256. *Chairman.*] Is it admissible for a trainer to become a member of the Australian Jockey Club? No; he cannot become a member once he has taken out a trainer's license, and there is no representation at all.
257. In a case of disqualification for malpractice, what does that carry with it;—take the case of a boy, does it simply mean that he is not allowed to ride in a race? It is according to the view which they take of the case. My boy has been disqualified for three years. He will not even be allowed to go on the course.
258. *Mr. Archer.*] These boys are not used to doing anything else? They have been brought up to this occupation as a trade, and they are fit for nothing else. It is their livelihood.
259. Have you attended the Melbourne races? Yes.
260. I believe that there they admit the public free to the flat? Yes; they do so at Flemington. That is what has led to the great success of the races over there.
261. Their allowing the public free to the flats is the cause of their success? It is, I am sure. Racing seems a national sport there. People can go and see the races without it costing them anything. It is not so here.
262. Here you have to pay an entrance-fee to the flat as well as to the other parts of the course? Yes.
263. *Mr. Fitzpatrick.*] You know the Hawkesbury Race Club, which is a club that has been racing for some considerable time, and is one of the private clubs within easy distance of Sydney? It is.
264. I suppose you have raced there with a number of your horses? Yes.
265. Have you noticed any falling-off in connection with those races of late years? Yes, a very great falling-off.
266. In what regard? In regard to attendance. Nobody seems to take any interest in the Hawkesbury races now.
267. And the prize money offered is small in amount? Yes, and the interest in the racing seems to be all lost.
268. Can you give any reason why that is the case? I do not know, unless it is through there being so much racing in the city. It is a fact that the interest in the Hawkesbury races seems to be all gone, as compared with what it used to be. There used to be bigger prizes given, and the Hawkesbury meetings used to be most sensational affairs; now the Hawkesbury meetings are of no more importance than any suburban meeting.
269. Do you think it is owing to the fact that the Australian Jockey Club has power to fix the day on which the races shall be held? That has something to do with it. At one time the Hawkesbury was to Sydney what Caulfield is to Melbourne. They used to race a few days before the big meeting at Randwick. But since the Australian Jockey Club have regulated the days on which the races are held (and they allow them whatever days they like) the whole thing seems to have lapsed. The meetings do not come in rotation as they used to, and the same interest is not taken in them now.
270. *Mr. Reid.*] Do you know anything of the procedure of other racing clubs in connection with charges of foul-riding or wrong practices;—I suppose there is a racing club at Wagga Wagga? Yes.
271. Suppose that some foul riding takes place at Wagga Wagga, or other malpractice, has the committee of that club power to call the offender before it? That committee has no power. They can hold a meeting and disqualify a boy for twelve or eighteen months, but that disqualification does not take effect until it comes before the Australian Jockey Club.
272. You cannot say that they have no power if they can do that;—that is one step? For the time being, the verdict is no good. It does not take effect until it comes before the Australian Jockey Club.
273. But it is fact each racing club can investigate charges of wrong riding or improper conduct which take place under their own observation? Yes; but the matter must come before the Australian Jockey Club.
274. Let us suppose that a jockey been guilty of some obviously improper conduct—say he has pulled a horse under the very noses of the committee, have they power to call that jockey before them? Yes.
275. What do they do then;—do they admit the public? No.
276. It is a fact that every racing club has the power to disqualify a jockey or a trainer as far as they are concerned? Yes.
277. Suppose that a boy is charged with foul riding on a country racecourse, is he allowed to have anyone before the committee to represent him? I do not know.
278. It may or it may not be? I do not know.
279. Suppose that a country racing committee does disqualify a person, have they to report to the Australian Jockey Club, and then have the Australian Jockey Club to consider the matter before the sentence operates? Yes; they have to consider the matter before the sentence on the boy operates at all.
280. Then it is quite open for them to send the case back to the country club? Yes.
281. They might say this evidence seems unsatisfactory to us, and we should like you to reopen the case and to have a further inquiry—it is quite competent for the Australian Jockey Club to do that? Their orders are final one way or the other.
282. Suppose a club has a person before it and the charge against him is not proved, the jockey being innocent, what happens then;—do the country club report if they find the man innocent, or does the thing drop? You mean if a boy was disqualified by a country club?
283. I am taking a case where a boy is not disqualified, as they find he is not guilty of the supposed offence? Then the Australian Jockey Club have power to bring him up afterwards.
284. Where they find that the person charged is innocent, they have to report even that to the Australian Jockey Club? No; I do not think so.
285. You think nothing more is heard of it? I think not.
286. Do you think the Australian Jockey Club claim the power to write down and say we want to see the papers? Yes; they have that power.
287. And they could reopen a case even if there had been an acquittal? Yes; they can do as they like.
288. *Mr. Gormly.*] How do you know that? From experience,

289. Where a jockey has been exonerated as regards any wrong-doing, you say that the Australian Jockey Club can inquire into the case afterwards? I did not say that. I say that if a jockey is disqualified, and the case is reopened, and then he is exonerated, all the papers have to come before the Australian Jockey Club. S. Fielder.
2 Oct., 1900.
290. *Mr. Crick.*] If a jockey is brought up and is exonerated, what then? I do not know that they have to do anything more. The Secretary of the Australian Jockey Club would answer that question. If a jockey has been disqualified, and the club has reopened the case and exonerated him, that has to come before the Australian Jockey Club, and they use their own judgment as to whether they will exonerate him.
291. What is the smallest circumference of a course on which horse-racing ought to take place? Not less than 1 mile.
292. You do not think the distance would be sufficient if it is under 1 mile? No.
293. How many horses do you think it is safe to start in a race? Fourteen or fifteen would be sufficient.
294. Do you think it dangerous to start twenty-five or thirty horses in a race? I am certain of it. It is very dangerous, especially on a circular course. But on a course like that at Flemington it would not be dangerous to start fifty horses.
295. Yesterday, at Warwick Farm, you saw nineteen babies start? Yes, and they had never run before.
296. Do you not think that was attended with a great deal of risk to the lives of the boys who were riding? Yes. The only extenuating circumstance was that they started on a pretty straight run; they had only one turn.
297. If any one of those had come down, it might have brought down a dozen others? Yes.
298. I suppose you have seen as many as four or five horses fall in a race? Yes, I have seen four horses fall many a time.
299. Is not the Canterbury Park Course about a mile round? I think it is more than a mile.
300. And after wet, is it not a dangerous course? Yes; it is rather a risky course at any time.
301. Do you remember that on one occasion they had a large entry, and that they determined, in the interests of safety to human life, to run the race in heats? Yes, and it was a very sensible thing to do.
302. Every sporting man approved of it? Yes.
303. Had you a horse running on that occasion? I think I had.
304. You know that every sporting man approved of their taking that course? It was the wish of every man concerned that they should do so.
305. Are you aware that the Australian Jockey Club, because they took that sensible course in the interests of the safety of human life, brought that racing committee up and fined them £50? Yes.
306. I believe they returned the money afterwards, but they wanted to make an example to show that no committee holding races under their rules should ever take such liberties? Yes.
307. Do you remember anything about a very big entry afterwards at Rosehill? I have seen as many as thirty-nine horses run in a race there.
308. I think that on one occasion there was an entry of nearly sixty horses? Yes.
309. Do you know that they wished to have that race run in divisions, and that permission to do so was refused? I was not aware of that myself, but I have heard a rumour about it.
310. What is the minimum weight for racing boys? 6 stone 7 lb.
311. But many boys ride who weigh less than 6 stone 7 lb.? Yes, many boys of 4 stone weight are riding.
312. Boys of very tender years? Yes.
313. Do you think it is right to allow a child of 4 stone weight to ride in a race when there are fifteen or twenty starters? No, I do not. I think they have altered that rule, and now they cannot ride if they are under 14 years of age.
314. What do you think ought to be the minimum weight of a rider? I should say that about 7 stone would be quite light enough.
315. You think that the minimum weight for horse-racing ought to be 7 stone? Yes, I should be in favour of that.
316. I suppose you would leave the maximum weight to the discretion of the handicapper? Yes.
317. Do you think it would improve racing from the jockey's point of view, from the trainer's point of view, and from the horseowner's point of view, if there was an open tribunal such as is proposed by this Bill where everything was dealt with openly the same as in every law court in the Colony? I am sure of it. That is the wish of everybody connected with horse-racing.
318. It is the wish of everybody connected with horse-racing that there should be an open tribunal where everybody could go and have his case openly dealt with? Yes.
319. I suppose that you feel pretty keenly the disqualification put on your son? I do indeed.
320. You feel that it reflects on you? Yes.
321. You have already stated that every witness you spoke to said that he gave evidence in favour of your son? Every one of them did, that is beyond all doubt.
322. Did the Committee in upholding the disqualification of your son give any reason for the decision they came to? Not the slightest.
323. *Mr. Reid.*] Were you present? Yes, at the final decision I was called in to hear the verdict.
324. *Mr. Crick.*] How many of the Committee were present at the time when the final decision was given? I forget now.
325. Were some of the Committee who sat and heard the evidence absent;—did they go away to Melbourne Races before the case was concluded? Yes, and one who went was the Chairman.
326. Amongst those who heard the evidence and who went away before the final decision was given was the Chairman, Mr. Dangar? Yes.
327. Were there not other members of the Committee who heard the evidence, but who was not present when the decision was given? Yes.
328. You used to race a good bit in country districts? Yes.
329. Do you find that the country clubs are all dwindling away? Yes; they are going to nothing altogether.
330. The racing regime of the Australian Jockey Club is simply focussing the racing in and around Sydney? Yes; it is the ruination of all the country clubs. That is the general cry.

S. Fielder.
2 Oct, 1900.

331. You have spoken of the Hawkesbury races, which you say were a very big event at one time? Yes; so were the Wagga Wagga races, but they are nothing now. They cannot get the horses to go to the country races.
332. A racing man cannot be at Cootamundra or Wagga Wagga;—he must send his horses to Sydney and have a trainer here, and spend his money here, and your experience is that the country clubs have been dwindling away? Yes; they are dwindling away to nothing.
333. *Mr. Reid.*] Have some of them retired from their connection with the Australian Jockey Club? No, they cannot.
334. *Mr. Crick.*] Do you think that if, in accordance with the proposal in [the Bill, the country were divided into racing districts, not adhering to these particular divisions, and those country districts were allowed each a member to sit on the central body, that that would revive interest in racing in the country? I think it would a great deal; they would have some say in matters.
335. They would have a say as to the fixing of the days of racing? Yes.
336. In your opinion what really killed the Hawkesbury Club was the way in which the Australian Jockey Club fixed the days for racing? Yes; that is my opinion.
337. The clubs within 40 miles of Sydney have no say in the fixing of the days on which their races shall be held; they are fixed by the Australian Jockey Club? Yes.
338. And the Australian Jockey Club choose whatever day they like? Yes; they rule everything.
339. The only qualification for a man to vote for a member of the Australian Jockey Club Committee is that he is a member of the Australian Jockey Club? Yes.
340. No country club, although it must race under the Australian Jockey Club rules, has the slightest voice in the election of the Australian Jockey Club Committee? Not that I am aware of.
341. Of course you say that as a trainer they will not allow you to become a member of the Australian Jockey Club? No.
342. About how many registered trainers are there in and about Sydney? I could not say, but there is a large number.
343. I suppose that trainers and jockeys together would number upwards of 300? Yes; there must be fully that number.
344. And not one is allowed to become a member of the Australian Jockey Club? No; they have no power at all.
345. You said you were in favour of a portion of the racecourse being set aside for the public free? Yes; I should be in favour of that.
346. *Mr. Reid.*] You would not object to wipe out the Australian Jockey Club altogether? Yes; I think it is a very necessary institution, but we should like to get fair play.
347. You have a grievance? Well, I have.
348. *Mr. Crick.*] If a man pays a license fee to the Australian Jockey Club, he can go on to the racecourse at Randwick and make bets? Yes, if they grant him a license.
349. But a man to whom they have not granted a license, if he attempts to bet, they have him put out? Yes, very quickly.
350. So that they get revenue for granting licenses to carry on betting on the course? Yes; they get revenue from everybody.
351. In order to assist in carrying out their betting business, if a person makes wagers, and is unable to pay, do they have him turned off the racecourse? Not unless the bookmaker asks for it to be done.
352. Suppose a person makes a wager and is unable to pay, can the bookmaker have him turned off the racecourse? He can make application to the Secretary, and the Secretary can have him turned off.
353. Then until he pays he is kept off the course? Yes.
354. *Mr. Reid* asked you if, in considering whether a boy or an owner has been guilty of malpractice, the Committee could not use their own judgment as to what they saw; do you think it right for a man who is a witness against you to sit on the Committee without giving evidence at all; that he should be both judge and witness, yet not giving evidence, so that you cannot cross-examine him? No.
355. You know from what you heard of the questions put to you when you were before the Committee in your son's case, that two members of the Committee took a strong view against your son? Yes, very strong.
356. Had your son any opportunity of asking either of those persons any questions? He never asked them one question.
357. He had no chance? No.
358. He was told that he could ask questions of the witnesses? Yes.
359. *Mr. Gillies.*] Do you know whether it is the practice for any members of the Committee to bet at horse-races? I do.
360. You know that? Yes.
361. Have you ever known any of the Committee to adjudicate on a case in which they were interested as backers of horses? I could not say of my own knowledge. I have heard a great deal about it. I know these things are talked about. Some of our committeemen are fairly good backers.
362. *Mr. Archer.*] You have no prejudice against the Australian Jockey Club? No, I am not prejudiced.
363. It has been insinuated that you came here prejudiced;—are you not here to object to the arbitrary way in which any supposed delinquent is tried before the Australian Jockey Club? That is my sole thought. I do not care if my boy is disqualified for life if it will do good.
364. What you object to is this Star Chamber business? Yes.
365. You think that if you are brought before that Committee you have a right to be heard and to have your witnesses heard? Yes; that is my sole thought.
366. In your opinion the falling away of the country clubs is owing to the arbitrary way in which the Australian Jockey Club fixes the days on which they shall race? Yes, I think that would be it. Of course a good deal of it is owing to the fact that there is so much racing in and about Sydney. The people have lost the idea of going to the country races with their horses. There is so much racing at their own doors that the country clubs have to suffer.
367. *Mr. Taylor.*] You have told us that the jockeys, trainers, and others pay considerable sums to the Australian Jockey Club? Yes.
368. Do you know how the public interest is benefited? No.

369. The money is spent by the Australian Jockey Club on racing? I do not know what becomes of it.
370. Do you think that in the interests of racing and of fair play to the country clubs the Australian Jockey Club should have the sole and supreme power to say what minimum prize any particular country club should give? I do not.
371. Do you not think that that has more to do with the crippling of the country clubs than anything else? I have no doubt about it.
372. The Australian Jockey Club claim the right to say what prizes shall be given? Yes.
373. Do you think that if a jockey or a trainer is brought before the Australian Jockey Club he should have an opportunity of being represented before the tribunal which is to try him? I do. When a boy comes before them he has no more to say than a child.
374. You know the members of the Australian Jockey Club Committee? I do.
375. Do you know one that does not belong either to the Union Club or the Australian Club? I could not say that I do.
376. Do you know any one who has been there for years past that does not belong to one of those clubs? No.

S. Fielder.
2 Oct., 1900.

TUESDAY, 9 OCTOBER, 1900.

Present:—

MR. ARCHER,
MR. HOGUE,
MR. LEVIEN,

MR. GILLIES,
MR. FITZPATRICK,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Thomas Strettel Clibborn sworn and examined:—

377. *Chairman.*] What position do you occupy in respect to horse-racing in this Colony? I am Secretary T.S. Clibborn. of the Australian Jockey Club.
378. You have occupied that position for a considerable number of years? Yes, since 1873—twenty-seven years. 9 Oct., 1900.
379. Have you been supplied with a copy of the proposed Racing Association Bill? I have seen it; I was not supplied with it.
380. There was a copy sent to you as Secretary of the Australian Jockey Club? No, I think not; but I have read the Bill.
381. I understood that a copy was sent to you? I have not received it.
382. Have you gone through the Bill? Well, I have not gone through it very carefully; I have read it.
383. I suppose you understand that the proposal is to set up a racing tribunal to practically superintend racing in the Colony in place of the powers now exercised by the Australian Jockey Club? Yes.
384. Now, dealing with your club, by virtue of circumstances you practically control the racing of New South Wales? Yes.
385. You are racing on a piece of Government property that you hold under lease from the trustees in whose hands it is vested? Yes.
386. Under the old Act of Parliament the Australian Jockey Club is empowered to carry on racing, and it has also other powers in respect to allowing other clubs to race upon that property? So far as I can judge, the Australian Jockey Club has the sole control of that land under their lease. If you would allow me to explain it would save trouble. I do not bind myself to the absolute accuracy of what I say in any way, but I will explain what I understand to be the position. I must go back a little bit first. In 1873, when I came over here, the lease of seven years, under which the Jockey Club held the ground at that time, had just expired, and the whole place was in ruin and almost in a state of dilapidation. I was consulted by my committee about it, and after they had discussed the matter they decided to apply to the late Mr. Stephen Campbell Brown and ask him to bring in this Jockey Club Act of 1873, which he did. Power was given to the trustees to extend the lease to twenty-one years to enable us to borrow money. We then issued debentures for a certain sum—I forget exactly how much—I think it was £3,500; and in order to complete the improvements which were undertaken by the committee they had to give a joint and several promissory note to the Commercial Bank. That is how the present Jockey Club came into possession of the racecourse, and it is my impression, although I cannot say positively, that the lease was given to the Jockey Club absolutely as a racing club, and that they were not compelled to let the place for cricket or for other sports or for rifle-shooting. As a matter of fact, the racecourse is utterly unsuitable for cricket at the present time, and it would be useless for rifle-shooting. Although in the olden days, long, long ago, there used to be some pigeon matches carried on there, it would be absolutely dangerous now, owing to the number of tracks with which the place is intersected. There are not two or three hours on any day now during which horses of some kind are not exercising upon the course.
387. *Chairman.*] Those are the provisions which are in the Deed of Trust, but I am now talking about the other phase of the matter. Does the Act empower the Australian Jockey Club to sublet the course to other clubs? I have not read the Act carefully, but I think it does. There is no clause in the Act to prevent the Australian Jockey Club from sub-letting the course. In the case of sub-letting, the money derived from the rent paid by the sub-lessees is devoted to the good of horse-racing, as it is added to the stakes that we offer.
388. That is, the stakes offered by the Australian Jockey Club? Yes; it is added to whatever stakes are given at Randwick. I may say here that if you take away the lease from the Australian Jockey Club they must reduce the stakes; and if the shilling at the gate is abolished—I do not think it could be abolished for a part of the course—it would mean a loss of about £5,500 per annum, and the Jockey Club would have to make a corresponding reduction in the stakes.
389. You worked that out simply upon the basis of the sum now received? Yes; we get £4,000 a year for the right of the gate, and then we should have to reduce the rents which we have been getting from the clubs who lease the course on account of the gate being done away with.

- T. S. Clibborn. 390. But would there not be corresponding advantages? I do not think so.
- 9 Oct., 1900. 391. You have had some experience in Victoria? Not of recent years. I was secretary of the Ballarat Club up to 1873, and of the Hamilton Club prior to that, as far back as 1867; but racing now is very different to what it was then.
392. But in Melbourne they open the course free? Yes; it is open it is true, but you cannot place New South Wales and Victoria, or, more properly speaking, Sydney and Melbourne, on the same basis with regard to racing. Melbourne has not the advantages that the people of Sydney enjoy. There is only the one place to go to in Melbourne, and that is the racecourse, whereas here we have Bondi, Coogee, the National Park, the Hawkesbury River, and various other places. Moreover, our young people are not a horse-racing community, but they are a sailing community. You have only to visit Circular Quay in order to see that for every 1,000 who go out to Randwick there are 10,000 who go out sailing. That is a matter of fact about which there can be no question.
393. That is as to the comparison between the two cities? Yes; I do not know that anything could be done that could alter the prestige of the Melbourne Cup in any way. You know yourself that there is no place in Melbourne for a visitor to go to unless he goes to the races.
394. So far as I am personally concerned it would be the last place I would go to; but I understand you to be speaking from the sporting standpoint? Yes, certainly.
395. I understand your club levies certain registration fees on all other clubs which, as it were, come within your union? Yes; perhaps I might explain that, first of all, the meetings are registered. A club is registered when it gives at least £150 in stakes, when it has a certain number of members, a course of a certain length, and so on; and it is generally understood that these clubs are non-proprietary, and are racing for sport, pure and simple. When they were first registered, in 1883 or 1884—I could not be certain—they paid one guinea with their application, and from that date until last year they never paid a shilling. Last year we found that the expense of printing the register and the increased business was so great that we asked them to subscribe a guinea a year, for which we render them every assistance in our power.
396. Did they come under your Government at their own request or at the request of the Australian Jockey Club? The Australian Jockey Club sent round a notice to the various clubs.
397. That was intimating that you intended to practically take charge of racing? Yes; and to assist them in seeing that everything was done in order and as it ought to be. The racing system is a very vast system indeed.
398. *Mr. Gillies.*] A vast system of what—do you mean swindling? I am not aware of any cases of swindling. That is a personal matter, and, as secretary of the Jockey Club, I know nothing about swindling. With all respect, I submit that that is not a proper question to ask.
399. You answer the questions and do not give us speeches? I am endeavouring to do what the Chairman has asked me to do.
400. *Chairman.*] Then you levy charges upon all people who take part in this sport—such as bookmakers? Yes; the bookmaker pays a registration fee for whatever place he may desire to ply his vocation at.
401. Then you also charge fees to jockeys and trainers? Yes; jockeys and trainers pay a fee of £1 a year.
402. Then these comprise practically everyone who takes part in the sport? Yes; those are the only ones who are required to pay any fee.
403. That is outside of the general public? Yes.
404. Under your present system it has been stated here that if a jockey, or a trainer, or a bookmaker applies for a certificate, or whatever you call it, it is competent for your committee under your regulation to refuse that person a license, and it is the common rule that no reason is given for the steps taken? The committee do not give reasons for their refusals, but they take care to satisfy themselves that the person applying, and whose application meets with a refusal, is not worthy to hold a license. Personally, if any individual case can be quoted, I have not the slightest doubt that my committee would be able to give the reasons that prompted their action.
405. The general rule, however, is that they do not give any reason? Yes.
406. Now dealing with the case of bookmakers, if a man is a bookmaker in a country district he has first of all to pay a levy to the club upon whose course he proposes to carry on betting? I do not know anything about the country clubs.
407. I am speaking about the clubs under the Australian Jockey Club rule? You mean suburban clubs?
408. Yes; assuming that a bookmaker does pay his fee to a suburban club, he is still prevented from betting on the Randwick course until he registers with the Australian Jockey Club? In the first place, the bookmaker applies to have his name registered, and he then applies to the racing club for a license to bet. If he applies to be registered at Randwick, he would not have to pay his guinea again. Supposing a man wants to be registered for Randwick and he is approved of, he pays £25 a year, but he would not be called upon to pay the additional guinea to be placed upon the register of bookmakers. If a bookmaker wishes to ply his vocation at racecourses other than at Randwick, he pays one guinea to the Australian Jockey Club in order to have his name placed upon the register, and then having obtained a certificate of character, he is at liberty to register wherever he likes outside of Randwick. It is a sort of insurance society to provide that a man shall not be registered to bet where betting is in vogue under these rules unless his name shall have been first placed upon the register of persons qualified to bet.
409. With your experience in connection with this club, do you think that it gives entire that satisfaction to the country clubs which you would expect from an association governing racing? That is rather a difficult question. If a country club has been guilty of what the Jockey Club consider malpractice, it is not likely that they would be satisfied with the control of the Australian Jockey Club, but, taking it on the whole, I think the country clubs are satisfied.
410. They have no voice in the appointment of the committee? No; the committee of the Australian Jockey Club is elected by the members—there are 500 members who elect the committee.
411. But the country clubs are bound by your rules and regulations in every respect? Yes, they are bound when they come under our rules; but, of course, if they do not choose to come under the rules it does not matter.
412. But I need not tell you that it would not pay any country club to stand outside? Yes; of course, that is right. But I would point out that it is not the Australian Jockey Club alone that is doing what you

you describe, but we run on practically the same lines as the English Jockey Club, and there is practically a union created for the protection of racing generally. T. S. Clibborn.

413. Do you know the system that obtains in New Zealand? I am only speaking from what I understand, but I believe there are ten or twelve clubs there of about equal standing, and that they have agreed among themselves to establish what they call a racing conference. 29 Oct., 1900.

414. They have an association of their own in which all the clubs have an interest? Yes, I believe so. I understand there are about twelve clubs; but you can get the names of the clubs from the *Weekly Press*, the New Zealand paper.

415. However, that is the principle on which it is worked? Yes; you can obtain all the information you want by writing to the secretary of the Jockey Club at Christchurch.

416. Every club there has a voice in the appointment of that tribunal? I cannot give you any particulars, because I only know in a general way.

417. Do you think it would be a better system or give more satisfaction if, as proposed under the Bill, the clubs within the Colony were to have a voice in the election of the committee constituting the central tribunal;—it is proposed to group the clubs in districts, and that each club district should have a voice in returning a representative to a central tribunal? No, I do not think it would be better.

418. What advantage does the present system present over that? The people who manage racing now understand it, whereas, as far as my experience goes, the people outside do not understand it.

419. Would not that obtain in New Zealand in the same way as here? No, I do not think so.

420. Well, we will take another case, that of North Queensland;—what system do they adopt there? I do not know.

421. You are not aware that they have an association there? No.

422. Under a system whereby each club would have a voice in the selection of a candidate, it would not necessarily follow that they would send a man from their own district direct; they could still appoint a man on the spot who would be well qualified in the same way as members of your committee are? No; but what would the man on the spot know about the requirements of a district perhaps 1,200 miles away?

423. But is that not the position at the present time? No; how does that obtain? The secretary at Broken Hill, say, communicates with my committee as occasion may require, and receives from us all the information that is necessary.

424. But would not the same thing obtain in the other case? No, I do not think so. I cannot see how men uneducated with regard to racing could properly control it.

425. *Mr. Levien.*] So far as that is concerned, any appeals would still come back on the evidence, and supposing anything occurred at Broken Hill, it would be purely a question of evidence as to whether the appeal would be sustained or not? I do not exactly follow the Chairman's question.

426. *Chairman.*] At the present time you have a central executive located at Sydney, and I want to know whether that executive would be improved if the members were elected by the voice of the people who are interested in racing throughout the Colony? I do not think so. The members of the Australian Jockey Club elect the committee. The members of the English racing clubs outside the Jockey Club do not elect the committee of the English Jockey Club, which occupies a position there similar to ours here.

427. The various racing clubs do elect the committee of the Racing Association in Queensland, at all events;—there was some evidence given here the other day in respect to inquiries which had been held by the Australian Jockey Club, and it has been assumed by the Press and the public that—I will not say an unfair decision—but that a wrong decision has been given, by accident or otherwise; there is the Fielder case, for instance;—you have produced the papers in connection with that? Yes.

428. You are acquainted with all the circumstances of that case, are you not? Yes.

429. At what meeting was that boy disqualified? I would have to refer to the evidence.

430. When was the first inquiry held? On the 4th January, 1900.

431. What was the boy charged with? An inquiry was made into the inconsistent running of "Mora" on the 26th December as compared with her running on the 1st of January. The boy Fielder was the rider.

432. That was why he was brought before the committee? Yes.

433. It appears from your answer that the race for which he was disqualified was run at some prior meeting? It was in consequence of the inconsistent running of the horse on the dates mentioned that the inquiry was held on 4th January.

434. *Mr. Archer.*] They did not bring the boy up on the day that the thing occurred? No; they did not. They did not understand the running of the horse on the 26th December; but when their suspicions were confirmed by her running on the 1st of January they thought an inquiry was necessary.

435. *Chairman.*] You say that the mare ran better on the second occasion than on the first? I did not see the race on the first occasion, but I saw the second race.

436. But you would surely know, as the secretary, that that was the reason they made the inquiry? I have stated the reason which is given in the evidence now before the committee.

437. That was the inconsistent running of the mare? Yes.

438. As secretary, would you be acquainted with the weights that the mare carried on both those occasions? I could not tell you off-hand; but I could have brought the race-book with all the information if I had known. I take very little interest in the racing, and, as a matter of fact, I did not see the first race.

439. Would it be inconsistent running if she carried a stone less in the second race? I could not tell you.

440. *Mr. Gillies.*] Would her running appear inconsistent if she carried a stone less on the second occasion? How could I say that? I could not give you an answer to that question, because you are asking me for an expression of opinion which, as an official, I could not give you.

441. *Chairman.*] Have you any opinion as to what would be inconsistent running;—supposing a horse ran in similar company in two races, carrying 8 st. 7 lb. in the first, and 7 st. 7 lb. in the second, running third in the first race, and second in the second race? I could not give an opinion; and, with all due respect to the Committee, I do not think I ought to be called upon to offer an opinion on these matters. I am prepared to answer every question I can, but that is a matter of opinion regarding which I do not think I ought to be called upon to give an answer.

442. You would be present at this investigation? Yes.

443. At this first inquiry—before we touch the others—was there any evidence outside of your own committee taken to condemn the lad? That is also a matter of opinion. 444.

- T. S. Clibborn. 444. That is not a matter of opinion; that is a straight question? I am not sufficiently acquainted with this evidence to give you an answer. I took no interest in this case, and I took no part in the inquiry at all.
- 9 Oct., 1900.
445. I suppose you had to keep a record of it? No; we keep a shorthand writer, Mr. Jones, and the report I have put in is compiled from his notes. I stand inside the door, but take no part in the inquiry.
446. *Mr. Levien.*] It is not Mr. Clibborn who makes the inquiry, but it is the stewards who are responsible for that. Mr. Clibborn is only an official. (*Addressing witness.*) That was what you mean, Mr. Clibborn? Yes; I have no part in the inquiry at all.
447. *Chairman.*] What is the usual course followed;—do they appoint certain stewards to deal with the matter? No; the whole committee act as stewards.
448. Then they stand in the position of prosecutors and judges;—that would be their position? It is the same all over the world.
449. No, there is a difference, I believe;—is there not a difference between the procedure here and that followed in Victoria? I think in Victoria they select a certain number of members of the committee to act as stewards for the day.
450. But in the case of an inquiry or a dispute these stewards would not sit upon the committee and act as judges? I could not tell you that.
451. You are not sufficiently acquainted with the procedure in Victoria? No.
452. We can take it that, as far as you are concerned, you did not know anything of the circumstances of this case at all? I did not see the first race run, but I have had it described to me over and over again, and at the time the evidence was taken I read it; but it occurred some time ago now. I could form no opinion of it, and if I could it would not be proper or discreet on my part as an official to make any comment on the action of my committee.
453. Would you give us your opinion upon this: If the race were run so badly, was it a proper and fair thing not to have pulled the boy up at once; if the act with which he was charged was so gross, do you not think the boy should have been pulled up at once? Personally, if I saw a boy misbehaving himself in a race, I would report him at once. As a matter of fact, I did report this very same boy some short time before for his riding of a horse called "Commander." As far as this case is concerned, however, I did not see the first race, and therefore could not say anything about it.
454. Do you recollect a case coming before you in respect to a protest made by one Mackie in connection with the running of a horse at Sunny Corner? If I could read his letter I might tell you, but I cannot remember just now. I suppose there are half a dozen cases every day coming before me.
455. You will recollect your replies, possibly;—it was in May, 1898;—you received an appeal against the local club, and this man entered a protest against a horse because it had run at an unregistered meeting;—after that, under your regulations, a deposit of £10 had to be sent along? No.
456. Would you explain what your regulation is?
457. *Mr. Levien.*] Have you the letter that you speak of before you, Mr. Chairman?
458. *Chairman.*] Yes, I have a letter here.
459. *Mr. Levien.*] Surely we ought to have an opportunity of seeing it?
460. *Chairman.*] I have only just got it, and I have other letters here which are unopened.
461. *Mr. Levien.*] Well, I would like to see the letter before we go any further.
462. *Chairman (after handing letter to Mr. Levien, and addressing witness).*] What is your regulation on appeals? If a man enters a protest against anything that has occurred in a race the matter is generally considered before the local committee first, and if the party is dissatisfied with the judgment of the local committee he can, within three days, give them notice of his intention to appeal. Then, within ten days, he can lodge a notice with me and give the ground of his appeal, accompanied by a deposit of £10.
463. That is on the appeal? Yes. Then the appeal is dealt with, and if the committee consider that the appeal is just and proper, and not frivolous, they may uphold it, or, on the other hand, dismiss it according to the merits of the case. If they consider that the appeal should not have been lodged, and that it was an improper appeal, they may if they choose forfeit the £10.
464. Where does that go? To the funds of the Australian Jockey Club. I may tell you that there are only three instances to my knowledge where such a forfeiture has taken place. There may have been more, but I should think about three would be all.
465. So far as the case I have mentioned is concerned, you could not locate it in your memory? No.
466. *Mr. Levien.*] It is very important that we should go into this matter about which you have been asked. I admit that there is a good deal in what the Chairman has said, but a charge is here made that certain votes were taken by proxy, and that a certain gentleman was allowed to vote upon this matter that was not upon the committee. What I would like to ask is, first of all, where is the evidence that there was any voting by proxy?
467. *Chairman.*] I am not desirous of going into that case as a specific instance just at present, but all I want to get at is the system on which they deal with these appeals. I have not gone through the papers myself yet.
468. *Mr. Levien.*] There is no use in half-asking questions when there are particulars most material to the matter in hand to be brought out.
469. *Mr. Taylor.*] You can follow it up later on, Mr. Levien.
470. *Mr. Levien.*] Of course I can, but I will take good care in the meantime to see that it is alright.
471. *Chairman.*] I have not gone beyond asking the witness about the system adopted. I do not know anything about the merits or demerits of this particular case, and all I want to find out is the system they adopt, and whether they penalise appellants to the extent of £10? If I had known, I would have brought a copy of the rules.
472. *Mr. Taylor.*] Who are the trustees of the racecourse at Randwick? Sir John Lackey, the Hon. H. C. Dangar, and Mr. F. C. Griffiths.
473. Do you get all the bookmakers' fees and all the trainers' and jockeys' fees and all the fines;—are they all absorbed into your funds? The fines go to the Distressed Jockeys' Fund.
474. You get all the others with that exception? Yes. The Distressed Jockeys' Fund amounts to £5,000, upon which we pay $2\frac{1}{2}$ per cent. per annum, but we never use it, and we get 3 per cent.

475. Do the country clubs subscribe anything in order to be registered? I explained before that the T. S. Clibborn. clubs pay one guinea per annum, and the meetings pay as often as they are registered.
476. Does your club give them any prize money in return for that? No; we do not. The expenses of ^{9 Oct., 1900.} management are very heavy in the way of printing, and so on.
477. Of course, I know that, but that applies to all clubs? But not to the same extent.
478. As a matter of fact, these country clubs get no return for their subscription to your club? No, except in respect to the assistance they receive, the forms with which they are supplied, and the copy of the register. We do everything for them that we possibly can.
479. But they get nothing in the way of money out of these fees? No.
480. Do you think it fair that the country clubs should be subject to a minimum rule as to prize money—that you should have the supreme control in the matter of fixing the minimum stakes to be given by country clubs? We do not fix a minimum of stakes except within 40 miles of the city. So far as the clubs within that radius are concerned, they used to pay £500 in stakes, but now they only pay £400.
481. But you have the power to shut them up altogether? Yes; but they do not complain.
482. I assure you they do complain; but that is not the point—what I am asking is due to the fact that they do complain;—do you think it a fair thing that you should have the power to say to all these clubs within 40 miles of the city that they should not pay less than a certain amount of money away in stakes? Yes, I do. What is to become of the horse-owners if they do not provide the money to run for?
483. But do you think it is fair? Yes, I do. I do not think it is unfair at all. Warwick Farm and Hawkesbury Clubs only give £300 in stakes.
484. Do you think that your minimum has had anything to do with the practical closing of the Hawkesbury Club? No; I can give you a very good reason, and that is, that the Hawkesbury Club relies on metropolitan support, and practically died with the late Mr. Andrew Town.
485. Did he give them support in the way of stakes? No; but he gave them the weight of his power and assistance. If it was not for the metropolitan support they could not exist. They now have three Saturdays on which they can race.
486. Do you not think that in the interests of racing it would be a fair thing for the Australian Jockey Club to give to the Hawkesbury Club, for instance, the same support that was accorded by the late Mr. Andrew Town? No; I do not. If they cannot afford to race, they ought to shut up shop.
487. But do you not see that concentrates all the racing in Sydney? Yes; perhaps so. If you will not consider me rude, I can give you a very good reason for the want of success of the country clubs, and that is the growth of proprietary racing. From the date the proprietary racing was first commenced there has been a decadence of the country clubs and outside courses. I am speaking from experience; and there are two members of the committee, who are pretty fair authorities on racing, who can remember when Singleton and Morpeth and Maitland and Orange and Bathurst used to give their £500 Cups, whereas now all the racing is centralised here, and I wish it could be altered.
488. That is why I am asking you the question;—do you not think that an improvement could be made if the Australian Jockey Club were to lend their support to country race meetings in the same way as the late Mr. Town did to the Hawkesbury;—do you not think it would exercise a good influence in tending to decentralise the racing? No.
489. Do you not think it would offer some encouragement to the country clubs? No.
490. How do you account for the good effects of Mr. Towns' influence? That was an individual case.
491. Well, suppose you apply the same thing all round? No; the Australian Jockey Club could not do it.
492. But you are absorbing all the subscriptions and fees from these country clubs without giving them anything in return? Well, so far as fees go, I can tell you that all the fees from all the clubs and meetings would not represent more than £500 a year at the outside.
493. Would that include bookmakers' fees and all? No; the country clubs charge the bookmakers themselves.
494. There are one or two other things that struck me in connection with the management of your affairs;—now, in connection with your inquiries, a boy may be very a good jockey, but, at the same time, not have any brains to enable him to conduct his own case before the committee; in fact, they are sometimes so confused that they do not know what they are doing;—do you not think a boy should have some representation when he is called up before the committee? That is a matter of opinion.
495. I am asking your opinion? My experience is that there is not one jockey out of a hundred who is not able to conduct his own case. They generally know as much as their employers, if not more.
496. Supposing there is one in a hundred who is not able to conduct his own case, is it fair that you should put that boy on trial and subject him to the risk of having his means of living taken away without giving him a chance of being properly represented? I hope you will excuse me, but I think that you are referring to an individual case.
497. No, I am not; I have nothing particular in my mind, but I am speaking quite generally? If my committee were satisfied that a boy was utterly incapable of conducting his case, no doubt they would take the matter into consideration.
498. I do not say "utterly incapable";—take the case of any boy? No; I think a boy is always able to answer questions, especially a jockey boy.
499. Are these boys allowed to ask the committee questions? Yes.
500. Do you think a boy is competent to do that? It depends upon the boy.
501. That is exactly what I am saying? I do not want to give any opinion. If my committee adopt a certain course, it is not fair for me to comment upon their action.
502. But we are here to get your opinion on certain matters, and I am sure your committee would not object if you could say anything that would be calculated to justify their position; I think that you feel that the boys ought to have some representation, and if you cannot justify what the committee do, I may take it that you lean towards the question;—are jockeys or trainers allowed to become members of the club? No; they are professional men.
503. Have they any voice whatever in the system under which they have to get their living? None whatever. If they conduct themselves properly there is no occasion for any complaint on their part.
504. Quite so; there would be no occasion for the police if there were no trouble;—but do you think it fair that hundreds of men and boys should have to live under a system in which they have no voice at all? Certainly

- T. S. Clibborn. Certainly I do. They are under a system, and if they abide by the conditions of the system they have no occasion to complain; it is only when they break bounds that they are brought to book.
- 9 Oct., 1900. 505. But I suppose you break bounds sometimes;—supposing the Australian Jockey Club make a mistake, how can it be rectified? The aggrieved party can appeal.
506. But supposing that the Australian Jockey Club confirm their original action, how do matters stand then? Well, I should think that after having had two hearings there should be no further appeal. If a man goes to the lower Court and then appeals to the Supreme Court, he could not claim to have any further appeal.
507. Then he has no recourse if they refuse to hear him again? None whatever.
508. I understand that the Supreme Court give reasons for their action, but you give none? We give reasons in some cases, but generally we do not.
509. Take a case: We will assume that there is a committal, and I want to know whether you give the person affected the same opportunities as he would have in the Supreme Court, where they have a certain rule upon which he can appeal;—do you tell him wherein his case was defective? No.
510. Then you give him no basis of appeal at all? No. If he does not disprove the charge, he has to suffer.
511. Exactly; but do you give him any reason at all so that he can have an opportunity of justifying himself? No; we give him no reason beyond the punishment.
512. I am quite aware of all that; but you do not give him any reason upon which he can base his appeal? No.
513. *Mr. Levien.*] They do not give any reasons in the Police Court? If you tell a man that he ought to have filled up a certain blank, he would probably come with a witness prepared to meet the case.
514. *Mr. Taylor.*] You do not think that trainers and jockeys should have any voice in the administration of the system under which they have to get their living? No.
515. Who lodged the complaint about the boy Fielder? No one lodged any complaint; the committee were dissatisfied with the mare's running, and they summoned him to appear before them.
516. Did they act conjointly in the matter? I cannot say that.
517. Will the evidence taken in the case show that? I cannot say from memory. I know that my instructions were to tell young Fielder and the owner and trainer of the mare that their presence would be required before the committee on a certain date. I delivered that message, taking my instructions from the then chairman, the Hon. W. A. Long.
518. And yet, instead of being hauled up when he made this mistake, this boy was not brought before the committee until some week afterwards? The inquiry was held after the second race. If there had not been a second race in which the mare took part there would not have been any apparent inconsistency, and it was the inconsistent running that led to the inquiry.
519. You have owned racehorses, and so have I;—have you not known horses run a good race on one Monday and a very indifferent race on the next Monday? Yes, I have.
520. Then how can you say in the face of that that the inconsistent running of the mare on these two occasions would afford sufficient justification for punishing the rider? That is a matter of opinion for my committee, and it is not for me to express my opinion on that.
521. *Mr. Hogue.*] Have you any voice in determining these matters yourself? None whatever.
522. *Mr. Levien.*] I find that Mr. Roulston gave evidence, and stated that the stewards on their own motion summoned Fielder in this case? Yes; that was so.
523. And they took their action on what they saw? Yes.
524. They would be perfectly justified, without calling any evidence, if they saw what they considered to be deliberate pulling on the part of the jockey, in disqualifying him without any further bother at all? They certainly have the power, but they have not, within my recollection, ever taken that extreme course. The practice has always been to give the accused person a chance to defend himself. That is the primary rule laid down; and in the case of country clubs very often it is printed on the face of the register, and the instructions are that the first thing they must do in the case of an inquiry is to give the man affected a chance of defending himself. Only last week a case came forward from Deniliquin and another from Corowa. Both cases were afterwards upheld by the Jockey Club on undoubted evidence; but the man who was affected said they neglected to hear him, and the case was referred back in both instances.
525. *Mr. Taylor.*] What chance did Ettridge get when he applied for his license again? He has had his license refused repeatedly, and I do not think the committee will ever give him a license.
526. But I am asking you whether they gave him any chance? He had two chances before.
527. But I mean in this last instance? They gave him no chance.
528. They gave him no reason? No.
529. Have you any idea of the reason? I have; and it is a most excellent one.
530. Have you any objection to tell us what the reason is? Yes, I have; but I would not mind telling you outside the door. I do not like to tell it here, because it is a most scandalous thing.
531. *Mr. Fitzpatrick.*] I think we might have it put down in evidence;—if a man raises an objection to the fact that he is not allowed his license—if he makes known his grievance at every street corner—then the reason should be given.
532. *Mr. Levien.*] Oh, I do not know about that;—why injure the man in seeking employment in another occupation? (*To Witness.*) His license has been refused elsewhere? Yes; everywhere.
533. *Mr. Taylor.*] It was not over a betting transaction? No.
534. *Chairman.*] If Ettridge comes forward himself and wants to give evidence, we may go into the reason for refusing him his license; but unless he leaves the matter in our hands I do not think we should go into it.
535. *Mr. Levien.*] You have never known of an instance in which they have not allowed a person charged to give evidence in his own behalf? No.
536. As a rule, jockey boys are pretty "fly"? Yes; they usually know a good deal more than I do.
537. They are not so stupid but what they know the charge which they are called upon to answer, and what is required of them? No.
538. They generally understand what they have to answer for? Certainly.
539. So that there is no necessity for any elaborate examination in their interests unless it is a case in which there may be some difficulty in explaining the running of a horse? No; and then they can always call any witnesses they like.

T. S. Clibborn.
9 Oct., 1900.

540. They can call any of the boys riding in the race? Yes.
541. Would the committee object to anyone standing by and suggesting questions to the person who was charged? It has never been the practice.
542. *Chairman.*] Has it been objected to? Yes; my committee have objected to it.
543. *Mr. Levien.*] Was there any objection, in the recent case of the lad Fielder, to his father sitting by the side of his son? Mr. Fielder was not in the room.
544. Was Mr. Fielder in the room at the time the examination was going on? No; he was not there the whole of the time.
545. Did he go out of his own accord or was he asked to go out? I think that after his evidence was given he was asked to go out.
546. That is at the second inquiry? Yes. He was not at the first inquiry, as he said he was obliged to go away to the country.
547. He never turned up at all in the first instance? No; he did not attend the first inquiry.
548. Then he must have thought his son capable of looking after his own interests? He was not there.
549. *Chairman.*] Was he notified on the first occasion? Yes; he was given notice of the inquiry, and he brought a letter to me stating that he was going up the country.
550. *Mr. Levien.*] He had every opportunity of attending on the first occasion and did not avail himself of it? Yes.
551. *Mr. Archer.*] Mr. Fielder had notice to attend? He was not one of those summoned.
552. *Mr. Hogue (to Chairman).*] Are we trying the Fielder case?
553. *Mr. Levien.*] No, but this matter has been gone into, and that is why I am asking the question.
554. *Mr. Hogue.*] We shall prolong the inquiry for months if we go on in this way.
555. *Chairman.*] It will be better if we make the questions and answers more direct.
556. *Mr. Levien.*] I am putting the questions directly enough.
557. *Chairman.*] Yes; but from the replies we have got it appears that Mr. Fielder was first of all summoned to attend the first inquiry. Now we have it explained—
558. *Witness.*] No, Mr. Fielder was not summoned to attend the inquiry, but he came to my office and told me that he was going away to the country and could not attend the meeting, and he wrote a letter to that effect, a copy of which is attached to the report of the inquiry handed in by me to-day.
559. *Mr. Levien.*] Mr. Fielder was present during a portion of the second inquiry? Yes. Mr. Fielder was only present in the room while he was being examined.
560. We have heard a lot of reports that Mr. Fielder had a blacksmith who shod the mare with these bogus aluminium shoes;—was any blacksmith produced to prove that fact?
561. *Chairman.*] Was that stated before the Australian Jockey Club committee? Yes. There was something in the evidence about it.
562. *Mr. Levien.*] Was there any blacksmith produced? Mr. Fielder produced a pair of iron shoes coated with something representing aluminium, and he said that he believed that his mare had been shod with similar heavy shoes, and he would give £50 to find the blacksmith who shod her. He was cross-examined as to why there should be any difficulty in finding the blacksmith, and he said that the work was done by a blacksmith at Kogarah, and that he had spoken to Mr. McLennan, who did his shoeing, and who tried to find the blacksmith, but could not do so. That is what Mr. Fielder said.
563. Then this blacksmith was never produced? No, not by Mr. Fielder.
564. Were the shoes produced? The shoes that were worn in the race—yes.
565. And who were they produced by? By the blacksmith who shod the mare.
566. Then he was there? No, not at that time. He made a statutory declaration, and he brought the shoes in and disproved the belief that Mr. Fielder had that the mare had been shod with iron shoes.
567. *Chairman.*] Then it was only a belief of Mr. Fielder's? Yes.
568. *Mr. Levien.*] Then Mr. Fielder brought in the shoes with which the horse was alleged to have been shod, but the actual shoes worn were afterwards sworn to by the blacksmith?
569. *Chairman.*] It seems to me that you have gone through this evidence, Mr. Levien?
570. *Mr. Levien.*] I have done nothing of the sort, and don't you make any assertion of that kind about me. I only know what Mr. Crick has told me. Mr. Crick told me some time ago about this evidence, and that is why I am acquainted with it.
571. *Mr. Hogue (to Chairman).*] What has this got to do with the present inquiry?
572. *Mr. Levien.*] I am glad you asked that.
573. *Mr. Hogue.*] This Bill does not propose to curtail the powers of the proposed association as compared with the present Australian Jockey Club, so that I do not see what use there is in our going into the question of disqualification. The new association will have precisely the same power of inquiry and determination as to disqualification as the Australian Jockey Club has at present.
574. *Mr. Levien.*] You have no right, Mr. Chairman, to insinuate that I have seen this evidence. Mr. Clibborn will tell you that I have not seen the evidence.
575. *Witness.*] Mr. Levien has never seen the evidence.
576. *Chairman.*] I have just come to the passage in the evidence which Mr. Levien has been quoting, only in a slightly different form.
577. *Mr. Levien.*] I signed petitions for Mr. Fielder's son, and Mr. Fielder knows that I was working at that time in his interest, so that there is no feeling against him so far as I am concerned.
578. *Chairman.*] Mr. Clibborn said he knew nothing about the evidence in this case.
579. *Witness.*] No; I did not say that.
580. *Mr. Levien.*] He never said anything so stupid.
581. *Witness.*] I said I would read the evidence to you. I said that it was taken in my presence by a shorthand-writer.
582. *Mr. Taylor.*] The witness was present when the evidence was taken by a shorthand-writer, and he could not remember particular portions of it.
583. *Witness.*] I could not remember the evidence, although I had read it and had marked certain portions of it.
584. *Chairman.*] Mr. Crick cited this case and two or three others to show that the committee had not been acting justly—that they had been exercising autocratic power, and had not given the accused persons a chance.

- T. S. Clibborn. 585. *Mr. Levien.*] That is not the way you asked Mr. Clibborn the question.
586. *Chairman.*] I have no desire to go beyond what I have suggested, and if I was doing wrong you had the right to object.
587. *Mr. Levien.*] Of course, I had; but I did not want to interfere. (*To witness.*) As far as these inquiries are concerned with regard to the licensing of the jockeys, I suppose that your committee have reports of their conduct throughout? We keep a record.
588. Have you ever known of any instances where jockeys have been disqualified or their licenses have been refused by your committee, and at the same time licenses have been granted by other clubs in opposition to you, or that the other clubs have asked you to reconsider your decision? The general practice is that they exercise their rights to ask us the reason why we have refused licenses. There are occasions in which licenses have been granted in Victoria whilst we have refused them.
589. In any case, applicants have the right to produce evidence in support of their application? Yes.
590. When persons are brought before the committee with reference to objections to their licenses, have you a licensing committee? Yes.
591. Do they deal with what charges are brought against the applicants? Yes; and give them an opportunity of defending themselves.
592. I suppose the committee are not actuated in any way by any feeling against these boys? I have never known of a case. I cannot tell you; but I have never known of it.
593. I suppose some of these jockeys have ridden for some of the members of the committee, whilst there are other members of the committee for whom they have not ridden? I cannot tell you; but I am not aware of any member of the committee having any personal feeling in the matter.
594. *Mr. Taylor.*] If they had, you would not be aware of it? No.
595. *Mr. Levien.*] With reference to trainers, some of the old trainers—such as Monaghan, Payten, Kerr, and Cook—their licenses have never been refused? No; not to my knowledge.
596. And it is very seldom that a license is ever refused to a trainer? No; unless he has done something decidedly wrong, and broken the rules and regulations laid down for trainers.
597. They pretty well understand them, I suppose? Yes.
598. With reference to the country jockey clubs, you say they pay a guinea registration fee? Yes.
599. Do you receive many communications from these clubs asking for interpretations of your by-laws and rules and regulations? Not so much as to our by-laws and regulations as to their own rules and by-laws. We also have questions asked relating to programmes and applications for all sorts of information, which we endeavour to give them. There are from twenty to thirty communications every day about racing matters alone.
600. From country clubs? From all the clubs, asking for information about racing matters.
601. But I mean registered clubs? Yes, registered clubs.
602. You mean asking for interpretation of certain rules? Yes.
603. It is a common thing? It is frequent, at all events.
604. You get none of these letters from suburban clubs who are thoroughly conversant with the rules of racing? It is very seldom that there are any.
605. You do not get any from Newcastle? No. Mr. John Gridale is an admirable secretary.
606. I suppose the same thing applies with Mr. Mitchell, in Maitland? He is not the secretary there; he is the handicapper.
607. But he has been a secretary? I am not aware of it.
608. You gave some evidence about country clubs, in answer to Mr. Taylor;—now, before these proprietary clubs were established, do you not know, as a matter of fact, that the Glen Innes, Armidale, Tamworth, Singleton, Maitland, and Newcastle Racing Clubs had plenty of meetings, with very large prizes? Yes; I do.
609. And very large numbers of city people used to go to those meetings; and horse-owners used to take their horses there from the metropolis? Yes.
610. That would be in the time of Mr. Tait and Mr. Archer, Mr. Town, and Mr. Glenister, and others? Yes. I could not be certain about the owners, but I can remember Mr. Archer being there. I remember being at Maitland, and assisting to make their handicaps, with the late Honorable J. Eales, and they had very good races then.
611. With big prizes? Yes; good prizes.
612. And all this has fallen off on account of the proprietary meetings you have spoken of? Yes; on account of too much racing.
613. Is it not generally a matter of too much racing? Not with the exception of the proprietary clubs, I think.
614. Do you think that if there were less racing and larger prizes it would conduce to a better class of horses, and greater success in connection with these different meetings? I think it would, to a great extent. I think it would increase the prestige of the racing in the country amazingly, and that they could force back a lot of the support which has fallen away from them.
615. I notice some questions have been asked with reference to the "Clansman" case;—I suppose the committee gave every consideration to that matter? Yes.
616. And there has been no appeal lodged against their decision? No.
617. *Chairman.*] To whom could they appeal? They have the right to ask for a rehearing. They could only appeal to the committee of the Australian Jockey Club. The Fielder case is a case in point, where the whole matter was reopened on application being made.
618. *Mr. Levien.*] Do you recollect the "Spry" case? Yes.
619. You know that that case arose at Dungog? Yes.
620. That was a case in which it was proved afterwards, beyond all doubt, that a horse was running under an assumed name, and if it had not been for the appeal to the Australian Jockey Club this swindle would have been upheld? Yes; it was in consequence of matters that came to the knowledge of the Australian Jockey Club that the case was laid bare.
621. And the Australian Jockey Club did inquire into it? Yes.
622. With reference to the English Jockey Club, all the racing in England is conducted under that club's rules? Yes; and under the Grand National Hunt Club Rules.
623. That is practically the same thing? Yes; it is a subsidiary institution on the same lines.

624. The racing there is all conducted under the rules of the English Jockey Club, in the same way T. S. Clibborn. that all our meetings in this Colony are guided by your rules of racing, which are a reflex of the English Jockey Club Rules? Yes; excepting that the English Jockey Club Rules are more drastic than ours, if 9 Oct., 1900. anything.

625. *Mr. Taylor.*] Is the English Jockey Club any more representative than the Australian Jockey Club? No; it is the most exclusive body in the world.

626. *Mr. Levien.*] It is a very difficult thing to become elected a member of the English Jockey Club? Yes, almost impossible. They elect their own members.

627. And it takes a man years to become elected? Yes. The chairman is elected for two or three years, and they invite men to become members of their body. The chairman of the Australian Jockey Club and the chairman of the Victorian Racing Club are both honorary members of the English Jockey Club.

628. Here you are merely nominated, and go through your election in the ordinary way? Yes.

629. You say that all the fees for registration, except those derived from jockeys, which go to the Jockey's Fund, are devoted to the assistance of horse-racing? Every shilling is used for increasing the stakes. We lost £1,000 over our last Spring Meeting, and we shall in all probability lose £1,500 over the Autumn Meeting, and that money is recouped to the Australian Jockey Club by the rents they receive for the use of the course from Tattersall's Club and the Sydney Turf Club.

630. Do you know the number of members belonging to these proprietary clubs? I do not know anything about it.

631. Take the case of the Rosehill Club;—the fees that are paid to that proprietary go to the proprietors themselves, and not to the Australian Jockey Club? I know nothing about the internal management of any one of the proprietary clubs.

632. Have you had any complaints from any of the secretaries of any of the clubs registered under your rules—that they have not received justice at the hands of the Australian Jockey Club? We have not had any complaints direct.

633. I am talking about direct complaints; we are shutting out hearsay evidence;—has anyone complained to you that you have not decided matters submitted to you, or answered their letters, or given information required? Whenever we receive a complaint of any kind from the secretary or committee of any club it at once goes before the committee of the Australian Jockey Club, and they do everything they can to assist the clubs and enlighten them as to why certain orders are given. Some short time ago they endeavoured to establish an association in the neighbourhood of Junee; but after the third meeting there were three delegates present, and the whole thing was abandoned as unworkable. They could not stand the expense of it. Since that was abandoned we have had no complaint. Every club has been registered in accordance with our regulations, and everything goes on quite smoothly. I do not know positively of any one club—from information received from them—which would make a complaint against anything the Jockey Club has been doing.

634. I suppose you have perused the sporting papers for a number of years; have you seen any complaints in those;—I mean such papers as the *Evening News*, the *Referee*, and the *Town and Country Journal*? They comment sometimes on the action of the committee; but I do not think they do it in any unkind spirit.

635. They have not accused you of unfairness or imputed injustice to you? No; I do not say that my committee, or any body of men, are immaculate; but speaking from twenty-seven years' experience of some of the gentlemen sitting on my committee, I can say that if I were to trust my life with anyone in this world, I would be ready to trust it with them. I believe they are honorable gentlemen every one. I have heard broad statements made about myself, and it has been mentioned that I am unpopular; and perhaps the same thing may have been said regarding the committee. Doubtless, I am unpopular with those who do wrong, and the committee also; but I should like to hear specific cases quoted of any complaints.

636. *Mr. Fitzpatrick.*] You say that no complaints have been made with reference to matters pertaining to country clubs;—do you not know that complaints have been made by country clubs with reference to the injuries which have been inflicted upon them? You are speaking of the suburban clubs.

637. I am speaking of the one club with which I have been most closely associated—the Hawkesbury Club? The Hawkesbury Club has complained, no doubt, because we did not fit things in to give them a two-days meeting. That was some three years ago. They said they would like to have three Saturdays, and we have given them three Saturdays for the last three years. They even asked for one Saturday in July, if I remember correctly.

638. The officers of the Hawkesbury Club seem to think that they have been—I will not say unfairly treated—but that the same amount of consideration has not been shown to them that they expected to meet with? I am sorry that they should think so, because it is one of the old-established clubs, and one that I was associated with in Mr. Town's time. The Hawkesbury Club, however, has been steadily going down, because the local people do not take the interest in it that they should. Mr. Alexander Benson is my authority, and I think Mr. Archer will tell you the same thing. I can remember the day when the Hawkesbury Club was one of the most thriving in the Colony; but where local support is not available a club is bound to go down.

639. I suppose that you attribute the falling-off at the Hawkesbury to the expansion of the racing system in the suburbs? I think there are now so many meetings close at hand that people object to going so far away as the Hawkesbury and paying the extra railway fare and other expenses. Moreover, the prizes are not sufficiently large to tempt horse-owners to go there. I do not think there is any matter of feeling against the Hawkesbury, or that any injustice has been done.

640. *Mr. Levien.*] The Hawkesbury Handicap was worth £500 or £600 at one time? Yes.

641. And Maitland used to have £200 prizes, and £150 on the second day? Yes.

642. *Mr. Fitzpatrick.*] If some means could be devised for decreasing the suburban racing, do you think it would have the effect of increasing the success of racing in the country? I am sure of it. As I said before, you can always fix the date of the commencement of the decadence of country racing by the date when the proprietary racing came into vogue.

643. *Mr. Archer.*] I have been told that you have done the Hawkesbury Club out of Boxing Day? Not within my recollection.

- T. S. Clibborn.
9 Oct., 1900.
644. They seem to be very sore about it? They have not had Boxing Day within my recollection. I know the Australian Jockey Club has been going for twenty years with their meeting on that day, and I do not remember Hawkesbury on Boxing Day.
645. *Mr. Levien.*] They did race a Hawkesbury Handicap on Boxing Day on one occasion, if I remember aright.
646. *Mr. Fitzpatrick.*] The Hawkesbury Club is the only club that is racing within the suburban area that is not a proprietary club? Except the Sydney Turf Club.
647. Do you think it would satisfy the country clubs if they had some sort of representation on the Australian Jockey Club? I do not think it would be a good thing to give them any representation, because I do not think they are sufficiently acquainted with the laws of racing to decide the very difficult and intricate matters that crop up in connection with racing now. It is a vast system, and they have little idea of its immensity.
648. *Mr. Taylor.*] Do you not think that Mr. Mayo, for instance, would have as much knowledge for racing as the members of your committee? He has had a great experience of racing *per se*, but not of the management of racing affairs.
649. You say he has had no experience of the management of racing;—has your late chairman, the Honorable W. A. Long, had much experience of the management of racing? Yes; he has.
650. Take the case of the man you mentioned, the late Mr. Andrew Town? He did not know very much about the management of racing affairs.
651. *Mr. Hogue.*] I suppose you have studied this Bill very carefully? No; I have not studied it very carefully, and some of the members of my committee are better acquainted with it than I am. I am familiar more particularly with the provisions regarding representation.
652. I presume that it is considered absolutely necessary that there should be some authority to manage racing? Yes; that has been acknowledged for all time.
653. Otherwise the whole institution of the turf would get into confusion? Yes.
654. Is there any instance of an association having been formed on the lines proposed in this Bill? None whatever.
655. In all the Colonies the system adopted is similar to what is followed here? Yes.
656. That is to say, that the leading club is permitted, by virtue of its position as the leading club, to clothe itself with certain powers; all the other clubs fall in with the arrangement? Yes.
657. Have you seen the schedule of this Bill? Yes.
658. Do you notice that in the Murrumbidgee district there are thirteen clubs who send one representative? Yes.
659. In some other districts there are nine clubs? Yes.
660. Do you think the representation these clubs would get in the association would be anything more than nominal;—do you suppose that the representatives could attend to manage the affairs of the association? I do not know whether they would attend; but I am quite certain that they would be incapable of managing or controlling the affairs of racing. There are a whole lot of clubs on these schedules which do not exist, and the whole thing seems to have been drawn up from the condition of affairs some seven or eight years ago.
661. Could you point out where the schedule is deficient? In Schedule B the Gerong Club is mentioned, but it no longer exists.
662. *Mr. Gillies.*] That is admitted. We know that the schedule is not perfect, but it is to be amended to bring it up to date, and make it complete.
663. *Mr. Hogue.*] Taking the country representation that it is proposed to give all round, could these representatives have anything like a reasonable opportunity of attending? I do not know; but I do not see how they could; I do not think they could understand it.
664. Presuming that they did understand the matter, could they attend? I cannot see how they could attend. Our meetings are fortnightly very often, and regularly monthly. We shall have one every three or four weeks. I may also point out that in Schedule A there are eight clubs, and that the Australian Jockey Club gives more than the whole of the clubs put together.
665. Touching the question of disqualification, is there any proposal in this Bill, as far as you have been able to see, which would give any powers to the proposed association different from those which the Australian Jockey Club now exercise? No, except that the evidence is to be taken on oath.
666. *Mr. Gillies.*] The evidence is to be taken on oath in open court? Yes; and I think it would be a very unwise thing to take the evidence in public.
667. *Mr. Hogue.*] Is there any power of appeal under this Bill? I could not say. I have looked more to the schedule than anything else.
668. I suppose the Australian Jockey Club gives about £20,000 a year in prizes? The prize-money will amount to £23,000 odd this year.
669. What does Rosehill give? They have eleven meetings of £400 each.
670. In all the clubs except the Australian Jockey Club they deduct the entrance fee? I believe all the clubs do. The Jockey Club do not charge the entrance fees at either their Spring or Autumn meetings, but on the small meetings, and partly on Summer meeting, they do charge. They could not get through the meetings, as they do not make more than £50 or £60 profit on any one of these meetings.
671. Taking the Bill as it stands, do you as a racing authority of several years standing, think that racing itself as an institution would be better conducted by an association established as here proposed, than by the Australian Jockey Club? I do not think so. The majority of racing men I have spoken to on the subject are of the same opinion as myself. What seems to be a great blot upon the Bill is that there are eight clubs in Schedule A, and sixteen in Schedule B, each sending a representative, consequently these sixteen clubs sending representatives down from the country could entirely out-vote the eight.
672. *Mr. Gillies.*] Why do you think they would do that? I do not say they would do it; but they would have a two to one vote.
673. *Mr. Hogue.*] There are other clubs mentioned in this schedule; but with regard to the pony racing clubs it is not proposed to give any representation;—the Australian Jockey Club does not recognise them in any way? Not in any way.
674. Would you disqualify a horse that ran at Kensington? As Kensington is an unregistered meeting, horses that run there are not qualified to run at registered meetings.

675. To your knowledge are the country clubs dissatisfied with your committee? I have never heard of any complaint in any way whatever. T.S. Clibborn.

676. And do you think if, as is suggested, the country clubs were to send representatives to the central association it would be more satisfactory to the horse-owners and trainers, or more satisfactory to horse-racing generally? I have said all along that I do not think that the people in the country understand the great business and system of racing now, and therefore I do not see where the gain would be. I am quite certain that if the representatives of the country clubs were to write to my committee and say they would like to meet in conference at any time, the request would be granted forthwith. My committee are always ready to hear, and always ready to learn. 9 Oct., 1900.

677. You would not give them a share of your funds? No; we could not do that. Then again, so far as the committee is concerned, the larger you make it the more difficult it is to manage affairs. That has been proved in many cases. Take the case of the railways, for instance. It has been shown that one man who thoroughly understands his business can do better than a large number. I have been at it for thirty-three years now, and I do not understand the business yet.

678. *Mr. Archer.*] Do you not think that if all these inquiries conducted by your club were held with open doors it would be more satisfactory to the public at large;—as you know, they say that it is a sort of star chamber business now? To my mind the greatest difficulty would be in connection with the libel law, as you could not declare the proceedings privileged. Of course, this meeting is open to the public and the Press, but the Press could not publish proceedings, even here, as fully as they could do in a Criminal Court, and we know that there are things said at race committee meetings which, if the proceedings were open to the public, would lead to endless libel actions.

679. Then you do not think it would do any good to have the proceedings open? No; I do not. I do not know where the motive of this Bill arises. I have been unable to find out why it was brought forward.

680. You are always willing to take evidence at these inquiries? Oh, yes, always.

681. Would you permit a man to be represented by a solicitor before the Committee? That has always been refused.

682. Do you not think that in a case like that of young Fielder's—who they say was not quite right in his head, and was not, it is suggested, able to take care of himself—he should be allowed to have a solicitor? I would be very glad to give you an answer, but that would be a comment on the action of my committee.

683. *Mr. Taylor.*] You said some time ago that the reason you objected to these country clubs being represented on the committee, as proposed under the Bill, was that you did not think they had the necessary experience to manage racing affairs? That is one reason.

684. Might I ask you what experience Mr. Adrian Knox had when he was elected to that committee? Mr. Knox had been racing for some considerable time.

685. Do you not find him one of the best members of the committee? He is a very able member of the committee.

686. He had practically no experience of the management of racing when he was elected to the committee? The members of the committee, as a rule, do not take much interest in the detailed management of racing, but they are called upon to decide all great questions.

687. You say that these men whom it is proposed to place on the committee as representatives do not understand the racing law? Yes; otherwise they would not write to me so frequently for interpretations of the law.

688. One reason, and the chief reason, that you object to the proposed plan is that they do not understand the racing law, and yet you say that the gentleman who is one of the ablest members of the committee has had, perhaps, the least experience? No; I did not say that. I said that he was racing for some considerable time before he came on to the committee.

689. It was a very short time;—I do not think he was racing two years before he was elected? He is a very able man.

690. We have many able men like Mr. Knox who are now excluded from the committee? Maybe there are.

691. There is another matter that has been brought forward, and I am not mentioning this by way of insinuation; it is stated that unless a man belongs to one or other of the two principal clubs in the city he cannot get on to the committee of the Australian Jockey Club—the star chamber;—is it not a fact that all the members of your committees belong to one or other of the two clubs, the Australian or the Union, and that this has been so for a number of years? That may be so; but you must remember that they are elected by the votes of the members of the club of the Australian Jockey Club.

692. Is any other club in the country entitled to the same privileges as Tattersall's Club, which I understand is not a racing club at all, in connection with racing at Randwick;—on what principle do they race? They pay rent for the use of the course, and as to their not being a racing club, they have been racing for twenty-seven years to my knowledge.

693. But are they a racing club? Well, their institution is a betting club, but they certainly combine racing and betting, and have done so to my knowledge for the last twenty-seven years.

694. As a matter of fact, are they a racing club at all in the true sense of the term? It is hard to define it. You can hardly call them a racing club, but they are in the same position as the Victorian Club at Melbourne, and Bowes' Tattersall's Club, and they all race.

695. Could any other club have the same privileges as are enjoyed by Tattersall's Club? Yes; if there were a day available. I wish to goodness they would come along, because Tattersall's Club pay us £250 a day.

696. *Mr. Gillies.*] But you have too much money already? No, indeed we have not; we are very badly off.

697. *Mr. Taylor.*] What is your object in fixing a minimum amount of stakes to be given by the various racing clubs? In the interests of the horse-owners. You cannot have a show if you do not have actors. 698. What is the object of the minimum? The object of fixing the minimum is to compel the clubs to give a certain amount of prize money, or to go out of existence.

699. Do you not think that if there were less proprietary clubs there would be a better chance for the people in the country;—would it not be a fair thing for the horse-owner if you cut down the prize money for proprietary clubs to £200? I do not think that would force racing away from Sydney.

- T. S. Clibborn. 700. You think they should pay a certain amount, or else all be wiped out? Rather than reduce the minimum, I would increase it, and if I had my way, would make it £500 at least.
- 9 Oct., 1900. 701. Why did you reduce it? At the request of the clubs. It was £500, and they asked us to reduce it, and we brought the amount down to £400. It was then represented that Hawkesbury was further away, and the same argument was brought to bear in connection with Warwick Farm to induce us to make a still further reduction, so far as those clubs were concerned. We reduced the prize money in their case to £300, and I believe every club is now perfectly satisfied.
702. In the first instance, you fixed the minimum at £500 with the object of benefiting racing, and you thought it was in the interest of racing and racehorses that such a minimum should be fixed; but through the influence of the clubs you reduced the amount to £400 and £300? Yes; they made a solid attack upon us, as the result of which we reduced the minimum to £400, and in the case of two of them to £300. The Hawkesbury Club could not have raced at all if we had not reduced the minimum in their case.
703. *Mr. Gillies.*] Do you not think that if the minimum weight imposed upon horses were raised it would tend to the breeding of better stock? That is a vexed question that was brought forward at the last general meeting of the Australian Jockey Club, and it was decided not to disturb existing arrangements. I think the committee acted on this principle: We will assume that the breeder tries to breed the very best article that it is possible to attain; but, unfortunately, he cannot always do that, and therefore some of the stock he breeds must be of an inferior description, and these must be catered for as well as the high-class horses. The late Mr. Scarr always used to argue that way, and that was his reason for advocating some 6-furlong races. Personally, I would sooner see the longer races and the higher weight; but the reason I have stated has influenced the committee in fixing a low minimum weight.
704. Do you think people take an interest in racing more particularly to improve the breed of horses;—do you not think that is the primary object? No, I do not. I think that used to be the object; but I am quite certain that gambling has a great deal to do with racing nowadays. If you took one of these suburban racing clubs, and shut out the bookmakers and the totalisator, they would play to empty benches.
705. Do you not think that the system of gambling that obtains on the racecourses is a very pernicious thing? No, I do not. I think that gambling should be confined to the racecourse, and that shop-betting, which is one of the greatest curses, should be stopped.
706. Would you admit that the raising of the minimum weight, and the lengthening of the distances of races, would have a beneficial effect upon the breeding of horses? It is purely a matter of opinion. I do not think it would improve the breed of horses, because I do not think they would breed the horses up to the higher standard. I do not think the raising of the minimum weights and the increase of the distance would in itself improve the breed of horses.
707. You say that you could not afford to set apart any portion of the racecourse for the free use of the public? I do not think that we could set apart a portion of the racecourse without setting apart the whole, because a man could walk into the portion of the racecourse that was free, and as soon as he liked he could go into the other parts of the course, and thus save his shilling that he would otherwise have to pay at the entrance gate.
708. How do they do it at Flemington? Victoria is in a different position altogether. They have a hill there that holds 25,000 people, at 2s. 6d. a head, and the railway to carry them there.
709. As far as the country districts are concerned, are you aware that when the courses were all free and open to the public the racing was better patronised and the profits were greater than under later conditions? I could not tell you that; I am not aware of the circumstances of the case.
710. *Mr. Levien.*] They always charged to go on the course at Maitland.
711. *Mr. Gillies.*] I have seen twenty-three booths on the Maitland racecourse when the course was free to the public as against two booths at the present time;—you say that the Australian Jockey Club is a vast union;—will you explain what you mean? That is not what I said. I said that the whole system of racing was a vast union. The Australian Jockey Club, the South Australian Jockey Club, the Victorian Racing Club, the racing clubs of New Zealand and of India, and the English Jockey Club exchange rules, calendars, and registers, and if any punishment is inflicted, or any decision is arrived at by any one of these bodies, it is practically published all over the English-speaking world, with the exception of America, which does not take part in the arrangement.
712. Have you lately given the members of your club increased advantages in the way of free admission to any part of the course for which they previously had to pay? We gave our members an extra lady's ticket lately; but I think it is very likely we will take that away next year.
713. Do you not admit your members to the course free? They all have to pay their shilling.
714. You said just now that the members of your committee dispersed themselves to the several parts of the course to watch the racing? I do not say so.
715. You say that the members of your committee watched the race? Yes.
716. And that when they see anything crooked they take steps to bring the rider and others concerned to account for it? Yes.
717. Do not you think that a better means of detecting what you may call pernicious practices during the racing would be afforded by employing paid stewards, who would be independent? No, I do not. I would qualify that by saying that so far as the proprietary jockey clubs are concerned paid stewards might be of advantage at suburban meetings.
718. You think that paid stewards might be of advantage for suburban meetings, but not for the Australian Jockey Club? Yes.
719. Why should the Committee of the Australian Jockey Club be better able to detect anything of that kind than the members of the country jockey clubs? I am not speaking of country jockey clubs, but of suburban clubs.
720. Well, take the suburban clubs? There are not such larger prizes given at suburban meetings as at Randwick, and when the prizes given at Randwick are run for, they generally try for them.
721. Can you say whether or not the members of the committee of the Australian Jockey Club are big wagers or bettors on races upon which they may possibly be called upon to adjudicate? I believe they are the smallest bettors I have met.
722. That is no answer to my question;—are you aware that the members of your committee are in the habit of wagering on races carried out under their jurisdiction? They may wager, but not heavily. I think they wager less than any men I know.

723. Was the Honorable W. A. Long your president? Our chairman.
724. Are the offices of chairman and president distinct? We have no president.
725. Will you admit that Mr. Long was a very heavy wagerer? On the contrary. I am aware that some years ago Mr. Long used to bet a good deal; but at the present time he does not wager very much.
726. Have you heard that your chairman and other members of your committee had backed the mare ridden by young Fielder in the race which led to his disqualification? I have not heard one word about it. You can have the members of the committee here, and examine them about it.
727. You have heard, I suppose, that Ettridge's license was refused? Yes.
728. Could you give us the reason for refusing Ettridge's license? Yes.
729. *Mr. Levien.*] I think it is best not to give the reason. He would not dare to apply for his license, and it is unfair to Ettridge to ask for the reason without his desiring the matter to be brought forward.
730. *Mr. Gillies.*] What would be the largest number of horses you have seen start at Randwick in a race? I think there were thirty-seven starters for the Tattersall's Carrington Stakes on one occasion.
731. Do you think it is safe to start such a large number of horses as that? Yes, on Randwick, quite safe.
732. But on some of these small courses? No.
733. You have seen a great number of horses run at Rosehill? Yes.
734. Do you think that you have ever seen more horses start at Rosehill than was safe? Not when I have been there.
735. Are you aware that such a thing has taken place? Not at Rosehill.
736. Or at any suburban meeting? I believe that when I was in England that the Canterbury race-course authorities were distinctly warned that they ought not to break the rules of the Jockey Club by starting their horses in two divisions, and the Jockey Club fined them; but the fine was afterwards refunded, because they did not want to be too hard on the authorities who erred from ignorance.
737. The case of Fielder has been referred to;—was he given the reason of his disqualification—was he told why he was disqualified? No. But you will see what the decision was by the evidence which I have handed in.
738. Do you remember how many witnesses were examined in connection with the Fielder case? There were fourteen examined at the second inquiry; but I do not know how many were examined at the first.
739. There were four witnesses at the first inquiry;—do you think in view of the evidence given by eighteen witnesses, all of whom gave it as their opinion that young Fielder was not to blame, that the decision of the Australian Jockey Committee was a fair one? I cannot comment on the action of my committee. I want to answer you with due respect; but I do not think I have any right to be questioned in that way.
740. Do you think there is a record of any case in the courts of the Colony where eighteen witnesses gave evidence in favour of the defendant, who was, all the same, found guilty? I do not think I ought to be required to answer that question.
741. *Chairman.*] The witness may object to the question if he does not care to answer it.
742. *Mr. Levien.*] I remember a case in which the late Chief Justice Martin, remarking on the fact that there were fifteen witnesses on one side and four on the other, said it was not the quantity but the quality of the testimony that was of importance.
743. *Mr. Gillies.*] Do you not think that, in the interests of racing, that all inquiries into crooked work and malpractice on the turf should be held in open Court? I do not. There is a danger in connection with the libel laws, and in my opinion the libel actions would be innumerable.
744. Then your chief objection to open inquiry is owing to the danger of libel? Yes, I think so.
745. Apart from libel action, do you not think it would be of advantage? No, I do not think it would. I think it would lead to any amount of trouble, and so long as you are assured of the quality of your judges I do not see any objection to the proceedings being carried on in private. The Australian Jockey Club committee is very far from being a star chamber, and I have heard the history of this particular Fielder case outside two or three times, with different versions in each case.
746. Is Tattersall's Racing Club identical with the Sydney Turf Club, or are they separate clubs? Separate clubs altogether. Tattersall's is a betting institution, which also carries on racing, whilst the Sydney Turf Club carries on its racing purely and simply for sport.
747. Who comprise the members of the Sydney Turf Club committee:—are not the members of the committee of management of the Australian Jockey Club and the Sydney Turf Club very much the same? No, not even in one case. A member of my committee cannot be a member of the committee of any other club. When Mr. Betts, who was chairman of the Sydney Turf Club, was elected some fortnight ago as an official of the Australian Jockey Club he had to resign his position as an official of the Sydney Turf Club, and he is now simply a member of that club. Other members of the committee of the Sydney Turf Club are Messieurs M. J. Macnamara, Alexander Busby, H. M. S. Cox, Robert Richards, J. B. Bettington, and Hamilton Osborne—all amateurs. I have had the honor of managing the Sydney Turf Club for twenty years.
748. Do you think that the Australian Jockey Club is justified in preventing the objects for which the land they occupy was granted to the trustees from being carried out? They do not do so. I tried to explain to the best of my ability what the position was, but I daresay you will have Mr. Knox here, and that he will be able to give you more information. It is my impression that the trustees have the power given under the Act of 1873 to lease the course to whom they like. They leased the course to the Australian Jockey Club for the purposes of racing, and my idea must be borne out by what has followed, because they would never have permitted the Australian Jockey Club to issue debentures, and build stands, and carry out all sorts of improvements, if they had intended to use the racecourse for rifle shooting or cricket. As a matter of fact, it is useless for cricket, and it is not required for that purpose, whilst it is absolutely useless as a rifle butts. These are the only two purposes, besides racing, for which it could be used.
749. You say it was granted for racing purposes? Yes.

- T. S. Clibborn. 750. And for rifle-shooting? That was under the original grant; but I believe the Act of 1878 revoked that original grant.
- 9 Oct., 1900. 751. That is what I want to get at? That is what I believe, but I am not sufficiently a legal authority to give you an opinion on the matter. The Crown Solicitor would be able to give you all particulars. No one has ever sought to play cricket on the racecourse or to use it as a rifle butts. There has been £105,000 laid out on buildings and making tracks, apart from the maintenance, and during the time we have been in occupation of the course we have given over £400,000 to be raced for, and so on, and all this without a single member of the Jockey Club having been benefited one farthing.
752. You have over 500 members? Yes.
753. Mr. *Levien.*] They have to pay 10 guineas to join, and 5 guineas a year? Yes.
754. Mr. *Gillies.*] Does it not strike you that the amount you charge for membership is contrary to the object of the original grant? No.
755. Is not the amount prohibitory? No.
756. Has the Randwick racecourse been used as a sale-yard for stock? Yes, it has, under these circumstances: I think it was in 1875 that there was no proper place for selling thoroughbred yearlings, and the committee of the Jockey Club permitted auctioneers, no matter who they might be, to sell yearlings only there. Yearlings have since been sold there under these conditions by Mr. Kiss, Mr. Thompson, myself, and other auctioneers who have applied for leave, up to two years ago, when they changed the venue. Mr. Chisholm built a new yard, and I use Payten's yard now. There has never been any charge made except the 1s. at the gate to keep out the mob, and that has been handed over to the Australian Jockey Club Racing Fund.
757. Have there never been anything but thoroughbred yearlings sold there? I think on one occasion some two-year-olds were sold.
758. Have any horses ever been stabled there for sale? No horse has ever been stabled there for sale. They have been led on to course prior to the sale and allowed to stand in the stalls, but they have never been stabled there, and they have been returned to their respective stables immediately the sale was over. It is one of the best places in the world for selling yearlings, because you can see them walking about. It is all for the encouragement of racing, and a perfectly legitimate thing.
759. Mr. *Levien.*] I suppose that the registering of these meetings protects the owners and the public against fraudulent entries of horses, and other similar practices? Yes; that is one of the reasons for it.
760. *Chairman.*] You have produced the evidence in the Fielder case and in the "Amiable" case? Yes.
761. Mr. *Levien.*] Could you also produce the evidence in the "Spry" case? Yes. [*The Exhibits handed in by witness were ordered to be printed at once.*]

THURSDAY, 11 OCTOBER, 1900.

Present:—

MR. ARCHER,
MR. LEVIEN,

MR. J. C. L. FITZPATRICK,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Thomas Strettel Clibborn recalled and further examined:—

- T. S. Clibborn. 762. *Witness.*] Might I ask you to correct, in a small measure, some evidence I gave on a former occasion? Mr. Taylor asked me some questions in regard to what became of the fees and fines received from jockeys and trainers, and, as well as my memory serves me, I said that the fines paid by the jockeys went to the credit of Distressed Jockey Funds, but that all other fees went into the funds of the Australian Jockey Club. What I now wish to say is that all the fines and fees paid by jockeys go to the credit of the Distressed Jockey Fund. The £1 paid by trainers goes to the Australian Jockey Club, but on the strength of that the trainers enjoy certain privileges, which are more than equivalent to the amount paid. Their trainer's ticket affords them an opportunity of going to all the metropolitan racecourses free. The presentation of the trainer's ticket will, in most instances, ensure admission to the course, and it will at least enable them to go to the secretary of the club and obtain an admission ticket. In the case of older trainers, they have a silver badge, by which they are entitled to admission, not only to the suburban courses, but also to Caulfield and Flemington; and, as a matter of fact, that concession is reciprocated by me in the case of Melbourne trainers. If a trainer registered in Melbourne wants to come to our race meetings I always give him a ticket.
763. *Chairman.*] How about jockeys;—have they the same privilege? Well, if a jockey comes to me who is on the register of the Victoria Racing Club, not only do we give him a ticket admitting him to the course, but we allow him to ride after taking out a license. If a jockey has a license it enables him to go to all the suburban meetings, for which otherwise he would have to pay.
764. Do you mean his Victoria Racing Club license? I do not know whether that would be so or not; but if a Victoria Racing Club man took out a license with us he would have the same privilege as our men.
765. The license-fee paid to the Australian Jockey Club entitles him to free admission to every meeting in the Colony? Yes. We have a rule with our trainers—it is different with the suburban clubs. We have a great number of trainers who do not frequent Randwick or train horses there. When a trainer comes and asks for a ticket for Randwick, if he has a horse training at Randwick, or a horse entered for a race at Randwick, we give him a ticket, but otherwise we do not. We adopted that course because we ascertained that it was the practice to take out trainers' tickets without having any horses in training, simply to enable them to get into race meetings.
766. Mr. *Levien.*] What about the balance-sheet of the Australian Jockey Club;—how often do you publish that? I may tell you what the system is if you will allow me. In addition to our staff we keep an accountant, who writes up the books every month, and strikes a quarterly balance. This is audited by the special auditor, Mr. Davenport, and submitted to the Jockey Club Committee when they require it. That is four times in the year, and the annual balance-sheet is submitted to the general meeting of members once a year.

767. That is published? Yes.

768. Did you ever know any of these proprietary clubs presenting their balance-sheet to a meeting of the members? I have never seen such a thing.

769. *Mr. Archer.*] You do not know whether they do or not? I do not know.

770. You have never seen any reports of their meetings published in the same way as those of the Australian Jockey Club are reported? No.

771. *Chairman.*] Dealing with that balance-sheet in connection with the Distressed Jockey Fund—would you explain to the Committee how that fund is arranged for, and the means that are adopted for considering applications for assistance from it? The form of application for relief from the Distressed Jockey Fund provides that the jockey who is injured shall sign his name, stating in whose employ he is, give the name of the place where he was injured, and describe the nature of the injury. That is accompanied by a certificate from a duly qualified medical man, stating what the nature of the injury is. That is submitted to the committee, and on that relief is given. In some instances, where men are permanently injured, we give them a lump sum at once. The grants from the fund are regulated according to the nature of the injuries.

772. Have you, as an official of the Australian Jockey Club, or have your committee, gone into the question of utilising that money for the purpose of establishing an Insurance Fund for the use of the boys? No; because the system we adopt is this: The contributions received for the Distressed Jockey Fund are credited as they come to hand, and at the end of the year the fund, which amounts to about £5,000, is credited with 2½ per cent. interest. So the fund goes on increasing.

773. *Mr. Archer.*] I suppose you deal pretty liberally with applicants for relief, as a rule? I do not suppose that any man is entirely satisfied, but I think that the Jockey Club deals fairly liberally with applicants. The Melbourne people have another system, under which they allow injured jockeys £1 a week; but, as a rule, I think the men prefer having their relief in a lump sum.

774. I suppose on occasions, where you think it necessary, you help the father or mother, if the boy who was injured has been their sole support? At first that was not allowable under the rules, but under the regulations now in force, which we got altered for the purpose, we are enabled to make allowances in such cases. In one instance I think £50 and in another instance £75 was given to these people.

775. I only ask these questions because a rumour is going around that you have large accumulations of money, and that you are hoarding them up without applying them to their legitimate uses as freely as you should? We have no right to touch the funds, or to make use of them in any way. You will see that we have £11,000 worth of deposits, but £5,000 of that belongs to the Distressed Jockey Fund. It is of no use to us, and we cannot apply it to any purpose except that for which it is intended. We pay 2½ per cent. interest for the fund, and we receive 3 per cent. for money on deposit. The ½ per cent. difference goes to pay the salaries of the people who have to attend to the business of the fund.

776. You say that the committee does deal with all these applications in a fairly liberal manner? Yes; it is of no advantage to them to do otherwise, as they have no interest in the fund beyond the legitimate one.

777. *Chairman.*] In connection with that case I mentioned to you at the former sitting, did you look the matter up? I did; I went all through the papers. That case cropped up at the Rockley Race Meeting, of which Mr. Oxley was the secretary. At the meeting of that club, held in May, this Mr. Mackay entered a protest against a horse which ran first in the handicap in which his horse was engaged, on two grounds—first, that the horse had run at an unregistered meeting, and, secondly, that the weights in the handicap had been raised from the ordinary scale to the welter scale. I immediately communicated with the secretary of the Rockley Club, and sent him a copy of the letter, asking him for a statement with regard to the case. The secretary replied by giving me the name of the handicapper, Mr. A. A. West, and sending me word that the race was a welter handicap originally—that is a heavy-weight handicap, where the weights are 2 stone, or 2 stone 7 lb. higher than they would be in an ordinary handicap—and that Mr. West had made a mistake in the first instance by issuing the weights on the lighter scale; but when his attention was called to it he altered the weights according to the higher scale. That settled part of the protest. The other point was that the alleged unregistered race meeting had been advertised in the Bathurst *Advocate*, and if it had been so advertised, according to the rule with regard to unregistered meetings, the horse would have been disqualified, and Mr. Mackay's contention would have been correct; but the only notification that appeared in the Bathurst *Advocate*—two copies of which were sent to me—was an announcement in the form of a paragraph written by the sporting editor, giving the weights that would be carried in the two handicaps. The matter was then submitted to my committee, and they said that as their opinion was—and I was of the same opinion—that that notice did not constitute an advertisement, they could not uphold Mr. Mackay's contention. Mr. Mackay was not satisfied with that decision, and at a more recent meeting of the committee of the Rockley Club he informed them of his intention to appeal, gave them notice properly, and sent me down £10 with his appeal from their decision. At the first onset I wrote to Mr. Mackay, telling him that I did not consider that his appeal was properly lodged, because I understood that the last meeting of the Rockley Club had been held on the day of the races, and his appeal would have to be lodged within ten days of the dispute or inquiry, which I calculated from the day of the race. It transpired, however, that the club did not hold its meeting till the day following the race, and this enabled Mr. Mackay's appeal to be received within the proper time. The appeal was then considered by the Australian Jockey Club Committee, who dismissed it, and as no evidence was brought before them to satisfy them that it was anything but a frivolous appeal, they forfeited the deposit. Mr. Mackay wrote, stating that he was very sorry indeed, that he had a wife and six children, and that he would never have appealed if he had not felt sure that he was right. That was submitted to the committee, but they refused to return the amount, because he had given the Jockey Club a great deal of trouble. Mr. Mackay had, in fact, set his opinion up against everybody else's—would not take "No" for an answer—and his appeal was frivolous from the beginning.

778. As to the system adopted in connection with the refund of the £10 paid to the appeals, are there many cases in which the Australian Jockey Club keeps the £10? When I was last before the Committee I said I thought there were three occasions on which the deposit was forfeited; but I have looked back through the books since, and if I state that there have been six such cases within the last five or six years, I shall be well within the mark. Allow me to point out one thing, and that is that if appellants were not obliged to lodge this £10 with their appeals, we should have all sorts of senseless appeals—in fact we had

T.S.Clibborn. had before the rule was altered, and in my opinion we ought to make the amount £20. In a case we had before us the other day, a man who lodged £10 with an appeal gave us a great deal of trouble in every possible way. In the inquiry that followed we found that his appeal was written by the bookmakers—the favourite had won the race—who had found the money for the appeal. Whether they ever got the money back or not I do not know, but I sent it to the secretary of the club when the appeal was dismissed. The secretary of the club stated that the appellant was a very poor man, and we refunded the money. That was at Deniliquin.

11 Oct., 1900.

779. *Mr. Levien.*] Poor men ought to keep out of the game.

780. *Chairman.*] Do you wish us to infer from that that the question of refunding the deposit is decided, not on the merits, but out of considerations of charity? I do not wish to convey that. I think, however, that the committee, in this case, thought that the £10 ought to have been forfeited, but they were guided by the intimation they received from the club that the appellant was more a tool than anything else, in sending the money back.

781. In connection with the Sydney Turf Club, is that a public club in the ordinary sense? No. I will give you the whole history of the Sydney Turf Club, if you care to hear it. There is no secret about it.

782. You might indicate to us the basis of it;—I thought there were two distinct kinds of clubs, the one being a public club, and the other a proprietary club, and I only wished to know what the difference was? The Sydney Turf Club is non-proprietary in every sense of the word, and races purely for sport, and the only people who derive any monetary advantage are myself, through my salary as secretary, and my head clerk, Mr. Evans. I would be very glad to tell you all about it, as to how it originated, and everything else. In 1875, or 1876, when there was no such thing as proprietary racing, and when racing was sport indeed, the Australian Jockey Club only used to race about eight days in the year, namely, in the Spring and Autumn. I may tell you at that time there was no regulation which prevented a member of the Australian Jockey Club Committee from being a member of another racing club committee. It struck myself and some other gentlemen that we might have very good racing on the holidays—the Queen's Birthday and Anniversary Day. The Jockey Club at that time let the course at very low rates, because there was so little racing, and they did not understand the business of it so well. The Hon. James White, Mr. Walter Hall, and a number of other members of the committee were at that time members of the Sydney Turf Club Committee; we raced and gave stakes on those days for some time. As time went on, the attendance increased at Randwick, and our funds reached at one time a sum of between £5,000 and £6,000. We could afford then to give prizes amounting to about £2,000 for a day's meeting, as in those days we often took £2,000 in the paddock on the one day. The Sydney Turf Club raced and kept their funds even until the charges for the course were raised to as much as £1,000 for two days' racing—all of which money went, all the same, for the benefit of racing. The Sydney Turf Club has been racing on this system ever since. We pay £1,500 a year for the privilege of four days' racing; we give £3,000 in stakes, and beyond the salaries to myself and Mr. Evans, no one has ever benefited directly in any way beyond having a good luncheon and a bottle of champagne occasionally.

783. You receive that money in your capacity as secretary of the Sydney Turf Club? Yes.

784. Is it managed by a committee, and is the membership the same as the Australian Jockey Club? It is managed by a committee, but it is not the same as the Australian Jockey Club. I gave some of the names of the committee the other day, but I forgot to mention that of Mr. E. Terry, M.L.A., when I named the principal members of the committee.

785. Does it come within your jurisdiction as an official of the Australian Jockey Club to detect any pulling of horses at Randwick, or other breaches of the laws of racing? Yes; I am ordered, as secretary, to report to the committee any cases of suspicious riding or malpractice that come under my notice; but I may mention that my other duties on race days are of such a nature that I might not see more than three races out of the six.

786. Still it does come under the head of your duties to report offences against the rules? Yes. On one occasion only, I am happy to say, have I had to report a man for suspicious riding.

787. Outside of the officers of the club, then, the whole of the committee being stewards, the cases are practically decided on what they see? No. I think myself it would be very much better if cases coming under the immediate notice of the members of the committee were decided at once without evidence, when it is a matter of the members of the committee seeing things with their own eyes; but I know of no instance—I will not test my memory as far as twenty-seven years—but I do not remember any instance of later years where the committee have not given the accused or suspected person an opportunity of defending himself. In fact, it is one of the rules primarily laid down, and sent out to all the clubs and meetings, that if they do not allow a suspected person an opportunity of defending himself, whatever punishment they may inflict may become nugatory. That was laid down to us by the late Chief Justice Martin, in very choice English.

788. This question was suggested to me when I was looking over the evidence on the Fielder case that was commented on the other day? The reason the committee did not take any action on the first race—the Christmas Handicap, was, that although they had very strong suspicions—in fact they were conversing about it—they decided they would wait and see how the mare ran on New Year's Day before they took any steps. Their suspicions were then confirmed, and they asked me to summon the owner, trainer, and jockey to come before them.

789. You were present when the evidence was taken? Yes.

790. Did the chairman tell the boy Fielder that he saw him pull the mare, with his own eyes? If he did say so it will be in the evidence.

791. It is in the evidence;—the chairman told the boy that he saw him—that he had his own glasses on him—and yet the inquiry did not take place till a week afterwards;—it seems to me very strange that the committee should have delayed dealing with the matter under such circumstances? Well, I think that that was giving the boy every possible chance.

792-3. I do not think so. It depends on the way you look at it, and you admit yourself that in cases where the committee see things themselves it would be better to deal with things on the spot? Yes, that is my opinion. I think it would be far better in such cases for the members of the committee to rely on the evidence of their own senses, and deal with the matter straight out; but my committee do not think so, as they hold that every man should have a chance of defending himself.

794. *Chairman.*] Yes; but it seems to me that the chance is a very haphazard one? Oh, no, not at all.

795. *Mr. Levien.*] Do you not think, Mr. Chairman, that we had better have Mr. Long here, and question him about these matters? T.S.Clibborn.
796. *Chairman.*] I only want to get up the method adopted in connection with these inquiries. I am trying to ascertain whether the system of trying men or boys for offences against the racing laws could not be altered, so that the stewards appointed to look out for these things would be the people to prosecute, whilst those who would be called upon to judge would be apart from them altogether, and leave them free to give evidence for the prosecution. 11 Oct., 1900.
797. *Mr. Archer.*] You mean that the prosecutors should not be the judges also?
798. *Chairman.*] Yes; that is what I mean.
799. *Mr. Levien.*] I do not know about that; it is a matter for argument. If you are a steward and you see anything going wrong, you do not want anything more than your eyesight to enable you to make your mind up.
800. *Chairman.*] That is a strong reason why those inquiries should not be held off for a week.
801. *Mr. Levien.*] I am rather inclined to agree with you on that point; the matter should be dealt with then and there.
802. *Chairman.*] The Australian Jockey Club do their very best to kill proprietary racing; that is to say, they will not recognise proprietary clubs in any way? Oh, yes, they are obliged to recognise the proprietary clubs, which have all come under our rules. With the exception of the Hawkesbury Club, about which there is some feeling which I do not understand, I do not know of any club that is making any objection to the Australian Jockey Club. You can easily ascertain what that feeling is by summoning a few representatives of these clubs.
803. The Pony-racing Clubs do not register with you? No, their meetings are outside our jurisdiction. We find it impossible to control them, as they carry on racing with a different class of horses and men.
804. Did you take any action in the direction of telling officers of the clubs registered with you that they should not associate themselves with Pony-racing Clubs? We gave notice to all officials of registered clubs that if they chose to act as officials of unregistered meetings they should resign their positions as officials of registered clubs, and those officials of ours who had been occupying dual positions had their salary raised, as some compensation for having to dissociate themselves from the Pony Clubs.
805. Do you mean by the Australian Jockey Club, or by the local clubs? I mean that the salaries were raised by the Australian Jockey Club, so far as their own officials were concerned.
806. There was a case I recollect in Newcastle;—you recollect Mr. Flemming, the Secretary of the Racing Club there, took up some position down here—was that in connection with the proprietary Club? He was measurer for ponies at Kensington. He was also Secretary of the Newcastle Jockey Club at the same time, and we told him he would have to choose one position or the other. He chose to stick to the ponies, and we gave him six months' grace, so that it should not interfere with his arrangements in any way. He had his own choice, but he was getting so much more money from the unregistered club than from the Newcastle Jockey Club that he determined to throw in his lot with the former.
807. *Mr. Levien.*] The same thing happened with Mr. Watson? He is one of those whose salaries were raised; also Mr. Benson.
808. *Chairman.*] This was done by the Australian Jockey Club with the object of dissociating itself altogether from the ponies? Yes. On the 31st of August, 1898, a resolution was passed in general meeting drawing a line between us and the ponies. The attitude taken up by us was practically that, whilst we did not want to compel the officials who held dual positions one way or the other, we were determined that they should be on one side or the other—that they should be with us or against us. If any racing official connected with a Pony Club had chosen to throw in his lot with the registered club up to this time, he was at perfect liberty to do so.
809. *Mr. J. C. L. Fitzpatrick.*] In the case of a man occupying an honorary position, such as being on the committee of a registered Racing Club, and occupying the position of a paid official in connection with a Pony Club like Kensington, the occupation of the two positions would not be permitted? No.
810. There was one case I remember, of Mr. Ridge, who was a judge at Hawkesbury? Yes; he took another position, for which he was paid. There was another case after that too. I think it was the ac of the chairman of the Hawkesbury Club (Mr. Skuthorpe), who was running an unregistered meeting at Kurrajong.
811. *Chairman.*] What advantage is it to racing to tie these men down in this particular? There is such a line drawn between the two systems that you cannot have a man running with the hare and hunting with the hounds—he must choose one thing or the other. We do not compel him to go in any particular way; but we say that if a man wants to act as an official of ours he cannot have anything to do with an unregistered club.
812. You do not permit them to have anything to do with unregistered clubs? No. In connection with this matter I might say that there is an impression abroad that people cannot hold holiday meetings in the country, or if they do hold them without so registering them, they will be violating the rules and regulations of the Australian Jockey Club, and exposing themselves to all sorts of unpleasant consequences. Now the only regulation the committee of the Australian Jockey Club make is, that if anyone wants to hold a meeting in the country for pure sport, provided that they do not advertise it in a newspaper and do not allow ponies and galloways which have been disqualified for running at unregistered meetings to race at their meetings, they can race to any extent they like, from a furlong to 10 miles. In many cases in the country the local publican gets up a race meeting solely for his own benefit, and it is no use to him unless he is allowed to advertise it. And that is the point of restriction placed upon advertising.
813. *Mr. J. C. L. Fitzpatrick.*] But they are permitted to advertise these race meetings by posters? Yes; they are allowed to adopt any means they like except that of advertising in a newspaper. I will be very happy to send you up a printed sheet of the regulations which is sent to every man who registers the meeting. This sheet contains not all the rules, but words of advice, to teach him how to run his meetings, and how he can do it without breaking the rules in any way.
814. In the matter of advertising, what difference is there between advertising a programme in a newspaper, and advertising it by means of posters which are circulated throughout the district? I am not sufficiently of a legal mind to answer that; but my authority was the late Stephen Campbell Brown, who said that we must define our advertisements, and that it was not fair to these country people to prevent

T.S. Clibborn, prevent them from sending round posters, or circulars, or cards. It was there and then decided that advertising should mean advertising in a newspaper.

11 Oct., 1900.

815. If I wrote an article of a libellous nature in a newspaper, or I printed it in a circular and had it circulated in the ordinary way, there would be no difference in the eyes of the law, as far as the offence was concerned? No, perhaps not. The only difference is in the eyes of the Jockey Club, who have made a rule to simplify matters, and this rule has answered very well.

816. What proportion of the established clubs of the Colony—I do not mean the ephemeral clubs—are registered with you? I think we have about eighty-five or ninety registered clubs of fairly good standing, including the Sydney Turf Club and those inside the metropolitan radius, and beyond that I should think that there would be over 400 meetings every year which we register. Goodness knows how many meetings are unregistered.

817. A club that is registered with you permanently pays £1 ls. per year? Yes.

818. With regard to the clubs that may register their meetings, what do they pay? Each meeting pays one guinea, and they come in in large numbers in stated times, such as the 24th May and the 9th of November. One of these meetings gives more trouble than six clubs, because there are certainly three or four disputes sent to us to settle in connection with each of these meetings. Frequently they draw up programmes themselves, and send them down to us to interpret when they go wrong.

819. I suppose that some of these country meetings develop into a sort of go-as-you-please meeting? Yes. There is a gentleman in the room—Mr. Willis, of the *Herald*—who can give you the most excellent evidence on that point. As far as I am concerned, I have been twenty-seven years in this Colony, and I am one of the least-travelled men in New South Wales. I have never been further north than Singleton, and I never go into the country. I spend my life in my office from 9.30 in the morning until 4 pretty nearly every day of my life. I have been out of Sydney on only two occasions for a week in the last three and a half years.

820. I suppose you find there is less trouble connected with bringing matters to a satisfactory conclusion in connection with the ordinary registered clubs than in respect to some of these ephemeral meetings? There is no comparison at all. Some of these registered clubs are most admirably managed. I believe they all have the best intentions in the world. A gentleman at Corowa, Dr. W. H. Lang, has written me a lengthy letter about this Bill, and if you brought that gentleman down here I think he would be able to give you a great deal of information about country racing. He is a man who is well informed, and of good standing, and he is a breeder as well.

821. *Chairman.*] Does it not work harshly in some cases when you disqualify horses that may commence their career on an unregistered racecourse? Well, if a horse has not been run as a pony or galloway, and a good case can be sent to the committee, they remove the disqualification within twelve months of the time the penalty was incurred. Such cases as these are considered once in every three months, and no later than the first Thursday in October there were four of such disqualifications removed. It is, however, very difficult to deal with some men in that way. There is a gentleman called Smith, of Penrith, who, although he has been warned over and over again, persists in holding unregistered meetings. It seems a great pity that he should adopt this attitude, because he has occupied a seat in this House, and is a man who ought to know better. One of the hunters which is going to compete in the Hunt Cup on the 20th October had the disqualification removed at our last meeting. The owner had no idea that he was disqualified until he came to me about it.

822. *Mr. Levien.*] It often happens that they sell these horses with the disqualification attached to them, and the buyer falls in? Yes.

823. Supposing I had a horse, and, not being a racing man, started him at one of these country race meetings, never thinking that he would develop into anything worth speaking of;—assuming that, after I had let him have a gallop, I found out that he was worth being brought to Sydney, what would I be able to do? In a case of that kind his disqualification would not be continued beyond a stated time, if it were properly represented to the committee. We get stereotyped letters dealing with cases of this kind. For instance, something after this style:—“Dear Sir, I have a very promising colt, which I lent to John Jones to hack about for a month or two, to get him quiet. Without my leave or permission, Jones took him to a race meeting, and ran him in a hack race, and I now find that the horse and rider are disqualified.” As far as Jones is concerned, of course he knew what he was doing very well, and very often it comes very hard on the owner. We get numbers of letters in this vein. I do not know what people think outside, and I do not want to blow the trumpet of my committee—they do not want me or anyone else to blow their trumpet—but so far as inflicting any intentional injustice is concerned, I do not believe one of them would be guilty of such a thing; and there are plenty more men in the club of the same calibre, who would be equally honest and fair.

824. You mean that they would not knowingly do a wrong? No.

825. *Mr. Taylor.*] It is not the personnel of your committee, but the system that is taken exception to.

826. *Mr. J. C. L. Fitzpatrick.*] Have you, as secretary of the Australian Jockey Club, had numerous complaints from persons who have raced at some of these country meetings to the effect that it very frequently happens that programmes are cut out to suit one or two horses that are run in as “dark ’uns,” in the interest of the promoters of the race meeting, to the exclusion of horses which would be legitimately entitled to win a fair prize? I have not had any complaints, but I have had one or two letters—not lately—where men have stated that they have lodged a protest with a committee, and that the committee would not deal with the protest because they were themselves interested in the horse that won the race. In one case, in which the very thing occurred, and where it was proved to our satisfaction that the clerk of the scales was to a certain extent interested, we upset the whole thing; and although the club had paid over the stake, in the first instance, to what they believed was the proper man, we made them pay it over to the next man. If cases of this kind are brought under our notice we take action. Supposing that you write down and tell me that your club has disqualified such and such a man for suspicious riding—I do not say that it is always so—the matter may lie for a month before it is dealt with by my committee, so as to give every possible opportunity for appeal. The case would certainly not be dealt with before the expiration of the ten days set down for the reception of appeals. Any man can appeal against the decision of any of these clubs.

827. *Mr. Archer.*] That is quite contrary to what we have been given to understand;—I understood that there was no appeal against your decision? Not against our decisions, but I am talking about the decision

decision of the country clubs. There is no appeal against the decision of the Australian Jockey Club, T.S. Clibborn. but if a man applies for the re-hearing of the case, and there is the very shadow of a possibility that he may be able to say something which will throw fresh light on the case, the Australian Jockey Club will not refuse him. 11 Oct., 1900.

828. *Mr. J. C. L. Fitzpatrick.*] That is an appeal from Cæsar to Cæsar? Yes.

829. *Chairman.*] Do not you think that you put a person to unnecessary cost and waste of time when the committee, at the rehearing, practically come to a conclusion based upon the fact that they saw the thing go on? You are speaking of cases that come under their own eyes, and that is going back to the same case again. I do not think I ought to comment on the action of the committee.

830. I am not taking any one case, but I am speaking generally;—you cannot call what you have described an appeal? It is not an appeal; it is a rehearing.

831. The members of your committee have run horses of their own—I do not say the present committee, but past committees? Oh, yes, they have.

832. Have any of them been before your committee for any wrong-doing at any time? During Mr. Long's absence in England, his trainer was before the committee of Tattersall's Club.

833. Not before your own committee direct? No, there are no cases that I can call to mind; but Mr. Cooper and Mr. W. T. Jones were up before the committee once, when they owned "Newhaven."

834. But I am talking now about members of your committee, and they were not members of your committee? No.

835. Were any of the members of your committee ever brought before the racing tribunals of any of the other colonies for doing anything suspicious? I do not think so.*

836. Were any of them ever before a tribunal in England? I could not tell you; but I should think that if they had been, it would be well known to you.

837. You cannot say they have not been? I could not say that.

838. *Mr. Levien.*] (To Mr. Taylor). Do you not think that that is a very broad question;—it seems to me that it is scarcely fair.

839. *Mr. J. C. L. Fitzpatrick.*] I think that it may convey an impression that is incorrect.

840. *Mr. Taylor.*] I do not see why it should, and I do not see anything wrong in the question.

841. *Witness.*] I know a statement was made in the House that it was the practice of the committee of the club to disqualify good horses that were worth something, and then buy them in for £5; but I may tell you that no case of that kind occurred.

842. *Mr. J. C. L. Fitzpatrick.*] An election recently took place for members of your committee? Yes.

843. How many members of committee were elected? Ten.

844. Do you recollect what was the largest number of votes polled, and who was at the head of the poll? Mr. Dangar topped the poll.

845. Do you remember the number of votes he got? No; but I can tell you it was something approaching 300.

846. *Mr. Levien.*] I think it was 296.

847. *Mr. J. C. L. Fitzpatrick.*] Do you remember what the eleventh candidate polled? I am not sure; but I think it was 203, or something like that. However, I will send you the figures; they were published in the *Herald* on the third Wednesday of August.

848. *Chairman.*] You say that the Australian Jockey Club issues an annual balance-sheet—is it published in the daily Press? Yes; I will be very happy to give you a copy of it, as it is in print.

THURSDAY, 18 OCTOBER, 1900.

Present:—

MR. ARCHER,
MR. LEVIEN,

MR. TAYLOR,
MR. WATKINS.†

J. GILLIES, ESQ., IN THE CHAIR.

Thomas S. Clibborn recalled and further examined:—

849. *Mr. Taylor.*] Will you tell us for what object the Sydney Turf Club and the Australian Jockey Club were formed; how came they to be constituted as clubs;—what is the difference between them? The Sydney Turf Club and the Australian Jockey Club are quite distinct clubs. As I explained in my evidence the other day, the Sydney Turf Club came into existence about twenty years ago. They were both established purely in the interest of sport. The late Hon. James White, Mr. Walter Hall, and Edward Terry, and a number of other names were on the committee of the Sydney Turf Club.

850. But what is the object of the Club, I mean? Purely for the promotion of sport. It was originally established about twenty years ago, when Queen's Birthday and Anniversary Day were not used by the Australian Jockey Club as racing days. We paid the club for the use of the ground on those days, and raced purely for sport. At one time we used to donate considerably to the funds of the Sydney Hunt Club, which I managed at the same time. For the first two years of the club's existence I did not receive any salary. I am not a member of the club now; I simply manage it. We pay £1,500 a year for the privilege of four days' racing. I was asked a question about Tattersall's Club—whether it was an incorporated club or not. I referred to Mr. J. B. Oliffe, and he, as secretary, has replied that the club is incorporated as Tattersall's Racing Club, and they do exactly as we do—they pay us £1,500 a year, and that money goes into the funds for racing; and it is used to enable us to keep up our stakes.

851. I notice that you charge 10 guineas or pounds for registering country clubs? No; that is a mistake. It is only 1 guinea; I corrected it in my evidence. Not only this year, but in 1883, we charged these clubs 1 guinea. From then until 1898 we never charged them anything; but we found our expenses in regard to dealing with complaints, registration, and postage were so great that we decided to charge them 1 guinea a year, and there was no grumbling about it on the part of the clubs, with the exception, perhaps, of four or five.

852.

T. S.
Clibborn.
18 Oct., 1900.

* NOTE (on revision):—The running of "Parthian" was inquired into at the V.R.C. spring meeting, 1899, by request of Hon. W. A. Long.

† See p. 34.

T. S.
Clibborn.
18 Oct., 1900.

852. I think you fined one of the clubs—the Canterbury Club, I think it was—for racing in heats? I was in England at the time; but I understand that the facts of the case were these: They had a very large field, and divided it into heats, and the Australian Jockey Club fined them for breaking the rules, which was a very proper thing to do; but they got their money back again.

853. But what objection had you? The rules distinctly state that a race shall not be run in heats.

854. Now, do you think that rule was framed in the interests of racing? Decidedly.

855. Do you think it right to let so many horses start—forty or a hundred, say;—do you think it would be safe to allow even eighty to start? No; I do not think so; but I think it would be safe to run forty at Randwick.

856. Then it would be safe to run twenty? Yes; but you must take the characteristics of the course into consideration. The Canterbury Course is only about 7 furlongs' ride around, and 50 feet wide, I think.

857. What do you charge bookmakers in the way of fees? £10 for the Flat, £10 for the Leger, and £25 for the Saddling-paddock.

858. And jockeys and trainers pay a fee of £1 a year, which, I understand, goes to the Distressed Jockey Club Fund? Jockey fees only.

859. I have been looking through the matter and cannot find upon what authority you make that charge—under what authority do you make it? Under our by-laws, which are approved by the Governor-in-Council.

860. Have you any legal authority for doing it? Yes; under the Act we have power to make by-laws.

861. Did you take counsel's opinion on the matter in 1895? I cannot say.

862. I would like you to look it up; I think you did take counsel's opinion;—it was Mr. Pilcher? I think a bookmaker did.

863. Did Mr. Pilcher say you had no power to make these by-laws? I believe he thought so, but I do not agree with him.

864. Have you any legal opinion to the contrary? I believe we have the power, and my belief is confirmed by the fact that the Governor-in-Council approved of the by-laws we made.

865. I have noticed, time after time, when going through your programmes, that you have three 6-furlong races each day? Not the Jockey Club.

866. I have seen it, time after time, and I want to know whether it is in the interest of sport that the Australian Jockey Club should have control over other Clubs, or power to tell them that they must have minimum prizes of, say, £200 or £300 for the meeting, and also power to say whether they shall run 6, 9, or 12-furlong events? They cannot have races for aged horses for distances less than 6-furlongs under the rules.

867. Do you know that they run sometimes two or three events at a meeting of these 6-furlong races, and do you think that is in the interest of racing? I do not.

868. Do you not think this: If racing is established for the purpose of improving the breed of horses, more particularly to increase the stamina and that sort of thing, that these 6-furlong races should be done away with? No, I think not.

869. Why would you not do away with them? Because varied classes of horses must be catered for. Every breeder tries to breed the best animal he can, but he cannot always accomplish what he wishes; he has invested his money in trying to assist racing, and if he does not get perfection you must have some consideration for him; and it is for such horses that these 6-furlong races are provided.

870. And is your institution established for the purpose of propping-up that rotten state of things? I do not think that improving the breed of horses depends upon the long or short distances that may be fixed for a race.

871. But is not racing established for improving the breed of horses? It assumes to be.

872. And on that assumption is it favourable to this improvement of the breed of horses that these 6-furlong races should be run? I think you must have varied distances in racing.

873. I quite agree with you; but would you have the distances from 6 furlongs up? From 6 furlongs up.

874. Not a mile up? Personally, I would; but you must take other people's views into consideration.

875. How many members have you on your committee representing the breeding of horses? Ten, I believe.

876. Are there any breeders on the committee? Yes; Mr. Allen is a breeder; and Mr. George Lee and Mr. Dowling breed a lot of horses, but not race-horses.

877. Then there is only Mr. Allen? Only Mr. Allen.

878. I asked the question for this reason: the other day you told us you could not well supplement your list with advantage;—do you think there are a great number of breeders who could be selected with advantage, and who would represent the district in which they are living? Well, a man might be a good breeder of horses, but not a good master of racing. I do not think that outside clubs would be properly represented, or could be, under such a system.

879. I am speaking of districts? Of all districts—they may be good breeders of horses, but would prove to be very poor committee men. There is one man, Mr. W. H. Lang, of Corowa.

880. You do not think it would be to the interest of racing that such districts should be represented by such men, and others that might be mentioned? I can only repeat my former answer to that. I do not think it is one of the advantages proposed to be provided by this Racing Association Bill.

881. But do you not think it would be in the interest of racing to have the districts of the Colony represented on your committee? Unless I knew what men were to be appointed I could not judge of their personal qualifications. My experience is, that the people in the country districts are, I will not say absurdly ignorant, but they know little or nothing of the ethics of racing. That is confirmed by the number of applications that we get.

882. Another thing about this £25 which the bookmakers pay, what becomes of the money? It goes to augment the funds.

883. But is there no advantage to the public? Yes, the advantage is this—in the Saddling-paddock there are supposed to be large sums of money betted, and no person can be licensed for the paddock unless he is a member of a recognised racing club, such as Tattersall's Club here, and the Victorian Club in Melbourne. We do not know them, and they come under our notice as having been registered in former years. We require a statement as to a man's character. The Leger is the next grade, and so on down to the Flat. Then, when a bet is made with one of these men, and a bet is disputed it is at once inquired into

into, and if the circumstances of the case show the bookmaker to be at fault he is made to pay. It is a T.S. Clibborn. protection to the public—a sort of insurance office.

884. Suppose a man makes a bet with one of these bookmakers, either in the Leger Stand or on the Flat; in the event of his not paying do you get it from him, or does the man who betted with him? We make the man pay, or turn him out. 18 Oct., 1900.

885. How long has that been the case? About two years.

886. Do you permit cash betting at Randwick? We put a notice up to say that it is strictly forbidden, and the police can take what action they please.

887. Are you not aware that women and children cash-bet there? I have seen that done.

888. Could that be done if the law were strictly enforced? I am not sufficient of a lawyer to say whether cash-betting is illegal or not.

889. But did not the decision in the Kempton Park case determine that any place such as that to which your by-laws refer is a place within the meaning of the Act? It is difficult for me to give you a legal opinion. The police some time ago took the names of numbers of people who were cash-betting, and nothing whatever came of it.

890. Do you not think it should be suppressed? No; I think it is the fairest way of betting, providing it is on the racecourse.

891. Why on the racecourse? Because a man must have a start for his money.

892. Presuming, for the sake of argument, that a man could have the same facilities in a shop, would you have any objection to his betting in the shop? That is an outside question. It is the greatest curse to owners of horses, the public, and everyone else. If a man goes to a racecourse in order to gamble it is some indication that he is able to pay his way. But with the shops (I can only speak from hearsay) they have most unscrupulous methods of obtaining money. It tends to create stiff running. Because if a man goes out there and finds before the day's racing has commenced that his horse is backed down to 2 to 1, he has either got to scratch him, or run him in such fashion that he will not break the Seventh Commandment, and be found out.

893. Then you object strongly to cash-shop betting? Yes; it is gambling pure and simple.

894. But supposing a man could not afford to go to Randwick, and yet wanted to have a certain interest in any race, do you think he ought to be prohibited? I do.

895. Are you aware that a great number of the owners back their horses in these different shops? I am not.

896. As a matter of fact, owners themselves back them largely? That only bears out what I said before, that racing now-a-days is a different thing to what it was in the old days.

897. And would also bear out what is contemplated by the Bill, that it wants regulating here? I do not admit that.

898. You have no power to cope with the shops? It is not our business.

899. Were not Oxenham and Moloney men of as good standing as any bookmakers that have ever been within the paddock? I will admit that. As far as I know they are men of high class standing as bookmakers.

900. Then why did you refuse to register them? Because they were breaking the law.

901. In what way? By keeping shops.

902. What have you to do with the law? That is my opinion.

903. On what authority did you deprive them of the right of going in there? Because we choose to do it. We have power to refuse to register any man we like; not only so, but before the law was enforced they received six months' notice of it. Mr. Maloney is perfectly satisfied with the system under which he is carrying on business now.

904. I have nothing to do with the system or with their business, I am asking the question on public grounds? On public grounds they were breaking the law from time to time.

905. But why did you begin to be the guardian of the law in these particular instances, and not when others were breaking it? I cannot tell you. My committee decided they would not register as bookmakers at Randwick any persons who kept shops, and they received six months' notice to that effect—just as they will not register a bookmaker who bets at a pony meeting.

906. You say you do not object to cash-betting at Randwick;—but at the same time you object to it in shops? Yes. If cash-betting is illegal at Randwick why do not the Government or the police put it down?

907. Why do you not go a step further and say that no bookmaker who bets a cash-bet shall not be registered? I cannot say. You had better ask some member of my committee. I do not think it right for me to criticise the conduct of my committee.

908. The fact is, then, you really cannot give us any reason why cash-betting should be permitted at Randwick, and not in Sydney? If a man goes to Randwick he is bound to get a start for his money. The law recognises it, and I have stated in other words that it is not, in my opinion, breaking the law—cash-betting at Randwick.

909. What, is it not breaking the law? No.

910. As a matter of fact, it is breaking the law to cash-bet, and yet you permit it at Randwick? My committee permit it.

911. And you permit women and children to bet at Randwick? I will not be positive that the notices about cash-betting have not been taken down since the decision in the case of *Dunn v. Kempton Park*. But they were there originally.

912. And all the time they were there you took no step to prevent cash-betting? I did not.

913. And your only reason why you object to cash-betting in Sydney is that you think the public should have a start for their money? That is not the only reason.

914. What other reason have you? It is against the law of the land to begin with. It encourages gambling in every shape and form, and the law seems powerless to put it down.

915. Do you think women and children should be permitted to bet at Randwick? No.

916. And have you not got it in your power to suppress it? No; we do not interfere with betting, although we might if we choose issue an edict against it. I consider it most unfortunate that women and children should bet.

- T.S. Clibborn.
18 Oct., 1900.
917. Can you not put it down? There is nothing in our by-laws to prevent it. I do not suppose there would be any difficulty in doing it, but the Government, I think, should take action.
918. Do you not think it is undignified on the part of an institution like the Jockey Club to allow on the racecourse, with your eyes open, women and children to bet? I have never seen children betting; but I have seen women. I am not prepared to give an opinion on that. Suppose we decided we would not allow it, how are we to stop it? I think it would be interfering with the liberty of the subject.
919. *Chairman.*] Mr. Pilcher's name came up just now;—is he not a Q.C., and legal adviser to the Australian Jockey Club? Yes, he is; and has been so for two years.
920. Did he not give an opinion with regard to the rules of your club? Yes.
921. You seemed doubtful about it just now? He did not give an opinion to the club, but to someone outside.
922. Have you seen his opinion in print? I think I have.
923. Do you hold with that opinion? That is, that our by-laws are *ultra vires*. I do not hold with that.
924. I suppose you will admit that by-laws that are *ultra vires* have been sometimes acted upon? I do not know. If you could give me any specific case I could answer the question.
925. Have you not stated that Mr. Pilcher's opinion is correct? I do not think so.
926. Can you tell us where the Australian Jockey Club derive their power to make by-laws? From the Australian Jockey Club Act of 1873.
927. If a race club does not comply with your by-laws with regard to registration, what do you do? Simply they are not registered. They can please themselves.
928. Do you disqualify them? No; the horses racing at their meetings do not come under the Australian Jockey Club rules, and would not be allowed to run at our meetings, because of having become disqualified by running at an unregistered meeting.
929. But do you not disqualify, not only the club that runs at an unregistered meeting, but also the horses that run? We do not disqualify the club, but the horses, the trainer, the rider, or the lessee, under the rules, which were approved of by a general meeting of members.
930. Therefore, you punish the horses, the owners, the trainers, and the riders? Yes, all of them. The same rule exists all over the world.
931. You said, in your evidence at a previous sitting, that country clubs have not expressed any want of confidence in the Australian Jockey Club? Certainly.
932. You do not know that country clubs have expressed want of confidence the Australian Jockey Club? I have never known a country club to express a want of confidence in us; but I have often known a club to feel aggrieved at decisions that we have come to.
933. Do you remember in August of last year a conference of country clubs being held at Junee? Yes. They addressed one letter to us, I think. There were ten clubs represented at the first conference; at the second, only five; then they dwindled away to two or three, and the conference died a natural death.
934. Now, in regard to that meeting at Junee in August last? I said in my former evidence that about ten clubs were represented; two or three of them were represented by the secretary of the Junee club.
935. You saw the report of the meeting? I did.
936. And are you aware that thirty-two clubs were represented at that meeting by letter? I cannot say.
937. But twelve of the clubs were actually represented personally and thirty-two by letter? I do not know.
938. Do you know that the conference carried a resolution adverse to the Australian Jockey Club? I heard so. I have not heard anything of it since.
939. *Mr. Taylor.*] Did you not alter your by-laws in consequence of the resolutions passed by that conference? No.

[* Mr. D. Watkins here entered the room and took the Chair.]

940. Do you know the object of the conference that was held at Junee? I cannot tell you. There was no notice taken of it as far as I am aware.
941. Was it not to protest against the arbitrary and unjust laws of the Australian Jockey Club? I do not know. The word "by-laws" is badly used. We only make by-laws under our Act for our guidance. The proper word would be "regulations."
942. Was not the Australian Jockey Club forced to amend or alter certain by-laws? I do not think so. If you would kindly name one I could tell you whether it had been altered.
943. Did the Australian Jockey Club alter its by-laws in relation to fees paid by jockeys in jumping races? Yes; that is a rule not a by-law. It was pointed out to us that in cases of a £10 hurdle race in the country it would be unfair to make an owner pay a boy £5 for his mount. The alteration was at once carried, as it was regarded as a reasonable request.
944. Why did not the Australian Jockey Club rescind the regulation when they were first requested to do so, without putting country clubs to the cost of holding a conference? I cannot say. We have gone even further with regard to the rule lately, and have ceased to compel secretaries of country clubs to collect jockeys' fees at all, if they do not desire to do so.
945. As trustees of the public estate, you say that the Australian Jockey Club are solely desirous of fostering racing? I may have stated it. That is their only object.
946. Some time ago you prohibited jockeys riding at pony meetings? Yes.
947. Why? On the 31st August, 1898, or thereabouts, it was settled that pony-racing and horse-racing should be conducted entirely apart; that horse-racing should be managed by the Jockey Club, and pony-racing by those who fostered it. Disqualifications incurred prior to that date were then and there removed, and jockeys and owners and trainers were afforded an opportunity of either remaining with the ponies, and racing under the management of pony clubs, or coming under the rules of the Australian Jockey Club. The result was that a regulation was made that if an animal raced as a horse went amongst the ponies, he had to stay there. The same with the jockeys. Numbers of the pony jockeys came back to racehorses, and after a time went away. The committee made a regulation that if any individual, having gone over from the horses in 1898, returned to the ponies, they would not be permitted to return again under the Jockey Club rules. They were allowed a choice as to which they would do. 948.

948. Then you did at the same time prohibit trainers from training ponies? Yes.
949. Did you at the same time prohibit members of the Australian Jockey Club from owning or being interested in the ownership of ponies? No; if a man choose to appear as owner of a pony he could not run horses at a horse-race. T. S. Clibborn.
18 Oct., 1900.
950. Did the Australian Jockey Club cite certain trainers and owners of horses to appear before its committee, and inferentially threaten them with punishment, if they went near a pony racecourse? They summoned certain trainers before them, but they did not threaten them with punishment. They summoned certain licensed trainers before them, and told them it was very bad form, and injudicious on their part to systematically attend pony meetings. They considered it was wrong for them to do so, and hoped they would not continue the practice.
951. Why were these horse-owners and trainers cited to appear? Because they had been frequenting pony-racing continually, and the committee had warned them against doing so. It was a natural inference to draw that from their attending so frequently pony-races that they had some interest in them. An owner of a horse is not supposed to have any interest in pony-racing.
952. From where did the Australian Jockey Club get the power to interfere with these trainers? I cannot tell you. As a matter of right, I suppose. Just in the same way as trainers are licensed by the Jockey Club.
953. I suppose you would expect to get the power from the deed of grants? No; we get it from the fact that each man has to take out his license.
954. I have here a copy of the deed of grant under which the Australian Jockey Club holds possession at Randwick;—will you point out where it permits a grant to be sub-let? I cannot do that.
955. Will you read the last five lines of the deed of grant, and note whether the land is not granted for the exclusive use of the Australian Jockey Club? But that is not the lease of the course. The lease was given by the trustees who hold the land comprised in this grant.
956. You know that the impression of the representatives of the country clubs is that Mr. Clibborn is the Australian Jockey Club? I do not know that, and I am not; that is not correct.
957. Well, here is a copy of the Australian Jockey Club Act (*handing it to Witness*), and can you point out in that Act where the original grant is revoked or altered? I really know nothing about that.
958. Did you, as Secretary of the Australian Jockey Club, write to the Railway Commissioners stating that the club did not give them permission to remove fences and take ground for a tramway? No, I did not.
959. As Secretary you have never done so? I have never written to the Railway Commissioners. I have told them that the committee would make no difficulty about their going through the land; but I have not written anything to them. If I have, it has escaped my memory. I was asked if there would be any objection to their going through the ground, and I said there would not be.
960. Will you kindly tell us what your reason is for saying that betting should be confined to a race-course? It is purely a matter of opinion. I would add to that—and to recognised betting clubs.
961. Then you are of opinion that if a man cannot find time or money to go to the Randwick Racecourse he ought to be forbidden from having a bet? I do not say that. Why should a man not have a bet if he chooses?
962. Do you know that shady characters frequent Randwick and bet;—do you know that of your own knowledge? I have seen very shady men, indeed, and have put them off the course.
963. Are there not shop bookmakers equally as respectable as course bookmakers? I cannot say.
964. Then do you wish this Committee to believe that you cannot say that you know that there are shop bookmakers who are equally as reputable as course bookmakers, whom you license and acknowledge as good men in all respects? I say there may be; but I cannot state whether a man is a reputable character or otherwise, beyond the conditions under which he meets his liabilities and pays them. He may be a most immoral man outside that.
965. You say you did punish Oxenham and Maloney? I say we did not punish them; but the club refused to license any bookmaker who kept a shop.
966. Can you tell this Committee from where the Australian Jockey Club derived the power to punish these men legally? In the first place, I do not say we did punish them.
967. You say you disqualified them? We refused to register them as bookmakers. They possess just the same rights as other men—the same right as you possess to dismiss your servant if he displease you. The Australian Jockey Club is not compelled to register a man.
968. Do you know it is generally understood that your committee was trying specifically to injure Oxenham and Maloney in refusing to register them? I do not believe it. Whoever made such a statement as that made an absolutely false one.
969. Do you not know that now Mr. Oxenham is out of the Colony bookmakers are prohibited by you from keeping betting offices, and yet are doing so with impunity? There is no bookmaker that I know of registered by the Australian Jockey Club who is keeping a shop.
970. Have you taken the trouble to inquire? We have a detective whose business it is to look after all that portion of the business.
971. Do you think that if the public cannot make a bet in town they would go to the racecourse? Yes, I think so, if they wanted to bet.
972. You would then obtain admission fees from them? Yes, I think it would improve the attendance at all the meetings.
973. You charge bookmakers' fees for the right to bet at Randwick? Yes.
974. And only those bookmakers who are registered and pay you fees are permitted to bet at Randwick? Yes.
975. And if a bookmaker refuses to pay the fee you eject him from Randwick? Not necessarily eject him; he goes off quietly. It is law, you see.
976. It is simply because the fees are not paid that you eject him? There are other reasons. If he stood up to bet, and was not a registered man, he would be prevented.
977. No matter what his character, or how well behaved, if he did not pay your fees you would not permit him to bet at Randwick? Certainly not; that is the law.
978. Then the obtainment of the fees is the main things? No; registration is the main thing.

T. S.
Clibborn.
18 Oct., 1900.

979. But all other things being equal, the payment of the fees is the main thing? No, decidedly not. A man might be willing to pay the fees a dozen times over, and yet the club might have reasons for not registering him.
980. Have you ever refused to register a man? Over and over again.
981. As a matter of fact, for a fee you would give the bookmaker an exclusive right as against those who do not pay the fee? I cannot say that directly; if a man is of reputable character, and asks to be registered, and is willing to pay the fee, he is registered.
982. Do you know that it has been decided by the Law Courts that anywhere where an exclusive right to bet can be obtained is a place within the meaning of the Act? I do not know.
983. Is not that what was laid down in the Kempton Park case and in the New South Wales Supreme Court case—the case of *Thoman v. the Crown*? I do not know.
984. Do you, or do you not, know that another race club has threatened certain bookmakers with certain pains and penalties for having disputed the right of the Australian Jockey Club to charge betting fees? No.
985. Have you heard, or do you know, that such a thing did occur? No; I never heard of such a thing.
986. Have you ever heard of the Kensington proprietors doing so? No.*
987. Do you believe in taxation without representation as regards racing clubs;—you tax the racing clubs of the Colony? That is not a tax.
988. And yet they have no say as regards the control of racing? We attend to anything they write about or ask. The district racing clubs draw up their own programmes, make their own rules and regulations, and I have had no strong objection from them, and know of none in any way. Anything they refer to us gets attended to.
989. With regard to these 6-furlong races, you say they have to be maintained in order to study the interests of horse proprietors? Not wholly. I think that a race programme should contain a 6-furlong race for some amount, because there are plenty of horses that will not stay for more than that distance.
990. And you think that that is in the interest of horse-racing? Yes. If you advertise a 6-furlong race and a 1½-mile race, you will get a greater number of entries for one than for the other.
991. For the same reason, should you not encourage pony-racing? No.
992. Not in the interest of horse-breeders? I do not believe in pony-racing in any shape or form. It has created a class that never existed years ago.
993. A class of horses? Of men, too. You go and have a look at them some day, and you will come back with the same opinion.
994. Does any member of your committee own a racing pony? Not to my knowledge; I do not believe any member does.
995. Does Mr. Chisholm, as a breeder, race any pony or ponies? I do not know; I do not believe he does. He may have leased some; but I do not know of it in any way.
996. You think he may have leased some? He may have done so.
997. Then you refuse to allow a man who is a trainer or a jockey of ponies to be registered in connection with the Australian Jockey Club? Yes.
998. Either to train or ride? Yes.
999. Then you think it is in the interests of pure sport that Mr. Chisholm should be allowed to lease ponies? I do not say he does.
1000. But, supposing he does, would you consider that he ought to be a member of the Australian Jockey Club? He is not considered to be an owner of a racing pony; if he is the owner of any such pony I do not think he should be a member of the committee.
1001. If a man leases a pony he owns it? I know nothing of Mr. Chisholm's private affairs.
1002. Do you think that any man who wagers on horses, or bets at all in connection with races at Randwick, should be a member of the Australian Jockey Club? That is a very large question of men and morals. I should not like to give any opinion. I said before that I believed that some members of my committee do bet, but they bet less than any other men I know of. I am certain of this, that if any member of my committee had any interest in any case that might arise about racing, or any interest in a bet connected with that case, he would not sit to hear it.
1003. Do you know any members of your committee who have been interested in a wager, who have sat on any case that has been brought before the committee? I cannot make any statement like that. In the first place I should have to be sure that they were betting, and then I must have the case quoted. I cannot bring anything of that kind to my recollection.
1004. *Mr. Taylor.*] As regards leasing a pony, you seem to think a man might remain with impunity upon your committee—that is, if he owned a pony that he leased, that even though he leased the pony for racing purposes, you think he might remain a member of your committee with impunity? It is rather a nice question to answer. I know positively that if he owned or raced a pony that he would be disqualified from racing or owning a horse. But I do not think that a member of our committee should lease, or have anything to do with leasing ponies for racing purposes.
1005. But supposing, for the sake of argument, that a man did lease a racing pony, do you not think it anomalous to make a distinction—that is, to disqualify a man for owning a racing pony, and at the same time allowing him to lease a pony for the same purposes? It is a distinction without a difference. Any member of the committee who tries to evade the laws of the Australian Jockey Club, is not worthy to be a member of the committee.
1006. *Chairman.*] Would any action be taken against a member of your committee were he to attend a pony-race meeting? Certainly not.
1007. *Mr. Taylor.*] Supposing one of your committee was to go out backing a pony for 50 or 100, would that come under your disqualification? No.
1008. He could do that? Yes.
1009. *Chairman.*] Do you not think, then, that if it was the desire of the Australian Jockey Club to stamp out pony-racing, they should go to the length of preventing a man from attending or encouraging these races? How could they?

1010.

*NOTE (on revision):—James Austin, an official of the A.J.C., informed me that he had been told that certain bookmakers had been summoned to attend at the Kensington Club office.

1010. I understand that you pulled certain bookmakers up? Trainers. The committee told the trainers practically that it was very bad taste on their part to be constantly attending pony racing. They replied that they had nothing to do, and that it gave them another day's racing; that they went there to fill up the time. T. S. Clibborn.
18 Oct., 1900.

1011. You do not register people who bet at pony meetings? No.

1012. You said something about pony-racing creating a certain class? Yes.

1013. You are not of opinion, then, that racing, as carried out by the Australian Jockey Club, has assisted to create a portion of that class? No; I do not indeed.

1014. Are you of opinion that it is a good thing, and in the interests of good society to allow women and children to bet? Certainly not; but it does not come within the rules of the Australian Jockey Club to say what they shall do.

1015. You restrict the public to certain things, do you not, by your rules? Women and children pay for admission to certain places, and it would be impossible to enforce any rule against them betting. I think it most undesirable; but I do not see how the Australian Jockey Club is going to put it down.

1016. *Mr. Gillies.*] You, I think, are in favour of the totalisator being introduced on racecourses? Personally, I do not care about it; but as Secretary of the Australian Jockey Club I did everything I could to secure its being introduced.

1017. Do you think, in the interest of public morality, it would be better for you to prohibit altogether betting on the racecourse? I do not; you would not have any racing if there was no betting allowed.

1018. Are you not aware that some big horse-owners race without betting a shilling? I think you can count them on your fingers. The best horse-owner we ever had in this country, the late Hon. James White, would bet as readily as anyone in the land.

1019. Would you advocate the Legislature taking steps to prohibit betting on any racecourse? Certainly not; you might as well shut up racing at once.

1020. What about public morality? That has nothing to do with me.

1021. You would sacrifice everything to the interests of the Australian Jockey Club? That is only one race club. If you permit the use of the totalisator, it is only introducing gambling in another form; if you prohibit betting it would put an end to all racing.

Adrian Knox, barrister-at-law, sworn, and examined:—

1022. *Chairman.*] You are a member of the Australian Jockey Club Committee? Yes; and have been a member since January, 1896. A. Knox.
18 Oct., 1900.

1023. And have paid close attention to the working of the committee? Yes.

1024. You understand that there is at present a Bill before Parliament, the object of which is to supersede the power exercised by the Australian Jockey Club over other clubs? So I understand.

1025. You have seen a copy of that Bill? I have.

1026. In relation to that Bill, do you think the arrangement would be better than that now in existence? I do not.

1027. First of all, then, taking its principal provision, the division of the Colony into districts, do you not think it would be fairer to the racing clubs of the Colony to have the whole of them in some way on your committee? I do not think it would be practicable. If I may be allowed to explain what I mean: The Bill proposes that an association should be formed, consisting of members representing city and suburban clubs, and clubs in different parts of the Colony. Now it is obvious that if the country clubs elected representatives resident in their district, they would not be able to attend the necessary meetings to consider the business that would come before the association. On the other hand, if they elected representatives who were not resident in their respective districts, and who were not conversant with the needs of those particular districts, you would be merely substituting one system of government by a Sydney head for another system. You would not get the advantage which I understand is aimed at by the Bill—that is, getting persons who are conversant with country racing to deal with matters affecting country racing.

1028. But it would give them a voice in saying who should represent them? Yes, it would certainly give them a voice; but I do not know that they want it. We have not had any complaints from country clubs about want of representation; and with the single exception of one occasion, when a conference was held in the Junee district, we have not had any complaint. We had one communication from that conference, suggesting certain alterations of our rules, and very largely we fell in with the suggestion made.

1029. In the other Colonies—for instance, take New Zealand—is it not a fact that that system is carried out, not under law, but on a voluntary basis? I believe it is so. All that I know is what I have read in the rules of the New Zealand Racing Clubs; but the exigencies of New Zealand are different to what they are here. In Victoria, in South Australia, and in this Colony there has been one club which has manifestly taken the lead, and which has had sufficient inherent force to lay down regulations which other clubs can adhere to or not, as they please, and if they do not adhere to them, they do not get the advantage of being registered clubs. In New Zealand there are a number of places—say, Christchurch, Auckland, Dunedin, Wellington, and other smaller places, such as Whanganui, and others—where the clubs were more or less on an equality; and there was no club which was in a position to, as it were, dictate its terms to the other clubs. Therefore each club administered the law in its particular local jurisdiction, which was obviously a very bad thing. Their decisions often clashed with one another. There was no community of interest, or very little, and no settled rule between these clubs. So they laid their heads together, and agreed upon the formation of an association, the exact scope and object of which I confess I am not fully acquainted with; but that it has to do with the government of racing I admit. They were independent clubs, the decisions of one not running, sometimes, in the jurisdiction of the other.

1030. But leaving New Zealand, are you aware that they have in Northern Queensland a racing association? I am aware that they have a governing body there, but I am not aware of the details of its constitution. The Queensland Turf Club formerly held much the same position as we do here, though in a less degree perhaps. In the northern districts they broke away and formed some sort of an association amongst themselves. It was not an association brought into force by law, and it was in no way recognised by law. 1031.

A. Knox. 1031. You have told us that the Australian Jockey Club has practically taken the lead and control of racing in this Colony by the force of circumstances? Yes; and by force of circumstances, as far as my knowledge goes, the other clubs—I speak generally—both proprietary, suburban, and country clubs are willing to submit to its jurisdiction.

18 Oct., 1900.

1032. You have had no direct complaints from any one club? No. I should like to qualify that in so far as direct complaints go, by saying that in one case, that of the Hawkesbury Club, we had a complaint. That club at one time thought we were treating them badly, owing to certain arrangements for the days of racing—not on the practice of racing law, but as regards the days for racing. It was in this way, so far as I recollect: They used to race on a Thursday and Saturday, two days in the week, shortly preceding our September and Easter meetings. Then, at their own request, as I understood at the time, we took away the Thursdays, because they could not make it pay, and we gave them a Saturday in July in lieu of those Thursdays. So that now they have three Saturdays to race on. We at the same time reduced the amount of added money which we required them to give from £400 to £300. They also had another slight grievance. Their course was in very bad order at one time, and they applied for leave to race at Rosehill. We gave them permission, and allowed it to go on for some time, something like twelve months, I think. Then we told them that as they were the Hawkesbury Racing Club they must race at the Hawkesbury.

1033. That is about the only case you can recollect? Of any discontent with our administration.

1034. You cannot say that you have seen in the Press, or heard outside, any complaint from any clubs against the administration of the Australian Jockey Club? I would not like to say. I have seen and read complaints in the Press; but no complaints have come before the committee. Of course, I cannot say of my own knowledge whether clubs are satisfied or not.

1035. At the present time you are racing on a piece of land at Randwick which the club has leased from the trustees? That is so. I may say that I have never seen the lease; but the deed of grant is recited in the Act, and I know generally what it is for, and the scope of it.

1036. *Mr. Levien.*] The trustees have the power to lease? I believe so. I think it is especially given to them by the Australian Jockey Club Act.

1037. The Australian Jockey Club leases from the trustees under the Act;—virtually, although these gentlemen were nominated trustees, the deed was made to the Australian Jockey Club? I have always regarded it in that way; but I was not conversant with the matter in 1873. It was given for the purposes of the Australian Jockey Club, no doubt. The Act itself recites that the grant was upon trust, under which horse-races might be run under the direction of the Australian Jockey Club, or of any other club or association then existing, or which might thereafter be founded for the purpose of horse-racing, or for the purpose of promoting or engaging in any other public amusement or purpose for which it was intended that the land should or might be used as aforesaid, the exclusive right to use and occupy the said lands, or any part thereof, as the trustees might in their discretion think fit.

1038. So that the Australian Jockey Club got the lease, and sublet to the other clubs? You may call it sublet.

1039. *Mr. Taylor.*] Have you power to do it? I cannot answer that as a question of law; I believe we have.

1040. You have seen Mr. Pilcher's opinion? I do not know that he has ever given an opinion.

1041. *Mr. Levien.*] These trusts were leased to the Australian Jockey Club, and under their deed of grant they sublease to other people? The Australian Jockey Club do not sublease under this Act; they take the land under the lease granted under this Act, and then permit the occupation by other clubs.

1042. And there has never been any complaint one way or the other? Not that I have ever heard of.

1043. *Chairman.*] You do not wish to state that the Australian Jockey Club and the trustees are one and the same person? Not at all. The Australian Jockey Club is recognised as primarily the body to which the trustees may lease; then, as lessees, I maintain we have the right to permit other people to occupy the land for purposes not inconsistent with the deed of grant, and upon any terms we may agree upon.

1044. Would it not be necessary in a case of that sort under the deed of grant to apply to the Governor-in-Council for permission to lease? That is a matter of opinion. I think we are perfectly within our rights.

1045. You read the speeches delivered on the introduction of the Bill, in which the Australian Jockey Club came under consideration? I did.

1046. The case of Samuel Fielder, which was introduced before this committee by one of the members;—were you present on the day that the horse "Mora" ran in the first race? I was. That was the time the trouble arose, and in respect to which Fielder was afterwards punished.

1047. He was not punished immediately after the race? He was not. If you like I will explain the circumstances as I saw them, and what I did. What happened was this: Before the race I was down in front of the officials' stand, near where the ring is, noticing, as I generally do, what odds are being laid on the different horses. As part of my duty as steward I do that. I noticed that "Mora" never seemed to get any better favourite than when she was started, which was between, say, 2 to 1 on and 6 to 4 on. I did not consider the betting satisfactory. I thought she ought to have been at much greater odds. She was then in a very bad field for a mare of her class, and I thought practically prohibitive odds would have been asked on her. Seeing the condition of the betting, I went up-stairs to the balcony from which the committee saw the races, and I said to one or more of the members of the committee—I did not know who was riding her—but I said to some of the members of the committee that I did not like the position this mare was in in regard to the betting. I thought she ought to be at much longer odds, and I thought we ought to watch her. I may say that that is the ordinary practice for a member to do if he sees anything suspicious—to ask two or three members of the committee to watch matters. I think two or three members of the committee watched that mare from start to finish in the race. I was satisfied from what I saw of the race that the mare could have done better than she did. I am not saying who was responsible for it indirectly; but I saw enough to satisfy me that, in my opinion, the mare could have done better than she did. I know that was also the opinion of one other member of the committee. After the race I suggested that it was desirable to have an inquiry. Some three or four of us discussed the matter, and I may tell you that at that time I had no idea in my own mind whether the boy or the owner was mainly responsible. We considered that, as all the committee had not seen what we were

dissatisfied

A. Knox.
18 Oct., 1900.

dissatisfied with, it would be better to wait for a few days, as the mare was entered for other events, and we could see what happened in regard to them. One of my objects in doing that was to see whether, if more people than the boy were responsible, time would help us to find it out. We did not hold the inquiry then, but to show this committee that we were not the only persons who noticed this, I may say that directly the race was over I went down from the verandah to the weighing-room, where I met Mr. Reginald Allen. Mr. Allen came to me and asked me, I think, whether the committee were blind. I said, "No, they were not." He said, "Well, surely you saw something in that race?" I said, "Yes, I did; I saw 'Mora.'" He said, "Are you going to have her up?" I said, "Not for a day or two; we are going to watch; we do not know who may be in it or not." I merely mention that to show that people outside noticed it as well as we did. I did not see the second race for Tattersall's Cup. When a meeting of the committee was arranged, Fielder had notice to attend. At that meeting I attended. I did not want any further evidence to convince me that the mare had not shown proper form in the first race. I was quite satisfied of that, although, of course, I was open to conviction. I will tell you exactly what happened. She came into the straight, to my mind, going well. I have seen a little racing, and I think I can say that when coming into the straight the mare was going well. She was fairly wide on the outside, I think about three horses inside her. Coming up the straight—I cannot say exactly at what point—but after they had straightened the horses up to come home, the mare was taken, as I thought, and as I still think, in behind those other horses, instead of pursuing her course when coming into the straight. She was thus taken into a position from which it was almost impossible for her to win, unless an accidental opening occurred.

1048. *Mr. Taylor.*] The object was to block her? It is a common way to stop a horse—to get her into such a position in the straight that she cannot get away from it.

1049. *Chairman.*] What was the charge you brought this lad, Fielder, up on? I cannot say off-hand. So far as my recollection serves me he was called upon to explain his riding of "Mora" in that particular race. Something was said about inconsistent running. Fielder was not on the mare in the second race.

1050. Was there any inquiry as to whether the mare ran stiff in the second race? Incidentally, that was discussed at the inquiry, but there was not any inquiry as to the running in the second race.

1051. Then the committee must have been of opinion that she ran a better horse on the second occasion than she did on the first? There is no doubt about that. I did not see the second race, but I read a description of it, and I heard the evidence given.

1052. Was it a higher class race, the second? Very much higher. There was more difference in the class of those two races than there was in the weight which the mare carried. I think she carried 9 st. 5 lb. in the first race, and 8 st. 4 lb. or 8 st. 6 lb. in the second race; and, in my opinion, there was a greater difference in the class than that.

1053. When you were down examining the state of the betting, was not 6 to 4 on a pretty warm favourite? Well, any odds on is a pretty warm favourite, but it depends on the field, and on the favourite, and the number of starters in the race, and a variety of things. All I can say is she should have been 4 or 5 to 1 on.

1054. But the boy, prior to what you saw, he does not regulate the betting? Sometimes the boys on the backs do regulate the betting.

1055. He does not put money on? But some of them on the backs regulate the betting.

1056. Did the owner back "Mora"? According to the evidence, I am satisfied that he did.

1057. The father of the boy also gave the owner money? The evidence was that he backed her.

1058. Then we are to believe that this boy robbed his father and all concerned? I cannot say that; I do not know what his motive was, or who told him to do it.

1059. What was the inference? I cannot say. I am sufficiently acquainted with racing to know it is possible for a man to put money on a horse with one hand and bet against the horse on the other hand.

1060. Cannot that be found out? I hoped it would be found out. One witness before our committee told us—I am speaking from memory—that he knew, or had good reason to believe, that certain bookmakers had gone on laying against this mare over the proper amount for their books. I then asked him if he would give the names of those bookmakers, and he declined. How were we to go further?

1061. That was one of your witnesses? It was Mr. Crick.

1062. Would it not have been fairer, in the interests of all concerned, in such a case as that of "Mora," that "Mora" and all concerned should have been examined after the race? Do you mean examined by a veterinary surgeon?

1063. No; instead of letting the thing go over for a week, that an inquiry should have been held there and then? I do not see that it would be any fairer one way or the other. I had my suspicions about the whole thing at the time of the first race, and I wanted to get to the bottom of it. And I may say this whilst I think of it, and the rest of the committee will tell you, that it was mainly, if not entirely, owing to my efforts that the inquiry was reopened. Mr. Crick, Mr. Levien, and a number of other gentlemen, signed a petition to have the inquiry reopened, and I did my utmost to get it reopened, and I succeeded.

1064. They produced the necessary evidence at the reinquiry? They produced a lot of evidence, but the evidence at the reopened inquiry convinced me that Mr. Knight and his trainer had no hand in the matter.

1065. Was that the evidence of a horse-trainer? Not entirely; it was partly the evidence of Hugh Roarty.

1066. Is he not a brother-in-law of the man who trained the mare? Yes. He was subjected to a fairly long and searching examination. There is another singular thing. In his evidence, Mr. Fielder made a point against us by stating that no one had given an opinion that the mare was pulled. I have searched my memory, and cannot recollect a case where a witness has gone in and stated that a horse was deliberately pulled. But Mr. Knight said this: "After the race I went to Fielder and told him I did not want the boy to ride the mare again."

1067. Were you surprised that Fielder went to him and told him he would not allow him? Fielder said that before us; but I do not believe it.

1068. Would you be prepared to believe it if a dozen others standing round said it was so? I should want to hear the whole of the conversation. A curious thing was that Fielder apparently went to Knight directly after the race and told him he would not allow the boy to ride the mare any more.

1069. The whole of your committee act as stewards? They do.

1070.

- A. Knox.
18 Oct., 1900.
1070. They therefore stand in the position of being prosecutors as well as judges? Yes; you can put it that way.
1071. Is that a different system to what obtains in Victoria? No. They have a number of stewards for the day, who are practically in charge of the racing on that day; but I understand that if any case is brought before the committee, the whole of the committee sit, including these stewards. I understand so; I do not say definitely that it is a fact.
1072. Would it not be a better system to tell off certain men as stewards and then prevent them sitting in judgment on any case that may be brought under the notice of the committee? Personally, I have always been in favour of having a limited number of committee-men sitting for the day. It is only my opinion; I fancy most do not agree with me. I think, if three members of the committee were appointed each day to watch the racing, and nothing else, it would be better; but I should not prevent them from sitting in judgment.
1073. Take it this way: you do not allow boys to be represented by anybody? No; we do not.
1074. Would it not be better, where lads of 14 or 16 years of age are called upon to explain any matter, that you should allow a solicitor to sit beside them? There are very great objections to it. One objection is that it at once leads to liability for libel for anything that might be stated.
1075. If they had a representative appearing on their behalf? Yes; mind you we have no legal standing whatever.
1076. That is the reason you do not permit representation on their part? That is one reason.
1077. As in the case of Fielder, was it not, in your opinion, rather unfair, when asking the boy questions, for the chairman of the Committee to tell him what he deliberately saw, when he was supposed to be trying him a week later? I think it was fair, in order to enable the boy to explain what he saw or did not see. We are in an anomalous position. If we do not exercise our eyesight, people cry out against us that we are doing nothing; if we do take notice of what we see, people cry out that we should only act on outside evidence.
1078. You cannot expect a boy to ask questions and cross-examine? Cross-examination is an art.
1079. Supposing I, sitting here, were to tell you I saw you do this or I saw you do that? I should explain to the best of my ability that I did or did not do it. The Association will be in exactly the same position under this Bill in having to act on what the members of the committee see.
1080. You have told us that some system of appointing a certain number of stewards would be better? By the club.
1081. That is not carried out at the present time? It is not. I have often had it in my mind to bring it before the committee; but have never brought it forward formally.
1082. In your opinion, is it a good thing for the club to act as they do now, in practically refusing to license some jockeys and trainers? In my opinion, it is absolutely necessary. With regard to trainers, we do it under subsection *b* of Rule 84, which reads:—"The committee of the club may refuse to grant or renew any such license without assigning any reason for such refusal, and may at any time cancel or revoke any such license before the termination of the period for which such license was granted."
1083. *Mr. Levien.*] Did that rule come before the committee? It came before a general meeting of the club. I moved its adoption on the 16th August, 1898. A number of members of the club was present at the meeting, which was held at the Chamber of Commerce. Several members strongly supported the rule which I brought forward. To-day I looked up the report of the meeting which appeared in the *Sydney Morning Herald* on the day following—that is, the 17th August—and I there found these words:—"Mr. W. P. Crick spoke strongly in favour of the adoption of the proposals, and instanced the prevalence in the streets of gambling as an outcome of pony-racing. In the interests of public morality, he advocated that the proposals should be adopted." After I had proposed the adoption of the rule, Mr. P. J. Hourigan moved an amendment, which would have had the effect of negating our power to refuse to license without assigning a reason. That amendment was defeated on division, and the rule which I proposed was adopted. With regard to jockeys, the rule does not provide that; but the practice—I am speaking of the time since 1896—is that when the jockeys come up annually for their licenses, they may in certain cases be refused without assigning a reason. The object of the rule is well known to every racing man.
1084. I suppose the committee come to some understanding before refusing? Undoubtedly.
1085. Matters are brought before the committee by someone? Sometimes complaints are made from outside. May I say that this Bill does not propose anything different, except the power to make by-laws. All it proposes is this—I am referring to clause 20: "The association shall have power to grant licenses to trainers, and licenses as well temporary as permanent to jockeys. Every application for a license under this section shall, together with such fees as may be payable in that behalf, be lodged with the secretary, who shall lay such application before the meeting of the association then next following. The decision of the association shall be notified by the secretary to the applicant." There is no provision that an applicant shall have the right of being heard; nor is there any provision that the inquiry shall be open to the public or the Press.
1086. And you are of opinion that there should not be any such provision? I am. I think you cannot administer racing rules or law, if you have inquiries open to the Press and the public.
1087. In the case of appeals from the decisions of other clubs, or by other people against the decisions of other clubs, you ask them to make a deposit of £10? Yes. Rule 9 reads:—"The committee of the club may, if they think fit, take into consideration any question or appeal arising out of the operations of those rules, and their decision thereupon shall be binding and conclusive. Any person appealing against the decision of any other committee other than the 'committee of the club,' shall, within three days after the giving of such decision, lodge a notice in writing of such an appeal, including the grounds thereof, with the committee against whose decision he appeals, and shall also, within ten days after such decision, lodge with the secretary of the club the sum of £10, and, after the hearing of such appeal, the committee of the club may make such order as they deem fit with reference to the disposal of such sum of £10 or any part thereof.
1088. Have they in many cases kept the whole of the £10? In very few.
1089. There have been some? I remember one case distinctly, and my impression is that it has been done in two or three cases. That is during the five years this rule has been in force.
1090. Do you recollect a case coming down from Sunny Corner? No.

1091. In a case of this kind, where a man, who has had a decision given against him, wrote you, for (say) his £10, and also asked what you intended to do, would the committee give him a reason for the disposal of the £10? I would not like to answer an hypothetical case. In a case of actual punishment we would look it up and say what happened. A. Knox.
18 Oct., 1900.

1092. If it were admitted to be a frivolous case, would you not tell him? No; I would tell him that his £10 was forfeited. He knows the rule; I should think that he would be told that the money was forfeited.

1093. In connection with the suggestion to throw the Flat at Randwick open to the public as in Victoria, would not that be practicable here? It would be.

1094. Would it be advisable in the interest of racing? Not in my opinion. It would mean that we should have to reduce the stakes at the very least by £5,500 a year, and probably more. If you threw the Flat open you could not charge a shilling at the gate at all, because people will not pay an extra shilling to go into other places; you could not charge a shilling at the gate for entrance for one part of the course and not for other parts. If the shilling entrance fee was taken off altogether we should make a loss of about £4,000 a year. In addition to that it would mean a loss in the rebate we should have to allow to other clubs who take the course, which loss would approximately amount to £1,500 a year. In addition we should, in my opinion, lose a great part of the custom which we now get for our Leger Stand enclosure. At present we get 2s. for the Leger Stand, in addition to the 1s. at the gate. I am convinced we should lose a great part of our Leger attendance, so I put our loss down at £5,500 a year at least. At present we give every 1s. we make for stakes.

1095. Would it not have other compensating advantages? Not that I know of. If it is suggested that it might induce bigger attendances, I do not think it would substantially, but I do not see that a bigger attendance helps racing along, unless the big attendance pays something; of course, I know the argument is that in Melbourne the Flat is open to the public free, and the races are very much more popular there, a great many more people attend them; but, so far as I am able to see, there is nothing else for them to do there. They are more of a racing community there. People here have so many other attractions. The Railway Commissioners, for instance, run trains to the National Park and back for 1s.; it costs a man 9d. to go to Randwick and back in the tram. People can go to Manly and back for 6d. Besides the attractions of our harbour, there is the Hawkesbury and other places where the people can go to. Melbourne lacks such attractions, and racing is on an altogether different footing there. It is not of the same absorbing interest here.

1096. I suppose it is a matter of opinion whether the people of Victoria are a more sport-loving community than the people of New South Wales? It is a matter of opinion, but I do not think there can be any doubt about it.

1097. *Mr. Taylor.*] Can it be accounted for why the people of Victoria are a more sport-loving community than those of New South Wales? On the Flat at Flemington you can see nothing or next to nothing, and if you go to the Hill you have to pay 2s. 6d. Then, again, there is something considerable made out of railway fares. The railway charge to Flemington on race days is much above the ordinary fare, and the Victoria Racing Club get considerable benefit from that. I understand that there is an arrangement between the Victoria Racing Club and the railway authorities under which the Victoria Racing Club get some benefit from the fares. The Hill at Flemington is a better place to see the racing from than our Ledger Enclosure.

1098. You get some money out of fees for the Distressed Jockeys' Fund—fines and jockeys' licenses? Yes.

1099. You have no regulations under which the fund is disbursed? We have regulations which were approved at a general meeting of the club, held on the 28th March, 1899. Those regulations do not provide for specific sums to be allowed for specific injuries. With the approval of the Committee, I will hand in a copy of those regulations. The committee can give up to £100 to the widow of any jockey killed in following his calling; and they can give any sum they may think fit for the benefit of any jockey who may be injured in following his calling; no sum can be granted except upon the production of a medical certificate. That is to prevent the funds from being imposed upon. Further than that, the committee may pay to any hospital for services rendered.

1100. Would it not be a better system to have a regular scale, a regular system of insurance, in which these lads can join? Jockeys are a shifting population. Men may be licensed one year and then not apply for a renewal for a year or two. Of course, we have a scale in our own minds. For instance, a man gets his collar-bone broken; if nothing worse, we should probably allow him £5. If necessary, he could make further application for aid. We have a scale in our own minds and allow them what we consider to be a fair thing.

1101. *Mr. Archer.*] Do you not think that the reason people attend races better in Victoria is because they have not so many clubs—outside clubs? I think they have quite as many suburban clubs as we have here. But I am not speaking of my own knowledge. I think they have.

1102. I have noticed that there are double the number of people present at races there? My opinion is that there is nowhere else for them to go to.

1103. *Mr. Taylor.*] I take it for granted that the main object of racing is to improve the breed of horses? No doubt that is the main object of racing; it is, to some extent, a characteristic object.

1104. Do you think that having so many of these 6-furlong races is conducive to that object? I should like to see the distances made longer, but one has to consider the trainer, the owner, and other people. We have to try and study all of them. May I point out that this is the only Colony, and, so far as I know and believe, one of the very few places in the world where we do not allow anything over 2-year olds to run anything less than 6 furlongs. In Victoria, they have 5-furlong races for aged horses; in South Australia, and Queensland, I believe they have the same thing.

1105. But keeping the main object in view, do you think it is in the interest of horse-breeding to allow that? I do not.

1106. Do you not think, with the exception of 2-year olds, it would be better to make the minimum a mile? No; I think that speed is one of the essential things in horse-breeding; and the great test of speed is a 6-furlong race. I often hear people talk about 6-furlong weeds. What were the best 6-furlong horses we ever had here—there was "Cranbrook," he was a very fine horse; and there were "Bungebah" and "Hopscotch." Those three horses particularly occur to me at present.

1107. They could go a great distance also? "Hopscotch" could never go a distance in company.

- A. Knox.
18 Oct., 1900.
1108. He put up the record for a mile? For a mile. You find very often the best-looking horses do not get as far as the rats.
1109. It is not for looks, but for stamina, that horses are bred; keeping that object in view, is it fair to have these 6-furlong races; I have seen programmes on which I have seen two 6-furlong races, and only one 2-mile race? Yes. In the first place, we must get fields of horses to interest the public; if we do not we do not get the public to attend. In the second place, we cannot get good fields of horses unless we cater for every sort of horse; and my impression is that if you take the Australian Jockey Club programme from year to year you will find that it contains a greater proportion of what you might call long races—that is, races over 6 furlongs—than any club of its standing in the world. Why, we have kept up the distance, better than other clubs have done.
1110. I see that you get a fair income, too, from the bookmakers and the jockeys? From the bookmakers, not from the jockeys.
1111. And from the trainers? £100 a year, perhaps.
1112. Would it not be fairer, in the interests of stock-breeding, to use some of the money in subsidising some of the country clubs? I do not see how that could help it. Race clubs in the country parts of England used to be subsidised, not by the English Jockey Club, but by a system known as Queen's Plates. That was found to be a system open to abuse, and to be not entirely necessary, and it has, I believe, been abolished in England, and, as I understand, the money that was devoted to that has been devoted to premiums for horses bred in the different districts.
1113. Do you think it a fair thing to fix upon these clubs a minimum prize? Yes.
1114. Do you not think it has a tendency to weaken such clubs as the Hawkesbury and other clubs? We fixed the Hawkesbury at £100 a day less than formerly.
1115. Upon what authority? That they submit to our jurisdiction. They were willing we should do it, and we did it.
1116. *Mr. Archer.*] You have had no complaints? No serious trouble at all. We have had, from time to time, applications to reduce the amount they have to give. Originally it was £500, and we reduced it to £400. When we receive these applications we consider whether compliance with them is necessary. We think horse-owners should have fair stakes to race for. If the clubs satisfy us that they are not in a position to give what we consider fair stakes, and still get a legitimate return for their money, we consider the question of reduction. I do not think that any club, with one exception, has submitted any figures in support of the assertion that we are asking too much.
1117. What is the object of fixing it? That owners may have decent stakes to race for.
1118. But you say they willingly submit? As far as my experience goes.
1119. But they have no alternative? They could make themselves very unpleasant about it.
1120. That is all;—you disqualify them? We think that racing should be kept up to a certain standard. Personally, I do not think that proprietary racing is a good thing. If you could have clubs that would race for sport only, and devote the whole of their funds to racing, they would be better than proprietary clubs; but whilst clubs are there to make money, we are there to say that they must give a horse-owner a fair share of the money they make.
1121. Are you in favour of, or do you think it desirable, there should be cash betting? Where do you mean?
1122. Anywhere and everywhere? I am not in favour of shop-betting. I think a more desirable thing is the totalisator.
1123. Do you think that cash-betting should be permitted at Randwick? I do not think that cash-betting on the racecourse is worse than book-betting. Under the decision given in England it is not illegal.
- 1124-5. Why do you consider it right on the Randwick Racecourse and not in the shops? I do not consider it right there and not in the shops. It is not a question of morals, but what is expedient. If a man goes to the racecourse to bet, he gets a day's outing in the fresh air. He may spend or not, as he thinks fit; but in the shops there is a constant invitation to men to put on more than they can afford.
1126. Are you aware that a good many women and children bet at Randwick;—do you approve of it? I do not approve of it. I have never seen a child bet there, and have very rarely seen a woman bet—that is, as compared to men.
1127. Do the Australian Jockey Club do anything to prohibit that? No; I see no ground on which we could stop it, unless we stop men from doing it, too. We could not stop them, nor could an Act of Parliament.
1128. According to one of your rules, anybody who races a pony is disqualified from running at Randwick? Not necessarily a pony; but anyone owning a horse running at an unregistered meeting is disqualified.
1129. Suppose I own a pony, and lease it, should I come under that rule? You would come under Rule 6.
1130. The reason I am asking the question is this: it has been stated that certain members of your committee own these ponies? I cannot say, unless you mention the names of the owners.
1131. Has it been given in evidence? I do not know, and I do not believe that any member of the Australian Jockey Club committee is interested in any racing pony.
1132. Coming to the matter of stewardship, do you not think it would be better to pay one or two men for that special object—that is, of seeing the racing properly carried out? For some things it would be good if you could get the man; but we have considered the matter over and over again in our committee—the appointment of a stipendiary steward, such as is done in Melbourne—and if we were willing to give £500 or £600 a year, I do not know myself one man in Sydney that would absolutely fill that billet.
1133. But if it could be done, you think it would be in the interest of racing? For a stipendiary steward to be employed, as in Melbourne—if you can get the right man.
1134. In consequence of what you have stated as regards the law of libel, boys cannot be represented before your committee;—do you not think that it would be well to give them representation on the committee? No, I do not.
1135. Not for the jockeys or trainers to have one or two representatives on the committee? I do not think it would be expedient. I never heard that they wanted it.
1136. But, apart from whether they wanted it or not? If they do not want it, it is not advisable.
1137. They cannot be members of a club? No.

A. Knox.

18 Oct., 1900.

1138. And have no voice? No.

1139. Do you think that fair? It is what is done all over the world, and is the only practicable way of carrying on racing.

1140. Suppose, for the sake of argument, that there was a representative from the western district, another from the northern district, and another from the southern district, instead of the whole thing being concentrated in these two clubs, would it not be in the interest of racing to have this wider representation? No. Any man can practically be a member of the Australian Jockey Club. I say that, from an experience of five years—that is, any man who chooses to pay his entrance fee and subscription;—and every member is eligible for election as a member of the committee. Mr. George Lee has been a member of the committee for years. Mr. Alexander Busby is off, because he is in England. Mr. Cox, son of Mr. E. K. Cox, has gone off the committee, because he has married and gone to live in Melbourne. There have been other country members on the committee—for instance, Mr. Dowling, of Mudgee.

1141. Mr. Walter Hall;—is it desirable to have men like him on the committee? I think it is very desirable. I think you want a certain number of horse-owners. Amongst their other duties, the committee have to see that their course, the training tracks, &c., are kept in fair order. There are complaints from time to time, and if you have no horse-owners on the committee, you do not stand half a chance of hearing about complaints.

1142. Then, on the same principle, trainers should have a voice? I do not see the necessity for it. I do not think it desirable, in the interest of racing, that they should. I think that you might just as well say you ought to give the people, whom the police are to look after, a voice in the selection of their own police. We are the policemen of the racecourse, to a certain extent.

1143. You said just now you have never heard any complaint from these country clubs;—are you aware that there was a meeting held in August, 1899, at which resolutions were passed condemnatory of a good many actions of your club? Where?

1144. At a place called Junee? I specified that. The only matter that I have ever heard of at all was a certain meeting or conference held at Junee. It sent us along certain recommendations. So far as I remember, they did not ask for a conference with us, nor did they ask us to recognise them in any way. If my memory serves me, they sent along certain suggestions, and two of them are now embodied in our rules. One was, that the payment of certain fees for riding should not apply to country districts; the other was, I think, something about the collection of jockeys' fees.

1145. Would not that suggest to your mind that representation by these people would be conducive to your interest and the interest of racing generally? No; the right thing is this: I am perfectly sure that our committee would only be too glad to confer with properly-accredited representatives of country clubs on matters of general interest—I mean properly-accredited men, who have a knowledge of the game and know what is wanted—to talk over matters pertaining to sport, but not to be a ruling body; but that has never been asked for.

1146. You know nothing about the working of the New Zealand Club? We get reports sometimes.

1147. Do you think the system they have there is working well? I am not in a position to say.

1148. You have heard no complaints, at any rate? I heard that it was not likely to go on.

1149. But it has been working for years? Not for many years. It is not an old standing thing at all.

1150. You really think the people interested—breeders of horses, owners of horses racing, trainers, jockeys—you think that a line ought to be drawn, so far as representation is concerned, at jockeys and trainers? I do not think it expedient that jockeys and trainers should be represented on the ruling body of the turf.

1151. May I ask you a reason for that; might there not come up a case respecting the training-track—matters on which those people could give you valuable information and valuable hints as to what ought to be done;—would not that equally apply to trainers and jockeys? I do not see how it is practicable to put them on.

1152. But if they want to air their grievances? They can always air their grievances. They are always heard. There are plenty of trainers here who will tell you—Mr. Payten, and dozens of others—they have no hesitation in the world in coming to us. Dozens of trainers have spoken to me and have gone to members of the committee with grievances, and they have been attended to at once. The committee always do their best to consider matters that are brought before them.

1153. You do not think it would strengthen the club, and give the people more confidence? No; I do not.

1154. Have they to pay a certain amount for training fees? No, they have not to pay training fees, but training fees have to be paid for every horse trained on our ground, and we consider that those fees are paid by the owners.

1155. In every system of government, we have always found it work well, where people have to be subjected to laws, that those people should have representation? I do not think it would work well in connection with racing. I do not see in this Bill any provision for giving jockeys and trainers representation.

1156. *Mr. Gillies.*] You say you do not see anything in this Bill which will give trainers and jockeys representation? No.

1157. Are you aware that trainers and jockeys can become members of country clubs under this Bill? Possibly they can; but I hardly suppose that metropolitan jockeys and trainers would. The great bulk of trainers and jockeys are in the metropolis, in and about Sydney.

1158. I know they are not allowed to join—the Australian Jockey Club will not allow them to join; but this Bill provides for representation on country clubs, does it not? Yes.

1159. And that being so, you will admit that there is a probability of trainers and jockeys being represented? I do not think there is—not in the metropolitan district, where a great majority of the trainers and jockeys live and carry on their business.

1160. Are you aware that since the Australian Jockey Club has assumed such control over racing, that country racing has almost died out, with the result that metropolitan racing has increased? I am not aware of that at all. The Australian Jockey Club has had exactly the same control over racing since 1874 as it has at present. Since 1874 there has been very good country racing until about the years 1883 or 1884. That is the time, I understand, that country racing began to deteriorate. But years before that the Australian Jockey Club had exactly the same control as it has now. The increase of racing

- A. Knox.
18 Oct., 1900.
- racing about Sydney is not difficult to understand. Take a man who keeps a stable of horses and wants to pay expenses. If he had them in England he would keep them at Newmarket; but here he keeps them in the metropolis where the best races are to be run. We do not let them race more than once a week. But does it not stand to reason that an owner would prefer to keep them here than to send them long distances into the country, where they would have the chance of winning only about perhaps £25 or £30.
1161. The trainers' fees in Victoria, charged by the Victorian Racing Club, are £2 a year—here the fees are £6;—is that not a great anomaly? Which do you mean: the trainer's license or the fee for the horse?
1162. For the horse? We have from time to time made certain concessions with regard to these fees. The trainers do not pay them, but the owners, and I have heard no complaints from owners about the fees being too high.
1163. You are aware that many owners are trainers—are owners themselves? Quite so.
1164. Consequently the trainer pays it? I have never heard any complaints from either trainers or owners about our tariff for training horses being too high.
1165. Mr. Pilcher is honorary legal adviser to the Australian Jockey Club? He is at present. If my recollection serves me he was first appointed to that position in August, 1899.
1166. *Mr. Levien.*] Talking about these trainers' fees, they are paid for the horse, and the owner pays them? Every horse that goes on to the track must have a training ticket, and for that ticket the owner pays 10s. a month.
1167. Do you presume that the Australian Jockey Club can legally make by-laws to control the various clubs of the Colony at their own sweet will? There is some misconception. There are four kinds of things which the Australian Jockey Club do in the way of rules. They have power under the Act to make by-laws dealing with the Randwick Racecourse. These will be found on pages 21 to 27 of the little book containing the Act and the rules, and other information. And they have power under the Act also to make what we call rules of the club—rules as to membership, the election of the committee, and so on. These are also printed in the little book I refer to. They have power also to make rules for racing, and the committee also make certain regulations. They have no legal authority to make by-laws binding anywhere but on their own land.
1168. But they can make legal by-laws binding on the public who attend the Randwick Racecourse? Section 12 of the Act reads: "The committee, or an absolute majority in number of such committee, present at any meeting may from time to time, subject to the special provisions of this Act, make such by-laws as they may think fit for regulating all matters concerning or connected with any lands authorised by this Act to be leased to the said chairman on behalf of the club, or any lands which may hereafter be vested in the chairman of the said committee, and the admission thereto and the expulsion therefrom of members of the club or any persons respectively, and at the rates or charges to be paid for such admission, and for the general management of the racecourse," and so on. Those regulations are passed by the Colonial Secretary.
1169. There has been a good deal of talk outside about the disqualification of young Fielder? Yes.
1170. Can you tell me how many members were present when that disqualification was placed on him? I cannot say from memory.
1171. Are you aware that in August, 1895, Mr. Pilcher gave an opinion to the effect that the committee of the Australian Jockey Club have no power to make a by-law which was binding upon any other race club or race meeting? I never saw that opinion. He was not the counsel of the club at the time. The opinion was given to some one else. Let me say this: I do not want to criticise Mr. Pilcher's opinion. As to by-laws, he is strictly correct. The only power we have in regard to by-laws is to make by-laws to control the Randwick Racecourse. The rules are different things. We make rules which we think are desirable in the interest of racing, and we say to other clubs if you want to race with us you must abide by our rules. If we made such outrageous rules as some people seem to think some of our rules are, there would be a revolt by other clubs which would sweep us away.
1172. Where does the Australian Jockey Club derive its powers to make by-laws and force them on other racing clubs? It derives its powers to make by-laws from the Act. But it derives powers to make rules which must be complied with by other clubs from its own inherent strength.
1173. If a race club does not comply with your by-laws *re* registration, what do you do? It is not a by-law, it is a rule.
1174. If they do not comply with your rules? If they do not register, and do not advertise their meetings, horses that run there are still free to run with us; but if they do not register, but do advertise, we then say that if they do not choose to race under our rules, the horses they race shall not race under our rules.
1175. Then, in fact, you disqualify not only the club, but every horse that competes at such meetings? We do not disqualify the club at all; but simply say that every horse that competes at that meeting is disqualified at our meetings.
1176. That prevents a club from being a club? It does not disqualify a club.
1177. You said that the country clubs, so far as you are aware, have not expressed want of confidence in the Australian Jockey Club? They have not, to my knowledge.
1178. Do you remember, in August last year, a conference of representatives of country clubs being held at Junee? I have no official knowledge of it, except that there was some correspondence with them.
1179. A full report appeared in the *Sydney Mail*? I will look it up.
1180. Thirty-two clubs were represented by letters expressing sympathy in the movement, and eight clubs were represented personally? I know nothing of what took place at that conference.
1181. Were not the Australian Jockey Club forced to alter their by-laws? Certain communications, I believe, were made to us from that conference, and on other representations that certain rules were not suitable to country clubs, we altered them.
1182. As a result of that conference, did not the Australian Jockey Club alter its by-laws relating to fees paid by jockeys? Partly as the result of representations made from that conference to us.
1183. The Australian Jockey Club was requested, first of all, by the country clubs to do so;—they would not do it, and then, as a result of the conference, they had to do it? I do not recollect.

1184. They put the country clubs to the expense of holding this conference, and then afterwards quietly altered the rules? I do not know that; I do not think they brought any pressure to bear. I do not think it was necessary to bring pressure to bear. We are always glad to get suggestions from men who take an interest in country racing. A. Knox.
18 Oct., 1900.

1185. Some time ago the Australian Jockey Club prohibited jockeys from riding at pony meetings? Yes.

1186. Why? The club passed a set of rules at a general meeting, which was held on the 16th August, 1898. You will find a report of that meeting in the *Referee*, of 17th August, and also in the *Herald* and *Telegraph* of the same date. That meeting was called for the purpose of passing certain rules to deal with unregistered clubs, to try if we could suppress a certain amount of pony-racing. I moved the new rules, my avowed object being to suppress pony-racing. Those rules were carried.

1187. Do you think ponies are prejudicial to the interest of horse-breeding? I think breeding ponies is a good thing.

1188. Having seen what horses were required for South Africa, do you not consider the breeding of ponies a good thing? Yes; but I do not think much of pony-racing.

1189. Do you at the same time prohibit trainers from training ponies? A rule passed at the same meeting did.

1190. Did the Australian Jockey Club cite certain horse-owners and trainers to appear before its committee, and then inferentially threaten them with punishment if they went near a pony race? Not to my knowledge—in fact, I know at the present time one licensed trainer who, up till quite recently, has been in the habit of attending pony races; and he is a man who is mixed up with horses, too.

1191. Do you know if they have cited R. Wootton and others? I do not know; not at any meeting that I was at. Some trainers may have been called; but I have no recollection of it at the present time. I do not remember Mr. Wootton. I do not remember who the men were; but I believe that certain trainers were given a hint that the committee had reason to believe that they had an interest in unregistered meetings, and that it would be well for them to cease it. That was not merely from the fact of their attending pony meetings.

1192. Here is a copy of the deed of grant. [*Copy handed to witness.*] Will you kindly point out where the power is given to the Australian Jockey Club to sublet? This grant and the Australian Jockey Club Act empower the trustees to lease to the Australian Jockey Club. Under that lease I consider that the Australian Jockey Club has a perfect right to allow other clubs to occupy the course on payment.

1193. Will you read the last five lines [*witness reads*]? I do not think that means what you think it means. I think it means that the trustees have the right, under this grant, to give the Australian Jockey Club an exclusive right to occupy the land, and they have given the club that right. If I am the owner of a house and lease that house to you, I give you the exclusive right to occupy that house, and if I do not say anything in the lease about subletting, my impression is that you have a right to sublet to whom you like. If I want to prevent you subletting, I must put in a clause for that purpose.

1194. Then, in your opinion, there is no implied restriction against subletting? No.

1195. Will you say why you think so? I cannot give a legal opinion on a matter I have not considered.

1196. Can you point out in the Act where the power under the original grant is revoked by the Act? I do not know that it is revoked.

1197. Then the original grant holds good? I presume so.

1198. Will you kindly read from the word "firstly" for ten or eleven lines? I have read them.

1199. Will you give me your opinion as to their meaning? The meaning, as I take it, is that the place is to be used for one or other of the purposes specified; not necessarily for all.

1200. It distinctly states the purposes for which the land may be used? It states the purposes for some of which, or one of which, the land must be used. There is nothing in the grant or that Act, as far as I am aware, that compels the use of the land for all these purposes together.

1201. Will you look at this clause [*clause shown to witness*]? Yes.

1202. Does not that specifically state that if the land granted is used for any other purpose, the lease must be cancelled? No; it states this: That if the land is used for any purpose not comprised in the four purposes specified, for any purpose utterly different to any of those four purposes—then it does cease.

1203. Has not the Australian Jockey Club permitted certain business to be carried on on the ground not mentioned in this grant? Not that I know of.

1204. Did not Mr. Clibborn, the secretary of the Australian Jockey Club, carry on business as auctioneer several times? I do not think you would call it the business of an auctioneer. Any auctioneer who applied for it had permission to conduct an auction of yearlings.

1205. Was that permitted by the Australian Jockey Club in the interest of sport, or within the uses specified in the grant? Yes; within the uses of the grant, and distinctly in the interests of sport. Suppose you were the owner of a valuable yearling, and sent him down to Sydney to be sold, along with 150 other yearlings to be sold for different people, would you like that yearling to be walked up and down in front of an auctioneer's place in Pitt-street, or would you not prefer to have it sold in the paddock at Randwick.

1206. *Mr. Archer.*] No other stock except thoroughbreds is sold there? Not to my knowledge.

1207. Do you think that betting should be confined to racecourses? I suppose morally there is no difference where you bet; but I think it expedient to confine it within as narrow limits as you can.

1208. Do you think betting is in the interest of the morals of the community? No.

1209. Do you think it in the interest of true horse-racing? I do not; but I do not see anything immoral in betting, if a man does not bet more than he can afford, any more than I see anything immoral in a game of whist for six-penny points.

1210. You do not think that betting should be confined to a racecourse? I think that both in the interests of the turf and the public it should be.

1211. Then if a man cannot spare time to go to races, and wants to indulge in that harmless amusement called betting ———? I do not say harmless. I say it is not immoral.

1212. Are you aware that women and children bet for cash at Randwick? I am not aware that children do; I have not seen a child bet. I have seen women bet.

1213. Have you not seen what we call society women betting on the grand stand? I have seen all sorts of women. I have seen women of all classes putting their money on in the ring. I do not like it; but I am not a woman's rights man.

- A. Knox. 1214. Of course you know that shady characters of all kinds visit the racecourse? Shady characters of all kinds visit everywhere.
- 18 Oct., 1900. 1215. You are against betting in shops? I am.
1216. Are you not aware that many holders of shops are equally respectable with course bookmakers? Yes; I do not know that there is any particular difference in caste between a bookmaker and a man who bets in a shop; but if he has a shop we do not let him bet at Randwick.
1217. You prohibited two bookmakers—Mr. Oxenham and Mr. Maloney—from keeping an office for betting? What we did was this: We thought it was not in the interest of horse-owners or of racing that these shops should be carried on. I thought, and I think still, that the great bulk of the betting done in these shops is absolutely illegal, and they could be shut up to-morrow if the police took proper steps. We thought that shops were not in the interests of racing, and with a view of helping to put them down we said that bookmakers who had shops should not be allowed to bet on our course.
1218. Yet these men are of good character? May I say that Mr. Moloney bets at Randwick now, and has a license, but he is not allowed to keep a shop for betting within our rule. What we wanted to put down was indiscriminate cash betting in shops. We thought it interfered with the interests of racing. We had no objection to a man having an office, so that his country clients may correspond with him; but it was obvious that if we allowed him to have a shop which the public could walk into and out of at any time, it was winking at that being carried on which we thought ought not to be carried on. At the time that regulation came into force, Mr. Moloney came and saw me. We gave five months' notice before that regulation came into force. He asked me what, in my opinion, was intended by the regulation. I told him that if he wrote a letter to the committee, I would get an expression of opinion as to what he could or could not do. He accordingly wrote a letter, which was laid before the committee, and the committee adopted the view that he was at perfect liberty to keep an office for the purpose of dealing with his correspondence so long as it was not used as a betting-shop. Mr. Oxenham took no steps for five months; then, when the regulations came into force, he said he had been very badly treated. Since then he has seen me about getting his license; but I told him that he was no different from any other bookmaker, and that he would have to send in an application, and make a statement that he was not keeping a shop, if he was desirous of obtaining his license.
1219. In what way could they stop betting in closing the shops of Mr. Oxenham and Mr. Moloney? I do not think we have power to interfere; but I thought we should shame the Government into doing something, when we took a step against our own interest.
1220. Can you tell me where the Australian Jockey Club derives its power to punish these shop-betting men? They do not profess to punish them.
1221. You prevent them from going on to the course? No; our by-laws contain a provision dealing with such cases, and those by-laws have to be approved by the Colonial Secretary. By-law 15, provides that no person shall carry on the business of a bookmaker within the Saddling-paddock, or the sixth or eighth division, until he shall have complied with certain conditions, one of which is that he shall be approved of by the committee of the club, and have a license; and what we do with regard to a person who will not comply with our by-law is simply to say that we do not want him.
1222. But I ask you as a legal gentleman? Legally, under that by-law we could prosecute any man who bets at Randwick without a license.
1223. And your own legal adviser stated that it was illegal? May I say, that counsel's opinion is not worth a snap of the fingers unless you see the case upon which the opinion was given. Those by-laws are undoubtedly as legal and valid and binding as anything in the world can be, because they are framed under an Act of Parliament, and then approved by the Colonial Secretary. And we have prosecuted offenders over and over again, and Mr. Levien has acted on several occasions in such cases.
1224. I suppose you know that it is generally understood that your committee was trying specifically to injure Mr. Oxenham? I do not care what is understood. I do not believe that any man who knew the members of that committee, and who ought not to be in Gladesville, could believe that. Besides the present committee, since the beginning of 1896, the following gentlemen have been members of it—the late Mr. Goodchap, Mr. Alec. Busby, Mr. H. M. Cox, Dr. Traill, Mr. MacKellar, Mr. H. C. Dangar, the Hon. Richard Jones, the Hon. George Lee, the Hon. W. Long, Mr. Chisholm, Mr. Dowling, Mr. Wentworth, and others.
1225. Do you not know, that since Mr. Oxenham left the Colony, bookmakers prohibited by you from keeping betting offices are doing so now? I do not know.
1226. I have heard you mention the names of certain gentlemen who you say cannot do wrong? I do not say they cannot do wrong; I say they were not actuated by improper motives.
1227. Have any members of your committee been charged with malpractices on the course? The horse belonging to one of our members, Mr. Long, Hopscotch, his running was inquired into by our committee; but at that time Mr. Long was in England on business. The horse was being run by his trainer. The matter was inquired into at once. That is the only case I can call to mind at the present moment.
1228. You are of opinion that if the public cannot make a bet in town they will go to the Randwick racecourse and bet? I do not think that necessarily follows at all.
1229. Then you think it would be a good thing if betting on the course was prohibited as well as betting elsewhere;—you think it would be better for the public? I do not think betting is a good thing; but I do not, at the same time, think there is any harm in it if you could make provision, and see that the provision is carried out, against any man betting more than he can afford.
1230. You charge bookmakers a fee for the right to bet at Randwick? We do.
1231. And only those bettors who pay you, and are registered by you, are permitted to bet at Randwick? That is to say, to bet as bookmakers.
1232. If a bookmaker does not pay you a fee for permission to bet, you eject him from Randwick? If he tries to bet we put him out. We have power to do that under our by-laws.
1233. It is because he does not pay the fees that you eject him from the course? It is because he does not comply with the by-laws.
1234. No matter what his character may be, if he did not comply with your by-laws he would not be permitted to bet? Not if he was the great Panjandrum himself. The payment of the fee is only one part of the condition; he must comply with all our rules. If he complies with our rules, and there is nothing against him, we register him. That is done for the protection of the public. May I say this?
- I

I have been a member of the Australian Jockey Club Committee for five years, and have been in the office when men have come in to see the secretary and complained that so and so has not paid them their bet, and asking what they are to do. The secretary finds the bookmaker out and advises him to pay; and if he does not pay, and cannot give any satisfactory explanation, we call upon him to show cause why his license should not be cancelled.

A. Knox.
18 Oct., 1900.

1235. But suppose the public are the defaulters with the bookmaker, what can you do then? We cannot touch the public. We can do this: the public cannot be defaulters unless they bet on credit. If a man is a defaulter on a credit bet the notice we take of him is this: under our rules if he is posted at Tattersall's, we warn him off the course.

1236. *Mr. Archer.*] Suppose a bookmaker makes out his case, do you order the stranger off the course? Clearly, if a bookmaker came to us out there and said so and so was a defaulter we should not take any notice of it at the time.

1237. For payment of a fee you give a bookmaker the exclusive right to bet, as against those who do not pay the fee? I am not prepared to say that; that is a question of law.

1238. Do you know that the law has decided that anywhere where an exclusive right to bet is obtained is a place within the meaning of the Act? I know the decision you refer to.

1239. Was not that laid down in the Kempton Park case, and in the New South Wales Supreme Court, in the case Thomas against the Crown, on appeal? There was a case here, which followed the case in England; but the decision, which is at present the law in England, does not decide that.

1240. Do you know that cash betting does take place at Randwick? Undoubtedly.

1241. You charge country clubs fees for registration? Country clubs, who register as clubs, pay a pound a year. Previous to a couple of years ago they paid £1 to be registered for all time; but a couple of years ago we thought that, in consideration of the expenses we were put to in printing, sending round a calendar, and so on, we ought to charge them more. None ever objected to it. Under Rule 4, clubs are registered for £1 for each meeting, and for that they get copies of the calendar, lists of disqualifications, and other necessary information.

1242. You will not allow anyone interested in ponies to train or ride on the Randwick racecourse? Not if they are trainers of horses, which have run on an unregistered course.

1243. On the committee of the Australian Jockey Club there is a Mr. Chisholm? Yes.

1244. Did the committee of the Australian Jockey Club ever deal with Mr. Chisholm in reference to the by-law with regard to racing ponies? No.

1245. Is it a fact that this Mr. Chisholm is connected with ponies or with pony-racing? Not to my knowledge. If it is proved to the committee that he is, he will be disqualified. If he has a pony and leases it, he will be disqualified.

1246. But would he lose his seat on the Australian Jockey Club? He would lose his membership as member of the club—that is, if he brings himself under the terms of Rule 7.

1247. With regard to investigations conducted by the Australian Jockey Club, are they held openly? No; nor are they proposed to be under this Bill, unless I have overlooked it.

1248. But the Bill says, "Every vote of the Association shall be open"? Open voting is a different thing. Open voting means this—you vote aye or no on a division, or a show of hands. It does not mean that every inquiry shall be open.

1249. Do you not think it would be more prudent to have investigations conducted openly, and the evidence given on oath? No; I think taking evidence on oath is immaterial. A man who will tell a lie will tell one whether he is on oath or not.

1250. *Mr. Archer.*] Have you taken particular notice of the class of women that bet at Randwick? My experience is that about a dozen professional women go there to bet, and they only. I was going to say this: Perhaps I do not go to the races so often as I used to do, but when I used to go to the races regularly, there were from half-a-dozen to a dozen women I used to see at every race meeting about Sydney, and who were betting as hard as the men. With the exception of that class of women, I have only seen women putting very small amounts on a horse.

1251. But it would give the outside public the impression that practically a racecourse was detrimental to any decent woman or child going there? If a woman likes to go into the ring and bet, I do not see how we are to stop her.

1252. *Mr. Taylor.*] Have you noticed whether this habit of women betting is growing? I do not know that I have.

WEDNESDAY, 31 OCTOBER, 1900.

Present:—

MR. GILLIES,

MR. TAYLOR.

MR. HOGUE,

D. WATKINS, ESQ., IN THE CHAIR.

Thomas Willis sworn and examined:—

1253. *Chairman.*] You are the sporting representative of one of the papers here? Yes; of the *Sydney Mail*.

T. Willis.

1254. You have had considerable experience of racing? Pretty well all my life.

31 Oct., 1900.

1255. You understand that racing is pretty well controlled at the present time, by force of circumstances, by the Australian Jockey Club? Yes; that is a fact.

1256. Are you of opinion that there could be any improvement upon that system of government? Yes.

1257. Would you mind, in your own way, giving the Committee the benefit of your experience by suggesting in what way the system could be improved upon? The committee of the Australian Jockey Club at the present moment, I believe, consists of ten committee-men who are elected by the members to manage the affairs of the club, and who also act as stewards. The complaint, I believe, is—I have heard that there is a complaint—that committee is not a fairly representative body, and that there is no appeal from it. That is perfectly true, and, in order to get over the difficulty, I suggest that they should take

T. Willis. take one representative from each of the three divisions of the Colony to act in conjunction with two members of the Australian Jockey Club committee as a Court of appeal. Then, if a man is charged with any offence against the laws of racing, and he is convicted by the committee and sentenced to some punishment or other, he can appeal to this Court of five, consisting of three representatives of the country districts and two from the Jockey Club. These two members of the Jockey Club sitting on the Court of appeal would not sit at the hearing of the case before the committee, and consequently the man who felt himself aggrieved would not be appealing to his original judges, as an offender is now. The two members of the Jockey Club and the three delegates from the country would have nothing to do with the first hearing of the case, but would only act as a Court of appeal, and consider all matters as to alterations of the racing laws and rules. The Australian Jockey Club would still manage their own business in their own way. So far as the proposed body, consisting of twelve delegates, to be constituted under the Bill is concerned, I think it is the greatest lot of rot I have ever heard of. I do not see how you are going to get the men to do it. I know all the good men in the country, and I do not know where you are going to get twelve men from. You could get a man like Mr. Thomas Cook, and perhaps one or two others; but as to getting twelve country men, that would be out of the question.

31 Oct., 1900.

1258. *Mr. Taylor.*] You believe in the principle, but not in the number? The Bill is badly drawn, and I do not think that you will do a bit better by taking the thing out of the hands of the Australian Jockey Club, especially if the Jockey Club will appoint three paid stewards to look after the racing. You can hardly expect independent gentlemen to go about looking for cases; but if there were three paid stewards to do the work that the honorary stewards are now supposed to do, they would take all the trouble off the shoulders of the Jockey Club committee, and they could bring cases before the club for trial. Good men would have to be paid well, and they would do the work well. I must say I do not know where they are going to get the stewards from; but it would be very desirable to have stipendiary stewards if they can get good men. The proposal to place the control of racing in the hands of representatives of clubs outside the metropolitan area would not be a fair thing, as the Australian Jockey Club give away more money than all the other clubs put together, and charge no nomination fees. Moreover, it would be unfair to put racecourse proprietors on the same footing as people who race for sport alone. The influence that would be exerted by the racing proprietors would not be good, because there would be a disposition on their part to vote for anything that would operate to their own advantage. You might just as well put three or four licensed victuallers on the Licensing Bench. If you cut the Colony up into three divisions and have one representative from each upon a Court of appeal, such as I have suggested, it would be much better.

1259. *Chairman.*] That is practically adopting the principle of this Bill with a modification? Yes, a very strong modification. The country racing is in a very bad state, as Mr. Gillies knows. There are small bookmakers and racing men in country towns who have no money, or very seldom have. The man who has no money looks for it, and it is always the opportunity that makes the thief—he gets the opportunity to do something, and he will do it. The consequence is that the better class of racing men stand out altogether from this crowd, and the “battler” is allowed to get in and do what he likes. Mr. Gillies knows that the club formed at Muswellbrook by the Hon. James White and one or two other sporting men in the locality used to get up as good a two-days’ race meeting as anyone could wish for, and yet the highest prize was only £12. These races attracted good horses—horses that were good enough to win a Doncaster Handicap. They had to do this to keep themselves clear of the professional class, and if the sporting people in the country cannot keep the sport clean in their own districts, how are they going to improve racing in the city?

1260. Does not that professional class exist at Randwick? Yes, very much so; but I think that if you divide the Colony into three divisions, and get a good man from each district—men like Mr. Thomas Cook from the northern district, Mr. Frank Mack from the western district, and Dr. Lang, of Corowa, from the south—you will have three good men who would assist in improving racing. As far as the management of the Australian Jockey Club is concerned, it is purity itself compared to some of the other colonies—Melbourne, to wit—and they conduct racing in such a way at Randwick that they do their best to improve the breed of horses. They do their best to damn it at Flemington. They do not encourage 2-year-old racing at Randwick; but they do it very largely at Melbourne, and if there is any grievance against the Australian Jockey Club on this account, there is a fifty times worse one against the authorities in Melbourne.

1261. I do not suppose you will go the length of saying that the Australian Jockey Club gives satisfaction to the racing men of the Colony? It gives satisfaction to the better-class men. I think the reason of any dissatisfaction with the Australian Jockey Club may be traced to one or two rather foolish mistakes—wrong decisions; that is my opinion. These caused a good deal of dissatisfaction. I am bound to admit that; but anybody will occasionally make mistakes.

1262. Would you be surprised to know that the racing people in the northern district are ready to form a Northern Association to comprise all the clubs north of Newcastle? You have just struck the right man and the right key, because I was the first man to advocate that. I sent every racing secretary a copy of an article advocating that, which was written about six years ago, and I asked them to give me their opinion upon the scheme—good, bad, or indifferent. I received only three answers. I wanted them to form associations, under the Jockey Club Rules, to manage their own affairs in the northern, southern, and western districts, and later on my present colleague assisted personally to work up the matter in the south, and twenty-two clubs were represented in the movement there; but in the end they did nothing. If they had done as was suggested then they would have been able to manage their own racing affairs in their own way, and if any man had disagreed with the decision of their executive he could have appealed to a tribunal such as I proposed to establish here.

1263. Of course you were not surprised that you did not get many replies, when you reflect that many of these men were, under the circumstances, afraid to fly in the face of the authorities in Sydney? Very likely so; I cannot say.

1264. You said a little while ago that the Australian Jockey Club had, in your opinion, made some mistakes? I think so.

1265. There have been one or two cases referred to here;—have you heard any expression of opinion from the general public in relation to these two cases? Oh, yes.

1266. The "Amiable" case was one? You mean the "Mora" case.

1267. No; I mean the "Amiable" case;—the horse was owned by the Messrs. Moses? Oh, yes; I remember. They made no mistake there, except, perhaps, that they did not make their sentence severe enough.

T. Willis.
31 Oct., 1900.

1268. How about the "Mora" case—the Fielder case? Well, so far as that is concerned, I can only speak as a man looking on. I think that young Fielder rode a bad race; but although I think that, I should be the last man to say that he deliberately "pulled" the mare. As far as the reversal of form is concerned, you should not take much notice of reversal of form, because horses run in-and-out so. Fielder rode in the first race, and—I do not know what his instructions were—he pulled the mare back, or was knocked back, between the 5-furlong and half-mile post, and he came with a run at the finish, but he was beaten. "Mora" was also beaten the next time, when another rider adopted the opposite tactics. On the second occasion the mare was ridden for her bare life all the way, and you can quickly finish a horse by running it to the front from the "jump." You can knock out a 3-mile horse in a half-mile that way. I do not think that there was any fair comparison between the two races.

1269. What was the general opinion of the public on that occasion? As far as I know, the general opinion was that the committee of the Australian Jockey Club had made a mistake.

1270. Then you think that these mistakes are more likely to occur, owing to the fact that all these men act as stewards, and consequently become prosecutors and judges at the same time? Exactly. There is no appeal from them.

1271. There is no appeal, you say; whereas if they had appointed paid stewards, these men would act as prosecutors, and the committee would be the judges? Exactly; and then there would be a court of appeal even from the committee, the appeal court consisting of representatives of the whole of the Colony. The Colony would be fairly represented by two of the members of the Australian Jockey Club, and three country representatives, but none of the proprietary clubs should be represented at all.

1272. You want to make a distinction between the public and private clubs? Decidedly.

1273. Then you practically agree to the principle of this Bill, with a big modification as far as the members are concerned, and also so far as the proportion of representation is concerned. The central authorities would get more representation, the proprietary clubs would not be represented, and the representation for the country districts would be reduced? Yes, that is the fact; but the country districts representation would only be fairly reduced, because they do not give the same amount of money in stakes as the Australian Jockey Club, who charge no entrance fees, and give away a lot of money.

1274. What is your idea as to having an Act of Parliament dealing with these matters;—of course, you will understand that the wording of this Bill may be modified? Yes.

1275. Do you think it is a good thing to have racing controlled as proposed in this Act? No. I think you could meet all complaints of the malcontents by amending the Jockey Club Act, by making it compulsory that this court of appeal, with the country representatives that I have mentioned, should be appointed. There is no necessity to bring in a new Act at all.

1276. You would rather deal with it in that way? Yes; and if you could, in your wisdom, see your way to compel the Jockey Club to appoint stipendiary stewards it would be a very good thing. At the same time, I must confess I do not see how it is to be done by Act of Parliament.

1277. That is a matter for regulation, I should think? Yes. Yes, I am afraid it must be a matter of discretion to some extent.

1278. With regard to these inquiries, do you think it a fair thing that a boy called before the Jockey Club committee, or anybody else who gets into trouble, should be represented before the committee? I think any boy who is brought up before the committee should be represented by an older person, and for this reason: A jockey boy is only a foolish little fellow at the best, and very few even of the leading jockeys have got much sense. When you get a boy in the hands of a clever barrister, where is the boy, or where would you or I be? I think that the boy should be represented, and moreover that the evidence should be published, but without comment. If comments are to be allowed, the evidence can be twisted in any way you like; but if the public want to know the full facts, let the evidence be published, and allow the public to judge for themselves. If any friend of mine were involved, I daresay I could, if I chose, twist the evidence to make out a good case in his favour by suppressing certain parts; but that should not be permitted.

1279. Do you think the parties interested should be supplied with a copy of the evidence when the decision is given? Certainly. Are they not supplied at present?

1280. No. In the case of anyone applying for a license, do you think it is a fair thing for the Jockey Club to refuse the application without giving a reason? Yes, decidedly so. When it comes to giving reasons, a body like the Australian Jockey Club would very soon lose their power. In order to have proper control, they must have very strong powers, so that they can put the fear of God into certain racing people, because if there is any possibility of beating the club, they will go to any lengths to do it. I have never known the Australian Jockey Club to refuse a respectable man a license; but they do give too many of them, and do not always give them to the right people. There is no difficulty in the case of a man who loses his trainer's license getting it again as soon as he gets out of a difficulty. Sometimes jockeys do not get their licenses when they apply for them again; but when you come to see the whole thing, you will know that there are plenty of them who do not deserve them. There was a case in your own district, where they applied to have the disqualification taken off a lad—that is where the use of the Jockey Club comes in—they refused to take off the disqualification, and rightly so. There are many things in racing that you cannot bring out in evidence, although you may be positive that you are right in your view, and that these very things exist, and if you were obliged to prove these things, as you would be in a Court of law, there would be no possibility of sheeting the offence home to many people. I have seen the name of a boy mentioned in evidence before the Committee. That boy was connected with a very bad gang, and when he rode a horse they backed the horse for all they were worth, and this was done without consulting the interest of the owner in any way. The owner brought the case before the Australian Jockey Club Committee, and they knew all about it, and they refused his license—the only mistake they made was that his license should have been refused five years before.

1281. *Mr. Taylor.*] Do you not think that in the case of an owner sending a horse out and telling the jockey to pull it, that that sort of thing interferes with the best interests of racing;—you say that practically the jockey had his instructions, but elected to go on his own, and won the race? What I

- T. Willis.
31 Oct., 1900.
- mean to say is, it did not matter what the owner did or what the owner wanted, the boy gave secrets of the stable away, and lost or won as he pleased, and the owner was the last man to know a word about it.
1282. Do you not think that is rather in the interests of racing? What! to pull a horse when the owner has backed it, and to win when he pleases; I think it is very much against it.
1283. But what I mean is, is it not against the interests of racing that horses should be pulled at all? Of course it is; but these things will occur. When you hear of a horse running in a moderate little handicap at Warwick Farm, and getting beaten, and then coming to Randwick and winning in a good big handicap, and after being backed by a certain clique, you may guess that they know all about it.
1284. But do you think there ought to be any secrets such as you allude to;—any holding back of information as to whether the horse is trying or not? There should be no such thing as a horse being pulled at all; but still when a man has anything good, I do not see why he should go on to the house-tops and say he has a certainty. He has to pay for the feeding of the horse and his training, and all other expenses, and if there is any profit to be made he ought to have a chance of making it. When the horse once goes out, however, I quite agree that he ought to be public property.
1285. But you do not think there should be any secrets about it? That will happen; you cannot help it. The only thing you can do is to make them try, and if they do not try disqualify them.
1286. That is the point I am trying to get at? You can make them try, and the only way to enforce that is, when you are positive in your own mind that a horse has been pulled—you have a lot of side evidence as to the horse's position in the betting market, and as to who is backing him, or laying against him—to send for the boy and ask him a few questions, and then disqualify him, without calling outside evidence, the same as they do at Kensington. I used to attend the Kensington races, and I have attended all their inquiries, and I have heard some awful rows when boys have been disqualified; but the committee has generally turned out to be right.
1287. *Chairman.*] In a case where there are fifteen witnesses coming forward and giving evidence on behalf of the supposed culprit, and there is not one to give evidence against these fifteen, do you think that is a presentable case to put before the public to support the action of the Australian Jockey Club in disqualifying a lad? It all depends upon who the witnesses are.
1288. Commencing with the owner and trainer? Those are interested, to begin with.
1289. Chiefly, though, in getting themselves off—that is the first consideration; then you get a lot of leading sporting people; there was not more than one trainer, and he was the brother-in-law of the trainer in question? I know the case you mean.
1290. It is not the case, it is the principle;—is it a fair case to put before the public, where they have a large balance of testimony in favour of the lad, and yet they convict him? I do not care to say anything about that; but as to the number of witnesses, I would only point out that you can get plenty of decent men to come up and say a good word for a boy or man who may be in trouble. I remember in one case, in which I was interested, I brought up twenty witnesses, and the other side brought twenty odd. The greatest trouble that the Australian Jockey Club has is in connection with outside evidence, because it is always biassed.
1291. But must not the tribunal be necessarily biassed where the members are prosecutors and judges at the same time? Yes; according to the way in which you gentlemen look at it, because you are in the habit of seeing a case tried in open Court; but if it came to racing, the Chief Justice would be nowhere; he would not be Chief Justice very long. If you had to depend upon proving everything up to the hilt in a racing case you would never get a conviction.
1292. *Mr. Taylor.*] Would it not be better to let a number of people escape, if there is doubt as to their guilt, and wait until you get a case that can be proved up to the hilt, and then disqualify the offender for life? Yes; I always say this about the Australian Jockey Club. That as the committee is at present constituted, I doubt if you could get ten better men anywhere, and instead of being harsh or arbitrary, they have been just the opposite. They have let too many people off; they might have done a lot of good if they had gone on slender evidence and “rubbed out” a few people.
1293. Now, just while you are on that point, do you think a member of the Union Club, who is running a few horses, would have any chance of being “rubbed out” at all unless it was a very glaring case? It would not be like human nature for men to sacrifice their own friends. That is where the stipendiary stewards would come in. It does not stand to reason that men mixing with each other, and eating and drinking together every day, would go out of their way to lay information against each other; but if you have stipendiary stewards, the onus of taking proceedings will be taken off the honorary men, and put on the paid officers, who will have their plain duty to do. I do not know whether the Australian Jockey Club are in favour of stipendiary stewards. They have one in Melbourne; but that is not much good.
1294. *Chairman.*] If that element of friendship operates in the clubs, would it not also operate on the committee of the Australian Jockey Club after it is elected? I suppose so. When the whole of the members of the committee belong to one or other of two clubs, anyone of them who might have done anything wrong could, of course, easily send round to his friends and say, “I did do a certain thing, but I want you to shut your eyes to it.” If, however, the country representatives were appointed as I have stated, that sort of thing could not occur. I propose, however, to place the power of initiative in proceedings against persons offending against the rules in the hands of three stipendiary stewards. I would make policemen of three paid officials.
1295. They would bring their case before the committee, and produce such evidence as they could in support of it? Yes.
1296. And I take it for granted that these three stipendiary stewards would have no voice in the decision? No. I would stake my life on getting fair play from any three members of the present committee; but I would not rely on them to trouble themselves very much about taking action that would have the effect of casting a slur on any member of their own committee, or on any other man of their own class.
1297. That is, unless the duty was shown to clearly devolve upon them? Yes; but if a man is paid for doing a duty, he will put up with a lot.
1298. Would it not improve the system if the members of that executive were men who strictly abstained from betting? Decidedly so; that is supposed to be understood. We understand that the members of the Australian Jockey Club committee are men who do not bet.
1299. But do not you know that they do bet? Of course they do. I have seen stewards betting, and yet give fair decisions, and I have seen them bet, and run their own horses, and run them out, while they were

were backing other horses. I saw that at Nyngan. If you pay a man, and bind him down not to bet, he would be a fool if he did bet. I am sure that Mr. Daly or Mr. Deakin would not bet under any circumstances. T. Willis.
31 Oct., 1900.

1300. *Mr. Taylor.*] Or Mr. Benson. No. He would not bet in any case. But those are paid men, and they understand that they are bound down by certain obligations, and surely it would be possible to get men to act as stipendiary stewards under similar restrictions as to betting.

1301. Mr. Watson would make a good steward? He is a good man; but he is too slow. You want a good wholesome detective like Roche. You cannot go amongst these people with kid gloves on, and you cannot expect a gentleman of independent means, or occupying an honorary position, to go about with his sleeves rolled up looking for trouble. You might as well expect the Government to leave their benches in the House, and keep the road clear out in front here. You have asked me whether the members of the Australian Jockey Club would take action against any of their friends, and I would only say that there are other racing clubs about Sydney, and that the Australian Jockey Club committee, I am quite sure, would not stand any more than the other racing club committees stand from their friends.

1302. *Chairman.*] They are the controlling body at the present time, and we have to consider whether this Bill would be an improvement on the present system, and as to whether we can suggest a still further improvement? Well, I daresay the opening up of this inquiry will do a lot of good.

1303. *Mr. Gillies.*] You say that you could not get a more honorable set of men than the members of the Australian Jockey Club committee? That is so.

1304. I suppose that you have watched the proceedings at Randwick at various times? Always.

1305. Do you know whether any of the members of the Australian Jockey Club committee ever make wagers on horses? Of course they do—I do not know that there are any of them who do not.

1306. And they wager pretty heavily? No, not now; none that I know of.

1307. Do you think that it is right that the decisions with regard to cases of foul riding, or pulling, or anything of that kind, should be left to be tried and decided by men who have a monetary interest in the decision they are likely to come to? No; I do not think that is a good thing, and I do not know of any men who would sit to decide a case if they had a monetary interest in the result of the inquiry. I have often seen cases where a steward has had a bet on a race and has refused to sit. I can remember the case of Mr. Miller, who backed a horse of mine, and I ought to have got the race—and I would have got it if he had sat on the inquiry—but as he was interested he would not take part in the proceedings. That was at a country meeting.

1308. That is an argument in favour of the honor of the country committees as compared with the Australian Jockey Club committee? No; I do not know of any Australian Jockey Club committeeman who would sit on a case in which he was interested. I know of a case in which a member of this Select Committee had a protest against a horse belonging to a member of the Australian Jockey Club committee at Randwick, in which the committeeman and a friend of his, who had backed a horse, would not sit on the case.

1309. *Chairman.*] But is it not a difficult matter to find out whether they have a monetary interest in a horse or not? Of course, it is very difficult; but when you mix a good deal with people about the race-course, you get to fancy you know something about these men. I do not believe there is a man on the committee who would be game to put a fiver on a horse—he might put a fiver on a good thing. Mr. Knox is a beautiful bettor—he will put about £2 on a pretty sure thing. Mr. Lee never bets, and Mr. Allen thinks he has a fortune staked if he puts a fiver on. I do not know a man on the committee who is a heavy bettor.

1310. *Mr. Taylor.*] Are you aware that Mr. Knox used to put a hundred or two on occasionally? I think it must have been for the club, and not for himself. I have seen him at Tarana, and I know the sort of bettor he is.

1311. What you are speaking of now must have been lately? Yes; I am speaking of lately. I know a member of the committee who used to back horses very heavily—he used to put his thousands on at a time—but he does not do it now. In connection with this proposed legislation for the control of racing, if you amend the Australian Jockey Club Act you will also have to consider the outside clubs.

1312. *Mr. Gillies.*] Do you think that the Australian Jockey Club should give their countenance to pony-racing? I do not. I think the Australian Jockey Club should not recognise or permit any proprietary racing, or countenance it in any way.

1313. Is it the rule of the Australian Jockey Club to disqualify persons who are interested in pony-racing? Yes; if they know it. They are supposed to do it, if they know of it, and, as a matter of fact, a man is subject to disqualification if he owns a racing pony, according to the Australian Jockey Club rules.

1314. Do you know Mr. Chisholm, who was on the committee of the Australian Jockey Club? Yes; I know him.

1315. Do you know that he is interested in a pony that races? I do not know.

1316. If Mr. Chisholm could be proved to be interested in pony-racing, or proved to have leased a pony for racing, do you think that ought to disqualify him from acting as a committeeman of the Australian Jockey Club? So long as he does not own the pony, or have anything to do with the racing of the pony, or profit in any way by its racing, it does not matter. If he leases a pony, it is no business of his how the pony should be raced. Mr. Chisholm, who is a breeder of horses, might have a well-bred mare which he proposed to breed from, and as she might be a little bit low in height for horse-racing, he might lease her to a pony-racing man; and the fact that the pony is being raced by the lessor would not have anything to do with him.

1317. *Chairman.*] But would not that be encouraging pony-racing? Perhaps it would, to a certain extent.

1318. *Mr. Taylor.*] Is it not often a condition of the lease that the owner shall have a share of the prizes won? Sometimes.

1319. *Mr. Gillies.*] Do you not think that pony-breeding should be encouraged? I do not think so. I do not think that pony-racing, or the breeding of small horses, should be encouraged at all.

1320. But is not a 14.2 pony sometimes superior to a 16-hand horse? There are plenty of men who are superior to me, but there are plenty who are not.

1321. But do you not think that we should encourage the breeding of these small horses? Well, one wallow does not make a summer, and because there happen to be two or three ponies who have a very strong

T. Willis: strong infusion of that vitality which is necessary in every racehorse, and they happen to beat some
 31 Oct., 1900. 16-hands duffer, or even beat a lot of his class, that is no argument in favour of having hundreds and
 hundreds of ponies raced every year, and kept to breed from afterwards. You can take the case of a
 pony like "Overture." She is only 14·2, but she would be heavier than "Hautboy." It is not so much the
 breed of horses you have to consider as the breed of men, and the class of men that pony-racing lets in—
 men who ought to be at work; a lot of brats of boys and women and children go to these pony meetings.
 The breeding of horses will balance itself in time. The men who breed thoroughbred horses will try to
 breed the best class they can, and they will cull out the bad ones. The Australian Jockey Club, I presume,
 tried to kill pony-racing, not so much on account of the breed of the horses as on account of it interfering
 with legitimate racing.

1322. But horses have their uses for other than racing purposes? Yes; but with regard to racing, you
 have to race horses in order to find out their strength to begin with. The man who breeds horses and
 imports thoroughbreds into this country is a public benefactor, because he imports that mother-blood
 from the old country that is so necessary to keep up the standard. The thoroughbred stallion, who is
 imported, leaves perhaps twenty other stallions behind him—perhaps not so good as himself, but good
 enough for breeding utility horses. The only way to find out the strength of that stallion is to race his
 stock.

1323. Do you not think that holds good with regard to ponies, and that the only way to test the sires and
 dams is on the racecourse? Yes.

1324. And that being so, do you not think it would be to the interest of Australia—not only of New
 South Wales—to encourage the breeding of good ponies after the experience with ponies in South Africa?
 I do not know anything about South Africa.

1325. But you have read of the experience with ponies and other horses during the war operations in
 South Africa? Yes; I have read a good deal, but I do not take much notice of what I read. I was
 reared on a station where there were 5,000 horses, and I think I know something about them, and I do
 not think that any pony is anywhere as good as a good horse.

1326. But the results in South Africa proved that the 14·2 pony that the Boers used mostly was better
 than the best English cavalry horse, or even than the Australian horse? You must consider that the
 horses they took from England were not thoroughbred horses at all, but were hybrids—mongrels with a bit
 of the trotter and draught and some of the thoroughbred about them. The English cavalry horse is no
 good for anything except to look at. That is the class of horse they took to South Africa, and I have read
 yards and yards of writing about him. The argument has been all in favour of the thoroughbred. Even
 the small thoroughbred or well-bred pony of the Boer was much better than the big English horse. A
 small well-bred horse is better than a big, poorly-bred horse, but a big well-bred horse from Australia
 would do as much work as any two ponies, and would carry 17 stone longer and better. The proof of
 that lies in the fact that the horses that were sent away with the First Contingent, which had been picked
 by the police, proved themselves to be of the highest class for the work out there. These horses are
 picked by the police with great judgment, as the men who pick them know all about the breeding of the horses
 in the districts in which they are stationed. The Police Department had a contract with Mr. Jack Smith,
 of Tucka Tucka, under which they give him £2 over the regulation price for his horses when they are
 2 years old. One of the best horses in South Africa was the horse that "Banjo" Paterson rode, and
 another one similarly bred who was sent out about the same time. These horses went out with the First
 Contingent, and they are there yet; and of the sixty police horses they took with the First Contingent,
 excepting those that have been shot, they have not lost 5 per cent. of them by their dropping by the way-
 side. They are well-bred horses, and they are big horses, 16 hands high. Of course, a wise Government
 sent word out from South Africa that they did not want big horses, as they could not get them into the
 trucks. I suppose they had no bush carpenter there who could alter the trucks to suit the horses. A big
 well-bred horse will always beat a little well-bred horse, on the principle that rats beat mice. Take the
 case of "Fitzroy," who is only a 14·2 pony. He weighs very heavily; but he is thick, and because he is a
 good one, and sometimes beats bigger horses, is no argument in favour of racing ponies. A horse of
 12 or 13 hands high is no good to carry a soldier.

1327. Do you think that one of the main objects of racing is to encourage gambling? I do not think so.
 I never said that.

1328. Do you favour the licensing of people to go on to racecourses to wager? No; I do not favour it
 at all. If they want to bet, there are other ways of betting than that. However, they do not license
 them in England, and yet they bet more heavily than we do.

1329. Do you not think that the fact of so much wagering going on militates against the best spirit of
 horse-racing? Yes; but how are you going to avoid it? They have betting at cricket matches and at
 football matches. The bookmakers do not go out with bags, and gold-braided hats, and red coats, and so
 on; but they get there just the same.

1330. *Chairman.*] But you never see the same number of women betting at cricket or football matches as
 at Randwick? Well, I do not know many bookmakers who would bet with the women.

1331. *Mr. Gillies.*] But there are a few? Yes; there are certain women who follow racing who do a
 little betting.

1332. Those are society women? No, they are not; they are women of very low society. I know plenty
 of men who make books who will not bet with women. You cannot stop women from betting, and I do
 not know why they should not bet as long as they behave themselves. Women will sometimes drink and
 bet, and you cannot stop them from doing it; the Australian Jockey Club cannot stop women from
 betting.

1333. But they perpetuate it by licensing the men for them to bet with? If they did not license the
 bookmakers the betting would go on just the same, and they may just as well get something from these
 men towards the support of racing. You remember, Mr. Gillies, that once at Maitland you imposed a
 charge of £2 2s. on bookmakers, and "fired" them out of the paddock when they would not pay it; but
 they got back and did their betting without paying the £2 2s.

1334. *Chairman.*] They could not keep up a system of secret betting all day long? They have done it.
 They did so after the first Kempton Park decision. They did not bawl out the odds, but they bet just the
 same. They do it in New Zealand, where it is illegal to bet, according to the law of the land. They do it
 in South Australia, where it is illegal to bet, except in a ring set apart for the purpose. But they come
 out of that ring and bet on the lawn just the same.

1335. Getting back to the principle of this Bill, do you know anything about New Zealand racing? No, I do not know much. T. Willis.

1336. They have an association there? They are differently placed in New Zealand to what they are here. In New Zealand there are four big clubs, of about equal importance, in different parts of the Colony. If the Auckland Club, for instance, took upon itself to rule racing in the whole of New Zealand the Christchurch Club would probably object, or the Dunedin Club might object, and perhaps the others as well. And they would be pulling this way and that. They have, however, come to an arrangement under which the largest club in each district shall manage the racing affairs of that district in all small affairs; and then they have a sort of racing parliament which administers matters for the whole of the Colony. All appeals and alterations in the laws of racing are dealt with by the parliament of racing; but the management of local affairs is attended to by the large clubs. If we had a similar arrangement here, and the Adelaide, Melbourne, Sydney, Brisbane, and Perth racing people resolved to combine, to form a racing parliament, the management of Victorian racing would be left in the hands of the Victorian Racing Club, New South Wales racing would be left to the Australian Jockey Club, and so on; but the racing parliament would deal with the rules of racing for the whole of Australia. In New Zealand they have a number of clubs of about equal standing; but here we have one premier club, which stands out above all the others. 31 Oct., 1900.

1337. In Queensland they have much the same kind of thing? Under the Queensland Turf Club things went pretty smoothly. I was racing there in the eighties, and things ran pretty smoothly then. Afterwards a strong man arose in Charters Towers, who had a row with the Queensland Turf Club, and he got other men to follow him. Charters Towers was, of course, a big sporting centre, and they struck out for themselves. After a while, Rockhampton decided that they were entitled to separation, and they struck out for themselves; and so the movement went on. In all these places, however, except in Charters Towers, the prizes now are very much smaller than they used to be, and the class of horses is nothing like it used to be fifteen years ago, when horses such as "My Love," "Ben Bolt," "Elsinore," "Lyndhurst," "Pirate," and "Wheatmeat" used to run at all kinds of country meetings. Now the worst class of broken-down plater from Sydney is good enough to win the best races up north. The champion of the Central district is old "Rob Ray," with a knee as big as my head. In the old days they used to start to race in Brisbane in May. A week afterwards they went to Toowoomba; then came back, and went to Maryborough, Gympie, Rockhampton, Port Mackay, Townsville, and Charters Towers. A man could start away with a horse, and if he got licked at Rockhampton he could turn back, and come home again. In this country we start at Armidale, to go to which place with a horse costs £25; but if we could start at Maitland, and run on, the owner who found that his horse was not worth taking on could come back in time to save himself incurring heavy and useless expense. My suggestion for the appointment of a racing tribunal, upon which three country representatives would be entitled to sit, might go some way towards altering the present unsatisfactory condition of things. I hold that the Jockey Club is to some extent to blame for the present state of affairs, as they should have made the country clubs fix their dates one after the other, in a way that would encourage horse-owners to take their horses to a succession of race meetings.

1338. *Mr. Gillies.*] They used to do it in the olden times; but now, if you have a real good horse in the country, you bring him down to Sydney, and do not take him away again? Yes; that is so. I prepared a statement some time ago, which I gave to Mr. Crick, showing that we had, within nine or ten, or nineteen or twenty, as many races run in the metropolitan area as were run throughout the whole of Great Britain in the course of the year. That is to say, that with a population of 450,000 people we supported as many race meetings as the 40,000,000 of people in Great Britain.

1339. *Chairman.*] You are of opinion that we have too much racing? Yes, decidedly. If a man has a good horse in the country he is no good to him there. As soon as he is discovered to be a good horse he is brought to Sydney, where he can be raced every week. Not more than seventy days' racing for horses should be allowed, and no racecourse should be less than 1¼ mile round. Every racecourse should have a certificate from the police, as suggested by Inspector Lawless, certifying to its soundness; and no racing should be conducted without the permission of the police. A suggestion of this kind was sent to Mr. Brunner by Inspector Lawless after two or three boys were killed in racing for a £6 pony prize.

1340. *Mr. Taylor.*] From what I have heard you say, I gather that you think pony-racing ought to be suppressed altogether in the interests of racing? In the interests of public morality.

1341. Apart from that, I have gathered from you that pony-racing has a tendency to produce further ponies, and that your idea is that racing should be carried on with a view to improve the breed of horses? Yes.

1342. And you really think that pony-racing ought to be suppressed in the interests of horse-breeding? Yes; and in the interests of public morality.

1343. Do you believe in betting being confined to the racing meetings? Yes. I believe in the American system of not allowing any betting until you get on to the course.

1344. Do you believe in cash betting? Yes; it is the best; it is the least likely to get people into trouble.

1345. Do you not think there are far too many short races in this country? Of course there are.

1346. Keeping the one object in view, namely, the improvement of the breed of horses, you recommend that there should be longer races and heavier weights? Yes.

1347. As well as fewer meetings and heavier prizes? Yes.

1348. I presume, also, that if pony-racing were suppressed, it would materially affect racing in the desired direction? Of course it would.

1349. I suppose there are about 500 jockeys and trainers altogether? Yes; about that.

1350. Do you think it would be unfair to provide in the Bill now before us that these jockeys and trainers should have representatives on the racing committee of the Board, or should have some gentleman to represent them? No; I do not think it would be advisable. You cannot be master and servant both.

1351. Would there not be a great many things come before the Board that only a jockey or trainer could properly understand or know the purport of; the ordinary racing man would have experience of the one side, and if the jockeys and trainers had their representatives, they would probably be able to throw a good deal of light on many matters that came before the Board, and would be able to explain the various terms, and so on;—do you not think that it would be advisable, for instance, to allow the jockeys and trainers to have one representative out of ten? No, I do not. I think that the jockeys and trainers enjoy

T. Willis. enjoy privileges which more than compensate them for any charges that are made upon them. The trainer pays £1 a year for privileges, such as admission to all the racecourses, which would cost any ordinary member of the public perhaps £50, and I do not see that he has any claim to be represented on the committee.

31 Oct., 1900.

1352. But there are many interests that jockeys and trainers have which are affected by the proceedings of the racing tribunal;—do you not think they should have representatives on the committee? I do not.

1353. You are satisfied that the appointment of three paid stewards would be a great improvement? It would effect a wonderful improvement.

1354. These three paid servants would have no voice in the settlement of any dispute, but they would state their case before the committee, and those who were charged would have the right to give evidence in reply? Yes; and the stewards would, of course, have the right to examine witnesses on either side.

1355. You think that two members of the Jockey Club, and three representatives appointed from the different divisions of the Colony, should form a court of final appeal? Yes; and also deal with any alterations of the rules. But they should not interfere with the management of the Jockey Club.

1356. You believe that jockeys should have some one to represent them when they are brought before the committee to answer any charge against them? Yes.

1357. You are satisfied that that is a fair thing? Yes.

1358. I suppose you have noticed, from time to time, that when a jockey is brought before the committee, he can only offer evidence when he is asked questions which are directed against himself? Yes; I recognise that he is not capable of defending himself when he is in the hands of a clever man, and that is the reason why I believe that he should be represented.

1359. *Mr. Hogue.*] Touching the question of pony-racing,—it is a comparatively recent development? I do not know; it has been in vogue since I have been in Sydney—for the last ten years.

1360. It has had the effect of largely increasing the number of small horses? Yes.

1361. Do not you think that the breeding of small horses is to be encouraged? No.

1362. Are they not useful? No, not compared with big horses.

1363. Have you had any experience in connection with cavalry horses? I have had some experience in connection with horses for stock-riding, and I should say that a good stock horse would be a good cavalry horse.

1364. Nearly all these ponies are very well bred? Yes, some of them.

1365. Some of them are from the best sires and mares in the Colony? Only odd ones. I know the breeding of most of them—there are plenty of thoroughbreds; but there are plenty that are not thoroughbreds.

1366. *Mr. Taylor.*] They are, generally speaking, “weeds”? Yes.

1367. *Mr. Hogue.*] Are they not as useful as horses? Not as useful as horses of moderate or large size.

1368. Are they not useful for light buggy or carriage work? They are very useful for sulkies, if you make the trap to suit the horses.

1369. They are very largely used for sulkies and other vehicles? Very much so, during the last ten years.

1370. Are they not more easily handled than big horses? No.

1371. Are they not less liable to bolt? No; a pony is more liable to bolt and buck than a big horse. The worst buck-jumpers you can get are ponies of from 14 to 14·2 hands. Ponies are more tricky than horses.

1372. I am speaking of their usefulness for light carriage work? If you want miniature light horses, they are, no doubt, very nice; but they are not as good as big horses.

1373. They are very easily handled? A big horse can be handled just as easily.

1374. They eat less? No. I do not think they do.

1375. *Chairman.*] Would not the superiority of one horse over another depend very largely on the character of the country in which you would test them;—would you not prefer a good strong pony of (say) 14 hands for mountainous country? I think the best kind of horse for the mountains is a horse of from 15·1 to 15·2 hands. That is to say, a well-set horse. I do not mean a chumpy horse, but a horse with good bone, and a well-set horse. I have seen big horses in the mountains as good as any others—odd ones. It does not stand to reason that a pony is as good as a 15-hands horse—a horse of 15 hands is not a pony. If a horse is small and weighs 7 cwt., even though he is well-shaped, with good bone, and a fair amount of nervous force, it stands to reason that he is not as good as a horse that weighs 11 cwt. and has a corresponding amount of nervous force. It is the unseen nervous force that stands to the horse—that force which they get from the thoroughbred, and from no other. I would sooner ride a thoroughbred Lillie Bridge pony than an underbred draught horse. But they do not improve the breed of horses. The small breed of horse is not saleable. They are not a good marketable commodity at all. You can sell them about the city for sulkies, at certain prices; but if you bring good big horses into the market, you can get from £25 to £40 for them unbroken, even if they are not racehorses. I say it is the business of Parliament, and the Australian Jockey Club, and of everyone who has the power to do it, to protect and encourage the men who breed horses, and to give them every assistance; and by conducting good racing you are encouraging them to go on importing good blood into the country. Take the case of a stallion like “Haut Brion.” We expect such a horse as that to leave behind him a lot of stallions to get good useful horses.

1376. *Mr. Hogue.*] Does the climate improve the breed of horses? No; it does not. As a matter of fact, the horse stock deteriorates in all these colonies, and, in fact, everywhere out of England.

1377. Will you explain how it is that so many sires from New South Wales have been bought up for England and America? Not one of those sires were bred in New South Wales. “Carbine” was bred in New Zealand. At any rate, that does not go against my argument. If you take the case of any great horse you please, from the time we first started breeding horses in this country, you will find that he was by an imported horse or out of an imported mare, with one or two notable exceptions. “Abercorn” was one of those exceptions, but he has never got anything like himself. “Chester” was out of an imported mare.

1378. By a colonial sire? Yes; but where are the “Chesters” now.

1379. Some of them are in England? There were two that were sent home by Mr. White as yearlings. It is not only in Australia, but in France, America, Germany, Russia, and everywhere else, that the English thoroughbred degenerates in time, and they have to go back to the mother country to keep up the supply

supply of the mother blood. The man who imports thoroughbred stock to this country from England ought to be encouraged, for he is bringing in a certain amount of nervous force.

1380. Is it not absolutely necessary, if we are to keep up the quality of our thoroughbred stock, to have the required infusion of new blood from the English thoroughbred and Arab? Not the Arab.

1381. But is not the Arab the original source of the English thoroughbred? That has nothing to do with it. The English thoroughbred derives its force from the feeding on the ground. He is descended from the Arab, the Spaniard, and the Persian, and also from the English mares that we have no trace of, but which are known as the Royal mares. All the English thoroughbreds in the world descend from forty-three mares.

1382. But does not the English thoroughbred largely owe his quality to the infusion of Arab blood? No, certainly not.

1383. Is it not necessary that we should have a constant infusion of new blood into our racing stock here? Yes. English blood, and regularly.

1384. And Arab blood? No.

1385. You deny the necessity for the Arab element? Yes.

1386. You say that in any case, take the best climate in the world—take New Zealand, for instance—the stock will degenerate rapidly if there is no infusion of new blood? Yes; they have degenerated without the infusion of new blood in New Zealand.

1387. Would that not take place irrespective of the climate altogether? Yes; it takes place all over the world, except in England.

1388. Why do they not degenerate in England? It is the food they get—it is the salt of the earth.

1389. Is it not a fact that the thoroughbred is degenerating in England? Yes; so far as some classes of racing are concerned. The Irish, American, and Australian horses have been winning the long-distance races; but that is a matter connected with the management of racing, and was brought about through racing horses when they are 22 months old. They are just as bad in Victoria.

1390. There is too much short-distance racing here? Yes, there is; but the Australian Jockey Club do not encourage it so much as it is encouraged in Victoria.

1391. Do you think that the management of racing by the Australian Jockey Club has been tolerably satisfactory on the whole? I do not think you would get much better. Of course we have had no other tribunal to compare it with.

1392. Is it not on the same basis as all the world over? Yes.

1393. It is analogous to all the jockey clubs in the world? Yes; excepting New Zealand and Queensland.

1394. Do you not think it would be an improvement to have representatives from the different parts of the Colony upon the Racing Association—that is, to control racing? No. Not on the lines proposed in the Bill.

1395. *Mr. Taylor.*] But you still think that it would be an improvement to have three different representatives from the country in the way you suggest? Yes; as a court of appeal, combined with the Australian Jockey Club.

[Committee adjourned until Friday, 2nd November, at 11 a.m.]

FRIDAY, 2 NOVEMBER, 1900.

Present:—

MR. ARCHER,

MR. J. C. L. FITZPATRICK,

MR. GILLIES,

MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Adrian Knox further examined:—

1396. *Chairman.*] I understand you have certain documents which you promised to lay before the Committee when you were previously under examination? Yes; I have a copy of the regulations for the administration of the Distressed Jockeys' Fund, and a copy of the rules bearing on trainers' licenses.

A. Knox.

2 Nov., 1900.

[Documents handed in to the Chairman.]

1397. Do you recollect the case of the Secretary of the Newcastle Club being instructed by your committee to either give up his position or some new position as starter, which he had taken in Sydney—a man named Fleming? I have some recollection of it. I may not be quite accurate, but I think this was the case: When the rules of August, 1898, were passed, splitting the horses from the ponies—that is, drawing a line between between the two classes of racing—we, as a consequence of those rules, refused to permit our officials, or the officials employed by any registered club within the 40-mile radius, to officiate in any capacity at any unregistered meeting. Then Mr. Watson, I think it was, having been starter at Kensington, had to resign in consequence of that rule. I may say that we increased our officials' salaries to make it up to them as far as we could. Mr. Watson having resigned, Mr. Fleming was appointed in his place. I do not think our committee ever insisted on Mr. Fleming resigning one billet or the other. I think what was ultimately done was this: We wrote to him and pointed out that in the new rules which had been passed a division had been made between registered and unregistered racing, and that it was not proper for him to hold the two positions. I am not prepared to say now that we absolutely told him that he could not hold them.

1398. My information is that you did? I am not prepared to say absolutely that we did. If we did it to him we only did what we had done to our own officials and officials of other clubs within the 40-miles radius, and acted on what we believed to be an expression of opinion by members of the club. I may say that Newcastle in some respects is dealt with as if it were in the 40-miles radius. It is a large centre of population, and its race meetings are not merely country meetings. The racing is more like metropolitan racing.

1399. *Mr. J. C. L. Fitzpatrick.*] That is the course pursued by most clubs of a prominent character—for instance, the Hawkesbury Club;—the officers of that club were called upon to forfeit either one position or the other? We made it a hard and fast rule in regard to clubs within the 40-miles radius. We conceived it to be the logical consequence of the line of division that has been drawn by the rule passed at the meeting in August, 1898.

1400.

A. Knox. 1400. You regard the practice as being a correct one? I regard it as being perfectly correct. A man must choose between one class of racing and another. That is the principle we have acted on ever since the club has been a club.

2 Nov., 1900.

1401. Your rules might be regarded in some sense like the rules of a unionist body;—a man cannot be a unionist and race at union meetings, and at the same time be a non-unionist associated with an unregistered racing club? The case is something analogous.

1402. *Chairman.*] That being so, would it not have been wise for the committee to have gone to the logical conclusion, and prevented their own members from attending pony race meetings? I do not see how we could prevent them from attending. We prevent them as far as we can from having anything to do with them. I do not know any member of the committee who ever does attend a pony race. Mr. Gillies, asked me, when I was last before the Committee, whether Mr. Harry Chisholm was not interested in racing ponies. I asked him about it, and have his authority for saying that he absolutely has no interest whatever in any horse or pony running at an unregistered meeting, and that he is perfectly prepared to come before the Committee and deny it on oath, if desired. I may say that I went to Mr. Chisholm at once, and told him I thought it was his duty, both to himself and to our committee, to be examined before this Committee. Then I told him I would make the statement I have made on his behalf. I do not say that he has not sold horses running at unregistered meetings as an auctioneer. I only speak as to his racing or owning them.

1403. *Mr. Gillies.*] These rules you have handed in to stand for rule 76, have regard to trainers? Yes.

1404. Do you think it is right to take a license away from a trainer without giving him a reason for it? I do not think the rule provides for that. I think it provides for refusing to grant or renew a license without assigning a reason, but it does not provide for taking away a license without giving a reason. As an illustration, take the publicans' licenses. It is the same as cancelling a publican's license before licensing day, and refusing to renew it on licensing day.

1405. But the publican is told the reason why it is refused? I daresay.

1406. This subsection says the committee of the club may refuse to grant or renew any such license without giving a reason? I think it is absolutely necessary to have that power. It is acted on all over the world. In the conduct of business like racing a great deal must be left in the hands of the authority, whoever it is, who controls it.

1407. Do you know any Court of Justice where such a rule would obtain—where, for instance, if a man were convicted, and sentenced without knowing why? I beg your pardon. In this case he is not convicted or sentenced. A man applies to us for certain privileges. We may or we may not grant him those privileges. We never take away a man's license without giving him a reason for it; but we may refuse to grant a license without giving a reason. May I point out, that for years and years there has been a contest in this very Colony between the temperance bodies and the publicans; the temperance bodies maintaining that a publican has no right to get his license renewed—that is to say, that he is merely a licensee for a year, and cannot complain if his license is dropped at the end of the year.

1408. *Chairman.*] You would hardly assume that a Jockey Club has the same power as an Act of Parliament? I do not assume it at all. We have the power under our rules, and persons voluntarily come under them.

1409. Does it not come rather as denying them a right than a privilege? No; I do not think it does. I think "right" is a wrong term to use.

1410. *Mr. Gillies.*] As regards the Australian Jockey Club, you think might is right? No; but I do not think any man has a vested right to get a jockey's or a bookmaker's license.

1411. *Mr. J. C. L. Fitzpatrick.*] As a matter of fact, I presume that the Australian Jockey Club is entitled to make any rules, no matter how stringent they may be regarded, provided they are upheld by members of the Club? Yes, with this limitation: that if we made rules which were not acquiesced in, and presumably thought to be proper by other people outside the Australian Jockey Club, we would be swept away.

1412. Just so; and provided they are upheld and obeyed by those interested directly in racing, rightly or wrongly, the committee could make rules of a most stringent character? That is it exactly.

1413. *Mr. Gillies.*] Will you not admit that important reforms in regard to racing of recent years have been made in spite of the members of the committee of the Australian Jockey Club? I do not think so. Could you give me an instance?

1414. *Mr. J. C. L. Fitzpatrick.*] Do you recollect just now what the disparity was between the support accorded to the so-called reform party at the last election of your committee and the members of the old committee, who were successful in retaining their seats—that is, so far as strength of numbers is concerned? I think I can tell you roughly. Mr. Dangar headed the poll with, I think, 290 odd votes. The member who was elected with the lowest number of votes had 201. The next was Mr. Frank B. Suttor, who had, if I recollect rightly, 150 odd votes. He was the highest unsuccessful candidate. Mr. George Osborne was next to him, I think. Mr. Crick had about 90 votes, perhaps a little more; then they dribbled down to about 20.

1415. *Mr. Gillies.*] Mr. Crick was unsuccessful? Yes.

1416. By reform party you mean progressive party? I cannot say which party was right. I thought we were right. Talking about reforms, there have been many alterations, and a reactionary party may consider a mere alteration a reform. There have been more alterations in the rules which, in my opinion, and in the opinion of the committee, are reforms, during the last five years, than there were during the fifteen previous years.

1417. *Mr. Taylor.*] Did not the new blood effect that? Not at all. I think the cause of it was in endeavouring to keep up with a different set of circumstances.

1418. Is it not a fact that you, yourself, proposed nine-tenths of those alterations? The committee generally asked me to propose them, because, as a professional man, I generally drafted them.

1419. But, in the majority of cases, have you not initiated them? I would not say.

1420. Would you say you have not? I would not like to say one way or the other, because at the present moment I could not classify exactly what has been done on my initiation. If I may explain how we proceed in altering the rules, you will see more clearly what I mean. Suppose I get an idea, which I think would be a good thing, I do not bring that before the committee in the shape of a motion; but I go to some of the older members of the committee, and ask them their opinion, and thresh it out with them

them informally. Then, if they approve, it is put on the business-paper, to be dealt with at a future meeting, with a view of having it discussed by the whole of the committee. But if they are not practically unanimous, probably the matter would not be brought forward at all.

1421. There is no question that nearly all these reforms date from the time when you joined the committee? There have been a great many reforms within the last five years.

1422. *Mr. J. C. L. Fitzpatrick.*] Have not a great many of those reforms been rendered necessary by the altered circumstances in regard to racing, and to the fact that so many new clubs have sprung up, especially within the vicinity of the metropolis? I have endeavoured to convey that. I think that many of the reforms have been the creatures of circumstances. We have simply been trying to keep up with the times.

1423. Going back to the last election, what number of members has the Australian Jockey Club? As nearly as possible, 500.

1424. What proportion of them voted at the election? I think about 400 of them had paid up their subscriptions, which would entitle them to a vote; but I cannot say how many voted. I should think between 350 and 400 voted.

1425. *Mr. Gillies.*] Does the Australian Jockey Club publish a balance-sheet? To their members, and then it is handed to the Press in the ordinary way, just like a company's balance-sheet.

1426. Do you give full details as to expenditure and receipts? Yes; they show the expenditure and receipts, but not the salaries and wages in detail. As in the case of most company balance-sheets, we lump the salaries and wages; and so with buildings and repairs, we probably lump them. An explanation is always given at the general meeting on any item in regard to which an explanation is asked for.

1427. Have you any idea what salary Mr. Clibborn draws altogether from the Australian Jockey Club? I believe it is £800 a year.

1428. Does that include everything? £800 or £900. He is only paid a salary, so far as I know. He gets a cheque every month. There is no explanation of the amount, unless there has been some change in the appointments. If there has been no such change, the salary is regarded as being the same as in the previous year. The amount is not specifically stated at each annual meeting.

1429. *Mr. J. C. L. Fitzpatrick.*] I understand that you can now give the Committee some very definite information with reference to the voting for your committee at the last annual meeting? Yes. Here is the *Sydney Morning Herald* of the 22nd August, 1900. I see by that that Mr. Dangar polled 293 votes. The lowest elected member polled 203. Mr. Frank B. Suttor was the highest non-elected member; he polled 154. Mr. George Osborne polled 144; Mr. Stephen polled 90, and Mr. Hardie, 82; Mr. Crick polled 80; Mr. Morton polled 56; Mr. McLaughlin polled 56; Mr. Cruickshank polled 51; Mr. Kennedy, 49; Mr. Hart, 27. I also notice that the balance-sheet is published with that report in the *Herald*.

1430. *Mr. J. C. L. Fitzpatrick.*] From the figures you have just read you would not come to the conclusion that the party which was supporting the reform candidates were very unanimous? Oh, no! In my opinion the new candidates did not get a unanimous support from any particular section of the club.

1431. *Chairman.*] Is it not possible in all these matters of reform, where too many candidates present themselves, that such a thing as splitting of the votes occurs? Undoubtedly. I think it was a significant election in this way. The three next elected members, Mr. F. B. Suttor, Mr. George Osborne, and Mr. Stephen, might be put on to the committee in place of any three who are now actually on without making any difference in the policy of the committee.

1432. *Mr. Taylor.*] With regard to the old committee;—was it an understood thing that they were to support a certain ten? No. I do not think it was. I would like to explain: Whenever there is either a general committee election, or a vacancy on the committee, members of the committee discuss the matter between themselves. And it may be that there are some men that they would sooner see on than others. For instance, at the last election some of the committee voted for Mr. Suttor, some for Mr. Osborne, and some for Mr. Colin Stephen, and some voted for the three new members who were elected, Mr. George Lee, Mr. Betts, and Mr. Reginald Allen.

1433. But there was a general consensus of opinion on the part of the committee that certain men should be elected? No. Without going into details, those three men I have just mentioned were not the three selected by the committee. They were not the three men who were talked over. I admit that I suggested one man whom I thought should stand. That was Mr. Colin Stephen.

1434. *Chairman.*] Those men are all experienced in racing matters? I do not know if Mr. Suttor is a racing man; but he would be a very useful man on the committee. He may have had experience in racing; but not to my knowledge. Mr. Osborne and Mr. Stephen are both experienced in racing.

1435. Can you give me any idea as to what proportion of the money received by the Australian Jockey Club is distributed in the interest of racing, and the breeding of stock? Take the past year, 1899–1900—the necessary expenditure in connection with meetings was £2,838. That was the expenditure in connection with meetings held at Randwick.

1436. Prize money? No; expenditure necessary to carry on the meetings—payment of gate-keepers, and all that.

1437. But can you give the committee the total amount of receipts and the proportion of the money that was returned in the way of stakes? The money added by the club for that year was £23,475. That was absolute added money. No owner or trainer contributed a shilling of that. The forfeits and sweepstakes, which are contributed by people running, and returned to the owners were £9,167. That is the absolute money given away; but then you will understand that you cannot distribute that money, nor could you collect the money to enable you to distribute it, without incurring very large expenses, which are absolutely necessary—for instance, the payment of gate-keepers and others.

1438. What were the total receipts? Forfeits and sweepstakes come in on that side, and training tickets, they amounted to £1,593; leasing the course, £2,764; members' subscriptions, £2,441; members' entrance fees, which are hardly revenue, amounted to £220. Admissions to the grandstand and paddock, £12,285; to the official stand, £166; to the leger stand, £2,681; entrance gate, £3,867; registration fees, £3,572; booths and stands, £1,590; rights for printing and catering, £2,405; trainers' licenses, £127. Then our other receipts are really from registering clubs and meetings, which came to £490; then there are sundries and interest.

1439.

- A. Knox.
Nov., 1900.
1439. Where does that money come in which you receive from different owners and nomination fees? We have no entrance fee, except for what we call odd meetings.
1440. For instance, if you run a Derby? It is included in the £9,167.
1441. Is that the only money you receive in the form of stake money? It is.
1442. You do not receive any more than the £9,167 during the year? It all goes back to the owners. Suppose a horse is nominated for the Derby, my impression is that you pay nothing; but before you take that horse out you have to pay something. Every shilling of what is paid at our big meetings, such as the September and the Boxing Day meetings; every shilling that is paid goes back to the owners. With regard to our small meetings, it is different. At them we get very few people, but we have to make both ends meet. I do not think we have made more than £200 in any one afternoon at a small meeting, and in order to get that we take £1 for each horse that is nominated.
1443. What I want to get at is this: say you nominate for the Derby, the owner of each horse that runs for the Derby has to pay £25? He does.
1444. And every horse that runs for the Sydney Cup pays? £20.
1445. Is that included in the £9,167? Yes. Everything that we get from the owners, with the single exception of the entrance fee at our small meetings, goes back to the owners in the shape of the winner, with the exception, of course, of the second and third money taken out of the stakes. As an illustration: the Sydney Cup is £2,000 added; £300 from the stake for the second, and £150 from the stake for the third. The natural conclusion would be that the winner would only get £1,550. As a matter of fact, the winner, I think, always gets between £2,200 and £2,400. That is made up by the contributions of unsuccessful horses in the race, such as forfeits and stakes. It is made up by their owners. In other words, an owner who runs his horse for the Sydney Cup takes 2,200 to 20 about his chance of winning.
1446. *Chairman.*] In relation to this £2,864 for rent, can you tell us what it is;—can you tell us the amount paid to the trustees by your committee? I doubt if we pay anything at all beyond a peppercorn rent.
1447. *Mr. Taylor.*] Are the receipts you mentioned all the receipts you get? From anything connected with the course or racing.
1448. Where do the other receipts come from? There is only about £161. There is interest on our accumulations and on the Jockeys' Fund.
1449. The amount of receipts given in a detailed form amount, say, to £36,000, and you give away £23,475; so, I presume, the £13,000 would go in the way of management? One way or another, I think it would. I can give you some of the items. The racing expenditure amounted to £2,838; that would include all the expenses of race days, such as the payment of gatekeepers. Then salaries and wages come to £2,991. We have a large staff out there. We have the rent of our offices, the secretary, the chief clerk, and two youths; but I think the management is conducted on fairly economical lines. We pay our men fair salaries; we have nearly always two carpenters employed; we have a painter, and we have five or six men always employed in looking after the tracks, and doing nothing else. Then we have a gardener and a ranger; then there is printing, advertising, and stationery—a pretty heavy item—£1,181. Then there are repairs and improvements not of a permanent character, £827; permanent improvements written off, £216; plant and material written off, £210. The balance of profit and loss on the year was just about £2,000.
1450. Carried forward? Carried forward. As a matter of fact, £62,000 was carried forward, but in the previous year £59,392 had been brought forward, so that the balance of profit and loss would be about £2,000. I should like to say that it is not prudent to work on a less margin than that.
1451. With a surplus of £60,000 a year, do you not think it would be in the interest of horse-racing to give, say, a £7,000 prize once a year? We have that in hand, like every other body has it. Our improvements and so on are all taken at a certain value.
1452. But have you not a sum of money out at interest? Sometimes it dwindles down to next to nothing.
1453. How much have you out at present? I cannot say.
1454. About? I see that on the 1st of August, 1900, we had £15,824 on fixed deposit, current account, and cash in hand; but since that date a considerable amount of that has gone in paying a building contract for the offices we are putting up. We build, of course, to save rent. I do not know how the account stands now. £5,000 of it belongs to the Distressed Jockeys' Fund, which amount we keep at fixed deposit, and add the interest to the fund.
1455. The reason I ask the question is this, there has been so much credit given to Victoria for the support which racing receives there, and I am trying to show that if the Australian Jockey Club catered for the public in the same way that they do in Melbourne, and gave larger prizes, and had fewer meetings, we should concentrate the best class of horses here instead of in Melbourne? I will give you my opinion. I suppose in Melbourne during the years 1890–91, they had as big a boom as in any part of the world. They increased their Cup prize to £10,000, and, in my opinion, they did not get a single horse to run for that £10,000 that they would not have got to run if the value of the prize had only been £2,000 or £3,000. Bad times came, and stakes had to be reduced—not only the Cup stakes, but all round. The result was that owners could not get a legitimate return in the way of prize money and had to contribute to the Victorian Racing Club to keep up racing. The Victorian Racing Club took the owners' money in order to keep up the nominal value of the prizes, although the actual value, perhaps, was not so good. In every new country, like New South Wales or Victoria, you must have these ups and downs. It is a certainty there will be boom and then collapse, and that will go on for a very long time. We have always acted on the opposite policy, whenever we feel we can legitimately increase what we are giving by levelling up. We begin with the smaller stakes. Our object is that every owner of a horse good enough to win a race at Randwick shall get a fair return for his money. That is to say, he shall get a fair stake. As opportunity offered we have devoted our efforts to levelling up the stakes and bringing the smaller stakes up to a fair limit; and when we have done that I think it would be a fair thing to devote a considerable sum towards increasing the big stakes; but before we do anything to increase the big handicaps, we should bring our weight-for-age races at Randwick up to the value of £500 each. As every racing man will admit that is where the test of superiority comes in. You may get some inferior horse in a handicap that has been "bottled" up, and let in by accident by the handicapper at a light weight, an
animal

animal that is not worth £100. That horse might win the suggested prize of £5,000 or £7,000, whereas on the weight-for-age scale the best horse generally wins; and, more important still, a good horse wins. With regard to the suggestion for a big Cup, I should like to point out that in England they found it a fallacy offering these big stakes. In England, where the Eclipse Stakes are £10,000, and there are other £10,000 stakes, it has been found that these large stakes do not draw any better fields, or better horses, than stakes of from £2,000 to £5,000.

A. Knox.
2 Nov., 1900.

1456. I remember the time when, at Manchester, they could not get a race meeting at all, but they commenced to give large prizes, and the consequence was that they concentrated the racing in the North of England at Manchester;—would not the raising of the prizes for weight-for-age once a year to £500 tend to concentrate racing in Sydney? I do not think it would be any more concentrated than it is now. At present I think we have as good a class of racing at Randwick as there is to be seen anywhere; and although Victoria does not send so many horses here as we send there, still they send the best. The object I had in view was not to attract big fields.

1456½. But the best class of racing? Big fields are not the best test of racing. In my opinion, weight-for-age is the best test.

1457. Then you would not favour a £5,000 prize when the club has a surplus of, say, £15,000? When we have increased the smaller stakes, then I should be in favour of increasing the Cup stakes. If we had the totalisator, then I would be in favour of giving £5,000 to the Sydney Cup to-morrow.

1458. If the flat at Randwick was thrown open to the public, do you think it would remove the idea that there is a stronger racing feeling in Victoria than there is here? I do not think it would.

1459. Do you not think it would attract the people by letting them in free? No.

1460. Do you think we should suppress pony-racing? I have never considered whether it ought to be suppressed. There may be pony-racing and pony-racing. I do not think pony-racing ought to be allowed every day of the week, like it is at present. I think it would be a very desirable thing if some body strong enough to deal with pony-racing could be brought into existence, without legislative authority, if possible. There is a very great difference in the way in which pony-races are conducted. For instance, I understand that pony-racing at Kensington is excellently well conducted, and that the stewards do their duty well; but there are pony-races that are not well conducted according to the generally-accepted opinion. In my opinion, pony-racing does not tend to improve the breed of horses; and another objection I have to it is that there is no authority to limit the number of days on which pony-races are held. They are held every day of the week, and then you have about Sydney a class of worthless rag-a-muffins who do nothing from year's end to year's end but hang about betting-shops.

1461. *Mr. J. C. L. Fitzpatrick.*] Then it does not improve the breed of boys? No; clubs under our jurisdiction within the 40-miles radius only race on Saturdays and public holidays, and two or three other days in the course of the year; but these pony clubs race every day of the week, and at night, too.

1462. Do you think the effect of having pony-racing, whether well or ill-conducted, would have a tendency to encourage breeders to breed for pony-racing rather than to improve the breed of horses? The advantage of pony-racing is this: No breeder of horses can guarantee that every horse he breeds will be a good horse and a good-sized horse; and, therefore, pony-racing, properly conducted, might form a useful outlet to enable a breeder who has really done good service to the country to get rid of those horses which are not of class enough for the big meetings; but I do not think pony-racing at present does that, and for many years I do not think it will offer sufficient inducement to any man to neglect breeding horses in order to breed ponies. If a man can breed good thoroughbreds, which will sell for fair prices, with a view to racing among horses at registered meetings, he is not likely, under present circumstances, to devote his attention to breeding ponies, which will notoriously have very much less value, and have to race for very much lower stakes.

1463. But if there was not this pony-racing—assuming, for the sake of argument, that you are a breeder, and a horse is put to a good mare—like breeds like as near as possible? Not always.

1464. But presuming that to be the tendency, do you not think, if you had breeding mares which really threw small stock, you would dispose of them, and not put them again to a horse? I am not an expert in breeding. I think a mare that throws a small horse to one sire is just as likely to throw a big foal to a different sire.

1465. But do you not think, when they have thrown a small one, you would not breed again from that small one? That depends upon the blood. If the small one turned out a grand racehorse, like "La Fleche," I very likely should. There is no more perfect racing horse than "Fitzroy," and he raced amongst ponies for years. He is a perfect horse, and I would as soon breed from him as from a bigger horse.

1466. It has been suggested to this Committee that it would be an improvement to have three paid stewards to look after the racing, instead of, as at present, leaving it to the pleasure of stewards to look after it—that is to say, that everybody's business happens to be nobody's business—but if there were three stewards paid to do certain duties, those duties would be much more effectively performed? I think it might be an improvement if three stewards were specially appointed to look after a race meeting; but I do not think it would be altogether an advantage to have paid stewards, unless you can get the right men. The trouble is to get the right men—men who are thoroughly conversant with racing, and who would command the confidence of the racing public. Such men might afford much valuable assistance; but, as far as my own experience goes, I should be very sorry to have to put my hand on any one man who is capable of discharging the duties properly, let alone three.

1467. But if three competent men could be got, you would be in favour of it? I do not say whether paid stewards would be a good thing or a bad thing; but I think it would be better if our committee appointed three of its members to supervise the racing on any particular day; but up to the present they have never been asked to do it.

1468. Do you think it advisable to have a Court of Appeal in the way that has been suggested? That would depend upon what appeals the court would have to entertain. If it had to entertain appeals from every trumpery decision of the committee, I am not in favour of it, because I do not think it would be practicable. But if the Court of Appeal, on the other hand, were to be something connected with what I may call the higher politics of racing, it would be a different thing. I think, possibly, some good might be done by establishing a body representing the Victorian Racing Club and ourselves, and the South Australian and Tasmanian Clubs, and other racing authorities throughout the different colonies, to determine appeals; but to think of establishing a Court of Appeal where everyone would have the right to go with any trumpery matter, would, in my opinion, prove unworkable.

1469.

A. Knox;
2 Nov., 1900.

1469. But if a man had to lodge a certain sum before appeal? I do not think it would be practicable, for this reason—in order to make it effective you would have to meet pretty frequently, otherwise damage might be done to a man before he could get to a court of appeal; and if the members of it were spread over a considerable area of country, as must be the case in Australia, you could not have meetings frequently enough to be of any value.

1470. What was suggested by one witness, was that there should be two members of the Australian Jockey Club, and one from each of three different sections of the Colony, thus making up a court of appeal of five—that would not be very expensive? That depends upon how often they had to sit. I do not think it would be much good unless the clubs sent representatives conversant with their local conditions. If they sent people resident in Sydney, I do not think that would be much improvement on the present system; and if they sent people resident in their own district there might be considerable inconvenience in holding the necessary number of meetings. At present Randwick is the only place where a decision is final.

1471. *Chairman.*] Is there not this difficulty in the case of Randwick, that the committee are prosecutors as well as judges? Undoubtedly they are.

1472. *Mr. Taylor.*] Speaking of the "Mora" case—have you read the evidence? Not recently.

1473. Have you any idea of the number of witnesses that were called? I could not say.

1474. Fifteen or sixteen, say? Yes; there may have been.

1475. Are you aware that everyone of them exonerated the boy? I could not say; but if they did I should not be surprised at it. I went in that case mainly on what I saw. I believed I saw, and believe now that I saw, that Mora was "pulled"; for that the boy was responsible, because he was on top.

1476. But in the light of all the evidence that has been given in the case, are you still of opinion that the trainer and owner are blameless? Yes, absolutely blameless.

1477. Then these men ought to be pulled up for perjury? I do not say that. These men only came in to express their opinion. As far as I recollect, they did not see anything to lead them to suppose that the boy wilfully "pulled" the mare; but no doubt we could get a hundred people who would say that they did see the mare "pulled."

1478. It is the opinion of 95 per cent. of sporting people who saw the race that the mare was not "pulled"? I do not agree with you. I know this, whenever we see a glaring case and whenever we convict a man, there is sure to be some howling; and if we do not take action, there are people who declare that we are blind, and fail of our duties.

1479. Is it not a noticeable fact that every question that was put to witnesses by members of the Committee was in the direction of incriminating the boy and exonerating the owner and trainer? I do not think so.

1480. Was not every question put to the boy Fielder, put with the apparent object of incriminating the boy and exonerating the owner? I could not say off-hand; my only object was to get to the bottom of the thing.

1481. *Chairman.*] Coming back to the point of law—the question of boys being represented before the Committee? I do not profess to express the opinion of the Committee; but, personally, I should have no objection to a boy being represented if I thought we could safely do it; but I do not think we could.

1482. Why? Because for the same reason that we cannot admit the Press.

1483. Because of the possibility of libel? Yes.

1484. But where would be the libel? In the publication to an outsider. Whoever appeared for the boy would be absolutely an outsider. If I were called upon to give evidence, I would refuse point blank to give it until strangers were removed from the room.

1485. But could not all that be altered—could not a clause be incorporated in the present Bill that would remedy that? It might be done.

1486. Suppose you are invested with the necessary power? My experience is that the boys get more than fair play. I have had a good deal to do with courts of justice, where people are represented and others are not represented, and my experience is that the man who is not represented gets more than fair play. I would sooner fight a case against leading counsel than against a complainant in person, if he had any merits.

1487. That applies to adults? No. If you go to a court when a plaintiff in person is fighting a case the Judge very often fights the case for him. I do not think any Judge on the Bench here would dream of allowing counsel to ask an inadmissible question, if the other party was appearing in person, whereas he might allow it to be done if the other party were represented. You could not help the Committee forming a strong opinion on what they see with their own eyes.

1488. But in a case like that mentioned, does it not seem incredible that the Committee of the Australian Jockey Club allowed a week to elapse before they took proceedings? I said before, that though, in my opinion, it was a conclusive case, I wanted to get to the bottom of it, and we could only do that by waiting.

1489. *Mr. Taylor.*] But if you saw the boy actually pull the horse, should he not have been called up at once, instead of allowing a week to elapse? It did not deprive him of a single witness, or any chance of demonstrating to us that he did not pull the horse.

1490. In the meantime, did you get anything that convinced you either of the boy's guilt or blamelessness? Not until the evidence came out.

1491. But did it not seem to weaken the case in the eyes of the public, this leaving the case over for a week? I cannot see that it made the least difference, except that perhaps the public may have thought, by our not taking action at once, that we had not seen what we did. I think a good many people thought that we took action simply on what happened in Tattersall's Cup. That is an erroneous impression on the part of the public, which is due partly to the fact that we did not hold the inquiry at once. But I maintain that we had a right not to hold that inquiry at once, because we were endeavouring to find out who was the prime mover in the matter.

1492. But did it not convey the idea that you were not very confident as to what you saw? I think not.

1493. *Mr. Archer.*] Is it not a fact that different horses have a different way of running or finishing—that some horses are very quick to get away;—now, in such a case as this of "Mora," is it not quite possible that the horse was held back to the last half-distance post? Yes; and was then let go.

1094. Is it not possible that some of your committee saw it apparently "pulled," and if not cognizant of the way of her running, you were not exactly certain whether she was not waiting for a late run? It is quite possible.

possible. I am confident that if we had held the inquiry at once, people would have said we were in too great a hurry.

1495. *Chairman.*] It was stated here by one witness, principally on behalf of your institution, that no general complaints had been made throughout the Colony against the administration of the Australian Jockey Club? I said no complaints had been made to my knowledge.

1496. Would it surprise you to know that at the present time it is spoken of with a good deal of probability that a Northern Association will be formed of all clubs north and north-west of Newcastle? I have not heard of it; but if such an association is formed, I do not think that it would necessarily be antagonistic to the Australian Jockey Club.

1497. But if it is formed chiefly on account of dissatisfaction with the Australian Jockey Club? I know of no reason why the Newcastle Club, or clubs further north, should in any way be dissatisfied, unless it be on account of the way in which we dealt with the Maitland Club in the "Spry" case. In that case we prevented a gross miscarriage of justice.

1498. Something has appeared in the Press from time to time about a tramway to the Randwick Racecourse? That is being made now.

1499. Has it been agreed to by the club? Oh, yes.

1500. The club had some objection? I think not. We have always been trying to get some better means of access for the public. At present they have to cross a dangerous road, and our first idea, some years ago, was to have an overhead bridge; but that was blocked. I do not know how exactly. The Randwick Council may have objected. We have since been trying to get the Railway Commissioners to run a tram, so as to land our passengers at a convenient and safe place. My strong impression is that when the Railway Commissioners came to us and stated that they wanted ground instead of funds, we at once acceded.

1501. *Mr. Archer.*] There would be no loss financially? We have just sanctioned the expenditure of £1,500 necessitated by alterations caused by the tramway. That is another illustration of the necessity for us to keep something in hand for a rainy day.

1502. *Chairman.*] I read something to the effect that the Government wanted you to pay half the cost? I think it was a very wrong proposal. The tramway had been made along towards the rifle butts, right past the Kensington gates. So far as I know, the Kensington Club was not asked to contribute. The tram ran along the Bunnerong Road, and from that road to our back gate, is perhaps a quarter of a mile or so. We asked the Commissioners either to branch a loop from the Randwick Road into our course or from the Bunnerong Road. The Public Works Department wrote to us, I think, and said that the work inside our boundary would cost about £6,000, and asking what we were prepared to contribute. We stated that we were not prepared to contribute anything. I maintain that we ought not to have been asked to contribute anything, because it would largely increase the traffic on the tramways. We were being put to considerable expense, and there was no reason why we should contribute when no one else had been asked to do so. We afterwards found that this estimate of £6,000 was caused by elaborate shunting-yards and other things. We agreed to give them our present back entrance, and to buy an allotment of ground to make another back entrance for ourselves. We practically said to the Commissioners you can come on our land and put your tram where you like, and we will alter our arrangements accordingly. But we declined to contribute to what we regarded as a demand of an exorbitant sum of money.

1503. You have something which you desire to hand into the Committee? Yes; as I promised, I now hand in a list of fixtures of the Australian Jockey Club for the year 1900. [*Appendix B 3.*]

1504. I understand that you desire to make some statement to the Committee? I desire to refer to some of the remarks which Mr. Gillies made in the Assembly when moving the second reading of the Racing Association Bill. He is reported in *Hansard* to have said: "Another reason why I have brought this measure forward is that I know from my own observation that there has been plenty of stiff and crooked running on the Randwick Racecourse, and the committee of the Australian Jockey Club, many of whom are backers and owners of horses, have shut their eyes to some of the most palpably crooked of these events, while they have time after time disqualified horseowners, riders, and trainers for crooked work when, in the opinion of the public who witnessed the event, there had been nothing of the kind." That statement conveys the suggestion—whether intentional or not is immaterial to me—but it conveys a suggestion that members of the committee of the Australian Jockey Club wilfully shut their eyes in certain cases where they know that a horse has been pulled, whilst they take action in other cases where a horse has not been pulled. I repudiate that assertion. Then a little further on he is reported to have said: "Whilst we know that many acts of injustice have been perpetrated by trainers, jockeys, and horseowners belonging to the lower grade of society, at the same time we also know that the autocrats of the Australian Jockey Club, who do more betting than any other of the people of New South Wales, disqualify at their own sweet will jockeys, owners, and trainers, because they will not act as they require them to do when they have got a good deal of money on." I say that that is absolutely and entirely false. If Mr. Gillies was speaking from his own knowledge, then he ought to have stated the instances in which things of that kind happened, or if he was speaking from information supplied he should have given the names of his informers. I do not suppose there are any ten men who go to races who bet less than do members of the Australian Jockey Club Committee. I do not think there is a member of the committee who has ever more than £2 or £3 on a race. Many of them never bet at all.

1505. Still, in times gone by, you have had men on the committee who have bet heavily? Not, except on their own horses, for many years.

1506. Is there anything further you wish to explain? Yes; further on in his speech Mr. Gillies makes a worse insinuation by saying there were members of the Australian Jockey Club who got jockeys to pull horses. Personally, I do not think any member of the Australian Jockey Club ever did such a thing. Then he made a most wild assertion. This is what *Hansard* reports him to have said: "We know also that if, for some reason or other, members of the Australian Jockey Club have their eye on a good horse which is owned by an ordinary man, and if they make advances to the owner with a view of purchasing that horse, as they have done from time to time in the past, they will take such steps as will compel the unfortunate owner to sell at their own price. What are the steps that they take in order to obtain a good horse? They simply delegate someone to lay a charge of stiff riding or crooked work against the unfortunate owner of the horse that is going to be a "ringer" in the near future; and, without going

very

A. Knox.
2 Nov., 1900.

A. Knox, 2 Nov., 1900. very far to look for evidence in substantiation of the charge, they disqualify that horse, its owner, and its rider for years, or perhaps for life." He there charges members of the Australian Jockey Club Committee with the grossest corruption; and he makes the charge on his own personal authority and knowledge; and what I want Mr. Gillies to do is either to come forward and state it on oath himself, or bring forward any credible witness who will state it on oath. To show how baseless the charge is, I should like to point out this: During the last five years, I believe I am the only man on the committee who has bought a racehorse, other than a yearling—that is, a racehorse that has raced. The horse that I bought was "Loch Leigh," which I bought from the trainer for £100. The other was a horse called "Speculation," which Mr. Payten bought for me last year at Newcastle, for the purpose of running at a small picnic race-meeting at Goulburn. Other than that, I do not think that any member of the committee has bought what is called an exposed horse during the last five years. Then there is another charge made by Mr. Gillies. He said:—"We have instances upon record which, upon investigation, could be proved up to the hilt—instances where honest, good boys have been disqualified for two or three years, and deprived of their means of gaining a living, because they refused to submit themselves to the rule or the orders of members of the Australian Jockey Club, or representatives of those members who had put their money on the horses." That is a vague charge to make; and until instances are brought forward, I am entitled to say that I believe the statement to be utterly untrue. Then Mr. Gillies said, "In many cases the Australian Jockey Club have tried, condemned, and sentenced the supposed defendant before he has been called upon for a reply." That is absolutely untrue, to my knowledge, extending over the past five years. In no case is any man condemned without being heard. A man may have been refused a license without being heard; but there has not been a case where a man has been subjected to a penalty without being heard. Then I come to another statement made by Mr. Gillies. He says, "I myself have been an eye-witness to some of the proceedings of the Australian Jockey Club." That may have some reference to the "Spry" case. In regard to that case, I hope that the papers will be produced. They will show that the Northern Jockey Club, at Mr. Gillies' instigation, or other persons responsible for it, were guilty of dereliction of duty. They attempted to hush up a case of "ringing-in." It was only through their handicapper, whom they discharged for insulting the committee; it was only by his writing to us that we got wind of it in time to refrain from confirming the disqualification. We inquired into the whole matter, with the result that we disqualified two men and a horse for life, and made the Northern Jockey Club pay the costs of the inquiry, which amounted to about £50. In my opinion, we dealt too leniently with them. Then there is another part of Mr. Gillies' speech I would like to call attention to. He said: "They have races in Sydney almost every week, whilst country racing clubs they can only register and only race at the will of the Australian Jockey Club." That is entirely erroneous. The Australian Jockey Club exercises no authority over the fixtures of clubs beyond the 40-mile radius. These are the chief matters which I desired to make clear.

WEDNESDAY, 7 NOVEMBER, 1900.

Present:—

MR. J. C. L. FITZPATRICK,

MR. ARCHER.

D. WATKINS, ESQ., IN THE CHAIR.

Samuel Robert Kennedy sworn and examined:—

- S. R. Kennedy, 7 Nov., 1900. 1507. *Chairman.*] What are you? A commission-agent.
1508. What experience have you had in connection with racing extending over what time? I have had twenty-five years' experience in horse-racing. I have been horse-racing twenty-five years.
1509. In this Colony? New South Wales. I have been horse-racing between twenty-four and twenty-five years.
1510. Has your experience been confined to the metropolitan area? Yes, simply.
1511. Simply to the metropolitan area? Yes, simply. I have at periods gone to the country, but latterly I have not. Years ago I went to the country, just for pleasure and to take a holiday—to Mudgee and Newcastle.
1512. Have you been connected with any of the principal clubs in the metropolis? I have been a member of the Australian Jockey Club for twenty years.
1513. For twenty years? Yes.
1514. Have you ever held positions in connection with the club in any way? No.
1515. Never? Never. I am connected with the Warwick Farm Club now. I have certain duties to perform there like the stipendiary steward—to report to the stewards whatever matters connected with racing I may see.
1516. It has been given in evidence here that the racing of the Colony is practically controlled by the Australian Jockey Club by force of circumstances;—is that a correct way of putting the position? That is a correct way.
1517. In connection with this club as a governing body, do you think the method of government could be improved upon in any way? I decidedly do. I would like to say, preliminarily, that anything I may state here to-day as regards the management of the Australian Jockey Club, is not dictated by any personal animus or spleen against the club. Against any of the individual members of the committee I have no grievance. I have nothing to say personally against any individual member of the committee. It is merely in the interests of racing that I am giving any information or knowledge that I possess. It is collectively I speak of them. I would like you to make a note of this. Individually the members of the committee of the Australian Jockey Club are gentlemen of very high standing, and to be trusted in all matters outside of their ordinary functions. The Chairman is a gentleman against whom the slightest accusation of unfairness could not be made.
1518. That is the present Chairman? The present Chairman; but when you get them collectively they seem to become homogeneous altogether in their actions, and autocratic. That is my impression. They are so simply "by force of circumstances," as you put it.
1519. Have they given satisfaction to the clubs generally in their method or mode of racing in this Colony, in your opinion? If you take the proprietary clubs and ask them, I should say "No."
1520. Could you say anything with respect to the country clubs;—has anything come within your observation? I could in this way: At the last meeting of the Australian Jockey Club I had occasion to bring

bring up some alterations in their rules which I thought would be beneficial, and I then quoted a letter which I will show you, written in one of the Newcastle papers. It may be of use to you. I have the whole of the balance-sheets of the Australian Jockey Club for the last ten years; they may be useful to you. This is a letter that appeared in the *Daily Telegraph*. It contains some comments made by Dr. H. Martin Doyle. This embraces the sentiments of most of the racing clubs of the country. These comments were made at a meeting of the Newcastle Jockey Club:—

S. R.
Kennedy.
7 Nov., 1900.

Dr. H. Martin Doyle said he thought the action of the Australian Jockey Club should be protested against. It was in keeping with the actions of that body for some years, and he was bound to say that if the Australian Jockey Club continued to treat country clubs as it has of late, those clubs would be bound, in self-defence, to make a stand. He had no doubt that if the country clubs were to form an association which would include the whole of the clubs racing outside of the Sydney area it would have very great strength, and would have its opinions registered by the highest authorities on racing. The Australian Jockey Club was a club which was dominated by Sydney, and it had arrogated to itself the right to be the Parliament of horse-racing in New South Wales. The committee of the Australian Jockey Club was elected by an extremely small body of men. It was practically a close corporation, because entrance fees and subscriptions debarred a large number of the best racing men from joining it. The committee was also elected on what he might call a very high franchise. Any organisation which wished to have its edicts carry proper weight should be a representative body. (Hear, hear.) No authority should be allowed in New South Wales, as regards legislation for sport, which did not properly represent the sporting public of the whole of the Colony. (Hear, hear.) He moved that a firm protest be made on behalf of the Newcastle Jockey Club against the action of the Australian Jockey Club in its dealings with Mr. Robert Fleming, the late secretary.

That is referring to some letter which they had written to Mr. Fleming as regards his duties as secretary of the club.

1521. You think that conveys practically the feeling of the country clubs generally? I do, sir; I think it does, from my own personal knowledge.

1522. Would it be correct to say that they feel that they should be represented upon whatever central body governs racing? I should think it would be only fair, and only what we should expect in racing.

1523. Do you think it would be practicable in a Colony like this? It would be practicable in this way. Under the Bill, as I read it, I think twenty-four members would be rather too much to expect. I am rather inclined to follow the ideas of Mr. Thomas Willis, who gave evidence here. If four representatives from the different districts were allowed to act with this committee it would have a very good effect. It would have the effect of appeasing the dissatisfaction which exists among the country clubs.

1524. If a statement were made here that it would be impossible to get men in the country fit to carry out the duties of committee-men in a central executive, would that be correct? No; because the Australian Jockey Club committee now is comprised of men who actually live in the country.

1525. Who do live in the country? Yes. Take Mr. Dowling; he lives away from town. Take Mr. H. M. S. Cox, who has just resigned—he lives in the country. You will find that a lot of the members here actually have lived in the country at different times—members of the committee, I mean—and have not attended, as I think they should, to the working of the Australian Jockey Club. They have not devoted the proper time to it. Mr. Busby has been away. He was actually one of the committee, and he has been away in England. He was half of his time upon his station. There would be no difficulty, I think, in getting men from the country. Anyhow, I think any change in the present system of the Australian Jockey Club committee, as it is constituted, would be an improvement.

1526. Do you mean by that they have managed very badly? I maintain that any other place in the world with the same facilities, and the same natural advantages that the Australian Jockey Club have, with their Randwick racecourse at their disposal, would have made the Randwick racecourse the prime, the leading racecourse in Australia. There is no course in the world which has such natural advantages as the Australian Jockey Club course for all kinds of racing.

1527. It is not the leading one? It is not. As regards the prizes it may be, simply because this is the oldest Colony; but as regards the management of racing, Victoria, South Australia, and New Zealand are all a long way ahead of it in every detail.

1528. If it were given in evidence here that the other colonies were inferior to this Colony in the management of racing, would that be a correct statement to make? No. No colony is inferior to New South Wales in racing matters.

1529. Not in racing matters? No; not to my mind. How can you expect it to be so when the Secretary admitted in his evidence that he had not been out of the Colony for twenty-seven years. Under those circumstances, how can he judge of the racing affairs of other colonies?

1530. Do you know the method of management of racing by the committee; in what respects do you think they fail as a committee? As a committee they have adopted certain rules and regulations which to my mind are very drastic. They elect their committee by a system which ought not to be tolerated in any civilised country. They elect their committee by a proxy form. Nine years ago I moved a resolution to alter the style of voting, if possible, to give a broader representation of racing men on the committee. I moved that the committee be elected by members who devoted their time to attend the meetings, which, I think, would be a better form than sending papers to the country and having them collected in Sydney here, when it is a well-known fact that one man collected over one hundred proxies, and practically bunched a ballot for the particular men they wanted on the committee. They are sent to the office. They are returned. This was a motion that I brought on in 1895. It was to repeal the system of having voting done some time before the election. The ballot-papers are put into a box and sent to the Australian Jockey Club office, and we do not know what becomes of the papers. There they are. I proposed that Rule 26, under the head of "Management," be altered, to read as follows:—

After the word "shall," in the fourth line, "hand to each member present at the annual meeting of the club, a paper, on which is printed a list of candidates who wish to serve on the committee, and who may have been proposed and seconded as prescribed in Rule 24, and any member present at the meeting wishing to vote shall erase the names of such candidates as he may not approve of, retaining no more than the required number of candidates."

That was to have the system of voting altered from the proxy system of sending in the papers from all over the country, so that the men re-elected would be able to devote their time to the meetings in Sydney.

1531. Do not you think that people living in the country should have a voice in the election of the committee by any other method than by proxy? Certainly. I should think it would be much better if they had their own representatives to represent them on the committee.

1532. Under a new system, by sending their own representatives? Yes.

S. R.
Kennedy.
7 Nov., 1900.

1533. But would it not be an improvement even upon what you suggest there under present conditions if they were allowed to vote themselves and post their ballot-papers to the Secretary? That is the way they do at present, but that is what I object to.

1534. That is not voting by proxy? It is a peculiar kind of voting. The papers are sent to the members, and they return them. I will show you: We tried to get a member on the committee, and I, myself, collected thirty-two ballot-papers. This was at the time when we were allowed to plump for one man. We scratched the whole thirty-two and voted for one man, still he was at the bottom of the poll. The top of the poll was 150, or something like that; our man was at the bottom of the poll, yet we plumped directly and gave him thirty-two votes. It may be all right, but it does not look so to the outside public. We want things carried out in a way that will please the public. The public are becoming very incredulous over these matters, and we would like to see everything done fair and square.

1535. You object to the method anyhow? Yes.

1536. Taking the question of the management of racing on the course, do you think that the system adopted by the Australian Jockey Club of leaving the watching of the racing generally to the whole of the committee is a wise thing, or do you believe in the appointing of set stewards to watch the racing? I do not believe there are five members on the committee who practically could tell whether a horse is "stiff," or whether he has been ridden out, or what he is capable of doing. There are not five men on the committee who could tell. They have never ridden a horse—in fact, they have never devoted any time to racing affairs. They cannot tell what a jockey is doing on top of a horse by simply looking at a race. They are not capable of judging. I hold, and think, that there should be paid stewards appointed. I brought that matter up repeatedly at their meetings, not recently, but years ago—that there should be paid stewards. In 1896 I brought up a motion to that effect, but, of course, my motions fall very flat. Some of the papers attributed to me want of backbone, but I did not want backbone. I wanted backing up in my ideas. I moved—

That in the opinion of this Club it is absolutely necessary that a stipendiary steward should be appointed to attend all race meetings, and report to the Australian Jockey Club all cases of suspicious running, foul riding, or malpractices of any kind detrimental to the interests of horse-racing.

That was one proposition. At the last meeting of the Australian Jockey Club I brought forward a similar motion, except that it did not read exactly in the same words.

1537. It was to the same purport? Yes; that the Australian Jockey Club appoint three of their own committee to act as stewards of the day, and not in cases of appeal; that these three stewards should sit and actually adjudicate upon cases which they had already committed, but that these three stewards should be delegated to look after races. They do not delegate any stewards to look after races at the Australian Jockey Club.

1538. There is no system? No. In South Australia they are a distinct body. There are five stewards and six committee-men. The stewards do the work of the day on race days. That is in South Australia. In Victoria it is the same. It is also the same in New Zealand and Queensland. There is no Club in any part of the world that I know of where one body of men practically acts as a committee, and where cases are referred back to the same committee which has already judged cases of stiff riding or malpractices. There is no court of appeal that I can see.

1539. *Mr. Fitzpatrick.*] Practically the committee are judge and jury? Practically the committee are judge and jury, and they will not stultify themselves. It would be very silly if they backed down after once doing a thing. After a great deal of trouble you might get what is called a rehearing of a case.

1540. *Chairman.*] That is by the same people? By the same people. They may be honourable gentlemen, but the public cavil at this kind of thing; they do not like it. If you or I had convicted a man of a crime, you would not be so silly as to stultify yourself by repealing your decision unless you had very glaring evidence.

1541. It seems, from what you have stated, that many members of the Australian Jockey Club have, from time to time, tried to improve the method of governing? The members of the Australian Jockey Club are very apathetic.

1542. But some of them have attempted it? Yes, I have, and I have been assisted by one or two others; Mr. Crick, for instance, assisted me in a certain way, but he had no weight with the Australian Jockey Club.

1543. How do you account for it that they are able to prevent any amendments, or will not submit to any amendments of that description being made. What is the reason for that? Clannishness, cliqueism, I consider.

1544. Simply cliqueism? Simply that.

1545. Would it be correct if it was stated here in evidence that the whole of the members of that committee are elected, from time to time, from two well-known clubs in Sydney? It is well known that they are. It is common talk that if the Australian Jockey Club want to get any men on their committee they have either to be members of the Union Club or the Australian Club, and then they can put the particular men they select on the committee.

1546. With regard to this Racing Bill, do you think that that Bill, with the modification which you suggest respecting the number of country representatives, would be a vast improvement upon the present system? It would appease the public. It would satisfy the public, who are very incredulous about racing affairs generally.

1547. Would you approve of any form of appeal, or any court of appeal, from a Board of that description; or would you form them into a board of appeal, or what? I think the public would be quite satisfied to take their risk, and get honest dealing under the Bill in a modified form—not to have so many representatives on it. I think they would be quite satisfied to have this court of appeal. It would satisfy them in cases where it is necessary to appeal to a higher court. It seems feasible that that should be so.

1548. With regard to the position of public clubs, as I suppose you would call them, as against proprietary clubs, has the Australian Jockey Club done anything at all, by way of abolishing private clubs, or preventing them from being established? You do not refer to pony-racing. You mean proprietary clubs?

1549. We will take the other ones first—proprietary clubs? If the proprietary clubs had more latitude than they get under these rules, I think they would give far larger prizes. Some time ago the Rosehill Club

Club launched out with a thousand pounds' cup. If they had got any encouragement from the Australian Jockey Club they would have continued that, but they were not allowed to give any big prizes before the big meeting of the Australian Jockey Club.

1550. Did the Australian Jockey Club prevent them from giving a big prize? They prevented them from giving a big prize, because, so far as I can remember, it would clash with their races here. Any innovation that has been caused in racing has come from the racing people—from the Rosehill, and other proprietary clubs. It would be impossible to knock anything new into the Australian Jockey Club Committee. They seem to be about fifty years behind every other racing tribunal in Australia.

1551. Who was the originator of the proprietary club at Warwick Farm? I think the Warwick Farm Club as originally called Brush Farm.

1552. *Mr. Fitzpatrick.*] John Bennett? John Bennett—John Bennett originally formed it into a club.

1553. *Chairman.*] Originally? Yes, and went to great expense; I forget how many hundred thousand pounds.

1554. I am talking of Warwick Farm; that originally belonged to Mr. Long? I believe so; and then it became Mr. Forrester's property by some means.

1555. Was it in Mr. Long's time that this proprietary club was formed to race in? No. It was purchased from Mr. Forrester, I believe.

1556. Was that subsequently to Mr. Long owning it? Yes. I think it was originally Mr. Long's property, and Mr. Forrester by some means got some portion of the estate, and he formed a training park; then it was formed into a proprietary club, of which the late Mr. Jack Thomson was a member, and a lot of others, and gradually Mr. Oatley put a terrible lot of money into the club, and improved the place wonderfully; then it eventually, from stress of times, fell into the hands of the man who had the most money in it—Mr. Oatley. I think it belongs to him totally now.

1557. Are those clubs, Warwick Farm and Rosehill—I take them as an example of proprietary clubs—as well-conducted as the Australian Jockey Club in racing transactions? Every bit.

1558. They carry as high a standard then in your opinion as the Australian Jockey Club? They do, and more than that, I think the Kensington Pony Club is an example to the Australian Jockey Club in the way of managing affairs—that little place where the ponies are—because they will mete out punishment when it is deserved, which they do not do at the Australian Jockey Club. They must have been very blind in instances that I have noticed.

1559. You think they have been lax in their efforts in meting out punishment at Randwick? The intention is good, but they have been certainly lax.

1560. Have they in any cases at Randwick gone to the other extreme, and either by accident or otherwise, punished the wrong people? They have.

1561. They have done that you think? Indeed they have, by mistake. For instance, some nine years ago which is a long time to go back, but it is a case that comes to my mind, there was a horse called "Friction." He ran at Canterbury in a mile welter, but he did not win it. A week afterwards he ran at Randwick, in a 2½ mile hurdle-race, and won. There was not a word said about any stiff running at Canterbury. The public and the committee thought something was wrong. I do not know whether there was or not. They had the owner up, they had the horse up, and they had the jockey up, and they disqualified the whole lot for life. A week afterwards at Randwick, as I say, the owner said nothing about the first race, and they did not disqualify him for running at Randwick, but they disqualified the man and the owner for not winning at Canterbury a week previous in the flat race. It was certainly an extraordinary thing to do, because, to my mind, there is no analogy between a hurdle-race and a flat-race. That is one instance I think of. It was very harsh treatment.

1562. Do you think of any other instance? There are many other instances; but I cannot think of any just now.

1563. *Mr. Fitzpatrick.*] More recent? I suppose you refer to the "Mora" case.

1564. *Chairman.*] We would rather you would select your own case? Because the Mora case caused a great sensation; and if I was asked my opinion as a disinterested spectator of the whole business, backed up by the public, and what I have heard them express, I should say they have taken the wrong man;—that they have punished the wrong people.

1565. They have punished the wrong people? They have punished the wrong people.

1566. Did you see the race on that occasion? I saw both races.

1567. That was a case where the matter was allowed to stand for a week, was it not, before any action was taken? Yes, a week—some period—a most extraordinary thing to do, because if the horse had run "stiff" at that particular time, it was the duty of the stewards, the committee, or whatever they call themselves, to have had the owner reported, and have had the jockey up, and dealt with it there, and not to let it sizzle up, and listen to hearsay and rumours that go on in a week. If the boy pulled that horse, he should have been dealt with immediately. Why let it go for a week?

1568. You say you saw both races? I saw both races.

1569. Would you think from what you saw that that mare ran "stiff" at all in those races? I was under the impression that she ran "stiff."

1570. How do you explain that they punished the wrong lad, if she ran "stiff"? I think the boy rode very very badly. That was my impression, that the boy rode badly.

1571. Still, you do not think he pulled her? I do not think he deliberately pulled her. I think there was something else wrong that we do not understand or know, or else the mare was in bad order; she would not race.

1572. She would not race? Perhaps not. I can illustrate an instance, in my own experience, of how horses race differently. I had a horse at Canterbury in a 6-furlongs race, and backed it down to 6 to 4, and absolutely lost. It was a horse called "Glen Elgin." I took the jockey off, and put the stable-boy on in a mile and a furlong race at a later period of the day, and won by about 30 yards. Now, if anybody had owned the horse but myself, I should have said that she was "stiff" in the first race; that she was not trying; but I am sure she was trying. She was badly ridden, and the horse would not race a bit. She got behind, and would not go through.

1573. You think they made a mistake in the "Mora" case? I think the intention of the Australian Jockey Club was very good to ventilate the case, but I think they have punished the wrong people. Anyhow, I would not have punished a boy of tender years riding a horse, because the boys are at the call

S. R.
Kennedy.
7 Nov., 1900.

of the trainers. The trainers get their instructions from the owners, and if you want to punish anyone you should go to the fountain head, and punish the owner and the trainer, but do not punish boys who are merely the servants of others, and who are told to do a certain thing, and if they do not do it they will put up another jockey who will do it. It is their bread and butter—their livelihood.

1574. Do boys sometime do it against the owner's and trainer's wish? I have been racing for twenty-five years, and I have never had a jockey deliberately pull a horse, to my own mind, when I knew that he was trying.

1575. That is to say, without instructions? Without instructions. I have been racing for twenty-five years, and have never been before a committee for "stiff" running, or anything of that sort. If a man knows a horse is not well he lets it go; he does not say anything; he gives it a run; that is natural.

1576. Do you know of any other cases where you think the Australian Jockey Club method of management could be improved upon? If there was a larger scope given for representation it would be better in every way, would it not?

1577. Would you put down pony-racing, for instance? No; if the Australian Jockey Club would allow one pony-race in their meeting, once a month or once a fortnight, it would encourage those who are unfortunate enough to breed small horses. Small horses are almost as good as large ones, to my mind. I take the instances of "Fitzroy," "Jean," and "Djin Djin," which have come from pony-racing, and gone in and won big races with horses.

1578. I understand from that that you have known of ponies which have raced as ponies, and have afterwards come out and won in big races? Dozens of them. Sir Rupert Clarke had a horse called, I think, "Metallic" brought here. There was some trouble over in Melbourne. He wanted to run his pony, and he was practically disqualified for running this pony, but I see he has been reinstated. Referring to these balance-sheets, there was not one of the members of the Australian Jockey Club who was game to ask what salary the Secretary gets. I never knew until I saw this evidence that the Secretary gets £900 a year, and I have been a member of the club for twenty years.

1579. *Mr. Archer.*] Does Mr. Clibborn get £900 a year? £900 a year from this club. What makes people think that racing is not carried on as it should be, and that there is not a proper class of gentlemen governing these affairs, is that he has got another club called the Sydney Turf Club, which no one knows anything about. They never publish a balance-sheet. They condemn proprietary clubs, but if that is not a proprietary club what is it? It has no members. It is merely controlled by the Secretary, Mr. Clibborn, and his assistant, and some gentlemen on the committee. What becomes of the proceeds I do not know. No one knows. People cavil at these things. They do not like to have this going on when they are objected to for other matters.

1580. *Mr. Fitzpatrick.*] The Sydney Turf Club usually gives Saturday afternoon racing, does it not? They usually give some very large prizes too.

1581. Do you know what the object of this Saturday afternoon racing is—that is, the racing that is promoted by the Australian Jockey Club, or run by the Sydney Turf Club? The Sydney Turf Club have only certain days a year allotted to them, but the Australian Jockey Club appropriated some extra Saturdays to race on. Ostensibly the object is to get all the money they could into their coffers from racing.

1582. But really to prevent some of the proprietary clubs from taking those afternoons? Yes; they might well dispense with them, because they say they lose by them—in fact we do not know what the Australian Jockey Club make, because the only balance-sheet we get is lumped up in such large sums that we really do not know how the money of the Australian Jockey Club is disbursed. We are not supposed to ask. They look at me like a naturalist looking at a new kind of beetle when I get up to ask a question—they look at me like a magpie looking at a pigeon. They think I have no right to ask these questions. I have been a member for twenty years, as you know, and I have as much right to know the working of the Australian Jockey Club as the Committee have.

1583. Does every member have equal voting power in the election of members of the committee, &c.? Every member gets a ballot-paper, scratches out the names of those who are repugnant to his ideas as committee men, and leaves the number that is required on. If there are any more or less left on, the ballot-paper is infernal.

1584. With regard to scrutineers, is the same system adopted which is usually adopted in Municipal and Parliamentary elections in connection with the counting of the votes, and so on, or what system is adopted? The scrutineers are appointed by the members present. They appoint two scrutineers who take out these papers, and go through them, and give each candidate the recorded number of votes.

1585. But still it is competent for any member who is interested in securing the election of particular gentlemen to the committee to go round and gather in a number of proxy votes, is it not? It is a well-known fact that a well-known gentleman of the committee had over 100 proxy papers in his possession. I had thirty-two in one instance in my possession, not this time, but ten years ago. I collected them myself. I could vote as I liked on them.

1586. You think that a different result would be achieved if this proxy system were put an end to—that is, the gathering together by an individual of a large number of votes in this fashion? Even if it did not have the desired effect, which I think it would have, it would give more satisfaction to the public, and lead them to believe that the election was carried on on a fair basis.

1587. I presume that you noticed recently in connection with another vote that was taken in the Colony, how that system of gathering together proxy votes was defeated? You refer to the Australian Mutual Provident Society?

1588. Yes? That is an illustration which is very similar. There are no corporate bodies that I know of which vote in that way, except the Australian Mutual Provident Society and the Australian Jockey Club. The Cricket Club for instance, and the Bicycle Club, I think, vote by the members present.

1589. Do you think the system under which the Australian Jockey Club has been conducting racing of late years has been detrimental to the interests of country racing clubs? It is the surfeit of racing in Sydney which has caused this centralisation of racing. If it could be decentralised, which it could be, if there were fewer days' racing it would be much better. When the Australian Jockey Club raced about eight or nine days in the year country people patronised their own clubs. A few years ago at Grafton, for instance, they gave a £500 prize which has come down to £50. That is because the racing is all now congregated in one spot, as it were, about Sydney, because there are so many races that if a man has a horse

horse with which he misses one day he can come in the next day, and get his horse in a race to pay expenses. This has been the cause of the whole of the races deteriorating in the country, because there has been too much racing in Sydney.

1590. *Chairman.*] There are too many days in Sydney? There are five times too many. With pony-racing and horse-racing I should think there are 360 days racing in a year.

1591-2. *Mr. Fitzpatrick.*] You have to take the Sundays out? Three hundred and sixty days, I should think. Sometimes there are two meetings a day—at Forest Lodge one day and some other place next day. There would be 360 races in a year.

1593. *Mr. Archer.*] Do you think the proprietary clubs are detrimental to horse-racing? No, sir.

1594. Do you think that by allowing a representative from the country clubs to sit on the Australian Jockey Club committee it would be better and more fair? Of course, it would be fairer. It would be more in keeping with the public idea of democracy. As it is now, it is too autocratic. Take the case of Mr. Levien. He is a bluff man. Outside of the police court he is a man who is not afraid of anything, but when he comes into a meeting of the Australian Jockey Club, he becomes as sleek as a sealskin muff. They all seem to become imbued with some hypnotic influence when they get there.

1595. *Mr. Fitzpatrick.*] I think there is something in the atmosphere in the Australian Jockey Club rooms? They do not give you anything there very strong. They do not even give you a dinner when you go to the meetings, or a glass of beer. I am a pretty courageous individual, and am not frightened of any man who is fair and square, but when I get before the Australian Jockey Club committee I begin to squirm. They take the conceit out of a man simply by their chilliness.

1596. Do they keep a rack and set of thumb screws on the premises? They do not keep anything there for the committee, at least the members never get anything.

1597. *Mr. Archer.*] Do you think that the amount enforced by the Australian Jockey Club on these country clubs is detrimental to racing; for instance, I believe, they have to race for £400;—is not that too much? The proprietary clubs?

1598. Yes? No.

1599. You do not think so? I do not think so. I proposed some time ago that there should be no race for any horse under £100. That seemed too severe, but that was my idea of the matter. That was one of my motions.

1600. *Mr. Fitzpatrick.*] That would have made it up to £500. It would have to be a five race programme? Yes.

1601. *Mr. Archer.*] Do you think the nature of hearing evidence at the Australian Jockey Club is working to the best advantage? No, sir.

1602. Then you think that the public, or the Press, which is the public, ought to be admitted? I really think so. I see that Mr. Knox said there would be danger of libel cases, but there would be no danger of libel cases so far as the Australian Jockey Club is concerned. The press take the responsibility of publishing evidence, and if they commit themselves they are responsible, and under the new Act I see that they have a deal more latitude in giving effect to what they think than they had previously. It is a great innovation, to my mind.

1603. Do you think a boy—I suppose some of them are as young as 14 or 15 years old—ought to be represented before the Australian Jockey Club committee by some legal gentleman, or some protector. As you say they make you squirm when you go before them, and you are pretty well able to take care of yourself, Mr. Kennedy, how much more must these boys squirm, what must be the condition in which these boys must be? I ask you, when you were 13 or 14 years of age, how you would have felt. You are a pretty hard case now.

1604. I have got my own opinion. I am asking you for your opinion? My opinion is that a boy of 14 is not capable of conducting an affair of the kind, or answering inquiries chosen in opposition to what he has said previously, especially when you get men such as Mr. Dangar in the Chair who is very clever, and Mr. Knox, who is a barrister, and is accustomed to cross-examine people. It seems a ridiculous thing that a boy should be expected to answer questions of the committee without committing himself in some way or other.

1605. Then you are fully of opinion that the investigations should be more open? Decidedly more open. And where a man or a boy is brought up before them he should be allowed to bring witnesses? As many as he chooses, and he should be represented by some man who is capable of getting fair play in a Court of Justice.

1606. Why I ask you that, Mr. Kennedy, is that one of the committee has said here that it is quite enough for them to see a thing; I suppose they are not infallible; that is my idea;—do you think they might make a mistake? Some of them might. I think about half of them could not see anything, especially after lunch. I could put my hand on three of them who could not tell you which way a horse was running. Some of them, of course, are very cute men. I do not say they are all so, mind you.

1607. You are still of opinion that they are quite liable to make a mistake? Yes.

1608. Every latitude should be given to bring forth evidence where anything has occurred, because I suppose you will admit that a good deal of it is prejudice, sometimes, or the man thinks he saw a thing? Yes.

1609. In your travels and transactions with horses have you not found that they are very difficult things to manage at times;—what I mean by that is that they are not bound to run alike for two days? They are not; indeed, and I might tell you that when a man, no matter who he is, even if he is a moneyed man, has got £2 on a horse, he loses all interest in everything else that is in the race to concentrate his eyes on the £2, the same as if you were playing whist with a gentleman, and he loses a pound, he is just as severe on you as if he had lost £100.

1610. You think more latitude should be given to boys? More latitude should be given to them. You read accounts of boys riding races. Not one of them could tell what post he came away from, or at what post he gave the horse the whip. It is all over in a flash. The words are put into their mouths. If you were interviewing the jockey who rode "Clean Sweep," I do not think he ever knew where he was half the race. I have ridden races myself, and I did not know where I was.

1611. *Chairman.*] That is to say, he could not locate different things afterwards? Not unless he was a very level-headed boy or level-headed man. They may say they can; but my impression of boys is that they cannot.

1612. They cannot do that? No.

1613.

S. R.
Kennedy.
7 Nov., 1900.

1613. Are you of opinion that the members of the executive committee should not bet? It would be a great deal better if you could get gentlemen to preside there who do not bet. I framed a motion to that effect at the last meeting—that any man who is known to bet should not adjudicate on that particular day.

1614. How was that motion received? Received with enough coldness to freeze Captain Cook's monument.

1615. Do you think it right that a self-asserted body should impose taxation upon country clubs, country horse-trainers, and others, without their own wish or authority? Well, the taxation that they do inflict is very little—only £1 a year. I think that is what the registration is.

1616. For the club? Yes; for the club.

1617. The boys pay the same? Yes; the boys pay £1.

1618. The trainers? They pay £1.

1619. The bookmakers? Very large. They pay £25, I think, at Randwick, and £10 for the Leger.

1620. Have they not to pay £1 to the Australian Jockey Club to bet on a local country course, and also to pay the local club;—for instance, at Hawkesbury they have to have a license? They have to pay the other clubs. They pay Warwick Farm, say, £5 a year.

1621. In addition to that, do they not have to pay the Australian Jockey Club? They still have to be licensed by the Australian Jockey Club.

1622. That imposes a double tax? Yes. This is the motion that I brought on:—

Any horse-owner, trainer, or jockey, or any servant connected with the club shall have the right to appeal to the committee in any case in which they have been found guilty at any race meeting for malpractice or for any cause connected with racing. Such appeal to be accompanied with £5, which may be forfeited or returned, as the committee may think fit; but in no case shall a steward or stipendiary steward be allowed to adjudicate or sit upon any case in which they have already found the offender or offenders guilty, but may appear as witnesses only.

That was one of my motions, but it met with the usual result.

1623. With the usual result? Yes. And this was another motion:—

The committee shall appoint three stipendiary stewards to attend all race meetings within a radius of 40 miles. The aforesaid stewards to act solely at such meetings as the Australian Jockey Club may determine. Each club shall subscribe to the Australian Jockey Club the amount necessary for payment of said stewards.

1624. Were those motions of reform opposed openly by the members of the committee by speech or otherwise? One of them was seconded by Mr. Crick, but it resolved itself into the nominator and the seconder being the only ones in its favour. I went on with the others as a matter of duty, but they were not seconded, consequently they were not dealt with or carried.

1625. *Mr. Fitzpatrick.*] There was nothing so very unreasonable about those propositions that they should not meet with, at any rate, some support? There was nothing unreasonable about them. It was only in the interests of racing that I brought these motions forward. I had no personal motive in bringing these motions forward.

1626. There was nothing revolutionary about them? No. Another motion was:—

The committee shall appoint five of their members to act as stewards of the day at each meeting held at Randwick under the auspices of the Australian Jockey Club, each steward to receive remuneration at the rate of not exceeding three guineas per day.

1627. They would be their own stewards for that day.

1628. *Chairman.*] That would put those men in the proper position as prosecutors who would have to give evidence? Yes, who would have to give evidence.

1628½. And they would thereby be subject to cross-examination, and they would be separated from the tribunal which judged? That is what I want; that is what they all want; that is what the public want. Men do not like to be judged by the same people twice.

1629. *Mr. Archer.*] You have raced at Randwick? Yes.

1630. Which gives you the knowledge you are offering us here now? I have owned horses, raced horses, and ridden horses, always my own, for the last twenty years. On the old Liverpool course, I rode myself. I am speaking unbiassedly. I have no spleen, as I said before, against any of the committee. It is merely in the interests of having racing conducted on a fair basis that I am giving my evidence.

1631. *Chairman.*] With regard to those balance-sheets, you say that the items are so bulked together that it is impossible for you to find out what salaries are paid, or anything? Yes, it is impossible. They put them in such large amounts that when one gets up one is not game to ask—the members do not ask.

1632. They do not ask? They do not ask.

1633. Would the information be given were a person to ask? I do not think the members have access to the books. The members have actually got no power. The members have no power to repeal any regulations which the Australian Jockey Club like to make. I brought up a lot of regulations to be repealed, but failed.

1634. That is, that the committee make? Yes. They were ruled out of order, because under some rule which they have they arrogated to themselves certain powers by Act of Parliament to make by-laws, and that private members could not have them altered in any way if the committee did not take it in hand to do it. What is the good of the members? We are all puppets here. We have no control over the affairs of the club at all. Only the committee have control.

1635. *Mr. Archer.*] You mean to say that there is such a keen interest taken in the subject by a certain class belonging to the Australian Jockey Club that it is impossible to bring in any fresh rules? It is impossible for an outsider to have the rules amended or altered in any way except by special favour of the Australian Jockey Club committee, which must be obtained by writing to them.

1636. *Chairman.*] By the committee you mean? By writing to the committee—by grovelling to them, and requesting them to do it. You cannot get at them in any other way. Here is an item they put down,—“Salaries and wages, £2,991 13s. 0d.” We do not know whether those wages were disbursed. The auditors may know; the committee may know; but the members do not know. They charge a trainer £6 a year for every horse that he trains. They receive from these training-tickets large sums—£1,393 they received last year. They charge £6 for each horse. In Victoria it is £2 for one year. In Adelaide it is £2 a year also. Here they charge £6, and it was not until I moved a resolution that they should reduce it that they did so. They used to charge £8 8s. a year, and now they charge 10s. a month, which reduction was procured after a great deal of trouble. It is the value nearly of some of the horses. In a few years it would run up to the value of the horse with other expenses.

1637. Notwithstanding those sources of income, do they give, on the whole, bigger prizes to any extent than Victoria gives? No. There are one or two good prizes. Why, in South Australia they have far better prizes right through.

1638. Right through? Yes. Take a place like Onkaparinka. This is due to the totalisator. If we had the totalisator here I think it would be the grandest thing for the country in the way of racing, because bookmakers and the sporting public, to my mind, should not come together at all. Book betting should not be connected with racing. As it is, you cannot separate them; but if we had the totalisator and a man put his pound on he would know exactly what he would lose, and he would not get into trouble by betting with bookmakers who are not able to pay. How often have I been in trouble myself, and got head and ears into debt. The bookmakers will stick you up in the street and insult you if you are not able to pay them.

1639. Is there anything else about the balance-sheet to which you object? I can give you the whole of the balance-sheet if it is of any use to you. I will leave it with you, in fact. Then you can see the amount the Australian Jockey Club receive. They say they are very poor. They will tell you the amount of money which they have in the bank, and the amount of money which they have paid for the new building in Bligh-street—£6,357. They purchased that, and yet they say they want more money. Why should they spend this money? Would not an office do them? They say they disbursed the money, yet they spend £6,357 for a new building. They have on fixed deposit £11,000. Commercial Bank current account, £4,621. They have a Jockeys' Fund which is considerably over £5,000, and which has been accumulating for years. This they allow 2½ per cent. on, which is very bad management. They could let it out at 4 per cent.

1640. Do they use that money of the Jockey Club and allow 2½ per cent. on it? They allow 2½ per cent. If a man breaks his shoulder or meets with an accident he has to cringe to get £5 out of them. In Victoria, if a man is married, he gets £2 a week, and all the doctor's expenses are paid while he is invalided.

1641. *Mr. Fitzpatrick.*] Do you mean to say that here he only receives a miserable gratuity? Yes, of from £5 to £10. I have been at them for years to disburse this money more liberally. We have jockeys here living on bookmakers; for instance, Geoghegan, a man who gets 15s. a week from Mr. Oxenham. He has had it for the last eight years. Why should not the Australian Jockey Club pay this man some money.

1642. *Chairman.*] He met with an accident? He is lame for life—paralysed all up one side.

1643. *Mr. Archer.*] He would be a fit subject to be put on this fund? Of course he would be.

1644. The permanent fund? The permanent fund. They have gone out of their way to give £50 in extreme cases, but this fund has been accumulating, and it has not been disbursed properly, to my mind.

1645. *Chairman.*] I suppose the patrons of racing would not object even to making a higher contribution to a fund of that sort, if there were proper regulations whereby those who might be injured would get a regular allowance? I should think they would not. They do not like to see people crippled.

1646. They would contribute more largely? They pay pretty well through the nose now for what they see; they pay 10s. to go in to see the races.

1647. I am talking now of that one particular fund;—I understand they got that money through fining jockeys? It is their own fines and registration fees.

1648. Do not you think some method could be adopted under a racing tribunal whereby we would get other sources of income to a fund of that sort, if it were publicly known that any one who was injured would get a weekly contribution while he was injured? Certainly. It would be a splendid idea if it could be done. I saw five jockeys at Randwick the other day who could not ride because their limbs were broken, and who had no means of getting a living. If they were to go to the Australian Jockey Club they would get £5. If the Australian Jockey Club made them insure their lives, and formed an accident fund out of that, it would be better, but they simply will not go out of the old routine groove. They see nothing new in anything until it is thrust down their throats by the proprietary clubs. They would not adopt the numbered saddle-cloths until Rosehill actually shamed them into it. Mr. Clibborn could not see anything new in it. What can you expect from a man who has stopped in his office for twenty-seven years, and who knows nothing about racing outside. He admits he has been over twenty-seven years inside, and never goes outside, and does not understand the ethics of racing. If he does not understand it in thirty years, he should give someone else a chance who can understand it. Anybody could read that book of Australian Jockey Club rules in two hours and understand the ethics of racing.

1649. With regard to the 1s. entrance fee, about which something has been said in evidence here, do you think that ought to be abolished? Certainly. They say they would lose a certain amount if they did abolish it. Why do they charge the fabulous prices they do for the race-books and cards? They charge 1s. for a race-book that is actually worth 1d. The printing costs 1½d. or 1d. And they charge 6d. for cards to the people on the Flat who cannot afford the 1s. for the books. They should reduce these prices very much. If they did that and opened the course there would be other methods by which the money would come into the club, and they would make it a public resort for people to go and amuse themselves. They would sell the books and cards, they could have extra booths, they would have the revenue from the railway, and everything of the kind would tend to make the affair boom.

1650. *Mr. Archer.*] They sell all the booths? They sell them all.

1651. *Mr. Fitzpatrick.*] By the time a man leaves Sydney and gets on the Grand Stand, or into the Saddling Paddock, I suppose he will not have much left out of a sovereign? He would not have enough for two drinks. They used to charge 1s. for drinks, and I had the greatest trouble in getting them to reduce it to 6d. The catering is horrible. You can get a better lunch in a coffee palace for 6d. than what they charge 2s. 6d. for.

1652. *Chairman.*] In short, according to your opinion, they have not moved ahead with the times, or with the other Colonies? No.

1653. They have done nothing to improve racing? They have actually retrograded. They will not go with the times unless they are forced to. They will not appropriate or adopt any innovation that is suggested by the outside public unless they are actually compelled to do so by force of circumstances in order to appease the public.

S. R.
Kennedy.
7 Nov., 1900.

WEDNESDAY, 14 NOVEMBER, 1900.

Present:—

MR. J. C. L. FITZPATRICK,
MR. HOGUE,MR. GILLIES,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Samuel Robert Kennedy recalled and further examined, as follows:—

S. R.
Kennedy.
14 Nov., 1900.

1654. *Chairman.*] When you appeared before us on a previous occasion, you were examined with regard to the balance-sheet of the Australian Jockey Club? Yes.

1655. Is there any further information that you can give us with regard to that balance-sheet? The balance-sheet is so vague and indefinite that really it would take a man of considerable perspicacity to understand it. The items seem to be bulked so much that they convey very little to the members of the general public. The balance-sheet is not nearly so explicit as those issued by other clubs. The Victoria Racing Club, for instance, publish a very plain balance-sheet, giving every detail; whereas in this case the items are so lumped together that you really cannot get at the particulars, or understand them clearly.

1656. You find fault with it generally in that way? Yes; I find fault with it in that way—that the members do not get a clear balance-sheet, disclosing the affairs of the club. The members of the committee may understand it, but the members of the club do not; in fact, they are afraid to ask questions at the meetings of the club. At the last meeting of the club Mr. Griffith Jones did ask that a proper balance-sheet should be published that would give the members of the club an idea how the money was disbursed; but the request was not very well received, and the committee did not seem inclined to comply with it.

1657. Then, there is no further information you can give us with respect to the balance-sheet? No; because no one can get at the details.

1658. Dealing with the general conduct of the committee, as a committee, questions have been asked with a view to getting evidence with regard to a suggestion that it has been the practice to disqualify horses in order to allow of members of the Australian Jockey Club buying such horses afterwards, with the disqualification resting on them;—have you heard of any case that would lead you to suppose that that sort of thing has been done by the Australian Jockey Club committee? No; I am sure that not one member of the committee, as at present constituted, would lend himself to any such thing. I am confident of that. I have heard it remarked that it has been done, but my own impression is that the members of the committee would not be parties to any such transaction.

1659. You say that the committee, as at present constituted, would not do any such thing? No; I am sure they would not.

1660. I am asking the question with a view to getting your corroboration of, or contradiction of, what has been publicly hinted at? I do not think that any individual member of the committee would dare to do such a thing.

1661. You say that you heard it remarked that such things have been done;—could you give us any idea of any case that would have led people to come to that conclusion? One of the great rumours that gained currency some little time ago was in connection with a horse called "Marvel." I am only expressing what the people thought. This horse "Marvel" was disqualified whilst he was under lease from a man named Monaghan to another man named Lopez. The horse was sold, not to a member of the committee, but to Mr. George Hill, who was a partner of the Honorable W. A. Long in racing affairs. Whether there is anything more in the matter than that I do not know; but people thought that because Mr. Hill owned the horse, the Honorable W. A. Long must have had some interest in the running of him.

1662. And in getting the disqualification lifted? Yes; and in the running of the horse. The horse eventually went to the Hon. W. A. Long's stud, but I know that the disqualification was lifted after the horse was sold.

1663. *Mr. Gillies.*] After the horse was sold to the Hon. W. A. Long's partner? Yes.

1664. *Mr. Hogue.*] Was that the great horse, "Marvel," that beat "Carbine" on one occasion? Yes. There is no direct implication on my part that Mr. Long was interested in the horse; but I merely say what the public thought.

1665. *Chairman.*] The circumstances which you mention gave rise to suspicion? Yes.

1666. With regard to the practice of betting at Randwick, do you think that it is conducted on a purer basis at Randwick than at any of the other courses? No, I do not.

1667. Is it purer at Randwick than at any of the other courses in this Colony? I do not think that betting anywhere is pure.

1668. Is it carried on with more strictness and fairness at Randwick than at other courses? There is not the least difference, to my knowledge, between betting at Randwick and on any other course in Australia. It is the same all through.

1669. Have you seen undesirable bookmakers betting in the stand at Randwick? Of course, bookmakers are not very desirable anyhow.

1670. But, taking them as a class—as bookmakers? I do not think they are any worse at Randwick than elsewhere. They seem to be registered there, and the same body of bookmakers bet there as on the suburban courses. As regards the general public who go to Randwick, I know that they allow loafers and men who have been disqualified even at pony races to assemble in the paddock, right in the face of their disqualification by the pony clubs.

1671. Would that be in the Grand Stand? Yes; you will see men who have been disqualified for objectionable practices knocking about the Grand Stand at Randwick with impunity, whereas they would not be allowed to walk about at Kensington or at any of the other pony meetings.

1672. And yet I understand that if they disqualify a man for malpractice at their own meetings the Australian Jockey Club will not allow him to go to Randwick? No.

1673. But I suppose there is nothing to prevent a man from going on the flat? No; although I believe they can be ejected even from there. Still, they generally resort to the Leger Reserve when they get to the length of their tether in the Paddock.

1674. Would they be allowed on the flat to carry on their business? They have to be registered in order to carry on business in any part of the course.

1675.

S. R.
Kennedy.
14 Nov., 1900.

1675. Would the Australian Jockey Club register a man after his having been disqualified by a pony racing club? I do not think they would. Your question relates to bookmakers, and if there were a case put to the Australian Jockey Club, and any one objected to such a man being registered, they would certainly not license him.

1676. But you say that those disqualified now are allowed to assemble there and bet? Yes.

1677. With regard to betting, are you of opinion that it would be a good thing to close the betting shops in town? I think the betting shops are the curse of racing. I have repeatedly written to the Press about the police looking the other way, and allowing a lot of shops to remain open for the purpose of carrying on betting, whilst they arrest a lot of little boys for playing two-up, or take up a lot of Chinamen for playing fan-tan. The law is very weak in its administration in regard to these betting shops. They have punished the proprietors of a lot of these establishments; still others are allowed to go on, and constitute a curse to racing and betting generally. In my opinion, there should be no betting at all. Betting is a thing quite apart from racing, and it would be better if we had far larger stakes and very little betting. It is the curse of the place when we see boys getting threepenny-pieces or tram-tickets, and investing them in doubles, without the slightest chance of winning. It is an incentive to robbery and dishonesty, and to all sorts of waywardness on the part of children and young people.

1678. Do you think the police can put these places down? I think they could.

1679. By using greater vigilance? Yes; they should do so; but they walk past the big shops, and make for the little ones.

1680. How would you improve matters;—would you make racing better by providing larger prizes? The only method of doing that is by adopting the totalisator. That would purify the turf to such an extent that the turf clubs in the country would be able to give larger prizes, and it would tend to keep horses from coming to Sydney, and induce the owners to retain them in their proper localities, and try for the prizes provided there.

1681. How would you run this totalisator;—would you prefer the Government to run it as a State machine, or would you favour the passing of the Bill that has been introduced to give the Australian Jockey Club control of it? We do not want the Australian Jockey Club to control it; but we want a Government scheme. The only way to do it is for the Government to run the machines, and take a percentage upon the money which passes through them, as they do in New Zealand, where they derive a revenue from the registration of "totes" and from the percentages amounting to £16,000 a year.

1682. Do you think that would tend to improve the stakes? Decidedly it would. The money derived from the "tote" would go towards the stakes, and it would be better for horseowners and for everyone concerned. At present, for every six people who bet there is one bookmaker, and the totalisator would tend to do away with a great deal of the evil that now attaches to our betting practices.

1683. *Mr. Gillies.*] Do you think the Press treat the business of the Australian Jockey Club and horse-racing generally as they should do? I do not. I think the Press fail to show the workings of the Australian Jockey Club in every detail. I will take the case of the *Daily Telegraph*, which launched out some time ago, and spoke very freely about the mismanagement of the Australian Jockey Club. The result was that for two years the *Daily Telegraph* got no advertisements, as they were debarred by the Australian Jockey Club from any share in their advertising; and their reporter, Mr. Mostyn, who is a man who would speak his mind very freely if he were not under the thumb of his editors, was debarred from entering the rooms of the Australian Jockey Club and Tattersall's Club for the purpose of getting any information.

1684. You mean they put the boycott on him? Yes. You will see from the Australian Jockey Club's balance-sheet that the advertising is a very large item, and that it amounted last year to £1,181. Of this amount the morning papers get the largest cut; and through the *Daily Telegraph* having spoken out, it was debarred from getting its share of that amount for a couple of years.

1685. Did they alter their tone after being boycotted? Yes; I think they did—they assumed a demeanour of subjection.

1686. *Mr. Hogue.*] They are not notorious for self-martyrdom? I am very glad that a new Bill is being brought in to give the Press greater latitude. There are a couple of little papers which do speak very freely upon racing matters, namely, the *Sportsman* and a little paper, edited by Mr. Haynes, called the *News Letter*.

1687. But they do not get the advertisements? No.

1688. And they are speaking freely until they do get the advertisements? Perhaps so.

1689. *Mr. Gillies.*] Then that shows that the Press is practically in the hands of the Australian Jockey Club? No; I do not think so; that is purely a matter of business.

1690. *Mr. Taylor.*] Do you not think that the "tote" would have a tendency to purify racing? Yes. Sir Richard Baker, President of the South Australian Jockey Club, sent me a copy of a very long letter which he wrote to Sir Rupert Clarke, in Victoria, in which he gave a very vivid description of the beneficial effects of the "tote" in South Australia. He said that the machine there had purified the turf by eliminating its worst evils, and speaking for myself, I can say that where the "tote" is in vogue there is not half the swindling carried on that exists in other places. The "tote" does not speak, and it does not pull horses.

1691. *Mr. Gillies.*] Do you think the Australian Jockey Club close their eyes to the practice of women and children betting at Randwick;—have you noticed it? Oh, yes. I do not see very much harm in women betting if they bet moderately. It is not, perhaps, very nice to see ladies taking the odds from a bookmaker; but they will bet so long as we have the present system. If we had the "tote" they could put their money on, and nothing would be said about it.

1692. Have you heard of any of the country clubs finding fault with the treatment meted out to them by the Australian Jockey Club? Yes, and I have received a letter on the subject from the Newcastle Jockey Club stating that the Australian Jockey Club had treated them very badly with regard to Mr. Fleming, and stating that if they go on in the same way as they are doing it will be compulsory for the clubs to form some sort of an association in opposition to the Australian Jockey Club. The complaint is that the Australian Jockey Club is too autocratic, and that there is no representation for country clubs, which is a great mistake.

1693. The Australian Jockey Club are supposed to control the amount of prize money that is offered at country meetings? I hardly think they are; but I could not say for certain. I know they do it in connection with suburban meetings.

1694.

S. R.
Kennedy.
14 Nov., 1900.

1694. Do you think it tends to elevate horse-racing when the Australian Jockey Club registers publicans race-meetings, where the total prize money only amounts to 7 sovereigns. I have a case here in which a meeting is advertised—"The Tunstall Gap Races, registered under the Australian Jockey Club Rules—Opening Handicap of 2 sovs.; Tunstall Handicap of 5 sovs."—that is all the prize money that is mentioned? I think that the Australian Jockey Club show themselves very willing to grasp all the sovereigns they can get for these little meetings, and that this has not a good effect on horse-racing generally.

1695. Do you think that meetings like that I have called your attention to should be registered by the Australian Jockey Club? I think it is not necessary. It is hardly necessary that they should come under the very strict rules that are adopted, and I do not know that these meetings should be registered at all. I think that people should be at liberty to hold small picnic meetings, and so on, without the necessity of registering, and that owners of horses running at such meetings should not suffer the pains and penalties of disqualification. At present a man may buy a horse, and afterwards find that, owing to its having run at some small unregistered meeting, it has been disqualified. I do not think that unless a club gives £100 in prizes the Australian Jockey Club should take any cognizance of it at all.

1696. *Chairman.*] If you allow people to race without registration, would you disqualify horses that run at such meetings? No. I think it is unfair and harsh to horseowners who race for pleasure; but it seems to me that the Australian Jockey Club, whilst posing as a club which races merely for love of sport, and the honor and glory of it, are most grasping in all their actions. They appear to want to get all they can into their own coffers, and that they want to control the whole of the racing, and to make the rules for other clubs that are similarly constituted, and towards which they occupy the position of a competing organisation. They grasp the whole of the best days here for racing, and give to other clubs the refuse; and I do not think they have any right to be so grasping. If they accumulate this money purely for racing, it is unfair to the suburban clubs, who have spent a lot of money, that they should be treated in the way that they are by the Australian Jockey Club. The Proprietary Clubs give a lot of money away, and if you take the Rosehill Club, they do not clear £40 for a day's racing, although they have £60,000 invested in the course and in the railway running to it. The same thing applies to Warwick Farm, the proprietors of which have actually spent money upon the improvement of the country, and in bringing traffic to the course. The days allotted to these clubs are scarcely fair, and they lose money on fully one-third of their meetings. If they could get a return of 3½ per cent. on their money right away they would close up their courses to-morrow.

1697. With regard to this Bill that is now before us, I suppose that you have fairly well examined its main principles? I understand the motive of it. I believe the impression outside is that this Select Committee has been brought about by some dissatisfied persons who have been disqualified for certain misdoings, of which the Australian Jockey Club, in their wisdom, have adjudged them guilty. That is altogether wrong, because this Bill was promoted six or seven years ago, long before any such case as the "Mora" case came before the public. I think it was as far back as eight years ago that this Bill was drafted, and there may be a few matters in which it is not up to date; but the intention of the Bill is good, and it will, no doubt, have a very beneficial effect if it is carried into law.

1698. In what way would you effect an improvement? Of course the representation is the chief difficulty just now, and perhaps the Australian Jockey Club should have a larger representation than other clubs; although, if you look at it from a democratic point of view, they should not. Considering, however, that they have a sort of inherent advantage, and that they have assumed the control of racing by a combination of fortuitous circumstances, perhaps, they should have a larger representation.

1699. You would not decapitate them all at once? No, I would not shut them up all at once; but if it is provided that there shall be representatives from each of the districts of the Colony, I think it would be very fair.

1700. Would you have a large body as a central executive in the Association that is proposed? Well; I think it should consist of eighteen or twenty members.

1701. You favour that number? Yes; because it is a very hard matter to get a quorum together, and have your business transacted in an equitable way, unless you have a large body. I proposed at the last meeting of the Australian Jockey Club that the committee should be increased from ten to fifteen members, but that did not meet with the view of the club.

1702. Do you think that an association like the one proposed could control racing better than it is controlled under the present system? Yes; it would satisfy the public, and that is the great thing. The public, who support racing, consider that they do not get fair dealing from the Australian Jockey Club; and the public, who pay the piper, are, I think, entitled to representation.

1703. *Mr. Hogue.*] Is there any possibility of satisfying the public in regard to racing, unless they win? No, perhaps not; you cannot satisfy everybody. Even under the Early Closing Act, you do not satisfy everyone, and yet the Act has had the desired effect in fifty ways, as compared with one in which it has given dissatisfaction. The same thing applies in other cases.

1704. *Mr. Taylor.*] Could you give us any idea as to the reason for the existence of the Sydney Turf Club? Now you have got me fairly mixed. I see that, according to the evidence, there are only two men who derive any benefit from the club, and those are the Secretary, Mr. Clibborn, and his assistant.

1705. The Sydney Turf Club have the right to race on certain days at Randwick? Yes; they have allotted to them two of the very best days in the year—Anniversary day for one.

1706. And you say only two men benefit by it? Yes; that is, as far as we know.

1707. *Chairman.*] Have you ever seen a balance-sheet of the Sydney Turf Club? No; I have never seen a balance-sheet.

1708. Then you think it would be inaccurate to say that they have issued one? I do not know; I have never seen one.

1709. *Mr. Taylor.*] I suppose that the appropriation of these two days by the Sydney Turf Club operates detrimentally to the other clubs? Yes; either the Rosehill or Warwick Farm Clubs would give just as much prize money as the Sydney Turf Club give. Before the days were allotted to these clubs, they appropriated a day that would stand in the same relation to the Australian Jockey Club meeting as the Caulfield meeting stands towards the Melbourne Cup meeting, and they came out with a £1,000 cup. It was found that this interfered with the Hawkesbury people to some extent, although the Hawkesbury people were only offering prizes amounting to £150. The Australian Jockey Club, however, thinking that it would affect Randwick racing, immediately put their veto on it, and stopped the whole thing.

S. R.
Kennedy.
14 Nov., 1900

1710. Have you read the terms of the grant of the Randwick Racecourse from the Crown? I have tried to understand it.

1711. Do you think the Australian Jockey Club would be justified in leasing that ground to any club? Well, I do not profess to be a lawyer, but I have read Mr. Knox's evidence, and I see that he only thinks they have the right to sublease the course. If they have the right to sublease to a racing club, why do they stop other people who afford amusement to the people from going on to the course. An instance occurred when the Australian Horse were down here a few years ago. They were camped out on the Kensington Road, and were up to their knees in water. They applied to the Australian Jockey Club for the use of their loose boxes, to put their horses in, but the application was refused. The Australian Horse then applied to the Kensington Racecourse authorities immediately alongside, and the permission required was immediately granted to them. The Kensington people have not one-fifth of the area that they have at Randwick, but they immediately allowed the military people to put their horses in the scraping-sheds, while the Australian Jockey Club objected, on the ground that the presence of their horses there would have interfered with their racing arrangements. It would have done nothing of the kind, because the Australian Horse might have been accommodated in the sheds on the far side of the course, where they would have been out of the way, and would have entirely escaped notice.

1712. Do you think pony-racing ought to be abolished? No; I blame the Australian Jockey Club, in the first instance, for the present surfeit of pony-racing. They brought in a lot of rules, which were quite against the principles of justice, to disqualify everyone who had ponies, or who trained ponies, or who rode ponies. I wished to have these drastic measures rescinded; but according to the constitution of the Australian Jockey Club the members have no power to alter anything that the Committee may do. The Committee have the whole power to make by-laws, to adopt rules, and do anything they like.

1713. Do you not think that the abolition of pony-racing would tend to simplify matters in connection with horse-racing, and tend to improve them? Well, I think that ponies are horses, and that they have their uses.

1714. I am speaking now of ponies in the ordinary sense—ponies of 14·2 and under;—do you not think that if racing with such ponies were done away with, it would tend to purify racing in general? Certainly; they should not be raced at all under that. Taking a broader view, I do not think that God ever intended that horses should be raced for money at all.

1715. *Mr. Fitzpatrick.*] Would not that objection apply equally to horse-racing? Certainly.

1716. *Mr. Taylor.*] Horse-racing is supposed to be carried on with a view to the improvement of the breed of horses—that is the only reason set down for racing? Yes.

1717. That being so, do you not think the purposes for which racing is carried on would be largely assisted by precluding all ponies from racing? Yes; it would be much better for racing if it were so, although if a man has a pony, I do not see why he should not race him as well as a horse.

1718. But if you encourage the racing of ponies, you encourage breeders to breed them? Yes; but you must remember that ponies have their uses. Take the case of a polo pony, that can carry an 18-stone man all day long.

1719. Do you think that if the Flat at Randwick were thrown open to the public instead of their being obliged to pay 1s. entrance, it would tend to popularise racing and stimulate it? Yes; I think it would.

1720. It has been remarked in the course of evidence that Melbourne is far ahead of Sydney in regard to racing? That is altogether wrong. There is not a man, woman, or child here who does not understand something about racing. We are losing hundreds of thousands every year by the exodus of people going to the Melbourne races; but there is no reciprocity in the matter, for they will not come here.

1721. Do you think that the opening of the Flat at Randwick would encourage people to go to our race-meetings there? Yes; no doubt a larger number of people would assemble on the course.

1722. Do you think that if the weight-for-age races were given greater importance by increasing the stakes to, say, £500, and if we had a cup of £5,000, and some good steeplechase prizes, it would tend to popularise racing, and make it more attractive? Yes.

1723. Do you think that it is owing to the larger prize money that is offered that the Melbourne people have got so far ahead of us? Yes; and because the Australian Jockey Club have done all they could to put obstacles in the way of breeders and owners of horses, and to keep back racing as a sport.

1724. You really think that if we gave £500 prizes for weight-for-age races, and a £5,000 cup once or twice a year, it would tend to centralise racing in this country, and bring the best horses here? Yes. Melbourne horse-owners will not come here, because they meet with rebuffs in every way from the Australian Jockey Club.

1725. Do you think that women and children should be precluded from betting at Randwick? Children should not be allowed to bet; but you cannot stop women from betting. If a woman wants to bet, and she cannot do it directly, she will get someone else to put the money on for her.

1726. Do you not think that would be more desirable? Yes.

1727. Do you not think it would be more in the interests of the community generally that women and children should be precluded from betting? Yes.

1728. Do you think that if the Colony were divided into, say three districts, and that representatives were appointed from each of these districts to form an executive or appeal committee it would be an improvement on the present arrangement? That is just what the people want—an appeal committee.

1729. Do you think there would be any difficulty to find three good men to act as members of such a committee? No; certainly not. I see that one witness said that it would be impossible to find even one good man, but I think it is an insult to our humanity to say that we could not get three men in the whole of New South Wales to act honestly in such a capacity as that indicated.

1730. Do you think it would be an improvement upon existing arrangements if there were two or three paid stewards appointed;—as matters stands now it is everybody's business and nobody's business to report cases of malpractice;—do you think that if there were two or three paid stewards specially appointed for that purpose, it would tend to improve and purify racing? Yes; I think that should be done.

1731. Do you think there would be any difficulty in finding two or three good men to act in this capacity? No; I could find you 100 in a day.

1732. Thoroughly reliable men? Well, as reliable as any member of the Australian Jockey Club. We have not degenerated so far that we cannot find three honest men.

S. R.
Kennedy.
14 Nov., 1900.

1733. Would you allow these paid stewards to have a seat on the committee, or a voice in any case upon which they had reported? No; that is just what I would not allow. What I would suggest is, that they should be allowed to adjudicate on the cases which came under their notice during the day, and in the case of an appeal the matter should be referred to the full committee before which the stewards might appear as witnesses, but they certainly should not act as judges.

1734. There are a great number of trainers and jockeys, and I would like to know whether you think these men should not have some representation upon the committee? That is just in keeping with my democratic views of fairness and reason. I think it is very fair that they should have some representative on the committee—in fact we should all have representatives on the committee.

1735. Do you think the committee ought to be elected on a different basis? Yes; that is just what I do think.

1736. Has it come under your observation that there has been a great deal of discontent as to the manner in which members of the Australian Jockey Club committee have been elected? Yes; I have given evidence about that before.

1737. Our object is to frame a Bill that will be beneficial to the whole Colony, and I would like to know if there is anything that strikes you that you could suggest as an improvement upon present arrangements in connection with racing—that is, in addition to the views you have already expressed? No; I have given you all the information I can just now. I presume that the Bill will be modified and brought into shape when it comes before the House so that it may suit all parties. With regard to the ethics of racing, and the comparison between the Australian Jockey Club and English racing institutions, I may say that the Australian Jockey Club bases everything on the English racing system. I have been to all the race-courses in America, France, and England, and I can safely say that in racing matters we are fully fifty years ahead of other parts of the world—that is to say, Victoria is and South Australia is and New Zealand is, and by constant agitation the Australian Jockey Club has been induced to introduce a number of innovations, but they have always objected, in the first instance, to any improvements.

1738. Has any outsider ever been able to introduce improvements;—we have been told that the committee are only too willing to entertain suggestions, and act upon them; but do you know whether any suggestions from outside sources have ever been acted upon? Not directly from a meeting of the members. Unless the committee as a body like to adopt any rules suggested, there is no possible chance of getting them adopted.

1739. Has there ever been anything agreed to at a public meeting of the members of the Australian Jockey Club? Yes; there have been one or two propositions of mine carried, but in those cases I had to consult the members of the committee beforehand, and see if they would consent. Mr. Dowling and myself brought a motion on to raise the minimum impost from 6 stone 7 lb. to 7 stone, which, I think, would be a very reasonable thing to do, but the proposal was defeated, because it was not in keeping with the views of the committee—they had not fathered it.

1740. They have been charged with being a very autocratic committee;—is that your experience? Yes; they are very autocratic.

1741. They are not in touch with the people at all? No; I do not think so.

1742. And racing people are not satisfied with them? I have never heard anyone say they were satisfied. If they were satisfied, they were so merely out of fear of the Australian Jockey Club, which has too much power; so much power that a man is afraid of having some punishment brought down upon him if he makes himself objectionable to the committee. Individually, I have no spleen or vindictiveness against the members of the committee. I do not fear them in any way, and I have never been brought before the committee, and I have never toadied to them.

1743. If you were a trainer with a great number of horses in hand, I suppose you would have some hesitation in coming here? Well, I speak as I feel; that has been my bane—speaking too freely.

1744. We shall have some difficulty, I suppose, in getting a trainer to come here to give us his views on things as they are? That you would.

1745. *Mr. Hogue.*] I gather from what you say that New South Wales has not reached the level in racing matters that it ought to have done in consequence of the inefficient management of the Australian Jockey Club? It is not inefficient management, but it is not up-to-date, because the committee do not grasp innovations with ordinary clear-headedness.

1746. I see that you describe the management as bad management? I do not mean that the members of the committee are bad men individually, but I mean that in legislating for racing they do not cater for the public interest and benefit.

1747. Then you describe the management as not up-to-date? Yes; it is certainly not up-to-date.

1748. You infer, from the general conduct and attitude of the Australian Jockey Club towards racing, that the committee of that body consider that horse-racing is to be carried on in the interests of the Australian Jockey Club rather than that the Australian Jockey Club should be conducted in the interests of horse-racing? The Australian Jockey Club, to my mind, is like all other corporate bodies when they become compact. Take the case of municipal bodies; they fancy that they own everything, and that it is for their benefit, and not for the benefit of the public, that matters should be ordered. The impression becomes ingrained in them that they ought to get everything that they can for their own benefit, and that other people are not entitled to be considered.

1749. Do you infer, from the proceedings of the Australian Jockey Club, that they attach more importance to their own interests than to the interests of racing? I think they do; they come first, and it is to themselves that they look. The members of the committee do not reap any benefit as individuals, but collectively they seem to be banded together to fight against the interests of racing?

1750. As a sort of close corporation? Yes.

1751. They love the monopoly of power? Yes; they love it.

1752. And you suppose that they are not sufficiently progressive owing to their fear that the power may be taken from them? I do not think they fear anything—possession is nine points of the law, and they do not think any one will interfere in the matter.

1753. *Mr. Taylor.*] Do you think a sprinkling of younger members on the committee would improve it? No; I think that any younger members would soon become homogeneously with the older members of the committee.

1754. *Mr. Hogue.*] You are acquainted with the Bill that we are considering? I have not read it.

1755. But you know the purport of it? Yes.

S. R.
Kennedy.
14 Nov., 1900.

1756. Does the bill as it stands meet with your approval? I think there are too many representatives from the country upon the proposed association, and I believe that they might be grouped, in a sense. Objection would be taken that you could not get members from the country to come to town to attend meetings of the committee, but I think you could get members living in Sydney who would attend to the affairs of the country clubs just in the same way as was done in Parliament before members were paid. I think that if representatives were sent from the country to represent country clubs they would do so willingly, and although there might be some expense, that would be covered by the country clubs in some way. I suppose, however, that they would not have free passes in the same way as Members of Parliament have.

1757. You have stated that the Bill, if modified, would satisfy the public? Yes, that is just what I do state. The public, who keep the game going, want some sort of body on whom they can rely, and to whom they can look up.

1758. Would you state the number of members that should, in your opinion, form the representative body? No, I would not go into that question.

1759. Would you state the representation that you approve of? I would allow each suburban club to have a representative, and I would allow the amalgamated clubs of the country to have representation; where the representation could be based on a certain number of country clubs.

1760. Do you think it is really practicable for the members of these country clubs to come into Sydney and look after racing affairs, in the same way as members of the Australian Jockey Club now do? Yes; because the Australian Jockey Club Committee generally resolves itself into about three members. The whole committee are dictated to by about three or four men, who practically control the whole of the affairs of the club, as far as I am able to judge. They run the whole business, and always have done so.

1761. Do you approve of proprietary racecourses? Yes. Of course, with the days allotted to them by the Australian Jockey Club they are placed at a disadvantage, but they have done a great deal more for racing than the Australian Jockey Club. They have opened up the country, and they have made beautiful courses and places of pleasure for the general public. I think they are deserving of every encouragement. At the same time, I would not allow any course round about Sydney to be less than $1\frac{1}{4}$ mile in length.

1762. You have said that you see no objection to pony-racing;—do you think it should be encouraged and brought under the management of some central authority, like the Australian Jockey Club, or under an authority that may be established in place of it? If the Australian Jockey Club had done as I suggested, and taken the practical control of the whole of the racing, and had adopted disqualifications from the pony clubs, there would not have been the discontent which now exists.

1763. Talking about these disqualifications from the pony clubs, are you aware that trainers, jockeys, and owners of ponies have been disqualified at pony-race meetings—say at Kensington—and that no notice has been taken of such disqualification—sometimes for life—by the Australian Jockey Club, further than that such persons are at liberty to enter Randwick Racecourse, and own horses and run them there and ride them? I do not think that they are able to ride, but they are allowed to go into the stand. I know that when they adopted the severe measures I was just now speaking about, with regard to pony-racing clubs, they lifted the whole of the disqualifications off the ponies, and they granted licenses to a whole lot of men who had not any horse, or perhaps only one horse altogether, and admitted a lot of low bottle men, who should never have been permitted to become associated with respectable horse-racing.

1764. So that men who have been disqualified for life, and branded as swindlers by the pony clubs, are not regarded as swindlers by the Australian Jockey Club, but are accepted by that club as patrons? They have been accepted as patrons of the Australian Jockey Club in many instances.

1765. Is not that a fault? Yes, it is a fault; and the Australian Jockey Club are to blame for the present state of affairs in regard to racing.

1766. Have you had any experience in connection with pony-racing at Kensington? Yes.

1767. Is the racing there carried on in a proper manner? There is no club in the world that carries on its affairs better than the Kensington Club.

1768. Are they strict in disqualifying there? Yes, they have disqualified over and over again, where they might, by overlooking faults, have secured very large fields.

1769. Do you know anything about the other pony-race meetings? No; I have not been to any of them.

1770. You approve of paid stewards? Yes. I propose that the committee should pay three stipendiary stewards, who should be so well remunerated that they should be kept away from all betting on races.

1771. Do you not think that the Australian Jockey Club is very autocratic in the matter of disqualifications, and very unfair? They may be unfair sometimes through not knowing, but they may be lenient in other cases. Really, I have seen at Randwick horses running in a worse way, and robbery going on in a more barefaced way, than at the other courses round about Sydney. Mind you, I do not say that members of the committee have seen it, but I have seen it.

1772. You approve of an independent appeal tribunal from the decisions of the Australian Jockey Club with regard to disqualifications where men's property, reputation, and business are affected? It would be only a simple act of justice to make some such provision.

1773. You believe that such a court of appeal should be entirely independent of the Australian Jockey Club? At present there is no appeal of any sort.

1774. *Mr. Taylor.*] Did you read the evidence in the "Mora" case? About that I would prefer to refrain from saying anything, because it has got abroad that this Committee was appointed on account of the "Mora" case.

1775. *Mr. Hogue.*] Do you know anything of the "Spry" case? No.

1776. *Mr. J. C. L. Fitzpatrick.*] With reference to pony-racing, you do not see any more objection to pony-racing than to horse-racing? No; why should pony-racing be any worse than dog-racing or pigeon-shooting?

1777. Do you not think that there is about the same amount of rascality in connection with horse-racing as in connection with pony-racing, only that it happens that the rascality is carried on by two different sections of society? Yes; and I have seen amateur gentlemen riding in races where schemes have been diabolically concocted merely for the love of it, and in order to get a few pounds out of the bookmakers. I have known gentlemen riders to arrange among themselves—"We will win to-day, and you will win to-morrow."

S. R.
Kennedy.
14 Nov., 1900.

1778. You are speaking of amateur meetings? Yes; I am speaking of picnic races in the country, and of other amateur meetings. When this occurs among gentlemen, how can you blame boys for doing wrong with such illustrations before them afforded by people who have been educated, and who ought to know better?

1779. As a matter of fact, take the case of some of the ponies that are raced;—are they not more useful than some of the horses that are used for similar purposes? Well, yes; according to "Banjo" Patterson's idea. He had a pony about 14.2 that carried him all throughout the war, and knocked out all the horses.

1780. *Mr. Taylor.*] But that was an exception;—a good big horse must necessarily be better than a good little horse? I do not know about that.

1781. Well, a good big man is better than a good little man? I question that; give me a little man any time.

1782. *Mr. J. C. L. Fitzpatrick.*] With reference to the representation of country clubs, you suggest a system whereby country clubs shall be represented by a certain number of members on the committee? Yes; if they are racing under the rules of the Australian Jockey Club it is only fair that they should be represented on the committee.

1783. How would you fix the number of representatives? I would group the clubs together in certain districts. I would group the clubs within easy access of one another, and go from one district to another as might be necessary.

1784. Take a club like the Hawkesbury;—what membership do you think they would have? On the principle of status, I should say that the Hawkesbury Club would have a right to very large representation on the Australian Jockey Club, considering that it is the oldest club in Australia.

1785. And yet it has a membership of something under twenty;—do you not think that the reduced membership, seeing that the club had a very large list of members at one time, is due in some measure to the treatment that has been meted out to the club by the Australian Jockey Club and to the excessive racing around about the city? Yes; and I have a letter from Mr. Guest, in reply to one I wrote asking him to lay out a steeplechase course up there, in which he states that he could not do it, as, owing to the autocratic treatment of the Australian Jockey Club, the club was not in a condition to spend the money. Mr. Guest has been secretary of the Hawkesbury Club for thirty years, and he attributes the decadence of the club to the action of the Australian Jockey Club.

1786. Do you not regard betting as absolutely inseparable from racing? Betting should not have anything to do with racing at all.

1787. But under present conditions, do you regard it as absolutely inseparable? Well, as far as I am concerned, I would sooner go on racing for £150 prizes, and not bet at all.

1788. But are there many like you? I do not know; perhaps other people have more money than I have; but I speak feelingly when I say that betting should have nothing whatever to do with racing.

1789. But, seeing that it is inseparable, do you not regard the introduction of the totalisator as a means by which it could be carried on in a more legitimate manner? Yes; with the totalisator the money must go back to enlarge the stakes after covering the working expenses, and, consequently, the racing-people can give big stakes.

1790. Then it would be infinitely better, you think, for the State to have the control of the betting? Yes; the same as in the case of public-houses, and matters relating to other vices. The State should come down and control racing, as it is the duty of the State to control and regulate it in the best interests of the public.

1791. Do you not think that, as betting is inseparable from racing, it is unwise on the part of those who are opposed to betting to oppose the totalisator under the impression that it is objectionable for the State to take a hand in legalising betting, and thus perpetuate an objectionable system? Yes; they have got the wrong hang of it altogether, because they think that by legalising the totalisator they are legalising gambling; but, as a matter of fact, the effect would be to reduce to a minimum the vices connected with racing.

1792. Is not gambling on a much firmer footing now than it would be if it were actually legalised? I am sure of it. With the totalisator, if a man goes to the races, and puts £5 on the "tote," he has lost his money, and has done with it; but if he goes to a bookmaker and makes a bet, and loses his money, and afterwards finds that he cannot pay, he gets himself into trouble. With the totalisator, you know your liabilities before you come away from the course.

1793. Do you think that if the Press had a little more liberty as to commenting on nefarious practices on the racecourse they would lay about them a little more liberally than at present? Yes; I think the press are rather cramped in their views—that they do not take a broad view of the ethics of racing. They cannot very well; I suppose they have to follow the large majority in this matter. They have to live, and if they speak too clearly they get themselves into hot water.

1794. But you are aware of the fact that the law is in such a condition that it practically places a bar on the exercise of free criticism? So it does, to a certain extent; but, so far as racing is concerned, I do not think there is much danger of actions at law, because I do not think any jury would agree when it comes to a question of betting. Betting is one of the biggest vices that we have to grapple with. It has got such a hold on the public that it will be impossible to eradicate it except by strict measures on the part of the Government. That is the only way to deal with the matter thoroughly, as the vice has run wild, and nearly everyone bets in some form or another.

1795. Seeing that it has got such a hold on the public, is it not within the province of Parliament to place as many restrictions as possible on the felonious games that are practised in connection with it? If the Government has the best interests of the public at heart, it is one of their first duties to minimise the vices connected with racing.

1796. Do you think there is more felony practised in connection with racing than in connection with other sports? Well, I do not know. In racing, perhaps, there is more money involved—it is a matter of money. You can say nasty things about other sports; but I am speaking about racing now.

1797. Is it not a fact that boat-racing and foot-racing have been destroyed by the objectionable practices that have grown up around them? Decidedly. Cricket matches and other things in the way of sports gatherings have all been destroyed by the gambling element. The virtues of sporting pastimes have been obliterated altogether by making them business affairs all through.

1798.

1798. *Chairman.*] Have you ever known of any member of the Australian Jockey Club who was a horse-owner being called up before the committee for malpractice? No; but I know of a case in which a member of the Jockey Club committee had a horse in a race, and I heard a man come up to him, and, with perfect *sang-froid*, ask him if his horse was trying, and he told him, "Yes; I have got my money on, and he is going." The fact of a man coming up to a committeeman and asking him if his horse was trying seemed to me to be a very significant comment upon the condition of racing affairs. If a man had come up to me and asked me such a question some time ago, I should have felt inclined to floor him; but now all I could do would be grin and bear it.

S. R.
Kennedy.
14 Nov., 1900.

1799. You do not know any member of the Australian Jockey Club who has been brought up before the committee for vicious practices? No; I do not think they would bring up a member of their own committee.

1800. *Mr. Taylor.*] But if a committeeman had a horse go wrong, would he not be brought up before the committee? Not if he were a very influential member of the committee. Supposing that the chairman of the Australian Jockey Club ran a horse "crook," who would there be to bring him up?—the secretary would not.

1801. Have the public had any doubts about the honesty of the conduct of members of the Australian Jockey Club committee as horse-owners? The public have said very cruel things about the late chairman of the Australian Jockey Club; but I do not care to say anything about that. Some very severe things have been said, and some very strong impressions have been made; but I do not care to say anything on that point, although it is generally recognised that where there is smoke there is fire.

1802. *Mr. J. C. L. Fitzpatrick.*] Do you not think some ideas prevail in the minds of the members of the racing clubs that it is not altogether a question of morality, but a question of smartness? Well, it is looked upon as a clever thing to win a race or lose a race, as the case may be.

Alexander Armstrong Farthing sworn and examined:—

1803. *Chairman.*] What experience have you had in connection with racing? I have been at it nearly all my life. I was the secretary and starter for the Newcastle Jockey Club for upwards of twenty years; I have owned racehorses, and I have been to nearly every race-meeting of recent years.

A. A.
Farthing.
14 Nov., 1900

1804. And you follow it up now? Yes; I have been more away from it during the last fortnight than ever I have been before. I have been to race-meetings all round the country.

1805. You understand the object of this Committee—we have a Bill before Parliament, into which we are inquiring? Yes.

1806. As the present government of racing rests with the Australian Jockey Club, the examination of witnesses naturally centres round that body;—have you had any experience in connection with their management? My only experience has been derived from going on to their course at Randwick. I have seen them disqualify people who, I think, should not have been disqualified; and I have seen people pull horses in the most barefaced way in front of them without having any action taken against them. Some years ago they disqualified Mr. Mayo, in connection with a horse called "Elastic," and it cost some £600 in going to law about it. He tried to get into the Equity Court, as he did not want damages; but, of course, you cannot go into Court against the Australian Jockey Club, because their rules are so worded that you are debarred from taking any action against them.

1807. *Mr. Taylor.*] The Australian Jockey Club is a law unto itself? Yes; their decisions are final, and it does not matter whether they are right or wrong, there is no appeal from them.

1808. *Chairman.*] The Australian Jockey Club having the sole control of racing, can you say if they have controlled racing to the satisfaction of the people engaged therein generally? No; I think they are very unpopular.

1809. With whom are they unpopular;—do you mean the majority of the racing public? Yes. They are too autocratic, and they do things in such an uppish style, that, guilty or not guilty, you have no voice in the matter. For instance, when they refuse a license to a boy, they do not give him any idea of what it is for; and they treat trainers in just the same way—they cancel their licenses without giving them any reason.

1810. And do you think that a reason should be given? Yes; if a man is charged, he ought to know what he is charged with. It is a very hard thing to take a man's means of living away without letting him know what it is for, and giving him a chance of clearing himself.

1811. Now, with respect to the conduct of the Australian Jockey Club towards other clubs, do you think they have given satisfaction generally to the country clubs? I do not think they take an interest in the country clubs. The most they do is to receive entries for them. I have very seldom seen any of the Australian Jockey Club officials at a country meeting.

1812. Have you known of any complaints being made from time to time against the Australian Jockey Club? I cannot name anything in particular; but I know myself that the people are not satisfied with them.

1813. In respect to some of these cases in which they have acted unjustly, do you know of any other case outside that of the horse "Elastic"? Yes; there is the "Mora" case.

1814. You might just give us your opinion on that case;—do you think that in that case the mare was pulled? I am certain she was not pulled; the boy was as innocent of pulling that mare as you are.

1815. And yet he was punished? Yes; he was disqualified, I think, for three years. I had my glass on that mare from the start to the death of that race.

1816. And you are of opinion that she was not pulled? I am certain of it; and I know as well when a horse is pulled as anyone who puts foot on a racecourse. I had not a shilling interest in the race; but I put my glass on the mare, because I had her going in the Caulfield Cup, because I reckoned that she was thrown in for it. I watched her right through. In coming round the turn for home the mare was on the outside. There was an opening on the inside, and the boy went to go through it, but as he did so, the other horses swung in, and if he had not stopped the mare, she must have gone over the top of them. Then he took hold of her to try and get outside of them again, but by that time Payten's mare was a long way away, and if "Mora" had had wings she could not have caught her.

1817. You formed the opinion that that was what led the committee to form the judgment that the mare was pulled? I do not know what they formed their judgment on, but I know what occurred.

1818.

A. A.
Farthing.
14 Nov., 1900.

1818. Are there any other cases in which you think that injustice has been done either way? There is injustice done by roping people out, and I think there is injustice also in not having stipendiary stewards appointed.

1819. You think that the Australian Jockey Club Committee, from their position, are not able to fill the offices of stewards? They have such men on the Committee; half of them do not know where a horse's hock is, and they could not tell whether a horse was pulled. I think they are more led than anything else.

1820. By whom—by other people interested in racing? Yes.

1821. That suggests that some improvement might be made on the present system? I think so.

1822. Do you favour the appointment of stipendiary stewards? Yes; men who understand racing. There is no use putting a man in as a stipendiary steward who knows nothing about racing, because he will then only do as he is told.

1823. Would you approve of the stewards being paid officials? Yes.

1824. And absolutely independent of the Committee? Yes, independent of anyone; because I think that the duty of the stipendiary stewards is to see that the horses do what they ought to do, and also that the officials do what they ought to do. I have seen some of the starters shoot the horses right away, giving some of them no chance at all, and when an official does that sort of thing he needs to be hauled over the coals.

1825. You would not allow the stewards to have any voice in the Court of Appeal? No; I think they ought to sit and lay their charge.

1826. But that would place them in the position of prosecutor, judge, and witness? I do not think they should act as judges—that would not be wise.

1827. Then you favour an arrangement by which the Committee would sit as judges, outside of the stewards, who would act as prosecutors? Yes; if they appoint good men as stewards the stewards will not report anybody unless they see something.

1828. With regard to the trial of cases of malpractice, do you think that boys should be represented by some one before the Committee? I think so, because when boys come up before the Committee they are very often flurried, and think they are sentenced before they are charged. I have known boys who have been sent out, while at the same time they were innocent—they did not understand the question at all.

1829. And you think that they ought to be represented at these inquiries? I think so.

1830. The Australian Jockey Club do not allow that? No; they do not allow anything.

1831. They do not allow anyone in the room when the inquiry is going on? No.

1832. Do you think the Press should be permitted to be present? I think so.

1833. Would there be any risk of libel in the event of the newspapers publishing the report of these inquiries? If they do what is right what fear of libel would there be?

1834. Do you think that the manner in which the Australian Jockey Club have managed racing has been the cause of the reduction in the amount of prize money given at country race meetings? Somehow or other country racing has gone down almost to zero. There is no doubt that country racing has been very largely interfered with by the excessive amount of racing in and around Sydney. With races in Sydney nearly every day, or every other day, there is no chance for the country clubs to get a show at all. I was reading an account of the Maitland Jockey Club the other day, and I gathered from that that the club has almost received its death blow, and that it is doubtful whether it will come up again.

1835. That used to be a popular place for racing at one time? Yes; in the old days, when Lauristina and other horses of that stamp were running, it was very popular. Racing now is so different to what it used to be; there is so much "gunning" now-a-days.

1836. You mean that it is now reduced to a science, and that the old genuine sporting spirit has been knocked out of it? Yes; I would not be surprised if they were to find a lot of the horses' teeth out round about some of the courses—it is a good job that the bridles are pretty strong.

1837. Then I take it that you think that the Australian Jockey Club Committee are too lax? They are too lax at all the places, because I think the officials do not understand their duty, or, if they do, they will not do it. If stipendiary stewards were appointed they would have to do their duty.

1838. Have you had any experience in the other colonies? No; nothing to speak of. I have been to Melbourne and to Queensland.

1839. Do the methods of racing appear to be regulated better there than here? I think Melbourne is far and away ahead of us; I think we are about fifty years behind the times in Sydney.

1840. Is there any reason why we should be behind Melbourne? No; I think we should be ahead of Melbourne; I think if we had good people in charge of affairs here we should be ahead. I know that if I were there I would not like Melbourne to be ahead of me.

1841. Have you seen the Bill that is now before Parliament? No.

1842. You do not know anything as to its provisions? No.

1843. Do you favour the Government interfering in this matter, and creating a strong representative body? I think somebody ought to interfere, because I think that the Australian Jockey Club are too tyrannical altogether, and that it is unfair that people should have their living taken away from them unless their guilt is established beyond all question, and all possible means of appeal have been afforded. I think that when people are brought up before the Committee they should have some one to represent them—to see that everything is fair and above board. I quite agree that if a man is guilty he should be shifted out at once, but they do not seem to catch those who are doing the worst things.

1844. Supposing that a tribunal were created representative of the various clubs of the Colony—that is, supposing the country clubs were grouped and allowed to return representatives to a central body—do you think that men could be found in the country capable of sitting on such a tribunal? Decidedly; there are some good capable men in the country, and I think there is a better chance of getting them there, perhaps, than about the city.

1845. It would be untrue to say that there are no capable men in the country? Yes, decidedly. I know of some men in the country who are equal to anyone they can find here.

1846. Do you think it would be possible for a Board to be thus created to manage racing? Yes, I think so. So far as the country is concerned, they can get plenty of good men in the place I come from, and I suppose they can everywhere else, because the people who are brought up amongst horses know more than

A. A.
Farthing.
14 Nov., 1900.

than those who are not. There are men on the Australian Jockey Club Committee now who do not know a horse's hock from his forelock.

1847. With regard to the management of Randwick Racecourse, is it in any way superior to the management of the Rosehill, or Kensington, or any of the other clubs? No. I may say that the Kensington Club manage their place better than any racing club I have seen. I do not know how it is, but they rope them out there whenever they catch them, no matter who they are. I know they roped out one man the other day who was a big shareholder in the concern, but that did not help him; he is doing time now. I do not see anything in the Australian Jockey Club management at all, because I think they might do a lot more than they do. Even in their race-books they will not give you a flysheet to make up your settlements on.

1848. You mean they do not cater to the public requirements? No; they ignore the public.

1849. With regard to admission to the flat at Randwick, do you think that it should be on the same basis as at Melbourne? If Melbourne can do it, surely we ought to be able to do it.

1850. Are there any natural conditions surrounding the Melbourne course that make it different to ours? The only difference is that they have a big hill for the Leger reserve; that is the only condition that I know of that is any improvement upon ours. If we had a big hill at the back of our place it would be better, but we have a good side entrance, and that is something, and you can see the races better than in Melbourne, although I do not know how it would be here if we had the same large crowd as they get down there.

1851. Would the free admission to the flat at Randwick lead to larger crowds assembling? Undoubtedly it would.

1852. Would that encourage racing? I do not know, but it would be an encouragement to those who would be free to go there.

1853. *Mr. Taylor.*] I understand that you have had over thirty years' racing experience? Yes.

1854. In all parts of the colony? Yes; I think I am one of the oldest hands connected with racing, and that the only one to beat me is old Bradbury.

1855. You have been connected with racing in various capacities? Yes; I have been on the committee, and I have been an official for many years.

1856. You are pretty well acquainted with the members of the Australian Jockey Club Committee, personally and publicly? I know most of them, but some of them I do not know.

1857. From what you know of them, do you think they are the ten men most competent to manage racing in this Colony? No, I do not.

1858. If a witness stated that it would be very difficult to get ten such men in any part of the Colony you would not think that statement was quite in accordance with the truth? No. Perhaps the man who said that had never seen anything more than the ten men he speaks of. I think there are some very good men on the Committee; but there are others outside who would be just as well there.

1859. Your idea is that they are not altogether competent, taken as a whole, and that they are very autocratic in their action? Yes.

1860. You also say that you know of a number of people who have been disqualified who ought not to have been? Yes.

1861. And that there are other cases in which people should have been disqualified, but in which no action has been taken? Yes; apparently the Committee never saw them.

1862. In these latter instances, would the people concerned be friends of the Committee or large horse-owners? Sometimes, perhaps, they would be friends of the Committee; or, perhaps, the members of the Committee were not competent to see what was going on. Perhaps they turned their backs when they did not want to see things.

1863. Do you think that it would be in the interests of racing that when an owner, trainer, or jockey, has a charge of malpractice sheeted home to him, he should be disqualified for life? Yes; if they can satisfy themselves that a man is really guilty he ought to be disqualified for life.

1864. Can you give us any idea for what purpose the Sydney Turf Club was established? No; no one seems to know much about it. I think the Taxation Commissioners ought to get hold of them, and see where the money is, and what they do with it. I do not think I have ever seen a balance-sheet from that Club since it has been in existence.

1865. Do you know any members of the Club? Only the Committee.

1866. Who are the Committee? Well, there is Mr. Clibborn, the secretary and general manager, and Mr. Betts, up at the Asylum, is a member of the Committee; but I forget the other names. Nobody, however, seems to know much about the Club; but they look at it that those meetings are all "cop."

1867. Then it is a sort of bogus club—I mean bogus in the sense that nobody seems to know anything about its members, or as to whether its objects are legitimate? I do not think there are any members of the Club. There is no voting for the election of officers or committee.

1868. You have no idea at all as to what purpose it was established for? No.

1869. Supposing that such a club were done away with, would it help any of the other clubs? Of course, if they took away the days that are now monopolised by the Sydney Turf Club, and gave them to other clubs, it would be a lot better for the other clubs, as the holidays are good days for racing.

1870. If the Flat at Randwick were thrown open it would popularise racing, and to some extent stimulate it? No doubt about it.

1871. Do you think that if the prizes for all weight-for-age races were raised to £500, and that a £5,000 prize was given for a cup once or twice a year, and the principal steeplechase prizes were raised proportionately, it would have a good effect in centralising the best racing in Australia in Sydney? No doubt; if you give large prizes people will be encouraged to go to more trouble in trying to win them.

1872. Would it centralise racing here, do you think? Yes; the best race-horses would be sure to come here, and would stop here, if you gave them good prizes.

1873. I notice that in Auckland the prizes they give vary from £250 to £500, and I think £250 was the lowest;—do you see any reason why, with higher stakes and better management, Sydney should not stand even before Melbourne as the racing centre? I cannot see any reason whatever, and I have often argued to that effect, and have said that Mr. Clibborn ought to be ashamed of himself to let Melbourne get ahead of him. We have everything that Melbourne has got, and more.

A. A.
Farthing.
14 Nov., 1900.

1874. The chief reason for our present position, you think, is the management? Yes; and the prices; they do not offer inducements to people to bring their horses here.

1875-6. Do you think that pony-racing should be suppressed, or controlled, or altered? I do.

1877. I am speaking of ponies of 14'2 and under;—do you think that racing with such ponies ought to be suppressed altogether, in the interests of the breeding of horses? Well, they breed ponies for children to ride, and some very good thoroughbreds are ponies. Take the case of "Diffidence." I do not think she is more than 14'2.

1878. But do you think that pony-racing should be carried on here? Well, they can be just as honest in racing ponies as with bigger horses, if the racing is properly carried out. As to improving the breeding of horses, I do not know so much about that. Of course, if they breed from weeds they must get little things.

1879. But if pony-racing were suppressed there would not be that tendency to breed little things that now exists? No; there would not be the same demand for them.

1880. Do you think the abolition of pony-racing would help to purify horse-racing? Yes, perhaps it would; there would not be the same demand for ponies.

1881. Do you think that whilst women and children are permitted to bet at Randwick the shop betting should be prevented? So far as shop-betting is concerned one reason for abolishing it is that there are plenty of men who own horses who are now making a living out of them through the shops, because the horses are put in the hands of the shops, and they are scratched, whereas on the racecourse you do get a start for your money.

1882. Is that the only objection? That is one objection. As far as children betting is concerned, I do not know that I have seen any children betting in the Paddock; but, of course, there are plenty of ladies who bet.

1883. At any rate, you think that shop-betting should be prohibited? Yes.

1884. Do you think that women and children should be prohibited from betting? I think so; I am not a believer in women going to races; not that they see any harm there, but I am not a believer in it.

1885. There has been one witness here who has suggested a certain course with regard to the appointment of an appeal tribunal; he suggests that the Colony should be divided into three divisions, and that each division should send a representative to the court of appeal. Under that arrangement there would be one representative for the north, south, and west, and one or two from the Australian Jockey Club;—would you approve of that plan? If they were good men I would not see any objection to it; if they understood racing and were removed from improper influences.

1886. Do you think there would be any difficulty in getting men for the middle division of the Colony? No.

1887. Or for the west? No.

1888. And there would be no difficulty in the north? No, decidedly not.

1889. And you think that that would be a great improvement upon the present arrangement? Yes.

1890. And you think there should be several paid stewards to superintend the racing, and detect cases of malpractice? Yes, I think so.

1891. And you think that, as things are managed in some cases, the officials take too much trouble, whilst in other cases they do not take enough? There is no doubt about that. There should be stipendiary stewards, who should be on horseback, so that they could dodge about all over the place.

1892. Would that be better than having them in a cage, as they have at Melbourne? Yes; I think the stipendiary stewards would be better on horseback, so that they can be at the start, or go out to the different points to watch the racing. The supervision of such stewards would tend to prevent the boys from cramming in on one another, as if the stewards were about they would be able to see what was going on.

1893. And they should not have a voice in what may be termed the judgment of these matters? No. I do not think the man who lays the charge should be the judge.

1894. I suppose you know there are a great number of trainers and jockeys connected with racing? Yes.

1895. Do you think these trainers and jockeys should have some representation on this controlling body, whatever it may be;—do you not think they should have a representative in some shape, and that they should combine to appoint the best man they could get on the committee? I do not see why, if they appoint a good man, he should not be there to explain matters to the committee.

1896. They are practically unrepresented at present? Yes.

1897. They are not allowed to be members of the Jockey Club, and have no representation at all? No. I think they ought to be represented, because there is no doubt there are lots of things that they see that would be for the good of racing. The Australian Jockey Club are not sufficiently liberal in their appointments at the course, or in their arrangements for the convenience of those who have race-horses to train. The training tracks there become so bad that the course is a perfect muck hole, and I think it is a disgraceful thing that they should shut up the Randwick course, and put trainers to the necessity of going to Kensington, just at the whim of "old Bill" or the secretary.

1898. You think that there might be a vast improvement? Yes.

1899. And you know that there are many racing men who would speak out if they dared? Yes; they would if they dare, but they dare not. Some time ago they stopped jockeys from riding, or trainers from training, ponies, and yet they allowed their own judge and starter to be officials at pony race meetings for ever so long; that is stopped now.

1900. Are you also aware that they have granted licenses to trainers and jockeys who were disqualified for malpractice at pony-meetings? I think that some time ago they wiped everything off, and took these men on.

1901. They took these men who were considered unworthy to train ponies and gave them a clean sheet? Yes; they let them off. I consider that the Australian Jockey Club are very niggardly. Supposing that a man comes down from Newcastle with two or three horses entered for Randwick, Mr. Clibborn will not give him a ticket to admit him to the Paddock, but will make him pay for it.

1902. And would he allow a Sydney trainer to go in? They are all licensed. But supposing a man comes from Newcastle, and I know lots of them, he will not as much as give them a ticket for admission to the Paddock, although they may have several entries.

A. A.
Farthing.

14 Nov., 1900.

1903. Do you think that the totalisator, conducted under Government control, would tend to purify and elevate racing? I am certain of it.

1904. You are positive of that after many years of experience? Yes.

1905. It would also put a stop to betting by children and shop-betting? Yes; it would stop all that. I am a great advocate of the totalisator.

1906. You think it would prove the best auxiliary for purifying racing? Yes; carried out by the Government. Where the totalisator is carried out honestly it is all right, and it will have to be under the Government to secure its proper working. There is no putting horses on the books and laying against them with the totalisator.

1907. That is where the purifying influence would come in? Yes.

1908. Then, again, the owner would reap the benefit, because the profits made out of the totalisator would be employed to increase the stakes;—the owner and breeder would get the benefit of that? Yes; the owners would be better able to get bigger prizes as the racing clubs would be in a position to multiply their stakes three times.

1909. *Mr. Fitzpatrick.*] How do you think that the introduction of the Totalisator would stop children from betting? Well, so far as the racecourse is concerned, from what I have seen of totalisators, God help the child that tries to get at them. The rush for the totalisator in some cases is terrible.

1910. Still there would be nothing to prevent a woman or child getting money put on for them? No; but the child would not be able to reach up to the machine himself.

1911. In reference to this question of opening the Flat, you say that it would tend to infuse more interest into racing? Yes.

1912. But it would not add to the funds of the club? No; it would not do that, but it would let people go in who cannot afford to pay, and as they do it in Melbourne, I do not see why they should not do it here.

1913. It would not improve the financial position of the club? No; not immediately, but it might ultimately.

1914. *Mr. Taylor.*] Reverting to the question of women and children, do you suggest that they should be prevented from attending race-meetings? I do not suggest that—that is a matter of opinion. My women folk and children do not go to the racecourse, as I do not believe in it. I do not say that there is any harm in their going there to see the racing, but I do not believe in their going there to bet.

1915. *Mr. Fitzpatrick.*] With regard to pony-racing, I would like to know whether you do not think that pony-racing, if properly conducted, would be just as well worthy of public support as horse-racing? Yes, properly conducted; but if you were to go out and see some of these "multy" little courses, you would agree that the proprietors should be convicted of manslaughter for permitting people to race there. Properly conducted pony-racing might be just as good as horse-racing, but it is not properly conducted at most of the places.

1916. Would you not be able to discover amongst the average racing ponies perhaps a more useful lot of horses for general purposes than you would be able to discover among the average run of racehorses—that is, for other purposes than mere racing? I do not know; some of the ponies would make very good buggy ponies; but then everyone does not want a pony. Some of them are very nice little animals; but then everyone cannot afford to keep a pony for his children. There is too much racing about Sydney altogether, and matters have reached a ruinous pass. Day after day, and every day in the week we have race-meetings, and I am afraid that it will be the ruin of the younger generation.

1917. Does not the existence of these pony-racing associations enable the owners of horses which would not be qualified to run at ordinary race-meetings to have a little bit of recreation and sport on their own account? Yes, no doubt; but at the same time I think it would be a jolly good job if they were shut up altogether.

1918. That is in the interests of horse-racing? No, in the interest of the community generally.

1919. Do you think there is any more vagabondage shown at pony meetings than at ordinary horserace meetings;—that is leaving out the question of the difference in the social scale of the two sets of people that attend these respective meetings? Well, upon my soul I would be afraid to go to some of the places where they carry on pony-racing. I would not like to take anything in my pocket. There is no doubt that there is too much racing altogether. There are people who are living on the game—what they call "biting your lug," and they will perhaps go to you with a certainty for a particular race, and get 10s. out of it, and they will keep at you until you cop out. At Kensington, pony-racing is very well conducted; but I see now that the bookmakers have most of the ponies. The effect of the bookmakers owning the ponies is that the members of the public go to a bookmaker and take the odds about a certain horse which may belong to the very bookmaker himself, and the consequence is that down goes the backer. At the time of the disturbance about "Merry Girl" and "Pearl Powder," which I was instrumental in bringing about, there were bookmakers who had not a shilling; but now you see them driving their traps and flashing their diamonds, and owning whole stablefuls of ponies. It was I who had all the bookmakers put out of the paddock at Kensington.

1920. Still it is quite open for pony-racing to be just as honestly conducted as ordinary horse-racing? Yes; just as you can have dog-racing, so long as men carry it on properly. There are too many bookmakers owning ponies at present, and you do not know where you are.

1921. *Mr. Taylor.*] Presuming that pony-racing is encouraged, and presuming that racing is established with a view to the improvement of the breed of horses—that much has been granted—do not you think that pony-racing must necessarily deteriorate rather than improve the breed of horses? Well, all breeders endeavour to breed them to size, and no breeder breeds for the sake of breeding ponies. That is the majority of breeders, such men as Mr. Cook or Mr. Dangar. They do not breed ponies; but they breed a pretty good sized horse, because a good sized horse always fetches his price in the market.

1922. But supposing there were no pony-racing, the pony mares would go out of the breeding paddocks altogether? Yes.

1923. I have quoted the case of "Diffidence," and she is a mare that they are sure to breed from. The probabilities are that she may never breed a big one, although you can never tell. I used to ride a little stallion, and you would be surprised to see how big his progeny were.

1924. *Mr. J. C. L. Fitzpatrick.*] If horse-racing were brought into existence for improving the breed of horses, do you think it serves that purpose? I do not think so.

A. A.
Farthing.
14 Nov., 1900.

1925. As a matter of fact, the horses that are bred for racing purposes are worthless for anything else? Oh, I do not know about that; they are horses of beautiful action, and they make splendid harness horses. I have a thoroughbred horse now which is a very handy horse.
1926. But that horse cannot race? Of course he can; but one sometimes gets a bellyful of racing. I have known a man drive his horse in a buggy to a race-course, and take him out and race him.
1927. But you do not breed them like that in our days? Oh, yes. There are few better buggy horses than mine, and I bet he will jump over any fence you put him at.
1928. There was not very much of the race-horse about old "Jorrocks"? Yes there was.
1929. The horses in those days were far better than they are now, do not you think? Yes; perhaps so in the days of "Lauristina," "Ben Bolt," "Zingara," and others of that school.
1930. Do you mean to say the horses of to-day would be capable of holding their own with horses of that type? I do not think they would. The tracks are better to gallop on now than they used to be in the old days.
1931. Was it not a frequent thing for them to run in 3-mile heats? Oh, yes; I have known a horse to run sixteen matches in one day.
1932. Could you go and pick one horse at Randwick that could do that? No, they would die under it.
1933. Do not you think the races should be increased in length? In Melbourne they have shorter races than we have. There are some horses that gallop well for 5 furlongs, and others for 6 furlongs, while others again are better at longer distances, and, I think, that in managing racing I would provide some 5 furlong races. I would endeavour to cater for all classes of horses.
1934. Do you think that for the purpose of encouraging a more useful class of horses the minimum weight should be still further raised? Yes, I believe in that. If you look at the handicaps you will see that they handicap two or three horses, and put all the others down to the lowest limit that they can get.
1935. That is not indicative of the entrants being a good class of horses? No; all the horses are bunched in at a low weight at which you cannot get enough boys to ride.
1936. *Mr. Taylor.*] What would you suggest as a minimum? Seven stone.
1937. *Chairman.*] You have expressed the opinion that there are too many race-meetings? Yes.
1938. Do you think that a body such as the Bill proposes, would be able, with Government sanction, to control the number of days that are raced better than the Australian Jockey Club? If they make it the law, they would be sure to control it.
1939. Do you think that the minimum length of course should be fixed? Yes; I think that the minimum length should be fixed for horse-racing, and that there should be very close supervision over pony-meetings, and that where the courses are not long enough, they should be condemned. How they manage to run round some of them, I do not know.
1940. What would you suggest as a minimum? I do not think any course should be less than a mile in length.
1941. You favour the totalisator? Yes.
1942. You think it should be in the hands of the Government? Yes; decidedly.
1943. And not in the hands of any one club? No; I am in favour of the Government controlling it, and taking a certain percentage of the money that passes through for the sake of charities or some other public purpose.
1944. You have had some experience in connection with the Distressed Jockeys' Fund? The only experience I have had is that I have known a number of unfortunate wretches, who have been out ever so long, to get a "fiver."
1945. Have you ever known any one of them get £50 or even more—£100? I think I have some recollection of £25 being given in one case, but as a rule, all they get is £5.
1946. They do not get a weekly allowance? I am not aware of it.
1947. The whole of that money has been subscribed by the jockeys? Yes; the whole of it was, but now that they have the starting-gate, there are few fines, that I do not know where they get the money from. In the old days of the starting-flag, the fines inflicted on jockeys were far more numerous than they are at present.
1948. Do you not think it would be advisable to insure these jockeys, so as to provide a weekly allowance for them? I think that if they pay anything into a fund like any other body, they ought to be entitled to receive compensation from it.
1949. You do not grasp my meaning;—would it not be better to have a regular scale of payments to those who may be injured, or to the relatives of those who may be killed? Yes; I think it would be a good thing to provide for the payment of so much per week, or so much per day. In fact it would be a good thing for everyone in every stage of life.
1950. And you think that something of this kind should be provided for jockeys? Yes.
1951. Do you think that sportsmen, and trainers, and horse-owners would willingly contribute their mite to this fund? I do not know whether they would do it willingly, because people will not always willingly contribute to funds, even for their own benefit.
1952. Possibly they would have to do it? In that case, their willingness would not matter.
1953. Is it desirable that they should be asked to contribute towards such a fund? Yes; I think that in every occupation, or profession, or business, it should be so. All my life I have been advocating the imposition of $\frac{1}{2}$ d. a ton tax on coal, $\frac{1}{4}$ d. to be contributed by the masters, and $\frac{1}{4}$ d. by the men themselves. This would make an enormous fund, and there would not be a poor man in the coal-mining districts. When one considers the hundreds of thousands of tons of coal there are going out every year, he can see what an enormous fund there would soon accumulate.
1954. Could a system of that kind apply to horse-racing? Yes, it could; if you make it the law. You could take 1 per cent. commission out of the stake, or you could take 5 per cent., if it comes to that. Of course, if you ran the totalisator, it would be much more easy.
1955. With respect to pony-racing, if pony-racing were managed by a central body, set up as proposed by the Bill, do you think it would then be admissible as a racing institution? I think racing with ponies can be carried out fairly and all right.
1956. Do you think all racing should be under one central authority? Yes; and I think that there should be only one day's racing a week, instead of three or four days; there is Kensington, Brighton,

Lillie Bridge, and Rosebery Park, which take up four days a week, and sometimes they have two days' racing.

1957. *Mr. Taylor.*] Then there is the horse-racing as well, besides those pony meetings? Yes; if the four days were knocked into one, and we only had one day's racing a week, it would be much better.

1957½. *Chairman.*] That would be quite possible under the direction of a central authority established by Act of Parliament? Yes.

A. A. Farthing.
14 Nov., 1900

THURSDAY, 15 NOVEMBER, 1900.

Present:—

MR. ARCHER,
MR. LEVIEN,

MR. GILLIES,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Robert Fleming sworn and examined:—

1958. *Chairman.*] You have had considerable experience in racing? Yes; I have been a long while connected with it.

1959. Would you mind telling us in what way you have been connected with the racing of the Colony? I have been connected with the Newcastle Jockey Club for the last thirty years as secretary and committeeman. When I was not secretary I was committeeman, and I have been racing and connected with racing all my lifetime.

R. Fleming.
15 Nov., 1900.

1960. Have you held, or do you hold, any other position? I am now measurer and starter for the Kensington Pony Racing Club.

1961. During that thirty years of your experience, did you find that the central body which now governs racing in New South Wales gave every satisfaction to the people engaged therein? Not in all cases. As far as the rules are concerned, I do not think the country clubs object to the Australian Jockey Club rules in any way.

1962. Do you think the country clubs would care about having a voice in the executive which controls them? Yes; I think they would.*

1963. They would like to have some say in the election of the members of that body? Yes; I certainly think so.

1964. Now, speaking of the rules, you think they are satisfactory;—with regard to the rules which affect the management of pony-racing and other things generally, do they give satisfaction to the racing people? It is not the rules that the country clubs take exception to, but the endeavour of the Australian Jockey Club to enforce their by-laws and regulations. The by-laws and regulations that they have formed to conduct their own meetings under they have endeavoured to put upon our club, and they are not at all suitable to us.

1965. They want to govern clubs that are surrounded by different conditions altogether by a hard-and-fast set of regulations? Just so. For instance, they took control of all the clubs within a 40-mile radius of Sydney, and then all at once they created a 40-mile radius from Newcastle Post Office in order to get the bookmakers and bookmakers' clerks under license to them at £1 per year. Newcastle is not within the 40-mile radius—it was never considered so—but they created a 40-mile radius from Newcastle, which includes Wallsend and Maitland.

1966. Do I understand that the application of these by-laws has the effect that bookmakers, before they can bet at Newcastle or within 40 miles thereof, have to register in Sydney and pay £1 to the Australian Jockey Club? Yes, undoubtedly.

1967. Although such bookmakers may never bet at Randwick? Yes; many of them have never been inside Randwick.

1968. Still, they are compelled to pay their guinea a year? Yes.

1969. Were the clubs within the 40-mile radius asked whether they would be agreeable to the change? No; I was the secretary of the Newcastle Jockey Club at the time, and the first intimation we got was a letter from Mr. Clibborn informing us that the Australian Jockey Club had created the radius of 40 miles from the Newcastle Post Office and that we were brought under the operation of Rule 166, which I find now in the book as 168. [*Letter produced and read, as follows*]:—

To Mr. R. Fleming, Secretary, Newcastle Jockey Club, Newcastle,—

Dear Sir,

Sydney, 7 January, 1899.

I am instructed to inform you that my committee has directed that all meetings held within a radius of 40 miles from Newcastle Post Office be brought within the operation of Rule 166, which you will note states that no person shall be allowed to carry on, or assist in carrying on, the business of a bookmaker, or to act as clerk to any person carrying on such business, unless his name be entered in the register. This order is to be observed from the above date. If you have not purchased the latest edition to the rules, it will be well to do so.

Yours, &c.,

T. S. CLIBBORN.

1970. Did your club object to being brought under the operation of that rule? No; they made no objection.

1971. They did not ask to be brought under it? No.

1972. Would you give us what, in your opinion, would be the reason they did not object? No; I do not think they gave it any thought at all. It did not so much affect us as it did the betting club.

1973. In making changes in the management of racing, have the Australian Jockey Club ever consulted country clubs before making them? Not to my knowledge.

1974. Would it be correct to say that the country clubs have come under the patronage of the Australian Jockey Club of their own free will? No; the Australian Jockey Club have taken upon themselves to set themselves over us in every way. They do not ask us anything at all; they merely say that we have got to do such and such things, and all the clubs have fallen in with the arrangement.

1975. And for any club to leave the Australian Jockey Club, or, rather, to dissociate itself from the Australian Jockey Club would be suicidal? Yes.

1976. You had a case yourself, had you not, with the Australian Jockey Club, in connection with your position as Secretary of the Jockey Club in Newcastle? Yes.

* NOTE (on revision):—I take the executive here to mean the Court of Appeal, not the A. J. C. Committee.

R. Fleming. 1977. Can you tell the Committee the exact circumstances? During my term as secretary, an advertisement was inserted calling for applications for the position of measurer and starter for the Kensington Racing Club. I went carefully over the rules and regulations of the Australian Jockey Club, and got others to go through them with me, and could not find anything in the rules to prevent my acceptance of the position. I applied for the position, and got it; and some time after I received a notification from Mr. Clibborn, as follows:—

Mr. R. Fleming, Secretary, Newcastle Jockey Club, Newcastle,—

Sydney, 14 April, 1889.

I am desired to bring under your notice that it is inconsistent with the regulations laid down by this club that you, as Secretary of the Newcastle Jockey Club, should hold office under an unregistered club, and to suggest the propriety of your resigning one office or the other.

Yours faithfully,

T. S. CLIBBORN.

The regulation here spoken of was introduced after my acceptance of the position referred to.

1978. Then they gave it a retrospective effect? Yes; it was introduced in the shape of a registration sheet, requiring each club to register once a year, instead of once for all. They issued a registration sheet, and on the head of it was a notice calling attention to the new regulation that any official of an unregistered club could not hold a position as an official of a registered club. That was the first intimation we had of that new regulation, and that was after I had accepted the position.

1979. That was giving the new regulation a retrospective effect? Yes; and they called upon me to resign one position or the other. I refused to do so. I told them I had gone carefully through the rules, and having found nothing there to prevent me, I had accepted the position. I pointed out that I had now engaged myself for twelve months with each of the clubs, and could not forego my agreements with them without making myself amenable to the law, which I did not feel inclined to do. They then reconsidered the matter, and gave me permission to continue my term of office with each club till the end of the year.

1980. After which you had to resign? I was called upon to resign by my own committee.

1981. It would not be correct to say that the Australian Jockey Club simply suggested the propriety of your resigning? They not only suggested that I should resign, but insisted upon it, by the sending out of the registration sheet. I did not resign, however; and the chairman of the Newcastle Jockey Club wrote to me, requesting me to come to a decision as to which club I intended to stay with; they offered to double my salary to stop with them.

1982. Have you read or heard of the principles of this proposed Racing Association Bill? Yes, I have. I do not altogether grasp all the contents of the Bill; but I think there should be some court of appeal.

1983. Do you think it would be better if a law were passed giving legal sanction to a racing tribunal in the direction indicated? Well, I am not prepared to answer that. As I say, the rules of racing cannot be too strict; and I do not know whether the Government regulations would prove as strict as the Australian Jockey Club rules now are. The rules of racing cannot be too strict, or too strictly adhered to, to ensure purity of racing.

1984. But the Act of Parliament itself will not provide regulations;—it simply lays down certain provisions for representation, and for the method of the management of racing, but it will rest with the proposed association to make rules and regulations? Just so.

1985. Do you think that, for a board to govern racing in New South Wales, you could find men in the country capable of filling the necessary offices—that is, outside the metropolitan area? Certainly; why not?

1986. It would be incorrect to say that all the capable men are located in Sydney? Certainly; there are many men conducting racing in the country who were racing when many of the members of the Australian Jockey Club committee were not born.

1987. Do you think it would be an improvement to cut the Colony up into districts, and let them each send one representative to a tribunal to govern racing? Yes; I think it would.

1988. You think it would give more satisfaction than the present arrangement? I would not say that as to meetings at Randwick, but with regard to country race meetings, or anything appertaining thereto, I think the country people should have a voice before they are brought under the by-laws and regulations that the Australian Jockey Club are in the habit of enforcing.

1989. But the Bill proposes that an executive shall be appointed, giving the Australian Jockey Club certain representation and the suburban clubs certain representation, whilst the country clubs will be grouped into districts, and will have the power of returning one man for each district;—do you think that will be a workable body? I do not think so.

1990. What improvement would you suggest? I would suggest that the country clubs should have a voice in the election of the judges to a court of appeal, and that each district should be allowed to manage its own racing affairs under the Australian Jockey Club rules.

1991. But does the Australian Jockey Club give the country racing clubs local autonomy? We always make our by-laws and conduct our own meetings; but we object to being compelled to take on by-laws and regulations of the Australian Jockey Club that are not applicable to our circumstances.

1992. Then you have not local autonomy—local government? No, not altogether.

1993. Could not an executive body, such as I have suggested, form an association to which you could all appeal, and who could manage racing generally, provided that you had a system of local government given to you independently of the central committee? Probably, it might be so.

1994. Do you favour, in the management of racing generally, the appointment of certain stewards to watch racing? Yes; I think it would be a very desirable thing; it is not done sufficiently now.

1995. Do you think that a general committee, such as the Australian Jockey Club Committee, should not only act as prosecutors but should sit as judges as well;—do you think it is a desirable state of affairs? Do you mean in connection with the hearing of cases that occur on the course, and that come before them?

1996. Yes? I do not see why they should not.

1997. For instance, supposing they appointed three or four stipendiary stewards to watch for cases of malpractice and to lay information, you would not give those men a seat on the committee? Certainly not.

1998. But you would allow the committee to sit as judges? Just so.

1999. Does it not appear to you a bad arrangement under which the whole committee are practically stewards, prosecutors, judges, and everything else? To a certain extent, of course, it would be, but we look upon the stewards as honorable men, who would be above anything like injustice, and who would seek to do justice to all parties. R. Fleming.
15 Nov., 1900.

2000. We are not talking about the honor of the men, but I am asking you if you think that it is a proper method to leave everything to a committee like that, where it is everybody's business and nobody's business? I cannot say; I do not see how you are going to adjudicate upon these cases otherwise.

2001. But you suggest that paid stewards should be appointed to watch the running of horses, apart from the committee;—have the Australian Jockey Club, by the methods they have adopted to find out cases of malpractice, always got hold of the right people or punished the right people? Not always. I know of more than one case where they have not, but that will always happen.

2002. But is not that rather due to the system rather than to the intention? I would not say that, because it is a difficult matter to prove. In matters of stiff running, and suspicious running, and that sort of thing, in ninety-nine cases out of a hundred they are correct, but innocent people sometimes suffer in all courts of inquiry.

2003. But you say that you know of a few cases in which people have not been justly dealt with? Yes; there was that case of Mr. John Mayo's, some years ago, which was a very hard case.

2004. Do you know of any others? I do not know of my own personal observation; I cannot call any to mind just now.

2005. With regard to the Distressed Jockeys Fund, are you of opinion that the present state of affairs is satisfactory;—is the fund satisfactorily administered? No; I think it is administered in a very niggardly way.

2006. Do you know what method they adopt in paying money out to injured jockeys now? There is a particular form to go through; you apply for the proper form, and make your application, and state your case, and, as a rule, you get from £5 to £10. Sometimes they "spring" a little more, and once we got £50 for Hebblewhite.

2007. That was a very bad case? Yes.

2008. Would it be an improvement upon that if they were to adopt a regular scale of payments for injured jockeys, providing for so much a week whilst they were hurt? Yes, I think it would.

2009. Do you think there would be any difficulty in establishing such a fund, and putting it on a proper footing? No, I think not. They have the nucleus of it now, and they might augment the fund in several ways. The 2½ per cent. they get from the jockeys for collecting their fees might go to that fund.

2010. You say they collect 2½ per cent. now;—what is that collected for? As commission for collection of the jockeys' fees.

2011. Does that go to the fund? I do not know what becomes of that.

2012. If a proper fund were inaugurated, do you think other means of income could be worked out, apart from those available at the present time? Yes; I think it would be quite possible.

2013. For instance, would horse-owners or bookmakers object to a slight tax for a purpose of this kind? No, I think not; and I believe a fund might be easily formed. If they were to put the 2½ per cent. that they now collect from the jockeys, as commission on their winning and losing amounts, it would come to a considerable sum per year.

2014. *Mr. Taylor.*] I understand you to say that you have had thirty years' experience of racing? Yes.

2015. In all branches of racing? Yes.

2016. Do you think the present system of conducting racing under the government of the Australian Jockey Club Committee is the best method of management;—I suppose you have read this Bill? No, I have not.

2017. Have you heard anything about the lines upon which it is framed? I have heard very little about it.

2018. Do you think that the present system of management is the best that could be provided with a view to improving the breed of horses, assuming, for the sake of argument, that racing is carried on for the improvement of the stock? I have no fault to find with the management of the Australian Jockey Club, as far as racing is concerned.

2019. But I am speaking all round;—you say that they were arbitrary in your case? Yes.

2020. I am speaking all round, and I want to know if you think the present system of management could be improved upon. I will give you an illustration of the lines of the Bill: Supposing the Colony were divided into districts representing two or three clubs, or whatever number may be considered necessary, the eastern, western, and northern districts having each so many representatives on a committee to be formed of practical men, with an appeal court—such as has been suggested here—of five gentlemen, comprising two from the central committee and three elected by the country clubs;—do you think that would be any improvement on the present system? No; I do not think that would be any improvement. I think, if you have a court of appeal elected by the various racing clubs, that would be all that would be required. Each of the clubs could manage its own affairs.

2021. Take the present mode of electing the Australian Jockey Club Committee itself;—is that the best way in which it could be conducted? I do not know how the Australian Jockey Club do elect their Committee; but you could not have a better way than we adopt in Newcastle.

2022. I do not know what system you follow there? A ballot-paper is sent out in an envelope, and returned closed, with the signature of the voter inside the envelope, which is opened by the scrutineers.

2023. The voter states who he votes for on his ballot-paper? Yes; and his name is signed on the envelope. The scrutineers do not look at the ballot-paper; but they simply take it out of the envelope and put it into the ballot-box, so that nobody knows who the voter has given his support to.

2024. Are you aware whether that is the system they follow in the Australian Jockey Club? That is the system laid down by the Australian Jockey Club rules.

2025. *Chairman.*] Do you permit of voting by proxy in your club? No.

2026. *Mr. Taylor.*] Are you aware that that is done here? No; according to the Australian Jockey Club rules the way I have described in the manner in which it should be done. The secretary sends out to each member a ballot-paper with an envelope, the envelope having a printed address on it. When the envelope is opened after the signature has been placed in it, the object is to ascertain whether the voter has paid his subscription and is fully entitled to exercise his vote. If he has not paid his subscription, the ballot-paper is thrown aside; but otherwise it is placed straight into the ballot-box. 2027.

- R. Fleming. 2027. There has been some suggestion of a difficulty in finding good men for a committee of this sort ;—do you think that the ten men on the Australian Jockey Club committee are the ten best men in the country ? Certainly not.
- 15 Nov., 1900. 2028. Are they approaching the ten best men ? I think you could find plenty of men quite equal to them. I think it was very egotistical on the part of Mr. Clibborn when he said that none of the country officials were capable of taking up positions of control in connection with the management of racing.
2029. Whether it was egotistical or not it may be true—are you satisfied that they are not the best men ? Yes, I am.
2030. And you are equally satisfied that you could find better men ? I would not say better men ; but we could find plenty equal to them, as far as I know them.
2031. Could you give us any idea as to what purpose the Sydney Turf Club exists for ? No ; and I never found anyone who could. No one has ever seen a balance-sheet, and, although I have made many inquiries, no one I have ever met has seen a statement of the club's affairs.
2032. Do you think it is in the interests of racing that a bogus club of that kind should be allowed to exist ? Certainly not ; I think there should have been an inquiry long ago, because I think Randwick has no right to be let to a proprietary club.
2033. I suppose that, but for the existence of the Sydney Turf Club, days that they now monopolise for racing—two of the best days in the year—would be distributed amongst the genuine racing clubs ? Yes, certainly. Anniversary Day and Queen's Birthday are two of the best days in the year.
2034. Do you think that racing with ponies of 14·2 and under should be abolished ? No, certainly not.
2035. Do you think it should be so regulated that one day a week would be provided for pony-racing all round, instead of four ? Yes, perhaps so. I dare say pony-racing properly carried out is just as great an acquisition to the breeders of sporting ponies as horse-racing. Of course there is pony-racing and pony-racing, and horse-racing and horse-racing.
2036. Do you think that pony-racing should be limited to one day a week ? I certainly think there is too much racing of all sorts.
2037. But you would limit horse-racing to one day a week, and pony-racing to one day a week ? I think that would be sufficient.
2038. Would the abolition of pony-racing tend to purify racing and improve the breed of horses ? I cannot see in what way it would do so. I do not think it would improve racing, and, so far as breeding is concerned, every stud breeds a certain number of diminutive horses every year.
2039. No doubt, but if pony-racing were done away with the ponies would go into other channels ? They would be of no benefit to the breeders in the other channels. You sometimes see ponies nowadays fetching £300.
2040. If the weight-for-age race prizes were increased to something like £500, and we had one or two cups a year of £5,000 each, and, say, a steeplechase prize of £1,000 every year, do you think it would tend to centralise the best horse-racing in Australia in this Colony ? Yes ; it would certainly tend to bring them here.
2041. Do you think it would centralise the horses here instead of in Victoria ? You would have a difficulty in beating Victoria.
2042. Would not this be the right way to attempt it ? It might be something towards it, but the Melbourne Cup Meeting has its hold on the people as a great carnival, to which the people turn out every year.
2043. Have you any idea that you think would be better ? No.
2044. Do you think that, if the Flat at Randwick were thrown open, it would tend to popularise racing ? I suppose it would tend to bring about larger attendances.
2045. Do you think it would tend to improve racing generally if the Flat were thrown open, in addition to giving these three high prizes that I have spoken of ? Yes, I think it would.
2046. Do you think that the totalisator would tend to purify and improve racing ? Yes, certainly I do.
2047. You are strong on that ? Yes ; that is where all the trouble comes in.
2048. You think that the totalisator would have a great tendency to shut up the betting shops ? Yes ; and until you get the shops shut up you will never get rest. Two-thirds of them are living on "dead meat." Half of them are laying horses that they know to be "dead" or certain to be scratched.
2049. Ought women and children to be permitted to bet on the different racecourses of the country ? As far as women are concerned, I do not see why they should not bet if they choose, and if they can afford to.
2050. But, irrespective of whether they could or could not afford it, do you think they should be prohibited ? I do not think so.
2051. Do you think that shop-betting ought to be prohibited, and that cash-betting ought to be permitted ? On the course—yes.
2052. And you say that cash-betting in the shops ought not to be permitted ? Yes.
2053. What is your reason for making that distinction ? If you go into a shop and take a wager the horse may be scratched and you lose your money, but if you take a wager on the course and the horse is scratched your money is returned to you.
2054. But presuming that you could go into a shop and could take bets, with a start, do you then say that the shop-betting should be prohibited, and that cash-betting on the course should not ? I say that cash-betting in the shops should be prohibited.
2055. Presuming that they gave you a run for your money, would you still say that shop-betting should be prohibited ? Certainly.
2056. Why ? Because they are only making their books for "dead" horses, and horses that will be scratched.
2057. But presuming that you get a run for your money ? If you do it will be a "dead 'un," if they lay you to any extent.
2058. You think generally, that "stiff" running is encouraged by betting in the shops ? Yes.
2059. *Mr. Levien.*] Some of those unscrupulous pony-racing people practically give their horses to the shops, and make their money in that way ? Yes.
2060. *Mr. Taylor.*] But could that not be done on the course ? No ; because you must have a "starter."

2061. Have you known innocent men to be punished severely under the present management of the Australian Jockey Club whilst club men have escaped? I know that Mr. John Mayo was punished in "Elastic," and that he was put under twelve months' disqualification while he had his horse engaged in the Melbourne Cup with what was considered a tip top chance, and backed by Mr. Mayo for £10,000 to £400.
2062. Have you not known of cases in which the circumstances have been very suspicious, and in which the responsible parties have escaped punishment altogether? Yes.
2063. *Mr. Archer.*] But those cases occur every day? I suppose so.
2064. *Mr. Taylor.*] Do you not think that there are many racing men who could, if they dare, give us valuable information with regard to the mismanagement of the present Australian Jockey Club Committee? Yes; I think there are plenty of them who could give you better information than I can.
2065. But the power over them is so great that they dare not? Perhaps so.
2066. Now you would favour the appointment of two or three stipendiary stewards for the purpose of looking after cases of malpractice rather than leave it solely to the committee of the Australian Jockey Club as at present? Yes.
2067. Do you think that if the Colony were divided into so many districts, and that each part of the Colony were represented by men on the Board, that we would have a more efficient directorate than the ten gentlemen who at present constitute the Australian Jockey Club Committee? It might be so, but I would not like to form an opinion about that. It might be so, but my idea would be to have a Court of Appeal to be appointed by the country race clubs.
2068. But after the main committee is formed in the way I have been explaining to you, an Appeal Court should be formed consisting of three or five gentlemen? No; I think that each club should conduct its own racing, as I do not like the idea of outside interests being thrust in upon them.
2069. Do you think that the country racing clubs would, under those conditions, settle their affairs on friendly principles instead of in the unbiassed way that would be provided for if you had an independent tribunal? Perhaps it might be so.
2070. Do you think that the trainers and jockeys who represent considerable numbers, and take a large and active part in racing matters, should have any representation on the central committee whether it is under the Government or otherwise? No; I should not think so.
2071. Will you give us your reason? I do not see any necessity for it, and I do not know in what way they could be represented.
2072. But assuming that they could be judiciously represented;—supposing that the jockeys and trainers elected a gentleman who had had a number of years' experience in racing matters, and they kept in touch with him, and through him were able to make representations to the committee upon important matters affecting racing, do you not think that that would be a great advantage to the committee in the first instance, to the public in the second instance, and thirdly to the trainers and jockeys themselves who ought to have some representation? It might be all right, but I have never given the matter any consideration at all.
2073. My reason for asking you is this: You could not expect a man like Mr. Walter Hall to know very much about the feelings of a jockey or trainer, or to have very much consideration for them? Do you mean that they should have a representative on the committee, or an advocate to appear before the committee?
2074. I mean that they should have a representative on the committee. There are many matters in which a trainer's representative might prove of great assistance to the committee? I do not approve of the idea—not on the committee.
2075. You do not think it would be advisable for the trainers or jockeys, or both combined, to have any representation on the committee? No, I do not.
2076. Do you think that a boy who has been brought up for any fraudulent practice, or cronk running, ought to have some representation before the committee when he is brought up for trial? Yes, I would not object to that.
2077. Do you think it would be fair and right? Yes, I think so.
2078. *Mr. Levia.*] With regard to this question of boys being represented, what representation would a boy want;—considering that he has only two duties to perform;—the first duty that every jockey has to perform is, once he is on his horse, to do his best to win, or he ought not to go out at all? Yes, he ought to try.
2079. And what representation would he require before the committee if he told the truth;—a liar might want any amount of representation; but supposing that a boy told the truth, he would not want any representation? But sometimes a boy gets very confused when he goes into a room before the committee men, and although he may be telling the truth he may tell it in such a way as to contradict or discredit himself.
2080. But you know as an old trainer and a horse-owner, and a man of vast experience, that the truth does not want much clothing, and that the committee men, taking them all through are men of the world, and, taking them as a body, they are absolutely straight? Yes, as a rule they are fairly straight. I can only speak for my own committee, and I know that they are all correct.
2081. Yes, your old judge is about as straight a man as we have in the Colony? I think so.
2082. And one of the best handicappers in Australia? Yes, I think so.
2083. What particular representation would a boy want when he has only got to get on his horse and ride him to win. If he wants to tell the truth he can do it without representation; but if he wants to twist something, and convey a wrong impression, then representation might aid him? Well, I should think it would be needed more in cases of protest and that sort of thing.
2084. But there could not be much in a protest that would require representation;—when a horse runs inside a post, or where there is a difference of opinion as to whether a horse was interfered with, it is, after all, a matter of evidence amongst the boys who ride in the race, and of what the committee themselves see? Yes, that is so.
2085. So what representation would be needed before the committee;—if you consider the time that it would take to secure representation by means of a legal adviser, or somebody else, you will see that it would cause a good deal of delay and trouble? I do not say that the representative should necessarily be a legal adviser; but a boy could call in his father or his trainer.
2086. But his trainer is generally called in? Not in all cases.

R. Fleming.
15 Nov., 1900.

- R. Fleming. 2037. But he is, if the committee think it advisable, and your committee give the boys every latitude to enable them to prove their innocence in every instance? Yes.
- 15 Nov., 1900. 2038. Do you remember the memorable incident in which "Odo" played a part? Yes.
2039. Your committee took upon themselves the responsibility of disqualifying in that case? Yes.
2090. And they were perfectly right;—and you did not then ask for the intervention of the public;—you saw swindling that was patent to every one, and you disqualified the people concerned, and conferred a benefit on the public? Yes; I remember the case.
2091. Mr. Taylor has referred to the mismanagement of the Australian Jockey Club;—do you know of any mismanagement on their part? No; I have no fault to find with the management of the Australian Jockey Club.
2092. You know nearly every man upon the committee? Yes, I know a few of them.
2093. You know Mr. Knox? Yes.
2094. And would you, if you had to submit a straight case to them, have any fear in leaving yourself in their hands? No, I do not think I would.
2095. You think that they are all straight and honourable;—is there a man on your own committee that you would fear to trust yourself with if you had a case that was fair and straight? No.
2096. Do you know of any committee in the north or south, or east or west, that you have had experience of, that you would not trust? Well, I would not care to go that far.
2097. At all events the Australian Jockey committee and the Newcastle committee, or any other committee—leaving West Maitland out, because I see there was something wrong there recently—are generally straight and honourable men, according to your experience? I cannot even go as far as that with you. I would not answer for anything outside of my own committee.
2098. Do you know anything against the Australian Jockey Club committee? Nothing.
2099. Have you got anything to impute against them? Nothing.
2100. You referred to the "Elastic" case, and I agree with you that there is no doubt Mr. Mayo was mistakenly dealt with;—I think it was a mistake on the part of the committee? There is no doubt that they made a mistake.
2101. With reference to stipendiary stewards, you are a believer in them? Yes, I think they would tend to make racing better.
2102. Do not you think they ought to be paid by the association if there is one formed, and paid a high salary in order to give them an independent position? Yes, assuredly.
2103. They should be men with a knowledge of bookmaking, and of the running of horses, and with a knowledge of training so that they could convey information to the principal handicappers? No doubt the betting market gives the first indication as to how a horse is going to run. When you see a horse going out at 6 to 4, and lengthening out to 8 to 10 to 1, you do not want to ask many questions then.
2104. I think you are perfectly right;—the betting market is no doubt the leading point in showing how the horses are to run;—do not you think that a man who is appointed as stipendiary steward ought to have a knowledge of bookmaking, a knowledge of training, and a knowledge of horses, and that he should have a really good sound knowledge of the game right through? Just so.
2105. Do you know of the want of more efficient direction on the Australian Jockey Club;—do you know of any inefficiency in their direction, or do you know of any management of the Australian Jockey Club in the control of racing that you would take exception to? No.
2106. And you have every confidence in their direction and management of their racing meetings? Yes, I have.
2107. You have been asked whether jockeys and trainers ought to be represented on the committee, and you say "No"? Yes.
2108. Bookmakers pay license-fees do they not? Yes; I believe so.
2109. That is in the interest of the public themselves? Yes.
2110. You do not think bookmakers ought to be represented on the committee? Certainly not.
2111. You have run horses here for many years? Yes.
2112. Have you had any fault to find with the management or control of the Australian Jockey Club in any way whatever? None.
2113. You have never had anything to fear from them, and they have never even insinuated anything against you, or the running of your horses? No; neither here nor anywhere else.
2114. Now, with reference to anything outside the "Elastic" case, do you know of any instance in which the Australian Jockey Club committee have done an absolute injustice? No; there is nothing I can call to mind, except that case of Mayo's.
2115. That was many years ago? Yes. Of course, there are things that the Australian Jockey Club have done that I did not approve of; but they may have had some knowledge that I knew nothing about.
2116. What do you think about the proposal to have open inquiries;—do you think it would be better to conduct them as they are now conducted, or to throw the inquiries open to the public? I do not think they should be open.
2117. You know that there are many things connected with these racing inquiries which would lead to injustice being done if the inquiries were open? There is no doubt about that; it would very often lead to people getting out of trouble who would otherwise get into it. The men who sit on some of these committees are business people, who might have to consider whether it would be worth their while to give offence to this one and that one, and rather than give offence to some good customer they would let him off.
2118. And these open inquiries would be the very means of contributing to that sort of thing? Yes; that is what I say.
2119. And you think it would be far better that the Australian Jockey Club system of having these inquiries held in private should be continued in the interests of the public? Yes; I think so.
2120. *Mr. Archer.*] I suppose that you know, in connection with this question of pony-racing, and the improvement of the breed of horses, that, no matter how big the sire or dam may be, they very often throw small horses? Every stud will throw more or less small horses.
2121. You have nothing to say against the members of the Jockey Club individually? No; my trouble is a collective one. I have no objection to the Australian Jockey Club rules in any shape or form, nor have my club; but what we do object to is that they should shove on to us their by-laws and regulations, which

- which they have no right to do. We contend that we have the right to frame our own by-laws and regulations, and conduct our own meetings. R. Fleming.
15 Nov., 1900.
2122. Do you not think that, in the case of disputes occurring in your neighbourhood, and exciting a good deal of high feeling, it is perhaps better for you to refer them to the decision of the Australian Jockey Club? Well, we generally decide our own matters without coming to the Australian Jockey Club, and I think we have only sent one appeal to them.
2123. You are not bound to send them to the Australian Jockey Club? Oh, no.
2124. If anything occurs on your racecourse you are capable of settling it among yourselves? Yes; we are.
2125. Are you of opinion that when a jockey-boy is brought up for some alleged wrong-doing he should have advice from somebody—legal advice if it is thought necessary? I think there should be no objection to a boy having someone in to look after his interests.
2126. I suppose that you know that some of these boys are very little lads and inexperienced, and that when they are brought up before a lot of stewards, and put under cross-examination they are placed at a disadvantage? Yes; they become very confused sometimes, and scarcely know what they are saying.
2127. I am asking you this to see whether there could not be an alteration in the Australian Jockey Club arrangements that would be of benefit to the boys and to the owners too, because if a boy is wrongfully convicted, the consequences will fall on the owner of the horse as well as the boy;—in many cases it means the condemnation of the horse as well? Yes, assuredly.
2128. *Mr. Taylor.*] I do not think any of the questions that you have been asked have cast any reflection upon any individual member of the Australian Jockey Club? No.
2129. I wish you to distinctly understand that; but do you not think that their action in your own case was altogether too arbitrary? I considered so.
2130. And are there not many cases in which mistakes have been made in a similar way? I do not know.
2131. Do you know anything about the "Mora" case? Nothing beyond hearsay. I was not present on that occasion.
2132. But you are still satisfied that a boy who is brought up before the committee ought to have some representation, whatever the charge may be? Yes; I certainly think there should be no objection to someone going in to look after his interests. I say so advisedly, because I have seen boys go in, and become so confused, that they did not know what they were saying.
2133. Do you not think that a boy is very liable to incriminate himself, if he has no one to represent him or look after his interests? He may do so without knowing it.
2134. *Mr. Archer.*] Do you not think that if your own club, which is second to none outside of Sydney, had one representative on the central committee, it would be to the benefit of racing;—supposing there were four or five clubs in a district, with one representative between them, and that there was a general system of representation for country clubs, do you not think matters would work more harmoniously than at present, when they have no one to represent them? I cannot quite grasp your meaning.
2135. Supposing there were were a combination like the Northern clubs, and that they had one representative for four or five clubs, on the association? What are they to represent?
2136. I am presuming that we should disband the Australian Jockey Club, and erect a racing association? I should not think there would be much advantage in that.
2137. *Chairman.*] There is some misapprehension as to the intention of the Bill; the association, as proposed by the Bill, would be a body to draft rules, to govern the racing of the Colony, and to pass by-laws, &c.;—each club would manage its own affairs, but the representative body would then become a Court of Appeal? That I would quite agree with, but I understood that the country clubs were to appoint representatives to a committee to manage racing in Sydney.
2138. *Mr. Taylor.*] Presuming that you were a committeeman, and saw a horse pulled, would you lodge that complaint at once, or wait for a week or a fortnight? I would lodge it at once.
2139. Do you think it would be fair to the people concerned to delay lodging the complaint for such a time, if you were certain that a horse had been pulled? If I were certain that a horse had been pulled, I would certainly lay a complaint at once.
2140. Do you not think that as a committeeman it would be better to make certain of a thing before taking action; but that having once made certain that a jockey had done something cronk, or that a trainer was involved in some malpractice, it would be well to disqualify such a man or boy for life, instead of giving them a more restricted punishment? I do. That is the impression I had in Fielder's case. After the committee had reopened the case, if they found that he was guilty, he should have been disqualified for life for taking down the owner and trainer, and everyone else.
2141. Presuming that a case is sheeted home to an owner, or trainer, or jockey, and that a clear case of fraud is established, do you not think that the people who are guilty ought to be disqualified for life? I would not go that far.
2142. *Mr. Levien.*] Considering the questions that have been put to you with regard to the representation of these poor innocent boys on the committee, would you disqualify for life a mere child who was led into evil or wrong-doing by a designing owner or trainer;—remember he is a poor innocent boy? No; certainly not.
2143. What would you do with him? I would not disqualify him at all, if I could get at the owners.
2144. But is he not the main instrument? Yes; but he is only obeying his employer's orders.
2145. Then what is his duty, if he is an honest boy and he gets instructions from his master to pull the horse;—what is his duty to the public? His duty to the public is to try to win.
2146. But is it not his duty to the public, the moment that he gets instructions to pull a horse, to refuse to ride? Yes, undoubtedly.
2147. Well, then, if he is anxious enough to pull a horse, and to do a scoundrelly thing, ought he to be considered at all? Perhaps you are right.
2148. Do you not think I am right? Yes; I believe you are.
2149. *Chairman.*] What would you do in the case of an owner instructing a boy to pull a horse, and on his refusal punishing him, either by discharging him or otherwise? The only remedy he would have would be to bring the owner before the committee; the boy could bring the owner before the committee for making improper overtures.
2150. Did your club ever allow what they thought was a deliberate case of pulling to stand over for a week before taking action? No.
- 2151.

- R. Fleming. 2151. You think that action should be taken at once in such cases? Yes, at once.
- 15 Nov., 1900. 2152. If there were a case in which a committee had allowed a case to stand over for a week, would that, to your mind, suggest a doubt? Probably so.
2153. Would you under such circumstances, in cross-examining a boy, deliberately tell him that you saw him "pull" the horse? No; I would not. If I had been in a position to tell him that, I would have told him so on the first day.
2154. You would not have put a question like this to the boy, "There is no good in saying you did not (pull the mare), because everybody saw you";—you would not put a question like that after having allowed the matter to stand over for a week before you took action? No; certainly not.
2155. Now, on the subject of open inquiries, you say you object to open inquiries, because business men and others would not care to do the thing that ought to be done under such circumstances;—does not that show that these men are really not proper men to have on a committee? They may not be the proper men, but where are you going to get them. The difficulty comes in everywhere—where are you going to get them. Non-betting stewards and all that sort of thing are all myths; you cannot get them. What I mean to convey in connection with open inquiries is that the guilty man may very often get off when he would otherwise be found guilty at a close inquiry.
2156. Mr. Archer.] You said in answer to Mr. Taylor, in reference to the "Mora" case to which he was alluding, that if you saw a wrong perpetuated you would act upon it there and then? Yes.
2157. But I suppose that would depend upon circumstances, in this way: As a man who has had a great deal of experience as a horse-owner, and in other ways for the last thirty years, you are aware that horses very seldom run two days alike? But that was not the question that was put to me.
2158. Is it not a well-known fact that you can very seldom get a horse to run the same way in two different races? That is very true.
2159. Well, in the "Mora" case, which Mr. Taylor thinks should have been acted upon at once, do not you think that the mare's running in the first race left some doubt in the minds of the stewards, which they wanted to settle before they acted? I do not know about that; that is not the question that Mr. Taylor put to me. He asked me if in the event of my seeing a deliberate case of "pulling" I would not act at once, and I said, "Yes."
2160. Chairman.] You say that the objection of your club to the Australian Jockey Club control is that you have got to obey the by-laws drafted by the Australian Jockey Club, which do not properly apply to your condition? Yes; the by-laws and regulations.
2161. And you cannot object to them in any way? No; we have no option, but to obey them, or submit to being struck off the register.
2162. From the power exercised by the Australian Jockey Club, your club could not in any way object? No.
2163. If you severed your connection with the Australian Jockey Club your club could not live? No certainly not, it would become an unregistered club.

TUESDAY, 20 NOVEMBER, 1900.

Present:—

MR. GILLIES,
MR. LEVIEN,

MR. HOGUE,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Hon. Henry Carey Dangar, M.L.C., sworn and examined:—

- The Hon. 2164. Chairman.] You are the chairman of the Australian Jockey Club? Yes.
- H. C. Dangar. 2165. You have held that position for some time? Yes; off and on, for a very considerable time.
- 20 Nov., 1900. 2166. You have had considerable experience in horse-racing generally? Yes; I have.
2167. Have you perused the Bill that has been submitted to Parliament? Yes; I have examined it.
2168. Of course, you will understand from it that it is proposed to set up a racing association to govern horse-racing for the Colony generally? Yes.
2169. And, naturally, as the Australian Jockey Club govern racing, their actions as administrators are being inquired into, with a view to see whether the system they adopt can be improved upon; as you have had experience in that connection, we shall be glad to receive any light that you may be able to throw on our inquiry, or any assistance you can give us;—regarding, first of all, the control of racing that is exercised by the Australian Jockey Club, I suppose this power is exercised by virtue of their prominent position in the racing affairs of the Colony? Yes. It is a sort of *lex non scripta*. The power they exercise has been conceded to them after years of experience, and without any question.
2170. They make by-laws that govern the racing of all the clubs within the Colony? They make racing rules and by-laws. The rules of racing, as they are called, have been established from time to time by the Australian Jockey Club and adopted by the members of the club, and they have passed by-laws for the regulation of their own affairs, more particularly in connection with the racecourse.
2171. And have country clubs any power of appeal from any by-laws that the Australian Jockey Club may make controlling country clubs? No.
2172. They must be subject to the laws as laid down by the Australian Jockey Club? Yes.
2173. Are the country clubs, as a whole, satisfied with that method of management? I think they are. So far as any objections that have been raised by them are concerned, I think I may safely say that the country clubs are satisfied with what we have done.
2174. Do you think that they would care to have representation on a simple tribunal, such as is proposed under the Bill? Well, for some things, perhaps, they might; but, so far as any objections they have raised to the action which has been taken by the Australian Jockey Club is concerned, I do not think that the country clubs have ever exhibited so much dissatisfaction with our control of racing as to show them to be particularly anxious whether they are represented or not.
2175. At the present time, as far as the management of your own racing is concerned, your Committee do not go in for the system of employing stipendiary stewards? No; we do not.

2176.

2176. We have had some evidence on that point;—are you of opinion that the appointment of stipendiary stewards would be an improvement on the present system? For a time we delegated the status of stipendiary stewards to one of our officers without—I think I am correct in saying—increasing his pay; in order, chiefly, that this man might attend suburban meetings and report any irregularities he might observe there; but I am not myself particularly in favour of the appointment of stipendiary stewards. It is extremely difficult, in the first place, to get capable men to discharge the duty; and, indeed, after what I may call a brief experiment, we practically gave it up. As far as I am personally concerned, I am not altogether in favour of appointing a stipendiary steward, and I think that if those who manage these suburban meetings did their duty there would be no necessity for these appointments.

The Hon.
H: C. Dangar;
M. L. C.
20 Nov., 1900.

2177. At the present time, does it not mean that the Australian Jockey Club Committee involuntarily occupies the position of both prosecutor and judge with reference to any cases that come before them? Well, I have seen from the published report of the evidence that has been given here, that that question has been persistently asked, and, if you like, it might appear that the stewards and Committee of the Australian Jockey Club, as far as our own meetings are concerned, are in the position of prosecutor and judges. At the same time, the prosecution that devolves upon them is created by the exigencies of the case, and I may safely say that they would be very glad to avoid it if they could; but they necessarily are somewhat in the position you have indicated. I would only like to say that that is a position which the English Jockey Club have been in for a century and a half.

2178. They occupy the same position? Yes.

2179. Would it not be more satisfactory if there were some court of appeal provided for? Well, provided that you can get capable and honest men, and men whose position is above question, to undertake the work that is now carried out by the Australian Jockey Club Committee, I do not think it is necessary to have a court of appeal. If you were to make any court of appeal of an open character, I think there would be no end of trouble, and no end of difficulty, in regard to the conducting of these cases, and I am not aware of any such reproach attaching to the Australian Jockey Club in connection with their control of the business of racing as has demonstrated the necessity for any such court being established. Personally, I do not think it is necessary to have any such court.

2180. There was a conference of country clubs held on one occasion? Yes, once, at June; but practically very little came of it. I may say, however, that some of the suggestions that were enunciated at that conference were attended to by the Australian Jockey Club Committee, who, I may say, are always open to receive hints or suggestions from anybody with regard to the improvement of the conditions under which horseracing is carried on.

2181. Was there not also some talk of a northern association being formed at one time? Well, I cannot say I have ever heard of that.

2182. It was stated here in evidence that it was proposed? I cannot say that I have ever heard of any such proposal as that.

2183. Now, with regard to some evidence that has been given here with respect to the fund which is arranged for the benefit of distressed jockeys, do you think that any improvement could be made in the basis on which that fund has been established? I do not quite understand the drift of your question.

2184. I understand that you collect certain fines that are inflicted on these boys and place them in a fund, which is called the Distressed Jockeys Fund? Yes.

2185. That fund is used now for the purpose of making lump sum allowances to the lads who are injured? Yes.

2186. I understand that in Victoria they follow the system of giving the boys a weekly allowance;—do you not think that it will be better if we have some permanent fund here for the purpose of making a similar provision? No; I cannot say I think that, because, as a general rule, the injury these boys receive is only of a temporary nature, and is such that they almost invariably recover in a short time, and are able to resume their duties. We endeavour to find out the nature and extent of their injury, and remunerate them accordingly, and we have almost a scale of payments, according to the nature of the injury the boys receive. That is a general rule, but in some cases the jockeys are seriously injured, and are not able to resume their occupation, and if you refer to making provision for cases of that kind it is a difficult matter to say what should be done with regard to the appointment of a body to control a fund to meet such cases as those. I may say, however, that we open our hearts if we find that the injury is a very serious one, although the fund was never established to provide for anything like a permanent annuity for jockeys who may be injured.

2187. Would there be any difficulty in getting sportsmen to contribute to such a fund placed on the basis I have described? Yes; I think it would be difficult to get a sufficient fund to provide annuities for permanently-injured jockeys.

2188. Or to pay them a weekly allowance while they are off duty? Yes.

2189. They do that in Victoria, I believe? I am not quite posted up as to the practice in Victoria, but you will rather surprise me if you tell me that they do such a thing there, because I do not think their fund amounts to such a sum as would enable them to do that.

2190. Some one said that in evidence? Well, I do not trouble myself much about the rules of other clubs, as we have enough to do with our own.

2191. What is the amount of your fund? About £5,000.

2192. How is that used? It is deposited by the club.

2193. And interest is allowed on the amount? Yes.

2194. Do you know the rate of interest? I think it is only 4 per cent. We used to get 5 per cent.; but the rate of interest is constantly changing, and I am not quite sure whether we get $3\frac{1}{2}$ or 4 per cent.; but it is not very much more than that.

2195. Then it would not be correct if it were stated in evidence that the club used a portion of this money, and only allowed $2\frac{1}{2}$ per cent. on it? I am not aware that that is the practice. I thought that the money was deposited, and I am under that impression now.

2196. Coming again to the practice of the Australian Jockey Club, with regard to cases of malpractice, are you of opinion that boys, who are practically juniors, and who are charged with offences against the law of racing, should be represented upon any inquiry that may be held? No; after many years of experience, I am quite of opinion that boys should not be represented upon these investigations. I think it would lead to an infinity of trouble. I think that very often, if boys were allowed to be represented

by

The Hon.
H. C. Dangar,
M.L.C.
20 Nov., 1900.

by friends or lawyers, the particular matter in dispute would be lost sight of, and all sorts of side issues would be raised, and all sorts of attempts would be made to perhaps screen the boys by means of other questions being introduced altogether foreign to the subject that was being considered, viz., the *mala fides* of the boy, or the offence with which the boy may have been charged. We have had no power, as is well known, to take evidence on oath, but we are obliged to get at the truth the best way we can, and, as a rule, jockey boys, I think, are very precocious, and are better able than most boys to take care of themselves. The nature of their occupation and their associations make them precocious, and I think they generally keep their wits pretty well about them. I see it reported that an attempt has been made to persuade this Committee that these boys are not able to look after themselves; but my opinion is that they are very well able to look after themselves in any case in which their conduct may be called into question.

2197. You were on the Australian Jockey Club Committee when the "Mora" case was gone into? I was.

2198. You were not in the position of chairman at that time? No; the Honorable W. A. Long was chairman.

2199. Did you notice that during the examination of the boy Fielder no response was given by him to certain statements that were made in the form of questions by the late chairman and another member of the committee? I cannot say that I ever observed that no response was given; but I did observe that in the case of one or two questions it was difficult to elicit a response from the boy.

2200. For instance, if you, as chairman of the committee, were prepared to state to a jockey or anybody that you saw them do any wrong, you would not think, in a case of that kind, of waiting for another race before you summoned them before the committee? I do not remember what was said or done on that occasion; to what do you refer?

2201. In the course of the inquiry, while the boy Fielder was under examination, the chairman said:—

Q. When you were at the 5-furlong post, according to my observation, you started to get her back? No, sir.

Q. I had the glass on you—I was watching you only—I saw what you were doing? (No response).

Well, the boy might naturally make no response. That was a fair thing for the chairman to say, as that was a matter that went to the bottom of the whole thing—the question whether he pulled her back or not. I am not surprised at the boy not making a response to that.

2202. Following that up, there is a question by Mr. Knox, who says:—

Q. There is no good saying you did not, because everybody saw her—there were four of us with the glasses on nothing else.

Would you, in a case like that, as chairman, think of putting a matter off for a week before summoning a boy before the members of the committee if you knew as much as those remarks seem to indicate? I may tell you, as far as my recollection serves me, our suspicions were excited with regard to the running of "Mora" in that race, and we discussed the matter in camera, but came to the conclusion that there was nothing so utterly suspicious or so decided as to justify us in taking action at that time. I well remember that. Although we thought that matters were very suspicious—because at that time "Mora" was a very brilliant mare, and there was a great deal of astonishment exhibited at the way she ran—we considered the matter, and came to the conclusion that there was nothing to justify us in taking the extreme action of pulling the boy up at that immediate time. I may tell you, also, that it is very desirable in all these cases, if there is any necessity for proceeding at all, to take action at once, so as to prevent the boys from dishing up a case, and giving some explanation that may be altogether foreign to the true one. As a rule, therefore, we take action at once in matters that we think require investigation. But in that case, as is well known, although our suspicions were excited, we did not think the case looked so bad as to necessitate further action at that time. It was only after the running of the mare in a subsequent race a few days or so afterwards, and her showing such an extreme difference in form, that we were almost compelled to take action.

2203. You say that was a case of suspicion at the time? Yes.

2204. Would you call it fair cross-examination to turn round and tell a boy that there were no less than four of the committee saw him do what he was accused of? I candidly confess I do not think that is the line I would have taken myself, because it was almost indicating to the boy that he was guilty beyond the possibility of explanation. I do not think that I would have taken that line myself; but I know there was a very strong feeling about it among my brother members of the committee.

2205. The statements which I have referred to are, to a certain extent, pre-judging the case? They are capable of bearing that aspect.

2206. That appears from the questions you put later on, and you are the only member of the committee who appeared to put the question fairly to the boy then;—would you be astonished, although Mr. Knox makes that statement there, to learn that, in reply to Mr. Taylor before this Committee, he gave evidence as follows:—

Q. Then these men ought to be pulled up for perjury? I do not say that; these men only came in to express their opinion. As far as I recollect, I did not see anything to lead me to suppose that the boy wilfully "pulled" the mare.

That part of Mr. Knox's evidence seems to me a little bit inconsistent, although I do not know whether he attaches any special strength to the word "wilfully." I do not know whether he means to make any distinction between "pulled" and "wilfully pulled."

2207. The boy would have to wilfully pull the mare before he would be condemned? We should have to be satisfied of his *mala fides*—of the intention to pull—before we would inflict any penalty.

2208. There was a rehearing of the "Mora" case? There was.

2209. Were you present during the whole of the second inquiry which was held? I was not present the whole time. I think I left for Egypt before the whole thing had been finally determined. I think I was present at the beginning of the inquiry, but I left the Colony about that time, and I think my departure took place before the final determination had been arrived at.

2210. Have you gone through the whole of the evidence in connection with that case at any time? On my return from Egypt I was very ill for some months, and the whole thing had gone over, and I do not know that I made any further reference to the evidence which was given; but the evidence was practically closed when I left, although the decision had not been given by the committee.

2211. Would you be surprised to know that in that case, although it was admittedly a case of suspicion in the first instance, all the evidence given is directly in the boy's favour, except the statements of the committeemen, which are against the boy? I am quite aware that there was a good deal of evidence—I heard

The Hon.
H. C. Dangar,
M.L.C.
20 Nov., 1900.

heard a good deal of it—directly in the boy's favour; but in these cases it must not be lost sight that the committee had the evidence of their own senses before them. It was not a case of the opinion of this man or that man, and you can always get heaps of men to come in and give evidence in favour of a jockey-boy. You can get people to come and give evidence in favour of the greatest criminals occasionally. I am not calling the boy a criminal in this case; but in this case I am quite sure that the committee acted as they did because they had the best evidence before them—the evidence of their own senses. I confess that I did not see the race, because I happened to have taken an English friend down to see the start of that very race, and the race was run whilst I was walking back to the Stand. When I did get back I found that they were all talking about the performance of the mare.

2212. In a case of that sort—a case of suspicion—would it not have been a fair thing for the committee to have made some inquiry to see whether the owner or trainer was to blame? That is the very thing we did. In all these cases the owner and trainer come under as much suspicion as the boy, and in this very case we did not summons any witnesses for the prosecution, but we did summon the owner and the trainer, who gave evidence, so that we might see whether or not they were so far implicated in the case as to afford any loop-hole of escape for the boy; but we came to the conclusion that there was no suspicion attached to them.

2213. Have you noticed that, with the exception of one or two questions put by yourself, there were no questions asked with a view to ascertaining whether the owner or trainer were guilty of any misconduct; but that the examination seemed to have been conducted rather with a view to exonerate them? Pardon me; but I think there was an effort made to ascertain whether there were any circumstances connected with the backing of the animal that would lead to suspicion, or show whether the owner or trainer was implicated, because you can only get at it in that way.

2214. In a case of suspicion like that where delay occurs, would it not be possible for a boy to be prejudiced through the fact of the mare not being examined at the time, or through certain evidence being obliterated during the period of delay? In what way do you mean that the mare should be examined?

2215. I mean that she might have her feet examined, or things of that sort? Well, we never heard there was anything wrong with the mare. There was no suggestion of anything ever being wrong with the mare; but there was a suggestion with regard to some shoes that she wore.

2216. At the rehearing of the case—you were not there the whole of the time—several of the witnesses from the course who saw the race gave as a reason why they did not back the mare the fact that they did not like her appearance? That may or may not be; but will you forgive me if I ask what all this has got to do with the Bill?

2217. The only reason I have now in asking you that is to ascertain whether you consider a case like the one I have referred to should be put off for a week, and as to whether that is not a fair case for a lad to have an older person to represent him? Will you excuse me; but that case was not put off for a week; and if the mare had not caused suspicion by her running in Tattersall's Cup a few days afterwards, there would have been no further action on the part of the Australian Jockey Club committee. But her performance in Tattersall's Cup was so utterly different to her running in the race for which the boy was disqualified that I do not think there was anything left for the committee to do but take the action they did. In the second case she ran a most brilliant race.

2218. *Mr. Taylor.*] But would not that point to the owner and trainer being at fault rather than the boy;—every one who has come here, and all the witnesses who have appeared before your own committee, have pointed to the fact that the mare was dead-beaten on the first day? I have told you that I did not see the race, and I am not giving any evidence on that point.

2219. The witnesses say that the mare was thoroughly exhausted, and could not raise a gallop, and in the face of that evidence, and the knowledge you have, would you not think that that rather pointed to the trainer than the boy being at fault? It might, perhaps, point to the trainer more than anyone else; but I do not know myself how the mare ran in that particular case. The mare had come in and left the paddock before I got back to the Stand after the race, and I cannot, therefore, say what state she was in. I can only tell you that on my return I found all my colleagues talking about her.

2220. *Mr. Gillies.*] But she carried a stone less than in the first race? Yes; but she had to run further, and in far better company.

2221. *Chairman.*] However, in a case like that, where a rehearing is granted, would it not be an improvement if that rehearing were held by a different body from that which first inquired into the matter? I do not think so. It is the most difficult of all the duties that the committee have to discharge, to investigate these cases of suspicious running or riding of horses. It is the most difficult and unpleasant of all the duties that we have to perform, under the circumstances in which we are placed. It is impossible for us to take evidence on oath—although I do not think there is a great amount of importance attached to the oath, because if men or boys are bound to give false evidence they will give it without any regard to oaths or anything of that sort—but I cannot, and I do not think that the appointment of such a body as you propose would have the slightest effect, or do practically more good than is now done by following the system which has been in existence here for so many years.

2222. Would it not give more satisfaction if you made some arrangement for the holding of an annual conference of representatives from the different racing clubs—I do not mean from any individual club, but from the various districts of the Colony? I am not inclined to say that it would not be a good thing to have an annual conference to ventilate matters of reform, and suggest improvements in the rules of racing; but as regards the general control of racing, and the appointment of a different body to investigate and deal with cases of malpractice, I do not think there is any necessity for such provision.

2223. As to the court of appeal? I do not think it is necessary. As long as you get good men who are intimately acquainted with the business of racing, as the members of the Australian Jockey Club committee are, from year's end to year's end, it would be an extremely difficult thing to get any men, paid or otherwise, to do the work better than they do. They are capable men, and competent men, who have the whole business at their fingers' ends.

2224. If a country club imposes a disqualification, their action is ratified by the Australian Jockey Club, and the club cannot remove or shorten the period of disqualification? The process is, that when a club imposes a disqualification they report the matter to us; and unless it is appealed against, or unless some good cause can be shown on appeal, we adopt that disqualification, and the club which originally imposed it cannot remove it unless we do. We are constantly being asked by country clubs, after the lapse of a certain

The Hon.
H. C. Dangar,
M.L.C.
26 Nov., 1900.

certain time, to remove the remainder of a penalty—that is, to remove a disqualification before the full term has expired. If the reasons given to us are, in our judgment, sufficient, we sometimes remove it, but not very often, because, as a rule, we find that the sentences imposed by these country clubs are very light and very insufficient for the offences committed. That is the process, and sometimes, not in all cases, a request is made to us, subsequently, to shorten the period of disqualification.

2225. And it rests with you to do that in all cases? Yes.

2226. You do not think it would be possible to improve the present method by adopting an appeal court, comprised of about three representatives from three districts of the Colony—north, west, and south—in conjunction with a certain number of representatives of the Australian Jockey Club? I do not think it would be found to be workable at all. Do I understand that it would be the intention to make it an open court of appeal?

2227. Not exactly an open court; but a court of appeal to decide all questions affecting the connection of country clubs with the Australian Jockey Club? I am not quite sure whether you intend to convey that the court of appeal is to be only a court of appeal for the hearing of cases arising out of offences against the laws of racing.

2228. Yes; and also to deal with cases of dispute between any of the country clubs and the central or other racing clubs executive? Much would depend upon the quality and the kind of men appointed. I am so confident myself as to the capability of the members of the Australian Jockey Club committee, who have the whole business of racing before them from one year's end to the other, and especially the committee constituted, as I am proud to say the committee of the Australian Jockey Club has been constituted for many years, that I am perfectly sure you could not obtain any court that would be more capable or more able to give decisions in cases which are submitted to them than they are. In the course of our experience we hear of some very good men who might be capable of acting in the capacity you indicate; but as the cases come up to us week after week, how on earth would it be possible to obtain these men from what you may call the three corners of New South Wales—north, west, and south—to come here and form the court that you would provide for. I think it is extremely unlikely that you would get men to perform the duties—certainly not without being paid—and I do not think it is necessary to establish any court of paid officers to do that work.

2229. They have a racing association in New Zealand, I believe? Yes, they have.

2230. And there are two in Queensland? I confess I do not know much about Queensland. I know that the people in the north and the south of that colony have been squabbling with each other for a considerable time, and, I believe, they have split; but what they are doing in the north now I do not know. We have had very little to do with the northern portion of the Colony; but we have something to do with what is known as the Queensland Turf Club; even they have come to grief amongst themselves.

2231. Can you give us any information with regard to the Sydney Turf Club, regarding which we have taken some evidence;—is it in every sense a public club, or does it come under the head of a proprietary club? It is certainly not a proprietary club, and it is not a public club either; it is a private club which races for sport. It is a club which I, for one, entirely commend, or we would not have given it the recognition we have. It is a private club; but it is in no sense a proprietary club, because they race for sport, and distribute all the money they get in sport.

2232. I suppose they produce a balance-sheet in the ordinary way? I suppose they do. I am not a member of the club.

2233. *Mr. Gillies.*] Did you ever know a balance-sheet of the Sydney Turf Club to be produced? I have never seen one; but I am not in a position to say anything about it, because, as I say, I am not a member of the club, and there is no necessity to produce one to me.

2234. Who leases the course for the Sydney Turf Club for their two days racing? Our secretary submits an application from the chairman of the Sydney Turf Club for the lease of the course for the days that we apportion to them.

2235. Then you are certain that it is not a proprietary club? I am perfectly certain about that. We would very soon have put a stopper on them if they had been a proprietary club.

2236. *Mr. Taylor.*] Is there any club at all? It is a club in this sense: that if there were a large deficiency, through bad luck or disastrous weather, that deficiency would have to be made up by some one.

2237. *Mr. Gillies.*] Is this Sydney Turf Club favoured by racing on the days they are allowed to choose? I assure you that they are not allowed to choose any days. That is another difficult duty that we have to perform—to apportion the days for the racing under the auspices of the different clubs. The Sydney Turf Club is not allowed to choose any day; but by prescription, so to speak, for some time past, certain days have been allotted to them. Those days are technically supposed to belong to them, and nobody wishes to oust them from those days, and we have no inclination to change them. They are days which for some years past have been allotted to the Sydney Turf Club, and no one has exhibited any inclination to appropriate those days, or alter the days which are now assigned to them.

2238. Are you not aware that the Hawkesbury and Rosehill Clubs have been trying to get those days which have been “collared” by the Sydney Turf Club? You must not use that term.

2239. Allotted to them, then? We do not allow anyone to “collar” anything. We have been the absolute masters of the situation with regard to the allotment of these days, and we have tried to do justice to all of the clubs. They are very hard to satisfy, especially the proprietary clubs; but I am not aware of any effort having been made, either by the Hawkesbury Racing Club or the Rosehill Club, to “collar” the days, as you say.

2240. No; I do not say that the Hawkesbury Club or the Rosehill Club wanted to “collar” those days, but the Hawkesbury Club say that these days were taken from them? I can assure you that if any statement of that kind has been made, I do not think that it is a correct statement to make. The Hawkesbury Club have had no power to take any days from anybody. Whatever was done must have been done by the committee of the Australian Jockey Club, and I am not aware of any injustice which has ever been done to the Hawkesbury Club. I have always had the greatest sympathy for the Hawkesbury Club, which is a non-proprietary club, racing for sport—a club which was at one time a very good one, but which has now gone to the bad, not from any fault of theirs, but owing to what I may call the redundancy of racing. That is the chief cause from which they have suffered. The extraordinary number of meetings which we have had to apportion amongst these proprietary clubs I believe is at the bottom of the

the decadence of the Hawkesbury Club. I saw in one of the reports that it was stated that the Hawkesbury Club had suffered from the injustice done by the Australian Jockey Club, but I am certain that there is no truth in that statement. We have never done them an injustice, but we have shown them every consideration by allowing them to race at Rosehill when their own course was not fit to race upon, and we have endeavoured to help the Hawkesbury Club in every way we could. They have, however, suffered from the redundancy of racing which is to be deplored by all of us, and I wish it could be restricted, for it is doing a great amount of injury to racing.

The Hon.
H. C. Dangar,
M.L.C.
20 Nov., 1900.

2241. Do you think the Australian Jockey Club is within its rights in subletting the Randwick course to the Sydney Turf Club? Most decidedly.

2242. Is Mr. Pilcher the honorary legal adviser of the Australian Jockey Club? I believe he is called the honorary counsel.

2243. Did Mr. Pilcher ever give an opinion to the effect that the Australian Jockey Club had no legal standing to enforce its rules upon any other club in the Colony? I should not be surprised if he had given that opinion, because I do not know that we have legal power to enforce our rules, or to force them upon anybody. Our rules have been submitted to tacitly in the interests of sport, as exceedingly good rules, and as absolutely necessary for the proper control of racing.

2244. Whence does the Australian Jockey Club derive its power to sublease the Randwick Racecourse? We get it from the Act of Parliament.

2245. But Mr. Pilcher has given an opinion contrary to that? I am not aware of that. There is a distinction between the two matters. As to our power to enforce the rules of racing, and that kind of thing, I say we have no legal power to do that; but as regards our power to sublease the racecourse, I should be utterly surprised to hear that Mr. Pilcher had given an opinion such as you state.

2246. Has Mr. Pilcher ever given an opinion that the Australian Jockey Club has no power to make any by-laws which are binding on any other jockey club in the Colony? I do not remember anything about it.

2247. If a race club failed to comply with your rules as to registration, what would you do with it? No race club is obliged to register with us; but the only difficulty that would take place would be with regard to horses that run at unregistered meetings. No club is obliged to register with us; it is purely voluntary on their part when they come to us to be registered.

2248. Would you not disqualify the club, and every horse and competitor that took part in their meetings? Well, I suppose you are referring to Rule 6 of the rules of racing. This is one of the most valuable rules we have. It states:—

If any horse, pony, or galloway run at any unregistered meeting after the 31st day of August, 1898, such pony, horse, or galloway, and the owner, lessee, trainer, and rider thereof shall be disqualified for all races at any registered meeting; and every horse owned by such owner, lessee, trainer, or rider, or in which it shall be proved to the satisfaction of the committee of the club that such owner, lessee, trainer, or rider has any interest whatever, may be disqualified for all races at any registered meeting.

I do not see in that that the club itself is disqualified.

2249. Then, if you have no power to disqualify horses or trainers, or so forth, do you admit that you act in an illegal way in enforcing your disqualifications? No; certainly not.

2250. But can you legally do so? I said that we had no legal power to enforce these things; it is only by tacit consent that deference is paid to our authority by the horse-owners, trainers, and so forth, throughout the Colony, in the interests of horse-racing generally.

2251. I suppose that you follow the lines of the English racing laws in the Australian Jockey Club? Our rules of racing are based on the English rules. We have adopted them to the fullest extent that we have considered desirable.

2252. Mr. Clibborn and Mr. Knox told us that? Yes; that is correct.

2253. A race meeting took place at Rosehill on Monday, the 12th instant, did it not? Yes; that was on the Prince of Wales Birthday.

2254. A horse named "Sweet Erina" won the Granville Stakes? Yes; I think so.

2255. An inquiry was afterwards held into the running of that horse? I am not aware of that.

2256. You do not know whether they held an inquiry or not? No.

2257. Is the Rosehill Club registered under the Australian Jockey Club rules? Yes.

2258. Then, consequently, the Rosehill Club must, in such matters as the "Sweet Erina" case, act in accordance with the Australian Jockey Club racing laws? Yes.

2259. "Sweet Erina" was disqualified? I was at the Rosehill races; but to my knowledge no investigation took place on the day with regard to the running of Sweet Erina; what took place afterwards I am not aware of.

2260. *Mr. Taylor.*] I understand that you have had a long and honorable career on the turf? I do not know what the public think about my career; it is not for me to say.

2261. That is the impression we have gathered here. I would like to go back to the matter of the Sydney Turf Club; we have it in evidence that there are only two gentlemen who are benefited by this club;—do you think it is fair for these gentlemen to run a club in their own interests, to the detriment of other established clubs? I have very little knowledge of the Sydney Turf Club; but I am perfectly sure that it consisted originally of a great many more than two members. I do not know of whom it consists now; but I am pretty sure that there are more than two members. Their officials number more than two.

2262. We have it in evidence here from Mr. Clibborn that there are only two persons who benefit from the Sydney Turf Club, of whom he was one? I told you just now, and I am perfectly sure of it, that the Sydney Turf Club is in no sense a proprietary club. Mr. Clibborn discharges the duties of secretary—we let him do it—which adds a small amount to his income; but as far as I know he is really the only man, except the officials paid for the day's work, who benefit by the club at all.

2263. Do you know Mr. Fleming, of Newcastle? I have often heard of him.

2264. I understand that he trained for you, or for your son? I believe he has an animal in training for my son at this present moment; but he has not trained for me.

2265. You refused to allow him to occupy two positions? In August last, when some very restrictive regulations with regard to pony-racing was passed, we required, not only our own officials, but every one with whom we had anything to do, to decide to give up either pony-racing or horse-racing. What we did with our own officials we did with Mr. Fleming, saying that he must choose between the ponies and the Newcastle Jockey Club. We have set our face against pony-racing, and in order to be consistent we told

The Hon. H. C. Dangar, M.L.C. told him he must choose one thing or the other—he was left a perfectly free agent, to do whichever he might think fit.

2266. Do you think pony-racing ought to be suppressed? I do, most decidedly.
 2267. Would it tend to improve the breeding of stock and purify racing generally? I cannot say that it would tend to improve the breeding of stock. It is a perfect fallacy to suppose that pony-racing is calculated to improve the breed of ponies, and I am not at all certain that it is a good class of animal to improve. If pony-racing were done away with it would certainly have a good influence on horse-racing. I have for many years given my support to horse-racing, which I do think has had a tendency to improve the breeding of horses; and in so far as the abolition of pony-racing would tend to better the position of horse-racing, it would contribute to the improvement of the breed of the horses. I cannot tell you what a great dislike I have for this pony-racing. I think the ponies are nothing but instruments for gambling, and that they are doing an infinity of harm, not only to the turf, but to all those who engage in the sport with which they are connected.

20 Nov., 1900.

2268. In the event of their not being suppressed altogether, do you think they ought to be limited to one day's racing a week? When I tell you I think pony-racing ought to be suppressed altogether, any step in that direction would naturally meet with my entire approval.

2269. Do you think that if we, as the senior colony of Australia, were to offer a £5,000 cup once a year, to give £500 prizes for all weight-for-age races, and to provide for a £1,000 steeplechase once a year, that it would tend to centralise the best horse-racing in this Colony instead of in Melbourne? I cannot honestly say that I think it would make any great difference. I think I saw it reported that Mr. Knox gave evidence to the effect that at one time the Victorian Racing Club raised the Melbourne Cup to £10,000. It was a very foolish proceeding on the part of the Victorian Racing Club, and I am perfectly sure of this—that it did not improve the race or improve the quality of the horses that competed in that race one bit. The end of it was that they had to come down, and instead of being the magnificent patrons of sport that they assumed to be, they have come down to be more shabby in their prizes than the poor old Australian Jockey Club, who have always cut their garments according to their cloth, and have given such sums as they could afford. If the Victoria Racing Club had not come down they would have been bankrupt by this time.

2270. *Mr. Levien.*] But that was due to the boom times? Yes; the boom times were dangerous times. I cannot say I think it would be any improvement to give the prizes you mention, or that you would get any better horses or more horses to contend for these prizes than you get now, and unless the Government supplemented the prizes to the extent you have mentioned, I am perfectly sure the Australian Jockey Club could not afford to give them.

2271. *Mr. Taylor.*] Do you not think they would have a tendency to increase horse-racing of the better class all round, and tend to purify it? I do not think it would have any such effect—I do not think it would alter it one bit.

2272. Might I ask how has Victoria got the lead in horse-racing? I do not admit that Victoria has got the lead. I say that they have one grand national holiday—Melbourne Cup Day—which, I must say, they have cleverly worked up into a big national demonstration, and that they succeed in dragging a whole lot of people there; but I am safe in saying that as a general rule, and taking the general run of our races, we have better races than they have at Flemington. We have a better course, and we get a good class of horses. We attract very few Victorian horses; but that shows poor spirit on their part, for we send a dozen horses down for every one they send us.

2273. But would not these big prizes tend to centralise racing here? It might have the effect of inducing a few more horses to come here, but you must not lose sight of this, that it is only for the big meetings that it would pay a man to fetch his horses over; it would not pay a man to come over to compete for small prizes.

2274. But do you not think the larger prizes would have a tendency to inspire public confidence that every horse in the race was trying, and that that feeling would extend gradually to other races? I am bound to say this, that, as a general rule, we hear less about non-triers in the Melbourne Cup than in any race that is run, and if we could afford to give prizes of that sort I would be very glad to advocate it. At the same time, I would not, for the sake of the advantages you have indicated, advocate that the Australian Jockey Club should give such prizes, because I know they could not afford it.

2275. You admit that it would inspire public confidence, as our experience proves that there is less talk about non-triers in the Melbourne Cup;—now, if it inspires public confidence in that respect, do you not think that people would take an interest in racing generally, owing to their confidence being so inspired, and that they would attend race meetings to an extent that they otherwise would not do? Because confidence would be inspired in regard to that particular race. I do not know that the same amount of confidence would be inspired in the case of races of smaller importance.

2276. At any rate, you think that a cup of £5,000 in this Colony would have a somewhat similar tendency to what the Melbourne Cup has in Victoria? I do not think it would very much alter the condition of things. It might induce a few more horses to come here; but that would be about all. I may say that we made an effort in conjunction with the heads of the metropolitan racing clubs to induce the Government to give us a sum of money for a large race meeting in connection with the Commonwealth celebrations; but they refused, and the proposal has fallen through—the fault is not ours. There was a possibility I was told—and I was very glad to hear it—of a good many Victorian horses coming over to compete for the prizes we proposed to give. But, generally speaking, I do not think that the giving of these large prizes would very much alter the condition of things existing here at the present time. You might induce a few more horses to come here; but I do not know that the mere giving of a few prizes such as you have indicated would alter the present state of things very materially.

2277. But you think it would tend that way? It would do no harm, anyhow.

2278. Everything tending that way would also increase the attendances, and hence place you in a position to give these higher prizes? I believe you have had some evidence before you on this question; but it is not the slightest use expecting that we should get the same attendances here as they get in Melbourne, for in Sydney there are all the minor counter attractions, whereas in Melbourne there are none. Their course is capable of accommodating a much larger number of people than ours. I will not say that they can accommodate them much better than we do. At the same time, it is a case there of going to the racecourse or nothing; there is no place to go to but the racecourse. On a race-day, anyone in Sydney going

going to the railway station or the Circular Quay can, as someone has already said, see the large number of people who are patronising our various counter attractions, and Randwick suffers in proportion.

2279. What are the counter attractions in Melbourne? I am not aware of any.

2280. I mean here;—what are the counter attractions here? Oh, the people go to Manly and all the different watering-places.

2281. Well, leaving out Manly, I notice that, so far as cricket is concerned, the number of cricket-grounds and the number of members belonging to the cricket clubs in Melbourne exceed ours? It is a fact that they do exceed ours, no doubt, because they have ground there where they can make cricket-grounds, and we have not got such facilities in Sydney. The suburban cricket-grounds are more numerous in Melbourne than here.

2282. So that, if anything, really they have more attractions;—do you know of any counter attractions they have here to exceed those in Melbourne? Well, I believe there are a great many more attractions to entice the people away from Randwick than there are in Melbourne to entice them away from Flemington. The steamers here are crowded on every public holiday taking people somewhere or other—where they go to I do not know. The railway is also crowded, taking people to one place and another, and, to my way of thinking, that almost entirely accounts for the difference. I do not admit that racing in Melbourne is one whit better than ours, and if it were not for our Sydney horses I do not know what they would do for their racing.

2283. Do you think that if the Flat at Randwick were thrown open it would help to popularise racing? No; I do not think it would. Randwick is about the cheapest racecourse in the world, so far as my observation has gone, and any man who cannot afford to pay a shilling to see a race meeting as well as he can see it at Randwick can just as well stay away. Anyone who wants to get an idea of what it costs to see racing ought to go to England and see how the people are treated. The English Jockey Club do not care a snap of their fingers for the public.

2284. The Leger Stand here is not so cheap as in Melbourne? The Leger Stand is cheaper than "the Hill" in Melbourne.

2285. What do you charge for the Leger Stand? Two shillings.

2286. That, of course, is 6d. cheaper? Yes.

2287. Do you think the totalisator would improve racing? I am entirely an advocate of the totalisator.

2288. And you think it would have a tendency to improve racing and improve the breeding of stock? It would improve the attendances, and would enable us, if carried out on the lines of the Australian Jockey Club proposal, to increase the prizes.

2288½. Do you think it would have a tendency to improve racing? Yes.

2289. Do you think there would be less cronk running than there is at present? I do not know that it would have very much effect upon that; but I think that the introduction of the totalisator would have a very good effect.

2290. But is it not your experience that malpractices on the turf are very largely due to the associations between jockey, trainer, owner, and bookmaker? Yes; that used to be the old reproach; but, after many years' experience, I do not think there is anything like the crooked business in connection with the turf that a great many people think there is.

2291. But those are the channels in which the crooked business runs? Yes.

2292. Would not the totalisator do away with that? I do not quite see how it would do away with it; but it would be a good thing.

2293. But it would do away with the bookmaker? Well, I am not sure about that. When I was in Calcutta, some little time ago, I saw the totalisator on one side of the street and bookmakers on the other.

2294. But, in the event of having the totalisator, I suppose you would approve of the bookmaker being suppressed altogether? I have no doubt the introduction of the totalisator would have the natural effect of practically putting an end to the bookmaker.

2295. Which would be an improvement? Yes.

2296. In answer to the Chairman, you said that you did not think that a Court of Appeal, such as he suggested, with two representatives from the Australian Jockey Club and one from the Northern district, one from the Southern district, and one from the Western district, would be any improvement upon the present arrangement? No, I do not think so.

2297. Do you think that if three paid stewards were appointed it would be an improvement? They would be utterly unnecessary, in my opinion. Of course, these are only matters of my opinion, and I think that three paid stewards are absolutely unnecessary.

2298. Do you not think that what is ten men's business is everybody's business, and no one's business in particular? Are you referring to the committee of the Australian Jockey Club?

2299. Yes, or any jockey club? I would like to remind you that in the old days it was customary to make the appointment of stewards a mere matter of courtesy, and gentlemen were appointed from their distinguished positions, and more from that than from any qualification they had for conducting the business of racing. They got through their business somehow or other; but things were very different then to what they are at the present day, and I have no hesitation in saying that those who devote their lives to racing from one year's end to the other, as the Australian Jockey Club committee has done for years and years, are far better qualified for undertaking the duties and conducting the business of racing than anyone else you could appoint. They are entirely familiar with the whole business, which comes to them without any effort, and they have the rules at their fingers' ends. The rules are very voluminous, and, of course, we cannot carry the whole of them in our heads, but most of us have a fair knowledge of what they are, and certainly would have a very good knowledge of how they ought to be interpreted.

2300. You do not think it would be an improvement if conditions such as the Chairman has indicated were introduced under this Bill? I do not think so. I have no personal object in saying that, because it is not for very long that I shall have very much more to do with the business of horse-racing. I have served a very long time at it, and I do not intend to follow it up much longer.

2301. Do you think that cash-betting ought to be prohibited? I think that if the totalisator were introduced it would do everything that is wanted in that regard. I would like to qualify any condemnation of cash-betting by saying that it is a good thing in one way. As a rule, small amounts only are staked with cash-bettors. When a man goes to Randwick with a little money he must stake it

The Hon.
H. C. Dangar,
M.L.C.
20 Nov., 1900.

in order to bet on the cash system, and if he loses it, and it is gone, he cannot bet any more. In that sense, cash-betting ought to be encouraged rather than otherwise. But at the same time there seems to be something not quite moral with regard to the encouragement of betting in any shape or form. It is, however, inseparable from horse-racing—horse-racing could not go on without a certain amount of betting, and if we were to take the law vigorously into our own hands, and pounce down on every betting-man at Randwick, we should practically abolish horse-racing. Betting has been connected with horse-racing from time immemorial, as any one can see who cares to read up the history of the sport, and notice the stupendous bets that were made in the old days when there were no bookmakers at all. As far as the amounts that are staked with cash-bettors are concerned, very little harm is done; but far more harm is done in connection with betting on credit.

2302. But you think, as far as it is possible, it ought to be discouraged or suppressed? It is a very difficult subject. I think it is almost impossible to suppress it, and I say there is much less harm in cash-betting than in betting on credit.

2303. Do you think women and children should be prohibited from betting? I have heard a great deal about women and children betting; but I think the way they bet is trumpery.

2304. But is it not demoralising? I would hardly go so far as to say it is demoralising. So far as children are concerned, we see very few children at Randwick, and I am not aware of children betting there; and as for the bets that women make, there may be one or two who bet a gold piece; but, as a rule, they bet in only small silver coins at Randwick.

2305. You would not be in favour of suppressing it? No, I would not.

2306. There are a large number of trainers in the country;—do you think that the Australian Jockey Club, or the proposed committee under the Bill now before Parliament, ought to permit the trainers and jockeys combined to have one representative on the committee? I do not; I do not know of any necessity or reason for it. The trainers have no complaints that I am aware of. Their interests are well looked after, they are treated fairly, and I do not think they should be represented on the committee—I do not know of any necessity for it.

2307. You see no reason for any representation at all? No.

2308. Do you not think it would be better if, in all cases which came before you in connection with "cronk" running or suspected "crooked" practice, the committee should abstain from condemnation unless they are absolutely unanimous and certain that wrong has been done; and that once they are certain they should disqualify the offending parties for life, instead of for a few months or years. I mean for them to be more particular with regard to disqualification;—would it not be better to let persons escape where there is any doubt, and wait until you can convict with certainty, and then disqualify for life? I may say that we let off a good many as it is.

2309. But there are a number of instances which have been cited to this Committee in which it is clear that mistakes have been made—after circumstances have proved it? I do not know what cases have been cited that come within your description.

2310. There was the case of Mr. John Mayo, and there was this "Mora" case? Well, I may say that the Australian Jockey Club Committee have often been taunted with leniency, and have been told that they ought to be more Draconian than they have been.

2311. Would you not approve of the offending parties being struck off for life, when you have the opportunity of thoroughly sheeting a case home? No; I do not know that I would. I think that would be going to extremes in the way of punishment. There are degrees of criminality—degrees of offence in these cases—and there are some cases in which it is only a matter of using abusive language.

2312. I do not mean such cases as that; but I mean cases of fraud or "cronk" running? No; I cannot say I am inclined to go the length you indicate. I do not want to say it to my own credit, or anything of that kind; but I have been more inclined to be merciful than tyrannical in these cases, because I think a great many people are apt to regard race-horses as machines that can be wound up to do a particular thing. I am sure that the race-horse is as variable in his habits, in his instincts, and his condition as a human being, and there is no greater fallacy than to suppose that because a horse has done one thing to-day he will do the same thing another day.

2313. That is the very reason I have had to go a roundabout way in my questioning;—would it not be better to let off the offenders in case of a doubt, and disqualify for life only when you are sure and entirely satisfied of the guilt of the person charged? I assure you it is an extremely difficult thing to be what you call entirely satisfied in regard to anything wrong in the running of a horse or the conduct of a jockey. It is one of the most difficult things in the world to decide. It is a thing so easily done. To begin with—the pulling of a horse is a very simple matter in the hands of a skilful jockey, as unless you are on the horse's back you cannot tell whether he was capable of a greater effort or not.

2314. Do you not think that your good-heartedness may have the opposite effect to what you intend, by producing a number of cases for your next meeting? No, because I think that most people connected with metropolitan racing have a wholesome dread of the Australian Jockey Club. They know the power conceded to them, and I think they have a wholesome dread of the exercise of that power; but there are times and circumstances under which they cannot resist temptation any more than other people. I do not think your plan would have any better effect than the existing state of things.

2315. *Mr. Levien.*] Many years ago, before registration at all, nearly all the jockey clubs used to race under the Australian Jockey Club rules? Yes.

2316. And when any dispute arose, and they were unable to interpret their rules, they used to send to the Australian Jockey Club to interpret them for them? Very often.

2317. It was a common thing right throughout the Colony? Yes, quite common. It is a common thing now to send rules down to be interpreted.

2318. With reference to pony-racing, there is no doubt that it is a regular systematic means of carrying on gambling? Nothing else.

2319. It is carried on night and day;—you have seen them advertising electric-light meetings? I have never been at a pony-race meeting, and I do not know anything about them; but I believe they do race by electric-light, and I think it is high time that the Government interfered with it, and put a stop to it. I think pony-racing is having the most pernicious effect upon the interests of the turf generally.

2320. With reference to "cronk" running, I believe the Australian Jockey Club have increased their prizes, and that there is no prize of less than £200? Yes.

2321.

2321. With a sweepstakes of £5? The sweeps vary.
2322. But there is nothing less than £5? I believe most of them are £5 sweeps—you are only referring to our Spring and Autumn Meetings.
2323. Yes. At your meetings the prizes are so large, with the sweep added, that horse-owners who enter their horses have got a good prize to start for without anything else, whereas if a man goes to a suburban meeting, and races for a £50 prize, he wants to put on £50, at four or five to one, in order to give him the equivalent of the prizes you offer with your sweep added? Yes; he would in the case you have referred to.
2324. So that it is the small prizes after all that have a tendency to encourage betting and "cronk" running? Yes; there is a greater temptation with the small prizes.
2325. The pulling of horses and cronk running are more frequent in the case of small races than where the prizes are larger, and a direct inducement is held out for the winning of the stake? Yes; I think that in proportion there are more cases of suspicious running at the suburban meetings than at Randwick. I think we went through our last four days' meeting without a single case of suspicion. There may have been some queer running, but we did not see it.
2326. With reference to the Sydney Cup and the Metropolitan, and the Derby and Leger, and Spring Stakes, are not all these prizes so large that there is no inducement whatever for a man to run cronk? There ought to be no inducement for crooked running with prizes such as those.
2327. Is it not a fact that the public have general confidence that these starters are going to run to win? I think that in the larger races they have confidence in the *bona fide* running of the entrants.
2328. Take the Autumn Meeting and the Summer Cup Meeting, and the other meetings of your club, do you not think that the running from year to year for these large prizes I have enumerated is carried on without anything being done at all in the way of "cronk" running by owners, trainers, or any one else connected with it? Yes, I think so; but the answer to that question is to be found by going back and ascertaining the number of inquiries which have taken place with regard to races of that character. I say that, as a general rule, there are very few inquiries with regard to the *bona fide* running of horses—there might be a case of foul riding—in races of that kind. However, the true test would be to find out the number of cases that have been investigated in connection with races of this kind. As a general rule, I am very happy to say there are very few cases. Most of the cases of suspicious running take place in connection with the running of minor races.
2329. And not in the cases where the prizes are sufficient to induce straight running? No.
2330. And the prizes generally are sufficient to induce straight running? Yes.
2331. Have you ever heard trainers suggest to the Australian Jockey Club that they wanted representation on the committee? Never.
2332. Or the jockeys? No.
2333. They have never sent in a petition asking to be allowed representation? Not that I am aware of; I have never heard anything of that sort.
2334. With regard to the registration of these clubs, I suppose the registration was merely to protect the interests of the public against people who used to send in fictitious names of horses and run "cronk?" The registration of the clubs was introduced to bring that under our control.
2335. And I suppose it was a common thing for people to run horses in fictitious names? I am sorry to say that such things have taken place; I cannot say that it is a common thing.
2336. I am pretty well certain of it, because I was secretary for a country club at Narrabri, and you would see the same horse running under three different names at three different meetings within a fortnight.
2337. *Mr. Hogue.*] Have you studied the Bill now before the House? Yes, I have read it.
2338. Do you approve of it? I do not; I think it is absolutely unnecessary.
2339. Do you know anything about the "Spry" case? Yes, I remember a little about it.
2340. Do you know the circumstances of that case? Well, it happened some little time ago. It was a case of "ringing in" an animal that had one name under another name. We had rather to haul the officials of the Northern Jockey Club over the coals and to tell them that they had not been sufficiently careful in the discharge of their duties, and I think they were ultimately convinced that we were right. It was not at all a nice case. Fortunately I have not a very retentive memory, for there are some things which it is better to forget than remember, and the "Spry" case was one of them.

WEDNESDAY, 21 NOVEMBER, 1900.

Present:—

MR. GILLIES, | MR. HOGUE,
MR. TAYLOR.

D. WATKINS, Esq., IN THE CHAIR.

William Lovel Davis sworn and examined as follows:—

2341. *Chairman.*] What position do you occupy in connection with racing? I am the Manager and Secretary of the Canterbury Park Racing Club.
2342. You have held that position for some time, I presume? I have; I have practically managed the club ever since its formation, about seventeen years ago, in 1883; we were the first proprietary club.
2343. Is your club what they call a registered club under the Australian Jockey Club? We are, and always have been.
2344. I suppose you have had considerable experience in the working of the Australian Jockey Club? I have.
2345. Can it be said that the method of managing racing in the Colony has proved satisfactory to the racing people and the general public;—what is your opinion? It has been fairly satisfactory, but I think it could be improved upon in this way: We believe in having a leading club, or a leading body, most certainly, but it appears that the powers of the present leading body have been, not exactly arbitrary, but have been so wide and extensive, that we have sometimes thought that they should not have such powers, or should not exercise them.

2346.

The Hon.
H. C. Dangar,
M.L.C.
20 Nov., 1900.

- W. L. Davis. 2346. You say that the Australian Jockey Club have administered affairs fairly well? Yes.
- 21 Nov., 1900. 2347. Can you particularise in what way they assume powers such as you have mentioned; do they not impose regulations for the guidance of other clubs, without giving those clubs a voice in the matter? That is exactly what I mean. We think we have so much at stake that we are certainly entitled to have some little say in the matter. Under the present régime we have no say, but at the same time, if you can understand, we have no specific grievance.
2348. You have a general grievance against the system? Yes, against the system.
2349. Do you think that the whole of these clubs should have their complaints voiced by means of some representation on the central body? Do you mean the whole of the clubs.
2350. I do not mean that every club should have a representative, but that a certain number of representatives should be allowed to the racing clubs, electing them in combination? I do think that would be a good plan, but I would like you to understand that the number of representatives proposed in the Bill now before you would be unworkable.
2351. We will come to that later on. You agree with the principle of setting up a central authority for the management of racing in the Colony? I do.
2352. Such representatives to be elected by the whole of the clubs of the Colony on a certain basis that may be suggested. They would have to be elected, not by the whole racing community of the Colony, but by the various racing people formed into clubs in the different districts? Yes.
2353. How many do you think the central body should comprise? I do not think it should consist of many more than there are now on the Australian Jockey Club Committee. They have ten members, and I should say that twelve or thirteen would be quite sufficient.
2354. In what proportion would you allot the representation; how would you group the clubs together, and what proportion would you allow the clubs in the metropolitan area as against the country clubs? I would suggest that the Australian Jockey Club should have three or four representatives, and that each metropolitan club should have one. I do not look upon Tattersall's Club, or the Sydney Turf Club, as racing clubs, as they have no capital for racing purposes, and have no racing tribunal at all. Certainly they are registered, because they have to be registered in order to hold racing meetings, but they are really not racing clubs. I think that with three representatives for the Australian Jockey Club, the Rosehill, Warwick Farm, Moorefield, Canterbury Park, and Hawkesbury Club should each have one representative, and that there should be two representatives for the clubs in the northern district, two from the south, and two from the west. Under the Bill as it stands you would have a preponderance of sixteen country delegates, as against eight for the metropolitan clubs, and that would never do. I understand that you are desiring me to give you suggestions.
2355. Certainly; that is what we are here for—to hear suggestions for the improvement of the bill? I think that the Government should also have a representative.
2356. Are you of opinion that a bill, not exactly on the lines of this bill but a modification of it, should be passed by Parliament to set up a tribunal to govern racing in this Colony? I do.
2357. You think that would be better than the present system? I do.
2358. In regard to the working of the Australian Jockey Club, we have had some evidence here respecting their method of giving decisions in disputes between clubs and in regard to penalties for malpractice imposed by other clubs;—does their method of arriving at decisions in these cases give satisfaction to the other clubs and the public generally who follow up racing? So far as the clubs are concerned, I think that in almost all cases they have given us satisfaction. We certainly must uphold some tribunal, and the Australian Jockey Club is the head tribunal. I am not going to say that they have not made mistakes. They generally endorse the action of the various clubs, and I cannot say that we have any reason to complain about their decisions.
2359. But supposing that you disqualify a person for a term of years, and, later on, ask the Australian Jockey Club to reduce that term or to remove the disqualification when it is half served, I suppose that you could not do anything yourself? No.
2360. Even though you appealed to them to do so they might still refuse? They could.
2361. *Mr. Taylor.*] Do they generally refuse? Not as far as my experience goes. I cannot say that I know of a case.
2362. Do you mean a case in which they have consented or refused? I do not know of a case in which they have refused to do what the committee of a club has asked them to do—of course, I am speaking for my own club.
2363. *Chairman.*] I expect a case to be brought forward in a day or two in which they did refuse;—do you know anything as to the financial position of the Australian Jockey Club Distressed Jockeys' Fund? I know that all fines which are imposed on the jockeys at the various meetings run under the Australian Jockey Club rules have to be forwarded to the office of the Australian Jockey Club, and that, in the case of disbursements from that fund it entirely lies with the Committee of the Australian Jockey Club to do what they choose?
2364. Could that system not be improved upon, in your opinion? I do not know whether we could improve upon it; but I think the Australian Jockey Club might be a little more liberal.
2365. You think they hang on a little too fast? Yes.
2366. Do not you think it would be better to set up a general system of insurance, as far as these boys are concerned, which would provide for the payment to them of a weekly allowance whilst they are injured? I certainly think it would be a good plan to give the injured jockeys so much a week whilst they are disabled, and when the injuries are finally ascertained you could determine upon the amount that you would give in addition.
2367. In order to establish a fund like that I suppose it would not be impossible to even get sportsmen generally to add their little mite by way of a compulsory contribution? I think that could be easily done, and I also think the various racing clubs would subsidise it to such extent as they could afford. While you are on the subject, I may say that the individual clubs often give gratuities to the jockeys independently of what they receive out of the Australian Jockey Club Fund.
2368. I suppose that is found necessary because the fund of the Australian Jockey Club is not sufficient to provide, or because they will not provide adequately for these boys when they are hurt? They are not considered to be very liberal. If a boy gets hurt on our own course we generally give him a cheque or pay his hospital fees quite independently of what he may receive from the Distressed Jockeys' Fund.
2369. They have about £5,000 in that fund? I believe so. 2370.

2370. Are you aware that the Australian Jockey Club borrowed that money at the rate of $2\frac{1}{2}$ per cent. ? I have only ascertained that by reading the reports. I think they might give the fund the credit of the full 3 per cent. W: L. Davis.
21 Nov., 1900.

2371. Are you in favour of appointing stipendiary stewards? I am not; because I am quite satisfied that it would be no good. We have tried everything, and we have had some experience in that matter. We found that any man who goes to a race-meeting goes there to have his pound on, and there is only one man in a thousand who goes to a race-meeting who can thoroughly enjoy it without having a sovereign on. I could name two or three gentlemen—high officials—who do not bet; but they are few and far between, and I do not think they would be good men as stewards.

2372. Do you think there should be a court of appeal from the central body such as it is proposed to create under this Bill, or from the head club such as now exists—a court that would be open to any clubs that might have a complaint, or to any one else who might have a grievance? I do not think there should be any appeal from the central body.

2373. Failing the passing of this Act, or the establishment of a Board such as is proposed, would it not be an improvement upon the present method of the Australian Jockey Club to have a court of appeal? I cannot see how you could improve upon it. I cannot see how you could form such a court—not as things are at present.

2374. You think that there would have to be a complete change of existing conditions? Yes; at present I certainly would go against having a court of appeal above the central body.

2375. You stated in your opening remarks that, generally, the Australian Jockey Club have given satisfaction, although in one or two cases they may have made mistakes;—do you know of any particular cases in which they have made mistakes? I do not know that I can bring any to mind—it is more from what one hears outside. As far as my own club is concerned, we have never had reason to complain of any decision they have given.

2376. Then you cannot give us any case? No.

2377. *Mr. Gillies.*] Do you think that inquiries held by the Australian Jockey Club should be open to the public and to the press? I do not see any objection to the press being present. I do not suppose that the press would publish anything that would be libellous, and in any case that would be their lookout. We have tried it both ways at our meetings in connection with both horse-racing and pony-racing. Sometimes we have left the inquiries open to the press; but it is not often that they will avail themselves of the opportunity to attend.

2378. You say you are interested in pony-racing? Some years ago we raced ponies but we were stopped by the Australian Jockey Club.

2379. Do you think that it would be in the interests of sport, or that it would tend to the improvement of the breeding of horses, if pony-racing were prohibited? I do not see why pony-racing should be stopped if it is carried on properly. Certainly there is too much of it; but if the Australian Jockey Club had taken control of it when they could have done, and should have done, they might have held it in check.

2380. Do you think that the Australian Jockey Club Committee have at all times been impartial in their decisions with regard to charges against jockeys, or trainers, or horse-owners, for malpractice? From my own knowledge I cannot say that I know of any instance in which they have been partial.

2381. Do you know whether any members of the Australian Jockey Club Committee bet pretty heavily? Well, I do not think any of them do now.

2382. You do not think the members of the present committee do? Well, with one exception probably—one man might bet a bit—but I think a pound or two would cover the transactions of the others on each race.

2383. Have you ever heard, or do you know from your own personal observation, of any case in which some members of the committee of the Australian Jockey Club who were interested in a particular race have sat upon the committee during the investigation regarding malpractice during such race? I could not say.

2384. Do you think it would be possible to improve the composition of the Australian Jockey Club Committee? I do.

2385. Then, if any of the members of the Australian Jockey Club Committee consider that they are the best men that can be found in the Colony, you think they are believing what is not correct? I think they are mistaken.

2386. Do you think it likely that under present conditions people who are in a position to give evidence either for or against this Bill will be prepared to come forward unhesitatingly and give us the benefit of their opinions? I do not see why they should not.

2387. Do you not think that the fact that the Australian Jockey Club have supreme power in racing matters in New South Wales, would, to a certain extent, prevent witnesses from coming here and telling us all they know about what transpires in connection with the Australian Jockey Club? It may have that effect on some of them, but it does not influence me.

2388. Would you approve of a representative of the trainers and jockeys being on the committee of the Australian Jockey Club? I think not.

2389. Do you not think that the trainers and jockeys should have some one to look after their interests on the Committee of a club like that? I do, but their proper course is to try and induce people who would look after their interests to go on the committee.

2390. But I suppose you are aware that it is almost impossible for a man who is outside of the ring that is ruled by the Australian Jockey Club Committee to get on that committee? That is the feeling we have—that there is no one outside of the committee of the Australian Jockey Club who has much chance of getting on the committee unless he is supported by the members of it.

2391. That is one reason why a Bill should be brought forward? That is exactly my reason.

2392. I suppose you are aware that although the Australian Jockey Club makes rules and enforce their decisions, they have no legal standing? That is a question that has been talked over many times. We certainly think sometimes that they have not the legal power to do many things which they assume to have the power to do.

2393. Are you not aware that Mr. Pilcher, Q.C., has told them that they have not any legal power? I believe he gave an opinion to the effect that they could not do anything outside of their own meetings.

2394. Do you know the conditions under which the committee of the Australian Jockey Club leased the Randwick Racecourse? I have read the conditions.

2395.

- W. L. Davis. 2395. Do you think they keep up to the original deed under which the ground was granted to them? I do not think they do keep strictly to their lease.
- 21 Nov., 1900. 2396. Do you know who it is that comprise the Sydney Turf Club? No, I am in ignorance on that subject, and I do not think anyone knows. Although I have been for many years connected with racing I do not know much about the club.
2397. Although that club has been racing for years, and has been countenanced by the Australian Jockey Club, you say you do not know anything about the syndicate who form the club or who run it? I do not know, and I do not suppose anyone outside Mr. Clibborn or his clerk could tell you.
2398. Do you think it right that one or two men should have so much power and control as to be able to run these race-meetings without the public knowing who they are? I do not think it is right—I do not look upon them as a racing club either.
2399. Do you think that the syndicate who run the Sydney Turf Club ought to be recognised by the Australian Jockey Club in the way they are? I do not think they should be recognised as a racing-club.
2400. Do you not think that this club has two of the best days in the year allotted to them for their race-meeting? They have.
2401. Do you think that that is detrimental to the interests of the other suburban clubs and, perhaps, of the country clubs? I am quite sure that it is detrimental to all of us.
2402. Have you ever been able to determine where the proceeds of these race-meetings go? I have never seen an account.
2403. You never saw a balance-sheet? No, I never saw a balance-sheet.
2404. I suppose you do not know who pay the officials? No; and I have never seen an account of a meeting of the committee.
2405. Have you ever known members of the Australian Jockey Club to take part in the deliberations or investigations where charges have been made in connection with races in which some of the members of the Australian Jockey Club have been heavy backers? I do not know of any case.
2406. Have you heard of any such cases? I do not know that I could mention any particular case; I could not bring any case to mind, although I have heard such things said.
2407. *Mr. Taylor.*] I presume that you will take the same view as other witnesses in assuming that horse-racing is carried on ostensibly for the improvement of the breed of horses? Yes.
2408. Taking that into consideration, do you think that the abolition of pony-racing would tend in that direction? No, I do not think that the abolition of pony-racing would tend to improve the breed of horses; in fact, I think that pony-racing is an outlet for diminutive race horses, providing it is not carried to too great an excess.
2409. Do you not think that if pony-racing were prohibited it would have the tendency to throw the racing ponies into other channels, and that pony mares would not be put to the stud in the way they now are? I think it would make ponies of a great deal less value, and that it would also throw a large number of people out of employment.
2410. But would it not tend to draw these pony mares away from being used for further breeding purposes? Certainly.
2411. Would that not have a tendency to improve the breed of horses? I do not think so. I know several breeders who purchase many mares out of the pony racers to breed from.
2412. That is just what I am trying to get at. They select these mares for breeding purposes to breed small horses because there is a market for them; do you not think that if pony-racing were abolished it would tend in that way to improve the breed of horses? No; I think it would tend the other way.
2413. Do you think that if pony-racing were reduced to one day a week it would be an advantage? Yes, I do.
2414. Do you think that would be quite sufficient? I do.
2415. And that would be reasonable? Yes.
2416. Do you think that if horse-racing were allowed an extra day's racing in the week it would tend, to a large extent, to minimise pony-racing? I believe an occasional day's extra racing on the Wednesday half-holiday would be a good thing.
2417. Do you think that if the flat at Randwick were thrown open it would tend to popularise racing? I think it would popularise racing, but I do not know that it would improve racing much.
2418. But it would have a tendency to popularise racing? I believe so.
2419. Do you not think that if we were to give a £5,000-cup once a year, for the Sydney Cup, or whatever you might call it, and we increased our weight-for-age prizes to £500, and gave a £1,000 steeplechase prize every year, it would tend to centralise the best horse-racing in this Colony? I have no doubt it would cause more sensation and draw bigger attendances, but I cannot see how they could afford to do it under the circumstances.
2420. But presuming that it could be done? If it could be done, we could make a considerable stride towards Melbourne Cup conditions.
2421. Do you think that a racing club that has £60,000 to its credit would be in a condition to try that experiment? If they had £60,000 they ought to try it.
2422. Are you in favour of the totalisator? I am.
2423. Do you think it would tend to purify racing? I am sure it would be much better for all parties concerned. The racing clubs would be placed in a position of great advantage, as they would be able to give larger prizes; secondly, no one would be allowed to bet except those who went to the racecourse, where they would get the legitimate odds. If £10 is invested on the totalisator, £9 is distributed; but when the people go to the shops with their money they are perpetually robbed under a system of barefaced robbery. Many a horse is left in a race where perhaps the owner or trainer has no intention of starting him—the horse is left in the race until the last moment, and the shops go on laying him until he is scratched, and they “collar” all the money. If you go to racecourses, unless your horse gets a start, you do not lose your money, and you know what odds you are going to get. With the totalisator, £100 in the pool will leave £90 for distribution after deducting the percentage; but you do not get that with the bookmaker.
2424. You seem to think that there will be some difficulty in finding three men suitable to act as stipendiary stewards;—do you not think that if you paid men like Mr. Watson or Mr. Benson, or several others who might be mentioned who have been connected with racing all their lives, that they would be
very

very good men to appoint;—would it not be better to have such men appointed rather than have ten men with no particular concern in discharging the duties which would fall to these stewards? You have named two exceptional men. Mr. Benson, in addition to being a judge, has acted as a steward; and Mr. Watson, being a starter, could not be a steward. W. L. Davis.
21 Nov., 1900.

2425. But I mean if you got three such men as those I have named, do you not think it would be a vast improvement upon leaving the business in the hands of ten men in the way it is done at present? It would be a vast improvement, if you could find the men.

2426. Well, I have found two? But one of those is a starter, and he could not act as steward.

2427. But you could find someone to fill his place—anyone can start? No; it is not everybody who can start, and it is not everybody who would enjoy the same confidence as the public place in Mr. Watson. Mr. Watson has the confidence of everybody; and that goes a long way.

2428. But the position of steward would be a still more important one than that of starter? Yes.

2429. You think it would be an improvement if you could get three men of the type I have indicated? Yes; if you could get three good men like they are.

2430. Do you think that if a court of appeal, or an appeal committee, were established, consisting of two members of the Australian Jockey Club, and one each from the three districts of the Colony—northern, southern, and western—that more satisfaction would be given in dealing with disputes and inquiries than is given under the present system? No doubt it would be a very good thing; but I think you would find it unworkable under the present regime.

2431. But we are not assuming that the present system will be continued? I have already given my opinion on that.

2432. Do you not think it would be a vast improvement? I think it would.

2433. Would there be any difficulty in the northern district in finding a good man? Not the slightest.

2434. Would there be any difficulty in the western district, or in the southern district? No; I think there are as good men to be found in the country as in the town.

2435. On the same principle as there are as good fish in the sea as have been caught? Yes; I do not pretend to know all about racing, because with all the years I have been at it, I have still a lot to learn.

2436. Do you think the members of the present Australian Jockey Club are the ten best men in the country for the purpose of controlling racing? I have no fault to find with the Australian Jockey Club committee, either individually or collectively; but I think the principle on which they are elected is not satisfactory.

2437. I suppose that even if they were as good men as they believe themselves to be, you think that a wider and more general representation of racing interests would give more satisfaction to the public in general? I think it would.

2438. Do you think that women and children should be prohibited from betting on the racecourses of the colony? I do not see why women should be prohibited from betting. A woman is supposed to be able to take care of her money, and if she throws her money away that is her lookout.

2439. Do you not think it is demoralising? Not to the extent to which it is carried on. A good deal is made of it, but it is not carried on to any great extent.

2440. Do you think that shop betting ought to be stopped? I do, certainly; and the sooner the better.

2441. There are a great number of trainers and jockeys throughout the country who pay certain fees to the Australian Jockey Club; do you not think that on this committee we are speaking about they should have at least one representative to bring their grievances before the committee? I do not see why they should not have one representative.

2442. To be elected in somewhat the same way as the cabmen had representatives on the Transit Commission? Yes.

2443. Do you think that in cases where small boys are brought up before the committee they should have the privilege of having someone to represent them? That is a very difficult thing to determine. I have had a lot of practice in this matter. There are some lads who are quite capable of taking their own part—quite as capable as the gentlemen who are sitting as their judges—but there are others who are nervous and excited, and, perhaps, a little ignorant, and when they come before the committee they become frightened and have not a word to say; you can make them say yes or no, at your own will. I think that such lads should be allowed to have their parents, or a trainer, or an owner to represent them. I see no objection to that, as the committee would soon see whether a boy was capable of looking after himself or not.

2444. Do you know the boy Fielder, who rode "Mcra"? Yes.

2445. Do you think that boy capable of conducting his own case before the Australian Jockey Club committee? He is one of the go-betweens. He has done a lot of riding, and he knows a lot; but I think it would have been better, when the charge assumed such a serious phase as it did, if his father had been allowed to be present with him.

2446. Or some representative? Yes, some representative; but I do not believe in legal gentlemen being present in that capacity.

2447. Do you happen to know anything about that case? I do not.

2448. Do you think that these three gentlemen, who might be appointed as stipendiary stewards, should have a voice in and sit upon the adjudication of matters in which they lodged complaints;—supposing three paid stewards were found, and that they lodged a complaint against a jockey, or a trainer, or an owner, do you think they should sit in judgment on the person complained of? In certain cases I think they should, because you see more by personal observation than you can get by evidence. I think, in fact, that if stewards were to act more on what they see the decisions would be much more satisfactory.

2449. While you are on that point, I would ask you whether you think that it would be in the interests of all concerned, as well as of racing, to wait until such time as you have a thoroughly established case against a man, and then make it a matter of life disqualification rather than to impose small sentences where you have not proved the case up to the hilt, but have acted on your own observation? Well, so far as these boys are concerned, one feels inclined to give them another chance, because a jockey's living is a very peculiar one. If you disqualify a jockey for life, he is a ruined lad, and is not fit for anything else. Take the case of Fielder. At the end of his term of disqualification he will not be worth 2d. as a jockey. If we have any doubt about a case we give the boy another chance.

2450. Could you not do that without inflicting punishment, under something the same plan as the First Offenders' Act? We have often given the boys a warning. 2451.

W. L. Davis. 2451. But would it not have a beneficial effect, when you are satisfied that either a trainer, owner, or jockey has been doing wrong—guilty of a gross fraud—if you were to wipe such a man or boy completely out? Most certainly. If you are satisfied that a man has done something terribly bad, he is better off the turf than on it.

21 Nov., 1900.

2452. It is not only the effect upon himself, but the warning that is salutary? Yes; certainly.

2453. You were asked something about the Sydney Turf Club, and I think we might as well ask you also about Tattersall's Club;—you say that you do not know anything about the Sydney Turf Club, and that you do not know of anyone, except Mr. Clibborn or his clerk, who could tell us about that;—could you tell us for what purpose Tattersall's Club was established? Tattersall's Club is a betting club, undoubtedly, and I presume, in order to augment their fund a bit, they hold one or two race meetings in the course of the year.

2454. Is that detrimental or favourable to racing? I do not think it is detrimental, and I do not think it is favourable in particular; their meetings are just the same as the ordinary meetings at Randwick.

2455. But do they not preclude the genuine racing clubs from utilising the days that are appropriated to them? Certainly. I may say that the proprietary clubs have only two holidays in the year. Rosehill has the 9th November, whilst Eight-Hours' Day is taken alternately by Canterbury Park, Warwick Farm, and Moorefield; so that we only get two holidays out of the whole lot. The Australian Jockey Club really get the benefit of the holidays appropriated to the Sydney Turf Club and Tattersall's Club, because they get paid £500 a day for the use of the course; so that really these are Australian Jockey Club days.

2456. What about the Sydney Turf Club;—what do they pay? I suppose they pay the same as Tattersall's.

2457. Now, presuming, for the sake of argument, that some great accident occurred, or something detrimental to the interests of the public generally;—would the public have any redress against the Sydney Turf Club? I do not think so.

2458. Is it your opinion that, in the interests of racing and fair-play, that club ought to be wiped out? Well, that is a very straight question to ask me. I do not look upon the Sydney Turf Club as a *bona-fide* racing club; they have nothing at stake.

2459. Could you give me an idea as to the comparative attendances and amounts of prize-moneys at race meetings in the different colonies? Well, if the two leading colonies would suffice, I can give you an idea. We are compelled to give £400 per day in prizes, whether it is a holiday or not; whilst in Melbourne they have only to give £300 on a Saturday, or £250 on a week day.

2460. How about the respective attendances? The attendances are much better in Melbourne than here.

2461. Although they give less prize-money;—how do you account for that? I account for it in the same way as Mr. Clibborn did. They have not so many counter attractions in Melbourne as we have in Sydney with boating, cricket, football, and the various watering places.

2462. But they have cricket in Melbourne? Yes, that is true; but they have not so many outlets for people in search of recreation or amusement, and we know from observation that the attendances are far in excess of ours.

2463. Do you think that it is a fair thing that the Australian Jockey Club should have the fixing of the minimum amount of prize-money to be given at race meetings throughout the metropolitan area? I cannot say that it is a fair thing. We wish they would reduce the £400 for us. We had a day's racing last Saturday, with every promise of a good day, but the rain came on, and the result to us has been a very heavy loss.

2464. Is it a fact that whenever the Australian Jockey Club find that any racing club has a genuine grievance, either as regards the prize-money or otherwise, they redress it at once? We have not found such to be the case. We certainly appealed once. In 1892, 1893, 1894, and 1895 we used to give £400 prize-money at each meeting, but in 1896 and 1897 the amount was reduced to £350 per meeting; whilst from 1898 up to the present time we have had to give £400 again.

2465. What was the object of increasing the amount again? Times have improved, and they thought we ought to be able to afford to give £400 again.

2466. Was that done contrary to your wish? Yes; we did not wish it. We would rather have had £50 taken off; in fact, the Hawkesbury and Warwick Farm Clubs only have to give £300 now.

2467. Was it a fact that when pony-racing was what may be termed tabooed by the Australian Jockey Club, they took in all the disqualified jockeys and trainers, irrespective of their disqualification by the pony-racing clubs, and allowed them to go on to Randwick racecourse to practise their calling? Yes; they did, unless a man was a very bad character. They lifted the whole of the disqualifications from men and horses.

2468. Is it a fact that no bookmaker can ply his calling at your racecourse, or at any other racecourse, unless he pays the Australian Jockey Club £1 ls.? Yes.

2469. Do you think that is a fair thing? I certainly cannot see the wisdom of it, because I submit that we are quite capable of judging of a man's stability and character as well as the committee of the Australian Jockey Club. They have four registrations. They register for the saddling paddock, the leger reserve, and the flat, and then they have a registration for bookmakers who bet at other race meetings than those at Randwick. We think it hard that when a respectable man applies to us we are placed in the position of being unable to allow him to bet unless he has paid his guinea registration fee to the Australian Jockey Club.

2470. And yet they actually allowed these men, whom you disqualified previously in connection with pony meetings, to come in at Randwick without let or hinderance? Yes, there were several disqualified men who were admitted.

2471. My object in asking these questions is to show that the action of the Australian Jockey Club has been arbitrary and unnecessary? It is not arbitrary upon us; but I think it is unnecessary. I do not see what there is in having to pay the Australian Jockey Club a guinea in order to permit a man to bet at Canterbury.

2472. I suppose you think it is unjust to the men and to you? I think it is unjust to the men and rather unjust to us too, because we might have to refuse to take a man's money simply because his name is not on the Australian Jockey Club list.

2473. In the event of your having sixty or seventy horses entered for a race, would the Australian Jockey Club permit you to run that race in heats? We had a case of that kind. We had a very large entry on one occasion, when there was a Tattersall's Sweep on the Canterbury Cup. I think there were eighty-one or eighty-two entries, and just prior to this there had been a sad accident at Rosebery Park, where four lads had fallen, and three were severely injured. The Caulfield accident had also just taken place; and these facts made my shareholders and myself a bit nervous. I was desirous of running the race in divisions—I called them divisions, not heats, because they make a mistake with regard to heats. The Australian Jockey Club distinctly state that we cannot run races in heats; but where a race is run in heats all the horses entered have to compete in each heat, and they have to win two out of three. I proposed that we should run in divisions, and I went to Mr. Clibborn and Mr. Dangar, the latter of whom was then acting as chairman of the Australian Jockey Club, and asked them if they would allow us to do as we proposed. After two or three interviews, Mr. Dangar came to the conclusion that he was not in a position to give the permission under the rules. He sat himself behind the rules as to heats, and in his position he would not consent, or say that we should not do as we proposed, but said that we could run the race in divisions at our own risk.
2474. *Chairman.*] I suppose it would be safer in many cases to run these races in divisions? Yes, much safer, and a right thing too, in the interests of human life.
2475. *Mr. Taylor.*] Is it not absolutely dangerous and detrimental to racing that such a rule should exist? I think it is. I saw a field of forty-three start at Rosehill, and, in such a case, not half the horses get a chance—that was a 6-furlongs race.
2476. Have the Australian Jockey Club been asked to repeal that by-law? We have never asked them since. I may tell you that we took the risk of running the race in divisions, and the Australian Jockey Club fined us £50.
2477. And they have never altered that rule? The rule has never been altered; but they returned our cheque. As far as I am concerned, I think twenty-five horses are quite enough to start in one race?
2478. Do you think there are a great many racing men in and about Sydney who could give us valuable information on this matter, if they dare;—what I mean is, does the Australian Jockey Club exercise a certain influence over a great many of the trainers and men connected with racing? I would not like to answer that question; I know there are plenty who could give evidence, if they would.
2479. You think from your conversation with them that they would give evidence favourable to the proposed new racing tribunal, if they dare? I think they would.
2480. Of course, you mix with a great many of these racing men, and you naturally hear things that we cannot get at, but which at the same time come to us indirectly? Yes. We have virtually no power ourselves, but we have to do what the Australian Jockey Club tells us. They hold that we need not do unless we choose, but if we do not choose to do it, we lose our registration.
2481. Is there anything you would like to explain to the Committee? No; nothing in particular. I have a list of the racing fixtures which you might like to see, perhaps, and I also have a tabulated list showing the distribution of the last ten years' race meetings. This list of racing fixtures has attached to it a notice, showing what we are required to do, and this will give you some idea of what the Australian Jockey Club call upon us to comply with:—“1. At all registered race meetings, Hawkesbury and Warwick Farm Racing Clubs excepted, within the metropolitan district (40 miles radius) the amount of added money shall not be less than £400 per day, distributed among not more than six races. 2. At all such meetings there shall be on each day at least one race on the Flat (not being a selling race) of not less than 1½ mile, to which the added money shall not be less than £100; and there shall not be more than one selling race each day, to which the added money shall not exceed £50. 3. These fixtures are subject to the following conditions:—At least one month before the day of any meeting, the club holding such meeting shall submit, for the approval of the Australian Jockey Club, the names of the committee or stewards appointed to act at such meeting, and no meeting shall be held except under the direction of the committee or stewards appointed by such committee. 4. These fixtures are issued on the understanding that the clubs hold race meetings on the days allotted, weather permitting, and subject to any alterations that may be made by the Government for the keeping or celebration of particular holidays.”
2482. Do you not think that it is most unfair to ask these clubs to contribute £350 or £400 to each race meeting when they only ask the Sydney Turf Club to contribute the same amount? They shelter themselves behind the argument that the Sydney Turf Club has to pay such a large sum for the use of the course. The Turf Club pay £500 for the two holidays and £250 each for the other two days.
2483. *Mr. Hogue.*] Of course, you will admit that it is necessary to have some central racing authority to govern racing? I quite believe in that.
2484. As far as your experience goes, has the Australian Jockey Club exercised their powers wisely in the interests of racing? Yes; I think they have done the best they could under the circumstances, but what we complain of is, that if they choose to exercise them they have unlimited powers.
2485. Do you consider they have too much power? I reckon they have any power they choose to assume.
2486. Do you reckon that they have too much power in their hands now? Yes, I do.
2487. In what respect? Well, they can simply make us do what they like. Take the question of prize-money. If they choose to raise us to £1,000 per meeting they can do it.
2488. They have autocratic power? Yes.
2489. Do you think they exercise that power in the best interests of racing or with any desire to be unfair to any particular club? I do not think they are unfair to any particular club, but I think they exercise their powers to the best of their judgment. At the same time we do not always think that we are well treated. We get some days when it is impossible to make a profit. For instance, I know for a certainty that Mr. Moore lost heavily on three days' racing last year.
2490. Was that through rain? Through counter attractions or rain. It is no more use racing here when the Melbourne Cup meeting is on than it is attempting to fly. You are sure to lose, because people kick about the town waiting for the result of the Melbourne races, and will not go out to the courses.
2491. Have you read the Bill that is now before us? I have.
2492. Do you approve of the Bill as it stands? I approve of the principle of the Bill.
2493. Do you think there should be some tribunal constituted with representation given to clubs outside as well as to the Australian Jockey Club? Yes.

- W. L. Davis. 2494. Do you think the Australian Jockey Club ought to have the preponderance of power? Yes; I have stated that already. What I would like to bring under the notice of your Committee is this: I have not seen it mentioned in any of the evidence, that the proprietary clubs have a very large amount of capital at stake. The Australian Jockey Club never had to purchase Randwick, because that was simply a Crown lease, and they never had to put their hands in their pockets at all. On the other hand, I am quite satisfied that the Rosehill, Warwick Farm, Moorefield, and Canterbury Park clubs have, between them, expended some £200,000 on their properties. I find a good deal of use is being made of the word "proprietary" in connection with these clubs, but if gentlemen come forward and invest £200,000, they naturally expect to get some little return by way of interest, and I am quite sure that not one of the clubs is paying decent interest on the money laid out.
- 21 Nov., 1900. 2495. Have you paid much attention to pony-racing? I did some years ago, when we used to race ponies on all the courses.
2496. Have you any objection to pony-racing as a sport? No; not if it is carried on properly.
2497. Is it carried on properly here? In some cases it is; for instance, they carry on racing very well at Kensington, but there are two or three other courses where all classes of ponies and all classes of men are allowed to participate. There are too many races for ponies of 12·2 and 12·3 hands—those are a miserable class of pony.
2498. Do you not think there are too many of these pony clubs altogether? I think there is too much racing altogether.
2499. Do you know anything of the Lillie Bridge or Forest Lodge racing clubs? I have not been there since it was called the Forest Lodge Racing Club.
2500. Do you think there is any necessity for a place of that kind? I do not.
2501. I mean in the interests of sport? No, that is not a course at all; but Kensington is a good course.
2502. Kensington is a very good course, you say? Yes. When we raced ponies we exercised a control over the racing, and it is a pity that we did not continue that control.
2503. But the Australian Jockey Club prevented you? Yes.
2504. And pony-racing might have been controlled now but for the Australian Jockey Club having interposed? Yes.
2505. Are there any great number of disqualifications from the pony clubs—some of them for life—that have not been endorsed by the Australian Jockey Club? It would not be necessary to endorse them, because from the fact of a man riding at Kensington he would be disqualified.
2506. But they are not prevented from entering the Australian Jockey Club course? No.
2507. They take no notice of Kensington disqualifications? No.
2508. Such a man is under no disability as far as any other courses are concerned? No.
2509. He can run horses there? No.
2510. Not after having been disqualified at Kensington? No; we would not take his nomination. I thought you meant that people who were disqualified at Kensington could obtain entrance to the Randwick paddock.
2511. You do not receive nominations from people if you know they have been disqualified? No; although we do not get any official list.
2512. There are no official relations at all between you and the pony clubs? No; but as a rule we know who have been disqualified.
2513. I suppose it is advisable, beyond the mere interest of sport, to encourage the breeding of ponies, is it not? I certainly think it would be very unwise to do away with pony-racing altogether.
2514. Pony-racing does encourage the breeding of ponies? Yes, if properly conducted.
2515. Many of our ponies are thoroughbreds? Yes; some of our best race-horses.
2516. Ponies such as "Djin Djin," I suppose? Yes; he has raced among the galloways.
2517. There is also "Cinder Ellen," and many others? Yes; many of the ponies have sold for much more than second-class race-horses.
2518. And they are a very useful class of horses to have in the country? Yes.
2519. Small thoroughbreds? Yes.
2520. They are good for military purposes? Yes; they have been found to be very useful for military purposes.
2521. I believe they have proved themselves to be very suitable for military purposes in South Africa—these small, hardy horses? Yes.
2522. And as a rule, a pony is a hardy stamp of horse? Yes; as a rule more hardy than horses.
2523. *Chairman.*] There is only one question I would like to ask in respect to the Sydney Turf Club;—do you find that they give larger prizes on the whole than the average proprietary club? They give some larger prizes; they seldom give less than £100, and sometimes they give two or three good prizes.

Joseph Burton sworn and examined, as follows:—

- J. Burton. 2524. *Chairman.*] What is your occupation? A horse-trainer.
2525. You have been training horses for many years? Yes, pretty well all my life.
- 21 Nov., 1900. 2526. Has your experience in racing been confined to this Colony only? Yes, except for a little experience in Victoria. I have just come from Melbourne now.
2527. You have had experience in that colony during your visits there? Yes, certainly.
2528. You are well acquainted with the methods adopted for the government of racing in this Colony by the Australian Jockey Club? Yes, fairly well.
2529. Are you of opinion that that system has given eminent satisfaction to trainers and horse-owners, and to the country clubs generally? Yes, on the whole.
2530. Do you think that the system of government might be improved in any way? Well, it might a little. Of course, there might be some little defects in the Australian Jockey Club rules that could be improved on; but I would not like to say.
2531. Have you seen the Bill that has been submitted to Parliament? Yes.
2532. Do you think it would be a better system if such an idea as that was carried out? Of course, it is a matter of opinion. I do not know that it would.

J. Burton.
21 Nov., 1900.

2533. Do you think that country clubs should have representation on the central body? Well, I have had a little experience, because when I was in Bathurst I was a member of the committee of the Bathurst Turf Club for many years, and they were quite satisfied to be governed by the Australian Jockey Club.
2534. Does that apply to the whole of the country clubs? I do not know that it does.
2535. Do you think that they ought to have some voice in the representation on the committee? I think they ought.
2536. Do you think a body in which the metropolitan clubs would have a preponderance of representation, and the country clubs grouped into districts would also have representatives, would give more satisfaction to racing people generally? I think it would.
2537. And it would be quite workable? Yes.
2538. I suppose you have, from time to time, had a good deal of experience as a trainer of the methods adopted by the Australian Jockey Club for investigating cases of malpractice and things of that sort? Yes.
2539. Do you think that they have made mistakes from time to time? Yes, I do.
2540. Would they be due more to the system at present in force than to any personal intent? There is a great difference of opinion about stiff running in particular, and I am quite satisfied that the Australian Jockey Club committee have been conscientious in all matters.
2541. Then you really think that the mistakes are really due to the system? I do not know whether you would call it that or not.
2542. Would it be an improvement if stipendiary stewards were appointed by all the different clubs co-operating? I would be in favour of it. I would like to see such officials appointed if they could get good, reliable men; but they are very hard to get.
2543. You would not allow such stewards to sit as judges in the cases upon which they reported? No; I would merely allow them to give evidence as to what they saw.
2544. They would be practically the prosecutors? Yes.
2545. Under the present system, is it not a fact that the Australian Jockey Club are both prosecutors and judges too? Yes, I suppose they are.
2546. Following that up, are you of opinion that boys who get into trouble ought to be represented when they come before a body of that sort? Yes; I am in favour of the boys being represented. As far as I am concerned, being a trainer, I would not be afraid to go before the Australian Jockey Club, who, I am satisfied, would act with justice. I could look after my own case; but I do not think that ignorant little boys—and many of them are ignorant—of 16 or 17 years of age are capable of conducting their own case. I know for a fact that boys of that age lose their heads when they come before a tribunal like the Australian Jockey Club committee. They scarcely know what they are saying, and very likely give evidence that would incriminate themselves without knowing it, through ignorance or not understanding the questions that are put to them, and that kind of thing.
2547. Supposing an unscrupulous owner or trainer and a boy were involved, would the boy under the present system have the same opportunity of escaping as the older people would have in the absence of that representation? I do not think the boy would have, because of his ignorance or inability to give effective evidence on his own behalf. At the same time, I think that, as far as the Australian Jockey Club committee are concerned, they would act fairly towards him.
2548. We are not doubting that, but does not the absence of proper representation for the boys make it more possible for a miscarriage of justice to occur? I know it has happened through that.
2549. Do you know of any particular case? I cannot exactly call any case to mind, but I have often had conversations with boys after they have come out from the committee-room, and they have told me that they scarcely knew what they were saying. Boys do get that way, through nervousness, sometimes.
2550. And practically regard themselves as convicted before they are asked a question? Yes, they are afraid to stick out. I do not mean all boys, but in many cases it does happen, as I have said. I have sometimes asked boys why they did not say so-and-so? and they have reported that it is all very well to talk like that, but that they forget and are afraid to speak almost.
2551. They do not often really get to the root of the matter under the present system, and miscarriages of justice must often occur under such a system? Yes.
2552. No harm could accrue for allowing a boy of the ages you have mentioned to be represented by an older person? I cannot see that it would; I have always been in favour of it.
2553. Supposing you were involved in a case of suspicion, would you, as a trainer, be in favour of the Press being present at the inquiry into the matter? Yes, certainly; I would like the Press to be present.
2554. There would be no fear of any actions for libel arising out of a proceeding of that sort? I should not think so.
2555. *Mr Hogue.*] The Press would have to be responsible for what they published? Yes, of course.
2556. *Chairman.*] Do you think that, if the Press were admitted to these inquiries, it would help to improve racing? I think it would give general satisfaction if the Press were admitted.
2557. At the present time is it not a fact that—once evidence is taken in camera by the Australian Jockey Club, it never sees the light of day—the evidence is never made public? No; certainly no one ever knows anything about the evidence.
2558. We have had two or three cases referred to here;—were you present at the running of the mare "Mora," which was afterwards the subject of an inquiry? I was present, and I gave evidence at the second inquiry, when the case was reopened.
2559. Supposing that, taking that case as an example, you had been involved in suspicion as a trainer, would you prefer the case to have been investigated at once, or to have been left over for a week, until the mare had run another race? I do not quite understand.
2560. If the committee were suspicious that your horse had been pulled, would you prefer to have the case threshed out at once, or wait until after the horse had run a second time? I do not think it would be a reasonable thing to wait for the mare to run again, as she might not run again for weeks or months; but the inquiry ought to be held at the time.
2561. It is rather a haphazard style to leave the matter open? Yes, certainly.
2562. Is it not also unjust to those concerned to allow a matter of that kind to stand over? I think the matter ought to be investigated at the time.

- J. Burton. 2563. What was your impression of that race? I think the boy was innocent.
 2564. Have you any doubt about it? Not in my own mind.
 21 Nov., 1900. 2565. You saw the race? Yes, I saw the race.
 2566. And, as a practical man, you thought he was innocent—that he did not pull the mare? Yes; I have no doubt that the boy was innocent of pulling the mare; and, in that case, I think that the Australian Jockey Club committed an error of judgment.
 2567. In a case of that sort, in the absence of an Act such as we propose, would it not be an improvement to have a court of appeal from the Australian Jockey Club? I do not know that you would need to go beyond providing for the representation of the persons involved.
 2568. You think that would meet the case? Yes, I think it would.
 2569. Do you think that if that boy had been represented at this inquiry, a different complexion might have been placed upon the matter? I think so. In that particular case, when the matter was reopened, I think it was Mr. Fielder's—that is the boy's father—own fault, because he seemed to damn his own case. He tried to bring evidence to show that the mare was stuffed, and shod with loaded shoes, whereas it was well known that she was not; that she did not have shoes on as he represented.
 2570. And you think that that went against the boy? I think it did.
 2571. *Mr. Taylor.*] Do you think pony-racing ought to be suppressed altogether? I think it would be rather selfish for me to say anything about it.
 2572. But we want you to speak from a public standpoint;—we are presuming that horse-racing is ostensibly carried on to encourage and improve the breeding of substantial horses, and taking that into consideration, do you think that pony-racing ought to be abolished? Undoubtedly, pony-racing cannot have any good effect.
 2573. And presuming it is tolerated, do you think it ought to be confined to one day a week, in the interests of the whole community? There is a great deal too much of it.
 2574. Do you think an extra day's horse-racing in the middle of the week would help to suppress pony-racing? I do not know that it would; it might, but I would not like to say. There is quite enough horse-racing at present.
 2575. And certainly too much pony-racing? Yes.
 2576. Do you think that all these small courses ought to be closed up in the interests of the community—that is, anything less than 6 furlongs? That is too small.
 2577. Do you think they should be closed up? Yes.
 2578. Would you increase that minimum? Yes, I would.
 2579. To what extent? I would not have anything under a mile for horse-racing, or under 7 furlongs for pony-racing.
 2580. Do you think that if the flat at Randwick were thrown open, it would tend to popularise racing? It might popularise it, but at the same time, I do not see how you are going to do it.
 2581. If it were done would it tend to popularise racing? Perhaps so; but I would not be in favour of throwing the flat open.
 2582. Do you think that if we gave a £5,000-cup once a year and a £1,000-prize for a steeplechase, and if we also raised the prizes for all weight-for-age races to £500, it would have a tendency to centralise the best horse-racing in this Colony? Certainly; but I do not think you would be able to make a Melbourne Cup meeting of it here, no matter what you did. You could not get a Melbourne Cup meeting here if you were to give £100,000 in prizes. Melbourne is the centre to which people can go from all the colonies much more easily than they can come here. They could not come to Sydney from South Australia and Western Australia as they can go to Melbourne.
 2583. What I have described, however, would have a strong tendency to centralise the best racing here? Yes.
 2584. Would the totalisator tend to purify and improve racing here? Yes, I think it would; it would give us a better class of men.
 2585. And it would give us better prizes also? Certainly; if you could not increase the prizes it would be no use having the totalisator—that is where you get the better prizes from. I am sure you would have a better class of men racing. Betting is not like what it used to be, as there is scarcely a man among the big horse-owners who wants to bet more than a few pounds now. There are three or four of them, perhaps, who back their horses heavily, but all they need can be done with the totalisator. The majority of the owners would sooner run for a big stake and have less betting.
 2586. Do you think there would be any trouble in getting stipendiary stewards? Yes; there would be a trouble in getting men.
 2587. But you think they are to be got? It is possible.
 2588. Do you think a court of appeal, consisting of two members of the Australian Jockey Club, or of whatever committee may be constituted, and one representative from the north, south, and west respectively, would be a better tribunal to hear appeals than the central body which simply has to re-hear the case which they have previously tried? You mean appeals against the Australian Jockey Club?
 2589. Yes, or whatever the central committee may be;—we will assume that there is a committee formed, it may be from members of the Australian Jockey Club or a committee constituted under this Bill;—would you approve of an appeal committee consisting of five members, such as I have described, to try cases of appeal;—do you not think that an appeal court of that sort would give greater satisfaction to those who are connected with racing and the public in general than the present system? I think it would give satisfaction all right and work very well, but at the same time, as I have already said, I think that if anyone involved in a case of malpractice were represented in the first instance before the Australian Jockey Club committee, that would meet the case.
 2590. But according to your own evidence there was a case where a mistake was made? Yes; but he was not represented in that case.
 2591. Do you not think that a boy, or an owner, or a trainer would have a better chance in coming before a tribunal collected from such a wide area than before a tribunal representative of only one club? He might have, but from my own knowledge of the Australian Jockey Club committee, I would be quite satisfied with them.
 2592. But do not you think such a tribunal would command greater respect on the whole? On the whole, perhaps, it would.

J. Burton.
21 Nov., 1900.

2593. And therefore give a healthier tone to racing? I dare say it would.
2594. Do you think women and children ought to be prohibited from betting? I do.
2595. Do you think shop betting ought to be prohibited? I do.
2596. Do you think trainers and jockeys who have a large interest in racing matters ought to have one representative on the central committee, whatever it may be, whether it is the Australian Jockey Club committee or a committee as proposed under this Bill—I mean one man to represent their views, a practical man? Do you mean to ventilate grievances, or anything of that kind?
2597. I mean a man who would act generally on behalf of trainers and jockeys on much the same principle as the cabmen have a representative on the Metropolitan Transit Commission? Quite so. I think it would be a very good idea.
2598. Do you think that they are fairly entitled to have a representative, and that it would be for the benefit of races? I do not know about the benefit to racing, but they are entitled to it I should say.
2599. Do you think that stipendiary stewards should sit in judgment on cases initiated by themselves? No; they should give evidence, but nothing more.
2600. Do you know anything about the Sydney Turf Club, and the purposes for which it exists? I do not know that I do. It originated among the huntsmen who formed it—Mr. Betts, Mr. Terry, and others.
2601. Is it in the interests of racing in any way? Yes, it is.
2602. Is it more beneficial that the Sydney Turf Club should race on the days allotted to it rather than that these days should be distributed among the other clubs? Yes; I think it is an all right club—it is not a proprietary club.
2603. Do you know who constitute it at all? I know some of them. There is Mr. Betts, who is as good a man as you could have.
2604. In cases of malpractice, do not you think it better to wait until you are certain that a gross case of malpractice has occurred, and disqualify the offending party for life, rather than to punish a number of boys for a year or two in the way that is now done, do not you think it would have a better effect upon racing? I do not know that it would. Certainly they would require to be very certain about a thing before they disqualified for life.
2605. That is what I say, would it not be better to satisfy themselves beyond all doubt before inflicting punishment, and then disqualify for life? Do you mean that they should give a short sentence and increase it afterwards?
2606. No; I mean that they should satisfy themselves first, and then come down heavily? I do not know how they could do it.
2607. What I mean is that whatever number of cases may come before the committee they should wait until they can make a certainty of one case, and make an example of that—do not you think that would be better than the present system? Yes, perhaps it would be.
2608. Do you think it is arbitrary on the part of the Australian Jockey Club to fix the minimum prize money to be given by the various racing clubs within a certain radius of the city? Yes; I do not think they should interfere beyond a certain radius.
2609. Is it arbitrary or right that the Australian Jockey Club should have the right, or exercise the right, to determine what the minimum prizes shall be at these race meetings in the metropolitan area? Well, I do not know that I should like to say, because racing would go to the wall if it were not controlled by the Australian Jockey Club in that matter, whether it be suburban or country racing. If the Australian Jockey Club did not fix the minimum, some of these clubs would be racing for £1 or 10s. prizes, and we should have all kinds of racing; I do not think that would be advisable.
2610. Do you think there are many racing men who could give us valuable information favourable to this Bill if they dare do it? There are plenty who dare do it.
2611. But are there not a good many who dare not? Do you mean racing men?
2612. Yes? No, certainly not; every racing man is free to come and give you any information he likes.
2613. Do you not think some of them are influenced by the power of the Australian Jockey Club? No, certainly not.
2614. *Mr. Hogue.*] I presume you have read the Bill now before us? I do not know that I can remember much about it.
2615. But you understand the general purport of it? Yes.
2616. The object is to establish a racing association wherein the country clubs will be represented? Yes.
2617. Do you approve of the principle of the Bill generally, or does it go too far; in your opinion, would it work as well in the interests of racing as the present system under the Australian Jockey Club? The present system has worked all right, as far as I know.
2618. I suppose you have heard this Bill talked about a good deal? Yes.
2619. Have you had any demand for a change from the Australian Jockey Club? I have heard grumbling, but of course you will always hear that. Racing men as a whole, taking them right through, are quite satisfied with the Australian Jockey Club. There are cases, as I have pointed out, on occasions in which a little boy has been brought before the committee and has been punished innocently, through not being represented, or being able to give effective evidence on his own behalf, but that is all.
2620. Do you think that some modified representation of country clubs and suburban clubs on a central committee would be an improvement? Yes; I think so.
2621. You would be in favour of some modified system of representation? Yes.
2622. Would you give the Australian Jockey Club a preponderating voice in the management? Yes.
2623. On the whole you are not dissatisfied with their management? Quite so; I am quite satisfied. I am speaking of the present committee, who, taking them as a whole, are a body of men well up in racing, and men of honour.
2624. *Chairman.*] Only under the present system they adopt in connection with investigations there is a chance of injustice being unintentionally done? Yes, unintentionally.

THURSDAY,

THURSDAY, 22 NOVEMBER, 1900.

Present:—

MR. ARCHER, | MR. TAYLOR,
MR. GILLIES.

D. WATKINS, Esq., IN THE CHAIR.

Henry Harris sworn and examined as follows:—

H. Harris.
22 Nov., 1900.

2625. *Chairman.*] What position do you occupy in connection with racing? I am a member of the Rosehill Racing Club, and I am also a large shareholder in the Kensington Racing Club as well.

2626. I presume you have had considerable experience in turf matters? Yes.

2627. Principally confined to this Colony? Yes.

2628. Have you had an opportunity of seeing the Bill that is now before the House? I have read certain parts of the Bill.

2629. With your knowledge of racing, you will of course understand that racing in this Colony is absolutely controlled by the Australian Jockey Club? Yes.

2630. They have assumed that power owing to circumstances? They have assumed that power I know.

2631. Do you think that their management of racing has given satisfaction to all the clubs, and other people connected with racing? To an extent it has; but there is a lot to be said on that point.

2632. You think there is room for improvement? Yes, I think there is.

2633. In what way do you think an improvement might take place? From the position in which I am situated I have an insight into the working of two clubs. With regard to proprietary clubs, I think that with a slight alteration in the working of the Australian Jockey Club, their position, or the Club's position, could not possibly be improved. I think it would be an improvement if the proprietary clubs were represented with the gentlemen of the Australian Jockey Club. I am under the impression, from what I have seen of the committee of the Australian Jockey Club, that no more honorable men could be selected to form a committee, and I think that whatever they do—although we have suffered considerably, as I will point out to you directly—they do as an act of conscience; but they are wanting in experience. They have taken control of all the racing to such an extent that they allot the fixtures for the various clubs, which I think could be improved. But, unfortunately, these gentlemen, who I consider are a fair sample of honorable men, have a connection in the shape of a secretary, which I think is a great drawback to the good government of the club. I refer to Mr. Clibborn, who, I think, rules the members of the committee in a most unjust way. From what I can see by the report of the committee they behave in a very liberal way to Mr. Clibborn as to salary, but he is not satisfied with the salary but enters into competition with the live-stock auctioneers and carries on his profession to the detriment, no doubt, of the members of that profession, and no doubt to his own interest. After all, human nature is pretty thin, and as Mr. Clibborn conducts sales for the various horse-breeders, many of whom are connected with the Australian Jockey Club, there is no doubt some *quid pro quo* in return for the preference shown to Mr. Clibborn. If Mr. Clibborn were to disassociate his business from the secretaryship of the Australian Jockey Club he would have more time to make himself conversant with the conduct of racing outside the Australian Jockey Club. As it is, he sets up his back, he is an almighty power, and nothing, to my mind, can be effected unless he is agreeable, which I do not think is a good thing. I wish to say that, because this has been rankling in my mind for a very considerable time. I do not think that the Australian Jockey Club Committee are acting wisely or justly in allowing business to be associated with the secretaryship of the Club. As I have said, if it were not so he would have more time to see what actually goes on. With regard to racing, the Australian Jockey Club say there is too much of it. When they made certain allotments to the proprietary clubs of days for conducting their racing, they withdrew certain days from these clubs on the ground that there was too much racing; but what became of these few days—it was like the case of the monkey and the cheese. They took them to themselves, and adopted these extra days to the detriment of the other clubs. If they were sincere in their view that there was too much racing they ought to have done away with all these days, instead of taking them from the other clubs and allotting them to themselves. We have had reason to feel somewhat sore with the Australian Jockey Club. When I say "we" I am speaking of the Kensington Racing Club, which has been brought into the question a good deal in the course of this inquiry. The Kensington Racing Club was formerly connected with the Rosehill Racing Club—it was an off-shoot, but has since been formed into a separate company. The Australian Jockey Club adopted arbitrary measures with a view to trying to do away with pony-racing—for what reason I have no idea—they disqualified every horse, trainer, and jockey who operated at pony-races. They were not satisfied with doing that; but they prevented officials of registered clubs from taking part in pony-racing. The Kensington Racing Club employed Mr. Benson, the judge of the Australian Jockey Club; and they employed Mr. Watson, the starter of the Australian Jockey Club; and every and all of their best officials for the good conduct of racing at Kensington. The Australian Jockey Club then gave notice that these men must elect to either act at Kensington or at Randwick, and they had to increase the salaries of these men on their retiring from Kensington. When pony-racing first started, the Australian Jockey Club were offered an opportunity to take it under their control, which they refused to do. They did not know the importance that pony-racing was destined to assume; but they thought that perhaps it would die a natural death; but for some reason or other, at any rate, they declined to have anything at all to do with it. I have read some of the evidence given here with regard to pony-racing, and in replying to that I can only speak as regards Kensington. Kensington was formerly a desert, which I dare say the members of the Committee know. We removed millions of tons of sand, and we made it into a beautiful spot. We have spent in prizes and in the formation of the course, during the last ten years which have just expired, £110,000, and we pay the Government £800 a year rent for a tract of land which never brought in a penny before; so that pony-racing has been attended with some advantages, and that brings me back to Mr. Clibborn, who knows nothing whatever about it. Pony-racing is attended with great advantages. It is the medium for utilising small horses, and, as any racing man will tell you, the very best of sires have got the smallest stock, some of which I could enumerate to you. To shut out this stock from the market because they are not big-grown horses would be a sin upon Nature. They are animals of great utility, and proof of this is afforded by the fact that when buyers were purchasing horses for the Transvaal and China campaigns, they selected mostly small horses of 14.2 or 14.3 hands. These are the kind of horses that are brought into good account

account in pony-racing. It is said that the people who attend pony-racing are the scum of the earth; but if Mr. Clibborn had time to look for himself, and see what goes on, he would see that the same class of people, with the addition of the Wednesday afternoon recreation people, attend Kensington as are to be found at Randwick. They are exactly the same people who attend Randwick and the meetings of the registered clubs. There is no doubt that Mr. Clibborn would derive a very good lesson if he visited Kensington to see the way that pony-racing is conducted there, for I assert—and assert it fearlessly—that there is no course in any part of the world, and that is saying a great deal, where racing is as well conducted as it is at Kensington. We disqualify horses, trainers, and jockeys at Kensington, and the Australian Jockey Club have taken them within their pale afterwards.

H. Harris
22 Nov., 1900.

2634. *Mr. Taylor.*] That is, before their disqualification has expired? Yes. They took them in immediately they were disqualified, in order to get them over to their club. Now, I am telling you plain facts, as I have nothing to keep back, and I am only too glad to have this matter ventilated. I am speaking from very long experience, and also from experience that has cost me a power of money. Referring to these disqualifications that I speak of, there was a horse owned by J. C. Smith; the jockey was McGee, and the disqualified horse was "Rigmarole." These were disqualified for six months, for malpractice, on 11th August, 1898, by the stewards of the Kensington Racing Club. Then there was the jockey, J. Duval, disqualified for life for malpractice, and using abusive language on 17th March, 1898. These were taken over by the Australian Jockey Club, and allowed to run at Randwick.

2635. *Mr. Gillies.*] I suppose all these names have appeared in print before? Yes. Although we disqualified these men from the club which is held in the greatest contempt by Mr. Clibborn—that is, the Kensington Racing Club—we have to accept their entries for the Rosehill proprietary club races under the Australian Jockey Club, and allow them to run at Rosehill. We have to accept these men that were not considered fit to run at Kensington owing to malpractice.

2636. The men and horses? Yes, and boys. Now, I attribute that to Mr. Clibborn. It is all very well for Mr. Clibborn to turn up his nose at pony-racing, for, as I say, if he wants a lesson as to how to conduct a club he has only to go to Kensington. With regard to what Mr. Clibborn says in reference to pony-racing, I would like to read to you some information with regard to what is being done by the English Jockey Club. I will read what I desire to bring under your notice. It is as follows:—"It is the general opinion that the committee of the Australian Jockey Club acted anything but wisely when they let the command of the pony and galloway meetings slip from their hands. What is more, the majority think that our leading body are also wrong in disqualifying everyone who takes part in that branch of racing. It has lately been said—and anyone that would take the trouble to read through the rules can see for themselves—that the racing business here and in England is carried out upon much the same lines. Now, the sport of pony and galloway racing is going ahead very rapidly in the Old Country. What is more, it is fostered by the English Jockey Club stewards, who are acting in a very different manner towards it than is the case of the Australian Jockey Club. According to the reports received by the last Mail, the following new rules were to be submitted: 'New rule 178 (a)—Any person who acts in any official capacity, owns, trains, or rides a horse running at any unrecognised meeting in Great Britain or Ireland, is thereby disqualified from acting in any official capacity, entering, training, running, or riding a horse at any meeting held under these rules. This rule shall not apply to pony or galloway races at meetings confined to pony or galloway racing.' By Mr. Lowther—to move the following new subsection to rule 176, to follow subsection iv.: 'To have acted in any official capacity at, or to have been concerned in the ownership, training, management, superintendence, or riding of a horse running at any unrecognised meeting in Great Britain or Ireland other than a meeting confined to pony or galloway races.' Thus it will be seen that pony and galloway racing does not come under the head of 'unregistered,' as we term it, or unrecognised meeting, as it is described in England. This is as it should be, and was in this Colony before the new rules and regulations were enforced." The English Jockey Club are doing all they possibly can to help pony and galloway racing, and there is not that opposition to pony and galloway racing that we find here. With regard to the management of the Australian Jockey Club, you might go a very long way before you would get a more honorable lot of men together.

2637. *Chairman.*] But you think that they want experience? I think they want experience in administration. I put the greatest reliance on their inquiries, as I think they take the greatest trouble in making their inquiries as just as possible. I think, however, that an improvement would be made if they were to appoint three of their number to act as stewards for the day when they have a racing meeting on. In the event of any question arising as to malpractice or anything of that kind, the stewards could bring the offending party to judgment, and he should have the privilege of appealing to the full committee of the Australian Jockey Club. I think myself that would be an improvement.

2638. *Mr. Archer.*] Do you not think proprietary clubs ought to be represented? I think it would be a great improvement if they were represented.

2639. *Chairman.*] While you are on that point, do you think a central body such as the Bill proposes, perhaps with a modification giving the Australian Jockey Club more representation, providing for the representation of the proprietary clubs, and one representative from the country clubs in north, south, and west, would form a better central tribunal of appeal? I do not think I should feel inclined to remove that from the Australian Jockey Club, provided it was done in the manner that I say, because it is a very hard thing to get a body of men together. It is all very well to talk of country representatives, but you have to get them to attend, and I think that if there were power to appeal to the general body of committeemen of the Australian Jockey Club, just as you can appeal to the Full Court, it would meet the case. There you have a body of twelve men who ought to govern anything. When we look at the Bank of New South Wales and the Commercial Bank, which are governed by perhaps half a dozen men, that number ought to be sufficient for racing, and I think that if fewer members were nominated by the Australian Jockey Club, and a few were nominated by the proprietary clubs, everything would work smoothly.

2640. In the case of Bank directors they are paid—would you be agreeable to pay these men? That is a matter that I have not considered. I wish to draw your attention to the fact, that in order that we might have good government at Kensington we employ a paid steward at a yearly salary, solely to attend our race-meetings. In the event of anything appearing that he thinks is not right, the offending parties are hauled up before the committee, and he forms one of the committee of inquiry. I notice that this Bill leaves Kensington out of the schedule altogether.

H. Harris. 2641. *Chairman.*] I may say that that schedule was drawn in a hurry? I think that such an important club as Kensington—I do not speak of any of the other clubs—in consideration of the amount of money that has been spent in bringing it to life, and the money that is spent there every week, and the utility it has in encouraging a class of horses that are so much needed in this country, ought to be included in the schedule of a Bill like this.

22 Nov., 1900.

2642. You think they ought to be recognised in a Bill of this kind? Yes. That course cost £30,000 to construct, and our expenditure is very large every week, besides the £150 to £175 that are given away in prizes at every meeting.

2643. Dealing with the question of pony-racing, you would not compare any of the other pony-races, from what you know of them, with Kensington? I would not like to answer that question. I can only speak from what I know, and know thoroughly. I know how we conduct it, because there is so much money put into that venture, that to make it a success, it must be well-conducted, in order to protect ourselves outside of anything else.

2644. However, we take it that you think pony-racing should be allowed to come under the control of a central tribunal? If there is anything of that kind established, of course it should be recognised. Not one of the Committee of the Australian Jockey Club have one brass farthing invested in racing, and they have not the courage to invest their money in the way we have done. We have put £80,000 into Rosehill, and Kensington has cost us £30,000, besides an immense expenditure ever since. Instead of trying to shut out the investment of capital, it is to the interest of this country that capital should be invested as largely as possible. We have our substance in racing, and that is more than any of the members of the Australian Jockey Club have.

2645. You are in favour of stipendiary stewards;—do you think it possible, under the arrangement, as carried out by the Australian Jockey Club, for justice to be meted out with a committee acting as prosecutors as well as judges;—do you not think mistakes are more likely to happen under a system like that? I would not like to say. I think that if the Australian Jockey Club committee give a decision, it is a decision of honorable men.

2646. That of course is not in question? I do not think it is necessary for a stipendiary steward to be appointed at Randwick, provided that they appoint stewards from their own body for the day. If they appointed three stewards to act for the day, and in the event of any question arising, these stewards could adjudicate, leaving any dissatisfied party the power of appeal to the full committee, it would be all that was necessary. That would be equivalent to an appeal to the Full Court in the matter of law.

2647. I take it that that full committee would be improved upon, if the other racing clubs had representation upon it? Yes.

2648. Do you not think the country clubs should have a voice in the power that governs racing—that governs them in the same way as it governs you? I do not see why they should have a voice in the metropolitan government. Why do they not form their own association?

2649. Is it not a fact that if they were to sever their connection with the Australian Jockey Club, they would be put under the same ban as the pony-racing clubs? Yes, they would.

2650. Then, as a matter of self-protection, they are compelled to be affiliated with the Australian Jockey Club? Yes; they are obliged to conform to the Australian Jockey Club rules.

2651. Do you not think they would feel themselves better secured, if they had the right to a voice in the election of a central tribunal, no matter what it is? They have a voice in the appointment of the Australian Jockey Club—they have a vote.

2652. Not unless they are members of the Australian Jockey Club? No.

2653. But I am talking of country clubs? I think that could be obviated, if an alteration were made in the rules of the Australian Jockey Club, and proxy voting were done away with, and members were required to vote personally. I think proxy voting is the cause of the trouble, because I should think that an excellent underground engineer like Mr. Clibborn would take care that his proxies were all out in the proper direction, so as to get as many proxies as possible.

2654. You think he would do that to secure the election of certain candidates? You can draw your own inference. If proxy votes were done away with, it would purify the election to a great extent, and the country people would have an opportunity of being represented on the committee. As it is now with the proxies, personal voting has little effect, and the result chiefly depends upon proxies. It would also serve the purpose of the country clubs, because the country men would then be able to secure positions on the committee.

2655. You have had some experience of the fund that is established for injured jockeys? I know very little about that.

2656. I suppose you know that the Australian Jockey Club have no regular system for the payment of moneys to injured jockeys? I know they have no regular system; but I am not sufficiently acquainted with the matter to give any evidence as to the fund itself.

2657. But do you not think that with all the racing that is going on in this Colony, it would be possible to establish a fund whereby all jockeys who may be injured could be provided with a weekly allowance? I think there is some existing rule of the Australian Jockey Club providing for deserving cases.

2658. Yes; but they are only one in 1,000, according to the evidence we have;—I am asking you as to the general question, whether such a fund could not be established? It could be established without a doubt, because the Australian Jockey Club have got plenty of funds. If they can afford to build premises like they have done, it appears that they have more funds than they know what to do with. There is one thing I might say, that it is a matter of question whether the money which has been invested by the Australian Jockey Club in the building and land they have bought, could not have been devoted to better purposes in augmenting the prizes for the various races. No doubt they could have rented offices for considerably less than the amount of interest on the money that this building will cost. That is merely my own opinion.

2659. Sporting men generally, and the clubs generally, would, I suppose, be only too glad to augment a fund of the description I have mentioned, if they knew it was established on a basis that would permit of boys that were hurt being properly provided for? My experience of sporting men generally is that they are most liberal, especially where matters affecting health or limb are concerned.

2660. *Mr. Taylor.*] I have heard you speak of the Australian Jockey Club committee as being composed of honorable men? Yes.

H. Harris.
22 Nov., 1900.

2661. Do you not think they partake too much of a family party altogether to give that perfect confidence to the public that a club of that sort should give—as matters stand we have ten men selected from two social clubs? Yes; but then that would be obviated to a large extent if proxy voting were done away with.
2662. But you think the committee does partake too much of a family party? I would not like to say that. I have too high an opinion of the members of the committee, many of whom I have known personally for many years, to think of them otherwise than I have stated. I think a great improvement could be made in regard to their secretary, but with regard to the gentlemen themselves, I think you could not get a more honorable lot of men together, and I should feel perfectly satisfied with any decision they might give.
2663. Do you think, taking the general committee as it is, that if a court of appeal were established for all cases, consisting of, say, five members—two from the Australian Jockey Club, and one from each of the three districts of the Colony—do you not think that would be an improvement upon the present system? I do not agree with you. I think that the governing body are quite capable of doing all you suggest, provided that the elections were different. If they were to do away with proxy voting, I think that would get over the whole difficulty.
2664. Do you think trainers and jockeys ought to have a representative on that committee? No, I do not.
2665. I think you told the Chairman that you believed that the appointment of paid stewards would have a beneficial effect? I do not advocate paid stewards for the Australian Jockey Club. If three gentlemen were taken from the committee for each meeting, and appointed as stewards for the day, in the event of any trouble arising, they could adjudicate upon it, and if they came to a decision which might not be satisfactory to the parties concerned, an appeal could be made to the general committee of the Australian Jockey Club.
2666. Do you think these three stewards should sit in judgment on the case? I think it would assist matters. When there is an appeal to the Full Court, the Judge who presided at the trial which is the subject of appeal always sits on the Full Court Bench, and no doubt their presence would be of great assistance.
2667. You would approve of those three stewards sitting on the court of appeal? I think so; I should not have any objection.
2668. Do you think women and children should be prohibited from betting? No, I do not; especially in anticipation of the Women's Franchise Bill.
2669. *Chairman.*] Does your reply extend to children? It all depends upon what you call children. I do not hold with children betting at all, but I think it would be very arbitrary to prevent women from betting.
2670. *Mr. Taylor.*] Do you think shop-betting ought to be prohibited? I think that is one of the greatest curses we have.
2671. Do you think the totalisator should be established? I would have no objection to seeing it established, providing they have freetrade in it—provided that the books were allowed to bet with the totalisator. It would be the means of enabling people to get better odds for their money. In some parts, where the bookmakers stand alongside the “tote,” the public can get better prices if they want to back a horse. I do not hold, myself, with legislating for these kind of things. I think gambling is carried out quite fast enough without assisting it with the totalisator. I think it would make it easier, and I do not think we have any reason to do that.
2672. You would not approve of it? No; I would not.
2673. Do you think that a cup of £5,000 and a steeplechase of £1,000 once a year, with the increase of weight-for-age prizes to £500 for each race, would have a tendency to elevate and purify horse-racing here? No, I do not; from my experience, I think they get every man and woman who would attend racing to attend now. No matter what the prize, and no matter what the stakes are, I do not think you will increase the attendance. We are a different community to what they are in Victoria. I had the pleasure of being present at the last Melbourne Cup, and it was a wonderful sight to see the number of people there. On their gala-days—and race-days in particular—they have very little to divert the attention of the public from racing, but it is different in New South Wales. It does not matter what prizes are given, or what inducements are offered, you can only get a certain number of people to attend race-courses, because there are so many attractions in different parts out of the city on the same day.
2674. Do you think that pony-racing ought to be confined to one day a week in the metropolitan area? I see no objection to its being done.
2675. Have you any objection to pony-racing being conducted on more than one day a week? No; not if it is properly conducted. The Kensington people race on Wednesday afternoon, and that affords a power of amusement to people who are locked up in their shops and offices all the week. From my experience, you will see a crowd there as good, as cleanly, and as tidy as on any racecourse in the Colony.
2676. Do you not think that one day's horse-racing and one day's pony-racing every week would be quite sufficient for the people of this country to sustain? I think it would be plenty.
2677. You have stated that Mr. Clibborn's business clashes with his duties as secretary, and you said something about a *quid pro quo*;—do I understand that he would be subject to showing favour to certain breeders in consequence of receiving favours from them? As I said before, human nature is weak, and Mr. Clibborn has a very nice position in the Club as secretary, which ought to be sufficient for him without engaging in business. There is no doubt that, as a man of the world, he would do all he can to retain that position, and, no doubt, he might feel inclined—I do not say he would favour breeders; he should be—like Cæsar's wife—above suspicion.
2678. You think his position ought to be quite sufficient without his business? Yes, I do; then he would have more time to visit these meetings, and see how things are conducted.
2679. If he were to tell you that he did not take much interest in horse-racing, would you believe him? I should think he was not fitted for his position.
2680. If he told you that, you would not think he was fit to be secretary of the Australian Jockey Club? No; and I will give you my reasons. Mr. Byron Moore does not understand one horse from another, and I do not think he takes much interest in horse-racing, but he devotes his time to the interests of horse-racing indirectly in looking after the course and in looking after the comforts of the patrons of racing. He does all he can to make things comfortable for everyone, and goes into the most minute details. If you visit Melbourne, and have noticed the many things that are to be found there, you will appreciate

H. Harris. appreciate what I say. They provide facilities there even down to the buying of a postage stamp on the course. He devotes his sole attention to the interests of racing people, and if Mr. Clibborn did the same thing it would be a distinct feather in his cap.

22 Nov., 1900.

2681. Can you give us any information with regard to the Sydney Turf Club? It has always been a mystery to me. I know nothing about it, and I think there are very few people who do.

2682. Do you think an irresponsible club like that should have the benefit of four of the best race-days in the year? I would not care to make any remarks about it, because I do not know anything at all about the club. Mr. Clibborn is secretary, I think, and I do know that there are some very fine fellows connected with it whom I am always pleased to meet.

2683. If it were sworn that there were only two people who participated in the benefits of that club, do you think it should be abolished? If it is a proprietary club, it should not be entitled to more privileges than Rosehill or Canterbury Park Club.

2684. Do you think that the four days now appropriated by the Sydney Turf Club should be distributed amongst the other clubs? Yes; if it is a proprietary club, or if the Sydney Turf Club is done away with. The Australian Jockey Club cannot think there is too much racing after having appropriated to themselves the days which they took from the other clubs.

2685. Assuming that there are only two people who participate in the benefits of this club, ought it to be done away with and the days now appropriated by it to be allotted to other clubs? I can only go as far as to say that if the Sydney Turf Club is a proprietary club they have no more right to receive any more consideration than any other club.

2686. If Mr. Clibborn says that he and another are the sole participators in the benefits of this club, would you say that the club should be abolished and that the days allotted to these two particular individuals should be distributed amongst the other clubs? If Mr. Clibborn and another gentlemen are the proprietors of the Sydney Turf Club, I maintain that they have no more right to receive more consideration than any other proprietary club.

2687. You have had experience not only as the proprietor of a racecourse, but as the owner of race-horses? Yes; I have indeed.

2688. Do you think it would be better, in the interests of racing, for the central racing tribunal to wait until such time as they can make certain that offences have been committed against the laws of racing, and then disqualify the offenders for life;—that they should refrain from passing sentences of six months, and so on, founded only on strong suspicion? We have adopted this rule at Kensington. If we think there has been malpractice, we never pass a disqualification for less than twelve months upon a horse, trainer, jockey, or owner; and if the malpractice is of a particularly bad character, we disqualify for life.

2689. Then, you agree that it would be better to let some guilty people off and only to punish when you are certain, and then to punish severely? I would sooner let 100 guilty men off than punish one innocent one.

2690. And when you have satisfied yourself that they are guilty, you would make the sentences severe? Rather.

2691. Is it a fact that bookmakers have to pay a fee to the Australian Jockey Club before they can bet on any other racecourse? Yes; they have to pay a fee before they can bet on any other course, and then they have to pay the proprietary clubs their registration fees besides. Since the Australian Jockey Club has taken up an attitude adverse to the pony club they will not register any bookmakers who ply their calling at the pony club meetings. They do not mind who they register, whether they are members of Tattersall's or not, provided they do not ply their avocations at pony club meetings.

2692. Are you aware that the Australian Jockey Club have a rule prohibiting races from being run in divisions? Yes.

2693. Do you think that that rule is not detrimental to racing, where there is a large field? I have never experienced it at Randwick.

2694. But at other courses? Yes; at certain courses it is; but it seldom occurs.

2695. Take the cases of Canterbury Park, Warwick Farm, or Rosehill;—in the event of their having eighty horses in a race, would you think it would be dangerous? I have never seen any such thing. I have very seldom had occasion to have any fear as to the way they run, independently of running the race in heats.

2696. But do you think it would be dangerous to run such a large number of horses? If there were an undue number of horses, it would be dangerous; but, at the same time laws must be made, and the exception proves the rule.

2697. Do you think the Australian Jockey Club should have the controlling power as regards the minimum prize-money that any other club should offer? They exercise that power, whether it is right or wrong.

2698. Do you think they should have that power? Provided that the elections of the Australian Jockey Club Committee were carried out in the way I have mentioned, they should have the power to do exactly what they are doing. Provided that the elections were differently conducted, and proxy voting were done away with, they would have a different combination on that committee. You must have a ruling power.

2699. Do you think that, considering that the Australian Jockey Club get their premises free, they should throw the Flat open to the public, and that by throwing it open it would tend to popularise racing? I think it would have a good effect. We have the experience in Victoria of the same thing. I noticed when I was at the last meeting at Flemington, that the Flat was thick with visitors, and I think it would be to the interest of the Australian Jockey Club, and that it would tend to popularise racing. The Australian Jockey Club have a lot to be thankful to the proprietary clubs for, as the operations of these clubs tend to keep things moving, and to make racing popular, and thus they feed the Australian Jockey Club meetings. They are the best friends that the Australian Jockey Club could have. I have nothing further to say, except that, considering the venture that the Kensington people have taken in hand, I hope that consideration will be given to their position, in the event of any action being taken to bring pony-racing under control. As I told you, there is an immense amount of money been spent, and we have a lease from the Government which brings in £800 a year to them, for a waste piece of land, which we have greatly improved. It is our sole desire to conduct racing in a fair and honorable way, and we only hope that if any Bill is framed at all the Kensington Club will be included within its provisions.

provisions. We do all that we can to assist the Government, and, if you remember, we gave them the use of our course for the camp for the Contingent before they went Home, and we are only too happy to assist by anything we can do.

H. Harris.
22 Nov., 1900.

2800. *Chairman.*] I may say that the evidence we have before us is very favourable as to the manner in which the Kensington course is conducted? Thank you.

Patrick O'Mara sworn and examined as follows:—

2801. *Chairman.*] What position do you occupy in connection with racing? I am secretary of the Kensington Racing Club.

P. O'Mara.
22 Nov., 1900.

2802. You have had considerable experience of racing? Yes; fifteen years.

2803. Have you been brought into contact with the working of racing as managed by the Australian Jockey Club during that fifteen years? During the whole fifteen years I have had contact with all the inner workings of racing matters.

2804. On the part of the parent body? I have worked for the Australian Jockey Club as a boy upwards.

2805. In the office? No; I used to work in their scratching tower, and I was secretary of the Rosehill Racing Club for many years as well.

2806. Are you of opinion that the present method of management could be improved upon? Yes; it might be slightly.

2807. Have you read the Bill before Parliament? Yes, I have.

2808. Would you favour a tribunal such as that proposed to be set up? No; I do not think it would improve matters at all.

2809. Do you think it would be too large? No. I think the thing to be done first is to appoint stipendiary stewards—say a body of three or four. That is the most important thing we want.

2810. Do you not think that the different suburban clubs and the country clubs should have a voice in the selection of the men who are sitting on the central body to govern racing? I do not see that they need it.

2811. Are they not brought under the government of the Australian Jockey Club? Yes; they are at present.

2812. And they have no voice in the conduct of their affairs? None whatever.

2813. They have to obey the will of the parent body? Yes.

2814. Should they not have some representation in a body of that kind? I do not see that it would improve matters, even if they had.

2815. Would it not give more general satisfaction to the country clubs to know that they had their grievances ventilated by their own representatives on the central body? I do not think so. Matters are in this position at present: There are what they style proprietary clubs—Rosehill, Warwick Farm, Moorfield, and Canterbury Park—and every Saturday is occupied by a race meeting. Every club has a certain number of Saturdays, and if they had representation on the committee I do not see how they could improve on the present allotment of dates.

2816. Are the proprietary clubs satisfied with the allotment? Certainly; they could not improve on it. Even the Australian Jockey Club could not improve upon it, and the only objection I have heard is in regard to the days allotted to Sydney Turf Club and Tattersall's Club.

2817. They have some of the best days in the year? Yes; they have two of the best holidays in the year and other days besides, and the only contention I have heard is that the proprietary clubs, having spent so much money in connection with their premises and race-courses, did not think it right that Tattersall's Club or Sydney Turf Club should be allowed to monopolise some of the best days of the year in order to race at Randwick.

2818. Do not the Australian Jockey Club derive a considerable sum for the use of the course on those days? Yes; I think they get £450 or £500 a day.

2819. As far as malpractices and disputes are concerned, do you think there should be a court of appeal from the Australian Jockey Club? My idea has been that the Australian Jockey Club, as a committee, should never sit as stewards. They should have a body of stipendiary stewards, and the Australian Jockey Club should be the court of appeal in itself. As matters are at present, if they disqualify a man, and he appeals, the case only goes back to the same body as listened to it originally.

2820. Would you give the stipendiary stewards the power to disqualify? Yes; I would give them full power, subject to a right of appeal to the Australian Jockey Club committee.

2821. Would it not give more satisfaction to the proprietary clubs if they had a representative on that court? I cannot speak as to what they would like; but I do not think it would be any great improvement. The Australian Jockey Club committee, as constituted now, is as fair a body of men as you could get together.

2822. But you think their methods could be improved? Yes, I do.

2823. Is it possible for injustice to occur under present conditions? Unintentionally only.

2824. Do you know anything of the working of the jockeys' fund in connection with the Australian Jockey Club? I know a little about it.

2825. Do you think it would be possible to establish in this Colony a fund from which injured jockeys would be able to receive a weekly allowance? Most certainly.

2826. Would racing men generally assist such a fund? They would assist it in every way. I have had the idea for some time that it would be a good thing to do; but until the registration of jockeys came into force, and the Australian Jockey Club had registered jockeys in the manner they have done, it was not possible to do it. A jockey was here to-day, and somewhere else to-morrow; but now that they are registered, and so many of them are permanently resident in Sydney, there is every opportunity for doing what is suggested.

2827. Such a thing could be financed all right, I suppose? I think so, easily. Under present conditions, if a boy gets injured, he may have a wife and family to keep, and they give him £4 or £5 only, which has to carry him over perhaps six or seven weeks while his injury incapacitates him for work.

2828. That is totally inadequate? Yes; it is, totally.

P. O'Mara. 2829. I understand that the jockeys practically own the money in that fund? The major portion of it has been derived from the jockeys; it has all been derived from fines. Before the starting-machine was introduced, it was a common thing for jockeys to be fined £5 and £10 a day; but now you do not see jockeys fined once in six months. The registration fees are now added to the fund; but originally the fund was formed from fines levied on jockeys—in fact, the minimum fine for disobedience at the post was £10.

22 Nov., 1900.

2830. Your general impression is that the Australian Jockey Club committee should form a court of appeal from a board of stipendiary stewards? Yes.

2831. Do you think that we have too much pony-racing here in Sydney now? I think far too much.

2832. Do you think some action should be taken to lessen the number of days that are taken up for racing? Yes; I think there is too much pony-racing altogether.

2833. You think that a reduction in the number of days' racing would put it on a better basis? It would be far better if we had only one pony race-meeting a week.

2834. And you would bring it under the control of a central authority? Yes, I think so.

2835. Are there any other improvements you would suggest? The greatest curse that racing has suffered from has been shop-betting.

2836. You think that the shops should be closed? Yes, I think so. I think the police took action about two years ago, and closed up every shop in Sydney during one Melbourne Cup meeting, and if they would do the same thing again, and shut them up altogether, it would be the best thing that could happen to racing. They are not only a curse to horse-racing, but to pony-racing; and if they closed the shops to-morrow it would not make ten more people go to races than go at present. I have always found that the people who bet in shops are altogether apart from the people who go to race-courses, and that they are people who would not bet but for the inducements offered by the shops.

2837. *Mr. Gillies.*] You think that the committee of the Australian Jockey Club as at present constituted is one of the fairest bodies you could get? I have every reason to believe so.

2838. Do you remember their disqualifying young Fielder over the "Mora" case? Yes; I have studied the whole thing as a steward myself at Kensington.

2839. Do you consider that seeing that there were over fifteen witnesses who were on the course, and who stated before the committee that in their opinion the boy did nothing "crooked," the committee were justified in disqualifying him? I have been a steward myself at Kensington for five or six years, and as a steward I have had to take part in a great number of inquiries, and I find that the evidence you take in these matters is the most unreliable you can get hold of. When it comes to a matter of disqualifying a man or a horse you must take your own eyesight, because if you take the evidence that is brought before you you would never go right. As far as evidence goes at these inquiries it is not worth the paper it is written on.

2840. For what reason? It is not taken on oath. Moreover, you will find if a horse should happen to run in a race, and it is well backed by the public, and he does not win, you will have hundreds of people who will come and tell you that the horse is "stiff," and should be disqualified; but supposing that that horse happened to be deliberately "pulled," and should be disqualified a week later, you would find the same people would sympathise with the man, and would say you should let him off.

2841. *Chairman.*] I suppose you have read the evidence that was taken before the committee? Yes.

2842. Do you say that a gentleman like Mr. Smith would be guilty of making a false statement? I do not say they are guilty of making a false statement; but it frequently happens that when men have bets on the race their judgment is biassed, and their view of what they see is not always reliable.

2843. *Mr. Gillies.*] Would not that hold good with the committee of the Australian Jockey Club? Yes, perhaps so; but the Australian Jockey Club as a committee should not adjudicate upon such matters in the first instance, they should have the stewards to do that.

2844. *Chairman.*] In a case like that, if you were acting as a steward, and you thought you saw a case of malpractice, would you pull the boy up at the time, or wait until the mare had run again? I am greatly opposed to so much importance being attached to inconsistent running. My opinion is that if a man is guilty of doing wrong this week and you do not see him, but pass the matter over, you have no right to disqualify him for doing the right thing the next week. The Australian Jockey Club committee had no right to bring young Fielder up after passing over his action the week previously. They had no right to question his action in the first case when he did right in the second. Assuming that he did wrong, they had no right to bring him up when he did right and disqualify him.

2845. From the fact that the club did that you would judge that they looked upon it as a case of suspicious running? They must have done.

2846. Did not the evidence produced in that case all tend to exonerate the boy? Yes; in a case like that all the evidence would tend to exonerate the boy—they had no evidence to show that the horse was "pulled."

2847. You notice the club did not call any evidence against the boy? No; what evidence could they call?

2848. You notice that some of the members of the committee make a statement that they saw the boy do this and that? If they did, why did they not have him up at the time.

2849. You think they were wrong? Yes; not only in this case, but nine-tenths of the stewards in racing clubs of the Colony are the same way inclined. If a horse should not happen to win his first race, and he wins his last race, they take it to be a case of inconsistent running, and disqualify.

2850. *Mr. Taylor.*] Have you not noticed many times that a horse though honestly ridden will run most inconsistently? Certainly; every horse will do it.

2851. *Chairman.*] Do you think these boys should have some older person to represent them in a case of that sort? No, I do not think so. As far as I am aware, the boys have always had every latitude given to them.

2852. Do you think that boy had every latitude given to him? I cannot judge from the evidence. The worst feature of a stewards' meeting is that nothing is taken on oath, and the evidence is simply just what any one cares to say, and I am afraid that if you introduced the legal element, or even an older person, to represent the boy you would not know where the inquiry would stop. As it is, the boys are given every opportunity.

2853. But do you think that many of these lads are capable of taking care of themselves? Most certainly. I never saw a jockey boy who was not able to defend himself if there was any occasion for it. P. O'Mara.
2854. *Mr. Taylor.*] Do you think that evidence of that kind ought to be taken on oath, and that it ought to be protected by law in some way? It would be far better if it were, but the question is, how are you going to do it? I have been a steward for many years, and I suppose I have seen as much of racing, as a steward, as a good many, and I always find that if a steward sees a race he does not want to know anything about the betting or anything else, but he can form his own conclusion as to whether a horse is trying or not. All the evidence in the world would not alter his mind. 22 Nov., 1900.
2855. *Mr. Gillies.*] That is supposing he is a competent man? Yes.
2856. But, in your opinion, are the majority of the members of the Australian Jockey Club competent men, so experienced that they would be able to tell whether a jockey was riding fairly or not? That is a question I could not answer.
2857. And yet, in your opinion, they are a fair committee? Yes. What I mean by a fair committee is that I do not think that they would do a man an injury if they possibly knew it.
2858. They would not intentionally injure him? No.
2859. *Mr. Taylor.*] You said you would favour the appointment of three or four stipendiary stewards? Yes.
2860. Would there be any difficulty in getting three good men for the position? Not the least.
2861. Men who would be thoroughly reliable? Thoroughly reliable and fully qualified to fill the position. I suppose you could get hundreds of them.
2862. Do you think that as the Australian Jockey Club gets its course for nothing it should throw open the Flat at Randwick, and that such action would tend to popularise racing? I have always thought it would be the best thing for them to do, and I think they are very short-sighted not to open the Flat.
2863. Do you favour the totalisator? Yes, in every way.
2864. Would it tend to purify racing and improve the breeding of stock? Yes; always providing that it would put a stop to city betting. I do not believe in that.
2865. Why? It is not that I believe that the shutting up of the shops would benefit the race-course, but I know that they induce people to bet who otherwise would not bet, and I think it is the worst thing that we could possibly countenance. I know that there are hundreds of people who otherwise would not bet who are induced to bet through the shops. There are many horses and ponies as well that are entered and taken to the various race-courses without any intention of starting them, for the simple reason that they are given into the hands of certain shopkeepers who lay against them as much as they can, because they know they will not be started. I know this to be the fact, although I cannot prove it.
2866. Do you think that if there was a cup established every year of, say, £5,000, and a steeplechase of £1,000, and if the prizes for all weight-for-age races were raised to £500, it would tend to centralise the best horse-racing in this Colony? Yes, certainly. I always thought the first move of the Australian Jockey Club should have been to throw the Flat open. If they threw the Flat open it would bring the people to the course, and instead of having 10,000 or 15,000 people at Randwick, they would have 30,000 or 40,000 on the Flat. My experience is that the greater crowds you draw the more paying people will come to see the races. Instead of having the attendances they have now in the Saddling Paddock and Leger Reserve they would have double the number. I know they say it would involve a loss of £5,000 a year, but they would get that back twice over in the returns from the Stands and Reserves, and also for the sale of privileges. I have always thought that it was short-sighted policy on their part that they did not open the Flat.
2867. And you think that the offering of prizes, such as I have mentioned, would tend to centralise the best horse-racing in this Colony? Certainly; the people of New South Wales are more sport-loving than those of Victoria, especially those in Sydney. Of course, the Melbourne Cup is a big thing to bump up against, but I think that in two or three years we could have equally as good a meeting here as in Melbourne.
2868. There are a large number of jockeys and trainers here;—do you think it would be an unfair thing to give these trainers and jockeys one representative among the ten or twelve men who represent racing? It all depends upon the representation you wish.
2869. I mean that the jockeys and trainers should have one man to represent their interests? I do not think it would be of any advantage. What would be the advantage of one man on a body of that sort?
2870. *Chairman.*] Could he not suggest means for securing their comfort? I do not think it would benefit them, because if a jockey or trainer ever suggests anything that would be beneficial their views are always met as far as possible.
2871. Do you know anything of the Sydney Turf Club? No; I do not suppose anyone else does, either.
2872. If it were sworn that there were only two men who participated in the benefits of that club, do you think the club ought to be abolished in the interests of the other clubs? Yes, I have always been opposed to it. No one knows anything about the constitution of the club, which has never spent a shilling in the formation or maintenance of a racecourse, and yet they are allowed four of the best days in the year to race on. I could form a body of men to-morrow who would be only too glad to take over the Sydney Turf Club engagements to offer the same prize-money and carry out their meetings. They would know what a large profit there was to be made out of it. They have the 26th January and the Queen's Birthday, and altogether four days, and I suppose there is not a racing man in Sydney who would not join a syndicate to take over those days and give the same prizes. Why should they be granted such a concession at the expense of other clubs?
2873. Do you think that these four days should be distributed amongst the proprietary clubs? I do not think they should be given to the Sydney Turf Club. It is not a club, and I never heard of a man who was a member of it beyond the committee. There is a chairman and a committee, and that is about all they have to represent the whole of the members.
2874. In these cases where boys are brought up and trainers, and all that sort of thing, do you think it would be better, in the interests of racing, that the tribunal, instead of punishing these boys on mere suspicion, should wait until they have a clear case established and then disqualify the offender for life? No, I would be strongly opposed to that.

P. O'Mara. 2875. Then do you think a man would become honest after twelve months' disqualification? No; I do not say that, but the whole thing is very peculiar. The evidence you get at these inquiries is not taken on oath, and you cannot rely on it. People will tell you all sorts of things, but you cannot believe it, and you have to go on what you see. There may, however, be some points on which you would call evidence in order to satisfy your own mind, but in the main the whole thing is done on the strength of your own eyesight.

22 Nov., 1900.

2876. Presuming that a boy "pulls" a horse, you give him twelve months' disqualification;—do you not think he will do it again? Certainly he will.

2877. Do you think it is a proper thing to put him back, and give him the opportunity to do the same thing again? They all do it.

2878. Yes; but although pickpockets are allowed to be at large because they cannot be detected, that is no reason why you should encourage pickpockets? According to your argument, then, whenever you catch a pickpocket you should put him in gaol for life.

2879. No, because he has the police to look after him? Well, so far as the boys are concerned, we keep an extra glance on him another time. It does not follow that because a man has once offended he will always do it; but, on the other hand, all the sentences in the world would not prevent him from doing it if an opportunity occurred.

2880. Do you not think it would have a very wholesome effect on sport if you were to disqualify for life when you have a case which is fully established against a man? No; I think a life sentence is a terrible thing to impose on any one. The best of us may make mistakes, and a jockey-boy is in a very false position. Half the time they have to do what they are told. It is not his fault if a boy does what he is told. The possibilities are that he will never get a ride again, and he has got to do wrong, to a certain extent, if he should be so instructed.

2881. Is it a fact that the Australian Jockey Club insist upon bookmakers paying them a fee before they allow them to bet on any other course? Yes; bookmakers must pay a fee for registration for different parts of the course.

2882. Do you think it is arbitrary or unfair that the Australian Jockey Club should have the right to fix the minimum amount of prize-money to be given by those clubs in the metropolitan area? I think there should be a minimum fixed, because if a minimum were not fixed by the Australian Jockey Club, there is no saying what the minimum prize-money would be. There must be a minimum fixed by somebody.

2883. *Chairman.*] Is there anything further you can suggest that would improve this Bill? There is one thing in connection with it. According to this Bill—of course, I am representing the Kensington Racing Club—pony-racing is entirely cut out, and is not recognised in any way.

2884. Do you think it should be recognised? I do. No matter how a man may breed horses, he cannot breed them all big. The best breeder in the world must have a number of small horses, and at the present time we are running representatives of every stallion in New South Wales, either imported or otherwise.

2885. *Mr. Taylor.*] But you think that pony-racing should be limited to one day per week? I think one day per week is sufficient. Pony-racing, properly conducted, is just as good as horse-racing. I have seen ponies, that would be utterly valueless otherwise, bring 150 or 200 guineas. They have been purchased to send to India; but if it had not been for their value for racing purposes, they would not have been worth £5. Polo ponies are especially valuable, and I have frequently seen £70 or £80 paid for a good polo pony up to about 14.1 hands—that is, if he is a good class of pony of good breeding.

2886. Do you think the Australian Jockey Club partakes too much of the nature of a family party? Far too much.

2887. And you think, therefore, that a constitution somewhat on the lines provided by this Bill, and more representative, would be better than the present constitution of the Australian Jockey Club committee? I think it would be a far better constitution. If the Australian Jockey Club were to do away with the proxy voting, it would make a wonderful change in their committee; that I am convinced of. I know there are plenty of men, members of the Australian Jockey Club, who would put themselves up as members of the committee; but they will not come forward, because they know they will not have any chance of becoming elected under the system of proxies. The system of proxies operates most unfairly, especially when you see a man with 150 proxies in his hand. When they are put in the box, what sort of a chance has an outsider?

WEDNESDAY, 28 NOVEMBER, 1900.

Present:—

MR. GILLIES,
MR. ARCHER,

MR. FITZPATRICK,
MR. TAYLOR.

D. WATKINS, ESQ., IN THE CHAIR.

Charles Septimus Guest sworn and examined:—

C. S. Guest. 2888. *Chairman.*] What club are you secretary for? The Hawkesbury Racing Club.

2889. I understand you have had considerable experience in racing matters? Yes; I have had a good number of years' experience; something like five or six and twenty years' experience.

28 Nov., 1900.

2890. Chiefly in that district? In that district only.

2891. I suppose you have had some experience in connection with the metropolitan district too? No; I have had nothing to do with them, other than managing a few little meetings of our own in Sydney.

2892. You have, of course, while managing the affairs of your club in the district, been under the direct supervision, as it were, or control, of the Australian Jockey Club? Yes; that is for the last ten or eleven years.

2893. They have assumed, as it were, the control of racing matters in New South Wales during that time? Yes, sir.

2894. Can you say, so far as country clubs are concerned, that the management or the methods adopted by the Australian Jockey Club have proved altogether satisfactory? I may state, Mr. Chairman, that when

when I received your summons to attend this meeting, I consulted with five members of my committee. I prepared certain evidence, and asked them as to the advisability of giving that evidence to-day. The five members of my committee initialled the paper which I produced to them, and directed me to give that evidence, and in order to make it clear to this Committee, I have reproduced that evidence in a fairly creditable form; and if it is not objectionable, I prefer to give it to you in writing. It is of a different character from any evidence which you have had yet.

C. S. Guest.
28 Nov., 1900.

2895. Would you mind reading that statement to the Committee in the form of evidence? Yes; I will read it. I have noticed some evidence in the papers, which is incorrect, and I thought I would give you this in the proper form. I may state, as I have already done, that my committee initialled this in its crude form, and I have reproduced it that it might be more acceptable to you. The witness here read the following statement:—"My committee have, for the last nine or ten years, been very much dissatisfied with the treatment meted out to the Hawkesbury Race Club by the committee of the Australian Jockey Club, more especially in regard to the allotment of dates for racing. Repeated written applications for suitable dates have been ignored, and a personal request to a leading member of the Australian Jockey Club Committee received the reply, "I do not think the Hawkesbury Race Club deserves any consideration, as the committee have allowed it to sink to the level of the proprietary clubs in the matter of poor prizes." This gentleman quite overlooked the fact that he and his committee were and still are mainly responsible for this by their actions in allotting unsuitable and isolated dates for Hawkesbury Race Club racing. Some years back the Hawkesbury Race Club gave prizes ranging from £100 to £750—all the best horses of the Colonies competed. So popular did the old club become that determined and persistent efforts were made to induce the committee to race after the Australian Jockey Club; but whilst Mr. Andrew Town remained a member of the Hawkesbury Racing Club Committee these attempts were fruitless. Almost immediately after his retirement the Australian Jockey Club, in a most tyrannical manner, ordered the Hawkesbury Race Club to race after their meetings. Protests were ignored, and the club lost £735 over the year's proceedings. In 1891 my committee reported:—"Your committee regret to report that the Australian Jockey Club Committee, without in any way consulting the wishes of your committee, or considering the interests of the club, have taken from them for 1891 the dates on which they have raced for many years, and have allotted the club dates after the Australian Jockey Club meetings. Your committee, being fully alive to this high-handed and harsh proceeding, appointed a deputation to wait upon the Australian Jockey Club Committee, to urge them to allot them their old dates, which are unallotted for 1891. They were unsuccessful in their efforts to obtain the club's undoubted rights, among other things, being informed 'that no club had any right to any special days or dates, yet they make no alteration to their own fixtures, and evidently forget the fact that the Hawkesbury Race Club Committee some years back freely surrendered to the Australian Jockey Club their right to the best holiday in the year, viz., Boxing Day. The deputation was also informed 'that by the Hawkesbury Race Club racing before the Australian Jockey Club much injury was, and would be, done to the latter; but by the Australian Jockey Club racing before the Hawkesbury Race Club the latter would not be injured, and in all probability would be greatly benefited.' These *unselfish* arguments your committee commend to your careful perusal and study." This brought forth the following remarks from the *New Zealand Referee*:—"Some of the metropolitan clubs of New Zealand have often been accused of exercising the authority conferred upon them in a too high-handed manner; but none of them have been, or could be, found guilty of such tyranny like that recently displayed by the Australian Jockey Club towards the Hawkesbury Race Club." In its issue of the 25th February, 1896, *The Town and Country Journal* says: " * * * such, however, is the case, and the blame can attach to no one but the committee of the Australian Jockey Club, who have for years past appeared to do all they can to knock out our old-established country race meetings." In 1897 the Hawkesbury Race Club Committee reported: "Yet it is a matter for regret that in consequence of the action of the Australian Jockey Club in most unjustly and wrongfully allotting the Hawkesbury Race Club unsuitable dates for racing on the year's racing resolved itself into three days only, your committee deeming it better, in the interests of the club, not to race on one of the days allotted." Again, in 1898, they reported: "The year now ended is remarkable by reason of the fact that for the first time your committee were compelled to race on two days only, the dates allotted by the Australian Jockey Club, despite the claim made for at least fair treatment, being so unsuitable that two out of the four allotted were not utilised." The Club has been allotted a day in July, 1891, which must, unless the day be exceptionally fine, result in a loss; yet by using the Rosehill course the meeting would probably be a financial success, yet to race there means the approval of the Australian Jockey Club committee. They have stated they will not entertain any such application in future. At Kurrajong is a really good course, and most enjoyable meetings are held there at least twice yearly. The country folk attend in hundreds. Mr. Henry Pateson acts as judge. The committee are highly respectable men, and until recently four members of the Hawkesbury Race Club committee sat on the Kurrajong Picnic Race Club Committee. In consequence of a certain circular three of the four resigned; the fourth continued to act as chairman. I reported this matter, by direction of my committee, and asked if this gentleman, Mr. H. Skuthorp, J.P., was wrong in so acting. I was asked by the secretary of the Australian Jockey Club for certain information, and supplied same at once. I was then informed that certain rules had been violated, and "that a repetition of the offence would lead to the cancellation of the registration of the Hawkesbury Race Club." My committee were highly indignant, and wrote strongly on the subject, complaining of discourtesy on the part of the Australian Jockey Club Committee. To this the secretary of the Australian Jockey Club replied that he had worded his letter in accordance with instructions. Personally, I do strongly object to the unwarrantable interference by the Australian Jockey Club in country race meetings, run purely for sport, and managed by respectable men. The fact of four members of my committee acting on the committee of a club such as I have mentioned surely should be evidence of its respectability; yet down comes the heavy hand of the Australian Jockey Club, retirement is ordered, and the cancellation of the registration of the Hawkesbury Race Club—a club dating back fifty years—is threatened. Is this purifying the turf? Surely it tends to the opposite. Again, why should not these small country meetings be held at the pleasure of the local people and without restraint of any kind? Beyond the foregoing I have nothing to say against the Australian Jockey Club Committee. They are gentlemen who give a large amount of time to their work, and certainly understand it better than any committee I have met. To the chairman, my committee are especially indebted for his work in connection with the Hawkesbury Racecourse Act. I do, however, think that the

usurped

C. S. Guest. usurped authority they now exercise in such a high-handed manner should not be allowed to continue; that a racing tribunal should be appointed, consisting of representatives from all clubs over whom such tribunal shall have authority; such representatives not to exceed eleven, three to form a quorum; the expenses of such tribunal to be borne by all clubs registered, at the rate of from 2 guineas to £21 each per annum, according to the position of the club, and by fees provided for under the Act. I do not approve of any appeal from such tribunal. It would lead to needless trouble, and would tend to weaken the moral effect that the knowledge that an all-powerful jury is prepared to act promptly, and with firmness, must have on all wrong-doers. My committee, and self, are ardent advocates for the totalisator. It cannot fail to increase the value of stakes run for, and at the same time reduce the evil effects of betting. By the latter I mean that with the machine no one can wager more than the amount of cash he has with him, consequently will not incur the so-called debt of honor.

28 Nov., 1900.

2896. That, however, is a summary of what is really the opinion of your committee? Yes; they initialled the whole of it.

2897. In relation to the management as carried on by the Australian Jockey Club? Yes, as carried on by the Australian Jockey Club.

2898. You have said something about a circular which was issued to a couple of gentlemen who occupied positions in connection with the Kurrajong Picnic Club? That circular was issued to me as secretary of the club, and as such I informed the members of my committee of the contents.

2899. Do you recollect its contents? The contents were something to this effect: That members of committees could not act in a similar capacity upon other committees of unregistered clubs.

2900. Was there any threat conveyed in the circular, or was there any threat of punishment, in any way, conveyed in the circular? The punishment would mean cancellation of the registration of the club. That was not stated clearly; but the rule is laid down that they must not act on other committees. On my representing this fact to them, that one of my committee retained his position, then came the threat that the cancellation of the registration would follow for a repetition of the offence.

2901. I suppose you have intermingled with many members of country committees? Yes.

2902. Is that, in your opinion, the opinion which is held by other clubs of the management of the Australian Jockey Club; I mean the opinion that you have practically given this morning;—is that shared by members of other committees? I think it is, very generally. I am very much surprised that some of the evidence which has been given before you is so much opposed to what the gentlemen who gave the evidence have told me privately—that is to say, in regard to the dissatisfaction with the treatment accorded them by the Australian Jockey Club.

2903. You have been surprised at their statements made before this Committee? They have modified their views very much.

2904. It seems as though there were some influence which prevents them from stating here what they had stated outside? I say without hesitation that they are half afraid to give it, thinking it might interfere with them hereafter.

2905. In relation to the management of the Australian Jockey Club—seeing that you are of opinion that it has not acted in the interests of racing—are you of opinion the methods adopted by them have brought down racing throughout the country? I cannot say that, sir. I think it has a contrary tendency. The only objection we have is to the unwarrantable interference with other clubs. They have such hard-and-fast rules that you cannot escape them in any way or shape.

2906. I do not think you have grasped what I mean;—are the country meetings now so good, from a racing standpoint, as they were before the Australian Jockey Club took the management? I misunderstood you, sir. No; they are not so good. They have gone down wonderfully. As an instance, I might say, that at one time we gave £2,800 to £3,000 to be run for in two days, but now it is as much as we can do to give £300 for one day. The Australian Jockey Club only allow us to run one day now. That is where we are being crippled.

2907. You cannot have two days successively without their permission? They allot certain days which we cannot avoid, and we must race on those days. We have been quietly informed that we cannot even give them up—that we must race on those days.

2908. Other clubs throughout the Colony have felt the effect in the same way of this management? I can only take that from report.

2909. From what you have heard? Yes; from what I have heard—that they suffer equally so. I do know that at Mudgee, Bathurst, and towns like those, they used to have first-class meetings. Now their meetings are insignificant. They are hardly equal to the little Kurrajong picnic meeting.

2910. Is it a fact that a club called the Sydney Turf Club has been allotted some of the best days of the year? It is a fact, sir.

2911. Days that would satisfy your club, or any other country club? Oh, yes. We look upon them as almost the pick of the season.

2912. Days that are occupied by that club? Yes; they are undeniably good.

2913. Do you think it is to the advantage of racing that a club like that should monopolise the best days of the year as against the country clubs? The only objection I have is, it is in the metropolitan area. Otherwise I would have no objection, because I look upon the Sydney Turf Club as a purely sporting club. It consists of something like ten or twelve members only. I know several of them—Mr. Bettington, Mr. Rouse, Mr. Frank Weston, Mr. McNamara, and Mr. Richards. They are on the Committee. I understand it is purely a sporting club.

2914. Do you know anything about its position in connection with the Australian Jockey Club? Not other than that they pay Mr. Clibborn £200 a year as secretary. I received that information last night from a member of the club—that they pay him £200 a year for managing it for them.

2915. Do you know what they pay the Australian Jockey Club for the use of Randwick? He told me £600 a day. That is what this gentleman told me the night before last.

2916. Are you sure his information is correct? I have no reason to doubt it—none whatever.

2917. And they race four days in the year, do they not? Four days in the year. He told me they have now to their credit something over £2,000.

2918. Of course that is hearsay evidence;—is he a member of the club? He is one of the few members who manage it. There are something like ten altogether.

2919. You do not know anything about that yourself? No, that is simply what this gentleman told me.

2920. I suppose you are aware of your own knowledge that they do give a large sum of money for the use of Randwick? Not of my own knowledge. C. S. Guest.
23 Nov., 1900.
2921. Assuming they give £2,400 or £2,500 per year for the use of Randwick, does not the Australian Jockey Club then have a special interest in this club, inasmuch as they get such a large sum of money for the use of their course? Of course that is a direct interest—an income like that.
2922. They, as you say, do an injury to the country clubs, or to clubs within a certain radius of Sydney, more particularly by allotting to themselves and to this other club the best days of the year for racing? Yes, no doubt; and from every week racing—from so much racing.
2923. And you think that if a Board, such as you suggest, were established to control racing, where the country clubs would all have a voice in the representation, such a state of things as that would not exist? It could not exist.
2924. Could not exist? It could not exist; because they would take good care that the country clubs were looked after better than they are now.
2925. Better than they are now? Yes.
2926. I understand that should you take action for malpractice against anybody it must be confirmed by the Australian Jockey Club before it has effect? Yes.
2927. It having been confirmed, do you think it right that the club which first interfered in the matter, or the Australian Jockey Club, should have the power to reduce a sentence for instance, or to alter it in any way afterwards? I think those who inflicted the sentence only should have the right to do so.
2928. Supposing your club had inflicted a sentence upon a boy, or a trainer, or an owner, and after what they thought was a reasonable time had elapsed, or if any other evidence came up, do you think your club in that case ought to have the right to alter that sentence? Certainly, sir. I think it is an undeniable right.
2929. But you cannot do that at present? We cannot do it at present; at the same time I think that if the Committee were to recommend it, it would in all probability be carried out by the Australian Jockey Club, but they cannot do without the approval of the A.J.C.
2930. Are you aware that there have been country clubs which have recommended the course which I have mentioned now, and that it has been refused to be adopted by the Australian Jockey Club? From hearsay only. I cannot say personally.
2931. You have not had any cases of your own? No.
2932. I suppose you have often been at Randwick? Yes.
2933. Dealing with that question of opening the Flat at Randwick, do you think that to do so would tend to popularise racing more so at least than it is at present popularised? I fail to see it. I cannot see why it should.
2934. Seeing that it is a piece of Government property, and that these people have it at a peppercorn rent—they have their saddling paddocks, and all their appurtenances, for which they charge—do you not think it is a fair thing that the public should have the centre of the paddock there, like they do at Flemington? That is a matter to which I have not given much consideration. It does not affect the Hawkesbury Racing Club very much, and, therefore, I have not given it very much consideration.
2935. Dealing then with the question of pony-racing, as it has grown in Sydney, are you of opinion that we have far too much pony-racing? Yes, without doubt.
2936. Do you favour pony-racing at all? Yes; I am a believer in it, if it is managed as it is at Kensington. I have not been to any other pony-meetings but those at Kensington. There they are splendidly managed.
2937. Do you think that the controlling body—of course, it has been the Australian Jockey Club in the past—should have taken this pony-racing under their own management, and seen that it was regulated properly? It would have been very much better for all concerned had they done so.
2938. And it would have saved this every-day and every-night racing that is going on now? Undeniably it would have done so. It is a great mistake that they did not do so. I think they regret not having done it.
2939. Had they taken charge of it, and regulated it properly, would it have had a good moral effect on the community? I think so.
2940. Do you think that in a central body like that which you suggest, it would be a fair thing if the Government were to appoint one representative upon that Board or committee? I do.
2941. You think that would be a good thing? I do, certainly.
2942. I think you have said that you do not believe in any appeal from that body if so established? I do not.
2943. Failing a body such as you have forecasted being established, do you think there should be any appeal from the present management of the Australian Jockey Club? I do not. I think the Australian Jockey Club would give those matters full consideration. I have stated in writing my reason for that.
2944. You believe, then, in the system of stipendiary stewards? That is the alternative to this judicial body or tribunal which has been suggested.
2945. Well, in connection with any body, do you believe in a system of stipendiary stewards to watch the racing, such stewards not to sit upon the committee in judgment; but simply to give evidence, and to act, as it were, as prosecutors? It is a system which could be carried out very well, Mr. Chairman; but I have my doubts about it being carried out properly, for the simple reason that it is very difficult to get hold of stewards who thoroughly understand the game, and who can tell when a horse is being "pulled" or is being properly ridden.
2946. How do they tell under the present arrangements? There is a good deal of guesswork.
2947. Under the present arrangements? Under the present arrangements; I have seen it myself repeatedly. I have heard the cry passed along that a horse was being "pulled" when I felt perfectly satisfied, from my own experience, that the horse was doing his best.
2948. The present arrangement, then, for a boy who is doing the correct thing is very unsatisfactory? Very unsatisfactory.
2949. Very unsatisfactory? It is.
2950. This stipendiary stewards system would be an improvement on the present system? Yes, because the gentlemen who would be told off would be specially chosen for the work, and would make that their special

- C. S. Guest. special study; consequently, we would expect better judgment to be exercised by them than by the others.
- 28 Nov., 1900. 2951. Under the present system does not this obtain—that the people that are prosecutors are also judges;—the committee having taken upon themselves to watch the racing they lay a charge against an owner, a trainer, or a boy, and then they sit in judgment upon that same case, and do not they occupy the position of prosecutors and judges at the same time? I have seen that.
2952. You have seen that? Yes.
2953. It cannot be obviated under the present system? Not well.
2954. In relation to malpractices as decided before the Australian Jockey Club, has there been to your knowledge any dissatisfaction with their judgment;—I do not mean to say intentional judgment, or anything of the sort, but as the outcome of the present system? In connection with my own club I have not heard of any. Of course when a sentence has been pronounced you are simply pestered with applications from all quarters to reduce that sentence. You would be simply surprised if you knew the leading gentlemen who write to the committee trying to get them to reduce the sentence inflicted on a jockey, for instance.
2955. Under the present system, taking jockeys as against trainers and owners, are not boys liable to be made scapegoats for unscrupulous trainers and owners? Yes.
2956. You think they are? Yes, I do.
2957. And it is possible that many boys have been punished, though innocent, when the real guilt has lain at the door of the owner or trainer? They have been simply punished for doing what they have been ordered to do. That is literally the case.
2958. Do you think that in the case of a boy acting thus, he should be punished as severely as those who gave the instructions? The difficulty is to find out who gave the instructions. If the committee knew he had received such orders, the principal would be punished, and the boy, in all probability, would get off with a very light sentence; but there is the difficulty of sheeting it home.
2959. There have been two or three cases put in here of decisions given by the Australian Jockey Club in connection with boys, owners, and trainers;—have you heard or read anything about them, or can you give any opinion about them. There was the “Elastic” case, the “Mora” case, and another case the name of which I cannot remember? Those are cases I am not conversant with.
2960. *Mr. Gillies.*] Mr. Guest, do you believe that the fact of the Australian Jockey Club depriving you of the days upon which you formerly raced, will be the means of deteriorating the value of your club, as a racing club? Undeniably.
2961. Have you ever protested against the Australian Jockey Club having deprived you of your chief days in former years? Repeatedly.
2962. What club is it that has the days now which the Hawkesbury Club used to have? The proprietary clubs have them.
2963. Is that the Sydney Turf Club? No. That is supposed to be a sporting club. It is purely a sporting club. The proprietary clubs are Moorfield, Warwick Farm, Rosehill, and Canterbury. We had two Saturdays previous to the Australian Jockey Club Spring and Autumn meetings. We had those for years, and on those days we could always make a success of our meetings. The Australian Jockey Club first compelled us to race after them when we lost £735 over the year, and then there was such a storm of indignation raised that they gave us back one of those Saturdays, compelling us to race on a Thursday and a Saturday. We found we could not race on the Thursday, so we were restricted to one day per meeting in—1898, I think, it was.
2964. If it has been stated in evidence by Mr. Dangar that your club has not protested against being deprived of the days you formerly had, would that be correct? Certainly not. It is absolutely incorrect. Mr. Dangar has made a mistake there.
2965. You are in favour of the control of racing being placed in the hands of representatives of the various districts of the Colony? Certainly; so that they can have a voice in the matter.
2966. Has the Australian Jockey Club threatened to withdraw the registration of the Hawkesbury Racing Club if any of the members continue to act on the committee of the Kurrajong picnic races? We have it in writing from them where they say that the repetition of the offence will lead to the cancellation of the registration of the Hawkesbury Race Club. There were, I think, at least six magistrates on that committee. I simply mention this to show that it was really a respectable little club.
2967. Mr. Skuthorp, Justice of the Peace, was chairman of it? Yes. He was a member of the committee and chairman.
2968. And there were six magistrates on the committee? There were five or six magistrates on the committee.
2969. Consequently it should be one of the best regulated clubs in the Colony? It was. It was really a well-conducted little club. Mr. Henry Pateson, manager of the Fresh Food and Ice Company, was judge.
2970. Do you consider that if the Australian Jockey Club continue in the future as they have in the past, with regard to the Hawkesbury Racing Club and other country clubs, it must militate against the success of racing in country towns? I have no hesitation at all in saying that it has done so, and will continue to do so.
2971. Have you read the Racing Association Bill? Yes, sir, I have.
2972. Do you approve generally of its principles? Yes, sir, generally I do. The only objection I have is to the great number of representatives proposed under it. There are too many representatives.
2973. Would you be able to give some suggestions, we will say, to the gentleman in charge of that Bill as to how the Bill could be amended in the interests of racing generally? That is the only fault that I think I have noticed so far—the great number of representatives proposed under it. They are too numerous. I have heard it said that you could not get the country members to attend. It does not follow that country clubs need appoint country representatives. They can appoint Sydney representatives to look after their interests. All they want to do is to have someone to look after their interests.
2974. To have representation? To have representation.
2975. Do you favour the totalisator? Thoroughly. I have never yet heard a racing manager object to it. From first to last, they all appear to be in favour of it.

2976. Do you approve of pony-racing? I do, sir, if managed as it is managed at Kensington; that is without saying anything against the other pony-racing clubs. I know nothing about them; but I know Kensington. C. S. Guest.
28 Nov., 1900.

2977. Do you think properly managed pony-racing would be conducive to the breeding of horse stock generally? I would hardly like to give a decided opinion upon that.

2978. Do you think a certain sort of ponies is as useful for general purposes as the real racehorse? They are infinitely better. I will give you an instance. I have a 13 hands 2 inch pony that will do a trip against any 15 hands 2 inch or 16 hands horse you can find.

2979. That is my experience, too? I have ridden her 55 miles, carrying 14 stone, over mountainous country, and had her bogged three times, and she came home almost pulling my arms out.

2980. You are aware that the demand for what we call galloways in South Africa and China has been something great lately? Yes, and really, for ordinary purposes—that is, for buggy purposes—it is the most useful horse you can breed. That is my experience; and I have had a long experience of horses.

2981. Well managed pony-racing, you think, will be conducive to the good breeding, or better breeding, of ponies? Yes; taking it in the way you have put it.

2982. *Mr. Taylor.*] Mr. Guest, in the first place, you say you have read the Bill;—do you think a change in the management and control of racing is necessary in the way indicated? I do certainly think so.

2983. As regards pony-racing, while you have that in your mind, do you think that if pony-racing is to be permitted at all it should be reduced to one day a week? That is ample for all purposes.

2984. You think it should be imperative that that should be carried out? It certainly should be reduced.

2985. Do you think that the same management should take control of both horses and ponies? I do. It stands to reason. It is necessary in case of disqualification. For instance, men who are not allowed to ride at Kensington are allowed by the Australian Jockey Club to ride at Rosehill. Under that Bill they could not do that.

2986. If a former witness here—connected with the Australian Jockey Club, for instance—had said they have met every reasonable request of the clubs in the metropolitan area, would that be correct? No, sir, it would not be.

2987. They have not met the reasonable requests of the various clubs? Very far from it, so far as the Hawkesbury Race Club is concerned.

2988. To what do you attribute your present unfortunate position;—is it to pony-racing or to the arbitrary power of the committee? Primarily to the excessive amount of racing.

2989. *Mr. Gillies.*] In Sydney? In Sydney. It simply crushes out country sport.

2990. *Mr. Taylor.*] And secondly? To the unsuitable dates allotted by the Australian Jockey Club. They not only give the extra racing in Sydney, but they allot us unsuitable days.

2991. Are these dates drawn by lottery, or are they the arbitrary gift of the Australian Jockey Club? Personally, I think it is done by the secretary of the Australian Jockey Club.

2992. Mr. Clibborn? Yes, that is my opinion. They are prepared by him and adopted by the committee.

2993. Your opinion is that the committee have merely to attend at the office to register what he has laid out? Yes, that is my opinion.

2994. Is that the general opinion of racing men? Yes; in my district it is.

2995. But down here? Yes; they express a similar opinion in the city.

2996. I understand you are favourable to some of the committee, or, rather, to some stipendiary stewards, superintending what may be termed the running of the various horses—paid stewards I mean? As I have stated to your Chairman, I think these gentlemen, who would be specially selected, who would be told off for that special duty, would naturally be expected to give a better decision than those who would not be.

2997. Do you think there would be any difficulty in finding three good men for these positions? I do not.

2998. You do not think there would be? No.

2999. The reason I asked you that question is because it has been denied here that three good men could be found in the Colony for that purpose;—you have no doubt that there could be three good men found for that purpose? I am perfectly satisfied on that point.

3000. Do you think the present committee, who belong to two special clubs here—the Australian Club and the Union Club—partake too much of a family party to give that general satisfaction which they otherwise would give? I would hardly like to express an opinion on that.

3001. But presuming they are really good men, the very fact of their partaking of the nature of that family party would discount their influence in the eyes of the country? It might have that tendency, sir. Without doubt, they are a lot of gentlemen; they are a splendid lot of fellows.

3002. But you think it would have that tendency—the fact of their being drawn from the two special clubs of the Colony? It causes suspicion to arise.

3003. It causes suspicion—no doubt about it? Probably.

3004. Do you think, in the face of that suspicion, considering the large number of trainers and jockeys there are, that those trainers or jockeys should have one representative on any committee of management or board of control, or whatever may be instituted by this Bill? I do. Until you asked me that question I did not give it any consideration, but I certainly think they should have a representative on it to look after their interests.

3005. Do you think, if there was one special prize set apart each year in the metropolitan area of £5,000—say a Sydney Cup—for a steeplechase, and all weight-for-age races were raised to £500, that that would have a tendency to centralise the best horse-racing in this Colony rather than in Victoria? There is no doubt it would have an excellent effect, but I fail to see how any club could carry it out, the prizes being so very high. I doubt even whether the Australian Jockey Club could do it.

3006. Suppose that the Australian Jockey Club had £60,000 to their credit, do you think it would be an experiment worth trying? Certainly—undeniably.

3007. Do you not think, as far as you can see of it, that it would have a tendency to centralise the best racing in this Colony? It would tend to raise the status of our principal club here, which is the Australian Jockey Club, as against the Victorian Club, which is now pre-eminent.

3008. Would not that have a tendency to bring the best class of horses to where the biggest prize was? Yes, I think so.

3009. That is what I mean by that question? Yes, it would.

3010.

- C. S. Guest. 3010. Are you in favour of the totalisator? Thoroughly.
- 28 Nov., 1900. 3011. Do you think it would have a tendency to purify racing and to increase stakes too? It would undoubtedly increase stakes. It would do away with the "nod" betting. No man would put on more money than he actually had with him if we had the totalisator, and I think the effect would be really good. A man would not incur a liability which he could not possibly liquidate.
3012. It would have a wholesome effect all round? Yes; it would have a wholesome effect all round.
3013. And would tend to purify racing? One of the greatest curses with which we have to contend at the present time is shop-betting.
3014. And the bookmaker? The shop-betting is worse than that.
3015. *Chairman.*] Do you believe that the shops known as betting-shops in this city have a deleterious effect upon the race clubs? They are most injurious.
3016. Most injurious? Most injurious.
3017. You think the Government should take strong action to see that they are totally obliterated? They should be stopped. I do not know whether you have ever seen—but I have—the continued stream of men going in and coming out of the betting shops here.
3018. And in those cases the people, admitting that betting may be right enough on a course or on a horse-race, do not always get a run for their money? That is very commonly spoken of now—that it is being carried out on a very extensive scale; that certain horses are nominated for these shops, and are very well spoken of, and the unfortunate little fellows here go in and put their money on a "dead one."
3019. They are induced, practically, to back it by circulated reports? Yes.
3020. With regard to the Jockey-boys' Accident Fund, that money all goes to the Australian Jockey Club, does it not? Yes.
3021. It is subscribed by the boys, through fines and other means, is it not? Yes.
3022. Do you think that the present system of giving portions of that money to boys who may be injured is satisfactory? It is not satisfactory at all.
3023. What is your experience in connection with that fund? That the Australian Jockey Club is not liberal enough with it.
3024. That it is not liberal enough with it? Yes.
3025. Do you know how they use the money that is so accumulated? I have heard that it is invested as a fixed deposit bearing interest, they, of course, keeping a certain amount of it at current account for calls.
3026. Have you heard that they themselves have borrowed some £5,000 of it at 2½ per cent.? No.
3027. You have not heard that? No.
3028. You do not know that of your own knowledge? No.
3029. Do you think that a fund could be established to provide for injured jockeys, which would provide a weekly allowance for those who might be injured? Yes, I think so.
3030. And a sum in case of a fatal accident? I think so. I think that could be very readily done. The Australian Jockey Club have this amount—it is in their hands—and they could do it straight away. Before the advent of the starting-machine the fines were very numerous and heavy. We have had nearly £100 on one race. That all went into this Jockey Fund. We had to send that down here. That is how the fund accumulated.
3031. What amount would you be likely to get for a lad who made application, and who might have been injured on your course? I should hardly like to say the limit; but as low as £5.
3032. What is the highest you recollect? I could hardly say. I think I have heard of £50 being given. I am not certain upon that point.
3033. You do not know of any case yourself? No.
3034. In the case where £5 would be given, what would be the length of time that the boy would be injured on an average;—we will say any boy who might be injured, and who would get £5? He probably would be thrown out of employment for two or three or four weeks.
3035. And he would get £5? And he would get £5, or in a special case a larger sum.
3036. It might be longer? Yes.
3037. Assuming that the source of revenue due to fines is diminished, do you think the clubs of the Colony, and other people engaged in racing, would assist a fund like that if properly administered? I cannot speak of the others; but I think my club would be only too glad to assist it.
3038. Provided it was on a proper basis? Provided it was on a proper basis, I think they would be only too pleased to do so.
3039. Provided the injured people got a weekly allowance, and that a certain sum went to the relatives at their death? I think they would be very glad to do it.
3040. *Mr. J. C. L. Fitzpatrick.*] Your Hawkesbury club conducts races for sport purely? Absolutely. There is no one except the paid officials—that is, myself and the caretaker—who get any benefit from it at all.
3041. No fees of any description are paid to any of the other officers? None whatever; even the judge is honorary. Of course, we pay Mr. Watson, who comes from Sydney to start for us. We pay him a fee. He would be a cheap man if we paid him double the amount.
3042. How long is it since you remarked a large falling off in regard to the general revenue—that would be from entries, nominations, and also from fees paid by the patronising public? From about the time when the Australian Jockey Club compelled us to race after them. That was in 1891; about that time. We lost about £735 that year.
3043. Of course, your committee, within your own knowledge, from being at the meetings, made frequent protests in committee meetings against the action of the Australian Jockey Club? Repeatedly, sir. It was spoken of very many times.
3044. And you, in your capacity of secretary, submitted these representations on behalf of the committee to the Australian Jockey Club? We went down and formed a deputation, and we received the rebuff which I have given in writing. We applied afterwards for an interview on another occasion, and we were told there was no occasion for it. They would not even receive the deputation.
3045. *Chairman.*] They refused to see the deputation? They refused to see the deputation.
3046. From your club? From my club. Mr. Ridge, J.P., was a member of my committee for some time, and he was compelled to resign because he accepted the position of judge at Kensington. He had to resign his position on the Hawkesbury Club committee. 3047.

3047. *Mr. J. C. L. Fitzpatrick.*] Twenty years ago you had two meetings a year of two days each? Yes; C. S. Guest, before the Australian Jockey Club Spring and Autumn Meetings.
3048. What was about the proportion of difference between the attendance then and the attendance at the present time? Something about three to one. It was then about 200 per cent. better than it now is. The fact of giving those large prizes, and making money over the meeting, is sufficient evidence of what it was at that time.
3049. In those days there were racing stables at Windsor, Richmond, and Clarendon, in which horses were housed for months—in fact, many were permanently housed? It was nothing unusual to see fifty or sixty horses working on that course in the morning. Victorian and Queensland horses would come as long as two months before our race meeting to train there.
3050. *Mr. Taylor.*] When you had large prizes, of course? When we had large prizes.
3051. *Mr. J. C. L. Fitzpatrick.*] The horses in the district are now practically restricted to some half-dozen or twenty at the most, I suppose? I suppose about ten at the present time. We keep our training park in first-class order. That is the only means by which we can keep these eight or ten.
3052. You made some reference to the shutting up of these betting-shops;—do you not think that a Government which is so anxious to put in force a law which prevents the sale of ginger-beer to people on Sunday should be more anxious to put into force a similarly modern law, which would prevent people from being contaminated by these institutions? I should very much like to see them close these betting-shops. If they did so, racing would be better, and the people generally would be benefited. Every shilling a lot of these young fellows can get hold of goes into these betting-shops. Of course, there are some very respectable ones among them; there is no disputing that. I suppose you would not find anything much better conducted than the one run by Mr. Oxenham—that is, without mentioning others which I know of; but I think his is run on very square lines. On the other hand, however, we have some abominable places in the city.
3053. You take particular notice, as an individual, of the racing that takes place at your club—I mean you watch it very closely? Yes.
3054. During your experience there, have you noticed very many cases in which malpractice has occurred—that is, pulling, &c.? No; not very many. Of course, it is put down as malpractice if a jockey pulls his horse back, or if a horse does not attempt to run into a place. There is many a horse which can, by dint of punishment, run into a place; but there is nothing to be gained by that at all. It is nothing at all for a rider to keep him back to fourth or fifth. There is no great harm done in doing that, because he knows he cannot win; and he runs fourth or fifth to escape a penalty, because the handicapper would put him up several pounds if he ran into a place.
3055. *Chairman.*] May they not be instilled with the desire to be simply humane, and not uselessly punish their horses when they know they are beaten? It would mean probably punishing the horse to get into a place, and the horse is hurt and he is penalised for it.
3056. *Mr. Taylor.*] The jockey is hurt in the future, and the horse is hurt by the punishment? No, the horse, not the jockey.
3057. *Mr. J. C. L. Fitzpatrick.*] Again, he may be nominated for a forthcoming event, and the result of punishment uselessly inflicted upon him may debar him from winning a race in which he would have a very good prospect? It would, in all likelihood, knock a good deal out of the horse.
3058. With regard to your committee, general satisfaction has been expressed, or evinced, I believe, by the racing public with any decisions they have given with regard to matters of that kind which have been brought before them at the various meetings? The only complaint which has been levelled at my committee was as to a case of leniency. They were too lenient upon one occasion. They erred on the side of mercy.
3059. The punishment was nominal as far as the jockey was concerned? He was disqualified for twelve months. It was a very serious penalty. I think it was either six or twelve months.
3060. *Chairman.*] Do you consider twelve months a very serious punishment for a boy? You can imagine he is not even allowed to ride horses in work.
3061. For twelve months? He is not allowed to be employed at all by any trainer while under disqualification. He is not allowed to go into a saddling paddock while a race meeting is being held. He would lose all his riding fees for the time.
3062. A boy to be disqualified for three years for a first offence is very serious? It practically puts a boy of 14 out of it altogether, for the reason that when he reaches 17 he is probably too heavy, and he has lost the practice which is so necessary to perfection in riding. Take one of our leading jockeys, Mr. Chairman, for example. The disqualification of a leading jockey would probably mean a loss of £1,000 to him for twelve months at the very least—probably more. Young Fielder's penalty, for instance, must have cost him well over £1,000.
3063. Per year? Per year. It must have cost him well over it. That boy must have earned considerably over £1,000 a year by his riding.
3064. *Mr. Taylor.*] Have you had any occasion to notice that boy at all? Yes. I have seen him riding on our own course. He always seemed to ride remarkably well, and was a well-behaved boy.
3065. *Mr. J. C. L. Fitzpatrick.*] Presuming that any of your stewards noticed a case of riding which they regarded as suspicious, do you think it would be their duty, and that they would recognise it as such, to immediately bring the matter before the meeting of their body? The plan adopted is this: If any one of the committee notices anything of the kind, he reports it at once to the chairman, and asks that the boy be brought before the committee as soon as he weighs in; and the chairman instructs me to call that boy, and gives him an opportunity to produce evidence; and if it is not a serious case, they tell him what they have seen, and give him a severe reprimand.
3066. Would you regard it as a proper course to adopt for a boy to be brought up a week after an offence was alleged to have been committed, and charged with that offence? It certainly ought to be done at the time, when the case is fresh in the minds of all who have seen it, and not allow that time to elapse.
3067. *Mr. Taylor.*] Would you think it a very extraordinary thing, after a lapse of a week, for one member of the committee to actually put a question to the boy, and say, "I saw you myself pull the horse; do not deny it"? I would; it certainly should be done at the time. He had no right to leave it over; it was his duty to take action immediately. My committee always do.

- C. S. Guest. 3068. And more particularly if they were so positive? Yes; if they were so positive. The matter should be dealt with forthwith. My committee has built a special room to allow these inquiries to go on, and at the same time not interfere with the racing.
- 28 Nov., 1900. 3069. *Mr. J. C. L. Fitzpatrick.*] There might be some excuse for delay if the information on which a charge was based did not come within the knowledge of the authorities until the expiration of a week? Yes; but the case should be initiated at once.
3070. Immediately on the occurrence of it? Yes; it need not necessarily be completed then. Of course, in the city they have better opportunities of carrying out these inquiries, because the boys and trainers are all here. In the country we are compelled to go through them more quickly, because it would mean the extra expense of these boys—bringing them up to go on with the inquiry. That is another reason why we are anxious to go on with the inquiry on the day of the affair.
3071. *Chairman.*] The fact of a case being allowed to remain over until a horse ran on a subsequent occasion undoubtedly proves that it was only a case of suspicion, does it not? I think so, sir. I would look upon it as such.
3072. If you imagined you saw a boy pulling a horse, then allowed it to go over for a week, until the horse ran again, would you then think of having the jockey up, under any circumstances at all, for his riding of the previous week? Certainly not.
3073. If the Australian Jockey Club did that in the case of Mora, is that, in your opinion, against the common practice of racing committees throughout the country? Unfortunately, it is not against the practice of the Australian Jockey Club; but it is very much against our usual procedure in the country.
3074. And, in your opinion, is it a very wrong procedure to adopt with a view to endeavouring to mete out justice to all concerned? I hardly know how to answer that. Of course, they have the idea themselves that it requires a second race to show whether a horse was really pulled in the first instance.
3075. Does that rather obtain in regard to a second race at the one meeting? Not necessarily. I have seen it occur on two successive Saturdays, and on two different courses.
3076. Under the one club? No; on two different courses.
3077. But horses do run inconsistently? Yes; there is no denying that. That is a thing which most stewards will not recognise; but it is a fact, nevertheless, that a horse will run a splendid race to-day, and to-morrow run a bad one, and still be supposed to be doing his best.
3078. That makes it the more difficult? It is an exceedingly difficult thing to compare one day's racing with another day's racing. There are very few horses you come across which will race consistently almost every time you ask them.
3079. Very few horses do that? Yes, very few.
3080. That makes it more possible for any committee to err when they take up cases of that sort which are allowed to remain over? Yes; I do not hold at all with that style of doing things.
3081. You do not hold with letting the matter stand over? I do not; I have a great objection to that.
3082. However, in any case where a matter was allowed to stand over, you would never think, if you were a committeeman, of telling a boy that you deliberately saw him doing a thing? I do not think that is the proper course to pursue at all.
3083. That is not the line of cross-examination you would pursue? No; my committee would not act so.
3084. Would not a line of cross-examination such as that tend to over-awe a boy? Yes; I should fancy it would have that tendency.
3085. In cases like that, which are supposed to be so serious, would it be a fair thing for a boy of 14 to have an older person—I do not say a legal gentleman, or anything of that sort—to sit with him in a committee-room, and assist him to conduct his case? My committee invariably ask the owner, if he is present, and the trainer, if he is present, to appear with the boy. They invariably do that.
3086. The Australian Jockey Club do not do that? I do not know.
3087. Do you think it would be a better system, in cases not only of malpractice, but in cases of disputes between the central body and the country clubs, that evidence should be taken on oath under the statute law? I think it would be more conducive to honest and truthful evidence if it were so. I certainly would like to see the Press admitted to these inquiries.
3088. You think these inquiries should be open to the public? I do—that is, to the Press—not to the general public, of course.
3089. If it was stated here in evidence that there would be no end of libel cases, do you think that would be a correct statement to make? I do not think so; I do not agree with that at all.
3090. Do you think that, if the intention of a committee is to find out the truth, there need be any fear of libel cases? I fail to see where it would come in. They would simply take their evidence on oath, and there would be a properly recognised tribunal. I fail to see where libel would come in. Of course, you know what libel is.
3091. However, there would be no more danger of libel in cases of inquiries in connection with racing than there would be in the courts of the Colony? I think not, sir; I cannot see where it would come in.

Patrick John Hourigan sworn and examined:—

- P. J. Hourigan. 3092. *Chairman.*] What is your occupation? That of a solicitor in Sydney.
- 28 Nov., 1900. 3093. I understand you are a member of the Australian Jockey Club? Yes, I am, and have been so for about twenty-three years.
3094. You have followed the working of the club pretty closely, I understand? Yes. I think fairly well during that period.
3095. Of course you understand that they control, principally, the racing as conducted in New South Wales? Yes; I quite understand that.
3096. Are you of opinion that the management has been of the best, and that it gives ample satisfaction to the country clubs of the Colony? I am of opinion that, generally speaking, the Australian Jockey Club have endeavoured to do what they thought best, but at the same time a great many of their rules, especially their rules as to trainers and jockeys, have not met with satisfaction.
3097. They have not given satisfaction? No. I may say, talking on that question, that, at the general meeting of members in 1898, Mr. Adrian Knox proposed the present rule which is now in existence with respect

respect to trainers. It is rule 84, p. 57, of the Australian Jockey Club rules. It is subdivided. The part, to which I now wish to refer, is:—

(b) The Committee of the Club may refuse to grant or renew any such license (this refers to the trainer's license) without assigning any reason for such refusal, and may at any time cancel or revoke any such license before the termination of the period for which such license was granted.

At the meeting at which that rule, amongst others, was submitted, I moved an amendment, which was as follows:—

That in lieu of Mr. Knox's proposal (b) to stand as one of the new rules after rule 76, "Trainers," the following be substituted:—"The Committee of the Club, before refusing to grant or renew a license, shall give at least three days' notice in writing to the applicant of any objection made to or to be raised against his application, and shall hear the applicant and his witnesses (if any) in answer to any such objection as aforesaid. The said Committee, may at any time before the termination of the period for which such license was granted, summon any holder of a license to appear before them, and show cause why his license should not be cancelled. Provided, however, that such holder shall be entitled to three days' notice in writing of the grounds on which it is proposed to cancel such license, and also to be heard with his witnesses (if any) in answer thereto. And, upon the appearance of such holder, or in his absence after notice given as hereinbefore provided, such Committee may adjudge any such license to be cancelled absolutely."

I hand copy of that in.

3098. Have different members of the club from time to time attempted to amend the rules with a view of putting the management on a better footing? I do not know that they have. I cannot say now from memory. Comment on the fact that an amendment of the above character was put forward and rejected in favour of the rule now in existence is superfluous, I take it.

3099. That is to say, you thoroughly disagree with a tribunal of that sort having the power to brand an individual a semi-rogue without giving a reason? Yes. I say that every man in a free country should be treated as a free man, and more especially those men who have to get their living by this particular avocation—they should have the same rights and privileges as any other free citizens.

What I most strongly object to in this rule is that it leaves a door open to stab a man in the dark, because it is possible that a most spotless man—I say it is possible, I do not say it has happened—a man with a most spotless reputation might apply for a license, and some designing, wicked person might go behind his back to some member, or members, of the committee, and allege something against him which was absolutely untrue. The man might subsequently come up for his license, and be told it was refused. It is possible, under the rule, that might happen. I am now dealing with the rule. The applicant might then ask what was the reason of the refusal, and be informed that he could get no reason—that rule 84 (b) provides that no reason need be given.

3100. In a case like that, where a man has been refused a license without a reason being given, has not that the effect of branding that man in the eyes of the public as being tainted with dishonor? Of course, if it was known it would, no doubt, be calculated to have that effect, because the public would not know but what the license had been refused for some substantial reason.

3101. *Mr. Archer.*] Do not some of these poor helpless boys come under that rule too? Yes.

3102. And are not able to take care of themselves? Yes. The jockeys have to apply annually for a license.

3103. But they are liable to be swept out of existence in the same manner? I believe so. They are subject to the same thing—there might be a complaint made against a boy behind his back, and he need would not know anything about it, and all that would happen then would be that he would have his license refused.

3104. *Chairman.*] He has no chance of refuting any charge that may be laid against him? I do not see anything in the rules which makes it compulsory upon the committee to give a reason for the refusal of a jockey's license. I understand that the practice is that they have to appear annually for a renewal of their licenses.

3105. Have you heard, from your experience in connection with that club, of any complaints from country clubs, from time to time? I cannot say that I have.

3106. You are not in a position to gather information of that kind? I am not in a position to gather information about country clubs.

3107. Your experience is more directly connected with the management by that club of its own affairs? Yes. I might go to the Hawkesbury races occasionally—just take a trip up for a holiday—but so far as complaints from country clubs are concerned, I would not be likely to hear much of them.

3108. Coming back again to the methods of holding inquiries;—do you approve of the method they adopt for inquiring into malpractices, or any charges against riders? Certainly I do not. I think, in the first place, that when there is any complaint made against any person, subject to their jurisdiction, there ought to be a specific complaint in writing, and that the man, or boy, as the case may be, should have reasonable and proper notice of what he has to answer. I certainly think that. And, furthermore, that when any person is brought up in that way he should have the right, if he so desired, to have some one to help him—some capable person. We know from experience that a great many of these persons, especially young jockeys, naturally get nervous, more particularly when they know their whole existence and means of livelihood, so to speak, rests with that very body before whom they are summoned.

3109. You think they ought to be represented? I do.

3110. You do not think that any harm could result, in any way, from the fact of their being represented before that body? There is one question which might arise—that is, as to whether under the existing state of things the club would not be open to libel actions. That is a debatable question. What I would suggest is that if there is to be any legislation with a view of amending the existing state of things there should be provision made in the Bill for that purpose—that all inquiries should be open to the Press, so as to make the position of the club secure, and also to make the position of newspaper proprietors secure.

3111–12. Do you favour the passing of an Act to take over the control of racing? I have perused the Bill styled "The Racing Association Bill"; but I, myself, am not in favour of that Bill, because I am of opinion that same would be impracticable. I believe you would find great difficulty in getting gentlemen in the country districts to leave their homes, give up their time, and be almost continuously in Sydney, and, I think, for that reason a Bill of the kind proposed would be impracticable. In lieu of the scheme proposed I think that inasmuch as the Australian Jockey Club hold some 202 acres of very valuable Crown land (at an annual rent of one peppercorn), worth in round numbers about £20,000 (I put it down

P. J.
Hourigan.
28 Nov., 1900.

P. J.
Hourigan.
28 Nov., 1900.

down at work about £300 an acre) the Government, as representing the people of this Colony, should, under the circumstances, have equal representation on the Australian Jockey Club committee with the members of that club. In other words, under the existing state of things the Australian Jockey Club have ten members elected. I should favour the Government having the power to appoint ten men at their own instance, and the Government, in that case, would have an opportunity of selecting the ten best men they could find in the Colony. I think if there was a tribunal of that kind created it would meet with general public approval. And, furthermore, it is a reasonable thing that the Government should have solid representation on a committee of this kind, having regard to this large asset that the Jockey Club holds from the Government at a nominal rental. The principle of Government representation has been carried out under our Sydney Hospital Act. I think that there are some twenty odd members on the Sydney Hospital Directorate. Of that number I believe there are ten Government nominees who are appointed by the Governor and Executive Council during their pleasure, so that it is not a new principle by any means.

3113. You think that such a committee as that would give general satisfaction? I do.

3114. You would not have any Court of Appeal from them? I always like to give a man an appeal. I should also provide in the Bill (although I do not think it would be often taken advantage of), that any person dissatisfied with the decision of such a committee should have a right to appeal to a Judge of the Metropolitan District Court.

3115. In the management of racing, do you favour the idea of the committee appointing stipendiary stewards? Yes. I think it would be a wise thing if you could get two first-class men.

3116. It would be an improvement upon the present system? I think so, because there would be another advantage in appointing stipendiary stewards. If we had stipendiary stewards, instead of having things as they are now—the committee acting as prosecutors and judges at the same time—I take it that the committee would then allow the stipendiary stewards to look after matters generally, and to give evidence when they laid a complaint against any individual, and that the committee would rest on the evidence of these men. There would not be the same system carried on as there is at present. There would be no necessity for it.

3117. Has the present system given satisfaction—that is, the system which the Australian Jockey Club have for finding out malpractices? I do not think it has, because it seems contrary to the principles of natural justice that any gentlemen, no matter how honorable, should act in the dual capacity of prosecutors and judges.

3118. Could you cite any cases where the Australian Jockey Club have, in your opinion, committed, say, an error owing to that system? Well, I think, myself, there is one case that came particularly under my notice, and that is the "Mora" case. I took a great interest in that matter, in fact I prepared the petition asking the committee of the Australian Jockey Club to grant the boy a rehearing. I know pretty well the whole ins and outs of that matter, from the very inception to the finish, and my opinion about that case is that the decision which the committee of the Australian Jockey Club arrived at is a blot on their administration, and I will give my reasons. My contention is this: If they really believed that young Fielder pulled "Mora" and prevented her from winning the Christmas Handicap, run on last Boxing Day, the Australian Jockey Club committee were guilty of a gross dereliction of duty in not having the boy up immediately after the race, as by so doing they would, as the custodians of racing, not only have upheld the purity of sport, but, furthermore, have protected the public with respect to bets made on the course, and in order to satisfy this committee about my statement in that matter, I now refer to Rule 19 of Tattersall's Club Betting Rules, which provides as follows:—

In the event of a horse or jockey being disqualified on the ground that the horse was pulled and fraudulently prevented from winning, the committee may declare all bets made on the course to be off in respect of such horse, or on the race, as they may think advisable.

I repeat that if the committee thought that the boy pulled that horse they should have had him up there and then, they must have known that the settling on the races would take place next morning at Tattersall's Club, and unless that boy is guilty was brought up and dealt with then and disqualified—as he ought to have been if he pulled the horse—there would be no chance of protecting the persons who made their wagers on the course. In confirmation of that, I may refer to a case which is, I daresay, familiar to Mr. Archer as a racing man. I happened to be on the committee of Tattersall's Club at the time. The race took place at Randwick, in the year 1888. There was a mare called "The Nun," which ran in the race. The race was called The Sydney Handicap, and it was run on the 27th September, 1888. That race was run at a general meeting of the Australian Jockey Club. The settling on those races would not take place until the following Monday, the race was run on the Thursday previous, but on the following Saturday morning the committee of the Australian Jockey Club brought the owner, trainer, and the boy up with respect to the running of "The Nun," and the result was they were all disqualified. In consequence there was a special meeting called of the committee of Tattersall's Club. That meeting took place on the 1st October, 1888. Present at the meeting were the Chairman, J. B. Olliffe, W. Forrester, M. J. Macnamara, W. Gannon, J. McLaughlin, C. C. Skarratt, S. Ackmann, the Hon. J. H. Want, and P. J. Hourigan. The following resolution was carried at that meeting:—"Resolved, that the Committee of Tattersall's Club, Sydney, having a due regard to the decision arrived at by the Committee of the Australian Jockey Club, with respect to the running of the racehorse known by the name of 'The Nun,' in the Sydney Handicap, on the 27th September last, and the disqualifications consequent thereupon, and the evidence now given before us, hereby declare all bets made on 'The Nun,' on the course on the above-mentioned race, to be off in respect to such horse."

3119. Do I understand you that in this "Mora" case the public did not benefit by the disqualification? No, not in the slightest.

3120. They lost their money? Yes. I am going on to explain, if you will pardon me for a minute. I have been speaking on the assumption that the committee believed that the boy pulled the horse. I say in that case they should have dealt with the boy at once. I submit that was the course they should have adopted, for two reasons:—first, in order to maintain the purity of the sport; and, second, in order to protect the public. But inasmuch as they allowed the matter to remain over for some nine days, the reasonable inference is that the committee looked upon the case as one of suspicion.

At

P. J.
Houtrigan.
28 Nov., 1900.

At the original hearing, they heard the evidence of the trainer and owner, and subsequently, at the re-hearing, they had a mass of important evidence before them exonerating young Fielder from any dishonesty or fraud, and my opinion is that, having heard that mass of evidence, they should immediately have removed the disqualification from that boy.

3121. You were looking at it as one of the public;—you were present at the race? I was present at the race. I am not quoting my own view now of the race at all. I am dealing with the matter on the evidence which was brought forward. I am treating the case, as I am entitled to treat it, as a case of suspicion, judging from the way the committee acted.

3122. Did the general public outside look at it as a suspicious case on the first occasion? I could not say that. I am dealing with the committee's action, because I take it this way—that surely the committee of the Australian Jockey Club would naturally be cognisant of the betting rule I have referred to in connection with Tattersall's Club, and being cognisant of that rule, surely they would have brought the boy up then and there, knowing that if they did not deal with him before the settlement of wagers took place there would be no chance of protecting the public with respect to bets; and inasmuch as they did not do that, I am entitled (as well as any other rational man) to assume that the committee regarded it as a case of suspicion.

3123. *Mr. Archer.*] Only? Only, at that time.

3124. *Chairman.*] Having afterwards made an inquiry, admitting on the appearance it was a case of suspicion only, can you understand, in cross-examination, a body of men telling him plainly that four of the committee saw him pulling the mare? No; I think it is unprecedented.

3125. You, as a solicitor, would not think of cross-examining upon those lines? Not if acting in a judicial capacity. It would be right enough if a man was appearing (say) as an advocate to cross-examine a witness; but the fact of a man acting in a judicial capacity puts a different face on the matter altogether.

3126. That is even worse? Of course.

3127. And if any of the members of that committee made such a statement as that four of them saw the boy pulling the horse, what would you say? What I would say is what I have already stated: If they saw the boy pulling the horse, they should have had him up there and then, and have dealt with him; and by so doing they would have not only upheld the dignity of their position as custodians of the racing of this Colony, but also have protected the public who had bet on the race on the course.

3128. Evidently the system they adopt for inquiring into cases of that sort must render them liable to error, in your opinion? I think that kind of secret inquiries must always have an unsatisfactory effect. It stands to reason.

3129. You believe, under any Bill that may be adopted, that all inquiries must be open to the Press? I certainly believe in that, and I would make express provision for it.

3130. And that boys should have the right of representation? Yes; or anyone else who is brought up, I do not care whether they are boys or men. Of course, plenty of men may be skilled in their business, but they may not be able to understand evidence or to grapple with it.

3131. I suppose you have paid some attention to the finances of the Australian Jockey Club in a general way;—you know how your Jockeys' Fund is administered? I do. I do not know directly. I know only from what I can hear; that is all. I understand that it is dealt with in a very haphazard kind of way—that there is no real system laid down for the distribution of the fund. I think that an improvement might be made in that respect—that there should be a proper system or basis to work upon—and that boys, in case of accident or infirmity, should get a certain weekly allowance until they were able to resume their avocation.

3132. *Mr. Archer.*] Which they do not get now? I believe they do not. I understand they only get what the committee think proper. What I suggest might be done, especially now, as I learn they have got a substantial sum of about £5,000 on hand. That is a pretty good basis to start a scheme of that kind on.

3133. *Chairman.*] I suppose sportsmen generally would be only too glad to help a properly-based scheme? I do not know that they would; nevertheless I think the boys themselves could do it with the £5,000. They could have a kind of insurance, the same as you insure for anything else.

3134. Do you approve yourself of the idea that the Flat at Randwick should be thrown open to the public? I do not know that I would do that. I think if the suggestion I have made about placing the management of racing in the hands of a body such as I have indicated, comprising an equal number of Government representatives and an equal number of Australian Jockey Club representatives, were carried out, we might fairly rely on such a body to do all that was necessary in the public interests. That is my impression.

3135. Are you of opinion that these betting-shops in Sydney have a bad influence upon racing? I do not think they do any good. I think they are calculated to lead young people into betting propensities who otherwise would not have such ideas at all, especially in their early youth.

3136. Do you approve of the totalisator being run in connection with racing in this Colony? I have had no experience of it, and therefore cannot speak with any personal knowledge; but I should be inclined to give it a trial, and see what it is like. We would be better able then to form an opinion about it.

3137. Is there any other suggestion you can make to the Committee? I would suggest that the present entrance fee for admission to the Australian Jockey Club should be abolished. I do not think it is a wise thing. I recollect when that entrance fee was proposed. I was present at the meeting. I believe it was Mr. Walter Hall, if my memory serves me, who proposed that resolution, and I recollect protesting against it at the time; and other members also protested and voted against it; but it was carried by a majority. It seemed rather selfish on the part of gentlemen who had been elected members of that club, without paying any entrance fee, to compel others who wished to join the club to pay an entrance fee.

3138. *Mr. Archer.*] The outer gate? No; to join the club. I know of several cases myself in which it has had the effect of preventing good men from joining who would be willing to pay 5 guineas a year to become members of the Australian Jockey Club, but object to paying 10 guineas for the first year.

3139. *Chairman.*] When was that entrance fee imposed? I think it was imposed some few years back.

3140. Prior to that, what was the fee? There was no entrance fee at all. If that entrance fee were abolished, I feel quite confident we would get far more members.

3141. Respecting the method of election to the committee, is the method adopted by the club satisfactory;—does it give general satisfaction to members? I cannot say that as far as the method is concerned, there is any objection to it, because they practically carry out the principle carried out by the A.M.P. Society. Every man, whether he is in the country or not, as long as he is a member, has

P. J.
Hourigan.
28 Nov., 1900.

a right to exercise his franchise. Of course I know that Mr. Want on one occasion proposed that in lieu of the present system, open and personal voting should take place. That was debated at a meeting of members; but Mr. Want was unsuccessful. That was before he was appointed honorary counsel to the Australian Jockey Club. As far as that rule is concerned, I do not see that we can say that any injustice is done, because every man has the right to vote. You cannot reasonably say to a man who lives in Bathurst, or any other part of the Colony, and who may not be able to come down, "Because you cannot come down to Sydney, you will not be able to exercise your vote as to the selection of the committee." Of course, under their present rule, every man gets a voting paper, and there is a list of candidates upon it. He has to leave ten names on that ballot-paper. There is also an envelope sent with it. He writes his name inside it, and encloses it to the secretary of the Australian Jockey Club. Then when the election comes off, the scrutineers are appointed, and they just open the envelope, and say, "Here is John Jones." The scrutineers inquire "if he has paid his subscription." The reply being satisfactory, then that paper is put into the ballot-box. I do not think there is anything wrong about that.

3142. The only point of difference you have with the proposed Bill is the matter of representation on the central tribunal;—you believe we should pass a law of some sort to take over racing, but you disagree with the principle proposed in the Bill? I think that a great improvement could be made in the way that I have suggested—that is, to have Government nominees. The Government nominees would not be depending upon the votes of members of the Australian Jockey Club, or anyone else. The Government would have this absolute right in their own hands, and having that right they would have the privilege of selecting the very best men they could find in the Colony.

3143. There is one other matter I want to ask you about;—are you of opinion that pony-racing should be abolished altogether? I may say that I have not taken much interest in pony-races, but I think if we had a tribunal such as I have suggested, that tribunal would be able to look after pony-racing, and control it just the same as horse-racing.

3144. You think then that the Australian Jockey Club have made a mistake in not controlling pony-racing? I would not say that. It is a debatable question. I believe the Jockey Club Committee meant well when they brought in those rules about ponies. I believe they thought that what they were doing would have a good effect on the community. That is my impression.

3145. Is there anything else in which you could assist us? I do not think there is anything else, Mr. Chairman.

3146. *Mr. Gillies.*] You are a lawyer? Yes; I am a solicitor, Mr. Gillies.

3147. Did you ever know of a case where a man was charged with anything, and eighteen witnesses came forward, and gave it as their opinion that he was not guilty of what he was charged with, and then he was convicted under those circumstances? No; I never heard of a case like that.

3148. Are you aware that that was what happened in regard to Fielder's case? I believe it was, so far as my knowledge of the matter extends.

3149. Do you think that members of the Australian Jockey Club Committee should not bet upon horse-racing? I would not go to that extent, because I do not think if any honorable man had bet £1 or £5 upon a race it would affect his judgment. I do not think the members of the Australian Jockey Club Committee bet much.

3150. Suppose some of them were interested in that "Mora" case, do you think they had a right to adjudicate upon it? No. If it could be proved that they had bets on the race, of course, they would have no right to really take any part in the deliberations in connection with the race; but I do not think they had any bets on the race for the reason that I have given about this rule 19. If they had had any bets on the race, I take it that they would have had that boy brought up there and then, because they would know then that if they disqualified the boy they would give Tattersall's Club jurisdiction to declare all wagers off. Without that action Tattersall's Club would have no jurisdiction under their rule 19.

3151. Do you believe that the practice of wholesale betting is conducive to the interests of horse-racing? My opinion is, that as long as you have horse-racing you will have betting, that betting and horse-racing are inseparable, and that if you were to pass a law, if it were possible to do so, declaring that no person should bet on the racecourse, making it a penal offence, or a crime, so to speak, you would find your racecourses pretty well deserted. That is my impression. Of course, people like a little interest in a race, no matter how small it may be.

3152. But if the totalisator were introduced, would not betting on racecourses be done away with altogether? Oh, no; it would not be done away with unless you had an Act of Parliament which prohibited it.

3153. Would you have to have an Act of Parliament for the totalisator? Yes; and if you desired to suppress betting you would have to pass an Act which declared that betting would not be allowed. I think that would be a great mistake, because, although a great many men might like to put a pound in the totalisator, yet, if the owner of a horse wanted to back his horse for a substantial amount for any big race, he could not do it on the totalisator. He would have to go to bookmakers to do it; and then, if there were no bookmakers, there would be no opportunity for a man to back his horse. Mr. Archer knows all about it; he has had a large experience.

3154. Do you not think the fact of men backing their horses sometimes leads the public on to back the same horses? No doubt.

3155. Do you not think that as a result a bookmaker is likely to be able to stiffen the horse or the owner of the horse, and let the public in? It is possible to do that; but so far as my experience extends, which is pretty considerable now, I think that, as far as the bookmaker is concerned, there is much less of that stiffening process carried on than people imagine.

3156. Do you approve of short races being run;—do you approve of so many of these 6-furlong spurts being run? I may say, of course, that it is hardly desirable; but the simple reason why it is done is this: You get horses often which are good for 6-furlong races, and perhaps if you take them beyond that distance they are no good; and the people who cater for racing, of course, want to get their entries as numerous as possible, and in order to achieve that object they introduce these 6-furlong races. That is the obvious reason.

3157. Do you not think, supposing horse-racing improves the breeding of good horses, that no race should be allowed to run upon a course of a shorter distance than a mile? That is quite right, I think.

3158. Do you not think it would be in the interests of horse-breeding? I think it would be in the interests

P. J.
Hourigan.

28 Nov., 1900.

interests of horse-racing; and not only that, but it would add to the security of the jockeys who have to take part in these several races.

3159. I suppose you know what the minimum weight is now;—I mean the weight allotted to a horse in these handicap races? It all depends upon whether it is a welter race or an ordinary race.

3160. An ordinary race? As far as my memory serves me, I think 7 stone; but I would not be sure of that.

3161. *Chairman.*] Six stone 7 lb? Six stone 7 lb.

3162. *Mr. Gillies.*] Would you not approve of the minimum weight being raised to 7 stone? Yes; I think it would be better, because you would be more likely to get boys to ride that weight.

3163. Good riders? Yes.

3164. It would make them breed a stouter sort of horse? If you have a minimum of 7 stone, the handicapper could raise the other horses up proportionately.

3165. Which would tend to improve the breeding of stouter horses? Yes; and enable the owners to get better riders.

3166. More reliable riders? Yes.

3167. *Chairman.*] You said that you took an interest in this "Mora" case? I did.

3168. Do I understand that that was a professional interest, or simply an interest from a sense of justice? I took that interest in the case from a sense of justice, and although young Fielder's father called upon me afterwards and wanted to pay me—in fact, volunteered to pay me—for any services I had rendered in connection with the case. I absolutely declined to take a shilling. I told him it was not a professional matter with me, that I believed the boy had been unjustly dealt with, and out of a sense of justice I had taken action.

3169. *Mr. Gillies.*] I suppose it would not be fair to ask you a legal question? Oh, yes; you can ask me any legal question you like.

3170. You said the Hon. J. H. Want was honorary counsel to the Australian Jockey Club? He is one of the honorary counsel I understand.

3171. Is not Mr. Pilcher, Q.C., an honorary counsel? Yes; I believe he is now.

3172. Do you know whether Mr. Pilcher has ever given them an opinion as to the legality of their operations? He did not give them an opinion; but he gave someone an opinion. I happen to have a printed copy of that opinion. I can hand it in.

3173. You might read it? This was in 1898. That was the time they brought in those new rules and by-laws. This is the document. It was handed to me as I was going in to the general meeting of members of the A.J.C.

[*The witness here read aloud Mr. Pilcher's opinion, of which the following is a copy:—*]

Re A.J.C. PROPOSED BY-LAWS.

Copy of Opinion of Mr. Pilcher, Q.C.

THE only powers to make by-laws possessed by the committee of the Australian Jockey Club are contained in the 12th section of the Australian Jockey Club Act of 1873.

The trust material to be considered in the deed of Grant of the lands in the Randwick Racecourse is upon trust to permit the said lands to be used as a racecourse, upon which horse-races may be run under the direction of the A.J.C.

The trustees, under the 3rd section of the above Act, granted a lease to the A.J.C. of the said lands for the purposes, *inter alia*, of horse-racing.

The by-laws to be made by the committee must be within the powers conferred, and must not be repugnant to any existing law in the Colony. When legally made they can be enforced against anyone under the provisions of the 19th section.

I am clearly of opinion that the committee of the A.J.C. have no power to make any by-law which is binding upon any other race-club or race-meeting; but any such club or meeting may voluntarily adopt those by-laws as their own if their own constitution enables them to do so.

Of the proposed new rules some affect the races at Randwick, and, so far, the committee have power to make them, as for instance those proposed by Mr. Knox and Mr. Cox.

All the other proposed rules would only be binding upon other clubs so far as they chose to adopt them. I do not think an infringement of any of those rules, even as against a registered club, would be punishable under the 19th section.

I think that the committee of the A.J.C. would have power to refuse to allow a horse to be entered in a race on their own course, and to refuse admission to their course of any person who offended against any of the proposed new rules, provided that they could show that they had a valid by-law in existence giving them that power, and that the refusal as to the horses, or the men, was a reasonable refusal, bearing in mind the original trust in the Deed of Grant and the power conferred by the 12th section.

13/8/98.

C. E. PILCHER, Q.C.

3174. They have no legal standing as regards punishing other jockey clubs? No; but you see what Mr. Pilcher points out, that if any man came to enter a horse on their course they could refuse to take his entrance.

3175. On their own ground? On their own ground. That means everything to a racing man. If you cannot run your horse at Randwick, where are you?—especially if he is a valuable horse.

[*The witness retired.*]

Adjourned sine die.

RACING ASSOCIATION BILL.

APPENDIX.

Appendix A.

[To Evidence of T. S. Clibborn, Esq.]

Dear Sir,

Rosehill Racing Club, 20, Barrack-street, Sydney, 13 November, 1896.

In connection with our race meeting on Saturday last, I have to report the following disqualifications having been imposed by the stewards of this Club, viz. :—"W. F. Portland," owner; Jonathan Griffiths, trainer; Chas. Pearson, jockey; and blk. m. "Amiable," 4 yrs., by "Lochiel"—"Affection," all for a period of twelve months, for suspicious running.

The stewards have also directed me to draw your attention to the fact that, although the jockey, Chas. Pearson, was disqualified by them on Saturday, he was permitted to ride at the meeting of the Northern Jockey Club on the following Monday.

Yours faithfully,

P. O'MARA,

Secretary.

The Secretary, Australian Jockey Club, Sydney.

Dear Sir,

Rosehill Racing Club, 20, Barrack-street, Sydney, 17 November, 1896.

In reply to your communication of 14th inst., I am instructed by the stewards of this Club to inform you that the notice of disqualification *re* "W. F. Portland," trainer, jockey, and horse was given in due form, as required by Rule No. 149.

Yours faithfully,

P. O'MARA,

Secretary.

The Secretary, Australian Jockey Club, Sydney.

Dear Sir,

Rosehill Racing Club, 20, Barrack-street, Sydney, 24 November, 1896.

As requested by yours of 17th inst., I beg to forward herewith copy of the evidence, also all correspondence, in connection with the "Amiable" case.

The stewards have also requested me to intimate to your committee that they consider this one of the most flagrant cases of dishonest running ever witnessed on a racecourse.

Yours faithfully,

P. O'MARA,

Secretary.

The Secretary, Australian Jockey Club, Sydney.

Meeting of the Stewards of the Rosehill Racing Club, held at 20, Barrack-street, on Thursday, 10th December, 1896.

Present :—Messrs. S. Ackman (in the Chair), W. L. Davis, T. M. Alcock, P. Moore, and E. E. A. Oatley.

The following is the statement of *W. F. Portland* :—(*Letter of 4th November, 1896, to H. C. Moses produced and read.*) I left money to back the mare ("Amiable") with my brother, H. C. Moses; the money was not put on; I told Griffiths before I left for Melbourne to take the mare to Rosehill, but gave him no instructions about the running of the mare; from what I have heard, our opinion is that "Amiable" was pulled; cannot say if the trainer or jockey took it upon themselves to pull the mare; we have always trusted both implicitly; I know Griffiths has been drinking lately; he was married lately, and had no money to speak of; was always pretty hard up; don't know if any bookmaker had her "in the bag"; this is not the first time the brother has put money on for us; when away, have on occasions put the management of the horse in other hands—that is, when we knew the mare to be good enough to back and left money for such to be done; we dismissed Griffiths at once, in consequence of the running of the mare; we have always given instructions for our horses to win if they could; had no reason to previously doubt trainer or jockey; have won races when horses have not been backed; left £50 with my brother, H. C. Moses, to put on. (*H. C. Moses' evidence was here read.*) Think my brother was very anxious at the last, as he did not like to see horse going out without something on; he knows very little of racing, and do not think he could tell if a horse was pulled or not; have seen Pearson since, but can ascertain nothing with regard to the pulling of the horse; Mr. Crick is the friend referred to in my letter to the A.J.C.

Extract from letter from Fred. Moses to H. C. Moses.

My dear Bert,

"Menzies Hotel," Melbourne, 4 November, 1896.

Yours to hand. Pleased to hear that you are O.K. Have just seen the weights for Rosehill. The handicapper has dealt pretty hard with us. If you, after seeing Jonathan, think it good enough, back her; but be guided by him, as he is the best judge. Personally, I think she has too much weight; but if Jonathan thinks different, put on what you think best, &c., &c., &c.

FRED.

Meeting of the Stewards of the Rosehill Racing Club, held at Rosehill Racecourse, on Saturday, 5th November, 1896.

Present :—Messrs. T. M. Alcock (in the Chair), W. L. Davis, and E. E. A. Oatley.

Inquiry—As to running of black mare "Amiable," 4 years, by "Lochiel"—"Affection," in Short's handicap.

C. Pearson stated: I rode "Amiable"; I received instructions from J. Griffiths, trainer, and Mr. Bert. Moses; Mr. Moses told me the mare had a big weight, and it would take me all my time to win; Griffiths told me to get well away, but not to make too much use of her, then come on at the finish, and win, if I could; the mare was not out of the way fractious before or at the post; jumped well away, and was running fourth, and within two lengths of the leaders, after going a furlong; at about the 4th furlong post the mare ran unkind, and began to run out with me; I persevered with her as much as I could all the way up the straight; she never stumbled or was interfered with about 3 furlongs from home, but she seemed to be saving herself and attempting to run wide there; when going to the post, I asked the clerk of the course to see if she was not lame, as she appeared to be saving a leg.

H. Moses stated: I represent the owners; as far as my limited knowledge of racing goes, I am satisfied with the running of the mare; I gave Pearson no instructions whatever, nor did I make any statement to him regarding the running of the mare, except that when I saw Pearson I think I told him that the trainer said "the mare is too fat, and he does not think she can win"; for this reason did not back her; my brother, the owner, wrote me from Melbourne to see the trainer, and if he says she can win back her; I laid the matter before the trainer, and left it in his hands; I watched the race closely; I thought the mare fell back at the turn; she seemed to lose her place; I have no interest whatever in "Amiable"; I know Griffiths well; I do not think he would deceive us in any way; Griffiths told me the mare could not possibly win, as she was too fat, and I replied that if there was at all a doubt about her winning I would scratch her.

Jonathan

Jonathan Griffiths stated: I train "Amiable"; I am satisfied with Pearson's riding all through the race; she was fractious at the post, and did not jump away too well; she appeared to lose ground at the turn, and the jockey told me after the race that she did; I told Pearson to get well away, and win if he could, but not to knock her out; did not think she could win, but started her, and chanced her winning; she has not done much work lately; I told Mr. Moses I did not think the mare could win; I know Mr. Moses had a letter from his brother.

Decision.—It was carried by majority that "W. F. Portland," owner, Jonathan Griffiths, trainer, Charles Pearson, jockey, and black mare "Amiable," 4 years, by "Lochiel"—"Affection," be disqualified, for suspicious running, for a period of twelve months.

Confirmed.—S. ACKMAN, Chairman, 13th November, 1896.

Meeting of the Stewards of the Rosehill Racing Club, held at the office of the Club, 20 Barrack-street, on Friday, 13th November, 1896.

Present:—Messrs. S. Ackman (in the Chair), T. M. Alcock, W. L. Davis, and P. J. Moore.

Minutes—The minutes of the previous meeting were read and confirmed.

Correspondence from "W. F. Portland," 10th November, 1896, asking for removal of the disqualification imposed on himself and brother.

Decision.—It was resolved that the request be refused.

Copy of letter referred to above.

Gentlemen,

36, Castlereagh-street, Sydney, 10 November, 1896.

On returning from Melbourne on Sunday night, I learnt with surprise that my brother and self, as owners of "Amiable," together with trainer, jockey, and mare, were disqualified for suspicious running. As this is a great stigma on our character and name, and as the decision was arrived at during our absence, I must respectfully request that the case be reopened, and that I, on behalf of my brother and self, be allowed to give evidence and produce instructions contained in a letter written whilst in Melbourne, which I feel satisfied exonerates us from any suspicious practices whatsoever. Of course I am not questioning the justness or correctness of your verdict, except as to my brother and self, and that, on the ground, as I have said, that we were condemned in our absence, and without being heard.

To the Committee of the Rosehill Race Club.

Yours, &c.,

W. F. PORTLAND.

Copy of letter from Secretary, Rosehill Racing Club, to "W. F. Portland."

Dear Sir,

20, Barrack-street, Sydney, 13 November, 1896.

Your letter of 10th instant was placed before a meeting of the stewards of my Club held this day, and I am requested to inform you that your application cannot be complied with.

Yours, &c.,

P. O'MARA,

Secretary.

Copy of letter from Secretary, Rosehill Racing Club, to Secretary, Australian Jockey Club.

Dear Sir,

20, Barrack-street, Sydney, 13 November, 1896.

In connection with our race meeting on Saturday last, I have to report the following disqualifications having been imposed by the stewards of this Club, viz., "W. F. Portland," owner; Jonathan Griffiths, trainer; Chas. Pearson, jockey; and black mare "Amiable," 4 years, by "Lochiel"—"Affection," all for a period of twelve months, for suspicious running.

The stewards have also directed me to draw your attention to the fact that although the jockey, Chas. Pearson, was disqualified by them on Saturday, he was permitted to ride at the meeting of the Northern Jockey Club on the following Monday.

Yours, &c.,

P. O'MARA,

Secretary.

Meeting of the Stewards of the Rosehill Racing Club, held at the Office of the Club, 20, Barrack-street, on Tuesday, 17th November, 1896.

Present:—Messrs. S. Ackman (in the Chair), P. J. Moore, E. E. A. Oatley, W. L. Davis, and T. M. Alcock.

Minutes—The minutes of the previous meeting were read and confirmed.

Correspondence—From Secretary, Australian Jockey Club, 14th October, 1896, asking if wish his Committee to adopt disqualification of owner, trainer, and jockey, also black mare "Amiable," 4 years.

Decision.—It was resolved that the Secretary reply as follows:—"That notice of disqualification *re* "W. F. Portland," trainer, jockey, and horse, was given in due form, as required by Rule 149.

From "W. F. Portland," 16th November, 1896, giving notice of appeal to the Australian Jockey Club against decision of Stewards in matter of disqualifications.

Decision.—It was resolved that the Secretary reply as follows:—"That no notice of appeal against their decision was lodged by you on 10th inst., your letter of that date being merely a request for the reopening of the case as regards yourself and brother, and which was refused."

Confirmed.—S. ACKMAN, Chairman, 21st November, 1896.

Copy of letters referred to.

From Secretary, Australian Jockey Club, to Secretary, Rosehill Racing Club.

Dear Sir,

14, Castlereagh-street, Sydney, 14 November, 1896.

I have yours of 13th instant, notifying the disqualification of "W. F. Portland," Jonathan Griffiths, Chas. Pearson, and black mare "Amiable," for twelve months for suspicious running. Please inform me if you wish my committee to adopt the disqualification.

With reference to Chas. Pearson, he was quite within his rights in riding at the Northern Jockey Club meeting, as his disqualification had not been adopted by this Club, unless the Northern Jockey Club saw fit to adopt your disqualification.

Yours faithfully,

T. S. CLIBBORN.

Copy of letter from Secretary, Rosehill Racing Club, to Secretary, Australian Jockey Club.

Dear Sir,

20, Barrack-street, Sydney, 17 November, 1896.

In reply to your communication of 14th instant, I am instructed by the stewards of this Club to inform you that the notice of disqualification *re* "W. F. Portland," trainer, jockey, and horse, was given in due form, as required by Rule No. 149.

Yours faithfully,

P. O'MARA,

Secretary.

Copy

Copy of letter from "W. F. Portland" to The Committee of the Rosehill Racing Club.

Sirs, 36, Castlereagh-street, Sydney, 16 November, 1896.
On the 7th inst. your committee disqualified for twelve months my brother William and myself, who race under the name of "W. F. Portland." On the 10th instant I lodged with your secretary notice of appeal against that decision. You further considered the matter, and gave a final decision on Friday, 13th inst., and I now beg, on behalf of my brother and myself, to give you notice of appeal from that decision to the Australian Jockey Club. The grounds are:—

1. That the decision against us was arrived at in our absence.
2. Your refusal to adjourn the case to allow us to be heard in our defence.
3. That we were not guilty of any improper conduct.
4. Your decision was against natural justice in condemning us unheard.

Yours faithfully,
W. F. PORTLAND.

Copy of letter from Secretary, Rosehill Racing Club, to "W. F. Portland."

Dear Sir, 20, Barrack-street, Sydney; 17 November, 1896.
I am in receipt of your communication of 16th instant, and am instructed by the stewards of this Club to inform you that no notice of appeal against their decision was lodged by you on 10th inst., your letter of that date being merely a request for the reopening of the case, as regards yourself and brother, and which was refused.

Yours faithfully,
P. O'MARA,
Secretary.

Telegram to T. S. Clibborn, Secretary, A.J.C., 14, Castlereagh-street.

SINCE seen Pearson personally; will attend your office Tuesday. Collect.

Gunnedah.

H. HOGARTH.

Re "Amiable" Case.

Dear Sir, Rosehill Racing Club, 20, Barrack-street, Sydney, 11 December, 1896.
Your letter of 4th inst., with enclosure, was laid before a meeting of the stewards of this Club, held yesterday, and I am directed by them to communicate to you the decision arrived at in the matter, and which is as follows:—

"This committee, in accordance with the request of the Australian Jockey Club, having heard Mr. "W. F. Portland" with reference to the running of his black mare "Amiable" at Rosehill on 7th November, 1896, regret that they cannot see their way clear to alter their former decision."

I enclose copy of the statement made by Mr. W. F. Portland.
T. S. Clibborn, Esq., Secretary, Australian Jockey Club, Sydney.

Yours faithfully,
P. O'MARA,
Secretary.

My dear Bert, "Menzies," Melbourne, 4 November, 1896.
Yours to hand. Pleased to hear you are "O.K." Have just seen the weights for Rosehill. The handicapper has dealt pretty hard with us. If you, after seeing Jonathan, think it good enough, back her; but be guided by him, as he is the best judge. Personally, I think she has too much weight; but if Jonathan thinks different, put on what you think best. Well, the Cup is over, and, as I thought, was won by "Newhaven" easily. I hope you had your little bit on. He is the best 3-year old I have ever seen, and canters over everything easily. I took 100 to 6 about him coming over in the boat. Sorry you are not here. Guv. says if he had known you wanted to come he would have brought you. "The Count," his friend, has asked me to a big dinner to-night at the Vienna Café. I am doubtful whether I will go. I wish you were here to go with me; he promises a good time. Have not seen little Farnell; lost her address. Had good news from Moree; splendid rain, which is a throw in. Expect to leave here on Saturday night, and be at Weemala on Sunday, and will tell you all the news.

Your affectionate brother,
FRED.

Gentlemen, 36, Castlereagh-street, Sydney, 16 November, 1896.
I desire to appeal to your committee against a finding by the stewards of the Rosehill Racing Club disqualifying my brother William and myself, who race under the name of "W. F. Portland."

The facts I desire to bring under your consideration are these:—We own the mare "Amiable," and she is trained for us by J. Griffiths. The mare was nominated to run at Rosehill on Saturday, the 7th inst., and on that day did run, and an inquiry was held which resulted in the disqualification of the mare, the trainer, the jockey, and ourselves. At the said inquiry my brother, H. C. Moses, attended before the stewards at their request, and informed them that I was away in Melbourne, where I had been for ten days, and that my brother William was away near Moree, where he has been for several months, and that neither of us had any knowledge of any impropriety as to the running of the mare. He further informed the committee that he had received a letter from me as to the running of the mare, and asked the committee to adjourn the inquiry so far as my brother and myself were concerned, so that he could show the committee the letter from me, and also to give us a chance of being heard in our own defence before being condemned. The committee refused this request. I returned from Melbourne on the 8th, and the first I heard of the decision was about the hour of 6 p.m. on the said Sunday, the 8th. I naturally came to the conclusion that the committee had acted unthinkingly in condemning us unheard, and I asked a friend to see the committee on the course on Monday and point out that it was a right never denied even the most unworthy of being heard in his defence before being condemned. I was asked by the committee through such friend to write a request to open the matter, for the purpose of being heard. I did this, but, much to my surprise, on Friday last, the 13th, the committee refused to hear us, or allow me any opportunity of showing that no blame could attach to myself or brother William. The letter which I wrote to my brother Herbert was written by me on the 4th inst., and in that letter I directed my brother to see the trainer and to be guided by his advice, and if the trainer advised him to back the mare to do so. No suggestion of any improper running of the mare was contained in this letter, which I shall be pleased to place before you. I am returning to-night to the country, but can return any time in case you should require to question me: and I am further prepared to swear an affidavit of the truth of the facts set out in this letter. I should deem it a great favour if you would take this letter into your early consideration.

The Committee, Australian Jockey Club, Sydney.

I have, &c.,
W. F. PORTLAND.

Australian Jockey Club.

Meeting of Committee, Tuesday, 29 December, 1897.

THE "AMIABLE" CASE.

Messrs. William Moses, F. Moses, and Herbert C. Moses having been invited to appear before the Committee, and having taken their seats,—

The Chairman said: I should like to ask Mr. H. C. Moses exactly what was the nature of the instruction given to him by his brothers who raced under the name of "W. F. Portland," with regard to the running of the mare "Amiable."

Mr. H. C. Moses: My instructions were contained in the letter that is now before the committee; those were the only instructions I received.

The Chairman: That is the letter you received from Melbourne from the brother signing himself Fred?

Mr. H. C. Moses: Yes.

The

The Chairman : You have nothing further with regard to the instructions you received than what is contained in this letter ?

Mr. H. C. Moses : No.

The Chairman : Did any communication, verbal or otherwise, pass between you and your brothers—either of them, before the one left for Melbourne or the other for the country, with regard to the intended running of this mare at Rosehill ?

Mr. H. C. Moses : No.

The Chairman : No instructions—no communication ?

Mr. H. C. Moses : I used to get a letter from them sometimes, but I never got any verbal instructions before they left.

The Chairman : How long was it before this race took place that your brother left for Melbourne ?

Mr. F. Moses : I left on the Tuesday ; about twelve days before.

The Chairman : And how long was it after the other Mr. Moses left for the country ?

Mr. W. Moses : Some months.

The Chairman : Were you aware of the weights that had been put upon "Amiable" at the time you left for Melbourne ?

Mr. F. Moses : No ; I wrote that letter immediately I saw the weights.

The Chairman : The weights were not out at the time you left ?

Mr. F. Moses : No.

The Chairman : I would like to ask Mr. Herbert Moses whether, on any previous occasion, he has been placed in a position of responsibility with regard to the running of "Amiable" owing to the absence of one or other of his brothers ?

Mr. H. C. Moses : I never had any responsibility, but I had money sent to me once before.

The Chairman : The question of responsibility is really the important point at the bottom of this inquiry ; not so much as regards you, Mr. Herbert Moses, as regards the responsibility of absent owners ; and I only ask the question in order to elicit the fact whether the position that you were in at Rosehill on that Saturday was a new position as far as you were concerned ?

Mr. H. C. Moses : I was in the same position once before—I think about three weeks or a fortnight before,—when I got £60 to put on her.

The Chairman : From your brothers ?

Mr. H. C. Moses : Yes ; I think it was from Fred.

The Chairman : This was once before ?

Mr. H. C. Moses : Yes.

Mr. Adrian Knox : Was that at our October meeting ?

Mr. H. C. Moses : No ; at the Rosehill meeting.

The Chairman : Of course nothing arises out of that, and I am only asking for your evidence as to what previous experience you have had as to the running of "Amiable" when your brothers have not been on the spot, and you give us to understand that only once before have you been put in the same position ?

Mr. H. C. Moses : Yes.

The Chairman : At any rate the position was not one to which you were entirely new ?

Mr. H. C. Moses : I had nothing to do except to ask the trainer whether I was to back the mare and give out the money.

The Chairman : Yes, that is reasonable ; your brother, in his letter, tells you to ask Jonathan and to be guided by what he says ?

Mr. H. C. Moses : Yes.

The Chairman : Do you give the committee to understand that you had no responsibility with regard to the running or scratching or backing of the mare except through some communication you were asked to make to Jonathan, and that you did not consider yourself responsible with regard to any conduct you might have thought fit to adopt with regard to "Amiable" ?

Mr. H. C. Moses : No ; I had no responsibility.

The Chairman : Had you the power to scratch the animal ?

Mr. H. C. Moses : No, I had not, unless I was told by the trainer.

The Chairman : On any previous occasion, did you undertake any responsibility—although you admitted that you did not feel that you had any—had you taken any responsibility with regard to the control of "Amiable" ?

Mr. H. C. Moses : No.

The Chairman (*addressing Messrs. W. and F. A. Moses*) : Have you made any personal efforts yourselves to obtain the attendance of these two men—I mean either Pearson or Griffiths ?

Mr. W. Moses : No ; I have not.

The Chairman (*to Mr. H. C. Moses*) : It has come to my ears, at any rate—I attach very little importance to these outside statements—that one of these men, I am not quite sure whether it is Pearson or Griffiths, is at present receiving pay from your brothers ;—do you know whether that is so or not ?

Mr. H. C. Moses : No ; I do not.

The Chairman : Since his suspension at Rosehill, I think it is Griffiths ; but it is one or the other is said to have been in receipt of pay ?

Mr. W. Moses : We have heard some report circulated—some very cruel ones too—and we are prepared to answer any of them. We have heard that Pearson has been in receipt of 30s. a week since his disqualification, and that he was to get it during the period of his disqualification ; but the report is utterly untrue, and we defy anyone to prove it. We have heard other little rumours.

The Chairman : I have heard this, but you give that an unqualified denial ?

Mr. W. Moses : Yes ; we defy any one to prove it.

Mr. Vincent Dowling : Does the same remark apply to the trainer ?

Mr. W. Moses : Yes ; we have dismissed the trainer, and we have nothing to do with him.

Mr. Walter Hall : When you dismissed the trainer and the jockey, did you pay them right off ?

Mr. W. Moses : Yes ; they have both been paid off.

The Chairman : Have you held any communication with them since you have paid them off ?

Mr. W. Moses : Yes ; I wrote and asked Griffiths about an account for some fodder—I think it was in some bankrupt estate—whether he knew if it was correct.

The Chairman : Where was he then ?

Mr. W. Moses : At Coogee Bay.

The Chairman : Have you any reason to think that he is keeping out of the way of the committee at the present time.

Mr. W. Moses : No ; I have no reason for supposing so.

The Chairman : Not with regard to either one or the other ?

Mr. W. Moses : No.

Mr. Adrian Knox (*addressing Mr. H. Moses*) : Did you not notice anything suspicious before this race in the way of betting ?

Mr. H. C. Moses : No ; I did not.

Mr. Knox : Were you in the ring ?

Mr. H. C. Moses : Yes ; I was about the ring.

Mr. Knox : Near the scratching board ?

Mr. H. C. Moses : Yes.

Mr. Knox : Did you not notice the mare go back in the betting ?

Mr. H. C. Moses : No ; I did not.

Mr. Knox : Did you make any inquiries as to the price at any time ?

Mr. H. C. Moses : No, I did not—not after the trainer told me not to back the mare.

Mr. Knox : Did you hear anything quoted about the mare just before the start ?

Mr. H. C. Moses : Yes, just at the start—2 to 1.

Mr. Knox : You heard no other price later than that ?

Mr. H. C. Moses : Nothing later than that. I think I heard 6 to 4. Just at the fall of the flag it was 2 to 1.

Mr.

Mr. Knox : On the previous occasion, when you had instructions about the mare, what were your instructions ?
Mr. H. C. Moses : Similar to these—I was sent money, and I was to see the trainer and ask him if I was to back the mare.

Mr. Knox : And did you back the mare on that occasion ?

Mr. H. C. Moses : Yes ; I did back the mare.

Mr. Knox : On this occasion, did Griffiths give you any reason for suggesting why the mare would not win ?

Mr. H. C. Moses : I told him, “ Here is a letter I have got from my brother, and I want you to tell me what to do.” And he said, “ I advise you not to back her ; I do not think she can win.”

Mr. Knox : Had you anything to make you suppose that there was any collusion between Griffiths and any members of the ring with regard to the running of that mare ?

Mr. H. C. Moses : No ; not so far as I was concerned.

The Chairman : You have some knowledge of racing and racehorses ;—did you not think it at all extraordinary that Griffiths had told you not to back the mare, from any appearance she presented as regards condition or anything of that sort ?

Mr. H. C. Moses : No ; I did not think it was queer. When I got the letter I saw a friend of mine, and asked him to go to the races with me, and I told him that I had instructions to see the trainer and back the mare. I took him up to Rosehill, and he was with me nearly all day, and I asked the trainer in his presence about the horse, and he told me not to back the mare, as she could not win.

The Chairman : I wanted to know whether you formed any opinion as to Griffiths’s reasons for giving you that advice, as far as the mare was concerned, when there was no solid reason why you should not back her ;—you said you did not form any opinion about that.

Mr. H. C. Moses : No ; I did not.

The Chairman : You trusted entirely to Griffiths ?

Mr. H. C. Moses : Yes.

The Chairman : Did Griffiths give you any reason for not backing the mare ?

Mr. H. C. Moses : No, only what I told you ; he advised me not to back her.

The Chairman : Did he give you any reason why he told you not to back her ?

Mr. H. C. Moses : I do not remember any reason.

Mr. Knox : Did he say anything about the mare being fat ?

Mr. H. C. Moses : Well, he may have said that. I was doubtful in my evidence before. I am not certain whether he told me or not, but I believe he did. I think the trainer said “ the mare was too fat and he did not think she could win.” That is the only thing I was uncertain about.

Mr. Knox : You were not certain about it ?

Mr. H. C. Moses : No ; the only thing I am certain about is that he told me not to back her as he did not think she could win.

Mr. Knox : Can you remember how long before this the previous meeting was held at which you had instructions to back the mare ?

Mr. H. C. Moses : About three weeks ; the time before she won at Rosehill.

Mr. Knox : She won that time ?

Mr. H. C. Moses : Yes.

The Chairman : Was this unfortunate race here the next performance after she won—when you had backed her ?

Mr. H. C. Moses : Yes, it was the next race.

Mr. Knox : What did she carry the time she won.

Mr. H. C. Moses : Nine stone five when she won, and she had 10 stone 1 lb. at Rosehill on the second occasion.

Mr. Knox : Do you remember what ran second and third when she won.

Mr. F. Moses : “ Freedom ” ran second when she won.

Mr. Knox : And do you remember what won on this occasion ?

Mr. W. Moses : “ Thespian ” won.

Mr. Knox : Did you hear any talk about the mare before the start ?

Mr. H. A. Moses : No, I did not ; I was with the trainer just before the start.

Mr. Knox : You know what I mean—I mean at any time before the start.

Mr. H. C. Moses : No.

Mr. Knox : You know what I mean—anything as to whether she was trying or not ?

Mr. H. C. Moses : No, I did not. I was with my friend.

Mr. Knox : And you say you got instructions in his presence ?

Mr. H. C. Moses : Yes.

The Chairman : Did you, or did you not, think it exceedingly queer ?

Mr. H. C. Moses : No, I did not think it was queer.

The Chairman : Not in view of the previous performance.

Mr. H. C. Moses : No, I did not ; I simply trusted to Griffiths.

The Chairman : Your suspicions were not excited ?

Mr. H. C. Moses : No, they were not.

The Chairman : Messrs. W. and F. Moses,—Do you wish to call any further evidence with regard to this matter before the committee now ;—have you any further evidence you wish to adduce in this matter before I ask you to make any statement you may wish to lay before us ?

Mr. W. Moses : No ; we have no further evidence.

The Chairman : It becomes my duty to inform you that if you wish to make any statement you may do so ; and I think it is only right and fair to ask you, inasmuch as the question must necessarily crop up, to say what you wish with regard to the liability of absent owners. That is a matter that must engage the attention of the committee in this case, that being apparently one of the chief grounds of your appeal ; that is quite evident from your letter.

Mr. R. Jones : Have you read the evidence sent in by the Rosehill committee ; and do you consider it correct ?

Mr. W. Moses : There are one or two matters to which I wish to direct the attention of the committee.

The Chairman (*addressing Messrs. W. and F. A. Moses*) : Was Mr. H. C. Moses authorised by one or either of you to act with regard to the management of that mare at Rosehill as your authorised agent ?

Mr. W. Moses : No, he was not ; it was the trainer. We were guided by the trainer, and our instructions were always to the trainer.

The Chairman : And whatever money you might have wished to put on the mare you gave to your brother ?

Mr. W. Moses : No, not always.

Mr. H. C. Moses : In my evidence before the Rosehill committee, I said something further about the limited nature of my instructions than appears in the evidence, and I asked them to call my brothers to prove the contents of the letter conveying my instructions with regard to the mare, as they would not receive the letter as evidence.

Mr. W. Moses : With reference to that part of our evidence which reads as follows :—“ When away have put the management of the horse in other hands.” I particularly asked Mr. Alcock what he meant by management, and explained that my brother had never had the management of the horses, but had on a former occasion received money to put on. Before going to the inquiry, and when we were waiting in the Rosehill office, a reporter of a daily paper asked us how we were going to get on ; to which I replied “ That we had no doubt about it, as we were innocent.” He then said, “ There is the ‘ Mabel ’ case.” At the inquiry, frequent reference was made to the “ Mabel ” case, and it was quoted as a precedent. No comment was made on our evidence, except repeated references to the above case, and I gathered from the remarks of the committee that they had the papers before them. My brother tells me that they had the “ Mabel ” papers before them. Just before the inquiry ended I requested the committee to give me their decision, as we had important business on the station, and had been delayed in town some time. Mr. Davis replied, “ Oh, you can have it now—well, in half an hour’s time.” I felt certain they had prejudged the case, for when I remarked that it was very unfair and hard on us, Mr. Ackman replied, “ Oh, there is the ‘ Mabel ’ case.” In the first instance, when my brother offered to produce the letter containing the instructions to him, it was refused ; and when he asked that the case might be adjourned to enable us to give our evidence, the request was also refused, and I contend the committee were prejudged.

The Chairman : You are speaking about the first inquiry ?

Mr. W. Moses : Yes ; but it was at the last inquiry that this evidence was given about the management. The Rosehill committee did not seem to take any notice of our evidence at all, but kept repeatedly referring to the "Mabel" case; and one of the members of the committee was joking with another about some horse called "Lieutenant." They did not seem to take any notice of our evidence at all.

The Chairman : That is a matter upon which we can hardly express an opinion. I am sorry the Rosehill committee have not thought fit to send a representative here. As to their prejudice against you, what you now state may be your *bona fide* belief, but it must remain as a matter of opinion.

Mr. W. Moses : I feel certain that the case was prejudged.

The Chairman : But you must see that any statement of that sort, unsupported by evidence, could not have great weight.

Mr. W. Moses : With regard to the question of the responsibility of absent owners, I would say that we have always given our instructions to the trainer when he started the mare to go to win, and he has always written us telling us whether the mare was fit ; and on this occasion we sent an amount to my brother, and told him to ask the trainer whether we should back her, and seeing the trainer told my brother Herbert that she was not fit to win, it seems very hard on us that we should be placed in our present position.

The Chairman : Do you consider it one of the duties of ownership of horses that somebody must be made responsible for them and their running ? It may be whoever you choose to appoint, but some one must be made responsible for the running of the horse.

Mr. W. Moses : We have no doubt that the mare was pulled, but the mare was left in the trainer's hands to run.

The Chairman : I do not think there can be any doubt of that from what I can read, but then this question of responsibility of an owner during his absence crops up. Do you consider it is the duty of owners, no matter who they are, to delegate their trust to somebody who shall be responsible for the running of their horses ; and that in the absence of any such appointment, or in the case of the absence of the owner he is responsible for the delegation of that person ;—that is to say, he is responsible for the person whom he may choose to make his trustee for the time being ?

Mr. W. Moses : Yes, if they carry out the owner's instructions ; but you may trust in a man for years and years and then he may deceive you.

The Chairman : That is quite true ; even your most trusted friend may play you false, and you may be severely punished in consequence of his breach of faith ; but that is hardly the point : I mean, do you consider, even in that case, that the owner is responsible for his false agent, no matter how great a blackguard he may be ?

Mr. W. Moses : No ; I do not see why we should be disgraced through a trainer who deceives us. It would be a terrible thing if it were so.

The Chairman : You do not admit that you are responsible, even admitting that this animal was pulled ; but you maintain that you are not responsible for the pulling because you were not on the spot ?

Mr. W. Moses : No.

The Chairman : That is the argument you mean to use—that is, you do not consider yourselves responsible because you were not on the spot and did not authorise the pulling of the horse ?

Mr. W. Moses : Yes.

The Chairman : That raises the question as to the responsibility of ownership and the interest of the public, who, having the fullest faith in the honesty and respectability of the owner, and who, being unaware of the blackguardism of the trainer, may lose their money, because they assume that the horse will be as on former occasions—run and win. I am only putting the position of the public in this matter, because that is a very important one, and it is our duty to protect the public as far as we can.

Mr. Knox : Have you taken any steps to get underneath the surface in this matter—to ascertain whether the trainer put the mare "in the bag" ?

Mr. W. Moses : Yes, I have ; but I cannot get any satisfaction. At the meeting at Rosehill a bookmaker named Oatley made the remark that he had heard that a bookmaker in Rowe-street had the mare.

Mr. Knox : Had you any conversation with Griffiths about the matter when you dismissed him ?

Mr. W. Moses : Yes, I had.

Mr. Knox : Did he offer any explanation ?

Mr. W. Moses : He said the mare had not been doing well—that she had not been out of a trot.

Mr. Knox : Did you make inquiries as to that ?

Mr. W. Moses : Yes ; I heard that she had been galloped 3 furlongs on the morning of the race.

Mr. F. Moses : For three mornings before the race.

Mr. Knox : Did you make any inquiries as to whether the trainer had any particular reason for taking you down ; because you suggest that the trainer did take you down ?

Mr. W. Moses : It looks like it ; but, of course, it is a hard thing to prove.

The Chairman : Have you made any inquiries, or do you know of any particular reason for this ?

Mr. W. Moses : No.

The Chairman : Do you know of anything that would lead you to believe that the trainer was in very great straits for a few pounds ?

Mr. W. Moses : I know he had been drinking a lot, and he got married lately to some girl who had a child to him.

The Chairman : How long before this did you pay him any money ?

Mr. F. Moses : I paid him before I went away to Melbourne. He told me he was in trouble about this girl, and asked me to let him have some money, and I gave him £15.

Mr. Knox : I assume from what you say that you used to pay the bills ?

Mr. F. Moses : Yes ; we used to pay him £1 a week, and we paid all the bills ourselves.

Mr. Knox : Then the £15 would represent his wages—he would not have to pay away any of that for fodder, and so on ?

Mr. F. Moses : No.

Mr. Knox : Did he make any statement to you at all ;—can you tell us what he told you ?

Mr. W. Moses : He said he ran the mare to win. I could not get any satisfaction about it.

Mr. Knox : Did you see Pearson ?

Mr. W. Moses : Yes, he said Griffiths instructed him to try to win, and he would have won only for being blocked somewhere in the straight ; he said two horses blocked him.

Mr. Knox : In the event of anything having gone wrong with the mare in your absence, who was actually responsible for the scratching of the mare ?

Mr. W. Moses : Griffiths.

Mr. Knox : Griffiths had the power to scratch ?

Mr. W. Moses : Yes.

Mr. Knox : Griffiths nominated her ?

Mr. W. Moses : Yes.

Mr. Knox : Did your trainer enter this horse, or one of you ?

Mr. F. Moses : I entered her.

Mr. Knox : Did Griffiths ever enter her ?

Mr. F. Moses : Yes.

Mr. Knox : Did he pay the sweepstakes ?

Mr. F. Moses : Yes ; if we were here we paid, but if not he paid. I think we were generally here at the big meeting.

Mr. Dowling : I understood you to say that Griffiths had been drinking ?

Mr. W. Moses : Yes ; I cautioned him then about drinking. I told him I heard he had been drinking, and said he would have to go up to the station if he could not do any better here.

Mr. Dowling : I want to know if you do not think it was a dangerous thing to do to place such implicit reliance in a man if he was so addicted to drink ;—how long had he been in your employ ?

Mr. W. Moses : About two years.

Mr. Knox : You remember lodging a complaint with reference to "Courallie" against John Delancy ?

Mr. W. Moses : Yes.

Mr. Knox : Griffiths was your trainer then ?

Mr. W. Moses : Yes.

Mr.

Mr. Knox : Had you ever any other trainer than Griffiths ?
 Mr. W. Moses : No.
 Mr. Knox : Who engaged Pearson ?
 Mr. W. Moses : Griffiths.
 Mr. Knox : Did you give instructions that Pearson was to be engaged, or did Griffiths engage him ?
 Mr. W. Moses : Yes, Griffiths engaged him.
 Mr. Knox : Who gave the instructions that he was to ride ?
 Mr. W. Moses : We gave the instructions.
 Mr. Knox : Had he ridden for you before ?
 Mr. W. Moses : Yes ; he rode the mare at Rosehill the time she won.
 Mr. Knox : That was the only time ?
 Mr. W. Moses : Yes.
 Mr. Dowling : Were you aware that the committee were anxious to obtain the presence of these two men here to-day ?
 Mr. W. Moses : Yes ; Mr. Dangar told me he was going to call them, and I found out their address.
 Mr. Knox : And you know nothing more definite as to their whereabouts ?
 Mr. W. Moses : No.
 Mr. Knox : Have you made inquiries about them from the bookmakers or any one laid the mare ?
 Mr. W. Moses : No ; I have only heard just in conversation.
 The Chairman : Has anything come to your knowledge to induce you to suppose that Griffiths has profited by the false running of that mare on that day—that he or Pearson got something for pulling her ?
 Mr. W. Moses : No, we have not heard anything for certain ; it is only hearsay reports.
 Mr. Knox : Do you know whether he has been spending any more money than usual since then ?
 Mr. W. Moses : No.
 The Messrs. Moses retired at this stage, and the committee proceeded to consider their decision.

3 December, 1896.

1. It was resolved, "That the disqualification of Jonathan Griffiths, C. Pearson, and the mare 'Amiable' be adopted."
2. "That the Rosehill Racing Club be informed that, in the opinion of the committee, the request of 'W. F. Portland,' for a reopening of the case by the Rosehill Racing Club, should have been acceded to, and that the committee is further of opinion that 'W. F. Portland' should now have an opportunity of being heard in defence."
3. "That, pending a decision by the Rosehill Racing Club as to the reopening of the case, the consideration of the appeal of 'W. F. Portland' be postponed."

29 December, 1896.

THE Committee, after hearing "Mr. W. F. Portland," and giving very anxious and careful consideration to the case, resolve, "That in the opinion of the committee, an owner, notwithstanding his absence, is responsible for the running of his horse and for the conduct of those persons to whom he entrusts its management, unless he can prove, to the satisfaction of the committee, that such persons have been guilty of fraudulent conduct towards him ; and therefore, that the appeal of 'W. F. Portland' herein be dismissed."

An amendment—"That the appeal from 'W. F. Portland' be sustained, as the committee are of opinion that 'W. F. Portland' is exonerated from all blame in the case under consideration"—was lost.

Australian Jockey Club.

4 January, 1900.

INQUIRY into the running of "Mora" on the 26th December, 1899, as compared with her running on the 1st January, 1900.

Present :—The Hon. W. A. Long (in the Chair), the Hon. H. C. Dangar, Adrian Knox, Esq., F. Wentworth, Esq., H. Chisholm, Esq., R. Jones, Esq.

The following letter was read to the meeting :—

To the Committee of the Australian Jockey Club,—
 Gentlemen,

Randwick, 2 January, 1900.

I learn from my son that he has to appear before you *re* investigation into the apparently inconsistent running of the chestnut mare "Mora" in the Christmas Handicap, decided at the Australian Jockey Club Summer Meeting on Boxing Day.

As I am leaving Sydney to-night, and will be absent for a week, I will be unable to attend your meeting ; but I beg most respectfully to tender you the following information, viz. :—I put £100 on the mare. Mr. Gënze put £25 on, Mr. W. Fuller put £50, and Mr. Knight put £25 on for me.

Trusting this information may assist you in the inquiry,

A. J. Gënze,
 George Fullin.

Yours respectfully,
 SAMUEL FIELDER.

The Chairman : Mr. Knight, Mr. O'Connor, and Mr. Fielder,—The committee desire to have an explanation of the discrepancy in the running of "Mora" in the Christmas Handicap on 26th December, as compared with her running in Tattersall's Cup on the 1st January.

Mr. E. H. Knight : I will try and explain it to you, gentlemen. I may tell you I am very pleased you ask for an explanation than otherwise—very pleased, indeed—because it gives me a chance, at least, to explain my part of the business. Frank Fielder rode this mare in the Christmas Handicap for me. I put £250 on her. Phil. Glennister and Sam. Mooney put my money on. In giving Fielder instructions to ride her, I told him to keep her up third or fourth pretty well all the way, then to make one good run, get ahead, and win, as it was better to be beaten by ten lengths than to get her blocked. After the race, I made no secret of being dissatisfied with his riding. He was to ride another race for me that day on "Royal Purple," but directly the race was over I went to his father and told him I did not want him to ride any more for me at all ; he had ridden too badly. I reckoned he threw the race away and lost my money. I thought I was entitled to say so. I thought the same all the way through the race. I think he rode very badly.

Q. You thought the same all through the race ? A. I did ; in every part of it.

Q. Describe his riding through the race ? A. From the 6 or 7 furlong post—I was up on top—he kept pulling her back, and kept her back too far, I thought, almost. When he let her run to the turn she seemed to be going a bit sluggishly ; however, he shook her up and sent her along there, and when he came up the straight, instead of, as I thought, coming where he had a clear run, he appeared to me to run her up where there was no chance to get through at all—right into four horses.

Mr. Knox : Q. Right in behind them ? A. Right in behind them.

Chairman : Q. Where was that ? A. At about 1 furlong from home ; 250 or 300 yards from home I could see he had thrown the race away.

Q. That would be the commencement of the Leger Stand ? I should say it would be, as near as I could tell you. That is where she seemed to me to make one run right up to the horses and could not get through ; he had to stop her, and the race was then all over. The money was thrown away. It made a difference of over £800 to me, so I assure you I should like to have seen her win. After the race was over—I did not put him in the last race because I thought he had ridden so badly—I went to Tom Payton and put his boy, young Kuhn, on "Royal Purple."

Q. She won ? No ; she had no chance. I backed her ; put a little on, not much, because I did not think she would do much good, but I put £250 on "Mora." I did not think she could lose the race. I thought it was like stealing the money. I put £250 on her, and the prize was £250, so it would have made a difference of nearly £800 to me if she had won.

Q.

Q. Is there anything more you want to say? A. That is all I can say about that race. Although he rode her so badly I have not any doubt in the world about him riding her honestly. I never thought for a moment that he did not ride her honestly, though he rode the mare very badly. Had I thought he rode her dishonestly I would have been the first man to come in and ask your committee for an explanation of his riding.

Q. You have known him as a jockey for some time? A. Yes.

Q. You have known him as a successful jockey? A. Yes; he has been successful for me.

Q. Not for you, but generally? A. Yes.

Q. And you have known him to be put up by other people and ride in important races? A. Yes.

Q. That being the case, how could you account for him riding, on a mare like "Mora," such a disgracefully bad race as you describe? A. That he might tell you; I wish I could. I cannot tell why he rode so badly. It was no fault of mine that he rode so badly. He might be able to explain that to you.

Q. I can understand a jockey making an error of judgment at a critical point—I am talking of jockeys now, not of ordinary riders—but can you understand a jockey of experience riding a race badly all through, pretty well? A. I cannot really. I was dissatisfied. I sung out on the stand to the people, "Goodness me; do you not see he is throwing the race away!" When he came into the straight I said, "I suppose he will beat them now, though he has given her every chance to lose." However, she got blocked. I made no secret about saying I was dissatisfied. I told him, and I told his father; I was dissatisfied, and I would not let him ride any more for me.

Q. Still, in the face of that opinion of yours, of a man who has a reputation as a jockey generally, you have not the slightest suspicion that he did this wilfully? A. I fail to see it. His father came to me and asked me to put £25 on for him. I have always been on the best terms with Franky Fielder, and thought him a decent lad. As far as thinking he could do anything wrong is concerned, I cannot see where his motive was. If there was any motive I would lend you any assistance in my power to find it out; but I do not see where it could possibly be. I do not see what motive he could have had.

Mr. Dangar: Q. You have not heard anything about the race to occasion any suspicion in your mind as to the honesty of the boy's riding? A. No; not at all.

Q. May I ask you, according to the information you had about your mare, was she well on the day of the Christmas Handicap? A. She did the best mile-and-a-quarter gallop for me on the day before that she ever did in her life. She did a trial on Wednesday morning early.

Q. You had no suspicion of the mare being wrong that day? A. I put £250 of my own on her that day, and I would not throw it away.

Q. This is an inquiry as to the inconsistent running of the mare on two different occasions;—may I ask you were you satisfied as to the way in which she was ridden in Tattersall's Cup? A. I was not. I might just as well say Parker rode her dishonestly.

Q. Are we right in supposing the running of the mare was totally different in Tattersall's Cup from what it was in the Christmas Handicap? A. Yes. I could see the running was different. I expected it to be different, otherwise I would not have backed her in Tattersall's Cup.

Q. Why did you expect it to be different? A. Because I thought Fielder threw the race away in the mile and a quarter.

Q. Do you think the race was thrown away in Tattersall's Cup? A. I will not go as far as that, because she may not have been able to beat "Vocalist"; but whatever chance she had of beating "Vocalist" at the time, by staying with the field, was lost. I instructed Parker to stay with the field, and keep well up, and not give them a long start, but he did exactly what I told him not to do.

Q. That occurred to a good many besides you? A. It occurred to me. I backed her for a lot of money in Tattersall's Cup all over the place, as everyone who was on the ground knows well.

Mr. Jones: Q. How much did you back her for? A. £2,000, I think. I have lost a fortune on her already.

Q. You backed her to win you £2,000? A. Yes.

The Chairman: Q. Will you describe to us her running in Tattersall's Cup? A. Yes. I can tell you that pretty clearly. She went off, and she was going very well within herself all the way right up—

Q. (interrupting). Where was she lying? A. Lying about fourth—third or fourth—and right up, pretty well to the front, where I told Parker to keep her, because I am satisfied she can stay. I told him to keep her fourth or fifth, and get in a nice place to get room to gallop. She is a mare that must not get cramped or get on top of other horses. I told him to keep her up and not be more than two or three lengths away from anything in the straight in the turn, then to make one run clear, because she has one very brilliant run. When I saw him coming at the 6-furlong post, and coming away from the field, I was paralysed.

Q. Did you notice her at the 7-furlong post? A. Yes; she was very well up there.

Q. Did you notice anything about the mare at the 7-furlong post? A. She was pulling with him, and going very freely.

Q. Fighting for the lead? Yes; she was indeed.

Q. Did you notice her from there on till she came to the front? A. Yes; she was going freely.

Q. Always fighting for the lead? A. Always fighting as if she wanted to get away.

Q. About the 5-furlong post she shot out and took a long lead? A. Yes; she took a long lead. It was not by my instructions she did that.

Q. Do you think it possible that the mare pulled Parker about so that he could not hold her any more? A. That is what he said. He said she was fighting so much she almost got away with him.

Q. Has he been riding much lately? He has had an accident, and hurt his knee. Parker rides for me. I give Parker £100 a year whether he rides or not. He always rides for me, but he had hurt his knee through an accident, and could not ride; therefore I had to get another jockey, and Fielder rode her in the Christmas Handicap; but I was not satisfied with the way Frank rode "Mora" in that race, so Parker rode two or three races on Saturday and appeared all right. He said he was all right, so he rode "Mora" in Tattersall's Cup.

Q. "Mora" is a powerful mare, you know? A. I never knew her to pull so hard.

Q. There is no doubt she was pulling in that race? A. No doubt she was pulling in that race—not the slightest in the world.

Q. And he was trying to keep her in position? A. Yes; there is not the slightest doubt in my mind that he was trying to keep her in position.

Q. Might it not have been the case that she had exhausted his strength? A. Very likely.

Q. And that he could not hold her any longer? A. Whether she exhausted his strength or not, Goodness knows. He said she was fighting for her head so much that he thought it was better to let her go than to keep on pulling at her. That is what he told me. I told you the instructions I gave him as to riding in the race.

Q. It might have been such a case that although you gave him the instructions, it was impossible for him, on account of his condition, to carry them out? A. Very likely; no doubt it was. I do not think the boy thought of doing anything dishonest, because had "Vocalist" not been in the race the mare would have won as easily as "Vocalist." The two beat the field easily. I do not think she could have beaten "Vocalist." They beat all the others. My opinion of "Mora" is that she has one very brilliant run, and if you keep her with the field, she will make that run whether it is a 1 mile race or a 2 mile race.

Q. The Christmas Handicap was run a week before Tattersall's Cup? A. On the 26th.

Q. Fielder was able to keep her with the field then? Yes, he did.

Q. Yet he could not win? A. He could not jump her.

Q. What do you estimate to be the difference between the classes of the two fields—the Tattersall's Cup field and the Christmas Handicap field? A. One was no race at all. It was like stealing money.

Q. What difference would you estimate in weight as the value of the two fields? A. Quite as much as "Mora" had—the difference between 8 st. 2 lb. and 9 st. 5 lb.

Mr. Knox: Q. You would not put £250 on her at 6 to 4 in Tattersall's Cup? A. I would not back her in the Summer Cup, because I would have had to take a ridiculous price. I thought I would try and win the easier race, and only have a 5 lb. penalty on. I thought I would back her in the Christmas Handicap, being the race she was more certain to win. I would sooner bet even money on her in the Christmas Handicap than take 3 or 4 to 1 on her in the Summer Cup; therefore I backed her in that race with the idea of putting whatever I might win on her there on her in Tattersall's Cup.

Cup. I put a tremendous lot of money on her, and lost on her in these races. If there is any question you would like to ask me, or any assistance I can give you, I shall be only too pleased to help you, because, as far as I am concerned, there has never been anything but what is *bona fide*.

Mr. Dangar: Q. Have you ever been conscious, Mr. Knight, of being put into the charming position that some horse-owners are supposed to be put in sometimes—"put in the bag"—about these races? A. None of my horses have ever been put into the bag by me.

Q. I do not know whether it is the horse or the owner that is "put in the bag";—had you any suspicions before the running of the Christmas Handicap—I am referring to that more particularly—that you were in the bag? A. I did not dream of such a thing. If she was put in the bag, she must have been put in the bag by Fielder; there was no one else.

Q. Fielder may have been instigated by somebody? A. Who was he instigated by?

Q. That is not evidence, and it is impossible for anyone to say. I only ask you have you had any suspicion of it? A. If I had, I would only tell you the bookmakers that did it.

Q. Have you any suspicion of it? A. Not the slightest, Mr. Dangar. So far as the boy's honesty is concerned, I do not doubt it for a moment. I told you, and I would tell him in front of his face, I was not satisfied with his riding, and that he threw the race away, but not through dishonesty. If you gentlemen know of anyone who has taken any undue liberties, I wish you would call them. I am very pleased that you asked for an explanation into this mare's running, because it gives me a chance of proving my *bona fides*.

Mr. Jones: Q. The mare belongs to you alone? A. Yes; every hair of her. I had her leased to Mr. Inglis until the beginning of this year. Last year he wrote in February saying things were going badly with him, and he wanted to sell his horse, and give me the first option of buying her.

Mr. Dangar: Q. Do you say you have been paying Fielder £100 a year? A. No, Parker. He (Fielder) rode for me the other day, because Parker met with an accident and could not ride her.

Mr. Knox: Q. He has not ridden for you since then? A. No; Parker has.

R. O'Connor called and examined:—

By the Chairman: Q. You saw the two races, Mr. O'Connor;—can you give any explanation of the discrepancy in this mare's running in the two races? A. Yes, sir. I saw both races. I think she was ridden very badly in both races on account of the over-confidence of both of the boys. It was simply over-confidence on the part of both of them. That is what I put it down to. This boy thought he could simply walk over them in any part of the race. What happened coming down the straight I could not see, because I was in the crowd. I heard them say, "There she goes." It never crossed my mind she would be beaten.

Mr. Knox: Q. You did not see her pulled in behind? A. I saw her rather far out of her distance.

Q. I mean pulled in behind in the straight? A. No; I did not see that. I was in the crowd.

Q. Mr. Knight described that.

Mr. Knight (*interrupting*): I was in the top stand, looking at her all the way.

The Chairman (to Mr. O'Connor): Q. Did you see her at the sheds? A. I saw her as I saw her ridden several races in Melbourne. She came through exactly the same way.

Q. He came round the turn on the outside with a clear run home; and, talking about getting through, can you account, when he had a clear run on the outside, for his pulling in behind four or five or more than four or five horses perhaps? A. No, sir.

Q. To get through? A. No; that is most unaccountable, if he came on the outside.

Q. Because you know, to the poorest imagination, or to the poorest intellect, it is clear that when you get round the turn you have as short a journey home on the outside as you have on the inside; and, if you pull in on the inside to get home you are losing ground, covering more ground, besides having to battle through the field;—can you account for his pursuing the course he did under those circumstances? A. Only I should think that he was riding to the gallery—flash riding to fetch off a brilliant run at the finish,—to come through his horses and make a dash.

Q. There is no gallery work about that. If he had wanted to come for the gallery he would have come straight on? A. I have seen him do it in Melbourne on "Australian Star."

Q. I am talking about this race, not about the Melbourne races. Wherever he did it there was no gallery work about it, because gallery work would be to come straight on and make an exhibition of it? [No response.]

Mr. Dangar: Q. You said, Mr. O'Connor, it might be an exhibition of over confidence? A. Yes.

Q. Would it not have been a greater exhibition of over confidence, if he had that confidence, to have come on the outside instead of pulling her in behind and trusting to providence, as it were, to make a sensational finish? A. Decidedly; but that is the bane of a man's life to get the boys to ride as you want them.

The Chairman: Q. Might it not have been some other motive, when he had a clear run home, that induced him to pull him in behind those horses? A. I doubt it very much, Mr. Long. The idiotic race he rode was simply stupidity. Of course I did not know what chance he had at the time. I did not know whether he was on the outside or inside. It was not until after the race that I knew.

Mr. Knox: Q. I suppose you know—we all know—it is a very ordinary method of stopping a horse, if they want to stop him, to pull him in behind something in the straight? A. Yes.

Q. That is a recognised method, is it not? A. Yes.

Q. Where did you cease to see her? A. Just about the 3-furlong post.

Q. You did not see her much after that? A. No.

Q. Were you on the slope there, in front of the stand? A. Yes.

Q. You did not see her again when just finishing? A. "Drama" and "Argo" were out in front of her, and those three were out in front of the crowd.

Q. You did not see her coming round the bend? A. No; I did not see that part of it.

The Chairman: Q. You noticed her running in Tattersall's Cup? A. Yes.

Q. Was Mr. Knight's description of her running in Tattersall's Cup an accurate one? A. Yes, perfectly. My opinion is that you could hold the mare with a straw. I think it was just simply over-confidence on Parker's part, and that she was going well. His leg may have been troubling him a little, but not much. I think it was over-confidence.

Q. Did you not see her fighting at the 7-furlong post? A. I reckon the littlest boy I have got could —

Q.—(*interrupting*)—Never mind that;—did you not see her fighting for the lead at the 7-furlong post? A. No. I thought she was going very easily. I had a pair of glasses on her, and I never saw her fighting for her head. In my opinion, I do not think the mare is capable of fighting for her head.

Q. She was shaking her head, as Mr. Knight described that race, and just as I saw it myself. She was fighting for the lead till she got it; then she dashed to the front; then he let her go. I do not know whether he could not hold her or whether he could; but Mr. Knight described the race accurately. [No response.]

Mr. Knox: Q. Mr. O'Connor, who rode her in that gallop on the Wednesday? A. My stable-boy.

Q. Neither of these boys? A. No.

Q. Neither Fielder nor Parker? A. No.

The Chairman: Q. You know, Mr. O'Connor, perfectly well that a boy who can hold a horse in a gallop is not always qualified to hold him in a race? A. That is quite right, Mr. Long.

Mr. Knox (*to Mr. Knight*): Q. Had Fielder ever ridden her before, as far as you know? Mr. Knight: A. No; he never rode her before.

Q. (*to Mr. Knight*): Not in work or anything? Mr. Knight: A. No. He was not on her back until Christmas

F. Fielder called and examined:—

By the Chairman: Q. What have you got to say, Fielder? A. I told Mr. Knight before I went out that I was going to jump her off and pull in behind the leaders third or fourth all the way. I jumped her off, and had her in a nice position at the 5-furlong post. When she came there she seemed to be beaten. I was riding her hard at the 5 furlongs with my hands and heels; and coming by the turn I went to go up on the outside, and there was a horse seemed to come across and block me. Of course, it never interfered with the chance I had, because I had no chance of winning.

Mr. Knox: Q. Coming to the turn, you say? A. Yes; and I came on the outside. Of course, she was just finishing along pretty well, but not too well. She was not finishing as fast as the two leaders.

The

The Chairman : Q. Anything else? A. When I swung round on the outside there was one horse that seemed to be out a little from the others, that seemed to run out a little, and I came on the inside of it. That is why they thought I pulled her up and got blocked, I suppose.

Q. Do you wish to say anything else? A. No, sir.

Q. When you were at the 5-furlong post, according to my observation you started to get her back? A. No, sir.

Q. I had the glass on you;—I was watching you only;—I saw what you were doing? [No response.]

Q. You got round the turn on the outside with a clear run on the outside, and, as Mr. Knight described it, when you got to the end of the Leger stand you pulled your mare in behind the field? A. I did not.

Q. But you did;—I saw you do it;—you got out again then, and came along on the outside and got third;—that is how you rode the race;—you may not know how you rode it, but I was paying particular attention to you? [No response.]

Q. Can you give me any reason for pulling her in in the straight? A. No, I never pulled her in.

Mr. Knox : Q. There is no good saying you did not, because everybody saw her;—there were four of us with the glasses on nothing else? A. I was running on the outside coming down the straight, and a horse seemed to run out a little bit, and I pulled her across a bit.

Q. My observation was that you went in right behind at least three horses—you had at least three horses bang in front of you, so that, as Mr. Knight says, you could not get through unless they happened to open out;—that was my observation;—was there any reason to make you pull in;—there was nothing hugging you or anything else? A. No.

Q. Why did you pull in? [No response.]

Mr. Jones : Q. When you came along the outside why did you not continue on the outside? A. If I continued I would have run into the horse on the outside. When he started to run out I ran in on the inside.

Mr. Knox : Q. But you did not keep your course;—you did not pull in only behind him, but you pulled in behind others? A. I had to pull in. I could not run into the horse.

Q. You say the horse ran out, and you were frightened he would run you out;—you pulled in not only behind him, but behind others as well? [No response.]

Mr. Dangar : That is what he seemed to want us to understand, that it was this horse running out across him that drove him inside.

Mr. Knox : I cannot see how that could be.

Witness : I was riding the mare with the whip when that happened.

The Chairman : No.

Mr. Knox : Q. You were riding her with the whip? A. Yes.

Q. Just after you came into the straight? A. Yes; about 1½ furlongs from home I was riding her with the whip.

Mr. Jones : Q. That is when you pulled out again after going behind the other horses? A. Yes.

Mr. Knox : Q. I mean just as soon as you straightened your horse up;—you know when you come into the straight you are about 2¾ furlongs from home;—you straightened your horse up in about three-quarters of a furlong;—that leaves you 2 furlongs from home? A. Yes.

Q. And it was at about the far end of the Ledger Stand that you began to pull in; you were not riding her with the whip there? [No response.]

Mr. Jones : Q. It was when you came out from behind the other horses that you used your whip? [No response.]

Witness : My father put £100 on her.

Chairman (to Mr. Knight) : Q. Do you want to call any evidence?

Mr. Knight : A. I want to call Mr. Glenister and Mr. Mooney.

Mr. Glenister called and examined :—

Chairman : This is an inquiry into the running of "Mora" in the Christmas Handicap and Tattersall's Cup, and I think Mr. Knight wants to put some questions to you.

Mr. Knight : I just want you to tell what you did for me. I may tell you, gentlemen, that I told Mr. Mooney to put on some money, and Mr. Fielder asked me to put on £25, and I came across Mr. Glenister and asked him to put on £50.

Mr. Glenister : I was standing in the reserve talking to some one when Mr. Knight came up. I forget who it was I was talking to; anyway they asked him if he had a chance. It is a thing I never ask anyone. He said he thought he could win; he pulled her out of the Summer Cup because he could not get a fair price, but Mr. Mooney was putting on £200 and I might put on an extra £50, which I did. Mr. Marsden sang out "£50 to £40." I took that, and he said "Even money on the field," and I laid him £10 more. That is all I can tell you.

Mr. Mooney called and examined :—

Chairman : This is an inquiry into the running of "Mora" in the Christmas Handicap and Tattersall's Cup, and Mr. Knight wishes you to give some evidence.

Mr. Mooney : The only evidence I can give is that he came to me and asked me to put £200 on her. I put it on, the even £200.

Mr. Knox : Q. In the Christmas Handicap? A. In the Christmas Handicap.

Q. With whom did you put it on? I got Mr. Nelson to put £50 on, Mr. Donovan and Mr. Cohen.

Q. You did not do it all yourself? A. No, I put £50 on myself.

Q. And you got three others to put £50 each on? A. Yes.

Q. You do not know who they put it on with? A. No.

Q. You paid and received? Yes, I paid and received.

Mr. Dangar : Q. Did you pay the money yourself? A. Yes; Mr. Knight paid me the money.

Mr. Knox : Q. With whom did you put your £50 on? A. £25 with Kelly, a Melbourne bookmaker, and £25 with Allsopp.

Mr. Knight : Q. I did not tell you to put that money on with any one particular man, did I? A. No, you did not ask me; you said Mr. Glenister was putting £50 on.

Mr. Dangar (to Mr. Knight) : Did Mr. Mooney inform you before the race was run that he had got the money on?

Mr. Knight : Oh, yes.

Chairman : Have you any other witness, Mr. Knight?

Mr. Knight : No.

Chairman : Have you, Fielder, any other witness?

Mr. Fielder : No.

Chairman : Have you, Mr. O'Connor?

Mr. O'Connor : No.

Mr. Knight : If there are any other questions, gentlemen, you would like to ask me, I would be glad if you would do so.

Mr. Clibborn : There is no person outside. The person that I telephoned said in his reply that he would be here in half an hour. There is, however, nobody in the office.

Chairman : I think, gentlemen, you can retire.

The Committee having given the case due consideration passed the following resolutions :—

Resolved, "That Frank Fielder, jockey, be disqualified for three years for pulling 'Mora' in the Christmas Handicap, at the A.J.C. Summer Meeting."

Resolved, "That, in the opinion of the Committee, no suspicion attaches to Mr. E. H. Knight, or to R. O'Connor, in connection with the running of 'Mora' in that race."

To the Chairman and Committee of the Australian Jockey Club,—
Gentlemen,

Sydney, 17 January, 1900.

We, the undersigned members of the above-named Club, whilst expressing our sincere regret that on the recent occasion of your calling upon the owner, trainer, and rider (Frank Fielder) of the mare "Mora" for an explanation of her running on last Boxing Day in a race at your Summer Meeting, designated the Christmas Handicap, you should have deemed it your duty to disqualify the said rider for a period of three years, yet firmly believing in the integrity of young Frank Fielder, who has not only been sadly stigmatised, but also prevented from following his calling in life for a term of three years at the least, by reason of your decision, hereby respectfully request your Committee to be so good as to grant him a rehearing, so that he may have full and ample opportunity to call witnesses, with the view of establishing his innocence and vindicating his character.

In support of our request, we desire most respectfully to direct your attention to the fact that Frank Fielder has been riding for about nine years, and during the whole of that time has been one of our most popular jockeys, and at all times borne an unsullied reputation. Also, to the fact, as we are informed, and believe, that on the occasion of your so disqualifying him he was completely taken by surprise, as no definite charge was made against him, and that he was not then (as we submit he should have been before you arrived at your decision) invited by the Chairman to call evidence on his own behalf. Further, we are informed, and believe, that, although the race in question took place in full view of your Committee on the 26th day of December last, no complaint was made to the rider after the race, nor was he called upon by your Committee for any explanation until after the running of "Mora" in Tattersall's Cup on New Year's Day. Also, we are informed, and believe, that it can be proved to the satisfaction of your Committee that Frank Fielder's father betted only on "Mora" in the race referred to, and thereby lost the sum of £100; and that young Fielder, as it appears to us, had nothing to gain, and everything to lose, had he ridden dishonestly in the said race. Lastly, that, having due regard to all the circumstances, and bearing in mind that Rule 10 of your Rules of Racing expressly declares that "Any person who takes part in any matter coming within these rules shall be held thereby to consent to be bound by them, and shall not be entitled to appeal to any court because of anything done under their provisions," we respectfully submit that it is not only right and proper, but a matter of natural justice, that your Committee should grant Frank Fielder an early re-hearing; and we feel quite confident that if, on such re-hearing, your Committee should come to the conclusion that, so far as he is concerned, a mistake has been made, you will thereupon immediately remove the said disqualification, and do all in your power to restore his former good name and character.

P. J. HOURIGAN,	J. MURRAY-WHITE.
EDMUND BARTON,	

Dear Sir,

Australasian Chambers, 28, Elizabeth street, Sydney, 1 February, 1900.

I signed a petition in reference to the case of young Fielder. I signed same (without reading it) at the request of Mr. Hourigan, solicitor, who stated it was a petition for a rehearing. I have since read a copy of same and I regret that it contains a paragraph reflecting on the Committee. Had I read that I would not have signed it. As I desire to second your Committee, and I am quite aware that no unfair treatment would be given by you to anyone. I was under the impression that the request was for a rehearing, *with fresh evidence*, and to that there could be no objection, as it would be accorded the greatest criminal. I much regret that I appended my name to a document containing any reflection, however slight, on the Committee, as my only desire was that further evidence should be heard; and, from what I know of the race in question, very serious information was not before your Committee. I personally would wish to give certain information to you that is well worth following up. Would you kindly oblige me by reading this letter to your meeting.

Hon. W. A. Long, M.L.C.

I have, &c.,
W. P. CRICK.

Dear Sir,

163, Pitt-street, 5 February, 1900.

Would you kindly inform your Committee that in signing the Petition in young Fielder's case, asking for a rehearing, signed same, being informed by Mr. P. J. Hourigan, solicitor, that it was correct. I now find erroneous statements were made in it, and I wish to express my regret at having signed a document containing same.

The Secretary of the Australian Jockey Club.

I have, &c.,
T. M. SLATTERY.

Dear Sir,

91, Elizabeth-street, Sydney, 31 January, 1900.

Referring to my letter of the 17th instant, *re* requisition forwarded to your Committee on last-mentioned date, on behalf of the Jockey Frank Fielder, and also to your letter in reply, stating that said matter would be considered by your committee on the 1st proximo, I now forward you herewith, under separate cover, addressed to your Chairman (The Hon. W. A. Long, M.L.C.), a statutory declaration in support of the said requisition made by Francis Kuhn, the jockey who rode "Drama," the winner of "The Christmas Handicap," run at Randwick, on last Boxing Day.

The said Francis Kuhn is leaving for Melbourne to-day, and he will be absent from Sydney for a considerable time.

T. S. Clibborn, Esq., Secretary, "Australian Jockey Club," Castlereagh-street, Sydney.

I have, &c.,
P. J. HOURIGAN.

Solemn Declaration—(Criminal Law Amendment Act of 1883, Section 295).

I, FRANCIS KUHN, of Newmarket, near Sydney, Jockey, do hereby solemnly declare and affirm that—1. I rode the mare "Drama," the winner of "The Christmas Handicap," run at Randwick on the 26th day of December last. 2. I was riding alongside Frank Fielder, the rider of "Mora," in the said race from the 7-furlong post to about 3½ furlongs from home. I took particular notice of "Mora," as I considered her the hardest to beat in the race, and when I left her about 3½ furlongs from the winning post, I saw that the said Frank Fielder was then riding "Mora" hard, and concluded she had no chance of beating me in the said race. And I make this solemn declaration as to the matters aforesaid according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Subscribed and declared, at Sydney, this 31st }
day of January, 1900, before me,— }
J. M'GILLAM, J.P.

FRANCIS KUHN.

Dear Sir,

91, Elizabeth-street, Sydney, 5 February, 1900.

On behalf of the several gentlemen signing the petition in favour of Frank Fielder, I desire to thank you and your Committee for granting our request, and at the same time to convey to you and your colleagues our sincere regret that the petition should have contained any suggestion or statement not in strict accordance with the facts.

With respect to the suggestion in the petition that proper notice was not given of the inquiry, I would like to explain that the petitioners were informed that the only notice Fielder received of the meeting at which he was disqualified was a verbal one given to him on the Randwick racecourse on New Year's Day by your Secretary, requesting him to appear before your Committee on the following Thursday at the Club's office.

Your

Your petitioners were further informed that said Frank Fielder had not been invited by you to call evidence, and although he now declares that he has no such recollection or knowledge, I now desire, on behalf of the petitioners, to inform you that whilst unreservedly accepting your statement to the contrary, yet would respectfully point out that Frank Fielder (owing mainly to a serious accident that befell him some years ago, as the petitioners are informed and believe) is a lad of dull intellect, and did not properly grasp either the meaning or seriousness of the situation, as very important evidence could have been called, for the obtaining of which he should have asked for an adjournment, and I wish further to state that the petitioners, whilst strongly believing in the said Frank Fielder's innocence, yet have too high a regard for your committee to question its integrity, and signed the petition without any such intention.

Your committee have always had the confidence of the sporting public by reason of your integrity, impartiality, and sense of "fair play," and, above all, as gentlemen of the strictest honor.

The petitioners, therefore, feel quite confident that the great desire of yourself and colleagues in the present case will be that a full and complete inquiry shall take place, and justice done to the boy.

That young Fielder, if innocent (as the petitioners believe him to be), should have been found guilty by your committee of dishonest riding, and disqualified for a term of three years, is to him one of the most serious things that could have happened, and if your committee, after fully investigating this matter, should see no just reason to alter or revoke their former decision, then his good name and reputation will be completely lost, and his prospects ruined for the remainder of his life.

This being so, you will admit that, in consonance with the ordinary principles of justice, it is right and proper and reasonable, under the circumstances, that you and your colleagues should afford him every opportunity, not only to establish his innocence, but also (in the public interest and for the purity of horse-racing) aid him in every legitimate way to bring out and elucidate all the facts and circumstances in connection with the race in question.

As it is apparent from the preceding statement that young Fielder is quite incompetent to conduct his own defence, or elicit facts, I now beg most respectfully on behalf of the petitioners, so that full justice shall be done, to request you and your colleagues, for the several reasons herein set forth, to be so good and considerate as to allow him to be represented, either by counsel or attorney, at the hearing of this matter on the 15th instant, and also that you will, on that date, of your own motion recall any witness that, in your opinion, ought to be further examined in the interests of a fair and just decision.

Your early reply to this letter will much oblige.

Yours &c.,

P. J. HOURIGAN.

The Hon. W. A. Long, M.L.C., Chairman, Australian Jockey Club, 14, Castlereagh-street, Sydney.

Statutory Declaration.

I, JOHN GILBERT, of Rocky Point Road, Kogarah, farrier, in the Colony of New South Wales, do hereby solemnly and sincerely declare as follows:—That I shod the chestnut mare "Mora" prior to her running for the Christmas Handicap at Randwick, on the 26th December, 1899, and that the plates I now produce and hand to T. S. Clibborn, Secretary of the Australian Jockey Club, are the plates she wore in the race aforesaid. And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales and to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Sydney, this 24th }
day of February, 1900, before me,—

JOHN GILBERT.

W. H. MOSELEY, J.P.

AUSTRALIAN JOCKEY CLUB.

Thursday, 15 February, 1900.

REOPENING of Inquiry into the running of "Mora," on the 26th December, 1899, as compared with her running on the 1st January, 1900.

Present:—The Hon. W. A. Long (in the Chair); the Hon. H. C. Dangar; Adrian Knox, Esq.; F. Wentworth, Esq.; R. Jones, Esq.; V. Dowling, Esq.; H. M. S. Cox, Esq.

Mr. C. F. Jones (the shorthand-writer) having previously informed the secretary, Mr. Clibborn, that he had been requested by Messrs. Samuel Fielder and Hourigan to supply them with a copy of the transcript of the shorthand notes of the evidence taken on the first inquiry, confirmed his statement before the committee.

The Chairman (to Frank Fielder): Q. You requested us to have a rehearing of your case? A. Yes.

Q. And the committee decided to do so, and you were informed that you might call such fresh evidence as you liked? A. Yes.

Q. You understand what that is, do you not? A. Yes.

Q. Such fresh evidence as you might desire to produce? A. Yes.

Q. Have you any evidence to produce? A. Well, there is my father.

Mr. Dangar: Q. Anybody else? A. Mr. Crick, Mr. Raynor, Mr. Burton, Mr. Cornwall, Mr. Mayo, and Mr. Fuller.

The Chairman: Q. What Fuller? A. Wizzy Fuller, and Mr. Gannon and Mr. Hart.

Q. If you have omitted anyone, you may think of them afterwards, and call them, but I want to suggest to you that you should call Mr. Crick first, as his time is most valuable, and hear what he has got to say;—does that meet with your approval? A. I would rather call my father first.

Q. He can wait; but it really makes no difference which you call first. Mr. Crick, of course, has important public business to attend to, and he may desire to get away as soon as possible; that is the only reason I put it to you in that way;—do you object to having Mr. Crick in first? A. I would just as soon have my father in, sir.

Samuel Fielder examined:—

The Chairman (to Frank Fielder): Q. You have called your father, Mr. Fielder? Frank Fielder: A. Yes.

The Chairman: Q. Do you wish to ask him any questions?

Mr. Samuel Fielder (interrupting): He has got no idea of asking questions. He has no memory of anything on account of an accident he has had.

The Chairman: Never mind that, Mr. Fielder. Q. What have you got to say, Mr. Fielder, senior? A. Will you grant me a favour before we go on. I think you want only to get at the truth of the matter, and I think I can help you. I ask that you will allow me to ask the witnesses one or two odd questions as they come in. It will enlighten you, and get at the truth of this thing.

The Chairman: We cannot accede to that.

Mr. S. Fielder: The boy is not capable of asking questions. He has had a bad accident, and has no memory. You can see his face is all smashed. He has no idea of asking questions.

The

The Chairman : I and the other members of the committee will assist Fielder in regard to his witnesses in every way we can.

Mr. S. Fielder : If you will not allow me to do it, of course I cannot do it, but I only ask you to do so in the interests of justice.

Mr. Knox (to the Committee) : Let him give his evidence first, and then we will consider it.

Mr. S. Fielder : It is only in the interest of justice I want to ask these questions.

Mr. Dangar : It is an unusual way of proceeding, but I am sure the committee will consider whether they will allow you.

Mr. S. Fielder : It is to get at the truth of the matter.

Mr. Dangar : That is all we want.

Mr. S. Fielder : Yes, that is all we want.

The Chairman (to Mr. S. Fielder) : Q. What evidence have you got to give? A. I saw the race all the way. I watched the race particularly, and am quite positive the mare could not possibly have won with any jockey in the world. I will bring witnesses to prove that. Everyone is of the same opinion as myself. She was running fourth all the way—running on the rails. "Drama" came up to her at the 7-furlongs post, and she ran alongside of her head and head to about the 3½-furlongs post. I had the glasses on the mare then, and I said to my friends, "The mare has got no chance; she is beaten now. He is riding her hard." I backed her myself. I also made my friend, Colonel Mackay, back her, and I made Mr. Crick back her, or asked him to back her. I never saw the mare race before. I was only going on her reputation. My boy had never ridden her before. I made all my friends back her. I had that liberty from Mr. Knight, who told me to put as much money on her as I liked. I put £100 on her, and would have put more on, but could not get a price on her until I saw the mare. When I saw the mare I would not put any more on her. My son begged me to put another £100 on her. I said, "I have seen the mare, and I do not care to have any more on her." I had my glasses on the mare, and I saw my son deliberately ride her as hard as he could possibly ride her or any other boy in the world, from the 3½-furlongs post to the winning-post, and instead of gaining ground she lost ground. That is all I have got to say about the race.

Q. What is your idea about the race? A. My own idea about the race is that she was not fit to race, or was not wanted to race. I told Mr. Knight when he came in afterwards that if he lived to be 100 years old he would not have my boy to ride his mare again.

Q. Why do you think she was not wanted to race? A. Because she had a belly like a mare in foal, and I do not care who knows it, but she had aluminium shoes on her. I have a pair to show you. Perhaps the committee never saw them. I have a pair at the door if you would like to look at them.

Q. Is that the pair the mare had on? A. I do not say that. I only want to show them to you—that is, for your own information—to let you know what aluminium shoes are. Perhaps the committee have never seen what these aluminium shoes are. If the committee would like to see them they are at the door there.

Mr. Dangar : Q. Do you mean to say they are not aluminium at all? A. To the public they are aluminium. They are at the door to give you an idea what aluminium shoes are supposed to be.

Q. Do you mean to tell us they are the kind of shoes she had on on that occasion? A. I cannot tell you, because he brought his own blacksmith from Moorefield to shoe her. I cannot prove it. That is only my opinion. It is my opinion because the mare finished like an old bullock. That is why I think there was something wrong with her. I lost £100 on her, as I wrote to you, and told you, and I have got the men here to prove that they put the money on for me. My son begged me to put another £100 on her, but when I saw the mare I did not care to do it.

The Chairman : Q. Your letter was read to the committee, and that is in evidence? A. Yes, thank you.

Q. You say the mare had a belly on her—she was full? A. Yes. When I saw her I did not care to have any more on her. I made all my friends back her in the early part, but had I seen the mare before I had done so I would not have done so afterwards.

Q. Had not you an opportunity of seeing her before? A. No. She had her clothing on. I had no opportunity of seeing her before she was led out.

Mr. Dangar : Q. What induced you to put as much as £100 on her without having seen her? A. Because I thought it was an absolute certainty, and I had the owner's assurance beforehand, which I thought a very unusual thing. He said, "You can put as much money as you like on this mare," and he told other people to do so. I picked backers to do this sort of thing. They are at it every day. I put £100 on her. I went to two different men not to do him an injury, and asked them to do it as quietly as they could. I thought, from the accounts of other people about the mare, it was an absolute certainty.

The Chairman : Q. Who did you go to to put the money on? A. Mr. Genge put £25 on, as he will tell you when he comes in; Mr. Fuller put £50 on, and Mr. Knight put £25 on. Mr. Genge was to put £50 on, but he could not get on at even money, and he could only get £25 on. After I saw the mare I told him not to put any more on—that I did not want any more on.

Q. Have you got the blacksmith that shod her here to give evidence? A. No; I have not. He is a private person. I do not know his name.

Mr. Knox : Q. You said he brought his own blacksmith with him? A. He came from Moorefield.

Q. If he is at Moorefield, you can find out who he is? A. I cannot. I have left no stone unturned, but cannot find out anything about him.

Q. Is not Roarty here to give evidence? A. Yes.

Q. Does not Roarty know who shod her? A. No.

The Chairman : Is it not true that, after the race, Mr. Knight went to you and said he would not allow your boy to ride her again? A. After I abused him first.

Mr. Dangar : Q. Why did you abuse him? A. Because I was dissatisfied with the mare. I thought he had made a cat's-paw of my boy? I said, why did he ask my boy to ride her at all—that he had his own boy. He said, simply because he thought the public would back whatever my boy rode, because they always back my boy—because they are sure of getting a good run for their money.

Q. You say he had his own horseman? A. His own horseman, that he retains and pays so much a year to.

Mr. Knox : Q. Do you not think that Parker was ill? A. I know that he was not ill. He was riding Mr. Lamond's horses all through, and was as capable of riding as my boy. If he had been on the horse the public would not have backed her, but my boy being on her they knew everything was all right, and they backed her. After I rowed with him he went over to the newspaper reporter, which the sporting editor of the *Herald* will tell you, and made a fuss about my boy, in case anything would appear in it afterwards—in case he would be had up over it. He wanted to put everything on to the boy.

Mr. Dangar : Q. Do you mean to say Mr. Knight put your boy up in order to induce the public to back the mare? A. I am as confident as that I stand here that that was his reason for engaging my boy to ride her. He knew my boy was a favourite, and that the public would back her if he rode her.

Q. That is not the policy of horse-owners generally to put special boys up to get a horse backed? A. Not if they want to win. My opinion is different. I have got my own opinion, and I think the boy was engaged and put up for purpose.

The Chairman : Q. Was he engaged to ride through the meeting? A. No; only for the one race.

Mr. Knox : Q. Had not he been engaged to ride "Royal Purple"? A. He engaged him to ride nothing but "Mora." He engaged him to ride "Mora" in the Summer Cup, which he had no intention of running her in.

Mr. Dowling : Q. How long before the race did he engage him? A. On the first day of the race-meeting. He was engaged somewhere near the middle of the day. There was some particular race being run at the time. He came up to me and asked me to let him ride.

Mr. Knox : Q. That was the day he did ride? A. No; it was the second day he rode. That was the same day as the Summer Cup. It was the first day he engaged my boy to ride. He came to me and asked me if I would let him ride in the Summer Cup. I said, "Yes."

Mr. Cox : Q. Was there any understanding that he should ride in Tattersall's Cup? A. None in the world. He simply asked me to let him ride her in the Summer Cup. I said, "Yes." I believed she was going to run in the Summer Cup, and so did everybody else until the last minute almost, when the bell rang and she was scratched, and when all the double money and everything else was gone. As soon as the bell was rung she was scratched.

Mr. Dangar : Q. Are you aware that Mr. Knight put a considerable sum of money on her in this Christmas Handicap? A. He said he did. I have no doubt he put some money on her, but it is quite possible, in a case of that sort, for every £1 a man puts on for him to get £5, when there is nothing else backed in the race but herself.

The

The Chairman : Q. How? A. To go to bookmakers and ask them to deal with this mare. Every £100 they laid against her he could get half of.

Q. If he could do that, other people could too? A. Certainly; but it is not every horse the public would back as they would a mare like that.

Mr. Dangar : Q. Do you think that is at all a common practice with horse-owners? A. I think it is an unusual practice, but it is done at times, I do believe.

The Chairman : Q. It is possible to be done? A. It is possible to be done. It is an unusual practice, I have no doubt about that, but still it is on record that these things have been done.

Mr. Jones : Q. It is unusual, because the opportunity is seldom? A. It is unusual that you can get the public to back a horse like they did this horse. The public would have nothing else but this horse in the race. It looked an absolute certainty. The public would back nothing else. All the betting was done on this mare. There was nothing else backed in the race. She opened at even money, and was even money at the finish. That does not look too good. She should have started at 3 to 1 if everything was *bona-fide*.

Q. Had you any suspicions about the whole thing? A. Not until I saw the mare.

Mr. Cox : Q. What struck you particularly? A. Because she had a belly on her. I am an experienced man, and have been training racing-horses thirty-five years. I saw this mare, and can bring experienced men, who have been training longer than I have been, who will say the same thing as I do—that the mare looked as if she had been fed on green lucerne all the night.

Q. Did you notice her shoeing? A. I noticed her shoeing. She had aluminium on. My horse was standing alongside O'Connor's on Tattersall's Cup Day, and as I walked past the blacksmith was shoeing her with steel plates. I said to O'Connor, "How is it, Dick, you are running her with steel plates to-day—not aluminium?" He said, "I am going to try her with steel plates to-day." Then it struck me as being curious. I had my own suspicions, but I had no proof. I have none now. He will tell you when he comes to-morrow, or any time you like to call him. I said, "Why are you not running her with aluminium to-day?" and he said, "I am trying her with steel plates to-day."

Mr. Dangar : Q. Do you know whether "Mora" is in the habit of running either in aluminium shoes or plates? A. I know nothing about her in the world. I never saw the mare race before. It was only on her reputation that I backed her, but I simply saw that she ran with aluminium the first day, and the second day, as I tell you, when I walked alongside the mare—my horse was standing alongside her—I asked him that question, why was he not running her with aluminium to-day, and he said, "I am going to try her with steel plates." I would like very much to show you those aluminium plates, if you would look at them, to give you an idea what they are.

The Chairman : Q. We clearly understand that those plates which you will show us were not used for "Mora"? A. Certainly not. It is just for your own information, and perhaps for future reference it may be handy to see them, to give you an idea what aluminium plates are supposed to be. If you would like to look at them, Mr. Clibborn, they are at the door. [*Aluminium plates produced and inspected by Committee.*]

Mr. Cox : Q. You can tell them if you hear nails being driven into them? A. No—not a bit in the world.

Q. From the sound of the hammer? A. No.

Mr. Knox : Q. Who made these? A. McLennan made those.

Q. What for? A. I got them expressly made to show you what aluminium plates are. They have never been on a horse. They are bran new.

The Chairman : Q. They are for rather a large foot? A. They are for no particular foot when you get them made for this purpose. It is not the foot or the shape, but the weight of them.

Mr. Dangar : Q. It is not aluminium at all? A. It is supposed to be. I mean to the ordinary public they are aluminium.

Q. They might be zinc? A. If you were looking on and saw those going out you would naturally suppose they were aluminium.

The Chairman : Q. Do you not think, Mr. Fielder, that so far as the weight goes these shoes are larger than usual;—you would never find a racehorse with a foot as big as that? A. Oh, ever so much bigger. That is not a big foot at all. It is the ordinary size. I only asked him to make them. I did not make any statement to him, or anything else—just asked him to make what are supposed to be the ordinary aluminium shoes. They are not measured to any horse.

Mr. Dangar : Q. They are not aluminium at all? A. No; but they are what are given to the public as aluminium. If you saw them going out on a horse you were backing you would naturally suppose he had aluminium shoes on, would you not?

Q. Probably. A. That is all I want to explain to you.

The Chairman : Q. Is there anything more you want to say? A. Nothing more.

Mr. Knox : Q. Have you any explanation to offer in regard to why you have made no effort to get this blacksmith to come here and give evidence? A. I have made every effort.

Q. What effort? A. I went to two or three of our different blacksmiths and asked them to find out for me—to do their level best. I did not care what it cost, as long as they could find out for me if this thing had been done.

Q. Have you found out now who shoes for Mr. Knight? A. Everybody may shoe for him. Downey used to shoe for him.

Q. I do not mean that;—you say he brought his own blacksmith from Moorefield? A. Specially from Moorefield.

Q. Have you found out who the man is? A. Nobody seems to know his name. I asked my blacksmith in particular. I said, "If you can find out for me, I do not care what it costs. I do not care if it is £50." He said he knew the man that shoes at Moorefield.

Q. Is he the man that was shoeing for O'Connor when he was putting the steel plates on? A. The same man.

The Chairman : Q. He lives at Kogarah, does he not? A. I believe he does.

Mr. Knox : You do not know his name? A. No.

Q. Or who he was employed by? A. No.

Q. Or whether he is the proprietor of a forge or an employed hand? A. No. I told my blacksmith, "I do not care what it costs. I do not care if it costs £50; find out what man put these shoes on this mare." He came back, and said, "It is not a bit of use; it is a thousand to one chance of finding out."

Q. Who is your blacksmith? A. McLennan. He has been for twelve years.

Q. Did not you bring him? A. I did not think it necessary.

Q. You make a sort of charge of conspiracy? A. I do not make a charge of conspiracy.

Q. You say that, in your opinion, Knight, O'Connor, and the blacksmith entered into a scheme to deceive the public by putting on bogus aluminium shoes—that is to say, shoes that are really iron shoes? A. That is my opinion. I believe that is what the mare carried. I believe it firmly. Still I cannot prove it.

Q. You say you have asked McLennan to make inquiries. A. Yes.

Q. In order to find out whether that is a fact? A. Yes.

Q. You say McLennan knows the name of this blacksmith? A. Yes; he knows him too.

Q. Knows him too? A. Yes.

Q. And that he has made inquiries? A. Yes.

Q. Does it not occur to you that it would be, at any rate, of assistance to the committee in getting to the bottom of this thing that this blacksmith should be here? A. I have not thought so, because I could not prove this man shod the mare.

Q. You proved he shod the mare;—do you not think it is material whether he comes here to tell us what he shod the mare with? A. I do not know who shod the mare.

Q. McLennan knows;—you told me he did? A. He said he knew the man that shoes at Moorefield, but whether he shod the mare or not I do not know.

Q. Did you not tell me just now that McLennan knew who the man was that shod this mare? A. I said he knew who the man was that shod at Moorefield. I told him to find out, no matter what it cost me, but I do not know myself.

The Chairman : Q. The value of the blacksmith would have been to elucidate to the committee the facts of the material with which he shod the mare, and as McLennan knew the blacksmith's name — A. (*interrupting*). He does not know the blacksmith's name that shod the mare.

A. You told us he did? A. I mean to say he knows the blacksmith that shoes for Moorefield. I asked him to try and find out, to spare no expense—to try and find out what this man put on this mare's feet.

Q. There was no necessity to go to any expense; the sole expense necessary was to pay the train fare to Moorefield and find out;—there was no necessity to spend £50. A. I do not think the blacksmith would betray a man for nothing. If I said to a man, "Shoe this mare, do not let the public know," do you think he would tell it for nothing.

Q. You should go to O'Connor and find out who his blacksmith was? A. The blacksmith would not tell me.

Mr. Knox: Q. Do you think, if you gave him £50, the evidence would be of any value? A. I do not know; something must have been wrong for her to finish in the way she finished.

Mr. Dangar: Q. When did this suspicion first occur to you? A. Before the mare went out in the run to do her preliminary it occurred to me.

Q. A suspicion entered your mind that the shoes she was wearing were not aluminium shoes? A. It did not enter my mind at all, but as soon as I saw the mare going out, and saw the belly on the mare—

Q. (Interrupting.) I am talking about the shoes—not about the belly on the mare? A. I had not the least suspicion. Q. It occurred to you some time? A. It occurred to me afterwards; when I saw the mare going out with a belly like a mare in foal I came to the conclusion she had no shoes on her. She was supposed to be a brilliant mare, and she was running fourth all the way.

The Chairman: Q. When was it that your son wanted you to put another £100 on her? A. I was talking to Mr. Crick and Colonel Mackay—Colonel Mackay is an old friend of mine for years, an amateur rider for me for years—and he came up to me, and said, "Sam, what do you think will win?" I said, "They tell me it is an absolute certainty for this mare." He said, "She is only even money." I said, "Is it not better to take even money than 10 to 1 about an outsider?" Mr. Crick will tell you; he was there at the time. I was talking to Mr. Crick at the time. I said, "Is it not better to take an even money chance about a certainty than 10 to 1 about an outside chance." After we were talking there awhile, O'Connor came leading the mare down out of the gate with Frank on her back. I went away round, and met my son, and he said, "Dad, you ought to go and have another £100 on this mare."

Mr. Knox: Q. What son? A. My eldest son, Jack. He said, "Go and have another £100 on her." I said, "I have had a look at her, and I do not care for her; I have enough on her." I felt a little down-hearted, because I considered I had been had for it.

The Chairman: Q. John Fielder had a long experience in racing? A. No.

Q. He had seen the mare stripped before? A. No, he never saw her stripped at all; that is the worst part of it. I would never have seen her stripped if I had not been talking to Colonel Mackay and Mr. Crick, and as I was talking to them at the cigar divan O'Connor came along leading the mare down.

Q. Why did you not have a look at her before? A. I do not want to pry into other people's affairs, because they might think I was interfering in their business to a certain extent.

Q. They walked from the stall down the paddock and through to the gate? A. Yes.

Q. Anyone can see them, then? A. You can if you are thinking about them; but if you are in the ring betting, or on the other side of the ring, it does not come into your head.

Q. How do you know your son John did not see her stripped? A. I am positive he did not.

Q. Why? A. Because when I said, "I am positive I have got enough on the mare. I do not like the look of her," he would have said, "She looks all right," or "She looks all wrong."

Mr. Knox: Q. He never told you he did not see her? A. No, because the mare was not there. As the mare was led past me when I was talking to Colonel Mackay and Mr. Crick, I turned straight down and met my boy between the end of the Members' Stand and the Grand Stand.

Mr. Dangar: Q. You must have known perfectly well that your son John had some very good reason for advising you to put another £100 on? A. Because he thought it was an absolute certainty, the same as everyone else did.

Q. It is not at all likely that you would back an animal for that large amount of money, knowing you had put a large amount on already, unless for some good special reason? A. That was the opinion of everybody. Everybody thought the mare could not lose. I never saw her race before. My son saw her race in Melbourne. Everybody that saw her race thought it was a case of putting the money on and picking it up. I thought there was no doubt about the mare running alright.

Q. You said you had consulted Mr. Knight—that you yourself had spoken to Mr. Knight? A. He told me to put as much money as I liked on her. I will tell you why. He said, "Now, look here, Sam, you may put what money you like on the mare," but he said, "Do not back 'Royal Purple.' What money you want to put on 'Royal Purple' I will put on for you." I said, "You put a pony on for me." He said, "You can put as much as you like on it, because the public will be in first, and you might as well be in with me as the public." So I went to Fuller, who does a lot of commissions for me, and I said, "Whizzy, go and put £50 for me on this mare; put it on as quietly as you can"; he went away. Then I said to Genge, "Go and put £50 on her as quietly as you can, so as not to do the owner any injury." Genge went away, and came back and said he could only get a pony at level money, and I went away, and I was talking to Colonel Mackay and Mr. Crick, and as I was talking to them the mare came past with her trainer leading her, and Frank on her back.

Mr. Knox: Q. You said just now that Genge came and reported to you that he could only get a pony on at level money? A. Yes.

Q. And a long time ago you told us that the mare was never at a worse price than even money? A. I said she started at even money. She opened at even money, and started at even money, and in the middle they were laying 6 to 4, and at the end she came back to even money, although there was no money going on the others to make her come back, yet at the end she came back to even money.

Chairman: Q. How much did Genge put on for you? A. £25; Fuller, £50; and Mr. Knight, £25.

Mr. Dangar: Q. Did you see the race run? A. Yes; I watched it particularly. I never took my glasses off it.

Q. Did you observe that your boy Frank, after just taking a run into the turn into the straight, took the mare inside of everything, and behind, I forget what animal it was, but instead of making an effort on the outside rode her right in on to the rails behind the fourth horse, I think it was, at that period of the race? A. She was never near the rails. I will explain the race as if I was looking at it now.

Mr. Knox: Q. You may not understand this plainly;—do you say that in the straight Fielder did not pull the mare in on to the rails? A. Do you mean right in on to the rails?

Q. Right in close to the rails—in behind the horses? A. Yes; behind the horses.

Q. He pulled in behind three horses? A. Yes.

Q. How far off the rails, to the best of your judgment? A. I should say about a length. It is a hard thing to say, looking at horses galloping past you. When they came down by the 3½-furlong post, "Red and Black" was in front, then "Drama," then "Argo," and "Mora" was running about fourth here [illustrating]. When they came round to the turn, "Argo," "Red and Black," and this other mare, the winner—"Drama"—came on by themselves, and "Red and Black" dropped out. There were three of them together coming down, running together—racing together side by side. Frank was getting here [illustrating]. There is the winning-post [illustrating]. There was an opening here, and he made for this opening here, but the mare could not get to it. She was not fast enough. The horses closed round.

Q. Do you think he pulled in to make for the opening? A. Yes; I am certain of it. The mare had not pace enough to get to the opening, and the horses closed over on her.

Mr. Jones: Q. What is the object of getting in the opening? A. A horse is very shifty sometimes. Sometimes you can get a deal more out of a horse—

Mr. Knox (interrupting): Q. You have no doubt that this was the reason for his pulling in? A. To get to the opening. I am positive of it, but he had not pace enough to get through.

Q. That was the only motive? A. Yes.

Mr. Jones: Q. Did you see anything particular in the early part of the race? A. No; he got away well, and had a really good opening at the half-mile post. I had the glasses on her. I had my suspicions, and I was watching her particularly. When she got a little past the half-mile post I said to one of my friends, "The mare has not got 1,000 to 1 chance"; and at the 3½-furlong post I took my glasses off her. She was beaten. She had not 1,000 to 1 chance. She never showed any brilliancy in any part of the race.

Mr. Dangar: Q. She ran a very different animal in Tattersall's Cup? A. Very much so, although she was ridden very badly.

Mr. Cox: Q. You saw the mare running in Tattersall's Cup subsequently? A. Yes.

Q. What did you think of her performance? A. I did not think very much of it. I did not think very much of it at all.

Q. Comparing her form in Tattersall's Cup a few days afterwards, what did you think of it? *A.* I think there was very little difference in it. I do not think the mare was a trier any more in Tattersall's Cup than in the other race, if you ask me the truth—not in either of them. You understand racing a good deal. You do not think one of our very best horsemen like Parker would do a thing like that if he was trying to win a race—that he would come at 6 furlongs from home, and ride a mare like that, a non-stayer.

Mr. Dangar: *Q.* She was not supposed to be a non-stayer, was she? *A.* Yes; she was supposed to be a non-stayer, but a very brilliant animal. Pace was her forte, but she was a non-stayer.

Mr. Cox: *Q.* Still, as a racing man, you consider there was a vast difference between those two performances—you could not compare them? *A.* I do not, indeed, because "Drama" carried 6 st. 9 lb. and "Argo" 6 st. 7 lb., or something like that. They both beat her. She ran a good third to those two horses. Later on, about an hour afterwards, "Argo" came out, and met a fair field, and beat them by ten lengths easily. "Drama" here the other day comes out and carries 8 st. 2 lb., and she meets the winner of the Anniversary Handicap, and beat him rather easily. Still, I do not think those classes of horses could beat "Mora," provided the mare was in her best form. They would not have a possible chance to beat her—"Inquirer" or anything else. To show you there was no difference in the form, any of you gentlemen who have been racing know well that "Willie" ran a good third to this mare "Mora." "Willie" beat "Mora" for third place. If "Drama" went out to-morrow with 6 st. 9 lb. on, and "Willie" with 7 st. 4 lb., the odds would be 10 to 1 on "Drama"; you would not be able to bet on the race. I saw "Drama" carry 8 st. 2 lb., and she met "Inquirer" with 7 st. odd, and simply made a hack of him. Then he came out the next day, and won the Anniversary Handicap comfortably.

Q. And he made a hack of her? *A.* Yes; she ran last but one. That is the inconsistency of running.

Mr. Fielder: Before I go, gentlemen, I would like to ask you to allow me to ask the witnesses some odd questions?

The Chairman: We will discuss that.

Mr. Dangar: The proceeding is somewhat irregular, Mr. Fielder. We will consider it.

[*Mr. S. Fielder, having retired, was later on called in again.*]

The Chairman: Mr. Fielder, after giving your request careful consideration, the committee has come to the conclusion to refuse it, on the ground that it is not in accordance with the practice of this club, nor in accordance with the practice of jockey clubs throughout the world—I mean the English-speaking world—wherever English racing is carried on, and the committee will not make a variance in that respect.

Mr. S. Fielder: Thank you.

The Chairman: They will not make any variation in the practice we have hitherto adopted, and which has been adopted by other clubs; but I may assure you that, in the handling or examination of the witnesses, your son will have every consideration and every assistance that is possible from the committee.

Mr. S. Fielder: He has got no idea in the world of asking questions. I only wish he had for your sakes as for my own. All I want is the truth. I want nothing further. I am afraid he will be unable to do it, but if you will help him he may be able to do it. Shall I sit here or retire?

The Chairman: You will have to retire.

[*Mr. S. Fielder retired.*]

Mr. W. P. Crick examined:—

The Chairman: *Q.* We are hearing fresh evidence called by Frank Fielder with regard to the running of "Mora" in the Christmas Handicap, and he desires you, or you desire, to be present? *A.* Yes. I wrote you to that effect.

Q. The Committee is very glad to see you here, to hear what evidence you have to give, and Fielder wishes you to give evidence? *A.* I would like to premise, of course, as I did in my letter to you, Mr. Long, last week, with regard to that petition for rehearing which I signed, that you will quite believe me when I say I do not want to pass any reflection on any of the committee. In regard to "Mora's" running, the decision of the committee was told me by a friend. I had not read it in the paper, and, I am bound to say I was staggered when I heard the boy was punished, and all the others were acquitted. On the day of the race I thought at the weights (and I have been racing now about eight or ten years) "Mora" had a 10 to 1 on show; in fact, I really thought it was madness to think anything had a show against her, taking her Melbourne form, and when I heard that a heavy stable commission—£350, I heard—had been put on her, I went in and inquired the price, and found the market had not altered. It was always even money, or 5 to 4. I knew very well, at least my racing instincts told me, that that could not be all right, that once the stable was on, instead of being taken at 5 to 4 or even money, it ought to be 10 to 1 on. I went then to see who was riding, and I saw Fielder on. Then I went round and saw the father, Sam. Fielder. I said, "This is a very funny thing, this mare keeping this even money the whole time." He said he had put a lot on her, about £100. I am bound to say that Fielder, with regard to information of that sort, in my experience has never put me astray. He has never put me on to a dead one. Just when I was talking to him, Colonel Mackay came up and he said the same thing again in my presence—that he had put this money on—and he said, "It does not look as though the mare could not lose." I went back again. I thought to myself, "That must be all right, if he has put £100 on, and the mare is still at the same price, instead of taking 2 to 1 or 5 to 2." I would have backed her. I looked at the mare, and she looked anything but ready for the race. I did not back her, but I thought it was all right. I have a good pair of glasses. I need hardly say, as a racing man, I keep my eye out for one that is strong for another day. I watched this mare carefully. I have no interest in the Fielders. It is seven or eight years ago since one of the boys rode a race for me. It is my opinion the mare was not interfered with. She looked either lazy or stiff, and coming up the straight she did not show the least form. She came out a few days afterwards and was all form, with Parker on her back. She was like lightning for 5 or 6 furlongs. Had she that form on the day of the Christmas Handicap it would have been impossible for the boy not to have won, unless he laid back in the saddle. I watched her carefully. I thought there was something wrong, but I could not see anything in the race to support my opinion, until I heard something which I dare say has been mentioned here before this, and that is, that their own private shoer was brought down from Moorefield to shoe the mare. At Randwick, there is Downey, the most experienced shoer in the Colony, McLennan, and others; and, then again, when she ran on the day of the Cup, the trainer's private shoer came down and shod her again. That appeared a very suspicious circumstance indeed. It is impossible for a mare to have made the improvement she did in those few days in a severe race—in that long race—which, in my candid opinion, she was not wanted to win. That is the opinion I formed. I am bound to say, with every respect to you, that I am only too delighted to support the committee, but I really thought when I heard this decision that the wrong man had been punished. That there was something wrong I am satisfied. I have spoken to a lot of sporting people who have the same opinion—people who are always supporting the committee, people who go out of their way, if anything, to do so, because there can be no possible reason suggested to do a wrong thing, still you will find a strong opinion outside that the penalty has fallen on the wrong head here. Had I not felt very strongly on the matter, I should certainly not have interfered. It is the first time I did interfere in a matter of this kind.

Mr. Dangar: *Q.* Do you think the money alleged to have been put by Mr. Knight upon the mare for that race was bogus bets? *A.* Of course, that is my opinion, and the only way of testing that would have been to have asked Mr. Knight, or whoever did the commission for him, to name the bookmakers he bet with, and then to have asked them to produce their books, and see if they laid anything else but "Mora" to any extent, because they could not possibly keep on laying even money on "Mora" up to the fall of the flag with the public backing that mare. If they did their books must have been wrong.

Mr. Knox: *Q.* Do you know who put the money on? *A.* No.

The Chairman: *Q.* Mooney and Glenister put it on? *A.* I would not doubt that the money was put on—that some one was used to put it on.

Mr. Knox: *Q.* I was going to ask you this: You know Mr. Glenister is not a man, at least you would presume so, you would say he is not a man one could go to and say, "Put this money on with Smith or Jones," or whoever it might be? *A.* I would not presume too much. I would not say that, but I would say here is the bald fact that if this mare with her performances had belonged to you, or any other member of this committee, she would have been 5 to 1 instead of even money.

Q. When you find it granted that an animal is stiff in a race there may be more than one party concerned in the stiffness;—the thing is to find out who is the cause of it? *A.* Exactly. That is the view I took at the time. Fielder, like other racing men, has his faults; but I have never heard it alleged against him that he ever worked in with a book, whereas I have heard it alleged against other parties whom I do not wish to name, and I know it has been done. I know the

the Caulfield Club was strongly of opinion that the mare was not a tryer in the Caulfield Cup—strongly of that opinion. I know another little incident in connection with this mare in regard to the Caulfield Cup, that Mr. Smith, of Tucka Tucka, if he cares to do so, can tell you, and it will open your eyes.

Q. Who is this? A. Mr. Smith, of Tucka Tucka. It is in regard to a conversation he had as to taking a big wager from Mr. Oxenham. As to saying that this boy or his father can compete with Mr. Knight in this sort of business, I don't think so. I watched the mare very carefully. I have good glasses, the best I can buy, and in my opinion the boy did not ride a good race.

Q. Did you see him blocked in the start? A. From my recollection of it, he looked to go in towards the rails, and then he pulled back, and came out; but if the mare had any running in her then she would have beaten that field, because here is "Drama" comes out afterwards, and we see her running. There is no question in the world that he pulled her back in part of the race, but coming up the straight the mare was ridden for all she was worth, and she could not make up a yard.

Q. Was she not on the outside at the turn? A. She swung a little wide at the turn.

Q. She was on the outside;—when they were where they just straighten them up after the turn she was on the outside? A. Yes, she swung out a little outside there. She went then to go up on the rails—

Q. (*interrupting*). At that time there were three or four horses running abreast there pretty well—three horses running abreast, and he went behind? A. He was blocked in his attempt to get on the rails, and immediately pulled out to get on the outside, but the mare was beaten then. She never made up a yard from that out. All she did was to pass horses that were falling out. She never made a yard up then. "Drama" had her beaten before that.

Q. Why did she try to get on the rails? A. The best jockeys always make for a run on the rails.

The Chairman: Q. He had a clear run on the outside, and that was his nearest way home, and about the Leger Stand—about the far end of the Leger Stand, or a little this side of that,—he shoots in behind his field? A. No; that is the far end from the Grand Stand. That is the beginning of the straight.

Q. He shot in behind these horses, and then he came out again? A. Well, if he was blocked—

Q. (*interrupting*). Of course, then his chance was gone, I admit,—after he had done that? A. Not if she had the running she showed subsequently.

Q. Of course the distance was shorter, you see, Mr. Crick? A. She made no ground.

Q. That would do her no good? A. I admit that was an error of judgment. I would have thought so if I owned the mare myself, but had she the running she showed a few days afterwards that would not have stopped her.

Q. She failed at the end of Tattersall's Cup? A. She had a good long run. I am only expressing my opinion. I have no interest in it, one way or the other.

Mr. Knox: Q. No more interest in it than we have? A. No; I simply watched the mare carefully.

The Chairman: Q. I am simply putting this to you as my view of the race, in contradistinction to your view of the race? A. Yes.

Q. In regard to the betting; these people here—Mr. Knight, Mr. Glenister, and Mr. O'Connor,—you say they could have got the money off? A. Without the slightest trouble if they bet.

Q. What is sauce for the goose is sauce for the gander? A. Yes.

Q. Fielder could have done the same thing? A. Exactly.

Q. And he had plenty of time to do it? A. Certainly. The only object in Fielder putting £100 on, and taking it off again, would be to get more out of some of the books. In my candid opinion, that mare has not tried for a long time, and will not try for some time. She is supposed to be at home disabled now.

Q. The committee have their opinion of the mare, which it is not necessary to disclose? A. I watched the mare especially, because I thought there was something wrong, and that they would come out later on and back her in that race. I watched her pretty carefully, and I am bound to say honestly I could see nothing that I could take exception to, except the misjudgment of the boy's riding.

Mr. Jones: Q. Do you know anything of your own knowledge of the shoeing? A. Only what I was informed. I was informed that they brought their own farrier down from Moorefield on each occasion.

Q. You did not notice the fact of the mare having any shoes on? No. I was up on the stand. I thought she was running with a good feed. I did not notice the shoes.

The Chairman: Q. There is nothing unnatural in their bringing their own farrier down;—it is not a great distance from Kogarah? A. The only thing is, I never heard of it before. It struck me as a very peculiar circumstance.

Q. It is a common thing? A. If it is, I never heard of it before.

Q. Do you think that if you wanted to find out who that farrier was that you could discover it? A. No. I am only saying what I heard afterwards.

Mr. Knox: Q. Do you think you could discover it if you wanted to find him;—if you were defending some one, and you had to find him, you could find him? A. If I thought he was brought down for an improper purpose I would hardly expect him to give himself away.

Q. But you could find out who he was? A. I dare say.

Mr. Jones: Q. You do not think it would be much trouble to find the man who put the shoes on? A. I dare say he could be found on searching.

The Chairman: Q. Kogarah is not a big place? A. Still I should think he would not say anything hurtful to himself.

Q. Is there anything else that occurs to you;—is there any further information that occurs to you to give us? A. That is all I wish to say.

The Chairman: Q. (*to Frank Fielder*): Is there anything you would like to ask Mr. Crick?

Frank Fielder: No.

The Chairman: Q. You have heard all his evidence, have you not?

Frank Fielder: Yes.

The Chairman: You understand the effect of what he said?

Frank Fielder: Yes.

Mr. Crick (*to Fielder*): Which of you rode for me—you or your brother?

Frank Fielder: Perce.

Mr. Clibborn: I have been asked by the Chairman, Mr. Crick, to read this. [*Mr. Clibborn here commenced to read from page 17 of the shorthand transcript of the evidence taken on the first inquiry.*]

Mr. Knox (*interrupting*): It is this, Mr. Crick: the evidence is that there were five men putting this money on for Mr. Knight—that is to say, he gave it to two men—you understand? A. Yes.

Q. And as it is generally done, they distributed it, to get it into convenient amounts to put on; it seems to me—I do not know whether it seems the same to you—that it would not be easy to ear-mark it? A. There would be no necessity for ear-marking it. You are not up to the business. Suppose I want a large bet. If I want to go and bet a level £100, I will not go round to men who will bet me a fiver; I will go to Peel, or Woods, or Westbrooke, or some of those men who will bet me at once.

Q. You say the way to distinguish the money would be to send for the books who laid Mr. Knight his money, and see if they had laid money on "Mora"? A. What I intended to say was to send for the books who kept laying "Mora" at his price.

Q. Do you know their names? A. Yes.

Q. Will you give them? A. No; I do not think it right for you to ask me.

Q. I do not want to press it; we have got to find out things; you say we can find out in a certain way—by sending for the books? A. Yes.

Mr. Dangar: I do not see what good it would be to find out with whom they laid "Mora."

The Chairman (*to Mr. Crick*): Mooney says (*reading from page 17 of the shorthand transcript of the evidence taken on the first inquiry*)—"The only evidence I can give is that he came to me and asked me to put £200 on her. I put it on—the even £200. Mr. Knox: Q. In the Christmas Handicap? A. In the Christmas Handicap. Q. With whom did you put it on? A. I got Mr. Nelson to put £50 on, Mr. Donovan and Mr. Cohen";—so that it is not likely that when the thing was split up in that way there was any concert about ear-marking it? A. Not to ear-mark that money, certainly. I saw a very strong thing at Randwick one day, and Mr. Clibborn asked me if I would give evidence. I said, "It is not a fair thing to ask me to give evidence"; but I told him what I saw.

Mr. Knox: I am putting it to you to show the difficulty we are in; people say we are expected to find out every-thing; we cannot be in the ring and know who laid it? A. If a horse is laid at even money, and keeps even, even, even, even money, then there is something wrong.

Q.

Q. I watched the mare for that reason, and I thought she ought to 4 to 1 on? A. I thought she ought to be more.
Mr. Dangar: Q. The most memorable case was the "Sir Mordred" case, where there was a very large commission put in about "Sir Mordred," and there was more coming, and "Sir Mordred" was scratched? A. That was before my time. I will say, in favour of Fielder, that, while it can be said of him that he might run his horse to suit himself, I never heard it suggested that he ever worked in with a book in his life.

Q. In your opinion, is there much of this bogus betting carried on? A. A terrible amount.

Q. A terrible amount? A. A terrible amount. That is one of my strong reasons why I never back favourites.

Q. You can put it in a phrase which, of course, you will readily understand—you mean to say that horses are very often in the bag, or the owners are in the bag? A. Very often something is wrong when they are at a short price. When horses are at a short price I make it a point never to back favourites, because it is so easy to get a lot of money at no risk. These favourites are to a great extent in the bag. That is the reason why I really turned round in my strong support of the committee; at first I thought you were a bit tyrannical.

Q. If you say that is carried on to a large extent, will you not admit, and will it not become evident at once, that any jockey—not referring to Fielder—that any boy who has to do a particularly dirty thing to carry out the vile objects of these fellows who put horses in the bag and make these fictitious bets, that that jockey must be in the swim with them? A. It could be done with the most honest jockey in the world.

Q. By stuffing a horse? A. Yes. In this race this day, this mare never showed a bit of brilliancy in any part of the race. Then she comes out afterwards with a jockey like Parker on her and she demoralises her field, when, in my opinion, she was the same as on this occasion, and should have died away earlier. If she had come out on this day as she did with Parker she should have won.

Mr. Cox: Q. You saw the two performances—this race and Tattersall's Cup? A. Yes.

Q. Taking a retrospective view of the performances, did it strike you at the time that the whole thing was wrong? A. Yes.

Q. Inconsistent? A. Yes.

Q. More than inconsistent—that there was some fraud? A. Yes; and I fully anticipated the action the committee took in having an inquiry. The way she darted out and showed that brilliancy in running a mile and a half was absolutely inconsistent with her being in the same condition as she was the previous day. It was not a matter of pulling, because she had a smart jockey on her the second day.

The Chairman: Q. To give you an idea of the difficulties this committee have to labour under in coming to the truth of anything, I may say that we finished an inquiry about three or four months ago with regard to the practices of a club in the country, and it took eighteen months to get to the truth of it. We were subjected to all sorts of abuse, both from the Press and from private correspondents, and the winding up of it was that the case was satisfactorily proved, and that those who were accused of being made cats' paws of wrote and apologised to the committee for their connection with the affair? A. I can assure you I took no interest in the matter. As I have just said in my reply, I anticipated there would be an inquiry on this change of form, and when I heard that Fielder was the party singled out it rather staggered me.

Q. He was not singled out; he happened to be riding the horse? A. I do not mean singled out exactly. When I found he was the party punished it really did stagger me. I said at the time to the gentleman who told me, and who is also a member of our Club, "I am surprised"; and when on inquiry I found this boy, who I know is regarded as a dull boy, was left to himself, and that his father went to the country, and that I found the boy took no interest in the matter, it surprised me much more.

Mr. Knox: Q. There is a letter from his father before the committee.

The Chairman (*interrupting*): There is a letter from his father before the committee. He said he had some other business in the country? A. That showed his neglect in the matter. Had I any stronger feelings in the matter, I assure you, gentlemen, I would not have interfered. If I thought for one moment the boy was guilty of it, I would think the sentence was far too light for him.

The witness retired.]

J. R. Smith examined:—

The Chairman: Q. The committee is taking fresh evidence that Fielder wishes to call with regard to the running of "Mora" in the Christmas Handicap, and you are his witness, and he wishes you to give evidence;—tell the committee what you know? A. I heard on the Tuesday before the race that she had done a good gallop at Kogarah, and a man put me on to back her for him for £200. I backed her for £200 myself, and Dr. Symes backed her for £100 for the Summer Cup. We took £500 between us, the three of us:—£500 to £42, I think it was. Of course she was scratched for that race, and the man that got me to back her for him for £200 put me on to it at Kogarah, on account of this good gallop. He came to me and said, "Go and get your money back. She is going for the Christmas Handicap." I said, "How do you know she is going for it?" He said, "I have seen Glenister backing it; Glenister must be doing a commission." I said, "It is not Teddy Knight's game to get men like Glenister to back her; he gets mugs to back her; he would not pay any commission." I would not back it on that account. Mr. Payton wanted me to back "Drama" for the same race. I told him I did not see how she could beat "Mora," so I did not back anything. I was in the centre of the stand and watched the race. The people were shouting out "Mora" was beaten. Then I thought when she came round the turn she was going to win. Just finishing, when she came to the Leger Stand, I thought she was going to win. She seemed to show out on the outside then. Then he pulled in behind the two leading horses, and the harder he seemed to ride her the more she seemed to roll. He was riding her hard when he passed me, and the harder he rode her the more the leading horses seemed to go away from her.

Q. Where were you? A. In the centre of the Stand.

Q. Of the Grand Stand? A. Yes; near the Governor's box.

Q. Did you see the mare before she went out on the running? A. No. I saw her when she left Kogarah in the morning; she came in in the same train with me.

Q. You did not see her after that until after she was racing? A. No; I did not see her after that.

Mr. Knox: Q. She had her clothing on? A. She had her clothing on—yes.

Mr. Dangar: Q. Did you see her when she walked out down the paddock to go down to the running? A. I did not see her at all.

Q. Did you see her take her preliminary? A. No, I did not; I did not see her at all, only in the race.

The Chairman: Q. Does it not occur to you, Mr. Smith, to say anything else with regard to the race;—do you know anything else? A. No, I know nothing else. My idea was that the boy was riding his best. He was riding a bad race. He was riding hard coming down the straight, and the harder he was riding the more she was rolling.

Mr. Knox: Q. You mean coming down opposite the Leger Stand? A. After passing the Leger Stand.

Mr. Dangar: Q. Why do you think he pulled her in behind the other horses? A. He rode her exactly the same way as he rode "Australian Star" at Caulfield. If the other horses had not opened out "Australian Star" would never have won.

Mr. Knox: Q. If this mare had all the pace in the world, and all the dash in the world, when she was in behind the other horses, unless they opened out she could not have got through? A. No; and she could not have got through at Caulfield if "The Chief" had not opened out and let her get through.

Q. I take it from what you said that you did not see any interference to account for his going in there? A. Not that I saw.

[The witness retired.]

H. Raynor examined:—

The Chairman: We are taking fresh evidence with regard to the running of "Mora" in the Christmas Handicap? A. Yes.

Q. Will you give the committee the benefit of what you saw? A. I only took particular notice of "Mora" in one part of the race. I had an interest in "Drama," and was watching her almost all the way. At the 3 furlongs, or somewhere thereabouts, I made the remark to Payton, who was standing alongside of me, "Mora is beaten; the boy is riding her for his life, Tom; your mare will win." I never watched her afterwards. I watched "Drama" afterwards, and "Drama" won. I could not say that I saw her in any other part of the race. You know when you have £1 on a race you generally watch it. I was just watching "Drama" all the way.

Mr.

Mr. Knox : *Q.* Just at the turn, you say? *A.* Just before she came to the turn—just at the bend round—I made the remark to Payton. He was standing with me.

The Chairman : *Q.* Is there anything else you can say about the race? *A.* Nothing else.

Q. Is there anything you know about the appearance of "Mora" before the race? *A.* I did pass some remark about the mare when she was going out. I was asked what I thought of her. I said, "She looks very stout to me. She looks nothing trained up like at Flemington."

Q. She did not look trained up fine? *A.* She did not look trained up fine as at Flemington. That is all the remarks I made about her.

Q. Did she look full? *A.* Very big—short of work, I think.

Q. But not as if she had been fed before the race? *A.* I could not say.

Mr. Dowling : *Q.* Did it occur to you that she might have been stuffed? *A.* She has always run pretty stout, but I thought she looked a great deal more stout about the body than at Flemington. I had a good look at her at Flemington. I met Mr. Mayo, and he made some remarks.

Q. Having observed her before the race, and her subsequent running, what impression did you form of her running form;—the impression you received at first was that she was too big—stuffed? *A.* By the appearance of the mare, I did not think she would run a good race. It was my opinion that she looked too big to run a good race.

Mr. Knox : *Q.* You saw her running in Tattersall's Cup? *A.* Yes.

Q. You know when she ran out to the front? *A.* Yes.

Q. Judging by her running in that race, did that throw any light on her condition in the other race? *A.* Certainly. It showed that she ran a far different mare than in the other race. She showed more brilliancy.

Q. Did you take any notice of her? *A.* I did not take any notice of her. She was very stout.

Q. The one race was on a Monday ———

The Chairman (*interrupting*) : How many days were there between the two races?

Mr. Clibborn : One was on the 26th December and the other on the 1st January.

Mr. Knox : Six days between.

Mr. Jones (*to witness*) : *Q.* Did you notice whether she had any shoes on the day she ran the Christmas Handicap? *A.* I could not say. I did not notice anything about shoes. I could not say whether she had shoes or plates on.

The Chairman : Fielder, do you want to ask Mr. Raynor any questions?

Frank Fielder : No.

Mr. Dowling (*to witness*) : *Q.* What did you think of the boy's riding? *A.* As far as that goes, sir, I could not say. I just saw the boy in one particular place, and I thought he was riding her very hard, and I made the remark.

Q. Did you notice her position in the race—whether he pulled her in or out or anything;—did you notice that? *A.* I did not look at him. I was watching the finish of the other two. I just saw the mare come third, but I took no notice of her at the finish.

Mr. Knox : *Q.* Nor anywhere after she came into the straight? *A.* No. I may have seen her, but I only saw she finished third. Payton was with me, and I was watching "Drama."

[The witness retired.]

John Mayo examined :—

The Chairman : *Q.* We are taking fresh evidence with regard to the running of "Mora" in the Christmas Handicap? *A.* Yes.

Q. And Fielder called you as a witness;—will you tell the committee what you know, or what your opinion is? *A.* About that race of "Mora's"?

Q. Yes? *A.* On the day of the race, Mr. Long, when the betting was begun, it was even money "Mora," so I could not understand it. I said, "Well, I do not know about even money. Surely it is not such a certainty." With that I went and looked at the mare. When I looked at the mare, in my opinion, the mare was not ready. She looked to me like a mare in foal instead of ready to run. I then went back and laid £10 even she could not win. That was my opinion. Mr. Hart told me he put £20 on. I said, "I think you are very foolish." He said "Why, it looks a certainty." I said, "I do not think the mare is fit to run. She might win though."

Q. But with regard to her running in the race;—did you notice her in the race? *A.* The only part I noticed her in was after she passed Oxenham's. She looked to me to be labouring then, and she had not then run above half a mile, I suppose.

Mr. Knox : *Q.* You mean at the mile post? *A.* Past the mile post; but I did not notice the finish, because I could see long before that, or I thought in my own mind, that the mare was beaten. I had only £10 on the race. That is all I had on the race. I did not back another horse in the race and I laid £10 she could not win.

The Chairman : *Q.* Did you see her run in Tattersall's Cup? *A.* Yes.

Q. Was there any variance in her running in the two races? *A.* Not a doubt of it.

Mr. Dangar : *Q.* Would you be surprised if Fielder had said there was practically no difference in her running in the two races?

Mr. Jones (*interrupting*) : As far as performances are concerned; one performance against the other? *A.* The only thing in Tattersall's Cup (I will tell you my opinion), she looked to me as if they wanted to run her out—as if she could not win. With a good horseman like Parker on her, it was the most silly piece of business I ever saw. He put the pace on when they were going fast, and when they put the pace on he kept her going slow. At the time he put the pace on that mare they were going fast.

Mr. Knox : *Q.* Comparing the two performances;—if she had run in the Christmas Handicap like she ran in Tattersall's Cup she could not have lost the Christmas Handicap? *A.* No; I do not think she could.

Q. When you said she was stout, I suppose she was only short of work? *A.* Yes.

Q. If she was as stout as you have described her, from shortness of work, they could hardly get her right by Tattersall's Cup? *A.* They could not.

Q. Did you form any opinion as to why she was stout? *A.* I thought the mare was stuffed. That was my opinion.

Mr. Cox : *Q.* She was full; her belly was full? *A.* Stuffed full; that is my opinion. That is the reason I did not back her, and that I laid £10 she could not win.

Mr. Knox : *Q.* Did you see her after the Christmas Handicap? *A.* No.

Q. Did you see how she pulled up? *A.* No.

Q. I mean, if she was stuffed she would have been blowing? *A.* Not a doubt of it.

Q. Heaving? *A.* Yes.

The Chairman : *Q.* She was a valuable mare, this "Mora"? *A.* They say so, Mr. Long.

Q. On her performances she was a valuable mare? *A.* Yes.

Q. Of course they say there is something wrong about her now;—would they risk stuffing a mare? *A.* You know as well as I do that some of them race that would do anything. That is my opinion. You know there are some people racing that do not care what they do.

Mr. Jones : *Q.* Do you know whether she had shoes on? *A.* That I could not tell you. I never noticed. It is a very serious matter, I should think, for any man to stuff a valuable horse; but still they do it.

Mr. Knox : *Q.* She would be no good afterwards; this boy says he rode her hard for half a mile;—if he rode a stuffed horse hard for half a mile you would not expect him to win afterwards? *A.* No.

Q. Especially six days afterwards? *A.* No.

Q. No doubt in Tattersall's Cup she showed immense brilliancy, because, as you say, they were going fast when she came out, and she left them as if standing still? *A.* Yes.

Q. In your opinion, if the mare had been stuffed on the day of the Christmas Handicap, the 26th, and had been ridden in a mile and three furlongs race I think it was, and ridden hard for half a mile with the whip for the best part of half a mile anyhow—in your opinion, I say, could that mare, a stuffed mare, come out six days afterwards and run a brilliant race? *A.* It is possible. It might hurt nine out of ten.

Q. It is possible, but not likely? *A.* Not very likely; but still it is possible it would not affect one horse so much as it would another. There may have been something on the mare's feet.

Q. I am confining it to the stuffing theory at present;—you would not expect it anyhow? *A.* No. would not; in fact, a man would be a fool that would attempt it.

Q.

Q. Supposing you knew, or thought you knew, that that mare had been stuffed in the Christmas Handicap, and you knew, or thought you knew, she had the best of the weights in a race six days afterwards, and she had had a severe race in the Christmas Handicap, would you think it a good thing to back her? A. No; I would not back her.

The Chairman: Q. On the other hand, if she was legitimately out of condition, not ready you know, short of work, no stuffing at all about it, would you expect her, after the exhibition in the Christmas Handicap, to go and run the race she did in Tattersall's Cup? A. You would hardly think so. They would only have six days, but still you know as well as I do that some horses come on faster than others. What six days might do for her, three weeks would not do for another horse. They say she is a mare that comes on very quick; but I do not know.

Mr. Knox: Q. You know nothing about the mare except what you saw? A. Nothing at all.

The Chairman (to Frank Fielder): Is there any other information you would like to get from Mr. Mayo?

Frank Fielder: No.

The Chairman: Q. Is there any other information you can give the committee, Mr. Mayo? A. Not that I know of.

Mr. Dowling: Q. What opinion did you form of the boy's riding in the race? A. Well, Mr. Dowling, to tell you the honest truth, after she passed that particular place, I did not watch the race much, because I came to the conclusion from the very jump the mare could not win.

Mr. Knox: Q. You mean, after she passed Oxenham's? A. Yes. I bet pretty big, but £10 is all I had on the race.

Q. You did not take particular notice of her more than of any other horse? A. No.

The Chairman: Q. In fact, you came to the conclusion she could not win before she commenced the race? A. Yes; before she went out of the yard.

[The witness retired.]

Joseph Burton examined:—

The Chairman: Q. We are taking fresh evidence in regard to the running of "Mora" in the Christmas Handicap, and Fielder has called you as a witness;—will you tell the committee what you know about it? A. What I know of the race?

Q. Yes; or of anything connected with the race? A. No; I cannot say that I know a very great deal, sir. I had a mare in the race—"Argo," you know. Of course, I did not think she had any possible chance of beating "Mora" from what I saw of "Mora" in Melbourne. I told the owner not to bet on her—that she had no possible chance of beating "Mora." However, when I saw that "Argo" had not any chance of winning—"Drama" was beating "Argo" at the finish, just the last bit—I took notice what was running third. I waited to see what was finishing up behind "Argo," and I noticed it was "Mora," and I noticed how the boy was riding her—very hard—that is what I thought.

Mr. Knox: Q. How far from the post was that? A. 150 yards, I suppose; not far from the post.

Q. Was that after "Drama" and "Argo" had singled out? A. Yes.

Q. And it was after "Drama" had got the better of "Argo"? A. Yes.

The Chairman: Q. Did you notice "Mora" at any other part of the race? A. I noticed "Mora" about the mile post.

Q. About the mile post? A. Somewhere about there. I cannot place the thing exactly—somewhere about the mile post. I think there were about five or six horses in front of her. She was in a fair position—as well up as I thought it necessary for a brilliant mare like her to be.

Mr. Knox: Q. Did you notice anything peculiar about her? A. The only thing I noticed peculiar about her was that she did not seem to be in her usual galloping humour that she was in the habit of being in in Melbourne. I knew what a brilliant mare she was, and she did not seem to be showing any brilliancy at all in the race. She did not seem to gallop in her free style.

The Chairman: Q. Did you see the mare before she went out? A. Just had a glance at her at a distance.

Q. Did you form any opinion of her before she went out to race? A. No; I could not form any opinion of her. She is a mare that was always very big. She has never been light at all.

Q. Runs big? A. Runs big I should think. She might have been a little too big in Melbourne, but she was no bigger than she was in Melbourne; not as far as beef was concerned.

Mr. Dowling: Q. What about her belly;—was her belly as big as it was in Melbourne, or bigger? A. I did not take particular notice of that.

Mr. Knox: Q. It would not have struck you that she was out of the way fat? A. No; because she has always been very fat.

Q. A round mare? A. She was very big in Melbourne. At Caulfield even more than in Melbourne.

The Chairman: Q. Were you training at Caulfield when she was working there? A. No, sir.

Q. I know you were not training her, but were you training your horses at Caulfield when she was running there? A. No, only running in the race. I was staying at "Lang's Hotel."

Mr. Clibborne: I saw her at Caulfield.

The Chairman: Q. It just occurred to me that, so far as the training reports go, she was never doing the preparation that an animal would want for the engagements she had down there? A. Quite true, from what I heard, and from her appearance.

Q. But still she ran a good mare? A. She showed a terrible lot of pace.

Q. That would show they knew how to treat her, so far as her training was concerned? A. No, if you will allow me to tell you what O'Connor said to me afterwards when coming home from Melbourne. I said, "You have given her very little work at Caulfield." He said, "You could not work her." I said, "It is a very funny thing, if you could not work, that she keeps all that beef up and she a bad doer." He said, "Who told you she is a bad doer?" I said, "They told me she was a bad doer, a finicky mare, and that you could not work her." He said, "Don't listen to that. She is a very gross doer." I said, "Why didn't you work her?" He said, "They would not let her work. The owner was under the impression she would want to be very big, and would not let me train her down. But no more of it. I am quite satisfied she will stand work, and when she runs again she will have to do a lot more."

Mr. Knox: Q. In her condition, when she ran in the Christmas Handicap, did you see anything suspicious? A. No.

Q. Would you say she was pig fat? A. No. So far as stuffing is concerned, if a horse is ready to run on the day, you cannot stuff him on the morning of the race, provided you have trained him up to that time. You can stuff a horse for a week by not working him, and by giving him plenty of mashes and green stuff, but not in one day.

Q. Supposing you were told that this mare did the best gallop, three days before that, that she had ever done in her life? A. Then you could not stuff her to stop her.

The Chairman: Q. You cannot get them to eat and drink when you like? A. No. Every horse gets dainty the nearer you get to the day you are having him trained for be as he should be, or as you want him to be. Of course you can get any horse to "do" while you are cantering it—giving it slow work.

Mr. Dowling: Q. That is the eating part of the theory, or if you keep a horse from drinking for a long time before a race, then he is not likely to run a big race if you give him a big drink before you start him; although he would not eat, he would take the drink if dying from thirst? A. You would be more likely to stop him by giving him no water at all. You would be more likely to choke him up by famishing him for a drink.

The Chairman: Q. The old practice used to be to stint them before the day of racing—set them the night before? A. Muzzled.

Q. All that is exploded? A. Yes, with me it has.

Q. You never hear of anyone muzzling them now? A. No. I do not use the muzzle. All that old idea of five or six swallows of water, and all that kind of thing is exploded, I think, a great deal.

Mr. Dowling: Q. Fielder wants you to testify as to the race probably; are you in a position to give any evidence which is likely to be of use with reference to his performance during the whole race;—did you watch him enough for that? A. I cannot say I did. The only time I saw him he seemed to be riding all right, where I would like to have the mare running if she was mine. I must certainly say that "Mora" did not seem to have the same style of galloping she usually has.

Mr. Knox: Q. What would you put it down to? A. I would be more inclined to say she had something on her feet than that she was stopped by her action.

Mr. Dangar: Q. Has not the mare got an injured knee? A. It is no detriment.

Q. There is a lump on her knee? A. Yes; that was from an accident, I think.

The Chairman: Q. Most horses have some defects of that kind? A. That is true.

Mr. Knox: Q. Did you notice her after the race in the yard? A. No.

Mr. Cox: Q. You saw her run in Tattersall's Cup? A. Yes.

Q.

Q. Did you consider the performances were inconsistent? A. I thought she was a very different mare in Tattersall's Cup—a very different style of mare.

Q. You would not attempt to compare the performances—that is to say, you would not say there was very little difference between the performances? A. I would say there was a vast difference. I thought she had a very weak field the day Fielder rode her.

The Chairman: Q. A very weak field where? A. In Fielder's race.

Q. In the Christmas Handicap? A. Yes; that is the race he rode her in isn't it?

Q. Yes? A. Yes.

Mr. Knox: Q. If she had run in Tattersall's Cup the same as in the Christmas Handicap she would never have got to the front? A. No. Then, again, if she had run the same in the Christmas Handicap, I do not think she would have got near, and *vice versa*. She showed the same form in the Caulfield Cup. She was full of running until she seemed to choke up at the finish.

The Chairman: Q. The Caulfield Cup was a much stronger field than Tattersall's Cup? A. Yes.

Q. And Tattersall's Cup was a much stronger field than the Christmas Handicap? Yes.

Mr. Knox: Q. There was no comparison between the class in the Tattersall's Cup and the class in the Christmas Handicap? A. No.

The Chairman (to Frank Fielder): Q. Do you want to ask Mr. Burton any questions?

Frank Fielder: No.

The Chairman (to Frank Fielder): Do you want to suggest any information he can give?

Frank Fielder: No.

[The witness retired.]

M. Kinnane examined:—

The Chairman: We are inquiring, you know, into the running of "Mora" in the Christmas Handicap—or, rather, we are hearing fresh evidence that Fielder wishes to be heard;—will you tell the committee what you know? Yes, sir. Well, I was in a rather prominent position on the course, just a little south of the new Members' Stand, and, I suppose, there were 2,000 people present in that crowd, or 1,500 approximately. I noticed the race. I bet a fiver on her; and between the 3 and 4 furlong post "Mora" was at the head of the second division, and the jockey was riding her for his life. He did not seem to make any improvement with her; in fact he lost his position, and at that moment the "books" called out, "Three to one against 'Mora'." She was previously at even money up to that point, and there was only one bookmaker that I saw take the bet. None of the public would back her at that time, because they could see, as I saw, that she had no possible chance of winning at that point. From that out I took very little interest in "Mora." I concluded, of course, that my small bet was lost. I therefore, consider, Mr. Chairman, that before the critical part of the race took place "Mora" was beaten, so that I do not think it was any fault of the boy's. I thought it was the fault of the horse not being able to win the race.

The Chairman: Q. Then you did not notice the mare after that point? A. I did not take much notice of her after that point.

Q. That is all the information you can give? A. That is all the information I can give.

Mr. Knox: Q. You thought the mare was not good enough to win as she ran? A. I did not think the mare was good enough the way she ran.

Mr. Cox: Q. That was your own money you put on? A. That was my own money.

Mr. Knox: Q. Had you any reason to suspect there was anything [wrong? A. Only the subsequent running of the mare.

Q. Of course, the subsequent running was very inconsistent? A. It did not at all contrast with that race, because in that race the horse seemed to run cramped, whereas in Tattersall's Cup the mare ran a free horse.

Q. But on the day of the Christmas Handicap, did you see anything in the condition of the mare, or her appointments, or anything about her, to make you suspect anything? A. No; I did not notice anything about her. I only just saw the mare at this particular point.

The Chairman: Q. You did not see her in the yard, or take any notice of her before she went out to race? A. No. I merely give this evidence to show that these 1,500 people who were alongside me refusing to take three to one on a mare which was at even money previously, showed that the whole crowd thought that she was defeated at that point.

Mr. Dangar: Q. Was that 3 furlongs from home? A. Between the 3 and 4 furlong posts.

Q. Before you come to the turn? A. Yes.

The Chairman: Q. Nearer the 4-furlong post? A. I think it was nearer the 4-furlong post; and, of course, as she did not improve her position, although the boy was riding her very vigorously, we concluded she had no chance—at least I did, and several others who were with me.

(To Frank Fielder): Do you wish to ask Mr. Kinnane any questions?

Frank Fielder: No.

[The witness retired.]

Frederick Gannon examined:—

The Chairman: We are taking fresh evidence, at the request of Fielder, with regard to the running of "Mora" in the Christmas Handicap; will you tell the Committee what you know? A. As to the running?

Q. As to any particulars with regard to the race that are within your knowledge? A. I backed her for a small amount straight out, and I backed her in two doubles. I think I lost £10 on her. I had my glasses on her. I watched the race from the new stand, and it appeared to me that below the Leger Stand—I was watching her very particularly—"Mora" was making a run on the outside of either two or three horses; I think it was three horses. I might say that the one on that side [illustrating] was making his run, and I made the remark to Dr. Marsden and several more that I thought "Mora" would win. The moment I said so, the horse on this side appeared to come out that way a little bit [illustrating], and the jockey made an attempt to go inside, and the moment he did, that horse went back again, and he had to come round here again [illustrating], and I thought from that out he had no more chance. That is the opinion I formed at the time; and that is how he lost the race, I thought.

Q. You thought at that stage he was making his effort? A. I thought he was making his effort to make his run from below the Leger Stand, and the reason he lost was on account of this one moving out. [Illustrating.]

Q. I think you said before that you thought he would win? A. When he first made his attempt to win, I thought he would win; and the moment I saw that I thought it was all over.

Mr. Knox: Q. He got pocketed and had to come out again? A. Yes.

Q. And he lost a lot of ground? A. Yes; I reckon he lost two or three lengths.

Mr. Cox: Q. Did she appear to you to be making up ground after that, or at that time? I did not think she had any show; I thought she was losing.

Q. At that time? A. At that time I thought she was all right. I made the remark to Dr. Marsden, "'Mora' will win." The moment I said so this horse moved out, and he made an attempt to get in, and then he had to come out again.

Mr. Knox: Q. There is no doubt she was keeping out down the straight? A. Yes.

Q. No matter whether something happened, or did not, from his position well out the boy put her in towards the rails? A. Yes.

Q. Then he got in behind three horses? A. Yes.

Q. And then he had to come out again? A. Yes.

Q. What that was caused by you do not know? A. My opinion is that it was in consequence of this horse coming out.

Q. And leaving an opening? A. Yes; and he attempted to come in and could not. He attempted to do it, but had to come round again.

Q. Did you notice anything at any other part of the race? A. No; I was not taking particular notice, except when they were making the run.

Q.

Q. Do you know anything in connection with the race in any way that would lead to the matter being elucidated in any way? A. Nothing struck me at all until below the Leger Stand, and I had my glasses on her, in hopes of winning my money. I thought I had a chance of winning, and I saw this horse moving out, and then the jockey tried to get in, and then came out again to get his former position.

Q. And that is what you consider lost the race? A. Yes; that is what I consider lost the race.

The Chairman: Q. Is that all you can say? A. That is all I can say.

[The witness retired.]

A. Cornwall examined:—

The Chairman: Q. Mr. Cornwall, we are taking fresh evidence as to the running of "Mora" in the Christmas Handicap? A. Yes.

Q. And Fielder wishes you to give evidence;—will you tell the committee what you know? A. The only part of the race where I noticed "Mora" was after they came round the straight. I had the glasses on her. He was riding her hard, and she appeared to me to be making no head-way much. I thought she made a little ground a bit towards the Leger, and some one got in front of me then, and I had to take my glasses down. I thought she made a little ground just by the Leger, but after that I thought she appeared to go back again; but still I thought the boy was riding her.

Q. Did you say that when you had the glasses on her just below the Leger some one got in front of you, or of her? A. Some one moved in front of me, and I had to shift round, and she appeared to get a little further back. I thought she was coming on there a bit. That is all I know about it. I thought she appeared to go back a little after that. That was all I saw of her. I only just came up the hill from the stall when the race was being run.

Q. You were running something in it? A. I do not think I had anything running.

Mr. Knox: Q. I thought you had "Willie"? A. Not in that race, I think. I am not certain. I do not remember.

Q. I think "Willie" ran fourth;—you train him do you not? A. Yes.

Mr. Cox: Q. Was he not fourth in that race? A. "Willie"?

Q. Yes? A. No.

Mr. Knox: Q. Why I suggested it to you was, I thought "Willie" ran in that race, and I thought it might bring something to your recollection that you have not remembered, if there is anything you have not remembered? A. I do not think I had a horse running. I would not say I had not; but I do not remember.

The Chairman (to Frank Fielder): Do you wish to ask him any questions, Fielder?

Frank Fielder: No.

The Chairman: Does any member of the committee wish to ask Mr. Cornwall any questions?

Mr. Knox (to the Chairman): Ask him if he saw her at any other part of the race?

The Chairman: Q. Did you notice her at any other part of the race but the place you have described? A. No. I had just come up. Why I noticed her was because I had £2 or £3 on her, and I just ran up to see how she was getting on. I thought she was beaten. I fancied so. Then I thought she came on again a little about the Leger.

[The witness retired.]

H. Roarty examined:—

The Chairman: Q. We are taking fresh evidence with regard to the running of "Mora" in the Christmas Handicap? A. Yes.

Q. Fielder has called you as a witness;—will you tell the committee what you know about it? A. Yes, sir. On the day of the race I went there, and I thought it was a real good thing, and I put £80 on her, and I put £20 on "Argo." I thought it was an absolute certainty that I would pick it in twice, so I put £20 on "Argo" and £80 on "Mora." I thought that if anything had a possible chance of beating her it was "Argo." I took particular notice of the race when they lined up at the post, and I thought I ought to put another £100 on her, because I thought it was the best of good things. Previous to the race starting, I went up and spoke to O'Connor, after I had backed her, and when I went up and spoke to him, I said, "Dick, I do not like her; she looks gutty-looking on it; and if I had seen her before I would not have backed her." I had seen her run a real good gallop about three or four days before the race was run, which built me up with confidence that it was an absolute certainty. She went with "Royal Purple," and "Royal Purple" picked her up the last mile of a mile and a quarter, and ran an extremely good gallop. When she ran the gallop, I said, "This is a certainty, no matter what they back her in." I was building up my ideas for the Summer Cup. I did not dream she was going to start in the Christmas Handicap. I put my £80 on her, and £20 on the other. I thought then, when they were lined up to the post to put more on her. I could have got even money after I got odds on. I bet a little at odds on. Then I bet an even £50; then £10 to £9 on twice; then I bet an even tenner. I felt that I ought to go on with it, it looked such a good thing.

Mr. Dowling: Q. This was after you had seen her and considered she looked gutty? A. I had that feeling, though she looked gutty. O'Connor said, "She is all right, nice and clean inside, and I have done plenty with her—any amount with her since I came back home." We had great wrangles over her before she went to Melbourne, that to my liking he was not giving her sufficient work. He said to me that Mr. Knight advised him not to work her at all; that she was a mare that would do with very little work. That was for Melbourne; but I know he did plenty with her after she came back; and when I stood down upon the lawn I was taking particular notice of the race; and I would like to have gone on for more but I was frightened, but I thought it was a real good thing. As I stood there, and when the horses jumped off, she seemed to jump out in front of them, and young Fielder seemed to get hold of her and steady her; and when he got hold of her and steadied her she got nicely into her stride and was in front of the last batch, but she was any amount close enough for a good, brilliant mare, and seemed to be going well within herself. All of a sudden, at the turn, between the 3 and the 4 furlong posts, I saw him moving on her. I got frightened. I said, "This is very funny," because I thought she would spring round the turn and beat them easily at the finish. When they made the turn I could see she was in trouble, and when they were nearing the Leger Stand she seemed to make a shoot; and when she made a shoot, to my surprise, instead of coming on the outside, she seemed to go for an opening between the two horses upon the rails—to go in between them. Then he altered his mind and swung up on the outside. When he swung up on the outside, then she did not come up to the horses; she seemed to stop, and she never seemed to make an effort afterwards. She seemed hopelessly beaten.

Mr. Knox: Q. There is no doubt that he either pulled her in, or she went in behind two or three horses in the straight run? A. Yes. There were two horses in front, and I thought she was going to run through them.

Q. You did not see any opening there? A. I could not see an opening.

Q. You judged that, from the pulling in, he saw an opening and was going for it? A. Yes; that he saw an opening and was going for it, then he altered his mind and swung on the outside of the horses; and no sooner did she put herself on the outside than she collapsed to nothing.

Q. That was at the end of the Leger Stand? A. Yes, where the machine stands.

Q. The 1½-mile starting post? A. Yes; she seemed to make a bit of a flattering run before she came to that, and then when she came to that she seemed to knock up. I was surprised; it gave me a shock, I know. I thought I could not lose.

Mr. Cox: Q. Was it your own money you put on? A. All my own money.

Mr. Knox: Q. You said you saw her do that gallop? A. Yes.

Q. No doubt she must have been in good condition to do that gallop? A. Yes.

Q. She must have been well? A. She must have been well to do it.

Q. Do you know who shoes for O'Connor? A. A man named Gilbert.

Q. Gilbert? A. Yes; he has two men that shoe for him—a man who used to be foreman for Downey, named—he has got a business now of his own—Jack Molloy. That man went to Melbourne, and he shod all the horses in every race they started in in Melbourne.

Q. For O'Connor? A. For O'Connor.

Q. So there was nothing strange about taking this man to Randwick to shoe his horses? A. Did he shoe there?

Q. I suppose he did;—there was nothing strange about that? A. No. O'Connor would not let me loose my money. I may tell you we are brothers-in-law. We are pretty well united to one another. I know if there was any such thing as any fear, as far as he was concerned, I would not lose a shilling.

Q. It has been suggested—I do not say whether there is any evidence of it or not—but it has been suggested that it is possible that this mare may have had a heavy set of shoes on? A. No; she did not. I can vouch for that—that the shoes that were put on her were real genuine shoes.

Q. Racing plates? A. Yes; aluminium.

Mr. Cox: Q. Aluminium or steel? A. Aluminium.

Mr. Knox: Q. Do you know the actual set of shoes she wore? A. Yes.

Q. Have you had them in your hands? A. On several occasions in Melbourne.

Q. Do you know that they were the same set that she wore in the Christmas Handicap? A. I would not like to swear to that. I think they were the same shoes. Mind you, they spread on her in Melbourne; I am opposed to aluminium shoes. I would never have them. I have always cried down any one that used them, and I would not have them.

Q. You say that if, for any reason, they had thought proper to run her in heavy shoes you would have known it? A. Beyond all doubt.

Mr. Cox: Q. That is, you would not have bet on her? A. No; I would not have put a shilling on her.

Q. I do not mean to say you would have put it on if she had loaded shoes on, if you had known;—but you mean O'Connor would have protected you? A. Certainly.

Mr. Knox: Q. This man, Jack Molloy, was the man you said they took over to Melbourne? A. Yes. Mind you, they did not take him there; but he was making a trip with the expectation that he was going to make a lot of money out of "Mora."

Q. At any rate, there would be no difficulty, I suppose, would there, in finding out from anybody;—if Fielder had asked you, you would have told him who shod O'Connor's horses? A. Certainly; if he had asked me.

Q. If he had asked you, would you have had any difficulty about finding either Gilbert or Molloy, or the other man, and bringing them here? A. Certainly not.

Q. Not the least difficulty in the world? A. Not the least difficulty. If I had known Gilbert was wanted, I could have easily told him to come in. He will be at Kensington to-day shoeing.

The Chairman: Q. Could any one of us, members of the committee, or Mr. Jones, who is writing down the evidence, not knowing Mr. Gilbert or his men, go to Kogarah by the train in the morning and find him easily? A. Find him easily.

Mr. Knox: Q. Ask anybody? A. Ask anybody. I would like to see one of you journey there now, before I went home, and you would find him there now. He is sure to come straight from Kensington. He gets on the train at Redfern, and generally catches the twenty-five minutes to 6 train.

Q. It has been suggested that there was great difficulty in finding out who shod for O'Connor, or in getting hold of the people who did shoe for him? A. You can get hold of them without any trouble.

Mr. Cox: Q. Who shod the mare on that day? A. I would not say that Molloy did so that day, or that Gilbert shod her, but both men do the shoeing.

Mr. Knox: Q. Suppose they brought a man from Kogarah to do the shoeing;—would they be likely to bring anybody else but Gilbert or one of his men? A. No.

Q. Is there another blacksmith there? A. Yes.

Q. Do they employ him? A. No; when I went there first there was a man named Callock, one of the best tradesmen I ever knew, but the laziest hound I ever met. He has a large family, and he is too lazy to look after his business.

Q. And he gave him up and went to the other? A. He sold his business to Gilbert, and he takes his own horses to Gilbert and uses his material, and on an odd occasion he lends him a hand to make shoes. Gilbert is not an experienced blacksmith; he can put plates on, but he cannot make shoes.

Q. But he has a good man under him? A. There are different people. Molloy has a business in Sydney.

Q. You told us Molloy was with Gilbert? A. No; he is along with Andy Downey.

Q. He has got a business of his own? A. Yes, in Sydney.

Q. Surry Hills? A. Yes.

Mr. Knox: Q. Supposing they had gone to you and said, "Now, look here, a man came up from Kogarah on the day that "Mora" ran the Christmas Handicap, and shod her at Randwick?" A. Yes.

Q. Would you have any difficulty in putting them on to that man? A. Not a bit of difficulty—none at all, whatever; because I could have brought him here.

Q. You could have found out who it was, and brought him here? A. There would be no trouble in bringing him.

Mr. Dowling: Q. Are you sure that either of these men shod the horse? A. No.

Q. For the Christmas Handicap? A. No, I don't know for certain which of them shod her. I am nearly as positive as that I sit here that it was one of the two.

Q. Is it likely anybody else did it? A. No.

Mr. Cox: Q. Callock? A. No.

Mr. Knox: Q. Would you have any compunction about going to O'Connor and saying, "Who shod your horse for the Christmas Handicap?" A. No.

Q. If you asked him he would tell you? A. He would tell you directly; he would not demur a moment.

Mr. Dowling: Q. If anybody offered you £50 to find out who shod the horse for the Christmas Handicap— A. (Interrupting) I would not take anything.

Q. If it was going begging? A. I would not take it, because I know it was one of the two men.

The Chairman: Q. What Mr. Dowling meant to ask you is, if anyone offered you £50 to find out the man who shod the mare, you could find the man out easily? A. Yes; I should like you to give it to me, and I would find out easily and give it to the Patriotic Fund.

Mr. Knox: Q. Were your suspicions excited in any way, either on the day of the race or by reason of her running in Tattersall's Cup, that there was anything wrong with her in the Christmas Handicap? A. No, it never entered my mind; I was excited—

Q. (Interrupting) What were you going to say? A. That I was excited at the finish of the race in seeing her beaten.

Q. Were you suspicious? A. It never entered my mind.

Q. I suppose you will admit that her performance in Tattersall's Cup was very different from her performance in the Christmas Handicap? A. Entirely different.

Q. I mean you could not reconcile the two? A. There was a difference, no doubt.

Q. If she had run in the Christmas Handicap the same as she did in Tattersall's Cup she would have walked in? A. So she would have.

Q. Have you got any suspicion that she was either stuffed or interfered with, or done anything whatever with in the Christmas Handicap? A. None at all, whatever. I think, with the small field she had, she had plenty of room, any amount of time, and ample opportunity of either coming on the inside or the outside, even if he had hustled through them; but she had melted—she had failed. When she went to make the running, there was no more of it. She made a bit of a dying, fluttering run. As soon as he pulled her on the outside of the horses, she was done up to nothing—rolling all over the place.

Q. Before he pulled her on the inside, was it your opinion he could win then? A. Yes.

Q. You were of opinion she could have won then? A. That she was sure to win.

Q. I am taking it that that was opposite the Leger Stand? A. A little bit, just the other side of the Leger

Q. You thought she could win then? A. Yes.

Q. If he had come straight along, there is no saying she would not have won? A. They beat her too fast. She was losing ground instead of gaining. She pandered (?) right to nothing. I was awfully demoralised when I saw her knock up the way she did. I could not make it out at all. I did not back her in Tattersall's Cup; I would not have her. I never had a shilling on her in the Caulfield Cup, and I never had a shilling on her in the Melbourne Cup. Only on the morning of the race of the Caulfield Cup Mr. Knight came to me and said, "Are you backing the mare?" I said, "I have not a shilling on her." He said, "You had better have something on her." I said, "I will have none." Q. In the Melbourne Cup? A. No; the Caulfield Cup. I was getting a shave, and he said, "You had better have £100 to £20." I said, "I won't back her." He said, "I am putting you down £100 to £20." I said, "Very well." He said, "If you can get any better bet on the course you can declare it off."

Q. In this Christmas Handicap, can you account for her not starting at longer odds on? I was satisfied to put 6 to 4 on myself. I would have been perfectly satisfied

Mr

Mr. Cox : Q. Laid? A. Yes. Markets are very funny. I have often seen it, when I thought it would be 3 or 4 to 1 on and I would get 3 or 4 to 1 against.

Mr. Knox : Q. At any rate, there was no suspicion excited in your mind? A. I never had the slightest suspicion at all. It has never entered my mind since. Of course, I thought it was one of those things we see which is an every day occurrence in racing, when you see a horse which you think is the biggest moral in the world and to your surprise he gets beat. I saw it times out of number. I cannot account for it. I remember several instances where I backed a horse; I put him out in the first race and he got beat, and I put him out again and he has cantered in then.

Mr. Cox : Q. You have had a great deal of experience of racing in your life? A. Certainly; since I left the cradle.

Q. You backed her with £80 of your own money? A. Yes; I have the books at home and the bets.

Q. She started at level money? A. She started at level money. She was once 5 to 4 and 6 to 4 on.

Q. She was a public favourite? A. Yes.

Q. Do you consider that that was a false price, having regard to the circumstances? A. The only way that I can account for it is that the public are suspicious of Mr. Knight. They do not care too much for him. He is not a public favourite. He is anything but a public favourite.

Mr. Knox : Q. They fight shy of him? A. They do not say he is a good, decent sort of a fellow. They do not like betting any odds on his horses, or even money on his horses.

Q. They do not like his horses at all? A. They would sooner leave them alone. They do not bet with any confidence.

Q. What were they backing to make a market of? A. "Argo." They came at "Drama," at "Argo," and something else at outside prices, but there was sufficient money to make the books keep coming. I think the public fought a bit shy. They do not care for him. If it had been anyone else, a real favourite of a man, they would have started her at 2 to 1 on. They are a bit dubious of him. I think they do not like treading on his ground at all.

The Chairman : If a suggestion has been made, or were made, that the mare was stuffed for the race, what would you say to it? A. Oh, I would not believe that from anybody; because I had no possible chance of losing £1, because O'Connor and I are too united together for anything like that.

Q. Again, if there was a suggestion that she was shod with heavy shoes, plated with aluminium, what would you say to that? A. I would still have no chance of losing my money if such was the case. I would have been prevented from backing her.

Mr. Cox : Q. O'Connor would not have allowed you to lose it? A. Certainly not.

The Chairman : Q. Is it your opinion, then, that she might have been, or could not have been, loaded? A. She was not loaded in any way, for I would not have lost sixpence if she had been.

Q. Then, so far as you know, so far as the trainer is concerned, she had a fair, square run, and everything was all right? A. Everything was a fair deal.

Mr. Knox : Q. As far as the trainer were concerned? A. As far as the mare and the trainer were concerned—as far as that we know we are sitting in this room.

Mr. Dowling : Q. How do you reconcile her running in the Christmas Handicap with the performance you saw her do two or three days before, and two or three days afterwards? A. That is the only thing that puzzles me. I cannot make it out; but I can assure you that, as far as my eyes are concerned—I never use glasses on the course—I can see everything going on through a race—I was as satisfied as that I sit here at this table that the mare was beaten on her merits. From some unaccountable reason she knocked up. I could not make it out for the life of me.

Mr. Knox : Q. Did you see her after the race—after she pulled up? A. Yes, in the yard.

Q. In the yard? A. Yes.

Q. How did she pull up? A. Like a big bellows. On the Sunday after the Christmas Handicap we galloped her, and she ran a mile and a half, and when she pulled up in the straight she staggered like that (*illustrating*) to and fro.

Q. Does she always do that? A. Yes, when you make her go out and gallop and keep her at it all the time, she staggers. She appears to me to be a mare that will not stand too much persevering with. She is rather of a softy nature, and I know that Mr. Knight's advice, when he was training her for the Caulfield Cup, was that he was not to gallop her. That was his instructions. I tried to advise him. I said, "I understand Mr. Knight has never seen this mare as big as she is, and in the state she is. I think she could do plenty of work. I would not tell Knight. Go on and try and prepare her. Never mind his advice. If you are not competent enough to train her in the way you think she should be trained, let him train her himself." It was on the Sunday morning or Monday morning after she ran in the Christmas Handicap. It was the day in between from when the handicap was run till the Tattersall's Cup.

The Chairman : Q. Would that be on a Wednesday or Thursday? A. Somewhere between.

Mr. Knox : Q. The Christmas Handicap was run on Tuesday? A. Yes.

Q. And Tattersall's Cup the following Monday? A. Yes. Then she galloped in between.

The Chairman : Q. Thursday would be a galloping day, and Saturday would be? A. Saturday would be the day she galloped—upon the off morning, I think it was, she ran a mile and a half.

Q. Where was that? A. At Moorfield. She staggered all over the place when she pulled up.

Mr. Cox : Did she run a good gallop? A. Yes.

Q. And was well? A. Yes; she was as well as ever she was. There was just a second between the two gallops—"Royal Purple" and herself. It was for the Cup preparation. She ran a mile and a half, and there was a second between them, and I thought that "Royal Purple's" was as good as hers, because there was dew on the ground when she galloped, and no dew on the ground when "Mora" galloped, so I equalised them. One boy rode both mares with the same saddle and weight.

The Chairman : Q. You backed "Mora" in the Christmas Handicap, and you were going to back her in the Summer Cup on the gallop you saw the Tuesday previously? A. Yes.

Q. Which, you say, was an extraordinarily good gallop? A. Yes; a few days previously. I could not name the day.

Q. Did she stagger at the end of that gallop? A. Oh! my word, she rocked about, and she got very drunk at the finish. She rocks all over the place when she is finishing. She sways to and fro. When she pulls up she seems as if she has not the use of herself. She puts you in mind of a person intoxicated. When you drive her at it, and make her do it, she rocks all over the place. She is a mare I was never in love with. I only backed her in the first race for weight-for-age. In the second I did not; and in the third race for weight-for-age I did back her, and she ran second.

Mr. Dowling : Q. You backed her the other day? A. Yes; but I only backed her once when she won. I had £10 on her when she won the first weight-for-age race at Melbourne.

The Chairman : Q. Is there anything more you can tell the Committee about this? A. No; there is nothing that I know of; only my opinion is that she was beaten fairly. That is all—that she was beaten upon her merits.

The Chairman (*to Frank Fielder*) : Is there anything you wish to ask Mr. Roarty, Fielder?

Frank Fielder : No.

The Chairman : Or any member of the committee?

Members of the committee : No.

[Witness retired.]

George Fuller examined :—

The Chairman : Q. We are hearing fresh evidence, which Fielder wishes to call as to the running of "Mora" in the Christmas Handicap? A. Yes, sir.

Q. Will you be good enough to tell the committee what you know about the running of "Mora" in that handicap, or any other circumstances connected with the race which are within your knowledge? A. I do not profess to be a judge of racing. All I know is that I put £50 on for Mr. Fielder.

Q. You put £50 on for Mr. Fielder? A. Yes.

Q. Is there anything else you wish to say;—did you watch the mare in the race? A. Yes; I saw her.

Q. What did you see? A. To the best of my opinion, I thought she was beaten getting to the turn. I said to Jack Fielder—I was standing with him—"This mare is beaten."

Q. Did you see anything after that? A. No, sir; I took no notice of her. I was watching the winner.

Q. You say you are not much of a judge of racing? A. No, sir; I do not profess to be.

Q.

Q. Would you mind telling the committee with whom you put the money on? A. Yes; Mr. Woods.

Q. Jack Woods? A. Yes, sir; an even £50, I think.

Mr. Jones: Q. Did you get any odds? A. No; even £50.

The Chairman: Does anyone wish to ask him any questions;—do you, Mr. Cox?

Mr. Cox: No.

The Chairman: Do you, Fielder.

Frank Fielder: No.

The Chairman: That will do, Mr. Fuller, if you are sure you can give us no further information.

Mr. Fuller: No; I can give you no further information.

[The witness retired.]

Alfred Genge examined:—

The Chairman: Q. We are inquiring into the running of "Mora" in the Christmas Handicap, and, at Fielder's request, taking fresh evidence;—can you give the committee any information? A. The only information I can give is that I was standing just alongside of Fielder just before the scratching bell went in the Christmas Handicap, and he said to me, "I wish you would put £50 on this mare for me. Do not take worse than even money. I do not expect you will get very much better." I said, "I will do the best I can." As soon as the bell rang I went across to Moffatt, and he called out, "Even money on the field;" that is W. Moffatt of Melbourne. I said, "Yes, £50," and there were four or five others there and he said, "A pony to you, pony to you," and "a pony" to one or two others, and he cut out the £100. I walked round to several others and could not get anything better than 5 to 4 on, and then I walked back to Fielder and said I could only get this pony on, and he said, "Do not bother," and he said Fuller had put an even £50 on, and "I have a pony on with Knight."

Q. That is all that occurred with regard to the betting? A. That is all that I did.

Q. With regard to the race, can you tell the committee anything? A. I do not know that there is very much for me to tell you. As far as my judgment is concerned, if the mare had been as brilliant as she was supposed to be, when she came to the 3 or 4 furlong post no boy in the world could have held her. If she had shown the same brilliancy in that race that she showed a week afterwards in Tattersall's Cup, no boy could have held her. I laid £10 to £9 on her myself in that race. I thought that was pretty good. I went up in the middle of the stand and had a good view of the race, and between the 3 and 4 furlong posts the boy was riding hard, and I turned round to my wife and said, "We have lost our money." That is all I can say. I do not flatter myself to be a very good judge of racing.

Mr. Jones: Q. When did you come to that conclusion—what part of the race? A. Between the 3 and 4 furlongs posts.

Mr. Knox: Q. Have you had a good deal of experience of betting in the ring? A. Yes.

Q. Did you hear anything in the ring that looked bad in that race? A. The only thing that looked bad in the race during the betting was at the finish—the mare went from even money to 5 to 4, and to 6 to 4 on, then 5 to 4, and then back to even money again. Everybody seemed to be anxious to lay a bit against it.

Q. Did you see anything that would lead you to suppose that she was in the bag? A. No, I did not see anything.

Q. You were about there all the time? A. Yes; I was always about walking round, putting a few pounds a race on, but I did not see anything to lead me to suppose she was in the bag.

The Chairman: Q. You do not think there was anything wrong? A. No, as far as my judgment would go.

Mr. Knox: Q. You did not see any bookmaker in particular getting money out of it? A. No.

Q. You know what I mean? A. Yes.

Q. Nobody peppered her more than anybody else? A. The only thing is, the mare went from 6 to 4 on back to even money against.

Q. She did not keep firm? A. No.

Q. If a commission had gone in for another horse, that would have steadied her? A. There was nothing else backed very heavily in the race.

Q. You see, when there is an even money favourite they play it up? A. They play it up as a rule.

Mr. Cox: Did you see a lot of people ready to back the mare;—was she in great demand by the public? A. Yes, by the public. As soon as ever the books were opened they bet even money on the field, and the public rushed in, and I rushed to Moffatt, knowing I could get a good bet from him. He is a Melbourne bookmaker, and Melbourne bookies bet pretty well. I went to get my £50 first pop. There were several there. At any rate he bet ponies all round.

Q. While you were waiting there was plenty of money going on? A. Yes; 10 to 9 on and 5 to 4 on. I laid £10 to £9 on myself.

Q. Did you think, by the demand she was in, that the price was a false one? A. No; I think she was quite justified in starting at 2 to 1.

Q. She started at level money? A. She started at level money.

Q. Did you not think that was too good a price? A. I thought it was at the finish. Of course we cannot account for it, you know.

Mr. Knox: Q. You saw nothing to arouse your suspicions? A. Nothing at all.

Q. You did not try to get out? A. No I did not look for anything else to try to get out. I only backed the one.

The Chairman (to Frank Fielder): You have heard what Mr. Genge has said?

Frank Fielder: Yes.

The Chairman: Do you wish to ask him any questions?

Frank Fielder: No.

The Chairman: Or to suggest anything to him, as to any information he may give the committee?

Frank Fielder: No.

[The witness retired.]

H. Roarty recalled:—

The Chairman: Q. Can you tell us the names of the men with whom you put the money on? A. Yes, sir. From memory—mind you, I would not be positive of the men—there was Kerr sung out "Even money on the field." I said, "An even pony" like that; and I said, "Again if you like." He said, "Yes, £50"; so he bet me the £50, and I think I bet £10 to £9 with Bob Wallace. I think I bet—mind you, I would not be positive, but I am certain of Kerr for the £50—positive of him for the £50. Previous to betting the £50, I think I bet someone an even tenner. I do not know the man's name, but he bet me the tenner anyway. The books show it at home. I have them at home. I laid two £10 to £9. One bet was with Kerr and the other was with Barney Allen I think. I would not be positive, but I think so from memory; but the books are there at home. There was £20 upon "Argo."

Q. Who was that with? A. Different men—£5 here and £5 there.

Mr. Knox: Q. You could tell us the names if you look them up? A. Yes.

The Chairman: Q. Perhaps you would not mind looking the names up and sending them into the committee;—write a letter? A. I can take them out with me and give them to Mr. Clibborn. I can give Mr. Clibborn the book. As far as my memory serves me, I am nearly as positive as that I sit here that I lost £100 on the race. £80 was on her for certain, and I put £20 or £15 on the other. I bet with seven or eight different men.

The Chairman: Q. Have you any other witnesses Mr. Fielder? [Addressing Mr. Fielder, senior.]

Mr. Samuel Fielder: I had some here and they went away. Marks was here three-quarters of an hour, and he said to ring him up again, and we rang him up and we cannot get him. I suppose he went to the Kensington races.

The Chairman: We cannot wait for any more witnesses.

Mr. S. Fielder: We must rely upon what we have now.

Mr. Samuel Fielder and Frank Fielder retired for a short time, at the request of the committee, and were later on called in again, when the Chairman said:—

The Chairman: Frank Fielder and Mr. Fielder,—The committee has postponed its decision on this matter till this day fortnight —

Mr. S. Fielder: Thank you.

The Chairman: When your son will attend. Of course you may attend or not, just as you wish.

Mr.

Mr. S. Fielder : It will not be necessary for me to attend ?
 The Chairman : Just as you wish.
 Mr. S. Fielder : There is no more evidence to be given ?
 The Chairman : That is for you to say.
 Mr. Fielder : Yes. In the meantime, may I ask you, Mr. Chairman, if the boy will be allowed to ride ?
 The Chairman : No.
 Mr. S. Fielder : This day fortnight ?
 The Chairman : Yes.
 Mr. S. Fielder : Yes ; thank you.

[Adjourned till Thursday, the 1st March, 1900.]

Re Frank Fielder.—Minute, 1st March, 1900.

Resolved :—“That the committee having heard the fresh evidence produced by the jockey Frank Fielder on the 15th February, 1900, supplementing that given on the 4th January, 1900,”—*decides*, “That such evidence clears Messrs. Knight and O’Connor from the imputation of fraud, and refuses to disturb the decision with regard to Frank Fielder, arrived at on the 4th January, 1900.”

B 1.

[*To Evidence of Adrian Knox, Esq.*]

DISTRESSED JOCKEYS’ FUND.

REGULATIONS for Administration of Distressed Jockeys’ Fund recommended by sub-Committee—Messrs. W. A. Long, Adrian Knox, R. Jones, and H. Chisholm.

1. That the committee may grant any sum not exceeding £100 to or for the benefit of the widow and children of any licensed jockey dying from injuries received on a racecourse in the exercise of his calling ; the sum so granted to be applied in such manner as the committee may direct.
 2. That the committee may grant such sum as they shall think fit to or for the benefit of any licensed jockey meeting with an injury on any racecourse in the exercise of his calling.
 3. That no sum shall be granted under the last preceding regulation unless the application be accompanied by the certificate of a legally qualified medical practitioner.
 4. That the committee may pay out of the fund to any hospital for services rendered to any licensed jockey received into such hospital in consequence of injuries sustained by him on any racecourse in the exercise of his calling such sum, either by way of subscription or otherwise, as the committee may think proper.
- Mr. Long set forth the above new regulations proposed by the committee, and submitted them for the approval of the members, which was unanimously accorded.

B 2.

[*To Evidence of Adrian Knox, Esq.*]

To stand as new Rules, after Rule 76.

Trainers.

- (a.) Any person wishing to be licensed as a trainer must apply to the committee of the Club annually for such license. Such application shall be made in such form as the committee of the Club may from time to time direct, and shall be accompanied by a fee of £1 (one pound).
- (b.) The committee of the Club may refuse to grant or renew any such license without assigning any reason for such refusal, and may at any time cancel or revoke any such license before the termination of the period for which such license was granted.
- (c.) Any person licensed as a trainer who shall at any time after the first day of September, 1898, have under his care, superintendence, or management, or in his stable, any “pony or galloway” may have his license cancelled.
- The following amendment, moved by Mr. Hourigan, and seconded by Mr. Flanagan, was lost :—
 I beg to move, as an amendment,—That in lieu of Mr. Knox’s proposal (b) to stand as one of new rules, after 76—
 “Trainers”—the following be substituted :—
- (c.) The committee of the Club, before refusing to grant or renew a license, shall give at least three days’ notice in writing to the applicant of any objection made to or to be raised against his application, and shall hear the applicant and his witnesses (if any) in answer to any such objection as aforesaid. The said committee may at any time before the termination of the period for which such license was granted summon any holder of a license to appear before them and show cause why his license should not be cancelled. Provided, however, that such holder shall be entitled to three days’ notice in writing of the grounds on which it is proposed to cancel such license, and also to be heard, with his witnesses (if any), in answer thereto ; and upon the appearance of such holder, or in his absence after notice given as hereinbefore provided, such committee may adjudge any such license to be cancelled absolutely.

B 3.

[*To Evidence of Adrian Knox, Esq.*]

AUSTRALIAN JOCKEY CLUB, 1900-1901.

DATES for Racing Fixtures.

Synopsis of Meetings.

Australian Jockey Club, 14; Rosehill Racing Club, 11; Canterbury Park Racing Club, 9; Warwick Farm Racing Club, 8; Moorefield Racing Club, 8; Tattersall's Club, 4; Sydney Turf Club, 4; Hawkesbury Racing Club, 3; City Tattersall's Club, 2.

Important Notice.

1. At all registered race meetings, Hawkesbury and Warwick Farm Racing Clubs excepted, within the Metropolitan District (40 miles radius) the amount of added money shall not be less than £400 per day, distributed among not more than six races.

2. At all such meetings there shall be on each day at least one race on the flat (not being a selling race), of not less than one mile and a quarter, to which the added money shall not be less than £100; and there shall not be more than one selling race each day, to which the added money shall not exceed £50.

3. These fixtures are subject to the following conditions: At least one month before the day of any meeting, the Club holding such meeting shall submit, for the approval of the committee of the A.J.C., the names of the committee or stewards appointed to act at such meeting; and no meeting shall be held except under the direction of the committee or stewards approved by such committee.

4. These fixtures are issued on the understanding that the Clubs hold race meetings on the days allotted, weather permitting and subject to any alteration that may be made by the Government for the keeping or celebration of particular holidays.

By order of the committee,
T. S. CLIBBORN,
Secretary A.J.C.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RACING ASSOCIATION BILL.

(PETITION FROM CERTAIN MEMBERS OF THE WOMAN'S CHRISTIAN TEMPERANCE UNION OF NEW SOUTH WALES, AT NEWCASTLE, AGAINST.)

Received by the Legislative Assembly, 9 October, 1900.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned, on behalf of the Woman's Christian Temperance Union of New South Wales,—

RESPECTFULLY SHOWETH :—

That the Woman's Christian Temperance Union of New South Wales, in Convention assembled at Newcastle, views with alarm any attempt now being made in the Assembly of New South Wales to carry through a measure to place racing and gambling under State control. We believe that such a measure would mean that the Government, by this act, approves of and legalises gambling, and lends the Colonial Secretary's Department, the *Government Gazette*, and the machinery of the State to the racing and gambling institutions of the country.

And your Petitioners pray the House to reject the Bill.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 3 signatures.]

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TOTALISATOR BILL.

(PETITION FROM CERTAIN MEMBERS OF THE WESLEYAN CHURCH, MOLONG, AGAINST.)

Received by the Legislative Assembly, 14 June, 1900.

To the Legislative Assembly of New South Wales.

The humble Petition of Residents of Molong, in the Molong Electorate, attending the Wesleyan Church at that place,—

SHOWETH:—

That your Petitioners view with alarm the proposal to legalise gambling by means of the Totalisator, believing, as they do, that gambling is immoral, and that the introduction of the Totalisator to this Colony would result in the increase of betting, and be demoralising to youth and the good order of society.

Your Petitioners therefore humbly pray that the Totalisator Bill now before your Honorable House may not become law.

And your Petitioners will, as in duty bound, ever pray.

[*Here follow 36 signatures.*]

Similar Petitions were received—

On 14th June, from certain Members of the Wesleyan Church, Garra ; 41 signatures.

On 14th June, from certain Members of the Wesleyan Church, Barragan ; 37 signatures.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TOTALISATOR BILL.

(PETITION FROM CERTAIN MEMBERS OF THE WESLEYAN CHURCH, DILGA, AGAINST.)

Received by the Legislative Assembly, 19 June, 1900.

To the Legislative Assembly of New South Wales.

The humble Petition of Residents of Dilga and neighbourhood, in the Molong Electorate, attending the Wesleyan Church Services at that place,—

SHOWETH:—

That your Petitioners view with alarm the proposal to legalise gambling by means of the Totalisator. believing, as they do, that gambling is immoral, and that the introduction of the Totalisator to this Colony would result in the increase of betting, and be demoralising to youth and the good order of society.

Your Petitioners therefore humbly pray that the Totalisator Bill now before your Honorable House may not become law.

And your Petitioners will, as in duty bound, ever pray.

[*Here follow 20 signatures.*]

Similar Petitions were received—

On 19th June, 1900, from certain Members of the Wesleyan Church, Lockwood; 16 signatures.

On 19th June, 1900, from certain Members of the Wesleyan Church, Reedy Creek and Red Hil.; 36 signatures.

On 19th June, 1900, from certain Members of the Wesleyan Church, Meranburn; 16 signatures.

NEW SOUTH WALES.

TOTALISATOR BILL.

(PETITION FROM CERTAIN RESIDENTS OF BARMEDMAN, AGAINST.)

Received by the Legislative Assembly, 27 June, 1900.

To the Legislative Assembly of New South Wales.

The humble Petition of Members of Society and Voters, &c., of Barmedman,—

SHOWETH:—

That your Petitioners view with alarm the proposal to legalise gambling by means of the Totalisator, believing, as they do, that gambling is immoral, and that the introduction of the Totalisator to this Colony would result in the increase of betting, and be demoralising to youth and the good order of society.

They therefore humbly petition that the Totalisator Bill now before your Honorable House may not become law.

And your Petitioners will, as in duty bound, ever pray.

CLAIM OF MR. J. L. DAVIDSON, PADDINGTON.

(PETITION FROM J. L. DAVIDSON, OF 9, CASTLEREAGH-STREET, PRAYING TO BE REPRESENTED BY COUNSEL OR ATTORNEY, OR IN PERSON, BEFORE THE SELECT COMMITTEE ON.)

Received by the Legislative Assembly, 18 July, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of J. L. Davidson, of 9A, Castlereagh-street, Sydney, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

(1.) That, on the 3rd day of July, in the year of Our Lord one thousand nine hundred, your Honorable House appointed a Select Committee to inquire into and report upon a claim for damages sustained by Mr. J. L. Davidson by reason of the proximity of the Police Station to his dwelling.

(2.) That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

18 July, 1900.

**EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.**

VOTES No. 10. TUESDAY, 3 JULY, 1900.

21. CLAIM OF MR. J. L. DAVIDSON, PADDINGTON:—Mr. Neild moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon a claim for damages said to be sustained by Mr. J. L. Davidson by reason of the proximity of the Police Station, Paddington, to his dwelling.
- (2.) That such Committee consist of Mr. See, Mr. Meagher, Mr. E. M. Clark, Mr. Holman, Mr. Storey, Mr. Spence, Mr. J. C. L. Fitzpatrick, Mr. Nobbs, Mr. O'Connor, and the Mover.
- Question put and passed.

VOTES No. 17. WEDNESDAY, 18 JULY, 1900.

2. CLAIM OF MR. J. L. DAVIDSON, PADDINGTON:—Mr. Neild presented a Petition from J. L. Davidson, of 9, Castlereagh-street, Sydney, stating that a select Committee had been appointed by the House to inquire into and report upon the claim of Mr. J. L. Davidson, Paddington; and praying to be represented by counsel or attorney, or in person, before the said Committee, with the right to call witnesses and adduce evidence, and to examine and cross-examine all witnesses that may give evidence.
- Petition received.
- Ordered to be referred to the Select Committee.

VOTES No. 42. THURSDAY, 13 SEPTEMBER, 1900.

8. CLAIM OF MR. J. L. DAVIDSON, PADDINGTON:—Mr. Neild, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and evidence taken before, the Select Committee for whose consideration and report this subject was referred on 3rd July, 1900, together with Appendix.
- Referred by Sessional Order to the Printing Committee.

CLAIM OF MR. J. L. DAVIDSON, PADDINGTON.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 3rd July, 1900, "to inquire into and report upon a claim for damages said to be sustained by Mr. J. L. Davidson by reason of the proximity of the Police Station, Paddington, to his dwelling," and to whom was referred on 18th July, 1900, a Petition from John Lewers Davidson, "praying to be heard by Counsel, or Attorney, or in person, before the said Committee,"—have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto) find as follows:—

1. That in the year 1883, Mr. John Lewers Davidson purchased a freehold having a frontage of 77 feet $1\frac{1}{2}$ inches to Wentworth-street, Paddington, and to a lane connecting with Leicester-street, in the same borough.
2. That upon portion of this land the said John Lewers Davidson erected an eight-roomed dwelling-house, and also a large workshop.
3. That about four years subsequently the Government erected a Court-house and Police Station fronting Point Piper Road, and extending to the said John Lewers Davidson's premises at the rear, the police cells being built up to the boundary line dividing the two properties, the distance of the nearest cell from the said John Lewers Davidson's dwelling being about 4 feet 6 inches. This cell has been and still is used as a store. The nearest cell in actual occupation as such, is about 15 feet from the said John Lewers Davidson's dwelling.
4. That the Government, when erecting the wall dividing the said premises, caused certain wooden doors to be constructed in the said dividing wall.
5. That the said Court-house and Police Station were opened for public use and occupation on the 4th April, 1893.
6. That from that date to the present time the said John Lewers Davidson and his family, his tenants, and other occupants of the said premises have experienced frequent and great annoyance from the shouting, screaming, singing, and bad language of prisoners confined in the said police cells, and have been disturbed, particularly at night, and deprived of the quiet and peaceable enjoyment of the said premises.
7. That numerous complaints regarding these disturbances have been made from time to time by the said John Lewers Davidson and other occupants of his premises but there has been no abatement of the nuisance, nor does this, in the opinion of your Committee, appear possible.
8. That from these causes, the said John Lewers Davidson has been unable to lease or let the said dwelling-house with any regularity, the only tenant who remained longer than three months being the said John Lewers Davidson's father-in-law. Only one tenant remained for three months, and the total letting in upwards of seven years has been less than two years.

9. That the existence of the said wooden doors in the wall dividing the said Police Station from the said dwelling-house premises has also contributed to prevent the leasing or letting of the said premises, by creating a sense of insecurity. This has been enhanced by the escape of prisoners over and through the said John Lewers Davidson's premises.
10. That for these reasons, and particularly by being prevented from leasing or letting his said premises, the said John Lewers Davidson has suffered material loss and injury.
11. That the present rental value of the said dwelling-house would be 20s. per week, supposing the Police Station did not occupy the adjoining land, but that consequent upon its proximity it is not possible to let the said dwelling at any reasonable rent or at all permanently.
12. That regarding it as probable that if sought, an injunction would be granted to abate the nuisance occasioned to the said John Lewers Davidson, arising from the occupation of the said Police Station, and that compensation might also be granted him, your Committee took evidence with a view to ascertain whether it was desirable in the public interest for the Government to acquire the said John Lewers Davidson's property.
13. Your Committee therefore inquired into the accommodation afforded by the buildings constituting the said Court and Police Station, and it has been shown that it is insufficient for the proper and satisfactory transaction of the business dealt with there.
14. It was further shown that it would be to the public advantage if prisoners carried by the police van were taken up and set down at the rear of the Police Station, instead of in the public street in front. The evidence shows that this has been pressed upon the Government by petition and deputation.
15. Your Committee are of opinion that it would be to the public interest for the Government to purchase the said property of the said John Lewers Davidson, and provide the needful additional accommodation, at the same time removing the nuisance complained of in connection with the police van.

Your Committee recommend the claim of the said John Lewers Davidson to the favourable consideration of the Government.

JNO. C. NEILD,
Chairman.

No. 3 Committee Room,
Legislative Assembly,
13th September, 1900.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 18 JULY, 1900.

MEMBERS PRESENT:—

Mr. E. M. Clark,		Mr. J. C. L. Fitzpatrick,
Mr. Neild,		Mr. Spence.

Mr. Neild called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.
Committee deliberated.

[Adjourned till Tuesday next, at 2 o'clock.]

TUESDAY, 24 JULY, 1900.

MEMBERS PRESENT:—

Mr. Neild in the Chair.

Mr. J. C. L. Fitzpatrick,		Mr. Spence.
---------------------------	--	-------------

Entry from Votes and Proceedings, referring the Petition of John Lewers Davidson, to the Committee, *read* by the Clerk.

Original Petition before the Committee.

Resolved (*on motion of Mr. Spence*) That the Prayer of the Petitioner be granted.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CLAIM OF MR. J. L. DAVIDSON, PADDINGTON.

TUESDAY, 24 JULY, 1900.

Present:—

MR. SPENCE, | MR. J. C. L. FITZPATRICK,
J. C. NEILD, Esq., IN THE CHAIR.

Mr. F. Y. Wilson, of the firm of Williams and Wilson, Solicitors, appeared for Mr. J. L. Davidson.

John Lewers Davidson sworn and examined:—

1. *Chairman.*] You are the owner of a certain property at the rear of the police station at Paddington? Yes.
2. And you are the gentleman who petitioned the Assembly for leave to be represented before this Committee? Yes.
3. *Mr. Wilson.*] I believe you bought this land in 1883? Yes.
4. What did you build on it? I built an eight-roomed house and a large workshop.
5. When was the Government building that you object to put up? About four years afterwards—about 1887, if I remember right.
6. Is the back of that building opposite the back of your place? Yes; the two are back to back. The rear of the police court faces the rear of my premises. My place fronts Wentworth-street, and the police court and station face Point Piper Road.
7. *Chairman.*] What is the distance between the police cells and the back of your house? I suppose not more than 30 feet. There is the recreation-yard between, and that is nearer to my property than the cells.
8. There is a passage between your house and the recreation-yard, and at the other side of the recreation-yard you come to the cells? Yes.
9. The total distance from the back wall of your house to the rear wall of the cells is about 30 feet? Yes, to the cells proper.
10. Is the passage part of your property? Yes; it is about 3 feet 6 inches wide. That is my freehold.
11. Is that passage an enclosed one? No; it is an open passage.
12. Then, any one could go into it? No; it is to the rear of my house and the police court—it leads to the w.c.
13. There is nothing whatever between your premises and the police court premises except a brick wall? No.
14. And in that brick wall there are two archways filled up by wooden doors? Yes.
15. *Mr. Wilson.*] Can you remember how long it is since they opened the police court? Yes; as nearly as I can remember, it was in 1889. They built it about 1886, and I think it was empty two or three years before they opened it as a police court.

J. L.
Davidson.
24 July, 1900.

J. L.
Davidson.
24 July, 1900.

16. Are you sure it was as early as that? It might have been 1890 before it was opened as a court.
17. *Chairman.*] Do you think it was opened before 1892? I think it was opened shortly before that.
18. *Mr. Wilson.*] Tell us something about the disturbances that go on there at night? I have been annoyed by the disturbances which were made at the police station, and I complained several times, but no notice was taken of the matter.
19. How often did the noises occur? Sometimes once a week; at other times three or four times a week; sometimes two or three times a week.
20. What sort of a noise was it? A noise made by prisoners—singing at night. They are very noisy. They scream and behave as if some one was murdering them. They make hideous noises.
21. *Chairman.*] Do you complain of the character of the language used? Yes, very much.
22. Is it blasphemous language? Yes, blasphemous and lewd, also very obscene.
23. Can you hear that language in your house? Yes, especially in the back bedrooms.
24. I suppose they could hear it in your kitchen? Yes.
25. Have you ever complained to the police whilst the noise has been in progress? Yes; I have complained several times to different officers.
26. Have you gone round to the front and complained? Yes.
27. It is some distance around, is it not? Yes; you have to go into Point Piper Road. It is about three minutes walk round from the back to the front.
28. And what has happened when you complained? I complained to the police and said that the noise very much inconvenienced me and people staying at my place, and I asked whether the noise could not be stopped. The policeman said, "We cannot help it."
29. Do you know whether the police in charge attempted to stop the noise? Yes. He went and asked the prisoners what they were making a noise about, when one asked for a drink of water, and another asked for something to eat.
30. Did the noise continue after that? Not so much until later on, between 11 and 12 o'clock.
31. Have you been awakened from your sleep by the noise? Yes. On many a night I was not able to go to sleep at all on account of the noise.
32. You were kept awake all night? Until 2 or 3 o'clock in the morning.
33. Was your wife kept awake also? I was not married then.
34. *Mr. Wilson.*] Tell us about the boarders you had? There were several boarders in the house when it was in the occupation of a tenant; but in consequence of the noise at the police station the boarders left. One of the boarders was Constable Hewett.
35. *Mr. Neild.*] He could not stand it? No; he went round to the police station to complain about it two or three times.
36. *Mr. Wilson.*] Did not some lady boarder leave for the same reason? Yes.
37. *Chairman.*] How many boarders had you at the time? It was a tenant who had the house, and he kept two boarders.
38. How long did that tenancy last? About eighteen months altogether.
39. When did it commence? It commenced about the year 1897.
40. Did the tenant keep boarders during the whole of that eighteen months? No; they could not get the boarders to stay.
41. How long had they the boarders? They did not stay very long.
42. But they had to continue the tenancy, I suppose? They had.
43. What was the rent of the house? For the house alone it was £1 a week; that did not include the workshop and the yard.
44. Did you keep the workshop in your own hands? Yes.
45. How much a week was that worth? I have had 25s. a week for the workshop and yard alone, but now I think that about 15s. a week would be a fair rent.
46. When did the tenancy terminate? About twelve months ago.
47. Who has occupied the house since? Myself.
48. *Mr. Wilson.*] I believe you made several other attempts to let the house? Yes.
49. With what success? Two or three people applied and were very much pleased with the house, thinking it would be suitable for a factory for small goods, a boot factory, or a cordial factory.
50. Did any of them take the house? No.
51. Why? One party was going to take it at 35s. a week, until he noticed the police station. I told him that the building at the back of it was the police station, and he said, "Well, I have some valuable goods, and I do not like that back entrance. I should not feel safe."
52. *Chairman.*] But that intending tenant did not shy off on account of the noise made at night? No; he was not there to hear it.
53. He thought a prisoner might escape and burgle his premises? Yes.
54. Do you not think he was an exceedingly nervous person? The doors being there, he said there was ingress and egress at the back. I gave him to understand that the doors were thoroughly safe, because they had never been opened to my knowledge, and the ground in the yard being some inches higher than the bottom of the doors, they cannot be opened.
55. *Mr. Wilson.*] It was on account of its proximity to the police station that he would not take the place? Yes.
56. *Chairman.*] You mean that the police station yard is higher than the bottom of the door? Yes; the yard has been raised about 18 inches.
57. What with? Asphalt and rubble.
58. *Mr. Wilson.*] Whom did you complain to about the noise? I complained to Sergeant Costigan and other officers.
59. Do you remember two prisoners escaping from that police station? Yes.
60. How long ago was that? About two years ago.
61. Can you tell us how they escaped? They were in the recreation-yard, and they separated the bars of the grating and came through my property. The bars were simply hollow pipes, and the prisoners pulled them apart. They got on the top of the grating, and on the parapet wall of the police court; then they had a jump of about 5 feet on to the roof of my closets, and from the roof of the closets they had another jump of about 7 ft. 6 in. into my back yard.

J. L.
Davidson.
24 July, 1900.

62. *Chairman.*] Did they come through your house? No; they were in the yard near the workshop, and they got into Tivoli-street.
63. *Mr. Wilson.*] Those men escaping made your wife very nervous? Yes.
64. Does she still suffer from the effects of it? Yes.
65. Does it make her ill? When she hears a noise in the police station it brings that escape back to her mind. Before the escape took place she was always in dread of prisoners coming over the wall, and now she is afraid of it happening again.
66. Did that have the effect of making her unhappy, and not content with her own home? Yes; I had to send her away for a change; she is in the country.
67. You are continually having to send her away for a change? Yes.
68. *Chairman.*] What rent was proposed to be paid by the intending tenant that you referred to? Thirty shillings a week; that was for the house and the workshop.
69. *Mr. J. C. L. Fitzpatrick.*] When was it that you purchased the land on which you erected this dwelling? I think about the latter end of 1882, six or nine months before the Government purchased the front part. My place was in course of erection when I heard that two allotments were purchased by the Government.
70. One of your tenants was Mr. Morris;—is he the only tenant you have had since the police station was erected? No; when my wife died I let the place furnished, and the same thing occurred with them.
71. Who were the people that you let the house to? Mrs. Farthing and Mrs. Curry. Mrs. Curry was a nurse; she took the house with the idea of having a lying-in hospital, but that matter fell through.
72. How long was she there? I suppose about three months.
73. Did she leave because the business she was embarking in failed, or did she take exception to the noise? She took exception to the noise, and was afraid to venture on making any alterations. She did not think the position was adapted for the purpose when she heard the noise. The patients would require quietness and rest.
74. *Mr. Wilson.*] She would not take the place because she thought they would be disturbed? Yes.
75. *Chairman.*] Was she a trained nurse? No; she was a probationer, but qualified.
76. Have you made any inquiries as to whether this nurse is to be found? I have; but I have not been able to hear of her.
77. Did any one else take the house? Yes; a party from the country.
78. Did he take it as a furnished house? It was partly furnished, but the people only stayed three weeks. They caused me to move out and take other lodgings, which was very inconvenient for me. Their family was too large to allow them to spare a room for me.
79. Did they give any reason for leaving? They simply said they could not live in the house. They did not exactly say why, but it was on account of the police station. The noise from there was something terrific, but the people in the house did not know where it was coming from. They came from the country, and no doubt they did not know that there was a police station behind them. I have made inquiries as to the parties, and I find that they have gone to South Africa.
80. I want to know whether your experience in letting was completely unfortunate—you never tried to let the house before the police station was built? No; I was living in it then myself.
81. As a matter of fact, your father-in-law was your principal tenant? Yes. I have spent some wretched nights in that house. I have been staying there during the last five months to prevent people from doing it any damage. I could not let it. Any man who comes to look at it refuses to take it, partly on account of the police station, and partly because it is too large. It is all very well till they get out at the back and look at those doors. I would not put in another five or six months there.
82. When you did let it, did you ever get full rent for it? I did not get as much as I should have liked. Rents fluctuate very much. I have seen places where they get more rent for a small house not in such a good position. How it is I do not know. I go by this—that so-and-so lets his house for so much, and mine ought to let for so much.
83. *Mr. Spence.*] Is it not the rent question that prevented you from letting it? No; under the circumstances I would have let it for almost anything to have the place taken care of.
84. People did not object to the rent, but they objected to the situation? Yes, to the situation.
85. As a matter of fact the longest tenancy you had was three months? Yes, except the tenancy of Mr. Morris.
86. *Mr. Wilson.*] Did you ever make any complaints to the police authorities about the noise at the police station? I complained several times, and I wrote to the Inspector-General of Police, but got no reply. No notice was taken of my letter.
87. *Chairman.*] Did you keep a copy of that letter? Yes; I believe I have it in the house.
88. *Mr. Spence.*] Did you make any further complaints in writing? I have been trying to get the Government to purchase the property, and save this inquiry and further trouble. I had an idea that they wanted the place, and I offered it to them at a reduced price. The house is too large for me, and I get very little comfort there on account of the police station.

Charles Lee Morris sworn and examined:—

89. *Chairman.*] What are you? I have an orchard and vineyard now?
90. *Mr. Wilson.*] You are now living near Liverpool? Yes.
91. Were you a tenant of Mr. Davidson's for some time? I was.
92. That was on the property at the rear of the Paddington police station? Yes.
93. How long ago was it? I left on the 13th February, 1898.
94. You were there about eighteen months? Yes; the family were.
95. Out of that time you were there about twelve months yourself? Yes.
96. Can you tell us something about the disturbances that took place at night amongst the prisoners in the police station? It does not happen every night, but very often two or three nights a week. The prisoners make a great noise, women screaming and men swearing, and it is certainly a great nuisance.
97. *Chairman.*] Their language was not instructive? No; it was very unparliamentary.

C. L. Morris.
24 July, 1900.

- C. L. Morris. 98. *Mr. Fitzpatrick.*] Could this disturbance be heard distinctly from the dwelling-house? Yes; especially in the back portion of the house.
- 24 July, 1900. 99. *Mr. Wilson.*] I suppose the women in your house would hear it all? Yes; they could not help it.
100. *Chairman.*] What is the distance from the nearest cell to the back of the house that you live in? I could not say exactly where the cells are, but if they abut on the wall the nearest room would be about 50 feet from the cells.
101. That is, if the cells came as far as the recreation-yard? It would not be 50 feet if they came as far as that.
102. There is really only the width of a little passage between the house and the police station premises? Yes; a passage about 5 feet wide.
103. *Mr. Wilson.*] You had boarders, had you not? We had.
104. Was one Constable Hewett? Yes.
105. Why did he leave? I was not at home at the time.
106. Did you ever hear why he left? They said he left on account of the noise in the police station; he could not sleep.
107. Did you know of any other boarders that left on account of that? No.
108. *Chairman.*] I think you had a lady boarder? I was not at home then. That house is not fit for anyone to live in at present, owing to its being so near the police station.
109. How many boarders had you? Only two.
110. How long did you rent the place? I cannot say exactly when Mrs. Morris took it. I was there for twelve months.
111. Was it taken on a monthly or yearly tenancy? Monthly.
112. Then you were annoyed with the noise all the time? Yes.
113. But it did not drive you out? No; I did not leave, because Davidson was my son-in-law. If he had been a stranger to me, I would not have lived in the house for twenty-four hours.
114. *Mr. Wilson.*] I suppose the noise that goes on in this place is a common topic of conversation in the neighbourhood? Yes.
115. Do you think that that noise being made there has materially decreased the value of the property? I do. I do not think the house could be let. I would not take it at 5s. a week to live there.

Sergeant William Costigan sworn and examined:—

- Sergeant W. Costigan. 116. What are you? Sergeant of police.
- 24 July, 1900. 117. You are aware of the subject which the Committee has been appointed to investigate? I have heard of it.
118. It is a claim advanced by Mr. Davidson in respect to a nuisance caused to his house in Wentworth-street, Paddington, owing to the proximity of the police station? Yes.
119. You know the police station? Yes.
120. Do you know Mr. Davidson's property? I do.
121. Does the plan produced fairly indicate the house, the Court, and the station? Yes.
122. That plan roughly shows the position of the different buildings? Yes; it is pretty correct.
123. What is the distance from the back of Davidson's house to the nearest cell? The nearest cell is the women's cell. It would not be very far. There is only a small exercise-yard for women between.
124. We are told that the passage between the two premises is 5 ft. 6 in. wide; what is the length of the recreation-yard? It would not be more than 8 feet by 10 feet.
125. Is there a men's recreation-yard? Yes.
126. You say the nearest cell is distant about 8 feet or 10 feet from the wall dividing the police station premises from Davidson's property? The yard would be about 10 feet by 10 or 12 x 12 feet. Then come the cells off that yard; then comes the exercise-yard for the men.
127. How far is the nearest cell from the wall dividing the two premises;—is it 10 or 12 feet? It is more than that.
128. Would it be 20 feet? I would not say that it would be. It might be about 20 feet—I have not measured it.
129. The nearest cell and the back of Mr. Davidson's house are sufficiently near each other for anything said loudly in the cells to be heard in his house? Yes; shouting would be heard.
130. And singing? Yes.
131. Have you any knowledge of what goes on in those cells at night? Yes.
132. You are on duty there sometimes at night? I am.
133. Have you heard any bad language there? Yes, when prisoners were locked up.
134. Have you heard bad language coming from the cells? Yes; persons have been locked up for being drunk and disorderly.
135. Have you heard shouting and filthy language in the cells? There is not much of that, but I have heard it occasionally.
136. I suppose that sometimes they sing a bit? Yes, they do.
137. And that singing is not exactly soothing to people who want to go to sleep? I should not think so.
138. Suppose you wanted a house for a dwelling, would you rent that house from Mr. Davidson? I could not answer that.
139. Would you care to live so close to the cells at that police station as Mr. Davidson's house is? I do not think I should fancy it for my own family.
140. If you had a family there you would expect them to be disturbed by the noise? Sometimes they would be.
141. How often? Not very often; the worst time would be Saturday night. As a rule we do not have many prisoners there during the week.
142. How often does the Court sit? Every day except Sunday. We always have an early Court; it sits four times a week at 9 o'clock, and twice a week at 10 o'clock.
143. Then the prisoners are only detained in the cells between the time of their arrest and the sitting of the Court the next day? That is all.
- 144.

144. Then if cases are remanded for further investigation or prisoners are committed for trial they are sent to Darlinghurst? Yes.
145. So the cells are only used at night for persons who are arrested? Yes. If a person is brought in after the Court is over he would not be sober for some hours, and next morning he would be brought before the Court.
146. What is the longest time that people are confined in the cells? If a man is locked up shortly after the Court has risen he will not be able to come before the Court before 9 or 10 o'clock on the following day.
147. Then a prisoner may be detained for more than twenty hours? Yes.
148. Then I suppose some may be detained for nearly forty-eight hours, (say) from Saturday morning until Monday morning? Yes; but it is very seldom that we get them in before Saturday night.
149. Generally speaking, the time would run from twenty to forty hours? Yes; but if a man is locked up for drunkenness, and a friend comes to bail him out, we accept bail when he is sober.
150. How many prisoners is it usual to have in the cells at night? Two or three; sometimes none; sometimes as many as nine, but that would be very seldom.
151. Would more than one be placed in a cell? The men would be put together. We have only three or four cells.
152. I suppose that one man making a noise would induce others to join him? Sometimes they do, but very seldom.
153. Have you heard women screaming in the cells? I have.
154. And using language that was bad? When drunk they are not very particular.
155. *Mr. Fitzpatrick.*] Have you got a record of the number of persons who have been locked up during the last twelve months? We have.
156. Have you any idea what the total number would be? It would average about eleven or twelve a week.
157. *Mr. Wilson.*] Most of them would be locked up for one night, would they not? They would.
158. If you brought a woman in about half-past 6, drunk and screaming, she would be screaming until she went to sleep at 2 or 3 o'clock in the morning, I suppose? Yes.
159. *Chairman.*] There is no means of stopping a prisoner who is determined to make a noise? They sing themselves to sleep when they are very drunk.
160. *Mr. Wilson.*] Were you there when those prisoners escaped? I was stationed there.
161. I suppose you saw the way that they escaped? Yes.
162. If other prisoners had tried they could have escaped in the same way, could they not? Yes; that was owing to the way the barricade was constructed. It was so constructed that if a prisoner used force he could escape. They got through the bars, which were hollow, and could be bent.
163. Do you remember Mr. Davidson coming and complaining about the noise? I think he spoke to me on one or two occasions. He did on one occasion.
164. Was there a noise going on at that time? Yes.
165. Do you remember other people complaining about the noise? Not to me.
166. Did you hear of any other complaints? No.
167. *Chairman.*] Would not complaints be addressed to the lockup-keeper? Yes.
168. You are not in charge of the police station? No; there is a sub-inspector there over me.
169. Your personal knowledge would be limited to what you saw on your visits there? Yes; I do not remain there, but I visit the police station. During the night we visit the prisoners in the cells two or three times.

Sergeant
W. Costigan.
24 July, 1900.

THURSDAY, 26 JULY, 1900.

Present:—

MR. E. M. CLARK, | MR. SPENCE.
J. C. NEILD, ESQ., IN THE CHAIR.

Mr. F. T. Wilson, of the firm of Williams and Wilson, Solicitors, appeared for Mr. J. L. Davidson.

Richard Lilley sworn and examined.

170. *Chairman.*] You are a senior-constable of police, are you not? Yes.
171. Are you in charge of the police station at Paddington? I do station duty for twenty-four hours, then another senior-constable takes my place for the next twenty-four hours.
172. You are frequently in charge? Yes; every other day and every other night.
173. There are two of you? Yes.
174. You know that this is an inquiry into an alleged nuisance created by occupants of cells at the police station at Paddington, and affecting the premises of J. L. Davidson? Yes.
175. *Mr. Wilson.*] How long have you been at the Paddington police station? Sixteen years, next month.
176. I suppose you can give the date on which the Court was opened? Yes; it was on the 3rd of April, 1893.
177. I suppose you knew Davidson's premises before the Court was erected? I could not say whether Davidson's house was built before the Court-house or after.
178. What is the average number of prisoners that you get at the Paddington police station? Between eleven and twelve a week is the average number of prisoners who go through the cells; but that wants a little explanation. Some of those prisoners had been previously locked up at Waverley and Darlinghurst stations. They are brought to Paddington for trial. Our own drunk and disorderly cases average about four per week.
179. *Chairman.*] I suppose that any noise, such as is complained of, would come more from the drunk and disorderly prisoners than from any other class? Yes; they are generally pretty rowdy.
180. Other classes of prisoners would not be quite so noisy? No.
181. I suppose you would hardly lock them up for disorderly conduct unless they were in such a condition that they would continue their disorderly conduct after they were locked up? Yes; drunkards are locked up for their own protection. Drunk and disorderly persons are locked up for making a noise in the street, and they are generally noisy in the cells. You cannot prevent it.

- E. Lilley.
26 July, 1900.
182. *Mr. Wilson.*] I suppose there is no doubt that once or twice a week the prisoners make a great deal of noise in the cells, shouting and singing? They do shout and sing.
183. Sing risque songs? Yes; not very often. They generally use bad language, and if you speak to them it only makes them worse.
184. Have you had any complaints from Davidson's people about it? No, never.
185. How far would the nearest prison cell be from the boundary of the property? It runs alongside of it, but we use that cell for a storeroom.
186. Anybody in Davidson's could not help hearing the noise? I would not like to answer that, but I suppose they could.
187. How far is it away? The nearest cell to Davidson's property would be the width of another cell, distant about 14 feet. Then there is the space between that and the house.
188. I suppose you could hear the noise from outside the building? Yes.
189. How big are those doors opening between the back of Davidson's property and the police station premises? I do not know of any doors. There is a doorway in the boundary wall.
190. How wide are those doors? I think they are the ordinary doors—2 ft. 6 in. or 3 feet.
191. Have you had any complaints made to you about the prison vans going up Point Piper Road? Not to me direct. I have heard of such complaints.
192. Do you remember when two prisoners escaped from the gaol? Yes. Fortunately, I happened to be off duty that day.
193. Do you remember the date? I could not remember the date. It was about a year ago.
194. Have they improved those railings now? Yes, they are all right now.
195. *Chairman.*] Could you tell us about how often the prison van attends to take up or set down prisoners there? That is a rather awkward question. Last week the van was up there four or five times. This week we have not had it there at all so far, although we have had nineteen prisoners through our hands.
196. Could you give us any idea of the average number of attendances of the van? No, I could not. Some weeks we require it, and other weeks we do not.
197. Would it average three times a week? I do not think so.
198. *Mr. Spence.*] Which way have they to take the prisoners to the van! Through the front.
199. Is it not a usual thing to have a back entrance for that kind of work? It is the usual thing, no doubt.
200. It would be more convenient? Yes.
201. *Mr. Clark.*] I understand that you have no yard room in connection with this police station? We have a yard, but no back entrance.
202. I understand that your cells abut on Davidson's property? One cell abuts on it, but that is used as a storeroom.
203. Does Mr. Davidson live in that house himself? I always understood that he did.
204. I suppose, as far as your knowledge of the station goes, it would be an advantage to you or the police authorities if they had this property of Davidson's? I could not express an opinion on that.

Frederick William Charlesworth Crane sworn and examined :—

- F. W. C.
Crane.
26 July, 1900.
205. *Chairman.*] You are Clerk of Petty Sessions and Chamber Magistrate at Paddington? Yes.
206. How long have you been stationed there? I opened the Court on the 4th April, 1893.
207. You know the nature of the claim which this Committee has been appointed to investigate? Yes.
208. Can you give the Committee any plans of Mr. Davidson's premises? I have left that and some statistical information behind me.

William Walter Dean sworn and examined :—

- W. W. Dean.
26 July, 1900.
209. *Chairman.*] You are by occupation a land and estate agent? Yes.
210. Where do you carry on business? At Paddington.
211. How long have you been carrying on business there? Eight or nine years.
212. Are you a native of the district? Yes.
213. You know the nature of the claim which this Committee is appointed to inquire into—a claim for damage said to have been done to the occupancy of Mr. Davidson's house in Wentworth-street by reason of the proximity of the police cells thereto? Yes.
214. You are well acquainted with the commercial value of premises in and about Paddington? Yes.
215. Do you know Mr. Davidson's house at the end of Wentworth-street? Yes.
216. Supposing there were no disadvantages attaching to that house by reason of the proximity of the police station, would you consider the present rental a fair one? You mean if the police station were not there?
217. Suppose there were no alleged disadvantage connected with the proximity of the police station, what would you consider would be a fair rental for the house? About £1 a week.
218. Would that have been a fair rental for the house at the time when rents were higher than they are now? Yes, about that. You might perhaps have got 25s. a week for it a few years ago. When I say a pound a week I mean for the house only.
219. Have you ever tried to let the house? Yes.
220. Have you taken people to see it? Yes.
221. What rent have you asked? For the house and the yard, 30s. per week.
222. That is including the workshop? Yes.
223. Have you succeeded in letting the house? I let the house, but Mr. Davidson kept on the workshop.
224. When was that? Two or three years ago.
225. Were the people in the house long? Not very long. Mr. Davidson was living with them.
226. What was the name of the tenant? The tenant's name was Morris.
227. Have you tried at other times to let the house? Yes.
228. And you have not succeeded? No.
229. Have you taken intending tenants to see the premises? Yes.

230. Have they given any reason for not taking the place? Yes. I took a person up one day who was connected with a laundry, and he said that the place suited him, but when he looked at the back-yard and saw the doors there he said, "What are these for?" I said, "That is the Police Court." He remarked, that that looked as if, when he had settled down and worked up a business, he might be turned out by the Government, and he said, "I could not work up a business to be afterwards turned out." He went and settled in Redfern. W. W. Dean.
26 July, 1900.
231. He did not make any objection about the proximity of the cells, but only spoke about the doorways? That was all.
232. Did you take anybody else? I have had several people there.
233. Have any others to whom you sought to let the house taken exception to it on the score of its proximity to the police station? Yes. They did not like to be so close to it because they could hear everything.
234. They considered that its proximity to the police station was a disadvantage? Yes. One day when we were there there were some women screaming in the police station. That frightened them.
235. The intending tenant then shied off? Yes.
236. When you speak of screaming, did you hear any bad language used? Yes.
237. That could be heard on Davidson's premises? Yes, distinctly.
238. There is between Davidson's premises and the police station a wall through which two doorways are pierced, and the archways are closed with wooden doors only? Yes, as far as I can see from Mr. Davidson's side.
239. Is there any other house situated in the same way as Davidson's is, so that it would have the benefit of all the noises from the cells;—any other house the inmates of which would suffer the same amount of annoyance? I should think that in the house on the left-hand side of the police station they would hear the noises.
240. Mr. Davidson's house is the only two-storey house on that side? Yes.
241. And you would not hear noises of that kind as readily on the ground as you would on an upper floor? No.
242. As a householder, would anything induce you to rent that house for the purposes of a dwelling, having regard to its proximity to the cells? I would not live in it.
243. Did you ever know of anyone who left the house, who abandoned the tenancy, on account of the nuisance occasioned by persons in the police cells? No.
244. If there is evidence before the Committee that persons occupying the premises, either as tenants or lodgers, left on account of the noises from those cells, would you be surprised to hear it? I heard of a policeman leaving, who had been a lodger there.
245. Would you think it unlikely that they would leave? No, certainly not.
246. *Mr. Wilson.*] What do you think would be a fair rental for the property as it is now, with the police station there? I should think we could ask 15s. or 16s. a week; but I do not think anyone would live in the house; once they heard the noise they would not stay.
247. What do you think is the present value of that property? About £500.
248. Is that the full value? Yes.
249. *Chairman.*] You mean for the block of land as well? Yes.
250. *Mr. Wilson.*] Suppose the Police Court was not there, and the site was vacant land, what would be the value of it? It would be worth £800 or £900 then, fully.
251. *Chairman.*] Do you consider that the proximity of the police station has reduced the value of the property by 45 per cent.? Yes, by fully that.
252. *Mr. Wilson.*] You think the property would be worth £500 now, but if the police station was not there it would be worth more? Yes. Because you could put up another house. If you built houses there now you could not let them.
253. *Mr. Clark.*] Is it a very old house? No.
254. Has it been long built? I could not say.
255. What number of rooms are there in it? There are six rooms and a kitchen.
256. Is it close to the tram? It is a little off the tram, down a lane.
257. Do you know the area of the land? No.
258. Would it have 100 feet frontage? No.
259. *Mr. Wilson.*] How many houses of the same size as that already erected could you put up on that land? You could put up two more.
260. *Mr. Clark.*] Suppose the land to be 100 feet in depth, what would be the value of it per foot? About £7 per foot.

John George Cohen sworn and examined:—

261. *Chairman.*] What is your official designation? Clerk of Records, Chief Secretary's Department. J. G. Cohen.
26 July, 1900.
262. Do you produce some papers in relation to the inquiry being carried out by this Committee in regard to a claim for alleged damage done to Davidson's property? Yes.
263. What are those papers? A petition, two letters from Mr. Davidson's solicitor, a letter from Mr. Davidson, and several police reports. The letter (produced) dated the 24th January, 1900, written by Davidson to the Chief Secretary, refers to a letter dated the 13th July, 1899, a complaint addressed to Mr. Brunner when he was Chief Secretary.
264. Have you that letter? No.
265. Can you tell the Committee where it is? I am under the impression that it is in the Justice Department.
266. Will you try to discover that letter and produce it on Tuesday afternoon next? I will.
267. That is all the correspondence on the question that you have in the office? Those are all the documents we have relating to the matter.
268. *Mr. Clark.*] You think that there are no other documents missing except the one you mention? That is all that I am aware of.
269. Will you inquire whether there are any other documents relating to the matter? Yes.

John

John Thomas Hewitt sworn and examined :—

- J. T. Hewitt. 270. *Chairman.*] You are a constable? Yes, a first-class constable, in the police force.
 26 July, 1900. 271. Are you aware that this is an inquiry into the claim made by J. L. Davidson for alleged injuries to his property in Wentworth-street, caused by its proximity to the police cells? Yes.
 272. *Mr. Wilson.*] You know Mr. Davidson's house? Yes.
 273. How long were you living there? Six or seven months.
 274. In what capacity? I was boarding in the house.
 275. Who was your landlady? Mrs. Morris.
 276. Were there any other boarders? Mr. Davidson was boarding there.
 277. I supposed you were sometimes disturbed by noises made by prisoners in the cells? Yes; on one occasion I had to get out of bed and go to the police station and ask them to try and pacify a prisoner who was in one of the cells.
 278. What sort of noises do they make? On that occasion the prisoner was kicking the door and singing out.
 279. And screaming, I suppose? Yes, screaming.
 280. Could you hear it quite clearly in Davidson's house? Yes. My bedroom was almost directly over the cell. I do not think that that night I got more than an hour's sleep. They got the prisoner quiet for a while, but he afterwards commenced again.
 281. Did the noise occur often? There were several other occasions when we were disturbed. I might say that almost every time a prisoner was in the cells there was much noise.
 282. Is it a fact that you left there on account of the noise? Not directly through the noise.
 283. Had that anything to do with it? No, not directly. I left in consequence of private matters.
 284. Do you think that those noises would make that house less comfortable to live in than it would be if there were no noises? Yes. I would not go back to live there again.
 285. Do you remember whom you complained to? Yes; to Sergeant Costigan and Senior-Constable Lilley.
 286. Did ever any of the people in the house complain about the noises? Yes. I heard Mrs. Davidson complain at the time when I went round to the police station. She was suffering from pneumonia. I heard great complaints about the noise on several occasions. In fact, I heard Mrs. Morris and all of them complain.

TUESDAY, 31 JULY, 1900.

Present:—

MR. NOBBS,

MR. SPENCE.

J. C. NEILD, ESQ., IN THE CHAIR.

Mr. F. Y. Wilson, of the firm of Williams and Wilson, Solicitors, appeared for Mr. J. L. Davidson.

Frederick William Charlesworth Crane further examined :—

- F. W. C. Crane. 287. *Chairman.*] Do you produce a plan of the police court premises at Paddington? Yes, it is one
 31 July, 1900. which I drew out last Tuesday. It is not to scale, but it conveys a good idea of the position of the building. [*Appendix B.*]
 288. The plan is not to scale? No; but it shows the relative positions of the buildings. The portion occupied by the prisoners is marked in coloured ink.
 289. The shed shown in the plan is Davidson's workshop? Yes.
 290. Roughly speaking, the cells and the main exercise yard shown in the plan are to the N.E. side of the premises? Yes.
 291. Can you give the Committee any idea of how frequently the cells are occupied by prisoners? Every day and night, almost without exception. I think there have only been about three exceptions during the last twelve months. Certainly since Christmas we have not had more than three exceptions.
 292. Would those exceptions be by day or night? The prisoners are generally in the cells at night, and they remain until the cells are cleared at 9 o'clock in the morning on three days of the week, and at 10 o'clock on the other three days of the week.
 293. How long are prisoners kept in the cell who are placed under arrest on a Saturday? At 9 o'clock the cells are cleared and any one coming in after that hour remains in the cells until Monday morning, unless he is bailed out.
 294. Do your duties take you to your office at the court-house pretty late in the evening? Yes; frequently, after midnight at times.
 295. Have you heard any disturbance from prisoners in the cells? Occasionally, when rowdy drunkards were brought in.
 296. The usual style of bad language, I suppose? Yes.
 297. Can you hear it in your room on the other side of the court-house building? I have heard it there when they are exceptionally noisy, but they must be very noisy to be heard at that distance. Sometimes drunkards will howl like dogs, then I can hear them.
 298. In your opinion would a noise made in the cells be very noticeable in Davidson's dwelling-house? Yes; but more so in the house adjoining the court. Davidson's house is some distance to the rear of the police station.
 299. *Mr. Nobbs.*] What is the distance from the cell to Davidson's house? There are some buildings between. There is a weatherboard building which runs up two storeys, 6 or 8 feet from the wall of the female exercise yard.
 300. There is no right-of-way there? No; although there are doors leading out of the yard on to Davidson's property. The distance from Davidson's property to the police store-room is about 6 feet, and between the workshops and the wall of the court property there is a distance of about 10 feet.
 301. You think from what you know that the proximity of the police cells to Davidson's property would cause a nuisance? It must annoy them. It would cause me a great deal of annoyance if I were living there. 302.

F. W. C.
Crane.

31 July, 1900.

302. Do you think the establishment of the Police Court would deteriorate the value of that property? It would trouble a nervous person. I do not say it would deteriorate the value of the property altogether.
303. I understand that Mr. Davidson is the owner of that property? I do not know.
304. Do you know who the owner of the property is? I know it is Davidson's house.
305. If that house were empty would the proximity of the police cells prevent a respectable tenant from taking the place if he knew what takes place in the cells? I do not know. It is a peculiar house. I am told that there was some talk some years ago about resuming the property and having the house occupied by the officer in charge of the district, but that he absolutely refused to go into the house. I would not say that it is the prisoners that cause it to be kept empty, although I should say that a nervous person would not like it.
306. The noises made there are something terrific, I believe? Yes, prisoners howling and that sort of thing.
307. *Mr. Spence.*] I suppose the officer in charge of the district would have the same natural objection to the noise as any other tenant? Yes; but they are supposed to be used to that sort of thing.
308. *Mr. Wilson.*] Have you heard any complaint from people about the prison van coming up Point Piper Road? Frequently. In fact, I have seen the road absolutely blocked time after time, and busmen shouting out to people to enable them to get along. I have seen over 200 children and adults standing in front of the Courts for a couple of hours. The van will sometimes come up at a certain hour, the Court being expected to finish at that time. On the occasion to which I have referred to the van arrived at ten minutes to 4, and had to remain until half past 5, and the crowd starting with a number of children developed into a regular mob. It is certainly very objectionable to have the van calling at the front of the building; but it does not frequently occur. When there are only one or two prisoners the police take them away in the tram or walk with them; when there are three or four more prisoners they are taken away in the van.
309. *Chairman.*] How many times a week does the van attend at the Police Court? I do not suppose it would go there more than twice a week.
310. *Mr. Wilson.*] Is there room for the van to drive up to the side entrance? No; the terraces on each side abut on the walls of the Court.
311. It would be far more convenient if we had some other place which they could drive up to? Yes. Another thing is that there is really no accommodation at the Court. On one occasion I had a case in which there was about £100 worth of furniture involved, and I had to have all the furniture brought and stacked in the Court. That was not a proper thing to do. There should be a yard with a big shed for an emergency of that kind.
312. Do you remember the prisoners escaping? Yes.
313. How long ago is that;—was it not about the 13th July last year? Yes, about that time.
314. That escape occurred in daylight? Yes, about twenty minutes to 1 p.m.
315. There are three doors in the brick wall shown on the plan? No, there are only two doors in the brick wall.
316. What is the number of prisoners who were locked up in the cells last year? I could not say what number were locked in the cells, though I can give you the number of persons who were arrested. Some persons who were arrested were brought straight into Court without going to the cells at all. The number of persons arrested last year was 871.
317. You have not been on Mr. Davidson's property when any noise was going on in the cells? No.
318. *Chairman.*] Have any representations been made by you to the Department with reference to the complaint of Mr. Davidson, or on his behalf? No; I have never received a complaint of that kind, but on two or three occasions persons came to me with petitions, and asked for certain information, which I gave them. They were anxious to abolish the nuisance of the vans stopping in front of the door to take up prisoners.
319. Have you made any representations in reference to the desirability of doing away with the practice of bringing the vans to the front of the Police Court? Not officially.
320. But you have given evidence to the effect that you consider that some increase of space is necessary for the proper conduct of the Police Court business? I think that that is absolutely necessary. Perhaps it is not within the scope of this inquiry to go into this matter, but I may say that there is at present an absolute want of accommodation for witnesses. If we had some room at the back it would be utilised for police purposes, and those two front rooms which are used as a charge room and an inspector's office could be turned into male and female witnesses' rooms.
321. How are witnesses accommodated at present? We have a room 6 feet by 8 feet, and we have had as many as twenty and thirty witnesses waiting. The females would be in the room, and the males would have to wait in the verandah.
322. What is the width of the verandah? Six or 8 feet.
323. And that is open to the rain and wind? Yes, the rain beats on the wall.
324. I suppose that an easterly or westerly wind would blow the rain in? The south-east and the easterly winds bring it in.
325. Then the witnesses cannot remain in the verandah? No; then they are allowed accommodation in the police charge room.
326. Is that convenient? No; because the police telephone is in that room. Consequently the police have to defer their business, or to ask the witnesses to go out whilst they send a message.
327. As Chamber Magistrate there, you do not think that the present arrangements are conducive to the satisfactory conduct of the business of the Court? I do not.
328. *Mr. Spence.*] I suppose it is very undesirable to have witnesses out of the room so as to come into contact with the public? No, it is not that. When they wish a witness to retire they can have a room to put one witness into. I might tell you another thing which the Stipendiary Magistrates have complained of. Mr. Isaacs, Mr. Smithers, and the late Mr. Johnston spoke very strongly about the annoyance of coming before 10 o'clock, and of having to pass through a crowd of people waiting about the passage and the verandah before going on to the Bench. They have frequently been stopped by people who wanted to give them a foresight of their case. The magistrates complain of the annoyance of having to pass along the passage. If we had a witnesses' room on the other side of the verandah, we could turn them out of the verandah. At present they collect in the passage, and we cannot turn them out.

- F. W. C. Crane.
31 July, 1900.
329. The passage on the south side of the plan is part and parcel of the building? Yes.
330. The passage on the north side and front of the cells is open? Yes, for prisoners only.
331. That is not part of the main building? No, it is not covered in. The passage in front of my office is under the one roof; that in front of the cells has no roof at all.
332. Have the magistrates made any comments as to the desirability of having a back entrance to the Court premises for the accommodation of the van? No, it does not come under their notice.
333. *Mr. Nobbs.*] Have you heard the public complain at any time of the want of convenience at the Police Court? Only those petitions which were brought up from the municipal councils and from, I think, Messrs. Dean & Co.
334. Do the people attending the Court complain? They frequently come in and ask if they can sit down. They have complained frequently. Those who arrive first, perhaps, the prosecutors, will get into the waiting-room with their witnesses, and the others will not go into that room where the prosecutors' witnesses are. They will not fraternise with them.
335. It would be a public benefit if more accommodation is provided? Yes.
336. Have the public at any time complained of the want of accommodation? They have frequently complained of the want of accommodation for the witnesses.
337. What have you been compelled to do in consequence of this want of accommodation? If the weather has been very inclement and boisterous I have allowed witnesses to sit in my own room. On one occasion I saw seven women sitting round the fire in the police charge room.
338. *Chairman.*] Have witnesses ever been accommodated in the Magistrate's room? Yes; but that is a very rare occurrence. We have allowed witnesses to sit there more as a favour than anything else, and because they did not want to mix up with certain people who prowl about the place.
339. *Mr. Spence.*] I suppose that, in regard to any of these admitted wants, it is not usual for officers of the Department to make suggestions unless they are called upon for a report? No; I have never done it. I do not know whether the Department would take it as being within my province to do so. As regards the use of the Magistrate's room by witnesses, I should like to mention that there was once a case from the Riviere College, the ladies' college, some girls having to give evidence in regard to the conduct of a man. It was not considered desirable to leave the young ladies, who had to give evidence, in the passage, and they were put into the Stipendiary Magistrate's room until the case came on.

John George Cohen, Clerk of Records, further examined:—

- J. G. Cohen.
31 July, 1900.
340. *Chairman.*] Do you produce a letter written by Mr. Davidson to the Minister of Justice in reference to his claim? Yes, the letter is as follows:—

To the Hon the Minister of Justice,
Dear Sir,

13/7/99,
Paddington.

Being the owner of the premises at the rear of the Paddington Police Court I have to inform you there were three prisoners escaped into my premises of a dangerous character, and was seen by my servant, which caused very great mental excitement both to wife and servant. For several years past the lock-up has been the source of annoyance and great loss to me, having lost several tenants, and being compelled to live here myself. I feel that I must appeal to you for protection for my wife and family.

Please appoint a personal interview, when the whole facts will be fully explained.

I am, yours, respectfully,
JOHN L. DAVIDSON.

341. Do you produce a written report of a deputation which waited on the Minister in reference to these Court premises? I do. [*See Appendix C.*]

342. *Mr. Wilson.*] Do you produce a letter dated the 24th January, addressed to Mr. John See on the subject? I do. It is as follows:—

14, Wentworth-street, Paddington, 24 January, 1900.

The Honorable J. See, M.L.A., Chief Secretary, Sydney,—

Re Paddington Police Court and premises adjoining.

Dear Sir,

On the 13th of July, 1899, I forwarded a complaint to the then Chief Secretary, Mr. Brunker, complaining of the nuisance of prisoners escaping into my premises; also the disturbance of prisoners in cells at night, to which I have repeatedly complained to the officers in charge.

I have lost several good tenants through that nuisance.

I had a personal interview with the late Chief Secretary, Mr. Brunker, and in reply thereto, he informed me my letter had been forwarded to the Inspector-General of Police, and up to the time of my interview he had not received the Inspector's reply, and my letter of the 13th July, 1899, still remains unanswered.

My reasons for not writing before are that I have seen by the daily papers of a public complaint about the prison van, and, therefore, I thought something would be done in this matter, but it seems to be like my letter—no notice taken of it.

Therefore, sir, you as a public gentleman, and myself as a ratepayer, I cannot see why I should tolerate a nuisance committed by the Government, considering I built the premises in question years before the Court-house was ever thought of.

I have the honor, &c.,
(Signed) J. L. DAVIDSON.

343. Will you read the letter sent by Messrs. Williams and Wilson, Solicitors, to the Hon. John See, on the 6th February last? Yes; it is as follows:—

The Hon. John See, M.L.A., Minister for Defence.

Dear Sir,

6 February, 1900.

On the 24th January last a client of ours, Mr. J. L. Davidson, a joiner and builder, in Castlereagh-street, wrote a letter to you on the subject of the nuisance and loss occasioned to him through the Paddington Police Court and the police cells which adjoin his property. He has not had any reply to his letter, and we have been consulted by him as to his position. Our object in now writing to you is to obtain an appointment for our Mr. Williams to see you, as it appears to us it is a matter which may be easily settled if dealt with promptly. We shall be glad, therefore, if you will give us an early appointment so that we may discuss the matter with you without prejudice to the rights of either party. We are not quite sure whether we are right in addressing you, but if not we shall be obliged if you will pass this letter on to the proper

proper quarter. We must ask prompt attention to the matter, as it is of importance to our client; and he does not intend to let the present state of affairs go on, which renders it impossible for him to let his property and compels him to live there himself against his will, at unnecessary expense, and at great discomfort and risk of health, particularly to his wife and child. J. G. Cohen. 31 July, 1900.

I am, &c.,
WILLIAMS AND WILSON.

P.S.—It is only a short time ago that prisoners escaped through the defective state of the Police Court premises and entered our clients' yard and greatly disturbed and frightened his wife and servant, and his wife has been in a highly nervous and frightened condition ever since.—W. & W.

To that letter the following reply was sent:—

Gentlemen,

With reference to your letter of the 6th instant, relative to the complaint of your client, Mr. J. L. Davidson, in respect to the Paddington Police Station, which adjoins his property, I am directed to inform you that the Chief Secretary sees no reason to take any action in the matter, and that Mr. Davidson must take whatever steps he may be advised.

Chief Secretary's Office, Sydney, 26 February, 1900.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Messrs. Williams and Wilson, Solicitors,
28, Queensland Chambers, Bridge-street, Sydney.

The following answer was forwarded to the Principal Under Secretary by Messrs. Williams and Wilson:—

The Principal Under Secretary, Chief Secretary's Office, Sydney, N.S.W.

Re Paddington Police Court.

28, Queensland Offices, Bridge-street, Sydney, 29 March, 1900.

Sir,

We have the honor to acknowledge your letter of the 16th of February last, which we have referred to our client.

He now instructs us to demand from the Government £500 for the damages and injury he has already sustained, and to call upon the Government to remove the nuisance forthwith.

If the nuisance be allowed to continue, then our client reserves his right to claim for any further damages or injury he may sustain.

We have, &c.,
WILLIAMS AND WILSON.

The reply to that was as follows:—

Gentlemen,

I am directed to acknowledge the receipt of your letter of the 29th ultimo, further respecting the complaint of your client, Mr. J. L. Davidson, in regard to the Paddington police station, which adjoins his property, and to invite your attention to my communication of the 26th February last, intimating that the Chief Secretary saw no reason to interfere, and that Mr. Davidson must take whatever steps he might be advised.

Chief Secretary's Office, Sydney, 6 April, 1900.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Messrs. Williams and Wilson, Solicitors,
28, Queensland Offices, Bridge-street, Sydney.

John Lewers Davidson further examined:—

344. *Mr. Wilson.*] The plan produced shows your property? Yes; that is my freehold. [See Appendix D.] J. L. Davidson. 31 July, 1900.

345. *Chairman.*] What is the width of the passage between the back of your house and the wall of the court premises? I stated before that the width is 3 ft. 6 in.; but I made a mistake—it is 4 ft. 6 in.

John Arthur Gibson sworn and examined:—

346. *Chairman.*] What are you? Furniture dealer and estate agent at present.

347. Are you a sworn valuator? No.

348. Have you been long in the estate-agency business? Eight or nine years altogether.

349. You are carrying on business in Paddington? Yes.

350. Do you know Mr. Davidson's premises? Yes.

351. Have you ever tried to get him a tenant? I did, about five years ago. I bought the whole of the furniture from his place.

352. Did you succeed in getting a tenant? No.

353. Was there any reason given why you could not get a tenant? No. Mr. Davidson went back and lived in the house himself.

354. Did you take any people to see the house? No; but I think that on one occasion I sent a person to see it.

355. Did any intending tenants that you sent make any objections to the proximity of the police station? Not to me.

356. What in your opinion is a fair rent for the house and workshop as they stand to-day, free from any objectionable surroundings? It is a very big workshop; and I reckon that the workshop and the ground with it would be cheap at 10s. or 10s. 6d. a week.

357. And what about the house? A guinea a week would be a fair rent for the house. It is an eight-roomed house.

358. Having in view the proximity of the police cells, what do you think is a fair rent of the building as it stands, taking that into consideration? My opinion is that you could not get 10s. a week for the place. You might let the workshop, but you could not get anyone to live in the house.

359. If the workshop is worth 10s. a week, and the whole of the premises no more than that, that means nothing a week for the house? You would not get a woman to live in the house. I would not take my wife to live there. I should be afraid to leave her there by herself.

360. Supposing the grating over the yard from which the prisoners escaped a year ago is now made secure, would that make a difference in your view as to the value? No; it is not so much the escaping of prisoners, as the noise that is made that would frighten a woman.

J. A. Gibson.
31 July, 1900.

- J. A. Gibson. 361. I suppose you hold the view that people do not care to be awakened out of their sleep in the middle of the night by objectionable noises? Yes; and another thing, when you go to the back and look up, it has such a dreary appearance.
362. You would not mind the noise? I should have to get the place very cheap or I should not take it. If it is worth £1 a week, and they offered to let it to me at 5s. or 6s. a week, I would take it, and put up with the noise as far as I am concerned; but if you have a wife and children you must consider them. I would not live in the house with my wife if I could have it at 10s. a week.
363. In your opinion as a house agent, would that be the view generally entertained by tenants? I am quite certain of it.
364. Would you spend time in taking people to see the house and trying to let it at a rental of £1 a week? No. We might take a tenant to see it, and the tenant might take the house, but we could not guarantee that he would stop in it. If he did not stay we should not bother taking any more tenants there, because we should have to let it free of commission.
365. Have you any knowledge of the freehold value of the land? I should consider that £7 or £7 10s. a foot would be a fair value for the land.
366. That is, for the frontage to the street; but there is a considerable portion to a 6-foot lane; do you include that? No; I speak of the house frontage.
367. Am I right in supposing that you would consider the land on the side frontage to the lane as necessary for yard purposes? Yes.
368. There is no yard behind the house, is there? There is a little passage—a bit of a yard.
369. You see the frontage to the street is taken up with front of the house and the cart-way into the yard and workshop? Yes.
370. It is the portion fronting the street which you would value at £7 10s. a foot? Yes.
371. And what value would you put on that shallow angle fronting the lane? I should not like to say. It is very difficult to estimate. In a case like that the frontage would have to be averaged.
372. Can you average it—the part to the street and the part to the lane? Taking the whole piece, I should say the value would be about £6 10s. a foot, because that bit of lane could be taken further back and a house put there.
373. Would it not be better to give separate valuations to the land fronting the street and the land fronting the lane? Yes.
374. What would be the value of the frontage to the lane, having regard to its shallow depth? If you took that away from the other frontage it would not be worth very much, because you could not do anything with it. The value for the whole frontage would be about £6 10s. a foot.
375. *Mr. Wilson.*] What do you think the land is worth as a block? I value it at £7 10s. a foot.
376. *Mr. Nobbs.*] What could you get for it? I believe we could get £7 a foot for it right through.
377. The whole depth? Yes.
378. How many feet are there? About 30 feet to the road.
379. You consider that the whole of the land is worth £225? Yes.

WEDNESDAY, 8 AUGUST, 1900.

Present:—

MR. SPENCE, | MR. MEAGHER,
MR. NOBBS.

J. C. NEILD, ESQ., IN THE CHAIR.

Mr. F. Y. Wilson, of the firm of Williams and Wilson, Solicitors, appeared for Mr. J. L. Davidson.

John Lewers Davidson recalled and further examined:—

- J. L. Davidson. 380. *Chairman.*] With reference to the plan which you put in on the 31st July, your property is there shown by a pink colouring, the dwelling-house site being denoted by a red outline enclosing a black hatching, while the workshop is also shown? Yes.
- 8 Aug., 1900. 381. The portion of the plan coloured blue represents the back portion of the Police Court premises? Yes.
382. There is also shown, in pink, a right of way for drainage; is that your freehold? No.
383. Who is the owner of it? It is simply a right of way for drainage purposes.
384. Who has the right to use it? I have been using it for sixteen years, and my right to do so has never been called in question. No doubt that right of way was laid out for the convenience of the two allotments.
385. According to the deeds who has a right to use it? I have.
386. Have the police a right to use it? For drainage only. They have a right to carry their drainage through it.
387. Has any other adjoining property the right to use it? No.
388. If the police allotment and your allotment were the subject of an undivided ownership, this 10-foot strip would practically become the freehold of the owner of the allotments? No one will dispute that.
389. Has the lane shown on the plan any name? No.
390. What is the width of it? Six feet. It is a convenient lane for Wentworth-street, off Leicester-street.
391. Do you wish to add anything to the evidence which you have already given? I think I have said all that I can say. I have suffered a great deal of annoyance.

THURSDAY,

THURSDAY, 13 SEPTEMBER, 1900.

Present:

Mr. J. C. L. FITZPATRICK, | Mr. NOBBS,
Mr. SPENCE.

J. C. NEILD, ESQ., IN THE CHAIR.

Augustus Vialoux sworn and examined:—

392. *Chairman.*] You are the Council Clerk of the Borough of Paddington? Yes.
393. You have a knowledge of the Police Court premises in Point Piper Road? Yes.
394. You have recently inspected the premises in connection with a complaint which had been made to you, or your Council, in reference to a lack of closet accommodation there? Yes; on two occasions.
395. You visited the premises twice? Yes; I was there again this morning.
396. What accommodation is there for the public? The accommodation is very inadequate.
397. Very inadequate? Yes; of course, there is a w.c. and urinal for the officers of the Court, and then they have another w.c. and urinal for the accommodation of the public generally—that is to say, men, women, and children. The whole of the space in which the two closets are placed occupies about 13 feet square, and that space also is devoted to the storage of firewood and coal kept for the establishment.
398. Then the space occupied by the closets comes out of that 13 feet square? Yes.
399. Is there room, in your view, for the erection of further closets? Oh, no; it is cramped as it is.
400. And the complaint made to you was that this was not accommodation suitable to the requirements? If you will allow me to explain, the complaint arose in this way: In the first instance, one of the aldermen drew attention to the matter in the Council, and informed the Council that there was no accommodation there of any kind whatever.
401. For the public? Yes; and the matter was left to me, in the ordinary course, to make inquiries. I went up there and found that there was this accommodation that I have already described. It is at the end of a narrow passage outside the Court from the Court offices, and there is a door at the end which opens out into this little space that is really not sufficient for a whipping-post.
402. There has been some correspondence between your Council and the Government about this? Yes. I visited the place, and the clerk said he would keep the door open, and I thought it was not necessary to do any more. The particular alderman to whom I have referred, drew attention to the matter again, because he had received a number of complaints from the public visiting the Court, and then I wrote a letter to the Minister for Justice. The letter is as follows:—

To the Under Secretary, Department of Justice,—
Sir,

Town Hall, Paddington, 29 August, 1900.

Complaints have been made at different times to my Council as to the lack of lavatory accommodation at the Paddington Police Court, for the general public, and I have been directed to write you on the subject. It appears that there is, at the back of the Court-house, some accommodation of the kind, to which access is obtained by way of a passage between the Court-room and the Clerks' office, but the end door of the passage is kept closed and there is nothing to indicate that such convenience is available.

I have, &c.,

A. VIALOUX, Town Clerk.

403. Have you received a reply? Yes, I received a reply, as follows:—

Sir,

Department of Justice, Sydney, 10 September, 1900.

Referring to your letter of the 29th ultimo, with regard to the lavatory accommodation at the Court-house, Paddington, for the use of the general public, I have the honour to inform you that inquiry has been made on the subject, from which it appears that the door to which you allude has been kept closed, owing to the water-closets being in such close proximity to the passage leading into the building, and also to prevent their being exposed to passers-by in the public street.

Steps are, however, being taken to have a notice placed on the door to indicate where the lavatory is to be found.

I have, &c.,

GEORGE MILLER,

Under Secretary.

The Council Clerk, Paddington.

404. As a fact, if this door is kept open, these closets will be in view of passers-by in Point Piper Road? Yes; and they will be highly offensive to the habitues of the Court and the officers. The Magistrates' Room is quite close.
405. Then, that is where the matter stands at the present time? Yes. There is no doubt about the inadequacy of the accommodation at that Court. Perhaps it may not be out of place for me to say that, a long time ago, we had a petition on the subject from the people resident in the neighbourhood.
406. Do you mean a petition presented to your council? Yes. It is rather apart from the subject, perhaps, but the petition was with reference to the taking of prisoners to and fro in the main street. As a matter of fact, it is not a well-constructed police station at all. There are no back premises; and there is no back entrance.
407. The fact of the matter is, that the court buildings and the police-station almost entirely occupy the ground, and there are no adequate back premises? Yes; everything else is crowded. There is a witnesses' room, for example, which is not as large as an ordinary clothes closet in a well-appointed house.

CLAIM OF MR. J. L. DAVIDSON, PADDINGTON.

APPENDIX.

A.

[Appendix by the Committee.]

NEW SOUTH WALES, } Before a Select Committee of the Legislative Assembly appointed to inquire into the petition
to wit. } of John Lewers Davidson.

On this twenty-fifth day of July, in the year one thousand nine hundred, Jane Ball, of Cameron-street, Hamilton, near Newcastle, in the Colony of New South Wales, wife of Edward Ball, of the same place, being duly sworn, maketh oath and saith as follows :—

1. About three years ago I was boarding with Mrs. Morris in Mr. John Lewers Davidson's house, the rear of which adjoins the rear of the police station at Paddington. I was often disturbed at night by the noises of the prisoners screaming, shouting, and swearing.
2. The noises became so great that I left the house on account of them.
3. I complained at the police court of the noises, but they were unable to stop them.

Sworn by the deponent on the day first above }
mentioned at Newcastle, before me,— }

T. CROUDACE, J.P.

JANE BALL,
Cameron-street, Hamilton, Newcastle.

C.

[To Evidence of J. G. Cohen, Esq.]

DEPUTATION regarding the discharge of prisoners, and their reception at the Point Piper Road Court-house.

19 December, 1899.

Present : Mr. J. C. Neild, M.P., Revs. J. W. Gillett, H. Wiles, and J. Fulton, Mr. W. Rush, and Mr. W. Deano. Apologies were made for the absence of the Rev. J. Fordyce and Dr. Quaife.

Mr. Neild said they wished to refer to the undesirable state of affairs existing in connection with the removal from, and the reception of prisoners at, the Point Piper Road Court-house. There was no back entrance to the premises, and the road was a thoroughfare of some considerable importance—a residential thoroughfare, with good surroundings. The sights seen there, and the language used, had long given offence to the residents, and this was considered very undesirable in regard to the numerous school children passing to and fro. The deputation represented the Protestant churches of the locality, and they voiced the wishes of the residents, who desired the Government to take steps to have a back entrance provided to this police court, so that the scenes that daily occur might be things of the past.

Mr. See : Would the use of a back entrance cause annoyance to other people ?

Mr. Neild : The street at the back is a most unimportant one ; it is a *cul de sac*, and was one of the last streets in Paddington that is discoverable. When the back wall of the police court was built, doorways were left in it, and wooden doors now exist between the police-court premises and private premises. Prisoners, when escaping, as they sometimes do from this lockup, get through the private premises at the back, causing great anxiety and excitement.

Mr. See : Would it mean the purchase of property ?

Mr. Neild : Yes, a small purchase.

Mr. Gillett said he had to support very strongly what Mr. Neild had said. His house was not very far removed from the Paddington Police Court, and he had frequent opportunities of noticing what went on there ; he had often seen the "Black Maria" drawn up between 3, 4, and 5 o'clock in the afternoon, and it had always been attended by a crowd of school children who congregated there, and watched with great delight all that went on. It was the opinion of all the residents around that that sort of thing produced a most demoralising effect upon these young people and others. The trouble could be removed by having an entrance at the back.

Mr. Fulton said that people were often taken to the court who in the end were found not guilty, and they were exposed to the gaze of many people, which was not a proper thing. He had for six months, some time back, lodged opposite the police court, and had sometimes seen 300 or 400 children gazing on the people in custody. Sometimes these people were discharged, and he thought it was a degrading thing that they should be looked at by hundreds of persons. Some of the prisoners used language which was very undesirable for children to hear. The police should order the children away. At the time a great boxing contest was on, there must have been 400 people in the street there, and a great number of them were children. The difficulty would be overcome if the people from the State coach could be discharged in a yard at the back.

Mr. See said that the people in the back street might object if the prisoners were discharged there and had to walk to the court, and though those people might not be quite so influential they must be considered.

Mr. Wiles said he had no personal knowledge of the matter, but had heard what occurred at the police court from a friend of his. Parents had been made to shudder when listening to the language used by some of the prisoners, who evidently delighted to use improper expressions in the presence of children, and took such an opportunity of doing so.

Mr. Neild said he was under the impression that the local police inspector had reported in favour of a rear entrance to this police station.

Mr. See said a petition had been presented in regard to this matter, which was signed by a great number of people. It was referred to the police, and the inspector reported "that on an average the police van for the conveyance of prisoners from the police station is not so employed more than once a week. It is now over three weeks since the van has been there. When there is only one prisoner, they are brought in the tram. The van seldom remains at the station more than four or five minutes if the warrants are ready. Most of the petitioners reside a considerable distance from the court-house, some of them about half a mile, and in consequence know nothing of their own knowledge."

Mr. Fulton said he had seen the coach, during that boxing contest, for fifteen minutes at the station. For a time, the coach went there at 8 o'clock in the morning, and did not go again until 6 o'clock in the evening, which was an admission by the police authorities that there was something undesirable going on. Provision had been made for a back entrance in the plans of the building.

Mr. See stated that no doubt if it could be done it would be just as well for the prisoners to be discharged at the back. He would have the matter inquired into, and call for a report, to see whether it was practicable to carry out the wishes of the deputation.

APPENDIX.

E.

[Appended by the Committee.]

Extracts from the address of Mr. F. Y. Wilton, Solicitor for Mr. J. L. Davidson.

The Law of Torts, by Sir Frederick Pollock. Second Edition.

A third kind (of nuisance), and that which is most commonly spoken of by the technical name, is the continuous doing of something which interferes with another's health or comfort in the occupation of his property, such as carrying on a noisy or offensive trade. Convenience and enjoyment.

What amount of annoyance or inconvenience will amount to a nuisance in point of law cannot, by the nature of the question, be defined in precise terms. Attempts have been made to set more or less arbitrary limits to the jurisdiction of the court, especially in cases of miscellaneous nuisance, as we may call them, but they have failed in every direction. Measure of nuisance.

It is not necessary to constitute a private nuisance that the acts or state of things complained of should be noxious in the sense of being injurious to health. It is enough that there is a material interference with the ordinary convenience of life—"the physical comfort of human existence"—by an ordinary and reasonable standard; there must be something more than mere loss of amenity, but there need not be positive hurt or disease. Injury to health need not be shown.

In ascertaining whether the property of the plaintiff is in fact injured, or his comfort or convenience in fact materially interfered with, by an alleged nuisance, regard is had to the character of the neighbourhood and the pre-existing circumstances. Plaintiff not disentitled by having come to the nuisance.

Again, a nuisance is not justified by showing that the trade or occupation causing the annoyance is, apart from that annoyance, an innocent or laudable one. "The building of a lime-kiln is good and profitable, but if it be built so near a house that when it burns the smoke thereof enters into the house, so that none can dwell there, an action lies for it." "A tan-house is necessary, for all men wear shoes; and nevertheless it may be pulled down if it be erected to the nuisance of another. In like manner of a glass-house, and they ought to be erected in places convenient for them." So it is an actionable nuisance to keep a pig-sty so near my neighbour's house as to make it unwholesome and unfit for habitation, though the keeping of swine may be needful for the sustenance of men. Learned and charitable foundations are commended in sundry places of our books, but the fact that a new building is being erected by a college for purposes of good education and the advancement of learning, will not make it the less a wrong if the sawing of stone by the builders drives a neighbouring inhabitant out of his house. Innocent or necessary character, per se, of offensive occupation, is no answer.

Where the nuisance complained of consists wholly or chiefly in damage to property, such damage must be proved, as it is of appreciable magnitude and apparent to persons of common intelligence, not merely something discoverable only by scientific tests; and acts in themselves, lawful and innoxious, do not become a nuisance merely because they make a neighbouring house or room less fit for carrying on some particular industry without interfering with the ordinary enjoyment of life; but where material damage in this sense is proved, or material discomfort according to a sober and reasonable standard of comfort, it is no answer to say that the offending work or manufacture is carried on at a place in itself proper and convenient for the purpose. A right to do something that otherwise would be a nuisance may be established by prescription, but nothing less will serve, or, in other words, a place is not, in the sense of the law, convenient for me to burn bricks in, or smelt copper, or carry on chemical works, if that use of the place is convenient to myself, but creates a nuisance to my neighbour. Convenience of place, per se, is no answer.

No particular combination of sources of annoyances is necessary to constitute a nuisance, nor are the possible sources of annoyance exhaustively defined by any rule of law. "Smoke, unaccompanied with noise or noxious vapour, noise alone, offensive vapours alone, although not injurious to health, may severally constitute a nuisance to the owner of adjoining or neighbouring property." Modes of annoyance.

The persistent ringing and tolling of large bells, the loud music, shouting, and other noises attending the performance of a circus, the collection of a crowd of disorderly persons by a noisy entertainment of music and fireworks, to the grave annoyance of dwellers in the neighbourhood, have all been held nuisances, and restrained by the authority of the court.

Persistence in a proved nuisance is stated to be a just cause for giving exemplary damages. Page 364, Damages.

The Law Reports, Equity Cases, Volume III., Crump v. Lambert, page 412. Lord Romilly, Master of the Rolls, says:—

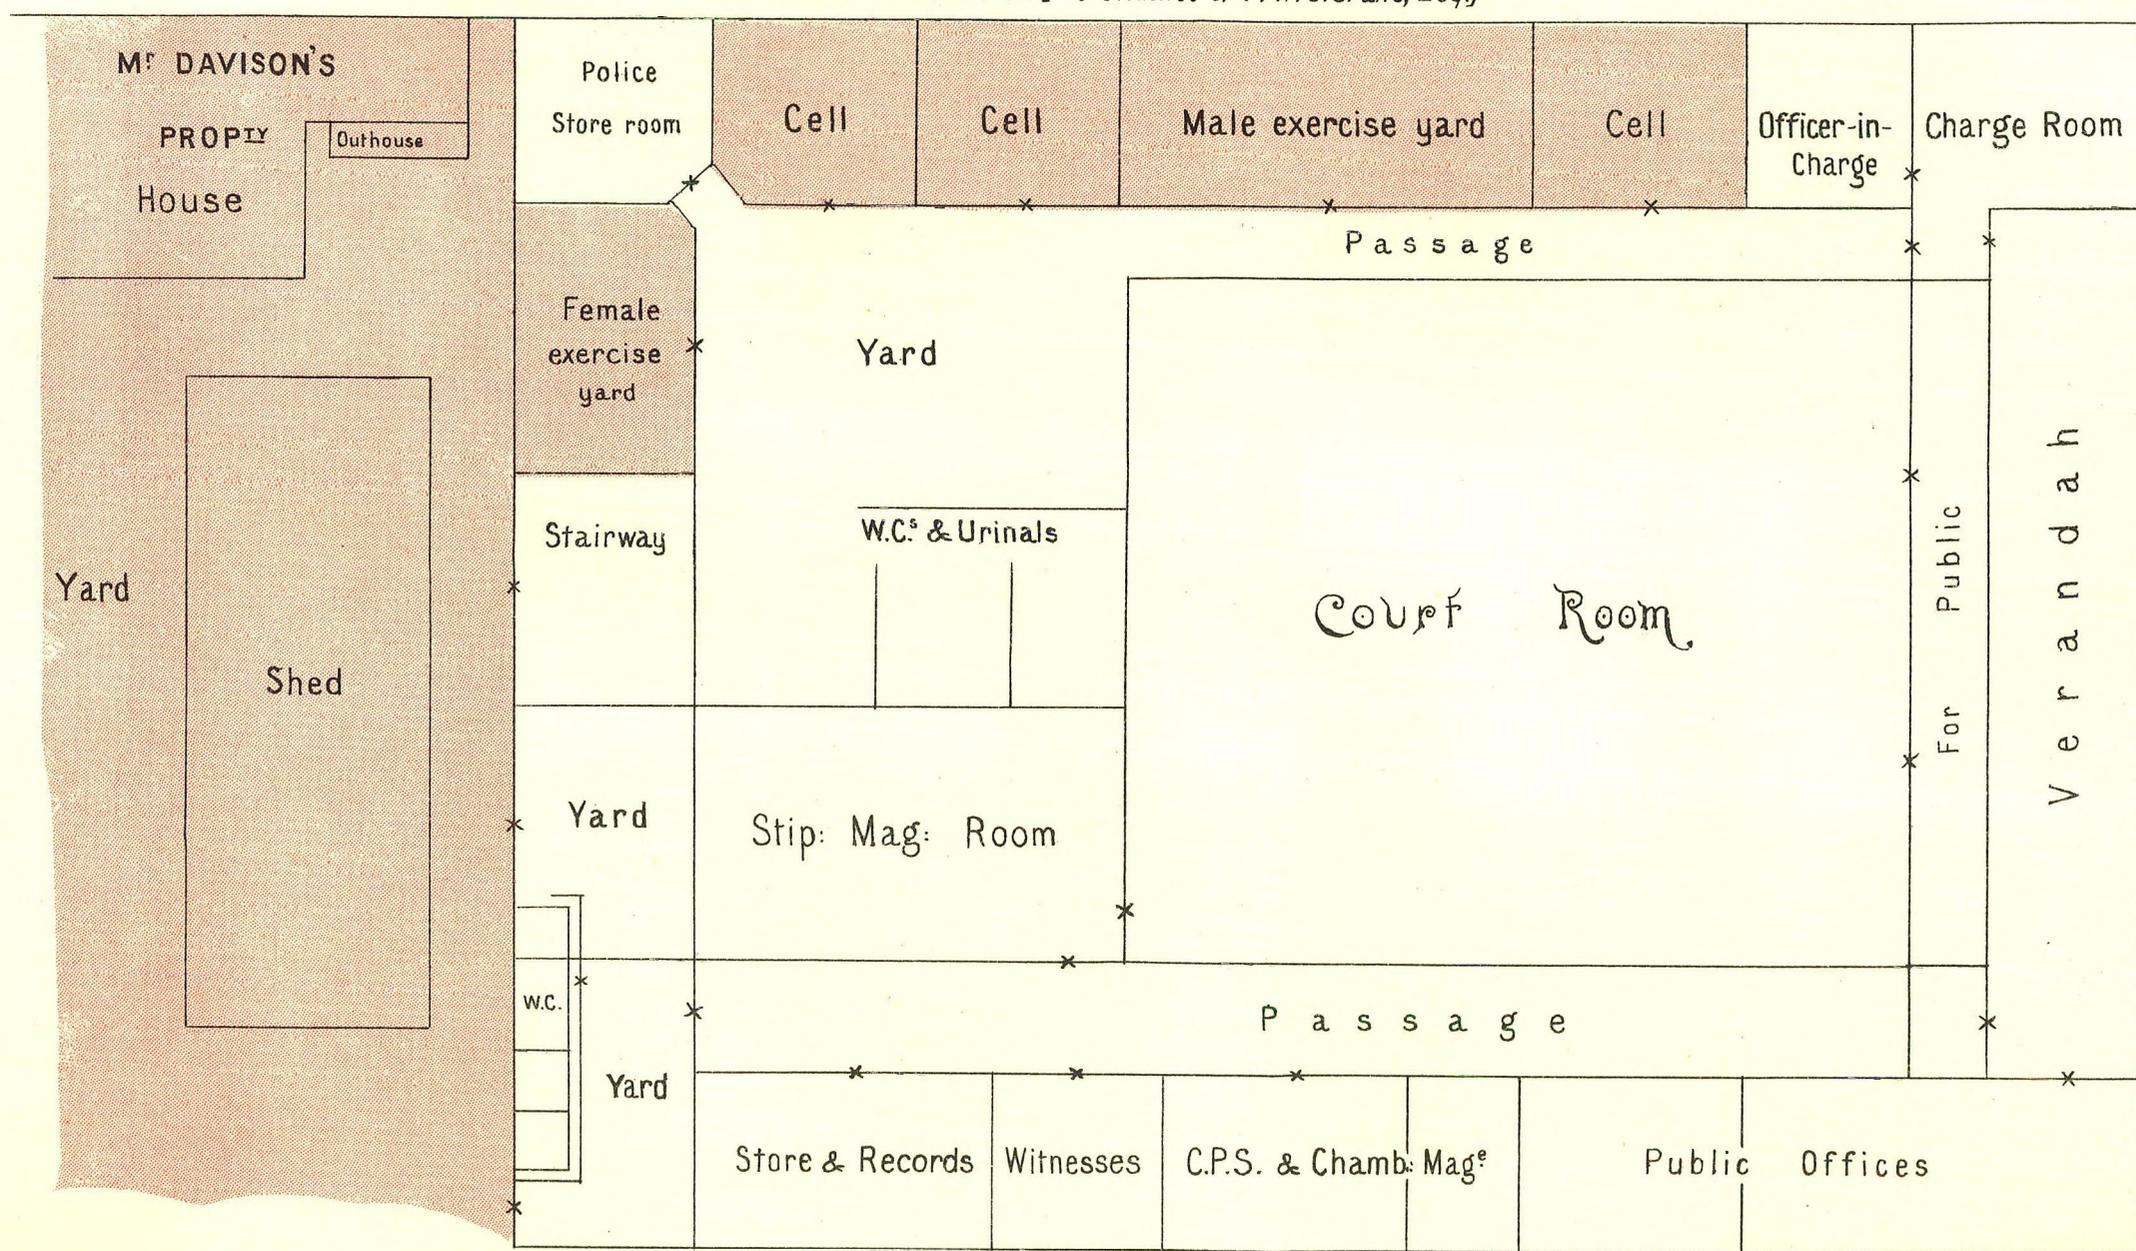

"With respect to the question of law, I consider it to be established by numerous decisions that smoke, unaccompanied with noise or noxious vapour, that noise alone, that offensive vapours alone, although not injurious to health, may severally constitute a nuisance to the owner of adjoining or neighbouring property; that, if they do so, substantial damages may be recovered at law; and that this court, if applied to, will restrain the continuance of the nuisance by injunction in all cases, when substantial damages could be recovered at law. Elliotson v. Feetham (1) and Soltan v. De Held (2) are instances relating to noise alone. In the former, damages were recovered in an action at law; and in the second an injunction was granted on account of sound alone. What constitutes a nuisance is thus defined by Lord Justice Knight Bruce, when Vice-Chancellor, in Walter v. Selfe (3):—"Both on principle and authority the important point next for decision may properly, I conceive, be thus put: Ought this inconvenience to be considered in fact as more than fanciful, more than one of mere delicacy or fastidiousness, as an inconvenience materially interfering with the ordinary comfort, physically, of human existence, not merely according to elegant or dainty modes and habits of living, but according to plain and sober and simple notions among the English people?" This definition is adopted in Soltan v. De Held by Vice-Chancellor Kindersley, and is, I apprehend, strictly correct; and it agrees with the principle of all the cases referred to at common law, and approved of in the case of St. Helen's Smelting Company v. Tipping (1), which settled the law as regards another part of this case, to which I shall presently have occasion, when citing Hole v. Barlow (2), to refer. The law on this subject is, I apprehend, the same, whether it be enforced by action at law or by bill in Equity. In any case where a plaintiff could obtain substantial damages at law, he is entitled to an injunction to restrain the nuisance in this court. There is, I apprehend, no distinction between any of the cases, whether it be smoke, smell, noise, vapour, or water, or any other gas or fluid. The owner of one tenement cannot cause or permit to pass over, or flow into, his neighbour's tenement any one or more of these things in such a way as materially to interfere with the ordinary comfort of the occupier of the neighbouring tenement, or so as to injure his property. . . . And the doctrine suggested in Hole v. Barlow—that the spot from whence the nuisance proceeded was a fit, proper, and convenient spot for carrying on the business which produced the nuisance—is no excuse for the act, and cannot be made available as a defence either at law or in Equity.

"The real question in all the cases is the question of fact, viz., whether the annoyance is such as materially to interfere with the ordinary comfort of human existence. This is what is established in St. Helen's Smelting Company v. Tipping (1), and that is the question which is to be tried in the present case."

NEW SOUTH WALES.

METEOROLOGICAL CONDITIONS IN NEW SOUTH WALES.

(REPORT OF THE GOVERNMENT ASTRONOMER RESPECTING THE RECENT SNOWSTORM.)

Printed under No. 5 Report from Printing Committee, 19 July, 1900.

The Minister for Public Instruction,—
Sir,

Sydney Observatory, 13 July, 1900.

In reply to your instructions to give all available information in reply to Question 14 of July 14, I have the honor to report that I have made a careful study of the recent snowstorm, which was in many places by far the heaviest storm on record—that is, of storms of which measurements of snow were made. Some of the snowstorms seem to have been of great severity in early days. The recent storm seems to have had its greatest force between Orange and Katoomba, and southwards of that, but not so far as Goulburn, for there no snow fell. At Bathurst from 20 to 24 inches of snow were measured in open places. On the railway the chief difficulty would appear to have been caused by drift snow, which in places accumulated in sufficient depth on the line to stop the railway trains, although I have not heard of any damage to the permanent way. Question 1

Orange.—At Orange snow fell from 7.30 a.m. July 5th, and ceased at 5 p.m., during which time 18 inches fell, which, although not the heaviest on record there, was the heaviest for ten years.

Molong.—At Molong the amount of snow was only 12 inches, which fell between 11 a.m. and 6 p.m., July 5th. The greatest previous fall there was 3 inches.

Goulburn.—At Goulburn, and over a large area round it, no snow fell during the recent storm.

Murrumburrah.—At Murrumburrah snow began to fall at midnight July 4th, and continued to 4 a.m. July 5th, when the snow measured 8 inches in open places. Previous falls of snow had not exceeded 4 inches.

Crookwell.—At Crookwell snow fell from 8 p.m. July 4th to 7 a.m. July 5th, and measured 15 inches on open ground, the heaviest on record.

Tumut.—No snow fell at Tumut on July 4th or 5th.

The Cause of the Snow.—Our meteorological observations and recorded phenomena supply an explanation of the cause of the recent snowstorm. At the beginning of July tropical rains appeared in the northern parts of Australia. These rains compared with our weather, and in coming south they met our cold southerly winds, which froze the moisture of the tropical winds into snow-flakes, and on the surface the cold was severe, but our complete meteorological station on Mount Kiandra shows that a *polar blast* rushed over Kiandra on July 3rd. The wind was of hurricane violence, and intense cold and snow, described by my observer and the residents as the coldest time they had ever known, and Kiandra has had a complete observatory since 1881; 3 ft. 6 in. of snow was deposited in the three days the wind lasted; how much it would have been with the intense cold, and without the wind to carry away the snow, it is impossible to say. This blast of a freezing polar wind found its way over the surface currents of wind, and into the tropical warm and humid air, and made snow very fast. On July 6th the polar wind had ceased at Kiandra, and when it got over Bathurst was nearly spent, and snow fell only for a few hours. Had it lasted, there would have been much more snow. Question 2

With an actual case before us, the cause of the snow and its possible recurrence, it is obvious that it may recur again; but in the light of past experience, during 100 years, the probable recurrence is remote. Question 3.

In the future—I hope a near future—when we get meteorological *kites*, we shall be able to forecast such storms, and much more of meteorological phenomena of the greatest use to the public.

I have the honor to be,

Sir,

Your obedient servant,

H. C. RUSSELL,

Government Astronomer.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

METEOROLOGICAL DISTURBANCES.

(REPORT BY THE GOVERNMENT ASTRONOMER RESPECTING.)

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

Reply to Dr. Ross' Question No. 9.

Sydney Observatory, 19 July, 1900.

REPLY to No. 1. The probable cause of the great heat in the Northern Hemisphere is the prevalence of southerly—that is, warm equatorial—winds, which clear the atmosphere, and makes the sun's heating power greater. In the south we have had the corresponding southerly cold winds, and bringing to us almost antarctic cold.

2. The probable cause of opposite weather in the two hemispheres is the prevalence of southerly winds, as shown in answer to No. 1. The sun's heat is exactly the same from year to year; that we know. The circulation of wind we do not know, and cannot trace as yet. In order to grasp all, Australia, instead of half, must be all under meteorological observation. South Africa, South America, and also the islands of the sea must yield a record to the meteorologist before we can fully grasp the weather of the Southern Hemisphere.

3. The Sydney daily weather chart is made from all the observations in Australia, Tasmania, and New Zealand, and that service will very much improve when we get cables of weather from South Africa and South America, instead of forecasts a day or a few days in advance. The forecasts will give us better data for making forecasts, which will be for weeks, and perhaps months, in advance.

4. No, it is not a fact that the highest meteorological authorities in England, &c., have ascertained that when the weather is severe in the Northern Hemisphere the opposite conditions exist in these colonies. Twice I have been to England, and each time spent time studying in the Meteorological Office, and have always been in close friendly correspondence with the head of the Meteorological Service in London, and regularly he sends me every week everything they publish in the London Meteorological Office, as well as frequent correspondence, and I know that the authorities there have not ascertained that very severe weather in the Northern Hemisphere has its correspondence in the colonies in the Southern Hemisphere. I know also that such statements are made by non-scientific men, upon data which to a scientific man do not constitute proof.

No. 1.

Mr. John R. Wallace to The Secretary, Board for Exports.

Re Supplies for the Cape.

New South Wales Master Bakers’ Association,
Moore-street, Sydney, 13 October, 1899.

Sir,

I am instructed by the President (Mr. A. C. Shadler, J.P.) to inform you that the members of the Board of Management of the above Association will be willing to act as experts for flour intended to be sent to the Cape.

Constituting as they do the ablest and largest bakers in the metropolis, they are better qualified to give an expert opinion on the merits of the different brands than most men. If necessary, I can supply you with confidential information on the matter.

Trusting that the compliment will be paid our Association of having, say, two members appointed.

Yours, &c.,

JOHN R. WALLACE,
Secretary.

No. 2.

Mr. A. C. Shadler to The Secretary, Board for Exports.

New South Wales Master Bakers’ Association,
Sydney, 5 January, 1900.

Sir,

I am in receipt of your letter of yesterday, in which you advise of the purchase of 500 tons of flour, subject to the same being passed as good flour by this Association.

The committee to deal with this matter will meet at 2 o’clock to-day, when the decision will, as you suggest, be made known to Messrs. Birt & Co. as to the nature of the tests required to be gone through before the certificate can issue.

I note that you are having special certificate forms printed for this purpose.

I have, &c.,

A. C. SHADLER,
President.

Mr. John R. Wallace to The Under Secretary, Department of Agriculture.

New South Wales Master Bakers' Association,
Sydney, 6 January, 1900.

Sir,

Referring to your letter (1900/127 A) regarding the inspection by my committee of 500 tons of flour, bought by the Government for South Africa, I beg to inform you that since receiving same the committee has received a communication from the Board for Exports, and the flour is now being tested and tried before a certificate will be issued as to its quality.

I have, &c.,
JOHN R. WALLACE,
Secretary.

No. 4.

Mr. A. C. Shadler to The Secretary, Board for Exports.

New South Wales Master Bakers' Association,
Sydney, 10 January, 1900.

Sir,

Reverting to your letter of the 4th instant, in which you advise me of the purchase of 5,000 sacks of flour for South Africa, and asking that it be tested by our Association.

I have now pleasure in informing you that an expert committee of the Board of Management of the Association has tested the various brands submitted, and its certificate is enclosed herewith.

I have, &c.,
A. C. SHADLER,
President.

No. 5.

Interim Certificate from the Expert Committee to The Secretary, Board for Exports.

Sir,

Sydney, 10 January, 1900.

We have inspected the following stacks of flour located:—2,000 sacks, McCorquodale Bros.' brand, at their mills, Sussex-street; Allsopp's "Silver Spray," at Neutch's Bond; "Lion" brand of flour, at Neutch's Bond; Affleck's brand, at the Grafton Bond; Great Western Milling Co.'s "Purity" brand, at N. Z. Loan and M. A. Co.'s Stores, Pyrmont, which have been purchased for shipment to South Africa.

We subjected these flours to a practical baking test, and beg now to report that of these, McCorquodale's, Allsopp's, "Lion," and Affleck's flours are good and wholesome and free from weevil, but the flour branded "Purity" is too dark and too weak to be used unless some other white and stronger flour is mixed with it.

There are 1,500 sacks of McCorquodale's flour still to be milled, and we will make a further test of same when ready.

We have, &c.,
A. C. SHADLER.
WILLIAM WHITE.
W. WOLFF.

P.S.—The flour branded "Purity" was not shipped.—D.McL.

Interim Certificate from the Expert Committee to The Secretary, Board for Exports.

Flour for South Africa.

New South Wales Master Bakers' Association,
Sydney, 13 January, 1900.

Sir,

Following up our letter of the 10th instant, in which we gave you an interim certificate for certain flours which had been inspected and practically tested by ourselves, we now beg to report on the balance (1,500 sacks) of McCorquodale Bros.' flour, which has just been milled.

The flour is of good quality and free from weevil, and has stood a practical baking test. We consider it quite fit for shipment to South Africa.

We have, &c.,
A. C. SHADLER.
W. WHITE.
W. WOLFF.

No. 7.

Interim Certificate from the Expert Committee to The Secretary, Board for Exports.

New South Wales Master Bakers' Association,
Sydney, 16 January, 1900.

Sir,

We beg to report that we have tested the following flours, which we understand are intended for shipment to South Africa, to a thorough baking test:—Young Co-operative M. Co.'s "Goldrop" flour; Great Western M. Co.'s "Purity" flour; "Star" (no maker's name); Kimpton's (Melbourne) "Bakers' Champion"; "Lion" (no maker's name); Vercoe Bros. & Co. (Adelaide); Dalton Bros.' (Orange) "Lily of the West."

Two

3

Two sacks of each of the above flours were forwarded from the various stores in Sydney by Messrs. Birt & Co. (Limited), and we find, with the exception of the flour branded "Star," that all these flours, while being wholesome and free from weevil, cannot be classed as first-class.* These particular flours are not up to the standard required by the leading bakers of Sydney. (*Re* the flour branded "Star," we condemn this as being unfit for food consumption.)

We have, &c.,
A. C. SHADLER,
President.
WILLIAM WHITE.
WILLIAM WOLFF.

P.S.—The flour branded "Star" was not shipped.—D.McL.

No. 8.

Mr. A. C. Shadler, Chairman, Expert Committee, to The Secretary, Board for Exports.

New South Wales Master Bakers' Association,
Moore-street, Sydney, 24 January, 1900.

Sir,

Reverting to your request that my colleagues and I should sign the certificate which you left with me yesterday, making use of the words you suggested in the body, I have now to say that we had a meeting this morning, and we decided that before we can sign any shipping certificate we must know beyond all question which of the flours we tried were shipped. When we know that, we can make the necessary remarks opposite each line of flour, and then sign. You might, in the meantime, obtain from the shippers a copy of the bill of lading, wherein are shown the different brands, and a statement from the bonds that these particular brands of flour left those bonds.

I am, &c.,
A. C. SHADLER,
Chairman, Expert Committee.

No. 9.

Mr. A. C. Shadler, Chairman, Expert Committee, to The Secretary, Board for Exports.

New South Wales Master Bakers' Association,
Moore-street, Sydney, 25 January, 1900.

Dear Sir,

I am in receipt of your letter of yesterday, and in reply, beg to state that neither I nor my colleagues are questioning any irregular shipments, nor do we doubt that any flour which we condemned has been sent away. We merely wish to draw up the certificate in a proper form, and to be quite satisfied that the flour we tested is the flour which has left by the s.s. "Surrey."

We will be glad if Messrs. Birt & Co. will satisfy us on the matter. The delay is now in their hands. My colleagues and I will need the documentary evidence mentioned in my letter of the 24th. Although we have nothing to do with rumours, but as they are in existence, it behoves us not to take anything for granted, and I agree with you that this matter is important, and that all doubts should be removed.

It is now for Messrs. Birt & Co. to satisfy us, not for us to satisfy ourselves.

If this firm will furnish me with the required documents, I will undertake to have the certificate completed within a very few hours.

I am, &c.,
A. C. SHADLER,
Chairman, Expert Committee.

No. 10.

Mr. John R. Wallace to The Secretary, Board for Exports.

New South Wales Master Bakers' Association,
Moore-street, Sydney, 3 February, 1900.

Sir,

I am directed by the President to acknowledge your letter to him of yesterday, in which you ask that a certificate of inspection be signed, covering a shipment of 12,567 sacks flour shipped by Messrs. Birt & Co. (Ltd.), per "Surrey," and consigned to the General Officer Commanding, Capetown, and in reply, beg to say that our members of the expert committee decline to sign any further certificates *until the fees owing by Messrs. Birt & Co. (Ltd.) for testing the various brands are paid.* Messrs. Birt & Co. (Ltd.) have demurred to this payment, although the President put it in writing to them before the flour was tried, and which they did not object to. Further than this, the President told you that when the first lot of flour was in question, that no charge would be made on that, but in future a fee of £10 10s. would have to be paid for every trial. My committee would not, of course, see the Government inconvenienced, as the question of a fee was not mentioned at first trials. Mr. Shadler then requested you to inform all owners of flour that in future tests they would be obliged to pay the above fee outside the value of flour used for testing purposes. When making that stipulation it was certainly understood that there would be but one brand, and not a dozen; therefore the matter of the fee now at issue concerns yourself as well as Messrs. Birt & Co. (Ltd.)

I have, &c.,
JOHN R. WALLACE,
Secretary.

Memorandum from the New South Wales Master Bakers' Association.

Breadstuffs.—Shipment of Flour to South Africa.

ONE of the immediate tangible advantages derived from sending the Contingents to South Africa is the fact that it has opened the way for the introduction of some of the Colony's flours for consumption by the troops at the Cape. The Imperial authorities have accepted offers of flour here, amounting to 12,500 sacks. Before this flour was shipped, the Board for Exports subjected it to a thorough practical baking test by a committee of experts appointed by the Board of Management of the New South Wales Master Bakers' Association. In all, twelve different brands were tested, and of this number, three brands passed as first-class, seven as second-class, and two were condemned altogether, thus showing the absolute necessity of testing, on behalf of the Government, all food supplies destined for foreign countries before shipment. The expert committee consisted of Messrs. A. C. Shadler, J. P. (President of the Master Bakers' Association), William White, Redfern, and William Wolff, Balmain. It is understood that the seven flours graded as second-class will be shipped with the necessary qualification.

This was done.—
D.McL.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INEBRIATES BILL.

(PETITION FROM ELIZABETH RENWICK, VICE-PRESIDENT OF THE NATIONAL COUNCIL OF WOMEN
IN FAVOUR OF.)

Received by the Legislative Assembly, 18 July, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

That at a meeting of the Executive of the National Council of Women of New South Wales held on 27th June, 1900, the following resolution was passed:—

“That we realise to the uttermost the misery and oftentimes ruin which are inflicted on individuals and families by the absence of any law enabling relatives to control persons connected with them who are subjects of the diseased state causing absence of self-control produced by excessive indulgence in alcoholic liquors, and that we firmly believe that the Bill entitled “The Inebriates Act,” which has been passed by the Honorable the Legislative Council, and has been sent by that House for the concurrence of the Honorable the Legislative Assembly, whose consideration it now awaits, will, in a large measure, remedy the evil above set forth.”

We therefore request the Vice-President presiding at this meeting to embody this resolution in a Petition to the latter Honorable House, and to sign it on our behalf.

Your Petitioners therefore pray that your Honorable House will give consideration to such Bill, and will, as you in your wisdom think fit, pass it into law as early as is practicable.

And your Petitioners, as in duty bound, will ever pray.

ELIZABETH RENWICK,
Vice-President.

1900.

NEW SOUTH WALES.

SUNDAY TRADING.

(PETITION FROM CERTAIN MEMBERS AND ADHERENTS OF HUNTER-STREET PRESBYTERIAN CHURCH,
NEWCASTLE, AGAINST.)

Received by the Legislative Assembly, 25 July, 1900.

To the Honorable the Speaker and the Honorable Members of the Legislative Assembly of New South
Wales in Parliament assembled.

Your Petitioners, the Members and Adherents of Hunter-street Presbyterian Church, Newcastle,—
HUMBLY PRAY:—

That, in view of the ever-increasing tendency towards Sabbath desecration, and the temptations placed before children on their way to and from Sunday-school, by the keeping open of Fruit, Confectionery, Tobacconist, and other Shops, the laws anent the observation of the Sabbath be enforced, and more stringent legislation passed, if necessary, to cope with the existing evils, and minimise the danger to the rising generation.

And your Petitioners will ever pray.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SUNDAY OBSERVANCE ACT.

(PETITION FROM CERTAIN RESIDENTS OF NEWCASTLE AND DISTRICT AGAINST SUNDAY TRADING.)

Received by the Legislative Assembly, 29 November, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

Your Petitioners, residents of Newcastle and District,—

HUMBLY PRAY:—

That, in view of the ever-increasing tendency to Sabbath desecration and the temptations placed before children on their way to and from Sabbath school and church by the keeping open of fruit, confectionery, tobacconist, and other shops, the law anent the observation of the Sabbath be enforced and more stringent legislation passed, if necessary, to cope with the existing evils and minimise the danger to the rising generation.

And your Petitioners will ever pray.

[Here follow 2,924 signatures.]

Similar Petitions were received on 29th November, 1900—
From Ellen Duncan, President, and Emma Carrington, Secretary, of the Women's Christian Temperance Union of Newcastle and District.
From Helen Whyte, President, and Mary Marley, Secretary, of the Women's Christian Temperance Union of Newcastle.
From Harriett Spear, Acting President, and Katie Morgan, Secretary, of the Women's Christian Temperance Union, Merewether.

EARLY CLOSING ACT.

(PETITION FROM CERTAIN RESIDENTS OF THE COLONY IN FAVOUR OF AN AMENDMENT OF.)

Received by the Legislative Assembly, 19 June, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly in Parliament assembled.

The Petition of the undersigned Residents of the Colony of New South Wales,—

HUMBLY SHOWETH :—

That your Petitioners are of opinion that the operations of the Early Closing Act should be applied to carters and carriers in general, that their hours may be shortened to ten hours per day, with one day holiday per month.

And we, the undersigned, therefore humbly pray that your Honorable House will so amend the Early Closing Act that the hours be sixty hours per week, and one day per month holiday, instead of one hundred hours per week.

And your Petitioners will, as in duty bound, ever pray.

EARLY CLOSING ACT AMENDMENT BILL.

(PETITION FROM CERTAIN RESIDENTS OF NEW SOUTH WALES, IN FAVOUR OF AMENDING THE
EARLY CLOSING ACT RESPECTING NEWSAGENTS.)

Received by the Legislative Assembly, 24 July, 1900.

To the Honorable the Speaker and the Members of the Legislative Assembly in Parliament assembled.

The Petition of the undersigned Residents of the Colony of New South Wales,—

HUMBLY SHOWETH:—

That the operations of the Early Closing Act, as applied to Newsagents and their businesses, frequently inconveniences your Petitioners, from the fact of their inability to purchase household stationery, school requisites, and cheap literature after 6 p.m., as, in the opinion of your Petitioners, the Legislature never intended the Act to be so applied.

Your Petitioners humbly pray that your Honorable House so amend the Early Closing Act that Newsagents may keep open until a later hour, say, until 8 o'clock p.m., during which time they be permitted to sell the class of goods usually sold by them.

And your Petitioners will ever pray.

EARLY CLOSING ACT.

(PETITION FROM CERTAIN SHOPKEEPERS, TRADESPEOPLE, AND CITIZENS OF THE CITY OF
NEWCASTLE AND ADJACENT MUNICIPALITIES, IN FAVOUR OF AN AMENDMENT OF.

—

Received by the Legislative Assembly, 4 July, 1900.

—

To the Honorable the Speaker and the Members of the Legislative Assembly in Parliament assembled.

The humble Petition of the undersigned, representing Shopkeepers, Tradespeople, and Citizens of the City of Newcastle and of the adjacent Municipalities,—

HUMBLY SHOWETH :—

That your Petitioners are fully in accord with the objects of the Act for early closing of shops, and to regulate the hours of employment in shops (being Act 38 of 1899) so far as the limitation of working-hours of shop employees.

That your Petitioners are of opinion, in a spirit of justice, a clause might reasonably be inserted in the said Act to the effect "that all shopkeepers in the shopping district of Newcastle be allowed to keep open their places of business until the hour of 9 p.m. on Pay Friday night, and up to the same time on the night preceding a public holiday, excepting the Sunday night when the public holiday falls on the Monday."

We have no wish to increase the hours of labour nor to interfere with the weekly half-holiday, but respectfully desire to draw your attention to the fact that for a great number of years it has been the custom of the people in this large and important district to pay their accounts, and order another supply of goods, on Pay Friday night, which arrangement has worked most satisfactorily to the shopkeepers and customers.

Your Petitioners therefore pray that your Honorable House will carefully consider the arbitrary and compulsory clause A, Part 1 of the said Act, which provides for the closing of shops at 6 p.m. on the Friday night, which your Petitioners believe will have a ruinous effect upon their business, and will result in a large number of shopkeepers, whose livelihood mainly depends upon the business they are able to do on that night and the one preceding a public holiday, being compelled to close up their shops after many years of hard work, and that you will insert such amendments and modifications as will effect the desired relief.

And your Petitioners will ever pray.

[Here follow 300 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EARLY CLOSING ACT AMENDMENT BILL.

(PETITION FROM CERTAIN SHOPKEEPERS AND TRADESPEOPLE, AND MEMBERS OF THE SYDNEY AND SUBURBAN REFORM LEAGUE OF THE CITY OF SYDNEY AND THE ADJACENT MUNICIPALITIES, IN FAVOUR OF AMENDMENTS.)

Received by the Legislative Assembly, 18 July, 1900.

To the Honorable the Speaker and the Members of the Legislative Assembly in Parliament assembled.

The humble Petition of the undersigned, representing Shopkeepers and Tradespeople, and Members of the Sydney and Suburban Reform League of the City of Sydney and the adjacent Municipalities,—

HUMBLY SHOWETH :—

That your Petitioners, whilst fully in accord with the objects of the Act for the early closing of shops, and to regulate the hours of employment in shops (being Act 38 of 1899), so far as regards the limitation of working-hours of shop employees, believe that the Act, by compelling shopkeepers to close their shops at the hours fixed in the said Act, is an infringement of their rights as British subjects, and an interference with their liberties of action in carrying on their business.

That your Petitioners believe that the sole purpose for which the Act was intended can be achieved by a repeal of "Part I (A) Metropolitan and Newcastle Districts" of the said Act, and by inserting a clause in the said Act to the effect that no shopkeeper shall be allowed to work any employee for more than fifty-four hours in any one week, and that each employee shall be allowed a half-holiday during each week.

Your Petitioners therefore pray that your Honorable House will carefully consider the arbitrary and compulsory closing clauses contained in the said Act, which your Petitioners believe will have a ruinous effect upon their businesses, and will result in a large number of shopkeepers, whose livelihood mainly depends upon the business they are able to do after 6 o'clock in the evening, being compelled to close up their establishments, and will insert such amendments and modifications as will effect the desired relief.

And your Petitioners will ever pray, &c.

[Here follow 3,707 signatures.]

A similar Petition was received :—

On 19th July, 1900,—From certain Shopkeepers and Tradespeople and Members of the Sydney and Suburban Reform League of the City of Sydney and the adjacent Municipalities; 7,427 signatures.

NEW SOUTH WALES.

EARLY CLOSING ACT AMENDMENT BILL.

(PETITION FROM ELIZABETH RENWICK, VICE-PRESIDENT OF THE WOMEN'S NATIONAL COUNCIL OF
NEW SOUTH WALES, IN FAVOUR OF.)

Received by the Legislative Assembly, 11 September, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in
Parliament assembled.

The humble Petition of the undersigned, on behalf of the Women's National Council of New South
Wales,—

RESPECTFULLY SHOWETH:—

That the law as to the hours of closing of Public-houses and Wine-shops should be brought into
harmony with the Early Closing Law for ordinary shops, especially in view of the manifold evils connected
with the sale of intoxicants.

Your Petitioners therefore humbly pray that your Honorable House will so amend the Early

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EARLY CLOSING ACT.

(PETITION FROM CERTAIN TOBACCONISTS OF SYDNEY AND SUBURBS AGAINST AMENDMENT OF.)

Received by the Legislative Assembly, 4 July, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

This Petition of Tobacconists of Sydney and Suburbs,—

HUMBLY PRAYETH :—

That in view of a Petition being prepared by the hairdressers and tobacconists (combined) of Sydney, praying that your Honorable House will amend the Early Closing Act of 1899 by altering the hours of closing of retail tobacconists' shops from 11 p.m. to 7.30, and 1 o'clock on Wednesday or Saturday, that no such alteration will be made in the Act.

The Early Closing Act has now been in operation for nearly six months, and from our knowledge of the trade, and our close study of the intimate acquaintance with the effects and working of the Act, we are thoroughly convinced that the existing provisions of the Early Closing Act which regulate the hours of closing tobacconists' shops (and which provisions were inserted in the Act of Parliament after due and thoughtful consideration) are those that best meet the requirements of the trade, and above all, the comfort and convenience of the general public, and we pray that, in the interests of the public and of the tobacconists of Sydney (who have a considerable amount of capital locked up in duty-paid stock, and who cannot afford to lose such an important and lucrative portion of their trade as is done between the hours of 7.30 and 11 p.m.), your Honorable House will not alter or amend the provisions of this Act as applying to tobacconists.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 142 signatures.]

EARLY CLOSING ACT AMENDMENT BILL.

PETITION FROM CERTAIN RESIDENTS OF SYDNEY AND SUBURBS, IN FAVOUR OF CLOSING CERTAIN SHOPS ON THE SABBATH DAY.)

Received by the Legislative Assembly, 10 July, 1900.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned Residents of Sydney and Suburbs,—

HUMBLY SHOWETH :—

That since by public authority all shopkeepers are now compelled to reduce the hours of labour, it seems anomalous and undesirable that our fellow-citizens employed in confectioners', fruiterers', tobacconists', or any other shop should be compelled to work on Sundays.

That the opening of these shops on Sunday is detrimental to the moral and material well-being of our country, and is a violation of the principle of the Early Closing Act and the Lord's Day Observance Act.

Your Petitioners therefore pray that the proposed Amendment Bill of the Early Closing Act shall include a clause prohibiting these shops from opening on Sundays.

And your Petitioners, as in duty bound, will ever pray.

(PETITION FROM CERTAIN EMPLOYERS OF LABOUR AGAINST.)

Received by the Legislative Assembly, 31 July, 1900.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the undersigned, representing employers of labour in all the principal branches of industry in this Colony,—

HUMBLY SHOWETH:—

1. That the Industrial Arbitration Bill now before your Honorable House proposes to make such radical changes in the relations hitherto subsisting between employers and their employees as are calculated, in the opinion of your Petitioners, to bring about a serious disruption of our industrial system, and have far-reaching and injurious effects upon the trade and commerce of the Colony.

2. That your Petitioners respectfully urge that before such legislation is passed by your Honorable House the fullest opportunity should be afforded to all concerned to consider the proposals, and to make such representations as may be deemed necessary to protect their respective interests.

3. That no such adequate opportunity has been given in connection with the present Bill.

4. That if it should be considered desirable to alter the law in the direction now proposed, any contemplated legislation should be federal in character, and should be so framed as to secure its coming into operation simultaneously in all the Colonies embraced within the Federation.

5. That conciliation and arbitration as applied to industrial disputes is one of the subjects specifically reserved under the Federal Constitution for the Federal Parliament to deal with.

Your Petitioners therefore humbly pray that your Honorable House may be pleased to refrain from passing the Industrial Arbitration Bill into law at the present juncture, or taking any steps to change the law relating to industrial conditions, until the whole question can be remitted to the Federal Parliament for consideration.

And your Petitioners, as in duty bound, will ever pray.

THEATRICAL LICENSES.

(REGULATIONS FOR ISSUE OF.)

Printed under No. 16 Report from Printing Committee, 15 November, 1900.

[Laid upon the Table of this House in accordance with promise made in answer to Question No. 7, of 1st November.]

REGULATIONS FOR ISSUE OF THEATRICAL LICENSES.

1. BEFORE a theatrical license is granted for any building, it shall be determined, after the report of the Government Architect, the number of persons that can be safely and conveniently seated in the building. The area for each individual not to be less than 4 square feet.
2. Every application for a license shall state the number of seats in each section of the auditorium, and such seats shall be marked with consecutive numbers.
3. Every such application shall be accompanied by plans giving the above particulars, also showing the position of exit doors, stairs, gangways, fireplugs, buckets, hose, and gascocks, with such other information as may be required.
4. Copies of the above-mentioned plans to be constantly exhibited in the vestibules and in each section of the theatre, for the information of the public.
5. No deviation from these plans, or alteration in the buildings or arrangements as before referred to, to be permitted during the currency of the license, without sanction in writing from the Colonial Secretary.
6. All gas and other lights throughout the building and its precincts to be efficiently protected by approved fire guards.
7. The lighting to be under the control of a properly-qualified person, and gasfittings and other lighting apparatus periodically examined. Separate stopcocks shall be provided for the various divisions of the buildings, and also stopcocks in the mains on the outside of the buildings, to admit of the gas being entirely shut off when necessary.
8. A sufficient number of lamps, burning animal or vegetable oil, to be provided within the building and precincts, to prevent panic which might arise from darkness consequent on the sudden extinction of the gas or other lights by accident or otherwise.
9. A sufficient number of buckets, painted red and labelled "fire-buckets," to be always kept full of water and in such positions as would be most serviceable in cases of emergency, and maintained solely for such purpose.
10. Approved water-hose (with nozzles) to be attached to the water service pipes ready for instant use, and the employees of the theatres instructed how to act in case of panic in the use of the hose and plugs, and drilled to the performance of firemen's duty, unless members of the Fire Brigade be constantly in attendance.
11. Whenever practicable, a water-tank, of adequate capacity, and with proper appliances, to be fixed at such a height as to command by gravitation the whole of the premises and precincts. Such tanks shall be kept constantly full of water solely for use in case of fire.
12. Intimation to be made by fire alarm communication to the Fire Brigade Station, Police Office, or such other place as may be directed.
13. Gangways of sufficient width (not less than 2 ft. 6 in.) to be reserved in convenient lines to facilitate the passage of persons to and from their seats, and such gangways shall not be occupied either by chairs or by persons standing.
14. All carpets or other floor or stair coverings to be kept in good condition, to prevent accident by persons tripping.
15. Strong hand-rails of approved construction to be securely fixed on each side of every stairway.
16. All doors to be constructed to open outwards, and the words "The way out" written upon and over the doors in conspicuous characters; and, in order to accustom the public to these doors, they should be open for use at the close of every performance.
17. All seats to be securely fixed, and under no circumstances shall chairs or movable seats be placed in the gangways or elsewhere.
18. All holders of theatrical licenses shall maintain their respective theatres and precincts in good repair and in a constant state of cleanliness and ventilation.
19. All licenses for theatres shall be issued subject to such limitations as regards occupation on Sundays as the Colonial Secretary may think fit.
20. An inspector appointed by the Government to be permitted by the lessee to have access at all times to all parts of the building.

HENRY PARKES,
Colonial Secretary.
