing; he has no redress at all.
218. Do you know many cases of that sort? I do. I could give a strong case.
219. A man named Etheridge was disqualified, I believe, by the Victorian Racing Club? Yes; he was refused a license here, and he does not know the reason why, and being refused here, he could not get a license in Melbourne.
220. And they would give him no reason? No.
221. He was not called upon to answer any charge? No; he displeased one of the Australian Jockey Club officials, and was refused a license for that reason. Many jockeys have been refused licenses without any reason for the refusal being given.
222. It is well known amongst racing men that the Australian Jockey Club declined to call upon the Jockeys to give reasons why their licenses should not be refused, and they declined to give any information? It is.
223. You have been a trainer for many years, have you not? Yes; for forty years.
224. You have to apply every year for a trainer's license? Yes.
225. Supposing you apply and are refused, do they call upon you to show cause why the license should not be refused? No; if I put in an application and do not get a license, they give me no satisfaction whatever.
226. Can you tell us if the proceedings before the Australian Jockey Club are held with closed doors, or is the press admitted? I never heard of the press being admitted.
227. One recent case was that of your son, who rode Mora;—was the evidence in that case published? No.
228. It has never been published? No.
229. Was the press admitted? No; we tried our best to get the evidence.
230. What is the age of your boy who was concerned in that case? He is 18 or 19 years old.
231. Has he been a jockey all his life? Yes.
232. He is a good rider, but he is not smart at anything else? He is not, owing to an accident which he had when he was a child. A dray ran over his head, and the doctor told me not to bother about sending him to school. He went to school, but he was allowed to do as he liked. He could not learn very much; he was very stupid. You might tell him a thing now, and he would forget it in a short time.
233. You applied to the Australian Jockey Club to have the case reopened and to be allowed to represent your son before the Committee? Yes. I asked the Chairman to allow me to represent him, as he was not capable of speaking for himself.
234. And they deliberated over that and refused? Yes. I asked if they would allow me to put questions to the witnesses, but they would not.
235. They refused to allow you to be present, did they not? They refused to allow me to be present in the room except when I was giving my own evidence. I was called in to give my evidence, and then when I had given evidence I had to go out again.
236. *Mr. Gillies.*] Is that the usual course? Yes.
237. *Mr. Crick.*] In that particular case you spoke to every one of the witnesses that gave evidence? Yes.
238. Is it not a fact that every witness that gave evidence in that case exonerated your son as regards any wrong-doing? Yes, every one; and they were the very best class of people you could find.
239. *Mr. Reid.*] That is to say, you were told so; you were not present, were you? I say that they told me in conversation.
240. *Mr. Crick.*] You spoke to every witness, and they all exonerated your son with regard to any wrong-doing? Entirely.
241. *Chairman.*] Have you any knowledge as to how the regulations of the Australian Jockey Club work in relation to country racing clubs? No; I have not thought the thing over.
242. The country clubs all come under the guidance of the Australian Jockey Club? Every club that holds races under the rules of the Australian Jockey Club is bound by those rules; they are compelled to run under those rules.
243. Do they pay anything to the Australian Jockey Club for that right? I do not think they do; they pay something for registration, and they register each meeting.
244. But they have no representation, either directly or indirectly, on the Australian Jockey Club? No.
245. Do trainers, jockeys, and others pay license fees? Yes; every one connected with racing has to pay license fees to the Australian Jockey Club.
246. They all have to obtain licenses from this central body? Yes; every trainer is registered.
247. *Mr. Crick.*] Are you sure that the country trainers have to be registered? By the rules every trainer has to be registered within a certain radius of the General Post Office—40 miles, I believe. I do not think any horse can be entered for a race unless it is trained by a registered trainer.
248. *Mr. Reid.*] They do not object to registration, do they? No.
249. Is it not to their interest to be registered? No; why should it be?
250. Just as in the case of barristers and solicitors it might be an advantage to trainers to be on a register? There is no advantage whatever attached to it.
251. Are you against the system of registration? I do not care one way or the other; we have to pay £1 a year for it.

- S. Fielder. 252. You pay £1 a year for a trainer; how much is it for a jockey? I think £1. It makes no difference to us whether we are registered or not.
- 2 Oct., 1900. 253. *Mr. Orick.*] Can a trainer be a member of the Australian Jockey Club? No.
254. So he cannot have any vote, though he pays £1 a year? No.
255. And it is the same with regard to jockeys? Yes; they have no say in the matter.
