1609. It has been suggested by some of those in favour of the scheme that a moderate fresh in the river is just as effective, from a scouring point of view, as a very heavy flood;—do you think there is anything in that contention? I think there is a certain amount of truth in it. I think that the water, so long as it is confined to banks does more good in equal time than a very high flood.
1610. Does it seem to lose speed when it gets away from the banks for miles? Yes; the water in the river, I think, does not actually flow so fast at those times.
1611. I understand that you were for a considerable time in charge of works on the Hunter River carried on by the Department? Yes; I spent twenty years in the Hunter River district.
1612. And amongst other things you carried out a flood relief work there? Yes.
1613. Where was it? It was just at the lower end of what is called Horse-shoe Bend, near West Maitland.
1614. What did the channel consist of? The channel at that place was about 150 feet wide.
1615. And across a neck in a bend in the river? The channel we cut was about 700 feet long and up to about 150 feet wide, speaking from memory.
1616. And approximate to the width of the river at the point where you started? Yes.
1617. It was across a bend in the river? Yes; very similar to the Figtree bend on the Richmond.
1618. You cut that down to what width? We only cut it a certain part of the way across, when the flood of 1893 came and cleared out the rest of it down to about summer level in the river.
1619. What was the effect of that flood channel upon the river immediately below? It filled up the whole of the original channel to within about 4 feet of the top of the banks of the river, where formerly there was a depth of water of about 7 or 8 feet, and the height of the bank was about 20 feet.
1620. Your experience then on the Hunter would bear out your present contention that the effect of making the proposed flood channel would be to increase the liability to silting between the proposed weir and the junction with the South Arm? I think so. Of course it would not have as great an effect as it had in the Hunter, because in this case the weir is 12 feet above low-water.
1621. There is always a certain amount of flow remaining in the North Arm below the weir; but the tendency would be in the direction of silting, you think? Certainly.
1622. Do you think, having navigation in view, that the amount of silting in that section of the river to which you refer would be sufficiently serious to make it weigh against any possible benefit that might otherwise arise from the scheme? I think so.
1623. Do you think the expense of keeping the channel open there would be likely to be very great? I think it would be very considerable after each flood.

1624. I suppose it would take your Department some time to dredge out the whole of that if it were silted? Yes, it would take a long time. I should like to say that as soon as the weir ceased to operate, and the North Arm, therefore, began to regain its usual course at a height of about 12 feet above high-water, that body of water would begin to scour at least some of the silt that may have been deposited. W. E. Kemp.
13 Mar., 1900.
1625. Would the deposit of silt, assuming it to have been made in that section of the river, occur equally along the 4 or 5 miles, or would it only occur at particular points where the current crossed? It would occur chiefly below the weir; and then, after passing each bend, I would expect a deposit of silt.
1626. Assuming everything else in connection with the scheme to be satisfactory, and all other objections met, would that probable result be sufficient in your mind to cause its rejection—leaving everything else out of account for the time-being? I certainly think that it would double the cost of the scheme, taking the interest on the money, and the yearly expenditure incurred for dredging as a basis.
1627. You think as much money would require to be expended each year for dredging as would amount to the annual interest on the cost of this scheme? Yes.
1628. The natural consequence of silting to any extent in the way you suggest would be to seriously impede navigation? Certainly.
1629. Even with dredging, it would take some time before silt could be removed in all cases, I suppose? Yes.
1630. And that would have an injurious effect upon the people further up the river than the proposed weir, who expect to be relieved by the removal of flood waters? Yes.
1631. So that it would seem that the people above the weir, who expect to be benefited by the removal of the flood waters, have to choose between two evils—either suffering occasional flooding or running the risk of having their navigation seriously impeded? Yes.
1632. It has been suggested that, for the purpose for which it is intended, the weir will not be sufficiently effective at a height of 12 feet above low-water, and some of the witnesses have recommended that it should be reduced by about 4 feet, making it about 8 feet above low-water;—what is your opinion on that proposal? I think that every foot you take off the height of the weir would increase the silting between the weir and Coraki.
1633. And increase proportionately the expenditure between those points? Yes.
1634. Would there be any point in connection with that escape channel at which it would be unsafe to further reduce the weir in height from the point of view of the scour in the portion of the river between Coraki and Broadwater, leaving out the small portion of the North Arm spoken of? No; I think that the South Arm and the Bungawalbyn Creek waters would keep that open to its present depth.
1635. Practically without any assistance from the North Arm? Yes.
1636. So that the effect of lowering the weir would be only felt between the weir and Coraki? Yes; I think so.
1637. Would you care to express any opinion on the general effect of the weir from the point of view of flood prevention, either above the weir itself, on the North Arm, or from Dungarubba Creek towards the weir? I think in a moderate flood it would improve the get-away of the water from the North Arm.
1638. Would that be beneficial, do you think, in the same kind of flood to the people below the weir and towards Dungarubba Creek—that big bend? No; I think it would increase the liability to flood in that direction. I think it would increase the liability to flood on the Tuckian side of the small dividing ridge between Tuckian and Dungarubba Creek and over towards the southern side of the proposed channel.
1639. For what reason? At present the water which floods the land adjoining Tuckian, on the southern side, has to come from the river and back up Broadwater into the Tuckian Swamp, and the proposed scheme would have the effect of making a direct channel from the North Arm on to that country, causing a greater flooding than would otherwise be the case.
1640. If the scheme were carried out, do you think it would have any effect on the land below the Broadwater in the way of increasing the liability to flood? I am talking at present about a moderate flood. I do not think it would make very much difference in the lower river in a moderate flood.
1641. And in the case of a high flood? I think in a high flood the proposed channel would make very little difference, indeed, in the way of reducing floods.
1642. Towards Lismore? On the whole river.
1643. What reason do you give for that? I think that the main river and the Broadwater in a high flood are already charged with as much water as they can carry.
1644. Would it have any effect in relieving the people above the weir towards Lismore, even in a high flood? I do not think it would in a very high flood.
1645. Is that because, when the flood gets to a certain height, the weir would then simply back water, or hold water that was backed up and not running? It would simply be a part of the flood channel from the Broadwater back to Lismore.
1646. In that high flood do you think the lower river—that is, from the Broadwater towards the entrance—would be likely to be detrimentally affected? I do not think it would to any great extent.
1647. You think there is sufficient get-away down there? I think there is. I do not think any more water would require to be taken down than is taken down at present.
1648. To some extent it would be taken down more gradually than at present, would it not—that is, a certain amount of it would go down a little earlier? Yes; there would be a little that would go down slightly earlier.
1649. So that whatever difference there might be, presumably, would be in favour of it getting away? It would be very little. The early part of the flood does not get away quickly. As you have heard this morning, the flood tide runs up the river for at least a week after the flood begins to rise at the head of the river.
1650. So it is only after that that the river begins to discharge properly—the river gets the mastery of the tides? Yes.
1651. And up to that time you think that any water coming through the proposed channel, and ahead of the main flood, would not get away? It would not get away at all quickly, in proportion to what it would afterwards. Of course, there would not be the same proportion of water to come out.
1652. Assuming that the channel were filled, there would only be a comparatively small portion for the lower river to discharge if it were all coming down? Yes; it would not be very great, still it would take all the longer to go out. I would point out that these escapes from the river to the ocean would tend to prevent the lower river rising much higher than it has yet done.
- 1653.

W. E. Kemp. 1653. Do you think there is any material danger to be apprehended from the existence of these high flood channels towards the ocean, through which the flood broke in 1890? There is no doubt that if they break out to any great extent they will have to be protected.

13 Mar., 1900.

1654. So as to prevent the possibility of their becoming permanent openings? Yes.

1655. Is there anything else you would like to state? In view of the fact that the level of the Tuckian Swamp is about 5 feet above low-water, and that evidence has gone to show that there is usually 7 or 8 feet of water in it prior to the flood breaking over the North Arm and from Swan Bay, and as the weir is only 12 feet above low-water mark, it seems to me that the water in the swamp, before the weir commences to run, will be on a level with the crest of the weir itself, which, I think, will allow little chance of rapid relief, and will raise the flood level in the swamp so as to flood the adjoining land to a greater extent than previously.

1656. Do you think that the raising of the flood level in the swamp by a foot would add to the force with which it would contend with the waters in the Broadwater? Yes. Every foot you raise the swamp would tend to throw more water out through the Broadwater.

1657. So that there will be an inclination for the water to come in to force other water out in the front of it? Yes; but the whole of the water has to pass the narrow points on the river below the Broadwater, such as that opposite Byrne's. I think the whole thing resolves itself into this: that, unless the water were raised immediately below the Broadwater, there would be no possibility of getting a greater quantity down to the entrance. The only way to deal with this or any other river subject to flood, is to start at the entrance and work upwards, removing obstructions as you go.

Thomas McDonnough, Surveyor, Harbours and Rivers' Branch, Department of Public Works, sworn, and examined:—

T. McDonnough. 1658. *Chairman.*] You are at present engaged on the Richmond River, and have been here for three years? Yes.

13 Mar., 1900.

1659. Have you prepared any data in connection with the proposed Tuckian Swamp? I did the survey for that channel and the swamp scheme contemplated at that time.

1660. Will you tell us the height of the present river banks at the proposed weir site? 21·12 feet above low-water at Woodburn.

1661. And the height of the weir above low-water? The crest of the weir is 12 feet above low-water. It is 8 feet where it abuts on the river, taking the same level.

1662. What is the height at the bottom of the proposed channel at the weir end? Five feet above low-water mark. The channel is level from the weir into the swamp.

1663. What is the height at the bottom of the channel at the point where the Department proposes that it should stop;—about 2 miles from the weir? That is 5 feet also.

1664. So that there is no fall in that part of the channel? No.

1665. Suppose the channel were constructed right through from the weir to the head of the Broadwater, what fall would the flood-water have in the channel from end to end? Four feet, taken to the level of the mud at the bottom of the head of Broadwater.

1666. In what distance? It would be a little less than 5 miles.

1667. Will you describe the state of the Tuckian Swamp at its junction with the head of the Broadwater? It is all mangroves right round, and it gradually changes into reeds when you get back a couple of hundred feet, and the reeds get so thick that the water does not flow much further in ordinary weather. The salt-water does not get much back on to it on account of the growth of weeds.

1668. But it is affected by the ebb and flow of the tide? Yes, it is for some distance back.

1669. The tide flows right on to it? Yes.

1670. About how far back? When I was there it did not go more than about 500 or 600 feet; but I could tell from the level that it would go a mile away if the reeds were burnt to give it a chance—they choke it.

1671. What is the rise of tide at the head of the Broadwater? About 4 feet.

1672. It is not extraordinary tides, but ordinary tides that get into the swamp to a certain extent? Ordinary tides would not get far—perhaps just spill over. The spring tides could go a mile, but they do not go more than 500 or 600 feet. If the growth were burnt off they would go much further.

1673. When it is spring-tide, and the swamp is full of water up to that high tide, would the water then flow down the Broadwater;—I mean the water through the proposed channel? It would while it was higher than the tide; but in places where the tide got up to the height of it it would not.

1674. Do you think that with a spring-tide that spring-tide water would run up the proposed flood-relief channel? Yes; if there was a channel it would conduct the spring-tide right up the channel, as long as there was not too much flow of water to resist it.

1675. How far above the bottom of the channel would it flow;—the short end of the channel? It would not get into the 5-foot level channel—that is a foot above high tide.

1676. If a channel were cut through the swamp, it would flood that channel? Yes.

1677. But the tide-water would not get into the short channel of 2 miles long adjoining the weir? No.

1678. *Mr. Watson.*] In fact it would not extend beyond the swamp? No; unless you deepened the channel.

1679. *Chairman.*] Do you know the drains made by Mr. Henderson? Yes.

1680. How does each high-tide affect them? The spring tides spill over the bank, and go a little distance.

1681. And does every tide run up the drain? I could not exactly tell that, because when I was there, there was always water running out. It was a wet season, there was never any salt-water there, but I made it my business at spring-tide to find whether it did go over the ground.

1682. Was that water running over the adjoining land, or was it running out through Henderson's drain? It was running through the drain. It spilled into the drains off the swamp.

1683. That would indicate then that the surrounding land was above the tide effect? Yes; above the tide then. Some of this ground is above spring-tide too. The bulk of the ground is in what appears to be a kind of basin.

1684. Do you think those drains of Henderson's were effective in draining the land? Only to a certain extent. I do not think they were a complete success, or anything like a success.

1685.

T.
McDonough.
13 Mar., 1900.

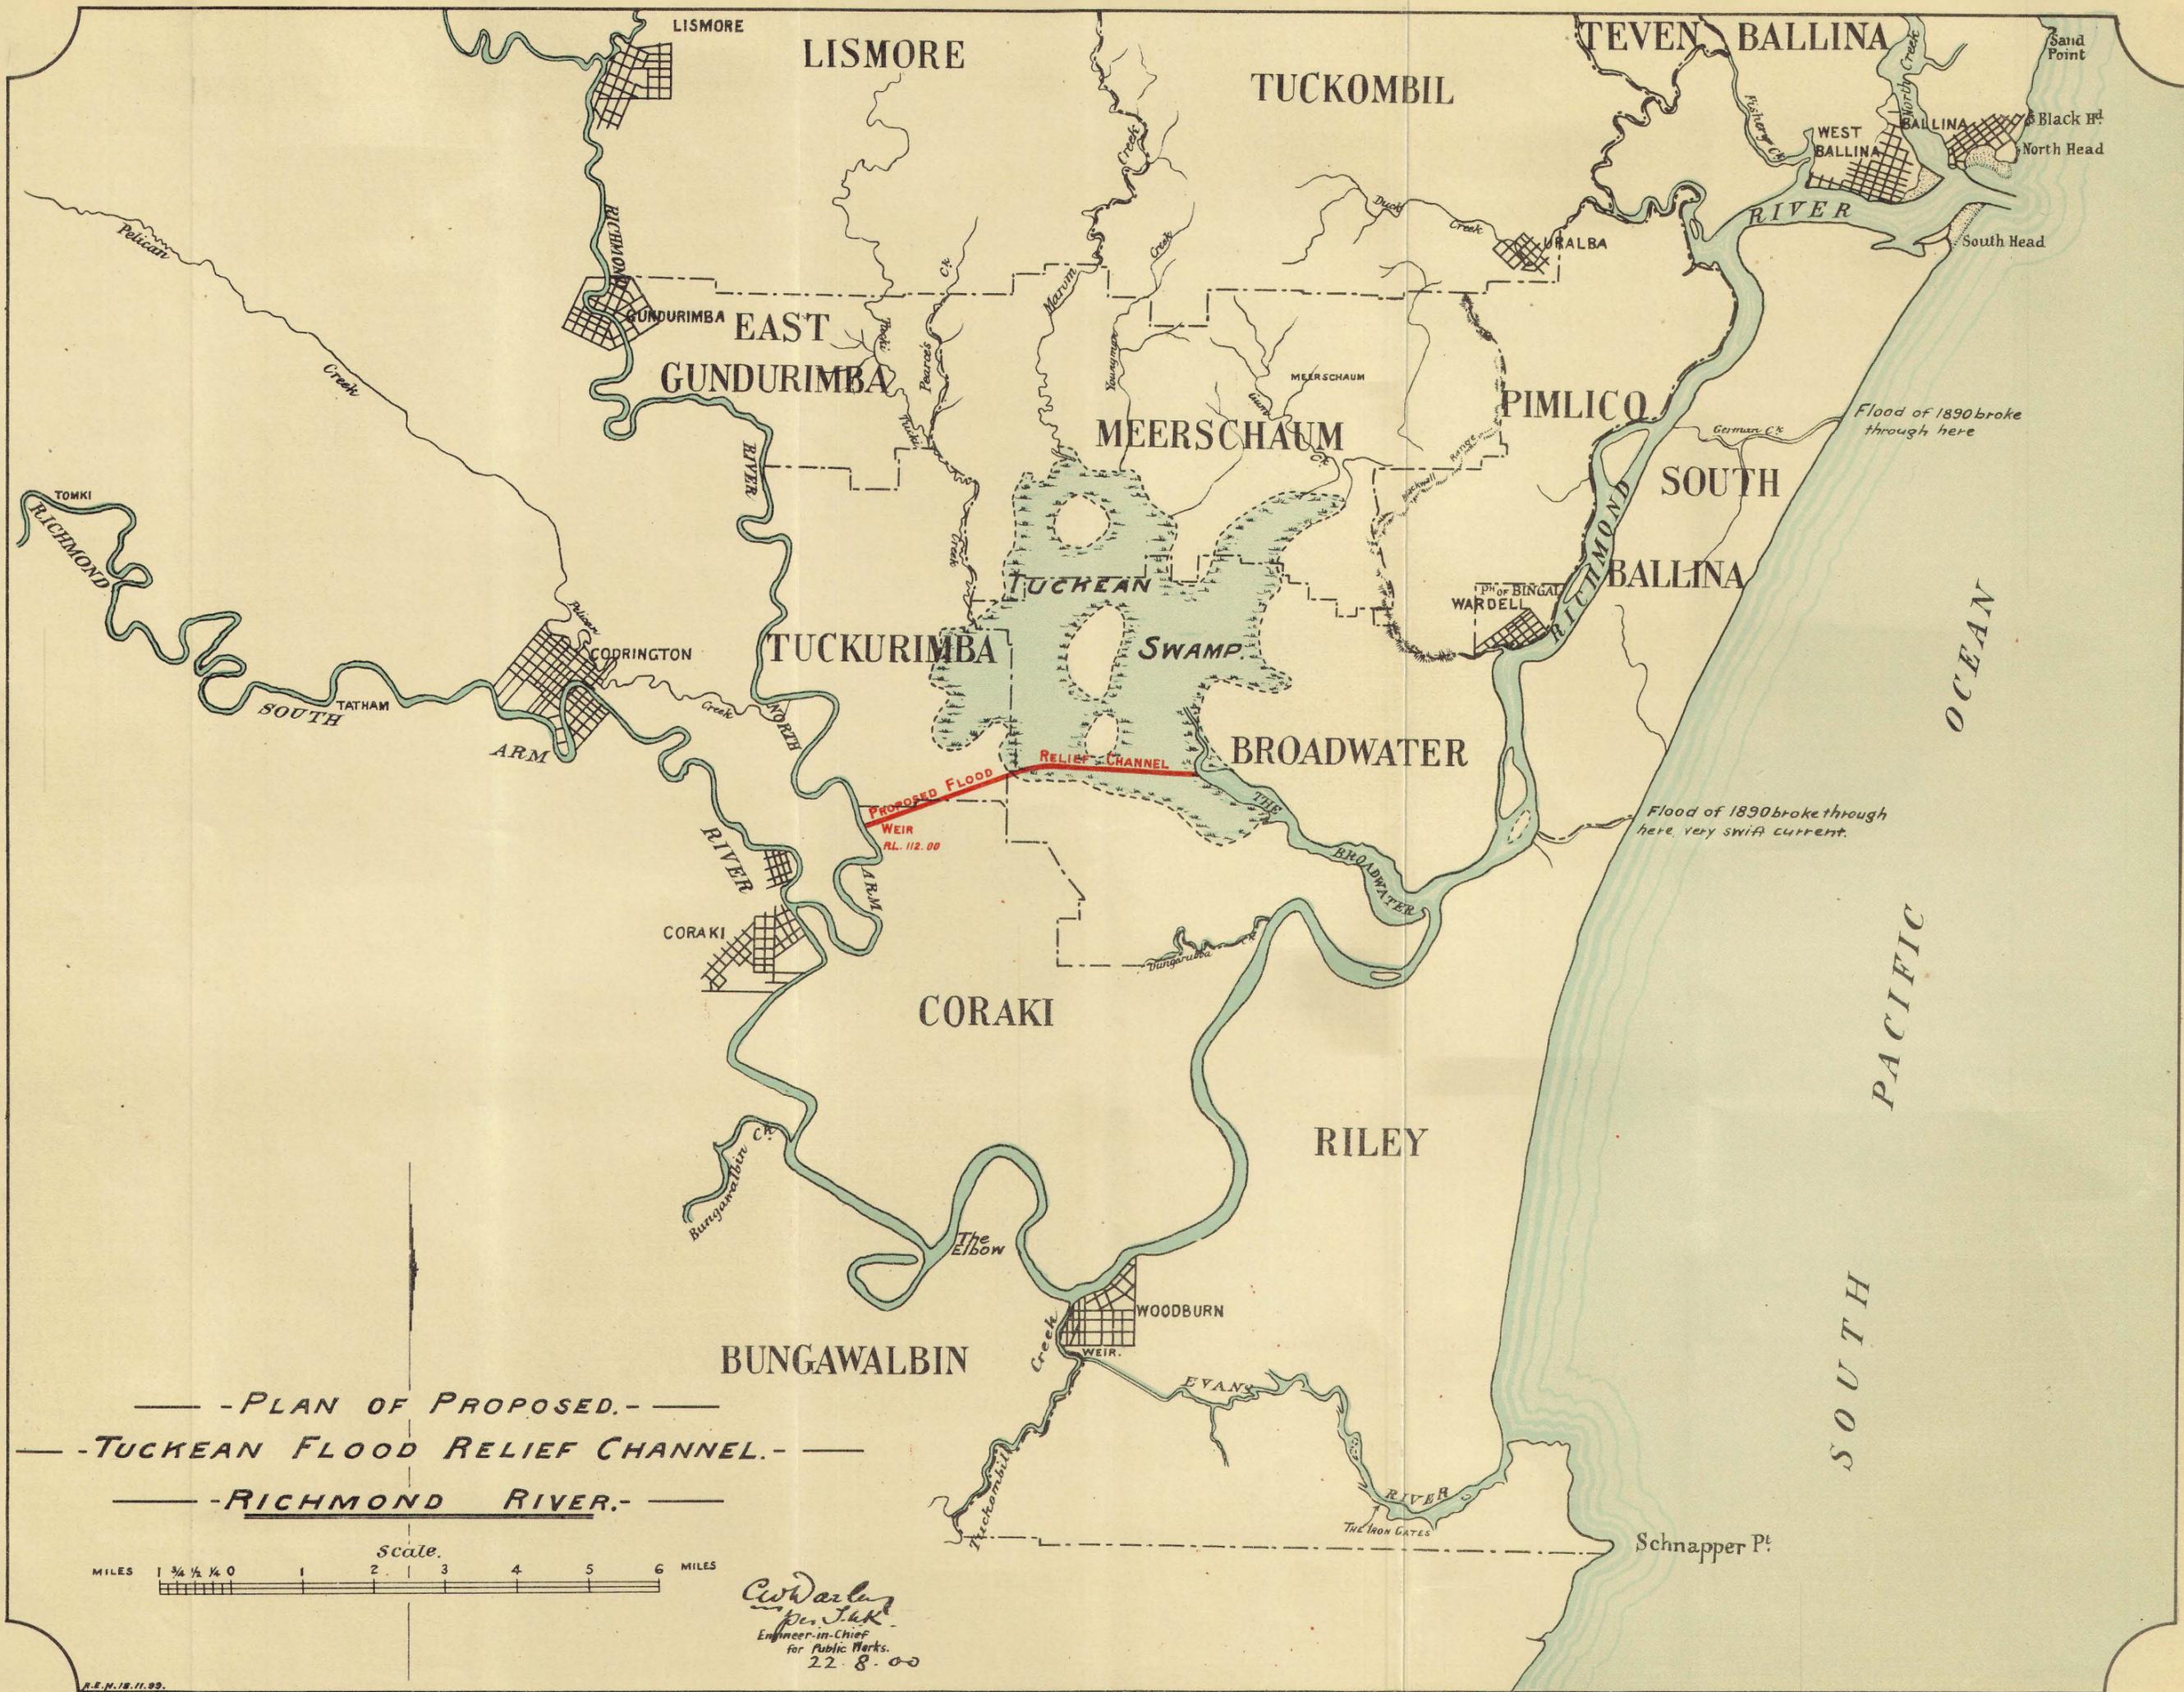

1685. But would you go so far as to say that they injure the land by letting salt-water in that would not otherwise go there? I would not say they are an injury, but I think they caused it to subside a couple of feet.
1686. They are good in dry seasons? Yes. While I was there they were no good for seven months; the land would not feed anything.
1687. It was a wet season? Yes; it was only now and again the cattle could get on to the land.
1688. You say they are only a partial success? Yes.
1689. As a means of getting rid of flood-water, they are really of no use? No; he has not tapped the creeks with them, for one reason; they were only intended to drain his own ground.
1690. You know the head of the Broadwater; it has been stated that there are ridges or banks there;—is that the case? There are no banks at the head of the Broadwater, where channel is shown on the map as joining the Broadwater. It is all flat.
1691. So that there would be nothing to prevent the water flowing that way? Only a belt of ti-tree. Some distance of thick ti-tree is the only obstruction. The timber is rather thicker there than it is further back.
1692. Would the ti-tree grow in water? Yes.
1693. Is it usually on land a little higher than the surroundings? No; mostly with a sounder bottom.
1694. The presence of the ti-tree might lead someone to believe the land was a little higher? Yes; looking from a distance you would think it was higher ground.
1695. How is the Tuckian Swamp flooded? Partly from the creeks draining into it, and partly from the water in the early stages of the flood backing up the Broadwater, and later on, when the flood breaks over the banks, it spills into it from a number of other points—from a point at Baxter's, from Swan Bay, and from Dungarubba Creek. The water from those points finds its way into the swamp, and that seems to change the current, and the water then runs down.
1696. Have you ever seen the water flowing up the Broadwater? Yes, in the 1898 flood.
1697. At what stage of the flood was that? It did not get very high there.
1698. How long had the flood been rising in the river up above? It had been rising at Lismore for a couple of days. But it was not high there; it was only a very moderate flood at this end.
1699. And then the water was running up the Broadwater? Yes, only just backing in; there was not a very strong current.
1700. Where was that water coming from that was running up the Broadwater? It was all water that was coming down the main river. The main river was a couple of feet over high-water, and it backed up. It is only at the beginning of the flood that water runs up the Broadwater, and at the later stages of a flood it flows back.
1701. Seeing that the object of the proposed channel is to relieve the early stages of a flood from the upper river, would the water running up the Broadwater at the early stages lower down prevent the escape of the water through the channel? It would not prevent it at that height, because the waters would not be up as high as 12 feet.
1702. There would be plenty of fall for the water to get away in the lower river? Yes; it does not get up as high as 12 feet in the Broadwater, except in extremely high floods.
1703. You heard Mr. Kemp give figures about the ordinary state of the swamp;—that there was 5 feet of water in the swamp above low-water mark? In some parts.
1704. Do you agree with him that you get a rise of 7 feet over that 5 feet in flood-time? You would not get it from back water.
1705. From any cause? I do not think you would get it until the flood broke over.
1706. Would you care to express an opinion on the scheme? It would be somewhat out of my province to give an opinion as to whether the scheme would be effective or not.
1707. You have some flood-levels? At the western end of the Tuckian Swamp, near the proposed channel, the following are the flood-levels:—In 1890, 13·80 feet above low-water; in 1893, 14·2 feet above low-water. On the eastern side of the swamp, near the Broadwater, the levels were: in 1890 flood, 12·58 feet; and in the 1893 flood, 13 feet.
1708. At what stage of the flood were those levels taken? At the top of the flood; they took the highest level. I also have the levels taken near Broadwater mill, where the Broadwater empties into the main river. In 1890 the level was 12·34 feet; and in 1893, 12·75 feet. Again, below the junction, near Boundary Creek, 2 miles lower down, the levels were: in 1890, 11·17 feet; and in 1893, 11·23 feet.
1709. Do those figures point to the conclusion that there is a backing-up or congestion of the waters at the junction of the Broadwater with the river? They have that indication. The following levels were taken at the Broadwater, just above the junction of the river:—In 1870, 11·03 feet; in 1887, 10·55 feet; in 1889, 11·07 feet. The flood-levels at the off-take or weir site were: in 1893, 22·31 feet; and in 1870, 22·06 feet; they told me that the flood-level in 1890 was the same as that in 1893. Data showing the various levels during the flood of 1898, from the Broadwater upwards to Lismore, and to Irvington on the South Arm, are indicated on the flood diagram produced, copy of which is in the Public Works Department, Sydney. The figures cannot well be conveyed except by diagram. The ridge of land referred to by Mr. Kemp and other witnesses as extending parallel with, and about 2 miles south of, the relief channel, does exist. The highest point I got in that direction was 9 feet; but I am not sure that that was the highest part of the ridge.
1710. Do you agree with Mr. Kemp that, if you put a quantity of extra water into the swamp, with a 2-mile channel, there would be a risk of its overflowing the land? I should think it would increase the height of the swamp. The water is about 8 feet higher in the North Arm than it is in the swamp. If you let the water of the North Arm on to the swamp it is pretty sure to raise it a bit. It would suit the man on the North Arm to get the water away from his place, but it might not suit the other fellow. My observation with regard to the rock obstructions in the river has been that, at flood time, there is a backing up of water—a block or choking in some places. I notice that, particularly at the reef just below the junction of the Broadwater and the river, and also at other places further up the river.
1711. Has your observation of the river enabled you to say whether any interference with the scour might have a prejudicial effect as regards silting up? It is pretty hard to tell, and I do not think my opinion is worth very much on that particular point.
1712. There are certain sand terraces near Boundary Creek, and it is said that gold-mining there has been the means

T. McDonnough. means of causing the sand to be distributed over the land? I examined those terraces, and I think the disturbance referred to is due to natural causes, because the same thing has occurred lately in other places along the coast. It may have been assisted slightly by the operation of the miners, but I think it is chiefly due to natural causes. In other places the sand has been washed away much more than at the place near Boundary Creek. I shall prepare and furnish to the Committee a tabulated statement showing the state of the floods in the Richmond River during the period from the 23rd to 25th February, 1898, giving the varying heights and the estimated discharge. The figures will be taken from the diagram already referred to. On the first day of the flood of 1898, namely, the 22nd February, I observed that the flood-waters broke over the bank at Baxter's, above Coraki. About two days afterwards I was at that part of the river known as Swan Bay, and I was told that the water had been up level with the banks, but had not broken over, and I saw no indications of its having broken over. When I returned it was level with the bank, about 10 ft. 6 in.

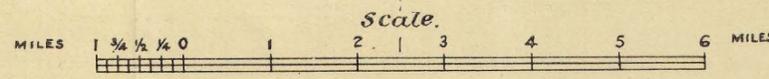

1 Mar., 1900.

1713. When it broke over at Baxter's were you able to see how far it went over the bank—whether it went right on to the Tuckian, or where it stopped? I traced it right down to the swamp—it was only a dribble. At the bank it might have been a foot deep. On the occasion of this flood there was not much water, comparatively speaking, going down the South Arm, and the flood was backing up Bungawalbyn.

Charles Lyne, Secretary, Parliamentary Standing Committee on Public Works	36-50

PLAN.

Wharfage, Woolloomooloo Bay.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

WHARFAGE, WOOLLOOMOOLOO BAY.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, the Public Works (Committees' Remuneration) Act of 1889, 53 Vic. No. 11, and the Public Works Acts Further Amendment Act of 1897, 61 Vic. No. 6, to whom was referred the duty of considering and reporting upon "the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney," have, after due inquiry, resolved that it is expedient the proposed work should be carried out, and they recommend that the new wharf be extended northward a further distance of 100 feet; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

THE PROPOSED NEW WHARFAGE.

1. In 1887–1888 the Government constructed at the south-west corner of Woolloomooloo Bay wharfage having a frontage of 433 feet, known as the Admiralty Wharf, then intended for the use of the Imperial naval authorities; but, in consequence of wharfs and stores being constructed on Garden Island, it has since been used for general shipping purposes, principally in connection with the Gulf line of steamers. It is now proposed to lengthen this wharf by 100 feet, and construct a new one 500 feet long adjoining the Admiralty Wharf, but placed 60 feet further from the shore line, and extending northwards along the site at present occupied by the Health Board's quarantine depôt, and some old boat-sheds and other similar structures, as far as Robinson's ladies' baths.

The face of the wharf would be about 2 chains from the present shore line, in order to obtain the requisite depth of water—28 or 30 feet—the space thus provided being ample for the erection of cargo sheds and offices, and for a 66-foot roadway and a 12-foot footpath. The reclamation, it is explained, would also allow for an addition of over three-quarters of an acre to the Domain if that should be necessary. No portion of the Domain frontage would require to be excavated or disfigured in any way; the rock face which exists there now, and the iron railing enclosing the Domain areas would remain untouched. When completed the new wharf would be capable of accommodating the largest of the vessels now visiting the port of Sydney.

ESTIMATED COST.

2. The estimate of cost is £23,000, which includes £1,800^s for re-erecting suitable buildings in connection with a quarantine depôt, which it would be necessary to provide in some other locality.

DEPARTMENTAL

DEPARTMENTAL REASONS FOR THE PROPOSAL.

3. On the question of the necessity for additional wharfage accommodation, it is urged by the Department of Public Works that the growing shipping trade of the port of Sydney, and the phenomenal and rapid increase in the size of the vessels trading here, make it absolutely necessary to provide further and more suitable berthing space. The existing private wharfs, it is pointed out, are not fully adapted to the requirements of modern steamships, and the Government wharfs are eagerly sought after and fully occupied, while fresh applications for berthing space are being received continually. But the more immediate cause which renders necessary the early construction of the proposed wharf is said to be the dangerously congested condition of the ferry passenger traffic at Circular Quay, which arises from the berthing of the large steamers of the Norddeutscher-Lloyd Company at the head of the Quay in close proximity to the ferry jetties. It is regarded as imperative in the interest of public safety that these steamers should be removed from their present berth at the earliest possible date, and as there is no vacant berth at the existing Government wharfs suitable for them, it is necessary to construct a new one, which it is now proposed to provide at Woollomooloo Bay.

WITNESSES EXAMINED.

4. In view of the reasons given for the proposed new wharfage, the Committee examined the manager of the North Shore Ferry Company, and a representative of the agents of the Norddeutscher-Lloyd Company, as well as the necessary official witnesses. Evidence was also obtained from the Acting-Chairman of the Metropolitan Land Board, with regard to the tenure upon which the baths in Woollomooloo Bay are held, and to steps taken by the Board for providing public bathing accommodation in another locality; from the Parliamentary representative of the electorate of which Woollomooloo Bay forms part; and from the Director of the Botanic Gardens and the Domain, to ascertain whether the proposed wharf would interfere to any extent with the use of the Domain for public recreation. Witnesses, who, on various grounds, objected to the proposal, were heard; and the evidence in the Glebe Island Improvements inquiry, on the subject of wharfage accommodation in Sydney harbour, given by the chairman of the Sydney Wharf Association, the general manager of the Colonial Sugar Refining Company, the late Collector of Customs, and the manager of the Wharf Association, was made an addition to the proceedings.

NECESSITY FOR THE WHARF.

5. The evidence as to the necessity for the wharf is strong. The statement that applications for berths are continuous is somewhat beyond what is actually the case, but, including the necessity for finding a berth for the Norddeutscher Lloyd steamers other than at the Circular Quay, the Manager of the Government Wharfs has received four applications, which he is in some difficulty to comply with satisfactorily. Three of these are mentioned in the Committee's Report relating to the inquiry respecting the proposed Improvements at Glebe Island, two of which, it is there pointed out, may be met by an extension of the wharfage in Woollomooloo Bay. On the eastern side of the Bay the wharf at the northern end is being extended 200 feet in order to make the existing berth long enough to accommodate two large steamers, and it is believed by the wharfage authorities that these two berths will be leased by the agents of the White Star line of steamships; at present they are under offer to the agents, and the matter is in abeyance pending the result of a reference to the owners. Should the White Star steamers take only one berth, the other may be used by San Francisco mail steamers of a newer and larger type than those now coming here, which are expected to arrive during the present year, or it may be taken by the Norddeutscher Lloyd steamers if they should prefer the eastern to the western side of Woollomooloo Bay. If neither of those companies should take the new wharf on the eastern side some other steamers are certain to avail themselves of the accommodation offered there. The Wharfs Manager does not doubt that vessels will be readily forthcoming for both this wharf and the new one now proposed on the western side of the Bay, and, judging from the advantages to steamers berthing in

in Woolloomooloo Bay, as compared with what is obtainable at other wharfs in the harbour, except those at the Circular Quay, there is much to support his view. The Norddeutscher steamers are peculiarly circumstanced. They are very large cargo and passenger carrying vessels, and competitors with the other ocean-going steamers of similar type which trade regularly between Sydney and Europe. All these steamers berth, if possible, at the Circular Quay, as the wharfs there are the nearest to the centre of the city and to most of the wool warehouses, and are most easily accessible. Intending passengers have no difficulty in going there to inspect the accommodation on any vessel, and the Quay is recognised as the fashionable centre of the European passenger traffic. It is therefore not surprising to find that while the agents of the Norddeutscher line admit that the movements of their large steamers have caused some inconvenience to the ferry traffic, they are reluctant to leave the Quay. To remove to Woolloomooloo Bay, they say, would place them at a great disadvantage. Under the circumstances the agents of the Norddeutscher Co. do not favour going to Woolloomooloo Bay, but they might be willing to berth some branch boats there, which are expected to arrive during the year to open up trade with the South Sea Islands. The large steamers they would like to have remain at the Quay, but failing that they mention the alternative of lying in the stream and lightening cargo. It was suggested that if the Norddeutscher-Lloyd Company do not accept the proposed berth, the difficulty could probably be met by transferring the German-Australian boats from Circular Quay to Woolloomooloo Bay. This company's boats carry cargo only, and would suffer no inconvenience by leaving Circular Quay. A transference northward could then be made of the China boats and of those of the North German-Lloyd, thus securing the necessary space for ferry traffic at the head of the Quay.

The North Shore and other ferry traffic at the Circular Quay is increasing rapidly, and, as it increases, the interference caused by the steamers berthing at the wharfs becomes more serious. The complaints take the form of both delay to the traffic and risk to the ferry-boats and their passengers. The delay is occasioned chiefly when the steamers are coming into the wharfs; the risk is brought about by colliers lying alongside the steamers, and thereby narrowing the course of the ferry-boats. The North Shore ferry-steamers run two or three five-minute trips, and the remainder trips of a ten minutes interval, from half-past 8 o'clock in the morning until 8 o'clock at night; and shortly the time of running at these intervals will be extended to from a quarter past 5 a.m. until midnight. The Manly, Watson's Bay, Neutral Bay, and Mosman's Bay steamers also run to and from the Quay, and recently the Balmain and other ferries have been added to the list. The fact remains, and is here emphasised, that the occupancy of the south-western corner of the Circular Quay by large steamers is undesirable, and, as it causes both inconvenience and delay, requires to be remedied.

OBJECTIONS TO THE PROPOSED WHARFAGE.

6. Three witnesses appeared before the Committee to protest against the construction of the proposed wharfage, one of them, the Director of the Botanic Gardens and the Domain, and the others two Members of the Legislative Council. The objections put forward were chiefly that by taking any portion of the water-frontage of the Domain the area set apart for public recreation is encroached upon and injured as a pleasure resort; that the operations of shipping at wharfs in Woolloomooloo Bay interfere greatly with the peace and comfort of residents in the vicinity; and that if the present proposal be sanctioned it will be followed by others of a similar character until the whole of the water-frontage of the Domain, as far as Mrs. Macquarie's Point, has been appropriated.

DECISION ARRIVED AT.

7. The Committee find that the construction of the wharfage already carried out in Woolloomooloo Bay has been justified by the large increase in the shipping trade of the port of Sydney during the last ten years, and that up to the present the wharfs have produced, in rents and wharfage dues, a satisfactory return on the cost of construction, notwithstanding that this has been loaded to a considerable

considerable extent by the cost of expensive land resumptions. Every berth for large vessels is either under lease or in frequent occupation, and there is no reason to doubt that the proposed additional wharfage will be taken up by one line of steamers or another as soon as it is ready. No place within the harbour offers a better site for long broadside wharfs, and that kind of wharf, which is the most convenient for large vessels, does not, with the exception of one instance, exist among the private wharfs in Darling Harbour. Next to the Circular Quay the most convenient place in Sydney Harbour for shipping is Woolloomooloo Bay, and the objections to additional wharfage raised in the Glebe Island improvements inquiry, by those witnesses whose evidence is published with that taken in the present inquiry, do not, in the main, apply to what is now proposed.

The principal objection to the present scheme is the aesthetic one, that by appropriating in the manner proposed a portion of the water-frontage of the Domain, the natural beauty of the place is seriously injured, and the advantages of the Domain as a public park thereby reduced. There may be some weight in this objection, but the public have made no protest against the proposal, and an inspection of the site selected for the new wharfage will show that in this instance, at any rate, such an objection is somewhat far-fetched. Sentiment must sometimes give way to utility. Woolloomooloo Bay is unmistakably established as a shipping centre, and this small addition to the well-constructed wharfs already there cannot possibly have the effect on the Domain predicted by its opponents. The objections of those who complain of the noise, &c., from shipping berthed at the wharfs on the eastern side of the Bay, where the objectors reside, do not apply to the proposed site which is removed from the residential portions of the Bay. It must also be observed that the frontage forming the site of the proposed new wharf is already taken up by structures far less desirable than a wharf for shipping,—including a quarantine depôt and deporting jetty for the most virulent diseases,—and that the locality would benefit by their removal.

Something was also said during the inquiry of the interference with the bathing facilities in Woolloomooloo Bay which the new wharf would cause. But the evidence taken in the matter of bathing, and the condition of the present baths, indicate that the Bay is not now a very desirable place for bathing purposes, and that to meet requirements in this respect the construction of a large and well-appointed public bath in Farm Cove has been recommended by the Metropolitan Land Board.

RESOLUTION PASSED.

8. Looking at the proposal in all its aspects, the Committee are of opinion that the additional wharfage should be constructed, and that the advantage arising from it will be very much increased if the new wharf be extended a further 100 feet, beyond Robinson's ladies' baths. The decision of the Committee is contained in the following resolution taken from the Minutes of Proceedings of February 2, 1900:—

“ Mr. Levien moved,—‘ That, in the opinion of the Committee, it is expedient the proposed construction of about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney, as referred to the Committee by the Legislative Assembly, be carried out; and the Committee recommend that the proposed new wharf be extended northward a further distance of 100 feet.’

“ The motion was seconded by Mr. Shepherd, and passed.”

W. J. TRICKETT,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 27th April, 1900.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

WHARFAGE, WOOLLOOMOOLOO BAY.

FRIDAY, 19 JANUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

THE HON. PATRICK LINDESAY CRAWFORD SHEPHERD.

THE HON. ANDREW GARRAN, LL.D.

WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.

ROBERT HENRY LEVIEN, Esq.

JOHN McFARLANE, Esq.

The Committee proceeded to consider the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and examined:—

1. *Chairman.*] You produce a Departmental statement showing the particulars of the proposed works on the west side of Woolloomooloo Bay? Yes; it is as follows:—

WHARF, WOOLLOOMOOLOO BAY.

THE proposal before the Committee was referred by the Legislative Assembly for its consideration on the 22nd December, 1899, in the following terms:—"That it be referred to the Parliamentary Standing Committee on Public Works to consider and report on the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney."

The history of wharfage accommodation at Woolloomooloo Bay begins in the year 1865, when the then existing circular wharf at the head of the bay was proclaimed. It was not, however, until 1885, twenty years afterwards, that vessels of any considerable size, or carrying general cargo, began to berth there. It was soon found that the wharf, to be of real service, would require to be straightened and cargo sheds erected thereon—both of which improvements were effected. The San Francisco line of mail steamers was the first regular line of vessels to use this berth and it continued to do so for about two years.

Applications for additional berthing accommodation then began to come in, and, with the view of providing same, the Government, about the year 1890, resumed the land, at that time known as the Challis estate, lying on the eastern side of the bay, and other adjacent lands reaching northwards as far as McQuade's property. On these resumed lands the Department constructed two wharfs of 236 feet and 372 feet in length, respectively, which were at once taken up by Messrs. Dangar, Geyde, & Co., for the use of their line of vessels. A further extension northwards, using up the remainder of the resumed lands, was recently completed, forming a wharf 840 feet in length, which accommodates such huge steamers as the "Medic," "Afric," &c.

Coming back to the head of the bay, the Government had, during the years 1887-1888, built a wharf extending from the south-west corner a distance of 433 feet northwards alongside the Domain. This wharf, generally known as the Admiralty wharf, was intended for the use of the Imperial naval authorities, but the construction of wharfs and stores on Garden Island rendered it unnecessary for their requirements. It was, however, at once made use of by the Gulf line of steamers.

The proposal now submitted to the Committee is the lengthening of this Admiralty wharf by 100 feet and the construction of a new wharf 500 feet long (which will be a continuation of the Admiralty wharf, but placed some 60 feet further from the shore line) extending northerly, and finishing short of Robinson's Ladies' Baths, without disturbing same.

In order to obtain the requisite depth of water (28 to 30 feet) the face of the wharf will have to be constructed some 2 chains from the present shore line, and there will therefore be ample room for the erection of cargo sheds and offices, and for a 66-foot roadway and 12-foot footpath. The reclamation will also allow for an area of over three-quarters of an acre being added to the Domain, if necessary, and no portion of the frontage will require to be excavated or disfigured in any way.

The site is at present occupied by the Health Board's Quarantine Depot, some old boat sheds, and other rookeries, and is altogether an unsightly portion of the bay frontage. A suitable site will, of course, have to be provided elsewhere for the Quarantine Depot, but, as there are several such available, no difficulty will arise on that score.

When completed, the new wharf will provide a berth capable of accommodating the large-sized vessels which now visit the port. The estimated cost of the scheme is £23,000, which includes a sum of £1,800 for re-erecting suitable buildings in connection with the Quarantine Depot.

Respecting the question of the need for this proposed addition to the existing wharfage accommodation in Sydney Harbour, there can be no doubt. The growing shipping trade of the port and the phenomenal and rapid increase in the size of the vessels visiting it, make it an absolute necessity to provide further and more suitable berthing space. In Sydney, as in the shipping centres of the United Kingdom, it is found that docks, wharfs, and jetties constructed only seven years ago are now out of date. The existing wharfs belonging to private owners are in most cases mere jetties, unprovided with cargo sheds, of inconvenient access from the landward side, and altogether unsuitable to the requirements of modern steamships. The Government wharfs, on the other hand, whether in Darling Harbour, Circular Quay, or Woolloomooloo Bay, are eagerly sought after and are now fully occupied, while fresh applications for berthing space are being received continually.

R. R. P.
Hickson.
19 Jan., 1900.

But the more immediate cause which renders necessary the early construction of the proposed wharf is the dangerously congested condition of the ferry passenger traffic in Circular Quay. This traffic, owing to the opening of the Milson's Point to Hornsby railway and the notable growth of all the North Shore suburbs, has greatly increased during the last three or four years, and has consequently created a demand for a much more frequent and rapid service between Circular Quay and the North Shore. Comparing the month of December, 1899, with December, 1896, the ferry company has increased the number of trips run between Circular Quay and North Sydney by 57 per cent. In December last, 8,386 single trips were run, as against 5,316 in December, 1896. During the greater part of the day the service is run at ten minutes' interval, and at one time in the morning at an interval of five minutes; and as nineteen trips each way have to connect with the trains at Milson's Point, it will readily be seen that any obstruction to the ferry steamers means a serious interference with a very important passenger traffic. The Government recognises that this large traffic demands every consideration, and that every possible facility should be provided for conducting it with safety and punctuality.

The chief ground of complaint and the principal source of danger in connection with the ferry passenger traffic arise from the German mail steamers being berthed at the head of the Quay and in close proximity to the ferry jetties. These mail steamers are of great size, and their passage to and from their berthing-place frequently occasions delay and danger to the ferry boats. It is imperative, therefore, in the interests of public safety, that they should be removed from their present berth at Circular Quay at the earliest possible date. There is no existing vacant berth, and the only suitable berth that can be provided for them within a reasonable time is the wharf now submitted to the Committee. The owners themselves, I am informed, desire such a change, inasmuch as they anticipate a speedy increase in the number of their steamers requiring to use the same wharf and for which no space can be provided at Circular Quay. A wharf in Woolloomooloo Bay will satisfactorily meet their requirements.

The total expenditure incurred by the Government in connection with Woolloomooloo Bay up to December last has been £366,324 13 5
of which there was paid in respect of land resumptions the sum of 224,856 11 6

leaving as the cost of reclamations, excavations, dredging, wharfs and cargo sheds, &c., the sum of ... £141,468 1 11

TUESDAY, 23 JANUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Robert R. P. Hickson, Under Secretary and Commissioner for Roads, Department of Public Works, sworn, and further examined:—

R. R. P.
Hickson.
23 Jan., 1900.

2. *Chairman.*] At the last meeting of the Committee you produced a Departmental statement with reference to the proposed addition to the wharfage on the western side of Woolloomooloo Bay? Yes.
3. *Mr. Shepherd.*] How do your Department gather information in reference to the necessity for additional wharfage accommodation? From Captain Jackson.
4. I suppose he is considered about as good an authority as we have? I think so.
5. We have evidence before us to the effect that there is no necessity whatever for additional wharfage accommodation? So I understand.
6. Several men in a good position, and who ought to be well informed on the subject, give us that information? So I understand.
7. Of course, we have to rely entirely on the information we receive, as we have no personal knowledge of that phase of the question? All the Department do is to erect the wharfs; we do not know anything about the working of them.
8. Pretty well the whole of the Government wharf accommodation in the harbour is already in use? Yes.
9. Large ships are now becoming very common, and require a different kind of wharf from the ships we had a few years ago? Yes.
10. It is absolutely necessary to have side wharfs where vessels can load and unload without difficulty? Yes.
11. It is considered very dangerous to berth many of these large ships at Circular Quay on account of the largely-increased ferry traffic? There is a certain amount of danger; but the delay to the traffic is the chief thing to be provided against. The large boats generally leave on Saturday morning about 12 o'clock, and that is one of the times when there is the heaviest passenger traffic on the ferries. I happen to be living over on that side myself, and on two occasions I was kept waiting for twenty minutes. If I had had to catch a train it would have been a serious matter. There is at present a great inconvenience to many persons.
12. Is it intended, in the event of the ferry traffic increasing to a much larger extent, that the whole of Circular Quay shall be given up to it? I do not think there is so much inconvenience so far as the vessels on the other side of the Quay are concerned. The P. & O., the French boats, and the Orient boats are fairly well out of the line of the ferry traffic; the greatest amount of ferry traffic is from Milson's Point and Lavender Bay jetties, and that traffic is not affected at all by the boats on the eastern side of the Quay. It is the vessels berthing on the western side which give rise to the inconvenience.
13. You think with proper management it would be quite possible to continue the use of those wharfs? I think so, with a smaller class of vessels. The German boats might be taken away, and the others might remain as they are. It would be quite possible then to carry on the ferry passenger traffic as it is.
14. It is estimated that the proposed additions at Woolloomooloo Bay would afford ample accommodation at present? Yes.
15. You are aware of the scheme for the improvement of Glebe Island? Yes.
16. If we take the proposed accommodation at Glebe Island in addition to the wharfage additions at Woolloomooloo Bay, it would probably afford more accommodation than would be required for some years to come? Captain Jackson is the best person from whom you could obtain information as to what accommodation is required.
17. *Mr. Watson.*] Is it a fact that the German boats are rather desirous of bringing about the suggested change in their berths from Circular Quay to the proposed wharfs at Woolloomooloo? So I have been given to understand by Captain Jackson.

18. The length of the wharf they now occupy, we were told in connection with another inquiry, is 512 feet? I think that is about the length.
19. The wharf you propose to give them at Woolloomooloo Bay is only 500 feet long? Yes.
20. Do you think that length would be sufficient in view of the rapidly-increasing size of their boats? I do. There will be more accommodation in that 500 feet at Woolloomooloo than in the 512 feet at Circular Quay, because they are not able to overlap at the Quay at all; whereas at Woolloomooloo they can overlap, the wharf being 60 feet out.
21. The proposed wharf will be 60 feet further into the fairway than is the Admiralty wharf? Yes.
22. And at the other end there will be the ladies' baths, so that there will be nothing to interfere with the overlapping in that direction? Nothing.
23. Do you know the length of the Norddeutscher Lloyd boats? I could not say from memory.
24. I observe that another boat is coming out even larger than those already coming here;—it is stated she will be about 2,000 tons larger, and probably she will be longer? Yes; but I think the proposed wharf will be amply long, on account of the way in which it is proposed to build it.
25. Have you any means of ascertaining whether any of the land resumed in connection with the various schemes from time to time at Woolloomooloo Bay has been resold or leased by the Government for other than wharfage purposes? No; you would have to get that information, I think, from the Treasury; the leasing and selling of that land would be done through the Treasury.
26. How do you make up the total of £224,856;—does that include the sum which has been voted for land resumption? That includes the amount paid for land resumptions.
27. *Mr. McFarlane.*] What is the total length of the wharfage at Woolloomooloo Bay at the present time? Including the jetty, 3,197 feet. I am including both sides of the jetty.
28. What is the length of the jetty? 262 feet on one side, and 260 feet on the other.
29. The proposed cost of the wharf by itself is £23,000? That is including provision for the new quarantine station.
30. Will there be any more difficulty in carrying out the proposed wharf than was experienced in carrying out those already constructed there? No.
31. It can be constructed at a similar cost in proportion to its length? Yes; and in proportion to its width; there is great width in this case.
32. It is stated that the congested state of the shipping at Circular Quay is one of the principal reasons for the construction of the proposed wharfage? That is the main consideration.
33. The present shipping at Circular Quay interferes with the ferry passenger traffic? Yes.
34. Would not that traffic be considerably reduced if a bridge were constructed to North Shore? It would be reduced to some extent; but I do not know that it would be largely reduced. The more accommodation you give, as a rule, the more traffic there is. A great number of persons would use the bridge, no doubt; but a great number would also continue to use the ferry.
35. Surely the bridge will have the effect of reducing the number of boats plying? No doubt there will be some reduction for a time.
36. Would not persons naturally prefer to cross by the bridge? I do not know. When you are crossing in the boat you get a nice breath of fresh air after confinement in your office. Of course, a bridge would affect the ferry traffic to a certain extent.
37. *Mr. Levien.*] Will there be any accommodation at Woolloomooloo Bay for the harbour steamers? No proposal has yet been made in that direction.
38. I suppose there would be plenty of accommodation there if required? I think so. I do not see why they should not use the jetty for that purpose; it is not of much use for large over-sea vessels such as are coming to the port now. It could be utilised for such a purpose as you suggest. At the same time, I am not aware that there has ever been any demand for it.
39. *Mr. Dick.*] It has been stated incidentally, in connection with the inquiry of the Committee into the proposed works at Glebe Island, that the German Company propose to reduce the inconvenience to traffic at Circular Quay by getting their boats in and out by a different method;—have you heard anything of it? No; I do not see how they can possibly do that.
40. We are told that, instead of swinging the boats into the Quay, it is intended to tow them in stern first, parallel to the wharf? They will still have to drop their anchor as usual towards the middle of the stream. If they could dispense with that, what you suggest might be practicable. The inconvenience arises not only in connection with the going in and coming out of the steamers, but also in connection with their loading and discharging. Steamers of considerable size lie alongside the other boats when they are at the wharf, and there is often no room for the ferry boats to get in and out. I noticed that on one occasion they had to go to the other side of the landing-stage.
41. Do they always drop anchor when out in the middle of the stream? All the big steamers going to the Circular Quay do that.
42. *Dr. Garran.*] They could still drop their anchor, even if they were towed in stern first? Yes.
43. *Mr. Dick.*] I notice that the proposed new wharfage accommodation at Woolloomooloo Bay does not run parallel with the Admiralty wharf? No.
44. In the case of any vessel overlapping the Admiralty wharf, what would one of the Gulf liners lying at the Admiralty wharf do in the event of her being ready to go out? There is 60 feet of projection in the proposed new wharfage, and the Admiralty wharf itself will be extended.
45. Some of the boats are 60 feet wide? But not in the bow.
46. But, even with the projection of 60 feet, how could a vessel wishing to clear out of the Admiralty wharf get out if a big vessel lying at the proposed new wharf were overlapping? The vessel at the new wharf would have to move ahead a little. She would have to be moved the length of the overlap.
47. Is the projection inevitable from the physical features of the bay? It is not absolutely inevitable, but it is a desirable mode of construction. If you carried out a parallel line you would encroach upon the Domain, and you would also get into very shoal water. The removal of the rock, which would be necessary, would also be expensive.
48. With the echelon system of wharfs at Circular Quay it is not necessary to move one vessel in order to free another? I think not.
49. *Dr. Garran.*] In connection with the proposed wharfage, you are going to attain a depth of 28 feet? Yes.
50. Have you that depth at the existing wharfs at Woolloomooloo Bay? Yes, on the eastern side.

R. R. P.
Hickson.

23 Jan., 1900.

- R. R. P. Hickson.
23 Jan., 1900.
51. At the whole of the wharfs on the eastern side? Yes.
52. But you have not that depth at the Admiralty wharf? No.
53. What is the depth there? It runs to about 22 feet.
54. What is the depth at the head of the bay? There are from 15 to 16 feet alongside the jetty. There are about 20 feet on the western side, and from 26 to 27 feet on the eastern side of the jetty.
55. The American steamers used to lie where there is a depth of 27 feet, I suppose? Yes.
56. In connection with the inquiry into the Glebe Island proposal, Captain Jackson said he had always been strongly in favour of increasing the wharfage at Woolloomooloo Bay, and he said also that it always formed part of his plan to construct a tunnel through from Circular Quay to Woolloomooloo Bay, under the Domain, through which the electric tracks could run, so that the passenger and the ordinary traffic would be on a level, going from one side to the other;—do you see any engineering difficulties in the way of that proposal? No.
57. The tunnel would be through sandstone all the way, I suppose? I think so; most of the way.
58. You could not give the remotest guess what it would cost? No.
59. It would be an immense addition to the convenience of the wharfs at Woolloomooloo Bay? A great addition.
60. It would make communication between the two bays very handy? Yes.
61. I suppose some proposal of the kind will have to come hereafter as part of the general scheme of wharfage? It would certainly be of great assistance.
62. It would tend to keep down any excessive charge for cartage down to Woolloomooloo Bay? Yes, assuming that there were a roadway in addition to a tramway.
63. Captain Jackson looks forward to this tunnel as an integral part of a scheme in the future, and I am asking you as an engineer whether you see any difficulty in the way? There is no great difficulty. It is merely a question of money.
64. Do you know anything about the depth of water further along the Domain, where it is proposed to make the wharf;—if you were to continue the wharf in a straight line to the point, would you have the same depth? I think so, although I would not like to say definitely without seeing the Admiralty chart. I think the wharfage could be continued in pretty well the same depth of water.
65. The construction of the proposed wharf is almost a suggestion for the making of another in the same direction, when it is wanted, and so on until the point is reached? Yes.
66. The probability is that the construction of the wharf now proposed will mean the prolongation of wharfage eventually to the point? Yes; unless the lovers of the Domain are too strong and stop it.
67. But the lovers of the Domain do not go into the water there except for their bath? No; but there has been a strong feeling that we should not take any of the frontage at all.
68. Are you aware whether the Metropolitan Land Board has already had under consideration the question of the baths of Port Jackson? Yes.
69. Do you know whether they have come to any definite conclusion as to the baths at Woolloomooloo Bay? Not to my knowledge. I have not seen their report upon the question.
70. There will be room at Farm Cove to which to transfer all the baths at Woolloomooloo Bay, if necessary? Yes.
71. It will be quite possible to make ornamental baths there;—they would not in any way spoil the beauty of the Gardens? That is a matter of opinion.
72. There is already one bath in connection with Government House at the Cove, and that is not a very beautiful object? No.
73. But the baths at the Cove need not necessarily be ugly in construction? No.
74. The baths at Farm Cove will be equally accessible to the people of the city as are the baths at Woolloomooloo Bay? They would be rather more accessible than are the baths at Woolloomooloo Bay.
75. Supposing the projected railway of Captain Jackson were made underneath the Domain, would it not be easier to have a station somewhere near the gates of the Domain at which passengers could alight in order to go down to the baths at Farm Cove? Yes.
76. So that the one scheme could be hooked on to the other? Yes.
77. I am asking you these questions with an eye to the future, because in sanctioning a scheme like this one has to look to what the consequences may be;—if we get rid of the whole of the bathing appliances at Woolloomooloo Bay we shall force the bathers to go somewhere else, and one has to consider their comfort and convenience of access? As far as the baths are concerned, Farm Cove would be an admirable place; the water is clean, and the baths would be more convenient to the greatest number of people.
78. *Chairman.*] In your statement you say that reclamation will allow of an area of over three-quarters of an acre being added to the Domain, and no portion of the frontage requires, as you say, to be excavated or disfigured? The throwing out of the wharf to get a certain depth of water will necessitate a certain amount of filling in behind. We shall get a space more than we require for wharf purposes, and part of the space filled in could be added to the Domain. You would get an addition of nearly an acre to the Domain. The space added will vary from a few feet to 20 and 30 feet in width.
79. Suppose the wharfage were extended towards Lady Macquarie's Chair, the proposal to add to the Domain would admit also of a level road being constructed in the direction of Lady Macquarie's Chair from Woolloomooloo Bay? Yes.
80. Vehicles would not have to come down to the end of Palmer-street, go up an incline, and then come down again, but they would have a level drive all round the edge of the Domain? Yes; there will be room enough for a level road at the back of the wharf outside the Domain railing. The road would run where there is water now.
81. And there would still be ample room left for the proposed wharfage accommodation? Yes.
82. The proposed wharfage terminates abruptly up against the ladies' baths? Yes.
83. Will not that very much interfere with the baths; it will not only destroy their privacy, but will place them in a sort of corner without any scour, where they will be subject to the set in from the north-east winds;—the place will be rendered very undesirable as a bathing-place, will it not? My own opinion is that the proposed wharfage will spoil those baths.
84. It will place them in a very cramped and undesirable position? Yes.
85. That being so, and there being some doubt whether 500 feet is sufficient for the proper utilisation of the proposed wharf, would it not be well to take in another 100 feet;—you would then have accommodation for the largest ships likely to come here? The first Departmental scheme proposed to do away with

with the baths, but there was a strong cry raised against that, and the scheme was stopped. I myself certainly think it will be better to make a longer wharf, and take away the baths.

86. From whom did the objection to the scheme come? Chiefly from persons who did not want the Domain to be interfered with in any way.

87. As far as one can see, the ladies' baths could be shifted right alongside the men's baths, with proper provision for privacy;—the baths would then have the advantage of purer water? Probably the best place to put them would be at Farm Cove.

88. You think that a more effective way of making a wharf for the purposes of the large ships likely to visit the port will be to take in the space now occupied by the ladies' bath? I do.

89. At the end of your statement showing the total amount expended upon the wharfage at Woolloomooloo Bay, the land resumption is stated at £366,324;—has any credit been allowed for land to the south of Cowper wharf, reclaimed by the Government and resold? I could not say, but the Treasury or the Lands Department could give you that information. I do not think that land enters into the statement at all, either by way of debit or credit. There was merely a filling-in; no land, I think, was purchased.

90. Perhaps you could discover the revenue resulting from the sale of the land and the account to which the amount is credited? I will endeavour to do so.

R. R. P.
Hickson.

23 Jan., 1900.

Cecil West Darley, Engineer-in-Chief for Public Works, Department of Public Works, sworn, and examined:—

91. *Mr. Watson.*] You know that Mr. Hickson has made a statement to the Committee with respect to the proposal before us? Yes.

92. It is in consonance with your details, I presume? Yes.

93. Will you describe to the Committee what it is intended to do in regard to the engineering aspect of the question? A part of the proposal is to extend what was formerly known as the Admiralty wharf. A portion of that wharf was built some years ago, in connection with the Naval Station at Garden Island. A part of the original agreement made with the Imperial authorities was that the Naval authorities should be given a wharf and store on shore, with a certain amount of space. Subsequently an agreement was come to between the Colony and the Imperial Government, under which large stores were erected at Garden Island, with a certain amount of extra wharfage. Everything was concentrated there under the supervision of the naval authorities, and they then gave up what was known as the Admiralty wharf, and it was converted into mercantile uses by the Treasury. The proposal is to extend that wharf 100 feet in a northerly direction, and to give good berths there for large ships. It is proposed then to go out in an easterly direction, at right-angles to the extension, for a distance of 60 feet, and to make in a northerly direction a further extension of 500 feet, giving a new berth. The chief object in going out 60 feet is to put the wharf out beyond a projection of rock, and to get deep water. We find, by experience, that whenever we have to remove rock in front of a wharf, to get a depth of water, it is a long and tedious process; and if we can cover the rock with a wharf we find it is cheaper to do so in the first instance. The proposal will not seriously inconvenience the inside berth. There is a similar case at the Circular Quay, where the berth at the south end, on the eastern side, is overlapped in the same way by the Orient boats; still it is not found an inconvenient berth for shipping.

94. The Admiralty wharf would be 523 feet long—actually longer than the proposed new berth? Yes.

95. That is a tied berth, whereas the new berth would be free? Ships can project at both ends at the new berth if desired. A ship 550 feet in length could berth at the proposed new wharf very comfortably.

96. Is it now becoming the practice for new vessels to have hatches right astern and in the bow, and will they not require wharfage provision in connection with those hatches? I do not know that that is the case in the very long boats, although they are going ahead so fast that they may build them that way in the future. As a rule, at present, boats which are over 500 feet in length have not hatches right in the bow or astern. Those hatches are to be found in what are called cargo tramps, but they are a shorter class of boats.

97. Do you know whether the Norddeutscher Lloyd steamers have hatches fore and aft, such as I have mentioned? I think not.

98. Is it the case with the Liverpool White Star line? I could not say. It is the boats of the "Langton Grange" class which have hatches right forward and aft.

99. Is it not the case with steamers of the Federal line? They are not very long boats, I think.

100. It is stated by Mr. Hickson that the proposed new wharf is intended primarily for the convenience of the Norddeutscher Lloyd Company; would it not be well to ascertain whether it will suit them in respect to the get-away from the hatches; if they have to overlap for any considerable distance, and if they have hatches well forward and well aft, it will be doubtful whether they can use the wharf with their existing boats? No boats which they have hitherto sent here have had the hatches right forward; they have used only the central part of the wharf. Changes, however, take place very rapidly, and there is no knowing what kind of vessels they may send here.

101. Do not the German steamers lighter at the extreme end;—I think I have seen them taking in wool from lighters at the extreme afterpart of the vessel? They might take in wool there for the after hold; but I do not think they have any hatch right down by the stern.

102. Do you get a mud bottom by taking the wharfage 60 feet out into the fairway? We get clear of the rock at 30 feet.

103. The proposal will necessitate filling in behind the wharfs? Yes.

104. What depth will you require to fill in;—the shore gradually deepens as it goes out, does it not? Yes; the average depth is not more than 10 feet.

105. You would have an average of from 15 to 20 feet of filling? At the deepest point we should not have more than 10 feet of filling at low water. The average would be about 5 feet of filling at low water.

106. Do you propose to bring the filling from Glebe Island? We should put in a backing of stone immediately at the back of the wharf with material from Glebe Island. The other filling will cost us practically nothing. If we put up a notice to the effect that we will accept filling we can get the work done in a few weeks. For many months we had an average of from 300 to 400 loads of filling at Darling Island.

C. W. Darley.

23 Jan., 1900.

C. W. Darley. Island every day. The great difficulty is to stop the people from bringing it. Woolloomooloo Bay being so much nearer to the town, if we were to put up a notice for filling, the place would be filled in, I dare say, in a week. We got about 20,000 loads of filling in a few weeks for the wharfs at Circular Quay.

23 Jan., 1900.

107. You would not take rubbish, of course? No; it would have to be sound excavation. Just now there is a great deal of building going on, and there are plenty of foundation excavations available. We shall put in a frontage of good rubble stone—in other words a dyke-wall—at the back of the wharf, and the filling will be put in at the back of that.

108. Private people have a difficulty in disposing of the spoil? Yes; they have to take it a long distance sometimes.

109. You do not anticipate any trouble whatever in getting it? None whatever.

110. The wharf will be of the usual timber construction? Yes.

111. With shed accommodation? Yes; somewhat similar to that on the eastern side of the bay.

112. Do you propose to put any additional shed accommodation upon the Admiralty wharf? We have two sheds there; but I daresay Captain Jackson will apply to have the northern shed extended.

113. Have you any details of the cost of the proposal? The timber wharf will cost £9,850.

114. Is that inclusive of the extra 100 feet addition to the Admiralty wharf? Yes. Then, including the wall, the masonry, and the whole of the earth filling at the back, which I have put down at the sum of 1s. per yard—we shall not have to pay for it, but I am allowing for contingencies—that will cost £4,250. Then there are the road formation and drainage works. That includes the road metalling, the kerbing and guttering, and the surface drains, and an asphalt footpath—a total of £1,725. Then a cargo shed 350 feet long by 45 feet wide, with offices, urinal, &c., will cost £5,000, and water supply and lighting £375. The reconstruction of the buildings for the Quarantine Dépôt is a work for which I have put down £1,800, making a total of £23,000.

115. Where do you propose to erect the quarantine buildings? I do not think it has been definitely settled; three or four sites have been proposed by me, and proposed to the Health Board.

116. You do not think there will be any difficulty in getting sites? None whatever. One site which can be made available—and I know the Health Board is in favour of it—is near Miller's Point, upon some Crown land there.

117. At the extreme end of the Point? Yes.

118. Have the Health Board been consulted as to the advisableness of moving the buildings from their present situation? They have been informed that the space will be wanted for wharf purposes, and certain sites have been suggested to them. There has been a good deal of correspondence on the subject; but the matter has been allowed to remain in abeyance until it is really decided that the buildings shall be removed.

119. Is the Quarantine Dépôt used merely in connection with the conveyance of goods to the Quarantine Ground? It is used as a receiving dépôt for goods going to the Quarantine Ground, and the space is also required to keep an ambulance, because when the Quarantine Station is in quarantine they put their dépôt in quarantine. A steamer communicating with the Quarantine Ground must go backwards and forwards, and must come within her fenced space in quarantine. In a case like that which occurred in the city a few years ago, when there was an outbreak of small-pox, a number of men were required for disinfecting purposes, and rooms were required for these men, as a sort of barracks, where they could live practically in quarantine. The men disinfect various places, and then return to their quarantine quarters. The ambulance is also established there. All that they have at present is an old cottage dating back to the early days of the Colony, in which a caretaker is living. There is also a stable there, in which a horse is kept, and a coach-house for the ambulance, and a disinfecting-room, in which they can put a cab for disinfection. When a small-pox patient has been conveyed in a cab the cab is taken to the station for disinfection. What brought the matter forward a few months ago was that money was set apart for extra accommodation. A number of cottages were to be built upon the Quarantine Dépôt, in which the men employed were to live, and tenders were called for. The proposal was to erect cottages upon the present site, and designs were got out by the Government Architect. When the tenders were going through the Reference Board, the matter was first brought under my notice, and I suggested the propriety of not putting up the buildings pending the removal of the present buildings for wharfage purposes. The Minister consented to hold the matter in abeyance, so that, fortunately, that money was not expended. The tenders had been received, but the deposit money was returned. At present the whole matter is in abeyance. I have put down a sum of £1,800 for the erection of new buildings, but that amount would be more than sufficient to replace the buildings which now stand on the ground.

120. Would it be a wise thing to place this quarantine station among a thick population such as you have at Miller's Point? I do not think the population there is much thicker than it is at Woolloomooloo at present.

121. Would it not be possible to pick out a landing-stage near the city which has not so many people living in its vicinity? There is chiefly wharfage at Miller's Point. There would be no population very close to the proposed station.

122. But there would be population immediately behind the wharf? So there is at Woolloomooloo Bay.

123. Not nearly so close, I think;—besides, it is doubtful whether the sanitary conditions are as good at Miller's Point as they are in other parts of the city;—it is an old part of the city? But the new sewerage has been extended to it. No diseases are kept at the station; it is merely a disinfectant station. The site at Miller's Point is one among several others which have been suggested.

124. I suppose that aspect of the question will be considered before the matter is decided? That is a point on which Dr. Ashburton Thompson could speak.

125. How does the estimated cost of the proposed additional wharfage compare with that of the work you have done round the bay, per 100 feet of wharf to be made available? I think it will be much cheaper than the wharfs on the eastern side, if you load them with the land resumption. Apart from that the cost will be practically the same.

126. We must leave the land out for the time being? Then the cost will be about the same.

127. Did you get a mud bottom on the eastern side? All but a little bit of rock, which we had to remove.

128. We were informed incidentally in connection with another inquiry that it was proposed to extend the new wharfs on the eastern side of the bay? Yes.

129. Can you give the Committee some idea of what is proposed there;—I understand that the latest C. W. Darley addition on the eastern side is 840 feet long? It is proposed to make that nearly 1,100 feet long.
130. Would that involve much in the way of resumption? The matter is in abeyance at present. ^{23 Jan., 1900.} Certain proposals have been made to the owners of property there, and they have submitted an offer permitting the Government to carry out the work under certain conditions. The matter is now under consideration. The owners of the property did not ask for money, but they asked for a certain area of reclamation. We are making an estimate of what it will cost. If we can see our way to make the reclamation, they will give us a little corner piece of land we require. If we do what they want, they will forego the loss of water frontage.
131. Judging by the pencilling you have just made upon the plan, showing the area of land you require, and the area which the owners of the property require to have reclaimed, they will not be getting more than they will be giving up? Yes; they will be getting nearly half an acre, and they will be giving up 27 perches. Those figures are subject to correction; I have not yet looked into the details.
132. It is estimated that, with that proposed extension, the wharf on the eastern side would be made long enough for any two of the large steamers coming to the port? Yes; the idea is that there should be two large berths. At present we have given up 550 feet of that berth to the White Star line.
133. That would leave about 300 feet for any other vessel requiring a berth? Yes.
134. That, it is estimated, is not sufficient? Just so; we want to lengthen it to make practically another berth.
135. Do you think it would be advisable to remove the ladies' baths and to extend the proposed wharfs on the western side further in that direction? I should have liked to do so; but there was so much outcry against touching the baths that the proposal was cut short. My opinion is that the ladies' baths in that position are very objectionable; it is a very dirty corner. I have not been into the baths myself; but from what little information I have gained, I think very little use is made of them.
136. You would favour an extension of the wharf in that direction? Yes; an additional 50 feet would be enough. The wharf would then be 550 feet in length.
137. That would take in the whole of the ladies' baths? Yes.
138. What would be the additional cost? Say, £1,000.
139. Would that wharf then be long enough for the German boats? Yes; 500 feet would be long enough for them, but they may be bringing out still larger vessels in a short time; I am thinking of the future.
140. If the baths remained in their present situation they would be affected by the presence of large steamers at the wharf—that is to say, there would be no scour to keep them clean;—they are dirty enough at present; but they would be still worse with steamers lying at the proposed wharf? They certainly would not be improved. My own opinion is that they should be removed. It is not at all a suitable position for baths.
141. *Mr. Dick.*] Is it absolutely necessary that the new part of the wharfs should not be parallel with the old Admiralty wharf? If you made it parallel it would mean the removal of a great deal of rock, and would postpone the date of completion of the work considerably.
142. The angle of projection from the Admiralty wharf is 60 feet in length? Yes.
143. Supposing it were made 120 feet? That would increase the difficulty of getting into the inner berth.
144. There would be no advantage gained then by the echelon construction? No. The object of the projection is to cover the rock. I am looking forward also to the contingency of wharf extension towards the point. We do not know what changes may be brought about in regard to the baths on that side of Woolloomooloo Bay. It is not the best place for baths, and it may be that a more suitable place will be found, that property can then be turned to better use, and the Government may think it advisable to extend the wharfs in that direction. I have put out the proposed new wharf at such an angle that it can be extended right along, still keeping clear of the rock.
145. If you maintain the direction of the new wharf, and it were thought desirable later on to extend it for a considerable distance, you would persist in getting further away from the present shore line, and be encroaching still further upon the waters of the harbour;—is that desirable? We should not encroach to any serious extent upon the harbour. The wharf would be practically parallel with the shore. The line would just touch the fence of Robinson's baths.
146. You think the best use has been made of the site, so far as the physical features are concerned—that is, to avoid the rock? Yes.
147. What is underlying the idea of adding another 100 feet to the Admiralty wharf? To make it serviceable for larger shipping.
148. Would it be available for large shipping if the new wharf were occupied? It would be only about 400 feet long as it now stands.
149. But under your present proposal it would be about 500 feet long? Yes.
150. Will there be enough water alongside for a vessel 500 feet in length? We can make the necessary depths by dredging.
151. There will be no necessity to remove any rock? No.
152. Suppose you had a vessel 500 feet in length at that wharf and another vessel at the proposed new wharf, overlapping, how would it be possible for the vessel at the Admiralty wharf, to get out, supposing she were loaded first? If the other boat were overlapping she would have to move ahead a little. The same thing takes place at Circular Quay every day. The inside berth there is overlapped by the Orient boats, in an aggravated form; besides, it would have to be a very large steamer, indeed, that would overlap the berths at Woolloomooloo Bay. Overlapping could take place at the other end; but there is no German boat coming here at the present time which would overlap at the Admiralty wharf end.
153. We are informed that German boats 2,000 tons larger than those now coming here are likely to visit us? I fancy they are widening the beam of the vessels rather than increasing their length.
154. It is, apparently, a necessity of the conditions of the spot that the awkward angle cannot be avoided, except at great expense? Quite so.
155. *Dr. Garran.*] You can make three new wharfs in prolongation of the proposed wharf, upon precisely the same principle? Yes.
156. And keeping the same line? Yes.
157. And, as far as you know, with the same depth of water? Yes.
- 158.

- C. W. Darley. 158. Seeing that you can get a rock bottom there, why do you prefer piles to concrete? We are having regard to the time occupied in construction.
- 23 Jan., 1900. 159. Would the expense of concrete be much greater? I should explain that the work at Woolloomooloo Bay is looked upon as an urgent matter. The wharf is required to admit of the removal of the German boats from Circular Quay as soon as possible. If the wharf there were made of concrete it would take a much longer time in construction.
160. But would it be more expensive? The first expense would be greater, but when worked out in detail I daresay it would be found cheaper in the end.
161. I understood you to say that, in connection with the work at Darling Island, you preferred concrete, because you had a rock bottom, and that you preferred piles at Woolloomooloo Bay because you had a mud bottom;—it appears that at this particular site you have rock? I do not know whether the rock at this particular point is shelving or not; I have not examined it, nor have I had borings taken to ascertain the nature of it. At Darling Island the rock is pretty well level; but the rock at Woolloomooloo Bay may be shelving. I went into that question in connection with the wharf at Circular Quay. I thought of putting in a concrete wharf there, but I found that the rock dipped at a sharp angle into a great depth of water, and I would not undertake a concrete wharf there because I thought it might slip bodily off.
162. If you were putting down piles in such a case at Woolloomooloo you would go into the rock some way, I suppose? Where the rock comes up we let the piles in 4 feet.
163. The other piles, I presume, will remain in strong mud? Yes; we always get clay overlying the rock.
164. It is not soft mud? No; it is strong tough clay.
165. *Chairman.*] Independently of the engineering aspect of these questions, I presume you are frequently about the harbour? Yes.
166. One of the chief questions put forward in Mr. Hickson's report upon this scheme is the immediate necessity for it, in view of the congested state of the ferry passenger traffic at Circular Quay;—have you noticed that? Yes.
167. Especially on the western side of the Quay? Yes. The North Shore ferry is so close to the German berth that the ferry-boats are frequently very much inconvenienced when the German boats are coming in or going out.
168. When the German steamers are being berthed they generally turn them right round on to the Quay to get them stern in, so that they may start straight away when they go out? Yes.
169. That is the main cause of the inconvenience? Yes.
170. Do you think it is very advisable that these German boats should be removed from that corner of the Quay? I certainly think the large vessels should be removed from there; the berths should be used for smaller vessels.
171. Vessels of from 2,000 to 3,000 tons could be accommodated there without inconvenience? Yes.
172. Whereas vessels of from 8,000 to 10,000 tons create great inconvenience? Yes.
173. Mr. Hickson also states in his report that wharfs constructed seven years ago are out of date in shipping centres of the United Kingdom;—is that the fact? That is the fact, in some cases.
174. The wharfs in use about seven years ago, while suitable for the size of the ships of that day, are not suitable for the increased size of the shipping of to-day? Exactly; the ships have taken a sudden start in the direction of length. Ship-owners suddenly rushed into ships of much greater length. I think it is brought about chiefly by the Germans. They have an ambition to own the largest ships, and immediately English builders construct a large ship the Germans think they ought to go one better. The increase in the size of vessels has been very sudden indeed. The length did not increase rapidly up to five or six years ago, but about then the vessels began to take great strides in length.
175. Is it also the fact that the private wharfs are in most cases not provided with cargo-sheds on the wharfs themselves, and that the wharfs are not very conveniently situated for the storage of cargo? That is so, in many cases.
176. Do you think that is one of the reasons why the Government wharfs are preferred for large ships? Partly on that account, and partly because the Government wharfs have better access; the approaches to many of the private wharfs are very inconvenient.
177. There seems to be a demand for the freer use of the jetty system of wharfage;—is not that a system which can be dealt with only when you have a great width of space from shore to shore, giving ample room for the moving of ships? I do not think the jetty system would be found convenient for large ships. You cannot get the sheds opposite the ship unless you have a great width of jetty, and in that case the cargo would be apt to get mixed, particularly if you had a vessel loading on one side and another vessel unloading on the other side. There would be great confusion. The large ships get their cargo out with such rapidity that they require a great deal of space. If you go down to Woolloomooloo Bay when one of the White Star boats comes in you will find they unload their cargo very rapidly indeed. They not only cover the whole of the wharf and shed, but a large space at the back of the wharf is also a mass of cargo. I was astonished at the rapidity with which they get the cargo out. The carriers could not take it away quickly enough. They have a number of hatches going, and there are hydraulic cranes all over the ship; the cargo can be tumbled out at a great rate, and it is impossible to get it carted away fast enough. If such a ship were unloading at a jetty she would have to stop her unloading from time to time. In the case I speak of, the carriers had access in all directions, but still the drays could not get the cargo away fast enough. The reclaimed land for a width of 200 feet was a mass of cargo; it extended right back to the rocks.
178. Do you regard the proposed wharf as a really good and useful work, likely to be a profitable addition to the wharfage at Woolloomooloo? I think it would be a most desirable addition.
179. From its position so near to the city and one of the main streets it is likely to be one of the most desirable wharfs at the bay, especially for passenger traffic? It would certainly be the very best wharf in the bay. I should say it would be very much sought after.
180. Taking the height of the Domain at the back of the wharf, do you think the wharf would be likely to interfere with the Domain as a pleasure resort? Not in the least. The proposed buildings would be more sightly than the old rookeries under the Domain at present, and the Domain fence would be straightened up.
181. And, instead of any space being taken away from the Domain, some space would be added to it? Yes;

Yes; we really shall have more land than is actually wanted for wharfage purposes, and a strip could be added to the Domain and planted with trees. The proposed buildings for the Quarantine Depot were on a level with the Domain. C. W. Darley.
23 Jan., 1900.

182. How long do you suppose it would take to carry out the work? I should think it would certainly take six months.

183. Certainly it could be done within twelve months? Yes; if we had a good contractor we could finish the work in six months.

WEDNESDAY, 24 JANUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

John Jackson, Manager of Public Wharfs, made an affirmation, and was examined:—

184. *Mr. Levien.*] How long have you been in your present position? A little over fifteen years. J. Jackson.

185. Mr. Hickson, in the Departmental report concerning the proposed wharfage at Woolloomooloo Bay, says: 24 Jan., 1900.

Applications for additional berthing accommodation then began to come in, and, with the view of providing same, the Government, about the year 1890, resumed the land at that time known as the Challis estate, lying on the eastern side of the bay, and other adjacent lands reaching northwards as far as McQuade's property. On these resumed lands the Department constructed two wharfs of 236 feet and 372 feet in length, respectively, which were at once taken up by Messrs. Dangar, Geyde, & Co., for the use of their line of vessels. A further extension northwards, using up the remainder of the resumed lands, was recently completed, forming a wharf 840 feet in length, which accommodates such huge steamers as the "Medic," "Afric," &c.

Do you agree with him that there is need for additional wharfage accommodation at Woolloomooloo Bay? Yes.

186. I suppose you have furnished information to the Department as to the need of the proposed accommodation? I always make application to the Treasury.

187. Why did you ask for accommodation in this instance? Because I had not sufficient accommodation for the present applicants.

188. You are satisfied, then, that there is every need for the proposed wharfage? Yes.

189. Mr. Hickson, in his report, says:

Respecting the question of the need for this proposed addition to the existing wharfage accommodation in Sydney Harbour, there can be no doubt. The growing shipping trade of the port and the phenomenal and rapid increase in the size of the vessels visiting it, make it an absolute necessity to provide further and more suitable berthing space.

Do you agree with that statement? Yes.

190. What is your opinion of the site? I think it is a splendid site for wharfage.

191. Would you be inclined to extend the wharfage beyond the limits now proposed, taking in the ladies' baths? I think the berth should be 600 feet long at the least, and I will give you a reason for it. Suppose a vessel is only 550 feet in length, it is always wise to leave a little space in addition so that lighters can come in when the vessel is discharging. A large quantity of the goods have to be put into lighters at the berth, and if the berth is only the length of the vessel there is no berthing accommodation for the lighters.

192. Mr. Darley said yesterday he would favour a suggestion for increasing the length of the wharf;—you are in agreement with him? Yes; a berth now-a-days should be not less than 600 feet in length.

193. In anticipation of larger vessels coming to the port? Yes.

194. Mr. Hickson says, also, that the more immediate necessity for the proposed wharfage lies in the dangerously congested state of the ferry traffic at Circular Quay;—you think that is a strong point in favour of the proposed works? I do.

195. What company do you think would take up the proposed berth? The Norddeutscher-Lloyd Company will take two berths. I think their mail steamers are prepared to go to Woolloomooloo if berthing can be provided there for them. In March and in August I think they will have two branch lines of the size of the "Carlsruhe"—that is 5,000 tons. One branch, I understand, will run to Hongkong, and the second to Samoa.

196. Do you think there will be sufficient depth of water, when the berth has been dredged, to accommodate the largest vessel? Yes.

197. What do you think of the locality itself? There is only one drawback for mail steamers, and that is the approach for passengers.

198. What is the objection? The passenger liners prefer to be all in a cluster. I spoke to one of the representatives of the Norddeutscher-Lloyd Company about the matter, and he said that if a line of steamers were at Woolloomooloo Bay passengers inquiring for berths would have to be sent a considerable distance from their office, which is in Bridge-street. There is no means of conveyance there.

199. Is there not a line of 'buses running to Woolloomooloo Bay now? From King-street; but intending passengers would have to go from Bridge-street to King-street to get a 'bus, and that no doubt would be a little inconvenient.

200. Are not the offices of the company centrally situated? They are in Bridge-street.

201. I suppose they would continue there? I should think so.

202. I suppose they could put their offices in a more central situation if they chose? The same thing holds good in regard to the offices as in regard to the berths. All the mail steamship offices prefer to be close together.

203. Do you not think that objection is rather a slight one? I do not see why they cannot do as some of the American shipping firms do, and that is, have conveyances of their own.

204. I suppose the passengers themselves prefer to see the vessel rather than the plan? They generally prefer to see the vessel.

- J. Jackson. 205. What rental do you expect to obtain from the proposed berths? If the Norddeutscher-Lloyd Company went there with their boats I do not think I could ask them the rental I could ask at Circular Quay. I daresay I should receive about £5,500 a year for 600 feet.
- 24 Jan., 1900. 206. *Mr. Watson.*] Would they take the whole of the 600 feet? They want 1,000 feet. They want accommodation for two branch lines of steamers, and that, in addition to the accommodation they require for their direct line, would mean considerably more than 1,000 feet.
207. *Mr. Levien.*] They are prepared, at all events, to pay for 1,000 feet? Yes.
208. What would you expect to get for the 1,000 feet? I should expect to get £3,000 a year in lieu of the tonnage dues, and I should expect £5,000 a year for the wharfage inwards and outwards.
209. £8,000 a year in all? Yes. From this one line of steamers at the Circular Quay I get close upon £6,000. That would be £2,080 rent, and the balance for inward and outward wharfage. Their vessels bring between 6,000 and 7,000 tons of cargo.
210. There would be plenty of room for drays and trollies at the back of the proposed wharfs? Plenty.
211. It would be quite as convenient for loading as is the accommodation at Circular Quay? Yes, quite.
212. To what length would you feel inclined to construct the wharf if the matter were under your own control? I would put up 1,100 feet.
213. Do you think it will interfere with the beauty of the spot itself? No, because the wharfage would be right under the cliffs. It would project a little into the water, and would not touch the Domain at all. In fact, I think that land would be added to the Domain, and there would be a level road under the cliff.
214. What class of ships would berth at the proposed wharf? The Federal line of steamers from New York, and Houlder's line. If we get the Norddeutscher-Lloyd steamers there, the new San Francisco line of steamers will berth at the Quay. If the Norddeutscher-Lloyd steamers do not go there, the San Francisco line will have to go there.
215. Would you sooner have the broadside wharf or the jetty system there? Jetties are of no use for the class of ships with which we now have to deal. They were all right fifteen or twenty years ago, when the old sailing ships were coming to the port, and when they could discharge cargo at their leisure; but in these days of competition ships must have despatch. Some of the German boats discharge out of eight hatches.
216. You have been advocating this increased wharfage accommodation in consequence of the numerous applications for berths which have been made to you? Yes.
217. You have read the evidence of Mr. Knox and of other gentlemen in connection with the Glebe Island Improvement inquiry? Yes.
218. They say that no further wharfage accommodation is needed? I quite admit that there is plenty of wharfage accommodation in Sydney, such as it is, but it is not suitable accommodation. It is adapted to sailing vessels, and to a small class of steamers, but it is totally unsuited to the modern large-sized steamers. The Wharfage Association must know that themselves. What they now say was said ten years ago. As a matter of fact, I said it myself.
219. The modern appliances make despatch much quicker? Yes; I can give you a case in point. If the "Surrey" had not berthed at Woolloomooloo, as she did the other day, she could not have got her cargo out in time to take the troops on board. She worked night and day, and discharged over 6,000 tons of cargo in three days. She discharged out of all her hatches. I cannot be certain to the hour, but I think the time was about three days.
220. There is plenty of room at the back of the proposed wharf to admit of the rapid discharge of cargo? Yes.
221. There would be quite as good access to Woolloomooloo Bay as there is to other wharfs;—there are four or five distinct means of access to the bay? Four, I think.
222. That would facilitate the cartage of goods from the wharfs to the city? Yes.
223. Would the price be affected? No; it has not been affected as a matter of fact.
224. Do you think that if the proposed wharfage were made stores would be likely to be erected at the bay by the merchants of Sydney? I think so.
225. In the immediate vicinity of the wharfs? Yes.
226. There is plenty of land available there for the purpose? Yes; I notice that an English company have purchased a piece of land on the eastern side, adjacent to the wharfs.
227. A number of old rookeries could be removed and stores could be advantageously substituted for them? That must come in time I think.
228. The whole of the wharfage accommodation from the point downwards on the eastern side has been filled up and is constantly in use? No wharfage is constantly in use. The wharfs may be slack one week, but in another fortnight they will perhaps be quite full.
229. You regard the wharfs at Woolloomooloo as a splendid asset of the Government? I think they will be one of the best they have.
230. There is a certain fixed return? Yes, and it is all cash.
231. *Mr. McFarlane.*] Have you received any complaints from the different ferry companies which have steamers plying between Circular Quay, North Shore, Neutral Bay, and other places, as to the delay to their traffic consequent upon large steamers coming into and leaving Circular Quay? Yes; from the North Shore Ferry Company. A certain amount of delay is inevitable when the large steamers come in if they are swung at the head of the cove; but it would be obviated in a large measure if the steamers were turned round outside the cove, and brought up stern first.
232. Has the delay ever come under your own observation? Yes, I have often noticed it.
233. Your opinion is that the shipping traffic is too much congested at the Circular Quay? Yes.
234. Hence the necessity for finding accommodation elsewhere for the larger ships? Yes.
235. You believe that to be absolutely necessary? I do; I have pointed out to the Treasury that all the picnic boats should be removed from the cove also; that, I think, has been approved of.
236. If the proposed North Shore bridge were constructed, that would take a large amount of the traffic? I do not think so.
237. Would not a large number of persons use the bridge? Yes; the ferries might be affected for a time, but I do not think they would be permanently affected, on account of the increased traffic.
238. There would still be a necessity for ferry steamers? Yes.
239. Woolloomooloo Bay is the best site available for additional wharf accommodation? I am sure it is.
240. Would you prefer it to the proposed site at Glebe Island? Decidedly.
241. For what reason? It is far more convenient to the city.
242. You think that the proposed wharf would be immediately taken advantage of by the shipping companies? There is not the slightest doubt of it.
- 243.

243. If this wharf is constructed at Woolloomooloo, would there be the same necessity for the proposed additional wharfage accommodation at Glebe Island? I think so. I am not speaking of the requirements of this year or next year. I am looking ten years hence. When large steamers come here, as they are doing from time to time, you cannot make berthing accommodation in a day; it is as well to be prepared for these things. J. Jackson.
24 Jan., 1900.
244. You think the amount proposed to be invested would be a good investment in view of the anticipated return? I myself would be prepared to give the Government £5,000 a year for the wharf.
245. The shed accommodation and the proposed wharf would be a great convenience? Yes; I may say that the sheds on some of the old wharfs are too near the water's edge. They are only 20 feet from the edge of the wharf. It is proposed in this case to make the shed 30 feet away. It would be better to have it 40 feet away, if possible.
246. To give increased facilities for the discharge and loading of cargo? Yes.
247. It would also enable the sorting of cargo to be better carried out? Yes.
248. I believe that some confusion now obtains in that respect? Not so much at the public as at the private wharfs.
249. You do not believe in the erection of jetties? Not for the discharge of cargo.
250. It is not so costly to erect jetties? No; but there is always a trouble with them.
251. It takes a ship longer to discharge or load at them? Yes; that is one reason why they are objectionable. The carriers have a difficulty in getting down to them for the goods.
252. There will be ample facilities for the approach of drays and trollies to the proposed wharf? Yes.
253. It will be an improvement on the existing state of things even at Circular Quay? Yes; although there has been a great improvement on the western side of Circular Quay. The trays back up to the side of the wharf; they do not go on to the wharf at all.
254. There is not so much delay at the Circular Quay now as there is at the private wharfs? No.
255. Is the delay at the private wharfs due to the jetty system? I could not say from personal experience, because they are intercolonial wharfs; but I have seen some of them so blocked up that it has been hardly possible to move about among the goods.
256. Do you think Woolloomooloo Bay will be a suitable place for jetties? No; you could not move large steamers there if there were jetties.
257. You are strongly in favour of the proposal of the Department? I am.
258. You do not think that the inconvenience of the proposed wharf, so far as passenger traffic is concerned, will prove any hindrance to the leasing of it? No; I think that is an objection the companies themselves will get over.
259. You do not think the inconvenience of the locality would lead to passengers preferring to travel by a line of steamers which did not berth there? No.
260. Still there will be an inconvenience? Yes; but people get used to these things.
261. *Mr. Dick.*] You feel satisfied that there is a demand for more wharfage accommodation for Woolloomooloo Bay? Yes.
262. On what facts do you base that conclusion? A good many. There are three lines of steamers now which I am unable at all times to berth—the Federal line, Houlder Brothers, and the San Francisco line. They have to take their chance of getting berths.
263. Do not Houlder Brothers say that the wharfs at Woolloomooloo Bay were not suitable for them;—were they not offered a berth on the eastern side of the bay? That must be the fault of the stevedore; it cannot be the fault of the wharf.
264. They state, I believe, that the berths on the eastern side of the bay do not suit them? I have never heard that from anyone. They are, without exception, the best wharfs in the city. There are, as I was saying, three lines of steamers for which I have no berth, but through accident I have been able to berth them in between, as it were. If the "Persic" had come here I could not have berthed them. Owing to an accident I was able to berth the two last New York boats on the eastern side of Woolloomooloo. There will be a new San Francisco line of steamers out some time this year. They also want a berth. The Norddeutscher Lloyd Company will undoubtedly have to be removed from the Quay, and it is possible that the San Francisco steamers may go there.
265. Has there been a proposal to shift the Norddeutscher Lloyd boats further up the Quay instead of removing them altogether from it? There has been a proposal of that kind, but it could not well be carried out. It would be a very costly affair. You would have to turn out the China boats and the German Australian line of steamers, and accommodation would have to be found for them elsewhere.
266. But would not that get over the difficulty arising from the fact that large liners like to congregate together? I do not think so. The Norddeutscher Lloyd steamers are getting too large for the cove. Having regard to the ferry traffic, I think their continuance there would be dangerous.
267. Are they the only offenders in that respect? They are, practically.
268. Yesterday we had evidence to the effect that all vessels which berth at the cove put out an anchor as they are coming in, and I presume that the anchor would be to some extent a source of obstruction to the traffic—perhaps almost as much as the vessels themselves; that is, while they are mooring? That inconvenience would not last more than three or four minutes—while the anchor was being dropped. I never heard of any complaint on that score. The ferry steamers would not go on either shore close to the spot where the anchor would be lying.
269. Where would the anchor be lying? It would be dropped 200 or 300 feet out from the wharf. It is dropped partly to heave the steamers off when they are going out. By that means they also get the stern out, so as not to injure the propeller when the engines are started.
270. If you remove the Norddeutscher Lloyd steamers from that corner of the cove you would let the wharf to another line of steamers of smaller size? Yes.
271. Would the difference in size make any great difference to the interference with the ferry traffic? Yes. There is a big difference in that respect between a steamer of 3,000 tons and a steamer of 10,000 tons.
272. Could you tell us how long it would take one of the big German boats to swing into position at the opening of the cove, and to get alongside? It would depend a good deal upon the weather; but, on the average, I should say it would occupy an hour.
273. Would the ferry traffic be inconvenienced during the whole of that time? Only while the vessel was at the head of the cove; but I myself have seen the ferry traffic stopped for about three-quarters of an hour. The steamers are timed to leave the Quay at 12 o'clock on Saturdays, and only last Saturday I

- J. Jackson. saw one leaving; she had two steamers, one at the stern and the other at the bow, and the line was right across the North Shore Ferry Company's boats, and they could not get either in or out. Then, when the big steamers are coaling at the wharf, they have a collier on each side. They are about 60 feet in the beam, and the collier on each side would make another 60 feet—making in all a projection of 120 feet. You cannot have that without a considerable amount of inconvenience to the ferry traffic.
- 24 Jan., 1900.
274. You gave Mr. Levien some details of the rent you expect to obtain from the wharf at Woolloomooloo Bay;—in connection with a previous inquiry you said that the charges you levied were fixed by law? Yes.
275. How do you reconcile that statement with the statement you made to-day;—you said you did not think you could get more than a certain amount at Woolloomooloo Bay, whereas you could get a higher amount at Circular Quay? At Circular Quay all the mail boats lease the wharfs. Under the law tonnage dues are charged. In lieu of charging the ships the tonnage dues the Government have seen fit to charge them so much rent, so that they may have the exclusive use of the berths at all times. The rent would total up to about £300 or £400 a year more than if the vessels paid the tonnage dues. Besides that we charge wharfage on all goods, inwards and outwards, at a schedule rate. The amount I have given is, of course, approximate. It depends on the amount of cargo a ship brings in, and the amount she takes out. In 1898 I totalled up the revenue I had from the Norddeutscher Lloyd boats, and I think it was £5,580—that was for wharfage, and the rent in lieu of tonnage dues. I could not charge quite as much rent at Woolloomooloo as I charge at Circular Quay. If they took the wharf at Woolloomooloo I could not expect the company to pay £400 or £500 over the tonnage dues. I should regard Woolloomooloo as in a second class compared with Circular Quay, and I should be satisfied if I got £100 more than the tonnage dues. I think that would be fair.
276. How do you levy the wharfage dues on these wharfs? Under a schedule to the Act. On a bale of wool there is a charge of 8d. inwards and 4d. outwards. In the case of merchandise—drapery, for example—there is a charge of 9d., and one-half outwards; upon iron there is a charge of 1s. 8d. inwards, and one-half outwards, and so on. Ironmongery has a special rate, and hardware has another special rate.
277. Going back to the total charge to be levied at the wharf at Woolloomooloo, your first statement made a difference of about £2,000 per annum? That is only approximate; of course a great deal depends upon the cargo a vessel brings. I am taking approximately the cargo which the vessels have brought in in previous years.
278. Have you offered any opinion to the engineers of the Public Works Department in regard to the shape of the wharfs they are going to build? I have not seen the plans since the alteration.
279. What was the alteration? It was proposed originally to carry the wharfs on in a straight line, without any projection.
280. How do you think the present proposal compares with the old one? I think it will be cheaper, because they will get into deeper water, and save the blasting of the rock, and instead of taking anything from the Domain they will add to it.
281. You prefer the amended plan then? Yes.
282. You do not anticipate any difficulty in getting boats into and out of the Admiralty wharf when the new wharfs are occupied? None whatever.
283. You are strongly of opinion that the proposed wharfs should be made longer than 500 feet? I think the length should be nothing less than 600 feet. Of course 500 feet would be better than nothing.
284. What have the Norddeutscher Lloyd boats between hatches? They are 525 feet between the perpendiculars.
285. *Dr. Garran.*] I gather from what you have said that the suggestions for new Government wharfs have generally come from you? Yes.
286. You report to the Government when you find that your applications are more than you can accommodate? I do.
287. Were all the wharfs on the eastern side of Woolloomooloo Bay built at your suggestion? Yes. In fact a portion of the land there was resumed at my suggestion. I recommended the resumption of the Challis estate.
288. Even now that you know the large amount that that resumption cost, you think it was a wise course for the Government to make it? Yes.
289. Notwithstanding that it cost more than you thought it would? Yes.
290. You think your advice was good? Yes; I am very glad I gave it.
291. You told me in connection with a previous inquiry that you had three applications that you could not satisfy? Yes.
292. To-day you have a further application from the Norddeutscher Lloyd Company—making four altogether? Yes; that is including the accommodation for the branch line.
293. This single wharf at Woolloomooloo Bay could not accommodate the branch line as well as the main line? That is true; but as the Committee are aware the White Star line have the refusal of the eastern side of Woolloomooloo Bay up to the 11th February. I do not know whether they will take it or not. If they should not take it, then if that wharf were lengthened by 200 or 300 feet it would be available for the Norddeutscher Lloyd Company and their branch line.
294. Supposing the White Star liners do not take that berth they will practically leave you altogether, because you have no other berth at which you could accommodate them? That is so.
295. They would have to go to Smith's wharf, or to some other private wharf? Yes.
296. Then you would have two berths available? Yes.
297. And if this proposal were added that would give you three berths? Yes.
298. Would those three berths meet your present requirements? Yes.
299. If the White Star liners went to Smith's wharf you would put the Norddeutscher Lloyd boats at the new wharfs, and the two other boats on the eastern side?
300. So that this one new wharf would meet your present requirements? Yes, because if the Norddeutscher Lloyd boats left the Quay we could put the smaller China boats where the Norddeutscher Company's boat now is, and we could put the San Francisco line where the China boat now is.
301. Could you put two boats where the Norddeutscher Company's boats now go? No, only one. If I were to put any large steamers there we should still have the nuisance to the ferry traffic.
302. There is only comfortable room there for a moderate-sized steamer? Yes.

303. The proposal to extend the wharfs on the eastern side of Woolloomooloo Bay would give you a length of 1,100 feet? Yes. J. Jackson.
304. It is a very great convenience to have a uniform broad-side wharf instead of having your wharfage broken up? Yes. 24 Jan., 1907.
305. Because in that case you can put there either one very large steamer or two moderate-sized steamers? Yes. A straight wharf is the best. The echelon wharfs were good when we knew what the size of the vessels would be.
306. But if the vessels outgrow the echelon wharfs you are blocked? Yes.
307. If the Orient or P. and O. steamers got a little longer you would find even the accommodation at Sydney cove inconvenient for them? We are lengthening the P. and O. berth now.
308. Suppose the whole of those steamers were to grow 50 feet longer, would you not have a great deal of trouble in getting them out of the echelon berths? Yes; if 50 feet were added to the Orient Company's berth it would be quite short enough. They have now only 380 feet.
309. So that the berths at Circular Quay, however suitable five years ago, may be found too short five years hence? Yes.
310. A continuous berth, therefore, is on every account desirable if you can get it? Yes.
311. Looking at the new wharf now proposed, does it not strike you, as a man of common sense, that if once we make that wharf we are bound to go on and make another one next to it? I think it is very likely.
312. You are already proposing that the wharfage accommodation there shall be 1,100 feet in length, and you say that the Norddeutscher Company would take the whole 1,100 feet, so that you would not have to go begging for a customer, even if you doubled the proposed length of the new wharf? No; I have a customer already.
313. So that the wharf we are considering might be doubled, and yet you would have no trouble in getting revenue for it? No.
314. You said you thought you could get £5,500 from it? Yes.
315. The cost, supposing it to be rightly calculated—and Mr. Darley does not think the estimate will be exceeded—will not be more than £24,000; therefore, the £5,500 would give the Government a very handsome return? If the Government would put up the wharf I should be very glad to give them £5,000 for it.
316. There is no such wharf at present returning such interest on the outlay? No.
317. Is it not the first time in wharf construction that a scheme has been put forward showing a return of 10 per cent? Some of the wharfs bring in 10 per cent.; but others bring in very little.
318. The wharfs on the other side of the bay are weighted with the enormous cost of the land resumption? Yes.
319. On the western side the project would have no such load? No.
320. Then do you not think, looking to the facts, that wharfage can be made there so cheaply compared with the anticipated revenue, and having regard to the beautiful frontage, giving you a continuous line of 1,500 feet, that it is almost certain the construction of this one wharf will lead to the construction of other wharfs beyond it? I should think it would in time.
321. So that the whole question of the æsthetic objection, on the ground of spoiling the Domain, is raised now? Yes.
322. We shall take away the water frontage; that is the only drawback there will be? Yes.
323. People on the bank above, instead of looking down upon the water, will look down upon the wharfs? Yes.
324. They have been in that position in regard to the Admiralty wharf for some time? Yes, for fourteen years.
325. In that case a piece of the Domain was actually taken for the wharf, was it not? I believe so; but I am not sure.
326. In the case of the new wharf, you do not propose to crib anything at all? No; on the contrary, land will be added to the Domain.
327. If these large companies had the choice to-morrow of taking the proposed wharf or a wharf of equal length at Darling Island, which do you think they would prefer? The wharf at Woolloomooloo.
328. There is no doubt about that, you think? No. They could not go to Darling Island to discharge inward cargo.
329. Whereas the proposed wharf will do, in a sort of way, for both import and export? Yes.
330. I suppose that at present very few ships shift from one wharf to another? Very few; there is no necessity for it.
331. There is no trade you know of in which the ships leave the import wharf and go to another wharf for export? No; except that sometimes they go to the Pymont wharf to take in coal.
332. That is, to take away a full cargo, and to load up their bunkers? Yes.
333. You are referring to ships which are chartered to take away the Metropolitan Coal Company's coal? Yes.
334. Ships go there because it is the only place where there are cranes? Yes.
335. If we want to increase the wharfage accommodation of Sydney by first-class wharfs, this western side of Woolloomooloo Bay is the only available place? Yes.
336. And it would be the most economical and profitable place? Yes.
337. And you think the project means the inevitable continuation of the wharf for another 1,000 feet? Yes, in time.
338. The time will not be far distant, if you say that already there is a demand for double the wharfage proposed? No doubt the demand is there.
339. You have spoken of the difficulty of passengers getting down to Woolloomooloo Bay;—if your scheme for a tunnel from Circular Quay to the bay were carried out there could be a penny omnibus running? Yes; and the electric tram would also be a paying line.
340. I suppose you could work the tram round at the head of Woolloomooloo Bay in just the same way as at the Circular Quay, thus creating a new terminus? Yes.
341. And that would get over the difficulty? Yes; and I do not think the tunnel would cost very much.
342. Have you ever had any calculation made? Since I was here last I have estimated the cost roughly at £30,000; that would be for a tunnel a mile in length, and 50 feet wide. 343.

- J. Jackson.
24 Jan., 1900.
343. That would accommodate a road as well as a tramway? Yes; a double road for drays, and a double line of tramway. An engineer made the estimate for me.
344. Suppose it cost £30,000;—if we added another 1,000 feet of wharfage, at the cost now proposed, the total cost of the scheme would be £100,000? Yes.
345. Do you think the scheme would be worth that expenditure? I do.
346. The three wharfs, supposing your estimate is correct, would give a gross rental of £15,000 a year? Yes.
347. That return upon the outlay of £100,000 would be a very handsome one? Yes; private investors do not get such a return.
348. And it would make the scheme a complete one? Yes.
349. If we had these three wharfs, in addition to the Darling Island wharfs, you would not be coming to the Government complaining you were short of accommodation? I do not think we shall be short of accommodation in my time.
350. We should be as well supplied with Government wharfs as any port in the world? Yes; and you must remember that private wharf-owners will also see the necessity of making alterations to their wharfs.
351. They are hampered by space and other difficulties, and cannot do much more than they are doing now? Not in the bight between Dawes' Point and Miller's Point.
352. It is possible for only the Government with their magnificent frontages to make any great difference in the accommodation provided? Yes.
353. You think this accommodation might be provided on the western side of Woolloomooloo Bay, and that with the Darling Island wharfs added we should then be superabundantly supplied? Yes; for some years.
354. If the German Company would take the proposed wharf doubled, I suppose it could be constructed quickly? Yes, I think so.
355. And the other wharfs might be left until they were wanted? Yes.
356. You think that in time there will be a demand for them? There will no doubt be a demand for them.
357. What width of roadway do you provide behind the sheds? Sixty feet.
358. Would that be for drays? Yes.
359. You would not put the drays between the shed and the wharf? No.
360. The wharf, then, would come in for cargo? Yes.
361. Would there be anyone to regulate the drays going there? There is always a wharfinger on the wharf.
362. And the draymen must obey his orders? Yes.
363. Do not the drays, as a rule, go there? Yes; it has been most difficult to get them off.
364. Then the goods would practically go in at one side of the shed and be taken out at the other? Yes.
365. *Mr. Shepherd.*] Do you consider the proposed addition of 600 feet on the western side would make the wharfage equally valuable to that on the other side? On the other side you would be able to get two berths; on the western side you would get only one.
366. Your estimate of revenue for the 1,140 feet is £8,000? Yes.
367. The expenditure of £23,000, however, on the western side would be a good investment, you think? Yes; for the frontage occupied by Dangar, Gedye, last year I had a revenue of about £4,000. Two berths would be about 550 feet.
368. Allowing 60 feet for a roadway and 12 feet for a footpath, what additional depth would there be to the water's edge in the case of the proposed wharf? From the front of the shed to the edge of the wharf there would be 30 feet, and the shed would be 45 feet in width.
369. Is the roadway at the back intended to communicate directly with the shed;—will drays be able to unload from the roadway directly into the shed? Yes.
370. There will be openings into the shed from the road? Yes; all along there will be sliding doors.
371. It will not be necessary to cut anything down on the Domain side? No, I think not.
372. Has the proposal to extend the wharfage beyond the point now proposed been considered? Not that I know of. I asked for 900 feet at first.
373. It is proposed to construct the additional wharf in the same way that the Admiralty wharf is constructed? Yes. I may mention that nearly all the wharfs at Pyrmont are not built upon land which has been resumed; they are all built outside of the resumed land, and the land is being used by the Railway Department. I do not think it is fair that the wharfs should be debited with lands used by that Department.
374. Do you think it probable that the ferry traffic will increase? I do not know much about the ferry traffic.
375. In the event of that traffic increasing very much, I suppose that the inconvenience at the Quay will be felt much more than it is now? It is felt very much now at the south-west corner.
376. *Mr. Watson.*] What would you receive from the berth at the Circular Quay now occupied by the Norddeutscher Lloyd Company in the event of their leaving? I suppose I should get about £3,000.
377. What revenue do you now receive from the Admiralty wharf? It is difficult to say. I could not give you particulars as to that special berth; it is used for sailing vessels as well as steamers. The Gulf line go there to discharge and load.
378. It is only a short berth at present? It is over 400 feet—you could not call that very short.
379. *Chairman.*] The Government proposal is that the wharf shall give at low water a depth of from 28 to 30 feet;—do you think that sufficient for the largest steamer that would come here? The depth should not be less than 30 feet.
380. Twenty-eight feet, you think, is not enough? No; there must be a depth of 30 feet.

Thomas Summerbell, Manager, North Shore Steam Ferry Co., Ltd., sworn, and examined:—

- T. Summerbell.
24 Jan., 1900.
381. *Chairman.*] You have been a captain in the merchant service for many years? I was engaged in the coastal service for about eight or nine years.
382. You know the port of Sydney very well? Pretty well.
383. *Mr. McFarlane.*] How long have you been employed by the North Shore Ferry Company? On Friday next, exactly twenty-one years.
384. You have a good knowledge of the shipping trade of the harbour? I think so. 385.

T.
Summerbell.
24 Jan., 1900.

385. Extending back how long? I should say about thirty years.
386. How many steamers has your company? We run from twelve to fourteen steamers daily.
387. They ply between North Shore and Circular Quay? Yes; and to Lavender Bay, Neutral Bay, and Mosman's Bay.
388. They ply at frequent intervals during the daytime between those places? Yes.
389. How many other ferry companies are there plying between Circular Quay and other places in the harbour? There is the Manly Company and the Watson's Bay Company. There are a number of other boats that go to the Quay, besides these boats.
390. What number of steamers have those companies? I could not say exactly, but I think the Manly Company are running three or four boats, and the Watson's Bay Company an equal number.
391. Is the passenger trade large, speaking generally? I cannot speak for the other companies, but the traffic of the North Shore Ferry Company is increasing rapidly.
392. Is it likely to increase? I think so; I know that we have difficulty in getting boats ready fast enough to meet the increased demand.
393. You have been increasing the number of your steamers at frequent intervals? Yes.
394. When did you make your last increase? About two and a half months ago. We have another steamer of the same size which will be ready in about six weeks. She is getting her machinery on board now.
395. You expect a further increase in the traffic? At the rate we are going on now, certainly.
396. Would the construction of a bridge to the North Shore interfere with your traffic? I can hardly say. I know my board never occupied their mind in a doleful way with the prospect of a bridge.
397. Perhaps they have thought that a bridge would never be built? I do not think that is the case.
398. I understand that complaints have been made by some of the ferry companies as to some of the larger steamers trading to the bay impeding their traffic? Yes.
399. Does that occur frequently? Yes; and while they are lying at the wharf they have colliers both inside and outside, and they also cause a great deal of inconvenience.
400. A great deal of delay? I cannot say that they occasion great delay—the delay is occasioned chiefly when the steamers are coming in; but when the colliers are lying alongside the steamers at the wharf, we have a good deal of trouble in navigating our steamers with safety. When the steamers are coming in they take charge of the whole place, so to speak—they stop our traffic altogether for a time.
401. Every time they come in? No; sometimes they come in better than at others. I say nothing as to the handling of them, because I think they are handled well.
402. The delay must be pretty frequent if it occurs nearly every time a big steamer comes in or goes out? The delay is not so great when the steamers are going out, but when they are coming in they interfere with us a great deal; and their colliers are also a constant source of trouble.
403. What would be the average length of delay when they are coming in? They delay sometimes one trip, and sometimes two.
404. Do these delays occur in a busy part of the day? Yes; that is the worst of it.
405. What is your busiest period? From half-past 8 in the morning till 1:10 o'clock, and then again in the afternoon from 4 until half-past 6 o'clock.
406. At what time do the large steamers leave? Generally between 12 and 1.
407. That would not be a very busy part of the day, would it? Pretty busy, because residents of North Shore are then going home to dinner, and it is necessary for them to return quickly. We run at present ten-minute trips from half-past 8 o'clock in the morning till 8 o'clock at night; but immediately our second new boat comes on we shall be running the trips from a quarter past 5 in the morning till 12 o'clock at night. Two or three of the trips are five-minute trips.
408. What line of steamers do you principally complain of? The German steamers.
409. Do the other steamers get in your way? Sometimes the Japanese steamers do when they are slewing round, but nothing to speak of.
410. The report of the Public Works Department as to the proposed wharfage, contains this paragraph:—
But the more immediate cause which renders necessary the early construction of the proposed wharf is the dangerously congested condition of the ferry passenger traffic in Circular Quay. This traffic, owing to the opening of the Milson's Point to Hornsby Railway and the notable growth of all the North Shore suburbs, has greatly increased during the last three or four years, and has consequently created a demand for a much more frequent and rapid service between Circular Quay and the North Shore. Comparing the month of December, 1899, with December, 1896, the Ferry Company has increased the number of trips run between Circular Quay and North Sydney by 57 per cent. In December last, 8,386 single trips were run, as against 5,316 in December, 1896. During the greater part of the day the service is run at ten-minute intervals, and at one time in the morning at an interval of five minutes; and as nineteen trips each way have to connect with the trains at Milson's Point, it will readily be seen that any obstruction to the ferry steamers means a serious interference with a very important passenger traffic. The Government recognises that this large traffic demands every consideration, and that every possible facility should be provided for conducting it with safety and punctuality.
- Does that correctly describe the state of affairs? Yes. There has been an immensely increased traffic during the past two months.
411. In view of the congested state of the traffic it has been deemed expedient to remove a portion of it elsewhere? I understand that.
412. Suppose there were wharfs at Woolloomooloo Bay, would they be as suitable for the German steamers as the present wharf at the Circular Quay? I do not say that Woolloomooloo Bay would be the best place for them, but if they were removed anywhere from the Quay that would suit us.
413. Supposing that the German line were moved from the Quay other steamers would probably take their place—the wharf would not be allowed to remain idle? I do not know about that; we thought that it would be left clear.
414. Suppose smaller steamers of 2,000 or 3,000 tons were berthed there, how would that affect your traffic? What I am about to say may appear ludicrous, but I can assure you that smaller steamers give more trouble than do big steamers. I have seen our wharfs taken charge of entirely by a small steamer; her lines have gone across us in every way.
415. Would it not take less time to bring in a steamer of 2,000 or 3,000 tons than one of 10,000 tons? Not always.
416. But generally? I have seen small steamers give more trouble than big ones.
417. Then it would not lessen your difficulty if the larger steamers were removed and smaller ones were put

- T. Summerbell.
24 Jan., 1900.
- put in their place? The difficulty is that if we want to run a second boat we cannot get her in. I think the place ought to be left quite clear. On Anniversary Day we shall want to run two boats. We were going to reduce the trips on that day, but we find we cannot do so. We expect that there will be a big steamer there, and that will still further increase our trouble.
418. What suggestion do you make to remedy the evil? I do not think any steamer should go to that corner at all. The North Shore Ferry Company are building large boats—one coming into use now is licensed for 896 passengers, and another for the same number, and they are 150 feet 6 inches long. We want that corner of the Quay for the berthing of our boats.
419. At present a considerable rental is being paid for the use of the wharf by the Norddeutscher Lloyd Company;—if no other line of deep-sea ships were allowed to berth there do you think the North Shore Company would be likely to take the berth? I do not think it would answer our purpose to go right in there, but I could not say definitely.
420. What size of steamers do you suggest should be allowed to occupy the berth? I do not think the Government should lease it at all.
421. *Mr. Dick.*] The Government at present receive £5,000 a year from the Norddeutscher Lloyd Company? I daresay.
422. We are informed that the whole of the ferry companies in the cove pay only £1,500 a year? I think that is a mistake; we ourselves pay £1,000 for our wharf—No. 1 Jetty.
423. You will see that from the Norddeutscher Company's wharf the Government receive more than they do from all the ferry companies put together? Yes.
424. Do you think the ferry companies would be prepared to make good the loss from the Government if they were to throw the Norddeutscher Company's wharf idle? That is a question I could not answer.

Richard Entz, Chief Clerk, Weber, Lohmann, & Co., Norddeutscher Lloyd S.S. Co., sworn, and examined:—

- R. Entz.
24 Jan., 1900.
425. *Chairman.*] You are the representative of Weber, Lohmann, & Co., the agents of the Norddeutscher Lloyd Steamship Company? Yes; I am chief clerk of the company.
426. *Mr. Dick.*] You have heard the evidence of the previous witness? Yes.
427. It seems that the size of the vessels you berth at the Circular Quay interferes occasionally with the ferry traffic which plies from the head of the Quay, and with a view to remove that interference it is suggested that new wharfs should be built at Woolloomooloo Bay, at which your vessels could be berthed;—could you offer an opinion as to the way in which your firm would view such a proposal? In the first place, I must tell you that our firm are not at all anxious to leave the Circular Quay if there is any chance of our being allowed to remain there. It would mean the loss of a good deal of prestige. If the P. and O. Company and the Orient Company were also removed to Woolloomooloo Bay, we should not mind going there so much; but we are a passenger line, and one of the chief objections to Woolloomooloo Bay is the approach to the place. The passengers would not take the trouble to walk from our office down to Woolloomooloo Bay to look at a ship.
428. It is important from your point of view that you should remain at Circular Quay, since it has become fashionable for the large passenger liners to berth there? Yes. We should be regarded, I am afraid, as a second-rate line for some years to come if we were to go to Woolloomooloo Bay. If we were a cargo line, it would be quite immaterial to us.
429. We have an official statement to the effect that your company desire the change suggested? I must deny that that is the case.
430. We are informed that your owners desired such a change, inasmuch as they anticipate a steady increase in the number of large steamers requiring to use the wharf at the Quay? *Mr. Weber* told me about the minutes of some meeting at which he was asked whether he would be agreeable to make the change, and he informs me that he said nothing to the effect which you now suggest. We require more accommodation than we have at the Quay, because we shall have branch steamers coming here during the year; but for our mail steamers going to Europe we should still prefer the Quay. We would berth our two branch steamers at Woolloomooloo rather than go anywhere else.
431. Then the statement that you are willing to go to Woolloomooloo Bay with your large steamers is not correct? No.
432. Do you think you could be accommodated by being berthed further up the Quay? If one wharf could be made where the E. and A., and the German-Australian steamers are berthed, I think we could be accommodated.
433. You admit that on account of the size of the vessels coming to your wharf and leaving it they must disorganise the ferry traffic to some extent? Yes; but that can be avoided if the harbour pilots received instructions to turn our boats outside the Quay, and bring them in stern first. I do not think we interfere with the traffic any more than do the Messageries or the Orient Company's boats. We should be quite agreeable also to moor our vessels at certain hours, avoiding the busy part of the day for the ferry traffic.
434. It was suggested yesterday that the putting out of your anchors into the cove interfered with the traffic as much as it was interfered with by the boats themselves? If the ships were brought in stern first they could drop their anchors when going astern. It is the fact of their lying broadside off the Quay which stops the ferry traffic.
435. Do you not think it is necessary to keep the boats well out into the cove in order to drop their anchors? I do not think so.
436. You think the difficulty could be removed, first, by choosing a quieter hour for the mooring of your vessels, and also by slewing them outside the cove and bringing them in stern first? Yes.
437. Where would you swing the vessels? Somewhere near Dawes' Point.
438. Would that interfere very much with the traffic in the fairway? I do not think it would interfere with it at all.
439. It has been suggested that your having two colliers, one inside and the other outside of your vessels when they are moored at the wharf, is another source of interference? No doubt that interferes with the traffic to some extent, but that would be avoided if we were to go out into the stream to coal. It would be inconvenient, but it could be done. I suggested to Captain Jackson that we should do so, and that the Government should make us some allowance to compensate us for our outlay in that respect.
440. You think that the greater part of the difficulty could be removed, then, by a rearrangement of matters, without your removing from the Quay? Yes.
- 441.

R. Entz.
24 Jan., 1900.

441. Have you ever considered the question of taking your wharf further up the Quay? So far we have seen no chance of getting one there. There is not sufficient length at any of the wharfs.
442. The Government would have to alter the wharfs to admit of your going there? Yes.
443. Would shifting to Woolloomooloo Bay be a great blow to your company? We should consider it so.
444. It would strike a blow at your passenger traffic? It would influence it considerably.
445. It would not interfere with the cargo traffic? Not in the least.
446. You know that the San Francisco mailboats occupied a berth at Woolloomooloo for two years? Yes.
447. It did not make much difference to them? But we are afraid it would make a great deal of difference to us. Persons going to America must go wherever the American boat is lying; but in the case of persons going to Europe there are three other mail boats lying at the Quay, and we should be disadvantageously placed if we were at Woolloomooloo Bay.
448. Have you considered any plan by which the difficulty could be avoided? We have considered, as an alternative to going to Woolloomooloo Bay, remaining in the stream and lightering our cargo.
449. What is the term of your present lease? We have a three years' lease; but there is a clause giving the Government the right to revoke it within three months at any time. We received notice of revocation in December last, and our lease will, therefore, expire at the end of February, or the beginning of March.
450. Your main objection to removal to Woolloomooloo Bay is that if you shifted there the other liners would have the advantage of fashionable wharfs? If there were other lines of mail steamers there we should not mind so much. The approach is also bad.
451. Do you think that in any other part of the world you would object to accommodation such as is offered to you at Woolloomooloo Bay? The locality has not a very good name. Of course, if in two or three years time, other lines of steamers were lying there, we should not so much mind the change.
452. When you say that the approach is bad, what do you mean? It is a considerable distance from town, and we could not expect steerage passengers to take a cab from our office down there. They would not take the trouble; they would rather look at other boats which were handy. Then, if we were at Woolloomooloo Bay, communication between the officers of the ship and the office would also be difficult.
453. You have had an opportunity to look at the plan of the proposed new wharf? Yes.
454. How would the length of 500 feet suit your vessels? We should not go to Woolloomooloo Bay at all unless we could accommodate two ships there. We shall have steamers coming out this year 570 feet in length, and our branch boats will be 435 feet in length. Altogether we shall want over 1,000 feet to accommodate them.
455. Then a berth of 500 feet will be useless to you? Yes.
456. You would not rent it? No.
457. Would you take a berth of 600 feet? Yes, if there were another berth of 500 feet close beside it.
458. Suppose the new wharf were made 600 feet in length and the Admiralty wharf were extended to 530 feet—that would give you 1,130 feet—would that be a suitable length? Yes; but if it came to a question of our going to Woolloomooloo we would sooner take berths on the eastern side, because there is more space behind the wharf.
459. In the case of the proposed wharf, there will be 140 feet from the water's edge to the back? When you make allowance for everything, including the roadway, I am afraid there will not be a sufficient space. We discharge our cargo very rapidly. At present we have to stop at times because we cannot get it taken away. On the eastern side of the bay there is any amount of space behind the shed, and that is why we should prefer it.
460. *Dr. Garran.*] What space is there on the eastern side? I do not know; I have not measured it, but I know there is a lot of space behind the shed.
461. In the case of the wharf on the western side, there will be 60 feet? I asked Captain Jackson about that yesterday, and he said we should have double the space behind the shed, on the eastern side.
462. I understand that if you can get two wharfs suitable for your purposes, with a total length of 1,100 feet, you will be accommodated? We should much prefer one wharf in a continuous line.
463. If you could not get that, would one wharf of 600 feet and another of 500 feet, close together, suit you? Yes.
464. It is impossible to get that at Circular Quay? Yes; but we could keep our mail steamers at Circular Quay and have our branch boats at Woolloomooloo.
465. Would it be important to have the two boats together? Yes; it would save a good deal of work.
466. But you would rather have them separated than leave Circular Quay altogether? Yes.
467. It is a great advertisement for you to be there? Yes.
468. Because the passenger steamers and the ferry steamers go there? Yes; and a number of persons visit the steamers on Sundays.
469. That is a consideration with all the companies? Yes.
470. You think that is not merely a theoretical, but a tangible advantage? Yes.
471. Foot for foot, you would not give the same rent at Woolloomooloo Bay as you give at Circular Quay? We could not be expected to do so, I think.
472. Not even if there were better room for the drays? No; that would not compensate us for the loss in other directions.
473. Then we are to understand that if this wharf is built by itself your company is not a customer for it—not even for your branch boats? It would not be sufficient, because we should be having two branch boats here, requiring at least 900 feet of accommodation, and we could not have our steamers at three different wharfs.
474. Captain Jackson has suggested that a tunnel should be made from the Quay to the head of Woolloomooloo Bay, and that the electric tram should be extended there, so that persons could go easily from one wharf to another;—would that overcome the difficulty? I think it would to some extent.
475. But it would not get over the absence of advertisement at Woolloomooloo Bay? No.
476. There may be eventually as many steamers at Woolloomooloo as there are at Circular Quay? Yes; but you must bear in mind that we are competing with the Orient Company, with the P. & O. Company, and with the Messageries Maritimes.
477. Of course, at Woolloomooloo there would not be the passenger and ferry boats, and you count a good deal upon them for advertisement? Yes.

- R. Entz.
24 Jan., 1900.
478. Do you think that, on the whole, the plan is a good one? I have not gone into the details at all.
479. The principal fault, you think, is that there is not sufficient dray-room at the back? Not for our big boats, which land 5,000 tons of cargo. We require far more space than there is at Circular Quay to continue discharging our ships. We always have to stop for want of space.
480. I suppose the space which would do for the Messageries or the P. and O. boats would not be enough for you? No, because they do not bring one-third of the cargo that we do. We unload sometimes from eight hatches; we fill our shed sometimes in five hours.
481. At what ports in Europe do your steamers coming here call? At Genoa, Naples, Antwerp, Southampton, and Bremen.
482. In which one of those ports do they get better accommodation than in Sydney? In none, as far as we know; we have never complained of the accommodation here.
483. Where do you get more than 60 feet of space at the back of a shed into which you unload? I cannot say.
484. Is there a long quay at Bremen such as there is at Antwerp? Yes, I think so.
485. Are there sheds on those quays with plenty of dray-room? Yes.
486. On the whole, for size, for access, and for quickness of discharge, none of the ports you have mentioned is better than Sydney? No.
487. Then you have not very much to complain of at present? We never have complained.
488. *Mr. Watson.*] To what places will your branch liners trade? I cannot say yet.
489. There will be a good deal of transhipping to do here? Yes, that is why we should like to have the steamers as near together as possible. We should like to get three berths close together.
490. Under present conditions at Circular Quay, you could not arrange for that? We admit that our principal object is to remain with our mail steamers at the Quay.
491. You would suffer the inconvenience of the separation of your various steamers, in order to keep one at Circular Quay? Yes.
492. You would rather do that than go round with all your steamers to berth at Woolloomooloo? Yes; if we could not find room at Circular Quay for the three steamers, we should have to find room for two of them elsewhere.
493. *Chairman.*] I should like to put this position to you—suppose the Government absolutely say, “We cannot allow you to remain in that corner of the Quay”—can you point to any wharf in Sydney, public or private, which will suit your requirements? The only wharf is at Woolloomooloo Bay, if it came to the worst; still we would not say definitely that we would go there. If we could not remain at the Quay, we might prefer to go into the stream and lighter.
494. If you were in a corner, you would have either to go to Woolloomooloo Bay, or to lighter in the stream? Yes.
495. Could you name any private wharf in Sydney which would suit your requirements? As far as we know, there is not one which would be suitable.
496. Do you know the wharfage at Darling Island? Yes.
497. Would that suit your purpose? We should not like to go to Darling Harbour; it is out of the way of the passenger traffic. If it were a question of choice between Darling Harbour and Woolloomooloo Bay, we would rather go to Woolloomooloo.
498. Chiefly from the point of view of the passenger traffic? Yes.
499. In connection with another inquiry, the general statement was made that many of the large steamers coming to this port brought very little freight;—that does not apply to your line? I do not think any line brings more revenue than ours.
500. Your ships are always full? Yes. It was said that the Government only derive £5,000 of revenue from us; but that is a mistake; it must be more than that. Since 1897 we have brought much larger boats here. They bring between 5,000 and 6,000 tons of cargo. The revenue must be between £7,000 and £8,000, including rent.
501. It is said that it is proposed to provide wharfage for half empty ships—that would not apply to your ships? No.
502. Do you take away a full cargo? We come here full, and we leave full.
503. In the wool season, I suppose, you take a good deal of wool away? Last year we took 70,000 bales away from Sydney only—more than any other line of steamers.
504. Would Smith’s wharf suit you? I do not know enough about it to be able to say, but I do not think so.
505. As a matter of fact the E. and A. Company, which have a considerable passenger traffic, used to berth there, but they come round now to Circular Quay? Their being there would not affect them very much, because persons going to Japan or China are accustomed to going to Darling Harbour; but it would be very hard to take such a line as ours to Darling Harbour, or to any other part of Port Jackson, away from the lines which are competing with us at the Circular Quay. Some arrangement might possibly be made whereby the E. and A. Company could leave their present wharf, and whereby another wharf could be made where the German–Australian boats now berth, and that would give us sufficient length.
506. I suppose you regard your present berth at Circular Quay as about the best in Sydney? We think it is a very good berth.

THURSDAY, 25 JANUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Hon. William Robert Campbell, M.L.C., sworn, and examined:—

507-8. *Chairman.*] You are a Member of the Legislative Council, a native of the Colony, and have been a long time resident in Sydney, residing, at present, at Elizabeth Bay Road? Yes.

509. *Dr. Garran.*] You understand exactly the nature of the project before the Committee? I think so.

510. Have you any objection to offer to it? I object to it strongly in every way; but principally on account of the injury which will be done to the Domain, which, by the wisdom of our forefathers, was given to the Colony. I protest most strongly against anything which would injure, in any way, that splendid park. The wharfage now proposed to be constructed would extend right up to the baths, and the presence of steamers at the wharf will mean the distribution of a great deal of smoke and dirt over a large portion of the Domain, to say nothing of the disagreeable smells arising from wool, tallow, and hides, which will constitute their cargo. Altogether, people walking or driving there will be subjected to a great deal of inconvenience. I regard the Domain as a pleasure resort, and I do not think it should be interfered with by the construction of wharfs. Then, a certain amount of injury will also be done to the harbour, because it is proposed to reclaim a great part of the bay, and that seems to me to be contrary to common sense. In most parts of the world the disposition with a port like ours would be to increase rather than decrease the water area. Besides, it seems to me that the diminution of the water space will render it more difficult for large steamers to get into the bay. It is said, I believe, that the scheme will take no land from the Domain; but the obstruction to the frontage is equivalent to taking land away. You might just as well say that if you place a building in front of a man's property you will not take his frontage away from him. Then, another very serious question is raised in connection with the bathing accommodation at Woolloomooloo Bay. It is a most important point. The water there is already dirty enough; but the immediate presence of ships will render it still more disagreeable. In a few years' time the sewerage system will be in full operation there, and the bay will be relieved of a good deal of offensive matter which is now taken into it. The place would then be an admirable place for bathing but for the presence of the steamers which it is proposed to place there.

511. Let us bring your objections down to as practical a point as possible. So far as the area of the Domain is concerned, you admit that the scheme will not take anything from it? No land is taken from it, but the Domain is interfered with considerably. There must be a certain amount of dirt and inconvenience created by the presence of the wharfs.

512. It is proposed to add three-quarters of an acre to the Domain;—you are aware of that, I suppose? I do not think that small area affects the question one way or the other.

513. Your principal objection is that the water frontage will be taken away? That is one of my chief objections to the proposal.

514. But all the western frontage of the Domain will be left untouched? But within the next few years they may propose to take the whole of that. If you give them an inch they will take an ell, and the effect may be that the whole Domain will be shut in by wharfage.

515. You know the Admiralty wharf? Yes.

516. That takes off a bit of the Domain frontage? Yes.

517. That has not been found to be an inconvenience to persons in the Domain? I think so.

518. We have already wharfs and a jetty for steamers at Woolloomooloo Bay, and their presence will necessarily cause some fouling of the water. The building of this wharf will be merely turning "seven" into "eight," as it were. There will be merely the addition of one steamer? The construction of wharfage there ought never to have been allowed. I protested strongly against it when the boatsheds were taken away.

519. You know that Sydney is not only situated upon a beautiful harbour, but that that harbour is essentially well suited for commercial purposes, and that if it had not been for the commercial conveniences afforded we probably should not have got on as well as we have done? We all know that the harbour has been a great aid to our prosperity.

520. Is it not a necessity that a city situated upon a harbour like this should make use of some portion of the frontage for commercial purposes? Of course.

521. Take Constantinople, for example, which is one of the grandest harbours in the world;—have not portions of the frontage been commercially used? It is a very dirty place; we do not want to see Sydney reduced to the same condition.

522. But it is absolutely necessary that some portion of the harbour frontage should be devoted to commercial purposes? Yes, if proper places are chosen.

523. You may not, perhaps, remember that Sydney Cove was at one time nearly as beautiful as Woolloomooloo Bay? I daresay it was.

524. And yet persons built wharfs there? It was in the centre of the harbour, and there where the ships first cast anchor and found fresh water from the stream close by.

525. Do you think, then, that it would have been better if Sydney Cove had not been used for commercial purposes? No; I think it was the proper place.

526. We cannot put any more big ships there? There are Darling Harbour and Pyrmont, and you might also go to North Shore.

527. Surely North Shore is as pretty as the shore on the south side, and you object to the spoiling of the beauty spots on this side? My principal objection is the interference with the Domain. That is largely used

Hon. W. R.
Campbell,

Hon. W. R.
Campbell,
M.L.C.

25 Jan., 1900.

used for recreation purposes, and it is already in existence. It is no argument, to my mind, to say that at one time Sydney Cove was a very beautiful spot. It does not at all affect the question of interference with the Domain.

528. But, as the commerce of the city grows, additional accommodation must be found for the great steamers which come here, and all our merchants, in fact everyone, agree that that accommodation ought to be as near to the business centre of the city as possible;—if you go to North Shore you will not be near that centre? You will be when the bridge is constructed. Besides there is Darling Harbour, and we know that business all gravitates in that direction. It does not gravitate towards Woolloomooloo.

529. Perhaps you do not know that persons connected with shipping matters say that if they were offered the choice of a wharf at Woolloomooloo or Darling Harbour, they would accept a wharf at Woolloomooloo in preference? I do not know that. I cannot remember hearing that anyone has said such a thing.

530. That is the case, because Darling Harbour is not so near the centre of business as is Woolloomooloo Bay? I do not agree with that statement that Woolloomooloo is nearer the centre of business than Darling Harbour. One recommendation at Darling Harbour is that there is a railway right up to the place, whereas there is none at Woolloomooloo, and in order to reach the bay you have to go through some of the streets of the city which are most congested with traffic.

531. Notwithstanding all that, men of business instincts say that, for shipping, Woolloomooloo Bay is preferable to Darling Island, even although there is a railway there? Perhaps that is the opinion of a few interested persons.

532. The evidence is that next to Sydney Cove Woolloomooloo is the most convenient place for large steamers? That is not my opinion, nor is it the opinion of commercial men I know.

533. It is the opinion of those who have given sworn evidence to the Committee? I have not seen their evidence.

534. In a case of this kind we must make some compromise between the æsthetic view and the commercial view? I do not think so.

535. You would make no compromise at all? No.

536. You know that the proposal does not actually diminish the area of the Domain? It affects a large space in the Domain, because you will have a distance of 500 or 600 feet liable to pollution by dirt, dust, and smoke, and by smells of all kinds.

537. The railing of the Government House Domain is not very far from the Circular Quay wharfs, is it? That portion of the Domain is in a different situation. There you are on the lee shore, as it were. On this side you are on the weather shore. The north-easterly winds prevail here for six months of the year, and if shipping were on the western side of Woolloomooloo Bay, smoke and dirt would be driven over the Domain.

538. But as regards the other side of the Domain, you might say that there are the westerly winds to bring objectionable matter from the steamers at Circular Quay? Those winds blow only occasionally, and we rely on the north-easters to cool the city atmosphere during the summer months. In that respect Sydney is more advantageously situated than is Melbourne, or any other city in Australia. I think we should endeavour to get as much unpolluted air as possible into the city.

539. While the steamers are lying at the wharves they make very little smoke? If you were to stand on any of the wharfs opposite to one of the steamers you would find that they disseminate plenty of dirt.

540. Have you noticed that any portion of the Domain is in any way polluted by steamers lying at Woolloomooloo Bay? If you sit in the Domain you will see traces of dirt and smoke from Woolloomooloo Bay and from Garden Island. All these places help to injure the Domain, and I do not wish to see any further injury done to it.

541. Do you think smoke from Garden Island enters the Domain? Yes, the soot from Garden Island and from the bay is often to be found in the Domain, and the place generally is made dirty by the presence of steamers.

542. Do you think that if we were to put no more wharfs at Woolloomooloo Bay, and were to erect some over at North Shore, that would be equally convenient for the merchants of Sydney? No doubt it will in time, when the bridge is built.

543. Do you think that even when the bridge is built it will be as convenient for ships to berth at North Shore as at Woolloomooloo Bay? It will be convenient for certain classes of traffic; it will benefit the Newcastle traffic tremendously.

544. Is there much goods traffic by railway from Newcastle? The distance is very much shorter to North Shore when you are coming from Newcastle. If you get out at Hornsby, and come down to North Shore you can generally save half an hour.

545. You are now speaking of the passenger traffic;—but do you think goods will come across by railway from Newcastle when they could be brought round by sea at half the price? I think goods will be brought to Sydney by that route in course of time; but there is any quantity of wharfage at Darling Harbour from Dawes' Point right round. The wharfs there are never full. They are not full now, and this is about the best time of the year.

546. It is said that the large steamers cannot be suitably accommodated at jetties in Darling Harbour;—do you think they can be? Yes. If you take the wharfs on the eastern side of Woolloomooloo Bay, you will find that there have been no ships there since the "Medic" and the "Afric." Some sailing ships go to the wharf nearer in occasionally; but the big ships which go there are very few and far between.

547. You are aware that the wharfage there is under offer to the White Star line. Perhaps that is the reason why it has not been in such frequent use. Although it is not invariably in use the Government Wharfinger tells us that it is necessary to have additional accommodation there for large steamers? I was not aware that the whole of the space was under offer to the White Star Company.

548. Your opinion is that in the interests of the Domain no further wharfage should be erected at Woolloomooloo Bay? Most decidedly.

549. Your objection is to the dirt and smell arising from the presence of steamers and their cargoes, and to the cutting off of the water frontage to the Domain? Yes.

550. You would sacrifice nothing to the commerce of the port? Not in that position. Besides, you would also be curtailing the water space most unnecessarily.

551. We are told that there is ample room in the bay for the manœuvring of vessels—more so than in Sydney Cove? It has not the same width at Sydney Cove.

Hon. W. R.
Campbell.
M. L. C.
25 Jan., 1900.

552. But then it is not jammed with ferry steamers? I do not think there has been much interruption to the ferry steamers at Circular Quay.
553. The Manager of the North Shore Ferry Company tells us that they are frequently stopped? Of course he is an interested person. He wants the large steamers to go elsewhere.
554. Mr. Hickson and Mr. Darley also say that there are frequent interruptions to the traffic? I do not pay much attention to the evidence of Captain Jackson, Mr. Hickson, or Mr. Darley. They are employees of the Government, and they do what their masters tell them.
555. *Mr. Shepherd.*] You ought to be well aware of the advantages of wharf accommodation from your family associations;—you know that the proposed scheme will not interfere in any way with the area of the Domain, because there will be a roadway at the back of the proposed wharf, and, as a matter of fact, a strip will be added to the Domain? I say that the Domain will be interfered with—the water frontage will be taken away.
556. But there is a steep, rocky bank at the back of the proposed wharf, and people never by any chance go there? Persons are constantly going there. I frequently walk across the Domain, and I see them there.
557. As far as the nuisance from smoke and that sort of thing is concerned, you are not aware of any complaints having been made from residents of George-street in connection with the steamers at Circular Quay? Probably if such complaints were made, they would not be listened to. No one wishes to see the Domain more injured than it is, by the presence of shipping.
558. We are told that there is the greatest difficulty in finding accommodation for large ships? I do not think you can have examined many persons interested in shipping, because I know a large number who will be able to tell you that there is any amount of accommodation for shipping going from Dawes' Point round to Miller's Point, and up Darling Harbour.
559. Witnesses tell us that there is room for small vessels at the piers; but that there is no accommodation for large ships? I do not know how they come to that conclusion; I can only deny the correctness of it.
560. We are told that some of the ships visiting the port are 550 feet in length, and that they discharge from a number of hatches;—if they were at one of the jetties you speak of, they could use only one or two hatches at a time, and there would be a good deal of delay, therefore, in unloading? I do not know of what particular jetty you are speaking; but I should have thought that there were plenty of jetties which could accommodate any ordinary-sized steamer.
561. Evidence has also been given to the Committee showing that the ferry traffic at Circular Quay is very much interfered with by large steamers lying there, and that it is absolutely necessary that berthing accommodation should be found elsewhere for those steamers;—so far as the Committee can form an opinion, Woolloomooloo would be the most suitable place for that accommodation;—it can be provided there at small expense? It is provided at small expense, because you take the Government land for nothing. You give the land to the people on the one hand, and then you take it away from them, and say that it will enable you to construct a public work cheaply; that seems to me to be rather a queer argument. It is very much like the proposal of the Railway Commissioners to take portion of Hyde Park for the railway, because that scheme would be a cheap one.
562. In this case no land is to be taken? But you fill up the frontage with wharfage and sheds; it comes to pretty much the same thing.
563. A roadway will be provided at the back of the wharf, and people who visit the Domain will really have more land than they have there at the present time? The bulk of the additional space you speak of will be in a dirty road. People would not go there for pleasure, or for the health of themselves or their children. I protest against your dumping down these disagreeable surroundings in such a place. Another objection to the proposal is that the wharfage would have no railway communication, and it is not likely that there will be any for many years to come.
564. Can you tell us of any better situation for the proposed wharfage? I would not allow any ships to go to that locality, or to any similar locality. There is any amount of room at Darling Harbour.
565. *Mr. McFarlane.*] You have had considerable experience in connection with the shipping of this port? I cannot say that, but I have had some experience in connection with wharfs. Members of my family were wharfingers some years ago.
566. You have some knowledge of the available wharfage accommodation of the port? I think so.
567. And you think that there is sufficient accommodation for the large ships in the space between Dawes' Point and Miller's Point, and up Darling Harbour? There is any amount of accommodation for large ships where the railway goes at the present time.
568. But in the whole distance between Dawes' Point and Pymont Bridge can you name any one jetty which would accommodate one of the large steamers? I have not had time to go into the matter in the short time at my disposal to-day—I cannot say.
569. Do you know of any jetty in that direction which will accommodate a steamer 570 feet in length? I could not say at this moment, because I do not know the measurements of all the jetties. As a matter of fact, you could accommodate a ship 1,000 feet long where the railway has been taken at Pymont.
570. I am speaking now of the jetties between Dawes' Point and Miller's Point? I do not know the lengths of all those jetties, but I know there are wharfs there which would accommodate very big ships.
571. Could any one of them accommodate a ship 500 feet in length without putting her to serious inconvenience when discharging her cargo? I daresay there might be some inconvenience, but the Government ought to take possession of the wharfs, and make one big wharf there.
572. At any rate, you are opposed to the construction of wharfs at Woolloomooloo Bay? Yes.
573. Your principal reason is that the wharfs there would destroy the beauty of the Domain? It would destroy the Domain as a pleasure ground.
574. In what way? I have already said that the Domain is greatly injured by the smoke, dirt, and smell resulting from the presence of steamers at Woolloomooloo Bay.
575. The wharfs at Circular Quay have not the disagreeable effects which you mention, and there are a number of wool stores there? I contend, as regards the wharfs, that they have. You will also have wool stores at Woolloomooloo Bay. What is the use of taking ships there if they are not to load with wool.
576. There will be cargo sheds at Woolloomooloo Bay, but the cargo will be removed almost immediately it is placed there? You know how disagreeable the wool stores at the Circular Quay are at the present time.

- Hon. W. R. Campbell, M.L.C.
25 Jan., 1900.
577. Are not the present conditions at Woolloomooloo Bay very disagreeable;—are not they, in fact, more disagreeable than they would be if the proposed wharfs were constructed? No.
578. What class of buildings is there on the spot where it is proposed to construct this wharf? I am not aware that there are any buildings at all.
579. There are some old rookeries, are there not? Not where it is proposed to place the 500 feet of wharfage.
580. You also object to wharfage extension on that side of the bay on account of the interference with the baths? Yes.
581. Do you not think it an objectionable place for baths? No; I think it a very pleasant and nice place to go to.
582. It has been stated in evidence that the baths at the present time are very far from clean? They are quite clean enough for me when I cannot get anything better. Of course, the water is not as clean as you would get it down near the Heads, but it is quite clean enough. The steamers which already go to the bay have done a great deal of injury, but you wish to make the injury worse.
583. Are there not plenty of available places in the harbour where clean baths can be obtained? There are not plenty of available places that I know of. You do not want baths down at the Heads for the people of Sydney; you want them at a place to which persons can walk with some ease. When the sewerage system is completed the water at Woolloomooloo Bay will be quite as clean as at other places in the harbour, down towards the Heads, and the sewerage system will be in operation within a very short time.
584. The Department of Public Works say that the site now occupied by the Health Board for a quarantine depôt is covered by old boat-sheds and rookeries, and that it is altogether an unsightly portion of the Bay frontage? Perhaps Mr. Hickson thinks any building unsightly which has not three stories. I objected, in the first instance, to the removal of the boat-sheds. At the present time persons have to walk to Rushcutters' Bay in order to get into a boat. I do not know of any rookeries on the spot to which you refer.
585. You know how the shipping of the port has increased during the past few years? I know the increase has been very large.
586. Is the increase likely to continue, do you think? I hope it will be doubled and trebled.
587. In view of that probability, and in view of the fact that those connected with the shipping of the port swear that the wharfage accommodation is at present too limited, would it not be desirable to provide increased accommodation? I have already said that in my opinion there is plenty of accommodation at Darling Harbour.
588. Do you think it will be necessary, in the near future, to provide additional wharfs? It may be necessary to do that, but I do not think they should be provided in the eastern portion of the harbour. Why not let the private wharf-owners make the necessary provision? I do not think it necessary that the Government should take up everything themselves.
589. Assuming it to be necessary to make additional wharfage, which would be the best part of the harbour in which to provide it? I think you ought to go as far up the harbour as possible. They are at present using guns which are said to carry 10 miles, and you want your shipping in port protected as much as possible. I am surprised at the Naval authorities going to Garden Island. I should have thought they would have gone as far up the harbour as possible out of the way of shot and shell.
590. You think it would be better for the shipping trade, then, if wharfage accommodation were provided at Glebe Island, for example? I would certainly prefer to go up in that direction to coming down towards Woolloomooloo.
591. You prefer Glebe Island to Woolloomooloo Bay, as a centre for shipping? Yes; the arguments are ten to one in favour of Glebe Island.
592. *Mr. Dick.*] There is a portion of the foreshore at Woolloomooloo Bay, from the end of the Admiralty wharf to the East Sydney Rowing Club's boat-shed, which is not available to the public? It is available; they can walk round there whenever they like.
593. They can walk upon the top of the cliff, but they cannot get down to the level of the water, can they? If they like.
594. The actual foreshore is not available to the public, I understand? As a matter of fact, people go down there and bathe.
595. But, excepting the use of the bathing accommodation, the foreshore is not used by the public? That is true, but it is the very privacy of the place which makes it desirable as a bathing place. It has been used for that purpose for the last fifty years.
596. For all practical purposes the frontage is already taken away from the Domain? It is not taken away at all.
597. But it has been allowed to be occupied by bathing-sheds and boat-houses? It was not taken from the public; it is merely devoted to special purposes.
598. The public cannot use the frontage free of charge? They have to pay of course for the use of the boat-sheds and the bathing accommodation. I think they can bathe at the old Fig-tree for nothing.
599. Even if we could find a more central spot for bathing you think it would be most undesirable to erect a wharf there? I think it would be most undesirable in every way. Besides, I would not take the place away from the bathers; it is convenient to thousands of persons. There is, of course, a good bathing place at Farm Cove, but many persons object to the use of the cove for that purpose.

Hon. Henry Carey Dangar, M.L.C., sworn, and examined:—

- Hon. H. C. Dangar, M.L.C.
25 Jan., 1900.
- 600-1. *Chairman.*] You are a Member of the Legislative Council, a native of the Colony, and have resided in Sydney for a great number of years? Yes, for the last thirty-five years.
602. Since you have been in the room you have made yourself acquainted with the proposal before the Committee? I have.
603. You have read the Departmental statement applying particularly to that portion of the Domain which would be affected by this scheme? I have.
604. Are you in favour of, or against, this scheme? I am against it.

605. Upon what grounds? I am against it, in the first place, because I have for very many years entertained an unfavourable opinion of the unhealthy competition which has been going on between the Government and the owners of private wharfs. I am also against the proposal because I have from a rather unhappy experience had an opportunity to observe what a serious invasion of private convenience the extension of wharfage at Woolloomooloo Bay has been. I have lived for thirty-five years at Potts' Point, and that Point was once the fashionable suburb of Sydney. It is now becoming absolutely intolerable as a place for private residence. I know from personal experience that one can scarcely sleep there at night owing to the noise from the steamers. I cannot do so in my own house. The noise continues throughout the night ever since the big steamers have been in possession of the wharfs on the eastern side of Woolloomooloo Bay. It is impossible to live there now with any degree of comfort.

606. About how far is your residence from where the ships unload? I should say from 150 to 200 yards. At night-time the noise is very much more easily heard than it is in the daytime. No thought appears to have been given to compensation to owners of property at Potts' Point, although their property has been most terribly interfered with by the extension of the wharfs. I do not mean for one moment to contend that private interests should be considered when we are dealing with public interests, and possibly although it may be bad luck to them the owners of private property at Potts' Point have hardly any ground upon which to make a claim for compensation. They probably would receive none, even if they made a claim; but no doubt serious injury has resulted to private interests from the construction of the wharfs. I am opposed to the scheme, also, because I think the Domain ought to be most religiously protected from anything in the shape of commercial buildings, both on account of the destruction of its picturesque aspect, and also because it has been regarded by the public as one of the most valuable privileges they possess, to frequent the place. Although this plan does not propose to interfere very materially with the actual part of the Domain which is used by the public, still it must, to a very great extent, interfere with their rights so far as the pleasurable enjoyment of the place is concerned. I am opposed to the scheme also on account of its interference with the public baths. Woolloomooloo Bay has been from time immemorial used as a bathing place by those who desire to keep themselves clean. There can be no doubt that the construction of the wharfs would involve a most serious interference with the bay as a bathing place. The sanitary conditions of the bay have not been good for some time. Ever since the firm with which I am only indirectly but not actually connected—Dangar, Geyde, & Co.—who lease the wharfs and stores in the south-east corner of the bay—have been there, one of their captains has complained to me that he has been unable to keep the port of his cabin open at night on account of the stench which arises from the state of the water at the head of the bay. I know that at that very place an attempt has been made by the Government, at considerable expense, to cleanse the waters of Woolloomooloo Bay by taking the sewage out to Bondi, but notwithstanding all that, the evil has been only partially remedied; and any proposal to make the place a larger commercial dépôt than it is, must have the inevitable effect of rendering the enjoyment of the baths there almost impossible. We all know what the effect of crowded steamers in a confined place like that must be, so far as the existence of pure water for bathing purposes is concerned. I believe the continuance of bathing places at Woolloomooloo Bay will be absolutely impossible if these wharfs are extended. In connection with the objection I first raised as to the competition going on between the Government and private wharf-owners, I know that the Under Secretary for Public Works, from his statement which I have read, has an idea in his mind that it is absolutely necessary, owing to the increasing trade of the port, that additional wharfage accommodation should be provided; but I think that instead of providing it in the manner proposed by this scheme it would be infinitely better for the Government, instead of carrying on this competition with private wharfs, to resume the best of those wharfs and adapt them to the requirements of the port, instead of building additional wharfs at Woolloomooloo. I do not entertain the shadow of a doubt that if the jetties were used to a greater extent than they are the extension of the wharfs, as proposed, would be found to be altogether unnecessary. I object altogether to the extension of wharfage at Woolloomooloo Bay, because I think it ought to be almost a primary condition for any extension that a wharf should be made easily accessible to railway communication. Although there may be some proposition to bring the railway round to Woolloomooloo Bay, that of course could only be achieved with a considerable expenditure of money, and it might be cheaper for the Government to avail themselves of sites which could be more easily connected with the railway system of the Colony. Any proposal to extend a wharf which cannot be made easily accessible to the railways would, I think, be a bad proposal. Every particle of cargo which is at present taken down to Woolloomooloo Bay has to be carted, I need not say, at a very great expense both to consignors and consignees. I think that should have been considered before the Government formulated the idea of building wharfs at Woolloomooloo Bay at all. The æsthetical view of the case may not perhaps have much effect upon the Public Works Committee, but having lived in Sydney as long as I have, I have a *bonâ fide* regard for the place, and I think that view is entitled to some consideration. The idea is supposed to exist that, owing to the enormous increase in the size of vessels coming here, and the increase of traffic generally in the port, it is necessary to find additional accommodation somewhere. But having lived here as long as I have, and having a great regard for the old place, I am exceedingly unwilling that anything should be done which is likely to prejudice the reputation it possesses as one of the finest and most beautiful ports in the world. The Domain, at any rate, ought to be most religiously protected from anything of the sort, because I cannot help feeling that if the increase of the trade of the port is going to increase at the rate of the last few years, the Government proposal to make wharfs will not stop at Robinson's Baths, and that the next proposition we shall have made will be to continue them round Mrs. Macquarie's Chair. Indeed, I have heard of a scheme for continuing the wharfs all round Potts' Point into Elizabeth Bay. Whether that is actually proposed or not I do not know. But I can quite imagine that at no distant time a continuance of the wharfage now proposed will be alleged to be necessary in the public interest. I made a few remarks in the Legislative Council when the proposal was first made, and my remarks, in conjunction with the arguments of Mr. Campbell, had the effect of stopping the construction of the wharfs without further consideration. I am hardly prepared to-day to state as fully as I might the objections I have to the proposal, but those which I have mentioned constitute my chief objections. I cannot help thinking that, instead of interfering with the Domain and that part of Sydney, very much increased accommodation might easily be found on the western side of the city—even in Darling Harbour itself. Darling Harbour has, by some natural process, come to be regarded as the commercial part of Sydney, and I have all my life entertained the idea that, instead of building wharfs at Woolloomooloo Bay, a drive should have been made all round from Circular Quay and Farm Cove to where the Admiralty wharf now is. It would have been one of the finest drives in the world.

Hon.
H. C. Dangar,
M.L.C.
25 Jan., 1900.

Hon.
H. C. Dangar,
M. L. C.
25 Jan., 1900.

607. With regard to your first objection—that you are opposed to Government competition with private owners—is not the fact that your firm leasing one of the wharfs on the eastern side of Woolloomooloo Bay somewhat of a satire on that position? I have no interest whatever in the firm to which you refer. The Mr. Dangar who was a member of that firm is my brother; but, even if I had any interest in the firm, my answer to your question would be that Dangar, Gedye, & Co. never had a wharf of their own; all the private frontages were mopped up years ago, almost before Dangar, Gedye, & Co. had any existence, and they have had to get wharf accommodation where they could. They are merely agents of lines of steamers, and they must take the accommodation necessarily where they can best find it. If the Government were to resume the private wharfs, and would give them the necessary accommodation, they would far rather, I think, take that than the wharf they have at Woolloomooloo Bay.

608. Your statement seems to indicate that there is a necessity for the wharfage at Woolloomooloo Bay, seeing that the firm to which you refer cannot be accommodated elsewhere? No doubt there has been good reason—and it is a reason which should gratify all of us—for increasing the wharfage accommodation.

609. Do you admit, then, that the wharfs already erected and available at Woolloomooloo Bay, apart from their objectionable character as regards private convenience, are necessary? I do not admit that they were necessary there; but I admit that longer wharfs, in consequence of the extraordinary length to which steamers and vessels are now constructed, were necessary somewhere. I do not by any means admit that it was necessary to extend the wharfs on the eastern side of Woolloomooloo Bay; I think that accommodation could have been easily found elsewhere.

610. Can you say where it could have been so easily found? Having lived all my life on the eastern side of Sydney, I am not as familiar as I ought to be, perhaps, with the water frontages on the western side; but I do not entertain a doubt, from the knowledge I do possess, that wharfs and jetties of necessary length might have been constructed in a great many places on the western side of the city. These could have been more conveniently connected with the railway system.

611. You mean in the direction of Darling Harbour? Yes, and I think the water frontages on the other side of Darling Harbour might have been used.

612. You mean the frontages in the neighbourhood of Pyrmont? Yes.

613. It has been stated to us that the reason why private wharf-owners have not kept up to date in the accommodation for large vessels is that they cannot get a long tenure of their wharfs;—is that your experience—I am referring now to the right to erect a jetty in front of the freeholds? I have not heard of it.

614. Coming to your second objection—the personal inconvenience you suffer by reason of the wharfs on the eastern side of Woolloomooloo Bay—are you exceptional in that objection;—have you heard of any complaints? In regard to a house called “Tarpeian,” I know that Mr. Willis finds it almost impossible to live there, and I think that in a short time he will have to vacate the house, although I admit he has not told me so. He finds it impossible to get a decent night's rest there.

615. We are told that the owner of “Bomerah” objects so little to the wharfage there that he is agreeable to the Government extending the present wharfage on the eastern side of the bay, a distance of 200 feet, and to their taking a part of his land, if he gets a little bit of land reclaimed? I cannot understand that. The wharfage there has been only lately completed, and a portion has not been used very much up to the present time. But if the “Afric” and “Medic,” and ships of that kind go there and work their four winches all night, I am almost certain that Mr. Stephen, the lessee, will soon talk to his owner with reference to his continuance in the tenancy of his house.

616. That is a point of view which has considerable force as regards the eastern side of Woolloomooloo Bay, but the proposed wharf on the western side is right up against the Domain, where there are no residences. The objection would hardly apply in that case? I admit that the objection would be less, but, as a matter of fact, the wharf at that side of the bay—the Admiralty wharf—has hitherto been occupied by the Gulf line and some sailing vessels, and the Gulf liners, in my experience, do not work at night. I am told that the reason the White Star liners work at night is that they are obliged to do so by reason of the enormous expense attaching to them. They have to carry on their loading and unloading operations in the briefest possible time. The day work is not so objectionable, but the abominable noise attendant upon the working of four winches all night long is, as you can quite imagine, very objectionable indeed.

617. Your main objection is that the Domain should be protected from the advent of commercial enterprise and buildings? Yes; I have a very strong opinion about that.

618. Seeing that this project does not infringe upon the Domain, but adds three-quarters of an acre to it, leaving a road between the wharf and the fence of the Domain a certain width—how would that affect your objection? I freely admit the statement that the portion of the bay which it is now proposed to devote to this purpose is at present covered by buildings which can hardly be characterised as anything else but hovels. I admit that they are neither picturesque nor necessary. I have always felt a great surprise in my mind how anyone could have been permitted to put up such buildings on that site near the Admiralty wharf. There are two or three most objectionable places there, and I think it is very undesirable that they should be retained there. How they came to be there at all I do not know. Some one must have had some friends at court to have been allowed to erect them; and once there I presume they have been allowed to remain. It is not proposed, as far as I understand the scheme, to invade any of the Domain proper, but at the same time, it is proposed to put a shed there, and that will scarcely be picturesque in its aspect, however convenient for commercial purposes. The frontage is at present to a certain extent available to the public, although it is leased to private individuals, and by putting a shed on the frontage you are practically invading the Domain. Access to the water frontage will be entirely cut off.

619. You are aware, I presume, that there is to be an actual addition to the Domain? That does not affect the question very much. What I object to is the placing of the Domain behind the sheds. As to the road, there is nothing picturesque in a drive behind the very best of warehouses. So far as the Domain is concerned, persons there will look down upon the roofs of the sheds.

620. And you do not think that a desirable foreground? I think it a most objectionable one.

621. Your next objection concerns the bathing-places at the bay;—the proposed wharfs will abut right against the ladies' baths? Yes.

622. You stated a little while ago that a captain of one of Dangar, Gedye's ships said that the water at Woolloomooloo

Woolloomooloo Bay was so objectionable that it was very unpleasant to live on the ships there;—how do you think that that water would serve for purposes of ablution? I am given to understand that the sewage has been diverted since the Bondi sewer was constructed. It would be absolutely unpleasant I admit for anyone to bathe in the water in the corner of the bay to which I refer; the water there is simply filthy.

Hon.
H. C. Dangar,
M.L.C.
25 Jan., 1900.

623. Although the sewage has been diverted into the Bondi sewer, the fact remains that the bay receives a great deal of surface water from the streets, and that does not render the water of the bay very fit for bathing? No. I myself have seen noxious gases bubbling out of the water in the most surprising way, and the stench was something frightful.

624. You said also, I think, that the baths would be affected by the flotsam and jetsam from the increased number of ships in the bay? Most decidedly.

625. You are aware that there are baths at Farm Cove, and that men-o'-war upon which there are frequently 2,000 or 3,000 men, lie at the mouth of the Cove, yet the objection you have urged is not raised in respect of the baths at the Cove? I do not know whether there has been any such objection raised in the case of those baths, but I myself had a very great objection to them being placed there. Frequent objection, however, has been raised to the presence of naval vessels in Farm Cove. It has been stated that their presence there has caused a great deal of inconvenience. There have been most objectionable appearances to which I need not further refer. One reason why the nuisance has not been so bad as it might be is that the vessels are within the influence of the tide, which carries off and renders less objectionable that which would otherwise create a very serious nuisance, and which would be far more objectionable in Woolloomooloo Bay where there is very little tide.

626. Your next objection to the proposal is that any wharfage scheme should be, if possible, connected with the railway system of the Colony? I think so.

627. That cannot be done at once;—it must be a work of gradual progress? Yes.

628. The Government have lately recognised that principle at Darling Island by bringing the railway there? Yes; it is a very convenient place for wharfage for that reason.

629. If the much-talked-of railway into the city should become an accomplished fact, I may state that a corollary of the scheme would be the diversion of the line under portion of the Domain, so as to connect with Cowper wharf;—would that proposal to some extent modify your view? Of course if the wharfs were connected with the railway system my objection in that respect would be removed, but it might be very undesirable in the public interest to incur the cost.

630. Mr. McMahon, who is one of the largest carriers in Sydney, has stated that there is no disadvantage at all attaching to cartage to Woolloomooloo Bay? I do not know anything of that. I admit that the gradients of the roads leading into the bay are often less steep than are some of the gradients down to the private wharfs near Miller's Point.

631. *Mr. Levien.*] With regard to the inconvenience resulting from the noise of the shipping at Woolloomooloo Bay, if the ships were loaded and unloaded by lighter, out in the stream, would there not be very much the same noise? Certainly not; the noise would be very much reduced by the distance. I hope the Committee will not think I am putting forward my own personal inconvenience. Of course the further off the ships were the less the noise would be heard; but it is an unusual thing, except for vessels loading coal, to continue their operations all night long. It means that all the lumpers and stevedores must be paid overtime, and they would be paid half as much again as they would receive in the daytime. I do not know how these big ships do it, but I am told they are obliged to do so.

632. The manager of the German Company told us yesterday that their ships would probably unload in the stream if they could not get a wharf at Circular Quay? There are hundreds of ports in the world where vessels are obliged to load and unload by lighter—where they cannot get accommodation.

633. Have you heard any complaints from persons visiting the Domain of inconvenience from the present position of the wharfs at Woolloomooloo Bay? I have heard only of the inconvenience to residents of Potts' Point.

634. *Mr. Watson.*] You laid some stress upon the necessity for having the wharfs connected with the railway system of the Colony;—you are aware, I presume, that the proposal is to devote the proposed wharfage mainly to import purposes? If I may take the case of the "Medic" and "Afric," the wharf on the eastern side was used for both purposes—those steamers took away a large quantity of wool.

635. The evidence in other inquiries of persons connected with warehouses has been generally to the effect that for other than export wharfs, railway communication is not of very large importance—that nearly all the imported goods have to go into warehouses for distribution, and various other purposes, and that, consequently, it would not pay to ship by rail from the wharf or to the warehouse, even if the railway existed. It was also stated as to wool, that it had to be put into warehouses for dumping purposes; so that, with the exception of wheat and meat, it has been stated in other inquiries that railway communication would not be so necessary? I am at a loss to understand that argument when I think that in Victoria every bale of wool and bag of wheat that is shipped comes direct in the railway truck, and is unloaded alongside the ship. We all know the expense of extra handling—whether it is wool or merchandise—it increases the cost to somebody.

636. Take the export of wool first—if it be true, as stated, that the wool is dumped in the city, and not, as a rule, before it is put on the railway trucks, then it must be dumped before it is put on the steamers here, and that would mean taking it off the railway truck, dumping it, and returning it to a railway truck before it is put on the steamer? It would.

637. It would mean the same amount of handling as is necessary under the warehouse system? Yes. It is the case that wool which has to be dumped is handled as you suggest; but generally there are convenient dumping places to every railway.

638. Do you mean where the wool is placed on the railway, or at the terminus? I know of a great many places where wool is dumped at the warehouses, and a great many others where it is dumped elsewhere. In some cases there is absolutely a connection with the railway. There are dumping sheds at Dangar, Geyde's wharfs at the south-east corner of Woolloomooloo Bay. I know a great many stations which now dump their own wool.

639. That would mean the saving of handling if you had direct railway communication? Yes.

640. Then, as to the export of wool, it is urged that the proportion of the pastoralists who sell their wool locally is increasing each year, and that the wool which is sold locally has to be opened for sampling purposes, and rebaled before it is eventually shipped—that means another handling? Yes.

Hon.
H. C. Dangar,
M.L.C.
25 Jan., 1900.

641. Do you think the proportion of wool locally sold is likely to increase? Opinion seems to differ very much as to whether it pays better to send the wool to England or to sell it here. It is hardly possible to answer a question of that sort; but I must say that there has been a remarkable increase during the past two years in the quantity of wool sold in the Colony.

642. The tendency seems to be that way at present? It does.

643. As to the import work, it would hardly pay to take case goods by railway from the ship's side to a point opposite a York-street warehouse, and to take them by trolley from that point into the warehouse? I should imagine not. In saying what I have I had in my mind what I have seen in Melbourne, where almost every case is landed on a railway truck.

644. They would require to use a railway, of course, if a ship were loading or discharging at Williamstown? Yes.

645. But all the traffic on the Yarra bank is done by means of drays, is it not? That I cannot say; but I should like to state, and I think it is very pertinent, that I do not think that steamers like the "Afric" and "Medic" could go up the Yarra, or, if they were full, even enter the port.

646. They could not fully load them to go up to Williamstown? No.

647. *Mr. Shepherd.*] You said, I think, that the annoyance resulting from the steamers at wharfs on the eastern side of the bay was not so great in the daytime? No; it is not so perceptible. We are not so sensible of it in the daytime as at night.

648. Of course, the wharfs on the western side would not be a source of annoyance, either by day or by night? I think that if the ships there worked at night the noise would be almost as great an annoyance as we get from the eastern side. Sound will travel a remarkable distance across water in the stillness of the night.

649. There being no residence on the Domain side the annoyance would not be felt there? Not so far as the Domain is concerned; but the sound would travel across the water, I am afraid, to residences on the other side of the bay. The comfort one formerly had in living at Potts' Point has been practically destroyed by the presence of the large steamers at Woolloomooloo Bay. I had no idea, when it was first proposed to put wharfs at Woolloomooloo, that the nuisance could be so great as it is.

650. *Dr. Garran.*] From your occupation you have, necessarily, had a great deal of sympathy with the commercial advancement of Sydney? Yes.

651. You admit that, beautiful as the harbour is, the growth of commerce renders the occupation of the foreshores in some degree necessary, and that that occupation must deface the original beauty of the place? I am afraid it is so.

652. If you compare the shores of Parramatta River now with what they were some thirty or forty years ago, there is a great difference;—the beauty of the place has been greatly defaced by the erection of buildings of various kinds? Yes.

653. Is that not inevitable? I am afraid that to a great extent it is, but I do not see why we should meet what is, to some extent, inevitable until the necessity actually arises. My argument is, that instead of disfiguring the eastern part of Sydney, wharfage accommodation should be given in the other direction.

654. You admit that it was inevitable that Sydney Cove should be utilised for wharfage purposes? I do.

655. You could not have kept it as a reserve? Certainly not.

656. The Cove being full to overflowing, the question comes in—what is the next most convenient place;—we have had witnesses before us who have been questioned particularly on that point, and they say that going eastward is more convenient than going westward, because it is going nearer to the business centre of Sydney? My opinion is that at the present time the capacity of Darling Harbour has not been one-quarter availed of as it might be for commercial purposes. No one can tell me that the eastern part of Sydney is more favourably situated for commercial purposes than is Darling Harbour—it would be preposterous to say so.

657. My personal feeling also was that business men would rather keep to the westward, but the evidence in this inquiry has been the other way? I am astonished to hear it.

658. A question has been put as to whether the owners of shipping, and the agents of large companies, would prefer a wharf at Woolloomooloo, without a railway, to a wharf at Darling Island with a railway, and they have invariably preferred the wharf at Woolloomooloo? I can understand that to some extent. Woolloomooloo Bay is a beautiful refuge for any vessel to lie in. It is much better than the smoky and dirty associations of Darling Harbour. I can quite understand the big steamers preferring to lie opposite the Domain than opposite a stinking wharf, in comparatively dirty water.

659. I do not think they were influenced by such a consideration—they appeared to be actuated by business considerations? Then I confess I do not understand their answer. I am astonished to hear it.

660. You say that Darling Harbour is not one-half utilised;—with the exception of the Government wharfs above the bridge, and the wooden wharfs from the iron wharfs to the bridge, the frontage of Darling Harbour is as much used as it could be, is it not? I do not admit that.

661. Of course the wharfs are not utilised all the year round, but you could not put out more jetties without interfering with the fairway could you? I do not know how that may be, but I can quite understand that it would not do to put out jetties on both sides. But if you extended them from Sydney side there would still be ample room for navigation. The real truth of the matter is that Sydney hitherto has given such splendid facilities to the shipping people that they have been absolutely spoilt. The facilities here are perfect compared with the facilities they get in other ports. In fact there is no port in the world where they are better or more conveniently served than in Sydney. That induces them to come forward and give all sorts of peculiar evidence as to where they would like to be berthed; but we have something else to consider in this matter besides the convenience of shipowners. We should recollect that their convenience is only a secondary consideration contrasted with the convenience of our own people.

662. The agents of the shipping companies admit that we give more convenience than is given in other ports, but what we have to consider is that we have a certain water frontage available, and that, having occupied Darling Harbour to the utmost extent, and Sydney Cove to the utmost extent, it becomes a question of going westward of Darling Island for further accommodation, or coming to Woolloomooloo Bay? I contest that argument at once in this way: We hear nothing about the concentration of ships at North Shore—at Berry's Bay, for instance. Why should ships not go there. There is any amount of frontage there, which at the present time is absolutely waste land, and where there is deep water. The place is now being used by a few boat-builders; but it is practically lost for commercial purposes. Instead of

of invading Woolloomooloo Bay and the Domain, why not erect some wharfs over there? There are hundreds of places on the North Shore where wharfs might be constructed with great advantage and profit. It would be cheaper to lighter from ships there than to convey goods from ships at Woolloomooloo Bay, I think.

663. All the merchants, and shipowners, and agents of companies lay stress upon their being as close as possible to the centre of business? So far as distance is concerned, I think it would be a shorter distance from North Shore to the centre of business than from Woolloomooloo Bay to that centre.

664. If you unload at Darling Harbour, and put the goods on drays, they can go straight to the warehouse; but if you unloaded at North Shore into a lighter, there would be the additional cartage on this side? I admit that.

665. Therefore, there would be two handlings instead of one? I understand that the North Shore bridge will be an accomplished fact before many years are over. When that bridge is constructed, the cartage from North Shore will not be much greater than, if as great as, the cartage from Woolloomooloo Bay.

666. You would have to take the goods from the ship's side in a dray up a steep incline to the level of the bridge;—having crossed the bridge, the goods would have to be brought down to the level of the stores in Sydney? I admit there would be some inconvenience in connection with the traffic; but in the not very distant future, if the trade of the port continues to increase as it has increased, some of the North Shore frontages will have to be used for commercial purposes.

667. If you were yourself a shipowner, and were offered a site at Berry's Bay, with a bridge across the harbour, or a site at Woolloomooloo Bay, you would prefer the Woolloomooloo site? I dare say I would. But it is the fact, I believe, that one company has built a large warehouse at North Sydney, which is available for wool storage at the present time.

668. Is not most of the wool that goes there lightered across from the railway terminus at Miller's Point? Yes; there is no railway communication with the warehouse, and whether they find it inconvenient or not I do not know; but I know that a large quantity of wool is sent over there.

669. With Sydney Cove and Darling Harbour filled up, we must go to the next convenient place, and all the witnesses agree that the next most convenient place is Woolloomooloo Bay? If they can satisfy the Committee that all the facilities at Darling Harbour and beyond are used up they certainly do not satisfy me. I have lived here a great many years, and have often been round that way, and although I must admit that I am not as familiar with that locality as I am with Woolloomooloo Bay, I cannot imagine, and do not believe, that all the capabilities of Darling Harbour have been availed of to anything like the extent they might be. The Government ought to resume, I think, the private wharfs, and construct there wharfs or jetties at which to accommodate some of the larger steamers.

670. That would involve running out a long distance into the fairway, and we are told that for large steamers jetties are inferior to broadside wharfs? I cannot speak as to that; but in regard to many of the jetties, all that would require to be done, I should think, would be to lengthen them.

WEDNESDAY, 31 JANUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN McFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Alderman Henry Chapman, M.P., sworn and examined:—

671. *Chairman.*] You are a member of the Legislative Assembly for the Fitzroy Division of Sydney, and you also represent that district as an alderman in the City Council? Yes.

672. You have long resided in the Colony? Yes.

673. And you have an intimate knowledge of that part of the city which is adjacent to Woolloomooloo Bay? Yes; I have been identified with that part of the city for something over thirty years.

674. *Mr. Dick.*] You have had an opportunity of inquiring into the details of the scheme now before the Committee? Yes. I have seen the plans before the Committee, and, as I live at Potts Point, overlooking the bay, I have an intimate knowledge of the trade of the place, and of the present state of the wharfage accommodation there. I was originally opposed to the proposal to increase the wharfage accommodation at Woolloomooloo Bay, because I thought that it was intended to take more than 600 feet; but as I understand now that only 600 feet are to be taken I have no objection to the scheme; and, indeed, I look upon it as likely to be beneficial to the district. I have on numerous occasions been asked to try to obtain the removal of the Quarantine wharf at Woolloomooloo Bay, and I am, therefore, very pleased that the proposed scheme will necessitate the removal of that wharf, because it is at present an eyesore, and a great source of complaint to a thickly populated locality. I myself have frequently seen women and children rush out of doors to watch the ambulance vehicles on their way to the wharf, and I think it is undesirable that the wharf should be there. Unfortunately, however, the proposed extension of wharfage accommodation will also necessitate the removal of the only boat-sheds which now exist in the bay, and these sheds are a very great convenience to the public. There is one point in connection with the scheme upon which I am not quite clear. The plan shows a roadway 66 feet wide, and a 12 feet pathway; but I do not know whether it is intended that that pathway shall be outside the premises. If it is on the wharf premises it will be of no advantage to the people using the Domain, because, as the wharfs are often locked up at night, people will not be able to use it at that time; and, if it is outside the Domain railings, it will be only a blind road. Another matter to which I think attention should be called is the height of the sheds which will be erected behind the wharfs. I do not think it would be desirable to block the view of the harbour from the upper portion of the Domain which overlooks that part of the bay, because that part of the Domain is very much used. I have heard a great many sentimental objections against the proposal now before the

Hon.
H. C. Dangar,
M.L.C.

25 Jan., 1900.

Alderman
H. Chapman,
M.P.

31 Jan., 1900.

Alderman H.
Chapman,
M.P.
31 Jan., 1900.

the Committee, but I think that these objections are very much out of place, and that regard should be paid to the facilities which will be given to shipping by the proposed extension of the wharfs. I have lived in the neighbourhood of the wharf for years, and in the past we have had to put up with the rattle and noise occasioned by the discharge of road metal from various steamers—a noise which is much greater than is caused by the unloading of ordinary vessels, because the metal is discharged from a height, and is thrown down roughly. As for the inconvenience caused to residents by the unloading of ordinary vessels, the sound of such operations is music to me. I have often remained on the wharfs until nearly 11 o'clock at night watching the operations, and I have met plenty of other people who live near doing the same thing. I think most people enjoy watching the bustle and excitement.

675. How near is your place to the wharfs? I suppose within a couple of hundred yards.

676. Is it nearer than Mr. H. C. Dangar's house? Yes. He cannot see the wharfs at all; he is right back from them; whereas my house is in Victoria-street, overlooking the wharfs, and I can see every vessel that enters the bay.

677. And you do not experience any inconvenience from the noise made in loading and unloading at night time? No. I know that my family like to see the vessels coming in and going out, and I have never heard any complaints in regard to the matter from the property-owners round about.

678. The constituency which you represent in Parliament is the constituency immediately surrounding the wharfs? Yes.

679. And you have heard no general complaint about the noise from the wharfs? No; not a syllable.

680. And no opposition has been urged against the proposal to increase the present wharfage accommodation? No; you cannot find an empty house around the bay now, so that looks as if the people there are not suffering any inconvenience.

681. It has been urged against this scheme that the smoke and dust from the wharfs will blow over the Domain, and make it anything but a pleasure resort? That is mere sentiment. If they had bays like that in Victoria, they would not consider the sentimental aspect. There they have had to spend thousands of money in making wharfs, while we have wharfage accommodation almost ready to hand.

682. As a rule, when steamers are lying alongside a wharf, they do not discharge very much smoke? You never see any smoke. The donkey engines do not make more smoke than would come out of an ordinary kitchen flue.

683. That part of the bay, which would be occupied by the new wharf, is not much used at the present time? Most of it is occupied by the Quarantine wharf at the present time, and it is fenced off, so that the public have no access to it. On the south side of the Quarantine wharf are Press's and Ireland's boat-sheds, and they unfortunately will have to be removed.

684. The general public will not suffer any serious loss? Only that part of the public which now uses the boat-sheds.

685. Do you know whether new wharfs are required by the shipping? That is a question which I have not studied; but I have seen as many as three or four ocean-going steamers, and three full-rigged ships lying in the bay at the same time, and I have been told that, with better wharfage accommodation, there would be still more vessels there.

686. We were told by one witness that the big wharfs on the eastern side of Woolloomooloo Bay are sometimes unoccupied for months;—is that your experience? That is wrong. There are three ocean-going steamers there to-day—two Gulf liners, and another steamer which is lying at the White Star Company's wharf. Even when there are no steamers there, cargo is being taken down there, and either sent away in lighters to other places, or being got ready for shipment. You rarely see these wharfs when they are not looking like beehives. Of course, it is no great time since those wharfs were completed; it was as much as they could do to get the White Star Company's wharf ready for the "Medic." I have been told that the sewage that enters the bay makes the place offensive, and would interfere with steamers going there; but, as a member of the Water and Sewerage Board, I know that some years ago plans were prepared for pumping all the low-level sewage of Woolloomooloo into the Bondi sewerage system, and the work is now nearly finished, so that it will not be long before that complaint will be groundless. The same complaint, however, can be made about Darling Harbour, but no attempt has yet been made to pump the low-level sewage which enters into Darling Harbour into the Bondi sewerage system, and I know that that work will not be finished for some years; so that the evil will remain for the next five years at least.

687. *Dr. Garran.*] Has your occupation brought you into contact with the business of Sussex-street? Yes; very much.

688. You know the way in which the trade is carried on between the intercolonial and coastal steamers and the Sussex-street commission agents? I do.

689. Do you think that the wharfage accommodation at Darling Harbour is adequate to the produce trade? I do not. The wharfage accommodation at Darling Harbour is of a very poor type. The trade is congested there, because of the keenness of competition, and none of the shipping companies care to move elsewhere, for fear of losing business. Eventually, however, they must move. At one time the Sussex-street trade was done between King-street and Erskine-street; but it has gradually extended, until it now reaches pretty well from Margaret-street to Hay-street. The shipping people try to be as near as possible to the commission agents, in order to save cartage; they put up with other inconveniences in order to do that.

690. We have been told that it is necessary that the wharfs should be near the produce stores, in order that buyers may be able to go down from the stores to the wharfs to inspect produce? Quite so.

691. If you were a producer, would you be willing to go as far as the head of Darling Harbour in order to inspect produce which might be lying there? Not from where I am now; but, if I were in Sussex-street, I should not think the head of Darling Harbour too far away, though I know that the Sussex-street people do. An agent would not think of walking round there with you to look at produce, whereas, if the stuff were nearer, he would go round.

692. The iron wharf at the head of Darling Harbour is said to be too far from Sussex-street to be suitable for a produce wharf? It will be too far away so long as there are nearer wharfs. Nothing would take the produce people there but want of room at the existing wharfs.

693. But, as the trade increases, they must go either up or down the harbour—either above Pymont Bridge or into the bight between Miller's Point and Dawes' Point? Going up the harbour you are blocked, first of all, by the Gas Company's premises, and then by the steepness of the frontage, until you get to the wharfs, which are occupied by deep-sea vessels.

694. But suppose the deep-sea vessels were taken away from those wharfs? Those wharfs would still not be as good as wharfs in Darling Harbour.
695. Wharfs in Woolloomooloo Bay or at Glebe Island would not accommodate the produce trade? Not in the slightest degree.
696. That trade must be dealt with at a point as near as possible to the premises of the commission agents? Yes; you cannot go far away from them.
697. The wharfs at present in use are overcrowded? Yes.
698. And the streets which give access to them are too narrow and steep? Yes.
699. That is a defect in the original laying out of the city which the Corporation has not been able to remedy? We have not had the power to resume and resell.
700. If the Corporation had a general power, such as they have over Moore-street, would that be sufficient? No. We were only empowered to resume sufficient land to make Moore-street; but if we had been able to resume an additional 60 feet on each side, we could have resold the land at a price which would have repaid the whole cost of the work.
701. Do you agree with other witnesses that, for the over-sea trade, Woolloomooloo Bay is better than Glebe Island? Yes.
702. If you were an agent for over-sea ships, would you prefer a wharf at Woolloomooloo Bay to a wharf at Glebe Island? Yes.
703. Captain Jackson suggested the making of a tunnel from the Circular Quay to Woolloomooloo Bay, so that the electric tramway might be brought down there;—do you think that would be an improvement to the city? I do not think that a tramway would be of much use. The tunnel would be very costly, and if communication of that kind is to be given, it must be for the accommodation of the goods traffic, not for the accommodation of the passenger traffic, and a railway would accommodate both. I do not think it would pay to construct a tunnel merely for tramway purposes. If a tramway were required, a branch could be made from the present William-street line, down Riley-street or Crown-street, for probably £5,000 or £6,000; but there is very little passenger traffic down to the wharfs, except on Sundays.
704. An objection to Woolloomooloo Bay is raised on the part of some of the agents of large shipping companies that the place is further than intending passengers will go to look at berths? There is a penny omnibus service right down to the wharf.
705. How often do the omnibuses run? I think every ten minutes. They deposit passengers alongside Dangar, Gedye, and Co.'s wharf.
706. Do you think that Woolloomooloo Bay is as good a bathing-place as Farm Cove;—is the water there as sweet as the water at Farm Cove? There are parts of Farm Cove where the water is not too good, and the same may be said of Woolloomooloo Bay; that is owing to the action of the currents.
707. Are the baths at Farm Cove as accessible as the baths at Woolloomooloo Bay? To people living on the Macquarie-street side the Farm Cove baths are the more accessible, but to people living up towards William-street the Woolloomooloo Bay baths are more convenient. It would surprise you to see the streams of people who go to the Domain baths every morning from Darlinghurst, Potts' Point, and Elizabeth Bay. My balconies overlook Woolloomooloo Bay, and I see everything that takes place there.
708. Have you talked to the residents of the locality about this proposal? Yes.
709. And you have heard no objections to it? No. There was a big outcry when it was thought that there was an intention to get rid of the baths, but I have not heard any complaint against the present scheme.
710. *Mr. Shepherd.*] With regard to the proposed new roadway which you spoke of; if an entrance to the Domain is given at the northern end it will be a great convenience to the public? Perhaps you are not aware that the approaches to all the wharfs are railed off, and at night-time the gates are locked, so that the public could not use the roadway you speak of, supposing it were outside the Domain railings. The City Council kerbed and guttered the roadway at the back of the Admiralty wharf, but, in spite of that, when the Government took over the wharf they shut out the public at night-time. So, too, on the eastern side of the bay, the Government have taken Grantham-street, Grantham-lane, and Challis-street, without compensating the Council for its outlay upon those thoroughfares, and they have only allowed 14 feet of roadway in front of valuable property there, so that the people residing there can only approach their houses on foot. I have been five or six years fighting this matter in the interests of the Council and of the local residents, but without effect. The Government have gradually gone back and back.
711. One witness has told us that the proposed new wharf will extend right up to the baths, and that smoke would be distributed from the steamers there over a large portion of the Domain, while the disagreeable smells arising from the wool, tallow, and hides constituting their cargoes would be very objectionable to the people in the neighbourhood—do you think there is anything in that complaint? No.
712. We have also been told that persons living in the neighbourhood can scarcely sleep at night owing to the noise made by the steamers lying on the eastern side of the bay? That noise has never kept me awake, and, as I have already said, I sometimes go down to the wharfs to watch them loading and unloading. The sheds at the back of the wharfs largely prevent any noise from being heard at any great distance.
713. Do you think there is any spot more suitable than Woolloomooloo Bay for the erection of 600-feet of additional wharfage? I do not think there is a more suitable place. Last year I spent a month or two at Manly, and I know that it was not unusual for the steamers to be kept out in the stream for ten minutes or so while big vessels were being berthed at the Quay. Such interruptions of the ferry traffic are a great inconvenience to business people who have engagements to keep. At Woolloomooloo Bay, however, vessels could be berthed without interfering with the ferry traffic at all, because there is no ferry traffic there. Passenger steamers only come into the bay on Sundays, to pick up passengers for Middle Harbour and other places, and at such times there are no big vessels being moved about. I should like to see the present jetty taken away from Woolloomooloo Bay.
714. It is estimated that the proposed new wharf will cost £23,000, and will produce a revenue of something like £3,000 a year; that will be a very good return? As 100 feet of the new wharfage will belong to the Admiralty wharf, I think, you can only charge the new wharf with the cost of 500 feet, which, I suppose, would only be about £19,000.
715. *Chairman.*] I suppose you remember the time when Woolloomooloo Bay was looked upon as altogether too much out of the way to be used by shipping? Yes.

Alderman H.
Chapman,
M.P.
31 Jan., 1900.

- Alderman H. Chapman, M.P.
31 Jan., 1900.
716. But was it found that directly wharfs were constructed there they were readily taken advantage of? Quite so.
717. Do you also know that the objection that carters would find the approach to Woolloomooloo Bay too steep has been entirely dispelled, and that carriers and others do not mind going to Woolloomooloo Bay more than to Circular Quay? Yes. There is only one pull to get up from Woolloomooloo Bay, and they can either go up William-street, past the Museum, or past St. Mary's.
718. And that is not looked upon as a hindrance to traffic? No.
719. Although a resident on the eastern side of Woolloomooloo Bay might object to the noise made by the shipping on that side, he could have no grounds for complaint in regard to shipping in the south-western corner of the bay? I fail to see anything in the complaint. Any man making such a complaint ought to go to some place where he can have 8 or 10 miles of unoccupied country all round him.

Henry Pettitt, Harbour Master, Sydney, sworn, and examined:—

- H. Pettitt.
31 Jan., 1900.
720. *Dr. Garran.*] You have been Harbour-master ever since Woolloomooloo Bay has been used for big ships? Yes.
721. You have handled all the big steamers that have gone there? A great many of them.
722. You have handled the largest vessels that have gone there? Yes; I have handled the "Medic," the "Afric," and others.
723. Used you to have any trouble in taking the American steamers up to the head of the bay and berthing them there? No.
724. It is easier to berth bessels at the side wharfs than at the head of the bay? Yes.
725. Taken as a whole, the eastern wharfs are remarkably convenient? Very convenient, indeed.
726. They are more easy to get at than the wharfs in the Circular Quay? Yes, because there is a lot of ferry traffic in the Circular Quay.
727. The water-space, however, is not so wide? The bay is a little narrow between Potts' Point and the old Fig-tree baths.
728. But there is hardly any ferry traffic there? No.
729. Did not the Manly Beach steamers at one time go to a wharf somewhere near the Admiralty wharf? Many years ago they went to a wharf in the south-eastern corner of the bay.
730. They do not go there now? No; there is no regular ferry traffic there.
731. A few passenger steamers go there on Sundays? That may be.
732. But you are not moving large steamers about on Sundays? No.
733. Will the proposed new wharf be as easy of access as the present wharfs? Yes; it will be a very nice wharf to berth at.
734. Will the projection of that wharf into the bay make it difficult for you to berth a ship at the Admiralty wharf? No; but I do not approve of too much water space being taken. If the new wharf comes out 2 chains into the bay, and a vessel is lying at the wharf on the other side, with lighters alongside her, it will not give too much room when you are slewing a large ship, and perhaps have to put an anchor out. I suppose the wharf is to be taken out into the bay in order to provide space for a roadway at the back.
735. Yes. According to the agent of the Norddeutscher-Lloyd there is no wharf in Sydney that will give his vessels the accommodation they require for their cargo? An enormous quantity of cargo comes out of these large ships, so, of course, they require a lot of room on the wharfs.
736. I understand that those steamers have not too much room where they are? No; although their wharf projects 200 feet from the original foreshores of the bay.
737. There would be 900 feet between the front of the new wharf and the wharf opposite;—would that not be sufficient? It would be sufficient for the steamers that now come here; but we do not know what limit will be put upon the length of vessels. The difficulty with Woolloomooloo Bay is that there are always a number of vessels moored to buoys between Mrs. Macquarie's Chair and Garden Island, so that the navigation there is somewhat intricate.
738. You go right into Woolloomooloo Bay before you slew a vessel? Yes.
739. Do you slew at the entrance of the bay or right opposite the wharf? To berth at the eastern wharfs you have to slew in the mouth of the bay, between Potts' Point and the Figtree baths, and keep pushing the vessel as close as you can to the eastern shore, so that her tail will clear the baths. There is a tide-way between Potts' Point and Garden Island, but after you clear it you are in still water.
740. It would be more easy to berth the big German steamers in Woolloomooloo Bay than in Sydney Cove? I do not know that it would, because there is a good wide entrance to Sydney Cove. The large German steamers and the White Star steamers have twin screws, and they also have the assistance of a tug, to keep them in position. In getting the German steamers to their berths they must be brought in very accurately, because the stern has to go into a kind of dock. If there were no ferry steamers at the Circular Quay I would rather berth vessels there than in Woolloomooloo Bay.
741. Because of the greater breadth of Sydney Cove? Yes; and because of the intricate approach to Woolloomooloo Bay. If no ships were lying at the mouth of the bay, I would sooner go to Woolloomooloo Bay than to Sydney Cove, because there is less traffic in the bay than in Sydney Cove.
742. Have you to thread your way through the vessels lying at the entrance of the bay, when coming through between Lady Macquarie's Chair and Garden Island? Yes.
743. If wharfs are built at Glebe Island, will there be any difficulty in towing large vessels from Woolloomooloo Bay to Glebe Island? No; except the difficulty of getting past the men-of-war. It is only the risk that you have in every crowded harbour, where you are taking a vessel along by the aid of tugs alone. Opposite Glebe Island the harbour is at times thickly studded with shipping.
744. There would be no difficulty in getting from Woolloomooloo Bay to Glebe Island? Not more than I have spoken of.
745. Do you think that the ocean steamship companies would prefer berths in Woolloomooloo Bay to berths further up the harbour than Circular Quay? I think that they would prefer Woolloomooloo Bay to Darling Island or to Glebe Island.
746. Because it is nearer to the city? Yes; and more convenient to the agents' offices and to the Exchange.

747. Do you agree with Captain Jackson that another wharf is wanted in Woolloomooloo Bay? I think that another wharf there would be patronised well, and that plenty of shipping would go there. H. Petitt.
748. You do not think that it would be a white elephant? I do not. I think it would be well used in the season. 31 Jan., 1900.
749. It would cost less than £24,000? I think it would be a very good investment.
750. *Mr. Dick.*] We have been told that the ferry traffic in Sydney Cove need not be hampered by the berthing of large mail steamers if these vessels were towed to their berths stern-first after having swung in the stream;—would you recommend that? These large steamers have to be kept out in the cove a certain distance in order to put an anchor down so that they may be hove out to allow colliers to come inside, and in getting the large German boats in you are bound to interfere with the North Shore ferry service. If you had a steamer too near the wharf and the propeller blades caught the piles, the vessel would have to be docked, and that would entail a very great expense. There are three of us who are engaged in berthing these vessels, and we try to do the work with the least risks to the ships, though, at the same time, we are anxious to keep clear of the ferry boats. We cannot always prevent interference with the ferry boats, but the interference never lasts very long.
751. The same witness also stated that the anchor-dropping could be done in some other way? I do not see how that could be done. If you ran a kedge out you would be half across the cove before you got a strain on it. I think an anchor is best. Of course, you could come in head-first, and in that way keep the propellers clear of the wharf.
752. But then you would have trouble in getting out again? No; because the propellers would be clear, and the vessel could back out. The agents, however, say that it is not practicable to work the cargo properly when the vessel is berthed in that way.
753. Has that method of berthing ever been tried? Yes; on one occasion, when a German steamer had been doing duty as flagship at the Anniversary Regatta, the captain told me that, as there was no more cargo to be taken in, the vessel could be brought up to the wharf again head first; but the agents say that generally the arrangement would not be a workable one, and I saw myself that it would prove very inconvenient in dealing with the cargo.
754. But if you thought it advisable, you have authority to say that these vessels should be berthed differently? Well, I think the agents' objection a sound one, and as the Company pays £2,000 a year for the wharf, I think you could hardly require them to berth their vessels in such a way as would prevent them from dealing expeditiously with cargo.
755. *Chairman.*] The other day Captain Jackson told us that it was absolutely necessary to give 30 feet of water at the proposed new wharf? I think 30 feet would be required. The Orient boats draw 27 ft. 6 in., and, although these cargo ships do not, as a rule, draw so much, they load very deep, and it would be cutting things rather fine to make the depth less.
756. You were examined on the 12th instant in regard to the proposed Glebe Island wharfage improvements, and the evidence which you then gave has since been submitted to you for perusal;—have you read it through? Yes.
757. With the slight alterations you have made, that evidence is correct, and may be taken by the Committee and by the Legislature as applying equally well to the present inquiry? Quite so.

THURSDAY, 1 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of Wharfage on the west side of Woolloomooloo Bay, Sydney.

Francis Henry Wilson, Chief Clerk, Department of Lands, and Acting Chairman of the Metropolitan Land Board, sworn, and examined:—

758. *Chairman.*] It is proposed to extend the wharfage accommodation in the south-western corner of Woolloomooloo Bay as far as the site of the ladies' baths;—we wish to know from you the particulars of the tenure upon which those baths and the gentlemen's baths to the north of them are held? The ladies' baths originally belonged to Charlotte Robinson. Her executors were Messrs. Wilson, who transferred to Hellings. The lease covers an area of 3 roods 6 perches, and runs from the 1st January, 1895, to the 31st December, 1904, at an annual rental of £20. The Government called upon the lessees to make certain improvements, but as they would not make them, the sub-lessee, Hellings, has applied for a fresh lease of both the ladies' and the gentlemen's baths. F. H. Wilson. 1 Feb., 1900.
759. Do the leases contain a clause empowering the Government to annul them at any time upon giving six months' notice? Yes.
760. Compensation being paid for actual improvements? Yes.
761. A portion of the foreshores as well as the water area is leased? Yes.
762. And access is given to the baths by steps leading from the Domain-road? Yes. The baths are in a very bad state of repair.
763. And have been for some time? Yes; so bad that one Minister, I think Mr. Copeland, ordered them to be pulled down, and new baths erected in their place.
764. Are the Government likely to grant any extension of the lease;—has it been intimated to your Department that the granting of an extension would be undesirable? No; but as a member of the Land Board, I know that it is proposed to extend the wharfage accommodation for a distance of, I think, 800 feet.
765. Are you holding the matter in abeyance until the question is settled? Yes.

- F. H. Wilson. 766. There is a distance of at least 200 feet between the ladies' baths and Robinson's gentlemen's baths? More than that. The gentlemen's baths are also held by Hellings, who gave £1,200 for his right and interest in both of them. The gentlemen's baths are in a worse state than the ladies' baths, and about two years ago a great gale blew in part of the structure on the south side of them. They are held under the same lease as the ladies' baths.
- 1 Feb., 1900. 767. Why have the Government allowed the baths to get into such a state of disrepair? The Department have tried to make the lessees do something to them, but the tenure is so uncertain that they are unwilling to spend anything upon them. It might happen, if they put down new piles, that six months hence the piles would have to be pulled up again. They want a new lease for twenty-eight years, subject to the Government having the power to resume.
768. If the wharfs were taken right up to the ladies' baths, would not the baths be practically spoilt? I think that they should be taken away. I do not think the water there is fit for bathing in.
769. Have you examined the place? Yes; we went round to every bath in and about the City, and we took the evidence of every expert we could get. We discovered that a large quantity of sewage from the Fish Markets is even now allowed to run into Woolloomooloo Bay.
770. The water is thoroughly impure there? We thought so.
771. And it is your opinion, founded upon the evidence which you have heard, that it would be desirable to remove the baths to some place where pure water could be obtained? That is my opinion, based upon evidence and personal experience. The members of the Metropolitan Land Board visited the baths two or three times—after rain, in fine weather, and on hot days.
772. Then it would be rather an advantage than otherwise, if, as the result of the construction of the proposed wharf, the baths had to go? Yes, if some other bathing-place can be found which will not be too far away for the bulk of the population.
773. Has such a site suggested itself to you? We went all round the harbour, and up every bay on the south side, and we saw a large number of places that would be suitable for the erection of baths. We also went to the North Shore, and round Middle Harbour for miles, and, of course, there are any number of suitable places there if the population were handy. Then we went to Manly and to Watson's Bay. We favoured the idea of making a large excavation close to where Cavill's baths are now moored, into which pure water could be pumped by pumps driven with electricity supplied from the power-house at Pymont.
774. Is not the water in Farm Cove tolerably clear? Yes; but when the whole squadron is moored in the cove, the excrement of 3,000 or 4,000 men goes into the harbour there.
775. Do not the men-of-war anchor out where there is a current? Nevertheless in some states of the weather part of the excrement comes into Farm Cove, and it has even found its way into the Governor's private bath. Our idea was to excavate a bath 200 or 300 yards long, and to pump it full of clean water every day.
776. Where would you take the water from? From opposite Garden Island, or from the middle of Farm Cove. Mr. Davis, the engineer to the Water and Sewerage Board, told us that a number of electric pumps would be employed to pump sewage from the low levels, and that similar pumps might be used for filling the bath I speak of,—while the Government might also light up the Domain with the electricity from the wires conveying power to the pumps. I think we have spent four or five months considering the whole question. The excavation would be made on the site of an old reclamation, and would be taken down to low-tide level.
777. Why not build baths out in the cove? There is a lot of drifting matter in the cove which might pollute the water in an outside bath. What rather helped us to the idea was what we saw of the naval baths at Garden Island. They are excavated on the island to low-water level, and can be cleaned out when necessary. This is done about twice a year. There is a good deal of seaweed floating about outside this bath, but very little gets in.

FRIDAY, 2 FEBRUARY, 1900.

Present:—

THE HON. WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. PATRICK LINDESAY CRAWFORD SHEPHERD.
The Hon. ANDREW GARRAN, LL.D.
WILLIAM THOMAS DICK, Esq.

JOHN CHRISTIAN WATSON, Esq.
ROBERT HENRY LEVIEN, Esq.
JOHN MCFARLANE, Esq.

The Committee further considered the expediency of constructing about 600 feet of wharfage on the west side of Woolloomooloo Bay, Sydney.

Joseph Henry Maiden, Director of the Botanic Gardens, sworn, and examined:—

- J. H. Maiden. 778. *Mr. Watson.*] Since the proposal to extend the wharfage accommodation at Woolloomooloo Bay has been before the Committee, certain objections have been raised to it, on the ground that it would interfere with the Domain, and the Committee would like to hear your views, as Director of the Botanic Gardens and of the Domain, on the subject? I have been approached by a considerable number of people who view with alarm the proposed extension of the wharfage in Woolloomooloo Bay.
- 2 Feb., 1900. 779. Do they think that the work would in any way curtail the advantages which the public who use the Domain now enjoy? Yes. It is thought that this is the beginning of a movement for taking away the whole of the Domain water frontage.
780. Then the objection is not to the proposal under the consideration of the Committee, so much as a fear of what it may lead to? There is an objection to the proposal before the Committee.
781. Is it thought that the Domain will be of less value as a place of public recreation if the proposal before the Committee is carried out? I am not deputed to speak on behalf of any member of the public; but I should like to say, on my own account, that if a large number of ships are brought into Woolloomooloo Bay they must necessarily pollute the waters of the bay, and interfere with the Domain frontage, while the smoke from the funnels of steamers and the various accompaniments of shipping operations there will certainly destroy the comfort of the people using the Domain.

782. I presume that you are aware that it is not proposed to take away from the public any part of the area of the Domain; but rather to slightly add to it? The suggestion that the Domain will not be interfered with by the proposal under consideration is a mere quibble, because the foreshores of the Domain will be damaged. J. H. Maiden.
2 Feb., 1900.

783. You consider it a matter of importance to preserve to the public access to the water-frontages of the Domain? Yes. Although the manner in which the foreshores of Woolloomooloo Bay are now used might be very considerably improved upon, I would point out that the proposal of the Public Works Committee will fix upon us a certain manner of utilisation for all time, and will prevent me or anyone else from improving the foreshores of the Domain for the recreation of the public.

784. In what way do you think the Domain frontage might be better utilised—by the extension of bathing accommodation there, by reclamation, and tree planting, or how? I might perhaps refer you to some evidence which I gave when under examination by the Parliamentary Standing Committee on Public Works in reference to the proposal to erect new Houses of Parliament, and I would, at the same time, like to hand in my last two annual reports, to show you what improvements are now being made in the Domain. That part of the Domain which fronts Woolloomooloo Bay and the harbour beyond is an ideal spot for public recreation. In the afternoon one can sit there and enjoy the sea breeze and the view without being troubled by the sun, and read his book or his paper with pleasure and quietude, and it has always been my idea that the grassy lawns there should be kept in the best of order, and provided with seats, and, if necessary, shelters for the comfort of the people. As it is difficult to approach the foreshores of the harbour there except by roads coming from the two extremities of the Domain, I have commenced to make little rock-work paths leading down to the water, so that invalids and other persons may be able to get down with facility. I am very anxious to do all I can to improve the land lying between Mrs. Macquarie's chair and the Admiralty wharf, and I have spent every penny I could scrape together from my slender votes during the last three or four years on its improvement. If, however, the proposed wharfage extensions are carried out, they will very much interfere with the potentialities of the place for public enjoyment. I understand that the proposed new wharf will terminate close to the present ladies' baths. Now, will anyone tell me that the presence of a ship close to baths such as those will not pollute the water in such a way as to interfere with the bathing. A ship is a house, amongst other things, and must necessarily pollute the water in which she floats. I look upon the pernicious proposal before the Committee as the forerunner of a larger proposal which will assuredly very greatly interfere with the enjoyment by the public of the whole of that part of the Domain.

785. Is not that part of the Domain lying immediately behind the site of the proposed wharf so high that the public cannot get access to the water from it now? It is only a matter of time when, if the frontage is not taken away from the Domain, the public will be able to use it for recreation purposes.

786. How could you give the public access to the foreshores there—by making reclamations? Yes, or by putting in steps. A part of the foreshore is held on temporary lease from the Lands Department, and as these leases fall in I shall protest against the renewal of some of them. At the present time, however, my hands are tied, and I am prevented from improving this portion of the Domain. Still, I do not want any steps to be taken which will for all time prevent its use by the public for recreation purposes. The people in the higher parts of the Domain do not want to be compelled to inhale the steam and smoke belched out from the funnels of steamers lying in the bay, nor do they want to hear the noise of donkey-engines day and night. My house is at a considerable distance from the bay, but I know that there are nights when I can hardly get a wink of sleep because of these donkey-engines. All these things tend to destroy the amenities of the place, and to curtail its enjoyment by the public.

787. So long as the leases which you spoke of are in existence that part of the water frontage of the Domain would not be available to the public? The public are to a certain extent restrained from free access to it, in order to provide bathing accommodation.

788. At the present time the public are not without free access to the foreshores of the Domain between the Admiralty wharf and the Sydney Rowing Club sheds? That is so.

789. Then would they be any worse off if that part of the foreshores were utilised for the construction of wharfs? Yes; the present occupation of that part of the Domain allows the public to use the water of Woolloomooloo Bay for bathing and recreation, and each year that water is becoming cleaner and sweeter. The reason why the public have allowed part of the frontage of the Domain to be filched from them is that twenty years ago Woolloomooloo Bay stank so abominably that no one thought he was losing anything; but I am certain that this filching process would not have been permitted of late years.

790. You say that the waters of the bay are becoming cleaner—that is, in spite of the fact that the shipping in the bay has very considerably increased of late years? Although the shipping has increased there has been a decrease in the quantity of sewage poured into the bay of late years.

791. Supposing your worst fears were realised, and wharfs were extended round the bay as far as the Sydney Rowing Club sheds, you would still have all the frontage that you have now;—there would be just as much frontage accessible to the public? No doubt.

792. Beyond your objections from an æsthetic point of view, what other objections have you to urge? My objections are mainly based upon æsthetic grounds. I would point out, however, that in carrying out a proposal such as that now before the Committee the Government are seriously damaging valuable public property. If an ordinary citizen who had a water frontage to his private grounds leased part of it to a shipping company for the erection of a wharf, while he might get a return from the erection of that wharf he would undoubtedly considerably damage the remainder of his property, and that is what the Government will do in this case. Besides, the more ships we have at Woolloomooloo Bay belching their smoke over the Gardens the greater will be the damage done to the Gardens.

793. Ships lying in Woolloomooloo Bay are at a considerable distance from the Gardens? Upon an afternoon like this, with a north-easterly blowing, the smoke from vessels in Woolloomooloo Bay must drift across the Gardens, and it is well known that coal smoke is injurious to vegetation.

794. Extensive wharfs have been erected on the eastern side of the bay, and it is proposed to extend that accommodation for a distance of 200 feet in the direction of McQuade's point, a work which involves the resumption of a small piece of Mr. McQuade's property. Now, although Mr. McQuade is undoubtedly a smart business man, who knows what the value of his property is, he is quite willing to give up that land to the Government free of cost if, in return, he gets a very small piece of reclamation carried out in front

- J. H. Maiden. of his other property? I do not suppose Mr. McQuade would make what appears to him to be a bad bargain, but I do not know that the position of his property is analogous to the position of the Domain in respect to these undertakings, and I would, therefore, rather let my protest stand on its own merits.
2 Feb., 1900.
795. You object to any extension of the wharfage accommodation in Woolloomooloo Bay beyond the existing Admiralty wharf? Yes; I object to it most earnestly.
796. Notwithstanding the fact that it is not proposed to take away any of the present area of the Domain? I object to the proposal as it is.
797. *Dr. Garran.*] You admit that the public are not allowed access to that portion of the frontage at the present time, but your objection is that steamers lying there would be a greater nuisance than the present buildings? That is only one of my objections to the proposal.
798. Do you find any nuisance occasioned by the existence of the Admiralty wharf? No particular nuisance, but it is a very small wharf.
799. Does the noise from the steamers there keep you awake at night? Only when I am a little unwell. I would not, however, like to speak from a personal point of view. A little wharf creates much less nuisance than a large wharf.
800. You admit that the commerce of the port must be provided for somehow or another? Yes.
801. The witnesses we have had before us seem agreed that Woolloomooloo Bay is the most convenient place for large wharfs;—there must be some compromise between the æsthetic and the useful in these matters? I have found that out already during my management of the Gardens, to my cost.
802. The buildings on Garden Island have defaced the harbour view to some extent? Yes; they are a terrible defacement, especially the shear legs.
803. As the commerce of the city increases we cannot avoid defacing our foreshores to some extent? No; but we should be very judicious in selecting sites for wharfs.
804. The proposal before the Committee is simply to place a wharf where there is now a quarantine wharf, and other buildings;—if the proposed wharf is not made the Board of Health will still keep their premises? The Board of Health wharf might be moved somewhere else, and, though people may say that the frontage should be taken for wharfage accommodation, my opinion altogether differs from theirs. It seems to me that ultimately we may see a line of wharfs stretching right round Mrs. Macquarie's Chair and Farm Cove until the wharfs at Circular Quay are met with. I think, however, that the æsthetic ideas of the people and the requirements of health and recreation should be attended to as well as the commercial requirements of the city.
805. But we must make some sort of compromise between the two claims? Well, so far, the reciprocity has been all on one side. Does not this proposal raise the question whether other available sites have been sufficiently utilised.
806. The steamship companies like to berth their vessels as close to the Circular Quay as they can get; they cannot afford to have their ships far away from the commercial centres? No doubt these people cast covetous eyes on the Domain frontage; but I do not see why they should get it.
807. The Government propose to build the wharf to make money out of it, and by putting it on the western side of Woolloomooloo Bay they are not compelled to resume any land? Exactly.
808. By spending £24,000 on this work they hope to get a revenue of £5,000 a year? Yes; and they could make a lot of money by cutting up the frontage to the Botanic Gardens. There are lots of ways of "raising the wind"; but I object to it being raised by the sale of the Domain frontages.
809. You would still have a large piece of frontage left? Yes; but while all these improvements are taking away from the public estate, I am not able to get a square foot added to the Domain. Ever since I have been in office I have been fighting against the efforts of one person and another to steal parts of the Domain.
810. Did you object to the placing of Cavill's baths in Farm Cove? I found them there, but I think they are an abominable eyesore.
811. You would object upon æsthetic grounds to the placing of any more baths there? A suggestion has been made to construct submerged baths near where Cavill's baths lie, but I have not formed an opinion upon that project, because I do not know the details of it. I have, however, a very strong objection to the presence of Cavill's baths in Farm Cove. There we have one of the most exquisite sites on God's earth, and we allow a galvanised-iron shanty to float on the water in front of it.
812. Would you object to the construction of baths there if they were architecturally beautiful? I would object to anything of a permanent or temporary nature being placed in Farm Cove. I think that when the proper time comes we can have in Woolloomooloo Bay, by rearrangement of the frontages, splendid bathing and boat-shed accommodation, including a large natatorium, in which thousands of people could congregate to witness swimming feats. When Woolloomooloo Bay has been utilised to the fullest extent, we can talk of other sites.
813. Are you of opinion that the Woolloomooloo Bay frontage is one of the best in Sydney at the present time for bathing purposes? No; but still it is an excellent place, and could be made very much better.
814. You think it should be kept for that purpose? Yes.
815. The proposed wharfs would not interfere with any of the existing baths? It is alleged that it would not do so, but it cannot be seriously argued that a wharf placed alongside a bathing establishment would not interfere with the bathing.
816. *Mr. Shepherd.*] I suppose there is considerably over a mile of frontage from the end of the Admiralty wharf to the junction of the Gardens with the Governor's grounds? I think there is a mile of frontage there.
817. Do you not think that that is a fair water frontage for recreation purposes? I think that 2 miles would be better.
818. Perhaps you would like the whole harbour? I would like more than I have got. Considering the frontage given to Port Jackson by nature, we have allowed the public access to a very small part of it.
819. Could you point to a place more convenient than Woolloomooloo Bay for the erection of wharfage accommodation for large vessels? No, but I take it that the question is one which does not concern me. I come here as the custodian of the Domain, and I am objecting to the proposal before the Committee.
820. When steamers are lying alongside a wharf is any large quantity of smoke being produced? Perhaps not very much, but still there is some, and the presence of any smoke at all in the Domain and the Gardens is a nuisance.

821. You admit that the construction of the proposed wharf would not take from the public any portion of the Domain to which they now have access? I understand that it is not proposed to take any part of the Domain beyond high-water mark, though I see that it is proposed to cut a footpath across the little cricket ground which I have set apart for the use of boys under 15 years of age.

822. The proposal under consideration will actually add three-quarters of an acre to the Domain? It is so stated; but I do not think that that land will be of any use for recreation purposes.

823. *Chairman.*] How many people have spoken to you about this matter? I should think about 100—rather more than less.

824. Visitors to the Domain? Yes. It is a common topic of conversation when people come to see me on other business.

825. They consider that although the proposed new wharf may not be a very great evil, further wharfage extension is to be feared? The great majority of those who have spoken to me hold the views which I have put before the Committee, though I am not authorised to speak for them. There are one or two people who wish to see this scheme carried out, but, in my opinion, they constitute a very small minority. I have expressed the views of a large number of people who are interested in the Domain and in the Botanic Gardens.

J. H. Maiden.
2 Feb., 1900.

James McMahon, carrier, sworn, and examined:—

826. *Chairman.*] On the 20th January last you attended before this Committee and gave a considerable amount of evidence in regard to the proposed Glebe Island wharfage improvements, and also in regard to wharfage matters generally, and the carrying business of the city? Yes.

J. McMahon.
2 Feb., 1900.

827. Does that evidence embody the views which you still hold on those subjects? Yes.

828. The Committee are now considering a proposal to extend the wharfage accommodation in Woolloomooloo Bay, near the Admiralty wharf, by lengthening that wharf by 100 feet, and making a new wharf of 500 feet in length;—do you think that those wharfs will be largely used by vessels coming into the port? I think that they would be used under different wharfage administration. At the present time very little of the shipping comes to Government wharfs. The shipping agents either have their own wharfs, or they have interests in certain wharfs, and the vessels consigned to them go to those wharfs. Latterly, however, some of the big steamers have had to go to the Government wharfs, because there is not sufficient accommodation for them at these other wharfs.

829. How could the Government secure more shipping for their wharfs? By charging tonnage dues on shipping coming through the Heads, and leaving the wharfs open.

830. You think that the site I have spoken of is a good one for wharfs? It is a beautiful site.

831. It could not be better? No; and the wharfs will not injure anyone. I do not think their existence will injure the Domain in any way, because that part of the Domain adjacent to the place you speak of is never used by the public, and is hardly accessible to them.

832. Is there any objection to Woolloomooloo Bay as a site for wharfs, on the ground of difficulty in getting goods away from there? No.

833. As a carrier, do you find it inconvenient to take goods to Woolloomooloo Bay, or to bring them from there? No; even if Woolloomooloo Bay is further from the city than some of the other wharfs, that disadvantage is counterbalanced by the quickness and despatch with which you can load and unload your drays there, because the ships all lie broadside on to the wharfs, and you have plenty of space for your operations. At some of the wharfs in other parts of the city, however, you may be an hour or two before you can load your dray.

834. Is it a drawback to Woolloomooloo Bay that you have to ascend a hill to get from there into the city? I think that Woolloomooloo Bay is easier of access from a point like Macquarie-street than some of the other wharfs are.

835. Do you think that the proposed new wharfs will be suitable for large mail steamers, supposing the berths at Circular Quay are crowded out? Yes.

836. Can you tell us of any better place, or of any place equally good? I do not think there is any better place in the harbour.

837. *Mr. McFarlane.*] Does it cost more to convey goods to or from Woolloomooloo Bay than to or from the wharfs at the Circular Quay? No. I convey goods from one point to another point in the city for the same charge in every case.

838. At some of the wharfs you are considerably delayed in loading and unloading your drays? Yes, as much as two and three hours at a time sometimes. The passage ways to some of the jetties are so narrow that a cart coming down blocks another cart going up. Then, when a vessel is discharging cargo from three hatchways, you sometimes cannot pass from the fore-hatch to get at the cargo put out from the after-hatch, because of the want of room on the jetty. At Woolloomooloo Bay, however, there is any amount of room.

839. You have a good knowledge of the carrying trade? Yes; I have been connected with it for nearly fifty years as boy and man.

840. *Dr. Garran.*] If you have to fetch cargo from Darling Harbour and from Woolloomooloo Bay, the dray that goes to Woolloomooloo Bay will probably get home earlier than the dray that goes to Darling Harbour? Yes, almost always.

841. You are glad to see an increase in the number of broadside wharfs? Yes. There is no difficulty in getting to Woolloomooloo Bay; but it is something like cruelty to animals to get to some of the other wharfs to which we take wool.

842. Then you do not lose money by charging the same rate to Woolloomooloo Bay as to other wharfs? No.

843. So far as your business interests are concerned, I suppose you consider Woolloomooloo Bay a very suitable site for a wharf? Yes. With regard to the objections which have been taken about the quantity of smoke that would blow over the Domain, I would like to say that the smoke at Woolloomooloo Bay will not be any greater than the smoke at Circular Quay, and that is very little.

Charles

Charles Lyne, Secretary, Parliamentary Standing Committee on Public Works, sworn, and examined:—

C. Lyne. 844. *Chairman.*] You remember that during last month Thomas Forster Knox, Chairman of the Wharf Association of Sydney; Edward William Knox, General Manager of the Colonial Sugar Refining Company, Limited; James Powell, late Collector of Customs, Sydney; and William Robson Benson, Manager of the Wharf Association, Sydney, gave evidence before this Committee in connection with the proposed wharfage improvements at Glebe Island? Yes.
845. You produce and hand in a copy of the evidence given by those gentlemen upon that occasion? Yes; as follows:—

Thomas Forster Knox, Chairman, Wharf Association, Sydney, sworn, and examined:—

T. F. Knox. 608. *Mr. Watson.*] You are Chairman of the Wharf Association and Managing Director of the Sydney branch of Dalgety & Co., Limited? Yes.
16 Dec., 1899. 609. Is the Wharf Association a body of men who merely use the wharfs, or is it a body of men who own them? It is an association of wharf proprietors. Some of them lease the wharfs from other private individuals; but they are either wharf-owners or lessees.
610. I believe that, in addition to being lessees of private wharfs, your firm also leases wharfs from the Government? We have at present the offer of a wharf at Woolloomooloo Bay.
611. At present you have no connection with the Government wharfs? Yes; we discharged two of the White Star steamers there, and we have an offer open from the Government for a few months.
612. The Wharf Association have nothing to do with that—that is purely Dalgety & Co.'s business? Yes.
613. You are acquainted with the proposal before the Committee to construct wharfs at Glebe Island;—it is at present suggested that only the north-eastern portion of the scheme should be gone on with—the portion on the right of the bridge, beginning at the bridge and going right round to White Bay, with the idea subsequently, if necessary, of extending the wharfs from the bridge towards the head of Rozelle Bay;—will you favour the Committee with your opinion of that proposal? Is it with the object of providing for import or export trade.
614. The idea, so we are informed by the Department, is that the accommodation will be used principally for the import trade; the usual wharf appurtenances, in the shape of sheds, will, of course, be erected? I do not think that any further wharf accommodation is necessary. My reason for saying that is that the Government contemplate extending the present wharfs at Woolloomooloo Bay on the eastern side by 200 feet. That would give two large berths.
615. In addition to what is now available? Yes. One of the berths is now in the occupation of the White Star line, and if the Government require another berth for another large line of steamers they could utilise the other one.
616. That would be the berth further north? Yes. Probably the White Star line will have the northern berth, because the Government have made a stipulation in their offer to us that we have to take the northern berth, as they contemplate making the addition.
617. I presume the reason why they wish the White Star line to take the northern berth is that the water there could be made deeper with less trouble? They will make it all to 32 feet. On the opposite side of the bay it is proposed to erect further wharfage accommodation to the extent of 600 feet. In addition to that, all the Darling Island wharfs are empty at the present time. They are not all completed, but they are all unoccupied; and with that vast amount of wharfage accommodation unoccupied, and the fact that at the present time, except in the case of very large steamers, the private wharf accommodation is very much in excess of requirements, I cannot see for what purpose the Government require further wharfage accommodation. I do not know how they are going to utilise it.
618. The private wharfs which are not fully occupied at the present time would be suitable for the larger class of vessels? The private wharfs certainly have not full occupation at the present time. As to the class of vessels to be accommodated, I was referring mainly to the deep-sea vessels. I cannot tell you very much about the intercolonial trade.
619. Confining yourself to wharfs for deep-sea vessels, when you say that private wharfs are not fully occupied, do you mean all the year round, or during the busy season—there is a busy season, I imagine, for the wharfs; at other times, do you think there is any lack of accommodation? I can only remember one instance of the Wharf Association not being able to accommodate a steamer—that is, within the last few years.
620. Allowing that there has been one instance, is it possible for the private owners to increase their accommodation for such a vessel? Yes.
621. In what way? Smith's wharf at Miller's Point is a broadside wharf of about 900 feet. It adjoins the Washington wharf, which has a further length of 300 feet. There would, therefore, be 1,200 feet available at Miller's Point alone.
622. Is not that wharfage at present occupied? It is occupied by other vessels which could be sent elsewhere. If a wharf were put there like the Government wharfs, I consider that it would be one of the best sites in Sydney.
623. Is the get-away convenient? It is as convenient as that of any of the wharfs, excepting, of course, the Circular Quay.
624. Would it be as convenient as the Woolloomooloo Bay wharf? Much more convenient to the bonds and to town work, on account of its proximity. The hill is a little bit steep; but I have never heard any complaint on that score. I would just as soon berth a steamer there as I would at Circular Quay or Woolloomooloo Bay. As a matter of fact, we berth at Smith's wharf all the George Thompson line; they are vessels 420 feet long.
625. If you wanted to bring larger boats there you would have to take the Aberdeen line somewhere else? There would be room both for the Aberdeen line and for the White Star line at Smith's wharf if we were the lessees. If I were in the position of Smith's trustees, I should build a 900-foot wharf there. It is the only broadside wharf now in the possession of private owners.
626. As a general rule, would it pay private owners to make broadside berths, having regard to the frontage they have to acquire to enable that to be done? It would pay them certainly if they had the connection. It would certainly pay a firm like Dalgety & Co.
627. Why is it, if there is room for the two White Star lines at Smith's wharf, that it is now proposed to take a berth for the "Medic" and the "Afric," and boats of that class, at Woolloomooloo Bay? Because I could not come to terms with the Perpetual Trustee Company, who are the late Mr. Smith's trustees. I do not anticipate coming to terms with them. At the same time, I look upon Smith's wharf as the best wharf in the harbour.
628. If the White Star line could be accommodated there, I presume the Norddeutscher line could also be accommodated? Yes.
629. There would be room enough? Yes, with alterations to the wharf. The wharf is out of date, and needs improvement.
630. You think that if there were willingness on the part of the private owners to give the necessary appliances, accommodation could be found there for very large vessels? Yes. As an example of increased accommodation, you may take Parbury's expenditure recently in the provision of a lift to take cargo up to the street level.
631. It is stated that a large proportion of privately-owned wharfs, being jetties, cannot give accommodation for quick despatch of large cargo boats—that, it is stated, can best be done by the broadside wharfs the Government have lately been constructing? A broadside wharf certainly offers better facilities than a jetty for the discharge of cargo; but I think the jetties are quite good enough for all the cargoes we have here. If you go down to Dibbs' wharf any day you will see American cargo being turned out at the jetties, and we have heard very few complaints. I have always had a preference for broadside berths for despatch; but it can also be given at a jetty. We have discharged on one side of a jetty and loaded the ship on the other side at the same time, without any difficulty whatever.
632. What would be the width of the jetty you are referring to? About 350 feet long by an average of 50 feet in width.
633. Can you get waggons and drays on to the jetties when the cargo is there? Yes.
634. Even although the cargo be placed on the jetty, it is wide enough to allow the traffic to and fro? Yes.
635. With the increase of late years in the size of vessels, I should think that even a small delay would be a matter of moment to the owners and other persons concerned? It depends very much upon whether the vessel simply comes to discharge cargo or to discharge and load as well. If she comes to discharge cargo and load, you can do as we did in the case of the "Afric" and "Medic": you can do a certain amount of loading at the same time, as well as taking in coal. A vessel like the "Medic" requires 4,000 tons of coal. We put that in one side, and take out the cargo on the other.

636. Vessels belonging to regular lines which have stated times of departure are not in such necessity as to speed? No. T. F. Knox. In addition to taking in coal and cargo there is a certain amount of work to be done at the terminal port. The engines, for example, have to be overhauled, and there has never been any complaint, to my knowledge, as an agent, of want of despatch. If there be any complaint it ought to be against the agent; but we have had no difficulty in giving despatch. 16 Dec., 1899.
637. How do you regard the general tendency of over-sea trade at the present time;—is it going to be more in the direction of large vessels? I think trading vessels have reached a size which is not likely to be exceeded.
638. When you say that, you refer to large vessels such as those of the White Star line? Yes; my reason for saying that is that you cannot build any vessel for Sydney alone. In order to make a vessel to advantage you want to provide for her going to Melbourne and other ports. In the case of Melbourne a vessel cannot go out drawing more than 27 ft. 6 in., and the same applies to Adelaide. So that it is no use exceeding the present size unless you want to build a vessel for Sydney alone, and that would not answer.
639. You hardly think the trade of Sydney would be sufficient to induce the vessels to come here loaded for this port alone? No; I do not think so, although I should like to see it very much. It is a great pity we cannot bring all the cargo round, as we do in the case of Queensland.
640. You mean by intercolonial vessels transshipping it into larger ones? Yes.
641. Do you think that is economy as compared with the system of vessels calling in? Occasionally.
642. *Chairman.*] Big vessels cannot go up to Brisbane? They cannot go up to Brisbane; but they can go to Pinkenla wharf.
643. *Mr. Watson.*] You do not think the present size of vessels is likely to be exceeded? No.
644. Would that involve the doing away of smaller vessels in favour of vessels similar to those of the White Star line for cargo purposes? I do not think so, because there is a certain amount of work which these boats are not fit for. For instance, you could not put on one of these big boats to go with a coal cargo to the coast of America, or anything of that kind. They are too large carriers. I think the smaller carriers will exist as well as the larger ones, just the same as the smaller ships of other classes are still running against the larger ones. If you sold a cargo of wheat the quantity a White Star boat could carry would be in excess of the requirements of a certain port.
645. Has there not been a tendency lately to develop over-sea shipping more or less into regular liners in preference to the old system of carrying cargo by tramping? I do not remember any line which has come here lately except the White Star line.
646. Is not the Federal line a new one? Yes, that is another.
647. They seem to have got together a number of vessels, and made regular liners of them, while previously the same vessels were tramping? Yes.
648. Do you think there is any advantage in having the regular liners as against tramps; suppose there were an economy in the carrying of cargo, there would be an economy all round with shippers and shipowners;—would the tramp ship have the same chance of gathering in cargo from different holders as would steamers coming regularly? I could not say; I think it is a benefit to have both.
649. It seems that a large proportion of the wharf space now available is quite suitable for sailing vessels, or for a small class of steamers? Quite.
650. Do you think sailing vessels will continue in the same proportion as exists now, having regard to the total tonnage? I think that for general cargo, sailing vessels will have to give way; but for carrying whole cargoes of wheat or coal, sailing vessels will continue.
651. Is that because it is wise sometimes to alter the destination of a special cargo of export goods? There is a good deal of wheat from the other colonies sold for orders which are given in the channel.
652. The vessel is told to await at a certain place orders for her eventual destination? Yes.
653. The eventual destination depending upon the place for which the wheat is sold? Yes.
654. It would not be so easy to arrange for the disposition of a large quantity in one cargo? If a sailing vessel or steamer take a cargo of one commodity she can be diverted, but if either class of vessels take a mixed cargo she sails for a fixed destination.
655. So that it seems likely that any export trade we do will to a large extent continue to be done by sailing vessels and by a small class of steamers? Yes.
656. That would apply, then, to what we are informed Darling Harbour and Pyrmont wharfs are at present intended for—the export of wheat, and possibly, later on, the export of wool? I should like to say, as regards the export of wool, that that will be controlled largely by the position of the stores. Most of the stores are on this side.
657. And at Circular Quay? Yes. I do not quite see how the Government are going to shift the whole of the export business to Darling Island—at all events, in the near future. I understand that they speak of leasing off the land for the building of warehouses, with the object of shipping wool direct from there. A great proportion of wool is now sold in the Colony, compared with what used to be shipped to England for sale; so that for many years to come I do not think Darling Island is likely to be utilised largely for wool export.
658. Even in the case of wool which is to be shipped to England for sale, there is the dumping to be done? Yes. They will have to have dumping appliances at Darling Island; in fact, the whole of the shipping business will have to be shifted there.
659. It has been stated by the Manager of Public Wharfs that he thought there would be a saving in the cost of handling by the transference of the wool traffic generally to Darling Island, and that this would be sufficient to induce the different companies and firms to transfer their business from Circular Quay to Darling Island;—do you think this saving will be sufficient to induce them to give up their present warehouses? No; the reason being that the Railway Commissioners now deliver the wool, whether to Pyrmont, Circular Quay, or Miller's Point, free. It costs the Railway Commissioners about 3d. a bale to deliver. A saving of 3d. will be effected by the Commissioners.
660. You do not think there would be a saving sufficient to counterbalance the removal of the business over there and the practical abandonment of the existing warehouses and stores? I do not think so. I myself do not see any inducement held out to persons to go there. Of course, it would be the better for Sydney generally if the traffic were not interfered with so largely as it is by the wool drays; but you cannot transfer a trade like the wool trade from Circular Quay to Darling Island in a day.
661. Do you think it is likely that the wool traffic, speaking broadly, will increase very largely in the Colony, bearing in mind that the extension of the railway system and the opening up of new districts have brought a great deal of land under cultivation for wheat? I do not anticipate any large increase in wool production for many years to come.
662. You do not think it will increase beyond the point at which it stood prior to the drought? No. We had 60,000,000 sheep then; the number is now reduced to something over 30,000,000.
663. The clip of the largest number of sheep we had—over 60,000,000—was dealt with pretty easily, some from Circular Quay and the other portions at existing wharfs? It was dealt with without any difficulty, as far as shipping was concerned.
664. I take it, then, that in your opinion it is not likely that we shall have to face any great difficulty with regard to the shipping of wool? I am sure we shall not. There are sufficient warehouses and facilities at the present time for berthing a great many more steamers than would be necessary to carry away double the present production of wool.
665. That would be more than the clip of the 60,000,000 sheep a few years back amounted to? Yes; because the sheep cut better now than they used to. There has been an improvement in the class of sheep. What I meant to convey is that you will find any quantity of wharfage available for a great many years to come. I do not anticipate that our imports will increase very largely, in view of the probabilities of duties being put on, and the increased production in the country. I do not see any prospect of a great increase in our imports.
666. There will, you think, be a proportional decrease in the imports following upon the adoption of Federal Customs duties? Yes.
667. You do not think it is likely that we shall continue the increase in tonnage which has been noted during the last four or five years? Not in the tonnage coming to take produce away.
668. We can assume, roughly, that as our exports have not materially increased during that period, owing to drought and one thing and another, the larger proportion of the increased tonnage is due to increased imports? I could not say whether or not that is the case. I do not know what the imports are.
669. The only alternative to that assumption would be that the owners were running a great deal of tonnage without income? You must bear in mind that steamers which go away from here do not carry a full cargo from Sydney. They take a certain proportion from Sydney, and more cargo is taken in at Melbourne and Adelaide.

- T. F. Knox.
16 Dec., 1899.
670. But any material increase in tonnage coming here would probably point to an increase in the amount of business done, or in the cargo carried? I do not think it is a reliable guide. I do not think you should take the tonnage of steamers as a guide to imports, or you would get astray. Take the "Medic," a steamer of 12,500 tons; she brought only 1,800 tons of cargo to Sydney, and she will appear in the tonnage list as adding 12,500 tons.
671. But it cannot pay to run such large vessels with a small cargo like that? A certain proportion of the cargo, of course, would be landed at Melbourne and at Adelaide. Then the steamer carries 350 passengers, and looks to having a full cargo for Home.
672. With a new line it is quite conceivable that for the first few trips, before trade got into a different groove, there would be comparatively a small cargo? Yes. What I say is more with a view to show that the tonnage coming to the port is no guide as to imports.
673. Putting aside wool, and coming to the export of wheat, I think you have already indicated that a great proportion of the wheat export, assuming that we have any great quantity of wheat to send away, will be done by means of sailing vessels? Yes; or moderate-sized steamers.
674. In either of these alternatives you would not require very large wharfs? No. I cannot see that for the export of wheat we should require any more wharfs, excepting perhaps those at Darling Island.
675. Where there is railway communication? Yes; and you must remember that that wheat export goes only for a few months. I daresay it is all concentrated in a couple of months.
676. It is estimated that the wheat yield this year will be approximately 14,000,000 bushels, and that, it is said, will give an exportable surplus of about 90,000 tons of wheat—about 3,000,000 bushels;—do you think there would be any difficulty in dealing with that quantity at the present time by means of the Darling Island and Pyrmont Railway wharfs? There would be no difficulty in dealing with it.
677. How would you deal with it at private wharfs? If the Railway Commissioners would give facilities to put the wheat into lighters where the railway meets the water at Darling Island, it could be lightered away to the ships at a cost of between 1s. and 2s. per ton. I think that would be preferable to carrying the wheat by dray through the city as wool is carried now. I see no difficulty in coping with 90,000 tons. That would all be removed by lighter from the place where the railway touches the water.
678. It would be taken to regular steamers lying at other wharfs? Yes; or to sailing vessels lying at other wharfs.
679. On the south-east side the wharf is completed, and the railway line goes along for some distance? There is no reason, then, why steamers or ships taking a full cargo of wheat should not berth there.
680. And load direct from the railway trucks? Yes; but if a steamer were taking in a mixed cargo, as is done in the case of the White Star boats, we should prefer to bring the wheat round by lighter to taking the ships round there. It is a big thing to move a 550-foot ship.
681. I suppose that wheat would be a desirable cargo to some extent for stiffening purposes? Yes.
682. So that the big ships would compete for a part cargo of wheat to some extent with the ships that take wheat alone, although the wheat might have to be lightered? Yes; it is a question whether it would be cheaper to take the ships to the wheat, or bring the wheat to the ships.
683. You think that, in the case of larger vessels, it would be cheaper to bring the wheat to the ship? Yes; because we can go on loading other classes of cargo at the same time.
684. Assuming that there is something like a proportionate increase in the production of wheat continued for the next five years, compared with that which has taken place during the past five years, practically doubling the production, that would leave us a much larger quantity of wheat available for export? Yes; at that rate you would have far more than 90,000 tons.
685. Do you think it would be possible to deal with that quantity of wheat from the wharfs being erected at Pyrmont and Darling Island? Certainly.
686. You are of opinion that the provision now being made there is sufficient to meet any probable increase in our export trade for the next five or six years? It would be far in excess of requirements for the next five or six years. With prompt delivery out of the trucks, and by means of lightering, you can shift any cargo cheaper than by dray, and wheat would not have to go into warehouses as would wool. Wool has to go there to be inspected. If you are going to put wool up for sale, you must take it to a warehouse to give buyers an opportunity to inspect it. Wheat could be sampled in trucks.
687. It does not need to be opened for sampling purposes? No. At Lyttleton, New Zealand, I have seen the wheat run right down to the ship's side. It is sampled there, and anything bad is rejected.
688. Wool would require to be dealt with in a warehouse before it was shipped; wheat does not require the same kind of treatment, and can be sent direct to the vessel's hold? There is a growing tendency on the part of growers in favour of selling wool in the colonies as against shipping it to England. I cannot myself see how you are going to divert the business which has been spoken of to Darling Island. I do not see how the wool business is going to be taken over there.
689. Arrangements could be made to take it there but for the vested interests already at Circular Quay? I think that Darling Island in future might be turned to better account if there is going to be a large wheat production such as you indicate. Darling Island would be much better suited to that export than for the handling of wool. It would be desirable to get the wool out of the streets. There is no doubt about that. Winchcombe, Carson, & Co., and Goldsbrough, Mort, already have stores at Pyrmont.
690. Leaving out of account altogether the question whether additional wharfs are necessary, do you think Glebe Island would be a sufficiently convenient place? I think consignees would prefer the delivery of their cargoes on wharfs at Darling Island, Circular Quay, or Woolloomooloo Bay. A ship discharging cargo at Glebe Island would be at a disadvantage.
691. To what extent? To this extent: there would be more expensive cartage to town, and the consignee, if he had the goods dumped down there once, would not have them put there a second time. He would not ship by any vessel going there.
692. Because of the extra expense? Yes.
693. At present all the wharfage charges are made to the consignee? Yes. The wharfage of goods is charged to the importer or exporter, as the case may be.
694. In the case of imports, the consignee has charged on to him wharfage dues? Yes.
695. And he also would have to pay the carriage of goods from Glebe Island, for example, to his store or warehouse at Sydney? Yes.
696. Do you think that pretty well all the goods would be brought to Sydney for opening up and inspection? What else could you do with them. A small quantity, perhaps, might go away direct to the country, but the main portion would come into town for distribution.
697. Is there not among large country houses an increasing tendency to indent goods direct to themselves? Yes; but the facilities are now greater for getting goods out, and consequently men do not lay in the stocks they used to lay in. They are now continually replenishing stock.
698. That would not affect the proportion indented direct to country houses and taken directly from the ship to the railway? My experience is that a very small proportion of the goods which come here goes direct to the railway. A very large proportion goes into the stores in Sydney.
699. What do you think would be the additional cost of conveyance of goods from Glebe Island as compared with Woolloomooloo Bay;—assuming that goods had to be taken to any of the houses in York-street, what would be the difference, speaking roughly? It would be only a certain class of goods which would go to York-street. A great many of the other goods go to Miller's Point or Circular Quay.
700. Could you give us an approximate idea of the difference in the cost as regards any one class of goods? No; but I daresay I could get you the information.
701. Do you know whether, at the present time, carrying companies make any distinction in the charge for bringing goods from Circular Quay as against Woolloomooloo Bay? I do not think they do. We have had no complaints whatever in the case of the "Medic" and the "Afric."
702. It would appear that the carriers take a broad zone view of the matter? Yes. Some time ago I think there was a different rate for the carriage of wool from some of the warehouses to Circular Quay and Woolloomooloo Bay, but I do not think there is any extra charge now.
703. Leaving wool out of the question, and taking import goods, can you say whether the carriers make any distinction in their

their charges for the conveyance of goods to York-street from Circular Quay and Woolloomooloo Bay? I do not think so at the present time. The charge would probably be greater from Glebe Island, because the bulk of the goods are warehoused about Circular Quay, Dawes' Point, and Miller's Point. You would have to add the distance from Market-street to those places.

T. F. Knox.
16 Dec., 1893.

704. Suppose the Federal Government imposed pretty heavy Customs duties, would there not be a large increase in bonded stores? No. We have more bonded stores now than are necessary. The thing was overdone a few years ago. We are about one of the largest lessees of bonded stores. For a great many years to come the stores will be able to accommodate everything that comes.

705. But with a large increase in the tariff the amount of goods bonded will be much larger than as at the present time? When we had the 10 per cent. *ad valorem* duties the bonds were never full; they were never filled to overflowing. Since then, in the boom times, more bonded stores have been built.

706. You think there will be enough to cover contingencies? Yes.

707. I thought it possible, with such an increase in the traffic as seems likely, bonds would be erected round about Woolloomooloo Bay, perhaps? It is very unremunerative work now; there is no money in it. Anyone who puts up stores for that purpose finds a difficulty in getting an adequate rent.

708. I take it that the tenor of your evidence is that there is very little probability in the first place of the increased wharfage proposed being required for many years to come? I cannot foresee any use for it.

709. You think, secondly, that if increased wharfage to that extent were necessary, within a few years Glebe Island would not be a very convenient place? I think it is not a convenient place compared with the other places we have available. Darling Island and Pyrmont are more convenient. Why could not the coal be taken to Darling Island, and shipped from there, instead of utilising the wharfs at Pyrmont.

710. In that case the wharfs from the bridge down to the northern end of the Pyrmont wharf could be utilised for general purposes? Yes.

711. The coal trade being transferred to Darling Island? Yes; they will not have anything to occupy Darling Island for a great many years to come.

712. *Dr. Garran.*] Would you utilise the space by putting up more jetties or by making a straight wharf? I should put up more jetties. Having regard to the large area of land, I think that more might be made of the island if there were jetties. I do not think the most has been made of it. Echelon jetties might, I think, be constructed.

713. *Mr. Watson.*] If you put out jetties from Darling Island proper, on the south-east side, you might then spoil the frontage between Pyrmont wharf and Darling Island? If it were private property I am quite satisfied it would not be kept in its present position. I refer, of course, to Darling Island.

914. You think that greater provision in the way of jetties might be a better means of meeting any need for increased wharfage accommodation than going as far as Glebe Island? Most decidedly. Jetties for the purposes of export are every bit as good as broadside wharfs.

715. Especially for wheat export? Yes; the present arrangement is a waste of good room. No private individual would dream of using Darling Island as it has been used.

716. You think it is a waste of opportunity to use broadside wharfs for coal and wheat exports? Yes. I could not give you an idea from the map how many jetties could be put out. Only yesterday the question of a jetty at Woolloomooloo Bay was raised; but it is impossible to have it there, because the steamers have only one or two hundred feet to spare, turning in that bay. If the Committee desired evidence on that point it might be obtained from Captain Pettit.

717. It was suggested yesterday that it was hardly necessary for a vessel to turn if she were taken in stern first? The harbour-master could give you an question on that point; but I think it would be a difficult thing in Woolloomooloo Bay to bring a large vessel out stern first or to take her in stern first.

718. Coming to the general opinion again, do you think that in your estimate of what is necessary or the shipping of the port you have paid sufficient attention to future requirements? I think so.

719. I might point out that when some years ago this Committee was inquiring into a proposal to extend the wharfage accommodation of Woolloomooloo Bay, the Wharf Association took up an antagonistic attitude, and said they did not think the accommodation was necessary, pointing to the fact that they were able to deal with the trade; but since then a very considerable addition has been made to the accommodation at Woolloomooloo Bay, and the accommodation seems to be taken advantage of as soon as it has been provided? Private enterprise has simply been blocked by the interference of the Government. I am quite sure of this: that but for the money which has been expended at Woolloomooloo Bay, and the fear which wharf proprietors had of coming into competition with the Government, they would have spent much more money upon their own wharfs, and with the result that they would still have been equal to all requirements. We could do without Woolloomooloo Bay if there were sufficient inducement to improve existing wharfs.

720. The Government, I understand, have not undercut the Wharf Association by charging a lower tonnage rate than you do? No; the Government charge is in accordance with the Act; they can only make one charge.

721. It is open to private owners to allow a rebate? Some of them below the bridge do so. It was done, I think, in the case of McIlwraith's wharf.

722. The Government do not give any? No.

723. So that in some cases the private owners are charging less than the Government are charging in the way of wharfage dues? Yes; but the Wharf Association is not.

724. I should like you to point out what disadvantage the private owners are under as compared with the Government; leaving Circular Quay out of account, private owners generally have the best sites? One disadvantage is that they can get a lease only for a limited term for the right to put out a jetty.

725. What is the limit? The last lease which came under my notice was for seven years. It is left for the Land Board in Sydney to decide. Two of our leases are falling in now. I think they were for fourteen years. The Board are trying gradually to reduce the terms. During the time you have the lease the Government have the right to remove the whole of your improvements—the property is only held on sufferance. You may have the land right down to the water; but in order to make use of the water you have to go to the Government to get a lease which first of all must have the recommendation of a Government official. Then you have to go before the Land Board with an application to erect a jetty of 300 or 400 feet. In the case of Parbury's wharf they made an application, I believe, for 350 feet.

726. That is an incomplete jetty? Yes; they have now made application for another 100 feet to the same jetty. They may be told by the Government that it is beyond the limit line. Of course if jetties go out to any great length they block one another. You can see how private enterprise has been blocked.

727. Chiefly by short tenure? Partly by short tenure, and partly from the fact that the Government can take the property at any time. If the Government resumed the foreshore they might claim to abolish the wharfs without compensation. They probably would be liberal; but if they wanted the land for, say, a railway, they would probably take all the private wharfs without compensation. The Government have a white elephant in the shape of a freezing-house over at Darling Island. We were going to put up in one of our stores freezing appliances for shipping; but we were afraid to do it, because there was talk of the Government doing the same thing. If Woolloomooloo Bay had been left as it was we should have been going along just as happily as ever—that is, if reasonable tenure had been given to wharf-owners, and they had been allowed to extend their jetties a fair distance.

728. With regard to increasing the tenure, you have to consider whether the public interests, speaking generally outside of shipping matters, might not be against it on account of the necessary resumption for railway purposes? I am merely explaining the reason why the present wharf-owners have not done more than they have done.

729. But assuming it to be impolitic to give very long tenure of frontage rights, then the disability under which private wharf-owners would suffer would continue, and thus deter them from making increased wharfage accommodation should it be necessary? I think there would be that tendency.

730. That being so, the Government would not only be justified, but would be called upon to make the necessary provision themselves? If it were necessary; but it is not necessary at the present time, nor will it be for a long time to come. With the new accommodation contemplated at Woolloomooloo Bay there will be plenty of accommodation. I saw it stated that 900 feet had been let to the White Star line. That was an error. Only room for a 550-foot ship has been provided for us.

731. You heard the evidence of Captain Jackson yesterday;—is there any point which has not been touched upon to which you would like to refer? I should like to mention one thing. Mr. Darley, in his estimate of the cost, does not appear to me to have looked at the matter from a business point of view. He has not taken into calculation the value of the land. I think that whatever proportion of the reclaimed land is used ought to be considered part of the capital.

- T. F. Knox. 732. He took as the value the cost of making it? Yes; but he could sell the land again.
- 16 Dec., 1899. 733. Could he sell it for more than it would cost to reclaim it? The Government have reclaimed the land, and unless they put it up for sale they could sell it to the other wharf-owners and people in business. I think they have a right to take that fact into consideration.
734. What they are doing now is practically to debit the wharfs with the cost of making the land which the wharfs are to utilise; what you say is that the Government should debit the value of the land when reclaimed against the whole scheme; but suppose the value of the land when reclaimed is greater than the cost of making it;—do you think it would be so? Yes, I think it would be very much greater.
735. It is estimated that the cost of the reclamation and filling works would be £125,000;—do you think the value of the additional land made on the island would amount to that? I do, for wharfage purposes—that is, in the future, with railway communication.
736. Do you think that in the distant future with railway connection it would pay private owners to take up the land for private purposes? Not for import purposes; but if your idea of wheat-growing comes off it might pay then. I should be sorry to take the land for a great many years to come. Mr. Darley says that the Darling Island wharfs, or rather one side of them will be ready in two or three months' time. If Glebe Island is a suitable place for dumping down imported goods, why should not Darling Island be more suitable as having a railway, and being slightly nearer the city? If the Government want berths for import ships, why not put berths at Darling Island? It cannot be used for export purposes for many years to come, and in the meantime I cannot see why it could not be used for import purposes.
737. *Chairman.*] There is one point upon which I should like you to give us information; when Mr. Benson was before the Committee in connection with the Woolloomooloo proposals, he gave us an estimate of the length of all the wharfs available in Sydney, the number of berths into which the wharfs could be divided, and the number of ships arriving, showing that, for the number of ships arriving, there was about three times the accommodation available; it was a very useful return, and it had a marked effect upon the Committee at the time? Yes; I think I gave evidence at the same time.
738. If you look at the return of that day, and the list of ships, you will see how remarkably the ships have increased in tonnage; a ship of 2,000 tons was regarded as a big ship then, now we have ships going up to 10,000 tons? I will look at that return, and will give you the information, as far as I can, as it applies to the present day.
739. *Dr. Garran.*] Has the shipping and wharfage business of Sydney in the export and import business increased much during the past five years? I think more ships have come here, but I could not say whether they have lifted more inwards and outwards within the past five years.
740. Has the distributing business of the port increased during the past few years? That I could not say.
741. You cannot say whether the shipping business has been in any way influenced by the free-trade policy of the Colony? I could not; I am not a merchant.
742. As Federation will be accomplished within the next few years, Sydney will have no particular advantage over Melbourne;—do you think that that will lead possibly to a relative diminution of our shipping business as compared with that in Melbourne? I do not think our shipping business will be affected. It is, to a great extent, guided by our export business.
743. And our position as a terminal port will be maintained? Yes; we have the coal, and we have the dock. It is a great advantage to steamers to come here and do their refitting.
744. When the Melbourne scheme of clearing out the Yarra is completed, will the advantages that port can offer be as great as ours? No. Ours must be the terminal port on account of the coal. It is of no use for steamers to lie idle doing nothing. A steamer here can take in coal and wool at the same time, or she can take in cargo from one side, and discharge cargo on the other. That is frequently done, both sides of the ship being worked.
745. Captain Jackson's opinion was much influenced by an increase in the demand for wharfage;—do you think there is any likelihood of that demand being kept up after Federation? I do not believe there will be an increased demand for wharfage. The Wharf Association could handle ships just as easily as they have done in the past, except, of course, steamers like some of the White Star boats.
746. But suppose the accommodation is short? I do not see how it can be short. The Government berths are all leased to different owners—the P. and O. Company, the Messageries, the Orient, the Norddeutscher-Lloyd, and so on.
747. Captain Jackson says that he is often short of accommodation, and that he takes advantage of a berth being empty to put another ship in immediately? That only happens occasionally. I do not see how he can be short of accommodation.
748. Do you think the progress of Port Jackson as a shipping port will be diminished within the next few years? I do not see how it can be otherwise; it will depend a great deal upon our exports. If we have good seasons, we shall have plenty of wool; if the drought continues, we shall have much less wool.
749. But there will always be a steady progressive trade? Yes.
750. *Mr. Shepherd.*] Do you consider the accommodation in Port Jackson adequate for the shipping? I consider it is more than adequate at the present time. I know of no instance of a ship that was not able to get a berth.
751. The Darling Island wharfs will be a considerable addition to the accommodation, and they have not yet been utilised? Quite so.
752. What is your opinion generally of the Glebe Island proposal? I think it is absolutely unnecessary. It would be far better to leave Glebe Island alone until we have railway communication, and know for what purpose we are going to use the wharfs. We shall be building an immense number of wharfs without having any occupation for them.
753. There is a large frontage in the hands of private individuals, particularly from Dawes' Point to Miller's Point, round to the head of Darling Harbour? Yes.
754. Is the whole of that frontage utilised at the present time for wharfs and jetties? There is a dispute with reference to a frontage next to Moore's wharf. I think the Government have some claim upon it. There is another small piece between Dibbs' wharf and the Gas Company which is not utilised, and, with these exceptions, I think the whole of the frontage is utilised.
755. Chiefly by jetties? Wholly by jetties, with the exception of Washington wharf, and Smith's wharf, and the small piece upon which the Government have some claim.
756. What is the size of the vessels, as a rule, that load at these jetties, more particularly at Dawes' Point and Miller's Point? At our own jetty we load all Thompson's steamers. They go up to 420 feet in length.
757. Is any inconvenience experienced? Not the slightest.
758. Neither in discharging nor taking in cargo? No.
759. Are the vessels discharged as expeditiously as they would be at Circular Quay? Yes. The ships are discharged, and the cargo is taken away quite as expeditiously. The importers are in the habit of leaving cargo on the wharfs as long as you will allow them to do so. In the olden days, when there was a duty on everything, the cargo was run into stores by the Customs. Now there are so many things free with which the Customs do not interfere. Merchants will often leave iron on the wharf until they can effect a sale, and it is then taken away in dribbles.
760. You say you prefer broadside wharfs to jetties? Yes; you can get rid of cargo more expeditiously, and can give greater satisfaction. That is, if the jetty is being used by two ships. I do not object to having a ship on only one side, but if a jetty is being used by two ships, and the discharge of cargo is at all careless, and is not made in a proper way, it is open to objection. For loading purposes, one is just as good as the other.
761. The advantage of a jetty is done away with to a certain extent, under the circumstances you mention? Yes; but if you have a property with only 120 feet frontage, it is necessary to put down a jetty in order to accommodate a ship.
762. It is simply an economy of space? Yes; you utilise the water.
763. For smaller-sized vessels, one kind of accommodation is just as convenient as the other? Yes; you could not call a 5,000-ton steamer, 420 feet in length, small, although it is small in comparison with the immense German boats and the White Star boats.
764. It would be rather inconvenient to utilise the North Shore for wharfage purposes? It would be absolutely useless, because there is no means of removing the goods to town.
765. So that we are practically confined to the south side of the harbour? I think so, for all time.
766. Are you aware of any unoccupied spaces convenient for wharfage purposes, which could be made available? Yes; but I should be very sorry to see them used. For instance, there is the western side of Woolloomooloo Bay and Farn Cove. I am sure we should all be sorry to see the Domain cut up. It was contemplated to take wharfs right up to Lady Macquarie's Chair. In addition to that, there are Dawes' Battery and the Artillery Barracks.

767. Has your association ever found itself unable to accommodate vessels? For some years I remember only a couple of instances where we have had a large steamer, and have not had a berth available at the time. Sometimes if a big steamer arrives, when the wool season is on, it may be more advantageous to us to use the wharf for wool export, because there is a good harvest while the wool season is on. After that, we have a comparatively idle time for some months.
768. Generally speaking, you are able to meet all requirements? Yes, excepting those of big steamers. We could not have taken the White Star boats, except at Smith's wharf.
769. *Chairman.*] You seem to take some objection to the Government competition? I do not think so, although it has certainly had the effect of strangling enterprise in wharfs.
770. But, putting that aside, and also the short lease of wharfs, do you think that wharfs held by freeholders have been kept up to date, having regard to the increased size of the steamers coming to the port? Of course, the German steamers are provided for; they go to Circular Quay. But until the arrival of the White Star boats the wharfs were equal to the requirements of the port. It is my opinion that, if any fair tenure could be given, the wharfs would be built in a different way. But a man does not care about spending from £15,000 to £20,000 on a wharf, even if he leases for a fixed time of ten or fifteen years. The Government do renew the leases, but the rent is left entirely in the hands of the Land Board, and they may fix it at £500 a year if they like. That would be as good as confiscating the wharf.
771. I was referring more particularly to the old wharfs. They do not seem to me to be kept up to date? I think the public have been a little bit spoilt by the quality of the Government wharfs. They are really magnificent wharfs—better than is really necessary. If a private individual had been erecting wharfs at Woolloomooloo Bay he would have spent much less money there.
772. *Mr. Watson.*] We are told that they are a paying investment. The companies, apparently, appreciate them? I do not know if the Government have taken into consideration depreciation. If they were private wharfs we should write off 10 per cent. per annum. In order to go with the times you must make many improvements. A few years ago a low wharf was good enough, but the big steamers are a great height above the wharf, and every lift takes longer to get into the ship and to get out. The tendency now is to build wharfs much higher. All these things have to be considered, and are considered, when 8 per cent. or 10 per cent. is written off for depreciation.
773. *Chairman.*] Are we right in assuming that, with the exception of the "Afric" and the "Medic," and the German steamers, the private wharfs can accommodate the other ships which comes here? With the exception of those berthed by the Government. I think the private wharfs could berth even the White Star boats. I would put the big steamers at Smith's wharf. I had one of the Shire boats there 500 feet in length. The difficulty is that we lease only portion of the wharf; the other portion is leased to Mr. Mailler. We were in negotiation, and if it had come out as we anticipated the steamers would have been left there for all time.
774. You have a general knowledge of the wharfage requirements of Sydney;—can you state whether there has been any general desire among shipowners for increased wharfage accommodation? I have not heard any dissatisfaction expressed. We have one of the largest lines—the George Thompson line—and they are perfectly satisfied; we never hear any complaint.
775. Their steamers never lie out in the stream for any inconvenient time? They have never done so.

Thomas Forster Knox, Chairman, Wharf Association, Sydney, sworn, and further examined:—

776. *Dr. Garran.*] Do you produce a letter from Mr. W. R. Benson, manager to the Wharf Association, dated 18th December, giving a statement as to present wharfage accommodation of the port? Yes; the letter is as follows:—
- "With reference to the request made by you to Mr. T. F. Knox, on Saturday, for a statement from me as to the present wharfage accommodation of the port, I have the honor to inform you that in my opinion it is more than ample for present requirements. During the last five years only one instance has occurred where the Association has been unable to supply a berth for a steamer, and I am satisfied that with the exception named no delay has been caused to shipping through being unable to obtain berthing accommodation at the Government or the Association wharfs. In fact, with the exception of during the height of the wool season, neither the Government nor the Association wharf is fully occupied.
- "With reference to the White Star line of steamers, of which the "Medic" and "Afric" have been berthed at Woolloomooloo, I desire to mention that my Association was in negotiation for the berthing of these steamers at Smith's wharf, and that they would have been berthed there had it not been that I was unable to arrange terms with the lessees, as otherwise the wharf was quite capable of berthing steamers of their dimensions.
- "I regret that the notice has not been sufficient to enable me to complete the returns I am now engaged in preparing, showing the number of berths available and the number of ships and steamers arriving, and their tonnage. This return will cover a period of three years to 30th June last."
777. What ship is referred to in the letter? The "Kent."
778. And it was only at private wharfs where she could not get berthed? Only at the Association wharfs.
779. Was there room for her at any Government wharf? Yes; she was berthed at a Government wharf.
780. Was there more than one space vacant at the Government wharf for her at that time? I should think so.
781. You cannot speak for certain? I have no doubt of it.
782. Then, although the wharfage at the disposal of the Association could not berth the "Kent," there was plenty of room in the port to berth her? Plenty of room.
783. It was not the wharfage of Port Jackson that was short? No.
784. Only that at the command of the Association? We were particularly busy at that time, and she could not have been berthed, I dare say, for forty-eight or seventy-two hours.
785. As a rule, is it a very rare thing for a ship to be kept waiting twenty-four hours? I cannot remember any occasion when a ship has had to wait. They come generally straight up to the wharf.
786. Is there any port you know of where wharfage is available more promptly than in Port Jackson? I do not think there is any port in the world where there are greater facilities for discharging and loading vessels than in Sydney.
787. You hear what captains say;—do you hear them complain? I never hear a complaint, and I have a good many captains to deal with.
788. They do not say that you are short of wharfage, you people in Sydney? No.
789. Do you know of any time when we have been short of wharfage? I am not aware of any occasion. I think it is extremely doubtful whether such a thing has occurred during the twenty years that I have been connected with the wharfage of the ports.
790. All that time the wharfage has been equal to the necessities of the case? Yes, more than equal.
791. We are told that the wharfage at Darling Island will add something like 2,500 feet of extra space;—is that so? 2,500 feet of broadside space.
792. How much available space is there at Circular Quay for the large steamers? 4,765 feet.
793. Then we should be getting more than 50 per cent. additional wharfage accommodation at Darling Island? I think it would be capable of a great deal more if it were in the hands of any individual.
794. You mean by the use of jetties? Yes.
795. But under the proposal of the Government to construct straightaway wharfs there would be 50 per cent. additional accommodation? Yes.
796. Do you think that 50 per cent. additional accommodation to what we have got now would be more than equal to the wants of the port? Far in excess of the requirements of the port.
797. Suppose the Government were to make one of these wharfs at Glebe Island a straight wharf—the north-east one—and the others jetty wharfs, sloping outwards, do you think that would be an advantage as compared with making straight wharfs? I think a system of echelon wharfs might be introduced, if the wharfs are going to be used for export.
798. If jetties were used on the north-west side of Glebe Island, do you think there would be room to work the ships in the bay? That I cannot say.
799. It is somewhat doubtful? I could not say, because I know nothing about the depth of the water, or whether it could be dredged or not. I think echelon wharfs would work.
800. At Darling Island, is there abundant room to work the ships if jetties are put there? Yes, there is abundant room. But the question as to jetties would be largely determined by the fact of whether you were going to use the wharfage for export or import. For export a jetty is quite as good as a broadside wharf.

- T. F. Knox.
18 Dec., 1899.
801. Will you explain why? At Darling Island, in particular, all the goods for export would either go by lighters to the ships or go by rail, and they could be taken alongside, and there would be no chance of the wharf being blocked. The complaint about jetties arises from the fact that importers do not remove their goods as fast as they are put off the ship, and if people are unwise enough to go and put two ships at a jetty, discharging on each side, it is not surprising there should be trouble, because, as a rule, the jetties are not very broad.
802. You know the Melbourne wharf at Sandridge? Yes.
803. There all the goods were taken into trucks? Yes; taken into trucks right away. I do not think they deposited them on the wharfs at all.
804. The wharfs were never lumbered at all? No; they could not do it.
805. The consequence was that the whole of the cargo went straight away to Melbourne in trucks? Yes.
806. But if you once allowed the consignees to let the goods remain until they chose to take them away, that would interfere very greatly with the use of the jetties? The consignees will leave the goods as long as they can. Many of them will leave them until they can sell them and distribute them.
807. Do they not do the same in the case of broadside wharfs? Yes; but it does not matter so much, because on a broadside wharf there is more room.
808. They block up the room a great deal? But the goods are spread right along, and the drays can get to every point easily enough, while the passage up a jetty is sometimes overcrowded.
809. I have seen a lot of cargo lying on Smith's wharf? Yes; the drays back up to the wharf, and get the goods. The ship will keep the goods under cover for a reasonable time, because it is in their interest to look after the interests of the consignees as much as possible. We are not obliged to do this. All that the ship need do is to turn the goods out on the wharf.
810. It is at the risk of the consignees if they choose to leave them there? Yes.
811. If they let them lie there, can you charge them storage? If they are there for an unreasonable time they are taken to the store, at the risk and at the expense of the importer.
812. I suppose where a wharf frontage belongs to a private person, who is anxious to make the most money out of it, a jetty is the more profitable method of dealing with the frontage? It depends very much as to whether the frontage is shorter than an ordinary ship. The frontage at Dalgety's is only 120 feet. Well, we could put nothing in there, for even a coal ship is 350 feet; but if the Government would allow us to take the jetty out 500 feet, we would gladly do it.
813. But suppose you had Smith's wharf, and the Government would allow you to run out a jetty long enough for big ships, could you not put jetties out? I would not. Situated as I am now, with the agency of the White Star line and the Aberdeen line, I should put those two lines of steamers there, and I should be satisfied with what we should make out of them. But you must bear in mind that it is not everybody who has a wharf that has also a business. A man that has not a business cannot make much out of a wharf. Very often an owner puts a jetty up, and then lets it to a man with a business.
814. Would he not put two jetties up in a case like that? Most decidedly.
815. He could turn his money to better account? Yes. I am sure Captain Smith would have done it if he had had the opportunity.
816. It was only because the Government would not let him, I suppose, that he did not? Yes. Take the same space at the Central wharf, and look at the number of ships accommodated there, compared with the accommodation at Smith's wharf.
817. Take the case of Dibbs' wharf;—until it was leased there were no jetties? Dibbs' wharf is all composed of jetties.
818. It is now; but before the jetties were built it used to be a straight wharf? I do not remember that.
819. The Government, of course, can afford to make these broadside wharfs much more conveniently than can private owners who have to look to their profit? Yes; because they are regardless of cost, and because of the land. Another thing is that private owners have not a tenure. The great difficulty is that if we build a jetty, or even a broadside wharf, we have only a short tenure—whatever tenure is fixed by the Land Board—and we are entirely at the mercy of the Government. They can resume these wharfs, I think, without compensation.
820. Has not that shortness of tenure been due to an idea on the part of the Government that a resumption of all the Darling Harbour frontage will soon become a public work, and they do not want to be blocked by long leases? As far as I know, the present system as to tenure has been going on for about fifteen or eighteen years. It is included in one of the Land Acts.
821. But has not the scheme of resuming the whole of the Darling Harbour frontage been before the country for fifteen years? It has for a great many years.
822. Is not that the reason, and not a jealousy of private enterprise? I do not think it is a matter of jealousy; I think the Government want to preserve their rights. But they would give greater encouragement to the expenditure of money, and there would be much more money expended, if the people had a tenure.
823. If the Government were to abandon the idea of resuming the frontage on the eastern side of Darling Harbour, and contented itself with making a dozen wharfs at Darling Island and Glebe Island, and then said to private owners, "Now we will give you as much right, as regards the extension of jetties, as will not interfere with the waterway,"—then, do you think private owners would make great improvements? Provided the Government were tied for all time to charge a fair rate for doing the work; but if they were to go into competition with private wharf-owners, and did the work for nothing, the private wharf-owners would have a bad time of it.
824. What length of tenure do you think would justify a private owner in making proper up-to-date wharfs—that is, with the right of resumption by the Government, with compensation? I should think twenty-one years would be a very fair thing.
825. If the Government could see its way to give twenty-one years in the case of Darling Harbour, you think private enterprise would greatly improve the wharfs there? Yes. I am sure of this, that if the Government were to give twenty-one years, even at Darling Island, and allow people to have the frontages for twenty-one years, they would put out their own jetties.
826. You think there is plenty of waterway to allow ships to project from Darling Island? Yes; I think so, with a system of echelon wharfs, perhaps.
827. Do you think if they got the right to throw out a jetty on a lease for twenty years, private people would make more use of Darling Island than the Government would do? Yes; but private people should have the right to collect tonnage dues and wharfage. There would be no profit in erecting a jetty if the Government were to collect the dues.
828. Then you think that, though Darling Island is a very splendid work, it might be utilised more by private enterprise than in the manner proposed by the Government? Well, I think it is absurd to take all the frontage of Darling Island for six ships.
829. How many do you think it could be made to accommodate? It is difficult to say right off. I do not see why it should not accommodate three times that number.
830. Looking at the present style of ships, how close together would it be safe to put jetties? If it were for export, I should have a very narrow jetty; and if it were for import, it would be necessary to have a wide one. In addition to that, you would have to leave room between the jetties for the colliers to come in and serve the ships. You would have to regulate it according to the size of the ships likely to use the jetties, and so as to allow the coaling to be carried on. I think 200 feet would be ample between the jetties. I would put the jetty at from 40 to 50 feet—60 feet for the steamer (and that is the widest steamer I know at present) and then 60 feet for two colliers, which would make 170 feet, and then another 60 feet would bring it up to 230 feet.
831. *Mr. Watson.*] So that 250 feet frontage would be enough for each jetty? Quite.
832. *Dr. Garran.*] Then a wharf of 300 feet would be ample for a wharfinger who only wanted to throw out one jetty? Yes.
833. As a wharfinger you would not like to take a long lease of a wharf if you were limited to the export trade;—you would want to make your wharf available for either exports or imports? Yes; but I do not think the import trade could be done to as great advantage at Darling Island as it could be done on this side, where all the bonds are.
834. If you were perfectly free to use the wharfage as you liked, you would still do your import trade at one wharf and your export trade at another? I would prefer to do my import trade at Miller's Point, and round towards Dawes' Battery. I should have to get a wharf on very cheap terms on Darling Island to induce me to go over there, because the wool would have to be lightered from the town to the ship there. Of course, under Captain Jackson's scheme the proposal is to sell the wool on the island.

835. It would never come to the city at all then? No; but then there are a great many other things besides wool that come in to be shipped. You have to account for the tallow, which at the present moment comes to the city; and then there are hides, and also ores. These things, no doubt, could be shipped. It would only be a question of lighterage.

T. F. Knox,
18 Dec., 1899.

836. Suppose you were doing the same business as you are doing now, and getting the same profit on it as wharfingers, if you had to have a wharf there, and a wharf where you have one now, you would have to be at the expense of two wharfs to do the same trade? As things are at present.

837. And that would add to your expense without adding to your income? Yes; unless we got a wharf on very favourable terms on the other side, with a long lease and a prospective value.

838. If all the other wharfingers wanted the same terms, that would diminish the income to be got from Darling Island? Very much.

839. Do you think the Government would get as much profit by leasing the wharfs themselves as by letting them to private persons? Not if they gave the right to put up jetties.

840. Suppose they did not give that right? If they did not give that right they could not accommodate more than six ships, because most of the ships are over 400 feet. You see if you are at a jetty you can overhang 50 feet.

841. Your idea seems to be, then, that if they did not give this right, but made a broadside wharf all round, they would not make a very remunerative investment at Darling Island? They would make a very poor investment—after taking into consideration the value of the land and the improvements they have made, and also the depreciation.

842. You think they would make a better investment if they were to let suitable wharfs to private wharfingers, with permission to put out first-class jetties? Yes, to private enterprise. I do not mean wharfingers only, because a wool firm might erect a building there. There might not be in the shipping trade, but they might let off their portion—that is, if the Government could pull the wool trade to Darling Island.

843. *Chairman.*] I understood you to say on Saturday that you prefer the broadside wharf? I do for imports. The goods can be got away quicker. I think it gives greater satisfaction to the consignee of the goods. It makes no difference to the ship. The ship bundles the goods out in pretty nearly the same time on a jetty as she does on a broadside wharf; but it gives greater satisfaction to the consignee, especially if you have a broadside berth that is a great deal longer than the ship, because you can move her up and down a little to suit the circumstances.

844. *Mr. Shepherd.*] You say you prefer broadside wharfs for imports;—what is the difference between exports and imports, as regards the loading or unloading of ships? The difference is this: that for export work you could comfortably handle two ships at a jetty, because the stuff would be taken delivery of by the ship as fast as it was brought down. The drays could not bring it down too fast for the ship to take delivery. On the other hand, delivery is given too fast for the importers to take the goods. They will not hurry themselves to take the stuff away.

845. So that the goods on the wharf would become congested? The wharf would become congested, and if there were two ships discharging, and goods being landed at the furthest end, the consignee would have a difficulty to get at his goods; and, of course, we must study the interests of the consignees, or they will not ship their goods by our steamers.

846. You say that the present wharfage accommodation is ample? It is far in excess of the requirements, for anything I can see, for years to come.

847. Taking into consideration the increase of tonnage during the last five years, for how long do you think the present accommodation will be sufficient? If the shipping goes on as it has done for the last twenty years, I cannot see any necessity for any increased accommodation for another twenty years. On this point I cannot help saying that there appears to be some misunderstanding as to what is meant by the term "shipping." I am told that Mr. Darley and Captain Jackson stated that the shipping of the port had increased 21 per cent. during the last five years. Well, what is that shipping. Is it simply that we have immense steamers coming in.

848. The tonnage has increased? But what do they bring more. The "Medic," having a tonnage of 12,500 tons—she can lift 11,000—comes into port with 1,800 tons, and the "Afric" follows with 1,800 tons, although they are on their maiden voyage from Liverpool. We do not expect to bring more than 2,000 tons by these vessels at any time; yet they are put down in the shipping as representing 12,500 tons, and this is totted up at the end of the year; but they do not bring in the tonnage that could be brought in by a 4,000-ton vessel. I cannot help thinking there has been some misunderstanding about the increase in the shipping, and that the increase in the imports and exports has not been on the basis of 21 per cent. I would not like to say what it has been. Of course I do not include imports from any of the Colonies; I am only referring to the deep-sea business. In the last year or two there have been immense imports from New Zealand in the shape of feed for drought-stricken centres in this Colony. I have not included that, because it is only a chance thing; it might happen again.

849. You saw the report, I suppose, from which this increase of tonnage is taken? I did.

850. And you think the increase of tonnage does not properly represent the increase of shipping? Yes. Take the Shire line. These boats come here and discharge their cargo, and directly they do so, they go right away to Queensland to load meat, and when they have taken in a large load of meat there, they go on to New Zealand to fill up, and then go away Home. It seems absurd to describe those vessels as an increase to the shipping of the port, because they do not bring in anything more than was brought before.

851. This report states that additional wharfage accommodation is urgently required;—you do not agree with that? No; I think the writer must have been misinformed.

852. *Chairman.*] There is one point I cannot quite follow you in, and that is with regard to your views on the increased tonnage of ships during the year, as stated in the report before the Committee: If the old 1,000 or 1,500-ton ships had remained in vogue I could understand your argument; but as the ships have grown to such enormous dimensions, although they may not come fully loaded or go away fully loaded, have not the people of Sydney to provide accommodation adequate to the size of the ships, and not merely for the quantity of goods that they may bring or take away? No, I do not think so. The Shire boats are very large boats. They discharge their cargoes very rapidly. We can discharge one of these ships on a pinch in from forty-eight to seventy-two hours, so that another one can step into her place. I do not think there is any place in the world, except Sydney, where a vessel can come straight up to the wharf and get accommodation and despatch such as is given here. In the old days, as was mentioned by Dr. Garran, the "Sobraon" was stuck up, and I can remember when vessels had to wait their turn for a berth; but now-a-days a steamer expects to get prompt despatch. There is nothing they are more glad of than to get their cargo out as quickly as possible, and get away to Queensland, or some other port where they have to load meat. Three days ought to be ample to discharge a vessel like that, and then her place could be taken by another, if not of too long a length. There are only a certain number of such great length. These are the largest boats that have ever come here, and they are coming as a monthly line; but there is no indication that any more will come. In my opinion they are too large for the trade—I am referring to the White Star line. I think that a moderate-sized boat would, perhaps, pay as well. It should be borne in mind that these immense boats have to pay tonnage dues, light dues, and pilotage as per registered ton, which, of course, is a very great tax upon the owners.

853. *Mr. Dick.*] Is there not a maximum tonnage as regards pilotage and tonnage? No; not for tonnage dues. Then there is another check to those larger vessels. These boats fully laden could not go into the Melbourne harbour. The maximum draught at which a vessel could come out of Melbourne is 27 ft. 6 in. Therefore, in building a large boat like one of these, you deprive yourself of the opportunity of using her for anything except one special trade. She could not be used as a "tramp"—as it is called here—so that she could trade here to-day and somewhere else to-morrow. She would have to go to only one or two ports with a very deep draught of water, or else she would have to put up with having to go away, as our boats do, drawing considerably less than she could be put down to if the succeeding ports were as deep as Sydney. So that I do not think you can look forward to any large increase in the big tonnage.

854. *Mr. Shepherd.*] I suppose a vessel of, say, 2,500 tons can be much more readily dealt with, requiring less accommodation than five vessels of 500 tons each? Certainly.

855. So that the actual tonnage does not altogether explain the additional wharfage required? No. The tonnage dues that are collected by Act of Parliament are at the rate of $\frac{1}{2}$ d. a ton a day. With one of these large steamers you do not want to stay at the wharf any longer than you can help, for the tonnage dues run into £25 a day. Naturally you get away as quickly as you can, and make room for another. In reference to the White Star boats, the Government reserve the right to put in other steamers; but they give us the berth at any time on forty-eight hours' notice. Of course, we can give them a week or ten days' notice from Albany; but they have the right—and, I believe, have done so—to put in another steamer; so that the wharf is not absolutely tied up to the White Star line. In Circular Quay the wharfs are tied up to the Orient and the P. & O. Companies, because they want to keep their vessels there as an advertisement. They are passenger boats, and it pays them possibly to do it; but they have smaller tonnage dues, being only half the size.

- T. F. Knox. 856. *Chairman.*] There is one fact that remains, namely, that after the completion of these Government wharfs, they are always occupied, is that not so—for instance, the wharfs at Woolloomooloo and the Quay? I do not think they are always occupied. Take the White Star wharf. There you have 850 feet. As far as I know, there have been three vessels berthed there in the last four months.
857. Then you think that in Woolloomooloo Bay the wharfage has not been availed of to the fullest extent? I do not think there has ever been any pressure—most decidedly not.
858. *Mr. Watson.*] Do you know the boats of the Federal line? Yes.
859. Do you know their length? I do not. They are pretty long boats.
860. Where are they usually berthed? The “Kent” came inwards. That was the vessel the Wharf Association did not berth. She berthed at one of the Government wharfs—I think in Woolloomooloo Bay.
861. Do they not usually berth somewhere between Dawes’ Point and Miller’s Point? Yes; there is no fixed berth for them, because they come in chartered to various people. I fancy they have berthed sometimes near Miller’s Point.
862. Have you heard any complaint from the captains of those boats about not being able to work their full number of hatches at the jetties provided? I have not come into contact with any of the captains. I have not heard any complaint. Nothing of the sort has come under my notice. It might have been the case if the wharf were not long enough. There are not many other places where there are such facilities as there are here, and I think, really, the captains are spoilt. We accommodate them too well, I am afraid.
863. *Mr. Dick.*] Are you aware that Sydney and Newcastle are practically the cheapest ports in the world for shipping? I am sure of it. They are the cheapest ports for the service rendered.
864. Do you know the “Maori King”? I know the name.
865. Some time ago when the pilotage rates were much higher, there was an amount of £125 for pilotage to enter either Newcastle or Sydney, but at present you can only charge a maximum of £20, so that the owners make a clear gain of about £100 in pilotage alone? Yes; but there are many vessels whose captains are exempt.
866. So that, as far as the official charges are concerned, it does not matter whether the vessel is 2,500 tons or 5,000 tons? It does, in regard to tonnage dues.
867. But not wharfage? Not wharfage. The tonnage dues are charged against the ship, and the wharfage is charged against the cargo.
868. A half-penny per ton per day? Yes.
869. *Mr. Watson.*] That is only while the vessel is at the wharf? She does not lie in the stream; she comes straight to the wharf.
870. *Mr. Levien.*] What do the P. and O. Company pay? They pay £2,000 a year, and the other lines pay something similar—£2,500—in lieu of tonnage dues. To show you that that is a fair thing, I am informed that the P. and O. Company would have to pay £1,800 a year if it were calculated closely. They pay £2,000 a year to the Government for the right to these wharfs, and they pay no tonnage dues. The wharfage dues are collected by the Government in addition. In regard to the White Star line, there is a different arrangement. The Government take tonnage dues and wharfage.

Edward William Knox, General Manager, Colonial Sugar Refining Company, Ltd., sworn, and examined:—

- E. W. Knox. 1055. *Chairman.*] I understand that you have a statement to make? Yes. I am General Manager of the Colonial Sugar Refining Company, which owns between 8 and 9 acres of water frontage opposite Glebe Island. The Company is not in any way interested in regard to the Government wharfage proposals, as our wharfs are used only in connection with our own business. I have read the statement prepared by the Works Department about the Glebe Island scheme, but do not concur in the conclusions therein expressed. It is not the case, so far as my observation goes, that the wharf accommodation now is insufficient. In the height of the wool season some of the berths have this year been empty for weeks in succession, and there has not been any attempt to utilise the wharf accommodation at Pymont, which would surely have been done had there been any demand for more berths. The statement says that there has been a great increase in the tonnage entering the port during the past three years; but it seems to me odd to ask for new wharfs for empty tonnage, and it cannot, I feel sure, be contended that, with the small increase in the population, and the great falling off in exportable produce, there has been a considerable expansion in over-sea imports. Nor is there any prospect of such increase; with a prohibitory tariff under federation, the deep-sea trade will diminish, though the coastal trade may increase, and the employment of larger steamers will allow of the work being done with fewer berths, while the higher cost of such boats, as compared with the old tramp, compels the owners to unload and load them in the smallest possible working time. So far as the private wharfs are concerned, I would say that the owners of these have for a long time been greatly hampered by the difficulties thrown in their way by the Lands Department. The Engineer-in-Chief does not take an unreasonable view of proposals for enlarging and improving private wharfs; but an excessive rent is demanded for the use of the land covered by the wharf. The lessee is only a tenant at will, and when he seeks to improve the whole position by substituting concrete for timber wharfs, he is met by the demand that the Government shall have the right to resume all the reclaimed land, and then to deprive him of access to the water at any time on paying the actual cost of the reclamation. The object is presumably the ultimate acquisition of the foreshores by the Government, which would be, in my opinion, a public misfortune, and would tend to neutralise such advantage as Sydney now has, by position, over other Australian ports. In wharfage, as in other matters of trade, competition is necessary to ensure progress. As to the employment of Glebe Island for the import trade, I do not think that there is any chance of this business being diverted in that direction for many years, if ever. Traders will resent being asked to send to Woolloomooloo Bay for one case and to Glebe Island for another; and if extra berthing accommodation were at any time wanted for vessels with cargoes of merchandise, this could be best provided on the Pymont and Darling Island property, which is hardly used at all now. In any case the cost of the work proposed seems to me altogether beyond the value of it when completed. I notice that this does not include the item of dredging, which would be extremely high if large vessels were to go to the island, for the bay itself is shallow, and it is probable that at the proposed wharfs an enormous amount of rock-cutting would have to be done under water, as would be the case on some of the adjoining properties, in order to get a depth of 27 feet. I do not believe that any firm here or in England would look at an offer of the 14½ acres of land and water north of the bridge for nothing if the condition of spending the £178,000 set down in the estimates were attached to the grant, and business men can work such a property much more efficiently than Government officials, so there is not, in my opinion, any justification for the proposed expenditure.
1056. *Mr. Dick.*] You have stated that in the height of the wool season some of the berths at Pymont have this year been empty for weeks in succession—that is, for the export of wool;—is it not a fact that these wharfs have not been very long completed, and that in any case it takes some time for a new fashion to be set up in the export trade? The berth I had in view was the berth adjoining the Pymont Bridge, which is never used at all by large vessels; at any rate, I think I have never seen a large vessel alongside that wharf, except at the end, for the purpose of shipping coal or horses.
1057. Would you call the “H. C. Bischoff,” a four-masted ship, a large vessel? I have never seen her there.
1058. Would you kindly state in a little more detail what you mean by the remark: “It seems to me odd to ask for new wharfs for empty tonnage”? Yes; the official statement says that the tonnage has increased by 21 per cent. in three years. The increase of the amount of tonnage entering the port is no guide as to the amount of goods, and we have the wharfs for the goods, and not for the ships.
1059. But is not the increase of the tonnage a guide as to the amount of wharfage accommodation that will be necessary? No; I do not think so, because the increase in the tonnage has not brought about any increase in the number of vessels. It certainly, also, I think, has not brought about any increase in the quantity of goods imported.
1060. But if there is an increase in the tonnage, does not that require an increase in wharf accommodation in order to deal with the vessels as rapidly as before the increase took place? I do not think so.
1061. Do you think that the last three or four years, in any case, are anything like a reliable guide as to what we may expect in the way of expansion, both of export trade and import trade? I think that the import trade is going to diminish, not increase.
1062. That is your view, as a result of federation? Yes.
1063. *Chairman.*] Do you mean by that that Sydney will cease to be the great distributing centre of Australia? To a certain extent, and also because the prohibitory tariff will promote manufacturing and reduce imports.
1064. *Mr. Dick.*] You think that any general system or resuming the foreshores along Darling Harbour, by the Government, with the view of doing away with the difficulties that at present exist therein, dealing with our trade, would be a public misfortune? Yes.

1065. You base that statement simply on the ground that it would do away with competition? It would do away with competition, and leave a number of the wharfs to be worked by management much inferior to that which now controls them. E. W. Knox.
1066. Is it not a fact that there is an association among the private wharf-owners at the present time? Among the owners of oversea wharfs there is; but Darling Harbour is to a great extent occupied by wharfs of steamship companies that do not belong to the association. 19 Dec., 1899.
1067. But the fact that the oversea owners' wharfs are now under an association points to the fact that that association has been brought about for the purpose of preventing undue competition? Preventing competition among themselves—yes.
1068. In what way would the acquisition of foreshores by the Government differ from the present arrangement, in the way of cutting down competition; at present they combine to prevent competition amongst themselves, and you say it is desirable to have competition? Yes; and, therefore, it would be a mistake for the Government to acquire the foreshores.
1069. Is it not a fact that in cases where the Government do invest public money for the convenience of traders, they are, as a rule, content with a fair amount of interest upon the money expended? I know of no case where private persons could not have served the public equally well for one-third less money, and with much more satisfactory results.
1070. Does that statement apply to Darling Harbour at present, where they have a chance of supplying the public at their own expense; in other words, comparing the facilities provided in Darling Harbour by private enterprise with those provided at Circular Quay and Woolloomooloo Bay at public expense, which of the two do you think would cater for the trade in the best manner? Give the private wharf-owner a title to his improvements, and he will beat the Government out of sight.
1071. You expect no good at all from a general scheme for resuming private wharfs? I think it would be a public misfortune.
1072. Do you know that all the wharfs in the important port of Newcastle, with one exception, are at present in the hands of the Government? Yes.
1073. Have you ever heard any complaints there as to the inefficiency of the Government facilities? I do not think it is necessary to make complaints when you get the work done for nothing. I never heard of anyone in Newcastle paying wharfage dues yet.
1074. It is a popular misconception that they do not pay wharfage dues in Newcastle; but they do not pay tonnage dues such as are paid in Sydney;—you do not think, speaking generally, that the requirements of this port, either now or for some time in the future, are, or will be, such as would justify the expenditure of any further money on wharfage accommodation at Glebe Island? I do not.
1075. *Mr. Watson.*] Are you aware that the wharfs constructed by the Government so far in this port are paying a handsome return on the money expended? I fancy that the return is handsome only because the Wharf Association keeps up the rate of wharfage.
1076. Well, the presumption is that the Wharf Association keeps up the rate to the maximum permitted by the Act, because there is enough trade at that rate to make the business pay them—that is an evidence, I should imagine, that their wharfs are fairly well occupied? I understand that the Government wharfs do not produce any revenue at all, except by way of wharfage—in other words, that the Government get no rent whatever for them.
1077. But the wharfage and tonnage returns from that source, it seems, are more than sufficient to pay interest on the cost of construction? Then why is it necessary to try to borrow money to put new pavement down on Circular Quay?
1078. It would appear, from the returns given us, that, as a matter of fact, the wharfs so far constructed are paying very well? I do not gather that from Mr. Darley's statement that appears in the paper this morning, wherein it is reported that he stated that, roughly speaking, the Government, from £1,600,000 of expenditure, which did not include the value of much of the land, were getting between £80,000 and £90,000 a year revenue.
1079. If the report stated that, it was incorrect, because that was not the evidence given by Mr. Darley; you speak of the probability of the adoption of a general scheme of foreshore acquisition and wharfage alteration by the Government as likely to neutralise such advantages as Sydney now possesses over other Australian ports;—are you aware, in that connection, that in nearly every instance in the other colonies the Governments, or other public bodies, do possess the wharfs? I know that; but I draw a wide line of distinction between the Government possessing wharfage property and other public bodies possessing it.
1080. I was about to ask you whether your objection to the Government managing the wharfs and the wharfage system would apply equally to a body representative, say, of the metropolis, in the shape of a harbour trust, which might be created? Not if it were entirely independent of the Government, and, unlike the Water and Sewerage Board, were compelled to have a sinking fund for its debts.
1081. So you would appear to be of the opinion that it would be quite possible for a body controlling as a whole the wharfage interests of Sydney to deal, because in a comprehensive, therefore in a more satisfactory, way with the wharfage system? I think that in small and narrow waters it is absolutely essential that you should have a body of that sort controlling the wharfage system; but in a harbour like Sydney, where there is such an enormous coast-line, I think it would be a mistake.
1082. But, taking Darling Harbour, is it not a fact, apparently, that although we have a great deal of water frontage, yet the water-way is narrow, and therefore not suitable for any large projection of jetties towards the centre of the Bay? But Darling Harbour is only one of four places all suitable and available for wharfage.
1083. Between Miller's Point and Dawes' Point it is quite possible that some restriction will be necessary on the length to which jetties might be taken out into the stream? Oh, yes.
1084. Your idea is that you could not rely on private owners dealing satisfactorily with the wharfage accommodation? Private owners require to be controlled, but they might be controlled and assisted, instead of being controlled and thwarted as they are now.
1085. Do you think that it is likely that private owners, even with a longer tenure, would be willing, practically, to destroy a lot of the property they have now, which, admittedly, is not sufficient to give convenience to the larger class vessels that are lately coming here, with a view of providing for that class of vessels—their present wharfs are largely inconvenient for the newer vessels, and is it likely that they will destroy those wharfs and put up new ones, even if a longer tenure were given to them? I think they would, because they have very large sums invested in the shore wharfs and the buildings connected with the jetties.
1086. *Chairman.*] Do I understand that your objections to a work of this kind go so far as to say that this Government should not do anything more in the way of wharfage additions for Sydney? I think it was from the first a mistake for the Government to interfere in the matter, and I think that the trade does not justify any additions now.
1087. Seeing that the Government railways are managed really by the Government, do you think that the acquisition of a place like Darling Island to be now worked by the Government, in conjunction with the railway system, for export purposes, is desirable? It is very desirable. The railway ought to have an outlet to the deep water.
1088. Then, having a view of the future, and seeing that Glebe Island may, or will according to the Government statement, in a few years to come be required for somewhat similar purposes, do you think it is too early, or that it is undesirable, to attempt to improve that island so as to increase the railway facilities in connection with wharfage? I think it is quite unnecessary, in the first case, so far as the next five years, at any rate, are concerned. I understand that no attempt has been made to devise any scheme to bring the railway to the island, and I am pretty certain that a survey of the bay would show that it is almost impracticable to ever take a 27-foot ship up there, unless an extraordinary outlay for dredging is undertaken.
1089. *Dr. Garran.*] You have no personal knowledge of the shelving of the water across to Glebe Island? No.
1090. *Chairman.*] You take this view of the matter: that although it might in years to come be necessary to make Glebe Island an addition, so to speak, to Darling Island, to be worked in connection with the railway, you think that at the present time it is not desirable or necessary? Yes.
1091. *Dr. Garran.*] The reason given in the official statement for extra wharfage is that the tonnage entering the port is increasing;—I understand you to say that that is a deceptive statement? Yes.
1092. A ship like the "Medic" may, and I believe does, come in with only 1,800 tons of cargo to Sydney, and yet she is entered as of 10,000 tonnage? Yes.
1093. All the ships that come here and make this their terminal port put out cargo at Adelaide and Melbourne before they come to Sydney? Yes.
1094. So they bring only a little to this port? Yes.
1095. And yet they are entered at their full tonnage? Yes.

- E. W. Knox. 1096. But, after all, they want to be berthed, whether they have little or much cargo? Yes.
 1097. Therefore wharfage accommodation must be provided for them whether they have a full cargo or merely an empty ship? Yes; but it is probable that if the number of vessels at the wharfs were counted now and five years ago it would be found that there are fewer vessels now than there were five years ago.
 1098. But larger vessels? Yes.
 1099. They want smaller space of wharfage per ton, I presume, because a large ship of 5,000 tons will want less lineal feet of wharfage than two vessels of 2,500 tons each? Yes.
 1100. So that, although these large ships require greater depth of water, they do not require the same lineal feet of wharfage? No.
 1101. Then the need for wharfage per foot is rather diminishing in consequence of the large shipping that now comes here? Yes.
 1102. Therefore the proper calculation would be to see how much the present class of vessels require as to extent of wharfage? Yes.
 1103. And that particular information is not given in the official statement? No.
 1104. Do you know whether it could be given at all by anybody? I think that the proper people to express an opinion on such a matter are the agents for the steamers.
 1105. You have been engaged in trade here for many years;—do you remember during the last few years any case where a large steamer could not get accommodated? I never heard of it.
 1106. Are your wharfs fully occupied? No; for five or six months of the year they are generally empty.
 1107. And they could be available for general trade if they were wanted? Yes, for vessels of small size.
 1108. But for vessels of that size there is plenty of berthing? Yes. I have not had any applications for berths for vessels during the time our wharfs have been unoccupied.
 1109. You will see that the Government improvements are to provide for ships of the larger class? Yes.
 1110. Is not there a need for extra accommodation for vessels of that class? I think not.
 1111. Could the private frontages give the accommodation that is wanted? Yes; if their owners were to get a decent tenure.
 1112. Is there anywhere in Darling Harbour where there is not a terrifically steep gradient up from the wharf to York-street? I think that from Dibbs' and Smith's wharfs the gradient is not very steep.
 1113. Do you not think that it is a great disadvantage to the Darling Harbour frontage that there is such a big climb? I think it is a great disadvantage to the port of Sydney, and this is evidenced by the fact that the cartage rates in Melbourne for the same distance are much lower than they are here.
 1114. Speaking of cartage rates, do you know whether the cartage rates to Woolloomooloo Bay are greater than those to Circular Quay? No, I do not.
 1115. Do you pay the same rate for goods brought to your store from Circular Quay as would be paid from Woolloomooloo Bay? We lighter all our goods from other wharfs.
 1116. Do you think that at present what the Government has done in the way of public wharfage has been to any extent an unfair competition with private enterprise? Yes; because private enterprise has been hampered by the Government regulations.
 1117. You think that if the Government did not sit on the wharf-owners, but would give them reasonable facilities for improving their properties, they would be more than equal to meeting the demand? Yes.
 1118. So they do not have a fair chance in the strife? No. That remark applies equally to wharfingers and to factories having a water frontage.
 1119. If the Government complete this work at Glebe Island, and I suppose also at Darling Island, there is a proposal to lease the frontages to private companies or persons;—would not that be as good for private enterprise as if the land were leased, and the people were allowed to make the wharfs themselves? Yes; but I appear here as a taxpayer, not as a man who wants to lease a wharf.
 1120. Still I mean that the competition, so far as ships are concerned, would be as great if the Government were to lease the wharfs to private people as it would be if the Government leased the water frontages? No; because the Government exacts the full wharfage rate.
 1121. *Mr. Watson.*] The Wharf Association does that too, does it not? Yes, I think unwisely.
 1122. *Dr. Garran.*] You mean that the Government compels those people to pay the full wharfage rate, and, therefore, the tenant must levy that on the consumer? I mean that here the consignee really pays the full wharfage rate, whereas I think there should be competition between the Government and the private wharf-owner for the trade of the consignee.
 1123. You mean to say that the leasing, say, of Darling Island and Glebe Island wharfs will not give the maximum of competition? No, it will not.

James Powell, late Collector of Customs, Sydney, sworn, and examined:—

- J. Powell. 1506. *Chairman.*] You were for many years Collector of Customs in the City of Sydney? Yes. I was Manager of the Wharf Association also for some years.
 1507. I understand you have a statement to make? Yes. I did not receive an invitation to attend before this Committee until 6 o'clock on yesterday evening, and I regret to say that I am very ill-prepared to undergo a searching examination in respect to any general statements I may make. I regret that my statement is of necessity general, because I am retired from official life, and I have not the access to official papers which would enable me to test or to support such opinions as I may have formed in the past respecting wharfage accommodation in Sydney. I was examined some years since on the same subject by this Committee, and I then, I think, hazarded the opinion that the wharfage of that date was not only equal to the wants of that time, but that the accommodation then existing was sufficient generally to suffice for any reasonable time later on. How much the conditions have changed we all know, but, speaking after consideration and with great deference for the opinion of those whose opportunities to gather facts and figures are greater than those now at my command, I hold the opinion I expressed when I was previously examined is maintained, and I still hold that the wharfage accommodation for the trade of Sydney is in full advance of the requirements of trade. *Mr. Coghlan* shows that the increase of steam tonnage for the nineteen years ending 1895 was 387 per cent. In the advertising columns of the daily Sydney journals of yesterday, four steam companies advertise vessels trading from Sydney to Europe representing a carrying cargo capacity of over 180,000 registered tons. This tonnage is the tonnage of twenty-seven vessels continually trading to this port, and the whole of the vessels are accommodated at the Circular Quay, and I may say that the berths are almost constantly filled by the vessels I refer to. Another feature is that, in yesterday's paper, the vessels advertised for London are all steam vessels, and not one sailing vessel was advertised on the berth to load for London or for any port in Europe. There are old colonists on this Committee whose memories will recall the daily advertisements of sailing ships in the back time, and the long string of names, such as the Phœnician, Walter Hood, Vimiera, Dunbar, Parramatta, Light of the Age, and a host of others—but this reminiscence would be an impertinent waste of your time if I did not intend to endeavour to found an argument upon it. I ask myself how many sailing ships have these steamers displaced. It would require a sailing fleet of 150 vessels of 1,200 tons each to take the place of the steamers now doing the Sydney and London trade:—From Great Britain, 1897, inward, 50 ships, 83,679 tons; 125 steamers, 350,992 tons; outward, 42 ships, 69,219 tons; 120 steamers, 337,737 tons. Many years ago the trading sailing vessels were principally berthed at the Circular Quay for loading, and a great number of them discharged their inward cargo at the (so called) back wharfs. Now it is all changed. The steamers have the trade to Europe, and they are nearly all at the Circular Quay; the sailing vessels as between London and Sydney have almost disappeared, and the back wharfs are frequently vacant. In this way I still contend then that the accommodation for shipping is sufficient for the trade of the port; but then it is a question of the nature and character of the accommodation offered. I am sure that any person visiting Darling Harbour must feel that, if it were not for the great intercolonial trade—and I may add, the greatest and most important carrying trade we have—Darling Harbour would be almost deserted by shipping. Empty berths are now the order of the day. The facts are that the Circular Quay is the place of places for the grand steamers and that it will long remain so. It has always appeared to me that if it is desirable in the interests of the public to increase wharfage accommodation, that end would be best attained by the resumption of private wharfs. I speak as an entirely disinterested person, and I have always felt that the Government should resume private wharfs rather than enter upon expensive projects in anticipation of a trade which may be quite as much revolutionised in the future as it has been in the past. Just
 as

- as certainly as that twenty years ago it might have been found difficult to berth the "Great Eastern" at the Circular Quay, so certain is it that in future years the over accommodation now suggested may not be found up to date. The idea of levelling Glebe Island and making wharf frontages is a grand one, but it is, I think, premature, and, under existing conditions, and with the great wharf extensions now approaching completion on the west side of Darling Harbour, it would be well to wait a few years and see the outcome of the latest additions before attempting any new works of a costly character. Another matter I wish to refer to is the extension of the wharfage area. It does not appear to me desirable to get too much away from the present trade centres. If it be granted, as I suppose it will be, that there is more than ample accommodation for the discharge of all the sailing vessels to the port, it follows that the proposition to utilise Glebe Island is with a view to the export trade of the Colony mainly, and, if so, the experience of that trade is that the place of shipment in the harbour will be influenced in various ways, and that it would perhaps be cheaper to load wool ships in the stream than to punt wool to Glebe Island. I think it would be wise to take a calm view of this wharf question. The questions—Does the present system pay?—Will the proposed addition pay? should form part of the inquiry. The value of the sites occupied, the amount spent in construction, from the introduction of responsible government to the present time, are questions to be considered in the attempt to bring the wharfage question within the range of commercial criticism. The telegram I received from the Secretary invited me to give you my views on the wharfage question and trade of Sydney. This must be my excuse for going over-old ground, which some of you may regard as tedious.
1508. There is one feature of your remarks with which I do not seem to quite agree—that is, in regard to Circular Quay; you seem to think that Circular Quay will always be the great centre wharfage for our large vessels; does it not occur to you that Circular Quay is every day becoming more a place for the ferry traffic of the city? There is no doubt of it.
1509. And it would appear, as far as we can see, that the ferry traffic is pushing out the big steamer traffic, especially on the southern end of the quay and the south-western portion of it;—is that not so? I scarcely think that the ferry traffic will ever be worth what the present dues give to the Government from the discharging and loading of ships.
1510. It is not a matter of value, but of utility? If it is not a matter of the value of money, or of making the thing pay, I have nothing more to say. It has always appeared to me that the big ships wish to be at the Circular Quay because it is a good advertisement for them in getting passengers. That place has always been a favourite place. Even in the old days of nearly fifty years ago we know that the passenger ships always endeavoured to get the best berths they could at the Circular Quay. Of course, it was a very small quay at that time.
1511. But have they not been gradually pushed out; within your memory and mine, and that of most of us round this table, the whole of the southern end of the quay was occupied by a string of large passenger sailing vessels;—where are they to-day? They have disappeared.
1512. And the ferry steamers have taken their place? The ferry steamers have taken the head of the cove, no doubt; but of course, the extensions have been made where the P. and O. boats are, and below that to the point, and all round that. At one time that was a kind of picnicking place.
1513. At the present day you must have noticed in regard to the large German steamers which berth at the south-western corner of the Quay, there is a kind of movement to get them away from there because the space is required for the ferry traffic? That is the larger giving way to the smaller, if it be desirable.
1514. I agree with you that for a certain class of steamer, such as the large mail boats, the Quay will always be popular; but in this inquiry we have had brought prominently under our notice the large vessels known as "tramps" and the very large line of steamers such as the White Star line, vessels of 10,000 tons each; those are the steamers which seem to require special wharfage accommodation, and where do you think they would find their resting-place? I do not think they would find it at Glebe Island.
1515. I do not want to know where they will not go, but where will they go? They would be very well served in the stream.
1516. But they bring general merchandise for warehousemen, and so on, and do you think it is desirable that they should discharge there goods in the stream? It has been done again and again in the case of large ships.
1517. But is that up-to-date? No, I do not think it is. Then the question is, are we going to get all the vessels of that class and character.
1518. We do not know what we are going to get, but we know what we have at the present time, and these vessels are a very large factor in our trade at the present time? No doubt.
1519. And those are the ships that we want to see if we can better convenience them to-day, and not only to-day, but in a few years to come;—do you think that, for many years to come—with Woolloomooloo Bay, with Circular Quay, with the wharfs commencing at Parbury's and going round to Moore's wharf, and with Darling Harbour and Darling Island—we have plenty of wharfage for years to come? If you take in what are known as the private wharfs, I say unhesitatingly yes; but if you leave those altogether out of consideration, and say they are past their time, then I agree with you that you will have to provide accommodation somewhere else.
1520. I do not wish to put aside the private wharfs for one moment; I mean to take the whole thing together—the Government wharfs and private wharfs, commencing at Woolloomooloo Bay and going right round to Darling Island;—do you think that there is ample accommodation for shipping to-day and for a good many years to come? Taking in the railway jetties on the west side, I think there is ample accommodation, because you have not commenced to use Darling Island yet.
1521. Although the quantity of wharfage accommodation may be sufficient in the space just mentioned, are the facilities afforded at those wharfs up to date for the present shipping necessities; have you been round lately sufficiently to say? Speaking generally, I would say that, with certain exceptions, there is no doubt that the Government wharfs are superior to the private wharfs, both in position and also in material and approach.
1522. Then your evidence amounts, I think, to this—that taking the present available wharfage, starting on the south-eastern end of Woolloomooloo Bay, and working gradually right round to Darling Island, bring all those wharfs up to date, and then there is ample accommodation for the shipping of the port to-day and for a good many years to come? That is my opinion.

William Robson Benson, Manager, Wharf Association, Sydney, sworn, and examined:—

1523. *Chairman.*] You are manager of the Wharf Association? Yes.

1524. The chairman of that association has already given evidence before the Committee, and you now supply some figures which he promised to furnish? Yes. I have the information in the form of a letter. It is as follows:—

W. R. Benson.
9 Jan., 1900.

To the Chairman, Parliamentary Standing Committee on Public Works,—

Dear Sir,

Sydney, 6 January, 1900.

Following my communication under date 18th December last, I now have the pleasure of handing you herewith returns then promised:—

Firstly:—The number of berths available to berth oversea vessels, excluding those provided for at Government wharfs; Secondly:—The number of oversea vessels which have arrived during three years, commencing from 1st July, 1896, and ending 30th June, 1899, and their respective tonnage.

I would point out that the berths available for berthing oversea shipping at private wharfs number thirty-three.

During the past three years (*vide* returns) the number of steamers and ships which have arrived numbered—steamers, 196; sailers, 253; total, 449.

Taking into consideration the knowledge that the following shipping firms berth their vessels at wharfs under control of the Government:—White Star line, Dangar, Geyde, & Co., A. McArthur & Co. (Limited), P. & O. S.S. Co., Orient S.N. Co., M.M.S.N. Co., Burns, Philp, & Co. (Limited), Gibbs, Bright, & Co., North-German Lloyd Co., German Australian Co., E. & A.S.S. Co., and that intercolonial steamers, vessels and timber-laden ships, are specially provided for, there are available thirty-three berths, capable of berthing on an average, say, two vessels each a month (sixty-six), or 792 a year. Now, taking into consideration that only 449 over-sea vessels—other than those provided for at Government wharfs—have visited the port during three years from 1st July, 1896, to 30th June, 1899, it means the average a year numbers, say, 150. As previously stated, there are thirty-three berths, each capable of berthing two vessels a month, which equals sixty-six a month, or 792 a year. These figures show that, outside Circular Quay and Woolloomooloo Bay wharfage accommodation, there is absolutely an excess of accommodation over and above that required to meet the shipping business of the port, inasmuch as the private wharfs are capable of berthing 642 vessels over and above what they are now doing.

I would also direct your attention to the fact that five broadside berths, each 500 feet long, could be made available for shipping purposes at Darling Island, and that on eastern side of Woolloomooloo Bay there is a berth in course of construction,

W.R. Benson. construction, and a proposal to construct two more berths—900 feet—on western side. This means, together with Darling Island, an additional eight berths, and, according to my previous statement, that a berth is capable of turning round two ships a month, there are then forty-one berths capable of berthing eighty-two vessels per month, or 984 a year, as against the average number of arrivals unprovided for, viz., 150 a year.

9 Jan., 1900.

In conclusion, I would say that the wharf occasionally occupied by the White Star line of steamers is not always occupied. This observation would also apply to several berths at Circular Quay.

Yours, &c.,
W. R. BENSON,
Manager, Wharf Association.

P.S.—I would desire you to note that all steamers are only partly laden. That the term over-sea vessels applies to all vessels arriving from ports outside Australasia.

I have also a return showing the number of inward cargo ships and steamers over-sea berthed at wharfs, exclusive of those controlled by the Government, from 1st July, 1896, to 30th June, 1899. According to this return, the number of steamers is 196, and the number of ships 253. I have another return showing the berths capable of berthing over-sea vessels. It is as follows:—

RETURN showing Berths capable of berthing Over-sea Vessels:—

Association.	Berths.	Private Wharfs.	Berths.
Dalgety's New	4	Hoffnung's	2
Smith's	3	Parbury's	2
Adelaide	1	Walker's	1
Moore's	3	Grafton	2
Towns'	1	Reid's Federal	3

In making the estimate contained in this last return, I have acted liberally, because I have not included Burns, Philp's wharf, and one or two others.

1525. You remember giving evidence before the Committee in November, 1888, when the question of running a wharf out into the middle of Woolloomooloo Bay was considered? Yes.

1526. You then gave evidence as to the wharfage accommodation of Sydney, and contended that there was ample accommodation for all purposes without the erection of the proposed jetty;—between 1888 and the present time, have the private wharf-owners kept the wharf accommodation up to date, so as to meet the requirements of the steamers, which have so largely increased in size, and which now visit this port regularly? Yes; excepting large steamers, such as the P. & O., the Orient, the Norddeutscher-Lloyd, and the White Star line. I may mention, however, that it is very hard indeed for private individuals to compete against the Government. Private individuals are continually handicapped. In the first place, they are limited in the construction of a jetty to a certain length, and there is also no fixity of tenure. The Government fix a limit line, and beyond that line you cannot construct a jetty. The line varies in different directions, but you cannot extend beyond it. If you do get permission they charge you a rental for the use of the water. Now, the Government themselves have no limit-line for their own constructions, and they pay no rental for the use of the water. You can see, therefore, how private wharf-owners are handicapped. Taking it all round you may say that the private wharf-owner is simply strangled by the Government competition. Even if a private wharf-owner made good accommodation the Government might at any time come in and give better.

1527. Your observations as to the extension of jetties and fixity of tenure would not apply to cases where the wharf-owners have the fee-simple? I do not know of any owners at Darling Harbour who have the fee-simple.

1528. Take the bight round from Dawes' Point to Smith's wharf, are the wharfs there not largely in the hands of private owners? I think they all pay the Government for the right of construction.

1529. Is not Dalton's wharf a modern wharf? Yes, though the jetty is not very long; but I think they have a right to extend another 100 feet.

1530. Is it a serviceable wharf? For a certain class of trade.

1531. I mention Dalton's wharf, because from my observation it is generally occupied by vessels? Not so much I fancy as one or two other wharfs. The best occupied wharf is, I think, Dalgety's new wharf, that is, Dibbs' old wharf.

1532. Do you think that with an improved tenure the wharf-owners would improve their properties more? I am quite certain of it.

1533. Your statement is to the effect that the ships are not in continuous occupation of the wharfs;—is not that the inevitable result of steamers overtaking sailing vessels in the import and export of goods? Of course, as regards steamers, we know exactly when they will arrive, and in the case of sailing vessels we do not know the date. Suppose a White Star liner comes alongside a wharf, bringing about 2,000 tons of cargo, it is discharged in two days, and she then leaves for another port. The same rule also applies to the Tyser line of steamers and other cargo steamers. Where you can berth two sailing vessels in a month you can berth three or four steamers.

1534. In the case of steamers there is not likely to be such a continuous occupation of wharfs as in the case of sailing vessels? Excepting steamers like the P. & O. and the Orient Companies' boats, which are purely passenger ships, and which wait for their regular days of sailing.

1535. In the present state of things the occasional vacancy of wharfs may be looked upon as inevitable? Yes; you will never have all the berths fully occupied. It is absolutely impossible.

1536. It is a necessity of the trade, by reason of the frequent and regular despatch of large steamers, that the wharfs are sometimes empty;—it may be described as an incident of the trade of the port? Exactly.

1537. It must not be taken as a reason for the non-necessity for increased wharfage accommodation? Quite so. A ship like the "Medic" may occupy a berth for three days, and for the balance of the month the wharf may be idle.

1538. The tendency of trade indicates that there will be frequent vacancies at the wharfs? Yes; it is only when it is found impossible to berth ships that there may be said to be a necessity for increasing accommodation.

1539. Do you know of any cases where ships have been delayed and have not been able to come alongside the wharfs through the want of accommodation on their arrival? As far as my recollection serves me, speaking of the past two years, and perhaps going even further back than that, I can think of only one steamer, the "Kent," which was so situated. We could have berthed that steamer ourselves, but we were very fully occupied by other large steamers, and we had to refuse her. I think that without any delay she went alongside the Circular Quay. That is the only case of the kind I can recollect.

1540. Can you say from your general knowledge whether there are frequently occasions when ships cannot get berths? That is not the case to my knowledge.

1541. We are informed that the White Star line are in treaty for the north-east berth at Woolloomooloo Bay for the use of the "Medic," the "Afric," and the "Persic";—is that arrangement completed? There is a private arrangement between Dalgety's Company and the Manager of Public Wharfs, I think. It was possible that we could have berthed their steamers at Smith's wharf; but the negotiations I had in hand fell through. Then Dalgety's took the matter in hand, and secured accommodation at Woolloomooloo Bay.

1542. Why could you not arrange for the steamers to be berthed at Smith's wharf? If we had been able to make arrangements with adjoining owners we should have had a berth of about 700 feet; but we could not come to arrangements with a certain company.

1543. Does not a case of that kind show the necessity for the provision of other wharfage for these large ships? It is very possible that in the near future it will be possible to berth them at Smith's wharf. There are close upon 1,200 feet of broadside frontage there, and I think it is more than probable that in the near future it will be converted into two wharfs capable of berthing the White Star line and another steam line.

1544. The state of affairs you indicate would seem to point to the necessity for some entire wharfage association;—that is, an association covering the whole of the wharfs;—that would overcome the difficulty of adjoining owners being unable to come to an agreement? I think the difficulty to which I referred just now will be overcome in a very short time. I am under that impression.

1545.

W. R. Benson:
9 Jan., 1900:

1545. Do you think there is a tendency to still further increase the tonnage of vessels coming to this port? It is very hard to determine the maximum limit of steamers; but I fancy the limit has been practically reached at the present time. Take the "Medic," for example: If she drew one foot more water, she could not come up the port beyond the Spit. She could not get into Adelaide or Melbourne either, alongside the wharf, leaving Brisbane out of the question. Therefore, I think, we are not likely to have larger steamers. Of course larger steamers go from England to New York, but they are purely passenger boats. We could not fill steamers like the "Medic" and "Afric" from New South Wales alone, and it would not pay them to bring cargo out to one Colony only. Trade will adjust itself to conditions, and I think you will find that the smaller class of steamers will always have a certain amount of work.

1546. You have, no doubt, given the Darling Island works some consideration. The wharfs there are just about being brought into operation, and seeing that the railway system of the Colony is in the hands of the Government, and that we are likely to become exporters of wheat, as well as frozen meat, do you not think it is desirable that the shipping should be worked hand-in-hand with railway transit? The export shipping is another question altogether. Take wheat for example. It can always be brought down from the country and discharged direct from the railway into the ship's hold. It can be easily tested in the trucks, but that is not the case with a bale of wool. A bale of wool must be opened out, and samples must be taken away. You must have specially adapted warehouses with a certain light, so that you can see the texture of the wool. You can ship wheat from the railway truck into the hold, but you will never be able to do that with wool.

1547. We have been told that wool warehouses would be better, if they were so arranged as to admit of loading from the top;—is that your opinion? It would be a great convenience; it would save all the hoisting.

1548. You have, I suppose, thought out the proposed improvements at Glebe Island? Yes; I know the place very well.

1549. Do you think it is necessary to provide more wharfage there? If I might speak plainly, I think it would be an extravagant waste of money. In the first place, you have three or four splendid berths at Pyrmont; they are adjacent to the city, and when you get a new bridge over there, the existing inconvenience will disappear in respect of traffic. The wharfs are, as I say, near to the heart of the city, and I should think it would be practicable to berth there three of the largest steamers coming to the port. I would take the coal traffic away from the wharfs at Pyrmont; they are used now only for the shipping of coal and the landing of ballast. I would transfer that trade to Darling Island, and would use the Pyrmont wharfs simply for the import business. Outside of Circular Quay I take the wharfs at Pyrmont to be the finest site in the harbour. You could carry on a big import trade there without any congestion of traffic.

1550. And you would take the coal traffic round to Darling Island? Yes; I would make it altogether a place of export. I might explain also with regard to Glebe Island that you have in Johnstone's Bay only 15 or 16 feet of water at low tide. If you were contemplating an import trade there you would have consignees of goods writing to their agents in London asking them not to ship by vessels discharging at that place. In the first place, there would be $1\frac{1}{2}$ mile or about 2 miles of extra cartage. We have already had consignees writing home requesting their representatives in London not to ship by certain vessels discharging at certain wharfs, and I am sure they would do that in the case of Glebe Island.

1551. We have had the evidence of carriers as to the charges from that point, and it would appear that there would be a little extra charge? I should say there would certainly be an extra charge, owing to the difference in distance.

1552. You object to the place on the ground of inconvenience? On the ground of the delay and the extra cost. You would have two bridges to cross, and a big grade on the other side.

1553. The tenor of your evidence is that private wharf-owners should have a fair show in the way of long tenure of their frontages, and that if they had that they would so construct their wharfs as to meet the requirements of the port, providing ample accommodation for many years to come? Yes; excepting accommodation for exceptionally large steamers. Take Parbury's wharf; that wharf at the present time is 350 feet long. They have applied for another 100 feet. That would give them 450 feet. In the case of jetties you can overhang a little. You can suit a ship according to her hatches; therefore, the 450 feet would really mean about 500 feet. Then there is the Central wharf; they have a right to extend 100 feet, and they are now out about 320 feet. That would give them over 400 feet. All the large ships, such as the "Medic" and the "Friederich der Grosse" are already provided for. We have to provide only for outsiders, and that we can do at the present time. We can make more than ample provision.

1554. What width should a jetty be at which vessels could load or unload on either side? As a rule, we do not discharge two ships at a jetty; we discharge one and load the other. In our Association we pay particular attention to stevedoring. If you had a width of 200 feet, with only one ship unloading, without supervision over the stevedoring you would be liable to be blocked. At several of our wharfs we do the stevedoring ourselves, and we assort all the consignees' marks, so that if a consignee should send a dray down for his goods he can find them in a certain stack, and there is no delay. In many instances where ships discharge at a figure below which it may not pay the stevedore to do the work the goods are simply tumbled out of the slings, and there is no assortment of the cargo. In those cases any jetty must get blocked, but that is not the case with several of our jetties.

1555. With proper stevedoring, and with ships arranged in the way you suggest—that is, one unloading on one side, and another loading on the other—what would be an ample width? About 60 feet.

1556. You think that would be ample for all purposes? Yes, if one stevedore does the loading and unloading.

1557. Do I understand that you are opposed to the Government having wharfs? Not in any shape or form. All that I desire to point out was that the Government enjoy privileges that private wharf-owners do not enjoy, and I gave you illustrations.

1558. Upon equal terms the private wharf-owners can give as good accommodation as can the Government? Yes; but in several respects the Government wharfs are in a different position. Take Woolloomooloo Bay for example. In the case of some of the land the Government resumed there they paid from £180 to £200 a foot. If you have a berth 500 feet in length, and pay £200 a foot, that means £100,000. In constructing their wharfs the Government put no value on the foreshores, outside the construction of the wharfs. Take the Challis property; about £200 a foot was given, and for Hill's property about £170 or £180. The Government take no notice at all of that. They have to reclaim a lot of land and to fill in, and they make no charge for it. A private individual will have to charge for that, and the Government, in estimating the revenue from their wharfs, leave that out of the question. Then, again, in our Association we allow something for wear and tear. A planked wharf needs constant attention. You must spend so much a year in order to keep it in proper order. A plank will wear out, or a pile will want renewing.

1559. You think, then, that in this respect the Government have a pull over private owners? Yes; they do not charge themselves with the freehold at all, and we have to take that into consideration.

1560. *Mr. McFarlane.*] You think there is sufficient wharfage accommodation at the present time for the numerous lines of steamers visiting this port? Yes; taking into consideration the fact that there is a proposal to make another berth at Woolloomooloo Bay, I do not think any more accommodation is necessary. There are the Pyrmont wharfs.

1561. Suppose a new line of steamers was established, would it be easy for the owners to get wharfage accommodation without the erection of new wharfs? Yes. In addition to the accommodation at Woolloomooloo Bay, I estimate that at Pyrmont we have accommodation for three of the biggest ships that could enter the port.

1562. You are not aware of any difficulty in getting wharfage accommodation experienced by a new line of steamers establishing trade here? I am not aware of it.

1563. You seem to anticipate that if wharfs are erected at Glebe Island there will be a considerable increase in the cost of cartage to the warehouses? That is my belief.

1564. Are you aware of any delay to shipping owing to insufficient facilities at the wharfs;—take Howard Smith's wharf, for example? You are referring to the intercolonial trade; my remarks have applied exclusively to the over-sea trade.

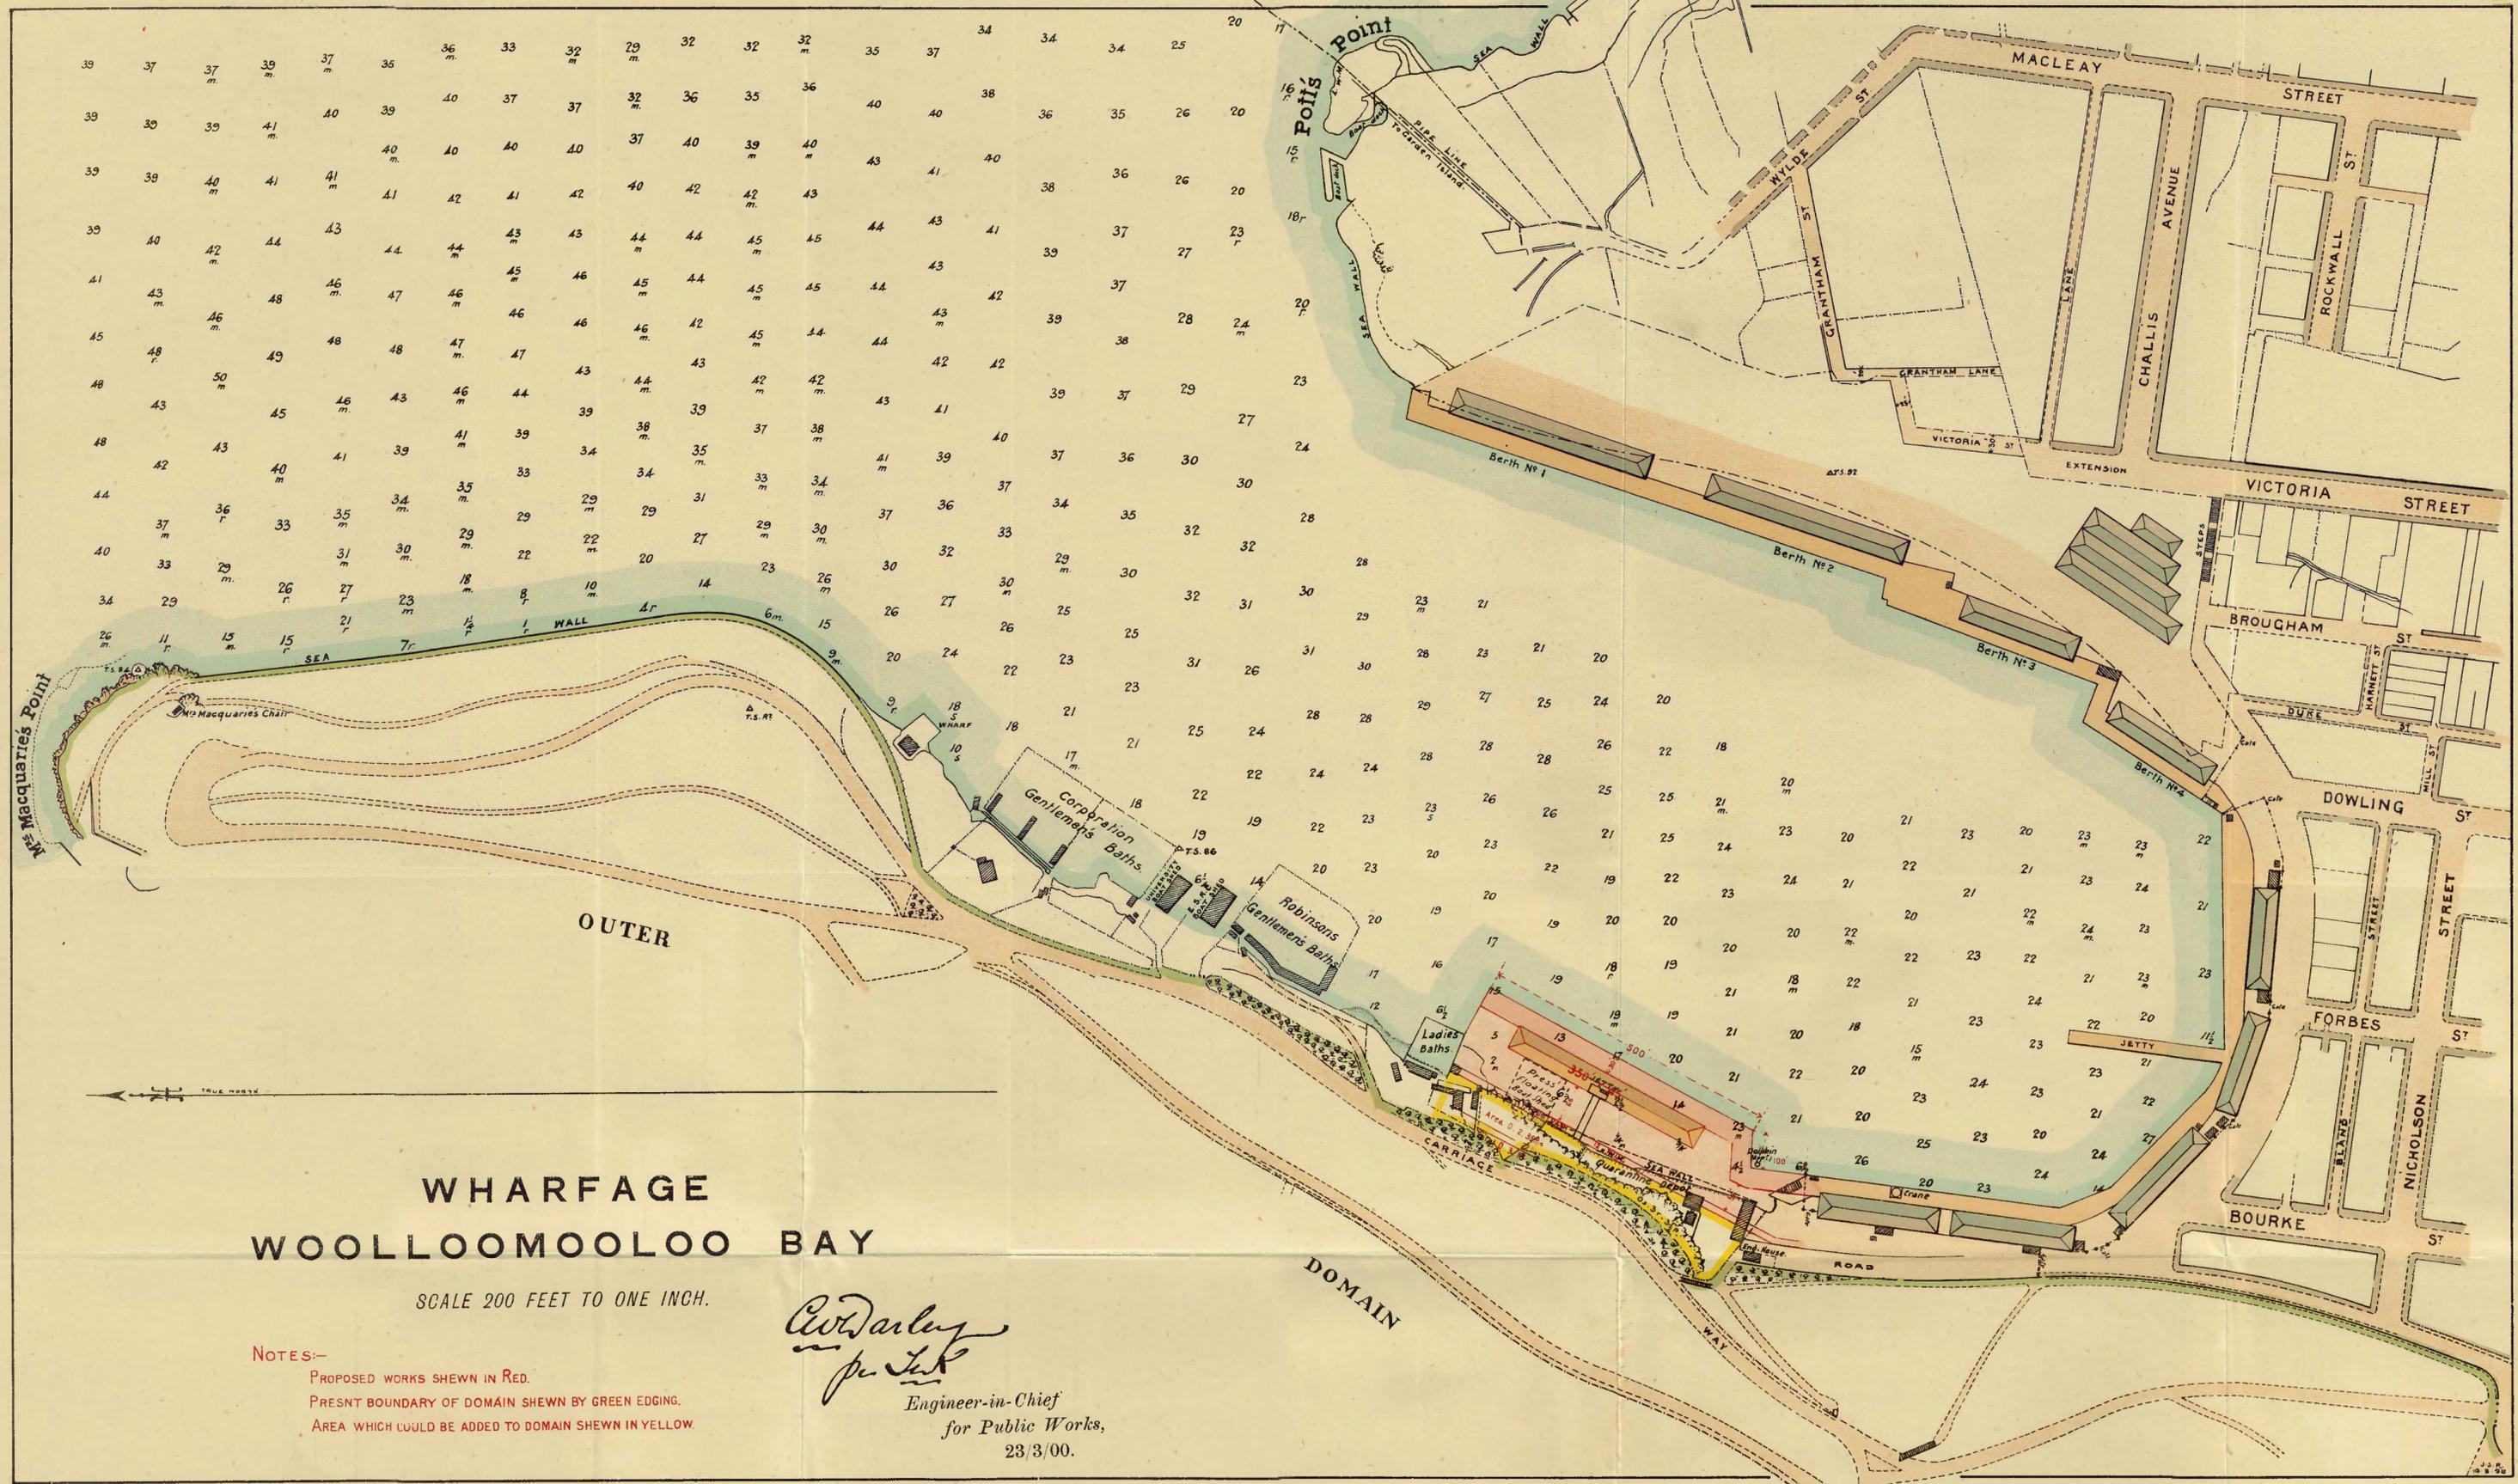

1565. But with regard to the intercolonial trade, do you not think increased wharfage accommodation is necessary? Under existing conditions I think they manage their business very well. Some people expect too much for what they pay. In the port of Sydney we have been in the habit of giving too much altogether. There is no port in the world which gives so much and receives so little.

1566. My reason for asking the question is that it is generally known that on the days of departure of intercolonial steamers there is great difficulty in getting the drays to the wharfs to load;—there is a similar difficulty in discharging cargo? I am not prepared to give evidence as to the intercolonial trade. I have been dealing exclusively with over-sea ships. I admit that in the intercolonial trade there is a certain amount of delay, but I think it might be obviated, in a great measure, by better inspection of the traffic.

1567. I have seen a line of drays extending nearly half a mile waiting for their turn to get to the wharfs? In the intercolonial trade people, as a rule, rush their goods down at the last moment, and that leads to congestion.

- W. R. Benson. 1568. Would not increased facilities do away with that congestion? I do not think so. I think the shippers are to a great extent to blame for it.
- 9 Jan., 1900. 1569. Perhaps they do not get their orders until the last moment? That also may have something to do with it.
1570. You do not think there is any likelihood of larger over-sea ships trading to this port? I should imagine that the "Medic," the "Afric," and the "Persic" are about the largest steamers likely to come here. A ship drawing over 27 feet of water could not get up the harbour over the sand-bar. In Adelaide and Melbourne also she would have to lighten her cargo, and that would mean additional cost. It would not pay to build larger vessels for one port alone.
1571. Could they not dredge the harbour? It is not at all likely, I think, that the Government would expend hundreds of thousands of pounds in dredging for the benefit of one company.
1572. Is it not a fact that for the past twenty years every steamer which has been built for existing lines has been of larger dimensions than the steamer she has replaced? No doubt that has been the case.
1573. Is there not, then, reason to suppose that the ships would increase in size with the increased volume of trade? You must take into consideration the suitability of the ship for the trade she is to follow. As I have already pointed out, bigger ships than those of the White Star line could not enter the port. If ships coming to the port had to lighten their goods it would take a lot of gilt off the freight.
1574. It is fair to assume that the companies would not build their boats of larger dimensions unless the trade warranted it? I think it will be many years before the trade will warrant larger ships than the White Star liners coming here.
1575. At the present time some of the liners cannot get alongside the wharfs at Adelaide? That is so. I do not think they can get to Brisbane at all. There is a wharf at a considerable distance from Brisbane which some of them might get alongside.
1576. Your evidence refers mainly to over-sea ships? Yes.
1577. And the arguments applied to those ships would not apply to intercolonial trade? No.
1578. *Mr. Shepherd.*] I think you said that 60 feet would be an ample width for two vessels at a jetty—one loading and the other unloading? Providing there were one stevedore. We have the control of the stevedores. One stevedore loads and unloads; therefore we have everything under our control, and we take care there is no block.
1579. In giving evidence in 1888 you said you thought that a width of from 150 to 200 feet would be required? Yes. At that time the circumstances were different. It was proposed to construct a jetty 700 feet long, and to put two or three ships on each side. The effect of that would be that the ship at the extreme end would be blocked by the ships in-shore. You would require an extra width in that case.
1580. Your width of 60 feet applies to only one vessel on each side? Yes.
1581. Is it your opinion that additional wharfage is absolutely necessary in Sydney? I think not.
1582. How many ships do you say can be accommodated at Pyrmont? I should think about three. You have one wharf there with a length of 1,070 feet.
1583. Do you think the piers there are wide enough to accommodate one vessel on each side? Yes; one is apparently 70 feet in width, and to the westward you have a width of about 80 feet or 90 feet.
1584. Even with the accommodation there and at Woolloomooloo you think the shipping is already fairly provided for? Yes.
1585. *Mr. Watson.*] You do not favour the construction of any more wharfage accommodation by the Government at the present time? Excepting the wharfs in contemplation at Woolloomooloo. I am particularly opposed to the construction of wharfage at Glebe Island, when you have such jetties as those at Pyrmont.
1586. Your Association has been opposed for many years past to any proposal to increase the wharfage accommodation of Sydney? I do not think so. I am advocating the use of the jetties at Pyrmont purely in a public spirit. They would be the biggest factor, by way of opposition, we could possibly have.
1587. Did not your Association oppose the construction of the wharfs at Darling Island? I do not think I gave evidence as to that proposal.
1588. I think that you yourself and the chairman of the association have opposed each proposed extension of wharfage by the Government? I do not think we have taken up that position. What I now say is that for the import business the Pyrmont wharfs are infinitely superior to the Darling Island wharfs. You might make Darling Island an emporium for the export trade. I do not think we have ever opposed the wharfs there in any shape or form.
1589. Are you aware that at the present time, even allowing for the various wharfs owned by the Government being debited with the cost of land resumption, which has in some cases been recouped to a certain extent, they are still paying a fair percentage on the outlay—between 3 and 4 per cent.? Nothing is written off for maintenance or depreciation, and a jetty will last only about twenty-one years—I mean, of course, a pile jetty.
1590. A great number of the Government wharfs are not pile jetties;—what about the wharfs at Darling Island? Nearly all the Government wharfs are pile wharfs, with decking.
1591. You think that twenty-one years is the limit of life of those constructions? I think so. I think you will find that Mr. Darley will support what I say.
1592. Have the jetties under your control been reconstructed in twenty-one years? Yes; we are reconstructing portions of them every twelve months. Piles require to be pulled up and new ones put down, and the decking has to be renewed.
1593. Captain Jackson estimated the life of the wharfs at Circular Quay at nearly fifty years? I am under the impression that Mr. Darley at one time quite agreed with us that the life of a jetty—I am speaking only from memory—was about twenty-one years.
1594. *Mr. Dick.*] In your statement you said you had thirty-three berths, accommodating on the average two vessels per month;—to complete that information, and make it more valuable, could you give us any idea of the average length of the berths? They would go from 400 feet down to 200 feet. The 200-foot berths would be few in number. There would be, perhaps, not more than four of them. They would be suitable for the Hamburg and New York ships. We take a great many sailing vessels of comparatively small tonnage. They vary from 3,000 tons to 1,200 tons. We have Glasgow, Hamburg, and New York ships of only 1,200 tons.
1595. *Chairman.*] Some of the witnesses opposed to this proposal seem to think that the extra tonnage of the port does not necessarily carry with it the necessity for increased wharfage accommodation;—do you agree with that suggestion? I can quite understand that extra tonnage does not involve a proportionate increase in imports; but quite apart from that, the ships of larger size require a certain space at the wharfs.
1596. For example, a 10,000-ton ship may deposit only 1,200 tons of cargo, and yet will require a great deal of space? Quite so.

NEW SOUTH WALES.

LAVENDER BAY JETTY.

(PARTICULARS RESPECTING EXTENSION OF THE LEASE OF.)

Printed under No. 4 Report from Printing Committee, 12 July, 1900.

LAVENDER BAY JETTY.

ON the 19th July, 1899, the Railway Commissioners made application for a special lease, under section 89 of the Crown Lands Act of 1884, of $7\frac{1}{2}$ perches of land, parish of Willoughby, county of Cumberland, at Lavender Bay, for a jetty, they being the proprietors of fee-simple land to which the lease applied for would front.

About the same time the Borough of North Sydney applied for an extension of their lease of the same site, which was to expire at the end of 1899.

At the time of these applications the jetty was let to the North Shore Ferry Co., at a rental of £80 per year, of which £30 was paid to the Department of Lands as rent under the principal lease.

On the matter coming on at the Land Court on the 2nd April, 1900, after several adjournments, the merits of the applications were discussed to some extent, and a further adjournment granted to allow of certain proposals being made by the solicitor for the North Sydney Council, which might avoid a conflict between applicants.

On 3rd April, Messrs. Pigott and Stinson wrote to the Solicitor for Railways, proposing that the Commissioners should allow the Council's application to proceed unopposed, the latter agreeing to pay a nominal rent of £1 per annum for the Commissioners' land, and to grant a new lease to the North Shore Steam Ferry Co. on the same lines as previously.

On 10th April the Council's solicitors were written to, intimating that the Railway Commissioners were ready to enter into the proposed agreement, and asking to have a draft submitted.

The agreement referred to was not proceeded with, pending negotiations between the North Sydney Council and the Sydney Ferries (Limited), successors to the former company.

On 27th April, Commissioners met Mr. E. M. Clark, M.P., with the Mayor and a number of aldermen representing the North Sydney Council, when the whole matter was discussed, and it was intimated that the only interest the Commissioners had in the matter was the convenience of the travelling public, and that proceedings in respect of the license would be suspended until the Council and the Sydney Ferries had arrived at some conclusion. The Commissioners, being aware of the terms the Sydney Ferries Co. offered, considered them reasonable, advised their acceptance, and intimated they would withdraw application if accepted.

As a result of these negotiations, as is assumed, the Commissioners, on 28th June, received a communication from the Town Clerk, North Sydney, that the Council had agreed, on obtaining a renewal of its lease, to give a further lease to the Ferries Co., on the terms of their former lease, with a further condition—(1) that the fares ruling at present should not be increased, and (2) that the boats should run at not greater intervals than thirty minutes between each trip—to which terms it was announced that the Sydney Ferries had agreed.

On receipt of this intimation, the Commissioners instructed their solicitor that the lease to the North Sydney Council might be consented to.

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

Professor RICHARD THRELFALL, M.A., A.M.I.C.E.; and
EDWARD FISHER PITTMAN, Assoc. R.S.M.

Greeting :—

Know ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or either of you—the members of Our recent Royal Commission of Inquiry “into the cause of the dangers to which vessels carrying coal are said to be peculiarly liable, and as to the best means that can be adopted for removing or lessening the same”—to now watch the effect of the recommendations contained in your Report of the 28th April, 1897, and to complete experiments already instituted by you, and to make further experiments, as may be deemed necessary, for the more complete elucidation of the causes of dangers to which vessels carrying coal are liable: And We do, by these presents, grant to you, or either of you, at any meeting or meetings to which each of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be the better informed of the matters herein submitted for your consideration and every matter connected therewith, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power, at your discretion, to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do, with as little delay as possible, report to Us, in the office of Our Colonial Secretary, under your hands and seals, upon the matters referred to as aforesaid, and that you may have power to certify unto Us from time to time as you may deem expedient what you may find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our Colony of New South Wales, that they be assistant to you and each of you in the execution of these presents: And We appoint you, the said Professor RICHARD THRELFALL, to be President of this Our Commission, which said Commission We declare to be a Commission for all purposes of the Act 44 Victoria No. 1, intituled “*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*”

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this eleventh day of May, in the sixtieth year of Our Reign, and in the year of Our Lord one thousand eight hundred and ninety-seven.

VICTORIA,

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
 . Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

ARTHUR ERNEST SAVAGE, Esquire.

Greeting :—

WHEREAS by an Instrument under the Great Seal of Our Colony of New South Wales, bearing date the eleventh day of May, One thousand eight hundred and ninety-seven, We did appoint PROFESSOR RICHARD THRELFALL, M.A., A.M.I.C.E., and EDWARD FISHER PITTMAN, Esquire, Assoc. R.S.M.—the members of our recent Royal Commission of Inquiry “into the cause of the dangers to which vessels carrying coal are said to be peculiarly liable, and as to the best means that can be adopted for removing or lessening the same”—to watch the effect of the recommendations contained in their Report of the 28th April, 1897, and to complete experiments already instituted by them, and to make further experiments, as might be deemed necessary, for the more complete elucidation of the causes of dangers to which vessels carrying coal are liable: And whereas the said EDWARD FISHER PITTMAN has resigned his office as a member of the Commission constituted by the Instrument aforesaid: Now, therefore, know you that We of our especial grace have thought fit to appoint, and do hereby appoint you, the said ARTHUR ERNEST SAVAGE, to be a member of the said Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the sixty-second year of Our Reign, and in the year of Our Lord one thousand eight hundred and ninety-eight.

By deputation from His Excellency,

(L.S.)

FREDK. M. DARLEY, Lieutenant-Governor.

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on Record by me, in REGISTER OF PATENTS, No. 20, page 186, this twelfth day of November, One thousand eight hundred and ninety-eight.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
 Principal Under Secretary.

COAL CARGOES FURTHER INQUIRY COMMISSION.

REPORT.

To His Excellency the Right Honorable WILLIAM, EARL BEAUCHAMP, Knight, Commander of the Most Distinguished Order of Saint Michael and St. George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY :—

We, your Excellency's Commissioners, have the honor to report the result of an experiment which has been conducted by us to ascertain the practical effect of moisture in promoting the spontaneous combustion of coal.

The Commission was appointed on the 11th May, 1897, following on an inquiry made under a former Commission into the causes which lead to the spontaneous combustion of coal in ships. During the course of that inquiry it was ascertained that considerable doubt existed here and at other large coal shipping centres as to the part played by moisture in aiding or accelerating spontaneous combustion; and the primary object of the present Commission was to gain further information on this matter by means of a practical test under conditions similar to those obtaining when wet coal is loaded into ships.

Mr. Pittman resigned from the Commission, and Mr. A. E. Savage was appointed in his stead on the 10th November, 1898.

To ensure a reliable and decisive result it was known, from writings on the subject, and the work of the previous Commission, that it would be necessary to deal with a large body of coal, and some difficulty was experienced in securing a site suitable for the accommodation of the buildings required to contain the amount decided upon; but ultimately, through the kindness of the directors of the Sulphide Corporation, we secured temporarily a portion of their land at Cockle Creek, conveniently situated for the erection and loading of the necessary bins.

We were unable to proceed with the experiment immediately on completion of the buildings owing to the difficulty of procuring small coal, partly through its not being available from any one colliery in the quantity and time required, and partly owing to the unwillingness of several of the colliery proprietors to supply the Commission with coal. This unwillingness seemed to be founded on a belief that the result of the experiment, if heating took place, might prejudice the trade of the colliery whose coal was purchased by the Commission. While we do not think there are any grounds for such a belief, in deference to it, we refrain from mentioning the source from which the coal was obtained. It is, however, a coal regularly used and shipped in large quantities, and is not one which differs in any material respect, so far as the result of the Commission's experiment is concerned, from that of many other collieries in the Newcastle district.

When ultimately the supply of coal was arranged for, it was impossible to obtain it as rapidly as was desirable, and the filling of the bins consequently extended over a period of twenty-one days.

For

For reasons, mainly of economy, it was decided at the outset not to observe temperatures except at considerable intervals, until the coal showed signs of heating. In view of the notable difference in the temperature of the two bins when the first thermometer reading was taken, and the peculiar irregularities in the temperature curves subsequently recorded, it is to be regretted, on scientific grounds, that the temperatures were not taken more frequently in the early stages of the experiment, though the practical conclusions are in no way affected by this omission.

CONSTRUCTION AND SITUATION OF BINS.

In view of the known importance of ventilation and removal of heat by atmospheric influence in connection with spontaneous heating of coal, we deem it necessary to describe the construction of the bins at some length.

Each bin was constructed so as to contain a cubical mass of coal, the length of each side being approximately 21 feet. The walls were constructed of old planks, averaging 6 inches wide by 1 inch thick, supported externally by a rough timber frame, well strutted to resist the outward pressure of the contained coal. The lining planks being of somewhat irregular shape, there were numerous spaces between them, which, though too small to allow coal to pass, permitted a certain amount of ventilation over the whole external vertical surface of the bins. To protect the coal from rain and sun, a flat galvanized iron roof was provided, supported on short uprights from the main frame of the bin at a height above the level top of the coal of from 4 feet on the north-west side to 7½ feet on the south-east side. The sides of the bins between the coal and the roof were closed with boards sufficiently to prevent the entrance of rain, but not too closely to prevent free ventilation.

The two bins were separated from one another by an air space of about 9 inches between the walls. This space was not open at the bottom or sides, and there was consequently no free circulation of air, but it was sufficient to give good heat insulation between the two masses of coal.

Two sides of the structure were entirely exposed to the weather, but on the south-east side (that on which the coolest winds prevail) it was protected by a railway embankment nearly as high as itself, and the space between it and the embankment was filled in with coke during the whole time the experiment was in progress. On the south-west side there was also a pile of coke almost as high as, and close to, the bins. It was on this side that the wet coal was situated.

FILLING OF BINS.

The erection of bins was completed about the end of October, 1897, but for reasons already mentioned, filling with coal did not commence until November the 12th, 1898, after which date the work proceeded as follows:—

November 12th	36 tons in dry bin	36 tons in wet bin.
„ 14th	45½ „ „	45½ „ „
„ 15th	36 „ „	36 „ „
„ 16th	36 „ „	36 „ „
„ 22nd	36 „ „	36 „ „
„ 25th	38 „ „	38 „ „
December 2nd	18 „ „	18 „ „
Totals	245½ „ „	245½ „ „

The two bins were loaded as nearly as possible simultaneously, in order to equalise the composition of the coal and the conditions under which it was loaded.

The coal was filled from the railway trucks into wheelbarrows, and tipped from these directly into the bins at several points over the area of the floor. The height from which the coal fell was at first 17 feet, gradually lessening until the bins were full. The two bins were filled as nearly as possible at the same time and rate, and as each barrow load of coal was dropped it was spread with shovels over the surface of the coal already tipped, thus avoiding, so far as possible, the separation

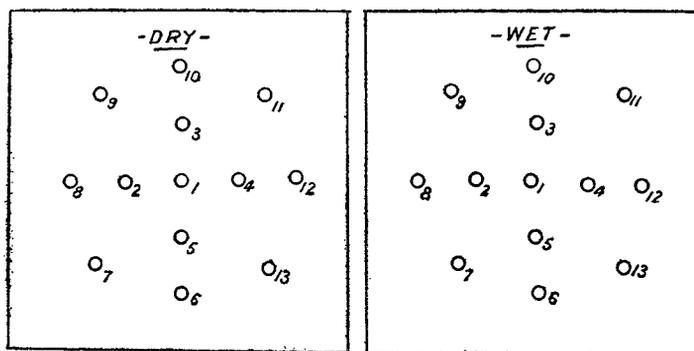

separation of the fine from the coarse coal. If the coal had been tipped at one point only and not levelled, a conical heap would have been formed, down the sides of which the larger pieces of coal would have rolled fastest and accumulated at the bottom.

When loading the coal into the "wet" bin, a stream of fresh water from a hose was continuously played over it in such a way as to thoroughly saturate it.

The quantity of water used was sufficient to cause a small stream to flow from the bottom of the bin, but not sufficient to wash out any considerable quantity of fine dust.

For the purpose of taking temperatures, thirteen thin galvanized iron pipes of about 2 inches in diameter and .018 inch (.457 millimetre) wall thickness, were placed vertically in each bin prior to loading, and were situated as shown in the diagram.

PLAN OF BINS.

The impact of the coal in loading slightly displaced these pipes, but not to any serious extent except in the case of two of them—No. 3 in the dry bin and No. 5 in the wet bin—which became obstructed so as to prevent temperatures being taken below 16 and 8 feet respectively from the surface.

It had been foreseen that this might happen in spite of all precautions to the contrary, but we were afraid to use any but very thin pipes for the following reason:—It was the object of the experiment to ascertain the distribution of temperature in a heap of coal under normal conditions, and it was therefore important that this distribution should not be affected by circumstances peculiar to the experiment. If the walls of the tubes had been thick, the vertical distribution of temperature in the tubes would have depended appreciably upon the conductivity of the tubes themselves, as well as upon the distribution natural to the coal, and the object of the experiment would not have been attained.

DESCRIPTION OF COAL USED.

The coal used was what is known as "small" coal, and contained the following proportion of sizes in samples taken from the bins at the conclusion of the experiment.

Sieve.						Dry Bin.	Wet Bin.
Remained on 2 mesh sieve	30.20	36.81

* Shape of openings approximately square, and diameters measured parallel to one side.

Samples taken from the coal while being loaded into the bins showed an average of 2·2 per cent. of moisture. The complete analyses of the coal are given below, as well as their "coking power."

ANALYSES.

"Dry" Bin.

Analysis of sample of small coal taken from same colliery and similar in every way to that used in the bins. The sample was obtained subsequent to the conclusion of the experiment, the original samples not having been preserved:—

<i>Proximate Analysis.</i>				<i>Ultimate Analysis.</i>			
Hygroscopic moisture	1·72	Carbon	68·512
Volatile hydrocarbons	31·83	Hydrogen	4·652
Fixed carbon...	51·93	Oxygen	} 11·559
Ash	14·52	Nitrogen	
			100·00	Sulphur	·503
				Ash	14·774
Specific gravity	1·387				100·000
Sulphur in coal	·495 per cent.				
Coke—well swollen, bright, firm.							
Ash—reddish brown, flocculent.							

Analysis made after the coal was dried at 100° C.

"Wet" Bin.

Analysis of sample from coal remaining in the "wet" bin, taken some time after the conclusion of the experiment:—

<i>Proximate Analysis.</i>				<i>Ultimate Analysis.</i>			
Hygroscopic moisture	1·75	Carbon	69·252
Volatile hydrocarbons	31·27	Hydrogen	4·731
Fixed carbon...	53·08	Oxygen	} 11·352
Ash	13·90	Nitrogen	
			100·00	Sulphur	·518
				Ash	14·147
Specific gravity	1·387				100·000
Sulphur in coal	·509 per cent.				
Coke—slightly swollen, dull, firm.							
Ash—light red brown, granular.							

Analysis made after the coal was dried at 100° C.

COKING TESTS.

Coal and sand were passed through a 60-mesh and then through a 100-mesh sieve, and the intermediate portion, *i.e.*, that which passed the 60, but remained on the 100-mesh sieve, was mixed so as to contain coal and sand in the following proportions:—

No. 1—Sand, 20 per cent.; coal, 80 per cent.	No. 5—Sand, 70 per cent.; coal, 30 per cent.
" 2— " 40 " " 60 "	" 6— " 80 " " 20 "
" 3— " 50 " " 50 "	" 7— " 90 " " 10 "
" 4— " 60 " " 40 "	

A sufficiency was placed in a 1-inch porcelain crucible (covered) and heated over a kerosene blast burner for one hour, the bottom of the crucible just showing red heat. The contents were then turned out on to a table, and the coke was pressed on top with a steel spatula to test resistance. The

The portions containing up to 80 per cent. of sand withstood the pressure of the spatula when it was deflected half an inch from a straight line without breaking. With a somewhat stronger pressure those containing 80 parts of sand were crushed. The cakes containing above 80 parts of sand were completely broken to powder with a deflection of the spatula of much less than half an inch. The coking power of the coal was, therefore, 80 of Mond's scale.

METHODS AND RECORDS OF OBSERVATIONS.

The bins being full on the 2nd December, the first temperature reading was taken on the 10th December by centigrade thermometer. The subsequent readings were taken at intervals shown by the temperature records. (See Appendix, p. 12.)

The temperatures recorded are the mean of two and sometimes three readings at each point. The reason for taking more than one reading was not because there was any extensive variation, but more as a check on the accuracy of the observer. The observed readings were corrected to the true temperatures by a table of corrections supplied with the thermometers from the Physical Laboratory of the Sydney University. The corrections resulted from a comparison of the thermometers used with the standards, whose two changes had been studied. The thermometers were enclosed in copper cases, both for the protection of the instruments and to provide a mass of metal to retard alteration in temperature while the thermometer was being drawn to the top of the tubes for observation. Experiments were made to determine the fall of temperature in the time usually required in pulling the thermometer to the top of the tube, but this being found inappreciable no correction was applied.

The temperatures were taken at two alternate sets of levels on alternate days, as is shown by the "temperature records," until towards the close of the experiment, this being rendered necessary by the inability of the observer employed to take the temperatures at all the points of observation in any one day; as it was, each day's work consisted of 156 readings. The curves are therefore, perhaps, not quite as representative as they might have been had observations been more frequent. It would, perhaps, have been appreciably better had there been daily readings in each pipe at each level, at any rate, when the temperatures began to rise rapidly, but this was impracticable under the circumstances.

The first temperature readings taken on the 10th December showed a mean temperature of 39.8°C . in the dry and 28.9°C . in the wet bin, a difference of 10.9°C ., of which we have no explanation, though most of it, at all events, must have been due to cooling produced by evaporation from the extensive surface of wetted small coal during the prolonged loading of the bins. That it was due to more rapid spontaneous heating of the dry bin seems improbable, in view of the slow speed of the rise of temperature recorded immediately subsequent to this date. With regard to the weather conditions, nothing abnormal was observed.

When the temperature of the coal in the "dry" bin began to rise, it increased very rapidly (precisely as in the experiments of Fayol), until February 13th, when at 8 feet from the surface in the centre tube the temperature was so high as to melt the solder connections of the thermometer and char the string that was used for raising and lowering it, thus causing the instrument to fall to the bottom of the tube. After the loss of the thermometer a cord was lowered into the tube and left for a short time, and on being drawn up was found to be charred for about half the depth of the bin from the top, and indicated by its appearance that the temperature was highest at about 8 feet from the surface.

In view of this decisive result and the inflammable nature of the bin and its surroundings, on February 13th it was decided not to risk a fire by prolonging the experiment. The dry bin was therefore flooded with water and unloaded as far as was necessary to remove all the hot coal. Before unloading there was no visible smoke, though there was a distinct, but not strong, smell of the gaseous products of distillation of coal. On digging down, the heat seemed to be confined to a spot immediately in the vicinity of the centre pipe. No visible amount of coking had
taken

taken place and the bulk of the coal was not to be distinguished by appearance from fresh coal. After the heated part of the coal and such as fell in from the sides during digging down, amounting altogether to about one-third of the whole, had been removed, the bin was left and showed no subsequent signs of heating.

The "wet" bin gave absolutely no indications of heating beyond the slight rises of temperature shown in the thermometer readings, and from the 27th January there was a steady decline in the mean temperature. Minor variations of temperature at particular points in both bins probably correspond to variations in ventilation depending on changes of direction of the wind, &c.

CONCLUSION.

In drawing an inference from these experiments we must restate the problem that we set out to solve. When coal becomes wet, either in the mine or in transport, or on the occasion of its being loaded on to a ship, are we to consider it as more or as less dangerous than coal loaded as mined, from the point of view of its liability to spontaneous combustion thereafter? To this question our experiment affords a direct and unconditional answer. Coal is less liable to spontaneous combustion when it is loaded wet than when it is loaded dry. If we pursue the inquiry still further and ask—how much less liable is coal to spontaneous combustion when loaded wet? we are unable to give a precise answer. Nevertheless our temperature curves (Appendix II), taken in conjunction with the similar curves formerly obtained by Fayol (and referred to in the Report of the previous Commission), indicate that if coal of the composition above stated, *i.e.*, ordinary New South Wales Newcastle coal, be loaded wet, the chance of its becoming heated during a voyage of eighty days through any ordinary weather is almost vanishingly remote.

The results of the trial are in no respects more interesting than in showing how very much coal is cooled by wetting it thoroughly with water, which itself is not very much cooler than the air.

Whether coal at a given temperature is, or is not, more subject to spontaneous combustion when it is wet than when it is dry our trial does not enable us formally to decide. This is a question of some possible interest, but it is not the question we have to deal with, and it remains perfectly open.

Another question which must be regarded as open, in so far as our experiment is concerned, is this: Is coal more liable to heat when saturated with salt water than it is when saturated with fresh water?

A question arising out of the trials is the following:—Was the wet coal protected from spontaneous heating by the fact of its being at a lower temperature, or by the action of the water in hindering the access of oxygen to the particles of the coal, or by both of these causes? From what we know of the way in which the heating of coal depends on the temperature of the coal, it might be supposed that the cooling would account for the immunity enjoyed by the wet coal. This, however, is not the case. If we look at the diagram on sheet 1 (Appendix II), showing the march of the maximum, mean, and minimum temperatures of the coal in the dry and wet bins respectively, we shall find two curves of supreme importance, *viz.*, those referring to the progress of the maximum temperatures during the first ten days, from 10th December to 23rd December. These curves are not far from parallel, showing that the central portion of the wet coal was heating nearly as fast as the dry coal.

By the 12th January the maximum temperature of the wet coal had reached the point at which the dry coal started, and by 18th January it had risen 7 or 8 degrees above this point. Now, why did not the temperature continue to rise? It is clear that either the wetting of the coal had exercised some specific restraining action, or that the external temperature had so fallen so as to allow the heat to pass off as soon as it was generated. The latter hypothesis is negatived by a study of the curves on sheet 4, which show very little variation in the temperature of the outer tubes. We are therefore thrown back on the first hypothesis, that the water does

does exercise a restraining influence, quite independently of the cooling which it brings about. What is the nature of this influence? It seems to us there are, at all events, three ways in which the wet bin might have been more or less protected.

1. Some of the fine dust may have been washed away.
2. Some of the fine dust may have been made to cohere, forming mud.
3. The surface of the particles being wet the carbon can only combine with oxygen after the latter has been dissolved by the water. Now, water can only dissolve oxygen from air very slightly, less than six volumes per 1,000 of water under the actual conditions obtaining in the coal heap, while in a 1,000 volumes of air there are about 210 volumes of oxygen. Moreover, when the coal has taken up the oxygen from the water (supposing it capable of doing so, of which there can be little doubt, though so far as we know it has not been proved), the water has to dissolve more oxygen before the coal can get it, and this takes time. It follows that Fayol was probably correct in regarding water as exercising a strong protective influence on coal. (See Report, N.S.W. Commission on Coal Cargoes, page 75.)

Our conclusion under this head is therefore that the water employed not only cools the coal to a greater or less degree, but that wet coal is in itself probably less liable to spontaneous combustion than dry coal. This conclusion can, of course, only refer to the coal we used; but there is reason to believe it will apply to all coals not containing a great excess of pyrites, and very possibly to them too. The truth is, that the idea that wet coal is more likely to heat than dry coal does not rest on any direct or scientific evidence. Instances brought under the notice of the former Commission on Coal Cargoes broke down on cross-examination, or were otherwise explained. In 1876 the English Commission on the heating of coal cargoes asked the question as to whether wet coal was or was not more liable to heating than dry coal, and received twenty-six answers to the effect that wet coal was the more dangerous. An analysis of the evidence, however, discloses that twenty-five of these answers were based on "general impression" or hearsay evidence only, while the twenty-sixth was not tested by cross-examination.

The opinions referred to were held, not by scientific men, but by those engaged in the coal trade, and concurrently with the idea that heating was due to a sort of fermentation in the coal similar to that which takes place in hay, in which case, of course, moisture plays a very important part. All such views, it seems to us, must now be definitely abandoned, nor is there any chemical or physical reason for thinking that salt water would be more likely to promote heating than fresh water, but quite the reverse.

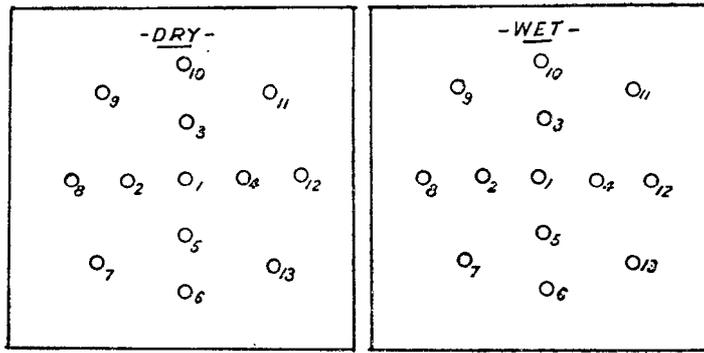

RECOMMENDATION.

Having in view the fact that cases of spontaneous heating invariably occur in the heap of small coal under the hatchways, and in the light of the foregoing conclusive result, we recommend that when large ships are being loaded during warm weather (say, when the air temperature is 90° F. or over) a hose should be played down the hatchway so as to wet, at all events, the coal which collects at that spot.

(situated about 3 feet radially from Centre Pipe).

Each of the equal lengths of the ordinates corresponds to 10°C: & the curves are simply placed one above the other for the sake of economy of space.

Appendix III.

NOTE BY PRESIDENT.

During 1898, the President of the Commission visited Liverpool, the Manchester Ship Canal, the unloading appliances of the London Gas and Coke Co., and the port of Cardiff, with the object of seeing for himself what precautions are taken in England for the loading of coal. Interviews were also granted to him by the officials of the Marine Department of the Board of Trade, and he desires to formally tender the thanks of the Commission to the officers of the Board of Trade for the facilities which they afforded him.

As the results of this investigation were practically merely to strengthen the conclusions arrived at, and expressed in the report of the previous Commission, it is not necessary to dwell upon them in detail.

The general conclusion arrived at is that, with the exception of the Lewis & Hunter plant at Cardiff, no precautions whatever are generally taken to prevent the breakage of coal. Curiously enough, at Cardiff, where considerations of safety would seem likely to have led the Lewis & Hunter system to be employed in the loading of sailing ships, it was found, on the contrary, that this appliance was practically entirely employed in loading coal for the large steamship companies, and the sailing vessels were loaded by tipping coal from the hatchways. In defence of this practice, it was stated that the large consumers insisted on having their coal loaded by the Lewis & Hunter cranes, in order to secure the minimum breakage of their coal. It is satisfactory to note that, with the exception of the Lewis & Hunter plant at Cardiff, the Newcastle, N.S.W., appliances are better than any other arrangements examined.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRIAL OF SEAMEN AT SYDNEY AND NEWCASTLE FOR
OFFENCES ON BOARD SHIPS.
(PARTICULARS RESPECTING.)

Printed under No. 2 Report from Printing Committee, 28 June, 1900.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 12th December, 1899, That there be laid upon the Table of this House a Return showing,—

- “ 1. The number of seamen who were tried at the Water Police Court, Sydney, and the Police Court, Newcastle, for offences on board ships whilst in the Ports of Sydney and Newcastle, during the years 1897, 1898, and 1899.
- “ 2. The nature of the offence or offences with which the seamen were charged.
- “ 3. The punishment awarded each seaman, amount of fine, or term of imprisonment.
- “ 4. Nationality of vessel, and port of registration.”

(*Mr. Samuel Smith.*)

RETURN of Seamen tried at Newcastle for Offences on board Ships whilst in the Port of Newcastle (Port Hunter) during the years 1897, 1898, and 1899.

The President, State Children Relief Board, to The Chief Secretary.

Charitable Institutions of New South Wales,
State Children Relief Board,
Richmond-terrace, Sydney, 5 April, 1900.

Sir,

In compliance with the provisions of Section 12 of 44 Victoria No. 24, I have the honor to present to Parliament my Annual Report showing the operations of the various divisions of the State Children Relief Department during the year ended 5th April, 1900.

A REVIEW OF THE OPERATIONS OF THE STATE CHILDREN RELIEF BOARD.

Upon examination of the statistics published in this report, which are more comprehensive than usual, it will be found that last year's results are exceptionally satisfactory.

Up to the year ending 5th April, 1896, the State Children Relief Board dealt only with children provided for apart from their parents, but since 10th September of that year deserving widows and deserted wives have been assisted by the Government to make provision for the support of their own children.

On 5th April, 1896, 3,456 children were placed out under the State Children Relief Act of 1881, and cost the Government £42,200 a year. At the present time 3,844 children are placed out under the provisions of this Act, but 1,301 of this number are either adopted without payment or are now supporting themselves. The children left in the custody of their mothers, and partly supported by the Government, have reached a total of 3,257, and the total cost of administration under both policies now amounts to £62,615 a year.

The capitation cost of children wholly supported by the State, apart from their parents, was £14 4s. 1d. during the year ending 5th April, 1899—the lowest capitation cost secured in any colony in Australia. This year these children have cost the Government only £13 19s. 3d. per head, or 4s. 10d. less than the expense incurred during the preceding year.

Prior to the introduction of the two distinct policies of boarding-out, the number of children under the age of twelve years increased at the rate of 325 a year, and an annual addition of £4,740 was made to my Board's expenditure. Last year, however, instead of this increase, the numbers in this division decreased by 58; and during the year under review there has been a further falling-off of 20. Owing, however, to the change of policy the reduction in the cost of administering this branch of my Board's work cannot be wholly regarded as a saving to the Government, for the cause which led to this reduction increased the expenditure in another division, though not to the same extent. The expenditure for the year 1895 over and above that for the year 1894 amounted to £4,767, whereas the additional cost in 1896 is set down as £4,725. In 1897-8 the expenditure of my Board was necessarily heavy, owing to the introduction of fresh legislation; but the work reached a normal condition in 1899, and then, instead of the outlay increasing at the rate of close upon £4,800 a year, it was found that the increase amounted to only £1,365—the lowest annual increase during any of the preceding ten years. And I am pleased
to

to be in a position to state that the operations of the present year also show that the annual increase in expenditure has varied but slightly from last year's experience. It will, therefore, be seen that, by omitting the years 1897-8 (during which the change of policy took place, and the admissions were necessarily heavy), and making a comparison between the normal increase in expenditure during 1895-6 and 1899-1900, the gross expenditure of the State Children Relief Board under the provisions of the Principal Act increased at the rate of £4,740 per annum, whereas under the present system of administering two policies the additional demand made upon the Consolidated Revenue does not exceed £1,500 a year—a relative decrease of £3,240. If the annual increase under the Principal Act had continued during the past four years at the same rate as it did prior to the introduction of additional legislation, the £42,200 per annum expended in 1896 in connection with the boarding-out of children with foster-parents would have already increased to £60,960. The total expenditure for the year 1900 for the combined work under both Acts is, however, found to be £62,615, or £1,655 in excess of the estimated cost under the original policy of boarding-out. From these figures it will be observed that on the 5th April, 1901, if the admissions under the Principal Act had continued at the same ratio as in 1895-6, the gross cost under the system of supporting children apart from their parents would exceed the estimated expenditure on that date of administering both departments of work.

Children wholly supported by the Government in the custody of foster-mothers cost about £14 per head per annum, but the natural guardians can provide for their offspring if assisted to the extent of about £6 per annum for each child. The mothers are not entitled to remuneration for services rendered in attending upon their own children; but foster-parents are not expected to undertake the custody of State children at the actual cost of maintenance. The cost of providing for one child, apart from the parent, is thus more than the cost of providing for two children left in charge of their mother. These allowances to mothers are invariably fixed at a minimum, so that thrift on the part of the parent and the elder children may not be influenced by the operation of this legislation, but the rates are increased whenever it is found that the allowance is inadequate. [*See page 11.*]

In addition to being able to announce that the annual increase in the demands made upon the Treasury have averaged only £1,500 a year during the past two years, there are other features connected with last year's administration to which I can confidently draw special attention. I find that, owing to the Acting-Director's firmness in carrying out my Board's directions, the revenue collections from parents has increased by 26 per cent., although the children wholly maintained by the Government have decreased in numbers. The additional revenue from this source amounts to £238, but savings in other directions have totalled £843. There are now 1,141 State children apprenticed under the State Children Relief Acts, each of whom is self-supporting. The total amount passed through the Apprentices' Wages Trust Account since 1881, amounted to £23,731 10s. 10d., £19,791 10s. 10d. of which has been paid to children whose indentures have expired. The cash balance now drawing interest in the Savings Bank is thus £3,940. During the year under review, £580 was collected in excess of the wages paid during the preceding year.

Passing from an examination of the financial operations of my Board's administration to the condition of the State children placed out under the Principal Act, I hope to be able to show that the results in this direction are still more satisfactory. In the first place I wish to explain, in order that a correct value may be attached to the figures I intend to quote, that the State Children Relief Board places out foundlings, scrofulous infants, and a large number of frail and delicate children as well. During the past year 262 children have been treated in the Cottage Homes for Invalid Children, and 3 deaths only were recorded. I have had a mortality table prepared of the whole of the State children reared apart from their parents during the past four years, and find a noticeable annual reduction in the death-rate. In 1897, 7.5 out of every 1,000 boarded-out children died from various causes. In 1898, this death-rate was reduced to 5.5; in 1899, to 4.9; while this year, I have much pleasure in recording the extraordinarily low death-rate of 3.6. Seeing that the cost for medicines and medical attendance has also been £327 less than last year, there is every reason to be satisfied with the general health of this class of dependent children.

But

But there is another interesting experience which is even stronger evidence of the health, comfort, and happiness of these children. The Act under which widows and deserted wives have been allowed assistance to support their young families was introduced to prevent the hitherto compulsory separation of mother and child before aid could be extended. On 5th April, 1896, 2,441 children were provided for apart from their parents. Of this number, approximately, 800 were admitted solely on the ground of their mothers' destitution. After the passing of the amended legislation it was anticipated that these women would have sought the restoration of their children, and applied for cash allowances to enable them to provide for their offspring in their own homes. These anticipations, however, have not been realised. I find that during the year ending 5th April, 1896, 288 children were withdrawn by parents and relatives unconditionally. After the application of the provisions of this Act, in September, 1896, these women made no effort to regain the custody of the children they had previously handed over through force of circumstances, and with whom they would not have parted had it been possible for the State Children Relief Board to have given cash allowances at that time. As a matter of fact, 286 children only were withdrawn in 1898, while in 1899 the discharges from the general division reached exactly the same number. These totals include not more than twenty-five transfers from one division to another, and, without deducting this number, the totals are actually less than the number discharged without payment during the year prior to this Act coming into force. When it is taken into consideration that the State Children Relief Board never refused an application received from a respectable woman for the return of her children, no conclusion can be arrived at other than that these women, who are allowed freedom of intercourse with their children, found them so well provided for by the Government that they preferred to leave them with their foster-parents rather than take them back and receive an allowance to assist them in supporting them at home. This is unique in the administration of the Boarding-out System; and I believe it will be readily admitted that if these children were unkindly treated, or if their mothers felt that they could improve their condition by withdrawing them from their guardians, the State Children Relief Board would not be in a position to record this experience.

PART I.

TWO POLICIES OF BOARDING-OUT CHILDREN.

I have already explained that since 10th September, 1896, the State Children Relief Board has dealt with children partly supported by the Government in the custody of their mothers, as well as with those who have had to be reared apart from their parents. Last year I fully described the methods adopted by my Board in connection with applications submitted by parents entitled under the Act of 1896 to receive cash allowances, but as a misapprehension appears to exist concerning the condition of the women who have been granted assistance by my Board, it is necessary to again explain that it is illegal to continue these payments after the return of the husbands; and in no instance have the allowances been paid, even in the case of chronic invalids, when the father has returned to his family. To prevent imposition in ordinary cases of desertion, my Board not only insists upon warrants being issued by the applicants, but has also taken the precaution to prevent these warrants from being withdrawn. In each instance the Clerk of Petty Sessions furnishes the Boarding-out Officer with a certificate, showing that a special note has been made of the case, and that an intimation will be sent should the deserter be arrested or an attempt be made to withdraw the warrant. While the warrant remains in force, it is highly improbable that the husband will return to his family without protecting himself against the consequences which must result if the Police or my Inspectors hear of his whereabouts; and, if he induce his wife to withdraw the proceedings, the allowance is cancelled on the report furnished by the Clerk of Petty Sessions. When the allowances are made to women whose husbands are inmates of Public Institutions, the Superintendents of these Institutions are duly advised, and report to my Board when the men are discharged. It is a pleasing feature connected with this work to find the number of women who, when they re-marry or find their circumstances improve, promptly thank my Board for the assistance rendered, and ask that the payments may be discontinued.

I may also state that the State Children Relief Board never initiate action in connection with these appeals for help, nor are the officials of the Department allowed to do so. The application form is issued to those who desire this form of assistance, and, until the case has been carefully investigated and reported upon by a Government official, and until the reports have been scrutinised and passed by the Senior Officers of the Department, the State Children Relief Board decline to assess allowances, and even then, in the case of deserted wives, the Chief Secretary is by law required to officially sanction the payments. It will thus be observed that the greatest possible precautions are taken to prevent imposition; and when the numerical strength of the out-door staff has been increased to the number employed during the year 1895, the constant supervision exercised after the allowances have been given will not only prevent the possibility of fraud, but will enable the Board to more frequently revise the allowances to meet the necessities of each family.

Admission of Boarded-out Children.

My Board continues to receive from institutions, wholly or in part subsidised by the Government, children under the age of twelve years for boarding-out under the Principal Act; but I observe that during the past four years there has been a noticeable diminution of admissions from the Industrial School Ship "Sobraon." During the fifteen years prior to 1896 the withdrawals averaged 24 per year. Since that date, however, the average has been reduced to 12, and only 7 were transferred during the year ended 5th April, 1900. The State Children Relief Act gives power to board-out children from this Institution up to the age of twelve years, and as 395 children have already been withdrawn, with most successful results, I am of opinion that a better system of classification would obtain on the "Sobraon" if the number of withdrawals increased. In addition to those received from public institutions, the inspectors and the police have succeeded in rescuing a number of children from undesirable parents, and brought them under the operation of the boarding-out system.

Amendment of Industrial and Reformatory Schools' Acts.

It is to be regretted that the Industrial and Reformatory Schools Acts have not been amended for upwards of thirty-four years. I have frequently pointed out the defects of these Statutes and pressed for amended legislation, so that the responsible Minister may have power to exchange the children of the State from one method of treatment to another. Under the provisions of existing laws we can never expect to remedy the faulty classification of the children of the State, which is one of the most objectionable features of our internal administration. Provision should be promptly made for the removal of the difficulties which hamper our management in this direction, and the commitment clauses of these Acts should widen the powers vested in magistrates. If this were done, the neglected and begging children could be rescued from our streets and sent to industrial schools, and, under the powers already embodied in the State Children Relief Act, tractable children could, after probationary treatment, be boarded-out. This method of dealing with them would introduce a more desirable system of classification, and would also remove the possibility of our industrial schools being overcrowded. The Children's Protection Act also needs amendment, and, when recast, it should not be necessary to prove wilful neglect or ill-treatment before a magistrate can direct the removal of children from the custody of incompetent guardians.

STATISTICAL TABLES.

Upon reference to Table No. 1, published on page 9, the variation that has taken place from year to year under each department of the general division of the work since my Board first commenced operations under the Boarding-out System will be seen at a glance.

Table No. 2 shows the number of children, partly supported by the State, in the custody of their mothers on the 5th April of each year since 1897.

And I have had Table No. 3 compiled to show the progressive increase in expenditure incurred in all departments of boarding-out since the introduction of the system in New South Wales.

INCREASE IN THE NUMBER OF CHILDREN.

Upon examining table No. 1 it will be found that the number of apprentices earning wages provided for in schedule has increased by 138, and now reaches a total of 1,159, or upwards of 30 per cent. of the total number of children placed out under the provisions of the Principal Act.

In 1896 the State Children Relief Board had control of 3,456 children. This number has since increased to 7,101, viz., 3,844 placed out under the Principal Act, and 3,257 partly supported by their mothers. If each child cost the State the same amount of money, the significance of these figures would become a matter of much more concern to the public than is likely to be attached to them after an explanation is given of their relative values as factors influencing the expenditure of the State Children Relief Board. It must not be assumed that because 3,456 State children cost the Government £42,200 in 1896, that 7,101 cost more than double that amount in 1900. The annual expenditure is but £62,615 16s. 4d. The difference arises from the fact that although the 3,456 children under the general division has increased to 3,844 in four years, 11 of this number have been adopted without payment, and no less than 270 have since passed from the boarding-out division, and are now earning for themselves. This reduces the "supported" children to an increase of 102 only, and each year, instead of increasing at the rate of 325 a year as heretofore, the total number shows for two years past an average decrease of 39. And the increase of 3,257 in the custody of their mothers does not mean an additional cost of £14 per head, because the mothers manage upon an allowance of about £6 a year for each child. The Amendment Act was passed to help women who received irregular grants of 2s. 6d. per week from local societies; to prevent the compulsory admission to State control of children whose mothers adopted this course with reluctance; and to help others who would accept assistance in no other form.

That

The Annual Increase in Expenditure reduced.

That the operation of this Act would lead to increased expenditure was generally understood, but it was not anticipated that five years after its application it would be found no more costly than operating on the lines previously adopted. If the annual increase experienced prior to 1896 continued, it is estimated that the operations under the Principal Act would cost almost as much as we now incur under both Acts of Parliament; and if the rate of admissions experienced under each branch during the past two years does not vary, the present system will actually show a comparative annual decrease of over £3,000 a year in favour of the dual policy after 1st April, 1901.

The following figures will more clearly explain my reasons for arriving at this conclusion:—

Year ending 5th April.		Annual Increase in Expenditure.		No. of Children.
1894	...	£3,676	...	2,809.
1895	...	£4,767	..	3,174.
1896	...	£4,725	...	3,456.
1899	...	£1,365	...	6,606.
1900	...	£1,654	...	7,101.

The statistics for 1894–5–6 represent the annual increase before administering the dual policy of boarding-out; those for 1899–1900 show the annual increase in the total expenditure after the operations under both systems had reached a normal condition.

A greater number of children provided for.

The State Children Relief Board is, therefore, providing for 7,101 children under two policies for the same amount of money that would have to be voted for wholly supporting 4,470 children under the provisions of the Principal Act. Seeing that comparatively few appeals are made for increased allowances, it may be assumed that the mothers, as a whole, are satisfied with the rates my Board allows.

RATES PAID TO WIDOWS AND DESERTED WIVES.

The early training of a large percentage of the children who come under the operations of the Principal Act has been sadly neglected by dissolute parents, and many others have become more or less troublesome through lack of supervision on the part of invalid women who cling to their children until they (the mothers) can no longer remain outside the institutions established for the treatment of our sick poor. Inherited diseases afflict many of the children, and these disorders appear periodically and require careful attention. It is not to be expected that the foster parents selected by the Government officials will undertake the custody of these children if the State allows a rate that is not remunerative; but it has been found that a remunerative rate can be paid and still the cost of administration will be considerably less than the expenses of management under the Barrack system. Under the Amendment Act of 1896 it was not contemplated that widows and deserted wives would be rewarded for maintaining their own children; neither was it the intention of Parliament that the rates paid should fully cover the cost of each child's keep. If this were done, industry and thrift on the part of the mothers and their elder children would be stifled, and a deserted wife would find herself in a better position after her husband left than before. It is a wiser policy to grant allowances at a minimum, and increase the rate when it is found to be set too low, than to encourage idleness and perhaps desertion as well, by basing the payments on a more liberal scale. These are the lines upon which my Board have administered this Act, and, if departed from, instead of this measure conferring a benefit upon the community, it is not improbable that in its results it may do more harm than good.

After deducting for time lost through intermittent employment and wet weather, many thousands of our industrial classes rear their families on an average wage of 27s. 6d. per week; thousands of others are compelled to live on even less. It is not the intention of the State Children Relief Board to place the recipients of assistance under the State Children Relief Act in a better position after than before their

their husband's death or disappearance. Men who have to support a wife and four children on 27s. 6d. per week cannot provide shelter at less than 7s. 6d. per week, nor can the cost of their living, lodge fees, and other expenses be set down at less than the same amount. Their wives and children must, therefore, live on 12s. 6d. per week; and, as I have stated, many others live on less, and make no demand for State assistance. While the husband is at home, relatives and charitably disposed friends seldom assist, but this direct form of relief is not withheld from the widow and deserted wife. The great difficulty these women have to contend with is the payment of their rent. With that guaranteed, it is the experience of my Board that able-bodied women can, if industrious, keep their homes intact by their own and their elder children's exertions, together with the assistance of relatives and the private help of personal friends. The education in such cases is free, and the sick are treated without cost at the hospitals.

The payments made by the State Children Relief Board are obviously not excessive, nor, in view of this explanation, do I think, when it is considered that many of these women live rent free while others have some of their children at work, that an average rate of 7s. per week, or £19 per year, for each family of three children will be considered unreasonable.

There is one advantage which this method of treatment provides which no other policy of dealing with juvenile offenders or neglected children can substitute. I refer to the healthy influence continuously exercised by an exemplary woman over the actions of her children, not only during the time the payments are made, but years afterwards, more especially at that critical period when the Government Official under other policies can no longer control the actions of the erstwhile State dependent—the time immediately following the termination of the period of detention, when a home and a mother's influence are most required.

THE AFTER-LIFE OF BOARDED-OUT CHILDREN.

Referring to this question a school-teacher states, in Appendix A, that "a number of boys have come under my notice during the past fifteen years, and, so far, not one of them has, to my knowledge, deviated from the path of rectitude. After a number of years of practical training in farm work, they have quietly settled into their places as useful and industrious members of the community. In some instances the farming work has been discarded for employment requiring more intelligence and offering higher remuneration and much better social position than ordinary manual labour would give." Other evidence of a gratifying nature has also been submitted. The question is one of vital importance, and one that my Board has under careful consideration. Reliable statistics are, however, difficult to collect; but in my next annual report I purpose dealing with the matter more fully, and anticipate being in a position to publish interesting and convincing statistics relating to the after-life of boarded-out children.

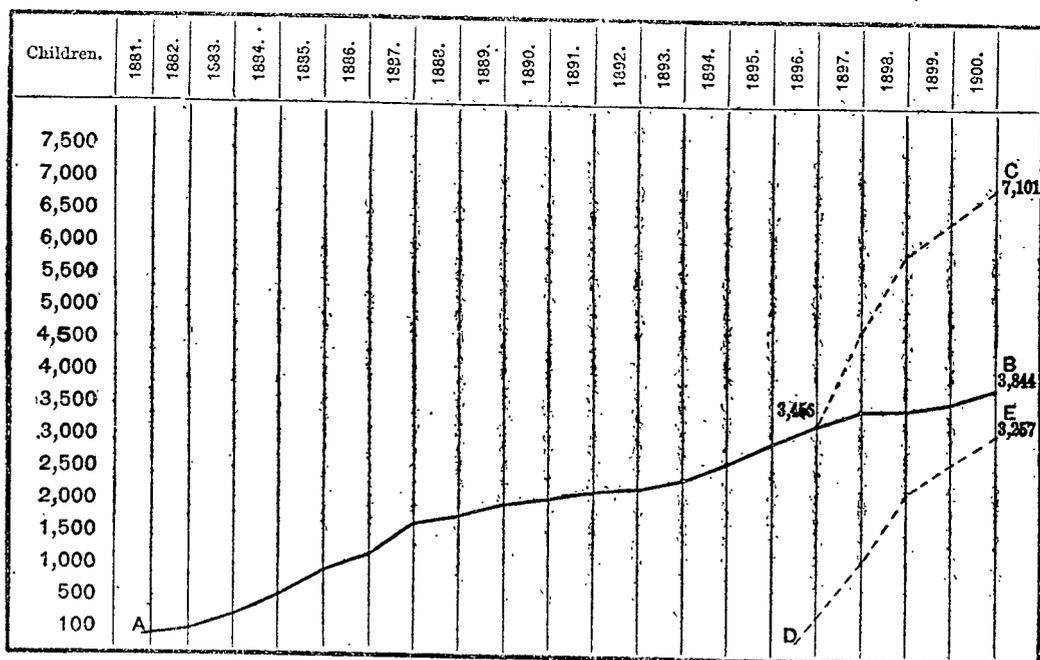

CONTRIBUTIONS, BY PARENTS TOWARDS THE SUPPORT OF BOARDED-OUT CHILDREN.

In New South Wales, where cash allowances are paid to deserted wives, greater precautions have to be taken to prevent abuses than in other colonies, where two policies of boarding-out are not administered. My Board has, however, in the past found much difficulty in dealing with deserters, in consequence of the weakness of the provisions of the State Children Relief Act relating to the recovery of maintenance payments; but through the valuable assistance rendered by the officers of the Crown Law Department and the Chamber Magistrates no trouble is now experienced, as legal action is taken under the Deserted Wives and Childrens' Act, which gives the Police power, when directed by my Board, to recover maintenance payments in any district, and removes the necessity for incurring the
expense

expense of sending my Board's Inspectors to country towns to institute legal proceedings. In the case of defaulters who have found remunerative employment in other colonies, it has been the custom in the past to seek the co-operation of the Heads of the respective Police Departments. This system answered satisfactorily for several years, but these men now refuse to contribute, under a belief that the extradition law will not be enforced. My Board has, in consequence, found that the results do not justify the waste of time involved in this process of negotiation. The question has been carefully considered, and, profiting by the experience of the State Children's Council of Adelaide, it has been determined to issue extradition warrants and arrange with the local officers in charge of Police in other colonies to estimate the weekly contributions the men should pay, and, in the event of their failure to remit the money, action will be taken to execute the warrant when a police escort is returning with other offenders to this Colony. Judging from the experience of the Adelaide Council, it is not probable that an example will have to be made in more than one or two instances, for the system will only be applied to defaulters employed by the Government or earning good wages in other ways, and when these men find that they must pay or be imprisoned, it is extremely improbable that they will choose the latter alternative.

The financial results already accruing from the firm administration enforced during the past twelve months is shown in Table No. 3. Last year the collections amounted to £904 10s. 10d.; this year the total has reached £1,142 8s. 11d., or an increase of upwards of 26 per cent.; and I anticipate a still further increase during next year, when the defaulters in Western Australia and other colonies find that they can no longer disregard their legal liabilities.

The following chart shows the increase in the number of children under the Board's control in both divisions, from year to year, since 1881:—

The line A B represents the increase in the number of State children boarded out, adopted, and apprenticed apart from their parents at the close of each year since 1881.

The line D E represents the increase in the number of children *partly supported* in the care of their mothers since 1896.

The line A C represents the total number of children whose names appear upon the records of the State Children Relief Board in all divisions.

PART II.

ADMINISTRATION OF THE STATE CHILDREN RELIEF ACT OF 1881.

(Children provided for apart from their parents.)

The following statistics represent the variation in numbers during the year ended 5th April, 1900:—

	Boys.	Girls.	Total.
Under control on 5th April, 1899	2,104	1,618	3,722
Admitted during the year	348	296	644
Total number of children under control during year	2,452	1,914	4,366
Discharged during the year:—			
Deaths from natural causes	6	8	14
Drowned	1	0	1
To relations and friends	126	92	218
Committed by police to Industrial and Reformatory Schools	4	0	4
To Deaf and Dumb and Blind Institution	1	2	3
„ Sydney Benevolent Asylum	3	10	13
„ St. Martha's Home	0	1	1
„ Newington Asylum	0	3	3
Death from Snakebite	1	0	1
To Hospital for Insane, Newcastle	1	0	1
„ Infants' Home, Ashfield	0	1	1
Over age	130	84	214
To Guardians	22	23	45
By marriage	0	2	2
To Boys' Home	1	0	1
	296	226	522
Total number under control on 5th April, 1900	2,156	1,688	3,844

The following Table explains the conditions under which these Children were placed out on the 5th April, 1900:—

				Total...	3,844

The following return shows the number of applications received for the custody of State Children under the boarding-out, adoption, and apprenticeship clauses of the Act during the past seven years:—

Year.	Approved.	Refused.	Not yet inquired into.	Total.
1894 ...	667	188	244	1,097
1895 ...	908	292	615	1,715
1896 ...	858	398	264	1,520
1897 ...	769	301	440	1,510
1898 ...	927	332	529	1,788
1899 ...	875	315	425	1,615
1900 ...	515	327	619	1,461

A total number of 1,461 applications was received during the year; 842 were inquired into, and of this number 327 were rejected upon the reports of the Board's inspectors.

Of the number received during the year ending 5th April, 1900, 1,021 were from Protestant and 440 from Roman Catholic applicants. The number of children applied for was 2,072, and the number of children admitted 644. The conditions under which the children were required are shown below:—

Religious Denomination.	Boarders.	For Adoption.	For Service.	Total asked for.
Protestant	1,021	40	422	1,494
Roman Catholic	440	11	127	578

Number of Children in each Home.

The principle of maintaining, as far as possible, the feelings of family affection, by not separating brothers and sisters, has been adhered to, with the results shown hereunder:—

1,405	homes with 1 child.
536	” ” 2 children, including 407 with children of one family.
232	” ” 3 ” ” 155 ” ”
99	” ” 4 ” ” 40 ” ”
12	” ” 5 ” ” 9 ” ”
1	” ” 6 ” ”

2,285 homes, containing 3,635 children (exclusive of 14 absconders, 13 in hospitals, 152 in cottage homes, and 30 in dépôt).

It will therefore be seen that there are 611 homes with children of one family.

Exclusive of homes containing children of one family, there are:—

1,405	homes with 1 child.
129	” ” 2 children.
77	” ” 3 ”
59	” ” 4 ”
3	” ” 5 ”
1	” ” 6 ”

1,674 homes, containing 2,151 children, or an average of 1.28. (Last year the average was also 1.28.)

Apprenticed Children.

On the 5th April, 1900, there were 1,141 children (696 boys and 445 girls) under indenture in various parts of the Colony. 113 boys and 78 girls were discharged during the year. Most of the girls are at domestic service, while the boys are employed by bakers, bootmakers, brickmakers, butchers, bookbinders, broom makers, coach builders, chemists, carpenters, dairymen, engineers, fruiterers, grocers, gardeners, grooms, hairdressers, messengers, mineral water manufacturers, orchardists, plumbers, printers, saddlers, tailors, and vignerons.

These children are all wage-earners, and the cost of supervision, transit, and replenishing (in a few instances only) of outfits when under transfer, is the only expense to the State. The total 1,141 is the greatest number yet recorded.

The

The amount of wages collected and paid to apprentices who have served their terms of indenture since 1887, is shown hereunder :—

Total collections to 31st March, 1900	£	s.	d.
...	23,731	10	10
Amount of disbursements	19,791	10	10
To the credit of Trust Account, 1st April, 1900	£3,940	0	0

The collections for the year total £3,035 6s. 4d., an increase of about £580 over last year.

The Central Home, Paddington.

The majority of the children received by the State Children Relief Board are admitted into the Receiving Depôt at Paddington immediately before being boarded out. Here the outfits are provided and the children remain temporarily until arrangements can be made for their distribution and transmission to the homes selected for them by the official in charge of this important duty.

The average daily number of children passing through the depôt during the past year was 30. The total cost of maintenance, etc., was £243 16s. 11d., and the capitation cost amounted to £8 2s. 7d. per annum only.

Cottage Homes for Invalid Children at Mittagong and Parramatta.

There are two cottages at Parramatta erected by the Government for the purposes for which they are now utilised; and seven (7) homes at Mittagong. The latter are private properties used temporarily pending the erection of suitable cottages.

These homes contain in all 152 inmates—37 males and 115 females.

The following Tables furnish additional particulars :—

	Boys.	Girls.	Total.
Total number of children admitted to Cottage Homes to 5th April, 1900	731	1,088	1,819
Total number of children discharged from Cottage Homes to 5th April, 1900	694	973	1,667
Number in Homes on 5th April, 1900	37	115	152

Epilepsy	4	Whooping cough	3
Healthy children passing through Home in transfer from one foster-mother to another	21	Total	119

Adopted Children.

There are 111 children adopted by reputable citizens without payment. As the cost per head for maintenance is £13 19s. 3d. for boarded-out children, the placing of 111 children with foster-parents for adoption represents a considerable saving to the Government. These children mostly assume the surname of the foster-parent, and the fact that they are not the legitimate offspring of their guardians is known to the officials of the Department only. The Board does not place out children for adoption after the age of 12 years,—the age when they become eligible for apprenticeship; but in thirty-one instances the foster-parents have voluntarily offered to keep these children without payment until they can find employment for them, and these offers have been accepted. Such offers are always made in the interests of the children; and the fact that they are sometimes wholly supported by the foster-parents for two years, is strong evidence of the affection of these people for the wards entrusted to their care.

PART III.

STATE CHILDREN RELIEF ACT OF 1896.

(Children cared for by their Mothers and partly supported at the Government expense.)

On 5th April, 1899, 935 mothers were receiving cash allowances to enable them to provide for 2,884 children. Including original applications received since that date, and cases in which grants had previously been made, but which it became necessary to bring again under review, the S.C.R. Board dealt, during the past year with 1,492 cases, with the following result :—

Widows.	Deserted Wives.					Refused.	Postponed.	Continued.	Increased.	Reduced.	Total.
	Deserted Wives.	Husband Insane.	Husband in Gaol.	Husband in Asylums.	Husbands in Hospital.						
233	86	17	16	7	12	93	50	389	128	224	1,255
	Discharged.										
152	54	11	11	5	4	237
385	140	28	27	12	16	93	50	389	128	224	1,492

(Now on Books. Widows: 755; D.W., 211; Husband Insane, 45; Husband in Gaol, 23; Husband in Hospital, 16; Husband in Asylum, 19. Total, 1,069.)

During the year 1,251 children were admitted to control, and 878 discharged. Including 2,884 on the books on 5/4/99 there are 3,257 under control. The ages are as under :—

Under 1 year.	1 to 2.	2 to 3.	3 to 4.	4 to 5.	5 to 6.	6 to 7.	7 to 8.	8 to 9.	9 to 10.	10 to 11.	11 to 12.	Over 12.	Total.
68	100	175	241	238	301	331	347	363	371	377	283	62	3,257
	Discharged.												
19	26	33	33	62	62	62	76	72	72	64	70	227	878

The following rates are now being paid for children under control :—

5s.	4s. 6d.	4s.	3s. 9d.	3s. 6d.	3s.	2s. 6d.	2s.	1s. 9d.	1s. 6d.	1s.	Total.
23	2	32	4	26	492	1,046	1,302	7	303	20	3,257

The children on the books belong to the religions stated hereunder :—

Church of England.	Roman Catholic.	Protestant, not specified.	Presbyterian.	Wesleyan.	No religion stated.	Primitive Methodist.	Congregational.	Baptist.	Salvation Army.	Methodist. PART IV.

BOARD MEETINGS, HONORARY VISITING STAFF, &c.

Board Meetings.

There were thirty-two (32) sittings of the Board during the year, viz., twelve (12) general, nineteen (19) adjourned, and one (1) special meeting, at which the members attended as follows:—The Hon. Sir Arthur Renwick, Kt., M.D., M.L.C., President, thirty (30); Mrs. Garran, 29; Mrs. Slattery, 26; Mrs. Stephen, 26; Mrs. Grimshaw, 23; Hon. W. J. Trickett, 10; Mrs. McMillan, 7; Mrs. Barton, 3; and the Hon. L. F. Heydon, 2.

In addition to the meetings above specified, the Finance and Purchasing Committees meet in advance each month, and examine and certify to the claims to be submitted for payment at each general meeting of the Board; and the lady members, in rotation, inspect monthly the Cottage Homes for invalid children at Parramatta and Mittagong.

Appointments, resignations, and leave of absence.

On the 24th April, Mrs. McMillan resigned her position as a member of the Board, owing to her intended departure for England, and on the 23rd May Mrs. C. B. Stephen was appointed to the vacant position.

Mrs. Barton resigned her position on the Board on the 25th September, and on the 24th November, Mrs. McMillan was appointed to fill the vacancy.

Lady Manning was away on leave of absence during the whole of the year.

The appointment of a Boarding-out Officer.

The late Boarding-out Officer, who also held the positions of Director of Government Asylums and Chief Officer under the Children's Protection Act, retired from the Public Service in the year 1897, but his successor has not yet been permanently appointed by the Governor and Executive Council of New South Wales.

Upon the recommendation of the Public Service Board, Mr. Ernest Hanson was appointed to the position of Acting Director in November, 1897, and he has continued to act in a temporary capacity up to the present date to the satisfaction of the Board.

Lady Visitors.

As is now well known, the State homes in various parts of the Colony are placed under the supervision of lady visitors, whose voluntary services on behalf of the children cannot be too highly appreciated. The usual list is appended hereto, viz.:—Armidale, Mrs. Allingham, Mrs. J. J. Bliss, Mrs. H. Mallon; Albury, Mrs. E. Edmondson, Mrs. C. Spencer; Ashfield, Mrs. Wilson, Mrs. Walton, Mrs. Dunnolly; Auburn, Miss M. Darmody, Mrs. C. Gannon; Annandale, Miss Julia O'Brien; Berrigal, Mrs. J. C. Bagot; Bega, Mrs. E. Bland; Branxton, Mrs. J. A. Tullock, Mrs. Bercini, Mrs. E. Smith; Bundanoon, Mrs. Osborn; Bathurst, Miss C. S. White, Miss Newman, Mrs. A. Reading, Mrs. C. R. Pickworth, Mrs. Marriott; Berrima, Mrs. G. Sheppard, Mrs. W. McCourt; Bethungra, Mrs. M. Sawyer; Baulkham Hills, Mrs. W. M. Best; Burwood, Mrs. Ireland; Berry, Mrs. E. Morris, Mrs. English; Boolong, Miss Grant; Burrowa, Mrs. C. Robinson, Mrs. J. H. Boucher; Barraba, Mrs. Kidd; Braidwood, Mrs. O'Brien, Mrs. Bayley; Balmain, Mrs. J. Dixon, Mrs. Venables, Mrs. G. Boulton, Mrs. W. McKenzie, Mrs. Pole; Brookfield, Mrs. S. Carlton; Ballina, Mrs. W. E. Evans; Blacktown, Miss Sylvia Middleton,

CONCLUDING REMARKS.

In conclusion, I have much pleasure in conveying the thanks of the members of the Board to Mr. Critchett Walker, C.M.G., the Principal Under Secretary, and to Mr. Fosberry, the Inspector-General of Police, Sydney, for the valuable assistance rendered to the Department during the year.

I have, &c.,

ARTHUR RENWICK,
President.

APPENDIX A.

EXPRESSIONS of opinion upon the results of the Boarding-out System received from the Head Teachers of the Public Schools of New South Wales.

The Head Teacher, Public School, Albury :—

The children attending this school, appear to be well fed, well clothed, and compare very favourably with others in the school.

The Head Teacher, Public School, Auburn :—

In my opinion the system works well. In my school the boarded-out children, *in several instances, seem to be cared for better than those having parents to look after them.*

The Head Teacher, Public School, Nicholson-street, Balmain :—

I have pleasure in stating that the children who attend this school are clean, comfortably dressed, and look well, apparently being well fed and well looked after.

The Head Teacher, Public School, Bankstown :—

I have only one boy in my school. He is always well dressed, clean, and tidy; also well behaved. He compares very favourably with the best tended of the children in my school. And if I am asked for an opinion of the system, then I say, judging from my observation, that the system is a real good one, and works splendidly.

The Head Teacher, Public School, Berridale :—

So far as my own observation guides me, I can state emphatically that the boarding-out system is a success. Any State children that have come under my notice have manifested evidence of being well cared for, as regards bodily comforts at least; and in every case their attendance at the school under my charge is both regular and punctual.

The Head Teacher, Public School, Blacktown :—

The pupils of this school are among the most regular attendants, hardly ever missing a day. They are sent to school clean and tidy, and appear well fed and cared for in general. Their moral character and conduct compare favourably with my best pupils. I certainly think the boarding-out system is much preferable to the barrack-room plan. I have had some years' experience of the latter, having been master of a large Industrial and Orphan School in the City of Manchester.

The Head Teacher, Public School, Bondi :—

I look upon the system as a good one as evidenced by the results of pupils under my charge, and they compare favourably with the others.

The Head Teacher, Public School, Canberra :—

The children, since coming to this district, have made good progress, mentally and physically, and compare favourably with the other children.

The Head Teacher, Public School, Canley Vale :—

The system of boarding out State children has been before me during the past ten years, and I have always found it to work well. Several such children are at present attending the school under my charge, and I find them well conducted and cared for. They seem perfectly contented with their lot, and there is nothing whatever in their appearance or the treatment they receive from the other scholars to betray their less favoured circumstances. I always show them a little extra consideration, and I think it has a good effect on the bearing of other children towards them.

The Head Teacher, Public School, Cobbitty :—

The State children are well cared for in every respect; being clothed, fed, and kept neat and clean. Their attendance at school is regular, and everything, so far as I am aware, satisfactory. In fact, fully up to any of the other children under my charge.

The Head Teacher, Public School, Colo Vale :—

My experience of the boarding-out system is very limited, only extending over three years at Colo Vale, and during that time have never visited the homes of the State boys attending this school, so can only speak of their school life, which on the whole, compares very favourably with the other children.

The Head Teacher, Public School, Coolac :—

I have much pleasure in stating that the results of the boarding-out system in this Colony, which I have had opportunities of observing for over fifteen years, are most favourable to that system. A number of boys have come under my notice during those years, and, so far, not one of them, to my knowledge, has deviated from the path of rectitude. After a number of years of good practical training in farming work, they have quietly settled into their places as useful and industrious members of the community. In some instances, the farming work has been discarded by them for employment requiring more intelligence and offering higher remuneration, and a much better social position than ordinary manual labour would give. The children who have attended the school under my charge have, in cleanliness, dress, and intelligence, compared favourably with the other children under my supervision.

[Note.—As Mr. Freeman has dealt with the after-life of the children, his opinion, expressed in the above words, is highly interesting, and I regard it as one of the most valuable published in this Report.—A. R.]

The Head Teacher, Superior Public School, Cootamundra :—

From twenty years' experience, I am of opinion that the boarding-out system in the Colony is a success. I have invariably found the children well cared for and happy.

The Head Teacher, Superior Public School, Croydon :—

The children attending this school are well dressed, and appear well fed, clothed, &c. I consider that they appear well looked after.

The Head Teacher, Public School, Dulwich Hill :—

The State children, as far as I have observed, have no ill-effect upon the other children. In dress and appearance they, as a body, compare favourably with the other children.

The Head Teacher, Public School, Dural :—

The experience I have had of the boarding-out system leads me to the conclusion that it is an excellent one. With few exceptions, the State children who have come under my charge have been well cared for, and compare favourably with the other children under my supervision. In fact, in many cases they seem better clothed and fed than many of the other children.

The Head Teacher, Public School, Ermington :—

I have three such children under my charge, and they seem to enjoy the same comforts and privileges with the other members of the family as the home provides. They compare very favourably with other children under my supervision.

The

The Head Teacher, Public School, Five Dock :—

I was head teacher of the Protestant Orphan School, Parramatta, 1878-9, and I was intimately acquainted with my predecessor in the position. I have since had a fair number of boarded-out children attending my schools. In every instance I was able to report that they were neatly clad and well cared for. In some instances there was a tendency on the part of guardians to curtail their opportunities for necessary mental culture, a matter which could easily be prevented by the Department. I have had every opportunity for closely observing and comparing both systems, and I have no hesitation in pronouncing the new system infinitely better than the old.

[As Mr. Halloran at one time occupied the position of teacher at the late Protestant Orphan School at Parramatta, it is gratifying to find that he is in a position to speak so highly of the system which led to the abolition of that institution.—A.R.]

The Head Teacher, Superior Public School, Forest Lodge :—

In reply to circular No. 3, from what experience I have had of the boarding-out system, I should describe it as a thorough success. The children appear to be in every way well looked after—equally so with the other pupils—and quite happy.

The Head Teacher, Public School, Germanton :—

While stationed at Jamberoo, a considerable number of boarded-out children, mostly boys, passed through that school. My experience then convinced me of the system's beneficial effects upon the majority of the children under control. The pupils did not, in outward appearance and intelligence, differ much, if at all, from the ordinary pupils. On the whole they seemed to live happily and contentedly with their guardians.

The Head Teacher, Public School, Gerogery :—

The State children who have come under my notice compare more than favourably, in some instances, with the other children attending school. I think the boarding-out system is yearly proving to be a highly successful plan.

The Head Teacher, Superior Public School, Goulburn :—

In manner, cheerfulness, cleanliness, and dress the boarded-out children who attend my school compare very favourably with other children of similar social position.

[In view of the fact that more State children are placed out in Goulburn than in any other town or suburb, Mr. Taylor's opinion is of special value.—A.R.]

The Head Teacher, Superior Public School, South Goulburn :—

I have now forwarded so many reports *re* the above that I have practically nothing fresh to state. I can only reiterate my former statements, that in my opinion it is the most humane system yet introduced. The children more fully realise and share in the comforts of a home, and this alone determines the superiority of the boarding-out over the barrack system. The children compare very favourably with my other pupils in every respect. They all appear to have good homes, come clean to school, are apparently well fed, and they generally have the happy expression natural to a child. One or two may be rather irregular in attendance, but they do not appear to have more vice than the other children. Some of the children, from my own knowledge, have the best of homes. Last week a gentleman called on me, accompanied by a pretty little child—a dear little girl of five or six years, I should think. He said, "She was their baby, and that they would never part with her," and I do not wonder at it, for she is really a fine child. You would be delighted to hear her recite, in her pleasant lisping voice, the first verse of the "Absent-Minded Beggar." This child is fortunate in having such a guardian. This is just a little experience met with the other day. I trust the account will interest you as the incident did me.

[Mr. Lumsden's expression of opinion is of exceptional value, owing to his school being situated in a district where upwards of 250 State children are boarded out.—A. R.]

The Head Teacher, Superior Public School, Hay :—

So far as my knowledge of the boarding-out system extends, with regard to my pupils, I can state that I think it successful, though I have always thought it would be still more successful if State children could be boarded with people who have no children of their own. If this could be done, much friction and jealousy, which generally ends to the disadvantage of the State children, would be avoided. I may safely state that my pupils, who are State children, appear clean, healthy and happy.

The Head Teacher, Public School, Gunning :—

I have formed a very high opinion of this system during the fifteen years I have had State children under my charge; and I consider it a great blessing to these children, as almost invariably they are well clothed, well fed, and well cared for in every way. Their guardians in nearly every case become attached to them and treat them well, not because they have to, but because of their liking for the child itself. I have at present four under my charge, and they compare favourably with the other children; in fact, in some cases they have the advantage.

The Head Teacher, Public School, Greta :—

As far as my limited experience enables me to judge, the State children at Greta are treated with paternal kindness. Their appearance shows that proper attention is given to their food and clothing, while their conduct and attainments compare very favourably with that of the other pupils under my charge.

The Head Teacher, Public School, North Granville :—

I beg to inform you that the boarding-out system appears to me on the whole to work satisfactorily. The children now attending this school appear to be well cared for; they are generally well clad, and compare favourably with the other children of the school.

The Head Teacher, Public School, Hexham :—

It is a pleasure for me to report favourably on the work of the State Children Relief Board. Wherever its boarding-out work has come under my observation it has proved much more satisfactory than any other system could possibly be. With children of good dispositions it often brings them to comfortable homes, where they are as well treated as if they were really the offspring of the guardians. Where children are of disagreeable or vicious disposition, they have less occasion to show it, and the home influence, and isolation from unsuitable companions, and the influences of a country life, all combine to improve their characters.

The Head Teacher, Public School, Hillston :—

I have none of these children attending my school, nor have I ever had any, but I have had some opportunities of observing the conduct of some two or three of these children out of school, and consider their conduct compares well with the average of the pupils under my charge. They appear to be well cared for, and well treated by their employers, and are generally contented and satisfied with the treatment they receive.

The Public School Teacher, Ingleburn :—

I have much pleasure in being able to furnish you with a most favorable report on the conduct, attendance, and progress at school of all the State children (twelve in number). They attend comfortably clad, are remarkably healthy, a credit to their guardians, and I am convinced under the present system of frequent supervision they will grow up worthy citizens. *For obvious reasons they are, age for age, the most advanced pupils in this school.*

The Head Teacher, Superior Public School, Inverell :—

I have the honor to inform you that the State children attending the above school are well clothed and fed, and their conduct at school is good.

The Head Mistress, Superior Public School, Kogarah :—

So far as individual cases have come under my notice, I consider that the system is, on the whole, doing good and effective work. Reports from teachers are invariably satisfactory, while the results of periodical visits to the various homes in this district have given little to find fault with.

The

The Head Teacher, Public School, Lakelands :—

So far as my experience goes in regard to the boarding-out system which is practised with State children, I find the results good. The children in the majority of cases obtain comfortable homes and kind treatment, and have a better chance of development in every direction than if kept together in a "home" or "institution." Those in the country have a chance of learning different kinds of work. So far as the health of the children is concerned it is also better for them to be separated. *A number with whom I have come in contact have suffered from weak eyes, and these are much better boarded-out than kept where they would be liable to communicate the weakness to other children.*

The Head Teacher, Public School, Merrilla :—

The children being scattered about the country in suitable homes is decidedly preferable to any other system of organisation. The children are well treated, as a rule, by the country people, and after living a few years with a respectable family there is every prospect of the State children becoming useful and intelligent members of society. Moreover, the State Children's Relief Board provides all school books free of cost, so that my experience is that the State children "compare favourably with the other children under my supervision."

The Head Teacher, Superior Public School, Mittagong :—

The boarding-out system works satisfactorily. The children connected with the system who attend this school compare favourably in every respect with the other children.

The Head Teacher, Public School, Lower Mittagong :—

I consider the results of the boarding-out system in this Colony, so far as they have come within my notice, eminently successful. The children reflect great credit on the responsible officers.

The Head Teacher, Public School, Moss Vale :—

My personal experience of the system has been very slight. The only State children of whose cases I have had any knowledge being five or six who attended the North Rocks School about eleven years ago, and two who are now attending this school. With regard to these, however, I am able to report very favourably on the system, the children always being clean, well clad, apparently well fed, and in all respects comparing very favourably with the other children under my supervision.

The Head Teacher, Public School, Mummel :—

So far as my own experience is concerned there is no better way of dealing with the State children than by the boarding-out system. There are cases under my own observation where the State children come to be regarded as members of the family, and speak of their guardians as father and mother. In my own opinion the benefits of this system are more marked when the children have been boarded-out in the country districts. The life is healthy, and the influences surrounding them are not so conducive to the formation of evil habits, as is so often the case where the children are boarded-out in the large centres of population where the field for evil is so much greater.

The Head Teacher, Public School, Muswellbrook :—

The system of boarding-out children is of great benefit to those sent out. I have two children attending my school, and comparing them with other children, they attend as regularly, are as neat and clean, progress as well, and seem to be as well-cared for, as any of the others. My opinion is that the Board are doing good work, and trust that others boarded-out can compare favourably with those under my notice.

The Head Teacher, Public School, Narrandera :—

I find the children, generally, under the system are regular in their attendance at school, and clean and tidy, and compare favourably with other children in attendance here.

The Head Teacher, Public School, Newtown :—

The State children attending Newtown Superior Public School are as well-behaved as their companions, and results generally satisfactory.

The Head Teacher, Superior Public School, Nowra :—

As it affects the children attending this school, the results of the system, as indicated by the children under my charge, are very satisfactory. The children are cleanly and neatly dressed, evidently well nourished, and their conduct is good.

The Head Teacher, Public School, Oberon :—

I have pleasure in stating that I have watched carefully the boarded-out children, and I think the system is an excellent one. Although I have known of many cases, there have only been one or two where the children have been unfairly treated. The majority of guardians treat their wards well, and, in many instances, the children are considered as "one of the family." The State children who have been pupils in my schools have always been well treated and compared favourably with the other scholars. Any faults would have been reported by me as a duty to the helpless children.

The Head Teacher, Public School, Ourimbah :—

My experience of the system is a very limited but at the same time a most happy one. The State child I knew to be boarded-out had the good fortune to be placed with a most homely and trustworthy couple, and, as the State child was the only family they possessed, all their care and affection appeared to be lavished on her.

The Head Teacher, Public School, Oxley Island :—

The few children who have been under my supervision were respectably clad, and had the healthy look produced by cleanly habits and a sufficiency of food, and in every respect they did not suffer by comparison with the other children attending the school under my charge.

The Head Teacher, Superior Public School, Parramatta North :—

My experience with "State children" during the past twelve months confirms the opinion I have expressed in former years, viz., that the system adopted is the most humane that could be devised, and gives every opportunity to the children concerned to make a fair start in life. I am sorry to have to add that my opinion, that the innate moral tone of most of these unfortunate children is rather low, has received sad confirmation. There are, however, many bright exceptions.

The Head Teacher, Superior Public School, Picton :—

That my experience of the system of "boarding-out" State children has convinced me of its excellence; the children under my charge are well-cared for, and have a fair chance of doing as well in after life as their more favoured fellows; and on the whole they compare favourably in moral character and general conduct with the other pupils.

The Head Teacher, Superior Public School, Penrith :—

So far as I have observed, the State children attending this school are cleanly, regular, amenable to discipline, and successful as pupils. The system is deserving of all praise when worked with careful discrimination; and to me it appears to be so worked.

The Head Mistress, Superior Public Infants' School, Penrith :—

The children attending this Department, as far as I have opportunity to judge, are clean, bright, and well-cared for; and compare favourably with other children attending the school.

The Head Teacher, Public School, Pokolbin :—

I have had under my observation several of the above-mentioned children for the past three years, and, so far as my experience goes, I am fully convinced that the system is a good one. The children compare favourably with the other scholars under my supervision in every respect. The

The Head Teacher, Public School, Quaana :—

I have much pleasure in testifying to the good results attending the boarding-out system. The State children who have attended the various schools under my charge have always been neatly dressed, well-cared for, and were quite as industrious, intelligent, and well-behaved as any of the other children. *I have also, after the lapse of years, met many of these lads who have served their apprenticeship, and have found them good and useful members of society.* This system of sending children to different parts of the country is an admirable one, and has been the means of saving many a child from destruction. I am of the opinion, however, that where children are apprenticed, it should be ascertained as far as possible if they are being instructed in the trades or business to which they have been apprenticed.

The Head Teacher, Superior Public School, Quirindi :—

There are no State children attending this school, but from inquiries made among teachers and friends, I have a very high opinion of the boarding-out system as now carried out.

The Head Teacher, Robertson :—

The State children brought under my personal observation have been decently clad, and apparently well nourished and well-cared for. They have on the whole compared favourably with most of the other pupils in the school. I am of opinion that the system, under careful supervision, is an admirable one, one that in most cases attains the desired object—home life for the homeless.

The Head Teacher, Public School, Rookwood :—

The children attending this school under the boarding-out system are well behaved, tidy, regular in attendance, and in every respect more than favourably compare with many pupils who have parents to take care of them.

The Head Teacher, Public School, Rouse Hill :—

For the past four and three-quarter years I have had at my school an average attendance of four State children. In general appearance there is nothing whereby these children could be distinguished from the rest of the scholars. They are well nourished, and, in some cases, more carefully looked after than other children from the same house. The foster-parents seem to regard them as a special charge, and display anxious care for their welfare. I have had pupils who gave me trouble in the way of breaking them in to cleanly habits—coming to school unwashed, and generally disreputable—but these were not boarded-out children. As far as my observation goes, the system is an admirable success.

The Head Teacher, Public School, Sackville Reach :—

I have the honor to state that the system seems to work admirably. The State children attending my school always appear cheerful and happy, and as regards neatness and cleanliness, compare very favourably with the other children.

The Head Teacher, Public School, St. Albans :—

The children who have come under my notice appear to have been well nourished, comfortably clothed, regularly sent to school, and generally well-cared for. In each case the child has compared favourably with other children, both as regards conduct and intelligence.

The Head Teacher, Public School, St. Peters :—

My opinion on this point has been given to your Board on several previous occasions. The boarded-out children compare very favourably with the children of the working classes, and it only requires careful selection of the guardians to whom they are entrusted.

The Head Master, Public School, Summer Hill :—

In all instances, except one, the children seem to be well-cared for, neatly dressed, and attend as regularly as could be expected. The exception is one where the children do not appear to have much care expended on their dress.

The Head Teacher, Public School, Tarago :—

The members of the one family who attend here are clean, orderly, and regular in their attendance, and in other ways compare very favourably with the other children.

The Head Teacher, Public School, Taralga :—

I have always been in accord with the boarding-out system, it having been the means of making many useful citizens of those who, no doubt, would have been thrown upon the world, and probably found their way into our gaols. I may say also that those who have been boarded-out in this district are, in general, well-behaved and well-cared for, and that all those who have attended at this school have compared most favourably with the other children under my supervision. This latter statement, of course, refers to the immediate past, it so happening that there is not one boarded-out child attending this school at the present time.

The Head Teacher, Public School, Tarana :—

I have but one State child attending my school; I have, therefore, limited opportunities of judging the results of the boarding-out system. The child in question is always clean and neatly dressed, and will compare favourably with any child in the school. Personally, I have always been in favour of the boarding-out system, as it is, as far as I am a judge, infinitely superior to the barrack system.

The Head Teacher, Tenterfield Superior Public School :—

I have closely watched its results, and have formed the opinion that it is working admirably. It is, as a rule, impossible to distinguish State children from the other members of a class, either as regards dress, apparent contentment, conduct, or attainments, though in the latter particular the results of early neglect are sometimes for a time observable. I believe that the best results are obtained where not more than two children are boarded-out in a family, and in country districts not too remote or thinly populated. In such case the guardians feel themselves practically under the surveillance of the whole neighbourhood in their treatment of the children. So far as my observation goes, the results of the boarding-out system on the happiness and general welfare of the children are of the most gratifying description. (Note.—Other than in cases where families are placed together, the average number in each home is less than two.—A.R.)

The Head Teacher, Public School, Tirianna :—

I desire to state that the State children now attending my school compare favourably in all respect with the other pupils, and are noticeably among the most regular in attendance.

The Head Teacher, Public School, Ulladulla :—

Both children are very well-cared for by their guardians. As regards progress, W.M. compares very favourably with other children.

APPENDIX B.

EXPRESSIONS of opinion upon the operations of the Boarding-out System received from Lady Visitors.

Mrs. R. Brady, Harden :—

During the year I have visited all the children of your department who are under my care. I have in every case found the little ones in perfect health, and seemingly happy. All are in perfect homes, and are well-cared for.

Mrs. Brennan, Cambewarra :—

I can only repeat my previous statement that the system is working most satisfactorily here.

Mrs. Broadhead, Bungonia :—

The children I visit in the Bungonia district seem happy and comfortable. I think the boarding-out system an excellent one.

Mrs.

Mrs. Byrne, Young :—

I am pleased to state the few children under my control in this district are well cared for. They seem contented, and have made no complaints. I consider the system is working very well in the country districts.

Mrs. Curwood, Wesleyan Parsonage, Lithgow :—

I have had very little experience in visiting in connection with the boarding-out system, having had only two cases here, and those were children with their own mothers. It is a great boon to the mothers, in helping them to keep the home together. I have come in contact with State children in the different districts in which I have lived, and judging from these cases I think the boarding-out system an excellent one, as it gives the children the advantages of home life. They become deeply attached to their guardians, and will, I believe, become useful men and women through this system.

Mrs. Dalton, Duntryleague, Orange :—

I have much pleasure in stating that as far as my experience goes, which is rather limited, the children boarded-out are very much better cared for than many children who are living with their parents.

Mrs. Dougherty, Leichhardt :—

The State children boarded-out in Leichhardt, in my opinion, are better cared for than the majority of children living with their own parents.

Mrs. Elwin, Narrandera :—

I certainly favour the boarding-out system, more particularly in placing children under the care of a mother. Mothers may not in all cases be as tidy as one would wish, but there is invariably the comfort of knowing that the dear little children are not ill-used. I am pleased to report that the system is working satisfactorily here, and the Department is to be congratulated on the efforts made for the relief and protection of poor and homeless children, and worked, as it apparently is, on lines of the strictest economy.

Mrs. Gannon, Auburn :—

As far as I can see the boarding-out system works very well. I think the State children in the Auburn district compare favourably with children that are under the care of their own parents.

Mrs. Gibson, Upper Picton :—

I consider the boarding-out system excellent. In many cases that have come under my notice the State children are better cared for than many others living with their own parents.

Mrs. Gray, The Rectory, Kurrajong :—

I have very great pleasure in stating that the system of boarding-out children, seems to me a very perfect and good one. For instance, in my little district there are three widows quite unprovided for, and by this system they are able to bring up their own children without further trouble to the state. Then there are those boarded with strangers, by this system of visiting and reporting, I do not see how the law can be evaded. As far as I understand its plans, and have watched its workings, it is a good system and a very great boon to the needy.

Mrs. Irons, Granville :—

I have much pleasure in saying that the homes visited by me are very good and comfortable, and that the foster-mothers generally take a very kindly interest in the children under their charge.

Mrs. Marsh, Bondi :—

The boarding-out system is, in my opinion, to be highly commended. My experience is based upon the supervision in connection with the children, whom from time to time I have had placed under my control and to visit, who have apparently comfortable homes and are well looked after. May I say, therefore, that my experience is most favourable of the system.

Mrs. McCollough, Deniliquin :—

My experience is very limited in regard to the boarding-out system, as for many years there has only been one child so placed in this town. I think, from what I have so far seen, it answers exceedingly well; the child I visit is very well looked after, is healthy, and seems very happy and contented. I certainly consider the boarding-out system a vast improvement on the orphan school.

Miss O'Brien, Annandale :—

Having discharged, for the last eighteen months, the duties of lady visitor in this district, it is my opinion that the results of the boarding-out system in this Colony make both for the moral and physical well-being of the children; their surroundings on the whole are cheerful, and they seem happy and contented.

Mrs. Oliver, Goulburn :—

I have much pleasure in stating that I am very favourable to the boarding-out system. The children under my supervision seem happy and well cared for, and in most cases show great affection for their guardians.

Mrs. O'Ryan, Ingleburn :—

Within the past quarter I have, without notice, several times visited the homes of the State children of Ingleburn and neighbourhood. I have inspected minutely their sleeping-rooms, bedding, and their own clothing, and elicited from the children the kind of food and treatment they receive. In all these particulars there is much cause for satisfaction. Speaking generally, the little ones are as well cared for as the children of the guardians themselves, and afford undeniable evidence of the wisdom of the present boarding-out system.

Mrs. Osborn, Bundanoon :—

I can only say that I still hold to my former statement, viz., that it is much preferable to the barrack system, as the children in most cases are brought up in quite a homely manner, and trained to be useful members of the household. As all of my visitations have found the children in my district clean, happy and contented, also attending school regularly.

Miss O'Sullivan, Kangaroo Valley :—

The State children in my district have comfortable homes, are well clothed, and appear very happy with their guardians. They compare favourably with children in the care of their parents. I think the boarding-out system an excellent one.

Mrs. Owen, Paddington :—

I have much pleasure in stating that I think the system a very good one, so very much better than herding them by thousands in barracks. But, of course, it requires a great deal of care in order to avoid being imposed on by people who do not need assistance.

Mrs. Ranford, Parkes :—

The State children under my care seem happy and well cared for; the boarding-out system is an excellent idea, and proves a boon to hard-working widows.

Mrs. Reeve, North Botany :—

I find the children very happy and contented in the different homes that they are placed in, and they would not like to be removed, I think it is a blessing that there is such a system for them.

Mrs. Richardson, St. Ives :—

As far as my experience goes, the boarding-out system is a successful one, and the children who have come under my notice have good, comfortable homes. I would, however, suggest that the payment for children who are boarded-out, should be raised from 5s. to 7s. per week for each child. It is of first importance that children should be well nourished when they are young, to build up good constitutions, and fit them for their work in the world in after years; and the present

present rate of payment is hardly sufficient, in my opinion, to enable those who have the care of them to feed and clothe them properly, and leave a small margin for profit to themselves. I think, too, it is a mistake to apprentice children at twelve years old. Speaking from experience, I find that it would be more satisfactory to board them out until 14, and apprentice them on leaving school. I shall be very pleased if my suggestions meet with the approval of the Board, as otherwise I consider the system all that can be desired.

Mrs. Pole, Balmain :—

The boarding-out of State children in this suburb has been very satisfactory. As a rule, the children compare favourably in health, comfortable clothing, and progress at school with those who reside with their parents. The assistance given to mothers who are widows or deserted wives, is a great boon, though the children may not fare so well for the present as if boarded-out to a stranger, it is the only way to strengthen the natural tie of relationship, and develop the respective responsibilities of parent and child.

Mrs. White, Queanbeyan :—

I think the system of boarding-out the State children very satisfactory, on the whole. In the Queanbeyan district the children all seem better in general health, and are well treated.

Miss Wilson, Wiseman's Ferry :—

The State children under my supervision seem contented and happy, and suitably clothed. They compare favourably with those under their parent's control. I think the boarding-out system very successful.

[Plan.]

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ABORIGINES.

(REPORT OF BOARD FOR 1899.)

Printed under No. 9 Report from Printing Committee, 16 August, 1900.

SEVENTEENTH ANNUAL REPORT.

Office of Board for Protection of Aborigines,

Sydney, 30 April, 1900.

Sir,

In accordance with the established practice, we have the honor to submit, for the Chief Secretary's information, the following Report regarding the work undertaken by us during the year 1899, together with information as to the number, location, and present condition of the Aborigines throughout the Colony, and the means adopted by us for their relief, so far as the funds placed at our disposal would admit.

We regret to have to report the death, on the 17th December last, of Mr. Sydney Burdekin, who was appointed to a seat on the Board on the 27th May, 1887.

Mr. Frank Norrie and Mr. Henry Trenchard, J.'sP., accepted seats on the Board, their appointments dating from the 14th November and 22nd December, 1899, respectively.

The statistics of the Aboriginal population of the Colony (*see Appendix A*), compiled from information collected by the police, on the 15th October last, show a total of 3,203 full-bloods, and 3,689 half-castes—6,892 in all. These figures, in comparison with those of the previous year, exhibit an increase of 1.

The deaths among the full-bloods exceeded the births by 60, the numbers being 139 and 79 respectively. On the other hand, there were 100 more births than deaths amongst the half-castes, the former reaching a total of 161, and the latter 61. These figures would, however, show a net increase of 40 in the whole Aboriginal population, instead of, as shown above, only 1. The deficiency is probably due to the difficulty in taking a correct census, owing to the migratory habits of the race, and by the border tribes crossing into the other colonies.

The number of full-bloods has declined from 6,540 in 1882, the year in which the first of such census returns was specially taken, to 3,203 at the present time. On the other hand, the half-castes have increased from 2,379 to 3,689—an average annual decrease in the former of 196, and an increase annually of 77 half-castes.

The total sum of £17,662 11s. 3d. was expended by the Government on behalf of the Aborigines during the year (*see Appendix C*). This includes an expenditure of £12,967 15s. 11d. by the Board, £861 4s. 9d. by the Chief Medical Officer, £1,078 7s. 8d. by the Minister of Public Instruction, £89 9s. 6d. by the Chief Secretary, and £2,665 13s. 5d. from the Vote for Stores.

The expenditure by the Board is given in detail (*see Appendix D*). A sum of £9,749 7s. 11d. was expended in the purchase of food, clothing, medical comforts, boats and gear, fencing-wire, farming implements, seed, material for the erection and improvement of dwellings, &c., £214 19s. 9d. for the fares of Aborigines travelling on the railway lines, and £3,003 8s. 3d. in liquidating claims incurred strictly in connection with the Cumerogunga (Murray), Warangesda (Murrumbidgee), and Brewarrina (Barwon) Aboriginal Stations.

At the following places the Aborigines have been assisted to erect comfortable dwellings for themselves :—Brungle, Cowra, Cumeroogunga, La Perouse, Lismore, Grong Grong, Port Macquarie, Uralla, Warangesda, and Wellington, and a sum of £11 6s. 11d. was expended in the purchase of material for the erection of a shed to shelter a boat recently provided for the use of the Aborigines at Lake Illawarra, for the purpose of deep-sea fishing.

The practice is for the Aborigines to procure the necessary timber and provide the labour, the Board authorising the purchase of tools, nails, and roofing-iron.

Five additional reserves, as under, aggregating an area of 239 acres, has been set apart for the use of the Aborigines during the year :—

	a.	r.	p.
Collarendabri	160	0	0
Nowra	43	0	0
Crudine (Rylstone)	9	0	0
Arakoon	25	0	0
Southgate (Grafton)	2	1	25

On the 31st December last, there were 123 reserves for Aborigines in different parts of the Colony, with a total area of 23,719 acres.

In numerous instances the land is successfully cultivated by the Aborigines, and there efforts have been encouraged by the Board, as far as practicable, by the supply of implements, seed, and other assistance. Several of the reserves have been enclosed with good substantial fences, the Aborigines providing and erecting the posts, and the cost of the wire being defrayed from the Board's funds.

The number of Aboriginal children throughout the Colony receiving instruction is 612—568 at public schools and schools established specially for them, and 44 privately.

The Board continue to offer every inducement to the Aborigines to send their children to school, chiefly by providing decent clothing for regular attendants, and by granting to them a weekly ration of food. The following extracts from reports by Inspecting Officers of the Department of Public Instruction prove that the efforts of the Board in this direction in a number of instances have had good results :—

Cumeroogunga.—“There were 60 pupils present on the date of inspection. Proficiency—Class 1, very fair; Class 2, fair to very fair; Class 3, fair to very fair. Conduct and habits—very satisfactory. All the subjects prescribed for Aboriginal schools are taught with very fair results, and, in view of the high standard of the school, I am of opinion that the full public school course should be followed. Eight pupils out of nine examined gained certificates of having been educated up to the standard required. The home-lessons are well done.”

Grafton Home.—“There are 10 Aboriginal pupils enrolled. The dark children work with vigour, and in mechanical subjects surpass the white children. Punctuality and regularity—very good. Appearance of pupils—tidy and clean. Average proficiency—very fair. The writing of the Aboriginal children at this school is a special feature. I enclose the copy-book of a little girl whose right hand is withered, and who writes with her left hand. The writing is very good, and I should like the writing shown to the Minister.”

Erambie.—School for Aboriginal children. Number of pupils enrolled—12. Punctuality and regularity—satisfactory. Appearance of pupils—neat and clean. One pupil passed the examination, and gained the certificate for having been educated up to the required standard.”

The police have been successful during the year in obtaining convictions against a number of persons in the metropolitan district for supplying intoxicating liquor to Aborigines, also in the following country districts :—Euston, Moree, Taree, Bermagui, Wee Waa, Deniliquin, Corowa, Lismore, Eugowra, and Coonamble.

Thirty-seven boats in all are now in use by the Aborigines at Taree, Arakoon, Kempsey, Forster, Macksville, Bellingen, Gladstone, Harwood, Wallaga Lake, Bombo, Gerringong, Lake Illawarra, Sackville Reach, Greenwell Point, Jervis Bay, Ulladulla, Port Stephens, Lawrence, Wardell, La Perouse, Minamurra, Moruya, and Twofold Bay. They are used for fishing purposes, conveying stores to and from their island reserves, and ferrying their children to school. Fairly good care is taken of them.

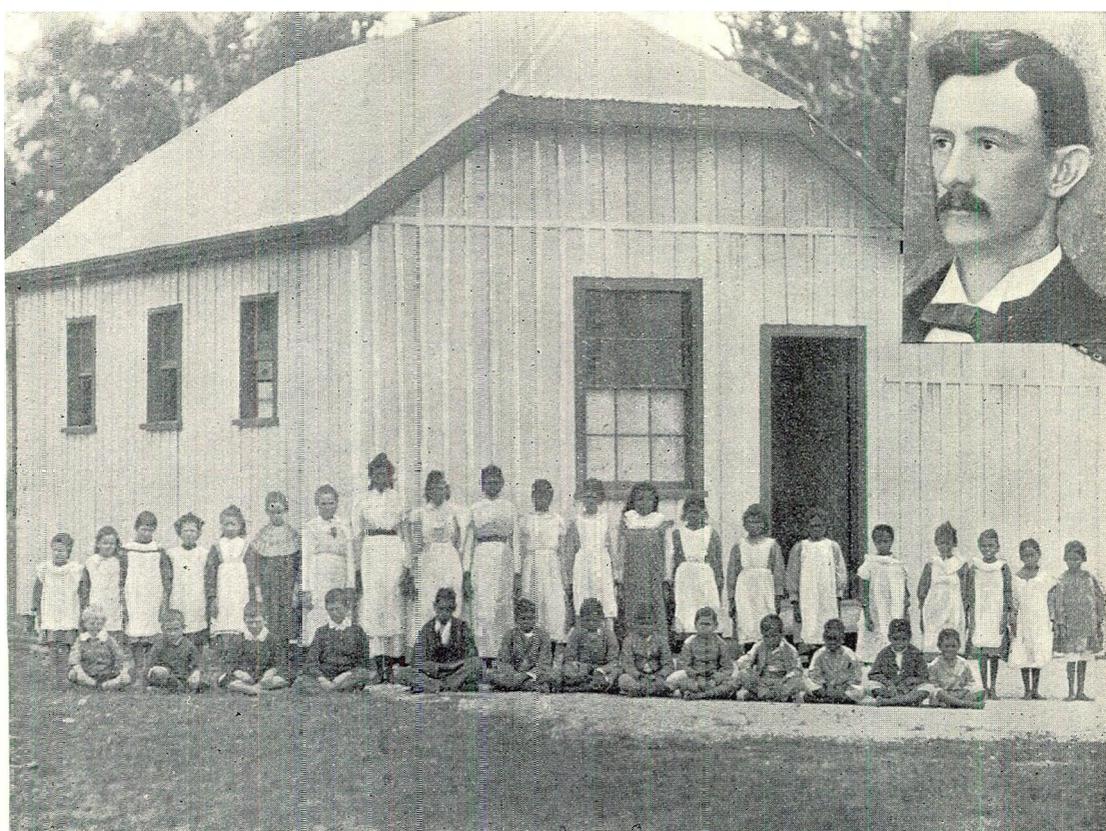

The number of Aborigines at the settlement at Brungle (Tumut District) on the 31st December last was 70—33 full-bloods and 37 half-castes. Seven births and 5 deaths occurred during the year. The average attendance at the school on the station was 16, and the children are reported to have made satisfactory progress with their studies. The health of the residents generally has been good.

GIRLS' SCHOOL CUMEROGUNGA.

BOYS' SCHOOL CUMEROGUNGA.

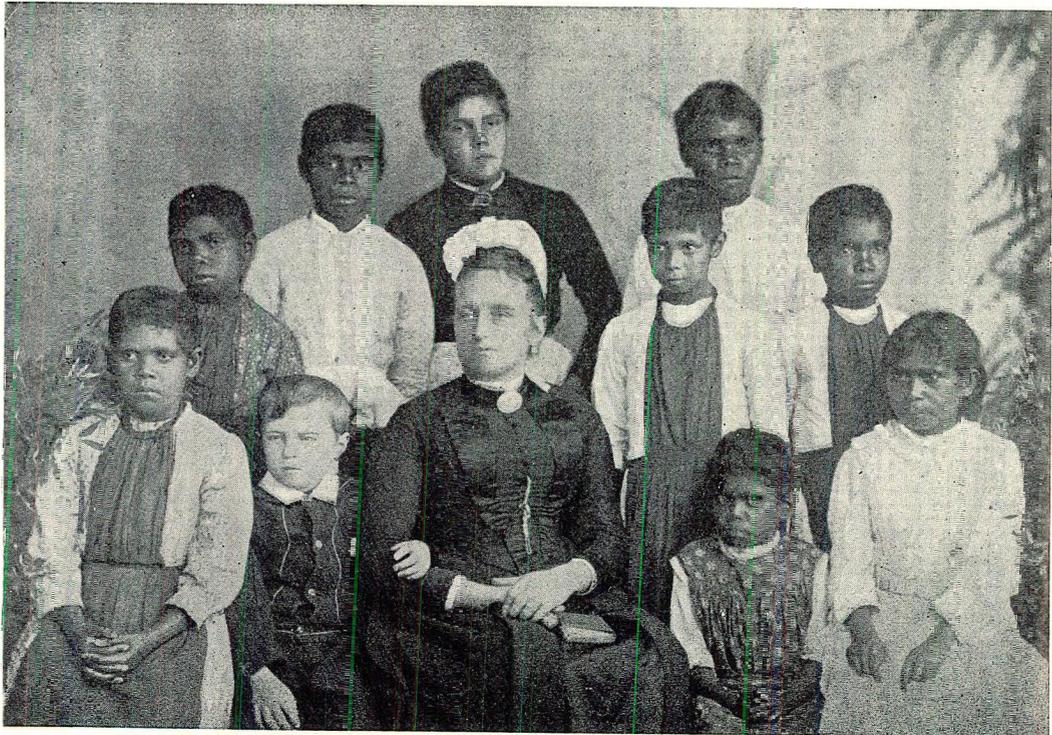

TEACHER AND SCHOOL CHILDREN—HOUSE FOR ABORIGINES, GRAFTON.

HOUSE BUILT FOR JACK TORRENS BY HOME STAFF, GRAFTON.

THE marriage of a couple of the Wallaga Lake aborigines took place at the station on Monday, the contracting parties being Arthur Ashby and Mary Jane Carter, while the Rev. G. Soares performed the ceremony. Mrs. Hockey kindly provided a cake for the occasion. We understand this is only the forerunner of several marriages to take place in the early future. The wedding party, including the clergyman, were photographed after the service.—*Cobargo Chronicle* Nov. 24/99.

MATRON AND DORMITORY CHILDREN WARANGESDA.

Forty acres were put under wheat, yielding 233 bags of good full grain, an average of 23 bushels to the acre. One and three-quarter acres were planted with potatoes, for a yield of $1\frac{1}{2}$ tons.

Two tons of hay and a quantity of maize has been stored for feed for the working horses during the winter months.

The manager's residence and school-house have been thoroughly renovated and painted, also office and outhouses, as well as a number of the dwellings of the residents whitewashed.

A new jetty has been erected at the creek, and a pump fixed thereon with piping to conduct water to a wash-house recently erected for the use of the Aborigines. A small area has been enclosed with a substantial fence, and divided off for the purposes of milking-yards and calf-pens.

1,300 slabs have been split by the Aborigines, also 300 flooring boards for the verandah of the school-house.

1,600 weatherboards have been stacked ready for use when required.

The general conduct and the morality of the residents are reported by the Local Board to be improving.

At the Home for Aborigines at Grafton fair progress has been made during the year, one new dwelling having been erected, and sundry repairs effected to other buildings.

Timber has been cut and prepared to be used in the construction of a barn.

An additional area has been made available for cultivation purposes, a number of trees having been felled, and the land cleared of stumps. A small portion is being cleared, which it is intended to enclose for a grass paddock, and a number of minor improvements have been carried out.

The crops were not satisfactory during the year, in consequence of a drought in the latter part of 1898, and floods in July and August, which swamped a large area planted with potatoes.

The Local Board report that the residents are happy and contented, and have no complaints to make.

The stock consists of 40 head of mixed cattle, 6 horses, and 45 pigs.

The sum of £46 12s. 10d. was realised during the year from the sale of farm produce.

Since the appointment of the Local Board and Manager at the Wallaga Lake Aboriginal Station (South Coast), in June last, many improvements have been effected.

There has been no cultivation of crops on the station, no cleared land being available.

Timber has been felled on 40 acres, which has been partly cleared, a small dam has been constructed, and two boat-sheds, stockyard, and cow bails erected. Sufficient slabs and other timber have been obtained by the Aborigines for the erection of several dwellings, also a large quantity of fencing material.

A very comfortable cottage of five rooms and kitchen has been built for the accommodation of the manager.

The health of the residents has been good, there having been very few cases of sickness.

During the last few months of the year no cases of drunkenness were reported.

The number of Aborigines at the station during the last week of the year was 121—48 full-bloods and 73 half-castes.

During the six months there were 5 births on the station, and 1 death, the victim being an old man aged 85, the last of the Wagonga tribe.

The children attending the school appeared cheerful and attentive. The average daily attendance was 28.

A number of improvements have been carried out at the Warangesda (Murrumbidgee) Aboriginal Station during the year. Posts for 4 miles of fencing have been split, and $1\frac{1}{2}$ miles of fencing has been erected and wire netting fixed thereon, also repairs effected to existing fences.

The fallen timber has been burnt off 400 acres, 160 of which have been cleared of stumps and suckered.

The dormitory and four new weatherboard dwellings were painted, and all other residences lime-washed. The cottages of residents, where the accommodation was found to be inadequate, were added to, seven rooms in all having been erected during the year.

Streets were laid out, and drains made to carry off storm water. Two new wells have been sunk.

As the result of continuous and severe drought, combined with a plague of grasshoppers, the general field work during the year was unsatisfactory, but there has since been a copious fall of rain.

The

The health of the residents has been remarkably good, and it is reported that there appears to be less desire on their part to absent themselves from the Station and wander about.

There was a good deal of sickness during the year, although not of a very serious nature. The appointment of a medical attendant is of the greatest benefit, not only in his attendance on the sick, but in the improvements he has caused to be made in the sanitary arrangements at the Station.

There were 104 Aborigines on the Station on the last day of the year—25 full-bloods and 79 half-castes. The daily average school attendance was 35.

The stock consists of 13 horses and 5 head of cattle.

A local Board, consisting of a number of gentlemen who take an interest in the welfare of the Aborigines at Gulargambone, where there are upwards of 50 Aborigines located, was established early in the year.

The Reserve of 75 acres has been subdivided, and small portions of 2 to 4 acres allotted to each family. The land is excellent for farming purposes, and it is expected that each block will yield a sufficient crop to clear a profit after paying for seed, &c.

One substantial dwelling has been built, and others are in course of erection.

During the year there were 2 deaths at the camp, and 1 birth.

Further improvements were effected at the Cumeroogunga Aboriginal Station (Murray River) during the year.

Four hundred and fifty acres of land were suckered; 120 acres grubbed and cleared for ploughing; 465 acres ploughed and sown with wheat; 100 acres of wheat were cut for hay, giving a return of 50 tons; 339 acres of wheat were stripped, yielding 1,520 bushels of grain.

A new main entrance has been erected, including a hundred feet of squared fencing, with ornamental posts.

A water supply, including the erection of two tanks with a capacity of 6,000 gallons, on a new stand 26 ft. high, has been completed. A 15 ft. well has been sunk, and a drive from it to the river formed and timbered.

Water has been laid on to 28 cottages. Crowns have been formed to George and Cooper Streets.

Ninety-six chains of fencing have been erected, and two two-roomed dwellings have been completed.

The area of 2,400 acres at Cumeroogunga is too limited for the purposes of the Station, at which there are upwards of 200 residents. At the instance of Mr. Chanter, M.P., the Minister for Lands has approved of the extension of the Reserve to include an irrigation lease, which has recently become forfeited. This area is very suitable for cultivation, and will be a valuable addition to the Station property.

The attempt to render some of the residents of the Stations independent of further Government aid, by granting them farm blocks to work, has been fairly successful.

At Cumeroogunga 18 such blocks were cultivated during last season, resulting in a yield of 1,520 bushels of wheat, and 10 tons of hay.

There were 231 Aborigines on the Station on the last day of the year—28 full-bloods and 203 half-castes.

The average daily attendance at school in December was 52.

The stock at the end of the year consisted of 15 horses, and 37 head of mixed cattle.

Five deaths occurred during the year.

At the Brewarrina (Barwon) Aboriginal Station 2,250 acres of land have been suckered. Repairs have been effected to some of the dwellings requiring attention, and eight gates were constructed and hung at the entrances to the different paddocks.

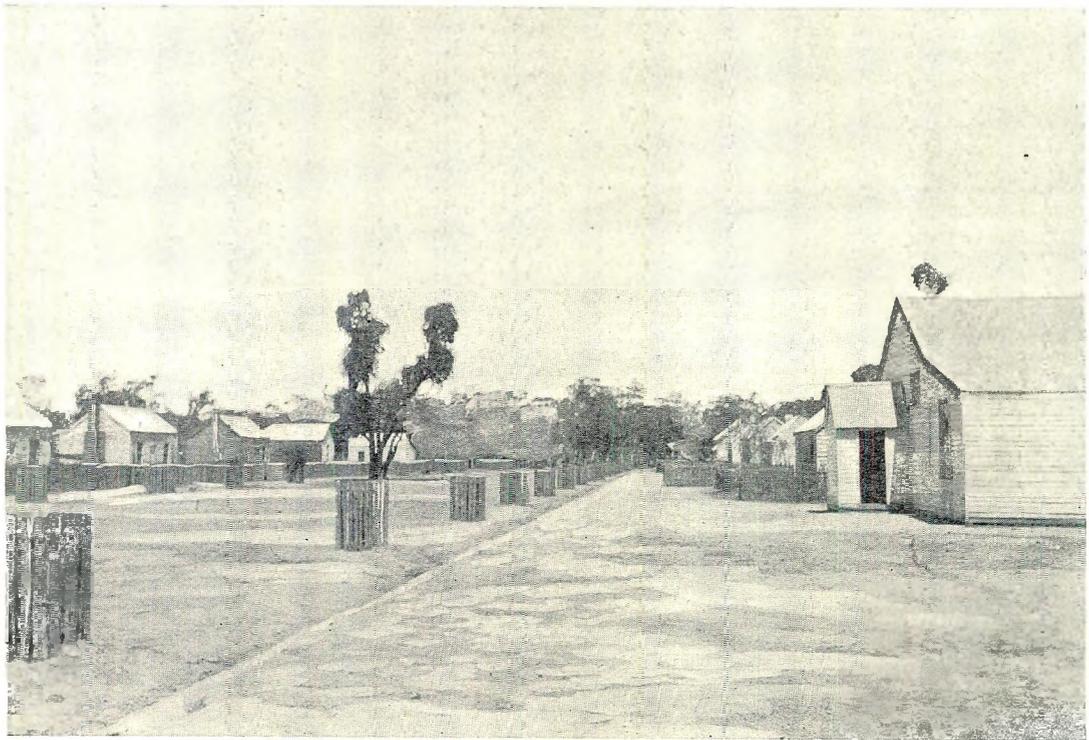

There were 323 sheep shorn, yielding 1,851 lb. of wool, which realised £84 17s. 5d. The proceeds of the sale of sheepskins amounted to £22 15s. 8d., and a sum of £25 16s. was realised from the sale of horses, cattle, and pigs.

There were 53 Aborigines on the Station on the 31st December.

The health of the residents during the year was good, and the condition of the settlement generally is very satisfactory.

GEORGE-STREET CUMEROOGUNGA ABORIGINAL STATION—WEST SIDE.

GEORGE-STREET CUMEROOGUNGA ABORIGINAL STATION—EAST SIDE.

CUMEROGUNGA FOOTBALL CLUB—PREMIER CLUB, SEASON '98-99—WINNERS OF THREE TROPHIES.

BREWARRINA ABORIGINAL STATION.

Yass District.—There are eight Aborigines' families residing on the reserve of 5 acres at Yass.

A reserve of 115 acres in the parish of Blakeney is fenced, about 15 acres cultivated, and the occupier, a half-caste, has a comfortable dwelling, with outbuildings erected thereon.

A reserve comprising 120 acres, in the parish of Opton, is also occupied by a half-caste and his family. The land has been enclosed, and portions have been cultivated.

A reserve of 100 acres in the parish of Boambola has been enclosed with a log and wire fence, and 14 acres of it is cultivated.

The half-castes occupying these reserves each own a few horses, cattle, and sheep.

At Arakoon—Kinchela Island—the Aborigines have erected comfortable dwellings, and constructed three strong and serviceable boats for their own use.

Portions of the Pelican Island Reserve are very suitable for cultivation purposes, and good yields are obtained from crops of maize, potatoes, turnips, &c.

The Aborigines were at the latter end of the year employed by the men engaged at the entrance works, cutting wood, &c., and by farmers when harvesting.

The Aborigines at Wellington occupy a small reserve on the Macquarie River, in a healthy and suitable position—sufficient for present requirements—which they have securely fenced. Seven comfortable dwellings have been erected thereon.

The roofing-iron and fencing-wire were provided by the Board.

The Aborigines at Lake Illawarra have for many years been living on portion of a forest reserve under permissive occupancy, on which strong, comfortable huts have been constructed by the Board.

This reserve has now been surveyed with a view to a portion thereof being set apart for the use of the Aborigines. When notified, a few acres of it will be enclosed with a fence for cultivation purposes.

Uralla.—Four families of Aborigines living on the reserve at Uralla have erected comfortable dwellings thereon, and have started cultivating vegetable gardens, which they have enclosed with fences. Some of the Aborigines make a comfortable living fossicking in the creek and old mines for gold.

Kempsey.—Nearly 100 Aborigines reside on the reserve. There are about 3 miles of fencing erected. The greater portion of the land is cleared and under cultivation. A yield of upwards of 800 bushels of maize was obtained from the crops in 1899, and an additional area is being prepared and will be planted with potatoes. The Aborigines have constructed barns for storing their produce. They live in comfortable slab and bark dwellings.

Bellingen.—There are five full-blood and two half-caste Aborigines children attending the public school. The Aborigines have cultivated 40 acres of the local reserve, and have raised good crops of maize.

Walcha.—There are two reserves in the Walcha district, one of 320 acres, and the other at Ingalba of 107 acres. The Aborigines have cultivated small areas on each, and have grown wheat, oats, potatoes, and vegetables.

Port Macquarie.—There are three reserves in this district upon which about 50 Aborigines reside. Several of the families cultivate portions of the reserves, and produced in the summer about 200 bags of maize. The cultivated areas are enclosed with substantial fences. All are fairly well provided with shelter.

Lismore.—At Lismore the Aborigines have felled the timber and cleared about 5 acres of the reserve upon which they are growing maize. They are residing in huts erected by themselves, the Board having provided the necessary roofing-iron. They are employed principally by farmers, doing general farm work, and by settlers, burning off timber, clearing land, &c.

Gladstone.—There are four reserves with secure fences. They are all cleared and cultivated, maize being chiefly grown.

On the whole the Aborigines are in a fairly flourishing condition, having horses and sulkies of their own. They have also provided themselves with boats, those supplied by Government being worn out.

All the families have erected comfortable dwellings for themselves.

Casino.—A sum of £650 having been voted by Parliament for the establishment of a Home for Aborigines in the Richmond River District, the Board have accepted a tender (£117) for the erection of dwellings, and fencing portion of a reserve of 115 acres at Runnymede. When this work has been completed a manager will be appointed.

A medical attendant for the Aborigines in the district has been appointed on the recommendation of the Board.

The conditions of the Aborigines at La Perouse is not such as the Board desire ; but, considering the close proximity of the camp to the city, it is feared that but little permanent improvement can be effected under the circumstances. It would be in the interests of the people themselves to have the camp removed to a site more distant from the city.

The Board have had under consideration a proposal to place selected lads as apprentices to suitable trades, such as bootmaking, tailoring, &c. The scheme will be further developed at an early date, and practical effect given to the proposal.

A number of the half-caste girls and lads at the Aboriginal Stations were placed in suitable service, and are reported to be giving satisfaction to their employers.

The receipts from the sale of produce at the various Aboriginal Stations during the year reached a total of £525 13s. 10d. The money was lodged to the Board's Produce Account, and expended in paying claims for labour, farming implements, provisions, tools, fencing-wire, seed, clothing, building materials, &c. A detailed statement will be found in Appendix "H."

The receipts from the Sale Stores at Cumeroogunga and Warangesda Aboriginal Stations totalled £466 17s. 1d., and the expenditure £479 15s. 4d. £13 10s. 8d. was carried forward from the previous year, leaving a balance on the 31st December of 12s. 5d.

A sum of £245 4s. 10d. was, on the 31st December, lying to the credit of the Trust Account in the Government Savings Bank, being the amount of wages received in trust from employers of a number of Aboriginal children apprenticed from the stations. Upwards of £110 was expended during the year for the benefit of those entitled to it.

Mr. Berckelman, who for so many years acted as Secretary for the Board, and performed his duties in a highly satisfactory manner, having been appointed Secretary to the Public Service Tender Board, the duties were undertaken by Mr. McCall, First Clerk in the office of the Inspector-General of Police, but the Board feel that the nature and extent of the duties, which are very exacting and increasing, are very insufficiently remunerated by the present allowance, £75 per annum.

In conclusion, the Board desire to express their appreciation of the valuable assistance rendered them by the District Boards of Advice and the members of the Police Force in furthering their aims for ameliorating the conditions of the race.

We have, &c.,

EDMUND FOSBERY, Chairman.	} Members of Board.
J. M. CHANTER,	
JOHN SEE,	
U. W. CARPENTER,	
G. E. ARDILL,

APPENDIX K.

REPORTS OF LOCAL BOARDS.

Gentlemen, Aborigines Protectorate, Local Board, Grafton, 17 April, 1900.

I beg to forward the annual report for the year 1899.

The number of Aborigines at the Home at the end of the year was 48, and the average population during the year 40, and the attendance at the school being 10 children.

The parents of children outside the Home have been advised repeatedly by me to send them to the school, but without avail; the attendance has not been so satisfactory as it should be, although the teacher (Mr. McPherson) is very attentive.

There were 3 births during the year, and 1 death.

The stock at the Home consisted of 40 head mixed cattle, 6 horses, and 45 pigs.

The crops were not satisfactory during the year owing to the drought at the end of 1898, and the swamping of some of the land in the middle of 1899, causing some potatoes sown to be destroyed.

The inmates of the Home seemed on the occasions of my monthly visits to be happy, and had no complaints to make. Drunkenness to some extent exists amongst them, liquor being obtained by white men and given them; they are supplied by some unscrupulous hotel-keepers who should be made liable for allowing them on their premises under any circumstances. The women are employed scrubbing, and obtain liquor and take it to men, who are generally waiting for them outside. The Aborigines are very reticent in saying where they obtain the liquor, and are always on the lookout for the police.

I, in conjunction with the police, do all that is possible to prevent them being supplied with liquor. One white man was summoned for supplying liquor to an Aboriginal, and fined; another was also summoned, but the case was dismissed.

The Manager and Matron are still devoting their time and labour in making the Home successful. Messrs. Wilcox and Crispin, members of the local Board, resigned at the end of the year.

I have, &c.,

THOMAS PARKER,

Chairman.

The Aborigines Protectorate Board, Sydney.

Report for year ended 31st December, 1899.

Home for Aborigines, Clarence River.

NUMBER of Aborigines at the Home on 31st December, 1899, 48. Daily average for the year, 40·6.

Work done.—Farm: All the available ground on the farm, about 24 acres, is now under crop, some having already borne one crop this year.

Building.—One new house for Aborigines, sundry repairs, timber prepared for new barn.

Clearing.—Twenty-seven large trees and about 170 stumps cleared on cultivation ground, also logs cross-burnt, trees ringbarked, &c., for clearing in grass paddock.

Fencing.—Post and wire fencing round oat-paddock, log fence for pig-paddock, rough paling round proposed orchard.

General Returns.—Drought in the end of 1898 caused the early crop for 1899 to be very light, and swamping of the land by wet weather in July and August caused double and sometimes treble labour in cultivation; also loss in potatoes and destruction of feed in the paddock necessitated use of maize for feeding horses and pigs that might otherwise have been sold, still the general result is about equal to the previous more favourable season. The particulars for the year are:—

	£	s.	d.
Produce sold	62	0	0
Pigs in stock for sale	30	0	0
Hay in stock for use	10	0	0
Potatoes in stock for seed and eating, 2 tons at £3	6	0	0
Potatoes consumed during the year, 4 tons at £3	12	0	0
Beef from home cattle, 2,545 lb. at 2d., £21 4s. 2d.—less purchase money, £4	17	4	2
By calves and increase in value of young cattle	15	0	0
Value of improvements, clearing, &c. (about)	50	0	0

£202 4 2

In addition to this, the 24 acres have been cultivated, and are bearing crop for next season's returns; so that, as far as wages and management, the Home is about self-supporting.

School attendance.—Boys, 3; girls, 7. Attendance is decreasing.

There are several orphans in the district who might, with kindness to themselves, be sent to the Home by magistrates till they can earn their own living.

Births, 3; deaths, 1 child.

Stock.—Forty head cattle (mixed), 6 horses, 45 pigs.

General.—Some Aborigines have left the Home; others have taken their places as permanent residents; others, again, come in for a little while when out of work. There has been little disturbance, and that only through drink. Intemperance cannot be said to increase; but there are publicans in and near Grafton quite aware of the difficulty the police have in obtaining necessary evidence for prosecution, and Aborigines can get as much liquor as they can pay for. I have heard of most disgraceful scenes; at one house in particular, and several Aborigines have been punished for crimes caused by drink, and although this is very necessary, the fact remains that the oftener an Aborigine goes to prison the worse he is for it.

F. C. CURRY,

Manager.

Gentlemen,

Gentlemen,

The Manse, Gulargambone.

We, as members of Local Aborigines' Protection Board at Gulargambone, have great pleasure in forwarding to you an annual report.

Since the Board was elected, early in 1899, great improvements are visible on the Camp. The land, which is comprised of 75 acres, is partly subdivided, small portions given to each family, as per enclosed plan.

If they had their portions divided a month or two sooner they could have had a fair crop of hay, which is selling now at £3 10s. and £4 per ton. The land is good, and each part of $3\frac{1}{2}$ acres, with a moderate season, should raise £10 or £12 clear profit, after paying for seed, if they did the labour.

One substantial house is put up on the ground, covered with galvanised iron; another one is up to the square. An application for iron is herewith enclosed.

We think since the local Board came into existence that the morals of the Camp is improved, especially so far as the drink question is concerned.

During 1899 there were 2 deaths. *Mrs. Duncan died in Coonamble Hospital, one named *Mary died on the Camp. One child was born in 1899.

As I contemplate visiting the Camp in a day or two, I will forward you exact number of inhabitants at the present time.

On behalf of local Board, I remain, &c.,

R. E. DAVIES,

Honorary Secretary.

To Aborigines Protection Board, Sydney.

* Mrs. Duncan, of hydatids; Mary, of old age.

Dear Sir,

Cumeroogunga Aboriginal Station, 16 March, 1900.

Report for the year 1899, as follows:—Nature and extent of work performed during the year: 450 acres sucker-cutting, 120 acres grubbed and cleared for ploughing, 465 acres ploughed and sown with wheat, 100 acres wheat cut for hay, giving a return of 50 tons, 339 acres wheat stripped, giving a return of 1,520 bushels; new main entrance erected, including 100 feet squared fencing, six ornamental posts, cap-rail on edge—the whole painted white; new water supply, including erection of two tanks, with a capacity of 6,000 gallons, on new stand 26 ft. high, top floor 20 ft. x 12 ft. on six legs on two sills 26 ft. long; well sunk 15 ft. and slabbed for pump, and a drive 3 ft. x 2 ft. 6 in. from river to well, 30 ft. long, and timbered; 1,700 ft. trenching for 2-in. main pipe coated with tar and laid in sand; water laid on to twenty-eight cottages; crown formed to George and Cooper Streets; 96 chains wire fence erected; 14,000 bricks made and burnt; two-roomed cottage erected. Twelve births, 1 marriage, 5 deaths—2 adults, 3 children. One hundred and ninety-nine services were held with an average attendance of forty-nine.

Yours, &c.,

GEO. H. HARRIS,

Manager.

C. L. Blair, Esq., Hon. Sec., Local Board, Moama.

The local Board have held twenty meetings to month of February, 1900, and visited the Station fourteen times.—A. E. KINSEY, Chairman.

Dear Sir,

Warangesda, 9 April, 1900.

In compliance with your request, I beg to forward you the following brief account of the working of the Mission during 1899. In the first place consequent upon, and as the result of, the continuous and severe drought, together with a plague of grasshoppers, the general field work of the Mission was a complete failure. The grasshoppers, when they visited us, fastened upon everything. They destroyed the garden and the wheat crops, eating the flags, then the heads, and finally the stalks; and when they left us there was not a straw to be seen; the ground was as bare as though it had been visited by fire.

The conduct of the people has been remarkably good. There was a great deal of sickness, the Mission being visited with measles, whooping-cough, and influenza, but in consequence of the regular attendance and attention of the Medical Officer, Dr. Watt, the people did not suffer as much as they have done in times past. The appointment of a Medical Officer has been of the greatest benefit to the people, not only in his attendance on them during sickness, but in the improvement he has caused to be effected in the sanitary arrangements.

The attendance at services was satisfactory, and there seems to be less desire on the part of the people to absent themselves from the Station for the purpose of attending race-meetings and such places or to wander the country.

During the year Mrs. Thorn resigned her position as Dormitory Matron, much to the regret of the local Board and of the residents, and was succeeded by Miss Ardill. Various improvements were effected in the shape of fencing, &c., but all through the year the Station looked like the surrounding country, a desolate waste.

I am, &c.,

G. R. F. NOBBS,

Hon. Sec., Local Board.

To the Secretary, A. P. Board, Sydney.

Work done at Warangesda for year ending 31st December, 1899.

Fencing.—Split posts for 4 miles of fencing; erected $1\frac{1}{2}$ mile Larkin's boundary; erected fence round garden and wire-netted same; erected fence round recreation ground, 7 acres; erected new sheep-yards; also put 60 posts into boundary fence, and straightened up fence round back paddock.

Clearing Land.—All timber felled, grubbed and cleaned up from 30 acres. Burnt off fallen timber and debris from about 400 acres, 130 acres of which I am getting all stumps and small stuff grubbed, suckers cut, and portion of the large trees ringbarked.

Farming.—Had 145 acres of land ploughed and sown with wheat, 3 acres with potatoes, 1 acre with field peas, and 1 acre with pumpkins, all of which were destroyed by grasshoppers. Also assisted Turner to put in 15 acres of wheat, Westall 7 acres, and Smith 6 acres. *Houses,*

Houses, &c.—Had dormitory painted, also four of the new weatherboard cottages, and all other places white-washed inside and out with lime. Built two rooms for Mrs. Lewis's cottage, one to Mrs. Murray's, one to James Gibson's, also paling fence erected round his house, and one room added to Upright's place. Built two closets; filled in old ones. Had all rubbish heaps carted away and the place made thoroughly clean.

Streets.—Laid out the streets, and made drains to carry away all rain water. Put about fifty loads of ashes and covering on to the streets. Had pepper-trees grown round square, which were also destroyed by grasshoppers.

Garden.—Rigged double buckets on the well; made two new ones. Laid out the garden, and have a good supply of vegetables planted; $\frac{1}{4}$ acre lucerne, $\frac{1}{4}$ acre barley, and $\frac{1}{2}$ acre field peas.

THOS. R. MACDONALD,
Manager.

Certified.—J. L. BENNET, Chairman.

Sir,

Tilba Tilba, 7 March, 1900.

I have the honor to submit the annual report for the Wallaga Lake Aboriginal Station for the year ending 31st December, 1899. The present local Board and Manager were only appointed in June, 1899, so that this report will only deal with the last six months of the year. There were seven regular and four special meetings of the local Board, the attendance of members being satisfactory. The number of Aborigines in attendance at the Station during the last week of the year was:—Full-blooded men, 24; full-blooded women, 12; half-caste men, 23; half-caste women, 18; full-blooded boys, 8; full-blooded girls, 4; half-caste boys, 19; half-caste girls, 13. Total, full-blood, 48; half-caste, 73.

Births during last six months of the year, 5. Only one death occurred from senile decay, the victim, aged 85, being the last of the Wagonga tribe.

There has been no cultivation of crops on the Station, on account of there being no cleared land available. Forty acres have been felled and partly cleared, a small dam constructed, and two boat-sheds, stock-yard, and cow-bails erected. Sufficient slabs and other timber for the erection of several houses have been obtained, also a large amount of fencing material.

A very comfortable cottage of five rooms and kitchen has been built for the accommodation of the Manager.

The health of the inmates of the Station has been very good during the six months, there being very few cases of sickness.

During the last few months of the year there have been no cases of drunkenness reported.

The district clergymen are frequent visitors to the Station, and take much interest in the residents.

The relations between the local Board and the Manager have been most cordial, and the Manager and Mrs. Hockey deserve much credit for the earnestness displayed in their work.

Mrs. Hockey has been having sewing meetings weekly, some of the work done being very creditable.

Twenty-eight children attend the school, and appear to be cheerful and attentive.

The local Board desire to thank the central Board for the courteous manner in which they have been treated, and for the liberality displayed when dealing with the recommendations of the local Board.

I have, &c.

DAVID GILPIN,

Hon. Sec., Local Board, Wallaga Lake.

The Secretary, Board for Protection of Aborigines, Sydney.

Sir,

Aborigines Protectorate, Wallaga Lake, 9 March, 1900.

With pleasure I herewith submit the annual report for 1899.

Since the commencement of my duties much has been done in the improvement of the Aborigines of the place. We endeavour to train the children by day in reading, writing, and arithmetic, and in many instances our expectation has been exceeded. Two nights during the week we set apart our dining-room for a mutual improvement class for the benefit of those who have to work by day, and it is surprising the eagerness with which this is taken up; in fact, if they had their wish meetings would be held every night. We get over forty men and women every meeting night; and, to show their appreciation of the substitute for the cards, pack after pack has been brought and thrown into the fire. Their conduct, too, when visiting the neighbouring towns proves beyond a doubt that the long-felt want has been supplied.

A cricket club has been formed, with a membership of over thirty, and a code of rules and by-laws drawn out for systematic working. Several matches have been played against the neighbouring clubs.

Mrs. Hockey has organised sewing classes for young and old, and the once thrown-off garment, by a little mending, has proved to be comfortable to wear for months.

We have received regular visits from the clergymen of the district, and their services are very much appreciated. The Rev. R. Waugh, of Neutral Bay, when spending his holidays in the neighbourhood, held two meetings, one of them being a lantern entertainment, at which ninety persons were present inside, and a number had to remain outside, not even standing room being available inside.

Five births and one death.

HERBERT E. HOCKEY,
Manager.

The Secretary, Aborigines Protectorate, Sydney.

Sir,

Aborigines Protectorate, Local Board, Brewarrina, 16 March, 1900.

I herewith beg to forward the Manager's report for the year 1899. This has been before the local Board, and, as everything in connection with the Station is fully set out, they endorse the report; and, in doing so, desire to add their continued satisfaction with the way in which the Manager (Mr. and Mrs. Hopkins) carry out their duties.

Yours, &c.,

H. LORAIN CATHIE,
Chairman, Local Board.

The Secretary, Aborigines Protection Board, Sydney.

Manager's Report for 1899.

Brewarrina Aboriginal Station, 10 March, 1900.

We had 24 adults and 29 children, 53 in all, sleeping here the last night of the year. The health of the people was good in general throughout the year; only 3 deaths occurred—1 old woman full-blood, 1 half-caste girl, only a few days old, and 1 full-blood girl, 9 months old. The 2 children that died were the only births during the year. The wives of the men residing here keep their houses and surroundings clean and tidy. Our weekly average for the year was 40.5. I may further add that I have cleared the place of about 6 able-bodied men, who seemed to prefer staying here for their rations rather than accept work elsewhere. I showed them from the circular issued that this was no place for them. We have at present 19 children on the school roll, and those present at the last examination passed creditably, and there are 22 that attend Sunday school. There are also 6 of our girls and 1 boy at service, and their employers are fairly well satisfied with them.

We had about nine months of continuous dry weather, no feed for the stock on the Station, so we were unable to bring the horses and cattle back from Dubbo until October, when there was a nice supply of herbage on the run. Thirteen head of horses were trucked at Byrock; only 10 received back. Also 25 head of cattle trucked, and only 13 received back. Most of the stock was poor, but are now all fat. There was a loss of 6 other horses, 3 of them old mares on the run, and 3 died on the way to Byrock. But little loss sustained amongst the sheep, as they were kept alive by cutting scrub. There had to be £28 10s. expended for 4 tons of chaff to keep the working horses alive on the Station.

There were 474 sheep killed for rations during the year, and there are now only 135 left on the Station, nearly all young ewes, none having been purchased since September, 1897, until the 100 purchased now from Mannix. There were 323 sheep shorn, yielding 1,851 lb. wool, which realised £82 12s. 5d. net proceeds, besides 6 bags bellies and locks, sold for £2 5s., and 5s. taken for trespass of horses; also, sheepskins, £22 15s. 8d.; 2 horses, £8, leaving 12 here now; 6 head of cattle, £9 15s., 1 killed for rations, 13 here now; 18 pigs, £8 1s., 12 here now.

The men were away a good portion of the year, but they suckered 2,250 acres, repaired some of the houses that were a little out of order, and made and hung eight pairs round wood gates leading into the different paddocks, which are eight in number.

Two Cato paddocks now rented for three months each, 1 for £13, and 1 for £9. The remainder of the ringbarked timber has now all been suckered, and commencing to do some of it again.

WILLIAM HOPKINS,
Manager.

H. L. Cathie, Esq.

Sir,

Brungle Aboriginal Station, 6 March, 1900.

I beg to submit report of proceedings and other matters that have taken place at above Station during year.

Local Board.—The local Board have held seven meetings during the year, settling all disputes, and dealing with other matters for advancement of Station.

School.—The attendance at school is being reduced owing to children being sent out to service, 3 boys and 1 girl having had positions found for them. The average attendance during year has been—boys, 8.6; girls, 8.2; total, 16.8. The scholars appear to be making good progress with their studies.

Health.—The residents, as a whole, have had good health during the year, the doctor attending regularly every month. Births: Half-caste, males, 3; females, 3; full-blood, 1. Total, 7. Deaths: Half-caste (adults), 2; children—(girls) 2, (boy) 1. Total, 5.

The conduct of the residents has been very fair, only a few cases of insubordination and breaches of rules, but in two or three cases of strangers, young men coming to the Station, and misconducting themselves, they have been dealt with by the local Board, and refused admission on the Station in the future.

The morality of the residents has greatly improved. Where persons were living together they have been married, and other objectionable characters removed.

Cultivation.—During the year 40 acres were put under wheat, yielding 233 bags of good grain, or an average of 23 bushels to the acre; 1½ acres were put under potatoes, yielding about 3 tons 10 cwt. About 3½ acres are under corn, but the yield, I am afraid, will not be very satisfactory on account of the dry weather. We have about 2 tons of hay in shed, and, with corn, will have plenty of winter feed for our horses. The gardens have been a failure, as the Aborigines will not cultivate vegetables, although I have raised plants for them to put out. The residents have been well supplied with potatoes during the last two months.

Implements.—We have 1 single-furrow plough, 1 cultivator, and 1 set of harrows, in good condition. The three Station horses are in good condition, but the want of a saddle-hack is greatly felt for Station purposes. Mr. McKinnon, one of the gentlemen on the local Board, has kindly lent us four cows for milking purposes, therefore the residents who require milk get it from the Station.

Improvement to property.—The Manager's residence has been thoroughly renovated, having had two coats of paint inside and out, and the outhouses, office, &c., have been white-washed, and gates painted. The school-house, also, has been given two coats of paint. Several of the residents' houses have been white-washed inside. A new jetty has been erected over creek, and a pump placed upon same, the pipe carrying the water to the wash-house (lately erected), about 60 feet away, for the use of the Aborigines. A good substantial four-rail milking-yard has been erected, with calf-pens. Two cesspits have been sunk in house paddock, and closets erected for use of Aborigines.

Rolling stock.—We find the new spring-cart a very great convenience, more especially for town purposes, in lieu of the old style of sending in the dray.

Materials for new houses.—We have on the ground 1,600 feet of weatherboard stacked away ready for use, 1,300 slabs, which have been split by Aborigines, 300 feet floor-boards for new verandah floor at school-house.

A

A cricket club has been formed, and all hands take great delight in the amusement. Several of the residents are away from the Station at present on a corroboree expedition, thus reducing the number on the Station.

I remain, &c.,

J. H. HUBBARD,

Manager.

The Secretary, Aborigines Protectorate.

Signed—GEORGE CLOUT, Chairman, Local Board, 7th March, 1900.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

METROPOLITAN CHARITIES ASSOCIATION.

(REPORT ON ADMINISTRATION OF.)

Printed under No. 10 Report from Printing Committee, 30 August, 1900.

Sir,

Richmond Terrace, Domain, Sydney, 8 August, 1900.

I have the honor to furnish, in accordance with your request, my report on the administration of the Metropolitan Charities Association.

The Association was formed in October, 1897, and its objects are set forth in Appendix "A" attached hereto.

Since its inauguration it has received from the Government grants amounting to £1,024 19s. 4d., and has collected from private sources £87 12s. 6d., in all £1,112 11s. 10d. With the exception of £22 0s. 6d. in the Treasurer's hands at the Central Office, and £95 4s. 11d. in the hands of the local Committees, this money has been expended (*vide* Appendix "B").

If this Appendix is analysed, it will be seen that no less than £656 1s. 11d. has been expended in salaries, nearly every managing officer of the separate committees being remunerated for his services, while in two instances the rent of telephones has been paid out of the funds.

The other items which, in my opinion, appear to be excessive, are:—

Stationery and stamps...	£31 16 9
Printing	98 18 9
Sundries	30 18 6
Do	35 17 10

The total amount expended in relief to distressed people is only £30 16s. 11d.

One of the primary objects of the Association is to prevent "overlapping" in the distribution of relief. For this to be thoroughly effective all assistance afforded by the different charitable agencies must be reported to the Central Association. This is not done, as an examination of Appendix "C" will show, only twenty-three out of the existing thirty-three societies supplying the requisite information. The Register kept at the Central Office is thus not complete; as a matter of fact at least two-thirds of the information it contains is furnished by one institution—the Sydney Benevolent Society.

Personally I do not think that any overlapping worth considering exists. In the Report of the Metropolitan Charities Association the significant statement appears, "There does not appear to be much overlapping," and the Secretary has verbally informed me that the number of cases in which assistance has been rendered from two sources to the same individual is so small as not to be worth mentioning. If, however, the Chief Secretary deem it wise that a record should be kept of the assistance afforded by the different societies, the information could be collected much more economically than at present, as, with the services of an additional clerk, at, say, £100 per annum, the work could easily be accomplished in this Department. Indeed, this would be a much more effective method, as a public Department could, in view of the fact that the societies are subsidised by the Government, insist on the necessary particulars being supplied, whereas an irresponsible body like the Association could not.

As to the work of organising the different charitable agencies, the principle is certainly to be commended; but I do not think the results secured by the Association justify the expenditure of nearly £1,100. Moreover it is apparent that the Association is not popular with either the public or the Benevolent Societies, as the private subscriptions have fallen from £50 in the first year of its existence to only £13 last year, and one-third of the societies have declined to identify themselves with the Institution.

I am, therefore, impelled to recommend that no further subsidy be granted by the Government to the Association for the following reasons:—

1. Proper economy has not been practised in its administration. The expenditure for stationery, printing, &c., will show this, and the amount paid in salaries cannot be justified on any ground. (Appendix "D.")
2. The amount of relief disbursed has not been proportionate to the expenditure. Monetary aid has been given in only ninety cases, at a cost of £30 16s. 11d.
3. The system of check adopted by the Association is incomplete, and has, therefore, failed in its object.

If my suggestion to have a record kept at this office to prevent overlapping is adopted, the Association will be relieved of the greater portion of its work. If the Association is disposed to carry on the work of organising the various Charitable Societies, the effort, in my opinion, should be purely a voluntary one, and no assistance should be rendered from the public funds.

I have, &c.,

E. HANSON,
Acting Director.

The Principal Under Secretary.

2

A.

Objects.

1. The establishment of a Metropolitan Charities Association, with a local committee in every Municipality within the Metropolitan area.
2. Efficient and constant inquiry into the circumstances of persons soliciting charity within the Metropolitan area. Requests for such inquiries from Charitable Societies or private individuals welcomed, and information to be promptly given.
3. Co-operation amongst Charitable Societies to be promoted.
4. The exposure of all persons who impose upon the public under the pretext of distress.
5. Indiscriminate giving to be discouraged, as far as possible the overlapping of relief to be prevented.
6. Relief from the funds of the Association to be given in cases of immediate necessity only.

B.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

METROPOLITAN CHARITIES ASSOCIATION.

(FURTHER PAPERS RESPECTING.)

Printed under No. 15 Report from Printing Committee, 1 November, 1900.

The Hon. Secretary, Metropolitan Charities Association, to The Principal Under Secretary.

Sir,

Sydney, 11 September, 1900.

The Council have the honor to acknowledge the receipt of your letter of the 21st ultimo, forwarding a copy of Mr. Hanson's Report, published on the 18th ultimo.

In compliance with the Colonial Secretary's invitation, they desire to make some observations on the Report, and request you to be so good as to lay them before him.

Mr. Hanson recommends that no further subsidy be granted by the Government to the Association, and gives three reasons for this recommendation.

1. *Relief.*

Mr. Hanson states: "The amount of relief disbursed has not been proportionate to the expenditure. Monetary aid has been given in only ninety cases, at a cost of £30 16s. 11d."

The facts (within Mr. Hanson's knowledge) are these:—

- (a) The Association is forbidden by its fundamental rules to grant relief out of its own funds "except in cases of immediate necessity."
- (b) Its function is, not to grant relief, but to obtain it by bringing to bear the appropriate sources of help.
- (c) Not ninety cases only, but over 200 cases, were dealt with by the Association during the year. For four of these alone outside help was obtained to the value of over £30, not to mention the outside help covered by the remaining cases.
- (d) The Association was the means, directly or indirectly, of establishing four local relief societies during the year.

It may be added—though this fact may not be within Mr. Hanson's knowledge—that another society, established earlier through the Association, and working in close co-operation with the local committee, whose officer entertains in the first instance almost all applications to the Society, has already been the means of affording relief to the value of over £250, on the basis of rules suggested by the Association.

The principle of obtaining, not granting, relief, is, as Mr. Hanson should know, one of the cardinal features of organisation, being adopted as offering the best guarantee for appropriate and adequate help, while avoiding encroachment on charitable societies.

Illustrations of the application of the principle to cases dealt with by the Association are given in the Annual Report—a copy of which is enclosed—and others might be furnished.

It may be pointed out here that the committees have been in operation for little more than a year—some of them not so long—and that it was not until December last that the general lines of action and the necessary details were finally settled.

2. *Expenditure.*

Mr. Hanson states: "Proper economy has not been practised in its administration. The expenditure for stationery, printing, &c., will show this, and the amount paid in salaries cannot be justified on any ground."

Details of the expenditure objected to will be found in the Appendix hereto.

A. *Salaries.*—It will seem from the Appendix that the bulk of this item has gone to the Manager. His duties, as shown by the Annual Report, comprise the whole of the organising and supervising work, the registration work, dealing with applicants not referable to local committees, and rendering assistance in various ways, when requested, to local committees or charitable societies. Mr. Hanson does not in terms object to his salary; he admits that the registration work alone is worth £100 a year; and has

verbally recognised, so we are informed, the immense amount of work done by the Manager, and that he ought to be paid for his services. Mr. Hanson may therefore be taken to endorse the Council's view that this salary is fully justified by the nature and extent of the work involved. The Manager is now receiving nothing, having offered, some time ago, in view of the state of the funds, to continue the same services gratuitously as far as his own occupations would permit.

As regards the local officers, their appointment and remuneration (if any) rest primarily with the local committees, comprising (as shown by the lists furnished to Mr. Hanson) representatives of the local charities, leading residents appointed by the Council, and (in the suburbs) the Mayor of the borough. The local officers have specified duties and specified hours of attendance, as appears from the Annual Report. The Appendix shows that the average remuneration of local officers during the past year was about 15s. 3d. each per month.

B. *Printing*.—The bulk of this item is attributable to the year ending 30th June, 1899, when communications were being opened with the charities and residents of fifty-five municipal areas, with the view of forming local committees and establishing the system of registration. This necessitated the printing of a large number of proposals and forms. A considerable stock of some of these forms is still on hand and available for future use.

C.—The same consideration largely accounts for the expenditure on stamps and stationery, as to which it is only necessary to add that both were bought and used for necessary correspondence or office work, and, as regards stationery, at the usual rates.

D. *Sundries*.—The item of £30 18s. 6d. is for incidental expenses connected with the work of the central office for a period of over two years, and seems to the Council to need no further comment. The item £35 17s. 10d. is the sundries of eighteen local committees, and shows an average of under £2 for each committee for a period of over a year.

3. *Registration.*

Mr. Hanson states: "The system of check adopted by the Association is incomplete, and has therefore failed in its object."

The Council say it is incomplete through no fault of the Association. Every effort has been made to secure returns; and the reason why some charities have not so far registered, or have done so irregularly, is no doubt due to the trouble involved.

The Council do not admit that the register has wholly failed in its object. The Annual Report shows that twenty-three charities had registered, and that 3,133 cases, representing 9,512 persons, were entered. It also classifies the forms of relief and the causes of distress. The register discloses a considerable number of persons in receipt of relief from different sources at different times.

Thus, even if there were no overlapping in the strict sense, the register would still be useful for statistical purposes and for tracing the history of applicants—often a most material point in determining the treatment.

Mr. Hanson's view that there is no overlapping worth mentioning is not endorsed by the Annual Report, which states: "So far as the register shows, up to the present time there does not appear to be much overlapping in the sense of relief being received concurrently from two or more charities without their knowledge and approval. Probably the mere fact of the institution of the register acts as a deterrent. Such cases do, however, sometimes occur." The statement attributed to the Manager, that there is practically no overlapping, is negated by a letter he wrote to Mr. Hanson four days before his Report was published.

There are many kinds of overlapping the Association has discouraged, which Mr. Hanson seems to have no conception of, such as the rounds made in the suburbs by professional mendicants. In one district the local committee has been the means of almost entirely stopping house-to-house begging.

Mr. Hanson suggests that the work of registration could be more effectively done in his Department, as the Government could insist on returns from subsidised charities; but it should be pointed out—(a) that the subsidised charities form only a proportion—probably not more than 50 per cent., if so much—of the metropolitan charities granting out-door relief; (b) that registration, being a useful adjunct of organisation, might well be left in the hands of the society which initiated it, and which is recommended to continue its organising work.

Further, some of the charities attach, and very properly so, great importance to the confidential character of the returns. This is strictly observed by the Association and secured by rules for the purpose. The charities might not consider that they had the same guarantee for secrecy in a register over which they have no control.

The suggestions made in the Annual Report for improving the register are as follow:—"The value of the register for all purposes would be greatly enhanced if the Association could be furnished with particulars of out-door relief afforded by the Government charitable departments, and if all Metropolitan charities which grant such relief would furnish returns. It would then only be necessary for charities to confidentially consult the register before dealing with new or doubtful cases, and the practice of exchanging lists might be rendered unnecessary. In this way the names of recipients would not be needlessly divulged, some labour would be saved, and the range of inquiry extended by collecting all cases in one register."

Conclusion.

The Council submit, therefore, that Mr. Hanson's reasons for his recommendation are not sustained.

Misconceiving the fundamental rules and aims of the Association, and failing to recognise its most arduous work—that of organising external sources of help—he naturally judges its expenditure and results by a false standard, and takes no account of the range and difficulties of the task on which it is engaged.

That task is to provide facilities throughout the Metropolitan area for efficient and constant inquiry into the circumstances of applicants, with a view on the one hand to discourage indiscriminate almsgiving, prevent overlapping, and expose imposters; and on the other to secure suitable and adequate treatment for proved cases of genuine distress.

There being no general or uniform machinery for these purposes, centres for inquiry and reference, and for combining the charitable resources of each district, were necessary. These centres the Association has succeeded in establishing in eighteen districts, in the shape of representative committees, with offices

to

to which the street or house-to-house beggar may be referred by importuned residents, and where, also, all claims for help may be thoroughly investigated. The committee, having no relief funds of their own, are intended to "organise" such relief as may be required—that is, to ascertain and bring to bear on each case the most appropriate sources of help, in the shape of local or other charities, relatives, friends, old employers, or even charitable strangers.

This mode of raising relief is adopted by the New York Society, which grants no relief whatever out of its own funds, and by the London Society, which does so only in default or supplementation of outside sources. Both these societies spend thousands of pounds annually on purely administrative expenses, with the full concurrence of their supporters.

When the Council waited on the Colonial Secretary in May last, they neither minimised difficulties nor exaggerated results. They based their request for further Government aid on the ground that past efforts and expenditure, and the stage of progress reached, justified every effort being made to continue carrying out the admittedly useful aims of the Association.

That is the position the Council still take up, and on that basis they would be pleased, should the Colonial Secretary so desire, to meet him in further conference, and discuss the whole question more fully.

I have, &c.,

EDWARD HARRIS,

Hon. Secretary.

May be referred to the Acting Director of Government Asylums.—C.W., 13/9/1900. Approved.—J.S., 13/9/1900. The Director of Government Asylums.—C.W., P.U.S., B.C., 13/9/1900. Report herewith.—E. HANSON, 25/9/1900.

[Enclosure.]

THE METROPOLITAN CHARITIES ASSOCIATION.

REPORT of the Council for the year ending June 30th, 1900.

Council, June 30th, 1900.

President :—The Right Hon. G. H. Reid, Q.C., M.P.

Objects.

1. The establishment of the Metropolitan Charities Association, with a local committee in every Municipality within the Metropolitan area.

2. Efficient and constant inquiry into the circumstances of persons soliciting charity within the Metropolitan area. Requests for such inquiries from Charitable Societies or private individuals welcomed, and information to be promptly given.

3. Co-operation amongst Charitable Societies to be promoted.

4. The exposure of all persons who impose upon the public under the pretext of distress.

5. Indiscriminate giving to be discouraged; as far as possible, the overlapping of relief to be prevented.

6. Relief from the funds of the Association to be given in cases of immediate necessity only.

REPORT

REPORT of the Council for the year ending 30th June, 1900, presented to the Meeting of Subscribers held at the Town Hall, Sydney, on Friday, 27th July, 1900.

Summary.

The main objects of the Association are, in co-operation with Charitable Societies, and with the aid of local committees and a system of registration, (1) to check overlapping, mendicancy, and other abuses; (2) to secure due inquiry and fitting action in all cases of alleged distress.

The register now contains entries of 3,133 cases reported during fourteen months by twenty-three charities. (For statistics, see Appendix A.)

262 applications for relief have been dealt with by the Association. (For statistics, see Appendix B.)

A meeting of secretaries of local committees took place at the central office on 26th September, and conferences of the committees were held at the Town Hall, on 23rd October and 6th December.

As the result of these meetings and of much consideration by the Council and by sub-committees, the scheme for local committees and the system of registration have been finally settled; the forms for recording and reporting cases simplified and improved; and progress made with the discussion and adoption of principles and methods affecting investigation and relief.

Local relief societies have, directly or indirectly through the influence of the Association or of local committees, been established in four districts.

The Council and Central Office.

The organising and supervising work of the Council is carried on at the central office. Here also the central register is kept, and to this office (as well as to the local committees) applicants may come or be referred, and their cases dealt with, or sent on to the committee of the district where the applicant resides. The central office also, when requested, assists local committees or charitable societies by making inquiries, helping to secure adequate relief, or in other ways.

Ten meetings of the Council have been held during the year. Matters of special importance have been referred to sub-committees, which have met frequently and submitted reports for the Council's guidance.

A deputation from the Council waited upon the Colonial Secretary in May last, and laid before him a statement of the aims and progress of the Association, with a view to obtaining further Government aid. The deputation met with a favourable reception.

A vacancy on the Council, owing to the retirement of Mrs. W. Rigg, was filled by the appointment of Mrs. John See as one of the members' representatives. A vacancy among those representatives, caused by the death of the Rev. J. Hill, which the Council learned with much regret, has not yet been filled. The Council desires to express its sympathy in the loss sustained through the death of Mr. E. T. Penfold, formerly a member of the Council.

The honorary officers and ten other representatives on the Council are to be appointed at the annual meeting by members of the Association. (Annual subscribers of 10s. or upwards are members of the Association; contributors of £10 or upwards in one sum are life-members.)

The ten representatives of the charities elected in May last are:—Mr. J. Sidney, Mr. U. W. Carpenter, Mr. Ellis Robinson, Mrs. MacCallum, Rev. A. B. Davis, Miss A. M. McNeil, Mr. G. E. Ardill, Mrs. J. Powell, Mr. W. E. Wilson, Mr. T. E. Murphy.

Pursuant to the new rule passed last year, ten representatives of the local committees were elected in December, namely:—The Ven. Archdeacon Langley, Mr. E. Milner Stephen, Mr. D. Maughan, Mr. T. H. Barlow, Dr. W. A. West, Mrs. Stophenson, Mr. John Sale, Mr. N. C. Neale, Mr. G. P. Jones, Mr. L. Leplastrier.

As regards representation of the local committees, notice has been given of intention to move the following new rule in place of that passed last year:—

“Each local committee shall be entitled, at such time and in such manner as the Council may determine, to appoint annually one representative as a member of the Council, and to fill any casual vacancy occurring in such representation.”

Local Committees.

It will be seen from the “objects” (set out on page 3), as adopted at the inaugural meeting, and endorsed by most of the Metropolitan charities, that prominence is given to the establishment of local committees. A committee is to be established (as far as practicable) in each city ward and suburban borough, or in two or more of these areas combined, consisting of the Mayor or an alderman (if willing to act), representatives of local charities, and a few residents appointed by the Council. Some of the committees originally formed never seriously started work, or have not seen their way to carry out the developed scheme, mainly, it would appear, owing to the difficulty of finding local workers with the necessary leisure. Eighteen committees (particulars of which will be found on page 3), are now in operation, and have adopted the scheme with modifications in some instances. On each the local Benevolent Society (if any), and almost every other charity operating in the district, is officially represented, and on each suburban committee the mayor has consented to act.

Scheme for Local Committees.

The scheme includes the following branches of work:—(1) Obtaining confidential returns from local charities of cases dealt with, entering them in the local index, and forwarding them to the central office for registration; (2) receiving at the local offices and dealing with applications for relief; (3) making local inquiries and reports on behalf of the central office, other committees, or charitable societies.

In developing the scheme the Council and committees have been largely guided by the experience of the London Charity Organisation Society, details of whose objects and mode of working will be found in the Second Report of the N.S.W. Royal Commission on Public Charities. At the same time, no development has been allowed which is not expressly or impliedly warranted by the official “objects” of the Association.

Expenditure.

As regards expenditure during the year, that on the central office has been reduced, the Manager having concurred in a reduction of salary in view of the state of the funds; and the items for printing and incidental expenses are not so heavy as at an earlier stage. The item for relief is small, and properly so, one of the fundamental rules of the Association being, “Relief from the funds of the Association to be given in cases of immediate necessity only.” The function of the association is to obtain, not to grant, relief; to organise, not to provide it. The total value of the relief obtained is considerable, though difficult of precise estimate. Relief is raised “specially” from various sources, such as relatives, friends, old employers, local charities, special charities adapted to the case, or private individuals, the principle kept in view being that relief should be suitable and adequate, and, as far as may be, permanent in its effects.

The expenditure on the local committees has also been considerably lowered. Each committee was recently asked to submit an estimate of its annual working expenses, and to state how far (without prejudice to local charities) such expenses could be raised locally. So far the committees have not, as a rule, seen their way to lessen the burden on the Association's funds by local contributions. The estimates submitted have been accepted by the Council (with agreed reductions in some cases) for limited periods only, at the expiration of which the estimates will of course, if necessary, be open to review in consultation with the committees severally concerned. A summary of the receipts and expenditure of the committees will be found at the end of the Report.

Conclusion.

The Council gratefully recognises the valuable assistance rendered in both the branches of work by many of the charitable societies, and by those members of the committees who have devoted a large measure of their time and abilities to the work of the Association. Material aid in dealing with applications for relief has also been generously forthcoming in some cases from private sources.

The Council desires to emphasise once more the need and value of organisation, if abuses are to be prevented and the problems of distress efficiently grappled with. Trained energy in the individual almoner and effective co-operation amongst all societies and individuals interested in the poor are the main conditions of success. Of course, too, funds are necessary to meet unavoidable expenses. In this respect the Council hopes it may in future receive more generous support from the public, so as to render the Association less dependent than heretofore on Government aid.

APPENDIX A

Registration Statistics

Remarks

Our purpose of a register is to prevent overlapping. So far as the register shows up to the present, there does not appear to be much overlapping in the sense of relief being received concurrently from two or more charities without their knowledge and approval. Probably the mere fact of the institution of the register acts as a deterrent. Such cases do, however, sometimes occur. One was recently discovered and notified to the charities concerned, in which a woman was receiving relief from one charity under one name and applying to another under a different name. The register shows a considerable number of persons in receipt of relief from different sources at different times. This indicates another purpose of the register, namely, to trace the antecedents of applicants. Its further use as a basis for statistics is obvious.

The value of the register for all these purposes would be greatly enhanced if the Association could be furnished with particulars of out door relief afforded by the Government charitable departments, and if all Metropolitan charities which granted such relief would furnish returns. It would then only be necessary for charities to confidentially consult the register before dealing with new or doubtful cases, and the practice of exchanging lists might be rendered unnecessary. In this way the names of recipients would not be needlessly divulged, some labour would be saved, and the range of inquiry extended by collecting all cases in one register.

The Association's confidential Return Form (which can be obtained gratuitously) leaves a large discretion as to the amount of information to be supplied. A few of the charities supply the whole of the information asked for in this form.

* In two districts, practically all cases dealt with by the Local Charity apply, in the first instance, to the office of the local committee. Including these cases, the number of cases dealt with by the Association would be 313.

† Mostly immediate help, pending investigation of cases, some of which did, and others did not, receive further assistance.

Some of the Cases dealt with.

A., with B. and two children dependent on him, is without work, food, or money, and about to be turned out of doors for non-payment of rent. Funds being obtained from a private source, they are provided with food and house-room (one week's rent being paid). Tools are procured for A., and employment in his trade, bringing in about 16s. a week, this being supplemented with a little assistance now and then from a local charity. Arrangements are nearly complete for sending B. and the children back to her people, on the understanding that A. will contribute what he can to the children's support.

C. with a wife and five children, ranging from 14 to 5 years; no funds or employment; rent in arrear; scarcely any food. C. had been relying mainly on charity for months. Immediate help (food) obtained from two local charities; £3 procured from friends. The family removed to a cheaper house, and three weeks' rent paid in advance. The eldest boy properly clothed, and permanent employment obtained for him at 7s. 6d. a week. Father urged to exert himself, with the result he speedily finds temporary employment.

D. with wife and nine children. Lost employment through weakness and ill-health, with sickness in family. Two boys at work, earning 9s.; allowance from local charity, 2s. 6d.; total weekly income, 11s. 6d. Then father and six children, including the two wage-earners, had to be taken to hospital with typhoid. Immediate relief to the value of £2 obtained from charities and private sources. Then £20 obtained from an institution on which it was found D. had claims, and applied for bedding, clothes, and weekly grants. On leaving hospital father sent to convalescent home. The two eldest boys, on leaving hospital, found temporary work. The £20 being exhausted, 10s. a week for four weeks procured till boys got strong and father well enough to look for work. Father has now obtained temporary employment. Loan of £5 procured to purchase a horse, cart, and harness to assist applicant in earning a livelihood for self and family.

The Acting Director of Government Asylums to The Principal Under Secretary.

Charitable Institutions of New South Wales,

Sir,

Richmond-terrace, Domain, Sydney, 25 September, 1900.

When directed to report on the financial operations of the Metropolitan Association, and advise the Colonial Secretary whether the results secured by the expenditure of £1,112 11s. 10d. justified additional demands being made upon the public funds, I intentionally confined my remarks as much as possible to the receipts and disbursements, and said no more about the constitution and management of this organisation than appeared to me to be sufficient to recommend the refusal of the application submitted for further assistance from the Consolidated Revenue.

During

During the past three years I have watched with considerable interest the well-intentioned efforts of the Association to protect the public from imposition, and, at the same time, improve the condition of the poor; and although I am heartily in sympathy with the principles of charity organisation, I regret to say that I am strongly opposed to the methods adopted by the Association in the unsuccessful efforts made to realise the aims and objects of its constitution.

It has to be remembered, however, that the members of the Metropolitan Charities Association have rendered their services gratuitously, and, guided by their best judgment, and assisted by their limited experience, have done the best they could to introduce here a system of organisation which has been tested with eminently satisfactory results elsewhere. Under the circumstances, I hesitated to speak as candidly of the management of this Association as I would, under other conditions, have considered it my duty to do.

But it now appears that my action in this matter has, unfortunately, led the Council and its supporters to believe that I was unfamiliar with my subject, and, therefore, unfair in my criticism; and so convinced has the Council become on this point, that I find myself directly charged, in an important document, with having "misconceived the fundamental rules and aims of the Association, and failed to recognise its arduous work." This being so, I am compelled to say in plain words that, in the interests of the members of this Association—who are responsible for the failure of their work—might well have been left unsaid.

Notwithstanding the adverse criticism my report received from some of the members of the Association, there is one important feature which should not be overlooked. I refer to the fact that the official reply is based upon a justification of the figures submitted by me, and not upon a denial of their accuracy. The financial figures and other statistics embodied in my report were furnished to me by the Manager. They are undeniably correct in every particular; and, although a laboured attempt has been made to justify the expenditure and magnify the importance of the results secured, the fact remains that the money has been spent and no sufficient evidence can be adduced to prove that the community has reaped a benefit commensurate with the outlay involved.

In my report I stated that "the amount of relief disbursed has not been proportionate with the expenditure. Monetary aid has been given in only ninety cases, at a cost of £30 16s. 11d." After perusing this sentence, it has been assumed that I must necessarily be unfamiliar with my subject, or no comparison would have been made between the total expenditure of an organising society and the value of the relief issued to the poor. It appears to have been overlooked that the Metropolitan Charities Association is both an organising society and a relieving agency as well. It has been established for six specific purposes, and one of these purposes is to grant relief "in cases of immediate necessity only." The disbursement of relief is, therefore, one of the six fundamental principles of its constitution, and we can only arrive at the conclusion that the relief issues of a successful and far reaching organisation, operating over an area comprising fifty-five municipalities, must be small by assuming that, as a general rule, the bulk of our poor are not in need of immediate relief; but every practical worker in the cause of charity knows that the deserving poor seldom appeal for help until they can no longer do without it. Still, when we analyse the official returns of the Metropolitan Charities Association, we are brought face to face with the fact that, after three years' labour, the management has only found and helped ninety people in this condition. If it is common experience to find that deserving poor appeal for help when they require it, and not before, then the importance of a regulation which provides for the immediate supply of food can be well understood; and when the total expenditure of an organisation is found to be so disproportionate to the relief disbursements, I submit that I was perfectly justified in calling attention to it, more especially when I found myself in the position of not being able to justify the expenditure of the balance of the outlay by advancing evidence of successful results in any other direction.

In 1897 the number of subscribers was 113, and the amount of collections, £50 15s. The number of subscribers last year is not given, but it must be considerably less, as the subscriptions were only £13 14s.

The Council has endeavoured to discredit the value of my statement that "monetary aid has been given in only ninety cases," by explaining that over 200 cases have been "dealt with by the Association during this year." As "dealt with" means, in this instance, that the poor were referred to other agencies for relief, the value of the correction may be taken for what it is worth.

The Metropolitan Charities Association collected £87 12s. 6d. from private sources, and received £1,024 19s. 4d. from the Government—in all, £1,112 11s. 10d. Of this large sum no less than £656 1s. 11d. has been expended in salaries; £31 16s. 9d. in stationery and stamps; £98 18s. 9d. in printing; £66 16s. 4d. in sundries; and £30 16s. 11d. only in relieving the poor. These are the figures published in my first report; and these are the figures, the accuracy of which is not challenged now.

The Association has prepared most comprehensive statements, showing in detail how this money has been expended; but I do not observe that any particular reference has been made to another account for £13 4s. 2d., which includes an item for £8 6s. 8d. for tea for the Charity Conference. This is a most interesting item, as it is worthy of notice that while in three years only ninety cases required immediate relief, at an outlay of £30 16s. 11d., in one afternoon £8 6s. 8d. was spent for afternoon tea in connection with a conference on charity.

It does not appear to me necessary to criticise the items of these accounts, as the total expenditure is admitted to be correct; but I may say that, after reading the two sheets of type-written matter enumerating the invitation forms and cards, the proposals for registration, the explanatory circulars, the decision books, the instruction circulars, the preliminary guidance circulars, the other numerous forms and suggestions (not forgetting the item £15 for registers issued and withdrawn), and the amount paid for paper, twine, and packing, one cannot fail to understand the reason which induced so many relieving agencies to withdraw from such a theoretical and red-tape organisation.

The total receipts of the Association amounted to £1,112 11s. 10d.; £30 16s. 11d. has been expended on relief, and the cash in hand amounts to £177 5s. 5d.; consequently the administrative expenses have totalled £964 9s. 6d., and it remains to be shown that the Association has conferred on the community benefits equal to this expenditure.

The Association justifies the expenditure mainly on the following grounds:—

- (1.) That eighteen local advising committees have been established by the Association.
- (2.) That five relieving societies have been "directly or indirectly" established by the Association.
- (3.) That the overlapping check has not wholly failed in its object.

I purpose dealing fully with the management of this Association, in order that the correct answers may be given to the following questions after this report has been perused. If the replies can be given in the affirmative, then the Association has conferred a benefit upon the community. If not, then the Association has failed in its objects:—

- (1.) Has the expenditure of £964 9s. 6d. been justified ?
- (2.) Has the Association conceived the fundamental principles of charity organisation ?
- (3.) Has the Association succeeded in "bringing the philanthropic forces of this city to work together instead of at cross purposes" ?
- (4.) Has the Association succeeded in preventing overlapping ?
- (5.) Has the Association "brought the well-to-do and the poor to a mutual understanding by working on the principle that the keynote of success is personal service" ?

I must first explain that the relieving agencies were established years in advance of the formation of the Metropolitan Charities Association. Each of these societies is managed by a committee of honorary workers; each acts independently of the Association, and the officials, being local residents, are as accessible to the people as the members of local committees of this Association. Moreover, they are in a position to issue food; whereas, we are given to understand, it is the function of the local committees "not to grant relief, but to obtain it." Each relieving agency works under rules and regulations, which are observed when consistent with safety; each society is subsidised by Government; its relief cases have been tested by Government officials; its receipts and disbursements have been examined and passed; and, judging from the number of annual reports examined by me, I am in a position to say that the expenses of administration have been reduced to a minimum, and are a distinct credit to the business capacity of their respective committees.

Thirty-one of these relieving agencies are now in existence throughout the Metropolitan area, and if I may rely upon the statements made in the report of the Association, there are as many private relieving societies as all the subsidised societies put together.

Now, the official reports show that there are fifty-five municipalities in the Metropolitan area, thirty-one relieving agencies subsidised by the Government, a large number of private societies, and eighteen advisory committees established by the Association.

Hitherto the method adopted in issuing relief has been for the poor to apply direct to the relieving agencies, whose honorary officials, owing to their experience, might be assumed to know how to give and what to issue better than other honorary workers who have not had the same experience; but the Association has endeavoured to change this system by establishing other local committees, and advocating that the poor should first be sent to the advisory committees and then back to the relieving agencies for food. If the local committees were wholly composed of the most competent members of the relieving agencies, the scheme might have something to suggest its adoption; but as a large percentage of the members of these committees have had no experience at all, and as the poor must, under such a system, pass under a double process of examination, which must result in delay, the wisdom of such a policy does not appeal to me. Nor does it appear to have suggested itself to the Association that if an applicant is undeserving he is cunning enough to appeal in every instance to the relieving agency direct, in preference to risking detection by a double test, and the only means to prevent the evasion is to prohibit any issues being made by a relieving agency until the applicant has been certified to by the local committee. And to apply such a hard-and-fast rule would be as harsh to the poor as it would be offensive to the local relieving agencies.

The Association takes credit for "directly and indirectly" establishing five relieving agencies, and I assume that these societies would not have been formed if it were not a function of the Association to supervise this branch of charity organisation. The progress made in this direction during three years' operations may, therefore, be considered. I have already pointed out that there are fifty-five municipalities, and, also, thirty-one relieving societies, five of these having been formed by the Association; consequently, in municipal areas alone, there are still twenty-four vacancies being filled up at the progressive rate of about two per year. At this rate of progress we may anticipate having these vacancies filled during the next twelve years. This, I submit, can hardly be considered satisfactory progress on the part of an Association which claims to have done so much, but which happens to be in the unfortunate position of not being able to prove it.

It is another duty of the Association to form local committees who find assistance, but do not give it, and eighteen such committees have already been established; but by some extraordinary coincidence they have been formed in centres already covered by relieving agencies, and not in municipalities where the poor need help and cannot secure it. If these committees were necessary in centres where supplies can be given, they are still more necessary in others where relief is not forthcoming; for I assume that as it is a function of these committees to find relief and not to give it, they would be in a better position to procure it than the poor themselves; and if these committees were formed in localities where no relieving agency had been established, they would at once have formed relieving societies, as it has been officially shown to be one of their duties to do so. But no such business capacity has accompanied the labours of this Association, and we now find eighteen committees, more or less moribund, endeavouring to find relief where relief is available, while thirty-seven Municipalities are without local committees, and twenty-four without relieving agencies. If the Association has not been able to form local committees in thirty-seven centres through the indifference of the public to this system of charity organisation, the scheme must have little to commend it; whereas, if the cause arises from mismanagement, then my adverse comments require no further justification.

But there is another question of great importance about which we have heard so much and done so little. I refer to the heavy demands made upon the public revenue for out-door relief and the still straitened condition of the financial resources of the relieving agencies. Before entering into this question it should be remembered that the State Children's Relief Board now spends £17,000 a year in the humane provision made in relieving widows and deserted wives. This responsibility now does not rest with relieving agencies, and many of the aged poor are supported by the Government as well. But we do not find that the demands upon the public revenue from these societies have been reduced. Surely, if there is one thing more than another which the Association should have done, it is to bring to bear the whole

whole weight of its social influence to establish relieving agencies in every direction, and see that each agency is never without a credit balance in the local Bank. It is not the fault of the people that these societies are without funds and frequently compelled to curtail their issues. The trouble arises through organising in the wrong direction. If the Association had operated in a practical and business-like way, and had not overlooked the fact that the poor are in want while schemes and forms are being devised, I would not have been called upon to criticise its work. In my opinion, if the Association had been elected by the active workers of the relieving agencies, the demands made upon the public revenue would have been less, the condition of the poor would have been improved, and, as there would have been no conflicting elements amongst the members of the Association, more harmony might have been expected to result from the hearty co-operation of the whole of the relieving agencies.

But, apart altogether from a question of principle, it does not appear to me that the local committees are even a convenience to the poor. Some of the offices are open daily, some three times a week, others twice, and in one instance the office is only open for one hour for one day of the week. The honorary officials of local relieving societies are accessible whenever they are in their own homes, and the ladies are mostly always at home. How then can it be said that the local agents of one committee are more accessible than visitors of another?

The Constitution of the Association.

The Association works under a constitution founded on a basis of unfair representation; and, if a motion now before the Council meets with approval, the remaining relieving societies may be expected to sever all connection with the Association, and without their support the Association must cease to exist. In the past, seventy-five societies took part in the annual election, but this number has now been reduced to twenty-three. The relieving agencies are allowed to elect ten representatives only. The eighteen local committees also elect ten delegates, and if the motion about to be dealt with is passed the number will be increased to eighteen, or one from each committee. Originally, when the subscriptions amounted to £50 15s. per annum, the subscribers had the right to elect ten representatives; and now, when the subscriptions have dwindled down to £13 14s., they still have the same right. The relieving societies, which should have an overwhelming majority on the Council, are outvoted by two to one. Under such a constitution neither cohesion nor enthusiasm can be expected.

The Aims and Objects of the Association.

The first principles of charity organisations, as laid down by the highest authorities in the United States, is to "bring the philanthropic forces of a city to work together instead of at cross purposes." The official report of the Association shows that fourteen subsidised relieving societies and one church society send in their returns regularly to the head office. Seven subsidised agencies and two church societies, and the whole of the private societies—often, then, the three referred to—ignore the Association altogether. The philanthropic forces of this city unanimously responded to the appeal in 1897; but, for reasons which must have appeared to them sufficient, they have since determined to work independently upon the lines originally observed.

The second principle of charity organisation is to prevent overlapping, by registering the facts concerning the families and persons relieved.

The Hon. Secretary states that "the Council does not admit that the register has wholly failed," which is tantamount to an admission that it has not been a success. It is worthy of note, however, that the Council cannot place even an approximate value upon the amount of relief diverted from improper channels; consequently the book-keeping, as well as the organisation has been a failure. My recommendation to transfer this check to my office does not appear to have been favourably received, notwithstanding that the Association has failed to administer it successfully; but the Council can hardly expect the Colonial Secretary to seriously consider the reason advanced for retaining this check at the head office of the Association. It is stated that some charities attach much importance to the confidential information furnished, and may, therefore, not be prepared to trust the Government officials with it. However that may be, the Government is certainly in a position to command the information from subsidised societies, and as only one church society pays the Association the compliment of observing its wishes in this matter, it does not appear that the private societies have any more confidence in the Association than it is implied they would have in the trustworthiness of the officials under my control.

The third governing principle of charity organisation is to "bring the well-to-do and the poor to a mutual understanding. The key-note is personal service."

I do not hesitate to say that, in this respect, the Association itself "has misconceived the aims and objects of charity organisation, and failed to recognise its most arduous work." The Metropolitan Charities Association has established a precedent in this Colony which, to the credit of the relieving agencies be it said, I do not think has ever been introduced before, to the humiliation of the respectable poor of this community. Instead of bringing the well-to-do and the poor to a mutual understanding, the Association has paid its agents mere pittance, and employed people formerly in receipt of aid from the Charity Vote to investigate and classify the applicants for relief, and then to pass them on to the agencies for the necessaries of life. During the past few days I have been officially informed that one of these agents, who, during the past fifteen months, attended to "all the investigation that was needed" by one committee, has lost his employment in consequence of the financial resources of this committee being so straitened as to prevent its work being continued. This agent received 7s. 6d. per week for doing all the inspection work of this committee, and I assume it has been his duty to help lift the poor out of their condition of distress, and render them independent of charitable aid in the future. It is my intention to recommend the renewal of his allowance of 5s. a week from the Charity Vote.

But this is not the only case that has come under my notice. In the head office of the Association, where the Manager has been in receipt of £250 a year, an agent equally poor and underpaid (an official most unsuitable for the position, however respectable he may be) has been called upon to perform duties of a similar nature. By adopting such methods as these, may I ask,—Is there any reasonable prospect of bringing the well-to-do and the poor to a mutual understanding, and thereby giving effect to the third important principle of charity organisation?

After

After three years' careful observation of the methods adopted by this Association to introduce an effective system of charity organisation, and, after perusing the reply to my official report, I am convinced :—

1. That the £964 9s. 6d. expended in administration has not been justified by the results secured.
2. That the amount of relief disbursed has not been proportionate to the expenditure.
3. That proper economy has not been practised in the administration of the Association.
4. That the first object of the Association, viz., to establish a local committee in every municipality, has not been accomplished, as only eighteen committees have been organised in fifty-five municipal centres.
5. That these local committees, if necessary at all, should have been composed wholly of charitable workers' selected from the most experienced honorary officials of relieving agencies.
6. That the members of local committees, who have had no experience in charitable work, are not competent to classify the poor.
7. That as there are only thirty-one relieving societies in fifty-five municipalities, and as only five of these agencies have been "directly or indirectly" established by the Association, the result is not satisfactory.
8. That the Association is not in a position to advance evidence to prove that the relieving agencies have financially, or in any other direction, benefited by the existence of the Association.
9. That the constitution is founded on a basis of unequal representation.
10. That the Association has not succeeded in bringing the philanthropic forces of this city to work together instead of at cross purposes.
11. That the management of the overlapping check by the Association has proved a failure.
12. That the Association has not brought the well-to-do and the poor to a mutual understanding.

Under the circumstances, I have no hesitation in recommending that the application for additional subsidy be refused, and that the overlapping check be transferred from the management of the Association to that of the Director of Government Charities.

I have, &c.,
E. HANSON,
Acting Director.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR THE YEAR 1899.)

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

The Inspector-General of the Insane to The Chief Secretary.

Sir, Lunacy Department, Inspector-General's Office, Gladesville, 30 May, 1900.

I do myself the honor, in accordance with the 81st section of the Lunacy Act of 1898, to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1899.

I have, &c.,

ERIC SINCLAIR,

Inspector-General.

Number of the Insane and the annual increase.

ON the 31st December, 1899, the number of insane persons under official cognizance was 4,217, and their distribution was as follows:—

Institution.	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville.....	537	362	899	9	33	42
Do Parramatta (Free)	683	378	1,061	9	8	17
Do do (Criminal)	44	7	51
Do Callan Park	483	392	875	12	29	41
Do Newcastle	176	143	319	1	1	2
Do Rydalmere	342	155	497	1	1
Do Kenmore	256	197	453	6	4	10
Licensed House for the Insane, Cook's River.....	14	20	34	2	1	3
Do do Ryde	8	8
Do do Picton	1	1
South Australian Hospitals	12	7	19
Total.....	2,547	1,670	4,217	40	76	116

On the 31st December, 1898, there were 4,073, so that during the year there has been an increase of 144. The average annual increase for the past twenty years was 110; the increase now shown is, therefore, above the average. It is, however, to be expected that some variation in the amount will occur from year to year, the general tendency being towards a larger increase as the population of the Colony enlarges. The proportion of insane to the general population is one insane patient to 321 persons in the Colony.

The patients on the register were distributed as follows:—4,042 were in Hospitals for Insane, 40 were in Licensed Houses, 116 were absent on leave under the provisions of the Lunacy Act, and 19 were in Hospitals for Insane in South Australia. The number in Hospitals has increased by 141, in Licensed Houses the number has remained the same, and in South Australia there has been an increase of 10.

Admissions.

The number of admissions during the year was 796. Of these, 702 were admitted for the first time, and 94 had been in the same hospital on some previous occasion. Of those admitted for the first time, however, some had been insane before and either treated at home or in some hospital other than that which now admitted them. The number admitted is greater than in any previous year, and is also considerably above the average. An increase in the number admitted is to be expected as the general

Deaths.

The deaths numbered 249, 189 being those of men and 60 of women. Calculated on the average number resident this gives a percentage of 6.20, which is slightly below the average for the past ten years.

The causes of death are given in detail in Table 4. As might be expected, diseases of the brain are responsible for the largest number, these being the assigned causes in 124 instances. Among these, general paralysis occasioned the large number of 48 deaths, or 19.27 per cent. of the whole number of deaths. The next most frequent cause of death was disease of the lungs, which accounted for 58 deaths. Half of these were due to pulmonary consumption, which is always present in the hospitals. A certain proportion of cases are, of course, admitted with it, but others originate within the hospitals themselves. In view of the modern ideas as to prevention and treatment, of this disease, it is evident some special provision should be made for caring for these patients in wards apart from the rest of the institution, and so arranged as to allow of the necessary specialised treatment. A ward for women has been designed, and will be erected at Rydalmere for this purpose, but it can only be made use of for the more chronic cases, the Sydney climate being an unsuitable one for consumptive patients. Advantage will be taken of the proposed new hospital for insane at Orange to add a special ward for both men and women in the hope that with the favourable climate a diminution in the number of deaths from this disease may be made.

Escapes.

The number of escapes was 43. All but 5 were followed, and returned to hospital within a short time of their escape, and of the 5 not recaptured no case was of the dangerous class. A certain number of escapes follows the greater liberty accorded convalescent patients by modern hospital treatment; but as they occur among the harmless and convalescent cases, the risk involved is but slight. Investigation into the escapes shows that the necessary precautions to safeguard dangerous patients are not so relaxed as to admit of their evading the hospital staff.

Accidents.

The number of accidents reported as having taken place in the hospitals was 21. Of these 4 ended fatally, only 1, however, being due to suicide. In this case the patient, during convalescence, was sent for an excursion in charge of an attendant, and at the railway station on his return journey suddenly threw himself in front of an approaching train. An inquest was held, at which the attendant was exonerated from blame, it being shown that he was alongside the patient and watching him, but that, not having hold of him, he could not prevent the sudden rush. The fatalities were due to suffocation from food in a feeble patient, to peritonitis from swallowing rubbish, and to pleurisy from fractured ribs.

Of the remaining accidents—17 in number—13 were fractures of bones or dislocations of joints, and 4 were severe bruises or wounds. The majority were due to falls or to assaults, or struggles with fellow-patients. In every case of accident or injury a special report is made by the Superintendent, and where necessary an investigation is made into the circumstances, and in cases of sudden or suspicious deaths the coroner is informed and an inquest held.

Broken Hill Patients.

Cases of insanity occurring in Broken Hill and its neighbourhood are, by arrangement with the Government of South Australia, treated in South Australian hospitals—a system which works well, and is of great advantage to the patients and their friends. These cases are included in the number of insane in the Colony, but not in the general statistics. The following table shows the numbers admitted, discharged, and still under care under this agreement since its inception:—

Year.	Remaining on 1st January.			Admitted.			Total under Care.			Discharged.			Remaining on 31st December.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1895	3	2	5	3	2	5	1	...	1	2	2	4
1896	2	2	4	3	4	7	5	6	11	2	5	7	3	1	4
1897	3	1	4	5	4	9	8	5	13	5	2	7	3	3	6
1898	3	3	6	6	2	8	9	5	14	4	1	5	5	4	9
1899	5	4	9	9	5	14	14	9	23	2	2	4	12	7	19

Accommodation.

There are at present 6 Hospitals for the Insane in this Colony, 3 Licensed Houses, a Hospital for Criminal Insane, and a Reception House. The hospitals had accommodation on 31st December, 1899, for a total of 3,911 patients, but contained 3,998 patients, being thus overcrowded to the extent of 87. An annual increase in the number of the insane under care must also be expected, as shown in the early part of this report, to the extent of at least 110. To provide for these patients wards are being erected, at Kenmore for men, and at Rydalmere for women, to contain 240 and 140 beds respectively. They, however, will not be fully completed and ready for occupation till some time in 1901, and by that time nearly sufficient patients will be waiting to fill them. It is, therefore, evident that the provision of additional accommodation is absolutely necessary, and this can best be made by the erection of the hospital at Orange recommended in last year's report at the earliest possible date.

The Licensed Houses receive only private patients. They have accommodation for 75 patients, and at the end of the year 42 were in residence.

The Hospital for Criminal Insane, with 45 beds, has 44 patients. There are in addition in the gaols of the Colony a small number of prisoners who have become insane while serving sentence. The Hospital for Criminal Insane is fully occupied and cannot receive them, its beds being required for those patients who have, while insane, committed a criminal act, and are not, therefore, really criminals; or for short-sentence prisoners whose offences have been of a trivial nature, and who have not the criminal instinct. The number of prisoners who become insane while serving sentence is not at the present time large, but it is certainly large enough to necessitate the provision of a special ward in connection with one of the gaols.

Changes

Changes in Staff.

The death of the Superintendent of the Reception House is recorded with regret. Mr. Moore had been in the service of the Department twenty-seven years, during seven of which he was in charge of the Reception House. He was a thoroughly trustworthy and painstaking officer, and his unexpected decease is a loss to the Department. He has been succeeded by Mr. Peterson, the Dispenser and Chief Attendant at the Hospital for the Insane, Rydalmere. The retirement from the Service of Mrs. Moore, late Matron of the Reception House, consequent on the death of her husband, has also to be recorded, and to her a tribute is due for the kindly and efficient manner in which she discharged her duties.

The number of attendants, nurses, and servants who left or were dismissed was 58, and of these, 51 voluntarily resigned their positions. The number of changes is larger than it should be, and shows some dissatisfaction with the conditions of service, either as regards the particular hospital the employee is in, or with the Service in general.

Receipts and Expenditure.

The receipts of the Department from all sources amounted to £16,907 2s. 8d., and were made up as follows:—Collected by the Master in Lunacy towards the maintenance of patients in hospitals, £16,113 10s. 5d.; paid by the Imperial Treasury for the maintenance of convict patients, £93 2s.; received from sale of fat and old stores, £644 18s. 4d.; and from rent of land, £55 11s. 11d. The details are shown in the following return:—

TABLE showing Total Receipts on account of Institutions for the Insane during the year 1899.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of Fat and old Stores.	Rent of Land.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Do Callan Park	6,318 3 3	97 9 7	6,415 12 10
Do Newcastle	914 0 8	31 0 8	11 16 9	956 18 1
Do Rydalmere.....	1,335 10 4	21 6 9	1,356 17 1
Do Kenmore	709 14 11	709 14 11
Do South Australia	45 15 7	45 15 7
Reception House for the Insane, Darlinghurst	15 4 3	15 4 3
Inspector-General's Office	55 11 11	55 11 11
Total	£ 16,113 10 5	93 2 0	644 18 4	55 11 11	16,907 2 8

The total expenditure amounted to £119,435 17s. 2d., and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £114,451 6s. 8d.; maintenance of patients in the Reception House at Darlinghurst, £1,350 15s. 4d.; maintenance of patients in South Australian Hospitals, £946 18s. 6d.; and general expenses—including cost of Inspector-General's Office, payments to official visitors, maintenance of steam-launch, &c.—£2,686 16s. 8d.

The average weekly cost per patient was 11s. 1d., without deducting collections, and 9s. 5½d. when these were deducted. This is somewhat higher than during the last four or five years, but below the average for ten years. As pointed out in previous reports, the cost has now been brought down to the lowest possible, commensurate with the safety of the patients and their recovery.

Returns as to cost in the Hospitals themselves, and in the Department, are given after the statistical tables.

TABLE 1.

SHOWING the Admissions, Readmissions, Discharges, and Deaths in the Hospitals and Licensed Houses for the Insane during the year 1899.

	Male.	Female.	Total.	Male.	Female.	Total.
In Hospital on 31st December, 1898	2,474	1,590	4,064			
Admitted for the first time during the year	436	266	702

1897	3,951	692	109,623
1898	4,064	730	115,418
1899	4,198	796	119,435

Reception House for the Insane, Darlinghurst.

The statistics of this Institution are not included with those for the Hospitals and Licensed Houses, as the patients are for the most part only admitted for temporary care and treatment on their way to the hospitals, or whilst awaiting the signature of the certificates and orders necessary for their admission to these Institutions.

The number of patients remaining on 31st December, 1898, was 3, and the number admitted during the year 533, making a total of 536 under care and treatment. This number, which was somewhat less than for several previous years, was made up of two classes—those under certificates of insanity (292 in number) and those under remand under section 1 of the Lunacy Act of 1898, of whom there were 244. Taking these classes separately—of the 292 under certificate, 7 were discharged recovered, 284 were sent to Hospitals for the Insane, and 1 remained at the end of the year; whilst of the 244 under remand, 135 were discharged recovered, 106 were sent to the Police Court, certified as insane, and returned to the Reception House, 1 died, and 2 remained at the end of the year. It will be seen that 106 of the number were first admitted in one and subsequently in the other class. The Superintendent of the Reception House reports that 5 cases under certificate, and 5 cases under remand, were admitted twice during the year 1899, and that 43 of the patients admitted during the year had in some one of the thirty years during which the Institution has been in existence previously been inmates. The large majority of these recurrent cases were suffering from the temporary insanity due to drink. The Institution has done good and useful work. The total number of patients discharged as recovered was 142, and there was only 1 death. Considering that a very large proportion of the cases was in an acute stage of the malady, the death-rate is a very small one, and the fact that no case of serious accident or suicide has occurred is creditable to the management.

The following table gives the detailed statistics of the Reception House for the year 1899:—

RETURN showing the Admissions, Discharges, Deaths, &c., of Patients in the Reception House for the Insane during the Year 1899.

	Remaining on 31st December, 1898.	Admitted during 1899.	Total Number of Patients under care.	Patients Discharged, Transferred, Died, &c.										Remaining on 31st December, 1899.

The Observation Wards at H.M. Gaols, Darlinghurst and Parramatta.

The statistics of these wards are as follows:—There were at the ward at Darlinghurst on December 31, 1898, 13 inmates, and 33 were received during the year, making 46 under care; 31 were discharged of sound mind, 2 were sent to Hospitals for the Insane, 7 were transferred to the Observation Ward at Parramatta, and 6 remained at the close of the year.

In addition to these inmates, for whom the ward was specially set apart, 84 other prisoners were for short periods inmates, the majority of these being cases suffering from temporary mental symptoms due to alcohol, whilst serving sentences of a few days, or whilst under remand.

At the ward at Parramatta there were on December 31, 1898, 10 inmates, and 20 were received during the year, making 30 under observation. Of these, 13 were discharged as of sound mind, 5 were sent to Hospitals for the Insane, and 12 remained at the close of the year. Into this ward, also, a number of similar cases to those received at Darlinghurst was admitted, the total number of these being 26.

The Lunacy Act provides that these wards should be visited by the Inspector-General of the Insane, and special visits of inspection were paid to the ward at Darlinghurst on January 14, February 1 and 23, May 16, June 28, July 12, August 16, and September 18, and to the ward at Parramatta on February 6, May 31, July 6, and October 4. The wards have also been visited at other times to see individual prisoners, or at the request of the visiting medical officers. At the visits of inspection care has been taken to see and speak to every prisoner, and to inquire into the circumstances of his case, as well as to make a careful examination into the general management of the ward.

The Comptroller-General of Prisons has courteously furnished the following returns, showing the general statistics of the two wards for the year 1899:—

RETURN showing the number of Persons received into the Observation Ward, H.M. Gaol, Darlinghurst, during the year 1899, the places whence received, and their disposal.

Whence received.	Remaining on 31st December, 1898.			Received.			Discharged.									Transferred to Observation Ward, Parramatta.			Remaining on 31st December, 1899.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY
GIRLS ASYLUM;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
1 *December*, 1900, *a.m.*

SYDNEY : WILLIAM APPELEGATE GULLICK, GOVERNMENT PRINTER.

1900.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 10. TUESDAY, 3 JULY, 1900.

17. DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM :—Mr. Holman moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon the circumstances surrounding the dismissal of Mrs. Abraham, Sub-Matron of the Shaftesbury Girls Asylum.
- (2.) That such Committee consist of Mr. McGowen, Mr. Ashton, Mr. O'Connor, Mr. Spruson, Mr. Quinn, Mr. Meagher, Mr. Storey, and the Mover.
- Question put and passed.
-

VOTES No. 43. TUESDAY, 18 SEPTEMBER, 1900.

6. DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM :—Mr. Holman (*by consent*) moved, without Notice, That the correspondence respecting Mrs. Margaret Abraham, late Sub-Matron of Shaftesbury Reformatory, laid upon the Table of the House on 10th July, 1900, be referred to the Select Committee now sitting on "Dismissal of Mrs. Abraham, Shaftesbury Girls Asylum."
- Question put and passed.
-

VOTES No. 45. THURSDAY, 20 SEPTEMBER, 1900.

9. DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM :—Mr. Holman (*by consent*) moved, without Notice, That the Select Committee on "Dismissal of Mrs. Abraham, Shaftesbury Girls Asylum," have leave to sit during any adjournment of the House.
- Question put and passed.
-

VOTES No. 66. WEDNESDAY, 31 OCTOBER, 1900.

13. DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM :—Mr. Holman (*by consent*) moved, without Notice, That the Select Committee on "Dismissal of Mrs. Abraham, Shaftesbury Girls Asylum," have leave to sit during the sittings of the House.
- Question put and passed.
-

VOTES No. 85. FRIDAY, 30 NOVEMBER, 1900.

12. DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM :—Mr. Holman, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and Report this subject was referred on 3rd July, 1900, together with Appendix.
- Ordered to be printed.

DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS ASYLUM.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 3rd July, 1900, "to inquire into and report upon the circumstances surrounding the dismissal of Mrs. Abraham, Sub-Matron of the Shaftesbury Girls Asylum," and to whom was referred, on 18th September, 1900, "the correspondence respecting Mrs. Margaret Abraham, late Sub-Matron of Shaftesbury Reformatory, laid upon the Table of the House on 10th July, 1900," and to whom was granted, on 20th September, 1900, "leave to sit during any adjournment of the House," and on 31st October, 1900, "leave to sit during the sittings of the House,"— have agreed to the following Report:—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto), and considered the correspondence referred, find,—

*See List, page 6.

That Mrs. Margaret Abraham was dismissed from her position of Sub-Matron at the Shaftesbury Reformatory under circumstances which entitle her to the favourable consideration of the Government.

W. A. HOLMAN,
Chairman.

No. 1 Committee Room,
Legislative Assembly,
30th November, 1900.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 19 JULY, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 26 JULY, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 2 AUGUST, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 8 AUGUST, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 21 AUGUST, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 22 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. Holman, | Mr. McGowen,
Mr. Spruson.

Mr. Holman called to the Chair.

Entry from Votes and Proceedings appointing the Committee read by the Clerk.
Committee deliberated.

[Adjourned till Tuesday next, at 2 o'clock.]

TUESDAY, 28 AUGUST, 1900.

The meeting called for to-day postponed by order of the Chairman.

WEDNESDAY, 29 AUGUST, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Ashton, | Mr. Spruson.

There not being a Quorum present during the sitting, the Chairman adjourned the Committee until to-morrow, at 2:30 o'clock.

THURSDAY, 30 AUGUST, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY,

TUESDAY, 4 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Meagher, | Mr. Quinn.

Mrs. Margaret Abraham called in, sworn, and examined.

Witness handed in List of Duties of the Sub-Matron at Shaftesbury Reformatory. (*See Appendix.*)

[Adjourned till To-morrow, at 2 o'clock.]

WEDNESDAY, 5 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Meagher, | Mr. Spruson.

Mrs. Margaret Abraham recalled and further examined.

Witness withdrew.

[Adjourned till Wednesday next, at 2 o'clock.]

WEDNESDAY, 12 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman, | Mr. McGowen.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 13 SEPTEMBER, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 18 SEPTEMBER, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 19 SEPTEMBER, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

FRIDAY, 21 SEPTEMBER, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

MONDAY, 24 SEPTEMBER, 1900.

MEMBER PRESENT :—

Mr. Holman.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 25 SEPTEMBER, 1900.

MEMBERS PRESENT :—

Mr. Holman in the Chair.

Mr. Meagher, | Mr. Quinn,
Mr. Spruson.

Entries from Votes and Proceedings,—

(1) Referring the correspondence in reference to the dismissal of Mrs. Abraham, laid upon the Table of the House on 10th July, 1900, to the Committee.

(2) Granting leave to the Committee to sit during any adjournment of the House,—read by the Clerk.

Mrs. Margaret Abraham recalled and further examined.

Mrs. Marion Edmunds called in, sworn, and examined.

Witness withdrew.

Harold

Harold Huntley (*Clerk, Bankruptcy Department*) called in, sworn, and examined.
 Witness produced papers in reference to the bankruptcy of Sydney Maxted.
 Witness withdrew.
 Mrs. Mary Jowett called in, sworn, and examined.
 Witness withdrew.
 Edward John Smith (*Van Proprietor*) called in, sworn, and examined.
 Witness withdrew.
 Re-assembling of the Committee to be arranged by the Chairman.
 [Adjourned.]

THURSDAY, 1 NOVEMBER, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 6 NOVEMBER, 1900.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 14 NOVEMBER, 1900.

MEMBERS PRESENT :—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY
GIRLS ASYLUM.

TUESDAY, 4 SEPTEMBER, 1900.

Present:—

MR. MEAGHER, | MR. QUINN.
W. A. HOLMAN, ESQ., IN THE CHAIR.

Mrs. Margaret Abraham sworn and examined:—

1. *Chairman.*] You were appointed to the Sub-matronship of the Shaftesbury Reformatory? Yes.
2. How long ago? In 1894.
3. I suppose you have no recollection of the date of the month on which you were appointed? I went there on the day on which Mr. Reid came in as Premier—on the 16th or 17th July.
4. Who was the Matron there at the time? Mrs. Jowett.
5. How long were you there altogether? I went in July and I left in July; but I was suspended for some months before I left.
6. You were twelve months on the premises; but during the latter part of the time for some months you were suspended? Yes.
7. Whilst you were there you were engaged in a regular daily routine of duty? Yes.
8. And you had every opportunity of seeing how the management of the place was conducted? Yes. I had the management entirely in my own hands.
9. What would that consist of? Apportioning the girls their different duties; seeing that the place was kept in order; that the clothes were attended to; seeing the meals put on the tables and properly served, and seeing that it was properly done, and that the right quantity of food was supplied.
10. Did you have the ordering of the provisions? No; I had nothing whatever to do with that. I produce a list of the duties of the Sub-matron. [*See Appendix.*]
11. You, I understand, had not had any previous experience in a similar position? Not under the Government.
12. But you considered yourself, and were considered by those who appointed you, to have had an experience of that kind which qualified you for such a position;—will you tell us what that experience was? I can only say that the gentlemen who got me appointed—the late Sir William Windeyer and Mr. Copeland—said that they knew no one so capable of managing such an institution as I was.
13. What made them say that? They had been in my house, and they had seen how it was managed.
14. You conducted a large boarding establishment in Parramatta? Yes, old Government House; and I conducted one in Sydney also.
15. It was largely on the strength of your practical experience that they recommended you? Yes; they said that they knew of no one more competent to manage the institution. Judge Murray also recommended me to Mr. O'Connor, the Minister of Justice.
16. Then did the management of the place whilst you were there strike you as being satisfactory? No; it was most unsatisfactory.
17. What were the unsatisfactory elements? Well, to begin with, the food which was prepared for the children was not eatable. The porridge in the morning was burnt, and was in such a state that after it had gone on for about ten days the Matron came in and apologised, and said that it would not be so again, as she had sent to Sydney for proper utensils to prevent the porridge from being burnt.
18. Were they obtained? Yes.

Mrs.
Margaret
Abraham.
4 Sept., 1900.

Mrs.
Margaret
Abraham.
4 Sept., 1900.

19. And that grievance was removed? Yes. Each child was allowed a pint of milk a day; but none of the children ever got more than a wine-glass full, if they got so much. With my own hand I put the milk in each child's porridge, so I can answer as to the quantity that there was.
20. Was any milk served out during the day? Only a little in the tea, and that was sent in made.
21. Then the milk supply was short? Yes. We used condensed milk for a considerable time. There were not so many children there at the beginning as there were afterwards. Two cows were kept. I spoke to the Matron about the milk on several occasions, and she said she was told that there was not sufficient milk. I said, "Have you seen the bucket when it comes in?" and she said, "No." I told her there was sufficient to give all the children a proper quantity, because the pail was quite full.
22. You say that from your observation the children's milk supply was short? Yes.
23. Was there any other kind of food that was short? Yes. On Sundays the children had roast beef for dinner. There was one potato, a small piece of roast beef, a slice of bread, and a small slice of plum pudding afterwards.
24. Was that enough for the children? For a young child it might do, but not for girls that were growing and those who were working in the laundry.
25. Did they complain of being short? I used to do the best I could. They never complained. No one was allowed to complain, but I spoke about it. On a Monday there was cold roast beef, one potato, and one slice of bread.
26. Was it your impression that there was enough? No, never. Then on the rest of the five days of the week there was hash, which was uneatable. Many of the children were violently sick after they had eaten it. I spoke to the Matron about it repeatedly. I said, "Is there no other way in which the food can be prepared for the children?" and she said, "No." I pointed out that the hash was not properly made. It was sent in sometimes with fat nearly an inch deep on it.
27. Was there enough for the breakfasts and the teas? For breakfast there was a small plate of porridge, with a little milk, and after that two slices of bread, and a little mug of tea. Butter was supposed to be allowed to the children. They got dripping and treacle enough, but never to my knowledge was butter given, except three or four times. Never anything but treacle and dripping. For tea they had a small mug of tea and two slices of bread. When the tea came in there were no conveniences. We had to stir the tea with a piece of stick. It was sent in in a milk-bucket. One of the older girls used to pour it out into the different mugs, and I used to see that they had a proper quantity. Any that was over was put on one side for the older girls who were doing work.
28. It struck you, speaking as a woman of practical experience, that the food supply was short, and badly cooked? Yes; that is what I complain of.
29. Did the girls themselves ever speak to you about the matter? They never complained. They told me they were sick, and could not eat their food. I complained for them.
30. We will take the question of the treatment of the children, apart from the feeding of them;—did that strike you as being satisfactory? No; it was most unsatisfactory.
31. In what way? There were so many things, I ought to have kept notes of them. For instance, Mrs. Jowett ordered all those children to have their heads washed in cold water during the winter. They had cold baths in summer on Tuesdays and Saturdays, and hot baths in winter. I spoke to the Matron about the children's heads being washed in cold water in winter. I said that the children all had colds, and that it was very wrong to have their heads washed every morning in cold water. She never gave me any satisfaction. She gave out a dozen pocket-handkerchiefs for the girls, and you can imagine of what use a dozen pocket-handkerchiefs were amongst thirty or forty children.
32. I think you raised some objection as to the work which was given to the children to do? I did.
33. Will you tell us what you noticed whilst you were at the institution? To begin with, there were no conveniences left in their bedrooms, and there was a great deal of unpleasantness over that. The Matron ordered that none should be left in the bedrooms. I took the law into my own hands, and left conveniences for the children, and arranged that one of the elder girls should attend upon the younger ones; and the same with regard to the boys. There was half a bar of soap allowed for all those children for their bath and for washing themselves every day.
34. How many children would there be there at that time? About forty or more. In the mornings, when the children went to the bath, I got that half-bar of soap and cut it up into as many pieces as I could; but the servant had the key of the bath-room, and could go in and out when she liked, and often the soap that I put in at 7 o'clock in the morning was gone at 9 o'clock. I pointed this out to the Matron. The brushes and combs were taken out, and at 9 or 11 o'clock these things were brought out of the servant's room. Then there were no proper arrangements for keeping anything. The buckets and dinner-things were taken away that belonged to my court to the nurses' court. I asked the Matron to give me buckets, scrubbing-brushes, and other requisites for the dormitories, and she did so; but they were taken away, and when my work was to commence at 6 o'clock in the morning there were no brushes and no buckets. Then, when I found that I could not manage to keep things, I took them into the day-room, where I locked up the buckets and the cloths in a large press after drying them. I locked them up every night, and gave them out in the morning. The brushes I had brought into my room, and put behind the door. I told Mrs. Jowett that I would get a case made at my own expense, in which to keep articles under lock and key. Things were taken up to the other court repeatedly, and when I wanted them I was unable to go on with my work. Wednesday was my day off, and on the morning, before going to town, I would give the girls all their duties to attend to, and each girl knew, when she came out in the morning, what work to go to. I found, however, that the Matron constantly changed the girls, so that when I came on on Thursday morning there was no girl to attend to the work. The girls did not know what work to go to. I said to the girls, "Who changed you?" and they said, "Mrs. Jowett." I bore that for three months—my girls being changed every week. I never once complained, until at last it got beyond bearing, and I found that the more I bore the more I should have to bear. I then told Mrs. Jowett that for the future I would not allow her to interfere with my work.
35. How long had you been in the establishment then? About three months.
36. Had you spoken to her before? No; that was the first time. I said I would not allow it; it was my place to give the girls their work, and that if she insisted on changing the girls she should take the duties on herself. By 9 o'clock in the morning everything had to be done; duties commenced at 6 o'clock, and by 9 o'clock the girls had to be in school. There were clothes to be mended, rooms to be attended to, and everything to be done to have the place in working order, and we were never five minutes behind from the day that I went there until the day that I left.

Mrs.
Margaret
Abraham.
4 Sept., 1900.

37. If you had been behind, was there any record by which it would have been shown? That I do not know.
38. No complaint was ever made to you about lack of punctuality? No. I had better say that on the first morning that I was on duty Mrs. Jowett came and showed me all the different duties. I then asked if she would go round with me every day for a week after I had done everything, so that I should know whether I had properly carried out her orders and know exactly what was to be done. She agreed to do so, and came for a week with me, and at the end of the week she said, smiling, "I think I need not come any longer; I think I might come to you for a lesson."
39. Of course, you did not find anything particularly difficult in the duties? No. I could manage a much larger establishment with the greatest ease if I could be allowed to carry it on in a proper manner; but what I complained of was that the things were not given to me. For instance, when I wanted such a thing as needles, unless I put them down on the list on a Saturday, I could not get them, because the Matron would not go into the store during the week. Thimbles would be wanted, and if we forgot to put them on the list we could not get them until the following Saturday.
40. These are matters of detail concerning the management which after all may have been annoying, but you can hardly say that anything more was involved in them than mismanagement; what we are more anxious to know about is whether there was anything that seemed to suggest actual callousness towards the interests of the children in the institution;—can you remember any experiences of yours which bear on that? Yes; the ill-treatment of the children. The first day I was on duty Mrs. Jowett said, "Mrs. Abrahams, no one person would be able to manage the kitchen and look after the food too. I will do that for you. You will not have to do that." I said, "But it is in the list of my duties." She said, "Yes; but you could not possibly manage it. I will look after the food for you." Of course, she was the Matron, and I obeyed. So that I do not know the quantity that any child would have. I only knew that the food was good, if it had been properly prepared. What I complained of was the insufficiency of the food and the improper cooking.
41. Did you see any cases of what you would call improper treatment of the children in any other direction besides neglect? I suppose I must first speak about the schoolmistress. Miss Bromby was appointed schoolmistress, and from the day when she was appointed there was constant beating of the children. Their cries never ceased. Hour after hour you would hear some child screaming. One day I found Mrs. Jowett leaning against the door listening to a child. I said to her, "How that Miss Bromby beats the children." Mrs. Jowett said, "Yes; if she cannot teach, she knows how to use the cane." I said, "I wonder how you allow it. You should put a stop to it." She replied that she had nothing to do with it. I said, "You should have a great deal to do with it. If I were Matron here, she should not beat the children." There was a boy named Johnston in the institution, and one evening when we were putting the children to bed, and this boy was undressed, I noticed that his back was black from his collar to his boots. I said, "What is the matter with that child?" and the reply was, "Oh, the Miss beat him." Miss Bromby was always addressed as "the" Miss.
42. Do you remember another case? Yes; there was a little girl named Mary Ann Tweedie, my own house servant. One Thursday morning when the child came to the house I saw that she looked very ill and wretched, and I said, "What is the matter with you?" when she burst into tears, and said, "The Miss beat me yesterday." I said, "What for?" and she replied, "I was holding my slate, and the pencil fell down." I asked, "Where did she beat you?" and the child said, "On my back." Her blouse was taken off, and on her right shoulder and arm there were nine great marks of the cane. When I went over after breakfast I spoke to Mrs. Jowett about it. I said, "How dare that woman beat the child?" Mrs. Jowett said, "Oh, Mrs. Abraham, she has a name." I said, "Yes; I beg her pardon. No woman would strike a child as she has done."
43. Did the Matron take any action? No.
44. She did not recognise that she had any jurisdiction? No.
45. What was the age of the child? I think she was about 14. The next case was that of a girl named Emily Markham. This girl suffered from some internal complaint. I cannot tell you what it was, but it was very unpleasant indeed. I spoke to the Matron about it, and asked if she would put her in a single dormitory.
46. Was it a thing which was likely to be offensive to the other girls in the dormitory? Yes; I suggested to the Matron that she should see the doctor. This occurred seven or eight times, and the Matron said she would cure the girl. I said, "I do not know anything about it. It would be better to see the doctor." However, the Matron ordered that the next time it happened, word was to be sent to her, and when it happened she ordered the girl to come out.
47. How did she treat the girl then? The Matron ordered the girl to come out, and put a wet sheet round her, and made her walk round the court for two hours.
48. What time of the year was this? I cannot say.
49. How long had you been in the institution then? I could not tell.
50. *Mr. Quinn.*] Was that at night? No; in the morning.
51. The court was in the open air? Yes; but covered with a verandah all round. I hope I shall never see such an exhibition again. I never saw a child suffer such grief as that child did. I never saw any creature suffer as that girl suffered. The second time that it happened the girl laughed defiantly.
52. *Mr. Meagher.*] Was this done in the presence of both sexes? Yes; the girl was made to walk round in the wet sheet for two hours.
53. What age would be the oldest of the boys present? Ten or 12 years, I should say, perhaps not so old.
54. *Mr. Quinn.*] How old was the girl? She was a very stoutly-built girl. I should think that she was 12 or 13 years old. She looked much older than she was.
55. And this treatment was repeated? Yes; it was.
56. *Chairman.*] Was the girl Tweedie beaten a second time? Yes. Then there was another girl, Dora Whelan.
57. How old was she? She was about 16, I should say. She had just come out of the hospital at Moorcliff, where she had been under treatment for sore eyes. She was put in the laundry, and her eyes began to get very bad again. I went to the Matron three times about the girl, and pointed out that her eyes were getting bad, and that the laundry was the worst place for her to be in. The Matron refused to

take

Mrs.
Margaret
Abraham.
4 Sept., 1900.

take the girl out of the laundry, and the third time she said she would not be bested by any girl. I said, "The girl will be blind if she is left in the laundry." She said at last she would take the girl out of the laundry and put her into the ironing-rooms. That was out of the frying-pan into the fire. When I was suspended a nurse had to put drops in the girl's eyes.

58. She had to go back under medical treatment? Yes. But there was no one there except the nurse who put the drops into the child's eyes.

59. Was she a trained nurse? Yes; an excellent nurse. She was a woman who did her duty to the girls thoroughly.

60. Do you recollect the case of the girl Helen Tracey? Yes; she belonged to the nurses' court. I had nothing to do with the five girls in the nurses' court.

61. What were they doing there? Keeping the place clean.

62. They were servants for the nurses? Yes; they had five, and I had only one girl to do anything for me, where all the children were. They told me one day that the girl Tracey was dreadfully sick, and that she tried to commit suicide. I am not sure about it, but I think she was shut up for two days. The next day at breakfast I spoke to her very seriously, and the girl said she was tired of her life. I asked if she did not know what a dreadful thing it was. I spoke to her kindly, and she cried. That is all I can tell you about it. Afterwards I heard that she broke things in her room. The girls told me that she twice attempted to commit suicide.

63. You were going to say something about the case of the girl Tweedie? Yes. On a certain afternoon I was sitting in the day-room with the girls sewing when we heard a loud screaming, and some one ran past the door. The girls said, "Mrs. Abraham, little Mary Ann there has been dreadfully beaten." I went to where the child was, and she certainly was a pitiable sight. Blood was dropping from one her fingers, and she had been beaten on her arms and hands. It seems that Miss Bromby had beaten her, and in trying to pull the girl's hands from under her arms she cut her finger with her nail, taking a piece of flesh out.

64. You saw that? Yes. I sent the girl over to my house, and my daughter tied up the finger with a piece of rag. This occurred on a Monday on the bathing evening. I was subsequently called into the office, and when I went in I found that an inquiry was going on. Mr. Green was seated in the room.

65. Had anything that you had done brought it on;—had you asked for an inquiry? No.

66. Do you know what was the nature of the inquiry? I only know that I had complained of the treatment of the children. Mr. Maxted asked me about it, and I told him of the treatment which they received.

67. You have told us now about the arrangements, about the feeding, about the working of the girls, and their general treatment, and on all these grounds you thought there was good cause for dissatisfaction? Yes.

68. Can you tell us about the personnel of the staff employed in addition to the nurses and the Matron? There was only one nurse. There was the Matron, and I was the Sub-matron. There was also the school-mistress; but she was not appointed until I had been there for some time.

69. Were there any men employed about the place? There was a man named Blaney and his wife.

70. What was his position? He was a servant.

71. And his wife? She was cook and laundress.

72. Did she have any girls under her in the laundry? Yes.

73. Did anything about Blaney strike you as being unsatisfactory? Yes; he was constantly intoxicated, and his wife used to smell of drink at 6 o'clock in the morning. He used to lie for a couple of days in the stable, and do nothing. I saw the nurse go and take the keys out of his pocket.

74. How often? I saw her do that once; but he was frequently intoxicated. On some occasions he was very bad indeed. One day his wife was lying out in the bush. The children had just come home from Rose Bay Convent, and were going to Watson's Bay. I heard some of the children calling out, "Oh, she is down. It is Mrs. Blaney." I went up to the gate, and said, "What is it?" and they told me that Mrs. Blaney was intoxicated in the bush, and had fallen several times. The same afternoon her husband was lying in the stable.

75. Then did you feel bound to mention this to the Matron? The Matron knew about it.

76. Did you speak about it to her? Yes; but a very serious affair happened before that. What I found fault with Mrs. Blaney about was the use of foul language to the girls. When I speak of this drunkenness do not think I mean to say that they were bad servants, because the man was a capital groom, and the woman was an excellent cook and laundress. There was no fault to be found with them, except as regards their intemperance.

77. Was it frequent on her part, as well as on his? No, not on her part. He was frequently lying under my cottage window intoxicated, or in the stable. I do not wish to make things worse than they were, but I saw him repeatedly intoxicated, lying about the grounds. His wife I saw intoxicated only once, but she constantly took drink. She took drink in the morning at 6 o'clock.

78. You only once saw her the worse for liquor? I have seen her worse for it several times, but not intoxicated.

79. What was this serious affair that you spoke of? The man Blaney had a dreadful dog, a most ferocious animal—the only dog that I was ever afraid of in my life. I asked them to put him out of the way. One afternoon the girls came and said that Blaney was mad drunk, and that he had lashed his dog nearly to death. He was very fond of his dog. I said I was very sorry. The girls went to bed at 8 o'clock. I was going to the dormitories, and, when opposite the day-room door leading into the nurses' court, I saw Blaney coming from the nurses' court. He looked very wild and very dreadful, and something seemed to say to me, take care of Blaney, he means to do you some injury. I went to the dormitory and watched him. At the door that led up to my place there was a pump, and Blaney stood leaning on the pump with his hand in his right coat-pocket. He was shaking as a man does when under the influence of drink. Previous to this Mrs. Blaney told me that he slept with a loaded revolver under his pillow. She said we were very brave to live in the cottage by ourselves, and that Blaney would not sleep without his revolver. There were two bolts on the door. I knew that Blaney carried a revolver in his pocket, and he was mad with drink, and had been beating the dog. He was in such an excited state that my life was not safe. I went to the kitchen to see if I could get out that way, without having to go near him. The kitchen, however, was locked, and I could not get out. I then called one of the elder

elder girls, and said, "Sarah, I want you to come across with me to the cottage." When we got outside the door Blaney was standing near, and she screamed out, and I said, "Oh, it is Blaney." It was dark, so that we could barely see. I said, "Sarah, run," and we both ran. When I got to the cottage I said, "Wait here until he goes in, and I will go into my house." I heard Sarah go and close the door; then I went in. I was so frightened that I did not know what to do. When I got in I spoke through the speaking tube, and asked Mrs. Jowett to come over, and I told her what had happened—that I was afraid of Blaney, that he had a revolver in his pocket, and that if the girl had not been with me something would have happened. She said, "Why should Blaney have any ill-feeling against you?" I said, "You know we have taken his cottage. They have not hesitated to tell me that, and they say they are uncomfortable where they are now." He had a little house of his own, for which he got 5s. a week rent, and he had to turn his tenant out to put his furniture in it. I said, "Do you attribute the unpleasantness that has occurred to my taking the cottage? You will remember that I told you that Mr. Maxted said that we were to have three years in the building." She said, "You did."

Mrs.
Margaret
Abraham.
4 Sept., 1900.

80. Was any act done by Blaney which justified those fears? No.
81. It was fear that might or might not have been well grounded? Yes; but he used to come round the house night after night.
82. But he may have had the most harmless purposes? He may have had, but I think I know, unfortunately, too much of what drunken men are capable of doing.
83. You never saw him commit any act of violence? No.
84. Did he ever use any bad language in your presence? No.
85. His wife did though? Yes. I said to Mrs. Jowett I would go in the morning and see Mr. Maxted, and tell him what had occurred. I went, but I could not see Mr. Maxted. I went and saw Sir William Windeyer and told him, and he said, "Has the Matron reported those people?" I said, "No." Then he said, "Your duty is plain. You must report the Matron for not doing her duty, and tell Maxted from me that those people have no right to be kept another hour in the Government Service, and a woman who does not do her duty has no right to be at the head of the establishment." He said, "Tell Maxted word for word what you have told me, and when he knows the nature of the case he will not keep them."
86. When did you see Mr. Maxted? Sometime after.
87. How long? I cannot tell how long. The portion about Mrs. Jowett I did not tell him. I never reported Mrs. Jowett in any shape or way.
88. Was this the first time you had a conversation with Maxted about the management of the institution? No; I had a previous one.
89. We may take it that this being the state of things that you found prevailing in the asylum you were highly dissatisfied with everything you saw, and, to the best of your belief, you reported to the Matron the various defects that you noticed? Yes.
90. Did the Matron ever come to you and point out any defects in your work? Never once, from the day that I went there until the day that I left.
91. Was it ever necessary to go round and re-do the work? Never once. I have been for ten days at a time without seeing the Matron. She never once found fault, or had occasion to find fault, with anything done in the institution.
92. Was any attempt ever made by your superiors to find out how your work was carried out? Never. The first time I saw Mr. Maxted I said, "Mr. Maxted, from what you hear about me, do you think that I understand my duties?" He said, "Mrs. Abraham, I have heard nothing but praise in the highest degree of the way you manage."
93. How were you first brought into touch with your official superiors, beyond the Matron;—who was the first officer that you saw? Mr. Allen, who came out to the Shaftesbury Asylum.
94. To do what? To take down particulars about Blaney.
95. That was the first time after you had seen Sir William Windeyer? Yes.
96. You had not spoken to any one else? No.
97. How was it that Mr. Allen was sent out? That I do not know.
98. Did the Matron report you? The Matron sent in a report about my having a girl, because I asked her to allow my servant to sleep in the house because we were afraid.
99. And she sent in a report? Yes.
100. Recommending or condemning it? Asking for permission. She allowed what I asked to be done for a week or ten days. Then she said she could not allow it any longer without permission. She wrote to Mr. Maxted, who wrote back to say that the girls were not to sleep out of the institution.
101. Did you think that that led to Mr. Allen coming down? Yes.
102. What did Mr. Allen do—hold an inquiry? I was called in, and I have been told that all that I said should have been written out, but it was never given to me. I merely told him what I have stated now.
103. You told Mr. Allen about Blaney? Yes.
104. What action was taken by the Department whilst you were there? Blaney, I heard, was dismissed. The Matron said that he was allowed to resign.
105. Then he did go? Yes.
106. There was no suggestion of any complaint against yourself in connection with that inquiry? Nothing that I ever heard.
107. The next step was the appearance of Mr. Green to hold an inquiry? Yes.
108. Can you tell us what occurred then? That was on the afternoon, and Mary Ann Tweedie was beaten the evening after.
109. Was Mr. Green on the ground when that occurred? No, he had not arrived. I sent her over to my cottage, and Mr. Green came and held an inquiry.
110. He did not come to hold an inquiry into the case of the girl, did he? I do not know.
111. Had you interviewed Mr. Maxted before Mr. Green came? Yes, twice.
112. And you went to see Sir William Windeyer, who recommended you to see Mr. Maxted? Yes.
113. And you went to see Mr. Maxted some weeks afterwards? Yes.
114. What did you say to Mr. Maxted? He asked me how the institution was managed, and I told him what I have told you. I said that there was a girl, called Haugh, who was a servant in the kitchen where the Matron's food was prepared, my house being separate. I said to that girl one day, and it was the only.

Mrs.
Margaret
Abraham.
4 Sept., 1900.

only question that I ever asked in the institution, "Who is Mrs. Jowett's butcher; our butcher gives us such dreadful meat that we cannot use it?" The girl said, "Mrs. Jowett has no butcher; she takes her meat out of the stores." I never asked her another question, or made another remark, but that girl was never allowed in the day-room afterwards.

115. I suppose you wish us to understand that you asked that question to obtain information for your own private guidance? Yes; for my own use. When I saw Mr. Maxted he asked how the children were treated. I told him what I have told you. I told Mr. Maxted that there was no butter used in the institution, that the supply of milk was short, that condensed milk was used, and that the milk was skimmed. Then I also told him what Mrs. Blaney had told me—that butter was made twice a week in the institution. Mr. Maxted apparently misunderstood this, and asked me if I asserted that Mrs. Jowett made 10 lb. of butter a week. I told him that I said nothing of the kind.

116. Did any further conversation take place? I told Mr. Maxted what Sir William Windeyer said. Another thing which I forgot was, that when I saw Sir William Windeyer I said, "I am going to ask for an exchange. I am going to ask Mr. Maxted to take me away." Sir William said, "You will do nothing of the sort. Why should you be turned out of your appointment by this drunken servant? It is monstrous; it is iniquitous. Tell Mr. Maxted what I say, and he will not allow it."

117. That was the advice you acted on as to seeing Mr. Maxted? Yes. Then Mr. Maxted said to me, "You will never be happy there. Write to me privately, and ask me to remove you." Then he said, "I wonder if Mrs. Tecece would exchange with you."

118. Did you make any further report to Mr. Maxted? I told him about the treatment of the children.

119. About the beating? No; it had not occurred then.

120. At the date of these interviews you had been at the institution four or five months? I do not think I had been there so long. I suppose I had been there about three months.

121. This was really the first time that you had seen Mr. Maxted in reference to the institution? Yes.

122. You had a separate interview with Mr. Maxted before Mr. Green held this inquiry? No; only one interview. The second time was just before I left the institution.

123. The next thing you know of is that Mr. Green came to make an inquiry? I did not know that he came to make an inquiry. The girls were bathing, and when they were bathed I was sent for. I had sent Mary Ann over to the cottage, and she was not to come back. She refused to go into the school. She would not go near Miss Bromby, and said she would run away. Mrs. Jowett said she must go into the school; but I said, "I will arrange for my daughter to give her lessons, so that she need not go into the school." Mr. Green held the inquiry on the day that the girl Tweedie had been beaten for the second time. I sent her over to the cottage to be attended to. The matter of the girl Tweedie came up before Mr. Green, and he told me that she was a very bad character; that she had a seven years' bad record against her. I assured Mr. Green that he was mistaken; that the girl had been brought to me by the Matron when she first came in; that the Matron had explained that her father was paying 2s. 6d. a week for her, and was anxious that a little extra attention should be given to her. Mr. Green disputed this altogether, and told me that I was in error.

124. What did you offer to do then? I said that I could call in her relatives, which I afterwards did, sending for her aunt.

125. What did she do? Her aunt said that she had been only three months on the State, and that she would bring her Sunday-school teacher to prove the time when she left the Sunday-school and was put on the State.

126. You have no doubt that she was a decent girl? She was a decent, quiet, respectable girl; but she was a nervous little thing, frightened, and suffered terribly with toothache; and she was put into the laundry, which I considered entirely unsuitable, as it exposed her to the alternations of heat and cold, which brought on her complaint.

127. *Mr. Meagher.*] In the light of subsequent investigation, do you still say that Mr. Green was mistaken? I think so. I think he mistook that girl for someone else.

WEDNESDAY, 5 SEPTEMBER, 1900.

Present:—

MR. MEAGHER.

MR. SPRUSON.

W. A. HOLMAN, ESQ., IN THE CHAIR.

Mrs. Margaret Abraham further examined:—

Mrs.
Margaret
Abraham.
5 Sept., 1900.

128. *Chairman.*] Since leaving, yesterday, have any further facts occurred to you illustrating the general management of the Asylum when you were appointed to the staff? I have some notes which I made when I was there. I looked them up last night. I thought I had better bring them, as there are one or two things which I had forgotten to mention. The boy Johnson to whom I refer, who was so desperately beaten, had a very unpleasant habit of soiling his bed. I tried everything possible to prevent it, and at last I spoke to the Matron, and asked if she would put him into a separate room. The Matron said she would cure him, and gave orders that he should be taken to her the next time he did it. On the next occasion that it occurred she had him put in a cold bath, and held under the water. This was done as soon as the marks of the previous beating went off the boy's back. Afterwards he was taken out of the institution. There is another thing which I forgot to mention—that is that there is no sewerage there. Earth pans are used, eight girls had to take the pans out in the morning, and when they came back the pans were washed and disinfected. There were a number of big boys in the place, and I thought that the boys were the proper people to do this work, so I took the girls off that duty and put the boys on to do it. On one occasion the man Blancy, who was in one of his fits of intemperance, was not there to attend to his duty, and his wife attended to them. There was a boy named O'Sullivan there, and she left him out in the paddock, and the horse kicked him on the jaw. That boy was taken away to the hospital, and I never saw him afterwards.

129. You cannot suggest that that was anything beyond an accident? Her duty was to see the children into the building.

130. Do you suggest that there was neglect in that case? Certainly; she had no right to leave the boy outside. He was very seriously injured.

Mrs.
Margaret
Abraham.

5 Sept., 1900.

131. *Mr. Meagher.*] Did you see what was done with the boy Johnson? No; the girl who put him in the bath told me, and I heard the boy scream. There is another thing which I remember. On three occasions there was a small jug of milk, not quite a pint, supplied. Those were the only occasions on which fresh milk was ever supplied to the children of the institution whilst I was there. That milk was for their porridge. Sometimes the skimmed milk which was allowed was turning sour. When I went to the institution there were two cows and a calf when I went there. When I was suspended there were five cows milking, and those children still got sour skimmed milk. The number of children in there at that time was forty. You asked me if I had any idea as to how to manage an institution of that sort, and I told you that I had not had any experience of the kind, except as regards the management of my own house. I have just looked through my books and I find that I had in my house at one time six or seven servants, and nearly fifty other people. Surely, if I was capable of managing an establishment like that to the satisfaction of everyone in my house, I was capable of managing a Government institution. My father, who was educated for the ministry, was master of one of the largest training schools in the north of Ireland, where hundreds of children attended annually. He was master of a training school to which men were sent to be trained by him.
132. *Mr. Spruson.*] Did you have any experience of that place which your father was at? I was born there.
133. Were you connected with the management of the place? I was only a child at the time.
134. Then you could not learn much from your connection with that institution? No.
135. Have you any other facts in regard to the state of the institution which you think the Committee ought to know? Just the generally unkind treatment of the children, and the insufficient clothing given to them. I could not get sufficient clothing for the girls; they were there on cold mornings without stockings, and some without boots.
136. Was there any marked shortage of stockings and shoes? No; in the stores there was plenty of everything, and the store was in the institution.
137. How is it you could not get them? I asked for the articles, but they would never give them to me. When I went to the institution the Matron called me and said, "This girl Markham has only one garment. If we sent a girl out of the institution in this state, what would be thought of us." I went to the Matron five times for a dress for the girl, and could not get it. I was told that there was no dress that would fit her, and I had to do the best I could. The clothing of the girl had to be changed every week.
138. Was there any marked deficiency of clothing;—did the girl get the clothing which you thought necessary for her? She did not. There were forty-one girls and boys at the meals, and there were two in the hospital, making forty-three altogether. I have a Memo. here which I read out to Mr. Green at the inquiry. There were twenty-one knives, thirty-four forks, thirty-five spoons, eleven cups and saucers, eight cups without saucers, some without handles, twenty mugs. On Friday, 2nd November, nine new mugs were given out. For several weeks a piece of stick was used to stir the tea with. Afterwards we got a tin spoon. There was an insufficient supply of hot water for washing up. There were three old towels for the dining-room, which were afterwards reduced to one. The brushes and combs were constantly stolen from both the rooms. The bath-room was kept locked, except when in use or being cleaned. The nurse has five girls for her work. I, for all my work, had one girl only. Only one of the nurse's girls goes to afternoon school. On Monday, the 29th October, the girls came through at 22 minutes past 6 o'clock; on Tuesday at 20 minutes past 6.
139. What is the purpose of this evidence? These elder girls had to take the management of the dormitories, and help the younger ones. There were two girls for each dormitory, making the beds, sweeping, scrubbing, and cleaning.
140. That there was disorganisation or inefficiency in the management is one thing, but who is responsible is another;—who was responsible for the girls not coming down earlier? The nurse was not there to let them out.
141. This statement is in the nature of a complaint against the nurse? A complaint against the management, and of the want of regularity in the establishment.
142. Was there anyone else responsible besides the nurse? I think the Matron is responsible for everything.
143. She may have been nominally responsible; but was the organisation of the place such as to require her attention to a matter like that? I do not know. My duty was to be in the place at 6 o'clock.
144. What you complain about is that it was the duty of the nurse to see that the girls were there, but they were not there? Yes; she locked them up.
145. And they were habitually not down at 6 o'clock? Yes; frequently it was half-past 6.
146. *Chairman.*] The Committee does not require a report on the institution;—you understand that, in consequence of the general state of disorganisation you saw you complained, and eventually friction arose between you and your superiors? I never had a word of unpleasantness with the Matron except on one occasion, when I told her that I would assert my authority.
147. You were dismissed? Yes.
148. And your allegation is that you were dismissed in consequence of friction arising between you and others about matters for which you were not responsible? Certainly not.
149. Irregularities existed, and you protested against them? Yes. The dormitories had to be scrubbed twice a week, but swept and dusted every day; but there were no brushes. The floorcloths could not be found. After 9 o'clock in the morning they might be found in the laundry. I asked Mrs. Jowett for a place to lock these things up in, but she said the room was required. The soap given out at 6 o'clock in the morning was stolen at 9. On the 5th of November, at five minutes past 6 o'clock, when I got over, I found the boys in the passage. They had not been locked in. I found that in both the dormitories occupied by the girls their windows were closed. During that morning, after school had been in for some time, I was searching for brushes and the dustpan, which I found in the laundry. I locked them up in the press in the day-room.
150. We may assume that there was a great deal of disorganisation, of which these are instances which you are giving? Yes. The man Blaney, when I went over for my meals, used to put the clock on twenty minutes or a quarter of an hour.
151. *Mr. Spruson.*] You and Blaney were on bad terms? I reported him and his wife for intemperance and for using improper language to the girls.
152. What do you mean by improper language to the girls; strong language? It went much further than strong language.

Mrs.
Margaret
Abraham.
5 Sept., 1900.

153. You have told us about some notes that you made; were they not in reference to matters before there was any misunderstanding or difference between you and the other parties in charge? Yes.
154. Why were they made? They were not made until after I had reported Blaney; then there commenced a sort of boycotting.
155. Did you complain? I complained to the Matron. There is another thing I must tell you. One day in crossing the court I spoke to Mrs. Blaney. I stopped to ask her a question in connection with the place, and she said, "Do not speak to me; there are four eyes watching us." I saw the Matron later on, and I told her what the woman said, and asked her the meaning of it; but she said she did not know. A day or two afterwards I said to Mrs. Blaney, "What did you mean by that remark," and she said, "When you have been as long in the institution as I have you will know that you cannot speak to anyone in it without being watched, and everything you do being remarked."
156. When did you begin to make notes after you reported Blaney? The dates are on the notes.
157. After you reported Blaney you continued to make notes? Yes.
158. From your position in the institution any report that you made must have been to the Matron; you could not officially have gone over her head? Certainly not; I reported these things to her.
159. Officially you did all you could to put matters to rights? I did.
160. You referred to the boy Johnson who was taken out of the institution after the marks on his body had disappeared;—who took him away? I do not know.
161. Do you suggest that he was taken away improperly, or in the ordinary course? I cannot tell you; he was taken away I suppose in the ordinary course.
162. *Chairman.*] At a certain stage you went and made a complaint to Mr. Maxted? No; I did not make a complaint to Mr. Maxted, but to Mrs. Jowett.
163. But you did eventually have an interview with Mr. Maxted? Yes.
164. The result of that interview was, apparently as far as you know, that some time afterwards Mr. Green came and held an inquiry in the institution? Yes, a considerable time after.
165. Can you remember what took place at that first inquiry by Mr. Green;—were you called in to give evidence? I was called in before Mr. Green, and was asked what complaint I had to make. I told him what I have told the Committee now. There were three of us in the room, Mr. Allen, Mr. Green, and myself. When I mentioned that the milk was always skimmed, and constantly turning sour, and that we never had fresh milk, Mr. Green jumped out of his chair and said it was a lie, that there was never a drop of skimmed milk supplied. He said that Kate denied that there was ever a drop of sour milk sent in.
166. What further points were raised? Mr. Green said that I was a most vindictive woman, most impertinent, insubordinate, and untruthful. Three times I was ordered to tell my reasons for believing that there would be another inquiry.
167. Had you expressed the belief that there would be another inquiry? I did. I said that when a proper inquiry took place I would ask to have the girls brought in. Mr. Green asked what reason I had to expect another inquiry. I said I declined to answer that question. He then ordered me to answer it, as he was my superior officer, and I refused. Then he said that my conduct was that of a pimp.
168. When you made your statement regarding the condition of the institution, what did Mr. Green do;—did he pass any comment upon it? He did not believe it. He was Mrs. Jowett's friend. I do not object to Mr. Green trying to do his best for his friend. Then Mr. Green accused me of wishing to have an epileptic girl thrashed.
169. Was that a fact? Certainly not. When I arrived at Shaftesbury that girl was in the hospital very ill, and had a nurse with her day and night, and was not expected to live, according to Mrs. Jowett's statement to me. On a certain occasion this girl had a fit of ill-temper. She used to drink tea that was very strong. A girl told me about her fit of ill-temper, and I said, "What an ungrateful girl, after all the kindness of the nurse!" I said if I had been the nurse I would have given her a good whipping. A girl named Bertha came in, and I said, "You were with the nurse last night"; and she said that the girl threw herself down, and screamed and screamed and screamed, and she said the nurse took off her shoe and beat her till she could not bear any longer. This was the girl that I said, for her ingratitude to the nurse, should have had a good whipping.
170. As a matter of fact, the nurse had whipped her? I did not know it at the time when I made that remark. Mr. Green made that accusation.
171. You never ordered or suggested that the girls should be beaten? No; I said that if I had been the nurse, I would have done it. Another thing which Mr. Green brought against me was that I had insulted Mrs. Jowett about some flowers. You know I had a right to go and take flowers as well as any of the other officers, but I would not do such a thing. I took a basket and asked Mrs. Jowett to pack some for me. She sent me a basket of flowers, but they were flowers which had been used in a house and were withered, and when my daughter saw them she sent them back.
172. Mr. Green said that you insulted Mrs. Jowett? I did not.
173. What other thing did Mr. Green say? Twice during the interview he advised me to ask for an exchange. I did not reply at first, but afterwards I said I could not do that without consulting my friends.
174. I suppose you saw no reason why you should apply for an exchange? I told you yesterday that when I saw Sir William Windeyer, he said that on no account was I to ask for an exchange after all the trouble that Mr. Copeland and he had taken in the matter.
175. Up to this time had any complaint been made to you about the discharge of your duties? Not one.
176. You had no idea, when you had the interview with Mr. Green, that there was any dissatisfaction with regard to your services? No. One morning Mrs. Jowett came and said that the bedsteads were not quite straight in the dormitory. I said, "Very well, I will go over with you." They were four truckle beds, and Mrs. Jowett tried for a quarter of an hour to put the bedsteads perfectly straight, but it was utterly impossible. We could not get them straight. That is the only time when Mrs. Jowett came to me with any complaint.
177. Then Mr. Green refused to give credence to your statement, and suggested that if there was friction between you and Mrs. Jowett it was your fault and that you should apply for an exchange? He said, "I advise you to apply for an exchange."
178. And as an officer of the institution you got no satisfaction from the interview with Mr. Green on that occasion? Not any.

Mrs.
Margaret
Abraham.
Sept., 1900.

179. What was the next thing that occurred after that? There is another thing that I forgot to mention. During the inquiry Mr. Green said that my hours were five hours a day on duty. I asked him how he made that out. I went on duty at 6 o'clock in the morning; I had a quarter of an hour for breakfast and an hour for dinner, and was on from 2 to 6; at 6 I was off for three-quarters of an hour, and I got home at 8 o'clock at night.
180. You were practically there fourteen hours a day then? Yes.
181. What was the next thing that happened after that interview? I went into town with an old lady friend of mine, and when we returned a paper was handed to me with a note from Mrs. Jowett asking me to sign it and return it to her. It was my suspension.
182. That was after the interview with Mr. Green? Yes.
183. Whom was the document signed by? I signed it and sent it back to Mrs. Jowett.
184. What step did you take on receiving notice of suspension? I went to see Mr. Brunker.
185. *Mr. Meagher.*] Will you give the date on which you were suspended? It must have been in October.
186. *Chairman.*] Was the first step you took to go in and see Mr. Brunker? No.
187. Did you, on getting the suspension, write to the Department asking that there should be an inquiry as to the reasons? I went to Mr. Maxted, and that was my second and last interview with him.
188. Was that the first official step that you took after your suspension? It was.
189. I suppose you went to Mr. Maxted to ask him to hold an inquiry? What I asked him to do was to hold a searching inquiry, to bring forward the girls, and find out whether I was to blame or other officers, or whether I was speaking the truth in every detail.
190. You went then, I suppose, with the feeling that you had been badly treated? I went with the feeling that what I spoke was the truth, that the establishment was disgracefully managed, that the children were most unkindly and brutally treated, that they had not sufficient food and not sufficient clothing, and that the food was not properly prepared. I told Mr. Maxted all that.
191. What did you ask him to do? To hold an inquiry.
192. You did not ask him to cancel the suspension? No.
193. What did Mr. Maxted say to that? He said it could not be done, as Mr. Green had held an inquiry.
194. Did you tell him that you thought the inquiry by Mr. Green was unfairly conducted? I could not say now; I wanted Mr. Maxted to hold a proper inquiry himself. During my suspension, before I saw Mr. Maxted, Mr. Sheridan had seen Mr. Brunker, and Mr. Brunker had given his word of honor that nothing should be done until a proper inquiry had been held into the whole matter. That promise was given before Mr. Green held his inquiry, and that is why I would not reply to his question when he asked me what reason I had to expect that a further inquiry would take place.
195. Did your interview with Mr. Maxted end there? Mr. Maxted told me that Mr. James Kidman was going to bring an action against me for speaking of the quality of the food supplied. He also told me that the Crown Solicitor had said that he would take stringent measures to have me put out, because I wanted to retain possession of the cottage till I could get an inquiry into the whole affair.
196. You were merely under suspension at that time? I do not remember whether I was under suspension or dismissed.
197. Did you take any other steps after your suspension before you interviewed Mr. Maxted? Not in connection with the Department.
198. You got no satisfaction from Mr. Maxted? No.
199. Was there not an inquiry held? No; I went to the Crown Solicitor and introduced myself; and he gave me his word of honor that he never said what I had been told he said; that a letter came requesting a certain statement to be sent in a letter to me. I went to Mr. Kidman and asked him if it was true that he was going to commence an action against me, and he said, "I never heard of the matter."
200. When did your dismissal occur;—how long after the notice of suspension? I think I was dismissed in January or February.
201. If it was on the 24th January, that would leave an interval of nearly three months between your suspension and your dismissal? Yes.
202. Did you do anything during that period except see Mr. Maxted? No; nothing, except that I saw Mr. Brunker.
203. That was after you had seen Mr. Maxted? No; it was before.
204. When you saw Mr. Brunker, you had seen Mr. Maxted, the Crown Solicitor, and Mr. Kidman? Yes.
205. Then you went to see Mr. Brunker? Yes; I gave him an outline of what occurred. A messenger brought in my papers, and Mr. Brunker said, "These are not all Mrs. Abraham's papers; bring in the rest." The messenger went away and came back and said, "Those are all." Mr. Brunker said, "They are not; bring the others." I said, "I have got rough copies of all my correspondence; I will leave them with you if you wish it." Mr. Brunker said, "No; I will have them brought in." But the man said that they could not be found. Then Mr. Brunker said, "If you will leave the papers, I shall be obliged to you." Mr. Brunker also said, "Remember, I believe every word you are stating."
206. What did Mr. Brunker tell you? He told me that I should have an inquiry.
207. When you first received notice of your suspension, did you write to the Department requesting that reasons should be given for the suspension, or did they write asking you to show why you should not be dismissed? Mr. Maxted wrote to me after my suspension. It is all in the papers.
208. A letter was sent? Yes, and I sent my report in reply.
209. Did you show reasons why you should not be dismissed? Certainly.
210. Did you get a reply to that? I cannot tell you unless I have the papers.
211. Mr. Brunker promised that there should be an inquiry? Yes.
212. No such inquiry was ever held? No; no inquiry was held after that.
213. When did you finally vacate your premises at the institution? On the 5th July, 1895.
214. During that period you were hoping, I suppose, for a further hearing? I was hoping for a proper inquiry.
215. On the ground of the promises which you received from Mr. Brunker? Yes, and knowing that what I spoke was the truth, I refused to leave the cottage unless I had a searching inquiry.
216. Were legal steps eventually taken by the authorities to put you out of the cottage? I received a letter from the Crown Solicitor.

Mrs.
Margaret
Abraham.
5 Sept., 1900.

217. The letter of dismissal was dated 24th January? Yes. I have here the letter appointing me. It is as follows:—"I am instructed by the Director of Government Asylums and the Boarding-out Officer to inform you that the Chief Secretary, under authority dated 28th June, 1894, has appointed you to the position of Sub-matron at the Shaftesbury Reformatory, South Head, with salary at the rate of £100 per annum, and £30 per annum in addition for rations, together with the usual allowances, to take effect from the date of commencing duties.—A. GREEN."

218. After you finally left your residence at the institution, were any further steps taken by the Department with the view of holding an inquiry into your case? Nothing further was done.

219. Up to the present day you never got an inquiry into the truth of your statements? No.

220. You say that you made a series of statements as to the charges of cruelty to the children similar to the statements you have made to us, that you made them to the Matron, to Mr. Maxted, to Mr. Green, and to Mr. Brunner? I told the Matron.

221. And that no inquiry was ever held, except the extremely cursory inquiry by Mr. Green? Yes.

222. Did you make those complaints about the ill-usage of the children, about the boy being put in a cold bath, and the treatment of one of the girls? No, not to Mr. Green; he jumped up and told me that what I was saying was a lie.

223. About how long was he in the room with you at that inquiry? I think about half an hour, perhaps a little longer.

224. You admit that you did not go into the details of the management with Mr. Green? Yes; I was so hurt and humiliated that I should be addressed in such a manner, that I would not.

225. Up to this time you had been on the best of terms with your superiors? No; I had not been on the best of terms.

226. Not with Mrs. Jowett? I was on the best of terms with Mr. Maxted. I do not think I ever spoke to Mr. Green from the day on which he and Mr. Maxted came and saw the cottage after it was finished.

227. Did not the inquiry, before Mr. Green, occupy nearly two hours? I do not think so.

228. At any time between your final severance from the institution and the present day, were you interviewed by anybody who represented that he came from the Department? I was not interviewed, but an offer was made to me.

229. By whom? A person named O'Brien.

230. What was he? A money lender, from whom I had to borrow £100 on my furniture.

231. You borrowed money from Mr. O'Brien? I did.

232. Before you were appointed? Yes.

233. *Mr. Meagher.*] Did I understand you to say yesterday that you had no objection to the quality of the food supply? I had no objection to the quality but to the quantity.

234. What did you see Mr. Kidman about? Mr. Maxted told me that Mr. Kidman was going to bring an action against me for speaking about the quality of the food. Mr. Kidman told me that that was the first he had heard of the matter.

235. Although you had no objection to the quality of the food, you had a very strong objection to the method in which it was cooked and the way it was handed out? Yes.

236. You say that it used to be brought in with fat an inch thick on it? Yes; the children were constantly sick after taking it. One or two girls never touched meat at all, except on Sundays and Mondays.

237. You were at the institution for six months? Yes.

238. How long were you in the institution as Sub-Matron before you complained of the way the food was cooked? Not a week. I think I complained of the porridge during the first week, and told the Matron about it.

239. Did she promise to rectify the cooking apparatus? Yes; she got a new saucepan and the porridge was better.

240. In regard to the meat and vegetables, was this hog-like way of cooking them and serving them round still persevered in after you complained? Yes.

241. Can you say that at the end of your six months there, there was any improvement in the cooking of the meat? There was no improvement. It was the same thing for five days of the week.

242. And you have no doubt yourself that it had a deleterious effect on the health of the children? I have told you that several girls used to be sick; some of the girls never had anything but half a slice of bread for dinner and a glass of water.

243. Did you call the attention of Sir Wm. Windeyer or Mr. Maxted to the cooking? I told Mr. Maxted and he said I should never be happy there, and advised me to ask for an exchange.

244. Did you tell Mr. Green? I think not; but I am not quite positive.

245. You know that butter was provided by the State for the children? Yes.

246. And notwithstanding that butter was provided they got an eternal round of dripping and treacle? Yes, nothing else. On one or two occasions when I first went there a little butter was brought in but afterwards they got none.

247. Yesterday you referred to a rumour that was current that the Matron made butter on the premises? Blaney's wife told me that they made butter twice a week.

248. Seeing that a pint of milk was supposed to be allowed for the porridge of each child for breakfast, that they only got a wine-glass full, that the milk had been skimmed and was on the point of turning sour once or twice, did it strike you that the milk that was supposed to be given to the children was kept by the Matron to make butter from? That was the conclusion that I came to. Four quarts of milk came into the dining-room every morning; and if you put 4 quarts of milk on to forty plates there is not much for each child.

249. Was there a regulation in writing that the children should each have a pint of milk for their porridge? No; that is what I am told they were allowed.

250. Who told you that? I think, Mr. Maxted.

251. You say, in regard to the tea, that apparently the necessary utensils were scarce and you were compelled to stir the tea with a stick? Yes; for weeks we used a stick, and then we got a spoon.

252. The girl, Emily Markham, you say, was suffering from an internal complaint? Yes.

253. Was it a complaint which you thought was curable? I think so. Of course, I knew nothing about it, but I should have called in a doctor. There was a doctor provided who should have been called in.

254. You think the complaint was one which could have been alleviated if not cured by a medical attendant? I thought so,

255. And you called the Matron's attention to it? Yes.
256. And her cure for it was to put a wet sheet round the girl and make her walk round the court? Yes.
257. You say she was a well developed girl of 12 or 14? Yes, I think she was about that age.
258. Then you could hardly think it would be conducive to morality for a number of growing boys to see a girl walking round the court with a sheet on;—was that the only covering she had? No; she was dressed.
259. Was the wet sheet put over her dress? Yes, and over her head.
260. Then she would have to change the whole of her clothing? That I do not know.
261. Would you think it conducive to health of a girl who was dressed to be compelled to put a wet sheet over her clothes and walk about in it, would she not get cold? I do not know; she used to wet the beds, and her wet sheets were put round her.
262. As a matter of fact, an involuntary action of that character can occur through weakness of the organs, for which the individual would not be responsible? I think the girl tried her utmost; I think she could not help it. What I wanted the Matron to do was to put her in a single room so that it would not be unpleasant, and the other children would not see.
263. *Mr. Spruson.*] That girl was never sent to the doctor? No.
264. *Mr. Meagher.*] You are perfectly clear that it was a case in which the girl was not responsible—that it was not a habit, but an affliction? Yes.
265. *Mr. Spruson.*] For what period was she in that condition without a doctor being called in? I think, at the most, it happened not more than a dozen times.
266. *Mr. Meagher.*] How many boys would be watching this rather disgusting pilgrimage of the girl with the sheet round her? Ten or twelve; some of them big boys, and some little ones.
267. How many had the cold baths? Only one boy, but every child's head was washed all the winter through in cold water.
268. In regard to the stores, there are certain regulation days for going to the store, I suppose? Yes.
269. There were not a great number of inmates in the institution? There were forty children.
270. Suppose that the store-day was at the end of the week, if you found that you wanted anything on the Monday, you would have to wait for it until Saturday? Yes.
271. You told us yesterday that only a dozen pocket-handkerchiefs were given out to forty children;—did you call the attention of the Matron to that? Yes.
272. Did you ask for more? Yes.
273. What was her reply? She said she thought there were quite sufficient.
274. How long would the children use that dozen handkerchiefs? They were washed every Monday.
275. Some of the children, then, had no handkerchiefs at all? Most of them had none.
276. *Mr. Spruson.*] You spoke about the girls being put on sanitary duties having to remove the pans from the earth-closets, and that you employed boys to do it;—who was responsible for putting the girls on that duty? I suppose the Matron did it before I was there. I suppose, when there were no boys, it was the practice for the girls to do it. The State School children came in after I went there.
277. Who was there who might have done it instead of the girls or the boys? Only the man Blaney.
278. Then, as soon as the thing came under your notice, you put the boys on? Yes. Then there were no conveniences in the place—no earth, no paper, no bags. The place was in a most horrible condition. I suggested that one or two ventilators should be made in the roof, and I had a window nailed open.
279. Then the practice of employing the girls at this work ceased? Yes.
280. Was any comment made when you made that alteration? No.
281. You told us about insufficient provision in the way of towels, brushes, and combs, and you said they were stolen;—do you insinuate that anyone in charge of the institution was culpable? The articles were taken away, and when we wanted them we could not get them; sometimes they were returned within two or three hours.
282. I want to know whether you insinuate that the Matron or any one else in charge of the institution stole those things? No.
283. Then it may have only been due to the inmates themselves being neglectful? It is only a question of disorganisation. I make no insinuation against any one.
284. *Chairman.*] Did you at first decline this position at the Shaftesbury Asylum? Yes; I refused the position.
285. On what ground? On the ground that I was promised the matronship of Brush Farm.
286. By whom? By the Premier, Sir George Dibbs.
287. Did you issue a writ against the Government in the matter? No; I did not, but Mr. Ernest Stephen took up the matter and then dropped it. He was Mr. O'Brien's lawyer. I was asked to put my case into his hands. I saw Mr. Stephen and he said, "I will take up your case." He read my papers and took them to his brothers. He said, "I have had the opinion of both my brothers on the subject, and there never was a stronger case brought into Court." He said, "I will not charge you a farthing, but you must give me an order for the money paid by the Government to come through my hands, and I must pay Mr. O'Brien first."
288. *Mr. Spruson.*] You are told in a letter that your appointment was abolished? Yes.
289. There was no one else appointed in your place? Yes; a Miss Crimes was appointed to my position.
290. Then it was not abolished? No.
291. *Mr. Meagher.*] You said Blaney in one of his drunken moods went and horsewhipped someone? A girl said he came with the intention of whipping someone. He went in to demand names with that intention.

Mrs.
Margaret
Abraham.
5 Sept., 1900.

TUESDAY, 25 SEPTEMBER, 1900.

Present:—

MR. QUINN,

MR. MEAGHER.

MR. SPRUSON.

W. A. HOLMAN, ESQ., IN THE CHAIR.

Mrs. Margaret Abraham further examined:—

292. *Chairman.*] In answer to Question 25, you said that the children never complained about being short of food;—by that I understand you to mean that they never complained to the officials? They never made any formal complaint.

Mrs.
Margaret
Abraham.
293. 25 Sept., 1900.

- Mrs. Margaret Abraham.
25 Sept., 1900.
293. Did they complain to you? Yes.
294. *Mr. Spruson.*] Did they complain to the Matron? No; they never spoke to the Matron.
295. *Chairman.*] In answer to Question 29, you said the children never complained, but they told you they were sick and could not eat their food? A number of them did not eat their food. When asked why they did not eat their food, they said that they could not eat it.
296. How did Mr. Maxted treat you in the different interviews that you had with him? Always politely.
297. You never had any cause to complain of his treatment of you? Never.
298. He was reasonable in every way? He was.
299. And I suppose you were surprised to find that you were discharged by him eventually;—you thought you had every reason to expect fair treatment from him? I thought I should get fair treatment.
300. About the matter of the allowances to the officers of the Reformatory, was any allowance made for rations to the Matron, yourself, and other officers? Yes; the Matron, the schoolmistress, the nurse, myself, and the servant were each allowed £30 a year for rations in addition to salary.
301. Your house was situated inside the enclosure? Yes.
302. Was the back gate near your house? Yes.
303. When girls were being brought in, were they brought through that gate? Yes; and sometimes by the other gate.
304. Where was that? Further to the right.
305. Was it visible from your house? Yes; you could see it.
306. Your house commands a view of both gates? Yes.
307. Did you always see when fresh girls were brought in? Not always.
308. Could anyone in your house see a buggy arrive with a girl? Anyone might who was at the front.
309. How were the girls brought to the institution—by what conveyance? By the conveyance that was there for the purpose.
310. Where was it kept? In the stable at the back of our house.
311. I suppose it is fair to assume that whenever that vehicle was taken out to bring girls in you would see it taken out? No; I should be in the institution.
312. It would be known in your house? Yes. I might be on duty, and I might or might not see it. Several times girls were brought before the school was out, and I did not know of it until after 6 o'clock.
313. When a new girl was brought into the institution was it reported to you? I was told when there were new girls there.
314. Was the arrival of new girls so frequent that it was a daily incident? Not daily; sometimes none arrived for a week, then seven or eight might come. I could not tell the exact number; but we have had five, six, and seven come in together.
315. Was the vehicle used for any other purpose besides that? It was used whenever the Matron wanted it; I never put my foot in it. The nurse and the Matron used to go into the town by it. It was used by the officers.
316. Was that a daily occurrence? No.
317. *Mr. Spruson.*] You made some statements with regard to the milk, which was intended for the inmates, being used for butter-making? Yes.
318. Is it a fact that milk was only used for that purpose when there was an excess of milk, or did you, in using milk for butter-making, leave the children short? I could not answer that question very straightly; but I have some old notes here. On Friday, 7th June, my daughter called me to the back door to look at a girl making butter in a tin churn.*
319. On 7th June, was there or was there not an excess of milk? I was dismissed before that date.
320. You cannot state definitely that the children were left short of milk because the milk was used for butter-making? I can only say that we never had fresh milk more than three times. We had a small jug of fresh milk; but at other times we had to use preserved milk and skimmed milk that was turning sour.
321. And butter-making was the reason? I never saw any butter made; I could not say of my own knowledge then that butter was made. Mrs. Blaney told me that it was. On the 7th of June I saw butter being made.

Mrs. Marion Edmunds sworn and examined:—

- Mrs. M. Edmunds.
25 Sept., 1900.
322. *Chairman.*] You were formerly Mary Anne Tweedle? Yes.
323. Were you an inmate of the Shaftesbury Asylum at the time Mrs. Abraham was there? Yes.
324. Do you remember Mrs. Abraham leaving the position of Sub-matron? Yes.
325. You came under the hands of the schoolmistress, Miss Bromby, did you not? Yes.
326. Did anything ever occur between you and Miss Bromby that forces itself upon your recollection now? Only that she beat me.
327. Will you tell me the circumstances of that affair, as well as you remember them? She beat me across the shoulders and on the arms and hands the first time. The second time she beat me on the hands and arms and cut my finger.
328. Looking back on it now, would you describe that beating as an act of cruelty? Yes.
329. You were beaten with undue severity? Yes.
330. You have a child of your own now? Yes.
331. Looking back at the matter from the standpoint of a grown-up person, do you think that the punishment was too severe? Yes.
332. Do you think it gave you a justifiable cause of complaint? Yes.
333. What were you beaten with? A cane.
334. You say you were beaten on two occasions? Yes.
335. For what offences? For letting my pencil run down the slate and for turning round.
336. On those two occasions did you relate the facts to Mrs. Abraham? Yes.
337. Were you in great pain at the time? Yes. The first time Mrs. Abraham was out.
338. All this took place six years ago? Yes.
339. Did Mrs. Abraham, in your hearing, speak to either the Matron or the schoolmistress about the way you had been beaten? Not that I remember.
340. Did she seem to be concerned about it when you went to her? Yes. 341.

* NOTE (on revision):—I never saw the milk at this time. The girls who carried the food into the dining-room brought the milk.

Mrs. M.
Edmunds.
25 Sept., 1900.

341. What position did you fill in the asylum, apart from being at school;—what work did you do? I was in the laundry, and I was working in the bedrooms. I was also servant to Mrs. Abraham.
342. Did you associate much with the other girls whilst servant to Mrs. Abraham? No.
343. Where were you living whilst you were servant to Mrs. Abraham? In the cottage.
344. Did you sleep there? No; I slept in the dormitory; but I spent the day in the cottage.
345. Can you tell us what the food arrangements were like generally at the asylum;—was there enough food, as far as you know? There was for the little children, but not for the bigger girls.
346. Did you ever hear it spoken of whilst you were in the asylum? Yes; by the girls.
347. Were they dissatisfied, or did they seem to be generally satisfied on the whole? They were not satisfied.
348. Do you happen to remember about the milk supply to the reformatory;—do you remember how they were off for milk there? No.
349. Where did you generally have your meals whilst you were in Mrs. Abraham's service? With the rest of the girls.
350. Then, if there was anything short, you would know about it? Yes.
351. How was the food generally cooked? Not very well.
352. Did you ever hear the girls complain about that? No.
353. What was the general attitude of the girls;—were they pleased to be there, or were they glad to get away from the place? They did not like being there.
354. Can you give us any idea of the reason why? No.
355. Did you think that, on the whole, the girls were treated with anything like cruelty or neglect? Only by the schoolteacher.
356. You did not see any instance of cruelty by any other officer there? No.
357. You do not remember anything about the milk supply? No.
358. You do not remember, for instance, how much milk you generally got? No.
359. Can you remember what Mrs. Jowett said when she brought you in? She wanted Mrs. Abraham to take more interest in me.
360. *Mr. Spruson.*] Were you ever in any other institution before you went to the Shaftesbury Home? I was at Ormond House, Paddington.
361. How did the treatment at Ormond House compare with the treatment of the girls at the Shaftesbury Asylum? It was a lot better at Ormond House than at the Shaftesbury Asylum.
362. In what respect? We generally got better treatment.
363. As regards this example of cruelty that you have mentioned, so far as your knowledge goes, would other girls in the institution have similar things to complain of? I do not think that any of the other girls were beaten as I was.
364. *Mr. Meagher.*] You worked in the laundry? Yes.
365. How old were you when you were working in the laundry? Twelve or 13 years.
366. What would your duties consist of? Washing.
367. Were you a robust girl at 12 years of age—were you healthy and strong? No.
368. You were not a strong girl? No.
369. How many hours would you wash in the laundry? From the start in the morning till breakfast time, and we should finish at about 4 o'clock in the afternoon.
370. Would you be working all that time? Yes.
371. What number of girls would be working at one time in the laundry? Two girls and Mrs. Blaney.
372. There were a number of girls older than you in the institution? Yes; there were some up to 17 years of age.
373. And there were girls more robust and muscular than you? Yes.
374. Who was the other girl that worked in the laundry? Annie Edwards.
375. How old was she? I do not know. She was much bigger than I was.
376. You can give the Committee no reason why a girl 12 years of age, apparently of not a very strong constitution, was picked out to wash in the laundry when there were a number of strong big girls on the premises? No.
377. Did you find yourself much enfeebled through working from breakfast time until 4 o'clock in the afternoon? Yes.
378. Did it affect your health? I suffered with my teeth all the time.
379. Did you complain? Yes; to the Matron and the nurse.
380. What reply did you get? The nurse wanted to pull the teeth out; but I did not care about that.
381. Did they release you from your arduous work in consequence of your complaints, or did you continue to work there? I continued to work in the laundry until I went to Mrs. Abraham.
382. You went from the laundry to Mrs. Abraham? I was boarded out for three weeks at Riverstone before that.
383. How long were you working in the laundry altogether? I could not recollect. I went into the laundry when I first arrived there.
384. How old were you then? About 12 years.
385. How long did you continue in the laundry? Not long. I went into the bedrooms, and then I went back to the laundry.
386. Did you go of your own choice? No; I was sent there.
387. Was that a punishment for anything? I do not know.
388. How long were you working there altogether? About three months.
389. There was a girl there named Emily Markham; do you remember any punishment being awarded to her;—do you remember her being compelled to wear a soiled sheet? Yes.
390. Where did she walk? All round the court, in front of all the children.
391. Did you see her? Yes.
392. There were boys there, too, were there not? Yes.
393. Did they see her? Yes.
394. You saw children of all ages and sizes come up and look at her? Yes.
395. *Mr. Quinn.*] Were the children brought up to see her? I could not say; they were all there to see.
396. *Mr. Meagher.*] Did the girl appear to be very much affected—was she very much upset? Yes.
397. Was she crying? Yes.

- Mrs. M. Edmunds.
25 Sept., 1900.
398. Did you hear any remarks made by any of the boys or girls of a jocular character to the girl? They were laughing at her.
399. Did you consider they were laughing in a jeering sense at her? Yes.
400. How often did this occurrence take place? I saw it twice.
401. How long did she walk each time with the sheet on her? I think she had to stop the morning out; I am not sure.
402. On both occasions? Yes.
403. Did you ever notice that the meals were served up in a very hog-like fashion;—have you seen the meat swimming in half an inch of grease? Yes.
404. Some girls have more delicate digestions than others—some can eat what others cannot eat;—did you ever hear any of the girls complaining, and their plates going away almost as full as they came? Annie Edwards could not eat her food; she left it.
405. Was she still kept on at the laundry, notwithstanding her inability to take food? Yes; she was in the laundry all the time. She ran away twice.
406. Can you say of your own knowledge whether she asked to be relieved from laundry work in consequence of being unable to keep her strength up by eating? I do not know.
407. *Mr. Quinn.*] Did you ask to be relieved of laundry work yourself on account of the effects of it on your teeth? No.
408. Why did you not ask to be relieved;—did you feel that working in the wet was giving you the toothache? I always suffered with toothache.
409. Did you feel that it was being made worse by working in the laundry? Yes.
410. Did it not strike you that if you got away from the laundry work it would be better for you? I never thought of asking.
411. Why did you not ask? I used to ask them to give me something to cure the toothache.
412. You never complained about being in the laundry? No.
413. Would you rather have been at some other kind of work? Yes.
414. You went there and did what you were told? Yes.
415. Do you think they would have given you anything else to do if you had asked them? I could not say.
416. You never asked? No.
417. I suppose that, as a rule, the girls did not ask; they were not accustomed to complain;—if they thought the work was giving them bad health, would they complain? Not that I know of.
418. Annie Edwards never complained, but she ran away? Yes; she ran away.
419. I suppose that a girl who felt her life there to be uncomfortable would run away instead of complaining? Yes.
420. Did you feel that if you did complain it would be of no use? I do not know.
421. Were the girls afraid to complain to the Matron or to the schoolteacher? I could not say.
422. When you were miserable with toothache, and felt that you could not go into the laundry and do a day's washing, would you be frightened to go to the Matron and ask her to let you off? Yes; I should have been frightened.
423. Do you think she would have let you off? No; I do not think so.
424. *Chairman.*] Did you think she would let you off when you were a girl there? I was too frightened to ask.
425. When the Matron knew you were suffering from toothache she made no difference, but ordered you to go into the laundry all the same? Yes.
426. *Mr. Quinn.*] And you used to ask them to relieve you of the toothache by giving you what? They had all sorts of chemicals, but they gave me nothing; they said I was to have the tooth out.
427. You did not care about parting with your teeth? No.
428. They never offered to stop one for you? No.
429. Did many girls run away when you were there? Only two.
430. Were they caught again? Yes.
431. Why did they run away;—was there any particular reason—were they punished or badly treated? No; Annie Edwards, from the laundry, and another girl went away together.
432. You do not remember why they went? No.
433. Do you think they would have gone whether they had been kindly treated or not? No.
434. You think it was because they did not like the treatment they got? Yes.
435. *Chairman.*] Do you remember how new girls are brought to the institution;—how were you brought there? My father took me there.
436. How were other girls brought there? In the buggy.
437. Where did the buggy stand when it was not being used? At the back of Mrs. Abraham's house.
438. Was the stable there? Yes.
439. You were working in Mrs. Abraham's house for some time? Yes.
440. Can you give us any idea how often that buggy would be used;—was it used at all regularly? No.
441. Sometimes it was used a great deal, and sometimes very little? Yes.
442. What length of time would elapse between the times that it was used? I could not say.
443. Would there ever be a week without the buggy being used? Yes.
444. The buggy would remain in the stable a whole week? Yes.
445. If anybody came to take it out, you could see it taken out? Yes.
446. You could see the stable from the house? Yes.
447. You are quite clear that sometimes periods of five, six, and seven days would elapse without anyone taking the buggy out? Yes; and sometimes it would go out twice a day, or twice a week.
448. *Mr. Meagher.*] How many years were you at this asylum altogether? I could not say exactly; I left the State School when I was 16.
449. You would be four years there? Yes.
450. During those four years, and I only ask this for your own self-protection, did you conduct yourself in such a way at the institution as to merit the reputation of having a very bad character? No; I did not.
451. During those four years was any exceptional punishment given to you in comparison with other girls? Only the schoolteacher beating me.
452. Were girls beaten by the Matron or any other person besides the schoolteacher? No.
453. The only person who beat a girl was the schoolteacher? Yes.

454. Were you beaten by the schoolteacher oftener than any other girl in the school? Yes; until I left Mrs. Abraham. When I came back to the school Miss Bromby was very kind.
455. Will you tell the Committee how many years you would be undergoing those beatings;—would it be during the whole of the four years that you were there? No; I was not more than twelve months in the school.
456. Then when you talk about being beaten, it only applies to twelve months of your life in that place? Yes.
457. During those twelve months were you beaten for anything outside of the infringement of school regulations? No.
458. The offences for which you were beaten were committed in school? Yes.
459. Were you guilty of any offences that you would feel any shame about in looking back? No.
460. Then any statement that you had a very bad character when you were there was false? Yes.
461. *Mr. Quinn.*] Did your father pay 2s. 6d. a week for you? He was supposed to do so. On the day that I went there he was told that he would have to pay 2s. 6d. a week; I could not say whether he did pay or not.

Mrs. M.
Edmunds.
25 Sept., 1900.

Harold Huntley sworn and examined:—

462. *Chairman.*] What is your position? I am a Clerk in Bankruptcy; I take all the evidence in cases before the Bankruptcy Court.
463. Do you produce the papers in bankruptcy of Mr. Maxted? I do.
464. Do those papers contain a list of the creditors in that case? They do. These statements are not always complete, but if that is discovered by the Official Assignee, the bankrupt has to amend his statement.
465. Are those statements made on oath? Yes.
466. Can you show a list of Mr. Maxted's creditors? I produce a statement of affairs, showing the debts due by the bankrupt on the date of his sequestration.
467. What date was that? The 19th October, 1898. Some of those debts date back to 1892.
468. Have you the date of each one? Yes; but the statement of affairs is incomplete. I have the date on which they were alleged to become due.
469. Does the list give a description of the occupation of each creditor? Yes.
470. Does it show that any civil servants are creditors of the bankrupt? The statement of affairs does not show, except in one instance, that there are debts due to civil servants, but the statement of affairs was incomplete, and that was shown by the evidence of the bankrupt.
471. Does the evidence show that Mr. Maxted owes money to Mrs. Jowett, who was Matron of the Shaftesbury Reformatory? Yes. Mr. Maxted stated on oath, under examination on the 24th November, 1898: "I owe Mrs. Jowett £50; she was a Matron of the State Children's Relief Department. I borrowed £50 from her to pay Mr. Isaacs, of the Original Monte de Piete Company. I have never paid Mrs. Jowett back. I borrowed it about April, 1896. At the time Mrs. Jowett lent me the money I was living at Ormond House, Paddington, and the bailiffs were in under the bill of sale. I did not agree to pay interest to Mrs. Jowett. I did not think she would ever ask me for the money from subsequent conversations with her. I quite forgot to include it in my statement of affairs. I show Gould and Shaw as creditors for £240 in respect of money borrowed from Captain Murray. It now amounts, with interest, to about £320. Captain Murray's wife was Superintendent of the Boys' Reformatory at Newington, and he had a position there. I borrowed £291 18s. 3d., on the 22nd September, 1894, on my personal security. I was to pay what interest Captain Murray paid—at first, 6 per cent.; afterwards, 8 per cent. He got judgment against me last year."
472. Does the evidence show that any money was owing from Mr. Maxted to Mr. Green? In his examination Mr. Maxted said: "I owe A. W. Green £50, money lent; it was really a gift. He was Secretary then in the Charities Office; he was next officer under me. He is now Superintendent of Government Asylums; he has never pressed me." That was in 1894. There is a paragraph here where Mr. Maxted refers to the officers of his Department. He says: "I owe £20 7s. to W. H. Peisley. This was for a promissory note indorsed for Mr. G. B. Allen, who is now a journalist in Victoria. He was then an officer in my Department."

H. Huntley.
25 Sept., 1900.

Mrs. Mary Jowett sworn and examined:—

473. *Chairman.*] What is your name? Mary Jowett.
474. You were for some years Matron of the Shaftesbury Reformatory? Yes; from 1894 to 1898.
475. You were Matron there at the time when Mrs. Abraham was appointed Sub-matron? Yes.
476. How long have you been in the Service? Thirty-seven years next month.
477. Have you always been engaged in children's institutions? Yes.
478. In various capacities? Yes. I went to the Protestant Orphanage as hospital nurse to commence with; after that I was Sub-matron. I was nearly seven years in the hospital before I was promoted to become Matron.
479. After you left the Orphanage where were you employed? At Ormond House.
480. In what capacity? As Sub-matron.
481. From there you went to the Shaftesbury Asylum? Yes; as Matron.
482. And you left the Shaftesbury Asylum and went to the State Children's Department again as Matron? Yes.
483. Whilst you were at the Shaftesbury Asylum, did you ever apply for a Sub-matron? No.
484. Then, if a Sub-matron was appointed it was without your requiring one? I was never consulted about it.
485. In your opinion, was a Sub-matron necessary? No; an attendant was all that was necessary.
486. You had no Sub-matron before Mrs. Abraham was appointed? No.
487. Did you have one after she left? No.
488. Mrs. Abraham was the only Sub-matron that you had there? Yes.
489. Having had thirty-seven years' experience in these institutions, you, of course, know what is necessary with regard to food supplies for children? I think so.
490. You have practically been left to manage such places as Ormond House and the Shaftesbury Asylum without a scale of rations at all? Yes.

Mrs. M.
Jowett.
25 Sept., 1900.

- Mrs. M. Jowett.
25 Sept., 1900.
491. You never had a scale of rations? No, never.
492. Were the children properly fed at the Shaftesbury Asylum? I consider that they were; the doctor always remarked upon their healthy appearance.
493. Who was the doctor? Dr. Pearce, of Watson's Bay.
494. Did he ever see the food that was given? I could not say that he did.
495. Was he the Government Medical Officer? Yes.
496. Visiting there? Yes.
497. It has been stated that the food was not properly cooked;—do you know anything about the cooking? I do not know that it was not properly cooked. I think once it was burnt; that was about all.
498. Had you any complaints from the children about insufficiency of food at any time? No.
499. Had you any complaints from the officers about it? No.
500. Something has been said about the milk supply;—was the milk supply generally adequate? In the early part of the time it was; but the cows went off very much.
501. How did you make up the deficiency? I had to use condensed milk sometimes for the children's porridge.
502. Was the milk given always skimmed milk? Certainly not.
503. Was skimmed milk ever given them for their tea or porridge? Not to my knowledge.
504. Was the milk supplied ever sour? No.
505. When were the cows milked? In the morning and in the evening.
506. Was the milk used or kept over? We generally kept a little over for the morning.
507. Was the milk scalded? No; there was not enough kept over for the children.
508. To your knowledge, there was never sour milk used, and skimmed milk was never used? No.
509. It has been stated that a girl was punished by you, who had incontinence of urine, by being made to parade the court with a wet sheet round her;—do you remember the circumstances of the case? I do not remember it, but I could not say that it did not happen.
510. You do not remember the incident? No.
511. It may possibly have happened? Yes, possibly.
512. The girl's name was Emily Markham;—do you know anything about that case? I remember that we used to have a great deal of trouble with her bed.
513. Supposing this did occur, why was it done? To make her ashamed.
514. Did you ever find a girl treated in that way improve? Yes; we used to do it sometimes at the orphanage when moral suasion was of no use, and it very often prevented them from doing it again.
515. In a case of this sort, would the doctor be consulted? I used to tell him sometimes about it. I do not remember whether I told him about Markham's case. It was after Mrs. Abraham was there that I told him about a girl.
516. In Markham's case, did you apply every remedy that you knew, and did she still continue this filthy habit? Yes.
517. What are the remedies that you usually use in these cases? We give them a cold bath in the morning and dry bread for tea, and we do not allow them to drink much at night. They are never beaten for it.
518. A girl named Tweedle is said to have been badly beaten by Miss Bromby, the schoolmistress;—do you remember the case? I remember that she ran screaming out of the schoolroom, and when I went to see what was the matter Mrs. Abraham had opened the door into the paddock and let the girl go over to her quarters. Miss Bromby told me, and I said, "You will have to let her stay till the morning."
519. Did you see that girl when she was beaten? I saw her next morning, and she had marks on her shoulders.
520. In your opinion, was she beaten more severely than she ought to have been? I do not think so, under the circumstances, because she attacked Miss Bromby in the schoolroom.
521. *Mr. Meagher.*] Do you personally know anything of this;—did you see it? No.
522. You are only telling us what Miss Bromby told you, which is not evidence? Yes.
523. *Chairman.*] You saw the girl afterwards, and she had been beaten? Yes; she had a mark across each shoulder.
524. Did Mrs. Abraham complain about the girl being beaten? Yes.
525. And showed you the marks? I do not know about showing the marks; she told me that the girl would not go to school any more.
526. Did you find the girl Tweedle troublesome, as a rule? She was only the same as any ordinary child; she was sent out to a situation once, but came back again.
527. Do you remember a boy named Johnstone? There was a boy of that name in the school.
528. He dirtied his bed, and it is stated that you ordered that the boy should have a cold bath, and be held under the water? We gave him a cold bath, but I never had him held under the water.
529. This boy Johnstone, I believe, was beaten by Miss Bromby;—do you remember anything about it? Mrs. Abraham told me afterwards that I did not see the boy.
530. With regard to the clothing, insufficiency of clothing is reported to have been the general order of things at Shaftesbury? I do not think so.
531. Do you remember whether there was sufficient clothing for the children? When I first went there we had no clothing; but we made clothing before the children came into the place. Of course the children were kept at needle-work, and they were always making more clothing. When we first went there, there were only twenty children, but the number increased to over sixty.
532. And your clothing did not increase proportionately? We kept making clothes, and we always had sufficient. They changed their under-garments twice a week.
533. We have also been told that they had not shoes and stockings? That is not so; they were never without shoes or stockings.
534. Do you remember how many girls the nurse had in the upper court to do her work? She used to have two on the hospital side, and I think there were two on the other side constantly to do the work.
535. Do you remember how many servants Mrs. Abraham had in the lower court? No; but there were sufficient. I remember that Mrs. Abraham was complaining that there were not sufficient girls, and I said we should have to manage to do the work. A number of girls had been sent for. When they were sent out there it was only for a time. When I got orders to send them to Paddington to be sent out, I had to let them go, and I said we should do the work the best way we could.
- 536.

536. As far as you know the girls were properly allotted to do the work of the institution in both the upper and lower courts? Yes.
537. Do you know a girl named Dora Whelan? Yes.
538. What was the trouble with that girl? She had sore eyes.
539. Do you remember her being put into the laundry to work? I do not know; she may have been put there. She was a very big girl. I asked the doctor whether the sea air was too strong for her, and he gave a certificate that it was, and she was removed to Mittagong.
540. You do not remember her being put into the laundry to work? No.
541. You do not remember Mrs. Abraham complaining that the girl ought not to have been in the laundry? That might have been. One does not remember all these little things.
542. There was a little girl there named Ellen Tracey? Yes.
543. Did you hear that she tried to commit suicide? No. She was a girl of very violent temper.
544. The man Blaney and his wife were reported for drunkenness, were they not? Yes.
545. And they were removed? Yes.
546. Do you remember Mrs. Blaney lying in the bush drunk on one occasion? No.
547. You never heard of it? No.
548. Do you remember Blaney lying in the stable drunk? Yes.
549. Do you remember the nurse having to get the keys for him? No. Mrs. Abraham told me that Blaney was lying in the stable drunk. I reported it.
550. Do you remember Mrs. Blaney using bad language to the children? No.
551. Was it ever reported to you that she used bad language? No.
552. Did you ever speak to Mrs. Blaney about it? I spoke to her, and she said she did not do it. I said that Mrs. Abraham told me.
553. Did you ever have cause to complain of Mrs. Abraham's work, or of her conduct to any of the officers? No. The only thing was that Mrs. Abraham was rather difficult to get on with. She told me she was only learning the A B C of the work, and that she had never been accustomed to anything of the kind.
554. What do you mean by being rather difficult to get on with? Making troubles about trifling things. If a scrubbing-brush could not be found, Mrs. Abraham always came to me, and said somebody had taken the scrubbing-brush, or that somebody had put them away. I used to say that she should make the girls take care of the things.
555. Do you remember that Mrs. Abraham complained to you about not being able to get a bucket? Yes; I remember that one Saturday morning she came and asked for a new bucket. She said she had not any buckets to do the work with. I said, "There must be buckets, and I cannot give new ones—the old ones must be found." I called Mrs. Blaney, and told her to look around the place to see if she could find the buckets. She did so, and found eight buckets, which she put in the middle of the court.
556. Did Mrs. Abraham not complain that there were no brushes and floor-cloths to do the work with? Yes; the children would not put them away after using them. They will not do anything without being watched. When they did not put them away they could not find the articles next time they were wanted.
557. It has been stated that there was only half a bar of soap allowed the children for one week? I remember that on one particular occasion Mrs. Abraham came and said that she wanted some soap. I went into the day-room, opened a cupboard, and found several pieces of cut soap. I said, "There is soap; use that, and if you require more it will be supplied."
558. It has been stated that whenever Mrs. Abraham took a holiday, the girls' work was changed by you? Not unless some of the girls went away. Sometimes when Mrs. Abraham was away girls would be removed.
559. Did it occur regularly? No.
560. You never removed them more than you could help? Not at all.

Edward John Smith sworn and examined:—

561. *Chairman.*] What is your present occupation? I am van proprietor, living at Annandale.
562. You were at one time in the employ of James Kidman? Yes.
563. What position did you fill in his employment? I was driving a delivery-van.
564. Was it part of your duty to deliver stores at the Shaftesbury Asylum? Yes.
565. Just explain the method which you used to adopt? Whatever requisition was sent in, we used to prepare all the things. The meat was weighed to me, and I used to get the groceries from another department, and get the vegetables ready. The bread I should receive by the pound, and everything would be put down in a book corresponding with the requisition. It would be my duty to take the articles and deliver them.
566. Did you ever meet Mrs. Abraham at the asylum? Yes; I was delivering there before she went to the asylum.
567. Do you ever remember bringing out parcels of stores for her? Yes.
568. On her personal order? Yes; I took out groceries that she ordered from me.
569. Would that include meat? No.
570. You remember taking groceries out? Yes.
571. Do you remember taking out stores for any of the other officials in the asylum? Yes, I have done that.
572. For whom? I took small items, something outside the usual rations, for Mrs. Jowett and Mrs. King. I took out goods for every person in the reformatory at different times. Mrs. Abraham would get her weekly groceries from me.
573. At different times you brought small items for others, but you brought stores out regularly for Mrs. Abraham? Yes. There was a person there, named Mrs. Blaney, who ordered groceries from me now and again.
574. With that exception, it was not the rule for you to bring supplies regularly for any other official? It would not be the rule for me to do so unless they gave an order.
575. But it was not the rule for them to order, was it? No.
576. But Mrs. Abraham did give you orders? Yes. When I went and found that Mrs. Abraham was not on rations I got her custom.

Mrs. M.
Jowett.

25 Sept., 1900.

E. J. Smith.

25 Sept., 1900.

- E. J. Smith. 577. You, of course, remember bringing odd parcels for almost everybody in the institution at one time or another; but you did not bring what you would call regular weekly supplies to anyone except Mrs. Abraham? Mrs. Abraham and Mrs. Blaney. Mrs. Blaney was dismissed from the reformatory at one time, but I think she was taken on again, and when she was taken on again I do not think she was on rations, and she started getting her groceries from me. She is the only one in the reformatory grounds that I delivered groceries to except Mrs. Abraham. The articles that I should deliver for Mrs. Jowett and Mrs. King would be tins of biscuits and other luxuries; but Mrs. Abraham's supplies would be butter, tea, sugar, and other necessaries.
578. How many times have you been in to attend the Committee? This is the sixth or seventh time.

WEDNESDAY, 14 NOVEMBER, 1900.

Present:—

MR. MCGOWEN. | MR. SPRUSON,
W. A. HOLMAN, ESQ., IN THE CHAIR.

Mrs. Mary Jowett further examined:—

- M. Jowett. 579. *Chairman.*] You have got a money allowance instead of rations? Yes.
580. Did you purchase your goods from the contractor? No.
581. It is an understood thing that the officers do not? Yes. I dealt with Mr. Pinder, in Oxford-street, whilst I was at Ormond House, and I continued to deal with him afterwards.
582. You told Mr. Pinder to serve you? Yes, with groceries; and I got my bread from Mrs. Hammett, at the Glebe. Her cart used to pass the door.
583. *Mr. McGowen.*] And did Mrs. Hammett send that cart to the Shaftesbury Asylum to deliver the bread to you? She delivered bread at the Bay, and the first day I was out there, seeing the cart go past, I stopped the man and ordered bread from him.
584. And the same thing applied to Pinder, the grocer? No; I sent to Pinder's. There were children going into the city on four or five days of the week, and when the trap went out I got what groceries I wanted.
585. What did you do if you ran short of groceries? I never did run short; I always managed to have a supply.
586. *Chairman.*] The groceries were generally brought out to the asylum in Pinder's own cart? No; we had a trap which took the children into the town and brought them back. If I wanted corn for my fowls, or anything of that sort, there was always an attendant going in with the children who could get me the things.
587. It was not a regular thing for tradesmen to call? No. The only one who sent was Hammett. I got my meat during a portion of the time from Mr. Gorrick, at Watson's Bay.
588. Did he send to the asylum? Yes; but I very often got a bit of beef, or something different from what I got at the Bay, brought out by the nurse who went with the trap. It never went in less often than four days a week, so I was always able to keep myself supplied with what I wanted. Of course, milk I did not buy. I used milk that I got from the institution.

Sydney Maxted sworn and examined:—

- S. Maxted. 589. *Chairman.*] You were for some time head of the Department of Public Charities? Yes.
590. During what period? I was ten years at the head of the Charities Department, and was over twenty years connected with the charities.
591. When did you leave the position of head of the Department? In 1897.
592. You remember Mrs. Jowett being Superintendent of the Shaftesbury Reformatory? Yes.
593. She was always a satisfactory officer? Yes; one of the best officers in the Public Service.
594. Did you ever hear anything at any time of mismanagement of the institution while she was in charge? I heard nothing of that sort except from Mrs. Abraham.
595. On investigation were the charges proved or not? In my opinion they were absolutely disproved. If you have not got the official papers I would suggest that you should get them, because they show the transactions very clearly.
596. Did you ever hear of any case of ill-usage of the children? Never, except what Mrs. Abraham stated. She made charges against Mrs. Jowett, and they were investigated under my direction.
597. And you were satisfied? Yes.
598. *Mr. McGowen.*] Did you investigate the charges? They were investigated by Mr. Green.
599. Did Mrs. Abraham have an opportunity of submitting evidence? Yes.
600. *Chairman.*] As far as you know Mrs. Abraham's position was not filled after she left the institution? It was not filled.
601. *Mr. McGowen.*] Was it not required, in your opinion? No; it was not required.
602. How long did Mrs. Abraham hold the position of Sub-matron? Several months, I should say.
603. If you found out after these charges that the position of Sub-matron was not required, how do you account for allowing Mrs. Abraham to fill that position for several months? To answer that, I should have to utter official confidences which I do not feel disposed to betray. I think the papers will show you. I recollect writing a letter in which I said that as there appeared a desire to give her employment, she might be tried on probation at the Shaftesbury Reformatory. I was afraid that if she were not placed there, where she would be under direct oversight, she might be placed in a position where from want of knowledge she might do some mischief. I might have had her as Matron of the Boys' Reformatory, which requires a very experienced person, but I thought it better to meet the wishes which were expressed to me at head-quarters, and let Mrs. Abraham remain at the Shaftesbury Asylum rather than have her where, by reason of her want of experience, the experiments about to be tried in the treatment of boys in a reformatory might be unsuccessful.

604. I do not want you to betray any official confidences, but let the Committee understand this—am I right in drawing the conclusion from your evidence, that pressure was brought to bear on you to induce you to put this lady in the Shaftesbury Asylum? To put her into some place.

S. Maxted.
14 Nov., 1900.

605. To find a place for her? Yes; that is absolutely the fact.

606. *Chairman.*] You forwarded to the Chief Secretary a letter from Mrs. Abraham, declining the appointment of Sub-matron at Shaftesbury, on the ground that she had a distinct promise of a position at Brush Farm? Yes.

607. *Mr. McGowen.*] Who was Chief Secretary at the time you sent the letter? I think it was Sir George Dibbs. I am not quite sure whether it was Mr. Brunner or Sir George Dibbs.

608. Who was Chief Secretary when Mrs. Abraham was appointed Sub-matron to the Shaftesbury Asylum? Sir George Dibbs.

609. *Mr. Spruson.*] Had Mrs. Abraham a predecessor there, or was it a new post? I think there was previously an officer in that position, who was teacher and Sub-matron.

610. Was that officer dispensed with? She got married.

611. Then no appointment was made when Mrs. Abraham left? No.

612. Not even until now? No; there is no work there. I thought that that asylum would have been abolished years ago. It is an absolute waste of public money to continue it. I reported to that effect when I was in office.

613. So we are to understand from you that Mrs. Abraham's services were not required at all, and she was appointed to oblige Sir George Dibbs? No; I do not say that she was appointed to oblige him. I know that pressure was being brought to bear on Sir George Dibbs by a member of his Government. I do not think he cared anything about it either one way or the other. If I had said to Sir George Dibbs that I would not have Mrs. Abraham, I am certain that she would not have been appointed.

614. Can you give us any assurance on this point that there was no inclination on the part of the superior officers of the Department to get rid of Mrs. Abraham by making her uncomfortable? No; I am sure that the contrary was the case. They knew my feeling in regard to the matter. They knew that one powerful friend of Mrs. Abraham was a close friend of my own. They knew that if I could possibly have done it consistently with my duty I should have preferred her to remain.

615. You can assure us that Mrs. Abraham was not prejudiced by the fact that there was a belief in your mind, and in the minds of some others, that her appointment was an unnecessary one? Certainly not.

616. *Mr. McGowen.*] What was Mrs. Abraham's salary? £100 per annum, with £30 in lieu of rations, quarters, and other conveniences, which were roundly estimated to be worth altogether about £250 per annum.

617. *Chairman.*] You were the head of the Charities Department? Yes.

618. What branches does that cover besides these reformatories, like the Shaftesbury Reformatory? It covers the Government asylums, the State Children's Relief Department, the Boarding-out Department, the children under the Children's Protection Act, and the Government lying-in homes. In addition to that, all reports regarding subsidies for charitable institutions used to go through that Department.

619. Not in regard to hospitals? Only occasionally.

620. What I should like to know is this: what machinery existed in the Department for the ascertaining of irregularities of management, if such occurred? If they were reported to me, I investigated them. If they were reported to the Chief Secretary, he would direct me to investigate them or he would cause it to be done.

621. Where did the reports generally originate? I should either investigate the matter personally or direct a qualified officer to make an investigation. Then the report would be sent on from me, with a recommendation to the Principal Under Secretary, for action. Sometimes complaints were made direct to the Principal Under Secretary, and he would send them to me for investigation.

622. You were ten years in charge? Yes.

623. Did you hold many inquiries? Yes; I should have held this one personally but for the belief that evidently existed in the mind of a friend of Mrs. Abraham, who was also my own friend, that I should be unfair.

624. Did you make a minute on the 13th September, 1894, intimating that, as Mrs. Abraham and her friends were apparently labouring under the belief that you were dealing unfairly with her in not placing her at Brush Farm, you would not hold an inquiry yourself into the statements made, and asking the secretary to hold a very close and careful inquiry, with the assistance of Mr. Allen, the Departmental shorthand-writer, into all these matters? Yes; I remember that I wrote that minute, though I did not recollect it until you mentioned it. I see that Sir William Windeyer's name has been mentioned. He held a strong opinion on the subject.

625. Were a large number of these inquiries held by the Department during your period as chief? Yes; some most important inquiries were held.

626. *Mr. Spruson.*] Did any of those inquiries refer to complaints about Mrs. Jowett? No. I never had a complaint against her before this case arose.

627. Did Mrs. Jowett always work amicably with the superior and the inferior officers? Yes. She is one of the most amiable women that I know.

628. How long has she been in the Department? She has been about thirty-three years in the Service, and about twenty years an officer of the Department.

629. Your knowledge of her extends over the whole period of your occupancy of that office? Yes; I have known her during the whole term—twenty years.

630. Is this the only case of complaint against the management of the Shaftesbury Reformatory? As far as I can remember, it is. There may have been minor complaints, but I could not recollect now.

631. There would be no serious complaints? No.

632. Neither from the officers nor from the inmates? There were certainly none from the inmates, and I do not remember any from the officers.

633. If there had been such complaints, there would have been some Departmental memo. of them? Yes. I think there was once something mentioned in connection with a school teacher, but nothing very important.

634. *Chairman.*] Would that be Miss Bromby? Yes.

635. Was that since the appointment of Mrs. Abraham? No; I think it would be before that.

636.

- S. Mexted. 636. How did these various inquiries which were held during your time generally originate, or from whom did the complaints come? From various people.
- 14 Nov., 1900. 637. In the majority of cases, from whom? Sometimes complaints would come from inmates, sometimes from officers, sometimes from people not connected with the institution. Once a complaint came from a member of the Public Service Board; on another occasion from a Minister of the Crown.
638. I suppose it is fair to say that in the Children's Asylum complaints would not come from the inmates? No.
639. You did not expect children under 14 years of age to send in complaints? No; complaints would not come from the inmates of those institutions; but they would come from the inmates of the adult asylums very often.
640. Can you give any idea as to how many cases of complaint there would be;—would there be dozens, scores, or hundreds? I should say scores. I might go so far as to say, perhaps, that there were hundreds during the last ten years. I have no doubt that Mr. Green gets them every day.
641. As the outcome of these complaints, have any officers of the Department been discharged? Yes; several.
642. Mr. Allen, I understand, was one of these? Yes; I would explain that Mr. Allen had no part in the conducting of the inquiry; he simply took shorthand notes.
643. Could you mention any other officers? Yes. There was the case of a clerk in the head office who had collected something from an inmate and had not handed it in. His conduct was generally bad, and he was discharged. There was another person who was dismissed for precisely similar reasons.
644. Those two clerks were both dismissed? Yes.
645. Those charges probably originated with the auditor, or, at all events, arose in connection with some official examination? No; the matters were found out in the office in both cases.
646. The charges did not originate with the inmates? No. I should treat charges made by inmates with very great caution, because I know how prone they are to make charges.
647. You do not know of any case where, as the outcome of complaints made by inmates, any alteration has been made in the personnel of the Department? There was one case; a Royal Commission dealt with that previously to my dealing with it.
648. Was that at the Parramatta Orphanage? Yes; at the Macquarie-street Asylum, Parramatta.
649. You wrote a letter at the beginning which was rather adverse to the appointment of Mrs. Abraham? Yes, I did. I will explain that. I knew it was not desirable to place her at the Reformatory at Brush Farm. I knew that no one who had not had experience of the work would be of any use, and there was a very important experiment about to be tried there, and everything depended upon the personnel of the staff. I can assure you, however, that I should have been very glad if it had been possible for Mrs. Abraham to have remained in the Service.
650. *Mr. Spruson.*] Why do you say that? Because the friend to whom I had really been under very heavy obligations, and whose family had been kind to me from the time I entered the Service, was a strong friend of Mrs. Abraham, and wished her to remain.
651. If you could have seen your way, consistently with your responsibility, you would have been inclined to balance matters in her favour? I would have strained a point in her favour; I can say that.
652. *Chairman.*] Do you remember having any interviews with Mrs. Abraham? I had a large number of interviews with her, both before and after her appointment.
653. Can you tell us what was the general impression created in your mind by those interviews? I remember the general impression very well. The more I saw of Mrs. Abraham, the more I thought she was unfit to be a public servant. I thought she was incompetent, and I thought she was unreliable.
654. Did Mrs. Abraham come to see you after Mr. Green had held the inquiry? Yes.
655. You remember that she was called upon after the inquiry to furnish a statement of any reasons that might weigh with the head of the Department against being dismissed from the position? Yes.
656. I understand that she had an interview with you about that? That I cannot remember. I assume that if she was asked to do that, she sent in some written reply. I imagine that she would do so. If that reply came through me, my initials would be on the letter.
657. The conclusion arrived at by you was the outcome of the inquiry, and of the report by the Matron? Yes; and of interviews with Mrs. Abraham at my own office.
658. You did not interview her at the institution? No.
659. Were you aware that Mrs. Abraham contended or asserted that the inquiry held by Mr. Green was an entirely unfair one—that it did not give her a proper opportunity to make out her case? She said so; but I know Mr. Green's method as well as I know my own, and I know that he would afford her every possible opportunity to make good her case, and he assured me that he had done so.
660. Did Mrs. Abraham tell you that Mr. Green gave her no notice of his intention to hold an inquiry, and took her unprepared? No.
661. Would you know whether any notice was sent to Mrs. Abraham? I should not know; but in a case like that, after she had formulated her complaints, I should not think that any notice would be required. I should have thought that she would have been able to go on with the matter immediately. If she asked for delay, which she never did, it would have been allowed her. Of course, Mrs. Abrahams, being at the institution, called anyone there whom she desired to speak for her.
662. This man Blaney, against whom Mrs. Abraham made a charge, was dismissed? I do not know whether he was dismissed or resigned.
663. His connection with the place was severed before his death? Yes.
664. Was there anything in your relations with Mrs. Abraham to suggest that she had personal animus against yourself? Nothing whatever before her removal.
665. If we have Mrs. Abraham's evidence that you always treated her with the most perfect courtesy and impartiality, so far, of course, as you can give an opinion on your own action, you say that that represents what you attempted to do? That is what I attempted to do always.
666. You were known as the Superintendent? No; as the Director of Charities.
667. Here is another point: Suppose any children ran away from one of these asylums, or attempted to break bounds, would that be reported to you? Yes.
668. Were these occurrences frequent? No, not very frequent.
669. I understand that the children who were sent to some of the asylums were criminal? Yes, very criminal.

S. Macted.

14 Nov., 1900.

670. It was not so with this one? Yes; there were girls in the asylum of the very worst class.
671. We have evidence to show that there were attempts made to leave in this way, immediately after the appointment of Mrs. Abraham? I should not think running away, unless great neglect could be shown, was evidence of bad management. It is a natural thing to do. When young people go there they at first find life very irksome compared with what it was where they came from. At Brush Farm, when boys first go there they are ready to bolt on the first opportunity, but after they have been there for a few months they do not want to leave.
672. *Mr. McGowen.*] Did you have more than one inquiry held into the charges made by Mrs. Abraham? Not more than one inquiry; there were complaints, and these interviews took place which I have referred to.
673. But in a précis of the case it says "inquiries"? I do not know who made that précis. A word has evidently been used which does not convey exactly what was meant.
674. The précis says, further on, referring to Mrs. Abraham, "At one time her conduct was such that the officials at Shaftesbury were so harassed and annoyed by her that they could not attend properly to their duties";—do you know anything of that? Yes; that was referred to me.
675. It is stated also that when the offer was made of the position of Sub-matron to Mrs. Abraham, she refused the appointment, stating that her friends had promised her a better position at Brush Farm? Yes.
676. That is dated the 16th June, 1894. On the 22nd June, 1894, Mrs. Abraham wrote to the Principal Under Secretary, expressing regret that, in a moment of excitement, she made use of expressions for which she felt that she owed an apology, which she trusted he would accept; and she said that, upon reconsidering her position, she would be glad if Sir George Dibbs would kindly allow her to withdraw her resignation of the office to which he had been good enough to appoint her, and which she now accepted with many thanks. That was previous to her appointment as Sub-matron;—when the offer was first made she refused it? She said she would not take it.
677. Was Mrs. Abraham ever in the public service under you previous to her accepting the position of sub-matron at Shaftesbury? No.
678. *Chairman.*] On the 16th June, 1894, you wrote this: "As it is desired that Mrs. Abraham should receive an appointment, I discard my own opinion with regard to her, and suggest that she should be allowed to occupy the position at Shaftesbury on probation";—what was that opinion based on? It was based on Mrs. Abraham's conversation with me, when I told her that she would be very unsuitable for a position at Brush Farm. In fact, she used threats. I found that she had had no experience. I drew her on to talk about the treatment of boys, and I was perfectly sure that there would be mischief if she was placed there.
679. That was as matron of Brush Farm? Yes.
680. Did Mrs. Abraham tell you that she had conducted a large boarding establishment in Parramatta for some years? I knew afterwards that she had done that.
681. You knew that she was an efficient housekeeper? I could not tell whether she was or not. I heard that she had kept a large boarding-house.
682. Of course, housekeeping is like any other business—it is a thing which, without experience, a person would be no good at? Yes.
683. But, having had the experience, I suppose it is merely a question of intelligently applying it to new conditions? Yes; always bearing in mind the class of people who are under control. I am perfectly certain that it is very much more easy to manage a gaol than to manage a boys' reformatory. I have an intimate acquaintance with both systems.
684. *Mr. Spruson.*] You wish us to understand that a first-class housekeeper might not be qualified to take charge of a boys' reformatory? She might not. A first-class housekeeper would, of course, understand all the domestic arrangements.
685. But the critical part of the work is in a different department? Yes; different altogether. I do not know of any position in which there is greater necessity for judgment, tact, forbearance, kindness, and firmness than in that of head of a reformatory. All these qualities are requisite in a person placed over a boys' reformatory, and in a girls' reformatory the difficulties are still worse.
686. *Chairman.*] The duties of Sub-matron at Shaftesbury Asylum were largely those of a housekeeper? Yes.
687. But on cheaper lines than housekeeping by a lady in her own establishment? I was going to say, on such lines as a lady in her position would not have had experience of.
688. Still, the greater includes the less generally? Yes. You might, by a fluke, put in a person who had had no experience at all, and find that you had done a good thing.
689. I might direct your attention to the evidence of Mr. Huntley, as to your own financial position;—there were statements made by you in the bankruptcy proceedings as to certain obligations to some of the officers? At the time of that inquiry I was under no obligation whatever to Mrs. Jowett or Mr. Green.

DISMISSAL OF MRS. ABRAHAM, SHAFTESBURY GIRLS' ASYLUM.

APPENDIX.

[*To Evidence of Mrs. M. Abraham.*]

SUB-MATRON.

9. The Sub-Matron will act under the orders of the Superintendent, and give directions for carrying out all arrangements for the proper working of the household duties of the institution.

TO APPOINT GIRLS FOR WORK.

10. She will attend the daily musters, and appoint such girls as she thinks fit for performing domestic and other duties.

SCHOOL-ROLL.

11. She will see that all the children whose names are entered on the school roll attend punctually each day.

PRAYERS.

12. She will, in the absence of a clergyman, read prayers daily, and on Sundays to such children as are of her religious persuasion, when required by the Superintendent to do so.

CHILDREN TO BE PROPERLY CLOTHED.

13. She will take care that every child upon admission is immediately stripped, well washed, and clothed in dress provided by the Government ; and that, on leaving the institution, every child be furnished with clean and suitable clothing.

MEALS.

14. She will be present in the dining-hall during the meals of the children, will frequently visit the kitchen whilst the same are being cooked and carved, and will see that the food is served up properly.

COOKING.

15. She will daily inspect the coppers and cooking vessels, and will see that the kitchen is kept scrupulously clean.

LAUNDRY.

16. She will frequently in the day visit the laundry, and see that the duties of that part of the institution are effectively and economically performed.

BATH-ROOM.

17. She will see that the lavatory and bath-room are kept in perfect order.

ESTABLISHMENT TO BE CLEANED ON SATURDAYS.

18. She will see that the house is thoroughly cleaned every Saturday, so as to secure a due observance on Sunday. She will notify to the Superintendent the name of any officer or servant applying for temporary leave of absence, and the provision to be made for the performance of the duties of the applicant during such absence ; and she will not leave the institution herself, nor allow any of the officers or servants to do so, without the permission of the Superintendent.

STORES.

19. She will keep all spare bedding, and other articles drawn for the use of the establishment, in her stores, the key of which shall always be in her possession.

CLOTHING.

20. She will cut out and measure off all material for clothing, and will brand the same, if intended for the use of the institution, when made up, subject to the directions of the Superintendent.

DORMITORIES.

21. She will visit the dormitories in the morning and evening, to see that the girls rise and retire at the proper hour, and keep order while they are dressing and undressing.

PLAYGROUND.

22. She will, on all occasions, attend the children when they are in the playground, or out of school, unless relieved by the orders of the Superintendent.

INDUSTRIAL TRAINING.

23. She will see that a portion of every day, except Saturday and Sunday, is devoted to teaching the children some branch of useful industry, and especially all the duties of household management.

ATTENDANCE ON VISITING-SURGEON.

24. She will attend the Visiting-Surgeon when he visits the sick, and take every care that his instructions are properly carried out.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CARPENTERIAN REFORMATORY.

(REPORT OF THE SUPERINTENDENT FOR THE YEAR 1899.)

Printed under No. 17 Report from Printing Committee, 22 November, 1900.

The Superintendent, Carpenterian Reformatory, to The Under Secretary of Public Instruction.

Sir, Carpenterian Reformatory, Brush Farm, Eastwood, 1 February, 1900.

I have the honor to submit, for the information of the Minister of Public Instruction, my report, on the Carpenterian Reformatory for Boys, for the twelve months ended 31st December, 1899.

The Institution has been in operation four and a half years, and during that period has dealt with 230 lads.

During the year 53 boys were admitted and 48 were discharged, leaving 91 lads in the Institution on 31st December.

The cost to the State per head, calculated on the average daily attendance, was £24 2s. 11d. Calculated on the year's enrolment the cost was £16 6s. 7d. The cost per head shows a small increase on that of the previous year, owing to the fact that several minor repairs and alterations were effected.

The results of the system continue to be a cause for congratulation, for 88 per cent. of the boys released have been reformed. Through the courtesy of Captain Neitenstein, Comptroller-General of Prisons, I have brought under my notice the case of any lad who gets into trouble after his discharge from the Reformatory.

Attention is again drawn to the fact that it is almost useless to send a boy to this Institution for a term of less than three years. It takes at least twelve months to wean him from his old bad habits and another two years to instil into him those that will be of service. My experience has shown me that a boy who is sent here for one or two years cannot have much permanent good done him in that time either morally or physically. As an instance of the futility of short terms, I might point out that of the sixteen failures to date thirteen of them served under three years.

Religious instruction is given the boys every Sunday, and the Institution is visited at regular intervals by the Rev. Mr. Britten (C.E.), of Ryde, and the Rev. Father Kerwick, of Rydalmere, to both of whom my sincere thanks are due for the gratuitous assistance they most unselfishly render.

Recreation, embracing such games as cricket, football, athletics, chess, and draughts, together with reading and outings of various kinds, forms no small element in the system followed here, and a considerable amount of attention, without in any way interfering with the industrial work performed, is devoted to these means of wholesome amusement. The Farm newspaper continues to appear monthly under the editorship of Mr. C. B. Cochrane, and encourages and assists the boys to put their ideas on matters of interest into words.

The school in connection with the Institution is most ably conducted by Mr. A. P. Humphries. The results of the last Annual Inspection of Mr. District-Inspector Dwyer are: First-class, 7·5; second-class, 8; third-class, 7·5.

With the exception of a few cases of "cold," the health of the boys for the year may be put down as excellent. The fine healthy position of the Institution and the free outdoor lives the boys live are in the main responsible for this satisfactory state of health.

The conduct on the whole has been very good, and all the officers report that the boys under their charge are making good progress in the various trades.

Industrial Work.

The industrial work done during the year shows an increase as to amount and value over that of 1898. The boys now are able to make all their own clothing, and carry out any alterations and repairs that are from time to time necessary. The trades taught are (1) capentry, (2) painting and glazing, (3) tinsmithing, (4) tailoring, (5) bootmaking, and (6) jam-making. In addition to these, all boys are taught the first principles of orchard and garden work, and quite a number learn milking and general farm work.

The carpenters make all the furniture required in the Institution, and also do all repairs to the buildings. Several articles of furniture were also made for the Stores Department. In

In the tinsmiths' shop, the closet-pans for the metropolitan, the suburban, and country public schools are made, together with all kinds of tinware.

The tailors produce all the clothing worn by the inmates, also the uniforms for the attendants.

From the boot-shop comes all the boys' footwear, and it is intended that in the near future this shop will be able to repair boots for other Government Institutions.

The jam-house turns out on an average about 1,500 lb. of jam weekly, which goes to supply the (1) N.S.S. "Sobraon," (2) Liverpool Asylum, (3) Newington Asylum, (4) Rookwood Asylum, (5) George-street Asylum, (6) Macquarie-street Asylum, and (7) the Girls' Industrial School.

Reference to Appendix B will show the amount of work done, with its approximate value, for the year.

Miscellaneous.

Applications for boys for farm and other work are being constantly received; but owing to there being no apprentice clause in the Act the applications have to be declined.

A great number of our old boys write us, and many who are able visit us. In conclusion, I beg to state that the work done here has been steady and progressive, and that there is every indication of a continuance of the good already done being carried on during the coming year.

The whole staff, a zealous and intelligent body of officers, have rendered me loyal assistance.

I have, &c.,

FRED. A. STAYNER,
Superintendent.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INDUSTRIAL SCHOOL FOR GIRLS, PARRAMATTA.

(REPORT OF THE SUPERINTENDENT FOR THE YEAR 1899.)

Printed under No. 17 Report from Printing Committee, 22 November, 1900.

Report for Year 1899.

Industrial School for Girls, Parramatta, 16 March, 1900.

THE year under notice has, I have great confidence in stating, been productive of good results in the work of training, and in the progress of reformation, in connection with the inmates of the Institution.

The general health of the girls has been very good. There were no deaths during the year.

The plan adopted by me, when assuming charge of the Institution, of making it as much as possible a well-conducted home, is bearing good fruit, owing to the hearty co-operation of the present Matron, Miss E. Kaye, and the other members of the staff, who use every means at their command to induce the girls to make a personal effort to improve.

I may point out that, from the antecedents of many of the girls, their moral and mental tone are exceedingly weak; so that to bring to a successful issue the work for which this Institution was designed, a demand is made upon the patience, forbearance, and sympathy of the members of the staff that would astound those not engaged in the work.

The girls, upon entering the Institution, are, by moral suasion, led to render a prompt and willing obedience to those placed over them, and they are carefully taught to look forward with hope, and to forget the past. Under the monitorial system the girls are encouraged to aspire to positions of trust in the Institution; and some girls, whose past records were painful to listen to, proved, after a few months in the Institution, most trustworthy mistresses and useful and reliable apprentices.

There is a greatly increasing demand for the girls from the Institution as apprentices; and I have at present filed more applications than can be supplied during the next twelve months from our girls ready for service.

Many of the girls apprenticed elect to remain with their employers, to whom they were bound, after their term of apprenticeship expires, and I am in receipt of many letters from both girls and employers in which the girls express gratitude to the Department for the training they received; and the employers write inquiring, "Could we oblige by letting some friend, as a special favour, have an apprentice?"

Much encouragement has been given to the apprentice by an occasional visit from me, or from a member of the staff who could be spared, and I hope that something more may be done in this respect during the current year.

I may state that I correspond with all the apprentices, and receive many letters from them. Some of the girls who are now happily married state that these regular letters encouraged them in their sometimes difficult task of satisfying their mistresses in their daily work.

In regard to the cases of the girls who have been discharged to their friends before they attained the age of 18 years upon my recommendation, or upon the applications of friends and approved by the Department, I am convinced that the action in each case was the correct one. I have made very careful inquiry into each case.

The material condition of the Institution is fast approaching what may be termed "perfection." The new kitchen range is proving all that could be desired, and the inmates are now served with properly-cooked food, and waste is obviated, and the safety of those engaged in cooking is ensured. By the building and fixing of the new range the old kitchen is now utilised as a cookery room, and eighteen girls are now taught weekly the art of cookery by the teacher from the Technical Branch. Some of the girls become excellent cooks and show great taste in their work.

The enrolment of girls for the past year was not so great as the preceding one, the number being 165. At the close of the year 1898 the number of inmates was 110, and the new admissions numbered 55, thus making the enrolment 165; of these 31 were over 14 years and 24 under that age. The discharges for the year numbered 62; of these 29 were apprenticed, 22 were discharged upon attaining the age of 18 years—some to friends and the rest to situations which I secured for them, 7 by order of the Governor-in-Council, and 4 to the Principal Boarding-out Officer. The girls remaining in the Institution at the end of the year numbered 103.

All the girls are systematically trained in general housework, kitchen, scullery, laundry, and dairy work in turn, according to their capacity. They are also carefully instructed in flower culture, needlework of all kinds, patching, darning, knitting, and dressmaking; in fact many girls who are admitted into the Institution utterly devoid of the knowledge of the rudiments of domestic economy are able, when they leave it, to make and mend their own clothing, and to prepare and cook a good meal. I am in receipt of many letters from mothers of discharged inmates expressing gratitude to the Department for the care

bestowed upon the training of their daughters. Most of the girls are particularly anxious to become members of the cookery class, and all strive to excel in this branch, and many of them become excellent cooks.

The work of the laundry class was very successful during the year, the girls being very carefully instructed in all the details of this industrial division. The articles of clothing dealt with in this branch during the year numbered 190,000, and the value of the work done was estimated at £978 15s. Of the above articles dealt with, 26,000 were sent from the students of Hurlstone College. A girl who has passed through a complete course in this class—from the washtub to the ironing table—has no difficulty in obtaining a good situation when she leaves the Institution.

Of the other industrial classes, the sewing division occupies a very prominent position. All the dresses, cloaks, jackets, aprons, and underclothing worn by the inmates are made and repaired by this class. In addition to this, the members of the division are taught knitting, darning, and crochet work. All inmates are members in turn.

For practical training in household duties the girls are placed in the Institution kitchen, and in the officers' quarters. The girls thus trained are always in great demand by people who have had apprentices from the Institution.

All the cooking of the place is done by the girls.

Much interest is taken by all in flower culture, and advantage is taken of this to beautify, as far as possible, the interior of the Institution. The flower gardens are kept in good order by the girls, under the Matron's direction; and, since that officer has taken charge of this branch of industrial work, the gardens present a very flourishing aspect, and the girls engaged in the work have been improved morally and physically.

In the schoolroom good work has been done, and the teachers were most painstaking in the discharge of their duties.

In the matter of recreation, the girls indulge in out-door games, under proper supervision, when the weather permits, and possess swings, rounder-balls and bats, skipping ropes, &c., &c., while others enjoy their leisure moments in reading "Home Chat," "Strand," "Royal," "Woman at Home," "Pearson," and "Wide World." All these are eagerly sought after by the inmates during time of recreation, and I am frequently perplexed to know how to meet the demand from the deserving girls for these.

I must gratefully acknowledge a parcel of magazines from Mr. J. T. Caldwell, also parcel of books and donation from officers and students of Hurlstone College. I would greatly appreciate donations of magazines for the inmates, more especially of those enumerated.

A carefully-drawn programme of evening recreation is prepared for winter, consisting of readings, recitations, and vocal and instrumental music.

In addition to these, a course of lectures or "plain talk" was given, on each Friday evening, during the winter, by the Matron. The elder girls only were permitted to attend this course of lectures.

I might be permitted to state briefly, that every means at my command is used to impart moral, mental, physical, and industrial education.

It has been asserted, on good authority, that the standard of health is considerably lowered among children living in Institutions. I can safely assert that this is not the case with our inmates. They begin to improve after they have been a few weeks under our control, and parents visiting them, on the days set apart for the purpose, frequently express astonishment at the wonderful improvement in their physical appearance.

As much care as possible is devoted to the case of each girl, and they speedily find out that personal interest is taken in their welfare, and begin to feel and act as members of a large family. As far as practicable, the inmates receive the training of family life, and are, on the whole, very bright and cheerful. This has been particularly the case during the year under review.

The spiritual welfare of the girls has not been neglected. The day's work opens and closes with prayer, and services are conducted morning and afternoon on each Sunday and on certain week days.

In addition to this, numbers of girls, in charge of officers, attend the services in the town churches every Sunday, weather permitting.

My grateful thanks are due to the Rev. J. Done, the Rev. T. O'Reilly, and the Rev. E. Price for their kind and much-valued ministrations. The interest taken by these gentlemen in the welfare of the inmates is exceedingly gratifying, and must be productive of good results.

The Rev. T. O'Reilly is assisted in his efforts for the spiritual welfare of the girls under his care by the Sisters of Mercy, who visit the Institution regularly, and who also deserve my grateful thanks for the interest manifested in the welfare of the girls.

During the year the Institution has been visited by many persons from India, and the Colonies of New Zealand, Westralia, Victoria, and South Australia, who have left a record of very favourable impressions made by their visits.

The expenditure for the year for maintenance was as follows:—

	£	s.	d.
Provisions, fuel, water, &c.	1,364	8	11
Salaries and contingencies	1,212	9	4
	<hr/>		
	£2,576	18	3

Calculated upon the enrolment basis, this amount would equal £15 12s. 4d. per head per annum, or 10½d. per diem.

Since my last report one change has taken place on the staff by the transfer of the teacher to another sphere of labour. The assistant teacher, Miss M. Richardson, was promoted to the higher position, and Miss A. Bennett appointed to the office of assistant.

I cannot conclude my Report without bearing testimony to the loyal support accorded me by every member of the staff, without which it would be absolutely impossible to carry out successfully the duties devolving upon me.

The Institution is now faithfully undertaking the work for which it was set apart. The results are good, and better results may be hoped for.

THOS. E. DRYHURST,
Superintendent.

NEW SOUTH WALES.

ASYLUM FOR THE INFIRM AND DESTITUTE, PARRAMATTA.

(INFORMATION RESPECTING.)

Printed under No. 18 Report from Printing Committee, 29 November, 1900.

The Acting Director of Charitable Institutions to The Principal Under Secretary.

CHARITABLE INSTITUTIONS OF NEW SOUTH WALES.

Offices of the State Children Relief Board, the Director of Government Asylums, and Children's Protection Act, Richmond-terrace, Domain, Sydney, 27 November, 1900.

Sir,

I have the honor to enclose herewith, for the information of the Colonial Secretary, a reply to the inquiries of Mr. John Norton, M.L.A., relating to the Asylum for the Infirm and Destitute, George-street, Parramatta.

I have, &c.,

E. HANSON,
Acting Director.

Question.

MR. NORTON: Is the Colonial Secretary aware that the Parramatta Asylum for Destitute Old Men is not only shockingly overcrowded, but that at night-time 1,000 old men, some of whom are helpless and bedridden, are left in charge of one warder, who also has to keep watch over the exterior of the building, and who is alleged to be half a lunatic himself? Will the Colonial Secretary have an inquiry made with regard to the supervision of these unfortunate creatures?

MR. SEE: I was not aware of the fact to which the Honorable Member refers. It has not been brought under my notice. It has been referred to me in a general way that there is an absence of accommodation for the number of old people who are in the Asylums at Parramatta, and others who desire to enter these institutions. I know the Inspector-General of Charities is doing all he can to ameliorate the condition and make the lives of these poor old men as happy and comfortable as possible. I will see this officer this morning and ascertain whether the state of things mentioned by the Honorable Member exists, and if so, whether it is not possible to do something more.

MR. NORTON: They are like human vermin in lofts, likely to be destroyed in their beds.

Answer.

The question of closing George-street Asylum, owing to its structural defects, has been under consideration for many years past, and the Public Works Committee has recommended its abolition; but as the scheme recommended by the Committee has not yet been adopted, this building has had to be kept in use to shelter the aged infirm and destitute who have appealed for admission. In 1898, 1,156 inmates were sheltered there, but additional pavilions, in keeping with modern requirements, have since been erected at Rookwood Asylum, and upwards of 200 of the old men from George-street have been removed, the number remaining there at the present time being only 942. From these figures it will be observed that the Institution is not overcrowded.

As to the complaint that the requirements of the sick are not attended to at night, it is pointed out that of the 942 inmates of the Institution, 329 only are under treatment in the hospitals, and provision has been made for a salaried attendant and twelve inmate wardsmen to be on duty all night to attend to their requirements. It is the duty of the night attendant to visit every ward of the Institution once every two hours and see that the inmate wardsmen are attending to their duties, and as the tell-tale clock registers such visits, it is not possible for the attendant to neglect his work in this particular without being detected. The night attendant was appointed by the Public Service Board under the provisions of the Public Service Act, and is not of weak intellect. He has not been reported for neglect of duty, nor have any of the inmates complained to the Chief Superintendent, the Visiting Medical Officer, or myself, of the neglect stated by Mr. Norton.

The Assistant Superintendent of the Asylum resides on the premises, and his quarters are connected by telephone with the main Institution, so that he is within call at any time, and he pays personal visits to the wards occasionally, at night. Moreover, the Dispenser and two Senior Attendants also reside on the premises, and their services are available in case of emergency.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HOSPITAL FOR THE INSANE, CALLAN PARK.

(REPORT OF BOARD OF INQUIRY INTO CERTAIN CHARGES AGAINST MISS M. A. FAIRBAIRN, MATRON.)

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

John Norton, Esq., M.P., to The Colonial Secretary.

Sir,

112, King-street, Sydney, 3 April, 1900.

I have to bring to your notice the fact that great dissatisfaction, not to say disorganisation, exists among the female nursing staff of Callan Park Asylum in consequence of what would seem to be the irregular and tyrannical conduct of certain of the officials, more particularly of the Matron, Miss Fairbairn, and one of the head nurses; certain very serious charges having been preferred against the Matron by a number of the nurses now in the Institution and by others who have since left, having resulted in bringing about a state of things that can only be properly described as anarchy.

Among these charges is brutal conduct, accompanied by physical violence, and not to say the unlawful administration of nauseous compounds to patients, misappropriation and consumption of food and comforts intended for the hospital patients, which, upon proper opportunity being afforded by you, I am prepared to prove on the evidence of eye-witnesses and others, have been taken to the Matron's quarters and consumed by her or her visitors.

These allegations of themselves are serious enough in all conscience to warrant a thorough inquiry; but when I tell you that certain witnesses have been grossly wronged and victimised by dismissal, either for divulging these proceedings or refusing to conceal them, without notice or explanation, you will at once see that it is about time that you, as the chief custodian of the charitable institutions of the Colony, should intervene and cause a thorough and searching inquiry to be made.

The necessity for such an inquiry at your instigation is made the more apparent and urgent from the fact that what would seem to be, after consideration of all the circumstances, a farcical investigation, is now being conducted at the Asylum, in a sort of *in camera* manner, by Dr. Blaxland, resident Medical Superintendent, and Dr. Sinclair, Inspector-General in Lunacy. The manner in which this inquiry is being conducted, the witnesses called before it, the manner in which some of the witnesses are treated, and in several instances cajoled, if not bullied, into distorting their evidence or withholding it, stamps the whole proceeding as a travesty, and gives good grounds for the suspicion that it is intended to discredit by it those nurses who have refused to be silent participants in the irregular practices complained of, as well as those who have been dismissed without warning or explanation, for refusing to become docile accomplices.

I therefore, in the name of a large number of the female nursing staff of Callan Park Asylum, have the honor to request that you will be good enough to consider the advisability of appointing a Royal Commission to inquire, not only into specific acts of misconduct on the part of officials in Callan Park Asylum, but into the whole system of management of that Institution. By acceding to this reasonable request, you will relieve me of the painful necessity of raising the whole question in Parliament by way of specific motion.

Yours, &c.,

JOHN NORTON.

Dr. Sinclair for report, B.C., 9/4/1900.—C.W., P.U.S.

The Inspector-General of Insane to The Principal Under Secretary.

Sir,

Lunacy Department, Inspector General's Office, Gladesville, 9 May, 1900.

On the 8th March last, Nurse Annie Quilkey was reported to me by the Medical Superintendent at Callan Park for insubordination and impertinence to the Matron, and her dismissal recommended. She had an interview with me on the 14th March, when, after hearing her defence, I came to the conclusion that the complaint was justified, and at the same time, from my own observation, decided that she was unsuitable for the position of a nurse in a hospital for the insane. I, therefore, approved of Dr. Blaxland's recommendation and agreed to her dismissal.

226—A

The

The nurse, however, made charges against the Matron, which I deemed it necessary to have investigated, and, owing to their nature, conducted the inquiry personally. These charges were:—

- 1st. That the Matron used hospital fuel (coal and wood) which she was not entitled to; and
- 2nd. That the Matron made use of food, meat, bread, &c., from the nurses' messroom, from ward No. 5, and on one occasion from the kitchen, to none of which she was entitled.

In the course of the inquiry I examined the Matron, Dr. Flashman, the Assistant Superintendent, the housemaid, storckeeper, and cook, and twenty-nine nurses. I also intimated that I would see any member of the staff who could throw light on the charges, or who might wish to make a complaint.

The inquiry showed that coal was taken from the coal heap to the Matron's quarters, as were provisions from the nurses' messroom, from some of the wards, and from the store. A certain amount of coal, and of provisions, from the store and the wards is however allowed, the former for the office, and the latter, the housemaid's allowance by dietary scale, and that sent by the nurses for the use of the patients working with her. The charges are accordingly narrowed to a decision as to whether the Matron herself made use of these allowed articles, or had a larger supply than required sent, which she converted to her own use; or utilised bread, milk, and meat, with an occasional supply of tea, sugar, and butter, which were sent from the nurses' messroom ostensibly for patients. The taking of food from the kitchen was entirely disproved.

The provisions from the nurses' messroom, which, being in addition to the allowance from the wards for the patients, are those most likely to have been used for the Matron's table, are stated by her and the housemaid to have been given to those patients, both men and women, who work with the housemaid for part of the day, to nurses who fairly frequently came to her kitchen for a meal, and to nurses laid up with illness, whose food appears to have been fairly regularly supplied by her, it being easier for her to make small dishes for any one sick than for the hospital cook. Sometimes the food required for this was brought by the nurses, but perhaps more frequently, that in her charge was used. The nurses' messroom being liberally supplied, there was always a surplus which the nurse in charge had available for distribution in this manner.

The Matron procured her bread, milk, and groceries from reputable firms, and shows receipted bills in support. She purchased meat, as required, for cash, sending a patient to the shop for it, and for this she has, therefore, no receipts.

There is no direct evidence of the Matron having used any hospital articles on her own table, or having in any way instructed a nurse to supply them. No nurse has asserted that she has seen them so used, with the exception of the one who occasionally took the place of the housemaid during her leave of absence. She admits having sent to the Matron's table a joint from the nurses' messroom, but does not claim to have had instructions from either the Matron or housemaid to do so.

On one occasion while the Matron was ill a nurse in charge of the adjoining ward, who was attending on her, sent daily some cooked fowl from the ward table, though the Matron does not admit having used it or known of it.

In regard to the coal also there is no direct evidence of the Matron having made use of it except for her office fire, for which she is allowed fuel. There was evidence that coal was purchased by her from coal merchants, as required, for her kitchen, and some receipts were shown for it. The evidence, however, shows that during the summer, when the office fire would not be expected to be in use, coal was still taken from the hospital supply to her quarters; but it would appear that the Matron made use of fires even in the warm weather, both on account of the dampness of her office, and her predilection for them. When ill she used them even in hot weather.

The Matron is not allowed either food or fuel from the hospital for her own private use, and evidence is adduced to prove that she purchased both regularly from outside. The quantity of each which went to her quarters, however, appears to have been larger than was necessary for the office fire in the case of coal, or the patients could make use of in the case of food; but there is no direct evidence the coal was used in her private apartment for her fire, or the food supplied to her table or sent from the wards or messroom for her use with her knowledge. In a charge of this nature, it is not sufficient to presume that excessive supply must have been used in the manner indicated in the charges, it being possible that it might be accounted for by careless waste. I am, therefore, unable to conclude that the charges are sustained, though I am convinced that there has been laxity in supervision and extravagance in consumption; but this—a matter of administration—I propose to deal with in a separate report.

I have, &c.,

ERIC SINCLAIR,
Inspector-General.

The Inspector-General of Insane to The Principal Under Secretary.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 25 May, 1900.

In the course of an inquiry into charges brought against Miss Fairbairn, the Matron of Callan Park Hospital, and on which a report was sent you on the 9th instant, it became apparent to me that there was laxity of administration on the part of that officer.

It was shown that provisions were daily taken from the nurses' messroom to the Matron's quarters much in excess of what could be used by the patients employed there, and that coal also in larger amount than was necessary for the office fire was daily received. No explanation that I could accept was forthcoming as to the use made of them. Assuming that the articles were not used by the Matron, it yet shows extreme laxity on her part to allow hospital property to this amount to be taken to her quarters daily, or a tacit approval of great waste. I gathered during the inquiry, and in other ways, that she is wanting in the tact and ability necessary to successfully manage a large staff, qualities very necessary in the Matron of an institution of the importance of Callan Park. It is, however, fair to add she has been in her present position over fifteen years, and has performed most of her duties satisfactorily. The wards are always neat, the patients tidy and well dressed, and cleanliness is found everywhere.

In conducting the inquiry, I found the laxity in administration involved also Mr. Whitting, the Assistant Superintendent, and that the charges against the Matron would not have been possible had he been as vigilant and capable as his position should warrant. In his hands rests, under the Medical Superintendent, the whole of the lay management of the Hospital, part of which is the procuring of supplies

supplies and the proper issue of them when supplied. The catering, the issuing to the kitchen and the messroom, and the looking after the messrooms and the food used therein, are all part of his duty, and it should not have been possible for coal or food to be used in the Matron's quarters as shown, without his knowledge. I found, however, that not only did he not know of them, but owing to his want of agreement with the Matron, he never entered the nurses' messroom, and was not, therefore, in a position to detect abuses. It appears, too, that he and the Matron do not speak to each other, a state of affairs which is clearly against the interests of the Institution. Though possessed of considerable ability, Mr. Whitling has shown in other respects a want of judgment and of appreciation of his duties which militate against his usefulness. He joined this service on the 23rd July, 1878, and was promoted to his present position on the 22nd December, 1884. He was previously Master of the Protestant Orphan School, Parramatta.

Steps have been taken to prevent the recurrence of similar abuses, but I think it right to inform you of the circumstances. I am of opinion that both these officers should be at least reprimanded.

I have, &c.,

ERIC SINCLAIR,

Inspector-General.

Dr. Sinclair might be asked to call about this matter. Submitted—C.W., 29/5/1900. Approved—J.S., 9/6/1900.

Minute by The Principal Under Secretary.

Sydney, 11 June, 1900.

Subject:—Charges against Matron of Callan Park Hospital for Insane.

THE charges in this case are of a very serious character, and I think that the papers might be referred to the Public Service Board, with a request that an inquiry may be made under the 51st section of the Public Service Act.

CRITCHETT WALKER,

Principal Under Secretary.

Approved.—J.S., 11/6/1900.

The Chairman of the P. S. Board.—C.W., B.C., 11/6/1900.

The Public Service Board to The Principal Under Secretary.

Public Service Board, 50, Young-street, Sydney, 18 July, 1900.

Inquiry under section 51 of the Public Service Act into certain charges against Miss Fairbairn, Matron of the Callan Park Hospital for the Insane.

WITH reference to the minute of the Principal Under Secretary of the 11th ultimo, requesting, with the approval of the Honorable the Chief Secretary, that an inquiry under section 51 of the Public Service Act might be held into certain charges made against the Matron of the Callan Park Hospital for the Insane, which was referred to in the reports of the Inspector-General of the Insane, transmitted with such minute, the Public Service Board have the honor to report as follows:—

Miss Fairbairn was summoned before the Board on the 16th June, and was informed of the charges which had been brought against her, viz.:—

1. That patients in the said Hospital for the Insane having been physically assaulted by one Bessie Smith, a nurse in charge of No. 4 Patients' Ward, by having forcibly administered to them noxious ingredients without the knowledge of the Medical Superintendent, and contrary to the Regulations of the said Hospital for the Insane, when the facts were brought under the notice of the said Matron, the said Mary Ann Fairbairn, she neither reported, reprimanded, or interfered with the conduct of the said Bessie Smith.
2. That the said Bessie Smith physically assaulted one patient in the said Hospital for the Insane, to wit, Jane Downey, by striking her on the face with a delf mug in the presence of the said Matron, the said Mary Ann Fairbairn, and the said Matron neither reported, reprimanded, or in any way interfered with the said Bessie Smith.
3. That the said Matron, Mary Ann Fairbairn, has appropriated to her own use, contrary to the Regulations of the said Hospital for the Insane, fuel and food intended for the patients and nurses of the said Hospital for the Insane.
4. That the said Annie Quilkey having truthfully reported the abovementioned facts to the Superintendent of the said Institution, Dr. Blaxland, the said Matron, Mary Ann Fairbairn, was instrumental in obtaining the dismissal of the said Annie Quilkey from her position as a nurse in the said Institution by making false charges against the said Annie Quilkey to the Superintendent, Dr. Blaxland, and others, which charges the said Annie Quilkey never had any opportunity of rebutting.

Miss Fairbairn having denied the truth of the charges, the Board proceeded to make inquiry. A number of sittings were held at the Board's office and at the Callan Park Asylum, and a large amount of evidence was taken, the notes of which are forwarded herewith.

The Board, after very carefully considering the evidence, came to the following conclusions, which were delivered in open Court before the persons concerned on the 12th instant, viz.:—

1. That Miss Fairbairn is guilty of charges Nos. 2 and 3 preferred against her.
2. With respect to charge No. 1, the Board are of opinion that Nurse Bessie Smith did forcibly administer pepper, salt, and water to the patients without the knowledge of the Medical Superintendent, and contrary to the Regulations; but they are satisfied the Matron did report the matter to the Medical Superintendent, as in her evidence she states she reported it, which evidence is corroborated by Dr. Blaxland. Nevertheless, the Board think that when Miss Fairbairn did make her report, she did it in such a way as to lead the doctor to believe it was a conspiracy on the part of the nurses to injure Nurse Smith, and thus prejudice his mind before he held the inquiry. The Board feel confident that if Dr. Blaxland had heard all the nurses' statements, he would have arrived at the same conclusion as they have.

With

With respect to charge 4, there can be no doubt that the Matron used her influence to obtain the dismissal of Annie Quilkey, but there is no proof that false charges were made. In the opinion of the Board no proper investigation was held in Nurse Quilkey's case, and the charge of impertinence, even if proved, is not an offence that should be visited with the extreme penalty of dismissal. This dismissal, in compelling her to leave the Institution on the afternoon she received notice, was unnecessarily harsh.

The Board now desire to make the following recommendations:—

1. With regard to the Matron, Miss Fairbairn, the evidence given at the inquiry, and the report furnished by Dr. Sinclair, show that Miss Fairbairn should not be continued in the position of Matron. As she has been a long time in the Service, and appears to have done good work in the past, she might be leniently dealt with and allowed to resign. We understand that she is not a contributor to the Superannuation Account.

2. With regard to Nurse Elizabeth Smith, the evidence clearly shows that she is not a suitable person to be placed in charge of insane patients. She appears to be cruel, and to have an ungovernable temper, which leads her to make use of language of a very objectionable character. We therefore advise her immediate removal from the Institution. The power of such removal is in the hands of the Inspector-General of Insane.

3. It was proved at the inquiry that extravagance, waste, and misappropriation of Government stores have been going on for a considerable time without being detected by Mr. Whitting, the Officer-in-charge. The Board are of opinion that Mr. Whitting has been culpably negligent, and recommend that Mr. Brodie, Chief Inspector of Public Accounts, be authorised to make a thorough investigation into Mr. Whitting's work.

4. The evidence leads us to the conclusion that there is some ground for the belief that female insane patients are sometimes treated with needless harshness, if not with positive cruelty. While a good Matron could do much to prevent this, more is required. We would advise that lady inspectors, empowered to visit the wards at any time, day or night, be appointed. The ladies employed under the Factories Act, or in the Public Charities Department, might be made use of for this purpose.

With regard to Miss Quilkey, although so far as we are concerned she simply appeared as a witness in the inquiry, we think it would only be an act of justice that she should be reinstated in the Public Service. As it would be undesirable, for obvious reasons, that she should be reappointed to the Lunacy Department, a place might be found for her in one of the other Asylums, such as Newington.

An application has been made on her behalf by her solicitors, Messrs. Westgarth, Nathan, & Co., that she should receive compensation for the time she has been out of employment, and that her costs of and incidental to the inquiry should be paid. This matter appears to be one which should be dealt with by the Government, but we think that she is fairly entitled to be allowed any reasonable costs to which she may have been put.

C. DELOHERY,

Member of the Public Service Board.

F. BRIDGES,

Deputy Member of the Public Service Board.

Before taking action on this report, I think the whole of the papers should be referred to Dr. Sinclair for any remarks he may desire to make.—C.W., 18/7/1900. Approved.—J.S., 18/7/1900.

The Matron, Callan Park Asylum, to The Principal Under Secretary.

Sir, Callan Park Asylum, Matron's Department, 17 July, 1900.

I have the honor to state, in view of the findings of the Public Service Board on the subject of the charges made against me by Annie Quilkey, lately employed as a nurse here, that it is impossible for me to continue to act as Matron of the Hospital, and to exercise a proper control over the nurses in this Department.

I accordingly request that I may be retired either immediately or subject to such leave of absence as the Executive Council may see fit to grant.

At the same time I beg to forward herewith a letter of protest against the findings of the Public Service Board, which I would respectfully request leave to have submitted to the Executive Council.

I would also respectfully bring under your notice my sixteen years' faithful service under the Government, including nearly fifteen years at Callan Park, dating from the opening of the Hospital, and the favourable reports of my work, which I am confident my superior officers will give.

I have, &c.,

M. A. FAIRBAIRN.

Dr. Sinclair.—H.B., 17/7/1900. The Principal Under Secretary.—E.S., 17/7/1900. Submitted.—C.W., 20/7/1900.

[Enclosure.]

His Excellency the President and the Members of the Executive Council of New South Wales.

Your Excellency and Honorable Gentlemen,—

I have the honor in forwarding my resignation, which accompanies this letter, to address you on my own behalf with regard to the judgment or decision of the Public Service Board and their report and recommendation upon the inquiry recently held into certain specific charges preferred by one Annie Quilkey against me as Matron of the female division of the Callan Park Asylum for the Insane.

With regard to the first charge, I crave leave to point out that the evidence of the complainants as to the alleged assault by Nurse Bessie Smith was very contradictory; that the two nurses (Quilkey and Wills), who first laid before me the allegation that noxious ingredients had been administered to the patients, contradicted each other in the statements which they then made to me, and that one point upon which they were then agreed, viz., that the alleged offence was then at least a fortnight old, they totally denied when before the Board, and then swore positively that the first such assault had been committed upon the 31st day of January of this year, and that they reported to me on the following day; that only one of the patients (Emma Rowe), upon whom the alleged assault was said to have been committed, was in a fit condition of health to be questioned upon the subject at the time, and when so questioned she most emphatically denied that such a thing had ever taken place; that in reporting the matter to the Medical Superintendent, I was bound to give him all the information which I had collected upon the subject.

I have at all times found it very difficult to ascertain the exact truth regarding any complaint by one nurse against another, and it has very frequently happened that my efforts to arrive at the truth of the complaint have been thwarted by a conspiracy of silence or denial on the part of those nurses who were able to afford information. It has not infrequently happened that a serious misdemeanour on the part of a nurse has been effectually concealed until long after the culprit had left the Institution.

That the Resident Medical Superintendent of the Institution (Dr. Blaxland) is firmly convinced, after hearing all the evidence, that an assault committed in the manner described by the witnesses for the prosecution is a physical impossibility, and I believe that the Inspector-General holds the same opinion.

As regards charge No. 2, it was not even pretended by the witnesses for the prosecution that the alleged assault, the subject of this charge, was of a serious character; indeed, it was admitted by all the witnesses that the mug with which this alleged assault was alleged to have been committed was a small vessel used for administering medicine to patients; that the alleged blow was not severe; and that if it were given at all it caused no mark or bruise to appear upon the patient's face; it was alleged, and not contradicted, that I reprimanded Nurse Bessie Smith at the time for what appeared to me at the most an act of negligence, or rather an absence of due gentleness, than a deliberate assault, as now sworn to by the witnesses for the prosecution. It was proved in evidence that I reported the occurrence to the Medical Superintendent on the same day on which it occurred, and that the immediate effect of such report was that glass vessels were substituted for mugs previously supplied to the wards as the means for administering medicine to patients.

Upon the subject of charge No. 3, I would point out that my duties as Matron consist in the general supervision of the Nursing Staff of the Institution, and in seeing to the comfort and welfare of the patients, but do not extend to the superintendence of the domestic affairs of the Institution or any part of it, nor to the supervision of the housekeeper appointed by the Government to attend to the quarters of the Matron and the Junior Medical Officer of the Institution.

It was shown in evidence that the Matron and the Junior Medical Officer were both entitled to supply of fuel from the Institution for use in their respective offices, also that the housekeeper (Maria McNulty) was entitled to a supply of fuel for her own use, and that she suffered a regular deduction from her wages on that account. It was also clearly shown that the laundry yard was the most convenient place from which the necessary supplies of fuel for the purposes named were to be procured, and that no other provision for such supplies were made. It was not proved that more fuel than was necessary for all the purposes aforesaid had actually been carried into my office, or into or through the precincts of my quarters. It was alleged, and not denied, that during the last twelve months only one fire (and that a wood fire) had been burned in my private rooms. It was proved that the housekeeper (Maria McNulty) had the authority of the Junior Medical Officer to order, in his name, all fuel which she required for his and my quarters (except for use in our respective offices), and that the bills for fuel so ordered were always duly paid by myself and the Junior Medical Officer in equal shares.

As regards the food mentioned in this charge it was admitted by the witnesses for the prosecution that such food as was alleged to have been taken to the housekeeper's quarters was principally surplus food from the nurses' dining-room. It was also admitted that upon all occasions the nurses had an ample supply for their own use without regard to such food as was alleged to have been brought to the housekeeper's kitchen. It was not proved that the food brought from the patients' ward was more than sufficient for the use of the patients employed in and about the quarters. If the evidence of the witnesses for the prosecution upon the charge relating to food is reliable, food was brought from the nurses' dining-room into the housekeeper's quarters, or into the quarters of myself and the Junior Medical Officer in daily quantities, amply sufficient for the necessities of a family of upwards of twelve persons, while, at the same time, it was sworn and not denied that sufficient food for my own personal requirements was regularly brought by the housekeeper and paid for by myself, and I particularly desire to point out that if the evidence of the witnesses for the prosecution on the food question is not reliable, or even if it is merely exaggerated, their evidence upon all the subjects of this inquiry ought to be treated with grave suspicion.

Begging your favourable consideration of the foregoing matters, and, without wishing in any way to reflect upon or criticise the members of the Public Service Board, I desire to respectfully protest against the conclusions at which they have arrived.

I have, &c.,

M. A. FAIRBAIRN.

The Inspector-General of Insane to The Principal Under Secretary.

Lunacy Department, Inspector-General's Office, Gladesville, 19 July, 1900.

REMARKS on Report by Public Service Board on an inquiry held by them into charges made against Miss Fairbairn, Matron of the Hospital for the Insane, Callan Park.

1. The recommendation as to Miss Fairbairn's resignation I concur in.
2. When the charges against Nurse Smith were first brought under my notice, in an inquiry held with reference to the conduct of the Matron, I did not consider the evidence adduced so far above suspicion as to justify any immediate action with regard to her; but in view of the fact that the evidence against her adduced by the Board has been accepted by it without question, and was fuller in some particulars than that brought out at my inquiry, which did not deal directly with the charges now brought against this nurse, I deem it advisable that she should be dismissed from the Service, and have accordingly ordered her dismissal.
3. I see no objection to an investigation by Mr. Brodie into Mr. Whiting's work. I have already reported in regard to this officer, but will be prepared to make further recommendations if necessary, on the conclusion of Mr. Brodie's investigation.
4. This part of the report as it stands might give the impression that female insane patients are frequently treated with harshness or cruelty. This is not the case, and I would point out that the evidence before the Board does not warrant such an assumption. Their conclusion appears to be based on charges 1 and 2, that Nurse Smith on one occasion administered a mixture of pepper, salt, and water to certain patients, and on another occasion struck a patient under the chin with a medicine mug. These two instances alone were given, even though the accused nurse is one whom the Board characterises as cruel and of ungovernable temper, and, it may be assumed therefore, one who would frequently have committed similar actions. Were it other than a very exceptional occurrence, surely nurses actuated by personal feeling towards a charge-nurse with the above temperament would have been able to instance other occasions during the years they were associated with her in the wards. No instance of cruelty or even harshness to patients on the part of other nurses was mentioned. The evidence as to the alleged assaults was contradictory and not by any means satisfactory, and I found was not supported but rather denied by patients present.

It is well understood that cruelty or harshness to patients is followed by severe punishment or dismissal, and as there is generally no great difficulty in obtaining evidence of it from intelligent patients who may witness the action as well as from those who may suffer, the continuance in the Service of a habitually cruel nurse is practically impossible. Patients' complaints are always listened to, and, if necessary, inquired into.

The Lunacy Act provides for inspection by official visitors, and if additional inspection by ladies is deemed desirable, an appointment should be made to the Board of Official Visitors. The appointment of lady inspectors, as recommended by the Board, I cannot agree with, and the objections to such a change are numerous and strong. Chief among these is the question of discipline, which, it is apparent, would be endangered by the introduction of ladies with the authority of inspector but without the responsibility which attaches to an officer of a department.

As

As to Miss Quilkey, I agree with the Board that it would be undesirable to reappoint her to the Lunacy Department, her unsuitability for employment therein having in my opinion been fully shown.

ERIC SINCLAIR,
Inspector-General of the Insane.

Submitted for the perusal and decision of the Chief Secretary.—C.W., 24/7/1900.

Minute by the Colonial Secretary.

Subject :—Report of Board of Inquiry into certain charges made against the Matron, Hospital for the Insane, Callan Park.

Sydney, 24 July, 1900.

In the matter of the inquiry conducted by the Public Service Board, under section 51 of the Public Service Act, into certain charges against Miss Fairbairn, Matron of the Callan Park Hospital for the Insane, I generally concur in the finding of the Board.

The appointment of lady inspectors cannot legally be done, but I purpose, under the 56th section of the Lunacy Act, appointing two Lady Official Visitors, who will act in conjunction with the Members of the Board of Visitors already appointed.

Miss Fairbairn having resigned, her resignation will be accepted.

Steps will be immediately taken to have an examination of the accounts made as suggested, and the Public Service Board have been requested to find employment in another institution for Miss Quilkey.

I am informed that Miss Bessie Smith has been removed by the Inspector-General of the Insane from her position.

JOHN SEE.

Minute Paper for the Executive Council.

Subject :—Accepting resignation of Miss M. A. Fairbairn, as Matron, Hospital for the Insane, Callan Park.

Chief Secretary's Office, Sydney, 24 July, 1900.

I RECOMMEND for the approval of His Excellency the Governor, with the advice of the Executive Council, that Miss M. A. Fairbairn's resignation of her position as Matron of the Hospital for the Insane, Callan Park, be accepted, to take effect as from the present date.

JOHN SEE.

The Executive Council approve of the acceptance of Miss Fairbairn's resignation.—ALEX. C. BUDGE, Clerk of the Council.—Min. 31; 24/7/1900. Approved.—B., 24/7/1900.

The Principal Under Secretary to The Inspector-General of Insane.

Sir, Chief Secretary's Office, Sydney, 24th July, 1900.

I am directed by the Chief Secretary to inform you that His Excellency the Governor, with the advice of the Executive Council, has approved of Miss M. A. Fairbairn's resignation of her position as Matron, Hospital for the Insane, Callan Park, being accepted, to take effect as from the present date.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

[A similar communication, on the same date, was addressed to The Secretary, Public Service Board.]

Public Service Board Inquiry.

AT 11 a.m. on Saturday, 16th June, 1900, the Public Service Board initiated an inquiry, under Section 51 of the Public Service Act, into certain charges against Miss M. A. Fairbairn, Matron, Callan Park Hospital for the Insane.

Present :—Mr. C. DELOHERY, Member of the Public Service Board (in the Chair); Mr. F. BRIDGES, Deputy-Member of the Public Service Board.

Mr. Robert Smith appeared on behalf of Miss Fairbairn.

Mr. A. W. Nathan appeared on behalf of Miss Quilkey, by whom the charges were made.

Miss Fairbairn and Miss Quilkey were also present in person; also Dr. Sinclair, Inspector-General of the Insane, and Dr. Blaxland, Medical Superintendent, Callan Park Hospital.

Mr. H. L. Ellis was sworn to faithfully take and transcribe notes of evidence, &c.

Mr. Nathan : I would like to mention that I have been away ill for a few days, and somebody telephoned to my partner about this matter, and asked if we would formulate the charges. Well, I presume that this inquiry is, first of all, whether Miss Quilkey was properly dismissed.

Chairman : No; that is not it at all. She preferred certain charges against an officer of this Institution. We want to know what those charges are. She lays the information, and we ask the party how she pleads, and then there is an inquiry held. We want you to formulate your charges.

Mr. Nathan : I cannot formulate these charges this morning. I would suggest that this matter stand over for a certain term, and I will formulate the charges and send them in to the Board as soon as possible, so that the other side may have the opportunity of seeing what they are. We do not wish to take them by surprise.

Chairman : When can you get them ready?

Mr. Nathan : I will try to get them ready by Monday.

Chairman : We will have to get Miss Fairbairn's plea before we hold an inquiry.

Mr. Nathan : If the matter could stand over for a week it would be advisable, I think.

Mr.

Mr. Bridges: Could you formulate the charges so that we could open the inquiry, say, on Thursday, and then, if the charges are denied, for the inquiry to be held, say, Monday week? Of course, it is one of those things that should not be held over any longer than is necessary.

Mr. Smith: If you could do it by Monday —

Mr. Nathan: Is not the Court going to inquire into the question of whether Miss Quilkey was wrongfully dismissed or not?

Chairman: No; that is not the inquiry at all. She makes certain charges against an officer of the Institution.

Mr. Nathan: But does not that come out in the same matter?

Chairman: No; we have nothing to do with that at present.

Mr. Nathan: But would it not be saving the time of the Court to go into it now?

Chairman: No.

Mr. Nathan: The two seemed to me to be so inseparably connected together that I thought you could go into it.

Dr. Sinclair: The Board has no jurisdiction in the case of Miss Quilkey's dismissal; she is appointed under the Lunacy Act.

Chairman: Thursday morning, at 11 o'clock. Complainant and Mr. Nathan need not necessarily be here; it will be only to take the pleas.

Mr. Smith: The inquiry will have to be held at the Institution?

Chairman: Yes; Mr. Bridges will take it?

At 11 a.m. on Thursday, 21st June, 1900, the adjourned inquiry, under section 51 of the Public Service Act, into certain charges against Miss M. A. Fairbairn, Matron, Callan Park Hospital for the Insane, was resumed at the office of the Public Service Board.

Present: Mr. C. DELOHERY, Member of the Public Service Board (in the Chair). Mr. F. BRIDGES, Deputy Member of the Public Service Board.

Mr. Robert Smith appeared on behalf of Miss Fairbairn.

Mr. A. W. Nathan appeared on behalf of Miss Quilkey, by whom the charges were made.

Miss Fairbairn and Miss Quilkey were also present in person.

Mr. H. L. Ellis was sworn to faithfully take and transcribe notes of evidence, &c.

Mr. Smith: In reference to the letter dated 18th instant, addressed to the Public Service Board, and signed by Westgarth, Nathan, & Co., we will admit those charges as having been read. [*Mr. Smith here read the charges, a copy of which is attached, marked Exhibit 1.*] No. 1 charge is—

"That patients in the said Hospital for the Insane having been physically assaulted by one Bessie Smith, a nurse in charge of No. 4 Patients' Ward, by having forcibly administered to them noxious ingredients without the knowledge of the Medical Superintendent, and contrary to the Regulations of the said Hospital for the Insane, when the facts were brought under [the notice of the said Matron, the said Mary Ann Fairbairn, she neither reported, reprimanded, or interfered with the conduct of the said Bessie Smith."

Miss Fairbairn pleads "Not guilty" in answer to that. The 2nd charge is—

"That the said Bessie Smith physically assaulted one patient in the said Hospital for the Insane, to wit, Jane Downey, by striking her on the face with a delf mug in the presence of the said Matron, the said Mary Ann Fairbairn, and the said Matron neither reported, reprimanded, or in any way interfered with the said Bessie Smith."

To that charge Miss Fairbairn pleads "Not guilty." Charge 3—

"That the said Matron, Mary Ann Fairbairn, has appropriated to her own use, contrary to the Regulations of the said Hospital for the Insane, fuel and food intended for the patients and nurses of the said Hospital for the Insane."

To that charge Miss Fairbairn pleads "Not guilty," and she asks for particulars of the days and dates, and of the fuel and food referred to. I do not ask the proceedings to be delayed; but in the former charges the particulars are given, and of course the particulars have to be given, or it is utterly impossible to answer the charges. If the particulars are not given, it is only a roving commission.

Chairman: The particulars will be given as the evidence is given, and then, if you want an adjournment for refuting the charges, it will be granted.

Mr. Smith: Of course, I could not cross-examine a witness unless I know what she is going to say. Witnesses could just swear to anything they liked if they do not give me days and dates. I must have days, dates, and persons.

Mr. Nathan: I will not give you days, dates, and persons at present.

Chairman: I suppose she cannot give you every day the fuel was used.

Mr. Smith: I do not want every day. If I get one day—Miss Fairbairn cannot make inquiries unless the dates are given. This charge is obviously worded in a manner that, if it was a charge for conspiracy or for anything else, she would have to give particulars.

Mr. Nathan: There have been dozens of occasions.

Mr. Smith: You should give me the particulars of the alleged offence. You must give the particular offences. The 4th charge:—

"That the said Annie Quilkey having truthfully reported the above-mentioned facts to the Superintendent of the said Institution, Dr. Blaxland, the said Matron, Mary Ann Fairbairn, was instrumental in obtaining the dismissal of the said Annie Quilkey from her position as a nurse in the said Institution by making false charges against the said Annie Quilkey to the Superintendent, Dr. Blaxland, and others, which charges the said Annie Quilkey never had any opportunity of rebutting."

Miss Fairbairn pleads "not guilty" to that; and upon that subject I would point out that if No. 4 is confined to the particular cases referred to in No. 3, then there can be no difficulty in giving days and dates—I mean they can have no difficulty. They say that "having truthfully reported" the said cases, Mr. Nathan will see that, so far as charge 4 is concerned, it purports to say that the particulars of No. 3 have been furnished to Dr. Blaxland.

Mr.

Mr. Nathan : We do not say that ; that charge does not mean that.

Mr. Smith : What facts ? You say " the above mentioned facts."

Mr. Nathan : That does not confine me to them. If I can prove it by twenty witnesses, that the thing has been done—

Mr. Smith : Will you let me have by Saturday such particulars as you are prepared to give of the third charge ? I ask particulars of the fuel, and the food, and the days, and the dates, and the persons. I only ask such particulars as you are prepared to give.

Mr. Nathan : If I am prepared to give you any, I will give them by that date. I do not want to bind myself at present to give any particulars.

Chairman : About the place. It would be more convenient to have the inquiry here. What do you say ?

Mr. Nathan : It will be more convenient for us to come here.

Chairman : You will give the names of the witnesses you want to Mr. Holliman. Adjourned till Monday, at 10 o'clock, here.

A FURTHER sitting of the Court of Inquiry upon the charges formulated by Annie Quilkey against the Matron (Miss Fairbairn) of the Callan Park Asylum for the Insane, was held in the Board Room, Youngstreet, on Thursday, 12th July, 1900, at 2.15 p.m.

Present : Messrs. DELOHERY (Chairman), and BRIDGES, Members of the Public Service Board.

Mr. Nathan (Messrs. Westgarth and Nathan), representing Miss Quilkey ; *Mr. Russell* (instructed by *Mr. H. Smith*), representing the Matron. *Dr. Blaxland*, Miss A. Quilkey, and the Matron (Miss M. A. Fairbairn) were also present in person.

The Chairman : This matter was adjourned till to-day for our judgment. After carefully considering all the evidence given in this inquiry, we have come to the following conclusions :—

1. That Miss Fairbairn was guilty of charges Nos. 2 and 3 preferred against her.

2. With respect to charge No. 1, we are of opinion that Nurse Bessie Smith did forcibly administer pepper, salt, and water, to the patients without the knowledge of the Medical Superintendent, and contrary to the Regulation ; but we are satisfied that the Matron did report the matter to the Medical Superintendent, as in her evidence she states she reported it, which evidence is corroborated by *Dr. Blaxland*. Nevertheless, we think that when Miss Fairbairn did make her report, she did it in such a way as to lead the doctor to believe it was a conspiracy on the part of the nurses to injure Nurse Smith, and thus prejudice his mind before he held the inquiry. We feel confident that if *Dr. Blaxland* had heard all the nurses' statements, he would have arrived at the same conclusions as we have.

With respect to charge 4, there can be no doubt that the Matron used her influence to obtain the dismissal of Annie Quilkey, but there is no proof that false charges were made. In our opinion, no proper investigation was held in Nurse Quilkey's case, and the charge of impertinence, even if proved, is not an offence that should be visited with the extreme penalty of dismissal. This dismissal, in compelling her to leave the Institution on the afternoon she received notice, was unnecessarily harsh.

All matters arising out of the decision which we have arrived at, with our recommendations thereon, will be submitted to the Cabinet.

Mr. Russell : Might we be supplied with a copy of the decision of the Court ?

The Chairman : Yes. The whole of the evidence and the decision will be furnished.

Mr. Nathan : I also would like a copy of the notes of evidence and your judgment.

The Chairman : We will supply a copy of the decision before the evidence ; it will take some time to typewrite the whole of the evidence.

The Court closed.

PUBLIC SERVICE BOARD INQUIRY.

AT 11 a.m. on Monday, 25th June, 1900, the adjourned inquiry, under section 51 of the Public Service Act, into certain charges against Miss M. A. Fairbairn, Matron of the Callan Park Hospital for the Insane, was resumed at the Hospital library.

Present :—*MR. C. DELOHERY*, Member of the Public Service Board (in the Chair) ; and *MR. F. BRIDGES*, Deputy Member of the Public Service Board.

Mr. Russell, instructed by *Mr. R. Smith*, appeared for Miss Fairbairn, Matron of the Hospital ; *Mr. Cargill*, of the Crown Law Offices, appeared on behalf of the Colonial Secretary's Department, to watch the proceedings ; and *Mr. Nathan* appeared for Miss Quilkey.

Miss Fairbairn and Miss Quilkey were also present in person.

Dr. Sinclair, Inspector-General of the Insane, and *Dr. Blaxland*, Medical Superintendent of the Callan Park Hospital, were in attendance.

Mr. E. W. Hine was sworn to faithfully take and transcribe notes of evidence, &c.

The Chairman : Would you like to have the charges read ?

Mr. Russell : Yes, sir. [*The charges set out in "Exhibit 1" were read.*]

The Chairman : To those charges *Mr. Smith* has pleaded "not guilty."

Mr. Nathan : I must ask that *Dr. Blaxland* be not allowed to remain in court during the hearing of this inquiry.

Argument heard ; and the Chairman decided that *Dr. Blaxland* should be permitted to remain.

Margaret Cahill sworn and examined :—

Mr. Nathan : What are you, Miss Cahill ? I am a nurse.

How long have you been connected with the Callan Park Asylum ? About seven years, on the 6th of last April.

First of all, let me ask you how long it is since the retrenchment ? Just about four years.

Since the retrenchment, have you seen coal taken from the female coal-house ? From the laundry-yard coal-house, on the female side.

Have you seen it taken to the Matron's quarters ? Yes.

Have

Have you seen that done frequently? Yes; I have seen it almost every day I have been on duty.

The Chairman: How often are you on duty? I am absent three days in the month.

Mr. Nathan: How was this coal taken into the Matron's quarters? It was taken in buckets.

Through the nurses' dining-room? Yes; through the sitting-room. There is a passage in the nurses' quarters, and it used to go through there.

And was taken to the Matron's quarters? Through the Matron's office, to the kitchen, and to her sitting-room.

Prior to the retrenchment, how used coal to be delivered at the Matron's quarters? I have seen it come in a cart; it was put down through a hole in the front verandah into the cellar.

That is the hole outside the pantry window? Yes.

It was brought a load at a time, and put down the coal-hole into the cellar at the Matron's quarters? Yes.

What quantity of coal did you see taken along from the laundry-yard? Two buckets at a time.

Was that in the morning? Yes; I have seen it almost all through the day; on several occasions during the day; it generally came in the morning and evening.

Did you see that in the summer as well as winter? Yes.

I believe that on several occasions you have relieved the Matron's housemaid or housekeeper? Yes.

Will you tell me how often, and for how many days at a time you did that? On one occasion I relieved for six days; on another occasion four days.

That is four days together? Yes.

Any other times? Yes; three or four single days in the month.

During the time you were relieving the housemaid, where did you get the coal from? From the coal-house in the laundry-yard; I do not know of it coming from anywhere except that place. Sometimes when I came down in the morning I found coal in the Matron's bath-room, or at the top of the stairs, or in the kitchen in buckets.

Was it always in buckets? Yes.

Did you, during the time you were relieving, use any coal from the cellar? No.

Did you send for coal yourself during that time? Yes, I did, because there was none left for me.

Did you, yourself, send patients to this coal heap for it? Yes; and they often went for it without my sending them.

Under whose instructions did you send for it? The Matron's housekeeper.

What is her name? Maria McNulty.

She told you? Yes. I have been present when she sent patients.

Did you use that coal in the Matron's kitchen? Yes, and also in the sitting-room when there was a fire there.

Was the Matron aware of that? Well, on one occasion I was called into the Matron's office; I was then working in the nurses' dining-room, and at that time the nurses used to send coal to the Matron's quarters. The housekeeper told the Matron I had not sent any coal, and I was sent for and reprimanded, and told to send it in.

That was the Matron herself? Yes.

Did you use the coal in the kitchen under the Matron's instructions? No.

Was she there when you were using it out of the buckets? She might have been; I cannot say; she has been in the kitchen, but I cannot say that I was putting on coal when she was there.

That is the only coal you used while you were there? Yes.

Is the Matron's coal-cellar kept locked? It was when I was there.

Have you seen coal at the top of the stairs, in buckets, taken down to the kitchen? Yes.

Who ordered that to be taken down? The Matron ordered me on one occasion to move it from the top of the stairs.

Did she say where you were to put it? No.

Did McNulty tell you? She told me to keep it down in the kitchen.

On the occasion you refer to, when the Matron reprimanded you for not having sent coal there, was it the practice to bring in coal at night and leave it standing in the passage near the nurses' quarters? Yes; and then it was brought in in the morning.

Was it for neglecting to bring in coal in that way that you were reprimanded? No; it was in reference to coal not being brought to the Matron's quarters.

You were reprimanded because there was no coal to cook the breakfast with? Yes; and I was told to send some in.

How long ago would that be? It may be two years or a year; I cannot exactly say.

Between a year and two years—that would be a fair time to put it? Yes.

Did the Matron reprimand you on any other occasion for not having coal there? That was the only time I was reprimanded.

Have you sent meat from the nurses' dining-room to the Matron's quarters? Yes.

Frequently? Yes, almost every day I worked there.

And how long did you work there? I worked there for two months on one occasion; that was when the dining-room was opened; it was not made the practice to send it every day then—only occasionally.

When the nurses' dining-room was first opened it was not the custom to send meat every day to the Matron's quarters? Yes.

Later on did it become a daily occurrence? Yes.

What quantity was sent? Sometimes one, sometimes two.

A joint at a time, or two joints? Yes.

And vegetables? No.

Any other luxuries? No.

What about milk, butter, and bread? Milk, butter, and bread were sent.

Used you to take them yourself? No; I sent them by one of the patients.

You sent milk, butter, and bread to the Matron's quarters? Yes.

Where did they come from? From the nurses' quarters.

Did you not take these provisions yourself sometimes? Not that I remember.

What quantities of milk, butter, and bread were sent down? There might have been a quart of milk, a loaf of bread, and about half a pound of butter.

At

At a time? Yes.
 Was that a daily occurrence? Yes.
 The meat sent from the nurses' dining-room—was that taken straight to the Matron's quarters?
 It was put in her pantry.
 Have you seen it used there? Yes.
 Have you yourself put the meat on the Matron's table? Yes.
 Were you at any time working in No. 5 ward? Not within the last two years.
 When you were working there did you see any provisions go to the Matron's quarters? Not that I remember; I was only working on occasions in No. 5.
 Did you at any time see any fowls going down from any of the wards to the Matron's quarters? No. I have received a fowl in the Matron's quarters.
 When you were relieving the housekeeper used chickens to come down from the wards? On one occasion some fowl and a jug of broth were brought down; the nurse said they were for the Matron. I had served her at the time, and I did not put them on her table.
 What did you do with them? I left them in the pantry.
 You do not know what became of the provisions? No.
 Had that sort of thing been going on for some time? I only saw fowl on one occasion.
 Were milk, bread, and butter frequently taken to the Matron's quarters? Yes.
 You saw them frequently going down? Yes; frequently going from the various wards to the Matron's.
 Occasionally, I understand, one or two patients were working at the Matron's quarters? There were nearly always two patients working there.
 Where did they get their meals? They usually had them in the Matron's quarters.
 Were they supposed to have meals in the Matron's quarters? I do not know.
 Food was always sent for them? Yes, from No. 5 ward.
 Those patients are not supposed to get food from the nurses' quarters, are they? No.
 Did the food sent down for the patients consist of more or less than the usual allowance? They did not eat it all in one meal.
 Can you tell me, knowing what the allowance for each patient is, whether the food sent down was more than enough for the patients working there? Yes, it was more than they are allowed.
 Was any of it returned to the ward? No.
 Do you remember on any occasion getting instructions from the Matron to ask Nurse Flannery to give you something; if so, what was it? On one occasion she told me to get some tea and sugar from Nurse Flannery to take up the mountains.
 I believe the Matron has a country residence at Katoomba, or some property there? Yes.
 She told you to get these provisions? Yes.
 What did you get on that occasion? Some tea and sugar.
 What quantity of tea? I cannot say exactly; it might have been a pound or 2 lb.
 And how much sugar? About the same of sugar.
 Did you take that? Yes.
 How long ago was that? About eighteen months ago.
 Since the row, have any coal or provisions been going to the Matron's quarters? No.
The Chairman: When was this row to which you refer?
Mr. Nathan: It was in March last.
Mr. Bridges: What was the row;—was it connected with Miss Quilkey?
Mr. Nathan: Yes. Certain charges were made, and there was an inquiry.
Mr. Bridges: That was the row?
Mr. Nathan: Yes. (*To witness*) Since March, you say, no provisions have gone from the nurses' quarters or from the wards to the Matron's quarters, and no coal? No.
 The whole thing has been stopped? Yes.
 Have you any ill-feeling against the Matron at all? No.
 What sort of a person is Miss Quilkey;—is she a respectable woman? I do not know; I know nothing wrong about her myself.
 Do you, on any occasion, remember receiving instructions from the Matron about some rice and sago? Yes.
 How long ago was that? I cannot say; it may be two years ago.
 Tell us about the incident;—did the Matron give you instructions to get some rice and sago? Yes, and I went to No. 5 ward and got it from Nurse Susan McLean, who was in charge.
 You got the rice and sago? Yes.
 What did you do with it? I brought it down to the Matron's pantry, and the housekeeper took it; put it into pie-dishes, and served it at the Matron's table.
 Had the Matron visitors at the time? Yes.
 Do you remember who they were? No, I do not.
 Has the housekeeper told you what it costs the Matron to live? She told me that it only costs her a few shillings per month.
 I think you said you were not in No. 5 ward for more than two months? I cannot say I was two months.
 Tell me, from which wards did you see provisions going to the Matron's quarters? From Nos. 4, 3, and 1, and also No. 5. I have been sent by the Matron's housekeeper to No. 5.
 It was a regular thing that these provisions went down? Yes.
Mr. Russell: There were two occasions on which you were for some consecutive days in charge of the Matron's housekeeping? Yes; I was six days on one occasion, and four days on the other.
 When was that? I cannot give you the exact time; it is within two years.
 Was it later in point of time than these other things you have mentioned? They have all happened within two years, and before.
 You said it was Miss McNulty who instructed you to send for coal? Yes; but the Matron was aware of it.
 Do you know that she was aware of it? Yes, because I was reprimanded on one occasion for not sending it in.
 Which

Which coal was that? The coal that comes from the laundry-yard.
 No coal comes now, you said? No.
 Does the Matron have a fire in the office? Yes.
 Where does the coal come from for that? The nurse working in the dining-room attends to that fire. I suppose she brings it from there, but I have not seen it come.
 You have not seen the coal coming since the row? No.
 Was it two years ago that the Matron's coal-cellar was kept locked? It has been for four years—ever since I have been working down there.
 During the period of two months you yourself sent meat from the nurses' dining-room to the Matron's quarters? Not every day.
 But occasionally during those two months? Yes.
 How long ago was that;—was it more or less than two years ago? I cannot say; it might be more than two years.
 What part of the Hospital were you working in at the time? In the nurses' dining-room.
 When were you in charge of the nurses' dining-room? I cannot say how long ago.
 Are you in charge of it now? No, I am not.
 How long ago is it since you ceased to be in charge? It is about six months since I relieved there.
 You were not relieving for the two months, were you? Yes, I did on one occasion; I do not know how long it is since that.
 Was it on that occasion you sent the meat down? Yes.
 It was not while you were regularly in charge? Yes, I was in charge; there was no one else there.
 I want to distinguish between being regularly in charge and temporarily in charge? It is six months since I was last in temporary charge; it must be two years ago that I was in charge for two months.
 You stated that the quantities of provisions sent from the wards were a loaf of bread, a quart of milk, and some butter;—did you yourself pack up those quantities? No, the patient did that, and took them down.
 Where from? From the nurses' pantry.
 Can you mention the name of the patients who did that? Mrs. Marshall was one.
 Were you in the pantry at the time? Yes.
 Did you see them go to the Matron's? Yes. I have been working in the Matron's quarters, and received the milk and butter from the nurses' dining-room from the patients.
 You have seen the patients take these quantities of provisions away from the pantry? Yes.
 Did you on that occasion see them come into the Matron's room? Yes; I can see from the nurses' quarters to the Matron's quarters.
 Did you usually watch? I generally looked out to see that the patients were all right; they were in my charge.
 When a patient goes with a message, do you generally watch to see that she is all right? Not as a rule.
 When coal was taken did you see it come from the laundry-yard? Yes; I have seen it coming through the nurses' dining-room.
 Did you watch the patients from the window in the same way, then? I do not know.
 You did not see where the coal went on those occasions? No.
 But when food was taken you saw where it went? Yes; I have been there to receive it.
 That must have been on a different occasion; you would not on the same occasion be at both ends of the journey? No.
 You say that some of the patients who assisted at the Matron's quarters got their food there, and that it came from No. 5;—did I understand you to say that the patients were sent more than their allowance? Yes.
 Who would do that? The senior nurse in No. 5.
 When you say they were sent more than their allowance, you mean they were sent a quantity of food by the senior nurse in No. 5, which you considered was more than their allowance? Yes.
 The meat sent from the nurses' dining-room, was that cooked meat? Yes.
 It was not asked for and sent raw from the kitchen? No.
 You were nursed yourself in the Matron's quarters at one time? No.
 Have you been ill since you came here? Yes.
 Were you about the Matron's quarters at that time? Yes.
 Used you to be given food there? Yes; I have had my meals there.
 For some time? I did not have every meal; I often had dinner.
 Dinner, day after day for some time? No; not day after day.
 For how long would that be? I cannot say.
 More than a week, or more than a year? It was not more than a year.
 Did you continue to have meals there for more than a year? No.
 You were never nursed, you say? I was nursed in the sickroom of No. 5.
 Did Miss McNulty attend to you? Yes; so far as giving me something to eat.
 The food she gave you was that cooked on the stove on which the Matron's dinner, and the dinner of the junior medical officer was cooked? Yes.
 And on which the housekeeper's own dinner is cooked? Yes.
 The housekeeper cooks for herself there, I suppose; when you were acting there you cooked for yourself, did you not? No; I did not cook a special dinner for myself. As regards vegetables, I had what was left after the Doctor and the Matron had been served.
 The food Nurse McNulty gave you sometimes when you were ill, that presumably would be cooked on the Matron's stove? I suppose so.
 It was not cooked in the general kitchen? No.
 You are a fair cook, are you not? I think so.
 Did you learn from Nurse McNulty? Yes.
Mr. Nathan: I object to that question.
The Chairman: What bearing has the question on the injury?

Mr. Russell : I think it shows the extent to which this stove was used by McNulty, and by Nurse Cahill, or whoever was in charge.

The Chairman : Do you want to show that she had a right to take coal from the laundry-yard and use it in this stove ?

Mr. Russell : It might come to that. I think the housekeeper has her coal supplied by the Hospital ; she is charged for fuel by the Hospital, I understand.

The Chairman : If you admit coal was taken it will save a lot of trouble.

Mr. Russell : I think we might admit some coal has been used there. We of course admit that coal comes into the office regularly ; that the Matron's office fire is maintained altogether by coal brought from the laundry-yard.

Mr. Nathan : Was coal taken from there by the housekeeper to teach the nurses how to cook ?

Mr. Russell : That is not my argument.

The Chairman : You can ask the question, Mr. Russell.

Mr. Russell (to witness) : When McNulty taught you cooking was it on the stove in the Matron's quarters ? She did not teach me cooking ; she told me what I was to do.

The Chairman : Did you often use the stove ? Yes, I have used it when I relieved down there.

Mr. Russell : Your own dinner was cooked on the stove when you were relieving ? Yes. I did not cook a special dinner, I had what was left over from what was cooked for the Matron and the Doctor.

Where is your ironing usually done ? In the laundry.

Did you do any ironing ? No. I have asked the patients to do it on one or two occasions who were working for the Matron.

On whose stove ? On the stove in the Matron's quarters.

That was for you ? Yes.

Now as to the tea and sugar taken up the mountains ; you took those things up yourself ? Yes.

Were you going to stay there ? Yes ; I was staying there with another nurse.

You and the other nurse I suppose would be using that tea and sugar ? No, we had our own private things ; we had a grocer to call at the cottage.

Do you mean to say that you took tea and sugar up to the mountains, and bought other tea and sugar from a grocer for your own use ? Yes.

What nurse was staying with you at the time ? Nurse Wills.

Was there anyone else ? The Matron and a friend—her sister, I think, came up after.

You and Nurse Wills were there alone ? Yes.

The Chairman : In the same house ? Yes.

Mr. Russell : Was that cottage at Katoomba ? Yes.

Was it the Matron's cottage ? Yes.

Was McNulty there ? No ; not on that occasion ; she has been there with me.

But not on the occasion when Nurse Wills was with you ? No.

Mr. Nathan : Do not let us have any misunderstanding about this meat which used to come from the nurses' quarters to the Matron's quarters ;—you say you were in charge for two months ? Yes.

And during that time it went down every day ? Not every day during the time I worked there for two months.

Subsequently it went down every day ? Yes.

And it continued until the row began ? Yes. I have been in the dining-room waiting for dinner and I have seen it go down.

Right up to the time of the row ? Yes.

The only place coal comes from is the laundry-yard ? It has come from the engine-room also.

Now, about the patients' meals ; did they have all their meals there or only occasional meals ? They had all their meals before the row, but they do not now.

You say that the vegetables for the Matron and the Doctor were cooked on the stove in the Matron's quarters—the stove in the kitchen ; and that you used to get what was left ? Yes.

The meat you got—did that come from up-stairs ? The meat came from the nurses' dining-room.

It was put on the table up-stairs ? Yes.

You did not have the first cut at it ? No.

Are you perfectly clear that the tea and sugar you took to Katoomba was not used by Nurse Wills and you ? Quite. We called at the grocer's the night we went through.

And got what you required ? Yes ; we left an order.

Were you allowed to stay at the Matron's cottage for the sake of your health ? I had holidays.

Did you keep the cottage in order ? Yes.

Were other servants kept there ? No.

You kept the place in order after the Matron and her sister arrived ? Yes.

You went there beforehand ? Yes.

Mr. Russell : You went at the invitation of the Matron ? Yes ; and also at the invitation of Nurse Wills, who was renting the cottage. I paid £1 per week and she paid £1.

Mr. Nathan : When you went on this occasion, you did their work ; on other occasions you paid rent like anyone else ? Yes.

Mr. Russell : On this occasion we are talking about, were you not the guest of the Matron ? No ; I was there before her. It was £2 we had to pay for a fortnight ; we had been there ten days ; we only remained a week, and we went back to spend the remainder of the time.

You arranged that with the Matron ? Yes.

Mr. Nathan : When you stayed there, you did work ? Yes.

Mr. Russell : Who did you pay for the fortnight ? Nurse Wills.

You made no arrangements except to pay Nurse Wills ? Yes.

And you stayed—how long ? We engaged the house for a fortnight, and we remained ten days.

And then you went for four days ? Yes.

That was the occasion you took up the tea ? Yes.

You say you did not have the first cut at any of the joints sent down for your dinner ? Yes.

I suppose the joints sent into the Matron's pantry had been cut into in the same way ? The joints put on the Matron's table were sent from the nurses' dining-room.

They had been cut into ? No, they had not.

They

They had already been on the nurses' dining-table? No, they had not.

Who cooked those joints? They were cooked in the kitchen.

Which kitchen? The main kitchen.

The general kitchen? Yes.

Then they came down cooked and unhurt? Yes.

Is the cooking in the general kitchen as good as McNulty's? Oh, no.

Things come out of the general kitchen badly cooked, do they not? Sometimes.

The Chairman: Will you explain about the coal and the laundry-yard—what is that coal used for? It is used in the laundry and in the wards.

Has it anything to do with the Matron's quarters? Not that I know of.

Even for the Matron's office fire? I do not know. She is allowed coal for the office.

You say there is coal in the coal-cellar? Yes.

What is that for? I should think it was for the Matron's quarters.

Where is the coal taken from for the Matron's office? It is brought from the laundry-yard.

Not from the coal-hole? No.

You say the cellar was locked? Yes, it was. When I worked there before this trouble started.

Now a man comes in and gets the coal out.

Mr. Bridges: You say this meat was taken away in joints from the nurses' dining-table? Yes.

Who is responsible for the supplies to that table? Nurse Flannery.

It was Nurse Flannery's business, was it, to see that the food was ordered, that it was cooked and put on the table? I don't think she orders the food; it is ordered by Mr. Whitling.

Someone must know how much food has to be cooked?

Mr. Nathan: Might I explain: There is a certain allowance for each nurse; the food is cooked in the general kitchen and is sent to the nurses' dining-room; and our case is that the joints sent to the Matron's quarters came from the nurses' dining-room.

Mr. Bridges: I want to find out whether anyone was responsible for the quantity put on the table?

Witness: Nurse Flannery was the only one responsible.

Mr. Bridges: How about carrying the coal: Was there any concealment? No; there was no concealment; it was done openly, and so was the taking of the meat.

Everyone knew what was going on? Yes.

Mr. Nathan: Our case is that before the retrenchment the Matron could use as much coal as she liked. It was then put down the hole under the verandah into the cellar. After the retrenchment the coal was taken in buckets from the laundry-yard, and the cellar was not used.

Mr. Russell (to witness): Have you ever, since the retrenchment, seen coal put into the Matron's cellar? On one occasion.

Mr. Nathan: Since the retrenchment, or since the row? I cannot say whether since the row or before.

Mr. Russell: It was since the retrenchment? Yes.

Mr. Nathan: You have seen coal put there since the row in March? Not to my knowledge.

Mary Flannery sworn and examined:—

Mr. Nathan: How long have you been a nurse in the Callan Park Hospital? About eleven years this month.

Have you seen coal going from the laundry-yard, through the nurses' dining-room, and to the Matron's office? Yes; I have seen it go to the Matron's office.

How often has that taken place? I have seen it frequently.

Was it a daily occurrence? Yes.

The Chairman: That was to the Matron's office? Yes.

Mr. Nathan: Do you remember how, prior to the retrenchment, coal was taken to the Matron's quarters? To the best of my knowledge it was put into the cellar.

Was it put down the hole under the verandah near the pantry window? Yes.

Did you ever see that done after the retrenchment? Yes; I have seen it done.

Do you mean since the row? Yes.

Since March last? Yes.

Did you see it after the retrenchment, and before this row began? I cannot say.

Have you relieved the Matron's housekeeper on different occasions? I have come in just to get the tea. I was there one day, but the Matron was away.

Have you relieved her for a number of days at a stretch? No.

What was the longest time you were there? I only remember one occasion, for one day only. I have often gone down to get the tea.

On those occasions where did you get the coal from? I never had anything to do with the coal. I boiled the water on the gas-ring in the pantry.

Have you never used coal in the Matron's kitchen? No; I was only there one day, and the coal was down there.

Have you never used coal in the Matron's kitchen? Yes, the coal was there.

Was it in buckets? Yes.

You do not know where it came from? No; I never bothered about the firing—the patients did that.

Did you get the coal out of the cellar on that occasion? Yes.

It was in buckets? Yes.

Who brought the coal to the Matron's quarters from the laundry-yard? The patients.

Did you see coal going down every day? I cannot say every day; there were days I was not there.

Was it the general custom for the coal to go down there? Yes.

In what quantities? The patients always carried a couple of buckets at a time.

Morning, afternoon, and evening; or at what times? At any time. I have seen it go down in the morning and in the afternoon.

Summer and winter? Yes. I would not say every day in the winter; but I have seen it go down in the summer.

And that has been going on for some years? Yes, to the best of my belief.

The Chairman: Where was that taken from? From the laundry-yard; any coal that came through the nurses' dining-room was from the laundry-yard.

Mr. Nathan: Have you lit the fire in the Matron's office? Yes, I have done that for the last two or three months.

That is since the row? Yes.

Is the coal brought in buckets? Yes; I get the patients to bring down a bucket and a half of coal every day.

Since the row in March last, has the practice been discontinued of taking coal down there? Yes. The only coal I get the patients to bring is for the Matron's office fire.

The other coal has been stopped? Yes.

Since the row, has the Matron had coal brought in for herself? Yes.

Has that been put down into the cellar? Yes.

Down the hole underneath the pantry? Yes.

Can you tell me if provisions of any kind have gone from the nurses' dining-room to the Matron's quarters? Yes; I have sent joints down myself.

What did you send? A joint of whatever meat was served in the dining-room.

Did you send any vegetables? No; just a joint of meat.

Did you send a whole joint every day? Yes.

Untouched and ready cooked? Yes.

That used to be taken down? The patients used to take it down. One of the patients sometimes took a joint off the dish and carried it down.

It was not first put on the nurses' table and then removed? No.

Did you ever send less than a joint at a time? A joint always.

And you never got it back again? No, never.

Have you seen that food yourself when you were relieving at the Matron's quarters? The day I was there I did not see it.

Besides the meat, did any other things go to the Matron's quarters? Yes; I have sent milk, bread, and butter.

And sugar? Yes; and I have sent tea down at the end of the week.

In what quantities at a time? I used to send down whatever tea was left at the end of the week.

You were the head of the nurses' ward? Yes.

Did you see any food sent down from the patients' wards? I cannot speak for the wards.

Did anything go from the wards to your knowledge? I have seen it go down, but I never gave it out myself.

What have you seen go down? I have seen a patient take down meat and vegetables from No. 5.

Milk and sugar, or anything of that sort. No.

Was that a frequent occurrence? Yes, every day.

Since the row, have those things been stopped? Yes; I have not sent anything from the dining-room at all.

Have you seen these things go down from the various wards? No.

Have you any illwill towards the Matron? No.

What sort of a woman is Miss Quilkey;—is she polite? Yes, so far as I know.

Always polite and ladylike? Yes.

Do you remember Nurse Cahill some eighteen months ago getting provisions from you to take to Katoomba? On one occasion she asked me for tea and sugar. She said the Matron wanted it, and I gave it to her.

Was that when she was going to Katoomba? Yes.

How much did you give her on that occasion? About a pound and a half or two pounds of tea, and two or three pounds of sugar.

Tell me, has anyone tried to get a statement from you during the last few days—I mean anyone from Norton and Smith's office? A gentleman sent for me to the Matron's sitting-room, and asked me if I had anything to say; I said, no; I said that what I had to say I would say here.

Did he ask you to give him a statement of what your evidence would be? I do not remember.

Tell us exactly what took place? To the best of my knowledge, that was all that was said.

You refused to give a statement? Yes.

Did he ask you to sit down? Yes.

And you refused, as you refused to give a statement? Yes.

Have you been reprimanded since for anything? No. The day I was out there was a little trouble. There was a charge against you for having dirty premises, although you have been eleven years here? Yes.

Mr. Russell: Are you and Nurse Quilkey particularly good friends? We are good friends, but not particularly so. I never knew her till she came here.

Have you kept up your acquaintance since she left? Yes. I have seen her two or three times.

Do you visit her frequently? No, I do not.

But you are particularly good friends? No.

Would you speak of her as being one of your really good friends? No, I would not; I would not call her an intimate friend.

Perhaps you would not be anxious to have her for an intimate friend? I do not know about that; I scarcely know how to answer that question.

There are doors between the laundry-yard where the coal is kept and the Matron's office? Yes.

Are those doors usually closed? Sometimes; but they are very often left open.

Are they not supposed to be kept locked? Yes; one door is seldom locked; that is the passage door. The door going into the nurses' dining-room or sitting-room is always locked; the passage door is seldom locked.

Is that the side-door of No. 5? That does not lead to the nurses.

Tell me, you can go to the laundry-yard through different doors? Yes.

One way is through the nurses' sitting-room? Yes.

And

And that door is open, is it not? Yes, one door is.
 The door from the sitting-room to the dining-room, is that open? Yes.
 If you go from the sitting-room you go into the dining-room? Yes.
 Is that door supposed to be kept locked? Yes.
 Then there is another door, marked No. 5; you may also go through that? Yes.
 Is not that also supposed to be locked? Yes.
 The Matron does not have access to those doors? Yes.
 Does the Matron look after the locking and unlocking of those doors? If she went in she would look after it.
 But if the doors are left open it is not the Matron's fault? No.
 Since the retrenchment you say you may have seen coal put down the hole into the cellar? Yes.
 It could go without my knowing it.
 You don't know whether it has gone or not? I am not sure.
 When you say you went to the Matron's quarters to get tea, does that mean afternoon tea? I have been down to make afternoon tea, and I have also gone down at night to take in tea.
 You have made afternoon tea? Yes.
 You made that on the gas-ring, I suppose? Yes.
 There is a gas-ring in the Matron's pantry? Yes.
 And afternoon tea would usually be made on it? Yes.
 Who drank the afternoon tea? The Matron and some of her visitors.
 But the Matron does not have visitors every day? No.
 Might you not yourself have a cup of afternoon tea? I might make it.
 And the other nurses? I do not know.
 Have you seen other nurses have afternoon tea there? I have seen the Matron's housekeeper and other nurses having a cup of tea.
 All the tea consumed is not used by the Matron; all the tea boiled on the gas-ring is not drunk by her, is it? No.
 I suppose only a small quantity was drunk by the Matron? I have often seen the housekeeper giving others a cup of tea.
 On one occasion I believe you relieved the housekeeper for a whole day? Yes.
 Did a joint of meat come in that day? I cannot remember.
 You cannot remember whether the Matron had it or not? The Matron was away that day; there was only the doctor there.
 And a joint may or may not have come down? Yes; I do not remember.
 What becomes of the food put on the nurses' dining-table; I suppose they do not eat it all? What is not used is thrown away.
 It is not sent back to the kitchen to be recooked? Some changes were made about two months ago.
 Since about two months ago it has all been recooked? It is all sent back now.
 Before that, what was left was wasted? Yes.
 In those days before two months ago, what was sent to the Matron had already come from the kitchen—the joints I mean? They came to the nurses' dining-room.
 They came from the kitchen to the nurses' dining-room, and were sent on? Yes.
 And what was not used was thrown away? Yes.
 It would go to waste very often then? Yes.
 There would be a fair amount of waste? Yes.
 Did you ever know of your own knowledge of McNulty sending nicely-cooked things to patients? No; I cannot say I do.
 It may have been done? Yes; but I do not know of it.
 Did you know of McNulty having sent things, which she had cooked herself, to any of the nurses? Maria has sent me vegetables she had cooked herself, and sometimes some meat. During the last twelve months I have not received anything more than twice.
 It was supposed to be better to eat what was cooked in the Matron's kitchen than what was cooked in the general kitchen? Yes. The housekeeper always did that; and whatever was left over in the nurses' dining-room the nurse sent down.
Mr. Nathan: You were asked if the Matron and her friends drank all the tea. The Matron had not friends in every day; and when she had friends, tea was made, and they drank it? Yes. I was only there on two occasions when the Matron had friends.
Mr. Russell: The tea that was used came out of the Matron's own pantry, did it not? Yes.
 And it was the Matron's own tea, so far as you know? Yes.
Mr. Cargill: Do you remember the day you were reprimanded for having dirty premises? On Friday that was. I was not reprimanded, but while I was out some of the nurses went into my pantry and turned the cupboards out. That was what happened, so far as I know.
 You say you were not reprimanded? Yes.
 Was any charge made against you? No.
 You were out on what day? On Friday.
 On Friday last, the 22nd instant? Yes.
 Were you out all day? I went out about 9 o'clock in the morning, and returned about 8 o'clock at night.
 What did you hear when you returned? I was told that some of the nurses had gone into the dining-room and turned the cupboards out, and said they were dirty.
 You heard nothing more about it? The Matron was not here on Saturday; but on Sunday morning she spoke to me about it.
 The Matron spoke to you? Yes. She said the nurses had sent for her to go over and look at the cupboards.
 Sent for her when? On Friday.
 The day you were out? Yes.
 Did she say she had looked at the cupboard? Yes.
 Did she say it was dirty? No, she did not. She said she was sorry it happened. That

That is what you complain about? Yes.

The Chairman: You say you sent joints every day from the nurses dining-room to the Matron's quarters;—were those joints cooked or uncooked? They were cooked.

And uncut? Yes.

At whose instructions was that done? I did not receive any instructions; it was done before I went into the dining-room, and I never altered it.

How long were you there? Three years.

Before you went there it was the practice? Yes; I saw other nurses doing the same thing.

You also sent milk, sugar, butter, and tea? I sent milk every morning.

At whose instructions? I did not get instructions.

It was the practice before you went there? Yes.

And so in the case of the tea, sugar, and other things? Yes. I sent milk, butter, and a loaf of bread before breakfast; and whatever was left in the way of tea at the end of the week I sent on.

At whose instructions? There were no instructions; it was the custom.

Who received these things? I sent a patient with them nearly always. Sometimes I took the tea myself and gave it to the Matron's housekeeper; or if she were not there I put it in the pantry.

They never came back? No. As soon as the nurses had finished at night I sent the milk over; and I got enough back in the morning to make a cup of tea for myself and two patients.

You have had instructions not to do that? Yes.

From whom? From the Matron.

Mr. Bridges: Previous to that you thought you were doing right? Yes; because I did it openly.

You have told us about the waste of food;—suppose there was a leg of mutton on the table half eaten, would the other half be completely wasted? Yes, at one time it would have been.

Absolutely wasted? Yes.

Were you responsible for that? No; I was never told to do anything with it. I was not told to send it to the kitchen, and I did not.

There was no attempt to save or utilise this broken food? No.

Fanny Tidyman sworn and examined:

Mr. Nathan: How long have you been nurse at this hospital? I have been here three and a half years.

Do you know the laundry coal-house? Yes; I do.

Have you seen coal going from that coal-house to the Matron's quarters? Yes; I have.

Frequently? Yes; very frequently.

Summer and winter? Yes; both.

In what quantities? Well, I cannot give the exact quantity; but it has gone down frequently, from morning till night.

At different times of the day? Yes.

Used it to go in buckets? Yes.

Who took it? One of the patients.

Have you seen coal being taken from the office to the Matron's kitchen? Yes; I have.

On many occasions? Yes; on a few occasions I have seen it in the kitchen. I have had occasion to go on business when patients have been wanted on visiting days, and I have seen the coal taken down into the kitchen.

I believe the Matron has a coal-scuttle in the office? Yes.

Would that hold enough coal for the fire for a day? I do not think it would hold enough. If it were filled once or twice it would be sufficient.

You know of the row in March last;—tell me, have you seen any coal go there since? No; I have not.

Now, were you present on an occasion when Nurse Bessie Smith struck a patient named Jane Downey? Yes; I was.

I do not want to lead you; tell us what took place? The patients were standing round the store door waiting for their medicine. Bessie Smith tried to give the medicine first to Jane Downey, but she refused to take it. She had refused her medicine for some time; half the time she never took it. She told her to wait, and that she would give the others their medicine and then try her again. Nurse Sadleir and I were helping. We were holding her and we put her on one side. All the other patients were given their medicine. When they had all finished, Jane Downey was brought up to the store door again. Bessie Smith tried to give her the medicine, but it was spilled, so she walked into the store and mixed another dose. When she found the patient would not take it she hit her on the chin.

What with? With a delf mug; a stone mug.

Was the Matron present? Yes; she was standing behind me, and she said, "Oh, Bessie."

That was all she said? Yes.

Was it a spiteful blow? I should think it was. It was done deliberately; there was no hesitation about it.

You say she struck the patient on the chin with a stone mug? Yes.

And all the Matron said was "Oh, Bessie"? Yes.

Did you hear of Nurse Smith being punished for that? No.

Who else was present on this occasion? There was the Matron, Nurse Catherine Sadleir, Nurse Annie McLeod, and Nurse McSweeney. Annie McLeod had been upstairs; she came down immediately afterwards and Bessie Smith told her what she had done.

When did that occur? About the middle of last June.

Will you tell me now what food used to go down from the nurses' quarters to the Matron's quarters? Well, there was a joint of whatever meat was on the table at dinner-time, and milk used to go down in the morning.

Did a joint go every day? Yes, regularly.

And milk in the morning? Yes.

Now about the patients' wards;—what provisions, if any, went down to the Matron's quarters? Milk, and bread and butter went down regularly. Suppose

Suppose any of the patients working in the Matron's quarters, had meals there, where would their food come from? Well of course food was sent there with the intention that it was going for the patients.

Where did it come from? From Nos. 5, 4, and 3.

If patients were working there, food for them would come from No. 5? From all the wards, just the same.

What was sent down from these wards? From No. 5, meat and potatoes used to go at dinner time.

That was every day? Yes.

And from the other wards? Bread, milk, and butter in the mornings—a loaf of bread, about a pint and a half of milk, and nearly half a pound of butter. That went nearly every morning, I know, because I took it myself.

You took it yourself? Yes; and other nurses have taken it also.

Where was it put? In the Matron's pantry. On three different occasions I refused to send it. Nurse Mitchell was in charge of the ward, and the housekeeper sent up to know why it had not gone down. I said it was sent for the patients, and I refused to send it, as there were no patients working that day from our ward. On other occasions Bessie Smith asked why it had not gone down, and I made the same remark.

Notwithstanding that, it went down all the same? Yes.

Have you any down on the Matron? No. I have no down on her.

Have you any ill-feeling towards her;—are you giving your evidence freely, or because you are prejudiced? No, I am giving it freely; I am just telling the truth.

Were you present on any occasion when Nurse Smith gave the patients pepper and water? Yes, I was.

Tell us about the incident? It was given on the 31st January, and the first time it was reported was 1st February. Bessie Smith said the patients were not taking their food, and she would know the reason why; she was sick and tired of having them fight so much. I was in the pantry at the time making some bread and milk, and she walked in and mixed pepper and water together. She gave the mixture to two or three of the patients. It did not seem to act, and she returned and mixed salt with the pepper and water; she mixed two large dessert-spoons full of salt with it.

Did you see her give it to the patients? Yes, I did.

Explain what was done? She gave it to the patients by force. She got one of the nurses to hold the nose of a patient while she gave it. She forced the stuff in the patients' mouths while she held their arms, which were pinned back. They all refused to take it, and it was given by force.

Explain to the Court how their arms were pinned? They were put behind them like this (*demonstrating the action*) and held behind a form.

And then the stuff was forced down their throats? Yes.

The Chairman: Which nurse assisted to hold the patients? Nurse McSweeney.

Mr. Bridges: How many patients were treated in this way? Five I know of.

They were all held in turn, one after the other? Yes.

Mr. Nathan: Was that reported to the Matron? Yes; the next morning—on the morning of 1st February.

Was anything done so far as you know? The Matron sent up for one of the nurses working in the ward, and Annie Quilkey went down.

You do not know what took place? No; I was not present.

But nothing was done to Bessie Smith? No.

It was reported to the Matron? Yes.

The Chairman: Were you present? Yes; I was in the office when it was reported.

Were you asked to give evidence? Dr. Sinclair asked me.

You were not asked until the inquiry was held by Dr. Sinclair? Yes.

Mr. Bridges: You were present when this took place? Yes.

Mr. Nathan: How long after was it that the inquiry by Dr. Sinclair took place? About a month or six weeks; somewhere about that.

Since this row in March, has the coal ceased to be sent down there? I have never seen any going down.

Have you seen coal going down? No.

If it had been going down you would have seen it? Yes; if it had been going down as before.

What about the provisions from the nurses' quarters? I have not seen any going down.

Have you seen any from the patients' wards? No.

If it had been going down you would have seen it? Yes; I should have noticed it some time or another.

The Chairman: Was Nurse Bessie Smith your senior? She was at that time.

Mr. Nathan: When the salt and pepper incident was reported, was that done out of spite towards Bessie Smith? No; because I do not think there had been any ill-feeling with any of the girls; nothing to speak of. They simply thought they were doing their duty by reporting the matter to the Matron; it was a thing anyone would have done.

The Chairman: Who reported it? Nurse Lizzie Wills; she was the next in charge.

Mr. Nathan: You were never called upon to give evidence until Dr. Sinclair came? No.

Were you shifted out of that ward? Yes, next morning; Nurse Wills, Nurse Quilkey, and I.

There was no explanation whatever; we were only shifted out of the ward.

The only one of the contingent left was Nurse McSweeney? Yes.

Mr. Bridges: What ward was this? No. 4.

Mr. Russell: I think you said that Nurse McLeod came upon the scene after the pepper incident? No; it was after the mug incident.

Bessie Smith told her what had occurred? Yes.

Were you there? No; but Nurse McLeod asked me if it was the case; if what Bessie Smith told her had happened.

What did she ask you? She said "Is it true that Bessie hit a patient with a mug?" and I said, "Yes, perfectly true."

She did not tell you what Bessie Smith had said? She said Bessie Smith had hit a patient, and she asked me if it was true, and I said yes.

She did not believe Bessie Smith? She did not believe she had hit the patient, as she said. I said it was perfectly true that she had hit her as she said.

About the coal taken from the Matron's office,—you say you have seen it go to the kitchen? Yes.

What were you doing in the kitchen? I had to go there on several occasions. When patients are wanted in the visiting room we have to fetch them up. On several occasions I have been going into the kitchen for patients, and I have seen the coal coming down.

How often did you go to the Matron's kitchen for patients with messages of that kind? Perhaps I would not go in one week; and perhaps there would be two days next week. The visiting days were Monday, Tuesday, and Wednesday.

Perhaps three or four times a month? Yes; on several occasions I have seen it.

And it has been on these occasions that you have seen coal carried down? Yes; those are the only occasions.

About four times a month you have been down to the kitchen for patients, and on those occasions you have seen the coal? Yes.

Would that happen in the afternoon? Yes.

What are the hours? From 10 to 12 in the morning and 2 to 3 in the afternoon.

Did you meet the coal on the stairs on those occasions? Yes; I have met it going into the kitchen to the fireplace.

Did you go to the Matron's kitchen for anything else? I have only been to her pantry when I have taken the bread and milk.

But when going to the pantry you would not see what was going down the kitchen stairs? I could see what was going down the stairs, even if I could not see it going into the kitchen.

There is a door at the top of the stairs? Yes.

Therefore you cannot see the stairs from the pantry? No.

Coal must have been going down pretty often if on those three or four times in the month you saw it on the stairs? Yes; when I have had occasion to go down stairs I have met coal on the stairs.

Are you and Nurse Quilkey great friends? We are friendly; I cannot say that we are great friends.

Are you more friendly with Nurse Quilkey than with Bessie Smith? Well, I suppose so. Bessie Smith was never a friend of mine. We were on good terms so far as duty was concerned; nothing more.

You were friendly with Nurse Quilkey beyond mere business relations? We were just friends—mere friends—that is all.

You were in the hospital before Nurse Quilkey came? Yes.

Have you been reported or reprimanded? Yes; I have been reported.

And been reprimanded? Yes; I have been reported. I admit all those charges.

I am bringing no charges? I know —

You have been reported? Yes.

And reprimanded? Yes.

Were you reprimanded with more or less frequency lately? No; I have not been reprimanded by the Doctor or the Matron for some considerable time.

What is "some considerable time"? Seven or eight months.

Before that you were reprimanded several times? A few times I have been before the Doctor on reports received from the senior nurses.

Mr. Nathan: The senior nurse being Bessie Smith? Yes; Alice Palmer and Bessie Smith.

Mr. Russell: Who ordered you to leave No. 4 ward—you and Nurse Quilkey and Nurse Wills? At the nurse's order. She makes out a list every day.

The Matron conveyed the orders? Yes.

You got notice from the Matron? The night nurse told us in the morning.

It was in No. 4 that the mug incident occurred? Yes.

Will you describe No. 4 ward—which ward is it? It is the receiving ward. Most of the new patients are received there unless they are very ill and then they are sent to No. 5, which is really the hospital ward.

Patients when they first come are more refractory and more difficult to manage? Some of them are; others are just the reverse.

Some of them are more difficult, and some are not very difficult? Yes.

The difficult ones quiet down after they have been in the Hospital some time? Of course they do; it is only natural.

The refractory patients are more violent before they undergo the hospital treatment? Some of them might take some time; others break out again even after they have been in for some time.

So that No. 4 is a difficult ward to manage? Yes, it is the hardest, so far as the patients are concerned. There is not the same amount of sickness as in No. 5, but the patients are more troublesome.

Do the patients refuse to take their drinks? Yes.

And force has to be used? You have to use some force.

I do not mean that it is necessary to strike the patients? You want to be firm and gentle too, if you can understand.

Even in giving draughts is not force used, and properly used? Occasionally, but not much force. If you have to use so much force with the patients when they are very bad it has to be reported; it is supposed to be.

If they are as bad as that? Yes, if they are as bad as that; lots of them would not take it.

Can you describe how you would get an unwilling patient to take a draught? If they will not take it by coaxing you have to hold them; if they put their hands up you have to hold them.

You have to put your arm round their neck, and hold them firmly? You have to support them in some way.

Tell me how you have seen it done—how you have seen nurses put their arms round a patient, or hold their head while they administer a draught? You secure their head by your arms; there are various ways of holding them.

A mug must be held firmly to their mouth? It should not be. If they will not take it by putting it to their mouth it is no use forcing them; if they will not take it, it is no use pressing them.

Have

Have you seen a draught trickling out of a patient's mouth when she would not take it? Yes.
Then the mug has to be lifted up again and pressed firmly to catch it? No.
If the liquid dropped out of their mouth, would you not bring up the mug and catch it again? It all depends.

But if the liquid is falling out of their mouth and they will not swallow? Yes.

You have seen it done? Yes.

Would you allow the draft to drop on their clothes, or attempt to catch it? You would not allow it to drop on their clothes.

You would put up a mug again and catch it? Yes.

Now with regard to the pepper incident: the patients food is sent to the wards unseasoned, is it not? I am not aware that it is sent unseasoned.

Have you added salt or pepper to patients' food? Yes, we generally put a little salt. Sometimes the food is too salt; at other times there is not enough.

If it is required it is left to the nurse to add the salt? Yes.

Both salt and pepper? Yes.

It is the nurse's duty to see that the patient's food is all right? Yes.

And it is left to your discretion what quantity of salt and pepper to add? Yes.

I suppose a nurse might make a mistake and put a little too much pepper in? Yes.

In this case you mention, it seems that the pepper was given more deliberately, and not by mistake? Yes. In the first place there was no necessity to use either pepper or salt—it was tea time.

Will you give me the names of the five patients? Jane Downey, Jemima David, Josephine Moore, Emma Rowe, and Frances Flynn.

When you were in No. 4 ward, did you have trouble with these patients yourself? They were troublesome, certainly.

Which nurse helped to hold them; you said one of the nurses helped Bessie Smith to hold them? Nurse McSweeney.

You had nothing to do with them? I did not hold them at all.

Were you present? Yes, I was present.

But you had nothing to do with it? No; I had nothing to do with the pepper at all.

Were you in the room? Yes, I was in the ward.

In the ward where it happened? Yes.

You saw it being done? Yes.

You were doing nothing? Yes, I was preparing tea for the patients.

Did you say this was done on the verandah? I did not.

You never said it was done anywhere except in the ward? I did not.

The food that went from the wards to the Matron's quarters you say was for the patients there? Yes; there were generally patients there.

And the food was intended for them? It was supposed to be.

Were they always fed there;—was it not their usual meal that was sent there? Yes.

Mr. Nathan: Was it their usual allowance? It was more than their usual allowance. More went from one ward than was enough for two patients; there was always more sent down than was necessary.

Mr. Russell: If there was one patient from a ward, then more food than was necessary for one was sent; and if there were six patients, more food than was necessary for six? Yes; there were never six patients working there.

Whatever number of patients was working, there was always in excess of food sent? Yes.

And that from whatever ward it came from? Yes.

Provisions came from various wards? From Nos. 3, 4, and 5.

And from No. 1? I did not mention No. 1; I said 3, 4, and 5.

You say that since the row you have seen no food going from the wards to the Matron's? Yes.

Are there any patients still working in the Matron's quarters? Yes, there are some.

Where are they feeding now? I do not know; I am away from the building now.

Then it is not wonderful that you do not see any food going? It was at breakfast time it went.

Was dinner and lunch not sent? No; they go to the ward for dinner. One or two might have had dinner; that would go from No. 5.

As well as breakfast, dinner might be sent from No. 5? Yes.

Where are you now? I am at the cottages.

You do not see what goes on now? No.

You do not see what goes at breakfast time? I have not seen anything going since.

You are at the cottage at breakfast time? No; I am here for breakfast. Before, we saw it going down at breakfast.

Can you see this from any place in this building? The nurses dining-room is on the verandah; you can see plenty going on.

Can you see it from the cottages? No.

Things might still go, and you do not see them? Yes.

You know what is meant by this row;—when did it commence? The start of it was when the pepper incident was reported on 1st February. Nothing really took place until some time in March.

I suppose you discussed it with the other nurses? No, there was no discussion.

You have not mentioned it? No.

It is a tabooed subject, I suppose? There was no discussion of it whatever; we are not in the habit of talking about things of that kind.

Not at the nurses' dinner-table? We do not discuss matters of that kind.

You do not discuss what will happen at this inquiry? No, nor any other.

Did Bessie Smith dine at the nurses' dining-table? She used to until the first starting of this row. I have not seen her in the dining-room since.

Was Nurse Quilkey present at the pepper incident? Yes.

She also was removed out of the ward at that time? Yes.

Do you remember 14th February—St. Valentine's Day? Yes.

Do you know anything about a valentine sent to the Matron and Bessie Smith?

(*Mr.*

(*Mr. Nathan objected to this question being gone into. Objection overruled.*)

Did you send that valentine? I did not; I know nothing about it. I never did such a despicable thing in my life.

You said nothing about the valentines? I said I knew nothing about the valentine.

You do not know about two being sent? I do not know what the number was; I know nothing about it.

You did not buy it? I did not. I know nothing about it.

Mr. Nathan: Although you are this bad girl, you have not been dismissed from the Institution? No.

There has been no talk of dismissing you, to the present? No.

Take the time when this stone mug was used;—was it to catch the drops from the patient's mouth, or was it a blow? It was a blow.

There is no doubt about it? No; there is no doubt about it.

It was no mere picking up of the drops? No.

Is it necessary to put salt and pepper in water to make the patients eat? I never heard of it being done before.

Was it done as a punishment? Yes, it was.

Do you recollect Bessie Smith saying why she did it? Yes, I do.

She was very angry? Yes.

What words did she use? She said she would know the reason why they would not take their food, and she would give them something to take it.

The Chairman: Was any mark left by this blow? No.

Was it a severe blow? It was hard; it sounded hard enough, anyway.

But there was no mark left afterwards? No.

What was the pepper and salt given for;—is it a usual thing to give to a patient? No.

Was it ordered by the doctor that you are aware of? I should not think so.

Did Bessie Smith say why she gave it? She said they would not take their food, and she would make them take it; she would try them with this, and she did.

It was not ordered by the officers? Not that I know of. It has never been ordered since, anyway.

Mr. Bridges: Do you think it was given as an appetiser or as a punishment? As a punishment.

Were these patients refractory? Most of them were quiet at the time. They were troublesome, but they were quiet.

Emma Rowe was the name of one of the patients you mentioned;—was she not in a weakly state when she came in? She was weak, but she was very noisy afterwards. She was not so bad when she came in, she got bad afterwards.

Was she not too weak to be refractory when she first came in? No.

When this pepper and salt was given, was she refractory? No, she was getting well; she was better mentally.

And yet this mixture was administered? Yes.

Did you make any remark when this took place;—did you remonstrate with Bessie Smith? I did.

What did you say? I said it should not be given; it was not a proper thing.

The Chairman: Did it act as an emetic? Some of them were sick after it.

Mary Braithwaite sworn and examined:—

Mr. Nathan: I believe you are a nurse at the Kenmore Asylum now? Yes.

You were a nurse at this hospital for how many years? For four years last February.

When did you leave this Institution? On 17th March.

Of this year? Yes.

Were you dismissed, or did you leave of your own free will? I left of my own accord.

During the time you were here, did you see coal going from the laundry coal-house to the Matron's quarters? Yes.

Was that in summer and winter? Yes; I have seen it in the summer.

And winter? Yes.

Used it to go down every day? Yes, I have seen it every day.

How was it taken? In buckets.

By the patients? Yes.

Two buckets at a time? Yes.

Have you ever seen that coal used? No.

Did you see provisions of any kind going from the nurses' quarters to the Matron's? Yes, I did.

What used you to see? I have seen legs of mutton going.

Did you see joints going down every day? Yes.

Were they taken fresh from the nurses' quarters, or were they first put upon the table and sent down afterwards? They were taken straight from the quarters.

That was an every-day occurrence? Yes.

Did you see any tea, or milk, or sugar taken down? No.

Have you seen anything going from the patients' quarters to the Matron's? Yes, I have.

What have you seen? Meat and vegetables.

Anything else? No.

Any milk? Yes, I have seen milk.

And bread? Yes.

Sugar? No, I have not seen sugar.

You have seen milk and bread going from the wards to the Matron's quarters? Yes.

Was that an every-day occurrence? Yes.

You have no ill-feeling towards the Matron? No.

Mr. Russell: With regard to the food from the nurses' quarters,—you say you have seen joints sent down to the Matron? Yes.

More than one joint? Not at a time.

One at a time? Yes.

And it happened nearly every day? Yes.

Very

Very frequently? Yes.

With regard to the food from the wards—that was food for the patients? Yes.

Meat and vegetables and bread and milk? Yes.

Those were the principal things you saw going there? Yes.

The Chairman: How many patients were working at the Matron's quarters at that time? One or two.

Was more food sent or taken down than was necessary to supply those patients? I do not think so. There was sufficient only to supply the patients? Yes.

Elizabeth Wills sworn and examined:—

Mr. Nathan: You are a nurse at the Callan Park Hospital? Yes.

How long have you been a nurse here? About ten years.

Were you present on an occasion when Bessie Smith gave any of the patients pepper and salt, or salt and water? Yes, I was.

I do not want to lead you: will you first of all tell us the names of the persons who were present—I want the names of the nurses who saw the incident? Nurse Quilkey, Nurse Tidyman, and Nurse M'Sweeney, Bessie Smith, and myself.

I believe the patients would not take their food, or something? Yes; that is true.

Tell us what took place on that occasion? Nurse Bessie Smith administered pepper and water to the patients.

First of all, let me ask was that an appetiser or a punishment? A punishment, I considered it.

Was the nurse angry? Yes, because they would not take their food.

Will you explain to the gentlemen present the kindly manner in which this was done? Bessie Smith pinned their arms behind their backs, put her arm under their chins, and forced the stuff into their mouths.

Did anyone hold the patients' noses? She made Nurse McSweeney hold the nose of one of the patients.

Did she make you hold a nose? No.

One by one the patients were taken, and their arms were pinned behind the form? Yes.

And Bessie Smith put her arm underneath their throats and forced a spoon down their mouths? Yes.

While one of you held the patient's nose? Yes.

You did not hold a nose on that occasion? No.

Nor the tongue of one of the patients? No; I did not.

The patients resisted this, did they? Yes.

It was not a kindly thing—the patient's were forced to take it? Yes; I would not have reported it otherwise.

Did you report the matter? Yes.

When? The next morning, to the Matron.

What did you say to the Matron? I told her that Nurse Bessie Smith had given the patients pepper. She listened for a little while, and then told me to go out until she had all the reports in, which I did. Then when Bessie Smith came down she called me in, and I stated the charge before them; and both the Matron and Bessie Smith said it was for spite. I said it was not for spite; and the Matron said, "Are you plotting this against the Charge Nurse?" I said, "I am not plotting this against the Charge Nurse." She said, "Have you any witnesses?" and I replied, "Yes; every nurse in the ward can say the same." She told me to call a witness—not to go myself, but to send another nurse.

Who did you send? Nurse Flannery.

And who did she bring down? Nurse Annie Quilkey.

Were you called back when Quilkey went into the room? Yes; we were both there.

What took place? The Matron asked who gave the pepper? And Nurse Annie Quilkey said, "I gave some first, by the orders of Bessie Smith."

Nurse Quilkey confirmed what you told the Matron? Yes, she did.

Did the Matron say anything to you when Nurse Quilkey had made her statement about this being a plot? She asked whether it was a plot amongst us. I said it was not. She said, "Do you know this is a serious charge to bring against a Charge Nurse?" I said it was done, and I had come to report it.

Did you hear anything more of the incident? No; not until Dr. Sinclair called me in.

Were you moved out of Bessie Smith's ward? Yes.

Was that the next day? Yes; the very next day.

Do you remember the Matron saying anything to you to the effect that you could do your best or worst, but that you would get no satisfaction out of her? Nurse Smith said that to me; she said "You can do your worst, and very little satisfaction you will get."

The Chairman: Was that said in the presence of the Matron or outside? That was said in the ward, when I was going to report the matter.

Mr. Nathan: Were you present when Jane Downey was struck with the mug? She told me about it; Bessie Smith told me about it.

What did she tell you? She said, "The Matron caught me, hitting Jane Downey under the chin with a mug; she followed me into the store and I would not come out again; she said, 'Bessie, Bessie!'"

Did you see any coal going to the Matron's quarters from the laundry yard? Yes.

Both in summer and winter? I have seen it occasionally in summer and winter.

How often used it to go down? Generally two buckets at a time.

Taken by the patients? Yes.

Were you ever in the Matron's kitchen when that coal was used? On one occasion I was.

When you saw the coal taken down in buckets and being used? Yes.

Within what period was that? It was some time ago, now.

Within the last couple of years? Yes; I should say so.

How did you come to see that? I was talking to the housekeeper at the time.

Have you seen provisions going to the Matron's quarters from the wards? Yes.

Tell

Tell us what sort of provisions used to go down—first of all have you taken them yourself? I have seen milk and bread and butter, and I have taken them myself.

To the Matron's quarters? Yes; to the Matron's pantry.

What quantity did you take? A pint or two pints of milk and a large loaf of bread.

Any sugar? No.

Or tea? Not from the ward.

What quantity of butter? Very nearly half a pound at a time.

Did those things go frequently? Every morning when I was there; sometimes, perhaps, I would be away.

Were you in charge of any ward from which these provisions were sent? Nurse Bessie Smith was in charge.

Did any of that stuff come back? I never saw any of it come back again.

Used provisions also to go from the nurse's quarters? Yes.

Every day? Every day I was there.

What used to go down? Two joints sometimes, and sometimes one.

Was that an everyday occurrence? While I was there; some days I was not there.

Did anything else go down—any vegetables? No; no vegetables.

Since the row in March last has anything gone down—any coal? I have never seen anything go down.

Have you seen provisions go down from the wards? Yes; from No. 3 ward.

What went down? Some milk and bread and butter. Not much milk from No. 3. Of course there was a patient working there.

Do you recollect the time of the retrenchment, four or five years ago? Yes.

Before the retrenchment how used coal to be delivered to the Matron? I have seen it brought in carts, and put down into the cellar.

Through the hole under the verandah near the pantry? Yes.

Since the retrenchment have you seen it done? Yes, occasionally—once or twice; it may be more.

It was not a frequent occurrence? No; I have not often seen it.

Is it since the retrenchment that the coal has been taken along in buckets? Yes.

Has the Matron ever ordered you to obtain cups and saucers out of private quarters? Once she did.

How long ago was that? Fifteen or eighteen months ago.

What were your orders? She asked me to get some cups and saucers, and of course I did not do so.

Out of what private quarters? Out of No. 6 cottage.

And you refused to do it? I did not give them to her at all. She said, "You need not be frightened; I will take the blame."

You refused to give them? Yes.

Have you given her anything else at any time out of private quarters? Yes; I have given her one or two bottles of bloater paste.

Was that when she was going to Katoomba? Yes; I gave her about two bottles—that was all; that was over; it was not used.

It was out of private quarters? Yes.

It belonged to the patients and not to the Matron? Yes.

She said she was going to Katoomba and she wanted it? Yes.

Have you any ill-feeling, any special ill-feeling, towards the Matron? Not in the slightest.

Are you a friend of Nurse Quilkey? I am not a friend of hers; I never saw her before she came here.

Is there any reason why you give this evidence? No; I am speaking the truth. I came here to speak the truth.

Have you had complaints made about you recently; any complaints about your conduct? I was spoken to this morning about leaving the ward. The Charge Nurse reported me for leaving the ward.

Who is the Charge Nurse? Nurse Mary Mitchell.

That occurred within the last couple of days? Only this morning it occurred. I never remember Dr. Blaxland speaking to me about my duties before, and I have been here ten years.

To-day is the first occasion you have been brought before him? Yes.

Is Nurse Quilkey an obedient, respectable woman always? So far as I have seen, she might.

Nurse Bessie Smith has a very violent temper, has she not? Yes, she has.

Mr. Russell: You said you are not a friend of Nurse Quilkey? She is not a friend of mine. I just know her as a nurse, that is all.

You were not approached by anyone from this side to give evidence—anyone for the Matron? No; I was not asked.

You have taken food to the Matron's pantry yourself? Yes.

That was from the wards? Yes.

That might be patients' food? Yes; it was used for the patients.

When food went from the nurses' room you have seen two joints go? Yes, sometimes.

More often than one? I will not say that.

It might be more often two? Yes, it might.

And that happened frequently? Yes; whenever I was there. Some days I was absent.

You were in the Matron's kitchen once? Yes.

And saw the coal used that was taken from the laundry? Yes.

How did you know it came from the laundry? I go down after the patients; I go down to speak to the Matron's housekeeper; I go in there the same time as the patients.

You saw the coal carried into the kitchen? Yes; two buckets.

When the Matron ordered you to give her the cups and saucers from the cottage you refused? I did not exactly refuse; I did not give them to her.

You might have answered in the same way when asked for the paste? The paste was over and was not wanted; the cups were wanted.

You have been in the Matron's pantry? Yes.

There

There are cups and saucers there? Yes, I do not know to whom they belong. Those were special cups at the cottage.

Have you been in the Matron's quarters at afternoon tea-time? No.

But the nurses occasionally have had afternoon tea there? I do not know. I never knew they had afternoon tea; some of them might slip in and have a cup of tea.

You have not known them to have afternoon tea? If the housekeeper was having a cup of tea, they also might have one.

Have you had a cup of tea with the housekeeper? Yes, once or twice.

Once or twice? I cannot say how many times; not at four o'clock.

But you have had tea there? I do not know whether it was there, or in the housekeeper's room at night.

Or it might have been in the Matron's quarters? Yes, possibly once or twice.

You have met other nurses there I suppose? Yes, the housekeeper's sister.

She is a nurse? Yes.

Have you met any other nurses there? Nurse Maggie Cahill; she was there when the housekeeper was away.

Have you met her there when the housekeeper was there? Yes, sometimes; but very often she has brought her own private tea.

And had it made in a separate pot? Not in a separate pot; she has emptied the tea-pot and made a second brew.

When you have been out of sorts, have you had a meal cooked by Maria McNulty? No; I have not.

Or cooked in the housekeeper's quarters? I have not had a meal. One day the nurses were given some vegetables, and they gave me a little.

Is one day all you can remember? Yes; that is all I can remember.

Were you ill at any time since you came here? Yes, I have been very ill.

Were you served with food cooked on the Matron's stove? Nurse Cahill cooked things herself. The doctor ordered what I was to have—eggs and milk.

Did they come from the general kitchen, or where? Nurse Cahill cooked them herself.

Which stove did she cook them on? Sometimes No. 1, and sometimes she went into the general kitchen.

You do not know whether she cooked them on the Matron's stove or not? She told me as a rule; but she never mentioned the Matron's stove.

What did she tell you? When she gave the things to me, I generally asked, "Where did you cook them"?

When you were ill, she told you where she cooked the things? Yes.

Did you anticipate this row then? No, I had no idea of it.

Why then should she mention where the food was cooked? I asked her.

Why did you ask her? I asked her, and she said, "I cooked them, with Lizzie Burt, in the kitchen."

Mr. Nathan: These cups we have heard about,—they were special cups? Yes; they were cups used by the patients.

The Chairman: What did the Matron require them for? She said they were very nice ones; they were of an old-fashioned pattern.

She did not want them as a loan? She said she would take the blame, if I let her have them.

Mr. Russell: Do you think she wanted them for good? I understood that she wanted them; that she had taken a fancy for them.

The Chairman: Did they belong to the Institution? Yes, to No. 6 cottage.

Mr. Bridges: With reference to the mug incident,—you said Bessie Smith told you the Matron saw her hit a patient, and that the Matron said "Oh! Bessie, Bessie!"—did you understand from her mode of speech that she approved or disapproved? She did not know what the Matron was going to do.

From the manner in which the Matron expressed herself, did you understand that she approved or disapproved of Bessie Smith's conduct? I was not present.

Mr. Russell: Did the Matron propose to give you any other cups in exchange for those she wanted you to give her? I do not remember her asking me to give her any other cups.

Catherine Miller sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? Fourteen years, last month.

Have you ever been reported during that time for any serious breach of the Regulations? Not that I know of.

You are not a bad character; that is what I want to get at;—you have not been continually hauled over the coals? No.

I believe you are in charge of No. 1 patients' ward? Yes.

Have you seen coal going from the laundry coal-house to the Matron's quarters? Yes.

Have you seen that frequently? Yes, I have.

—Summer and winter? Yes.

How often each day? Twice a day.

At what times? At breakfast and at tea time.

How used it to be taken down? Two buckets full at a time.

That was a daily occurrence? Yes.

You recollect the retrenchment which took place four or five years ago;—you are now speaking of what took place since the retrenchment? Yes.

Before that, was the coal delivered to the Matron's quarters, and put down the hole under the verandah? I never noticed.

Have you taken any provisions, or did provisions used to go, from any of the wards to the Matron's quarters? Yes; I have taken milk myself.

You have taken provisions from No. 1 ward yourself? Yes.

Have you seen it going on other occasions;—did it go as a regular thing? Yes; from the nurses' dining room.

What

What have you taken to the Matron's quarters from the patients' wards? I have taken half a pint of milk, a loaf of bread, and about half a pound of butter.

Did you take meat? No.

Any other provisions? No.

Used those things to be taken down daily from No. 1 ward? Not now; it has been stopped.

Until the last two or three months was it taken every day? It has not been taken down this twelve months.

You mean you have taken nothing down? Yes.

It is twelve months since you took anything down? Yes.

Have you known of anything going down since? No.

Who instructed you to send these things to the Matron's quarters? The Matron.

The Matron herself? Yes.

Was that food supposed to be for the patients who were working there? Yes.

I suppose at times there were one or two patients from your ward working there? Yes.

Was the food you sent down enough for two, or barely enough? There was more than enough for two.

Was it considerably more than the regulation allowance for two? Yes.

What is the regulation allowance for each patient? Generally a gill of milk daily, 14 oz. of bread, and 1 oz. of butter.

Used you to send as much as a pint of milk at a time? Yes.

From No. 1 ward? Yes.

How much butter did you send? Half a pound.

Did you ever send a loaf and a half of bread? No, a loaf of bread.

Or more sometimes? No, only a loaf.

And that was sent down at the Matron's instructions? Yes.

When you sent down more than the regulation allowance for the patients employed at the Matron's, was any of it returned? No.

Since March last, at any rate, you have taken nothing down? No.

Did the Matron ever get anything from you from any of the patients' quarters to take up country with her;—you know she had a place at Katoomba? Yes.

Did she ever get anything from you? She asked me for some corned beef to make some sandwiches to take up country with her.

What ward were you working in then? No. 1.

Did you give her the corned beef? No.

Has she asked you for anything else? She has asked for sugar.

For what kind—for brown sugar? Yes.

Did she get it? No.

Did she borrow baskets from you to take up the country? Yes; on one occasion she asked me, but I did not lend them to her.

Are these things in accordance with the Regulations, or against the Regulations? Against the Regulations.

Did you ever see meat or anything going from the nurses' quarters to the Matron's? Yes.

What did you see? I saw a joint of meat going down.

Was it a daily occurrence? Yes.

Have you any ill-feeling towards the Matron? No.

So far, you have not been dismissed from the Institution? No.

Mr. Russell: You say you have no ill-feeling towards the Matron? No.

Have you any ill-feeling towards Annie Quilkey? No.

You are on good terms with everybody? Yes.

Who ordered you to take these provisions from No. 1 ward to the Matron's? The Matron.

Who fixed the quantities;—did you pour the milk into the jug? Yes.

Did you know it was more than the regulation allowance you were taking? Yes.

On other occasions you refused to do things for the Matron; you refused to give her the meat, or lend her the baskets;—sometimes you did as she told you, and sometimes you did not? I refused in the matter of the baskets.

You say you were told to send down food for the patients? Yes.

And that you always sent more than was necessary? Yes.

You knew the number of patients from your ward working at the Matron's? Yes.

Mr. Nathan: You never got anything back? No.

The Chairman: Did the nurse tell you what to send down? If I did not send enough she told me.

What did she tell you to take down? She asked me for milk.

What quantity? She did not tell me the quantity.

Any quantity of butter or of bread? She asked for bread and milk and butter.

She did not say how much? No.

You used your own discretion in the matter? Once or twice when I sent milk she said it was not enough.

Mr. Bridges: Was that milk for the patients? Yes.

Mr. Nathan: McNulty never complained that you sent down too much? No.

Mr. Russell: It did not often happen that she said you had not sent enough? No.

There may have been days when you did measure out a little less; did you measure out the same quantity every day; did you use a measure? No, I just guessed it.

Catherine McSweeney sworn and examined:—

Mr. Nathan: How long have you been nurse in this Institution? Five years next December.

Were you present in January of this year; when Nurse Bessie Smith gave some of the patients a concoction of pepper and water? Yes; I was.

They were some patients in No. 4 who would not take their food? Yes.

Was she angry with them for not taking their food? Yes; they refused to take their food.

Did

Did she make them take it? She said she would see why they would not take it.
 Was it pepper and water, or pepper and salt and water? I did not see it mixed; I could not see whether there was salt in it.
 Was it given as a punishment? She said they would not take their food, and she would see why.
 Was it soup she was giving them? No.
 It was something intended as a punishment? Yes.
 Will you explain what was done? Nurse Bessie Smith pinned their hands behind their back, and she asked me to hold the nose of one of the patients while she did it.
 Did she put her arm underneath the patient's chin? Yes.
 What did she do then? She forced the stuff down their throats with a spoon.
 She made you hold the patient's nose? Yes.
 The patients resisted, then? Yes.
 Resented what she was attempting? Yes.
 She forced them to take it? Yes.
 There was no mistake;—she was angry at the time? Yes.
 Who else was present on that occasion? There were four nurses present.
 Who were they? Bessie Smith, myself, and Nurse Annie Quilkey, Nurse Tidyman, and Nurse Wills.

Was the matter reported to the Matron? Yes; it was reported next morning by Nurse Wills.
 Was any inquiry held at that time? Some of the girls went down to the Matron's office about it.
 Were you called to give evidence? No.
 Were you asked questions about it at all? No, nothing whatever.
 Did Nurse Smith ask you to do anything on that occasion? After the matter had been reported, she asked me if I was going to say she starved the patients—which I did; and I said I would not say anything of the sort.
 Did she ask you something about going to put her away? She asked me if I was going to say she gave pepper; and I said yes.
 The other nurses, I believe, were removed from the ward; you were allowed to stay? Yes.
 You never gave any evidence at that time? No.
 Were you present on any occasion when Nurse Smith struck Jane Downey on the mouth with a mug? Yes; I was there, but I did not see her do it.
 The Matron was there, was she not? Yes. I happened to be standing near, though I did not see Bessie Smith do it. I heard the Matron call her by name; she said, "Oh, Bessie!"
 That was all that was done, so far as you know? Yes.
 Was the patient suffering at all? I did not see the blow; not that I know of; I cannot say.
 Did Bessie Smith say that the Matron saw her strike the patient with a mug? When she was at the breakfast table she said she could not eat anything; she was too upset because the Matron had seen her strike a patient.
 Have you seen coal going from the laundry-house to the Matron's quarters? Yes, I have.
 Used that to go summer and winter? Yes.
 In what quantities? Two buckets I have seen going down.
 Have you seen it go both night and morning? Yes.
 Have you seen coal taken from the Matron's quarters into the kitchen? I have seen it go into the office; I have not seen it go further; I saw it go through the office.
 Through the office? I saw it going through the office-door.
 You did not see what became of it afterwards? No.
 Have you seen provisions going from the patients' wards to the Matron's quarters? I have taken broth.
 I ask you, have you seen them? No.
 Have you taken them yourself? Yes.
 What used you to take down? A loaf of bread, a jug of milk, and some butter.
 Used that to go down every day? Yes.
 Since the row in March last, has anything of the sort been done? No.
 Has any coal gone down since the row? No; I have not seen it lately; I saw it before.
 You have not seen it since the row? No.
 Have you any ill-feeling towards the Matron or Bessie Smith? No; I have no ill-feeling towards anybody.

Mr. Russell: There are patients still working at the Matron's? Yes.
 Just as they did before the row started? Yes.
 Do you not see their food being taken down? Not now.
 You have not seen it go lately? No.
 You are sure of that? Yes, I am positive.
 You used to see it before? Yes.
 Are you doing the same kind of work now as then? Yes; I am in a different ward.
 You are not at the cottages? No.
 You are in the quadrangle as much as you were before? Yes, just the same.
 You have seen patients who refuse to take their food or draughts? Yes.
 Do they not sometimes refuse to swallow their medicine, even when it is in their mouth? Very seldom.

Has it not happened that a patient has refused to swallow the liquid, and that it has poured from her mouth? I have not seen it.

The Chairman: They cannot help themselves if you hold their nose? No.
Mr. Russell: Did you assist to administer the draughts? No.
 When the pepper was given who pinned the patient's arms? The nurse in charge of the ward—Bessie Smith.
 And she also gave the pepper? Yes.
 Was the pepper dry, or mixed with water? Mixed with water.
 She did the whole thing herself? I held the nose of one of the patients; she asked me to do so.
 And the others? She did it herself. To

To all of them? So far as I know.
 What were their arms put behind? Behind the back of the seat.
 In what way? They were held tightly.
 Did the patients resist this very much? Yes.
 They did? Yes, they resisted.
 Bessie Smith could hold their arms and neck firmly and administer the draught herself? She pinned their hands behind their backs with her knee, put one hand under their chin, and with the other hand held the mug to their mouth.
The Chairman: Was Nurse Quilkey there? Yes.
 Did she do anything? No.
 Did you see her administer any pepper? No.
 Did you hear any one say she had done it? No, I did not.

Grace Braithwaite sworn and examined:—

Mr. Nathan: How long have you been a nurse here? Two and a half years.
 Have you seen coal going from the laundry coal-house to the Matron's quarters? Yes; I have seen it go as far as the Matron's door.
 In what quantities? I have seen a patient take two buckets.
 Did that occur night and morning? Yes.
 Summer and winter? Yes.
 More in the winter, I suppose, than in the summer? I did not notice.
 Did you ever take coal down yourself? No.
 Have you seen provisions going from the patients' wards to the Matron's quarters? Yes; I have.
 What did you see? I have seen go down in the morning from No. 3, bread, butter, and milk. I used to take it down myself.
 In what quantities? A loaf of bread. I do not know how much butter; I did not weigh it.
 About how much milk? A jug. I was there only two months.
 Did you take meat and vegetables? Not from No. 3.
 Where did they come from? From No. 5.
 At the same time? When I was in No. 5.
 Did the Matron get mutton-broth and luxuries of that kind from the ward? It used to go down to the Matron's quarters.
 What was it—mutton-broth? Mutton-broth and pieces of fowl.
 And any other little delicacies? Yes; milk and eggs.
Mr. Russell: That is in addition to the meat and potatoes? Yes.
Mr. Nathan: Were there any sick patients there at the time that you knew of? No.
 If patients were there sick, would they be kept there, or would they be sent back? They would be sent back.
 Did you see any food going from the nurses' quarters? No; I have not seen it go from the nurses' quarters.
 Was ever a whole joint sent down from No. 5? Yes; sometimes a piece, and sometimes a whole joint and vegetables.
 Did you ever deliver these things yourself into the Matron's hands? Once I gave her some mutton-broth in the office.
 And chicken? No; only mutton-broth.
 Have you given her chicken? I have taken it to the house.
 What did the Matron do with the mutton-broth? I cannot say; I just gave it to her.
 Were any patients from your ward working there when you took this mutton-broth and chicken to the Matron's quarters? Not from No. 5.
 There were none that you are aware of? No.
 Have you sent down to the Matron's quarters whatever was served in the wards? Not everything.
 But pretty well everything that was in the place? Yes.
 Under whose instructions were you sending the stuff down? The Charge Nurse—Nurse McLean.
 Have you given food to the other nurses to take down there? I have not given it; I have seen other nurses take it.
 Was the food sent down from the ward only enough for a patient or two, or was it in excess of their usual allowance? It was more than enough for two or three patients—the meat, vegetables, and potatoes.
 How about the bread and butter and milk? A jug of milk was sent; and on some days two jugs.
 Used you to get any back? Not that I know of.
Mr. Russell: Would you necessarily see it if any food were sent back? I might not see it.
 It might come back and you not see it? It might happen so. I do not think it would come back.
 You do not think it was so, but it might have been so? Yes.
 Some of the provisions you sent were from No. 3? Yes.
 That did not include meat and potatoes? No.
 Were any patients from No. 3 working at the Matron's quarters? There was one patient from No. 3.
 I suppose she was allowed meat and potatoes? No meat and potatoes ever went.
 Would it have been wrong to give that patient meat and potatoes? No.
 Then they must have been supplied from elsewhere? I suppose so.
 Did you send milk from No. 3? Yes.
 And sometimes, you say, a whole joint was sent from No. 5? Yes.
 You can remember a whole joint being sent? Yes.
 In spite of the fact that no patients from No. 5 were working at the Matron's? Yes.
 Did that strike you as being contrary to the Regulations? Not at that time; I did not think anything about it.
 Who told you to do it? The nurse in charge—Nurse McLean.
 The Charge Nurse means the nurse in charge of a ward? Yes.

You

You have been on friendly terms with the Matron? Yes.
 And are still? Yes.
 The fact that you are giving this evidence has made no difference in the Matron's treatment of you?
 Not the slightest.
 Have you ever had tea in the Matron's room? No.
 Or in the Matron's quarters? No.
 Have you had tea with Maria McNulty? No.
 Have you been in the kitchen? I may have been there once.
 Not very often? No.
 Sometimes the patients become ill and delicate? Yes.
 Have you ever known of them having food cooked by Maria McNulty, or by any of the nurses who
 may have relieved her? No.
 You never heard of that? No.
 You never saw it done? No.
 You never saw food brought from her stove? No.
 Have you seen anything brought for the nurses—anything specially nice? Yes; on one occasion
 I did.
 Was it for you? No; I saw it on one occasion.
 Do you not know it was done more than once? I remember two nurses being ill in No. 5, and she
 sent dinner to them.
 She sent them a well-cooked dinner one day? I do not remember when it was; I remember seeing
 it come in. It was a plate of something.
 Have you known of anything being cooked to help the nurses' dining table? No, never.

Emily Barrett sworn and examined:—

Mr. Nathan: How long have you been nursing in this Institution? For the last six months.
 Do you remember any occasion on which milk or provisions of any kind was sent to the Matron's
 quarters? Yes, from No. 4 ward; I took milk, bread, and butter.
 Was that prior to the row? Just about the time it commenced.
 What happened on that occasion? I just took it down to the Matron's pantry under the instructions
 of the senior nurse in No. 4 Ward.
 Who is that? Bessie Smith.
 Did you take provisions down in that way on more than one occasion? Yes, four or five times.
 Do you remember any occasion on which the Matron accused you? Yes; that was when I was
 relieving in the nurses' dining-room.
 When was that? On 22nd April.
 Of this year? Yes.
 Did you take anything from the nurses' dining-room to the Matron's? No; the milk taken was
 taken by one of the patients whom Nurse Cahill sent.
 Some milk was sent by one of the patients? Yes; Nurse Cahill sent a patient to me for enough
 milk for three cups of tea for herself and two patients. I sent it down. The Matron sent for me, and
 asked me how I dared to set a trap for her; and she stamped her foot at me, and asked how I dare to spy
 upon her. I reported to Dr. Blaxland next morning.
 Was there any trap? Not that I know of; I know nothing about it. Nurse Cahill sent for the
 milk, and I gave it to her.
 This was since the trouble commenced? Yes.
 You reported it at the time? Yes; I went down on Sunday afternoon, but the doctor was not
 there; so I went down again first thing in the morning.
 Has Nurse Smith been interfering with you at all? No; but she has made things unpleasant in
 the ward.
 Since this time? Yes.
 Did she make things unpleasant before that incident? Yes; I had only been here a short time;
 I was relieving one day in the ward when —
 Tell me this: did you ever have your arm bitten by a patient? Yes.
 When was that? About two months ago, or six weeks.
 Was it after the row began? Yes. Nurse Smith never attempted to do anything for me. I was
 going about with my arm bleeding, and she told me to feed the patients.
 You were forced to work? Yes; she told me to feed the patients at dinner-time. I went on
 working, and then I was put in another ward.
 Were you put in No. 4? I was out two or three days, and then placed back again.
 You were not allowed to see the doctor for a long time? I saw Dr. Blaxland next day.
 You were forced to go on working? Yes.
 Is it a fact that Bessie Smith called the other nurses out, so that your injury could not be attended
 to? Yes; I went on working till 3 o'clock before my arm was bandaged.
Mr. Russell: When Nurse Cahill sent for the milk, did she say it was wanted for tea? Yes.
 For herself and two patients? Yes.
 Where was she? She was relieving at the Matron's quarters.
 It was in No. 4 ward that your arm was bitten? Yes.
 That is the relieving ward? Yes.
 And the patients there are more troublesome? Yes.
 Bessie Smith is in charge of that ward? Yes.
 Bessie Smith is not well liked, I believe? I do not know.
 You do not like her well? She has made things unpleasant for me.
 She expects a great deal from the nurses under her? Yes, she does.
 She is a hard taskmistress, whatever her other qualities may be? She is.
 However good she may be in any other way? Yes.
 She exacts hard work from all the nurses? So far as I have seen.
 Were you in No. 4 ward with Nurse Quilkey? No.

Mr.:

Mr. Nathan: You have no ill-feeling towards the Matron? No; she made things rather unpleasant for me.

You have no ill-feeling towards anyone? No.

Kate Sadleir sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? Four years, on the first of next October?

Were you present on an occasion last year when Nurse Bessie Smith struck Jane Downey with a mug? Yes.

Was the Matron also present? Yes.

It was done in her presence? Yes.

Was it a friendly tap, or a blow? It must have hurt the patient.

It was a stone mug? A delf mug.

And you say it must have hurt the patient? Yes.

What did the Matron say? She said, "Oh, Bessie!"

How was that said? I thought she wanted to stop her from doing it again.

Bessie Smith, I suppose, was not just collecting the drops from the patient's mouth;—it was a blow? Yes.

Was any further notice taken of the matter, so far as you know? No; Bessie Smith said the Matron asked her what she meant by joggling the patient under the chin. She said she was not annoyed about it. She did not say much to me.

Are you on bad terms with the Matron? No, I am not.

You are not giving evidence out of illfeeling or spite? No.

Have you seen coal going to the Matron's quarters? Yes, frequently.

How did it go down? In buckets.

Night or morning? I do not remember seeing it at night; but I have seen it early in the morning—about half-past 5 or 6 or 7 o'clock.

Both in summer and winter? Yes, both times.

Have you also seen provisions going from the nurses' quarters to the Matron's quarters? Yes.

In what quantities? A leg of mutton, a joint of whatever meat was served up in the dining-room, a piece of corned beef, or a shoulder of mutton.

It was always a joint? Yes.

Did you ever see any come back again? No.

You were not always there, I suppose? No.

Have you seen bread and milk going down there? Yes; I have taken it down myself.

And butter? Yes.

From the nurses' quarters? No, from the patients' quarters.

Under whose instructions did you take it? Under the instructions of the nurse in charge of No. 3, and sometimes of No. 4, ward.

Do you recollect the night before Nurse Quilkey was dismissed? Yes.

Were you present on any occasion when she was supposed to have been cruel to any of the patients? I heard the Matron talking to the nurse in charge, who said that Annie Quilkey had left a patient undressed standing on the cold floor. I saw the nurse go up one staircase and the patient up another, so that she could not have been undressed before she got there.

Was Nurse Quilkey cruel? Not to my knowledge.

Mr. Russell: At the time Nurse Quilkey was dismissed, you were in the same ward? Yes.

Under Bessie Smith? No, under Ada Anderson.

Which ward was that? No. 2.

That was after Nurse Quilkey had been moved from No. 4? Yes.

Have you been in No. 4 with Nurse Quilkey? Yes, but only for a short time.

Would it be correct to describe Bessie Smith as rather a hard taskmistress? Yes; she was very hard.

And the nurses under her did not like her very much? No.

Does she do much work herself? Yes.

She is herself a good worker? Yes; she is always working.

Mr. Nathan: Does she curse and swear at the patients? Yes; I have often heard her.

Does she use filthy language? Yes; I would not care to repeat it.

Tessy Impey sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? A year and ten months.

Used you to see coal go to the Matron's quarters from the laundry coal-house? Yes; I have seen it go through the nurses' dining-room.

In what quantities? I have seen it going down, two buckets at a time.

Morning and evening? I cannot say about the evening; I have seen it in the morning.

Did you ever see it in the evening? No, not in the evening.

Did that take place from the time you came into the Institution? Yes.

Do you recollect the row in March last? Yes.

Used it to go down regularly up to that time? Yes.

Have you seen it go down since? I have seen it go down—one bucket of a morning.

Not in the same quantities as it did before the row? No.

Have you seen provisions going from any of the patients' wards to the Matron's quarters? When I was working in the wards of a morning I have taken down butter, bread, and milk.

In what quantities? I have taken a loaf of bread, some butter—I cannot say how much—and a jug of milk.

How many patients from that ward were working at the Matron's at that time? There was one working there.

Did you take more provisions than was enough for one patient? I suppose I did, because I took a loaf of bread and a jug of milk.

Would

Would a jug contain nearly a pint of milk? It would be more than a pint; it was a big jug sometimes.

And about half a pound of butter? Yes, about that.

Did you ever take meat and vegetables there? No.

From any of the wards? No.

Did any meat and vegetables go from the wards? It was usual for meat to go down, but the patients always came and got it.

That was from No. 5? Yes.

Whose ward was that? Nurse McLean's.

Was that a regular thing? Yes.

Did the bread, milk, and butter go down every day? I was told to take it down every morning when I was working there.

Were any patients working from No. 3 ward then? Yes.

How many? Only one that I know of.

Did you take the same quantities of things down every day? Yes.

Have you seen any food go from the nurses' dining-room to the Matron's quarters? I have seen it at dinner time.

A joint of meat at a time? Yes.

Did you see that happen every day? I cannot say every day.

Did you see it frequently? Yes. When I have been early for dinner I have seen it; that is all.

Under whose instructions did you take those provisions from the wards to the Matron's? The nurse in charge.

Who was the nurse in charge? Nurse McNulty.

The housekeeper? No; her sister.

Did you get instructions from Nurse Bessie Smith? Only once or twice I took it down.

Since March last, when the row took place, have these things gone down? Not that I know of.

Would you have seen them if they had gone down? Yes.

There has been a sudden change so far as you know? Yes.

Mr. Russell: Who was it told you to bring the milk from No. 3? Nurse Martha McNulty.

You have been in the Matron's office? Yes.

You have to go there on business, sometimes? Yes.

Have you been in the Matron's pantry or kitchen? Yes.

Have you had afternoon tea there? No.

Have you seen people having afternoon tea there? No.

Have you been in the pantry? Yes.

There is a gas ring there, is there not? I cannot say; I never noticed it.

You did not notice whether it was in use when you were there? No.

At what times have you been there? I have been there when looking for the Matron, or when taking things down.

Are you on good terms with Maria McNulty, the housekeeper? I do not know her very well; I have only spoken to her when I have met her.

Do you know Annie Quilkey well? I have known her since I have been here.

You are on good terms with her? I know her better than I do Nurse McNulty, because we shared a room together when she came here.

Ada Anderson sworn and examined:—

Mr. Nathan: What ward are you in charge of? No. 2.

How long have you been a nurse here? Eight years.

Was Nurse Quilkey in your ward before she was dismissed? Yes.

Was she always a respectful girl;—did she do her work properly? Yes; I reported her once.

What was that for—for anything serious? She came over to the ward, and, without asking my permission—

She was always polite and respectful? Yes.

Have you seen coal going from the laundry coal-house to the Matron's quarters? Yes.

How often used that to occur? I saw it going three or four times a day—perhaps more.

Perhaps less than that? No; not less than three or four times.

What quantities at a time? Two buckets the patients used to carry.

Was that summer and winter? Yes.

Did you see the coal used on the Matron's premises? No.

Have you known provisions to go from the various wards to the Matron's quarters? Yes.

In what quantities? I saw it coming from No. 4.

What was it? Bread, milk, and butter.

In what quantities? I never saw how much milk.

It was in a jug? Yes; I could not see how much.

Were there any patients from No. 4 ward working at the Matron's at that time? Sometimes. I cannot say that they were working there always.

Did you see anything from the other wards going down--any provisions? Yes, when working in No. 5, some four years ago, but not since.

Did provisions go from the nurses' quarters to the Matron's quarters? I have seen meat go down.

What quantity? A joint of whatever meat came up.

Was that a daily occurrence? Whenever I was on duty I saw it.

Mr. Russell: How long was Nurse Quilkey in your ward? I cannot say how long she was there; she was there a good while.

About how long? About twelve months.

A full twelve months, would you say? I cannot say within a month or two; it seemed twelve months.

What did you report her for? She came over from one of the other wards, and asked a junior nurse for some beds, in place of asking me; and the other nurse gave her permission.

She

She took the beds? Yes.

What was her object;—did she save herself work? It was late in the evening. The patients were having tea. They were short of beds at the ward she was in.

Why were they short? There were not enough; it is a common thing. The Matron spoke to me about it.

You go into the Matron's office as a matter of business? Yes.

It is a very cold office, is it not? I cannot say that it is different to any other place.

Does it get the sun into it as this room does? No.

It is on the other side of the building? Yes.

And there are two doors opening opposite to each other? Yes.

There is a constant draught through it? Yes.

Then it is a cold room? Yes.

Mr. Nathan: Does she have a fire in the office in summer;—is it as cold as that? I never saw fires in the summer.

Mr. Russell: There is a fire in it whenever you go there? Yes, in the winter.

Have you had afternoon tea either in the office or in McNulty's kitchen? I have often had a cup of tea.

Not necessarily afternoon tea; in the kitchen or in the pantry? Yes.

McNulty made it for you? She did not make it specially; she was having some, and I had a cup with her. I did not go purposely. If I happened to be there she gave it to me.

Would she also give it to other nurses? Yes.

Have you seen other nurses having tea there? Yes.

Have you known nurses to have things cooked by Maria McNulty;—have you seen things on the nurses' dining-table or in their own rooms? After the Matron and Doctor have dined she has sometimes sent meat and vegetables over. I only saw meat once, but very often vegetables. That is a good while ago.

Not since the row? Twelve months before the row.

Have you ever known McNulty cook anything specially nice for sick patients? No.

The hospital, of course, supplies them from the general kitchen; but, as a matter of extra kindness, might she not do so? I have never known of it being done.

[The inquiry was adjourned at 4:30 p.m. till 11 a.m. the following morning.]

TUESDAY, 26 JUNE, 1900.

The inquiry was resumed at the Callan Park Asylum at 11 o'clock a.m.

Ada Anderson further examined:—

Mr. Nathan: You were asked yesterday about some occasion on which you reported Nurse Quilkey;—will you tell us what it was for? Yes. She came from No. 2 ward and asked the junior nurse's permission to take some beds out of the ward. She ought to have obtained my permission as Charge Nurse. Of course I spoke to the junior nurse.

Were you there at the time? Yes; I was at the top end of the room. When the Matron came in to go through the ward, about half an hour afterwards, I told her of the circumstance.

That sort of thing, I suppose, has been done frequently before by the nurses? It is a common thing for nurses to borrow beds from each other; but the senior nurse is asked for them.

You were annoyed? Yes; because she did not ask my permission.

You swore yesterday that you have seen buckets of coal going down to the Matron's office;—how many buckets have you seen in the office at one time? On one occasion I saw six buckets carried there.

They were all put in the Matron's office? Yes; it was in the winter, and there was a fire burning.

Is there a coal-scuttle in the Matron's office? I cannot say if there is always one there.

Can you say anything about a scuttle? I cannot say if there is always one there. It was sometimes taken in buckets, sometimes in an old soup-can, and sometimes in a scuttle.

On one occasion you saw six buckets there: did you see what became of it;—were you in the Matron's office? I was waiting at the door when I saw the coal brought in.

Tell us about it? When I was standing at the door waiting to deliver a report I saw one of the patients come in and take it out—not all, but perhaps one or two buckets.

You saw some of the buckets taken out? Yes; I cannot say they were all taken.

They were taken through the door? Yes.

The door leading to the kitchen? You must go through that door to get to the kitchen.

Mr. Russell: You saw them take it through that door? Yes.

Mr. Nathan: You saw them taken into the hall, and that is the only way into the kitchen, unless you come through the main entrance? Yes.

Mr. Russell: How many months ago is it that you saw these six buckets of coal? I cannot say how long ago it is.

You cannot remember how long? No; the patient who usually took the coal was not well enough.

Was it in the winter? Yes.

Was it this winter? Yes.

If coal were being taken to the junior medical officers' sitting-room, would it come through the same passage;—would it pass through the Matron's office into the passage, as you saw the buckets going? Yes, so far as I know, it would have to go that way.

Mr. Nathan: If it were used in the Matron's sitting-room it would have to pass that way? Yes; or if it were used in the kitchen.

Mr. Russell: Who was the patient you saw carrying these six buckets? Mrs. Marshall.

Who carried them into the hall? I do not remember the patient's name; there were different ones working there at that time. I remember Mrs. Marshall, because she always worked there.

You cannot say who carried it beyond the office? No.

Mr. Nathan: You were asked if coal intended for the doctor's use would be brought through the Matron's office? It would be brought through this door (*indicating the main entrance*).

You were asked if that were the way coal would be brought? It could be brought that way or
But

But this (*the main entrance*) is the way it would be brought? Yes, of course.

The Chairman: You say it could be brought through this way? Yes.

Which way was it usually brought? Through the Matron's office.

When it was required for the use of the medical officer? I cannot say.

Was it brought through this way (*main entrance*)? I cannot say.

Mr. Russell: Did you ever see coal being taken through this door to the medical officer's quarters?

No.

You are in charge of No. 2 ward? Yes.

Do you remember the Matron on one occasion speaking about one of the patients having been left half undressed in the cold? She may have spoken about it, but I do not remember.

Are you sure you cannot remember the Matron speaking of such an occurrence? No.

It happened in your ward—a patient left standing in the cold half undressed? No; I cannot remember that.

It was a patient under Nurse Quilkey? I do not remember anything about it. It did not happen while I was there. While I was away on my holidays I believe Nurse Quilkey was spoken to about leaving a patient half dressed, but I know nothing about it myself.

When were you away? The last fortnight of March.

March of this year? Yes.

Mr. Nathan: Was Nurse Quilkey cruel to the patients in your ward? No.

The incident referred to happened while you were away, and after the row began? Yes; I heard of it on my return.

Did you hear that it happened the night before she was suddenly dismissed? Yes.

Victoria Steel sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? Seven years, this coming July.

Have you ever been reprimanded during that seven years. Yes, by Dr. Blaxland.

Was it for a serious offence, or what? He has told me nothing serious.

Let me ask you: do you remember the night before Nurse Quilkey was dismissed from this Institution? Yes, I do.

There was some report that she was cruel to one of the patients? The Matron said she was cruel.

The Chairman: Did you hear the Matron say it? The Matron told me that Nurse Quilkey was dismissed, and she tried to make me say she was cruel; but she was not cruel. The Matron said Nurse Quilkey had left a patient standing on the staircase half dressed.

Mr. Nathan: Who was the patient? Mrs. Macauley. To get to that staircase she would have to pass through a locked door.

Mr. Russell: Were you there? Yes; I was the nurse in charge.

Mr. Nathan: To get to the staircase you would have to do what? A door would have to be unlocked; it was locked. I had to unlock it to let the patients through, and I had to see them into their rooms. Mrs. Macauley went up one staircase as the Matron went up the other, and she had only just finished undressing and put her clothes on the shelf as I opened the door of the room she was to sleep in that night.

The Chairman: You say the Matron tried to get you to say that Nurse Quilkey was cruel? Yes; and I replied, "No, she is not."

What did the Matron say? The Matron said, "You know Nurse Quilkey was cruel to the patient—Mrs. Macauley." I said, "No." I denied it; I said it was not true.

Mr. Nathan: What did the Matron say then? She muttered to herself as she went across the Court. I had to follow her to the next ward with a lantern.

Have you seen coal going from the laundry coal-house to the Matron's quarters? Yes, I have.

How often? In the early morning, and during the day at different times.

Both summer and winter? Yes. I have let the patients through, when I have been on night duty, to get coal between half-past 5 and 6 o'clock on the summer mornings.

How much coal did they carry? A bucket full in each hand.

How many buckets a day have you seen? Several.

And that used to go on in summer as well as winter? Yes; I have seen it in summer and winter.

Do you know of any provisions of any kind having gone from any of the wards to the Matron's quarters? Yes; milk, butter, and bread, I have taken myself from the wards.

From which wards? From No. 3 and No. 4.

Who was in charge of No. 3? Nurse Bessie Smith at that time.

What quantities did you take down? A jug of milk—I cannot say how much; a quart more or less possibly; it all depended on the size of the jug—a loaf of bread, and about half a pound of butter.

At the time you took those provisions from No. 3 ward, how many patients from that ward were working at the Matron's quarters? One patient.

If you did not take them down, how did they go? They were taken by another nurse.

It was an everyday occurrence? Yes; one nurse had to do it each week.

When you took provisions from No. 4 ward, how many of the patients were at that time working at the Matron's? One patient from there. The nurse who was in charge of that ward has left now.

Who was she? Nurse Scarlett.

Under whose instructions did you take those things? The senior nurse's.

During the time you were there, did the patients working at the Matron's come up to the wards for their meals? Yes, they have come up.

About the quantity of provisions taken down, was it enough, or more than enough, for the number of patients working? It was more than the allowance for one patient.

Did you ever get any of it back again? No; I never saw any come back.

Did you ever send tea and sugar down? I have been asked for it out of the nurses' dining-room.

Used you to send sugar and tea from the nurses' quarters? Yes; when Maria McNulty, the housemaid, asked me for it.

Did any meat go from the nurses' quarters? Yes.

In what quantities? A joint.

Was

Was that every day? Yes; that was when I relieved. When I was in charge I did not send anything for three months. Then another nurse took my place, and when I relieved afterwards I found it was a daily occurrence to send a joint down to the Matron's quarters.

Was it a joint from the table, or was it a fresh joint? It was taken off the dish as soon as it came from the kitchen, and carried down by a patient.

The joint was uncut? Yes.

Did any of it come back while you were in charge? No.

Do you recollect the retrenchment which took place four or five years ago;—before that time, how was the coal taken to the Matron's quarters? I cannot remember.

Did you ever see it put down the coal-hole into the cellar? Oh, yes; I have seen it go down there.

Since the retrenchment, have you seen it put down there? I cannot say.

Do you recollect the row in March;—have you seen any coal go down to the Matron's quarters since? No.

Have any provisions gone from the nurses' quarters since that time? Not to my knowledge.

Or from the wards? Not from the wards I am in.

Mr. Russell: You were asked if any tea and sugar went from the nurses' to the Matron's quarters;—who sent for it? Maria McNulty asked for it.

About this incident of the stone stairs;—was the patient supposed to have been on the stairs? No.

Where was the patient? She was supposed to be getting undressed to go into her room.

Where was the patient when the Matron arrived? She went up one staircase as we went up the other.

You and the Matron went up one staircase and the patient went up another? Yes.

The staircases were at different ends of the ward? Yes; the patient had to walk the length of the dormitory, and undress. As I opened the door she had just undressed and put her clothes on the shelf. She was walking towards the door as I opened it.

Which door was locked? The door leading to the staircase; the door of her room was locked.

Where was Nurse Quilkey? She was coming before the Matron, and I told her it was the nurses' duty to lock the door after I opened it.

Had you opened the bedroom door? I opened it and let her in.

Was Nurse Quilkey in the room before you got there? She was upstairs in the dormitory seeing the patients to their rooms.

She was in the ward before the Matron arrived? Yes.

Was she there before Mrs. Macauley got there? Yes.

If one witness said that the patient walked upstairs, one step ahead of Quilkey, that would not be true;—would it be true to say that Macauley went upstairs one step ahead of Quilkey, or one step ahead of the Matron? She went up the other staircase.

And Quilkey was in the room before her? Yes; nurse was upstairs.

You said, I think, that you had let the patients through the door of the nurses' quarters with coal for the Matron's quarters from the laundry-yard? Yes.

At other times those doors are locked? Yes.

The patients cannot get through unless the door is opened for them? There is a passage through the nurses' pantry.

There are two doors, both kept locked? They are always locked by the night-nurse.

Are they locked in the daytime? The door on the verandah is, unless the nurses are going for their meals.

You have seen patients working in the Matron's quarters come to the wards for their meals? Yes, I have.

Did they invariably do so? Yes.

They returned to whatever ward they belonged;—when you were in No. 4 ward the patient from that ward came back for her meals? Yes.

For all her meals? Yes.

Would it be correct to say that the patients got their breakfast, the earliest meal of the day, at the Matron's quarters;—suppose another witness said that, would you say she was right or not? When I have been in the ward I have seen patients come for their three meals a day; that is all I can say.

You are good friends with Nurse Quilkey? Yes, I am.

Where does she live at present? Is it necessary for me to tell you that?

Does Nurse Quilkey live with your mother at present? Yes, she does.

You go there, sometimes, I suppose? Yes, I do.

Is it a fact that Bessie Smith does not dine in the nurses' mess-room since the row? She only came back from her annual leave the day before yesterday. She discontinued it for some time. I do not know why.

Do you discuss the dispute which has been going on in the nurses' dining-room? No, I do not make it a habit of doing so.

I suppose it is referred to sometimes? We only have half an hour for dinner; we have not much time.

You do talk? We are not dumb.

You are not dumb on this question? You can form your own idea of that.

Do you discuss these matters? Has it any bearing on the case?

The Chairman: You have talked about this matter? It is natural enough; it is natural to talk about that as anything else going on in the building. As for making it the common discussion, we do not do it.

You say that, before the retrenchment, you saw coal go down the coal-hole from the coal-house in the laundry yard? The only time I have seen coal going down the coal-hole it came from the coal merchant.

It did not come from the coal-yard? It was brought by a man in a cart.

Mr. Nathan: Is there any truth in the suggestion that you nurses are clubbing together against the Matron? No.

It is true that Nurse Quilkey is living with your mother;—was she not turned out at a moment's notice? She was told to go in the afternoon.

And she stays with your mother? Yes,

Where

Where has Bessie Smith been dining lately? In the ward.

Now about this passage door; when the coal for the Matron's quarters goes through the nurses' dining-room, the door has to be unlocked to let the patients on to the verandah, but the passage door is left open? There is a passage on the other side of the nurses' dining-room, and one this side. It was the door of the passage on this side that I opened to let the patient through; the other is the door left open in the daytime.

To get through that passage you have to go through the nurses' dining-room and through the kitchen? Yes.

Did I understand you to say that door was never shut? On this side it is always shut.

The passage door on this side is always kept locked? Yes.

And the door from the nurses' sitting-room on to the verandah is kept shut? Yes.

The passage door beyond that? That is left open.

In the daytime? Yes.

Have you any ill-feeling towards the Matron? No.

Mr. Russell: Going from the laundry-yard to the Matron's office, does not a locked door always intervene? Not necessarily; they can get through the nurses' dining-room.

When is the door of the nurses' dining-room open? When the nurses go for their meals.

And the door opening into the sitting-room,—how often is that opened? It all depends on the nurse in the dining-room how often she locks it.

Is it not her duty to keep it locked? When she is there. She is not always there. The nurses go along and open it.

Either she is on duty within reach of the door, or else the door is kept locked? It should be kept locked, but in the absence of the dining-room nurse the other nurses open the door and often leave it open—that is, the dining-room door from the laundry-yard.

Is it not a breach of the Regulations to leave it open? It may be.

Annie McLeod sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? Three years and three months.

Have you ever been reprimanded for bad behaviour, or anything of that sort? No.

Have you ever worked in the Matron's quarters? No; never.

Have you seen coal going from the laundry coal-house to the Matron's quarters? Yes; I have.

In what quantities? Two buckets at a time.

How often? Frequently during the day.

Summer and winter? I cannot say that.

Will you swear that it did not go in the summer? No; I cannot.

Where was it taken to? I saw it go into the Matron's office, but I cannot say if it went further than there.

You do not know how much further it went? No.

Were you ever in the office when coal was taken out? No.

Have you ever seen food taken from the nurses' quarters to the Matron's quarters? Yes.

In what quantities? A joint of meat, and bread, butter, and milk.

In what quantities? I cannot say.

Was that a frequent occurrence? It went down whenever I was in the nurses' dining-room.

A whole joint of meat at a time? Yes.

Did any of it come back that you ever saw? No.

Used things to go down from the patients' wards to the Matron's quarters? Yes.

Tell me what wards you know of? Nos. 3, 4, and 5.

What used to go from those wards? A loaf of bread, a jug of milk, and —

What sized jug? It would hold between a pint and a quart.

What else went down? And butter.

How much butter? Four or six ounces.

At the time these things went down, how many patients from the wards were working at the Matron's? There was one patient working from No. 3.

From No. 3 ward, what went down;—was it more than is allowed for one patient? Yes, it would be more.

Did you get any of those provisions back? No.

Now from No. 4 ward,—how many patients were working at the Matron's? One.

Was more stuff sent down from No. 4 than was sufficient for one patient? Yes; and it went from No. 4 when no patients were working from there at all.

From No. 5 ward how many patients were at work when the stuff was sent down? One patient from No. 5. Only meat and vegetables went down at dinner-time from No. 5. I saw nothing else go.

Was there more than enough for one person? Enough for two or three.

Did any of it come back? No.

Did you know of any of these patients working at the Matron's returning to the wards for their meals? They have to No. 4, but not to the other wards.

Have you any ill-feeling towards the Matron? No.

Mr. Russell: You say you have seen a loaf of bread go from these wards? Yes.

Was that from each ward? That was from Nos. 3 and 4.

On the same days? Yes.

Have you ever seen the Matron have a meal? No, I have not.

You do not know whether she eats three loaves of bread a day? No.

Mr. Nathan: Does the Matron keep a big dog? No, nor a cat.

Mary Ellen Sadleir sworn and examined:—

Mr. Nathan: How long have you been a nurse in this Institution? Three years and nine months.

Have you ever worked in the Matron's quarters during that time? Yes, I have.

For how long at a time? For a day, relieving; I cannot say how often.

Relieving Maria McNulty. Yes.

How often have you relieved her? Sometimes two days in the month—sometimes three; I really cannot say how often.

During the times you were working in the Matron's quarters, where did you get the coal from to burn in the kitchen? I got it downstairs somewhere.

Did you get it out of the cellar? I got it somewhere close at hand—either from a bucket by the fireplace or from somewhere close at hand downstairs. It is some time ago since I was there.

Did you ever get it out of the coal-cellar? I cannot remember. I got it from there somewhere, but I cannot remember where. I cannot remember where the Matron's coal-cellar is.

Did you, when working there, get the coal from the Matron's cellar, or was it ready at hand in buckets? I cannot remember.

Used you to see coal going from the laundry coal-yard to the Matron's quarters? I have seen it go as far as the Matron's office door.

In what quantities? Two buckets.

Two buckets at a time? Yes.

More than once during the day? No; I cannot say I saw it more than once. I have seen it going at different times during the day.

But you cannot say how many buckets a day went? No.

Did that go on both summer and winter? Yes; I have seen it going down in the summer months.

Used provisions to go from the nurses' quarters to the Matron's quarters? Yes.

In what quantities? A joint of meat at a time.

Was that a daily occurrence? I have seen it go frequently.

Anything else besides a joint? No.

Now, from the various wards, did you ever see anything go from the patients' wards to the Matron's quarters? Yes.

From which wards? No. 3.

What went down from No. 3? Some milk, butter, and bread.

What quantity of milk? About three-parts of a jug. I cannot say what a jug would hold.

What quantity of bread? A loaf of bread.

What butter? A piece about the size of an egg.

How many patients from No. 3 were working down there at that time? Two, I believe; but I only took it once or twice, and I cannot say.

Did you see provisions carried down at other times? I never noticed.

Were there any other wards from which things were taken? No. 5.

What used to go from No. 5? A dinner usually.

What do you call a dinner? An allowance of meat, vegetables, and pudding, if it was pudding-day.

How many patients were working from No. 5? I cannot say for the minute; I know there was one sometimes.

Was more stuff sent down than would be enough for one? Just about a dinner, I suppose. I sent it myself, and I judged it would be sufficient for the patients.

You cannot tell how many were working there at the time? No; I sent what vegetables I thought would be sufficient—what there was to spare.

You do not know how many were working at the time? I am not sure.

Did you ever get any of the stuff back? It would not be worth while sending back. It was very often broken potatoes that were sent down; they were scarcely worth while sending down, much less sending back.

Mr. Russell: Have you ever had anything cooked by Maria McNulty? Yes; I have eaten something cooked by her.

When you were ill? I was on day duty, but I was not strong.

More than once? Yes.

How often? I cannot say how often.

Several times? Yes, several times; two or three days in succession.

Was her cooking more tasty than that in the nurses' room? It was some mutton she sent over.

She did it out of kindness? Yes.

You say you saw food going to the Matron's quarters—did you ever take any yourself? Yes; I took it myself from No. 3.

To whom did you give it, and where did you leave it? I left it in the Matron's pantry.

Mr. Nathan: What did Maria McNulty cook for you? She sent me vegetables—some beans.

Anything else? Yes; some soup, and some pudding.

Did you know where they were cooked? No; I did not inquire. I was very grateful for the attention.

Arthur Whiting sworn and examined:—

Mr. Nathan: I believe you are Acting Superintendent—Assistant Superintendent—of this Institution? Yes.

Do you remember, in March last, Nurse Quilkey speaking to you in reference to the question of coal being used by the Matron? Yes.

[*Objection was taken to this evidence by Mr. Russell. The objection was sustained, Mr. Nathan stating that he would call the witness at a later stage.*]

Mr. Nathan: There are two witnesses I should like to see called—Nurse Middleton and Nurse Kelly. I mention the names as people who have worked in the Matron's quarters, and I should like to see them called, though I do not intend to call them as my witnesses.

Mr. Russell: If they substantiate my friend's case I will call them. I cannot, of course, disclose now what witnesses I am going to call.

Mr. Nathan: I do not know whether I shall call any patients at this stage. If my friend—

Mr. Russell: I suppose my friend will complete his case-in-chief. He will have a case in reply; but he must present his case-in-chief before we can reply.

The Chairman: Quite so. We might call witnesses outside either of you.

Margaret Chamberlain sworn and examined:—

Mr. Nathan: I believe you are cook in this Institution? Yes.
 The general cook of the Institution? Yes.
 How long have you been here? Thirteen years, within a few days.
 Did anyone from the Matron's quarters ever come to your kitchen for fuel? The nurse came.
 Which nurse? Nurse Middleton.
 What did she come for? For fuel.
 For the Matron's quarters? Yes; that is what she asked for.
 Did you give it to her? No; I did not.
 What did Nurse Middleton say? She said it would be all the same.
 You refused to give it? Yes.
 [*Mr. Russell objected to this evidence; and Mr. Nathan said he would call the witness again later on.*]

Annie Quilkey sworn and examined:—

Mr. Nathan: I believe you were employed as nurse in this Hospital from 6th July, 1897, to 19th March of this year? Yes.
 Did you come on 6th July first of all, on probation? Yes. I was here for six weeks; then I went away for a fortnight, and then came back on 6th September.
 September, 1897? Yes.
 And since that time till 19th March you continued as a nurse in this Institution? Yes.
 I believe you were dismissed by Dr. Blaxland? Yes.
 What was the date of that? 19th March.
 On what charge were you dismissed? For giving the Matron impertinence.
 Did you ask Dr. Blaxland to give you that in writing? Yes.
 Did he comply? No.
 He refused to do it? Yes.
 And that was the charge on which you were dismissed? Yes.
 Giving impertinence to the Matron? Yes.
 Impertinence in connection with what? In referring to the coal.
 In consequence of certain information received, did you go to the Matron in reference to a charge of your having given information that the Matron was using Government coal? Yes.
 You went to the Matron? Yes; and I told her I had not reported it.
The Chairman: When was that? I do not exactly know the day; it was some time in March.
Mr. Nathan: About the beginning of March? Yes.
 Will you tell the Court what took place at that interview? I heard that Bessie Smith had said to the Matron —
 Tell us exactly what you said to the Matron? I heard that Nurse Bessie Smith had told the Matron she had better watch herself, as I was going to report her to Mr. Whitling for using Government coal. The Matron asked me who told me. I said I would not mention names; and she replied, "Perhaps you will mention them to the Doctor."
 Did you ask the Matron to bring you face to face with Bessie Smith? Yes; I asked her to come to Mr. Whitling's office, and said perhaps he would tell her that I did not report it.
 What did the Matron say? She did not say any more. That is all that was said.
 Did she not say something about your telling the Doctor? Yes, "Perhaps you will tell the Doctor."
 What did you reply? "I am going to Mr. Whitling now; I will tell him I did not report it." I said, "You will not listen to me; perhaps you will listen to Mr. Whitling when he tells you I did not report it."
 Did the Matron tell you to go back to work? Yes; she told me to go back to the ward.
 And you did that? Yes.
 Did you, as a matter of fact, see Mr. Whitling? Yes; I saw him afterwards.
 Now what occurred between you and Mr. Whitling? I told Mr. Whitling he had made things unpleasant for me with the Matron, saying that I reported the coal. He said, "No, you have not reported it." I asked him if anyone had reported it. [*Objection was taken to this evidence by Mr. Russell; objection overruled.*]
 You asked Mr. Whitling if anyone had reported it? Yes; he said I had not reported it. Then I asked if anyone had reported it, as I had been blamed. He said, No; he had his own suspicions. He saw the patients taking the coal, and he noticed the wood going down. He had sent for the Matron's house-keeper to know where she was getting coal from, and she had told him they were getting it outside. I do not know what she said.
 What else did you say? "All the same, I did not report it, but the coal is going down." He said he was glad I told him, and that he would tell the Doctor about it.
 During the interview you had with the Matron, were you in any way impertinent to her in word or manner? No; that is all that was said.
 As a matter of fact, did you tell Mr. Whitling anything about the coal until that occasion? No; I did not.
 After you told Mr. Whitling that it was true, and he said he would tell the Doctor, what took place? Shortly after that Dr. Blaxland sent for me, and he said he would write to Dr. Sinclair and recommend my dismissal on the charge of insubordination. I told him what had passed between the Matron and me; and he said I should have gone to him and not to Mr. Whitling.
 Were you entitled to go to Mr. Whitling? As the Matron would not listen, I thought Mr. Whitling would tell her to clear me—that I had not reported it.
 Dr. Blaxland said you should have reported it to him? Yes.
 Was any inquiry held by Dr. Blaxland at which you and the Matron were present? No.
 Tell us what took place? Dr. Blaxland said he would write and ask for my dismissal.
 On what grounds? For giving the Matron impertinence, and for insubordination. I said I would write myself to Dr. Sinclair for an interview.
 Did you write? Yes.
 Did you show the letter to Dr. Blaxland before you sent it? Yes. Did

Did Dr. Sinclair see you? Yes.

Did he tell you anything? He said I should hear from him in a few days through Dr. Blaxland.

Did he say anything to you about dismissal, or anything of that sort? He asked me what I intended doing, and I said I thought I was not treated properly, and that I would go further, and have an inquiry. He said, "It will be time enough to see to that when you are dismissed."

You did not hear anything more from Dr. Sinclair, but you did from Dr. Blaxland? Yes; in a few days' time he sent for me, and told me that my services were not further required.

For what reason? For giving the Matron impertinence.

Tell us exactly what took place between you and Dr. Blaxland, as near as you can recall? He said to me, "Are you not aware that you can be prosecuted for bringing such serious charges against an officer?" I said, "No, I was not aware of it." I asked him when I should go—in the morning? and he said, "No, to-night." That was about 4 o'clock in the afternoon.

Did you ask for anything in writing? When I went to give my keys up at 6 o'clock, I told Dr. Blaxland I wanted a written dismissal; I wanted to know what I was dismissed for. He said he would not give me one.

Beyond the charge of impertinence, did you ever hear of any other charge being brought against you, and for which you were dismissed? No.

I want to ask you this: No doubt you were a very bad girl while you were here;—how many times were you called over the coals, and what for? I have been down to Dr. Blaxland's office three times. Once I was on at 8 o'clock. The patients are supposed to go to bed about half-past 6 or 7; and one of the nurses sat up with them for an hour or so afterwards. It was my night on. I counted the patients, and there were ten sitting up, and I told the night nurse ten; but it appears there were eleven. I was reported for leaving that one patient out. When the nurse went on the rounds she noticed the patient sitting out on the verandah. That was one occasion. On another occasion a patient attempted to get over the wall. There were two of us in the airing court—another nurse and I. While I was at breakfast the other nurse got the steps out so that the windows might be cleaned. Just as I got back I saw one of the patients with the steps just getting over the wall. I did not know the steps were in the yard. Before the patient got very far we had secured her. I was down for that. On another occasion I was down for not stamping the clock when on night duty. Those were the only times I have been down to the office.

Those were the only times you were reported while here? Yes, that I know of.

If there were other times, nothing was said? No.

And you have had no opportunity of knowing it? No.

I want to ask you about the night before you left the Institution: you were supposed to have been cruel to Mrs. Macauley;—tell us about that incident? I was upstairs that night, and the Matron came there rather early. Nurse Steel was in charge, and she came with the Matron. Mrs. Macauley was getting undressed to go to bed just as the Matron and the charge nurse came through. The Matron did not say anything to me at the time about my being cruel.

The Chairman: Where was she getting undressed? She was near her room. The rooms are always locked until the patients are ready to go in.

Mr. Nathan: She did all the undressing on the stairs? No; she undressed outside her room.

Mr. Bridges: Is there a corridor? Yes; the patients always undress outside their rooms.

Those rooms open on the corridor? Yes.

Mr. Nathan: Nothing was said to you at the time? No; I heard nothing till next morning, when Dr. Blaxland spoke to me, and I was surprised.

What did he tell you? He said the Matron had reported that I was cruel to this patient; that I left her undressed on the cold stairs, and that I did not offer to help when she was discovered.

The Chairman: What day was that? That was the night before I was dismissed.

Mr. Nathan: The day you were dismissed was 19th March? Yes.

The Chairman: That was the day he told you? Yes.

Mr. Nathan: Dr. Blaxland told you the Matron had reported you? Yes; he said the Matron had reported that I was cruel to the patient, leaving her undressed on the staircase; and that when there was a struggle I did not offer to help.

Was it true or false that you did any such thing? It was false.

Did Dr. Blaxland hold an inquiry into that matter in your presence, or in the presence of the Matron? No; that was all I heard.

Was that given as a ground for your dismissal? I suppose it would help towards it.

Did Dr. Blaxland mention that when dismissing you; he said you were dismissed for impertinence;—did he mention this matter at the same time? Yes.

Have you been cruel to the patients? No.

Were you ever accused of being cruel to the patients? No.

Not until this night before your dismissal? No.

Now let us get on to the coal business: did you see coal going from the laundry coal-house to the Matron's quarters? Yes.

Was it an everyday occurrence? Yes.

Summer and winter? Yes.

In what quantities? I have seen patients take two buckets at a time, and several times during the day.

Where would that coal come from? From the laundry coal-house.

And where was it going to? To the Matron's office, and down to her kitchen.

Have you been in the kitchen when the coal was used? No.

When you say you saw it going through the Matron's office to the kitchen, how do you mean you saw it? I did not always see it going; on several occasions I saw it going to the kitchen.

You saw it going downstairs? Yes.

On those occasions it was not being brought to the Doctor's quarters? No; it went down to the Matron's kitchen.

Did you see coal in the Matron's bathroom in buckets? No.

Was there a coal scuttle in the Matron's office? I never noticed one.

About the time of the row, when you were supposed to have given this information to Mr. Whitting, did you see coal go to the Matron's quarters? No; I did not see it myself. You

You only heard? Yes.

You were present on the occasion when Nurse Bessie Smith is said to have given some of the patients pepper and salt and water to drink? Yes.

First of all, let me ask you was that given as a tonic or as a punishment? Given as a punishment.

Was Nurse Smith angry at the time? Yes.

How many patients were there, and what were they doing? There were five or six patients; they were having tea.

Do you remember the names? There was Jane Downey, Matilda Norton, Jemima Dowd or Bowd, Josephine Moore, Emma Rowe, and Frances Fynne.

Were those violent patients? No; they were quiet at the time, but they were stupid.

What offence did they commit which angered Bessie Smith? They were not taking their tea well.

Explain what she did;—what did she give them first of all? They refused their food. She said she would see why they would not take it, and she went into the pantry, mixed pepper and water, and gave it to the patients.

How did she give it,—did she hand it to the patients and say, "Here, drink this"? No; she put their hands behind the form, holding them with her knee, put her arms round their head and held their nose. Nurse McSweeney held the noses of some.

You say she pinned their arms behind the form;—what did she do with her left arm? She held the patients' heads; she put her left arm under their chins.

She held their noses with the other hand, and forced this stuff down their throats? Yes.

Is there any truth in the suggestion that this was not done as a punishment—that Nurse Bessie Smith was only adding a little more pepper to the cooking? No pepper was required. The patients were having tea. She gave it to them out of a mug.

Did the patients resent it? Yes.

Did you yourself administer any of the mixture? Yes.

Under whose instructions? Nurse Bessie Smith; I gave some the same evening; she came to the door, and asked me to give some pepper. I said "No, I will not." She said I would have to give it. I gave a little—not very much; and I told the Matron next morning, and Dr. Blaxland on the first opportunity I had.

Will you show the Board how Bessie Smith secured the patients? [*Witness gave a demonstration.*]

I do not suppose you have had any experience of boxing; but if you get a person by the chin you can render them helpless? Yes.

You say Nurse McSweeney assisted to hold the noses? Yes.

And this mixture was forced down the patients' throats? Yes.

And you reported it to the Matron? Yes; Nurse Wills reported it.

Were you called before the Matron? No particular nurse was sent for. A nurse working in the ward was asked to go down, and I went.

What did you tell the Matron—what happened? She started to mimic me, and she said she could hardly believe a charge-nurse would do such a thing. I said it was perfectly true, and that Bessie Smith had ordered me to give pepper. She said she would report the matter to the Doctor, and she told me to go back to the ward.

Did she say anything about a plot? Yes, she asked, "Is this a plot against the charge-nurse?" I said, "No; send for other nurses from the ward, and they can prove it."

Did she send for any of the other nurses, so far as you know? No.

Did you hear anything more about this pepper-and-salt incident? ———

Mr. Russell: My friend mentions salt repeatedly; but there is no evidence that salt was administered.

Mr. Nathan (to witness): Did you hear anything more? No; I never heard anything more about it.

My friend objects to my mentioning salt;—was any salt given to the patients at this time? When Bessie Smith first went into the pantry she mixed pepper and water; then she returned and mixed up pepper, salt, and water.

Did it make the patients sick? Yes.

You were removed out of the ward after this occurrence? Yes; three nurses were removed.

Who else besides yourself? Nurse Wills and Nurse Tidyman.

McSweeney was allowed to remain? Yes.

When was that? That was in January.

Did you hear anything more of the incident until after this row began;—when did you hear of it from the Doctor? I did not hear anything more about it.

Was any inquiry held? Not while I was here; I believe there was after I left.

You were here till 19th March? I was put in No. 2 ward, and the Matron told the charge-nurse to watch me to see if she could make any charge against me.

Nurse Middleton gave you some information, did she? She said the Matron asked her to watch me particularly.

There was no inquiry until after you left the Institution? No.

Now tell me about the provisions: did any food go from the patients' wards to the Matron's quarters while you were in this Institution? Yes; I have seen food going.

In what quantities? From Nos. 3 and 4 wards I have seen milk, butter, and bread go down; in fact, I have taken them down myself on different occasions.

What quantities used to go down? A loaf of bread and a jug of milk.

What sized jug? I suppose it would hold between a pint and a quart.

What quantity of butter? About half a pound.

You have taken that down yourself? Yes; from Nos. 3 and 4 wards. I have also seen it go down. it was the usual thing for it to go down every morning.

Where did you take it to? To the Matron's pantry.

Did you ever see the Matron when you were taking it down? No.

She never stopped you, and turned you back;—she did not want to know what you were doing there? No.

When you took these things from No. 3, how many patients were working at the Matron's? There may have been one.

Was

Was more food than was necessary for one patient sent down? Yes.
 Did you get any of it back? Not to my knowledge.
 How many patients were working from No. 4 ward at the time provisions went down? Sometimes one; sometimes two, and sometimes none at all.
 Used these things to be sent whether patients were there or not? Yes.
 You know that of your own knowledge? Yes.
 From No. 5 ward what used to go to the Matron's quarters? Dinner used to go down every day. I have seen beef-tea go down, and fowl, mutton broth, and rice and sago pudding.
 Any bloater paste? No; beef-tea at eleven. I have taken broth and fowl myself by the senior nurse's orders.
 Who was it given to? I gave it to the housemaid. I used to leave it in the pantry. The senior nurse used to tell me to take it down for the Matron's dinner.
 Who was the senior nurse? Nurse McLean.
 When patients were working at the Matron's quarters did they come for their meals to the wards? I have seen them sometimes come to No. 4 for their meals.
 When they came for their meals were provisions sent down as usual to the Matron's? Yes.
 Now with regard to the nurses' quarters: what luxuries went from there to the Matron's? I have seen a joint of meat going down.
 A whole joint? Yes. I have also seen milk, bread, and butter going down of a morning.
 Was the sending down of a joint a daily occurrence? Yes.
 It was sent down whole and fresh roasted? Yes; it was always sent down before the nurses' dinner was served.
Mr. Russell: You were reprimanded by Dr. Blaxland three times before you were discharged? Yes.
 You might have been reprimanded by the charge-nurse without the matter being serious enough to go to Dr. Blaxland? Yes.
 Did that happen? Yes.
 Did it happen often? Not that I am aware of.
 When it did happen you were aware of it? No, I was not. The charge-nurse might report me, and I might not hear anything about it.
 Dr. Blaxland might not consider it serious enough for a reprimand? Yes.
 But sometimes the charge-nurse might speak herself? Yes.
 Did that happen? Oh, yes.
 Often? No, not often.
 More than once? Perhaps so.
 Did it happen when you were in Bessie Smith's ward? Yes.
 And in Nurse Anderson's ward? Not that I am aware of.
 What about the time you took those beds? That was No. 5.
 Whose ward was that? Nurse McLean's.
 Was that Nurse McLean here this morning? No, that was Nurse Anderson.
 Did Nurse Anderson reprimand you? No.
 Did she speak to you? No.
 I understood Nurse Anderson to say you took some beds without asking her leave? Yes, she spoke to the Matron about it.
 Did she speak to you about it? No.
 What was this incident about stamping the clock;—was that a tell-tale clock? Yes.
 Where do you stamp them? They are in all the wards—Nos. 1, 2, and 3.
 One in each ward? Two or three in each ward.
 How did you come not to stamp it? I do not know. Sometimes you may pass one without stamping it. I was not aware that I had not stamped it.
 What is the object of them? We go the rounds every hour.
 And there is a clock in each ward? There are two or three clocks in each ward—one on each flight. You stamp these when going the rounds on night duty.
 Do you go through all the floors? Yes.
 Of all the wards? Yes, 1, 2, and 3.
 How many wards did you go through that night? Through all of them.
 How many is that? Three.
 Are they all in the same flight? They are three different wards.
 Are they all on the same level? Yes.
 Did you stamp the other clocks that night? Yes.
 Which one was it that you neglected to stamp? No. 3.
 That means you did not visit the ward? I always went through each.
 Is not the clock there to prove to the management whether you are fulfilling your duties? Yes.
 What do you do besides stamp the clock? See that the patients are all right.
 Do you go into their bedrooms? Yes.
 In the middle of the night? Yes.
 Into each room? You always go in the single rooms twice during the night.
 How many times do you stamp the clocks during the night? Each hour.
 That is more than twice? On two occasions, the 8 round and the 4 round, you accompany the senior nurse.
 Were you with the senior nurse when you forgot to stamp the clock? I do not think so.
 Then it was not the round when you were visiting the patients? No, not with the senior nurse.
 Do you visit the patients during these other rounds? All but those in the single rooms.
 I suppose they sleep in the general dormitory these you visit? Yes.
 And you do not go into the separate rooms? No; you just look through and see that the patients are all right.
 Where was the clock fixed? At the door where you go in.
 At the door of the general dormitory? Yes.
 What had you to do then, besides stamp the clock? See that the patients are all right.
 Does that involve walking through the room? Yes. That

That is all, as a rule? Yes.

You walk through the room, see that all is well, stamp the clock, and go away? Yes.

That is the routine? Yes.

Do you say you went through? Yes.

You are sure of that? Yes.

When you were reprimanded by Dr. Blaxland on those three occasions, was the reprimand serious?

No.

I think you said you have taken both fowl and broth down to the housekeeper or to the Matron's pantry? Yes.

Did you ever see the Matron eat the chicken or the broth? No; I just brought the things down and went away again. I never saw the Matron have a meal.

What ward was that from? No. 5.

Now, reverting to the pepper incident: you administered pepper yourself to one of the patients, or more than one? To one.

Did you hear a witness say that Bessie Smith administered all the pepper? No.

The Chairman: She said this witness administered it to one.

Mr. Russell (to witness): I think one witness said no one but Bessie Smith? Perhaps she did not see me.

It would be incorrect if a nurse said Bessie Smith administered this dose of pepper herself to all the patients? She administered to five or six herself.

If someone said Bessie Smith did it all, it would be incorrect? Probably they would not see me.

It would be incorrect, as a matter of fact? Yes; so far as they were concerned, it would be.

So far as the actual facts are concerned, it would be incorrect? I administered it to one myself.

You say you did that at Bessie Smith's instructions? Yes.

Did you give it out of a spoon, or how? With a spoon.

Who gave you the spoon? Bessie Smith.

Did she fill it herself? No.

You filled it? Yes.

From what? From a mug.

Did the mug already contain pepper and water? Yes; it was already mixed.

And you merely administered it? Yes.

When you complained to the Matron, did you not say that you administered the pepper dry? No.

You do not remember saying that? I did not say it; I said she had taken dry pepper and mixed it with water.

But pepper is usually dry; it is not necessary to say she took dry pepper;—however, that is your explanation? Yes.

Before you were dismissed, were you ever heard as to any of your complaints, or the complaints against you, by Dr. Sinclair or Dr. Blaxland? I was by Dr. Blaxland.

You were heard by Dr. Blaxland;—did either Dr. Blaxland or Dr. Sinclair give you an opportunity of explaining? I explained about the pepper to Dr. Blaxland.

He made some inquiry, and you gave your explanation? There was no inquiry; he sent for me to his office.

What did he ask you? He asked how the pepper was administered, and I told him all about it.

You gave your version of the story? Yes.

Did you make any statement to Dr. Sinclair before you were dismissed? I told him about the pepper incident, and about the Matron using the coal and wood.

Were you some time telling Dr. Sinclair that? Not very long.

I mean to say the interview was not over in a minute;—you had time to say all you desired? Yes.

Were you present at the delf-mug incident? No.

Did you quarrel with the Matron during the first year you were here? Not that I am aware of.

You would remember a quarrel if you had one; or do you quarrel so frequently that you cannot remember them? I do not.

You do not remember quarrelling with the Matron the first year you were here? I remember when I was going on my annual leave—the first holiday I was entitled to—the Matron would not give me a pass. I should have gone for my holiday on Thursday. I was prepared to go on Friday, but the Matron told me I was not to go till Saturday. When Saturday came she refused me a pass and said I was not to go.

Who did you get leave from? The Matron granted it afterwards. I asked her the reason she had prevented me going, as I was the only nurse to whom she had refused a pass.

That was your first holiday? Yes.

Is it the Matron with whom you deal about your holidays? Yes.

When you want holidays, and when they are due? Yes.

Have you had any more quarrels or rows or disputes? I do not consider that was a quarrel.

Have you had any other differences with the Matron? No, not to my knowledge.

Did you get on well with the Matron? Well, I think I got on as well with her as any other of the junior nurses.

You have heard a number of the junior nurses say they bear the Matron no ill-will;—you bear her no ill-will, I suppose? No.

You consider the Matron falsely accuses you? Yes, I do.

Mr. Cargill: You said that you went to the Matron about the beginning of March? Yes.

At her office, I suppose? Yes.

You there said to her that you had heard Bessie Smith had told her something;—now, why did you go to the Matron? The Matron was making it very unpleasant for me in the wards. I thought by going to her she would clear it up.

In what way was she making things unpleasant? In more ways than one. If I wanted to go through a door the Matron stopped me; and if I turned round suddenly I found her standing behind my back. She told the nurses to watch me.

There is no reason why she should not stand behind your back? No.

Is it not a fact that you merely suspected the Matron was doing things to annoy you? I am sure she was.

Are

Are those the only instances you can give us of the Matron's conduct towards you, and of which you thought you had cause to complain—simply that she stood in the doorway when you wanted to go through, and that when you turned round you found her at your back? If she had occasion to speak to me she spoke insultingly.

And it was because of that you went to her office on this occasion to clear matters up? Yes.

Now, when you went in, what did you first say—do you remember? I asked her if Bessie Smith had told her I was going to report her to Mr. Whitling.

What did she say? She asked who told me.

That was her only answer? Yes.

She did not say whether Bessie Smith had told her or not? No.

You declined to say who told you;—did the Matron say anything after that? She said, "Perhaps you will tell the Doctor."

What did you say to that? I said I would see Mr. Whitling, and tell him I did not report it; and as the Matron would not listen to me perhaps she would listen to him.

Did the Matron ask you to leave her room during that interview? When we were coming out of the door, she told me to go back to the ward—to go back to my work.

Did she ask you to leave the room? Not at that time.

Did she at any time? Yes.

When was that? It was when Nurse Wills reported about the pepper.

That was a previous occasion altogether? Yes.

Were you at all excited at the time this conversation took place about Bessie Smith and the coal? No.

What tone did you speak in? I spoke as I am speaking now.

You spoke respectfully? Yes.

And you left the room to tell Mr. Whitling that you did not report about the Matron using Government coal? Yes.

Would not Mr. Whitling know who reported it;—was he not the person to whom the report would be made? Yes.

He would know? Yes.

Then what necessity was there for you to tell him you did not report it? So that he would tell the Matron I did not report it.

You went to ask him to tell the Matron, not to tell him that you had not reported it? To tell him to tell the Matron I had not reported it.

Not to tell him you did not report it; he knew that? I told him all the same.

As a matter of fact, Mr. Whitling told you no one had reported it? Yes.

Had you any idea that it had been reported? I thought perhaps that someone had reported it to him.

What led you to suppose that? I heard from different nurses that it had been reported, and that I was blamed for reporting it.

Did you at that time believe it to be a fact that the Matron had had this coal—that coal had been taken from the laundry-yard? Yes.

And you had spoken to the other nurses about it? We used to see the coal going.

Had you spoken to the other nurses about it? Yes, I had.

When was it that Dr. Blaxland sent for you—how long after the interview with the Matron? About three or four days.

What did he tell you? He told me that the Matron had reported I was impertinent to her.

Did he particularise the occasion? About the coal.

What did you say in reply to Dr. Blaxland? I told him I had not been impertinent to the Matron.

Was that the whole of your conversation? I suppose there were some other things said.

Have you any recollection what they were? No; I cannot remember.

Dr. Blaxland then said, as you told us before, that he would write to Dr. Sinclair, recommending your dismissal? Yes.

Then you wrote to Dr. Sinclair for an interview, and you had an interview? Yes.

Did you at that interview refer to your conversation with the Matron? Yes.

Do you remember what it was you said? I told him what had passed between the Matron and me.

Just as you have told us to-day? Yes.

And nothing more than you have told us? No.

Did you refer to any other matter? Yes; I told him about the Matron using the coal, and about the food going down.

In answer to Mr. Nathan you said you told Dr. Sinclair, "I will have an inquiry," or "I will inquire further," or some words to that effect? Yes.

Was that in reference to your interview with the Matron, or in reference to the taking of the coal and the food? Yes; it was in reference to the interview with the Matron.

You are sure of that;—there were two distinct matters you spoke about—one, your so-called impertinence; the other involved a charge against the Matron? Well, I meant both.

Did not Dr. Sinclair say to you that he could not deal with the charges against the Matron at that stage? I do not remember.

Did he not tell you that you were there in reference to a charge against yourself, and that he was prepared to hear you as to that? Yes.

And that, after that was concluded, you could say anything you chose on the other matter? Yes.

And you did, as a matter of fact, say all you had to say about the charge of impertinence;—you had every opportunity to say what you desired? Yes.

That is so? Yes.

You told the Court that on three occasions you were reported to Dr. Blaxland and reprimanded by him? Yes.

Are those the only occasions? Those are all I remember.

Do you remember, in February, 1899, being reprimanded for general carelessness in the performance of your duties? No; I do not remember.

I will read the whole charge with regard to that: "Severely reprimanded for carelessness (general) in performance of duties, taking no interest in her work, and indifferent to the cautions of the nurses in charge; warned that any future irregularity will probably lead to dismissal";—you say you have no recollection of that? It was when I was working in No. 4, under Nurse Bessie Smith.

Have you a recollection of being so reprimanded? Yes.

Was that one of the three occasions you mentioned this morning? I heard of it when I was down on these other charges.

You remember three distinct occasions: on the first you counted ten patients when there were eleven sitting up; on the second a patient got over the wall; the third was the charge of not stamping the clock;—those were the instances you mentioned? Yes.

You have told us that you do recollect being reprimanded on one occasion for taking no interest in your work, and being indifferent to the cautions of the nurses in charge? I heard of that when I was down on another charge—one of the three I have mentioned.

And on that occasion you were warned that for any future irregularity you would probably be dismissed? Yes.

By whom? Dr. Blaxland. That is a false charge.

Now, which charge were you down in Dr. Blaxland's office about when this was brought under your notice? I do not remember which it was.

Just try and think; there are not so many occasions—it is only one of three? It was either for not stamping the clock or the 8 o'clock.

It was one or the other? Yes.

Mr. Nathan: Now, take this charge of February, 1899, when Bessie Smith accused you of not doing your work;—was it true, or was it false? False.

Were you brought face to face with Bessie Smith over this matter? No.

Did she ever mention that she was going to report you? No.

Did Dr. Blaxland bring you face to face with your accuser? No.

After that you were in Bessie Smith's ward again? Yes.

From February, 1899, when Dr. Blaxland warned you that if there was further trouble you would probably be dismissed, to the time of the pepper incident, was there any bother of any kind that you know of;—were you reprimanded? I may have been for not stamping the clock; I think it was after that.

This "tell-tale" clock does not prove that you did not visit the ward because you neglected to stamp it? No.

Were you ever, during the inquiries by Dr. Blaxland or Dr. Sinclair, brought face to face with your accusers, or were you seen alone? By myself.

You never had an opportunity of meeting these people who made the charges against you? No.

There was no inquiry beyond you being sent for? No.

You had no opportunity of asking questions of your accusers? No.

You say you were under the impression that the Matron was watching you, and treating you differently to other nurses? Yes.

And I suppose you wanted to find out the cause of it? Yes.

You then heard from somebody that the Matron imagined you had reported this coal business? Yes.

It was to clear the ground that you went to see the Matron—to tell her you had done nothing of the kind? Yes.

That was your object in going there? Yes.

And when you found she would not listen to you, you went to Mr. Whitting? Yes.

Was anyone else present when you saw the Matron about the coal business? No.

Beyond your two selves there was no one else in the office? No.

The interview did take place in the office? Yes; I was waiting a quarter of an hour before the Matron came down; there was no one else there.

If anyone were sneaking about outside you would have seen it? Yes.

You never saw anyone outside the doors? No.

The Chairman: When you went to Dr. Blaxland—when he sent for you—did he call the Matron in? No.

Did you see her face to face in reference to this matter? No.

Did he tell you what you were charged with? Yes.

He heard your reply, and that was all? Yes.

You denied the charge? Yes.

There was no written report, or anything of that kind? No.

You say you were not brought into the presence of the Matron? No.

Mr. Bridges: You said you saw the coal taken down into the kitchen? Yes.

Where were you when you saw that? At different times I have been in the Matron's office, or in her pantry.

Could you see it taken into the kitchen from the pantry? Yes; when I was going through the hall.

Could you see from the pantry? I could see it taken down the stairs.

Now, with regard to the food,—what was prepared for the nurses' dinner? There would be a joint and vegetables.

One joint? No; different joints.

After these joints had been sent away to the Matron's rooms, would there be ample for the nurses? Yes; there was always sufficient.

They never went short? No.

This matter of the giving of the pepper mixture; you have shown how the patients were held; tell me, did Nurse South take hold of their hands when she put them behind the form? Yes.

When she let go would not the patients move their hands? She held them with her knees.

The patients were sitting on a form; and when Nurse Smith removed her hands, did the patients continue to hold theirs behind them? Yes; she held their hands with her knees.

They were struggling I presume? Yes.

And when she let go their hands with hers, would they not pull them away? They could not pull them away.

What would hold them? She held them with her knees; they could not take their arms away from the back of the seat.

Is Nurse Smith a strong woman? Yes.

Mr. Russell: The stairs to the Matron's kitchen, they are off the passage? Yes.

And the inner door of the Matron's office opens into the same passage? Yes.

Are the stairs opposite the door of the office? Yes.

Where is the pantry? It is on the other side of the office.

It is not right opposite the door leading to these stairs? No.

You were in the pantry when you saw the coal being carried down? I should be coming from the pantry towards the office.

Did you not say that you were in the pantry? I could not see it going down if I were right in the pantry. When I was coming from the pantry or going to it I saw it on different occasions.

If you said it was while you were in the pantry it was a mistake? Yes.

When Bessie Smith treated the patients to the pepper, when did she mix it? In the evening.

She mixed it in a mug? Yes.

Where did she put it? She took it out with her; she mixed it in the pantry.

Where did she put the mug while she wrestled with the patients? She put it on the table.

Did she take it up herself? Yes; she put it down alongside the patient she was going to administer it to.

After pinning the hands of the patient she got the mug herself? Yes.

You did not hand it to her? No.

Mr. Nathan: If you were standing at the door of the pantry you could see coal being taken down the kitchen stairs? Yes.

If you were going along the hall towards the Matron's office you could see the coal being taken from the office towards the stairs leading to the kitchen? Yes.

There is nothing wonderful about that? No.

—

Susan McLean sworn and examined:—

Mr. Nathan: How long have you been a nurse at this Hospital? Eight years last month.

Have you known provisions to go from the various wards to the Matron's quarters? Yes.

From which wards? From No. 5 ward.

Any other ward? No; I do not know of other wards.

What provisions went down from No. 5 to the Matron's? Meat and potatoes for the patients at dinner-time.

Anything else besides meat and potatoes? I sent fowl down for a little while.

Any bread, butter, or milk? Milk went occasionally, but no bread or butter.

Now about the fowl, did you take it down yourself? No.

Did you ever take fowl to the Matron's quarters when she was in bed? No.

Have you ever said to anyone that you did? I have never taken fowl down; I have sent a little piece down by one of the nurses.

Who for? It was supposed to be for the Matron when she was sick; I sent it myself.

That was from No. 5 ward? Yes.

Did you send anything else—any mutton broth? Yes; I sent a cup full of mutton broth.

Anything else? Also some beef-tea.

At the time the meat and vegetables were sent down, how many patients from No. 5 were working at the Matron's? The patients were not always from No. 5; they were from the other wards—from Nos. 3 and 4.

But how many from No. 5 when these things went down? Sometimes one, but not always.

How much provisions were sent down? Just enough to do them for dinner.

Enough only for one? Enough for three or four, because they did not get dinner from the other wards.

What provisions went from the nurses' quarters to the Matron's quarters? I do not know.

Did you ever see anything going? I have seen the patients with a dish, but I could not say what it was; the dish was covered up.

Did you never see joints of meat going down? I never saw joints; I might have seen a joint, but I could not be sure.

You will not say anything about? I cannot be sure.

Did you see coal going to the Matron's quarters from the laundry yard? Yes.

How used that to go—through the nurses' quarters? I have seen it go through the door besides the nurses' quarters.

Through the nurses' dining-room, and then through the passage? Yes.

Night and morning? No, only in the morning.

Summer and winter? I cannot tell you; it is a long time since I saw it.

Where did the coal go to? I saw it go round the verandah into the Matron's office. I never saw it afterwards.

Did you ever work in the Matron's quarters? No.

Used milk and butter and flour go from the patients' wards to the Matron's when you were in charge? No.

You never saw them go? I have given milk, but never butter or bread.

In what quantities have you given milk? About a pint and a half. The patients used to come and ask me for milk.

How much bread? I did not give any bread.

Did you ever send any eggs to the Matron's? No.

Will you swear that you never sent any from the wards? No.

Did you ever take any down? No; but the housekeeper borrowed some from me—that was all.

How many did she borrow? Sometimes one, sometimes two; never more.

Did she return them? Sometimes she did; at other times she offered them, and I told her I did not want them.

Who was the housekeeper? Maria McNulty.

Mr.

Mr. Russell : You said that you did not work in the Matron's quarters ? Yes ; with the exception of the time the Matron was sick, and I went to look after her.

You helped to look after her ? Yes.

You have been to the Matron's kitchen ? Yes.

Have you ever had a meal cooked there by the housekeeper ? Yes.

Several times ? Yes.

Have you ever had afternoon tea made there ? Yes.

Are you on good terms with the housekeeper ? Yes.

You have two sisters nursing in the Institution ? Yes.

Have you seen them have a meal there, or meals ? One of them I did.

Was she delicate ? Yes.

Was that the one who died subsequently ? No.

Did she often have meals with the housekeeper ? Not very often ; not as often as I did.

You had them fairly often ? Yes.

And both your sisters had meals there ? I do not remember my other sister having any.

Do you remember bringing some chicken down to the Matron when she was sick ? Yes.

Did the Matron eat the chicken ? I gave it to the housekeeper to give to the Matron.

Do you know what became of it ? No.

Was the Matron in bed at the time ? She was in bed at the beginning.

At the beginning of this illness ? Yes.

Was it a whole chicken you took down ? No ; a small piece.

What was it, a wing or a piece of breast ? A wing and a bit of breast or a leg.

Did you take anything else there while the Matron was ill ? Mutton broth and beef tea.

Mr. Nathan : When you were in the kitchen with McNulty, what did she cook ? She used to cook birds for me, of my own.

Where did she get the coal from when she was cooking your birds—was it in buckets near the fireplace ? I do not know.

You did not notice anything of that sort ? No.

You did not see where she got the coal from ? No.

All your attention was centred on the bird ? Yes.

Arthur Whiting further examined :—

Mr. Nathan : In March last, did Nurse Quilkey see you ? I believe it was in March last.

Was it about the beginning of March ? I think it was ; there is no record of the date.

March of this year ? Yes.

Tell us what took place at that interview ? Well, the nurse came to me and said she had had a rough time lately. I asked her what for ; and she said the Matron had accused her of telling me she was taking coal. I said that was impossible ; no one had ever told me ; and I said I had heard a rumour and I had gone into the question myself. She then said " Well, I accuse the Matron of taking coal, and I will prove it." I said I had no more to say in the matter, and that she must refer it to Dr. Blaxland.

Up to that time, had Nurse Quilkey said anything to you about the Matron taking coal ? No.

Were your suspicions in any way aroused ? No ; not about the coal ; about the wood-heap.

Explain that ? We have a lot of cut wood in the wood-yard, and in going round it seemed to me that it was disappearing rather rapidly. I knew that one of the patients working here was in the habit of taking wood round to this place ; and I thought to myself he is doing it again ; I will make inquiries from the Matron's cook.

What is her name ? McNulty. I asked her—

And Maria McNulty told you something ? I simply asked her a question.

And she gave you a certain answer ? Yes.

Did you, as a matter of fact, report the matter to Dr. Blaxland ? Yes.

Mr. Bridges : What matter ? The report that McNulty made. It was not about the wood ; I did not report that to him. I was making those inquiries on my own account.

Mr. Nathan : Did Nurse Quilkey say anything to this effect : " I did not tell you anything about it, but it is true" ? I do not remember those exact words. What I understood her to say was, " The Matron does take the coal, and I will prove it."

Did she ask you whether she had ever told you ? I cannot recollect that.

Tell me, is the Matron entitled to any coal except for her office fire ? No ; not according to the Public Service list.

Is the Assistant Medical Officer entitled to any coal except for his office ? No.

He is not entitled to coal for his cooking ? No.

Up to the time of this row in March last, was the housekeeper entitled to any coal for herself ? Yes ; according to the Public Service list she is.

As a matter of fact, was she allowed any ? No one is allowed coal, not even for the wards or office or anything else. If a person is entitled to coal he can only have a sufficiency, without waste ; a fire will only consume a certain amount. There is no regular weight allowed : just enough for a fire.

If Maria McNulty wanted to warm herself, where would she go ? I do not know, I am sure.

Would she go to the nurses' sitting-room ? Yes, or to her own kitchen. I want you to understand that up to the time of this row there was no established allowance of coal for McNulty.

Did she get any order from you for coal ? Not from me personally.

Was she entitled to get an order for coal ? Not necessarily. Before the advent of the Public Service Board there was an allowance of coal for all these places, including the Matron and the Junior Medical Officer—no specified allowance, but a sufficiency for the purpose for which it was required, without waste. They cannot use more when cooking than the fire will burn.

Before the retrenchment the Matron and everyone was allowed as much coal as they wanted ? Just a sufficiency, without waste.

After the retrenchment the coal was knocked off ? They used to draw the coal from the Engineer's heap, as we called it, a barrow load at a time being taken to wherever it was wanted. That was the regular course. When it was stopped I gave the engineer instructions to see that no more was allowed to go in barrows. I have asked him since, and he assures me that no coal has gone from there.

Whenever

Whenever it was taken it was taken from the laundry yard? No more has been taken from the engine room. I do not know anything about the laundry yard, because we have no responsible person in charge of the coal there.

That is the only other coal heap is it not? There is one at No. 6, at the old building; there is a heap there. There are three heaps in the place.

Since the row, has there been any alteration as to the coal to be taken by the housekeeper? She came to me about two or three weeks ago and asked if she could be allowed coal. I said, "No, not at present." I said, if she wanted to sit anywhere she could sit in the nurses' mess-room for the present. Coal is provided by the Matron and the Medical Officer.

You do not know that of your own knowledge? No.

What cooking she does she does with their coal? She is supposed to.

If the housekeeper is entitled to coal, how much per day is she allowed? There is no regular allowance—a sufficiency without waste, I say. Anyone who is allowed coal must have a fireplace—a cooking-place in the kitchen, a sitting-room in the winter. They cannot want more coal than the stoves will burn.

When she is working in the Matron's kitchen, and wants to warm herself, she must burn her own coal? That is the difficult point of the whole affair in her case; it is difficult to make an allowance. That is why I lately refused to do anything.

She is working for the Matron and the Medical Officer, and yet she must not cook her own food with theirs, but with coal which comes from the Government? That is really the case, because the Government have deducted so much money from her salary for fuel.

Has the Matron any right to have provisions sent down from the patients' wards? No.

Mr. Russell: Do you pay the nurses' wages? I do not pay them myself; the clerk does.

But it is done from your office? Yes.

Is a deduction made from McNulty's wages for an allowance of coal under the Board's Regulations? Yes.

No coal has been regularly supplied to her by the routine and management of the place? No.

No one has been deputed to carry her a supply of coal? No.

She cooks her own dinner on the Matron's stove? Yes.

She has no food anywhere else? She draws provisions from the store and takes them away.

Draws them raw? Yes.

And takes them away? Yes.

She has not drawn coal regularly that you know of? No.

McNulty cooks for the Matron, for the Junior Resident Medical Officer, and for herself, on the same stove? I presume so; I never visited the kitchen.

Mr. Nathan: You have not seen her doing it? No.

Mr. Russell: If the stove were wholly worked by coal supplied by the Medical Officer and the Matron, then the Government would have McNulty's food cooked for nothing, although she is entitled to an allowance of coal? No; it would go into the general mess.

Would that not be an advantage to the Public Service Board? I do not see that it would make much difference.

It is only a small matter, one way or the other? The things are all put in the general oven to be cooked; one more ration would make no difference.

It is not arranged that McNulty shall go to the nurses' dining-room? No.

But the food cooked in the general kitchen goes to the nurses' dining-room? Yes.

There is no arrangement that McNulty should go there? No.

She has her food in the Matron's quarters? Presumably so; she does not have it in the mess-room.

She draws her rations raw? Yes.

Before the retrenchment, did you see this coal taken in barrows? Yes; frequently.

It used to be wheeled round in a barrow? Yes.

How would it go to the Matron's kitchen, then? There is a hole just outside the pantry window.

It was brought in barrows from the engine-heap and put down the coalhole into the cellar? Yes.

It was not brought in a cart? I never saw it come in a cart.

It would not be a regular thing for the contractor's cart to take coal to that chute? Not on the hospital orders.

I mean before the retrenchment? No; it would go in barrows.

You never saw a cart deliver coal there? No.

Have you seen a cart go since the retrenchment? I cannot say that I have.

Since the Regulations? I have not noticed one.

You say there is no one in charge of the laundry yard? Not the laundry coal-yard.

That is not in the definite charge of anyone? No.

Mr. Nathan: Do you really mean to say that, while the meals for the Doctor and Matron are being cooked, the cooking of a chop for McNulty would increase the consumption of coal? I could not say that it would.

Do you mean that seriously? I do not think I said that.

Do you think it would? No, no more than it would if it were cooked in the kitchen.

Mr. Russell: If McNulty had to get her meals in the general mess-room with the other nurses, would that not interfere with her duty to the Matron and the Medical Officer? Yes, possibly it would.

As a matter of convenience, it is better that she should get her meals in the kitchen? Yes.

Mr. Nathan: I presume the Matron and the Doctor eat at regular times? At 1 o'clock, I believe.

The Chairman: Since the retrenchment, has any saving been effected in the consumption of coal? I cannot say without referring to the books.

Do you not know, in a general way? I think it is about the same; not in the large amount we use.

There has really been no saving? Not to any appreciable extent.

Mr. Bridges: Who orders the supplies of coal? I do, generally. We have a standing order that they draw as often as they can, till we have sufficient on hand; then we knock it off. Sometimes, in wet weather, it is difficult to get coal, so we always try to keep a good stock on hand at the engine room, which is the general distributing place. If they are short in the laundry yard the Engineer sends some over. He sends one of the carts over as soon as it has been weighed.

Do

Do you keep any account of the coal taken to the laundry yard? I do not think so; no regular account. We have an account of all the coal that comes, but not of its distribution.

Have you any means of judging whether the consumption of coal is excessive or not? We have the monthly accounts, and we can compare one month's consumption with another.

You have an idea that a certain quantity of coal should be consumed in connection with the laundry? It goes up largely in the winter, because all the wards burn coal, and that is drawn from the laundry yard. All that is required on the male side is drawn from the engine room.

Do you order the food? Yes.

A certain quantity is ordered for the nurses' room, I understand? Yes.

We have had it stated that whole joints have been taken away to the Matron's quarters;—could that be done without awakening any suspicion on your part? Yes; because I have no means of knowing that.

You have an idea of the number of nurses? Yes.

And they get a certain quantity of food? Yes.

If whole joints were taken away from their room, and used somewhere else, would that not be a suspicious circumstance? Why should it? We give a quantity of food to the kitchens which, when cooked, is sent to the mess-rooms, and then we have done with it.

But this quantity is supposed to be proportionate? It is proportionate.

Suppose enough is allowed for twelve persons, that would not be enough for the consumption of twenty? They only get the scale of rations; so much meat, so much bread, so much sugar, so much tea, so much butter; each individual is allowed so much. The dry goods, such as tea, sugar, butter, are sent in bulk to the mess-room, and placed in charge of the attendant; the meat and vegetables are sent to the kitchen.

How can you account for the fact that a big joint is taken away regularly from the mess-room? It must be eaten.

It is not eaten by the nurses? Then it must be the fault of the mess-room nurse; she is supposed to it receive from the kitchen and see to its distribution.

If that could be taken away and not noticed, the supply must have been in excess of what was required? It looks like it. On the male side I have heard the men complain that there is an insufficiency of food.

Do you know the quantity which went into the nurses' room? Yes.

And you are satisfied it was not an excess? I never knew it was. How could I find out?

By the quantity? I do not know the quantity they eat. I know the quantity of food we have to give them under the scale.

How many nurses are supplied with food on the average? About forty; they are divided into three messes. The nurses simply get what they are entitled to, and once it leaves the kitchen we have no more supervision over it. The scale of rations, as it was drawn up, was approved by the Chief Secretary, and we draw supplies to that scale.

I am to understand, then, that the supply is so liberal that a round of beef or a shoulder of mutton could be taken away without appreciably affecting the quantity allowed to the nurses; they still have an abundance? If that is the case, it must be so. On the other side, the men, and especially the single men, say we have not been in the habit of giving them enough to eat at tea time; they say, to go from dinner to breakfast time is starvation work.

Would it be possible for food intended for the single men to find its way to the nurses' quarters? Not the slightest.

The Chairman: What is done with the refuse food? It goes into the pig-tubs.

When the food reaches the nurses it belongs to them? Yes.

They can do what they like with it? Yes; they are charged so much per annum for rations. This ration scale was drawn up some time ago; it shows the supplies they have been entitled to, and which, I take it, they can claim.

Mr. Russell: The rations and coal allowance is deducted from their wages? Yes; so much, less allowance, is their salary.

There has been more economy since March, so far as you know, with regard to the supplies sent to the kitchen? Not at all. We draw exactly the same quantity of rations; exactly the same quantity is given to the kitchen for the nurses' mess-room as before; it has never varied.

Herbert Blaxland sworn and examined:—

Mr. Nathan: You are the Medical Superintendent here, Dr. Blaxland? Yes.

And you have been here how long? Eighteen and a half years.

Will you tell me this: did the Matron report Nurse Quilkey to you for impertinence at the beginning of March? Yes.

Was it impertinence in connection with the inquiry she made about the supposed use of Government coal by the Matron? No; it was that she supposed someone had told the Matron that she had informed Mr. Whitling so. The Matron reported her for being impertinent over that matter.

Then you came to certain conclusions, I suppose? Yes.

You sent for Nurse Quilkey;—did you ever bring the Matron and Nurse Quilkey together at the same time in your presence? No.

Subsequently Nurse Quilkey was dismissed? Yes.

Was she dismissed for impertinence? Not only for impertinence; that was the last straw.

What did you tell her? I told her I should send her to Dr. Sinclair, and recommend her dismissal for this and for other things I told her she had been reprimanded for.

What other things? They are all down in the report.

The things you mentioned to her? Yes. I also told her I considered her generally unfit for a nurse. I forget the exact words I used.

Did the Matron report to you that she had been cruel to Mrs. Macauley? Yes.

That was on the evening of the day before she left? I think it was; I am not quite certain.

It was reported before she was dismissed? Yes.

Did you hold any inquiry into that? I had Quilkey's dismissal with me then, and I did not think it worth inquiring into.

You had made up your mind to dismiss her? She had been dismissed.

You

You did not tell her? I did not tell her about it until I was telling her she was dismissed. The matter was reported? It had nothing to do with her dismissal, if that is what you want. It occurred before she was dismissed, and she was never brought face to face with the Matron over that? No.

As a matter of fact, you told her at the time you dismissed her of this charge which had been made; suppose you had not made up your mind to dismiss her, would a charge of that kind have influenced your mind? I cannot say.

Will you say it had no effect upon your mind in dismissing her? Yes; decidedly it had no effect.

When Nurse Quilkey was leaving the Institution, did she ask you to give her a written dismissal, giving the grounds? Yes.

Did you refuse? Yes.

Did you turn her out of the Institution that night? Yes; I told her to leave that evening.

Did she ask to be allowed to remain till the morning? She asked if she was to go to-morrow morning; I said, "No, that night."

Did you ever hold any inquiry into the pepper and salt incident? Yes.

Was that some time after it occurred;—was it reported to you? Yes.

How long after it occurred was it reported to you? I do not know when it occurred; it was reported to me the same morning that the Matron heard of it.

Did you hold any inquiry into the matter? Yes; I asked about it.

Did you call any nurses at all? I saw the nurse in charge.

Who was that? Bessie Smith.

Did you see Nurse Wills? No.

Did you see Nurse Quilkey about it? No.

Did you Nurse McSweeney? No.

You passed that over? Yes.

On what grounds? I did not believe it, and I do not now altogether.

You did not call any one of these witnesses down? No. I was satisfied with the statement of the nurse who was said to have administered the mixture. I had known her for a long time, and I knew she had not done it.

You took Nurse Bessie Smith's statement, although there were four other nurses present who say they saw her give the stuff? Yes.

When accusations are made to you about nurses, is any inquiry held;—is any opportunity afforded for the accused nurses to come face to face with those who make the accusations against them? No.

How are they conducted, these inquiries;—if Nurse Quilkey were accused of something, would she have any opportunity to cross-examine her accusers? She has no opportunity; she would not have in any case I had to do with.

You draw your own conclusions? Yes; from investigations.

You never bring these people together? No.

There is no opportunity to cross-examine; it is left absolutely to you? Yes.

Mr. Russell: I suppose, if you brought the Matron and nurses together every time a complaint was made, the nurses in this Institution might have the Matron before you continually? There would be pandemonium, I think; the Institution would be unworkable.

Now, as to the mug incident: was that reported? It was not exactly reported as an assault; but the circumstance was mentioned as an unsatisfactory way of giving medicine to the patients, and the Matron asked if I could get something else. We thought over what we could get, and, as a result, I obtained some tumblers.

These mugs are opaque? Yes; it was hard to see if all the medicine was taken.

With a tumbler it is possible to see if a draught is taken? Yes.

What is the size of the medicine mug? It is a little tiny thing; they are small mugs.

Are there any other opaque mugs in the building? Yes; there are the tea mugs; they hold about a pint.

It is customary to give the draughts in medicine mugs? Yes, in small mugs.

Now in regard to the pepper incident,—did you ask anyone besides the Matron and Bessie Smith about it? Not at the time.

How long has the Matron been here? About fifteen years, I think.

Has the Matron always been satisfactory? Yes.

Has the Matron ever been attacked in this way before, outside this year? Attacked in what way?

I mean, has she been complained about in this way before? Yes; by nurses who get into trouble.

That is a matter you would deal with? Yes; they are quite common.

I suppose that is not out of the way? No; it is not out of the way for a nurse to complain and say it is someone else's fault. The Matron is liable to that sort of thing at the hands of any nurse.

Mr. Nathan: With regard to the delf-mug business,—was Bessie Smith ever reported by the Matron for having struck a patient under the chin? I have answered that question, I think.

Was she reported by the Matron for having struck a patient? No.

The Chairman: How did you hear of it? The Matron reported that there was some trouble in administering draughts with these mugs, and so far as I recollect, instanced this case which she had witnessed.

Did she say what she had witnessed? I do not recollect her accusing the nurse of having struck her.

What did she say? I cannot remember what she said. All my recollection of the case is that the Matron said it was an unsatisfactory way of feeding the patients, that she had noticed some difficulty in giving medicine with these mugs, and she asked me if I could get something else. After talking it over, tumblers were suggested, and I got them. I did not take the report as a report of striking or illusing a patient.

Mr. Nathan: And you made no inquiry into it? No.

Mr. Russell: It was since that incident that tumblers have been introduced? Yes; and because of that incident.

Mr. Cargill: Between the time of your recommending Nurse Quilkey's dismissal, and the hearing of this charge of cruelty to Mrs. Macauley, a considerable interval elapsed;—you heard of the charge of cruelty on the day on which Nurse Quilkey was discharged? Yes. How

How long was it before that that you recommended her dismissal? I had recommended it before. How long before? A few days, I think.

At any rate, it was some days before? Yes.

Mr. Nathan said this was all the evidence he had to call. He, however, wished to cross-examine Martha McNulty, and Nurse Middleton, though he did not desire to call them as his witnesses.

Mr. Russell: I do not propose to call Martha McNulty; I may possibly call Middleton.

The Chairman: If we see there is any necessity to call these witnesses we will do it.

—
Maria McNulty sworn and examined:—

Mr. Russell: You are the housekeeper to the Matron? Yes.

How long have you been in this Institution? Seven and a half years.

You cook at the stove in the Matron's quarters? Yes.

Who do you cook for? For the Doctor, the Matron, and myself.

Have you cooked for anyone else there? Yes; for patients and nurses.

How often? Not very often.

Sometimes? Yes.

There is a gas-ring in the pantry, is there not? Yes.

Do you cook on that at all? Yes.

The gas consumed is supplied by the Institution? Yes; there are two gas-rings—one for the Matron's pantry, and one for the Doctor's.

You cook on the Matron's gas-ring? Yes.

What sort of things do you cook? Vegetables, and stews.

Anything else? I boil the water for tea, boil milk and coffee, and make porridge.

Do you decide what to give the Matron for dinner, or does she decide? I get it for her; she does not order it.

It is left in your hands as to what you will give her? Yes.

How about the Doctor's dinner? I get everything; no one gives me any orders.

They both leave it to your discretion what to send up for their meals? Yes.

Is the Matron a heavy eater; has she a large appetite? No.

How many times a day does she eat meat? Some days she does not eat meat at all; sometimes for nearly a week.

Does she eat vegetables? Yes.

Is she fond of puddings? She does not eat puddings.

Where do her vegetables come from? From the garden.

From the Hospital garden? Yes.

Can you say whether she pays for these? Yes, I can.

How is that done? Mr. Whitling sends the bill in every two or three months.

The Hospital gardens are under Mr. Whitling's charge? Yes. The Doctor pays half of the bill. I show him the account, and he gives me half the amount. It comes to about £2 or £2 10s.

At the end of the quarter? They do not send the account in regularly.

Do you get the Matron's half from her? All the vegetables are sent in together, mixed up; and I cook them together and divide them.

Do you collect the money with which to pay Mr. Whitling? Yes; I generally take it down. I think the Matron has sent it occasionally. I get the money from the Doctor, and give it to the Matron, or I get it from both and take it round to Mr. Whitling myself.

Have you ever spent other money for the Matron? Yes; I spend ready money.

When? At any time I require to send out for anything for her.

Does it happen that you want to send out often? Nearly every day I want something.

Whom do you send for it? A patient.

How are these money matters arranged between you? I have to ask the Matron when I want ready money, and she gives it to me, and I tell her afterwards how it has been spent.

Does she ask for particulars? When I give her the change I tell her what I have spent it for.

Does most of the money spent on housekeeping go through your hands? Yes; all she spends on housekeeping goes through my hands.

About how much does she spend per month? About £1 16s., or £1 17s.; sometimes £2. It has hardly ever exceeded £2 unless there has been something extra.

Does that include coal? Sometimes; it comes to £2 when the coal bill is included.

You have to pay the coal bills for her? Yes; the Doctor pays half.

Have you ordered coal for her? No; I order it in the Doctor's name, and he gets the bill through the post.

Where did you order coal from? At first we ordered it from a man named Smith.

Mr. Nathan: Where does he live? I think he lives in Annandale; he is the tailor's brother-in-law.

Mr. Russell: Was it since the retrenchment that you ordered from Smith? After the retrenchment.

Have you ordered from anybody else? Yes; from Byrnes, of Circular Quay, and from Jones.

Where is Jones? I do not know; the man in the hall telephoned for it. Jones had the contract.

He had the Callan Park contract? Yes.

Did you order coal more than once from Byrnes? Yes.

And once, or more than once, from Jones? Only once.

Does the Matron tell you where to get the food from that you put on her table? She does not tell me anything about it.

She leaves it to you? Yes.

Does the Matron get her groceries from the Civil Service? Yes.

Have you ordered anything for her? Yes; I order every Thursday, when the collector comes here.

The Chairman: How long has that been going on? Ever since I came here.

Mr. Russell: You cook your own dinner on the same stove as the Matron's? Yes.

Has the Hospital sent you any coal for yourself? No, they have not.

The Matron's coal-cellar is kept locked, is it not? Yes.

Do

Do you remember when a lock was put on it? Two or three years ago. The carpenter might remember; he was brought down to put it on.

Why was a lock put on? The old man used to take the fine coal out, and take it to the engine-house. I told the Matron, and she said she would have the lock seen to.

Was it more than three years ago that happened? I do not remember quite.

You know that the coal taken to the Matron's office is Government coal? Yes.

Have you ever used some of that? Yes, I have.

Have any rules been laid down as to when you are to use the Matron's and Doctor's coal in that stove? No.

I think you said you had done some cooking for nurses and patients as well? Yes; I have cooked something for sick patients in the hospital.

You rather pride yourself on your cooking;—do you consider yourself a pretty good cook? I can cook, I know.

Did you ever cook anything for Nurse Cahill? Yes.

Was she rather delicate? Yes, two or three years ago.

What sort of things did you cook? Stews and puddings and vegetables; I cannot remember all I have cooked for her.

Do you keep up the kitchen fire in the evening for yourself? Very seldom, unless I want to cook something. I do not use it very much in the evening. We have midday dinner, and I do not use the stove very much after that, unless there is something special.

If you want to do any ironing, where do you do that? I do not do ironing.

Have you seen any food sent from the nurses' dining-room? Yes; I have received it.

You have seen it in the Matron's pantry as well? Yes; I have taken it there from whoever brought it.

Have you used that? Yes.

Would you put that, or some of it, on the Matron's table occasionally? No; I never put it on the Matron's table.

Would the Matron have asked you if you had done? She never asked me; she never interfered with me about the food.

It was left entirely to you to manage as you pleased? Yes.

Did you ever see two joints come on the same day from the nurses' dining-room? I never did. I got two joints once from the wards on the same day.

But never from the nurses' dining-room? No, never two joints.

How many patients work in the Matron's quarters? There are two women always; sometimes there are three or four when there is extra work to be done; then there are three or four men working about there.

Have they had meals in the kitchen? Yes; they all have meals.

Where does their food come from? From the wards.

Which ward would it come from? The meat and potatoes came from No. 5—the hospital ward.

Where did the other provisions come from; they had something besides meat and potatoes? Yes; bread, milk, and butter.

Where did they come from? From the wards.

Do you know what came from each? Meat and potatoes from No. 5. If I have a patient from No. 3, I get bread, butter, and milk from there; and when one from No. 4, I get the same there.

Where did you serve dinner to them? In the Matron's kitchen.

Did it happen often that they had meals? They have had meals there for five or six years regularly, these two patients. The others I gave lunch to, and in the afternoon, tea. I also gave something to the men every day.

Where does the light wood come from that you use for the fires? It is gathered from under the trees.

How many rooms are there under your charge? Sixteen or seventeen.

That includes the rooms used by the Medical Officer? Yes; this room and the room above this are also included in my work.

These two women patients help you in that work? Sometimes I have four or five, when the windows and the fenders and the grates have to be cleaned.

You have other things besides housework to do? Yes; the windows and the grates have to be cleaned.

Where would this coal consumed in the Court-room come from? This is the first time I have seen that fire lit; one of the attendants lit it to-day.

Can you mention any other than Nurse Cahill for whom you have made beef-tea, or afternoon tea? There have been so many, I cannot recollect all. I have cooked for the McLean sisters—three of them; Nurse Searles, who had fever; and Nurse Palmer, who is here now.

Did you do anything in that way for Nurse Flannery? Yes.

Did you ever send a tray of food out? Yes.

Where to? To the nurses' sitting-room.

Was that food cooked on the stove in the Matron's quarters? Yes.

Mr. Nathan: When you used to cook these things and send them out, did you scrape the Matron's coal out of the stove and put the Government coal in? No; I put the Government coal in with the coal that was in the stove.

When you used Government coal on these occasions, where did you get it from? From the drying ground; from the laundry yard.

The coal was brought down into the Matron's kitchen in buckets? Yes; when I sent for it.

I am not imputing anything wrong; I simply want to find out what the practice has been;—the coal, you say, was brought from the laundry yard to the kitchen? Yes; when I used to send for it. I sent for it and I burned it. I asked many times for coal. I was told I could go to the nurses' sitting-room. When I wanted coal I sent for it and burned it.

Before the row began, if you wanted coal you sent to the laundry yard and it was brought to you? Yes. I have hardly used the kitchen at all for a year; I have used the gas-ring in the Matron's pantry.

When

When you were making these things for the nurses, did you light the fire in the kitchen? If I had no fire I lit it up. I have asked them to bring the coal, and I made a fire specially.

Have you kicked up a row because no coal was brought to enable you to cook the Matron's breakfast? No; I never had that much to cook for the Matron.

What do you cook? Bacon and eggs or cornflour, or a little porridge; I cooked these on the gas ring.

Will you swear that when you used the stove downstairs for cooking for the Doctor and the Matron that you consumed their own coal? Yes.

Where did you get it from? Out of the coal-house.

And when you were cooking your own food? My food was cooked at the same time as theirs.

You would not require Government coal at all? I do not say I used it every day; I say I have used it. I would not be cooking for myself every day.

If you were cooking for the Matron and the Doctor, I suppose, you cooked for yourself? Yes. I do not know how much coal I burned; I got 2 or 3 tons a year. I have used the gas-ring. The Matron does not eat much, nor the Doctor either.

You admit that you cooked for the Matron and the Doctor in the middle of the day;—did you cook anything for yourself at the same time? Not always. I did not always cook something for myself at the same time. I might want to cook something after.

How do you mean after? In the afternoon.

What do you cook in the afternoon? I might want to cook some scones or pastry. They sent me raw flour.

For yourself? Yes.

Was that used in the Matron's quarters? No.

Did she not eat some? No.

Not when friends were there? No; she does not eat pastry, and I never gave her any.

You used the Government coal for your own pastry, and for the things for the nurses? Yes.

Where did you get it from? The nurses sent it to me from the drying-ground.

Is it true that the patients used to bring a couple of buckets of coal at a time, three or four times a day, to the Matron's quarters? They brought two buckets a day; that, I sent for.

For use in the kitchen? For the Matron's office.

How much did you send for when you wanted coal in the kitchen? The nurses sent a couple of buckets, perhaps, or sometimes one bucket.

Used coal to be kept in buckets in the Matron's bathroom? No; unless it was put in while the office was being scrubbed.

Was coal kept in buckets in the kitchen? Yes; every morning I have a bucket filled from the cellar.

I mean Government coal? No.

You told us that you had ordered coal for the Matron;—taking the last three years, will you tell me from whom and in what quantity you have ordered coal? I cannot remember; I have not kept all the bills. Dr. Flashman has been here over two years. He may remember how many times coal was got.

Did you pay for everything? Yes.

Can you mention anyone from whom you ordered coal during the last two years? Mr. Byrnes; 2 or 3 tons. I have been getting it from Byrnes for the last year.

Before March, where did you get it from? From Byrnes.

How much did you get from him in the last twelve months? About 3 tons.

How much in the twelve months prior to 1st March? I cannot remember.

Have you any of the bills? I have lost some of them.

Which Byrnes was it? Of Circular Quay.

What is his Christian name? Bernard Byrnes.

Does he contract? I do not know whether he is the contractor.

Will you swear that you got 3 tons of coal from him during the twelve months prior to 1st March of this year? I think I got 3 tons.

How much do you get at a time? A ton.

You will not swear that you got 3 tons;—will you swear that you got 2 tons? I will not swear anything till you find out.

I am trying to find out from you? I cannot remember.

Will you swear that you got 2 tons of coal from Byrnes? Yes.

In the twelve months prior to 1st March of this year? Yes.

In whose name? Dr. Flashman's.

Do you pay the bills? Yes.

Who did you pay? I sent a man once, and I sent the money by the post.

Where is Byrnes' office? Circular Quay.

Mr. Nathan: I would like Byrnes to be subpoenaed, Mr. Chairman. *To Witness*: Have you a key to the Matron's coal-cellar? Yes.

Now, I suppose, when patients were working in the Matron's quarters, any food they wanted was supplied from the various wards? Not any food; I never got sugar or tea. The nurses have given me tea for them—tea and sugar. I got in very little till I went away for my holidays. I asked Mr. Whitting to allow me something for them.

Everything stopped after April? Yes, while I was away.

That was after the row? I do not know.

Did you see anything that came from the nurses' quarters for the patients? Yes.

You say you got meat and vegetables from No. 5, and other things from the other wards? Yes.

If it has been sworn by at least a dozen witnesses that you had a joint of meat from the nurses' quarters, is that true or false? It is true.

What was done with it? It was given to the patients, and some of it to the nurses.

Why should it be given to the patients? I suppose I have done wrong feeding too many.

Did a joint of meat come down every day? Yes.

Was that never put on the Matron's table? No.

Not even when she had a friend there? No.

Did you not run the whole show yourself? Yes.
 You supplied everything? Yes.
 Did you not give your own rations to the Matron? Yes; I have given my own chops to the Matron, and told her.
 You cooked your own rations, and gave them to the Matron? Yes.
 You are not a great meat-eater? No.
 Nor is the Matron? No.
 Is Dr. Flashman? No.
 How much rations do you draw—how much meat? Over a pound.
 Four chops, or a pound of steak? Yes.
 And you used to cook that meat, and give it to the Matron? Not all of it.
 If the Matron has a small appetite, and you have a small appetite, why should you send out every day to buy things? I sent for different things.
 What did you send for? For fish; often for tinned fish and tongues. I did not say I sent every day for them.
 How often have you sent for sheeps' tongues? Not very often.
 What else did you send for? I forget; different things.
 Though you were "going whacks" with your rations with the Matron? I have given her a chop occasionally. I did not say I did it regularly.
 You would not see any meat wasted? No.
 If you are running the show for the Matron, and you had more meat than you wanted to eat yourself, why should you go and buy meat outside the premises rather than give her what you had? I would buy it if she wanted it. I would not throw anything out if I had six times as much, so long as there were people to eat it up.
 But why did you buy meat? I gave some to the patients. There were patients coming in at different times of the day, and I have given them something to eat.
 They used to come in for lunch and afternoon tea? They did not come in; they had business about which brought them down.
 Have you given them meat? Yes, in the morning; bread and meat to the male patients.
 Did you not tell me that you used to send to the patients quarters for meat and vegetables? Yes, for two or three women patients.
 What I want to know is what you did with the joint of meat that came from the nurses' quarters each day? They were only small joints; they only weighed 3 or 4 lb.; they were not large joints. If I gave bread and meat to three or four men there would not be much meat left.
 You did not give dinner off these joints? No; I gave it to the patients during the day.
 You gave a joint of meat a day to the patients? Yes, I did. I have given the nurses some, too. I have given them meat and vegetables. I have got some meat, and sent it to the nurses with vegetables.
 What you say is that you gave this joint to two or three men at different times during the day; I must take that as your answer? Yes.

(The inquiry was adjourned at 4:35 p.m. till 11 a.m. on the morrow.)

WEDNESDAY, 27 JUNE, 1900.

The inquiry was resumed at 11 a.m.

Maria McNulty further examined:—

Mr. Nathan: Are you a Roman Catholic? Yes.
 Do you regard an oath sworn on that Bible as being binding on you? Yes.
 Have you said to any one that you did not? No.
 Have you said that you did not regard your oath as binding on you, because it was not sworn on a Roman Catholic Bible? No.
 Did you say that in the presence of your own sister? No.
 Nurse Flannery and Nurse Lizzie Wills? No.
 Have you said in the presence of anybody that, what with your loyalty to the Matron and having to give evidence on this matter, you were nearly driven mad? Yes; I have said that.
 Have you said in the presence of the nurses that it did not cost the Matron 5s. a month to live? No, I have not.
 Let me refresh your memory; let me put it this way: have you said there was no necessity for the Matron to be nasty to the nurses? No, I have not.
 Because she practically lived on them? No; I never said that.
 Nothing of that sort? No.
 You swear you never said it did not cost the Matron more than 5s. a month to live? No.
 These are the people in whose presence you were supposed to have said it—Nurse Cahill, Nurse Steel, and Nurse Anderson; now, will you swear that you have not said it? Yes.
 Is it true or false? It is not true.
 You never said it? No.
 Are you sure of it? I have not said it; I am quite sure.
 Will you tell me this: did you eat any of this joint which went from the nurses' quarters every day? No.
 You never used to eat any of it? No.
 You are certain of that? Yes.
 And neither did the Matron nor the Doctor? No.
 Provisions were sent daily for the two patients working in the Matron's quarters? Yes.
 And this joint you disposed of by giving lunch to the men working about the place? Yes; and by giving some to the nurses who had food in the Matron's pantry.
 Every day to the nurses? Yes; at some time of the day, nearly every day. I have also sent some to the nurses' sitting-room. For nearly two years I sent in something every day.
 Will you tell me this: why, if you never gave it to the Matron, or to the Doctor, and never eat it yourself, did you always get a hot joint at lunch time? I do not know why; the nurse sent it, and asked if it would be any use.

It

It was sent down all hot at lunch time, and yet no one used it; now, drop your loyalty to the Matron and tell us the truth;—have you not made a mistake? No; it is the truth.

That is the absolute truth? Yes.

You do not want to alter your statement? It is true.

Did you ever cook with the gas-ring in the Matron's pantry prior to the row? Yes; ever since I came to the Institution.

Is the Matron allowed as much gas as she wants? I cannot say what she is allowed.

Is she allowed gas for cooking? I do not know; I was never told not to use the gas-rings. The rings were provided, and I had no instructions not to use them.

You used them prior to the row? Yes; ever since I came here.

Will you admit that since the row these provisions have not been sent from the nurses' dining-room to the Matron's quarters? No; they have not been sent down.

Have things been sent down from the patients' wards since the row? No; they have not.

During the time the men were working, and you used to give them lunch, did they get their regular meals at their own quarters? Yes, they did.

Just tell me exactly what took place; you have told us that neither you nor the Matron eat much, that you get your rations raw every day, that sometimes you gave a bit to the Matron, and sometimes you do not;—now, where did you buy meat for the Matron? I do not know; I sent one of the patients out for it.

How much meat a week did you get? I do not know; I did not feed them wholly on meat.

You cannot say how much you got? I bought whatever was required.

The whole business was left to you;—tell me how much meat you got? I do not exactly know.

You do not even know where it was got from? I do not know all the butchers' names.

Have you any bills? No.

Do you keep bills? I do not have bills.

You used to send a patient out;—you do not know where she went, and you do not keep bills? No.

From whom did you buy bread? From Wolff.

Have you any of his bills? Yes.

Prior to 1st March last? I think so; I think the Doctor has some.

How much bread per day did you get for the Matron? Half a loaf every other day.

Is that all you got? Half a loaf for the Doctor. If there were visitors I got more.

There were visitors sometimes? Yes; I sent out for bread, if I wanted it.

You sent a patient out? Yes.

Where to? I never told them where to go; the same man has been going messages since I have been here.

Did the Matron have visitors occasionally? Yes.

Will you swear that the joints which came from the nurses' quarters were not put on the table when the Matron had visitors? Yes, I will swear.

Where did the Matron get her milk from? From the Fresh Food and Ice Company.

How much per day? The man delivers it; half a pint in the summer, and in the winter a pint.

Was that for herself and the Doctor? No; I got the Doctor's separately. I got it from the same people.

Have you any bills for that? Yes, I have a few bills; I did not always keep them.

Prior to 1st March? I will see.

In whose name was the milk ordered? In the Matron's and the Doctor's.

Did you run bills, or did you pay cash to the baker and the milkman? These were monthly bills.

In whose name were those bills? The Matron's in her name, and the Doctor's in his.

And you have some of those bills? Yes, I have.

The Matron you say did not eat much meat? She only got half a loaf of bread every other day, and half a pint of milk daily;—I suppose you made puddings and things of that sort? I did not make many puddings; she used cornflour.

I presume you required milk if you made cornflour? I used condensed milk for the puddings.

Where did you get that from? From the Civil Service Store.

In whose name would that account be? The Matron's.

Have you any of those bills? The items are not shown on the bills; you can get them from the store.

How do you know if all the things have been received unless you have the items? There is the pass-book.

Do you not keep a check? Yes.

Where is it? At the grocer's.

When will it be back? To-morrow.

I should like to see that book? Very well.

Mr. Russell: Have you any bills with you now? They are not here.

Could you get them? Yes.

To the Chairman: I will ask leave for the witness to get these bills; she may as well get them at once.

The Chairman: Will you kindly get them, witness.

(Witness having returned).

Mr. Nathan: Have you said, in the presence of your sister Martha, of Nurse Flannery, and Nurse Lizzie Wills, and Nurse Quilkey, that what Nurse Quilkey said of the Matron was perfectly true? No. When she said she had told about the coal, I said it was true; I had burned the coal.

That was said in the presence of these witnesses? I do not know who was there; there were two or three present.

That was before the inquiry started—it was some time ago? I think it was the day she had been to Dr. Sinclair.

You admit you said in the presence of these witnesses that what Nurse Quilkey had said about the coal was true, because you had used the coal? She said she had told about the coal, and I said I had burned coal. I did not say where I had burned it.

You

You deny that you said in the presence of the witnesses I have named, that everything Nurse Quilkey had said about the Matron was true? Yes, I deny that; I have not spoken six words to Nurse Quilkey in my life.

I am speaking of your sister, Nurse Flannery, and Nurse Wills;—did you say that in their presence? I did not say it.

Did you say anything like it that you can remember? I do not remember.

Did you say it, or do you not remember having said it? No, I did not say it; I spoke about the coal.

Mr. Russell: There are no coal bills among those you have handed in? I have lost some; I have not any of Dr. Read's or Dr. Millard's.

Have you any other receipts belonging to the Matron besides these;—do you keep all the receipts? I do not keep them very long; I am not very particular about keeping them; sometimes I throw them into an old box, and burn them after a time.

These are all the receipts you have? Yes.

When did you look for them? I looked them up when Dr. Sinclair was here, and I have kept them since.

Before that, had you any occasion to look up the receipts? I was never very particular.

To the Court: We produce these receipts, such as McNulty has kept. There is a receipt for coal delivered in the middle of 1897; and a receipt for coal delivered in April, 1898.

Mr. Nathan: Let it appear that these receipts are in the name of Dr. Flashman.

The Chairman: That has already been explained.

Mr. Russell: There is a delivery note and an account for coal in January, 1899, with accounts rendered in March and June; and a receipt showing coal delivered in February of this year. Those are all the coal bills I put in.

Mr. Nathan (to witness): Do you get your groceries from the Civil Service store? Mostly.

Where did the patient go when you sent him? I do not know. Sometimes I got things myself before the early closing.

Mr. Russell: There is a bill from the Civil Service Co-operative Society for goods supplied prior to February 1st of this year. It shows the amount of account, as per pass-book, to be 7s. 11d. That is the only bill I have. Then there are two bills from Wolff, the baker, showing half a loaf of bread supplied every other day. I put in these bills, as also two Civil Service receipts for 11s. 3d. and 7s. 11. [*Bills put in and marked Exhibit 2.*]

Mr. Nathan: The fairest way with the Civil Service store would be to get a copy of the account for last year.

Mr. Russell (to witness): With regard to the coal, can you remember when it first came to the Matron's office from the laundry-yard? I think it is about three years ago.

Did it come from the laundry-yard immediately after the retrenchment? No, it did not.

There was an interval between the retrenchment and the coal coming? Yes, there was.

During that interval, where was the coal obtained with which the Matron's office fire was kept up? From the cellar.

Is that the Matron's cellar? Yes.

Do you remember having a conversation with the Matron after the retrenchment about the coal? Yes?

Was it after that conversation that the coal was first brought from the laundry-yard? Yes.

Who brought it? A patient; Jessie Wylie was the first girl.

She brought it regularly? Yes.

In that interval, how was the coal delivered in the Matron's cellar? Through the hole in the verandah. It was brought from the engine-house in a barrow. That was the old system.

Was the coal taken from the cellar during the interval used for the Matron's office fire? Yes.

How was the coal put into the cellar? Through the hole under the verandah. An old man used to bring it in barrows and empty it down.

When was it that the old man brought the coal in barrows? Before the retrenchment.

Did he bring it in barrows after the retrenchment? He was bringing it one morning, and the chemist stopped him. He was in great distress; he came and told me that the man would not allow him to bring any more coal down. I said, "What man?" and he said, "Mr. Floyd."

Then, after the retrenchment, he did not bring any coal in barrows? No.

Tell me, where did the coal come from after that, and before Jessie Wylie brought it in buckets from the laundry-yard? It came out of the coal cellar.

How did it get into the coal cellar? There was some coal left that the old man had brought; he filled the cellar. When that was used we ordered some. The old man never brought any more after the retrenchment.

Who put it down the hole after that? We bought coal from the coal merchant. Any that was put in was by the coal merchant.

How did he bring it? In a cart.

Have you seen the cart there? Yes; I have shown them where to empty the coal.

Did you ever see a cart there before the retrenchment? No, never; they had no business there.

Mr. Nathan: Before the retrenchment there was no question raised about the coal at all? No.

Before the retrenchment an old man used to bring the coal from the engine-house in barrows and put it down the hole near the pantry? Yes.

It was the old man's habit to do that; he was pleased to be allowed to bring it? Yes, he was.

He kept the cellar well stocked? Yes.

When the retrenchment came, and the chemist stopped him from delivering any more coal, I suppose he was angry about it? Yes.

After the retrenchment you did not see there was any coal in the cellar? I know there was.

You used what was there? I used it; and before it was emptied I had more put in.

You used whatever coal was there? Yes.

Then, after this lapse of time you started getting coal from the laundry yard? Yes.

What is the engine house? That is in the male division.

On the southern side of the building? Yes.

The

The laundry yard is on the female side? Yes.

And on the northern side of the Institution? Yes.

The Chairman: Can you give me any idea how much coal you used? I have not used very much this past year; I have used the gas-ring more than ever.

How much coal do you consume in a year? Between 2 and 3 tons.

Not more? No, not more.

You said just now that you receive no food for the patients at the Matron's quarters;—none is sent from the nurses' room? Not now.

How are they fed? They go to the wards for their meals.

They are not fed at the Matron's quarters? I give them lunch. Mr. Whitling allows me something for lunch for them.

They do not get dinner? No.

Mr. Nathan: When the patients are given extra work they are given something extra to eat at 11 o'clock.

The Chairman: The food is supplied for them; they are not fed at the Matron's? They do not get regular meals; they go to the wards.

Mr. Russell: About the 2 tons of coal;—do you mean that is all you order for the Doctor and the Matron, or that is what the stove consumes? I mean that is all I order.

The Chairman: I asked how much you consumed? I suppose, perhaps, 2 tons and a quarter—perhaps not that much; I am not long enough in the kitchen.

What is used for the Doctor's quarters? For over two years the Doctor has not had a fire in his sitting room.

Why does he pay for it? To cook his food.

Mr. Russell: Does the Matron ever have a fire in her private sitting room? No, very rarely, these two or three years. I heard she had a fire while I was away on my holidays, but I did not see it.

She does not have a fire as a regular thing? No, she uses the office.

Mr. Nathan: But the Matron suffers from cold, and has fires in the summer? Yes.

Elizabeth Smith sworn and examined:—

Mr. Russell: You are the nurse-in-charge of No. 4 ward? Yes.

How long have you held that position? I think about two years and three months.

How long have you been in the Institution? I think I came on 3rd April, 1890.

You have been here continuously since then? Yes.

What is No. 4 ward? It is the receiving ward.

How is the work in that ward? It is very hard. They are all new patients that come in, and they want special care and special attention in every way.

How are the duties of the nurse-in-charge;—are they correspondingly difficult? Yes; I think they are more difficult. I have only been in charge of one other ward—No. 3; I was twelve months there.

Have you worked in other wards? Yes; I have worked in all the wards.

How does the behaviour of the patients when they are brought in compare with their behaviour subsequently? Some of them are very wild when they are brought in; some are melancholy, some are troublesome, and you have to be very strict with them.

Are the violent patients more or less violent when they have been in the Institution some time? Some remain violent for a considerable time; others are more violent when they first come in.

Patients are drafted out of No. 4 ward to the other wards? Yes, as they get better; or if they are very ill physically, they are sent into the hospital—No. 5.

Was Annie Quilkey in your ward? Yes, she was.

And Lizzie Wills? Yes.

Who else was there at that time? Fanny Tidyman and Kate McSweeney.

Do you remember being accused of having given pepper to some of the patients? Yes, I do.

Who by? By Lizzie Wills and Annie Quilkey.

Did they speak to you first or to the Matron? To the Matron.

What did you do when that accusation was made? I was accused in the Matron's office. Lizzie Wills came down from the ward and accused me of giving pepper to some patients. I came into the office shortly afterwards and the Matron asked me about it. I said I had not done it. The Matron then asked Wills to bring in a nurse to prove that I had given it. Wills went out and brought Annie Quilkey down, and she stated that I had given it. Anything more than that I do not know. The Matron questioned me, and I said I had not done it. Dr. Blaxland also questioned me, and I said I had not done it. He asked me if I had given it as a medicine. I said I did not; I only gave it in the food in the regular way. I have tried to study the patients, and when they have not had enough pepper or salt in their food I have put it in. I have given them salt in milk occasionally. The Matron is very particular about the food of the patients when they first come in.

Did Nurse Quilkey say who had actually given the pepper? She said I had given it, and that she had given it.

What did Nurse Wills say as to that? I do not remember that she made any remark about it.

She did not do as much talking before the Matron as Annie Quilkey? She did quite enough talking, so far as I remember. She accused me of giving pepper. Anything more than that I do not know.

It was after you saw the Matron that Dr. Blaxland spoke about the matter? Yes.

Have you ever reprimanded Quilkey? Yes, very often. I have also reported her to the Doctor; and when I reported her to the Doctor she tried to make out that I had done so because she was at variance with another charge nurse.

Did Lizzie Wills describe how the pepper was given? She said I gave it in water; but Quilkey told the Matron I gave it dry.

Mr. Nathan: Were you present when Annie Quilkey said that? Yes.

Mr. Russell: Was that at this time when you were before the Matron? Yes.

After Dr. Blaxland interviewed you, did you hear any more about it? Yes; the Inspector-General questioned me some time afterwards.

Did you hear anything from Dr. Blaxland or the Inspector-General between those times? No.

Did you report any other nurse as often as you reported Quilkey? I have reported to the Matron; I do not think I reported any other nurse to the Doctor, so far as I remember. Did

Did you ever report Tidyman? Yes.

The Chairman: Were those verbal reports or written ones? They were verbal reports.

[*Mr. Nathan submitted that this evidence was inadmissible; but his objection was overruled.*]

Mr. Russell: Was Nurse Tidyman in your ward before Quilkey? There was no other before I came into No. 4.

Did you have any serious trouble with her before Quilkey came or not? She never spoke to me when she first came. She was never nice to me at any time. She always did her work in an unsatisfactory manner.

Do you remember any improper treatment of a patient by Quilkey? I do not remember. She was always very careless with the patients.

Can you remember an instance of her carelessness? I remember she would continually allow the patients —

If you cannot remember a particular instance say so, and we will let it pass? On one occasion Nelly O'Hair snatched some meat, and Quilkey refused to take it from her. Paralytic patients are not supposed to have meat; you have to be particular with the food. Quilkey refused to take the meat away from her. She said, "Let her choke." That was because I reported her. After that she would do no work, and I reported her to the Doctor.

Is that what she said? After that I went down and reported it to the Matron.

The Chairman: You were there at the time? Yes; I was there carving the dinner at the time.

Mr. Russell: That happened before Quilkey reported you? Yes; it was some time before.

Was that reported to the Doctor? I do not know; I did not report it to the Doctor.

You reported to the Doctor at another time? Two or three days afterwards. Because I reported her to the Matron she did her work worse than ever. She would not do anything unless I compelled her to do it.

Subsequently you did report her to the Doctor? Yes.

Who looked after this paralytic patient, Nellie O'Hair—who was appointed? No one in particular.

On this occasion, when Nurse Quilkey did not go to her? I do not know who took the dinner from her afterwards. I do not remember whether anyone took it. Someone must have done it. I do not remember whom.

Did anyone take the meat from her that she was attempting to swallow? I took a lump of meat off her plate myself; and then I put the carving knives in the box and went straight down to the Matron and reported it.

Were you carving for the patients? Yes; I always carve.

Are you severe with the nurses? Yes; I am pretty strict with them.

I suppose you do not shirk work yourself? No, I never do; I do not think I do.

Do you know a patient named Jane Downey? Yes.

What sort of a patient is she? She is a melancholic, and refuses her food.

How is she to manage? She is not violent in any way.

How about getting her to take her food? She is always troublesome with her food.

Is Downey strong? No she is not strong physically. She could not do you any harm.

Do you administer draughts to the patients? Yes.

That is part of your duty? Yes.

Have you administered draughts to Downey? Yes.

Does she swallow them easily? No; many of the patients do not take their medicines well.

And Downey is one of them? Yes.

What is it necessary to do in such cases? I simply hold them with one hand, and give the medicine with the other.

Have you to hold them pretty firmly? Yes, sometimes.

Do you hold their head back? I hold them by the neck, and give the draught from a glass or mug.

Do you remember when glasses were substituted for mugs? Yes, I do.

What size were the medicine mugs? They held about a pint.

Was it from one of those mugs that you administered the draughts to Downey? Yes.

Do you remember an occasion when you were said to have been rough with Downey? Yes, I do.

What happened at that time? I was simply giving the medicine; she wriggled about, and I hit her under the chin with the mug.

Was that after she had refused to take the draught? No; it was while I was giving it.

You say she was wriggling about? Yes; and she wriggles now in the same way.

I suppose the liquid might be put to her mouth and not be swallowed? Yes; she lost some of it. Most of it I caught in the mug and put it into her mouth; some of it ran over her dress, and I wiped it off. The Matron came along at the time.

Did the Matron see it? Yes, she spoke to me. She said I was rough; but I did not consider I was doing anything I could help. Sometimes a thing looks bad, when no harm is meant. If you are struggling with a patient it may look as if you are hurting them, when you really are not.

Did the Matron speak as if she considered you were rough? Yes.

When? She spoke to me at the time; she afterwards spoke to me in her office.

Did she speak more in detail then or afterwards? She said I had been very rough.

What did the Matron say in the office? The same thing—that it looked very bad; it looked as if I had been rough. I said I had not been rough. She made me at the time go and get another mug and wash it out, and use it instead of the one I had.

At the time you were administering the draught? Yes. She came to the door, looked round, and saw what I was doing.

Those mugs are opaque, are they not—so that you cannot see how much of the draught has been taken? Yes.

Since that, what has happened? I do not know how much longer afterwards, but glasses were introduced in place of mugs for giving medicine out of.

Have you ever been to the Matron's apartments to take your meals? No, I have not.

Have you ever seen food prepared by Maria McNulty in the nurses' room? Yes, I have; and I very often had some of it.

How

How much would there be sent in? Some was kept for me as a rule; I do not know what came in before.

Have you seen food sent from the nurses' dining room to the Matron's? I cannot say I have.

You have not seen it sent? No.

Was there always plenty of food in the nurses' room? Yes; I have often taken food to the wards afterwards, food that was left over, and distributed it among the patients—puddings and such like.

There was something left over after the nurses dined? Yes, always.

Have you seen coal taken to the Matron's quarters? Yes.

How much? I cannot say how much. I have seen it when I have been in the office in the morning with the reports.

How early in the morning? About half-past eight; after breakfast.

Patients with two buckets? Sometimes she had not and sometimes she had.

Sometimes she had less than two? I have not noticed sometimes whether she had one or two buckets. It was a usual occurrence, and I did not take particular notice of it.

There was an inquiry before Dr. Sinclair recently, was there not? Yes.

Since then, where have you been having meals? In my own room until I came back from my holidays.

That was in preference to the nurses' dining room? Yes.

Mr. Nathan: How many times have you been reprimanded and brought before the Doctor? I cannot say how many times. I suppose about three.

Will you swear you have not been brought before him on more than three occasions? I would not swear.

Have you been brought up three times? Yes; I think about that.

Mr. Nathan: Can we have Nurse Smith's record?

Mr. Russell: I ask for Nurse Quilkey's record, also.

Mr. Nathan (to witness): Some time ago you were at Richmond? I was.

You left because you could not pass the examination? Yes.

Will you tell me this: you say this story about the pepper and water is untrue? Yes, I do.

It is not true that you held the patients' arms back behind the form, and forced their heads back by putting your arm under their chins, and then forced the pepper and water down their throats? No, it is not.

Did you put their arms behind their backs? Yes; when giving them their food sometimes, but not for pepper and water.

Do you recollect the occasion when Quilkey, Tidyman, Wills, and McSweeney saw you administer pepper and water to the patients, and when Nurse Wills reported you? Yes.

Did you on that occasion put the patients' arms behind their backs? No, I did not.

Then, if four witnesses swear that you did, it is false? I say I did not give any of the patients pepper and water.

What did you give them? Nothing at all.

On this particular occasion? I may have given them vegetable soup or beef tea; but never pepper and water.

Will you swear that you did not give them pepper and water as a punishment for not taking their food? No.

Were you angry on that occasion? No, I was not.

Are you a good tempered woman? No, I am not.

You will not say whether you were angry or not? I was not.

You swear that, in the presence of these four witnesses, you did not give any of the patients pepper and water, or pepper, salt, and water? Yes; I did not, nor any dry pepper.

What time did this occur—was it in the evening? No. When I heard of it in the morning I was told it happened a week or a fortnight before.

I mean this occurrence when the pepper was administered—was it at tea time? I have given them beef tea and vegetable soup.

Was it about tea time that this was given? I do not remember what was given.

You were spoken to at the time by the Matron? I was not spoken to at the time by the Matron; I was not reported until a week or a fortnight afterwards, when I had no idea about the thing at all.

You say the Matron told you you were rough to Downey, and that she spoke to you in the office afterwards? Yes.

What did she do? She spoke to me. She said I had been rough; that is all I heard.

You did not hear from Dr. Blaxland on that occasion? No.

You were not reprimanded in any way beyond what you have told us? No.

Nothing was said in the presence of the nurses who witnessed the blow given? Not that I know of.

Maria Rowe—is she a violent patient? She was after she came in.

She was one of those you gave pepper and water to;—was she violent? No; not when she was getting better.

At the time you were administering the pepper and salt and water to the patients? I do not remember; I know she was better then.

Tell us what took place on that occasion? I do not know the occasion any more than that it was about a week or a fortnight—some days at all events—before it was reported.

It was in the morning that the Matron spoke to you? It was in the office in the morning; that was the first I knew about it.

Nurse Wills says she reported it next morning? That is not what she said in the office to me, and before the Matron.

Have you any recollection of what occurred on that occasion? Not the giving of the pepper; I swear no one ever saw me do such a thing.

You swear you did not do it? Yes; I swear I did not.

That matter came before Dr. Blaxland some time afterwards? Yes.

And Dr. Blaxland has sworn he took your word without making any inquiry into the matter; he was satisfied you were correct? He spoke to me, and anything more than that I do not know. It must have been reported to the Inspector-General, because he spoke to me. Although

Although they spoke to you, you cannot recollect what took place? I do not understand you.

You cannot recollect what took place on this occasion when you gave the pepper? We hold the patients' hands behind their backs, and feed them three times a day.

I mean the occasion when you were supposed to give the pepper and salt for punishment? I do not recollect anything more than I have told you; I do not recollect at any time doing anything of the sort, except in the ordinary way of giving them food.

You have no love for Annie Quilkey—are you fond of her? I cannot say I am fond of her.

Have you not a great down on her? I cannot say I have, except for saying these things about people; one cannot help being a little angry about it.

You say that when O'Hair, the paralytic patient, seized the meat, you told Quilkey to take it from her, and that she would not, and that she said, "Let her choke"? Yes.

Will you swear that those words, or any words like them, were used by Annie Quilkey? Yes; I heard her say, "Let her choke."

Was Annie McLeod present? I believe she was.

If she was present she must have heard what Quilkey said? Annie McLeod observed about the lot of abuse I had to put up with when speaking to Quilkey.

Was O'Hair a violent patient? Yes.

She had seized the meat and swallowed it when you spoke—and yet you wanted this girl to take it from a lunatic? We always had to do it.

You told us you have seen coal going to the Matron's office when you were there about half-past 8 in the morning? Yes.

Did you ever see it at any other time? I cannot say I have; I have not been to the office at other times.

Did you say you were not aware that provisions used to go from the nurses' quarters to the Matron's quarters? I say I have not seen them.

Do you say you did not know it? I have never seen it.

Did you never see a patient take away a joint to the Matron's quarters? I cannot say I have.

Do you know it? I do not know anything about it; I never saw it go.

Are you in the habit of using foul language to the patients? No; I am not.

Are you in the habit of swearing? No, I am not, although some years ago I might have done so. The Matron spoke to me about it; that is years back.

[*Mr. Nathan asked the permission of the Court to put a series of questions to test the credulity of this witness; but the Court refused to permit of it.*]

You admit you have used bad language, and that the Matron reprimanded you? I did not use it to the patients.

To whom did you use it? I said I had used bad language, but not to the patients.

To whom did you use it? It was years back that the Matron corrected me for it, and asked me if I had been in the habit of using it, and I said "No."

Have you not sworn at the patients within the last three years? No; I have not.

You are not in the habit of swearing at the patients? No; I am not.

Used patients to be sent from the wards with provisions for the Matron's quarters? Yes.

What provisions used to go down? I have seen butter, milk, and bread, always.

And other things? No; nothing else.

In what quantities did those provisions go? It all depended on how many patients were working down there. I suppose I may have sent a pint of milk in a jug, and bread and butter.

Was more sent down than was necessary for the patients who were working at the Matron's quarters? I do not think so.

Will you swear there was not? I will not.

Will you not admit that these things went from the patients' wards to the Matron's? I have already admitted it. I say I sent bread, butter, and milk; but I will not say how much, because I did not measure it. I may have sent a little more at one time than another.

You were not careful in the measurement? No.

Did you send any rice, or sago, or eggs? No.

Have any eggs gone down? Never.

Mr. Russell: About the patient Rowe;—you remember the time the pepper incident was mentioned to you in the Matron's room? Yes.

Where was the patient at that time? She was in the sewing-room that day.

In what state of health was she? She was pretty well.

Was she able to feed herself? Yes.

And she took her food herself? Yes.

Was there any necessity to force her to take her food at that time? No; there was not.

The Chairman: Who first made the report about this pepper and water incident? Lizzie Wills.

Who was called in afterwards? Annie Quilkey.

Did they communicate with one another? Lizzie Wills went out for Annie Quilkey; she went from the Matron's office to fetch her.

Was anyone else brought down? No; there was only those two.

Did anything of this kind occur in the presence of these four nurses? No; I have never given pepper.

It was reported on 1st February, was it not? I do not know; I cannot remember what day it was.

Did anything occur where the patients were violent, and where you had to give them anything? No.

On that day or a few days before? No.

There was no occurrence of that kind where you had to hold their hands back? We always have to hold troublesome patients to feed them.

Were there any patients you could not feed, and had to do anything with at that time? No.

Did you ever direct Quilkey to give the patients pepper and water? No; I never did.

Did you ever give salt and water? No; only salt and milk.

Were they sick after what you gave them? No.

You

You swear positively nothing of the kind occurred? Yes; I swear I never gave it, nor told any one else to administer it

You sometimes gave salt and water as an emetic, I suppose? The only time I did that was when a nurse gave a patient linament by mistake.

That was some time ago? Yes; it was Annie McLeod who did it.

Mary Mitchell sworn and examined:—

Mr. Russell: You are nurse in charge of No. 2 ward? No. 3 at the present time. I do one month night duty, and then one month in the ward from which the nurse relieves me.

How long have you been in this Institution? Eight years on the 2nd of next month.

What ward are you working in now? No. 3 at present.

Have you been in charge of No. 2? Yes, the month before last.

You are in charge of these wards alternately? I am a month in each ward all round the building; every second month I am in a different ward.

Before you were in this position were you in No. 4? Yes, as second senior.

Second to Bessie Smith? Yes.

Did you ever see Bessie Smith administer draughts to the patients? Yes, many a time.

It was your business to assist? Generally I shook the draughts up and handed her the bottles.

The Chairman: Were you there in February last, or in January? No.

Mr. Russell: Did you ever find Bessie Smith harsh with the patients? No.

Do you know a patient named Downey? Yes, I know Jane Downey.

Is there any difficulty about administering draughts to her? Yes, she is awkward to get to take medicines at any time; there is always great difficulty.

Does your duty bring you to the Matron's quarters early in the morning? Yes, between 5 and 6 o'clock, when I am on night duty.

Have you seen coal brought there? No, I have not.

Mary Ann Fairbairn sworn and examined:—

Mr. Russell: You are the Matron of this Institution? Yes.

Where were you formerly employed? At the Coast Hospital.

At Little Bay? Yes.

How long have you been here? Fifteen years.

What salary were you receiving at Little Bay? £100 a year and quarters.

When you came here, what did you first get? £140 per annum, with £30 per annum allowance for provisions, and £7 deducted for fuel.

What do you get? £190, less £26 for house rent.

You get £164 actually, then? Yes.

How many nurses were there when you came? Eighteen.

And how many patients? One hundred and twenty.

How many are there now? There are about 380 patients, and forty nurses, four laundresses, and a housemaid.

They are all under your control? Yes, all of them.

Your work consists in controlling these people? Yes.

Will you explain the routine of your work;—what do you do first thing in the morning? I inspect the wards and see the patients.

How many wards are there? Six.

Does that include the separate bedrooms? Yes, the whole of the wards, bath-rooms—in fact, wherever the patients are.

Do you make regular rounds? I go round in the early morning, though not at the same time each morning, to any particular ward.

Beyond that what is your work? I have the general supervision of the whole place.

If anything out of the way occurs the nurses have to refer to you? Yes.

And occasionally to have to hear complaints about the nurses? Yes.

Or you have to make a complaint? Yes.

Is it necessary or proper that you should report to Dr. Blaxland every time you reprimand a nurse? Oh, no.

There are many times that you speak to a nurse without carrying it on to the Doctor? Yes; I speak to the nurse, and if it is anything serious I pass it on to the Doctor.

Can you say how many rooms there are under your control? The whole of the female division; there are sewing-rooms, laundry, general bath-room, and stores.

You supervise the sewing-rooms as well as the living-rooms? Yes; the whole of the place where the female patients are kept.

Is there any work the female patients do besides sewing? Laundry work and cleaning.

Is the laundry work under your general supervision? Yes.

In your own quarters, who are working? There are patients working for me.

First of all, tell me who are permanently in your quarters? The housemaid, the Doctor, and myself.

Who else is about these quarters? Patients.

If a nurse come to you on business, whose would you see her? In the office.

The Chairman: How many patients are working there regularly? Two or three; others come on to help with the extra work.

Mr. Russell: Those are female patients? Yes.

Do any male patients come round? Yes; we have men working here also.

Under the regulations of employment have you to find your own food and fuel? Yes.

You are not to provide the housekeeper's food? No.

That is provided by the Government? Yes.

So that when the housekeeper is cooking for you she should use your own coal; and I suppose the same thing would apply in the case of the Junior Medical Officer? Yes.

And

- And if she cooks for herself? She uses Government coal.
- Where does she get that? She would take it from the office, or get it from the drying-ground.
- Have you given her any instructions as to how and when to use the Government coal? No; I told her it was to be used in my office; and if she was doing cooking for the nurses—I gave her permission to do that—they were to provide their own fuel. They were to send it down and not use mine in the box.
- Have you laid down any rules for her as to when she is to burn your fuel, or when she is to burn Government coal? When she is cooking for the Doctor and for me she uses our fuel.
- The Chairman*: Are you present when the cooking goes on? No; I cannot possibly be present.
- Mr. Russell*: Are you much in the kitchen? No; my duties take me away from this part of the building.
- The kitchen is entirely under McNulty's control? Yes.
- So far as the housekeeping goes, everything is left to her? Yes; I leave it entirely to her.
- Who arranges for your meals? She does; she arranges them herself.
- Do you order your own meals? No; she orders it for me. She knows my tastes. I have no time to attend to matters of that kind.
- What do you eat for breakfast? I really cannot say.
- What does it usually consist of? Not legs of mutton.
- What is your usual breakfast? Porridge; toast, occasionally, and tea; fish occasionally; eggs and bacon very rarely.
- What would be your usual lunch? Tea and bread and butter at half-past 10.
- And dinner? If I have soup and bread, I have nothing else.
- Do you eat many puddings? I do not eat puddings at all.
- Do you eat much meat? No; 6 lb. of meat would last me twelve months.
- Do you supply McNulty with money for the housekeeping? Yes.
- How is that done? I pay the tradesmen's bills every month; anything extra she requires I give her the money for.
- Those are the things she sends out for? Yes.
- Do you ask her for particulars? No, she gives them; she asks for the money and accounts for it afterwards.
- What regular tradesmen have you? The Civil Service Stores, for groceries; Fresh Food and Ice Company, for milk, and bread and butter occasionally; and Woolf, the baker.
- Have you any regular butcher? No, no regular butcher.
- You say you have fish for breakfast occasionally;—where does that come from? An old man brings it in, or a fishman calls.
- The fishman calls here frequently? Yes.
- Is the amount of food sent up from the kitchen and allotted to the patients and to the nurses under your control? No, I see it after it is cooked; I have nothing to do with the cooking.
- It comes under your jurisdiction as soon as it is put on the table? Yes.
- You see it then? I may see it then; the patients' food I see.
- You have nothing to do with the amount that is sent up? No.
- Have the nurses ever complained as to the quantity of food they get? They have complained of the quality.
- And of the quantity? No; they complained of the way it was cooked. They have also said there was too much.
- Is the cooking of the general kitchen good? No, it is not.
- Is there much more than is required sent up? Yes.
- Have you seen waste going on? Yes.
- How often do you have a fire in the office? As often as I can get it—all the year round.
- Do you mean to say you have it lit in the warm weather? Yes; on the hottest days of last summer I had a fire in the office; before I had the influenza. I have a fire every year if there is an epidemic of influenza.
- Do you know where your vegetables come from? From the garden.
- How much a month, about, does the housekeeping cost you? About £2. That is the amount I allowed fifteen years ago, and I have not altered it since.
- Do you keep regular accounts? No; the bills come to me every month from the tradespeople.
- Do you keep methodical private accounts? No.
- Do you keep a banking account? No.
- Do you know of any food brought to the table that you have not paid for? Unless anything has been made a present of to me. I have not paid for that.
- These joints we have heard so much about from the nurses' quarters;—do you remember seeing these put on the table? No.
- Have you eaten anything cooked in the general kitchen? Not that I am aware of.
- Is a fire often kept in the sitting-room? I do not have a fire in my sitting-room. I did not have a fire twice last year, and then it was made of wood.
- Where did the wood come from? From the cellar; it was wood we had gathered in.
- Tell us about that? During the storm on 1st June, 1897, the trees were blown down all round the place. Dr. Blaxland and I happened to be looking on as they were clearing the trees away, and I asked him if I could have one of the trees; and he said, "Yes." He gave instructions for one of the trees to be sent to me. The tree was cut in lengths and brought here; and an old man used to chop it into small pieces. It took him a long time to cut it up—some months, in fact. We stacked the wood under the verandah and downstairs.
- Have you any of that wood still? No; it has all been used.
- Do you know the gas-ring in the housekeeper's pantry? Yes.
- Have you seen McNulty cooking on that? Yes.
- Did you see her cook on it before March of this year? There has been cooking done on that gas-ring for fifteen years; but more within the last year.
- As to the charge about the administering of pepper;—do you recollect the complaint being made to you? Yes.
- Who made the report? Nurse Wills. What

What did she say? She rushed into my office in an excited state and said, "Matron, do you allow pepper to be given to the patients?" I said, "No; what do you mean?" She said, "Nurse Bessie Smith gives pepper to the patients." I then asked her again, what she meant. And she replied, "She gives them pepper for punishment." I said, "How does she give it?" And she said, "She gives it in water, mixed with salt." I said, "Why?" She said, "I do not know." I said, "Who saw her give it?" And she told me, she and another nurse, the name of the other nurse being Annie Quilkey. I questioned her further. I asked when it was that Bessie Smith gave the pepper. And she said, "Last Saturday at tea-time, and Thursday at dinner-time." I then asked at what time—whether before or after dinner. And she said before meals, and after meals. "Who gave it?" I next asked. "She gave it, and we gave it," she said; and so she rambled on. I told her to send for Bessie Smith; and when Bessie Smith came I asked her if she was in the habit of giving pepper to the patients. And she said, "No." I made Nurse Willis repeat the charge.

Was Quilkey present? I sent for her; I sent another nurse for her. She came in, and I asked her about the matter. She said it was true that pepper was given; they all gave it. I asked her why. And she said the charge-nurse told them. I said, "Did you give any pepper?" And she said, "Yes." I said, "How much?" And she said, "A large spoonful of dry pepper."

Did you ask how she gave it? No. She said she gave them a large teaspoonful of dry pepper. I asked her why she gave dry pepper. And she said, because the charge-nurse told her to. I said, "This is a matter I must report to the Medical Superintendent." I gathered up my work, went to the Medical Superintendent's room, and told him; and it was in his hands then.

Did either of them say Bessie Smith had given it? Yes; and that she had ordered them to give it, and that they had given it under her instructions.

Did you believe in this at the time? No.

Did you report it? Yes.

Do you know whether Dr. Blaxland inquired into it? Yes; I think he did.

Mr. Nathan: Were you present? No; I was not.

Mr. Russell: How soon did you report it? As soon as I left my office; after I had seen the other nurses.

Do you remember what has been called the mug incident? Yes.

Did you see that? Yes.

You were in the ward at the time? Yes; I was going round the wards.

Was that a serious assault by Bessie Smith? No.

What happened? She was giving the draughts in the early morning. All the patients were standing round, and the nurses were on guard. As I went through the ward I saw her administering the draughts. She was giving them roughly—not as carefully as I thought she might. She took the mug from the mouth of one of the patients and put it back suddenly underneath her chin. I called out to her; I said, "Nurse, do not do that." I said, "You are giving the medicine too roughly." I reproved her. I said, "You must not give it roughly; even if it is not roughly given, it looks rough, and I object to it."

That was at the time? Yes. I told her to wipe the medicine off the woman's dress (some had been spilled), and she picked up her own dress and wiped the drops off.

That was the incident? Yes. She went back into the store, and I spoke to her again; I asked to see the basins in which the mugs were washed. She said, "It is here." I said, "Get a basin of clean water and wash them out"; and she did so.

Did you speak to her again? I spoke to her in the office about it.

Was that next day? That was in the morning, when she came to give her reports. I told her she must be very careful about it; she must be careful when she gave the medicines; she must not handle the patients roughly. She said, "I was not rough." I said, "It had all the appearance of being rough, and I do not like it."

You spoke to her in the pantry; that was within a few minutes after—it was practically the same time as the first speaking? Yes; I followed her. She finished with the patient, wiped her mouth, and then turned back into the store. I went in behind her as she walked in with the mug in her hand. I spoke to her as she looked round for the basin of water to rinse her hands.

The Chairman: What time elapsed? Just while I was speaking.

Mr. Russell: How close is the store to the place where the draught was given? She was just outside the storeroom door; the medicine cupboard is in the storeroom.

Were the draughts given outside the store? Yes; the patients were standing round the door, and the nurses were on guard.

Did you do anything as the consequence of that incident? I took my reports into the Doctor's office later on in the morning, and I spoke to him about it; I explained what I saw, and objected to the mug as not being a nice thing to give the medicine out of, because the nurse could not see whether all the medicine had been given. I asked him if he could suggest anything else, and he said he would see.

What reports did you take in? The nurses' reports—the reports brought in by the charge-nurses each morning—the daily reports from the wards.

It was not a written report of the incident? No.

Is it true that you made a report to the Doctor about Quilkey's insubordination and impertinence? Yes.

Can you describe what that insubordination and impertinence consisted of? I was in my room upstairs, and a patient came to tell me that the nurse wished to see me in my office. I said I was engaged, and would come in a few moments, and the nurse said she would wait till I was disengaged. I asked who it was, and was told that it was Nurse Quilkey. I had had some trouble with Annie Quilkey, and I thought she had come to make an explanation to me.

What happened when you went into the office? I went in and asked if she wanted to see me. She said, "Yes." She seemed very excited and very angry. I could hardly follow what she said. She said, "Matron, I have been told that you accuse me of going to Mr. Whitting with the report that you have taken Government coal." I said, "Who told you?" She said, "I will not tell you." I said, "Tell me who told you"; and she said, "I did not report you." I said, "Will you go to the Doctor about it?" She said, "No, I will not tell the Doctor about it; I will go to Mr. Whitting; I will tell him, and see if he will listen to me." I said, "Will you tell me who told you? If you do not tell me I cannot listen to you."

you." She said, "I will never say who told me; I will tell Mr. Whiting I did not tell him that you took the coal, but there are other things I can tell about." I said, "Leave my office at once; tell whom you please, but leave my office at once."

Did she leave? Yes.

Did she leave as soon as you asked her? No, she returned and threatened; and I told her twice to leave my office.

Was she standing during that interview? Yes.

Were you standing? Yes.

Tell me, if a nurse has a complaint to make, is Mr. Whiting the proper person to approach? No; they usually go to the Doctor.

They go to you in the first place? Yes; and I would send the nurse to the Medical Superintendent.

Have the nurses any regular business with Mr. Whiting? Yes, the nurses in charge have.

Have the assistant nurses? No, not unless they are sent.

I suppose they get paid from the office? Yes, from the clerks' office.

Was Quilkey impertinent on any other occasion? Yes, frequently.

Do you remember any other occasion? Yes, about her leave in 1898. I cannot recollect the whole of the case, but she wanted more than I could conveniently give her; her request was unreasonable.

She came to you for a pass? She was to have annual leave.

What was her demeanour? It was rude.

Mr. Nathan: You say you were at Little Bay Hospital before you came here? Yes.

Where before that? I was nursing in my own home before that.

How long were you at the Little Bay Hospital? From December, 1884, until I came here in October, 1885.

You got £100 a year there? Yes.

Did you keep yourself? No, I was provided.

When you came to this Institution had you any bank account? Yes.

Where was it? At the Barrack-street Savings Bank.

How much money had you when you came here? I cannot tell you.

You have been very kind to your relations? No, I have not.

How much had you when you came here as Matron? About £130.

Had you any property at that time? I had just bought some land.

Where? In Grosvenor-street, Woollahra.

You had the land and this money in the bank? I bought the land.

With the money you had in the bank; and had you the land and the money in the bank at the same time? I cannot recollect about that. I had the land, and I paid for it with the money I had; then there was another allotment transferred. My brothers and sisters bought some land, and I got one lot and paid for it.

I want to know what you were worth when you came to this Institution in 1885? Not much.

When you came here you had about £140? Yes.

And up to the time of the retrenchment you were allowed everything? I had £140, and board allowance.

And coal? No, I paid for the coal.

Before the retrenchment? There was £7 a year deducted from my salary for coal for eleven years.

What difference did the retrenchment make;—what was knocked off your allowance? I understood the £30 would be left on, and that £26 would be deducted for rent.

Before the retrenchment you had as much coal as you wanted? Yes.

After the retrenchment you were only supposed to have coal for your office? Yes.

Practically your allowance was reduced from £220 to £190, and from that £190 £26 was deducted for quarters;—you get, net, £164 per annum? Yes.

Have you any banking account now? No.

When did you last have an account? I have not had one for some time.

How many years? Since 1895 or 1894.

You told us it costs you £2 a month to keep yourself going here? That has been my allowance from the very beginning.

What does it cost you to dress? Very little.

Where do you put your savings? I bought my houses. Then, in 1895, my life insurance money fell due.

What I want to arrive at is how you managed to get these Katoomba cottages? I bought the land in Katoomba in 1893; I am not quite sure.

What did you give for it? I bought 200 feet at 12s. per foot—£120.

What did it cost you to put up the cottages? I paid for the land at the time with money I had in the bank.

What did it cost you to erect the cottages? I erected two cottages in 1895.

What did you spend on them? The contract was £375; it cost £400 in all.

How much was your insurance policy? £268.

Did you say you had not had great expense with your family? No, I have not.

At the time you built the first cottage, did you owe any money on it? Yes; I owed some to my sister.

Do you mind telling me how much it was? I cannot remember exactly; it was over £100.

Have you since paid your sister? Yes.

Now, tell me about the other cottage? I began the second in February, 1897.

On the same land? Yes.

What did you spend on that? £175, £155 of which I borrowed from my sister.

Have you any other cottages? No.

Have you refunded your sister? She is just paid back now.

Have you property of any other kind? Only a small block of land in Waverley.

Have you any bank shares? No.

Shares in any company? No shares at all.

Will you tell me what you have done with your money: The first cottage cost £520—£120 for the land and £400 for the building; you paid for the land, and your insurance money provided £268 towards the £400—that left £130; the second cottage cost £175, or £300 which you had to pay;—you have been saving since you came here? No, I paid my sister off; I have paid her £5 per month. I owed her over £200 altogether.

What about the money you have saved besides? Since that time I have paid £5 per month.

Your living has only cost you £2 per month, and very little for your clothes; and yet you are getting £160 per year;—what have you done with your money? There is not much left. I paid my sister £60 a year, and my living £24.

Will you swear that is the only money you have spent? Yes, on building my houses and furnishing them.

You have no bank account? No; there is an account in my name at the Savings Bank, but that is my sister's.

Do you say the money you have mentioned is the cost of the houses, including furniture? Yes. It would simplify matters if I showed you my books. If you wish to see them, you may have my books; and if you can see daylight through them I shall be glad.

You have told us about this delf-mug business; you say that when you saw Bessie Smith strike Jane Downey you spoke to her; you spoke to her in the pantry, and both you and Bessie Smith have sworn, that you spoke in your office next morning;—did not you think that something serious? If she did strike her I thought it a serious matter.

Did you report the fact that she had struck a patient to Dr. Blaxland? No, I did not.

I understand from you that you live principally on toast and tea, and bread and butter and tea, and soup and bread, and things of that kind? I will try and make out a dietary scale for you.

You have friends to see you, I suppose? Yes, occasionally.

You leave everything to Maria McNulty;—so long as there was food you did not worry about it? I had something else to worry about.

Will you undertake to swear that no joint which came from the nurses' quarters was ever put on your table? No. I will not undertake to swear. There was a stupid nurse relieving once who put it on the table. It does not follow I would eat it. I did not generally inquire where it came from.

You admit you had the joints; you leave everything to McNulty to arrange;—is that not true? Yes.

You do not mean to tell us that when you saw joints on the table that you could say whether they came from outside the gate, or from the nurses' quarters? I swear there was never a joint on my table.

Do you swear there was never a joint on the table, or that you did not know it? I swear I did not know it.

Until this row took place, was there ever any question raised as to the housemaid's coal; tell me, was there any allowance of coal for the housemaid;—has not this question cropped up recently? No; it cropped up at the time.

When? In July, 1896, when the retrenchment took place. I inquired about it at the time.

Whether she was entitled to coal? I knew she was, from what I read in the *Gazette*.

Do you know what coal she had in your quarters? I did not see the coal.

You did not see the coal always going there; were you there always;—if nurses have sworn that as many as six buckets per day went down, will you swear it is not true? Yes, I will.

You are not there all the time;—will you undertake to swear that that coal did no go there? If buckets of coal were going there so frequently they must have been about the place and I must have seen them. Six buckets could not be downstairs at the same time without my seeing them.

If it is sworn that coal went down morning, afternoon, and evening, will you swear it is untrue? Coal would go in the morning.

What time do you get up? Six o'clock.

Were you in your office all the time? No.

Will you swear that coal did not go down, or that you did not see it go? I did not see it go.

Did you ever call down to your office Nurses McSweeney and Tidyman and question them about the pepper incident? No.

Do you produce any accounts, beyond those already handed in, in connection with your private living;—have you any receipts you can produce? No; I do not keep receipts.

Your case is that you leave everything to Maria? Yes.

Will you swear that when Nurse Quilkey saw you, on the occasion when she was supposed to be impertinent, she did not say, "If you will not listen to me I will see Mr. Whiting and get him to tell you"? No; she said she would go to Mr. Whiting and get him to listen.

Were you angry—were you annoyed about this insinuation about the coal? Yes; I was annoyed.

When this girl came to tell you she had not made any report, did you not think it was the conduct of an honest girl? I came prepared to listen to any explanation she might make.

Did you not think her conduct was the conduct of an honest girl? She did not come in a proper manner.

I suppose you had heard the rumours going about? Yes; and I wanted to get to the bottom of them.

As a matter of fact, you had not suspected Quilkey before this time? I had.

And had you not been watching her? No; I had not been watching her.

You suspected her, but you had not been watching her? I did not watch her more than any other nurse.

Did you say, in the presence of anyone, that you thought Quilkey had made the report? I do not remember.

Will you swear you did not? I do not remember.

You admit you suspected her; we have heard something about a valentine being sent? Not on Valentine's day; it was at the end of February.

Did you suspect that Quilkey had anything to do with it? I cannot say who sent it.

Did you suspect her? At the time I did not.

Will you swear that you did not suspect her at that time, or about that time? No; I did not.

When did you first suspect she had sent it? I did not suspect her.

As

As a matter of fact, you do not know who sent it? No.
 You say Quilkey had no right to go to the Assistant Superintendent, Mr. Whitling, and ask whether she had made any report to him, and ask him to tell you? Yes; I think she should have gone to the Doctor.

Is it not a common thing to go to Mr. Whitling on matters of that kind? No; they have no right to go.

You swear you ordered Quilkey out of your office? Yes.

Although you went down with the best intentions? She was impertinent.

Although she came to tell you she had not reported you for using Government coal, and although you suspected her, you turned her out of the room;—you admit there was no one present, except you and Quilkey? Yes.

Now, when Bessie Smith struck Jane Downey with the mug, will you swear you said anything at all except, "Oh, Bessie"? I never made use of such a remark.

You deny that? Yes; I do deny it.

You have told us what you said;—that is your version of the affair? Yes.

I think you said, in reference to the pepper and salt incident, that you never brought McSweeney and Tidyman down to your room to inquire into it? No.

Will you produce your account-book from the Civil Service Store for the twelve months prior to 1st January? Yes.

Mr. Russell: We will undertake to produce that.

Mr. Nathan: Is Nurse Smith one of your favourites? No; I have no favourites.

Is she not in the habit of giving you presents of fruit and things? Yes; but she is not the only one.

Mr. Russell: About the pepper and salt incident, was the name of either Nurse Tidyman or Nurse McSweeney brought into the discussion by Nurse Wills or Nurse Quilkey? I do not remember who was mentioned. Nurse Quilkey was named as being in the ward at the time.

The Chairman: Referring to your property: What did the allotment at Waverley cost? I think £100.

Did you acquire that before or after you came here? That was bought before I came.

Mr. Russell: Was the Katoomba land the only land you acquired since you came here? Yes.

What are those cottages built of? Of weatherboard with brick verandahs.

The Chairman: What does it cost you for coal per annum? I have not counted it up.

Can you give me a rough idea? I cannot remember.

Have you no idea at all? The housekeeper can tell you how much she ordered; I paid half the amount.

I think you said your expenses were about £2 a month? Yes.

Had you any other expenses? Yes, clothing; there were other expenses.

Have you had any members of your family to assist? Not now.

Had you? I assisted my mother till 1897; she was aged and invalided.

You kept her? I thought it my duty to keep her.

Mr. Bridges: Did you ever know of any coal being brought from the laundry yard to your private quarters? No; except for the purposes already stated.

Did you know of food coming from the nurses' dining-room—joints at a time? Yes.

Did you ever give an order for a certain quantity of tea and sugar to be packed up and taken to the mountains? Never.

You are quite sure of that? Yes.

You never ordered any quantities of bloater paste or anything of that kind to be taken up? Nothing of the kind.

As a matter of fact, you have not ordered anything from the stores to be taken for your private use? No, I have not.

[It was agreed at this stage that the official records relating to Annie Quilkey and Bessie Smith should be put in, Mr. Cargill being authorised to make an extract from the Hospital book of the record of Bessie Smith.]

Elizabeth Middleton sworn and examined:—

Mr. Russell: This witness is called for my friend to cross-examine; she has no evidence to give that I know of.

Mr. Nathan (to witness): How long have you been here? About seven and a half years.

Have you relieved the housekeeper at the Matron's quarters during the last three years? Occasionally.

How many times? Very rarely; about six times in eighteen months.

For how many days at a time? For single days; one day at a time.

Where did you get the coal that you burned in the kitchen on those occasions? It was left there; I never had to bring it.

Was it left in buckets? No, in a scuttle.

Did you ever see it in buckets? No.

Do you know where the coal came from? It never troubled me where it came from.

Did you ever see it come from the laundry coal-house? No.

Did you never see coal from the laundry yard going to the Matron's quarters during the last three years? I may have seen it occasionally; very seldom.

Did you see joints of meat going from the nurses' quarters to the Matron's? I never noticed.

Will you swear you never saw them? Yes.

Will you swear, when you relieved there, that you never received them? If they came down I never saw them.

Mr. Russell: That closes my case.

Mr. Nathan: I have a case in reply, and desire to recall a number of witnesses.

Ada Anderson recalled:—

Mr. Nathan: Did Maria McNulty state in your presence, on any occasion, that it did not cost the Matron 5s. a month to live? She said it did not cost her more than 5s. a month.

Who were present on that occasion? I remember Mary Flannery being there.

Do you remember Nurse Cahill? There were others present, but I only remember Flannery.

Mr. Russell: How long ago did this take place? I cannot remember how long ago; some months ago.

Have you no clear recollection of it at all? I remembered where it happened, but I do not remember how long ago it was.

Was it three months or three years ago? About ten or eleven months ago; it seems that long ago.

Where do you say it was? In the nurses' sitting-room.

Was there a fire there? I do not think there was; I cannot say.

Is there usually a fire in the winter? Always.

Margaret Cahill recalled:—

Mr. Nathan: Were you present on any occasion when Maria McNulty said it did not cost the Matron 5s. per month to live? A few shillings, I heard her say on one occasion in the nurses' dining-room.

How long ago was that? I cannot say; she has said it at different times when I was there working. I asked what there would be for dinner, and she said whatever came in from the nurses' dining-room; she was only allowed a few shillings a week to keep the Matron.

That was when you were relieving? Yes, when I was working there.

Do you remember any occasion in the nurses' dining-room when she said words to that effect? Yes; I remember her saying a few shillings on one occasion.

Mr. Russell: Was Nurse Anderson there? There were some nurses. I cannot remember. I believe Nurse Anderson and Nurse Flannery were there.

Were you sitting round a fire? We were in the centre of the room.

Was any one sitting round the fire? I cannot remember if there was a fire or not.

Do you remember when it was? I cannot remember how long ago.

Was it more than six months ago? I cannot say. I remember it was said there, that is all.

Tell me within a year when it was said;—was it three years ago? Nurse Flannery was not in the dining-room; it is since Nurse Flannery worked in the dining-room.

When did she first work there? About two years ago.

It might be two years ago? It might be.

And it might be as recent as six months? Yes.

You cannot fix the date nearer than that? No.

Can you recollect whether it was summer or winter? I cannot recollect.

Do you recollect if there was a fire? I cannot say. I was helping with the housekeeping down here.

Mary Flannery recalled:—

Mr. Nathan: Do you remember, on any occasion, Maria McNulty saying in your presence that it did not cost the Matron 5s. a month to live, or words to that effect? Yes; I do.

Will you tell us when that was;—how long ago was it, do you think? It might be twelve or thirteen months ago; I cannot say exactly.

Where did the conversation take place? In the nurses' sitting-room.

Do you recollect the exact words used? I cannot say the exact words. It was in the sitting-room, and there were other nurses present.

Mr. Russell: Did she say 5s., or a few shillings? Five shillings, to the best of my recollection.

Did you see Nurse Anderson pass out of here a moment ago? Yes; I saw her coming here.

Did you see her going out;—were you waiting at the door? No; I only just came in. I was not at the door a minute. There were other nurses there. I walked straight in.

Do you remember when this conversation took place? It seems ten or twelve months ago; I cannot say exactly.

Was it in the winter or summer? If it was twelve months ago it would be winter-time.

Would there be a fire in the room? In the winter-time we always have a fire.

Were you sitting round the fire? Yes; Maria often came over in the afternoon.

And sat there? Yes.

Where was she sitting? If there was a fire, we would be sitting in front of it.

If it was twelve months ago, in the winter, you would probably be sitting round the fire at the time? Yes.

Victoria Steel recalled:—

Mr. Nathan: Were you present on any occasion when Maria McNulty said that it did not cost the Matron 5s. a month to live, or words to that effect? Yes. I heard her say in the nurses' sitting-room that it did not cost the Matron so many shillings per month to live, and she need not be so nasty with the nurses, as they very nearly kept her.

Will you tell me how long ago that was? It was some time ago; it must be quite twelve months ago.

If it was twelve months ago, and you were sitting in the nurses' room, there would be a fire? I had occasion to go in to see the senior nurse; that is how I came to hear the remark.

Have you heard her say it on more than one occasion? No.

Mr. Russell: You were not one of the party having a conversation there? No; I went into the sitting-room to see the senior nurse.

You heard the remark quite casually? Yes. When

When did you hear the remark—as you walked to the group? I walked up to talk to the senior nurse, and I heard Maria McNulty, who was conversing with the nurses, make the remark; she was talking as I got into the room.

Did anyone else speak? I did not stop to hear.

You spoke to the senior nurse? Yes. I spoke to the senior nurse, Ada Anderson, and went out.

Were the nurses sitting down or standing? Some were sitting; McNulty and Flannery were sitting down. There were a few nurses there.

Was Ada Anderson sitting down? I cannot remember.

What part of the room were they in? In the sitting-room, on the side where the fireplace is; they were scattered about; they were not really in one part.

Were they in the middle of the room? Not exactly; they were nearer the fire.

Are you sure there was a fire? No, I am not sure of that. I was not long enough in the room.

What time of the day was it? In the afternoon.

In the middle of the afternoon? It must have been towards 4 o'clock; something like that.

You do not remember the time of the year? No.

It might have been more than twelve months ago? It is that, as near as I can recollect.

It seems to you about a year ago? Yes; it might be a little more or less.

You did not hear who else took part in the conversation? No.

Mr. Nathan: You saw Nurses Anderson, Flannery, and McNulty there;—did you notice Nurse Cahill? I cannot remember.

When you girls are discussing things in the sitting-room, you do not go whispering in corners? No.

There was some discussion about the Matron's treatment of the nurses? There is no necessity to whisper in corners.

There was a discussion about the Matron's treatment of the nurses, and you came in at that moment? Yes.

—————

Mary Flannery again recalled :—

Mr. Russell: Do you know who introduced the subject of this conversation? I cannot exactly say how it came up; I forget. Of course, it is some time ago since it happened.

Do you remember Maria McNulty making the remark you mentioned? Yes, I do.

Did she first speak of it, or did someone speak of it to her? I cannot remember exactly.

Were you not discussing the Matron at the time? I suppose something must have been brought up about the Matron when the conversation took place.

Were you sitting down? It is more than likely we were sitting down, because it was a thing we generally did in the afternoon.

Do you remember whether Nurse Steel was there? I think she was near Nurse Anderson.

Were you all sitting down? I will not swear to the other two.

Can you recollect how long anyone was there besides yourself? No. It was nearly tea-time, so far as I remember.

Afternoon tea-time or 6 o'clock? I think about 4 o'clock. We have tea at 4 o'clock in the winter-time.

It was winter-time? Yes; I believe so.

Do you remember any nurse coming in, and walking out again? I cannot remember.

You were there some time yourself? I am always over there in the afternoon.

You are in charge of that room? Yes.

And, of course, nurses might walk in and out again? It is the usual thing.

Mr. Nathan: There was some discussion about the Matron's treatment of the nurses? Maria McNulty said the Matron should not be nasty to the nurses, seeing they kept her? Something like that it was.

—————

Elizabeth Wills recalled :—

Mr. Nathan: You recollect the occasion of the salt and water incident? Yes.

When did you report that occurrence to the Matron? The very next morning.

Is it true you left it for a week? No; I told the Matron it was the night before.

Is it true that Nurse Quilkey, when she was called down, said that dry pepper had been administered? No. What I understood was that she put dry pepper in the mug, and mixed it with water.

It was not true that she said she saw Nurse Bessie Smith give the patients dry pepper? Not to my knowledge.

Mr. Russell: All the pepper you use is dry until it is mixed with water? Certainly it is.

Was there more than one occasion on which you said pepper was administered? Yes; but I had not seen it.

Mr. Nathan: You had heard of it, but you had not seen it? Yes.

Mr. Russell: What morning was it that you reported the occurrence? On the morning of 1st February.

Do you recollect the day of the week it was? To the best of my knowledge, it was Thursday.

What night was the pepper incident? 31st January.

And you believe that was Wednesday? Yes.

Did you not say it was done on the previous Saturday? No.

Or on Thursday before Saturday last? I said it was done on 31st January, and I reported it on 1st February.

When you told the Matron, you did not say, "Matron, this was done on 31st January"? Excuse me, I did—I said the night before.

Did you say "last night" or "the night before"? I said it was done last night, and I told her also it was done on the 31st January. The Matron did not speak to me from 1st February to 8th March; she passed through the wards, and never spoke to me.

On that morning was Quilkey sent for? Certainly she was sent for.

The

The Matron spoke to you? Not after I had reported it; not until 8th March.

Was Quilkey sent for on 1st February? She was there in my presence.

After you had reported the matter, Quilkey was sent for? Yes.

Was Bessie Smith sent for? No; she came down with the reports.

Bessie Smith was in with the Matron at the same time as you and Quilkey? Yes; she was.

Mr. Nathan: Have you ever been brought before the Doctor until the last few days? I went to see him on Monday to change a key, and the Doctor spoke then.

Have you been reported during the ten years you have been here, until then? No, not to my knowledge.

Tessy Impey recalled:—

Mr. Nathan: Were you present on an occasion when Nelly O'Hair seized some meat? Yes; I was. Bessie Smith was in charge? Yes.

And this patient seized some meat? Yes, she did.

Is it true that on that occasion Nurse Quilkey said, when she was ordered to take the meat away from the patient, "No; I will not do it; let her choke"? She did not say that; it is not true.

Did she say anything like it? I was there. She was carrying some plates at the time, and before she could put them down, the patient had eaten the meat. When Bessie Smith told her to take the meat away from O'Hair, Quilkey said, "I cannot; she has swallowed it." And so she had; I was close by, and before I could take it she had swallowed it.

Would you have liked to take it? It was impossible; she had swallowed it.

She did not give you a chance? No.

Mr. Russell: Did Nurse Quilkey make any reply? Just exactly what I said.

Will you repeat it? "I cannot, Bessie; she has swallowed it."

What did Bessie Smith do? She was carving at the time, and she threw down the knives and walked away; she did not lock them up; I remembered it was a most unusual thing for a senior nurse to do—to leave knives about.

Why do you say Bessie Smith did not lock them up;—did you happen to know that Bessie Smith swore she locked them up? I am simply saying what I saw.

Where did she throw the knives? On to the table.

Not on the floor? No; she is not in the habit of throwing them on the floor; at least, I do not think so.

You never saw her? Very likely she did.

Mr. Nathan: Was she in a bad temper? Yes.

Mr. Russell: You never saw her throwing the knives on the floor? No, never.

Annie McLeod recalled:—

Mr. Nathan: Were you present on an occasion when Nelly O'Hair seized some meat when Bessie Smith was carving? Yes.

Is it true that on that occasion, when Nurse Smith told Quilkey to take the meat from O'Hair, that Quilkey refused, and said, "Let her choke"? She most certainly did not do anything of the sort. She tried to take it, but O'Hair had swallowed it.

When you say she tried to take it from her, did she at once go towards the patient, or had she some plates in her hand? She had three plates in her hand, and she had to put them down.

It is untrue, then, that she said, "Let her choke"? She said, "She has swallowed it."

Did Bessie Smith put the knives in a drawer? No; she threw them on the board.

Was she very angry? Yes.

It is not true she put them in the drawer? She left them on the board where she was carving.

Is that a proper thing to do? No.

Mr. Russell: Did she throw them down? Yes.

Mr. Nathan: Is it true Nurse Quilkey abused Bessie Smith at that time? She said nothing, but that she could not get the meat, as the patient had swallowed it.

Mr. Russell: Have you sympathised with Bessie Smith about the way Quilkey has spoken to her? I did not say anything to anyone. I went to Quilkey's assistance, to help her get the meat from O'Hair.

What does going to her assistance mean;—did you get far enough to put your hand on the patient? Yes, I did.

Did you get your hand on before Nurse Quilkey or not? No; Nurse Quilkey got the patient first.

Did Quilkey try to take the meat from the patient? Certainly.

Did she try to make the patient open her mouth? Yes.

And she found the meat was swallowed? Yes; and another thing, O'Hair was a violent patient, and no one nurse should have been expected to go to her.

When did Nurse Quilkey have the plates in her hand? She took the plates in her hand to pass the dinners round; it was while she was doing that that the patient snatched the meat off the plate.

Off a plate, in Quilkey's hand? Yes.

Quilkey was standing by her at the time? She was standing at the end of the table O'Hair was sitting at.

And O'Hair seized the meat from the plate Quilkey had in her own hand? Yes.

And yet it was too late to take the meat from her? She had three plates in her hand at the time.

She was standing by the table? Yes.

What did Bessie Smith say? She told her to take the meat from the patient.

How soon did she say that? As soon as she saw what the patient had done.

What did Quilkey say? She came and told Nurse Smith that she could not take the meat, as the patient had swallowed it.

How soon afterwards did she say that? After she had tried to take the meat away.

She tried to carry out the instructions and then she replied? Yes.

In the meantime, you had come up and tried to help her before she replied? Certainly.

How far away was Bessie Smith? At the next table, carving.

You told us she threw the knives down on the board? Yes.

Is that the table? The board is on the table.

What became of the knife and fork? I stood there and looked after them. I went on with the carving.

Catherine McSweeney recalled:—

Mr. Nathan : Do you recollect the occasion when Nelly O'Hair took a piece of meat when Bessie Smith was carving? Yes, I do.

Is it true that when Bessie Smith told Annie Quilkey to take the meat from the patient she refused, and said, "No, let her choke"? She did not say that. She had some plates in her hand at the time. She put the plates down and ran to take the bit of meat out of O'Hair's mouth, but she had swallowed it in the meantime. She told Bessie Smith she had tried, but could not take the meat away as the patient had swallowed it.

What did Bessie Smith do with the knife and fork? She threw them down, and said she would see she would do as she was told.

And cleared off? Yes.

Is it true she put the knife and fork in a drawer? No; she put them on the table.

Did she throw them down? Yes.

Was she angry? Yes.

Mr. Russell : Where did the patient get the meat from? Off the plate.

Which plate? A plate Nurse Quilkey was carrying.

Nurse Quilkey was standing beside her? She had to pass her with the plates. O'Hair was sitting down, and she jumped up and snatched the meat.

Did she move out of the seat? She stood up and turned round. Nurse Quilkey had occasion to pass her.

How many plates was Nurse Quilkey carrying? I did not notice how many; her hands were full.

You are sure they were plates? Yes.

It might have been a dish of potatoes? No; I am sure she had plates.

Where was she carrying them from? She was serving the dinners round.

Where was she carrying them from? Bessie Smith was carving, and she was carrying the plates from that table.

Mr. Nathan : Was there any inquiry into this incident;—were you called upon to give evidence to Dr. Blaxland? No.

Annie Quilkey recalled:—

Mr. Nathan : You have heard about this occasion when O'Hair seized a piece of meat: is it true that when Bessie Smith told you to take the meat from the patient, you refused, and said, "Let her choke"? It is not true.

Did you say anything like it? No.

Will you tell us what took place? I was passing the dinners round at the time. I put the plates down to see if I could take the meat away from her; but by the time I got round she had swallowed the meat. That is all that transpired. Bessie Smith put the knives down.

Did she put them down? She just threw them down.

And cleared off? Yes.

Did you tell her you could not get the meat as the patient had swallowed it? Yes.

Was O'Hair a pretty violent patient? Yes.

And she was not allowed to have meat because she was a paralytic? Yes.

You would have a difficulty in getting the meat from her once she had it in her mouth? Yes.

Mr. Russell : You said you went round to take the meat from her;—where did you go from? I was passing the dinners. I put the plates down on the table and went to her.

Did you put the plates down close by her? I put them on the table where Bessie Smith was carving; it was close to the table at which O'Hair was sitting.

What sized piece of meat was it? Only a small piece.

Was it as big as a chop? No.

Mr. Nathan : That is all the witnesses I wish to call in reply.

Mr. Russell : There is one other matter I should like to put the Matron in the box again to question her upon.

The Court adjourned till 11 a.m. the following day at the Board-room.

THURSDAY, 28 JUNE, 1900.

The Court reassembled at 11 a.m. in the Departmental Board-room, Young-street.

Mr. Russell : I do not propose to call further evidence except in regard to the Matron's house-keeping affairs. I have requested the Secretary of the Civil Service stores to furnish a copy of the accounts for the last three years to 1899. The baker, Wolff, has promised to go through his books and send in a report at 2 o'clock to-day; and the Fresh Food and Ice Co., also. With regard to Byrnes, most of his books have been destroyed in the quarantine, and he is unable to furnish any particulars, except for the last year or so. He also expects to be here at 2 o'clock. I think the statement which I have here from the Civil Service store will satisfy my friend.

Mr. Nathan : This statement only shows the monthly totals; it does not give the details. I should prefer particulars of three months—any three months my friend selects—of 1899.

Mr. Russell : We are willing to produce all particulars. I think an adjournment till to-morrow would be best; it would be easier to get all the evidence by that time than by 2 o'clock to-day.

[The records of Annie Quilkey and Bessie Smith were put in and made an exhibit of the Court.]

Mr. Nathan : I do not admit the proof of the statements contained in those records.

The Chairman : But you consent to their being put in.

Mr. Nathan : Yes. I should like to have the letter sent by Nurse Quilkey to Dr. Sinclair.

Dr. Sinclair : I do not think I have it.

Mr.

Mr. Nathan : Miss Quilkey has a copy.

The Chairman : She might produce it, and let Dr. Sinclair verify it.

Dr. Sinclair : I doubt whether I could say it is a copy.

Mr. Nathan : It is simply a letter asking for an interview.

The Court adjourned until 10 a.m. on the morrow.

FRIDAY, 29 JUNE, 1900.

The inquiry was resumed at 10 a.m. in the Board-room.

Joseph Purcell sworn and examined :—

Mr. Russell : You are in the employ of Bernard Byrnes? Yes.

Have you the business ledger with you? Yes.

Will you produce it. [*Book produced.*] Have you looked up what entries you have of the deliveries of coal, either to Miss Fairbairn or Dr. Flashman? The account is in Dr. Flashman's name.

How many entries can you show? Three.

What are the dates? August 16th, 1898.

How much coal was delivered then? One ton.

What was the next? December 21st, 1899.

How much then? One ton.

And after that? February 5th, 1900.

How much was delivered then? One ton.

Have you no record of coal delivered between the last two dates? No; I have not.

If coal were paid for by cash on delivery, would that appear in the ledger? No.

Where are your records prior to 1898? This ledger started about the beginning of 1898.

And those are all the entries you have in that ledger? Yes.

Have you your delivery books? We have no books; we only have loose tickets.

If coal were paid for on delivery a ticket would be given? There would be no record—a receipt would be given by the carter, nothing more.

Have you any of these tickets for a year back, or more than a year back? They were all destroyed in the quarantine; besides which we have removed twice.

Mr. Byrnes is the contractor to the Asylum? Yes.

Since when? I cannot tell you; he might lose it for awhile and then get it again.

Since when have you been continuously contracting? Since January, 1899. There was a break of about six months previous to that—from August, 1898, to the end of the year.

Were you contracting before that? Yes.

For some time before that? Yes.

Mr. Russell : I should like to recall the Matron.

Mary Ann Fairbairn recalled :—

Mr. Russell : You have heard that the last entry in Byrnes' ledger was February of this year;—when was the last coal you got before that? August, 1898.

From whom was that obtained? I do not know.

I am talking of 1900;—did you get any coal in 1899? We got a ton between July and August.

From whom? I cannot say.

Do you remember whether it was a cash purchase? Yes.

Do you tell Maria what groceries to order, or does she decide herself? She orders them herself.

Does she refer to you at all? Very rarely.

Mr. Nathan : Will you tell me this: the tree Dr. Blaxland gave you, was that a willow tree which fell down in one of the plantations? No; it was one of the large gum-trees.

Mr. Russell : Can you say when it was consumed? We did not begin to use it until about 1898—twelve months afterwards.

Maria McNulty recalled :—

Mr. Russell : Do you remember any coal being delivered by Byrnes at the beginning of this year? Yes.

Can you remember what was the last lot delivered before that? It was in the middle of the year, I think.

Do you know where it came from? From Byrnes'.

How was it paid for? I forget; I think I sent a patient with the money. It was the last time I sent a patient.

Can you remember what you did the time before the last? No, I cannot.

When you ordered groceries, did Miss Fairbairn tell you what to get, or did you order yourself? I ordered myself.

Without asking her what you should order? Yes.

Do you remember where you got the Matron's sugar from? From the Civil Service stores.

How long is it since you ceased getting tea from the Civil Service? I do not remember; it is some time ago.

Do you remember where the flour came from? From the Civil Service, a few times.

Anywhere else? From Wolff's, the baker's.

Mr. Nathan : When you got it from the baker's I suppose you paid cash? No.

It was entered in the bills? Yes.

Have you any bills which will show that? No; I do not keep the bills.

You say you got flour from the Civil Service stores? I did not get it regularly; I only got it occasionally.

When did you cease getting tea? I do not know; I got it when I wanted it; I do not know how often.

Did

Did you give Quilkey the hint that the Matron thought she had told the Assistant Superintendent about using the Government coal? I did not tell her.

You did not give her the hint? No.

You swear that? I swear it.

Did you hear that the Matron thought Quilkey had given the information? Yes, I did.

Yet you swear you never gave her the hint? Yes; I never gave her the hint.

When the Assistant Superintendent sent to you about the fuel, did he ask you where the Matron got her coal from to burn in the kitchen? He did not say anything about the kitchen; he said "Where do you buy the coal?" and I said, "From Byrnes."

Will you swear he did not ask you where the coal came from that you used in the kitchen, and that you said you bought it all from Byrnes? I do not remember.

Will you swear that you did not? I do not remember being asked much about coal. He asked me where the tons and tons of wood went to that were taken from the old building.

Do you swear he did not ask you where the coal came from that the Matron burned in the kitchen? He asked me where I got the coal from, and I said from Byrnes; that is what he asked me, and that is what I answered.

Mr. Russell: Can you remember when you consumed the last of the wood from the tree that was cut down? We were burning a little up to April of this year.

Where was it stacked? In the cellar and in the scullery.

—
Annie Quilkey recalled:—

Mr. Nathan: Was it Maria McNulty who told you that the Matron suspected you had given information to Mr. Whitling about her using Government coal? Yes.

- There is no doubt about it? No.

It was in consequence of what she told you that you went and saw the Matron? Yes; she said it in the front of witnesses; there were other nurses present at the time.

—
The Chairman: That concludes the inquiry. I suppose you gentlemen desire to address the Committee?

Mr. Nathan: I have been put in the position of making the charges, and I claim the right to reply.

Mr. Russell: Then it is left for me to open?

The Chairman: If you wish.

Mr. Russell: The Matron has been brought here to answer four specific charges. Those charges are framed in words chosen by my legal friend; and it will be necessary for me to draw the attention of the Board to the actual words of those charges, because it is upon that I am relying. As I said, there are four charges. Referring to them briefly, the first two are practically charges of laziness, or idleness, or callousness. They suggest that the Matron, when things were going wrong in the wards, rather than trouble herself, allowed things to go their own way—rather than reprimand anybody and do her duty in the protection of the patients, she allowed things to go on unchecked. The third charge relates to the alleged use of fuel intended for the patients and nurses, and of food also; while the fourth charge, which seems to me to be the key to the whole inquiry, alleges unfair treatment of Miss Quilkey by the Matron. It is this allegation of unfair treatment which affords Miss Quilkey an opportunity to instigate this inquiry. So far as she is personally concerned, that is the charge of deepest interest to her. It is her purpose to show that she herself has been unfairly treated; not that the patients have been unfairly treated. Reviewing the case on the point, the statement we have is that in the interview with Nurse Quilkey, when there was a discussion between her and the Matron about this use of coal and provisions, the Matron reported her to Dr. Blaxland for insubordination. Quilkey's case is that the Matron was wrongly using this Government material, and that she went to the Matron in a conciliatory spirit. It is hard for us to determine on the evidence exactly what happened at that interview. The Matron says Quilkey was impertinent, and that she reported her for it; Quilkey says she was perfectly deferential and proper in her manner. That is her case. She was wrongly suspected, and she went to put herself straight with the Matron. Whoever reported the abuse, it was not Quilkey. Now, is Quilkey's case on the point reasonable? Other than Quilkey and the Matron, no one was present at the interview. Quilkey says, "The Matron was in the wrong; I went in a conciliatory spirit"; yet it is clear that Quilkey rushes off to Mr. Whitling, and the Matron reports her for impertinence. Now, was her attitude fair, and deferential, and conciliatory? Both Quilkey and the Matron are fairly clever women; and if one woman were in the wrong and the other was conciliatory is it likely the interview would end in the way it did. Is it possible or credible that Quilkey was conciliatory, and that she should immediately rush off to Mr. Whitling, who really was not the proper person to complain to? The nurses, I understand, had nothing to do with the Assistant Superintendent, whose duties are to attend to the purely business side of the establishment. Dr. Blaxland is the right authority to approach; yet, knowing this, Quilkey proceeds to the Assistant Superintendent; and when she was told of the charge of insubordination by the Medical Superintendent she makes these counter-charges. She did not initiate the report which brought the Matron and her before Dr. Blaxland; the Matron herself was the author of that; and then Quilkey counter-charged. We have Quilkey's evidence that she was asked what she wanted to say in her own defence by Dr. Blaxland; and we have her own evidence as to what occurred before Dr. Sinclair. She says she was never given an opportunity to rebut these charges. My friend Mr. Cargill elicited, in cross-examination, from Miss Quilkey:—"I do not remember whether Dr. Sinclair told me he could not deal at that stage with my charges, but he did say I was there charged myself, and that after I had defended myself I could bring charges against the Matron." On her own evidence, does not Quilkey disprove the charge that her dismissal was procured without her being given an opportunity to rebut the charge? She says she had plenty of time to say what she wanted. Does she now bring any evidence to show that she was a good nurse, that she was willing to nurse or to learn nursing, or that her demeanour was perfectly respectful? Might she not have offered that when she had the opportunity to make her statement before the Inspector-General? Would it not have been of great importance, and of great service in this inquiry, if she had said to the Inspector-General at that interview: "I cannot get on with the Matron, I do my best and try to nurse well, and I do maintain a respectful demeanour, and the nurses

nurses who know me well will say I do." That would have been the right attitude for her to take. If this charge is unsustainable, it seems to me that, so far as the case can be of any personal advantage to Miss Quilkey, it must go down altogether. The earlier charges are more important, from one point of view—and that the standpoint of their importance to the general public. The charges that the patients of this Institution are under the care of an incapable Matron—of a Matron who permits abuses by failing to report them, are of much more serious magnitude, when we consider the number of patients under her control, viz., 380. How many members of the public must be interested in these, or in the patients in other institutions under the same administration? For not only are those interested who actually have friends or relatives or acquaintances among the patients, but all those members of the public who believe in humane administration, and who are burdened with the payment of taxes for the upkeep of these institutions, are interested in knowing whether the patients are well cared for. From the public standpoint, therefore, the earlier charges, as I before said, are the most important of those before this inquiry. Charge 1 embodies the incident which we have spoken of shortly as the "pepper incident." The charge is, that when the facts were reported to the Matron, "she neither reported, reprimanded, or interfered with the conduct of the said Bessie Smith." Though a good deal of evidence has been called which is not altogether relevant, the Matron, I submit, has clearly shown that she did report the matter to Dr. Blaxland; and that is sufficient to clear us. Bessie Smith comes into this case in many ways, and it is necessary to look a little more closely into this occurrence. It is impossible to discover what that pepper incident is founded on. The evidence of the nurses is conflicting, as, indeed, is much of the evidence throughout the case. The majority of the witnesses called by Quilkey say, in relation to this charge, that the pepper was administered by Bessie Smith herself to five patients in succession, and that in one instance McSweeney assisted by holding the patient's nose. To account for such a circumstance Bessie Smith must have been four-handed.

Mr. Nathan: She said Quilkey gave some.

Mr. Russell: All these witnesses say the pepper was given by Bessie Smith herself; but Quilkey says she gave this noxious draught, under Bessie Smith's instructions, to one of the patients. The Matron, it appears, was unable to get to the bottom of this matter; she regarded it as a plot, and it is not astonishing to me that she should do so. It is clear she reported it to Dr. Blaxland, and that he dealt with it; and, therefore, so far as the first charge goes, it falls to the ground. She reported the matter, and a change was made in the ward, some of the nurses being transferred to another ward. In regard to this incident there was one point which my friend, though afforded the opportunity, refrained from investigating. One of the patients to whom the pepper was said to have been administered was Emma Rowe. I elicited that this patient was well and able to work in the sewing-room at the time the matter was reported. My friend made no attempt to refute the statement. Though it was said by the nurses, who testified to the incident, that the pepper was given as a punishment—for what was not explained.

The Chairman: It was said the patients would not take their food; it was on that account they were punished.

Mr. Russell: Of course the Court will see all the evidence. My evidence is that Rowe was well, and working in the sewing-room, and, therefore, could not be giving much trouble. One of Quilkey's own witnesses said none of these patients were very troublesome. I thought the idea of that was to show that Bessie Smith's account was aggravated. Now, with regard to the "mug incident," as it has been termed, which forms the basis of the second charge, I submit that of this charge, also, the Matron must be exonerated. The complainant's own evidence showed there was some roughness; but a most important query by the Chairman, put immediately, elicited the fact that the striking with the mug left no mark. As in the case of the first charge, the second also sets out that, the Matron "neither reported, reprimanded, or in any way interfered with" Bessie Smith. The evidence adduced by the complainant is that the Matron spoke reproachfully, and that Bessie Smith did not want any breakfast next morning, her explanation being that she had been caught by the Matron and was too upset to eat anything. That is most important when, by way of corroboration on the other side, we have the Matron's and Bessie Smith's own evidence that the latter was reprimanded by the Matron, both in the ward and in the office next morning. More important still than that is the fact that an administrative change for the better was introduced: the opaque mugs, in which the draughts could not be seen, were done away with, and glasses were substituted. Various other incidents have been brought in—Bessie Smith's treatment of Quilkey with regard to the seizure of some meat by a paralytic patient for instance—but I do not propose to go at length into these. If Bessie Smith was angry it was to her credit. According to Miss Quilkey's own story, the patient seized the meat, and she did not succeed in getting it from her; and Bessie Smith surely was not at fault in assuming that, had Quilkey not delayed, and had she been more alert, she might have succeeded in taking the meat from the patient. If Bessie Smith lost her temper it was clearly out of zeal for her duties. After her temper had cooled down she had to report Quilkey, who had been sulky since that time. With regard to the cruelty of which Quilkey was said to have been guilty before leaving the Institution, Dr. Blaxland's evidence shows that when that matter was reported he had already recommended Quilkey's dismissal; so that it clearly did not influence her discharge. Now, the third charge, to which we are next brought, involves at the same time the business management of the Institution and the Matron's honesty; but the circumstances of the charge are so trivial that I cannot believe I have to defend the Matron. Quilkey has not proved, nor have any of her witnesses proved, that she ever saw the Matron eat the food brought into the kitchen in the way described. I am unable to deny that a lot of food was brought into the kitchen, and that coal was brought to the office in buckets; but putting Miss Quilkey's case at its highest she did not see the coal taken to the kitchen, nor did her witnesses; nor did her witnesses see the food eaten. On the contrary, the Matron has ordered food for herself, and a lot of food taken over was supplied to the patients, and, indeed, was sent specially for the patients. The evidence my friend has called with regard to this food from the wards seems to be entirely answered by the number of patients, male and female, who were employed about the Matron's quarters. These people had dinners, or tit-bits, or something of the sort, given them by McNulty; and a great many nurses had food cooked for them. It was clear this had nothing to do with the Matron, or with the Junior Medical Officer. The Matron says she gave McNulty permission to cook for the nurses, but stipulated that they must supply their own coal; and they seem to have allowed the doors between their quarters and the Matron's to remain open purposely to allow of the fuel being taken. Although we are given to believe that this charge is of a most serious kind, it seems impossible to prove, in spite of the fact that these nurses were
about

about the kitchen, and in spite of the fact that they frequently went for afternoon tea, that the Matron ever ate any of the food sent down—none of the witnesses ever saw or pretended to see that; and, besides, it is quite obvious she could not have consumed the quantities of food sent down; nor is anyone able to prove that the coal which was sent from the office was actually used in the kitchen. The only definite information is furnished by Quilkey, who said she saw it going down, and used it. It is clear McNulty did a great amount of cooking; and it is unfair that the Matron should bear the expense of the fuel consumed in that way. If she had been charged for it, possibly it would never have been allowed to go on. McNulty appears to have been a most benevolent institution; she was sought after by the nurses to cook extra dishes for them when they got poor cooking from the general kitchen, and she had the care of these patients. The nurses who have been called against the Matron all admit having had special meals.

The Chairman : Afternoon tea.

Mr. Russell : Some of them meals; one had meals for several consecutive days. The rules do seem extraordinary. I am in a delicate position in criticising these rules before the Board; but I must confess that to me they do seem extraordinary. Under them the housekeeper has so much per annum deducted from her salary for fuel; and yet no fuel is supplied to her. Because it is deducted from her cheque, it must remain unquestioned that McNulty was entitled to Government coal. It is absurd to say she must get her meals in the nurses' dining-room. She could not attend to her own duties if she must do that. The housekeeper's fuel must be used, and her food must be cooked in the Doctor's stove if she is to do her work properly; and therefore she was clearly entitled to fuel from the Government. As a matter of fairness the Government should have defrayed one-third of the cost of running that stove, even if no food had been supplied to and cooked for the patients, or any cooking done for the nurses. McNulty no doubt considered that the Government owed her coal, and that she might use the coal in what she thought was a fair quantity, which was brought over for the Matron's office. Now, with regard to the food from the wards, it seems to me that is amply explained by the food distributed among the patients. My friend attempted to make a good deal of capital out of that, but he allowed to go uncontradicted the evidence that the vegetables supplied to the Matron by the Hospital were paid for; therefore, so far as my friend was laying stress on the vegetables, that part immediately vanishes from the case. From the nurses' room it was principally joints that were provided, and it is submitted in evidence on our side, and remains uncontradicted, that the Matron seldom ate meat. Another matter referred to was tea. The tea is a thing I have to lay some stress upon, because it was not a commodity which would be likely to be supplied to be passed on to the patients in the same way that the food from the wards was. I knew nothing about the subject of the tea till this morning, until these particulars were forthcoming from the Civil Service. I presumed tea was amongst the groceries; I saw there was some flour, but not much; the tea, it appears, is sent over regularly. Altogether, it appears to me, this third charge has arisen out of the confusion of rules—out of the impracticable and unworkable rules that are in force—as to the use of this stuff and the supply of coal to the Matron, and out of the habit the nurses themselves had of sending food from their quarters without being asked by the Matron, considering it was the right thing to do. Nurse Flannery said, in reply to the Board, who questioned her in reference to her statement, that when in charge of the nurses' room, and when in the ward, she had continuously sent food to the Matron's—that she supposed it was the right thing to do, as it had been the practice before her time. In all cases where food was sent from the wards to the Matron's quarters for the patients working there, it would appear that the nurses themselves judged the quantity. The prevalence of the afternoon tea habit was shown by Nurse Cahill. She apparently sent over milk to make the afternoon tea with, after these abuses had been discovered and reformed. Since these matters were brought before the authorities in March, reforms have been introduced, and no fuel and no food has gone down to the Matron's quarters from the wards or from the nurses' quarters. Every matter which has been mentioned here, and which was one of administration has been reformed since March—since, in fact, it came under the knowledge of the proper authorities. I cannot leave this subject without pointing out that a large margin of exaggeration has to be allowed in dealing with the evidence of the complainant and her witnesses. In every matter almost the stories told are discrepant; in some they are utterly incredible. Nurse Tidyman, for example, was so anxious to prove Quilkey's case that she had to see the coal right down from the office to the kitchen. Apparently she did not want to admit that she was in the kitchen a great deal. She explained she was only there occasionally on visiting days; but on each of these occasional visits she saw the coal going downstairs. Another of Quilkey's witnesses, Nurse Steel, who came to prove that McNulty had said the Matron's living did not cost more than a few shillings per month, said, "I walked into the room to give a message, and I heard McNulty say the Matron should not be hard on the nurses, as her own living does not cost her more than a few shillings a month." She walked into the room at the critical moment, and then walked out again. She could not submit to cross-examination; she simply heard this one statement; it was all the evidence she wanted; and as to giving further facts of how the conversation occurred she was entirely dumb. That is the woman whose mother Quilkey is living with, and through her Quilkey has access to all the gossip which goes on in the nurses' mess-room; and any man who has had experience of large institutions where there are many officers, knows how the junior officers at their own dinner-table will take, as the subject of conversation, the manager and the higher officials. I have seen it myself, and the members of the Board know that kind of thing is a sure topic of conversation. It was not only that Nurse Steel's evidence was absurd; but it was remarkable how all the nurses were unanimous as to the statement that McNulty said the Matron's living did not cost her more than 5s. a month. One said "a few shillings," but that was the only variation from complete unanimity on the point. The first few nurses I questioned about it were diffident as to time; the others put it at a year ago. In that they were also unanimous. On points they did not expect to be questioned about—as to whether there was a fire; or whether they were sitting or standing; who constituted the company, and what they were discussing—they could not give a coherent statement. How absurd this is. McNulty herself has sworn the Matron's cost of living is about £2 per month; and the Matron confirms it. On the basis of 5s. per month, or £3 a year, the Matron's expenses would not exceed £9 for the last three years; whereas her bill from the Civil Service Store for groceries alone is £17 for that period. And that average of her expenditure in this direction is not decreasing; it amounts to about 10s. per month. As I said McNulty's own statement refutes the evidence of the other side. As a matter of fact a body of nurses is very much like a body of sailors; they are congregating together continually and there is a uniformity

uniformity in their ideas. If we were dealing with sailors we should find that all those from the fore-castle would tell exactly the same story. In the same way it is not wonderful that the nurse's statements coincide, and that the discrepancies are few; but the few there are are sufficiently serious. Little things have come out in cross-examination—such as that the pepper administered was dry—which show this clearly. This word "dry" had to be explained away somehow, [and not only one but more than one witness introduced the word in this absurd way. As I said, the nurses have their meals together, and they have one constant topic of conversation, which is the Institution they work in and its affairs; and it is natural that the Matron, whom it concerns them greatly whether they get on ill or well with, should be a considerable portion of their conversation. In any Institution there must be some few nurses disaffected. Take the case of Quilkey: She was the junior, in point of service, of all the nurses called on her side. She is a cleverer woman than all of them, and better dressed. It has not been the least bit difficult for her to make herself the leader of these more stupid nurses who have been called on her side. She has fulfilled her natural *role* in this matter as an agitator. How did she behave before Dr. Sinclair? She has an opportunity of clearing herself, and she threatens the Inspector-General with an inquiry. She does not say, "I would like to call evidence to show I am a good nurse, and respectable," and so on; no, she says, "I will have an inquiry upon this matter." Is that inconsistent with the theory that she is a cleverer woman than the rest of the nurses, and had obtained the leadership over them—in fact, that she had put herself at the head of the disaffected party in the nurses' common room? There is one other item which shows there is a margin of exaggeration to be allowed all through Quilkey's statement, and that is the matter of the carts bringing the coal. All the witnesses, in opening the case, said that before the retrenchment the coal came in carts and was put down the coal hole; whereas, it is clear the coal came from the engine room and was brought in barrows. If they saw them at all, the nurses saw the carts after the retrenchment; but in order to put the Matron in the wrong, and to support Quilkey's case, they profess to have noticed them before. It is not the statement of one nurse. It shows the story has been carefully gone into, and that they have all come prepared to say the carts came prior to the retrenchment. Altogether, I submit that when the margin which is necessary to be allowed has been allowed these charges against the Matron must appear very trivial. The Matron is a woman of responsibilities. She is in charge of this Institution, with over 400 people under her control—an Institution which has grown to its present considerable dimensions during the time she has been here. The Matron has not time to look after her own staff and her own cooking. That is entirely done by McNulty, who appears to be invested with complete discrimination as to what she shall order and what she shall serve at meal-times. The casual purchases were made by McNulty. The things ordered outside were ordered by her. If things were wanted from the wards, they were asked for by McNulty. The nurses all say the food went down openly; only one saw a covered dish; and only one says the Matron saw it. There are very few other matters I need refer to; but there is one matter my friend went into, but abandoned.

Mr. Nathan: Do not say that; I have abandoned nothing.

Mr. Russell: You have abandoned the vegetables, surely.

Mr. Nathan: No; I have not.

Mr. Russell: Very well, then. My friend, in his cross-examination of the Matron, went into her private affairs. I do not know whether he started out with the idea that the Matron made money by selling the joints, and built houses with the proceeds; but, whatever it was, he entirely abandoned it. The whole case, I confidently submit, has completely broken down so far as it concerns the Matron. What we have brought in reply utterly discredits the two first charges, while the evidence of McNulty completely demolishes charge 3.

Mr. Nathan: Mr. Chairman and Mr. Bridges, for any remarks I am about to make affecting Dr. Blaxland I offer no apology; because he is a man, and he must be prepared to take the responsibilities of his actions. If he has allowed his heart to interfere with his head in this matter, he must stand his grueling. As for the Matron, it is as painful for me as for you—it is painful for me at any time to have to attack a woman—especially is it so when that woman has occupied an honorable position for years, as Miss Fairbairn has, and who has many friends who are the mutual friends of all of us. But I have a duty to do here, and that, too, in defence of a woman—Annie Quilkey—who, although she was not the Matron's protegee or Dr. Blaxland's pet, is quite as honest—is more honest—than Bessie Smith, and as respectable as the Matron or any woman they have in that Institution. This woman, for whom I am appearing, in defence—because it is in defence of her character she comes here—was cast out into the streets at a moment's notice by Dr. Blaxland on a charge of impertinence. If you believe Miss Quilkey, she asked that the grounds of her dismissal might be put in writing; but Dr. Blaxland refused to do it—as a matter of fact, he dare not. This woman, I say, was thrown out into the streets, although she asked to be allowed to stay till the morrow. She was summarily dismissed after three and a half years' service in this Institution. This woman, against whom they can bring nothing to impeach her honesty, although one of the oldest members of the Bar—Mr. Robert Smith, than whom there is no abler man in the profession—is attending personally to this case. Not a single thing have they been able to produce to throw doubt upon the credibility of Annie Quilkey. Now, Mr. Chairman, you may very well ask yourself this: Was this woman dismissed for impertinence, or because they imagined that in getting rid of her they would frighten the other nurses, and hush up this business about the coals and other things? Dr. Blaxland has been at this Institution for eighteen years, the Matron for fifteen years; and people in such positions get hand-in-glove. Can you blame me, therefore, for saying that it is their mutual interest to stick together, and support each other? Of course, my friend has carefully avoided this point, but the Court has to consider why it is that these charges, which are now made openly, were not instigated by the authorities of this important Institution; why they were not laid by Dr. Sinclair, and proved. Why was Miss Quilkey left to do it? It may be it was thought she would not dare to do it; but, having stated these things, she says, "I will take them in hand and prove them"; and I hope to satisfy you she has proved every one of them. When this woman was dismissed from this Institution, she had no appeal to the Public Service Board, because she had not come under it; and it was only because she had influence to bring about this inquiry, that she is enabled to come before you now. I ask you to add to your finding that there is nothing against this woman's character; otherwise she is branded as a woman who was kicked out of this Asylum, and sustains an indignity from which she will suffer all her life. Why does she come here? it may be asked. Let me put this before you; or rather, let me first say this in reference to Dr. Sinclair: Dr. Sinclair,

Sinclair, good soul as he is, has acted very weakly in this matter, and got rid of Dr. Blaxland in one act, because the other side carefully avoided referring to it; but at the same time we see how anxious Mr. Smith was to get these documents before the Board. As a matter of fact, this letter of Dr. Blaxland's is worth a "Jew's eye" to me. "I have the honor to report," writes that gentleman on March 8th, "that the nurse named in the margin [Annie Quilkey], and whose papers are sent herewith, has been guilty of insubordination, and to recommend her dismissal. She went to the Matron's office to deny some trivial report about herself, lost her temper, and threatened to report the Matron to the Assistant Superintendent for stealing coal; and actually did so. The report was absolutely false." This is Dr. Blaxland's report. But what about the evidence I have brought here? Disregard it, and what is Dr. Blaxland's opinion worth? What chance would any nurse have if a matter were reported to Dr. Blaxland? "She went to the Matron to deny some trivial report," and "threatened to report the Matron to the Assistant Superintendent." There is no mention in this report that Annie Quilkey threatened the Matron to expose other things. No, the Matron's friend, Dr. Blaxland, only refers to the coal stealing, when recommending Quilkey's dismissal. We find Dr. Sinclair writes: "I have seen this nurse, and heard her defence, which amounts to denial of the offence. It now becomes a case of believing her statement or the Matron's; and, in view of her previous record, and Dr. Blaxland's opinion" (what is it worth—the man who would write that letter?), "and my observation of the nurse, I must accept the Matron's account." [In other words, I must take the words of the Matron as officer, as against the nurse and servant.] "I therefore order Nurse Quilkey's discharge. The nurse brings countercharges against the Matron which are beside the present case, but might be worth inquiry by Dr. Blaxland." We are told that subsequently some inquiry was held. Now, this document is of importance to me for more reasons than one. Why was Dr. Sinclair not called by the other side? I had to put my head in the lion's mouth when calling upon Dr. Blaxland to give evidence, and I ask why was not Dr. Sinclair called. They have never denied the fact that Quilkey spoke to Dr. Sinclair, and in the course of the interview said something about an inquiry, and that Dr. Sinclair observed, "There is no necessity to talk about an inquiry; you are not dismissed yet." Dr. Blaxland's letter, I would have you observe, is dated 8th March, and Dr. Sinclair's, the 19th March. There is not the slightest doubt they must have spoken to each other about the case; but Dr. Blaxland's opinion and the Matron's word must be taken against this woman, and in a moment of weakness Dr. Sinclair allows her to be dismissed. It is an important matter to me in another way: not only does it show the relations between Dr. Blaxland and the Matron, but it also shows how they were persecuting this woman. There is an interval of eleven days between Dr. Blaxland's recommendation and Dr. Sinclair's reply; and never anticipating that Dr. Sinclair would approve of Quilkey's dismissal on the 19th, they readied up this charge of cruelty to O'Hair on the night of the 18th March. Bessie Smith and the Matron bring this charge, which was reported to Dr. Blaxland on the morning of the 19th; and Dr. Blaxland in evidence says: "I did not inquire into it, because I knew she was going to be dismissed"; but he did not hesitate, when dismissing Quilkey, to say that this charge of cruelty had been brought against her. In his heart of hearts he felt that the charge of impertinence was a weak one; but they had to get rid of Quilkey, and they thought they would kick her out. There is one thing you must not overlook, though my friend may say what he likes about nurses cackling. This girl was turned out on 19th March; it is now 29th June, and the inquiry was only commenced a few days ago—three months after Quilkey is discharged. Yet, what do we find? Eighteen nurses, whose interest it is to stick to the powers that be, have come forward to offer their evidence; and I ask you to believe they are witnesses of truth. How can we believe otherwise that these women will go so much against their interests as to give evidence for Quilkey, when they know they must incur the displeasure of Dr. Blaxland and his friend, the Matron. After the row, in March, when the supplies of provisions are stopped, we find Wills against whom there is nothing brought, hauled before the Doctor when this inquiry starts; and we find Flannery, who has been in the Institution for years, has her cupboards overhauled in her absence; in fact, every effort has been made to prevent these women giving evidence. However, you have had the opportunity of seeing them in the box, and of hearing their cross-examination, and I ask you to believe that they are witnesses of truth. Now, we must come to this matter: it is a very marvellous thing that Dr. Blaxland should have allowed this woman to be dismissed for impertinence, without bringing her face to face with the Matron. Is it fair that the accuser and the accused should be given no opportunity of questioning each other. Now, I want to come to this, the charges that are made here, I submit to you, I have proved, one and all of them, and I will show you how. First of all, let us deal with the charge against Bessie Smith, of forcibly administering noxious ingredients to the patients of No. 4 ward. Take the facts in connection with the incident: We will first of all deal with Bessie Smith, the woman whom Dr. Blaxland believes in preference to anyone else. She admits she has a violent temper, and that she used to swear until the Matron reprimanded and stopped her; she is a woman, whose record shows that she has been hauled up three times, and once severely reprimanded. And yet she is held up as a model of discipline, whom all the nurses was against, because she did her work so well. We have seen Bessie Smith give her evidence; and we have heard Wills, Tidyman, McSweeney, and Quilkey, swear that this pepper was administered and describe how it was done. Bessie Smith, in charge of a ward and of certain patients, not violent, but who would not eat their food, says, "I will make them eat it." She gets a mixture of pepper, salt, and water; she takes the patients in succession, and, having pinned their arms behind the form with her knee pressed against them, puts one arm under their chins, and with another nurse holding the nose, forcibly gives them the mixture. The patients, we are told, were sick after swallowing it. Now, what happens? Nurse Wills, against whom nothing has been reported for ten years, goes next morning to the Matron, and reports the circumstance. The Matron receives the report, with the observation, "Is this a plot against the Charge-nurse?" Nothing, of course, must be said about dear Bessie, the Matron's friend. Flannery then goes, and Quilkey comes down; there is no talk between the three; and Quilkey verifies Wills' report. Now, Dr. Blaxland has sworn that the Matron reported the matter to him. I have no doubt it is so; but it was not reported as a charge against their pet, Bessie Smith. It was something of this sort: "What do you think of Quilkey and these others;"—and mind you, Tidyman and McSweeney were not called upon either by the Matron or the Doctor for weeks afterwards—"they accuse Bessie Smith of giving the patients pepper and salt? Oh, we must have them removed." Thereupon Quilkey, Tidyman, and Wills, without being called upon, are removed from Bessie Smith's ward. McSweeney, a poor, quiet, inoffensive girl, who would not say "boo" to a goose, they allow to remain—but they do not get her evidence. Now, having read Dr. Blaxland's letter, and knowing the intimacy there is between them, do you believe the Matron reported Bessie Smith? It

s a peculiar thing that these nurses were removed from the ward; it is a funny thing there was no inquiry for months afterwards. Is it not fair to say that Bessie Smith was neither reported, nor reprimanded, nor interfered with? Was she not treated differently to the other nurses? If that view is correct, I submit the first charge is fully proved. What can you expect from treatment like that, other than that it must ruin the discipline of such an Institution as this? Take Bessie Smith's evidence. She has the impertinence to swear that she did not remember anything about the matter at all; she did not remember on what night it occurred—in fact, she could make nothing of it. The matter was reported next day, and it was the next morning that, if she were called for at all, she would be called by the Matron. Quilkey was brought down—an accidental choice; there was no connivance—and she substantiated the charge; and yet this woman, Bessie Smith, swears she has no recollection of the matter—knows nothing about it. Is that true? Is she a witness to the truth? When I pressed her about the provisions that went from the nurses' dining-room to the Matron's quarters, her mind was equally vacuous—she could remember nothing, except that on one day a dish went out with a cover on it. She did not know McNulty had admitted a joint came down every day. She thought her answer about the cover very clever, no doubt; but it was just the piece of evidence I want. This joint of meat, sent down daily, they want us to believe, was distributed among the male patients working in the Matron's quarters. If that is so, it is a marvellous thing that the joint should be taken away with a cover over it to keep it hot, when it is intended to give it cold to the patients next day. Now, let us take the second charge, which is fixed on your minds as the "mug incident." What is Bessie Smith's version of this incident? The Matron, she says, spoke to her at the time, and spoke to her next day. The Matron's version is that she thought the act so cruel that she spoke to her at the time in the ward, followed her into the store and spoke again, and also spoke to her next morning. The offence was so serious that the Matron spoke about it on three separate and distinct occasions. And yet she never reported it to Dr. Blaxland; nor was Bessie Smith punished or interfered with in any way; because, if we believe the evidence of Tidymar, of Wills, and of Sadleir, nurses who were present, all the Matron said at the time was, "Oh! Bessie." What effect must that have on the discipline of the Institution? The evidence of the Matron shows that it must have been a severe blow—otherwise there was no necessity to interfere—which this angel, Bessie Smith, inflicted on the poor patient; and how do they try to account for it? It was never reported to Dr. Blaxland. Bessie Smith's explanation is that she was picking up the drops from the patient's chin. I say this circumstance was never reported to Dr. Blaxland, except subsequently some suggestion was made that tumblers should be substituted for the stone medicine mugs; and Bessie Smith was never reprimanded in such a way as the offence warranted, and as was visible to the staff. Now I come to the third charge, and in dealing with this we must put ourselves in this position: How were things going before the retrenchment? The Matron then had whatever she wanted, whatever coal she wanted, and, there is no doubt, whatever provisions. After the retrenchment this liberality was stopped. Prior to the retrenchment coal was brought down to the Matron's quarters from the engine-house, whether in carts or barrows we do not know—there is evidence both ways; but whichever way it came it was put down the coal-hole into the Matron's cellar. When the coal was subsequently taken, whether with the Matron's knowledge or not I shall show presently, it was a funny thing that it was brought, not from the old place, but from the laundry yard, quite on the other side of the Institution, which necessitated a walk through the nurses' quarters before it could be deposited in the Matron's office. If the coal remained in the Matron's office, that is one thing; but it is quite certain the only way it could be taken to the kitchen, if it were required, was through the Matron's office. We are asked to believe that all the coal consumed by Dr. Flashman and the Matron was only a couple of tons a year. McNulty has sworn 2 or 3; the bills produced show that at the most 1 or 2 tons were purchased outside. Of course the Matron must have some coal; her position would be absurd otherwise. She would be risking her position if she did not buy some provisions and some coal when she is not allowed to have them otherwise. It is a remarkable thing that between January and March of this year we find a ton and a half of coal going into that place in the height of summer, or at the rate of 9 tons a year. The Matron was such a cold individual that she had fires at midsummer. I ask, is it possible that all the coal consumed by the Matron and the Doctor for their private use was only 2 tons a year? I give them the benefit of the tree; that only shows Dr. Blaxland's friendliness for the Matron again. How do the other side come to explain this state of affairs? My learned friend wanted us to believe there is a great deal of cooking done for the patients and nurses, and all that sort of thing; and besides, Maria McNulty, the housekeeper, has to do her own cooking, and would be entitled to coal. Now let us deal with the facts. I put it to Maria McNulty, "Do you mean to tell me that when cooking for yourself you would have to put fresh coal on—that you would have to scrape the fire out and put on Government coal?" She saw the absurdity of the position. The Matron's defence of this charge is that as a matter of fact McNulty was entitled to a certain allowance of coal by the Government, and this would never have been raised had they not found themselves in a hole and called upon to explain all this coal going down. You have had the statements of the various witnesses who have seen this coal going down summer and winter at various times of the day. Bessie Smith saw it at half-past 8 in the morning; others saw it in the afternoon going through the nurses' quarters. Nurse Cahill, a woman seven years in the Service, and upon whose evidence I place great reliance, takes the coal further. She tells us that when she was relieving in the Matron's quarters she used this coal and none other, and she was there several days at a time under the Matron's instructions. She also lit a fire in the Matron's sitting-room on one occasion with this coal. It is remarkable that although the Matron was so cold there never was a fire in her sitting-room or bedroom. Take the evidence of Cahill, of Flannery, Miller, Wills, Steel, and Impey; these witnesses all tell what coal was there. What is the defence?—that the coal used was Maria McNulty's. Good old Maria McNulty, the scapegoat; she is a typical housekeeper. The Matron seems to have shut her eyes, and opened her mouth, and accepted without question whatever Maria McNulty gave her. Maria McNulty has admitted that, what with her loyalty to the Matron and her oath, she has been nearly off her head; and, if you ask me, I think her loyalty to the Matron has had the best of it. Now with regard to the provisions—there can be no doubt that quantities of stuff came down from the patients' wards every day. The answer is that there were a couple of patients working there who had their meals. That is all very well, but the evidence is that food was sent down in liberal quantities, and none of it was ever returned. They say, "You cannot prove the Matron has eaten it." What were the chicken, the mutton-broth, and the beef-tea sent down for? What were these hot joints, sent down

every day, required for? The Matron, of course, knows nothing; she did not worry; she left the whole business to Maria; Maria did everything, and was asked no questions; she had no regular butcher; she can produce no accounts, though she is not above using the housemaid's rations. Maria McNulty tells us she sent a patient out to get the meat, but she cannot say where; all she knows is that she got the meat, and all the Matron knows is that she ate it. We find a joint went down every day; there is no doubt about that; and even Maria McNulty, with all her loyalty to the Matron, cannot make the joint less than 5 or 6 lb. We are asked to believe that this joint, sent down hot with a cover over it, never was put upon the Matron's table; that it was kept until the next day, when Maria gave slices of cold meat to the old men working about there at 11 o'clock. Can you believe it, gentlemen? What about the cold meat that was not consumed? Cannot you see the dainty stews, and hashes, and fricassees made by this excellent cook, Maria, placed upon the Matron's dinner table? Now, what is the Matron's position? "Do you tell me you never had joints upon the table?" I asked her. "No, I will not say that," she replies. "How can you tell me, if you left everything to McNulty, that the joint on your table did not come from the nurses' quarters, but from outside?" She admitted she could not tell me. This has been going on for years. You cannot explain it away with "I do not know; whatever Maria McNulty gave me to eat I ate." The bread bill was pretty large for two of them—half a loaf every other day. Here is this lady, who does not like meat, yet accepts the housekeeper's rations. I ask her to produce her bills, and we find half a loaf every other day for the Doctor and herself—this lady, who lives on toast, and tea, and bread, and soup. When asked about the milk, Maria McNulty says there was half a pint a day in the summer, and a pint in the winter. The Matron had visitors calling to see her, and yet half a pint of milk is the consumption in the summer-time. I said, "What about the puddings for the Matron?" "Oh, I made those out of condensed milk," she replies. Look at the Civil Service Store list, and you will not find a single tin of condensed milk charged for. Where was it obtained? Maria says she used to send out. What for? I asked her. "I used to send for sheep's tongues." This is only a small thing; but they had to be kept as small as possible. When you look through the Civil Service list you will not find much except tea, a little essences, and a little flour. The Matron volunteered the information that her living expenses were £2 a month; she spent that before the retrenchment, and it has not cost her any more since. Maria McNulty says it was £2 a month when the coal bills were included. And in regard to the coal, we have had Byrnes' books produced, and 1 ton of coal is all we find entered. But they say there was another ton supplied, which was paid for by cash at the time it was delivered. I leave that as it is. I simply ask—how can the Matron have lived on that amount? The Civil Service account is 10s. a month. There are no butchers' bills produced in any shape or form; the milk and the bread bills speak for themselves. We have the evidence of four nurses that Maria McNulty on one occasion, about twelve months ago, when sitting in the nurses' sitting room, declared there was no necessity for the Matron to be nasty with the nurses, because it did not cost her 5s. a month to live. McNulty may have been exaggerating at the time; but the statement was made long before the row, and it must, therefore, be taken as strong evidence against her. Flannery, Cahill, Anderson, and Steel all heard the remark, but because Steel came into the room at an inopportune moment for my friend, her evidence, we are told, must not be believed. The Court, I think, will agree with me she is a witness of the truth. My friend could not shake her evidence; the remark would naturally impress itself upon her mind, and I ask you to believe her. It is a wisp of straw shows how the wind blows. It is a marvellous thing the Matron should not have known about it; but if you believe the evidence of Wills, she was not above taking a pot of bloater paste from her. When she wanted some pretty cups and saucers and was refused, she said she would take the blame for them. If you believe the evidence of Cahill and of Flannery, she is not above asking for tea and sugar when people are going to her cottage at Katoomba. My friend fell into a hole over that matter. "Were you not staying there?" he asked. "Were you not entitled to provisions?" It turns out that they got their own groceries immediately on arriving at Katoomba, and that, for the fortnight they stayed in the cottage, the girls paid the Matron £2. If the Matron is such a generous, good creature, why should she charge the nurses for staying there? Then we have Kate Miller, who says that when the Matron sent for beef for sandwiches, she refused; and McLeod, who sent down eggs. Cannot you see what has been going on? For years the Matron, no doubt, had been accustomed to have practically what she wanted. Then this cruel Public Service Board comes along and makes this retrenchment. It was rather annoying, and, perhaps, for a time, the system was stopped; but gradually the old condition of things was reverted to. In other words, "Oh, the Government does not lose much; it would never do for me, the Matron, to be taking these things, but Maria McNulty, that excellent housekeeper, will pay all the bills, and I need know nothing. All I have to do is to sit at my table, have my food, and ask no questions and I will be told no lies." Is not that the secret of the whole thing? Do you remember how this inquiry was brought about? Mr. Whitling, finding the wood going, sends for one of the old patients who had been accustomed to take it. As a result of his inquiries, it strikes him that it would be a good thing to send for the Matron's housekeeper. He asks Maria, "What about the Matron's coal?" or words to that effect. Maria, not forgetting her loyalty, says the Matron bought it. But what does she do? She immediately walks back—at least, this is a fair inference—and tells the Matron, and the Matron, with a certain amount of guilty conscience, wonders who on earth has put her away. And, you will remember, she admitted she suspected Quilkey of having done it. That is how this trouble was brought about. Mr. Whitling was quite satisfied with the answers he got, and nothing more would have been done had not the Matron been so anxious to find out who had split. That is my interpretation of the affair, and I think it is a reasonable one. My friend, in his light and airy manner, says this is a trivial matter. I consider this third charge a most serious one, and I do not propose to pass it over. The Matron was, no doubt, quite satisfied to accept what food was put before her; but if she used the food and things from the patients' quarters, she has committed a very serious offence. You may say, how does this affect Quilkey? We were compelled to make the charge, and we are not going to be prevented from proving them. My friend suggests that I have abandoned the vegetables. I say, no. The vegetables were sent down from the patients' quarters in excess of requirements, and someone had the benefit of whatever was left over. Now I come to the fourth and final charge. I admit this charge might have been framed in better language; but it was wanted in a hurry. With its defects, there will be no difficulty in proving it. I say that the charge of impertinence made by the Matron against Annie Quilkey was false, and I will prove it from my point of view. You have to recollect this, that Bessie Smith must have had some influence with the Matron
and

and Dr. Blaxland. On the 1st of February we have heard Nurse Wills reported the pepper incident, with the result, not that Bessie Smith was reprimanded, but that certain nurses were transferred to another ward. Mind you, about this time rumours of the coal business began to get about. We have heard something about a valentine which was sent to the Matron. Whether it was a piece of coal and meat nicely done up in a parcel we do not know; but they never dared ask Quilkey if she sent it, but they asked Tidyman. That incident, perhaps, helped to increase the ill-feeling. Then Quilkey hears that she is suspected of having told the Assistant Superintendent of the use of Government coal by the Matron. The Matron admits she suspected Quilkey. It is with a desire to clear herself of the imputation that Quilkey goes to see the Matron; and the Matron went down to that interview in her office, believing in her heart that Quilkey was the woman who had given her away. When Quilkey said, "Oh, Matron, they say you think I said you are using Government coal," do you not think, if the Matron had entertained any kindly feelings, she would have said, "Well, Nurse Quilkey, I did suspect you, and I am very glad you have told me you did not, because I should be sorry to be under a false impression." No, she does do that; she flies into a rage and says, "Who told you? Tell me who told you I said so?" Quilkey declined, because she did not want to put Maria McNulty away; and then the Matron says, "Perhaps, you will tell the Doctor?" Is it not consistent with Quilkey's version, that she went to the Matron's office to put herself right, feeling, as she did, that the Matron was dogging her and treating her unkindly; and is it not fair to believe that she would say, "Well, I will get Mr. Whitting to tell you I did not report it." This suggestion that she refused to leave the room is not mentioned in Dr. Blaxland's letter; nor is there any mention that she threatened other charges. The only charge is that she accused the Matron of stealing Government coal. As a matter of fact, her charge was not that the Matron was stealing, but that she was using Government coal. Do you believe the Matron's version or this girl's? She goes to Mr. Whitting and says, "Did I tell you that the Matron had used the coal?" and he said "Certainly not." Then she did what has turned out to be in the interests of the public; she told Mr. Whitting, "I did not tell you before, but it is true, and I can prove it." Has she not proved it? The Matron has said, "Why did she not tell Dr. Blaxland?" I say, was it not sufficient to tell the Assistant Superintendent? Is that insubordination? Is that impertinence? Perhaps it is that Dr. Blaxland is annoyed because she did not go to him direct. Do you believe that this girl, anxious to put herself right, would have acted as the Matron says she did? The Matron does not attempt to show she was glad the girl called to tell her the rumours were not true; her venom towards Quilkey would not permit her to do that. Now, gentlemen, a thing that shocked me was my friend's reference to Miss Quilkey's being better dressed than the other girls, and having influence with them. What is the use of dragging such matters into this inquiry? You have seen Nurse Quilkey give her evidence, and you have seen that she has not been shaken in cross-examination; and I ask, is she not a witness of truth? Now as to these false charges. If you believe the Matron accused her of impertinence, then I say the charge the Matron has made is a false one; and, if you believe that, then what is the position of affairs? This girl has been thrown out of this Institution, practically into the streets, spitefully, on a false charge brought by the Matron, and upon wrong opinions formed by Dr. Blaxland, in the hope that this matter would be hushed up. The date of Dr. Blaxland's letter, which my friend was so anxious should be put in, helps me considerably. Dr. Sinclair's memo., which is attached, bears the date 19th March—the very day Annie Quilkey was dismissed. Now, what does the evidence disclose? Here is the Matron going up to the wards the night before, and reporting Quilkey on the following morning for cruelty to Mrs. McCauley. Both Sadlier and Steel swear absolutely that there was no cruelty on that occasion in any shape or form. You are never taken up and shown these quarters; we were through other places, but that one is carefully avoided. This charge of cruelty was reported to Dr. Blaxland on the 19th March. It is all very well for Dr. Blaxland to say that he did not inquire into this matter because he had received Quilkey's dismissal from Dr. Sinclair. It does not make the Matron's charge against this woman any less false or untrue, and it does not get rid of the fact that the Matron, fearing her previous shots had failed, was looking round to prepare another. During this period of eleven days, when Dr. Sinclair was trying to smooth matters over, nothing must satisfy the Matron and Dr. Blaxland but this poor girl's blood; and we find the Matron looking round, and if it is again a false charge, it shows the venom of the Matron towards this woman, whom she suspected of having put her away with regard to the coal. There is another false charge, and that is the case of O'Hair. You will find she was reprimanded and told, if not more careful, she would be dismissed. These were charges brought against her—by whom? By Bessie Smith. Ada Anderson, one of the chief nurses, under whom Quilkey worked longer than anyone else, gives Quilkey an excellent character; she only had to report her once for removing some beds. Why, if Quilkey was such a bad character, and so unwilling to do her work, should she do her work for Anderson? The case of O'Hair was this: Quilkey was carrying some plates, and Bessie Smith was carving the dinners. O'Hair, a paralytic patient, seized a piece of meat and swallowed it—swallowed it quickly, you may be sure. Quilkey is told to take it from her, and finds that it has gone. Bessie Smith gets into a temper; throws the knife and fork down, regardless of the other patients; rushes out and reports the matter to the Matron. This charge also, I believe, was brought before Dr. Blaxland. If it was, I say it was a false charge. But whether it was or was not, you see the venom of the Matron in all these matters, because no inquiry was held, and none of these witnesses were called down. Here it is again: Bessie Smith being protected at the expense of Quilkey. Why should the Matron allow Bessie Smith to do things of this kind; and if Quilkey was charged, why was she not brought down, and why were the other nurses not brought down? The only answer is the ill-feeling towards this woman. I submit I have shown that the Matron not only made false charges, but made them maliciously. She had always a down on this woman, and wanted to get rid of her, and she succeeded; but, unfortunately, they got rid of a woman who would not go forth from this Institution dumb, and content to submit without having an inquiry and being brought face to face with those who made the accusations against her. My friend made some reference to the confusion of the rules framed by the last Public Service Board. The rules are the rules made by the Board, whether wisely or not it is not for me to say; and whether the result of this inquiry will be that these nurses will be brought under the Board and given a fair court of appeal, I also do not know. The rules are made by the Board, and we must be guided by them. There is one thing that must strike us all as being very funny. Why, if what the Matron did, and what McNulty did, with the coal and provisions was correct and honest and straightforward, was it all stopped after this row? It has been stopped; there

there is no question about that. The Matron talks about the coal being taken openly from the laundry yard; but because it has been taken openly, it does not make the offence any the less. We do not say that the Matron has gone round picking up junks of coal furtively; we say the coal has been taken openly; but we do say that Maria McNulty, the scapegoat, has been running the whole show, and that the Matron has quietly acquiesced. Now gentlemen, in closing, let me say: my remarks must be taken for what they are worth; you, men of the world, having read the evidence carefully, will estimate them at their proper value. My friend asks, what have these things to do with Quilkey? Remember again that we were forced to make these charges, and having made them we have taken the responsibility of proving them. We could not appeal from the decision of Dr. Blaxland and Dr. Sinclair to the Public Service Board on charge 4; but we have framed the charge in such a way that we could go into the question of the different matters, go into them thoroughly, and show you the falsity of the charge, and thus enable Quilkey to place herself on the pedestal she occupied before she was kicked out of this Institution. I make no appeal to your sentiments, gentlemen; but I do ask you, seeing this girl has come before you, carrying on her shoulders what Dr. Sinclair should have carried on his, namely, the truth of these charges, in all fairness, whatever decision you come to, to add a rider which will prevent this girl from being branded, and not only herself but her family, as a woman who has been cast out of a public Institution managed by Dr. Sinclair and Dr. Blaxland, men whom we all respect personally, though we may impugn their methods, and by a lady like the Matron who has many friends. I ask you, in fairness to this girl, to say a mistake was made in this matter; that they were too hasty in dismissing her from this Asylum and thus enable her to hold up her head again among her relatives and friends.

PUBLIC SERVICE BOARD.

CALLAN PARK HOSPITAL INQUIRY.

EXHIBITS.

No. 1—Copy of Charges. No. 2—Matron's Trade Accounts. No. 3—Records of Nurses.

Exhibit No. 1.

COPY of charges against the Matron (Miss M. A. Fairbairn), formulated by Messrs. Westgarth, Nathan, & Co., on behalf of Annie Quilkey.

1. That patients in the said Hospital for the Insane having been physically assaulted by one Bessie Smith, a nurse in charge of No. 4 Patients' Ward, by having forcibly administered to them noxious ingredients without the knowledge of the Medical Superintendent, and contrary to the Regulations of the said Hospital for the Insane, when the facts were brought under the notice of the said Matron, the said Mary Ann Fairbairn, she neither reported, reprimanded, or interfered with the conduct of the said Bessie Smith.
2. That the said Bessie Smith physically assaulted one patient in the said Hospital for the Insane—to wit, Jane Downey—by striking her on the face with a delf mug in the presence of the said Matron, the said Mary Ann Fairbairn, and the said Matron neither reported, reprimanded, or in any way interfered with the said Bessie Smith.
3. That the said Matron, Mary Ann Fairbairn, has appropriated to her own use, contrary to the Regulations of the said Hospital for the Insane, fuel and food intended for the patients and nurses of the said Hospital for the Insane.
4. That the said Annie Quilkey, having truthfully reported the above-mentioned facts to the Superintendent of the said Institution, Dr. Blaxland, the said Matron, Mary Ann Fairbairn, was instrumental in obtaining the dismissal of the said Annie Quilkey from her position as a nurse in the said Institution by making false charges against the said Annie Quilkey to the Superintendent, Dr. Blaxland, and others, which charges the said Annie Quilkey never had any opportunity of rebutting.

Sir,

Balmain, 28th June, 1900.

At the request of Messrs. Norton, Smith, and Co., solicitors, who are acting on behalf of Miss Fairbairn, Matron, of Callan Park, I beg to inform you that I have been supplying Miss Fairbairn with bread and flour for the past two years, and have always received payment for same monthly.

Yours faithfully,

W. WOLFF.

President, Civil Service Board, Sydney.

Acknowledge receipt, /1900. Acknowledged, 29/6/1900.

The New South Wales Fresh Food and Ice Company (Limited),

Head Office, Sydney, N.S.W., 28th June, 1900.

Dear Sir,
In reference to Mr. Calvert's call here regarding our business transactions with Miss M. A. Fairbairn, Matron of the Callan Park Asylum, we beg to say that for three years previous to January of this year we supplied Miss Fairbairn with about ½ pint milk daily, which was charged to her own account, and paid for by her. We cannot trace having supplied butter to Miss Fairbairn during that period.

Yours faithfully,

N.S.W. Fresh Food and Ice Co. (Ltd.),

H. PATERSON,

Manager,

(per J.B.D.)

The President, Public Service Board, Young-street.

Exhibit

Exhibit No. 3.

A.—Dr. Blaxland's letter recommending Annie Quilkey's dismissal. B.—Record of Annie Quilkey. C.—Record of Bessie Smith.

(A.)

Sir,

Hospital for the Insane, Callan Park, 8th March, 1900.

I have the honor to report that the nurse named in the margin, and whose papers are sent herewith, has been Annie Quilkey, guilty of insubordination, and to recommend her dismissal.

She went to the Matron's office to deny some trivial report about herself, lost her temper, and threatened to report the Matron to the Assistant Superintendent for stealing coal; and actually did so. The report was absolutely false.

I have, &c.,

H. BLAXLAND,

Medical Superintendent.

The Inspector-General of the Insane, Gladesville.

I have seen this nurse and heard her defence, which amounts to a denial of the offence. It now becomes a case of believing her statement or the Matron's; and, in view of her previous records, Dr. Blaxland's opinion, and my observation of the nurse, I must accept the Matron's account. I therefore order Nurse Quilkey's discharge. The nurse brings counter-charges against the Matron which are beside the present case, but might be worth inquiry by Dr. Blaxland.—ERIC SINCLAIR, 19/3/00. Dr. Blaxland.

(B.)

LUNACY DEPARTMENT.

HOSPITAL FOR THE INSANE, CALLAN PARK.

RECORD of Annie Quilkey, engaged temporarily, *vice* Mary J. Flynn on sick leave.

5th July, 1897.

Name—Annie Quilkey. Address—Jasper's Brush, Shoalhaven. Age—23 years. Weight—11 stone 9½ lb. Height—5 ft. 8½ in. Married or Single—Single. Birthplace—Jasper's Brush. Religion—Catholic. Public and private school; never in service; reads well; health good.

Medical Certificate.

I have this day examined Annie Quilkey, and find that she is in good health, and physically fit in all respects for the position of nurse in an hospital for the insane.

5th July, 1897.

H. BLAXLAND.

RECEIVED Book of Rules, and I agree to accept service under same.

6th July, 1897.

ANNIE QUILKEY.

Date of Appointment, Promotion, &c.	Position.	In place of—	Salary.	Recommended by Medical Superintendent.	Approved by Inspector-General of the Insane.	Reasons for Appointment and Promotion.	Result of Examination. Reprimands or Punishments, &c.	Date of leaving the Service, and reasons.
1897. July ..	Temporarily..	M. J. Flynn, sick.	£ 63	14/12/98.—Cautioned for irregularity in stamping clock on night rounds. Missed No. 3, top storey. Exchanged a dog-watch with another nurse without permission.	19th August, 1897; end of temporary service.
Sept. . .	Re-engaged—Special.	63	February, 1899.—Severely reprimanded for carelessness (general) in performance of duties, taking no interest in her work, and indifferent to the cautions of the "nurses in charge." Warned that any future irregularity will probably lead to dismissal.—H.B.	18th March, 1899. Dismissed for insubordination and general unfitness for a nurse.—H.B.
1 Nov. . .	Probationer..	M. Cumming, resigned.	63	H. Blaxland..	Approved from 1/11/97.—E.S., 17/12/98.	13/1/00.—While in the airing court, did not see a patient take a pair of steps and scale the wall, though told the steps were being used in there.	
1898. 1 Dec. . .	Junior nurse.	67	H. Blaxland..	Having served twelve months and passed the Junior Examination.	Junior Examination, 1898—65 per cent. Senior Examination, 1899—Failed.	

(C.)

NURSE BESSIE SMITH.

- 15/7/96. Severely reprimanded for breaking leave at night, and warned that any similar offence will be severely dealt with.
- 31/1/97. Censured for, when in charge of four females, leaving ward-store open, whereby a nurse was enabled to enter and remove a pair of scissors without her knowledge, and which were not found for two days.
- 19/8/99. Reprimanded for allowing a junior nurse—A. McLeod—to measure and hand out the medicine, whereby a patient was given a dose of hair-wash (harmless).

[Extracted from Register, started 22nd October, 1889.]

Printed under No. 11 Report from Printing Committee, 11 September, 1900.

A. Griffith, Esq., M.P., to The Honorable the Chief Secretary.

Sir,

28 June, 1900.

I should be glad if you could receive a Deputation of Members of Parliament on Tuesday next, at 2:30, to ask for a reduction in the working hours, and an increase in the holidays of attendants (male and female) in the Lunatic Asylums of the Colony.

I am, &c.,

ARTHUR GRIFFITH.

Deputation 2:30 on Tuesday arranged verbally by Mr. See.

[Enclosure.]

Hours of Duty, Sick and Annual Leave, in Hospitals for the Insane, New South Wales.

Sir,

We beg to submit the following facts for your consideration, with the hope that you may be able to bring sufficient influence to bear in the proper quarter, so that we may be placed at least on an equality with other branches of the General Division, viz., as to leave of absence, annual leave, sick leave, and hours of duty. At present we are allowed two (2) days in each month, thirteen Sundays per annum, fourteen days' annual leave, and two extra holidays; total, fifty-three days per annum.

Hours of Duty.—From 6 a.m. until 7 p.m. for about eight (8) months of the year, with an allowance of half an hour for each meal. Those periods divided into days will give 312 days of eleven hours per day, or 429 days of eight hours per day, so you will see that the full amount of leave allowed us during the year only equals one day in seven, with one day extra, which is covered several times over by concert, dance, and other extra duties. I think you will find the above figures are in excess of any other branch of the Service.

Sick Leave.—At present only three days are allowed, after which a substitute is provided, who is paid by us rather than allow the sick person to lose his salary. There are no allowances beyond the above, while others in the Service, who are much more able to bear the drain on their resources, are allowed two (2) months on full pay, one on half-pay, and apparently a further extension if needed. Hence you cannot fail to see the necessity for an improvement in this direction. There are special holidays proclaimed by the Government, which we sometimes get, though not in the manner prescribed in the *Gazette*. Instead of each member of the Staff obtaining a holiday, only one-fourth are allowed off duty; those detained do not get a day in lieu thereof; consequently, we should only receive in four (4) years the number due to us in one.

As to salary, see *Government Gazette* No. 744, clause 2,707, 18th September, 1896.

Trusting this communication will receive careful consideration.

P.S.—We are also liable to be called on duty during meals. We would remind you further that the resident nurses and attendants are required on reserve duty from 10 p.m., and dispersed in various rooms throughout the wards; are compelled to pay £15 yearly for sleeping accommodation, thus reducing the estimated salary by that amount.

The following are the conditions under which the artisans work in the Hospitals for Insane:—

Hours of duty: forty-eight per week; seven public holidays granted yearly; no annual leave; three days' sick allowance as above. They have also to work overtime when required, without pay or time off for doing so.

The above grievances are owing to the dual control, in our unbiassed opinion.

The Inspector-General of Insane to The Honorable the Chief Secretary.

Lunacy Department, Inspector-General's Office, Gladesville, 2 July, 1900.

Dear Mr. See,

I enclose copy of the report which Dr. Manning in 1897 furnished on the question of introducing the eight-hour system into the institutions. I am in accord with Dr. Manning in what he says in it, and do not desire to add anything.

The cost would, of course, be greater now owing to the increase in the number of attendants, nurses, &c. The present figures are:—

Attendants	220
Nurses	162
Servants (omitting artisans)	110
Total	492

Total salaries and allowances, £46,741.

To introduce the eight-hour system would require:

Attendants	73
Nurses	54
Servants	36
Total	163 persons.

The additional cost for salaries and allowances would be £15,600, and the cost for quarters for increased staff, at £100 per bed, would be £16,300.

Yours faithfully,

ERIC SINCLAIR.

Lunacy Department, Inspector-General's Office, Gladesville, 30 June, 1897.

The Public Service Board is desirous of ascertaining—

- 1st. What would be the additional cost of introducing the eight-hours system of labour into this Department, so far as affects the hours of the nurses employed in the Hospitals for the Insane? and,
- 2nd. The general advisability of this course.

I would point out, first, that whatever is done with regard to the nurses, must be done also with regard to the attendants in this Department. Their duties are in every respect similar to those of the nurses, and their hours and other conditions of service are the same. They are, in fact, male nurses. There is also another large body of employees in this Department—the servants or out-door staff, comprising the out-door and farm attendants, the gardeners, carters, cooks, laundresses, &c., all of whom are charged with the supervision of patients, and whose hours on duty are only a little less than those of the attendants and nurses, who will at once, and with reason, claim to come under the altered system, should this be introduced. Indeed, the alteration must be extended to the whole of the subordinate staff of this Department, except the artisans and engineers.

There are in all 133 nurses, 203 attendants, and 99 servants, a total staff of 435, whose position in this respect must be considered. This staff at present costs the Government for salaries and allowances £40,768 a year. There is at each hospital a day and a night staff, the nurses and attendants being changed from day to night duty as occasion may require. The night-staff is a comparatively small one, comprising altogether some thirty to thirty-five persons; so that the whole staff cannot be broken up into three shifts of eight hours each; but the day and night staff must be dealt with separately.

Under no arrangement which I can devise, except by practically doubling the staff, can any eight-hours daily system be arranged; but with some difficulties it would be possible to arrange for fifty-six hours a week, including Sunday—or forty-eight hours, Sunday being excluded. To do this, however, would involve an addition to the staff of at least one-third, or of 45 nurses, 68 attendants, and 33 servants. A total of 146 persons would be required at an annual additional cost of salaries and allowances of £13,590.

It would be necessary, also, to provide quarters for this large additional number; the nurses and younger attendants must of necessity be resident, and the older attendants would receive a monetary allowance in lieu of quarters, or their salaries would be calculated on this basis. The original outlay for these additional quarters would not be less than £14,000, or at the rate of £100 a bed, inclusive of day-room, extra kitchen, and other accommodation.

Turning to the general advisability of introducing the eight-hours system into this Department of the Government service, it is necessary, in the first place, to point out that a large number of other Departments would be affected; that the Department under the Medical Adviser, the Department of Public Charities, the Department of Prisons, the Quarantine and Reformatory Service, and other Departments, the position of whose employees is in many respects similar, must be involved in any such change, and at a very large additional expense for each Department.

With regard to this Department, the change does not seem to me advisable even if the expense could be easily met. I should be glad to be able to grant a somewhat larger amount of leave than is now possible with the number of the staff under my directions; but I consider the introduction of the eight-hours system as not only unnecessary but as distinctly mischievous. It cannot be said to be necessary, because, though the service is in some respects trying, the duties are much varied, it involves no long continuous physical or mental strain, it is not without times of comparative leisure and relaxation; it comes under the category of domestic service rather than ordinary labour, and that it does not affect the health is shown by the small amount of sickness and the general vigour and appearance of the staff.

It would be mischievous in taking the nurses, who are all young unmarried women, and the younger unmarried attendants from the hospitals, which are practically their homes, in giving them much more leisure than they have ever sought for or could profitably spend, in affording them opportunities of spending money which is now saved, and in cultivating pursuits and indulging in pleasures which would only unfit them for their duties.

F. NORTON MANNING,
Inspector-General.

Deputation.

Deputation.

Chief Secretary's Office, Sydney, 3 July, 1900.

Subject:—Reduction in working hours of attendants (male and female) in Hospitals for Insane; also increases in their holidays.

Present:—Hon. J. Perry (Minister for Public Instruction); Dr. Sinclair (Inspector-General of the Insane); and the following Members of Parliament:—Mr. A. H. Griffith, Mr. E. Terry, Mr. W. J. Ferris, Mr. T. Rose, Mr. J. Kidd, Mr. E. M. Clark, Mr. J. Ashton, Mr. W. Archer, Mr. J. R. Dacey.

Mr. Perry explained that the Chief Secretary had been called away at lunch time on urgent business, and had asked him to hear on his (Mr. See's) behalf the representations the deputation had to make.

Mr. Griffith said that the objects of the deputation were to ask for a reduction in the hours that were worked by attendants, male and female, in the Hospitals for Insane, and for an extension of their leave. It would be remembered that about four years ago the Legislative Assembly passed a resolution to the effect that in the opinion of the House female attendants should only work the hours prescribed by the Factories Act, namely, forty-eight hours per week. The Public Service Board immediately after obtained a report from Dr. Manning as to the practicability of eight hours per day being introduced. The position, however, was that the attendants, instead of working only forty-eight hours per week were working eighty and a half hours still. During eight months of the year the hours of duty were from 6 in the morning until 7 at night, with three intervals of half an hour each for meals. That was eleven and a half hours per day, or eighty and a half hours per week on actual duty. They had no slack time on their hands, for an enormous amount of work was done by them. There were fifty-two Sundays in the year and nine public holidays—sixty-one public holidays in all—but these attendants, both men and women, only got three days in each month in lieu of Sundays and holidays, thirty-six days in all during the year. He maintained that they worked unreasonably long hours, and did not get a proper or reasonable number of days in the year to make up for Sundays and public holidays. It was only just that those who worked on Sundays should get another day in lieu thereof, but they did not. Another thing, entertainments were frequently given at the Hospitals, and the attendants had sometimes to attend, but this was not counted at all. More attendants should be employed to admit of a substantial reduction in the working hours. The matter of expense, when it was a case of the health and welfare of the attendants, ought not to be allowed to stand in the way. It was nothing but white slavery the hours these attendants had to work. The Government should set an example to private employers. The attendants ought to receive more humane treatment; they were people of good character, selected for very important work—attendance on the sick, &c., who required constant care and attention—and they should be reasonably treated. Something like forty-eight hours, or something very much less than eighty and a half hours, should be given. Their holidays should also be increased; they should get four days ordinary leave in each month, and with what they get in lieu of Sundays the total should be increased from thirty-six to sixty-one days in each year. There was another point—if an attendant became incapacitated for work he was only allowed three days off in the year, and any time over that another man had to be put on and paid in his place. The condition was an unfair one to the attendants. He hoped that the injustices he had named would be removed.

Mr. Clark said that he had nothing to add. He could only support all that Mr. Griffith had stated.

Mr. Ashton said that he had already submitted a memorandum on the question of the wages of these attendants, but he did not propose to introduce the matter that afternoon. He endorsed the statements made by Mr. Griffith as regards the hours worked. The attendants had a very strong case for the consideration of the Government.

Mr. Rose said that he had no idea so much white slavery was being carried on. He desired to ask that the matters brought under notice by Mr. Griffith should receive early consideration by the Government.

Mr. Ferris said that the matter applied to his district very extensively. He had every reason to believe that the figures which had been quoted were quite correct, and he hoped the matter would be placed before the Minister to deal with. They were only asking for holidays in reason, and they certainly thought it a great injustice that when a man was incapacitated for work through some injury he had to pay for every day over three days in the year that another man was employed to do his work. The attendants had a very strong claim for the consideration of the Government, even as compared with other Civil Servants. He felt sure that the Government would deal fairly with these people.

Mr. Terry said that two of the largest Hospitals for Insane were in his district, and he could endorse all that had been said. They should not be treated worse than other branches of the Service. As a matter of fact their duties were more arduous; they had to deal with lunatics, and their brains wanted rest. He was fully confident that the Government would agree that the requests were reasonable.

Mr. Ferris thought it only right to point out that the heads of the Department, or the Minister, and not the doctors, were responsible for such matters.

Mr. Kidd said that he was very much surprised to learn that such a condition of things was allowed to exist, and he had no idea that the employees had to work anything like the hours set forth. The Government would not allow such a state of things to continue; something should be done, and something of a drastic character. If discussed in Parliament the press and people would feel very deeply on the subject, and he had hopes that the Government would take the matter into consideration as early as possible, for they could do a great deal. The employment of a few extra hands was a matter of no moment. Work of such a character could not be carried out satisfactorily unless the servants were properly treated. He hoped that immediate consideration would be given to the whole question.

Mr. Archer could not add anything. It appeared to his mind that the matter must have been overlooked. Besides being a matter of justice to the attendants, it was also to be taken into consideration that they could not, under the present circumstances, give proper attention such as required by many of the inmates.

Mr. Dacey did not think that he had anything to add, but if he did say anything it would only be to strengthen the case placed before the Minister by Mr. Griffith. They had a right to expect some reasonable answer to the statements in the document Mr. Griffith had put in. The attendants had a very strong

strong case, and he heartily supported it. They had hoped to receive some statement by way of reply. It was most unjust that these people should be placed under a different rule to other Public Servants, and he felt sure that the Government would grant their requests, if it lay in their power.

Mr. Perry said that all that he could state was that after hearing their representations, he must admit that a very strong case had been made out. He did not know whether the deputation had had any opportunity of learning the amount of work the attendants were called upon to do. Some businesses required that the employees should be on duty for a large number of hours, but during a certain number of those hours very little work was done. He was not saying that this case was one of them. Mr. See had had a report prepared which showed that it would cost £16,800 additional per year to carry out the forty-eight hours a week suggestion. Forty-eight hours a week was what the hard-working men were asked to do.

Mr. Clark : These attendants have to keep their brains at work all the time.

Mr. Perry said that he had with him a memo. which showed that during the summer months the hours of duty, attendants, and nurses, were from 6 a.m. to 7 p.m., less one and a half hours for meals = eleven and a half hours. During the winter months from 6.30 a.m. to 6 p.m., less one and a half hours for meals = ten and three-quarter hours.

Mr. Griffith : Four months in the year.

Dr. Sinclair : No; five.

Mr. Perry said that as to leave, it appeared they had fifty-three and a half days in the year—fourteen days annually, thirty-six days as monthly leave, including proportion of Sundays, and three and a half public holidays. The question of hours of work generally was one that the Government were dealing with. The Government should set an example, so far as they could in all Departments and works, and no doubt the case of the attendants would be gone into very carefully, and the views of the deputation met as far as possible.

Mr. Griffith : Everyone should have some leisure in his own home.

Mr. Perry : It should not be forgotten that there was a deal of difference between the case of the attendants and that of men who were doing, say, pick and shovel work.

Mr. Clark : A man wants rest, no matter what work he is at.

Mr. Perry said that Dr. Sinclair informed him that if an attendant were incapacitated in any way, through injury or illness, in the performance of his duty, he would be paid the whole time away, but if away through ordinary illness, only three days' pay would be allowed.

Mr. See would no doubt go into the whole matter, and give every consideration to the representations of the deputation. The Government desired to lessen the hours of labour wherever possible, and whilst it was their aim to get the best class of men in their employ, they did not wish to make the Service too attractive.

[The deputation then withdrew.]

T. Rose, Esq., M.P., to The Honorable the Chief Secretary.

Dear Sir,

24 July, 1900.

I have the honor to point out that the artisan class engaged at Kenmore Asylum are subjected to the deprivation of the annual holiday extended to other employees, and, apart from Sundays, only receive Good Friday and Christmas Day in the year.

If such is the case, I beg to recommend that they be granted an annual holiday, similar to other classes, namely, a fortnight per year.

I have, &c.,

T. ROSE.

The Inspector-General of Insane for report.—J.S., 25/7/1900.
Insane.—C.W., P.U.S., B.C., 26/7/1900.

The Inspector-General of the

T. Rose, Esq., M.P., to The Honorable the Chief Secretary.

Dear Sir,

24 July, 1900.

Will you be good enough to inform me how matters stand *re* deputation, of which I formed one some four weeks ago, asking for reduction of hours of labour of male and female warders in asylums.

I have, &c.,

T. ROSE.

I have requested Dr. Sinclair to report upon this matter. Let me have report.—J.S., 25/7/1900.
The Inspector-General of the Insane.—C.W., P.U.S., B.C., 26/7/1900.

The Inspector-General of Insane to The Principal Under Secretary.

Sir,

Lunacy Department, Inspector-General's Office, Gladesville, 8 August, 1900.

I have the honor to enclose a report, for the information of the Colonial Secretary, on various points connected with the hours of duty, leave of absence, &c., of the general staff employed in the Department of Lunacy.

The eight-hours principle is not usually held applicable to such employments as hospital nursing, which more nearly approaches domestic service than ordinary labour. The staff do not perform the hard and continuous physical work of the artisan; they have intervals of comparative quiet and rest, and the good health they enjoy as a body proves that no excessive strain is caused by the long hours.

A large increase in the amount of leave—anything approaching an amount that would diminish the hours of work to forty-eight per week—would cause the absence from his ward of an attendant for two and a half or three days per week, and would interfere most seriously with the continuity of treatment of the patients under his charge. The medical officer would find it necessary to repeat his directions to a second attendant, would be confused by their alternations of duty during his treatment of the patients, and would be uncertain who was responsible for the carrying out of his orders. It would, I feel sure, be most injudicious to shorten the hours of duty, or allow more frequent absences from the hospital. These objections do not, perhaps, apply with the same force to an increase in the annual leave, and, in view of the general tendency of late years to extend the privileges of annual leave, I would recommend that that given the general staff of this Department be increased from two weeks to three, to be taken at one time. The cost of this for extra staff would be £1,100.

I

I would also recommend that the sum of £500 be placed on the Estimates "To provide substitutes for members of the staff absent from sickness." The whole of this sum would probably not be used in the course of the year, but a smaller amount would be insufficient to ensure that all sick attendants had leave in the event of an outbreak, such as an influenza epidemic. When this amount is available it will be possible to make the regulations of the Public Service Board as to sick-leave applicable to the Lunacy Department.

It should, perhaps, be pointed out that the conditions of service as to hours, leave of absence, &c., in this Department, more or less accord with those in such other parts of the Service as the Prisons, Charitable Institutions, Coast Hospital, &c.

I have, &c.,

ERIC SINCLAIR,

Inspector-General.

Lunacy Department, Inspector-General's Office, Gladesville, 8 August, 1900.

REPORT on the hours of duty, leave of absence, sick leave, &c., of the General Staff employed in the Department of Lunacy.

1st. Sick-leave.—The arrangements in this Department are liberal to attendants with long service and of senior rank, but do not benefit the juniors, who comprise more than half the staff. To place them on an equality with the rest of the Government Service in this respect (to the General Division of which the Public Service Board has lately made the regulations for sick-leave applicable), it will be necessary to place a sum of £500 on the Estimates "To provide substitutes for members of the staff absent from sickness." The whole of this sum would probably not be used in the course of the year, but a smaller amount would be insufficient to ensure that all sick attendants had leave in the event of an outbreak such as an influenza epidemic.

2nd. Hours of duty.—The hours of duty, excluding time for meals, are, in summer 11½ hours, and in winter 10 hours, an average of from 10¾ to 11 hours all the year round. To reduce the hours worked each day would be impossible without inflicting hardship on the patients, who already retire for the night at 5.30 p.m. in winter, and 6.30 p.m. in summer, to allow the staff to leave duty. Any reduction in the hours of duty would, therefore, necessitate the patients being sent to bed at an earlier hour in the afternoon (the hardship of which need hardly be pointed out), or the introduction of an equal number of attendants to relieve those going off duty. This latter course would be, in addition to its expensiveness, inadmissible, since the patients would not remain under the control of the same attendants during the whole day. Peculiarities of insane patients, suicidal tendencies, and details of treatment could not be explained as fully as necessary by the man going off duty to his successor, and continuous treatment of the patients would, as a matter of course, cease.

If a reduction in the number of hours on duty is necessary, it must, therefore, be carried out by shortening the hours worked per week. The staff in the Hospitals are on duty seven days in the week, but the leave given may fairly be deducted from these, as it is, partly at any rate, intended to compensate for the Sunday duty. The leave amounts to fifty-three and a half days per year, or, roughly, one day a week, leaving for duty six days. The actual number of hours worked per week is, therefore, sixty-six, and to reduce this to forty-eight would require an increase in the staff of about 27 per cent. of its present strength. In addition to this, it seems to be expected that two weeks additional annual leave should be given to make their correspondence with the Public Service in general exact, and for this a still further increase would be necessary. The required increase in the staff is thus as nearly as possible one-third of the existing amount, and would require an addition of seventy-three attendants, fifty-four nurses, and thirty-six servants, at a cost for salaries and allowances of £15,600, and for quarters of £16,300.

The effect of this shortening of hours, which corresponds to the introduction of an eight-hours' day, would be to give the staff a fortnight's annual leave as with the rest of the Public Service, a day in lieu of Sunday, and—seeing that they must be in the Hospital during their days on duty for a longer period than eight hours—an amount of leave in compensation equal to an additional day and a half per week. (Fourteen days annual and two and a half days per week).

Leave of Absence and Public Holidays.—Though referred to separately, these cannot be considered apart from the question of hours of duty. When the leave given in this Department was arranged, the scale was a liberal one. It was intended to compensate for the loss of Sundays, Saturdays, and public holidays, and it was introduced at a considerably enhanced annual cost. There has, however, been a tendency of late years to increase leave, and our scale, though still a fair one as compared with similar services in other countries, is, perhaps, not as liberal as that of the General Division of the Public Service under the control of the Public Service Board. In the General Division a fortnight's leave is given to each employee who is not allowed to charge overtime for his work. If this is looked on, therefore, as a condition of Government employment, thirty-nine days only are left for our men which can fairly be taken as compensation for Sundays, public holidays, &c. The cost of increasing the leave by one week a year would amount to £1,100 for the employment of additional staff, and a proportionately larger amount for a greater increase.

As it is impossible to allow more than a quarter of the staff off duty together, this number alone can be given any one public holiday. It is not desirable to give to the others a day in lieu of the public holiday. To do so would compel the shutting in the wards of all the patients in the Hospital for three other days, and this would be too great a cost to pay for the benefit to the attendants.

Additional Duty.—The staff of attendants and nurses are required to assist when entertainments are held for the benefit of patients; but as they are taken in rotation, the amount of duty in the course of a year is not very great, and as they participate in the entertainment itself it need hardly be taken into account. Calls on those who sleep in the wards, too, are made so infrequently as to be of no practical amount, months often passing without even one attendant being roused.

Artisans.—These employees are on a different footing to the rest of our staff. They work forty-eight hours per week, and are granted seven public holidays per year. They are not paid for overtime; but are practically never required to perform any. I do not know that much hardship attaches to them; but if desired to give them the usual fortnight's leave, a sum of about £200 would be necessary to provide substitutes.

It must also be remembered that other Departments working under similar conditions to this must also be conceded the same privileges. These are the Department under the Comptroller-General of Prisons, the Directors of Charities, and the Medical Adviser to the Government.

ERIC SINCLAIR,

Inspector-General of the Insane.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COAST HOSPITAL, LITTLE BAY.

(REPORT FOR THE YEAR 1899.)

Printed under No. 10 Report from Printing Committee, 30 August, 1900.

The Chief Medical Officer of the Government to The Principal Under Secretary.

Sir,

Office of the Chief Medical Officer, Sydney, 22 August, 1900.

I have the honor to submit, for information of the Chief Secretary, my Annual Report on the working of the Coast Hospital at Little Bay for the year 1899, to which the usual statistical returns are appended.

2. The number of patients remaining in on December 31st, 1898, was 208; 2,151 were admitted during the year—the total number under treatment thus having been 2,359. Of the total, 2,076 were discharged, while 113 died; the mortality was, therefore, 4·79 per cent. The average daily number of occupied beds for the year was 224·25, being a decrease of 7·35. The annual cost per bed was—for maintenance and treatment, £71 7s. 2½d., for the ambulance service, £5 17s. 2½d., and for repairs, £2 3s. 9d.; total, £79 8s. 2½d. The gross expenditure for the year was £17,807 19s. 3d.

3. The duties of Medical Superintendent were carried on temporarily by Dr. J. N. E. MacLennan until 16th April. He was succeeded by Dr. W. B. Violette, who was transferred from the position of Government Medical Officer at Parramatta to permanent charge of the hospital.

The posts of house surgeons were filled by the undermentioned graduates of the Sydney University:—Dr. Robert Dey, to 31st January; Dr. Percy Glover Cooley, to 14th January; Dr. Gerald Francis Brade, from 14th January; Dr. Herbert Leopold Ashton Shorter, from 1st February; Dr. Ada Caroline Affleck, from 14th February.

Miss Jean McMaster continued in the office of matron and Mr. C. G. Willman in that of clerk and storekeeper.

I have, &c.,

J. ASHBURTON THOMPSON,

Chief Medical Officer of the Government.

Sir,

Coast Hospital, Little Bay, 16 July, 1900.

I beg to forward herewith Statistical Return for the year ending 1899.

This shows the total number of cases admitted was 2,151, as against 2,487 admitted in 1898, being a decrease of 336, which was probably caused by the absence of epidemics or their prevalence in a lesser degree than in the preceding year.

The average daily number resident has been 224·25, 231·6 being the average for 1898. The mean residence has been increased from 31·4 to 36·3 days.

The rate of mortality over all cases treated was 4·79. The deaths have been 113 during the year, as against 145 in 1898, and include 2 from scarlatina, 10 from whooping cough, 1 from diphtheria, 15 from enteric fever, 6 from cancer, 4 from heart disease, and 7 from phthisis.

One hundred and forty-eight cases of enteric fever were admitted, of whom 13 died, the death rate being 8·78 per cent.

The infectious fever return shows 132 cases scarlatina, 21 cases diphtheria, 2 cases scarlatina and diphtheria, 4 cases enteric and scarlatina, 10 cases measles, 8 cases chicken-pox, 54 cases erysipelas, and 42 cases of whooping cough, being a total of 273.

Additional buildings have been provided to accommodate the Senior House Surgeon, the Dispenser, and Office Staff.

The new steam laundry has been completed, and is now working smoothly and satisfactorily.

A 6-inch water main, with five hydrants and 1,200 feet of canvas fire hose, has been provided for the hospital proper, giving an abundant supply of water for ordinary use, and will no doubt prove to be of invaluable service in case of fire.

The following increases in the number of the staff have been made during the year:—1 house surgeon, 1 engine-driver, &c., 1 stableman, 1 attendant for the male staff quarters, and 1 general servant.

Lectures to the nurses have been given during the year by the Matron and Medical Staff. Quarterly examinations were held, and five nurses obtained their certificates of efficiency.

The work of the Hospital, speaking generally, has been carried out in a most satisfactory manner.

I have, &c.,

W. BRADLEY VIOLETTE,

Medical Superintendent.

APPENDIX A.

TABLE No. I.—General Statement showing Total Admissions, Transfers, Discharges, Deaths, Average Daily Number, and Average Stay of each Patient for the Year ending 31st December, 1899.

1900.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

COAST HOSPITAL, LITTLE BAY.

(REPORT OF THE PUBLIC SERVICE BOARD INTO CERTAIN CHARGES AGAINST MR. C. G. WILLMAN,
CLERK AND STOREKEEPER.)*Printed under No. 10 Report from Printing Committee, 30 August, 1900.*

Coast Hospital.

Inquiry under Section 51 of the Public Service Act into certain charges against Mr. C. G. Willman,
Clerk and Storekeeper, Coast Hospital.Public Service Board, 50 Young-street,
Sydney, 2 August, 1900.

WITH reference to the blank cover communication of the Principal Under Secretary, dated 24th April last, forwarding reports by Mr. G. E. Brodie, Chief Inspector of Public Accounts, in regard to an inquiry held by him respecting certain charges made by Mr. F. C. Glynn, late Storekeeper at the Coast Hospital, against Mr. C. G. Willman, Clerk and Storekeeper at that institution, the Public Service Board have the honor to report that, in view of the recommendations contained in the reports referred to, they determined to initiate an inquiry into the conduct of Mr. Willman, under the provisions of Section 51 of the Public Service Act.

It having been arranged that Mr. Brodie should represent the Department in the matter, that gentleman was asked to formulate specific charges, which he did. They are as follows:—

1. Wilful disobedience of instructions conveyed by Dr. Violette in August, 1899, in connection with the proper keeping and supervision of the diet-books of the Coast Hospital, Little Bay.
2. Misleading the Medical Superintendent in connection with the carrying out of his instructions conveyed to the Clerk and Storekeeper in August, 1899.
3. Lax supervision in connection with duties performed by E. A. Miles, messenger and telephone attendant, resulting in excess and short supplies of provisions being requisitioned for on the contractor.
4. Wilful neglect of the important duty of personally attending at the delivery of provision stores, with the view of ascertaining if same were supplied to the Coast Hospital according to contract entered into with the Government.
5. Lax supervision over revenue derivable from sale of fat.
6. General neglect of the more important duties devolving on an officer holding the position of Clerk and Storekeeper.

The powers of the Board for the purposes of holding the inquiry were delegated to Mr. C. Delohery, one of the members of the Board.

The inquiry was initiated at this office on 16th June, and was adjourned to the Coast Hospital, where it was resumed on 19th, 20th, 21st, and 22nd June.

A considerable amount of evidence was taken, a copy of which (together with the papers) is forwarded herewith.

After careful consideration, the Board have come to the following conclusions:—

Charges 1, 2, and 3.—It was clearly shown that for many months past Mr. Willman has neglected his duties, which, to a certain extent, he admitted himself. His excuse is that he was suffering from ill-health at the time; but this could be no answer to the fact, as shown by the evidence, that he handed over the most important of his duties to a telephone-boy named Miles, without exercising the slightest supervision over the work. Although this lad was in receipt of the small salary of £75 per annum, Mr. Willman deputed to him the work of entering in books kept for that purpose "diets" ordered for the patients by the medical officers, taking the particulars from the clinical records in the wards. From these books a patient's daily diet list should be made up, and a daily ration return, from which the quantity of provisions required should be compiled and ordered from the contractor. This important work Mr. Willman not only did not perform, but, having directed Miles to do it, he did not exercise the slightest supervision over him to see that it was properly carried out; consequently, Miles did this duty in a most lax and perfunctory manner, and for months no entries whatever were made in these books, and Miles, to save himself trouble, prepared the daily ration returns and patients' daily diet lists from the nurses' lists. This resulted in diets being drawn for patients who were dead or left the hospital, and for other patients who had just come into it no diets were drawn; this led to endless confusion and trouble. Numerous other duties were thrust upon him by Mr. Willman, and, as no doubt he found it was impossible to carry them

all out properly, he ultimately neglected them and did them anyhow. Evidence was given that the Medical Superintendent (Dr. Violette) gave Mr. Willman instructions as to the proper keeping and supervision of the diet-books, which instructions he wilfully disobeyed, and he further misled the Superintendent by informing him that the diet-books were properly kept.

Charges 4, 5, and 6.—It is proved conclusively that it was the duty of the Storekeeper to be present at the delivery of the provision stores, to see if they were supplied according to contract. This duty he neglected to perform, as he was seldom, if ever, present, and allowed the goods to be passed by the assistant-storekeeper and the cook. It was highly necessary that he should have been present, as, according to the evidence given, it was generally recognised at the hospital that the contractor would endeavour, if he were allowed, to evade the spirit of the contract by delivering goods of an inferior kind and food that was not fit for human consumption. The Matron, in her evidence, says that she held Mr. Willman in contempt with respect to stores. Her opinion of the goods supplied is as follows:—Poultry: atrocious, old, small, tough, and as hard as wood; vegetables: peas as hard as bullets, cabbages old, vegetable-marrows washy and full of fibre, turnips so hard you could strike a match upon them; butter, rancid; fish, very bad and unfit for human consumption, and had to be returned nearly every day; fruit, bad; vermicelli and macaroni so bad that when soup was made of it the nurses refused to drink it, as weevils were floating on the top. Other officers describe the fish as bad, and sometimes stinking; vegetables slimy, and in a state of fermentation; potatoes, rotten; butter not eatable, and hardly any of the goods up to standard. Everything had to be weighed or counted, as many articles were often short in weight or number. On going over the premises with Dr. Violette, he pointed out a weighing-machine recently erected to serve as a check on the contractor. He was asked if he had weighed any coal there. He replied, "Yes; the first lot of coal sent out since its erection, represented to be a ton, when weighed was found to be 14 cwt." The goods were seldom delivered up to contract time (7:30); they arrived sometimes as late as 10. The horses used by the contractor were of so poor a description that, in many instances, they were unable to draw the loads to the institution, and the drivers would come to the hospital for assistance, and the horses of the Government were repeatedly sent for miles along the road to where the vehicle was stuck up. On one occasion a valuable horse belonging to the hospital was made useless in consequence of receiving an injury whilst assisting the contractor's men. It was a usual thing for the hospital authorities to have to send to Sydney to purchase goods in lieu of the articles supplied by Mr. Kidman, and refused delivery, and thus a great loss of time and considerable inconvenience and expense was entailed, and, if anything, a gain to the contractor, as the goods bought at the contractor's risk were nearly always cheaper and better than what were supplied.

In the opinion of the Board the evidence points very clearly to a partisanship on the part of Mr. Willman towards the contractor. Constant bickerings were going on between Mr. Glynn and Mr. Willman as to the refusal or otherwise of the provisions supplied—Glynn being in nearly every instance correct when the matter was referred to the Medical Superintendent. Reports were constantly sent to the Health Office by Dr. Violette respecting the bad and inferior provisions supplied, and, in some instances, samples were sent, but with little or no result. In one instance Mr. Kidman was threatened to be fined the next time he was complained of, but, on the next time arriving, he was merely cautioned.

Mr. Willman, it appears to the Board, has been too long at the institution, as he has apparently the idea that all that is required of him is to superintend and not to work, and the Board have therefore decided that he be transferred to some other position in the Public Service at a reduced salary.

Mr. Glynn, no doubt, has done good work in endeavouring to expose the contractor's attempts to palm off bad and inferior provisions, and is entitled to some consideration. The Board are making further inquiries with regard to him, and will deal with his case in a further minute. In the meantime they recommend that he be paid three months' salary at the rate he was formerly receiving.

At the conclusion of the inquiry it was ascertained that the Tender Board proposed to accept the tender of Mr. Arthur Kidman for the supply of groceries to the hospital for another year, and that no exception was taken to its acceptance by the Health Office authorities, and the Board suggested to the Honorable the Premier that further action might be deferred until he had perused the evidence taken at this inquiry, and the report thereon. Mr. Arthur Kidman hearing of this, asked that the inquiry might be re-opened, in order that he might call witnesses in his defence. This was consented to. Mr. Kidman gave evidence, and endeavoured to show that there was a conspiracy on the part of the employees of the hospital to injure him by rejecting provisions which were in accordance with his contract. This, in the opinion of the Board, he failed to prove. Permission was given him to call any evidence he pleased which might throw a light on the defence he set up, and to cross-examine any of the witnesses already examined, and at his request the further hearing was adjourned, when, after taking further evidence, the inquiry was concluded.

In the opinion of the Board, Mr. Kidman did not rebut any of the evidence given at the inquiry, and altogether failed to prove his defence. The Board therefore invite the attention of the Government to the evidence, so that the question whether Mr. Kidman should be allowed to take up any future Government contracts may receive due consideration.

It is clear that the whole management of the Coast Hospital is very lax, and the Board suggest that the attention of the Chief Medical Officer should be drawn to the evidence which has been given in the case.*

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LITTLE BAY HOSPITAL.
(TEMPORARY SUPPLY OF PROVISIONS TO.)

Printed under No. 18 Report from Printing Committee, 29 November, 1900.

EXTRACT FROM VOTES AND PROCEEDINGS, No. 79. THURSDAY, 22 NOVEMBER, 1900.

- (2.) Temporary Supply of Provisions to Little Bay Hospital:—*Mr. Molesworth*, for Mr. Reid, asked the Colonial Treasurer,—
- (1.) What firm was asked to supply provisions, &c., to the Little Bay Hospital during the past few months, when Mr. Arthur Kidman's supply was stopped?
 - (2.) Was that firm one of the tenderers for the service for the current year?
 - (3.) How many tenderers were there for the supply in question, giving them in the order of cheapness?
 - (4.) Was the tenderer next lowest to Mr. Arthur Kidman offered the temporary supply, or any tenderer?
 - (5.) Were the prices of the firm selected for the temporary service lower than those of the tenders referred to, or higher?
 - (6.) Has he any objection to produce any one of the monthly vouchers of the firm performing the temporary service?
 - (7.) Did the Tender Board recommend application to the firm that got the temporary supply?
 - (8.) Who is the Ministerial head of the Department which includes the Little Bay Hospital?
 - (9.) If the Tender Board had nothing to do with the selection, what Minister approved of it?

Sir William Lyne answered,—I intend laying the papers in connection with these matters upon the Table.

EDMUND FOSBERY,
Chairman, Public Service Tender Board.

GENERAL

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR SUPPLIES FOR THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY (SECTIONS I, II, III, IV, VIII, IX, X, AND XI), FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

1. *Interpretation of Terms.*

WHENEVER the following terms occur in these Conditions, or in any Contract or Specification, in respect of the procuring of stores or other materials or requisites for the Public Service, they shall be held to mean, and shall mean as follows:—

“Government” shall mean the Government of New South Wales.

“Minister” shall mean the Colonial Treasurer or the Member of the Executive Council for the time being performing the duties of the said Colonial Treasurer.

“Board” shall mean the Public Service Tender Board.

“Officer” shall mean any officer or person authorised by the Board.

“Materials” shall mean stores or other materials or requisites for the Public Service.

“Contractor” shall mean the person or persons, corporation or corporations, who contracted to execute the works or supply the materials.

“Sydney District” shall mean the area within a radius of 6 miles of the General Post Office, and any vessel or wharf in Port Jackson or in the Parramatta River and tributaries, and any railway trucks at Darling Harbour, or Redfern or Milson’s Point Railway Stations.

“Hunter River District” shall mean the area within a radius of 6 miles of the Post Office at Newcastle, and any vessel or wharf in the Port of Newcastle, or in the navigable portion of the Hunter River and its tributaries, and any railway trucks at Newcastle.

“Special Conditions” shall mean any “Special Conditions” attached to and forming part of the Contract; and such Special Conditions shall be read with the General Conditions as part and parcel of the Contract.

2. *Description of Contract.*

This Contract is for the supply of the materials described in the Schedule of Prices attached hereto, and to be supplied in such quantities and at such times as may be ordered during the currency of the Contract.

The right is, however, reserved to make special arrangements with any person for the supply of any of the materials enumerated in the Schedule of Prices for use in any part of the Colony, outside the District for which the Tender has been accepted, and to use any of the materials set out in the Schedule of Prices which may be manufactured in any of the gaols of the Colony.

Net weights and measurements only will be paid for.

The Contractor must deliver, where directed, within the District for which his Tender has been accepted, materials ordered for such District, free of cost, and must pay wharfage and loading charges, if any.

3. *Description of Articles, &c.*

All materials must be of the very best quality, according to sample (if any), and are to be subject to the approval of the officer or his authorised representative.

If called upon to do so, the Contractor shall supply samples of all, or any, of the materials enumerated in the Schedule of Prices free of cost, such samples to be returned to Contractor on the termination of the Contract; or failing return, to be paid for at the Schedule rates of the Contract.

It must be distinctly understood that should materials of an inferior quality, or differing from those ordered, be supplied, the officer shall have power, in the event of the Contractor failing to replace same immediately on being called upon to do so, to purchase the materials at the Contractor’s risk and expense, and should it not be possible to procure materials of the kind or quality ordered, the Officer shall be entitled to purchase, at the Contractor’s risk and expense, such substitute therefor as may in the opinion of the Officer be most suitable, even should such substitute be of a higher cost. If such power should be exercised at any time by the Officer, the Contractor may in such event, or in the event of any dispute as to any other matter in connection with the Contract, appeal to the Board, and the decision of the Board shall be final. All charges, freight, &c., in connection with the forwarding and return of goods wrongly supplied to be borne by the Contractor.

4. *Delivery.*

The Contractor will be responsible for the safe and prompt delivery of the materials where directed, but if delivered outside the District for which his Tender has been accepted, shall pay all freight and charges thereon, the Government, however, taking the responsibility of total loss by sea, unless the Contractor has been previously instructed to insure, in which case should he fail to do so he shall take all risk and be responsible for any loss, should such occur. Sub-vouchers for freight and charges herein provided are to be attached to and the amount included in account rendered for the materials. Freight on the Government Railways must be paid by the Contractor in advance. Should any unreasonable or unnecessary charges be made in connection with the forwarding of materials, it shall be competent for the Officer to reduce such charges to what is fair and reasonable. No charge over and above the Schedule rates is to be made for packing, or for bottles, jars, kegs, casks, tins, cases, or other description of container whatsoever, which charges are understood to be included in the said rates; but the Contractor may remove, at such time as may be convenient to the Officer, containers, such as butter kegs, tins, casks, &c., which are usually returned in the ordinary course of business as empties. All supplies delivered to be accompanied by invoices in duplicate on departmental forms, or in triplicate if called for.

5. *Time.*

Unless otherwise stated, all materials under this Contract are to be delivered where directed within the District for which the Tender has been accepted, within a reasonable time, to be fixed in the order on the Contractor, or if for any other part of the Colony, shall be despatched within a reasonable time, to be fixed in the order. In the event of the Contractor failing to deliver or despatch materials ordered as specified above within the time so fixed, the officer, or his authorised representative, shall have

have power, without any further reference or notice to the Contractor, to purchase such materials elsewhere at the Contractor's risk and expense; and should it not be possible to procure materials of the kind or quality ordered, the officer shall be entitled to purchase, at the Contractor's risk and expense, such substitute therefor which, in the officer's opinion, may be most suitable, even should such substitute be of a higher cost.

6. *Stamp and Customs Duties.*

The Contractor will have to pay all stamp duties required in connection with the Contract.

The materials contracted to be supplied under the Contract will be liable to duty, if any, which must be paid by the Contractor, and will not be remitted on the ground that the materials are intended to be supplied under the Contract; but in case of any increase or decrease or repeal, during the currency of this Contract, of any Customs duty now chargeable upon any materials hereby contracted to be supplied, such materials shall thereupon be subject to an increase or decrease, as the case may be, in the Contract price of such materials, corresponding in rate and amount with the amount of such increase or decrease or repeal of duty, as the case may be.

7. *Securities.*

Within fourteen days after the notice of the acceptance of his Tender has been given to the Contractor, or posted to the address of his last known place of business or residence, he shall deposit with the Chairman of the Board, or, at the option of the Chairman, in some Bank or Banks in Sydney, upon fixed deposit in the name of the Chairman of the Board, a sum of £60 for Section I., £200 for Section II., £20 for Section III., £5 for Section IV., £20 for Section VIII., £30 for Section IX., £25 for Section X., and £20 for Section XI., to be held by the Board as security for the due and proper performance and completion of this Contract, or until this Contract has been cancelled by the Minister under the power given to him in that respect under Clause 10 of these Conditions, in which last-mentioned event happening, the money so deposited shall become forfeited to the Crown, and shall be paid to the Consolidated Revenue Fund.

If, however, the Contract has not been cancelled under the said Clause, and if orders comprised in this Contract are not completed in accordance with Clause 5 of these Conditions, the amount of loss to the Government (if any) caused thereby may be deducted and taken from the money so deposited.

If the Contractor fails to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the Tender, or if he fails to execute the Contract for the due performance of the service mentioned in the said Tender, the Minister may declare such acceptance to be annulled, in which case the amount of the preliminary deposit will, as provided by Regulation 289, be absolutely forfeited to the Crown.

If the money is placed in a Bank at fixed deposit, the Contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, as such interest becomes payable; but it is expressly declared that the Government is not to be held liable or answerable in any way for loss on the money so deposited, or for any loss of interest from the fixed deposit not being renewed.

8. *Contractor not to Sublet Contract or Assign Moneys.*

The Contractor shall not assign or underlet this Contract, or any part thereof, or assign or mortgage, charge or encumber all or any of the moneys payable or to become payable under this Contract, or any other benefit whatsoever arising, or which may arise, under this Contract, to any person without the consent in writing of the Minister being first obtained. The Contractor for each and every breach of this Condition shall be liable to pay to the Government a sum not exceeding £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the Contractor under this or any other contract with the Government. And any permission to assign or underlet services to be performed or works to be done under this Contract shall not discharge the Contractor from any liability in respect of this Contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this Condition; and all rights under these Conditions shall remain in full force, and shall be available as against any such subsequent breach.

9. *Bankruptcy, &c.*

In case the Contractor assigns or underlets this Contract, or any part thereof, or assigns or mortgages, charges, or encumbers, or attempts to assign, mortgage, charge, or encumber, all or any of the moneys payable or to become payable under this Contract, or any other benefit whatsoever arising, or which may arise, under this Contract, without the consent in writing of the Minister being first obtained, or in case the Contractor becomes bankrupt, or makes an assignment of his estate for the benefit of creditors, or makes an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this Contract, and without prejudice to any right that may have accrued to liquidated damages under any of these Conditions, to take the works done under the Contract wholly or partially out of the hands of the Contractor, and to employ or contract with any other person or persons to execute the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Officer, and together with any sum payable as liquidated damages under these Conditions shall be deducted from any money that may be then due or may thereafter become due to the Contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the Contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the Contractor to the Minister, and may be recovered accordingly.

10. *Cancellation of Contract.*

In any or either of the events mentioned in the last preceding clause of these Conditions, or if the Board is not satisfied with the manner in which orders may have been executed, the Minister may, without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this Contract whether there are any orders remaining to be executed or not, and in such case the moneys which have been previously paid to the Contractor on account of the orders executed shall be taken by him as full payment for all orders executed under this Contract, and upon notice in writing under the hand of the Minister, that he, under the authority of this condition, cancels

cancels this Contract, being given to the Contractor, this Contract shall be cancelled, and thereupon all sums of money that may be due to the Contractor, or unpaid, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this Contract within the times specified on orders, shall also be forfeited and become payable to the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of Contract.

11. *Power to Order for other Departments.*

The Board shall have the right to order, for the use of the Imperial Government in connection with the Colonies, any of the materials comprised under this Contract, and they shall be supplied, if ordered, at and under the Contract rates and conditions.

12. *Patent Rights to be included.*

The Contractor is to include in his Tender the amount of all patent rights and royalties which may be claimed by any patentee for the manufacture and use of any portion of this work, or of any materials herein contracted to be supplied under this Contract, and must undertake to liquidate the same when required to do so.

13. *Free Passes, &c.*

No free passes on any of the Government Railways will be granted either to the Contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

14. *Conditions not to be waived.*

None of the Conditions of this Contract shall be varied, waived, and discharged, or released either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

15. *Bad Materials, Supplies, and improper Works to be removed.*

The Contractor shall be bound to remove, upon receiving written notice from the Board or Officer to that effect, any materials which may appear to the Board or Officer to be of an inferior or improper description; and, in cases of refusal, the Board or Officer shall have the power to get such materials removed at the Contractor's expense, and to withhold all payments until such instructions have been complied with.

16. *Progress Payments without Prejudice.*

No progress payment given to the Contractor shall prevent the Board from rejecting at any future time before the final settlement all unsound materials and improper workmanship discovered subsequently to any previous payment; and notwithstanding any approval given or made by the Officer that portions or the whole of the Contract have or has been satisfactorily performed, the Board may require the Contractor to remove or amend at any future time previously to the final payment on account of the Contract any materials or work that may be found not in accordance with this Contract; and the Contractor must at his own cost remove all such materials and amend all such work when so required; and if he refuse or neglect to do so, the Board may carry out such work, and deduct the whole cost thereof from any moneys that may be due, or that may become due, to the Contractor.

If, in the opinion of the Board, further inquiry is necessary or desirable before any progress payment is made, the Board may withhold the certificate on which such payment would have been made for any period which the Board may consider necessary for the purpose of such inquiry.

17. *Insurance.*

The Contractor shall from time to time, when required to do so by the terms of the Contract, insure in the name of the Chairman or an officer to be approved by the Board any of the materials required to be manufactured into specific articles against loss or damage by fire, for the amount of the full value of the work or materials completed, as determined by the Board, and shall lodge with the Board the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the Contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the Contractor to deliver up the articles and material to the Board, completed in all respects according to the Contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the materials are finally completed, and shall then be credited to the Contractor in the final settlement of accounts in the event of the Contract not having been previously cancelled under these Conditions.

18. *Instructions to be obeyed.*

Should the Contractor refuse or neglect to carry out the instructions of the Board or the Officer, the Board may suspend the usual certificate until such instructions have been complied with.

SPECIAL CONDITIONS.

Provision and Forage Contracts.

1. The bread must be delivered in such sized loaves as may be ordered, and such proportion as may be required by the Officer in charge must be baked in tins. The maize meal to be ground to such degree of fineness as may be required, and where it is not procurable, an equal weight of wheaten bread may be accepted.

2. Beef and mutton in carcase to be supplied in such proportions as may be required, and when the quantity admits of it, in fore and hind quarters alternately of beef, and in whole carcasses of mutton. Meat, other than in carcase, to be delivered in such proportions and joints, and, as to chops and steaks, of such size and description as may be ordered. The gravy beef must be thick flank or buttock, free from bone or fat. Kidney fat must be removed from carcasses by Contractor before delivery, and when beef or mutton is supplied in carcase the shank and shin bones are to be first cut off by the Contractor.

3. In the event of objection being taken by the Officer as to the quality of the bread or meat and unless the Contractor or his agent at once replace the article objected to, the Officer may in lieu of proceeding under Clause 3 of the General Conditions give to the Contractor or his agent one hour's notice of the intention to hold a Board upon the same, which Board at the expiry of such notice shall meet at the Establishment or Institution, and shall be constituted as follows, viz. :—One person named by the Officer, one person named by the Contractor (hereinafter called the arbitrators), and an umpire chosen by the arbitrators. Should the arbitrators not agree immediately as to the matters referred to them, then the umpire will be called upon for his decision, which shall be given in writing immediately thereafter, and shall be final, anything contained in Clause 3 of the General Conditions to the contrary notwithstanding. Provided always that in the event of the Contractor failing to appoint some person on his behalf within the time in the said notice limited, or should the umpire not give his decision forthwith, the Officer may accept the decision of his arbitrator, which decision shall be final. And it is further provided that in the event of the decision under such reference being adverse to the Contractor, the costs of such reference may, at the discretion of the Public Service Tender Board, be deducted from any moneys due or becoming due to the Contractor under this or any other Contract with the Government as and for liquidated and ascertained damages for failure to supply articles of the quality ordered.

4. The vegetables to be supplied are to be a fair assortment of those in season at the time, and such as may reasonably be required by the Officer in charge of the establishment, and must be dressed and without stalk.

5. The butter shall, where the quantity admits of it, be delivered in original packages, as put up at the factory where it was made, and the Officer in charge shall have power to reject any supply which, in his opinion, has been repacked. Any butter so rejected shall lie at the Contractor's risk.

6. The milk must be fresh, pure, and unskimmed, having a specific gravity of not less than thirty degrees (30°) at a temperature of sixty degrees (60°) Fahrenheit.

7. Articles of supply grown or produced within any of the Gaols, Establishments, or Institutions may be used therein, or in any other Gaol, Asylum, Industrial or Reformatory School, or other Government Establishment or Institution whatsoever, in lieu of Contract supplies of a similar character.

8. When it is necessary to use the Institution weigh-bridges, the supplies shall be delivered in such vehicle as will stand thereon.

9. The Contractor, on the order of the Officer in charge of the Establishment, shall supply to the
Officers and crew of the "Sobraon,"
Officers of the Coast Hospital and Leper Lazarets, Little Bay,
Officers of the Trial Bay Prison, and
Officers of the Carpenterian Reformatory,

any article named in the Contract, to be paid for by the officials concerned at Contract rates, and in the event of the Contractor failing to supply such article within a reasonable time, the Officer in charge of the Establishment shall have power to purchase such article at Contractor's risk.

10. When it may be necessary to substitute one article for another, the following proportions are to be observed, viz. :—1 lb. wheat flour, or 1 lb. biscuits, equal to 1 lb. bread; 12 oz. wheat flour, or 15 oz. bread, equal to 1 lb. maize meal; 8 oz. wheat flour, equal to 1 pint oatmeal; 1 lb. salt beef, or 1½ lb. mutton, or 10 oz. salt pork, equal to 1 lb. fresh beef; 4 oz. candles equal to 1 gill oil; and 5 oz. candles and 1 gill of common oil equal to 1 gill of kerosene oil.

11. The substitutions are to be made only when required by the Officer authorized to draw the supplies, or his deputy, and the Contractor will not be bound to substitute articles other than those mentioned in the preceding clause. Contractors must, in submitting their accounts, charge for such articles only as were *actually supplied*, in cases where substitution may **have** taken place at the request of a responsible Officer.

12. In connection with the Prisons Department, where supplies of meat exceed 25lb., an allowance of 5 per cent. on the total amount for cutting up is to be allowed by the Contractor.

13. No Public Officer, unless authorized by the Permanent Head of his Department, shall be permitted to prepare vouchers, but the Contractor must, if desired, forward a list of articles supplied, to be checked at the Establishment receiving stores. The Contractor will, if required, prepare his own account, monthly, on the prescribed form, which he will deliver in a complete state to the Officer in charge of the Establishment drawing the supplies for his certificate and transmission, through the Permanent Head of the Department, to the Treasury for payment. The Contractor for the Groceries Section must, if required, at the termination of his Contract, remove all articles supplied, but not issued, if such are in good order.

14. The hay to be either all oaten or not more than one-third lucerne, both to be good, sound, and sweet. The straw to be wheaten, and the other articles to be of the best quality. Hay and straw to be delivered in trusses.

The supplies for the Police are to be delivered at the Police station, on the requisition of the Officer in charge of the district or station, and to be accompanied by an invoice showing the quantities; gross, tare, and net weight to be on the back of the requisition or order; and receipt under the same being then signed and returned to the Contractor, to be by him rendered in support of his account.

The number of horses required to be foraged, as stated in the Schedule, is only approximate, and it must be understood that either more or less may be drawn as required; the excess over the estimate will, however, in no case exceed 50 per cent.

15. In addition and without prejudice to any right that may have accrued to liquidated damages under Clause 3 hereof, the Contractor for each and every breach of these Conditions shall be liable to pay to the Government a sum not to exceed £5 as and for liquidated damages; and the sum or sums payable as such damages may be deducted by the Head of the Department from any sum or sums due to the Contractor under this or any other Contract with the Government, but any action taken under this Condition shall not curtail or limit the power of the Minister under Clause 10 of the General Conditions, or operate as a waiver of any of the rights of the Minister thereunder.

TENDER FORM.

Department of Public Service Tender Board.

In pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide and deliver at the Coast Hospital and Leper Lazarets, Little Bay, at such times and in such quantities as may be required from 1st July, 1900, to 30th June, 1901, the supplies enumerated in the Schedule of Prices hereunto annexed, for the service of such hospital and lazarets, agreeably to the Special Conditions and General Conditions, which have been inspected by me, and at the rates written by me against each item; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Public Service Tender Board a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 7 of the said General Conditions; and I enclose herewith bank-note for the sum of £5, as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw same; or if, in the event of this tender being accepted, I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the tender regulations, printed on the back hereof, and by which I agree to be bound.

Dated the first day of June, 1900.

Witness—S. LINTERN.

ANTONIO THEODORE,
158, Oxford-street, Sydney.

TENDER REGULATIONS.

All envelopes containing tenders must be addressed to the Chairman, Public Service Tender Board, and have legibly endorsed upon them the name of the service tendered for.

When specified, every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, as set out in the Specification, or if not so set out, then as calculated according to the following scale:—

	£	s.	d.
For amounts exceeding £50 and not exceeding £150	3	10	0
For amounts exceeding £150 and not exceeding £500	5	0	0
For amounts exceeding £500, and not exceeding £1,000	10	0	0
For all sums over £1,000, one per cent. on the amount of tender up to a maximum of £500.			

Such deposit shall be in the form of a cheque in favour of the Chairman of the Tender Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

Any tender which may be received without the required deposit shall, unless otherwise directed by the Tender Board, be deemed to be informal and rejected accordingly.

In submitting a tender, the full Christian name and surname and address of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each number. The omission of this information will render the tender liable to be declared informal.

In the event of any tenderer failing to complete the necessary contract documents, and proceed with the contract within the time specified in the general conditions relating to the service (or withdrawing his tender after it shall be opened, whether such tender has been accepted or not), all moneys deposited by him on account of or in connection with his tender shall be forfeited to the Crown.

Whenever a tenderer fails to proceed with a contract as aforesaid, fresh tenders may be invited at short notice for the service, unless, in the opinion of the Tender Board there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary may be excluded from the competition and from any competition for other services.

The Minister shall not be bound to accept the lowest or any tender.

SCHEDULE OF PRICES.—Supplies for the Coast Hospital and Leper Lazarets, Little Bay, from 1st July, 1900, to 30th June, 1901.

N.B.—Provisions, &c., to be delivered at 7-30 a.m., daily, Sundays included, unless otherwise ordered by the Medical Superintendent or his deputy.

Oysters, in bottles ½ doz. bottles	Ten shillings	10 0
Do in shell, 2-lb. bags..... ½ bag.	Ninepence	0 9

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR THE SUPPLY AND DELIVERY OF MILK (SECTION V) TO THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY, FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

(As printed on pages 3, 4, and 5.)

SPECIAL CONDITIONS.

- (1.) The milk must be fresh, pure, and unskimmed, having a specific gravity of not less than thirty degrees (30°), at a temperature of sixty degrees (60°) Fahrenheit. Milk that cannot pass this test will be rejected by the Medical Superintendent, whose decision shall be final; and the Contractor must replace the same within a period of twelve hours, otherwise an equivalent quantity to that rejected may be purchased at the Contractor's risk and expense. The Contractor, or his servant or servants, must remain at the Institutions while the test is being made, and in the event of the test being unsatisfactory must at once remove the supply.
- (2.) All supplies are to be delivered by the Contractor at his own cost, on the days for which they have been ordered, *at such hours as may be most convenient to the Medical Superintendent, and at such part or parts of the Establishments as may be directed by him.*
- (3.) The Contractor will be bound to furnish the article tendered for *in such quantities as may be required* when called upon to do so by the Medical Superintendent.
- (4.) The Contractor will receive notice on one day of the quantity required to be delivered on the day following. If the Contractor make default in delivery, the Medical Superintendent may purchase an equivalent quantity at the Contractor's risk and expense. As far as practicable the daily supply will be of uniform quantity, but the Contractor must not rely upon this.
- (5.) If milk is rejected by reason of its failing to pass the requisite test more than three times in a month, it shall be competent for the Colonial Treasurer to at once terminate the Contract.
- (6.) The officers and all other employees to be supplied at contract price with any milk they may require, it being clearly understood, however, that they are not of necessity bound to purchase from the Contractor.
- (7.) The Contractor shall render his account to the Medical Superintendent only. Payment will be made as soon after the end of each month as may be practicable.
- (8.) The expression "Medical Superintendent" in these conditions means the Medical Superintendent of the Coast Hospital, Little Bay, or his deputy.

TENDER FORM.

Department of Public Service Tender Board.

IN pursuance of advertisement in the *Government Gazette*, the undersigned do hereby tender to supply and deliver milk to the Coast Hospital and Leper Lazarets, Little Bay, for a period of twelve months from 1st July, 1900, agreeably to the Special Conditions and General Conditions, which have been inspected by us, at the rate of twopence and fifteen-sixteenths ($2\frac{1}{16}$ d.) per quart; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Public Service Tender Board, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 7 of the said General Conditions, and we enclose herewith our cheque for the sum of £3 10s., as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same; or if, in the event of this tender being accepted, we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the tender regulations, printed on the back hereof, and by which we agree to be bound.

Dated the twenty-ninth day of May, 1900.

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR THE SUPPLY AND DELIVERY OF EGGS, FOWLS, AND DUCKS (SECTION VII) TO THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY, FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

(As printed on pages 3, 4, and 5.)

SPECIAL CONDITIONS.

- (1.) The eggs will be taken in lots of not less than 25 dozen at a time. The supply will be subjected to the following test, *i.e.*, out of each delivery of 25 dozen, one half-dozen eggs will be taken promiscuously and broken by the Medical Superintendent in the presence of the Contractor or his servant or servants. If the lot delivered is in excess of 25 dozen, the number taken for test shall be in the same proportion, *i.e.*, one twenty-fifth. If more than one-third of them are found to be "stale," or other than new laid, the whole lot shall thereupon be rejected; and unless they are replaced within twelve hours by others which will pass the test, the Medical Superintendent may purchase an equivalent quantity at the Contractor's risk and expense. The decision of the Medical Superintendent shall be final. The poultry must be of the best quality of its several kinds.
- (2.) All supplies are to be delivered by the Contractor at his own cost, on the days for which they have been ordered, *at such hours as may be most convenient to the Medical Superintendent, and at such part or parts of the Establishment as may be directed by him.*
- (3.) The Contractor will be bound to furnish any of the articles tendered for *in such quantities as may be required* when called upon to do so by the Medical Superintendent.
- (4.) The Contractor will receive notice on one day of the quantity required to be delivered on the day following. If the Contractor make default in delivery, the Medical Superintendent may purchase an equivalent quantity at the Contractor's risk and expense. As far as practicable the daily supply will be of uniform quantity, but the Contractor must not rely upon this.
- (5.) The officers and all other employees to be supplied at Contract price with any of the goods herein specified that they may require, it being clearly understood, however, that they are not of necessity bound to purchase from the Contractor.
- (6.) The Contractor shall render his account to the Medical Superintendent monthly. Payment will be made as soon after the end of each month as may be practicable.
- (7.) The expression "Medical Superintendent" in these conditions means the Medical Superintendent of the Coast Hospital, Little Bay, or his deputy.

TENDER FORM.

Department of Public Service Tender Board.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to supply and deliver Eggs, Fowls, and Ducks to the Coast Hospital and Leper Lazarets, Little Bay, for a period of twelve months, from 1st July, 1900, agreeably to the Special Conditions and General Conditions, which have been inspected by us, at the following rates, namely:—

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR SUPPLIES FOR THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY (SECTIONS I, II, III, IV, VIII, IX, X, AND XI), FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

(As printed on pages 3, 4, and 5)

SPECIAL CONDITIONS.

(As printed on pages 5 and 6.)

[Enclosure.]

Dear Sir,
15 and 17, George street West (close to Railway Station), Sydney, 1 June, 1900.
Enclosed please find cheque, value £111 5s, being preliminary security with tenders for contracts—Hospital, Little Bay, Gladesville, Callan Park, Liverpool, and Darlinghurst Gaol. I have taken the liberty of adding the total amount in one cheque, and trust this will not be considered informal by your Board..

The Chairman, Public Service Tender Board.

Yours, &c,
H McILRATH.

TENDER

TENDER FORM.

Department of Public Service Tender Board.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide and deliver at the Coast Hospital and Leper Lazarets, Little Bay, at such times and in such quantities as may be required from 1st July, 1900, to 30th June, 1901, the supplies enumerated in the Schedule of Prices hereunto annexed, for the service of such hospital and lazarets, agreeably to the Special Conditions and General Conditions, which have been inspected by me, and at the rates written by me against each item; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Public Service Tender Board a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 7 of the said General Conditions; and I enclose herewith my cheque for the sum of £55, as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw same; or if, in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the tender regulations, printed on the back hereof, and by which I agree to be bound.

Dated the 1st day of June, 1900.

Witness—GEORGE J. A. ACHESON.

H. McILRATH,
George-street West.

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR SUPPLIES FOR THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY (SECTIONS I, II, III, IV, VIII, IX, X, AND XI), FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

(As printed on pages 3, 4, and 5.)

SPECIAL CONDITIONS.

(As printed on pages 5 and 6.)

TENDER FORM.

Department of Public Service Tender Board.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide and deliver at the Coast Hospital and Leper Lazarets, Little Bay, at such times and in such quantities as may be required, from 1st July, 1900, to 30th June, 1901, the supplies enumerated in the Schedule of Prices hereunto annexed, for the service of such hospital and lazarets, agreeably to the Special Conditions and General Conditions, which have been inspected by me, and at the rates written by me against each item; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Public Service Tender Board a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 7 of the said General Conditions; and I enclose herewith my cheque for the sum of £25 as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw same; or if, in the event of this tender being accepted, I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the tender regulations, printed on the back hereof, and by which I agree to be bound.

Dated the 31st day of May, 1900.

COLIN FINNIE,
Botany Road, Botany.

Witness—GEORGE DUNCAN.

TENDER REGULATIONS.

(As printed on page 7.)

No. 3.

Schedule of Tenders received for Provision Supplies (Section VI) for the Coast Hospital and Leper Lazarets, Little Bay, from 1st July, 1900, to 30th June, 1901.

GENERAL CONDITIONS, SPECIAL CONDITIONS, TENDER, AND SCHEDULE OF PRICES FOR THE SUPPLY AND DELIVERY OF BUTTER, CHEESE, AND ICE (SECTION VI) TO THE COAST HOSPITAL AND LEPER LAZARETS, LITTLE BAY, FROM 1ST JULY, 1900, TO 30TH JUNE, 1901.

GENERAL CONDITIONS.

(As printed on pages 3, 4, and 5.)

SPECIAL CONDITIONS.

- (1.) The butter must be best creamery (in 1 lb. rolls) and fresh factory (in original packages) respectively, and each must be of the best quality of its kind. The cheese must also be of the best quality of its kind. Any supplies rejected must be replaced within a period of twelve hours, otherwise an equivalent quantity to that rejected may be purchased at the Contractor's risk and expense. The Contractor, or his servant or servants, must, at the time of each delivery, remain at the Institution until such time as the supplies are inspected by the Medical Superintendent; whose decision shall be final. The Contractor must at once remove any rejected supplies.
- (2.) All supplies are to be delivered by the Contractor at his own cost, on the days for which they have been ordered, at such hours as may be most convenient to the Medical Superintendent, and at such part or parts of the Establishment as may be directed by him.
- (3.) The Contractor will be bound to furnish any of the articles tendered for in such quantities as may be required when called upon to do so by the Medical Superintendent.
- (4.) The Contractor will receive notice on one day of the quantity required to be delivered on the day following. If the Contractor make default in delivery, the Medical Superintendent may purchase an equivalent quantity at the Contractor's risk and expense. As far as practicable the daily supply will be of uniform quantity; but the Contractor must not rely upon this.
- (5.) If butter is rejected by reason of its failing to pass the requisite test, more than three times in a month, it shall be competent for the Colonial Treasurer to at once terminate the contract.
- (6.) The officers and all other employees to be supplied at contract price with any butter, cheese, and ice they may require, it being clearly understood, however, that they are not of necessity bound to purchase from the Contractor.
- (7.) The Contractor shall render his account to the Medical Superintendent monthly. Payment will be made as soon after the end of each month as may be practicable.
- (8.) The expression "Medical Superintendent" in these conditions means the Medical Superintendent of the Coast Hospital, Little Bay, or his deputy.

TENDER FORM.

Department of Public Service Tender Board.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to supply and deliver butter, cheese, and ice to the Coast Hospital and Leper Lazarets, Little Bay, for a period of twelve months from 1st July, 1900, agreeably to the Special Conditions and General Conditions, which have been inspected by me, at the following rates, namely:—

		Words.	Figures.
Butter, best creamery, in 1 lb. rolls.....	7 lb.	Elevenpence halfpenny ...	11½d.
Do fresh factory, in original packages.....	do	Elevenpence.....	11d.
Cheese, best New Zealand	do	Fivepence.....	5d.
Ice	do	Halfpenny	0½d.

and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Public Service Tender Board a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above-mentioned, and to provide the security required by clause 7 of the said General Conditions; and I enclose herewith my cheque for the sum of £3 10s. as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw same; or if, in the event of this tender being accepted, I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the tender regulations, printed on the back hereof, and by which I agree to be bound.

Dated the 1st day of June, 1900.

TENDER REGULATIONS.

(As printed on page 7.)

No. 4.

The Secretary of the Public Service Board to The Under Secretary for Finance and Trade.

Public Service Board, 50, Young-street, Sydney, 25 June, 1900.

Inquiry held at the Coast Hospital.

IN connection with the inquiry which was held by the Public Service Board at the Coast Hospital into certain charges against the Clerk and Storekeeper (Mr. Willman) evidence was given showing that the contract held by Mr. Arthur Kidman for the supply of groceries, meat, coal, &c., to that establishment has been carried out in a most unsatisfactory manner; and as it is understood that the tender of this Contractor is about to be accepted for another year, I am directed to ask that you will be so good as to at once bring the matter under the notice of the Honorable the Premier and Treasurer, with a view to the acceptance of the tender being delayed until he has had an opportunity of perusing the evidence and the Board's report.

J. W. HOLLIMAN,
Secretary.

Have the tenders been dealt with yet?—F.K., 25/6/00. The Acting Secretary and Executive Member, Public Service Tender Board.—F.K., 25/6/00.

Mr. Arthur Kidman's letter of acceptance has been made out, and signed; but I am holding it at the request of the Public Service Board. Two letters recently received from Mr. Kidman are forwarded to you herewith. I await instructions.—MANDER ROSS, 25/6/00. The Under Secretary for Finance and Trade.

Submitted.—F.K., 26/6/00. In view of the statements herein made the acceptance of Mr. Kidman's tender must be delayed pending inquiry; purchases in the open markets to be made in the meantime.—W.J.L., 26/6/00. The Acting Secretary, &c., &c., &c., Public Service Tender Board.—F.K., 26/6/00. Chief Med. Officer informed accordingly, 28/6/00.

No. 5.

The Acting Secretary and Executive Member, Public Service Tender Board, to
The Chief Medical Officer of the Government.

Sir, Department of Public Service Tender Board, Sydney, 28 June, 1900.

I have the honor to enclose a copy of *Supplementary Gazette* No. 633 of 26th instant, containing the names of the successful tenderers for Annual Provision Supplies, 1st July, 1900—30th June, 1901.

Sections 2 and 6 for the Coast Hospital are in abeyance. Ministerial authority has been given for purchase in the open market, from time to time, as required, for those sections, pending decision.

I have, &c.,

MANDER ROSS,
Acting Secretary and Executive Member.

Medical Superintendent, Coast Hospital, B.C.—C.A.S., 3/7/00. Please return. Noted.—
W.B.V., 7/7/00. Medical Superintendent. Returned, 7/7/00. Health Department. The Chief
Medical Officer of the Government. Mr. Gullick.—C.A.S., 7/7/00. The Superintendent of
Quarantine, B.C.—A.R.G. (for Secy.), 10/7/00. Noted, B.C.—J.F.V., 11/7/00. The Chief Medical
Officer. File, 12/7/00.

No. 6.

Mr. Charles T. Willman, Clerk and Storekeeper, Coast Hospital, to The Medical Superintendent, Coast Hospital.

Sir,

Coast Hospital, 30 June, 1900.

I have the honor to inform you, respecting the new contracts for provisions, &c., that yesterday I called on the Secretary of the Public Service Tender Board, respecting Sections II and VI (groceries, butter, and cheese), and asked him if any tenders for these sections had been accepted. He informed me the matter was before the Premier, and that a letter had been sent to the Chief Medical Officer to the effect that goods could be purchased in the open market until further notice, and I thereupon interviewed Mr. Simms, Secretary, Health Department, and after consideration the firm of Messrs. Anthony Hordern and Sons was decided on. Accordingly, I gave the first order for groceries to that firm on the same day for the 1st July, and the goods have been received, and are of good quality.

I have, &c.,

CHARLES T. WILLMAN,
Clerk and Storekeeper.

Forwarded for your information. —W.B.V., Medical Superintendent, 2/7/1900. The Chief Medical Officer of the Government. For favour of reference to the Public Service Tender Board. The Principal Under Secretary.—J. ASHBURTON THOMPSON (per C.A.S.), B.C., 4/7/00. Refer to P.S. Tender Board.—C.W., B.C., 11/7/00. Seen by Public Service Tender Board.—MANDER ROSS, Acting Secretary and Executive Member. The Principal Under Secretary.—M.R., B.C., 19/7/00. Returned.—C.S.O., 20/7/1900. Seen.

The Secretary of the Board of Health to The Principal Under Secretary.

Department of Public Health, New South Wales,
Sydney, 7 September, 1900.

Sir,

I am directed by the Chief Medical Officer of the Government to ask that you will have the goodness to cause papers noted in the margin to be returned to this office for submission to the Treasury in connection with payment of certain accounts.

I have, &c.,

C. A. SIMMS,
Secretary.

00/15932.
Coast Hospital
reports: "Gro-
ceries being
obtained of
Hordern and
Sons." Sent to
the Principal
Under Secretary,
July 7th.

Papers herewith, 12th.—The Chief Medical Officer, B.C., 12th Sept., 1900.—C.W., P.U.S. The Examiner, Treasury.—C.A.S., 18 Sept., 1900. The Minister's approval for purchasing in an open market is not attached. Please furnish a reference to same.—W.H., 20/9/1900, Examiner. The Secretary, Board of Health.

No. 8.

The Secretary of the Board of Health to The Chief Medical Officer of the Government.

Department of Public Health, New South Wales,
Sydney 25 September, 1900.

MIGHT the Chief Secretary be asked to approve the purchases from A. Hordern and Sons.—C.A.S.

Ministerial authority for purchasing, &c., having been given as stated in Secretary, Public Service Board's letter of 30th last not being produced, perhaps Minister's authority to purchasing of Anthony Hordern might be sought.—Done, 4/10/1900.

No. 9.

The Secretary of the Board of Health to The Principal Under Secretary.

Sir,

Department of Public Health, New South Wales, Sydney, 4 October 1900.

I have the honor, by direction, to forward herewith papers in connection with the purchase of groceries in the open market for the Coast Hospital, and to request, in view of the authority referred to in the letter of the Secretary to the Public Service Tender Board, of 28th June last, not having been produced, that you will have the goodness to obtain confirmation thereof.

I have, &c.,

C. A. SIMMS,
Secretary.

Examined.—C.W., 10/10/00. This is a matter which has been entirely dealt with by the Public Service Tender Board, and the Treasury. Copy of papers attached. The Chief Medical Officer, —C.W., P.U.S., B.C., 16/10/00.

No. 10.

The Secretary of the Board of Health to The Under Secretary for Finance and Trade.

Sir,

Department of Public Health, New South Wales, Sydney, 18 October, 1900.

I am directed to submit herewith papers relating to purchase by the Coast Hospital of groceries, etc., in the open market, and accounts from A. Hordern and Sons for the supplies.

It will be seen that the arrangement was duly reported to the Public Service Tender Board.

The Examiner requires Ministerial authority for payment.

This was sought from the Chief Secretary as Ministerial head of the Coast Hospital, but is now referred to you in consequence of the minute of the Principal Under Secretary, dated the 16th instant.

I have, &c.,

C. A. SIMMS,
Secretary.

Examined.—F.K., 22/10/00. Approval of Colonial Treasurer already obtained. See 00/9781.

No. 11.

Anthony Hordern and Sons to The Superintendent, Coast Hospital.

Dear Sir,

George-street, Parker-street, and Gipps-street, Sydney, 19 October, 1900.

We beg to draw your attention to a mistake made in charging up a number of half-chests of tea as follows:—

1st September	should be	60 lb., 90s.
1st "	"	60 lb., 90s.
10th "	"	60 lb., 90s.
18th "	"	60 lb., 90s.
2nd October	"	60 lb., 90s.
2nd "	"	60 lb., 90s.
16th "	"	55 lb., 82s. 6d.

In

In error, the salesman invoiced them up as 40s. and 45s., instead of which they weighed 60 lb. each, with the exception of the half-chest on the 16th instant. This weighed 55 lb. We enclose debit note showing difference on transaction to enable you to fix the matter up in your books, and will charge the correct prices on vouchers, which will be sent in the ordinary course next week.

Regretting the mistake, we are,

Yours, &c.,
ANTHONY HORDERN AND SONS.

No. 12.

Mr. G. E. Brodie, Chief Inspector of Public Accounts, to The Under Secretary for Finance and Trade.

MEMORANDUM.

Supply of tea, Coast Hospital, Little Bay.

Treasury, 20 October, 1900.

THE attention of the Chief Medical Officer should be drawn to the excessive price paid for tea supplied by A. Hordern and Sons (not in contract) to the Coast Hospital, Little Bay.

The following are the supplies since 1st July last:—

July	150 lb., at 1s. 6d. per lb.	...	£11	5	0
			37 lb., at 1s. 2½d. per lb.	...	2	5	0
<hr/>							
			187	£13 10 0
August	270 lb., at 1s. 6d.	20 5 0
September	180 lb., at 1s. 6d.	13 10 0
			60 lb., at 1s. 6d. (Lazarette)	4 10 0
October	110 lb., at 1s. 6d.	8 5 0
			60 lb., at 1s. 6d. (Lazarette)	4 10 0
			60 lb. (3 tins 20 lb. each, at 22s. tin)	3 6 0
<hr/>							
			927				£67 16 0

I am satisfied upon inquiry, and in view of the large orders given, that a splendid tea can be obtained for 1s. per lb.

927 lb. have been supplied to the Coast Hospital at a cost of £67 16 0

The same quantity at a uniform rate of 1s. per lb. = 46 7 0

Loss to the Government in three months £21 9 0

An explanation might be obtained from the Medical Superintendent, Coast Hospital, why better and more economical arrangements have not been made by him in connection with the supply of tea.

G. E. BRODIE,
Chief Inspector of Public Accounts.

Might be referred to the Chief Medical Officer.—J.V., 20/10/1900. The Under Secretary. The Principal Under Secretary.—F.K., 23/10/1900. The Chief Medical Officer.—C.W., B.C., 26/10/1900. Medical Superintendent, Coast Hospital, B.C., 29/10/1900. I shall be glad to receive Dr. Violette's explanation with reference to the last paragraph of Mr. Inspector Brodie's letter.—J.A.T., 29/10/1900.

No. 13.

The Medical Superintendent, Coast Hospital, to The Chief Medical Officer of the Government.

Sir,

Coast Hospital, Little Bay, 31 October, 1900.

With reference to the supply of tea to this hospital. When the last contract expired Mr. Willman left here to wait upon you and arrange for the supply of provisions and other articles not contracted for; later on he telephoned to me that you were out, but that on the advice and concurrence of the secretary, Mr. C. A. Simms, he would place the orders with Messrs. A. Hordern & Sons, as he expected to procure them cheaper there than elsewhere, if I approved. I replied that I did not care where he got them so long as they were of good quality.

No price for tea was submitted to me. I learnt subsequently that 1s. 6d. per lb. was charged for the first lot of tea sent by them, and that afterwards 1s. 3d. per lb. was charged. This, however, turns out to be an error, as the enclosed letter from Messrs. A. Hordern & Sons will show, and they now claim 1s. 6d. per lb. For some time we have been endeavouring to buy tea at a cheaper rate, and the last two lots supplied were 1s. 2d. and 1s. 1d. per lb. respectively.

I have, &c.,
W. BRADLEY VIOLETTE,
Medical Superintendent.

No. 14.

The Secretary of the Board of Health to The Chief Medical Officer of the Government.

MEMORANDUM.

Department of Public Health, New South Wales, Sydney, 1 November, 1900.

SOME weeks ago (I do not remember the date) I met Mr. Willman, by chance, in the account room. He stopped me to say that permission had been given to buy groceries in the open market, and that he thought of going to Anthony Horden's.

I advised him to ask Mr. Ross (the Secretary to the Tender Board) about it. This was the only conversation that Mr. Willman had with me. It is absolutely incorrect that Mr. Willman went to Hordern's "with my advice and concurrence."
C. A. SIMMS,
Secretary.

The Principal Under Secretary,—B.C., 1/11/00. Returned.—C.S.O., 2/11/00. Inform Treasury.—C.W., B.C., 3/11/00. The Under Secretary for Finance and Trade. Accountant.—F.K., 7/11/00. These papers might be referred to the Public Service Board who are dealing with the whole question of supplies.—J.V., 9/11/00. The Under Secretary. The Secretary, Public Service Board.—F.K., 9/11/00.

No. 16.

Messrs. Aulsebrook and Sons to The Chairman, Public Service Tender Board.

Dear Sir,

Sydney, New South Wales, 13 April, 1899.

We beg to call your attention to a matter to which you will kindly give your earnest consideration.

In the tender for the Coast Hospital and Little Bay Leper Lazaret, under the heading of biscuits, Arnott's are specified; but, considering our biscuits are equal in quality and finish to Arnott's, and that we possess more medals and certificates than any other firm of biscuit manufacturers in New South Wales, that the item "biscuits" should be left open, and no special firm's goods stipulated.

We do not know if Arnott's goods are specified in any other tenders, but we have noticed it only in the above-named tender.

Yours, &c.,

AULSEBROOK AND SONS (LIMITED),

J. B. AULSEBROOK, Director.

Acknowledge.—H.S.K., 18/4/99. The schedule was prepared by the Hospital authorities, to whom the matter might be referred.—R. H. BEARDSMORE, 20/4/99. The Chief Medical Officer.—W.H., 21/4/99. Chairman, Public Service Tender Board. The Medical Superintendent, Coast Hospital, for favour of information.—J. A. THOMPSON, C.M.O. (per A.R.G.) There seems to be a decided preference for Arnott's biscuits here, therefore their brand is specified in the contract.—W.B.V., Medical Superintendent, 24/4/99. The Chief Medical Officer, Sydney.

I am not aware of any reason why this institution should not requisition the brand of articles preferred by the members of its staff who are to consume them.—J.A.T., B.C., 26/4/99, Chief Medical Officer of the Government. The Secretary, Public Service Tender Board.

Directions were given for a reply to be sent that it will be impracticable to make any alteration during the term of the present contract, but that the matter will be considered when fresh tenders are being invited.—R. H. BEARDSMORE, Secretary, Public Service Tender Board, 28/4/99.

No. 18.

The Chairman of the Public Service Tender Board to Messrs. Aulsebrook and Sons (Limited).

Sir,

Department of Public Service Tender Board, Sydney, 3 May, 1899.

With reference to your letter of the 13th ultimo, in which you point out that "Arnott's" biscuits are specified in the schedule for supplies for the Coast Hospital, Little Bay, and ask that in future no special brand be mentioned, I have the honor to inform you that it is impracticable to make any alteration during the term of the present contract; but the matter will be considered when tenders are being invited next year.

I have, &c.,
Chairman.

TENDER REGULATIONS.

All envelopes containing tenders must be addressed to the Chairman, Public Service Tender Board, and have legibly endorsed upon them the name of the service tendered for.

When specified, every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, as set out in the specification, or if not so set out, then as calculated according to the following scale:—

	£	s.	d.
For amounts exceeding £50 and not exceeding £150	...	3	10 0
For amounts exceeding £150 and not exceeding £500	...	5	0 0
For amounts exceeding £500, and not exceeding £1,000	...	10	0 0
For all sums over £1,000, one per cent. on the amount of tender up to a maximum of £500.			

Such deposit shall be in the form of a cheque in favour of the Chairman of the Tender Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft,

Any

Any tender which may be received without the required deposit shall, unless otherwise directed by the Tender Board, be deemed to be informal and rejected accordingly.

In submitting a tender, the full Christian name and surname and address of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. The omission of this information will render the tender liable to be declared informal.

In the event of any tenderer failing to complete the necessary contract documents and proceed with the contract within the time specified in the general conditions relating to the service (or withdrawing his tender after it shall be opened, whether such tender has been accepted or not), all moneys deposited by him on account of or in connection with his tender shall be forfeited to the Crown.

Whenever a tenderer fails to proceed with a contract as aforesaid, fresh tenders may be invited at short notice for the service, unless in the opinion of the Tender Board there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary may be excluded from the competition and from any competition for other services.

The Minister shall not be bound to accept the lowest or any tender.

TENDER FORM.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MOLONG HOSPITAL.

(REPLY OF HOSPITAL COMMITTEE TO THE OFFICIAL REPORT ON THE MANAGEMENT OF THE.)

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

Memorandum from the Secretary, Cottage Hospital, Molong, to The Principal Under Secretary, Sydney.

Dear Sir,

9 July, 1900.

Herewith please find reply to Mr. W. Wilson's report on the management of the Molong Hospital, together with newspaper clipping of committee meeting where same was discussed.

Yours, &c.,

W. C. READ,
Secretary.

REPLY TO MR. W. WILSON'S REPORT DATED THE 7TH MAY, 1900.

Sanitary Arrangements.—The drains have been carried out some 30 or 40 feet as suggested.

Telephone.—It was the intention of the Committee some time back to have connected the hospital with the medical officer's residence, but owing to obstacles placed in their way by the Telegraph Department they were abandoned.

Infectious Wards.—Plans were prepared for these, but Mr. Wilson thought that the number of patients treated did not warrant the expenditure of such a large amount, viz., £610, but informed us that you had a plan in your office that he thought would be suitable. If such is the case my Committee would feel obliged if you would forward it for their inspection.

Medical Officers.—My Committee cannot see their way to make any alteration in their appointment of Dr. Veech as medical officer for this year, and have therefore declined to appoint Dr. Lamb for this year; but they have authorised the Treasurer to call for Dr. Lamb's services in cases of emergency, and to remunerate him for same. Any other suggestion made by Mr. Wilson in his report will be carried out by the Committee in due course.

W. C. READ,
Secretary.

Molong Hospital, 9th July, 1900.

MOLONG HOSPITAL COMMITTEE.

A LONG AND LIVELY MEETING—DR. LAMB MAY NOT HAVE BEDS—MAY BE CALLED IN WHEN WANTED—AND PAID BY COMMITTEE—NOT BY PATIENTS.

NOTWITHSTANDING the bitterly cold atmosphere of Molong Town Hall last Monday evening, there was an animated argument by some members of Molong Hospital Committee, at its regular monthly meeting that evening; and, judging by the voting on the matter in dispute, there ought now to be a return to "peace, perfect peace," in the Committee.

Mr. Chas. Stockwell occupied the chair, and with him were Messrs. Geo. Garlick, G. Burgess, J. F. Wynne, J. Neilson, D. M. McCallum, G. W. Griffith (Manildra), G. Packham, E. G. Finch, W. J. Windred, J. Black (Treasurer), and W. C. Read (Secretary).

Minutes of previous meeting were read and confirmed.

Visiting Committee's Report.

The Secretary read the following, which was received, on the motion of Messrs. Windred and Finch:—

"Molong, 2nd July, 1900. Hospital Visiting Committee report for the month of June last:—We visited several times during the month and found everything satisfactory, no complaints, patients all well satisfied. Buildings and everything in good order. The slop drains were being extended as suggested by the Inspector when here.—JOHN BLACK and GEO. GARLICK."

Matron's Report.

This was read by the Secretary, as follows:—"To the Chairman and Committee of the Molong Cottage Hospital. Gentlemen,—I have the honor to report: Patients treated during month, 15—14 males and 1 female, of which 8 males were in on June 1st; since admitted 7—6 males and 1 female; discharged, 10—9 males and 1 female, 9 cured and 1 relieved; remaining in on June 30th, 5 males. I gratefully acknowledge the following gifts received during month:—From Peter Lemon, vegetables; Mr. Kinsela, piece of pork and vegetables; Mrs. Ward, vegetables; weekly supply of papers from School of Arts; *Express* papers.—ELSIE KIRBY."

Mr. Garlick proposed that the report be received, and that a vote of thanks be accorded to the donors of various articles mentioned.

Seconded by Mr. Finch, and carried.

Under the Act.

The Secretary read a communication from the Chief Secretary's Office, as follows:—

"Chief Secretary's Office, Sydney, 26th June, 1900. Sir,—In reply to your letter of the 29th ultimo, I am directed by the Chief Secretary to inform you that the necessary proclamation has been published in this day's *Government Gazette*, extending the provisions of the Public Hospitals Act, 1898, to the Molong Cottage Hospital.—I have the honor to be, &c., CRITCHETT WALKER, Principal Under Secretary. The Secretary, Cottage Hospital, Molong."

Mr. Wilson's Report.

Mr. Stockwell (Chairman) said that at last meeting a report upon the hospital and its management was presented from Mr. Wilson, of the Chief Secretary's Department. On that occasion, Mr. Murray had moved that it stand over for consideration until this meeting. He had hoped that Mr. Murray would be present to take charge of the report, but he was sorry to say that gentleman was unavoidably absent. But the report was on the table, was open for discussion, and he hoped some other gentleman would take the matter up.

Then occurred what musicians describe as "lunga pausa."

Eventually, Mr. Griffith disturbed the silence by asking if the Committee had to send a reply to the report.

Mr. Stockwell said he had seen a report in a paper to the effect that a copy of the report had been sent to the Committee of Management of the hospital for any remarks they might wish to make, but no reply had been received from them. Of course, as the report was postponed for discussion, no reply could be sent. He thought that the only portion of the report which called for discussion was that which referred to the sanitary condition of the hospital as concerned certain drains, and that matter had already been attended to.

Mr. Griffith thought the Department wanted a reply to the report, which, he considered was very favourable to the institution. The sanitary matter referred to therein had already been attended to, and the drain carried out further than the inspector suggested. There was, however, another point in this matter, for referring to which he had been considerably called over the coals by people who seemed to take a special delight in attributing wrong motives and wrong meanings to people and matters. At the previous meeting he had asked if it was the recognised practice, when a second medical man was required, for the patient on whom he attended to pay his fee; and he would ask again—is it expected that patients in certain cases must pay for the attendance of a second doctor? He did not think this was a rule of the hospital management; but if it were, he was quite sure, it was not right. In such cases the Hospital Committee should pay the doctor—not the patient. As to the remainder of the report in question, we, as a committee, were shown to have attended to our duties in a proper and satisfactory manner; and there was no sort of complaint against the management. As to the inspector's reference to the advisability of having two doctors in attendance at the hospital, the suggestion might be right enough; but under existing circumstances our reply should be that such alteration could not be made just now. Existing arrangements would not permit of it being done. We could not alter the present state of affairs while Dr. Veech continued to attend properly to his duties. To introduce another doctor now would be simply to insult Dr. Veech. If that gentleman had been guilty of any act of neglect, or other objectionable conduct, the case might be different; but so far he had given complete satisfaction. Of course, at the end of the twelve months, when Dr. Veech's engagement expired, it would be quite open to the Committee to make any different arrangements it thought fit; but at present he could not see how Dr. Veech could be interfered with. There were no complaints against the doctor, or the Committee, and all the patients appeared to be perfectly satisfied with the treatment they received. That being so, where was the wisdom of making any change. There was one more matter he would like to refer to. Something had been said about the fact that names of subscribers to the hospital were not published. Now, he thought it was very desirable that such should be done in future.

The Chairman asked if Mr. Griffith meant that the names of every person who contributed towards the hospital should be published, or only those who were entitled to vote? There were very many who gave only small sums—was it intended that their names should be published? The papers here charged pretty high prices, and it might in some instances cost more to publish the names than the subscriptions amounted to.

Mr. Griffith said, No! He only contemplated publishing the names of subscribers of one guinea. In the report reference was made to the advantage of having telephonic communication between the hospital and the doctor's residence. That was a matter worthy of full consideration. It had been previously mentioned at a meeting, but the expense appeared to be too great. Perhaps now, that Government had drawn attention to it, Government would be willing to help the Committee in the cost of erection.

Mr. Wynne asked: Why was the inspector sent here? He thought it was on account of the dispute about the doctors; but he did not know. With regard to Mr. Griffith's suggestion that the names of subscribers should be published, he considered the name and amount of subscription of every person who subscribed even one shilling should be published. This was done elsewhere, and should be done here. Long ago he had wanted it to be done; but there was some objection on the score of expense. That, however, should not stand in the way. A shilling was as much to the poor man who contributed it, as a pound was to a man who could afford to give that amount. They should all be published alike. As

to

to the question of having two doctors, he could not see that it would interfere with Dr. Veech, even if there were six doctors; but they would certainly relieve him of some of the work. Then, he saw something in the papers about allotting beds. What did that mean? He had not been to any meetings lately, as Monday was an awkward day for him, and he did not know what had been going on. In fact, he was quite fogged on the subject. But this was done elsewhere—at Orange, it was done—and he could not see why it could not be done here. He did not know that the hospital belonged to the doctors, but it seemed they thought that it did. However, he thought every contributor's name should be published. Mr. Day had shown him a report of the Forbes Hospital, and it appeared all the names were published there.

Mr. Stockwell interrupted the speaker, to apologise for the absence of Mr. Day, who was busy with the half-yearly balance.

Mr. Wynne continuing, said that as it was there was no check upon the collectors, and no satisfaction to the public. If, for instance, when he was out collecting, suppose a person gave him half-a-crown; what was there to prevent him keeping it. He did not suppose that any collector would do such a thing, but there was nothing to prevent him. He considered every donation should be published, and also the name of the collector to whom it was given, just as was done in Forbes.

Mr. Neilson said he could endorse Mr. Wynne's remarks about the subscriptions. Referring to the report, it said that one of the medical men should always be in town every day in the week, in case he might be wanted; and he thought this should be the case. If the doctors were out of town for twelve, twenty-four, or forty-eight hours at a time, and an emergency case occurred, the patient could not be attended to until a doctor returned, when serious results might follow. He read the paragraph in the report bearing on this subject, and said he heartily agreed with it. As for Dr. Lamb's request to be allotted certain beds, there was no difficulty in the matter at all; and such an arrangement would not at all interfere with Dr. Veech nor detract from his salary, as Dr. Lamb was prepared to act gratuitously [Here Mr. Neilson read from the report, sentences bearing on this point.] He moved, that Dr. Lamb be allotted some of the beds for the use of patients who have come under his care, and who require further treatment in hospital.

Mr. Wynne asked for an explanation as to what was meant by allowing Dr. Lamb some of the beds? He had not been to any meetings lately, and did not understand it. He thought the Hospital was for the benefit of the poor and distressed people—people who could not afford to pay for a doctor or nursing; and he understood they had to get a ticket from a subscriber and then see the doctor. At any rate people had applied to him for a ticket. The hospital was not for the purpose of doctors sending their patients there—such as people who could afford to pay for nursing and medical attendance, and had homes of their own. If this sort of thing were allowed of putting people in the hospital who were well off, it might soon be full of these paying patients, to the exclusion of the poor and destitute. This was not right, and the hospital was never intended for such purpose.

Mr. Neilson re-read the last paragraph in the report (that on which his motion was based), and maintained that the patients referred to by Dr. Lamb, and for whom he wanted beds, were poor people, who were unable to pay for medical attendance or medicine.

The Chairman asked: Has anyone been refused admission to the hospital?

Mr. Neilson: No, I don't know of anyone being refused admission.

The Chairman: Well, why talk of refusals.

Mr. Black said he could endorse all that Mr. Griffith had said. As to the recommendation in the report about the drains, well that had been attended to. He also believed that the names of all subscribers up to one shilling should be published under the name of the person who collected them. That, however, could not be done this year, but would be done next year. With regard to the trouble about the doctors, he did not see how any alteration could be made at present. We had agreed with Dr. Veech for twelve months, and could not do anything which would interfere with that arrangement, except with his consent, which would have to be asked for. In justice to Dr. Veech, we certainly could not appoint Dr. Lamb. Had there been anything wrong with Dr. Veech, the case would be different. But there was not. There was not a complaint against him of any kind; but, on the contrary, everyone was perfectly satisfied with him. Next year, of course, if it were then deemed advisable, a change could be made; but not till then. He had much pleasure in seconding Mr. Griffith's resolution.

Mr. Neilson said that before the resolution was put, there was something else to be done. It might happen that while we only had one doctor he might be away from town when a serious accident happened; and what was the Committee to do then? As for asking Dr. Veech if we could give beds to Dr. Lamb, who would give his services gratuitously, there was no necessity to do so—it was not his hospital.

Mr. Black: No, but he is our doctor.

Then several members of Committee started talking altogether and to each other.

Eventually, Mr. Griffith succeeded in pointing out that if it were agreed to have two doctors now, the fact would have to be stated in the reply to the Chief Secretary.

Mr. Stockwell (Chairman) then suggested that, supposing the Committee did appoint Dr. Lamb, and Dr. Veech immediately resigned, what would happen? The hospital would then only be served by one doctor, so the position would be no better than it is at present. Under such circumstance, there could be no doubt Dr. Veech would be perfectly justified in resigning.

This phase of the case was not argued.

Mr. Griffith alluded to the statement that patients had paid for the services of a second doctor. He thought this was entirely wrong, if it had been done, as asserted. Patients, when they entered the hospital, did not belong to the doctor, but to the hospital; and if a second doctor were required in any case, the Committee should pay him, not the patient.

Mr. Read (Secretary) said the Committee had never been asked to pay for a second doctor. If one had been paid by any patient, it had been done without the slightest reference to the Committee.

Mr. Griffith explained that had the Committee elected Dr. Lamb it would have been all the same to him; the terms of the agreement must be adhered to. Personally, he would like to see two doctors in attendance at the hospital; but he could not see how that result could be effected until the end of the year. If any member of Committee could point out how it could be done, he would support him. But he was most decidedly opposed to allotting beds in the manner suggested.

Another confusion argument ensued.

Mr.

Mr. Wynne objected to Mr. Black's view of the situation. He could not see any reason why Dr. Lamb's request should not be granted. He said he wanted beds for poor patients. Well, the hospital was for the benefit of poor people, and not for influential people, such as were some of those who had signed the petition. [More confusion.] It looked to him as if the doctors thought they owned the hospital, and could do as they liked with it. He could not understand the division of beds matter at all, but it seemed Dr. Lamb offered his services gratuitously.

Mr. Griffith said that if the Committee was going to have Dr. Lamb as honorary doctor, there must be some arrangement made between them which would work to the satisfaction of each. How was that to be done? If anyone could suggest a satisfactory method, he would support it. But, under the suggested arrangement, who was to be the responsible man to whom the Committee would look for the institution being properly attended to? At present, Dr. Veech was our paid medical officer, and we look to him. But suppose a patient goes in who is not properly one of the Committee's patients, who shall look after him? It appeared to him the Committee would have no control over the doctors at all; yet, if anything went seriously wrong, all the blame therefor would fall on the Committee. Then again, supposing the hospital to be full with these doctor's paying patients and an accident case comes along. The subject of an accident must be admitted without any reference to doctor or committeeman, and which doctor is to be sent for to attend to it?

Mr. Stockwell: The hospital doctor, of course.

Mr. Griffith: Exactly; but who will be "the" hospital doctor under such circumstances? What stipulations are to be made with Dr. Lamb, and what is to become of the accident patient if all the beds are full? Is one of Dr. Lamb's patient's to be turned out to make room for him? These were points on which he would like some very decided information. However, the report did not say that a second medical man must be appointed. It said, "If in the meantime it could be arranged to allot Dr. Lamb one or two beds"——

Then there was another confused argument in which several members took part, and Mr. Wynne was understood to say something about the circumstances of Dr. Veech's appointment.

Mr. Windred jumped up, and addressing Mr. Wynne, said, "You were at the meeting at which Dr. Veech was appointed, and ought to recollect the circumstances." Mr. Windred explained that applications were invited for the medical officer; there was nothing about tenders for two doctors. Dr. Lamb applied in terms which were not in accordance with the Committee's ideas, and the end of it was that Dr. Veech was chosen.

Mr. Wynne said he recollected that Dr. Lamb's application was a very vague one. It said something about being appointed "on the Committee's terms."

Mr. Windred: Yes! And the Committee's terms were £40 a year; and Dr. Veech had given satisfaction, and he was retained in the position.

Mr. Wynne: Supposing Dr. Lamb had offered then to do the work honorary?

Mr. Windred: Then I would have been one of the first to support him. But he did not do so then.

Mr. Neilson proceeded to urge his motion.

The Chairman turned up the minutes of the annual meeting, and read a passage from them showing that Mr. Neilson moved an amendment with a view to having Dr. Lamb appointed.

Mr. Finch said he could not see how they could guarantee any doctor any beds.

Mr. Neilson persisted in his advocacy of Dr. Lamb's claim for consideration. The report said that "In the meantime it could be arranged"——

Mr. Griffith: "If." It says, "If it could be arranged."

Mr. Neilson (reading from the report): "In the meantime"——

Mr. Griffith: No! "If in the meantime"——

Mr. Neilson: There is no "if" about it.

Mr. Griffith: Pardon me; there is.

Mr. Neilson (looking closely at the report): There is "if," but it is not after meantime. (Laughter.)

Mr. Neilson said he would again move his resolution, namely, "That Dr. Lamb be allotted some of the beds for the use of patients who have come under his care and who require further treatment in hospital." If this were done, everything would be amicably settled; and there was no difficulty in working it.

Mr. Wynne: "The motion wants writing out." If the motion was written he would second it. He knew very well it would be carried, as then we would be complying with the wishes of the public and acting for the benefit of the institution. At present the hospital was being injured through this trouble about the doctors. He saw in a paper that through this difficulty Cumnock people would not get up any sports for the hospital this year, which was to be regretted. But he believed that Drs. Lamb and Veech would work well together.

Mr. Windred reminded the meeting, that at last meeting Dr. Veech was asked whether it was true as the report stated, that he had said he would work with Dr. Lamb, and he distinctly stated that it was not.

Mr. Wynne repeated that he would second the motion if it was written out by Mr. Neilson.

The motion was then written, and submitted by the Chairman.

Mr. Griffith said if the motion were carried it practically gave the hospital over to the doctors. He hoped members would consider well what they were doing before they voted for it. He maintained that the Committee's first care and anxiety was for the poor and needy, and not for patients who could afford to pay doctors, and had comfortable homes in which they could be treated. To this end, the Committee must have absolute control of the hospital; and it must be careful to not run the institution into such a state as would perhaps induce Dr. Veech to resign. So far, neither the mover nor the seconder of the motion had shown how their scheme was going to work. It was all very well to say, "Oh! it will work all right." That would not do. The Committee at present employs Dr. Veech, and if anything went wrong it looked to him. But under this proposed arrangement, if there were any complaints, who then must the Committee look to?

Mr. Wynne said that in large towns, such for instance as Orange, they had more than one doctor.

Mr. Griffith: Yes! And they are always in trouble.

The Chairman proceeded to put the motion, when——

Mr.

Mr. Packham said he would propose an amendment. He would move—"That Dr. Lamb be not appointed, and that the Treasurer be empowered to employ Dr. Lamb when he is wanted."

Messrs. Griffith and Finch rose to second this.

Mr. Windred failed to see that it was an amendment on Mr. Neilson's motion.

This point was discussed, and then Mr. Packham said that as there was doubt on the subject, he would submit it as a second resolution.

Mr. Griffith said he still could not see how Mr. Neilson's motion was to be made to work satisfactorily. But he thought that if Dr. Lamb's services were required he should be called in and be paid by the Committee.

The Chairman then put Mr. Neilson's motion, for which only the mover and seconder (Neilson and Wynne) voted, all other members voting against it.

Mr. Packham's resolution was then submitted and carried, only Mr. Neilson's hand being held up against it.

The Result.

By request, Mr. Read read the passage in the report which had reference to the proposed fever ward; to the cost of which the inspector had objected.

Mr. Black submitted a resolution to the effect that a reply to the report be sent to the Chief Secretary, stating that the matters therein referred to had been attended to.

A general discussion ensued as to how the subjects should be set forth, but eventually the meeting seemed to consider that this would be properly attended to.

Donation.

The secretary acknowledged receipt of £3 from Mr. McCulloch, of Buckinbah; and on the motion of Messrs. Black and Packham, it was ordered to be acknowledged with thanks.

Visiting Committee.

On the motion of Mr. Garlick, seconded by Mr. Neilson, Mr. G. Packham was put on the Visiting Committee for the ensuing three months.

Accounts.

The Secretary read the following list of accounts, namely:—Carriage, 15s. 8d.; vegetables, 11s. 6d.; gas, £1 2s.; W. Starr, bricks, &c., £1 11s. 6d.; H. A. Bennett, repairs, £2 7s.; R. Thomson, bread, £1 4s. 1d.; G. Packham, milk, £2 9s. 6d.; J. Packham, butter, &c., £1 6d. 2d.; C. Parker, groceries, £4 10s. 5d.; J. T. Parslow, junr., meat, £2 4s. 6d.; salaries and wages, £17 5s. 10d. Total, £35 15s. 2d.

The meeting then terminated at 1 o'clock.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MOLONG HOSPITAL.
(LIST OF SUBSCRIBERS TO THE.)

Printed under No. 6 Report from Printing Committee, 26 July, 1900.

[Laid upon the Table in accordance with promise made in answer to Question 7 of 5 July, 1900.]

Question.

- (7.) Appointment of Medical Officer, Molong District:—Dr. Ross asked the Colonial Secretary,—
- (1.) In answer to Dr. Ross' Question of the 21st June (No. 6), in reference to the necessity of appointing an additional or second Medical Officer for the more satisfactory and efficient working of the Molong Hospital, has he yet decided what steps (if any) he intends to take to have this public grievance rectified, in accordance with the wish of a large majority of the subscribers?
 - (2.) Is it his intention to compel the Hospital Committee to send in their reply to the officer's official report who some time back visited the locality in reference to the condition, management, and necessity of appointing a second Medical Officer to the institution?
 - (3.) Will he also insist on the Hospital Committee furnishing his Department with a complete list of the names and addresses of the subscribers to the Hospital Fund for the information of the public?

Answer.

Mr. See answered,—

- (1 and 2.) As soon as the reply has been received to the official report from the Hospital authorities the matter will be considered. I have sent a reminder to the Committee of Management to-day, asking them to expedite their reply.
 - (3.) The list of subscribers was furnished to this Department on the 19th February last in connection with application for subsidy, and is now with the Auditor-General. I will lay it upon the Table as early as possible.
-

LIST

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MOLONG HOSPITAL.

(CORRESPONDENCE RESPECTING THE APPOINTMENT OF A SECOND MEDICAL OFFICER.)

Printed under No. 12 Report from Printing Committee, 20 September, 1900.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 16th August, 1900, That there be laid upon the Table of this House:—

“Copies of all letters, papers, petitions, official reports, and other documents having reference to the appointment of a second Medical Officer for the Molong Hospital.”

(*Dr. Ross.*)

Dr. Ross, M.P., to The Chief Secretary.

Sir,

Molong, 24 February, 1900.

Herewith I enclose clipping from *Molong Argus* of letter from Dr. Lamb, M.A., complaining of the committee of the Molong Hospital, and which, at your hands and the interest not only of the institution but the public, demands some investigation.

It appears that Dr. Lamb, by the contents of his letter, had not received that justice and fair play that he was entitled to, and therefore the institution must suffer (it being subsidised by the Crown) in consequence, and therefore warrants the fullest possible investigation. The hospital consists of twelve beds and three nurses, and extra assistance when required. It is essentially necessary, therefore, that in place of only one medical officer there should be two, especially in cases of operations where chloroform is needed, in place of being left in the hands of nurses.

Dr. Lamb has put his case in clear and unmistakable language, and his complaint is one, it being a public institution, that demands public inquiry.

Yours, &c.,

ANDREW ROSS, M.D.

Acknowledge. For inquiry and report.—J.S., 26/2/00.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Dear Sir,

Sydney, 27 February, 1900.

In forwarding Dr. Lamb's letter to you that appeared in last Friday's *Molong Argus* re committee of the Molong Hospital and appointment of medical officer, I omitted to state that Dr. Lamb occupies the position of Government Medical Officer for Molong, and therefore has a just claim to have some share in the management of this institution, and one subsidised by the Crown.

Yours faithfully,

ANDREW ROSS, M.D.

The Principal Under Secretary to Dr. Ross, M.P.

Sir, Chief Secretary's Office, Sydney, 6 March, 1900.
I am directed by the Chief Secretary to acknowledge the receipt of your letter of the 24th ultimo, covering a communication from Dr. Lamb that appeared in a recent issue of the *Molong Argus*, in which he complains of the treatment meted out to him by the local hospital authorities, and to inform you that the matter has been duly referred to the committee of the Molong Hospital for any remarks they may desire to offer thereon.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Principal Under Secretary to The Secretary to the Molong Hospital.

Sir, Chief Secretary's Office, Sydney, 6 March, 1900.
In transmitting to you the accompanying copy of a letter addressed to this Department by Dr. Andrew Ross, M.P., covering a communication from Dr. Lamb that appeared in a recent issue of the *Molong Argus*, in which he complains of the treatment meted out to him by the local hospital authorities, I am directed by the Chief Secretary to request that you will invite the committee to furnish me with any remarks they may desire to offer on the subject.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

The Secretary to the Molong Hospital to The Principal Under Secretary.

[Re Dr. Lamb.]

Sir, Molong, 9 March, 1900.
Your letter, dated 6th instant, duly received. I will call the committee together as soon as possible, when a reply will be sent.

Yours, &c.,

W. C. READ,
Secretary.

Dr. Andrew Ross, M.P., to The Principal Under Secretary.

Sir, Sydney, 23 March, 1900.
It is several weeks since I sent in a clipping of Dr. Lamb's letter, the Government Medical Officer for Molong, in reference to the way the committee of the Molong Hospital has treated him; but up to this date I have received no reply. It is surely time that I had a reply to the charge or complaint made by Dr. Lamb. For your further information, I enclose a second letter from Dr. Lamb on the subject. The matter is one, I think, that demands the fullest information in the interest of the general public.

Yours, &c.,

A. ROSS, M.D.

[Enclosure.]

[Extract from the *Molong Argus*, 16 March, 1900.]

PUBLIC OPINION.—THE HOSPITAL COMMITTEE AND FAIR PLAY.

[To the Editor of the *Argus*.]

Dear Sir,—Will you kindly allow me an opportunity of showing the unreality of both of the objections that were brought forward against my application at the last meeting of the hospital committee?

(a) Much was said about the Hospital Act, behind which both chairman and secretary took refuge. Further, a lot of dust has been thrown, no doubt unwittingly, into the eyes of members of the committee and of the public, by references and appeals to this same Act (Public Hospitals Act, 1898).

Let anyone who doubts the following statements procure a copy from the Government Printer, Sydney (price 6d.), and study it for himself, and he will find—

1. The Molong Hospital has not yet been proclaimed under the Act, and all appeals to the Act by our committee are beside the mark. A proclamation from the Governor, published in the *Gazette*, has yet to be obtained.
2. Those hospital committees that have come under the Act are directed by the Act to appoint "annually"—not necessarily at the annual meeting—a treasurer, secretary, medical officer, warder, matron, "and any other officer or servant they may deem necessary for the efficient working of such hospital."

Thus the Act is meant to direct that these appointments must not extend over a year at a time, and that at some time every year—no definite time being stated—the committee must appoint an efficient staff.

Now, Sir, the Act, instead of preventing, actually commands a hospital committee to appoint an "efficient" staff; and as one man cannot give chloroform and operate, would you call the present staff "efficient"? No; the Act is on the side of efficiency, safety to the public, and justice, and our committee have yet to learn how to act up to it.

I must apologise for having to bring these facts before the committee and the public. With a most practical and experienced chairman, a paid secretary, a C.P.S., and several justices of the peace among their number, it should not be necessary for me to point out the true facts. But such is the case. He who doubts may read (Public Hospitals Act, Part II, Section 11).

It follows therefore, take it as you may, the chairman's ruling at last meeting is null and void. For the committee, on the score of illegality, to refuse to appoint an honorary medical officer, and at the same time to proceed with the building of a fever ward, is veritably to strain at the proverbial gnat and to swallow a whole camel. This in the face of the Act.

(b) Members of the committee also profess to be in a "fog" as to what was meant by division of the beds. The two principal methods—of dividing the beds among the medical staff, or of dividing the patients by taking month about—were referred to at the meeting. Whichever method is most in vogue in
New

New South Wales, I prefer the former, as being the fairer and as working more smoothly. It was not experience, but lack of experience, that led our new committeeman to say that he had never in his life heard of dividing beds among a medical staff. However, it is quite unnecessary to discuss the pros and cons at length here. For the benefit of the gentlemen who are in a "fog," and "in the dark," I may state that when an acute case, or an accident case, is brought into the hospital, if Dr. A's beds are full, the patient is assigned to Dr. B., and *vice versa*. It is not the doctor but the patient that has to be considered. The committee are at liberty to adopt whichever method seems to them best. Again thanking you for your courtesy, I remain,

Yours, &c.,

R. LAMB.

The Principal Under Secretary to The Secretary to the Molong Hospital.

Sir,

Chief Secretary's Office, Sydney, 26 March, 1900.

I am directed by the Chief Secretary to draw your attention to my letter of the 6th instant respecting the complaint preferred by Dr. Lamb against the Molong Hospital authorities, and to request that you will invite the committee of such institution to furnish me with an early reply thereto.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

The Principal Under Secretary to Dr. Andrew Ross, M.P.

Sir,

Chief Secretary's Office, Sydney, 26 March, 1900.

I am directed by the Chief Secretary to acknowledge the receipt of your letter of the 23rd instant further respecting the complaint preferred by Dr. Lamb against the committee of the Molong Hospital, and to inform you that the secretary of the institution has been requested to furnish me with an early reply to the communication addressed to him on the 6th idem on the subject.

2. I am to add that when such reply has been received a further communication will be made to you.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

Dr. Andrew Ross, M.P., to The Principal Under Secretary.

Sir,

Sydney, 3 April, 1900.

Some weeks back I forwarded a clipping from *Molong Argus* of complaint made by Dr. Lamb, the Government Medical Officer for Molong, against the committee of the Molong Hospital; but, remarkable to say, to this date I have yet received no reply to Dr. Lamb's complaint against the committee from the committee of the hospital, to whom you informed me the committee had been called upon for an explanation. The Molong Hospital, being a public institution and subsidised by the State, are entitled to furnish some explanation to the complaint made by Dr. Lamb, an officer of the Government. May I ask you, therefore, to insist on the committee sending in their answer without further delay.

Yours, &c.,

A. ROSS, M.D.

The Secretary to the Molong Hospital to The Principal Under Secretary.

Sir,

Cottage Hospital, Molong, 3 April, 1900.

In reply to your letter of the 6th ultimo, which was duly placed before the committee of the Molong Hospital; and they desire me to inform you that as there were only two applications for the position of medical officer to the institution, and as they had decided to allow the sum of £40 per annum as payment for same, they considered that one medical officer was sufficient for the efficient working of the hospital, they re-appointed Dr. Veech as medical officer for the year 1900, he having given every satisfaction, and, therefore, fully entitled to be re-elected, there being no complaints of any sort, but, on the contrary, only praise for the manner in which he had carried out his duties.

As for any unfair play that Dr. Lamb complains of, my committee fail to see where they have treated him in such a manner, as he has always received every courtesousness from their hands. Herewith I beg to hand you copies of applications and newspaper report of the meeting when the medical officer was appointed.

I have, &c.,

W. C. READ,

Secretary.

Dr. Ross may be so informed.—C.W., 10/4/00. Approved.—J.S., 10/4/1900.

[Enclosures.]

To the President and Committee of the Molong Hospital.

Gentlemen,

Molong, 9 February, 1900.

I have the honor to apply for the position of medical officer to the Molong Hospital on the same terms that I held the position last year.

If again elected I will try to carry out my duties with satisfaction to all concerned.

I have, &c.,

M. VEECH.

To the President and Members of the Hospital Committee.

Gentlemen,

Molong, 23 January, 1900.

I herewith apply to be appointed as medical officer to the local hospital during the ensuing period according to terms arranged by the committee.

I am, &c.,

ROBT. LAMB.

The

[*The Molong Express and Western Districts Advertiser*, Saturday, 17 February, 1900.]

MOLONG HOSPITAL.—RE-ELECTION OF CHAIRMAN STOCKWELL.

THE first meeting of the newly-elected committee of Molong Hospital was held in the Town Hall, Monday evening, 12th February. There were present:—Messrs. Chas. Stockwell, W. C. Read (Secretary), J. Black, W. J. Windred, E. G. Finch, Geo. Packham, F. S. Murray, D. M. McCallum, J. F. Wynne, J. Neilson, G. Burgess, Geo. Garlick, A. Parker, also Dr. Veech.

Election of Officers.

Chairman.—Mr. Read said the first business was to appoint a chairman.

Mr. A. Parker proposed that Mr. Charles Stockwell be chairman.

Mr. J. F. Wynne seconded the motion. Mr. Stockwell had done so well in the past, he had no doubt he would do so in the future.

Mr. Read submitted the motion, which was carried unanimously, and Mr. Stockwell took the chair.

Mr. Stockwell thanked the gentlemen present for the honor they had conferred upon him, and was glad to welcome the new committee. He thought they had been remarkably successful in the past, and had no doubt they would be equally so in the future. (Applause.)

Vice-chairman.—Mr. John Black proposed that Mr. S. P. Reynolds and Mr. J. D. Day, be Vice-chairmen for the ensuing twelve months. Seconded by Mr. G. Garlick, and carried.

Treasurer.—Mr. A. Parker nominated Mr. John Black for the position of Treasurer. He was a good man for the office, and was good at taking care of the cash. Seconded by Mr. W. J. Windred, and carried.

Minutes of the previous meeting were then read, and confirmed.

Visiting Committee's Report.

Mr. Read read the following:—"Molong, 12th February, 1900. The President and Committee Molong Hospital. Gentlemen,—We visited the institution several times during the month, and found everything satisfactory.—Yours faithfully, John Black, W. J. Windred, D. M. McCallum.

Mr. Garlick moved the reception of the report. Seconded by Mr. E. G. Finch, and carried.

Matron's Report.

This was read by the Secretary, as follows:—"To the President and Committee of the Molong Cottage Hospital. Gentlemen,—I have the honor to report.—Patients treated during month, 22 (18 males and 4 females), of which 7 (6 males and 1 female) were in on the 1st January; since admitted, 15 (12 males and 3 females); discharged, 11 males, all cured, 1 died; remaining on 31st January, 10 (7 males and 3 females). I gratefully acknowledge the following gifts received:—Mrs. Dickenson, pair of fowls; Mr. Martin Toohy, bag of onions; Mrs. Fitzpatrick, fowl; Mrs. Roberts, buns; Mr. J. White, straw; Mrs. Dickenson, turkeys; Mrs. Pike, fruit; weekly supply of papers from School of Arts and *Express* Office.—ELSIE KIRBY.

On the motion of Mr. W. J. Windred, seconded by Mr. A. Parker, the report was received, and the usual vote of thanks to donors of gifts recorded.

Christian Army Contribution.

The Treasurer (Mr. J. Black) said he had very much pleasure in announcing that he had received the sum of £2 11s. from the Christian Army. These people worked in a very quiet, unostentatious manner, and regularly made a contribution without being asked to do so. He thought they deserved the best thanks of the committee, and moved that a vote of thanks to them be entered in the Minutes, and that the Secretary write to them acknowledging receipt of the money, and conveying the committee's thanks.

Mr. G. Packham had much pleasure in endorsing the sentiments expressed by Mr. Black, and seconded the motion, which was carried.

Medical Officer.

The Secretary read applications from Dr. Lamb and Dr. Michael Veech, for the position of medical officer to the hospital.

Mr. W. J. Windred moved that the late medical officer, Dr. Veech, be re-appointed. That gentleman had been very attentive to his duties in every respect, and had given complete satisfaction. He could not see any reason for making a change; but, on the contrary, considered they would be doing wrong by so doing. He referred to the difficulties experienced last year with regard to the medical officer, and maintained it was undesirable to court a repetition of them. On that occasion, Dr. Veech had met the committee in a reasonable and proper manner, and it would be very wrong for them to throw him over now, and without the slightest kind of complaint.

Mr. Garlick said he had much pleasure in seconding the motion. He believed Dr. Veech had proved himself to be an excellent officer, and he certainly had never heard any objection to him.

Mr. Neilson said he would move an amendment. There were now two medical gentlemen in town, and it was only fair to give the other one a trial. If a serious operation had to be performed, two doctors were required; and if the two local gentlemen did not work together, they would have to go to the expense of sending to Orange for a doctor. It was only fair to give the other a trial.

Mr. Black said he must oppose the amendment, and briefly recited the details of last year's troubles over the appointment of a medical officer. He objected to an interchange of doctors, by giving them month about, as he did not believe such a plan would work satisfactorily. On the other hand, he knew that Dr. Veech was a most attentive officer, who spared no time in the execution of his duties, and on several occasions he had remained all night at the hospital. There were no complaints of any kind against him, but plenty of complimentary remarks about him could be heard. He saw no reason at all for making any alteration of existing arrangements, and positively objected to any change. Moreover, if the step proposed were adopted, it would be necessary to give Dr. Veech a month's notice, and a sufficient reason for dispensing with his services. The mere statement that it was only fair to give another man a trial would

not

not be a sufficient reason. If any member of committee, or any subscriber or patient, had any complaint to make against Dr. Veech, it was quite open to them to make it, and it would be thoroughly considered. Until something of this kind were done he would strongly oppose any change.

Mr. Neilson wished it to be distinctly understood that he had not the slightest complaint to make against Dr. Veech; but he thought that as there were two medical men in town they should have turn about. Fair play was bonny play. Dr. Lamb, whatever his attitude was last year, now came forward and offered his services on the committee's terms, and his offer should be accepted. Suppose there was a serious operation needed, and Dr. Lamb declined to assist, then they must go to Orange for a doctor. But he did not think that either of the local doctors would refuse to assist the other; and as there were two here they should have turn about. Fair play was bonny play. At the same time he had no word of complaint against Dr. Veech, who was an excellent officer.

After some remarks by Mr. Packham and Mr. Windred, condemnatory of a change, and the amendment not being seconded, the motion to appoint Dr. Veech was put, and carried.

Dr. Veech thanked the committee for its renewal of confidence in him, and was glad to hear he had given satisfaction. Certainly he had endeavoured to carry out his duties to the best of his ability, and he would continue to do so. (Applause.)

Fever Ward.

Mr. Stockwell (chairman) wished to draw the committee's attention to the absolute necessity for the erection of a fever ward; not necessarily of their own motive, but the Government would insist upon one being provided. Financially, they were in a good position, and could erect the ward without any extra canvassing for subscriptions. He thought they should instruct the secretary to communicate with some architect, and have a plan of a fever ward prepared by next meeting.

Mr. Wynne was very glad to hear that the financial position of the institution was so good, and endorsed the idea suggested by Mr. Stockwell. He moved that the secretary be instructed to communicate with Mr. Lamrock, of Orange, and ask him to visit Molong for the purpose of preparing plans for a fever ward for the hospital. Also, that a works committee be formed to meet the architect and explain to him what was wanted; such committee to consist of—Messrs. J. Black, W. J. Windred, Chas. Stockwell, the Medical Officer, and Secretary.

Mr. E. G. Finch seconded the motion, which was carried.

Mr. Geo. Packham proposed, that Dr. Ross, M.P., be written to, with the object of ascertaining whether he could get £100 from the Government towards the erection of a fever ward. He noticed that in several other towns special grants had been given for hospital purposes, and did not see why Molong should not be similarly favoured. Moreover, inasmuch as the Government insisted on the erection of a fever ward, it should certainly bear some portion of the expense.

The secretary said that some time ago £100 was granted, but it was never accepted.

Mr. Neilson seconded the motion. He thought that if the money could be obtained they might as well have it.

Mr. F. S. Murray asked how long ago the money was granted? It was just possible it was still available.

Mr. Stockwell saw an objection to obtaining Government aid in this matter. If they did so, it would involve an additional staff, which would be under the control of the Government to some extent; and the Government would submit its own plans, supervise the erection of the building, and probably involve them in heavy and unnecessary expenditure. He preferred that the committee manage the matter in its own way.

Mr. Wynne also thought the committee should "do it on their own." They would then show that Molong was very different to other towns.

Mr. Stockwell said he was sure it would be a mistake to ask the Government for money in this matter. The expense would be much greater than was necessary, and by doing the work themselves, they would set an example to other places.

Mr. Packham then said that, with the consent of the seconder, he would ask that his motion stand over for the present.

Mr. Neilson agreed to the suggestion, and the motion was withdrawn.

Surgical Instruments.

The chairman said they were all aware there were no surgical instruments belonging to the hospital, as it had been the practice of the medical officers to find their own instruments. He thought it was time the institution was furnished in this respect. He understood that a list of instruments had been submitted to Dr. Veech, which could be obtained for about one-third of their cost; and he suggested that they be purchased.

Dr. Veech, in response to the chairman's request, said the instruments referred to had been the property of the late Dr. Tennant, of Dubbo. They were nearly new, and of the most approved pattern, and could be obtained for about £45. When new, they would have cost at least £150. Some of them would not be required at the hospital, as they pertained to cases which were not treated therein. The price of those was between £10 and £15, and he would take them for his private practice; that would leave the committee to pay about £30 for those useful in the hospital.

Mr. Stockwell reminded the committee that a long time ago it was decided to spend £5 a month on surgical instruments, but that idea had not been carried out.

Mr. Wynne thought these instruments should be purchased. It was not at all reasonable to expect the medical man to find instruments for hospital work; and he believed the committee would act wisely in buying them; of course, providing they were in good order. He proposed that the instruments referred to be purchased, subject to Dr. Veech taking those which were not required at the hospital.

Mr. Neilson seconded the motion.

A discussion then ensued as to who should inspect the instruments, and determine whether they were worth the money or not. Committeemen admitted their inability to handle such a delicate subject.

Eventually, Mr. F. S. Murray submitted an amendment, to the effect that a sum of £30 be voted for the purchase of surgical instruments, such sum to be spent at the discretion of the chairman.

Mr.

Mr. Wynne said he would second the amendment, as he liked to see some opposition. With regard to the value of the instruments in question, he did not think Dr. Veech would recommend them unless they were in good order, and worth the money. He thought the committee was getting a bargain.

Mr. Stockwell said he quite agreed with Mr. Wynne that the instruments should be purchased; but he objected to Mr. Murray's amendment, by which the responsibility of the purchase would be placed on his (Mr. Stockwell's) shoulders. He did not claim to be a competent judge of surgical instruments.

The Principal Under Secretary to Dr. Andrew Ross, M.P.

Sir,

Chief Secretary's Office, Sydney, 17 April, 1900.

In continuation of previous correspondence respecting Dr. Lamb's complaint against the committee of the Molong Hospital, I am now directed by the Chief Secretary to append copy of a communication which has been received from the secretary of such institution on the subject.

I have, &c.,

CRITCHETT WALKER,
Principal Under Secretary.

Dr. Robert Lamb to The Chief Secretary.

Sir,

Molong, 7 April, 1900.

As my name has appeared in the public Press in connection with a letter from your Department to the committee of the Molong Hospital, may I request the liberty of addressing you, and of explaining the matter in a nutshell, as it affects myself and the public weal. It has already been pointed out that the committee are establishing a monopoly, and that my patients, as long as they remain such, even when they are entitled to be treated in the hospital, are debarred from that privilege. This applies to quite one-half of the community.

Further, of the £840 standing to the credit of the hospital, the Government have given virtually one-half; and of the £600 required annually to carry on the institution, the Government also supplies one-half; indeed, the Government subsidies last year amounted to £447. Hence I, being Government medical officer, representing the Government in this district, have applied to be appointed as an honorary medical officer with half the beds. This application is being repeatedly refused, for no other reason than a disinclination on the part of the ruling section of the committee to give fair play.

Perhaps it is my duty to call attention to the fact that the hospital, instead of being reserved for necessitous cases, is being used for all and sundry.

That the present staff is not efficient, as there is but one medical officer appointed, and my own assistance is frequently required.

As representing the Government here, I am again applying to the committee to be appointed to the staff; and if the matter comes within the province of the Chief Secretary, and if the request is a legitimate one and meets your view, may I ask that you would be so kind as to advise the committee to grant the application.

I am, &c.,

ROBT. LAMB.

For report.—J.S., 9/4/00.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 14 April, 1900.

Herewith I enclose clipping from the *Molong Argus* of the 13th April, 1900, from Dr. Lamb, Government Medical Officer for the district of Molong, complaining of the way the hospital committee have treated his application to be appointed one of the medical officers of this institution and one subsidised by the Government.

The complaint is one in the interest of the public that demands the fullest investigation, especially to a Government Medical Officer.

Yours, &c.,

A. ROSS, M.D.

I think an inquiry should be made.—J.S., 17/4/00.

[Enclosure.]

[EXTRACT from the *Molong Argus*, Friday, 13 April, 1900.]

PUBLIC OPINION.—THE HOSPITAL COMMITTEE AND FAIR PLAY.

[To the Editor of the *Argus*.]

Sir,

I have read your report of the last meeting of the hospital committee, and have found in it something refreshingly new. Mr. Windred's imagination is surely very fertile when he could declare that I was a monopolist, and that I had asked for the very monopoly that I am now appealing against. Or, perhaps Mr. Windred was drawing a red herring across the scent. If so, Mr. Griffith and the "several members" were readily caught and fell at once into the trap. Surely they were very willing, or their memories were very short, or they were confused with the heat of the discussion. It is a good thing that one man at least was able to maintain his equilibrium, and stand out for the truth. The committee and the public know well enough that from first to last I have fought against a monopoly, either for myself or for another. And the committee, and the public, too, know well enough who is clinging to the said monopoly at the present moment. I have just come across my first application, made when Dr. Browne was here. It reads as follows:—

Molong, 31st December, 1898.—To the President and Members of the Hospital Committee.—Gentlemen,—Having settled in Molong and taken up practice with a fair prospect of success, I desire both to assist and participate in the work of your public institutions. I therefore request you, at your annual meeting, to favourably receive my application to be appointed

appointed a medical officer to the hospital. This I do, not only on behalf of myself, but in fairness to those of my patients who may be suitable applicants for admission to the benefits conferred by the hospital. I have no wish to disturb present arrangements in any way, and do not make this application with a view to remuneration. If appointed, I shall do my utmost to add to the efficiency of the hospital, and to preserve the harmony at present existing.—I have the honor to be, &c., yours faithfully, ROBERT LAMB.

Could I have been fairer?

Again, the terms of my application this year were as follows:

I hereby apply to be appointed as medical officer to the hospital for the ensuing period, on the terms arranged by the committee.

Now, Sir, I did not ask for a monopoly, but, as was explained at the meeting, for the next "turn"; and I left the committee at liberty, among other things, to make the "period" as short as they pleased. Even Mr. Black took it in this sense, for the *Express* (17th February) reports him thus:

He objected to an interchange of doctors, by giving them month about, as he did not believe such plan would work satisfactorily.

Surely the committee will be convinced out of their own mouth? Yet Mr. Windred has the effrontery to charge me with having asked to be appointed sole medical officer with the monopoly. And pray who are the "several members" who

Challenged (Mr. Neilson's statement) and claimed that Dr. Lamb's application was very clear. He applied to be appointed the medical officer of the hospital.

What a God-send this "find" must have been to them! Yet I am sorry; for what hope is there of justice or fair play when such false and specious arguments are so eagerly grasped at?

Doubtless outsiders wonder why there should be all this fuss over the appointment of an honorary medical officer to a charitable institution. But is it a charitable institution? "Ay, there's the rub." Let us put aside the word "charitable"; people object to it. The institution is meant to help those who need help—such help as they cannot afford outside, and every one is glad to assist and to see such help both given and taken. But, as a prominent supporter of the hospital pointed out recently, the rule is rapidly being departed from, and the hospital, instead of being reserved for the really necessitous, is beginning to be used by all and sundry. Indeed, the practice is becoming fashionable, and the hospital is usurping the place of a private hospital. While the committee, in their annual report, rejoice that

This is the largest number of patients treated at the hospital during one year since its foundation—

the private hospital we had in the town, such as it was, had to close up, and its nurse had to seek "fresh woods and pastures new." In fact, if the committee would add a maternity ward, as well as a fever ward, to the fair buildings on the hill, private nursing in the town would be reduced to the vanishing point.

Now the rule referred to above (I should say—the rules and regulations), showing clearly the proper function of the hospital and the nature of the cases that are admissible, will be found conspicuously printed on the back and front of each subscriber's ticket. The first four lines on the front read thus:—

I recommend the bearer ————— as an in-patient, and I certify that he is in necessitous circumstances, and unable to pay for medicine and medical advice.

And the first regulation on the back, with which subscribers must conform, is this:—

1. To ascertain that the person desirous of obtaining an order is without means.

Now, Sir, it is easily seen where the monopoly comes in. The one doctor, contrary to the regulations, is privileged to utilise a public institution and its nursing staff for his own and his patients' benefit. The other doctor and his patients are debarred. (Nevertheless he is very useful to have by for emergencies, and to cover the present inefficiency.) True, two blacks would not make a white; but a community that loves fair play will not be satisfied with the present state of affairs.

There is another phase of the subject which the committee has forgotten. Of the £842 in the banks, the Government have given virtually one-half. Again, of the £600, nearly, required to carry on the hospital annually, the Government also gives one-half; and, in fact, the Government subsidies last year to the Molong Hospital amounted to £447. Hence I, as Government Medical Officer, and as representing the Government in this district, claim a right to honorable and fair consideration when applying for a due share in the work of the hospital.

Notwithstanding the Chairman's ruling—which I maintain is contrary to the letter and spirit of the Act*—that application will be laid again before the next meeting of the Hospital Committee.

Doubtless by that time the Chairman will be more amenable to reason and to what is just. The following declaration made at last meeting is not only far removed from that spirit of "sweet reasonableness" so desirable in one who occupies the principal seat, but it amounts to a petty tyranny:

I have already given my ruling about this matter—that Dr. Lamb's application is invalid. I will not allow it to be discussed any more in future, and if members of the committee are dissatisfied with my ruling, they can remove me from the chair if they like.

There is still some power in the well-known parable of "The Widow and the Unjust Judge," and we have reason to hope that, under its teaching and influence, peace and right will prevail without such a serious result to the committee as the loss of its worthy Chairman.

Again thanking you for your courtesy,

I am, &c.,
ROBT. LAMB.

Molong, 7 April, 1900.

* Observe the Chairman's ruling:—"The Chairman (to Mr. Neilson): My dear fellow, don't you know that all officers of the institution are elected, according to the Act, at the annual meeting?"—*Argus*, 9th March.

Compare the Act, Part II, Clause 11:—"The committee of any hospital shall annually appoint a treasurer, and shall also appoint a secretary, medical officer, warden, matron, and any other officer or servant they may deem necessary for the efficient working of such hospital."

NOTE.—The Act thus insists that the treasurer only has to be appointed every year; that the committee must appoint an "efficient" staff, and no particular date or meeting is specified at which this is to be done.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 25 April, 1900.

I do really think Dr. Lamb, the Government Medical Officer for Molong, is being unfairly treated by the Molong Hospital committee, and it cannot be denied but what it is necessary for the more satisfactory and efficient working of the institution that two medical officers should be appointed instead of only one. May I ask to be informed what you intend to do in this public matter? I enclose clipping from *Molong Argus* for your information, and signed by myself, feeling sure that the bulk of the general public are in favour of the appointment of Dr. Lamb as second medical officer.

Yours, &c.,

ANDREW ROSS, M.D.

Send Mr. Wilson up to report upon the hospital and the management generally. Get all letters and papers connected therewith. Inform Dr. Ross, M.P.—J.S., 27/4/00.

[Enclosure.]

PUBLIC OPINION.—THE HOSPITAL COMMITTEE FRACAS.

[To the Editor *Molong Argus*.]

SIR,—In order to render what little assistance I can to bring about, if possible, an amicable and satisfactory settlement of the hospital committee *contretemps*, or unpleasant embroglio, I crave your indulgence while I endeavour in a friendly spirit to offer a few remarks on a question that has created much dissatisfaction and ill-feeling. It must be admitted by all fair unbiassed-minded persons who have taken the trouble to read Dr. Lamb's terse and lucidly-expressed contribution in your last issue on the above subject, that his complaint is not without some degree of provocation, and must enlist at least a fair share, if not the entire sympathy and approbation of the public. The committee in their somewhat misplaced zeal, or perhaps arrogant simplicity, seem to think they can do just as they please with this charitable institution, forgetting the fact that they are for the time being merely the servants of the public or subscribers, and therefore liable at all times (like any other responsible body) to have their actions scrutinised, and fairly and reasonably criticised. By persisting in their present, I won't call it obstinacy, but rather indiscretion, they are simply attempting to flout the public in the face by declining to accept the services offered by Dr. Lamb as a second medical officer, and one, be it said to his credit, that has so liberally and honourably offered his professional services to the institution gratuitously. What fairer or more reasonable offer can the committee desire than this? The committee must see that the suffering public are entitled to fair and full consideration from a Government subsidised institution, especially when it is known that the person who complains (and not without reason) is the Government Medical Officer for the district, and therefore entitled to have some say in the management of the institution—this too for the sake of poor patients entitled to admission who may come under his notice in his official capacity. Can it for a moment be doubted or denied that the institution would be considerably benefited by having the services of two medical officers in place of one, and both officers should be placed on the same footing of equality.

As the institution is now worked, according to Dr. Lamb's complaint, the two medical residents must at times unnecessarily be brought into unpleasant conflict with each other, in consequence of which the public in some degree are made to suffer—that is to say, by the one having the sole management of the institution to the disadvantage of patients belonging to the other. This is a state of affairs in the working of a STATE SUBSIDISED CHARITY that ought not to be allowed to exist in the general interests of the public, and one, at the hands of the Government, that demands the fullest investigation, in order that such public grievances may be rectified as speedily as possible, and the institution relieved from any suspicion of being in the hands of a clique or monopoly. It is not the whims, convenience, and caprice of the committee that has to be studied or considered, but it is the unfortunate suffering poor who have occasion to seek temporary shelter and medical aid in the institution, but are debarred (as Dr. Lamb clearly enough points out) by having only one medical officer attached to the institution. Not that I, in these few remarks, seek to disparage in any way the valuable services rendered by the present officer; but, as the old adage says, "two heads are better than one," more especially when serious accidents or capital operations are required, in place of looking to nurses for help that forms no part of their duties, or when either officer happens to be absent in the country on some emergency call. Dr. Lamb therefore, I maintain, is entitled to the sympathy of the entire public, and his gratuitous medical services should readily and thankfully be accepted by the committee in the interest not only of the subscribers but the general public; and not because of any latent pique or spite the committee may possibly bear towards Dr. Lamb, or Mr. Neilson, for having so honestly and manfully stood by the cause of FAIR PLAY AND JUSTICE. For the sake of peace, and in the future interest of the institution, I sincerely hope the committee will see the propriety and justice at their next meeting of accepting Dr. Lamb's liberal offer, by appointing him as an additional medical officer for the more satisfactory and efficient working of the hospital.

Yours, &c.,

ANDREW ROSS, M.D.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 3 May, 1900.

A telegram, I observe, appears in a late issue of the *Herald* and *Telegraph*, from Molong, in which it is stated that an officer from your Department paid a visit of inspection to the Molong Hospital during the week; this, I presume, being in connection with certain complaints made by Dr. Lamb (the Government Medical Officer for Molong) in reference to the appointment of medical officers for that institution, and subsidised by the Government.

As I have taken the trouble, on behalf of the public, to bring the matter under your special notice, may I ask you to kindly favour me with a copy of the officer's official report, so that Dr. Lamb, the general public, and myself, may know exactly what steps, if any, are being taken in the matter.

Yours, &c.,

ANDREW ROSS, M.D.

Approved.—J.S., 4/5/00.

Molong

Molong Hospital.

At the request of the Principal Under Secretary, I visited the Molong Hospital on the 28th April last to report upon the institution generally, and upon the claim of Dr. Lamb for appointment as one of its medical officers.

The hospital was opened at the beginning of 1898. The site, about 8 acres, in which it stands, is somewhat under a mile from the centre of the town, and is in an elevated and suitable position.

The main building, which is a rather pleasing structure in appearance, is of brick with slate roof, and is satisfactory in construction and arrangement, except that it would have perhaps been better had a separate operating-room been provided in place of utilising an extension of the male ward as such, which is obviously open to objection. This extension is screened off when an operation is being performed. The number of operations, however, has so far been small.

There are two wards, with accommodation for twelve patients—eight in the male and four in the female ward. The other rooms in the main building are a committee room, matron's bedroom, nurses' room, pantry, and store rooms, and off each ward are closets, bath, and lavatory. At the rear, connected by a covered way, is a building of similar construction used as a kitchen, nurses' sitting-room, and laundry.

There is also a morgue, and a wooden iron-roofed detached store room.

The buildings cost between £1,500 and £1,600, towards which, I was informed, the Government contributed in the first instance £500 as a special grant.

The sanitary arrangements are fair, but the spot upon which the drainage from the hospital is discharged is too close to the building, and might with advantage be removed 20 or 30 feet further away.

The institution is under the control of an elected committee of sixteen—a chairman, two vice-chairmen, a treasurer, and twelve members. From the committee a visiting committee of three is appointed, which is changed in personnel by the retirement of one and the appointment of another member each month. The general committee meets once a month, and the visiting committee visits the hospital once a week. There are always five trustees in whose hands are placed the funds of the hospital.

The staff consists of a medical officer, paid £40 a year, a matron £60 a year, two probationary nurses £25 each, a cook and laundress £30, and secretary £20 a year. A gardener is employed occasionally and receives a small remuneration. The auditors are each paid a fee of £1 1s. which, it is said, is invariably refunded to the institution as a contribution.

The matron, who was appointed in March, 1899, is a fully qualified nurse.

The medical officer, Dr. Veech, visits once a day, or oftener if required.

The number of patients in hospital at the time of my visit was six. The number treated in 1898 was 102, and in 1899, 145. The average daily number in the latter year was eight. For all ordinary requirements the accommodation is ample, but no special provision has been made for the treatment of cases of infectious disease, to which reference will subsequently be made. The hospital provides treatment for out-patients, the number of this class in 1899 being thirty-four. Patients are admitted on the order of a subscriber (each subscriber having one order a year), the medical officer, the Government Medical Officer, or on being brought to the institution by the police. Before admission on a subscriber's order, the patient must be examined by the medical officer, with a view to ascertaining his or her fitness for hospital treatment.

The hospital is clean and well kept, and the management generally (assuming that patients admitted have been proper subjects for hospital treatment) has been economical, and, to all appearances, well directed and business-like.

The average annual cost per occupied bed in 1899 was £73 9s. 3d., or £1 8s. 3d. a week.

It would be of advantage if the hospital were placed in telephonic connection with the residence of the medical officer, in view of its distance from town.

The financial position of the hospital is good. At the commencement of 1898 the amount of funds in hand was £592 11s. 5d.; £441 was spent in improvements in that year. At the beginning of 1899 the credit balance stood at £405 18s. 8d., and at the close £842 10s., £757 1s. 5d. of which was deposited in the Savings Bank under four separate accounts, each in the name of a different trustee. This expedient is resorted to so that interest may be obtained on the whole amount. The funds now in hand amount to £765. They consist entirely of accumulated surpluses of revenue over expenditure.

The Government have, I am informed, only given one special grant to the hospital—that of £500 for the building; but each year the ordinary £1 for £1 subsidy has been received. The income for each of the past two years was as under:—

	1898.			1899.		
Subscriptions, donations, and proceeds of entertainments	£	s.	d.	£	s.	d.
Subscriptions, donations, and proceeds of entertainments	438	16	6	482	5	9
Patients' payments	59	12	9	89	2	6
Subsidy	350	18	3	447	16	7
Interest	10	11	1	5	0	5
	<hr/>			<hr/>		
	£859	18	7	£1,024	5	3

The expenditure was—In 1898, £1,046 11s. 4d.; and in 1899, £587 13s. 11d.

No difficulty, it seems, is found in obtaining subscriptions and donations, and a large proportion of the amount collected is received from the outlying districts, particularly Cumnoock. In 1899, £302 18s. 2d. was received as the proceeds of entertainments (sports, &c.) conducted on behalf of the hospital in the town and district. The annual report does not contain a list of subscriptions and donations, and the attention of the committee might be officially drawn to this omission.

The population of Molong is said to be about 1,200; but the district from which the hospital would gather patients is a large and fairly populous one.

The supplies for the hospital are not procured under contracts, but are obtained from the local tradesmen in turn, for a month at a time, conditionally on their being full subscribers of £1 1s.

The committee purposes erecting a brick infectious diseases cottage for four beds. Plans have been prepared and tenders called for, the lowest of which is £610. The tenders at the time of my visit had not been before the committee for consideration, having only just been opened.

While special provision should certainly be made for the treatment of infectious cases, there is no present or prospective need which would justify the expenditure of so large an amount on this object. The town of Molong is a healthy one, and very few cases of infectious disease have occurred. In 1898 there were only four cases in the hospital which should have been isolated, three in 1899, and one in the past months of this year.

The charge is made by Dr. Lamb in official correspondence that the hospital, "instead of being used for necessitous cases, is being used for all and sundry," implying that persons in a position to pay for medical treatment outside are admitted into the hospital. This is a matter always of difficulty in dealing with country hospitals. A person residing many miles away may need daily medical and nursing attendance, which it is perhaps only possible to receive in the main town, and there (1) he may be unable to obtain suitable residence for operative or other treatment; or (2) while possessed of small means, these may not be sufficient to cover ordinary medical and nursing charges. In such cases there seems to be no option but to admit him to the hospital; but it then becomes the duty of the committee to see that, if able, he pays the full cost of his treatment, or such portion as can reasonably be expected of him.

Some such cases appear to have occurred in this instance, but the charge made by the hospital has, under one of their rules, been limited to £1 a week.

In 1898 the amount received from patients was £59 12s. 9d., increasing to £89 2s. 6d. in 1899. In the majority of cases the full amount of £1 a week has been paid, and it is not unreasonable to assume that in some instances the patients were in a position to pay more. From a record kept by the matron it was ascertained that in 1899 twenty-six out of thirty-eight patients paid at about that rate (£1 a week), the other payments being:—

£	s.	d.	
0	7	6	for 12 days in hospital.
1	0	0	" 19 "
1	5	0	" 19 "
1	10	0	" 43 "
1	15	0	" 16 "
3	0	0	" 38 "
3	0	0	" 47 "
5	0	0	" 47 "
5	0	0	" 50 "
5	0	0	" 3 of one family, totalling 85 days in hospital.

In the whole year there were thirty-nine paying patients, or 26·9 per cent. of the number treated—a fairly large proportion.

This year there have been eleven paying patients (from whom £22 15s. have been received to 23rd April), seven of whom have contributed at the rate of £1 a week.

A closer inquiry would have been a long and rather delicate matter, with probably no conclusive result. The president, secretary, and matron assured me that in nearly every case the patients have been in poor circumstances, and, in one instance, where more might have been paid, the president justified the committee's action, on the ground that had more been charged a large number of donations would have been lost from Cumnock, where the patient, a well-to-do butcher, took a leading part in organising sports in aid of the hospital funds. This patient was in a position to obtain the services of Dr. Clubbe from Sydney to perform an operation upon him in the hospital, which, I understand, must have been a costly matter. Another case was that of the wife of one of the committeemen, who was in the hospital for a few days for operative treatment. In both instances, I was told, suitable room could not be found for them elsewhere in the town.

No hard and fast line can be drawn between patients who shall and shall not be admitted, but it behoves the committee not to be too free in the bestowal of the charity of their institution, and, when circumstances seem to demand the admission of patients in fair financial circumstances, to see that no loss to the institution is occasioned.

As to the contention of Dr. Lamb for appointment as joint medical officer, misunderstandings have evidently taken place, but the matter resolves itself into three points for consideration:—

- (1) Is the efficiency of the hospital impaired under the present arrangement of having only one medical officer.
- (2) Has the monetary support of the public been lessened.
- (3) Has the charity of the institution been abused.

In neither respect can I learn that the institution has so far suffered, at least to any very material extent.

The subscriptions increased during 1899; and in regard to patients, while admission may perhaps have been easily obtained in some instances, *i.e.*, without a very strict regard to the fact that the hospital is a charitable institution, I do not think that the public interests have appreciably suffered. I sought to ascertain whether members of the two local branches of friendly societies had been granted unwarranted admission, but could not find that such was the case.

As to the question of efficiency, Dr. Veech's services meet with the committee's fullest approval, and, so long as Dr. Lamb has been ready, as he has in the past, to give his services in consultation and the administration of anaesthetics, there has apparently been no cause for complaint.

During 1899 Dr. Lamb's attendance at the hospital was called for upon a few occasions—he admits under twelve; but had he declined to attend it might have been necessary to send to Orange for another medical man.

When Dr. Lamb has attended for the purposes mentioned, he has been paid, he informed me, by the patients, £1 1s. per visit, when they were in a position to afford that amount, or less under other circumstances.

Until about the end of 1898 there was only one medical practitioner in Molong, Dr. Browne, who was the medical officer at the hospital. Dr. Lamb then commenced practice there, and shortly afterwards Dr. Browne sold out to Dr. Veech, who, naturally, is desirous of retaining the hospital practice on the old terms. There is only a moderate living, I understand, for two doctors in the town, and the position of medical officer of the hospital gives the occupant certain advantages over his rival.

Apart

Apart from the occasional need for the services of another doctor, and the advantages which would accrue to the institution in having the advice and services of another medical officer, the question is largely one of personal interest between the two medical men.

I do not think it necessary or desirable to enter here upon the differences which have occurred in the past between the two doctors and the committee. The position now is, that Dr. Veech has been appointed medical officer for the current year; the committee are disinclined to give more than forty pounds a year for medical services (though I think it is desirable that the hospital should be in a position to call for Dr. Lamb's services in emergencies), and Dr. Lamb had offered to give his services in an honorary capacity. In regard to the latter, it is not advisable that the medical officers should be on a different footing.

Both doctors are away on two days in the week visiting in the district, and when one is away the other should be available. This is not so now, as both are absent from the town on Mondays.

Dr. Lamb states, in support of his side of the case, that in the event of any of his patients needing and being fit subjects for hospital treatment and care, they must pass from his hands on entering the hospital, and some, he says, are disinclined to enter the hospital on that account.

While no alteration can well be made in the terms of Dr. Veech's appointment for this year, I think it would be well for the committee to consider that the public interests, and the interests of the hospital, would rather be the gainers, while the committee would be relieved of a certain responsibility by having at their command the services of two medical men.

While Dr. Veech wishes to retain the whole hospital practice, he is ready to work in co-operation with Dr. Lamb, and suitable arrangements might well be made for the appointment of the two doctors on the staff next year.

If, in the meantime, it could be arranged to allot to Dr. Lamb one or two of the beds for the use of patients who have come under his care, and who require further treatment in hospital, I think it would be desirable.

7th May, 1900.

WALTER WILSON.

A copy of this report might be sent to Dr. Ross and the hospital authorities.—C.W., 21/5/00.
Approved.—J.S., 22/5/00.

Dr. Andrew Ross, M.P., to The Principal Under Secretary.

Re dispute concerning the appointment of Medical Officer for Molong Hospital.

Sir,

Sydney, 12 May, 1900.

Herewith I enclose the printed correspondence taken from the *Molong Argus* of the 11th May, of the late meeting of the hospital committee held on the above subject, and one, I think in the interest not only of this institution (and one subsidised by the Government) but the general public, that demands the fullest investigation. Dr. Lamb being the Government Medical Officer for Molong is entitled to the protection of the Government in having his case and complaint fully investigated by some competent officer appointed by the Department to take evidence on oath and report on the matter, and one of much public importance to all parties concerned, and the more efficient working of the institution.

Yours, &c.,

A. ROSS, M.D.

Submitted.—C.W., 18/5/00.

[*Enclosure.*]

[EXTRACT from the *Molong Argus*, 11 May, 1900.]

MOLONG HOSPITAL.

THE usual monthly meeting of the committee of the above was held at the Town Hall on Monday evening, when there were present:—Messrs. C. Stockwell (chair), D. M. McCallum (acting secretary), G. Burgess, F. S. Murray, G. Packham, J. D. Day, G. Garlick, G. W. Griffith, J. Black, J. Neilson, and E. G. Finch.

Apologies.

The Chairman apologised for the absence of the secretary (Mr. Read), also Messrs. A. Parker and W. J. Windred (who he regretted to say were very ill).

Minutes.

The minutes of the last general committee meeting and special committee meeting were read and confirmed.

Matron's Report.

The matron's report, as follows, was read:—

To the President and Committee of the Molong Cottage Hospital.—Gentlemen.—I have the honor to report: Patients treated during month, 12 (8 males and 4 females), of which 9 (5 males and 4 females) were in on 1st April. Since admitted, 3 males; discharged 8 (5 males and 3 females); cured, 7; relieved, 1; remaining in on April 30, 5 (4 males and 1 female). I gratefully acknowledge the following gifts received during the month:—From Mrs. Toohey, bread, fowls and vegetables; Mrs. Hasemer, fruit; School of Arts, weekly supply of papers; *Express*, papers; A. F. Macaulay, illustrated papers.—ELSIE KIRBY.

On the motion of Mr. G. Garlick, seconded by Mr. Packham, the report was received, and the customary vote of thanks accorded to the donors.

Visiting Committee.

The visiting committee (Messrs. Neilson and Murray) reported as follows:—

Molong, 7th May, 1900.—To the Hospital Committee.—Gentlemen.—We have visited the hospital several times during the month, and found everything satisfactory.—JOHN NEILSON, F. S. MURRAY, Visiting Committee.

Received, on the motion of Mr. Garlick, seconded by Mr. Griffith.

Dr.

Dr. Lamb's Application.

The following letter was read, and received on the motion of Mr. Garlick, seconded by Mr. Packham :—

To the Chairman and Members of the Hospital Committee.—Gentlemen,—I herewith apply once more to be appointed as an honorary medical officer to the local hospital, with half the beds, and I do so on the following grounds :—

1. In common justice to one-half of the Molong community. The whole of the people join hands in supporting the hospital, while all those in my practice who are entitled to its privileges, because and so long as they are my patients, are debarred.

2. In courtesy to the Government. I need hardly remind the committee that the Government provide virtually one-half of the funds required for the support of this institution, and in fact, last year, while the expenses nearly totalled £600, the Government subsidies amounted to £477.

Therefore I, as Government Medical Officer, and as representing the Government in this district, have a right to fair and honorable treatment at your hands.

3. In the matter of efficiency. This is a *sine qua non* to the success of the institution. To maintain that a medical staff of one is efficient is an absurdity in view of the needs and extent of the district with its long distances. In serious cases consultations are necessary, and no major operation can be performed without assistance. If proof were wanting before, the instances furnished by this Easter season are surely sufficient.

To you, as wise men, the claims of justice, courtesy, and efficiency will doubtless appeal, and not in vain, for all due consideration.—I remain, yours, &c., ROBERT LAMB, Molong, 2/5/1900.

The Chairman : I have already ruled the matter out of order, and I therefore decline to allow any discussion on it at all.

Mr. Neilson : I very much regret, but I must dissent from the chairman's ruling.

Accounts.

The following accounts were passed for payment, on the motion of Mr. Burgess, seconded by Mr. Day :—

	£	s.	d.
Gas	0	14	0
W. C. Crook (drugs)	1	9	0
G. Packham (milk, &c.)	2	5	0
R. Thomson (bread)	1	5	2
J. Packham (butter)	1	3	0
Ah Tig (vegetables)	0	15	6
J. T. Parslow (meat)	2	6	6
J. Haslam (groceries, &c.)	7	17	10
Salaries	16	13	4
	£34	9	4

An account from W. Lamrock, £17, for fees in connection with the preparation of plans and other services rendered, in reference to the fever ward, was read.

PUBLIC OPINION.

[To the Editor of the *Molong Argus*.]

SIR,—Your readers and the public have already noted the course of events in connection with the management of the hospital; also the line of action adopted from the outset by the committee and its medical officer. After observing the part played by the chairman at the committee meeting this week the public will not be surprised at the stand I now take.

Henceforward I decline to assist in maintaining a selfish monopoly; nor shall my services be available for making "fish of one" section of the community and "flesh of the other." The committee's reply to the Government has already been made public. It contains the assertions that there has been no want of fair play or of courtesy, and that one man is "sufficient for the efficient working of the hospital." Of the truth or falsity of such statements the people must be the judge.

On two recent occasions my services were urgently required during the absence of the medical officer. On the first of these (diphtheria) I offered to attend the patient if the chairman wished it. He afterwards repudiated the responsibility, and said I had done so "as a matter of professional courtesy between two gentlemen." There must be something wrong somewhere, as Dr. Veech never acknowledged these services, and the committee, through its chairman, repudiates them. I need hardly say that there is no reference at all here to money matters; it is the question of common courtesy.

On the second occasion (gunshot), a young man was brought in a distance of 10 miles, bleeding, and in great pain; to quote the driver's words, "the sulky was full of blood." Again I offered to attend the patient at the hospital till the medical officer's return, if the chairman would send me written word to that effect. The chairman was absent, and the secretary declined to give the necessary line. However, one cannot be inhuman, and I did what was possible till the medical officer's return, when the services of the nursing staff and of both medical men were found necessary.

I had no intention of using these facts, and merely offer them now as a comment on the committee's assertions in its report to the Government.

Therefore, so long as the present injustice continues, I decline absolutely to render any further assistance in the work of the hospital, unless in a sudden and serious emergency during the absence of the medical officer, and then only on condition that the request comes from the chairman in writing—pencil will do.

I regret having to take this step, but can see no alternative; and I think public opinion will justify my action.

I am, &c.,

ROBT. LAMB.

The

The Principal Under Secretary to Dr. Andrew Ross, M.P.

Sir, Chief Secretary's Office, Sydney, 25 May, 1900.
In compliance with the request preferred in your letter of the 3rd instant, I am directed by the Chief Secretary to transmit herewith for your information copy of the official report in connection with the Molong Hospital.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

The Principal Under Secretary to The Committee of Management of the Molong Hospital.

Gentlemen, Chief Secretary's Office, Sydney, 25 May, 1900.
I am directed by the Chief Secretary to transmit herewith for your information, copy of official report in connection with the Molong hospital.

I have, &c.,
CRITCHETT WALKER,
Principal Under Secretary.

Memorandum from The Secretary, Cottage Hospital, Molong, to The Principal Under Secretary, Sydney.

Dear Sir,

9 July, 1900.

Herewith please find reply to Mr. W. Wilson's report on the management of the Molong Hospital, together with newspaper clipping of committee meeting where same was discussed.

Yours, &c.,
W. C. READ,
Secretary,

REPLY TO MR. W. WILSON'S REPORT, DATED THE 7TH MAY, 1900.

Sanitary arrangements.—The drains have been carried out some 30 or 40 feet as suggested.

Telephone.—It was the intention of the committee some time back to have connected the hospital with the medical officer's residence; but owing to obstacles placed in their way by the Telegraph Department they were abandoned.

Infectious wards.—Plans were prepared for these, but Mr. Wilson thought that the number of patients treated did not warrant the expenditure of such a large amount, viz., £610, but informed us that you had a plan in your office that he thought would be suitable. If such is the case, my committee would feel obliged if you would forward it for their inspection.

Medical officers.—My committee cannot see their way to make any alteration in their appointment of Dr. Veech as medical officer for this year, and have therefore declined to appoint Dr. Lamb for this year; but they have authorised the treasurer to call for Dr. Lamb's services in cases of emergency, and to remunerate him for same. Any other suggestion made by Mr. Wilson in his report will be carried out by the committee in due course.

W. C. READ,
Secretary.

Molong Hospital, 9th July, 1900.

MOLONG HOSPITAL COMMITTEE.

A LONG AND LIVELY MEETING—DR. LAMB MAY NOT HAVE BEDS—MAY BE CALLED IN WHEN WANTED, AND PAID BY COMMITTEE—NOT BY PATIENTS.

NOTWITHSTANDING the bitterly cold atmosphere of Molong Town Hall last Monday evening, there was an animated argument by some members of Molong hospital committee, at its regular monthly meeting that evening; and, judging by the voting on the matter in dispute, there ought now to be a return to "peace, perfect peace," in the committee.

Mr. Chas. Stockwell occupied the chair, and with him were Messrs. Geo. Garlick, G. Burgess, J. F. Wynne, J. Neilson, D. M. McCallum, G. W. Griffith (Manildra), G. Packham, E. G. Finch, W. J. Windred, J. Black (treasurer), and W. C. Read (secretary).

Minutes of previous meeting were read and confirmed.

Visiting Committee's Report.

The Secretary read the following, which was received, on the motion of Messrs. Windred and Finch:—

"Molong, 2nd July, 1900. Hospital Visiting Committee report for the month of June last:—We visited several times during the month, and found everything satisfactory—no complaints; patients all well satisfied. Buildings and everything in good order. The slop drains were being extended, as suggested by the inspector when here.—JOHN BLACK and GEO. GARLICK.

Matron's Report.

This was read by the secretary, as follows:—"To the Chairman and Committee of the Molong Cottage Hospital. Gentlemen, I have the honor to report: Patients treated during month, 15 (14 males and 1 female), of which 8 males were in on June 1st; since admitted 7 (6 males and 1 female); discharged, 10 (9 males and 1 female), 9 cured and 1 relieved; remaining in on June 30, 5 males. I gratefully acknowledge the following gifts received during month:—From Peter Lemon, vegetables; Mr. Kinsela, piece of pork and vegetables; Mrs. Ward, vegetables; weekly supply of papers from School of Arts; *Express*, papers.—ELSIE KIRBY."

Mr. Garlick proposed that the report be received, and that a vote of thanks be accorded to the donors of various articles mentioned.

Seconded by Mr. Finch, and carried.

Under

Under the Act.

The secretary read a communication from the Chief Secretary's Office, as follows :—

“Chief Secretary's Office, Sydney, 26th June, 1900. Sir,—In reply to your letter of the 29th ultimo, I am directed by the Chief Secretary to inform you that the necessary proclamation has been published in this day's *Government Gazette*, extending the provisions of the Public Hospitals Act, 1898, to the Molong Cottage Hospital.—I have the honor to be, &c., CRITCHETT WALKER, Principal Under Secretary. The Secretary, Cottage Hospital, Molong.”

Mr. Wilson's Report.

Mr. Stockwell (Chairman) said that at last meeting a report upon the hospital and its management was presented from Mr. Wilson, of the Chief Secretary's Department. On that occasion, Mr. Murray had moved that it stand over for consideration until this meeting. He had hoped that Mr. Murray would be present to take charge of the report, but he was sorry to say that gentleman was unavoidably absent. But the report was on the table, was open for discussion, and he hoped some other gentleman would take the matter up.

Then occurred what musicians describe as “lunga pausa.”

Eventually Mr. Griffith disturbed the silence by asking if the committee had to send a reply to the report.

Mr. Stockwell said he had seen a report in a paper to the effect that a copy of the report had been sent to the committee of management of the hospital for any remarks they might wish to make, but no reply had been received from them. Of course, as the report was postponed for discussion, no reply could be sent. He thought that the only portion of the report which called for discussion was that which referred to the sanitary condition of the hospital as concerned certain drains, and that matter had already been attended to.

Mr. Griffith thought the Department wanted a reply to the report, which, he considered, was very favourable to the institution. The sanitary matter referred to therein had already been attended to, and the drain carried out further than the inspector suggested. There was, however, another point in this matter, for referring to which he had been considerably called over the coals by people who seemed to take a special delight in attributing wrong motives and wrong meanings to people and matters. At the previous meeting he had asked if it was the recognised practice, when a second medical man was required, for the patient on whom he attended to pay his fee; and he would ask again—is it expected that patients in certain cases must pay for the attendance of a second doctor? He did not think this was a rule of the hospital management; but if it were, he was quite sure it was not right. In such cases the hospital committee should pay the doctor—not the patient. As to the remainder of the report in question, we, as a committee, were shown to have attended to our duties in a proper and satisfactory manner; and there was no sort of complaint against the management. As to the inspector's reference to the advisability of having two doctors in attendance at the hospital, the suggestion might be right enough; but under existing circumstances our reply should be that such alteration could not be made just now. Existing arrangements would not permit of it being done. We could not alter the present state of affairs while Dr. Veech continued to attend properly to his duties. To introduce another doctor now would be simply to insult Dr. Veech. If that gentleman had been guilty of any act of neglect, or other objectionable conduct, the case might be different; but so far he had given complete satisfaction. Of course, at the end of the twelve months, when Dr. Veech's engagement expired, it would be quite open to the committee to make any different arrangements it thought fit; but at present he could not see how Dr. Veech could be interfered with. There were no complaints against the doctor, or the committee, and all the patients appeared to be perfectly satisfied with the treatment they received. That being so, where was the wisdom of making any change. There was one more matter he would like to refer to. Something had been said about the fact that names of subscribers to the hospital were not published. Now, he thought it was very desirable that such should be done in future.

The chairman asked if Mr. Griffith meant that the names of every person who contributed towards the hospital should be published, or only those who were entitled to vote? There were very many who gave only small sums—was it intended that their names should be published? The papers here charged pretty high prices, and it might in some instances cost more to publish the names than the subscriptions amounted to.

Mr. Griffith said, No! He only contemplated publishing the names of subscribers of one guinea. In the report reference was made to the advantage of having telephonic communication between the hospital and the doctor's residence. That was a matter worthy of full consideration. It had been previously mentioned at a meeting, but the expense appeared to be too great. Perhaps now, that Government had drawn attention to it, Government would be willing to help the committee in the cost of erection.

Mr. Wynne asked: Why was the inspector sent here? He thought it was on account of the dispute about the doctors; but he did not know. With regard to Mr. Griffith's suggestion that the names of subscribers should be published, he considered the name and amount of subscription of every person who subscribed even one shilling should be published. This was done elsewhere, and should be done here. Long ago he had wanted it to be done; but there was some objection on the score of expense. That, however, should not stand in the way. A shilling was as much to the poor man who contributed it as a pound was to a man who could afford to give that amount. They should all be published alike. As to the question of having two doctors, he could not see that it would interfere with Dr. Veech, even if there were six doctors; but they would certainly relieve him of some of the work. Then, he saw something in the papers about allotting beds. What did that mean? He had not been to any meetings lately, as Monday was an awkward day for him, and he did not know what had been going on. In fact, he was quite fogged on the subject. But this was done elsewhere—at Orange, it was done—and he could not see why it could not be done here. He did not know that the hospital belonged to the doctors, but it seemed they thought that it did. However, he thought every contributor's name should be published. Mr. Day had shown him a report of the Forbes Hospital, and it appeared all the names were published there.

Mr. Stockwell interrupted the speaker, to apologise for the absence of Mr. Day, who was busy with the half-yearly balance.

Mr.

Mr. Wynne, continuing, said that as it was there was no check upon the collectors, and no satisfaction to the public. If, for instance, when he was out collecting, suppose a person gave him half-a-crown; what was there to prevent him keeping it? He did not suppose that any collector would do such a thing, but there was nothing to prevent him. He considered every donation should be published, and also the name of the collector to whom it was given, just as was done in Forbes.

Mr. Neilson said he could endorse Mr. Wynne's remarks about the subscriptions. Referring to the report, it said that one of the medical men should always be in town every day in the week, in case he might be wanted; and he thought this should be the case. If the doctors were out of town for twelve, twenty-four, or forty-eight hours at a time, and an emergency case occurred, the patient could not be attended to until a doctor returned, when serious results might follow. He read the paragraph in the report bearing on this subject, and said he heartily agreed with it. As for Dr. Lamb's request to be allotted certain beds, there was no difficulty in the matter at all; and such an arrangement would not at all interfere with Dr. Veech nor detract from his salary, as Dr. Lamb was prepared to act gratuitously. [Here Mr. Neilson read from the report sentences bearing on this point.] He moved, that Dr. Lamb be allotted some of the beds for the use of patients who have come under his care, and who require further treatment in hospital.

Mr. Wynne asked for an explanation as to what was meant by allowing Dr. Lamb some of the beds? He had not been to any meetings lately, and did not understand it. He thought the hospital was for the benefit of the poor and distressed people—people who could not afford to pay for a doctor or nursing, and he understood they had to get a ticket from a subscriber and then see the doctor. At any rate people had applied to him for a ticket. The hospital was not for the purpose of doctors sending their patients there—such as people who could afford to pay for nursing and medical attendance, and had homes of their own. If this sort of thing were allowed of putting people in the hospital who were well off, it might soon be full of these paying patients, to the exclusion of the poor and destitute. This was not right, and the hospital was never intended for such purpose.

Mr. Neilson re-read the last paragraph in the report (that on which his motion was based), and maintained that the patients referred to by Dr. Lamb, and for whom he wanted beds, were poor people, who were unable to pay for medical attendance or medicine.

The Chairman asked: Has anyone been refused admission to the hospital?

Mr. Neilson: No; I do not know of any one being refused admission.

The Chairman: Well, why talk of refusals?

Mr. Black said he could endorse all that Mr. Griffith had said. As to the recommendation in the report about the drains, well that had been attended to. He also believed that the names of all subscribers up to one shilling should be published under the name of the person who collected them. That, however, could not be done this year, but would be done next year. With regard to the trouble about the doctors, he did not see how any alteration could be made at present. We had agreed with Dr. Veech for twelve months, and could not do anything which would interfere with that arrangement, except with his consent, which would have to be asked for. In justice to Dr. Veech, we certainly could not appoint Dr. Lamb. Had there been anything wrong with Dr. Veech, the case would be different; but there was not. There was not a complaint against him of any kind; but, on the contrary, everyone was perfectly satisfied with him. Next year, of course, if it were then deemed advisable, a change could be made; but not till then. He had much pleasure in seconding Mr. Griffith's resolution.

Mr. Neilson said that before the resolution was put, there was something else to be done. It might happen that while we only had one doctor he might be away from town when a serious accident happened; and what was the committee to do then? As for asking Dr. Veech if we could give beds to Dr. Lamb, who would give his services gratuitously, there was no necessity to do so—it was not his hospital.

Mr. Black: No, but he is our doctor.

Then several members of committee started talking altogether and to each other.

Eventually, Mr. Griffith succeeded in pointing out that if it were agreed to have two doctors now, the fact would have to be stated in the reply to the Chief Secretary.

Mr. Stockwell (Chairman) then suggested that, supposing the committee did appoint Dr. Lamb, and Dr. Veech immediately resigned, what would happen? The hospital would then only be served by one doctor, so the position would be no better than it is at present. Under such circumstance, there could be no doubt Dr. Veech would be perfectly justified in resigning.

This phase of the case was not argued.

Mr. Griffith alluded to the statement that patients had paid for the services of a second doctor. He thought this was entirely wrong, if it had been done, as asserted. Patients, when they entered the hospital, did not belong to the doctor, but to the hospital; and if a second doctor were required in any case, the committee should pay him, not the patient.

Mr. Read (Secretary) said the committee had never been asked to pay for a second doctor. If one had been paid by any patient, it had been done without the slightest reference to the committee.

Mr. Griffith explained that had the committee elected Dr. Lamb it would have been all the same to him; the terms of the agreement must be adhered to. Personally, he would like to see two doctors in attendance at the hospital; but he could not see how that result could be effected until the end of the year. If any member of committee could point out how it could be done, he would support him. But he was most decidedly opposed to allotting beds in the manner suggested.

Another confusion argument ensued.

Mr. Wynne objected to Mr. Black's view of the situation. He could not see any reason why Dr. Lamb's request should not be granted. He said he wanted beds for poor patients. Well, the hospital was for the benefit of poor people, and not for influential people, such as were some of those who had signed the petition. [More confusion.] It looked to him as if the doctors thought they owned the hospital, and could do as they liked with it. He could not understand the division of beds matter at all, but it seemed Dr. Lamb offered his services gratuitously.

Mr. Griffith said that if the committee was going to have Dr. Lamb as honorary doctor, there must be some arrangement made between them which would work to the satisfaction of each. How was that to be done? If anyone could suggest a satisfactory method, he would support it. But, under the suggested arrangement, who was to be the responsible man to whom the committee would look for the institution being

being properly attended to? At present, Dr. Veech was our paid medical officer, and we look to him. But suppose a patient goes in who is not properly one of the committee's patients, who shall look after him? It appeared to him the committee would have no control over the doctors at all; yet, if anything went seriously wrong, all the blame therefor would fall on the committee. Then, again, supposing the hospital to be full with these doctor's paying patients, and an accident case comes along. The subject of an accident must be admitted without any reference to doctor or committee-man; and which doctor is to be sent for to attend to it?

Mr. Stockwell: The hospital doctor, of course.

Mr. Griffith: Exactly; but who will be "the" hospital doctor under such circumstances? What stipulations are to be made with Dr. Lamb, and what is to become of the accident patient if all the beds are full? Is one of Dr. Lamb's patients to be turned out to make room for him? These were points on which he would like some very decided information. However, the report did not say that a second medical man must be appointed. It said, "If in the meantime it could be arranged to allot Dr. Lamb one or two beds"——

Then there was another confused argument, in which several members took part. Mr. Wynne was understood to say something about the circumstances of Dr. Veech's appointment.

Mr. Windred jumped up, and, addressing Mr. Wynne, said, "You were at the meeting at which Dr. Veech was appointed, and ought to recollect the circumstances." Mr. Windred explained that applications were invited for the medical officer; there was nothing about tenders for two doctors. Dr. Lamb applied in terms which were not in accordance with the committee's ideas, and the end of it was that Dr. Veech was chosen.

Mr. Wynne said he recollected that Dr. Lamb's application was a very vague one. It said something about being appointed "on the committee's terms."

Mr. Windred: Yes; and the committee's terms were £40 a year; and Dr. Veech had given satisfaction, and he was retained in the position.

Mr. Wynne: Supposing Dr. Lamb had offered then to do the work honorary?

Mr. Windred: Then I would have been one of the first to support him; but he did not do so then.

Mr. Neilson proceeded to urge his motion.

The Chairman turned up the minutes of the annual meeting, and read a passage from them, showing that Mr. Neilson moved an amendment with a view of having Dr. Lamb appointed.

Mr. Finch said he could not see how they could guarantee any doctor any beds.

Mr. Neilson persisted in his advocacy of Dr. Lamb's claim for consideration. The report said that "In the meantime it could be arranged"——

Mr. Griffith: "If." It says, "If it could be arranged."

Mr. Neilson (reading from the report): "In the meantime"——

Mr. Griffith: No; "if in the meantime"——

Mr. Neilson: There is no "if" about it.

Mr. Griffith: Pardon me; there is.

Mr. Neilson (looking closely at the report): There is "if," but it is not after meantime. (Laughter).

Mr. Neilson said he would again move his resolution, namely, "That Dr. Lamb be allotted some of the beds for the use of patients who have come under his care and who require further treatment in hospital." If this were done, everything would be amicably settled; and there was no difficulty in working it.

Mr. Wynne: "The motion wants writing out." If the motion was written he would second it. He knew very well it would be carried, as then we would be complying with the wishes of the public and acting for the benefit of the institution. At present the hospital was being injured through this trouble about the doctors. He saw in a paper that through this difficulty Camnock people would not get up any sports for the hospital this year, which was to be regretted. But he believed that Drs. Lamb and Veech would work well together.

Mr. Windred reminded the meeting that at last meeting Dr. Veech was asked whether it was true, as the report stated, that he had said he would work with Dr. Lamb, and he distinctly stated that it was not.

Mr. Wynne repeated that he would second the motion if it was written out by Mr. Neilson.

The motion was then written, and submitted by the chairman.

Mr. Griffith said if the motion were carried it practically gave the hospital over to the doctors. He hoped members would consider well what they were doing before they voted for it. He maintained that the committee's first care and anxiety was for the poor and needy, and not for patients who could afford to pay doctors, and had comfortable homes in which they could be treated. To this end, the committee must have absolute control of the hospital; and it must be careful not to run the institution into such a state as would perhaps induce Dr. Veech to resign. So far, neither the mover nor the seconder of the motion had shown how their scheme was going to work. It was all very well to say, "Oh! it will work all right." That would not do. The committee at present employs Dr. Veech, and if anything went wrong it looked to him. But under this proposed arrangement, if there were any complaints, who, then, must the committee look to?

Mr. Wynne said that in large towns—such, for instance, as Orange—they had more than one doctor.

Mr. Griffith: Yes; and they are always in trouble.

The Chairman proceeded to put the motion, when ——

Mr. Packham said he would propose an amendment, He would move—"That Dr. Lamb be not appointed, and that the treasurer be empowered to employ Dr. Lamb when he is wanted."

Messrs. Griffith and Finch rose to second this.

Mr. Windred failed to see that it was an amendment on Mr. Neilson's motion.

This point was discussed, and then Mr. Packham said that as there was doubt on the subject, he would submit it as a second resolution.

Mr. Griffith said he still could not see how Mr. Neilson's motion was to be made to work satisfactorily; but he thought that if Dr. Lamb's services were required he should be called in and be paid by the committee.

The Chairman then put Mr. Neilson's motion, for which only the mover and seconder (Neilson and Wynne) voted, all other members voting against it.

Mr. Packham's resolution was then submitted and carried, only Mr. Neilson's hand being held up against it.

The Result.

By request, Mr. Read read the passage in the report which had reference to the proposed fever ward; to the cost of which the inspector had objected.

Mr. Black submitted a resolution to the effect that a reply to the report be sent to the Chief Secretary, stating that the matters therein referred to had been attended to.

A general discussion ensued as to how the subjects should be set forth, but eventually the meeting seemed to consider that this would be properly attended to.

Donation.

The secretary acknowledged receipt of £3 from Mr. McCulloch, of Buckinbah; and on the motion of Messrs. Black and Packham, it was ordered to be acknowledged with thanks.

Visiting Committee.

On the motion of Mr. Garlick, seconded by Mr. Neilson, Mr. G. Packham was put on the Visiting Committee for the ensuing three months.

Accounts.

The secretary read the following list of accounts, namely:—Carriage, 15s. 8d.; vegetables, 11s. 6d.; gas, £1 2s.; W. Starr, bricks, &c., £1 11s. 6d.; H. A. Bennett, repairs, £2 7s.; R. Thomson, bread, £1 4s. 1d.; G. Packham, milk, £2 9s. 6d.; J. Packham, butter, &c., £1 6s. 2d.; C. Parker, groceries, £4 10s. 5d.; J. T. Parslow, junr., meat, £2 4s. 6d.; salaries and wages, £17 5s. 10d. Total, £35 15s. 2d.

The meeting then terminated at 1 o'clock.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 12 July, 1900.

Herewith I have the honor to place in your hands a petition, signed by 650 residents of the district of Molong in favour of having "two medical" officers appointed to the hospital at Molong, as set forth in the petition, in place of "only one" as at present, for the following reasons, viz. :—

1. For the more efficient working of the institution, because, when the medical officer happens to be called away on some emergency case, and delayed, possibly, twelve, twenty, or thirty hours, the hospital during his absence is left entirely without any medical aid or assistance, and this, the petitioners consider, could be easily avoided and provided for by the appointment of "two" medical officers, in place of only one medical officer, as at present.

2. A large majority of subscribers to the hospital are opposed to the institution being managed under such circumstances, more especially as Dr. Lamb, the Government Medical Officer for the district, has freely offered his medical services gratuitously, but which the hospital committee have repeatedly declined to accept.

3. By this means the subscribers have been forced to approach you by petition, so that you may take the necessary steps to have a second medical officer, viz., Dr. Lamb, appointed for the more satisfactory and efficient management of the institution.

4. It is the wish of the petitioners, and a large majority of the subscribers, that Dr. Lamb's application and services should be accepted by the committee; but they emphatically decline to do so, as the correspondence and newspaper clippings in your office, and submitted by me from time to time, will prove beyond any dispute or cavil.

5. Unless a second medical officer is appointed, it will have the effect of causing subscribers to withdraw their subscriptions, thereby shutting up the institution.

6. The institution is subsidised by the Government, and the petitioners, therefore, feeling aggrieved at the refusal of the committee to accept Dr. Lamb's application, feel that they have no alternative but to approach you in the matter, so that the Government may see the necessity of at once stepping in with the view of having (as the petitioners request) the prayer of the petition carried into effect by appointing an additional medical officer for the better management of the institution.

Hoping the matter will receive your earliest and most favourable consideration.

Yours, &c.,

ANDREW ROSS, M.D.

PETITION.

To the Honorable John See, Colonial Secretary,—

Honorable Sir,

Molong, 21 May, 1900.

We, the undersigned residents of Molong, Cummock, Catombal, Baldry, Garra, Cudal, Manildra, and surrounding districts, desire to bring under your notice the way in which the management of the Molong Hospital is conducted.

Honorable Sir, the Molong district is a large one, and the hospital doctor is often called away to attend patients at long distances; consequently the hospital patients are left for a considerable length of time without the services of a medical man. And, as there are frequently cases of sickness and accidents which require immediate attention arriving in town that are subjects for the hospital during the medical officer's absence, we, the undersigned petitioners, respectfully appeal to you, Honorable Sir, to take the necessary steps to appoint a second medical gentleman to the Molong Hospital.

Dr. Lamb, the Government Medical Officer for the district of Molong, has frequently applied to the committee of the Molong Hospital for a portion of the beds of the institution—without remuneration—but the majority of the committee has on every occasion refused his application, giving as their reason that one medical man was quite sufficient for the efficient working of the institution.

Therefore, Honorable Sir, your petitioners (with all due respect to the gentlemen composing the Molong Hospital Committee) beg to differ from them, and assert that one medical gentleman is not sufficient, and cannot efficiently attend to the patients in the institution.

And moreover, Honorable Sir, your petitioners feel that a very great injustice has been done by the Molong hospital committee, not only to the Government Medical Officer (Mr. Lamb), but also to a very large portion of this community who, being his patients, do and may require the professional services of Dr. Lamb, by being denied the right to use the institution that is so liberally supported by them, should they at any time require it.

Your petitioners, therefore, Honorable Sir, ask you to take their petition into your most favourable consideration, and allot a portion of the beds of the institution (Molong Hospital) for the benefit of the Government Medical Officer (Dr. Lamb) and his patients, who may seek admission thereto.

We are, Honorable Sir, your obedient servants.

[Here follow 653 signatures.]

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 17 July, 1900.

On leaving Molong on Monday, I was credibly informed that the Molong Hospital committee intend to take no notice of the influentially-signed petition (signed by 653 names) presented by me and the Mayor of Molong (Mr. Wynne, J.P.) *re* the long-pending hospital dispute.

No time, I hope, will be lost in sending an official letter to the hospital committee intimating your decision, and calling upon them to furnish a reply, and also the names (in full) of the subscribers to the hospital that I have asked for some weeks back, but yet received no reply from the committee. I hope you will not allow them to sit upon your decision as a Minister of the Crown, as they have done nine-tenths of the residents of Molong and the general voice of the public in the locality.

Hoping the matter will receive your usual immediate attention.

I have, &c.,

A. ROSS, M.D.

Dr. Andrew Ross to The Principal Under Secretary.

Sir,

Sydney, 17 July, 1900.

Before leaving Molong last night I was informed the Molong Hospital committee intended to take no notice of the Minister's (Hon. John See) decision *re* the Molong Hospital and appointment of second medical officer and the petition that was presented to him last Thursday by Dr. Ross, M.L.A., Mr. Wynne, J.P. (Mayor of Molong), and Mr. R. Scott, J.P.

I need not say that nine-tenths of the inhabitants are much pleased at the Minister's decision. No time should be lost in sending the Minister's decision (in reply to the influentially signed petition, containing 653 names) to the hospital committee, to afford them an opportunity of forwarding a reply without delay.

May I ask you to kindly favour me with a copy of the letter that was sent to the hospital committee, conveying the Colonial Secretary's decision in the matter, and you will oblige,

Yours faithfully,

A. ROSS, M.D.

N.B.—Has the Molong Hospital committee yet condescended to furnish you with a list of the subscribers to the Molong Hospital,* in reply to my question; if not, may I ask you to insist on the list being forwarded to you without delay.—A.R.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir,

Sydney, 18 July, 1900.

To me it seems self-evident that the Government have power to compel the Molong Hospital committee to entertain the application and offer made by Dr. Lamb, to be appointed a second medical officer for the more efficient working of the institution, but which the committee have repeatedly refused to entertain.

The petition presented by me, and signed by 653 residents of the district of Molong, say that under the circumstances one medical officer is not enough, and they demand the appointment of two for the more efficient working of the hospital, for the following, among other, reasons:—That, when the medical officer happens to be called away into the country on an emergency case, delaying him probably for many hours, no one is in attendance to look after cases brought to the hospital in his absence suffering from serious accidents—of which, of late, several serious cases have occurred. It is for this reason that the residents have petitioned for the appointment of a second medical officer to render medical services when required in cases of serious accidents, and their request is a just and reasonable one.

To remove any doubt, it is to me evident that the Government have a right to interfere, seeing that the institution is subsidised by the state, and the petitioners, under these circumstances, insist on the appointment of two medical officers in place of only one, for the more efficient working of the institution.

The 11th section of the Public Hospitals Act provides for such cases as your petitioners point out:—“The committee of any hospital shall annually appoint a treasurer, and shall also appoint a secretary, a medical officer, warden, matron, and any other officer or servant they may deem necessary for the efficient working of such hospital.”

The last part of this clause is clear enough that the committee have power at any time to appoint “any other officer or servant,” and this is what your petitioners insist on and complain, viz., that the committee have repeatedly refused to appoint Dr. Lamb to meet the wishes of the petitioners, and for the more efficient working of the institution. It is for this reason that the residents have, by their petition, asked for your protection, and that steps be taken to compel the committee to accept Dr. Lamb's offer and gratuitous services to meet the wishes of the petitioners and nine-tenths of the general public.

Yours faithfully,

A. ROSS, M.D.

* The list of subscribers to the Molong Hospital, for the year 1899, was laid upon the Table of the Legislative Assembly on the 25th July, 1900.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir, Sydney, 23 July, 1900.
 May I ask you what steps, if any, you intend to take to have two medical officers appointed for the more efficient management of the Molong Hospital, in compliance with the petition presented to you and signed by no less than 653 residents in the Molong district? The public are anxiously waiting your decision in this long-pending matter, especially those who signed the petition asking for the appointment of Dr. Lamb, the Government Medical Officer, as an additional medical officer for the institution, his services having been offered gratuitously.

Awaiting an early reply.

Yours faithfully,
 A. ROSS, M.D.

Minute of the Chief Secretary.

RELATING to the subject-matter of the petition what power has the Department got to deal with it?

J.S., 23/7/00.

The Government has no power to carry out the wish of the petitioners. Section XI of the Hospital Act places the whole power of appointments in the hands of the committee.—A.E.H.

Dr. Ross informed, 24/7/00.

The Principal Under Secretary to Dr. Andrew Ross, M.P.

Sir, Chief Secretary's Office, Sydney, 24 July, 1900.
 With reference to your letter of the 23rd instant, and the petition presented at this office by you, signed by 650 residents of the district of Molong, in favour of having two medical officers appointed to the staff of the local hospital, I am directed by the Chief Secretary to inform you that the Government have no power to carry out the wish of the petitioners, as Section XI of the Public Hospitals Act 1898 places the whole power of appointments of such officers in the hands of the committee of the institution. A copy of the Act referred to is enclosed herewith for your information.

I have, &c.,
 CRITCHETT WALKER,
 Principal Under Secretary.

Dr. Andrew Ross, M.P., to The Chief Secretary.

Sir, Sydney, 2 August, 1900.
 When lately in company with the Mayor of Molong (Mr. Wynne, J.P.) and Mr. R. Scott, J.P., I presented a petition to you signed by 653 of the most influential residents of Molong, requesting the appointment of a second medical officer for the more efficient management of the Molong Hospital. You promised the deputation that then waited on you that unless the second doctor was appointed by the committee that the subsidy would be stopped. Since then, and to my great surprise, I am informed that the Government have lately paid the subsidy. If so, what can I, as the representative of the district, think of such undeserved treatment? It is simply something not only extraordinary but even degrading to me in the eyes of my constituents to be treated after this fashion, and tends to belittle me in the eyes of the general public—say nothing of treating the prayer of the petitioners with what seems to me nothing short of worse than ridicule and contempt. It may not have been done with your knowledge or approval; but, be this as it may, it is far from being complimentary to me in my capacity as the member for the district to turn round on me in this fashion, and without offering some reasonable excuse for doing so.

Yours faithfully,
 A. ROSS, M.D.

1900.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

OPERATING THEATRE FOR THE ST. VINCENT'S HOSPITAL.

(REPORT OF A DEPUTATION WHICH WAITED UPON THE CHIEF SECRETARY ON 25TH APRIL, 1899,
ASKING FOR A GRANT OF £2,000 FOR THE PURPOSE OF ERECTING A NEW.)

Printed under No. 4 Report from Printing Committee, 12 July, 1900.

REPORT of a Deputation which waited upon the Chief Secretary on the 25th April, 1899, asking for a grant of £2,000 for the purpose of erecting a new Operating Theatre for the St. Vincent's Hospital.

At 11 a.m. on Tuesday, the 25th April, 1899, a deputation waited upon the Chief Secretary, the Hon. J. N. Brunker, at his office, composed of members of the Medical Staff of St. Vincent's Hospital and Members of the Legislative Assembly, for the purpose of endeavouring to obtain from the Government a grant of £2,000 on behalf of that institution.

PRESENT :—

<p>Hon. John Hughes, M.L.C., Treasurer, Colonel Williams, Senior Surgeon, Dr. Fairfax Ross, Senior Physician.</p>	}	St. Vincent's Hospital.
<p>Dr. McCarthy, Dr. O'Neill, Dr. Scot Skirving, Dr. C. H. Maher, Dr. Odillo Maher, Dr. Kenna, Dr. Mullens, Dr. Müller, Dr. A. A. Cohen, Mr. H. Copeland, M.L.A., Mr. J. Ashton, M.L.A., Mr. Clarke, M.L.A.,</p>	<p>Mr. E. W. O'Sullivan, M.L.A., Mr. T. Waddell, M.L.A., Mr. D. Davis, M.L.A., Mr. W. W. Davis, M.L.A., Mr. F. A. Byrne, M.L.A., Mr. J. S. Hawthorne, M.L.A., Mr. P. E. Quinn, M.L.A., Mr. W. J. Spruson, M.L.A., Mr. J. A. K. Mackay, M.L.A., Mr. W. J. Ferris, M.L.A., Mr. W. G. Spence, M.L.A., Mr. J. G. Carroll, M.L.A.</p>	

The deputation was introduced by Mr. Hughes, M.L.C.

MR. HUGHES: I have the honor to introduce a deputation, consisting of the Medical Staff of St. Vincent's Hospital and Members of the Legislative Assembly, with a view to asking the Government to make a grant of £2,000 upon similar conditions to those of 1870 and 1892. The Government of Sir Henry Parkes and the Government of Sir George Dibbs granted each of them a sum of £1,000, conditionally that it was devoted to the interests of the hospital. *The purpose for which the present grant is required is for the construction of an operating theatre.*

I would like to point out that this hospital, which has become a prominent institution of our city, has existed exclusively, with the exception of the two grants which I have mentioned, upon voluntary donations. Since the opening of the hospital, the enormous sum of £153,000 has been spent on its maintenance, and the cost of land and building.

CHIEF SECRETARY: For what period?

MR. HUGHES: Since 1857. The cost of the land and buildings to date has been £53,532. This is an extraordinary debit. The hospital is entirely unsectarian. On account of its position, it has become the hospital for the reception of such accidents as those which frequently occur on the Randwick racecourse, the football ground and polo ground, bicycle track, and, in fact, in all places devoted to sports, which I am sorry to say are rather fruitful of accidents, necessitating immediate and prompt treatment. The particular hospital to which these accidents naturally go is St. Vincent's. It is with a view of rendering that prompt assistance, and of having the appurtenances of the hospital up to date, that the deputation urge upon you the necessity of possessing an operating theatre of a modern kind.

MR. COPELAND: I shall not detain you more than a minute, Mr. Brunner; I think it will be better for the professional gentlemen, who have full knowledge of this matter, to occupy whatever time you can spare. It seems to me, sir, that there is no institution in the country more deserving of the support of the Government than this hospital. It relieves the Government of a very much larger expense than anything they are now asked for.

You will notice that it is close upon seven years since the Government gave them assistance at all. I received a report this morning from the Prince Alfred Hospital, in which I notice that the Government subsidy for last year to Prince Alfred Hospital is £4,600. This St. Vincent's Hospital receives no annual subsidy from the Government, and it is seven years since they have received anything in the shape of a grant at all. So, if you will divide that £2,000 over the seven years during which they have received no subsidy, while the Prince Alfred Hospital has doubtless been receiving four or five thousand pounds per annum, you will see that the £2,000 will come to less than £300 a year, while the Prince Alfred Hospital received last year £4,600.

It cannot be disputed that one institution is doing quite as good work as the other, only the St. Vincent's Hospital is doing about half the amount of work the Prince Alfred is doing; but it is an institution that might well receive Government aid.

When we think for a moment of the number of institutions in the country which receive Government subsidies, none of these are to be mentioned in the same breath with an institution like this, doing Christian work, carried on for the express and sole purpose of relieving the sick and the wounded.

I shall not occupy your time any longer, Mr. Brunner, but I only hope you will see your way clear without any difficulty whatever, to grant this sum of £2,000, which is an absolute necessity, and by the aid of which they will be able to perform their operations with something like comfort and skill.

DR. ROSS: Our object is to make our hospital as perfect and complete as possible, and in order to do that we must be thoroughly up to date in our methods.

Our treatment of diseases has always been most successful, especially our treatment of pneumonia and other complaints; but nowadays a more scientific treatment is coming in, and we find now that we have not the apparatus in our hospital which we need, for preventing disease, not only for curing it. That is all I wish to say, sir.

COLONEL WILLIAMS: I have the honor, sir, to have been connected with this hospital as senior surgeon, on the staff of honorary medical officers, for over fifteen years. I have seen the hospital grow, and I have seen the utter inadequacy of the present operating-room to meet the modern requirements of surgery. In the report of the hospital for 1898, received this morning, a summary of operations is given, in which 763 were done during that year, a large proportion of them being operations of a most serious character.

In addition, sir, to the general requirements of the operating-room, and these requirements are most specially needed; because, unless you have an operating-room up to date in every principle of modern surgical sanitation, you cannot get good results; in fact, it is a question whether you are justified in operating in certain cases unless you have the proper room to do it in.

In addition, sir, to it being a general hospital, I should like to point out that it is not generally known that the women and children of the permanent military forces who are entitled to medical attendance are received there, and yet the hospital only receives from the military authorities the paltry sum of £25 a year. It does not matter whether I send in ten or twenty cases in a year, or whether they are there a week or six weeks, £25 a year is graciously received. Every attention is given to these patients, as if they were paying the full rates.

I do urge, sir, that the question of this grant for the operating-room may receive every consideration.

MR. HUGHES: I think I might add a few words to what has been said. During those times in 1872, when Sir Henry Parkes made the first grant of £1,000—of course that was before my time—that was made at a time when the hospital was embarking in large expense for building. The £1,000 given by Sir George Dibbs' Government later on, which was during the term of my office as Treasurer, was under like circumstances.

Now, the authorities of St. Vincent's Hospital have taken upon themselves to provide an institution that is unique in itself, I understand; and that is a hospice—a small building on the last portion of land they bought, to start a hospice for the receipt of dying patients.

The difficulty is that none of these hospitals can take in an absolutely hopeless case unless the prospect of death is near. They cannot fill up the beds with patients who are not likely to recover, and whose cases are likely to drag on for months and months, at the expense of those who are at present in urgent need of accommodation. I believe the only place open for the reception of such patients is the Hospice for the Dying in Victoria-street, adjoining the hospital. That has been carried on under some difficulties, and I may say at the present moment we are looking out for a place in which we can carry it on better for the benefit of the patients. That will take a much larger expense than that we now ask, but for that we are not coming to you. We are quite satisfied with the small fund we have got in hand to make a purchase for putting it on a better basis.

There is another matter in which the hospital has a claim on the Government. You remember some time ago—our friend, Mr. Davis, of the Water and Sewerage Board, will be able to confirm what I now say—there was serious trouble with some of the hospitals regarding their sewerage rates. St. Vincent's has paid their sewerage rate, and, even lately, we have paid the rates up to the present time simply on the understanding that one hospital would be treated the same as another with regard to that.

I do not want to draw invidious comparisons, but I want to point out that through the action of the Government the Water and Sewerage Board has had to contribute something like a thousand pounds in overdue sewerage rates to Prince Alfred Hospital. That is a large sum to wipe off, in addition to the amount Mr. Copeland mentioned.

Most patients who come to us are absolute pauper patients, who cannot afford to pay anything whatever.

I may also point out this: that some years ago the Railway Benevolent Institution saw the representative of the hospitals, and an arrangement was made by which they paid for their own patients at any of these hospitals. Now, these railway patients are received, and at the end of the year the Railway authorities distribute the balance of their funds *pro rata* according to the patients that have been received. St. Vincent's is on a par with the leading hospitals, the Prince Alfred and the Sydney.

Finally,

Finally, sir, I want to call your attention to this, that the cost of maintaining these patients is something very small as compared with the cost of maintenance in any other hospital. Of course, there is a reason for that—the sisters and others give their services free for the benefit of the poor. The average income of St. Vincent's has never exceeded the amount shown in the present balance-sheet, about £5,300. With an income not exceeding that amount they have been able to maintain a very large number of patients. Altogether, 9,309 patients were treated at St. Vincent's Hospital last year—1,665 indoor and 7,644 outdoor—at a cost of only £5,300 for the year's maintenance, which works out to a cost of approximately 10s. per head per annum.

MR. DAVIS: Mr. Hughes has very kindly referred to the question of rates remitted to Prince Alfred Hospital. As a matter of fact, the Prince Alfred Hospital had an amount of about £1,000 due to the Water and Sewerage Board, and Mr. Reid very kindly instructed the Board to forego the collecting of these rates; and if the Prince Alfred Hospital could be treated in that manner, others might be put on all-fours with them. The Prince Alfred Hospital have had a special sewer constructed through their ground at a cost of £15,000.

I would point out that the Prince Alfred Hospital has had their rates remitted, and I think other hospitals might be entitled also to have theirs.

DR. MCCARTHY: I would draw attention to the unsectarian nature of the institution. Persons of any persuasion, either Catholics, Protestants, Jews, Mohammedans, and so on, are free to avail themselves of its benefits. The clergymen of the various denominations are admitted at all times.

We request the Government, through you, Mr. Brunner, to grant us this money. We wish to advance, to keep abreast of the times. The ambition of our institution in this respect is not to be behind-hand.

No doubt we cannot, we do not, claim this grant as a matter of right, or as any claim upon the Government; we have no actual claim on the Government—we know that whatever is granted to us will be as a matter of grace. The granting of this will give satisfaction not alone to the Sisters of the Hospital and to those connected with it, but to the entire community. No doubt you will agree with us, that any money expended in the direction in which we request will be money well spent. And the granting of this money will give encouragement to every member of the staff of St. Vincent's Hospital to still further advance the institution, and to advance and increase his sphere of usefulness.

CHIEF SECRETARY: Mr. Hughes and Gentlemen, I am very pleased to receive this deputation to-day, in view of contributing to the more perfect system which you wish to adopt in connection with St. Vincent's Hospital. I say that, not only because my sympathies are strongly with you, not only from the representations that you have made here to-day, but from the representations that are received from the general public with regard to the treatment administered to patients and the liberal way in which they are received in St. Vincent's Hospital.

With this assurance, I am sure that you need no further words from me to convince you of my desire to do everything I possibly can, not only for the purpose of making your institution as complete and perfect as possible, but also to exercise my best efforts to make every institution similarly enabled to carry out their work in the most perfect manner.

You are, of course, aware that Ministers who occupy the same position as I do are here simply to administer the law just as they find it. Reference has been made to the small amount received by St. Vincent's Hospital. In consideration of the large amount of work that they do—and very excellent work it is, and done in the interests of every section of the community—it has only received a very small sum in comparison with other institutions of a similar character.

Now, the law prohibits the Ministers from making concessions to that institution which are given to other institutions; the law prohibits it, and I dare say those of you who are acquainted with the law thoroughly understand the assertion which I am making. It is not my fault that the law has limited the amount of assistance to this hospital as compared with other institutions. It is simply because we have a law to administer, and have to carry it out.

So far as I am individually concerned, as I said at the outset, you have my strongest sympathy; and, with perfect knowledge, irrespective of what you have said to-day with regard to the liberal treatment that patients receive at St. Vincent's Hospital, I shall have very much pleasure in bringing the representations made by this influential deputation before the Cabinet, and trust that I may be able to succeed in obtaining what you actually require.

I know from my observation in various hospitals throughout the Colony that there is a great lack of accommodation with regard to their operating theatres. Most of those I have seen have been lacking in this direction, which is an absolute necessity, and, in fact, are far from being complete.

I may say that I think it is the duty of the Government to render such assistance as to have institutions such as St. Vincent's Hospital made as perfect and complete as any institution in the world. It is the duty and the right of the public to have these institutions rendered in every respect fully adapted to the purposes for which they are established.

I shall be glad to give you my assistance, and shall make a representation to the Cabinet about it to-day.

[The Deputation then withdrew.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

OLD AGE PENSIONS.

(PETITION FROM F. B. BOYCE, CHAIRMAN OF A PUBLIC MEETING HELD IN ST. PAUL'S SCHOOL, REDFERN, IN FAVOUR OF.)

Received by the Legislative Assembly, 20 September, 1900.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned, Chairman of a Public Meeting held in St. Paul's School, Redfern, and well attended,—

RESPECTFULLY SHOWETH :—

That the following resolutions were passed thereat :—

1. That, in view of the distress and suffering which are so often consequent on old age, this meeting is of opinion that some active steps should be taken by the State to give satisfactory and permanent relief.
2. That, in the opinion of this meeting, a well-devised scheme of old age pensions will alone satisfactorily meet and relieve the existing conditions.
3. That the Chairman be requested to embody the foregoing resolutions in a Petition, to be signed by him and presented to Parliament on behalf of this meeting.

And your Petitioner therefore humbly prays that your Honorable House will take the premises into favourable consideration, and grant such relief as may seem best to your Honorable House.

And your Petitioner, as in duty bound, will ever pray.

F. B. BOYCE,
Chairman of Public Meeting.

OLD AGE PENSIONS.

(PETITION FROM THE MOST REVEREND THE ARCHBISHOP OF SYDNEY, PRESIDENT OF THE
SYNOD OF THE DIOCESE OF SYDNEY, IN FAVOUR OF.)

Received by the Legislative Assembly, 2 November, 1900.

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the Most Reverend the Archbishop of Sydney, President of the Synod of the
Diocese of Sydney,—

HUMBLY SHOWETH:—

That, in view of the severe distress so often consequent on old age, the Synod is of opinion
that a well-devised system of pensions for the aged should be at once passed by the Parliament.

Your Petitioner therefore humbly prays that your Honorable House will be pleased to take the
premises into your favourable consideration and grant such relief as your Honorable House may deem fit.

And your Petitioner, as in duty bound, will ever pray, &c.

NATIONAL PARK.

(REPORT OF THE TRUSTEES FOR THE YEAR ENDED 30TH JUNE, 1900.)

Printed under No. 18 Report from Printing Committee, 29 November, 1900.

Sir,

National Park Trust Office, Sydney, 24 November, 1900.

The Trustees of the National Park have the honor to submit to you their Report for the past year.

During the year Mr. James Sinclair Taylor McGowen, M.P., has been appointed a Trustee of the Park in place of Dr. Maurice O'Connor, M.R.C.P., deceased; and Mr. John Barnes Nicholson, M.P., was appointed a Trustee in accordance with the provisions of section 4 of the "Public Trusts Act, 1897."

The increasing popularity of the National Park, offering as it does such a healthful stretch of country, diversified and exhilarating in every aspect, is evidenced in a very important degree by the number of visitors greatly increased during the year, many of them being visitors from other colonies, with whom the Park is in great favour. Others include travellers and tourists from all parts.

Additional public interest is recognised in the picturesque rivers, ports, and their shores, and in the nearness of the ocean itself. The prevailing note of comment is one of satisfaction.

The principal work carried out during the year is as follows:—

The necessary repairs to the pavilion have been carried out with advantage to its usefulness. A room has been added to the lessee's quarters. Store-room and a linen-room have been fitted up in a part of the building which will be found most convenient. A wash-house and laundry have been built, fitted with fixed troughs and boilers, also other conveniences.

Work carried out.

The pavilion has been entirely repainted inside and out effectively.

The accommodation having been in so many details made adequate is a good deal more availed of, and fully appreciated.

Accommodation

Additions have been made to the building occupied by the Ranger at Yenabilli, and a new boat-shed has been built in a convenient place there.

Yenabilli.

Many useless trees and a great deal of fallen timber and scrub have been burnt off, thus affording more feed for the deer. The animals are in good health, and they are increasing in numbers.

Deer Park

Ornamental trees and shelter trees in considerable number have been planted. They are making good growth.

Plantations.

The older plantations, affording necessary shade, are much in favour, and largely availed of as picnic places.

The river has been cleared of trees and logs which interfered with navigation. New beacons have been placed in different parts of the river to define clearly the navigable channel.

Saltwater River.

This portion of the stream has been kept well cleared of fallen timber and logs which impeded the navigation.

Freshwater River.

Several places on the banks have been cleared, and seats, &c., provided for the comfort and use of picnic parties and visitors.

The birds and animals continue to do well, and are increasing their numbers.

Aviary.

Several very interesting presents of birds have been made to the Trustees during the year. Much interest is shown by the public in this part of the Park and its bird-life.

The flora and fauna of the Park are strictly protected, so preserving the chief natural features of the place.

Flora and fauna

Many parts of the roads were much cut up by the heavy and continuous winter rains.

Roadways and culverts have now been repaired, and this beautiful and interesting drive is in much favour during the summer months.

Lady Carrington and Waterfall roads.

The roads and pathways leading through different sections of the Park have been put in repair, and kept in good order.

Roads and pathways

About 1½ mile of the main road from Loftus to Audley has been re-formed and widened, and new culverts put in where required.

Military road.

The Military road, leading from Audley to the site of the Field-firing Range, is in course of formation, and will be completed in a short time.

By-laws.

The revised by-laws have been lettered on boards specially made for the purpose, and placed in the most conspicuous and popular places.

Punt.

The punt used as a floating jetty at Audley has undergone a thorough overhaul and been redecked and coppered, making it sound and serviceable.

Launches and boats.

The launches and boats have been repainted, and are in good order and condition.

Warumbul.

A capacious brick tank has been built with water storage of upwards of 30,000 gallons, which will give a sufficient supply for all purposes. Connections by pipes have been placed with fire-hose attachments, so that any risk is minimised.

Additional outbuildings have been erected, and house and domestic accommodation added to, and improvements made, and renovations attended to.

Fencing.

A paddock of about 50 acres has been fenced, in which several ornamental and useful trees have been planted for the purpose of improving the surroundings.

Post office.

A daily mail has now been established to and from Warumbul.

Telephone.

The telephone line has been opened between Audley and Warumbul, and is a great convenience to visitors, as communication can now be made to all parts of the city.

I have, &c.,

CRITCHETT WALKER,

Chairman.

The Honorable The Chief Secretary.

(RETURN RESPECTING.)

Printed under No. 1 Report from Printing Committee, 26 June, 1900.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 7th November, 1899, That there be laid upon the Table of this House, a Return showing,—

- “(1.) The total area of reserves for parks and public recreation in each municipality in the county of Cumberland.
“(2.) The sum granted in each of such municipalities out of the Parks “Vote during the last financial year.”

(Mr. Dugald Thomson.)

RETURN showing total areas of all public parks and recreation grounds within municipalities in county of Cumberland, and the sums granted in respect of same during the last financial year.

Date of Return, 31st December, 1899.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC PARKS AND RECREATION RESERVES.
(RETURN RESPECTING.)

Printed under No. 2 Report from Printing Committee, 28 June, 1900.

[Laid upon the Table of the Legislative Assembly in accordance with promise made by the Honorable the Secretary for Lands in answer to Question No. 1, Votes and Proceedings No. 6, of the 21st June, 1900.]

Question 1.

How much of the £10,000 voted on the last Estimates for Country and Suburban Parks was expended on the purchase of Parks?

Answer.

£4,574 1s. 10d.

Question 2.

For what places were these Parks purchased, what did each cost, and what was the area of each?

Answer.

Electorate.	Place.	Area.	Amount Paid.

Question 3.

How was the balance divided amongst the other suburbs and electorates, and what did each receive?

Answer.

	£ s. d.
Balance of Vote after paying for acquisitions, resumptions, purchases, &c.	5,425 18 2
Subsidies granted out of Vote for 1898-9, for which vouchers were issued to the Treasury prior to the 30th June, 1899, but not paid, afterwards charged by that Department to Vote for 1899-1900	210 0 0
Subsidies granted out of Vote for 1898-9, but withheld owing to the non-adjustment of previous advances prior to 30th June, 1899, when the Vote lapsed, subsequently authorised by the Secretary for Lands and paid out of the Vote for 1899-1900	210 0 0
Special grants prior to general apportionment, as per Schedule A	308 0 0
General distribution, as per Schedule B	4,695 0 0
Balance unappropriated	2 18 2
	£5,425 18 2

Question 4.

How many parks are there in each electorate, and the approximate area of each?

Answer.

Particulars given in Schedule B herewith.

Question 5.

How many parks had special sums voted for the purchase of same, where were they situated, and what was the approximate area of each?

Answer.

Mosman—6 acres 1 rood 10 perches; cost, £3,300, of which Parliament voted £3,000, and the residents contributed £300. Kurnell—£1,000 voted "For cost of acquisition of land in connection with Captain Cook's landing place, improvements, &c." Approximate area, 253 acres.

SCHEDULE A.

LIST of Special Subsidies granted out of the Vote for Parks, 1899-1900, prepared in connection with answers to Questions 3 and 4, asked by Mr. Affleck, M.P., Votes and Proceedings No. 6, of 21st June, 1900.

Electorate.	Park or Recreation Reserve	Amount
		£ s. d.
Kahibah	Adamstown Recreation Ground	25 0 0
Maitland East	Bank-street Recreation Ground, East Maitland	40 0 0
Murrumbidgee	Junee Park	45 0 0
Ryde	Beecroft, "The Village Green" Reserve	20 0 0
Tamworth	Tamworth, "The Oval" Recreation Reserve	51 0 0
Wickham	Wickham Park	20 0 0
Woollahra	Rose Bay Park	25 0 0
Woronora	Woonona, Nicholson Park	82 0 0
	Total	£ 308 0 0

SCHEDULE B.

SCHEDULE showing the amounts granted to each Electorate out of the Vote for Parks 1899-1900, number of Parks in each Electorate, and approximate area of each, prepared in answer to Questions 3 and 4, asked by Mr. Affleck, M.P., Votes and Proceedings No. 6, 21st June, 1900:—

State Nursery, Campbelltown.

Distribution of plants.	Water supply.
Preparation of plants for season 1900.	Improvements.
Seeds and plants received.	Phylloxera-resistant vine-stocks.
The weather.	The Valonia oak (<i>Quercus Egilops</i>).
Spring frosts.	

Hill View, Sutton Forest.

Maitland Gaol Reserves.

Botanic Gardens.

Arrangement Ground.—No important changes have been made in this educational section of the garden; at the same time a number of plants have been added to several of the natural orders divisions in order to make them more representative.

Other Beds and Borders.—The principal alterations under this heading have taken place in the lower garden. They are as follows:—

- No. 21. New border encircling fountain; border of palm-bed enlarged; six new flower-beds made.
- „ 18. Two new beds made, and one enlarged.
- „ 23. South border and one flower-bed enlarged.
- „ 22. Three flower-beds altered in design.
- „ 1. One flower-bed altered in design.

The numbers refer to the portions of the garden so marked on the lithographed plan which has been prepared for the as yet unpublished guide.

During the winter the side of the lawn immediately to the east of the largest pond was fenced with wire netting on neat iron standards to keep off the black swans. For the first time in the history of the Gardens these swans devoured the growing tops of the *Ranunculi* which were in beds on this lawn, and if the fencing had not been hurriedly proceeded with, the public would have been deprived of the winter display of these plants, which is one of the features of these Gardens.

Medicinal Plants.—Improvements have been made in the large border devoted to these plants by the removal of interlopers, and by the addition of a few not previously represented. Many additional plants are still required, and I am availing myself of every opportunity to get them. The students of the Pharmaceutical Society of New South Wales and of the Materia Medica Classes at the University (Dr. T. S. Dixon) take great interest in our collection, incomplete as it is.

Rock Garden.—We have not a rock garden of the richness of many of those in European countries; at the same time considerable use is made of artificially-made rock-work and of the rocks which in some parts of the garden protrude through the soil. During the year I imported over a hundred species and varieties of *Opuntia*, partly with the view of settling the nomenclature of some of those which, under the name of prickly-pear, are a pest in this Colony, and partly with a view of testing, in rockeries and other situations, the horticultural value of some sorts which are imperfectly or entirely unknown in this Colony.

Lawns.—Beyond an endeavour to keep the lawns in good order, there is nothing to report in connection with them.

Creek and Ponds.—The condition of the creek and chain of ponds or small lakes is a frequent cause of anxiety to me. After heavy rain the amount of sand and other debris that is deposited in the bed of the creek and its expansions (the ponds) is enormous, and can scarcely be realised unless actually observed. At present I am simply unable to spare the labour of a large gang of men to remove the silt after heavy deposits, and if I were able to do so, it would not be an easy matter to dispose of such large quantities of comparatively useless material. Even if a suitable site were obtained the cost of conveying it thence would be considerable, and beyond my resources at present. Until something of a radical character is done the public are compelled to see the creek and ponds far less beautiful than they ought to be. This silt-question is a very difficult one, and as my scheme for tackling it is not yet complete, I will say no more for the present.

By

By a suitable arrangement of artificial rock-work in the hands of a specialist, who would remove all straight and hard lines from the creek-margins and introduce cunning devices in which cascades, water-basins, and pockets for plants would find a place, the creek could be transformed into a veritable fairyland. As it is, the view up the creek from two out of the three bridges that span it is very beautiful, and one longs for the time when it will be made still more beautiful.

Aquatic Plants.—The numerous small ponds and basins scattered throughout the garden are, mainly through the geniality of our climate, rich in vegetable life. We have had a beautiful display of flowers of nymphæas and other aquatic plants during the year, and it is a matter of regret that after heavy rains some of these ponds are liable to be silted up. In addition to aquatic plants of horticultural value, there are a large number of botanical interest,—I was going to add the word “merely,” but surely that would be out of place in reference to the contents of a botanic garden.

Boundaries and Fences.—No alterations or important repairs to boundaries or fences have to be reported.

Plant-houses.—The year 1899 has seen important works carried out in connection with our plant-houses. They were all in a serious state of disrepair; in fact, two, if not three, of them were in such a condition that I was afraid I should have to exclude the public. The large palm-house has been practically reroofed, and important repairs have been carried out as regards the side sashes; iron houses have received new doors and stages, while the old houses have been practically rebuilt with the exception of the brickwork. The whole of the houses have been repainted, and now look bright and clean. The work was carried out by Mr. D. McDonald, at a cost of about £315.

A low-roofed orchid-house, 40 by 15 feet, has been erected. No wood has been used in its construction except for the doors, the benches being of wrought-iron. The pitch of the roof has been kept as low as it was possible to construct it, and the panes of glass both of roof and sides are of very large size. This is a departure, at all events as regards Australia, and up to the present no sheets of glass have been broken, although the house has been in use for several months. In fact, the house appears to be quite satisfactory. It was erected by Mr. J. M. Wilson at a cost of £426. It is intended to be used as an Australasian and Polynesian orchid-house; but as our collection of such plants requiring the protection of glass is not sufficient at present to fill it, it is being temporarily used as a miscellaneous house.

Another iron hot-house, uniform in design with the two which are at present devoted to orchids and to miscellaneous tropical plants respectively, has arrived from England. I hope to give an account of it in my next report, as it is being erected as I write. It is intended to utilise it entirely for ferns, our collection of these plants being at present scattered amongst several houses.

A new plant-frame, 33 by 8 feet, has been placed in position, while two plant-pits, 64 by 6 feet and 64 by 7 feet respectively, have been rebuilt.

I shall not be satisfied until I am able to display to the public properly classified collections of hot-house plants. We require special houses for ferns, orchids, palms, aroids, aquatics, economic plants, and miscellaneous plants, and to accommodate some of these groups I look forward to have two or more houses. I feel sure that the realisation of my hopes in this respect is only a matter of a very few years, for Parliament is always generous in its appropriations to the Gardens, and every improvement to them is warmly appreciated by the public.

New Buildings (other than Plant-houses).—Following is a description, which has been kindly drawn up by the Government Architect, of the new building which has been erected during the year to accommodate the herbarium, museum, and administrative offices:—

“The additions carried out to the above building consist of the following:—Ground floor—Large herbarium, museum, library, store-room, photographic room, laboratory, and w.c.s. The museum and library, seed-room, and Superintendent’s office are portions of the original building which have been altered, enlarged, and rearranged. The whole of the first floor is a new addition to the original building, and affords the following accommodation:—Two large rooms for herbaria, Director’s office, and an office for assistant. The whole of the exterior is finished in cement and painted and sanded to resemble stone, three elevations having an enriched cornice at first-floor level and also a corbelled and enriched main cornice, finished with a balustraded parapet continued around the whole of the first-floor storey. The ceilings throughout are of stamped steel with stamped zinc cornices, consols and mouldings in the herbaria and principal rooms, all of suitable design and plainly decorated. The walls are finished in plaster, coloured with Duresco in tints suitable to give prominence to botanical diagrams and specimens. The staircase connecting the two floors and the fittings throughout are of cedar. The accommodation now provided consists of the following:—

“Ground floor—Herbarium, 41 feet x 31 feet.

Museum, 40 feet x 30 feet.

Library and office, 32 ft. 6 in. x 19 feet.

Staircase hall, 19 feet x 13 feet.

Store, 19 feet x 12 feet.

Painters’ shop, 12 ft. 6 in. x 11 feet.

Entrance hall, 18 feet x 7 feet.

Superintendent’s office, 18 feet x 12 feet.

Seed-room, 25 feet x 18 feet.

„ 27 feet x 14 feet.

Lavatory and water-closets; enclosed yard, tar-paved, with verandah on two sides paved with arkilite.

“First floor—Herbarium, 41 feet x 31 feet.

Herbarium, 40 feet x 30 feet.

Director’s office, 32 ft. 6 in. x 19 feet.

Assistant’s room, 26 feet x 19 feet.

Staircase hall, 19 feet x 13 feet.

“Most of the original building has been taken down to provide the accommodation necessary, the only portions remaining being the walls of the museum and portion of the back, together with the old seed-room. The style of architecture adopted is Italian, modified to harmonise with the façade of the old museum, a portico being introduced, forming entrance to herbarium, to balance the design.”

The

The total cost was about £4,500, and the contractor, Mr. J. M. Pringle, of Waverley. The building is a beautiful one, and worthy of its charming surroundings. The exterior has called forth the admiration of visitors, while its internal arrangements are most convenient, the architect having consulted my wishes in every possible way. Although the building is of considerable size, because of the style of architecture adopted, its situation and its arboreal surroundings, it is not unduly conspicuous, thus not dominating or overpowering the Gardens in any way.

Scientific botany has now worthy headquarters in New South Wales, and I trust that the erection of this excellent building will be contemporaneous with the active development of botanical science in the Colony.

I took possession of the building piecemeal (I first used my office on 13th November), and the building was finally handed over by the contractor in December. I should be ungrateful if I did not record the considerate way in which Mr. Pringle did all he could to minimise the inconvenience my botanical and clerical assistants had to undergo during this trying period of "carrying on business during alterations." In spite of many an anxious hour during the wettest winter for years, when one had to be constantly on the alert to protect the contents of museum and herbarium from rain, no serious damage resulted, while no great delay was even experienced by correspondents in regard to the examination of plants sent for report. Also the collections from outside sources, and gathered from the garden itself, multiplied in a delightful manner. So abundant have been the accessions that I am simply unable to make a reliable estimate as to the number of species at present in the herbarium, and the species-register cannot be brought up to date by my limited staff.

Two cottages facing the Domain-road, near the northern end of the grounds attached to my official residence, have been erected for the indoor propagator and the gardener (hot-houses). The site is a commanding one, and enables these officers to exercise some supervision out of hours over both Gardens and Outer Domain, while the cottages, which are very picturesque, are an ornament to the landscape. The dwellings which were formerly used as residences by the staff were insanitary and inconvenient in many ways, and were demolished during the improvements which culminated in the erection of the National Herbarium building.

The following details were kindly furnished by the Government Architect:—

"These cottages, two in number, are semi-detached 2-storey buildings, erected on a site on road to Mrs. Macquarie's Chair, and overlooking Woolloomooloo Bay, and are constructed of brick with hollow walls, tiled gables and tiled roof, the interior being finished in plaster. Each cottage contains the following accommodation:—

"Ground floor—Entrance lobby, 5 feet x 5 feet.
Dining-room, 15 feet x 14 feet.
Parlour, 14 feet x 12 feet.
Back lobby, 5 feet x 5 feet.
Pantry, 7 ft. 6 in. x 5 feet.
Kitchen, 12 feet x 10 feet.
Back verandah, 5 feet x 20 feet.

"First floor. — Bedroom, 14 ft. 9 in. x 14 feet.
" 12 feet x 12 ft. 3 in.
" 12 feet x 10 feet.
Bathroom, 7 ft. 6 in. x 5 feet.

"Each building has an enclosed tar-paved yard at back, and is also provided with laundry 10 ft. x 10 ft., fitted with copper and tubs, and the necessary closet accommodation. The front of the buildings is also enclosed with dwarf wall and iron railing, with steps and porches to entrances."

Messrs. Foster Bros. were contractors for the cottages, the amount of their contract being £1,260. Mr. W. Annear erected the dwarf wall, iron railings, and gates, together with some weatherboard fencing at a cost of £68 18s. 6d.

National Herbarium.—From what I have recorded, it is obvious that the year 1899 will be a red-letter year in regard to the National Herbarium of the Colony, and, I trust, in regard to the development of botanical education in New South Wales. The herbarium has now a "habitation and a home," and my requests for specimens have been very kindly received by official and non-official botanists in many parts of the world. In a very few years I hope to receive large acquisitions as the result of my appeal, made under special circumstances. As regards exchanges, I offer as liberal a return in Australian plants as possible, and it will always be my endeavour to make every return in my power to those botanists who have dealt liberally with this establishment.

A botanic garden cannot properly perform its functions without the support of a rich herbarium, for a herbarium is, after all, only a garden of dried plants. And whereas the richest garden only contains but a few thousand species growing at any one time, a herbarium may contain tens or hundreds of thousands of species, all subserving the grand object of giving information and developing the resources of the Colony.

Phanerogams and Ferns.—My residence being adjacent to the herbarium has enabled me to devote a good deal of time to herbarium work. Mr. Ernst Betehe, my botanical assistant, has been unremitting in the exercise of his duties; while Mr. Julius Camfield, overseer of the Garden Palace Grounds, has systematically collected specimens from the garden as they appeared in flower or fruit, and has, during the time he could spare from his other duties, given valuable help in the herbarium.

Cryptogams.—Mr. W. Forsyth is in charge of the mosses, and reports as follows in regard to his labours during the year:—

"Substantial progress has been made with the herbarium during the past year. In October last we received from Dr. Brotherus, of Helsingfors, the returns from a collection of mosses forwarded to him for determination some three months previously. The returns added a large number to the list of species recorded for the Colony, as well as some new for the Continent, and a few new to science. A further collection of 400 packets, the result of a good deal of collecting, is now on its way to Dr. Brotherus.

"Several important additions have been made to the herbarium, notably a fine collection of European species from Dr. Goebel, of Munich. The herbarium, which was begun about two years ago, now contains about 1,200 species—Australian and exotic combined, besides a considerable number of duplicates. It is hoped that by the end of next year we may be in a position to enter into exchange work."

Mr.

Mr. Forsyth is the overseer of the Centennial Park, an office which leaves him with very little spare time. He has freely devoted his evenings, Saturday afternoons, and holidays to the development of the herbarium of mosses, nearly the whole of the specimens being neatly and uniformly mounted and labelled, the result being most creditable to him.

Algae.—Mr. A. H. Lucas, M.A., B.Sc., has very generously undertaken the honorary curatorship of this group of plants. At present the collection is in its infancy, but it is being put in order and is being steadily added to. He made a trip to Jervis Bay and other places on the South Coast during the year for the purpose of collecting specimens. Exclusive of the Harveian collection, we have about 750 species, and the duplicates are accumulating so satisfactorily that Mr. Lucas hopes to be able to enter into exchanges towards the end of the year. Mr. Lucas is his own préparateur, and his specimens are alike a credit to himself and to this establishment.

Fungi.—Mr. Alexander Grant is in charge of this portion of the herbarium. He reports that, owing to the general upset caused by the building operations, his work was mainly confined to collecting and preserving specimens. Besides the micro-fungi and also the fungi, which were preserved dry, he acquired during the year about 120 glass jars of fungi preserved in the wet way, and some of these jars contain five or six species. During the coming year these accumulations of material will be suitably dealt with.

Lichens.—In my last report I stated that I would give some account of the Lichen herbarium of the Revd. F. R. M. Wilson, of Victoria, which, owing to the generosity of Parliament, I was able to secure for this Colony. I am only able to make a very brief statement, for two reasons: In the first place, owing to the building operations, I was chiefly engaged in, protecting it from rain and other destructive agents. It has been partly overhauled, and seems to have gone through the ordeal unscathed. In the second place, no member of my staff specialises in this group of plants, and I have not yet met with an honorary curator of this section. The Wilson collection consists of over 20,000 specimens, mostly Australasian and Polynesian; it contains, it is supposed, about a thousand named species,—how many more are contained in the unworked material one cannot guess at at present. It is rich in varieties. In addition there have been collected, during the last three or four years, by my staff and myself, a large number of lichens from many parts of the Colony.

It is a source of great satisfaction to me to see the active interest in botanical matters taken by many members of the gardening staff. A knowledge of botany will make them more efficient custodians of their plant-charges, and is in every way desirable. I encourage them to attend the botany classes at the Technical College and extend my sympathy to them in their studies in any way I can. It would perhaps be invidious to mention names, but quite a number of gardeners both at the Gardens and Centennial Park have acquired excellent botanical knowledge, and will, I feel sure, continue their studies.

A Laboratory wanted.—In order to utilise the educational advantages of the Botanic Gardens to the fullest extent, we require accommodation for the study of vegetable physiology, pathology, anatomy, development, and cytology. These subjects can only be satisfactorily studied in a well-furnished botanic garden, with abundance of living material and suitable equipment for the growth of plants and the preservation of tissues. And viewing the marine situation of the Botanic Gardens, I hope, at no distant date, to see facilities within the garden itself for the study of marine vegetation. It would, doubtless, be a convenient arrangement to erect a picturesque building to serve as a joint laboratory for investigations in physiology, &c., in marine botany and in aquatic plants generally.

At Kew, the Jodrell laboratory contains rooms for physiological and microscopical research "for the use of scientific investigators who wish to utilise, for the purpose of experiment and study, the materials afforded by the museums and collections of living plants in the Royal Gardens." This laboratory, which has rendered possible a long series of brilliant researches chiefly in vegetable physiology, was built and endowed by the private gentleman whose name it bears. I hope that a colonial Jodrell will arise to enable me to carry out my scheme of a laboratory on the lines I have indicated; or, should public-spirited wealthy citizens desire to advance the objects for which the Gardens were founded, I could indicate several schemes, and, if the donor would permit it, we would gratefully associate his name, for all time, with his benefaction.

Botanical Museum.—During July the building operations had become so aggressive that the museum had to be closed to the public, and it has not yet been reopened. The acquisition of specimens has, however, proceeded in a most satisfactory manner, and I am only waiting for a number of modern show-cases (for which tenders have been already called) to display these treasures, which I feel sure will be much appreciated. An account of the contents of the museum had better be deferred until the opening has actually taken place.

Public Lectures.—During the winter and early spring I gave illustrated lantern lectures, entitled "A Botanist on Mount Kosciusko" and "Some Gems of the Mount Kosciusko Flora," before the Y.M.C.A., the Horticultural Association, and the Registered Pharmacists' Society, and two Sydney churches. I received several other applications to repeat the lecture, but other engagements and press of work compelled me to decline. I gave an illustrated lantern lecture on the Sydney Botanic Gardens before the Hunter River Agricultural and Horticultural Association, West Maitland, and one on Weeds and Poisonous Plants at Campbelltown.

Departments of Agriculture and Forests.—A good deal of time has been devoted to the naming of plants and the preparation of reports, of varying length, for these two important Departments. Further particulars will be found in my Annual Reports thereto.

Botanical Survey of the Colony.—My specific proposal for a botanical survey of New South Wales was propounded in my Presidential address delivered before the Royal Society of the Colony on 5th May, 1897, and the subject has been constantly before me since then (as it had, in fact, for some years previously).

The matter is of such importance to the people of this Colony—to their direct material interests, as well as to the advancement of botanical science—that I propose to deal with it in some detail.

The desirability of a botanical survey for the Colony is so obvious that I require only to touch upon a few points which suggest themselves because of our special circumstances and environments. In the first place, we are frequently asked where this or that plant, or a supply of its product, may be obtained in quantity, and sometimes we can only indicate the locality in general terms. The establishment of a botanical survey need not involve the expenditure of a large sum of money, but rather the organisation and control of existing agencies which may subservè the grand object in view. I feel sure that

that in country districts there are hundreds, nay, even thousands, of private citizens and officials, such as engineers, surveyors, mining, land and forest officers, schoolteachers, postmasters, and many others; who would give voluntary aid to the furtherance of a botanical survey. Many would, in their spare moments, gladly supply information and collect specimens if they knew what would be acceptable; but, while the work must be largely voluntary, it need be none the less systematic. I have conducted an informal botanical survey on my own account for many years, but my correspondents, although many, do not represent the whole of the Colony, and their work has been largely of a fitful and unorganised character.

In time to come we shall not only have geological and mining surveyors, but also agricultural and forestry surveyors. I use the word surveyor (as regards agriculture, forestry, &c.) not so much in the sense it bears as applied to a land surveyor, for a man may be able to furnish valuable information suitable for a botanical and agricultural survey, and yet be incapable of using a theodolite. To summarise, I would use the term "botanical survey" as correlative to geological survey, and it would include observations applicable to—

|------------------------|-------------------------|
| <i>a.</i> Pure Botany. | <i>c.</i> Forestry. |
| <i>b.</i> Agriculture. | <i>d.</i> Horticulture. |

Let us touch upon these heads in a little detail.

(*a.*) *Pure Botany.*—An obvious advantage to the systematist would be that material from a wider area would be available, and thus he would be better able to define the limitations of species and varieties than he is at present. How frequently we have to deplore the one-sided description of a species, often prepared from one specimen, from one locality, in ignorance perhaps of the amount of variation the same plant undergoes a very short distance away. A botanical survey will, above all things, secure thoroughness; its action will be comparable to that of the wide-spreading net which sweeps a large area, while our present spasmodic efforts in the same direction may be compared to those of the patient and stationary angler who must fain be content with a bite here and a bite there. The acquisition of more complete material in many orders will lead to the employment of specialists. Many of our local botanists, who take up the subject broadly, will probably specialise on certain genera and orders. Nor under an improved arrangement will any orders or groups of plants be ignored, as some practically are at present. The headquarters of the botanical survey will be practically a botanical clearing-house; waste and duplication will be minimised, and no man who desires material for research need go unsatisfied. I may, perhaps, draw special attention to the desirability of additional botanists and collectors in New South Wales giving attention to fungi (particularly micro-fungi), mosses, lichens, and seaweeds.

Local Floras.—A properly-organised botanical survey would supersede the special preparation of local floras, or rather, the local botanist would have his task limited to the filling in of blanks in well-defined geographical or geological areas. I have nothing but praise to bestow upon the outlines of local floras already published for districts of New South Wales, but their authors would be the first to admit that their observations are incomplete, and lack their full educational value for the reason that they had to work upon imperfectly-defined areas. We have much to learn in regard to the range of plants with respect to geological formations. The admirable coloured geological map issued by our geological survey is one of the greatest services to botanical collectors collecting with the above object in view.

Flowering Periods of Australian Plants.—A botanical survey might also take cognizance of such matters as the flowering periods of indigenous plants, information which would be desirable, on the practical side, as indicating when fruits and seeds might be probably available.

(*b.*) *Agriculture.*—The subject of agriculture is so important that it might either have a survey of itself, or the facts having a special bearing on the subject might be collated by themselves. Of course, in dealing with this subject the indigenous plants are, on the whole, of inferior importance to exotic ones. The crops we raise are practically all exotics; at the same time we must never lose sight of the possibilities of our indigenous fodder-plants. For instance, the character of the indigenous vegetation is a valuable guide to the agriculturist who desires to break up fresh soil, therefore a botanical survey should be in a position to furnish him with information. Not that any sensible man would buy land without looking at it previously; at the same time a farmer is usually a poor man, and whether he is or not, we should endeavour to supply all information which will facilitate settlement. The Department of Agriculture is already in possession of a vast amount of information in regard to the suitability or otherwise of different districts and small areas; for the cultivation of various plants an agricultural survey would systematise such information and render it more readily available to the public. The establishment by the Department of model farms in different parts of the Colony will, besides teaching improved methods of farming, furnish the Colony with many of the agricultural data requisite for a complete agricultural survey.

The survey will also take cognizance of weeds, of the areas affected by the noxious species, of the spread of such plants, of various methods for weed eradication, and their results, and all matters which will assist in the framing of laws and regulations for coping with these pests.

The botanical survey should be in close touch with the geological survey, as we require to know, amongst other things, the character of soils and subsoils, and various matters connected with the retentiveness of the soil for water, natural water supplies, &c. This information will supplement that of the chemist of the Department of Agriculture on the chemistry and physical properties of soils. As regards the desirability of co-operation with the entomologists of the Colony, I have only to state the case to commend it to consideration, as plant and insect life are indissolubly connected.

(*c.*) *Forestry.*—We have much to learn in regard to the geographical distribution of even our principal forest trees; much more, then, is there scope for inquiry in regard to the distribution of those of less frequent occurrence. The matter is of importance from a utilitarian point of view, because of the fact that, be a timber ever so desirable, it cannot be utilised commercially unless a continuous supply be available, and to obtain supplies we must know the localities of its occurrence not merely in general terms. The value of a botanical survey would be most immediately felt in regard to our forests. We could by the aid of it take stock, as it were, of our possessions, of our standing timber, and prepare a scheme for scientific conservation. A general statement to an outsider as to the vastness of our timber supplies is at once met by the plain questions—Where are each of our timber-trees found, of what size are they, and in what abundance?

Measurement of Trees.—One of the matters to which attention would be given by a botanical survey would be that of ascertaining the heights and trunk-diameters of various kinds of trees, different observations being made in regard to the same species in different districts. In this way a ready index would be obtained as to the climates and soils in which various species flourish best. Notes would also be taken of the sizes of abnormally large trees. These are, of course, becoming rapidly fewer ever since the advent of the white man. If the identity of individual trees be noted, either by marks on or near trees themselves in the forest, or on the maps, it would be easy to procure records of the rates of growth of our Australian trees, a matter of considerable economic importance, and of some scientific interest, but in regard to which we possess very few data at present.

Rate of Growth of Forest Trees.—This is a forestry matter, which might well engage the attention of a botanical survey. We have a few scattered notes on the growth of indigenous trees, but no inquiry of this nature, on a large scale, has to my knowledge been yet attempted. The ascertainment of the rate of growth of exotic trees in various districts is also of great practical importance, and the data are often more readily available than is the case with indigenous trees, as, since they have been generally planted by man, approximate dates of planting are often ascertainable.

Natural Reafforestation.—A phase of the forest question that is not often inquired into is the conversion of grazing land into forest growth since European settlement. It is a well-ascertained fact that, since the advent of the white man, a growth of trees, more or less dense, has, without artificial planting, taken possession of grass land. Inquiry might be made into the circumstances of each case, for opinions are by no means unanimous as to the cause of these forest growths. The reason of this change is attributed to the overstocking of country, the stock eating down the grass, so that bush-fires (which formerly consumed the seedlings of forest-trees) are now less frequent, and devastate smaller areas of country than they used to do. In some cases there is no doubt that stock aid in the propagation of trees by trampling the seeds into the ground, and even manuring the ground, thus preventing the seed being washed away by rain. At the same time one must not lose sight of the fact that stock have important influence on the formation of natural forest growths, as they eat out (particularly when grass is scarce) many young trees.

(d.) **Horticulture.**—Many of our plants are well worthy of cultivation for ornamental and other purposes. The merits of but few are known to horticulturists, so that there is room for much inquiry. Some desirable plants are sparingly distributed; in regard to these, we require full data as to localities, with particulars as to soil, aspect, &c., and particularly the season for maturing seeds.

County and Parish Maps.—As the results come in they will, after checking, be carefully entered by a draughtsman clerk (many of whom already possess knowledge of plant names) in the county and parish maps. The county maps will serve for more general records, the parish maps for those in more detail. To accompany each map, or group of maps, registers could be attached, where information could be recorded which is unsuitable for (either on account of its bulk, or for other reasons) the maps themselves. Such registers could have printed columns and head lines; thus expense could be saved, and neatness and uniformity secured.

India has for many years enjoyed the advantages of a botanical survey, and I trust that no great time will elapse before we have a properly-organised botanical survey of New South Wales.

In the meantime I am steadily working on the lines I have indicated. The Colony is being systematically worked as regards its vegetation, and I would ask all local botanists who publish local floras to deposit duplicates of their plants in the national herbarium here. A local flora may be nearly worthless unless supported by specimens of the plants it records. Also it is obviously desirable that co-types of all species described be deposited by our botanists in the national herbarium.

Mr. A. G. Hamilton has published during the year, in the Linnean Society's Proceedings, a flora of Mount Wilson. To that gentleman, and also Mr. Jesse Gregson, I am indebted for a very extensive series of plants from the locality. Mr. W. Blakely, a member of my staff, on duty at the Jenolan Caves, has during the last year or two pretty well exhausted the flora of the locality, so that his collections, with those of my own, will form the basis of a useful local flora, should it be at any time desirable to undertake it. Mr. J. F. Campbell, of Walcha, has contributed extensive collections from New England, and so has Mr. R. H. Cambage, from many western and southern localities. These gentlemen are surveyors, and I have no more valuable coadjutors than surveyors. Their work takes them off beaten tracks, and, as a rule, they are keen observers of vegetation. The Rev. T. V. Alkin, M.A., of Campbelltown, one of the senior working botanists of the Colony, has made many contributions to the national herbarium, and so have Mr. H. J. Rumsey, of Barber's Creek, Mr. Staer, of Hornsby, Mr. Heron, of Conjola, and Mr. J. W. Thompson, of West Maitland.

Following are the principal journeys I have made:—

1. Mount Kosciusco, January. (The botanical results of this trip are recorded in the *Agricultural Gazette of New South Wales*.)
2. King's Table-land, March.
3. Valley of the Grose, from foot of Govett's Leap, April.
4. Jervis Bay, Nowra, &c., July, over some of Robert Brown's and Caley's collecting-grounds.
5. Scone to Stewart's Brook, &c., August, nearly connecting with my previous visits to the Barrington and Gloucester.
6. Hill Top south to the Goulburn district, September.
7. National Herbarium, Melbourne, September.
8. Mount Wilson, October.
9. Blue Mountains and western slopes as far as Rydal, November.
10. Narrabri, foot-hills of the Nandewar Range, Tibberena, Boggabri, November.
11. Ben Lomond and other high parts of New England, December.
12. Weddin Forest Reserve, Bimbi, Young, &c., December.
13. Blayney, December.

On trip No. 1 I was accompanied by Mr. W. Forsyth, and on trip No. 6 by Mr. J. L. Boorman. I have kept systematic notes of every trip, listing the species, with the special object in view of furnishing data for the botanical survey. Mr. Forsyth made two important collecting trips, viz., to the Warrumbungle Ranges in October, and from the Upper Shoalhaven, at Marulan, through very rough country, to Nowra in

in September. In the latter trip he was accompanied by Mr. A. A. Hamilton, and in both of them he made extensive and valuable botanical collections. He has furnished me with reports and list of plants of both trips, which are valuable contributions to the botanical survey. I hope he will be able to make further observations, so that these reports may be available for publication. He has also made collecting trips to the Blue Mountains and to the South Coast.

Mr. J. H. Camfield has collected during the year in the Kiama and Jamberoo districts, also the Botany Bay and George's River districts, and on the Blue Mountains.

Mr. Alexander Grant has collected and preserved large numbers of fungi; while Mr. William Buckingham has made several collections of the same group of plants, which are much appreciated.

Mr. J. L. Boorman has collected in the various districts to the west, north, and south of Sydney during the year; he is an accurate and painstaking observer, and his collections and notes are both valuable.

Publications.—Following are the publications made by me, or in co-operation with others:—

WITH MR. HENRY DEANE, M.A.

Observations on the Eucalypts of New South Wales. Part V.

Four new species are described, viz. :—

- (a) *E. Macarthuri*, the "Camden Woolly Butt," at one time known as "Woolly Gum of Argyle," a fibrous-barked species included by Bentham under *E. viminalis*, and since confused with *E. Stuartiana*.
- (b) *E. quadrangulata*, a box-like tree found on the Southern Dividing Range, and named because of the remarkably quadrangulate twigs, which are even-winged.
- (c) *E. acacie formis*, a handsome New England species, hitherto looked upon as a form of *E. Stuartiana*, and locally known as "Narrow-leaved Peppermint." The remarkable sucker-leaves bear considerable resemblance to the phyllodes of some acacias, hence the specific name. A variety is also described under the name of *linearis*.
- (d) *E. rubida*, a widely-diffused white or ribbon gum, with cruciformly-arranged buds and broad suckers, which has usually been placed under *E. viminalis*. It has often a glaucous bark, hence one of its local names, "Candle-bark." Notes are also given on *E. regnans*, F.v.M., and *E. fastigata*, D. & M. *E. dives*, Schauer, is shown to be identical with our *E. amygdalina*, Labill., var. *latifolia*. *E. Muelleriana*, Howitt, of Victoria, is shown to occur in New South Wales and to be identical with *E. dextropinea*, R.T.B. An interior variety of *E. siderophloia*, Benth., is described under the name of *glauca*. *E. goniscalyx*, F.v.M., var. *nitens*, is described; also *E. Gunnii*, Hook., var. *glauca*. A small-flowered variety of *E. saligna* is described under the name "Silky Gum." *E. dealbata*, A. Cunn., is reduced to a variety of *E. tereticornis*, and extended notes are given on the varieties of this species.

In Part VI three new species are described, viz. :—

- (a) *Eucalyptus conica*, a drooping box of the western plains, allied to *E. polyanthema*.
- (b) *E. aggregata*, variously known as "Peppermint," "Floated Gum," a fibrous-barked species found in damp situations, and closely allied to *E. Macarthuri* (see Part V).
- (c) *E. nooa-anglica*, the "Black Peppermint" of New England, which is closely allied to *E. Stuartiana*, and may also occur in Victoria.

The miscellaneous notes comprise observations on *E. stricta*, *E. obtusiflora* (which is shown to be a connecting link between *E. stricta* and *E. virgata*). *E. virgata* is shown to be synonymous with *E. huekemanniana*, F.v.M., and is accepted as a good species; the cause of the confusion between *E. virgata* and *E. Sieberiana* being pointed out. *E. largiflorens* and *E. microtheca* are dealt with, and some account given of their variation. The former is "Goborro" and the latter "Coolibah." *E. Behriana*, a box, is shown to occur in this Colony. The variation of *E. Maidenii* and *E. globulus* is discussed, and a note on *E. goniscalyx* given. *E. Stuartiana*, F.v.M., the common "Apple," is stated to be identical with the recently-described *E. Bridgesiana* of Mr. R. T. Baker. Additional notes on *E. squamosa*, D. & M., are given, showing which different views have been held by botanists as to its systematic position.

WITH MRS. T. W. EDGEWORTH DAVID.

"Observations on the Plants collected at Funafuti, Ellice Group," by Mrs. David, during the stay of Professor David's coral-boring expedition on the island during 1897. A further announcement will be made when this paper is published.

WITH ERNST BETCHE.

Notes from the Botanic Gardens, Sydney, No. 4.

Citriobatus lancifolia, Bailey, a Queensland species, is recorded for New South Wales, as is also *Abutilon Mitchellii*, Benth., hitherto only recorded from Queensland and South Australia. *Gastrolobium Boormanii* is a new species from the coast district (Wyong), the only other New South Wales species (*G. grandiflorum*, F.v.M.) belonging to the desert flora. *Pultenea Campbellii* is from Walcha, and is also a new species, its affinities being with *P. glabra*, Benth. *Myriophyllum pedunculatum*, Hook., f., was found in ponds on Mount Kosciusko. It was previously only recorded from Victoria, Tasmania, and Western Australia. *Rhodamnia trinervia*, Blume, var. *glabra*, is a new variety, chiefly distinguished by the absence of all hairs. *Azorella Muelleri*, Benth., found on Mount Kosciusko, is new for the Colony, having hitherto been found only in Victoria. The leaves of *Crantzia lineata*, Nutt., described in the *Flora Australiensis*, as from 1 to 2 inches long, or even more, are shown to acquire a length of from 6 to 18 inches at Walcha. *Olearia alpicola*, F.v.M. var. *aglossa*, is a rayless form of the species from Mount Kosciusko, now described for the first time. *Alrotanella nivigena*, F.v.M., is recorded from Mount Kosciusko; it had previously only been obtained in Victoria, the same remarks applying to the variety *radicans*, F.v.M., of *Guaphalium japonicum*, Thunb., *Glossostigma spathulatum*, Arn., a tropical Asian and African plant, hitherto recorded from Queensland, was found near Walcha, as was also a variety of *Limosella aquatica*, Linn., with terete leaves. *Plectranthus congestus*, R.Br., is new for New South Wales; it has previously only been recorded from Queensland. *Endiandra globosa* is a new species from the Tweed River, with globular fruits 2 inches in diameter.

The authors reduce their *Macadamia integrifolia* to a variety of *M. ternifolia*, F.v.M. *Exocarpus nana*, Hook., is shown to be new for New South Wales, having hitherto only been recorded from Victoria. *Eremochloa muricata*, Hackel (in place of *Ischmarum pectinatum*, Trin.), is shown to occur in the Colony, and by following Hackel in his latest monograph of the Andropogonæ the genus *Eremochloa* is added to the flora of the Colony, and the rather intricate synonymy of this grass elucidated. *Agrostis (Deyeuscia) densa*, F.v.M., from Mt. Kosciusko, is shown to be new for the Colony. *Pteris falcata*, R.Br., var. *nana*, Bailey, a fern hitherto only recorded from Queensland, is shown to occur in New South Wales.

Notes from the Botanic Gardens, Sydney, No. 5.

A new variety (pedunculata) of *Hibbertia stricta*, R.Br., was described from the Wingello district, and *Lepidium ruderale*, Linn., var. *spinescens*, Benth., hitherto only found in South Australia, was recorded from this Colony. *Dodonaea adenophora*, Miq., is shown to be confined to Western Australia, it having been confused with *D. tenuifolia*, Lindl., as far as New South Wales is concerned. An account is given of *Swainsona Cadelli*, F.v.M. (ined). *Verticordia darwinoides*, Maiden and Betcher, is shown to be synonymous with *Rylstonea cernua*, R. T. Baker (Proc. Linn. Soc. N.S.W., 1898). A South American composite weed, *Soliva sessilis*, Ruiz and Ravon, from South

South America, was recorded for the first time in Australia, having been found in the turf at the Sydney Cricket Ground, Moore Park, Centennial Park, &c. *Goodenia glomerata*, a new species, with affinity to *G. geniculata*, R.Br., var. *lanata*, is described from the Braidwood district. An interesting new species of *Melodinus* to which the name of *M. Australis* was given was received from Yarrahappini Mountain, Kempsey district. *Sarcophilus Fitzgeraldi*, F.v.M., var. *rubicentrum*, var. nov., was recorded from the Tweed River, having hitherto only been found in Queensland. To a new variety of *Chrysopogon Gryllus*, Trin., with the spikelets mostly in pairs, the name of *spicigera* was given.

The papers contain notes on new localities and various critical notes on New South Wales plants.

In the proceedings of the Linnæan Society of New South Wales I have described a new variety of *Dendrobium undulatum* from the Solomon Islands. The lateral petals are shorter and without undulate margins, the dorsal and lateral sepals are shorter and scarcely spirally twisted; the margins not undulate. The lateral petals are dull purplish; the sepals and labellum are whitish, tinged with purple; named *Woodfordianum* in honor of Mr. C. M. Woodford, from whom it was received. In the same journal I also published "Some further Observations on the Vegetation of Lord Howe Island," which was illustrated by two fine photographs of the hitherto undepicted inflorescence of *Hedyscepe Canterburyana*. This paper also contains a description of a proposed new variety (*Howeanum*) of *Dendrobium gracilicale*, F.v.M.

I contributed the following articles (some of them illustrated) to the *Agricultural Gazette* of New South Wales during the year:—

"Some Exotic Grasses":—No. 2. *Paspalum dilatatum*, Poir. No. 3. *Paspalum compressum*, Nees. (The carpet grass of the Southern United States.)

"Useful Australian Plants":—No. 51. *Agropyrum velutinum*, Nees. No. 52. *Agrostis venusta*, Trin. No. 53. *Agrostis Muelleri*, Benth. No. 54. *Agrostis scabra*, Willd. No. 55. *Apluda mutica*, Linn. No. 56. *Aristida arenaria*, Gaud.

Some Native Australian Fodder Plants.

Indigenous Vegetable Drugs (Parts II to V).

Native Food Plants.

The Weeds of New South Wales.

A variety of *Panicum decompositum* (a so-called Native Millet grass).

The Valonia Oak.

A second Contribution towards a Flora of Mount Kosciusko.

The Noogoora Burr or Cockle Burr (*Xanthium strumarium*).

The papers on the Valonia Oak and on the Flora of Mount Kosciusko have brought me a considerable amount of correspondence.

Mr. D. McAlpine read a paper before the Linnæan Society of New South Wales entitled: "On a micro-fungus from Mount Kosciusko; and on the first record of *Uncinula* in Australia."

The fungus is *Puccinia calthæ*, Link, and was found by me on living leaves of *Caltha introloba*, F.v.M. Fungi are rare on Mount Kosciusko, and this was the only one observed. It is interesting to note that it is identical with the species found in Europe on *Caltha palustris*, Linn. The *Uncinula* was found by Mr. Alexander Grant, of the Botanic Gardens, on the leaves of *Lagerstræmia ovalifolia*, Teys.

Mr. W. Forsyth made a "Contribution to a knowledge of the Moss-flora of New South Wales," to the Linnæan Society during the year. Sixty-one species are recorded, forty-three of which are new for the Colony, Port Jackson furnishing twenty-six. Some of the species are new for Australia; one of the most notable of these being *Eucalypta tasmanica*, Hpe. and C.M., hitherto recorded from Tasmania. A number of species from Mount Kosciusko are also recorded, some of them very interesting, previously known only from Tasmania and Victoria (Australian Alps).

Guide to Gardens.—The thorough upset caused by the building operations prevented me from doing any work at the Guide since May last. The preparation of a Guide of this character requires a considerable amount of elbow-room, and as I am far from straight at present, and have not yet received my office furniture, I cannot say when work on the Guide will be resumed.

Sewerage.—Mr. G. Donaldson carried out a contract for converting the closets and laying the drainage to the same, at a cost of £200 5s. 5d. This work was in connection with the main sewer, completed as detailed in my last report.

Water Supply.—Following is the registered supply of water during the year:—

Meter No. 215.—Gardens	3,649,000 gallons.
Meter No. 217.—W.C.'s, &c.....	742,000 ,,
Meter No. 221.—Propagating ground	932,000 ,,
Total	5,323,000 ,,

Roads and Paths.—Endeavour has been made to keep these in repair, as far as possible—though some of them are far from satisfactory to me. The most important work undertaken during the year is in the lower garden, where a portion, 250 yards in length, has been regravelled, viz.:—Walk leading from sundial north-east to beach walk, and from sundial north-west to beach walk.

Street Tree-planting.—Much correspondence and several leading articles on the above subject have appeared in the Sydney newspapers during the year. In fact, I do not remember the subject to have been brought so prominently before the public mind for a number of years. Very little practical result appears to have ensued, but it is a subject in regard to which we must keep pegging away and not be disheartened. Alderman J. H. Barlow, of the City Council, is actively working in this matter, and in a very few years, I doubt not, we shall see trees planted in most of the suitable spots in Sydney and suburban streets. It seems out of place on the present occasion to dilate on the advantages of tree-planting in streets.

During the year (November) a fine silky oak (*Grevillea robusta*), which formed one of an avenue of trees which formerly extended from the main entrance to the central Norfolk Island pine, died. It was about 50 years old, and was 47 feet high, with a trunk circumference of 7 feet at a height of 3 feet from the ground. There is no great depth of soil at the situation in which it grew, and it apparently died from natural causes. I am afraid, however, that the silky oak is not a long-lived tree under the most favourable circumstances.

Labelling.—I am sorry that, owing to the necessity of employing the label-writer on other duties of an urgent character during part of the time while the building operations were proceeding, the work of labelling was interfered with. This was a matter of very great regret to me, but quite unavoidable. Instead of having a part-time label-writer, as at present, there is ample work in the Gardens for at least two full-time label-writers.

Spraying.—Not much spraying for insects and fungi was undertaken during the year, but the work of combatting these pests was nevertheless vigorously proceeded with. Large numbers of diseased plants or portions of plants were carefully removed and destroyed by fire. It is not always convenient or desirable to employ this drastic method, but it is certainly the best to adopt in a number of cases. I am afraid that a garden free from pests and a city free from disease are practically incapable of realisation, but they are grand ideals.

Fumigating Chambers.—Detached wooden buildings, with galvanised-iron roofs, have been erected at the Botanic Gardens, and also at the State Nursery, Campbelltown, for the purpose of fumigating cuttings, living plants, or anything likely to communicate disease to other plants. The dimensions of each building are:—Floor, 7 ft. 4½ in. by 6 ft. 4 in.; height, 7 ft. 11 in., diminished to 6 ft. 10 in. The fumigations are usually by hydrocyanic acid gas, which is liberated by the action of crude sulphuric acid on fused cyanide of potassium. It seemed unreasonable to insist on nurserymen, fruit-growers, and others fumigating trees and fruit without the Government botanical establishments setting the example.

During the year a case of indecent behaviour was punished with six months' imprisonment, while convictions have also been secured for flower and plant stealing and wilful damage to plants. Increased watchfulness for perpetrators of offences against the comfort of the public property has been maintained, and will not be relaxed.

Correspondence.—Letters registered from 1st January to 31st December, 1899, 5,270, being 719 more than during the corresponding period of 1898. Letters despatched from 1st January to 31st December, 1899, 5,230, being 779 more than during the corresponding period of 1898.

Seeds received and despatched.

<i>Received</i>	BOTANIC GARDENS.	<i>Despatched.</i>
Antwerp— 18 packets miscellaneous seeds.		Baroda, India— 156 packets New South Wales seeds.
Bangalore, India— 3 fruits of <i>Theobroma cacao</i> . 2 pods <i>Spathodea campanulata</i> . 2 packets seeds.		Bangalore, India— 18 packets New South Wales seeds.
Demerara, British Guiana— 4 packets miscellaneous seeds 9 bags palm-seeds.		Berlin, Germany— 141 packets New South Wales seeds.
Dresden, Germany— 63 packets miscellaneous seeds.		Belgrade, Servia— 41 packets New South Wales seeds.
		Darmstadt, Germany— 40 packets New South Wales seeds.
		Demerara, British Guiana— 100 packets New South Wales seeds.
		Dublin (Glasnevin)— 55 packets New South Wales seeds.
		Dresden, Germany— 65 packets New South Wales seeds.
		Durban, Natal— 214 packets New South Wales and other seeds.
		Bonn, Germany— 85 packets New South Wales seeds.
		Brunswick, Germany— 25 packets New South Wales seeds.
		Breslau, Germany— 54 packets New South Wales seeds.
Buitenzorg, Java— Seeds of 22 species of palms. 1 bag <i>Stevensonia grandiflora</i> . 1 packet <i>Chrysalidocarpus lutescens</i> .		Buitenzorg, Java— 267 packets New South Wales and other seeds.
		Cambridge, England— 41 packets New South Wales seeds.
		Ceylon— 58 packets New South Wales and other seeds.
		Cracow, Austria— 62 packets New South Wales seeds.
		Edinburgh, Scotland— 92 packets New South Wales seeds.
		Erlangen, Bavaria— 50 packets New South Wales seeds.
		Greifswald, Germany— 73 packets New South Wales seeds.
Greifswald, Germany— 68 packets miscellaneous seeds.		Hamburg, Germany— 128 packets New South Wales and other seeds.
Groningen, Holland— 20 packets miscellaneous seeds.		Heidelberg, Germany— 50 packets New South Wales seeds.
Hamburg, Germany— 66 packets miscellaneous seeds.		Hobart, Tasmania— 37 packets New South Wales seeds.
Heidelberg, Germany— 112 packets miscellaneous seeds.		Jamaica— 40 packets New South Wales seeds.
Hobart, Tasmania— Seeds of <i>Clianthus punicea alba</i> .		Jurjew (Dorpat), Russia— 49 packets New South Wales seeds.
Jamaica— 1 bag Lignum Vitæ seed. 4 bags palm-seed.		

Received.

- Kew, England—
6 packets miscellaneous seeds.
- Liege, Belgium—
42 packets New South Wales seeds.
- Lille, France—
84 packets miscellaneous seeds.
- Louvain, Belgium—
66 packets miscellaneous seeds.
- Madras, Agri-Horticultural Gardens—
10 packets miscellaneous seeds.
- Madrid—
100 packets miscellaneous seeds.
- Malta—
30 packets miscellaneous seeds.
- Ootacamund, India—
10 packets miscellaneous seeds.
- Paris (Museum of Natural History)—
122 packets miscellaneous seeds.
- Rome—
4 packets seeds.
- Saharanpur, India—
162 packets miscellaneous seeds.
- Siena, Italy—
28 packets seeds.
- St. Petersburg, Russia—
148 packets miscellaneous seeds.
- Trinidad Botanical Department—
1 bag seeds *Oreodoxa oleracca*.

Despatched.

- Kew, England—
20 species New South Wales Eucalyptus seeds ($\frac{1}{2}$ lb. each).
353 packets New South Wales and other seeds.
- Lausanne, Switzerland—
21 packets New South Wales seeds.
- Liege, Belgium—
106 packets New South Wales seeds.
- Lemberg, Austria—
55 packets New South Wales seed.
- Leyden, Holland—
26 packets New South Wales seeds.
- Louvain, Belgium—
80 packets New South Wales seeds.
- Lyons, France (Municipal Gardens)—
40 packets New South Wales seeds.
- Lyons, France, Botanic Gardens of the Faculty of Medicine—
35 packets New South Wales seeds.

- Madrid—
75 packets New South Wales seeds.
- Malta—
140 packets New South Wales seeds.
- Melbourne—
127 packets New South Wales and other seeds.
- Montpellier, France—
105 packets New South Wales seeds.
- Munich, Bavaria—
13 packets New South Wales seeds.
- Nantes, France—
26 packets New South Wales seeds.
- Oxford, England—
90 packets New South Wales seeds.
- Ootacamund, India—
140 packets New South Wales and other seeds.
- Palermo, Sicily—
180 packets New South Wales and other seeds.
- Poona, India—
100 packets New South Wales and other seeds.
- Rome—
56 packets New South Wales and other seeds.
- Calcutta—
20 species New South Wales Eucalypts ($\frac{1}{2}$ lb. each).
- Siena, Italy—
61 packets New South Wales seeds.
- St. Petersburg, Russia—
169 packets New South Wales seeds.
- Stockholm, Sweden—
7 packets New South Wales seeds.
- Tiflis, Caucasus—
43 packets New South Wales seeds.
- Tours, France—
60 packets New South Wales seeds.
- Trieste, Austria—
113 packets New South Wales seeds.
- Utrecht, Holland—
44 packets New South Wales seeds.
- Zurich, Switzerland—
16 packets New South Wales seeds.

OTHER BOTANICAL ESTABLISHMENTS.

Received.

- Brisbane Acclimatisation Society—
6 fruits *Averrhoa Carambola*.
1 fruit *Solanum grandis*.
1 " *Avocada* pear.
200 seeds *Macrozamia Paulo-Guilielmi*.
500 " *Licuala Muelleri*.
- Buysman, Dr., Middelburg, Holland—
83 packets miscellaneous seeds.
- Forest Department, New South Wales—
1 bag *Pandanus pedunculatus* seed.
3 lb. *Harpullia pendula* seed.
- Jamaica Plains, U.S.A., Arnold Arboreum—
1 packet seed of a new arborescent palm.
- McOwan, Professor, Government Botanist, Cape Town—
1 bag *Pterocylon utile* seed.

Despatched.

- Barbadoes Imperial Department of Agriculture—
60 packets New South Wales seeds.
- Brisbane Acclimatisation Society—
10 packets *Acacia* seeds.
15 " grass and fodder seeds.
- Buysman, Dr., Middelburg, Holland—
29 packets New South Wales *Acacias*.
48 " " *Eucalypts*.
58 " " Miscellaneous New South Wales seeds.
- California, University Garden of Native Plants—
11 packets New South Wales saltbush seeds.
- Cape Town (South Africa) Conservator of Forests—
130 packets New South Wales and other seeds.
- Christchurch, New Zealand, Canterbury College—
260 packets New South Wales and other seeds.
- Forest Department, New South Wales—
1 lb. *Ficus rubiginosa*.

Received.

Technological Museum, Sydney—
Tubers from New Angledool.

Received.

Anderson & Co., Pitt-street, Sydney—
7 packets flower-seeds.

Austin, G., & Co., Seedsmen, Hay-street, Sydney—
4 packets flower-seeds.
Axford, Dr., H.M.S. "Pylades"—
Fruits of *Cypokentia Samoensis*, from Samoa.

Best, T., care of Overseer, Centennial Park, Paddington—
1 packet palm-seed, from New Guinea.
Beadle, C. D., Biltmore Herbarium, North Carolina, U.S.A.—
7 packets Rhododendron seeds (American species).
Blakely, W. F., Jenolan caves—
 $\frac{1}{2}$ lb. seed *Senecio macranthus*.
Bode, Mrs. F. R., Bromley, Bowen, Queensland—
1 packet dwarf Chili seed.

Corlette, Rev. Canon, Ashfield—
Seeds of the native Tamarind (*Diploglottis Cunninghamii*).

Cox, J. D., Mount Wilson—
Fruits of the Spanish Chestnut.

French, G., 430, Bourke-street, Melbourne—
7 packets miscellaneous seeds.

Herbe and Wulle, Messrs., Naples, Italy—
15 packets flower-seeds.

Despatched.

Sander, Messrs., & Co., St. Albans—
2 bags of palm-seeds.
San Francisco, Golden Gate Park—
100 packets New South Wales seeds.
Saigon, Cochin China, Department of Agriculture—
80 packets New South Wales seeds.

Washington, U.S.A., Department of Agriculture—
237 packets New South Wales and other seeds.

FIRMS AND PRIVATE INDIVIDUALS.

Despatched.

Allison, John, Fresno, Dubbo—
Seeds of *Trifolium Johnsoni*. (The seed of this clover distributed is from British Central Africa pastures, and was received from Kew.)

Anderson, A. G., Post Office, Corowa—
Seeds of *Trifolium Johnsoni*.
Antill, J. M., Jarvisfield, Picton—
Seeds of *Trifolium Johnsoni*.

Baillie, William, Codrington, Richmond River—
Seeds of *Trifolium Johnsoni*.

Bolton, G. A., Crystal Creek, North Arm, Tweed River—
Seeds of *Trifolium Johnsoni*.
Bray, G. F., Wellington, N.S. Wales—
Seeds of *Trifolium Johnsoni*.
Brown, W., Consul for Chili, 24, Pitt-street, Sydney—
23 packets saltbush and fodder seeds.
Brown, J. Ednie, Conservator of Forests, Perth, Western
Australia—
4 oz. *Grevillea robusta* seed.
Brown, Rev. Dr., Sydney—
For distribution in the South Sea Islands—
24 packets flower-seeds.
17 packets vegetable-seeds.
Campbell, J. F., Walcha—
12 packets grass-seeds.
Cleary, Rev. F., St. Alphonsus, Waratah—
1 packet *Hortemesia Absinthum* seed.

Cowan, Thomas, Mona Farm, Tenterfield—
Seeds of *Trifolium Johnsoni*.

Crowe, J. A., Glenferrie P.O., Whceo—
Seeds of *Trifolium Johnsoni*.
Dall, James, Collingwood, New Zealand—
Seeds of *Hymenosporum flavum*.
De Salis, Mrs. R. F., Virginia Water, England—
Seeds of *Leonotus leonurus*.
Dunkley, J., Russell-street, Bathurst—
Seeds of *Trifolium Johnsoni*.
Epler, Mons. Joseph, "Palace Hotel," King-street—
Seeds of *Castanospermum Australie* (for experimental purposes).
Finckh, Mr., Victoria-street, Darlinghurst—
Spores of *Alsophila Samoensis*.
Fitzhardinge, J. F., 62, Hunter-street—
7 packets seeds of New South Wales plants.

Gambling, Caleb, Thornleigh—
Seeds of *Trifolium Johnsoni*.
Goss, W. H., care of Burns, Philp, & Co., Port Moresby,
New Guinea—
12 packets New South Wales seeds.
Gray, John, Post Office, Vineyard, via Riverstone—
Seeds of *Trifolium Johnsoni*.
Griffiths, James, 534, George-street, Sydney—
Seeds of Tea-plants.
Grist, John, Peel, via Bathurst—
Seeds of *Trifolium Johnsoni*.
Halse, Walter, Bulawayo, Rhodesia, South Africa—
17 packets New South Wales seeds.

Received.

Hose, Rev. W. Clark, St. John's Vicarage, Corowa—
3 packets New South Wales seeds.

King, Miss Georgina, Bradford-road, Homebush—
7 packets New South Wales seeds.
Koch, Max, Mount Lyndhurst, South Australia—
7 packets South Australian seeds.
Le Souef, P. A., Zoological Gardens, Perth, West Australia—
29 packets West Australian seeds, principally ever-
lastings.

Menzel, O. E., Aldgate, South Australia—
1 packet seed *Agonis flexuosa*.
1 " " *Eucalyptus calophylla*.
Moore, F. H., 7, Gresham-street, Sydney—
6 packets West Australian seeds.
Moore, Miss, Perth—
3 packets West Australian seeds.
Minyabe, K., Agricultural College, Sappora, Japan—
49 packets miscellaneous seeds.

McIntosh, A., Sydney—
Seeds of Nuronge (?) from the Castlereagh River.

Perez, G. V., Puerto Orotava, Teneriffe—
40 packets miscellaneous seeds.
3 oz. flower-heads, *Statice macrophylla*.

Ross, Dr. Chisholm, Kenmore—
97 packets miscellaneous seeds.
Rumsey, H. J., "Baronia," Barber's Creek—
23 packets New South Wales seeds.

Thozet, A., Rockhampton, Queensland—
Ripe fruits of *Eggle marmelos* (Bengal Quince).

West Australian Seed and Nursery Co., Claremont, Western
Australia—
19 packets West Australian seeds.
Westmacott, F. H., Macquarie-street, Sydney—
1 packet seed from New Guinea.
Woodford, C. M., H.M. Commissioner, Solomon Islands—
Seeds of *Livistona Woodfordi*.
Seeds of *Pritchardia Woodfordi*.

Despatched.

Hinton, A. L., O'Connell-street, Parramatta—
4 packets New South Wales Acacia seeds.

Hughes, Senor Interventor Don Federico R., Cordoba,
Argentine Republic—
5 packets New South Wales saltbush seeds.
Jackson, H. V., Experimental Farm, Wollongbar, Richmond
River—
26 packets grass-seeds.
Kidston, Thomas, Euambeline, Dandaloo—
1 packet tree tomato seed.

Lippens, Mons. A., Member of the High Council of Agri-
culture, Ghent, Belgium—
9 packets New South Wales saltbush seeds.
Luehmann, J. G., National Herbarium, Melbourne—
Various seeds.
Malcolm, Lieutenant M., D.S.O., Nanda Rifles, Mombassa,
East Africa—
16 packets New South Wales Eucalyptus seeds.
Maxwell, C. E., Coraki—
Seeds of *Trifolium Johnsoni*.

Morphett, C., Parliament House, Adelaide—
2 packets saltbush seeds.
Murphy, Thomas, Ardeen, Koorawatha—
Seeds of *Trifolium Johnsoni*.
Murphy, Andrew, Woy Woy—
9 packets New South Wales seeds.

Nicholson, Duncan, Harwood Island, Clarence River—
Seeds of *Trifolium Johnsoni*.
Oliver, Alex., Shelcate, Neutral Bay—
1 packet grass-seed.
Pearce Bros., Messrs., King-street, Sydney—
78 packets New South Wales seeds.
Perez, G. V., Puerto Orotava, Teneriffe—
8 packets New South Wales *Acacia* seeds.
1 packet seed, *Passiflora edulis*.
Perth, Western Australia, City Council—
12 packets miscellaneous seeds.
Purchase, Samuel, Parramatta—
27 packets miscellaneous seeds.
Purkiss, H., The Mount, Guy Fawkes—
7 packets miscellaneous seeds.
Robson, E. J., C. of E. Grammar School, North Sydney—
1 packet *Grevillea robusta* seed.

Samuels, J. A., Macquarie View, Dubbo—
Seeds of *Trifolium Johnsoni*.
Skelton, Mrs. M. A., Drummoyne—
1 packet acorns.
Sohn, S., Kiancene, near Wardell—
Seeds of *Trifolium Johnsoni*.
Stewart, J. H., The Mount, Bathurst—
Seeds of *Trifolium Johnsoni*.
Thomas, D., Post Office, Lithgow—
Seeds of *Trifolium Johnsoni*.

Tomlins, William, Broughton Village, Gerringong—
Seeds of *Trifolium Johnsoni*.
Wall, Thomas, Woollomin, via Tamworth—
Seeds of *Trifolium Johnsoni*.
Wellford, Dr., Riverside, Kuala Selangor, Straits Settle-
ments—
13 packets New South Wales Acacia seeds.

Woodford, C. M., H.M. Commissioner, Solomon Islands—
42 packets flower-seeds.
34 packets vegetable-seeds.

Living Plants received and despatched.

BOTANICAL ESTABLISHMENTS.

Herbarium and Museum Specimens Presented.—In addition to the very large number of correspondents of the Botanic Gardens who send specimens for identification, following is a list of the principal contributors to the herbarium during the past year :—

Axford, Dr., H.M.S. "Pylades"— 27 species of Pacific Islands plants.	Helms, R., Perth, W.A.— 115 species of Western Australian plants.
Brown, J. Ednie, Perth, W.A.— 11 specimens of Western Australian timbers.	Heron, W., Conjola— 93 species of New South Wales plants.
Brown, F. H., Mudgee, N.S.W.— 43 specimens of New South Wales plants.	Little, A. G., Public Works Department, Sydney— 40 herbarium specimens from Walgett.
Buckingham, C. A., Wahroonga— 7 species of fungi, in quantity.	Moore, Miss, Perth— Various Western Australian plants.
Campbell, W. S.— 7 herbarium specimens from Grenfell, N. S. Wales.	Perry, Mrs., Bulli— Collection of seaweeds.
De Coque, J. V., Public Works Department, Sydney— 14 specimens of New South Wales timbers, together with corresponding fruits and herbarium specimens.	Phillips, C., Sydney— Nuts of <i>Canarium</i> sp. from New Guinea.
Dixon, Samuel, Adelaide— 106 species of fruits and herbarium specimens of North Queensland plants.	Rumsey, H. J., Barber's Creek— Many herbarium specimens from the district.
Froggatt, W. W., Sydney— 4 species of plants from Gunnedah.	Staer, J., Hornsby— Many herbarium specimens from the district.
Goldsmid, Dr. J. A., Murwillumbah— Mosses from the upper slopes and summit of Mount Warning, and 5 collections of freshly-gathered phanerogams, &c.	Thompson, J. W., West Maitland— Specimens of Australian orchids.
	Whitelegge, Thos., Sydney— Specimens of Port Jackson seaweeds.
	Williamson, H. B., Hawkesdale, Victoria— A type specimen of <i>Grevillea Williamsoni</i> , F. v. M.

Herbarium Specimens purchased.

- 415 species of South African plants (Schlechter's Iter IV), including co-types of many new species.
- Norfolk Island plants.
- 325 species of South Australian plants (Far North); also, 172 specimens in 31 species.
- "Hepaticæ Britannicæ Exsiccatae," by Carrington and Pearson, in 3 parts—comprising 215 species in all.

Herbarium Specimens exchanged.

<i>Received.</i>	<i>Despatched.</i>
Australian Museum, Sydney— 612 European phanerogams. 34 ferns and lycopods. 126 mosses.	Baage J., Naestved, Denmark— Australian species of Polamogeton.
Berlin Botanic Gardens— 68 species of Dr. Karl Mueller's type specimens of Australasian and Pacific Islands' mosses.	Berlin Botanic Gardens— 300 species of Australian plants.
Biltmore Herbarium, South Carolina, U.S.A.— 317 species of North American plants.	Biltmore Herbarium, South Carolina, U.S.A.— 400 species of Australian plants.
Calcutta Botanic Gardens— 51 species of Indian plants.	Boissier Herbarium, Chambésy, near Geneva— 100 species of Australian plants.
California : University of Berkeley— 100 species of Californian plants.	British Columbia Department of Agriculture— 200 species of Australian plants.
	Buenos Ayres Botanic Gardens— 100 species of Australian plants.
	Buitenzorg Botanic Gardens— 100 species of Australian plants.
	Calcutta Botanic Gardens— 300 species of Australian plants.
	California : University of Berkeley— 400 species of Australian plants.

- | <i>Received.</i> | <i>Despatched.</i> |
|---|--|
| Cape Government Botanist (Prof. McOwan)—
214 Hawaiian* herbarium specimens.
4 Samoan " "
500 European " "
550 South African " "
* The Hawaiian plants are portion of a set of Hillebrand's collections,
and include a number of types and co-types. | Cape Government Botanist (Prof. McOwan)—
300 species of Australian plants. |
| Copineau, Mons., and Momllefraine, Mons., France—
356 European phanerogams.
84 European cryptogams. | Copineau, Mons., and Momllefraine, Mons., France—
350 species of Australian plants, in duplicate. |
| Dendy, Prof. A., Christchurch, New Zealand—
Museum specimens of <i>Ranolia eximia</i> , &c., and <i>bryoides</i>
and <i>Haastia pulvinaris</i> . | Darwin, Prof. Francis, Cambridge, England—
9 herbarium specimens of climbing plants. |
| Durban Botanic Gardens, Natal—
332 species of Natal plants. | Dorpat Botanic Gardens—
100 species of Australian plants.
Durban Botanic Gardens, Natal—
50 carpological specimens.
440 herbarium specimens.
Gandoger M., Villefranche—
700 species of Australian plants.

261 species of South-east European plants.
100 species of <i>Cryptogameæ cassicatæ</i> plants. | |
| Walter, C., Melbourne—
259 species of Victorian plants. | |
| Watts, Rev. W. W., Ballina—
43 species of Australian mosses. | |
| Whitelegge, T., Sydney—
251 species of Australian mosses. | |

I have arranged the acquisitions of the year on the lines of the International Catalogue of Scientific Literature as far as it has been convenient to do so. Perhaps another year I may catalogue acquisitions in one list, whether they are acquired by gift, purchase, or exchange; this will facilitate the use of the International Catalogue arrangement for the purpose of the Annual Reports.

The arrangement of the International Catalogue is, however, only partially applicable to the publications received by us. For example, it does not take cognizance of works on economic botany, forestry, agriculture, &c. The classification of some of our acquisitions is a matter of convenience. For example, it seems desirable to place all the publications of the United States Department of Agriculture in juxtaposition. At first sight, the publications of the Divisions of Agrostology might go under Taxonomy, 6,000 monocotyledons, but agrostology includes fodder-plants in general, many of which are dicotyledons. I am not clear where works treating of several sections of cryptogams should go—perhaps under 5,000 "General Works on Systematic Botany," but that removes them from the rest of the works on cryptogams. A place for such general works should, I think, be found between 7,700 and 7,900. At present I have put them under 6,700 Vascular Cryptogams, because they treat, *inter alia*, of such plants. Under "Geographic Distribution" there is no special number for Australasia, unless 8,600 Austral Asia, which seems is intended for such. Mr. J. Shirley, in his Queensland volume of the International Catalogue of Scientific Literature, adopts 9,700 and 9,800 tropical and South Indo-Pacific for Queensland; but it appears to me that these numbers had better be reserved for the small Oceanic islands. Other difficulties will appear and disappear as the International Catalogue of Scientific Literature is applied to special libraries. I am adopting the Catalogue, as far as it is applicable, to the library of the establishment under my control, and I am collecting material for an Australian catalogue of botanical literature.

Publications acquired by Purchase.
